DESIGN ON THE COVER

This represents a bronze knocker of the twelfth century, probably made in the first instance for an abbey church. From some time before 1500 until about 1900 it was fixed to the front door first of the old, afterwards of the new, dwelling-houses on the farm called after it 'Brazen-head Farm', in the parish of Lindsell, near Great Dunmow in Essex. The iron ring is of modern date.

The knocker, which is 14·5 in. in diameter, was presented to the British Museum by Henry Oppenheimer, Esq., F.S.A., through the National Art Collections Fund in 1909.

See National Art Collections Fund, Sixth Annual Report, 1909, no. LXXII, p. 46; Proceedings of the Society of Antiquaries of London, XXII, p. 380.

Device on the lid of the Case of Mathematical Instruments,
Plate XXIV. (From *Archæologia*, LV, p. 531.)

P R E F A C E

THE friends of Sir Hercules Read, wishing to commemorate his long services to the British Museum, felt that nothing could better fulfil this object than such a visible record as this volume contains.

The field for illustration is indeed so wide that it cannot be fully covered: it ranges in time from prehistoric ages to our own day, in space from China (nos. XLIII-XLVIII) to Peru (nos. LIII and LIV). It was therefore thought best only to reproduce objects acquired while Sir Hercules Read was Keeper of the Department of British and Mediaeval Antiquities and Ethnography (1896-1921), omitting those obtained in the earlier years (1880-1896) during which he was officially associated with the late Sir A. Wollaston Franks. With the exception of the great series of flint and stone implements bequeathed by Dr. Allen Sturge in 1919, the more notable collections added by gift, bequest, or purchase during this period are represented in the following pages: the Waddesdon Bequest (1898); the Morel collection of objects illustrating the Early Iron Age (1901); the series from Sir Aurel Stein's excavations in Turkestan (1907); the Greenwell collection of prehistoric bronzes, presented by Mr. J. Pierpont Morgan (1909); the Falcke collection of Wedgwood ware (1909); the Torday ethnographical collection from Central Africa (1909); the Polynesian idols and ceremonial objects brought to Europe by the early Missionaries, obtained from the London Missionary Society (1911); the fine collection of painted Enamels bequeathed by the Rev. A. H. S. Barwell (1913); a series of antique glass vessels presented by Mr. W. Lockett Agnew

and Mr. C. Fairfax Murray (1913); the important collection of plaquettes given by T. Whitcombe Greene, Esq. (1915). But many interesting objects in the book came into the Museum in smaller groups, or independently; of these a number were presented through the National Art Collections Fund.

While subscribers may wonder at the diversity of arts and civilizations here illustrated, Sir Hercules Read himself may derive a more intimate pleasure from these pages. Old memories will be evoked by almost every object. One thing will recall a curious history, another good luck in the auction room, others munificence of bequest, others, again, the generous support of friends. The binding itself is reminiscent. The design on the upper cover represents the 'Brazen Head', a mediaeval Knocker from Essex (p. iv); the leather comes from Nigeria: thus British, Mediaeval, and Ethnographical interests are all suggested.

In wishing Sir Hercules Read health and prosperity, those who unite to offer this volume will not anticipate for him an inactive life, but a strenuous leisure in which the welfare of the British Museum will often be present to his mind. They believe, as his own colleagues know, that the severing of an official tie will leave unbroken a stronger bond, the personal love for a great foundation.

LIST OF PLATES

- Portrait by J. Seymour Lucas, R.A.
- I. Painted pottery vessel, Iron Age.
- II. Early bronzes, Eastern Mediterranean.
- III. Triple gold collar from Portugal.
- IV. Iron Age bucket from Hallstatt.
- V. Greek bronze medallions.
- VI. Roman agate vase with enamelled mounts.
- VII. Glass of the Roman period.
- VIII. Early Byzantine jewellery.
- IX. Boss and penannular brooch of the eighth century.
- X. Ivory horn.
- XI. Ivory tau-cross.
- XII. Portable altar.
- XIII. Mediaeval crozier-head.
- XIV. Mediaeval seals.
- XV. Gold enamelled reliquary.
- XVI. Mediaeval silversmith's work.
- XVII. Mediaeval bronze jug.
- XVIII. Mediaeval alabaster relief.
- XIX. Enamelled leaf, Limoges.
- XX. Panel of a triptych by Nardon Penicaud.
- XXI. Silver altar furniture from Spain.
- XXII. Italian plaquettes.
- XXIII. Enamelled cameo pendants.
- XXIV. Case of mathematical instruments.
- XXV. The Lyte Jewel.
- XXVI. Mediaeval pottery dish, Orvieto.
- XXVII. Maiolica oak-leaf jar.
- XXVIII. Staffordshire pottery jug.
- XXIX. Copy of the Portland Vase, Wedgwood.
- XXX. Chelsea covered vase.
- XXXI. Capo di Monte statuettes.
- XXXII. Pierced bronze plaques from the Caucasus.
- XXXIII. Siberian bronze plaques and Bactrian axe.

- XXXIV. Bactrian winged monster.
XXXV. Buddhist relief from N.W. India.
XXXVI. Parthian silver dish; Sassanian silver bowl.
XXXVII. Silver dish from the Punjab.
XXXVIII. Painted wooden panel, Chinese Turkestan.
XXXIX. Marble relief of a monster from Rajputana.
XL. Persian albarello.
XLI. Hispano-Moresque dish.
XLII. Kutahia bowl.
XLIII. Sepulchral wine-jar, Han Dynasty.
XLIV. Statuette of a lady, T'ang period.
XLV. Pottery statue of a Lohan.
XLVI. Wooden statue of a Bodhisattva.
XLVII. Pottery statue, Ming Dynasty.
XLVIII. Porcelain bowl, Sung Dynasty.
XLIX. Ivory mask from Benin.
L. Bronze head of a girl, from Benin.
LI. Wooden figure from the Congo.
LII. Polynesian gods.
LIII. Peruvian modelled ware.
LIV. Peruvian painted pottery, Nasca.
LV. Mexican stone mask.

I

PEDESTAL URN of the Early Iron Age (La Tène I), from Prunay,
Department of the Mâne, France. The red surface is ornamented
with Celtic scrolls in brown. The name of this type is due to
the hollow base, which became nearly flat in the 'Aylesford' type
of the 1st century B.C. The Gaulish origin of such British urns is
now beyond dispute.

4th century B.C.

H. 17.2 in. Morel Collection. Purchased 1902.

and the best of our educational institutions are not
interested in public health. Good health can be maintained
in spite of many difficulties and self-sacrifice, but good
men "bent on f[reedom]" will not find success unless good will and
a sense of duty lead to vigorous action and self-sacrifice.

II

EARLY BRONZES, EASTERN MEDITERRANEAN

Mycenaean bronze knife with handle and (originally) pommel of ivory. It was found in a tomb with a silver pin and a glass pendant with spirals in relief, at Colophon in Ionia, Asia Minor.

About 1300 B.C.

L. 13·25 in.

Bronze axe-head still attached to the head of its shaft; found at Tell el-Amarna, Egypt.

About 1380 B.C.

L. 21·75 in.

Bronze axe-head of Syrian type, with socket for hafting and two openings in the blade; found at Beyroot.

About 1700 B.C.

L. 5·5 in.

Copper axe, with original handle and feather binding, from the tomb of Nekht, Superintendent of soldiers under Rameses III of the 20th Egyptian Dynasty; found at Kurnah, Thebes, Egypt.

About 1200 B.C.

L. 17 in.

These four objects are selected from the collection made by the late Canon Greenwell, of Durham, and given to the British Museum by J. Pierpont Morgan, Esq., in 1909.

II

ENTERTAINMENT OF SPARTA IN GREECE - PART

In Sparta, I thought you had about done with your entertainments.
However, when you consider the nature of the men of Sparta
you will find it very difficult to judge of their entertainments
with exactness.

202

Indeed, I think you will find that the Spartans have
entertainments, but they are
of a very different kind to ours.
I will tell you what they are.

203

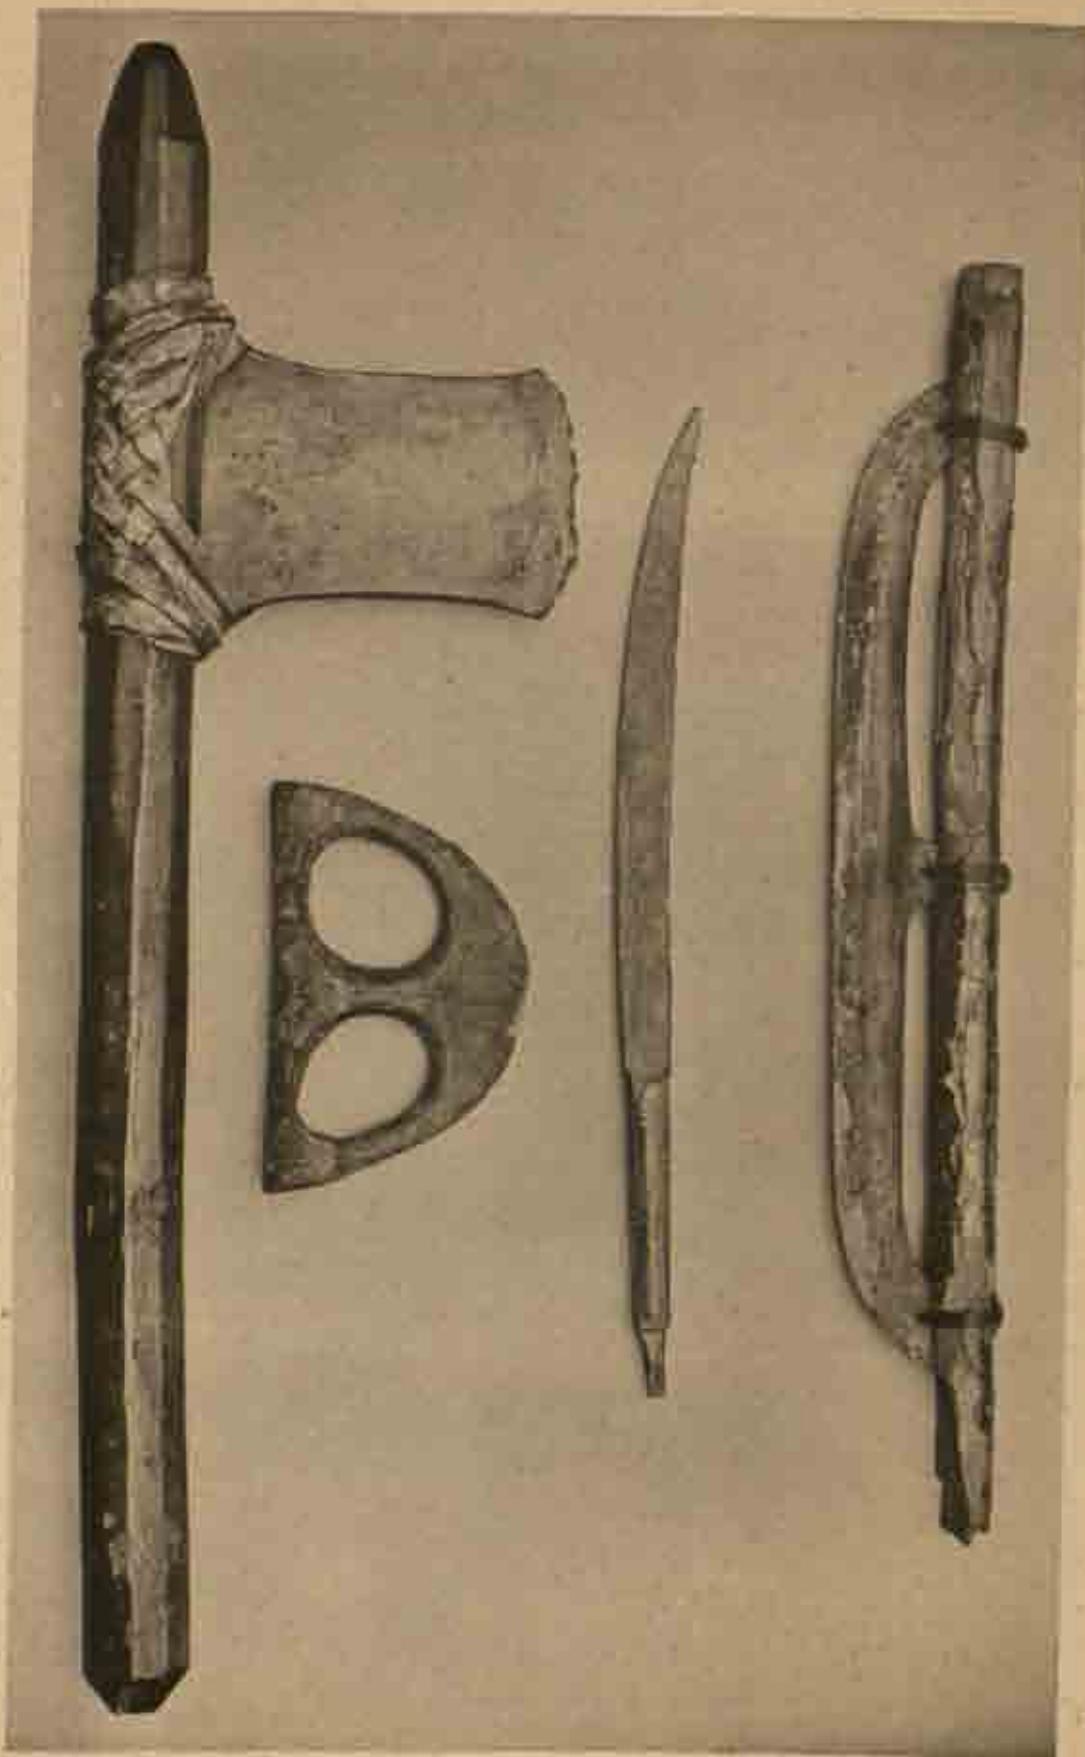

They used to have three great meetings in a year, at which
they set themselves in array, and made
a show of magnificence,
and grandeur.

204

At these meetings they used to have shows more magnificient
than any other nation's, and to make up for the want of
magnificence, they made up for it by the grandeur of their
array, and the magnificence of their shows.

205

Now, you will say, this sounds like a very foolish and
extravagant way of spending money, but you must remember
that the Spartans were not rich, and that they did not care
about wealth.

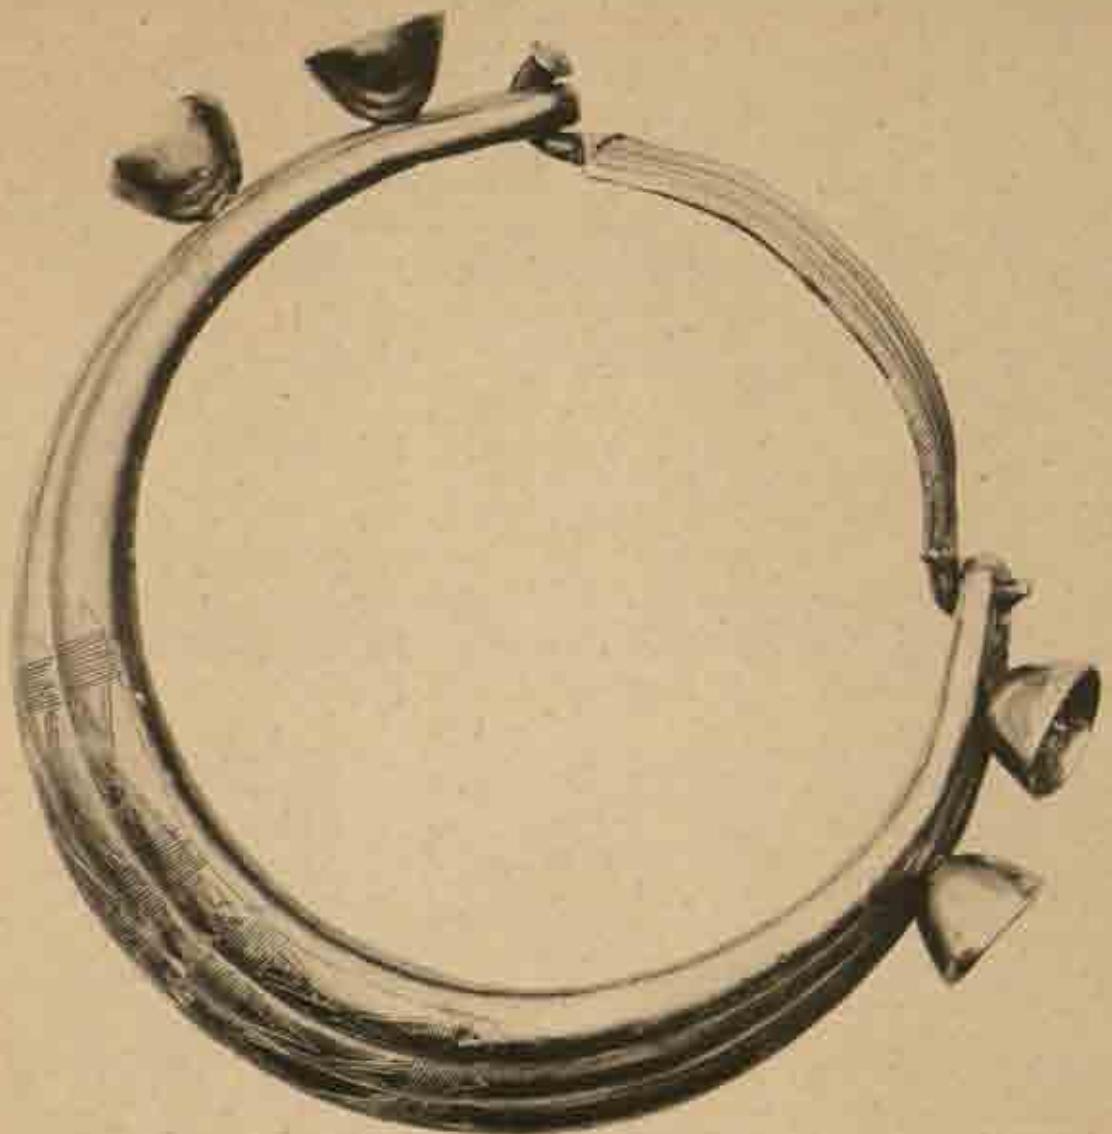

III

MASSIVE TRIPLE COLLAR OF GOLD, from Cintra, near Lisbon.
In type it resembles the triple torc of the Late Bronze Age in
Scandinavia, but the tulip-like additions on either side of the
movable limb point rather to the Hallstatt period.

Perhaps 8th century B.C.

D. 6-2 in. Weight, 40 oz. 170 grains. Purchased, 1900.

IV

BRONZE BUCKET with cordons and zones embossed with birds and wheels symbolic of the sun, from the famous burial-ground at Hallstatt, Upper Austria. The type is familiar and characteristic of the Hallstatt period, but specimens are seldom found in such good condition. It was excavated in 1869, and was acquired on the spot by Sir John Lubbock (first Lord Avebury).

About the 8th century B.C.

H. 22 in. Given by the Right Hon. Lord Avebury, 1916.

See *Archaeologia*, LXVII, p. 146.

V

PAIR OF BRONZE CIRCULAR MEDALLIONS, each with the head of a Bacchante, cast and chased, with a ribbed ring for use as a handle; they probably formed the handles of a funeral litter (*leptos*). Found in a tomb on the road between Samsun (Amisos) and Icshashamba, on the southern shore of the Black Sea.

Greek, about 280 B.C.

D. of medallions, 3·6 in. Total length, 9 in.
Reproduced by Baron Ferdinand Rothschild, M.P., 1898.
C. H. Read, Catalogue of the Works of Art presented to the British Museum
by Baron Ferdinand Rothschild, M.P., 1902, no. 1.

VI

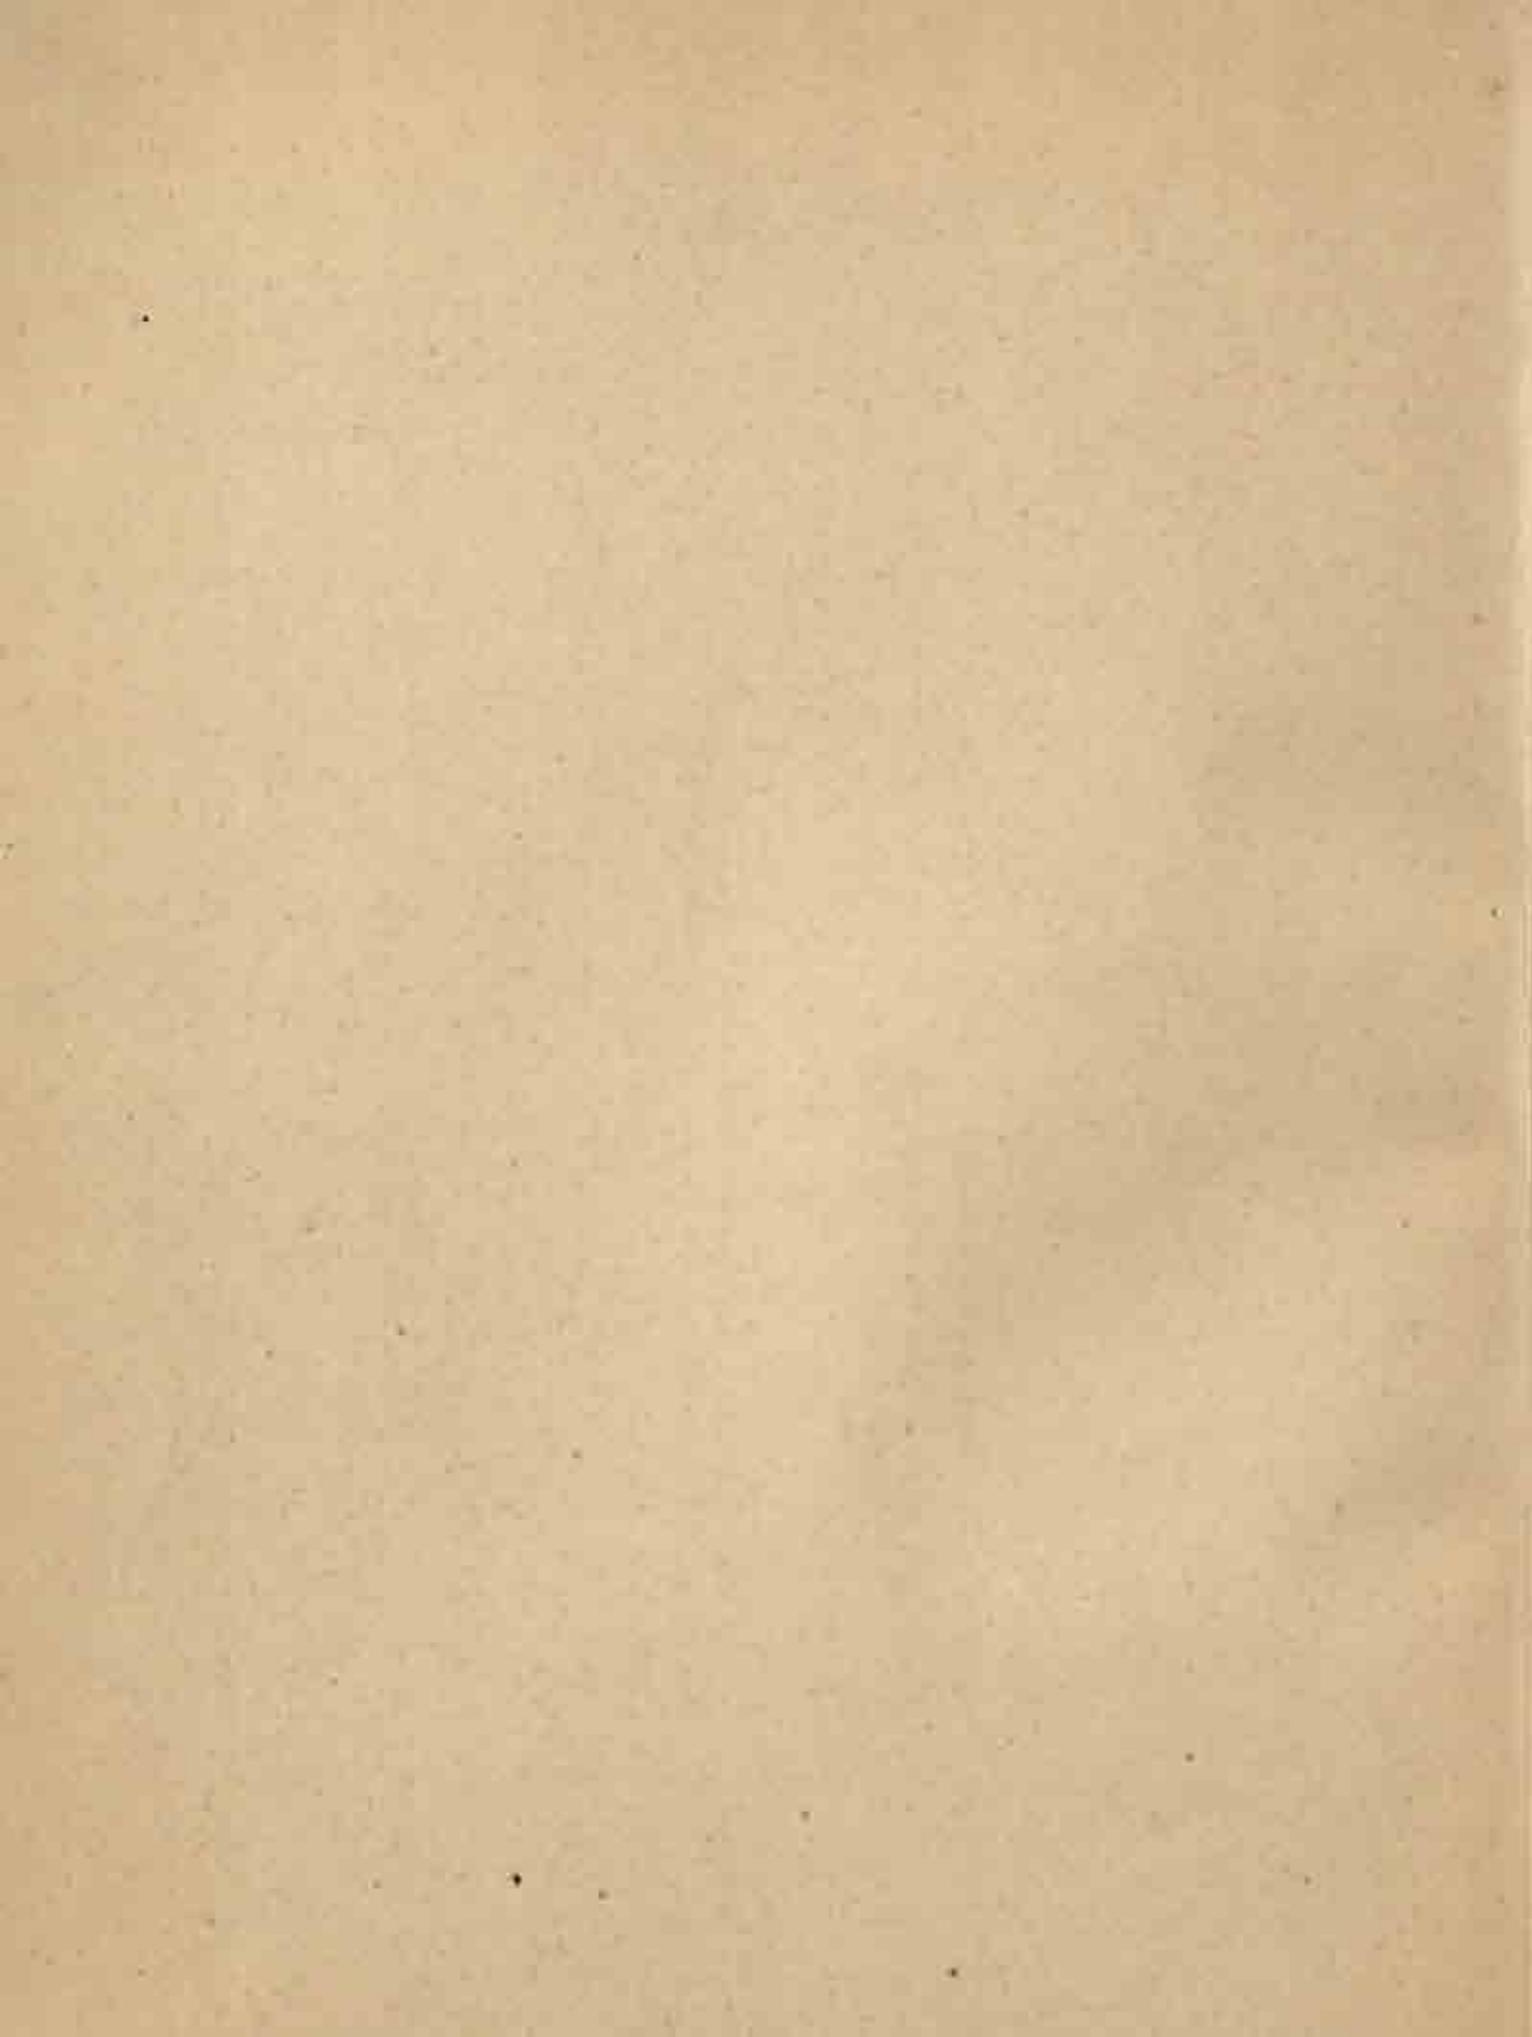

TWO-HANDED VASE of honey-coloured agate with mounts and cover of gold, richly enamelled. The body is cut in cameo with vine-branches rising from acanthus leaves; the handles rise from heads of Pan. The cover is chased in relief with four satyrs enamelled in white, holding bunches of grapes enamelled in translucent colours. On the upper part of the foot are chased and enamelled rams' heads; the square plinth shows on the sides sunk panels with Bacchus reclining, enamelled in white, and fret-designs enclosing cases, enamelled in red. To judge from the style, the mounts appear to be by the same hand as that which produced the Cellini salt-cellar at Vienna; they may therefore be Cellini's work. The vase was formerly in the possession of the Duke of Devonshire.

The vase antique; the mounts Italian, 16th century.

H. 6·5 in. Bequeathed by Baron Ferdinand Rothschild, 1893.

C. H. Read, *Catalogue of the Works of Art bequeathed to the British Museum by Baron Ferdinand Rothschild, M.P., 1902*, no. 68; Burlington Fine Arts Club, *Exhibition of European Sculpture, 1897*, no. 245.

VII

Glass of the Roman Period

(1) Ewer of dark blue glass with white ornament applied in bands and 'grained' pattern.

Greek. From Ampurias (ancient colony of Emporium), Gerunda, N.E. Spain.

H. 8.75 in.

Purchased 1906.

(2) Amphora with obliquely ribbed body; clear glass of faint greenish tone with blue rings on neck, and blue handles.
From Mount Carmel.

H. 8 in.

(3) Bottle of elegant form; clear glass with iridescent surface.
H. 7.75 in.

Part of a fine collection of ancient glass made in 1871 at ~~1871~~, and given by C. Fairfax Murray, Esq., and W. Lockett Ainsworth, Esq., 1913.

VIII

EARLY BYZANTINE JEWELLERY

- (1) Large pierced gold medallion forming the breast-piece from an ornament for breast and back. Four chains composed of smaller pierced gold discs are attached to the loops on the circumference of two large discs, of which one is here shown. Probably two of the chains passed over the shoulders (where they were fastened) and two under the arms.
- (2) Gold necklace, consisting of a plaited chain with openwork pendant, enriched with pearls, root of emerald, and sapphires.
- (3) Pair of gold ear-rings with pendants; set with root of emerald, sapphires, and coloured pastes.

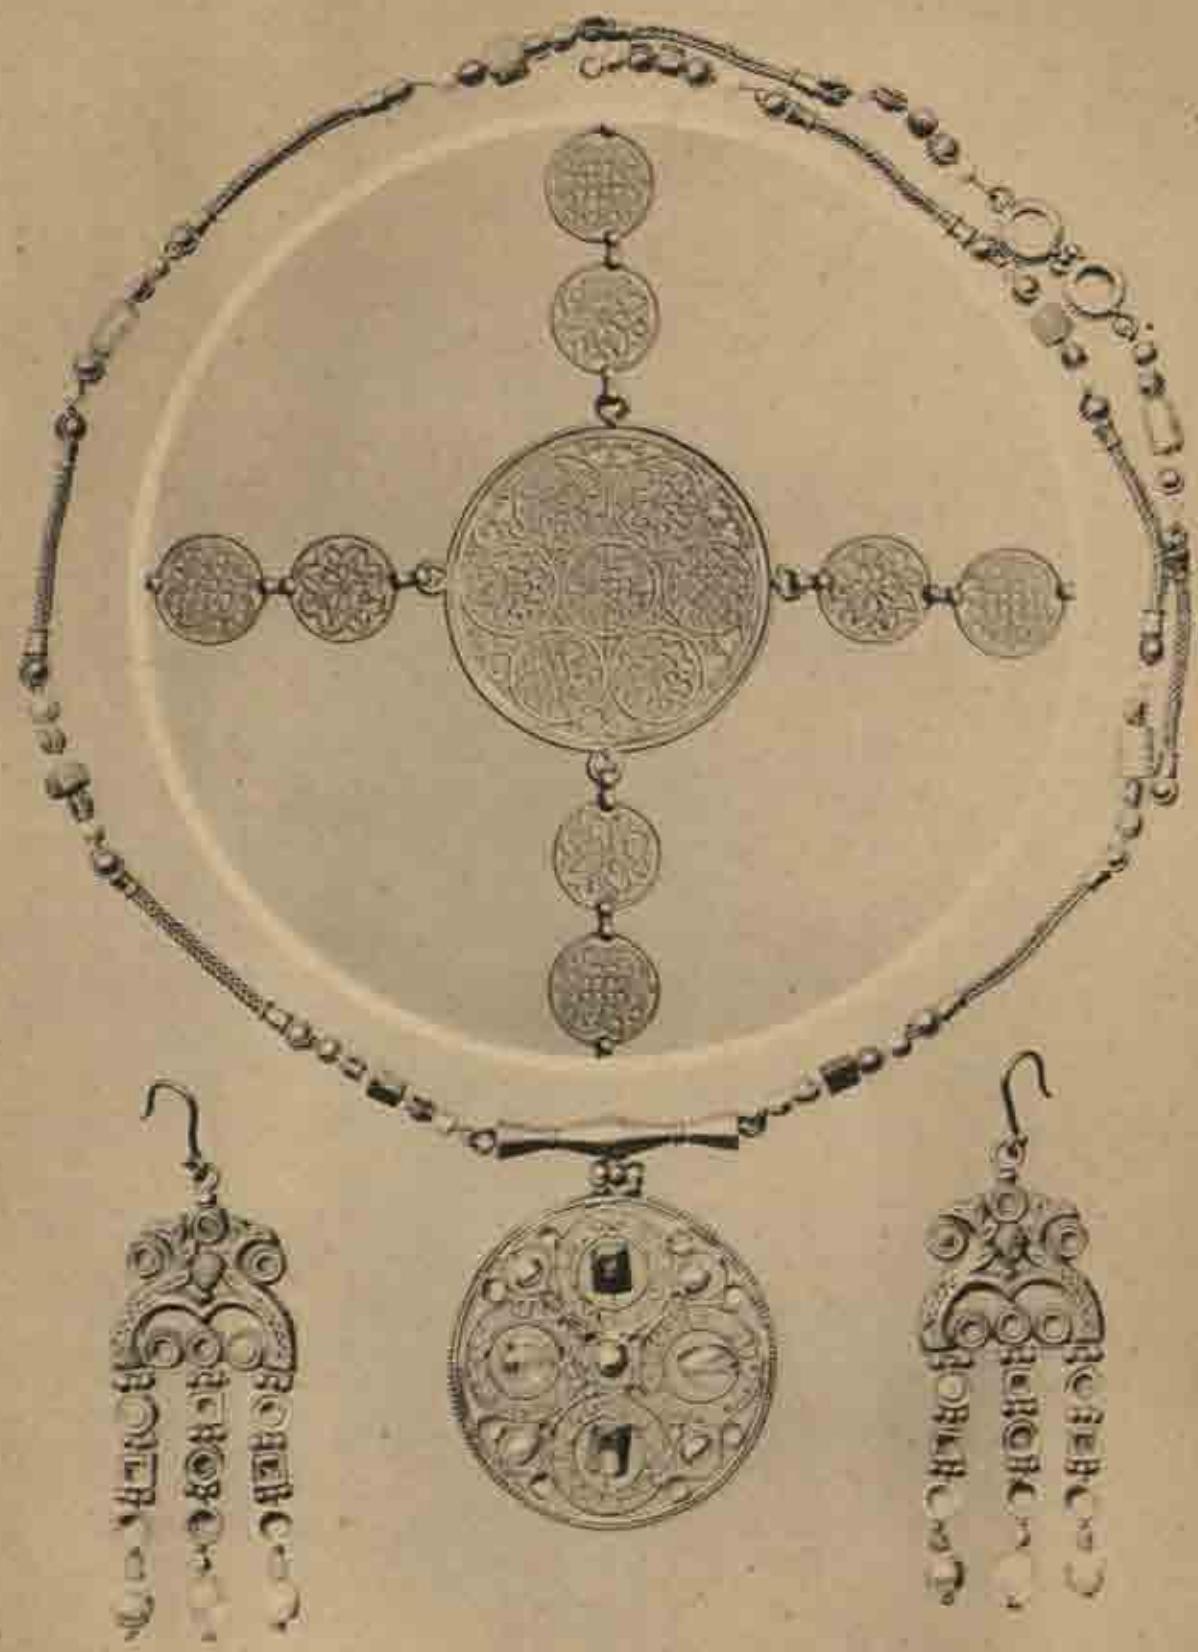

These objects, obtained in Cairo, are believed to have formed part of a treasure discovered in 1908 or 1909 either at Sheikh Abîda, the ancient Antinôe, on the east bank of the Nile, opposite Ishmûnein, or near the village of Tomet, in the vicinity of Assiût. Other jewellery from the same source is in the Freer Collection at Washington, the Morgan collection at New York, and the Gans collection in the Antiquarium at Berlin.

