PREFACE  37

THE MUSIC AND MUSICAL INSTRUMENTS OF THE ARAB.
BY FRANCESCO SALVADOR-DANIEL.

INTRODUCTION.

HOW TO APPRECIATE ARAB MUSIC,

Author's residence among the Arabs—Could at first discern no melody nor rhythm—No musical theory—Arab music to-day the same as European music of the Middle Ages—Vestiges of Arab civilisation in Spain—Why the author claims to speak as an authority on the subject of Arab music  43

CHAPTER I.

THE THEORY OF ARAB MUSIC.

Arab musical history—Musical system borrowed from the Greeks—Their definition of music—Theoretic or specu-
lative music—The science of numbers—Dispute between the Pythagoreans and Aristoxenians—The Jews in progress of musical art—Practical music ... ... 61

CHAPTER II.

THE CHARACTER OF ARAB MUSIC.

Why Europeans do not appreciate this music—The “gloss” or embellishments—Band of the Bey of Tunis—A certain habituation or “education of the ear” necessary to understand Arab music—Arabs unacquainted with harmony—An Arab concert—The Noubâ—Bécheraf—Character of Arab melody—No third or quarter tones in their music—The drawled scale—The terminations ... ... ... ... ... ... ... ... 73

CHAPTER III.

THE DIATONIC MODES OF THE ARABS.

Arab and Greek modes—Tones of plain-song—Historical résumé—Four principal modes—Irâk—Mezmoum—Edzeil—Djorka—Four secondary modes—L'sain—Saïka—Meïa—Râsd-Edzeil ... ... ... ... ... ... ... ... 93

CHAPTER IV.

ARAB MUSICAL INSTRUMENTS.

Tetrachord and hexachord—Instruments used by the ancients—Those of the Arabs—Gosba—Taar—Dof—Kanoun—Djaouak—Raita or Gaita—Atabal—Atambor—Derbouka—Bendair—Kemendjah—Rebab—Konitra—Value of octaves unknown to the ancients—Chords of the third and sixth—Boëtius—St. Gregory—Guido of Arezzo lays the foundation of a single scale—harmony ... ... ... ... ... ... ... ... 107

CHAPTER V.

THE RHYTHM OF ARAB MUSIC.

Arab rhythm is regular and periodic—Rhythm with the Greeks—Poetic rhythm applied to music and the dance
CHAPTER VI.

THE CHROMATIC MODES OF THE ARABS.

Wonderful effects attributed by Arabs to their music—Dance of the Djinn—Song of Salah Bey—The Alfarabbi legend—The chromatic modes—Rummel-Meia—L'saïn-Sebah—Zeidan—Asbein—Diabolus in Musica—The habit of hearing and "education of the ear"—Poetic exaggeration—Examples of the law of habit acquired by education of the ear ... ... ... ... 143

CONCLUSION.

ARAB INFLUENCE ON EUROPEAN MUSIC.

Résumé of previous deductions—The system of Pythagoras passed on to Arabs—Influence of the Arabs upon Europe up to the fifteenth century—Provençal literature and the troubadours in relation to the Arabs—The Arab minstrel and his Garagous, the forerunner of the European minstrel and joulgeur—Arab music to-day what European music was prior to fourteenth century—Whilst European music has progressed, that of the Arab has remained stationary—A source of new wealth of harmony hidden in Arab music ... ... 157

NOTES ON ARAB MUSIC. BY HENRY GEORGE FARMER.

1. No science of music with Arabs to-day. 2. Similarity of Arab music with modern Catholic church music. 3. The music and poetry of the Arabs passed on to the troubadours. 4. Survivals of Arab music in Spain. 5. Musical history, in theory and practice, of the Arabs. 6. Arab music unappreciated by Europeans. 7. The rhythm of the Arabs. 8. The "gloss" or embellish-
Contents.

MEMOIR OF
FRANCESCO SALVADOR-DANIEL.

Walking in the streets of Paris you elbow thousands of passers-by to whom you do not pay the least attention. . . . They are individuals without individuality . . . . the multitude, the mass, the flock. . . . They are the happy, the joyous, the peaceful, the dependents of the law. . . . But besides these, pass and repass—sad sometimes, dreamers often, poor always—fine and striking figures, that have a physiognomy, a colour, a relief, an originality, a date, a signification: they are artists, poets, thinkers, searchers, restless vagabonds—enamoured of glory, infatuated with idle fancies, indulgers in dreams. . . . They are chosen by Nature, full of intelligence and of heart. They know how to love, they feel enthusiasm, they have the sense of life. . . . And the crowd, the ignorant . . . . the Philistines—covers them with disdain, with injuries. . . . The crowd only sees the worn coat seams! But I know the crowd and it is bad knowledge: I know it.—"At Home in Paris," by Blanchard Jerrold (1871).

HEINE warned those who fought with him in the War of Liberation, that they must expect their names to be uttered with slander in Philistia. That is the penalty all soldiers of progress must pay. If they are fortunate enough to win a place in the annals of men, their fame

1

2
may live it down: if not, their portion is a sneer or silence. For instance, take Wagner's anarchical tendencies and the part he played in the Dresden rebellion of 1849. In those days "the crowd," the Philistines, looked upon Wagner as one of Blanchard Jerrold's "restless vagabonds," and covered him with disdain and injury. He was wanted by the police, and declared a "dangerous political" with no less a person than the arch-anarchist, Bakunin. But to-day, Wagner is among the world's elect, and those same delectable occupants of Carlyle's "thousand gigs of respectability"—the "crowd"—now profess to see his rebellion in the light of a harmless escapade. That is to say, Wagner has arrived at the portals of Fame, and there you never see the "worn coat-seams" that Jerrold speaks of.

'Twas ever thus. No matter if one is a thousand-fold genius, unless he is one of the arrivés, the crowd—the narrow, ignorant, mutable many, who only see the "worn coat-seams," cross themselves and pass on. Unless, mark you! the "worn coat-seams" dares to tell of his "idle fancies," and more so to practise them; then, God help him! all the genius in the world will not save him from their abuse and calumny.

Such is the case of a certain Salvador Daniel, musician and savant, composer of the "Chansons Arabes," author of "La Musique Arabe," and direc-
tor of the Paris Conservatory of Music, the successor of Auber and predecessor of Ambroise Thomas. But alas! he was not among the arrivés, albeit a director of the Paris Conservatory: for it so happened that his directorship did not come from the “crowd,” but from the citizens of the “worn coat-seams” themselves, who, once upon a time, tried to save the “crowd” from its sloth and ignorance. Their attempt is known in history as the Paris Commune of 1871. So Salvador Daniel is only one of the “worn coat-seams,” after all, and the “crowd” must assert its prerogative of disdain or injury towards him. Thus we have authoritative works (“Grove,” for instance) completely ignoring him, whilst others, in damning with faint praise (I will speak of his calumniators later) say “he was not without merit,” or that “he would perhaps have made a name for himself,” if “only he had lived a respectable life.” Bah! He had sufficient merit to die for his convictions, and those who live the “respectable life” need have no fears for his name. Even should it fade in the annals of music, it will be ever fresh in the hearts of those of the “worn coat-seams.”

* * * * *

Francesco Salvador-Daniel was the eldest son of Don Salvador Daniel, a Spanish nobleman and
officer, who, after supporting the Carlist rebellion of 1830, fled with Don Carlos across the French frontier. Don Salvador had his property and estates confiscated, and eventually settled at Bourges, as a teacher of languages and music, becoming later the organist at the cathedral, and professor of singing, piano and harmony, at the Collège Royal and Ecole Normale. He gained some reputation as an advocate of the Gallin (Chevè) system, and as the author of several educational works, highly praised by Fétis and Castil-Blase—"Grammaire Philharmonique," etc. (1836-7), "Alphabet Musical" (1838), "Commentaires de l'Alphabet Musical" (1839), "Cours de Plain Chant" (1845), and "Guide de l'Instituteur pour l'Enseignement du Chant" (1847). I purposely enumerate the works as the father and the son have been confused in authoritative quarters, viz., Fétis, in his "Histoire Générale de la Musique," the British Museum Reading Room catalogue* and at the Bibliothèque National, Paris.

Francesco Salvador was born, says Mendel, at Paris in 1831. He received his schooling at the Ecole Normale at Bourges, where his father settled down soon after his birth, and his father and uncle gave him his musical education, the former having him as a chorister in the cathedral, and teaching him the piano, violin and theory, whilst the latter, who was an

* This has since been altered at my request.
army bandmaster, no doubt imparted to him the "good practical knowledge of wind instruments" which Salvador possessed.

In 1843, Daniel père and the family removed from Bourges, but where to is not known. However, in the mid-fourties, one of the many aspirants for fame who made their appearance at the Paris Conservatoire was young Salvador. The gay city was then on the full tide of Opéra Bouffe, and all serious art had become subserved to this "intelligent musical persiflage." In such an atmosphere, the enthusiastic Salvador, straight from the provinces, with high-flown notions on art, was bound to suffer a rude awakening. He was a very ordinary pianist, although on the violin he was considered quite a "capable performer." His métier was, however, composition, and in this, as his friend Paul Delbrett said, "he was a genius, who under happier circum-

* Having a double surname, he has been called both Salvador and Daniel. Lacal’s "Diccionario de la Música" (1889), Playfair’s "Bibliography of Algeria," actually mention him under both, evidently thinking they were different persons. In Algiers he was known by both. The "Annuaire de Algerie" speaks of him as M. Salvador, whilst a "Guide à Alger" says M. Salvador Daniel. His first contribution to the "Rêve Africaine" was erroneously given as by Daniel Salvador, which was afterwards corrected. Delion ("Membres de la Commune"), Leighton ("Paris under the Commune," Rev. Ed.), Bernard ("Figaro," 1871), all refer to him as Salvador. It was by this name that he was known to his friends, and I use it throughout this memoir.
stances would have left an immortal name." But there never was room for genius in this workaday world of sheer industrialism. The normal, commonplace, practical man naturally falls into the mould which the normal, commonplace, practical world makes for itself, it has no place for the abnormal and uncommon, and it had no place for Salvador. Thus he found himself on the old Bohemian road misère that Murger speaks of in "La Bohème," by which everyone who enters the arts, without other means of existence than art itself, is forced to travel. Poor Salvador, for sheer subsistence was compelled to cry a truce with the "crowd" (as Wagner did before him), and help to contribute to their mediocre tastes. And so we find him in the service of popular music publishers as a copyist, proof reader and arranger of dance music, comic songs, etc., besides doing all sorts of literary hackwork, writing musical and theatrical notices, an avocation which wellnigh broke his heart.

Salvador was for a long time without regular employment. He got introduced to Offenbach in the hope of gaining entry into his orchestra at the Théâtre Français, but without success. At last he found a place as viola or second violin at the Théâtre Lyrique, a post he held for several years. Here he became very friendly with Delibes, then the accompanist at the theatre, and afterwards famous
as the composer of the delightful ballets, "Coppélia" and "Sylvia."

Meanwhile, Salvador became very much attracted by the life and art-work of Félicien David, whose "Le Désert" was the talk of Paris. David was an ardent St. Simonian, and when the "brotherhood" was dispersed in 1833, David and others set out on a mission to the East. They journeyed through Turkey, Palestine and Egypt, returning to France five years later. During his travels, David made a study of the music of the Orient which formed the basis of his "Mélodies Orientales" and "Le Désert." He had no more enthusiastic admirer than Salvador and the two became friends. Indeed, it is not at all unlikely that Salvador formed his earliest ideas of social revolution, which he afterwards espoused with fervour, from David's ecstatic communistic faith.

Salvador had long meditated upon "going abroad." He was one of those restless spirits, brimful of impulse. The struggle with misère had left an indelible imprint upon him, and years after he always spoke with great fervour, of his sufferings and aspirations as a youth in the "Quartier Latin." Like the wounded soul in Lamartine's "Les Préludes," the altar of his artistic faith had been swept away, and nothing save conflict would rekindle his manhood. All around he saw how noxious this so-called civilisation was to Art, and Heine's "Promised Land" was as bad as the rest. Ever since his
first acquaintance with David, the East had been calling him. Its strange primitive music, unsoiled by the rude breath of Western civilisation, completely enchanted him. A new land, a new people, a new art, meant conflict, and he soon made up his mind to set out on a similar quest to his master, Félicien David. But not to Egypt or Palestine, but Arab lands not yet known (at least musically)—i.e., Algeria, Tunis, Morocco and Kabylia. This was in 1853.

* * * * *

We next hear of Salvador settled in Algiers, residing in the Rue Rovigo as a professor of music, teaching principally the violin, whilst a Mlle. Salvador, who lived with him, taught singing. From the day he landed in Algeria, Salvador, who was already a good all-round linguist, speaking Spanish and German, besides being a fair classical scholar, took up the study of Arabic. Having mastered the language, he began translating, under the surveillance of a friend named Cotelle, who was the interpreter at the Consulate at Tangiers, some of the ancient music treatises of the Arabs.

Salvador especially directed his attention to the problem which several Arab philosophers of the ninth and tenth century had propounded, the connection of their music with that of the Greeks. He took a great interest in the Société Historique Algérienne,
and thus came in contact with many Orientalist savants, both Europeans and native, and among them Comte Randon, the Governor-General, and Berbrugger, the conservateur of the museum at Algiers, who took great interest in his study of Arab music. Salvador threw himself con amore into his work, travelling note-book in hand, frequently if not always dressed in native costume, thus getting in closer touch with the people, taking down Noubas songs and dance tunes just as he heard them sung or played. He not only mixed with the native musicians, but played with them at their concerts. He traversed every corner of the three provinces of Algeria. Tunis, which he considered was to Africa—from a musical point of view—what Italy was to Europe, was a place of special pilgrimage to him. Morocco and Malta also found him collecting airs. He even visited Egypt and Spain, so as to trace in the national song, the influence of European civilisation in one, and the persistence of a past Arab civilisation in the other. During his travels he collected no fewer than four hundred specimens of Arab music which he made the basis of his study.

One of the first results of his labours was an “Essay on the Origin and Transformation of several Instruments,” contributed to a Madrid journal, the “España Artística” in 1858, and reprinted in the “Révue Africaine” in 1863. But his
most important work was a lengthy study of Arab music in the "Révue Africaine" in 1862 and 1863. This was most enthusiastically received and was immediately published in book form by Bastide, Algiers, as "La Musique Arabe, ses rapports avec la Musique Grecque et le chant Grégorien: et Essai sur l'origin et les transformations de quelques instruments" (1863). Comte Randon, to whom the work was dedicated, was highly delighted with it, and graciously sent Salvador a purse of one thousand francs, in recognition of his services to the "Arts Mussulmans." Félicien David, Salvador's old master, also gave his praise, and promised to write an appreciative review in the Paris journals. The work was, however, dealt with in a lecture by J. B. Wekerlin, in March, 1864, before the Société des Compositeurs de Musique at Paris, when three of Salvador's "Chansons Arabes" were performed. "La Musique Arabe" is now a standard work on the subject,* and is referred to in Lacál's "Diccionario de la Música" as "a valuable work," whilst the littérature, J. B. Wekerlin, speaks of this "interesting brochure" as "extremely rare" ("Musiciana," 1877). So rare indeed that the demand for it necessitated another edition. This was brought

out in 1879 by Jourdan, Algiers, who added a short essay of Salvador’s, a “Notice sur la Musique Kabile” (1863), with fifteen specimens of Kabyle songs.

To fully estimate the value of Salvador’s work, it must be understood that his theory was in direct opposition to his predecessors in this field of inquiry, viz., La Borde, Villoteau and Kiesewetter. These writers had allotted the “Messel” system (the seventeen third tones within the octave) to the Arabs in general. This Salvador denied. He, unlike his predecessors, did not seek to probe the character of Arab music from the ancient Arab treatises alone, nor did he look to Egypt or Arabia as the most likely field for inquiry. He set about his task, as we have seen, in nine years’ personal investigation in a land (less influenced by Western civilisation) that could claim, besides its own traditional music, some vestiges of the great art of the Arabs of Spain. His work has therefore not only the value of being gathered at first hand by a practical musician and a specialist, but gathered in the very heart of Araby. After years of investigation, Salvador came to the conclusion that the Arab system (at least in Mauretania) was identical with the Greek, and denied that there was any trace of the “Messel” system (see “Explanatory Notes”).

Our apostle of Arab music was not so much obsessed with the antiquarian side of his art, as to
neglect the æsthetic. Many of the Arab songs he arranged for voice and piano, set to French and occasionally to Spanish words. These transcriptions and versifications were in a great part his own work, although he took many specimens from Victor Bérard’s “Poèmes Algériens,” and the works of Perron. Nine of the chansons were published by Richault; they were:

He also published a “Chanson Mauresque de Tunis” in Spanish (Salazar, Madrid) and in French (Petit aïné, Paris).

Three of the above chansons were issued for male voice choir, with additional accompaniment for oboe and tambour de Basque. The whole of these songs were published prior to 1863. Later he published three more: “Le Chant de la Meule” (Kabite song, after the Khacidah), “L’Ange du Désert” (song of the Moors of Spain), “Marguerite” (Maltese song).

These “Chansons Arabes” reveal the high-water mark of genius, for there is as much Salvador as Arab in them. He took the rough, unpolished song of the Arab, and created a veritable art work out of it. On this account he has been decried by the anti-
quary, for the Arabs never had any harmonic system, as we shall see in Salvador’s "La Musique Arabe." Notwithstanding the great variety of their instruments, nothing beyond unison, octave, the embellishments and perhaps pedal point, were ever admitted. But with Salvador, we must distinguish between the antiquary and the musician. Salvador as the antiquary may be seen in his collection of "Chants Kabyles." There you have the music in its natural form. But in the "Chansons Arabes" Salvador the musician stands revealed. In these latter, it seems to me, that he sought to show how the Arab would have presented his song had he reached the harmonic stage. Whilst retaining all the genre of Arab physiognomy, Salvador, following their quaint melodic intervals, struck out in an entirely new path in his harmony, modulation and accompaniment, as original as anything Grieg or the new Russian school touched upon. Salvador stands in relation to the Arabs, as Grieg does to the Norwegians or Borodin and Moussorgsky to the Russians.

Besides his songs, Salvador published three or four "Fantaisies Arabes" for piano (solo and duet), which were also arranged for orchestra and a Nouba. He also wrote several symphonic works, a suite of "Danses Arabes," some compositions for violin and piano (one, a "Chanson de Mai," was performed at the Société des Compositeurs in 1869), and piano-
forte pieces after the “theme and variation” style. All of these works were based on Arab modes or on Arab song.

Daniel Bernard wrote a notice of Salvador after his death in the “Figaro,” and speaks thus of his compositions: “His works numbered three or four, not one of which is worth mentioning. They (Bernard refers to the ‘Fantaisies,’ which were the only works published beside the ‘Chansons’) are divagations on a crowd of themes, each more odd than the other. The composer’s greatest fault was an absolute want of precision in mind. He lost himself in endless dissertation under the pretext of fantastie.” Just fancy a mere journalist trying to appreciate the work of this revolté musician. Why! Salvador himself had pointed out years before, in his “La Musique Arabe,” that Europeans could not appreciate the beauties of Arab music at first hearing. And when to the bisarrerie of Arab music were added the rebel ideas in harmony and form of Salvador, no wonder this Bernard found him “wanting.” I suppose such a passage as this:

![Sheet music](image-url)
which is the last four bars from the song, "L'Ange du Désert," must have shocked the poor man!

* * * * *

After the publication of "La Musique Arabe" and the "Chansons Arabes," Salvador found himself quite famous in Algeria, and looked upon as quite the authority in all appertaining to the native music. In the local musical circles he was considered a most important person, and besides a good private teaching connection, he was music professor at the Ecole d'Alger in the Rue Porte Neuve, and conductor of two musical societies, the Orphéon Algérien and the Harmonie d'Alger.

For some time he had been engaged upon an Arabian opera, which, says his friend, Paul Delbrett, contained "some charming melodies." The libretto which also came from the pen of Salvador, was founded on an Algerian episode prior to the French conquest. It was Salvador's hope, no doubt, to produce his magnum opus in its indigenous atmosphere. But, unfortunately, in the midst of his increasing prosperity, came a severe blow, which almost wrecked his life. He fell in love with a beautiful girl, the daughter of a merchant of Algiers, and they were betrothed. On the very eve of the nuptial day, his bride was stricken ill and died almost immediately. Salvador was prostrated with grief, and the unfor-
tunate affair so preyed on his mind that his friends were compelled to remove him from his work.*

When he regained his normal self, he decided to quit Algeria for ever. Paris once more loomed on his horizon, and to that city he set his face. Friends strove to deter him, pointing out that Paris after so many years' absence was like entering a new land, whilst his position in Algiers was now assured for him. Yet Salvador, like all inherent rebels, had unbounded faith in his powers. As a teacher he flattered himself he would be as successful in Paris as Algiers. There was also his reputation as a littérateur and savant and his knowledge in general of the "Arts Mussulmans," which would for certain open a door to him. Moreover, he was considered a good conductor, and the thought of Paris acted more as a filip than a check to his ambitions in this direction. Finally, there was his Arabian opera, which he had longed to stage, and Paris offered good opportunities for that. And so, at the close of 1865, Salvador bade farewell to Algeria.

* * * * *

From the day of his arrival in Paris, Salvador

* Pougın, in "Le Menestrel" (1871), says that the incident inflicted Salvador with a sort of malady of despair. In his supplement of Fétis's "Biographie Universelle," this belief grows into a statement that his mind became deranged. Finally in Ternant's article in the "British Bandsman" (1889), a lunatic asylum is brought in.
found himself readily admitted to the most influential literary and artistic circles, and sought after as an authority, not only on Arabian music, but upon all ancient music. Dupleix says he had a good knowledge of the music of the Greeks, whilst M. Raoul Pugno informs me that he was a specialist on the plain-song.

In September and November, 1866, I find him contributing once more to the "Rêve Africaine," in an article entitled "Fantaisie sur une Flûte Double" ("Instrument Arabe"), a most charming and original piece of writing.

At the Société des Compositeurs de Musique, of which he was a member, Salvador lectured several times. Two of his subjects that I have noted were "La Facture des instruments primitifs pendant les premiers âges du monde" and "Les Chants cabirique ou gallique," the second lecture being published in the journal of the society.

In 1866 or 1867, having failed to get his opera mounted on a Paris stage, Salvador made arrangements to have it produced at Marseilles. Then it was found that the management demanded a larger sum than the composer could raise among his supporters, who were mostly Greek and Jewish mer-

* He seems to have been well known in musical circles, as Wekerlin in a lecture before the Société des Compositeurs de Musique in 1864, speaks of him as "well known amongst us."
chants engaged in the North African trade, and the whole scheme was abandoned. Salvador afterwards sent his score to Berlioz, who was so delighted with it that he promised to use his influence with Liszt to have the work produced at Weimar. Berlioz's death intervened and that ended all.

In 1867 was published at Paris a work entitled "Poésies populaires de la Kabyles," by Colonel Hanoteau, with examples of Kabile music by Salvador.

Belonging by birth to the "upper ten," the favours of the Tuileries had been practically extended to him, for his album of "Chansons Arabes" had just been reissued by Richault, and were quite the rage of the salons. This collection comprising twelve songs is now published in a very artistic volume by Costallat et Cie, Paris.

In June, 1867, at the suggestion of Prince Napoleon, Salvador gave concerts, "antique et orientale," which were highly praised by the press. These concerts were given on a grand scale at the Maison Pompéienne in the Champs Elysées. Here the orchestra, under Salvador's baton, performed for the first time in Paris his "Fantaisies Arabes." The success of these auditions led Salvador to establish a series of "Concerts for the People," after the style of the popular twenty-five centimes concerts of 1848. These concerts, which were given in a hall at the
bottom of the Rue St. Denis, revealed Salvador in a new rôle.

Salvador, like Courbet, Rochefort, Réclus and Vallés, was a true child of the rebellious sixties. Although brought up a Royalist and strict Catholic, Salvador had long ago thought himself out of the slough of conservatism in politics and religion, and had become a revolutionary socialist ("very red," says Raoul Pugno) and an atheist. In 1868-9 he became affiliated to the Socialist group in the sixth Arrondissement, and found his friends in Rochefort, then editor of the famous "Lanterne," Rogoird, the author of "Les Propos de Labienus," Vallés, who wrote that rebellious classic, "Réfractaires," Flourens, Arnould, Vermorel, Grousset, the very élite of revolutionary littérateurs. Andrew de Ternant says that it was Salvador's intercourse with the revolutionary party that kept him out of a good position under government patronage.

However, Salvador had now quite settled down to regular literary work. As a musical critic he was engaged in contributing the usual causerie to journals, revealing himself possessed of keen critical acumen. He also became sub-editor of a musical periodical. Raoul Pugno ranks him highly as a critic, and both Pougine and Andrew de Ternant have praise for him, but as Pougine and Félix Clément point out, Salvador was far too unorthodox a critic and too uncompromising in his views to suit
the mediocrity of brains which he had to address, and as John Stuart Mill once remarked, originality is the one thing which unoriginal minds cannot feel the use of, and they soon found no use for Salvador.

"Salvador," says Daniel Bernard ("Figaro," 1871) "sincerely believed in a 'music of the future' which would be both social and democratic . . . and while Courbet painted pictures under the inspiration of Proudhon, Salvador was in search of an opera in the same style."

"True art impulse can only come from the people," said Salvador, which was another way of putting the dictum of Wagner, that art was the result of a "common and collective need" of the folk. Thus it was revealed to Salvador how important was the relation of Art to Life, and the immediate necessity for the social revolution.

Whether Salvador's revolutionary art-views were the outcome of his revolutionary social-politico views, or vice versa, I am not going to argue. The real artistic mind is inherently anarchistic, and readily assimilates fresh forms of expression with fresh forms of thought. I believe Salvador's "revolt," or for that matter all revolt, proceeds from deeper physical causes. Revolt is constitutional, and the same organisms that prompted Salvador as a rebel to the politico form in society, accounted for him as a rebel to the harmonic form in music. As to this let any student take up his "Chan-
sons Arabes" and in particular "L'Ange du Désert," "Le Ramier" and "Le Chant de la Meule," and he will see the aesthetic reflex of this revolt.

In the national folk-song Salvador naturally divined a vital force in the realisation of la musique sociale, and led him to publish some brochures on the subject under the title of "Lettrés à Mlle. Thérésa, de l'Alcazar." This lady, a well-known singer at the salons and cafés concerts, was his co-worker in the propaganda of la musique sociale. The first brochure (1867) had for a sub-title, "Le Personnage Régnant," which was soon followed by another brochure entitled "La Complaine de l'Ogre," both of which were printed in Algiers but published by Noirot, Paris. A third volume, "La Fête de la Saint-Jean," was proposed but did not appear. In his advertisement for these works, Salvador said: "The three letters collected into one volume, give the history of the chanson in its three usual forms: (1) The warlike chanson in 'Le Personnage Régnant'; (2) The religious chanson in 'La Complaine de l'Ogre'; (3) The chanson of love and labour in 'La Fête de la Saint-Jean.' In the first the author chiefly studies the warlike chanson of the eighteenth and nineteenth century: in the second, the religious chanson is presented especially at its most active period, the Middle Ages and Renaissance: in the third, the author proposes to establish a parallel between the songs of an-
tiquity and the production of to-day in the same genre. The three letters justifying the principal title of the work, 'A Propos de Chansons.'"

Bernard refers to these brochures as "very curious," showing "special aptitude, even too special, since they were by no means successful." Alfred Ernst, in "Le Grande Encyclopédie," speaks of them with high praise. As to their success, at any rate they do not find their way into the second-hand book stores, as I have been trying for years to obtain copies.

In 1869, Salvador began contributing to Rochefort's journal, "La Marseillaise," which so mercilessly lashed the Empire. Here we find him as ardent as ever over la musique sociale and kindred subjects, as the titles of his articles tell, "Le Chants du Peuple," "La Liberté des Théâtrés," "La Musique Sociale," etc. From this date Salvador's purse began to lack the wherewithal. Indeed his friend, Félix Clément, the author of the "Dictionnaire Lyrique," says he was "very poor." His pupils were few, and he seemed to gradually lose connection with the "respectable" journals for which he worked, doubtless owing to his opinions. Indeed he began to think that the old road misère would find him once again on its track. At last he found it necessary to take up his violin as an orchestral player, and was glad to accept, I believe, a seat in the orchestra of the "Folies Dramatiques."
Of Salvador's personal appearance and character at this period, his friend, Edouard Vaillant, now the veteran socialist député in France, writes me: "Salvador was of medium height, thin . . . . a fine figure . . . . of nervous, intelligent and sympathetic disposition." Raoul Pugno, the famous pianist, another intimate friend, tells me he was "dark, short, and wore a beard, with quite an Arabian air." Dupleix speaks of his "large dark eyes and clearly-cut aristocratic features." This latter is also noted by Bernard, who further refers to Salvador being "fond of argument, giving his opinions in a quiet, calm voice without heat." Arthur Pougin, the musical littérateur, met Salvador several times at the "Société des Compositeurs de Musique," and at the réunions intimes of a certain M. Gouffe, where Salvador sometimes took the alto part in a quartet. He says that Salvador was a good musician, "finely endowed, from a point of view of intelligence . . . . devoted to art, in the discussion of which he showed great enthusiasm." Another friend, Wekerlin, the musical critic, speaks of him as "a distinguished violinist" and a "conscientious musician." Mendel also refers to him as a "talented musician." Paul Delbrett, Salvador's friend and secretary during the Commune, says he was "a most kind-hearted man, a water drinker and almost a vegetarian."

Salvador, on his return from Algiers, resided for
some time at 11 Rue Villedo." He then moved to 13 Rue Jacob, near the Rue Bonaparte, only a few doors (as he was wont to remind his friends) from the house where Lamennais lived in 1848 when he issued "Le Peuple Constituant." One who visited Salvador here, says: "He lived on the first floor . . . . On his mantelpiece there stood together, by strange chance, a skull, a statue of the republic and a tambour de Basque. . . . Instead of a piano by Pleyel or Bord, there was a clavécin of olden times, littered with papers and rare books concerning plain-song and German philosophy. In an alcove hung a laced coat and kepi (his uniform as an officer in the National Guard, H.F.)," etc. It appears that Salvador had quite a collection of Arab stringed instruments, upon some of which he played with skill, but only to his most intimate friends. Upon these instruments† he would play his weird music of the desert, someone invariably accompanying him upon the quaint old clavécin, to Salvador's extreme delight.

At the outbreak of the war with Germany (1870), the theatres and concerts in Paris closed one by one, and musical critics and musicians were denied their

---

* A charming letter from Salvador to Wekerlin given in the latter's "Musiciana," is addressed from here.
† Probably the rebaíd or kemendjah.
vocations. Salvador, little perturbed by this, still wielded his pen in the cause of the revolution, and joined Maretheux on the staff of a rebel journal called “L’Homme,” to which he contributed during the war and the Commune. In this he wrote a fine article on “L’Art et les Artistes,” which is commented upon in a very ridiculous fashion in Firmin Maillard’s “Histoire des Journaux,” etc. He also collaborated in a Latin Quarter sheet, called, I believe, the “Réfractaire.”

In the several armed agitations against the government, Salvador took part, and was prominent in both the insurrections of October, 1870, and January, 1871, but, strange to say, escaped judiciary proceedings, although in the former affair he received a wound in the arm which laid him low for a short time.

On March 18, 1871, the revolutionary party seized upon governmental power and proclaimed the Commune in Paris. For two whole months it held the city against the regular army whose base was at Versailles. The administration of Paris which, according to Frederick Harrison, “was never more efficiently carried on,” was directed by nine “commissions,” one of which, the Commission for Education (specially connected with our subject), supervised the schools, colleges, museums, art galleries, theatres, etc., under the control of a “Delegate” named Edouard Vaillant, to whom we have already re-
ferred. All these institutions were maintained in their regular course as far as possible under the Commune. The Conservatoire de Musique, however, remained closed for some time. The fact was, the school had been in a state of disorganisation since the German siege, when it was used as a hospital. On May 12 came the news of the death of Auber, the venerable director of the Conservatoire. This decided the Commission for Education and Fine Arts upon the reorganisation of the school, and immediately looked round for a director from amongst the adherents to the communal régime. The most eminent of these were: Henry Litolf, the well-known composer and an old rebel of '48 at Vienna, De Villebichot, a popular chef d'orchestre, Raoul Pugno, now the famous pianist, Johann Selmer, a promising young Norwegian, and Salvador Daniel.

Both Litolf and De Villebichot were already connected with a group of révolté musicians and actors known as the Fédération Artistique, which was organising fêtes for the Commune. Pugno and Selmer had been appointed to a commission for the organisation of the Opéra. This left Salvador, although his appointment had been practically decided upon weeks beforehand, and he was certainly the most fitted for the post, first, by virtue of his many years' experience in teaching, and secondly, he was devoted heart and soul to the communal cause. Since
March 18, Salvador had not been idle. He was one of the foremost in his district in consolidating the revolution. Under the Commune he had been appointed one of the administrative delegates to the sixth arrondissement, and its delegate to the National Guard. He was also instrumental in urging the Commune to organise the opera, theatres and concerts, with his friend, Albert Regnard, and was one of the delegates invited on May 1 to the meeting at the opera house, to discuss its opening. And now at the recommendation of Vaillant, "Delegate for Education," and Courbet, "Delegate for Fine Arts,"* he was nominated "Delegate to the Conservatoire de Musique."

Salvador's appointment as director has never been officially recognised by the Conservatoire. When I applied to the secretary for information on the subject, I was informed: "Salvador Daniel, n'ayant pas exercé officiellement, il n'existe aucune pièce le concernant." Yet his appointment is logically as bona fide as that of his successor, Ambroise Thomas. Where is the difference in Salvador's appointment by a revolutionary socialist government and that of Thomas by a revolutionary republican government? By the criterion laid down by these people, one ought

* Under the Commune all titles which savoured of the bourgeois monarchical régime were ignored. For instance, the "Minister" for Education was called the "Delegate," and the "Ministry" was known as the "Ex-Ministry."
really to ignore the appointments of the revolution of 1789, which actually established the Conservatoire. Even Pierre, in his monumental "History of the Conservatoire," makes no mention of either Salvador or the Commune. Neither does the name of Salvador appear (strange to say) in "Le Livre Rouge de la Commune," by Heyli, which is supposed to contain all the appointments of the Commune.

Salvador had many times criticised the Conservatoire in his writings in the socialist press (see "La Marseillaise," February 22, 1870—his article on the "Organisation du Conservatoire"), and now that the revolution had actually put the reins into his own hands, he was determined to remedy the abuses personally and without loss of time. As soon as Salvador was notified of his appointment, he convoked all the professors and officials of the Conservatoire to a meeting there on May 13. It has been said that he threatened with dismissal all who did not respond. This is not true. The circular, as quoted verbatim by Wekerlin in his "Musiciana," contains no intimation of this sort.

