PREFACE

A part from the general interest attaching itself to an Elizabethan translation of the Travels of Marco Polo, the present edition aims at supplying a long-felt want in Polian research—a series of maps embodying the latest work and discoveries of explorers and cartographers. Owing to the kindness of Sir Aurel Stein in allowing me to use the maps illustrating his Third Journey in Innermost Asia, I have been able, with the help of my expert cartographer, Miss G. Heath, to construct eleven entirely new maps, which I trust will help to elucidate the itinerary of our great traveller.

With regard to the notes, the chief difficulty I have experienced is brevity, for Marco Polo offers unlimited resources to the student of research. I have, however, chiefly limited my notes to a consideration of Frampton's text, and to any fresh light that has been shed on the vexed question of Polo's itineraries.

I am greatly indebted to the Rev. A. C. Moule, who has read my proofs and given me valuable advice; to Dr C. O. Blagden, who has guided Polo's fleet safely through the Malay Archipelago; and to Miss Frances Welby, whose generous help in Mediaeval Spanish and Italian has been of the very greatest value. The exhaustive index is the work of the Cambridge University Press, whose help and care throughout the entire work has been beyond praise.

THE TRAVELS OF MARCO POLO

AN INTRODUCTION

BY

N. M. PENZER, M.A.
INTRODUCTION

The existence of an Elizabethan translation of the Travels of Marco Polo will probably come as a surprise to the majority of readers. This is not to be wondered at when we consider that only three copies of the work in question are known to exist, and that it has never been reprinted. The very rarity of the book would be of itself sufficient excuse for reprinting it, but in the present case there are other considerations which make its appearance little less than a necessity.

In the first place, its value to students of Elizabethan literature is self-evident. Bearing this in mind, I have made no attempt to alter the spelling in any way, nor have I marred the charm of the narrative as known to contemporary readers by the insertion of unsightly notes. These are relegated to the end of the volume. The original head- and tail-pieces have also been preserved, together with sixteenth-century capitals.

In the second place, the translation, made by John Frampton from the Castilian of Santaella, originates in a MS belonging to the Venetian recension, one of the most important of all the Polian recensions. Its editing, therefore, should be of considerable interest.

Then again, the recently issued work of Prof. Benedetto, to which we shall return later, has so greatly helped to unravel the tangled skein of Polian texts, that it is now necessary to reconsider afresh many of our long-accepted theories.

Finally, thanks to the recent surveys carried out in Central Asia and Mongolia, we are able to trace the itineraries with a much greater degree of accuracy than before, and although many queries still remain, some of the blanks have been filled in, and a few of the old mistakes rectified.

§1. JOHN FRAMPTON AND SANTAELLA

John Frampton

Apart from what Frampton tells us about himself in the Prefaces to one or two of his translations, we know nothing whatever about him. From these we learn that he was resident for many years in Spain, and that on his return to his native country about 1576, employed his leisure in translating several works from the Spanish. His knowledge of the language was
very extensive as a comparison of the original with any of his translations will show. He must have worked hard during the first few years after his return to England, as between 1577 and 1581 six separate translations made their appearance.

His first work seems to have been an English rendering of Nicolas Monardes' *Prima Y Segunda Y Tercera Partes de la Historia Medicinal de las Cosas que se traen de nuestras Indias Occidentales que siruen en Medicina*, printed at London in 1577 by William Norton "in Poulles Churche-yarde," under the title of *Joyfull Newes out of the Newe Founde Worlde wherein is declared the rare and singular virtues of diverse and sundrie hearethes, trees, oyles, plantes and flomes, with their aplications, as well for phisicke as chirurgie..."

It was dedicated to Sir Edward Dyett (d. 1607), the Elizabethan courtier and poet, as was also *Marco Polo* and another of his translations, on China, to be mentioned later. A welcome reprint of *Joyfull Newes* has recently (1925) appeared in the Tudor Translations Series, edited by Stephen Gaselee. In his Introduction, the editor draws attention to a most interesting point: that it is by no means unlikely that to John Frampton is due the first interest taken in tobacco in England, leading shortly to the actual importation of the first smoking implements and the plant itself by Ralph Lane and Francis Drake.

To Monardes' description of tobacco, Frampton has added an account given him by Jean Nicot himself relating how, when French ambassador at Lisbon in 1559–61, he became acquainted with the new discovery and sent seeds to his Queen, Catherine de' Medici. An abstract of the actual report sent to France follows, in which we read of "the smoke of this Hearbe, the whiche theye receive at the mouth through certain coffins [paper cases of conical shape], is asse the Grocers do use to put in their Spices."

Thus nine years before Raleigh received the "herba santa" from Drake, a full description of it had been published in London by Frampton. A second edition, with some additions, came out in 1580, and a third edition in 1596.

His next work appears to be unrecorded, except in the Registers of the Company of Stationers of London. See Arber's *Transcript*, Vol. ii. p. 325, where we find that Henry Bynneman obtained a licence on March 10th, 1578, for, "A brief Declaracion of all the partes, creekes, baiers, and havens conteyned in the west India..." the original whereof was *Dedicated to the mightie Kinge Charles the V Kinge of Castile*. I know of no copy in existence to-day. It was copied by Ames and Herbert, *Typographical Antiquities*, Vol. ii. p. 982.

In January 1579 Frampton finished writing the Dedication of his *Marco Polo*, so we may assume that it appeared in the early spring of that year. We shall return to a full discussion of this work later.
On Oct. 1st he finished another Spanish translation which was published before the end of the year. It was Bernardino de Escalante's 'Discurso de la Navegación que los Portugueses hacen a los Reinos y Provincias del Oriente, y de la noticia que se tiene de las grandeszas del Reino dela China, Seuilla, 1577, which appeared as 'A Discourse of the navigation which the Portugales doe make to the Realmes and Provinces of the East parts of the world, and of the Knowledge that growes by them of the great things, which are in the Dominions of China. Written by Barnardine de Escalante, of the Realme of Galífia Priest,' Imprinted in London at the three Cranes in the Vine-tree, by Thomas Dawson, 1579.

Two copies each of the original edition and Frampton's translation are in the British Museum. They are exceedingly rare books.

Most of the work deals with the customs, etc., of China. Thus, when in 1745 it was included in Vol. ii. pp. 25–91 of 'A Collection of Voyages and Travels... compiled from the curious and valuable library of the late Earl of Oxford,' we find the title-page altered as follows: 'An Account of the Empire of China:... to which is prefix'd 'A Discourse of the Navigation which the Portugues do make... As a matter of fact, the order of the chapters themselves are unaltered except that a few notes have been given to Chs. vi, ix, xi, xiv; Appendices added to Chs. xi, xii–xv, xv; and eleven "Reflections upon the Idolatry of the Jesuits, and other Affairs relating to Religion in China," inserted between Chs. xv and xvi [mis-numbered xiv].

Frampton's next work is of the utmost rarity, the only recorded copy being at the Lambeth Palace library. Its full title is as follows: 'A Discouerie of the countries of Tartaria, Scithia, & Cataya, by the North-East: With the manners, fashions, and orders which are used in these countries. Set forth by John Frampton merchant.' Imprinted at London at the three Cranes in the Vine-tree, by Thomas Dawson. 1580.1

At first sight it would appear to be an original work by Frampton, but closer inspection shows it to consist of accounts of different parts of the East "collected and written by a certaine learned man called Francisco

1 Owing to the excessive rarity of this work further bibliographical details will perhaps be welcome. The leaves are numbered on the recto only [1]–49, the actual number of pages being 680. Signatures are: \[Q.3.\+1 A.\ 2. A.\ 3. A.\ 4.+4 B. B 2 B. 3. B. 4.+4 C. C. 2. C. 3. C. 4. D. D. 2. D. 3. D. 4.+4 E. E. 2. E. 3. E. 4.+4.\] The dots before and after the figures are inserted or omitted as shown above. \[D. 4.\] is marked in the middle of the page above the tail-piece. \[E. 3.\] is in a plain roman font. The Colophon appears on the bottom of f. 49 r. The work forms No. 6 in a volume of several similar items. It is numbered 30, 8, 8, and bears the stamp and initials "R.B." on either side, showing it to have been the former property of Archbishop Bancroft.
This Francisco Thamara, who flourished in the first half of the sixteenth century, was Professor of Belles Lettres at the University of Cadiz from 1550 to 1552, and made translations of selections from Cicero, and a collection of apophthegms. (See further Diccionario Enciclopedico Hispano-Americano, 1897, vol. v, p. 167.) In 1556 he compiled a book of travels taken mainly from Joannes Boemus' Omnium gentium mores, . . ., 1536. It was entitled El libro de las Costumbres de todas las Gentes del mundo, y de las Indias, Anvers, and is the work translated in part by Frampton. He merely selected those portions dealing with the East. Much of the information is taken direct from Marco Polo and Nicolò de' Conti. There are four distinct sections: (1) of the Region of Tartaria, and of the Lawes and power of the Tartars, ff. 1-13; (2) Of the Countrie of Scithia, and of the rude manners of the Scithians, ff. 13 v°-21; (3) Of the Countrie that is called, the other side of Ganges, and of Cataya, and the region of Sinas, which is a countrye of the great Cham; and of the meruailleous things that haue bene seene in these countries, ff. 21 v°-28; and (4) of many notable things that are found in the land of Tartaria, and in the East India, ff. 28 v°-40 v.

On ff. 24 and 27 v, the same mistake is made as occurs in Marco Polo (see Appendix I. Note 53, p. 164) where Santaella translates "lingua persi" as "lengua de persianos", thus making the natives of China and the Malay Archipelago speak Persian! On f. 27 Polo is referred to in connection with Giampago, or Japan.

Frampton dedicated his translation "To the right worshipfull fyr Rowland Hayward Knight, and to master George Barne, Alderman of the citie of London, and gournours of the worshipfull company of merch auants adventurers for discouerie of newe trades, and to the afflents & generalitie of all the sayd worshipful fellowship, John Frampton wifheth all happye successe in all their attempts."

His next publication was in 1851, when he made a translation of Pedro de Medina's Arte de navegar . . . Valladolid. 1545, under the title of The Arte of Navigation, wherein is contained all the rules, declarations, secrecy & aduises, which for good Navigation are necessarie & ought to be known & practised: made by (master Peter de Medina) directed to the right excellent & renowned Lord don Philippe, prince of Spaine, & of both Siciles. As with most of Frampton's books, it was dedicated to Sir Edward Dyer, and the date is given as Aug. 4, 1581. A second edition appeared in 1595.

Both are very rare. Dr Pollard, Short-title Catalogue, p. 402, No. 17771, records a copy of the first edition as being in the library of Sir R. L. Harnworth, and the second edition in the H.E. Huntington library.
The British Museum contains the original 1545 work of de Medina, as well as six French, two Venetian, and one Dutch translation.

This comprises, as far as I can ascertain, all the translations made by Frampton. Although it is difficult to say for certain, it seems probable that he was alive in 1596, and personally re-edited the third edition of Joyfull Newes, which was, without doubt, his most successful work.

It remains to discuss the bibliographical difficulties of Marco Polo. It was published, as we know, by Ralph Newbery in Jan. 1579, but for some reason or other was not clearly entered in the registers of the Company of Stationers, and has become connected with another work with which it has been thought actually to coincide. It is duly entered in Ames and Herbert, Typographical Antiquities, Vol. ii. 1786, p. 907, but a note is added as follows:

“He [Ralph Newbery] had licence about this time to print A description of the East Indies, translated out of Italian, Q. if this be the book intended?”

Now on reference to Arber’s Transcript of the Registers of the Company of Stationers of London 1554–1640 A.D., we find in the Index Volume (Vol. v. p. 113) that Frampton’s Marco Polo is recorded as appearing in Vol. ii. p. 342, but this reference is preceded by a query. On turning up the page in question we find no mention of Polo or Frampton at all. The entry is as follows:

“Raffe newbery. Receaued of him for his licence to printe the description of the East Indies which was translated out of Italian and lyckencid by master Tottell and master Cooke vnder their handes in the tyme of their being wardens.”

The date of the licence was Dec. 3rd 1578. Arber has simply copied Ames. The trouble is that no such work on the East Indies has been traced, and the above bibliographers have come to the conclusion that as Marco Polo appeared in January 1579, its licence must have been obtained in December 1578. The only work on the “East” licensed to be published by Newbery about that time was “the description of the East Indies,” and this has been taken to be intended for Marco Polo!

Although this may seem quite unjustifiable, I notice that Dr Pollard, in his Short-title Catalogue of Books...1475–1640, has accepted the connection, and gives Marco Polo as having received its licence on Dec. 3rd 1578. Personally I believe there is no connection whatever, and that the two works are quite distinct. It is possible that the East Indies was never
published; so also Marco Polo may never have been entered in the register as it should have been.

Furthermore, all Frampton's works were translated from the Spanish, and we are distinctly told that the East Indies was from the Italian. Prolonged search has shed no light on the matter.

It is also rather strange that no subsequent edition of Marco Polo was issued. Here was a work that represented the first detailed information about the Far East, published at a time when English discovery and exploration was at its height, yet, as far as we can judge, its sale could not have warranted a reprint, and copies gradually got used up and lost. Thus to-day only three copies of the work are known to exist. Of these, two (979, f. 25 and G. 2755) are at the British Museum, while the third is in the Lambeth Palace library. For the present edition I have used 979, f. 25. In G. 2755 the title-page is missing, and has been copied out in ink.

The Lambeth copy is bound up in a volume of tracts, but is in very fine state with wide clean margins. The librarian tells me that as the volume bears the catalogue mark of Cambridge it certainly dates back to Archbishop Bancroft's time, when during the Commonwealth the library was transferred to Cambridge for twelve years. He considers, however, that it probably formed part of Archbishop Whitgift's collection.

Leaving John Frampton, we must pass on to a brief account of the life and writings of Santaella.

Santaella.

Rodrigo Fernández de Santaella y Córdoba was born in 1444 at Carmona, twenty-six miles north-east of Seville. Nothing is known of his early life, and we first hear of him in 1467 when he was presented with a fellowship of theology at the College of San Clemente de los Españoles at Bologna by the Archbishop and Chapter of Toledo. The fellowships lasted for eight years, so we may assume that Santaella remained at Bologna until 1475. After taking his degree as Doctor of Theology and Arts, he preached before Sixtus IV at Rome in 1477, in the presence of Innocent VIII.

Meanwhile Isabella had been recognized as heiress to Castile, and in 1469 had married Ferdinand of Aragon. The "Catholic Kings" were proclaimed in 1474, and soon after Santaella returned to Spain and embarked on his career of ecclesiastical preferment.

In 1499 his magnum opus appeared, the Vocabulario Eclesiástico, dedicated to the Illustrious Catholic Queen. It went through no less than thirty editions, which are duly recorded by D. Joaquin Hazañas y La Rua,
whose work, *Maese Rodrigo, 1444-1509* (see pp. 155-196), is practically my sole authority for these few remarks on Santaella.

His *Saeerdotalis instructio circa missam* followed later in the same year, and the *Manual de Doctrina necesario al visitador y a los clérigos* in 1502.

In 1503 his Castilian translation of *Marco Polo* was published. In his Preface Santaella tells us that he was prompted to undertake the work since he realized its importance and no one had come forward to do it. It had already been printed in German, Latin, Venetian and Portuguese, and Santaella wished to see it in his native tongue. He also tells us that his library contained the treatise of Nicolò de’ Conti, another Venetian, whose travels largely confirmed the narrative of Polo, and because of this fact he determined to include a translation in his work, “porque como nuestro señor dixo por boca de dos ó tres se confirma mas la verdad.”

As is related on a later page (p. xxvi) the Polo MS used by Santaella is now preserved in the Biblioteca del Seminario at Seville. Subsequent editions appeared in 1507, 1518, 1520 and 1527, the last three being posthumous.

It is unnecessary here to enumerate the subsequent publications of Santaella. They consisted chiefly of sermons and other ecclesiastic writings of a similar nature, and are fully catalogued by La Rua.

On Sept. 12th 1502 Hurtado de Mendoza, Cardinal of Seville, had died, and Santaella was made “Visitador” for the whole of the see. On June 3rd 1503 the Chapter divided the Archbishopric into four sections, that including the city of Seville and Triana falling to Santaella. The vacancy was filled by Don Juan de Zúñiga, who made his entry into Seville on May 13th 1504, but he died on July 26th of the same year. The esteem in which Santaella was held is shown by the fact that at the death of Zúñiga, he was nominated “Provisor” during the interregnum, the next Archbishop, Fray Diego de Deza, not arriving at Seville till 1506.

For some years past Santaella had been deliberating on the founding of a university at Seville, and on June 13th 1503 the site was purchased for 4700 maravedis. A Bull, pointing out the necessity for a local university for the benefit of scholars and poor clergy studying in Seville, was approved by Julius III. Santaella’s idea seems to have been to create a College for ecclesiastical studies, as well as a general university. In 1508 he obtained another Bull by which the College was united with three other

---

1 It was published at Seville in 1909, being a greatly enlarged edition of a 46-page pamphlet issued in 1900, entitled *Maese Rodrigo Fernández de Santaella. Fundador de la Universidad de Sevilla*. 

b-2
benefices in order that medicine might be taught, and the whole establishment placed on the same footing as the university of Salamanca.

Santaela died on Jan. 20th 1509, and was buried in the chapel of his college. In 1771 the Colegio Mayor, as it was called, was separated from the university, and by 1847 hardly one stone remained upon another.

Thus the illustrious Archdeacon of the Realm, Maese Rodrigo Santaela, was almost completely forgotten, when the Rector of the university conceived the idea of erecting a statue to its founder.

This statue, more than life-size, was unveiled on Dec. 10th 1900, and stands in the great court of the university.

Having thus briefly given a short account both of Frampton and Santaela, we can pass on to a consideration of the extant texts of the Travels of Marco Polo.

§ ii. THE MANUSCRIPT TRADITION

Previous to 1928 it would have been practically impossible to have written anything new about the numerous Polian texts, unless it had been to have given more detailed accounts of the leading MSS already briefly described by Yule.

Early last year, however, the eagerly awaited work of Prof. L. F. Benedetto made its appearance in Florence\(^1\), and for the first time the MSS were properly classified and arranged in the respective groups to which they belong.

But this is only a small portion of the work that Benedetto has accomplished. He has not only increased the Yule-Cordier list\(^2\) of MSS from 78 to 138, but has discovered a copy of one that contains many of the passages used by Ramusio, the origin of which was not previously known. I shall return to this later.

All this forms the first part of Benedetto's work; the second half contains the text of the most famous MS of all, fr. 1116, correctly edited for the first time with textual notes and important passages from other MSS.

\(^1\) *Marco Polo: Il Milione*. Prima edizione integrale, a cura di Luigi Foscolo Benedetto, Firenze, 1928. I have reviewed this great work at considerable length in *The Asiatic Review*, Oct. 1928, Jan. 1929, and April 1929. I have to thank my friend the editor, Mr F. J. P. Richter, for allowing me to make what use I like of it in the present work.

\(^2\) The Yule-Cordier list consists of 92 MSS (85 in the 1903 work and 7 in Cordier's *Notes and Addenda* of 1920), but, as Benedetto has shown, 14 are either duplicates, mistaken references, or are not MSS at all. Thus the total of 78 is obtained.
In order to derive the full benefit afforded for the elucidation of the complicated mass of MSS, it is necessary to study both parts in conjunction.

As is only to be expected in research of this nature, it is impossible to find proofs for every statement, and in the reconstruction of lost originals there is plenty of scope for what amounts to little less than pure guesswork.

I have never been able to understand exactly why Yule discarded fr. 1116, which he owned to be the best text, in preference for those used by Paulyer which were much inferior. His excuse that the awkwardnesses and tautologies in fr. 1116 prevented its use hardly seems sufficient to debar a scholar from attempting to overcome those difficulties.

But Yule was no paleographist; he was a commentator, and a very great commentator; just as Cordier was a bibliographer. Benedetto, on the other hand, is both a philologist and a paleographist, and only such a scholar can give us the thread that will guide us safely through the labyrinthine intricacies of Polian manuscript tradition.

As a close study of the works of these scholars is a *sine qua non* for every student of Marco Polo, it is to be regretted that Benedetto has not used Yule's chapter enumeration for facilitating reference, in addition to his own.

Owing to the fact that Benedetto's work is limited to only six hundred copies, that it is in Italian, and that its high price places it quite outside the reach of students, I make no excuse for giving here some account of the different groups of MSS as now first classified and described by him, together with such further information or comments as my own reading has suggested.

We will consider the MSS under the following headings:

1. The Geographic Text (fr. 1116).
2. The Grégoire Version.
3. The Tuscan Recension.
4. The Venetian Recension.
5. Ramusio's Version and the ante-F phase.

As is only natural, Benedetto first discusses the precious MS at the Bibliothèque Nationale, Paris, fr. 1116 (formerly 7367). It was published in 1824 by the French Geographical Society, since when it has been known as the Geographic Text. Benedetto refers to it as *F*. Although that letter also includes all French MSS (twenty in number) in this group, fr. 1116
is its only complete representative. We know little of its history, except that it is supposed to have come from the old library of the French kings at Blois. It is round this MS that scholastic controversy has chiefly centred, and since the appearance of Yule's *magnum opus* we have been perfectly content to accept the view that in fr. 1116 we have a direct representation of what Marco Polo dictated to his fellow-prisoner in Genoa.

In the light of Benedetto's new evidence we find that we have to reconsider the whole question. In the end shall we see all our pet theories destroyed, with little hope of settling points concerning the early history of the book until various new lines of research have been exhausted to their utmost.

At first sight this may seem a hopeless position, but one thing is certain, and that is that we can never hope to clear up the history of any important work until we know what data we have to work on, and are satisfied that such data are arranged in their correct order, each separate item in its proper place. This, then, is the achievement of Benedetto. He has brought order into chaos. We are now in a position to ascertain what the MS tradition can teach us, and once we are on the right path there is no telling what headway may be made in the future.

Our discussion opens in the prison at Genoa, where Polo's fellow-prisoner, a Pisan, is called in to help in the writing of the narrative. The name of this man is shown definitively to be Rustichello, instead of such forms as Rustician or Rusticiano. It was natural to suppose that he had been chosen by the Genoese authorities because of his reputation as a writer of French Arthurian legends. Scholars have, therefore, been at pains to compare the style of fr. 1116 with that of his other works. They have considered (Yule especially) that the language of fr. 1116 is much more crude, inaccurate, and Italianized than that of Rustichello's other romances. This supported the theory of Polo's dictation, which, it was said, clearly betrayed itself in the halting style of the narrative.

Benedetto, however, after comparing numerous passages of fr. 1116 with portions of Rustichello's other works, has found practically identical phrases and idioms, some of which clearly betray the same hand. From this he argues that the same care and diligence that produced the romances also produced fr. 1116—in other words, that Rustichello did not copy down at Polo's dictation, but produced fr. 1116 (or rather a version of

---

1 It should be noted that Yule fully realized that the form *Rustichello* was the correct one (see his Introduction, p. 65). He only used *Rusticiano* as being the nearest to the form given in his text. Certain reviewers have credited Benedetto with the sole discovery of this.
which that manuscript is a descendant) after a prolonged and detailed study of all the notes with which Polo supplied him. Polo was no trained writer, and, moreover, would not trust himself to present his story in a style acceptable to Western ears after his prolonged absence in the East. Here was a professional story-teller ready to hand! What more natural than to allow him to “write up” the work, after supplying him with all the necessary information! As Benedetto puts it:

“Compito espresso di Rustichello dev’ essere stato quello di stendere in una lingua letteraria accettabile quelle note che Marco, vissuto così a lungo in oriente, non si sentiva di formulare con esattezza in nessuna parlata occidentale. Abbiamo intravisto abbastanza com’ egli, assolvendo un tal compito, sia rimasto fedele allo stile ed alla visuale dei romanzi d’avventura. Ma non possiamo dire nulla di più.”

Thus the style of fr. 1116, with all its “story-teller” mannerisms, does not necessarily betray dictation, but rather the usual style of a professional romance writer, who saw in Marco Polo a King Arthur come to life! Moreover, as regards the Italian words, we find quite a large percentage of them in fr. 1463, a MS which we know was not dictated. I may note in passing that Ramusio, in the Introduction to his version (to be discussed later), neither states that Polo dictated his work, nor that a Pisan had anything to do with it. He says that Polo was “assisted by a Genoese gentleman” who “used to spend many hours daily in prison with him,” and helped him to write the book. It has always been taken for granted that facts had become muddled, and it was Rustichello the Pisan to whom reference was made. Now Benedetto argues (pp. xxxi et seq.) with considerable skill that fr. 1116 must represent only a later copy of the original Polo-Rustichello compilation. Might it not be possible that Ramusio, so correct and reliable in other points, is also correct here—and that one of the numerous Genoese, who without the slightest doubt did visit Polo, became very friendly with him, and helped in the editing of the work, in addition to Rustichello? 2

However this may be, the fact remains that we must no longer regard F as the one and only direct and immediate descendant of the original Genoese text. Nor must we imagine that all subsequent recensions can be traced back to F. As will be seen later, they originate in lost prototypes dependent on lost MSS which we must regard as brothers of F. The Cottonian Codex Otho D. 5 at the British Museum, fragmentary though it be, is of importance in proving that the Franco-Italian recension was diffused, as well as all those MSS dependent on purer French texts.

1 This suggestion was made to me by the Rev. A. C. Moule.

A detailed study of this version has led Benedetto to believe in the existence of a lost version, $F^1$, very akin to $F$, but containing just those differences necessary to the production of an elaborated version (the lost $FG$) from which the Grégoire group is descended. In order to prove that $FG$ is not a revision of $F$, as hitherto believed, it is necessary to determine the exact status of $F^1$ and to reconstruct it as far as possible.

This can be done chiefly by comparing the existing types of $FG$ with $F$. This will show that $F$ does not possess all the points necessary to produce $FG$—some of the lacunae should be different, and certain passages should be much more detailed. Thus the $FG$ group must come from a MS similar to $F$, but certainly not $F$ itself. This lost MS is Benedetto’s $F^3$. $F$ and $F^1$ can, therefore, be regarded as brother MSS.

We now examine $FG$ as a separate group. Yule only knew of five MSS, while Benedetto has been able to add another ten. He divides $FG$ into four sub-groups, A, B, C, and D. These again are subdivided into single MSS which are closely connected. Thus $B$ has seven subgroups, of which $B^1$ and $B^3$ are closely related. So also $B^4$ and $B^9$. $B^3$ differs slightly from these two latter, while $B^6$ and $B^7$ form a more collateral branch. By arranging the MSS in this way a genealogical table can gradually be built up.

I might note in passing that Pauthier’s “A” type, which formed the basis of his, and Yule’s, translation, consisted of $A^1$; his “B” type of $A^8$; and his “C” of $B^4$. $B^8$ and $B^4$ (to which now must be added $B^9$) are especially interesting, as they bear the curious certificate of one Thibault de Cepoy, on which Pauthier placed such great importance. It appears that Thibault was a captain in the service of Philip the Fair. After beginning as valet and squire, he rose to the rank of Grand-Master of the Cross-bow men. He then entered the service of Charles de Valois, Philip’s brother, who sent him to Constantinople to substantiate his claim to the throne on the grounds that his wife, Catherine de Courtenay, was the daughter of Philip de Courtenay, titular Emperor of Constantinople. Thibault left Paris on September 9th, 1306, and proceeded to Venice, where he concluded a treaty of alliance in December, 1306. During his stay there he met Marco Polo, who in August, 1307, presented him with a copy of his book, inscribed as “the first copy of his said Book after he had made the same.” After Thibault’s death, his son Jean made a copy of the book, which he gave to Charles de Valois. He also made other copies for those of his friends who asked for them.
The three MSS mentioned above thus describe in the Note attached to them Polo’s gift to Thibault, and how copies of it came to be distributed in France.

The great importance that Pauthier attached to these MSS on account of the Note has long since been proved quite unjustifiable. Although Yule realized this, he still made Pauthier’s MSS the basis of his own translation.

Benedetto has entirely discredited the Note and will not even allow Thibault to give his name to the group at all. He points out that it is impossible to believe that no copy of Polo’s work should have been made until 1307. Certainly it is, but where is the evidence to prove it was made in 1307? Perhaps it had been written in 1299, and Polo had kept a copy by him for any important presentation such as this. Or, on the other hand, there may be something in Langlois’ suggestion when he says: “Mais, avant 1307, Ser Marco avait dû faire à bien des gens semblable politesse, peut-être avec des protestations analogues qu’il la faisait pour la première fois….”

Benedetto credits Grégoire with being the founder of this group because his name appears on two of the MSS (A$^1$ and A$^3$), while the date of the work is given as 1308 on the grounds that “this present year 1308” appears on another of the MSS (D). I cannot feel convinced, however, that Benedetto has proved his point in preference to accepting the original Thibault copy as the earliest extant MS of the group.

As I have already mentioned, FG is subdivided into four main groups. Among these, A$^2$ is the beautiful MS fr. 2810 at the Bib. Nat. containing 266 miniatures, of which 84 belong to the travels of Marco Polo, occupying the first 96 folios of the MS.

3. The Tuscan Recension.

At the commencement of the fourteenth century a Franco-Italian version of the original Genoese prototype was translated into Tuscan. It must have been very similar both to F and F$^1$, and can therefore be called F$^2$.

We possess five copies, which Benedetto has called TA$^1$-5. Of these TA$^1$ is the famous MS II. iv. 88 of the Bib. Naz. at Florence, better known as the Codex della Crusca.

The other copies are at the Bib. Naz. Florence (TA$^2$, $^5$); the Bib. Nat. Paris (TA$^3$); and the Bib. Laurenziana (TA$^4$).

1 Histoire Littéraire de la France, Tome xxxv, Paris, 1921, p. 255.
The Tuscan group contains two other versions which must be mentioned. The first is a Latin one (Bib. Nat. lat. 3195) in which the Tuscan translation is corrupted by Pipino’s version (to be mentioned later).

It was this text which formed the basis of H. Murray’s English translation in 1844. It was published in 1824 by the French Geographical Society in the same volume as fr. 1116.

The second is a free résumé of TA found in the Zibaldone attributed to Antonio Pucci (d. 1388), the Florentine poet.

Owing to the differences found in the sub-groups of TA, it is necessary to utilize them all in attempting to restore the prototype of TA. Although TA1 is the oldest codex, it is incomplete (as also TA2) and less close to F than the others.

When we have restored TA as best we can with the help of all the sub-groups, we find that we have a complete text save for the omission of certain historic-military chapters and some minor details. It is of assistance in revising certain corruptions in F, as some of the lacunae in fr. 1116 could not have existed in F2 from which TA is descended.

4. The Venetian Recension.

This group is of the utmost importance, and contains over eighty MSS. In order to fully appreciate the extensive ramifications of its sub- and sub-sub-groups, it is necessary to study the genealogical table given by Benedetto on p. cxxxii.

It is, moreover, of particular interest to us, as it contains the Spanish version of Suntella, the English translation of which is reprinted in the present volume. A glance at the table referred to above shows that the primitive Venetian codex is represented by five MSS (VA1-5). Although VA3 and VA4 are the only complete ones, VA1 is by far the most important, as it consists of the Casanatense fragment (Bib. Cas. 3999), which is a direct descendant from the prototype which served as the source of Fra Pipino’s famous version. The great fame that this version achieved from its first appearance, and the eulogic manner in which Pipino referred to his sources, led to the popular opinion that the Venetian version was nothing less than Polo’s original! Consequently, the Pipino texts are more widely distributed than any others. To the previously known twenty-six MSS Benedetto has added another twenty-four. These fifty must be supplemented by seven more in the vulgar tongue, besides a very large number of printed versions. Nearly all the important European libraries possess one or more Pipino MSS. There are several copies in the British Museum, while others will be found at Oxford, Cambridge, Glasgow, and Dublin.
INTRODUCTION

Of particular interest is the MS which once belonged to Baron Walckenaer. Benedetto describes it correctly as being in a volume containing other matter, including a version of the Mirabilia of Jordan de Sévérac. He regrets that its present locality is unknown, and conjectures that it has probably found its way to America. Both Yule and Cordier had previously made similar statements as regards the MS itself; yet only last year my friend, the Rev. A. C. Moule, “discovered” it properly catalogued and indexed at the British Museum!1

When scholars and bibliographers2 can pass over such fully recorded MSS, we can the more easily imagine that many unknown Polian treasures may still lie in European libraries wrongly catalogued, or not catalogued at all.

The fame of Pipino’s version is well attested to by the numerous translations of it which exist—in French, Irish, Bohemian, Portuguese, and German. The French translation exists in two MSS, one at the British Museum (Egerton, 2176), and the other in the Royal Library at Stockholm. The Irish version is that in the famous “Book of Lismore,” discovered in such a romantic manner3 in 1814. The Bohemian version forms part of Cod. III, E. 42, in the Prague Museum, and dates from the middle of the fifteenth century. Benedetto considers, however, that the MS is copied from a still older Pipino text. The Portuguese translation was printed at Lisbon in 1502 (reprinted 1522).

The first printed Latin text appeared about 1485, while a second edition (1532) was included in the famous collection of travels known as the Novus orbis regionum ac insularum veteribus incognitarum. It was edited by Simon Grynaeus, but actually compiled by Jean Huttichius. The text is corrupt, and has been considered by many to be a retranslation from the Portuguese of 1502.

There were several editions of the Novus orbis—1535, 1537, and 15554, as well as translations—German (1534), French (1556), Castilian (1601), and Dutch (1664). Apart from this, Andreas Müller reprinted the Latin

1 Journal of the Royal Asiatic Society, April, 1918, pp. 406 et seq. The MS is numbered Add. 19513.
2 Even when Cordier printed the entire Table of Contents of Walckenaer’s volume in Les Merveilles de l’Asie, 1925, p. 44, he gave no indication that here was the long-lost Polo text.
3 See Yule, Vol. 1, pp. 102 et seq. of his Introduction.
4 Apparently the 1555 is the most complete edition. There is a fine copy of this in the Grenville Library at the British Museum (G. 7034), which contains the map that is so often missing.
in 1671 on which was based the French translation in Bergeron’s *Voyages faits principalement en Arie* (1735).

The text of Ramusio (to be more fully discussed shortly) can be regarded as based on a version of Grynaeus, so that it is fundamentally a Pipitian text.

Apart from Pipino’s version (P) and also that of an anonymous Latin writer (LB), a group of six Tuscan translations of the Venetian (TB1-8) must be added. This Tuscan group in its turn gave rise to a German translation (Tod.) and another Latin one (LA).

We now turn to a group based on a MS similar to that which gave rise to the Tuscan group. It consists of two distinct sub-groups, the first of which comprises: (a) a fifteenth century Venetian MS at Lucca (Bib. Governativa, No. 1296), and (b) a Spanish version from a Venetian codex, translated into English by John Frampton in 1579.

The second is also of importance as it consists of a mass of MSS and printed texts based on the early Venetian edition of 1496.

The Lucca MS is a paper codex of seventy-five pages, containing a brief epitome of Odoric besides the text of Polo. On the verso of the last page we are informed that it was completed on March 12th 1465 by one Daniele da Verona. The Spanish (Castilian) version of Santaella was taken from a MS of 78 folios, without pagination, which once belonged to the Biblioteca del Colegio Mayor de Santa Maria de Jesus at Seville. After the separation of the College and University in 1771 it entirely disappeared, and was given up as lost. Years later it was discovered with a number of papers in the garret of an old building belonging to the College, and is now preserved in the Biblioteca del Seminario of Seville. The manuscript is described by La Rua as a quarto volume, written in two inks, in contemporary binding, somewhat deteriorated by the action of the weather. It contains 135 chapters (as in the present translation), and was completed on Aug. 20th 1493. All Santaella’s editions are of extreme rarity, and it is hard to say for certain how many there were, or even to be sure of the date of the first edition.

As far as I can ascertain, the first edition was that described by Salvá (*Catálogo de la Biblioteca de Salvd*, Vol. ii. No. 3278), and published at Seville on May 28th 1503. There is a fine copy at the British Museum (C. 32. m. 4.) which has been fully described by Yule (Vol. ii. p. 566). An edition of 1502 is mentioned in some detail by Don Fernando Colon, but

---

1 Yule wrongly refers to this MS as No. 296 (Vol. ii. p. 544).
2 *Maese Rodrigo*, p. 52.
as he gives the same printers and exactly the same date for the completion of the work (May 28th) as in the 1503 edition, it would seem that an error has been made.

The work was reprinted at Toledo in 1507, and, after the author's death, at Seville in 1518 and 1520, and again at Logroño in 15291. This latter edition is also at the British Museum (G. 6788), and for all we know may be the actual copy used by Frampton. The excessive rarity of the work fully justifies such a possibility.

Turning, now, to the second sub-group, we find a large number of Venetian MSS and printed texts all based on the edition printed by Sessa in 1496. This edition was derived from a MS which, like the Lucca, began with an epitome of Odoric. Owing, however, to a large lacuna after the first folio, it has not only been sadly reduced, but the first chapters of Marco Polo itself have also suffered heavily.

Apart from these mutilations, and the fact that in places the text is abbreviated and somewhat corrupt, the early Venetian printed edition is identical with both the Lucca text and that of Santaella.

Without going further into the relationships of the various branches of the Venetian recension, we will pass on to Ramusio and the earlier connected MSS.

5. Ramusio's Version and ante-F phase.

In 1550 the first volume of a collection of travels appeared under the editorship of one Gian Battista Ramusio, an illustrious member of a noble Italian family of Rimini. In 1556, another volume (Vol. iii) was issued, while Vol. ii, containing Ramusio's account of Polo's travels, did not appear until 1559—two years after the editor's death.

Other editions of the Navigationi et Viaggi, as the collection was called, soon followed, and the "Ramusian Recension" of Marco Polo took a unique place of honour in Polian tradition.

Ramusio was a good scholar, and enjoyed a great reputation for learning and critical research. His chief pursuit was geography, and he is believed to have opened a school for its study in his own house at Venice. In fact, everything we know about him compels us to treat his work with the utmost consideration and credence, as he fully justifies his title of "the Italian Hakluyt." Bearing this in mind, we can more readily appreciate the disappointment with which Yule had to record the absence of those MSS from which Ramusio had obtained certain parts of his information. Turning to the volume itself, we find that in a letter to his friend Jerome

1 For details of all these editions see La Rua, op. cit. pp. 198–201.
Fracastoro, Ramusio speaks of his sources, clearly indicating Pipino’s text as well as another *di maravigliosa antichità*. Although Ramusio’s text was at first ignored, its great importance has been gradually established, until, with Benedetto’s discovery of $\mathcal{Z}$, it is a *sine qua non* in helping to trace the earlier stages of the history of the book. At the same time, he admits that it is a composite text—*sbocco a tradizioni già sicuramente corrotte*—and therefore cannot be used as a basic text, especially when compared with $F$. Benedetto would analyse the Ramusio text as containing: (a) Pipino as the original and principal base; (b) three other MSS, $V$, $L$, and $VB$; (c) the newly discovered MS, $\mathcal{Z}$, which corresponds to the Ghisi codex mentioned by Ramusio himself.

The history of the Milan copy of $\mathcal{Z}$, so far as it is known, is very interesting. It is taken from an old lost Latin Codex Zeladiano, copied in 1795 by the Abate Toaldo to complete his collection of Polian documents. The original of this copy must be identified with the MS *cartaceo in-8°, del sec. xv.*, mentioned by Baldelli-Boni, who says it was left by the will of Cardinal Zelada to the Biblioteca Capitolare of Toledo. A close inspection of $\mathcal{Z}$ shows it to be a Latin version of a Franco-Italian codex, distinctly better than $F$. But, as we shall see later, $\mathcal{Z}$, as represented in the Milan MS, is by no means complete.

The first three-quarters of $\mathcal{Z}$ seem like an epitome of a much fuller text, but after Chap. 147 $F$ is faithfully followed, while the additional passages point to a pre-$F$ codex, which must have been considerably more detailed than $F$. Benedetto suggests that the copyist of $\mathcal{Z}$ began with the idea of a limited selection of passages, but gradually became so interested in his work that he eventually found himself unable to sacrifice a single word.

A point of prime importance with regard to $\mathcal{Z}$ is that it clearly betrays Polo’s mode of thought, showing that, as far as it goes, it is a literal translation of an early text now lost. This is also supported by the fact that the names of peoples and places appear in $\mathcal{Z}$ in less corrupted forms than in $F$ or subsequent texts—e.g., Mogdasio, Silingi, etc.

The various indications of $\mathcal{Z}$’s antiquity to $F$ suggest a subsequent suppression of certain passages by a copyist or by the cumulative work of several copyists. A large percentage of these passages occur in Ramusio, while some are found in $\mathcal{Z}$. In those cases where $\mathcal{Z}$ only resembles an epitome, we must conclude that Ramusio had access to a text closer to the archetype of $\mathcal{Z}$ than $\mathcal{Z}$ itself. We can call this text $\mathcal{Z}^1$. We can, therefore, agree that if $\mathcal{Z}$, as represented by the Milan text (Y. 160 P.S.), can account for unique passages only in the latter part of Ramusio, it is not unreasonable to conclude that he had a complete $\mathcal{Z}$ text before him ($\mathcal{Z}^1$),
and took all the unidentified chapters in the first half of his book from it. The discovery of the archetype of both \( \mathcal{Z} \) and \( \mathcal{Z}^1 \) would doubtless help to settle the question.

We now come to \( V, L, \) and \( VB. \) They can be looked upon as coming somewhere between \( F \) and \( \mathcal{Z} \). They are of value because they occasionally contain passages neither in \( F \) nor in \( \mathcal{Z} \).

\( V \) is a curious Venetian recension (Staatsbib. Berlin, Hamilton 424) which has undeniable echoes both of a Franco-Italian and a Latin text. It contains about thirty unique passages, and was undoubtedly used by Ramusio. \( L \) is an interesting Latin compendium represented in the four following codices: Ferrara, Bib. Pubbl. 336NB 5; Venice, Mus. Corr. 2408; Wolfenbüttel, Bib. Com. Weiss. 41; and Antwerp, Mus. Plantin-Mor. 60. They are practically identical, and represent the best compendium of Marco Polo extant. Its Franco-Italian origin is proved by the survival of certain expressions which, not being understood, have been retained unaltered. It was probably used by Ramusio, though this cannot be said for certain.

Taken together, \( V \) and \( L \) must be regarded as closely related to, but distinctly a sub-group of \( \mathcal{Z}^1 \) and \( \mathcal{Z} \).

\( VB \) is a Venetian version (Donà della Rose 224 Civ. Mus. Corr.) differing from any of the Venetian recensions we have already discussed. Two copies exist: one in Rome (Bib. Vat. Barb. Lat. 536I) and the other in London (Brit. Mus. Slo. 251). \( VB \) shows signs of a Franco-Italian origin, and in two cases contains details ignored by \( F \), but preserved by \( \mathcal{Z} \). On the whole, however, this is the worst of all Pollan texts, and it is a pity that Ramusio used it at all.

To sum up, we must not blind ourselves to the undoubted defects of Ramusio. Here is a man who has selected a distinctly ragged garment \( (P) \), with the intent to make it look new by the addition of various patches \( (\mathcal{Z}, V, L, VB) \). Some of the patches are of very good material, but others are frayed and badly put on, and, moreover, not always in the best places. They do not harmonize well with the cloth to which they are sewn. In some cases they have been trimmed a little, but then again we find in other cases that our repairer has added extra pieces of his own.

Thus altogether, while the finished article contains much material, it does not approximate in any way to a complete and original garment.

In spite, however, of all this, Ramusio remains an essential source in the reconstruction of the richer text by which \( F \) was preceded. It has continually been assumed that from time to time additions were made to the original work of Polo. The researches of Benedetto clearly show that, on the contrary, as time went on, impoverishments have occurred.
Z gives occasional bits of folk-lore and details of intimate social customs; so also does the Imago Mundi of Jacopo d'Acqui (D. 526 Bib. Ambros.) called I by Benedetto. It may be that the church censored some of this material, for in the Z passages we have caught a glimpse of Marco Polo as the careful anthropologist, and how can we determine what curious and esoteric information was originally supplied to Rustichello? We do not find it hard to believe that there may well be some genuineness in the passage of Jacopo d'Acqui when he says in Polo's defence: "And because there are many great and strange things in that book, which are reckoned past all credence, he was asked by his friends on his death-bed to correct the book by removing everything that was not actual fact. To which he replied that he had not told one-half of what he really had seen."

The gradual decadence of the original text as proved in the cases of FG, TA, and VA must also have occurred in the stage anterior to F. The discovery of Z, the study of V and L, the analysis of Ramusio, and the reference of certain elements to the lost Ghisi codex all seem to point to the fact that F was preceded by more conservative and more exact copies, Z, V, and L not only help to bridge the distance from F back to the original Genoese archetype, but also prove the richness of the latter and its gradual impoverishment. They show as well, that each of the three phases (Z, V and L, F) is dependent on the same original Franco-Italian text. Thus, apart from restoring the lost passages of F, they also bear witness to its unique importance and authenticity.

Having thus briefly surveyed the five main groups into which, thanks to Benedetto's labours, we can now divide the Polian texts, it will be as well to summarize the conclusions:

1. Fr. 1116 of the Bibliothèque Nationale is the best Polo MS that has come down to us.

2. It does not represent a direct copy of the Genoese original, but is a later version, which, together with its three brother manuscripts, F1,2,3, is described from a common Franco-Italian MS of earlier date, now lost.

3. From F1,2,3 were derived respectively the lost prototypes of the Grégoire, Tuscan, and Venetian recensions (FG, TA, VA).

4. Of these VA is the largest and most important, Santaella's Castilian version being made from a MS in one of its sub-groups.

5. There was an ante-F phase, as yet only represented by Z, L, V and VB.
(6) Ramusio based his version on Pipino, with additional help from all the MSS of the ante-\textit{F} phase, as mentioned above. He also used one or more other MSS, at present undiscovered.

(7) The most complete account of Polo's travels, therefore, consists of fr. 1116 as a base, supplemented by Ramusio, together with a few unique passages from other MSS.

\textbf{§ iii. The Itineraries}

Of all the Polian problems which still remain unsolved, or at any rate not entirely solved, the most important, and at the same time the most difficult, is that of the itineraries. We may well wonder what the Elizabethan readers made of Frampton's book. They read of places and customs of which they knew nothing, and of which, in many cases, nothing more was known until after 1860!

The marvel of Polo's achievement lies not only in the fact that he was the man who first drew aside for Western eyes the curtain veiling the "mysterious East," but that so many of the places visited and localities described remained unvisited again for over 600 years.

The curtain, pulled aside for a moment to reveal a world as unknown and amazing as it appeared unreal and fantastic, was soon to fall again. The audience had been charmed and amused, but that was all. For the majority it had been but a clever story, one which in later years the admirers of Galland might have enjoyed.

There were a few, however, to whom the real value of the work was at once manifest. Foremost among these was Christopher Columbus, whose copy (Pipino's Latin version) is copiously annotated in his own hand, and now lies in the Biblioteca Colombina at Seville (see Yule, Vol. ii. p. 558).

When Frampton introduced it to England we like to think that the wish expressed in his Dedication—"that it mighte giue greete lightte to our Seamen, if euer this nation chaunced to find a passagge out of the frozen Zone to the South Seas"—was not made in vain, and that Drake, Ralegh and Frobisher eagerly devoured the work of their great predecessor.

The clouds of scepticism and incredibility took a long time to disperse, but with the increasing light of subsequent discoveries the claims of the "Father of Geography" became accepted and his exaggerations explained. The identification of some of the places mentioned or visited by him still remains uncertain, while that of others has only been determined within the last few years.
In some instances, when the identification of a town is almost certain, we find that Polo's itineraries places it on the wrong side of a river or double the distance that it really is from a previously mentioned locality.

In order, therefore, to appreciate the difficulties in attempting to trace the itineraries, several points must be taken into consideration. In the first place, we must remember that we are not dealing with a single journey occupying a fixed time, but with many journeys spread over more than thirty years.

In the second place, we know that while in the service of the Khan, Polo was sent on various missions. In some cases the outward route appears to have coincided with that taken on the return, but details are sadly wanting. In other cases we suspect a slightly varying return route, necessitated, it may be, by differences of natural conditions. A fordable stream in the summer may become a raging torrent in the winter. As we shall see later, some such explanation may account for the difficulties in deciding the route at the crossing of the Hwang ho.

In the third place, we cannot always be certain that Polo is describing places on an itinerary at all. Two distinct possibilities at once suggest themselves. At times he may be speaking of places and peoples visited by the elder Polos alone, which information merely served as a supplement to that dependent on the actual itinerary being followed. Such seems to have been the case with the Turfan—Camul—Sachiu section. On the other hand, he may be quoting from local reports and the gossip of native traders. Thus we are still uncertain whether he personally visited either Karakorum or Baghdad. Unfortunately, Polo does not carry out his promise made in the Prologue that he will clearly differentiate between things actually seen, and those only heard about.

Finally, we must not forget the circumstances under which the book was written. The Polos had arrived back in Venice in 1295, and in 1298 Marco was taken to Genoa as a prisoner of war. Thus over two years had elapsed in which he must have related his travels constantly, and, we imagine, gone through his notes, continually adding and altering as his memory, or those of his father and uncle, dictated.

After Genoa had become fully acquainted with the oral relation of his travels, as Venice had done previously, we can well appreciate Marco's wish to have his notes with him if his experiences were to be put into writing. Accordingly, these precious notes were sent for. Ramusio tells us about them in his famous Preface to Vol. ii of Della Navigationi et Viaggi. It was considered by some editors that Ramusio had invented this passage himself, but we may well ask how Polo could possibly have
remembered such details as are found in his Book. In view of this, it is both interesting, and at the same time reassuring, to read the remarks of Sir Aurel Stein on the subject (Journ. Roy. Geog. Soc. Aug. 1919, Vol. LIV. p. 103):

"We have seen how accurately it reproduces information about territories difficult of access at all times, and far away from his own route. It appears to me quite impossible to believe that such exact data, learned at the very beginning of the great traveller's long wanderings, could have been reproduced by him from memory alone close on thirty years later when dictating his wonderful story to Rusticano during his captivity at Genoa. Here, anyhow, we have definite proof of the use of those 'notes and memoranda which he had brought with him,' and which, as Ramusio's 'Preface' of 1553 tells us (see Yule, Marco Polo, Vol. i, Introduction, p. 6), Messer Marco, while prisoner of war, was believed to have had sent to him by his father from Venice. How grateful must geographer and historical student alike feel for these precious materials having reached the illustrious prisoner safely!"

In returning to the Book itself, we find that the first nineteen chapters of the best MS extant (fr. 1116) form a kind of general introduction to the whole. Most editors, accordingly, have given it the name of "Prologue," and divided it into what we may call an Invocation and eighteen chapters.

Frampton, however, while also having a Prologue, does not divide it up into chapters, nor does he end it in the customary and obviously correct place. He stops short after the presentation of the Polos to the Khan. Thus the first four chapters of Frampton appear in other editions as still part of the Prologue.

The first half of the Prologue deals in the briefest possible manner with the journey of the elder Polos, performed in the years 1260-1269 while Marco was but a boy in Venice.

In the second half of the Prologue no itinerary of the outward journey is given at all. We are merely told of the double start from Acre, the enthusiastic reception by the Khan, the reluctance with which he let them depart after seventeen years' employment in his service, and their being chosen as escort of the princess Cocachin (Kükächin), bride-elect of Arghun, Khan of Persia.

As the journey overland would be too strenuous for a lady, they decided to travel by sea, and started, apparently from Zayton (? Chuan-chau), in 1292. Their route to Persia lay via Little Java (Sumatra) and the Sea of
India. Depositing their charge, they continued to Trebizond, Constantinople, and Negroponte, finally reaching Venice in 1295.

Thus the Prologue ends, and we can now begin our attempt to trace the route from Acre to K’ai-p’ing fu, as described by Polo in Chapters xx-xxxxv of fr. 1116; i.e. Book 1 of Yule, and Chs. 5-52 of Frampton.

Leaving Acre for the second time in Nov. 1271, on reaching Ayas (Frampton’s “Gloza”) once again, the Polos find the Egyptian invasion of Syria an obstacle to their taking the usual eastern caravan route (as well as to the enthusiasm of the two friars who were going to convert the East to Christianity!), and so they were forced to turn north-eastward. Thus Polo starts by giving a brief description of Lesser Herenia (the classical Cilicia), Turconomia (Anatolia), and Greater Herenia (Armenia). His route apparently was Laias, called Gloza by Frampton (the modern Ayas)—Casserie or Casaria (Kaisariya)—Savast or Sevasta (Sivas)—Arzilingal or Arzinga (Erzingan)—Argiron (Erzerum)—Arzizi or Darzizi (Ardish, near lake Van)—Toris or Tauris (Tabriz). This agrees with Yule as far as Argiron, but after that he prefers to include in the itinerary every place mentioned in the text, whereas I regard them as mere annotations to the main route. Thus from Argiron Yule makes Polo go to Mus (Mush)—Meridin (Mardin)—Mausul (Mosul)—Baudas or Baudac (Baghdad)—Bastra or Basra (Basra)—the Persian Gulf—Kisi or Chisi (Kish or Kais)—Curmosa or Ormus (Hormuz). Arzizi is left out of the itinerary altogether, while Toris and all places between it and Kirmän are taken to refer to the return of the Polos. I fail entirely in finding sufficient evidence to justify Yule in his preference.

First of all let us consult the actual passages in the best text extant (fr. 1116). Here we read: “The most noble city is Arzingal which is the See of an archbishop. Others are Argiron and Darçiçi... It is bounded on the south by a Kingdom which is called Mosul... on the north it is bounded by the Jorgiens of whom I shall tell you more later.” This corresponds practically verbatim to the texts used by Yule. In Ch. xxiv of fr. 1116 (Ch. v of Yule) the kingdom of Mosul is described briefly. We are then told that Baudas is a great city. This is all. There is not a word about Mus or Meridin in any of the French MSS. They are merely mentioned in Ramusio as producing cotton. Yet Yule considered this sufficient evidence to include them all in his itinerary, at the same time completely ignoring Arzizi which occurs in all the best texts. But quite apart from this, a traveller at Erzerum having Mosul as his objective

1 See Yule’s Map 1 in Vol. 1, p. 1 of his edition of Marco Polo.
would certainly find the Tigris his best medium of progress. He would reach it from Mush either directly by the tributary the Batman Su, or else via Bitlis and the Bitlis Su. Mardin, forty miles to the west of the Tigris, would be quite out of the line of march.

But to continue, Polo next tells us that a river flows through Baudas, and that as you descend it you pass through Basta and reach the Sea of India (Persian Gulf) at Kisi. Now surely if Polo had visited Baghdad personally and sailed through the Gulf of Hormuz he could never have placed Kisi (Kish) on the Tigris, when it is only about 165 miles from the mouth of the gulf. Furthermore, it seems very strange that he entirely omits to mention the buildings of the city, nor does he refer to the Tigris by name, or describe it at all, as he usually does when meeting with a large and important river. Finally, the five chapters devoted to the taking of Baghdad and the legend of the blind cobbler strike one as mere repetition, and in no way support the theory of a personal visit to the city. I imagine that these details were picked up by Polo on his return home, and, being fresh in his memory, found a place in the narrative when speaking of the locality in question.

So also I would account for the mention by Ramusio of the castle of Paipurth (Baiburt) between Trebizond and Tabriz, as well as the convent of St Leonard.

Turning to the alternative route which I have suggested above, if Polo did go to Tabriz from Erzerum, he would naturally skirt the northern shores of Lake Van, and mention some place near the lake. And this is exactly what he does; for Arzizi is close to the lake and in a direct line between Tabriz and Erzerum.

THE ROUTE THROUGH PERSIA AND AFGHANISTAN INTO EASTERN TURKESTAN

After Toris (Tabriz) I would give the itinerary as: Saba (Saveh)—Kashan—Yasdi (Yezd)—Bafk—Kirmän—Hormuz, where, finding the boats unseaworthy, they decided to continue their travels by land. So retracing their steps to Kirmän by a different route, they crossed Persia in a north-easterly direction. Polo describes the journey from Kirmän to Hormuz in detail, but as Yule has brought his travellers down the Persian Gulf to Hormuz he is forced to make Polo describe his itinerary backwards at this point. This is so highly improbable that unless some very good reason is given, its acceptance is quite impossible. Thus, when Sir Percy Sykes challenged the statement in 1905 (Journ. Roy. Geog. Soc. Vol. xxvi. pp. 462 et seq.), we expected an adequate explanation by Cordier,
but this was not forthcoming. Instead of answering the points at issue, he contented himself by saying that Baghdad was not off the main route for some years after its fall.

In view, therefore, of all the above facts, it would seem certain that we must entirely abandon any attempt to trace the itinerary, either on the outward or on the return route, via Baghdad and the Persian Gulf. We shall require much more convincing evidence than we have at present before we can accept the position that Yule has given it.

The itinerary from Kirmān to Hormuz has always been a puzzle, and even now it is impossible to be absolutely sure of the route. Yule has devoted a long note to it (Vol. I, pp. 110–115), so that it is unnecessary to go into any great detail here.

Polo tells us that from Kirmān you ride seven days over a plain country when you come to a great mountain, and having reached the top of the pass, you find a great descent which continues for a good two days. The intense cold experienced after leaving Kirmān is especially noted. At the end of the descent you reach a vast plain with the city of Camadi at the beginning of it. The name of the province now entered is Reobars. After crossing the plain in five days, you find another descent of twenty miles at the foot of which lies the Plain of Formosa. Two more days bring you to the sea at Curmoza, i.e. Old Hormuz, to the east of Bandar Abbas.

One of the various routes with which the above description had been thought to coincide, is that followed by Abbott and Smith running S.S.E. from Kirmān through the Deh Bakri pass and across the plain of Jirupt and Rudbar, over the pass of Nevergun to the coast; the Plain of Formosa being the plain of Harmuza between Nevergun and the present site of Old Hormuz near Mināb.

The latter part of this suggested route seems to be practically certain, but Gen. Houtum-Schindler has pointed out that the more westerly Sārdū route from Kirmān via Jupar, Bahramjird, over the Sarvistan pass, down a two-days' descent to the ruins now called Shehr-i-Daqiqānūs (Camadi), and so to the plain of Jirupt and Rudbar, fits Polo’s description much better.

This, then, is the route marked on the map opposite. On comparison with that facing page 112 of Yule’s first volume, it will be seen to lie in its northern portion, between that given by Yule himself and that followed by Smith. As we have already mentioned, on arriving at Hormuz, Polo found the ships unseaworthy and accordingly returned to Kirmān. This seems to me to be so clearly stated that with this fact added to all the previous evidence against the Persian Gulf route, I am unable to discover
The Itinerary from Kirmān to the coast and the return Journey
any evidence whatsoever in support of Yule's theory. Polo tells us that the return route to Kirmân led through some very fine plains, and that you pass natural hot springs which cure skin diseases, and that there are plenty of partridges as well as dates and bitter bread. All these details fit the Urzû-Bâft route rather than the Târum-Sirjân route, which latter was that suggested by Yule. The medicinal springs occur both at Qal'eh-i-Asghar and Dashtâb, and the bitter bread is found only at Bâft and in Bardishir.

On departing from Kirmân, the route continues through a desert for seven days to Cobinan (Kuh-Banân). As the direct line of march via Zerend is only ninety-five miles, and Polo especially speaks of waterless deserts, it has been suggested that he went via Kûhpâyeh and the desert lying to the north of Khabî. This seems to me too far east and quite unnecessary to account for the seven days' march. I suggest the route to the west of Kûhpâyeh running through desert and hilly country to Râvar. From here he would take the westerly road to Cobinan via Tara. This would give an average daily march of a little over twenty miles, which is not at all unreasonable in this sort of country.

Eight days more, also through a desert, brings Polo to the province of Tunocain (Tûn-o-Kân), but his exact itinerary at this point is not easy to determine. It has been discussed by many people, including Yule, Sykes, and Sven Hedin. Yule supposes that he travelled to Tebbes (or Tabas), while Sykes favoured the eastern route via Naibend. The evidence of Sven Hedin (Overland to India, Vol. ii., Ch. xl.; reprinted in Cordier, Ser Marco Polo, p. 27) in support of the Tabas route is so convincing that we need have no hesitation in accepting it. As will be seen from the accounts of the respective routes given at the above references, that from Kuh-Banân to Tabas agrees both with Polo's description and also with his distances. On the other hand, that from Kuh-Banân via Naibend to Tun does neither. In fact Sven Hedin quotes Sykes\(^1\) to show how his description of the stage after Duhuk disagrees with Polo. It seems probable that Polo went to Tabas via Bâhâbâd, which is not only on the route, but is the branching-off place for caravans going from Tabas to Yezd. Sven Hedin

\(^1\) It was very disappointing to find nothing of any value in a recent article by Sykes in The Nineteenth Century, May 1928, p. 682. In fact, he skips all the difficulties; he ignores Cobinan, and even gives a wrong impression of the itinerary, for after informing us that Tunocain "represents Tun and Cain," he mentions the Assassins and continues: "Upon resuming the account of their journey, we find ourselves at Balkh..." Thus, not only are the various suggestions neither stated nor discussed, but the six days' journey through fair plains and the city of Sapurgan are entirely omitted.
actually met such a caravan at Tabas which had arrived from Sebsevar (Sabzawār), north of Tun.

When Polo arrived at Tabas he was in one of the "many towns and villages" which he mentions as being in the province of "Tonocain." From Tabas he undoubtedly proceeded to Tun, probably via Bushrūch, but whether he also called at Kāin we have no means of ascertaining. After Tun our difficulties in no way decrease, because Polo interrupts his itinerary to tell us about the Arbre Sec and the Old Man of the Mountain. When he returns to it again he is no longer at Tun, but at the "Castle" of the Old Man. It is almost impossible to decide where this "Castle" was. It may have been some ruined fortress which merely served as an excuse for telling Polo a romantic story which was the common property of the East. It should be remembered that the number of "Castles" in Persia, as well as in Syria, had been steadily growing since the founder of the Assassins, Hasan Shabāh, had seized the fortress of Alamūt ("Eagle's teaching")2, near Kazvin in 1019.

I consider, therefore, that in attempting to assign to the "Castle" of Polo a definite locality such as Alamūt, Yule has deflected the itinerary much too far north. Thus he has been led to include Sebsevar (Sabzawār), Nishāpūr and Meshed in the route, giving it a most improbable right-angled turn just south of Shāhrūd and Bustām. No wonder he was surprised that none of the cities were mentioned in the narrative. Moreover, had Polo been going on to Sebsevar, etc., he would never refer to Tūn-o-Kāin as "the extremity of Persia towards the north." But what finally disposes of this suggested itinerary is the further evidence of Sven Hedin, who shows that the Sebsevar—Meshed road does not agree with Polo's description of "fine plains and beautiful valleys, and pretty hill-sides producing excellent grass pasture..." This kind of country extended for six days, and then he arrived at Sapurgan.

Now this place has been identified with the modern Shibarghān, about seventy miles west of Balk, so that six days of fine plains could not possibly be anywhere near Meshed, as they must directly link up with Sapurgan. Thus we can have no hesitation in accepting Sven Hedin's suggestion that the six days must have been passed, after crossing the nemek-sār (salt

---

5 This appears to be the correct meaning in spite of the article in Ency. Islam, p. 249. See Browne, op. cit. supl.
INTRODUCTION

To sum up, then, I would give the itinerary north from Kirmān as: Čobinān (Kuh-Banān)—Bāhābād (?)—Tabas—Tun—Kain (?)—nemek-sār—Herāt, or some other place near or in the Paropamisus range—Firuz-Kuh (Firozkohi)—Band-i-Turkistān—Maimana(?)—Sapurgān (Shābargān).

From Sapurgān Polo went to Balk (Balk), the “Baldach” of Frampton; thence to Dogana, the identification of which is still uncertain. Neither Ramusio nor Frampton mention it at all, but proceed straight to Taican or Thaychan (Tallkan) which they both give as being two days’ journey from Balk. This is obviously wrong, as the distance between these two places is at least 140 miles (Yule gives it as 170, but this is excessive).

On turning to the French texts, we find that after speaking of Balk, they say: “Now we will leave this city, and I will tell you of another called Dogana.” We are not told the distance between Balk and Dogana, nor are we given any details of the latter place, for the texts immediately continue: “When one leaves this city that I have been telling you about, one goes a good twelve days (bien xii jorno) between north-east and east... and... when one has gone this twelve days (doce jorno) one finds a fortified town (caustianus) called Taican.”

The passage contains several difficulties. In the first place, what was the city that he has been telling us about? Does he mean Balk or Dogana? If he means the latter, as being the last mentioned, it seems obvious that there is a lacuna in the texts; but if he is referring to Balk we are still unable to adjust the distances, for the journey between Balk and Tallkan would be easily accomplished in seven days.

Yule suggests that the “XII” is a mistake for “VII.” If we accept this, it follows that “this city that I have been telling you about” was Balk, not Dogana. From the passage quoted above it will be noticed that the second mention of the distance is written in full, “Doce” or “Doze,” but this need not upset Yule’s contention of the mistake in copying, for the scribe having once written “XII” a few lines above in mistake for “VII” would certainly have written it in full as “doce.”

The next point we must try and decide is the identification of Dogana. Yule is unable to make any satisfactory suggestion, and the interpretation given by Parker (see Cordier, op. cit. p. 34) with such assurance is quite unacceptable. He would connect it with the Chinese T’u-ho-lo or Tokhara. The limits of Tokharistan as given both in the Chinese annals and works of the Arabic geographers included a large part of
Badakhshan as well as Chitral, Kafiristan and Kabul. Thus it in no way fits into Polo's itinerary. Moreover, there is no evidence whatsoever to show that the name was used in Polo's day at all.

As we have already seen, Dogana must lie somewhere between Balk and Talikan, and from its method of introduction cannot possibly be a district of the size of Badakhshan, still less of the classical Tokharistan. Correspondence with Prof. Sten Konow of Oslo has entirely convinced me of this. In one of his letters he makes a most interesting suggestion after consulting Dr Morgenstierne, the well-known authority on Iranian languages. It is possible that Dogana is directly connected with the Persian dogāna, "double," because it was a "double district," embracing two main cities or two rivers. A glance at a large scale map will show that such a district exists to the west of Talikan, where the Āk Sarai branches into two main streams, on each of which is a city—Kunduz on the westerly and Khānābād on the easterly branch. It seems, therefore, that we are probably right in accepting Yule's reading of "VII" for "XII," and must look upon Dogana as being introduced en passant simply because it was the local name Polo heard applied to the Kunduz-Khānābād district as he was travelling to Talikan.

From Talikan he reaches Casem (Kishm) in three days, and the same distance again brings him to Badashan (Badakhshan). The line of march is quite clear, but we must not insist on a too definite determination of Badashan, because the district now bearing that name stretches southwards past Talikan and north-eastwards to the great bend of the Oxus at Kala Khum. It is hard to say if it extended so far west in Polo's time, but the approximate localization is identical.

After telling us of Badashan, Polo adds that the province of Pashai lies ten days to the south, and, later, that Keshmir is another seven days from Pashai. This is a digression, and really belongs to the information Polo acquired about the incursion of Nogodar into Kashmir, as mentioned by him previously in the chapter on Camadi (see Appendix I, Note 102).

As this route is of considerable interest, we too will make a digression in order to discuss some of the queries raised. Polo is talking of the Caroanas and explaining the methods of attack employed by them. Their king, he tells us, is one Nogodar, nephew of Chaghatai; and he goes on to relate how this man made an expedition through Badashan, Pashai.Dir and Ariora-Keshemur, and how that after subduing all these provinces, he entered India at the extreme point of a province named Dalivar, and seized the government from Asedin Soldan.
INTRODUCTION

Yule has given us most interesting notes on many of the difficulties in ascertaining the actual route taken by Nogodar, but the identification of some of the localities, such as Ariora, has only recently been made possible owing to the explorations and research of Sir Aurel Stein. He has dealt fully with the whole itinerary in *Journ. Roy. Geog. Soc.* Aug. 1919, pp. 92-103. It will suffice, therefore, to give here his conclusions, with a brief note on "Ariora."

Badshan is, of course, Badakhshan, the province lying to the north of the Hindukush, and which Polo describes in some detail. Pashai-Dir is a copulate name: Pashai being a tribal designation applied to an area in Kafiristan which stretches to the south-east as far as the Kunar river and the tracts lying to the west of Dir. This wider application of the term Pashai has only been known since the results of Sir George Grierson's research on the Dardic languages have been published in the *Linguistic Survey*.

It is now possible to appreciate "Keshimur" as being seven days' journey from Pashai. Dir, which, by the way, does not appear in fr. 1116, has long since been recognized at the head of the western branch of the Panjora river. The next locality is also a copulate name: Ariora-Keshe- mum, but here again I would point out that "Ariora" does not occur in fr. 1116, or in Ramusio.

Stein has now identified it with the modern Agror, the hill tract on the Hazara border which faces Buner on the east from across the left bank of the Indus. Keshemur is, of course, Kashmir.

With regard to Dalvar it would appear that Marsden's original suggestion was quite correct, and the name is a misunderstanding of "Città di Livar," for Lahawar or Lahore.

The name of the ruler, Asedim Soldan, has been definitely identified with Ghiasuddin, Sultan of Delhi (1266-1286).

The complete itinerary from Badashan would be, then, in all probability as follows: Badakshan—across the Mandaal pass—down the Kafir valley of Bashgal—Arnawai on the Kunar river—across the Zakhanna pass—Dir—down the Panjora river—Chakdarra—across the Mora-Bazdana pass in Lower Swat—Bajkatta in the Buner district—the Indus at Amb.

* Sir George tells me that since he wrote his account of Pashai our knowledge of both country and language has been greatly extended by Morgenstierne in his *Report on a Linguistic Mission to Afghanistan.*

* In his edition of *Marco Polo,* Charignon tells us that it corresponds to Haripur on the left bank of the Indus. His authority for this curious statement is entirely lacking. Incidentally, I was not aware that Haripur was on the Indus.
or Darband—over the Hazara district at about the latitude of Mânsehra—the Jhelum near Muzaffarabad.

We now return to Badakhshan whence the itinerary continues E.N.E. for twelve days to Vokhan (Wakhân), and thence another three days north-east to the plain of the Great Pâmîr. The French texts merely tell us that Polo found a fine river running through a plain, but Ramusio also mentions “a great lake.” This could be either Lake Victoria or Lake Chakmak, but is probably the former (see Stein, Innermost Asia, Vol. II. pp. 858 et seq., also Ancient Khotan, Vol. I. pp. 30 et seq., and Serindia, Vol. I. p. 65). He now describes a twelve days’ desert ride across the plain, followed by another forty days of continuous desert tracts without any green thing to relieve the dreariness and monotony. To this country he gives the name of Bolor.

It is clear, then, that the itinerary could not have passed through the cultivated valleys of Tâsh-Kurghân or Tagharma, and Sir Aurel Stein reasonably suggests (Ancient Khotan, pp. 40–42) that, after visiting either the Great or Little Pâmîr, he travelled down the Ak-su river for some distance, and then, crossing the watershed eastwards by one of the numerous passes, struck the route which leads past Muztâgh-Ata (24,000 ft.) and on towards the Gez defile. Previous suggestions of the itinerary will be found in Yule, Vol. I. pp. 173 et seq.

The route continues to Kashgar and then turns south-east past Yangi-Hissar to Yarcun (Yarkand) and Cotan (Khotân).

He mentions Samarkand en passant, but was obviously never there himself, and obtained his information from his father and uncle. From Khotân the route runs to Pein and Charchan, and thence, in five days, to Lop.

The position of Pein, the “Pimo” of Hiuen-Tsiang (Hsüan-tsang), has led to much speculation. Sir Aurel Stein would identify it with Uzuntatı, now forming part of a débris-covered area, thirty-five miles to the west of Keriya river. But Huntington (Pulse of Asia, pp. 387–8) shows that both distances and descriptions fit Keriya itself much better. (See further Charignon, Marco Polo, Vol. I. pp. 105 et seq.) From Pein the itinerary continues east through Niya to Charchan and along the Charchan river to Lop (Charkhlik); thence in a north-easterly direction past Mirân and Kum-Kuduk, along the Su-lo-ho to the Khara-Nör, thirty miles S.E. of which lies Tun-huang, or Sha-chau (Polo’s “Sachiu”) on the Tang-ho, a tributary of the Su-lo-ho.

At Tun-huang an important digression occurs, and Polo tells us of the Turfan-Hami district to the north-west. Its interest lies not only in the
fact that it presents unsolved identification difficulties, but also that in all probability it formed part of the route of the elder Polos, and joined the itinerary we are following at Tun-huang.

In the leading MSS the localities mentioned are Camul (Hami) and Ghinghintalas, to which must now be added Carachoco (Kara-Khoja) which is mentioned in the newly found Z manuscript.

As Benedetto would identify this later place with Kara-Khoja, it is necessary to show how it agrees with Kara-Khoja in every detail, and is also a means of helping us to locate Ghinghintalas. From the map opposite it will be seen that Camul (Hami) lies about 200 miles N.N.W. of Sachiu (Tun-huang). After describing Camul, Polo says: "Or laison de Camul et vos contes des autres que sunt entre tramontaine et maistre. Et sachiés que ceste provence est au grant can." He then continues: "Ghinghintalas est une provence que encor est juste le desert entre tramontaine et maistre. Elle est grant XVI jornee. Elle est au grant can." Thus it is clear that Ghinghintalas lies N.N.W. from Tun-huang past Hami.

Turning for a moment to the Z text (Benedetto, p. 46 note c) we find that in the very middle of the Camul chapter is inserted a passage which may help us in identifying Ghinghintalas.

It begins as follows: "Icoguristam quedam provincia magna est et subiacet magno can. In ea sunt civitates et castra multa sed principalior civitas Carachoco appellatur. Civitas ista sub se multos alias civitates et castra distingit." Now there is only one place that fits in with all the data, and that is Kara-Khoja, the ancient capital of Turfan, the ruins of which, dating down to Uigur times, have been proved so rich in archaeological spoil (see Stein, Innermost Asia, Vol. 1, pp. 587–609).

The Turfan territory was known in medieval times as Uighuristan, being the chief seat of the Uigur domination. Thus we have no difficulty in identifying both the "Icoguristam" and "Carachoco" of the Z passage. We have seen from the above quotation that Carachoco "subiacet magno can," and it is this statement that should help us to locate Ghinghintalas. Yule, thinking that Kara-Khoja lay to the N.W. of Turfan, instead of

---

4 Kara-Khoja is a ruined town on the Eisin-gol, 135 miles N.E. of Mao-mei, and is to be identified with Polo's "Etzina," as we shall see later. Benedetto appears to have been misled partly by the similarity of name. Seeing the statement supported by Cav. de Filippi in his review in Journ. Roy. Geog. Soc. March 1928, I challenged the identification, and a correspondence ensued. Filippi wrote to Sir Aurel Stein for his opinion, and the results were published in Journ. Roy. Geog. Soc. Sept. 1928, pp. 300–302. The identification of Carachoco with Kara-Khoja was definitely established.
to the S.E., pointed out (Vol. i. p. 214) that it would be outside the Khan’s boundary, yet Rashid-ud-din, the famous Persian historian, a contemporary of Polo, distinctly says it was a neutral town on the border-line. He also tells us that a point near Chagan-Nör (lat. 48° 10'; long. 99° 45') was also on the boundary. Now if we take this boundary-line to run in a semi-circle from Kara-Khoja to Chagan-Nör, we can surely place Ghanghitalas in the neighbourhood of Barkul.

Thus we would be “au grant can,” as the Z text tells us it is, and also N.N.W. of Hami.

After coming to this conclusion, I found that in his edition of Marco Polo, Vol. i. pp. 141 et seq., Charignon had reached the same identification, but by entirely different means—etymological grounds and evidence of Chinese tradition. Thus there would seem to be little doubt that in Ghanghitalas we must recognize the Barkul district lying to the N.N.W. of Hami, and to the N.W. of the Karlik-Tagh.

Returning to Tun-huang (Sachiu), we continue our main itinerary eastwards. Ten days’ ride E.N.E. brings the travellers to the province of Succiu whose chief city bears the same name. This is according to the reading in fr. 1116; but Yule speaks, not without considerable hesitation, of the province of Sukchur and the town of Sukchu.

Whatever reading we adopt, it is obvious that the province and town of Suhchau (Su-chow) are meant.

Polo tells that during these ten days’ journey you find practically no dwellings, and that there is nothing of interest to report. It is hard to decide for certain the exact route followed, but after leaving Tun-huang the most natural route (according to Stein’s maps of the district) would be north-east to the Su-lo-ho at An-hsi, along the line of the ancient times (the fortified border constructed by the Chinese Emperor Wu-ti in the latter half of the second century B.C., recently discovered by Stein, Serindia, Ch. xv, sec. ii–v) to a point marked Shih-erb-tun, where it would drop south-west to Suhchau. The other alternative would be nearly due east from Tun-huang. After visiting the cave temples of Thousand Buddhas to the south-east of the city, he would continue due east to the small oasis of Tung-pa-t’u, visit the cave temples on the T’a-shih river, follow the river to Shih-pao-ch’eng and reach Ch’ang-ma-pao-tzū on the So-lo-ho via its tributary the Sha-ho, whence Suhchau would be reached by a weary ride through gravel steppe and stony scrub slopes.\(^1\)

---

\(^1\) It is impossible to follow these alternative routes without reference to Maps 41 and 42 of Stein’s Chinese Turkistan and Kansu (or ditto, Innermost Asia, Vol. iv).
The ancient cities of Kara Khoja and Kara Khoto.

(Reproduced by special permission from the recent surveys of Sir Aurel Stein)
The former route seems much preferable, and if he took it we need not be surprised that he makes no mention of the *times*, because in the first place, unless it lay directly in his path, he might never have noticed it, and in the second place he even omits all mention of the Great Wall which commences at Su-hchau, or rather Chia-yu-kuan fourteen miles to the west of the city.

Proceeding in a south-easterly direction, Polo reaches Canpicion, or Campichu, the capital of Tangut. In this we have little difficulty in recognizing Kan-chau, the chief city of Kansu. Before continuing to Erguiul we have another digression—this time to Karakorun via the Etsin-gol.

As we are quite ignorant as to whether Polo visited Karakorun personally, it would be waste of time to try to ascertain his point of departure from the main route. If, however, it was Kan-chau his route would lie in a large semi-circle to the north-east along the Kan-chau river to Mao-mei, where the name changes to Etsin-gol after its confluence with the Pei-ta-ho.

Turning to the text, we find in fr. 1116 the following words as a kind of introduction to the digression:

"Et por ce nos partiron de ci et aleron seisante jornee ver tramontaine."

After twelve days’ ride you reach Echina, or Eztina, described as "chief dou desert do sabion, ver tramontaine."

As Cordier originally suggested, this town has proved to be on the Etsin-gol, and has now been identified with Kara-Khoto, the "Black Town," first visited by Col. Kozloff in 1908-9, and again by Stein in his Third Journey of Exploration (see *Innermost Asia*, Vol. I, pp. 435-506).

As has already been mentioned, it was this town that Benedetto and Filippi identified with the "Carachoco" of the *Z* text, instead of Kara-Khota. De Filippi objected to the site of Kara-Khoto for Eztina because Polo describes the latter as a pastoral and agricultural community, whereas Kara-Khoto has proved rich in cultural relics. As I pointed out in *Journ. Roy. Geog. Soc.* Sept. 1928, p. 302, de Filippi appears to forget the fate of Kara-Khoto under the ruthless hand of Chinghiz Khan in 1226. Polo knew of it only as an agricultural community, and perhaps only a small one at that (see Lattimore, *Journ. Roy. Geog. Soc.* Vol. 1 xxii. Dec. 1928, p. 510).

On the other hand, the large remains and important yields of Kara-Khoto, the old capital of Turfan, fully justify Polo’s description of it already quoted (p. xliii).

---

Another forty days north lies Caracoron, of which Polo gives us practically no description at all, but appears to introduce it merely to include a long account of the wars of Prester John and Chinghiz Khan, together with the "customs of the Tartars." It is, of course, quite possible that he may have visited it during his long service with the Khan.

After speaking briefly of the Plain of Bargu and the provinces as far north as the Ocean Sea, Polo returns once more to Kan-chau, whence five days' ride brings him to Erginul, or Erguiil, which has been identified with Liang-chau fu. Eight days more takes him to Egrigaia, a province whose capital is Calacian, or Calachan. It appears that here Polo takes the route running north-west through Alashan, instead of following the Great Wall to the south-east of Liang-chau fu; and that Ning-sia fu and Ting-yuan-ying represent Egrigaia and Calacian respectively.

The province of Tanduc, which is mentioned next, is not easy to identify. It must include the district lying in the neighbourhood of the great northern bend of the Hwang ho, while what evidence we have leads us to favour the modern Tokto as its chief city.

After riding seven days eastwards through the province, Polo comes to a city called Sindachu, or Sindaciu, which Yule and others would identify with Siuen-hwa fu (Hsüan-hua fu), the Siuen-te-chau (Hsüan-té chou) of the Chin dynasty. This may possibly be correct, but it seems curious that Polo should turn south-east towards Cambalu (Peking) when he was going north-east to the Khan's summer residence at Chandu. We must not forget that in the Prologue Polo tells us that the Khan sent people a full forty days' journey to meet them, so at this point the Polos were already accompanied, and would not have gone to the capital by mistake thinking the Khan was in residence at the time.

Yule's text continues: "Now we will quit that province and go three days' journey forward. At the end of those three days you find a city called Chagan-Nör." This Yule would place to the west of the Anguli-Nör where there are many small lakes taking their names from neighbouring towns. It will thus be seen that if we accept Siuen-hwa fu, the itinerary bends back to Chagan-Nör before continuing to Chandu. This seems most improbable.

Thus I would doubt Yule's suggested identifications. Charignon (op. cit. Vol. 1, pp. 255 et seq.) considers "Syndatu" to be the ancient Hing-Houto (Chang-pei), fifty kilometres north-west of Kalgan. He also produces evidence to show that Chagan-Nör (Ciagannor of Fr. 1176) lay some considerable way to the east of Anguli-Nör.

These identifications certainly deserve our close consideration, for apart
The Route from Chêng-ting fu (Acbaluc) to Si-ngan fu (Kenjanfu) and the crossing of the Hwang ho
from historical evidence they correspond with Polo’s distances and enable us to trace the itinerary in a north-easterly sweep via Hing-Houo and Chagan-Nör to Chandu, or K’ai-p’ing fu, twenty-six miles to the northwest of Dolon-Nör.

Having safely conducted our worthy travellers to the presence of the Khan, we will proceed to the Chinese itineraries.

Polo gives us no details either as to the nature of the missions on which he was sent during his long service with the Khan, or as to the number of such missions. We have already suggested that he may have visited Karakorum when in the Khan’s service. In his Preface, Polo speaks of continually going on missions, and when preparations were being made for the escorting of the fair Cocachin to Persia, we find he suddenly turns up from some mission to India. It will thus be seen that we must not attempt to include in the itinerary every place mentioned in the text, as the information given may have been picked up on a previous journey to be included here simply because we are somewhere in the same locality. As we shall see later, this is apparently what has happened in the case of Java.

THE MISSION TO YUNNAN AND BURMA

The first long journey given in detail is that through South-Western China to the Province of Mien, or Burma.

In attempting to trace this itinerary we shall continually be faced with such difficulties as have been enumerated at the beginning of this section of the Introduction.

Alternative routes present themselves at places, while on other occasions, unless slight errors in Polo’s distances and geographical details be allowed, we find it impossible to complete the itinerary satisfactorily. At first the route is clear. Starting at Cambaluc, on the site of which is the modern Peking, it goes ten miles to the Pulisanghin river (Hum-ho), then thirty miles to Goygu or Juju (Cho-chau). One mile further Polo reaches branch roads, the western one leading through Cathay, and the southern one through Manzi. He takes the former, and, according to Ramusio, reaches Acbaluc (Ch’eng-ting fu) in five days. In another five days he arrives at Taianfu (T’ai-yuan fu), whence he reaches Pianfu (P’ing-yang fu) in seven days more. It is after leaving this place that our troubles begin. In two days he is at the “Castle of Caichu,” which is described as being twenty miles from the Caramoran (Hwang ho) river. Two days later he is at Casiomphur, Cachanfu (P’u-chau fu), and at Bengomphu, Kenjanfu (Si-ning fu) in another eight days.
The identity of the “Castle of Caichu” is unknown. Other forms of the word appear as Caicui, Caicin, Caicin, Caytui, etc.; while Ramusio alone gives it as Thaigin or Taigin.

Yule suggests its identification with Ki-chau, a place lying about fifty miles from Ping-yang fu, but not more than eight or nine miles from the Hwang ho (although Yule describes it as “just about 20 miles” from it). He would then trace the route either down the west bank of the river, or else on the river itself, to a point opposite Pu-chau fu, and then on to Si-ngan fu. Now Polo tells us that the “castle,” or perhaps “fortress,” is two days’ ride westward of Pianfu, and that after crossing the river at a point twenty miles west of the “castle,” he reaches Cachanfu (Pu-chau fu) in two days, which place, he says, is on the west of the river. This latter statement is a mistake, as Pu-chau fu is on the east of the river. Whether it is due to a lapse in Polo’s memory, an error in his notes, or merely a slip on the part of the copyist, seems to be immaterial.