Probably made at Alexandria, late 6th century.

D. of medallion 3·65 in. Given by Mrs. Burns, 1916.

L. of ear-rings, 4·9 in.

See Walter Demason, *A Gold Treasure of the Late Roman Period* (University of Michigan Studies, Humanistic Series, Vol. XII), 1918.

IX

BOSS AND PENANNULAR BROOCH

Silver-gilt penannular brooch, probably found in Scotland, but of Irish origin. The incised work and filigree are characteristic of the best period, and even the back has two discs of scroll-work on the terminals.

Late 8th century.

D, 3·8 in. Given by Sir John Ramsden, Bart., 1919. The pin, now incomplete, was about 8 in. long.

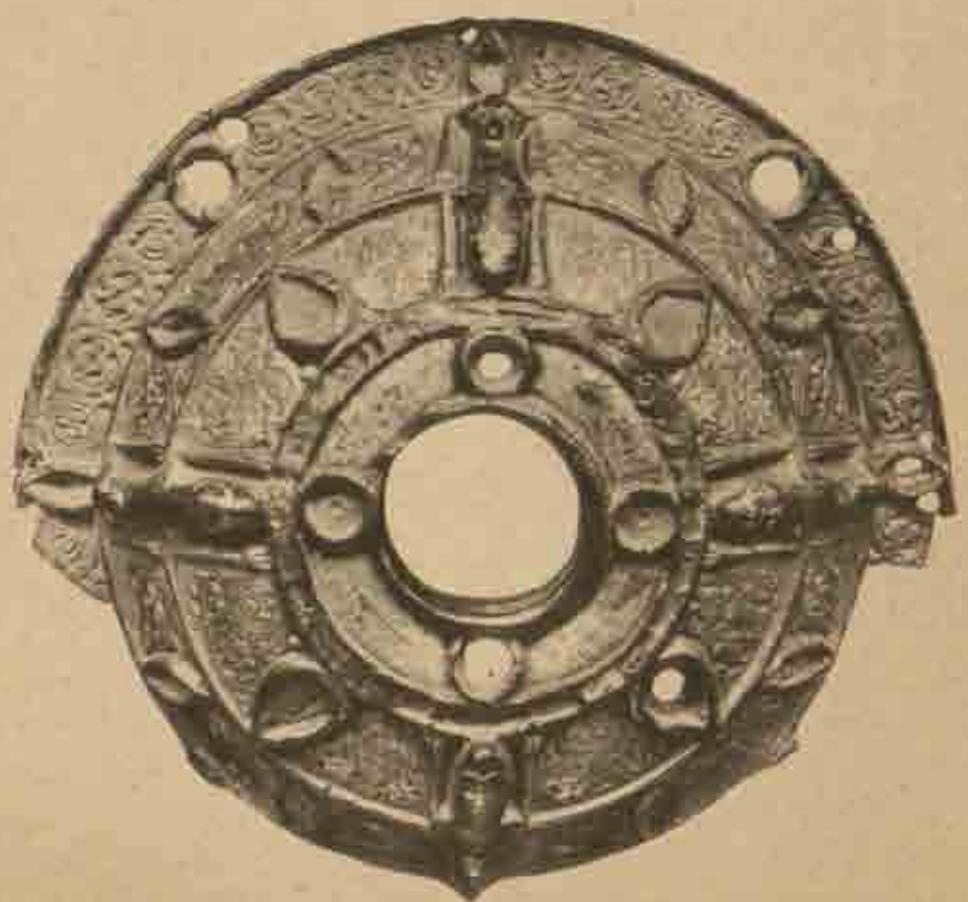

Proceedings of the Society of Antiquaries of London, XXXIII,

Bronze-gilt boss found in the churchyard at Steeple Bumpstead, Essex, and later affixed to a door of the church. It belongs to the best period of Irish art, and probably formed part of a shrine similar to that of St. Manchan, or Monaghan. It is of the same school as the Tara brooch and the Ardagh chalice, and was probably looted in Ireland by Vikings, who brought it to Essex when that part of the country was included in the Danelaw. The oval-settings, now missing, were probably of amber and blue glass.

8th century.

D, 5·5 in. Given by Henry Oppenheimer, Esq., through the National Art Collections Fund, 1916.

Proceedings of the Society of Antiquaries of London, XXVIII, p. 87.

X

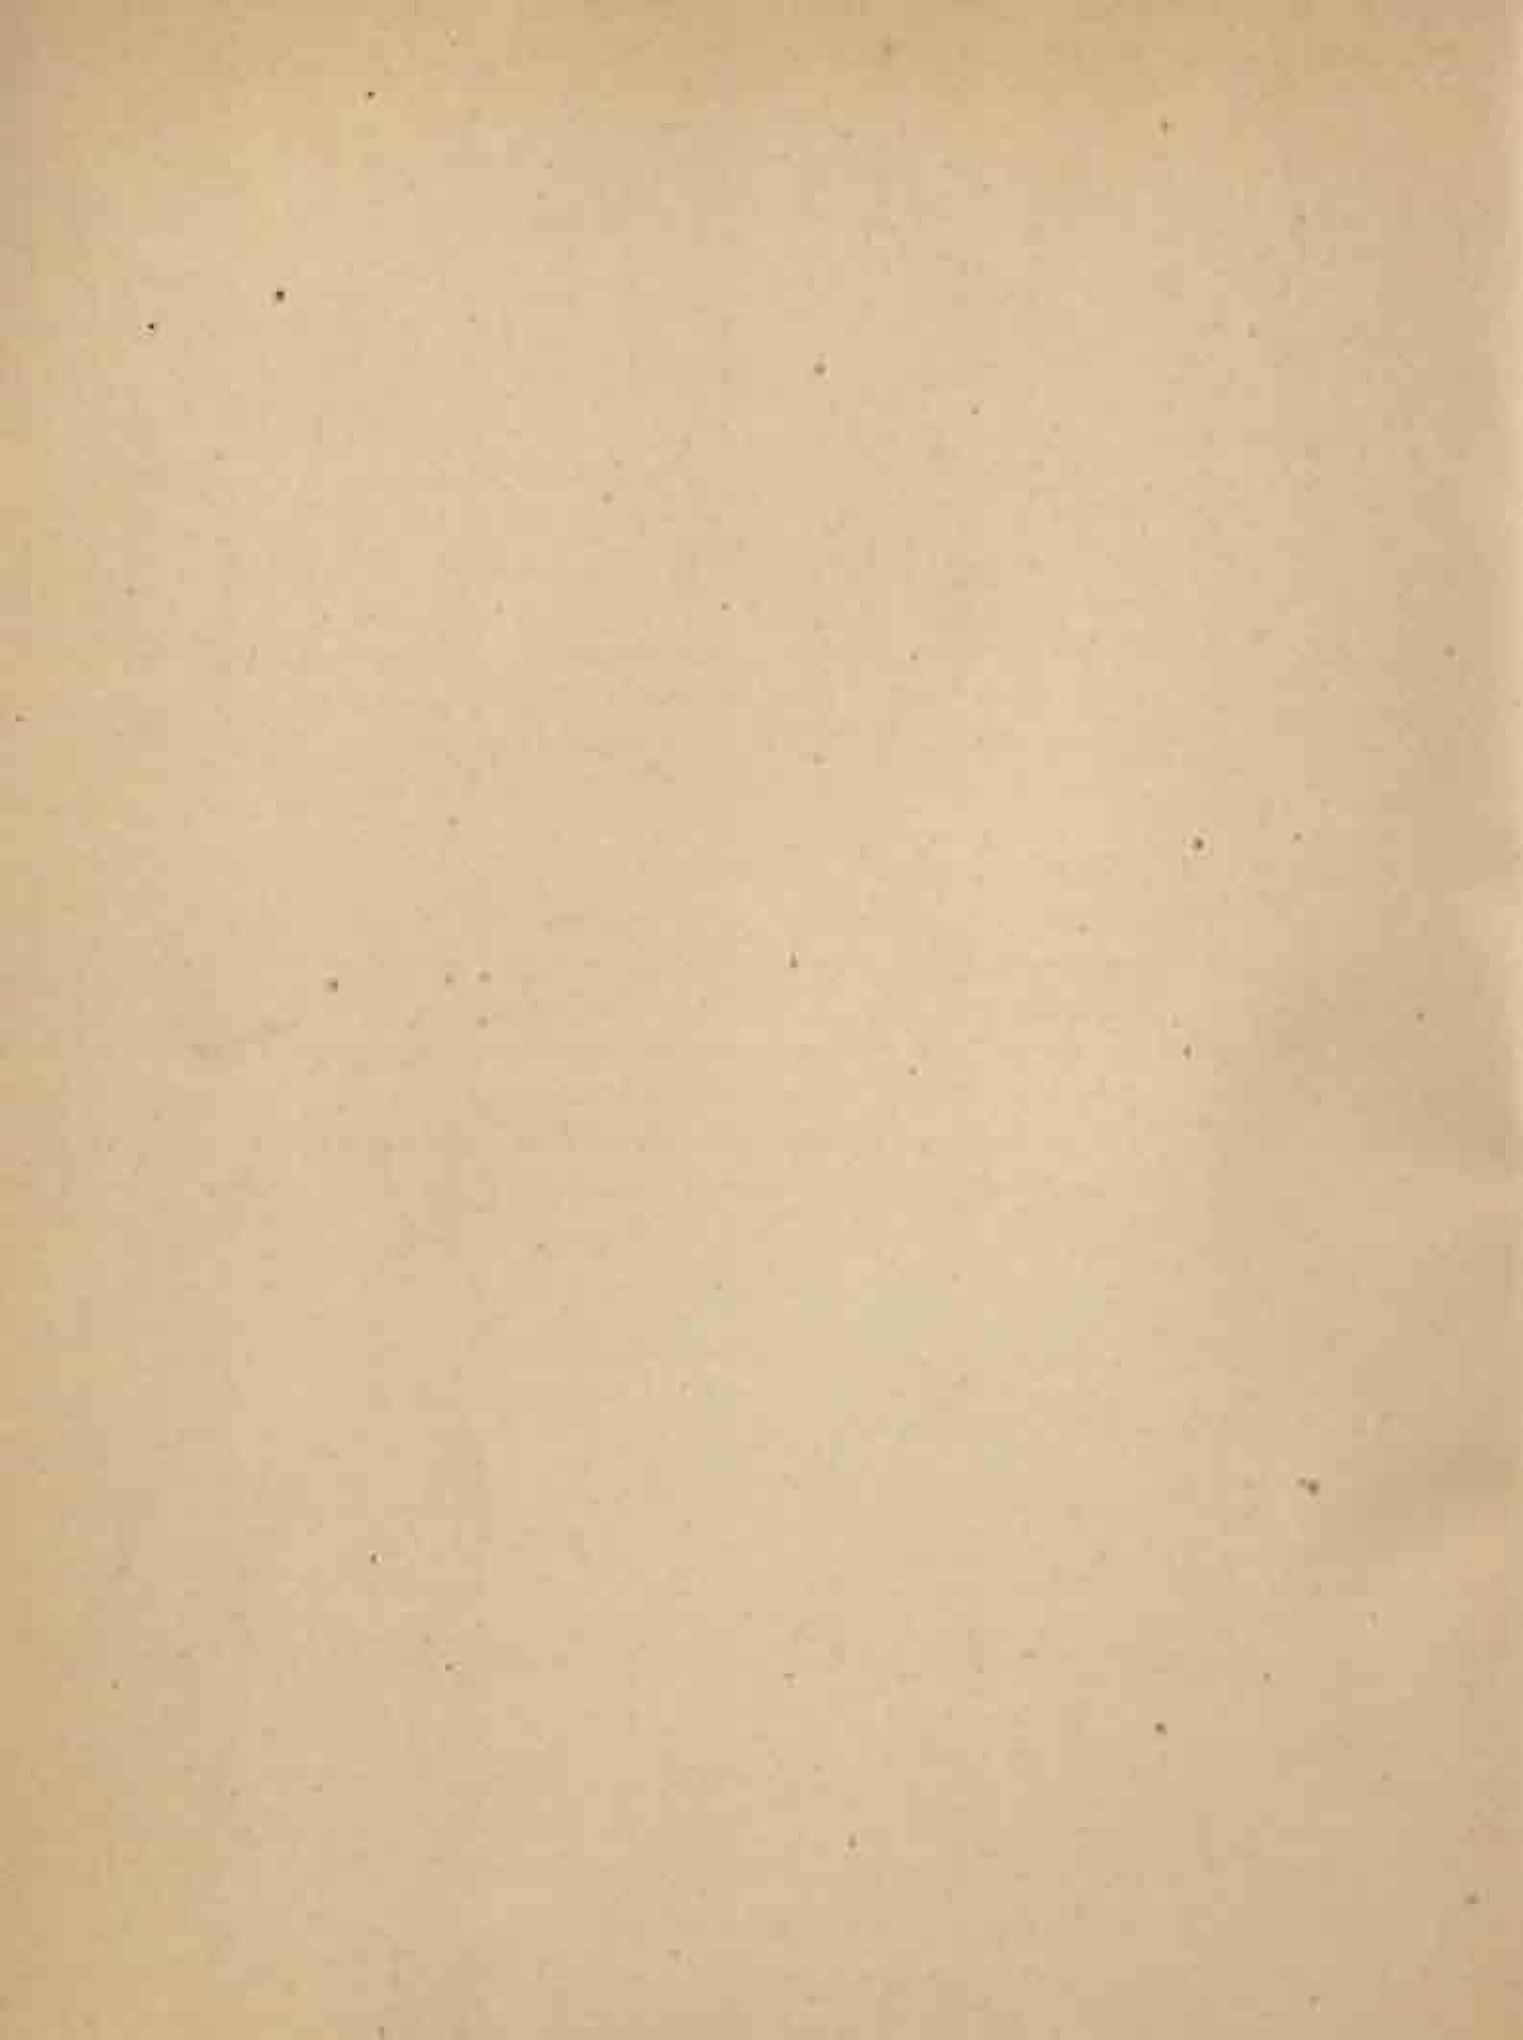

Ivory Horn, or OLIPIANT, carved with bears and monsters in
a network of interlacing circles of oriental style.

Byzantine or Mid-European, 11th century.

L. 25 in. Deposited by Charles Borrelle, Esq., 1911.

Proceedings of the Society of Antiquaries of London, XXVI, p. 9.

XI

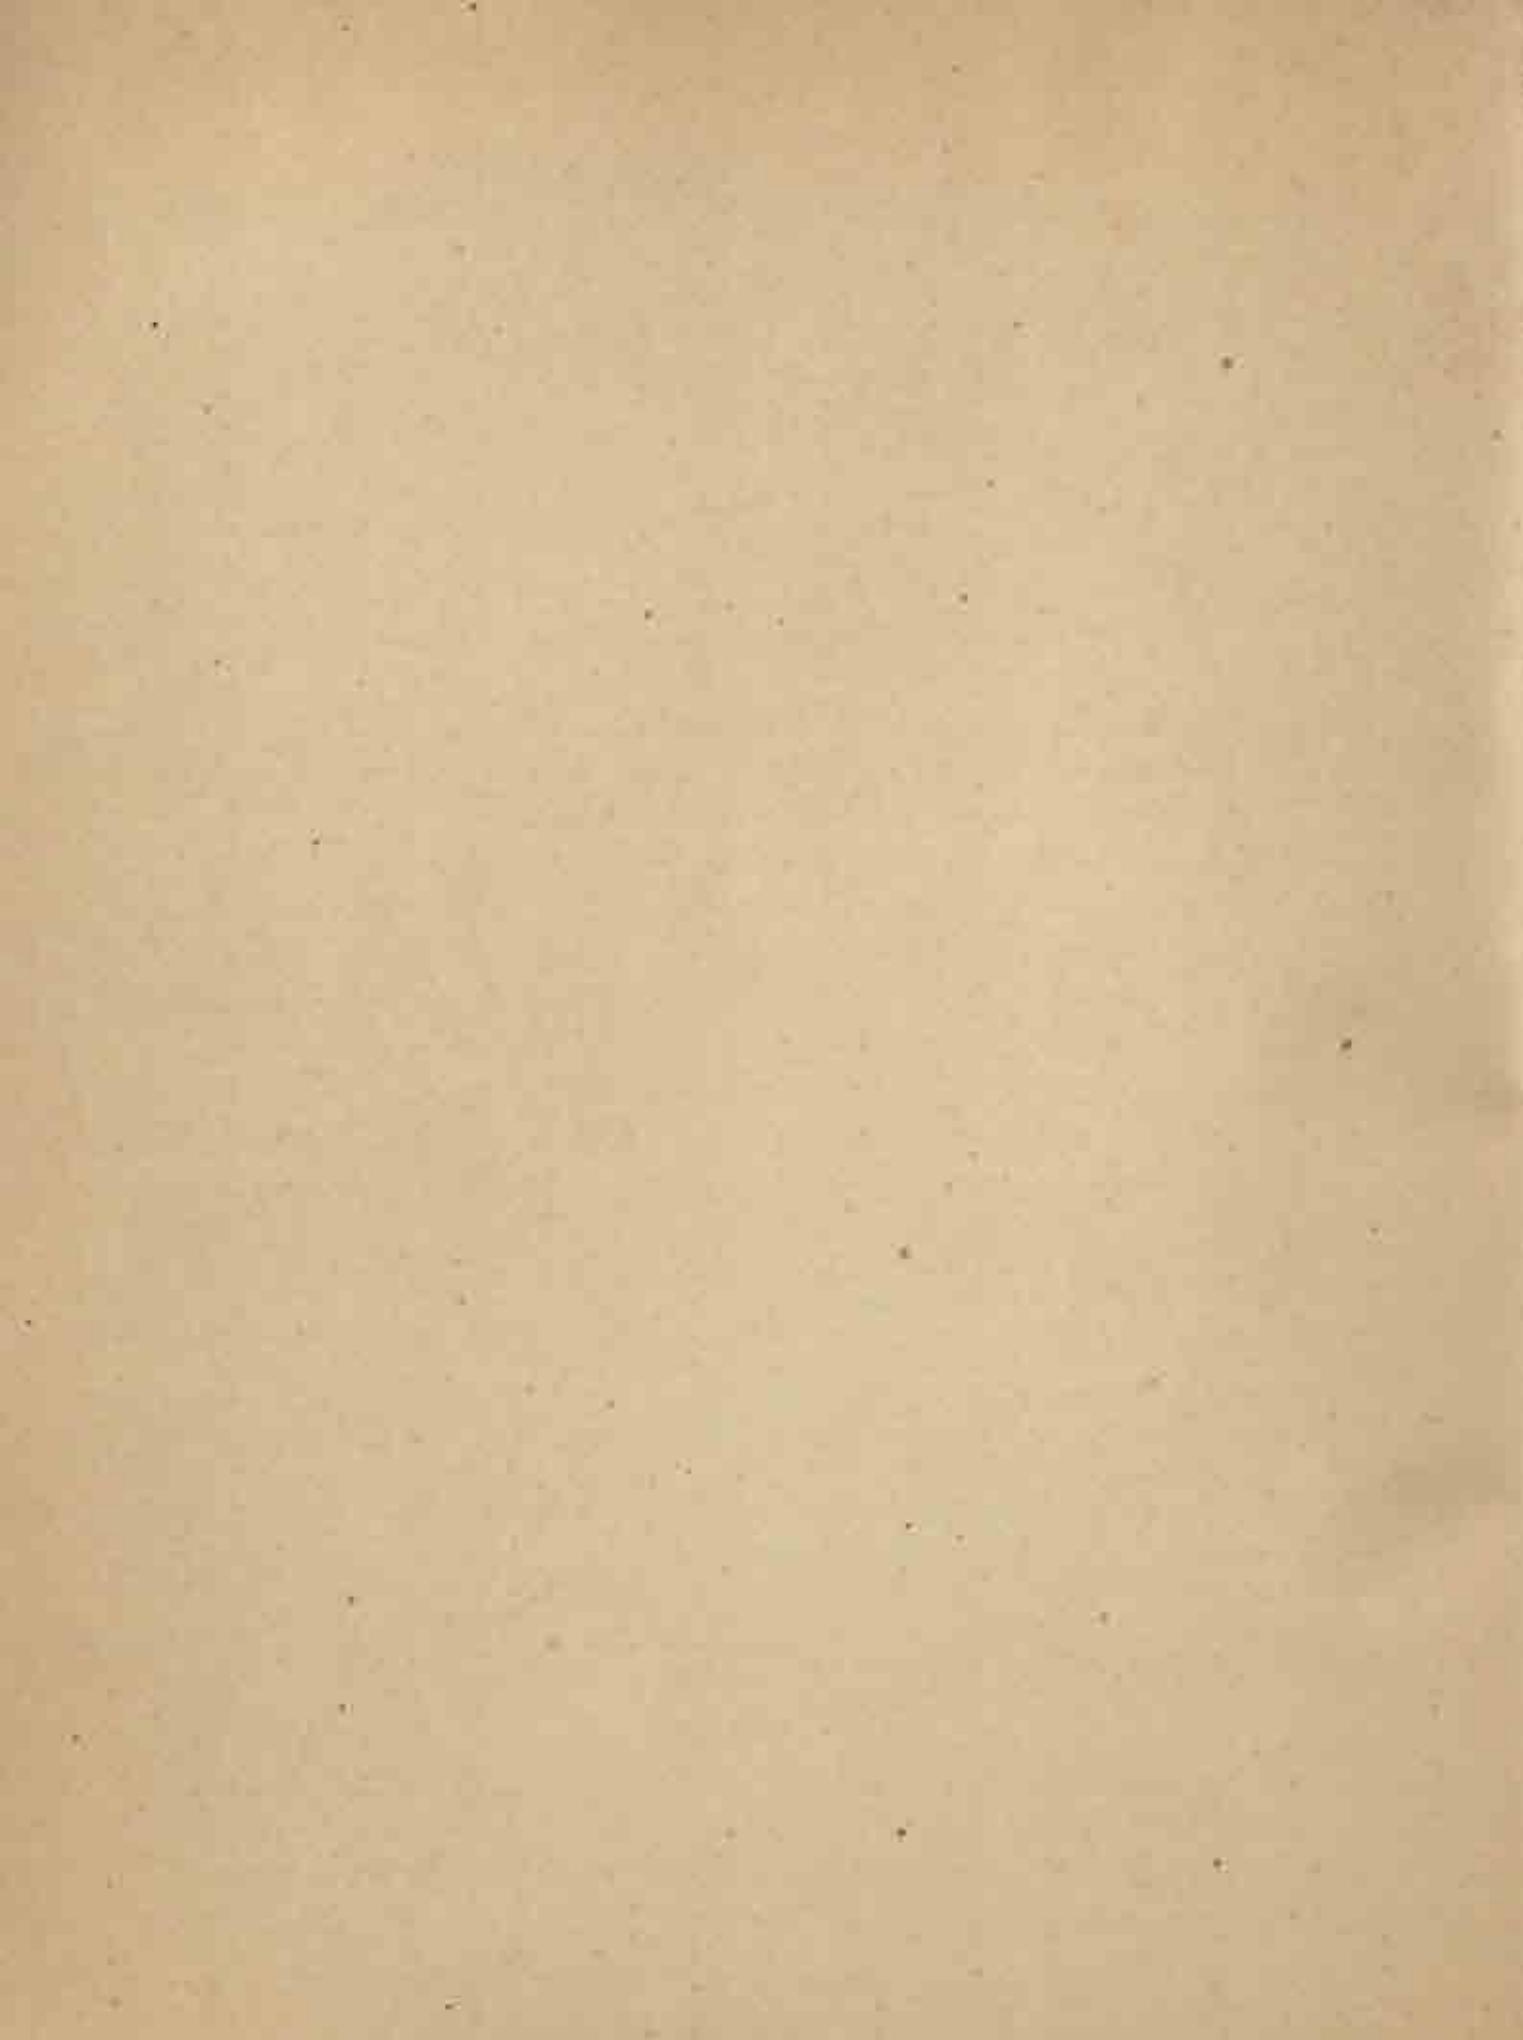

TAU-CROSS OF MORSE IVORY. The volutes are covered with conventional foliage in high relief and deeply undercut, with fantastic animals in the convolutions; near each animal is an open flower. The end of one volute is now broken, but originally each end had a gryphon's head biting at the foliage, and on the outer edge a rib pierced with holes, as if pearls or jewels had been threaded along it. On the top are two dog-like heads, the ears ornamented with interlacing bands. On each face, between the spring of the volutes, is a central subject: on one side the Crucifixion, on the other Our Lord treading upon the Lion and Dragon. Traces of heavy gilding remain in the interstices of the carving, and the plain spaces at the top may have been filled with plates of gold; probably colour was also employed to enhance the effect. This tau-cross may have been the pastoral staff of an abbot or bishop. It was found in the Rectory garden at Alcester, Warwickshire, and was possibly used at Evesham Abbey, which was founded in Saxon times. The style of the carved leaf work is that of the foliage painted by the illuminators of the Winchester School.

English, early 11th century.

L. 5·65 in. Given by the Friends of the British Museum, 1903.

Archæologia, and series, VIII, 1903, p. 497; British Museum, Catalogue of Ivory Carvings, 1909, no. 32.

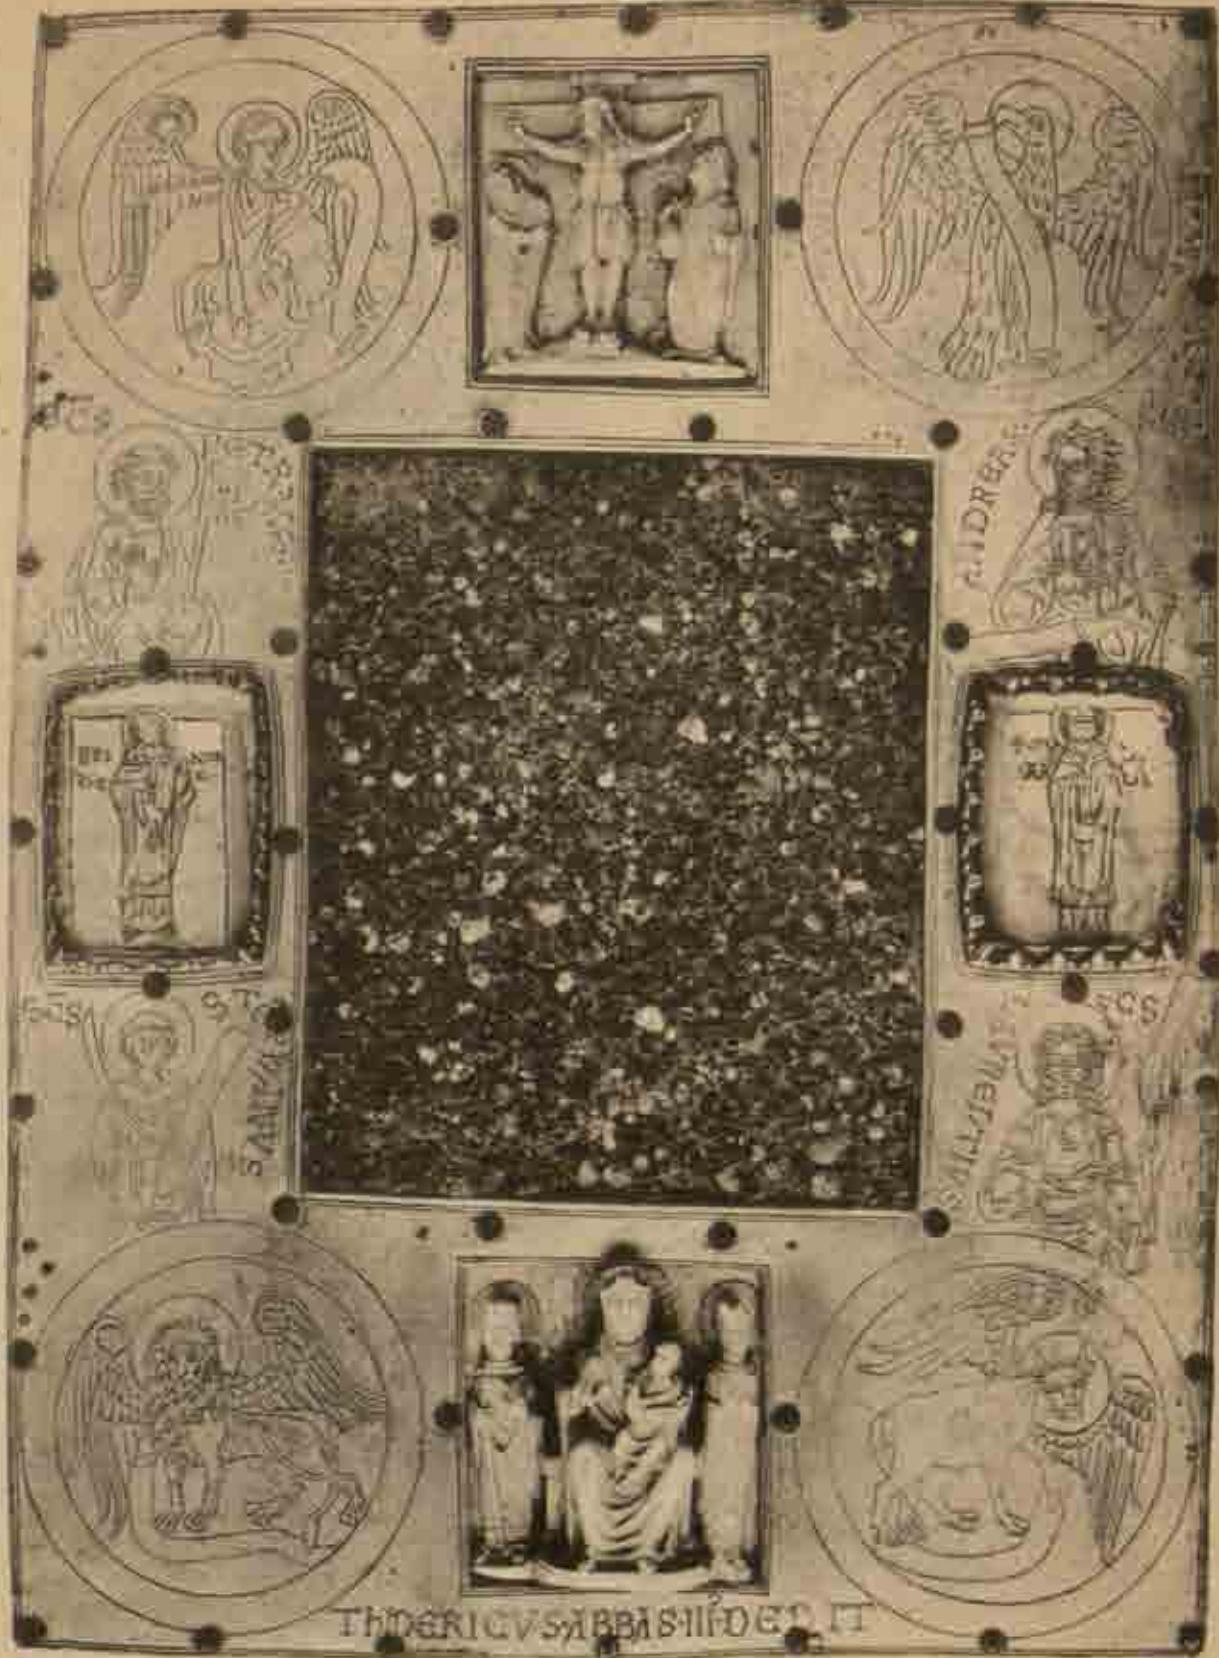

XII

PORTRABLE ALTAR; a marble slab inlaid in a thick wooden panel covered by plaques of gilt-bronze. In the upper plaque are inset two ivory reliefs with the Crucifixion and Virgin and Child between saints, and two miniatures of saints under crystal. The surface is engraved with the Symbols of the Evangelists in medallions, and with four half-figures of saints with their names: SS. Peter, Andrew, Stephen, and Lawrence. At the bottom is the inscription: THIDERICVS ABRAS III^o DEDIT. The plaque at the back of the altar is engraved with the names of between thirty and forty saints in horizontal bands. Probably presented to the Abbey of Scheida in the 13th century by the above-named abbot.

Rhenish, early 13th century.

L. 1438 in. Purchased 1902. Debruge-Dumetil, Soltykoff,
Seillière, Remesse-Bredbach, and Carnichael Collections.

See Viallet-Le-Duc, *Dictionnaire du mobilier français*, I, p. 20; J. Lefèvre,
Collection Debruge-Dumetil, p. 737.

THOMAS BECKET

XIII

HEAD OF A CROZIER of gilt bronze, with rock-crystal knob. It is covered with applied foliate ornament in the naturalistic style adopted by Frère Hugo of the Priory of Oignies, to whom it is attributed. The work is enriched with gems and small niellated plaques in raised settings.