On May 13, at two o'clock, Salvador arrived at the school, but found only five professors, including a lady, had put in an appearance. This meagre attendance* rather distressed Salvador, but he con-

* I doubt if there were many professors in Paris at the time to respond to the appeal. At any rate, according to Pougin, during the first siege only twenty-one out of forty-seven professors remained in the city.
soled himself with the idea that probably the absence of so many was owing to the death of their old and revered director, Auber. However, Salvador addressed the few professors and officials who had gathered there, including Réty, the secretary, and Wekerlin, the librarian, to impress them with the importance of their adherence to the Commune, if they desired to see the regeneration of the Conservatoire and the fine arts in general. Had not the Commune, which the world had called "barbarians" and "vandals," launched forth a mandate for the furtherance of art instruction in the primary schools? Had it not opened and restored the Louvre and other art galleries? Had it not specially administered the great National Library? Had not the Commune organised musical and dramatic fêtes on a grand scale, recalling the days of the great revolution? Had not the Grand Opéra and the theatres been specially administered for? Had not education in all its branches been favoured by the Commune beyond all expectation? If the Commune could ratify the great educational reforms in the fine arts, asked for by the painters, sculptors, etc., would it not do the same for musicians and the Conservatoire? This was why Salvador begged these professors and officials to give him and the Commune their support.

After a cordial leave-taking the assembly broke up. Before leaving, however, Salvador questioned
Réty, the secretary, concerning the finances of the school. This man, who was no doubt very humble before Salvador, afterwards boasted how he saved (!) the funds of the Conservatoire by falsifying the accounts, thus showing a very insignificant balance of cash in hand, which he had the insolence to say was too small a sum for Salvador to appropriate. All the communal officials were libelled in the same fashion. These men, as the courts martial proved, were honest even to the point of ridiculousness,* when they might have had millions if they had desired to be what their calumniators would paint them. But revenons à nos moutons.

A second convocation was arranged at the Conservatoire for May 20. In the meantime, two "commissioners" had been appointed by the "Commission of Education" to assist Salvador. One of them, Chollet, was a student at the Conservatoire, and nephew of a late professor there. The other was (I believe) Paul Delbrett, Salvador's secretary during the Commune. They were life-long friends, and Delbrett had been the pupil of Salvador's father. He was a brilliant violinist, and was engaged at the Opera in Paris. After the Commune he fled to London, where he resided until 1890, playing in several theatre orchestras.

* Vouchers even for petty sums, a few centimes were insisted upon.
On May 20, Salvador and his "commissioners" arrived at the Conservatoire, and presented themselves to Wekerlin, the librarian, who was an intimate friend of Salvador's. Wekerlin immediately informed Salvador that the school had been taken possession of by the Fédération Artistique, an association of littérates, actors and musicians. Salvador sent for the chief of the Fédération, named Montplot, and demanded his authority for the intrusion. He produced the authorisation of the mayor of the ninth arrondissement, which Salvador refused to recognise, saying he was master of the Conservatoire, and asked the Fédération to withdraw, which was done.

Wekerlin then conducted Salvador and his assistants to the small hall for the meeting, where two professors only were found, who had responded to his invitation. Poor Salvador felt his position most keenly: yet so strong and fervid were his ideals, that even this blow could not daunt him. And so he turned and addressed them concerning the reforms he was about to make. One idea of his concerning teaching is worthy of notice. Salvador strongly condemned the system of leaving a class to the sole direction of one teacher. Nothing destroyed individuality and initiative more than that. He suggested for the future that instead of one teacher, there would be ten or twenty, who would in turn take each class, and in each expounding their prin-
ciples, would broaden the intellectual horizon of the students, instead of narrowing it under the prevailing one-teacher system. (In the communal reforms by Courbet and his associates in the fine arts a similar idea prevailed.)

The meeting broke up about 4.30, when Wekerlin accompanied Salvador to the foyer, and wished him good-bye, saying: "You are playing a dangerous game," to which Salvador replied: "I know I risk being shot, but I act according to my convictions."

On May 20 the Commune issued a decree suppressing all state subvention to theatres, etc., and placed them under the administration of the "Commission of Education," which was to substitute a scheme of co-operation in the place of the existing system of capitalistic exploitation. Salvador was appointed the "delegate" to ensure these reforms, and a notice was published inviting the artists, orchestra, choir, ballet and staff of the Opéra, Opéra Comique and Théâtre Lyrique, to meet the delegate at the Conservatoire de Musique on May 23. Alas! this very day, Salvador, chassepôt in hand, was fighting at the barricades in defence of the Commune. But the story must be told in full.

The sands of the revolution were running low. Proletarian Paris, strong in its faith for the Commune could not see that the end was near. On Sunday, May 21, a monster fête was held at the Tuileries in aid of the wounded, widows and
orphans of the Commune. The massed bands of the National Guard, numbering fifteen hundred musicians, played under the baton of Delaporte. It was the last fête of the Commune. Salvador, who was one of its promoters, was present. At that very hour, almost within gunshot, the regular troops were silently entering Paris by an unguarded gate. Then came the cry: “To arms,” all too late, for the invasion was complete. Barricades were thrown up, and at the sound of the tocsin the Commune hurried to the defence, eager to defy death in their cause.

Francesco Salvador-Daniel, director of the Conservatoire de Musique, did not forget his duty to the social revolution, and he was one of the many thousand heroic souls who entered the valley of the shadow of death in the “bloody week” of May, 1871. History! says—“he died in an engagement with the regular troops” (Riemann, “Dictionary of Music”), or that “he was killed in battle” (Baker, “Biographical Dictionary of Music”). That is the version of the so-called “friends of order.” When the regular soldiery were killed in open fight, their journals shrieked “murder!” But when they themselves massacred men, women and children of the Commune they wrote it: “Died!” Salvador was one of these, and we shall see how he died.

By May 22 the regular troops had invaded the quays on the left bank of the Seine and reached the Invalides. Here the Commune offered a strong resist-
ance, but by the evening of May 23 were compelled to retire. Salvador took part in the defence of this quarter and fought in the Rue l'Université and contiguous streets. At five o'clock on the morning of May 24 seven Communards, apparently under Salvador's orders, were defending a barricade which had been erected close by his house in the Rue Jacob. This was maintained until mid-day when Salvador and another retired into the former's house, which was barricaded.

The inhabitants of the quarter, who were opposed to the Commune, no sooner found the regular troops in their midst, than they denounced the adherents of the Commune. In this way Salvador was marked for vengeance. When the troops entered the Rue Jacob, an officer and ten men were seen approaching the house of Salvador. Disdaining any attempt to escape, he called his companion, and they immediately opened fire upon the aggressors. The doors were forced and the soldiers entered. Salvador, calmly smoking a cigarette, and another were seized with rifles in their hands. The officer, interrogating Salvador, said: "You are Salvador, a member of the Commune. You have three names—first, your own, you also sign yourself Clemént in the journals and Vaillant at the Central Committee." All this was sheer nonsense. Salvador was never a member of the Commune, and he did not write in the journals as Cle-
ment,* and Vaillant was quite another person. But it would have been of small avail to have argued with these blood-maddened soldiers. "Since you are discovered," continued the officer, "do you know what is in store for you?" Salvador merely shrugged his shoulders in reply. "Follow me," said M. le lieutenant, and the party descended into the street, marching in silence towards the barricade, Salvador calmly blowing clouds of tobacco smoke into the air. The party halted and Salvador, slightly pale, turned to the officer and said: "All right, I understand." Having adjusted his flowing silk cravat which had become disarranged, he turned and bravely (even defiantly, says Bernard) faced the platoon, and pointing to his neck, asked them to aim there. Two soldiers raised their rifles, and a volley rang out: Francesco Salvador-Daniel was dead.

Three or four hours later his body was removed to the hospital of La Charité, and afterwards interred in one of the common graves.†

* Delion ("Membres de la Commune") says that Salvador wrote two or three brochures under the name of Clément.
† The accounts of Salvador's arrest and death vary considerably. However, I have only accepted the above after careful study of the facts and advice from competent authority.
known for God to permit the Devil to torture a man who bore the name of Salvador." How odd! Salvador Daniel suffered torture all his life. As a youth, with noble aspirations he entered the arts, and at the threshold stood 
misère to greet him. As a young man with honour and position won in Algiers, life's sweetest cup was dashed from his lips—misère. At middle-age, heroically sacrificing wealth, position and finally his life's blood in the cause of the people, once again 
misère. His body, scarcely cold, his assassins covered his name with the vilest infamies, and now posterity would even pass him by in silence. Misère, always misère.

HENRY GEORGE FARMER.
PREFACE.

THERE is no need, I hope, for reasons for the appearance of the present work. It is the first book on Arab music published in the English language, and may therefore "supply a long-felt want," as the advertising gentry say. The body of the book is a translation from F. Salvador-Daniel's "La Musique Arabe." With this work I have taken no liberties worth mentioning. In one place I have omitted the words of a Kabile song, and elsewhere have omitted statements, which, owing to chronology, would have been misleading if inserted. Otherwise, Salvador's "La Musique Arabe" remains (I hope) as he wrote it.

With the aim of making this work as complete as possible, the present writer has contributed an additional section, "Notes on Arab Music," where many items of importance in Salvador's work are
elaborated, the results and conclusions of various authorities introduced and discussed in the light of modern research, with numerous illustrations of instruments and musical examples, amongst which will be found a complete Nouba. This section, together with the "Bibliography," will be of considerable help to the student. In the "Memoir of F. Salvador-Daniel," the Paris Commune in its connection with the Conservatoire of Music, figures rather largely. This was considered imperative, since this period has been ignored by the historian of the Conservatoire.

Perhaps I ought to make it clear that these contributions, the "Notes on Arab Music," "Memoir of F. Salvador-Daniel" and the "Bibliography," are original: that is to say, they do not appear in the French edition.

My own "authorities" are quoted fully in my "Notes" and in the "Bibliography." I would, however, desire to express my indebtedness to M. Jules Rouanet, Officier d'Instruction Publique, Algiers, and M. Edmond Yafil, Director of the Ecole de Musique Arabe, Algiers, for personal information; and also to Messrs. Breitkopf and Härtel for several courtesies.

My chief authorities for the memoir are Pougins's biography in his supplement to Fétsis's "Biographie Universelle des Musiciens," his articles in "Le Menestrel" (1871), and personal information from same
source; Wekerlin's "Musiciana" (1877) and his article in "Le Menestrel" (1871); Mendel's "Musikalisches Conversations-Lexicon"; Clement's "Histoire de la Musique"; Andrew de Ternant in "The British Bandsman" (1889), and numerous notes from the same writer, based on information from Paul Delbrett, Salvador's secretary and friend, and many other communards, including a nephew of Louis Blanc's; Daniel Bernard, in the "Figaro" (1871) and several articles in the same journal; Delion's "Membres de la Commune" (1871), the bulletin of the "Société des Compositeurs de Musique," the "Annuaire de l'Algerie," besides the many histories, journals, etc., of the Commune, and papers and journals concerning Algeria. I have also received help from M. Edouard Vaillant, the veteran delegate for education under the Commune, now a deputy for Paris; M. Raoul Pugno, through the courtesy of Mr. Peaty, of Pleyel, Wolff, Lyon and Company; and M. Henri Dupleix.

H. G. F.

July, 1914.
The Music and Musical Instruments of the Arab by Francesco Salvador-Daniel.
THE MUSIC AND MUSICAL INSTRUMENTS OF THE ARAB.

Introduction. How to Appreciate Arab Music.

HAVING lived in Algeria for many years,*
and an artist in the real sense of the word, since the designation belongs to those who live on the product of an art, it seemed to me that I might employ my leisure in a way perhaps useful, and certainly interesting, by studying the music of the Arabs.

Like everyone else, I at first recognised in it only a frightful medley, devoid of melody or measure. However, when I had become habituated

* The author resided in Algeria from 1853 to 1866.—Ed.
to it, from a sort of education of the ear, a day came when I could distinguish something resembling a tune. I tried to set it down but without success, the tonality and the measure always evading me. I could distinguish many series of tones and semitones but it was impossible to assign to them a starting note or tonic. Then again when I directed my attention to the drums, which form the only accompaniment to the music of the Arabs, I certainly distinguished a kind of rhythm, but it seemed to me to have no relation to that of the tune.

Yet where I heard nothing but noise, the Arabs found a pleasing melody, in which they would often join their voices, and where I could distinguish no measure, I was compelled to admit of one by the dance. There was an interesting problem in this difference of sensations, and I tried to fathom it. For this purpose I became acquainted with native musicians, and I studied with them in order to succeed in feeling the sensation which they experienced, but which did not affect me in the least.

I now revel in Arab music. But it is not the pleasure of a difficulty surmounted that I seek, it is a desire to participate in joys which the music of the
Arab procures for those who understand it. In fact, to be able to judge Arab music it is necessary to understand it, just as it is necessary to possess a language in order to be able to appreciate its real beauties.

Now, Arab music is a music apart, resting on laws entirely different to those which govern our system, and one must become accustomed to their scales or rather, their modes, putting aside our Western ideas of tonality. Correctly speaking, we have two scales only, major and minor. The Arabs have fourteen scales or modes, in which the semitones are changed so as to form fourteen different modalities. The grouping of sounds is made by tones and semitones as with us, and I have never been able to discover in Arab music, those third and quarter tones which others claim to find.

All the musicians play in unison, and there is no other harmony than that of drums of various sizes, which I designate "rhythmic harmony."

It will be thought, no doubt, that with such simple means (a melody accompanied by drums) it should not be difficult to understand this music. One fact will explain what serious difficulties do arise. The
Arabs do not write their music, and, moreover, they have no kind of theory, nothing which can assist research. All sing and play by rote, most often without even knowing the mode of the tune they are performing.

I have endeavoured to reconstruct this lost theory. For this purpose I collected a considerable number of songs, always written from audition. In these I sought the explanation of the few rules which I had been able to glean casually from the different musi-

* See "Notes on Arab Music," 1.

† The memory was the only means by which musical works were preserved. Thus, all the past of this art is lost in the East, and nothing remains of the ancient compositions. How many of them have lived only in the life of their composers? It is only known in what tone, in what measure, in what mode such and such a composition was. The books have preserved just this memory, even of the best and most celebrated compositions. To-day, no Arab, even a learned Arab, knows the meaning of the ancient designations of the rhythms, or even the most frequently repeated terms in what remains of the treatises of music. I have not been able to find a single Musulman who knew what the great romancero or the Arānī wished to indicate by the musical terms which he quotes in specifying the genres of musical compositions which he so often names in his pages.—Dr. Perron, "Femmes Arabes depuis l'Islamisme," Chapter XX.
cians with whom I frequented. I traversed the three provinces of Algeria, both coast and inland. Tunis I visited, which is for Africa, from a musical point of view, what Italy is to Europe. From Tunis I journeyed to Alexandria, then to Spain, where I found in the popular song, traces of the Arab civilisation. Finally, with about four hundred songs in my possession, I returned to Algiers, where I endeavoured to arrange properly the data gathered in so many places, and to take up this study of Arab music on a positive basis.

This study which I pursued at first out of mere pleasure and curiosity, eventually gave me a loftier aim. Comparing Arab music with plain-song,* I asked myself whether it would be a rash supposition that this present-day music of the Arabs was the same as that which existed up to the thirteenth century, and if, with the information supplied by this music still existing in Africa, and studied on the spot, it would not be possible to reconstruct the music of the first centuries of the Christian era, and

* See "Notes," 2.
thus, with the study of the present, fill the gap in the musical history of the past.

What, indeed, do we know of the state of music prior to the thirteenth century? Nothing, or next to nothing! Here we have a considerable lacunæ, which, if my supposition, just hazarded, is justified, can be filled. Besides, to go back in this way into the past, would have the advantage of placing us amid the right surroundings to appreciate a music, which, for us, is six or seven centuries behind the times. I shall therefore endeavour to show that the present in relation to the Arabs, corresponds to what music prior to the thirteenth century would be for us, and that Arab music to-day is no more than the song of the Troubadour and Minstrel.*

I must here warn the reader against the general tendency of people to judge everything by present standards. Indeed, if a thing departs ever so little from what is known and accepted, a mass of quite honest people cry out at once against the rash innovator, who often brings forward as a novelty, merely something many centuries old, but abandoned for

* See "Notes," 3.
unknown reasons. And yet, how many good things thus forgotten have been restored to the light and have contributed to the development of human knowledge!

It often happens, nevertheless, that on going back a little way into antiquity, one does not get a correct notion of the changes, more or less important, which took place at certain periods. Yet on the faith of authorities, people make much of them without having a precise idea of their nature. Let me explain my meaning by an example taken from musical history.

Gui d’Arezzo is known as the inventor of the names of the notes for which he took the first syllable of each of the verses of the hymn to St. John. Now, previous to Gui d’Arezzo, the Arabic letters were used to name the sounds, so the change of names cannot constitute a serious invention, and if Gui d’Arezzo had done nothing else he would certainly not have enjoyed the reputation which has immortalised him.

It will be seen without difficulty that this reputation based upon such a fact would have been nothing short of usurped, since to name A what was called
alif, B what was called ba or bim, and so on, does not, I say, constitute an invention.*

What then did Gui d'Arezzo do? He laid the foundations of music such as we understand it to-day, which was quite different from that existing formerly. It was a music uniting melody and harmony, which Victor Hugo rightly calls la lune de l'art.

II.

Can one imagine the effect that would be produced to-day by one of the songs written in harmony by the musicians contemporary with Gui d'Arezzo or Jean de Muris? Or again, the impression which our present-day music would have on those same musicians? Clearly the result would be the same in both cases. Is not the beautiful but a mere convention? How is it that what was beautiful in the thirteenth century appears so ugly to us in the nineteenth? while our music will produce the same result on those very people to whom is attri-

* See "Notes," 38.
buted the greatest progress. A word or two will decide this question. It is "the habit of hearing." It is by virtue of a habit acquired, in some degree unknowingly, that we admire to-day the musical works which we rejected yesterday. In music, the habit of hearing acts as a law, and through it, the exception of yesterday becomes the rule of to-day.*

It is variety which is specially sought after in music. Variety implies novelty, i.e., progress. Now all progress supposes in an art an equal progress in the sense affected by it, and therefore an extension in the usual round of knowledge acquired and sensations experienced. Let Jean de Muris and his contemporaries undergo the gradations of progress which has characterised music, and they will understand the melodic and harmonic beauties of our operas to-day.

Let us try and reverse the process, and turn our

---

* Be it clearly understood that I speak only of the new melodic formulas, the originality of which may at first strike, but which need to be known, for their charm to be appreciated, or of the harmonic steps a composer uses long before the law governing them has been formulated. Apart from these two examples, there could be nothing but anarchy, and consequently confused noise in music, without laws.
attention to that *descant* which summed up the harmonic science of their day. Let us forget our acquired habits and we shall enjoy this improvised harmony which is but the infancy of the art.

Apply this process to ancient music and see the result. That same Jean de Muris who, in his "Speculum Musicae," laid down the laws of the musical revolution, of which Gui d'Arezzo had been the first apostle, who was already protesting against the innovations of his contemporaries (*Sic enim concordiae confunduntur cum discordiis, ut nullatenus una distinguatur ab alia*), would he not have smiled in pity to hear the unison of the Gregorian chant? And would not St. Gregory have been quite right in saying to this proud canon: "You make all these melodies go side by side, I believe, but you have only one scale, whilst we have eight and we use them according to the different effects we desire to produce." And if a Greek philosopher had been able to hear this reply, he, in turn, would have spoken of the fourteen modes of his system, of the three genres—diatonic, chromatic and enharmonic, and of all those
things forgotten in our days, but which then made the beauty and variety of music.

How could we judge the effects of this music? The information that we have of it is obscure and incomplete, and even admitting as exact a translation which Meybomius, Burette, etc., have given us of some of their songs, we have the letter but not the spirit.

I believed I had discovered in the music of the Arabs that lost theory of the music of the ancients—the extraordinary effects obtained by this music, and therefore I had to extend the scope of my subject at first so restricted. I determined, as far as possible, to follow everywhere the traces of Moorish civilisation. In this, no country better than Spain (except Africa, which I had already traversed to a great extent) could offer the traces of what the music of the first centuries of our era was.*

Spain has to-day the advantage of uniting still vital in the present, the history of its glorious past. Listen to that noise which is heard in the popular quarters of Madrid. Two children go along the

* See "Notes," 4.
street singing, their voices alternating with the beating of the drum. They are singing a villancico, a Christmas carol, impressed with all that sad and passionate character, peculiar to primitive songs. Was this the song which the Magi sang when they went to adore the infant Jesus? And why not? Have we not in the Roman liturgy chants of the same kind and which must have had the same origin? Have not those songs which Spain has been able to preserve, thanks perhaps to Arab domination, a character distinct from those of our present-day music, and which seems to exclude every idea of harmony? "Melope" for song and "rhythmope" for the drum.

Yet if we examine these songs from the point of view of our present knowledge, their simplicity is no doubt admired, but they are too simple to afford us resources of any value. If, on the contrary, we examine them in relation to the period when they were esteemed the complete result of accepted musical culture, we ask ourselves if this was really the music which charmed our forefathers, and if Alfarabbi, Zaidan, Rabbi-Enoch and other great musicians who made illustrious the reigns of the
Caliphs, really followed the tradition which Augustine, Ambrose, Isidore of Seville had preserved of the Greek and Roman melopoeia.

The distance which separates this music from our own is so great, and the bases which control each are so divergent, that they seem never to have had any connecting link, and the popular music lies buried in the chaos of the past, while harmony draws us into the whirl of delight to which it has accustomed us.

What then, was music before Gui d’Arezzo? Melody. What has it been since? Harmony. Gui d’Arezzo did not invent, or rather change the names of the notes, but he reduced to a single scale all those which existed before by basing the relations between the sounds on the law of harmonic resonance.

III.

It will be understood how difficult it is to appreciate the character of the ancient songs made for the most part on the scales abandoned since the discovery of harmony. To search for these scales and
the character peculiar to each was primary object of my work; the second consisted in establishing the date of the birth of the harmonic principle, and the separation of the two systems. I could do no more than to touch upon this subject, as I lacked at the time, the means of confirmation. But I believe I have traced out a path for others, who will thus be placed under more favourable conditions, to take up this work in indicating the direction followed in the abandonment of the different scales before arriving at the use of a single one.

In conclusion, I recognise the wonderful effects obtained by the Arabs by their music, which are not without analogy to those which the ancients attributed to theirs.

As to the results drawn from this study of Arab music, they appear to me to be so diverse that I will content myself with emphasising the one which springs from the fount of my labours.

Much has been written about Arab music, but nearly always the judgments come from persons of little musical knowledge and whose opinions were founded upon a restricted number of hearings.
Under such conditions it was almost impossible not to be mistaken. If the opinion which I advance, is to have any value, it is not because I am a musician, as the term is understood in Europe, but because, mixing with Arab musicians, I take part in their concerts, playing their songs with them, and finally, in consequence of a habit acquired after several years of work, I have arrived at a comprehension of their music.
Chapter I. The Theory of Arab Music.

Although it is not my intention to write the history of the music of the Arabs, I am compelled by the very study of this subject, to seek, at least, the relationship of their musical system with that of the peoples, in contact with whom, it may have been modified in order to arrive at its present state.*

This relationship is met with first of all in the instruments most commonly used: the Kouitra, commonly known as the Tunisian guitar, the shape, together with the name, recalling the Cithara of the Greeks; and the Gosba or Djaouak, the most popular instrument, which, in the hands of an Arab, recalls the flute player of antiquity, as much by the shape of the instrument as by the position and costume of the player.

These first indications permit of the belief that,

* See "Notes," 5.
if the Arabs already knew music at the period when Egypt was the cradle of the arts and sciences, their musical system must have developed more notably when Roman domination, with its civilisation, carried to them the music of Greece, which then embodied all that was known on the subject.

But civilisation disappeared with the fall of the empire, and while in the West, the arts and sciences found an asylum in the cloister, Mahomet in the East forbade their study under severest penalties. The Arabs religiously observed the precepts of the law-giver until the reign of the Caliph Ali, who authorised the study of the sciences, and with them music and poetry. His successors encouraged the cultivation of literature still more, and soon the Arabs, then masters of a large portion of Greece, submitted as the Romans did before, to the law of the vanquished, in the study of the arts and sciences. They translated the most celebrated works of the Greeks, and among them, such as treated of music.*

---

* The basis of the system of composition and of song is the basis of the Greek system, and several of the Greek technical terms are even preserved in Arabian transcription.—Perron, "Femmes Arabes depuis l'Islamisme."
II.

Did the Arabs, like the Greeks, attach to the word "music" the same meaning as we give? It will suffice for us to recall the various definitions given by ancient authors to this science, to explain the nature of the revolution in music accomplished by the sect of Aristoxenians, which resulted in the isolation of practical music, and making a special science of it, where the ear was recognised as the only judge fitted to determine the relation of sounds.

In a dialogue between Alcibiades and Socrates we find the following passage:

Soc.—Which is the art that combines with the playing of instruments, the song and dance?
Alc.—I cannot say.
Soc.—Reflect on this subject.
Alc.—Which are the divinities that preside over this art?
The Muses.
Soc.—Exactly; now examine what name is appropriate to the art in which they all concur.
Alc.—That of music.
Soc.—It is so.

Hermes defines music as "the knowledge of the order of the things of nature." Pythagoras teaches that "everything in the universe is music." Plato
designates it "the general principle of human sciences," and does not fear to add that no change can be made in music which is not one in the constitution of the State. "The gods," he says, "have given it to men, not only for the delight of the ear, but furthermore to establish harmony in the faculties of the soul." All these definitions sufficiently demonstrate that the ancients attached to the word "music" a meaning much wider than it has preserved with us.

It was the art in which all the Muses combined. It was the principle from which could be deduced the relations uniting every science. Music being the result of order and regularity in sound and movement, was to be studied as the generic principle of the various sciences, so as to lead to the knowledge of the harmony of the things of nature, in which all is movement and sound.

The two words, music and harmony, expressed then one and the same thing. It was purely theoretical and speculative music, giving the numerical reason of spaces, and the knowledge of the relation of sounds among themselves. The principle of the resonance of sounding bodies developed arithmetic
and geometry, and was afterwards applied to astronomy. Thus is explained the general definition of the “science of numbers” given to music.*

When Plato wrote over his portico: “Depart from here thou who knowest not Harmony,” he certainly did not speak of the successive order of sounds produced by voice or instrument, but rather the physical and mathematical relations of these sounds among themselves. Such things belonged to the domain of physics, or rather acoustics, and not to music in the sense that we attach to the word. We find music with the same meaning allied to arithmetic, geometry and astronomy, in the liberal arts, which, under the designation of QUADRIVIUM, formed one of the principle branches of education in the universities dating from the ninth century. Such

* Is it necessary to recall here the well-known story of Pythagoras’s hammers? This philosopher, speaking of unity, defines it: “The principle of all truth.” The number two is called “equal”; three is called “excellent,” because everything is divisible by it, and its power extends over universal harmony; four has the same properties as number two; five combines that which was separated; six he calls “harmony,” to which before him had already been given the qualification of “the world.” Quia mundus at etiam senarius ex contrariis sepe visus constitisse secundum harmoniam.
was speculative music, which, among the ancients, brought the system of tetrachords applied to practical music. This was the system of Pythagoras.

In opposition to the physicist and theorist, must be placed Aristoxenes, the musician in the modern sense, who first separated the science from the art, and laid down the difference between theory and practice, effecting a lasting revolution in the music of the ancients. Let us make a slight examination of the essential points which prepared this revolution.

History tells us that in the beginning of all peoples, the musician, poet, singer and legislator were combined in one person. Orpheus, Amphion, Simonides, and many others, dictate their laws in music, and we know from the Bible that the same thing occurred among the Hebrews. Bossuet, in his "Discours sur l'Histoire Universelle," says that the laws were songs. What were these songs if not music in the sense that we attach to the word—"practical music," against which Plato protested when imported into Greece by the Jews.

It was in vain that Pythagoras formulated a rigorous system. It was in vain that the laws op-
posed any change in it. A division occurred among those who pinned their faith to mathematical precision, and those with Aristoxenes, who were in the majority, admitting only to the judgment of the ear, and not requiring of the human senses a perfectibility that was impossible. The secession soon became an accomplished fact.

Practical music will again have to recourse to theory to develop its means of action, but this theory will have the ear for supreme arbiter, henceforth to be recognised as the final test as to what must be accepted or rejected. Let each take its path. Theory remaining the science of numbers, practice will be called upon to waken dormant sensations or give birth to new ones in the hearts of listeners. With the first will be accomplished the scientific discoveries which belong to universal harmony, whilst the latter will become the divine language of melody and song.

III.

Let us note from the start a fact worthy of serious attention, the constant participation of the Jews in the progress of musical art among the nations
of antiquity until the first centuries of Christianity. The Jews, like the Greeks, had drawn from the same source, and although the author of Genesis names Jubal, the son of Lamech, as the inventor of music—*Jubal fuit pater canentium citharé et organo*—while the pagans cite Mercury and Apollo, we must remember that Moses, the Hebrew law-giver, had been brought up in Egypt, where Pythagoras had studied. Besides, the relations established between the Jews and the Egyptians during the long captivity of the former, must have brought into the arts and sciences, despite the differences in their religions, the same effects of assimilation seen later with the Jews and Christians, Greeks and Romans, Arabs and Spaniards.

The musical principle, developed in the purely practical sense, was spread among all nations, at the dispersion of the Jews. In the time of Plato, a celebrated Jewish musician, Timothy of Miletus, was hissed at first, and then enthusiastically applauded. In Rome the Jewish musicians were placed in the first rank. It was from the Jews that later were borrowed the rabbinical notes found in ancient collections of plain-song. Finally, in Spain, during
the Arab domination, the Jews are mentioned among the most skilful musicians. All this is corroborated by the musical reputation still enjoyed by the Jews of Africa, and this question we must bear in mind, which will help us in the special object of this study, the frequent opportunities to establish similarities.

IV.

I have perhaps devoted too much time to this first musical revolution, called the dispute between the Pythagoreans and the Aristoxenians. However, I thought it necessary to dwell upon this point, so as to be free to examine from now, the purely practical part of music.

It would be easy to show a similarity between the Pythagorians and several learned men of these days who pass their lives, like the ancient philosophers, in studying speculative music. For them, music is still the science of numbers, and they study in it the order and arrangement of the things of nature.

Let us confine ourselves to merely recording this
fact, and then return to those in a humbler position, and more disposed to accept the homage of the crowd, who know but the purely practical in music, the poets and singers, the last successors of the rhapsodists and the troubadours. They find in music naught else than a distraction or enjoyment, a happy mingling of song and verse, an art and not a science. Faithful disciples of Aristoxenes, their only judge is the ear, and all they ask of music is but to express the all-human feelings which stir them. A hymn to the divinity, an amorous plaint, a war-song, these are the expressions most usually expected of it, and without troubling about the laws of acoustics, which they do not know, they sing, accompanying themselves on their instruments, gathering round awhile, a numerous audience always delighted to listen.
Chapter II. The Character of Arab Music.

LISTEN to an Arab musician: the first impression will always be unfavourable.* Yet a singer of merit will be talked about, and as the Arabs crowd to a fête, to hear a skilful musician, even if he be an Israelite,† you too will go, on hearing of his fame, in the hope of listening to agreeable music, and your European taste will assign no difference between the singing of the native artist and that of a Mozabite of the Moorish baths. It may be, however, that the latter will be, if not exactly pleasing, at least less disagreeable. Whence, then, this difference of sensation? In the first place, it is because of the

* See "Notes," 6.
† The deep scorn of the Arabs for the Jews is well known.
singer's improvised variants, with which he adorns his melody; and also on account of the percussion instruments which accompany him, producing what I call "rhythmic harmony," where the strange combinations and the discordant divisions seem designedly introduced against the melody. This is one of the most interesting parts of this music, and the most difficult to grasp, and has made so many writers say that the Arabs have no idea of measure. Yet it is the one essential point in their music.*

The Arab singer will easily dispense with a singing instrument, i.e., a violin or guitar, but the percussion instrument for beating time he must have. In default, he makes one himself, his feet marking the accented beats on the floor, whilst his hands perform all sorts of rhythmic divisions possible on a piece of wood. He must have his rhythmic accompaniment, his real and only harmony.

It will be possible for the European, disregarding this mute accompaniment, to distinguish a melodic phrase, often tender or plaintive in accent, quite rhythmic in itself, and capable of being written in

* See "Notes," 7.
our scale and accompanied by our harmony, especially if the singer has chosen one of those popular melodies which does not exceed four or five notes in range. But he will also have to notice the variants, since the beauty of the performance consist in the embellishments improvised by each musician on a given theme.

This kind of improvisation is known to us under the name of the "gloss." This, according to Aristides Quintilian, was introduced into Greece by Timothy of Miletus, the Jewish singer mentioned before. Let us add that even if this musician's reputation was great, he had to contend against a lively opposition founded on the very fact that these embellishments added to the melody. It is to him that is traced the invention, or at least the perfecting of dithyrambic poetry upon which he placed his best musical embellishments.

Gradually the "gloss" extended its influence over all the rhythms, either because it was modified itself, or more probably because it had become a habit, a necessity. However, it is found in the music of every nation until, under the name of descant (dis-\textit{cantus}), in the religious song of the tenth to thir-
teenth century, it led to the system upon which our present music is based, i.e., harmony.

It was the “gloss” which formed the chief point of discussion between the Frankish and Italian cantors summoned by Charlemagne. These latter corrected the antiphoners and taught the Franks the Roman chant; “but as for the tremulous accented and abbreviated notes in the chant, the Franks could never render them well, producing trills rather than rolls, caused by the natural and barbarous coarseness of their throats.”* These trills, accents and abbreviations, which adorned the music of the time of the most pious King Charlemagne, were the same among the Arabs, who still have kept them.†

This is the chief obstacle in our admiration for

* . . . excepto quod tremulos vel vinnulas, sive collisibles vel secables voces in cantu non poterant perfecte exprimere Franci, naturali voce barbaricâ frangentes in gutture voces quâm potius exprimentes.

† I extract the following passage from Félix Mornand’s book, “La Vie Arabe”: These erotic verses were intoned to a melancholy air, which by its trills, its languishing intonations and the absence of all rhythm, recalls our plain-song. It was a kind of broken and plaintive tremolo, alternating without any transition from forte to piano, the rapid movement of which was little in harmony with the song.
Arab music,* yet it is easy to remove this obstacle. I heard the band of the Bey of Tunis at his princely residence of La Marsa. It comprises some twenty brass instruments, made in Europe, such as cornets, horns, trumpets, trombones, ophicleides, in fact, all that compose a military band. All these play in unison without any other accompaniment than the rhythm marked by a big drum and two side-drums. With these instruments the trills, accentuations, in a word, the "gloss," become impossible, and there results to European ears a tune, for whilst preserving its Oriental character, the notes, one from another, are easily discernible.