An alternative route has been suggested by Baron von Richthofen. He points out that Caicui or Caichu may be, as Marsden originally conjectured, Kiai-chau, or Chieh-chau, near the salt marsh half way between Ping-yang fu and the fortress T’ung-kwan on the Hwang ho; and that Ramusio’s Taigin may be Tai-ching-kwan (locally pronounced Taiginkwan) close to Pu-chau fu. Thus as both forms can be separately identified, he would suggest that Polo passed one of these places on his outward, and the other on his return journey. From Ping-yang fu he would go to Kiai-chau, on to T’ung-kwan, and so to Si-ngan fu; while on his return he would re-cross the river at Tai-ching-kwan and reach Kiai-chau again via Pu-chau fu.

The sketch-map opposite clearly indicates these alternative routes. It will be seen that either might be correct, but we have to make certain concessions whichever we accept. If Polo is to be taken literally when he says that the “castle” is two days west of Pianfu, Richthofen’s theory cannot be correct. Added to this is the fact that the distance to the lake is rather too long (eighty miles) for a two-days’ march. Kiai-chau is twenty-six miles from the river, which, according to Polo, is too far, just as the distance of Ki-chau was too short. Finally, it is only one day’s march from Kiai-chau to the river, so that there seem to be a number of difficulties to overcome before we can accept this itinerary. The only objections I can see to Yule’s route is that Ki-chau is W.N.W. of Ping-yang fu, and is too near the river. The only other suggestion I can offer is that Siang-ning, which is forty-three miles from Ping-yang fu and eighteen from the river, is the “castle.” In either case I think Polo must
The itinerary from Yunnan to Ta-tung, the return to Yunnan via Am-ichau.
have descended the river by boat if he was to reach Pu-chau fu in two
days.

After leaving Kenjanfu (Si-ning fu), the itinerary runs over difficult
country across the Tsin-ling-shan, through the Han kiang valley, across
the Ta-pa-shan, and then through the fertile regions of the province of
Sze-ch’wan to the capital, Sindafu (Ch’eng-tu fu). The only trouble here
is that Polo took forty-five days to do the journey, while recent travellers
have shown that it can be done quite easily in six or seven days.

It is possible, of course, that some of his figures are wrong, or that
certain delays occurred which he has counted in his reckoning. From
Sindafu five days’ journey brings the travellers to “Tebet,” which must
be taken as commencing at the mountainous region near Ya-chau. Pro-
ceeding in a S.S.W. direction through uninhabited country for twenty
days, Polo arrives at the town of Caidu (Kien-ch’ang, usually called
Ning-yuen fu in modern maps). Continuing now due south through the
beautiful valley of Kien-ch’ang, with the mountainous and inhospitable
country of the Lolos on his left and Menia on his right, Polo crosses the
Kin-sha kiang at its great bend due north of Yunnan fu. He now enters
the province of Yunnan (Carajan), and after five days’ journey reaches
the capital, Yachi, or Iaci (Yunnan fu).

Ten days’ travelling westwards (really W.N.W.) through the province
of Yunnan brings Polo to the town of Carajan (Ta-li fu). Five days more
to the west takes him to Cardandan, or Zardandan (the “Nocteam” of
Frampton), the land of the “Gold-teeth” people. Although its exact
locality cannot be stated with absolute certainty, it can be taken as being
a district near the present Yunnan-Burma boundary. Polo gives its capital
as Vocijan, Vochan, the “Nociam” of Frampton, in which we recognize
Yung-ch’ang, half-way between the Mekong and the Salween. In the
map of Burma issued by the Indian Survey (1918, corrected 1925) it
appears as Pao-shan-hsien. The itinerary now becomes very confusing
and it is not possible to trace it with certainty across the frontier, through
Burma, and back again to Sindafu. We must, I think, agree with Yule
in concluding that Polo never went personally further south than the city
of “Mien.” But let us see what he tells us himself in the French texts.
On leaving Yung-ch’ang (Pao-shan-hsien), there is a great descent which
lasts for two days and a half, at the end of which lies the province of Mien,
or Amien, the “Machay” of Frampton. After travelling for fifteen days
through an unfrequented and wooded country the city of Mien is reached.

As Yule has pointed out, the real capital of Burma at the time was
Pagan in lat. 21° 13’, but fifteen days of overland travel would never be
sufficient to reach so far. If, however, we take "Mien" to be Old Pagan, i.e., Tagaung on the Upper Irrawaddy in lat. 23° 28', the distances would be reasonable.

In the first place we must try and determine the locale of the "great descent." Dr. Anderson's suggestion that it is the descent into the plains near Bhamo need not detain us, nor need we consider further the route W.S.W. to Teng-yueh. After a study of altitudes and roads shown in Sheet No. 92 (3rd Provisional issue, 1926) of the "India and Adjacent Countries" series, I find it impossible to accept Yule's suggestion that the route lies direct to the Shweli valley. Yung-ch'ang is 5500 feet, and although the descent is continuous to the Salween, the altitudes in the vicinity of Pang-lung vary between 8000 and 10,000 feet.

The communication of Mr. H. A. Ottewill published by Cordier (Ser Marco Polo, p. 89) contains a much more likely suggestion: that from Yung-ch'ang Polo went south to Niuwang, gradually dropped down to the Salween, and after crossing it, proceeded to Lung-ling and so to Keng-yang. I would suggest the full itinerary here as follows: Yung-ch'ang—Takwansih—Niuwang—Hsiang-tou-shan—the Salween—Hochia Chai—Chin-an-so—Pawan Chai—Lung-ling—along the Nam Hkawn, tributary of the Shweli (Lung-chiang)—Keng-yang. After this, we are practically reduced to guesswork, but if his objective was Tagaung he would surely have followed either the land route from Keng-yang to Mong Mau or Selan—Namhkam—Sin—Mabei—Pyinlaha (just across the river)—Tagaung; or else he would have continued along the Shweli to Myitsôn and then turned N.W. to Tagaung.

This is, with but little doubt, the end of the present itinerary in its south-westerly direction. It is, however, practically impossible to say at what point we are on the return route to Sindafu (Ch'eng-tu fu). Polo speaks vaguely of Bangala (Bengal); Cangigu (? Upper Laos or Tonking); and Aniu, or Anin (? the district S.E. of Yunnan near Ami-chau, or Homi). We are now approaching Yunnan fu again, after which Polo seems to be following an itinerary once more. He mentions the province of Toloman, or Coloman (? N.E. of Yunnan fu to about Wei-ning), from which place he travels twelve days in an easterly direction through the province of Ciugi (Yule reads "Cuiju") to the city of Ciugi (Yule here reads "Fungul"). It is very doubtful which localities are meant, but if we have placed Toloman correctly, the distance and description would lead us to Sui fu in the province of Sze-ch'wan, at the point where the two chief branches of the Yangtze meet. If, however, Toloman stretched farther north, the town of Lu-chau opposite Nachi may be meant. Another
Contour map showing the crossing of the Lu-chiang or Salween River
INTRODUCTION

twelve days brings Polo to Sindafu once again, so that unless the march was exceedingly slow, the city of Kiating fu would be too close to it to be the city of Cingju. In spite of the efforts of Yule and others to trace this portion of the route, it still remains very uncertain and at present our identifications are little more than guesswork.

It should be pointed out that Frampton has avoided the whole difficulty by entirely ignoring all places between Mien and the road-bifurcation near Cho-chau, which he calls "Cinguy." (See Appendix I, Note 317, p. 219.)

After leaving Sindafu (Ch'eng-tu fu), Polo travels seventy days back to Juju (Cho-chau). Apparently this is the end of the journey, although we are not told if he went on to Cambaluc before starting on his next mission to Manzi and south-eastern China. It seems highly probable that he did so, but he writes as if the itinerary was continuous, for having arrived at Juju, he says that four days south brings him to Cacianfu. In the next chapter, however, being still in Cacianfu, he writes: "We will now set out again, and travel three days to the south when you come to another city by name Cianglu."

In studying the itineraries as described in his missions, we can definitely say that the Yunnan-Burma route ends at Cho-chau.

THE MISSION TO THE EASTERN PROVINCES

Starting at Cacianfu or Cacanfu (Ho-kien fu), the itinerary runs three days to Cianglu (Tsang-chau) and thence five days to Ciangli (Tsi-nan fu), which Yule writes Chinangli. In another five days Polo reaches Tandinfu (Yen-chau), whence three days brings him to Singiumatu (Tsi-ning-chau). All is clear so far except that the account of Yen-chau fits Tsi-nan much better. But after Singiumatu our troubles begin once again. Frampton, as well as Ramusio, speaks next of the Caramoran (Hwang ho), but the French texts make Polo go in turn to Linju, Piju, and Siju. The two latter have been fairly satisfactorily identified with Pei-chau and Su-t'sien, but "Linju" remains a mystery.

Yule, taking a hint from Murray, would identify it with Lin-ch'ing just under the 35th degree of latitude (not to be confounded with Lin-ch'ing chau on the canal, in lat. 36° 51'). I have consulted all the old maps, and no two spell it exactly alike or put it in exactly the same place. It has, moreover, entirely disappeared from modern maps, unless it has become the Liuchuan in practically the same locality, north of Sù-chau fu. But it is a very small and insignificant place neither on the Grand Canal nor on the Hwang ho. The various forms of the name
tell us nothing, being due merely to the mixing up of "n" and "u" in the MSS. We may, perhaps, gain some useful information by studying Friar Odoric’s itinerary in the same district.

He is travelling north from a city called Menzu “towards the mouth of that great river Talay (Yangtze).” Menzu has been identified with Chin-kiang, but in Polo the name remains unchanged. After eight days’ travelling from this place, Odoric arrives at a city called Lenzin, “which standeth on a river called Caramoran.” Continuing “by that river towards the east,” he comes to a city called Sunzumatu (Polo’s Singiumatu). The next place he mentions is Cambaleck (Peking). Thus we see that (1) Odoric is on the same route as Polo, only going north instead of south; (2) he is only mentioning places of importance; (3) his “Lenzin” would seem to correspond to Polo’s “Linju.”

Now if we look at another section of Odoric’s itinerary in order to ascertain his rate of travelling, we find that he goes from Cansay to Chilenfu (Hang-chau to Nan-king) in six days. Travelling from Menzu (taking it to be the modern Chin-kiang) at the same rate, eight days would bring him very near to Sū-chau fu, on the old course of the Yellow River (Hwang ho), or, if we go more east, to Han-chwang. Returning to Polo, we see that he takes three days to go from “Siju” to “Coiganju” (i.e. from Sū-tings to Hwai-ngan-chau). Taking this distance as the radius of a circle whose centre is at “Piju” (Pei-chau), we find that it will actually pass through Sū-chau fu, as well as Han-chwang. As a matter of fact, it also cuts I-chau fu, but this is right out of the itinerary. Now as the distance between “Piju” and “Linju” is the same—three days—it will be seen that as far as distances are concerned, as given both by Polo and Odoric, we are fully justified in making “Linju” the modern Sū-chau fu (34° 12', 117° 20').

We now turn to descriptions. Odoric gives none, but Polo draws attention to the fact that although the inhabitants are great traders, they are also good soldiers. He adds that the necessities of life are found in abundance, and that the vessels transport much merchandise. In a certain secret report issued by the Admiralty during the war, I find these very points mentioned: the inhabitants are great traders, the town being the entrepôt for merchandise from East Homan, South Shan-tung, and North Anhwei. At the same time they are described as having a military disposition, while Sū-chau fu has a great reputation as a recruiting centre. It lies on the great road from Peking to Nan-king, which is also the trade route for cart traffic. In Polo’s time the shipping up the Hwang ho (dried up since 1851) must have been on a very large scale.
The Grand Canal Route from Hwai-ngan-chau (Coilangiu) to Hang-chau (Kinsay)

(Based, with permission from H.M. Stationery Office, on the Province of Kiangsu, map to semi-official Admiralty publication)
INTRODUCTION

All this supports my suggestion; but if "Linju" is to be identified with Su-chau fu, the itinerary will have to go slightly north to Pei-chau before continuing south to Su-t'sien and Hwai-ngan-chau. If, however, Han-chwang were "Linju," the direction would certainly be more in accordance with the text—that is, taking it absolutely literally. But in view of the fact that it is only a large village with apparently no past history, and that it is on the canal and not on the river, I have no hesitation in accepting Su-chau fu in preference either to Han-chwang or any other place that can claim a possible agreement with the text.

After leaving Siju (Su-t'sien), Polo travels three days to Coiganju (Hwai-ngan-chau), on the east bank of the Grand Canal, opposite which, on the other side of the river, lay the small town of Caigiu. No trace of this latter place exists and we must conclude that it has been claimed by floods many centuries since. One day's march takes our traveller to Pauchin (Pao-ying-hien), whence the same distance brings him in turn to Cayu (Kao-yu-chau), Tiju (Tai-chau) and Yanju (Yang-chau). It was at Yanju that Polo was "Governor" for three years, for which see Appendix I. Note 351, p. 227. Tinju is also mentioned, being described as a great salt centre lying between Tiju and the sea. In this we should in all probability recognize the modern Hsien-nü-miao (see Ser Marco Polo, p. 94). At this point Polo leaves the itinerary to tell us of "Nanchin" (Ngan-king on the Kiang, not to be confused with the famous Nan-king near the mouth of the river), and the siege of Saianfu (Siang-yang fu), for which see Appendix I. Note 353, p. 228.

Returning to Yanju, the route runs fifteen miles to Sinju (I-ching-hien) and then on to Caiju (Kwa-chau) on the Kiang opposite the Golden Island and Chin-kiang fu, to which latter place he now proceeds. Three days more bring him to Chinginju (Chang-chau) and so to Siju (Su-chau), eighty miles west of Shang-hai.

Between Siju and Kinsay (Hang-chau) the route is uncertain. Two alternatives present themselves: he either (1) continued to follow the canal, in which case the itinerary would be: Wu-kiang—Ping-wang—Ka-shing—Shih-men-wan—Shih-men-che—Wu-li-t'ou—Hang-chau (or from Shih-men-che a shorter way would be via Ch'ang-an and Lin-ping) or else he (2) went from Ping-wang to Hu-chau, just south of the T'ai Hu, and then due south to Hang-chau via Teh-tsing, Tang-si and Wu-li-t'ou. The route across the lake is obviously not the one taken by Polo. Frampton jumps from Su-chau to Hang-chau without giving any details of the intermediate part. Fr. 1116 mentions three distinct places: "Vugiu," "Vughin," and "Ciangan," which Yule calls respectively "Vuju,"
"Vughin," and "Changan." The question to be answered is—which of the above mentioned routes do these places fit the best?

I can see no need to go as far east as Sung-kiang to look for our route as Pauthier did. Although fr. 1116 is alone in giving three distinct localities, we find that all the best MSS agree in stating that Kinsay was reached from some place or other (the names vary) three days' journey away, and that during these three days a number of towns and villages were passed through. Surely, therefore, it is useless to look for any of the three named places within a three days' area from Kinsay. Thus I fail to see how we can expect to find them in the neighbourhood of Shih-mên-che or Ch'ang-an, as Moule (T'oung Pao, July 1915, pp. 393 et seq.) rather hesitatingly suggests.

Now Hu-chau is forty-three miles, and Ka-shing sixty-three miles from Hang-chau (Kinsay). Thus either of these could be described as three days' journey away, but Ka-shing would seem preferable, being on the more direct route from Su-chau, and giving a fair average of over twenty miles a day.

Returning to Su-chau we read that Polo goes one day's journey to "Vughu." It has been suggested (Yule, ii. 184) that Wu-kiang is meant. But this is only eight and a half miles from Su-chau and has no past or present history of any importance. Any attempt at tracing the localities on etymological grounds seems hopeless. The only place of any importance that is roughly a day's journey from Su-chau (twenty-two miles) is Ping-wang, which is still a market town of 800 houses. It may once have justified Polo's description as a "great fine city." His "Vughin" is a "great and noble city" with a large trade in silk and other merchandise. This I take to be Hu-chau. His "Changan," a rich place with a good trade, I consider can be no other than Ka-shing.

The complete section, therefore, I would give as: Su-chau—Ping-wang—Ka-shing—Hang-chau.

As Moule (op. cit. p. 411) has pointed out, Hu-chau and Hang-chau were very intimately connected, and I imagine Polo to have visited the former on the occasion of one of his numerous stays at Hang-chau.

After leaving Kinsay, the itinerary runs in a general south-westerly direction to Kelinfu (Kien-ning fu), and thence to Zayton on the coast. The difficulty lies in fixing the route between Kinsay and Kelinfu, and again between Kelinfu and Zayton.

In the first section, the places named are: Tanpiju—Vuju—Ghiuju—Chanshan—Cuju. Yule would identify these with: Shao-hsing—Kinhwa—Kiu-chau—Sui-chang— Chun-chau respectively. On looking at the map, we see that Kiu-chau is right away from the itinerary, and no attempt is made to include it in the line of march in Yule's Map VI.
His arguments in support of his choice of Sui-chang and Chu-chau seem to be practically non-existent. In fact, his notes on pp. 221, 222 in no way prepare us for what we find in his map.

Another route has been suggested by Mr Phillips: Fu-yang—Tung-lu—Yeng-chau—Lan-ki—Kiu-chau. Thus Kiu-chau is given as the identification of Cuju and not of Ghinju.

So far I am inclined to favour Phillips’ choice. But to continue—in the second section, i.e. after Cuju, the itinerary runs to Kelinfu whence it goes to Unken, Fuji, and Zayton. These three latter places Yule would interpret as Min-tsing, Fu-chau, and Chüan-chau respectively. Phillips, on the other hand, gives them as Yung-chun, Chüan-chau and Chang-chau. The evidence on both sides is given by Yule in his notes (pp. 229–245). The two routes are clearly marked on the map opposite.

An unbiased survey of the total evidence, aided by the better maps of to-day, convince me that Yule’s identification of Cuju with Chu-chau has led him completely off the correct route, and that we should see Cuju in the modern Kiu-chau whence Phillips’ itinerary to Kelinfu (Kien-fu) via Kiang-shan—Chung-hu—Pu-ching is much more preferable to Yule’s most indefinite stretch of country from Chu-chau to Kelinfu.

But after Kelinfu, Yule’s Min-tsing, Fu-chau, and Chüan-chau seem better than Phillips’ Yung-chun, Chüan-chau, and Chang-chau. At the same time, however, I can see no evidence for accepting Min-tsing as the identification of “Unken.” As Yule says, the directions here are unusually clear. Polo is shown to be travelling at the rate of thirty miles a day. From Kelinfu to Fuji is three days, and “Unken” is reached after the fifteenth mile on the third day, i.e. seventy-five miles from Kelinfu and fifteen miles from Fuji. This corresponds with Yüyüan better than with Min-tsing, Phillips’ suggestion of Yung-chun, despite its similarity to “Unken” and to the fact that it is in the sugar-growing district, would entirely disagree with Polo’s clearly recorded details at this point. Moreover, Yung-chun is due south of Kelinfu, while Yüyüan is south-east as the text definitely states.

With regard to the identification of Zayton, Yule’s evidence is too strong to give up the idea of Chüan-chau being meant, although the evidence in favour of Chang-chau shows that the harbour of Amoy may be included in the term “Zayton.” This does not in any way mean that we must accept one theory alone and reject the other entirely. It appears that much shipping to Chüang-chau anchored in Amoy harbour, so that when Polo left “Zayton” with the princess and a fleet of fourteen ships, it is quite possible that either harbour may be meant.
THE MALAY ARCHIPELAGO, INDIA, AND THE HOMeward VOYAGE

After telling us of the Khan’s expedition against Chipangu (Japan), and of the 7459 islands in the “Sea of Chin” (Frampton has 7448), Polo commences his last itinerary—by sea from the port of Zayton to Venice, via the Malay Archipelago, India, Persia and Asia Minor.

Although the course is fairly satisfactorily known, there are many points which hitherto have proved of considerable difficulty to scholars.

In describing Java, it is agreed that Polo is either speaking from hearsay or else had acquired his information on some mission of which he has left us no detailed account. By this time we are used to the introduction of places lying off the main route, and merely regard them as interesting, but quite natural and explicable, interpolations.

It is not easy, however, to determine his exact course through the Straits of Malacca, nor to identify certain place-names on the Sumatran coast.

In order to solve these difficulties as far as possible, it is necessary not only to possess an intimate knowledge of the Straits, but also to be fully acquainted with the various dialects of the Archipelago.

I am, therefore, especially fortunate in obtaining the services of my friend Dr C. O. Blagden, the well-known Malay scholar, who has voluntarily offered to pilot the fleet through the Archipelago until it is safely past the Nicobars and Andamans, and well on its way to Ceylon.

The actual place-names mentioned by Polo in connection with his voyage from Zayton to the Sea of Bengal are Chamba, Java, Sondur and Condur, Locac, Pentam, Malaiur, Java the Less, with six of its “kingdoms,” viz. Perlec, Basma, Samara, Dagroian, Lambri, and Fansur, the island of Gauenispola, two islands of which one is called Ncuveran, and the island of Angamanain. In certain cases he gives the distances from point to point and also the directions, but both are clearly only approximate. Unfortunately, except in the case of Samara, he does not mention where his fleet put in. But it is probable that it did so once or twice before reaching Samara.

Chamba is Champa, roughly the southern half of what is now the coast of Annam. Java is styled by Polo the great island of Java, in contradistinction to his Java the Less, which is Sumatra, though the latter is in fact much the larger. He is, however, not the only authority who uses the name Java for both islands. It is quite certain that he did not visit Java on this journey. It would have been ridiculous for the fleet to go so far out of its way, and he himself under-estimates the distance. After coasting
along Chamba, the fleet passed Sondur and Condur, a group of small islands off the coast of French Cochinchina, of which the central and largest one is marked Condor or Condore on modern maps. It was a well-known landmark and there are no other islands of note in the neighbourhood. From thence the course lay straight to Locac and the landfall must have been made at some point on the N.E. coast of the Malay Peninsula in the region of Patani, Kelantan or Trêngganu.

The name Locac has been variously and doubtfully explained. Probably the last syllable is the Chinese word kok, or kuok, "country." The first one may be the same as the first syllable of Lo-yueh, an old Chinese name for the Peninsula, or possibly the end of the term Hsien-lo, which became the Chinese name for Siam after Northern and Southern Siam had been united. But in Polo's time the Northern Siamese of Sukhothai had only recently occupied the isthmus of the Peninsula down to Ligor or Nakhon, about 150 miles N.W. of Patani. The suggestion that Locac is a drastic contraction of Lengakasuka, the name of an old state or district in the northern part of the Peninsula, seems improbable in view of the fact that the fuller form is mentioned in the Javanese poem Nāgarakrtāgama in 1365 and has survived in local popular tradition down to modern times.

At any rate in Polo's terminology Locac is the Malay Peninsula, and the fleet sailed down its eastern coast till it came to the island of Pentam. This can only be Bentan, which lies about fifteen miles to the south of the S.E. promontory of the Peninsula. Here is the eastern entrance of the Straits of Singapore, and Polo says that he proceeded for sixty miles "between these two islands," by which he must have meant Locac and Pentam, for no others have been mentioned in this connection. The mileage is approximately correct (in English miles) as representing the distance between the two extremities (S.E. and S.W.) of the Peninsula or the two ends of the Straits. But in the welter of islands lying about the middle of this space there are numerous channels, three of which are of practical importance.

The first one divides the island of Singapore from the mainland of the Peninsula. The island has much the same shape as the Isle of Wight, but is about a third larger, and the channel dividing it from the mainland is circuitous and subject to strong tides; and though in general about a mile wide, it narrows in some places to little more than three furlongs. It has usually been supposed that this first channel was the ancient traditional course of shipping between the China Sea and the Straits of Malacca, but this erroneous notion was finally exploded by the late W. D. Barnes in the Journ. Roy. Asiatic Soc. Straits Branch (1911), No. 60.
The second channel approaches close to the southern point of Singapore Island and there passes between it and some smaller islands, through a passage formerly called New Harbour but in 1900 renamed Keppel Harbour. This is the route now used by large liners calling at Singapore, as they can go alongside their wharves in this harbour, the depth of water near the shore being sufficient for the purpose. This route was in use at least five centuries ago, as attested by Chinese records. It is, of course, the shortest way of approaching Singapore from the west.

The third channel, used by smaller vessels which do not go alongside but lie in the roadstead off the centre of the town, a few miles N.E. of the harbour, runs much further south among the islands to the south of Singapore and is much wider. It is in every way better fitted than either of the others for large sailing ships, particularly if they do not propose to call at Singapore. Polo may have used either the second or the third route, but the probabilities are in favour of the third. Nothing can be certainly inferred from his statement about the shallowness of the course taken by the fleet. His four paces (twenty feet) throughout the strait must in any case be an understatement, unless his pilot persistently hugged the shallows or unless the soundings have altered materially in the last six centuries. As for the first channel, if Polo had changed his course to the N.W. and sailed into the strait north of Singapore Island he could not have imagined that he was proceeding between the Peninsula and Bentan, seeing that he had left the latter miles away in his wake and had got behind another large island. On the other hand, if his course lay south of Singapore, it would be perfectly natural for him to take that island for a part of the coast of the Peninsula, while the islands to the south of the third channel, of which Bentan was the first he saw, might well be taken by him to constitute one single island.

The question of the route is somewhat involved with the identification of Polo's Malaiur. He does not say that he went there, but merely that after the sixty miles of Straits one had to go about thirty more in order to reach it. But no place within that space could have been the site of such a fine commercial emporium as he described. If it had been Singapore (which may have existed in his time), its site was at the mouth of the Singapore river on the S.E. edge of the island a little to the N.E. of its southern point and just where the centre of the modern town is, that is to say about halfway between the two ends of the Straits, not thirty miles beyond their western end. Malacca, on the other hand, is about a hundred miles away from the western entrance of the Straits of Singapore, and there is no evidence of its existence, let alone of its commercial
importance, in Polo's time, Malain, a Tamil corruption of the real name Malayu, is well attested as having been for more than six centuries before Polo's day the name of an East Sumatran coast district considerably to the southward, and probably lying along the lower reaches of the Jambi river. It seems likely that this was the place of which he was told; but it is about 150 miles south of the course he followed.

Leaving the Straits of Singapore the fleet proceeded up the Straits of Malacca towards the N.E. corner of Sumatra, and here Polo's information becomes somewhat clearer. His Ferlec (in Malay Périak) shows signs of Arabic pronunciation. The fact that it was already Muslim in his time agrees with tradition, which thus, for what that may be worth, helps to support Polo's statement. If the order of his other place names is geographically right, Basma must be Pasai (Achinese Pasè); but the form of the word is difficult to explain. The Portuguese Pacem does not help, for it is merely an example of the common Portuguese tendency to nasalize final vowels (e.g. Tenasserim). It almost looks as if the name of Pasai had been contaminated by Polo's informant mixing it up with such other Sumatran place names as Paséman, or the still more remote Bésémah, on the west side of the island, or else the not very distant Pasangan on its N.E. coast. Samara is for Samatra (otherwise Samudra) a place very near to Pasai; it is generally considered that this little port gave its name to the whole island. Polo stayed there for five months under stress of weather. No doubt the S.W. monsoon had set in and the fleet had to wait till it was over. He remained during that time intrenched, for protection against the idolatrous and, as he thought, cannibal natives. But we know for certain that the town, at any rate, was being islamized at this very time, for its first Muslim king died in 1297, as recorded on his tombstone.

The next place, Dagroian, is unidentified but must have been on the same line of coast. Its inhabitants are also accused of cannibalism. Lambri is well known from sources and cannot have been situated far away from Kota Raja, the capital of Achin, close to the N.W. end of Sumatra. Fansur, on the other hand, is certainly identical with Baros (or Barus), which was celebrated throughout the centuries as a port for camphor. Though Polo associates it also with the production of sago, which he says he himself saw made and ate, it is not likely that he went out of his way down the W. coast of Sumatra to Fansur; he may very well have seen the sago made, and have eaten it, at Samara or elsewhere. Polo locates the last six places together on one side of the island. Had he said "near one end," no fault could have been found with his statement.
Gavenispola is one of the small islands off the N.W. end of Sumatra, and very near to Lambri. It is also mentioned by Arab writers, and its proper name was probably Pulau Gamas (or Gamis). Next come the Nicobars, which he must have skirted (he speaks of two islands and his Ncouveran is no doubt Great Nicobar, the main southern island), and lastly the Andamans (which he calls "a very large island"). He cannot have seen them, as they lie to the north of the Nicobars and the fleet must have passed along the south of the Nicobar group. It would then have sailed due west to some southern point of Ceylon, perhaps Galle. Both Dr Blagden and Don M. de Z. Wiekremasinghe agree with me that it would be most improbable for a fleet of Polo's time to go via the north of Ceylon and through Palk Strait, as he is sometimes represented as doing.

Although Polo mentions many places on the coasts of India (Telingana, Madras, Tanjore, Tinnevelly, Cape CORMORIN, Travancore, Cananore, Bombay, Cambay, Somnath and Mekran) and Arabia (Aden, Es-Shehr, Dhour, Kalhat), as well as Socotra, Madagascar, and Zanzibar, we must, with but few exceptions, regard this as having nothing whatever to do with the homeward journey.

From Ceylon the fleet would round Cape Comorin, and follow the western coast of India and Mekran (called Besmaecian by Frampton and Kesmacoran by Yule) into the Persian Gulf at Hormuz.

We can fairly reasonably assume that Polo derived his information about the Indian coastal regions from one of his earlier missions. The legends concerning the Male and Female Islands, the Roc, etc., are, of course, mere travellers tales picked up in course of conversation.

After the Polos had delivered their charge safely in Persia, they made the final stage of their long wanderings across Armenia to Trebizond and thence by sea via Constantinople and Negroponte (Euboea) to Venice,
The most noble and famous travels of Marcus Paulus, one of the nobilitie of the state of Venice, into the East partes of the world, as Armenia, Persia, Arabia, Tartary, with many other kingdoms and Provinces.

No lesse pleasant, than profitable, as appeareth by the Table, or Contents of this Booke.

Most necessary for all sortes of Persons, and especially for Travellers.

Translated into English.

At London,
Printed by Ralph Nevvbery
Anno 1579.
To the right worshipfull Mr. Edward Dyar Esquire,

John Frampton wisheth prosperous health and felicitie.

Having lying by mee in my chamber (righte Worshipful) a translation of the great voyage &alog trauels of Paulus Venetus the Venetian, manye Merchautnes, Pilots, and Marriners, and others of dyuers degrees, much bent to Discoveries, referting to me vpon severall occasions, toke so great delight with the reading of my Booke, finding in the same such strange things, & such a world of varietie of matters, that I could not bee in quiet, for one or for an other, for the committing the same to printe in the Englishe tongue, perfwading, that it mighte give greate lighte to our Seamen, if euer this nation chaunted to find a passage out of the frozen Zone to the South Seas, and otherwise delight many home dwellers, furtherers of travellers. But finding in my selfe small abilitie for the finishing of it, in suche perfection as the excellencye of the worke, and as this learned time did require, I slayed a long time, in hope some learned man woulde have translated the worke, but finding none that would take it in hand, to satisfie so many requestes, nowetr at last I determined to sett it forth, as I could, referring the learned in tongues, delighted in eloquence, to the worke it selfe, written in Latine, Spanilsh, and Italian, and the refte that haue but the Englishe tong, that fecke onelye for substancie of matter to my playne translation, beseeching to take my trauell and good meaning in the best parte. And bethinking my selfe of some special Gentleman, a louer of knowledge, to whom I mighte dedicate the same, I founde no man, that I know in that respete more worthy of the same, than your worshippe, nor yet any man, to whom so many Schollers, so many travellers, and so manye men of valor, suppressed or hindred with povertie, or distrefed by lacke of friends in Court, are so muche bounde as to you, and therefor to you I dedicate the same, not bicause you your selfe walt the knowledge of tongues, for I know you to haue the Latine, the Italian, the French, and the Spanilhe: But bycausse of your worthinesse, and for that I haue since my selfe acquaintance founde my selfe without any grete deferte on my parte, more bound vnto you than to anye man in England, and therefore for your defert & token of a thankefull minde,
I dedicate the same to your worship, most humbly praying you to take it in good parte, and to bee patron of the same; and so wishing you continuance of vertue, with much encrease of the same, I take my leave, wishing you with many for the common wealths fake, place with authoritie, where you maye haue daylye exercise of the giftes that the Lorde hath endowed you withall in plentiful forte. From my lodging this xxvj. daye of Iannarie 1579.

Your worships to command,  

John Frampton.
Maister Rothorigo to the Reader.

An Introduction into Cosmographie.

Becaule many be desirous of the knowledge of the partes of the worlde, what names they haue, and in what places they be, and that many and somery times the holy scripture doth make mention, and alfo it is profitable for suche as doe traffique and trade to haue knowledge, I was moued to giue notice to all suche as are desirous or haue pleafure in reading.

You shal understanding, that a man turning his face to the rifting of the Sunne, that parte that is before his eyes where the Sunne doth rife, is called Orient or Eafte, and his contrarie where the Sunne seteth, is Occident or Weaft. The courfe or waye of the Sunne is called Medio die, or South, whiche is on your righte haande, his contrarie parte that is on the lefte haande is called Septentron or North.

Furthermore, you shal understanding, that if a manne stande in the Ilande of Cailes, and looke towadres the risting of the Sunne, he shal see three principal partes of the worlde, dividid by the Sea called Mediterranean, that cometh out of the greate Oceane and Weafte Sea, and runneth towadres the Eaft, and by two very great and principal riveres, the one comming from the South, called Nilus, and the other from the North, called Tanais.

Africa

You shal also understanding, that from the entring of the Ilande called Iberaltare, upon the righte haande to the riever Nilus bordering uppon Egipt, is called Africa, the Sea that is towadres vs, is called Libya, that whiche is towadres the South, is called Ethiopia, whiche is the Oceane, the Sea towadres the Weaft, is called Atlantic, and is also the greate Oceane Sea. It hath these famous Cities and Prouinces. Ouer againste Iberaltar, and the coaft of Mallaga is Mauritania, whiche we call Barbarie. It is named Barbaria, bycause the people be barbarous, not onely in language, but in manners and customes. Following towadres the Eaft is Numidia, Getulia, Tunes, a citty in Africa, the name to giuen by Asu, to all Syria, and Aegipt. On the South parte be the Ethiopians, whiche hereafter shall be spoken of.
An Introduction

Europa

Europa is called al y prouinces against Africa towards the North from the great Ocean Sea, that entrench into the streits to the riuwer Tanai, and the great lake called Meotis, where this riuwer entrench into. In this there is comprehended Portugal, Britania, Spaine, France, Almaine, Italie, Grecia, Polonia, Hungarie, or Panonia, Valachia, Asia the leff, Phrygia, Turkia, Galata, Lydia, Pamphilia, Lauria, Lyicia, Cilicia, Scythia the lower, Dacia, Goeia and Thraia.

Asia

Asia the greater is that that is beyond Europa and Africa, that is to say, on the other side of Nilus Southward, and the riuwer Tanais Northward, following the way Eastward, and is as bigge as Europa and Africa, and compassed with three Seas, Easterly or Orientall, Indico to the Southward, Scythia to the Northward, having provinces, Soria, Mesopotamia, Parthia, Armassia, Asianica, Arabia, Persia, Armenia, Medea, Hircania, Carmania, the Indias on thys side and beyond the riuwer Ganges.

Also you shall understand, that the great Sea called the Ocean, doth compass aboute the forefaid three principall partes of the world, and do doth compass all the whole world, although there be divers regions and places whereas they be, having divers names.

Moreover, you shall understand, that in whatsoever parts of the Sea that doe anfwer to any parts of the forefaid Countries, as there be many Islands inhabited with divers people, aswel as the East parts, whereas is Taprobane and Thyle, and others infinite number on their sides, aswel as on the other parts before declared, and those that be betweene them and al others, are to be understanded to pertain to one of these three partes of the world beforefaid, to whiche it may be molte properly judged to be, and lyeth nearest vnto.

Ethiopia

Moreover, you must note, that Ethiopia is a common name to manye Provinces and Countries, inhabited with blacke people called negros. And to begin with the molte Weaste partes, the firstt is Ginney, that is to fayce, from Cabo Verde or the greene Cape, and following the coast of the Sea, to the mouth of streits of the Redde Sea. Al those provinces be called ethiopians, and of these ethiopians from Ginney vnto Cafa Manfa, that is to fayce, the Kings pallace, they be of the sect of Mahomet, circumcised the moiste parte of them. And the chiefeft and moiste principall of these people be the Jolofos and Mandingos, and be moiste parte vnder the gouernement of a King called Mandimansa, for
Mansa is as much to say as Senior of Lord, and Mandy Mandinga, so by this his title he is Lord Mandinga. This King is blacke, and his abiding is in the province of Sartano four hundred leagues within the land, in a Citie compassed about with a wall called Jaga, which is riche of golde and siluer, and of all suche merchandize as is occupied in Aden and in Meca: and from thence forwarde the Ethiopians be Idolators to the cape called Buona Esperanca, and there turneth againe to the fect of Mahomet. Beyonde these provinces following vp into the land of Sartano be¢e great and highe mountaines or hillts, called mountaines of the Moone, the topps of them be always covered with Snow, & at the foot of the springeth the riuers Nilus, and this Countrie is called Ethiopia beside Egypt, and in Arabia it is called Abas, and the inhabitants Abassmos, and be Christians, and doe vse to be marked with an yron in the face: they be not baptized with fire (as some doe faye) but as we are, but they be heretikes, Iacobites, and hebevontites. They do holde on the olde lawe with the newe, and be circuimcised, and doe keepe the Sabaoth daye, and doe eate no Porke, and some of them doe take manye viues, and be also baptized, and doe faye, that their King came and descended of King Salomon, and of the Queene Saba, and this King hath continuall warres with the Moores.

There is another Ethiopia called Afratica interior, which the Arabians call Zeniam, and thet doe extende from the fayd hilles of the Moone, and of Nilus, to the borders of Barbarie. And the lying is, that among all Riuers, onelie Nilus entereth into two Seas, that is to faye, one branche into the East Sea, and another branche into the West Sea. All these Ethiopians be¢e Moores, and theyr laboure and occupation is digging of golde out of the grounde, where they doe fynde great plentie. There is also another Ethiopia called Tragodytica, and thyth dothe reache or extende from the forefayde Ethiopia, to the freyete or mouth of the redde Sea, and thef be¢e somewhat whyther, and the King and people be¢e Moores, and came out of Arabia felix, for the Arabians came ouer the freyete of the redde Sea, and gotte that Countrey of the Iacobites by force, and at this daye there is robbing and steealing among them secreety, for the King of the Iacobites is of so greate power, that the Soudan of Babilon doth giue him tribute. Arabia

That whiche vee doe call Arabia, the Arabians doe call Arab, and is called Gefyrdelaab. That whyche is betweene the redde Sea, and Sinus Persicus, is called the Island of Arabia, and thyth is called Arabia Felix, by reason of the Incense that groweth there.
There bée other two Arabias beyde thys, the one of them extenyng from the Mount Sinai, to the dead Sea, where the Children of Israel wente fortye yeares, and thys is called Arabia petrea, takyn that name of a Citie that is there. The other dothe extende betwyene Syria and Euphrates towards the Citie of Lebo, and thys they doe call Arabia desaria, which is as muche to say, as of Siria, and our Latines doe call it Arabia deserta. And wheras the vulgar people, and men for the moost part, do thinke that Antilla, or those Ilandes lately found out by commaundemente of the Catholike King Don Fernando, and Lady Isabella Queene, be in the Indias, they be deceyued therein, to call it by the name of the Indias. And for bycause that in Spayna, or newe Spayne, they do find gold, some doe not let to say it is Tharsis, and Ophir, and Sethin, from whence in the time of salomon, they brought gold to Hierusalem. And thus augmenting errours vpon errours, let not to faye, that the Prophetes when they sayde that the name of oure Lorde God should be pronounced to people that haue not hearde of it, and in places and Countreys very farre off, and parted, which is fayd to be vnderstanded by those that be called Indians, and by these Ilandes, and furthermore doe not let to fay to this day, that it is to be vnderstanded by the places mentioned in the holy Scripture and the Catholike doctors, and that this secret God hath kept hidden all this time, and by finding out these Ilandes did reseale it. I seeing how they are deceyued in their payne inuentions, and great simplicie, for zeele and good will of the truth, and to kill this canker, that it creape no more nor ingender greater errours, will give light to this error, anfwering to the saide muttering talkers, according as to cuery of them doth require.

And fyrst you shall vnderstande, that this name India, according to all Cosmographers, as well Christians as Infidels, of old time, and of later yeares, the name dothe come of a Rier named Hynde, or Hynda, that goinge towards the East, is the beginning of the Indias, whiche bée three in number, that is to say, the fyrst is called the lower or nether India, the seconde is called the middle India, and the third is called the high or upper India. The fyrst or lower India is renamed Ceyfar, and thes do extend towards the East, from the Rier India, vnto a Porte or Hauen on the Sea side, of great traffike and trade, called Cambaya. And the King of this India, and also the moost part of the people be Moares, and the rest Idolaters. The seconde or middle India is surnamed Mynbar, and dothe reache to the borders of Calchico, and this hath very faire Havens, and Portes of great traffike, where they doe lade Pepper, Ginger, and other Spices and Drugges. The Portes or Havens be called Coloull, Coulun, Hel, Fatenor Coenugar, and heere be many Christians Heretikes Neftorians, and
many Indians, although towards the North they be Idolaters. The third India, which is the high India, is surnamed Mahabar, and doth extend vnto Cauch, which is the River Gange. Here groweth plenty of Sinarmon, and Pearle. The King and people of this Country worship the Oxe. Besides these three Indias, which lye towards the rising of the Sunne, there can not be found neyther Author nor Man that hath travelled the firme land, neyther the Seas adioyning thereunto, that can say, there is any other Province or Iland named India, fauing that if any wyoulde gyue to vnderstand, that going towards the West, he wente towards the East, and that although he came vnto the terrenall Paradis, and that these Ilands shouulde lye in the grete West Occian Seas, it appeareth playnely, for that those that fayle thither, fleame their Shippe towards the Occident, and his direct wind whiche he fayleth withall, is out of the Orient or the East. So it appeareth, that they fayle not vnto the India, but that they flye and depart from the India. And thus it appeareth that he would say, that the firste name that euer it hadde, or was fettte, naming it Antilya, leeming, that by the corruption of the vulgar, naming it Ante India, as to say against India, even as Antechrist is contrary or against Christ, or Antenorth againste the North. And thus it appeareth, that it can not be named India, but to vnderstande it as an antephrase, cleane contrary, as a Negro, or a blakke Moore shoulde be named white John, or a Negresse or blacke woman, to be named a Pearle, or a Margarita, that for finding gold in the Iland named Hispaniola, it should haue the name fet Tharjia, or Ophin, or Sethin, nor beleuie it standeth in Asia as some woulde faye, although the thyng is so cleere, that it seemeth a mokerie to proue it: but reason doth the leade, that we shoulde gyue Mylke vnto Children and Infantes. Sainte Austine declareth, that the circumstance of the letter dothe illuminate the sentence. And it appeareth in the thyrde Booke of Kings, in the tenth Chapter, and the second of Paralipomenon, in the ninth Chapter, do faye, that the Servantes of Salomon, and of Diran, doe fynde they broughte from Ophin and Sethin, and Tharjia, not onely golde, but also Siluer and Timber, called Thina, and Elephantes teeth, and Peacocks, and Apes, and Precious stones, the whiche thyngs in infinite places of the very true Indians, as well in Countreys farre within the lande, as also in Countreys uppun the Sea fyde, and also in Ilandes wythout number, that bee in the Oriente or East Seas, shalbe founde, as by experience of the Merchantes trafficking into the East, conforming to the holy Scripture, and to all those that doe write, as well Catholikes, as Prophanes, is manyflet. And in the Ilande called Spaniola, there can bee found no suche Timber, nor all the other thyngs before named, fauyng.
Golde, the whiche as by this worke wyll appeare, is founde in a greate number of places of the Orientall partes. What is hée that in bringing gold from Antilla, will prove it is from Ophin, or Sethin, or Tharfs, from whence it was brought to Salomon. Fyrst hée must prove that it was neuer founde but in one place, and that at thyis daye it is not to be had, but in the same place only, from whence it was broughte to Salomon, the which is a manifest vntruth or fals. And also they that vnderstande that the fiorie of the holy scripture, and the holy prophets, when they do now name countries from whence those things be brought, and farre Ilandes of Idolatours, whereas the name of God was not heard, did not speake but of Spaniola, and of the other Wett parts, he must prove there is no other Idolatours in the woorlde but those whom he fallye calleth Indians, nor other Ilandes but the Spaniola, and the other Wett Ilandes, and thys is of a truth, all fals, for Grecia is Ilandes, Sicilia, a noble Ilande, and Malta, and Lipari, Yzcla, Serdenya, Corfica, Mallorca, Minorca, Ybisa, Canaria, England, and others infinite in the four partes of the world, before now hath bin founde. Of the whiche in the Orient or easte, is Taprobano, which is the most noble Iland in the world, and the Ile which is fayde to be fo happie and fortunate, that of neuer trée there falleth a leafe of in the whole yeare, as also by thys Booke of Marcus Paulus is to be scene in the .106. Chapter, of one Ilande that is in the Orientall seas .1500. myles, in the which there is found gold in fo great abundance, that it is fayde the Kings Pallace is couered or tyled wyth gold.

And furthermore, it is fayde, that the fame is, that in those seas be feauen thousand four hundred fortie eight Ilandes, in the whiche there is not founde one trée, but that is sweete, pleafant, and fruiteful, and of great profit, wherby we may wel concluilde, that in many other Ilandes, there is gold to be found: therefor it is not necellarie, that the holye Scriptures shoulde be so vnderfandde by Antilla, when it is fayde, they went for gold to Tharfs, & Ophyn, and Sethyn, yea and although they wyl not beleue the other truthes, they can not denye the faying of the holye Scripture in the Seconde Chapter of Genesis, where it is fayde that the firt riner that goeth out of Paradiffe is Bhylon, which doth compaffe the whole countrey of Eiulath, where golde doth growe, and that the golde of that countrey is very good and pure, nor it was not wyldefull to have three yeres from Jerufalem to Antilla, as it is for the Ilandes of the Indians, whiche is more further off, by a great deale, and with much more difficultnesse to prouyde the precious stones, and all other things they brought frō thence, and also the wayes be more dificulte and strange, by reason of contrarye windes, and manye other incumbrances. And that this
was not understood that the people a farre of are these Ilandes now founde, it appeareth by Saint Paule in the fiftieth Chapter to the Romaines, where is expounded the faying of Elay in the 52. Chapter, wher it is fayde, That thofe to whom it was not pronounced vnto, shoulde fe, and thofe that did not heare of him, shoulde vnderstande. And this, as a lyttle aboue is fayde, is vnderstanding, that from Ierusalem to the Isles of Grecia, to the sea Illyrici which is the end of Grecia, and the beginning of Italy, by Slauonia, or Dalmatia, and Venice, where before they had not hearde the name of Christ declared. And bycause the holye ghost hath interpreted thys sentence by Saint Paul, applying that prophecie with other like of his worke, there remaineth no licence for other to apply it to Antilla.

But now let vs come to the summe of this reckning, and say, that if for the golde that is founde in Antilla, wee shoulde beleue that it is Tarsis, and Ophyn, and Sethyn, by § other things that be founde in Ophyn, &c, and not in Antilla, we must beleue that it is not thofe, nor thofe it. And moreover, it appeareth that Afa and Tarsis, Ophyn, and Sethyn, be in the East, and Antilla the Spanyola in the west, in place and condition much different.

FINIS.
Here followeth a Table of the Chapters conteyneyd in this Booke.

FINIS TABVLÆ.
The Prologue.

O all Princes, Lordes, Knightes, and all other perfons that this my Booke shallo fee, heare, or reade, health, prosperitie, and pleasure. In thyse Booke I do mind to giue knowledge of strange and marvellous things of the world, and specially of the partes of Armenia, Persia, India, Tartaria, and of many other prouinces and Countreys, witche shalbe declared in this worke, as they were seene by me Marcus Paulus, of the noble Citie of Venice: and that which I faw not, I declare by report of those that were wife, diferete, and of good credite, but that which I faw, I declare as I faw it, and that which I knew by others, I declare as I heard it. And for that this whole worke shal be faithfull and true, my intente is not to write any thing, but that which is very certaine. I do giue you all to vnderstande, that fithence the birth of our Saviour and Lorde Iesus Christ, there hath bin no man, Christian, nor Heathen, that hath come to the knowledge and sight of so manye diuers, marvellous, and strange things, as I haue seene and hearde, whiche I will take in hande the laboure to write, as I did se and heare it. For me think I shoulde do a great injurie to the world, in not manifesting or declaring the truth. And for better information to them that shal reade or heare this worke, I do giue you to vnderstande, that I trauelled in the forefaid Provinces and Countreys, and did se those things that I will declare, the space of finte and twentie yeares, & caused the to be written to Master Vstacheo of Fiza, the yeare of our Lorde God 1298. He and I then being prifoners in Tranua. 1298

Aizing in Constantinople the Emperoure Baldouino, and in his time in the yeare of our Lord 1250. Nicholas my father, and Mapheo my vnkle his brother, Citizens of Venice, went to Constantinople with their Merchandises. And beeyng there a certayne tyme, wyth councell of theiyr friendes, passyd wyth suche wares and iweels as they had boughte in the Countrey of the Souldan, where they were a long time,
determining to goe forarde, and trauell a long journey, came to a Citie of the Lorde of the Tartarians, which is called Barcagan, who was Lord of a greate parte of Tartaria, Burgaria, and Asia. And this Lord Barcagan, tooke greate pleasure to see my father Nicholas and my Uncle Mapheo, and shewed them greate friendship, and they presented to hym such jewels as they broughte with them from Constantinople, who receyued them thankfully, and gave them gifts double the value, whiche they sent into dyuers partes to sell, and they remayned in his Courte the space of one yeare, in whiche tyme warres beganne betwene the fayde Barcagan and Alan, Lord of the Tartares of the East, and there was betwene them many great battayles, and muche shedding of bloud, but in the ende, the victorie fell to Alan. And bycause of these warres, my father and uncle coulde not returne the tyme they went, but determined to goe forarde to the Eastward, and so to haue returned to Constantinople, and following their way, came to a Citie in the East partes, called Bucata, whiche is within the precinct of the East Kingdome. And departing from this Citie, past the Riuere which is called Tigris, which is one of the foure that commeth out of Paradise terrenall, and goinge fourmonthene dayes journeyes through a Deserte, not findinge anye Citie or Towne, yet meetinge with manye companyes of Tartares, that went in the fields with their Cattel: beinge past thys Desert, they came to a great & noble Citie called Bocora, and the same name hadde that Province, which the Kyng of that Countrey had, and the Citie was called Barache, and this is the greatest Citie in Persia. In thys Countrey, were these two breethren thre yeares. And in this time came an Embassadoure from Manuel Lorde of the East, which went to the great Alan Lorde of the Tartares, that before was spoken of. This Alan is otherwise called the great Cane. Thys Embassadoure maruelled muche to see thes twoo Breethren beeing Chrystians, and tooke greate pleasure at them, bycause they hadde never before that tyme seene any Chrystians, and sawde to them, Friends, if you will followe or take my counsell, I will shewe you wayes or meanes whereby you shal gete greate riches and renowne. Oure Lorde the King of the Tartares, didde never see any Chrystians, and had the great desir to see of them, if you will goe with me, I will bringe you to his presence, where you shall haue greate profite and friendhippe of hym.

They hearing thys, determined to goe with hym, and trauell the space of one yeare towards the East Southeast, and after turning to the lefte hande towards the North east, and after towards the North, in fine, they came to the Citie of the great Cane, in the whyche they sawe manye straunge and marvellous things, whyche shall be declared in thys
Booke. And these two bréethren, bécyn presencted to the great cane, were receyed by him very fanourably, shewing to them greate frendshippe, demaundyng of them of the Emperoure of the Christians, of hys stat, and howe hée ruled and gouerned hys Countreys, and kepe them in peace and iustice. And when hée made anye warres, howe and after what manner hée broughte hys people into the fielde, and he demaunded of them the stat and order of other Kyngdomes and Dukedomes in Chrystendome, of theyr conditions, and afterwarde wyth greate diligence, hée enquired of them of the pope and the Cardinalles, and of theyr fayth, and of the Catholike Church, and of all other conditions of the Christians, to the which demaundes the two bréethren aunswered in order very difcretely and wisely, who hadde vnderstanding, and could speake the Tartarie language. The great cane vnderstanding theyr answeres, had great pleasure therein, and speaking to his Lords, sayng, that hée woulde sende an Embassadour to the Pope, the head Bishop of the Christians, and requestted the said two bréethren, that it woulde please them to be his Embassadours to the Pope, with one of his Lordes: they aunswered, they were readie to doe all that he woulde command them. Stright way the great cane causd to bee written Letters of belife in the Tartarian tong to the Pope, and also commandedyng by worde of mouth to hys sayd Embassadours, that they shoulde faye, and desyer hys holynesse, that it woulde please him to send him a hundred men, discrete, wise, and learned Christians in the Catholike faith, to instruct him and his Subiects, whereas then they did all worship Idols, and would gladly receyue the true faith. And also, the great cane requestted them to bring him some of the Oyle that did burne before the Sepulchre of Iefus Christ the in Jerusa-lem. This done, the great cane commanded to be brought to him a Table of gold, and wrote in it, commandyng expressly to all hys Subiects that shoulde see that his Table, that they shoulde receyue those Embassadours with all frendshippe, and to shew them honour and obedience, and to do al things that shoulde be necessarie, and to deliuer them money, and to provide them what they would demaund, as well for shipping, as also Horfes, or any other thing, in as ample maner, as if it were for his owne perfon. When the sayd Nicholas and Mapheo, and Cocoball, Embassadour to the great cane, were at a poynct to depart, taking their leaue of y great cane, they rode with their company thirtie days iourney, and at the ende of them, the sayde Cocoball fell sicke and dyed, and the two bréethren followed on theyr iourney, and in evey Towne where they came shewing the foresayd Table of gold, were very honourably receyued and enterteyned, as the perfon of the King. And continuing
their journey, they came to a town called Giaza, and from thence departed, and came to Acre in the moneth of Aprill, in the yeare of our Lord God 1272. whereas they understoode that the Pope Clement was dead, and finding there a Legate of the Popes, which was called miser thebaldo, that was there for the defence of the holy Church, at the uttermost partes of the Seas, to him they did their Embassage of the greate cane, and when miser thebaldo understoode their Embassage, he prayed them to trarrie the creation of a newe Pope, and hearing this aunswered, the two brethren departed incontinente, and went to Negro Ponte, and from thence to Venice, to see their houses, and founde the wife of Nicholas dead, and had left behinde her a sonne, whose name was Marcus, of the age of fifteen yeares, which never saw his father before, for he left hir with child of him at his departing, and this is the same Marcus that made thys Booke, as hereafter followeth. These two brethren remayned in Venice the space of two yeares, tarying the creation of a newe Pope, and seeing how long they had taryed, departed from Venice to Jerusalem, to gette some of the Oyle that burned in the Lampe before the holy Sepulchre of our Lord God, for to carrye with them to the greate cane, according as he commaunded, and carryed with them Marcus, sonne to the faide Nicholas, and after they had taken of the fayd oyle, returned to Acre, whereas the Popes Legate theobaldo was, and taking leave or licence of him to returne to the greate cane, for whome the fayde Legate gaue them Letters, seeing they would not trarrie to do their Embassage to the Pope, and fayde, as fooner as there was a new Pope created, he would doe their Embassage to the Pope, and that he should provide that which should be convenient, and so departed the two brethren, and Marcus, and travelled till they came to a Towne called Giaza. And in this time the Legate recyued Letters from Rome, that there was a new Pope created, called Gregorie of Placentia. The fayd Legate incontinent sent his messenger after these two brethren, that they should returne to Acre, certifying the, y there was a new Pope created: and they understanding this, requesteth the King of Armenia to commande to arme for the a Galley, wherein they fayled incontinente to the Pope, of whome they were well receyued, who hauyng hearde their Embassage, fraughte way gaue them two Friers, of the order of Saint Dominicke, being greate Clearkes, to go with them to the greate cane, the one of them was called Frier Nicholas of Venice, and the other Frier William of Tripolle, the whiche were well seene and exercized in disputations in the defense of the holy Catholike faith. And these two religious men with Nicholas and Mapheo, and Marcus, travelled, till they
came to a Towne called Giaza. And in this time the Soulldan of Babylon came into Armenia, and did there greate hurte, and for that caufe, fearing to passe anye further, the two Friers taryed there, and wrote to the greate cane, that they were come thyther, and the caufe wherefore they wente not forarde. The sayd Nicholas and Mapheo, and Marcus his fomme wente on theyrr iourny, and came to a Citie called Bemeniphe, where the greate cane was, but in the way they passhed in greate daunger of their bodyes, and saw many things, as shall hereafter be declared, and taryed in going betweene Giaza and Bemeniphe, a yeare and a halfe, by reason of great Riuers, rayne, and cold in those countriees: and when the greate cane hadde knowledge that Nicholas and Mapheo were returned, he sent to receyue them, more then ffortie dayes iourny, and at their comming receyued them with gret pleasure, and they knéelyng down, making gret reverence, he commanded them to arisse vp, demanding of them how they spedde in their voyage, and what they had done with the Pope, and after they had made their anfweare to al things, deliuered to him the Friers letters that remayned in Giaza, and the oyle they had taken out of the Lampe that burned before the holy Sepulchre of Iefus Chrift, whiche he receyued with gret pleasure, and put it vp, and kept it in a secrete place, with alfo the letters, and demanding of them, who Marcus was, they aunfwered, he was Nicholas fomme, of the which the greate cane was glad, and toke him into his seruice, and gaue order to place him in his Court among his Lordes and Gentlemen.
Here foloweth the discourse of many notable
and strange things, that the noble and worthy
Marcus Paulus of the Citie of Venice did
see in the East partes of the world
Howe Miser Marco Polo vsed himselfe in the Court of the Great Cane

CHAPTER I

Marco Polo learned well not onely the vsed language and conditions of those people, but also other three languages, and coulde write and reade them, and by that meanes came in great favour with the great Cane, whose pleasure was to proue what he could do, to be lent in Embassage, and made hym his Embassadour in one of his Countreys, like Monethes journey. And he perceiving the great Cane had greate pleasure to heare newes, and oftentimes would find fault with his Embassadoures and messengers, when they coulde not make discourse, and tell him newes of the Countreys and places they travelled into, he determined with himselfe to note and vnderstand in that journey all that could be spokyn, as well of the Townes, Cities, and places, as also the conditions and qualities of the people, noting it in writing, to be the more reade to make his aunflwe, if any thing should be demanded of him: and at his returne declared to the great Cane the aunflwe of the people of that Countrey to his Embassage: And withall declared vnto hym the nature of Countreys, and the conditions of the people where he had bin, and also what he had heard of other Countreys, which pleased well the great Cane, and was in great favour with him, and set great store by him, for which cause, all the noble men of his Courte had him in great estimation, calling him senior or Lorde. He was in the great Cane's Court xvij. yeares, and when anye great Embassage or businesse should be done in any of his Countreys or Provinces, he was always fente, wherefore, divers great men of the Court did enuie him, but he always kepethis order, that whatsoever he faue or heard, were it good or euill, hee always wrote it, and had it in minde to declare to the great Cane in order.
The manner and wayes that the two brethren, and
MARCUS PAULUS had for their returne to Venice

CHAPTER 3

He sayd NICHOLAS and MAPHEO, and MARCUS PAULUS, hauyng bin in y greate Caines Court of a long time, demanded licence for to returne to Venice, but he loyng and sauces them so well, would not giue them leave. And it fortuned in that time, that a Quene in India dyed, whose name was BALGONIA, and hyr Hubande was called Kyng ARGON. This Quene ordeyned in hir Teltamente, that hyr Hubande shoulde not marrie, but with one of hyr blooud and kyndered, and for that cause the sayde Kyng ARGON fente hys Embassadors with great honor and company to the Greate Cane, desiring hym to sende hym for to bec hys Wife, a Mayde of the lineage of BALGONIA his firste Wife. The names of these Embassadors were called ONLORA, APUSCA, and EDILLA. When these Embassadors arrived at the Courte, they were very well receyued by the Great Cane. And after they hadde done theryn marriage, the Greate Cane causd to bec called before him a Mayden, whiche was called COZOTINE, of the kindred of BALGONIA, the whiche was very faure, and of the age of feaenteene yeares. And as hie was come before the Great Cane, and the Embassadors, the great Cane sayde to the Embassadors, thys is the Mayden that you demaund, take hyr, and carrie hir in a good houre; and wyth thys the Embassadors were very joyful and marrie. And these Embassadors understandyng of NICHOLAS and MAPHEO, and MARCUS PAULUS, ITALIANS, which before that tyme had gone for Embassadors into the Indians, and were desirous to depart from the greate Cane, desirde hym to gyue them licence to goe, and accompanye that Lady; and the Greate Cane, although not wyth good will, but for manerly sake, and also for honour of the Ladye, and for hyr more safegarde, in paffing the Seas, bycaus they were wife and skilfull women, was content they should goe.
How they sayled to Iaua

CHAPTER 3

[Marston: Bk. i. Ch. 1. Sects. v (last 23 lines), vii. Paushier: Ch. xvm (Prol.).
Yule: Ch. xvm (Prol.). Benedetto: Ch. xix]

Auing licence of the Greate cane, the sayde Nicholas & Mapheo, and Marcus Paulus, as aforesayde, as his custome was, gaue them two Tables of golde, by the whiche he did signifie that they should passe frendlie through all his provinces and dominions, and that theyr charges shoulde be borne, and to be honourably accompanied. And besides this, the great cane sent divers Embassadours to the Pope, and to the Frenche King, and to the King of Spayne; and to many other Provinces in Christendome, and caufed to be arme and fette forth foureteene great Shippes, that every one of them had foure Maftes. To declare the reaon wherefoe he did this, it were too long, therefore I let it passe. In every Shipp he put fixe hundred men, and prouifion for two yeares. In thefe Shippes wente the sayd Embassadours, with the Lady and Nicholas, and Mapheo brethren, and Marcus Paulus aforesayd, and sayled thre Moneths continually, and then arriv’d at an Ilande called Iaua, being in the South partes, in the which they found maruellous and strange things, as hereseafter shall be declared. And departing from this Iland, sayling on the Indian Seas xvij. Moneths before they came to the place they would come to, founde (by the way) many marvellous and strange things, as hereseafter shall be declared.

How Nicholas and Mapheo, and Marco Polo returned to Venice, after they had seen and heard many marvellous things

CHAPTER 4

[Marston: Bk. i. Ch. 1. Sects. v (last 23 lines), vii. Paushier: Ch. xvm (Prol.).
Yule: Ch. xvm (Prol.). Benedetto: Ch. xix. (All continued)]

Aft their arriuall with this forefayde Lady to the Kingdome they went unto, they found that the King Argon was dead, and for that caufe, married that mayde to his sonne: and there did gouerne in the roome of the Kyng, a Lorde, whose name was Archator, for bycaufe the King was very yong. And to this Gouernour or Uiceroy, was the Em-
baffage declared, and of him the two Brethren and Marco Polo demanded licence to goe into their Countrey, whiche he granted, and withall gave them foure Tables of gold, two of them were to haue Ier-fawcons, and other Hawkes with them. The thirde was, to haue Lyons. And the fourth was, that they shoulde goe free, withoute paying any charges, and to be accompanied and entertained as to the Kings owne person. And by this commaundement, they had company and gard of two hundreth Knightes from Towne to Towne, for feare of manye Thècues ypon the wayes: and so much they travelled, that they came to Trastamara, and from thence to Constantinople, and so to Nigro Ponto, and finallie, to Venice, in the yeare of oure Lord God 1295.

This we doe declare, for that all men shal knowe, that Nicholas and Mapheo brethren, and Marco Polo, haue decyne, heard, and did knowe the maruellous things written in this Booke, the which declaring in the name of the Father, and the Sonne, and the holy Ghost, shall be declared as hereafter followeth.

Of Armenia the lesser, and of many things that there is made

CHAPTER 5

[Massens: Bk. i. Ch. ii. Pauthier: Bk. i. Ch. xxx. Yule: Bk. i. Ch. i. Benedette: Ch. xx]

First and foremost, I will beginne to declare of the Province of Armenia, noting suche commodities as there is. You shall understand, there be two Armenias, the greater, and the lesser. In the lesser, there is a King subject to the Tartar, and he doth maynteyne the Countrey in peace and justice. In this Countrey be many Cities and Townes, and greate abundance of all things. In this Countrey they take great pleasure and pastime in Hawking and Hunting, as well of wilde beasts, as of Fowles of all sortes. In that Countrey be many infirmities, by reason the ayre is yll there, and for that cause, the men of that Countrey, that were wone to be valiant and strong in armes, bee turned nowe to be vile, and giuen to ydlenesse and drunckenness. In this Province ypon the Sea side, there is a Citie called Goloza, wherevnto is greate trade of Merchandize, and all Merchante that doe traffique thither, haue their Cellers and Warehoufes in that Citie, as well Venetians, and Janouyes, and all other that doe occupy into Leuant.
Of the Torchomanos in Armenia the leffer

CHAPTER 6

Haue declared vnto you of Armenia the leffer, and now I will shewe you of Torchomania, which is a part of Armenia, in the which ther be thre maner of people, the one called Torchomanos, and thosbe clee Mahometts, and speake the Perisian language, and they liue in the Mountaynes and fieldes, whereas they may finde pasture for their Cattell, for thos people liue by y gains of their Cattell. There be very good Hortes called Torchomani, and good Moyles of great value. The other, or second maner of people be Armenians and Greekes, and thos dwell and liue togethers, and liue by occupations and trade of Merchandises. There they doe make very good and rich Carpettes, large and fayre, as you shall finde in any place. Also, they worke there, cloth of Crymson Silke, and other goodly coulours. The chiefe Citties in that Countrey be Chemo, Isree, and Sebo, whereat Saint Blase was martired. There be also many Townes, of which I make no mention, and they be subiecte to the Tartar of the East, and he fetteth gouernours there.

Of Armenia the greater, and of the Arke of noe

CHAPTER 7

Armenia the greater is a greate Prouince or Countrey. In the beginning thereof is a greate Cittie called Armenia, where they doe make excellente Bochachims or Buckrams. In this Cittie be very good Bathes naturallye. And this Countrey is subiect to the Tartar, & there is in it many Citties & Townes, and the moft noble Cittie is called Architie, which hath joynynge to it two prouinces, the one called Archeten, the other Arzive. In this Cittie is a Bishop. The people of this Countrey in y sommer time bee in the pastures & meddowes, but in y winter they can not, by reaflow of y great cold, snow, & waters, for then it is so colde, y scant the cattell and beastes can liue there, and for this caufe they do drive their
cattell into warmer places, where they have grasse plentie. In this great Armenia is *Arke of NOE on a high Mountain towards *South, which both joyn to a Province towards the East called Mayfill. And in that Province dwell Christians, which be called Jacobites, and Nestorians Heretikes, of the which hereafter shall be spoken. This Countrey towards the North doth joyn upon the Georgians, of the which shall be spoken in the next Chapter. In this part towards the Georgians there is a well, the water whereof is like oyle, and is of great abundance & quantitie, that sometimes they lade too. Ships with it. And this oyle is not good to eate, but for Lamps and Candles, and to anoint Camels, Horses, and other beastes that be called, scabbie, and have other infirmities, and for this cause it is fetched into divers places.

Of the Georgians, and of the Tower
and gate of yron

CHAPTER 8

[Narsdon: Bk. i. Ch. v. Pantheier: Bk. i. Ch. xii. Iuda: Bk. i. Ch. iv. Benedetto: Ch. xxiii]

In Georgiaria is a king called Nand Maliche, which is as much to lay as Dawnid, and is subject to the Tartar. The saying is that in the olde time, the Kings of that Province were borne with a token or signe vnder their right shoulder. In this Countrey men be faire of body, venterous & valiant in arms, and good archers, and are Christians & Greckes mingled together, & they go all with their heare like Prieetes. This is the Province *King Alexander could not passe, whiche he would haue come towards the West parts, bycause *wayes were dangerous & narrow, & compassed on *one side with *Sea, & on the other side with high Mountains, that no Horse can passe, or go for *space of four leagues, for *way is so narrow & strog, *a few me be able to keepe it against al the hostes of *world. And *Alexander perceiving *by no meannes he could passe, would likewise make prouision, that the people of that Countrey might not passe to him. And made there a greate & strong Tower, which is called the Tower and gate of yron. In this Province of the Georgians be many Cities and townes, & there they do make great plentie of cloth of gold, & of silk in great abundance, for they have greate plentie of filke. And there doe breede the goodlyest and beft Hawkes in the world. And the Countrey is plentifull of all things neede-
full. They live there by the trade of Merchandize, and by labour of the Countrey. Through all this Countrey is great Mountaynes, and the way narrow and strong, and many welles, and for this cause the Tartars can neuer haue the upper hand of them. There is a Monasterie of Monkes of the order of Saint Bernard, and hard by the Monasterie there is a water that descendeth from the Mountayne, in the which they find no filhe, but in Lent, and then they do take it in great plentie from the firste day of Lent, till Easter even. The place is called Geluchelan, and hath five hundred Miles compass, and it is from the Sea twelve dayes journey, and this water entreth into Euphrates, whyche is one of the foure principall Rivers whiche come from Paradise terrenall, and commeth out of India, and is deuided into many branches, and doth compass those hilles. From thence they bring a filhe called Gella. Now I haue declared vnto you the partes of Armenia which be towards the North, and now I wil declare vnto you of others their neybours which be towards the South and West.

Of the partes of Armenia towards the South, and of the Kingdome of Mosfull

CHAPTER 9

[Marsden: Bk. i. Ch. vi. Pauhelius: Bk. i. Ch. xxiii. Ude: Bk. i. Ch. v. Benedetto: Ch. xxiv]

Mofull is a great Kingdome, in the which dwell many generations of people called Arabies, and all be of the sect of Mahomet, although there be some Christians, called Jacobites, and Nestorians, and these haue by themselves a Patriarke, called Jacobia, and he dothe institute Bishops, Archbishops, Abbots, Priestes, and other Religious men. There is made cloth of gold, and of filke, which be called by the name of the Kingdome Mosfullus; and there is great plentie and abundance of it, and also great plentie of spices and good cheape, and of other Merchandize. In the Mountaynes of this province dwell people called Cordos, and others called Jacobinos. The rest be Moores of the sect of Mahomet, and be good men of warre, and be all rouers and robbers of Merchants.
Of Baldach, and of many goodly things that be there

CHAPTER 19

Baldach is a very great Citie, in the which is resident one that is called Calipho, which is among the Mooreys, as it were chiefe governour & head. Through the middest of the Citie runneth a great Riuere, and goeth into the Indian Sea. And there is from this Citie to the place where it entretith into the Sea, xviij, dayes journey. From this Citie to the Sea, and from the Sea to this Citie, ther dothe pafte dayly by this Riuere, in many and divers vessels, divers kinds of Merchandise, and they haue to their neybour the India, And in this Countrey is a Citie called Chiif. By this Riuere they goe to the Indian Sea. Between Baldach and Chiif vpon the Riuere is a Citie called Barfere, compassed with great Mountaynes of Palmes and Date treês perfect good. In Baldach they doe make cloth of golde of divers fortres, and cloth of filke, called cloth of Nafich, of Chrimfon, and of divers other colours and fashions. There is great plentie of fourfe footed Beastes, and of Fowles. This Citie is one of the best and the noblest in the worlde. There was in this Citie a Calipho of the Mooreys, wonderfull and maruellous rich of gold and prectious stones. And in the yeare of our Lorde God 1230. the King of the Tartars called Alan, joyned a great company, and went and sette vpon this Citie, and taxe it by force, being in the Citie one hundred thoufande Horfemen, besides infinite number of footeemen, And there he founde a great Tower full of golde, filuer, and prectious stones. And King Alan seeing this great treasure, maruellous much, and sent for the Calipho, and sayd vnto him: I do much maruell of thy avarice, that hauing so great treasure, didst not giue parte of it to mainteyne valiant men, that might defend me from thee, knowing that I was thy mortall enemie. And percesyng the Calipho knewe not how to make him an answere, payd vnto him, bycaufe thou louest this treasure so well, I will thou halte haue thy fill of it, and caused him to be shut fast in the same Tower, where he liued foure dayes, and died miserably for hunger, and from that time forwards the Mooreys would haue no more Caliphos in that Citie.
Of a Cittie called Tottis, and of other notable things

CHAPTER 11

Tottis is a greate Cittie of the Province or Countrey of Baldach, in the whiche Province there be manye Cities and Townes, but the most noblest is Tottis. The people of this Cittie bee Merchantes, and handycraftes men. There they do make cloth of golde, and of silke, very riche, and of great value. And this Cittie is sette in so good a place, that they doe bryng thyther all Merchandizes of India, and of Baldach, and of Osmafrilli, and of Cremes, and of many other Cities and Countreys, and also of the Latines. There is greate plenty of preisious stones, and for that cause the Merchants gette mucho. Thyther trade the Armenians, Jacobites, Nestorians, Persians, and these in a manner bee all Mahometts. Rounde aboute this Cittie be many fayre Gardens full of singular good frutes, although the Moores that there doe dwell be very ill people, robbers and killers.

Of a great miracle that hapned in Mosull

CHAPTER 12

In Mosull, a Cittie in the Province of Baldach was a Caliph, a great eminime of the Christians, whose studie daye and night was how he might destroy them, and to make them forake their faith in Iesus Christ, and upon this, ioyned in counsell divers times with his wife men, and in the ende one of them saide, I will tell you a way how you shal have good cause to kill, or force them to renounce their Faith. Iesus Christ saith in his Gospell, If you have so much Faith as the grayne of a Mustard seede, and faye to thyse Mountayyne passe from this place to another place, it woulde do, therefore cause to be called togither all the Christians, and commaund them by their beléce, that such a hill doe passe from that place to such a place: truly it is not possible for them to doe it, and not doing it, you may iustly faye to them, that euyther theyr Gospell dothe not faye truth,
and by that meanes they follow Iyes, or else they have not so much Fayth as a grayne of Muftarde seede. And thus as well for the one, as for the other, you maye liustly putte them to death, or else force them to forlacke theyr Fayth they holde. This councell pleaded well the calipho, and thos of hys sicth, beleuing, that nowe they hadde good occasion to per- forme their euill purpose, and incontinent he commanded all the Chrystians that were in hys Countrey, to come togeth, whiche was a great number, and they being come before hym, he caufed the to reade thos Scriptures of Iesu Christ. And after that euery one of them had earde it, he asked them if they beleued that these sayings were true, and they answered ye. Incintinent saide the calipho to them, I wil gie you fiftene dayes repit, to make either yoder hill to passe to such a place, or else to renounce youre fayth in Iesu Chritte as falle, and to turne Moors, and if you will not doe this, you shall all die. And the Chrystians hearing this cruell sentence, were fore troubled, yet on the other part they comforted themselues, with hope in the faith they had in the truth they beleued. And incontinent the Bishops, and Prelates, and Minifters that were among the Chrystians, commanded all the Chrystians, men, women, and children, to fall to continuall Prayer to oure Lorde Iesu Christ, that he would helpe and councell them howe to rule and gouerne themselues in that greate trouble and neede.

¶ And after eyght dayes were past, appeared an Angell to a holy Bishope, and commanded him that he should say vnto a Shomaker that was a Chrystian, that had but one onely eye, that he should make Prayers to God, the which for his fayth and Prayers, shoulde make that hill remoue from his place, into the place the calipho had appoynted. And incontinent the Bishope shante for that Shomaker, and with great defire prayed him to make Prayers to oure Lord God, that for his merce and pitie he would remoue that hill as the calipho and Moors had appoynted. The poore Shomaker excused himselfe, sayinge, he was a grete Sunner, and unworthy to demand that grace of God: and this excuse he made with great humilitie, like a iuft and chaft man, full of vertue and holyneffe, and a keeper of Gods commandements, deouute, and a grete almes man, according to his abilitie.

¶ You shal understand, that thys Shomaker dyed pull out his eye by this meanes: He hadde hearde manie times this sayinge in the Gospell, If thy eye offende thee pull it out, and cast it from thee. He being a simple man, thought, that fo corporally and materially the Scriptures shoulde be vnderstonded. For it chanced on a time, there came a Mayde into his Shoppe to blespeake a payre of Shoes, and to take the measure of hir foote,
put off his hope, and he withall was tempted to lye with hir, remembering himselfe, and thinking upon his time and yll intent, wont hir away, without discovering any thing of his yll thoughte and intente, and remembering the faying of the holy Gospell, being overcome with zeale, and yet not having the true knowledge, plucked out his eye. And for this shomaker being so defrayed by the Bishop, and other Christians, did graunt, and promised to praye vnto our Lord God for the sayd cause. And the time of the xv. dayes being come, that the Calipho had appoynted, he caufed to come togethre all the Christians, which came in Procession with their Croffe, into a faire playne, hard by the hill and Mountayne. And to that place came the Calipho, with suche people armed, with intention, that fireight way, if the Mountayne did not remove, to kill them all. Incontinente the Shomaker kneeleed downe vpon the earth vpon his bare knees, and very devoutely prayed to oure Lorde, lifting vp his hearte and handes to Heauen, praying to Iesu Chrift to succour and helpe them his Chritians, that they shoule not periue: and for that his faith was cleare, makynge an end of his Prayer, the power of the Almighty God Iesu did caufe the Mountayne to remove and goe from the place it floode, into the place the Calipho and his Councell hadde commanded.

And the Moores seyng thyss greate and manysfelt miracle, floode wonderfully amazed, sayeing, Great is the God of the Chritians, and the Calipho, with a greate number of the same Moores became Christned. And after this Calipho dyed, the Moores that were not Christned, would not consente that this Calipho should be buried, whereas the other Caliphoes were buried, for bycaufe that after that myracle, he lyued and dyed like a true and faithfull Chritian.

Of Persia, and of the Countreyes of the Magos, and of other good things that be in them.

CHAPTER 13

Persia is a noble Province or Countrey, although it was much more in the old time, than it is at this prefent, for it was destroyed by the Tartars. In Persia is a Citie called Sabba, from the which the faying is, the three Kings departed, that went to Iesu Chrift, that was newly borne in Bethlehem. In this citie there are Sepulchres, very faire and beautifull,
and I MARCUS PAULUS was in that Citie, and asked of the people of that Countrey what they could say or knewe of the three Kings, to the which they could say nothing, but that they were buried in those three Sepulchres. But ye other people out of the Citie three dayes journey, talked of this matter in this manner following, for which you shall understand, that three days journey from the Citie Sabba is a Towne, which is called Calaffa Tepesijten, which in our language is as much as to say the Towne of them that worship the fire for their God. And these people say, that when the three Kings departed from their province, for to go to the land of the Iewes, which was Bethlehem, to worship the great Prophet there newly borne, they carried with them the Golde, Incense, and Myrre, and when they came to Bethlehem in Judaea, found a child lately borne, and did worship him for God, and presented him the forefaide three things; and that the said child did give the a little Boxe, clofed, or shut fast, commanding them they should not open it. But they, after they had travelled a long journey, it came in their minde to see what they carried in the said Boxe, and opened it, and found nothing in it but only a stone: and they taking it in ill parte, that they fawe nothing else, did cast it into a well, and by and by descended fire from Heaven, and burnt all the Well with the stone. And the Kings seeing this, each of them took of the same fire, and carried it into their Countreys: and for this cause they do worship the fire as God. And when it chanceth in any place in that Countrey that they lacke fire, they goe to seeke it in another place where they can get of it, and so do light their Lampes. And sometimes they goe and seeke it eight or tenne dayes journey, and not finding of it, they goe oftyme to the Well aforesaid, to haue of the same fire. Of all this before written, you shall take which doth agree with the holy Gospel, in laying the three Kings went to worship our Lord Jesus, and did offer those gifts aforesaid. All that is declared besides that, be errours, and reacheth not to the truth, but augmente with lyes upon lyes, as the vulgar people without knowledge are accustomed to do.
A DISCOURSIE OF

Of eyght Kingdomes in Persia, and the commodities of them

CHAPTER 14

In the Province of Persia be eyght Kingdomes, the first is called Casfin, the second which is towards the South is Curdistan, the third Lore, the fourth Cislan, the fifth Inflanth, the sixth Iciagi, the seauenth Corehara, the eyght Tunshay. All these Kingdomes be in Persia, in the partes towards the South, fauing Tunshay. In these Kingdomes be very faire Horfes and Mowles, & courfers of great value, and Asses the greatest in the worlde, & of great price, that wil go and runne very swiftestly, and these the Merchants of India do commonly buy in the Cities of Atrifo, & of Arcanes, which do ioyne by Sea upon the India, and do seel the as Merchandise. In this Kingdome Tunshay be very cruell me, y wil kill one another. If it were not for fear of y TARTAR of the Eaf, which is their Lord and King, neyther Merchant nor other could passe, but shold be eather robbed or taken prisoner. They be strong people, and be of the feft of MAHOMET. There they do worke, and make greate plentie of cloth of gold and filke in greate abundance and rich. In that Countrey groweth greate plentie of Cotten wooll. Also, there is greate abundance of Wheate, Barly, Dates, and other grayne, and Wine, and Oyles, and frutes.

Of Iafsiv, and of many maruellous things there

CHAPTER 15

Afsiv is a goodly Citie and bigge, full of Merchants. There they do make great abundance of cloth of gold, and filke. They be called accordyng to the Citie Iafsiv. The people of this Countrey be of the feft of MARTIN FINOL, that is, MAHOMET, and do speake another language than the Persians. And going forward eyght dayes iourney from this Citie, through a playne Countrey, but not peopled, or anye Towne, fauing Mountayne, where is great plentie of Parriches, and wild Asses,
at the end of this, is the Kingsme of the Grérina, that is, a Kingdome of the Persians, of a great and long inheritance.

In this Countrey they doe finde gréate plentie of pretious stones, and of Turkies great store in the Mountaynes, in the whiche Mountaynes, is gréate plentie of Uayne, or Ore of Steele, and ofCalamita. In this Citie, they do make gréate plentie of costly faddles, bridles, and harnes for Horfes, and for noble men Swords, bowes, and other riche furniture for Horfe and Man. The Women of this Countrey doe nothing, but commande their Seruantes. They make also there very riche cloth of gold and filke. And in those Mountaynes be exceding good Hawkes, valiaunte, and swifte of wings, that no fowlie can scape them. And departing from Grérina, you shall goe eyght dayes journe in playne way, full of Citie and Townes, very faire, and there is pleasaunte Hawking by the way, & gréat plentie of Pariiches. And being palt the sayd eyght dayes iourny, there is a going downe the hil of two dayes iourny, whereas there is gréat plentie of frutes. In the olde time there was manye Townes and houses, and now there be none but heardmen, that kepe the Cattell in the field. From the Citie of Grérina, to this going down, al the winter is fo great cold, that although they goe very wel clothed, they haue enough to do to line. And being palt this going downe two dayes iourny forwarde, you shall come into a faire playne way, the beginning whereoff is a gréat faire Citie, called Camath, the whiche was in the olde time noble and gréate, and nowe is not fo, for that the Tartars haue destroyed it. That playne is very hote, and that Province is called Reobare. There be apples of Paradife, and Fesucas, and Meclars, and divers other costly frutes in great abundance. There be Oxen maruellous great, the hearde short and fott, and the hornes short, bigge, and sharp, and haue a gréate rounde bunche betwéene the shoulers, of two spannes long. And when they will lade these Oxen, they doe kneele downe on theyr knées like Camels, and being ladé, do rife, and they carré great weight. There the Shéepe be as gréate as Asses, haung a gréate tayle, and thicke, that will weigh. 32. pound, and be marvellous good to eate. In that playne be many Citie & townes with walles, and Towers of a gréat heighe for the deñfence of the enimies, called Curates, which be certaine Uillages. The people of that Countrey their Mothers be Indians, and their fathers Tartars. When that people will go a robbing, they worke by enchantment by the Deuill, to darken the aire, as it were midnight, because they woulde not bee seen a farre off, and this darkenee doe endure all dayes. And the Theuces that know well all the wayes, goe togethe, withoute making anye noyse, and as many as they can take, they robb. The olde men they kil, and the yong men they fell
for flauces. Their King is called Hegodar, and of a truth I Marcus Paulus do tell you, that I escaped very hardly from taking of these robbers, and that I was not flaine in that darkeneffe, but it pleased God, I escaped to a towne called Ganaffalim, yet of my companie they toke and flewe many. This playne is towards the South, and is of feauen dayes journe, and at the end of them is a moûtayne, called Detufllyne, that is eitheeene miles long & more, and is also very daungerous with theues, that do rob Merchautnes and all travellers. At the ende of this mountaine is a faire playne, called the goodly playne, which is feauen dayes journe, in the which there be many wels, and date trees, very good, and this playne bordereth vpon the Ocean Sea, and on the river of the sea, is a Citie called Carmoe.