Art of the Meuse Valley, first half of the 13th century.

H. 15·7 in. Purchased 1898.

XIV

MEDIEVAL SEALS

(1) Bronze matrix and impression of the seal of John Duke of Bedford, Regent of France and Admiral of England (A.D. 1420), who died in A.D. 1435. The device is a ship with crow's nest on the mast, and a mainsail charged with the arms of France and England quarterly, with a label of five points, ermine and flour-de-lis; in the field, floral scrolls and the root of a tree. The matrix was found at, or near, Poole, in Dorsetshire.

English, 15th century.

D. 22 in. Given by John Milford, Esq., F.S.A., 1898.
cf. British Museum Catalogue of Seals, no. 7166.

(2) Double matrix and impressions of the seal of Joanna, Queen of Sicily and Countess of Toulouse, daughter of Henry II of England. It is of silver, with a figure of Joanna on each half, in the one case as Queen, in the other as Duchess of Narbonne, Countess of Toulouse, and Marchioness of Provence. This princess married William II of Sicily in A.D. 1177, and the royal half of the matrix was probably used by her during his lifetime. After his death she married in A.D. 1196 Raymond VI, Count of Toulouse, and died three years later.

H. 35 in. Purchased 1897.

Found in the ruins of the Claretian Abbey of Grandseaux, Turbe-et-Caramone, France.

ADOLESCENCE

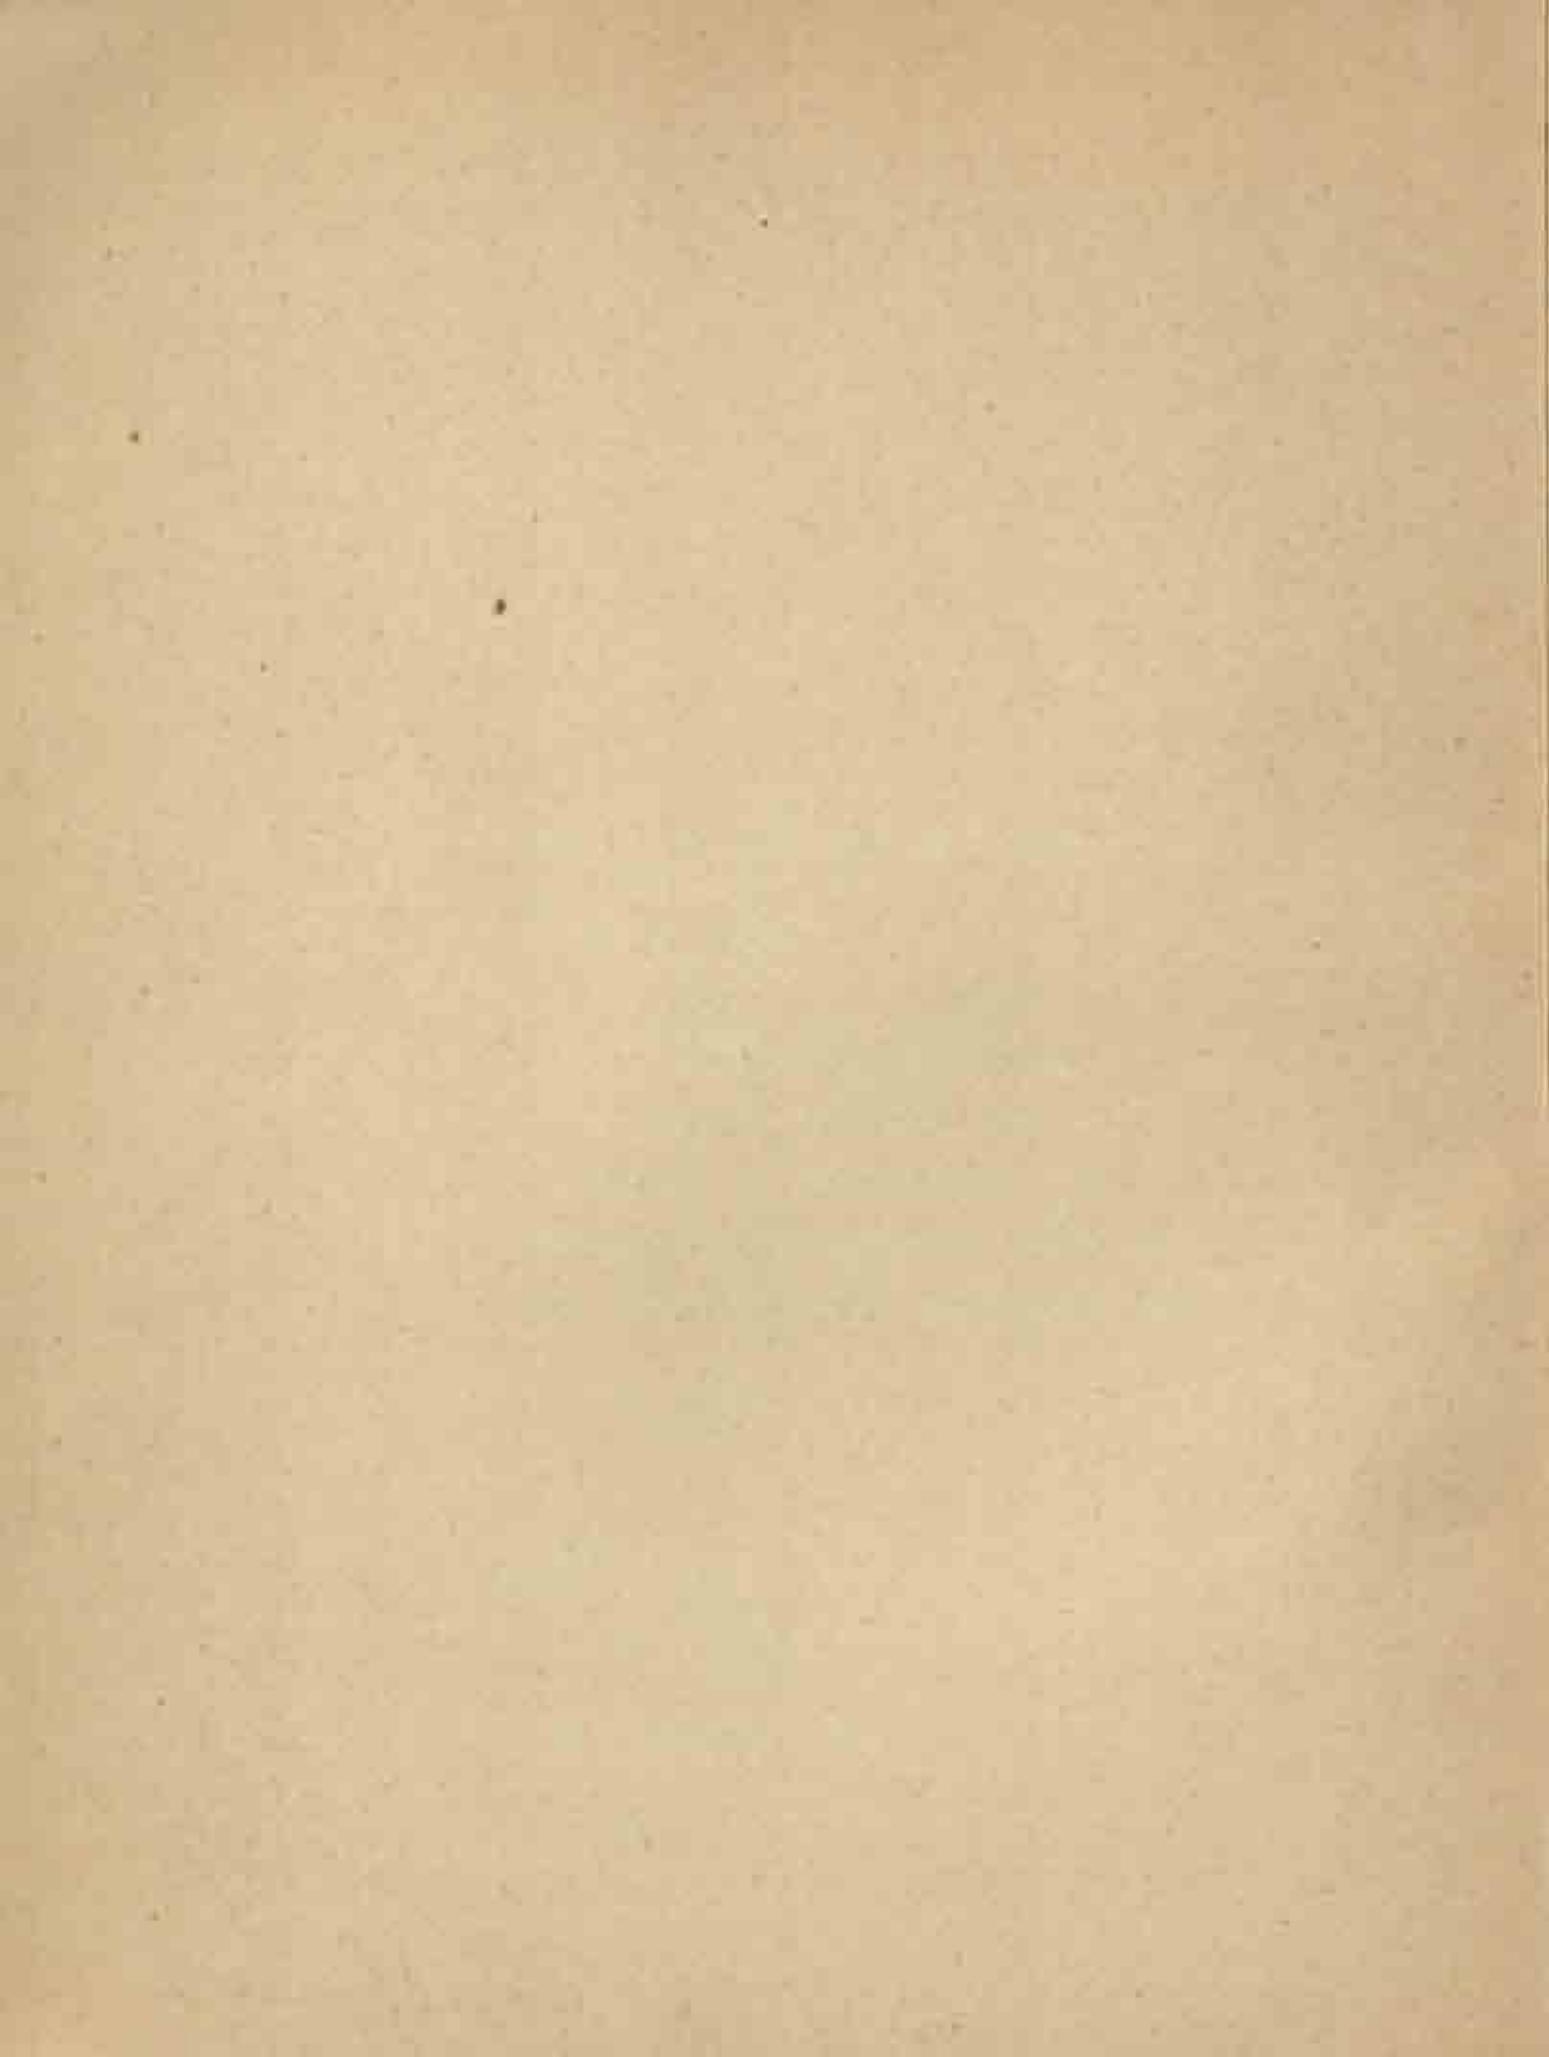

which older children also experience, but which most of us do not. Adolescence is a period of transition, one of the periods of greatest instability, when our interests, ideals, longings, fears, and ways of thinking undergo a tremendous change. But this is not all. The other basic change is a process of selection and淘汰 (elimination) of those traits and abilities which we have developed during childhood.

THESE TRAITS

which we have developed during childhood are not all good, nor are they all useful; some of them may even be harmful. We must therefore select from among them those which we shall keep and those which we shall eliminate. This is a process of selection and淘汰, and it is a process which begins very early in life. In fact, it begins before birth, when the fetus is still in the womb. The mother's diet, her health, her physical condition, her emotional state, all affect the development of the fetus. After birth, the child's experiences with his parents, with his environment, all affect the development of his personality. The child's own temperament, his own physical constitution, all affect the development of his personality. All these factors, both internal and external, contribute to the process of selection and淘汰.

THESE TRAITS

XV

GOLD RELIQUARY with covers formed of large amethysts, enclosing a central compartment with a Holy Thorn under crystal, by the side of which is an inscription in enamel: **DGI SPINA SĀTH GORONIE.** This compartment is closed by a small miniature of the Nativity, covered by talc. On the back of the compartment are two scenes in translucent enamel: the Presentation in the Temple and the Flight into Egypt. On the inside of the outer covers are similar translucent enamels: the left cover has, above, the Virgin and Child between angels, and, below, a kneeling king and queen; the right cover has the Crucifixion below and the Deposition from the Cross above.

This reliquary is said to have been given to a King of Aragon by St. Louis, who had acquired the Crown of Thorns from the Venetians. The style of the enamels points, however, to a date rather later than the death of St. Louis.

French, about A.D. 1310.

Length, without the loops, 1·54 in.
F.S.A., 1902.

Given by George Salting, Esq.,

*See L. Gonse, *L'art gothique*, p. 457, and plate opposite p. 234.*

nothing equal to these cases from our博物館 class
where we could find nothing but a few broken bones & skeletons
in the hill side. Since we thought no fossils in this area of
the country were to be found, or were supposed to be. However
we soon began to find out all the old limestone, which was
deposited before the formation of the new one
was covered, caused us to close off all the upper and middle layers
which were made out of sand stone, but the limestone remained which
was very fine, yellowish, & white, and always covered with
fossils, & shells.

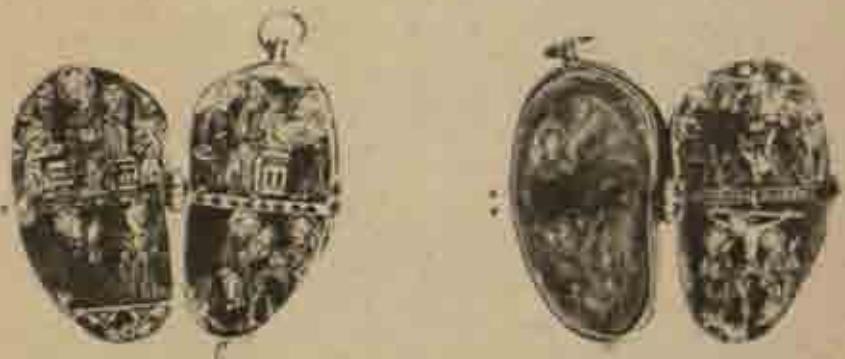

These fossils were very numerous, and varied in kind, & size,
but were mostly to be found in the sand stone between the
old & new limestone, because the old limestone all
had a thin layer of sand stone just above it. And
therefore the old limestone was easily found.

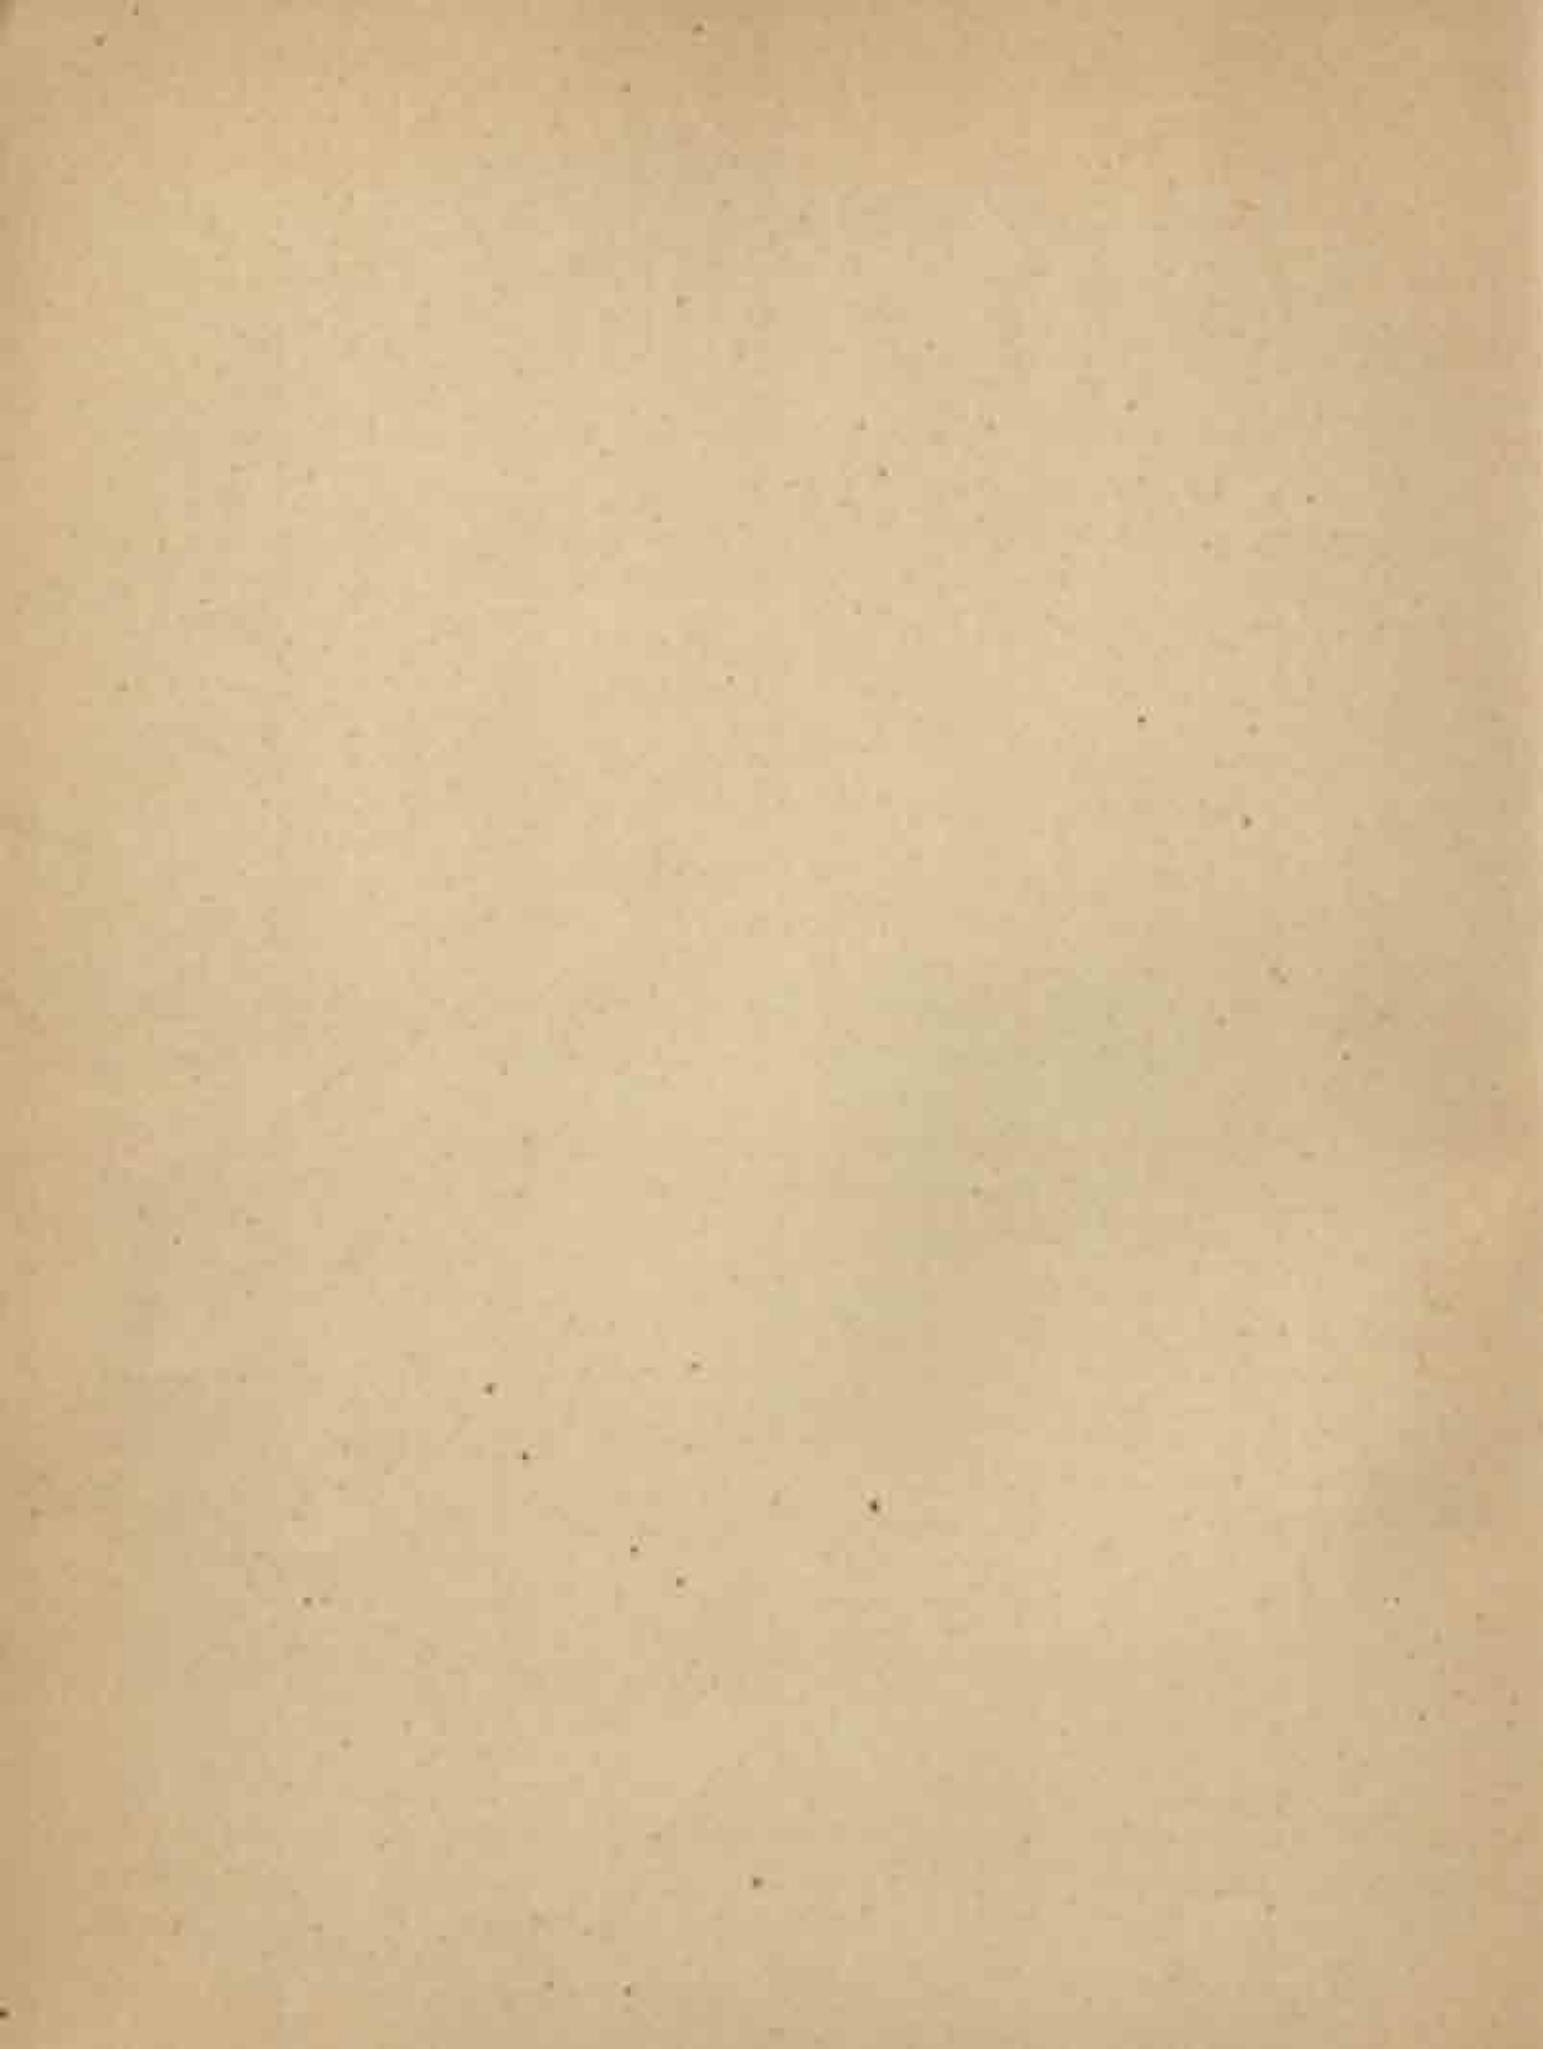

11.12.1851. Sunday.

Left town at 7 A.M.

Arrived at C. L. C. about twelve o'clock

Wrote letter to Mr. M. H. Day, and Dr. J. W. Brewster, and

XVI

MEDIAEVAL SILVERSMITHS' WORK

(1) Silver-gilt turret of uncertain use with detachable lid, and tubes at the sides for suspension. It bears an early silversmith's mark, a lily and a vase (Paris) with the letters **rd** beneath.

French, 14th century.

H. 7·4 in.

(2) Crystal rod with architectural silver-gilt mounts at each end enriched with pearls and enamels. The transitional style of the pinnacles on the mounts shows that it can hardly date from before the close of the 15th century. Apparently a baton or sceptre, it may have been made in the Venetian area for a Hungarian prince.

North Italian, about A.D. 1500,

H. 10·7 in.

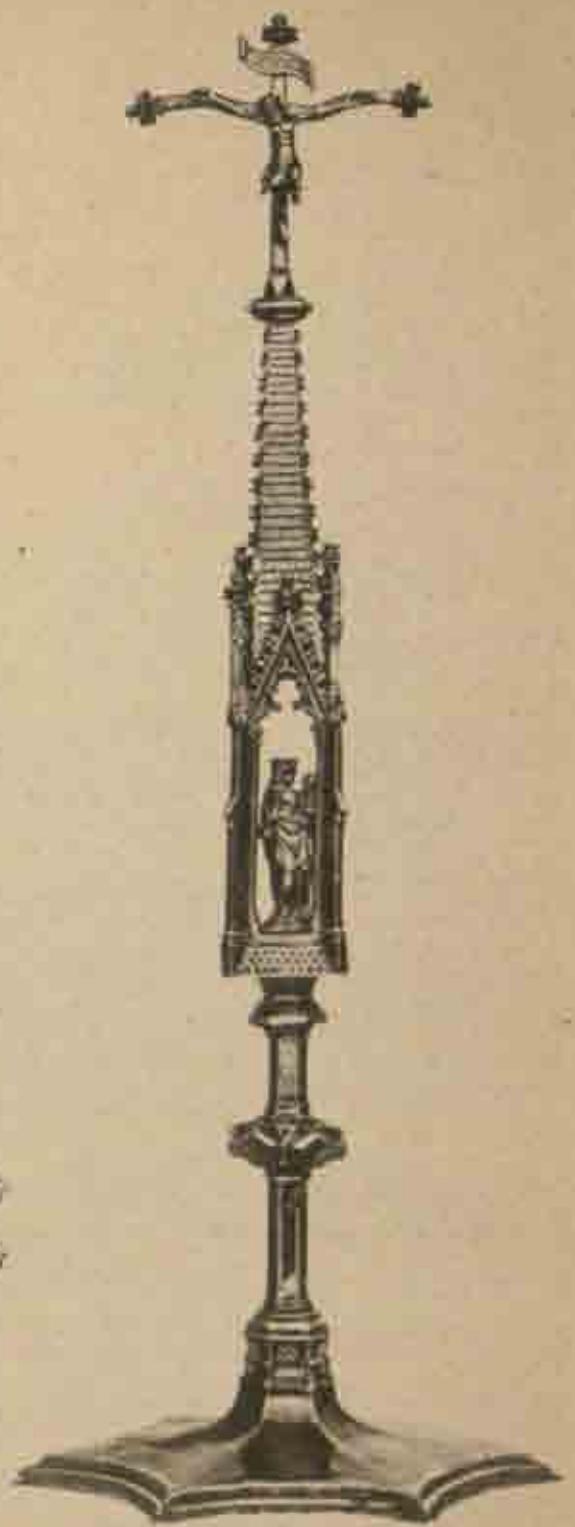

(3) Silver-gilt tabernacle, with a figure of the Virgin carrying the Child, standing under a canopy surmounted by a crucifix of later date.

French, first half of the 14th century.

H. 10·7.

These three objects were deposited by Charles Borradale, Esq., with other works of art in 1913; all formed part of the Magniac collection, and have been shown at various exhibitions. The history of no. 2 can be traced back to the second half of the 18th century; it belonged to Lady Betty Germain, and afterwards to Horace Walpole.

XVIII

ALABASTER RELIEF from a retable: St. Peter before the High Priest. A fine example of the work of the Nottingham School of alabastermen', preserving much of the original colour both on the figures and on the background.

English, 15th century.

H. 24 in. Barwell Bequest, 1915.

Two other panels of the same series are known. One, also from the Barwell Bequest, with the Decapitation of S. Paul, is in the British Museum. The other, with the Crucifixion of S. Peter, and belonging to Lt.-Col. Croft Lyons, F.S.A., is exhibited in the Victoria and Albert Museum.

III 7%

digit and ended with .00 addressed a most tactful correspondence
in books, newspapers, etc. to those who do business with the industry
so as that sales traffic will be stimulated.