In this connection I was able to notice a much more decided and general affection for Arab music in Tunis than in Algeria, and this, in the midst of a European population, in which the Italians were in the great majority. This affection is obtained in consequence of a more frequent contact with the natives. I assert this all the more readily, since I have proof of it in the encouragement I received in Algeria for this study of Arab music. Most of

* See "Notes," 8.
this I owed to the heads of *bureaux arabes,* who, from the nature of their functions, and residing so many years among the natives, have, in part, assimilated their customs, character, I might almost say, their sensations.

We must therefore admit a certain "acquired habit," a certain "education of the ear," to understand the meaning of an Arab melody (the band of the Bey of Tunis being only an exception, and an isolated one), the "gloss" reigning as supreme and absolute mistress over all singers and players from Tangier to Alexandria. *

Let me add that the gathering together of a military band playing in unison, is sufficient evidence for the assertion that the Arabs are unacquainted with harmony. †

For it is quite evident that if they had only the notion of two different sounds forming an agreeable combination, it could have been recognised nowhere

---

* See "Notes," 9.

† Before Islamism, music was little else than very unpretentious psalming, varied and embroidered by the singer, male or female, according to the taste, emotion or effect desired. These variations, or rather these caprices, were
better than in the band of the Bey of Tunis, owing to the fact of it being composed of European instruments. So I repeat, harmony, for the Arabs, only exists in the rhythmic accompaniment of percussion instruments. At Tunis, this will be performed by the big drum and two side-drums which complete the military band: elsewhere the stringed or wind instruments will play in unison, while the Taar, Bendair, or other percussion instrument peculiar to the country, will beat the rhythmic accompaniment, the only harmony which they appreciate.

prolonged interminably on a syllable, word or hemistych, in such a way that the singing of a cantilena of two or three verses might be prolonged for hours. Even to-day this same custom lasts. What traveller in Egypt has not heard the two words: ya leyly ("O my Night!") sung without break for half an hour or more. The timbre of the voice, its mobility and vibrations, the feeling which made it sound or quaver, determined the merit of the singers. In these ancient concerts, of one voice or two voices in unison, liveliness, gaiety and amorous languor were the most potent and reliable resources; whilst the chief themes were wine and love.—"Femmes Arabes avant l'Islamisme," Chapter XXXI.

These words, "two voices in unison," tell us that harmony did not exist before Islamism. As to the variants, they are probably to-day what they were then.
II.

Imagine an Arab singer accompanied by a stringed instrument. The *mélange* of the song, played strictly on the instrument, and the variants improvised by the singer, will produce a confusion which frequent auditions alone will be able to lessen and finally disperse. If the accompanying instrument is the *Kouitra*, the song will be repeated in the form of a *ritornello* after each couplet, with all the embellishments peculiar to this instrument, such as notes repeated *à la* mandolin, and a profuse use of *pizzicati*, performed as grace notes by the left hand.

Judge the effect, when to the *Kouitra* is joined the *Rebab*, or the *Kemendjah* (a violin with four strings tuned to a high pitch), and requiring a like number of percussion instruments to balance the strength of the rhythmic harmony with that of the melody played in unison by the "singing instruments."* It is now no longer mere popular

---

*I* call "singing instruments," those other than the drums, which play the song continually, and nothing but the song in unison with the voices.
melodies that will be heard, but a complete piece known by the name of *Nouba.*

The *Nouba* consists of an introduction in the form of a recitative, followed by a primary theme of moderate *tempo*, connected with a secondary theme more animated. Then comes a return to the first motive, sometimes in a different rhythm, but always more lively than the preceding, and finally a concluding *allegro vivace*, falling to the last note in pedal point, which seems to recall the recitative of the introduction. Usually, the introduction has an accent of plaintive sadness, of sweet melancholy, perfectly in accord with the kind of interpretation imparted to it by the Arabs. With the singer we have a mixture of the ordinary voice with *falsetto*, and the repetition of each phrase as a recitative on the lower strings of the *Kemendjah* or the *Rebab* further increases this effect.

The singer's recitative is preceded by a *prelude* performed by the singing instruments and intended to indicate the *mode* in which the song is to be sung. Has not this way of indicating the mode by means

---

* See "Notes," 10.
of a melody known all, fixed in advance, the same origin as the Nomos of Greek music, in which it was forbidden to make any change, because they characterised each of those special modes.

Among the Arabs this prelude is called Bécheraf. This prelude gives first the ascending and descending scale of the mode in which one has to sing. Then it indicates the transitions by which it may pass from one mode to another, whether by similar tetrachords belonging to different modes, or by the extension above or below the scale of the original mode by the characteristic notes of the "gloss." Indeed, the "gloss" is not, as might be imagined, entirely subject to the caprice of the performers. It is subordinate to rules from which no musician is permitted to deviate unless he wishes to have applied to him the proverb used formerly for singers as well as poets, who passed from one subject to another without transition, from one mode to another which had no relation to it: a Dorio ad Phrygium. The "gloss" is, in a way,

* See "Notes," II.

† The mode indicated by the Bécheraf corresponds to our diatonic scales and does not exclude accidental changes.
indicated in the prelude, by "describing circles," as the Arabs say. This expression conveys the meaning that it is necessary to ascend or descend in the developments to the scale, by irregular steps, but they must, however, belong to the same tetrachord. Thus, instead of D, E, F, G, may be performed D, F, E, G, and so on, either ascending or descending.*

The Bécherat also indicates the characteristic notes of the mode to which one must usually keep, and those only to be used with moderation. Such is, in its entirety, this prelude required by all Arab concerts.† These divisions, although having a certain relation with those of the Greek melope (Lypsis, Mixi and Pettaya) have not, however, all the de-

* This expression, "to describe circles," has made some people think that the Arabs used these figures to write and explain their music. The late M. Cotelle, dragoman at the French Consulate at Tangier, a learned orientalist and distinguished musician, showed me in 1856 the translation of an Arabic MS. containing an ancient treatise on music, which contained figures in the form of a circle. Indeed the Arabs formerly used circles divided to parts, to indicate the poetic rather than the musical rhythm, upon which different songs could be composed. The use of these circles might be compared to that of the measures indicated in our vaudevilles for singing couplets to a well-known air. (See "Notes," 12.)

† See "Notes," 13.
velopments given to the subject represented by each of these three words. We shall be content with noting this relation without laying further stress in order to continue our observations on the melody intoned immediately after the Bécheraf.

III.

The song begins: the last note of the recitative prolonged on the violin, serves as a cue for the percussion instruments and as a starting point for the melody. Whatever the mode is to which it belongs, the singer will drawl his voice ascending or descending, from the last note of the recitative until the first verse of the song. The first couplet will be a simple song of slight range. The melody will appear easy to catch, making allowance for the singer's guttural accent and the rhythmic combinations beaten upon the instruments of percussion. But already the violin has made its ritornello adding to the melody its own particular embellishments, while the guitar continues the theme without any variation. Then the singer, taking up the second couplet, commences to adorn his endings and
cadences with a series of small notes encroaching beyond the given scale, both above and below. As the theme develops the singer grows animated. Soon, to the small notes are added fragments of the drawled scale, without apparent regularity, and yet without change in the measure, since whilst the song is played and sung, but always in unison, the percussion instruments uniformly mark the rhythm begun in the first couplet of the song.

IV.

At the outset two facts become evident: first, the absence of the leading note, and secondly, the constant repetition of one or two fundamental sounds on which the melodic idea is founded. The absence of the leading note will prove to us that the system of the Arabs rests upon principles entirely different from ours; a melody without the note characteristic of the key, our ears would be unable to suppose. Now, the characteristic notes of an Arab melody will occur at the third or fourth degree of the scale, the last being always* considered as the

* See "Notes," 14.
starting note, or tonic. Arab songs being made up of a large number of couplets, separated by an instrumental ritornello, it becomes easy to locate the starting note.

Starting from this principle, we will find a scale the first note of which will be taken from somewhere among the seven that we use, but preserving intact the position of the semitones. Take, for example, D as our tonic, we have the following scale: D, E, F, G, A, B, C, D, and according to the different starting notes, the key, or rather, the mode, will be changed, but the position of the semitones will always remain fixed and invariable, from E to F, and B to C. With our harmonic system, on the contrary, the semitones are displaced, according to the starting point, to be found from the third to fourth, and seventh and eighth degree of the scale. Such is the most usual composition of Arab scales, imitated of those Grecian modes and the plain-song.

At this point, we can formulate the character of the Arab melody in the following manner: "A melody of which the starting note taken from the seven notes of the scale, does not, in consequence of
the absence of the leading note, displace the semitones." And now, resting upon this principle, we can write the Arab songs, and submitting them to a closer examination, we shall recognise that these fundamental notes are found generally in the third and fourth degrees, according to the starting note which determines the tonality, and that these notes fulfil the functions of the two semitones of our musical system.

V.

My view is thus widely divergent from those who claim to find third and quarter tones in Arab music. This opinion, which I assert to be utterly erroneous, is due, no doubt, to the use of the drawled scales of which I spoke earlier.* The use of these scales is one of the most usual means of ornamentation, especially by singers and violinists, and I confess without regret that this is what has the least charm for me in Arab music. On the contrary, nothing can be more delicately ornate than the ever-varying terminations, either by the upper or lower notes

* See "Notes," 15.
added to the song, or by the several small notes used at various intervals, but always in the key of the song, to reach the note on which the melodic idea falls. These terminations, for which the Arabs have quite a special talent, are some of the prettiest things imaginable.

The suppression or addition of a note, sometimes the mere interposition, suffices to impart a fresh melodic idea, another accent, yet quite in accord with the entire subject, and one which prepares in a novel and graceful manner, the return to the fundamental note.

As the number of couplets increase, so the variants increase (their new and diverse form doing away with the monotony which would necessarily result from the constant repetition of the same phrase), until two or three repetitions of the principal ending, made in the form of a reply by the violin, serves as a connecting link for the second motive. If the violin is in the hands of a skilful musician, he will essay, in these replies, a *descant* on the lower strings (generally the fourth), thus preparing the change that will be made in the tonality. The same kind of performance with the variants is then repeated.
gradually, in returning to the first motive, this time executed in a different rhythm.

It will now be understood how utterly impossible it is to appreciate at first hearing this music, which is so little in accord with our sensations, and why we have laid down this theory of the "habit of hearing" or the "education of the ear" as the indispensable condition for appreciating at its true value a music so different from ours.
Chapter III. The Diatonic Modes of the Arabs.

I.

As each note of the scale can serve as a starting note for one of the scales in the music of the Arabs, they will therefore have seven different scales or modes. Yet if a native musician be questioned on this subject, he will reply without hesitation that their musical system contains fourteen. Ask him to enumerate them and he will succeed in naming twelve only. I have long and vainly sought to learn of the other two, and certainly have been unable to trace their existence in the analysis I made of the songs written by me at the dictation of Arab musicians. I have therefore been compelled to limit my enumeration to the twelve modes whose names have been given to me, and whose different qualities are admirably adapted
to the special character of each song. But before naming these, and in order to avoid repetitions, it is useful here to take an historical survey, which will assist us in our estimate.

II.

At the period of the invasion of the barbarians, the arts and sciences found a refuge in Christendom. The new religion had borrowed from the Hebrews their psalms, and from the Gentiles their songs. But the abuse arising from the admission of instruments into the religious chants, and the use of modes which were inimical to the theatrical representations of the Romans, called for a severe reform. This was undertaken by St. Augustine at Hippo and by St. Ambrose at Milan. Both made a choice from among the songs esteemed worthy of being sung in the temples, and this choice was directed chiefly to those belonging to the most ancient modes of the Greeks.

Later on, St. Gregory continued this work of reform, necessitated by a fresh invasion of the modes already prohibited, and which the Heresiarchs de-
sired to introduce into the religious chant. But at the same time that he reformed and regulated this chant, which has preserved his name, St. Gregory augmented the number of modes, or rather, he authorised their use in the two ways formerly employed among the Greeks, i.e., in the two proportions, "arithmetical" and "harmonic."* Each of the tonalities laid down by the first reformers thus became the starting note for two different modes. Finally, these modes were divided into "authentic" and "plagal," or superior and inferior, each one having its own starting note, on one of the seven notes of the scale.

In all these reforms the principle of the two semitones placed invariably from E to F and B to C had been respected, and it seemed that it was always to be so. But owing to the introduction of the harmonic system, the ear became familiar with the displacement of semitones subordinated to the change of the tonic, and as the principles of the old system still obtained, there resulted from the

* The octave is divided ""arithmetical"" when the fourth is below and the fifth above. In the ""harmonic"" division it is the opposite.
struggle between them, a song which resembles nothing, belonging to no period, and admits of our harmony only on condition of changing its melody, so that musicians do not accept it as music, and I doubt whether St. Gregory himself would be able to recognise it, if he came amongst us now.

Will this study come to the assistance of those who wish to lead plain-song back to the path from which it should never have strayed? It is in a little way, with this object, that I now give you the different modes of the Arabs, against the Greek modes and the tones of plain-song, which correspond with them; being happy if I can thus add my stone to the work of restoration, which is to be recommended in every way.

III.

Let us examine, first of all, the four principal modes, those most used. (1) The Irak mode, corresponding to "Dorian" mode of the Greeks and the "First Tone" of the plain-song, having D for its base.

It is serious and grave; suitable for singing of war and religion. Nearly all the chants of the
Hanefi rite are in this mode. An example of it will be found in that species of religious song the first words of which are "Allah ya rabbi sidi." This song contains a melodic expression which would not be disowned by a modern composer.*

(2) The *Mezmoum* mode, corresponding to the "Lydian" mode of the Greeks, and the "Third Tone" of plain-song, having E for its base.

It is sad, pathetic, effeminate, and leads to indolence.† Plato banished the Lydian mode from the republic. The dance known in Constantine by the name of CHABATI, a slow and voluptuous dance, the movements of which are mainly contortions of the body, is in this mode. To this mode also are sung nearly all the love-songs, among which I may mention that well-known one beginning "Mâda djeridj." We should also note the song made by the women of Bou-Sada in honour of the *bureau arabe* entitled "El-biro ya mléh." In plain-song the "Third Tone" has preserved the same

---

* See "Notes," 16.

† I found this mode almost constantly in Spanish popular songs.
character, but its use is becoming rarer from day to day. It is still used in some dioceses for the litanies of the Virgin Mary.*

(3) The Edzeil mode, corresponding to the "Phrygian" mode of the Greeks, and the "Fifth Tone" of plain-song, having F for its base.

Glowing, proud, impetuous, terrible, this mode is suited to stir one to warlike combat. Its use is almost exclusively restricted to instruments of martial music.† "Timotheus aroused the fury of Alexander by the Phrygian mode, and soothed it by the Lydian mode" (Rousseau). It is found chiefly among the warlike tribes of Algeria. The Kabiles employ it frequently, and this explains their almost sole use of wind instruments.

Let us mention more particularly the danse des Zouaoua, the character of which corresponds well

* See "Notes," 17.

† To this mode is attributed the term, Diabolus in musica, which really belongs to the Asbein mode. This latter was not used in the Gregorian chant. The harshness of the Edzeil mode, arising from the tritone which forms its base (F, G, A, B), has led to the wrongful assigning to it a character which is applicable only to the Asbein mode, as is proved by the legend which I quote in Chapter VI.
with the idea that one has of this valiant tribe, which has given its name to the Zouaves.

The song which the Kabiles made about Marshall Bugeaud has the same proud and savage mark, which is even found in some love songs, such as "Sidi Aiche." Indeed, it appears that this was the only mode whose use suited a people which had always boasted of being free, and which only submitted to French rule after many campaigns.*

(4) The *Djorka* mode, corresponding to the "Æolian" mode of the Greeks (some authors call it the Grave Lydian), and the "Seventh Tone" of plain-song, having G for its base.

This mode is grave and serious. It seems to sum up the qualities of two of the preceding modes (*Irak* and *Edseil*), from which it is sometimes difficult to distinguish. In the plain-song the "Fifth Tone" is continually being confused with the Seventh as regards the relationship of the intervals. Rousseau, speaking of its origin, says that its name came from Æolia, a country of Asia Minor, where it was first used. It was from the Æolian mode that

* See "Notes," 18.
Burette translated into notes the "Hymn to Nemesis." This mode is found everywhere in Arab music, in which it expresses the most varying feelings. Severe in the military marches of the Tunisian band (which one might conjecture were based on our harmonic system, but for the absence of the leading note), sad with him who sings "Ya leslam ha hedabi," tender and plaintive in the "Amaroua" of Tizi-Ouzou and in the song of "Beni-Abbès," while in Constantine it accompanies the voluptuous dance of the Chabati as he sings "Amokra oulidi." It can also impart a simple grace to the "Guifsaria" of the Kabiles, and its influence will also extend to the chant of the Muëddin, which summons the faithful to prayer.

It would be vain to attempt to give you an idea of the delight which Arabs find in this mode, or to enumerate the songs with their different characters. A musical Proteus, the Djorka mode can assume all forms, and take all aspects. I cannot make it better appreciated than by pointing out its use in plain-song for all solemn festivals.*

* See "Notes," 19.
IV.

The four modes which follow, bear to the other modes a resemblance due as much to the reproduction of the tetrachords as to the arithmetical division on which they are based. They comprise the four lower tones of plain-song. Here they are in the same order as the preceding.

(5) The L’Sain mode, corresponding to the “Hyper-Dorian” mode of the Greeks, and the “Second Tone” of plain-song, having A for its base.

This mode sometimes effects the religious solemnity of the Itrak mode, as in the Tunisian “Gammara,” or in the plaintive song beginning “Ami sebbah el ahhbab.” The Kabiles also sing the song of Sebastopol, which they call “Stamboul,” to this mode. In spite of its title, this song has nothing warlike in it, hence the mode used. It is the lament of a young warrior, whose sweetheart prevents him from going to defend the standard of the Prophet. The frequent use of this mode among the Moors and Arabs has led to it being affirmed that
nearly all their songs are in the minor key.* It would indeed be the same as our minor scale if there were a leading note, but the Arab song obstinately brings in the G natural with the L'Sain mode.†

(6) The Saika mode, corresponding to the "Hyper-Lydiian" mode of the Greeks, and the "Fourth Tone" of plain-song, having B for its base. Its use is very rare and its character is also ill-defined. It is often confused with the Mezmoum mode from which it is derived.‡

(7) The Meia mode, corresponding to the "Hyper-Phrygian" mode of the Greeks and to the "Sixth Tone" of plain-song, having C for its base.

According to Plutarch, this mode is of a kind to temper the vehemence of the "Phrygian." Indeed, although it partakes of the nature of the Edzell mode, of which it sometimes has the ferocity, it preserves a character of grandeur and majesty even among the Kabiles, who use it in several of their popular songs, "El ou mouima ou lascar" (sung by

---

* See "Notes," 20.
† See "Notes," 21.
‡ See "Notes," 22.
the women to encourage the warriors in the fight) and the song of "Beni-Mansour." In plain-song the "Fifth" and "Sixth Tone" seem now to form only one.*

It would be interesting to find out by what steps these scales have been gradually abandoned, used as they were in profane as in sacred music, to preserve only the scales of the "First" and "Sixth Tone" of plain-song.

From this point of view it would be useful to study more especially the music of the Spaniards, not of the fifteenth and sixteenth centuries, as has already been done, but the popular songs. In these, where the Arab character, stamped upon them by seven centuries of domination, is easily seen, as in the "Canas Jacaras," etc., the transition from the ancient to the modern principle. It is the germ of the musical revolution which gave birth to harmony, of which Gui d'Arezzo was the first apostle.

In speaking of instruments in the following chapter, I will attempt to give a few indications on this subject.

* See "Notes," 23.
(8) The Rāsd-Edzeil mode, corresponding to the "Hyper-Mixo-Lydian" mode of the Greeks, and the "Eighth Tone" of plain-song, having D (octave) for its base.

This mode presents a peculiar mélange or summing up of the others, especially the Edzeil, to which it imparts a lugubrious tinge. It is said to be suitable for sublime or divine meditations. The songs written in this mode are only to be distinguished from the first mode (Irak) by the terminations and by details which would take too long to enter into here.*

Such are, in all, the first eight modes of Arab music, each of which is based upon one of the seven notes of the scale with displacement of the semitones.

Chapter IV.

I.

Shall seek to explain how the ancient musical principle, based on the system of tetrachords passed to hexachords before reaching that of the octave, which now governs it. In this direction, the examination of the various instruments in use among the Arabs will considerably help us, since we shall find in some the classification of the sounds reduced to one single tetrachord, and in others developed to a range of three octaves and three notes, which must have been the extreme limit of appreciable sounds produced by such imperfect instruments.

Whatever hesitation one may have in admitting a musical system governed by the tetrachord or even the hexachord, we shall have to acknowledge its ex-
istence in the three-holed flute, giving only four notes, a tetrachord; in the guitar tuned by fourths, then by fourths and sixths; and finally in the Rebab, that primitive violin, which in the ordinary position has a range of six notes only, a hexachord.

On the other hand, if we admit the Arab influence in Europe, particularly from the eighth to the fourteenth century, which cannot be doubted in the case of literature in the South of France, in Spain and in Italy, we may be allowed to believe that this influence must have been exerted on music also, which with poetry formed the essential part of la Gaye-science of the troubadours and minstrels.

In our opinion, this is the important aspect of this study, seeing that from it may be deduced curious and interesting information of a period almost unknown in musical history.

II.

"Drums and flutes of the rudest kind are found in the most thinly populated isles, and it could be shown by innumerable examples that music is absolutely the same among all barbaric races." Thus
does Fétis express himself in his translation of Stafford's "History of Music."

A flute and a drum comprise the popular orchestra of the Arabs, the instruments being generally, if not of the rudest kind, at any rate certainly primitive. A reed pierced with three holes forms a flute called the Gosba. A dried skin stretched over a wooden ring like the tambourine, and there you have the Tarr.* Sometimes this drum takes a square form, mainly among the wandering tribes of the Sahara. It is then called the Dof. Let us add to these two instruments, a singer, and we have Arab music as it is generally heard.

The three-holed flute gives four notes including the one without the help of the fingers (i.e., the open note). It is the "singing instrument," whose duty is to sustain the voice by playing constantly the theme of the song. In the ritornelli between each couplet, the variants consist of a kind of trill, imitating tremolo. Then in the repetition of the song it plays higher tones, produced by the pressure of the lips upon the end of the reed, and finally in the

* See "Notes," 25.
mingling of these two different pitches of sound. This *Gosba* is nearly the same size as our concert flute. Here let us remark that the change from the low to the high notes is not an octave, but a fifth, just as with the fife of the Provençal *bateleurs*, or the *flûte à bec* of certain provinces of Spain. Yet the melody played or sung never exceeds the range of the tetrachord, except in the embellishments of which I have spoken.

The accompaniment is made by the drum, whose constant even rhythm regulates that of the song, at the same time its muffled sound seems to provide a sort of thorough-bass. We see in the Bible that at the crossing of the Red Sea, Moses and the Children of Israel sang a hymn of thanksgiving, and Miriam the prophetess, Aaron's sister, took a tambourine, a *Tof*, and danced, followed by all the women.* The square-shaped *Tof* of the Hebrews, or the *Dof* of the Arabs, still exists in Spain, where it plays the same

---

* The singer who first acquired great renown, after the foundation of Islamism, was one called Towais, of Medina, and slave of Othmán (Osmán), son of Affan. Arwa emancipated Towais. It was he who invented the *Dof*—

"Femmes Arabes depuis l'Islamisme," Chapter XXI.
part under the name of *Aduf.* There, as in Africa, it marks the rhythm of the old popular songs, which are within the range of four notes.

III.

Speaking of the *Tof* of the Hebrews, it will doubtless be objected, the harp of David and the four thousand singers of Solomon. Let us see what this harp was, and this will lead us direct to the examination of the musical system† of the ancients at its highest development as regards the number of appreciable sounds possessed by their instruments.

If we were to imagine David's harp as resembling the one used by us at present, it would be a strange idea. One fact, however, leads to the belief that this instrument was of considerable size. Seventy-five strings are spoken of. And such an instrument is still in use among the Arabs, chiefly in Tunis and Alexandria. Among the Hebrews it was called the *Kinnor,* whilst its name with the Arabs is *Kanoun* or

* See "Notes," 27.

† Be it clearly understood that I mean by system, the total of classified sounds at this period, from the lowest to the highest.
Ganoun.* The Greeks had a similar instrument named Kynnira. This harp is placed upon the knees of the player, and, in spite of its seventy-five strings, it is scarcely larger or heavier than a guitar. The longest strings are a little less than a yard in length, and are stretched horizontally on a harmonic box of maple wood covered with a dried skin like a drum. This harmonic box has the shape of an acute triangle. The strings are plucked by means of small whale-bones or quills fixed by rings to the first and middle finger of each hand.†

The only embellishments suited to the Kanoun are ascending and descending scales, performed by running the quills rapidly over the strings, at the same time, however, subject to the rhythm of the song marked by the percussion instrument. The two fingers on each hand used to pluck the strings might lead one to suppose a succession of sounds producing harmony, but there is nothing of the sort. The Kanoun player uses the first finger of each hand

* See "Notes," 28.
† This harp in perfected form became later the Polyplectron, an invention attributed to Gui d'Arezzo. This was the first form of the "spinnet," which led to our piano.
in the rapid passages and in the scales, but the four fingers are only used for performing certain repeated notes, a species of embellishment of which I have spoken in reference to the Kouitra. The Kanoun plays the same part as the Kouitra in Arab concerts.

As for the seventy-five strings, they are so tuned that each three consecutive strings are in unison. This reduces to twenty-five the number of sounds forming the range of the system based upon the tetrachord. Again, it happens that the extreme notes are rarely used. The range of the Kanoun is then only three octaves, comprising sixty-six strings, by the omission of the three highest notes.

The mode of tuning is in conformity with the first tone of plain-song. The lowest string gives D, and the sounds succeed one another in natural order—D, E, F, G, A, B, C, D, etc.* With sixty-six strings the range is three octaves, from D to D. With seventy-five strings, it is three octaves and three notes, from D to G, the extreme limit of appreciable notes on such imperfect instruments.

* See "Notes," 29.
IV.

Let us return to the tetrachord. The most ancient popular songs, as we have said, are within the compass of the four notes of the three-holed flute. The tetrachord itself is all-sufficient, and it is only in a few embellishments that a fifth note is heard in a rapid glide.

How did the system of sounds extend to three octaves, which we know to be the range of the Kanoun? In the case of the lyre, the addition of a string above or below is easily explained. In the flute, on the contrary, there is no transition between the use of the three-holed instrument, forming the tetrachord, and that of the six-holed one, affording the union of two conjoint tetrachords.

On this subject, the only information I have been able to gather is a legend. A certain Mohammed was one of the most celebrated musicians in Constantine. He was summoned to all the fêtes, from which he invariably returned laden with presents. Yet Mohammed was sad. Alas! his son, who had given promise of inheriting his talent and renown, had died shortly after his marriage, and the old
musician never ceased to implore the Prophet to permit him to live long enough to transmit his musical knowledge to his grandson, the last of his race.

The boy, who was named Ahmed, showed early a pronounced taste for music. Soon the old man, having made a small flute, suited to the tiny hands of the child, was able to take him to the fêtes, where everyone congratulated Mohammed on his grandson's precocious talent, and assured him that the latter would attain his own excellence. One day when the boy had remained at home, Mohammed was much astonished on his return, to hear music which seemed to be produced by two instruments. Thinking that some strange musician had come to see him, he quickened his pace, but on entering the courtyard, he only saw his grandson, who not having heard him approach went on playing the flute, and producing by himself this entirely new combination of sounds.

The child by inserting the end of his little flute in that of his grandfather's had obtained a range of sounds, until then, unknown. When questioned by Mohammed about his discovery, the child replied simply that he wished his voice to follow his grand-
father’s. Indeed, the notes of the little flute did follow those of the large one, or to be more explicit, almost completed the octave, of which the large flute gave simply the first tones, the lowest.

The marabouts, asked to give a pronouncement of this extraordinary fact, concluded that the Prophet had wished to indicate that the boy would continue his grandfather’s reputation and even surpass it. This is why this new flute was called the Djaouak, i.e., “that which follows.”

According to this legend, we shall consider the flute of six holes, and therefore the seven notes, as dating from the Mussulman era. The Djaouak in use to-day, more especially among the Moors, has seven holes and gives a complete octave. It is seldom, however, that the songs played on this instrument exceed the range of six or seven notes, and the octave is hardly ever used except in embellishments. A Gosba, a large flute with five or six holes, and so giving at least a hexachord is also met with sometimes.*

Let us recall in this connection that the Greeks

* See “Notes,” 26.
had flutes of different kinds for the different modes, and that the writers often mention the three-holed flute. The double flute, being a combination of two flutes, belonging to the Dorian, Ionian or Phrygian modes, would thus have been the first step in the discovery of the hexachord, brought about by the simultaneous use of two modes, which although different, were yet closely related. Now by combining the extreme notes of these two flutes, a range of six notes or a hexachord was not exceeded. The Dorian flute gave D, E, F, G; the Ionian gave E, F, G, A; and the Phrygian gave F, G, A, B. The complete range was thus from D to B. Have we not already here a precedent for the hexachord system of Gui d'Arezzo.

V.

To complete our enumeration of the wind instruments, let us mention the Raita or Raica, a kind of musette with seven holes and a bell-shaped end. This more perfect instrument (seeing that it comprises the octave) is known in Spain as the Gaita. Among the Arabs it is generally used for war-songs, and the mode suitable to it is called by the ancient
authors *Jaika* or *Saïka*, names which are still given to it in certain parts of Africa,* a fact which may cause confusion.†

The rhythmic accompaniment to the *Raita* is played by pairs of kettledrums of various sizes, beaten with two sticks. They are called *Atabal.*† In the martial music of the Arabs,§ there is also a large drum named the *Atambor.*‖ It is played with an animal’s bone. The number of percussion instruments in use by the Arabs is so considerable, that it would be impossible for me to name them all. I shall confine myself to mentioning, as being more in common use, the *Derbouka*¶ and the *Bendair.***

This latter is a modification of the *Tarr.

* *Saïka* is the name of the sixth mode with B for its base. A few varieties of these different kinds of instruments, such as the *Meïa, L’sain,* etc., also take their names from the mode peculiar to them.

† See "Notes," 30.

** See "Notes," 35.
VI.

Among the stringed instruments figures the violin, known by the name of the Kemendjah. It is provided with four strings and tuned by fifths like our European instrument. The only difference lies in the manner of playing it. The musician being seated holds his instrument with his left hand, resting the lower part of the sounding board on his knee. The bow, held in the right hand passes over the strings like that of our violoncello, but the position of the hand is inverted, the wrist being below the bow and the finger-tips turned upwards. I attribute to this position of the hand a certain pressure on the string which is quite peculiar to the native artists. The bowing is always in the same line, but a manipulation of the left hand makes the violin turn so as to bring the string in use under the bow.

A primitive violin, the Rebab (Rebeh or Rebec) plays an important part in Arab music. It has a convex box like the mandoline. The top of the instrument which is slender, serves as a handle. A copper plate covers its surface and forms the fingerboard. The lower part is covered with a skin, and on it
rests a piece of reed cut lengthwise to serve as a bridge. Two strings, as large as those of our double-bass and tuned in fifths, are set in vibration with the aid of a small iron bow bent to an arch. The \textit{Rebab} is played like the \textit{Kemendjah}. To facilitate the shift, the head of the \textit{Rebab}, which is bent in the opposite direction to that of the violin, is supported on the player's shoulder.\footnote{See "Notes," 36.}

\textbf{VII.}

I still have to mention the \textit{Kouitra},\footnote{See "Notes," 37.} called the Tunisian guitar. This is the instrument known to the Greeks as the \textit{Cithara}, which has retained the original shape of the lyre.

It is well known, that according to the history of mythological times, it was Mercury, or Orpheus as some say, who invented the lyre by causing the nerves of a tortoise dried in the sun, to vibrate at his touch. Now the Greeks retained in the \textit{Cithara} this concave shape of the tortoise's shell. They
transmitted it to the Romans, among whom the name *Lira* was generic to all stringed instruments, as that of *Tibia* was to all wind instruments. The *Cithara* remained an instrument different from others of the species, although it retained more than the others the primitive shape found in the *Kouitra* of the Arabs.

The *Kouitra* has eight strings, there being two to each note; so it really only gives four notes. It is played by means of a quill held in the right hand, while the fingers of the left do the same as with our guitar. The finger-board has no frets.

The method of tuning can only come from the Greeks, for we find in it two disconnected tetrachords, giving the octave as extreme notes, and separated by an interval of a tone thus:

D—G. A—D.

Does not this guitar which, like the *Kanoun*, seems to reveal the existence of the harmonic element, exclude all idea of it, when we see a quill which can only strike one string.

According to Diodorus, Mercury's lyre had only three strings, no doubt the three connected tetrachords: D—G—C. Boëthius, however, speaks of Mercury's tetrachord as the four notes mentioned
above, whilst Nicomaeus attributes it to Pythagoras. The fact remains that, among the ancients, the tetrachord played the same part as the octave amongst us. We have the proof of this in the complete independence of each tetrachord, in the existence of the three-holed flute giving only four notes, and in the four syllables used for sol-fa. These latter, according to Quintillian were ῥε, ῥα, ῥέ and ῥό, and were repeated for each tetrachord, as we repeat seven of them for each octave.

The Tunisians, who, like the Algerians, have no musical alphabet, still use the same syllables to-day in teaching the Ḳoubira.*

VIII.

A fact which must excite general astonishment is that the Greeks, who possessed such a wide acquaintance with, and taste for the arts, did not divine the properties of the octave in this very combination of two disconnected tetrachords. The reason for this is perhaps found in the large number

* See "Notes," 38 and 39.
of signs they used for representing the notes in each of the fifteen modes of which Alypius speaks. According to this author, the number of signs represented by letters of the alphabet taken in different positions, amounted to more than six hundred.*

The Romans greatly diminished these number of signs. However, we come to Boëthius and find fifteen letters in use only. Henceforth the tetra-chords can more easily be compared, and St. Gregory, considering that the relations between the notes are the same for each octave, further reduces these signs to the first seven letters of the alphabet, which he repeats in various forms in different octaves.†

At this period a new factor and one of great importance presented itself. I mean the simultane-

* Mamoun, during the first twenty months of his reign, did not hear a letter, i.e., a note of music, nor a word of song.—"Femmes Arabes depuis l'Islamisme," Chapter XXVIII.

† Before this event, a preliminary reform had been attempted by St. Augustine and St. Ambrose. The former had heard hymns sung in Alexandria, whose simplicity struck him so much, because it gave greater pleasure to the Africans that the countless ornamental hymns used in other dioceses. At Alexandria the words were in Greek. It was
ous sounds, due, no doubt, to the introduction of the organ into the temples. Some authors mention St. Damas as the inventor of the organ, whilst others say it came from the east. However, Boëthius is the first to speak of consonances of thirds and sixths applied to the melody, vague attempts at the future counterpoint, of which descant is the first manifestation, and from which later was to spring the harmony of Palestrina. The chords of the third and sixth, improvised on a given melody, were thus a preliminary step towards harmony. But before the law of this new science was formulated, what mistakes, what groping in the dark.