Of the Citie Carmoe, and of many maruells and strangue things that be there

CHAPTER 16

Armoë is a greate Citie, and is a good porte of the Ocean Sea. Thither do occupie Merchats of the Indies with spices, cloth of gold & filke, and with precious stones, and Elephantes teeth, and is a Citie of great trade, with merchandize, and is heade of that kingdome, and the king is called Minedanocomoyth. It is very hote there, and y aye infectious. When there doth dye any Merchaut, they doe make hauocke of all his goods. In this Citie they do drinke wine made of Dates, putting good spices to it, yet at the beginning of dinner it is daungerous, for those that be not vfed to it, for it will make them very solubile, ftreight waye, but it is good to purge the body. The people of that Countrey do not vfe of our victuals, for when they eate bread of wheate and leafe, by and by they fall sicke. Their victuals is Dates & sultanners, Tonny, Garlike & Onyons. The people of that Countrey be blacke, and be of the sect of Mahomet. And for the great heate in the Sommer, they dwell not in the town, but in the fields, and in gardens, and Orchards. There be many riuers and Wels, that euyre one hath faire water for his garden: and there be manye that dwell in a defart, wheras is al sande, that ioyneth to that playne. And thofe people afioone as they feele the great heate, they ge into the
waters, and there tarrie till the heate of the daye be past. In that countrey, they do fowe their wheate and corne in November, and gather it in Marche. And in this time the fruits be greater than in any place. And after March is past, the grasse, herbes, and leaves of trees do drie, fauing of Date trees, which continue till Maye. And in that countrey they have this custome, that when the husband doth dye, the wife and her friends doe weepe once a day, for the space of four yeares.

When the husband dyeth, the wife & friends doo weep once a daye, for the space of four yeares.

Of the Citie of Grerima, and the death of the Olde man of the Mountaine

CHAPTER 17

(Eaving here this Citie, and not declaring any more, of the INDIANS, I returne to the Northwardes, declaring of those provinces turning another way, to the Citie Grerima, aforesayde, for bycause that way, that I would tell of, could not be trauelled to Grerima for the crueltie of the king of that countrie, which is called Reu me cla vacomare, from whom fewe could escape, but eather were robbed or slayne. And for this cause manye kings did paye him tribute, and his name is as muche to faye, as the olde man of the mountayne. But I wyll nowe declare vnto you, howe this cruell King was taken prisoner in the yeare of our Lord 1272. ALAN King of the Tartars of the East, hearing of the greate crueltie of this olde man of the Mountayne, that he did, sent a great hoff of men, and besette his Castell rounde about, and thus continued three yeares, and could not take it, till that victuals did fayle them: for it was very strong, and vnpossiblle to be gotten. At the length ALAN toke the Castell, and the old man of the Mountayne: and of all his Souldiours and men he caused the heads to be stricken off, and from that time forarde that way was very good for all trauellers.)
What is found in that Countrey

CHAPTER 18

Departing from the forefayd Castell, you shall come into a very faire playne, full of graffe, with all things in it fitte for mans sustenance. And this playne dothe last sixe dayes of journey, in the whiche there is much faire Citie and Townes. The people of that Countrey speake the Persian language, and haue great lacke of water, and sometimes they shall fortune to goe 40. miles, and not finde water. Therefore it shall be needfull for those that do trauell that way, to carrie water with them from place to place. And being past these sixe dayes journey, there is a Citie called Sempergayme, faire and pleasaunte, with abundance of victuals. There be excellent good Mellones, and the best Hunters for wilde beastes, and taking of wilde Fowle, that be in the world.

Of the Citie of Baldach, and of many other things

CHAPTER 19

Rauelling forward in this Countrey, you shall come to a Citie called Baldach, in the whiche King Alexander married with the daughter of Darius king of Peria. This Citie is of the Kingdome of Peria, & they do there speake the Persian tong, and be all of the sect of Mahomet.

And this Countrey doth ioyne with the Tartar of the East, betweene the Northeaste, and the East. And departing from this Citie towards the Countreys of the saide Tartar, you shall goe two dayes journey, without finding any Towne, because the people of that Countrey doe conueit to the strong Mountaynes, because of the ill people that be there. In that Countrey be many waters, by reason whereof is greater plenty of wilde Fowle, and of wylde Beasts, and there be many Lions. It is needfull for the trauellers that way, to carrie provision with them that shall be needfull for themselues, and for their Horfes those two dayes journey.
And being past that, you shall come to a Towne called Thaychan, a pleasaunt place, and well provided of all vittayles needfull, and the hilles be towards the South faire and large. That prouince is xxx. dayes iourney. And there is great plentie of salt, that all the Cities and Townes thereaboutes haue their salt from thence.

Of that Countrey

CHAPTER 28

Fate: Bk. 1. Ch. xxviii (cont.). Benedetto: Ch. xlv (cont.).]

E partly from that town, and trauelling North east, and to the East for the space of three dayes iourney, you shall come to faire Cities and Townes well provided of vixtuals and frutes in great abundance, and these people do speake the Perfiuan language, and be Mahometts. There be singular good wines, and great drinkers, and yll people. They go bareheaded, haung a Towell knit aboute their browes. They weare nothing but skinnes that they do dreffe.

Of the Citie Echa fen

CHAPTER 32 [32]

Fate: Bk. 1. Ch. xxviii (cont.). Benedetto: Ch. xlv (cont.).]

After that you haue trauelled forwarde foure dayes iourney, you shall come to a Citie called Echa fen, on a playne, and there is not farre from it manie Cities and townes, and great plentie of woods about it. There goeth through the middest of this Citie a gret riuerr. There is in that countrie, many wilde beastes, and when they be disposed to take anye of them, they will cast dartes, and shooote them into the flancs and into the sides. The people of that countrey do speake the Perfiuan tong, and the husbandmen, with their cattayle do liue in the fieldes and in the woods.
A DISCOVERIE OF

Of the manner of the Countrie

CHAPTER 27

[Marston: Bk. 1. Ch. xxv (lines 11-end). Pauthier: Bk. 1. Ch. xlv (cont.). Flye: Bk. 1. Ch. xxvii (cont.). Benedetto: Ch. xlvii (cont.).]

Daparting from this Citie, you shall trauayle three dayes journey, without comming to any towne, or finding any victuals eyther to eate or drinke, and for thyse cause the trauellers do prouide themselues for lattice time, & at the end of these three dayes journey, you shall come to a prouince called Ballafia.

Of the prouince called Ballafia, and of the commodities there

CHAPTER 28

Allafia is a great prouince, & they doe speake the Perisian tong, & be Mahometts, and it is a great kingdome, and auncient. There did raygne the Succesflours of king Alexander, and of Darius king of Perisa. And their king is called Culturi, which is as much to say, as Alexander, and is for remembrance of the great king Alexander. In this countre grow the precious stones, called Ballafyes of greate value. And these stones you can not carrie out of the countre without speciall licencse of the king, on pain of leefing life and goods. And thode that he doth let paсть by, eyther he doth forgie tribute of some king, or else that he doth fell: and if they were not so straigly kept, they would be little worth, there is such greate plentie of them. This countre is very colde, and there is found great plentie of siluer: there be very good couriers, or horses, that be never shod, bycause they breede in the mountaines and woods. There is great plentie of wilde foule, and greate plentie of corne, and Mylo, and Lolio. In this kingdome be great woods & narrow ways, strong men, and good Archers, and for this cause they feare no bodie. There is no cloth, they apparell themselfes with skunes of beasts that they kill. The women do weare wrapped aboute their bodies like ye neather part of garments, fome an hundredeth fathom, & fome fourefscore, of linnen very fine and thinne, made of flaxe and Cotton wool, for to seeeme great and fayre, and they doe weare breeches very fine of filke, with Mufke put in them.
Of the Province of Abassia where the people be blacke

CHAPTER 24

[Mayden: Bk. i. Ch. xxvii. Pauthier: Bk. i. Ch. xlvii. Tals: Bk. i. Ch. xxx. Benoulet: Ch. xlviii]

After you be departed from Ballafia eights dayes journey towards the South, you have a province called Abassia, whole people be blacke, and do speake the Persan tong, and doe worship Idolles. There they do use Negromancie. The men do weare at their haeres jewells of golde, siluer, and pretious stones. They be malicious people, and leacherous, by reason of the great heate of that Countrey, and they eate nothing but flesh and Rice.

Of the Province called Thassinum, and of many things there

CHAPTER 25

[Mayden: Bk. i. Ch. xxvii. Pauthier: Bk. i. Ch. xlvii. Tals: Bk. i. Ch. xxx. Benoulet: Ch. xlviii]

Within the jurisdiction of this Countrey, betweene the East and the South, there is a Province called Thassinum, and the people do speake the Persan tong. They be Idolaters, and great Negromancers, and do call to the Spirits, and make them to speake in the Idols, and do make their Temples seeme to moue. They doe trouble the ayre, and doe many other diuellish things. From hence they may go to the Indian Sea. The people of that Countrey be blacke and lean, and do eate nothing but flesh and Rice. The Countrey is temperate. In this Countrey be many Cities and Townes, and rounde about many hilles and strong wayes to passe. And for this cause they feare no body, and their King dothe mainteyne them in peace and justice. There be also Hermites, that doe keepe great abstinence in eating & drinking. And there be Monasteries, and many Abbeys, with Monkes, very devout in their Idolatric and naughtynesse.
Minde not now to passe further in this province, for in pasing of it I should enter into the Indeas, wherof for this time I wil not declare any thing, but at the returne, I wil declare of it largely, as wel of the commodities there, as also of their manner, and vflages.

Of a province called Vochaym

Eparting from Balaffia, you shal three dayes iourney betweene the North east, and by a riuer that is neare to Balaffia. In thys province be many Citie and townes. The men of this province be valiant in armes, and speake the Perzian language, and be Mahometes. At the ende of this three dayes iourney is a City called Vochaym very long, of three dayes iourney on eyther side. The people of this province, be subiecte to the king of Balaffia, and there be greate hunters of wilde beastes, and taking of wilde foules in great number.

Of the nouelties of this Countrey

Hrée dayes iourney going forwarde, you shal goe vp an hill, vpon the whiche is a riuer, and goodly fruitefull pastures, that if you put in your cattell there, very leane, within tenne dayes they wil be fat. There be greate plentie of wylde beastes, and among them wilde sheepe, that some of them haue their hornes of foure and some of seuen, and some of tenne spannes long. And of these hornes the heerdemen there doe make dihnes, and spones. In the valey of this mountaine called Plauor, you shal trauell tenne dayes iourney, without comming to anye towne,
or anye graffe, therefore it shalle be needefull, for the trauclours that waye, to carrie prouision with them, as wel for themselfes, as for their horfes. There is greate colde in that Countrey, that the fire hath not the strenght to feste their victuals, as in other Countries.

Of the Desert Bosor, and of manye maruellous things there

CHAPTER 39 [39]

...
Of Sumarthan, and of a miracle.

CHAPTER 31

[Somarthan is a Citie great and faire, in the which dwell Christians, and Moores, that be subiect to the great Cane; but this king beareth them no good will. In this Citie chaunced a marvellous thing. A brother of the great Cane, that was Lorde of that Countrey, became a Christian; by meanes whereof, the Christians there, receyued great comfort, and buylded them a Churche, in the name of Saint John Baptist. And it was buiulde in such fort, that one Piller of Marble standing in the middest, did beare vp all the route of the Church, and the Christians did put under the sayde piller a goodly Marble stone, whiche was the Moores, and for bycaufe the king was a Christian, they durst say nothing of it. This king died, and one of his sons succeded him in the kingdome, which was no Chriſtian, and on a time the Moores demaunded their stone of the Christians, thinking that in taking away that stone, the whole route of the Church would fal downe: and the Christians did offere to pay the Moores for the stone, what they woulde demaunde: but they woulde not by anye meanes, but haue their stone, and in the ende, the new king commanded the Christians to restore the stone to the Moores, and the time appointed being come, that the Moores would haue it, the sayde Piller lifted it selfe vp, three spannes aboue the stone, and so haged in the ayre, that the Moores might take away their stone, and yet the Church fell not, and so doth the Piller remayne til this day.

Of the province of Carcham.

CHAPTER 32

[Oing forwards, you shall come to a province called Carcham, which is five dayes iourney long, and is subiect to the greate Cane, and be Mahometts, but there is among them Christians Nestorians. There is in this province aboundance of all things.]
Of the province *Chotta* and of their manners

CHAPTER 33

*Hotta* is a province between the North-east, and the East, and is of five days journey, subject to the great Cane, and be Mahometts. In this province there be divers cities and towns, but the chiefest is *Chotta*. In this province be goodly possession, and faire Gardens and Vines, plenty of Wine and fruits, and Oyles, Wheate, Barley and all other victuals, great plenty of Cotton-wooll. In this Countrey be rich Merchants, good and valiant men of armes.

Of the province of *Poym* and of their vflages

CHAPTER 34

*Poym* is a small province of five days journey, it is between the North-east and the East, and be subject to the great Cane, and be Mahometts, and the principall Cittie is called *Poym*. In this province there is a river, in the which there is founden precious stones, called Jasper and Caracdonies, there is great plenty of all kinds of victuals, and great trade of Merchandizes. In this province there is this custome, that when the husband departeth from his house for fifteen or thirtie days, or more or lesse, if the wife can get another husband for the time, she taketh him, and the husband taketh another wife till he returne home to his house.

Of the province of *Ciarchan* being in great Turkie

CHAPTER 35

The provinces beforefaide, from Caschar, to this, be subjectes to the greate Cane, and were of greate Turkie, in which there is a great Cittie called *Ciarchan* in a province also called *Ciarcham*, let betwene the North-east & the East, and the people of that Countrey speake the Persian tong, and be Mahometts. In this province be many Cities, townes, and
riueres, wherein be founden many pretios flones, called Calcedonies, whiche Merchauantse carry all the worlde ouer to sell, and get muche money by them. In this Countrey is aboundance of all things neecedful: And this province for the most part is fandie, and the waters there, for the most part, plesaunt and sweete, yet in some places brackish. And the people of that Countrey, fereng the ill people, doe flie with their householde stubbe, and cattell, two or three days iourney, till they maye come to some good place, whereas is water and grasse for their cattel, and by reason the way is fandie, their tracte is stone filled, by reason whereof, the thecues knowe not howe to follow in that Countrey.

Of a great deferte, and of the Citie called Iob

CHAPTER 36

E partial from Caneous, you shal trauayle shue dayes iourney in fandie, and in the waye, freth and sweete waters, and sone saight. Being past these shue dayes iorney, you shal finde a great defert, and at the beginning of it a gret Citie called Iob, between the Northeaste and the Easte. They be vnder the obedience of the great cane, & be Mahomet. And they that wil passe this defert, had neede to be in thys Citie a weke, for to pro vide them victuals and other necessaries for them, and their horses for a moneth, for in this defert, you shal finde nothing to eate or drinke; and there be many fandie hills, and greate. After you be entred into it one dayes iourney, you shall finde good water, but after that nether good nor badde, nor beastes, nor foules, nor any thing to eate; and trauelling that waye by nighte, you shal have in the ayre, the sound of Tabers and other instruments, to putte the trauellers in feare, and to make them lose their way, and to depart from their company, and lose themselves: and by that means many doe die, being deceived so, by euill spirites, that make these foundes, and also do call diuerse of the trauellers by their names, and make them to leave their companye, so that you shal passe this defert with great daunger.
After you be past the fayde thirtie dayes journey by the desert, you shall come to a citie called Sangechian, subject to the greate gane. And this province is called Tanguith, in the whiche al be Idolaters, fauing some be Christians, Nestorians, and some Mahomet. The Idolaters speake the Perian tong, and doe liue by the frutes of that countrey. There be among them manye Monasteries of the Idolaters, wher with great devotion they bring their children, and with euerie of them a sheepe, and do present to their Idols: and euerie yeare they come with theyr children and make great reuerence to their Idols, & brynge with them their sheepe, and kill them, and seth them, and present them there, before their Idols, faying to them, they must eate their meate, the which they can not doe, for they haue nyther mouth nor sense, and seing their Idols doe not eate it, they carrie it home to their houses with great reuerence, and call theyr kyndered togethers, and do eate of it, as meate sacrificed to their Gods, and put the bones in a basket. When anye man or woman dieth, they burne the body: and this they accustome to doe with al the Idolaters. And in the way that the deade bodies shall passe to be burnt, stande all their friends and kinfolkes to accompany the body to the sepulchre, all clothed in cloth of golde and filke: and after the burnt bodye is put into the grounde, they cause to be brought thither meate & drinke, and there they do eate and drinke with greate myrth, saying: These bodies shall be received in the other worlde with like honour. When they burne the bodies, they do also burne with them diuers papers paynted, of men, women, and beastes, sayng, that as many pictures of men, women, and beastes, as they do burne with them, so many seruants they shall have in the other world to doe them seruice: and when they Cary them to bury, there goeth before them diuers kinds of instruments playing. And whome one of these Idolaters dieth, his friends incontinentlye declare to the Astrologers, the day and the houre hee was borne in, and wil not bury him before the day & houre the Astrologers doe commaunde: by that meanes some they bury straights, and sometymes, they tarry ten, twenty, and thirtie dayes, and sometime fixe
moneths, according as the Astrologers doe commaunde: and in the meanestime, they do fire the body with spices, and put it in a coffin, and mayle it stale, and lay a cloth over it, and every day they set their table over the Coffin, and there do eate and drinke, and pray the dead body to eate with them. And when the day appointed is come for to bury him, the Astrologers do say, that if he hath layne there one month, it is not goode to take him oute of that place, by the judgement of the Constellations, and for that cause must first remove him to some other side of the houfe, & from thence carry him to bury.

Of the province Chamul, and of the euill customes there

CHAPTER 38

Hamul is a province in the whiche be manye Citties and Townes, whereof the chiefest is called Chamul, and this province is towards the winde called Maistral, which is North-east, and hath two Deferts: on the one side, the Deferte is of three dayes iorney, and on the other side as muche. The people of this Countrey worship Idols, and doe speake the Perian tongue. They live by their labor in the Countrey, and haue plentie of all things needefull. They be people giuen much to their owne pleasure, as playing on instrumentes, dauncing, and singing. And if any stranger doe goe to see their pastime, they receiue him, and make very much of him, with feasting and cheare, and the goodman commaundeth his wife to make hym the bette cheare she can, and to obey hym in all things he will commaund or desire, and so the goodman goeth to his labour into the fieldes, and leaueth the stranger with his wife, willing hir to obey hym as to his owne perfon: and this custome the menne and the women vs there, & be not ashamed thereof. The women be very faire there. In the time of the greate CANE that is paffe, for the greate diphonostie hée heard of the people of that countrie, and the greate hurte they suffeted in their houfes, commaunded them that they should receive no strangers into their houfes, wherewithall the people were sore offended, and thinking themselves not well vsed, sent Embassadours to the greate CANE, requesting him, that he woulde not restraine them from their auntient liberties and customes, that their anticeffors hadde euer vsed,
and they for their partes woulde continue the same, otherwise they shoude be vthankefull to their Idolls. After the grete cane hadde hearde their Embaillage, auntewered them, feyng they had pleafure in suche fhamefull vlages, and woulde not leaue it, he also was contented with it.

Of the prouince Hingnitala, and of the Salamandra that is founde there

CHAPTER 29

Hingnitala is a prouince set betw een the North and the Eaft, and is a long prouince of fixeteene dayes iourney, and is subiect to the grete cane, and there is manye Cities and Townes. There is also in that prouince, thre linages of people, to faye, Idolaters that be Christians, Neftarions and Jacobites, and the other Mahometes. At the ende of this prouince towards the North is a grete hill, on the whiche there is neither behastes nor Serpent, and from thence they doe gather that whiche is called Salamandra, which is a threede they doe make cloth of. They gather it after this manner, they digge a certaine vayne that they doe there finde, and afterwarde they beate it in a morter of a fofer, and afterwarde wahfe it, and there remaineth smalle fine thredes faire and cleane, and after they hauce caft out that which they doe wahfe it withall, they fipmen it, and weauce it, and make table clothes and napkins of it, then they cafte them into the fire for a certaine time, whereas it waxeth as white as snowe; and the grete cane once in thre yeres doth send for some of them that be made of Salamandra. And they wer wont for to fed of these napkins, for to hang before the vernacle of oure Lorde Iefus Chrift, whome the people of Leuant do take for a grete prophet. Departing from this prouince, and going betw een the Northeast and Eaft, you shal travaile tenne dayes iourney and come to little habitation, and at the end of the tenne dayes iourny, you shal find a prouince called Sachur, in it be Christians and Idolaters, subiects to the grete cane. The two prouinces beforefaide, to fay, Chamul, and Hingnitala be called Tanguth, with the prouince of Sachur. In all the hilles of this prouince is found grete plentie of Rewbarbe, and there the Merchantes do buy it, and carry it to all places to feld. There they doe not vfe any occupation, but the moste parte doe liue by the laboure of the Countrey.
A DISCOVERIE OF

Of the Citie called Campion, and of many euill vlages there

CHAPTER. 44 [40]

Ampron is a greate Citie and fayre, & is the heade of the province of Tanguth. In this Citie be thre corre of people, that is to say, Christians, Idolators, and Mahometts. The Christiâns haue thre great Churches and faire, and the Idolators haue alfo Monasteries, Abbeys, and religious houses, more chaffe and comly than the other, and they do kil no beast nor fowle there till the fift day of the Moone, and in thofe five dayes they liue more honest, devout, and chaffe, than in any other time of the yeare. These Idolators may haue thirtie wifes appece, or more, if they be able to maintaine them, but the firste wife is chiefe, and if anye of them doe not contente him, he may put hir away. They do mary in kinreds, and liue like beasts. In this Citie was Mapheo Nicholas and Marcus Paulus feauen yeres, vng the trade of merchandize.

Of a Citie called Eusna, and of many notable things in Tartaria

CHAPTER: xlii. [41]

Dparting from the forefayde Citie Campion, and trauailling twelve dayes iorncy, you shall come to a Citie called Eusna, the whiche is in a field of the Defert called Sabon, toward the North, and is of the province Tanguth. In this Citie they see al Idolators, and haue great abundaunce of Camels and other cattell withall: they gette their liuing by labouring the ground. In this Citie thofe that do trauaile, do provide them of victualles, and other necessaries, for fortie dayes iorncy, whiche they must passe through a great Defert, whereas be no towns nor houses, nor grasse, but in the mountaines about dwell people, and also in the valleys beneath the Defert. There be many Aflis and other wild beastes of the mountaines, and greate Pine apple trées. At the ende of this Deferte there
is a Citie called Catlogoria, whiche is towarde the North, and of this Citie was the first Prince or Lorde among the Tartars, and his name was Catlogoria. The Tartars dwell towards the North, wheras is but few cities & Townes, but true it is, there be fayre playnes, pastures, riuers, and very good waters. There dwell Tartars that have no King nor Lorde, they doe gouerne themselues in common, and do pay tribute to Prester John. If fortuned, that these Tartars multiplied to so greate a number, that Prester John did feare, that they would take against him, therefore he determined with himselfe to sende certaine Lordes of his that shoulde be among them to keepe them afunder, and also to keepe the countrey in good order, and to baniſhe or diminifhe parte of them, bycause they should not be of so greate a power. And the Tartars perceyuing this, ioyned themselues together, and tooke counsell, determined to leave that countrey, and to goe and dwell upon the mountaines and in the deferts, by meanes whereof from that time forward they floode in no feare of Prester John, nor woulde pay him tribute. And at the end of certaine yeares, that they were not under the obedience of Prester John, they did elect and choose among themselues a King whiche they called Chenchis, a valiant and wise man; and this was in the yeare of oure Lorde God 1187. and crowned him for King of the Tartars aforefaide. And all the Tartars that were in Persia, and other Countreys thereabouts, came to him, and put themselues vnder his gouernement, and obeyed him as their King, and he received them very friendly, governing them iustely and discretely. And after that Chenchis was confirmed, and had the whole gouerniment, within a short time he made war, and in short time conquered eight Kingdomes or Prouinces, and when he hadde gotten anye Prouince or Citie, he did minstrie to no man, but lette them remaine wyth their goods, sauing to those that were able and fitte menne for him, them he tooke with him into the warres, and by this means he was welbeloued, and all men were content to goe with him.
Of the beginning of the raigne of the Tartars, and of
many maruellous and straungenge thinges

CHAPTER 42

(in part), lxvi, lxviii (in part), lxix]

CHENCHIS perceyuyng himselfe to be of suche power, minding
to ioyne himselfe in kindred or flocke with PRESTER JOHN,
fente to him his Embassador, requiring his daughter in
marriage: and this was in the yeare of our Lord God 1190.
PRESTER JOHN disdainne that Embassage and aunswered,
that he maruailed muche that CHENCHIS being his Sub-
jecte shoulde presume to demaunde his Lordes daughter to be his wife,
saying he woulde rather kil hir: fo the matter remayned thus. CHENCHIS
hearing this aunswer of PRESTER JOHN, was sore troubled and vexed
in minde against hym, and incontinent sent him defaunce, saying, he
woulde warre vpon hym, and of this PRESTER JOHN made small reckning
saying, that the TARTARS were but flues, and not men of warre, not-
withstanding he made himselfe in a readinesse, and came vpon CHENCHIS,
who had also made himselfe in a readinesse, and came oute against him
and encounterd togethers in a great plaine called Tanguth, where it was
appointed the battaile shoulde be of both parties, & thus ioyned togethers
in a fierce & larg battel, for both parts was strong, but in the end, PRESTER
JOHN being flaine, and many of both parts, the field remayned to
CHENCHIS, who conquered all the province, Cities, and townes of
PRESTER JOHN, and raigned after his death fixe yeares, and at the end
of fixe yeares, laying siege to a Castell, was hurt in the knee with an
arrow, and of that wounde dyed. After the death of this CHENCHIS,
was made Lord of the TARTARS onc called CANE, and this was the
firste that was called Emperour and Greate CANE. And after hym
raigned BATAH CANE, and the fourth was called CHENCHIS CANE, &
the fifth was CUBLAY CANE, which raigneth nowe. This CUBLAY CANE
is the greatest and of most power of anye of al his predecessors, for among
the christians and heathen, there is not a greater Prince than he is, nor
of fo great a power, and that hall you clereely perceyue hereafter, by
that which followeth. All the CANES, successors of the firste CHENCHIS,
were buryed in a montaine called Alchay, and there dwelled the greate
CANE. And when the greate CANE dyeth, they cary hym to be buryed
there. Those that do carry him, or go with him, kill as many as they meete withall in the way or stréece, and when they kill them, they saye: Go, and servë our Lorde in the other worlde, and they beleue certainly, that they go, and doe him seruice. And likewise by this reason, when the great cane dieth, they kill all his Camels, Horses, and Moyles, beleëuing that they fed them to servë their Lord in the other world. When Monogu cane Lorde of the Tartars dyed, there was flaine 300000 men that they encountred in the way, by those that wente wyth hym to his burial to the faide mountaine.

The habitation of the Tartars in the Winter, is in the plaine fieldes, where it is warme, and good grasse and pasture for their Cattell, and in the Sommer in the mountains and wooddes, where it is freche and pleasaunt aere: and they make rounde houses of tymber, and couer them with feltes, and these houses they carry with them at all times when they do remove: and alwayes they sette their doore in the Sommer time towards the South, and in the Winter towards the North. These Tartars haue theyr cartes or Wagons couered with blacke feltes, that neuer any water can passe through, and in these Cartes or Wagons go their wiues, children, and family, and their Commels do drawe these Wagons. The Tartars wiuws doe buy and sell al manner of things belonging to householde, or any thing needesfull: their husbands take no care for it, but onely in hawking, hunting, and going on warrefare. They do eate all manner of flesh, and drinke milke of all kinde of beastes and mares. The Tartars maye take as manye wiuws as they will, and maye marry with anye of their kinred, excepting no degree: but their firste wife is the chiefest, and is most made of: the women doe gyue their dowries to their husbands. There is none of them will haue conuerfation with an other mannes wife. And when the father dyeth, his eldest sonne doeth marry wyth his mother in lawe, and when the sonne dyeth, his brother marryeth with his sister in lawe, and for the time do keepe great solemnitie and feastes at the wedding.
Of the custome, orders, faith and honoring the great cane, and howe he goeth to the warres

CHAPTER 43

He Greate cane Emperor of the Tartars, doth worthippe for his God, an Idoll called nochygap, and they sayne and beleue, that he is the eternall God, that taketh care to preserue hym, hys wiues, children, familie, cattell, and eorne, and hath hym in great reverence, and every one hath the figure of that Idoll in his house. And this Idoll is made of feltes, or of other cloth, and of the same felte or cloth they doe make wiues and children for their Idols, and the women be fette on the left side of the Idols, and the children before them. When they thinke it dinner tyme, then they doe annoynte the mouthes and lippes of theire Idols, and wiues and children, with the fatte of the fodder fleshe, and do poure out the broath vpon the floore, saying, that theire Idols, their wiues, and children doe fill themselfes with it, and they do eate the fodder fleshe, and their drinke is the milke of Mares trimmed with spices, that it is like white wine, and it is very good, and is called with them cheminis. The Lordes and men of power and riches, goe appareled in cloth of golde, and cloth of silke, furred with riche furres. Their harnesse is the hydes of buffe, or other thicke and strong Skynnes. The Tartares be valiant men of armes, and strong to abyde any travaile or laboure, and can well suffe hunger and thirst, for in the warres they be many times one moneth, and eate nothing, but of wyld beasts they doe kill in the field, and drinke Mares Milke. When they be in the field day and night they be on Horfe-backe, and the bridle in their hands they giue the Horfes meate. When their King setteth forward with his hoft, before and on euery side of him they do let foure battels of the beft and most valiant men, for bycause their King shoulde not bee put in feare. And when he goeth a warrefare a farre off, he caryeth nothing with hym but hys armoure, and a thing to couer him when it doth rayne, and two flaggons with Milke for to drinke, and a Potte to fetch his meate in when neede is. In a tyme of neede he will ride tenne days journe, without eny time of fodder meate. For his drinke, they will carrie Milke made like dry paste, and when he is disposed to drinke, he will take a little of that paste, and dissole it in
fayre water, and so drinke it: and when thysshall sayle hym, and that he can gette no other drinke, hee letteth hys Horse bloud, and drinketh of it. When the Tartares wyll ikrymishe wyth theyr enemie, they hyde their Sallets secretely, and as they doe beginne to ikrymishe, fireightway they lhevew as though they woulde runne away, and that they were over-come of theyr enemie, and thus fleeing, putte on theyr Sallets, and fireght way they returne valiantly vpon their enemie, and by this meanes commonly they doe breake the array of theyr enemie. The Tartares haue theys custome, that if one of theyr sonnes dye being yong, and also of another man his daughter, after they be dead, they marrie them, saying, they shall be married in the other worlde. And of theys Matrimonie they doe make a publike writing, and this writing they burne, saying to the dead, that as the smoke thereof ascendeth on high, so doe they sende them that writing, declaring theyr marrie. And at suche marriages they make great feasting and solemnitie, and doe feath muche victuals, and poure out the broth vpon the floor, saying, that those which be dead in this world, and maried in the other, do eate of the victuals prepared for the wedding. And besides all this, they caufe to be painted the figure of the sonne and daughter, vpon the backside of the forefayde writing, and withall the pictures of manye Camels, and other diuers beasts, and apparell and monny, and many other things, saying, that as that writing dothe burne, all those things therein goe straight way to their chyldren, after the smoke as aforesayde, and the fathers and mothers of thes children that dyed, doe take hands together, and be alwayes after friends, and Grand-fathers and Grandmothers, and Couens, euyn as though they had bin maried aliove.

Of a plaine called Barga, and of the customs of the people of that Country

CHAPTER 44

Daparting from the Citie called Cathogora, aforesayde, and the mountaine called Acy, where they bury theyr Kings of the Tartars, which is the greate cane, you shall travell through a great plaine called the plaine of Barga, fortie dayes iorney towards the North. The people of that country be called Mecrith. They be sauage people, and doe lyue
the most parte by killyng of redde Deare called Stagges, and other wilde
beastes, and doe ride and travaile vppon harts or flagges, as they doe in
other places vppon horfes. They haue neyther breade nor wine, and be
subiectes to the great CANE.

Of the greate Sea called the Oceean

CHAPTER 45

[Marston: Bk. I. Ch. I. (cont.). Pauthier: Bk. I. Ch. LXX (cont.).  Falle: Bk. I. Ch. LXXI (cont.).
Benedetto: Ch. LXXXI (cont.)]

After you haue travailed ffortie daies iorney, you shal come
to a greate Sea called the Oceean Sea, and also greate
mountaynes, in the which you shal haue goodly Hawkes
greate plentie, and speciall good, called PEREGRINOS. And
in the Ilandes of the Sea breedeth great plentie of Gerfalcons.
In this Sea be two great Ilandes, whiche shall be spok of
hereafter, and lye towards the North, and haue the Sea out of the South.

Of the Kingdome Erguil, and of many other Kingdomes,
and of Mulke, and other sweete and pleasaunte thinges
that be there founde, and many other things

CHAPTER 46

[Marston: Bk. I. Ch. II. Pauthier: Bk. I. Ch. LXXII.  Falle: Bk. I. Ch. LVII. Benedetto: Ch. LXXXII]

Haue declared vnto you of the provynce of the North, till
you come to the mountaynes, and the Oceean Sea: and now
I will compote to you of the other provynces belonging to y
great CANE, til you come to his country, returning to the
country called Campian, where you shal passe 55 days iorney
in length, in the which many times you shal hear the voices
of eull spirits. At y end of these ffte iorney towards y East, there is
a kingdom called Erguil, of y proynce of Tanguth, subject to the greate
CANE, and in this provynce there lye three sorts of people, that is to say,
Christians that be Neftorians, and Idolators and Mahometts: and there be
many Cites and Townes, but the principall Cite is called Erguil. From
this Cite trauelling East Southeast, you shal come to a Countrie whiche
is a greate provynce, in the whiche there is a great Cite called Syrgay,
that hath neare vnto it many Cities and Townes, all subject to the greate Caine, and there be in it Christians, Idolators, and Mahometes. There be wild Oxen as bigge as Elephants, very faire beasts to see, white and blacke, al couered with haire, fauing a spaine long vpon the necke, whyche is called Del Espinazo, whiche is bare, and hath no haire, and many of these Oxen they do make tame, and doe laboure and till the grounde with them. They will carrye greate waighthe, by reason they be so great bodied. There is the belt Muske in the worlde. The Beast that they haue it off, is bodied like a Catte, with fourte teeth, two above, and two beneath, of three fingers long, they be flescher of body, and haue heare like a redde Deere, and feete lyke a Catte, and they haue a thing like a poiffe, or bagge of bloud, gathered together nere to their navel, betwix the skinne and the fleshe, whiche they cutte and take away, and that is the Muske: and there be many of those Beastes there. The people of that Countrey do live by their occupations and trade of Merchandise, and have good plenty of corne. This Countrey is long, of 25. days journey. There be plenty of Peyants, and very great, for one of them is as bigge as two of oures, with tayles of eyght, nine, and tenne spannes long. The people of that Countrey be fatte, and of lowe browes, and blacke heared, and haue no beardes, but a fewe heares about the mouth. The women be faire and white, and well bodied. The people of that Countrey bee gyuen muche to the pleasure of the body, for a riche man to obteyne the fauour of a woman, wyll gyue hir a joynter. They bee all Idolaters.

Of the Citie called Calacia, and of many things they do make there

CHAPTER 47

Departing from Erguill, and trauelling towards the East eyght dayes journey, you shall come to a Province called Eregia, that hath vnder it many Cities, and is of the Province of Tangute, and the principall Citie of it is called Calacia, and is subjecte to the greate Caine, in the which be three Churches of Christians, Neftorians, and all the rest be Idolaters. There they make excellent good Chamlets of Camels heare of white wooll, and from thence Merchantes carrie them to fell into other Countreys.
Of the Province called Tangute which is subject to Prester John, and of a stone called Lapis laguli, that is there found, and of Gog and Magog

CHAPTER 48

Of the Cittie Sindathoy in Cataya, where siluer is founde

CHAPTER 49
province is a Citie of the greate Canes called Sindathoy, where they doe worke and make all manner and kinde of armour for the wars, and in the mountaines of this province be vaines of fine filuer, and plentie, called there Idica.

Of a Citie called Giannonum, and of many nouelties.

CHAPTER 30

Arting from this Citie, and traveling iij. dayes iorny, you shall come to a Citie called Giannonum, in the which there is a maruellous goodly Pallace of the great Canes to lodge him and his Court when he commeth to that Citie, and in this Citie he is deferous to be with good will, for bycause that neare vnto it is a good country, in the which be great plentie of wyld Geese, and Ducks, and of Cranes, of five sortes or manners: the first be great and all blacke like Crowes: the second all whyte, fauing the heades that be all red: the thirde al black, fauing the heade is white and shyning: the fourth greene, with blacke heads: they be farre bigger than ours: the fift be little with all their feathers redden. Neare vnto this Citie is a great valley, where the great Cane hath many wilde beasts, great and small, and among the great plentie of Partridges, to serue for his prouision, when he goeth into that Countrey.

Of a maruellous Citie called Liander, and of many marvellous and faire things they haue there.

CHAPTER 31

Eparting threé dayes iourney from this Citie, between the Northeast and the North you shall come to a Citie called Liander, which CUBLEY CANE buyled. In this Citie is a marvellous goodlye Pallace made of Marble and flint stones, called pedras vinae, al gilded wyth gold, and neare to this Pallace, is a wall which is in compass fifteene miles, and within this wall be faire riuers, Wels, and greene Meadowes, where the
great Cane hath plentie of all kinde of wilde foule and beasts, for to finde his Hawkes, called Faulcons, and Gerfaucons, that bée there in mew, which be at sometimes more than 40000, which many times he goeth thither to see. Whē he doth ride in these Meadowes, he carrieth behinde him on the buttockes of his horse, a ruffet or graye Lyon tame, and fetteth him to the flagges, or redde Deere, and to other wylde beasts, and upon these beasts do the Gerfaucons and Faulcons feason. In the middel of these Meddowes is a great house, where the great Cane doth repaire to dinner, and to banquet, and to take his repaste and pleasure in, when he goeth that waye. And this house is compassed about with greate Canes, that be gilded and covered with Canes that be varnish’d, and closed all in one, in such sort, that no water can passe through it. Every Cane is at the leaf three spannes compasse, and from tene to fifteen paces long. And this house is so made, that at all times they maye take it downe and set it vp againe, upon a sodaine. It is tied with aboute 200. cordes of cloke, after the manner of tentes, or pavilions. And the greate Cane repayreth thither for his pleasure, in June, July, and August, and there by commandement of his Prophets, Idolaters makest sacrificie with milke to his Idols, for to preferre and keepe his wines, and bonnes, and daughters, and his subiectes, and seruauntes, and cattell, and foules, corne, vines, fruit, and all other things in his countries. All the Mares that the great Cane rideth on, be as white as milke. Amonge the which, he hath alwayes ten Mares that no body doth drinke of their milke, but onlye he and some greate men of his Courte, and some others that be called honourable and noble, bycause of a victorie had against the enemies of Chenchis the first king of the Tartars.

Of the sacrificie and other maners, of the life of the greate Cane

CHAPTER 52

[Marston: Bk. 1. Ch. xxxi (cont.). Pawthier: Bk. 1. Ch. lxxxiv (cont.). Yale: Bk. 1. Ch. lxxi (cont.). Benedetto: Ch. lxxxv (cont.)]

Hen the great Cane will make sacrificie, he poureth out the Mares milke vpon the ground, and in the ayre, and the Prophets of his gods say, that milke poured out, is the holy Ghoste, of the which all the Idols be ful, and do beleueie, that this sacrificie is the cause of his confirmation, and of his subiectes, & of all his other things. And this sacrificie he doth
every yere the 29. day of August. And to those white horses and Mares wherefoever they do go, they do great reverence. This great Cane hath in his Court certaine Negromancers, which be by arte of the Duuel, when it is soule & troublesome weather, it shal be fayre and cleare weather in his Pallace. And do gyue to vnderfandde to the people, that the clearneffe is ouer the Pallace where the great Cane is, only for his deferts and holy life, and by vertue of his Idols. When anye one is judged to dye, as foone as he is deade they feeth him, and eate him, but those that dye by natural death, be meat for their Idols.

And besides this, when the great Cane is at his table, these inchaunters doe worke by arte of the Duuel, that Cuppes doe rife from the table tenne Cubits into the ayre, and do set themeselves down again, and where they wyll doe this, they demaunde of the great Cane a blacke sheape, and the wood of Aloes and Incense, & other sweete spyces, whereof there is great plenty, bicause their sacrificce should feme the more sweeter, and he com- maundeth to be delivered to them, what they will haue, for bicause they beleue that their Idols doe preferue and kepe him and all his companie. These Prophets and Priestes, do cause the fleth to be sodden with spyes in presence of their Idols, & do put incense therin, and pour the broth into the ayre, & they say the Idol taketh of it what pleaseth him: and this they do with grete tinging. Every Idol hath his name, and to every one they do this worship on their daies, as we do on our saints daies. They haue many Monasteries deputed to the names of their Idols. There is in that countrey one Monastery as big as a good Citie, in the which there be 400. Monkes that goe honestly apperalled, and their bearde and heads shaven. Upon their feaste daies they kepe great solemnity, with tinging, and praying, and lights, and some of these religious men haue many wives, and some of them liue chaft: the chaft do eate the branne and the meale kneaded together, with a little hote water, and do fast oftentimes in reverence of their Idols, and do weare garments made of Canvas died blacke or blewe, & some white, and do lye in Almadrabes, harpe and harde beds, and the other religious that be married, they go well apperalled, and do eate and drink wel, and doe faie that those which liue the freight life be Heretickes and fools, bicause they do punifh their bodies, by meanes whereof they cannot honor their Idols as they ought to do, and as reafon is. All the Idols of these married religious men, they do name by the name of women, bicause they be such leacherous people.
Ere, for your better information, I wyll declare vnto you of a victorie the gret cane had, whereby you shal the better vnderstand and know of his strengthe and power. It was he that now raigneth, which was called CUBLAY CANE, which is as muche to saye, as Lorde of Lordes. You shal vnderstande that this CUBLAY CANE descended lineally of the imperiall stoke, from CHENCHIS CANE, from whence he myght descend, that shal be Lorde of the TARTARES: and this CUBLAY CANE, begane his raigne in the yere of our Lord God 1256. And as CHENCHIS CANE by his prouidence and wisedome, made himselfe the firste Lord of the TARTARES, as is before declared, so likewise this for his wisedome and prouidence, contrarie to the good will of his kinred, that would haue put him out of it, did so celerne and gourne his Dominions and Countries, til the yere of our Lord God 1298, so that he reigned two and forty yeres, and was fifth and forty yeres old when he was made Emperor, and euery yeare hadde warres, for he was valiant and expert in the warres, but he himselfe after he was made Emperour, neuer went to the warres but one time, but alwayes lent his fornes, or some noble men, whom he thought best. And the cause wherefore hee went at that time in person, was this. In the yere of our Lord God 1286, a nephew of his, of the age of thirtie yeres Lord of many prouinces, Cites, and townes, percyuing himselfe to be subiecte to the greate CANE, as his predecessors had ben, determined in himselfe not to be subiect to anie, and concorde with another kineman of the greate CANES, whyche was called CARDIN, whyche mighte well make 100000. Horfemen, and was morall enemie to the greate CANE hys yncle, and did moue warre both of them with theyr horses agaynte the greate CANE, and hee hauyng knowledge thereof, dyd not feare, for hee was a Prince of maruellous greate power: but incontinent he called hys people togethier for to go against hys enimies, and toke an oath, that the crowne shoulde neuer come on his head, till that he had cruelly reuenged hymselfe on them as Traytors and Rebels, so that within two and twenty dayes, he had ioyned particularly a great host of three hundred thousand fighting men, of horfemen and footemen, and woulde ioyne no greater an host, nor haue it publishd abrode, that
his enemies should have knowledge of it, and also for that he had many of his men of warre abroade in other places on warfare, and could not bring them togerther in so short a time. But you shall understand that when the great cane will make his power, and take time to doe it, he may joyn to great a number, that it were a great trouble to number them. These three hundred thousand of fighting men, be not all menne of experience, for there were about foure thousande Falconers, and Servants, and Courtiers that attended upon the Kings perfon, and served in his Courts. But thus having his hosts joyned, he commanded to be called before him his Astrologers, and would know of them in what fort and time he should set forward on this enterprize, and they answered him that the time was good, and that he should have victorie over his enemies, and so incontinent set forward on his way with his people, and came to a playne, where as was nauia with 200000 men tarrying there the comming of caydu with another hundred thousand of horlemen, for to set on the Countreys of the great cane. The Lordes of the great cane had bet on all the playnes, and taken all the flytes, that neither succoure shoulde come, nor his enemies fle, by cause he would take them all prisoners. Nauia knowing nothing of this, or that the great cane had prepared himselfe for any warre, for the great cane had before bet all the playnes and passages, that no man could passe to carry any newes to nauia, and by this means, not thinking nor flading in any doubt, thought he might well take his rest that nighte, and all his people: but the great cane was stirring in the morning betimes with all his hosts, and did sette his Campe hard by the place where as nauia had his, and found them all unarmed, and vnproided, not thinking any thing of it, and perceiving it, he was in great feare. And the great cane had made a great frame upon an Elephant, wherin his flanderdes were carried, and before and behind, and by the sides went his battels of Horsemen and footemen, that is to say 125000 in a battell. And with these battels be sette all the hof of nauia round, and when nauia sawe this, he leapt on horsebacke, and caused his trumpets to blowe, and set his armie in as good order as he could, and so joyned battell, whereas was a great and strong fighte, and continued from morning till nighte, and great number slayne on both parties, but at the end nauia and his company were not able any longer to withstande the furie of the great canes armed men, and beganne to fle, in such fort, that nauia was taken prifoner, and his people not being able to doe anye good, submitted themselves to the great cane: and nauia being preferred alie to the great cane, he caused him to be bounde vp in a Carpet, and so long hee vted him to bee caried,
that hée dyed, and thys death hée gaued hym, for that hée woulde not 
haue the bloud of NAUIA beeing of his kindred, fall to the grounde, nor 
that the ayre shoulde hée hym dye an euill death. After that NAUIA was 
deade, all his Lordes and other prisoners became sworne to the great 
cane, to be obedience to him. These foure provinces were vnder the obedience of 
NAUIA, that is to say, Furencia, Guli, Bafton, Seincinguy.

Now that I haue shewed you of the great cane, how he past with 
NAUIA, I will also declare vnto you, of his manner, condition, and person, 
and of his wives and children, and of other things.

Of the personage of the great cane, 
and of his wives and children

CHAPTER 34

Benedetto: Chs. lxxxii, lxxxiii]

He great cane that was called CUBLA CANE, was a manne of a middle stature, well flethte, and of good complexion, 
and wel proportioned in all his members, well coloured of 
face, his eyes black, his nofe well made: he hath four that 
be his Legitimate wives, and his eldest sonne, that he hath 
by his first wife, doth kepe Court by himselfe, and everye 
one of these foure Queenes, haue in their Courtes 300. wayting women, 
and many maydens, with also many me and women, that do learnise in 
the Courtes: for every one of these foure Queenes haue in their Courtes 
more than 4000. persons, of men, women, maydens, and seruants. Also 
great cane hath many Concubines of TARTARS, which be called 
Origiathe and be of a good and honeste behaviour, and of these the great 
cane hath a hundred maydens choosen out for himselfe, which be in a 
pallace by theselves, and haue auntient women to kepe them. And of 
these hundreth, ererye three dayes fixt of them doe ferue and attend vpon 
the great cane in his Chamber, and the three dayes being past, they doe 
returne to ther Pallace agayne, and other fixt come for to kepe 
the great canes Chamber. And thus they do remoue from three dayes to 
three dayes. The luyd great cane had by his luyd wines two and twenty 
Sontes, the eldest of them is called CHINCHIS, in remembrance of the 
first King of TARTARS, and also to renue that name, this firstt sonne is 
called CHINCHIS CANE, and shoulde haue succeded his father in the
Kingdome, but bycaufe he dyed before his father, his eldest sonne called THEMUR CANE, and this his fones sonne, bycaufe he should raigne after him, kepte a greate Court by himselfe.

Of a greate Citie called Cambalu, and of all the goodly and maruellous things that be done there

CHAPTER 35

Ow I will declare vnto you of the worthy and noble Citie called Cambalu, the whiche is in the province of Cathaya. This Citie is foure and twenty myles compass, and is four-square, that is, to euery quarter five miles compass. The wall is very strong, of twenty paces high, and battlements of three paces high. The wall is five paces thicke. This Citie hath twelve gates, and at euery gate is a very faire pallece. And upon the toppe of euery corner of the saide wal is also a faire pallece, and in all these palleces ioyning to the wall be many people appoynted for to watch and kepe the Citie. And in those palleces be all maner of armour and weapons for the defence and strength of the Citie. The streetes of this Citie be so faire and freight, that you may see a Candle or fire from the one ende to the other. In this Citie be manye fayre Pallaces and houses. And in the middeft of it is a notable greate and faire Pallece, in the whiche there is a great Toure, wherein there is a greate Bell, and after that Bell is tolled three times, no body may goe abroade in the Citie, but the watchmen that be appoynted for to kepe the Citie, and the nurfes that doe keepe children newly borne, and Phillitions that goe to visit the sick, and these may not go without light. At euery gate nightlye there is a thousand men to watch, not for feare of any enimies, but to auoyde theeues and robbers in the Citie, which many times do chance in the Citie. And this great watche the greate CANE doth caufe, to conferue and keepe his people and subiects, that no man shoule do them hurt. Without this Citie be twelve suburbes very greate, and euery one of the answereth to his gate of y Citie. And in thele be many Merchantes and men of occupations: and thyster do refort all people that come out of the Countrieys, and such Lords as haue to do with the King or his Courtes. And in these suburbes be moe than twentye thoufande singlie or common.
women, and neuer a one of them maye dwell within the Citie on payne of burning. Out of this Citie goeth every daye aboue a thoufande Cartes with filke. The great Cane is garded every night with twentie thoufande Gentlemen on Horfebacke, not for any feare, but for dignifie. They be called Chiftanos, which is as much to fay, as Knights for the body, or truftie Knights. The manner of the great Cane for his dinner, is this: They make ready all the Tables rounde about the Hall, and in the middeft of the Hall, is made ready the Table for the greate Cane, setting his backe towards the North, and his face towards the South. His frithe wife fitteth next vnto him on his lefte hande, and his other wifes following orderly. On his other fide do fitte his fonnes, and his fonnes children, one after another, according to his age. Thofe that be of the imperiall lignage, do fitte downe afterward at another table more lower. And the other Lords and their wifes do fitte at other Tables more lower, according to their degrées, dignities, offices, estates, and age. At the faine Tables commonly do fitte foure thoufand perfon, or very néeere, and euerie one may fée the greate Cane as he fitteth at his dinner. In the middeft of the Hall is a very greate vellell or ceferne of fine gold, that will holde tenne Hoggeheads, which is always kept full of perfect good drinke. And néeere vnto that vellell is other foure vellells of filuer bigger than that, full of good wine, with many other vellells and pottes by them, of gold, and of filuer, which may be of pottels a peece, or as muchoe as will ferue foure men for a dinner. At dinner, out of the vellell of golde, wyth pottes of golde, they drawe wine for to ferue the greate Cane his Table, for him, his wifes, children, and kindred: and out of the vellelles of filuer, with Iars and Pottes of filuer, they drawe wine to ferue the Lordes and the Ladies, and all others fittting at the Tables, as well women as men. And euerie one that fitteth at the tables haeth a cuppe of golde before hym to drinke in. And euerie one that bringeth anye feruice to the greate Cane, Table, haeth a towell of golde and filke before his mouth, bycaufe his breath shal not come vppon the meate and drinke they bring. When the great Cane will drinke, all the Mufitian that bee in the Hall doe play, and euerie one that ferueth, knéeleth downe till he haue drinke. In the Hall be always Iefters, Imagiers, and foole, attending vpon the Tables, to make pastime all dynner tyme, and after Dinner is done, and the Tables taken vppe, euerie man goeth aboute his businesse. All the Tartares keepe greate feaftinge and chéeere euerie yeare on the daye that Coblaye Cane was borne, which was on the eights and twentithe day of September, and that is the greateft feaft they make in all the yeare faue one, that hèreafter shal be spoken of. The greate Cane doth apparell
his selfe that day he was borne on in cloth of golde marvellous rich, and .12000. Barōs be apparelled with him after the fame forte touching the cloth of golde, but not fo rich and preciouse, and every one of the hath a great girdle of golde, and that apparell and girdles the great cane giueth them. And there is never a one of those garments with the girdle, but it is worth .10000. Bisancias of golde, whiche may be a thousand Markes. By this you may perceyue, that he is of great power and riches. And on the fayde daye, all the Tartares, and Merchants, and subiecie, and those that dwell in his Countreys, be bounde to presente vnto hym every one somethynge, according to his degree and abilitie, in knowing him to be their Lorde. And whatsoeuer he be that doth begge any office or gift of him, must giue him a present, according to the gift he doth ake. And all his Subiecies and Merchante, and trauellers, or any other that be founde in his Countreys or Prouinces, be visuall bounde to pray for the greate cane to hys Idols, to preferue hym and hys Countreys, whether they be Tartares or Christian, or Iewes, or Moors. The Tartares begin their yeare the firste day of February, and do kepe a great feast that daye. And the greate cane and hys Barons, with all the rest of the Citie, doe apparell themselfes in white that daye, making greate pastymes, lyesing, the greate cane is blessed and fortunate, and fo doe desire a joyfull yeare. And on that daye there is presented to the great cane more than .10000. Horſes and Mares al white, and more than five thousand Elephants, with two greate baskettes vpon them full of prowision necessarie for hys Countes. And besides thys, there is presented to hym a great number of Camels, couered all with white cloth of filke, for seruice of their K. And when they giue thefe presents, they doe all passe by, where the great cane doeth stande and see them. On the fame daye that this feast is, in the morning betimes, before the Tables be couered, all the kings, Dukes, Marqueses, Lords, Captaynes, Gouvernours, and Justices of his countreys, & other officers, come into the Hal before ſ prefence of the great cane, and those that can not come in, be in another place, where as the greate cane may see them all; and thus being altogether as though they woulde make some request, there goeth one yppe vpon a byulding or scaffolde that is made for the same purpose, in the middeſt of the hall, & with a loude or high voyce, biddeth them al kneele downe vpon their knes, and giue laudes and thankes to their Lord, and freight wayes every one doth honor him as if he were an Idoll: and this they doe four times, and thys being done, every one goeth and sitteth downe in his place, and afterwards do rife one after an other, and goe to an aulter, whiche is set in the middeſt of the hall, and vpon it is a table fet, written on with letters of
gold, and garnished with precious stones of greate value, and the writing is the proper name of the greate Cane, and wyth Senfors of fine golde full of incense and fire, they incense that table in honour of the greate Cane. And after that, euerie one in presence of the greate Cane, doth offer great and precious gifts according to his flate, condition, and abilitie, and this being done, they go all and fitt downe at the tables to dinner. And the greate Cane thirteene times in the yeare doth giue apparel to his Barrons, in thirteene great feastes he doth make, and at euerie time he doth chayne this apparel, and this apparel that he doth giue, is of greater and lesse value, according to the degré of him that he giueth it vnto. And to euerie one he giueth a girdle, or a payre of hofen, or a haette, garnished wyth golde, and set with pearles and precious stones, according to the degré of the parties: and of this apparell euerie yeare .15000, and thys he doth for to honour and magnifie his feastes. And at euerie fuch feast the gret Cane hath lying at his feete a tame Lyon, vpon a rich Carpet. And the greate Cane is resident, during the fayde thrye moneths, in Camballo, that is to say, December, Januarie, and Februarie. And during the fayd thrye moneths, the whole country thereabout, to fay thirtie dayes journey, is kept for hawking, hunting, and fouling, only for to serve the Courtes, and what they do take and kil, is presented and broughte to the greate Cane Court, and such as dwell further of in other provynces that kill wilde beastes, not able to bee bought to the Court, they do trimme and dresse the skins thereof, and bring them to the Courte for to dresse, make, and trimme armour and munitions, for the wars, which he hath infinite number.

Of the manner the greate Cane doth use in his hunting

CHAPTER 56

His CUBLAY Cane, of greate Cane, hath wyth him two noble men, that be his brethren, the one called BAIAN, and the other MYTGAN, and they be called Cintil, which is as muche to say, as maisters or gouernours of the dogs or Maities of theyr Lords, cyther of these two noble menne, hath tenne thoufand manne all appareled in one livery of whyte and redde, and euerie one of these twentie thoufand manne
hath charge and gouernemente of two Maflyes, or at the leaft one, and when the great Cane wyl go on hunting, thefe two noble men go wyth him with theyr twentye thoufande men, or with the molte parte of them, and fo beginne their hunting with thofe men and dogges, who be wel vfed to it, and the great Cane goeth into the middeft of the fields, hauing his two Lordes with their men and dogges on eche side of him, and diuideth them into companies, in Iuch forte, that there shal no game rife, that shall scape them, what kynde of beaft I fo euuer it bee.

Of the manner of his hauking for wildefoule

CHAPTER 27

[Marsden: Bk. ii. Chs. xvi, xvii (in part). Pasteur: Bk. ii. Ch. xxiv and a few lines from Chs. xcvii and xcvi. Yule: Bk. ii. Ch. xx and a few lines from Chs. xxi and xxii. Benedetto: Ch. xcv and a few lines from Chs. xiv and xvi]

The firft day of March, the great Cane departeth from Cambalu and goeth with his Court and Barons, towards the South seas, named the Ocean, that lyeth two dayes journey from Cambalu, and he carrieth with him ten thoufande Faulcons, five thoufand Gerfaulcons, and other kynde of Haukes a great number, which are very singular and good, above all other, and are bred in his Seniories, and al thofe that they take in his countries are presented to the great Cane, for his own vfe, Court, and Barrons, that alwaies kepe his companie, which are neuer leffe than 15000, and they be called Tusforis, which is as much to fay, as the Lords gard, & all thofe do praftife hauking, and euer one of them doth carry his reclayme or lewer, and haukes hood, that when he hath neede he may take vp his Hauke. They doe neuer leffe one of thefe Faulcons, for euer one of them hath faftned vnto hys Belles a Scutchion of gold, wherein is written the name of hys Mayfter, and when focuer one of the is lofte, he that findeth him ftreightly wayes doeth prefent him vnto the great Cane, or to one of thofe barrs his brethren, and he caueth hym to be deliuered agayne, to him that before had charge of him, for he is known by the Scutchion that the Hauke hath vpon his belles.
Of the manner that the great cane hath in travelling in his country, and how he abydeth in the fields in his tents and paullions

CHAPTER 58

Hen the greate cane maketh any journey in his country, he goeth in a fayre lodge or edification, hauing a verye faire chamber made vpon fourc Elephants, which is couered with the skynnes of Lions, and in this chamber he hath twelue Gerfaulcons, and certain of the Barons in his company to gie him pleasure and pastime: and round about these Elephants there be on horsebacke very many barrons, and as soone as they see anye foule, or Crane fly, they declare it vnto their Lord, and he immediately, letteth these Gerfaulcons flye: and after this fort he goeth through his country; and when the greate cane commeth to any brede and faire fields, which they do call Casianon, which he doth finde ready set with tents and paullions for him and his wifes, and for his children and barrons, and these tentes and paullions, are at the leaft 10000. and the tentes of the great cane are so large, that when they are set vp, there may be vnder and walke at theyr cale 2000. knights, and the entering into them openeth towards the South, and one of the tentes is for the Barons and Knightes that are of the Lordes garde, and in a smaller tente that standeth by it, opening towards the Septentrion, edified wyth faire chambers, wrought all with golde, ordanyned for y great cane where he kerpeth Courtes, and audience to all them that come: and in this tente there be two chambers with faire Halles, and the feelings is sustaine vppon three pillars of a maruellous worke, and are couered with Lions skynnes, and of other beasts, wroughte and painted of diuers colours, so that neyther wind nor raine can enter or passe through, for they are made onely for that purpose: and these chambers and halles, are furred with Ermines and Iebelines or Sables, whiche Sables is so prethis, that on furre for a Knighte are or is worth 2000. Bynancies of gold. All the cordes of these tente are of silke, and these twoo tentes are of suche value, that a meane King though he do fell all his lande, is not able to buy them. And rounde aboute these two tente flande manye other tentes being verye faire, for the Barons, and for the other people, so wel set and ordainde,
that it seemeth to be a great city: and from every place there commeth people to see the mighineffe & pleasure of the great cane. There goeth with the great cane all his court that he keepeth in Cambalu, and in the place he remayneth hunting and hawking vntil al the moneth of April, for there they finde great plentie of wildefoule, for that there be great lakes and riuers. When the great cane goeth on hawking for wildefoule, there may no man hawk nere him, not within twentie dayes iorny, vpon a great penalty. And from the beginning of March vntill October, there is no Baron nor subiecte vnto the great cane, that dare take any wild beast or foule, though there be very great plentie in that countrie, vpon great penalty, and when the time of his hawking is ended, he returneth vnto the citie of Cambalu, hawking by the way, and nere vnto the citie he doth keepe solemn cheare iij. dayes. Within the safte citie they lodge no strangers, nor bury any dead corps. There commeth vnto this citie merchandize from all parts of the world, cloth of gold and of filke, pretious stones and pearles, and great plentie of other notable things to maintaine the magnificence of the great cane's court that he hathe, and for the great estrofe of people that come thither: and this citie is situate in the midde of his provinces and countries.

Of the money that is sted in all that countrie

CHAPTER 39

[Marshop: Bk. n. Ch. xviii. Paushier: Bk. n. Ch. xcv (abridged). Tyse: Bk. n. Ch. xcv (abridged). Banodatto: Ch. xcvi (abridged)]

He great cane causeth his money to be made in this manner, causyn the rine of a mulberry treé to be cut very thynne, whiche is between the vttre rine and the treé, and of this he maketh mony both small and great, whiche some of them is worth halfe an ounce, some an ounce, some ten groats, some twentie, some thirte, and some worth a Bisanco of golde, and some of twooo Bisancos, and fo they rife vntil tenne Bisancios of golde. This money is shaped with the signe of the Lord, & it is currant in all his country, and in all the provinces which are subiecte vnto him, & no man may refuse this mony, for if he do he must leefe his head, & he that doth counterfeit his coin shall be destroyed vnto the third generation. There commeth sometimes vnto the court of Cambalu, Merchants that bring golde and pretious stones for to buy the cloth of golde and filke, and other merchandizes in quantite of three thousand
Bifancios of golde, and many times the greate cane commandeth, that all the golde, filuer, and pretious stones, that may be founde in the Merchants handes, and subiectes of his dominions, shoulde be deliuered to his treasurers, and so they doe, and they be paid for it in this faide money, which is made of the rine of a Mulbery trée, that they may see how all the gold, filuer, pearle & pretious stones is closed vp in his treasury being boughte for this vile money of no value, so that little golde, filuer, pearles and pretious stones commeth out of his country: and after this forte he maketh himselfe the richest Prince of the worlde.

Of the order and rules that he hath in his dominions

CHAPTER 60

He great cane hathte sette tenne Barons or noble men of great estimation to gourerne 64. provinces and countries subiects vnto him, and they ever remaine in hys Cite imperial of Cambalu, and these tenne Barons doe appoynt Judges, and Notaries ouer the Countries that are vnder their guiding, of the which every one of them doth exercise his office in the country that he hath charge of, and these Judges remaine also in the Cite of Cambalu, vnder the obedience of those Barons. These tenne Barons do constitute gouernours and officers through the all the Countries, and doe chaunge them when they like, and when they haue putte them in the roome, they doe present them before the great cane, and hee doeth accepte them, and giueth them Tables of Golde, and by writing the order howe to vfe themselfes: and these gouernours and officers doe giue them knowledge by letters and messengers vnto the Judges which are deputies ouer them, and those Judges doe notifie all things vnto those ten Barons, and they do make declaration of it vnto the great cane, so that after this manner, he knoweth what is done in hys Countries, and prouideth for all things necessarie.
Of the saide order

CHAPTER 61

Here ten Barons are called senich, which is to say, the principalles of the Court: and these doe prouide for the preseruation of the great canes etale, and they do ordain his warres and hofles, and Knightes, and they doe treate and make peace betwene the Lordes, and they doe make prouision in euery manner of thing that toucheth their Lordes estate, and to all his dominions, but they lette nothing passe, untill suche time as their Lorde do vnderstande it.

Of the Citie Cambalu

CHAPTER 62

He Citie of Cambalu hath manye outhettes and gates, that thoroughgoe them they maye goe vnto diuers prouinces and countries, & when they goe from thence, for to goe vnto Cataya, they finde a great mountaine, where there is lyk blacke stones, & they burne lyke wood, when they be well kindled they will keep a fire from one day to another, which I suppose be of the nature of oure Sea-coles, and they do burne of them in that Country, though they haue woodde, but the woodde is more dearer than are the stones or sea-coales.

Of the meruailous things that be founde in that countrey

CHAPTER 63

He great cane sent me Marcus Paulus as his Embassador towards the Occident or Westwarde, in the which message I was fourtenee moneths, from the time that I went from Cambalu. And here I will declare to you of the meruailous things that I saw with mine owne eies, aswel at my going outwards, as at my commyng homewardes, as that at my
going for Cambalu, and taking my journey towards the Occident or
Westward. And after that I had gone ten times journey, I
found a very great river which is called Polusfanguis, and
runneth his course into the Ocean sea. Upon this river there is a bridge, the fayrest in the
world, it hath three hundred paces of length, and eighteen paces of breadth, so
that there may goe tenne menne in a rancke on horsebacke. This
Bridge hath the four and twenty arches of Marble, very artificially wroughte,
at the head of this Bridge at one side standeth a Pillar being very
greate of Marble, hauing a Lion standing on the toppe, and an other
Lion at the neather ende, being very liuely made, and a pace and a halfe
distant, from that standeth another like unto it, and so orderly standeth
one by another, till you come unto the further ende of the bridge, so there
is on eche side of the bridge two hundred pillers, and in the middes of
every piller, there is made Images of men very artificially.

Of the Citie named Goygu, and of
many meruellous things

CHAPTER 64

Rom this Bridge you shall goe tenne miles throughe fields full of
Vines, & very faire palaces: at ye ten miles end, there is a Citie
named Goygu, it is very great & faire, in it there standeth a great
Abby of Idolatry. The people of this Country liue vpon mer-
chaundize, and be artificers, for they do make great plentie of cloth of
gold and filke. Also there is plentie of lodgings for those that do tranaille,
and come thither out of other places.

Of the way that goeth vnto the
Countrey of the Magos

CHAPTER 65

Oyng from this Citie almoast a mile, there parteth two wayes,
the one goeth vnto the Occident or Weast, and the other goeth
towards the Siroes. The waye whiche goeth vnto the Occident
or Weaste, leadeth vnto the Ocean Sea towards the high
THE EAST PARTES, ETC.

Countrey of the magos, and you may travaile throughe the province of Cataya tenne dayes journey, in the whiche waye there is many Cities and Townes.

Of the Citie named Tarafu

CHAPTER 66

Fir you do goe from the Cittie of Caynu travailling ten dayes journey, you come vnto a Cittie named Tarafu, whiche is the heade Cittie of that countrie or province, where there is plentie of vynes & muche wine, and there they doe make muche armoure for the greate canes Court. In the Countrie of Cataya, there is no wine, for they prouide themselues of wine out of this region.

Of the Citie named Paimphu

CHAPTER 67

[Marsden: Bk. ii. Chs. xxxix, xxx (cont.). Pauuiller: Bk. ii. Ch. cvi (cont.). Tule: Bk. ii. Ch. xxxvii (cont.). Benedetto: Ch. cviii (cont.)]

Raveling from thence towards the Occident or West eighte dayes journe throughe fayre Cities and Townes, wherein they doe traffike Merchandizes, at the eyght dayes journe you shall come vnto a very gret and fayre Cittie whiche is named Paimphu, and going twoo dayes journe beyonde it, you shall come vnto a fayre Towne named Caychin, whiche was made by their King.

Of a King named Bur

CHAPTER 68

His Bur warred a long time with Prester John, & he could not haue anye vantage of him, but at laste Prester John gott him by a traine after this sorte: Scawen yong Gentlemen of Prester Johns Courte went from him with his licéce, and came to the Court of this king Bur, shewing as though they had departed from
PRESTER IOHNN in great displeasure, & so offered themselves to ferue the said King Bur, who retained them as squires and pages in his Courte, and after they had been with him two yeares, having great confidence and trute in them, thys King Bur on a tyme roade abroade for his pleasure, and taking with him the faide feauen Gentlemen, and being the distance of a mule from his Castell, perceiving they had him now at advantage to execute their purpose, tooke him, and carried him to PRESTER IOHNN, and PRESTER IOHNN made him his sheepehearde, and kept his sheepe two yeares, and afterwardes gaue him horles and menne, and sent him to his Castell as his sheepehearde.

Of the Citie named Cassomphur

CHAPTER 69

Eyond this castel twentie miles towards the Occident, there standeth a great Citie named Cassomphur, and the people of it worship Idolles. The like doe all those of the Countrey of Cataya. In this Citie there is made muche cloth of golde and of filke.

Of the Citie named Bengomphus, and of many things that there is found in those parties

CHAPTER 70

Going from Cassomphur eight days journey towards the Occident, you shall goe always by great Cities and faire Townes, and excellent places, with goodlie and faire Gardens, with principal houses; there is great plente of wilde beasts and foules, for hunting and hauking, and at the ende of these eight days journey, there standeth a faire Citie which is called Bengomphus, and is the head Citie of that realme. There is in this Citie as king, one of the great canes sones, who is called MAGALA. The people of this Realme are Idolatours. This Citie hath plente of all things, and without this Citie standeth the pallace royall of the king, the which with the Wal of the Citie is tenne myle compassed. In this Citie there is a lake made of many fountaines, that runneth and
Of the province named Chinchy

CHAPTER 71

Oing from thys pallece towards the Occident three dayes iourney, you come vnto a playne full of faire Cities and townes, and at this three dayes iournyes ende, there bee greate mountaines and valleis belonging to the province of Chinchy, in these mountains and valleys there be many Cities and townes, and all the people there are Idolaters, husbandmen, and hunters. This iourney endureth twentie dayes, there be in it manye Lions, and plentie of other wilde beastes, and in all these twentie dayes iourney there is plentie of lodging for those that doe travell.

Of the Countrey and Citie called Cineleth Mangi, and many other things which be founde there

CHAPTER 72

At the end of twentie dayes iourney landeth a Citie named Cineleth, a noble and a greate Citie, and under the obedience of this Citie there be many Cities & townes toward the Occident. The people of this Countrey are Idolatours, they haue great trade of Merchandize. In this countrey there is plentie of Ginger, and from thence the Merchants do carrie it vnto Cataya. Also there is aboundance of wheate and other graine. This countrey is called Cineleth Mangi, and it hath two dayes iournye of plaine countrey, Beyond this countrey, there be great playnes and valleys & mountaines, being greatly inhabited with Cities and townees, for the space of twentie dayes iournye, where there be many Lions and beares, besides other wilde beastes, Also there is greate plentie of Musk cats, and other noble and faire beastes.
A DISCOUERIE OF
Of the countrey and Citie named Cindarifa,
and of a maruellous bridge

CHAPTER 73

After you haue gone these twentye dayes ioyrnynge, you come
vynto a great plain, being of the countrey named Cindarifa,
wich is twenty miles compass, and the great cane before
he did, diuided it into three partes, & al three parts
be strongly walled rounde about. Through the middest of
this countrey runneth a great riner, which is called Champhu,
half a mile bronde. There is in this riner plentie of fish, and there is
scituated vpon this riner many Citie and townes: alle by shipping vpon
this riner they fayle from Citie to Citie, with all kind of Merchaundizes.
From the beginning and heade of this riner, vntill the entring into the
maine sea, there is thirtie dayes ioyrnynge, and the chiefe Citie of this
countrie is named Sindarifa. From this citie over the riner, there is a
bridge of a mile long, and eight paces bronde, made of marable stone,
and cowered with timber of Pineapple treee, verye fayre. On the sides of this
bridge, there be houfes and shops for Merchaunte, and of diuerse occupa-
cions, and at the foote of this bridge there standeth a cuytome houfe,
very faire made, where they do gather their Lords cuytomes, and euer
daye they receiue tenne thousande Bifancias of God. The people of this
countrie are Idolatours.

Of the prouince named Cheleth

CHAPTER 74

Going from this countrey, you shal trauell through a faire
plaine countrie, ful of many townes and Citiees, it inuredeth
five dayes ioyrnynge, and then you shal come vnto a prouince,
wich is called Cheleth, which was destroyed by the great
cane. In this prouince there bee Canes which are called
Berganemos of fiftene paces long, and tenne spannes in compass,
very one of them, and they haue from the one knot to the other three spans.
The trauellours make fire with these Canes, for they haue this propertie, that
as soone as they felle the heate of the fire, they glie fuch a great cracke, that
the found is harde many miles off, and the Lyons and wilde beastes that are thereabouts, be so fearfull of that noyse, that they do run away, and do no hurt vnto those that trauell, and the horſes that the trauellours doe ride on, haue so much fear of that noyse, being not vſed vnto it, that they breake theyr bryles and haulters, and runne away, so that sometymes they cannot finde them againe, therefore those that trauell, doe tye their horſes and Asses in certayne holes or Caves that they finde in the Mountaines. This countrey is twentie dayes iournye long, where they finde nothing to eate, nor yet to drinke, nor no habitation, therfore those that trauell that way do carrie prouifion for those twenty daies iournye, whiche they do paffe with great feare and trauell.

Of the Prouince named Thebet, and of the maruellous beaftlineſſe and filthie liuing of the people there

CHAPTER 75

[Marston: Bk. ii. Cha. xxxvi: (last 7 lines), xxxvii (in part). Panthier: Bk. ii. Cha. cxiii (last 7 lines), cxiv. Tacle: Bk. ii. Cha. xli (last 5 lines), xlv. Benegetto: Cha. cxv (last 5 lines), cxvi (All continued)]

But these twenty dayes iournyes end, you come vnto a Prouince or Countrey, that is full of Cities and Townes. And the custome in this Countrey is, that none dothe marrie with maydes nor virgins, but that first she must be known carnally of many men, and specially of strangers. And for this occasion, when the mothers meane to marrie anie of their damfels, the mother dothe carrie them neere the high way side, and with mirth and chere procureth those that do trauell, to sleepe with hir, and sometymes there lyeth with hir ten, and with some other twenty. And when the stranger or traueller goeth his wayes from any suche Damſell, here must leaue vnto hir some iewell, the whiche iewell, the faide damſels or wenches do hang at their neckes, in token and signe that they haue loft their virginitiſ with strangers. And she that hath vſed hir selfe with moste strangers, it shall be known by the most quantitie of iewnels that she weareth aboute hir necke, and the most sooneſt shall finde a mariage, and shall be most prayed and loued of hir husband. And those of this prouince are Idolaters, euill men, cruell, and robbers. In this Countrey there be manye wilde beastes, and specially of Mufkettes. All those of this Countrey doe weare Canuas, and Cowhydes, and the skynnes of wilde beastes, whiche they do take in hunting. This Countrey is named Thebethe, and is adioynyng vnto the Prouince of Magy.
Of the Prouince and Countrey named Maugi

CHAPTER 76

Maugi is a great prouince and Countrey, and it hath vnder it eyghte Kingdome and Riuers, and in the same there is found much gold of Payulfa. And they doe vfe money made of Currall, and the Currall is there very deere, for that the women doe vfe to weare it about their neckes, and doe decke their Idols with it. In this Countrey they doe worke cloth of gold and filke, and of Chamlet great plenty. Alfo, there groweth much spicce. Alfo, there be manye Negromancers, Astronomers, Inchaters, and euill disposed men. Alfo, there be in this Countrey Mastsies as bigge as Affes, and the people be subjicets to the great Cane.

Of the Prouince and Countrey named Candone, and of the iewels that grow there, and of the beastly conditions of the people

CHAPTER 77

Andone is a Countrey that lyeth towards the Occident, and it hath vnder it seauen Kingdomes of Idolaters, subiectes vnder the greate Cane. In this Countrey there be many Cities, Townes, and Villages. And in one place of this Countrey, there is greate plenty of Pearles and precious stones, but the greate Cane doth not suffer them to be had out. And in the Mountaynes in this Countrey there be fould many Turques and they may not be had out of the Countrey, without expresse licence of the greate Cane. Alfo, the custome of the people in this Countrey is, that as soone as there commeth a stranger to lodge in his house, the good man goeth out, commanading his wife, children, and seruantes to obey that Stranger, as his owne proper person, and hee never commeth home vnto his owne house, vntill he knoweth that the Stranger is gone from his house, and he knoweth it by a signe and a token that the Stranger doth leaue at his going at the dore. And when the good man sypeth the signe or token, he entreteth into hys house. This vfe they doe
kkepe thorough all that Countrey, and take it for no shame, although the Strangers do vide their wiues. But rather they doe take it in greate honor and estimation, that they do so well enterthe, and theyr Idols tell them, for that they doe honoure the Strangers, their Gods do encrease their substance. The people of this Countrey do vide money made of gold, that every peice is worth 7. Duckes. In this province and Countrey there is great plenty of all kinds of spice and muske, and great plenty of fishe, by reason of the great lakes and pooles that be there.

Of another Province, where there is found gold and other things

CHAPTER 78

[Macellus: Bk. ii. Ch. xxxviii (cont.). Panthier: Bk. ii. Ch. cxvi (cont.).
Dale: Bk. ii. Ch. xlvii (cont.). Benedicto: Ch. cxxviii (cont.).]

Going out of the forefaid province, and trauelling tenne dayes journey through a Countrey full of Cities and Townes, and very much people, seming much in their vide and custome, vnto those of the laft rehearsed Countrey. And at the tenne dayes journeys end, you come vnto a greate Riuere, which is named Brus, at the which endeth the Countrey and province named Candew. In this Riuere there is founde great plentie of gold. And fast by this riuere groweth very much Ginger. And thyse Riuere falleth into the Ocean Sea.

Of the Province named Caraya

CHAPTER 79

Benedetto: Ch. cxxix]

Eyonde this Riuere you come vnto a Province named Caraya towards the occident. In this Countrey there be seauen Kingdomes, subiectes vnder the greate cane. Here reigneth one of the greate canes, named Esentemur, being rich, wise, and a valiant man, and governeth his subiectes with great prudence and iustice. These people be Idolaters. And after that you have passe the saide Riuere, and trauelling nine dayes journey, there be many Cities and Townes, and there is brought vp and bredde great plentie of Horles.
Of the Province named Ioci, and of their beastly customes

CHAPTER 80

At the dayes iournys end, you come vnto a Citie which is named Ioci, and is verye great and full of people Idolaters, sauing that there be some Chriustian people Heretikes Neftorians. They do vse for their money fine thelles white, which are founde in the Sea, and fourecore of them are worth a Sazo of gold, whyche is worth two grotes of golde. And eght Sazos of siluer, which is an ounce, and is worth a Sazo of golde. There they do make Sault of the water of Welles great pléty. And in this Countrey no man careth though another man have to do with his wife. There is a Lake in this Province, hauing in compassle a hundred miles. Therein is plentie of excellent good fish. The people of this Countrey do eate rawe fish after this manner. They cut it in small pieces, and fauce it with Garlike and spices, which giueth them a good taste vnto the flesh.

Of the Province named Chariar, and of the strange Serpents that be there

CHAPTER 81

Going from this Province Ioci, and trauelling tenne dayes iourny, you come vnto another Province named Chariar, subiect vnto the greate Cane, and it is full of people of Idolaters, and one of {great} canes fomes named Cho-cayo, ruleth and gouerneth them. And in this Countrey there is found great plentie of gold. And a Sazo of golde goeth there for five of siluer. And they doe vse in this Countrey little white thelles of the Sea, in stead of money, which is broughte from India. In this Province there be certayne Serpents of tenne paces in length, and their gaine is folde very deere, for they do vse it in manye medicines: for if a man shoulde be bitte with a madde Dogge, laying vppon the fore so muche quantitie of that gaule as will lyne vppon a farthing, it healeth it immediately. Also, it caeleth a woman of hir pangs, that is in trauell.
The men of this Country are peruerse people, and cruel, for if they do see anye travellers that are prudente and faire, they do marke where the night doth take them, and thither they come and kill them, sayinge, that the faireneffe and prudence of the dead, doth passe vnto them, and therefore they do kill them, and not for to rob them. This peruerse custome was among them before they became vnder the great Cane. But .95. yeares hitherto that they were vnder the great Cane, they dare not doe anye such thing, and therefore become a greate deale better people, and of a better disposition.

Of the Province named Cingu, and of many things that be there, and of the City named Caucafu

CHAPTER 82

After that a man departeth from Chariar, he goeth five dayes journey towards the Occident, and commeth to another Province named Noctem, and also the City named Nociam, which is the head of this Province, and it is under the great Cane. All the men of this Province have their teeth couered with golde. And the women do dreffe their Horfes. The men doe no other thing, but goe on Hunting, passing the time in the fields, and goe vnto the warre. The women doe buy and sell, and do all things necessarie belonging to the houfe, and gouerne all the goodes, and their men and women Seruantes. Ouer and aboue this, the women of this Countrey haue this custome, that as she is deliuered of childe, the rifeth and wrappeth the childe, and doth all things belonging to the houfe, and receueth no more payne, than though she had not bin deliuered of childe, but in giving the childe sucke, and as soone as she is deliuered, the husband lyeth in the bedde, laying the childe by hym, as though he had borne it himselfe, for the space of fortye dayes, and the woman doth the ferue him. He is visited of the kinsmen and friends & neyghbours, as though he had bin deliuered himselfe, making great feaftes for the space of thirtie dayes. In this Country they doe giue a Sazo of golde, which is an ounce, for fyue Sazos of Siluer, being fyue ounces. Also, they doe vfe Persioulas, beeyng little shelles of the Sea, whiche come from India, in stead of money. These people haue no Idols, but every householde worshippeth theire Superior and Mayfter. None
of them can write nor reade, for that they dwell among the moyst Mountaines, corrupted with euill ayres. In thyse Provinces, and in the other two afore specified, there be no Phisitions, but when they doe fall sicke, they caufe to come vnto their house certayne Minifters, which vfe inchantmenstes by the power of the Diuell, and declare the sickness that the diseased hath, and these Minifters founde their instrumentes in honor of theyr Idols, in so muche that the Deuill entereth into one of theys Minifters, Inchanters, or Idols, and falleth downe as though hee were dead, and theys Minifters, or Mayfters of the Idols, demaund of hym that lyeth inchantet, or in a trance, wherefore that man fell sicke, and hee aunswereth, for that he hath angered suche or suche an Idoll, and then theys Mayfters or Minifters of the Idols fayse vnto him that is inchantet, we request thc to pray vnto that Idoll that is angrie wyth the sicke bodye, to pardon hym, and wyll make hym Sacrifice with hys owne bloud. And if hee that is in thyse trance, doe beléeue that the diseafe is mortall, hee aunswereth, thyse sicke man hatho displease the Idoll, that I knowe not whether he will pardon hym or not, for that hee hath determined that he shoulde dye, and if he thinke that he shall escape hee layeth, it hee wyll lyue, it behoueth hym to gyue vnto the Idoll fo manye Sheepe that haue bake neckes, and to dresse fo manye fortes of meetes dressed with spices, sufficient to make the sacrificces vnto the Idoll that is angry with him, and for the minifters that servet hym, and for the women that servet in his temple, which is all fraude and guile of the enchanters for to gette victualls, by this means all are dammed vnto Hell. To this banket there is committet the maifters and minifters of the Idols, the enchanters and women that servet in y temple of that Idoll. And before they sitte downe to the Table, they doe sprinkle the broath aboute the house, singing and dauning in the honor of that Idoll. And they doe after the Idoll, if he haue forgien the sicke man. And sometimes the Feende aunswereth, that there lacketh such or such a thing, which immediately they do prouide: and when he aunswereth that he is pardoned, then they do sitte downe to eate and to drinke that sacrificce which is drest with spices, and this done, they go vnto his house with great joy. If the paciente heale, it is good for him, but if he dye, it is an everlafting payne for him, and if he recouer, they do beléeue that the diuellishe Idol hath healed him, and if he die, they say that the caufe of his death was for the greete offence that he had done vnto him, and so they be lost as brute beasts in all that Countrey.
Of another Prouince named Machay where there be Vunicornes, Elephants, and wilde Bestes, with many other strange things

CHAPTER 83

[Maridin: Bk. ii. Ch. xlix and a few lines in the middle of Ch. xxx. Pauthier: Bk. ii. Ch. cxxxix and a few lines in the middle of Ch. xxx. Vulc: Bk. ii. Ch. lxx and a few lines in the middle of Ch. lxxi. Benedetto: Ch. cxxxi and a few lines in the middle of Ch. cxxx.