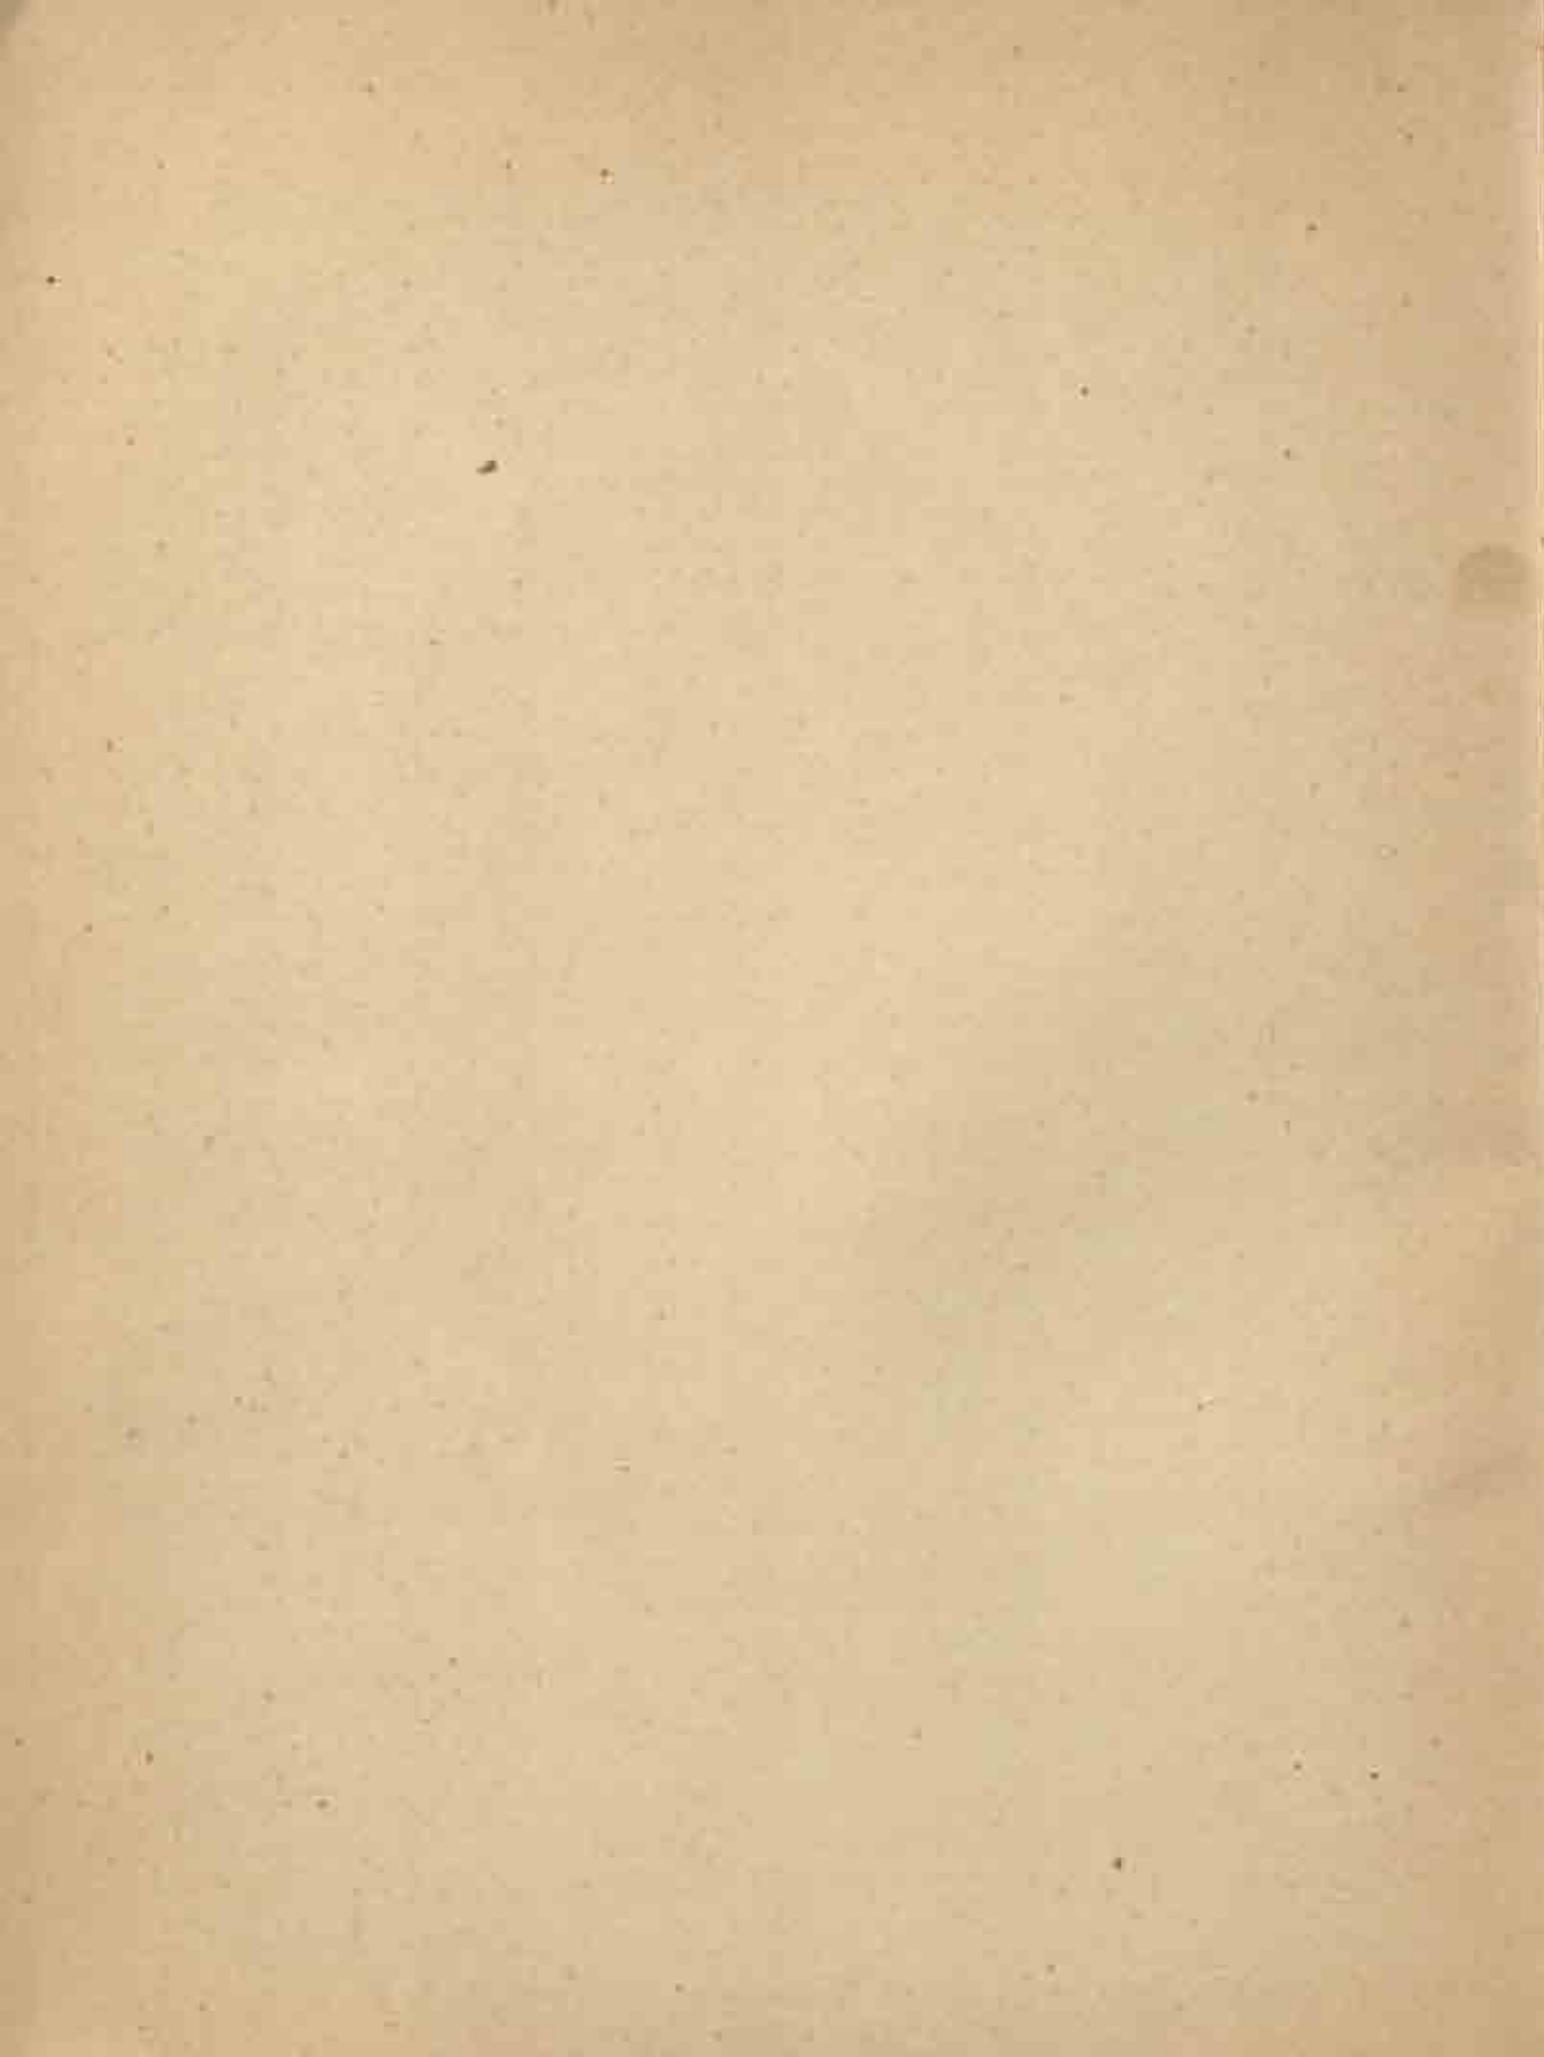

Introducing into my business

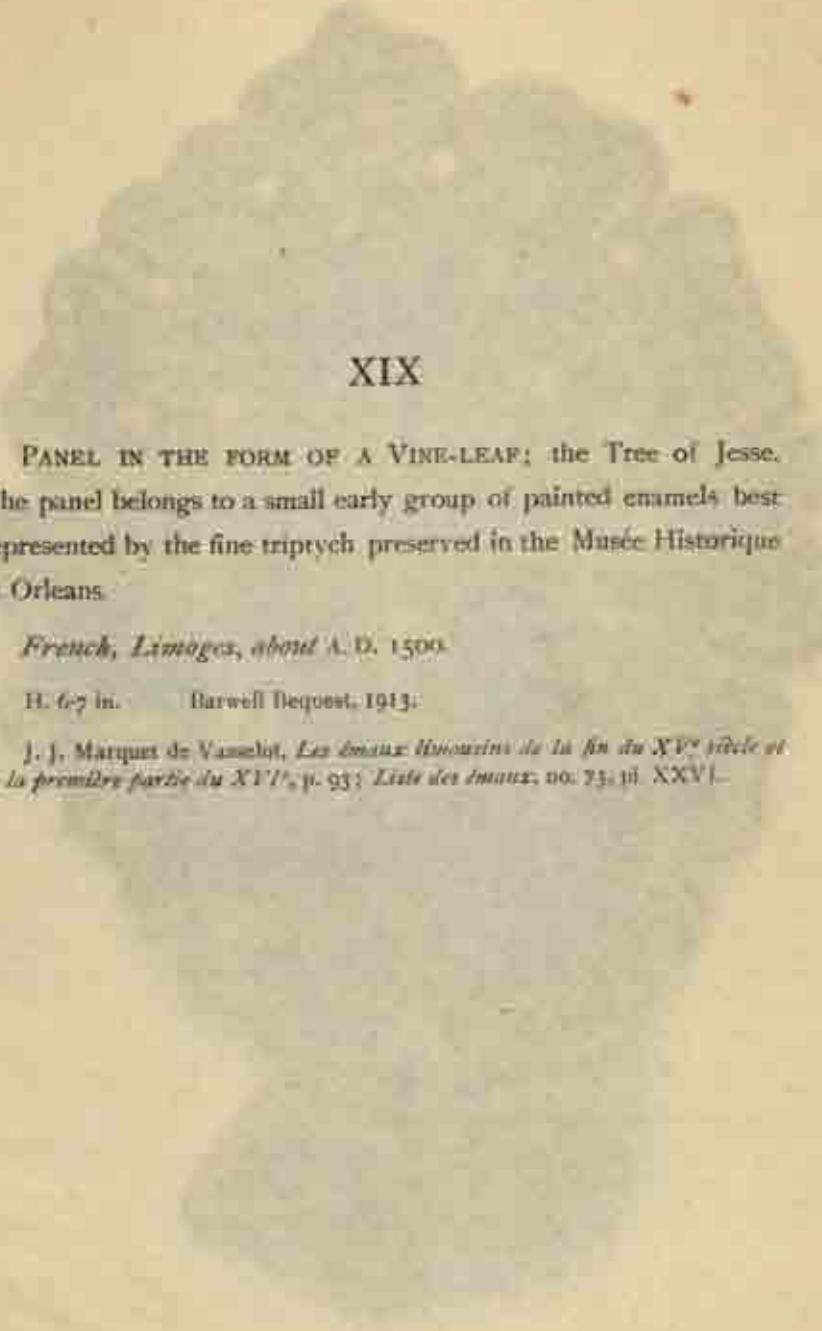

customers like Allegan,

Michigan Steel Works, etc. etc. etc.

All conditions, etc. around me were never like so strong, influential,
concerned about me as such. It is now difficult to realize those days
when I have to hold up a telephone receiver and hear a man say
"I want to speak to Mr. John D. Rockefeller."

XIX

PANEL IN THE FORM OF A VINE-LEAF; the Tree of Jesse.
The panel belongs to a small early group of painted enamels best
represented by the fine triptych preserved in the Musée Historique
at Orleans.

French, Limoges, about A. D. 1500.

H. 6*7* in. Barwell Bequest, 1913.

J. J. Marquis de Vassalot, *Les émaux limouiniens de la fin du XV^e siècle et de la première partie du XVI^e*, p. 93; *Liste des émaux*, no. 73, pl. XXVI.

XX

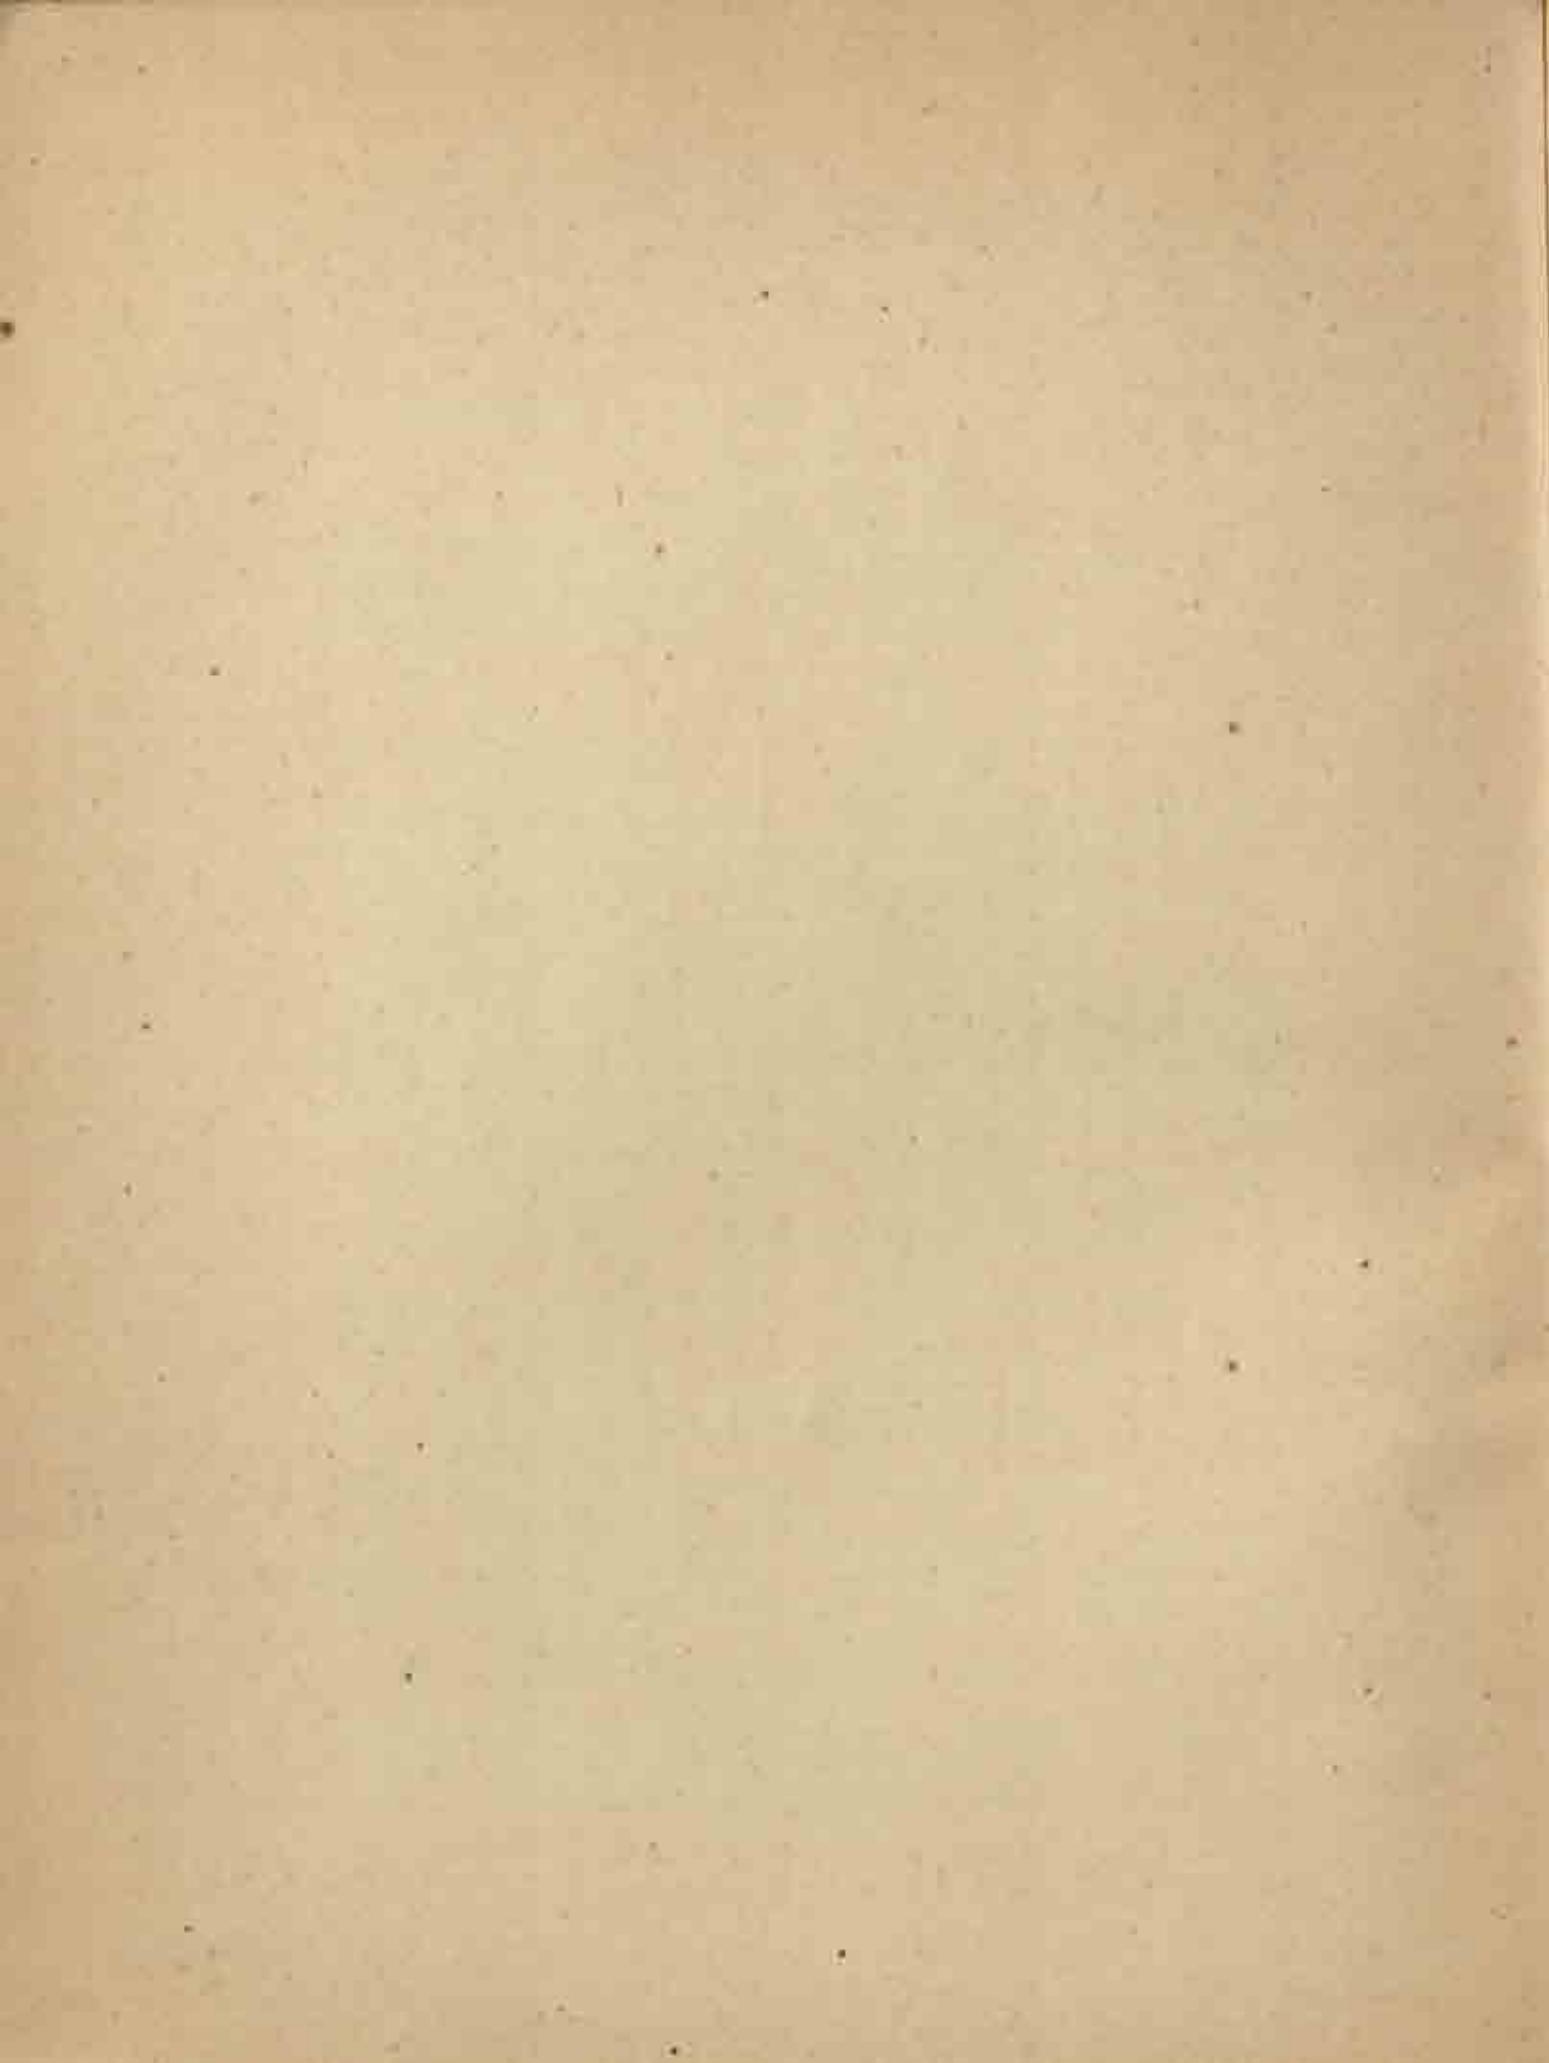

CENTRAL PANEL OF A TRIPYCH, the Entombment, by Nardon Pénitaud in his later period. On the leaves of the triptych are the Deposition from the Cross and the Resurrection. The work is of the finest quality both in design and colour.

French, Limoges, about A.D. 1510.

L. 95 in. H. 45 in. Barwell Bequest, 1913.

J. J. Marquet de Vassiot, *Les œuvres émaillées et la porcelaine portée du XV^e/XVI^e siècle des mondes*, no. 119, pl. XXXVIII.

SILVER ALTAR FURNITURE; a crucifix and two candlesticks, part of a set also including a ciborium (*custodia*), a chalice and paten, add a second crucifix.

The crucifix is of silver-gilt with late Gothic tracery and enamelled panels : in front are the Virgin and S. John, to right and left; above and below are the arms of Velasco and the cross of S. Andrew. On the back are relics beneath crystal, and four enamelled panels with the symbols of the Evangelists.

The candlesticks are silver, parcel-gilt, the knobs set with lozenge-shaped panels ornamented with niello.

The altar service of which these objects formed part belonged to the Hospital of the True Cross at Medina de Pomar, near Burgos ; founded by Don Pedro Fernández de Velasco, Señor de Medina de Pomar (b. 1399, d. 1469-70). The hospital was a home for twelve inf. impoverished noblemen, living under a kind of monastic dispensation, and joined in 1459 by the founder himself. All bore the white cross of S. Andrew on their cloaks.

Spanish, probably about A.D. 1455.

H. of the crucifix, 17 in.; of the candlesticks, 8·75 in. Given by John Pierpoint Morgan, Esq., 1911.

Proceedings of the Society of Antiquaries of London, XXIII, 1909-10,
pp. 474 ff.

24 October 1911. Elberton, Georgia. Work carried
by white & Johnson, McRae & Miller, only one & by first
order license. At the time

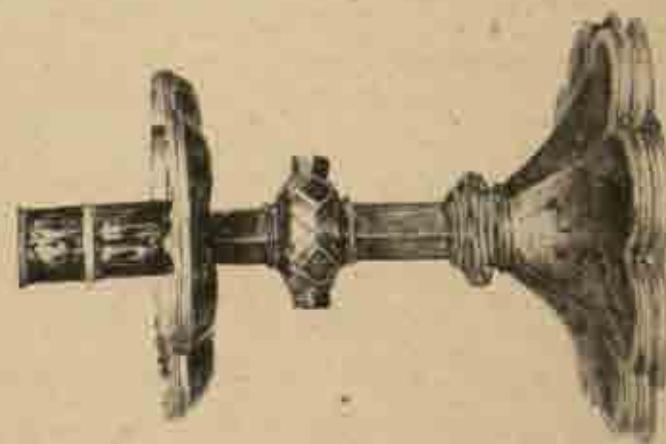

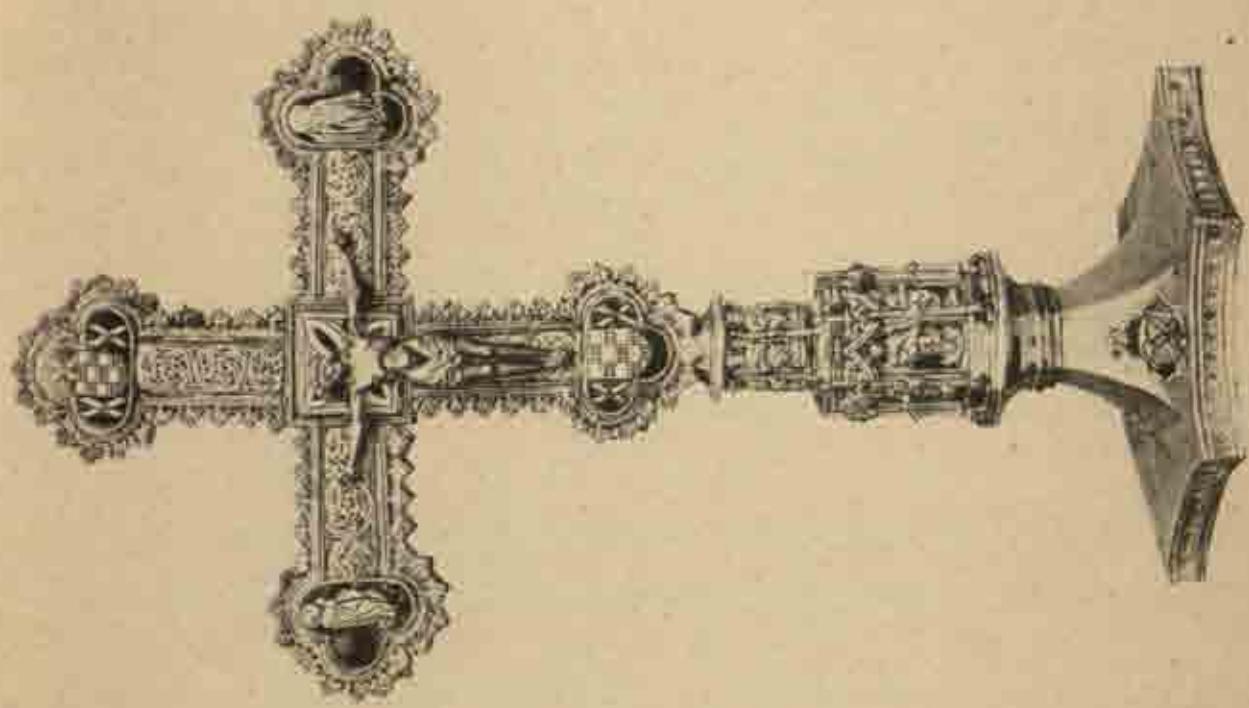

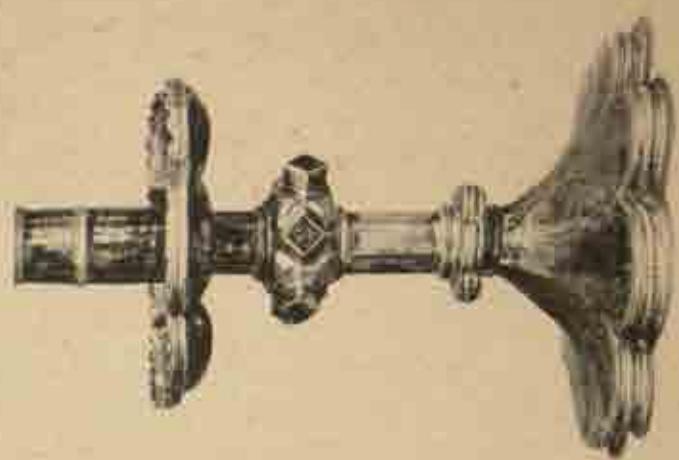

they were about half way up the road from town and had
driven off his only horse with no motor because that last
one has been destroyed again and so now ~~exists~~ ^{exists} 2
motor cars. All the horses left the station because
they are weak and ~~disabled~~ ^{disabled} will not stand over off

ground long enough until they are dried out or
they are much stronger to stand over long enough
in case of water. Some of the horses have had quite a bit of
water and have got blindfolded or pulled out of
the stream. When it has to stand over a smaller body of water
they do not like them when they stand over it long, but
stand with something in front

and are not afraid.

Elberton - 24 October 1911. Work carried by first
order license. No motor because that last

one has been destroyed again and so now ~~exists~~ ^{exists} 2

ENAMELLED CAMEO PENDANTS

(1) Portrait head on onyx, formerly attributed on insufficient evidence to Alessandro Cesati; in a pierced enamelled gold frame.

L. 1·6 in.

(2) Two sides of a double cameo on onyx; with busts of Hercules and Omphale, in a gold frame set with jewels.

L. 1·12 in.

(3) Head of Lucius Verus (?) to r. in a pierced gold enamelled frame, and back of the enamelled frame.

Italian, 16th century.

All from the Marlborough Gems, sold in 1899.

Nos. (1) and (3) given by Charles Butler, Esq. No. (2) purchased at the sale.

See British Museum, *Catalogue of Engraved Gems of the Post-Classical Periods*, 1913, nos. 403, 109-110, 236.

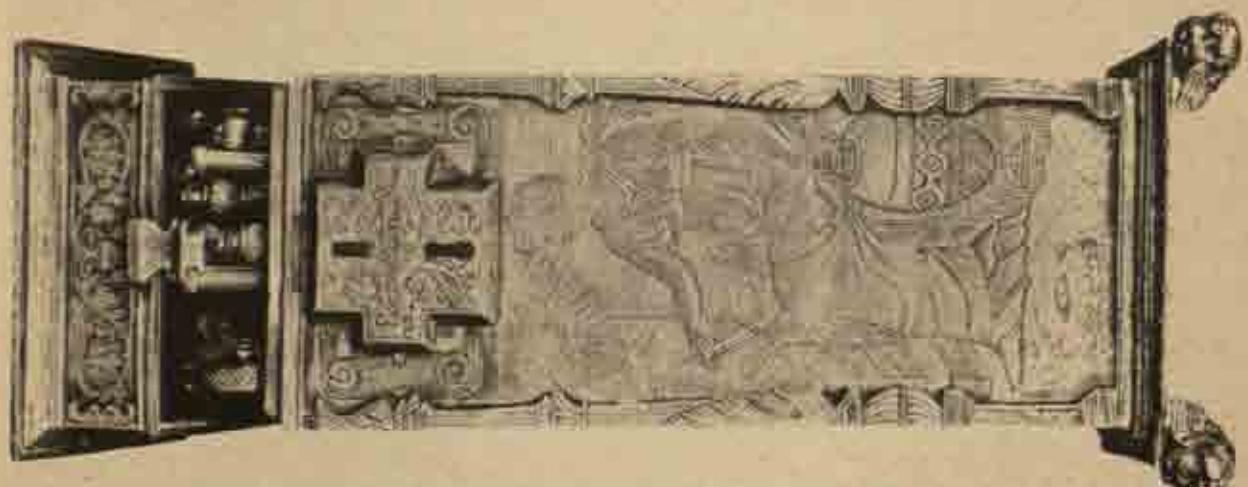

XXIV

CASE OF MATHEMATICAL INSTRUMENTS of gilt brass. The sides are engraved with figures of Peace and War, and of their respective children, Abundance and Poverty. On the front, here shown, Peace, seated by an urn, is approached by a dove bearing an olive branch; above, on the plate of the lock: *Pax omni expositissima*. On the top of the case is engraved a lion passant. (See D. viii.) on the bottom is the name: *Bartholomew Neesam*, engraved in a cartouche.

Bartholomew Neesam, or Newsam, was from A.D. 1590 clock-maker to Queen Elizabeth, for whom this fine set of instruments may have been made.

English, late 16th century.

H. 7½ in. Bequeathed by Max Rosenheim, Esq., F.S.A. 1912.
See *Archæologia L.V.*, 1897, p. 331.

XXV

THE LYME JEWEL. An oval pendant of gold, richly enamelled and set with diamonds. It contains a miniature portrait of James I of England as a young man, by Nicholas Hilliard. The openwork cover has the letter R with diamonds on the outside, over rich enamel; the frame consists principally of square diamonds connected by slender enamel bands. The back is a white enamel plate with a design in fine gold lines and ruby enamel.

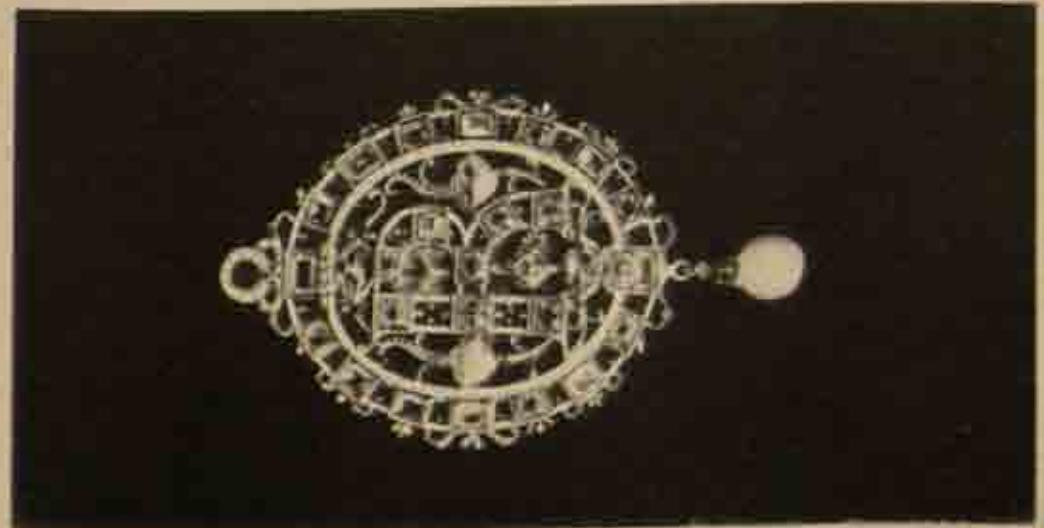

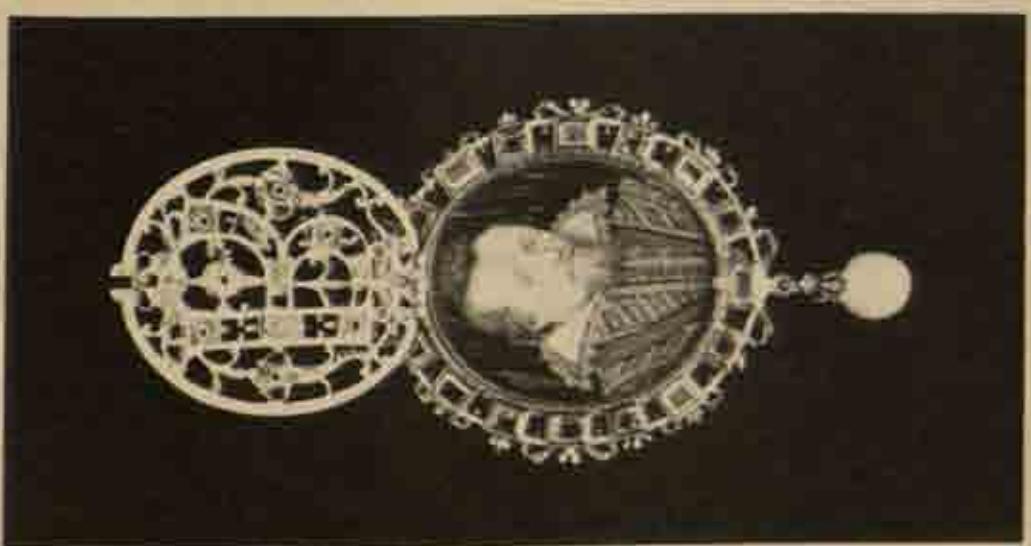

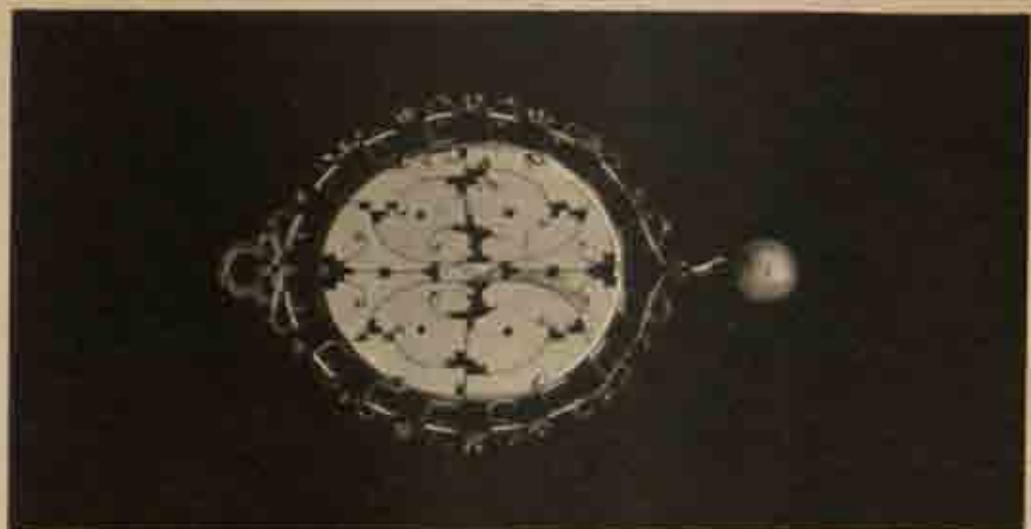

The jewel was given by King James to Mr. Thomas Lye, of Lyte's Cary, Somerset, who had made a pedigree carrying the royal ancestry back to the mythical King Brut. Mr. Lye, who died in 1638, is represented wearing the jewel in a portrait belonging to a descendant. The jewel was formerly in the possession of the Duke of Hamilton.

English, early 17th century.

L. 3125 m.

Borrowed by Baron Ferdinand Rothschild, M.V., 1898.

C. H. Read, *Catalogue of the Works of Art bequeathed to the British Museum by Baron Ferdinand Rothschild, A.C.P.*, 1902, no. 107; Sir H. Maxwell-Lyte, K.C.B., *Prestonage of the Someret Archaeological Society*, XXXVII, 1893, p. 60.