That same Boëthius who drew up in the fourth century a treatise on music, after the style of the ancients, seduced, no doubt, by the charm of simultaneous sounds, endeavoured to introduce them into his tetrachords, but without result.

from the East also, that St. Ambrose brought to Milan, what is called the Ambrosian chant.

At the same time, the modifications of these two reformers, effected only the form of the melodies, especially the embellishments and made no change in the basis of the system. The same kind of reform had been introduced into Spain by St. Isidore of Seville.
in the midst of the general upheaval, caused as much by heresies, as by barbarian invasions, the heretics used this discovery as a weapon to increase the number of their adherents. It was then that St. Gregory himself and the councils, forbade the use of instruments in churches. However, the idea of harmony now existed, and it was to germinate in the very bosom of Christianity by means of the descant and organ. The new religion which had imbibed from paganism the principles of its religious song, adopted as its instrument the flute of Pan. But its reeds were no longer to resonate to the breath of an individual, but by means of a keyboard and a bellows.

Little by little the chords of thirds and sixths crept in, side by side with progressions of the fourth and fifth, deduced from the system of tetrachords. The two systems were now face to face with each other, and they contested their ground fiercely until the time of Gui d'Arezzo, who, developing the idea of St. Gregory, established the relations of the hexachords, and laid the bases of a new scale allowing of the use of simultaneous sounds.
IX.

One would have a strange notion of Gui d’Arezzo’s reform, if we assign to him merely the invention of the names of the notes taken from the hymn to St. John. His real discovery, one which led to the harmonic formula, consisted of the establishment of the relations of the hexachords, of the mutations and of the flat. Where St. Gregory had seen two similar tetrachords giving as extreme notes the octave, $D-G=A-D$, Gui d’Arezzo, proceeding by the application of harmonic consonances, recognised two similar thirds, separated by a semitone and giving as extreme notes the sixth, the hexachord: $C-D-E=F-G-A$. Then, applying to his discovery the two progressions, arithmetic and harmonic, which consisted in inverting the position of two tetrachords* he placed at the top the third which had been at the bottom in the first hexachord. There resulted a second hexachord with a different starting point, but entirely similar to the first as regards

* We have recognised its use by St. Gregory in his reform of the religious song.
the relation of the notes to one another. This second hexachord was indeed, composed, like the first, of two similar thirds, separated by a semitone: $G-A-B = C-D-E$.

Following this method of procedure, he took the second third of the first hexachord to form the basis of a new hexachord, and, by means of the flat placed on the first note of the second third, completed the three fundamental hexachords of his system. Finally applying this, in a range of fifteen notes only, he formulated the harmonic law, comprising:

I. Two hexachords beginning with $G$ called "hard hexachords."

II. Two hexachords beginning with $C$ called "natural hexachords."

III. One hexachord beginning with $F$, called the "soft hexachord."
First Hard Hexachord

First Natural Hexachord

Second Hard Hexachord

Second Natural Hexachord

Third Soft Hexachord
This system was applicable to the whole range of perceptible sounds produced by those instruments, the most complete of which, as we already know, embraced three octaves and three notes. The series of the five tetrachords could be reproduced both high and low, under the same conditions (see table on previous page).

The Hymn to St. John explains perfectly the meaning of this discovery, since, although it is written in the first tone of plain-song, it includes the six notes of the first natural hexachord, which is the starting point of Gui d’Arezzo’s system. Each verse begins with a different note, following the ascending order of the degrees of the scale.

*Ut* queant laxis
*Resonare fibris*
*Mira gestorum*
*Famuli tuorum*
*Solve polluti*
*Labii reatum*
*Sancte Joannes.*

As for the mutations to facilitate the transition
from one hexachord to another* it is only necessary to look at this table with a little attention, to be convinced that their purpose was to bring the singing of all melodies to one and the same scale, comprising a range of six notes.

No doubt, there was still a lacuna here, which was not bridged until later by the discovery of the leading note, but it remains none the less evident that the law of harmony was formulated by Gui d'Arezzo.

As for the tetrachord system, just enough of it was retained as could be in accordance with the new principles, and the guitar, modifying its mode of tuning, formed with the two systems an anomalous combination which it has preserved.† The excep-

* The mutation consists in the change of the name of a note but not the sound. Thus C-fa of the first hard hexachord becomes C-ut in the first natural hexachord, although the sound does not change.

† The notes of the strings of the guitar were represented by the letters: A, D, G, C, E, A. The creation of a fixed diapason has changed them, but without in the least modifying its mode of tuning, as the strings of the guitar are now tuned, E, A, D, G, B, E.
tional nature of this mode of tuning—three tetra-chords surmounted by a hexachord cut at its base by a third, seems to be the result of the fusion of the two systems of St. Gregory and Gui d'Arezzo.
Chapter V. The Rhythm of Arab Music.

Music, considered in its simplest state—rhythmical sound, absolutely requires a measure. Now Arab musicians playing in unison, i.e., producing together the same sound, the same musical phrase, must of necessity sing and play in time. Does this measure sufficiently resembles ours, for us to be able to feel its influence immediately, or shall we once more find a difference in this, as we have recognised as existing between our harmonic system and the Arab melodic system.

I have already mentioned the "rhythmic harmony" of the band of the Bey of Tunis, and that, more simple, produced by the Arab percussion instruments. This, alone would suffice to show the existence of the same dissimilarity. Yet, measure is as rigorous in Arab music as in our own. It regu-
lates the movements of the dance. It follows the slow or lively pace of the melody, which cannot proceed without it, since it is an essential part. The rhythmical division is produced in a regular manner, which is unalterable throughout the accompaniment of a song. But this division, probably subordinated in principle to the poetic rhythm, has led to what are for us, strange combinations, the regularity of which does not strike us at first.

What was the poetic rhythm of the ancients? The mingling of long and short syllables. From the very beginning this rhythm was evidently applied to music among the nations to whom the words "to say" and "to sing" meant the same thing.

From music to the dance, the transition was easy, and as the song was not sufficiently noisy to mark the dancer's movements, this function became the part of the percussion instruments, whose tones were never drowned, even by the most enthusiastic shouts and plaudits which would accompany the dance.*

* There was a time-beater called the koruphaios, choryph or podoctupos, on account of the noise he made with his feet. He wore sandals of wood or iron, and this allowed him to use at the same time a stringed instrument with his hands and a percussion instrument with his feet. The Romans
Just as poetry varied its accents, so the dance varied its movements, and the application of each new rhythm had to be done at the same time for poetry as for dancing. When, in consequence of these variants, so displeasing to Plato, the song had gradually freed itself from the shackles of poetry, the percussion instruments alone remained responsible for maintaining the rhythm, the Cithara, as Plutarch tells us, producing the same note as the voice. Although the song was freed from poetry it still had need of a regulator. The guitar could not perform this office, as it slavishly followed the song, and therefore to the drum came the task of regulating the movement of the melody.

In place of the *dactyl* and the *spondee* there was a rhythm of two equal feet, figured by two long, or a long and two short notes, and in place of the *iambus* and *trochee*, there was a rhythm in which the two feet were in the proportion of two to one, either two and one long note or two and one short note, or vice versa.

added to the sandals for time-beating, shells and bones of animals. These were played with the hands, hence the name of *mandueto* for the time-beater.
Was it due to the influence of the satiric authors that with the more frequent use of the *iambus*, this rhythm was almost constantly applied to the dance with the name of *tempus perfectum*, whilst the rhythm of two equal feet (*dactyl* or *spondee*) was called *tempus imperfectum*? What I can testify, is the existence of this identical fact among the Arabs. For them the three time rhythm or rather triple time, has much more charm, although the duple time is also met with.

The rhythm marked by the drums is generally subject to the song, as the *tempus perfectum* or *tempus imperfectum*, but sometimes it seems to break away from it altogether. The spirit of independence which had brought about the separation of music and poetry, was shown in the instruments of percussion, and so it often happens that the song is accompanied by a rhythm which appears entirely opposed to that necessitated by the melody. Here, again, the habit of hearing can alone make us distinguish divisions in which the time of the former is to the latter in the proportion of three to two.*

* This is the rhythm used by the Basques in Spain.
Sometimes while the melodic rhythm is *three and three*, the rhythm of the drums is *two and four*, or again, *two, two and two*. In another song where the measure of the melody will be divided into eight equal parts, the rhythmic accompaniment will be *three, three and two*.

Let us suppose a complete Arab orchestra.* The guitars, flutes and violins will all play the song with the necessary glosses, while the drums of various kinds, on the other hand, will produce, not one single rhythm, but a *mélange* of several rhythms, forming a kind of “rhythmic harmony,” the only harmony known to the Arabs,† and in which the parts are so entangled that only long habituation can distinguish in it a certain regularity.‡ And yet regularity does exist. Each drummer follows exactly the kind of rhythm indicated to him by the chief musician,§ the greater or lesser number of

---

* See “Notes,” 40.
† See “Notes,” 48.
‡ There is a little of this rhythmic *mélange* in the “Sequidillo” of the Spaniards.
§ “Ibrahim el-Mausely,” says Perron, “was the first who, with baton in hand, marked and indicated the cadence and musical measure.” This Ibrahim was a musician at
rhythmic divisions being always very well regulated to the volume of the instrument.

It is this rhythmic harmony which constitutes the second element of Arab music. A self-respecting instrumentalist, no more plays without his drum accompaniment than a European artist sings without the piano. In such a case, and certainly in every small orchestra, the diversity of timbres of the drum, in itself produces this accompaniment.*

Such is the function of the drums which mark the measure in Arab music, the character of which I will formulate as follows: "An accompanying rhythm, nearly always independent of the melody, the relation of which to the melody is fixed from the beginning of each measure."

Melody and rhythm are thus the constituent elements of Arab music,† corresponding as regards arrangement, to the two elements of Greek music, melopoeia and rhythmopoeia.

the court of Haroun-el-Raschid. At the present day the chief musician of an Arab orchestra plays the principal instrument, the Kemendjah or Raita.

* See "Notes," 7.
† See "Notes," 41.
VI
Chapter VI. The Chromatic Modes of the Arabs.

I.

We remain impassive when listening to Arab music. Impassive! do I say? We should be inclined to flee from such a confused noise of voices and instruments as would offend our ears. Yet with the Arabs the reverse occurs. They are exalted by the sounds of their instruments. With their music they express the most varied feelings, to which they attach wonderful effects.*

Who has not seen in Algeria those women who dance until they fall exhausted? A moment since they were calm. But the singers performed a modulation which caught their ear. Then this modula-

* See "Notes," 42.
tion recurring with each couplet of the song, they seem to rise with haggard gaze and panting breath. They move an arm, then a leg, turning slowly at first, then more rapidly, leaping at the same time, until they fall unconscious in their companion’s arms. Inquire the cause of this frenzied dance, and you will be answered: the *Djenoun* (*Djinns*). They are possessed by the demon.

II.

Sometimes, when listening to an Arab song, tears will be seen to flow from the eyes of everyone. This nearly always happens with the song of *Salah Bey*. Here is the story of the song. Salah was Bey of Constantine. He was summoned to the Dey of Algiers under some pretext, who had him beheaded in order to remove him and to seize his fortune.

The song comprises two parts. The first refers to the farewell of Salah Bey to his family, the entreaties of his relatives to make him stay his journey, his arrival at Algiers and his death. The second part contains the poet’s lamentations, praising the lofty deeds and noble virtues of Salah Bey. The two parts are separated by a *recitative* of these
words: "The Bey is dead," repeated and uttered in such a lugubrious tone that it makes one shudder. The first words of this song are: "Galoû el- Arab galouû."

III.

Let me quote as a final example the legend of the celebrated Arab musician, Alfarabbi.

Alfarabbi had learnt music in Spain in those schools founded by the Caliphs of Cordova, which were in a flourishing condition at the end of the ninth century. The fame of the celebrated musician, says an Arab author, had spread as far as Asia, and the sultan Fekr ed-doula, desiring to hear him, sent messengers several times bearing rich presents and instructions to induce him to visit his court. Alfarabbi fearing he would not be allowed to return to his native land, long resisted these offers, but finally yielding to the Sultan's entreaties and prodi-gality, he determined to pay his visit incognito.

On arriving at the palace of Fekr ed-doula, he made his appearance in such a tattered costume that he would have been refused admission had he not said he was a strange musician who wished to
gain a hearing. The slaves whose duty it was to introduce poets and musicians, then led him into the Sultan's presence, as it happened to be the hour when Fekr ed-doula held his daily concert.

Alfarabbi's shabby dress was not of a kind to gain him much notice; however, he was asked to play and sing. Scarcely had he begun, when all the court were seized with a fit of laughter which even the Sultan's presence could not check. Alfarabbi then changed the mode and immediately sadness succeeded the joy. Such was the effect of this, that tears, sighs and groans took the place of the noise of laughter. Suddenly the singer once again altered his melody and rhythm, which evoked in his audience such a fury of madness, that they would have hurled themselves upon him, if a new change of mode had not appeased them, and while they were thus plunged in a deep slumber, Alfarabbi had time to get out of the palace, and even out of the town before anyone could attempt to follow.

The Arab author adds that, when the Sultan and his court awakened they could only attribute such extraordinary effects of the music they had heard to Alfarabbi.
IV.

Let us apply these effects to the modes we already know. Joy will be caused by the L'sain mode, fury by the Edzeil. But what about sadness, slumber, and also the dance which causes it to be said, that the women are possessed of devils? These effects belong to the modes—Rummel-meia, L'sain-sebah and Asbein, which seem to be the last remains of those chromatic modes to which the Greeks attached such extraordinary characteristics.*

(1) The Rummel-meia mode, derived from the simply Meia, borrows from it the first tetrachord, but modifies the second, by raising the first note a semitone, giving D sharp in a scale with G for its starting note.†

(2) The L'sain-sebah, derived from the L'sain mode, corresponds entirely to our minor scale with G sharp.‡

(3) The Zeidan mode, derived from the Irak

* The first eight modes referred to in Chapter III, formed the diatonic modes, which proceeded by two tones and a semitone for each tetrachord.
† See "Notes," 43.
‡ See "Notes," 44.
mode, borrows from this its second tetrachord, but modifies the first by raising the second note a semitone, thus producing G sharp in a scale which has D for its starting note.*

(4) The Asbein mode, derived from the Mesmoun or Lydian mode (that sad mode conducing to indolence, which Plato banished from his republic) borrows from this its second tetrachord, modifying the first by producing G sharp in a mode that has D for a starting note.†

It is the Asbein mode (often confused in Algiers with the Zeidan), that makes the demon-possessed women dance in spite of themselves. It was this Asbein mode which really deserved the qualification, Diabolus in musica, applied later to the Edzeil mode. Here is the Arab legend on the subject.

When the devil was driven from Paradise, his first thought was to tempt man. To succeed well, he made use of music and taught the celestial songs which were the privilege of the elect. But in order to punish him, God took from him this knowledge,

---

* See "Notes," 45.
† See "Notes," 46.
and thus he was only able to teach men this single mode with such extraordinary effects.

The impression which this mode produces on the Arabs is such that at Tunis I have seen a musician of great reputation, who formerly was employed by the Bey’s former minister, Ben Aïed. I have seen him, I say, fall into quite an ecstasy when playing on his Kemendjah those diabolical songs in the Asbein mode. To meet the objection that this effect is due to religious enthusiasm, I add that this musician is a Jew, and his name is Sahagou Sfoz. At the time I heard him in 1857, he was playing in a street café. He was the only native violinist I ever saw shift on his instrument.*

V.

Although we may hesitate to call up memories of Orpheus, Amphion and all those renowned singers, in order to represent them as performing their wonders by such means, we cannot mistake the relationship of the extraordinary effects produced by Arab music, with those attributed by the Greeks to theirs.

* See "Notes," 47.
But if, with such restricted means, they produced in antiquity the effects which we cannot imitate now; if all this musical science placed by the philosophers in the front rank of the sciences, is summed up in a song accompanied by a drum; if among a people which appreciated the beautiful in art and literature, musical questions were confined in such a restricted sphere; how can we believe in that importance which the philosophers attach to the study of music in those praises accorded to it by poets and orators, and those sects which were ready to fly at each other, just as among us the classicists and romanticists, or the Piccinists and Gluckists did.

Shall we say, like others, that we must allow for poetic exaggeration in accounting for these wonders, and that the chief effects of music were due to poetry, to that Greek language, whose accents were so sweet that "to speak" and "to sing" were the same thing. Or shall we ascribe the cause of these wonders to the ignorance and coarseness of the listeners, or shall we, like Rousseau, decide to think that it is impossible to judge a music of which we might have the letter but not the spirit?
For my part, after allowing for poetic exaggeration, I recall the principle of "the habit of hearing," or, if it is preferred, "the education of the ear," which should in my opinion give the key to this enigma. "The pleasure caused by music," says Halévy, in his "Souvenirs et Portraits," "always presupposes a preliminary education acquired by the sole habit of hearing or by the study of the art." This principle of preliminary education, or of the habit of hearing, is applicable to all degrees of musical knowledge as to all kinds of music.

We already know that the first laws were songs. Now if singing came into existence at the same moment as speech, we must recognise that the first musical rules were but the expression of an already acquired habit. As the first notes were appreciated, they had to be confined at first in a single tetra-chord, but each new extension of the system of sounds for the classifying of different tetrachords aroused opposition. It was a new habit to acquire, a new task in the education of the ear. It was almost a revolution, and the wise sought to evade it. Terpander was banished from the republic because he had added one string to the lyre. Timotheus of
Miletus was hissed when he first appeared in public with his cithara of eleven strings, and afterwards he was looked upon as the first musician of his day.

On what does the quarrel of the Pythagoreans and Aristoxenians rest, if not upon the law of the habit of hearing? Aristoxenes relegated to the ear the care of accepting or rejecting melodic combinations. Pythagoras wished to subject this judgment to precise laws, and under the pretext that he was preserving the beautiful, he set up before musical art his Pillars of Hercules and said: "Thou shalt go no farther."

Do we owe to these very fetters the progress made as a result of the separation of theoretical from practical music? I should be more ready to believe it, as, from this period music appears to accept no other rules than those based on the feelings awakened. From then under the caprice of the ear and in proportion to the habit acquired, it accepted that which it had rejected yesterday. In this way, all the extraordinary facts in the musical history of the ancients can be explained by an extension of the sum of acquired knowledge, and vice versa.

Would that Timotheus, of whom I have spoken as having increased the number of strings of the
cithara, and of introducing the "gloss" into singing, would he, with his eleven strings, have produced effects similar to Amphion with his lyre of four strings? Would he, like the latter, have been able to charm the workers as they raised the walls of Thebes? He would not perhaps have been hissed, as he was at Athens, but in proportion to the extension which he gave to the musical system by the use of the eleven-stringed guitar, and the "gloss," the workers at Thebes, being neither able to understand his manner of singing, nor appreciate his entirely new range of sounds, so utterly beyond their "preliminary education acquired by the sole habit of hearing," would not have listened to him, or else would have taken him for a madman.

Let us take another instance from a period nearer to our own, and examine the progress made by the harmonic system from the thirteenth century down to to-day, and endeavour to imagine the effect upon us of one of the chansons organisées of Jean de Murris (thirteenth century). Then let us reverse the question, and suppose Jean de Murris to be present at an opera, or at the performance of one of Beet-
hoven's symphonies. Whatever period we take, the answer to this question will always be the same.

Orpheus, Terpander, Amphion, possessed the musical knowledge of their times, and besides being in the front rank among singers, they further contributed to progress by gradually increasing the sum of this knowledge. To this extension is due the wonderful effects attributed by the Greeks to their music, the existence of which I have recognised among the Arabs, to whom the Greeks transmitted their musical system.

It is therefore not surprising to find their recurrence in these days, among a people who have remained at a standstill for several centuries, and whose musical system (I cannot too often repeat it) is clearly the same as that in use in Europe before the discovery of Gui d'Arezzo.

As for the acceptance of what is new in music, one might mention the most famous of our composers, who, each after his kind, but always in proportion to the development which they gave to the harmonic formula, have met, or still meet, with the lot of Timotheus.
Conclusion.
Conclusion. Influence on European Music.

I.

I HAVE now to indicate the results to be deduced from this study of Arab music compared with Greek music and the Gregorian chant. First of all, let us recapitulate the points put forward, and the conclusions will follow naturally.

We have seen that in the beginning of all nations, the first law was dictated in song, and, according to Strabo, "to say" and "to sing" meant the same thing. The classification of sounds appears with Orpheus and Mercury. Until their time, sounds were not regulated; the fixed distance between two sounds had not been established. System did not exist, and this discovery appeared so wonderful that it was attributed to the gods. The system is indicated by the lyre of Orpheus, or that of Mercury. The length or thickness of the strings gives
a succession of fixed notes, soon imitated in wind instruments by the gradation of the pipes in Pan's flute. This was the starting point, developed gradually and formulated in a more complete manner in the system of Pythagoras, in proportion to, and as the result of the very development of the sense of hearing.

The system of Pythagoras does not, on principle, admit of more than four notes, but it continually reproduces them in series throughout the range of perceptible notes produced by voice or instrument. Hence comes the change of the starting note for each tetrachord, although the position of the semitones is regularly maintained between the same notes.

I have had nothing to say concerning the Romans, as among them the cultivation of the arts was not developed until the end of the Republic. The progress and destiny of the arts, and of music in particular, had to be sought elsewhere. Thus we passed from the Greeks to the Christians, from the tetrachord of Pythagoras to the tetrachord of St. Gregory, to arrive at the hexachord of Gui d'Arezzo.
I have shown the part played by St. Augustine and Boethius, especially at this period. The system of simultaneous sounds must at that time have appeared incompatible with melody based on tetra-chords. And so, it is really the system of Pythagoras, pure and unalloyed, which passed to the Arabs, at the same time that it became the basis of the reform made in the religious song by St. Gregory. "But," says Villemain in "Le Tableau de la Litterature au Moyen Age," "just as the Latin tongue was modified by contact with the pronunciation of the barbarians, so music was to lose its sweetest intonations." This is why, in Europe, the plain-song and secular song, too, preserve only the diatonic genre. As for the chromatic and enharmonic, vestiges will perhaps be found in Asia and Africa.

"Was it not by the orders of Haroun El Raschid and his son, Mamoun, according to the writings of the Greek, Hebrew and Syrian philosophers, that most of these translations were made, the knowledge of which became so valuable to the Christians; and can one deny the powerful influence exercised by the Arabs upon the latter up to the fifteenth century, both by intellect and force of
arms." According to Guinguéné and Sismondi, the Provençal literature is a continual imitation of Arab literature. If Christian music brought Arab-Hebraic literature into Europe, the Arab invasion doubled the working of this means, by the aid of the gaye-science, the science of the trouvères and troubadours.

"What were the troubadours? Warriors for the most part. Some lords of castles, others the wits of the day, who, animated by their Southern love of music, favoured by that sonorous and metallic language, and enduring with verve the popular thought, in turn attacked or appraised in their songs the noblemen of the neighbourhood. The troubadour made verses and often sang them himself. But he was followed by one or two jongleurs, whose special task it was to sing and recite the stories of chivalry. Girard de Calanson, in a piece of verse in which he lays down the precepts of his art, recommends first of all the power of invention, of rhyming well, of speaking well, and of boldly proposing a jeu-parti.†

* Delécluze, "Dante et la poésie amoureuse."

† By jeu-parti was understood a song improvised by two voices alternating in the form of question and answer. In short, it was the double choir singing the strophe and antistroph.
In addition, he says, one must be able to play well on the drum and the cymbals; to bring out the symphony; to throw apples into the air and catch them skilfully on the point of a knife; to imitate the nightingale's song; to perform tricks with baskets; simulate an attack upon a castle; jump through four hoops at a time; play the cytale and mandora; handle the manicarde and guitar; play the harp and set the jig going to brighten the tune of the psaltery."

But sometimes, the trouvère, who had to know so many things, could not even write, and the words as well as the music, were transmitted orally. Hence the need for a short poem, which had to be divided into couplets with a separate refrain. Fauriel gives an example in the "Récit en vers de la croisade contre les hérétiques albigeois," which contains the following: "Sirs, this song is made in the manner of that of Antioch, and versified in a like manner, and is sung to the same air for him who knows it."

This circumstance supports the opinion of Villemain, who says: "I imagine that the Arabic and Spanish

* Villemain, "Tableau de la Litterature du Moyen Age."
songs must have been able to give, by their very music, the type of this Provençal poetry, which is rigorously enslaved within its metres.” From this it is clear, that if at this period “to say” and “to sing” were no longer the same thing, poetry was still, however, inseparable from music, which ruled the measure in verse.

Music with its attempts at harmony, known by the name of Descant, gave birth to Discord, a piece of verse which combined a little of all languages, Italian, Provençal, French, Gascon, Spanish, etc.

Need it be mentioned that the Crusades, constantly renewing the relations between Europeans and the Moors, established a continual exchange in the language as well as the scientific and literary knowledge of both people. But while the Moors remained stationary, the nations of the West, after assimilating the knowledge of the East, developed it in another direction, and we have seen how the musical system was strangely modified and enlarged by Gui d’Arezzo’s discovery. Music, in the West, becoming calm and serious, developed at its ease the harmonic principle, abandoning to the
Mussulman the "gloss" and embellishments, who has retained them.

The Arab singers are still required to know a great deal of what was expected of the trouvère, and if all are not found to possess the special talents which seem to have been reserved for the jongleur, we must understand that this personage has been replaced in Moorish fêtes by a buffoon of another kind, whom it will suffice to name. I refer to the Garagous, the native clown, whose coarse pleasantries are always so well received among the Mussulman population.

II.

Let me say now, what results we shall deduce from this study of Arab music examined in its relation to Greek music and Gregorian chant.

Until the fourteenth century, twelve different scales were used, each one of these scales giving to the melody a particular character. From the fourteenth century, these scales were abandoned, with the exception of one, which was the basis of the harmonic system. Later on another was resumed, the
minor scale, which only exists as a derivation from the first, and cannot, harmonically speaking, get on without it. Thus, previous to the fourteenth century, music was only melody, but this melody was developed in twelve scales or modes of different character.

Now these two scales, which correspond to our major and minor modes, having formed part of the modes of the system of melody in use before the fourteenth century, have we not the right to think that in the other ten modes, abandoned at the same time, there is something, if not all, to be obtained, that would aid in the development of our harmonic system. As for us, we have not the slightest doubt, and yet, at the moment when we are closing this work, we wonder whether the interest it has awakened among a few people will find an echo in the musical world. We remember the sarcasm which Meybomius and Burette received in their attempts at Greek music, and without taking shelter behind a false and useless modesty, we confess that we do not expect to impart to our readers the conviction which animates us.

No doubt we shall be told that the effects of Arab music are known and that it has been possible to
judge them, notably in "Le Désert" of Félicien David. Our reply will be that this is a great mistake. Félicien David has done the very opposite of what we ask. He has modified Arab melody to apply it to our harmonic system, thus renewing by his work what is done every day by plain-song.

We, on the contrary, would like the application of a system of harmony appropriated to the scale of each mode, without altering the character of the melody. Here lies, in our belief, the source of a new wealth of harmony, the use of which could be combined with those which we have already. Just as the minor mode has a special harmony, so ought each of the other modes we have mentioned. Work in this direction would immediately result in bringing plain-song back to its true path, and would put an end to the confusion introduced into the religious song by the mixing of the melodic principle, which is the foundation of St. Gregory's system, with the harmonic principle, to which it is desired to bend it, and which only succeeds in disfiguring it.*

* In this connection I can only refer the reader to the valuable information given by Niedermeyer in his "L'Harmonie appliqués au plain-chant."
As for the application of a similar system to our present-day secular music, we cannot assert its possibility; time and experience alone being able to show to what point the resources of ancient melody, allied with a special harmony, would be compatible with our musical habits. However it may be, we think that, in our work, there are some historical points, I would almost say, of musical archæology, which may be of some interest. And if we are told that the tetrachord of Pythagoras and the hexachord of Gui d’Arezzo will not renew among us the dispute of the Gluckists and Piccinists, we shall none the less believe that the study of the past often furnishes the truth of the present, and allows us to conjecture the future.
Notes on Arab Music and Musical Instruments.

Eastern Kemendjah Player.
Notes on Arab Music and Musical Instruments.

By Henry George Farmer.

1.

SCIENCE OF ARAB MUSIC.

Since the downfall of Arab polity and civilisation in Spain, the Arabs (at least those of Mauretania) seem to have lost the science of their music.* Shaw, in his "Travels in Barbary" (1757) says the Arabs and Moors do not write down their compositions, and have no science of music, everything being learned by ear, yet, he says, "the greatest uniformity and exactness is always preserved throughout their performances."

* In Persia, however, in the eighteenth century, a traveller speaking of native musicians said, "they learn by rule and play by note."—Pinkerton's "Collection of Voyages," etc.
Niebuhr ("Travels in Arabia," 1790) says they "use no notes but sing by ear." Addison ("West Barbary," 1671) says he was told that formerly every mosque had a layman who "understood the cadences of the Alcoran" and could chant it in its original metre. Jones ("Lyric Airs," 1804) says that the Turks are equally ignorant of the use of written notes, yet they have a practical theory for all that, and "there is no school of music in the West of Europe, where it (music) is more discussed" than in Turkey. "The want of notes . . . . does not prevent them from composing and executing concertos of great length." Lane ("Modern Egyptians") says the Arabs of Egypt have very few books on music, and these are not understood by their modern musicians.

2.

SIMILARITY TO CATHOLIC CHANT.

"We cannot fail . . . . to be struck with the remarkable similarity which the melodies of the Koran bear to the responses and chants of the Catholic liturgy." (Naumann, "History of Music.") A traveller in Algeria (Lumsden, "Trip to Algerine Ter-
ritory," 1847) refers to visiting a mosque and hearing the Imaun "chanting portions of the Koran in a manner which reminded me forcibly of many parts of the Catholic mass." Addison ("West Barbary," 1671) speaks of the mosque music in Morocco, as "a delightful piece of devotion."

3.

THE TROUBADOURS.

"The Provençal singers (the troubadours) resembled the Arabian, not only in sentiments and character, but also in the very forms of their minstrelsy. As the Arabians had their dual verses, so had the Provençals their Coblas, or 'couplets.' . . . As the duality of the verse had led to those amicable 'Contentions,' or poetic duels, of which we have spoken among the Arabian singers, so had the Provençals their Tensos. . . . No less the manner of using the rhymes. For as the Arabians had their Casisdas or long poems all on one rhyme, and their short bespangled and dainty Maouchahs or 'embroideries,' so also had the Provençals. . . . Even
the names they gave their songs ... are but Arabian names translated." (Rowbotham, "History of Music.")

4.

**ARAB INFLUENCE IN SPAIN.**

"There is a striking degree of similarity between many of the airs which I have heard in Egypt and some of the popular melodies of Spain." (Lane, "Modern Egyptians.") "Not only do we meet with certain terms and expressions in the popular songs of Spain," says Engel in his "Study of National Music," "which forcibly remind us of Arabic music, but also several Spanish instruments are of Arabic origin." Strange to say, Engel failed to mention the dances of Spain, which bear a wholesale imprint from the Arab: the Sarabande, Villarro, Pabana, Chaconne, Villota, Maya, Giga, Gallarda, etc. Engel points out that whilst there is little trace of Arab music in the Catholic church music in Spain, there is considerable influence to be seen in the music of the Jewish synagogue. This latter is also testified by De Sola in his "Ancient Melodies of the Spanish and Portuguese Jews" (1857). Durieu
("Present State of Morocco," 1854) found the rhythm of Moorish songs "precisely the same as that of the jacaras or Andalusian romances."

5.

HISTORY OF ARAB MUSIC.

The early Arab musicians were possibly of the wandering minstrel type, like the "Calenders" we read of in the "Arabian Nights." Such at first was Mabed, one of the most famous of the early Arab musicians. Similar to the Western minstrels, they were as much poets as musicians. "This," says Lane,* was sufficient to satisfy a people passionately fond of poetry, whose first object is to understand the meaning of the verses which are chanted." Indeed, the song in these days, says Christianowitch,† was a sort of recitative with a light refrain. Thus the music of the Arabs, bound in subjection to the words, would necessarily make slow progress. Then again, it is clear from the teachings of Mahomet that music was tabu, at any rate as regards

* Lane, "Arabians of the Middle Ages."
† Christianowitch, "Enquisse Historique," etc.
the practice of the faith. The prophet had said: "Music and singing cause hypocrisy to grow in the heart, as water makes corn grow." "Your prayers, if music form a part of them, will end but in piping and hand-clapping."

Although we read of the Caliph Omar (634), who was said to be a composer, and the Caliph Othman (644), the patron of the musician, Ibn Soureidj, music continued under the ban of the prophet, until the reign of Caliph Ali (656), when, as Salvador points out, music, together with art and literature in general, began to be freely cultivated. Under the reign of the Caliph Moawiya (661), a large portion of Greece had been annexed by the Arab armies, and the Caliph, who was surrounded at his court by poets, littérateurs and scientists, now commanded translations of the works of the Greeks, including those on music. How much they profited by these works, says Lane ("Modern Egyptians") is well known. "It appears," continues Lane, "that they formed the system of music which has prevailed among them for many centuries partly from Greek, and partly from Persian and Indian treatises. From the Greek language are derived the most general
Arabic term for music, namely, 'mooseeka,' and the names of some of the Arab musical instruments; but most of the technical terms... are borrowed from the Persian and Indian languages."

Salvador was under the impression that Greek influence upon Arab music dates from so early a period as this. But there can be little doubt that at this period the Arabs were more persuaded by the Persians† than the Greeks, for since the Arab conquest of Persia in the seventh century, there had been a gradual absorption of the musical theory and practice of the conquered race.

However, that be as it may. We do know that in the eighth century music had become a necessary adjunct to Arab life. Some of the early caliphs were accomplished musicians. Such was Yazid (680), a composer, and Walid I (705), a performer on the lute. The caliphs Abul Abbas (749) and Mansur (754) are spoken of as patrons of music, whilst Mahdi (775) was not only a musician himself, but his children were also accomplished in the art.

---

* Hammer-Purgstall, on the other hand, says the word "Mooseeka" is derived from the Persian.