Oing from the Prouince of Chartian, you go downe a greate penet or hill, whiche endureth two dayes journey, without any habitation, sauing one towne, where they doe keepe holyday thre dayes in the weke. There they doe take a Sazo of golde for fyue of siluer. And paft these two dayes journey, you doe come vnto the prouince named Machay whyche lyeth towards the midde daye or South, adioynynge vnto the Indias, and through this prouince you trauell fiftene dayes journey, through deffete mountaines, where there be many Elephants, and other wilde bestes, for that the countrey is not inhabited. Also there is found Vunicornes. When they wil take any Elephant, they do compass him with dogges, and so they do hunt him, that they make him weare, and so he is faine to rest for weareneffe, and his resting is, leaning vnto a great tre, for that he hath no lyntes in his knes, so that he can not lye downe nor rife vp. The Maffies dare not come neare him, but barke at him aloofe, & the Elephante hath neuer his eye off those Maffes, and then those that be expert and hunt him, hurle Dartes, and so kil him. In this countrey is much gold and silke.

Of a prouince named Cinguy, and of the Citie named Cancafu

CHAPTER 84

Eyond this prouince Machay, there is another prouince named Cinguy, and trauelling four dayes jouruie in it, you passe manye Cities and townes, and at these four daies iouruies ende, standeth a greate Citie named Cancafu, being verye noble, sitted towards the
mydday or South, and this is of the freight of Cataya. In thys Citie there is wroughte cloth of Golde, and silke greate plentie.

Of the Citie named Cianglu

CHAPTER 85

From this Citie travelling five dayes journey, you come unto another Citie named Cianglu, which is very noble and great, situated towards the midday, or south, and it is of the freight of Cataya, here is made greate plentie of fafe: and there runneth through this countrey a very great riuere, that vp and down this riuere there trauell many ships with merchandifce.

Of the Citie named Candrafræ, and of
the Citie named Singymata

CHAPTER 86

Sixe dayes journey beyonde the Citie named Cianglu, towards the midday or south, you come unto a Citie named Candrafræ, which had vnder it before the greate cane did conquere it, twelue Cities. In the counteries aboute this Citie there be faire Gardens, and good grounde for corne and silke, and beyonde this Citie three dayes journey towards the midday, or south, there standeth a Fayre Citie named Singymata, which hath a great riuere that the Citizens made in two parts, the one way runneth towards the easte, and the other towards the Occident, or Weaft through Cataya, and yppon this riuere there fayle shippes with Merchaundifces in number incredible.
Of the Riuier Coromoran, and of the Citie Choygamum, and of another Citie named Cayni

CHAPTER 87

Oing from Singuywata seuenteen dayes iourney towards the midday or southe, you passe throughge manye Cities and townes, in the which there is greate traffique of Merchandisse. The people of this countrey are subiectes under the greate cane. Their language is Perfan, and they do honour Idols. At the seuenteen dayes journeys ende, there is a greate riuer that commeth from the Countrey of prester John, which is named Coromoran, hauing a myle in brede, and it is so deepe, that there may fayle any great vessel laden with Merchandisse. Vpon this riuer the great cane hath fiftenee great ships for to passe his people vnto his Idols, that are in the Ocean seas, everie shipp of these hath fiftenee horses, and fiftenee mariners, and al victuals necessarie. Vpon this riuer there fladeth two Cities, one on the one fide, and the other one the other. The biggest of them is named Choyganguy, and the other Caycu and they be both a dayes iourney from the sea.

Of the noble provinice named Mangi, and of many maruellous things that were there, and how it was brought vnder the great canes gouernance

CHAPTER 88 [88]

Assing the faide riuer, you enter into the provinice of Mangi, where reigneth a king named Fugusur, of more power and riches than any King in the worlde sauing the great cane. In this realme there be no men of warre, nor horses for the wars, for it is situate strongly, in a place compassed rounde about with many waters. And rounde about his Cities and townes, there be verye deepe ditches and caues, being brode and full of water. The people of this countrey are giuen to feebleneesse, they do liue delicately; if they were giuen to warres, and feats of armes, all the worlde
could not conquere the province of Mangi. This king of Mangi was very
leachorous, but hee had in himselfe two good properties, the one was, that
he maintayned his realme in great iustice and peace, that every one re-
mayned in his place, and both day and nighte you might traffique and
trauell surelye; the other property was, that he was verye pitifull, and did
greate almes vnto the poore, and euery yeare he brought vpp twentye
poore striplings, and he gaue them as fonnes and heires vnto his Barrons
and knightes. In his Courte he hadde alwayes tenne thousande Squires
that servede hym. It fortuned that in the yeare of our Lord 1267, CUBLAY-
cane got perforce the countrey of Mangi, and the sayde king of this
province fledde with 10000 shippes vnto his Ilandes that were in the
Ocean Seas. He lefte the principall Citie of his province Mangi named
Gaillyunder the guidyng of his Queene, and when she knew that there
was entred into hir lande BAYLAINCON CAN a Tartarous name, which
is as much to say in English, as a hundredth eye, a Captaine belonging
to the greate CANE with a greate hoste, and so without any resistance,
he submitted hir selfe with all hir country, and al the cities fauing one named
SINPHU, which kepte it selfe three yeares before it yielded. Thys Queene
was carried vnto the greate CANES Courte and kepte like a Queene, and
the King FUCUSUR came not out of thosse Ilandes vntill he died, being
out of his feigniorie.

Of the Citie named Coygangui, and
many other thyngs

CHAPTER 94 [89]

Ere I will tell you of the fashion and condition of this faide
province Mangi. The first Citie at the entring is named
Coygangui, which is a greate and a noble Citie feituated
towards the wind SYRICO or East southeaste. The people of
this Citie doe worship the Idolles, and haue the Perfian
tongue. They haue many shippes, and burne their dead
bodies. This citie standeth vppon the riuer COROMORAN. In this Citie they
make fo muche salte as woulde suffice for fourtie great cities, and of the
abundance of thys salte, there groweth greate profits vnto the greate
CANE.
Of the noble Citie named Pangui, and of another Citie named Cayn

CHAPTER 92 [90]

[Marchant: Bk. II. Chs. LVII, LVIII. Pouteir: Bk. II. Chs. CXI, CXII. Fule: Bk. II. Ch. LXVII. Benedetto: Chs. CXIII, CXIII]

Affynge from Cayganguie towards the winde Siroco, which bloweth betwene Leuant and the midday, which we call Easte Southeaste, you trauaile vpon a fayre Shoneye Cawley well made. It beginneth at the entring of Mangi, and there be very depe waters on ech side of the cawley. In this country of Mangi there is a citie named Pangui, very faire, and of greate magnificence. In this province they doe vse that money that the greate Cane doeth vse in his countrie, and here is greate scarcitie of corne, and of al things else that sufficeneth the body. And at another iorneries end towards Siroco there standeth another noble and greate citie named Cayn, and all the inhabitants are Idolaters, and there is abundance of fishe and beasts, and wild-foule, so that there is boughte thre good Fesants for the value of fife pence.

Of the Citie named Tingui

CHAPTER 93 [91]

[Marchant: Bk. II. Ch. LX. Pouteir: Bk. II. Ch. CXIII. Fule: Bk. II. Ch. LXVII (first half). Benedetto: Ch. CXIV]

Dayes iorner beyonde Cayn you shal find fayre villages, and eared grounde, and so you come vnto the grounde of Tingui, plentiful of Wheate, and of al things necessayre for shipping. The people of this countrey doe honour the Idolles, and thre dayes iorner from this Citie you come vnto the Ocean Sea: and at the sea side there is greate plentie of salt.
Of the Citie named Mangui, whiche haue vnder their
Lordship feuenteene Cities, and of an other Citie named
Saimphu which hath vnder it twelue Cities

CHAPTER 94 [92]

Benetett: Ch. cxlv]

Beyond Tinguy a dayes iorney towards the winde Siroco you
come vnto a faire Countrie, and at the ende of it standeth a
Citie named Manguy very fayre and greate, and there they
honour the Idolles, and speake the Persian tong. This Citie
hathe vnder it feuenteene Cities, and I Marcus Paulus
did gouerne this vnder the great cane three yeares. Toward the Occident or West standeth a province or Citie named Manguy,
where they doe make greate plentie of cloth of Golde and filke. Also
there is greate plentie of corne, and of all manner of victualles. And
beyonde this Citie standeth the Citie of Saimphu which hath vnder it
twelue Cities, whiche is the Citie that refisstt it felle agaynst the power
of the greate cane the space of three yeares.

Howe this province was wonne.
by the great cane

CHAPTER 93

Tule: Bk. ii. Ch. lxx (abridged). Benetett: Ch. cxlvii (abridged)]

After that the great cane had wonne the province of Mangi,
conquested by induftry and counsell of Nicholao and
Mathio and Marcus Paulus, as nowe you shall perceiue
in this present chapter: From the houfe of the greate cane
I write vnto the greate cane, that that province by no
manner of way could be wonne or taken, of the whiche
newes the greate cane was fore abalshed, and we perceyuing his haunineffe,
wee went vnto hym and sayde: Potentiffmo and mightie Lord, receiue you
no conceite nor haunineffe, for wee wil haue suche means, that this province
shall come into youre hands: who being comforted withoure
promis, gaue vs full power and libertie to doe all those things that vnto
vs shoulde seeme befte, and that we shoulde be obeyed as to his owne
proper person. And then I MARCUS PAULUS took upon mee this charge, and gathered together certaine VENETIANS that I founde in those Countries, being discreet menne, and exercised in seate of armes, and I caused to be made three greate Trabuco or greate pieces of ordinaunce, which shotte a pellet of a thousande pounde weighte, and hadde them vnto the campe, and planted them where they should be shotte off, and this done, by the meanes of these pieces I shotte into the Citie greate pellettes, and when those of the Citie saw their houses fall about their eares, by suche meanes as they never saw nor heard of before, they receyued great feare, and immediately they yielded themselves vnto the great CANE.

Of the Citie named Singuy, and of many other things

CHAPTER 94

Tate: Bk. ii. Ch. lxxvii (abridged). Benedetto: Ch. cxxxviii (abridged)]

Oyng from Siamphu, and traulling fiftene dayes journe towards Syria, or to the Easte southeaste, you come vnto the Citie named Singuy, whereunto belongeth a great number of shippes: and this Citie is situated vpon the greatest river of the world named Tuogurou which is 17. miles in breadth, and one hundred dayes iorncie in length, and there is neuer a river in the worlde, where there playeth fo manye shippes with Merchandizes, as there. And I MARCUS PAULUS was in this Citie, and did tell standing vpon a bridge at one time fiue thousande shippes or barkes that failed vpone this river, and vpone this river there standeth two hundred Cities, being greater than this that we have spoken of. Thys river passeth through sixe fiftene provinces.
A DISCOURSIE OF

Of the Citie named Cianguy

CHAPTER 96

[Marston: Bk. II. Ch. cxxv. Pauthier: Bk. II. Ch. cxlvii. Tule: Bk. II. Ch. cxxii. Benedetto: Ch. cxlii.]

Cianguy is a small Citie standing vpon the saide riuere, it hath nothing vnder it but good ground, where they do gather plentie of corne, and rice, which is caried vnto Cambalu, that the great Cane may have greate plentie of victualls in his Courte. This Citie standeth towards the Siroco, and they doe carry this proviision vnto Cambalu vpon this riuere, and not by sea. Therefore there commeth through this riuere greate profite vnto Cambalu, for it is better provided with barkes than with cartes, or horfes.

Of the Citie named Pingramphu, and of many other things that be in that Countrey

CHAPTER 98 [96]

Pingramphu is a Citie of the province Mangi, in the which there is two churches of Christians Nestorians, edified by MARSAR CONOSTOR, which was Lord of that Citie vnder the greate Cane, and it was in the yeare of our Lord 1288. Whē you do go from Pingramphu, you goe three dayes iournye against Solano, which is East and by South, through manyCities and Townes, where there is traffiqued muche merchaudizes, and many artes. At these three dayes journeys ende standeth the citie of Tigningai, greate, riche, and abundant of all things to line vpon, and alfo of Wine. On a time certaine Christiān men named ALanos tooke this citie, and that nighte they drunke so muche wine, that they were all drunke, and slepte like dogges al that nighte, and the Citizens perceynynge that they were all alleepe, killed them, and BARAYN King of these ALanos, afoone as he knewe this, gathered a great hoste, and went against thys citie, and tooke it perforce, and causd to be killed all those that he found in the citie, men, women and children, small and grete, in the renewing of his Christiāns.
Of the Citie named Singuy, and of many other things there

CHAPTER 97 [97]

[Marsden: Bk. II. Ch. 1xvii (in part). Paulhier: Bk. II. Ch. ci. (in part),
Ticle: Bk. II. Ch. 1xxv (in part). Benedetto: Ch. clxii (in part)]

Singuy is a very great and a noble citie whiche is .40. miles in compass. There is in this citie people innumerable, where you may beleue, that if the people of Mangi were exercised in the feate of warre, all the worlde could not winne it, but they be all Philosophers, Philisitions, Merchants and Artificers, very cunning in all artes. There be in this Citie 7000. bridges of stone, very faire wroughthe, and under any of these bridges there may rowe a Galley, and under some twoo Galleys maye rowe together. In the mountaines of this Citie groweth Rewbarbe greate plentie, and so mucho Ginger, that for five pence they doe give more than five pound of Ginger. Under this Citie there be .17. Cities greate and saffre. In this Citie they do worke greate plentie of cloth of golde & filke, for that the Citizens there delighte mucho to weare suche cloth, and of many colours.

Of the Citie named Quinsay, that is to saie, the Citie of Heauen, which is a hundred miles in compass, having twelue thousand Bridges, and fourtene Bathes, and many other things of wonder

CHAPTER 97 [98]

[Marsden: Bk. II. Ch. 1xviii. Sect. v, vi, vii, viii (in part). Paulhier: Bk. II. Ch. clxii,
Ticle: Bk. II. Ch. 1xxvi. Benedetto: Ch. clxiii]

Quinsay.

Oing from Singuy, and traueling fuye dayes iournye, you come ynto a noble and famous Citie named Quinsay, that is to say, the citie of Heauen. This is the noblest Citie of the worlde, and the headie Citie of the province of Mangi. And I Marcus Paulus was in this citie, and did learn the curiomes of it, and it was declared ynto me, that it was one hundred miles in compass, and 12000. bridges of stone with vaultes and
arches so highe, that a greate shippe mighte passe vnder, and this Citie standeth vppon the water as Venice doth, and the people of this citie euery one of them must vse the science of his fathers, and of his predecessors. In this Citie there standeth a lake whiche is in compasse thyrtie myles, and in this lake there is builte the fairest Pallaces that euer I saw: And in the mids of this lake standeth two Pallaces wherein they do celebrate all the weddings of that Citie, and euer there remayneth within them all the things necessarie whiche belong vnto the weddings. Also there is round aboute this Citie other Cities, but they be small ones. In this Citie they doe vse money of Tartaria, to wit of a Mulbery tree, as it is vfed in the great Caines Court, and as it is afore mentioned. Vpon euerye one of these 120000 bridges of stone, continually there standeth watch and warde, bycause there shall be no euill done, and that the Citie doe not rebell. In this citie there is an highe mountaine, and vppon it there standeth a very highe Tower, and vppon it there is a thing to sounde vppon, and it is founded when there is anye fyre or anye rumour in the Country. There is in this citie fourteeene Bathes: and the great Cane hath great watch and ward in this Citie.

Of the Citie named Gansu

CHAPTER 99

Yule: Bk. ii. Ch. lxxxvi. Benedetto: Ch. clvi. (All continued)]

Eyonde Quinse highe myles, bordereth the Ocean sea between east and North, and there standeth a Citie named Gansu, which hath a faire porte or hauen, and thither come many ships out of the Indias: betwixt the Citie and the Sea, runneth a great river, that paffeth through many countries, and out that way there go many ships vnto the sea.
The province Mangi was divided into 8. kingdoms, by the great cane, and of every kingdom there is about 1,400 cities under a king. There is in all the province of Mangi 1,202 cities obedient unto the great cane, and all those which be borne in this province of Mangi, are written by days and hours, that the province may know the number of its people, and that they may not rebel. When they do go on any journey, they consult with the Astrologers, and when any diet, the parents do cloth the dead in Canons, and burn the bodies with papers, whereupon is painted, mony, horfes, flaues, beastes for their house, apparell, wyth all other things, for they doe fayre that the dead seeth all this in the other world, and that with the smoke of the dead body, and of those papers, whereon there is painted all those things rehearsed, believing, that it goeth all with him, into the other world, and when they burne those bodies, they sing and playe vpon al kinde of instrumentes and musique that they can finde, and fayre, that in that order and pleasure, theyr Gods doe receyue them in the other world. In this Citie standeth the greate Pallace of Etnafogi, which was Lorde and King of that province of Mangi.

This Pallace is made after this wise, it is square and strongly walled, tennne myles in compass. It is high and fayre, with faire chambers, Hals, Gardens, fruits, fountains, and a lake with many fishes. In this Pallace there is twenty Halles, wherein there may fitte downe at meales, twenty thousand perrons: by this it may be comprehended how bigge this Citie is. In this Citie there is a famous Churche or Temple of Christians Nestorians, and euerye one that dwelleth in this Citie hath written his name, and of his wife, Children, menne feruantes, and women feruantes, and horfes that he hath in his house, ouer the Porch of his doore. Also when there is anye that goeth to another Citie, it behoueth that the Inholders that lodge strangers, doe brynge a Regifter vnto the officers appoynted, giuyng relation howe long they doe remayne, and when they goe away.
Of the rent which the great cane hath
of the province of Quinsay

CHAPTER 101

[Marot: Bk. II. Ch. lxxix (abridged). Panthier: Bk. II. Ch. clvi (abridged).
Tale: Bk. II. Ch. lxxviii (abridged). Benedetto: Ch. cliv (abridged)]

Eeing I haue declared vnto you of the City and province of
Quinsay, now I will declare you what rent the greate cane hath
yearely, out of this province only, of the falt euery yerke .4500.
Hanneys or bushels of Gold, and to euery measure goeth .18000.
Sazos, and euery Sazo of Gold is worth seaven Duckets, and of the other
rentes ouer and aboue the falt he hath euery yeare .10000. hanneys of
gold.

Of the Citie named Thampingeuy, and of
many other maruellous things

CHAPTER 102

Tale: Bk. II. Ch. lxxxix (in part). Benedetto: Ch. clv (in part)]

Oing from Quinsay, trauelling towards Solano a dayes
journey, you do goe by Cities and townes, and manye
Gardens, and at the ende you come vnto the Citie named
Thampingeuy, which is faire and gret hauing abundance of
all things, and it is vnder the Seigniorie of greate cane:
the people are Idolaters, and passing other .3. days journey,
you come vnto an other citie named Vuyy, & going two days journey
beyond, towards Salano, or eastr and by South, there is so many Cities &
townes y he that trauelleth, thinketh that he never goeth out of townes,
& there is great plentie of all provision, here is Canes great and thicke
of foure spannes in compass, and fiftene in length. At two journeys ende
standeth the Citie named Greguy very noble and greate, hauing abundance
of all things neeedful. The people are Idolatours, and vnder the
greate cane. And going from this Citie three dayes journee towards
Solano, you shal finde many Cities and townes, and manye Lyons.
The people do kill them in this manner, the man doth put of his hosen, and
apparell, and putteth on a weede of Canuas, carriyng a certaine thing
pitched, vpon his shoulders, and carrieth a sharpe knife in his handes with a pointe, and in this manner he goeth vnto the Lions denne, and as the Lion seeth him come, he maketh towards him, and the man when he is neare caulet vnto him the pitched thyng whyche he hath vpon his shoulders. The Lyon taketh it in his mouth, thinking that he hath the manne, and then the man doth wounde him with the sharpe poynted knife, and as soone as the Lyon seeth hymselfe hurt he runneth away, and as soone as the colde entereth into the wounde he dyeth. In this maner they do kill many Lyons in that countrey, which is of the prouince of Mangi.

Of the CITIE named Cinaugnury, and of many other noble Citie, and of the cruelty of the people that inhabit there, and of other thinges.

CHAPTER 101 [103]

[Rauelling forward foure dayes journe you come vnto a citie named Cinaugnury, a great and a famous Citie standing vpon a Mountayne, which parte a riuer into two partes, and travelling foure dayes journe forwarde, you come vnto a Citie named Signy, whiche is vnder the signiorie of Quinsay. And after you enter into the Realme of Fugay, and travelling forward fixe dayes journe towards Solano, or Eaat, and by South, through mountaynes and valleys, you shall finde many Citie and Townes, hauing plenty of all victuals, and singular for Hunting and Hawking, and plenty of spices, and fuger fo plenty, that you may buy forty pound of Suger for a Venice groate. There groweth a certayne fruite like vnto Saffron, and they vfe it in stead of Saffron. The people of this Countrye eate mans fleth, so that he dye not of naturall death. When the people of this Countrye go vnto the warres, they do make certayne signes in their forheads, to be the better knownen: and they go all on foote, except their Lorde, who rideth on Horsebacke. They are very cruel people, and vfe the speare and sword. They do eate the flethe of those men that they kill, and drinke their bloud. In the middes of these fixe dayes journe, standeth the Citie named Belimpha, whiche hath foure bridges of marble, with very fayre pillers of marble. Every bridge of these]
is a mile in length, & nine paces in breadth. Vnto this Citie there commeth great plenty of Spices. Alfo, there is in thys Citie very faire men, and more fayre women, and there be blanke Hennes, and fatte without feathers, and very perfect to eate. In this countrey there be Lions, and other wilde & perillous beasts, fo they trauel in this countrey in great feare. At these fixe dayes journeys ende, flaneth the Citie named Vguca, where there is made great plentye of suger, which is all carried vnto the great Canes court.

Of the Citie named Friguy, and of manie other maruellous things which be there

CHAPTER 104

Affinging out of the Citie of Vguca, and travailing fifteene miles, you come vnto the Citie named Friguy, which is the head of the Realme of Tanca, which is one of the nyne Kingdomes of Mangi. Through the middest of this Citie runneth a Riuere of sauen miles in breadth. And in this Citie there be made many Ships, and is laden greate plenty of Spices, and driers other Merchandizes that is gathered neere to that Riuere, and Precious stones whiche be broughte out of India maior. This Citie flaneth very neere vnto the Oceann Seas, and hath abundance of all kind of viuitals, or any thing else neededfull.

Of the Citie named Iaython, and of many other things

CHAPTER 105

Oying from Quinfoy, and passinge the saide Riuere, travailing fyue dayes journey towards Solamo, or East, and by South, you find many Cities and Townes, hauing abundance of all viuitals. And at the ende of these fyue dayes journey, flaneth a great and a faire Citie named Iaython, which hath a good Hauen, and thither come many Shippes from the Indyes, with many Merchandifes, and this is one of the best Hauens.
that is in the world, and there commeth Shippes vnto it in such quantitie,
that for one Shippe that commeth vnto Alexandrie, there commeth .100.
vnto it. The great cane had the great custome for Merchandises, in and
out of that Hauen, for the Ship that commeth thither, payeth tennne in
the hundred for custome, and of Precious stones and spices, and of any
other kind of fine wares, they pay thirtie in the hundred: and of Pepper
.44. of the hundred, so that the Merchants in freights, tribute, and customes,
pay the one halfe of their goodes. In this Countrey and Citie there is great
abundance of victuals.

Of the Ilande named Ciampago, and of things which be found
there, and how the great cane would conquer it

CHAPTER 105

Tale: Bk. iii. Chs. ii, iii, iv (abridged). Benadon: Chs. clx, clxi, clxii (abridged)]

Will passe from hence vnto the Countreys of India, where I
MARCUS PAULUS dwelte a long time: and although the
things which I will declere, feme not to be beleueed of
them that shall heare it, but haue it in a certayne and of
a truth, for that I gave it all with mine owne eyes. And
now I will beginne of the Iland named Ciampago, whiche
standeth in the high Sea towards the Orient, and it is separeted from the
mayne land 1500. miles. The people of this Countrey are fayre, and of
good maners, although they be all Idolaters. There is in thys Iland a
King franke and fre, for he payeth no tribute at all to any Prince. The
people of this Countrey speake the Persien tong. And there is found
in this Iland great plenty of golde, and they never haue it forthe vnto anye
place out of the Ilande, for that there commeth wetheuer Shyppes,
and little Merchandise. The Kyng of thys Ilande hade a marvellous fayre
and great Pallace, all covered with golde in paste, of the thicknesse of a
peece of two Ryals of plate. And the windowes and pillers of this Pallace
bec all of golde. Also there is greate plenty of precious stones. And the
great cane knowing of the greate fame and riches of this Iland, deter-
mined to conquer it, and caufed to be made great provision of munition
and vittayles, and a greate number of Shyppes, and in them he put many
Horsemen and footemen, and sent them vnder the gouernance of two of
his Captaynes, the one was named ABATAN, and the other VONSAUGIN,
and these two went with this great armie from the Hauen of Jaythyn and of Glosky, and they went vnto the Iland Ciampago, where they went alande, and having done great hurt in Mountaynes and valleys, there enried suche enmie and hatred betweene these two Captaynes, and so much discord, that loke what the one would have done, the other did againe lay it, and through this means they tooke neyther Citie nor Towne, but only one, and they killed all them that they founde therein, for that they would not yeld, fauing eyght men, whiche could not be killed with any iron, for that each of them had a precious stone enchanted in his righte armie, betweene the fleche and the skynne, and these stones did defend them from death to be killed with yron, and knowing of it, these two Captaynes procured to kill these eyghte men with clubs of wodde, and take those stones for them felues, and in that instant there arose suche a templet of wind of Septentrion or North so terrible, and doubting that their Shippes would breake, they hoyled vp Sayle, and went vnto another Iland, tenne miles distant off fro this, and the wind was so terrible, that it opened many of their Ships, and manye were forced to make backe towards their owne Countrey againe, and about 30000. of them fledde by land, of these they thought that they were all killed. And as soone as it was caulme on the Sea, the King of this Iland which had bin so spoyled, wente with a great armie of Shippes vnto the other Iland, where as they were gone to haue taken them that were fledde, and as soone as hee was on lande with his men, the Tartares like wise and politike men, retired backe by the Ilande, and went vnto the Shyppe of this King whiche they had lefte without strengthe, enried in, hoyled vp the Sayles, with the Auncientes and Flagges of that King, whiche they left behinde in the Ilande, and sayled vnto the first Iland, where they were receyued, and the gates opened, thinking it had bin their owne King. And in thys manner the Tartares tooke that Citie, wherein the King had his habitation, and ransacked it. And as soone as the King of this Ilande knewe of it, he caused many other Shippes to be prepared, and with the men that hee had, and many other that hee tooke of new, environed his proper Citie, hauynge it befeeged seauen moneths. And finallye the abouefayd Tartares hopyng for no succoure, deluyered vp the Citie vnto the right King, conditionally to let them goe with their liues, bagge and baggage. Thys hapned in the yeare of our Lorde 1248. In this Ilande there bee Idols, that some haue heads like Wolues, some heads like Hoggges, some like Sheepe, some like Dogs, some have one head and foure faces, some three heads, hauing one only necke, and onely one righte hande, some haue onely one lefte hande, some haue foure handes, and some tene,
and the Idoll that hath most handes, is taken to be the most beautifull:
and to him that demandeth of them, wherefore they have so many Idols,
they doe gyue no other reason, sauing that so did their predecessors. Whi
the people of this Ilande do take in battell any stranger, if he doe not
raunsome himselfe for money, they kill him, drinke his blood, and eate
his flesh. This Ilande is enuironed round about with the Ocean sea. The
portes are free for themselfes, The Marriners which see that Sea, say, that
there is in it 1748 Ilandes. There is no tree there, but he is of a sweete
odoure, frutefull, and of greate profite. In this Ilande groweth the white
Pepper. From the Province of Mangi vnto the India and home, is a yeares
fayling, the reason is, for that there rayngeth two freedaft windes, the one
in the winter, and the other in the Sommer, contrary the one vnto the
other.

Of the Province named Ciabane, and of that King, who
hath 325. fonnes and daughters of his owne. There
be many Elephants and much spieces

CHAPTER 107

[Marston: Bk. iii. Ch. vi. Pauthier: Bk. iii. Ch. clxi. Yule: Bk. iii. Ch. v. Benedictus: Ch. clxviii]

Hen you do go from Iaython, whych is vnder the signiorie of
the greate cane towars the Occidente, and somewhat
declininge towards the midday five dayes journey, you come
unto a Countrey named Cyaban, wherein there is a Citie
riche, great, and famous, subjicet vnto a King that he and
his subjicets speake the Perisian tong. And in the yeare of
our Lord 1248. the greate cane fente thither a great Baron, named
Sagato, with a greate armie, to conquer that Province, and hee
could do nothing, but destroy muche of that Countrey, and for that he
should do no more hurt, that King became tributarie vnto the greate cane,
and euery yeare he fente him his tribute. And I MARCUS PAULUS was in this
countrey in the yeare of our Lord 1275. And I found this King very olde,
He had many wifes, and amongst fonnes and daughters he had 325.
Among his fonnes he hadde 25. of them that were very valiant men of
armes. In this Countrie there be many Elephants and Lyons greate
plenty, and great Mountaynes of blacke Ebbanie.
Of the great Island named Iava, and of many Spices that grow there

CHAPTER 108

[Marston: Bk. iii. Ch. viii. Pauwier: Bk. iii. Ch. ix. Tule: Bk. iii. Ch. vi. Benedetto: Ch. clxv]

Oing from Cibane, sayling betwene the midday and Solano, or East and by South 1,400 miles, you come vnto a greate Ilande named Iava, which is in compass of three thousand miles. In this Iland, there be feauen crowned Kings fre, paying no tribute at all. In this Ilande there is great abundance of victuals, and greate riches, hauing very muche Pepper, Cinamon, Cloues, and many other singular Spices in great quantitie. The people do honour the Idols. The greate cane could never make himselfe Lord of it.

Of the Iland named Locath, and of other two Ilands, their conditions and properties

CHAPTER 109

Ayling scauenéene myles from Iava, betwene the midday and Solano, or East and by South, you come vnto two Ilands, the one is named Sanduro, and the other Condur. And beyond these two Ilands almost two hundreth miles, standeth the Countrey named Locathe, great and rich. They speake the Perrian tong, and worship Idols. They pay no kinde of tribute to any man, for there is no man that can do them hurt. There is found greate plente of gold, and a greate number of the small white flyes of the Sea, whyche is vied in some places in stead of money, as before it is rehearsed. Alfo, there be many Elephants.

Vnto this Ilande there commeth very fewe Strangers, for that it standeth out of the way.
Of the Kingdome named Maleineir, and of the Ilande named Pentra, and of Iaua the leffe, and of their customes

CHAPTER 110

Ayling beyond Iocath five miles towards the midday, you come vnto the Iland named Penthera, full of Mountaynes. And in the middes of this Iland, about forty miles, there is but four paasses of water, therefore the great Shippes do take off their Rudderes: and being past these five miles towards the midday, you come vnto a Realme named Maleineir. The Citie and the Iland is named Pepethan, where there is plente of Spices. And going forwarde, sayling by Solano, or East, and by South a hundred miles, you come vnto the Ilande named Iaua the leffe, which is in compass two hundred miles. In this Iland there is eyghte Kings, every one having his Kyngdome by himselfe. They doe all speake the Persian tong, and honour Idols. They haue scant of victuals. From this Ilande you can not see the North Starre little nor muche. Beyonde it standeth the Realme of Ferlech. The people are Moores. They do honor Martin Pinioio, which is Mahomet. There dwell others in the Mountaynes that haue no kind of law. They doe line as bestes, honouring the first thing that they do see in the morning, as their God. They doe eate all kinde of dead fleche, and the fleche of man, caring not howe, nor yet after what sorte it dyeth.

Of the realme named Baffina, and of the Vnicornes, and other wilde beastes

CHAPTER 111

Oing from Ferlech you come vnto the realme of Baffina, wher the people are without law, living as beastes, being subiect at their will vnder the gret cane, although they do giue him no tribute, sauing, that at sometimes when it pleaseth them they doe fende vnto him some strage thing. In this realme there be Apes of diuerse forts, and Unicornes, little leffe than Elephants, haung a head like vnto a fwyne, and always
hanging it downward to the grounde, and standeth with a good will in
Cieno or miery puddel. They haue but one horne in their forehead, wher-
by only they are called Unicorns, their horne is large and blacke, their
tong is rough and full of prickles long and thicke. The Apes of this country
are small, having a face like vnto a childe, and those in that countrey do
flaye them, so that they looke like vnto a naked childe. They feeth it, and
dresse it with sweete spieces, so that they haue no euil ayre nor strong fent,
and so foden, they doe fende them aboute in the worlde to fell, faying
they be foden children. In this countrey there be haukes as blacke as
Rauens, very strong and good to hauke with.

Of the realme named Samara, and of many strange things that are founde in the sayd countrey

CHAPTER 112

Benedetto: Chs. clxviii, clxxi]
should die for hunger, and the soule of the deade bodie shoule suffer greate penurie in the other world. They do hide this chelt with the bones, in a cause of the mountaines, so that it maye not be founde. All the straungers that they doe finde, they kil and eate them, if they be not ransomed for money as soone as they take them.

Of the Kingdome named Lamby, and of the straunge things there founde, and of the realme Samphur, and of the things founde there

CHAPTER 113

Jule: Bk. iii. Ch. xi. Benedetto: Chs. clxxx, clxxxv]

Amby is another realme in this Ilande, where there is great plentie of spices. The people are Idolaters. In this realme there be men that haue feathers about their priuities, great and bigge, and of the length of a goose quill. The first realme of this Iland is named Samphur, where there is found the beft Camphore that is in the world, and it is solde for the weight of gold: here they doe the Wine of treés. In this provence there is a kinde of great treé, and it hath a very thinne ryne, and under the ryne it is full of singular meale, and of thys meale they do make perfect meats, of the which I MARCUS PAULUS did eat many times.

Of two Ilandes, and of the euill liuing and beastlynesse of the people

CHAPTER 114

Going from Lamby sayling 140. myles towards the North, you come vnto two Ilandes, the one is named Necumea, and the other Nangania. The people of Necumea, liue like beastes, the men and women go naked, couering no part of their secrets: they do vse carnallye like beastes or dogs in the streets, or wheresoeuer they doe finde, without any shame at all, hauing no difference, nor regard, the father vnto the daughter, nor the sonne vnto y mother, more than vnto another woman, but every one
doth as he luffeth or may. Here there be mountaines of Sandolos or Sauders, and of nuts of India, and of Gardamonio, and many other spyces. Nangana is the other Ilande, it is fayre and great. The people therof are Idolaters, they lune beastly, and eate mens flesh, they are very cruel, they haue heads lyke great Maffe dogges, and the men and women haue teeth like dogs. In this Ilande there is great plentie of spices.

Of the Iland Saylan, and many noble things which be founde there

CHAPTER 115

[Marston: Bk. iii, Ch. xix. Pauthier: Bk. iii, Ch. cxxvii (first part only). Tule: Bk. iii, Ch. xiv (abridged). Benedetto: Ch. cxxxiv (abridged)]

After that you go from Nangana, you go toward the Occident, and declynynge against Arbano about ten hundred myles, you come vnto the Iland of Saylan, which is the beste and the greatest Iland in the world, being in compass thirtie thousand myles. In this Iland there is a very rich king, the people are Idolatours, and they goe all naked in this Ilande, fauing that they do weare a linnen cloth before their secretes. There is great plentie of Rice and of cattel, and of the Wyne of trees. In this Iland are founde the best Rubies, that bee in the worlde, and they be founde in no other place than here. And here there be founde manye precious stones, as Topafes, Amatiftes, and of diuerse other kindes. This king hath the fairest Rubic in the world, the length of a spanne, and is as thicke as one's arme, as redde as fire, glistering without any blemish. The men of this countrie are wonderfull leacherous, and they are worth nothing for the warres.
Of the province named Moabar, wherein there be fiue kingdomes, and of the noble things that be founde there

CHAPTER 116

Fare: Bk. iii. Ch. xvi. [in part], xvi. Benedetto: Ch. cxxv (in part)]

Asling from thyse fayde place, and travelling towards the Occident fortie myles, you come vnto a greate province named Moabar in the great India. This is the greatest and the beft province that is in ṭ world, standing in the firme land, being an excellent region. There is in thyse province, Margarites verye fayre and great. This province is diuided into fiue kingdomes, wherepon raigneth fiue brethren legitimatte. In the firft beginning of this province standeth the firste kingdome governed by one of those fiue brethren, named Sendarba, and is entituled as king of Nor, here is fiue great pearles, in great number. This king hath the tenth of all ṭ pearls which are founde in his kingdome. The fistermen do fhit these pearles, from the beginning of April, vntill the midde of May, in a gulf of the Sea, where there is greate plentifie of them, they are founde in the Oysters. The men and women of this realme goe all naked, fasting that they do weare a certaine cloth to couer theyr priuities. Also the king goeth naked, and to be known, he weareth about his necke a lace full of precious stones, whyche are in number a hundereth & foure, in the remembrance of a hundreth & foure prayers, that he vfithe to say in the honour of his gods morning and euening, and on his armes, legges, fette, and téeth, he weareth so manye precious Stones, that tenne riche Cities be not able to paye for them.

Q This king hath fiue hundredth wifes, and one of them he toke from his brother. In this realme there be verye faire women of themselues: also they do vse paynting, setting more beautie vnto their faces and on their bodies. Thys king hath alwayes a greate companie with him, to ferue him: when the king dyeth they burne his bodye, and with him of their owne voluntarie willes, all those that accompanieed and ferueed him in his life time, leape into the fire, and burne themselues with him, sayinge, that they do go to beare their king companie in ṭ other world, and live as they did here in this worlde. Yerely this King buyeth tenne thoufande horses of the countrey named Cormor, at the price of fiue ounces of gold euery horse, some more, some leffe, according vnto the goodnesse and beautie of the horse. The merchants of Quinsay, of Suffer, and of Bedon, sell those
horses vnto the merchante of this realme. These horses lyue not in this province above one yere; by this meanes that king consumeth a greate part of his trefure in horses. In this country they doe vfe this custome, that is, when a man is condemned to dy, he is beged of the Prince that he maye kill himselfe, and when they have obtayned the kings good will, he killeth himselfe, in the loue and honour of his Idols. After thys wife, having obtayned the kings grace and favoure, the wife of this malefaicour and kinred, taketh him, tying about his necke twelve kniues, and in this manner he is carried by them vnto a place of justice, where he crieth as lowde as he may, saying, I doe kill my selfe in the honour and for the loue of suche an Idoll, and with one of thos kniues striketh himselfe, and then with another, vntyll such time as he falleth downe deade: this done, his parents with great ioye and gladnesse burne the dead body, thinking that he is happy. In this country every man hath as many wiues as he is able to maintain: where husband dyeth, according vnto their custome, his bodie is burnt, and his wiues of their owne fre willes burne themselves with him, and thei that leapeth firste into the fire, the beholders take hir to be the best. They are all Idolaters, and for the more part of them, worship the Ox, saying, he is a Saint, for that he labourth and tilleth the grounde, where the corn grown, and so by no manner of meanes they will eate anye kind of Ox flesh, nor yet for all the golde in the world, will they kill an Ox, and when any Ox dyeth, with his tallow they do rubbe al the insides of their houses.

These people defende of thos that killed Saint Thomas the Apostle, and none of them can enter into Saint Thomas Church, whiche he edified in that country: besides this, if one will presume to enter into the Temple, he falleth freight deade. It hath bene proued oftentimes, that some of them would enter perforce into the Church, and it hath not bin possiblle for them to doe it. The king and thos of this province eate alwaies upon the ground, and if it be demaunded of them by question why they doe so, they doe aunswere, for that they doe come of the earth, and to the earth they muste, and they cannot doe so much honour vnto the Earth as is worthy. In thys province there growneth nothing els but Rice: these people go naked vnto the warres, having no other weapon but speare and shield, and they kill no wilde beaules at all for their eating, but they caufe some other that is not of their lawe to kill them. All the men and women do wase themselfes twice aday, morning, and evening, for otherwisse they dare neyther eate nor drinke, and he that shoulde not kepe this vfe among them, shoulde be reputed to bee an Heretike: and they do walke themselfes in thys manner, as we haue rehearfed: they goe
all naked, and so they go into the river, and take of the water, and pow're it upon their heads, and then one doth help to wash another. They are good men of warre, and very few of them drink wine, and those that doe drink it, are not taken to be as a witness, nor yet those that go into the Sea, saying, that the Marriners are dronkards. They are desperate men, and esteem lecherie to be no sinne. This country is intolerable hot, and the boys go altogether naked. It never raineth in that Country, failing in June, July, and August. In this Region there be many Philosophers, and many that use Negromanie, and very many of them that tell fortunes. There be Hawkes as black as Rauens, bigger than ours, and good to kill the game. Also, there be Owles as big as Hennes, that flye in the ayre all night. Many of those men doe offer their children unto those Idols that they have most respect unto, and when they worship and feast those Idols, they do cause to come before them, all the young men and maides, which are offered unto them, and they do sing and dance before the Idols, and this done, they do cause their meate to be brought thither, and they do eat the flesh, saying, that the smell of the flesh filleth the Idols.

Of the Realme named Musuly, where there be found Adamants, and many Serpents, and of the manners of those in that Country

CHAPTER 117

[Marsden: Bk. iii. Chs. xx. Sect. iv. in part; xxii (abridged). Pantheier: Bk. iii. Chs. clxxvi. clxxxi (abridged). Thule: Bk. iii. Ch. xviii. and few Ch. xix. Bonadette: Chs. clxxvi. clxxvii (a few lines only.)]

Musuly is a Region that flaneth beyond Moabar, travelling towards Septentrio which is the North, 1000 miles. The people of this Realme worship Idols. And in the Mountaynes of this Country, there be found fine Adamants. And after they have had much rain, the men go to seek them in the fireames that runne from the Mountaynes, and so they do find the Adamants, which are brought from the Mountaynes in Sommer when the days are long. Also, there be strong Serpents and great, very venemous, seeming that they were fette there to keepe the Adamantes that they might not be taken away, and in no parte of the world there is found fine Adamants but there. There be in this Country the biggest Sheepe in the world. And in the Province of Moabar afore-
named, lyeth the body of the Apostle Sainct Thomas, buryed in a small Citie, whither there goeth but few Merchants, for that it liandeth farre from the Sea. There dwell manye Christians and Moores, having great reverence vnto the body of Sainct Thomas, for they doe beleue and say, that he was a Moore, and a great Prophet, and they do call him Thomas Dauana, which is to say, a holy man. The Christians that go on Pilgrimage to visit the body of Saincte Thomas, take of that earth where he was martired, and when any falleth sicke, they doe give him of it to drinke, with wine and water. In the yeare of our Lorde 1297. it chanced there to be a miracle in this wise: A Knight gathered so much Rice, that he had no place to put it in, but put it into a house of Sainct Thomas, and the Christan men desired him not to pester the holy Apostles house with his Rice, where the Pilgrims did lodge, yet the Knighte would not heare them, and the same night, the spirite of Sainct Thomas appeared with a Gallowes of iron in his hande, putting it aboute the Knightes necke, and sayde, If thou cause not thy Rice to be taken out of the house of Sainct Thomas, I will hang thee. This miracle the Knight told with his owne mouth, vnto all the people of that Countrey, and forthwith the Christians rendred hartie thankes to the holy Apostle, who dothe many miracles on the Christians that committe themselves devoutly vnto him: All the people of this Countrey be blacke, not bycause they be so borne, but for that they woulde be blacke, they annoynf themselfes with a kind of oyle, called oyle of Aioniolly, for the blackest are esteemed most favre. Also, the people of this Countrey cause their Idols to be paynted blacke, and the Diuels to be painted white, sayyng, that God and his Saintes are blacke, and the Diuels white. When they of this Countrey go on warfare, they weare hattes vpon their heads, made of the hides of wild Oxen, and vpon their shieldes. And to the feete of their Horfes, they fasten the heares of an Oxe, sayyng, that Oxen heares be holy, and haue thyss vertue, that whosoeuer carieth of them aboute him, can receyue no hurt nor danger.
Of the Provincie _Lahe_, and of the vertue
that is in the people

CHAPTER 118

[Marston: Bk. iii. Ch. xxii. Pauhier: Bk. iii. Ch. clxxii. Tate: Bk. iii. Ch. xx.
Benedetto: Ch. clxxxviii]

Oing from that Towne of SAINCT THOMAS towards the Occidente, you come vnto a Provincie named _Lahe_, and there dwell the men named _Bragoner_, which are the truest men in the world. They will not lye for all the worlde, nor yet content vnto any falsche-hooede for all the world. They are very chaste people, being contented only with one woman or wife. They neuer drinke wine, and by no manner of meanes they will take another mans goodes, nor will eate fleshe, nor kill any kinde of beafl for all the world. They do honour the Idols, and haue much understanding in the arte of Fortunes. Before they doe conclude anye greate bargayne, and before they doe anye thing of importance, first they doe consider theyr shadowe agaynste the Sunne, whereby they judge the thyng that they must doe by certayne rules whiche they haue deputed for it. They doe eate and drinke temperately. They are never let bloud, therefore they be very wife. In this Countrie there be many religious men, which are named _Cingnor_, and liue a hundred and fiftie yeares, for their greate abstienice and good liuing. In this Countrie there be also certayne religious men Idolaters, who goe altogether naked, couering no part of their body, saying, that of themselfes they be pure and cleane from all sinne. Thise doe worchip the Oxe. Thise religious men weare eache of them vpon his forhead an Oxe made in mettall. They do oynt all their bodie with an oytment, which they make with great reuerence of the marow of an Oxe. They do neyer eate in dishes, nor vpon trenchers, but vpon the leaues of the Apple tree of Paradis; and other drye leaues, and not greene by no manner of meanes, for they faye, that the greene leafe hath life and foule. They do sleeepe naked vpon the ground.
Of the Kingdome named Orbay, and of many things and strange beasts found there, and of their beasty living

CHAPTER 119

[Marston: Bk. iii. Ch. xxv. Pauwier: Bk. iii. Ch. cxxiv. Tule: Bk. iii. Ch. xxii. Benevetto: Ch. cixxxv.]

Orbay is a Kingdome that standeth towards the Orient, or the East, beyond Marbar five miles. In this Kingdome there be Christians, Jewes, and Moores. The King of Orbay payeth no tribute. Heere groweth more Pepper, than in any place of the world. There is a thynge in coulour redde, which they do call Indyaca, there is pietie, and it is good to dye withall, and is made of hearbes. A man can scarce keep himselfe in health, for the greate heate that is there, whiche is so vehemente, that if you should put an Egge in the water of the rier at such time as the Sunne hath his strenght, it would seeth it as though it were put in seething or scalding water. There is greate trade of merchandize in this Countrie, by reasone of the greate gaynes. There is very muche Pepper, and very good cheape. In thys Countrie there be manye and strange Beastes to beholde. There groweth no other kynde of grayne for sustenance, but Rice. There bee many Philistines and Afrologers. The men and women are black, and go naked, stanning that they do couer their priuities. Heere they do marrie the Cousen with the Cousen, and the sonne in lawe with the mother in lawe, and throughout all India they do keepe this manner of wedding.

Of the Province named Comate, and of the people and strange Beastes that be there

CHAPTER 120

[Marston: Bk. iii. Ch. xxvi. Pauwier: Bk. iii. Ch. cxxv. Tule: Bk. iii. Ch. xxii. Benevetto: Ch. cixxxvii.]

Omame is a Countrie of India, from whence you can not see the North Starre, nor yet it can not be seen from the Ilande named Iawa to this place. But going from hence, byling vppon the Sea thirtie miles, you shall discouer the North Starre straight. In this Countrie there are very strange people, and very strange Beastes, but specially Apes that are like men.
Of the Kingdome named Hely, and of the strange beastes found there.

CHAPTER 121

Benedetto: Ch. clxxxvii]

Oeing from Comate agaynst the Occident, or the Weast thirtie miles, you shall playnely see the North Starre, and come to the Region of Hely, where they are all Idolaters. The King of this place is very rich of treasure, but he is weake of people. Thys Countrey is so strong, that no man can enter into it perforce. And when any Shippe commeth thither by force of weather, or otherwise, those of the Countrey robbeth hym, saying, that those Shyps come not thither, but to robbeth them, and therefore they do earnestly beleue that it is no finne to robbeth them. Hiere be Lyons, and other wynde beastes a great number.

Of the Kingdome named Melibar, and of the things found there

CHAPTER 122

[Maridam: Bk. III. Ch. xxviii. Pauthier: Bk. III. Ch. clxxxvi. Tule: Bk. III. Ch. xxv.
Benedetto: Ch. clxxxiv]

Elibar is a greate Kingdome in India, towards the Occidente, and the King payeth no tribute. All the people of this Countrey be Idolaters. Out of this Realme and the nexte, there goe manie Shippes unto the Sea a rouing, which robbeth all kind of people. They doe carrie with them their wifes and chylldren, and they sayle in all the Sommer a hundre Shippes together, and when they doe come to the thore, they roue into the Countrey a hundre miles, taking all that they can finde, doynge no hurte vnto the people, sayling vnto them, Go, and gette more, for peraduenture you shall come againe into our hands. In this Countrey there is plentie of Pepper, of Ginger, and of Turbit, which is certayne rootes for medicines. Of this Countrey, and their conditions, I will not rehearse, for it would be very tedious, therefore I will passe vnto the Realme of Giesurath.
Of the Kingdome named Giesfurath, of their cuill conditions

CHAPTER 123

[Gesdene: Bk. iii. Ch. xxxix. Pauhier: Bk. iii. Ch. clxxxvii (abridged). Tudie: Bk. iii. Ch. xxvii (abridged). Benedetto: Ch. clxxxv (abridged)]

Giesfurath, is a Kingdome, in lawe, faith, and Tong of the Persians, standing towards the Occidente. All the people are Idolaters. Frō hence you maye playnely see the North Starre. In this kingdome be the worft and cruellefte Rourers in the worlde, they doe take the Merchantes, not onely taking their goodes, but setting a price of their ranfome for their bodyes, and if they do not pay it in a short time, they gie them fo great tormentes, that many dye of it. Here they worke good Leather of all maner of coloures.

Of the Kingdome named Thoma, and of the Kingdome Sembelech, which stand in India the great

CHAPTER 124

Going from Giesfurath towards the Occidente, you come vnto the Kingdomes of Thoma & vnto Sembelech. In these Realmes there is a kind of Merchandizes. And these Realmes have the language and fayth of Perfia, and in none of them both there groweth anye other fulnessane than Rice. They are Realmes and Provinces of India the great.

Of the things already declared

CHAPTER 125

[Gesdene: Bk. iii. Ch. xxxii (last few lines). Pauhier: Bk. iii. Ch. clxxxii (last few lines). Tudie: Bk. iii. Ch. xxx (last few lines). Benedetto: Ch. cclxxxix (last few lines)]

Hawe onely declared of the Provinces and Kingdomes of India, which stande only vpon the Sea coaft, and haue declared nothing vnto you of the Provinces and Kingdomes within the land, for then this treatise would be very long and tedious vnto the Readers, but yet something of those partes, I will not let to declare.
Of two Islands, the one of men, and the other of women, Christians, and how there is much Amber

CHAPTER 126

[Marsden: Bk. m. Ch. xxxiv. Pauthier: Bk. m. Ch. cxxvii.
Tale: Bk. iii. Ch. xxxi. Benedetto: Ch. cxxi]

When you go from Befinaceian, sayling thorough the meane sea towards the midday or South 25. miles, you come vnto two Islands of Christians, the one thirtie miles distant from the other. The Island where there is all men, is named Masculine, and the other where there is all women, is named Feminine. The people of those Islands are as one. The men go not vnto the women, nor the women vnto the men, but three moneths in the yeare, as to witte, August, September, and October, and these three moneths, the men and women are togethers, and at the third moneths end, they returne vnto their owne houses, doing the rest of their businesse by their selves. The children Males tarry with their mothers vntill they be seaven yeares of age, and then they goe vnto their fathers. In this Island there is great plentye of Amber, by reasone of the great number of Whales that they do take. In this Island they are good fishers, and take great plenty of fishe, and drye it at the funne, having great trade with it. Here they liue wyth fleche, milke, fishe, and rice, and there increaseth no other sustenaunce. Here ruleth, and governeth a Bishop suffragane of the Archbishop of Discorsia.

Of the Island named Discorsia, whiche are Christians, and of the things that be founde there.

CHAPTER 127

[Marsden: Bk. m. Ch. xxxv. Pauthier: Bk. m. Ch. cxxxiiv.
Tale: Bk. iii. Ch. xxxii. Benedetto: Ch. cxxi]

Oing from these two Islands, and sayling towards the middaye 500. myles, you come vnto an Island named Discorsia, wherein are Christians, and haue an Archebishoppe. Here is great abundance of Amber. Also they do make very faire clothes of Cottenwooll, the people goe all naked without any clothing. Here is the flall of Rouers and Pirates, and the Chriffians buy with a good wil the goods whiche they bring, & haue
robb'd, for that these Pyrates do not robb'e but only the Moores and Paynims, and meddle not with the Christians. When a ship sayleth ynder sayle with a prosperous winde, a whole day, the day following the Pyrates, with inchauntmentes of the Diuel, caule the shipp to haue a contrarie winde, and so take it.

Of the Ilande named Maydeygasfar, where Elephantes be founde, and other strange things, and the foule named Nichas, which hath quils on his wings twelue paces in length, and of many other conditions.

CHAPTER 128

[Maron: Bk. iii. Ch. xxxvi (abridged). Poullier: Bk. ii. Ch. clxxxv (abridged). Talte: Bk. iii. Ch. xxxii (abridged). Benedetto: Ch. cxxxii (abridged)]

Maydeygasfar is an Iland standing towards the midday, distant from Discoria about a thousande myles. This Iland is govern'd by foure Moores, and hath in compasse a thousande four hundred myles. Here is greate trade of Merchautiffe for Elephantes teeth, for that there is great plentie: they eate no other flesh in this Iland but of Elephants, and of Cammels. Here be many mountaines of redde Sandalos or Saunders trees, also there is founde greate plentie of Amber. Here is good hunting of wilde beasts, and hauing of foules, and hither come many shippes with Merchautiffe. Also there is very great plentie of wilde Boares. There was sente from hence unto the greate cane the lawe of a wilde Boare which wayghed twentie fiue pounds. In some times of the yeare, there is founde in this Iland a certaine foule named Nichas, which is so big, that the quill of his wings is of twelue paces long, and he is of suche bignesse and strengthe, that he with his talents [sic] taketh an Elephant, and carrieth him vp into the ayre, and so killeth him, and the Elephant so being dead, he lettieth him fall, and leapeth ypon him, and so feedeth at his pleasure.
Of the Iland named Tanguybar, where there be men like Gyants

CHAPTER 129.

Anguybar is an Ilande of great nobility, being tenne thousand myles in compasse, and the people of this countrie are Idolators, and fo bigge and groffe, that they seme like Giants. One of them wil bear a burthen as weightie as fixe of our men may beare. They are all black, and go naked without any couer. These men are fearefull to beholde, hauing greate mouthes, and a great redde nofe, great eares, and bygge eyes, horrible in light. The women are filthy and euil favoured. There is great trade of Merchandize. These people are bigge of their bodies, striong, and great fighters, and esteeme not their luyes. The wilde beastes of thys Iland differ much from other wilde beastes of other Ilands and countries.

Of the things rehearfed

CHAPTER 139

Ou shall understande that all whyche I haue declared of India, is only of the noble and great provinces bordering vpon the sea coatses, and I doe beleue that there was never man, Christin, nor Iew, nor Paynim, that hath sene so much of the leuant partes as I Marcus Paulus haue sene, for I haue sene India bothe the greate and the leffe, & Tartaria, wyth other provinces & Ilands, which are so many, y the age of one man, yea peraduenture of iiij men, would not suffice to travel them all. And now I will declare vnto you of India the great.
Of Ablasheya

CHAPTER 131

In India the greate, there is a greate prouince named Ablasheya, which is to say the middle India, for it standeth betweene India the greate, and India the leffe. The king of the prouince is a Christian, and the Christians that be under hym carrie two tokens made with a burning yron, from the forheade vnto the pointe of their nose. The great King dwelleth in the midst of the prouince, the Moores dwelleth towards the prouince of Caddamy.

The holye Apostle Sainth Thomas did converte muche people vnto the Christian faith in this prouince, and afterwaerd went from thence vnto the prouince of Moaber, where he was martyred. In this prouince there be many valiant knights, and me of armes, and they do ever make war against the Souldan of Adem. The people of thys countrey live vpon flethe, milke, and Rice, and of no other thing. There they vfe muche vfurie, and in this prouince there be many Cities and towns.

Of the prouince of Adem or Ades, and of the things found there

CHAPTER 132

He prouince of Adem hath a King, and he is named the Souldan of Adem. There be in this prouince many Cities and Townes, and the people are Moores, and haue greate strife with the Christians. There be in this prouince Ports and Hauens, whither many shippes come with merchandize, and the moste of this prouince liue vpon Rice, for that they have little flethe, and lesse milke. This country is very dry and without fruite, and there groweth no graffe, and therefore the beastes of this prouince liue vpon drie fishe, falte and rawe, which they doe eate in steade of strawe and barley.
Of a mightie King of the Orient parties

CHAPTER 132

Tula: Bk. iv. Ch. xx (in part). Benedetto: Ch. cxxviii (in part)]

Owe I haue tolde you of India the greate, India the leffe, and of middle India, and nowe I haue remayning to tell you of the Countries which are towards Septentrion or the North, where there raygneth a King of the imperiall house of the greate cane. These people do worchippe the same Idol that the tartarians doe worchippe, which they name nazigay. This province hath the plaines and mountaines. There groweth no kinde of lustenouncce neither corne nor Rice, and the people lute onelye vpon flethe and milke of Mares, and no man maketh warre againste them, nor they againste no mane. Here bee manye Camelles and other beastes, but they are deade. Vpon the Seignorie of this Kyng there is a Countrey so strong, that no man maye enter into it, nor yet beast being bigge, by reason of the fuites, lakes, and fountaynes whyche bee there, and for that alwayes there is fluche feruent colde, that it is alwayes frozen, and vnto them there can come no shippynge. This Countrey is in compasse twelue dayes Journey.

Howe Armines are boughte, and of other beastes

CHAPTER 134

[Marsden: Bk. m. Ch. xlv (in part); xlvi. Pauthier: Bk. iv. Chs. cxxvi (in part), cxxvii.

Will declare vnto you howe in these twelue dayes iourney they doe buye the wilde beastes for to haue their skinnnes. In euerye place of these twelue dayes iourney there is plentie of habitations, and there bee masties or dogges little leffe than Asses. These masties doe drawe after them a certayne thing made of Woodde, which is called Sioiala, whiche is a fleade, as the Oxen or Horfes doe drawe a carte, fauing it hath no wheeles as our Cartes haue, and there Sioialas or bleddes, are as bigge as twoo menne maye be in it, that is to faye, the Mayster of the mayfties or carte, and the
Merchant that goeth to buy the skins. And these mastsies cease not drawing, except it be in some mytery place, they sette foure or five mastsies to drawe, as among vs wée doe sette Oxen or Horses, & when they do come to their journeys end, the Merchant hyreth an other carter with his head and
mastsies, for that the firste could not endure so muche labor, and so he maketh
his twelve dayes journey, till he come to the mountains where the Armines
and skins are sold, where they buy them, and afterwardes they retournes
as they came. At the ende of this Countrie there standeth a Kingdome
which is named the Darkland, for it is there ever darke, as wée call the
Twylight, for the Sunne shyneth not there, and is not seene. The people
of this Countrie haue no King, but live as best they without lawe. In this
Countrie the men and women are well made of their bodies, although
they be somewhat yellowe of colour. The Tartarians that border
vpon them, doe spoyle them very muche, and when the Tartarians
doe goe to robbe in that darke valley, they ride vpon mares that haue
horse or mare coltes following them, for they doubt to come outhe that
ways that they were in, by reason of the darkeness and wooddes, and
when they come near unto the place where they meane to robbe, they
doe tye their horses or mare coltes vnto the trees, and ride vpon the mare,
and doe their seate, and as they have done it, they letteth their mares goe
whither they lifte, and the mares goe straighte vnto their horses or mare
coltes, where they letteth them tied vnto the trees. Those in that Countrie,
with certaine devils doe take many Armines, and divers other wilde
beasts, and take the skins and dresseth them, & make merchaundyse.
This obscure and darke Countrie, joynewth one parte with Rousetande.

Of Rousetande, and of other things
which he founde there

CHAPTER 152

Yule: Bk. iv. Ch. xxvii (abridged). Benedetto: Ch. cccc (abridged)].

Rousetande is a great Province towards Transmontana which
is the North. The people of Ruffe are Christians, according
to the vle of the Germans. Touching the things of the holy
Church, they are very simple. Rousetande is a strong
Countrie, and hath very strong passagges. There be very
fayre menne and women, and vnto no man they giue
tribute, paying unto the King of Tartarie of the Occident. There is made
great merchandise of noble furs for apparel. In Roufeland there be
founde many mines of siluer, also there is such fervent colde, that the
people can scarce liue. This province reacheth unto the Ocean Seas to-
wards the Septentrion, in which Seas there be many Ilandes wherein
breedeth many Gerfauclons, and singular Hawkes.

Finis
THE TRAVELS OF
NICOLÒ DE' CONTI
IN THE EAST
The Introduction

Or that this treatise which I found in the second Booke towards the end, that Maister Poggio Florentine, Secretary vnto Pope Eugenius the fourth wryteth of the varietie or chaunge of fortune, it maketh muche vnto the confirmation and prooфе of the things that Maister Marcus Paulus writeth in his Booke, for that by the mouth of two or three (as our Redeemer saith) there is proved the truth I thoughte good to translate it out of Eloquent Latine, whiche hee did write it in, and to communicate it into my rude Calilian and naturall tongue, for that iyntly fuche twoo wittesse in thyse prent worke may make a full, or almooste a sure prooфе of some things, for that it hath not bin seene in our Europa, or that in any antient writing appeareth, it may be thoughte harde or difficile creidence, And the saide Poggio followeth in this manner, in the ende of his seconde Booke.

It seemeth not vnto me a thing straunge from reaſon, if I decline from the stile that hitherto I haue vfed in this Booke, declaring of the harde fortune making an ende, counting the diererties of things, wherein the heartes of the Readers finde more tate, and amiable gladnffe, than in those that already I haue written. Notwithstanding that also in the caufe I will declare, appeareth plainlye the force of Fortune, in returning a man vnto Italy oute of the extreme partes of the worlde of the Orient, after that he had suffered and passe fufe and twentie yeres such greate fortunes, aſwell by sea as by lande. The olde Authors do write many things of the INDIANS with the common faame, of the whiche the certayne knowlege that since we haue hadde, sheweth them to be rather fables than of truth, as it appeareth by the referring of one NICHOLAS a VENETIAN, that after he had travailed the intrailes of the Indies, he came vnto Eugenius the fourth Pope of that name, who then was in Florence, to reconcile himselfe, and to haue pardon, for that comming oute of India, and neere vnto Egypt towards the rede Sea, hee was contrayned to renounce and forfayke the faith, for feare of death, more of his wife and children, than of hymselfe. And for that I hearde by manye, that he
declared of manye singular things, I desired muche to heare hym, and not onelie to demande of him concerning the things whiche hee hadde seene, in the presence of wife Barons, and of greate authoritie, but also to enforme my selfe wyth hym in myne owne housie, and to take a note of his relation, for that there mightte remaine a remembrance of it vnto thosc that hereafter shoulde come after mee. And of a trueth hee tolde fo certaynelye, fo wisely, and fo attentiveyly all hys travaile made amongst people of fo farre Countries, the vfe, manners, and custome of the Indians, the diuersitie of wilde beastes, trees, the lynages of Spices, and in what place it groweth, that it appeared well, hee dydde not declare a fained tale, but the trueth of that whiche hee hadde seene. And as it feemeth, this man went fo farre, as none of the olde tymes hadde seene, for he passed the riuer Ganges, and wente beyonde the Ilande Taprobana, where we reade there came none, excepte one Captaine of ALEXANDERS fleete named ONEYSYCTO, and a Citizen of Rome, that by fortune of tepett arrtued in those parties in the time of TIBERIUS CESAR. This NICHOLAS VENETIAN being yong, was as a Merchant in the Citie of Damasco in Syria, and hauing learned the ARABIAN tonge, he departed from the sayde Citie in the company of 600 Merchantes, the whiche company they do call CAROUANA, or CARUANA, & travailling with his merchandize through the deferts of ARABIA, otherwise named PETREA, and from thence thorouge Cahlia, he came vnto the greate riuer Eufrates.

Q Hée saide, that at the going out of the Deferte, hee fawe a meruailous thing, that aboute midnight, being all at refte, he heard a great noysie and found, that they thoughte it hadde bin companies of ALARABES wild naked menne, or robbers, and that they were comming to doo them some hurte, and all the whole company arose and were al ready with the feare, and they fawe manye battels of horfemen whiche passed harde by their tents much like an hoste, dooing vnto them no hurte at all, and those that hadde vfed that way, saide it was ceraine companies of fiends which did overrune in thosc forte the Deferts.

Q There flandeth aboue Eufrates a noble Citie that the wallis of it be of foureteene thousande paces. And this Citie was a parte of the olde Babylon, and thosc of that Countrie name it by a newe name Baldachia, and Eufrates runneth in the middes of it, and they doe passe ouer a bridge that hath fourteene arches of ech side, where appeareth many remembrance of the olde Babylon, and manye edifications throwne downe. It hath a stronge and a greate Pallaice royall standing vpon a mountaine. The King of this province is of a mightie power. From hence vp the riuer twentie dayes sayling, he fawe manye noble and populous, and earable
groundes of Ilandes, and so he travailed eight dayes iourney by lande vnto the Citie Balfern, and from thence in foure dayes he came vnto the Sea of Persia, whiche ebbeth and floweth as ours doeth, and so thare laylyng fyue dayes, he arryued at a Hauen called Chalcoun, and thence hee wente vnto an Iland named Omerfia, whych is a small Iland, & distant from the firme lâd about 12000. paces, & frõ thêce he passed toward India a hundred myles, and came vnto a Citie named Calabatiæ, which is a noble Citie of the Persians, wher merchantes vfe to traffique, and here he was a certaine time, and learned the Persiaan tongue, and made him apparell as the Persians had, and so he passed from thence forward al his time and trauell. And here he tooke shipping in a shippe with company of the Persians, and of the moores, & among them they keepe muehe their promisse, lawes, and othes made in company, and so layyng a moneth, he came vnto a noble Citie named Cambayla, situate at the second entrance that the riuere of India maketh in the lande. In this Countrie there is founde the precious stones whiche are called Sardins or Sardonicas: and here when the husband dieth, they do burne his wife or wive as he hath, with his body, and the that he moost louted, layeth hir neck vpon hir husbandes arme, and in this wife being in his husbandes arme, they burne them; and the other wive they burne in an other fire whiche is made for that purpose, and of this vfe it shal be rehearsed hereafter. And passing on twentie dayes iourney, he founde two Citie, the one named Pacamuria, and the other Hely. In this Countrie there groweth Ginger whiche is called in that countrie Bellvedy, Gebelly, and Belly, and it is the roote of trees of two cubites in height, the leaues are great, and after the fashion of a kette, y bark is hard like y barke of Canes, & it couereth his fruit: out of it procedeth the ginger, which mingled with ashes, & layd against the Sun, it drieth in three dayes. From hence he wente vnsailing frõ the sea coste three hundreth myles, and he came vnto the greate Citie named Berengatia, whych is in compass three score myles, being enivoroned on the one side with harde and highe rockes, and on the other side towards the valleys and playne grounde with strong adarues and boughes. They faye here is 100000. menne that may weare armoure. The men of that country take as manie wines as they like, and are burnete with them when they dye. In this their King hath ouer them greate vantage, for he taketh twelve thousand wive, and of thëce there goeth on foote after him wherefoer he goeth foure thousand, whych do onely prepare and dreffe his victuals: and there rideth foure thousand on horsebacke, well apparellled, and of more eftimation than the firste. The other foure thousand ryde in cartes and wagenes, and
of thefe at the leafe there be two thousand or three thousand of them that he taketh with condition, that when the king is dead, they of their owne fre willes muste be burnte wyth hym: vnto thefe they do great seruice and obedience. This king hath another very noble Citie, which hath ten thousand paces in compasse, being eight dayes iourny from Berengalia, from whence in twentie dayes iourny by lande, hēe came vnto a Citie vppon the sea coffe, with a good hauen called Pediветamian, and in these twentie dayes iourny hēe went through two Cities, the one named Odes Chyria, and the other Conteri Chyrian, where there groweth the redde Sandolas or Saunders. From hence he passed vnto a Citie named Malpuria, which standeth beyonde the seconde entring, that the riuer India maketh in y end, wher the body of saint Thomas the Apostle lyeth honourably in a fayre and famous Church, where he is greatlye honoured and wor-shiped by the Heretickes Neftorians: and there liue almost a thousande men of them in this Citie. These doe liue throughout all India scattered as the Iewes doe among vs. All this province is named Mahabaria, beyonde there standeth a Citie named Gayla, where there be plenty of pears, and many trees that beare no fruite, of fixe Cubits high, and as muche in compasse: the leaves of these trees are fo thynne, that being playted or fouled vp, you may put one of them in the palme of your hand. They doe yfe these leaves in stead of Paper to write vpon, and for to cover their heades with when it raineth, for one leafe will couer three or foure men, when they doe trauell. In the middeft of this fea there standeth a noble Ilande named Zaylan, whyche is three thousande myles in compasse, where there be many precious stones, as Rubies, Saphires, Granates, and those that are named Cattes eyes, whyche are muche esteemed there. Also there is plentye of Synammon, which is a trea muche like vnto ours of the greatset Hawthornes, sauing that the brouches runne not vpwarde, but open and fireight flopewiffe: the leaves be muche like vnto our Bay leaves, sauing that those of Synammon are bigger: the rine or barke of the brouches is bext and thynne, and the rine of the bodye and roote is thickeft, and of leffe taffe: the fruite is like vnto the Baye berries, out of whych there commeth a very frewe Oyle, and the people yfe to make oyntment of it, wherewith the Indians do amoint themselfes: they burne the wood of the trea, when the rine is taken away. There is in this countrey a lake, and in the middeft of it standeth a royall Citie of three myles compasse. The Lords of this Iland are of the lynage of the Bragmanos, and are taken to be of more witte than the others. The Bragmanos Studie Phylosophy all their life, and also Astrologie, and liue honestly. From hence he passed vnto the famous Ilande named Tāprobana, which the
Indians call Seyamucera, where is a noble Cittie, and there he was a twelue month: it is fixe myles in compasse, and is a famous Cittie, having great trade of Merchandize there, and in al that Iland. From hence he sayled with a prosperous winde, leaving on the right hand the Iland Adamania, which is as much to say, as the Ilande of Golde, whereof is 800. myles compasse, wherein the Eutrofagius doe line, and no strangers goe thither, except it be for necessity of weather, and immediately those barbarous people heewe them in pieces, and eate them. He sayde that Taprobana is 160000. paces in compasse, the men are very cruell, and of stubberne conditions, and the men and women have very bigge ears, laden with Hoopes of golde, and with precious stones. They do weare linnen and cloth of silke or cruell downe vnto their knees: they take many wives: their houses are lowe, by reason of the greate heate that the sunne hath there. They are Idolatours, and haue muche Pepper named the greatest, and of the long Pepper, and greate plentie of Camphor and golde. The tree that maketh the pepper is like the Iedra, or Iue tre, the berries are green lyke vnto the Juniper berries, and redde, and being mingled with ashes, they harden with the sunne: there is a greene fruite named Duriano, of the bignesse of Cucumbers. And there be some of them lyke long Oregies or Lemans, of divers fauours and taste, as like butter, lyke milke, and like curdes. In that part of this lande, whiche is named Batet, & Antropophagos dwel, and haue continuall warre with their neyghbours, and eate the flesh of their enemies that they doe take, and keepe their heads for treaure, and vfe them in stead of money, when they do buy anye thing, in giving moste heads for the thing that is moste worth, and he that hath moste heads of the deade men in his keeping, is esteemed to be moste rich.

Hauing the Iland Taprobana, and sayling fiftene days, he arriued by tempest of weather, vnto the entring of a riuier called Teniferum, and in this region there be manye Elephants, and there groweth much Brashil. And goyng from thence travelling manye dayes journe by land, and by sea, he entred at the mouth of the Riuier Gangy, and sayled fiftene dayes vp the riuier, and came vnto a Cittie named Cernomen, very noble and plentifull.

Thys Riuier Gangy is of fuche breadth, that Saylyng in the middeft, you shall fee no lande on neyther side, and hee affyrmeth that it is in some places fiftene myles in breadth. In the armes and branches of this riuier there be Canes of fuche a maruellous length, and so bigge, that scarce a manne maye compasse one of them wyth both his armes; and of the hollownever or pith of them, they do make things to fielhe with, and of thy
wood which is more than a spanne thick, they do make boates to trauell
with vpon the riuere, and from knot to knotte of these Canes it hath of
hollowneffe the length of a man.

There be in this riuere certayne beasts, hauing four feete, named Croco-
diles, which liue in the day time vpon the lād, and in the night in the
water: and there be many kindes of fische which are not founde among
vs, and vpon the branchses of this riuere be manye fayre Gardens,
habitations, and delectable grounde. On eche side there groweth a kinde
of fruite muche like vnto a figge, which is named Musa, and it is verye
pleasaunte, and more sweete than honnye. Also there is another fruite,
whych we call Nuttes of India, and manye other diuerse fruities. Going
from hence vppe the riuere thre moneths, leaving behinde him foure
famous Citie, he came to a goodlye famous Citie named Maurezia, where
there is great plenty of the trees called Alboes, and plentie of golde, and
silver, Pearles, and precious stones. And going from hence he directed
hys waye vnto the mountaynes of the Orient, for to haue Carbuncles, and
travelling thirteene dayes, he returned firste to Cerman and afterwardes
vnto Buffetanya.

And after that, sayling a whole moneth by see, he came vnto the entring
of the riuere Nican, and sayling vpon it fixe dayes, he came vnto the Citie
also named Nican, and he went from thence seuentene dayes journey
throughe deferte mountaynes, and plaine countrey, the fiftene dayes of
plaine countrey, vntil he came to a riuere greater than the riuere Gange,
which the people of that countrey cal Claua, and sayling vp this riuere a
month, he came vnto a famous great Citie called Aua, being 15. miles in
compaflle.

This province is named of the inhabitauntes Marcino. They haue greate
plenty of Elephanthes, for their Kyng dothke keppe tenne thousande
of them for the warres, and seteth vpon euerie Elephanthes backe a Caffell,
whych maye carrie eyghte or tenne men with Speares and Shields, or
Bowes, or Crossbowes. He rehearfed that they toke the Elephanthes in
this manner, Plinie agreeth vnto the like. They let the tame Elephanthes
females goe vnto the mountaynes, vntill suche time as the wilde bee
acquainted with them, for the male commonly doth content himselfe with
one female, and when they haue once acquaintance, the female bringeth
the wild, by little and little, graffing, vnto a small yarde strongly walled,
haunyaung two dores, one to come in at, and another to goe out at. The
female when she is in at the first gate, she goeth out at the seconde, and
the male following hir, the two dores be locked againe frome him, and then
haunning him within, by certayne loupe holes made for the purpofe, there
commeth in to the number of a thousand men, euery one with his snare in his hande, and one of thosc men pretenteth himselfe before the Elephant, which runneth, thinking to kill the man, and then all thosc men runne vnto the Elephant, fastning thosc snares on his feete, and whē they be fastned, with great diligence, they do tye the snares vnto a great poft, which is set there for that purpose, and they let him alone fo three or four dayes, till he be more feeble, and after the space of fifteene dayes, they giue him a little graffe, in the whiche time he waxeth tame, and then they do tye him among other tame Elephants, and carrie him aboute the Citie, and in tenne dayes he becommeth as gentle as one of the others. Alfo he sayde, they did tame them in this other wise, that they had and draue them vnto a valley compafted round about, where they did put vnto them the females that were tame, and being somewhat feeble with hunger, they draue them into streyter places made for the nonce, where they be made tame, and the Kings do buy for their owne yse. Some are fedde with Rice, and Butter, and some with graffe. The wilde Elephants feede vpon graffe, and vpon the trees of the fields. He that hath the charge of them, ruleth them with a rodde of yron, or a ring whiche he putteth round about his head. The Elephants haue so much prouidence, that manye with their feete, pull away the Speares from their enimies, for that they shoulde not hurt thofe that be vpon their backes. The King rideth vpon a white Elephant, which hath a chayne of golde about his necke, being long vnto his feete, let full of many precious stones. The men of this Countrey haue but one wife a pieece. Both men and women of this Countrey pricke themselues, making diuers markes, and of diuers coulores, on their bodyes. They be all Idolaters, and asloone as they do rife in the morning, they looke into the Orient, holding their hads together, and worship. There is in that Countrey a certayne kinde of fruite, like vnto the Orenge, whiche they doe call Gyano, full of juuce and sweete-sesse. Alfo, there is a trée whiche they doe call Tall, whereon they do write, for in all India, except it bee in the Citie of Combahita, they doe yse no paper, and it beareth a fruite like vnto the Turnep, but they are greate and tender like vnto Gelly. It is pleafant in eating, but the rynse is more pleafant. There be in that Countrey daungerous Serpents, of lixe cubites in length, and as thicke as a man, hauing no feete. The people of that Country haue great delight in eating of thosc Serpēts rofted. Alfo they do eate a certayne redde Ante as bigge as a crabbe, eftemming it much dreff with Pepper. Alfo, there is a certaine Beaff, hauing a head like vnto a Hogge, the tayle lyke vnto an Oxe, and a horn in his forehead, like vnto a Unicorn, but smallet by a cubite. He is in coulore and
bignelle like vnto the Elephant. He is an enemie to the Elephant. The vitter part of his horns is good for medicines against poyson, and for this caufle he is had in great price and estimation. At the end of this Region towards Catay, there be Oxen both blacke and white, had in great estimation. They have a mane and a tayle lyke vnto a Horse, but more hearie, and reacheth vnto their feete. The heares of their tallowes be very fine, and like vnto feathers, and they be fold by weight, and therof they do make Mofcaderos or Table clothes, for the Altars of their Gods, or for to cover the Table of their King, or for to trimme them with gold and siluer, to cover y buttocks or breasts of their Horses, for beautifulness, & they esteeme the for principall ornaments. Also, the Knights hang of these heares faft by the yron of their Speares, in token among them of singular nobilitie.

Beyond the sayde Marcino, there is another Province more principall than the others, which is named Catay, and he is Lord of it that is named the great Cane, which is as muche to laye in their tong, as Emperoure, and the City royall, which is .28. miles in compasse, four square, is named Cymbalechya. There standeth in the midde thereof, a very faire and strong Pallace, that serueth for the King. At every corner standeth a round fortresse of .4. miles compasse, whiche serue for houses of all manner of armoure, and necessarie engines for the warre, and combat against any Cittie. And from the Pallace royall there runneth a wall with arches vnto every one of these fortresses, wherein the King may go vnto any of them, if in case they would rise against him in the Cittie. From this Cittie fiftene dayes journey, there standeth another Cittie newly edified by the great cane, and is named Nentay. It is in compasse thirtie miles, and is most populous of all the rest. And this Nicholas affirmeth, that the houses and Pallaces, and all other policies of these two Citties, seemed much like vnto those of Italy, the men beinge modest and courteous, and of more riches than the other be.

Going from Ava vpon a small riuere seuentene dayes journey, he came vnto a Hauen Cittie, being very greate, named Zeitano, and from thence he entred into another Riuere, and in tenne dayes, he came vnto another greate and populous Cittie, which is in compasse .12000. paces, which is called Paonya, where he remayned foure monethes. In this Cittie he founde Uines though they were few, for all India lacketh Uines and Wine, nor they make no wine of the Grapes. This Grape growth among the trees, and after the Grape is cut, the first thing of all, if they do not sacrifice with it vnto their Gods, it is by and by auoyded out of their fight. Also, there be in this Countrey Pines, Aberrycocks, Chestnuttes, and
Mellons, although they be small and green. Here is whyte Sandalos or Saunders, and Camphora, or Camphire.

Is There is in India farre within, almost at the farthest end of the world, two Ilandes, and both of them are named Lava, the one is of two miles in length, and the other of three, towards the Orient, and they are known in the name, for the one is called the great, and the other the lefte. And turning unto the Sea, he went unto them, seeing distant from the mayne land a moneths fayling, and the one is a hundred miles distant from the other. He was in these with his wife and children nine moneths, for in all his pilgrimage he had them ever with him. The dwellers in these Ilands are the most cruel and uncharitable people in the world. They eate Rattes, Cattes, Dogs, and other viler beastes. They esteeme it nothing to kill a man, and he that doth any crime, hath no penalty, and the debtors be given to be as slaves vnto the creditors, and some debtors will rather dye than serve, and take a Sword, and kill those that are weaker than they, till they find one that is of more strength than themselves, who killeth them, and then they carry the creditor of that murderer before the Judge, and cause him to pay the debts of the debtor. If any of them do buy a new Sword or knife, he proueth it vpon the body of the first that he meeteth, and there is no penalty for it. Those that come by looke vpon the wound, and pray the hardinesse of him that did it, if it be a great wound. They take as many wifes as they lift. They do vie much the game of Cockfighting, and they that bring them as well as the lokers on, lay wagers whiche Cocke shall overcome, and winne the game. In Lava the great, there is a Fowle like vnto a Douce, which hath no fette, his feathers light, and a long tylle: he refleeth alwayes on the trees, his flesh is not eaten, the skinne and tylle are esteemeed, for they do vie to weare them on their heads.

Is Sayling fiftene dayes beyond these two Ilandes towards the Orient, you come vnto two other Ilandes, the one is named Sunday, where there is Nutmegges and Al maxiga or Masticke. The other is called Bandan, where Cloues grow, and from thence it is caried vnto the Ilandes named Claua. In Bandan there be three kinds of Popiniaves or Parrets, with redde feathers, and yellowe billes, and others of divers coulours, which are called Noros, that is to say, cleare. They are as bigge as doues. There be other white ones as bigge as Hennes, named Cachos, that is to say, better, for they exceede the others, and they speake like men, in so mucche, that they doe awnswere vnto the things that they are asked of. The people of these two Ilandes are blacke, by reason of the great heate. Beyond these Ilands there is a mayne Sea, but the contrary winds will not suffer men to trouell on it.
Leaving these fayde Ilands, and hauing done his Merchandife, he toke his waye towards the Occidente or Weste, and came vnto a Cittie named Cyamtta, hauing abundaunce of Aloes and of Camphore, or Camphire, and of golde, and in so muche time as he came hither, whiche was a moneth, he came vnto a Cittie named Coloen, whiche is a noble Cittie of three miles compass, where there is Ginger named Conbobo, and Pepper, and Uergino, and Sinamon, which is named Gruessa. Thys Province is named Melibarya. Also, there be Serpents of fixe cubites in length, and fearefull to behold, but they do no hurt, except they receyue hurt. They do delight muche to fee children, and for to fee them, they come where men be. Their heads when they be layde, feeeme like to Celes heads, and when he lifteth vp his head, it seemeth bigger. It hath at the hinder partes a face like to a man, and as though it were paynted of divers coulures. They doe take them by enchantments, which the people vfe muche there, and carrie them to be feeene, and doe no hurt to anye body. Also, there is in this Province, and in the nexte adjoyning named Sulmarnia, another kind of Serpents, which hath foure feete, and a long tayle lyke malties. They doe take them hunting, and cate them, for they doe no hurte, and are to eate as amonst vs the Hinde or wilde Goate. The people say they are good meate. Their Skinnes be of divers coulures, and those people vfe them for divers couerings, for it is very faire to behold. Also, there be other Serpentes of a maruellous figure in that Countrey, of 8 length of one cubite, with wings like vnto Battes. They haue feauen heads, ordinarily feete of the length of his bodye. They dwell among the trees, and are of a swithe flighte. They are more venomous than the other, that onely with their breath they kill a man. Also, there be Cattes of the Mountayne, that flye, for they haue a small skinne from the backe vnto the bellie, ouer all theyr body and feeete, whych is gathered vp when they are still; and when they will flye, they spredde it, and moue it lyke wings, leaping from one treé vnto another. The Hunters do follow them, till they be weerie with flying, that they fall downe, and so are taken. Also, there is in this Countrey a treé named Cachy, that of the troncheon there groweth a fruite lyke vnto a Pyne, but it is so great, that a man can scarce beare it. The hull is greene and harde, but it is of luche a forte, that if you thrue it with your finger, it gyueth place. It hath within it two hundred and fiftie, or three hundred Apples, like vnto Figgges. They are of a pleasante taft, and are separated with a very thinne rine. The hull within is like vnto the Chellnut in hardneffe and fauoure, and in like maner they are rosted. They are windie, so that if they be putte into the fire, except they be cut, they will flart out. They do giue the vitter rine vnto the Oxen to eate. Sometimes
they fynde this fruite vnnder grounde in the rootes of the trées, and thosè be of a pleasanter taft, therefore they doe vse to presente them vnto the Kings and Nobles. The fruite within hath no rine. This trée is muchè like vnto a great Figge trée; the leaues are like vnto the leaues of Platanos, or ragged. The wodde is like vnto Boxe, therefore it is hadde in elimina\-tion, and is vfed aboute manye things. Alfo, there is another fruite named Amba, verye gréene, like vnto a Walnut, but bigger than a Peache. The rine is bitter, and within, it hath the fauour of hony. They lay them in water before they ripe, and dresse them as we doe the gréene Olyues for to eate.