XXVI

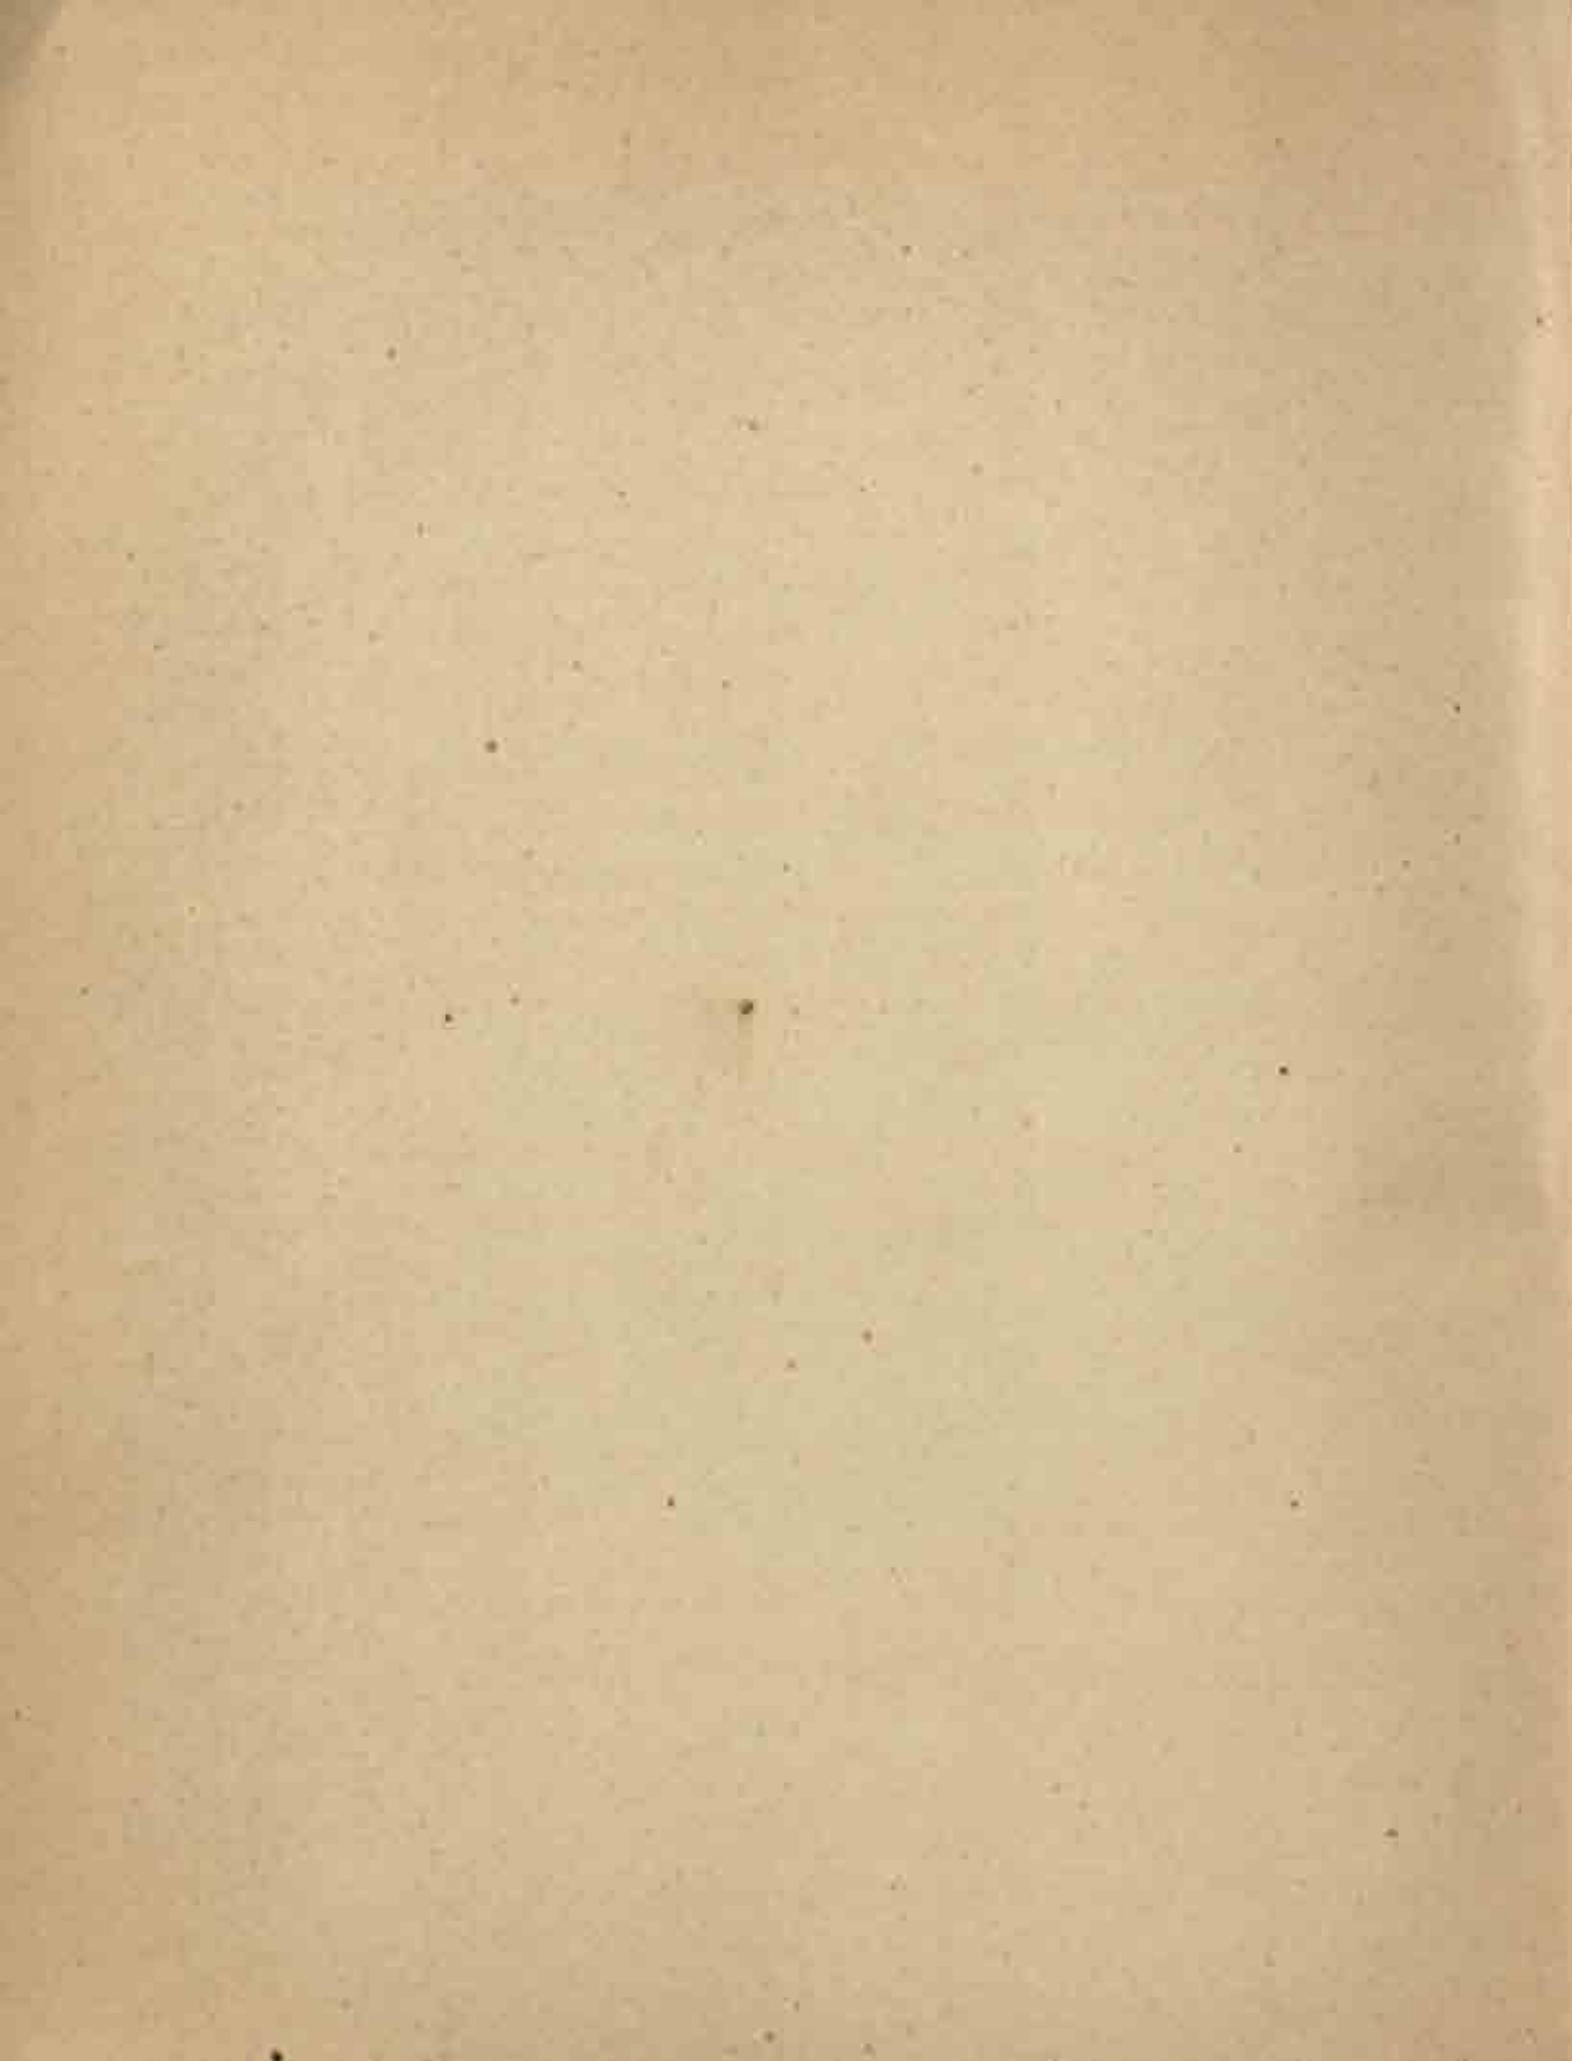

DISH OF BUFF POTTERY washed with white slip and painted in manganese purple with touches of green beneath a colourless glaze. The design consists of an interlacing knot with crowned heads at the four ends. Cross-hatching and quatrefoil ornament in the spaces.

Orvieto ware, about A.D. 1300.

D. 13 in. Purchased 1915.

A similar interlaced design with two serpent heads occurs on early Persian lustred pottery. See Pérou, *La céramique arabe de l'Islam*, Paris, 1920, pl. 140.

XXVII

WIDE-MOUTHED JAR with two broad flat handles, made of tin-glazed faience painted with dark blue and manganese purple. The designs outlined in purple and filled in with thick, heaped up blue, consist of a youth on each side flanked by sprays of oak. On the neck and handles are running foliage scrolls. Ornamental details on the youth's costume are reserved in white.

Made about 1460, perhaps at Florence.

H. 13-3 in. D. (with handles) 16 in. Formerly in the de Osma Collection, Madrid, and purchased in 1902.

See H. Wadsworth: *Old French Jars*, 1903, figs. 10 and 11.

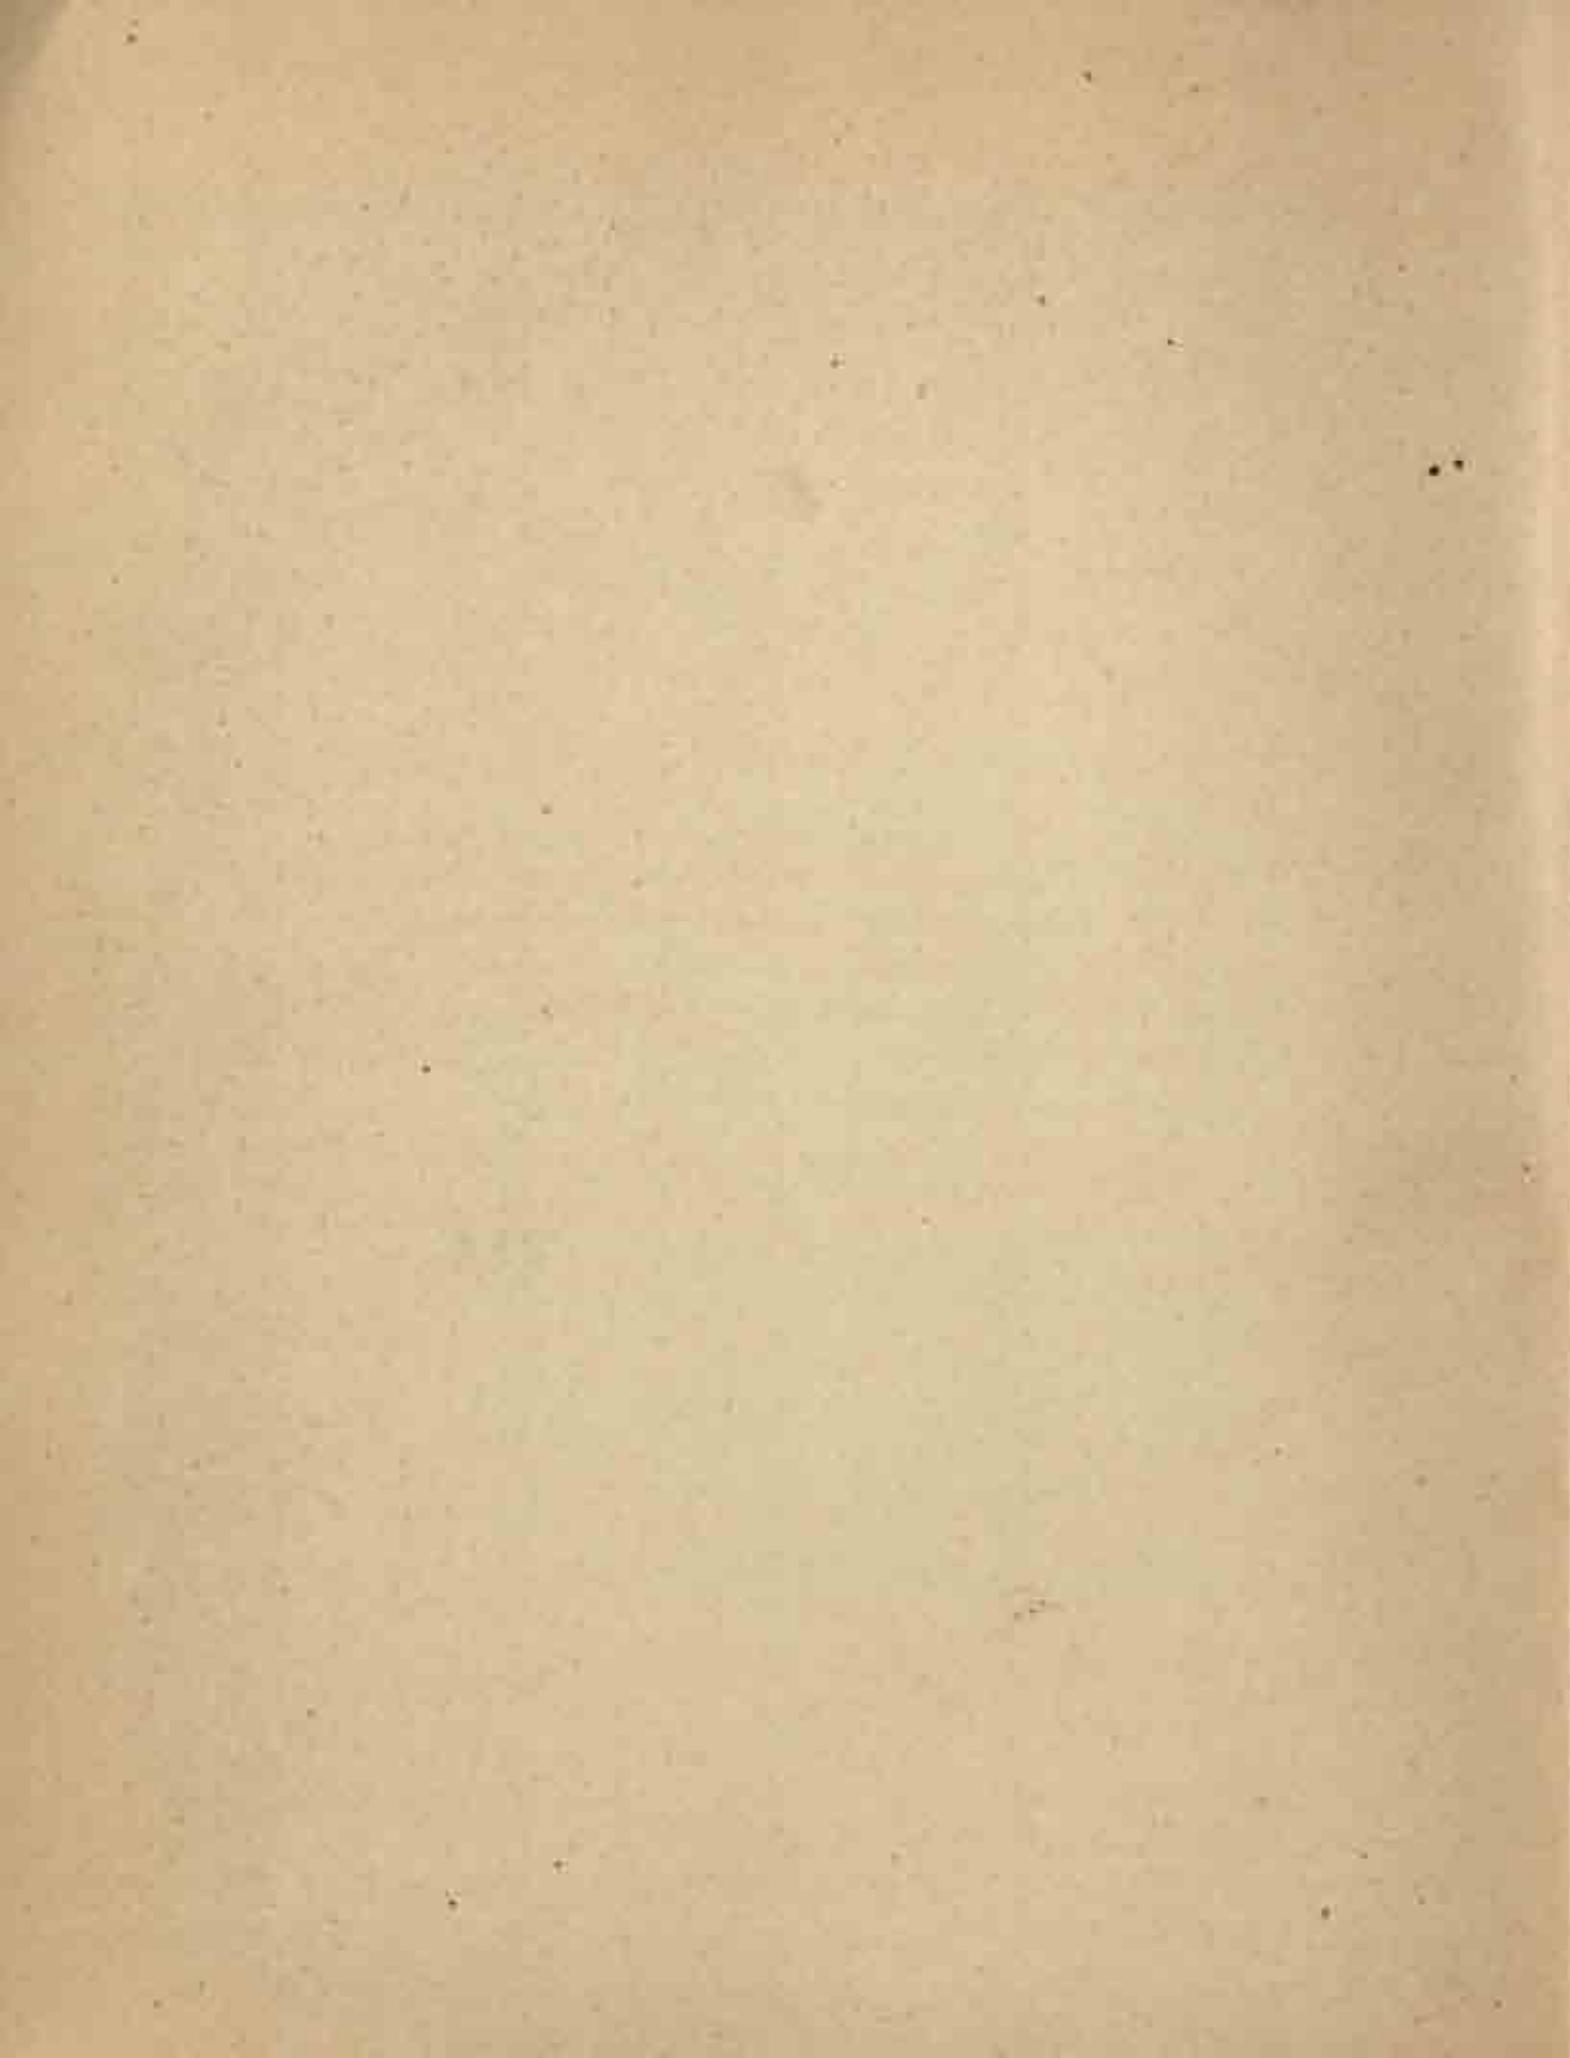

1752

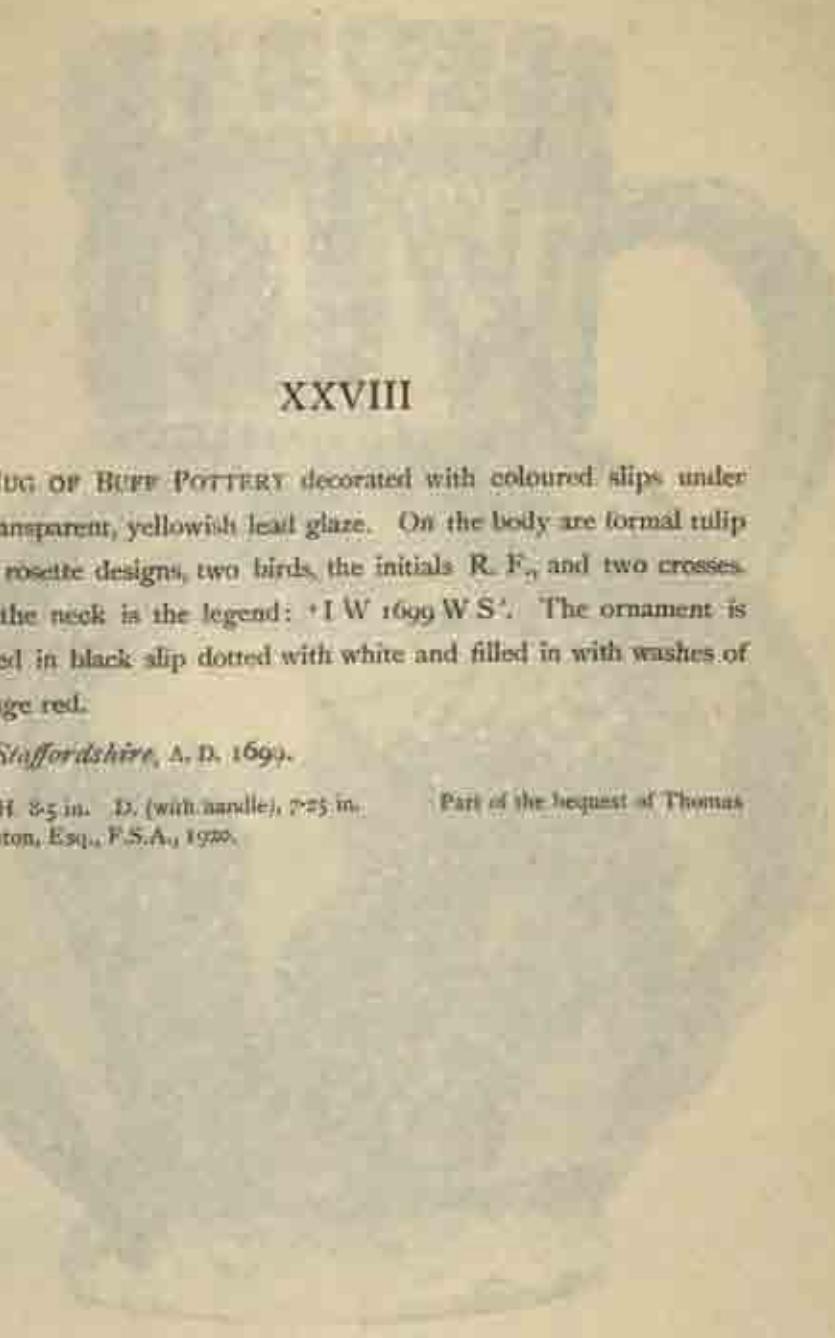

and the other author will stand over him and determine him? If
the other physician has just been at the meeting, would he easily
remember his name? And if he is to be the one to give in his opinion, English
will not do, as he is going to publish also there as there is no room
there for him. Therefore, the physician must either speak
in German, or another language which is
necessarily to speak, which is better done.

As you have a physician, who is qualified, and I am not, I will
not go to him, but you can go to him if you like.

As far as I am concerned, you may do what you like.

XXVIII

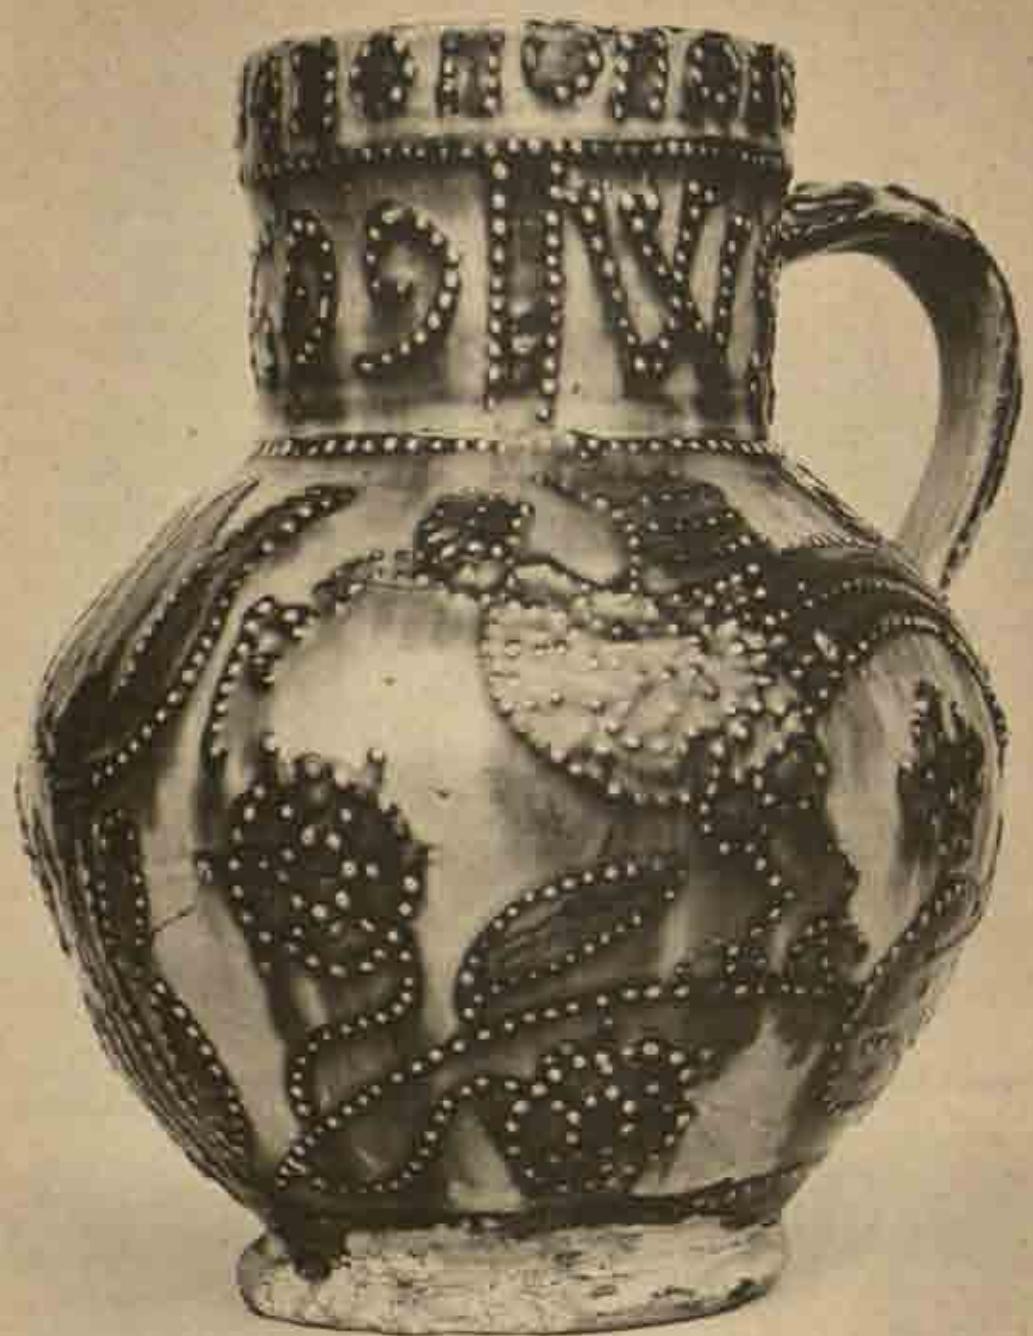

JUG OF BUFF POTTERY decorated with coloured slips under a transparent, yellowish lead glaze. On the body are formal tulip and rosette designs, two birds, the initials R. F., and two crosses. On the neck is the legend: 'I W 1699 W S'. The ornament is traced in black slip dotted with white and filled in with washes of orange red.

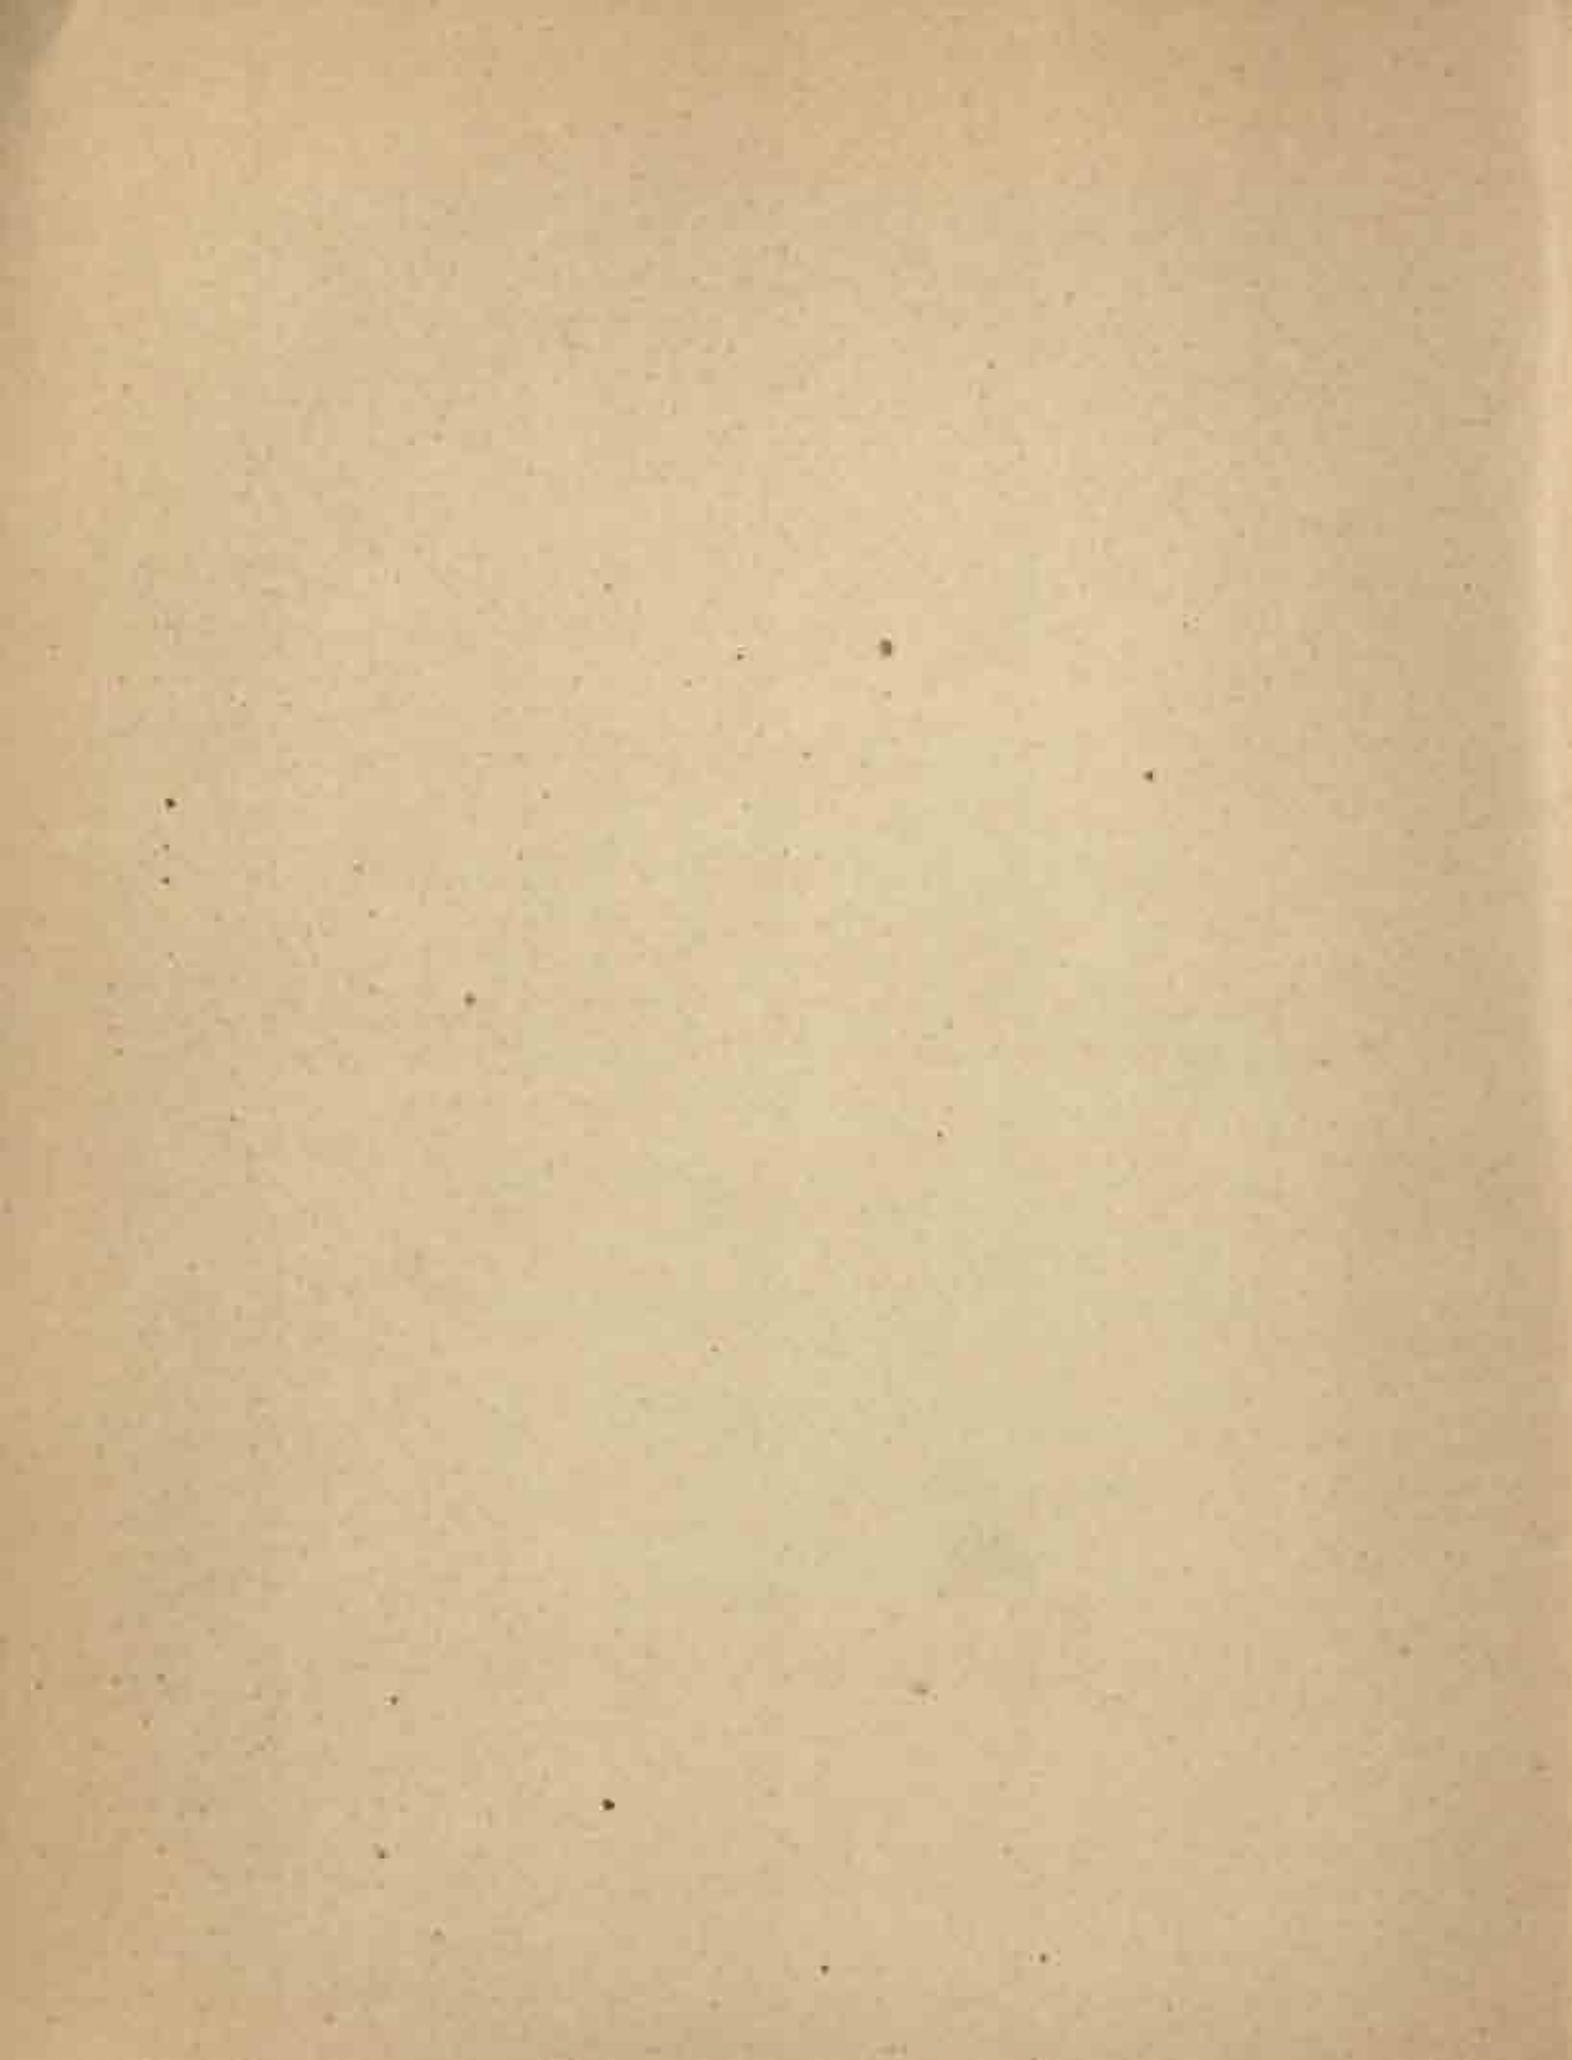

Staffordshire, A.D. 1699.