† Ibn Khaldoun, "Asiatic Journal," Volume XX.
Bagdad had become the capital of the great Arab Empire which stretched from the borders of Tartary in the East to Spain in the West, and here were gathered the finest musical talent in all Arabia. It was the golden age of Arab music. Here was held the refined and dazzling court of the son of Mahdi, the famous Caliph Haroun El Raschid (786), a name immortal in Eastern song and story, and the unlimited patronage of art and music at his court is still on the lips of the Arab minstrel to-day. Haroun never built a mosque but what he attached a school to it. Schools and colleges, including those specially set apart for music, sprang up throughout the empire. Tudela, in his "Itinerary," says he found in Alexandria more than twenty schools for philosophy alone. Cairo, too, had its colleges, and in Fez and Morocco the most magnificent buildings were assigned for educational purposes, whilst Arab Spain vied with the mother country in its zeal for art, science and education.

In the ninth century, says Fétis,* there are traces

* Fétis, "Histoire générale de la musique."
of a didactic science of music with the Arabs. About 780, the poet Chalil had written his "Book of Sounds" and "Book of Rhythms." Another writer of the period was Obeidallah Ben Abdallah, who wrote a treatise on the "Tones and Mutations in Song." Then came El Kindi, who, in 862, wrote six books on music: (1) "On Composition"; (2) "Laws of Tone"; (3) "Elements of Music"; (4) "Book of Rhythm"; (5) "On Instruments"; (6) "Union of Poetry and Music."

His pupil, Achmed Ben Mohammed, also wrote works on music, including an "Introduction to the Science of Music."

Then there were the practical musicians who were famed throughout the length and breadth of Araby. The first of these was the great Ibrahim of Mossoul (742-803), called the "patriarch of Arab music"; Junis Suleiman; Zobeir Ibn Dahman, who was such a favourite at court as to have two villages assigned to him; Mabel of Medina, who had wandered as a minstrel all over Arabia; Jesid Haura, who introduced female singers into the harem; Mohammed

Ibnol Hares; Koraiss (d. 838), who wrote a book on singing; Abu-Aica, son of Caliph Motawakil, a composer of three hundred songs; Isaak (767-849), son of Ibrahim, no less renowned than his father, for he was the author, composer and editor of many works.

Among the famous singers of Arabia were: Orieb, poetess and composer, who boasted of knowing 21,000 melodies by heart; El Garid and Ibn Sorcidschuma, the rival singers at court; Selsel (d. 791); Jelid-Ibnol, whom Haroun commissioned with two others to collect the songs written during his reign; and Mokarik (fl. 800-64).

But we must leave Bagdad and the East, which all too soon was to start on its decline from greatness and grandeur, and seek to continue our history in the Western limit of the Arab empire—Spain.

At Cordova, the capital of Arab Spain, the cultivation of the arts and sciences was carried on even further than at Bagdad. In the ninth century during the reign of the Spanish Caliph Hakam I (796), a famous Bagdad musician named Serjab was invited to the court of Cordova. He was a pupil of the famous Ibrahim of Mossoul, and his talents had even raised the jealousy of the master. He ar-
rived in Spain about the year 821, and here, under the caliph's patronage, he opened the Music School of Cordova,* which afterwards became famous for its musicians and theorists: the learned Al Farabi (d. 950), whose treatise on music is still preserved; Ali of Isphahan (d. 918-9), whose songs and writings, though ten centuries have passed, may be seen in his "Kitab-el-Aghani," or "Book of Songs"; Ben Zeidan; Rabbi Enoch; Rabbi Mozes; Vadil; Moheb; Abil; Mousali, the pupil of Serjab; and Abu Bekr Ibn Bájeh, of Granada, who wrote a commentary of Aristotle's "Treatise on Sound" and whose songs were very popular.

Now the music theory which Serjab brought within the doors of the music schools of Spain, was naturally the Arabian-Persian system, which had been gradually formulated in Persia since the Arab conquest. Although soon to be abandoned by the Spanish Arabs, as we shall see, the system was adhered to by the Eastern Arabs and Persians, and became the basis of their fourteenth century theor-

* Other music schools were opened at Seville, Granada, Valencia and Toledo.
ists. What this system was, we know from its development.

In the fourteenth century the Arabian-Persian arts and sciences were put forth with considerable vigour, and music especially came under quite a revival. The leader of this revival was an Arab of Bagdad named Ssaffieddin Abd El Monim, whose principal work, the "Schereffije," was written in the Arab tongue. Not that there had been any dearth of musical theorists with the Arabs since those we mentioned. Following Chalil and El Kindi, in the eighth and ninth centuries, came the Hispano-Arab writers, chief of whom was Al Farabi. Then we have Abd El Moumini (eleventh century), Mohammed Ben Ahmed El Haddah (twelfth century), and Mohammed Schirasi (thirteenth century). But the fourteenth century was, with the Eastern Arabs and Persians, most propitious for the cultivation of the arts and sciences, as they were now under the beneficial rule of the Mongols. And from this period has come down to us several works on the science of Arabian-Persian music, and three especially; those of Ssaffieddin, Mohammed Ben Abu Bekr Ben Scerouni and Abd El Khadir. From these works we
can see what the system of the Eastern Arabs and Persians (for they cannot be separated), really was.*

Sir Hubert Parry, in his "Art of Music," has referred to the Eastern Arabs and Persians as possessing "the most elaborate scale system in the world." The octave was divided into seventeen parts (third tones). This has led historians and writers to assert that the Arabs had more notes within the octave than Europeans. As a matter of fact this *Messel* system, as it was called in the East, did not give them more notes in practice, but was intended as a provision for an absolutely true scale. As Land† and Hatherly‡ point out, the theorists discriminated (for example) between the scale of C sharp and D flat. By this system were obtained true fifths and fourths, a true minor seventh, and a very reliable major third and sixth. Here we have evidence

---

* How much was Arabian and how much Persian, is difficult to say. The influence of the latter no doubt predominated. Six out of the twelve principal modes are named from the Persian language, as are most of the technical terms.

† Land, "Recherches sur l'histoire de gamme Arabe" (1884).

‡ Hatherly, "Treatise on Byzantine Music."
that in the fourteenth century at latest, the Eastern Arabs and Persians had established the consonances of the third and sixth major and minor, whilst Europe was still under the Greek theory. That these "niceties" of the scale were really practised is doubtful. Riemann thinks that the Messel only belonged to the theorists,* since we know that at this time (fourteenth century) the diatonic system of seven fundamental tones and five intermediate tones was in practical use with the eastern Arabs and Persians. Land ("Recherches sur l'histoire de gamme Arabe") has also shown that the practical working of the Messel as stated by Villoteau ("Description de l'Egypte") was not followed. A. J. Hipkins (Grove's "Dictionary," article, "Pandora") perhaps rightly sums up the question when he says: "The arithmetical reasonings of philosophers who sought to explain the musical scale could never have been, excepting in the larger intervals, the practical art of musicians."

These Arabian-Persian theorists divided their music into certain fixed modes or scales, and

*A century ago an Arab musical theorist named Mechâga reduced the scale to quarter tones.
although the theorists do not agree precisely with one another, we may summarise the modes as follows: there were twelve principal modes called the Makamat:

USCHAK: A, B, C♯, D, E, G♯, G♯, A.
NEVA: A, B, C, D, E, F, G, A.
ABU SELIK: A, A♯, D, D♯, F, G, A.
RĀSD: A, A♯, C, D, E, F♯, G, A.
IRAK: A, B♯, C♯, D, E♭, F, F♯, G♯, A.
ISPAHAN: A, B♯, C♯, D, E♭, F, G, A.
ZIREFKEND: A, B♯, C, D, D♯, F, F♯, G♯, A.
BUZURG: A, B♯, C♯, D, D♯, E, G♯, G♯, A.
ZENKLA: A, B, C♯, D, D♯, F♯, G, A.
RIAQUİ: A, A♯, C♯, D, D♯, F, G, A.
HIDSCHAF: A, A♯, C, D♯, F♯, G, A.

Besides these, there were six other modes called the Evasat, viz.: Shenas, Meīa, Selmek, Nevrus, Kirdanıah and Koucht, considered by some writers as earlier modes, and by others as derived from the Makamat. The nature of these modes was demonstrated by circles divided into eighteen points, representing the seventeen intervals, and from these "circulars of the mode," as they were called, resulted eighty-four scales. This was doubtless the system, but naturally in its earlier and less complex
form, which Serjab introduced into the music schools of Arab-Spain in the ninth century.

But among the doctors at Cordova, a very catholic course of music study prevailed. Not only their own musical science, but the theories of Pythagoras and the Greek system in general were taught to the pupils. In the process of time the Greek theory led to modification in the Arabian-Persian, and by the tenth century, when the music culture of the Arabs of Spain had almost paled the fame of Bagdad, the learned Al Farabi had become a strong advocate of the Greek system, which finally resulted in a definite abandonment of the old theory.* In its place was formulated a system which, although retaining the old designations, was Greek at bottom.† It is the musical system which has since remained with the Arabs and Moors of Mauretania.

From the argument which I have placed in the foregoing, that the musical system of the Eastern Arabs is different from that of the Mauretanian Arabs, and by the reasons and proofs for this dif-

---

* Fuertes, "Historia de la musica Española."
† Kosegarten, "Alii Hispananensis."
ference which I have endeavoured to give in these notes, we may be able to reconcile the divided camps of theorists who have dealt with the problem of Arab music.

According to La Borde ("Essai sur la Musique"), Villoteau ("Description de l'Egypte") and Kiesewetter ("Die Musik der Araber"), the Arabs in general had the "Messel" system and the theory as laid down by the fourteenth century Eastern Arab theorists, Ssaaffieddin, Abd El Khadir, etc. On the other hand, Kosegarten ("Alii Hispahanensis" and other writings), following the tenth century Hispano-Arab theorists, Al Farabi and Ali of Ispahan, opposed the former writers, saying they had confused the Arab with Persian theory and insisted on the Greek theory as being the basis of the Arab. Salvador held this view, although he did not arrive at his conclusion from the theorists, as did Kosegarten, but from a prolonged study of Arab music among Arab musicians.

Between the time of Kosegarten (1840) and Salvador (1863) it had been stated positively by Sori-ano-Fuertes ("Historia de la Musica Española," 1855) that in the ninth to tenth centuries the His-
pano-Arabs had abandoned the Arab-Persian theory for the Greek. Although this statement appears to have been ignored by every writer on the subject (including Fétis but excepting Rowbotham), I believe it is the crux of the whole question. What became the theory of the Hispano-Arabs in the tenth century came naturally to the Mauretanian Arabs, who have since preserved it, and is precisely what Salvador found. The Eastern Arabs, however, appear to have been uninfluenced by the new theory accepted in Spain, and held to their own system, as illustrated by the fourteenth century theorists.

6.

EUROPEAN VIEWS OF ARAB MUSIC.

"I must confess," says Lane ("Modern Egyptians") "that I generally take great delight in the more refined kind of music which I occasionally hear in Egypt; and the more I become habituated to the style, the more I am pleased with it; though, at the same time, I must state that I have not met with many Europeans who enjoy it in the same degree as
myself." Compare this with a traveller (Campbell, "Letters from the South") who was not habituated to the music, and says: "Music, which to European ears, if I may judge by my own, is unintelligible and execrable." Villoteau found the "forced modulations," the "rude and extravagant ornaments" of Arab music, "revolting to the ear." Neukomm, the composer (quoted by Fétis), when in Algiers in 1835, spoke of his ears being "tortured" by the native music. Even a musician like Sir Arthur Sullivan, who heard the finest musicians in Cairo at a concert at the house of Tigrane Bey, the Khedive's cousin, was perplexed. There were six performers —two singers and players on L'Oud, Kanoun, Nây and Taar. He says: "We had three hours and a half... the Chief, who played L'Oud, was a very fine player with really remarkable execution. The music is impossible to describe and impossible to note down. I came away dead beat, having listened with all my ears and all my intelligence."—("Fortnightly Review," January, 1905.) Harris, speaking of the Persians in the eighteenth century ("Pinkerton's Voyages"), says their music is "so different from ours, that it is a long time before it
becomes pleasant to a stranger’s ears.” Addison (“West Barbary,” 1671) found that Moors had “very harsh and sawing voices” which “grated” upon the ears. Niebuhr (“Travels through Arabia,” 1790) thought the music “disagreeable.” Another writer, Macgill (“Account of Tunis,” 1811), says the “music is of the most barbarous kind. The braying of an ass is sweeter than their softest note, whether vocal or instrumental.” On the other hand, Shaw (“Travels in Barbary,” 1757) speaks of it as “artful and melodious”; Lempriere (“Tour from Gibraltar to Morocco,” 1793) finds it “beautiful and simple”; and Durrieu (“Present State of Morocco,” 1854), thinks “nothing can be more plaintive” than some of their songs (see No. 42 of these “Notes”).

7.

RHYTHM.

“In the Algerian airs I could discern no rhythm —what, you will say, melody without rhythm! It is impossible, and the fault was in your ears. Well, I own to you the utter difficulty of imagining music without rhythm, and I thought at first that the fault
lay wholly in my own ear; but when I spoke on the subject with a Frenchman here, who is the leader of a regimental band, he told me that the rhythm in Moorish melodies is so capricious as to puzzle him."
—Campbell, "Letters from the South," 183-

Here are some specimens of rhythm from the "Zendani," or popular melodies. The top line of the drums stave is played by the Derbouka and Djnoudj (metal castanets attached to the thumb and middle finger), and the bottom line by the Taar and Bendair:

"Kadria Zendani."

\]
8.

THE "GLOSS."

Emil Naumann says of the Arab melodies: "If some are remarkably pleasing, there are others whose beauty is marred by confused and intricate progressions, elaborated with every kind of possible and impossible flourishes, producing a most disagreeable effect on the ear of the auditor."—"History of Music."

9.

THE "GLOSS."

This example of the gloss is taken from Villoteau, and is one of the few that have been given.

* I am loth to use this example of Arab music, which does not belong to Mauretania, but since I can find no examples of the "gloss" elsewhere, I am compelled to fall back on Villoteau.
Lane's examples of Arab music are given without any of the embellishments which are added by the A'lâteeyeh (professional musicians), and so are those of Salvador and Christianowitch. With Rouanet, the gloss appears only to be partially
avoided. The talent of the singer or player is absolutely determined, says Salvador in his "Notice sur la Musique Kabyle," by their ability in improvisation with the gloss. The use of these embellishments have made it very difficult to distinguish the melody proper. Christianowitch, when collecting for his book on Arab music, experienced this difficulty in taking down the melody, covered as it was by "trilles, roulades et fioritures."

Ouseley ("Travels," 1815) found the gloss in Persia, and says, whether the music was vocal or instrumental, "the predominating characteristic seemed to be a querulous tendency . . . . and the tune a little more than a succession of trills and shakes." Morier ("Second Journey through Persia," 1818) speaks of a singer who fanned his mouth with a piece of paper so as to obtain these trills and shakes.

Since the modern Arabs have no written music, every note, every phrase, being passed by audition and routine from one musician to another, it is easy for an alteration in the original text of music to creep in, by reason of this very gloss. An additional note or phrase which one musician may play as an embellishment, may unwittingly be taken for
the original motive by another. Salvador shows in his "Notice sur la Musique Kabyle," that in modern Arab music even a few months is sufficient to admit of alterations in the melody, caused by the gloss. He mentions a song, "Banni-banni," sung in Tunis in 1857, and when imported into Algiers a few months later, it was considerably altered. One of the most popular songs in Algiers, "Chebbou-chebban," has two forms, whilst the song of "Salah-Bey" was noted by Salvador in five different manners. In his essay on Kabile music he gives a song, "Dadda-Ali," in two versions, and admits he does not know which might be the original.

Ernest Newman has often referred to the correlation between an art and the physical condition upon which it is dependent. No better example of this could be found than with the Arab, and especially in the gloss. The whole of Arab history, language and social life may be summed up in one word—"phantasy." Their literature, science and art certainly reveal abundant evidence of this. Look at their architecture; it is more decorative design and complicated pattern than staple structure. Their pictorial representations all point to colour array and unde-
finable arabesque, without organic arrangement. The same with their music. It is the gloss, the variants and ornaments, that is the dominant factor.

10.

THE “NOUBA.”

The *Nouba* is the classic musical form with the Arabs, as the symphony is with Europeans. It is an arrangement of songs or melodies in a prescribed form. There are two kinds, according to Rouanet ("Répertoire de Musique Arabe"), a *Nouba Neklabat* and a *Nouba Gharnata*. The former is made up of songs (*Neklab = song*), and each song has its prelude called *Mestekber*. This class of *Nouba* has also an overture termed *Tchenebar*. The three specimens of this class of overture which I have seen in the "Répertoire" mentioned are of Turkish origin, and indeed Rouanet says that this music was introduced into Algiers by Turkish musicians in the service of the Sultans of Algiers at the beginning of the sixteenth century. According to Makrisi and the Persian writers on music, the word *Tchenebar* was used to denote a melody in duple measure.
The *Nouba* proper is called the *Nouba Gharnata*. It is of more importance, musically, than the *Nouba Neklabat*. This is the *Nouba* in five movements described by Salvador, which are named by Christianowitch ("Enquise Historique," etc.): (1) *Mosadder*; (2) *Betaihh*; (3) *Derdj*; (4) *Inisraif* (*Messraf* in Rouanet); (5) *Khélas* (*Meklass* in Salvador and Rouanet). Rouanet says that every *Nouba Gharnata* is preceded by a prelude—*Mestekber*, and an overture—*Touchiat*.

Christianowitch gives the notation of seven *Noubet*, whilst Rouanet gives a complete *Nouba*, six overtures (*Touchiat*) to the *Noubet Gharnata*, three overtures (*Tchenebar*) to the *Noubet Neklabat*, and several preludes (*Mestekber*).

Every Arab musician is familiar with the *Kadriat senáa* and *Zendani*, i.e., the classical and popular songs, yet only the elect know and play the *Noubet*. Christianowitch says that he knew of three musicians only, in all Algiers, who knew the *Noubet*.

Concerning the origin of the *Nouba*, it is credited to both the Turks and the Moors of Spain. When we consider the art history of the Turks, and especially at the beginning of their domination of Maure-
tania (fifteenth to sixteenth century), when it is generally acknowledged (see Hatherly's "Byzantine Music") that they possessed no music of their own,* this claim for the Turkish origin of the Nouba cannot be credited, in the face of the advanced arts of the Moors. The very titles and sentiment of the Noubet, at any rate the Noubet Gharnata, carry the imprint of the Moors of Spain. With the Noubet Neklabat, Turkish influence may, perhaps, be acknowledged in the form. Possibly the Nouba Gharnata of the Moors was too complicated and severe for the Turks, hence the need for an easier form—the Nouba Neklabat, which is simply a string of songs preceded by an overture (Tchenebar). In the examples of Tchenebar that I have seen, they not only bear Turkish titles, but have the strong martial colouring of the Irak and Saïka modes. Jones, in his "Lyric Airs," gives a Turkish piece of music, of several movements, called "Susudil," which like the Nouba Neklabat, is a mere string of melodies without organic relation to each other.

* Ouseley ("Travels," 1815) says that prior to 1637, the art and science of music was unknown to the Turks.
Here we give a specimen of a Nouba Gharnata (mode L'saīn) from Christianowitch's "Enquisse Historique de la Musique Arabe," which contains the five movements proper to the Nouba. To fully grasp the importance of this class of work, one must really see the Nouba edited by Yafil and Rouanet, which contains the Nouba in its entirety, overture, preludes, bridge passages, gloss, etc.

The mode L'saīn is A, B, C, D, E, F, G, A, but Arab musicians, like European, select a pitch suitable to the compass of the voice, and to the sentiment of the music performed. The question of pitch is of small importance with them, so long as the character of the mode, in its particular succession of intervals, is maintained. It was the same with the Greeks. Munro, in his "Modes of Ancient Greek Music" (1894), says that after Ptolemy's reform of the scales of the modes "the pitch was left to take care of itself." Hatherly ("Byzantine Music") shows that the same custom exists in Turkey and Syria. He says: "In the East it is not unusual, when the notes become inconveniently high or inconveniently low to suit his voice, for a singer to modu-
late into another key, as we should style it, taking his mode with him. . . . Instrumentalists do the same. . . . But effect, not convenience, is the constraining motive in their case."

Thus we have in this Nouba several keys, but the mode always remains the same, with the semitones from second to third and fifth to sixth degrees. According to Rouanet ("Répertoire de Musique Arabe") these transpositions are regulated, and only certain ones are allowed.

f
p
11.

THE "BECHERAF."

The Bécheraf is apparently the Mestekber alluded to by Rouanet, who says it is played by a solo instrument unaccompanied by the drums. Sir Arthur Sullivan, when in Cairo, describes hearing an Arab orchestra playing a Pescheveff ("Fortnightly Review," January, 1905). With the Nouba Gharnata
the prelude is called *Mestekber senda*, i.e., a classical prelude, to distinguish it from the ordinary *Mestekber* which precedes the songs in the *Nouba Neklabat*. There is also a smaller prelude called *Kersi*, which precedes all the movements of the *Nouba Gharnata*, save the last, as well as a vocal prelude (possibly the singer's recitative mentioned by Salvador), known as *Daira* (see also No. 13 of these "Notes").

---

12.

**THE "CIRCLES."**

The Arabs were much attached to the circle as a means of expression. They explained their modes in this way, as shown by Kiesewetter ("Die Musik der Araber"), hence the phrase "circulations of the mode." La Borde ("Essai sur la Musique") gives an example of the Arab system of musical notation by this means, which is extremely interesting.* His explanation of it, and its translation into modern notation by Dalberg ("Ueber die Musik der Indier"), although accepted by Kiesewetter, has been rejected

---

* It is taken from the sixteenth-seventeenth century MS. of Schamseddin-Saidaoui.
by Fétis ("Histoire Générale de la Musique"). The MS. of Ali of Ispahan contains these "circles," such as Salvador speaks of, to denote the rhythm.

13.

THE PRELUDES.

Shaw ("Travels in Barbary," 1757), who visited Mauretania very early in the eighteenth century, says that in the historical cantatas (presumably the Noubet) the Arabs had their preludes and symphonies, each stanza being introduced with a flourish from the Arabebbah (a kind of Rebab), whilst the narration was accompanied with some soft touches upon the Gaspah (Gosba).

14.

THE TONIC.

Salvador says the fourth note in the scale is always the tonic. His own examples will not stand this firm law.
13.

THE DRAWLED SCALE.

The nasal method of singing and the habit of gliding from note to note, especially in the gloss, has led historians and travellers, especially those who were aware of the Messel system of the fourteenth century Arabian-Persian theorists, to assert that the Arabs played these third and quarter tones.

It was this that probably misled Lane, who refers to these third tones as "small and delicate gradations of sound," which "give a peculiar softness to the performances of the Arab musicians."

This nasal intonation and portamento is an absolute necessity to an Arab singer, and the more exaggerated its character, the greater is the merit of the performer. Precisely the same idea exists with instrumentalists, the portamento being cultivated to the extreme. Naumann, the historian, found this peculiarity among the modern Greeks and Andalusians, which is probably a survival of Arab influence.

J. B. Wekerlin, in a lecture before the Société des Compositeurs de Musique, in 1864, agreed with Salvador and attributed Villoteau's belief in practical
third tones with the Arabs, to this nasal style and the drawled scale.

---

16.

THE "IRAK" MODE.

Here is the scale of the Irak mode:

\[
\text{Irak.}
\]

Of examples in the mode Irak, Christianowitch could find no trace. Yafil and Rouanet, however, give several specimens, a Tchenebar Irak, a Mestekber and Neklab "Li Habiboum Ked Samah li," and some Kadriot senāa and Zendani, and gives the scale as A, B, C sharp, D, E, F sharp, G, A, which clearly does not agree with Salvador. This scale is Djorka, which, as Salvador says, has the characteristics of Irak. Rouanet has perhaps confused the modes. Among the Zendani which he gives, the one entitled "Djatni bria" shows that he is not certain of the mode since he labels it Irak or Djorka. Salvador says in his "Notice sur la Musique Kabyle," that in the Irak songs the melody rests within the compass of a seventh,
the lowest note being A, and the highest G. This is clear from the examples he gives, "Erfed-adhar-im-ehouzz adaoui-m," "A-ir'ef-iou-ekker-our-eggan," a song made on the expedition of Marshal Bugeaud against them in 1847, and a song known as the submission of the Kabile to Marshal Randon in 1857. This compass may perhaps only refer to Kabile music, as the Tunisian-Moorish song, "Le Ramier," quoted by him as Irak, is not so restricted. The "Li Habiboum Ked Samah li," given by Rouanet as Irak agrees entirely with Salvador. Salvador speaks of the Hanefi chants being in this mode. So is the Koran chant given by Lane in his "Modern Egyptians." In the Eastern Arabian and Persian system there is an Irak mode known as the "Arabian mode." Its scale is A, B flat, C sharp, D, E flat, F, F sharp, G sharp, A.

Here is an example in the Irak mode:

"ERFED-ADHAR-IM-EHOUZZ ADAOUI-M." KABILE SONG.

(IRAQ MODE.)

\[ \text{Allegro} \]

\[ \text{Drums} \]
17.

THE "MEZMOUM" MODE.

Here is the scale of the Mezmoum mode:

\textbf{Mezmoum.}

There is an absence of the second note in the songs of the Mezmoum mode, says Salvador ("Notice sur la Musique Kabyle"). The scale really is E, G, A, B, C, D. It rarely ever reaches E octave, the melody usually lying in the compass of six or seven notes. This is noticeable in the specimens that he gives of Kabile songs, "Ait-erbah" and "Laman-ichoud-r'er-en-nedieh." Rouanet is rather confusing in his description of the mode, by saying it is the "Lydian" scale, and at the same time calls it the modern major scale, neither of which, how-
ever, agrees with Salvador. In Spain, says Salvador, all the old popular songs are in the Mesmoum mode, a fact which is also noticed by Engel ("Study of National Music"). Fétis says Mesmoum is not known to the Arabs of Asia, Egypt nor Spain. If this is so, it is further evidence of the independence of the music of the Mauretanian Arab. There is a quaint specimen of Bedouin music given by La Borde ("Essai sur la Musique"), which is entitled "Le Mizmoume." There is also an interesting Arab belief mentioned by Shaw ("Western Barbary," 1757), that "the flowers of mullein and mothwort will drop upon playing the 'Mizmoume.'"

Here is an example in the Mesmoum mode:

"Ait-Erhiab." Kabile Song.
(Mezmoum Mode.)
18.

THE "EDZEIL" MODE.

Here is the scale of the Edseil mode:

\[
\text{EDZEIL.}
\]

The Edseil mode is referred to by Christianowitch and Rouanet as Dil. The former gives no examples, and the specimens of the latter in the Kadriat senda and Zendani, seem to agree with Salvador, although Rouanet considers Edseil little different from Meia. The scale of the latter he gives in two forms, one of which falls entirely into Salvador's Edseil. Salvador has two specimens of the mode, both modern Kabile songs: one made on the expedition of the French against the Kabiles in 1851, and another on the expedition of 1856.

Here is an example in the Edseil mode:

\[
\text{KABILE SONG,*}
\]

\begin{align*}
\text{(EDZEIL MODE.)}
\end{align*}
Notes on Arab Music.

II.

* Song made upon the Expedition of General Pélinier against the Kabiles, 1851.

19.

THE "DJORKA" MODE.

Here is the scale of the Djorka mode:

DJORKA.

The Arabs to-day, according to Rouanet, say there is no mode Djorka because there is no Nouba Djorka. This is really no argument, since there are Noubet of which mere fragments remain, and so it is not unreasonable to suppose that the Nouba Djorka has been lost entirely. The mode is not mentioned by Christianowitch, but is acknowledged by Rouanet, who says that although its character seems more resolute, and has different endings, it is much about the same as Irak, the scale of which he gives as:
A, B, C sharp, D, E, F sharp, G, A. This is identical with Salvador's Djorka, and Rouanet is evidently wrong in assigning a common scale to both modes, as the difference between his Mestekber and Neklab Djorka "Mahma Iekter fel Moudelel," and his Mestekber and Neklab Irak "Li Habiboum Ked Samah li," is as clear as daylight. Salvador points out that Djorka has the characteristics of Irak, "from which it is sometimes difficult to distinguish it." In the three examples which the latter gives of Kabile songs, "A-bab-el-lefedhol," "Imma-Hanna" and "Complaine de Dahman-ou-Meçal," he admits that owing to the restricted compass of the songs he is unable to say whether they are in Djorka or Irak.

Here is an example in the Djorka mode:

"Klaa Bent Abbes," Kabile Song.

(Djorka Mode)

Allegretto \( \left( \frac{58}{4} = \frac{3}{4} \right) \)

Drums
Carl Engel probed forty melodies of the Algerians, and found twenty-seven in the major, three in the minor, seven major and minor, and three uncertain. Prima facie this disposes of the idea of the predominance of the minor mode with the Arabs. But the truth is, since the Meïa mode corresponds with our major scale, and the L'sain mode with our minor scale, there is abundant evidence that the music of the Arabs may be found more readily in the latter. Engel has evidently taken Christianowitch's harmonised arrangement\(^1\) of Arab music as his authority. This arrangement is done in con-
formity with European tonality, and is entirely wrong, so far as the modal base of the Arab is concerned.

21.

THE "L'SAĪN" MODE.

Here is the scale of the L'sain mode:

L'sain.

L'sain or Hassine is the name of one of the Eastern Arabian and Persian modes, known as "The Lament," and named probably after a famous national hero, Hassine or Hussine, whose death is the subject of a sort of national passion-play. This mode has a scale: A, A sharp, C, D sharp, F sharp, G, A, which is also the scale allotted to their mode Abuselik (evidently a mistake somewhere). However, from this scale it is clear that the Eastern mode has nothing in common with the Mauretanian.
Strange to say, it is the Eastern mode *Neva* that resembles the Arab mode *L'sain*. Christianowitch, who gives a *Nouba L'sain (Hoseïn)*, and Yafil and Rouanet, who give a *Touchiat Gribt L'sain (Has-sine)*, agree generally with Salvador's reading of the mode. The examples given by the latter are: part of a *Nouba L'sain* called "Yamina," an Algerian song, "Chebbou-chebban," and several songs of the Kabiles, "Zohra," "Stamboul" and "Dadda-Ali" (two versions).

Here is an example in the *L'sain* mode:

"**Chebbou-Chebban.** Moorish Song from Algiers.
(L'SAIN MODE.)

</table>

![Musical notation image]
22.

THE "SAÏKA" MODE.

Here is the scale of the Saïka mode:

Saïka.

Salvador gives no examples of Saïka, but Christianowitch has a Nouba Saïka, which agrees generally with Salvador's modal scale. Yet there is a persistence of F sharp and also of D sharp. This is noticeable too in the Yafil and Rouanet "Répertoire," the Touchiat Saïka, the Tchenebar Saïka (ancient march of the Dey of Algiers), the Mestekber and Neklab "Ghouzili Sekkour Nabet," the Mestekber and Neklab "El Ked eladi Sabani" and the Kadriat senaă.

Here is an example in the Saïka mode:

"INSIRAF NOUBA SAÏKA."

(MODE SAÏKA.)
Rouanet is uncertain of the scale, and gives it in three forms in which he found it, saying it has been altered from its original form. The Eastern Arabian Persian mode of Abuselik (= L'sain) agrees with Salvador's Saïka. The three bars at the Mathla in the example are in the Edzeil mode, which might be termed the relative mode to Saïka.

23.

**THE "MEIA" MODE.**

Here is the scale of the Meia mode:

![Meia scale notation]
Christianowitch gives the notation of a Nouba Meia, which agrees with Salvador's mode. Yafil and Rouanet, too, have some examples, a Touchiat Meia and a Moorish dance, "Bane Cheraff," which fall into Salvador's scale, notwithstanding that Rouanet confuses the student by saying first it is the Hypolydian scale (agreeing with Salvador) and again gives it as C, D, E, F sharp, G, A, B, C. In the Eastern Arabian and Persian system there is a Meia mode with a scale, B, c, D, e, f, G flat, G natural, A. It was called "The Treasury of Tones." From this it is evident that the ancients divined the "treasures" of the major mode (for such the Meia mode is) long before European civilisation had grasped it.

Here is an example in the Meia mode:

"HEUSS-ED-DOURO." MOORISH SONG FROM ALGIERS.

(Meia Mode.)

\[\text{Allegretto} \left( \frac{38}{\text{d}} \right)\]
THE "RÅSD-EDZEIL" MODE.

Here is the scale of the Råsd-Edzeil mode:

Fétis, in his "Histoire," misquotes Salvador's reading of the Råsd-Edzeil mode, and then proceeds to correct him. He gives Salvador's scale as beginning on G, whereas it should be D. Here are Salvador's
words: “Le mode Rāsd-Edseil, correspondant au mode Hyper-mixolydien des Grecs, et au huitième ton du plain-chant ayant pour base le ré, octave du premier.” Fétis also finds fault with his designation of the keys of plain-song, but according to the most trustworthy authorities, Salvador is right. Where Salvador might have stood corrected was in his conception of the Greek modes. This mode is mentioned by Christianowitch, but not by Rouanet. I have seen no examples of Rāsd-Edseil. (See No. 47 of these “Notes” for a mode Rāsd.)

25.

THE “TAAR.”

The Taar described by Lane (“Modern Egyptians”) is eleven inches in diameter, which is about the size of the one given by Christianowitch (“Enquisse Historique,” etc.). Lane says it “is held by the left or right hand, and beaten with the fingers of that hand, and by the other hand. The fingers of the hand which holds the instrument, striking only near the hoop, produce higher sounds than the other hand, which strikes in the centre.” Note this in relation
to the diversity of timbres from the drums as mentioned by Salvador in Chapter V. Shaw ("Travels in Barbary," 1757), who visited Mauretania in the first decades of the eighteenth century, describes the Taar of the Moors as identical with the above, but that of the Arabs and Bedouins did not have the metal discs in the rim. He says it served as a bass to the concerts, and the players touched it "very artfully" with their fingers, knuckles and palms.

![Taar](image)

**TAAR.**

26.

**THE "GOSBA" AND "DJAOUAK."**

Shaw ("Travels in Barbary," 1757) speaks of the Arab flute Gosba (Gaspah) of three or more holes according to the ability of the performer. Lumsden ("Trip to Algerine Territory," 1847) writes of an
Arab street player, who "played an air, if air it may be called, consisting of about two or three bars at the utmost, of a simple modulation on three or four notes on a rude flute." Shaw (see above) says Arab music rarely consists of "more than one strain." Lempriere ("Tour from Gibraltar to Morocco," 1793) found in the slow airs a "melancholy sameness."

THE DJAOUAK AND GOSBA.

27.

THE "DOF."

The Dof is about eleven inches in diameter, and is played and held similarly to the Taar. It has
"snares" stretched across the inside of the head, which give the instrument a sharp crisp tone. It is mentioned among the instruments of the Arabs of Spain by Al-Farabi (tenth century), and still in use by them to-day as the *Aduf*. The *Dof* of Persia given by Ouseley (*"Travels,"* 1815) is more like a huge tambourine without the metal plates. The *Tof* of the Hebrews, according to Kircher (*"Musurgia Universalis"*) appears to be like a kettledrum.