1 From Colon he wente three dayes journey vnto a Citie named Cochìn, it is fiue myles in compasse, lictuated at the entring of a Riuere, of the whiche it hath the name, and laying a certayne time vpon the Riuere: he saw manye fiers and nettes falt by the Riuere, and thought there had bin fishemen, and he demaundèd what thosè fishemen did with thosè fires every nighte, and thosè of that Courtray gave him anfwere yecpè, yecpè, that is to say, they were físhes or monstres, hauing humane forme, that on the daye time liued in the water, and in the night they doe come out of the water, and gather wodde togethier, and make a fyre, striking one fítone agaynste another, whiche Monstres did take and eate físhè, for there woulde come manye vnto the lighte of the fíre, and somtimes there is taken some of them, and there is found no difference in them from other men and women. In this Region, the frutes are like vnto thosè of Colon. Beyond this, there stánteth another Citie named Calonguria, standing at the entring of another Riuere into the Sea, and beyond, there stánteth Palarius, and Malayacra, and this name among them signifieth a great Citie, it is nine miles in compasse. He wente through all thosè, and came vnto Colychachia, a City standing vpon the Sea coaste, it is euyght miles in compasse, it is the most noble in trade of Merchandife, that is in all India.

2 There is lièere very much Pepper, Lacar, Ginger, groffe Sinamon, and other spìces Aromatike, and of a sweete fauoure. Only in this region, the woman taketh as manye husbands as she lifteth, and the husbands agrée among themselues what eache shall giue towards the mantenance of the wife. Evryy husband is in his owne house, and when he goeth vnto his wife, he setheth a signe at the dore, and when another of them commeth, and setheth the signe, he goeth another way. The children are the husbands that the wife lifteth to giue them vnto. The sonne dothe not inherit his fathers lande, but his sonses sonne.

3 From hence he travelled fiftene dayes, tylly hée came to a Citie called Cambayta, standing néere the Sea. It is twelue miles in compasse towardes
the Occidente. There is plenty of Æsico, Nardo, or Lacca Indico, or 
Gome Laka, Myrabolano, & Crewill.

There is here a certayne kind of Priesles, whiche are named Bachales, 
hauing but one wife a-piece, and the (by their law) is burnt with hir 
husband. This kind of people eateth no flesh, but onely frutes of the 
grounde, and Rice, milke and hearbes.

Here be many wilde Oxen, they haue manes like vnto Horfes, but 
longer, and his hornes are fo long, that when he turneth his heade they 
reache vnto his tyle, and for that they be fo bigge, they doe vse them in 
sleade of bottels to drinke in by the waye. Returning to Cotiechis, her 
passe vnto an Iland named Secutera, whiche standeth towards the Occi-
dent, distant from the mayne lande a hundrith myles. It is fixe hundrith 
myles in compass, and it is replenished for the most parte with Christianns 
Neftorians Heretickes. Right against this Iland no more than five myles, 
there standeth two Ilands, a thousande myles distant the one from the 
other, the one is of men, the other of women, sometimes the men passe 
untu the women, and sometimes the women go ouer vnto the men, and 
they returne backe vnto their Ilande before fixe moneths, for if they 
shoulde tarrie any longer, they thinke they shoulde dye.

From hence he passe by sea, vnto a Citie named Adena in five days, 
which hath many edifications, and from thence in seaven dayes he wente 
unto Ethiopia, vnto a hauen named Barbare, and from thence in a moneths 
sayling he came vnto the redde sea, vnto a hauen called Byonda, and from 
thence he sayled two moneths with great difficultie, and landed in a 
countrey neare vnto mounte Sinaie, & from thence travelling through the 
deferts, he came vnto Carras, a Citie in Egypt with his wife, four mones, 
and as many servaunts. In this Citie his wife, two mones, and his ser-
vaunts died of the plague, and finallye after long perilous and daungerous 
pilgrimaghes, he came vnto Venice, his own countrey.

Pogio

Demanding him of the life and customes of the Indius, he 
gave me aunfweare that all India was diuided into three 
parts, the one from Persia vnto the riuere Indo, another from 
the riuere Indo, vnto the riuere Gange, and the other standeth 
beyond these, and exceedeth the others in riches, humanitie, 
and policie, and are equal vnto us in customes, life, and 
policie, for they haue sumptuous and neate houeses, and all their vessells
and houhholde stuffe very cleane: they esteeme to liue as noble people, auoyded of all villanye and crueltie, being courteous people & riche Merchants, in so muche that there is one merchant having fortie flipees for his owne trade, and every one of them is esteemed in 50000. Duckets. These only vse as we do, tables couered with table clothes, and haue theyr Cupboardes of plate, for the other Indians eate vppon a thing layde vppon the grounde. The Indians haue neyther vines nor Wine, they doe make their drinke of grounde Rice mingled with water, putting vnto it a certaine redde coloure all tempered with the iuyce of a certayne trée.

Also they make their pottage like vnto their Wine. In the Ilande named Taprobana they doe cutte the braunches of a certaine trée, whiche is named Tall, and leaue them hanging, and out of them there runneth a swete licour whiche they vse to drinke. Also there is a lake betwene the rivers Indo and Gange, of a maruellous sauerie and pleasaunte water to drinke, and al tho[se] that dwell there aboute drink of it, and also farre off, for they haue flet horse from place to place, for the purpose, so that they haue it brought freshe every daye: they haue all want of breade: they liue vpon Farro or Rice, fleshe, milke, and chéefe. They haue gret plentie of Henes, Capons, Partridges, Feyfauntes, and manye other wildefoules. They doe vse much fowling and hunting. They haue their beardes, and nourishe a Heare tayle: and some rye their haire wyth a silken lace, behinde their shoulders, like a tayle, and so they weare them vnto the warres. They haue Barbars as we haue, they are tall of bodye as we be, and also in their time of life, they doe lye in sumptuous beddes, and couered with quilles of Cotten. Their apparell is diuerse according vnto the diuerfitie of the countrie. They haue all fante of woollen cloth, they do vse cloth of lyne and of cruell and make apparell of it. As well the men as the women couer their feectes vnto their hammers, with a pece of linnen, & vpon it they put a vesture of linnen, or of silke, for the greate heate will not suffer them to weare more apparell, and therefore they doe goo so fingle tyed with Crimson lace, and of gold tyed as we do see the painters make on the auentient pictures. The women vse certaine thinne fioes of leather, trimmed wyth Golde and cruell.

Also they doe weare for gallauntnesse Hoopes of golde on their armes, and about their neckes, about their breastes, and on their legges, the weight of threee pounde fett with precious stones: the common women kepe theyr houfes as baudes: there be manye and easie to finde, for they are almost in euery striétt, the which with perfumes and soft oyntmentes, with their tender age and beautie prouoke muche the menne, for in that countrie they are muche inclyned vnto thofe women, and for thyse caufe
the Indians knowe not what thyng is that abominable sinne. Of manye
wayes they do dreffe theyr heads, but commonlye moste of them vie to
couer theire heads with fine lawnes wreathed, and their haire laced
with a filken lace: in some other places they binde theyr haire vp to thei
heads, in manner like vnto a pear, and on the knot aboue on their
haire they set a pinne of golde, whereby they do hang certaine cordes of
golde, beinge of divers colours, hanging betwene the haires. Some
women vie commonly blacke haire, and among them it is moste esteeemed.
Some women couer theyr heads wyth certaine painted leaues of trees,
and they doe not paynte their faces, but thole inhabiting the province
named Cataya doe.

¶ In the India within, they do not consent to a man to haue but one wife.
In the others they haue as manye as their carnall lust will, sauing the
Christian Hereticke Neftorians, which dwell scattered throughout all the
Indias, for they take but one woman. The maner of their tombes is not
as one in all the Indias, for the moste India exceedeth other, in diligence
and sumptuousnesse, for they doe make causes vnder grounde, in trimming
it with a fine wal, and laye in the deade body in a precious bedde,
trimmed wyth Ornaments of Golde, settinge certaine bakettes round
about wyth his moste precious apparell, and put on rings, as though the
deade bodye shoule enjoye thole things in Hell. They close the mouth
of the caue very strongly, that none may enter, and vpon it they do make
a sumptuous and rich tombe strong to abide rayne, and to be the more
durable: but in the middle India they doe burne the deade bodies, and
most commonly they do burne their wifies alyue with the deade body,
one or manye, according as hée had.

¶ They doe by law burne the firste wife with him, although it be but one.
Also they doe take other wifes on this condition, for to honoure him in
his death, burning hir selfe with him: and this among them is no little
honour. They do laye the deade bodie in a bedde trimmed with the beste
apparell that he hath. They do make a fyre rounde about with sweete
wood, and when it burneth, his wife is trimly dreft with hir beste aray,
and conning with Trumpets and Shawmes and fongs merily, as though
she did sing, she goeth rounde about the fire. At this there is presente
the Priest, whiche they name Bachale in a Pulpit, preaching vnto hir
howe she mufle not esteeeme the life nor death, saying, that she shall haue
in the other worlde with hir husband suche pleasure, and shall possesse
greate riches, honour and apparell: she inflamed with thole words that
he teleseth hir, after that she hath gone a certaine time rounde about the
fire, she standeth nigher the Priests Chayre or Pulpit, and putteth off
all hir apparell, & putteth on a white linnen sheete, and leapeth into the fyre. If some of them be fearfull (for they haue seene the lyke of some) that lamenteth and stireth with death, after that she leape in, then the flanders by doe throwe hir in wheather shee will or no. After they be burnte, they gather the ashes, and putte them into pottes, and sone into the grane.

8 They doo wéepe for the deade after divers manners. The inner INDIANS couer theyr heads with a sacke, and some putte boughes of trees in the highe wayses, and doe hang from the toppe to the grounde painted verdes, playing three daies vpon certain instrumets of Copper. They do giue vnto the poore for Gods sake. Other do weep three daies for the deade, and all the kinsfolkes and neighbors goe vnto the deade bodies houfe, and they doe carry victualles, but it is not dreffe in the dead mans houfe. In these three daies, those that haue buried their father or mother, do carry a bitter leafe in their mouth, and in a whole yere after they doe not change their apparell, nor eate not but once a day, nor yet cutte theyr nailes, nor haire of their head or beard. The women which weep for the dead, are many, they flande neare vnto the deade bodies bedde, being naked vnto the nauell, and strike theyr breastes with a loud voyce, saying, alacke, alacke: and one of them beginneth to praise the vertues of the deade bodye, and all the reste answereth vnto hir wordes; striking theyr breastes: some put in certaine vessels of gold, and of siluer. The ashes of their Prince they cause to be cast into a lake that they haue, saying, it is hallowde by their Goddes, and that that waye they goe downe vnto their Gods. The Priestes whych they doe call BACHALES, eate of no kinde of beastes, especially not of the Oxe, for they will neither eate, nor kill him, saying, he is very profitable vnto menne aboue all beastes. They doe eate Rice, hearbes, fruites, and fuch like; and haue but one wife, which is borne with hir husbande when he dyeth; laying hir armes aboute his necke, receyuing hir death with fo good a wil, that she fl neweth no signe of paine. Through out al INDIA there is founde a lynage of Philosophers named BRAMANOS, whiche studeye Astrologie, and prognosticate things to come. They are appareled more honestly, and liue more holily than the others. NICHOLAS faide, that he hadde seene amongst these men, some of 300. yeares, and among them it was hadde for a miracle, for wherfoeuer that man wente, the boyes woulde followe hym, as a thing of noueltie; and among them is suche vised the superstitition whiche they doe call GEOMANCIA, by the whiche they tell thinges to come, as thoughe they were present. Alfo they are gyuen vnto inchauntementes, fo that dyuers tymes they doe moue and caufe tempsettes to cease, and for this
cause manye do eate in secret, for that they should be enchaunted by those that looke vpon them.

The faide Nicholas dydde tell for a trueth, that hée béeving patrone and owner of a Shyppe, hée hadde a calme feauen dayes, and hys mariners fearyng, they wente all vnto the mayne malle, and sette vppe a Table, and after they had made their sacrifices vpon it, they leapt and daunced rounde aboute, calling manye times the name of their Gods, whych they name Mutia: and among these there entred a Féend in a Alarabe or Moore, whych was amongest them, he beganne to sing maruellously, running aboute the Shippe lyke a madde man, and afterwardes he came vnto the Table, and dydde eate vppe all the meate vnto the bones and fire.

Also hée didde demaundde a Cocke, and killed it, and drunke vp the bloude, and immediately hée demaunded of those of the Shippe, what they woulde haue that hée shoulde doe, and they demaunded that he shoulede gyue them wind, he promisid to give it them within three dayes, and fuche, that they shoulede come vnto harbore: and he shewed, setting his handes behinde, from whence the wind shoulde come, and willed them to prepare for the strenth that the winde woulde bring; and when he hadde this faide, the manne fell downe as halfe deade, without anye knowlege or remembaunche of anye thing that he hadde faide, and in fewe dayes after they were fette in harbore. Commonly the Indians fayle by the guiding of the Starres of the Pole Antartique, for feldome times they doe see our North Starre. They sée not the Loademans londe as wée doe; they doe measure their waye, and distance of places, according as their Poale rifeth and falleth, and so they doe knawe by this meanes, what place they are in. They doe make bigger Shippes than wée doe, that is to faye, of twoo thousande Tunnes, wyth fyue fayles, and fo manye malle: they builde their Shippes wyth three planckes one vpon another under waater, that they maye the better resisthe the tempestes, for there chaunceth many. These Shippes are made with Chambers, after suche a forte, that if one of them shoulde breake, the others maye goe and finnish the voyage. Throughout al India they doe worchippe Idolles, and haue Churches muche like vnto oures, painted within with diuers pictures, whiche they doe decke with flourres at their feasts. They haue within Idolles of stone, and gold, of siluer, and of Iuorie, some of .6o. foote in height. They haue among themselfes diuers manners in worshipping, and sacrificing. When they enter into the Church, they wash themselfes in cleane water, and so they go in the morning, and in the afternoone, they go in lying along vppe the grounde, lifting vppe their feete and handes, and so praye a whyle, then they doe kiffe the grounde, and sende their
Idolles with the smoake of sweete woodde. On this side of Gange the Indians vse no belles, but in thead of them, they doe strike vpon a vessell of Copper, and with an other vesseell they doe offer victualles vnto their Gods as the Gentiles did, and afterwaide doe impart it to the poore, that they may eate it.

In the Cittie whiche they name Cambayta the Priestes preach vnto the people in presence of the Idoll their God, declaring howe they shoulde worshippe him, & howe much it pleaseth their Gods, when they do kill themselues for their loue: and there stands in presence many that determine to kill themselues for them. They have a hoope of Iron aboute their neckes, the vttre parte of the hoope is rounde, and within, it is sharpe like vnto a Rafe: alfo they doe hang vnto the fore parte of the hoope down thebreathe a chaine, and being sette downe, they fallen theyr feete vnto it, and byeyng thus, as the Priest layeth certaine wordes, they stretch forth their legges, and lifte vp their heades, and thus with the sharpenesse of the hoope, cutte off their heades in sacrificie of their Idoll, yelding yppe their liewes. And they that kill themselues in this order, are esteemed as Saints. In the Cittie of Bizengalia in certaine time of the yeare, they doe carry about the Cittie in procession their Idoll betwene two cartes, in the company of muche people, and the Damoyelles ride in cartes in trimme array, singing in the praise of hym with muche solemnite, and manye induced by the strength of theire faith, do lay themselues vpon the ground, that the wheeles of the cartes may goe ouer them, to bruife their bones, and so to dye, saying, that that death is acceptable vnto theire God. Others there be, that for the better adorning of the cartes, make holes through the sides of their bodies, putting a rope through it, and tye themselues vnto the carte, and so hanging dead in the procession, accompany theire Idoll, thinking that they cannot doe greater worshippe nor sacrificie vnto their Gods. And they make their solemnity thrée times in a yeare. In one time there gather together all the menne and women, and people of all ages, walking themselues in the sea, or in a riuer, having all newe apparell, doyng nothing else in thrée dayes but feast, daunce, and sing. Another feast they celebrate in burning manye lampes within and withoute their Churches, burning with oyle of Jonamolly, and the light goeth not oute daye nor nighte. In the thirde, they doe fette yppe poales like smal mastes through all the freetes, and from the toppe vnto the grounde, they doe hang very faire clothes, wroughte with golde, belonging vnto their Gods and painted, and on the toppe of these poales, at the whole nine dayes that it endureth, they do fette a religious man that hath a benigne and mecke face, who suffereth all that paine for to
receive the grace of his God, and the people throwe vnto him Orrenges, Lemmons, and other like fruities, and he suffereth it all with patience. There bee other three folke myne dayes, that they doe caste Saffron water vpon those that passe through the freetes, and manye laughe at it. They doe celebrate their weddings wyth banquets, songs, trumpets, and instrumentes muche like vnto ours, fauing Organs whiche they haue not: they doe make very lumpous seafles day and nighte, with instrumentes, daunces, and songs. They dauncye rounde aboute as wée doe, following one after an other in order, and twoe of them carrying twoo painted wandes in their handes, and as they doe meete, they doe chaunge sticke or wandes.

And Nicholas rehearseth, that this was a fayre sighte to beholde. They doe vse no Bathes, fauing the Indians beyonde Gange. The others doe walke themselfes manye times of the daye with colde water: they haue scant of oile, and other fruites of ours, as Peaches, Peares, Cherries, Damsons, Apples, and of Grapes they haue but fewe, and (as aboue is rehearsed) onely in one place. And in Pudifetamas, a province, there groweth a certaine tree withoute fruit, it groweth three cubites aboue grounde, and they call it shamefulness, for when a man commeth vnto it, it incloseth the braunches, and when he goeth away, it spreareth abroade his braunches.

Birengalia is a Mountaine whiche standeth beyonde towards the Septentriion fiftene dayesدرج. It is environed with many lakes, named Birenegalizia, which are full of venomous beastes, and the montaine standeth daungorous to bee entred, by reason of Serpentis. And thereon growe the Adamantes: and for that menne dare not goe vnto it, the policie of manne founde a way to enter, and to take the Adamantes, for there standeth adjoyning vnto it an other montaine, being a little higher, and in certaine times of the yeare menne goe vppon the toppe of it, where they doe kill certaine Oxen that they carrye with them, and the peces of flethe being hothe and bloody, with certaine Croffebowes for the purpuse, doe shooote them vppon the toppe of that other montaine, and with the fall, it cleaneth fafte vnto the Adamantes, and then the Bitturs and Eagles that flye in the ayre, snatchie vppon that flethe with their clawes or tallants, and flye vnto other places, where they maye seethe vppon it without feare of those Serpentis, and so the men finde the stones that fall from the flethe: they doe fynde wyth more easie the precious stones, for they doe digge in sundrye places, where they vse to finde suche stones, so deepe, til they fynde water mingled wyth grauell, and then they doe take a fyue for that purpuse, and putte in of the grauell, and the water runneth
out, and keep the stones that remaine behind, and after this forte in all these partes they doe vs to finde them: and the Maisters that sette to feke them, haue greate care that their servauntes doe not steale of those ftones, for they haue those that search all their apparell, yea, and so neare, that they leaue not unsearched their priuie partes, to knowe if they haue hidden anye. They divide the yeare into twelve moneths as we doe, and counte the moneths according to the twelve signes of the Elements. They accompte the yeare in diuers manners, and the mofte parte doe reckone it from August, for that in the time of Augustus Octavius Caesar there was an vnuerfall peace throughoute all the world, and they reckone from that time 1490. yeares. In some regions they haue no money, but vs in steade of money a certayne small stone which they name Cattes eye, and in some other places they do vs pecces of Iron like needles, somewhat bigger. In other places they do vs the Kings name written in paper in steade of money. In some provinces of India more within the lande, they doe vs Venice duckets of golde, and also other mony of two duckettes in one. Alfo they doe vs money of filuer, and of copper, and in other places they doe make certaine pecces of golde, and vs them in steade of money. The firffe INDIANS in the warres vs darts, & swords, a defence for their armes like Almaine rinetes, rounde Targes, and bowes. The other INDIANS vs skulls, backes, and breaste plates. The INDIANS which are beyond, vs Crosbrowes and gunnes, & al other ingenious artillerie vsed against Cities. These name theofe of the Weafele free, and lye, that all other people are blinde, lauing they, whiche haue twoo eyes, and laue that we haue but one, signifying, that in prudence they do exceede all the worlde. And onelye the Cambaytas write in paper, and all the refle write vpon leaues of trees, and of them make Bookes of a good liking: nor yet they write not as we doe, nor as the Jews from one fide vnto an other, but begin aboue, and fo write downe waides. There be among the INDIANS diuers languages. They haue gret aboundance of flaines. The debtor that can not paye, they caufe him to ferue the creditor, & he that is accused of any crime, there being no certaine witnesse against him, is quitte by his oth: they vs three manner of othes. There commeth the partie before hys Idoll, and sweareth by that Idoll, that he is not faultie, and they haue reade a hotte burnyng Iron like vnto a filfe hooke, and caufe hym that swore, to touch it with his tongue, and to liceke it, and if it doe him no hurt, he is quitte. And others bring the partie before hys Idoll, and caufe hym to take that same burning yron in his hande, and fo to carry it certaine paces, and if it hurt him not, he is quitte, but if it doe, he is guiltie. The thirde manner of swearing, which is molte vsed, is fiche:
They doe sette before his Idoll, a potte full of hot melt butter, and he that sweareth not to be guilty, dippeth in two of his fingers into the butter, and so wrappeth them with a clove, and sealeth it, that it shall not vnloose, and at three days ende they vndoe it, and if there be founde any signe of buming, hée is guilte, if not, he is quitt. There is no pestilence in the Indias, nor yet other of the diseaues that vse to trouble oure regions, and for this cause there is more Townes and people than is to be beleued. There be manye that make hostes of a million of menne, whych is 1000000. NICHOLAS declared, that of one towne, there went out against another towne great hostes, and had battayle, and when the one had overcome the other, for a great triumph, they did bring twelve Cart loads of goold laces, and of like, with the whych the men that remayned deade, had tyed theyr locke hayres, that hanged downe vpnon their backes. He layd more, that sometimes he had gone to their wars, only for to see both parties, and they dyd not hurt hym, for that they knew hée was a straunger.

In an Iland named Lava the great, is founde in a feewe places a treé, that hath in the middeef of the harte a rodde of yron, very small, but so long as the hart goeth, and hée that hath of this yron next vnto his flethe, shall not perifie by no kinde of yron, and for this cause there be many that cut their kinnes and put a peece of it betwene the kinne and the flethe, it is much estéemed.

The things that of the byrde Phœnix be declared and written in verfes by LATANCO, fèeme not to be fables, for the fayde NICHOLAS doeth say, that at the end of India, there is only one byrde named Senuenda, whose bil is like vnto Alboge, or together with many hoales, and when the time of his death commeth, he gathereth together dry woodde into his neste, and fitting vpon it, he fingeth fo sweetely wyth his bill, that he delighteth and plealeth muche thofe that heare him, and then fluttering with his wings vpon the wood, there cōmeth fire, and he letteth hymselfe burne, & then there commeth a worme out of his neste, and of hys ailes, and of it breðeth the birde, vnto the likenesse of that byrdes byl. Thofe of that country made the Alougue with the which they play very sweetely. And NICHOLAS marvellings much of it, they tolde him of what the making of it procedeed. Alfo there is in the first India, in an Iland called Saylana, a riuer named Artanie, fo full of fishe, that easily they maye take them vp with their hendes, but as foone as a manne holdeth one of those fishe in his hande, there commeth vnto him a Feuar, and letting the fishe goe, the Feuar is gone from hym, the cause of it appeareth to be the nature of the fishe, as among vs there is a fishe which we call Torpedo, whych fishe if a man do hold in his hand, it will be num, and grieue him: although the Indians
faye, that it commeth by means of their Goddes, by a certaine tale that they do tell of it.

After, for an information to the reader, keeping the truth of the Historie, I did write those things rehearsed, as the sayd Nicholas gau report, and then there came another out of the high India, which wandeth towards Septentrion, or the North, and he came, sante vnto the Pope for to see the things and manners of these parties, for in those parties they had fame, that in the Occident or west there was another world, being Christians. And this man declared that neere vnto Cattaya there was a kingdome, which indured twenty dayes journey, the which king and people were Christians, but of the sect of the Nestorians. He declared hath the Patriarch of the Nestorians had sent him for to bring him tydings certaine from these parties. He rehearsed that they had bigger, & more richer Churches than ours, being al vaulted, and that their Patriarch was very rich in golde and in siluer, that every father of family did give yearely vnto him an ounce of siluer. I communed with this man, by an interpreter whych could the Turkish tong, and the Latin, and I demanded of him by means of this, the wayes, & townes, houses, customs, manners, and of other things that a man delighteth to heare, there was great difficultie to learne it, for lacke of the interpreter, and also of the Indian, but he affirmed the power of the great cane, or Emperoure of al men, to be greate and mighty, for he had vnder him nyne mighty kings.

Also he declared that he hadde trauelled many months through the high Scithia, is nowe Tartaria, and through Peria, and that finally he came vnto the river Euphrates, from whence he entered into the sea, and layed vnto Tripole, and from thence to Venice, and from thence to Florence. He reported to haue seene manye Cities more faire than ours, both in publike edifications, and of Citizens, for he declared to haue seene many cities ten myles, and of twenty myles in compasse. And after that this man had spoked with Eugenius the fourth Pope of that name, he wet from Florence for to see Rome in denotion: he demandeth neyther siluer nor gold, seeming, that he came not for gain, but only to fulfill the messenger of hym that sent him.

In the same time there came vnto the Pope certaine men from Ethiopia, in denotion of the faith, with who I had communication, by an interpreter, to knowe if they knew any thing of the river of Niles, and of his
springing. Two of them gaue answere, that they were of a country being very neare vnro two wellsprings, from whence the riuene Nilus procedeth: when I hearde this, I couted to knowe the things that of this matter the olde aunciente Phylosophers, namely ptolemeus, did write: firste of the fountaines of Nilus. It appeareth not that they knewe it, but only by coniequence, to appeare that they drew out some things of the Original incr ease of the fayne riuer. And as these witnesses of sighte, did tell me of these and of others worthy to remayne in memorie, it seemed unto me verye good to write them.

They declared that the Riuere Nilus hadde his head and Wellspring neare vnto the Region Equinociall at the foote of very hyghe mountaynes, whych are alwayes covered on the topp with Mistes, from thrce wellsprings, two of them standing .40. paces the one from the other, and in 500. paces they meete, and make the riuere fo great, that no man may passe ouer but with boate. The thirde which is the biggest, standeth a thousand paces from the other two, and he commeth into the riuere of the others, ten myles off. Also they sayde that more than 1000. riuers did enter into Nilus, and it increaseth so muche in those countrie, with the raine of March, April, and May, that it makest Nilus to swell ouer so muche, that it made wonderfull great floues. Also they declared that the water of Nilus was verye sweete and sauerie, before he entereth among the other Riuers, and it hath vertue to heale those that haue the leaprice and sicke, if they walke themselues in it. And beyonde the headsprings of Nilus fifteen daies journey, there be verye fruiteful countries, ful of people, and well tilled, having very notable Cities, and also sayde that beyonde that countrye there was the sea, but they had not seene it, and that neare vnto the spring of Nilus there was a Citie, wherein they were borne, and it was five and twentie myles in compasse, full of people, and in the night had 1000. watches for to defende the Citie from daungers and alterationes that might rife. This region is temperate, and delightell, and plentiful of all thinges, in so much as 3. times in the yere there springeth new graffe, and twice in the year it beareth corne. It hath aboundsaint of bread and wine, although the moft parte of Ethiopia vfe (in feade of wine) barley sodden in water. They haue figges, Peaches, Oranges, and Cucumberes like vnto our Lemmons, Sytrons, and sauing Almonds. They haue al our kinde of fruite. Also they named dieres trées that they had, which we never saw nor hearde of in our partes, and they are difficult to write, for that the interpreter could not altogether understand the Arabian tongue. But of one of those trées, I muste nede se rehearse, which is as thicke as a man maye compasse, and as highe as a man. It hath
many rynes one within another, and betwéene thofe rines hath his fruite like vnto the Chestnut, and being ground, it becommeth meale, and of it they do make pleasanct white bread, which they do vse in their bakes. The leafe of this tree is more than a cubit in breadth, and more than two cubits in length. They sayd also, that towards the Ilande Meroe, the Niles could not be layled, by reason of the number of Rockes that were there, and that from Meroe vnto Egypt, it was navigable, but they tarrie fixe moneths in the Navigation, for that the river gieth manye turnes. Thofe that dwell in that Countrey, haue the face of the Sunne towards the North, as we haue it towards the South, and in March they haue it right ouer their heads. All Ethiopia hath one manner of letters, although they haue diuers languages, according vnto the greatnesse of the provincies. Some of them that dwell in the regions towards the Sea coaft, and in the hart of the India, there was very much Ginger, Cloues, Nutmegs, and Suger. Betwéene Ethiopia and Egypt there be deserts of 50. dayes journey, and they trauell so farre, hauing with them provisiof of meate and drinke vpon Cammels. It hath dangerous passages in many places, by reason of the wilde men that go naked in those deserts, like wild beastses riding vpon Cammels, whose fielth and milke they do eate. They doe robbe the Cammels and provisiof that the trauellers carie, so that many dye for hunger, and for this cause there passe fewe that way vnto vs. The Ethiopians moft commonly are of longer life than we, for many liue vntil 120. yeares, and 150. yeares, and in some places they liue tyll 200. yeares. It is a Countrey much inhabited, and never hath the plague, nor other infirmities, so with this, & with their long liues, their multitude is much encreased. They haue diuers customes, according to the diuersitie of the Countrey. They haue no wooll, but weare linnen and silk both men and women. And in some places, the women weare long traines, and a girdle of a spanne broade, trimmed with gold and precious stones. Some of them weare vpon their heads a Lawne, weaved with gold: and some weare their heare loose: and some wound vp in a lace hanging downe at their backes. They haue more plente of gold and precious stones than we. The men vse to weare rings, and the women brafelets wrought of gold and precious stones. From Christmas vnto Lent, they feaft euerie day, eating and dauming. They do vse little Tables, so that two or three may sitte at one of them, and do couer them with table clothes as we do. They haue but one King, which is entituled King of Kings, after or vnder God, and they saye, he hath many Kings vnder him, and that they haue diuers kinds of beasts. The Oxen are crooke backed, like vnto Camels, with hornes of three cubites in length bending vpon their backes,
so that vpon one of their hornes they do carrie a Rundlet of wine. Their dogges are of the bignesse of our Aflies, and there is some of them that may do more than a Lion, and hunt with them. They haue very great Elephants, and bring vp some of them for their pleasur & for hostilitie, & some for the warres. They bring them vp of yong ones, & tame them, and then kill the old. Their teeth are of fixe cubites in length. Alfo, they do tame and bring vp Lions, and to shew them for a magnificence and ostentation. Alfo, there is a kind of beasts of divers coulours like vnto the Elephant, but they haue not suche a tronke and snoute, they do call him Belus. They haue feete like vnto a Camell, and two very sharp horns, each of a cubite in length, the one standeth in his forehead, and the other vpon his nose. Alfo, there is another beast some what lager than a Hare, but in all proportions like, whiche they name Zebet, and hath such a strong smell, that if at any time he rubbe himselfe againstie any small tree, he leaueth behinde hym such a sweete sauour, that those that trauell and smell it, cutte off that part of the tree where the sent is, and carrie it with them, and in small pecces do sell it deerer than gold. Alfo they reported, that there is another kind of beast, of nine cubits in length, and fixe foote in height, hauynge clouen feete like vnto an Oxe. Their body is a cubit in compasse, and much like in haire vnto the Libard, headed like vnto a Camell, and haethe a necke of fixe cubites in length. His tayle is very thicke, and moche esteeemed, for the women do worke with it, embrodering it with precious flores, hanging them at their armes. They haue another wild beast, which they do take hunting, and he is to be eaten. He is as bigge as an Afi, striped with coulours redde and greene, and haethe wreathed hornes vpward, of three cubites in length. Alfo, there is another, much like vnto a Hare, with little hornes, and of coulour redde, whiche giueth a greate leape. There is another moche like vnto a Goate, with his hornes vpon his buttockes more than two cubites pending, and for that the smoke of them healthe Feauers, they are solde for more than fourtie Duckets a pecce. There is another much like vnto this Beast, fauing that he haethe no hornes. His hayre is redde, hauynge a necke of two cubites in length. There is another bodyed lyke vnto a Camell, and of the couloure of a Lybarde, hauing a necke of fixe cubites in length. They sayd he had a head like vnto a Deere. Alfo they sayd they had a bird of the height from the ground of fixe cubites, small legges, feete like a Goafe, the necke and vilege like vnto a Henne. This bird flyeth little, but runneth faster than a Horce.

Many other things they told me, whiche I leauе vnwritten, for that I finde my felse wеerie. And they sayd, that there were Serpents in the
Desertes without féete, of fiftie cubits in length, hauing a Scorpions tayle, and swallow a whole Caulfe at once. And in these things almost they did all agree, and it seemed vnto me that they made no lie, seeing they had no cause why for to lye, and I thought good to write it, for your profit of those you lift to rede.

FINIS
APPENDIX I
NOTES TO FRAMPTON'S TEXT
OF
MARCO POLO
NOTES

PROLOGUE

1. Page 15, line 1

The Prologue commences with a kind of invocation, which, however, reads quite differently in the Geographic Text (fr. 1116), and in all the more important MSS. It is, moreover, in the third person. I translate direct from fr. 1116:

"Governors, Emperors and Kings, Dukes and Marquises, Counts, Knights and citizens! and all those who would fain learn of the divers races of mankind and of the differences of the various regions of the World, take this book and read it."

2. Page 15, line 22

Vatican

The Geographic Text of 1824 reads "Rustacians," which has now been corrected by Benedetto to "Rusticianus." Yule used the form "Rusticiano," as being the "nearest probable representation in Italian form of the Rusticien of the Round-Table MSS. . . ." He adds, however (Intro. p. 63), that it is highly probable that the Pisan's real name was Rustichello, which form he found in a long list of Pisan officials during the Middle Ages. It is, therefore, satisfactory to see that Benedetto has come to the same conclusion (p. xiii) with a mass of fresh evidence.

3. Page 15, line 23

Iamua

Genoa. Written "Jene" in fr. 1116. Frampton follows the word with a comma, and continues immediately with, "raigning in Constantinople. . . ." This, however, is the beginning of the Travels, and should be quite distinct from what has preceded it. I have, accordingly, changed the comma to a full stop, and left a space of a few lines.

This starting-point in the four leading editions is: Marsden, Bk. 1, Ch. 1, Sect. 1; Pauly and Tule, Prologue, Ch. 1; Benedetto, Ch. ii.

In all future notes these four editions will be referred to simply as M., P., Y. and B. respectively.

4. Page 15, line 24

Raigning in Constantinople. . .

Both Ramusio (to be referred to in future as R.) and the Venetian MS called V by Benedetto (i.e., Staatsbib. Hamilton, 424a) give us the additional information that there also resided at Constantinople a magistrate representing the Doge of Venice—for the significance of this office of Podestà, see M. p. 4; cf. also p. ix and note of his Introduction where he quotes a similar passage from the lost Soranzo MS (see No. 61 of the Yule-Cordier table, Y. Vol. ii. p. 546).
5. Page 15, line 25

in the yeares of our Lord 1250.

So read all the best texts, but, as Marsden and all subsequent editors have pointed out, this is clearly an error in copying. As we shall shortly see, the brothers were back at Acre in 1269, and on reaching Venice found Marco fifteen years old. Thus they must have left Venice in 1254 at the very earliest. Now both R. and F. (Frampton) state that Nicolo left his wife with child. This would date the departure at 1253–4. But neither fr. 1116, nor any of the MSS used by Pauthier or Yule mention this fact. Thus, if it is a later interpolation, Nicolo may have seen his son before leaving Venice. The only reason for mentioning this latter point is that as their start from Constantinople was in all probability 1260 we cannot account for how the years from 1254 to 1260 were passed, unless they were engaged all this time at their branch house which we know they had in Constantinople. In any case, we are quite justified in changing 1250 to 1260.

See further Notes 20 and 21.

6. Page 15, line 30

Courtray of the Souldan

The once prominent port of Soldaia, now Sudak, is meant. Rubruquis passed through it in 1253 on his great journey to Karakorum. It lies on the south-east coast of the Crimea, between Uskyut and Otus. The elder Marco Polo had a house here.

7. Page 16, lines 1, 2

came to a Citie of the Lords of the Tartarians, which
is called Baracoan

Barka Khan was the third son of Juchi, the firstborn of the famous Chinghiz (Genghis) Khan. His two cities, mentioned in all the important texts, were Sara and Bolgara (Sarai and Bolghar), both on the Volga.

R. adds that Barka "had the reputation of being one of the most liberal and civilized princes hitherto known among the tribes of Tartary."

8. Page 16, line 10

Alan

This should read Alau, i.e. Hulaku, brother of Kublai and Mangku Khan, and founder of the Mongol dynasty in Persia. The war between Barka and Hulaku is described in that portion of the Book which Pauthier and Yule have turned into Book iv (P. Bk. iv. Chs. cccxi-ccxxvi; Y. Bk. iv. Chs. xxy–xxvm; B. Chs. cccxi–ccxxvi). As Yule has reduced the chapters to a few lines, and they appear neither in R. nor F., I have added them in full in Appendix II. pp. 337–39, taking them from Wright's edition of M.
APPENDIX I

9. Page 16, line 16

**Buccata**

Ucaca or Ukek, on the Volga halfway between Sarai and Bolghar. The name occurs in widely varying forms in the different MSS. It is “Ouchacca” and “Oucaca” in fr. 1116, “Euchatha” in Bib. Nat. 3195, “Oukaka” in R., and “Guthaca” in the Latin version published by Grynaeus in the Novus Orbis, 1532.

10. Page 16, lines 17, 18

*the River . . . Tygris, whiche is one of the foure that commeth out of Paradise terrenall*

By the “Tygris” is meant the Volga. Yule (Vol. 1, p. 9) suggests that the connection in name arose out of some legend that the Tigris was a reappearance of the same river, and adds that the ecclesiastical historian, Nicephorus Callistus, appears to imply that the Tigris coming from Paradise flows under the Caspian to emerge in Kurdistan. Neither Y. nor B. mention the above passage which is found both in R. and the Berlin Latin text. Its inclusion in F. is very interesting, see P. p. 8. That portion of the text dealing with the Volga area corresponds to: M. Bk. 1, Ch. 1, Sect. 1 (cont.); P. and Y. ProL. Ch. 11; B. Ch. 11m. See also Note 69.

11. Page 16, lines 22, 23

*noble Citie called Bocora, and the same name hadde that Province, which the Kyng of that Countrey had, and the Citie was called Barache*

This is obviously a mistake for “. . . and the Kyng was called Barache,” i.e. Borra Khan, great-grandson of Chagatai. Bokhara was considered as a part of Persia.

12. Page 16, line 27

**This Alan is otherwise called the greate Cane**

This is, of course, a mistake. Kublai was the great Khan, and the envoys were on their way back to him from Hulaku. The French texts clearly say “qui aloit au grant sire de tous les Tartars.” R. says the same, but adds: “qual stà ne confini della terra fra Greco, & Leuante,” “whose residence was at the extremity of the continent, in a direction between north-east and east.” A similar passage is also found in Ζ and V. (As already mentioned in Note 4, V = the Berlin Staatsbib. MS Hamilton, 424, of the fifteenth century. It was copied in 1793, and this copy forms Milan. Bib. Ambrosiana, Y. 162. P.S. This must not be muddled up with Bib. Amb. Y. 160. P.S. which = Ζ.)
13. Page 16, line 35  

friendshipp of hym

At this point end P. and Y. Prol. Ch. iii and B. Ch. iv.

14. Page 16, line 40 and page 17, line 1

shall be declared in thy Book

Here end M. Bk. i. Ch. 1. Sect. 1, P. and Y. Prol. Ch. iv and B. Ch. v.

15. Page 17, lines 7, 8

Dukedomes in Chrystendome, of theyr conditions

Here end P. and Y. Prol. Ch. v and B. Ch. vi.

16. Page 17, lines 12, 13

Could speake the Tartarie language

Here end P. and Y. Prol. Ch. vi and B. Ch. vii.

17. Page 17, line 26

Sepulchre of Iesus Christe in Jerusalem

Here end Y. Prol. Ch. vii and B. Ch. viii. The French texts mention the Khan’s ambassador, Cogatal, early in the chapter. He appears as “Cocoball” in F. a few lines further on.

18. Page 17, line 37  

fell sicke and dyed

I can find no reference to his actual death in any of the other MSS. Fr. 1116 merely says “chel amalaides,” while R. reads, “s’ ammaló grauemente.”

19. Page 18, line 1  

a towne called Giaza

i.e. Ayas, once a famous port on the gulf of Scanderoon, thirty miles southwest of Adana.

Here end P. and Y. Prol. Ch. viii and B. Ch. ix. They give us a little more information, which is also found in R.:

“...so great were the natural difficulties they had to encounter, from the extreme cold, the snow, the ice, and the flooding of the rivers, that their progress was unavoidably tedious, and three years elapsed before they were enabled to reach a sea-port town in the Lesser Armenia, named Giaza.”
20. Page 18, lines 2, 3

in the years of our Lord God 1272.

This clearly shows a clumsy effort to make the date consistent with the wrong departure date, 1250 (see Note 5). F. should have gone further in his efforts, and when mentioning Marco’s age a few lines lower down, should have changed it to twenty-two. R., giving the return as 1269 (which is quite correct), makes Marco’s age nineteen, thereby justifying the previous 1250 date. The French texts all have 1260 as the return date, which should be corrected to 1269.

Marco’s age should be fifteen, as all the best texts have it. Roux, in his edition of fr. 1116 in 1824, mistook xv for xii, but this has been since corrected. See further next note.

21. Page 18, line 3 the Pope Clement was dead

None of the early texts give his name. It appears, however, in the Crusca Italian as Clement, while in Bib. Nat. 3193 it is “Clementem IV” and R. has: “che Clemente Papa Quarto nuouamente era morto.” Now Clement IV died in November 1268, so that R.’s “recently dead” supports their return date as being 1269. Furthermore, the new Pope, Gregory X, was elected in 1271, in November of which year the three Polos made their second start from Acre.

22. Page 18, lines 4, 5 Miser Thebaldo

Called “Teald de Plajence” in fr. 1116, and “Tebaldo de’ Vescontei di Piacenza” in R.

Fr. 1116 describes him as “legat por le yglise de Rome en tout le regne d’Egipte.” F. is somewhat abbreviated at this point.

23. Page 18, lines 9, 10 Nigro Ponte

Negroponte was the name given to the island and port of Euboea in the thirteenth century; so-called, says Pauthier (p. 16), because there was a bridge of five arches of which “l’arche du milieu était un pont-levis pour le passage des navires.” After it had become the centre of Venetian influence in Romania, it formed a port of call on the Venice—Constantinople—Trebizond route.

24. Page 18, lines 15, 16

tarying the creation of a newe Pope

25. Page 18, lines 16, 17  
from Venice to Jerusalem

I.e. via Acre. The full itinerary, including the double start, was: Venice—
Acre—Jerusalem—Acre—Ayas—Acre—Ayas and across Asia to K'ai-p'ing fu (the

26. Page 18, line 26  
and so departed

Here end P. and Y. Prol. Ch. x and B. Ch. xi.

27. Page 18, lines 33, 34  
they sayled incontinente to the Pope

Here end P. and Y. Prol. Ch. xi and B. Ch. xii.

28. Page 18, lines 35, 36  
two Friers, of the order of Sainct Dominike

Fr. 1116 simply says "deus freres precheors," so also P., Y. and R.

29. Page 18, lines 38, 39  
disputations in the defense of the holy Catholike faith

Fr. 1116 mentions "brevilejes et carte...", while R. is fuller:

"To them he gave license and authority to ordain priests, to consecrate bishops,
and to grant absolution as fully as he could do in his own person. He also charged
them with valuable presents, and among these, several handsome vases of crystal,
to be delivered to the Grand Khan in his name and along with his benediction."

30. Page 19, line 1  
the Souland of Babylon

Most MSS mention his name: "Bondocdaire," "Bendocquedair," "Bundok-
dari," etc. "Babylon" means Cairo (Bambellonia d'Egitto).

For a good note on Bundukdar's invasion of Cicilian Armenia see Y. Vol. i.
pp. 23, 24.

31. Page 19, lines 4, 5  
they went not forarde

Here end P. and Y. Prol. Ch. xii and B. Ch. xiii.
32. Page 19, line 9  
*a yeare and a halfe*

All the chief texts read three years and a half, or, to be exact, "bien trois ans et dimi." Thus if we take the second start from Acre as being in November 1271, F. lets them reach the Khan in May 1273 instead of the more correct May 1275.

33. Page 19, line 12  
*fortie dayes journey*

The best texts add that they were honourably entertained upon the road, and found at each place through which they passed every comfort provided for them.

See Marsden's interesting note (No. 43), pp. 23, 24.

Here end M. Bk. i. Ch. i. Sect. iii, P. and Y. Prol. Ch. xiii and B. Ch. xiv.

34. Page 19, line 24  
*Lordes and Gentlemen*

With these words F.'s "Prologue" ends, corresponding, at this point, to the end of P. and Y. Prol. Ch. xiv and B. Ch. xv.

From this point the corresponding chapter numbers of M., P., Y. and B. are not given in these notes, but will be found in square brackets immediately beneath those of F. in the text of this volume.

---

**CHAPTER 1**

35. Page 22, line 2 (Chapter-headings, etc., are not counted in the numbering of the lines).

*but also other tres languages*

Fr. 1116 reads "il soit de langaies et de quatre lettres et scriture." B. supplies "quatre" before "langaies." The texts of both P. and Y. read "plusieurs languages" and "iiiij. lettres de leur escritures."

For a note on what the languages might have been see Y. Vol. i. pp. 28-30.

36. Page 22, lines 6, 7  
*in one of his Countrys, sixe Monethes journey*

R., V, and L (which represents a Latin compendium as explained on p. xxix of this volume) give the name of the city as "Carazan," "Chiarenza," and "Caçaram," respectively.

Y. has shown (Vol. ii. p. 67) this to refer to the province of Yunnan.
37. Page 22, lines 20, 21

Senior or Lorde

This appears to be Santaella's attempt to convey the "mesere" of the text. But it is abbreviated—the full translation of the best texts being:

"From the time of this embassage onwards the young man was called Messer Marco Polo, and so we shall call him in this our book. And we have ample justification in so doing for he was both learned and of good breeding."

38. Page 22, line 23

he was always fente

"And sometimes," adds R., "also he travelled on his own private account, but always with the consent, and sanctioned by the authority of the Grand Khan."

39. Page 23, line 3

demanded licence for to return to Venice

We find much more detail in R.:

"Our Venetians having now resided many years at the Imperial court, and in that time having realized considerable wealth, in jewels of value and in gold, felt a strong desire to revisit their native country, and, however honoured and caressed by the sovereign, this sentiment was ever predominant in their minds. It became the more decidedly their object, when they reflected on the very advanced age of the Grand Khan, whose death, if it should happen previously to their departure, might deprive them of that public assistance by which alone they could expect to surmount the innumerable difficulties of so long a journey, and reach their homes in safety; which on the contrary, in his lifetime, and through his favour, they might reasonably hope to accomplish. Nicolo Polo accordingly took an opportunity one day, when he observed him to be more than usually cheerful, of throwing himself at his feet, and soliciting on behalf of himself and his family, to be indulged with His Majesty's gracious permission for their departure..."

The Khan refused, said he was hurt at the request and was willing to double all their possessions.

Now the point I would like to mention here is that in this longer account given only by R. (and not noted by Benedetto) is that he especially states that it was Nicolo, the head of the family, who made the request. The other texts say "they asked many times," yet a little further on all texts (except, of course, F., who abbreviates the whole account) agree that Marco had been away on a mission from which he suddenly returns at the psychological moment. Thus the reliability of R. seemed to be supported here.
whose name was Balgania

Read "Bolgana," i.e. Bulughan, wife first of Abâka, and then of Arghun, the "Argon" of our text.

Onlora, Apsca, and Edilla

Fr. 1116 reads: "le primer Oulatai, le segont Apsca, le tierces Coia."

a Mayden, which was called Cozutine

Fr. 1116 reads "Cogacim," which Y. gives as "Cocachin." The correct form of the name would be "Kûkâchin."

was content they should goe

Yet R. adds that he "...showed by his countenance that it was exceedingly displeasing to him, averse as he was to parting with the Venetians."

R. also has a curious passage, which Yule says is no doubt genuine, in which he states that the party started on their way (without any of the Polos), but that owing to wars they were forced to return. It was at this juncture that Marco chanced to return from his mission to India.

sent divers Embassadours to the Pope...

So also fr. 1116 which reads "a l'apostoille..." but Y., following Pauthier's text, ignores the Pope and adds "the King of England."

fourteene great Shippes

So also in fr. 1116 and R., but Y. reads "thirteen." F. omits to say that the vessels can spread twelve sails. R. reads nine sails, and adds:

"Among these vessels there were at least four or five that had crews of two hundred and fifty or two hundred and sixty men."

I cannot trace the source of F.'s "fixe hundredeth men," but see next note.
CHAPTER 4

married that maybe to his sonne

According to fr. 1116 his name was "Casan," so also in P. and Y. Here again R. gives us much more detail:

"Upon landing, they were informed that King Arghun had died some time before, and that the government of the country was then administered, on behalf of his son who was still a youth by a person of the name of Ki-akato [the "Archator" of F. and "Chia(ca)to" of fr. 1116]. From him they desired to receive instructions as to the manner in which they were to dispose of the princess, whom, by the orders of the late King they had conducted thither. His answer was, that they ought to present the lady to Kasan, the son of Arghun, who was then at a place on the borders of Persia, which has its denomination from the Arthur seco, where an army of sixty thousand men was assembled for the purpose of guarding certain passes against the eruption of the enemy. This they proceeded to carry into execution, and having effected it, they returned to the residence of Ki-akato, because the road they were afterwards to take, lay in that direction. Here, however, they reposed themselves for the space of nine months."

F. omits to mention the great loss of men suffered on the journey. Fr. 1116 says that of the six hundred that started, not counting sailors, only eighteen arrived. Y. makes the number of survivors eight. R. has quite a different account, and says that of all the crews and other persons six hundred were lost, and of the three ambassadors, only one, named Goza, survived. Of the ladies and their female attendants only one died.

47. Page 25, line 3

four Tables of gold

According to R., the inscription on the fourth Table began with invoking the blessing of the Almighty upon the Grand Khan, that his name might be held in reverence for many years, and denouncing the punishment of death and confiscation of goods to all who should refuse obedience of the mandate.

F. makes no further reference to the princess, neither does R. or most of the other MSS. Fr. 1116, however, has a most interesting passage which Y. has translated (Vol. 1. p. 36) as follows:

"The Great Khan regarded them with such trust and affection, that he had confided to their charge the Queen Cocachin, as well as the daughter of the king of Manzi [also mentioned in Bib. Naz. Florence, II. iv. 88, the Codex della Crusca], to conduct to Argon the Lord of all the Levant. And those two great ladies who were thus entrusted to them they watched over and guarded as if they had been
daughters of their own, until they had transferred them to the hands of their
Lord: whilst the ladies, young and fair as they were, looked on each of those three
as a father, and obeyed them accordingly.

Indeed, both Casan, who is now the reigning prince, and the Queen Cocachin
his wife, have such a regard for the Envoys that there is nothing they would not
do for them. And when the three Ambassadors took leave of that Lady to return
to their own country, she wept for sorrow at the parting.”

See Pauthier’s note on the passage, p. 32.

48. Page 25, line 9  and so much they travelled

R. says that during their travelling they received news of the death of Kublai
Khan. He had died in 1294.

This is probably a later addition, for, as P. has pointed out, Polo always speaks
of Kublai as if he believed him to be still alive.

CHAPTER 5

49. Page 25, lines 17, 18

First and foremost... as there is

These two lines seem to be unique to F. Fr. 1116 begins directly with: “Il est
voir qu’il sunt deus Harmenies.” So also with P. and Y.

The Lesser Armenia roughly corresponds to the classical Cilicia.

50. Page 25, line 29  a Cittie called Gloza

This is the “Laias” of fr. 1116, the modern Ayas. See Note 19, where F. spells
it “Giaza” which is decidedly preferable to “Gloza.” The evolution of the modern
“Ayas” can be seen in the following forms:

51. Page 25, lines 30–32

have their Cellers and Warehouses in that Cittie, as
well Venetians, and Ianoys, and all other that do
occupye into Levant

This passage seems to be unique to F. All the chief MSS merely say that Venetians
and Genoese come to trade at Ayas, which city is a starting-point for
merchants travelling into the interior.
There is, however, a further passage found both in R., and Z (the newly found Latin MS, Bib. Amb. Y. 160. P.S.), as well as in V (for which see p. xxix of the Introduction and Note 12) where it is somewhat abbreviated. It runs as follows:

"The boundaries of the lesser Armenia are, on the south, the land of Promise, now occupied by the Saracens; on the north, Karamania, inhabited by Turkmans; towards the north-east lie the cities of Kaisariah, Sevasta, and many others subject to the Tartars; and on the western side it is bounded by the sea which extends to the shores of Christendom."

Both Z and V add "Turchia" before "Cayssaria, & Sevasta."

CHAPTER 6

52. Page 26, line 2

_Torchomania_

This practically corresponds to Asia Minor, or perhaps better, to the Asiatic country of Rûm.

53. Page 26, lines 4, 5

_and speake the Persian language_

This is the first occurrence of a very curious mistake, which we shall find many times in Frampton's translation.

Santaella has translated "lingua per si" as "lengua de persianos"; thus instead of speaking a language "peculiar to themselves," we shall find peoples all over the East speaking "the Persian language"!

54. Page 26, lines 8, 9

_The other, or second maner of people be..._

This is a mistake for "The other two..." or some similar wording, as he has distinctly said there are three "maner of people," and no third is given.

55. Page 26, line 13

_Chemo, Ifiree, and Sebagio_

It is not easy to see Kònia, Kaisariya and Sivas in these corrupted forms.

"Chemo" must be a misprint for Chonio, the "Conio" of fr. 1116. "Ifiree" is intended for Caserie, while "Sebajo," the least corrupted, is the "Savast" of Y. and "Sevasto" of fr. 1116.

56. Page 26, line 14

_Saint Blase_

Blasius, not mentioned in fr. 1116 or Y., but occurring in R., became patron saint of wool-combers, owing, apparently to the fact that before being beheaded (in A.D. 316) his flesh was torn off him by wool-comber's irons.
57. Page 26, line 16: he setteeth gournories there

All MSS end the chapter here, but some additional information is to be found in the _Imago Mundi_ of Jacopo d' Acqui. This is reproduced by Benedetto as note (b) on p. 14 of his edition. See also pp. cxciii–cxylii for details of this work, which he calls _I_. The MS is in the Ambrosian Library at Milan (D. 526).

58. Page 26, lines 18, 19

_a great Cittie called Armenia, where they doe make excellent Buchachins or Buckrams_

A mistake for Arzinga or Arzingal, the modern Erzingeran, ninety-seven miles west of Erzerum.

R. reads "bochassini di bambagio," but exactly what these buckrams are is uncertain. See Yule's interesting note, Vol. i. pp. 47 et seq.

R. and Z add that the city also produces "many other curious fabrics, which it would be tedious to enumerate."

59. Page 26, lines 22–24

_Archinia...Archeten...Arzire_

These appear in Y. as "Arzinga," "Arziron" and "Arzizi"; and in B. as "Arzingal," "Argiron" and "Daryci." They correspond to the modern Erzingeran (which we have already had above), Erzerum, and Arjish close to the north-eastern shores of Lake Van.

It was Erzingeran which was the see of an archbishop, not Arjish as stated by F. R. and Z mention a castle at Paipurth or Paperth (Baiburt), half-way between Trebizond and Erzerum, where is a silver mine. V also speaks of the mine, but does not mention Paipurth.

60. Page 27, line 2

_3 Arke of Noe on a high Mountain_

Further details are found in R., Z and I. The fullest account is that of Z, which is as follows:

"In the central part of Armenia stands an exceedingly large and high mountain, upon which, it is said, the Ark of Noah rested, and for this reason it is termed the mountain of the Ark. The circuit of its base cannot be compassed in less that two days. The ascent is impracticable on account of the snow towards the summit, which never melts, but goes on increasing by each successive fall."
In the lower region, however, near the plain, the melting of the snow fertilizes the ground, and occasions such an abundant vegetation, that all the cattle which collect there in summer from the neighbouring country, meet with a never failing supply."

61. Page 27, line 3

towards the East called Mayfind

In addition to Mosul, R. mentions "Maredin" (Mardin), while Z gives "Munsul Mus et Meridin."

CHAPTER 8

62. Page 27, lines 13, 14

Nand Maliche... Dawnid

Here the text is muddled. The correct reading should be "Davit Melic... Davit roi."

63. Page 27, line 16

with a token or signe

F. omits to say what sign. It was that of an eagle, as all texts clearly state.

64. Page 27, line 17

In this Country

R., Z, L and V all give details of the country not found in other texts. See B. p. 16.

The passage in R. is as follows:

"One part of the country is subject to the Tartars, and the other part, in consequence of the strength of its fortresses, has remained in the possession of its native princes. It is situated between two seas, of which that on the northern (western) side is called the Greater sea (Euxine), and the other, on the eastern side, is called the sea of Abakh (Caspian). This latter is in circuit two thousand eight hundred miles, and partakes of the nature of a lake, not communicating with any other sea. It has several islands, with handsome towns and castles, some of which are inhabited by people who fled before the Grand Tartar, when he laid waste the kingdom or province of Persia, and took shelter in these islands or in the fastnesses of the mountains, where they hoped to find security. Some of the islands are uncultivated. This sea produces abundance of fish, particularly sturgeon and salmon at the mouths of the rivers, as well as others of a large sort. The general wood of the country is the box-tree."
Tower and gate of yron

The French texts add further details. Y. translates:

"This is the place that the Book of Alexander speaks of, when it tells us how he shut up the Tartars between two mountains; not that they were really Tartars, however, for there were no Tartars in those days, but they consisted of a race of people called Comanians and many besides."

Hawkes

R. adds, "of a species named amgra."

a Monasterie of Monkes of . . Saint Bernarde

This seems to be a corruption from the "monasterio intitolato di San Lanardo di monachi" of R.

It was, however, a nunnery called St Leonard's.

The reading of fr. 1116 is: "un monester de nonain qui est apelé sant Lionard. . . ." So also in P. and Y.

Geluchelan . . five hundred Miles compass

The Caspian: fr. 1116 and Y. read "seven hundred," the former definitely stating that figure is the circumference ("gire") of the lake. Benedetto, with the help of the Z, L and F MSS. has altered "VII" to "II ¼ VII" which is undoubtedly correct. The Caspian is 760 miles long and its circumference has been given by Halbass (Peter. Mitt. Geog. Ergänz. No. 185, pp. 18-19) as 6000 kilos. Thus Yule's objection (Vol. 1, p. 59) to 2700 miles as being too large is quite unfounded. It is just about 1000 miles too small.

from Paradice terrenall

Cf. with Note 10. Here again the passage seems to be unique to F.

For an article on the four rivers of Paradice, mentioned in Genesis ii. 10-14, see Hastings, Dict. of the Bible, under "Eden."

a filke called Gella

Spelt "Gelle" in fr. 1116, written by B. as "G[h]elle."

The name given to the silk is undoubtedly derived from "Ghel," the Caspian.
CHAPTER 9

71. Page 28, line 20

a Patriarke, called Jacohia

F. omits to add that he sends them out to India, Baudas, and Cathay, just as the Pope does in the Latin countries.

72. Page 28, line 24

and of other Merchandize

Apart from muslins and spices, Y. speaks of pearls and cloths of silk and gold.
At the end of the chapter R., Z., L and V mention both "Mus" (Mush) and "Merdin" (Mardin), and refer to the large quantities of cotton they produce. The "Cordos" are, of course, the Curds.

CHAPTER 10

73. Page 29, line 3

chiefe governour & head

All the best texts add "as at Rome the Pope is of all the Christians."

74. Page 29, lines 10, 11

Betwene Baldach and Chifi upon the River is a Citie called Barfera

The fact that in all MSS Polo makes the Tigris flow through Baghdad (Baldach of F.; Baudac of fr. 1116), Basra and the island of Kais (Chifi), about 150 miles from the mouth of the gulf, is surely sufficient to show he is not speaking from personal knowledge. If he ever did visit Baghdad personally we would expect a much more definite proof of the fact. See pp. xxxiv et seq. of the Introduction.

75. Page 29, line 13

cloth of Nafich, of Chrimson...

Fr. 1116 reads "nassit et nac et cremosi"—"stuffs of silk and gold." See Y. Vol. 1. pp. 65, 66. The text then explains how the materials are wrought with figures of animals, but F., not realizing the connection, tells us that the country is well supplied with "four footed Beastes" and "Fowles." See, further, Note 207.
This Citie is one of the beft...  
Before this statement R., Z, L and V have an additional passage. R. reads: “Almost all the pearls brought to Europe from India have undergone the process of boring, at this place. The Mahommedan law is here regularly studied, as are also magic, physics, astronomy, geomancy and physiogonomy.”

Read with the best texts “1265...Alau....”

and take it by force

R. contains considerably more detail about the capture of Baghdad and the death of the last of the Abbasides, Mosta’sim Billah. As the passage in question is lengthy, it will be found in full in Appendix II. No. 1, pp. 263, 264.

CHAPTER 11

Totis is a greateCitie...of Baldach

Read “Toris [Tauris]...of Yrac ['Irak].”

P. has given this chapter before the account of the miracle of the mountain, which comes first in all the best MSS.

and of Osmafeilli, and of Cremes.

I.e. of Mosul and Cremesor or Garmir, the Hormuz district of the Persian Gulf. Y. omits “Mosul,” which is curious as it is in both P. and fr. 1116.

robbiers and killers

R. Z and V give additional information. I take the following from R.: “The Mahommedan inhabitants are treacherous and unprincipl. According to their doctrine, whatever is stolen or plundered from others of a different faith, is properly taken, and the theft is no crime; whilst those who suffer death or injury by the hands of Christians, are considered as martyrs. If, therefore, they were not prohibited and restrained by the powers who now govern them, they would commit many outrages. These principles are common to all the Saracens.
When they are at the point of death their priest attends upon them and asks whether they believe that Mahommed was the true apostle of God. If their answer be that they do believe, their salvation is assured to them; and in consequence of this facility of absolution, which gives free scope to the perpetration of everything flagitious, they have succeeded in converting to their faith a great proportion of the Tartars, who consider it as relieving them from restraint in the commission of crimes. From Tauris to Persia is twelve days journey."

Ramusio then gives a short chapter: "Of the Monastery of Saint Barsamo, in the neighbourhood of Tauris." There is no need to give it here as Y. has included it in full (Vol. i. p. 77). It is curious, however, that he does not print it between square brackets, to show it is from R.

CHAPTER 12

82. Page 30, line 14

_In Mosull, a Citie in the Province of Baldach_

Here again our text is muddled. It should place the miracle as having taken place between the two cities.

Fr. 1116 gives the date, omitted in Y., as 1275. For a note on this see B. p. 20.

83. Page 32, lines 25, 26

_he lyued and dyed like a true and faythful Christiain_

So ends F.'s abbreviated account of the legend. R. and Z have two unique passages. Firstly, after the cobbler has offered up his prayer he cries in a loud voice: "In the name of the Father, Son, and Holy Ghost, I command thee, O mountain, to remove thyself!"

Secondly, the chapter in R. ends with the following:

"In commemoration of this singular grace bestowed upon them by God, all the Christians, Nestorians, and Jacobites, from that time forth have continued to celebrate in a solemn manner the return of the day on which the miracle took place, keeping fast also on the vigil."

CHAPTER 13

84. Page 32, line 30

_the three Kings_

Fr. 1116 and Y. distinctly read "three Magi." Their names are given as Beltasar, Gaspar and Melchior.
85. Page 33, line 7  

_Calassia Tapeziften_

Fr. 1116 has "Cala Ataperistan," so also P. and Y. Its locality has not yet been ascertained, but Y. would put it between Saveh and Abhār. See also Cordier, _Ser Marco Polo_, p. 18.

Chapter 13 of F., representing an abbreviation of two corresponding chapters in P., Y. and B., is not found in R.

---

86. Page 34, line 1  

eight Kingdomes

Viz. Kazvīn, Kurdīstān, Lūrāstān, Shīlāstān, Ispāhān (the reading in Y. is "Istānī," an obvious corruption; B. has "Isfahan"), Shīrāz, Shabānkāra and Tūn-o-Kān. Some of the readings in F. are sadly corrupted. He omits to mention that all the above kingdoms lie towards the south, except the last which lies in an easterly direction bordering on the country of the Arbre Sec, or Arbre Sol.

87. Page 34, line 7  

_& coursers of great value_

F. omits to mention the actual prices; "...il vendent le m bien ce libre de tarnis" and the asses, "un trioste mares d'argent." says fr. 1116. Yule states that the _lire tournais_ of Marco's time was equivalent to a little over 18 francs of modern (1903) French silver. Z. and R. have a passage about the advantages of the ass over the horse. R. adds: "Camels also are employed here, and these in like manner carry great weights and are maintained at little cost, but they are not so swift as the asses."

88. Page 34, lines 9, 10  

_Arifo, & of Arcones_

These are very corrupted forms of Chisi and Curmosa.

89. Page 34, line 14  

_robbed or taken prisoner_

R. adds: "A regulation is also established that in all roads, where danger is apprehended, the inhabitants shall be obliged, upon the requisition of the merchants to provide active and trusty conductors for their guidance and security, between one district and another; who are to be paid at the rate of two or three groats for each loaded beast, according to the distance."
Both R. and Ζ have an interesting passage about wine-drinking:

"Should anyone assert that the Saracens do not drink wine, being forbidden by their law, it may be answered that they quiet their consciences on this point by persuading themselves that if they take the precaution of boiling it over the fire, by which it is partly consumed and becomes sweet, they may drink it without infringing the commandment; for having changed its taste, they change its name, and no longer call it wine, although it is such in fact."

CHAPTER 15

90. Page 34, line 19  Iafo is a goodly Citie...
   I.e. Yasdi, or Yezd.

91. Page 34, line 23  another language
   This mention of language seems to be unique to F.

92. Page 34, line 24  eight dayes
   So also in R., but the French texts read "seven."

93. Page 35, line 1  Cretina
   Read "Chermon," the "Kierman" of R., the "Creman" of P., the modern Kirmān.

94. Page 35, line 2  of a great and long inheritance
   All the best texts give more details: "...it was formerly governed by its own
   Princes in hereditary succession; but since the Tartars brought it under their
   dominion, the rule has ceased to be hereditary and they appoint as governors
   what lords they wish."

95. Page 35, line 5  plentie of Uaye, or Ors of Stéèle, and of calamita
   Read "plentie of veins of steel and ondanique."
   the "ondanique" to be the pin t'ien, or "pig iron" of the Chinese. See Cordier,
   op. cit. p. 19.
APPENDIX 1

96. Page 35, line 12  
**eight days**

As before (Note 92) read "seven."

97. Page 35, line 19  
**have enough to do to live**

This corresponds to the end of M. Bk. i. Ch. xiii, Y. Bk. i. Ch. xvii and B. Ch. xxxv, but \( \zeta \) contributes an entirely fresh passage on Kirmān and its king. See B. p. 27 note a.

98. Page 35, lines 22–24  
**Camath...Reobarle**

Fr. 1116 reads "Camandi...Reobar," i.e. Camadi and Rudbar. See the map facing p. xxxvi, of the Introduction.

99. Page 35, line 25  
**goodly frutes in great abundance**

At this point R. (also \( \zeta \)) reads: "Turtle doves are found here in vast numbers, occasioned by the plenty of fruits which supply them with food, and their not being eaten by the Mahommedans, who hold them in abomination." All the best texts then continue:

"and on this plain there is a kind of bird which is called francolin, but different from other francolins of other countries, for their colour is a mixture of black and white, and their feet and beak are red."

100. Page 35, line 31  
**a greate tayle...that will weigh...32. pound**

Fr. 1116 and all leading texts read "thirty" or "a good thirty." On the fat-tailed sheep of Persia see Cordier, op. cit. p. 19.

101. Page 35, line 33  
**Caroanes**

F. omits to mention that they ride abreast to about the number of 10,000, but sometimes more or fewer.

102. Page 36, line 1  
**Their King is called Hegodar**

I.e. Nogodar. F. omits to describe the most interesting inroad to Kashmir, as given in all the best MSS. See Introduction, p. xl, and accompanying map.
R. gives a few extra details about the "Karaunas":

"...and these are the people who have since been in the practice of committing depredations, not only in the country of Reobarle, but in every other to which they have access."

After speaking of the magical darkness (dry fog and dust storm), he adds:

"Most frequently this district is the scene of their operations; because when the merchants from various parts assemble atOrmuz, and wait for those who are on their way from India, they send, in the winter season, their horses and mules [sic Marsden, but the text has "muli e camelli," mules and camels, very distinctly; "cavalli" is Ramusio's word for horses] which are out of condition from the length of their journeys, to the plain of Reobarle, where they find abundance of pasture and become fat. The Karaunas, aware that this will take place, seize the opportunity of effecting a general pillage, and make slaves of the people who attend the cattle, if they have not the means of ransom."

103. Page 36, line 4  a towne called Ganafalim

Santaella's text gives "n" as the last letter. The 1503 edition has only one "s," i.e. Canosalmi, as in fr. 1116; or Conosalmi as in Y. Its identification is not certain, but the suggestion of Houtum-Schindler, that it is the ruined town of Kamasal (Kahn-i-asal) near Kahn-i-panchar and Vokilabad, seems to be much the best.

F. says Polo lost many of his companions. Fr. 1116 has "sex" and P. has "seft."

104. Page 36, lines 5–7

and is of seaven dayes journey, and at the end of them
is a moûtayne, called Detuslino, that is eitheene miles
long...

All the best texts read "five" days journey, but there is nothing about a mountain called Detustlino. Fr. 1116 reads:

"...un autre clinee que convent que l'en aille pur au declin xx milles...."

Santaella's text clearly says "vn monic que llaman Detuclino que dura en luengo feys leguas y media." Thus F. is true to his text, except that "t" has become "c," and "i" appears as "y." We can, however, see the "clinee" of the French texts in Santaella's jumbled word.

105. Page 36, line 9  the goodly playne

I.e. Harnuza, the "Formosa" of the French texts.
CHAPTER 16

107. Page 36, lines 17, 18

the king is called Minedanocomyth

Written “Ruemedan Acomat” in fr. 1116 and “Ruomedan Ahomet” in Y. This is Rukn ud Din Muhammad (Wilson, op. cit. p. 104) or possibly Rokned-Din Mahmud III (Cordier, op. cit. p. 24), but see further, Note 111.

108. Page 36, lines 19, 20

they doe make hauocke of all his goods

All the best texts state that the king confiscates the property of the deceased.

109. Page 36, line 27

And for the great heate in the Sommer…

F. has unfortunately omitted the important section about the boats being unseaworthy. This plays a part in our attempt to reconstruct the itinerary through Persia. See p. xxxvi of the Introduction.

The account of the summer heat is much abbreviated, and the terror of the hot wind ignored. Ramusio has an interesting story about the “ruler of Ormus” and how his body of troops was suffocated by the hot wind.

In view of the above, I have reprinted all these passages from R. in full. See Appendix II. No. 2, pp. 264, 265.

CHAPTER 17

110. Page 37, lines 8, 9

and not declaring any more, of the Indians

This is a mistake for “not go on to declare about India,” or some such statement; the original corresponding passage in fr. 1116 is:

“Et ne vos contaron de Endie a cestiu point, car vos bien le conterai en notre livre avant, quant tens et leu sera.”
111. Page 37, line 13

_Rev. me clu vacomare_

This apparently represents a very corrupt form of Ruemedan Acomat, as found in fr. 1116. There is considerable difficulty in determining which king of Hormuz is meant. It should be either Rukmuddin Masa'ud or Fakhruddin Ahmed (the spellings vary greatly), though it is possible that Polo has muddled the two and so produced his Ruemedan Acomat, or Ruomedam Ahomet (as in Yule's texts). Frampton has inadvertently connected this ruler with the Old Man of the Mountain whose cruelties are made the excuse for Polo's returning to Kirmān by a different route. There should be, of course, no connection whatever. Polo had experienced extreme cold on his journey to Hormuz, but apart from not wishing to endure this again unnecessarily, he would also have to encounter a "slope" that took over two days to come down. No wonder he preferred another route on the return journey. F. tells us nothing of this route. It was in all probability via the Urzū district and Bāft. See the Introduction, p. xxxvii. It is described as lying through fine plains with "abundance de viandes," including partridges, fruits (especially dates), wheaten bread, which is bitter owing to the water, and hot baths which cure the itch and other skin diseases.

112. Page 37, line 17

_in the yeare of our Lord 1272. Alain...

Fr. 1116 reads "1262," and Y. "1252," which latter is the more correct date. See Y. Vol. 1, p. 146. The name should, of course, read "Alau," for Hulaku. He took the fortress of Alamūt in 1265. By jumping to this part of the story of the Old Man of the Mountain, F. not only misses out all the first part of the tale, but omits the portion of the itinerary from Kirmān to Čobín (Kuh-Banān) and Tunocain (Tun and Kain). See Introduction, pp. xxxvii–xxxviii.

I have, accordingly, restored all this in Appendix II, No. 3, pp. 266–8.

CHAPTER 13

113. Page 38, lines 2, 3

_with all things in it fitt for mans sustenance_

The French texts add that armies (les ost) gladly stay here on account of the great plenty that exists.

114. Page 38, lines 5, 6

_speake the Persian language_

F. has this instead of "et les homes aorent Maomet" as found in fr. 1116 and other leading texts.
115. Page 38, line 7  

_to go .40. miles_

Fr. 1116 has "Et aucune foies trouve l'en desert de lx milles, et de l, et quelz ne i se trove eive,...."  
P. reads "...de soixante milles ou de mains," while R. has "40 or 50." I rather suspect this latter is correct, and that the "lx" of fr. 1116 is a mistake for "xl."  
Y. writes "50 or 60" without comment.

116. Page 38, line 10  

_a Citie called Sempergayms_

This is the "Sapurgan" of all the best MSS, as well as R.

117. Page 38, line 11  

_There be excellente good Mellones_

This is abbreviated. The French texts add that the fruit is cut in strips, and dried in the sun, when it becomes sweeter than honey. In this form it finds a large sale in all the country round.

118. Page 38, line 14  

_a Citie called Baldach_

In speaking of "Baldach," i.e. Balk, F. omits to mention its former greatness now reduced owing to the injury received at the hands of the Tartars. "Many of its fine palaces and marble buildings are still visible," add the texts (including R.), "but only in a ruinous state."

119. Page 38, line 17  

_speake the Persian tong, and be all of the sect of Mahomet_

As before, in Note 114, the reference to the language is an addition of F. The second part of the line, however, is found in fr. 1116: "Les gens aorent Maomet," but not in the Y. texts. It must also be in the majority of the Pipino texts as it is in R. as well as F.

120. Page 38, lines 19, 20  

_And departing from this Citie...you shall goe two
dayes..._

Here, as in R., no fresh place is mentioned, and in two days we arrive at "Thay-chan" (Talikan). In Yule and fr. 1116, however, we hear of "Dogana" (called
"Gana" in two of the P. texts), after leaving which a twelve days' ride brings the travellers to Talikan.

It is very difficult to determine where "Dogana" is and what is included by the term. I have discussed the question as best I can in the Introduction, p. xl.

121. Page 39, line 1  

A Towne called Thaychan

The account of Talikan is abbreviated. The fullest account is found in R.:

"...you reach a castle named Thaikan, where a great market for corn is held, it being situated in a fine and fruitful country. The hills that lie to the south of it are large and lofty. They all consist of white salt, extremely hard, with which the people, to the distance of thirty days' journey round, come to provide themselves, for it is esteemed the purest that is found in the world; but it is at the same time so hard that it cannot be detached otherwise than with iron instruments. The quantity is so great that all the countries of the earth might be supplied from thence. Other hills produce almonds and pistachio nuts, in which articles the natives carry on a considerable trade." [This last passage occurs only in R. and Ζ.]

CHAPTER 20

122. Page 39, line 9  
do speake the Persian language

See Note 119, first paragraph.

123. Page 39, line 10  
singular good wines

The French MSS add that the wine is boiled.

CHAPTER 21 (misprinted 12 by F.)

124. Page 39, line 13  
foure dayes journey

Read "three" days with all the best texts.

125. Page 39, line 14  
a Citie called Echasen

I.e. Casem, the modern Kishm. The French MSS add that it is subject to a count ("un cuens").

126. Page 39, lines 17, 18  
many wilde beastes

F. omits to mention porcupines by name, which are described as rolling themselves into balls and shooting out their quills at the hunting-dogs.
APPENDIX I

127. Page 39, line 20  *doe speake the Perfiæ tong.*

Here is the old mistake for "lingua per si." See Note 53.

CHAPTER 23

128. Page 40, line 6

"Ballasias is a great province, & they do speake the Perfiæ tong."

This is Badashan, the modern Badakhshah, in north-east Afghanistan. For "Perfiæ tong" read "a language peculiar to themselves." See Note 53.

R. adds that the kingdom is a full twelve days' journey in length.

129. Page 40, line 9

*Darius king of Perfiæ,... Culturi*  
F. has omitted "daughter of" before "Darius."

"Culturi" is a very corrupted form of "Zulcarnein," i.e. Zu'il-karnain, the "two-horned," an Arabic epithet of Alexander which probably arose from the horned portraits on his coins. See V. Vol. 1. pp. 160, 161.

130. Page 40, line 12  *stones, called Ballasias.*  
I.e. the balas-ruby, a rose-red spinel, deriving its name from Badakhshah and Balk. The mines are in the Ghāran country, which stretches along both sides of the Oxus. They have not been worked for a very long time. References are extremely scarce, but Romanowski, in his *Materialien zur Geologis von Turkestan*, 1880, p. 37, quotes A. Born, *Reise in der Buchara*, i831-3, iii. Th. 1. pp. 292-3, Moscow, 1849, where there is a brief description of the mines. See also Stein, *Innermost Asia*, Vol. ii. p. 877.

131. Page 40, line 18  *greate plenty of siluer.*  
I can find nothing concerning these mines at the Geological Society or elsewhere, save the notes by Wood, *Journey to the Source of the River Oxus*. They were known by the name of Lājjurud, and lay in the Korān valley of the Kolicha. See V. Vol. 1. p. 162.

132. Page 40, line 18  *there be very good coursers, or horses.*  
Here F. has abbreviated very much, while R., on the other hand, has several additions. The whole passage from R. is therefore given in full. See Appendix II. No. 4, pp. 269, 270.
CHAPTER 24

eight dayes iourney... a province called Abaffia

All texts read "ten." This is Pashai or Fascail, which as we have seen (Introduction, p. xlii) is an area in Kafiristan stretching as far east as the Kunar river. The old mistake about the "Perfian tong" follows. See Note 53.

CHAPTER 25

a Province called Thaffynur

Written "Thaffsimur" in the chapter heading. This is, of course, Kashmir. See Note 53 re "Perfian tong," as before.

CHAPTER 27

three dayes iourney

This should read "twelve" with the best MSS.

CHAPTER 27

There be also Hermites

This is abbreviated. The fullest account is in R. In the following passage the part about the natives not killing animals is exclusive to Z and R.

"They have amongst them a particular class of devotees, who live in communities, observe strict abstinence in regard to eating, drinking and the intercourse of the sexes, and refrain from every kind of sensual indulgence, in order that they may not give offence to the idols whom they worship. These persons live to a considerable age. They have several monasteries, in which certain superiors exercise the functions of our abbots, and by the mass of the people they are held in great reverence. The natives of this country do not deprive any creature of life, nor shed blood, and if they are inclined to eat flesh-meat, it is necessary that the Mohamedans who reside amongst them should slay the animal."
CHAPTER 28

139. Page 42, lines 19–21

And of these horns...mountaine called Plauor, you
shall travell tenne dayes journey

This is the first time the Pâmirs are mentioned in any work. The form has been well preserved as both fr. 1176 and Yule read “Pamier.” F.’s corrupted form is merely due to the numerous languages and scribes through which it has passed.

Apart from the uses mentioned to which the horns of the Pâmir sheep (Ovis Poli) are put, Ramusio adds:

“and with the same materials they construct fences for enclosing their cattle, and securing them against the wolves, with which, they say, the country is infested, and which likewise destroy many of these wild sheep and goats. Their horns and bones being found in large quantities, heaps are made of them at the sides of the road, for the purpose of guiding travellers at the season when it is covered with snow.”

The passage about the wolves is also in Z. The latter portion attests to the veracity of Ramusio. The piles of heaped horns have been noted by several travellers; see Y. Vol. 1. p. 176.

For “tenne dayes iourney,” read “twelve” with all the best MSS.

140. Page 43, lines 3, 4

the fire hath not the strength to stiehe their vitals, as
in other Countries

In the first place, F. omits to tell us that the country is so cold that you never see birds flying. (See Stein, Innermost Asia, Vol. I. p. 860.) In the second place, we note that R. introduces the remark about the fire by: “and however extraordinary it may be thought, it was affirmed, that from the keenness of the air, fires when lighted do not give the same heat as in lower situations,...”

This reads as if Polo had not seen the phenomenon for himself, but here we can surely see the hand of the editor who, while anxious to record what he reads, finds his own credulity a bit strained at times.

See the interesting notes on the subject collected by Y. Vol. 1. p. 178.

CHAPTER 29 (misprinted 39 by F.)

141. Page 43, lines 12, 13

And this Country is called Bofor

Written “Belor” in fr. 1116 and “Bolor” in Yule. Its exact modern equivalent is unknown, but the dreary route described by Polo must refer to the district
east of Little Pamir, and his itinerary would have led him past Muztagh-Ata and on towards the Gez defile.

It is interesting to note that this chapter is actually slightly fuller than the French texts.

CHAPTER 30 (misprinted 40 by F.)

142. Page 43, line 16

Caschar

This is, of course, Kashgar. R. says the inhabitants produce flax and hemp as well as cotton, and that besides being covetous and sordid, they eat badly and drink worse!

F. makes his usual mistake about the "Persian tong." See Note 53.

CHAPTER 31

143. Page 44, line 1

Sumarthan is a Cite: great and faire

R. adds that Samarkand is adorned with beautiful gardens, and surrounded by a plain, in which are produced all the fruits that man can desire.

F. describes the city as being under the "great Cane," but fr. 1116 has "neven dou grant can," while Y. adds his name as "Caidou." A little lower F. speaks of "a brother of the greate Cane" without giving his name. This is, however, given in most MSS as "Ciagatai" or "Sigatai." It should be pointed out that Chagatai was uncle, not brother, to the Great Khan.

F.'s account of the miracle is, as usual, somewhat abbreviated.

CHAPTER 32

144. Page 44, line 23

a province called Carcham

This is Yarkand, and appears practically the same, "Yarcan," in the French MSS.

There is the following interesting addition found in Z, V, L and R.:

"Provisions are here in abundance, especially cotton. The people are craftsmen. They are largely afflicted with swellings in the legs, and tumours in the throat, occasioned by the quality of the water they drink."

In support of the above, Sven Hedin notes that to-day three-fourths of the population of Yarkand are suffering from goitre.
CHAPTER 33

145. Page 45, lines 1, 2

Chota...five dayes journey

All the best texts describe Khotan as being eight days in length. It is very interesting to note that in common with R. alone F. speaks of wine, fruits, oil, wheat, and barley as well as cotton wool.

146. Page 45, line 7

good and valiaunt men of armes

Here F. has turned a negative into a positive. Fr. 1116 clearly reads "Il ne sunt pas homes d'armes."

CHAPTER 34

147. Page 45, line 8

Paym is a small prouince

Also written "Pen" (fr. 1116) and "Pelin" (Y.). It is the "Pimo" of Huen-Tsiang, and is probably to be identified with the modern Keriya. See Introduction, p. xiii.