H. 8·5 in. D. (with handle), 7·25 in.

Part of the bequest of Thomas

Boynton, Esq., F.S.A., 1920.

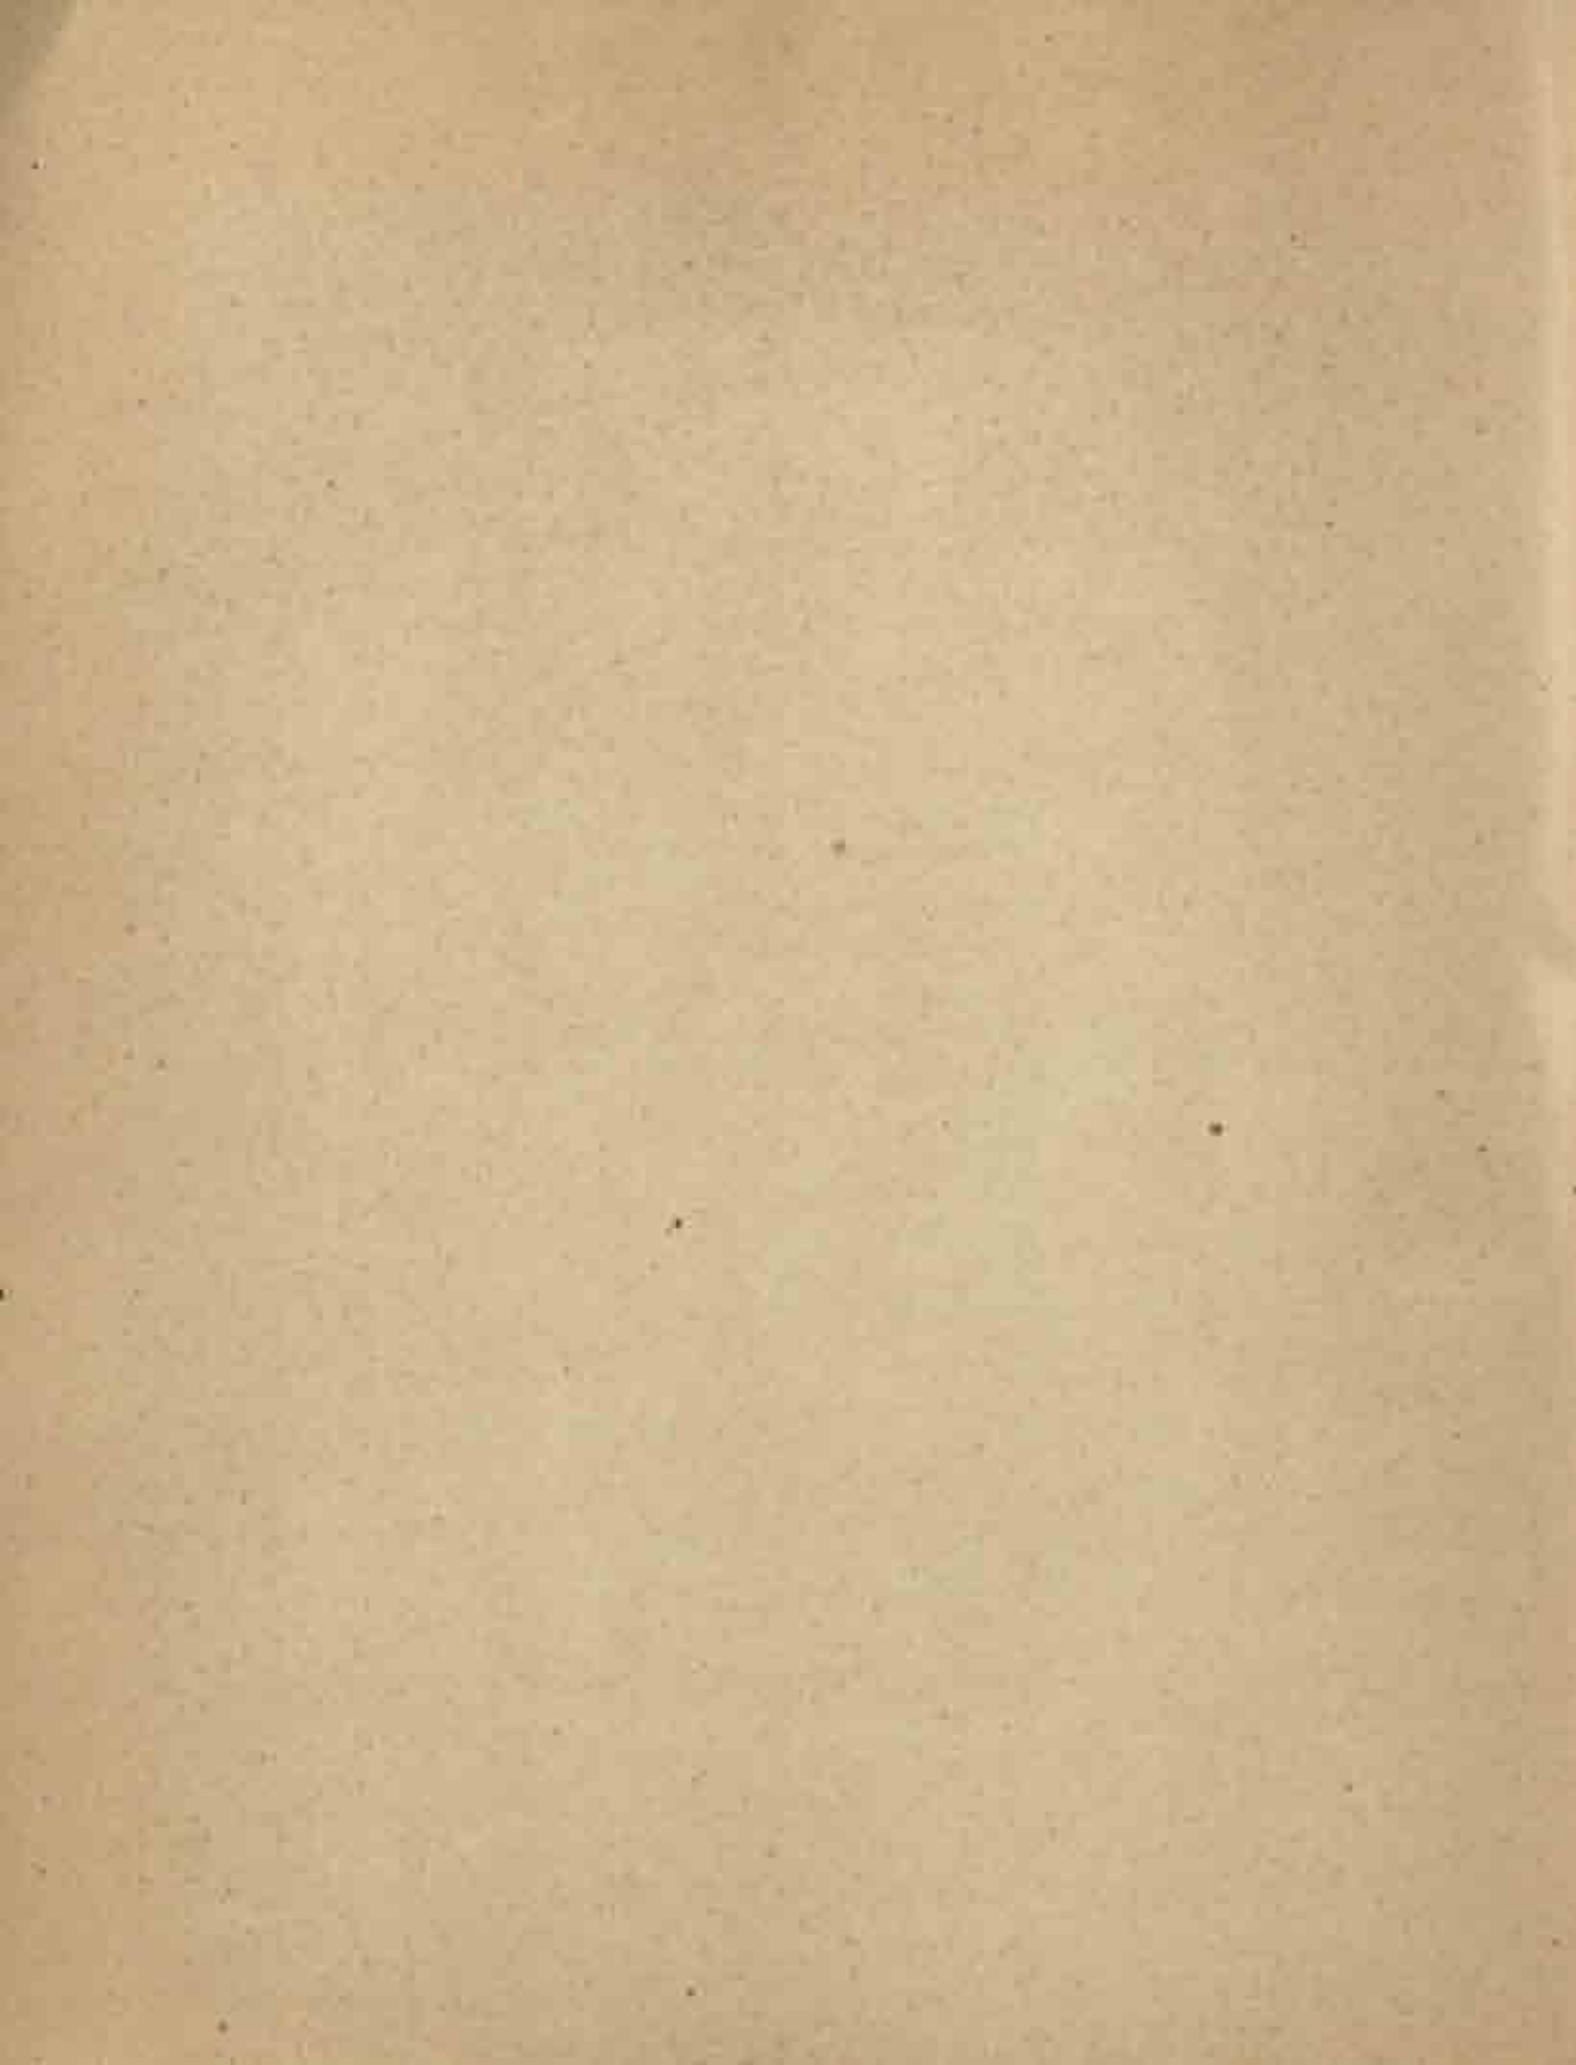

XXIX

COPY OF THE PORTLAND VASE in black jasper ware with white reliefs. This is one of the original set of copies made by Josiah Wedgwood about 1790, and it bears the number 4.

H. 10 in. Part of a large collection of Wedgwood wares given by Mr. and Mrs. Isaac Falckie in 1909.

XXX

COVERED VASE with two handles in roccoco taste. 'Soft-paste' porcelain with deep blue ground, rich gilding and large panels painted with coloured designs. In the panels are pairs of Watteau-esque figures with musical instruments and flowers, probably painted by John Donaldson. Mark, a gold anchor.

* *Cheltenham, Period IV (1759-1770).*

H. 13·5 in. D. (with handles), 8 in. Barwell Bequest, 1913.

XXXI

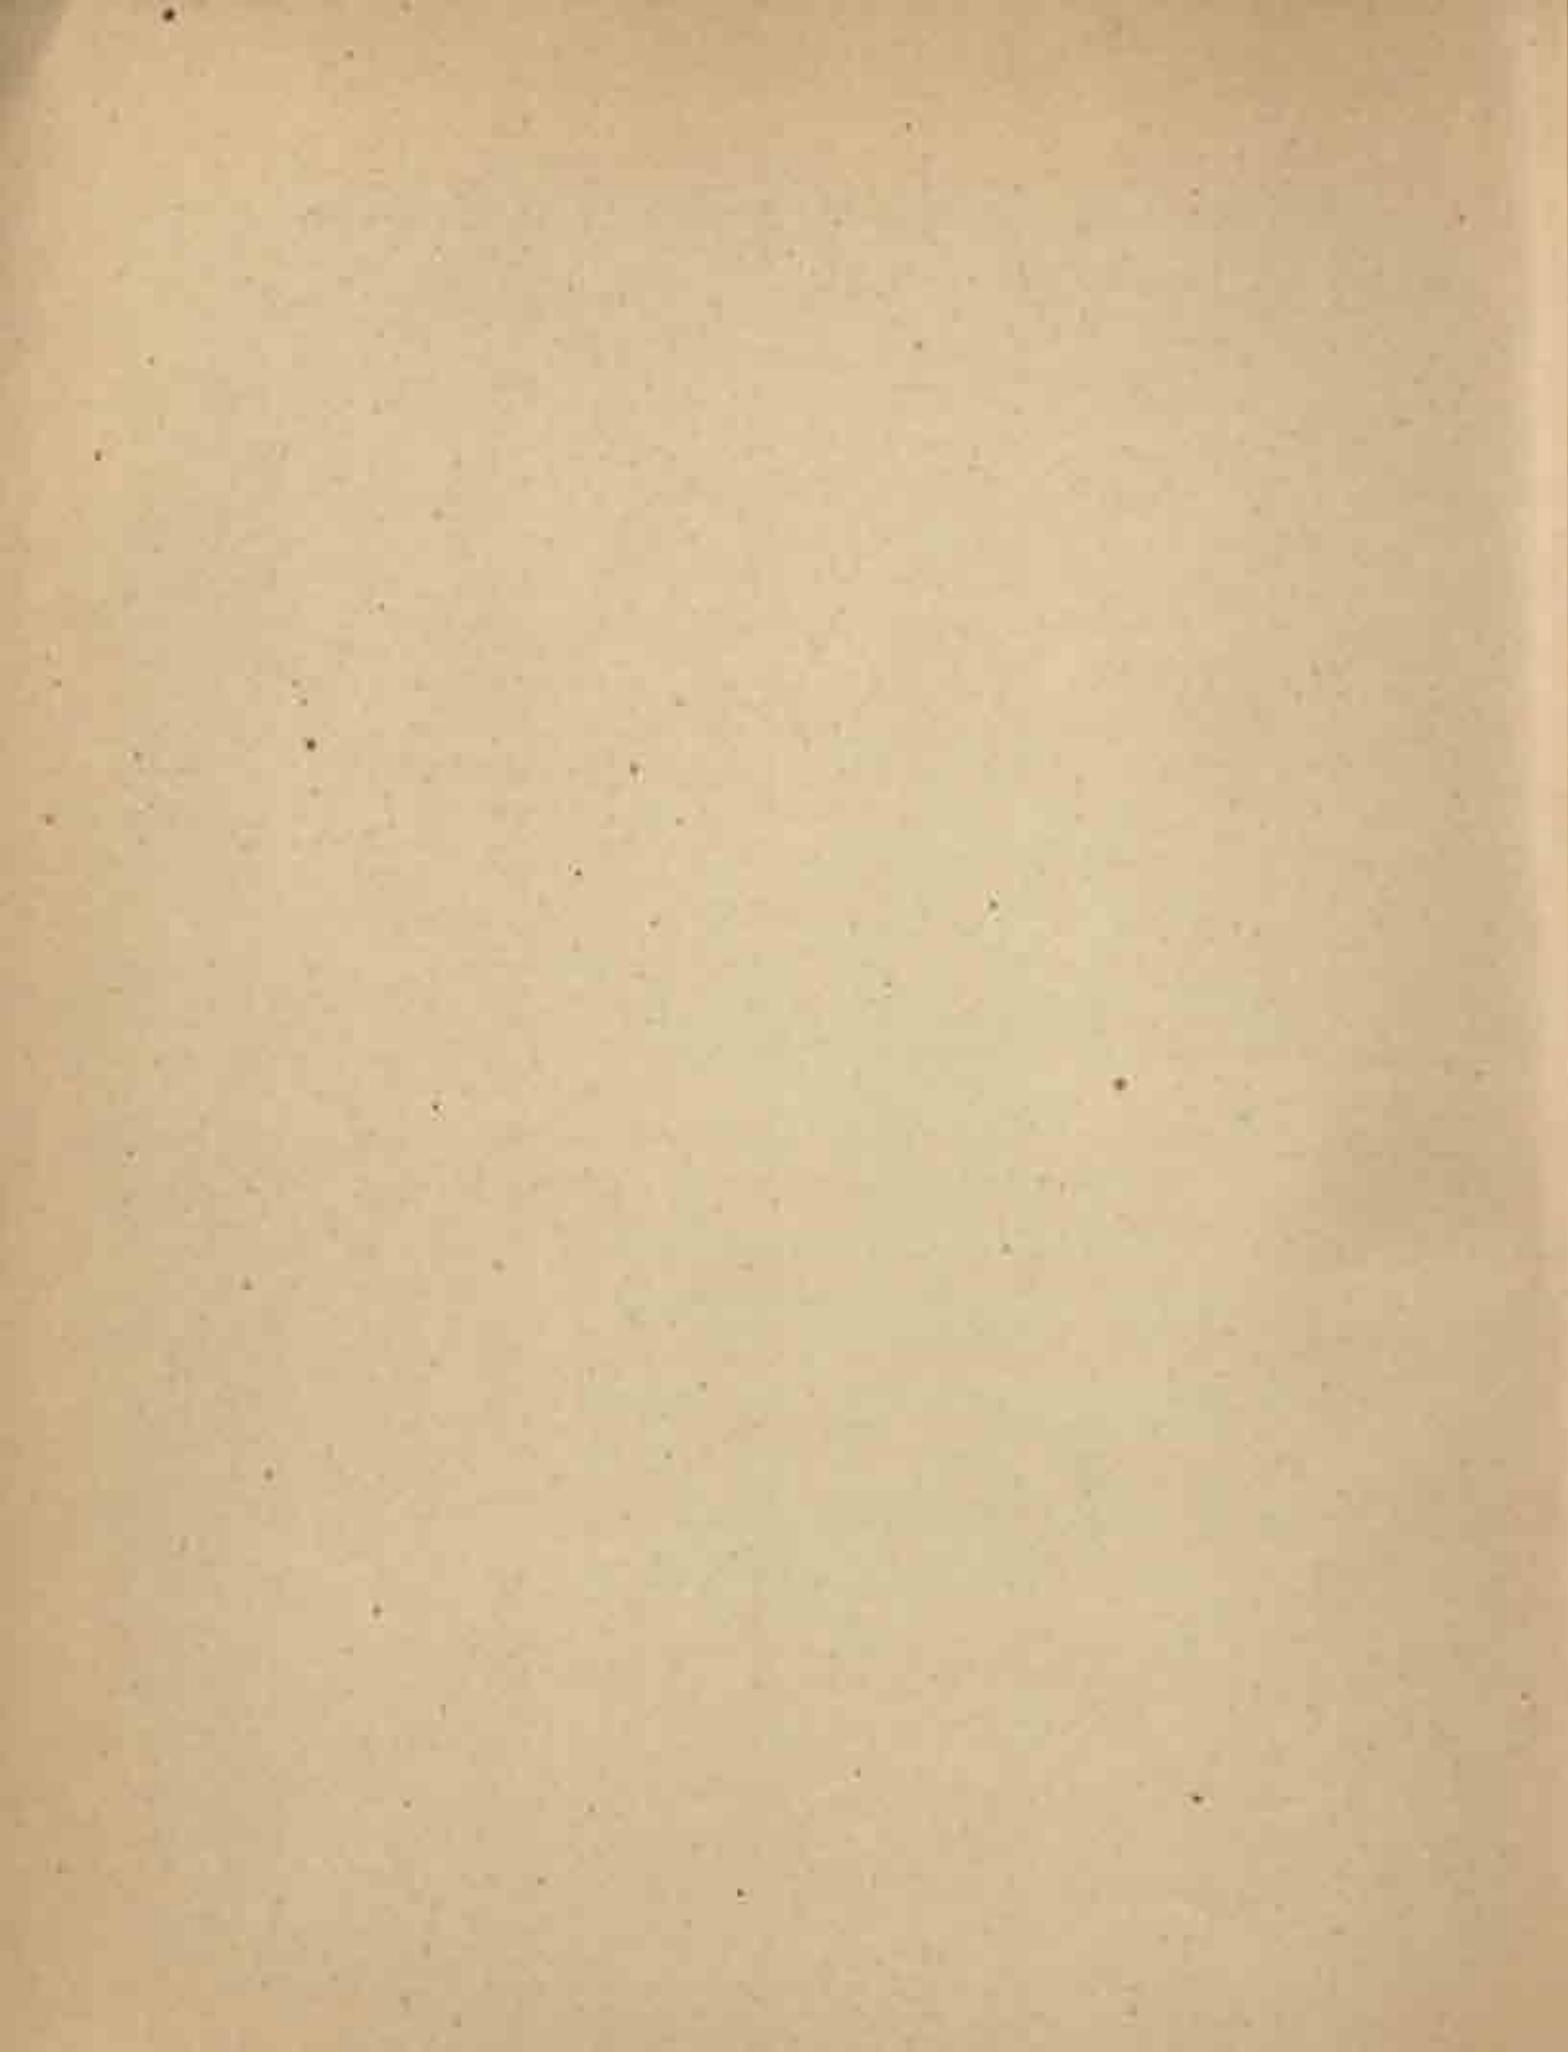

Three STATUETTES of 'soft-paste' porcelain painted in colours: viz. a Neopolitan girl and a youth made about 1755; and a girl with muff modelled by Giordano, about 1775.

Coppo di Monte, 18th century.

H. of tallest, 6·5 in.
D.C.L. 1899.

Part of a bequest of G. Drury E. Forum, Esq.

XXXII

PIERCED BRONZE PLAQUES FROM THE CAUCASUS

(1) Belt clasp, concave at the back with pierced design of a deer standing with head turned back, attacked by a hound, the figure of which, highly conventionalized, can be seen between the deer's feet. The design is framed in an ornamental border of reversed spirals with a conical boss at each corner. At the back, a ring and a hook.

Perhaps made in the early centuries A.D.

H. 3·7 in. W. 4 in.

(2) Similar clasp, with a standing deer attacked by a hound, which leaps at its head. Under its body is the figure of a bird, while above, to the left, is that of a bull. Border of string-pattern, with a large conical boss at each corner. At the back, a ring and a hook.

Perhaps made in the early centuries A.D.

H. 5·2 in. W. 5·4 in. Given by Louis C. G. Clarke, Esq., F.S.A., as a mark of recognition on the occasion of Sir Hercules Read's retirement. Said to have come from the Caucasus.

For other examples of the same kind, see Countess Uvarov, *Materials for the Archaeology of the Caucasus*, Part VIII, Moscow 1909, pl. CXXXIV, and figs. 237, 276, 277.

1792.

THE HISTORY OF THE AMERICAN REVOLUTION

and a few others, from Virginia, partake of a similar spirit; but the majority still regard it as a just measure, and desire that their government and its most influential representatives should, notwithstanding their aversion to armed force, intercede with France to restrain the English self-government party in their efforts to subdue the colonies. They will

XXXIII

SCYTHIC BRONZE PLAQUES AND BACTRIAN AXE

(1) Pierced plaque, concave at the back, representing a combat between a lioness and an eagle. The former grasps with her jaws the legs of the bird, which has a firm grip with its beak on the lioness's neck. Greenish-grey patina.

Siberian, about the beginning of the Christian era.

Length 4 ft. in.

(2) Bronze plaque similar to the above, but representing an animal with horse-like body, griffin head, conventional mane and branching antlers, being attacked by a wolf-like creature which has seized it by the foreleg. Smooth green patina.

Siberian, about the beginning of the Christian era.

Length 4 ft. in. (Figured by Fêng Yün-p'êng, *Ch'u shih* no. 1823, vol. 1, cap. 4. The blocks illustrating this book were cut in 1821.)

Given by Louis C. G. Clarke, Esq., 1916. (See *Man*, 1917, no. 1 and cf. E. H. Mims, *Scythians and Greeks*, 1913, p. 274 and fig. 197.)

(3) Bronze ceremonial axe, composed of the figures of three animals, a boar, a tiger, and an ibex. The cutting edge is formed by the back of the first which is attacking the tiger, who turns a remonstrant head while he grips with his forepaws the flanks of a couching ibex. The stripes of the tiger are indicated in silver inlay. Below the bodies of the two last are flanges forming the socket for the haft of the weapon, which did not pass through the axe, but was secured by two rivets. Obtained in the N.W. Province of India.

Bactrian, about 4th century B.C.—

L. 7 in. Given by Henry Oppenheimer, Esq., F.S.A.

See National Art Collections Fund, Ninth Annual Report, no. CXX, p. 55; *Man*, 1914, no. 11; *Proceedings of the Society of Antiquaries of London*, XXV, p. 56.

XXXIV

Bronze Figure of a Winged and Horned Monster
(*'Lion-Gryphon'*), cast and chased. The mouth is open in a
snarl; the ears point forward, and along the neck runs a rigid
mantle, cut in wedge-shaped steps. On the throat and breast is
a leaf-like ornament, in low relief, and the tail is represented by
a circular ring, the upper side of which is foliated. Said to have
been found near the Helmand River, Afghanistan.

Probably Bactrian work, about the 2nd century B.C.

H. 98 in.
Given by the National Art Collections Fund, 1913.

See *Annual Report, 1913*, and *Egypt and Assyria Presented to William Ridgway*, Cambridge, 1913, p. 263.

XXXV

SREATITE RELIEF: Illustrating the Jataka story of King Sivl.
On the left is the king, seated under a canopy, having a piece of
flesh cut from his leg, with which to ransom the pigeon (by the
leg of the king's chair) from the hawk (deceived to the right of the
canopy). Over him bends the figure of a woman in an attitude of
tenderness. In the centre is an attendant with a basin, and to the
right, two immortals, the more prominent recognizable as Indra.
From Gandhara, N.W. India.

Graeco-Buddhist art, 1st or 2nd century A.D.

L. 12½ in. Purchased 1912.

See *Mes.* Vol. 30, p. 11.

XXXVI

SILVER BOWL: Sapor II (A.D. 310-380), killing a buck; in the foreground is another stag already laid low.

Sassanian Persian, 4th century A.D.

D. 7 in. Purchased 1908.

See *Archaeologia*, LVI, 1901, p. 381.

SILVER DISH with subject in relief: the Triumph of Dionysos. The car in which the god reclines is drawn by a draped figure escorted by another figure with a nimbus; at the back is seated Ariadne; on the front, a winged genius. Behind the car is Herakles; in the field are other genii, and a tree suggesting a vine, but with large blossoms. In the exergue, a panther drinks from a vase.

The composition is derived from a classical type, but the oriental artist has modified and rearranged the subject according to his own ideas. The technical method employed in producing the relieved figures is not that used by Greek silversmiths, but one generally associated with the Iranian area.

Down to 1829 this dish formed part of the treasure of the Mirs of Badakshan. In 1858 it was acquired by Dr. Lord, and presented by him to the old India Museum.

Parthian (?) 2nd-3rd century A.D.

D. 8½ in. Transferred from the India Office, 1908.

See Smirnov, *Oriental Silver*, nn. 35; pl. XIII; G. Birdwood, *Industrial Arts of India*, p. 147.

XXXVII

SILVER DISH with subject in relief: a god drinking from a *rhyton* and holding a wine-skin in his left hand; by his side is seated a female figure holding a cup and a garland; in the field, vine stems. The subject is reminiscent of Greek mythology, but it is doubtful whether the figure can be said to represent Dionysos. The dish, in which hardly any classical influence is apparent, was found near Budhigarna, near Taki, a town in the Dehra Ismail Khan district of the Punjab.

North Indian, about the 3rd century A.D.