**Dof.**

### 28.

**THE "KANOUN."**

The name *Kanoun*, says Lane is derived from the Greek and means "rule," "law," "custom." The *Kanoun* of Mauretania is of different shape to that used in Egypt and Asia, being more like the *Santir.*
The Kanoun described by Lane ("Modern Egyptians") has seventy-two strings. Fétis, quoting the Belgian Consul at Alexandria in 1839, as his authority, says the instrument had seventy-five strings, like the one described by Salvador. The instrument is played on the knees. "Under the hands of a skilful player," says Lane, "the Kanoun pleases me more than any other Egyptian instrument without an accompaniment." Salvador says, in his "Essai sur l'origine de quelques instruments," that whilst the instrument came from the Greeks, he is not sure whether it is derived from the Trigonon or Kynnira. The former seems the more probable etymologically, and moreover we find that Al Makkari mentions the Kennire with the Arabs.
29.

**THE "KANOUN" SCALE.**

Fétis ("Histoire, etc.") says the lowest note is E and gives a different scale.

30.

**THE "RAITA" OR "SAÏKA."**

Among the instruments of the Arabs of Spain, as given by Al-Farabi (tenth century) are Azahika (Saïka) and Almeya (Méia). In Spain today there are dances by these names, which are of Arab origin (Fuertes, "Historia de la Musica Española").

31.

**THE "ATABAL" AND "NAKÁKEER."**

Salvador does not speak of the kettledrums as Nakákeer, a word generally considered to be the Arabic equivalent, but as Atabal, which, he says, is the old Arab designation.* The term Nakákeer is

* This is also the designation of Christianowitch.
not used in Mauretania for kettledrums. It is, however, the common appellation for them with the Eastern Arabs, and in Egypt, Persia and India. In his "Essai sur l'origine de quelques Instruments," Salvador points out that Nacguaires (Nakâkeer) was the general term used by the ancient Arabs for their warlike chansons, and as the kettledrums were, with the oboes, the warlike instruments, the word Nacguaires became transferred to the kettledrums, just as the military oboes became known under the name of the mode in which the war-songs were sung, viz., Saïka or Raita. The word Naguaires (known to the French as Nacaires and the English as Nakeres) doubtless came into Europe at the time of the Eastern Crusades (Michaud, "Histoire des Croisades"). With the Arabs of Spain, kettledrums were Atabal, as with the Mauretanian Arabs. It is the name for kettledrums with the Spaniards to-day. Here again we see the independence of the Mauretanian from the Eastern Arabs. (The question of its introduction into Europe is dealt with fully by Kastner, "Manuel Générale de la Musique Militaire," and also in the present writer's "Rise and Development of Military Music").
32.

THE MILITARY BAND.

A traveller (Lumsden, "Trip to Algerine Territory," 1847) describes a military band of the Arabs as comprising "three wind instruments resembling clarinets, of a very rude construction, however; six small drums shaped like our kettledrums, but measuring only six or eight inches in diameter; like the kettledrums, each person took charge of two; three large bass drums played upon with a regular drumstick at one side, and a switch at the other; and two pairs of brass cymbals." This is little different to the military band of the Turkish Janissaries (Farmer, "Rise and Development of Military Music," 1912).

33.

THE "ATAMBOR.

The Atambor seems to be identical with the Tabl given by Lane ("Modern Egyptians"). Like the
Nakakeer, it belongs to military and processional music. At the time of the Crusades it was adopted by the Western armies for their military bands, which hitherto had only been served by trumpets and horns. In England this Eastern name for the side drum (Tabor) survived until as late as the eighteenth century (Grose, "Military Antiquities"), although it had been then generally superseded by the word drum. In France, as Tambour, the designation still persists.

ATAMBOR.

34.

THE "DERBOUKA."

Lane speaks of two kinds of Derbouka, of wood and of earthenware. That used amongst the Arabs
of Mauretania appears generally to be of the latter (see Christianowitch, "Enquisse Historique," and Campbell's "Letters from the South"). It is about fifteen or sixteen inches long, and in being played is suspended by a cord over the left shoulder, and carried under the left arm. It is beaten with both hands and yields different sounds when beaten near the edge and near the middle. Macgregor in his "Eastern Music" says: "Its tone is full and musical with a range of three notes depending on the mode and place of striking the top." Among the upper classes, some beautifully designed Derboukas, inlaid with mother-of-pearl, are used.
35.

THE "BENDAIR."

The Bendair, as we may see from the illustration, resembles the Taar, but the metal discs which jingle in the rim are missing. Instead of these, there are "snares" stretched across the inside of the head, which give the instrument a tone like our side drum.

36.

THE "REBAB."

Rebab, says Lane ("Modern Egyptians"), is the general Arabic name for a viol. In its earliest form (which is given here and also in the frontispiece) it was probably not a bowed instrument, but
played like a guitar. It was found in this form in modern times among the desert Arabs (Crichton, "History of Arabia"), and also in Algieria to-day with the Kabiles. When it became a bowed instrument is difficult to say. Fétis ("Antoine Stradivari," 1856) says that a bow with a fixed nut may be seen among the ornaments in a collection of poems, of an Arab MS. of the time of the first caliphs (seventh century) at the Imperial Library of Vienna. Al-Farabi is usually referred to as the first to men-
tion the *Rebab*. But it is mentioned by Ali of Isphahan as being used by the musicians at the court at Bagdad two centuries and a half before this. Al-Farabi speaks of *Arrabil*. This is none other than the *Rebab*. Heron-Allen, the diligent historian of the violin, mentions having seen in the Basque provinces the *Rebab* under the name of *Rabel*; whilst our own Chaucer speaks of the *Ribible*. This instrument, shown above as the *Eastern Rebab*, was, no doubt, used by the Arabs and Moors at the time of their conquest of Spain, and may be counted as one of the precursors of our violin. Kathleen Schlesinger ("Precurors of the Violin Family"), one of the most careful and diligent of musical antiquaries, has not accepted this flat-chested *Eastern Rebab* in the ancestry of the violin, for these reasons: Because: (1) it is entirely different to the European *Rebec*; (2) it is held like the violoncello; (3) there are no proofs of its antiquity. None of these reasons appear to be valid enough for rejecting the *Eastern Rebab*, as: (1) the *Rebec* did not come from the flat-chested *Eastern Rebab*, but from the *Oud*, which, as we shall see later, was the parent of the vault-chested *Moorish Rebab*; (2) other recognised
precursors of the violin were played violoncello-wise, e.g., the guitar-fiddle given by Miss Schlesinger in Fig. 176, which is admitted to be "by no means a solitary example of this position"; (3) the very primitive construction of the Eastern Rebab is itself sufficient evidence of its antiquity.* It is used everywhere by the Arab race, save in Mauretania. I feel convinced that Miss Schlesinger is wrong in neglecting this flat-chested Eastern Rebab, and preferring to treat with the vault-chested Moorish Rebab, which is simply the bowed Oud. The valuable references which she has given to the vault-chested Rebab from Susa and the Sassanian silver dish, merely confirm the antiquity of the Oud and not the Moorish Rebab.

There seems every reason for believing that it was the flat-chested Eastern Rebab which the Arabs and Moors brought to Spain. A Rebab is mentioned by Al-Farabi as one of instruments used by the Moors of Spain, and that this was the bowed flat-chested

* In Appendix E of her "Precursors of the Violin Family," the reference to a rectangular cittern found in a fresco of the Omayyad or Abbaside dynasties, may modify this doubt of the antiquity of the flat-chested Rebab
Eastern Rebab is evident from a contemporary Arab writer, Ali of Isfahan, who says in the "Liber Cantilenarum" (Fol. 69) that it was played on a foot or peg violoncello-wise. It appears, however, that at a period subsequent to this (i.e., after the tenth century), another kind of Rebab came into use—the vault-chested Moorish Rebab. How this came about we can only surmise.

During the Middle Ages we find the same string instrument played in various ways, by hand, plectrum or bow. This practice was evidently common with the Arabs as it is to-day, and the Oud, which was their most important instrument, was no doubt one such instrument played alike by hand, plectrum and bow. But as the term Rebab was given generally to all bowed instruments (Lane, "Modern Egyptians") just as Tanbura was common to all wire stringed instruments (Niebuhr, "Travels through Arabia"), it is possible that the bowed Oud became known in the course of time, as a Rebab, and eventually this bowed Oud, (now the vault-chested Moorish Rebab), was actually preferred so much to their flat-chested Eastern Rebab that the latter was
allowed to fall into neglect.* This is the reason why to-day, the Mauretanian Arabs, the descendants (and how proud they are of it) of the Moors of Spain, possess the vault-chested Moorish Rebab, whilst the entire remaining Arab race has the flat-chested Eastern Rebab.†

With Europe, the very opposite took place, for although it kept the hand and plectrum, played L'Oud in the Lute, which has survived in the modern Mandoline, it abandoned the bowed Oud (or Moorish Rebab).

* The fourteenth century Spanish poet, Ruiz (quoted by Riaño, "Notes on Early Spanish Music") refers to the shrill tone of the Moorish Rebab (Rave Morisca), which was most likely the vault-chested instrument. We see the same preference for the vault-chested type in the Oud. From the types given in the Spanish "Cantigas de Santa Maria" (thirteenth century), the Moor seems to have a vault-chested instrument like our Mandoline, whilst the Spaniard favours a flat-chested instrument like our Guitar.

† Shaw, who visited Mauretania in the early eighteenth century, refers to the Arab and Bedouin population having the Arabebbah ("the bladder and string") which was evi-
Moorish Rebab), after it reached the Rebec and Geive stage. On the other hand, it developed the flat-chested instruments, the Eastern Rebab especially, which with the flat-chested Pandore (the Bandurria of Spain) contributed to the parentage of the modern violin.

If we compare the European Rebec, Rubeba, etc., of the twelfth and thirteenth centuries, we will find them almost identical with the instrument used by the Mauretanian Arabs of modern times. The truth is that whilst Europe has progressed with civilisation, the Arabs have remained stationary, and the instruments of the modern Arabs are practically in the same state as they were at the fall of the Arab polity in Spain.

Yet here a problem arises. In Mauretania to-day, whilst the Moorish Rebab retains its original designation and form, the Kemendjah has grown out of all recognition to its original type. Now the original Kemendjah may be seen in Lane's "Modern
Egyptians," and on page 169 of the present work. In the Persian language, says Lane, it means "a bow instrument," and indeed it seems to be of Persian or Indian origin. Villoteau says that it is Persian, and in the lexicons means "a viol," whilst Fétis would derive it from the Indian Omerti. The instrument (at least by name) was unknown to the early Arabs of Spain, and is not mentioned in Arabic works until the fourteenth century. It is also unknown to travellers in Mauretania during the seventeenth and eighteenth centuries. Shaw, in his "Travels in Barbary," 1757, devotes a whole chapter to music, but does not mention the Kemendjah by name. He does, however, refer to the Arabelbah, the Rebebb with two strings, and "a long-necked kitt or fiddle, played upon like the rebebb." This latter would appear to be the Kemendjah.

With the Eastern and Egyptian Arabs, the Rebab has made no progress, and remains to-day almost in its primitive form. It was these people who probably first adopted the Persian Kemendjah of two strings, as an improvement upon their own cumber-
some one-string instrument, and thus it probably became the custom of looking upon all improved bowed instruments under the general designation of Kemendjah, as has been suggested by a recent writer (Harold Sheridan) in "Cairo Scientific Journal." This notion (although it is in direct defiance of the conservative Musulman spirit) may have taken ground in Mauretania, but how it grew from its primitive state with the cocoanut sounding-board, to the present Moorish Kemendjah, which is almost identical with our violin, is not easy to grasp. Villoteau found an improved kind of instrument in Egypt, which tended towards the model of our modern violin, and from this, and the examples of Fétis, such as this Kemendjah (see illustration) one might be tempted to believe in a gradual evolution up to the present Moorish Kemendjah given below, but the clear-cut European features of the latter are unmistakable.
37.

THE "KOUITRA."

The Kouitra, which seems to belong specially to the Mauretanian Arabs, is a derivation of L'Oud, an instrument common to Eastern Arabs. But the former is smaller, has no frets, and the head, instead of being turned at a right angle, is almost straight. In Persia it is called Sitar, which means literally "four strings." It is mentioned in two sizes by Al Farabi with the Arabs of Spain in the tenth century, and also by Ali of Isphahan. Addison in his "West Barbary" (1671), speaks of Fez possessing good teachers of the Kouitra. Shaw ("Travels in Barbary," 1757), who visited Mauretania in the early years of the eighteenth century, and speaks of the music of the Moors as "more artful and melodious" than that of the Arabs and Bedouins, says also that they had a greater variety of instruments, and among them Quetaras (Kouitras) of different sizes.

As the Rebab passed into Europe as the Rebec, L'Oud as the Lute, etc., so the Kouitra became the Guitar. Concerning the latter, however, Salvador believed that the Arabs got the instrument from the Greeks, through the Romans, who brought it to
Spain, where the Arabs found it. (Salvador’s "Essai sur l'origine de quelques Instruments."

KOUITRA.

Kathleen Schlesinger ("Precursors of the Violin Family") shows, like Salvador, that the Guitar is derived from the Kithara, and says that "in Arabic of the present day the word kithara is still in use, but the Arabs of North Africa pronounce it githara (with a hard 'g' and a 'th' as in 'thick')." This is
a very sweeping statement which, according to Salvador ("Essai sur l'origine de quelques instruments"), requires some modification. Salvador says that whilst in Algeria the pronunciation is Kouitra, it is more soft in Tunis, and in Morocco is simply Kitra. This agrees with the mediaeval Hispano-Arab word Cuirte or Cuitara. Where the hard "th" is to be found, says Salvador, is in Alexandria, where the "t" is pronounced "th" as we do in English.

38.

THE MUSICAL ALPHABET.

In the sol-fa used by the Moors we again have evidence of the Greek basis of the music of the Mauretanian Arabs. If they had maintained the old Arabic-Persian theory, they would, instead of the sol-fa, referred to by Salvador, speak of A as Alif, B as Ba, C as Gim, D as Dal, E as He, F as Vau, G as Zain. Crichton, in his "History of Arabia," says: "It is highly probable that the terms sol, fa, ut, etc., used in the old mode of teaching music, were borrowed from the Moors of Spain." Pocock, in his "Flowers of the East," holds a simi-
lar view to this. Fuertes ("Historia de la Musica Española") also makes this claim for the Moors.

39.

THE "GUNIBRY."

The Gunibry, which is favoured by the Kabiles, belongs only to the Mauretanians. It is like the Tanbura,* an instrument common to Eastern Arabs, and played like it with a plectrum but differs in having no frets. Now, the presence of the fretless Gunibry and Kouitra with the Mauretanian Arabs, and the presence of the fretted Tanbura and L'Oud with Eastern Arabs, again bears evidence to the independence of the musical system of the former. Beside the Gunibry and Kouitra, the flutes and

* The Tanbura, through its phonetic variations, Pandura, Pandola, Mandura, became the European Mandola and so the Mandoline.—(Hipkins in Grove's "Dictionary.")
The Arab Orchestra.

oboos of the Mauretanians differ, at least by name, from those of the East. The Mauretanians have the Gosba (or Djaouak) and Raita, whilst the Eastern Arabs have the Nay and Zemr. In a list of two hundred Arab and Persian instruments given by Kiessewetter ("Musik der Araber"), no mention is made of the Mauretanian Gosba, Djaouak, Raita or Gunibry,* which shows how the author's researches were particularly confined to the Arabs of the East and Egypt.

——

40.

THE ARAB ORCHESTRA.

An Arab orchestra to-day usually comprises, besides singers, the Kemendjah or Rebab (sometimes both), the Gosba, the Kanoun, the Kouitra, the Taar, Derbouka and Znoudj, etc. This has been its constitution for centuries. Lane, speaking of Egypt, describes the position of these musicians when performing. "The performer on the Kemendjah usually sits on the right hand of him who performs on

* Unless it is the same as Gunawe.
the Kanoun, or opposite (that is, facing) the latter, on the left hand of whom sit the performer on L'Oud (the Kouitra in Mauretania); and next to this last is the performer on the Nây (the Gosba of Mauretania)." In an engraving (circa 1800) of an Arab orchestra in the writer's possession, the performers are ranged in one line, from left to right, thus: Taar, Kouitra, Gosba, Kemendjah and Bendair. Christianowitch says that in the Turkish songs and melodies, i.e., the martial music, the Raita and Atabal are introduced.

41.

AVICENNA ON MUSIC.

Avicenna, the famous Arab philosopher of the eleventh century, had said Arab music comprised two parts: the télif (melody) and the ikāa (rhythm or measure).

42.

INFLUENCE OF MUSIC UPON THE ARABS.

"The natives of Egypt," says Lane, "are generally enraptured with the performance of their vocal and
instrumental musicians: they applaud with frequent exclamations of 'Allah!' and 'God approve thee!' 'God preserve thy voice!' and similar expressions. Jorsen in his notes to the Arabic version of the "Arabian Nights" says: "The effect produced by music upon the people of the East is often very powerful. When under no restraint, they give way to the excitement of the moment, and vent their feelings in exclamations and cries. I have been frequently told of men being completely overcome, falling senseless and fainting under the influence of music."

Naumann says that "F. G. Welcker, the archaeologist, repeatedly saw Dervishes dance till they fell to the ground in spasmodic fits, oftentimes foaming at the mouth" ("History of Music"). The literature of the Arabs is full of the wonderful effects produced by their music. This, as Salvador points out, may seem strange to Europeans, especially when we see ("Notes," 6) how distasteful this music is to them generally. Besides Salvador, who believed in this power of Arab music, I have only read of one other personal testimony of a European to this effect of music upon the senses. Edmond de Amicis, in his
"Morocco" (1897) tells us when he first heard Arab music he felt "bewildered, with my brain in a tumult, and a curious, unfamiliar impression of my own personality." And this was produced by "a few notes of a thin human voice and a discordant guitar." And yet he says, "in that continual repetition of the same motive, almost always a melancholy one, there is something that little by little steals over the soul."

_____

43.

**THE "RUMMEL-MEİA" MODE.**

Here is the scale of the Rummel-Meia mode:

Rummel-Meia is mentioned by both Christiano-witch and Rouanet. The latter gives several examples, a Tchenebar Rummel-Meia "Noubet el Sultan," a Mestekber and Neklab "Ya Badi el Hassni ahla ya Merhaba," a complete Nouba Rummel-Meia, and
several Kadriot senda and Zendani. The scale, according to Rouanet, is A, B, C, D, E, F sharp, G, A, which is totally different from Salvador’s scale.

44.

THE "L’SAIN-SEBAH" MODE.

Here is the scale of the L’sain-Sebah mode:

\[
\text{L’SAIN-SEBAH.}
\]

Neither Christianowitch nor Rouanet mention this mode, L’sain-Sebah, and Salvador has left no examples. In Rowbotham’s "History of Music" (page 577, Vol. III) there is an Arab song taken from a MS. collection of Turkish, Persian and Arabic songs of the seventeenth century, in the British Museum, which has the character of L’sain-Sebah. The "Osmanie Imperial March" given by Hatherly in his "Treatise on Byzantine Music," seems to be in this mode, the second part undoubtedly. It certainly cannot belong to any of the eighteen chromatic modes which Hatherly specifies for the Orient.
In these modes, by the way, I can only trace one of Mauretania: and that is Asbein.

---

45.

**THE "ZEIDAN" MODE.**

Here is the scale of the Zeidan mode:

Zeidan.

\[ \text{\includegraphics[width=2in]{zeidan-scale.png}} \]

The scale of Zeidan, says Rouanet, is A, B flat, C sharp, D, E, F, G, A. This scale, according to Salvador, is Asbein. The latter points out that these two modes are frequently confused in Algiers, and perhaps Rouanet has mistaken the scale, as it is really difficult to discriminate between them. In the examples given by Yafil and Rouanet, a Touchiat Zeidan, a Mestekber and Neklab Zeidan "Ya Rachael Fitane," and several Kadriat senda and Zendani, it is possible to read both scales into them. Christiano-witch gives a Nouba Zeidan, but with the exception of the first movement, it cannot be interpreted with Salvador's scale. The examples given by the latter in his "Chansons Arabes" are: a song, "Soleîma" (given below), and a movement (Khēlas) from
The "Zeidan" Mode.

the Nouba Zeidan known as "Ma Gazelle." One of the famous musicians of the Moors of Spain was a Ben Zeidan.

Here is an example in the Zeidan mode given as it is usually sung, i.e., a fourth higher than its modal base, but still preserving the modal character. Transpositions are customary with the Arabs (see No. 10 of these "Notes").

"Soleīma."
(MODE ZEIDAN.)
46.

THE "ASBEIN" MODE.

Here is the scale of the Asbein mode:

```
Asbein.
```

The mode Asbein is not mentioned by Christiano-witch nor Rouanet. Salvador published a Moorish song from Tunis in this mode which I have not seen. The example below from Salvador's "Chansons Arabes" is an old song of the Moors of Spain, and although Salvador does not specify the mode, it is I believe Asbein, although the latter part (from *) is Meia. In the Eastern Arabian and Persian system there is a mode Ispahan, with the same scale as Asbein. It is possible that the word Asbein is a corruption of Ispahan.

Here is an example in the Asbein mode:

"THE ANGEL OF THE DESERT."
(MODE ASBEIN.)

```
A la Valse
```

```
The "Asben" Mode.
47.

OTHER ARAB MODES.

Both Christianowitch and Rouanet mention other modes which do not appear in Salvador's list. The former speaks of five: Medjenneba, Rummel (Raml), Ghrib, Rāsd (Roust) and Rhaoui. These, with the exception of the last, are referred to by Rouanet, who adds another, Moual. These six added to the twelve of Salvador's make eighteen, the number of modes in the Eastern Arabian and Persian systems. Against this half suggestion we must remember that Salvador says the Mauretanian Arabs claim to have fourteen modes (although he could only find twelve), whilst Christianowitch also names fourteen and Rouanet* fifteen, but only give proof of twelve, although not the same as Salvador. At the same time, there are several modes mentioned by Salvador which are ignored by the other two writers. Christianowitch does not mention Djorka, and Rouanet does not mention Rāsd-Edzeil, whilst neither of them refer to L'sain-Sebak nor Asbein. It

* Al-Farabi, the tenth century Hispano-Arab theorist, speaks of sixteen modes.
is, of course, not improbable that some modes may be known by several names. Let us look into this.

The Moual mode, says Rouanet, is the same as Meia, and certainly the Mestekber and Neklab Moual called "Djar el Haoua Ouhrek," as well as all the Zendani Moual, in the "Répertoire," bear him out.

Rhaoui, says Christianowitch, has been entirely lost, there being no examples extant. There is, however, a mode by this name in the Eastern Arabian and Persian system, with a scale, A, A sharp, C sharp, D, D sharp, F, G, A, which has the features of Rummel-Meia.*

Of the mode Rāsd, there is no trace of the scale, says Rouanet, yet he mentions a Nouba Rāsd, and says the Touchiat Mesmoun is played with it, there being no Touchiat Rāsd. From this it would appear that Rāsd and Mesmoun had something like a common scale to permit their use together in a Nouba Gharnata. There is a mode Rāsd in the old Eastern Arabian and Persian systems, the first tetrachord of which resembles Mesmoun. Its scale is A, A sharp, C, D, E, F sharp, G, A.

* The wandering minstrels in Arab Spain were called Rhaouis.
Rouanet mentions *Medjenneba* but does not specify its scale. Yet, since he says that the *Touchiat Gribt Hassine* (which agrees with Salvador's *L'saïn*) is played for either the *Nouba Hassine* or *Nouba Medjenneba*, these two modes may have a common scale. Christianowitch gives a *Nouba Medjenneba* which has the characteristics of *Irak*.

Of the mode *Rummel*, there is a *Nouba Rummel* (*Raml*), in Christianowitch, and a *Touchiat Rummel* (*Remel*) in Rouanet. In neither of these have I been able to determine a common scale, and even Rouanet does not seem to know it. It sometimes looks like *Djorka*, and possibly they are one and the same.

Rouanet also confesses his inability to grasp the scale of the mode *Ghrib*, although he gives a *Touchiat Ghrib*, whilst Christianowitch gives a *Nouba Ghrib*. Again, I cannot locate a common scale for this mode.

From all this we may hazard a summary, although a very doubtful one:

*Moual* = *Meia.*
*Rhaoui* = ?.
*Räsd* = *Mezmoun.*
*Medjenneba* = *L'saïn, L'sain-Sebah* or *Irak.*
Invention of Notes.

Rummel = Djorka.
Ghrib = ?.

Perhaps it is more likely that these are the names of some ancient modes, which are not in practical use to-day save in relation to the ancient Noubet, and even then have lost their modal characteristics.

It is significant that in the Yafil and Rouanet "Répertoire," the names of these modes only occur in the ancient music of the Moors of Spain, and not in the modern Arab, Moorish or Turkish music of Mauretania.

47a.

INVENTION OF NOTES.

This claim of Salvador's for Jean de Muris and the invention of notes, was the current view. Coussemaker, however, disproved it. It is strange, however, that whilst European music in the tenth century had but three note values, the Arabs of Spain, according to Ali of Ispahan, had four, and a century later had eight. (Fuertes, "Historia de la Musica Española.")
48.

**HARMONY UNKNOWN TO ARABS.**

Parry, in his "Art of Music," when treating with the rise of harmony, and endeavouring to show an inherent desire for it, speaks of the "practice of combining several tunes together" by "several savage and semi-civilised races.... for instance, the Bushmen at the lower end of the human scale, and the Javese, Siamese, Burmese and Moors about the middle." With other than the Moors we have no concern here; but with them, I protest that there is not the slightest evidence of any such practice as he suggests. It is an entire misreading of the structure of their music. It is the "gloss" that has misled his "authorities," who in turn have misled him. Even so careful a writer as Ernest Newman follows Parry in this so far as for him to assert* that "phenomena like these undermine the crude and hasty inference that Orientals and savages have no notion of harmony." He surely cannot accuse Villoteau and Salvador of "crude and hasty inferences"! At any rate he sets out to prove his

---

* "Musical Studies" ("Spencer and Origin of Music").
argument by saying that "with many instruments of various shapes and sizes, it is incredible that the performers should all have been playing the same notes," and quotes Emil Naumann as his authority.

Now although Ernest Newman admits that the result "could not have been harmony in our acceptation of the word," we must remember that Emil Naumann (his authority) distinctly means our acceptation of the word, since he speaks of these various instruments "sustaining the melody by chords, arpeggio or otherwise." What is more, Naumann's English editor, Sir F. Gore Ouseley, took the meaning in our acceptation of the word, and rebuked Naumann for "an assertion which is in total opposition to the present practice of Oriental nations, as well as to all their indigenous traditions." Again, let it be stated clearly that so far as the Moors are concerned, and indeed all purely Arab music of Mauretania, Egypt, Syria and Arabia, harmony is unknown. Shaw, speaking of Mauretania ("Travels in Barbary," 1757) says there is no "contrast or variety of parts" in their music. Niebuhr, in his "Travels through Arabia" (1790), found that "all the instruments play in unison; unless it happen that
one or another, take the fancy to play a continual bass.” Ouseley (a learned orientalist, so interested in Arab and Persian music that he began translating the ancient music treatises of the East), tells us in his “Travels” (1815) of the absence of “harmonious combinations or counterpoint.” Edmond Yafil, the director of the Ecole de Musique Arabe in Algiers, says positively: “la musique arabe n'admet pas les sons concomitants et en est restée à la symphonie d'unissons et d'octaves d'Aristote.” Jules Rouanet, Officier d'Instruction Publique, Algiers, and late director of the Ecole de Musique du Petit Athénée, Algiers, also insists in his “Répertoire de Musique Arabe,” that harmony does not exist with the Arabs. Indeed, in the correspondence that I had with MM. Yafil and Rouanet I found them so strict on this point, that they severely censured Salvador for daring to harmonise Arab music. The “gloss,” as we have said, is responsible for this false notion concerning Oriental music. In Arab music we have the “singing instruments” (as Salvador calls them) and the voice, which start out to intone the theme proper. Then, each instrument takes the theme which it improves with the “gloss” in its
own particular fashion: the Kanoun has its rapid scales, the Kouitra its repeated notes (*à la Mandoline*) and left hand pizzicati, the Kemendjah its ornaments without end, to which must be added the gamme trainée of the singer. It is these several "glosses" of the theme played together that have led the uninitiated to conclude that different themes were in progress.

---

49.

**FELICIEN DAVID AND ARAB MUSIC.**

Salvador's complaint against Félicien David for "bowdlerising" Arab melody, has substantial grounds. In spite of the claim of Francis Hueffer (Grove's "Dictionary") that David is "almost the only composer of his country who can lay claim to genuine local colour," and that "his Arabs are Arabs, not Frenchmen in disguise," anyone who cares to look into "Le Désert" will see for himself how David has "modified" Arab melody to suit our harmonic and melodic tastes, and that his Arabs are very much "Frenchmen in disguise." Moreover, despite the fact that David had travelled for many
years in Asia Minor and Egypt, his published specimens do not reveal much original research, since so many of them are to be found in La Borde, Villotteau and Lane. Naumann refuses to admit that David copied his material from these writers, and argues that the identity is simply "further proof of its genuineness." Against the "genuineness" of David, it must be remembered that one specimen of Arab music that he "palmed off" to Europe, was afterwards identified with a work written in his St. Simoneon days, for the "brotherhood."

---

30.

THE ORIGIN OF THE MOORS.

It is worth noting that Fétis recognised six of the Mauretanian modes as identical with those of ancient Egypt. This led him to argue that the Moors under the name of Berbers came from Egypt. This theory should be compared with Salvador's, which is contained in an interesting lecture before the Société des Compositeurs de Musique, entitled "Les Chants cabirique ou gallique."

THE RISE AND DEVELOPMENT
OF MILITARY MUSIC

BY

HENRY GEORGE FARMER

(With an Introduction by Lieut. A. Williams, M.V.O.,
Mus.Doc., Bandmaster Grenadier Guards)

13 Illustrations

PRESS OPINIONS.

"The Standard" says: "More than welcome.... The
history and evolution of the band.... and a mass of
other exceedingly interesting particulars are told in a man-
ner which cannot fail to make the work a valuable addi-
tion.... to this department of musical art."

"The Daily Telegraph" says: "A considerable array of
facts and a good deal of out-of-the-way information."

"The Yorkshire Post" says: "Shows a considerable
amount of research.... and the information it gives re-
garding modern times.... is often valuable."

"The Musical Standard" says: "Summarises the facts
in a masterly manner, which cannot fail to interest."

"The Music Student" says: "Much needed literature."

"The United Service Institution Journal" says: "A
compendious history."

"The Stage" says: "May be recommended heartily.
A capital and.... commendably exhaustive treatise."

LONDON:
WILLIAM REEVES, 83 CHARING CROSS ROAD, W.C.
Price 5s.

MEMOIRS OF
THE ROYAL ARTILLERY BAND
ITS ORIGIN, HISTORY AND PROGRESS

BY
HENRY GEORGE FARMER

14 Illustrations

Press Opinions.

"The Daily Chronicle" says: "An interesting history, quaint old lore relating to the earliest military music in England."

"The Times" says: "A record of considerable research."

"The Daily Telegraph" says: "Very interesting reading."

"The Musical Times" says: "We have nothing but praise for the book which shows a considerable amount of original research. Much information on a branch of music that is comparatively little known."

"The Monthly Musical Record" says: "This work will be thankfully received."

"The Orchestral Times" says: "A most exhaustive history."

London:
WILLIAM REEVES, 83 CHARING CROSS ROAD, W.C.

HISTORY | ORCHESTRA
CRITICISM | PIANO
ÆSTHETICS | VIOLIN
ESSAYS | VOCAL
WAGNER

"Mr. W. Reeves, who has established his claim to be regarded as the recognised publisher of English Musical Literature, has a strong list of books for the amateur and the professor."—Publishers' Circular.

"William Reeves, who makes the propagation of works on music his speciality."—Music Trade Review, New York.

"Mr. William Reeves, the publisher, beyond all other publishers, of the literature of music."—The Expository Times.

"The best and safest method for the inexperienced to adopt, is to make application to some leading and trustworthy publisher of musical books of the class in question, relying on his judgment and the traditions of his house to supply what is genuine and suitable. Without being invidious, we may say that such a publisher is Mr. W. Reeves."—Bazaar.

"The Press which in recent years has given to the musical world so much that is of intrinsic value."—Sheffield Daily Independent.

"Mr. Reeves is a famous publisher of music."—Musical Star.

"There are few publishers of musical works who turn out more up-to-date and suggestive productions than Mr. W. Reeves."—Kelso Chronicle.

"Mr. William Reeves, the well-known London publisher of musical books."—The Scotsman.

"Nous ferons remarquer combien le catalogue de la libraire Reeves temoigne et par les ouvrages originaux et par les nombreuses traductions, du developpement musical en Angleterre."—Gustave Robert in the revue, S(ociété) I(nternationale de) M[usique].

W. REEVES, 83 Charing Cross Rd., London, W.C.

(26) Revised Editions of this Catalogue B are issued in the Spring and Autumn or oftener.
Announcements.

Until quite recently it was thought impossible to give practical instructions on the art of teaching, but the error of this idea has been proved by the great success of the teachers' classes at the various musical institutions. The author's aim is to supply a guide-book expressly for beginners and those with limited experience in the art.

HISTORY OF THE VIOLONCELLO, the Viol da Gamba, their Precursors and Collateral Instruments. With Biographies of all the most Eminent Players of every Country. The Result of Thirty Years' Original Research. By Edmund J. S. van der Straeten. Illustrated with Portraits, Musical Examples, Facsimile Letters, Reproductions from Rare and Curious Paintings and Engravings. Nearly 700 pages, 8vo, cloth, 21s. net. Descriptive prospectus on application.

Also a limited edition in two volumes, with Additional Illustrations. £1 11s. 6d. net.

THE VOICE AND SINGING. Practically Explained. Condensed and Comprehensive Information by an Experienced Singer and Teacher. Cloth, 2s. (paper, 1s.).

Announcements.

HOW TO ACCOMPANY AT THE PIANOFORTE. By EDWIN EVANS, Senior. With Music Examples throughout.

CHATS WITH VIOLINISTS. By WALLACE RITCHIE (author of "Advice to Violin Students"). With Illustrations. Crown 8vo, cloth, 2s. 6d. net.

Chapters: On the Importance of being Accurate on Various Details; On the Violin and its Fittings; On Reading from Sight and Playing from Memory; A Few Violin Secrets; Some Valuable Technical Exercises; Hand Development for Violinists, including Eighteen Excellent Finger Gymnastics; Sundry Useful Hints.

I here lay before the public information and advice which I have hitherto been content to reserve for the sole use of my own private connection of pupils. During a considerable experience, both as a student and as a teacher of the violin, I have naturally pieced together quite a variety of small hints and items of information which, though modest enough individually, have been found on the whole to be of no inconsiderable value, not only with regard to my own playing, but also—and which is of far more importance—in enabling me to impart a knowledge of the art to others.

There is no suggestion in this book which I have not over and over again impressed orally upon my pupils as occasion required, and I may safely say that in every instance where my advice has been honestly put to the test nothing but the highest benefits have been derived.

MUSIC IN EDUCATION. By EDWARD DICKENSON. Crown 8vo, cloth.

WELL-KNOWN VIOLONCELLO SOLOS. How to Play them with Understanding, Expression and Effect. By EDMUND VAN DER STRAETEN. First Series, dealing with Eighteen Pieces. Crown 8vo, 1s.
ÆSTHETICS, CRITICISMS, ESSAYS.

GLUCK AND HIS OPERAS. With an Account of their Relation to Musical Art. By Hector Berlioz. Translated from the French by Edwin Evans, Senior. Crown 8vo, cloth, 4s. net.

A CRITICAL STUDY OF BEETHOVEN'S NINE SYMPHONIES, with a Few Words on His Trios and Sonatas, a Criticism of "Fidelio" and an Introductory Essay on Music. By Hector Berlioz. Translated from the French by Edwin Evans, Senior. Portrait. Crown 8vo, cloth, 4s. net.

These analyses of Beethoven's symphonies are masterpieces of sound insight and clear expression. Berlioz counts among the very small number of writers on music who deserve to be read also for their critical style.

THE DEATH AND RESURRECTION OF THE MUSICAL FESTIVAL. By Rutland Boughton. 8vo, sewed, 1s. net.

The Decay of Triennials—The Rise of Competitions—The Reform of Competitions—The Festival of the Future.

SOME ASPECTS OF GIPSY MUSIC. By D. C. Parker. Post 8vo, cloth, 2s. net (or paper covers, 1s. net).

SOME ASPECTS OF CHINESE MUSIC AND SOME THOUGHTS AND IMPRESSIONS ON ART PRINCIPLES IN MUSIC. By G. P. Green. Post 8vo, cloth, 2s. 6d. net, paper covers, 1s. 6d. net.

HANDBOOK TO THE VOCAL WORKS OF BRAHMS. An Historical, Descriptive and Analytical Account of the Entire Works of Johannes Brahms. Treated in the Order of their Opus Number. Preceded by a Didactic Section and followed by Copious Tables of Reference. For the Use of Concert-Goers, Pianists, Singers and Students. By Edwin Evans, Senior. Thick 8vo, cloth, 10s.

IMAGINARY INTERVIEWS WITH GREAT COMPOSERS. A Series of Vivid Pen Sketches in which the Salient Characteristics and the often Extravagant Individuality of each Composer are Truthfully Portrayed. By Gerald Cumberland. Frontispiece. Crown 8vo, cloth, gilt top, 6s.

Composers treated of are: Chopin, Haydn, Mendelssohn, Paganini, Beethoven, Handel, Rossini, Schubert, Liszt, Berlina, Mozart, Wagner, kovsky, Cherubini, Hugo Wolf, Borodin, Schumann and Sullivan.
THE FUTURE OF MUSIC, Coming Changes Outlined in Regard to Composer, Conductor and Orchestra. By LOUIS LALOY (author of "Aristoxene et la Musique de l'Antiquité," "Claude Debussy," "Rameau," "La Musique Chinoise"). Translated by MRS. FRANZ LIEBICH. 8vo, cloth, 2s. (paper, 1s. net).

THE SYMPHONY WRITERS SINCE BEETHOVEN. Critical Essays on Schubert, Schumann, Götz, Brahms, Tchaïkovsky, Brückner, Berlioz, Liszt, Strauss, Mahler, Mendelssohn, Saint-Saëns, etc. By FELIX WEINGARTNER. Translated by A. BLES. Many Portraits. Crown 8vo, cloth, gilt top, 6s.

"Most stimulating and suggestive, full of acute thinking, of felicitous expression."—New York.

"The book is certainly well worth reading."—Daily Chronicle.

"A most fascinating book . . . . the works of the various composers are critically discussed in regard to form and orchestration."—Musical Star.

GREATER WORKS OF CHOPIN. (Polonaises, Mazurkas, Nocturnes, etc.), How they should be Played. By J. KLECYNSKI. Translated by MISS N. JANATHA and Edited by SUTHERLAND EDWARDS. Second Edition. With Portrait, Facsimile, etc. Crown 8vo, cloth, 5s.

"A new book on Chopin which will doubtless receive a warm welcome from the lovers of the greatest genius of the pianoforte. . . . . What gives this book a unique value of importance as a novelty is that it includes what is left of Chopin's notes for a pianoforte method which, brief as it is, contains some valuable and interesting hints which will benefit all pianists and students."—New York Evening Post.

"Essays filled with literary charm and individuality, not self-willed or over assertive, but gracious and winning, sometimes profoundly contemplative, and anon frolicsome and more inclined to chaff than to instruct—but interesting and suggestive always."—New York Tribune.

_Ditto._ Second Series, Third Edition. Thick crown 8vo, cloth, 540 pages, 10s. 6d.

There are two sides to musical criticism, both equally interesting: the one, which is scientific analysis of musical form and treatment, possible only to experienced musicians, the other, which is the spiritual perception of the aesthetic side and influence of music, possible for any great mind whose perceptions are keenly cultivated in the highest canons of any art. Schumann represented the ideal musical critic, in that both of these essential points in criticism are to be found in his writings.

Scarcely find words sufficiently strong to express our delight... a book so rich in thought, so full of humour, so remarkable for its refined sarcasm, so original in its criticisms, so sprightly and elegant in language.—_Naut Maas in the Musical World._

"A disquisition upon the value of Schumann's labour as an art critic seems quite uncalled for at the present date. Suffice it to say that it can hardly be over-estimated, and that his writings are as interesting and instructive at the present as they were when they were first penned."—_Monthly Musical Record._

"There is no use in trying to quote characteristic passages, because the volume is of such uniform merit and such continuous interest that it is impossible to make a selection. Musicians who take up the book will not find it easy to put down again."—_Athenaeum._

"Most fascinating reading, even to those who are not deeply versed in music."—_Westminster Review._

"Contains the cream of Chopin's instructions to his own pupils. To admirers of Chopin and players of his music we should say this book is indispensable."—_Bazaur._

THE ART OF LISTENING TO AND APPRECIATING GOOD MUSIC, or the Education of a Music Lover. By Professor Edward Dickinson (author of "The Growth and Development of Music," etc.). 293 pages, crown 8vo, cloth, 6s.

AESTHETICS, CRITICISMS, ESSAYS.

"He writes with the ripe knowledge and thorough understanding of a practical musician. Every musical student or amateur can safely trust him as a competent and agreeable guide. This English translation is most opportune, and will doubtless assist many a lover of Beethoven’s music to appreciate more keenly the master’s sonatas."—E. Pauer.

WOMAN AS A MUSICIAN. An Art Historical Study. By F. R. Ritter. 8vo, sewed, 1s.

Translations of this brilliant essay have already appeared in Spanish, Italian and German.

THE PLACE OF SCIENCE IN MUSIC. By H. Saint-Georges. Addressed to Advanced Students of that branch of Musical Knowledge commonly called Harmony. 8vo, sewed, 1s.

PURITY IN MUSIC. By A. F. Thibaut. Translated by J. Broadhouse. Crown 8vo, cloth, 2s. 6d.

Schumann says: "A fine book about music, read it frequently!"

SCHUMANN'S RULES AND MAXIMS. For Young Musicians. Sewed, 2d.

THE BIRTH OF ARTHUR. The Words of the Drama. By Reginald R. Buckley. 8vo, paper covers, 1s. net.

ESSENTIALS IN PIANO-PLAYING AND OTHER MUSICAL STUDIES. By J. Alfred Johnstone, Hon. L.Mus.T.C.L. Portrait, 243 pages. Crown 8vo, cloth, 4s. 6d.
BIOGRAPHICAL

SOME MUSICAL RECOLLECTIONS OF FIFTY YEARS.
By Richard Hoffman. With Memoir by Mrs. Hoffman. Illustrated with many Plate Portraits. Crown 8vo, cloth, 6s. 1910

MOZART: THE STORY OF HIS LIFE AS MAN AND ARTIST. According to Authentic Documents and other Sources. By Victor Wilder. Translated by F. Liebich. To which is now added a Comprehensive Bibliography of Mozart Literature from every source, English and Foreign and a List of his Compositions Published and Unpublished. With 23 Portraits gathered from Various Sources. With Index. 2 volumes. Crown 8vo, cloth, 10s.

VERDI: MAN AND MUSICIAN. His Biography, with especial Reference to his English Experience. Portraits by F. J. Crowest. 8vo, cloth, 3s. 6d. net (pub. 7s. 6d.)

TCHAIKOVSKY. His Life and Works. With Extracts from his Writings and the Diary of his Tour Abroad in 1888. By Rosa Newmarch. Second Edition Enlarged and Edited with Additional Chapters by E. Evans. 1908. With a Complete Classific Account of Works, Copicous Analyses of Important Works, Analytical and other Indices; also Supplement dealing with "The Relation of Tchaikovsky to Art-Questions of the Day." Portrait and Index. Thick crown 8vo, cloth, gilt top, 7s. 6d.

SKETCHES OF GREAT VIOLINISTS AND GREAT PIANISTS. Biographical and Anecdotal, with Account of the Violin and Early Violinists. Viotti, Spohr, Paganini, De Beriot, Ole Bull, Clementi, Moscheles, Schumann (Robert and Clara), Chopin, Thalberg, Gottschalk, Liszt. By G. T. Ferris. Second Edition. Crown 8vo, bevelled cloth, 3s. 6d. (or cloth, gilt edges, 4s. 6d.)

A very useful book for a prize or gift.
CHOPIN: THE MAN AND HIS MUSIC. By JAMES HUNeker (author of "Mezzotints in Modern Music"). With Musical Examples. Thick crown 8vo, cloth, 10s.

"Mr. Huneker is a Chopin enthusiast. He accords admiration to Brahms, to Wagner, to Tchaikovsky: his worship is reserved for Chopin. Being gifted with clear insight and imagination which grasp many and diverse moods Mr. Huneker is a sane critic and a manly... There is no pretence at new material in the book. Mr. Huneker has garnered all that has been written about the composer and he has threshed out the grain from the chaff. The result is, therefore, of value."—Musical Standard.

"The volume will at once take its place in the front rank of books on Chopin... the masterly chapter of seventy-four pages on the études will soon be found indispensable by all teachers and students of the pianoforte."—The Nation (U.S.A.).

"A work of unique merit, of distinguished style, of profound insight and sympathy and of the most brilliant literary quality."—The New York Times.

"Of works on Chopin published since Niecks's life, this is by far the most important."—G. C. Ashton Jonson in "A Handbook to Chopin's Works."

GEORGE SAND describes it as "un peu exubérant en style, mais rempli de bonnes choses et de très belles pages."

G. C. ASHTON JONSON says in his "Handbook to Chopin's Works":—"For the personal reminiscences of one of the greatest composers by one of the greatest executive artists of the world must be invaluable to the Chopin student."

"Franz Liszt has written a charming sketch of Chopin's life and art."—Ency. Brit.

"Liszt's criticisms upon his separate works have all the eloquent mysticism to be expected from him; and the biography is a book musicians will always prize."—Sunday Times.

"It will afford the student the greatest help in understanding the undertone of emotion which characterises the works of Chopin."—Morning Post.

"Let us therefore contribute one good word to help it forward, as we would tend a flower which springs up spontaneously over the grave of one we love."—Musical Times.

BEETHOVEN. By RICHARD WAGNER. With a Supplement from the Philosophical Works of Arthur Schopenhauer. Translated by EDWARD DANNREUTHER. Third Edition. Crown 8vo, cloth, 6s.

"This characteristic essay, a written exposition of Wagner's thoughts on the significance of the master's music, may be read with advantage by all students."—W. H. Wran in The Pianist's A. B. C.

"It is a plain duty to be familiar and even intimate with the opinion of one famous man about another. Gladly therefore we welcome Mr. Dannreuther's translation of the work before us. Mr. Dannreuther has achieved his task with the conscientiousness of his nature and with a success due to much tact and patience."—Musical Times.

"Chopin is and remains the boldest and proudest poetic spirit of the age."—ROBERT SCHUMANN.

"A book with which all students of Chopin must needs be acquainted. It contains a good deal of first hand information and is our only source for many valuable documents."—The Guardian.

Grove's Dictionary of Musicians says: "The truth about Chopin's birth, family, health, character, friendships, early training and the dawn of his career as a player and composer was not known until the publication of Moritz Karasowski's recent and trustworthy biography."

"The first serious attempt at a biography of Chopin."—PROF. NIECEK.

"Gives bits of information found nowhere else and the Letters of Chopin make the book invaluable to those who would really know the Polish master."—Musical America.

The author's endeavour throughout this work has been to convey an impression of the personality of each composer, as well as to furnish biographical detail. At the end of each biography is a tabulated list of the composer's works and dates of production, together with a facsimile from one of his original manuscripts. A useful volume, get up in good style and well adapted for a gift or prize. Has speedily run into four editions.

CHOPIN: AS REVEALED BY EXTRACTS FROM HIS DIARY. By Count Tarnowski. Translated from the Polish by N. Janotha. With Eight Portraits. Crown 8vo, cloth, 2s. 6d. net (or paper cover, 1s. 6d. net).

CHERUBINI. By F. J. Crowest. Crown 8vo, cloth, 2s. net.
DICTIONARY OF 4,000 BRITISH MUSICIANS. From the Earliest Times. By F. J. Crowest. Crown 8vo; cloth, 1s. net (paper cover, 6d. net).

A Dictionary of British Musicians—a work devoted exclusively to the names of native composers, instrumentalists, vocalists, writers, etc., who have contributed to the making of English musical art from the earliest times to the present. Blank spaces are left to each letter for any additional names to be written in.

BIOGRAPHICAL DICTIONARY OF FIDDLERS. Including Performers on the Violoncello and Double Bass, Past and Present. Containing a Sketch of their Artistic Career, together with Notes of their Compositions. By A. Mason Clarke. 9 Portraits. Post 8vo, bevelled cloth, 5s.

"We may here take the opportunity of recommending a useful book to all lovers of violins and violinists. Fiddlers, Ancient and Modern, is practically a little Biographical Dictionary, well arranged with some excellent portraits."—Northern Whig.

CHERUBINI. Memorials illustrative of his Life. By E. Bellasis. Thick crown 8vo, cloth, 6s.
The standard biography of Cherubini.

FRANZ LISZT. By T. Carlaw Martin. 12mo, bound, 1s.

A standard biography.

TEMPLETON AND MALIBRAN. Reminiscences of these Renowned Singers, with Original Letters and Anecdotes. Three Authentic Portraits by Mayall. 8vo, cloth, 2s. 6d.

BALFE: HIS LIFE AND WORKS. By W. A. Barrett. Crown 8vo, bevelled cloth, 3s. 6d. net (pub. 7s. 6d.)

SKETCHES OF ENGLISH GLEE COMPOSERS. Historical, Biographical and Critical. From about 1735-1866. By D. Baptie. Post 8vo, bevelled cloth, 5s.

THE BACH LETTERS. Letters of Samuel Wesley, relating to the Introduction into England of the Works of Bach. Ed. by E. Wesley. Second Edition. 8vo, cloth, 2s. 6d.
NOTICE OF ANTHONY STRADIVARI. The celebrated Violin Maker known by the name of Stradivarius, preceded by Historical and Critical Researches on the origin and Transformations of Bow Instruments, and followed by a Theoretical Analysis of the Bow and Remarks on Francis Tourte. By F. J. Fétis. Translated by J. Bishop. Facsimile of a Letter of Stradivarius. 8vo, cloth, 5s.

The greater part of the matter in above is the work of M. Vuillaume, who spent the greater part of his life in studying the principles which guided Stradivarius in his labours. With the aid of Fétis and his additional suggestions and matter the now celebrated work was produced.

WEBER. By Sir J. Benedict. Crown 8vo, cloth, 2s. net.
PORTRAIT GALLERIES.

SIXTY YEARS OF MUSIC. A Record of the Art in England during the Victorian Era. Containing 70 Portraits of the most Eminent Musicians. Oblong quarto, boards, cloth back, 2s. 6d.

NATIONAL PORTRAIT GALLERY OF BRITISH MUSICIANS. By John Warriner, Mus.D. Trinity College, Dublin. Introduction by Joseph Bennett. Over 500 Photo Portraits of Well-known and Eminent Living Musicians of Great Britain and Ireland, with short Biographical Notice of each. The whole bound in one handsome oblong folio volume, cloth lettered. Offered for 7s. 6d. net (published 14s. net).

REEVES' CATALOGUE OF MUSIC AND MUSICAL LITERATURE. Ancient and Modern, Second-Hand and New; containing the Contents of Libraries recently purchased, with a large quantity of Curious, Scarce and Useful Music: Full Scores, Organ Music, Duets, Trios, Quartets, Quintets, Sextets, Septets, etc.; Tutors, Historical, Theoretical and Biographical Works in English, French, German, Italian, Spanish, Dutch, etc., including some Works of the greatest rarity and value. Published for over 50 years. 1d. Weekly.

Weekly, one penny (by post, 1½d.). Annual Subscription, post free, 6s. 6d., Six Months, 3s. 3d., Three Months, 1s. 8d. (Abroad, Twelve Months, 8s. 9d., Six Months, 4s. 5d.) Terms for Advertisements on application to the Manager. Cases for binding, 1s. 6d. net (by post, 1s. 9d.).
HISTORY OF RUSSIAN MUSIC. By M. MONTAGU-NATHAN.
Being an Account of the Rise and Progress of the Russian School of Composers. With a Survey of their Lives and a Description of their Works. Frontispiece. Thick crown 8vo, cloth, 5s. net.

"Mr. Montagu-Nathan's book breaks new ground; it introduces the English reader to a number of composers most of whom until recently were nothing more than names. Mr. Montagu-Nathan presents a vast amount of new material to the music-loving public of this country... his book should find many eager readers."—Manchester Courier.

"Everyone now is talking of the Russians and wondering eagerly about them... Probably what we most desire just now is information... We want a book packed full of hard stuff. This we get at its best in... Mr. Montagu-Nathan's History...—Saturday Review.

"... An excellent guide to opera as the music of the concert-room. The author writes well, and as his symphonies are modern, he writes with conviction on the latest musical developments."—Glasgow Herald.

TREATISE ON BYZANTINE MUSIC. By the very Rev. S. G. Hatherly, Mus.Bac. Oxon., Protopresbyter of the Patriarchal Ecumenical Throne of Constantinople. With Music Examples throughout. 162 pages. 4to, cloth, 7s. 6d.

A valuable work on Eastern music construed within the limits of the title word, Byzantine. After discussing the formation of the musical scale, the author passes in review the Gregorian system, a Western development of Eastern tradition, and proceeds to a full description of the old Greek diatonic genus, the chromatic genus, and the mixture of the diatonic and chromatic, on which the bulk of Eastern music, now prevalent, is constructed. There are upwards of fifty unabbreviated musical pieces, ancient and modern, from Greek, Russian, Turkish and Egyptian sources, given and fully analysed: the way thereby being opened up for future musical composers who may desire to cultivate this vast and fertile field.

FROM MENDELSSOHN TO WAGNER. Being the Memoirs of J. W. Davison, Forty Years Music Critic of "The Times." Compiled by his Son, HENRY DAVISON, from Memoranda and Documents. With 52 Portraits of Musicians of the Time and many Important Letters previously Unpublished of Berlioz, Mendelssohn, Gounod, Macfarren, Sterndale Bennett, Jullien, etc. Thick 8vo, cloth, gilt top, 12s. 6d. net.

A BIBLIOGRAPHY OF MUSICAL INSTRUMENTS AND ARCHAEOLOGY. Intended as a Guide to the Study of the History of Musical Instruments. By K. Schlesinger. 8vo, cloth, gilt top, 5s. net. 1912

The above is reprinted from the two-volume work entitled "The Instruments of the Modern Orchestra and Early Records of the Precursors of the Violin Family." 18s. 6d. net.

The Times: "The finest work of its kind since 'De Violinilia Bibliographia,' and will be found of great value to all musicians."

HISTORY OF HUNGARIAN MUSIC. By J. Kaldy (Director of the Royal Hungarian Opera). Crown 8vo, bevelled cloth, 2s. 6d. net.

"Information not to be had anywhere else ... should be on every musical shelf."—Internationalen Musikgesellschaft.

THE RISE AND DEVELOPMENT OF OPERA. Embracing a Comparative View of the Art in Italy, Germany, France and England. By Joseph Goddard. Showing the Cause of the Falling Back of the English School in the Modern Period, and the Compensation which that Falling Back Involved. With numerous Musical Examples, Portraits and Facsimiles. Crown 8vo, cloth, gilt top, 4s. 6d. net.

THE MUSIC OF THE MOST ANCIENT NATIONS. Particularly of the Assyrians, Egyptians and Hebrews; with special reference to recent discoveries in Western Asia and in Egypt. By Carl Engel. With numerous Illustrations and Index. Thick 8vo, cloth. Published at 18s., now offered for 8s. 6d. net.

Grove's Dictionary says of Carl Engel:

"His attainments as a musician, his clear insight into books in many languages, his indefatigable perseverance in research, and the exercise of a rare power of judicious discrimination, made him one of the first authorities on his subject in Europe, he became a collector when opportunities were more frequent than they are now for acquiring rare instruments and books. He thus formed a private museum and library that could hardly be rivalled except by a few public institutions."
MANUAL OF MUSICAL HISTORY. From the Epoch of Ancient Greece to our Present Time. By Dr. F. L. Ritter. Second Edition. Cr. 8vo, bevelled cloth, 2s. 6d.

The volume treats of the national tunes, folk-songs and airs of the various races of the world. And the chapters are undoubtedly marked in a high degree with the critic's acumen attesting the wide range of Chorley's learning as a student of the art.

CHRONOMETRICAL CHART OF MUSICAL HISTORY.

Presenting a Bird's Eye View from the Pre-Christian Era to the XXth Century. By C. A. Harris, A.R.C.O., etc. On linen, folded in case, 2s. net (on special paper, 1s. net).

Dr. T. H. Yorke Trotter, Principal, London Academy of Music: "Extremely well got up and will be useful."

Dr. F. J. Kars, Principal, London College of Music: "Your very useful chart... extremely well drawn up, showing in a compact form a great deal of information, and is a useful comparative form. Several professors have expressed delight with it."

Trinity College, London: "The Library Committee desire me to express their most cordial thanks for the donation of a copy of a 'Chronometrical Chart of Musical History' to the College library."—Shelley Fisher.

"Like a Borrill tabloid—much nourishment in a little room."—Revd. Miss Reed, South African School.

Sure to be very useful to students... excellently arranged and seems to be very accurate and thorough."—Dr. Ralph Dunstan.

"Excellent chart... and is certainly valuable in helping the imagination to grasp synchronous events."—H. Osborne Anderson, Esq., Librarian to Birmingham and Midland Institute School of Music.

THE RISE OF MUSIC. Being a Careful Enquiry into the Development of the Art from its Primitive Puttings forth in Egypt and Assyria to its Triumphant Consummation in Modern Effect. By Joseph Goddard. With Illustrations of early Instruments and numerous Musical Examples drawn from Ancient and Modern Sources. With Index. Thick crown 8vo, cloth, gilt top, 7s. 6d.

CATECHISM OF MUSICAL HISTORY AND BIOGRAPHY.
Tenth Thousand. 187 pp. Post 8vo, cloth, 2s. (paper, 1s.)

This work gives special attention to English musicians, and is brought down to 1903.

Musical Education says: "An excellent little book—yet not so little since it contains an immense amount of information—historical, biographical and critical—in a very small compass."

A HISTORY OF PIANOFORTE MUSIC. With Critical Estimates of its Greatest Masters and Sketches of their Lives. By JOHN C. FILLMORE. Edited with an Introductory Preface by RIDLEY PRENTICE. Crown 8vo, cloth, 3s. 6d.

DUNLER BUCK says of it: "In my judgment the work should be in the hands of every earnest student."

"The only book of its kind in English. It groups the composers and their works into epochs and gives a clear description of the different epochs."—Kinde.

THE WORLD'S EARLIEST MUSIC. Traced to its Beginnings in Ancient Lands. By collected Evidences of Relics, Records, History and Musical Instruments, from Greece, Etruria, Egypt, China, through Assyria and Babylonia to the Primitive Home, the Land of Akkad and Sumer. By HERMANN SMITH. With 65 full page Illustrations and Cuts, nearly 400 pages. Crown 8vo, cloth, 6s.

Mr. ERNEST NEWMAN in The Manchester Guardian writes: ".... the extent and the accuracy of the information conveyed make the book indispensable to students and to public libraries."

A GENERAL HISTORY OF MUSIC from the Infancy of the Greek Drama to the Present Period. By W. S. Rockstro. Fourth Edition, 535 pages. Thick 8vo, cloth, 7s. 6d. net (published originally at 14s.).

HISTORY OF THE HARP. From the Earliest Period down to the Present Day. By JOHN THOMAS (Pencerdd Gwalia). Svo, paper covers, 2s. net (published originally at 5s.).
ORCHESTRAL.

Wind instruments have a republic of their own in the wind-band, where each one is sovereign, not subject, and all may express themselves freely, for them they are the paramount power. In this book it is sought that each instrument shall be accorded respect as befits its specic importance. For that reason, the qualities of each are taken into consideration from the viewpoints of history, acoustics, construction, technique and collective utility. At present there is no book in the English language dealing with wind instruments and the wind-band in plan or scope herein attempted.

A Work of Original Research and Study.

THE INSTRUMENTS OF THE MODERN ORCHESTRA AND EARLY RECORDS OF THE PRECURSORS OF THE VIOLIN FAMILY. With 500 Illustrations and Plates. By KATHLEEN SCHLEISINGER. Two handsome volumes, thick 8vo, cloth, gilt tops, 18s. 6d. net.

"It is no mere echo of other historians but a work of original research. This is made clear by the fact that novel conclusions are reached and new verdicts given. It would seem that we shall be compelled to reconsider and probably to reconstruct our notions as to the origin of the violin. . . . A splendid book which will become a classic. The many years of laborious and persevering study given to its compilation and composition will be appreciated by generations yet to come.—Birmingham Gazette and Express.

JONH BROADWICK in the Musical Standard writes: "Far surpasses any book on the subject which it has been our good fortune to read. The whole line of the investigation is in every sense of the word original; not trusting the researches of her predecessors, Miss Schleisinger has, during many years, gone fully and deeply into the matter for herself; and, having arrived at conclusions quite at variance with those of other writers, she is not afraid to say so. The tone of the book is moderation itself . . . ."

The music critic of the American Musical Courier in an able essay says: "It is a great work in two volumes with over five hundred illustrations and plates. . . . She [the author] is a kind of musical Darwin who has given no end of toil and trouble to trace the ancestors of our instruments into their humble and remote sources."

E. VAN DER STRAETEN writes in the Strad: "This work ranks among the most remarkable modern literature on the subject."

HOW TO PLAY FROM SCORE. Treatise on Accompaniment from Score on the Organ or Pianoforte. By F. FETIS. Translated by A. WHITTINGHAM. With 40 pp. of Musical Examples. Cr. 8vo, bevelled cloth, 3s. 6d.

This popular and useful book might have been entitled "The Art of Making Arrangements for the Organ or Pianoforte from Full Orchestral and Other Scores." It contains all that is necessary to know upon this subject.