148. Page 45, line 15

fiftene or thirtie dayes

All the best MSS distinctly say "twenty."

CHAPTER 35

149. Page 45, line 20

a great Citie called Ciarcan

This place has preserved its name unaltered—Charchan or Chachan. The form given by F. closely resembles the "Ciarcian" of fr. 1116.

150. Page 46, line 6

sering the ill people

There is some mistake here. The texts clearly read "when an army passes through the land...."

CHAPTER 36

151. Page 46, lines 14, 15

a gret Citie called Job

APPENDIX I.

152. Page 46, line 23  the sound of Tabers...

The fullest account of these spirits of the desert is to be found in R.:

"...In the night-time they are persuaded they hear the march of a large cavalcade on one side or the other of the road, and concluding the noise to be that of the footsteps of their party, they direct theirs to the quarter from whence it seems to proceed; but upon the breaking of day, find they have been misled and drawn into a situation of danger.... It is said also that some persons, in their course across the desert, have seen what appeared to them to be a body of armed men advancing towards them, and apprehensive of being attacked and plundered have taken to flight.... They find it necessary also to take the precaution before they repose for the night, to fix an advanced signal, pointing out the course they are afterwards to hold, as well as to attach a bell to each of the beasts of burden for the purpose of their being more easily kept from straggling." Stein (Innermost Asia, Vol. I. p. 306) says this fear of danger from evil spirits is as lively to-day as ever.

CHAPTER 37

153. Page 47, lines 2, 3  Sangechian... Tanguith

I.e. Sachiou or Saciou, the modern Sha-chau or Tun-huang on the Tang-ho. Tanguith is a corruption for Tangut, the modern Kansu.

154. Page 47, lines 12-14  the which they can not doe, for they haue neyther mouth nor fensse, and seeing their Idols do not eate it...

This has been added in deference to the Christian readers who could never believe that the idol really ate the food! but 1116 makes it clear, whereas Yule misses the point by saying, "And, if you will believe them, the idol feeds on the meat that is set before it!" Fr. 1116 reads: "et dient que le ydre menuient la sustance de la cars," This we can all understand. R., Z., L and V add "The priests of the idol have for their portion the head, the feet, the intestines, and the skin, together with some parts of the flesh."

155. Page 47, line 20  all clothed in cloth of golde and silke

It was not the mourners who were so dressed, but a small house was draped with cloths of silk and gold, before which the body was set down and offered food and drink.
and put it in a coffin

R. adds: "the joints or seams they smear with a mixture of pitch and lime, and the whole is then covered with silk."

remove him to some other side of the house

Here F. misunderstands the text. A hole was to be made in the wall through which the body was to be taken. R. adds a passage saying that any mishaps which occur later are attributed to some breach of the etiquette.

CHAPTER 38

Chamul is a province

I.e. Hami, lying off the main route to the north-west. This may have been the route followed by the elder Polos. See Introduction, p. xliii, where I have discussed this digression and the additional mention of "Carachoco" as found in the Z text.

The greatest Cane that is paste

The best texts give his name, Mongu or Mangu Kaan.

CHAPTER 39

Hingnitala is a province

Fr. has "Ghinghintalas." Its exact locality has not been determined, but following Polo's description closely I have suggested (Introduction, p. xlv) that it should in all probability be looked for in the neighbourhood of Barkul.

that which is called Salamandra

F. omits to mention that steel and ondanique are also found. In most texts Polo explains that it was a Turkish friend of his, named Zurficar, who told him all about the Salamanders, or asbestos. See Laufer, T'oung Pao, Vol. xvi. 1915, pp. 299-373.

a province called Sachur

The ten days must be taken from Tun-Huang (or Sachiu) to which Polo now returns. Sachur is the "Succiu" of fr. 1116 and the "Sukchur" and "Sukchu" of Y. It is to be identified with the modern Suhchau, or Su-chow.
and carry it to all places to sell.

R. and Z add an interesting passage. R. reads as follows:

"It is a fact that when they take that road, they cannot venture amongst the mountains with any beasts of burthen excepting those accustomed to the country, on account of a poisonous plant growing there, which, if eaten by them, has the effect of causing the hoofs of the animal to drop off; but those of the country, being aware of its dangerous quality, take care to avoid it.... The district is perfectly healthy, and the complexion of the natives is brown."

CHAPTER 40 (misprinted 44 by F.)

164. Page 50, line 1

Campion is a great city.

This is the "Campion" of fr. 1116, the modern Kan-chau, chief city of Kansu.

165. Page 50, line 5

the Idolators have also Monasteries.

F. omits the interesting account of the idols. R. gives the best account:

"and in these [monasteries] a multitude of idols, some of which are of wood, some of stone, and some of clay, are covered with gilding. They are carved in a masterly style. Among these are some of very large size, and others are small. The former are full ten paces in length, and lie in a recumbent posture; the small figures stand behind them, and have the appearance of disciples in the act of reverential salutation. Both great and small are held in extreme veneration."

166. Page 50, line 6

more chaife and comly than the other

F., or rather Santealla, omits details about intercourse. The latter part is unique to R. and Z:

"The unlicensed intercourse of the sexes is not in general considered by these people as a serious offence; and their maxim is, that if the advances are made by the female, the connection does not constitute an offence, but it is held to be such when the proposal comes from the man." The French texts, but not R., say that if a man take pleasure with a woman against nature he is condemned to death.

167. Page 50, line 13

seauen yeres

All texts agree that the period was one year, not seven. Fr. 1116 and R. state that Nicolo was there also. P. makes them "en legation," but fr. 1116 merely says "por lor fait que ne fa a mentovoir."
CHAPTER 41

168. Page 50, lines 15, 16
   a Cittie called Eufina...in a fielde of the Desert
called Sabon

I.e. Etzina on the edge of the sandy desert. F. reads “Sabon” for “sablon”
and takes it as a proper name. It should be identified with Kara-Khoto on the
Etsin-gol, and should be clearly distinguished from Kara-Khoja, the old capital
of Turfan. See Introduction, p. xliii.

169. Page 50, line 19  other cattell withall

No mention is made of the falcons: “facons lanier et sacri assez et sunt mort
bones.”

170. Page 51, line 1  a Cittie called Catlogoria

I.e. “Caracoron” of the texts, the famous Karkorum. F. becomes muddled
and repeats the name as that of the “first Prince or Lorde among the Tartars,”
whereas all the text means to convey is that Karkorum was the first city possessed
by the Tartars. R. and Z add a few further details:

“It is surrounded with a strong rampart of earth, there not being any good
supply of stone in that part of the country. On the outside of the rampart, but
near to it, stands a castle of great size, in which is a handsome palace occupied
by the governor of the place.”

B. and Y. name Giorcia, or Chorchia (the Manchu country) as the place
where the Tartars first dwelt. R. speaks of “Giorza and Bargu,” while F. writes
simply “the North.”

171. Page 51, lines 6, 7
   and do pay tribute to Prester John

The best texts have “Unc. Can,” which is given as the native form of the name.
See Yule’s long note, Vol. i. pp. 231–7, also the article on “Prester John” by

172. Page 51, line 12
   Should not be of so greate a power

R. makes a further addition:

“With this view also, whenever the occasion presented itself, such as a rebellion
in any of the provinces subject to him, he drafted three or four in the hundred
of these people, to be employed on the service of quelling it; and thus their power was gradually diminished. He in like manner despatched them upon other expeditions, and sent among them some of his principal officers to see that his intentions were carried into effect."

173. Page 51, lines 19, 20

Chenchis . . . 1187.

So also B. and Y., but R. gives 1162 as the date of the election of Chinghiz (Genghis) Khan to the throne. This agrees with the Chinese Annals. R. alone mentions his eloquence in the catalogue of his virtues.

174. Page 51, lines 26, 27

conquered eights Kingdomes

So also B. and Y., but R. has "about nine provinces," and adds:

"Nor is his success surprising, when we consider that at this period each town and district was either governed by the people themselves, or had its petty king or lord; and as there existed amongst them no general confederacy, it was impossible for them to resist, separately, so formidable a power."

CHAPTER 42

175. Page 52, line 4

in the yeare of oure Lord God 1190.

Both B. and Y. read 1200. R. gives no date. F. has altered the subsequent passages to oratio obliqua.

176. Page 52, line 15

a great plains called Tanguth

Read "Tanduc" with all the best MSS. The identification of this place is uncertain, and the accounts have become muddled.

The final defeat of Prester John (Aung Khan) was at Chacher Ondur, near the modern Urga (Orgo, or Hurae as the Mongols call it), on a tributary of the Tola river, about 700 miles north-west of Peking.

177. Page 52, line 17

but in the end...

F. has here omitted the account of the consultation of the astrologers by Chinghiz Khan as to the issue of the battle. See Marsden, Ch. xlv (Murray, Ch. xlv); Y. Ch. xxix, and B. Ch. lxvii. It tells how the Saracens were unable to foretell
the result of the battle, but that the Christians split a cane lengthways and let one piece represent Chinghiz and the other Prester John. The piece representing the conqueror would of itself move on to the top of the other one. As Chinghiz watched he saw the cane bearing his own name move on to the other piece, and so was greatly delighted.

178. Page 52, lines 21, 22

laying siege to a Castell, was hurt in the Kufe... and... dyed

Fr. 1116 gives the name of the Castle as "Caagiu," the "Caaju" of Y. The historical accounts of his wounding and death vary. Chinese Annals, however, agree that he was wounded by a stray arrow at the siege of Ta-t'ung fu in 1212, and died at the travelling palace of Ha-la T'u on the Sa-li stream in 1227. See Cordier, See Marco Polo, p. 57.

179. Page 52, line 23

one called Cane

F. omits his name—Cuy or Cui. He repeats Chenchis and omits the "Oktai" and "Mongu" of fr. 1116 and the "Alacon" of Y. As Y. has pointed out neither Batu nor Hulaku have any right in the list, as the former was Khan of Kipchak and the latter Khan of Persia. The real succession ran: Chinghiz—Qokodai—Kuyuk—Mangku—Kublai.

180. Page 52, line 31

a mountaine called Alchay

181. Page 53, line 7

300000: men

The figure has increased! Read "more than 20,000" with the best texts.

182. Page 53, lines 12, 13

where it is freshe and pleaseunt aire

At this point R. adds:

"and their cattle are free from the annoyance of horse-flies and other biting insects. During two or three months they progressively ascend higher ground, and seek fresh pasture, the grass not being adequate in any one place to feed the multitudes of which their herds and flocks consist."
183. Page 53, line 14

and these houses they carry with them...

The French texts also tell us that the frames of the tents are made very strong but at the same time light for carrying. R. adds that they are carried on a sort of cart with four wheels. Yule gives a picture of one facing p. 254 of Vol. 1.

They do eate all manner of fleshe

F. omits to mention "des rat de faraon" which is found in large quantities on the plains. Possibly it is a variety of marmot or dormouse, but "Pharaoh's Rat" was the name given by foreigners to the Egyptian ichneumon (Herpestes ichneumon), the mongoose of India.

185. Page 53, line 24

as manye wives as they will

"They may take 100 wives if they want to," say the French texts. R. adds that the women are most faithful, and although ten or twenty of them are all living together peace and quietness reign supreme.

CHAPTER 43

186. Page 54, line 2

an Idol called Nochygay

Written "Nacygai" in fr. 1116, and by Y. as "Natigay." The idols are apparently identical with the Ongons of the Buriats. See the article on them by Demetrius Klementz in Hastings, Ency. Rel. Eth. Vol. iii. p. 12.

R. starts his corresponding chapter with the words: "They believe in a deity whose nature is sublime and heavenly. To him they burn incense in censers, and offer up prayers for the enjoyment of intellectual and bodily health. They worship another likewise, named Natigay,..."

According to Banzaroff all the relatives and forefathers of Chinghiz Khan have become Ongons, and usually consist of pieces of material sometimes decorated with owl-feathers or various furs.

187. Page 54, line 15

and is called with them Cheminis

This is, of course, Kimiz, Kumiz, or Koumiss made of mare's milk to which a little sour cow's milk is added. It is continually churned in a vessel made of horse-skin. See further Y. Vol. 1, pp. 259 et seq.
APPENDIX 1

188. Page 54, line 17

Their harness.

F. omits to mention the weapons—bows and arrows, the sword and mace.

189. Page 54, line 31

Milke made like dry pufle

R. tells us how it is made: "They boil the milk and skimming off the rich or creamy part as it rises to the top, put it into a separate vessel as butter, for so long as that remains in the milk, it will not become hard. The latter is then exposed to the sun until it dries. Upon going on service they carry with them about ten pounds for each man, and of this, half a pound is put, every morning, into a leathern bottle or small outre, with as much water as is thought necessary. By their motion in riding the contents are violently shaken, and a thin porridge is produced, upon which they make their dinner."

190. Page 55, line 3

When the Tartares will skirmish with their enemies.

The account given by F. is much abbreviated. He makes no mention of the method by which the Tartar princes convey orders to their armies, or how justice is administered by blows with a stick. The description of the marriage after death, however, is a full account.

CHAPTER 44

191. Page 55, lines 27, 28

Cathgora...Acay

As we have already seen, F. previously spelt these names Catlogoria, and Alchay.

192. Page 55, lines 30-32

Barga...Mecrith

I.e. Bargu...Mecrit, or Mesrith. The country in question lay near Lake Baikal, while the tribe, the Merkit, inhabited the district to the south-east of the lake.

193. Page 56, line 3

They have neither bread nor wine

R. adds: "They feed likewise upon the birds that frequent their numerous lakes and marshes, as well as upon fish. It is at the moulting season, or during summer, that the birds seek these waters, and being then, from want of their feathers, incapable of flight, they are taken by the natives without difficulty."
CHAPTER 45

194. Page 56, line 8 called Peregrinos

After mentioning the Peregrine falcons, F. omits to say that it is so cold that you find neither man nor women, but only a bird called Bargherlac, or Barguerlac on which the falcons feed. "They are about the size of a partridge," says R., "with tails like the swallow, claws like those of the parrot kind, and are swift of flight. When the Grand Khan is desirous of having a brood of peregrine falcons, he sends to procure them at this place."

CHAPTER 46

195. Page 56, line 19 a kingdom called Erguil

Having returned to Kan-chau, Polo continues to Erginul or Erguiul which has been identified with Liang-chau fu. F. spells it with a "y" a few lines lower.

196. Page 56, line 24 a great Citie called Syrgay

Called "Sinju" in Y., which B. would write "Silingiu," the modern Si-ning fu.

197. Page 57, line 5 called Del Espinazo

This is, of course, the yak, Bos grunniens. R. adds: "Their hair, or rather wool, is white, and more soft and delicate than silk. Marco Polo carried some of it to Venice, as a singular curiosity, and such it was esteemed by all who saw it."

198. Page 57, line 13 and that is the Muske

R. tells us that the animal is taken during full moon, "when they cut off the membrane, and afterwards dry it, with its contents, in the sun... Marco Polo brought with him to Venice the head and the feet of one of them dried." See further, Note 281.

199. Page 57, line 16 of .25, days journey

This agrees both with fr. 1116 and R., but Y. has "26."

200. Page 57, line 17 Peysants, and very greate

As Yule says, this is probably the China pheasant known as Reeve's Pheasant. F. says naively "I think these be Peacocks."
CHAPTER 47

Egregia...Chalacia

Written in fr. 1116 as "Egrigaia" and "Calacian." As stated in the Introduction, p. xlvi, I take these to represent Ning-sia fu and Ting-yuan-ying respectively.

CHAPTER 48

Arguill,...Tangute

F. has got muddled and brings in Liang-chau fu again, which he now spells "Arguill." See Note 195.

As before (see Note 176) we should read "Tanduc" for "Tanguthe." The province must have included the district lying at the great northern bend of the Hwang ho.

Page 58, line 4

called George by his proper name

Both R. and Ζ tell us he was a Christian and a priest, and that many of the inhabitants were also Christians.

Page 58, lines 9, 10

Lapis laguli

The French texts merely say: "En ceste provence se trouve les pieres dont l'azur se fait."

Page 58, line 14

Argarones, or Galmulos

The word Guasmul was used by Franks in the Levant as a name for half-breeds sprung from their unions with Greek women.

Page 58, line 21

Gog and Magog

F. omits to mention that the natives call it Ung and Mungul, the former being the name of the inhabitants of the country, and the latter a name applied to the Tartars.
CHAPTER 49

cloth of gold

The names have been omitted—in fr. 1116 we read "...que l'en apelle nascisi fin et nac, et dras de soie de maintes maineress. Ausint com nos avon les dras de laine de maintes maineress, ausint il ont dras d'ores et de soie de maintes maineress." Y. writes them "Nasich" and "Naques," and says he thinks they correspond to the mediaeval "Tartary cloth."

In Ch. 10 F. speaks of "cloth of Naich, of Crimfon, and of diuers other coloures and fashions." See Note 75.

CHAPTER 50

a Civite called Gianorum

L and R. tell us that it means "White Pool." The form found in F. is corrupted from Chaganor or Chagan-Nór. It probably lay to the east of Anguli-Nór.

when he goes into that Countrey

F.'s account is abbreviated, but there is an interesting unique passage in R.:

"Nigh to this city is a valley frequented by great numbers of partridges and quails, for whose food the Grand Khan causes millet, panicum, and other grains suitable to such birds, to be sown along the sides of it every season, and gives strict command that no person shall dare to reap the seed; in order that they may not be in want of nourishment. Many keepers, likewise, are stationed there for the preservation of the game, that it may not be taken or destroyed, as well as for the purpose of throwing the millet to the birds during the winter. So accustomed are they to be thus fed, that upon the grain being scattered and the man's whistling, they immediately assemble from every quarter. The Grand Khan also directs that a number of small buildings be prepared for their shelter during the night; and in consequence of these attentions, he always finds abundant sport when he visits this country; and even in the winter, at which season, on account of the severity of the cold, he does not reside there, he has camel-loads of the birds sent to him, wherever his court may happen to be at the time."
CHAPTER 51

Länder

This is Chandu, or K'ai-p'ing fu, Kublai's summer residence.

Page 59, line 24. in compass fifteen miles

All the best texts read "sixteen." F. is abbreviated here.

Page 60, line 3. 40000.

This is unique to F. The leading MSS read "more than 200." The "graye Lyon" mentioned two lines lower down should be "leopard."

Page 60, line 10. And this house...

F.'s description of the pavillion is abbreviated. R. gives us most details. "In the centre of these grounds, where there is a beautiful grove of trees, he has built a royal pavilion, supported upon a colonnade of handsome pillars, gilt and varnished. Round each pillar a dragon, likewise gilt, entwines its tail, whilst its head sustains the projection of the roof, and its talons or claws are extended to the right and left along the entablature."

He also speaks of the precautions made against high winds, etc.

Page 60, line 24. and some others

"appellés Horiad" says fr. 1116. Y. writes "Horiad" for "Uirad" or "Oirad," a tribe from the head waters of the Kem or Upper Yenisei.

CHAPTER 52

Page 60, lines 29, 30. that milke pour'd out, is the holye Ghoste

Apparently F. has taken "espirit" in the sense of Holy Ghost, and has made it identical with the milk. The texts, however, make it clear that a libation of milk is being offered to the spirits and idols as a propitiation for a continuance of future blessings.

Page 61, line 1. †. 29. day of August

A mistake for "28" as found in all the best texts.
by virtue of his Idols

F. omits to tell us that the men who perform these wonders come from Tibet and Kashmir, and that they persuade people to believe that they obtain their power because of the holiness of their lives.

R. adds that they exhibit themselves in an indecent state, and are filthy, and squalid in appearance. Most texts give these men the name of “Bacsi,” probably a corruption of the Sanskrit Bhikshu, a title used for wandering Buddhist ascetics.

they demaund of the greate Kane . . .

F.’s account, much abbreviated, has altered the text into oratio obliqua, which in all the best texts reads as a speech made by the “Bacsi” to the Khan.

R. tells us that the Khan occasionally invites people to witness the performance of the moving cups.

The French texts read “more than 2,000,” which is no exaggeration. See Y. Vol. i. p. 319. F. omits to mention the fact that the name given to the ascetics who “do eate the branne and the meale kneaded together” (probably the Tibetan parched barley) is Sensin, a corruption, or rather transcription, of Sien-seng, the name given by the Mongols to the Tao-sze. F. tells us they “do lye in Almadraques, harpe and harde beds.” This appears to be unique to Santaella who seems to have in mind the spike beds of Hindu ascetics (see Ocean of Story, Vol. i. p. 79 n. 1). “Almadraque” is an obsolete Spanish word for “bed” or “matress.” F. omits to mention the fact that the idols of the Tao-sze have female names.

CHAPTER 53

and was five and forty yeares old when he was made Emperor

So far the dates in this chapter have agreed with the best texts. Here slight differences occur. Fr. 1116 says by 1298 he had reigned forty-two years, and that now (1298) he was eighty-five years old, while Y. adds that he must have been about forty-three years of age when he first came to the throne.

but alwayes sent his sones, . . .

So also in R., but not in Y. or B. at this particular place. In these versions the statement will be found in Bk. ii. Ch. vi. and Ch. lxxxii respectively.
APPENDIX I

223. Page 62, line 20

*a nephew of his*

F. omits to give his name, Nayan or Naian. In all texts the relationship is mixed. Nayan was the great-great-grandson of Chinghiz’s brother Uchegin. Fr. 1116 and R. say he could put 400,000 men in the field. Y. makes this 300,000.

224. Page 62, line 24

*whyche was called Cardin*

This is, of course, Kaidu, Kublai’s cousin and enemy.

225. Page 62, line 32

*two and twenty days*

This agrees with fr. 1116, but some texts have read “xxx” as “x, xii,” and translated, as Yule did, “ten or twelve.”

F.’s 300,000 fighting men should be 360,000 cavalry and 100,000 footmen, as in all the best texts.

R. adds a passage explaining that the Khan found it necessary to maintain garrisons throughout his dominions to preserve order, and that if he decided to summon only half the men thus employed, the number would be incredible.

226. Page 63, line 13

*set forwarde on his way with his people…*

Both R. and F. omit to say that he marched for twenty days.

The French texts give Nayan’s host as consisting of some 400,000 horse.

227. Page 63, line 23

*thought he might well take his refit that nighte*

F. omits to mention that Nayan was in the arms of his favourite wife. As this is found in R. and the Pipino texts, it has probably been purposely left out by the Catholic Santaella.

228. Page 63, line 28

*a great frame upon an Elephant*

All the best texts read “four elephants.” Fr. 1116 says he was mounted “sor une bertresche ordree sor quatre leofans.” Yule correctly translates “bertresche” or “bretesche” by “bartzian,” the Old English derivate applied to any boarded structure of defence or attack.
The French texts have 30,000. The fullest account is found in R.:

"His army, which consisted of thirty battalions of horse, each battalion containing ten thousand men, armed with bows, he disposed in three grand divisions; and to those which formed the left and right wings he extended in such a manner as to out-flank the army of Nayan. In front of each battalion of horse were placed five hundred infantry, armed with short lances and swords, who, whenever the cavalry made a show of fight, were practised to mount behind the riders and accompany them, alighting again when they returned to the charge, and killing with their lances the horses of the enemy."

and caused his trumpets to blowe

F. abbreviates here, and tells us nothing of the music and singing which preceded the battle, or of the beating of the Nakkaras, the great kettle-drums of war. His description of the battle is reduced to a minimum, but, as Yule suggests, the style is very reminiscent of similar battle scenes found both in Eastern and Western histories. There are descriptions even in the Thousand and One Nights, as well as in the Kathā-sarit-sāgara, which contains practically identical sentences.

Written in the French texts as "Ciorcia," or "Charcha"; "Cauli"; "Barscol"; and "Sichentingin," or "Sikintinju." The two first have been identified with Churchin, the Manchu country, and Kao-li, Korea respectively. The other two are still uncertain. See Y., Vol. 1. p. 345.

F. makes no mention of the fact that Nayan was a Christian, and ignores the chapter on the rewards given to Jews, Christians, Mahommedans and his nobles. This is given in full in Appendix II. No. 5, pp. 270-72.

Here the point is missed. The French texts clearly tell us that the eldest of his sons by any of his four wives is the heir to the throne.

The number of the queen's retainers is given as 10,000, but F. follows the Crusca edition in reducing it to 4000.
The "Ungrac" of fr. 1116, and "Ungrat" of Y.—the Mongol tribe of Kungurat. F.'s account of the concubines is sadly abbreviated. The fullest description is found in R., and is of very great interest to the student of sociology. It is reprinted in full in Appendix II. No. 6, pp. 272, 273.

CHAPTER 55

A noble Citie called Cambalu

Into this chapter F. has crowded Polo's highly interesting description of Kublai's capital, together with the manners and customs of its inhabitants. The fullest account is that given by R. to which reference should be made, as it is impossible here to reprint every addition that the text affords. I have, however, reprinted his description of the New City of Tai-du in Appendix II. No. 7, pp. 273–5, which is entirely omitted by F.

Without this Citie be twelve suburbes...

This portion of the text about the suburbs and large number of prostitutes is a very brief résumé of part of B. Ch. xcvi and Y. Bk. ii. Ch. xxi. The rest of these chapters corresponds to the last six lines of F. Ch. 58, p. 71.

They be called Chifitanos

Written in fr. 1116 as "Quesican," and in Y. as "Keshican." It is a Mongol term to designate the Khan's lifeguard. See the long note in Y. Vol. i, pp. 379–81.

At the faide Tables commonly do fitte foure thousand persons, or very nèere

The sense is wrong here. The French texts clearly explain that the tables are arranged in such a way that the Khan can see them all at a glance. R. then adds that most of the soldiers and officers sit on carpets, and that on the outside stand a great multitude of persons who come from different countries, bringing with them many rare and curious articles. The French texts, however, state that the crowd is outside the hall, and numbers more than forty (not four) thousand.
238. Page 66, lines 28, 29

*hathe a cuppe of golde before hym to drinke in*

F. is not clear here. Fr. 1116 reads "... Et se metent deus homes que sieent a table un. Et chasun de cesti deus homes hont une coppe d’or a manueque; et con celle cope prennent dou vin de cel grant vernique d’or. Et ausint en ont entre deus dames unde celz grant [verniques] et deus cuppes comant ont les homes." The etymology of "vernique" is uncertain (see Y. Vol. 1. p. 384), but it was probably a large lacquered bowl from which the smaller cups would be filled—corresponding in some degree to our punch bowls and sets of cups.

All the best texts mention the amazing quantity and value of the Khan’s plate. R. adds an interesting passage in which he explains how strangers are informed of the etiquette of the court, and how two enormous officers stand at each door in order to see that no one touches the threshold with their feet on entering the hall. It is considered a bad omen if this happens, and the offence is punished by blows or else by the person’s garment being taken to be redeemed by payment. The rule does not hold after a banquet, as the guests would not have control over their feet!

239. Page 68, line 19

*to say thirtie dayes iourny*

Fr. 1116 has "sixty days’ journey," and Y. "some forty days’ journey." R. tells us how the animals are killed: "all persons possessed of land in the province repair to the places where these animals are to be found, and proceed to enclose them within a circle, when they are killed, partly by dogs, but chiefly by shooting them with arrows."

F. omits the chapter telling of the lions, leopards and wolves used by the Khan for the chase. See M. Bk. ii. Ch. xiv; Y. Bk. ii. Ch. xviii and B. Ch. xci.

CHAPTER 56

240. Page 68, lines 27, 28

*Baian, and the other Mytigan, and they be called Cinitil*

The first name is correctly written, the second is "Mingan" in the French MSS. Their title appears as "Giunci" in fr. 1116; and "Chinuchi (or Cunichi) in Y. Lauer considers the word to be derived from the Tibetan *lang-k`i*, "wolf-dog," while Pelliot would read the word *Cuinci*, and connect it with the verb *g`ayi* or *g`ayi*, "to run." See Cordier, *Sen Marco Polo*, p. 79.
241. Page 68, lines 31, 32

all appareled in one liyere of wyhte and redde

This is a mistake. The whole point was that the two companies should be distinguished in the field. The French texts clearly state that one lot was clad in vermilion and the other in blue.

Some few lines later, R. has the following addition:

"The two brothers are under an engagement to furnish the court daily, from the commencement of October to the end of March, with a thousand pieces of game, quails being excepted; and also with fish, of which as large a quantity as possible is to be supplied, estimating the fish that three men can eat at a meal as equivalent to one piece of game."

242. Page 69, line 13

finc thousand

Read "500" with all the best texts.

243. Page 69, line 18

they bee called Tusiores

Read "Toscaor" or "Toscaol," the Turki meaning "guardian" or "watcher."

244. Page 69, line 25

one of those burros his brethren

F. omits to tell us that his title was "Bularguci," keeper of lost property, and that all articles found must be delivered up to him. He took his stand in a prominent part of the camp, and displayed his banner to attract attention, and proclaim his whereabouts.

245. Page 70, line 11

which they do call Caziamon

The "Cacciar Modun" of fr. 1116, and "Cachar Modun" of Y. Yule considered it must be in the region north of the eastern extremity of the Great Wall. Pelliot says it must be the "Ha-ch'a-mu-touen" of the Tsuan Shih, Ch. 100, fo. 22.

246. Page 70, line 15

2000. knights

Read "1000" with all the best texts.
247. Page 71, between Chs. 58 and 59

At this point Yule has given the very interesting account of the oppressions of Achmath (Achmac, or Ahmad) the Bailo, and the plot that was formed against him. It is only found in the Ramusio text and is accordingly reproduced in full in Appendix II. No. 8, pp. 275-8. The revolt against the oppression of Kublai's tyrannical minister is fully substantiated in the Chinese records, as well as in the contemporary Persian version by Rashid-ud-din (the Jami' ul-Tawarikh), whose account tells us of two separate attempts to murder Ahmad, and, curiously enough, connects them with the siege of Saianfu (Siang-yang), for which see Note 353, p. 228, and Appendix II. No. 23, pp. 301, 302.

After carefully weighing over all the evidence, the Rev. A. C. Moule has come to the conclusion (Journ. North China Br. Roy. As. Soc. Vol. LVIII. 1927, pp. 1-35) that if the story does not come direct from Polo, it cannot in any case be much later in date than his lifetime. He considers, however, that Murray's arguments against Polo's authorship perhaps deserve more attention than they have hitherto received. Murray's argument (Travels of Marco Polo, pp. 32 and 124) is that the Achmath chapter contains a statement that the Cathayans detested the Khan's rule, while in a passage of undoubted Polian authorship they are said to "worship him as he were God." Such contradictory statements, he suggests, would never have been countenanced by Polo. But I doubt whether they really are contradictory statements. The Mongol conqueror, Kublai, would doubtless inspire fear, and possibly hate, in a vanquished foe, as well as "worship," when he extended munificence to the poor. Unfortunately the newly discovered Z text is silent, so R. still remains the sole authority for the story.

248. Page 71, line 20

CHAPTER 59

The greate Cane caueth his money to be made in this manner.

F.'s account of the paper-currency is unfortunately abbreviated. See M. Bk. u. Ch. xvii; Y. Bk. i. Ch. xxvii; and B. Ch. xcvii. To Yule's notes, we must add those given by Cordier, op. cit. pp. 70-72.

CHAPTER 60

249. Page 72, lines 10, 11

ten Barons...to governed 64 provinces and countries.

Here F. has got his figures wrong. It should be twelve Barons and thirty-four provinces.

R. gives us some extra details concerning the duties of these men with respect to the army, the conferring of benefits, etc.
CHAPTER 61
are called Shenich

The "scieng" of fr. 1116, and "sheng" of Y. Two similar words, "Sing" and "Sheng," were apparently applied both to the High Council of State as well as to the provincial governments. We meet with "Sing" as the denomination of Yang-chou. See Note 350.

CHAPTER 62
The City of Cambalu...

This short disjointed passage about the gates of the city, and the subsequent one on the "blacke stones," is all that remains in F. of seven chapters. As R.'s account is the fullest, it is reprinted in Appendix II. No. 9, pp. 278-86.

CHAPTER 63
fourteen moneths

Read "fourth" with all the best texts.

CHAPTER 64
tenne days iorney, I founde a very great riuer
which is called Poluisfanguis

Read "miles" instead of "dayes." The river referred to is the Hun-ho, called "Pulis-anghun(z)" in the French texts.

CHAPTER 65
two hundred pillers

This seems to be unique to F. R. gives us a few further details about the bridge, but says nothing about the number of the pillars.

tenne miles...Goygu

Read "thirty miles." Fr. 1116 gives the name as "Giongin," and Y. as "Jiju." It corresponds to the modern Cho-chau.

Country of the Magos

Read "country of Manzi," i.e. China south of the Yellow and Huai rivers.
CHAPTER 66

257. Page 75, line 5

A City named Taianfu

This is T'ai-yuan fu, called "Taianfu" in the French texts. For a note on the vines referred to by Polo, see Cordier, op. cit., pp. 75 et seq.

R. tells us of Acbaluc (Ch'eng-ting fu) which, he says, is reached in five days from Ch'ou-chau, and to which the limits of the Khan's hunting-grounds extend, "and within which no persons dare to sport, excepting the princes of his own family, and those whose names are inscribed on the grand falconer's list; but beyond these limits, all persons qualified by their rank are at liberty to pursue game...."

CHAPTER 67

258. Page 75, lines 10-13

eighte dayes... Paymphu

Read "seven days." The name of the city should read "Pianfu," the modern Ping-yang fu.

259. Page 75, lines 14, 15

a fayre Towne named Caychin

This should read "Castle of Caiciu," or Caichu, the exact situation of which is so puzzling. See Introduction, p. xlvi.

F. omits any sort of description of the king of "Caychin" to whom he gives the name of Bur (for Dor). The fullest account is given by R. After mentioning the collection of paintings of the princes who have ruled at the castle, he continues:

"A remarkable circumstance in the history of this King Dor shall now be related. He was a powerful prince, assumed much state, and was always waited upon by young women of extraordinary beauty, a vast number of whom he entertained at his court. When, for recreation, he went about the fortress, he was drawn in his carriage by these damsels, which they could do with facility, as it was of a small size. They were devoted to his service, and performed every office that administered to his convenience or amusement. In his government he was not wanting in vigour, and he ruled with dignity and justice. The works of his castle, according to the report of the people of the country, were beyond example strong. He was, however, a vassal of Un-khan, who, as we have already stated, was known by the appellation of Prester John; but, influenced by pride, he rebelled against him."
APPENDIX I

CHAPTER 68

260. Page 75, line 16

This Bus

As mentioned in the last note, this is a corruption of Dor, i.e. Roi D'Or, a literal translation of the Mongul Altun Khan, the Emperor of the Kin or Golden Dynasty. There appears to be no historical foundation to the legend briefly related in this chapter. The number of the "Yong Gentlemen" agrees with that given in fr. 1116, but Y. makes it seventeen.

None of the conversation between King Dor and Prester John, as found in the French MSS, is retained in F.

CHAPTER 69

261. Page 76, line 12

a great Citty named Caesiumphur.

I.e. Cachanfu, the modern Pu-chau Fu. F. has muddled his distances. He omits to mention the Caramoran (Hwang ho) which Polo crosses twenty miles after leaving the castle, and then after two days he reaches Pu-chau Fu. See the Introduction, p. xlviii and map opposite.

CHAPTER 70

262. Page 76, line 15
eight dayes

So also in all the best MSS, but R. has "seven."

263. Page 76, lines 17, 18

with goodlie and faire Gardens

F. omits to mention the abundance of mulberry trees. R. and Z add: "The inhabitants in general worship idols, but there are also found here Nestorian Christians, Turkomans, and Saracens."

264. Page 76, lines 20, 21

a faire Citty whiche is called Bengomphu

I.e. Sian-fu, famous in Chinese history.

265. Page 76, lines 22, 23

one of the great Canes finnes, who is called Magala

I.e. Mangalai, third son of Kuhlai Khan.
the which with the Wal' of the Citie is tenne myle
compass

Fr. 1116 simply says the palace wall was five miles in compass. R. tells us that
the palace stood in a plain five miles from the city and that the wall of the park
was five miles in circumference, enclosing all kinds of wild animals, both beasts
and birds, which were kept for sport. He adds that the halls and chambers of
the palace were ornamented with paintings in gold and the finest azure, as well
as with great profusion of marble.

CHAPTER 71

the province of Chinchy
I.e. the southern portion of Shen-si in the neighbourhood of Han-chung fu.

Lions, and plentie of other wilde beastles
I.e., of course, tigers, etc. Most texts give more details of the "other wilde
beastles," viz. bears, lynxes, fallow deer, antelopes and stags.

CHAPTER 72

a Citie named Cyneleth
In the chapter heading F. spells it Cineleth. It is a corruption of Acbalec.
The district referred to is doubtless the river valley of the Han kiang. R. speaks
of "Ach-baluch Manji, which signifies the White City on the confines of Manji...."

Lions and beares, besides other wilde beastles
Yule's texts do not mention these animals, but fr. 1116 reads "lionz et ors et
leurs cerver, dain, cavroidz et cerf," i.e. "lions [tigers], and bears and lynxes,
fallow deer, roebuck and stags."

CHAPTER 73

the country named Cindarifa
For Cindarifu, i.e. Sindafu, the modern Ch'eng-tu fu. F. spells it "Sindarifa"
a few lines lower down.
272. Page 78, line 4

divided it into three parts

F. omits details about the division of the city. All the best MSS relate how when
the old king was dying he divided his city into three parts, one of which he gave
to each of his three sons. Each son walled off his part of the city and became a
powerful king, but the Great Khan conquered them all.

For a possible explanation of this see Cordier, See Marco Polo, p. 79.

273. Page 78, line 18

tenne thousande Bisancios of God

I.e. "bezants of gold." R. reads "100," and fr. 1116 "1000."

The description of the watering of the city and of the bridge is given much
fuller in R. and Z, where certain unique passages also occur. In the following
extract those portions found only in R. are given in italics:

"The city is watered by many considerable streams, which descending from
the distant mountains, surround and pass through it in a variety of directions.
Some of these rivers are half a mile in width, others are two hundred paces, and
very deep; over which are built several large and handsome stone bridges, eight
paces in breadth, their length being greater or less according to the size of the
stream. From one extremity to the other there is a row of marble pillars on each
side, which support the roof; for here the bridges have very handsome roofs,
constructed of wood, ornamented with paintings of a red colour, and covered
with tiles. Throughout the whole length also there are neat apartments and
shops, where all sorts of trade are carried on. One of the buildings, larger than
the rest, is occupied by the officers who collect the duties upon provisions and
merchandise, and a toll from persons who pass the bridge. In this way, it is said,
his majesty receives daily the sum of an hundred besants of gold. These rivers
uniting their streams below the city, contribute to form the mighty river called Kian,
whose course, before it discharges itself into the ocean, is equal to an hundred days' journey; but
of its properties occasion will be taken to speak in a subsequent part of this Book" [i.e. F. Ch. 94; M. Bk. II. Ch. lxiii; P. Bk. II. Ch. cxxvii; Y. Bk. II. Ch. lxxi; B.
Ch. cxxviii. See Note 355].

274. Page 78, lines 21, 22

it indeureth fivse dayes iourny

At this point most texts add a few lines stating that the inhabitants live by
agriculture, that many savage beasts, such as lions and bears, are found, and that
the people of "Sindu" live by manufactures, particularly of fine cloths, silks and
gauzes.
275. Page 78, lines 23, 24

Cheleth, which was destroyed by the great Cane

I.e. Tibet, yet in the next chapter it is called "Thebet." Evidence of the "destruction" of Tibet appears to be wanting. It seems to have been a case of peaceful occupation and surrender without fighting. See Y. Vol. ii. p. 46, but cf. De Guignes, Histoire Générale des Huns, Book xvi. p. 123. R. (also L) adds "To the distance of twenty days journey you see numberless towns and castles in a state of ruin; and in consequence of the want of inhabitants, wild beasts, and especially tigers, have multiplied to such a degree, that merchants and other travellers are exposed there to great danger during the night." The whole passage is not unique to R. and L, as the French MSS refer to the "multiplication of wild beasts" somewhat later.

276. Page 78, lines 24, 25

Canes which are called Berganegas

Polo is referring here to the bamboo, but F. is alone in using the word "Berganegas." Prof. Dr Sten Konow considers it to be Iranian, apparently for "Bargānaga," where bargāna would mean "leafy" from the Persian "barg, ga" being the otiote suffix. But this seems to have no connection with bamboo. Likewise the Hindustani, bargā, "rafter," can surely have nothing to do with it. A more probable derivation is through the Spanish "caña de Bengala," a cane. The feminine ending -ega would make "Bengalega," whence the corruption to "Berganega" is not forced. See Deiz, Etymologisches Worterbuch der romanischen Sprachen.

277. Page 79, line 1

the sound is harde many miles off

Fr. 1116 and Y.'s texts give a definite distance, ten miles.

R. reads, however, "duoi miglia," which seems more reasonable, especially as Yule (Vol. ii. p. 46) considers Polo's account somewhat exaggerated.

F.'s description of the burning bamboo is abbreviated. The French texts explain how that the horses became so alarmed by the noise that the men tie all four legs and peg them down firmly with ropes, as well as wrapping up the heads and eyes of the animals. R., alone adds that the merchants provide themselves with iron shackles.

278. Page 79, line 10

do carrie provision for thosse twenty daies journey

Both R. and Z add: "unless perhaps once in three or four days, when you take the opportunity of replenishing your stock of necessaries."
APPENDIX I

CHAPTER 75

279. Page 79, lines 12, 13

a Province or Country, that is full of Cities and Townes

R. and Ξ say that at the end of the twenty days "you begin to discover a few castles and strong towns, built upon rocky heights or upon the summits of mountains, and gradually enter an inhabited and cultivated district where there is no longer any danger from beasts of prey."

280. Page 79, lines 13, 14

And the customes in this Country is...

So also fr. 1216 merely says, "Et hic a un tial costumes...," but R. (following Pipino here I imagine) is evidently shocked, for he says: "A scandalous custom, which could only proceed from the blindness of idolatry,..." Again, somewhat later, he (as also F.) omits the frivolous remark found in the French texts about it being a fine place for young bachelors to visit. Details of the custom in question vary in the different MSS. For some unexplained reason Yule never mentions the interesting variant readings in R., while Benedetto omits to record R. as saying, "che questo piace alli loro Idoli." He gives, however, an interesting passage from Ξ which appears to be the origin of R. It reads (B. p. 111, note c):

"Nam mulier sive doncella que non fuerit ab aliquo viro cognita dicitur apud eos diius fore ingrata quare propter hoc homines aborent eas et de ipsis non curant, quare si eorum ydolis essent grate eas homines concupiscerent et affectarent."

The next point of interest (unrecorded by Y. or B.) is that R. speaks of "a caravan of merchants" who are visited "after they have set up their tents for the night." This mention of a "Carouana di mercanti" should have found a place in Hubson-Johnson in view of its etymological interest. Fr. 1216 speaks of "ior tendes" to which the old women take their daughters to numbers varying between twenty and forty. P. and Y. read (somewhat lower down) "twenty or thirty." R. gives no figures at all. In our text, we see that F. has changed matters round, as he says "and sometimes there lyeth with hir ten, and with some other twenty."

It has long since been pointed out that customs similar to that described by Polo exist in many parts of the world. The most recent, and largest number of references I have seen is given by Briffault, The Mothers, Vol. m. pp. 313 et seq. He points out that several reasons for the dislike of marrying virgins are found among different tribes. In primitive society marriage is an economic measure rather than an avenue to sexual life. The necessity of fertility in the woman is, therefore, a sine qua non in the bride. Prostitution with strangers is among many peoples considered a means of getting into touch with the powers whence her fertility is truly derived (see further, op. cit. p. 317).
To return to our text, F. reads, "And she that hath her selfe with mote
friencers, it shole be knowne by the moost quantite of jewels that she weareth
aboute her necke, and the moost foone shall finde a mariage, and shole be moost
prayed and loued of hir husband." R. is fuller than other texts:

"When, afterwards, they are designed for marriage, they wear all these orna-
ments about the neck or other part of the body, and she who exhibits the greatest
number of them is considered to have been the most attractive in her person, and
is on that account in the higher estimation with the young men who are looking
out for wives; nor can she bring to her husband a more acceptable portion than
a quantity of such gifts. At the solemnisation of her nuptials she accordingly
makes a display of them to the assembly; and he regards them as a proof that their
idols have rendered her lovely in the eyes of men...."

Part of the above probably came from Z (see B. p. 111 note g). P. and Y. tell
us that a girl must have at least twenty tokens before she can get married.

In concluding this note, I might refer to the fact, well known to most readers,
that the lady with the lovers' tokens appears in the frame story of the Thousand
and One Nights, whence she came from India, in Somadeva's great collection, the
Kathā-sant-sāgara. See my Ocean of Story, Vol. v. p. 122. For further examples
to those I give in the note on that page, see Wesselski, Märchen des Mittelalters,
Berlin, 1925, pp. 185-7.

281. Page 79, line 29

...and specially of Muskettles

R. (and Z) give us the fullest account of the methods of obtaining musk from
the musk deer:

"Here are found the animals that produce the musk, and such is the quantity,
that the scent of it is diffused over the whole country. Once in every month the
secretion takes place, and it forms itself as has already been said, into a sort of
imposthume or boil full of blood, near the navel; and the blood thus issuing, in
consequence of excessive repletion, becomes the musk. Throughout every part of
this region the animal abounds, and the odour generally prevails. They are called
gudder in the language of the natives, and are taken with dogs."

Cf. the interesting account given by Chardin (see p. 151 of the Argonaut Press
edition, 1927). One of the earliest accounts is that by Cosmos, the Egyptian monk
(c. A.D. 545), who says it is "called in the native tongue Kastouri. Those who hunt
it pierce it with arrows, and having tied up the blood collected at the navel they
cut it away. For this is the part which has the pleasant fragrance known to us by
the name of musk. The men then cast away the rest of the carcase." The gland producing the musk is only found in the male, and in a sac about
three inches in diameter situated beneath the skin of the abdomen, the orifice

The word musk appears to be derived from the Sanskrit mushka, meaning "scrotum."

282. Page 79, lines 30, 31

Canvas, and Cowhide, and the Skin of Wilde Beastes

The French texts also mention "bocoirus," buckram, for a note on which see Y. Vol. I, pp. 47, 48.

F. omits to mention that no coined money is used by the Tibetans, nor even the Khan's paper money, but that salt (or, according to R., coral) is in circulation instead.

CHAPTER 76

283. Page 80, line 1

Mangi is a great province and Country

I.e. Manzi or Mangi, Southern China. F. has got muddled. He is still speaking of Tibet in this chapter, but was misled by the mention of "Mangi" at the very end of Ch. 75. He describes it later in its proper place (Ch. 88), where he correctly calls it Mangi.

284. Page 80, line 3

gold of Payulfa

I.e. gold dust, the "or de paliolle" of fr. 1116, and "oro di paiola" of R. It corresponds to the modern French "paillettes d'or."

The French texts also mention that "canel," cinnamon, grows in great abundance.

285. Page 80, line 7

and of Chamlet great plenty

The camlet here mentioned is the "giambelot" of fr. 1116, and the "Zambelotti" of R. It was a stuff of camel's hair and originally, as in our text, only referred to such a product. In time, however, the term was applied to stuffs containing both wool and silk.

286. Page 80, lines 8, 9

Inchawters, and euill disposed men

R. (and Z) give us more detail:
"These people are necromancers, and by their infernal art, perform the most extraordinary and delusive enchantments that were ever seen or heard of. They cause tempests to arise, accompanied with flashes of lightning and thunderbolts, and produce many other miraculous effects."
Masties as bigge as Aflas

R. tells us that these Tibetan mastiffs are "strong enough to hunt all sorts of wild beasts, particularly the wild oxen, which are called beyamini, and are extremely large and fierce."

For a possible explanation of beyamini see Y. Vol. ii. p. 52 and Cordier, Ser Marco Polo, p. 83.

All the best texts now mention the breeding of manner falcons and the good sport they have with them. R. also refers to "sakers, very swift of flight."

The French texts follow on with a paragraph explaining that all these provinces now being described are subject to the Great Khan, and that this fact must be understood even if it is not mentioned.

CHAPTER 77

Candew

F. calls it "Candon" in the chapter heading. It is "Gaindu" in fr. 1116; and "Caindu" in R. (written by M. as Kain-du). The exact etymology is uncertain (see Y. Vol. ii, p. 79), but its identification has been determined. The name was applied both to a district and to its chief town. This is definitely stated both in R. and L. The district is the Kien-ch'ang valley watered by the Ngan-ning (or An-ning) which meets the Yalung Kiang just before the latter joins the Kin-sha kiang about 120 miles N.N.W. of Yunnan fu. The town of Caindu is the modern Ning-yuen fu on the Ngan-ning, roughly half-way between Ya-chow, and Yunnan fu (I see it is called Ling-yuen in map 62 of The Times Atlas).

that lyeth towards the Occident

R. is much more explicit: "Kain-du is a western province which was formerly subject to its own princes, but since it has been brought under the dominion of the Grand Khan, it is ruled by the governors whom he appoints. We are not to understand, however, that it is situated in the western part (of Asia), but only that it lies westward with respect to our course from the north-eastern quarter. Its inhabitants are idolaters. It contains many cities and castles, and the capital city, standing at the commencement of the province, is likewise called Kain-du. Near to it there is a large lake of salt water, in which are found abundance of pearls, of a white colour, but not round."

the custome of the people in this Country is...

Cf. with Note 280. Ζ adds a few interesting details, see B. p. 114 note e.
The people of this Coûtre y do yse money made of gold...

The last lines of this chapter are sadly abbreviated. The fullest version is to be found in R. but as the passage is lengthy it will be given in toto in Appendix II. No. 10, pp. 286, 287.

CHAPTER 78

And at the teue dayes iournies end, you come unto
a greate River, whiche is named Brus, at the which
endeth the Countrie and proyince named Candeau

R. reads "fifteen days." Here the valley of Kien-ch'ang is referred to. The "Brus," corrupted from "Brius" of fr. 1116 and all the best texts, is the Kin-sha kiang already mentioned in Note 288. It is the Tibetan portion of the Yang-tze kiang which "fallleth into the Oceean Sea" in lat. 32° N.

CHAPTER 79

a Province named Caraia

I.e. the "Caragian" of fr. 1116; "Carajan" of Y.; "Caraian" of P. and "Karaiian" of R. This is the province of Yunnan.

one of the greate Canes sones, named Esentemur

Isentimur was the grandson, not son, of Kublai. See further, Note 303.

great plentie of Horfes

Here all the texts add that the province had a language peculiar to itself and very difficult to understand. Santalla probably omitted it on purpose, for, as we have seen, he always translated "lingua persia" as "lengua persiana." Apparently he hesitated in describing the Chinese as talking Persian, but when dealing with the islands of the archipelago his qualms disappeared!

CHAPTER 80

a Citye which is named Ioci

I.e. Yunnan fu, called "Iaci" in fr. 1116, "Yachi" by Y., and "Jacin" by P. In the chapter heading F. wrongly calls it a "Prouince."
297. Page 82, line 2

and full of people Idolaters...

R. adds that the Idolaters are the most numerous; while all the best texts have a passage about their wheaten bread being unwholesome, that rice takes its place, and that they make a spiced drink which has the effect of alcohol.

298. Page 82, lines 4–6

fine shelles white...and foure score of them are worth a Sazo of gold...

A mistake for "a Sazo of silver," as is obvious when F. immediately afterwards tells us the next unit of value is 8 Sazos of silver = 1 ounce = 1 Sazo of gold. It is hard to say what a "Sazo" is. R. calls it "Saggio," and fr. 1116 writes "Saje," and says that "un saje d'arjent" corresponds to "deus venesians gros." Yule's text adds that two Venetian groats = 24 "piccoli" ("livres" in P.).

299. Page 82, line 8

There they do make Sault of the water of Welles
great pléy

All the best texts mention the fact that the king derived a large revenue from the duty on salt.

300. Page 82, lines 12, 13

They cut it in small pièces, and sauce it with
Garlike and Spices...

It is interesting here to compare the passage in several of the texts, for it would appear that R. shows a closer relationship to fr. 1116, while F., Y. and P. show signs of inferior readings.

From fr. 1116 it is obvious that Polo is trying to explain that the rich and poor each dress their meat a distinctly different way. R. also clearly appreciates this. The other texts, however, have mixed up the two accounts as one. Let us look at fr. 1116 first:

"Encore vos di que il mennent la char crue de galine et de mouton [B. reads mouton] et de bœuf et de bufal; car les povres homes se [corrected by B. to s'en] vont a la becarle, et prenet le fèfe crue tant tost con [B. reads con] se trait hors de
la bestes, et le trence menu, puis le met en la sause de l'aillé et le menuie maintenant. Et ausi font de toutes les autres chars. Et les gentilz homes menuent encore la cars crue, mes il la font menuier menuemant, puis la metent en la sause de l'aillé meslée con bone espece, puis la menuient ausi bien con nos fuisen la coite."

The words from "Et les gentilz" to "con bone espece" are omitted in P. and Y. Hence the comparison intended in the passage is lost. In R., however, we find no reference to the "becarie," shambles, but the differentiation clearly made:

"The people are accustomed to eat the undressed flesh of fowls, sheep, oxen, and buffaloes; but cured in the following manner. They cut the meat into very small particles, and then put it into a pickle of salt, with the addition of several of their spices. It is thus prepared for persons of the higher class, but the poorer sort only steep it, after mincing, in a sauce of garlic, and then eat it as if it were dressed."

I consider that a comparison of the above passages clearly shows, if further proof be needed, the high importance of R. For although the MSS used by P. and Y. resemble fr. 1116 closely at first, they not only add nothing further, but have grave lacunae.

But if R. omits a passage found in fr. 1116 it often adds a sentence that gives further information and shows a grasp of the original which we do not find in the other texts. This is by no means a solitary example. Many could be cited.

CHAPTER 81

301. Page 82, lines 14, 15

*tenne dayes journey*

Fr. 1116 and all the best texts have "por ponent," or the equivalent, "in a westerly direction."

302. Page 82, line 15

*Province named Chiarar*

F. omits to mention that the city also bore the same name as the province. Chiarar, the second city of Yumnan, is undoubtedly Ta-li fu. Full evidence will be found in Yule's notes on this and the previous chapters. Fr. 1116 calls it "Caragian"; M. writes "Karazan" and Y. "Carajan."

303. Page 82, lines 17, 18

*named Chocayo*

I.e. a corruption of Cocain or Cocachin. Obviously Polo has got muddled here as he told us in the last chapter that "Esentemur" was ruler of "Carai," i.e. Yumnan.

Hukäji (Chocayo) was succeeded by Isentimir.
great plenty of gold

F. omits to mention gold dust, the "gold of Payulsa" as he calls it in Ch. 76. See Note 284.

there be certayne Serpents

F.'s account of the crocodiles is sadly abbreviated. The fullest version is found in R. which also contains additional passages towards the end of the chapter. The rest of R. Ch. xxi. will, therefore, be found in full in Appendix II. No. 11, pp. 287-9. Some of the passages hitherto considered unique to R. are also found in Z. See B. pp. 116, 117.

But .95, yeares hitherto

Read "35 yeares hitherto."

CHAPTER 82

another Province named Nocteam, and also the Cittie named Nociam

Both names are quite unrecognizable in such corrupted forms. "Nocteam" is the "Çardandan" of fr. 1116; the "Cardandan" of R. which M., owing to the absence of the cedilla, gives as "Kardandan" instead of the more correct "Zardandan" of P. and Y. On p. 85, line 1, read "Nocteam" for "Charian."

The name means "Gold-teeth" being the Persian zőr-dandān, equivalent to the Chinese chin-chǐn. The exact locality of this Province cannot be stated for certain, but roughly speaking it embraced a district in Western Yunnan having the Salween (Nu-wu or Lu Kiang) from about 24° to 27° N. lat. as a longitudinal centre. The Kachins inhabited the western part, while the Northern Shans were due south. See Cathay and the Way Thither, Vol. III. p. 131 n. 1. In "Nociam" we see the corrupted "Vociam" of fr. 1116, the "Vochan" of Y. and "Vochang" of R. All forms are attempts at the Chinese Yung-ch'ang, which town lies nearly half-way between the Mekong and the Salween.

tooth covered with golde

R. alone adds a passage about tattooing;

"The men also form dark stripes or bands round their arms and legs, by puncturing them in the following manner. They have five needles joined together,
which they press into the flesh until blood is drawn, and then they rub the punctures with a black colouring matter, which leaves an indelible mark. To bear these dark stripes is considered as an ornamental and honourable distinction.”

309. Page 83, lines 19, 20

the women of this Country haue this custome...

F.’s account is slightly longer than that found in most texts. It closely resembles that in R.

To the notes on the custom known as cowade given by Yule, add those by Cordier, Ser Marco Polo, pp. 85–7, and W. Crooke, Religion and Folklore of Northern India, 1926, p. 214. In his article on “Burma” mentioned in the last note, Sir Richard Temple, in speaking of the Karens, says:

“Among Red and White Karens there are curious traces of the cowade. Among the Red Karens only the father may act as midwife, and he may not speak to any one after the birth of his child. Among the White Karens (Mēpū) no one may leave the village after a birth until the umbilical cord is cut, this event being announced by bursting a bamboo by heating [see Note 277]. This custom is said to be extended to the birth of domestic animals. No stranger may enter the house of a woman during her confinement. No customs seem to exist connected with the umbilical cord, except that the Red Karens hang up all the cords of the village in sealed bamboo receptacles (Kyedauk) on a selected tree.”

A curious example of the cowade entering into local legendary history is afforded by the story of the invasion of Ulster by the Fir Bolg and how the male inhabitants were unable to defend the kingdom of Conchobar, being en cowade. The situation was saved by the help of Cūchulainn, the sun-hero. It has been suggested that the custom is here used to explain the annual birth of the sun-god just within the Arctic circle. See further T. Barns, Hastings’ Ency. Rel. Eth. Vol. iv. P. 749.

310. Page 84, lines 1, 2

for that they dwell among the moyst mountaynes,
corrupted with evill ayres.

After describing the cowade, F. abbreviates considerably. In the first place the chief texts tell us that the inhabitants eat rice with their meat, and manufacture
a wine from rice to which a mixture of spices is added. Their ignorance of writing, etc., is thus described in R.:

"They have no knowledge of any kind of writing, nor is this to be wondered at, considering the rude nature of the country, which is a mountainous tract, covered with the thickest forests. During the summer season the atmosphere is so gloomy and unwholesome, that merchants and other strangers are obliged to leave the district in order to escape from death. When the natives have transactions of business with each other, which require them to execute any obligation for the amount of a debt or credit, their chief takes a square piece of wood and divides it in two. Notches are then cut on it, denoting the sum in question, and each party receives one of the corresponding pieces; as is practised in respect to our tallies. Upon the expiration of the term, and payment made by the debtor, the creditor delivers up his counterpart, and both remain satisfied."

311. Page 84, line 33

If the paciente heale...

From this point to the end of the chapter we have a passage not found in fr. 1116, P. or Y.

An even fuller account, however, appears in R.:

"and if through God's providence the patient recovers, they attribute his cure to the idol for whom the sacrifice was performed; but if he happens to die, they then declare that the rites had been rendered ineffective, by those who dressed the victuals having presumed to taste them before the deity's portion had been presented to him. It must be understood that ceremonies of this kind are not practised upon the illness of every individual, but only perhaps once or twice in the course of a month, for noble or wealthy personages. They are common, however, to all the idolatrous inhabitants of the whole provinces of Kataia and Manji, amongst whom a physician is a rare character. And thus do the demons sport with the blindness of these deluded and wretched people."

312. Pages 84, 85

Chaps. 82 and 83

Between these two chapters F. has omitted the account of the battle called by the Burmese the Battle of Ngas-aunggyan, 1277 [not 1272 as in the MSS] which was fought on the Taping river about seventy miles above Bhamo.

The fullest account is given by R., which will be found in full in Appendix II. No. 12, pp. 289-92.

In order to appreciate the errors made by Polo, readers should see Cordier, Ser Marco Polo, pp. 87, 88, and especially G. E. Harvey, History of Burma, 1925, pp. 64-70, 333 and 336.
CHAPTER 83

313. Page 85, lines 1, 2
a greate penet or hill

The word "penet" troubled me for a while, as I had hoped to discover in it a clue to Frampton's county. All dialect dictionaries, however, yielded negative results. It seems, therefore, to be a misprint for "pente," the modern French for a descent, slope, or declivity. This use in English must be very rare. Murray has no note of it. "Pent" is given as short for "Penthouse."

314. Page 85, line 2
two dayes journey

All the best texts read two-and-a-half days.

315. Page 85, line 3
saying one towne

Fr. 1116 reads "une grant place," while P. has "une moult grant place." In R., however, we have "una pianura ampla, & spatioasa," which Marsden translates as "a spacious plain."

316. Page 85, line 5
a Sazo of golde for fyue of siluer

F. omits details here. R. continues: "The inhabitants are not allowed to be exporters of their own gold, but must dispose of it to the merchants who furnish them with such articles as they require; and as none but the natives themselves can gain access to the places of their residence, so high and strong are the situations, and so difficult of approach, it is on this account that the transactions of business are conducted in the plain."

"Nor will they allow," says Y., "anybody to accompany them so as to gain a knowledge of their abodes."

317. Page 85, line 6
you doe come unto the province named Machay

Fr. 1116 reads "Mien est apelès." Y. (and also P.) have "Amien." R. has "la città di Mien," i.e. Burma.

Unfortunately at the end of this chapter F. omits six short chapters (corresponding to Y. Bk. II. Chs. liv-xliv; B. Chs. cxxvi-cxxxi; and M. Bk. II. Chs. xliv-xliv) dealing with the city of Mien (probably Old Pagan, i.e. Tagaung) Bengal, Laos, Tonking, and the route back to Sindafu (Ch'ëng-tu fu) and so to the point where the two roads meet near Juju, i.e. the "Cinguy" of F.'s next chapter.

All these missing chapters are given in full in Appendix II. Nos. 13-18, pp. 292-296 from the R. texts, with notes between square brackets showing varying readings or additional matter from other texts.
When they wil take any Elephant...

For some unexplained reason the account given here really refers to tigers, and not elephants, and has been taken from the middle of one of the omitted chapters (Y. Bk. ii. Ch. lxxix; B. Ch. cxxxi; and M. Bk. ii. Ch. xlix).

CHAPTER 84

another province named Cinguy

Here we are back at the road bifurcation near Cho-chau, the "Giongii" of fr. 1116; the "Juju" of Y.; and "Gingui" of M.; corrupted to "Cinguy" by Santaella and F.

a greate Citie named Cancafu

This is Ho-kien fu ("Cacianfu" in fr. 1116; "Cacanfu" in Y. and P.; and "Pazan-fu" in M.) in Chih-li, one hundred miles nearly due south of Peking and seventy-five miles from the coast at Chi-kow on the gulf of Pe-chih-li. Here the new itinerary starts through the eastern provinces of Cathay and Manzi to the city and harbour of Zayton (Chii-an-chau fu, Tsiuan-chau fu).

R. gives more details of the city than any other text; he says it "belongs to Kataia [Cathay] and lies towards the south in returning by the other side of the province. The inhabitants worship idols, and burn the bodies of their dead. There are here also certain Christians, who have a church [only in R. and Z]. They are subjects of the Grand Khan, and his paper money is current amongst them. They gain their living by trade and manufacture, having silk in abundance, of which they weave tissues mixed with gold, and also very fine scarfs. The city has towns and castles under its jurisdiction.

A great river flows beside it, by means of which large quantities of merchandise are conveyed to the city of Kaibalu; for by the digging of many canals it is made to communicate with the capital [only in R. and, with differences, in Z]. But we shall take our leave of this, and proceeding three days journey, speak of another city named Chan-glu."

CHAPTER 85

fve daves journey

As we have just seen, R. makes it "three days journey," which agrees with all the best texts.
Cittie named Cianglu

At last we have a form which exactly corresponds to that of fr. 1116, as well as P. Yule, following M., reads "Changlu." It would appear to be the modern Tsang-chau, about thirty miles E.S.E. of Ho-kiên fu. F.'s account is abbreviated, and the best is that found in R. (also in part in Z):

"Chang-lu is a large province, situated towards the south, and is in the province of Kataia. It is under the dominion of the Grand Khan. The inhabitants worship idols, and burn the bodies of their dead. The stamped paper of the emperor is current among them. In this city and the district surrounding it they make great quantities of salt, by the following process. In the country is found a salty gossous earth. Upon this, when laid in large heaps, they pour water, which in its passage through the mass, imbibles the particles of salt, and is then collected in channels, from whence it is conveyed to very wide pans, not more than four inches in depth. In these it is well boiled, and then left to crystallize. The salt thus made is white and good, and is exported to various parts. Great profits are made by those who manufacture it, and his majesty derives from it a considerable revenue.

This district produces abundance of well-flavoured peaches, of such a size that one of them will weigh two pounds troy-weight. We shall now speak of another city named Chan-gli."

CHAPTER 86

Sixe dayes journey beyonde the Cittie named Cianglu

But from Cianglu Polo went to Ciangli which took five days. It seems that Santaella's copyist thought the two places were identical.

There is, however, some excuse for the mistake, especially as "Ciangli" and the next place mentioned, "Candrafra," appear to have been mixed up. See next note.

a Cittie named Candrafra

This has been identified with Yen-chau (35° 37' N. lat., 116° 50' E. long.). It appears in fr. 1116 as "Tandinfu." Other readings are: Candinifu, Condinifu and Cundinifu. R. has "Tudin-fu." As Yule has pointed out (Vol. I. p. 137) Yen-chau was of only second importance, and the description and history applied to it really belong to "Ciangli" which, as we have seen, is omitted by F. "Ciangli" of fr. 1116 is the "Chinangli" of Y. and must be identified with Tsian-nan fu (36° 48' N. lat., 116° 57' E. long.).

See Appendix II. No. 19, pp. 296-7.
222

APPENDIX I

325. Page 86, lines 11, 12

had under it...twelve Cities

All the best texts read "eleven."

326. Page 86, line 15

a faire Cite named Singuyamata

Here the name is well preserved. Fr. 1116 has "Singiumatu," P. "Singuy
matu," and Y. "Sinjumatu." It is the "Sungumatu" of Friar Odoric (see Cathay
and the Way Thither, Vol. ii. p. 214 n. 2). It is to be identified with the modern
Tsi-ning-chau. See A. C. Moule, T'oung Pao, July 1912, pp. 431-3.

Frampton has badly abbreviated Polo’s account of "Candrafra" and "Singe
uyamata," and has entirely omitted the story of Liyan Sangon (R.’s Lucansor).
After "Singuyamata" the texts of Y. and B. continue the itinerary to "Linju," "Pij
ju," and "Jiju," the two latter of which we can probably identify with Pei-chau
and Su-tsien respectively. "Linju" is a difficulty and I can see no way of accepting
Yule’s Lin-ch’ing as its modern equivalent. I would suggest Su-chau fu (34° 12’ N.,
117° 20’ E.) as fitting the conditions the best. See p. iii of the present volume.

For a full account of "Singui-matu" and the passages omitted by F. see Ap
pendix II, Nos. 20, 21, pp. 297-9.

CHAPTER 87

327. Page 87, line 1

Going from Singuyamata seventeen days.

This represents an attempt to bridge the gap caused by the omitting of "Linju,"
"Piju" and "Jiju." It might be a misprint, I think, for "sixteen" as found in R.
This would be correct as the distances to be added are: 8 + 3 + 2 + 3. In the
next few lines F. gives the usual formula about the people being subject to the
Khan, etc., which, however, includes: "Their language is Persian." This is, of
course, the mistake already referred to (Note 53), but none of the best texts
mention the language here at all.

328. Page 87, lines 9, 10

Upon this riever the great Cane hath fiftiene great
ships

F. omits to tell us that quantities of large fish are found in the river. Santanaella
apparently dislikes possible exaggerations, and reduced the "15,000" of all the
texts to "15." He does the same with the "twentye poore striplings" of Ch. 88
(see Note 335).
APPENDIX I

329. Page 87, line 12

and fiftene mariners

Read "twenty" here with all the best texts.

330. Page 87, lines 14, 15

The biggest of them is named Choyganguy, and the other Caycu and they be both a dayes journey from the sea

"Choyganguy," (printed "Choygamum" by F. in the chapter heading), is the "Koi-gan-zu" of R.; "Cuguiganguy" of P.; "Coigangu" of Y.; and "Coigangiu" of fr. 1116.

It is to be identified with Hwai-ngan-chau, now -fu (usually spelt Hwaianfu in modern maps) in c. lat. 33° 30' N., long. 119° 10' E. Its recent official name is Huaian-hien, though commonly called Huai-ch'eng.

In a certain semi-confidential Admiralty publication (from which I have permission from the Controller of H.M. Stationery Office to quote, but not to mention by name) there is a Gazetteer of all the chief places in Kiangsu. In this, Hwai-ngan-chau is described as being very poor in population, while the whole city lies below flood-water level, so that sometimes in summer the gates have to be kept continually closed and backed up with earth ramparts for protection against floods. All the surrounding country is low-lying, swampy and liable to floods.

This information fully prepares us for our inability to discover any trace of "Caycu," the small town opposite. Perhaps it has been swept away in course of time. Hwai-ngan-chau actually consists of three walled cities, and we can imagine that its preservation has been only due to the constant combating of the floods by closing the gates as mentioned above.

"Caycu" is the "Caiju" of fr. 1116 and the "Caiju" of Y. It should be clearly distinguished from Yule's "Cayu," which we shall come to soon. (See Note 349.)

F. tells us that both places are a day's journey from the sea. This information is apparently an addition. Hwai-ngan-chau is about seventy-five miles from the Yellow Sea (Hwang-Hai).

CHAPTER 88 [Misprinted 80 by F.]

331. Page 87, line 16

Passing the faide river, you enter into Æ province of Manji...

R. and Æ alone give us the following further information about Cathay before Pole goes on to describe Manzi or Southern China:

"Upon crossing this river, you enter the noble province of Manji: but it must not be understood that a complete account has been given of the province of
Kataia. Not the twentieth part have I described. Marco Polo in travelling through the province has only noted such cities as lay in his route, omitting those situated on the one side and the other, as well as many intermediate places, because a relation of them all would be a work of too great length, and prove fatiguing to the reader.

Leaving these parts we shall, therefore, proceed to speak, in the first instance, of the manner in which the province of Manji was acquired, and then of its cities, the magnificence and riches of which shall be set forth in the subsequent part of our discourse.”

332. Page 87, line 17

_Where raigneth a king named Fucusfur_

I.e. Facfur, which, however, was only a title; being the Persian equivalent of the Chinese _Tien-tzu_, “Son of Heaven.”

333. Page 87, lines 22, 23

_being brode and full of water_

R. says “a bow-shot wide”; Y. translates, “more than an arblast-shot in width.”

334. Page 88, lines 1, 2

_was very leacherous_

R. says “He maintained at his court and kept near his person about a thousand beautiful women in whose society he took delight,” while Y. has “…all their delight was in women, and nought but women; and so it was above all with the King himself, for he took thought of nothing else but women, unless it were of charity to the poor.” Fr. 1116 simply has: “mes sun delit estoit de femmes et fasoit bien a povres jens.”

335. Page 88, lines 6, 7

_twenty poore striplings_

Fr. 116 has “XXm,” so also Y. and MS C. of P.

336. Page 88, line 9

_in the yeare of our Lord .1267._

The date differs in the various MSS. All are wrong. It should read “1276.” See Y. Vol. ii. pp. 148 et seq.

337. Page 88, lines 12, 13

_named Gaissay_

I.e. Kinsay, the Chinese _Kung-sze_ meaning “Capital.” Its proper name was Lin-ngan, and is now Hang-chau. See further Note 367.
Baylayncon Can

Fr. 1116 writes "Baian Cinesan," and Y. has "Bayan Chinesan." F. seems to have arrived at his corrupted form by imagining that "csan" was meant for "Can."

"Bayan" means noble and the Chinese form Pe-yes could punningly mean "100 eyes." The second part of the name is merely the title Chinsiang, "minister of State."

339. Page 88, lines 17, 18

saving one named Sinphu...

This city, which in Ch. 92 F. calls "Saiphlu," is not mentioned until its proper place in the French texts or R. Unfortunately F. misses the whole point of the surrender of Kinsay as he omits the incident about the horoscope, and the Queen's consequent superstition. The account given by R. is much better arranged than that of either Y. or B. and for this reason, and also for the sake of comparison, is given in full in Appendix II. No. 22, pp. 299-301.

CHAPTER 89. [Misprinted 91 by F.]

340. Page 88, lines 23, 24

Citie...named Coyganguy

F. apparently fails to realize that this is the "Choyganguy" to which he has already referred in Ch. 87. See Note 330.

341. Page 88, lines 26, 27

and have the Persian tongue

Here again the best texts have no mention of the language at all. See Note 327.

CHAPTER 90. [Misprinted 92 by F.]

342. Page 89, lines 4, 5

and there be very deepe waters on ech side of the cawsey

R. (and Z) gives more detail. R. says: "On both sides of the causeway there are very extensive marshy lakes, the waters of which are deep, and may be navigated; nor is there besides this, any other road by which the province can be entered. It is, however, accessible by means of shipping; and in this manner it was that the officer who commanded his majesty's armies invaded it, by effecting a landing with his whole force."
343. Page 89, line 6  
*a citie named Pangu*  
Fr. 1116 reads "Pauchin"; Y. "Paukin"; and R. "Pau-ghin." It corresponds to the modern Pao-ying, a *hien* city dependent on Yang-chau.

344. Page 89, lines 8, 9  
*and here is great scarcity of corne...*  
Here F. is wrong. The text reads "a great plantee."

345. Page 89, line 11  
named Cayn  
Fr. reads "Caiu," Y. "Cayu" and R. "Kain." It is the modern Kao-yu-chau, recently officially named Kao-yu-hien, having an estimated population of 15,000.

346. Page 89, line 13  
*for the value of sixe pence*  
The texts have "a Venetian groat," which was equal to 5d., or 4:99d. to be exact. See Y. Vol. ii. p. 591.

347. Page 89, line 15  
the grounde of Tinguy  
A misprint for *city* of Tinguy (?). Fr. 1116 writes "Tigu" to which B. supplies an n: Ti[n]giu; Y. has "Tiju" and R. "Tin-gui." It is apparently Tai-chau an important city of about 70,000 inhabitants. It is a great centre of the salt industry, and is entirely surrounded by a moat. F. omits to mention "Tinju" of which Y.'s texts says:

"And there is a rich and noble city called Tinju, at which there is produced salt enough to supply the whole province, and I can tell you it brings the Great Kaan an incredible revenue. The people are Idolaters and subject to the Kaan." Yule would identify it with Tung-chau, but this is over ninety-eight miles from Tai-chau and is not a salt centre at all, being famous for cotton and silk. The suggestion made by J. C. Ferguson (*Journ. North China Br. Roy. As. Soc.* Vol. xxxvii. 1906, p. 190) that it is Hsien-nü-miao (Siennümiaio) seems much more probable. It is only twenty-three miles from Tai-chau, is an important salt centre, and fits in better with the itinerary.
CHAPTER 92.  [Misprinted 94 by F.]

348. Page 90, line 3  

*a Cité named Manguy*

Spelt "Mangui" in the chapter heading. It is the "Yangiu" of fr. 1116, the "Yanju" of Y., and "Yan-giu" of R., and is to be identified with Yang-chau on the west bank of the Grand Canal, eleven miles north of the Yangtze. It is the centre of the salt administration of the Liang Huai district. The principal industries are lacquerware and silverwork, a possible echo of the harness-making mentioned by Polo [see Note 350 below].

349. Page 90, line 4  

*and speake the Persi on tong*

Here again F. is alone in mentioning the language. See Note 327.

350. Page 90, lines 4, 5  

*This Cité hathe under it sequentéene Cités...*

Read "twenty-seven" with all the best texts. F. suppresses all details. R. is as follows:

"...which, having twenty-seven towns under its jurisdiction, must be considered as a place of great consequence. It belongs to the dominion of the Grand Khan. The people are idolaters, and subsist by trade and manuel arts. They manufacture arms and all sorts of warlike accoutrements; in consequence of which many troops are stationed in this part of the country. [Y. translates: "a great amount of harness for knights and men-at-arms." ] The city is the place of residence of one of the twelve nobles, before spoken of, who are appointed by his Majesty to the government of the provinces; [R. omits "car elle est esleue por un des xii sajes," which Y. translates, "for it has been chosen to be one of the twelve Sings"] and in room of one of these [unique to R.], Marco Polo, by special order of His Majesty, acted as governor of this city during the space of three years." See next note.

351. Page 90, lines 5, 6  

*and I Marcus Paulus did gouerne this under the great Cane three yeares*

We must not take this too literally, even if we accept the reading "Seigneurie" of fr. 1116 and fr. 5631 (Pauthier's "A") instead of the "Sejourna" of fr. 5649 (P.'s "C"). R. reads: "di commissione del gran Can, n'hebbe il gouerno tre anni..." and it is due chiefly to this that subsequent editors have made him 'Governor-General.' At most he held the post of governor of the Lu, or circuit, of Yang-chau. Y. suggests the three years in question must have been between 1282 and 1287–8.
APPENDIX I

In order to appreciate the whole argument it is necessary to study Pauthier, pp. 467, 492; Y. Vol. II. p. 157; and Pelliot, Young-Pao, 1927, pp. 164-8, in his review of Charignon’s edition of Le livre de Marco Polo.

352. Page 90, line 7

*a province or Cité named Manguy*

This must be a misprint as we have just finished with “Manguy.” It is probably meant to be “Nanguy,” a corrupted form of the “Nan-ghin” of Y. and R. and the “Nanchin” of fr. 1116. Here Polo leaves his itinerary to describe “two great provinces of Manzi which lie towards the west.” The first of these is “Nanchin,” that is the Ngan-king or Anking fu of modern maps; the second is “Saimphu,” for “Saianfu,” the modern Siang-yang fu. F. omits to mention that the Khan derives a large revenue from the city.

CHAPTER 93

353. *Howe this province was wonne by the great Cane*

Here we have a distorted précis of the surrender of Siang-yang. The much fuller accounts found in R. (for which see Appendix II. No. 23, pp. 301, 302 and the best French MSS are, however, equally difficult to explain.

They tell us that Siang-yang held out three years after the rest of Manzi had surrendered. This is in exact contradiction to fact. The siege of Siang-yang was the prologue, not the epilogue, to the conquest of Southern China. But this is not all, for not only does the claim made by Polo of being personally responsible for its surrender seem exaggerated, but the Chinese records clearly prove that Polo could not have been at the siege at all. In the annals of the Sung shih, the siege is continually mentioned. It started in the winter of 1268-9 and ended on March 17th, 1273. Now the three Polos did not reach Kublai Khan till 1275, or later in 1274 at the very earliest. It will be noticed in R.’s account (Appendix II. No. 23) that Marco is not mentioned. It has therefore been suggested that Nicolo and Maffeo were at the siege before their first return home. But, as we already know, the brothers had reached Acre by April, 1269, and were in Venice during the next two years.

Thus none of the Polos could possibly have been at the siege. It is quite contrary to the whole character of Marco Polo to imagine that he is purposely lying in order to get credit for himself, his father and his uncle.

We can only suspect the romantic pen of Rustichello. In order to appreciate how easy it would be to substitute the Polos for the people who did make “mangonels or trebuchets” reference must be made to the excellent paper by A. C. Moule, “The Siege of Saianfu and the Murder of Achmach Bailo,” Journ. North
China Br. Roy. As. Soc. Vol. LVIII, 1927. We have already referred to the murder of the Bailo in Note 247, and mentioned how in the Jami’ul-Tawarih, Rashid-ud-din gives a curious version connecting the two events. Among other evidence from Chinese sources, Moule gives extracts from the biographies of two of the Moslems mentioned as the catapult-makers: A-laow-a-ting (Alau’d Din) of Mu-fa-li (Mosul?) and I-su-ma-yin of Hsu-Lieh or Shih-la (Shiraz?). In the biography of the latter, we learn that after his death his son Pu-pai held his office assisted by his brother I-pu-la-chin and his colleague Ma-ha-ma-sha. In these three men, Moule would recognize the three brothers mentioned by Rashid-ud-din as (A)bu bak(r), Ibrahim and Muhammad.

Taking all the evidence given by Moule from Chinese sources as a whole, it is impossible to doubt the accuracy of the stories told both by Polo and Rashid as far as the main events are concerned, but there is no thread of evidence that the Polos had anything, or could possibly have had anything to do with the siege. We can only imagine that Rustichello, the editor and translator of Romances, was thoroughly determined that the heroes of such an entertaining tale should not be three men with unknown names, and Moslems to boot! What could be easier than substituting the three heroes of the whole book?

CHAPTER 94

354. Page 91, lines 12–14

Goyng from Siamphu [sic], and travellng fiftene
dayes journey towadres Syroco, or to the Easte
southeaste, you come unto the Citie named Singuy

The break in the itininary in order to speak of Nanchin and Siaianfu has caused trouble in the different MSS.

F. and R. talk as if the itinerary had not been broken, and make “Singuy” fifteen days from Siaianfu, which is reasonable.

Fr. 1116 and Y. make him travel fifteen miles from Yanju to “Singuy” on the Yangtze which is also reasonable.

Several editors, however, have muddled the two up and made Polo reach the Yangtze after a journey of fifteen miles from Siaianfu!

Y. is troubled about Polo’s direction. The text says he went “sceloc” or “yseloc,” south-east; whereas if we identify “Singuy” with Icheng or I-ching-hien (which seems correct) the direction was south-west. However, he dismisses the point on the grounds that Polo’s style of orientation must not be taken too literally. But may not the explanation be that Polo is thinking of the direction from Siaianfu? In order to get back to his route the name of the place might be altered as well as “jornee” becoming “milles,” but the direction remain unaltered.
Fr. 1116 reads "angiu" as the point of the renewal of the itinerary. This has been written by B. as [Y]angiu, and taken to be the "Yangiu" of his Ch. cxlv. This seems entirely justifiable. Icheng is a walled town connected by a creek with the Yangtze, one and a half miles to the south. Another creek, the San-ch'a ho (I can find no trace of Y.'s "two branch canals"), connects the town with the Grand Canal.

355. Page 91, lines 16, 17

river...named Tuognrou...17. miles in breadth, and one hundred dayes iorney in length

"Tuognrou" is a misprint for the "Tnoguron" as printed by F. in the margin. I cannot suggest how the corruption was arrived at, unless it is meant for "Ta-kiang," "great river," one of the best known names of the Yangtze.

In Ch. 73 F. called it "Champlu." As regards its breadth, it is, of course, exaggerated. Most MSS give varying distances of ten, eight and six miles. In point of fact, the Yangtze averages from three-quarters to two miles in width during its course through the province of Kiangsu. Below Tungchau it is ten miles wide, and even exceeds this at Woosung on the coast opposite Shang-hai. The length is by no means exaggerated. The latest estimates put it somewhere between 3200 and 3500 miles.

356. Page 91, line 20

five thousand shippes or barkes

So also in R. The number is missing in fr. 1116, and B. has supplied "Vtr." Pauthier's text says that Polo heard from the Khan's revenue officer that 200,000 ships passed up-stream in a year, without counting those going down. Y. has included this in his translation in addition to the statement that "Messer Marco Polo said that he once beheld at that city 15,000 vessels at one time." The smaller number, as in our text, seems much more likely to be the correct one. R. contains several lines not in the French MSS and is valuable for comparison. It is therefore given in full in Appendix II. No. 24, pp. 302, 303.

* also contains an important addition; see B. p. 140 note c.

CHAPTER 95

357. Page 92, line 1

Ciuguy is a small Citie

"Cuguy" of P.; "Caiju" of Y.; and "Caygiu" of B. This is, without any doubt, Kwa-chau on the north bank of the Yangtze, thirteen miles E.S.E. of Icheng.
for it is better provided with barses than with
cartes, or horses

So ends the chapter, omitting, however, the very interesting passage on the
Grand Canal and Golden Island.
Y. translates as follows:

"You must understand that the Emperor hath caused a water-communication
to be made from this city to Cambaluie, in the shape of a wide and deep channel
dug between stream and stream, between lake and lake, forming as it were a great
river on which large vessels can ply. And thus there is a communication all the
way from this city of Caiju to Cambaluie; so that great vessels with their loads
can go the whole way. A land road also exists, for the earth dug from those
channels has been thrown up so as to form an embanked road on either side.

"Just opposite to the city of Caiju, in the middle of the river, there stands a
rocky island on which there is an idol-monastery containing some 200 idolatrous
friars, and a vast number of idols. And this Abbey holds supremacy over a number
of other idol-monasteries, just like an Archbishop's see among Christians."

Both accounts, the Grand Canal and Golden Island, are accurate.

In the semi-confidential Admiralty publication we read:

"The embankments of the Grand Canal consist of earth actually thrown up
when the bed of the canal was cut, further reinforced by soil taken from the
adjacent plain. The eastern embankment measures about 100 ft. at the base and
30 ft. at the top. The western embankment is somewhat narrower (about 80 ft. at
the base, 10 ft. at the top) .... The top of the embankment provides a convenient
towpath, but the available room is greatly reduced by the numerous houses which
line the water-way."