D. 99 in. Given by M. Longworth Dames, Esq., formerly Divisional Judge at Jhelum, 1897.

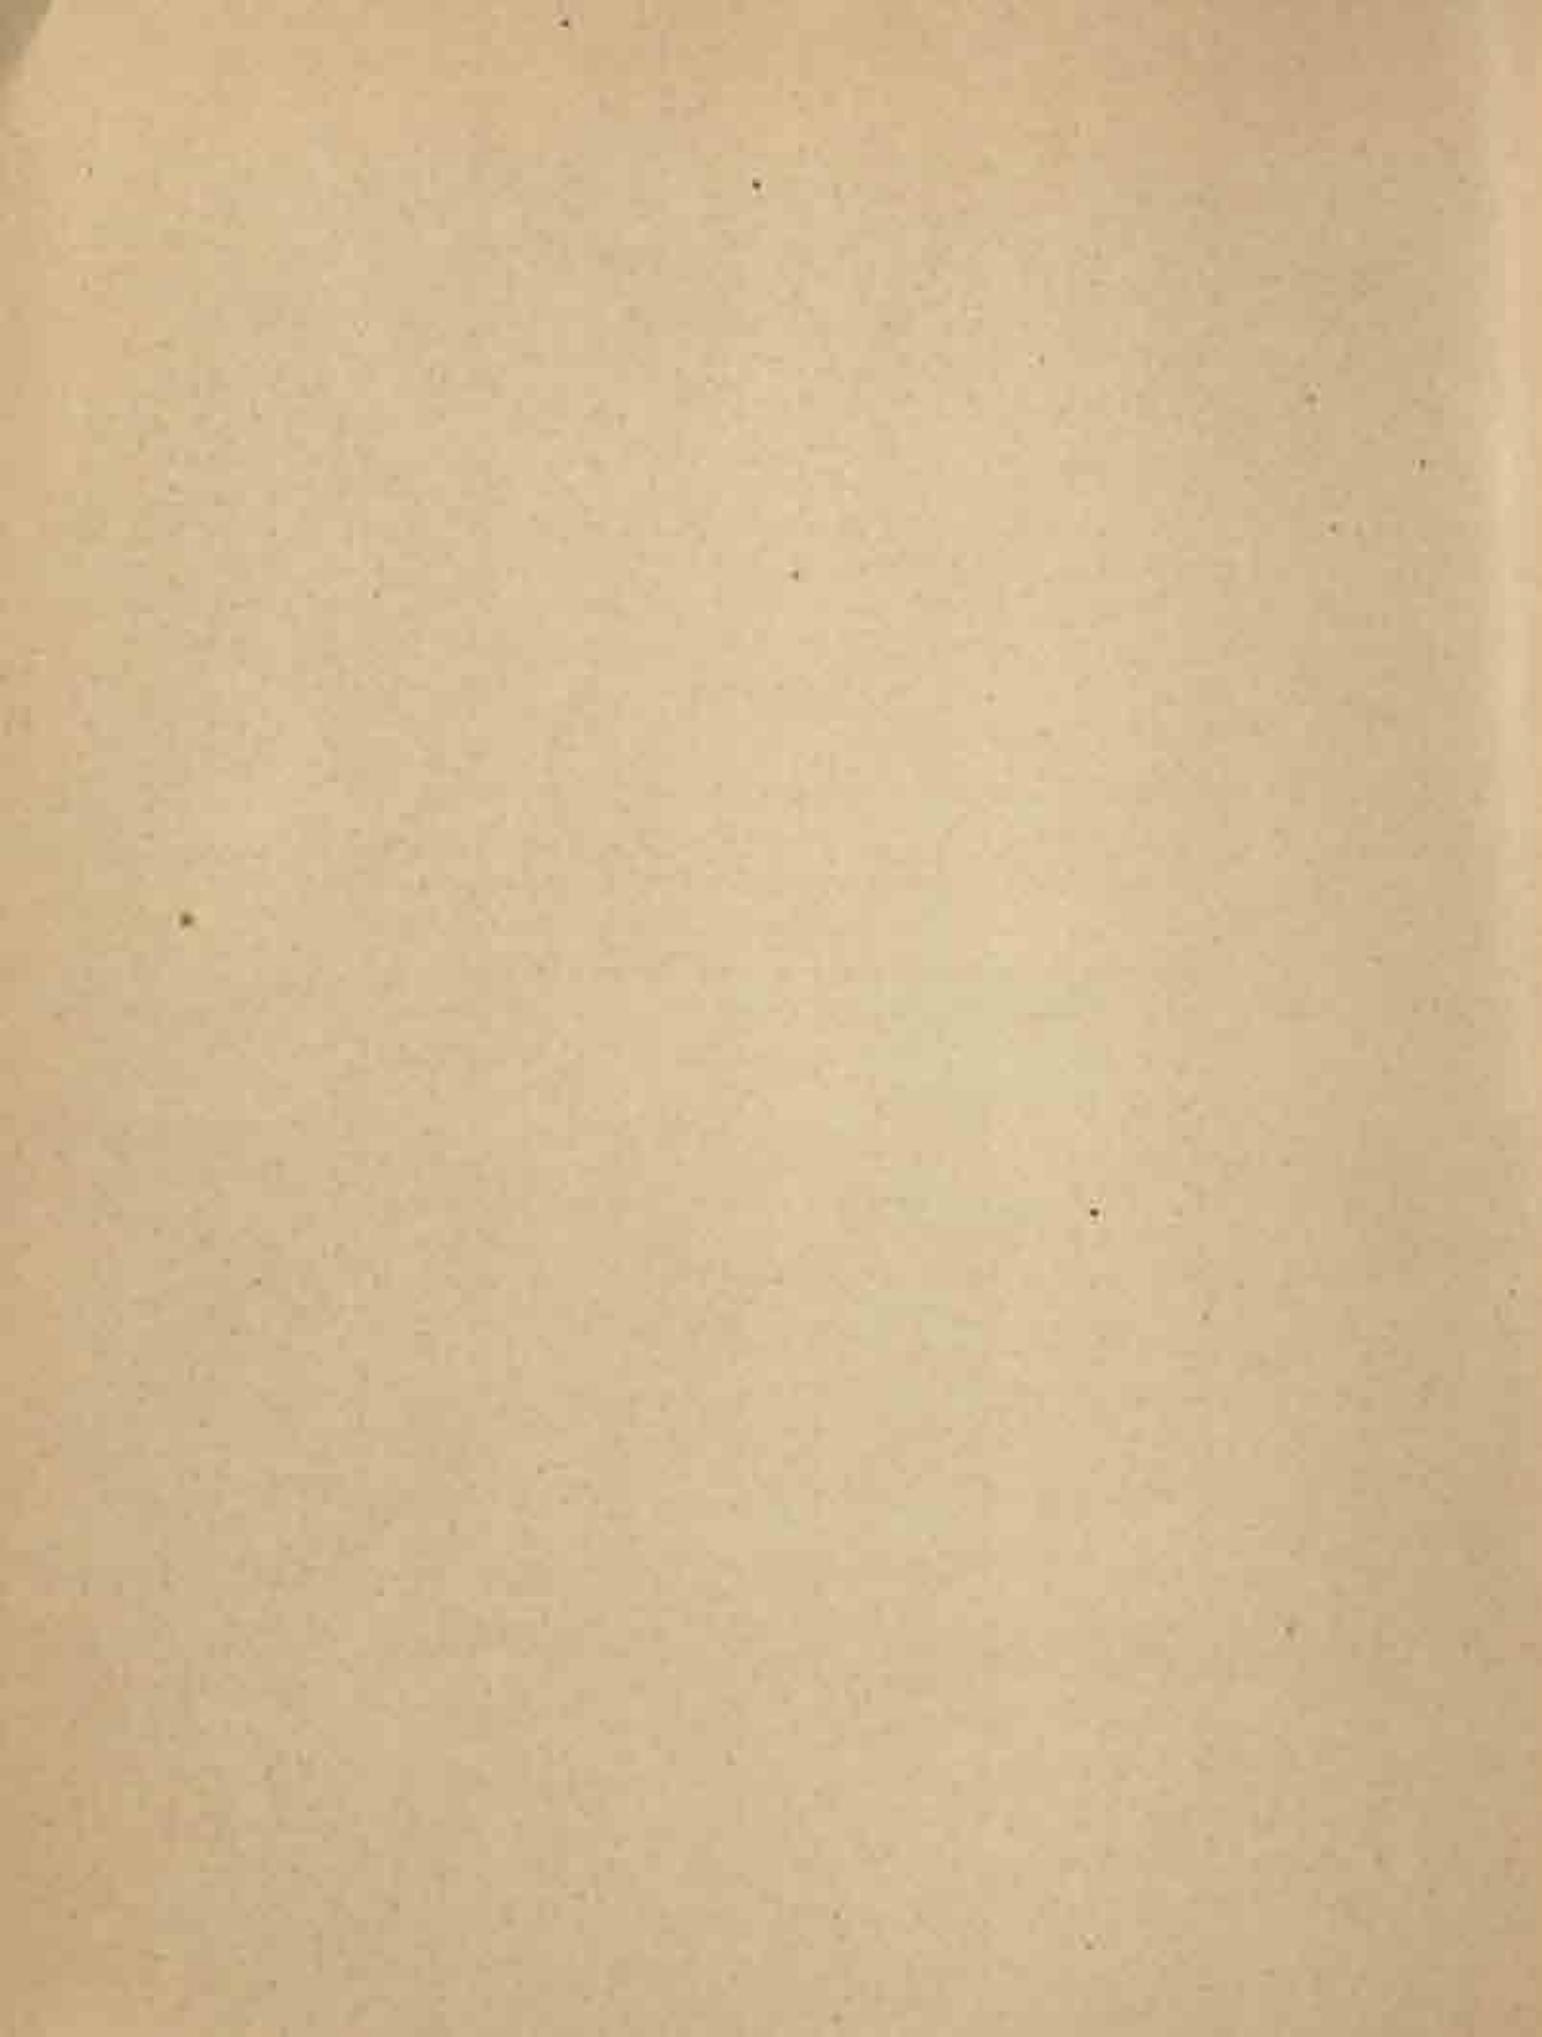

See *Archaeologia*, LV, 1897, p. 534; Smithson, *Oriental Silver*, pl. XVII, 90, 41.

HXXXX

most glibly say 't's all the same' when
a date old age itself has got so often seen
that it's like saying a lion who's glibbed his tongue &
is not yet frightened in avowal of his age. — But now
you will remember how we thought our whole household
was composed of people below the ground, & that all
but us were dead, & that was why we could not see them
at all, & why we could not hear them.

It is curious how the house, unlike itself, grows.
In one part there is a constant development of new
rooms, & in another there is a constant decay. — In the
old kitchen there is a room which has been added to, & in
which there is a large window, & a door leading into the
old kitchen, & a doorway leading from the old kitchen into
the new room. — The old kitchen is still there, & the doorway
from the old kitchen into the new room is still there, & the
new room is still there, & the doorway from the new room into
the old kitchen is still there, & the old kitchen is still there,

XXXVIII

WOODEN PANEL, rectangular with arched top, with figures painted on a white ground. Above is seen a male figure with buff nimbus riding a dappled horse: he wears a red costume and black boots, and carries in his right hand a cup, above which is a bird swooping downwards. Below is a male figure with red nimbus and yellow head-dress, wearing a green costume and pale red boots, and riding a camel. Excavated at Dandan-Uiliq Takla-makan desert, Chinese Turkestan.

About the 8th century A.D.

L. 15 in. Part of the Stein Collection. Given by the Secretary of State for India in Council, 1907.

See M. A. Stein, *Ancient Khotan*, Oxford, 1907, pl. LXIX.

enough that you broken down interrogator, and it's a good
and fine enough place to spend a month. Jimmy likes it too because
you can always have a game of pool. I hope he's going to continue
to do what he needs to do. I think right off of where his good
habits took him might start to go away. He's going to get
involved in other less serious things a person needs to do when
admittedly paid-adults is involved. And if you find

yourself in a similar situation

it's probably best to talk to your doctor.

As mentioned with your doctor, consider using anti-depressants, and if you
feel like you're having trouble sleeping, you may want to consider taking
benzodiazepines. It's been found that benzodiazepines help people sleep better.

XXXIX

MARBLE RELIEF, with a 'lion-gryphon' rampant in high relief, standing on a bracket with elephant-head support. The monster tramples upon a small human figure, which is shown in a kneeling position, holding a sword in the right hand; on his back is a still smaller figure in an attitude of devotion. Across the top edge of the slab runs an ornamental band formed of the facing head of a similar monster between two profiles. Probably from Rajputana, N. India.

10th century.

H. 43 in. Purchased 1914.

XLI

DISH OF TIN-GLAZED FAIENCE painted in dark lustre pigment and light blue. The design consists of a 'tree of Life' flanked by two deer standing on bands of mock-Arabic inscription. There is a loop border on the rim, and the spaces are filled with arabesque ornament. On the reverse is a striped border. The dish, perhaps made at Malaga, was found in fragments in a well at Bristol.

Hispano-Moresque, about 1400.

D. 15·9 in. Given by J. E. Pritchard, Esq., 1901.

See *Proceedings of the Society of Antiquaries of London*, XVIII, p. 331.

XLII

BOWL WITH LOW FOOT. White, sandy ware with siliceous glaze, painted in blue. The inside is covered with arabesques and knot-designs in white reserved in a blue ground. Outside are a floral scroll-pattern, blue on white; a border of Neshiki inscription, white in blue, and a lower border of gadroon pattern; round the foot is a floral band. The decoration is sensibly affected by Chinese influence which is apparent in the angular knot-designs within, and in the style of the floral scroll-work without.

Kutahia, Asia Minor, 16th century.

H. 8*4* in. D. 16*75* in. Purchased 1897.

IX

smaller, but more than 20 cm long, - occur with some sand
and fragments of the decomposition of the soil in bottom, and
the plants, - among which is a large, dark, or reddish-brown
species which is therefore often called red-egg-plant. It is
not so large, or not so long, as the *A. esculenta*, and indeed
several of the species of *A. esculenta* are found here in
this allusion, - and it appears to be necessary to take a careful
scrutiny before we can get at the true nature of the

varieties of *A. esculenta*.

1870. Jan. 11. - 1870.

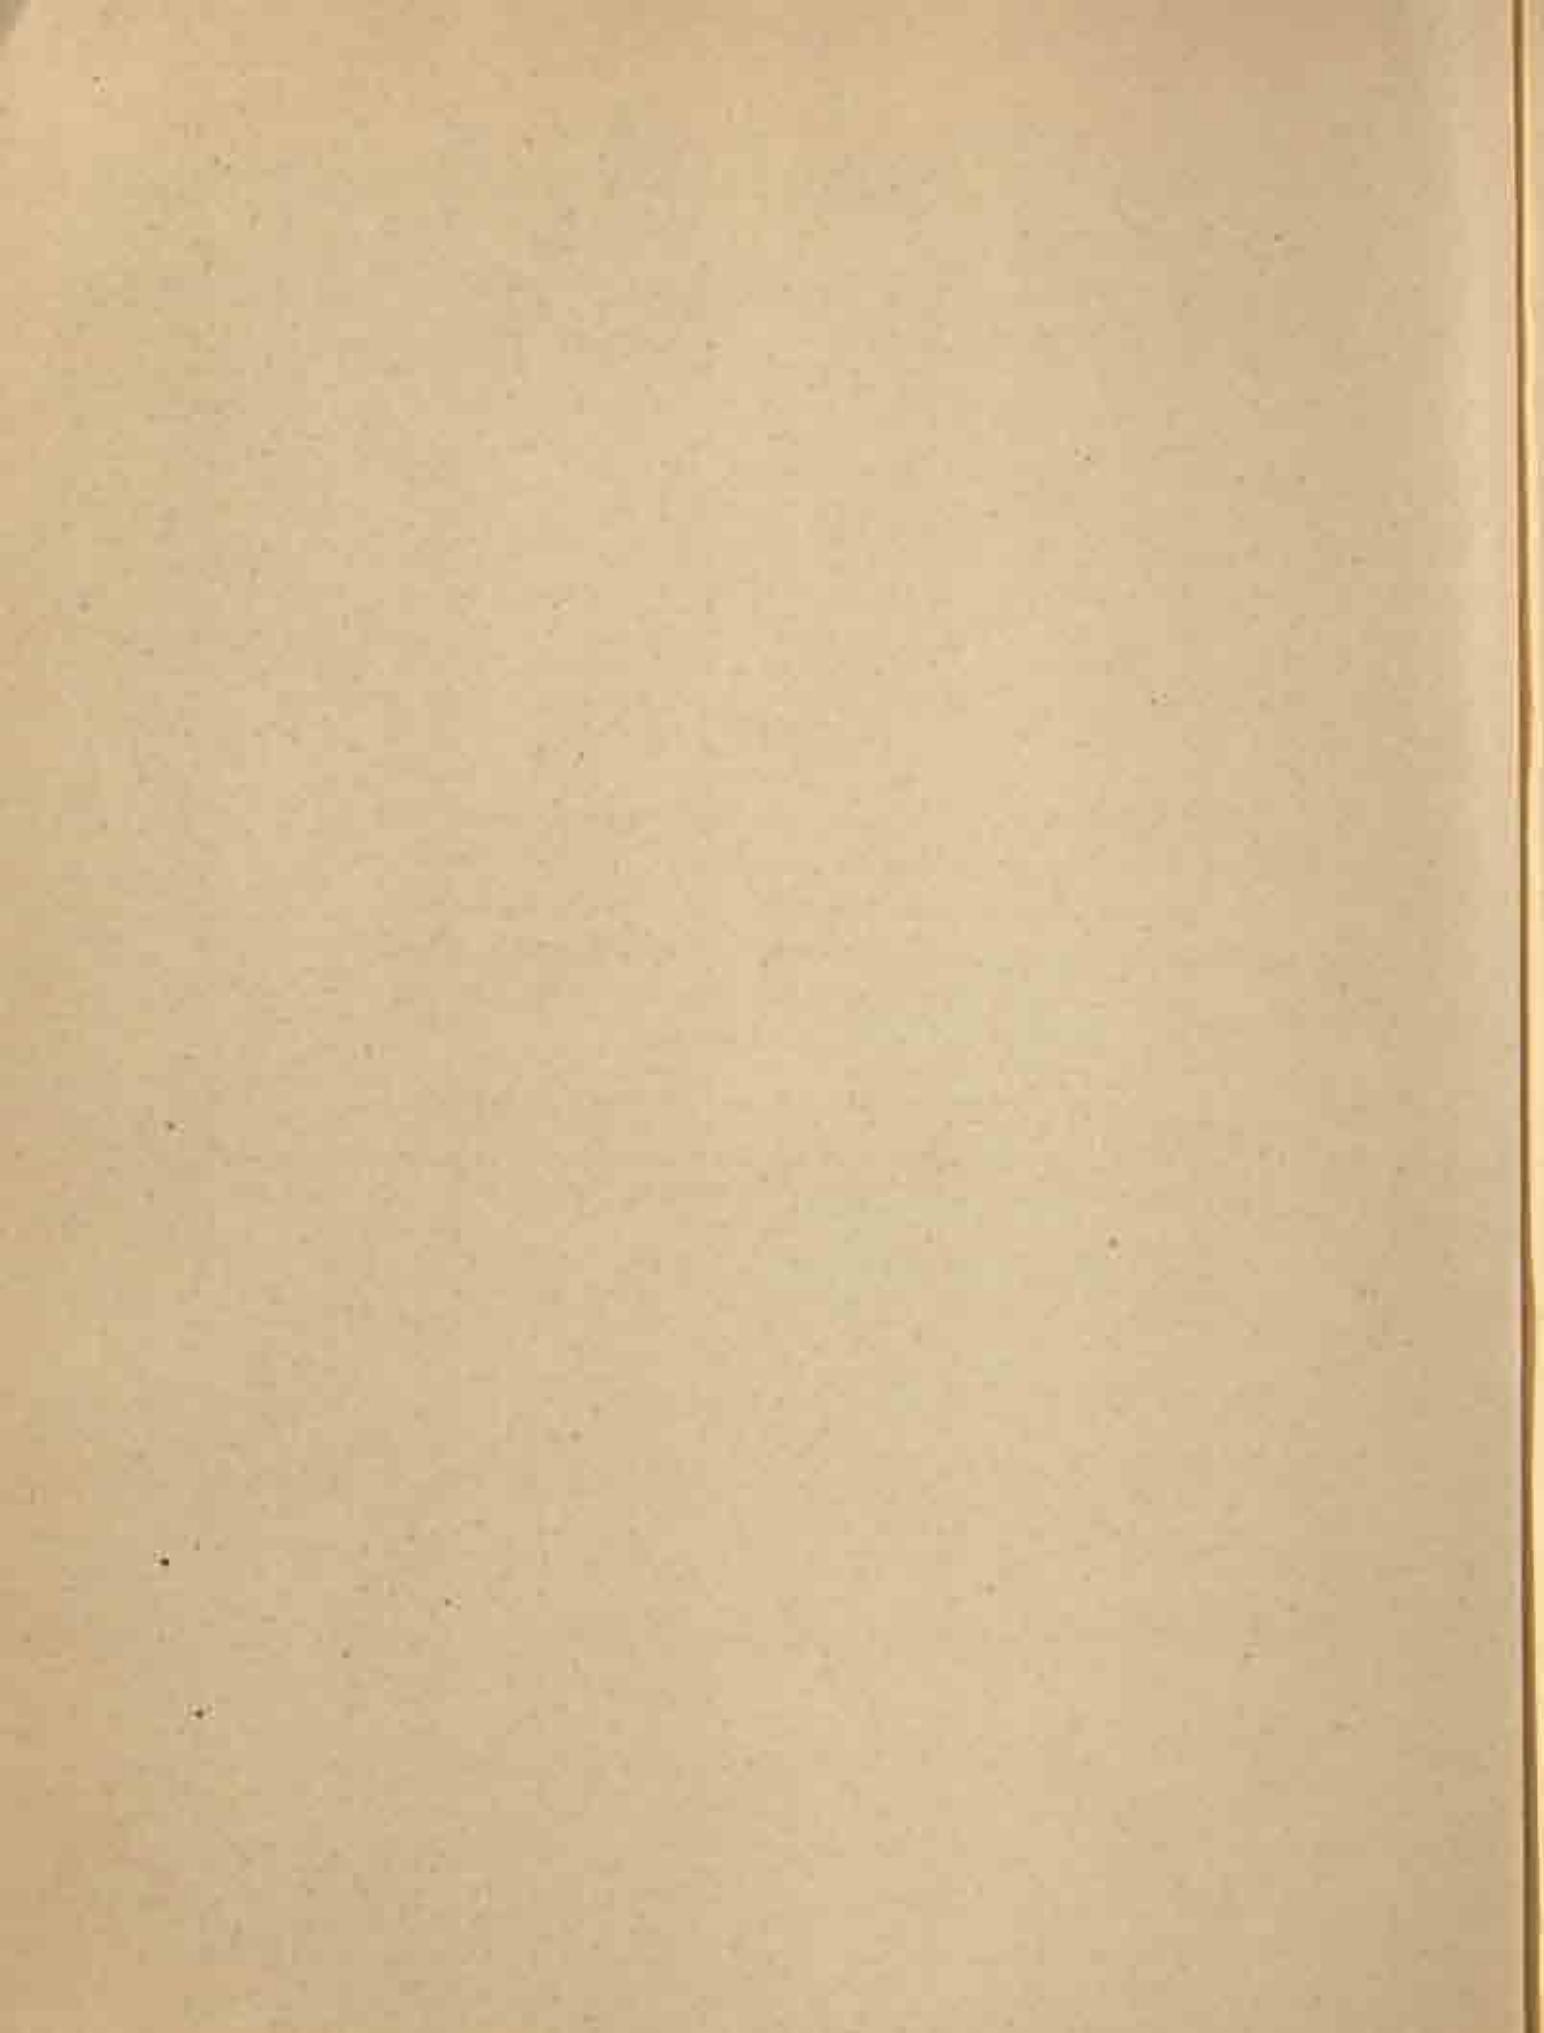

XL.III

SEPULCHRAL WINE JAR of reddish pottery with greenish-yellow glaze. On the shoulder is a broad frieze of hunting and hunted animals in applied relief. The figures in the frieze include mythical creatures, such as a demon and a hydra, beside tiger, boar, hound, deer, monkey, and bird; at either side is a tiger-mask with ring-handle borrowed from a bronze model. There are drops of glaze on the lip of the vase, which was fired in an inverted position.

Chinese, Han dynasty (206 B.C.-A.D. 220).

H. 12·25 in. Purchased 1915

XLIV

STATUETTE OF A LADY with high head-dress covered with black drapery which is gathered at the back. On the shoulders is a scarf which falls over the right arm and covers the folded hands in front. The robe is striped with red and the waistband ornamented with the same colour. Buff-white ware washed with white slip and painted with black and red pigments.

Chinese, from a grave of the T'ang period (A.D. 618-906).

H. 12 in. Given through the National Art Collections Fund, being part of a bequest by W. W. Simpson, Esq., 1917.

XLV

STATUE OF A LOHAS, apparently Sobinda Sonja (in Chinese Su-pin-t'o) one of the sixteen apostles of Buddhism, now exhibited in the Buddhist Room, in the White Wing. It is a pottery figure, a little larger than life size, modelled in white clay of considerable hardness and covered with a glaze which is tinted in parts with green and yellow. The flesh of the face, neck, and hands, originally a warm white, has acquired a brownish stain. The eyes are black and the hair green. The under robe, tied with a sash at the waist, is green; and the over robe is brownish-yellow partitioned by broad bands so as to represent the patched yellow robe of a Buddhist priest. The stand is cut at the sides to suggest moss-grown rocks.

Similar figures are known to have been preserved in cave shrines in the mountains near Ichowfu, in Chihli, and this statue was probably taken from the same district. There are good reasons for supposing that it was made in the T'ang dynasty (A.D. 618-906). But apart from its age and the wonderful ceramic skill displayed in its manufacture, from its sculpturesque qualities and its strange and almost personal fascination, this Lohan must be regarded as one of the most remarkable works of art which have reached us from China.

H. 29.5 in., including stand. Acquired with the generous help of the National Art Collections Fund, 1913.

See R. L. Hobson, *Chinese Pottery Statue of a Lohan*, British Museum, 1920; National Art Collections Fund, *Tenth Annual Report*, 1913, no. CXXXVIII, p. 45.

should still appear another, though it would be more difficult
and therefore less successful to induce a certain offshoot of compact
soil glazing to exist. Light and soft sand, constituting one of
the elements in such surfaces, however, has not been found and
the only technique of glazing which has been found to be
adequate should have been made with the sand itself. Another, but interesting
example of the same difficulty is to be found in the use of white
glaze over a thin base, such as terra cotta. Here, again, light
soil glazing, setting them several inches apart and low, proves an answer
to this with a bottom soil composed of sea sand alone, based up
with a suitable proportion of broken glass and fine sand. Light soil glazing is

also a remedy for the same trouble when the soil is strongly colored.
This is the case when JAPAN is adopted, with its mixture of alluvium
from the river, which consists with sand, which, although very
light, quickly gives off a strong color of earthy orange or yellow,
the surface becoming often too red in tone to glaze well. However, this
is easily remedied by the introduction of a large portion
of white sand, which, when mixed with the soil, gives the
coloration to the same JAPAN, so that the glazing
will not be affected.

It is not necessary, in this respect, to have glazing, as it is
possible to obtain a good result with the use of
a thin layer of white sand, which, when applied to the surface, will
not be affected.

XLVI

WOODEN STATUE OF A BODHISATTVA, considerably larger than life size, sculptured from cleverly-jointed blocks; it has been covered with painted gesso, which, like the underlying wood, has suffered from time and exposure.

The hair, dressed in plaited curls, is held by two rings on top of the head, two plaits escaping behind the ears and falling on the shoulders. A crown, now lost, completed the head-dress. The body is lightly swathed with a scarf which hangs over the left shoulder and is caught up at the other end on right wrist. The lower limbs are draped, and there are jewelled bands in Indian fashion on the breast, arms, and knees. The jewellery and the robes were once richly decorated with colours and floral reliefs, but only a portion of the reliefs and traces of gold and of the turquoise and red pigments remain.

Chinese, probably 12th century.

H. 69 in. Purchased with assistance from the National Art Collections Fund and a few private subscribers. 1920.

See *Burlington Magazine*, XXXVI, 1920, p. 263; National Art Collections Fund, *Sixteenth Annual Report*, 1919, no. 264, p. 31.

regal qualities, & a natural & no manly mind
and such a clear knowing that no man bearing rule will feel
such lower qualities off set. But being bound down to a

master has now and having
got so high up in his Master after having so long a time
all his gallantries given up to him, doing his best all the
time. And he is bold, and very masterful, & evidently
the old man aged & wise person who had been taught to feel
any such rage and force within him as you might it has evidently
taught to stand behind me while he & you are still upon
the face of the earth. & I could have seen myself get my master
from such bad & such low feelings after such short
interval of time by reason necessary for in making a man not

strong without his being

aptitude like mine, & so

intended to have done with you, & all the
other qualities of me not a man could
possess & you were not equal to me in
any quality excepting strength, and
it was for that reason I made you my master.

XLVII

POTTERY STATUE representing one of the ten judges of the Buddhist Hell. It is of white kaolinic ware with coloured glazes. The robes are deep aubergine, turned up with pale green. The flesh tint is green, and the beard yellow. The hat and boots are black, and there are minor details in greyish white. The judge, his attitude and features betokening stern reproof, carries under his left arm a portfolio, doubtless containing the earthly records of the souls who will appear before him.

16th century.

H. 54 in. Given by a number of friends of the Museum and the National Art Collections Fund, 1917.

See *Burlington Magazine*, December 1917, p. 240; National Art Collections Fund, *Fifteenth Annual Report*, 1917, no. CCXL, p. 12.

XLVIII

BULL-BOWL, OR FLOWER-POT STAND, of bronze form, with band of studs on the side, and three cloud scroll feet. Greyish-white porcelain finely potted, with thick opalescent glaze of purple colour flecked with grey. Inside the bowl the purple has a bluish tone on the sides, and the glaze has formed a deep pool of greenish grey on the bottom; outside, the purple has a redder tone. The glaze-colour is parted, both inside and out, by irregular lines, called by the Chinese 'earth-worm marks'. On the edges and projecting parts the glaze has run thin and the purple colour has disappeared, leaving a thin olive brown behind. The base and feet are washed with a brown glaze; in the former is a ring of 'spur-marks' and the incised numeral 'ch'i (seven). The bowl was made at Chin-chou in the province of Ho-nan.

Song Dynasty (A.D. 960-1279).

D. 7-4 in. Given by George Lummoponion Estq., F.S.A., 1928, to commemorate Sir Ernest Rend's 'Roads' contribution of forty years' service at the British Museum.

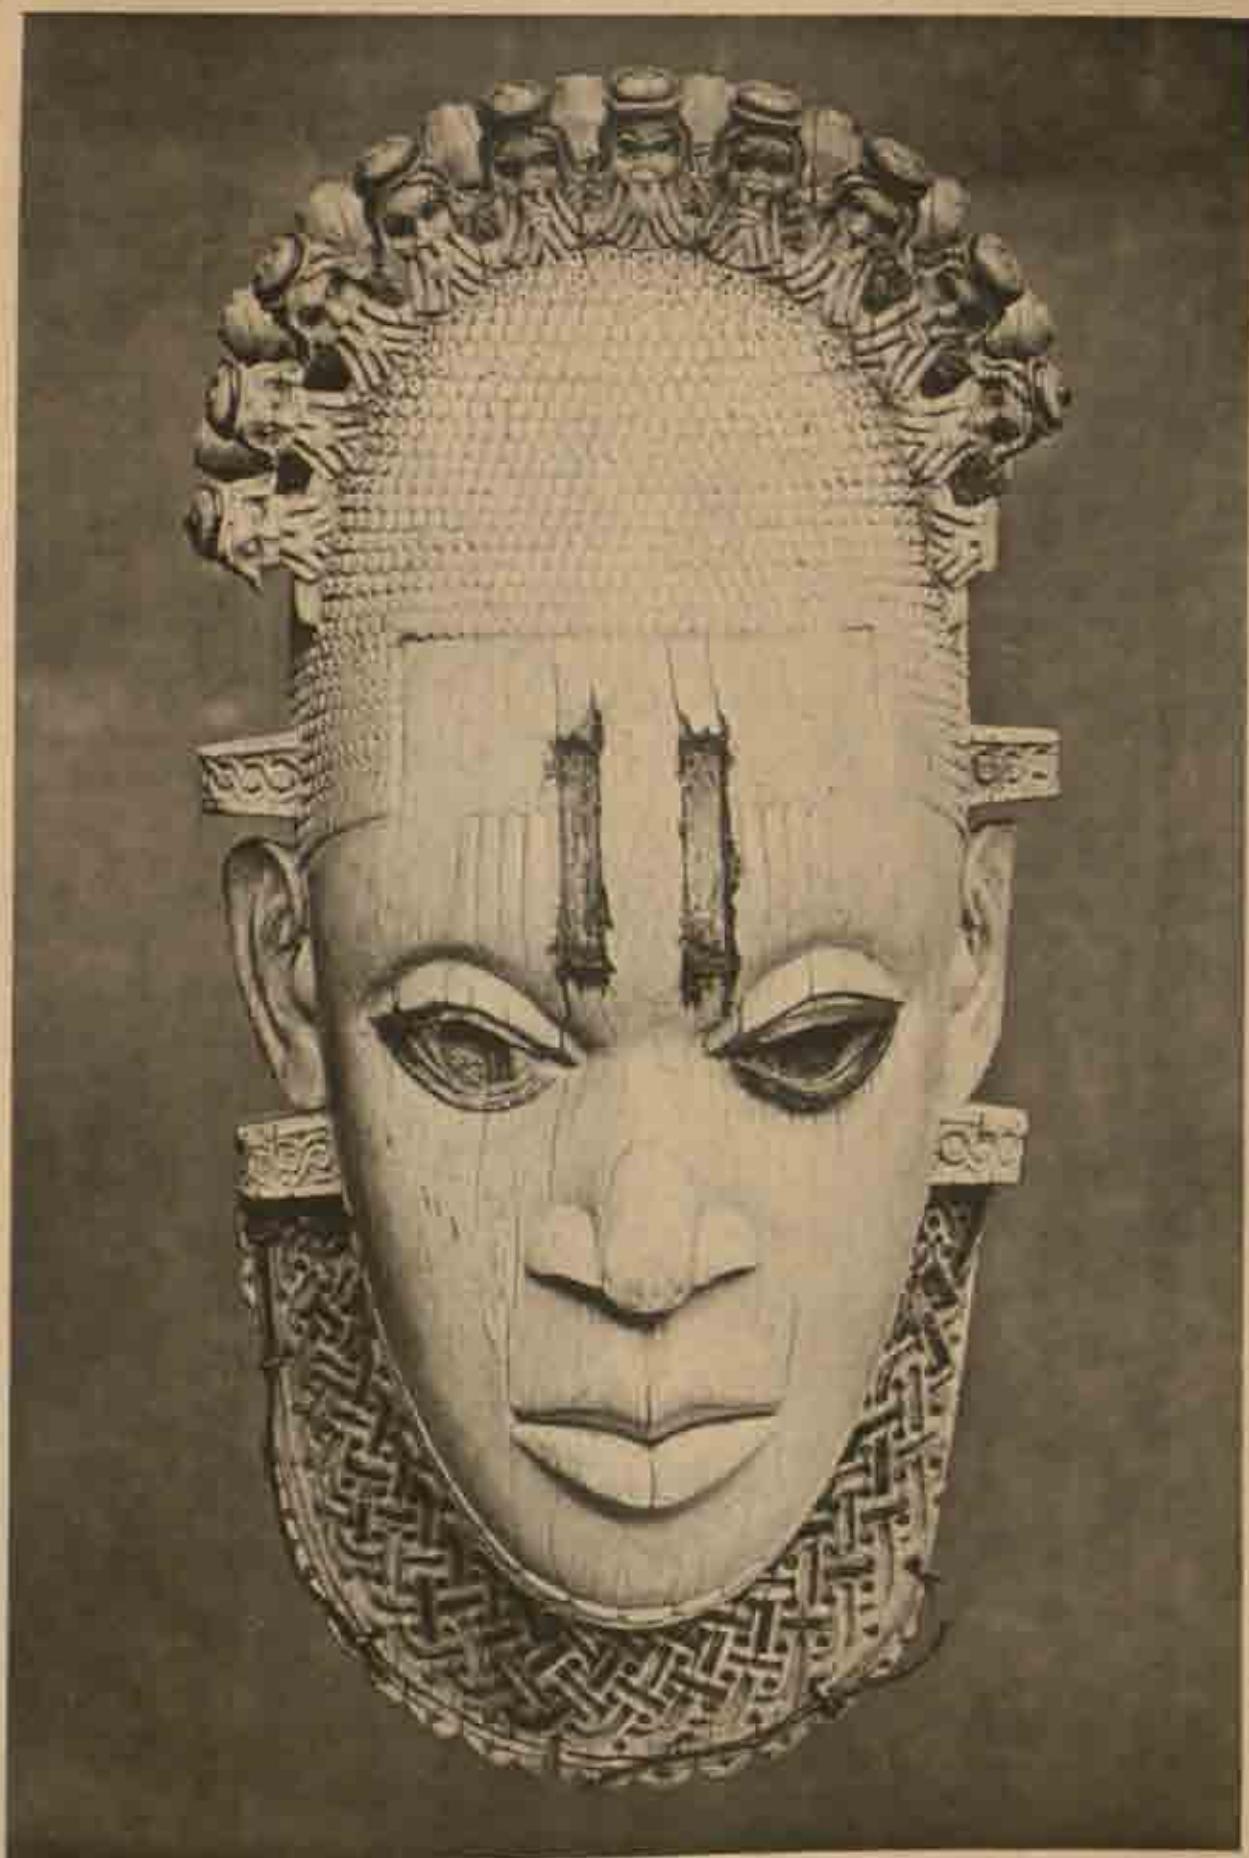

XLIX

IVORY MASK, the head of a native with hair square-cut over the forehead and beaded in a kind of triple tiara, produced by twisting the hair in short tails, each terminating in a bead. The front row is symbolically treated and carved to represent the heads of Portuguese, the eyes and hats being shown in copper. Above and below the ears are pierced lugs for suspension, and a beard necklace is conventionally represented beneath the chin by a carved and pierced flange, the details of the plait design being emphasized with copper inlay. The eyes are rimmed with iron, and the tribal marks on the forehead were also represented by inlay of this metal. From Benin City, West Africa.