MODERN ORCHESTRAL INSTRUMENTS, Their History, Structure and Capabilities. By K. SCHLESINGER. A Practical Illustrated Handbook for the Musician, Student and Concert-Goer. Numerous Illustrations and Musical Examples throughout. 8vo, cloth, gilt top, 7s. 6d.

The Times says: "We do not hesitate to recommend the volume to all lovers of music who would know something of the instruments which produce the marvellous tone colour of the modern orchestra, or desire, by aid of the large and clear illustrations, to recognise the various forms which are now to be found in our large military and municipal bands."

The above volume, with "The Precursors of the Violin Family," form the two-volume work by K. Schlesinger, 18s. 6d. net. For full description see preceding item.

ON CONDUCTING. By RICHARD WAGNER. Translated by E. DANNREUTHER. Second Edition. Cr. 8vo, cloth, 5s.

A treatise on style in the execution of classical music, written by a practical master of the grand style.

Wingraven says: "Wagner's book laid the foundation for a new understanding of the function of the conductor, in whom we now recognize, not only the eternal factor that holds together an orchestral, choral or operatic performance, but above all the spiritualising internal factor that gives the performance its very soul."

Grice's Dictionary says: "One of the finest of his minor publications, and to a professional musician perhaps the most instructive. A Treatise on Style, giving his views as to the true way of rendering classical music, with minute directions how to do it and how not to do it, together with many examples in musical type from the instrumental works of Beethoven, Weber, Mozart, etc."

NOTES ON CONDUCTING AND CONDUCTORS. By T. R. Croger, F.R.G.S., F.Z.S., also the Organising and Conducting of Amateur Orchestras, with three full page Illustrations of the various "Beats" and Plan of the Orchestra. Third Edition, Revised and Enlarged. Crown 8vo, cloth, 2s. net (paper, 1s. net).

"A mine of good things."—Musical Opinion.

"One of the best guides to conducting."—Music Trades Review.

"A capital little book brightly written and full not only of entertaining and racyly-told anecdotes, but also of clear and sensibly-expressed opinions on musical matters."—The Stage.

A MUSICAL ZOO. Twenty-four Illustrations displaying the Ornamental Application of Animal Forms to Musical Instruments (Violins, Viol da Gambas, Guitars, Pochette, Serpent, etc.). Drawn from the Carved Examples by HENRY SAINT-GEORGE. 2s. net (or cloth, 3s. 6d. net).
ORGAN.

THE MAKING OF SOUND IN THE ORGAN AND IN THE ORCHESTRA. By Hermann Smith. An Analysis of the Work of the Air in the Speaking Organ Pipe of the Various Constant Types, and an Exposition of the Theory of the Air-Stream-Reed Based upon the Discovery of the Tone of the Air, by Means of Displacement Rods. With 30 Illustrations and Tables. Thick crown 8vo, cloth, 6s.

Mr. Hermann Smith has gained a distinguished position as an investigator in matters relating to sound production in musical instruments. His conclusions arrive at a theory widely different from those which have been propounded in the several learned works on acoustics.

MODERN ORGAN BUILDING. Being a Practical Explanation and Description of the Whole Art of Organ Construction, with Especial Regard to Pneumatic Action. Together with Chapters on Tuning, Voicing, etc. By Walter and Thomas Lewis (Organ Builders). With 76 Illustrations Drawn to Scale and Reproduced from Actual Working Drawings, together with Diagrams, Tables, etc. 4to, cloth, 7s. 6d. 1911

ADVICE TO YOUNG ORGANISTS. By J. T. Field. 2d.

THE PEDAL ORGAN. Its History, Design and Control. By Thomas Casson. With folding Diagram, Second Impression. 8vo, cloth, 2s. net (paper, 1s. net).

THE ORGAN FIFTY YEARS HENCE. A Study of its Development in the Light of its Past History and Present Tendencies. By Francis Burgess, F.S.A., Scot. 8vo, 1s. net.

THE EARLY ENGLISH ORGAN BUILDERS and their Works, from the Fifteenth Century to the Period of the Great Rebellion. An Unwritten Chapter on the History of the Organ. By Dr. E. F. Rimbault. Well printed, with woodcuts. Post 8vo, cloth, 3s. 6d.
SOME CONTINENTAL ORGANS (Ancient and Modern) and their Makers. With Specifications of many of the fine Examples in Germany and Switzerland. By James I. Wedgewood. Pp. 80, cloth, 2s. net.

Contains specification and a brief critique of some of the famous old Continental organs as they exist at the present day. Describes also several up-to-date Continental organs. Amongst other organs particulars are given of those at Haarlem, Cologne, Aix-la-Chapelle, Frankfurt, Heidelberg, Ulm, Stuttgart, Einsiedeln, Strasbourg and Antwerp. This work forms a valuable supplement to Hopkins's and Rimbault's great treatise.

"Mr. Wedgewood remarks on all details such as workmanship, tone, peculiarities of mechanism, cost, etc. We thoroughly recommend the book to those who are interested in organs."—Bazaar.

MODERN ORGAN TUNING. The How and Why, Clearly Explaining the Nature of the Organ Pipe and the System of Equal Temperament, together with an Historic Record of the Evolution of the Diatonic Scale from the Greek Tetrachord. By Hermann Smith. Crown 8vo, cloth, 3s. 6d.

"The greatest authority on acoustical matters connected with organ pipes who has ever lived," says Mr. G. A. Audley of Hermann Smith in his "Art of Organ Building."

"Simple non-technical terms set out with an attractiveness and lucidity I have never seen surpassed the history of the evolution of the diatonic scale from the Greek tetrachord . . . . by no means intended for organ students alone . . . . the historical explanations add to the fascination of this volume."—Daily Telegraph.

"Recommended to the notice of organists with the fullest confidence that they would derive both pleasure and profit from its perusal."—Scottish Guardian.

A SHORT HISTORY OF THE ORGAN, ORGANISTS AND SERVICES OF THE CHAPEL OF ALLEYN'S COLLEGE, Dulwich. With Excerpts from the Diary of the Founder By W. H Stocks Crown 8vo, sewed, 1s.

ANALYSIS OF MENDELSSOHN'S ORGAN WORKS. A Study of their Structural Features. For the Use of Students. By Joseph W. G. Hathaway, Mus.B. Oxon., 127 Musical Examples. Portrait and Facsimiles. Cr. 8vo, bevelled cloth, 4s. 6d.

ORGANIST'S QUARTERLY JOURNAL of Original Compositions. Edited by Dr. W. Spark, 5s. per part. New Series Volume, 160 large pages, oblong folio, bound in cloth, 18s.
RINK'S PRACTICAL ORGAN SCHOOL: A New Edition, Carefully Revised. The Pedal Part printed on a Separate Staff, and the Preface, Remarks and Technical Terms translated from the German expressly for this Edition by JOHN HILDS. The Six Books Complete, handsomely bound in red cloth, gilt edges, ob. folio, 10s. 6d. net (issued at 20s.), or the six parts 7s. 6d. net (issued at 6s. each), parts sold separately.

The best edition ever published of this Grand Classical work. No other edition will bear comparison with it for care and skill in editing, nor for beauty of engraving and excellence of printing. One special merit of this edition is that the bar lines are bold, and that they are drawn right through the score, instead of through each staff, as was the custom in days gone by. The student who will take the trouble to test this edition against any other, will at once perceive the advantage he gains from this clear and distinct style of "barring"; to an advanced performer the matter may be perhaps of less importance, but even he cannot fail to appreciate the comfort of increased legibility.

As a royal road to thorough and sound Organ Playing in all styles, there is no other School which will bear comparison with this: a Beginner can follow no better course than to go through it slowly.

HENRY SMART'S ORGAN COMPOSITIONS ANALYSED. By J. BROADHURST. Crown 8vo, bevelled cloth, 2s. 6d.

THE INFLUENCE OF THE ORGAN IN HISTORY. By DUDLEY BUCK. New Edition with Illustrations. Crown 8vo, cloth, 2s. (or paper, 1s. net).

REFORM IN ORGAN BUILDING. By THOMAS CASSON. Crown 8vo, sewed, 6d.
INDIVIDUALITY IN PIANO TOUCH. By Algernon H. Lindo and J. Alfred Johnstone. Crown 8vo, 1s. net.

This volume is also issued in separate parts, paper covers, as follows:

Handel, 6d. net; D. Scarlatti, 6d. net; Beethoven, 1s. net; J. S. Bach, 6d. net; C. P. E. Bach and Haydn, 6d. net; Clementi, 6d. net; Mozart, 6d. net.

THE ARTIST AT THE PIANO. Essays on the Art of Musical Interpretation. By George Woodhouse. 8vo, cloth, 2s. 6d. net (or paper covers, 1s. 6d. net).

The celebrated pianist Paderewski, after reading the manuscript of this stimulating volume wrote: "The booklet is quite a remarkable work and a really valuable contribution to the philosophy of pianistic art."

Not a few of those who have spent years at the work of giving lessons in pianoforte playing fail to achieve the success their abilities deserve simply for the lack of some clear, systematic, practical knowledge of the art of teaching. In this volume methods are suggested, hints are offered, principles and rules are formulated, courses of study are sketched out; and all these are sufficiently general and varied to furnish a useful guide for the teacher without circumscribing his individual genius or running any risk of stunting his development.

"The work of one who is both an experienced instructor and a thorough musician."—Nottingham Guardian.

"The most comprehensive handbook for teachers that we know... the chapter on finger exercises is excellent."—The Literary World.

"To read this book thoroughly is to a pianist a liberal education... the most comprehensive handbook for piano professors we have ever met with."—Cheltenham Examiner.

PRACTICE REGISTER for Pupil's Daily Practice. A Specimen, 1d. (or 1s. per 100).
REEVES' VAMPING TUTOR. Art of Extemporaneous Accompaniment, or Playing by Ear on the Pianoforte, Rapidly Enabling anyone having an Ear for Music (with or without any Knowledge of Musical Notation) to Accompany with Equal Facility in any Key with Practical Examples. By FRANCIS TAYLOR. New Edition, to which is added Instructions for Accompaniment with Equal Facility in every Key illustrated by Examples. Folio, 2s.

REEVES' THE POPULAR PIANOFORTE TUTOR. Instructions, Scales, Exercises, Tunes. Folio, 1s.

PIANOFORTE TEACHER'S GUIDE. By L. PLAIDY. Translated by FANNY RAYMOND RITTER. Crown 8vo, boards, 1s.

"Evidently written by a pianist who is a thorough master of his instrument as well as a good teacher."—Educational Times.

"Some of the finest pianists of the day owe much of their technical facility to Plaidy's excellent method."—Bazaar.

THE DEPPE FINGER EXERCISES for Rapidly Developing an Artistic Touch in Pianoforte Playing, Carefully Arranged, Classified and Explained by AMY FAY (Pupil of Taussig, Kullak, Liszt and Deppe). Folio, English Fingering, 1s. 6d. (Continental Fingering, 1s. 6d.).

The Musical Times says: "We are asked by a well-known pianist to say that Herr Emil Sauer was trained up to his seventeenth year on the Deppe system and that he owes his wonderful technique almost solely to that method.... Our correspondent adds that Herr Sauer speaks as enthusiastically of the Deppe method as did Miss Amy Fay."

PIANOFORTE SCALES IN THIRDS AND SIXTHS FOR EACH HAND, In All the Major and Minor Keys. Fingered and Arranged by M. ROCK. 1s. 6d. net (published at 4s.)

PIANO TEACHING. Advice to Pupils and Young Teachers. By F. LE COUPPEY (Prof. in the Conservatory of Music, Paris, etc.). Translated from the Third French Edition by M. A. BIERSTADT. Post 8vo, cloth, 2s.

"Well worthy of perusal both by young teachers and pupils. The book contains sound advice, particularly applicable to the study of pianoforte playing."—W. H. Weeks in The Pianist's A. B. C.

Contents: Position—Arm—Wrist—Fingers; Touch (Tone Production); Legato; Equality of Tone; Tension and Contraction; Five Finger Exercises; Skips; The Scale; Arpeggio Chords; Firm Chords; High Raising of the Arm; Melody and its Accompaniment; Connection of Firm Chords; The Tremolo; The Shake (Trill); The Pedal; Fingering.

Ditto, the above divided into four parts, in paper covers, 1s. each series.

The Second, Third and Fourth Series contain a similar varied selection.

Draws one's attention to the beauties in a piece, explains difficulties here and there, draws attention to a pedal effect and any peculiarity of fingering, and generally gives all the information a professor is expected to give to his pupils.

"Described in detail in a manner to be understood by the youngest student, and with a charm that must ensure the popularity of the book."

"In plain language free from technicalities proffers valuable help to the budding piano soloist."—Leicester Mail.

"Deals with rhythm, measure, phrasing and tempo as applied to piano-forde playing . . . . explains the difference between the subjective and objective in delivery and expresses his opinion that a performance of the born artist must of necessity be subjective, while the wavering, undecided and uninspired amateur will be safest in giving an altogether objective rendering. The section with reference to accent is particularly good. There are numerous illustrations from the works of the masters."—W. H. Wessen in The Pianist’s A. B. C.
PIANO TOUCH, PHRASING AND INTERPRETATION. By J. ALFRED JOHNSTONE (author of "The Art of Teaching Piano Playing," etc.) Crown 8vo, cloth, 3s. 6d.

HANDBOOK TO CHOPIN’S WORKS. Giving a Detailed Account of all the Compositions of Chopin. Short Analyses for the Piano Student and Critical Quotations from the Writings of Well-Known Musical Authors. By G. C. ASHTON JONSON. The Whole Forming a Complete Guide for Concert-Goers, Pianists and Pianola-Players, also a Short Biography, Critical Bibliography and a Chronological List of Works, etc. Crown 8vo, cloth, gilt top, 6s.

Will be found equally useful and helpful to concert-goers, for whom it forms a permanent analytical programme, to pianists, and to those amateurs of music who can now, owing to the pianola, pursue for the first time a systematic and co-ordinated study of Chopin’s works, a delight hitherto denied to them owing to their inability to read or play the more difficult compositions.

"Here in one compact volume, is all that it is necessary to know about Chopin and his works except by the leisurely enthusiast • • • Each separate opus is placed in its proper sequence, and attached to them are brief extracts, again from very many writings, together with Mr. Ashton Jonson’s own lucid criticisms. The task is well done; nothing has apparently been left out that ought to have been put in, and never once can our author be accused of being tedious. The book should be greatly studied by all."—Daily Chronicle.

A SYSTEM OF STUDY OF SCALES AND CHORDS. Being Chapters on the Elements of Pianoforte Technique. By B. VINE WESTBROOK, F.R.C.O. Illustrated with numerous Musical Examples. 8vo, cloth, 2s. (paper covers, 1s.).

The supreme importance, the absolute necessity, of a study of scales and chords, the latter in the form of arpeggios, to the student of the pianoforte, is universally admitted. It is the aim of the writer to lay before the reader the simply fundamental rules which it is believed will render scales and chords interesting and intelligible, if not actually easy. The author outlines a scheme which abolishes the drudgery and inspires the pupil with an enthusiasm for practice and formulates a method or system in which that practice may be carried out.
TECHNICAL AND THEORETICAL.

To R.C.O. and Diploma Candidates.

This book has been prepared primarily to help candidates entering for the R.C.O. and T.C.L. Diplomas, though it contains much information for the amateur musician and general reader. It is indispensable to teachers who wish to guide their pupils through a course of study dealing with a large number of subjects like those set for the F.R.C.O. and A.R.C.O. examinations.

ELEMENTARY LESSONS ON SIGHT SINGING. Combining the Staff and Tonic Sol-fa Notations. With Music Examples throughout. By J. W. Rossington, L.R.A.M. 1s. net.

For many singers there is only one method of becoming good sight-readers, viz., combining the tonic sol-fa with the staff notation. It is hoped that a perusal of these elementary lessons will show the principles on which this combination is effected and simplify the somewhat difficult task of sight-reading.

RUDIMENTS OF MUSIC. Set forth in Graded Questions with Answers. By B. Howarth, L.R.A.M., A.R.C.M.

For the Use of Candidates preparing for the Examinations of the R.A.M., L.R.A.M., A.R.C.M. Crown 8vo, 1s.

It is believed that he who thoroughly masters the contents of these pages will be prepared to study intelligently the harmonic structure of the works of the great masters, and also to follow critically the changeable tendencies of the present day.

600 QUESTIONS AND 600 EXERCISES IN ELEMENTARY MUSICAL THEORY. By W. H. Palmer. Crown 8vo, cloth, 2s. net (paper covers, 1s. net).

Intended as a help to the private student and to the candidate preparing for the several musical examinations.

ON THE MODAL ACCOMPANIMENT OF PLAIN CHANT.

A Practical Treatise. By Edwin Evans, Senior, F.R.C.O. Part I, Theoretical; Part II, Practical School of Plain Chant Accompaniment, consisting of 240 Exercises, with an Appendix of Notes. Crown 8vo, cloth, 3s. 6d. net.
MODERN CHORDS EXPLAINED. (The Tonal Scale in Harmony.) By Arthur G. Potter. With Musical Examples from the Works of C. Debussy, Richard Strauss and Granville Bantock. 8vo, limp cloth, 1s. (paper cover, 6d. net).

EXERCISES IN VOCAL SCORE READING. Collected from the Works of Orlando di Lasso, Palestrina, Vittoria, Barcroft, Redford, Peter Certon, Byrd, Gibbons, Croft, Rogers, Boyce, etc. For Students preparing for the R.C.O. and other Examinations. By James Lyon, Mus.Doc. Oxon. 4to, 3s.

EXERCISES IN FIGURED BASS AND MELODY HARMONIZATION. By James Lyon, Mus.Doc. 4to, 2s.

HOW TO COMPOSE. A Practical Guide to the Composition of all Works within the Lyric Form, and which include the Valse, Gavotte, Mazurka, Polonaise, March, Minuet, and all Ordinary Dance Forms; as also the Nocturne, Impromptu, Berceuse, Reverie and Similar Characteristic Pieces. By Edwin Evans, Senior, F.R.C.O. (author of "The Relation of Tchaikovsky to Art-Questions of the Day," "A Handbook to Brahms' Works," "The Modal Accompaniment to Plain Chant," etc.). With 60 Musical Examples. Crown 8vo, cloth, 2s. 6d. (paper, 1s. 6d. net).

PRONOUNCING DICTIONARY OF MUSICAL TERMS. By Dr. Dudley Buck. Sixth Edition, with the Pronunciation of each Term accurately given. Edited and Revised by A. Whittingham. Crown 8vo, cloth, 1s. (paper, 6d.)

A most valuable and useful little book to all musical people. The method adopted for giving the correct pronunciation of each term is most concise and clear.

HARMONY, EASILY AND PROGRESSIVELY ARRANGED. Presenting in a Simple Manner the Elementary Ideas as well as the Introduction to the Study of Harmony. With about 300 Musical Examples and Exercises. By Paul Colberg. Crown 8vo, cloth, 2s. (paper, 1s.)

August Wilhelmj says:— "This work is distinguished by brevity and clearness I most warmly recommend it."

ELEMENTARY MUSIC. A Book for Beginners. By Dr. Westbrook. With Questions and Vocal Exercises. Thirteenth Edition. Crown 8vo, cloth, 1s. 6d. (paper, 1s.)

"His explanations are extremely clear. The questions at the end will be found very useful."—Musical Times.

"This little primer is one of the best of its kind, and forms an admirable course of preparation for the local examinations in music ... it ensures, as far as a book can, an intelligent and thorough grasp of the elements of musical knowledge. The questions at the end of the book will be found invaluable to teachers."—Journal of Trinity College, London.

Ditto, Vol. II. 8vo, boards, cloth back, 5s.

COUNTERPOINT: A Simple and Intelligible Treatise. Containing the most Important Rules of all Text Books, in Catechetical Form (forming an Answer to the Question "What is Counterpoint?") Intended for Beginners. By A. Livingstone Hirst. (Reeve's Educational Series, No. 6). Crown 8vo, sewed, 9d.

"Mr. Kenton proves himself an excellent guide; and indeed we know of no other work devoted to the subject with which he has dealt so thoroughly and so successfully."—Glasgow Herald.

"Points out the paramount importance of being able to play from memory. Many useful hints are given on the course of study to be adopted."—Morning Post.

"A most valuable little book of eight chapters, containing valuable information on the art of memorising, with many illustrations."—Western Morning News.

"May do much good inducing young pianists to exert their brains together with their fingers."—Yorkshire Post.

THE ART OF MODULATION. A Handbook showing at a Glance the Modulations from one Key to any Other in the Octave, consisting of 1,008 Modulations. For the Use of Organists and Musical Directors. Edited by Carl Z. Zoeller. Third Edition. Roy. 8vo, cloth, 4s. (paper, 2s. 6d.).

HOW TO HARMONIZE MELODIES. With Hints on Writing for Strings and Pianoforte Accompaniments. By J. Henry Bridger, Mus.Bac. With Musical Examples throughout. Crown 8vo, cloth, 2s. 6d.

HOW TO WRITE MUSIC IN SHORTHAND. For Composers, Students of Harmony, Counterpoint, etc., can be Written very Rapidly and is more Legible than printed Music, with Specimens from Bach, Handel, Chopin, Wagner, Mendelssohn, Spohr, Mozart, etc. By Francis Taylor. 14 pages, 12mo, sewed, 6d.

TRANPOSITION AT SIGHT. For Students of the Organ and Pianoforte. By H. Ernst Nichol. Fourth Edition, with numerous Musical Exercises. Crown 8vo, cloth, 1s. 6d. (paper, 1s.)

There is no need to dwell upon the usefulness or even the necessity of transposition to the organist or the accompanist of songs. The practice of transposing upon the lines here laid down develops the "mental ear," quickens the musical perception and gives ease in sight reading; as it is evident that, if the student can transpose at sight, he will not have much difficulty in merely playing at sight. The author has made free use of the tonic sol-fa as well as the old notation in his many musical examples.

THE STUDENT'S HELMHOLTZ. Musical Acoustics or the Phenomena of Sound as Connected with Music. By John Broadhouse. With more than 100 Illustrations. Fourth Edition. Crown 8vo, cloth, 7s. 6d.

"In his Preface the author says: 'The object of the present book is to give, in one volume, a good general view of the subject to those who can neither spare time to read, nor money to buy a number of large and expensive works.' A perusal of the book justifies us in asserting that this design is most satisfactorily carried out; and it is not too much to say that although the plan of the work excludes the possibility of minutely dissecting every subject treated upon, any careful reader may obtain a clear insight into the principle of acoustics, as to enable him not only to pass an examination but to store up a large amount of general knowledge upon the phenomena of sound."—Musical Times.

"'The Student's Helmholtz' will be very useful to many musicians, to whom much in Helmholtz's work must appear obscure. I shall recommend the book whenever an opportunity offers itself."—Dr. Ritter.

This work has been specially designed for musical students preparing for examination.

EXAMPLES OF FOUR PART WRITING FROM FIGURED BASSES AND GIVEN MELODIES. By James Lyon, Mus.Doc. 4to, 4s.

These exercises are printed in open score so as to be of use in score reading tests. This volume forms a key to "Exercises in Figured Bass" by the same author.

THE STUDENT'S BOOK OF CHORDS. By Paschal Needham. Crown 8vo, sewed, 6d. net.

The Author says: 'A very large number of music students, executive and theoretical, have expressed to me from time to time a desire for a cheap book, in which the chords with their inversions and resolutions are briefly and clearly explained. To these students I dedicate this work.'
VIOLIN.

THE PRECURSORS OF THE VIOLIN FAMILY. Records, Researches and Studies. By K. Schlesinger. With over Two Hundred Illustrations and Plates. Thick 8vo, cloth, gilt top, 12s. 6d. net.

The Times says of Miss Schlesinger's work: "The results of original research are evident ... a new light is here thrown on the early history of the violin family, and in any future work on this subject account will have to be taken of the research disclosed in this volume."

This volume, complete in itself, formed originally a part of the two-volume work entitled "The Instruments of the Modern Orchestra and Early Records of the Precursors of the Violin Family.

ADVICE TO VIOLIN STUDENTS. Containing Information of the Utmost Value to Every Violinist. By Wallace Ritchie, Principal, West London Violin School. Crown 8vo, cloth, 2s. 6d. net.

CONTENTS: Selecting and Adjusting—Choice of a Teacher—Course of Study—The Slowik Method—Practising—Style—Tone Production—Pronunciation of Terms, Names, etc.—Graded List of Studies, Pieces, etc. Together with Hints on Common Faults—Shifting—Reading Music—Stopping—Harmonics—Vibrato—Tempo—Intonation, Pitch, etc.

AN IMPORTANT LESSON TO PERFORMERS ON THE VIOLIN. By the Celebrated Tartini. Portrait. Being the Translation by Dr. Burney, issued originally in 1779, together with the original Italian. 8vo, cloth, 2s. net (or paper covers, 1s. net).

THE VIOLINIST'S DICTIONARY. Containing nearly 2,000 Words, Phrases, References, etc., used in the Study of the Violin Fully Explained. By Frederic B. Emery, M.A. With a List of Important Composers of Violin Music, and of Old Violin Makers, also Rules for Pronouncing Foreign Terms. 8vo, cloth, 2s. 9d. net.

THE VALUE OF OLD VIOLINS. By E. Polonaski. Being a List of the Principal Violin Makers, British, Italian, French and German. With Approximate Valuations of their Instruments and Occasional Notes on their Varnish. Facsimiles of Labels and Violins. Crown 8vo, cloth, 2s. 6d. net.

NOTES ON THE CONSTRUCTION OF THE VIOLIN. By W. B. Coventry. 12mo, cloth, 2s. (or paper covers, 1s. net).

INFORMATION FOR PLAYERS. Owners, Dealers and Makers of Bow Instruments, also for String Manufacturers. Taken from Personal Experiences, Studies and Observations. By WILLIAM HERWORTH. With Illustrations of Stainer and Guarnerius Violins and Gauge of Millimetres and Centimetres, etc. Crown 8vo, cloth, 2s. 6d.

STRADIVARIUS. By FETIS. See "Biographical Section."

THE HISTORY OF THE VIOLIN and other Instruments Played on with the Bow from the Remotest Times to the Present. Also an Account of the Principal Makers. Coloured Frontispiece and numerous Illustrations and Cuts. By W. SANDYS, F.S.A., and S. A. FORSTEN. Thick 8vo, cloth, 7s. 6d. net (published at 14s.).

Contains instructions for the repair, preservation and bringing out the one of instruments; tracing model for violin, mutes and fiddle holders; list of classical works for stringed instruments. This work is especially valuable for makers of violins.

HOW TO PLAY THE FIIDDLE. For Beginners on the Violin. By H. W. and G. GRESSELL. Eighth Edition. Crown 8vo, cloth, 2s. (paper, 1s.)

JOACHIM says: "Contains many useful hints about violin playing."

VIOLIN MANUFACTURE IN ITALY and its German Origin. By Dr. E. SCHEBEK. Translated by W. E. LAWSON. Second Edition. Square 12mo, cloth, 2s. (paper, 1s.)

BIOGRAPHICAL DICTIONARY OF FIDDLERS. See "Biographical Section."

HOW TO REPAIR VIOLINS and other Musical Instruments. By ALFRED F. COMMON. With Diagrams. Crown 8vo, cloth, 2s. (paper, 1s.)
THE VIOLIN. Its History and Construction. Illustrated and Described from all Sources. Together with a List of Tyrolese and Italian Makers. With 29 Illustrations and Folding Examples of the First Music issued for the Lute, Viol and Voice. From the German of ABELE and NIEDERHEITMANN. By JOHN BROADHOUSE. Crown 8vo, cloth, 2s.

"The learned and instructive treatise of Abele, skilfully rendered by J. Broadhouse and supplemented by a version of Niederheitmann's list of Italian and Tyrolese violin makers, a compilation invaluable to collectors and connoisseurs of rare fiddles ... a work which forms a noteworthy addition to the small number of English books upon this interesting subject."—Scotsman.

HOW TO MAKE A VIOLIN, Practically Treated. By J. BROADHOUSE. New and Revised Edition. With 47 Illustrations and Folding Plates and many Diagrams, Figures, etc. Crown 8vo, bevelled cloth, 3s. 6d.

This new edition has had the advantage of being revised throughout by a celebrated violin maker.

SKETCHES OF GREAT VIOLINISTS AND GREAT PIANISTS. See "Biographical Section."

THE ART OF HOLDING THE VIOLIN AND BOW AS EXEMPLIFIED BY OLE BULL. His Pose and Method proved to be based on true Anatomical Principles. By A. B. CROSBY, M.D., Professor of Anatomy. Portrait, Diagrams and Illustrations. 8vo, cloth, 2s. (paper, 1s.)

Included in the above are some interesting recollections and anecdotes of Ole Bull.

THE VIOLIN AND OLD VIOLIN MAKERS. Being a Historical and Biographical Account of the Violin. By A. MASON CLARKE. With Facsimiles of Labels used by Old Masters and illustrations of a copy of a Gasparo da Salo. Crown 8vo, cloth, 2s. net (paper, 1s. net).
TECHNICS OF VIOLIN PLAYING. By KARL COURVOISIER.
With Illustrations. Tenth Edition. Cloth, 2s. 6d. (paper, 1s.)

"It is my opinion that this book will offer material aid to all violin players."—JOACHIM.

"As far as words, aided by diagrams, can make clear so practical a subject as the playing of a musical instrument, this little book leaves nothing to be desired. The author, who was a pupil of Joachim, has treated the subject in a most thorough manner, and we can highly recommend his little book."—Educational Times.

A CHAT WITH CHORAL SINGERS. By H. W. Sparrow, A.R.C.O. 8vo, paper cover, 4d.

"An immensely interesting book that has every right to be classed among those that are genuinely useful, and it should be prized by all vocalists from the highest to the lowest . . . . short essays, brief and to the point, on the varied phases of the singing voice; there is none of the superfluous literary padding about it . . . . is earnestly recommended to all as being a most exhaustive treatise in concise form of the art, and we trust that it may reap what it deserves, by running into many editions."

—The Musical Observer.

A correspondent writes to the author: "I have read and re-read your little booklet with much interest and attention, and think that this book should be in the hands of everyone having a real interest in singing. It is the best investment I have made, and although it has dispelled many illusions, I wish to thank you right heartily for having placed such an excellent work at the disposal of the public."

THE THROAT IN ITS RELATION TO SINGING. A Series of Popular Papers. By Whitfield Ward, A.M., M.D. With Illustrations. Crown 8vo, cloth, 2s. (paper, 1s.)

CONTENTS: Anatomical Structure of the Throat: What we see with the Laryngoscope; How we Sing; How we Breathe; How to take Care of the Voice; Hints to Voice Builders; How the Voice is Destroyed; Common Throat Affections of Singers, together with their Treatment, etc.

Recommended to all students of the Italian method of singing by the late Charles Lunn.

"The readers of 'The Etude' have frequently been treated to quotations from this remarkable work. To the teacher and student of singing it has a peculiar message. It stands for all that is sound and final in the philosophy of singing and shows that the esthetics and morals of the art are changeless. Those who need a healthful mental stimulus should read this reprint of a work that represents the best thought and practice of the old Italian singers and singing masters."—The Etude.

"It is a practical treatise on singing in which the aged teacher embodies his own experience and that of his contemporaries at a time when the art was probably more thoroughly taught than it has ever been since. Many of its remarks would still be highly useful."—Grove's Dictionary of Music and Musicians.

Advice to singers on every point of interest in references to the vocal organs.

Mr. Thorp's two books have from time to time been recommended by various eminent vocal specialists as giving practical aid and advice for the training, care and development of the voice. They are free from any biased "system" or "discovery."

GRADUATED COURSE OF EXERCISES FOR BOY CHOIRISTS. With Pianoforte Accompaniment. For Use in Conjunction with Above. By G. T. Fleming. 4to, album, sewed, 1s.

—Ditto, Boy's Voice Part only, 6d.

SOME FAMOUS SONGS. An Art Historical Sketch. By F. R. Ritter. 8vo, sewed, 1s.

HOW TO SING AN ENGLISH BALLAD. By E. Philp. Seventh Edition. Crown 8vo, sewed, 6d.

"It would be difficult to find a casket of brighter gems than those which lie within the cover of this little work."—Illustrated London News.

PHYSICAL DEVELOPMENT IN RELATION TO PERFECT VOICE PRODUCTION. By H. Travers Adams, B.A. 8vo, sewed, 2s. net.

This work is especially intended for students and is divided into sections such as Vibration, Breaks and Registers, The Speaking Voice, Attack, Practical Application, Breathing, Inspiration, Final Exercises in Inspiration, Expiration, Active or Forced Inspiration, Completion of Breathing, Practice of Sounds, Placing, Classification of Voices.

VOICE PRODUCTION AND VOWEL ENUNCIATION. By F. F. Mewburn Leven. Diagrams by Arthur C. Behrend. Post 8vo, sewed, 6d.

VOCAL EXERCISES FOR CHOIRS AND SCHOOLS. By Dr. Westbrook. Post 8vo, sewed, 2d.

WAGNER.

WAGNER'S TEACHINGS BY ANALOGY. His Views on Absolute Music and of the Relations of Articulate and Tonal Speech, with Special Reference to "Opera and Drama." A Series of Papers for the Student. By Edwin Evans, Senior, F.R.C.O. Crown 8vo, cloth, 2s. 6d. net.

An introduction to the study of Wagner's Prose Works.

The value of the study of Wagner's prose writing as an education to the musical student cannot be overestimated and amongst these prose writings "Opera and Drama" may be considered his principal critical and theoretical production. Without a study of its contents no true and lasting understanding of opera can be arrived at. Wagner's somewhat heavy and Tentonic style in the original has been admirably Englished by Edwin Evans, and Wagner students will feel they owe him a full debt of gratitude for so clear and expository a translation which has now been placed within their reach! This pleasure is added to by the setting of the text which has been arranged in numbered paragraphs, each with a sub-heading denoting the subject dealt with. A copious index makes possible an easy and quick reference to any of these paragraphs and the whole thus gains in attractiveness and loses the heavy and discouraging appearance of the original.

Wagner writing to his friend Uhlig said:

"Here you have my testament: I may as well die now—anything further that I could do seems to me a useless piece of luxury."

Ernst Newman in "A Study of Wagner" writes: "Although there appears here and there in his prose-work something of the vast synthetic power of his musical imagination—such a work as 'Opera and Drama,' for instance, finally compelling our admiration for its tenacity of purpose and the breadth of vision that sweeps so far before and after."

"This work contains his contributions towards the metaphysics of music, if, indeed, such can be said to exist. Apart, however, from metaphysics the work is an exposition of Wagner's thoughts on the significance of Beethoven's music."—Grove's Dictionary.
JUDAISM IN MUSIC. Being the Original Essay together with the Later Supplement. By RICHARD WAGNER. Translated from the German (Das Judenthum in der Musik) and Furnished with Explanatory Notes and Introduction. By E. EVANS, Senior. Crown 8vo, cloth, 3s. 6d.

"It at last becomes possible calmly to seek to draw from this essay those valuable lessons relating to articulture which are therein contained, not in that aspect of the main subject by which Wagner was most exci-
cited or his adversaries most offended, but in those subsidiary references and explanations by means of which he then thought merely to support his case but to which time has given a greater value than to the case itself. The noise and disturbance created by the publication of the above work drew public attention for the first time to Wagner's prose writings and created a demand which has continued ever since."

"This 'human document' shows Wagner in a peculiarly personal light, and as such it will be read with interest by those who believe that the composer of the 'Ring' never wrote anything which is not worth reading."

—The Scotsman.

THREE IMPRESSIONS OF BAYREUTH. The 1908 and Previous Wagner Festivals. By ROSE KOENIG. With Two Facsimile Programmes. Crown 8vo, cloth, 2s. net (paper, 1s. net).

"Entertaining and agreeable reading, as recording the impressions of a musical and susceptible hearer."—Yorkshire Post.

To be appreciated in the smallest way Wagner must be studied in advance.

"Description and analysis go hand in hand with the narration of the story. Musical examples are given as aids to the identification of the leading motives and an index makes it easy for any reader to turn up any particular motive instantly."—Yorkshire Observer.

"Such a compact handbook is almost indispensable to a real understanding of the mythology and the musical motives which have been blended into so superb a creation by Wagner."—Halifax Guardian.

MY RECOLLECTIONS OF RICHARD WAGNER. By AUGUST LESIMPLE. Post 8vo, cloth, 2s. net (or paper covers, 1s. net).
WAGNER. A Sketch of his Life and Works. By N. KILBURN, Mus.Bac. Cantab. Sewed, 6d.

BAYREUTH AND MUNICH. A Travelling Record of German Operatic Art. By VERNON BLACKBURN. Crown 8vo, stiff boards, 1s. net.

ON CONDUCTING. By RICHARD WAGNER. Translated by EDWARD DANNREUTHER. Second Edition. Crown 8vo, cloth, 5s.

"One of the finest of his minor publications, and to the professional musician, perhaps the most instructive, giving his views as to the true way of rendering classical music, with numerous directions how to do it, and how not to do it, together with many examples in musical type from the instrumental works of Beethoven, Weber, Mozart, etc."—Grove's Dictionary.

WAGNER. See "Makers of Music," ("Biographical" Sect.)

See "Mezzotints in Modern Music," (Æsthetica, etc., Section.)
MANUSCRIPT MUSIC PAPER.

(a) 12 Staves. Roy. 8vo (10 by 6½). Ruled even, 5 quires (120 sheets), the lot 2s. 6d.

This is pre-eminently the Musical Students' Paper, as it is light, portable, smooth and easy to write upon; each sheet, too, will hold a large quantity of matter. There is no paper better suited for Exercises on Counterpoint and Harmony.

(b) 12 Staves. Oblong folio (14 by 10). Ruled in groups of 3 Staves for Organ Music, 5 quires (120 sheets), the lot 5s.

The paper is of the same size as ordinary oblong folio. Organ Music, e.g., Best's Arrangements, etc.

(c) 12 Staves. Folio music size ruled in threes (10 by 14). 5 quires (120 sheets), the lot, 5s.

Exactly the same in size as ordinary folio printed music so that upon it Songs or Organ Pieces may be written just as they are to be printed. It is a very useful paper, as Manuscript music written on it can be bound with Printed Music.

(d) 12 Staves. Quarto size (11¼ by 9¼). 5 quires (120 sheets), the lot 3s. 6d.

(e) 12 Staves. Oblong quarto (9¼ by 11¼). 5 quires (120 sheets), the lot 3s. 6d.

(f) 12 Staves. Folio music size, ruled even (10 by 14). 5 quires (120 sheets), the lot 5s.

(g) 24 Staves. Folio music size, full score (10 by 14). 5 quires (120 sheets), the lot 5s.

(h) 14 Staves. Quarto size (11¾ by 9¼). 5 quires (120 sheets), the lot, 3s. 6d.

MANUSCRIPT MUSIC BOOKS. Quarto size, 6d.; Octavo size, 6d. and 3d.; Brass Band book, 3d.; Exercise book, oblong, 4d.

CHOIR ATTENDANCE REGISTER.

DIARY OF A PILGRIM IN THE NETHERLANDS. The Holy Grail in Bruges and Other Impressions of Travel. Bruges, Courtrai, Tournai, Amsterdam, the Hague, Antwerp. By Rose Koenig. Crown 8vo, cloth, 2s. net (paper covers, 1s. net).

A MASONIC MUSICAL SERVICE BOOK FOR THE THREE DEGREES OF CRAFT FREEMASONRY. The Whole Compiled and Edited by T. J. Linekar (of St. Trillo, 2569). Royal 8vo, blue cloth, limp, 2s. 6d. net (or paper covers, 1s. 6d. net).

The Freemason says: "It contains all that is necessary for the degrees in the way of Psalms, Hymns, Kyries, etc."

THE FIRST MUSIC PRINTED FROM ENGRAVED PLATES IN ENGLAND.

PARTHENIA Or the First Musick ever Printed for the Virginals. Composed by three famous Masters, William Byrd, Dr. John Bull and Orlando Gibbons. Translated into Modern Notation and Edited by E. F. Rimbault, LL.D., F.S.A. With Fac-similes of the original Engraved Title, showing a Lady playing the Virginals, a page of the Music, and the Curious and Interesting Dedication. Followed by the whole of the Music arranged for Playing on the Piano in the Modern Notation this forming a further 50 pages. Together with an account of the Virginals, Method of Playing, Early References, etc. By Dr. Rimbault. This Reprint limited to 250 copies only. Folio, gilt top, rough edges, imitation old boards, cloth back lettered. To Subscribers, 12s. 6d. (pub. 21s.)

The Virginal or Virginals from Henry the Seventh's time to nearly the close of the 17th century, included all quilled Keyboard instruments, the Harpsichord, Spinet, etc. Henry the Eighth, according to a contemporary, played well on the Virginals. Queen Mary is said to have equalled if not surpassed Queen Elizabeth in music playing, the Regals and Lute as well as the Virginals. The first music for this tribe of instruments—including the Harpsichord—was the "Parthenia." It consists principally of "Pavanes and "Galliarda," in common use for dancing purposes in Queen Elizabeth's time, "Preludiums," "Fantasia of Foure Parts," etc.

RATIONAL ACCOMPANIMENT TO THE PSALMS. By F. Gilbert Webb. Post 8vo, 6d.

MODEST IDYLLS FOR MUSICAL SETTING. By Ernest Alfieri. Crown 8vo, sewed, 1s. net.
MINIATURE VOCAL SCORES OF THE ORATORIOS. with Pianoforte Accompaniment. Beautifully and Clearly Printed, Gem Pocket Editions, bound in limp red cloth, volumes as follows, 1s. each:

CREATION. MESSIAH. ELIJAH. ST. PAUL.

HYMN OF PRAISE and HEAR MY PRAYER (in one volume).

ENGLISH GLEE AND MADRIGAL WRITERS. By W. A. BARRETT. 8vo, cloth, 2s. 6d.

"Mr. Barrett is highly to be commended, no less for the vast amount of reliable information which he has collated upon the subject in hand, than for the concise manner in which, for the benefit of the reader, he has compressed it into a small space."—Monthly Musical Record.

NATIONAL SCHOOL OF OPERA IN ENGLAND. Being the Substance of a Paper read before the Licentiates of Trinity College, March, 1882. By FRANK AUSTIN. Post 8vo, sewed, 6d.