The changing nature of the river-bed at this point has continually altered the
position of Chin Shan, or Golden Island. In 1823 it was described as being on
the left bank; in 1842 it was an island in the middle of the river; in 1862 it was
joined to the right bank by a spit; in 1907 it was nearly 700 yds. inside the low
river edge. To-day it can be described as a precipitous rocky hill on the right bank
of the river. It is covered with temples and crowned by a pagoda 213 ft. high.

CHAPTER 96. [Misprinted 98 by F.]

Pigramphu is a Citie...

A much corrupted form of Chinghianfu (Chin-kiang fu), a walled city of the
usual type on the south bank of the Yangtze, three and a quarter miles S.E. of
Kwa-chau.
edified by Marsar Conoflor...in the yeare of oure Lord 1288.

The best texts read "1278." Fr. 1116 repeats the date twice, and reads the name "Marsarchis." Y. has "Mar Sarglis" (or Dominus Sergius) which he says appears to have been a common name among Armenian and other Oriental Christians. Our text omits the usual details: that the city consists of idolaters, that they are subject to the Khan, use paper money, live by trade, have abundance of victuals, and make stuffs of silk and gold.

the citie of Tigningui

"Chinginguy" of P.; "Chinginjü" of Y.; "Cangiu" of B.; while R. preserves a form somewhat similar to that of our text: "Tin-gui-gui." It is the modern Chang-chau, forty-eight miles south of Chinkiang, on the Grand Canal. R. explains that the walls of the city were surrounded by a double wall. If so, no trace now remains. The present walls, however, date from the Ming period and are four and a quarter miles in perimeter, 25 ft. high, surrounded by a moat 5 to 15 yds. wide and 3 to 8 ft. deep.

men named Alanos

The Alanos, the remnants of whom were settled on the northern skirts of the Caucasus. See Y. Vol. ii. pp. 179, 180; Cordier, Ser Marco Polo, pp. 95, 96 and the references given in those pages.

Barayn

Here we recognize the "Baylayncon" of Ch. 88, the "Baian" of fr. 1116 and "Bayan" of Y.

CHAPTER 97. [Misprinted 99 by F.]

Singuy is a...noble citie

The "Sugiu" of fr. 1116; "Suju" of Y.; and "Sin-gui" of R. This is the modern Su-chau (Soochow), the capital of Kiangsu, with an estimated population of 280,000. Polo's description applies to-day as it did in the thirteenth century. The city is celebrated for its silk-weaving, and is an important educational centre.

.40. miles in compass... .7000. bridges of stone

Y. reads "60 miles," but F. agrees with fr. 1116. Our "7000" is a misprint for "6000" as found in the best texts.
for five pence they doe giue more than five pound of Ginger

Here again, as in Ch. 90 (see Note 346), "sise pence" is given for "un venesian gros." All the best texts read "40 pounds" instead of "five" as in our present version.

there be .17. Cities greate and sayre

All the best texts read "16," and add that Su-Chau and Kinsay mean "City of Earth" and "City of Heaven" respectively.

This false etymology is probably due to a local "vulgar error." Before proceeding to describe Kinsay, most texts mention two intermediate cities. Fr. 1116 mentions three—Vugiu, Vughin and Ciangan. These I take to be Ping-wang, Hu-chau, and Ka-shing. See the Introduction p. liv and map facing it.

CHAPTERS 96–100. [Misprinted 97 by F.]

a noble and famous Civie named Quinjuy

These three chapters constitute Frampton's entire description of Kinsay, which is given in such great and most interesting detail by Ramusio. No edition of Polo could possibly afford to ignore it, and it will be found in full as passage No. 25 in Appendix II. pp. 303–14. The "Ganfu" of F. is probably to be identified with Ning-po, but see Pelliot's suggestion in Cordier, op. cit. p. 98.

CHAPTER 101

what rent the greate Cane hath yearely

So abridged is this chapter that it is necessary to give it almost complete from Ramusio: "In the first place, upon salt, the most productive article, he levies a yearly duty of eighty tomans of gold, each toman being eighty thousand saggi, and each saggio fully equal to a gold florin, and consequently amounting to six millions four hundred thousand ducats. This vast produce is occasioned by the vicinity of the province to the sea, and the number of salt lakes or marshes, in which, during the heat of summer, the water becomes crystallized, and from whence a quantity of salt is taken, sufficient for the supply of five of the other divisions of the province. There is here cultivated and manufactured a large quantity of sugar, which pays, as do all other groceries, three and one-third per cent. The same is also levied upon the wine, or fermented liquor, made of rice. The twelve classes
of artisans, of whom we have already spoken, as having each a thousand shops, and also the merchants, as well as those who import the goods into the city, in the first instance, as those who carry them from thence to the interior, or who export them by sea, pay, in like manner, a duty of three and one-third per cent.; but goods coming by sea from distant countries and regions, such as from India, pay ten per cent.

So likewise all native articles of the country, as cattle, vegetable produce of the soil, and silk, pay a tithe to the King. The account being made up in the presence of Marco Polo [Pauthier's text says that the Khan sent Polo to inspect the amount of the revenues], he had an opportunity of seeing that the revenue of His Majesty, exclusively of that arising from salt, already stated, amounted in the year to the sum of two hundred and ten tomans (each toman being eighty thousand saggis of gold), or sixteen million eight hundred thousand ducats."

CHAPTER 102

370. Page 96, lines 11, 14, 19

Thampinguy...Vguy...Greguy

I.e. "Tanpi[n]giu...Vgui...Ghugiu" of fr. 1116, and "Tanpiju...Vuju...Ghiju" of Y.

I would identify them with Fu-yang, Tung-hu and Yeng-chau respectively (according to Phillips) rather than with Shao-hsing, Kin-hwa and Kiu-chau as suggested by Y. See further in Introduction of this volume, p. liv.

371. Page 96, lines 22 et seqq.

and many Lyons

This account of catching lions [tigers] appears to be unique to F. Anyway, I can find no trace of it in any of the leading texts. It may, perhaps occur in one of the innumerable Pipino versions.

CHAPTER 103. [Misprinted 101 by F.]

372. Page 97, lines 12, 15, 16

Cinaugnary...Signy...the Realme of Fuguy

I.e. "Cianscian...Cugiu...the kingdom of Fugiu" of fr. 1116, and "Chanshan...Cujn...the kingdom of Fujiu" of Y. Here again the true identification of the places is difficult, but, as already stated in the Introduction (p. lv), I much prefer Phillips' "Lan-ki...Kiu-chau" to Y.'s "Sui-chang...Chu-chau" for the first two places.
APPENDIX I

F. gives the distance between them as four days. This should be corrected to "three" with all the best texts.

His "Realme of Fuguy" is Fu-chau, to which we return very soon.

373. Page 97, line 20 and sugar so plenty

This is a mistake for "ginger."

374. Page 97, lines 29, 30

the Citie named Belimpha, which hath four
bridges of marble...

I.e. Kien-ning fu, the "Queni[n]fu" of fr. 1116 and "Kelinfu" of Y. All texts have "three bridges" instead of "four."

375. Page 98, line 6

At these sixe dayes journeys ende, fliandeth the Citie
named Vguca...

Here F. has got muddled in his distances. We are dealing with the second half of the six days' journey, and fr. 1116 reads: "Et au drean de ceste trois journee a xv. milles...." Thus it is clear that after travelling from Kin-chau (Cugiu) to Kien-ning fu in three days, Polo goes on for another three days. At the 15th mile on the third day he reaches "Vguca," the "Unquen" of fr. 1116, and "Unken" of Y. Continuing a further fifteen miles he gets to "the noble city of Fugi...chief of the kingdom of Choncha." So at this point Polo was travelling thirty miles a day. Thus "Unquen" should be seventy-five miles from Kien-ning fu and fifteen miles from Fugi. This fact, added to the agreement of the description and direction, has made me (Introduction, p. lv) suggest Yüyilan as its modern equivalent, rather than Min-tsing (Y.) or Yung-chun (Phillips).

376. Page 98, line 7 great plenty of sugar

Both Z. and R. have additional information. Marsden translates: "Previously to its being brought under the dominion of the Grand Khan, the natives were unacquainted with the art of manufacturing sugar of a fine quality, and boiled it in such an imperfect manner, that when left to cool it remained in the state of a dark brown paste. But at the time when this city became subject to His Majesty's government, there happened to be at the court some persons from Babylon [i.e. Cairo] who were skilled in the process, and who, being sent thither, instructed the inhabitants in the mode of refining the sugar by means of the ashes of certain woods."
CHAPTER 104

377. Page 98, lines 10, 11

the Citie named Friguy, which is the head of 5
Realme of Tonca, which is one of the nyne
Kingdomes of Mangi

As we have seen, the "Realme" was mentioned by F. in the last chapter as "Fuguy," and is to be identified with Fu-chau in the province of Fu-kien. "Tonca" is the "Choncha" of fr. 1116 and "Chonka" of Y. Its etymology has not been satisfactorily explained. See Y. Vol. II. p. 232.

F. now correctly speaks of "nyne kingdomes," but in Ch. 100, line 1, he said, "Mangi was diuided into 8. kingdomes,..."

378. Page 98, lines 12, 13

a Riner of seaven miles in breadth

Read "one mile" with the best texts. The rest of the text is much abbreviated. Apart from the passage from R. quoted below, Z has 70 unique lines (see Benedetto, pp. 157-8) of considerable interest. They deal with lion-hunting with the help of dogs, "animalia vocata papiones," and the religious views of the people of Fugiü as described in a conversation with Marco and Maffeo.

The passage from R. (also with slight differences in Y., etc.) is as follows:

"In this place is stationed a large army for the protection of the country, and to be always in readiness to act, in the event of any city manifesting a disposition to rebel. Through the midst of it passes a river, a mile in breadth, upon the banks of which, on either side, are extensive and handsome buildings. In front of these, great numbers of ships are seen lying, having merchandise on board, and especially sugar, of which large quantities are manufactured here also. Many vessels arrive at this port from India, freighted by merchants who bring with them rich assortments of jewels and pearls, upon the sale of which they obtain a considerable profit. This river discharged itself into the sea, at no great distance from the port named Zai-tun. The ships coming from India ascend the river as high up as the city, which abounds with every sort of provision, and has delightful gardens, producing exquisite fruits."

CHAPTER 105

379. Page 98, lines 20, 21

having abundance of all viuuals

F. omits to mention that many of the trees supply camphor, and that all the people are traders and craftsmen, subjects of the Khan, and under the government of Fugiü.
APPENDIX I

380. Page 99, line 2

_for one Shippe that commeth unto Alexandria_

Read, "one ship-load of pepper that commeth...."

After mentioning the various percentages, Polo speaks of tattooing, the manufacture of porcelain at Tiungiu [? Jau-chan fu], the language and writing of the province of Manzi, etc. All this is omitted by F.

The process of the porcelain manufacture is the most interesting, and is found both in C and R. It is thus translated by Marsden:

"They collect a certain kind of earth, as it were, from a mine, and laying it in a great heap, suffer it to be exposed to the wind, the rain, and the sun, for thirty or forty years, during which time it is never disturbed. By this it becomes refined and fit for being wrought into the vessels above mentioned. Such colours as may be thought proper are then laid on, and the ware is afterwards baked in ovens or furnaces. Those persons, therefore, who cause the earth to be dug, collect it for their children and grandchildren. Great quantities of the manufacture are sold in the city, and for a Venetian groat you may purchase eight porcelain cups."

Before passing on to speak of Japan, Polo gives us a chapter on the merchant ships of Manzi. This is omitted by F., but is to be found in full from R. in Appendix II. No. 26, pp. 314-15.

CHAPTER 106

381. Page 99, line 15

_the Island named Ciampagu_

Written variously Cipangu, Chipangu, Cipingu, Zipingu, etc., representing the Chinese Jih-pen-kwe, Japan.

382. Page 99, line 20

_speake the Persia tong_

See Note 53. It will be unnecessary to refer again to this oft-recurring mistake.

383. Page 99, line 25

_a piece of two Ryals of plate_

This I take to mean "of the diameter of a two-real piece of silver." Mr G. F. Hill, of the Dept. of Coins and Medals at the British Museum, tells me that the two-real piece was a common denomination of the Spanish coinage in Santaella's time. Under Ferdinand and Isabella it measured 1.15 in. in diameter, which is the exact measurement of "two fingers thick" of the average man's hand, as found in the best texts.
greate plenty of precious stones

F. omits to mention the pink pearls (perles...rojes), which are described as being equal in value to the white ones.

R. and Z add that some of the dead in the Island are buried, and others are burnt, and that when a body is burnt one of the pearls is placed in the mouth.

Abatan, and the other Vonsaucin

Written almost identically in the French texts. The "u" in the latter name should be "n." See note to line 22 of R., pp. 163, 164; also Cordier, op. cit. p. 103.

and in that instant...

This certainly makes a better story, but in none of the MSS I have seen is the killing of the eight men in any way connected with the storm. In fact, in the French texts the incident about the pieces of iron comes later on. In R. we find the text rearranged as in F. Conti also speaks of the use of iron inserted under the skin for the same purpose. See p. 144 (last few lines) of this volume.

tenne miles

Read "four miles" with the best texts.

retired backe by the Ilande

R. (and also Z) has a more detailed account:

"The Tartars, on their part, acted with prudent circumspection, and, being concealed from view by some high land in the centre of the island, whilst the enemy were hurrying in pursuit of them by one road, made a circuit of the coast by another, which brought them to the place where the fleet of boats was at anchor."

and ransacked it

F. omits "except the pretty women, whom they kept for their own use."
Appendix: 1

390. Page 100, line 36

in the yeare of our Lorde 1248.

The date varies greatly in the different MSS. Fr. 1116 has 1268, Y. 1279, R. 1264. Kublai made many unsuccessful attempts to conquer Japan from 1266 to 1274, but the final disaster (only briefly related by Polo, but with additional facts which apparently have no historical basis) came in 1280-1. See Y. Vol. u. pp. 260, 261. F. omits to tell us the fate of the two commanders.

I quote from R., which alone with Ζ gives the additional information about the mode of punishment on the island of Zorza.

"The Grand Khan having learned some years after that the unfortunate issue of the expedition was to be attributed to the dissension between the two commanders, caused the head of one of them to be cut off; the other he sent to the savage island of Zorza, where it is the custom to execute criminals in the following manner. They are wrapped round both arms, in the hide of a buffalo fresh taken from the beast, which is sewed tight. As this dries, it compresses the body to such a degree that the sufferer is incapable of moving or in any manner helping himself; and thus miserably perishes."

391. Page 101, line 8

7448. Ilandes

This number agrees with that given in fr. 1116. Y. has 7450, and R. 7449. In the Catalan map, where the information was almost certainly derived from Polo, the number is given as 7548. See Yule and Cordier, Cathay, Vol. 1. p. 302.

F. omits to tell us that the name of the sea containing the islands is "The Sea of Chin," which is the same as saying "The Sea over against Manzi."

392. Page 101, line 17

a Countrey named Cyaban

This is the "Cianba" of fr. 1116, and "Chamba" of Y., the mediaeval "Champa," corresponding to the southern half of Annam. See M. G. Maspero, Le Royaume de Champa, Paris, 1928.

It is interesting to note that in R., and also Ζ, we find an interpolation immediately before the mention of Champa. As Y. says, Marsden's translation is forced so as to describe the China sea. His only rendering is as follows (ii. 266):

"Leaving the port of Zayton you sail westward and something south-westward for 1500 miles, passing a gulf called Ch'inan [? 'An-nan, i.e. Tong-king], having a length of two months' sail towards the north. Along the whole of its south-east
side it borders on the province of Manzi, and on the other side with Anin and Coloman, and many other provinces formerly spoken of. Within this gulf there are innumerable Islands, almost all well-peopled; and in these is found a great quantity of gold-dust, which is collected from the sea where the rivers discharge. There is copper also, and other things; and the people drive a trade with each other in the things that are peculiar to their respective Islands. They have also a traffic with the people of the mainland, selling them gold and copper and other things; and purchasing in turn what they stand in need of. In the greater part of these Islands plenty of corn grows. This gulf is so great, and inhabited by so many people, that it seems like a world in itself."

393. Page 101, line 20

Read 1278 with the French MSS. The name of the "great Baron" is given in fr. 1116 as "Sogatu," and in Y. as "Sagatu." In the Chinese history he appears as "Sotu."

394. Page 101, line 24

his tribute

F. omits to tell us what the tribute was. The French texts give it as twenty large elephants, to which R. and Z add, "and a very large quantity of lignum-aloes." R. gives the king's name as Accambale.

395. Page 101, line 25

The best texts read 1285. Maspero thinks the actual date of Polo's visit to Champa was 1288. See Cordier, Sér Marco Polo, p. 164.

396. Page 101, lines 26-28

he had. .325. Among his sonnes he hadde. .25.....

men of armes

All leading texts read "326" and "150" capable of bearing arms.

397. Page 101, line 29

and great Mountaynes of blanke Ebhane

Fr. 1116 reads "Il ont maint bosches dou leigne que est apellés bonus, que est mout noir, dou quel se font les escace e les calamans [les échecs et les écrivains]"
The "bonus" is "Abenir" in Spanish, from the Persian "Abnīs," hence our "ebony." F. makes no mention of the chessmen or pen-cases.
APPENDIX I

CHAPTER 108

398. Page 102, lines 2, 3

1400 miles... in compasse thousand miles

Read "1500" with the best texts. P. gives the circumference of Java as an even more exaggerated figure—5000 miles.
F.'s "teauen" Kings should read "a great King."

CHAPTER 109

399. Page 102, lines 9, 12, 13

Sayling seuentene myles... two hundreth miles

Locathe

F. is very far out in his distances. For "17" read "700," and for "200" read "500." After passing the Condor group, Polo touched at some point on the N.E. coast of the Malay Peninsula which the best texts call "Locac." F.'s "Locathe."

400. Page 102, line 20

standeth out of the way

F. omits to add that the king discourages visits to the island, on account of the treasures and other resources it contains.

CHAPTER 110

401. Page 103, lines 1, 2

five miles... Penthera

Read "five hundred" miles. "Penthera" should read "Pentain" or "Pentam," in which we must recognise Bentan. F. becomes very hard to follow here, as he obviously has no idea what Santaella means. His mileages are all wrong, and even in the best texts are not easy to understand. I need only refer here to Dr. Blagden's remarks on pp. lvi et seq. of this work.

402. Page 103, lines 13, 14

Beyond it standeth the Realm of Ferlech

The French texts tell us that Ferlech, or Perlech (in Malay Perliak), was so overrun by Saracen merchants that the natives were converted to Mahommedanism.
CHAPTER II

403. Page 103, line 19

Baffyna

Written also by F, as Baffina and Baxina. It is the “Basman” of fr. 1116 and R., and the “Basma” of Y. Blagden considers this to be undoubtedly Pasai, though the etymology is hard to explain. See p. lix.

404. Page 103, line 24

and Unicorns

This, of course, is the rhinoceros. F. omits a short passage well worth quoting. Y. translates:

"'Tis a passing ugly beast to look upon, and is not in the least like that which our stories tell us of as being caught in the lap of a virgin; in fact, 'tis altogether different from what we fancied."

This mediaeval legend is said to have arisen from Aelian, xvi. 20, where mention is made of the gentleness of the unicorn to its mate at mating time. Personally I am inclined to ascribe the legend to the well-known folk-lore belief of the power of virginity. For a good general article on the unicorn see Enc. Brit. 11th Ed. Vol. xxvii. p. 581, where many useful references are given.

405. Page 104, line 2

Cieno or miery puddel

It would appear that F. has left the Spanish cieno, mire, untranslated by an oversight.

CHAPTER II

406. Page 104, line 12

Samara

For Samatra, which probably gave its name to the whole island. R. gives us much fuller details of the precautions taken by Polo against the natives whom he thought were cannibals:

"...Marco Polo established himself on shore, with a party of about 2,000 men; and in order to guard against mischief from the savage natives, who seek for opportunities of seizing stragglers, putting them to death and eating them, he caused a large and deep ditch to be dug around him on the land side, in such a manner that each of its extremities terminated in the port, where the shipping lay. This ditch he strengthened by erecting several blockhouses or redoubts of wood, the country affording an abundant supply of that material; and being defended by this kind of fortification, he kept the party in complete security during the five
months of their residence. Such was the confidence inspired amongst the natives, that they furnished supplies of victuals and other necessary articles according to an agreement made with them."

407. Page 104, lines 19, 20

and from them commeth water, as it commeth from the vine...

Once again we must turn to R. who gives the fullest description of the tree, the Arenga Saccharifera, which supplies the toddy,

"So wholesome are the qualities of this liquor, that it affords relief in dropsical complaints, as well as in those of the lungs and of the spleen. When these shoots that have been cut are perceived not to yield any more juice, they contrive to water the trees, by bringing from the river, in pipes or channels, so much water as is sufficient for the purpose; and upon this being done, the juice runs again as it did at first. Some trees naturally yield it of a reddish, and others of a pale colour. The Indian nuts also grow here, of the size of a man's head, containing an edible substance that is sweet and pleasant to the taste, and white as milk. The cavity of this pulp is filled with a liquor clear as water, cool and better flavoured and more delicate than wine or any other kind of drink whatever. The inhabitants feed upon flesh of every sort, good or bad, without distinction."

The passage about the cocoa-nuts appears in F. as "In this Island there groweth great plentie of the Indian nuts," but even so has become misplaced as it was not Dagorian but Samara that is described as producing nuts.

VB also contains the passage about the "noxe de India grosso quanto el chapo de l'omo..." etc.

408. Page 104, line 22

which is named Deragoya

Written "Dagozion" in the French texts. It is still unidentified, but must have been near Samara on the same line of coast.

CHAPTER 113

409. Page 105, lines 6-8

Lambry...great plentie of spicces...men that have feathers about their priuities...

"Lambri," cf. fr. 1116, was somewhere near Kota Raja at the N.W. end of Sumatra. The description of the region as given by Polo has proved too incredible for Sanctaella.
He omits to mention the brazil of which Polo brought some seed to Venice, and tried in vain to grow.

The tailed men of Lambri have become "men that haue feathers about their priuities..." while the unicorns and other beasts are ignored.

410. Page 105, line 10

Samphur

The "Fansur" of the French MSS is to be identified with Baros, famous for its camphor.

Z and R. (also VB to a lesser extent) have a much fuller account of the sago tree than is found in other texts.

See Appendix II. No. 27, pp. 315, 316, where R.'s version is given in full.

CHAPTER 114

411. Page 106, lines 16-18

Going from Lambry sayling 140 myles...the one
is named Necumea, and the other Nangania

F. makes no mention of the "ysle molt pitete que est apellé Gauenispola," lying very close to Lambri. Although Polo says he will tell us about the island we hear nothing more of it. This has caused confusion in some of the texts, for a few lines later he speaks of "two islands, of which one is called Neceveran."

Some editors have made Gauenispola the "other" island.

All is clear, however, in fr. 1116.

All the best texts read "about 150 miles" as the distance from Lambri to the Nicobars.

F.'s "Necumea" and "Nangania" (which he spells variously "Nangama" and "Nangana") are corruptions of Necoveran and Angaman, in which it is not difficult to see the Nicobars and Andamans.

412. Page 105, line 18

The people of Necumea, live like beasts

Here F.'s account of the immorality of the inhabitants appears to be unique. He omits, however, to mention that they are idolaters.

The Z text has an interesting passage describing how the natives buy most beautiful kerchiefs or face-napkins of silk ("taveleas sive faciertgia de Syrico") from passing traders. They make no use of them except to keep them in their houses hung over poles. They value them as if they were pearls or precious stones, and those who possess the most and finest are held to be nobler and greater than the rest.
Mr E. H. Man, C.I.E., the well-known expert on the Nicobars and Andamans, informs me, through Dr Blagden, that Polo's description is perfectly correct, and that to this day the natives will eagerly store up every gaudy silk handkerchief or piece of cloth which they can obtain from the traders. Plated goods, German silver spoons, cruets stands, chains and other similar objects have been added since Polo's day. All these are found hanging up inside the huts. No other use is made of them except to excite the admiration and envy of the less fortunate neighbour. As it is incumbent on mourners to destroy the personal property of their deceased relatives at their death, one sees valuable wooden chests and such objects as have been mentioned above covering the graves of the recently deceased. They are, moreover, specially damaged in some way or other as to render them useless in the future.

41.3. Page 106, lines 1, 2

mountaines of Sandelos or Sauders, and of nuts of India, and of Gardamonia, and many other spices

Fr. 1116 has "il sunt sandal vermoit [VB and R. say both red and white varieties are found] e noces d'Inde e garofal et berçi e maintes autres bonnes arbres."

The text also adds apples of Paradise (plantains, see Y. Vol. 1. p. 99), to which F. refers in Chs. 15 (p. 35) and 118 (p. 111).

It is hard to say where F. gets his "mountaines" from; we must read "woods containing...."

For a note on sandalwood, see my Ocean of Story, Vol. vii. pp. 105-7. I imagine that "Gardamonia" is some corrupted form of the "Garofal" of the best texts. This latter word needs a little explanation. Other forms are Garophul and Karphophul; it apparently became Hellenised as Caryophyllum, whence the modern French girofle. The English clove was derived from clou, nail, which name was given by the French in 1770 when they introduced the clove-tree into Mauritius. See further, Ocean of Story, Vol. vii. p. 96 n. 2. It is of interest to note that Polo mistook the ports whence cloves were shipped for the home of the plant, whereas Nicolò de' Conti was the first traveller to describe it correctly as coming from the Moluccas (or rather Banda) to Java and Sumatra, see p. 133 of this volume, where "Clouas" is a mistake for "Iauas," the Greater and Lesser Java.

41.4. Page 106, line 6 great plentie of spices

R. mentions "Indian nuts, apples of Paradise, and many other fruits different from those which grow in our country."

Z also adds an interesting passage on the strength of the currents, and how ships find it impossible to anchor, and become entangled with the large amount of trees and roots which are washed into the gulf.
CHAPTER 115

415. Page 106, lines 10, 11

being in compass thirtie thousand myles

This is a compromise of F. The French texts say 2400 miles, and in ancient times 3600 miles, but that part of the island has become submerged by the strong winds. Y.‘s text adds: “For you must know that, on the side where the north wind strikes, the Island is very low and flat, insomuch that in approaching on board ship from the high seas you do not see the land till you are right upon it.”

Although thirteenth-century writers have greatly reduced the exaggerated estimates of the circumference of Ceylon, they still made it nearly four times too much.

416. Page 106, line 11 a very rich king

F. omits to mention his name, Sendemain. It is not clear to whom Polo refers here. The native king from 1267 to 1301 was Pandita Prakama Bahu II. See further Cordier, Ser Marco Polo, p. 111.

417. Page 106, line 14 and of the Wyne of trees

F. omits to mention brazil, sappan-wood, which is described as being very abundant and the best in the world.

418. Page 106, line 17 and of diverse other kindes

The French texts also name sapphires, while Z and R. add garnets. F. omits to tell us that the Khan tried to procure the great ruby from the king of Ceylon, but was unable to obtain it at any price.

CHAPTER 116

419. Page 107, line 2 fortie myles

All the best texts read “sixty miles.”

420. Page 107, lines 9, 10 named Sendarba...king of Nor

Fr. 1116 has “Sender Bandi Devar,” and Y. “Sonder Bandi Davar.” F.’s rendering must have been due to an error in Santaella’s MS, such as we find in the Latin text (Bib. Nat. lat. 3195) where the Tuscan is corrupted by Pipino’s
APPENDIX I

version (see p. xxiv of this volume). Here we read "Senderba, rex de Var," which at once enables us to see how F. has arrived at his corruption.

As to the possible identification of the king, see Y. Vol. ii. pp. 333 et seq.

421. Page 107, line 11

The fishermen do fish

F. abbreviates here sadly. The French texts give a fairly detailed account of the methods employed by the pearl-fishers. R. adds:

"These [oysters] they bring up in bags made of netting that are fastened about their bodies, and then repeat the operation, rising to the surface when they can no longer keep their breath, and after a short interval diving again. In this operation they persevere during the whole of the day, and by their exertions accumulate (in the course of the season) a quantity of oysters sufficient to supply the demands of all countries. The greater portion of the pearls obtained from the fisheries in this gulf are round, and of a good lustre. The spot where the oysters are taken in the greatest number is called Betala, on the shore of the mainland; and from thence the fishery extends sixty miles to the southward."

422. Page 107, line 17

a hundereth & foure

Apparently a mistake for "108," the mystical number among Brahmans and Buddhists. See Y. Vol. ii. p. 347; and Ocean of Story, Vol. ix. p. 145. Here I mention a suggested interpretation offered by M. Pelliot, viz. that 108 represents a multiplication of the 12 months by the 9 planets. R. adds that their prayer consists of the words "pacauna, pacauna, pacauna" [P Pagava, "Lord"].

423. Page 107, line 20

tenne riche Cities

Read with fr. 1116, "une bone cite." F. omits to tell us of the restrictions enforced by the king against taking pearls out of the kingdom, and of the big prices he gives for those brought to him.

424. Page 107, lines 31–33

country named Cormos, at the price of nine ounces
of gold every horse... The merchants of Quin-
flay, of Cush, and of Beden....

F. has muddled the text. Fr. 1116 reads: "... les mercant de Curmos e de
quisc et de Dufar et d'Escor e de Aden.... Il vendent le un bien V° sije d'or
APPENDIX I

que vaillent plus de c mars d'arjent." These places we now recognize as Hormuz, Kais [which F. has taken to mean "Quinfay"], Dhofar, Sohār, and Aden.

The 500 "sage" or "saggi" is probably intended for dinars. See Y. Vol. u. p. 349; and Stein, Rājatarahgīti, Vol. ii. pp. 308-28.

425. Page 108, line 24 These people

F. omits to mention the name of the caste, which is given in the French texts as "govi" or "gavi." It almost certainly corresponds to the modern Paraiyan caste of the Tamil country. See Thurston, Castes and Tribes of Southern India, Vol. iv. pp. 77-139.

426. Page 108, line 33 In this province...

The account of the manners and customs of the people of "Maabar" [the Coromandel coastal regions] is so greatly abbreviated by F. that I have given the full account from R. in Appendix II. No. 28, pp. 316-19.

CHAPTER 117

427. Page 109, line 19 Mussul is a Region

Read "Muffili" with all the best MSS. It is to be identified with Motupalli, a port in the Guntur district of Madras, 170 miles north of the capital.

F., whose accounts of the Indian Provinces are all abbreviated, omits to tell us that the country was formerly under the rule of a king, but that since his death his queen [Rudrama Devi] had ruled with great justice for forty years.

The chief food of the inhabitants is flesh, rice and milk; to which R. and Z. add fish and fruits.

428. Page 109, line 25 they do find the Adamants

F. has muddled the account about the methods of obtaining the diamonds, and has entirely omitted any mention of the famous legend, so well known from Sindbad the Sailor's second voyage, of the eagles and the flesh to which the diamonds stick. Full reference to this incident will be found in V. Chauvin, Bibliographie des Ouvrages Arabes, vii. pp. 10, 11. We shall meet Sindbad's huge bird, the rukh, or roc, when we come to Madagascar.

The Z. text tells us there are many other methods as well as those mentioned by which the diamonds are obtained.

F. also omits to mention the fine buckrams which are described as looking like the tissue of a spider's web. See Cordier, Sir Marco Polo, p. 118.
APPENDIX I

429. Page 110, line 6  

*Thomas Dawana*

We can see from this latter word how the "Anania" which we find in R. has been created. We should read "Avarian" with the French texts, which has been explained as a corruption of the Arabic Ḥamārīy, "An apostle of the Lord Jesus Christ." For traditions relating to St Thomas see Cordier, *op. cit.* pp. 116, 117; and M. Longworth Dames, *Duarte Barbosa*, Hakluyt Society, 1921, Vol. ii. pp. 98 (and note) – 101, 126-9.

F. omits to mention the legend of St Thomas' death by a chance arrow intended for a peacock.

The French texts, as well as R., tell us that the colour of the earth where the Saint was martyred is red; and Ζ adds that Marco Polo took some of it to Venice with him.

The date of the miracle should read "1288" with all the best texts.

R. adds a passage about the "Indian Nuts." It is much more detailed in Ζ.

See B. p. 187 note a.

430. Page 110, line 23  

*yle of Aionolly*

Read "oleo de sosiman" with fr. 1116 etc., "oil of sesame."

CHAPTER 118

431. Page 111, lines 2, 3

*a Province named Laho, and there dwell the men named Bragmanos*

For "Lar," or more correctly "Lāt-desa," an early name for Guzerat and North Konkan.

"Bragmanos" is a corrupted form of "Abraiaman" as found in the French texts, apparently an Arabized form of Brahma.

432. Page 111, line 4  

*They will not dye for all the world.*

Both Ζ and R. have an additional passage. R. reads:

"When any foreign merchant, unacquainted with the usages of the country, introduces himself to one of these, and commits to his hands the care of his adventure, this Brahma undertakes the management of it, disposes of the goods, and renders a faithful account of the proceeds, attending scrupulously to the interests of the stranger, and not demanding any recompense for his trouble, should the owner uncourteously omit to make him any gratuitous offer."
They do honour the Idols.

Before speaking of this, the best texts mention the sacred thread (see Ocean of Story, Vol. vii. pp. 26–8), and the king who sends to Soli (Chola) for pearls and precious stones.

doe eate and drinke temperately

F. omits various other superstitions; e.g. observing if a tarantula advances from a lucky quarter, sneezing, and the flight of a swallow; and also the mention of betel chewing. See further, p. 321.

Cinogos:

Written “Ciugui” in fr. 1116, and “Chuglii” in Y. The sect of yogis is, of course, meant. F. omits the passage about the novices and the test they have to undergo at the hands of dancing-girls.

Both R. and Z have a curious passage about the care taken by the yogis to scatter their ordure. See Wright, p. 404, and B. p. 192 note d.

This chapter should be followed by a short one on Ceylon and another on the city of Cail [Kall, a port on the Tinnevelly coastal region]. Both are given in full from R. in Appendix II. Nos. 29, 30, pp. 319–321.

CHAPTER 119

Orbay is a Kingdome... beyond Marbar five miles

This should be written “Coillum,” our “Quilon.” For “five” read “five hundred.”

F.’s account is much abbreviated. He makes no mention of brazil or ginger, nor does he name the animals: lions, parrots, peacocks, cocks and hens.

CHAPTER 120

Apes that are like men

In speaking of this country around Cape Comorin, Polo finishes the chapter with the following sentence (omitted by F.):

“Il hi a gat paul si devises que ce estoit mervoille. Lions, liopars, lones, out en abondance.” It is hard to say exactly what is meant by “gat paul,” but as Y. has pointed out (Vol. ii. p. 385) it must refer to some variety of monkey. The P. MSS read “granz paluz et moult grans pautains,” swamps and marshes; being entirely ignorant of the word. See P. Vol. ii. p. 646.
CHAPTER 121

438. Page 113, lines 1-3

thirtie miles, . . . and come to the Region of Hely, where they are all Idolaters

Read “three hundred miles.” Hely, or Ely, lay about sixteen miles north of Cananore on the Malabar coast. Monte d’Ely is famous as being the first Indian land sighted by Vasco da Gama in 1498. The meaning of the word is not easy to discover, and many suggestions have been made (see M. L. Dames, Duarte Barbosa, Vol. ii. pp. 1, 2). Later forms of the word have substituted “D” for the “H,” due, it would appear, to confusion with the lati in Rāmantāli, a name given to-day to the country around Monte d’Ely. After saying that the people are idolaters, F. omits to tell us that there is no proper harbour in the country, but that the rivers have good estuaries. Pepper, ginger, and other spices are also mentioned. The ginger is described by Conti (see p. 127 of this volume) as being called “Bellyedy, Gebelly and Belly,” known as Belledi or Baladi to the Italians of the fourteenth century. Marco Polo appears to have been the first traveller to have seen the plant alive. It was first described by John of Montecorvino in 1292, and was exported to Europe as a sweet in the Middle Ages.

439. Page 113, lines 8, 9

that it is no sinne to robbe them

F. omits to add that ships arriving from Manzi and other places lay in their cargoes in six or eight days owing to the lack of a port and danger of sandbanks. The ships from Manzi, however, have large wooden anchors which hold in the worst weather.

CHAPTER 122

440. Page 113, lines 16, 17

a hundred Shippes together, . . . they row into the Country a hundred miles

F. has muddled the sense here. The account found in R. is reliable:

“In order that no ships may escape them, they anchor their vessels at the distance of five miles from each other; twenty ships thereby occupying a space of a hundred miles. Upon a trader’s appearing in sight of one of them, a signal is made by fire or by smoke; when they all draw close together, and capture the vessel as she attempts to pass. No injury is done to the persons of the crew; but as soon as they have made prize of the ship, they turn them to provide themselves
with another cargo, which, in case of their passing that way again, may be the
means of enriching their captors a second time."

Mention is also made of copper, gold brocades, silks, gauze, drugs, etc. brought
by the ships from Manzi.

CHAPTER 123

they give them so great tormentes...

The French texts tell us they are made to drink "tamarendi et eive de mer," apparently some fruit mixed with the salt water, which causes them to void any
pearls or precious stones they may have swallowed.

F. makes no mention of the Guzerat (Giefurath) pepper, ginger, indigo or cotton
which is found in all the best texts.

CHAPTER 124

Thoma & unto Sembelech

I.e. Tana and Semenat, the modern Thana and Somnath. F. has greatly ab-
abbreviated the two original chapters into one very short one, and omitted Cambaet,
Cambay.

He makes his usual error about the "language and fayth of Perfia." Consider-
ably more detail is found in the leading texts. Tana is described as being an im-
portant shipping centre, with a large export of leather, buckram and cotton.
The king has an arrangement with the corsairs whereby he obtains a supply of
horses. The exports of Cambaet are given as indigo, buckram, cotton and hides,
while the chief imports are gold, silver and copper to which R. adds tulia, for
making kohl for the eyes. Semenat is merely described as a great kingdom where
the people are honest and enjoy good trade by their industry.

CHAPTER 125

In this chapter F. merely tells us he will not weary his readers by describing
the places inland. He omits, however, to mention Kesmacoran, or Mekran,
although he refers to it in Ch. 126 as Bemaceian. R. says of it:

"Some of the inhabitants are idolaters, but the greater part are Saracens. They
subsist by trade and manufactures. Their food is rice and wheat, together with
flesh and milk, which they have in abundance. Many merchants resort thither,
both by sea and land."

Thus the brief description of the seaports of India ends. As I have mentioned

To the list of spices, which includes turbìt (Rades Turpetti), we should add
cinnamon and nuts of India. R. reads "cubebs" instead of "turbìt."
in the Introduction, except at one or two points we are on no fixed itinerary and the muddled order of the places given must not surprise us. See Y. Vol. ii. p. 403.

CHAPTER 126

444. Page 115, line 2
Read "500 miles."

445. Page 115, line 8
_August, September, and October_

Read "March, April, and May."

446. Page 115, line 11
until they be seauen

The best texts state that if the children be girls they stay with their mothers, but if boys they go to their fathers on arriving at the age of fourteen.

For Chau Ju-kwa's remarks on the Male and Female islands see Cordier, _Ser Marco Polo_, p. 120.

CHAPTER 127

447. Page 115, line 20
_an Ilande named DIscofia_

This is, of course, Socotra, written Socatra in the best MSS. The name as written by F. is a corruption of the _Dioscorides_ of the Greeks.

448. Page 115, line 22
_great abundance of Amber_

R. gives us more details: "The inhabitants find much ambergris upon their coasts, which is voided from the entrails of whales. Being an article of merchandise in great demand, they make it a business to take these fish; and this they do by means of a barbed iron, which they strike into the whale so firmly that it cannot be drawn out. To the iron a long line is fastened, with a buoy at the end, for the purpose of discovering the place where the fish, when dead, is to be found. They then drag it to the shore, and proceed to extract the ambergris from its belly, whilst from its head they procure several casks of oil."

A very much fuller account will be found in the _Z_ text. See B. p. 204.

449. Page 115, line 23
_cloth of Cottemwooll_

F. omits to mention salt fish, meat, milk and rice. Merchants purchase gold at the island, and vessels bound for Aden touch at it.

The Archbishop is subject, not to the Pope, but to the "grant prelais" at Aden. All these details are found in the leading texts.
APPENDIX I

CHAPTER 128

450. Page 116, line 8

*four Moors*

Fr. 116 reads “esseque,” sheikh.

451. Page 116, line 9

*a thousand four hundred myles*

Read “about four thousand miles.”

452. Page 116, lines 11, 12

*but of Elephants, and of Cammels*

This is a mistake. The best texts only say camel’s flesh was eaten, but R. and Z add that although the flesh of camels is preferred, that of other cattle is also eaten.

F. omits to mention Madagascar as a great entrepôt for ships from all parts of the world, or to speak of the high seas and strong currents of the Indian Ocean.

453. Page 116, lines 16, 17

*the Facte of a wilde Boare which wayged twenty five poundes*

Here again is a mistake. Apparently the reference is to the boar’s tusks [hippopotami teeth] mentioned later in the French texts. Their weight, however, is given as fourteen pounds.

454. Page 116, line 18

*a certaine foule named Nichas*

This is, of course, the roc or rukh, for which see *Ocean of Story*, Vol. 1, pp. 103–5, where I have collected numerous references. The best bibliography on the subject is to be found in Chauvín, *Bib. des Oustrages Arabes*, v. p. 228 and vii. pp. 10–14.

I have no idea how F. arrived at his “Nichas.”

455. Page 116, line 23

*at his pleasure*

So ends F.’s chapter; but he makes an omission that is of more importance than appears at first sight—he fails to mention asses and giraffes among the “wild beasts of strange aspect” found in Madagascar. The point is that giraffes do not, and never did, exist in the island. So also with regard to elephants, camels, lions,
leopards and bears. This and other facts led Yule to sus-
tpect some confusion between Makdahau (Magadoxo) and Madagascar. We must not forget, of course, that
Polo is only speaking by hearsay, and that after coasting past Mekran his next
port of call would be Ormuz.

For the giraffes see further, Note 459.

CHAPTER 129

456. Page 117, lines 1, 2

ten thousand myles in compass.

Read "two thousand miles...."

457. Page 117, lines 4, 5

as farse of our men may heare

Read "they can carry enough for four and eat enough for five men."

458. Page 117, line 7

The women are filthy

F. gives no details as to their huge mouths, big eyes, thick noses and enormous
drooping breasts.

Modesty also makes him ignore the old myth about the human method of
copulation adopted by the elephants.

459. Page 117, line 10

The wilde beastes of thys Iland

I.e. elephants, lions, and giraffes. Sheep are also mentioned. For an interesting
work on giraffes see B. Laufer, The Giraffe in History and Art, Field Museum of
Natural History, Chicago, 1928. In dealing with the Middle Ages the author points
out (p. 74) that Polo is the first to recognize the wider distribution of the giraffe
and to look for it beyond the limits of Abyssinia. Clavijo (1403) gives us a very
good account. See Broadway Travellers edition, p. 149.

F. omits to tell us of the equipment of the warriors, and of the howdahs from
which they fight, and of the curious custom of making the elephants intoxicated
before a battle.

CHAPTER 130

460. Page 117, line 12

all whyche I have declared of India

All the best texts speak more especially of the islands of the Sea of India, and
the divisions of India the Greater and India the Lesser. See Y. Vol. ii. pp. 424-7.
CHAPTER 131

451. Page 118, line 1

Province named Abashia

This is the Italianized Habash, i.e. Abyssinia. The text is muddled here. There were six kings, three of whom were Christians and three Saracens. The Christians bear three facial marks, the Jews two, and the Saracens only one.

452. Page 118, line 8

Cadamy

I.e. Aden.

453. Page 118, line 13

War against the Souldan of Aden

F. omits the story of the bishop who visited the Holy Sepulchre at Jerusalem on behalf of the Christian King of Abash. It tells how he was subsequently circumcized by the Soldan of Aden because he refused to renounce his faith. On hearing of the insult offered to the bishop the King of Abash attacked Aden and fully avenged himself by a severe defeat of the Saracens.

454. Page 118, line 14

Fleshe, milke, and Rice...

Sesame is omitted, while both R. and Z add corn. All the best texts also mention elephants, not bred in the country, giraffes (see Note 459), bears, leopards and lions, as well as a variety of other animals such as wild asses, cocks, hens, ostriches, parrots, and monkeys with faces like men.

R. alone adds that Abyssinia is extremely rich in gold, and much frequented by merchants who obtain large profits.

CHAPTER 132

455. Page 118, line 16

Adem...named the Sowdan

In the previous chapter F. speaks correctly of the Souldan of Aden! This chapter is greatly abbreviated. The last four lines really belong to the chapter on the city of Esher, or Escier (Es-Shehr, 330 miles east of Aden) omitted by F. together with those on Dufar (Dhofar), Calatu or Kalayati (Kalhat), and Ormus or Curmas (Hormuz). These chapters will be found in full in Appendix II. No. 31. pp. 321-5.
APPENDIX I

F.'s abbreviation of the description of Aden has caused the interesting account of the over-land trade-route to Alexandria to be omitted. The texts have somewhat varying readings, due in all probability to subsequent editing as increased knowledge prompted.

R. tells us that the merchants unlace their cargoes and put them on smaller vessels "with which they navigate a gulf of the sea for twenty days, more or less, according to the weather they experience. Having reached their port, they then load their goods upon the backs of camels, and transport them overland (thirty days' journey) to the river Nile, where they are again put into small vessels, called ferms, in which they are conveyed by the stream of that river to Kairo, and from thence, by an artificial canal, named Kalizene, at length to Alexandria."

Mention is also made of the large trade in horses done at Aden, and of the great wealth of the Soldan arising from the duty thereon.

The text contains an interesting passage on the precautions taken to ensure as far as possible against loss of the more valuable part of the cargoes (pearls, precious stones, etc.) due to the numerous shipwrecks which are encountered in this region. Bags of skins are filled with the valuables as well as necessary food and clothing, and, after being joined together, are fastened to rafts. See B. p. 213 note f.

CHAPTER 133

466. Page 119

This chapter on Siberia, and half of the next, being much abbreviated, are included in full in the "Ormus" chapter of R. already referred to in the last note. See pp. 324, 325.

CHAPTER 134

467. Page 120, line 10

for the Sunne shyneth not there, and is not siene

Only in R. do we get an intelligent account of the phenomena of the arctic circle. As Yule says, all other versions imply a belief in the perpetuity of the darkness. The following extract from R. makes this clear:

"... during most of the winter months the sun is invisible, and the atmosphere is obscured to the same degree as that in which we find it just about the dawn of day, when we may be said to see and not to see. ... The inhabitants of this region take advantage of the summer season, when they enjoy continual daylight, to catch vast multitudes of ermines, martens, arcolini, foxes and other animals of that kind, the furs of which are more delicate, and consequently more valuable, than those found in the districts inhabited by the Tartars, who, on that account, are induced to undertake the plundering expeditions that have been described..."
CHAPTER 135

Fr. 1116 reads: "un roi dou ponent qui est Tartars, que a a non Toctai." Toktai was a son of Mangku-Temur, and ascended the throne of Kipchak in 1291. We meet him again in some of the quasi-historical chapters (e.g. Chs. 69, 70 and 71) reprinted in Appendix II. pp. 339-41.

Here again F. does not enumerate them. "Car il ont gebellines assez et ermin et vair et ercolin et voupes en abondance," says fr. 1116, R. also mentions the export of wax.

At this point Ξ has a most interesting and important passage of over 50 lines dealing with the intimate social customs of the Russians, necessitated chiefly on account of the intense cold. See B. pp. 233-234.

So Frampton's translation ends. There remains only the chapters dealing with Great Turkey, Kaidu, Abaga, Argon, Acomat, Baidu, Alau, Nogai and Toktai.

All these will be found reprinted from Wright's edition of Marsden in Appendix II. No. 32, pp. 335-41.
THE TRAVELS OF NICOLÒ DE' CONTI IN THE EAST

Although it is not within the scope of the present work to annotate the Travels of Nicolò de' Conti, I feel that it is impossible to reprint them at all without saying a few words on the great need for a new edition of what is undoubtedly the best account of Southern Asia by any European traveller of the fifteenth century.

In the first place the present English translation by Frampton from the Castilian of Santaella seems to have escaped notice. Thus when J. Winter Jones translated the Latin version from Poggio's De Varietate Fortuna: libri quatuor for the Hakluyt Society in 1857, he imagined he was making the first English translation. Nor can I find any mention of Frampton's work in recent years. This is to be regretted, because a comparison of the present version with that of Jones at once shows the superiority of the former. The numerous misreadings in Jones are largely corrected in Frampton, and although many of the place-names are hopelessly corrupted by Poggio, the excellence of the translation as a whole is undeniable. The narrative of Conti is short, and I believe that this is why it has not attracted more notice than it has. As in the present case, owing to its brevity it has continually been included with other works. Its value as a kind of commentary to, and proof of the veracity of the wonders related in Marco Polo has constantly been recognized. Thus we find it in the Portuguese edition of 1502, and in the Dutch version of the Novus Orbis of 1664, etc. For a full account of all versions and translations of Conti, see Cordier, "Deux Voyageurs dans l'Extrême-Orient au XVe et XVIe Siècles," T'oung-pao, Vol. x. 1899, No. 4.

Nicolò de' Conti started on his travels in 1419, for on his return to Venice in 1444 he tells us he has been absent 25 years. He passed through Damascus, Baghdad, Busra, and Hormuz to India, and on to Ceylon, Java, Sumatra, and the south of China. On his return journey he visited Burma, and ascended the Irrawaddy to Ava, and touching at Cochin, Calicut, Cambay, Socotra and Aden arrived at Jidda, the port of Mecca, whence he reached Cairo. At Mount Sinai he met the Spanish traveller Pero Tafur to whom he related many of his experiences. Among other things he told him how on his arrival in India he was taken to see Prester John who received him graciously and married him to a woman by whom he had several children. On reaching Mecca he was ordered to abjure his Faith or be killed. He chose the former course for the sake of his family. On his arrival in Venice in 1444 he sought absolution for his apostasy from

1 An excellent and complete translation of Pero Tafur has recently been made by Malcolm Letts (Broadway Travellers Series, 1926). Conti's account of his travels appears on pp. 84-95. As the translator states, a reference to the volume establishes the fact that Conti told Tafur much that he did not relate to Poggio.
Eugenius IV. This was granted on condition that he would truthfully relate his travels to the papal secretary Poggio Bracciolini. This was accordingly done, being written by Poggio in Latin. Copies, if they existed at all, must have been very scarce, for Ramusio, after vainly attempting to find one, had to use a Portuguese translation, which is of little value. It found its way later into Purchas. (See Vol. xi. p. 304 et seq. of the MacLehose edition, 1906.)

Frampton's translation has only one important omission, and that is with regard to the "sonalia," or little bells of gold, silver or copper worn on the members of the men to excite the women to lechery. The practice has been noted by many travellers, yet in his recent edition of Duarte Barbosa, Longworth Dames doubts if the custom really existed, and suggest it to be "a mere figment of the imagination such as sailors picked up from the loose talk at seaports." There is no doubt whatever as to the existence of the custom, although the objects used vary. See, for instance, the curious articles known as amballang at the Wellcome Historical Medical Museum in London. The point of interest as raised by Brista is whether they represented mere voluputary ingenuity, or must be regarded as amulets used solely to guard the opening of the body against evil spirits. (See Brista, op. cit. p. 280.)

The latter portion of Conti's travels consists of an account of the manners and customs of the Indians given in direct answer to questions asked by Poggio himself.

Thus we have the heading "Pogio" on p. 137 of the present edition.

APPENDIX II
SELECTED PASSAGES FROM RAMUSIO
&c.
APPENDIX II

SELECTED PASSAGES FROM RAMUSIO, &c.

The following more lengthy passages are, with but few exceptions, from Ramusio as translated by Marsden, 1818.

The pagination of the revised edition of Marsden, edited by Thomas Wright for Bohn’s Antiquarian Library in 1854 (reprinted 1886, 1890, etc.) is also added. This is followed by references, in square brackets, to the chapter and page of Frampton’s text where the particular passage fits in, together with the number and page of its corresponding Note in Appendix I.

   [Frampton, Ch. 10, p. 29; Appendix I, Note 78, p. 169.]

Concerning the capture and death of the Khalif of Baldach
(Mosta’sim Billah)

The above-mentioned khalif, who is understood to have amassed greater treasures than had ever been possessed by any other sovereign, perished miserably under the following circumstances. At the period when the Tartar princes began to extend their dominion, there were amongst them four brothers, of whom the eldest, named Mangu, reigned in the royal seat of the family. Having subdued the country of Cathay, and other districts in that quarter, they were not satisfied, but coveting further territory, they conceived the idea of universal empire, and proposed that they should divide the world amongst them. With this object in view, it was agreed that one of them should proceed to the east, that another should make conquests in the south, and that the other two should direct their operations against the remaining quarters. The southern portion fell to the lot of Ulaâ, who assembled a vast army, and having subdued the provinces through which his route lay, proceeded in the year 1255 to the attack of this city of Baldach. Being aware, however, of its great strength and the prodigious number of its inhabitants, he trusted rather to stratagem than to force for its reduction, and in order to deceive the enemy with regard to the number of his troops, which consisted of a hundred thousand horse, besides foot soldiers, he posted one division of his army on the one side, another division on the other side of the approach to the city, in such a manner as to be concealed by a wood, and placing himself at the head of the third, advanced boldly to within a short distance of the gate. The khalif made light of a force apparently so inconsiderable, and confident in the efficacy of the usual Mahometan ejaculation, thought of nothing less than its entire destruction,
and for that purpose marched out of the city with his guards; but as soon as Ulah perceived his approach, he feigned to retreat before him, until by this means he had drawn him beyond the wood where the other divisions were posted. By the closing of these from both sides, the army of the khalif was surrounded and broken, himself was made prisoner, and the city surrendered to the conqueror. Upon entering it, Ulah discovered, to his great astonishment, a tower filled with gold. He called the khalif before him, and after reproaching him with his avarice, that prevented him from employing his treasures in the formation of an army for the defence of his capital against the powerful invasion with which it had long been threatened, gave orders for his being shut up in this same tower, without sustenance; and there, in the midst of his wealth, he soon finished a miserable existence.

[Freshman, Ch. 16, pp. 36, 37; Appendix I, Note 109, p. 175.]

Of the City of Ormus (Hormuz), its hot wind, shipping, &c.

During the summer season, the inhabitants do not remain in the city, on account of the excessive heat, which renders the air unwholesome, but retire to their gardens along the shore or on the banks of the rivers, where with a kind of oziwerk they construct huts over the water. These they enclose with stakes, driven in the water on the one side, and on the other upon the shore, making a covering of leaves to shelter them from the sun. Here they reside during the period in which there blows, every day, from about the hour of nine until noon, a land-wind so intensely hot as to impede respiration, and to occasion death by suffocating the person exposed to it. None can escape from its effects who are overtaken by it on the sandy plain. As soon as the approach of this wind is perceived by the inhabitants, they immerse themselves to the chin in water, and continue in that situation until it ceases to blow. In proof of the extraordinary degree of this heat, Marco Polo says that he happened to be in these parts when the following circumstance occurred. The ruler of Ormus having neglected to pay his tribute to the king of Kerman, the latter took the resolution of enforcing it at the season when the principal inhabitants reside out of the city, upon the main land, and for this purpose despatched a body of troops, consisting of sixteen hundred horse and five thousand foot, through the country of Rebarle, in order to seize them by surprise. In consequence, however, of their being misled by the guides, they failed to arrive at the place intended before the approach of night, and halted to take repose in a grove not far distant from Ormus; but upon recommencing their march in the morning, they were assailed by this hot wind, and were all suffocated; not one escaping to carry the fatal intelligence to his master. When the people of Ormus
became acquainted with the event, and proceeded to bury the carcases, in order that their stench might not infect the air, they found them so baked by the intense-ness of the heat, that the limbs, upon being handled, separated from the trunks, and it became necessary to dig the graves close to the spot where the bodies lay.

The vessels built at Ormus are of the worst kind, and dangerous for navigation, exposing the merchants and others who make use of them to great hazards. Their defects proceed from the circumstance of nails not being employed in the construc-tion; the wood being of too hard a quality, and liable to split or to crack like earthenware. When an attempt is made to drive a nail, it rebounds, and is frequently broken. The planks are bored, as carefully as possible, with an iron auger, near the extremities; and wooden pins or treenails being driven into them, they are in this manner fastened (to the stem and stern). After this they are bound, or rather sewed together, with a kind of rope-yarn stripped from the husk of the Indian (cocoa) nuts, which are of a large size, and covered with a fibrous stuff like horse-hair. This being steeped in water until the softer parts putrefy, the threads or strings remain clean, and of these they make twine for sewing the planks, which lasts long under water. Pitch is not used for preserving the bottoms of vessels, but they are smeared with an oil made from the fat of fish, and then caulked with oakum. The vessel has no more than one mast, one helm, and one deck. When she has taken in her lading, it is covered over with hides, and upon these hides they place the horses which they carry to India. They have no iron anchors, but in their stead employ another kind of ground-tackle; the consequence of which is, that in bad weather, (and these seas are very tempestuous,) they are frequently driven on shore and lost.

The inhabitants of the place are of a dark colour, and are Mahometans. They sow their wheat, rice, and other grain in the month of November, and reap their harvest in March. The fruits also they gather in that month, with the exception of the dates, which are collected in May. Of these, with other ingredients, they make a good kind of wine. When it is drunk, however, by persons not accustomed to the beverage, it occasions an immediate flux; but upon their recovering from its first effects, it proves beneficial to them, and contributes to render them fat. The food of the natives is different from ours; for were they to eat wheaten bread and flesh meat their health would be injured. They live chiefly upon dates and salted fish, such as the thunnus, cepole (copola tania), and others which from experience they know to be wholesome. Excepting in marshy places, the soil of this country is not covered with grass, in consequence of the extreme heat, which burns up everything. Upon the death of men of rank, their wives loudly bewail them, once in the course of each day, during four successive weeks [all the French MSS. read "years"]; and there are also people to be found here who make such lamenta-tions a profession, and are paid for uttering them over the corpses of persons to whom they are not related.

[Frompois, Ch. 17, p. 37; Appendix I, Note 113, p. 176.]

Of Kobiam, Timochain, and of the Old Man of the Mountain (Kuh-Banān and Tun-and-Kain)

Upon leaving Kierman and travelling three days, you reach the borders of a desert extending to the distance of seven days' journey, at the end of which you arrive at Kobiam [not mentioned till later in the French MSS.]. During the first three days (of these seven) but little water is to be met with, and that little is impregnated with salt, green as grass, and so nauseous that none can use it as drink. Should even a drop of it be swallowed, frequent calls of nature will be occasioned; and the effect is the same from eating a grain of the salt made from this water. In consequence of this, persons who travel over the desert are obliged to carry a provision of water along with them. The cattle, however, are compelled by thirst to drink such as they find, and a flux immediately ensues. In the course of these three days not one habitation is to be seen. The whole is arid and desolate. Cattle are not found there, because there is no subsistence for them. On the fourth day you come to a river of fresh water, but which has its channel for the most part under ground. In some parts however there are abrupt openings, caused by the force of the current, through which the stream becomes visible for a short space, and water is to be had in abundance. Here the wearied traveller stops to refresh himself and his cattle after the fatigue of the preceding journey [the passage in italics is unique to R.]. The circumstances of the latter three days resemble those of the former, and conduct him at length to the town of Kobiam. [The French texts mention that asses are found during these three days.]

Kobiam is a large town, the inhabitants of which observe the law of Mahomet. They have plenty of iron, steel, and ondanique. Here they make mirrors of highly polished steel, of a large size and very handsome. Much antimony or zinc is found in the country, and they procure tutty which makes an excellent collyrium, together with spodium, by the following process. They take the crude ore from a vein that is known to yield such as is fit for the purpose, and put it into a heated furnace. Over the furnace they place an iron grating formed of small bars set close together. The smoke or vapour ascending from the ore in burning attaches itself to the bars, and as it cools becomes hard. This is the tutty; whilst the gross and heavy part, which does not ascend, but remains as a cinder in the furnace, becomes the spodium. [For an article on kojl and collyrium, see my *Ocean of Story*, vol. 1, pp. 211–18.]

Leaving Kobiam you proceed over a desert of eight days' journey exposed to great drought; neither fruits nor any kind of trees are met with, and what water is found has a bitter taste. Travellers are therefore obliged to carry with them so
much as may be necessary for their sustenance. Their cattle are constrained by thirst to drink such as the desert affords, which their owners endeavour to render palatable to them by mixing it with flour [unique to R. and Z]. At the end of eight days you reach the province of Timochain [Tonocain] situated towards the north, on the borders of Persia, in which are many towns and strong places. There is here an extensive plain remarkable for the production of a species of tree called the tree of the sun, and by Christians arbor secco, the dry or fruitless tree. Its nature and qualities are these:—It is lofty, with a large stem, having its leaves green on the upper surface, but white or glauconus on the under. It produces husks or capsules like those in which the chestnut is enclosed, but these contain no fruit. The wood is solid and strong, and of a yellow colour resembling the box. There is no other species of tree near it for the space of a hundred miles, excepting in one quarter, where trees are found within the distance of about ten miles. It is reported by the inhabitants of this district that a battle was fought there between Alexander, king of Macedonia, and Darius. The towns are well supplied with every necessary and convenience of life, the climate being temperate, and not subject to extremes either of heat or cold. The people are of the Mahometan religion. They are in general a handsome race, especially the women, who, in my opinion, are the most beautiful in the world.

Having spoken of this country, mention shall now be made of the old man of the mountain. The district in which his residence lay obtained the name of Mulehet [fr. 1116 has “Muleete”] signifying in the language of the Saracens, the place of heretics, and his people that of Mulehettites, or holders of heretical tenets; as we apply the term of Patharini to certain heretics amongst Christians. The following account of this chief, Marco Polo testifies to having heard from sundry persons. He was named Alo-eddin, and his religion was that of Mahomet. In a beautiful valley enclosed between two lofty mountains, he had formed a luxurious garden, stored with every delicious fruit and every fragrant shrub that could be procured. Palaces of various sizes and forms were erected in different parts of the grounds, ornamented with works in gold, with paintings, and with furniture of rich silks. By means of small conduits contrived in these buildings, streams of wine, milk, honey, and some of pure water, were seen to flow in every direction. The inhabitants of these palaces were elegant and beautiful damsels, accomplished in the arts of singing, playing upon all sorts of musical instruments, dancing, and especially those of dalliance and amorous allurement. Clothed in rich dresses they were seen continually sporting and amusing themselves in the garden and pavilions, their female guardians being confined within doors and never suffered to appear. The object which the chief had in view in forming a garden of this fascinating kind, was this: that Mahomet having promised to those who should obey his will the enjoyments of Paradise, where every species of sensual gratification should be found, in the society of beautiful nymphs, he was desirous of its being
understood by his followers that he also was a prophet and the compeer of Mahomet, and had the power of admitting to Paradise such as he should choose to favour. In order that none without his licence might find their way into this delicious valley ["except those whom he intended to be his Assassins," add the French MSS.], he caused a strong and inexpugnable castle to be erected at the opening of it, through which the entry was by a secret passage. At his court, likewise, this chief entertained a number of youths, from the age of twelve to twenty years, selected from the inhabitants of the surrounding mountains, who showed a disposition for martial exercises, and appeared to possess the quality of daring courage. To them he was in the daily practice of discoursing on the subject of the paradise announced by the prophet, and of his own power of granting admission; and at certain times he caused opium to be administered to ten or a dozen of the youths; and when half dead with sleep he had them conveyed to the several apartments of the palaces in the garden. Upon awakening from this state of lethargy, their senses were struck with all the delightful objects that have been described, and each perceived himself surrounded by loving damsels, singing, playing, and attracting his regards by the most fascinating caresses, serving him also with delicate viands and exquisite wines; until intoxicated with excess of enjoyment amidst actual rivulets of milk and wine, he believed himself assuredly in Paradise, and felt an unwillingness to relinquish its delights. When four or five days had thus been passed, they were thrown once more into a state of somnolency, and carried out of the garden. Upon their being introduced to his presence, and questioned by him as to where they had been, their answer was, "In Paradise, through the favour of your highness"; and then before the whole court, who listened to them with eager curiosity and astonishment, they gave a circumstantial account of the scenes to which they had been witnesses. The chief thereupon addressing them, said: "We have the assurances of our prophet that he who defends his lord shall inherit Paradise, and if you show yourselves devoted to the obedience of my orders, that happy lot awaits you." Animated to enthusiasm by words of this nature, all deemed themselves happy to receive the commands of their master, and were forward to die in his service. The consequence of this system was, that when any of the neighbouring princes, or others, gave umbrage to this chief, they were put to death by these his disciplined Assassins; none of whom felt terror at the risk of losing their own lives, which they held in little estimation, provided they could execute their master's will. On this account his tyranny became the subject of dread in all the surrounding countries. He had also constituted two deputies or representatives of himself, of whom one had his residence in the vicinity of Damascus, and the other in Kurdistan; and these pursued the plan he had established for training their young dependants. Thus there was no person, however powerful, who, having become exposed to the enmity of the old man of the mountain, could escape assassination.
Of the province of Balashan (Badakhshan)

The mines of silver, copper, and lead, are likewise very productive. It is a cold country. The horses bred here are of a superior quality, and have great speed. Their hoofs are so hard that they do not require shoeing. The natives are in the practice of galloping them on declivities where other cattle could not or would not venture to run. They asserted that not long since there were still found in this province horses of the breed of Alexander's celebrated Bucephalus, which were all foaled with a particular mark in the forehead. The whole of the breed was in the possession of one of the king's uncles, who, upon his refusal to yield them to his nephew, was put to death; whereupon his widow, exasperated at the murder, caused them all to be destroyed; and thus the race was lost to the world. In the mountains there are falcons of the species called saker (falco sacer), which are excellent birds, and of strong flight, as well as of that called laner, (falco lanarius). There are also goshawks of a perfect kind (falco astur, or palumbarius), and sparrow-hawks (falco nisus). The people of the country are expert at the chase both of beasts and birds. Good wheat is grown there, and a species of barley without the husk. There is no oil of olives, but they express it from certain nuts, and from the grain called sesame, which resembles the seed of flax, excepting that it is light-coloured; and the oil this yields is better, and has more flavour than any other. It is used by the Tartars and other inhabitants of these parts.

In this kingdom there are many narrow defiles, and strong situations, which diminish the apprehension of any foreign power entering it with a hostile intention. The men are good archers and excellent sportsmen; generally clothing themselves with the skins of wild animals; other materials for the purpose being scarce. The mountains afford pasture for an innumerable quantity of sheep, which ramble about in flocks of four, five, and six hundred, all wild; and although many are taken and killed, there does not appear to be any diminution. These mountains are exceedingly lofty, insomuch that it employs a man from morning till night to ascend to the top of them. Between them there are wide plains clothed with grass and with trees, and large streams of the purest water precipitating themselves through the fissures of the rocks. In these streams are trout and many other delicate sorts of fish. On the summits of the mountains the air is so pure and so salubrious, that when those who dwell in the towns, and in the plains and valleys below, find themselves attacked with fevers or other inflammatory complaints, they immediately remove thither, and remaining for three or four days in that situation, recover their health. Marco Polo affirms that he had experience in his
own person of its excellent effects; for having been confined by sickness, in this country, for nearly a year, he was advised to change the air by ascending the hills; when he presently became convalescent.

[Omitted in *Frompean. See Appendix I. Note 231, p. 198.*]

The reason of the Khan's not becoming a Christian—his various kinds of rewards

The Grand Khan, having obtained this signal victory, returned with great pomp and triumph to the capital city of Kanbalu. This took place in the month of November, and he continued to reside there during the months of February and March, in which latter was our festival of Easter. Being aware that this was one of our principal solemnities, he commanded all the Christians to attend him, and to bring with them their Book, which contains the four Gospels of the Evangelists. After causing it to be repeatedly perfumed with incense, in a ceremonious manner, he devoutly kissed it, and directed that the same should be done by all his nobles who were present. This was his usual practice upon each of the principal Christian festivals, such as Easter and Christmas; and he observed the same at the festivals of the Saracens, Jews, and idolaters. Upon being asked his motive for this conduct, he said: "There are four great Prophets who are reverenced and worshipped by the different classes of mankind. The Christians regard Jesus Christ as their divinity; the Saracens, Mahomet; the Jews, Moses; and the idolaters, Sogomombar-kan, the most eminent amongst their idols. I do honour and show respect to all the four, and invoke to my aid whichever amongst them is in truth supreme in heaven." But from the manner in which his majesty acted towards them, it is evident that he regarded the faith of the Christians as the truest and the best; nothing, as he observed, being enjoined to its professors that was not replete with virtue and holiness. By no means, however, would he permit them to bear the cross before them in their processions, because upon it so exalted a personage as Christ had been scourged and (ignominiously) put to death. It may perhaps be asked by some, why, if he showed such a preference to the faith of Christ, he did not conform to it, and become a Christian? His reason for not so doing, he assigned to Nicolo and Maffio Polo, when, upon the occasion of his sending them as his ambassadors to the Pope, they ventured to address a few words to him on the subject of Christianity. "Wherefore," he said, "should I become a Christian? You yourselves must perceive that the Christians of these countries are ignorant, inefficient persons, who do not possess the faculty of performing anything (miraculous); whereas you see that the idolaters can do whatever they will. When
I sit at table the cups that were in the middle of the hall come to me filled with wine and other beverage, spontaneously and without being touched by human hand, and I drink from them. They have the power of controlling bad weather and obliging it to retire to any quarter of the heavens, with many other wonderful gifts of that nature. You are witnesses that their idols have the faculty of speech, and predict to them whatever is required. Should I become a convert to the faith of Christ, and profess myself a Christian, the nobles of my court and other persons who do not incline to that religion will ask me what sufficient motives have caused me to receive baptism, and to embrace Christianity. ‘What extraordinary powers,’ they will say, ‘what miracles have been displayed by its ministers? Whereas the idolaters declare that what they exhibit is performed through their own sanctity, and the influence of their idols.’ To this I shall not know what answer to make, and I shall be considered by them as labouring under a grievous error; whilst the idolaters, who by means of their profound art can effect such wonders, may without difficulty compass my death. But return you to your pontiff, and request of him, in my name, to send hither a hundred persons well skilled in your law, who being confronted with the idolaters shall have power to coerce them, and showing that they themselves are endowed with similar art, but which they refrain from exercising, because it is derived from the agency of evil spirits, shall compel them to desist from practices of such a nature in their presence. When I am witness of this, I shall place them and their religion under an interdict, and shall allow myself to be baptized. Following my example, all my nobility will then in like manner receive baptism, and this will be imitated by my subjects in general; so that the Christians of these parts will exceed in number those who inhabit your own country.” From this discourse it must be evident that if the Pope had sent out persons duly qualified to preach the gospel, the Grand Khan would have embraced Christianity, for which, it is certainly known, he had a strong predilection. But, to return to our subject, we shall now speak of the rewards and honours he bestows on such as distinguish themselves by their valour in battle.

The Grand Khan appoints twelve of the most intelligent amongst his nobles, whose duty it is to make themselves acquainted with the conduct of the officers and men of his army, particularly upon expeditions and in battles, and to present their reports to him, and he, upon being apprised of their respective merits, advances them in his service, raising those who commanded an hundred men to the command of a thousand, and presenting many with vessels of silver, as well as the customary tablets or warrants of command and of government. The tablets given to those commanding a hundred men are of silver; to those commanding a thousand, of gold or of silver gilt; and those who command ten thousand receive tablets of gold, bearing the head of a lion; the former being of the weight of a hundred and twenty sags, and these with the lion’s head, two hundred and twenty. At the top of the inscription on the tablet is a sentence to this effect: “By the power
and might of the great God, and through the grace which he vouchsafer to our empire, be the name of the Kaan blessed; and let all such as disobey (what is herein directed) suffer death and be utterly destroyed." The officers who hold these tablets have privileges attached to them, and in the inscription is specified what are the duties and the powers of their respective commands. He who is at the head of a hundred thousand men, or the commander in chief of a grand army, has a golden tablet weighing three hundred sigri, with the sentence above mentioned, and at the bottom is engraved the figure of a lion, together with representations of the sun and moon. He exercises also the privileges of his high command, as set forth in this magnificent tablet. Whenever he rides in public, an umbrella is carried over his head, denoting the rank and authority he holds; and when he is seated, it is always upon a silver chair. The Grand Khan confers likewise upon certain of his nobles tablets on which are represented figures of the geraulcon, in virtue of which they are authorised to take with them as their guard of honour the whole army of any great prince. They can also make use of the horses of the imperial stud at their pleasure, and can appropriate the horses of any officers inferior to themselves in rank.

[Franken, Ch. 54, p. 64; Appendix I, Note 233, p. 199.]

There the Grand Khan sends his officers every second year, or oftener, as it may happen to be his pleasure, who collect for him, to the number of four or five hundred, or more, of the handsomest of the young women, according to the estimation of beauty communicated to them in their instructions. The mode of their appreciation is as follows. Upon the arrival of these commissioners, they give orders for assembling all the young women of the province, and appoint qualified persons to examine them, who, upon careful inspection of each of them separately, that is to say, of the hair, the countenance, the eyebrows, the mouth, the lips, and other features, as well as the symmetry of these with each other, estimate their value at sixteen, seventeen, eighteen, or twenty, or more carats, according to the greater or less degree of beauty. The number required by the Grand Khan, at the rates, perhaps, of twenty or twenty-one carats, to which their commission was limited, is then selected from the rest, and they are conveyed to his court. Upon their arrival in his presence, he causes a new examination to be made by a different set of inspectors, and from amongst them a further selection takes place, when thirty or forty are retained for his own chamber, at a higher valuation. These, in the first instance, are committed separately to the care of the wives of certain of the nobles, whose duty it is to observe them attentively during the course of the night, in order to ascertain that they have not any concealed imperfections, that they sleep tranquilly, do not snore, have sweet breath, and are free from un-
pleasant scent in any part of the body. Having undergone this rigorous scrutiny, they are divided into parties of five, one of which parties attends during three days and three nights, in His Majesty's interior apartment, where they are to perform every service that is required of them, and he does with them as he likes. When this term is completed, they are relieved by another party, and in this manner successively, until the whole number have taken their turn; when the first five recommence their attendance. But whilst the one party officiates in the inner chamber, another is stationed in the outer apartment adjoining; in order that if his majesty should have occasion for anything, such as drink or victuals, the former may signify his commands to the latter, by which the article required is immediately procured: and thus the duty of waiting upon his majesty's person is exclusively performed by these young females. The remainder of them, whose value had been estimated at an inferior rate, are assigned to the different lords of the household; under whom they are instructed in cookery, in dressmaking, and other suitable works; and upon any person belonging to the court expressing an inclination to take a wife, the Grand Khan bestows upon him one of these damsels, with a handsome portion. In this manner he provides for them all amongst his nobility. It may be asked whether the people of the province do not feel themselves aggrieved in having their daughters thus forcibly taken from them by the sovereign? Certainly not; but, on the contrary, they regard it as a favour and an honour done to them; and those who are the fathers of handsome children feel highly gratified by his condescending to make choice of their daughters. "If," say they, "my daughter is born under an auspicious planet and to good fortune, His Majesty can best fulfil her destinies, by matching her nobly; which it would not be in my power to do." If, on the other hand, the daughter misconducts herself, or any mischance befalls her (by which she becomes disqualified), the father attributes the disappointment to the malign influence of her stars.

[Frampton, Ch. 33, p. 69. Appendix I. Note 254, p. 129.]

**Of the New City of Tai-du**

Some of the inhabitants, however, of whose loyalty he did not entertain suspicion, were suffered to remain, especially because the latter, although of the dimensions that shall presently be described, was not capable of containing the same number as the former, which was of vast extent.

This new city is of a form perfectly square, and twenty-four miles in extent, each of its sides being neither more nor less than six miles. It is enclosed with walls of earth, that at the base are about ten paces thick, but gradually diminish to the top, where the thickness is not more than three paces. In all parts the
battlements are white. The whole plan of the city was regularly laid out by line, and the streets in general are consequently so straight, that when a person ascends the wall over one of the gates, and looks right forward, he can see the gate opposite to him on the other side of the city. In the public streets there are, on each side, booths and shops of every description. All the allotments of ground upon which the habitations throughout the city were constructed are square, and exactly on a line with each other; each allotment being sufficiently spacious for handsome buildings, with corresponding courts and gardens. One of these was assigned to each head of a family; that is to say, such a person of such a tribe had one square allotted to him, and so of the rest. Afterwards the property passed from hand to hand. In this manner the whole interior of the city is disposed in squares, so as to resemble a chess-board, and planned out with a degree of precision and beauty impossible to describe. The wall of the city has twelve gates, three on each side of the square, and over each gate and compartment of the wall there is a handsome building; so that on each side of the square there are five such buildings, containing large rooms, in which are disposed the arms of those who form the garrison of the city, every gate being guarded by a thousand men. It is not to be understood that such a force is stationed there in consequence of the apprehension of danger from any hostile power whatever, but as a guard suitable to the honour and dignity of the sovereign. Yet it must be allowed that the declaration of the astrologers has excited in his mind a degree of suspicion with regard to the Cathaians. In the centre of the city there is a great bell suspended in a lofty building, which is sounded every night, and after the third stroke no person dares to be found in the streets, unless upon some urgent occasion, such as to call assistance to a woman in labour, or a man attacked with sickness; and even in such necessary cases the person is required to carry a light.

Without each of the gates is a suburb so wide that it reaches to and unites with those of the other nearest gates on both sides, and in length extends to the distance of three or four miles, so that the number of inhabitants in these suburbs exceeds that of the city itself. Within each suburb there are, at intervals, as far perhaps as a mile from the city, many hotels, or caravanserais, in which the merchants arriving from various parts take up their abode; and to each description of people a separate building is assigned, as we should say, one to the Lombards, another to the Germans, and a third to the French. The number of public women who prostitute themselves for money, reckoning those in the new city as well as those in the suburbs of the old, is twenty-five thousand. To each hundred and to each thousand of these there are superintending officers appointed, who are under the orders of a captain-general. The motive for placing them under such command is this: when ambassadors arrive charged with any business in which the interests of the Grand Khan are concerned, it is customary to maintain them at His Majesty's expense, and in order that they may be treated in the most honour-
able manner, the captain is ordered to furnish nightly to each individual of the embassy one of these courtesans, who is likewise to be changed every night, for which service, as it is considered in the light of a tribute they owe to the sovereign, they do not receive any remuneration. Guards, in parties of thirty or forty, continually patrol the streets during the course of the night, and make diligent search for persons who may be from their homes at an unseasonable hour, that is, after the third stroke of the great bell. When any are met with under such circumstances, they immediately apprehend and confine them, and take them in the morning for examination before officers appointed for that purpose, who, upon the proof of any delinquency, sentence them, according to the nature of the offence, to a severer or lighter infliction of the bastinado, which sometimes, however, occasions their death. It is in this manner that crimes are usually punished amongst these people, from a disinclination to the shedding of blood, which their baksis or learned astrologers instruct them to avoid. Having thus described the interior of the city of Tai-du, we shall now speak of the disposition to rebellion shown by its Cathaian inhabitants.

[Omitted by Frampton. See Appendix I. Note 247, p. 392.]

Of the Oppressions of Achmac (Ahmad)

Particular mention will hereafter be made of the establishment of a council of twelve persons, who had the power of disposing, at their pleasure, of the lands, the governments, and everything belonging to the state. Amongst these was a Saracen, named Achmac, a crafty and bold man, whose influence with the Grand Khan surpassed that of the other members. To such a degree was his master infatuated with him that he indulged him in every liberty. It was discovered, indeed, after his death, that he had by means of spells so fascinated His Majesty as to oblige him to give ear and credit to whatever he represented, and by these means was enabled to act in all matters according to his own arbitrary will. He gave away all the governments and public offices, pronounced judgment upon all offenders, and when he was disposed to sacrifice any man to whom he bore ill-will, he had only to go to the emperor and say to him, "Such a person has committed an offence against Your Majesty, and is deserving of death," when the emperor was accustomed to reply, "Do as you judge best"; upon which he caused him to be immediately executed. So evident were the proofs of the authority he possessed, and of His Majesty’s implicit faith in his representations, that none had the hardiness to contradict him in any matter; nor was there a person, however high in rank or office, who did not stand in awe of him. If any one was accused by him of capital crime, however anxious he might be to exculpate himself, he had not the means of
refuting the charge, because he could not procure an advocate, none daring to oppose the will of Achmac. By these means he occasioned many to die unjustly. Besides this, there was no handsome female who became an object of his sensuality that he did not contrive to possess, taking her as a wife if she was unmarried, or otherwise compelling her to yield to his desires. When he obtained information of any man having a beautiful daughter, he despatched his emissaries to the father of the girl, with instructions to say to him: "What are your views with regard to this handsome daughter of yours? You cannot do better than give her in marriage to the Lord Deputy or Vicegerent" (that is, to Achmac, for so they termed him, as implying that he was His Majesty's representative). "We shall prevail upon him to appoint you to such a government or to such an office for three years." Thus tempted, he is prevailed upon to part with his child; and the matter being so far arranged, Achmac repairs to the emperor and informs His Majesty that a certain government is vacant, or that the period for which it is held will expire on such a day, and recommends the father as a person well qualified to perform the duties. To this His Majesty gives his consent, and the appointment is immediately carried into effect. By such means as these, either from the ambition of holding high offices or the apprehension of his power, he obtained the sacrifice of all the most beautiful young women, either under the denomination of wives, or as the slaves of his pleasure. He had sons to the number of twenty-five, who held the highest offices of the state, and some of them, availing themselves of the authority of their father, formed adulterous connexions, and committed many other unlawful and atrocious acts. Achmac had likewise accumulated great wealth, for every person who obtained an appointment found it necessary to make him a considerable present.

During a period of twenty-two years he exercised this uncontrolled sway. At length the natives of the country, that is, the Cathaians, no longer able to endure his multiplied acts of injustice or the flagrant wickedness committed against their families, held meetings in order to devise means of putting him to death and raising a rebellion against the government. Amongst the persons principally concerned in this plot was a Cathaian, named Chen-ku, a chief of six thousand men, who, burning with resentment on account of the violation of his mother, his wife, and his daughter, proposed the measure to one of his countrymen, named Van-ku, who was at the head of ten thousand men, and recommended its being carried into execution at the time when the Grand Khan, having completed his three months' residence in Kanbalu, had departed for his palace of Shan-du, and when his son Chingis also had retired to the place he was accustomed to visit at that season; because the charge of the city was then entrusted to Achmac, who communicated to his master whatever matters occurred during his absence, and received in return the signification of his pleasure. Van-ku and Chen-ku, having held this consultation together, imparted their designs to some of the leading
persons of the Cathaians, and through them to their friends in many other cities. It was accordingly determined amongst them that, on a certain day, immediately upon their perceiving the signal of a fire, they should rise and put to death all those who wore beards; and should extend the signal to other places, in order that the same might be carried into effect throughout the country. The meaning of the distinction with regard to beards was this; that whereas the Cathaians themselves are naturally beardless, the Tartars, the Saracens, and the Christians wear beards. It should be understood that the Grand Khan not having obtained the sovereignty of Cathay by any legal right, but only by force of arms, had no confidence in the inhabitants, and therefore bestowed all the provincial governments and magistracies upon Tartars, Saracens, Christians, and other foreigners, who belonged to his household, and in whom he could trust. In consequence of this, his government was universally hated by the natives, who found themselves treated as slaves by these Tartars, and still worse by the Saracens.

Their plans being thus arranged, Van-ku and Chen-ku contrived to enter the palace at night, where the former, taking his place on one of the royal seats, caused the apartment to be lighted up, and sent a messenger to Aichmac, who resided in the old city, requiring his immediate attendance upon Chingis, the emperor's son, who (he should say) had unexpectedly arrived that night. Aichmac was much astonished at the intelligence, but, being greatly in awe of the prince, instantly obeyed. Upon passing the gate of the new city, he met a Tartar officer named Kogatai, the commandant of the guard of twelve thousand men, who asked him whether he was going at that late hour. He replied that he was proceeding to wait upon Chingis, of whose arrival he had just heard. "How is it possible," said the officer, "that he can have arrived in so secret a manner, that I should not have been aware of his approach in time to order a party of his guards to attend him?" In the meanwhile the two Cathaians felt assured that if they could but succeed in despatching Aichmac they had nothing further to apprehend. Upon his entering the palace and seeing so many lights burning, he made his prostrations before Van-ku, supposing him to be the prince, when Chen-ku, who stood there provided with a sword, severed his head from his body. Kogatai had stopped at the door, but upon observing what had taken place, exclaimed that there was treason going forward, and instantly let fly an arrow at Van-ku as he sat upon the throne, which slew him. He then called to his men, who seized Chen-ku, and despatched an order into the city, that every person found out of doors should be put to death. The Cathaians perceiving, however, that the Tartars had discovered the conspiracy, and being deprived of their leaders, one of whom was killed and the other a prisoner, kept within their houses, and were unable to make the signals to the other towns, as had been concerted. Kogatai immediately sent messengers to the Grand Khan, with a circumstantial relation of all that had passed, who, in return, directed him to make a diligent investigation of the treason, and to punish,
according to the degree of their guilt, those whom he should find to have been concerned. On the following day, Kogatai examined all the Cathaians, and upon such as were principals in the conspiracy he inflicted capital punishment. The same was done with respect to the other cities that were known to have participated in the guilt.