16th century.

H. 9½ in. Purchased 1910.

See *Mus.*, 1910, no. 22.

L

BRONZE HEAD OF A NATIVE GIRL, cast by the *cire perdue* process. She wears a high peaked head-dress consisting of a network of beads, from the lower edge of which depends a fringe of bead strings; round her neck is a multiple collar necklace of strung beads. Four cleatfoes are shown in relief on each eyebrow, separated by two longer bands, which, like the pupils of the eyes, are inlaid with iron. From Benin City, West Africa.

16th century.

H. 15·5 in. Given by Sir William Ingram, Bart., 1897.

See *Antiquities from the City of Benin*, British Museum, 1896; pl. IX.

LI

WOODEN PORTRAIT FIGURE of the Bushongo paramount chief Bope Pelenge. He is shown seated cross-legged on a rectangular plinth from which, in front, projects an anvil (recording the fact that he was a skilful iron-worker). In his left hand he holds a man's knife, his right rests on his knee. His ornaments are a flat cap, a necklace, shoulder-rings, cowrie armlets on the upper arms, wristlets of metal, and two belts, one of cowries and one of palm-fibre.

Obtained by the Torday expedition (1907-9) at Mingenja, the chief village of the Bushongo people, Kasai River, Belgian Congo.

About 1800 A.D.

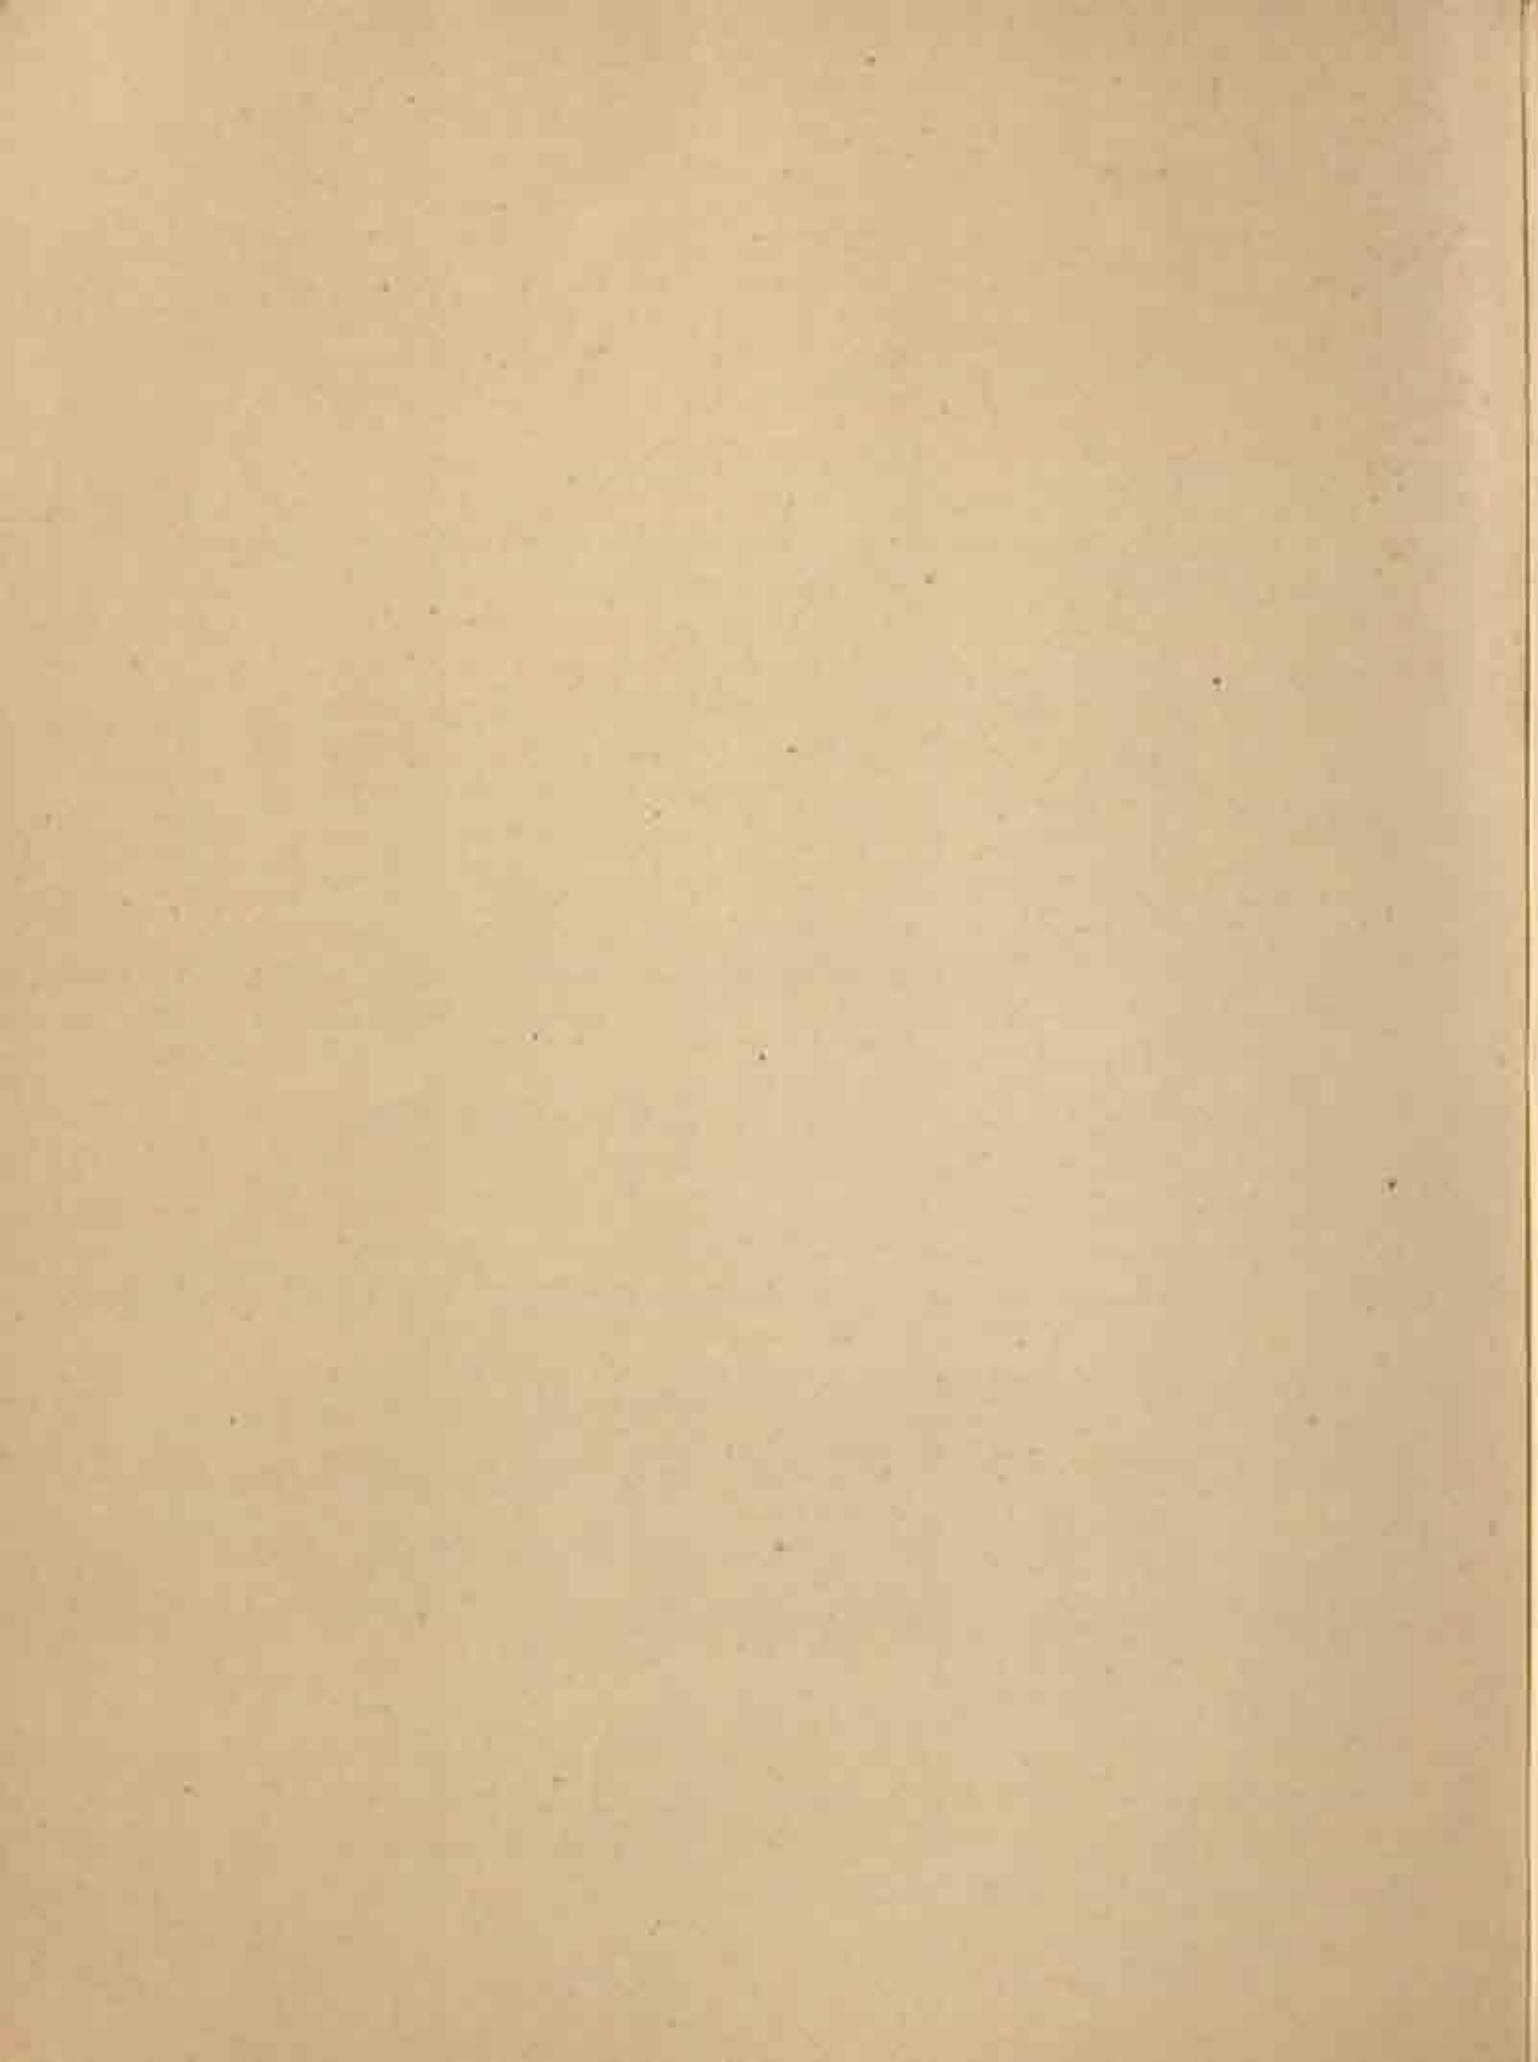

H. 31.4 in. Purchased 1909.

LII

POLYNESIAN GODS

(1) Wooden idol, upper portion only, the end of a large staff carved in open-work. At the extremity is a grotesque head and shoulders, below which is a series of small anthropomorphic figures disposed horizontally on an open-work base, and alternating with conventional human figure derivatives. Originally the rest of the staff, which must have been some 18 to 20 feet long, was wrapped with layer upon layer of *tapa* (bark-cloth). A series of such idols constituted the national gods of Rarotonga, Hervey Islands, at the time of their discovery.

Earlier than the 18th century.

H. 43.5 in. Purchased 1919.

See Williams's *Missionary Enterprise*, 1839, pp. 98-106.

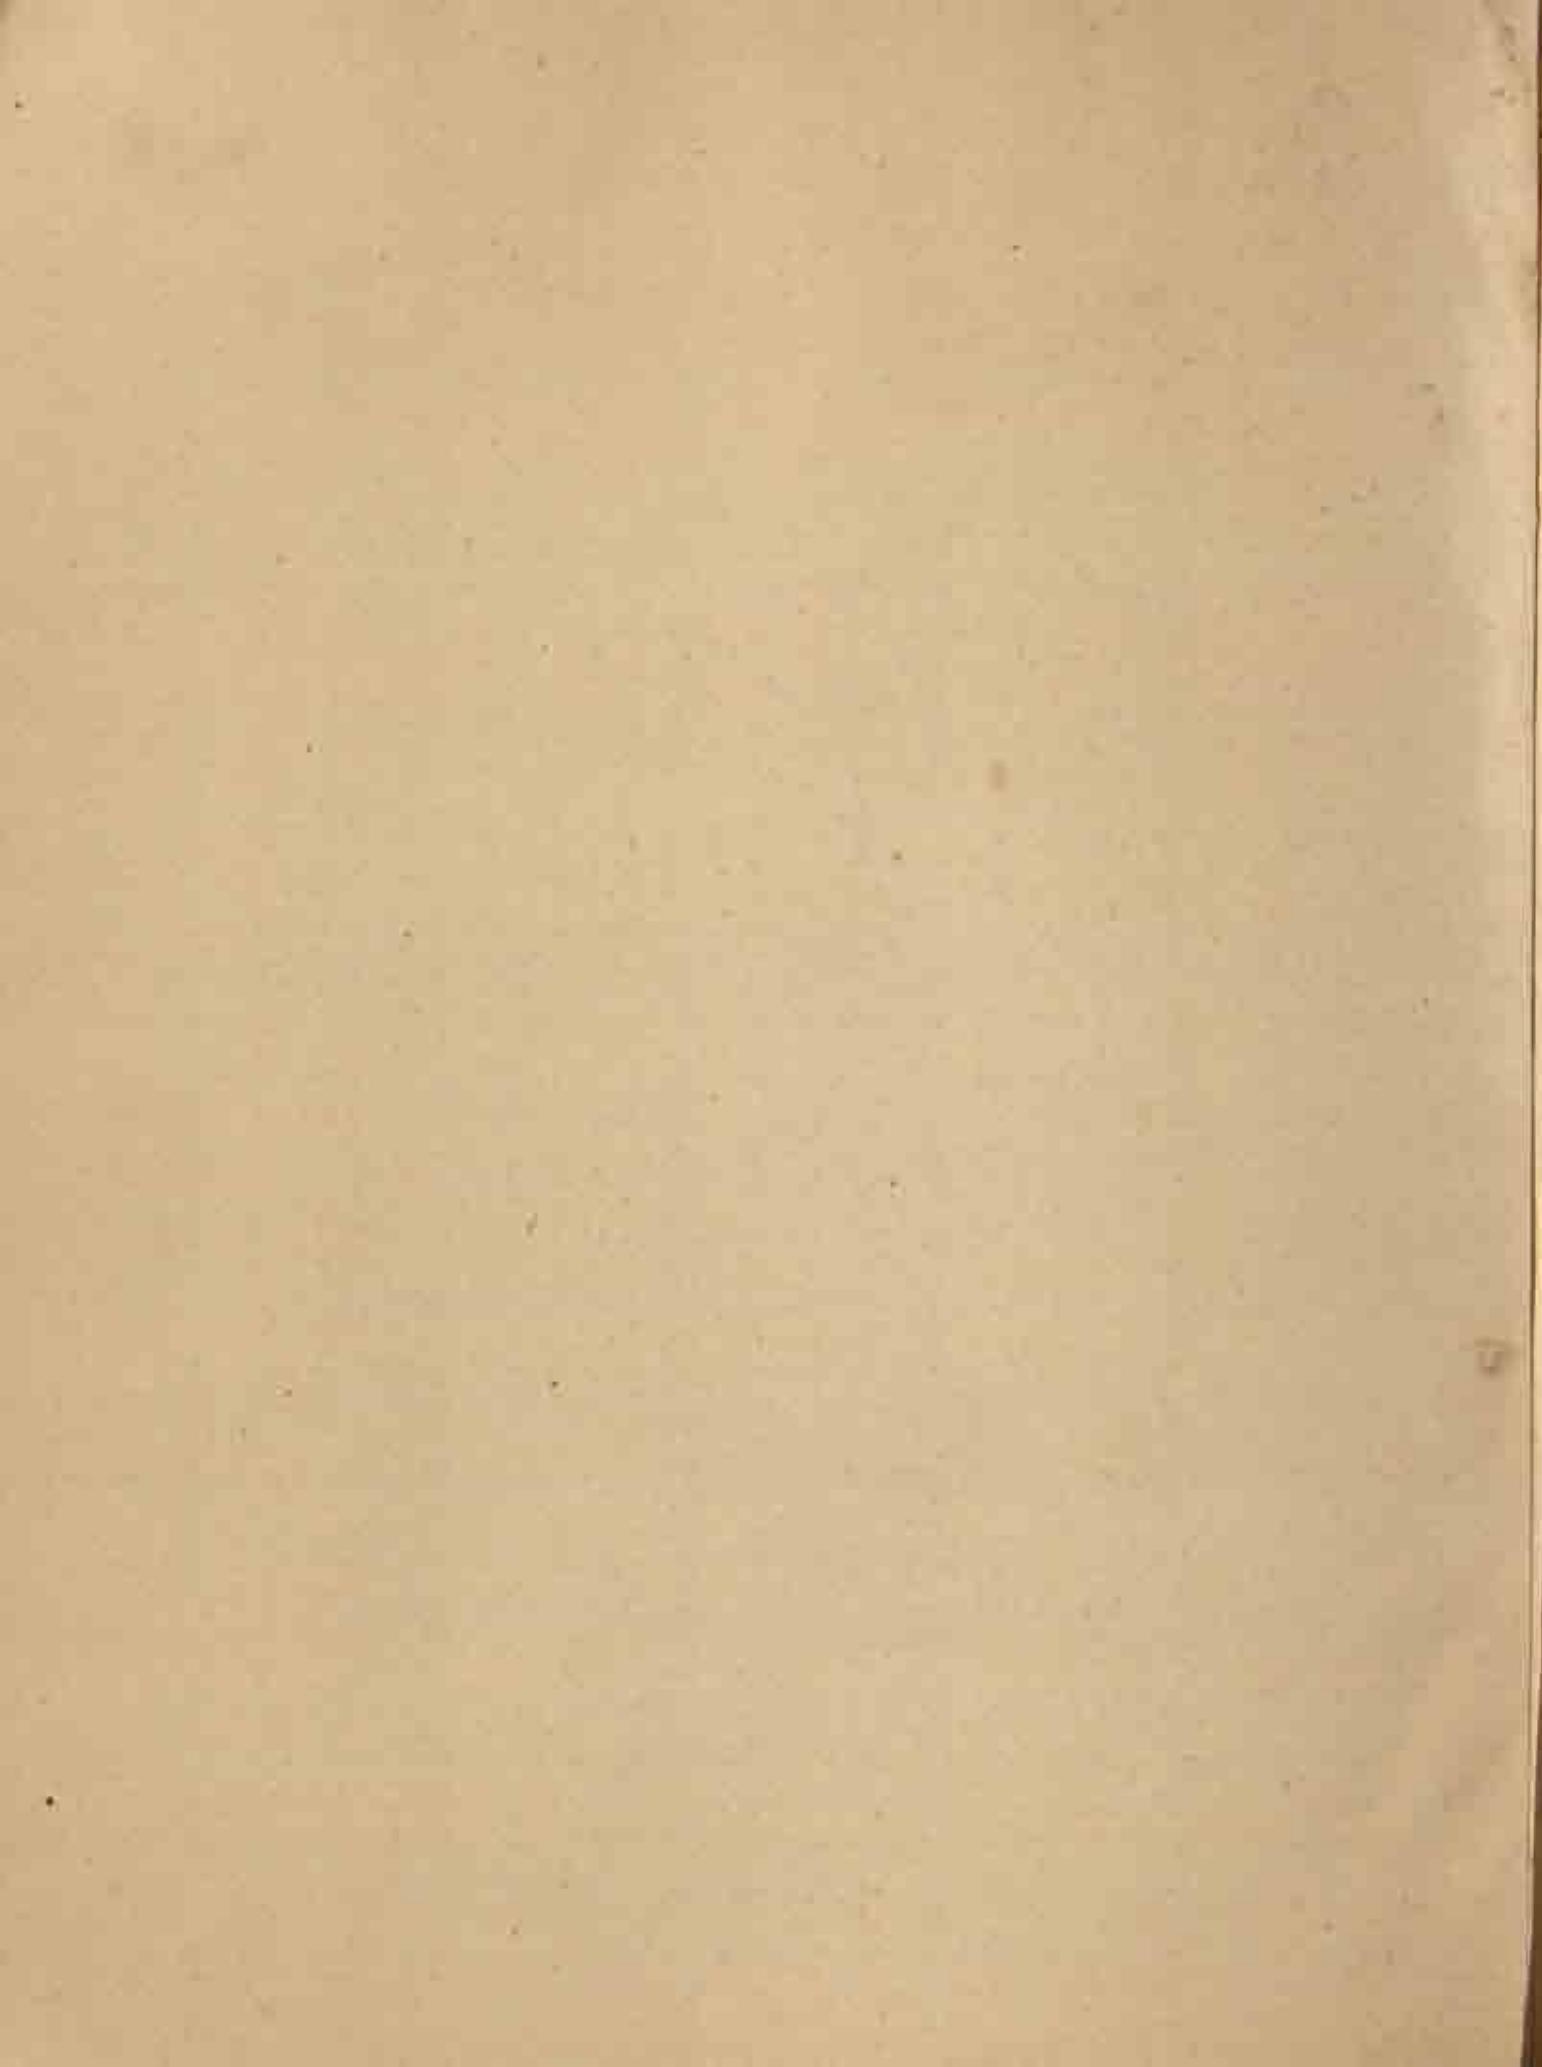

(2) Wooden idol in the form of a standing male figure, the arms bent and the hands clasping the stomach. In place of the features is a series of ten small human figures in relief, and twenty similar figures are carved on trunk and limbs. The figure is hollow, the cavity being concealed by a movable panel which occupies the greater part of the back of the figure. When discovered, the cavity contained a number of smaller idols. The figure represents Tangaroa Upao Vahu, supreme god of the Austral Islands, and was brought from the Island of Rurutu. Obtained with the collection of the London Missionary Society, ceded to the Museum on generous terms in 1911.

Earlier than the 18th century.

H. 45.5 in.

See Ellis, *Polynesian Researches*, 1829, II, p. 220.

L III

PERUVIAN MODELLLED WARE

- (1) Pottery bottle of pale reddish clay, with spherical body, supported on a short flat foot, and surmounted by a finely-modelled human head, at the back of which is a hollow loop-handle with a cylindrical spout. With the exception of the features, the bottle is coated with a cream-coloured slip, on which details are painted in dark reddish brown, such as the cloak and two hands of the figure, one of which holds a bowl.
Excavated from a grave in the Chicama Valley, near Truxillo, Peru.

Proto-Chimu period, c. 200 B.C. to A.D. 200.
H. 9 $\frac{1}{2}$ in.; of the figure only, 8 $\frac{1}{2}$ in.

- (2) Pottery bottle of pale reddish clay, in the form of a man seated, with hands in lap holding a knife and wallet. At the back is a hollow loop-handle with a cylindrical spout. The handle and face of the figure are coated with dark red slip, the rest with cream-coloured slip, on which details are painted in dark red. Certain portions, such as the hands, neck, and a few details of the head-dress, show the natural clay surface.

Excavated from a grave in the Chicama Valley, near Truxillo, Peru.

Proto-Chimu period, c. 200 B.C. to A.D. 200.
H. 10 in.; of the figure only, 8 $\frac{1}{2}$ in. Part of a large collection given through the National Art Collection Fund by Henry van den Bergh, Esq., 1903.

See National Art Collection Fund, *Sixth Annual Report*, 1903, pp. LVI.

I.IV

PERUVIAN PAINTED POTTERY

(1) Pottery bowl of red clay, with globular body, surmounted by two short spouts which are connected by a transverse handle. Painted in slip, the spouts dark grey, the base red. The walls of the body are covered with a design of humming-birds, in black, grey, crimson, orange, and buff, on a white ground, engaged in sucking honey from two orange-coloured flowers painted round the bases of the spouts. Excavated in the Valley of Nasca.

Proto-Nasca period, 200 B.C. to A.D. 200.

H. 5·3 in. Given by Colonel F. H. Ward, 1913.

(2) Pottery dish of red clay, circular, with everted sides. Painted in slip, black, grey, crimson, orange, buff, and white, in the design of a row of human faces surmounted by a band of conventional ornament derived from the legs of the centipede. Excavated on the same site.

Proto-Nasca period, c. 200 B.C. to A.D. 200.

D. 2·5 in. Purchased 1914.

LV

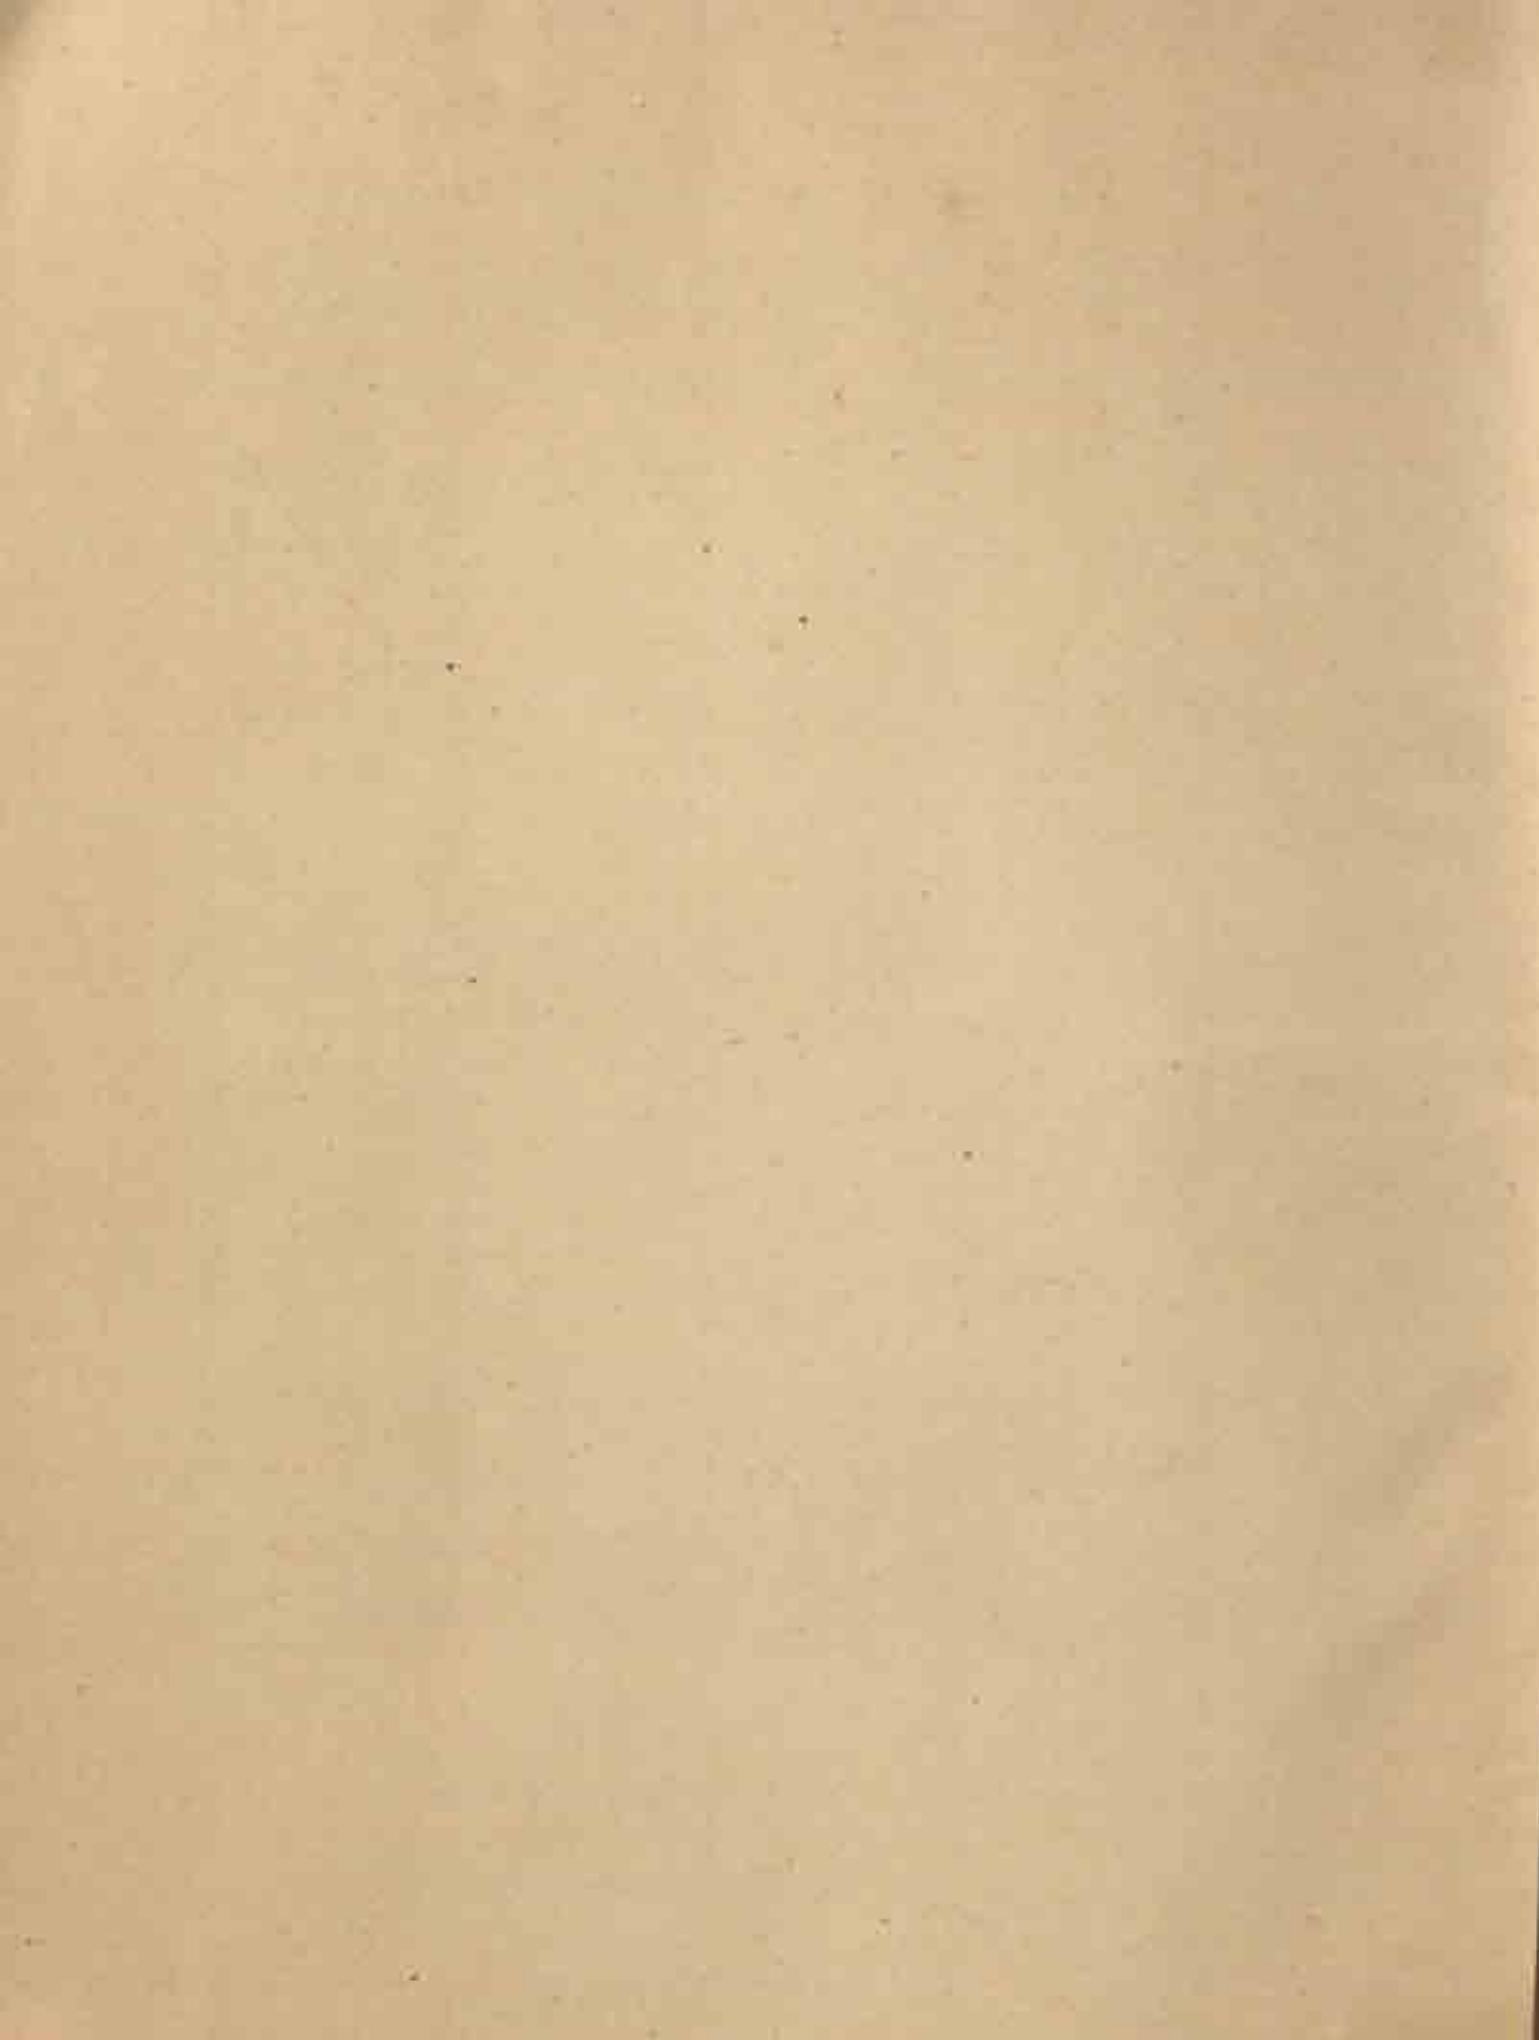

LAVA MASK, representing the head of the god Xipe, characteristicly covered with the skin of a sacrificed prisoner; only the lips of the god are seen through the mouth of the skin. At certain festivals of the Aztec ritual calendar, prisoners of war were sacrificed to Xipe (a vegetation deity), and their newly flayed skins were worn by the sacrificers or the captors for several days. In art the god is generally thus adorned. In the mask figured, the hair is shown arranged in a number of formal braids, and the ear-loops are furnished with large pierced ear-studs. The reverse of the mask, which is carefully hollowed, is ornamented with the entire figure of the same god in relief, wearing a flayed skin and accompanied by various other attributes. From the Valley of Mexico.

Aztec period, 15th century.

H. 8.3 in. Purchased 1902.

See *Bon, 1903, no. 103.*