When the Grand Khan returned to Kanbalu, he was desirous of knowing the causes of what had happened, and then learned that the infamous Achmac and seven of his sons (for all were not equally culpable) had committed those enormities which have been described. He gave orders for removing the treasure which had been accumulated by the deceased to an incredible amount, from the place of his residence in the old city to the new, where it was deposited in his own treasury. He likewise directed that his body should be taken from the tomb, and thrown into the street to be torn to pieces by the dogs. The sons who had followed the steps of their father in his iniquities he caused to be flayed alive. Reflecting also upon the principles of the accursed sect of the Saracens, which indulge them in the commission of every crime, and allow them to murder those who differ from them on points of faith, so that even the nefarious Achmac and his sons might have supposed themselves guiltless, he held them in contempt and abomination. Summoning, therefore, these people to his presence, he forbade them to continue many practices enjoined to them by their law, commanding that in future their marriages should be regulated by the custom of the Tartars, and that instead of the mode of killing animals for food, by cutting their throats, they should be obliged to open the belly. At the time that these events took place Marco Polo was on the spot.

[Omitted by Frampton, save for the few lines that constitute Ch. 62. See Appendix I, Note 251, p. 203.]

Owing to the number of chapters omitted by Frampton at this point, the Ramusian chapter-headings are given consecutively:

**CHAPTER XX**

Of the places established on all the great roads for supplying post-horses—of the couriers on foot—and of the mode in which the expense is defrayed

From the city of Kanbalu there are many roads leading to the different provinces, and upon each of these, that is to say, upon every great high road, at the distance of twenty-five or thirty miles, accordingly as the towns happen to be situated, there are stations, with houses of accommodation for travellers, called *yamb* or post-
houses. These are large and handsome buildings, having several well-furnished apartments, hung with silk, and provided with everything suitable to persons of rank. Even kings may be lodged at these stations in a becoming manner, as every article required may be obtained from the towns and strong places in the vicinity; and for some of them the court makes regular provision. At each station four hundred good horses are kept in constant readiness, in order that all messengers going and coming upon the business of the Grand Khan, and all ambassadors, may have relays, and, leaving their jaded horses, be supplied with fresh ones. Even in mountainous districts, remote from the great roads, where there were no villages, and the towns are far distant from each other, His Majesty has equally caused buildings of the same kind to be erected, furnished with everything necessary, and provided with the usual establishment of horses. He sends people to dwell upon the spot, in order to cultivate the land, and attend to the service of the post; by which means large villages are formed. In consequence of these regulations, ambassadors to the court, and the royal messengers, go and return through every province and kingdom of the empire with the greatest convenience and facility; in all which the Grand Khan exhibits a superiority over every other emperor, king, or human being. In his dominions no fewer than two hundred thousand horses are thus employed in the department of the post, and ten thousand buildings, with suitable furniture, are kept up. It is indeed so wonderful a system, and so effective in its operation, as it is scarcely possible to describe. If it be questioned how the population of the country can supply sufficient numbers for these duties, and by what means they can be victualled, we may answer, that all the idolaters, and likewise the Saracens, keep six, eight, or ten women, according to their circumstances, by whom they have a prodigious number of children; some of them as many as thirty sons capable of following their fathers in arms; whereas with us a man has only one wife, and even although she should prove barren, he is obliged to pass his life with her, and is by that means deprived of the chance of raising a family. Hence it is that our population is so much inferior to theirs. With regard to food, there is no deficiency of it, for these people, especially the Tartars, Catha-

rians, and inhabitants of the province of Manji (or Southern China), subsist, for the most part, upon rice, panicum, and millet; which three grains yield, in their soil, an hundred measures for one. Wheat, indeed, does not yield a similar increase, and bread not being in use with them, it is eaten only in the form of vermicelli or of pastry. The former grains they boil in milk or stew with their meat. With them no spot of earth is suffered to lie idle, that can possibly be cultivated; and their cattle of different kinds multiply exceedingly, insomuch that when they take the field, there is scarcely an individual that does not carry with him six, eight, or more horses, for his own personal use. From all this may be seen the causes of so large a population, and the circumstances that enable them to provide so abundantly for their subsistence.
In the intermediate space between the post-houses, there are small villages settled at the distance of every three miles, which may contain, one with another, about forty cottages. In these are stationed the foot-messengers, likewise employed in the service of His Majesty. They wear girdles round their waists, to which several small bells are attached, in order that their coming may be perceived at a distance; and as they run only three miles, that is, from one of these foot-stations to another next adjoining, the noise serves to give notice of their approach, and preparation is accordingly made by a fresh courier to proceed with the packet instantly upon the arrival of the former. Thus it is so expeditiously conveyed from station to station, that in the course of two days and two nights His Majesty receives distant intelligence that in the ordinary mode could not be obtained in less than ten days; and it often happens that in the fruit season, what is gathered in the morning at Kanbalu (Cambaluc) is conveyed to the Grand Khan, at Shan-du (Chandu), by the evening of the following day; although the distance is generally considered as ten days' journey. At each of these three-mile stations there is a clerk, whose business it is to note the day and hour at which the one courier arrives and the other departs; which is likewise done at all the post-houses. Besides this, officers are directed to pay monthly visits to every station, in order to examine into the management of them, and to punish those couriers who have neglected to use proper diligence. All these couriers are not only exempt from the (capitation) tax, but also receive from His Majesty good allowances. The horses employed in this service are not attended with any (direct) expense; the cities, towns, and villages in the neighbourhood being obliged to furnish, and also to maintain them. By His Majesty's command the governors of the cities cause examination to be made by well informed persons, as to the number of horses the inhabitants, individually, are capable of supplying. The same is done with respect to the towns and villages; and according to their means the requisition is enforced; those on each side of the station contributing their due proportion. The charge of the maintenance of the horses is afterwards deducted by the cities out of the revenue payable to the Grand Khan; inasmuch as the sum for which each inhabitant would be liable is commuted for an equivalent of horses or share of horses, which he maintains at the nearest adjoining station.

It must be understood, however, that of the four hundred horses the whole are not constantly on service at the station, but only two hundred, which are kept there for the space of a month, during which period the other half are at pasture; and at the beginning of the month, these in their turn take the duty, whilst the former have time to recover their flesh; each alternately relieving the other. Where it happens that there is a river or a lake which the couriers on foot, or the horsemen, are under the necessity of passing, the neighbouring cities are obliged to keep three or four boats in continual readiness for that purpose; and where there is a desert of several days' journey, that does not admit of any habitation, the city
on its borders is obliged to furnish horses to such persons as ambassadors to and from the court, that they may be enabled to pass the desert, and also to supply provisions to them and their suite; but cities so circumstanced have a remuneration from His Majesty. Where the post stations lie at a distance from the great road, the horses are partly those of his majesty, and are only in part furnished by the cities and towns of the district.

When it is necessary that the messengers should proceed with extraordinary despatch, as in the cases of giving information of disturbance in any part of the country, the rebellion of a chief, or other important matter, they ride two hundred, or sometimes two hundred and fifty miles in the course of a day. On such occasions they carry with them the tablet of the gerfalcon as a signal of the urgency of their business and the necessity for despatch. And when there are two messengers, they take their departure together from the same place, mounted upon good fleet horses; and they gird their bodies tight, bind a cloth round their heads, and push their horses to the greatest speed. They continue thus till they come to the next post-house, at twenty-five miles distant, where they find two other horses, fresh and in a state for work; they spring upon them without taking any repose, and changing in the same manner at every stage, until the day closes, they perform a journey of two hundred and fifty miles. In cases of great emergency they continue their course during the night, and if there should be no moon, they are accompanied to the next station by persons on foot, who run before them with lights; when of course they do not make the same expedition as in the day-time, the light-bearers not being able to exceed a certain pace. Messengers qualified to undergo this extraordinary degree of fatigue are held in high estimation. Now we will leave this subject, and I will tell you of a great act of benevolence which the Grand Khan performs twice a-year.

CHAPTER XXI

Of the relief afforded by the Grand Khan to all the provinces of his empire, in times of dearth or mortality of cattle

The Grand Khan sends every year his commissioners to ascertain whether any of his subjects have suffered in their crops of corn from unfavourable weather, from storms of wind or violent rains, or by locusts, worms, or any other plague; and in such cases he not only refrains from exacting the usual tribute of that year, but furnishes them from his granaries with so much corn as is necessary for their subsistence, as well as for sowing their land. With this view, in times of great plenty, he causes large purchases to be made of such kinds of grain as are most serviceable to them, which is stored in granaries provided for the purpose in the several provinces, and managed with such care as to ensure its keeping for three or four years without damage. It is his command, that these granaries be always kept full, in order to provide against times of scarcity; and when, in such seasons,
he disposes of the grain for money, he requires for four measures no more than the purchaser would pay for one measure in the market. In like manner where there has been a mortality of cattle in any district, he makes good the loss to the sufferers from those belonging to himself, which he has received as his tenth of produce in other provinces. All his thoughts, indeed, are directed to the important object of assisting the people whom he governs, that they may be enabled to live by their labour and improve their substance. We must not omit to notice a peculiarity of the Grand Khan, that where an accident has happened by lightning to any herd of cattle, flock of sheep, or other domestic animals, whether the property of one or more persons, and however large the herd may be, he does not demand the tenth of the increase of such cattle during three years; and so also if a ship laden with merchandise has been struck by lightning, he does not collect from her any custom or share of her cargo, considering the accident as an ill omen. God, he says, has shown himself to be displeased with the owner of the goods, and he is unwilling that property bearing the mark of divine wrath should enter his treasury.

CHAPTER XXII

Of the trees which he causes to be planted at the sides of the roads, and of the order in which they are kept

There is another regulation adopted by the Grand Khan, equally ornamental and useful. At both sides of the public roads he causes trees to be planted, of a kind that become large and tall, and being only two paces asunder, they serve (besides the advantage of their shade in summer) to point out the road (when the ground is covered with snow); which is of great assistance and affords much comfort to travellers. This is done along all the high roads, where the nature of the soil admits of plantation; but when the way lies through sandy deserts or over rocky mountains, where it is impossible to have trees, he orders stones to be placed and columns to be erected, as marks for guidance. He also appoints officers of rank, whose duty it is to see that all these are properly arranged and the roads constantly kept in good order. Besides the motives that have been assigned for these plantations, it may be added that the Grand Khan is the more disposed to make them, from the circumstance of his diviners and astrologers having declared that those who plant trees are rewarded with long life.

CHAPTER XXIII

Of the kind of wine made in the province of Cathay—and of the stones used there for burning in the manner of charcoal

The greater part of the inhabitants of the province of Cathay drink a sort of wine made from rice mixed with a variety of spices and drugs. This beverage, or wine as it may be termed, is so good and well flavoured that they do not wish for
APPENDIX II

It is clear, bright, and pleasant to the taste, and being (made) very hot, has the quality of inebriating sooner than any other.

Throughout this province there is found a sort of black stone, which they dig out of the mountains, where it runs in veins. When lighted, it burns like charcoal, and retains the fire much better than wood; insomuch that it may be preserved during the night, and in the morning be found still burning. These stones do not flame, excepting a little when first lighted, but during their ignition give out a considerable heat. It is true there is no scarcity of wood in the country, but the multitude of inhabitants is so immense, and their stoves and baths, which they are continually heating, so numerous, that the quantity could not supply the demand; for there is no person who does not frequent the warm bath at least three times in the week, and during the winter daily, if it is in their power. Every man of rank or wealth has one in his house for his own use; and the stock of wood must soon prove inadequate to such consumption; whereas these stones may be had in the greatest abundance, and at a cheap rate.

CHAPTER XXIV

Of the great and admirable liberality exercised by the Grand Khan towards the poor of Kanbalu, and other persons who apply for relief at his court

It has been already stated that the Grand Khan distributes large quantities of grain to his subjects (in the provinces). We shall now speak of his great charity to and provident care of the poor in the city of Kanbalu. Upon his being apprised of any respectable family, that had lived in easy circumstances, being by misfortunes reduced to poverty, or who, in consequence of infirmities, are unable to work for their living or to raise a supply of any kind of grain: to a family in that situation he gives what is necessary for their year's consumption, and at the customary period they present themselves before the officers who manage the department of His Majesty's expenses and who reside in a palace where that business is transacted, to whom they deliver a statement in writing of the quantity furnished to them in the preceding year, according to which they receive also for the present. He provides in like manner for their clothing, which he has the means of doing from his tenths of wool, silk, and hemp. These materials he has woven into the different sorts of cloth, in a house erected for that purpose, where every artisan is obliged to work one day in the week for his majesty's service. Garments made of the stuffs thus manufactured he orders to be given to the poor families above described, as they are wanted for their winter and their summer dresses. He also has clothing prepared for his armies, and in every city has a quantity of woollen cloth woven, which is paid for from the amount of the tenths levied at the place.
APPENDIX II

It should be known that the Tartars, when they followed their original customs, and had not yet adopted the religion of the idolaters, were not in the practice of bestowing alms, and when a necessitous man applied to them, they drove him away with injurious expressions, saying, "Begone with your complaint of a bad season, which God has sent you; had he loved you, as it appears he loves me, you would have prospered as I do." But since the wise men of the idolaters, and especially the baksis, already mentioned, have represented to His Majesty that providing for the poor is a good work and highly acceptable to their deities, he has relieved their wants in the manner stated, and at his court none are denied food who come to ask it. Not a day passes in which there are not distributed, by the regular officers, twenty thousand vessels of rice, millet, and panicum. By reason of this admirable and astonishing liberality which the Grand Khan exercises towards the poor, the people all adore him as a divinity.

CHAPTER XXV

Of the astrologers of the city of Kanbalu

There are in the city of Kanbalu, amongst Christians, Saracens, and Cathalians, about five thousand astrologers and prognosticators, for whose food and clothing the Grand Khan provides in the same manner as he does for the poor families above mentioned, and who are in the constant exercise of their art. They have their astrolabes, upon which are described the planetary signs, the hours (at which they pass the meridian), and their several aspects for the whole year. The astrologers (or almanac-makers) of each distinct sect annually proceed to the examination of their respective tables, in order to ascertain from thence the course of the heavenly bodies, and their relative positions for every lunaion. They discover therein what the state of the weather shall be, from the paths and configurations of the planets in the different signs, and thence foretell the peculiar phenomena of each month: that in such a month, for instance, there shall be thunder and storms; in such another, earthquakes; in another, strokes of lightning and violent rains; in another, diseases, mortality, wars, discords, conspiracies. As they find the matter in their astrolabes, so they declare it will come to pass; adding, however, that God, according to his good pleasure, may do more or less than they have set down. They write their predictions for the year upon certain small squares, which are called takumi, and these they sell, for a great apiece, to all persons who are desirous of peeping into futurity. Those whose predictions are found to be the more generally correct are esteemed the most perfect masters of their art, and are consequently the most honoured. When any person forms the design of executing some great work, or of performing a distant journey in the way of commerce, or of commencing any other undertaking, and is desirous of knowing what success may be likely to attend it, he has recourse to one of these astrologers, and,
informing him that he is about to proceed on such an expedition, inquires in what disposition the heavens appear to be at the time. The latter thereupon tells him, that before he can answer, it is necessary he should be informed of the year, the month, and the hour in which he was born; and that, having learned these particulars, he will then proceed to ascertain in what respects the constellation that was in the ascendant at his nativity corresponds with the aspect of the celestial bodies at the time of making the inquiry. Upon this comparison he grounds his prediction of the favourable or unfavourable termination of the adventure.

It should be observed that the Tartars compute their time by a cycle of twelve years; to the first of which they give the name of the lion; to the second year, that of the ox; to the third, the dragon; to the fourth, the dog; and so of the rest, until the whole of the twelve have elapsed. When a person, therefore, is asked in what year he was born, he replies, In the course of the year of the lion, upon such a day, at such an hour and minute; all of which has been carefully noted by his parents in a book. Upon the completion of the twelve years of the cycle, they return to the first, and continually repeat the same series.

CHAPTER XXVI

Of the religion of the Tartars—of the opinions they hold respecting the soul—and of some of their customs

As has already been observed, these people are idolaters, and for deities, each person has a tablet fixed up against a high part of the wall of his chamber, upon which is written a name, that serves to denote the high, celestial, and sublime God; and to this they pay daily adoration, with incense burning. Lifting up their hands and then striking their faces against the floor three times, they implore from him the blessings of sound intellect and health of body; without any further petition. Below this, on the floor, they have a statue which they name Natigai, which they consider as the God of all terrestrial things, or whatever is produced from the earth. They give him a wife and children, and worship him in a similar manner, burning incense, raising their hands, and bending to the floor. To him they pray for seasonable weather, abundant crops, increase of family, and the like. They believe the soul to be immortal, in this sense, that immediately upon the death of a man, it enters into another body, and that accordingly as he has acted virtuously or wickedly during his life, his future state will become, progressively, better or worse. If he be a poor man, and has conducted himself worthily and decently, he will be re-born, in the first instance, from the womb of a gentlewoman, and become, himself, a gentleman; next, from the womb of a lady of rank, and become a nobleman; thus continually ascending in the scale of existence until he be united to the divinity. But if, on the contrary, being the son of a gentleman, he has behaved unworthily, he will, in his next state, be a clown, at length a dog, continually descending to a condition more vile than the preceding.
Their style of conversation is courteous; they salute each other politely, with countenances expressive of satisfaction, have an air of good breeding, and eat their victuals with particular cleanliness. To their parents they show the utmost reverence; but should it happen that a child acts disrespectfully to or neglects to assist his parents in their necessity, there is a public tribunal, whose especial duty it is to punish with severity the crime of filial ingratitude, when the circumstance is known. Malefactors guilty of various crimes, who are apprehended and thrown into prison, are executed by strangling; but such as remain till the expiration of three years, being the time appointed by His Majesty for a general gaol delivery, and are then liberated, have a mark imprinted upon one of their cheeks, that they may be recognised.

The present Grand Khan has prohibited all species of gambling and other modes of cheating, to which the people of this country are addicted more than any others upon earth; and as an argument for deterring them from the practice, he says to them (in his edict), "I subdued you by the power of my sword, and consequently whatever you possess belongs of right to me: if you gamble, therefore, you are sporting with my property." He does not, however, take anything arbitrarily in virtue of this right. The order and regularity observed by all ranks of people, when they present themselves before His Majesty, ought not to pass unnoticed. When they approach within half a mile of the place where he happens to be, they show their respect for his exalted character by assuming a humble, placid, and quiet demeanour, insomuch that not the least noise, nor the voice of any person calling out, or even speaking aloud, is heard. Every man of rank carries with him a small vessel, into which he spits, so long as he continues in the hall of audience, no one daring to spit on the floor; and this being done, he replaces the cover, and makes a salutation. They are accustomed likewise to take with them handsome buskins made of white leather, and when they reach the court, but before they enter the hall (for which they wait a summons from the Grand Khan), they put on these white buskins, and give those in which they had walked to the care of the servants. This practice is observed that they may not soil the beautiful carpets, which are curiously wrought with silk and gold, and exhibit a variety of colours.

Of the Province of Kain-du (the Kien-ch’ang valley)

The money or currency they make use of is thus prepared. Their gold is formed into small rods, and (being cut into certain lengths) passes according to its weight, without any stamp. This is their greater money; the smaller is of the following
description. In this country there are salt-springs, from which they manufacture salt by boiling it in small pans. When the water has boiled for an hour, it becomes a kind of paste, which is formed into cakes of the value of twopence each. These, which are flat on the lower, and convex on the upper side, are placed upon hot tiles, near a fire, in order to dry and harden. On this latter species of money the stamp of His Majesty is impressed, and it cannot be prepared by any other than his own officers. Eighty of the cakes are made to pass for a saggio of gold. But when these are carried by the traders amongst the inhabitants of the mountains and other parts little frequented, they obtain a saggio of gold for sixty, fifty, or even forty of the salt-cakes, in proportion as they find the natives less civilised, further removed from the towns, and more accustomed to remain on the same spot; inasmuch as people so circumstanced cannot always have a vend for their gold, musk, and other commodities. And yet even at this rate it answers well to them who collect the gold-dust from the beds of the rivers, as has been mentioned. The same merchants travel in like manner through the mountainous and other parts of the province of Tebeth, last spoken of, where the money of salt has equal currency. Their profits are considerable, because these country people consume the salt with their food, and regard it as an indispensable necessary; whereas the inhabitants of the cities use for the same purpose only the broken fragments of the cakes, putting the whole cakes into circulation as money. Here also the animals, which yield the musk, are taken in great numbers, and the article is proportionably abundant. Many fish, of good kinds, are caught in the lake. In the country are found tigers, bears, deer, stags, and antelopes. There are numerous birds also, of various sorts. The wine is not made from grapes, but from wheat and rice, with a mixture of spices, which is an excellent beverage.

This province likewise produces cloves. The tree is small; the branches and leaves resemble those of the laurel, but are somewhat longer and narrower. Its flowers are white and small, as are the cloves themselves, but as they ripen they become dark-coloured. Ginger grows there and also cassia in abundance, besides many other drugs, of which no quantity is ever brought to Europe.

[Footer, Ch. 81, p. 81; Appendix I. Note 305, p. 216.]

**Of the province named Karazan (Ta-lifu)**

Here are seen huge serpents, ten paces in length, and ten spans in the girt of the body. At the fore-part, near the head, they have two short legs, having three claws like those of a tiger, with eyes larger than a fourpenny loaf (*pane da quattro denari*) and very glaring. The jaws are wide enough to swallow a man, the teeth are large and sharp, and their whole appearance is so formidable, that neither
man, nor any kind of animal, can approach them without terror. Others are met with of a smaller size, being eight, six, or five paces long; and the following method is used for taking them. In the day-time, by reason of the great heat, they lurk in caverns, from whence, at night, they issue to seek their food, and whatever beast they meet with and can lay hold of, whether tiger, wolf, or any other, they devour; after which they drag themselves towards some lake, spring of water, or river, in order to drink. By their motion in this way along the shore, and their vast weight, they make a deep impression, as if a heavy beam had been drawn along the sands. Those whose employment it is to hunt them observe the track by which they are most frequently accustomed to go, and fix into the ground several pieces of wood, armed with sharp iron spikes, which they cover with the sand in such a manner as not to be perceptible. When therefore the animals make their way towards the places they usually haunt, they are wounded by these instruments, and speedily killed. The crows, as soon as they perceive them to be dead, set up their scream; and this serves as a signal to the hunters, who advance to the spot, and proceed to separate the skin from the flesh, taking care immediately to secure the gall, which is most highly esteemed in medicine. In cases of the bite of a mad dog, a pennyweight of it, dissolved in wine, is administered. It is also useful in accelerating parturition, when the labour pains of women have come on. A small quantity of it being applied to carbuncles, pustules, or other eruptions on the body, they are presently dispersed; and it is efficacious in many other complaints. The flesh also of the animal is sold at a dear rate, being thought to have a higher flavour than other kinds of meat, and by all persons it is esteemed a delicacy. In this province the horses are of a large size, and whilst young, are carried for sale to India. It is the practice to deprive them of one joint of the tail, in order to prevent them from lashing it from side to side, and to occasion its remaining pendent; as the whisking it about, in riding, appears to them a vile habit. These people ride with long stirrups, as the French do in our part of the world; whereas the Tartars, and almost all other people, wear them short, for the more conveniently using the bow; as they rise in their stirrups above the horse, when they shoot their arrows. They have complete armour of buffalo-leather, and carry lances, shields, and cross-bows. All their arrows are poisoned. I was assured, as a certain fact, that many persons, and especially those who harbour bad designs, always carry poison about them, with the intention of swallowing it, in the event of their being apprehended for any delinquency, and exposed to the torture, that, rather than suffer it, they may effect their own destruction. But their rulers, who are aware of this practice, are always provided with the dung of dogs, which they obligate the accused to swallow immediately after, as it occasions their vomiting up the poison, and thus an antidote is ready against the arts of these wretches. Before the time of their becoming subject to the dominion of the Grand Khan, these people were addicted to the following brutal custom. When any stranger of superior quality, who united
personal beauty with distinguished valour, happened to take up his abode at the house of one of them; he was murdered during the night; not for the sake of his money, but in order that the spirit of the deceased, endowed with his accomplishments and intelligence, might remain with the family, and that through the efficacy of such an acquisition, all their concerns might prosper. Accordingly the individual was accounted fortunate who possessed in this manner the soul of any noble personage; and many lost their lives in consequence. But from the time of His Majesty's beginning to rule the country, he has taken measures for suppressing the horrid practice, and from the effect of severe punishments that have been inflicted, it has ceased to exist.

[Frame:om, Ch. 82–83, pp. 84, 85; Appendix I. Note 912; p. 218.]

Of the manner in which the Grand Khan effected the conquest of the Kingdom of Mien and Bangala (Burma and Bengal)

Before we proceed further (in describing the country), we shall speak of a memorable battle that was fought in this kingdom of Vochang (Unchang, or Yun-chang). It happened that in the year 1272 the Grand Khan sent an army into the countries of Vochang and Karazan, for their protection and defence against any attack that foreigners might attempt to make; for at this period he had not as yet appointed his own sons to the governments, which it was afterwards his policy to do; as in the instance of Cen-temur, for whom those places were erected into a principality. When the king of Mien and Bangala, in India, who was powerful in the number of his subjects, in extent of territory, and in wealth, heard that an army of Tartars had arrived at Vochang, he took the resolution of advancing immediately to attack it, in order that by its destruction the Grand Khan should be deterred from again attempting to station a force upon the borders of his dominions. For this purpose he assembled a very large army, including a multitude of elephants (an animal with which his country abounds), upon whose backs were placed battlements or castles, of wood, capable of containing to the number of twelve or sixteen in each. With these, and a numerous army of horse and foot, he took the road to Vochang, where the Grand Khan's army lay, and encamping at no great distance from it, intended to give his troops a few days of rest. As soon as the approach of the king of Mien, with so great a force, was known to Nestardin, who commanded the troops of the Grand Khan, although a brave and able officer, he felt much alarmed, not having under his orders more than twelve thousand men (veterans, indeed, and valiant soldiers); whereas the enemy had sixty thousand, besides the elephants armed as has been described. He did
not, however, betray any signs of apprehension, but descending into the plain of Vochang, took a position in which his flank was covered by a thick wood of large trees, whither, in case of a furious charge by the elephants, which his troops might not be able to sustain, they could retire, and from thence, in security, annoy them with their arrows. Calling together the principal officers of his army, he exhorted them not to display less valour on the present occasion than they had done in all their preceding engagements; reminding them that victory did not depend upon the number of men, but upon courage and discipline. He represented to them that the troops of the king of Mien and Bangala were raw and unpractised in the art of war, not having had the opportunities of acquiring experience that had fallen to their lot; that instead of being discouraged by the superior number of their foes, they ought to feel confidence in their own valour so often put to the test; that their very name was a subject of terror; not merely to the enemy before them, but to the whole world; and he concluded by promising to lead them to certain victory.

Upon the king of Mien's learning that the Tartars had descended into the plain, he immediately put his army in motion, took up his ground at the distance of about a mile from the enemy, and made a disposition of his force, placing the elephants in the front, and the cavalry and infantry, in two extended wings, in their rear, but leaving between them a considerable interval. Here he took his own station, and proceeded to animate his men and encourage them to fight valiantly, assuring them of victory, as well from the superiority of their numbers, being four to one, as from their formidable body of armed elephants, whose shock the enemy, who had never before been engaged with such combatants, could by no means resist. Then giving orders for sounding a prodigious number of warlike instruments, he advanced boldly with his whole army towards that of the Tartars, which remained firm, making no movement, but suffering them to approach their entrenchments. They then rushed out with great spirit and the utmost eagerness to engage; but it was soon found that the Tartar horses, unused to the sight of such huge animals, with their castles, were terrified, and wheeling about endeavoured to fly; nor could their riders by any exertions restrain them, whilst the king, with the whole of his forces, was every moment gaining ground. As soon as the prudent commander perceived this unexpected disorder, without losing his presence of mind, he instantly adopted the measure of ordering his men to dismount and their horses to be taken into the wood, where they were fastened to the trees. When dismounted, the men, without loss of time, advanced on foot towards the line of elephants, and commenced a brisk discharge of arrows; whilst, on the other side, those who were stationed in the castles, and the rest of the king's army, shot volleys in return with great activity; but their arrows did not make the same impression as those of the Tartars, whose bows were drawn with a stronger arm. So incessant were the discharges of the latter, and all their weapons (according to the instructions of their commander) being directed against the elephants, these were soon covered
APPENDIX II

with arrows, and, suddenly giving way, fell back upon their own people in the rear, who were thereby thrown into confusion. It soon became impossible for their drivers to manage them, either by force or address. Smarting under the pain of their wounds, and terrified by the shouting of the assailants, they were no longer governable, but without guidance or control ran about in all directions, until at length, impelled by rage and fear, they rushed into a part of the wood not occupied by the Tartars. The consequence of this was, that from the closeness of the branches of large trees, they broke, with loud crashes, the battlements or castles that were upon their backs, and involved in the destruction those who sat upon them. Upon seeing the rout of the elephants the Tartars acquired fresh courage, and filing off by detachments, with perfect order and regularity, they remounted their horses, and joined their several divisions, when a sanguinary and dreadful combat was renewed. On the part of the king’s troops there was no want of valour, and he himself went amongst the ranks entreating them to stand firm, and not to be alarmed by the accident that had befallen the elephants. But the Tartars, by their consummate skill in archery, were too powerful for them, and galled them the more exceedingly, from their not being provided with such armour as was worn by the former. The arrows having been expended on both sides, the men grasped their swords and iron maces, and violently encountered each other. Then in an instant were to be seen many horrible wounds, limbs dismembered, and multitudes falling to the ground, maimed and dying; with such effusion of blood as was dreadful to behold. So great also was the clangour of arms, and such the shoutings and the shrieks, that the noise seemed to ascend to the skies. The king of Mien, acting as became a valiant chief, was present wherever the greatest danger appeared, animating his soldiers, and beseeching them to maintain their ground with resolution. He ordered fresh squadrons from the reserve to advance to the support of those that were exhausted; but perceiving at length that it was impossible any longer to sustain the conflict or to withstand the impetuosity of the Tartars, the greater part of his troops being either killed or wounded, and all the field covered with the carcasses of men and horses, whilst those who survived were beginning to give way, he also found himself compelled to take to flight with the wreck of his army, numbers of whom were afterwards slain in the pursuit.

The losses in this battle, which lasted from the morning till noon, were severely felt on both sides; but the Tartars were finally victorious; a result that was materially to be attributed to the troops of the king of Mien and Bangala not wearing armour as the Tartars did, and to their elephants, especially those of the foremost line, being equally without that kind of defence, which, by enabling them to sustain the first discharges of the enemy’s arrows, would have allowed them to break his ranks and throw him into disorder. A point perhaps of still greater importance is, that the king ought not to have made his attack on the Tartars in a position where their flank was supported by a wood, but should have endeavoured
to draw them into the open country, where they could not have reasied the first impetuous onset of the armed elephants, and where, by extending the cavalry of his two wings, he might have surrounded them. The Tartars having collected their force after the slaughter of the enemy, returned towards the wood into which the elephants had fled for shelter, in order to take possession of them, where they found that the men who had escaped from the overthrow were employed in cutting down trees and barricading the passages, with the intent of defending themselves. But their ramparts were soon demolished by the Tartars, who slew many of them, and with the assistance of the persons accustomed to the management of the elephants, they possessed themselves of these to the number of two hundred or more. From the period of this battle the Grand Khan has always chosen to employ elephants in his armies, which before that time he had not done. The consequences of the victory were, that the Grand Khan acquired possession of the whole of the territories of the king of Bangala and Mien, and annexed them to his dominions.

Of the city of Mien, and of a great sepulchre of its king.
(The city of Pagan in Burma)

After the journey of fifteen days that has been mentioned, you reach the city of Mien, which is large, magnificent, and the capital of the kingdom. The inhabitants are idolaters, and have a language peculiar to themselves. It is related that there formerly reigned in this country a rich and powerful monarch, who, when his death was drawing near, gave orders for erecting on the place of his interment, at the head and foot of the sepulchre, two pyramidal towers, entirely of marble, ten paces in height, of a proportionate bulk, and each terminating with a ball. One of these pyramids was covered with a plate of gold an inch in thickness, so that nothing besides the gold was visible; and the other with a plate of silver, of the same thickness. Around the balls were suspended small bells of gold and of silver, which sounded when put in motion by the wind. The whole formed a splendid object. The tomb was in like manner covered with a plate, partly of gold and partly of silver. This the king commanded to be prepared for the honour of his soul, and in order that his memory might not perish. The Grand Khan, having resolved upon taking possession of this city, sent thither a valiant officer to effect it, and the army, at its own desire, was accompanied by some of the jugglers or sorcerers, of whom there were always a great number about the court. When these entered the city, they observed the two pyramids so richly ornamented, but would not meddle with them until his majesty’s pleasure respecting them should be known. The Grand Khan, upon being informed that they had been
erected in pious memory of a former king, would not suffer them to be violated nor injured in the smallest degree; the Tartars being accustomed to consider as a heinous sin the removal of any article appertaining to the dead. [The Ζ text has a unique passage here. See B. p. 124 note d.] In this country were found many elephants, large and handsome wild oxen, with stags, fallow deer, and other animals in great abundance.

   [Omitted in Frangham. See Appendix I. Note 317, p. 319.]

Of the province of Bangala (Bengal)

The province of Bangala is situated on the southern confines of India, and was (not yet) brought under the dominion of the Grand Khan at the time of Marco Polo’s residence at his court [the date is given in the French texts as 1290]; although the operations against it occupied his army for a considerable period, the country being strong and its king powerful, as has been related. It has its peculiar language. The people are worshippers of idols, and amongst them there are teachers [this is a corruption, eunuchs are intended; see Y. Vol. ii, p. 115 note] at the head of schools for instruction in the principles of their idolatrous religion and of necromancy, whose doctrine prevails amongst all ranks, including the nobles and chiefs of the country. Oxen are found here almost as tall as elephants, but not equal to them in bulk. The inhabitants live upon flesh, milk, and rice, of which they have abundance. Much cotton is grown in the country, and trade flourishes. Spikenard, galangal, ginger, sugar, and many sorts of drugs are amongst the productions of the soil; to purchase which the merchants from various parts of India resort thither. They likewise make purchases of eunuchs, of whom there are numbers in the country, as slaves; for all the prisoners taken in war are presently emasculated; and as every prince and person of rank is desirous of having them for the custody of their women, the merchants obtain a large profit by carrying them to other kingdoms, and there disposing of them. This province is thirty days’ journey in extent, and at the eastern extremity of it lies a country named Kangigu.

   [Omitted in Frangham. See Appendix I. Note 317, p. 319.]

Of the province of Kangigu ("Ciugi" or "Cangigu,"
   Upper Laos)

Kangigu is a province situated towards the east, and is governed by a king. The people are idolaters, have a peculiar language, and made a voluntary submission to the Grand Khan, to whom they pay an annual tribute. The king is
devoted to sensual pleasures. He has about three hundred wives; and when he hears of any handsome woman, he sends for her, and adds her to the number. Gold is found here in large quantities, and also many kinds of drugs; but, being an inland country, distant from the sea, there is little opportunity of vending them. There are elephants in abundance, and other beasts. The inhabitants live upon flesh, rice, and milk. They have no wine made from grapes, but prepare it from rice and a mixture of drugs. Both men and women have their bodies punctured all over, in figures of beasts and birds; and there are among them practitioners whose sole employment it is to trace out these ornaments with the point of a needle, upon the hands, the legs, and the breast. When a black colouring stuff has been rubbed over these punctures, it is impossible, either by water or otherwise, to efface the marks. The man or woman who exhibits the greatest profusion of these figures, is esteemed the most handsome. [A fuller account of the tattooing is found in 7. See B. p. 126 note b.]

[Omitted in Frampton. See Appendix I. Note 317, p. 219.]

Of the province of Amu ("Aniu" or "Anin,"
the S.E. corner of Yunnan)

Amu, also, is situated towards the east, and its inhabitants are subjects of the Grand Khan. They are idolaters, and live upon the flesh of their cattle and the fruits of the earth. They have a peculiar language. The country produces many horses and oxen, which are sold to the itinerant merchants, and conveyed to India. Buffaloes also, as well as oxen, are numerous, in consequence of the extent and excellence of the pastures. Both men and women wear rings, of gold and silver, upon their wrists, arms, and legs; but those of the females are the more costly. The distance between this province and that of Kangigu is twenty-five [the French texts read fifteen] days' journey, and thence to Bangala is twenty days' journey. We shall now speak of a province named Tholoman, situated eight days' journey from the former.

[Omitted in Frampton. See Appendix I. Note 317, p. 219.]

Of Tholoman ("Toloman" or "Coloman," the western frontier of Kwei-chau)

The province of Tholoman lies towards the east, and its inhabitants are idolaters. They have a peculiar language, and are subjects of the Grand Khan. The people are tall and good-looking; their complexions inclining rather to brown than fair.
They are just in their dealings, and brave in war. Many of their towns and castles are situated upon lofty mountains. They burn the bodies of their dead; and the bones that are not reduced to ashes, they put into wooden boxes, and carry them to the mountains, where they conceal them in caverns of the rocks, in order that no wild animal may disturb them. Abundance of gold is found here. For the ordinary small currency they use the porcelain shells that come from India; and this sort of money prevails also in the two before-mentioned provinces of Kangigu and Amu. Their food and drink are the same that has been already mentioned.

[Omitted in Fromont. See Appendix I, Note 317, p. 219.]

Of the cities of Chintigu, Sidin-fu, Gin-gui and Pazan-fu  
(Kwei-chau, Ch’eng-tu fu, Chochoau and Ho-kien fu)

Leaving the province of Tholoman, and pursuing a course towards the east, you travel for twelve days by a river, on each side of which lie many towns and castles; when at length you reach the large and handsome city of Chintigu, the inhabitants of which are idolaters, and are the subjects of the Grand Khan. They are traders and artisans. They make cloth of the bark of certain trees, which looks well, and is the ordinary summer clothing of both sexes. The men are brave warriors. They have no other kind of money than the stamped paper of the Grand Khan.

In this province the tigers are so numerous, that the inhabitants, from apprehension of their ravages, cannot venture to sleep at night out of their towns; and those who navigate the river dare not go to rest with their boats moored near the banks; for these animals have been known to plunge into the water, swim to the vessel, and drag the men from thence; but find it necessary to anchor in the middle of the stream, where, in consequence of its great width, they are in safety. In this country are likewise found the largest and fiercest dogs that can be met with; so courageous and powerful are they, that a man, with a couple of them, may be an overmatch for a tiger. Armed with a bow and arrows, and thus attended, should he meet a tiger, he sets on his intrepid dogs, who instantly advance to the attack. The animal instinctively seeks a tree, against which to place himself, in order that the dogs may not be able to get behind him, and that he may have his enemies in front. With this intent, as soon as he perceives the dogs, he makes towards the tree, but with a slow pace, and by no means running, that he may not show any signs of fear, which his pride would not allow. During this deliberate movement, the dogs fasten upon him, and the man plies him with his arrows. He, in his turn, endeavours to seize the dogs, but they are too nimble for him, and
draw back, when he resumes his slow march; but before he can gain his position, he has been wounded by so many arrows, and so often bitten by the dogs, that he falls through weakness and from loss of blood. By these means it is that he is at length taken. [F. gives the above description as part of his Ch. 83, but makes the animal an elephant instead of a tiger.]

There is here an extensive manufacture of silks, which are exported in large quantities to other parts by the navigation of the river, which continues to pass amongst towns and castles; and the people subsist entirely by trade. At the end of twelve days, you arrive at the city of Sidin-fu, of which an account has been already given. From thence, in twenty days, you reach Gin-gui, and in four days more the city of Pazan-fu, which belongs to Cathay, and lies towards the south, in returning by the other side of the province. The inhabitants worship idols, and burn the bodies of their dead. There are here also certain Christians, who have a church. They are subjects of the Grand Khan, and his paper money is current among them. They gain their living by trade and manufacture, having silk in abundance, of which they weave tissues mixed with gold, and also very fine scarfs. This city has many towns and castles under its jurisdiction. A great river flows beside it, by means of which large quantities of merchandise are conveyed to the city of Kanbalu; for by the digging of many canals it is made to communicate with the capital. But we shall take our leave of this, ...

[Fromton, Ch. 86, p. 86; Appendix I. Note 324, p. 221.]

Of the city of Tudin-fu ("Candrafra," "Tandinfu," Yen-chau)

When you depart from Chan-gli, and travel southwards six days' [so also B., but Y. reads "five"] journey, you pass many towns and castles of great importance and grandeur, whose inhabitants worship idols, and burn the bodies of their dead. They are the subjects of the Grand Khan, and receive his paper money as currency. They subsist by trade and manufactures, and have provisions in abundance. At the end of these six days you arrive at a city named Tudin-fu, which was formerly a magnificent capital, but the Grand Khan reduced it to his subjection by force of arms. It is rendered a delightful residence by the gardens which surround it, stored as they are with handsome shrubs and excellent fruits. Silk is produced here in large quantities. It has under its jurisdiction eleven cities and considerable towns of the empire, all places of great trade, and having abundance of silk. It was the seat of government of its own king, before the period of its reduction by
the Grand Khan. In 1272 [Y. reads 1273] the latter appointed one of his officers of the highest rank, named Lucansor [corrupted from “Lūtam Sangon” of fr. 11:16 and “Liyan Sangon” of Y. See Pelliot, Journ. As. 1913, p. 584 n., and Moule, T'oung Pao, July 1915, p. 417] to the government of this city, with a command of eighty thousand horse, for the protection of that part of the country. This man upon finding himself master of a rich and highly productive district, and at the head of so powerful a force, became intoxicated with pride, and formed schemes of rebellion against his sovereign. With this he tampered with the principal persons of the city, persuaded them to become partakers in his evil designs, and by their means succeeded in producing a revolt throughout all the towns and fortified places of the province. As soon as the Grand Khan became acquainted with these traitorous proceedings, he despatched to that quarter an army of a hundred thousand men, under the orders of two others of his nobles, one of whom was named Angul [read Aguil] and the other Mongatai. When the approach of this force was known to Lucansor, he lost no time in assembling an army no less numerous than that of his opponents, and brought them as speedily as possible to action. There was much slaughter on both sides, when at length, Lucansor being killed, his troops betook themselves to flight. Many were slain in the pursuit, and many were made prisoners. These were conducted to the presence of the Grand Khan, who caused the principals to be put to death, and pardoning the others took them into his own service, to which they ever afterwards continued faithful. [At this point the newly found Ť text adds 64 entirely new lines. See B. pp. 130-132.]

[Frompton, Ch. 86, p. 86; Appendix I. Note 305, p. 222.]

Of the city of Singui-matu (Tsi-ning-chau)

TRAVELLING from Tudiin-fu three [M. originally had “seven”] days, in a southerly direction, you pass many considerable towns and strong places, where commerce and manufactures flourish. The inhabitants are idolaters, and are subjects of the Grand Khan. The country abounds with game, both beasts and birds, and produces an ample supply of the necessaries of life. At the end of three days you arrive at the city of Singui-matu [see above], within which, but on the southern side, passes a large and deep river, which the inhabitants divided into two branches, one of which, taking its course to the east, runs through Kataia, whilst the other, taking a westerly course, passes towards the province of Manji. This river is navigated by so many vessels that the number might seem incredible, and serves to convey from both provinces, that is, from the one province to the other, every requisite article of consumption. It is indeed surprising to observe
the multitude and the size of the vessels that are continually passing and repassing, laden with merchandise of the greatest value. On leaving Singui-matu and traveling towards the south for sixteen days, you unceasingly meet with commercial towns and with castles. The people throughout the country are idolaters, and subjects of the Grand Khan.

21. As both Frampton and Ramusio omit the chapters on the cities of "Linju," "Piju," and "Siju" they are given below from the translation by Yule, corrected, however, by fr. 1116.

In Frampton's text they should come at the end of Ch. 86. See Appendix I, Note 326, p. 222.

Yule, Bk. II, Ch. 133; Ben., Chs. cxxxvii and cxxxviii.

Concerning the cities of Linju and Piju (Süchaufu and Pei-chau)

On leaving the city [fr. 1116 has "ceste ville de Singiu"] of Sinju-matu you travel for eight days towards the south, always coming to great and rich towns and villages flourishing with trade and manufactures. The people are all subjects of the Great Khan, use paper-money, and burn their dead. At the end of those eight days you come to the city of Linju, in the province of the same name of which it is the capital. It is a rich and noble city, and the men are good soldiers, notwithstanding they carry on great trade and manufactures [fr. 1116 also has "Il sunt ydres..."]. There is a great abundance of game in both beasts and birds, and all the necessaries of life are in profusion. The place stands on the river of which I told you above. And they have here great numbers of vessels, even greater than those of which I spoke before, and these transport a great amount of costly merchandise. [Here the next chapter of B. commences.]

So, quitting this province and city [fr. 1116 has only "cité..."] of Linju, you travel three days more towards the south, constantly finding numbers of rich towns and villages. These still belong to Cathay, and the people are all idolaters, burning their dead, and using paper-money, that I mean of their Lord the Great Khan, whose subjects they are [fr. 1116 simply says, "et sunt ut grant Kaan," but adds, "Et ausint sunt (com) les autres que je vos ai contés en ariere"]: This is the finest country for game, whether in beasts or birds, that is anywhere to be found, and all the necessaries of life are in profusion.

At the end of those three days you find the city of Piju, a great, rich, and noble city, with large trade and manufactures, and a great production of silk. This city stands at the entrance to the great province of Manzi, and there reside at it a great number of merchants who despatch carts from this place loaded with great quantities of goods to the different towns ["towns and villages" in fr. 1116] of Manzi.
The city brings in a great revenue to the Great Khan [fr. 1116 adds: "Il n'a a autre cause que a mentovoir face; et par ce nos en partiron et vos conteron de un autre cité, qui est appelé Gingiu que est encore a midi"].

Yule, Bk. ii, Ch. lxiv; Ben., Ch. cxxxix

Concerning the city of Siju, and the Great River Caramoran (Su-t'sien and the old bed of the Hwang ho, or Yellow River)

When you leave Piju [fr. 1116 has "la cite de Pingiu"] you travel towards the south for two days, through beautiful districts abounding in everything, and in which you find quantities of all kinds of game. At the end of those two days you reach the city of Siju ["Gingiu"], a great, rich, and noble city, flourishing with trade and manufactures. The people are idolaters, burn their dead, use paper-money, and are subjects of the Great Khan [Y. omits the last part of this now usual formula, found in fr. 1116: "and use paper-money"].

This ends the portions omitted in F. The rest of Y. Bk. ii, Ch. lxiv and B. Ch. cxxxix corresponds roughly to F. Ch. 87, p. 87 of this volume.

[Frombbo, Ch. 88, p. 88; Appendix I, Note 339, p. 225.]

Of the most noble province of Manji, and of the manner in which it was subdued by the Grand Khan

The province of Manji is the most magnificent and the richest that is known in the eastern world. About the year 1269 it was subject to a prince who was styled Fanfur, and who surpassed in power and wealth any other that for a century had reigned in that country. His disposition was pacific, and his actions benevolent. So much was he beloved by his people, and such the strength of his kingdom, enclosed by rivers of the largest size, that his being molested by any power upon earth was regarded as an impossible event. The effect of this opinion was, that he neither paid any attention himself to military affairs, nor encouraged his people to become acquainted with military exercises. The cities of his dominions were remarkably well fortified, being surrounded by deep ditches, a bow-shot in width, and full of water. He did not keep up any force in cavalry, because he was not apprehensive of attack. The means of increasing his enjoyments and multiplying his pleasures were the chief employment of his thoughts. He maintained at his court, and kept near his person, about a thousand beautiful women, in whose society he took delight. He was a friend to peace and to justice, which he ad-
ministered strictly. The smallest act of oppression, or injury of any kind, committed by one man against another, was punished in an exemplary manner, without respect of persons. Such indeed was the impression of his justice, that when shops, filled with goods, happened, through the negligence of the owners, to be left open, no person dared to enter them, or to rob them of the smallest article. Travellers of all descriptions might pass through every part of the kingdom, by night as well as by day, freely and without apprehension of danger. He was religious, and charitable to the poor and needy. Children whom their wretched mothers exposed in consequence of their inability to rear them, he caused to be saved and taken care of, to the number of twenty thousand annually. When the boys attained a sufficient age, he had them instructed in some handicraft, and afterwards married them to young women who were brought up in the same manner.

Very different from the temper and habits of Fanfur were those of Kublai-khan, emperor of the Tartars, whose whole delight consisted in thoughts of a warlike nature, of the conquest of countries, and of extending his renown. After having annexed to his dominions a number of provinces and kingdoms, he now directed his views to the subduing that of Manji, and for this purpose assembled a numerous army of horse and foot, the command of which he gave to a general named Chin-san Bay-an, which signifies in our language, the “Hundred-eyed.” A number of vessels were likewise put under his orders, with which he proceeded to the invasion of Manji. Upon landing there, he immediately summoned the inhabitants of the city of Koi-gan-zu to surrender to the authority of his sovereign. Upon their refusal to comply, instead of giving orders for an assault, he advanced to the next city, and when he there received a similar answer, proceeded to a third and a fourth, with the same result. Deeming it no longer prudent to leave so many cities in his rear, whilst not only his army was strong, but he expected to be soon joined by another of equal force, which the Grand Khan was to send to him from the interior, he resolved upon the attack of one of these cities; and having, by great exertions and consummate skill, succeeded in carrying the place, he put every individual found in it to the sword. As soon as the intelligence of this event reached the other cities, it struck their inhabitants with such consternation and terror, that of their own accord they hastened to declare their submission. This being effected, he advanced, with the united force of his two armies, against the royal city of Kinsai, the residence of king Fanfur, who felt all the agitation and dread of a person who had never seen a battle, nor been engaged in any sort of warfare. Alarmed for the safety of his person, he made his escape to a fleet of vessels that lay in readiness for the purpose, and embarking all his treasure and valuable effects, left the charge of the city to his queen, with directions for its being defended to the utmost; feeling assured that her sex would be a protection to her, in the event of her falling into the hands of the enemy. He from thence proceeded
to sea, and reaching certain islands, where were some strongly fortified posts, he continued there till his death. After the queen had been left in the manner related, it is said to have come to her knowledge that the king had been told by his astrologers that he could never be deprived of his sovereignty by any other than a chief who should have a hundred eyes. On the strength of this declaration she felt confident, notwithstanding that the city became daily more and more straitened, that it could not be lost, because it seemed a thing impossible that any mortal could have that number of eyes. Inquiring, however, the name of the general who commanded the enemy's troops, and being told it was Chin-san Bay-an, which means a hundred eyes, she was seized with horror at hearing it pronounced, as she felt a conviction that this must be the person who, according to the saying of the astrologers, might drive her husband from his throne. Overcome by womanish fear, she no longer attempted to make resistance, but immediately surrendered. Being thus in possession of the capital, the Tartars soon brought the remainder of the province under their subjection. The queen was sent to the presence of Kublai-khan, where she was honourably received by him, and an allowance was by his orders assigned, that enabled her to support the dignity of her rank. Having stated the manner in which the conquest of Manji was effected, we shall now speak of the different cities of that province, . . .

[Foerster, Ch. 93, pp. 90, 91; Appendix I. Note 353, p. 228.]

Of the City of Sa-yen-fu, that was taken by the means of MM. Nicolo and Maffeo Polo (Siege of Siang-Yang)

Sa-yen-fu is a considerable city of the province of Manji, having under its jurisdiction twelve wealthy and large towns. It is a place of great commerce and extensive manufactures. The inhabitants burn the bodies of their dead, and are idolaters. They are the subjects of the Grand Khan, and use his paper currency. Raw silk is there produced in great quantity, and the finest silks, intermixed with gold, are woven. Game of all kinds abounds. The place is amply furnished with everything that belongs to a great city, and by its uncommon strength it was enabled to stand a siege of three years; refusing to surrender to the Grand Khan, even after he had obtained possession of the province of Manji. The difficulties experienced in the reduction of it were chiefly occasioned by the army's not being able to approach it, excepting on the northern side; the others being surrounded with water, by means of which the place continually received supplies, which it was not in the power of the besiegers to prevent. When the operations were reported to His Majesty, he felt extremely hurt that this place alone should
obstinately hold out, after all the rest of the country had been reduced to obedience. The circumstance having come to the knowledge of the brothers Nicolo and Maffeo, who were then resident at the imperial court, they immediately presented themselves to the Grand Khan, and proposed to him that they should be allowed to construct machines, such as were made use of in the West, capable of throwing stones of three hundred pounds weight, by which the buildings of the city might be destroyed and the inhabitants killed. Their memorial was attended to by the Grand Khan, who, warmly approving of the scheme, gave orders that the ablest smiths and carpenters should be placed under their direction; amongst whom were some Nestorian Christians, who proved to be most able mechanics. In a few days they completed their mangonels, according to the instructions furnished by the two brothers; and a trial being made of them in the presence of the Grand Khan, and of his whole court, an opportunity was afforded of seeing them cast stones, each of which weighed three hundred pounds. They were then put on board of vessels, and conveyed to the army. When set up in front of the city of Sa-yen-fa, the first stone projected by one of them fell with such weight and violence upon a building, that a great part of it was crushed, and fell to the ground. So terrified were the inhabitants by this mischief, which to them seemed to be the effect of a thunderbolt from heaven, that they immediately deliberated upon the expediency of surrendering. Persons authorised to treat were accordingly sent from the place, and their submission was accepted on the same terms and conditions as had been granted to the rest of the province. This prompt result of their ingenuity increased the reputation and credit of these two Venetian brothers in the opinion of the Grand Khan and of all his courtiers.

Of the city of Sin-gui, and of the very great river Kiang
(Tcheng on the Yangtze)

Leaving the city of Sa-yen-fa, and proceeding fifteen days' journey towards the south-east, you reach the city of Sin-gui, which, although not large, is a place of great commerce. The number of vessels that belong to it is prodigious, in consequence of its being situated near the Kiang, which is the largest river in the world, its width being in some places ten, in others eight, and in others six miles. Its length, to the place where it discharges itself into the sea, is upwards of one hundred days' journey. It is indebted for its great size to the vast number of other navigable rivers that empty their waters into it, which have their sources in distant countries. A great number of cities and large towns are situated upon its banks,
APPENDIX II

and more than two hundred, with sixteen provinces, partake of the advantages of its navigation, by which the transport of merchandise is to an extent that might appear incredible to those who have not had an opportunity of witnessing it. When we consider, indeed, the length of its course, and the multitude of rivers that communicate with it (as has been observed), it is not surprising that the quantity and value of articles for the supply of so many places, lying in all directions, should be incalculable. The principal commodity, however, is salt, which is not only conveyed by means of the Kiang, and the rivers connected with it, to the towns upon their banks, but afterwards from thence to all places in the interior of the country. On one occasion, when Marco Polo was at the city of Sin-gui, he saw there not fewer than five thousand vessels; and yet there are other towns along the river where the number is still more considerable. All these vessels are covered with a kind of deck, and have a mast with one sail. Their burthen is in general about four thousand cantari, or quintals, of Venice, and from that upwards to twelve thousand cantari, which some of them are capable of loading. They do not employ hempen cordage, excepting for the masts and sails (standing and running rigging). They have canes of the length of fifteen paces, such as have been already described, which they split, in their whole length, into very thin pieces, and these, by twisting them together, they form into ropes three hundred paces long. So skillfully are they manufactured, that they are equal in strength to cordage made of hemp. With these ropes the vessels are tracked along the rivers, by means of ten or twelve horses to each, as well upwards, against the current, as in the opposite direction. At many places near the banks of this river there are hills and small rocky eminences, upon which are erected idol temples and other edifices, and you find a continual succession of villages and inhabited places.

[Frampton, Ch. 98-100, pp. 93-95; Appendix I. Note 368, p. 233.]

Of the noble and magnificent city of Kin-sai (Hang-chau)

Upon leaving Va-giu you pass, in the course of three days' [F. has "five"; possibly an attempt to make up for the omission of "Vuju," etc.] journey, many towns, castles, and villages, all of them well inhabited and opulent. The people are idolaters, and the subjects of the Grand Khan, and they use paper money and have abundance of provisions. At the end of three days you reach the noble and magnificent city of Kin-sai, a name that signifies "the celestial city," and which it merits from its preeminence to all others in the world, in point of grandeur and beauty, as well as from its abundant delights, which might lead an inhabitant to imagine himself in paradise. This city was frequently visited by Marco Polo, who
carefully and diligently observed and inquired into every circumstance respecting it, all of which he entered in his notes, from whence the following particulars are briefly stated. According to common estimation, this city is an hundred miles in circuit. Its streets and canals are extensive, and there are squares, or market-places, which, being necessarily proportioned in size to the prodigious concourse of people by whom they are frequented, are exceedingly spacious. It is situated between a lake of fresh and very clear water on the one side, and a river of great magnitude on the other, the waters of which, by a number of canals, large and small, are made to run through every quarter of the city, carrying with them all the filth into the lake, and ultimately to the sea. This, whilst it contributes much to the purity of the air, furnishes a communication by water, in addition to that by land, to all parts of the town; the canals and the streets being of sufficient width to allow of boats on the one, and carriages in the other, conveniently passing, with articles necessary for the consumption of the inhabitants. It is commonly said that the number of bridges, of all sizes, amounts to twelve thousand. Those which are thrown over the principal canals and are connected with the main streets, have arches so high, and built with so much skill, that vessels with [M. had “without”] their masts can pass under them, whilst, at the same time, carts and horses are passing over their heads—so well is the slope from the street adapted to the height of the arch. If they were not in fact so numerous, there would be no convenience of crossing from one place to another.

Beyond the city, and enclosing it on that side, there is a fosse about forty miles in length, very wide, and full of water that comes from the river before mentioned. This was excavated by the ancient kings of the province, in order that when the river should overflow its banks, the superfluous water might be diverted into this channel; and to serve at the same time as a measure of defence. The earth dug out from thence was thrown to the inner side, and has the appearance of many hillocks surrounding the place. There are within the city ten principal squares or market-places, besides innumerable shops along the streets. Each side of these squares is half a mile in length, and in front of them is the main street, forty paces in width, and running in a direct line from one extremity of the city to the other. It is crossed by many low and convenient bridges. These market-squares (two miles in their whole dimension) are at the distance of four miles from each other. In a direction parallel to that of the main street, but on the opposite side of the squares, runs a very large canal, on the nearer bank of which capacious warehouses are built of stone, for the accommodation of the merchants who arrive from India and other parts, together with their goods and effects; in order that they may be conveniently situated with respect to the market-places. In each of these, upon three days in every week, there is an assemblage of from forty to fifty thousand persons, who attend the markets and supply them with every article of provision that can be desired. There is an abundant quantity of game of all kinds, such as
roebucks, stags, fallow deer, hares; and rabbits, together with partridges, pheasants, francolins, quails, common fowls, capons, and such numbers of ducks and geese as can scarcely be expressed; for so easily are they bred and reared on the lake, that, for the value of a Venetian silver groat, you may purchase a couple of geese and two couple of ducks. There, also, are the shambles, where they slaughter cattle for food, such as oxen, calves, kids, and lambs, to furnish the tables of rich persons and of the great magistrates. As to people of the lower classes, they do not scruple to eat every other kind of flesh, however unclean, without any discrimination. At all seasons there is in the markets a great variety of herbs and fruits, and especially pears of an extraordinary size, weighing ten pounds each, that are white in the inside, like paste, and have a very fragrant smell. There are peaches also, in their season, both of the yellow and the white kind, and of a delicious flavour. Grapes are not produced there, but are brought in a dried state, and very good, from other parts. This applies also to wine, which the natives do not hold in estimation, being accustomed to their own liquor prepared from rice and spices. From the sea, which is fifteen miles distant, there is daily brought up the river, to the city, a vast quantity of fish; and in the lake also there is abundance, which gives employment at all times to persons whose sole occupation it is to catch them. The sorts are various according to the season of the year, and, in consequence of the official carried thither from the town, they become large and rich. At the sight of such an importation of fish, you would think it impossible that it could be sold; and yet, in the course of a few hours, it is all taken off, so great is the number of inhabitants, even of those classes which can afford to indulge in such luxuries, for fish and flesh are eaten at the same meal. Each of the ten market-squares is surrounded with high dwelling-houses, in the lower part of which are shops, where every kind of manufacture is carried on, and every article of trade is sold; such, amongst others, as spices, drugs, trinkets, and pearls. In certain shops nothing is vended but the wine of the country, which they are continually brewing, and serve out fresh to their customers at a moderate price. The streets connected with the market-squares are numerous, and in some of them are many cold baths, attended by servants of both sexes, to perform the offices of ablution for the men and women who frequent them, and who from their childhood have been accustomed at all times to wash in cold water, which they reckon highly conducive to health. At these bathing places, however, they have apartments provided with warm water, for the use of strangers, who, from not being habituated to it, cannot bear the shock of the cold. All are in the daily practice of washing their persons, and especially before their meals. [See Y., Vol. n. p. 189, and note 8 on p. 198.]

In other streets are the habitations of the courtesans, who are here in such numbers as I dare not venture to report; and not only near the squares, which is the situation usually appropriated for their residence, but in every part of the city they are to be found, adorned with much finery, highly perfumed, occupying
well-furnished houses, and attended by many female domestics. These women are accomplished, and are perfect in the arts of blandishment and dalliance, which they accompany with expressions adapted to every description of person; insomuch that strangers who have once tasted of their charms, remain in a state of fascination, and become so enchanted by their meretricious arts, that they can never divest themselves of the impression. Thus intoxicated with sensual pleasures, when they return to their homes they report that they have been in Kin-sai, or the celestial city, and pant for the time when they may be enabled to revisit paradise. In other streets are the dwellings of the physicians and the astrologers, who also give instructions in reading and writing, as well as in many other arts. They have apartments also amongst those which surround the market-squares. On opposite sides of each of these squares there are two large edifices, where officers appointed by the Grand Khan are stationed, to take immediate cognisance of any differences that may happen to arise between the foreign merchants, or amongst the inhabitants of the place. It is their duty likewise to see that the guards upon the several bridges in their respective vicinities (of whom mention shall be made hereafter) are duly placed, and in cases of neglect, to punish the delinquents at their discretion.

On each side of the principal street, already mentioned as extending from one end of the city to the other, there are houses and mansions of great size, with their gardens, and near to these, the dwellings of the artisans, who work in shops, at their several trades; and at all hours you see such multitudes of people passing and repassing, on their various avocations, that the providing food in sufficiency for their maintenance might be deemed an impossibility; but other ideas will be formed when it is observed that, on every market-day, the squares are crowded with tradespeople, who cover the whole space with the articles brought by carts and boats, for all of which they find a sale. By instancing the single article of pepper, some notion may be formed of the whole quantity of provisions, meat, wine, groceries, and the like, required for the consumption of the inhabitants of Kin-sai; and of this, Marco Polo learned from an officer employed in the Grand Khan's customs, the daily amount was forty-three loads, each load being two hundred and forty-three pounds. [R. has "dugento, & ventitre," so we must alter M.'s translation to "229." This is supported by X as well as Y.]

The inhabitants of the city are idolaters, and they use paper money as currency. The men as well as the women have fair complexions, and are handsome. The greater part of them are always clothed in silk, in consequence of the vast quantity of that material produced in the territory of Kin-sai, exclusively of what the merchants import from other provinces. Amongst the handicraft trades exercised in the place, there are twelve considered to be superior to the rest, as being more generally useful; for each of which there are a thousand workshops, and each shop furnishes employment for ten, fifteen, or twenty workmen, and in a few instances
as many as forty, under their respective masters. The opulent principals in these manufactories do not labour with their own hands, but, on the contrary, assume airs of gentility and affect parade. Their wives equally abstain from work. They have much beauty, as has been remarked, and are brought up with delicate and languid habits. The costliness of their dresses, in silks and jewellery, can scarcely be imagined. Although the laws of their ancient kings ordained that each citizen should exercise the profession of his father, yet they were allowed, when they acquired wealth, to discontinue the manual labour, provided they kept up the establishment, and employed persons to work at their paternal trades. Their houses are well built and richly adorned with carved work. So much do they delight in ornaments of this kind, in paintings, and fancy buildings, that the sums they lavish on such objects are enormous. The natural disposition of the native inhabitants of Kin-sai is pacific, and by the example of their former kings, who were themselves unwarlike, they have been accustomed to habits of tranquillity. The management of arms is unknown to them, nor do they keep any in their houses. Contentious broils are never heard among them. They conduct their mercantile and manufacturing concerns with perfect candour and probity. They are friendly towards each other, and persons who inhabit the same street, both men and women, from the mere circumstance of neighbourhood, appear like one family. In their domestic manners they are free from jealousy or suspicion of their wives, to whom great respect is shown, and any man would be accounted infamous who should presume to use indecent expressions to a married woman. To strangers also, who visit their city in the way of commerce, they give proofs of cordiality, inviting them freely to their houses, showing them hospitable attention, and furnishing them with the best advice and assistance in their mercantile transactions. On the other hand, they dislike the sight of soldiery, not excepting the guards of the Grand Khan, as they preserve the recollection that by them they were deprived of the government of their native kings and rulers.

On the borders of the lake [F. has "in" instead of "on" the lake] are many handsome and spacious edifices belonging to men of rank and great magistrates. There are likewise many idol temples, with their monasteries, occupied by a number of monks, who perform the service of the idols. Near the central part are two islands, upon each of which stands a superb building, with an incredible number of apartments and separate pavilions ["Pallaces" in F.]. When the inhabitants of the city have occasion to celebrate a wedding, or to give a sumptuous entertainment, they resort to one of these islands, where they find ready for their purpose every article that can be required, such as vessels, napkins, table-linen, and the like, which are provided and kept there at the common expense of the citizens, by whom also the buildings were erected. It may happen that at one time there are a hundred parties assembled there, at wedding or other feasts, all of whom, notwithstanding, are accommodated with separate rooms or pavilions,
so judiciously arranged that they do not interfere with or incommode each other. In addition to this, there are upon the lake a great number of pleasure-vessels or barges, calculated for holding ten, fifteen, to twenty persons, being from fifteen to twenty paces in length, with a wide and flat flooring, and not liable to heel to either side in passing through the water. Such persons as take delight in the amusement, and mean to enjoy it, either in the company of their women or that of their male companions, engage one of these barges, which are always kept in the nicest order, with proper seats and tables, together with every other kind of furniture necessary for giving an entertainment. The cabins have a flat roof or upper deck, where the boatmen take their place, and by means of long poles, which they thrust to the bottom of the lake (not more than one or two fathoms in depth), they shove the barges along, until they reach the intended spot. These cabins are painted withinside of various colours and with a variety of figures; all parts of the vessel are likewise adorned with painting. There are windows on each side, which may either be kept shut, or opened, to give an opportunity to the company, as they sit at table, of looking out in every direction and feasting their eyes on the variety and beauty of the scenes as they pass them. And truly the gratification afforded in this manner, upon the water, exceeds any that can be derived from the amusements on the land; for as the lake extends the whole length of the city, on one side, you have a view, as you stand in the boat, at a certain distance from the shore, of all its grandeur and beauty, its palaces, temples, convents, and gardens, with trees of the largest size growing down to the water's edge, whilst at the same time you enjoy the sight of other boats of the same description, continually passing you, filled in like manner with parties in pursuit of amusement. In fact, the inhabitants of this place, as soon as the labours of the day have ceased, or their mercantile transactions are closed, think of nothing else than of passing the remaining hours in parties of pleasure, with their wives or their mistresses, either in these barges, or about the city in carriages, of which it will here be proper to give some account, as constituting one of the amusements of these people.

It must be observed, in the first place, that the streets of Kin-sai are all paved with stones and bricks, and so likewise are all the principal roads extending from thence through the province of Manji, by means of which passengers can travel to every part without soiling their feet; but as the couriers of His Majesty, who go on horseback with great speed, cannot make use of the pavement, a part of the road, on one side, is on their account left unpaved. The main street of the city, of which we have before spoken, as leading from one extremity to the other, is paved with stone and brick to the width of ten paces on each side, the intermediate part being filled up with small gravel, and provided with arched drains for carrying off the rain-water that falls, into the neighbouring canals, so that it remains always dry. On this gravel it is that the carriages are continually passing and repassing. They are of a long shape, covered at top, have curtains and cushions of silk, and
are capable of holding six persons. Both men and women who feel disposed to take their pleasure, are in the daily practice of hiring them for that purpose, and accordingly at every hour you may see vast numbers of them driven along the middle part of the street. Some of them proceed to visit certain gardens, where the company are introduced, by those who have the management of the place, to shady recesses contrived by the gardeners for that purpose; and here the men indulge themselves all day in the society of their women, returning home, when it becomes late, in the manner they came.

It is the custom of the people of Kin-sai, upon the birth of a child, for the parents to make a note, immediately, of the day, hour, and minute at which the delivery took place. They then inquire of an astrologer under what sign or aspect of the heavens the child was born; and his answer is likewise committed carefully to writing. When therefore he is grown up, and is about to engage in any mercantile adventure, voyage, or treaty of marriage, this document is carried to the astrologer, who, having examined it, and weighed all the circumstances, pronounces certain oracular words, in which these people, who sometimes find them justified by the event, place great confidence. Of these astrologers, or rather magicians, great numbers are to be met with in every market-place, and no marriage is ever celebrated until an opinion has been pronounced upon it by one of that profession.

It is also their custom, upon the death of any great and rich personage, to observe the following ceremonies. The relations, male and female, clothe themselves in coarse dresses, and accompany the body to the place appointed for burning it. The procession is likewise attended by performers on various musical instruments, which are sounded as it moves along, and prayers to their idols are chanted in a loud voice. When arrived at the spot, they throw into the flame many pieces of cotton-paper, upon which are painted representations of male and female servants, horses, camels, silk wrought with gold, as well as of gold and silver money. This is done, in consequence of their belief that the deceased will possess in the other world all these conveniences, the former in their natural state of flesh and bones, together with the money and the silks. As soon as the pile has been consumed, they sound all the instruments of music at the same time, producing a loud and long-continued noise; and they imagine that by these ceremonies their idols are induced to receive the soul of the man whose corpse has been reduced to ashes, in order to its being regenerated in the other world, and entering again into life.

In every street of this city there are stone buildings or towers, to which, in case of a fire breaking out in any quarter (an accident by no means unusual, as the houses are mostly constructed of wood), the inhabitants may remove their effects for security. By a regulation which His Majesty has established, there is a guard of ten watchmen stationed, under cover, upon all the principal bridges, of whom five do duty by day and five by night. Each of these guard-rooms is provided with
a sonorous wooden instrument as well as one of metal, together with a clepsydra (horinoto), by means of which latter the hours of the day and night are ascertained. As soon as the first hour of the night is expired, one of the watchmen gives a single stroke upon the wooden instrument, and also upon the metal gong (hacino), which announces to the people of the neighbouring streets that it is the first hour. At the expiration of the second, two strokes are given; and so on progressively, increasing the number of strokes as the hours advance. The guard is not allowed to sleep, and must be always on the alert. In the morning, as soon as the sun begins to appear, a single stroke is again struck, as in the evening, and so onwards from hour to hour. Some of these watchmen patrol the streets, to observe whether any person has a light or fire burning after the hour appointed for extinguishing them. Upon making the discovery, they affix a mark to the door, and in the morning the owner of the house is taken before the magistrates, by whom, if he cannot assign a legitimate excuse for his offence, he is condemned to punishment. Should they find any person abroad at an unseasonable hour, they arrest and confine him, and in the morning he is carried before the same tribunal. If, in the course of the day, they notice any person who from lameness or other infirmity is unable to work, they place him in one of the hospitals, of which there are several in every part of the city, founded by the ancient kings, and liberally endowed. When cured, he is obliged to work at some trade. Immediately upon the appearance of fire breaking out in a house, they give the alarm by beating on the wooden machine, when the watchmen from all the bridges within a certain distance assemble to extinguish it, as well as to save the effects of the merchants and others, by removing them to the stone towers that have been mentioned. The goods are also sometimes put into boats, and conveyed to the islands in the lake. Even on such occasions the inhabitants dare not stir out of their houses, when the fire happens in the night-time, and only those can be present whose goods are actually removing, together with the guard collected to assist, which seldom amounts to a smaller number than from one to two thousand men. In cases also of tumult or insurrection amongst the citizens, the services of this police guard are necessary; but, independently of them, His Majesty always keeps on foot a large body of troops, both infantry and cavalry, in the city and its vicinity, the command of which he gives to his ablest officers, and those in whom he can place the greatest confidence, on account of the extreme importance of this province, and especially its noble capital, which surpasses in grandeur and wealth every other city in the world. For the purposes of nightly watch, there are mounds of earth thrown up, at the distance of above a mile from each other, on the top of which a wooden frame is constructed, with a sounding board, which being struck with a mallet by the guard stationed there, the noise is heard to a great distance. If precautions of this nature were not taken upon occasions of fire, there would be danger of half the city being consumed; and their use is obvious also in the event of popular commotion, as, upon the
signal being given, the guards at the several bridges arm themselves, and repair

When the Grand Khan reduced to his obedience the province of Manji, which

APPENDIX II

signal being given, the guards at the several bridges arm themselves, and repair
to the spot where their presence is required.

When the Grand Khan reduced to his obedience the province of Manji, which
until that time had been one kingdom, he thought proper to divide it into nine
parts [F. has "8 kingdomes"], over each of which he appointed a king or viceroy,
who should act as supreme governor of that division, and administer justice to the
people. These make a yearly report to commissioners acting for His Majesty, of
the amount of the revenue, as well as of every other matter pertaining to their
jurisdiction. Upon the third year they are changed, as are all other public officers.
One of these nine viceroys resides and holds his court in the city of Kin-sai, and
has authority over more than a hundred and forty cities and towns, all large and
rich. Nor is this number to be wondered at, considering that in the whole of the
province of Manji there are no fewer than twelve hundred [F. has "1202"],
containing a large population of industrious and wealthy inhabitants. In each of
these, according to its size and other circumstances, His Majesty keeps a garrison,
consisting, in some places, of a thousand, in others of ten or twenty thousand men,
accordingly as he judges the city to be, in its own population, more or less powerful.
It is not to be understood that all these troops are Tartars. On the contrary, they
are chiefly natives of the province of Cathay. The Tartars are universally horse-
men, and cavalry cannot be quartered about those cities which stand in the low,
marshy parts of the province, but only in firm, dry situations, where such troops
can be properly exercised. To the former he sends Cathaians, and such men of the
province of Manji as appear to have a military turn; for it is his practice to make
an annual selection amongst all his subjects of such as are best qualified to bear
arms; and these he enrolls to serve in his numerous garrisons, that may be con-
sidered as so many armies. But the soldiers drawn from the province of Manji he
does not employ in the duty of their native cities; on the contrary, he marches
them to others at the distance of perhaps twenty days' journey, where they are
continued for four or five years, at the expiration of which they are allowed to
return to their homes, and others are sent to replace them. This regulation applies
equally to the Cathaians. The greater part of the revenues of the cities, paid into
the treasury of the Grand Khan, is appropriated to the maintenance of these
garrisons. When it happens that a city is in a state of rebellion (and it is not an
uncommon occurrence for these people, actuated by some sudden exasperation,
or when intoxicated, to murder their governors), a part of the garrison of a neigh-
bouring city is immediately despatched with orders to destroy the place where
such guilty excesses have been committed; whereas it would be a tedious operation
to send an army from another province, that might be two months on its march.
For such purposes, the city of Kin-sai constantly supports a garrison of thirty
thousand soldiers; and the smallest number stationed at any place is one thousand.

It now remains to speak of a very fine palace that was formerly the residence of
king Fanfur, whose ancestors enclosed with high walls an extent of ground ten miles in compass, and divided it into three parts. That in the centre was entered by a lofty portal, on each side of which was a magnificent colonnade, on a flat terrace, the roofs of which were supported by rows of pillars, highly ornamented with the most beautiful azure and gold. The colonnade opposite to the entrance, at the further side of the court, was still grander than the others, its roof being richly adorned, the pillars gilt, and the walls on the inner side ornamented with exquisite paintings, representing the histories of former kings. Here, annually, upon certain days consecrated to the service of their idols, king Fanfur was accustomed to hold his court, and to entertain at a feast his principal nobles, the chief magistrates, and the opulent citizens of Kin-sai. Under these colonnades might be seen, at one time, ten thousand persons suitably accommodated at table. This festival lasted ten or twelve days, and the magnificence displayed on the occasion, in silks, gold, and precious stones, exceeded all imagination; for every guest, with a spirit of emulation, endeavoured to exhibit as much finery as his circumstances would possibly allow. Behind the colonnade last mentioned, or that which fronted the grand portal, there was a wall, with a passage, that divided this exterior court of the palace from an interior court, which formed a kind of large cloister, with its rows of pillars sustaining a portico that surrounded it, and led to various apartments for the use of the king and queen. These pillars were ornamented in a similar manner, as were also the walls. From this cloister you entered a covered passage or corridor, six paces in width, and of such a length as to reach to the margin of the lake. On each side of this there were corresponding entrances to ten courts, in the form of long cloisters, surrounded by their porticoes, and each cloister or court had fifty apartments, with their respective gardens, the residence of a thousand young women, whom the king retained in his service. Accompanied sometimes by his queen, and on other occasions by a party of these females, it was his custom to take amusement on the lake, in barges covered with silk, and to visit the idol temples on its borders. The other two divisions of this seraglio were laid out in groves, pieces of water, beautiful gardens stered with fruit-trees, and also enclosures for all sorts of animals that are the objects of sport, such as antelopes, deer, stags, hares, and rabbits. Here likewise the king amused himself, in company with his damsels, some in carriages and some on horseback. No male person was allowed to be of these parties, but on the other hand, the females were practised in the art of coursing with dogs, and pursuing the animals that have been mentioned. When fatigued with these exercises, they retired into the groves on the banks of the lake, and there quitting their dresses, rushed into the water in a state of nudity, sportively swimming about, some in one direction and some in another, whilst the king remained a spectator of the exhibition. After this they returned to the palace. Sometimes he ordered his repast to be provided in one of these groves, where the foliage of lofty trees afforded a thick shade, and
was there waited upon by the same damsels. Thus was his time consumed amidst the enervating charms of his women, and in profound ignorance of whatever related to martial concerns, the consequence of which was, that his depraved habits and his pusillanimity enabled the Grand Khan to deprive him of his splendid possessions, and to expel him with ignominy from his throne, as has been already stated. All these particulars were communicated to me, when I was in that city, by a rich merchant of Kin-sai, then very old, who had been a confidential servant of king Fanfur, and was acquainted with every circumstance of his life. Having known the palace in its original state, he was desirous of conducting me to view it. Being at present the residence of the Grand Khan's viceroy, the colonnades are preserved in the style in which they had formerly subsisted, but the chambers of the females had been suffered to go to ruin, and the foundations only were visible. The wall likewise that enclosed the park and gardens was fallen to decay, and neither animals nor trees were any longer to be found there.

At the distance of twenty-five miles [F. has "fifteen myles"] from this city, in a direction to the northward of east, lies the sea, near to which is a town named Gan-pu [F. has "Ganfu" and Y. "Ganfu"], where there is an extremely fine port, frequented by all the ships that bring merchandise from India. The river that flows past the city of Kin-sai forms this port, at the place where it falls into the sea. Boats are continually employed in the conveyance of goods up and down the river, and those intended for exportation are there put on board of ships bound to various parts of India and of Cathay.

Marco Polo, happening to be in the city of Kin-sai at the time of making the annual report to His Majesty's commissioners of the amount of revenue and the number of inhabitants, had an opportunity of observing that the latter were registered at one hundred and sixty toman of fire-places, that is to say, of families dwelling under the same roof; and as a toman is ten thousand, it follows that the whole city must have contained one million six hundred thousand families, amongst which multitude of people there was only one church of Nestorian Christians. Every father of a family, or housekeeper, is required to affix a writing to the door of his house, specifying the name of each individual of his family, whether male or female, as well as the number of his horses. When any person dies, or leaves the dwelling, the name is struck out, and upon the occasion of a birth, it is added to the list. By these means the great officers of the province and governors of the cities are at all times acquainted with the exact number of the inhabitants. The same regulation is observed throughout the province of Cathay as well as of Manji. In like manner, all the keepers of inns and public hotels inscribe in a book the names of those who take up their occasional abode with them, particularising the day and the hour of their arrival and departure; a copy of which is transmitted daily to those magistrates who have been spoken of as stationed in the market-squares. It is a custom in the province of Manji, with the
indigent class of the people, who are unable to support their families, to sell their children to the rich, in order that they may be fed and brought up in a better manner that their own poverty would admit.

[Omitted in Frampton. See Appendix I. Note 386, p. 237.]

Of the Merchant Ships of the Indian Seas

Having treated, in the preceding parts of our work, of various provinces and regions, we shall now take leave of them, and proceed to the account of India, the admirable circumstances of which shall be related. We shall commence with a description of the ships employed by the merchants, which are built of fir-timber. They have a single deck, and below this the space is divided into about sixty small cabins, fewer or more, according to the size of the vessels, each of them affording accommodation for one merchant. They are provided with a good helm. They have four masts, with as many sails, and some of them have two masts which can be set up and lowered again, as may be found necessary. Some ships of the larger class have, besides (the cabins), to the number of thirteen bulk-heads or divisions in the hold, formed of thick planks let into each other (incastroti, mortised or rabbeted). The object of these is to guard against accidents which may occasion the vessel to spring a leak, such as striking on a rock or receiving a stroke from a whale, a circumstance that not unfrequently occurs; for, when sailing at night, the motion through the waves causes a white foam that attracts the notice of the hungry animal. In expectation of meeting with food, it rushes violently to the spot, strikes the ship, and often forces in some part of the bottom. The water, running in at the place where the injury has been sustained, makes its way to the well, which is always kept clear. The crew, upon discovering the situation of the leak, immediately remove the goods from the division affected by the water, which, in consequence of the boards being so well fitted, cannot pass from one division to another. They then repair the damage, and return the goods to that place in the hold from whence they had been taken. The ships are all double-planked; that is, they have a course of sheathing-boards laid over the planking in every part. These are caulked with oakum both within and without, and are fastened with iron nails. They are not coated with pitch, as the country does not produce that article, but the bottoms are smeared over with the following preparation. The people take quick-lime and hemp, which latter they cut small, and with these, when pounded together, they mix oil procured from a certain tree, making of the whole a kind of unguent, which retains its viscous properties more firmly, and is a better material than pitch.
Ships of the largest size require a crew of three hundred men; others, two hundred; and some, one hundred and fifty only, according to their greater or less bulk. They carry from five to six thousand baskets (or mat bags) of pepper. In former times they were of greater burthen than they are at present; but the violence of the sea having in many places broken up the islands, and especially in some of the principal ports, there is a want of depth of water for vessels of such draught, and they have on that account been built, in latter times, of a smaller size. The vessels are likewise moved with oars or sweeps, each of which requires four men to work it. Those of the larger class are accompanied by two or three large barks, capable of containing about one thousand baskets of pepper, and are manned with sixty, eighty, or one hundred sailors. These small craft are often employed to tow the larger, when working their oars, or even under sail, provided the wind be on the quarter, but not when right aft, because, in that case, the sails of the larger vessel must becalm those of the smaller, which would, in consequence, be run down. The ships also carry with them as many as ten small boats, for the purpose of carrying out anchors, for fishing, and a variety of other services. They are slung over the sides, and lowered into the water when there is occasion to use them. The barks are in like manner provided with their small boats. When a ship, having been on a voyage for a year or more, stands in need of repair, the practice is to give her a course of sheathing over the original boarding, forming a third course, which is caulked and paid in the same manner as the others; and this, when she needs further repairs, is repeated, even to the number of six layers, after which she is condemned as unserviceable and not sea-worthy. Having thus described the shipping, we shall proceed to the account of India; but in the first instance we shall speak of certain islands in the part of the ocean where we are at present, and shall commence with the island named Zipangu.

[From *Shipton, Ch. 119 (second half)*, p. 105; Appendix I, Note 416, p. 244.]

Of the Kingdom of Fanfuir

Fanfuir is a kingdom of the same island, governed by its own prince, where the people likewise worship idols, and profess obedience to the Grand Khan. In this part of the country a species of camphor, much superior in quality to any other, is produced. It is named the camphor of Fanfuir, and is sold for its weight in gold. There is not any wheats nor other corn, but the food of the inhabitants is rice, with milk, and the wine extracted from trees in the manner that has been described in the chapter respecting Samara. They have also a tree from which, by a singular process, they obtain a kind of meal. The stem is lofty, and as thick as can be grasped
by two men. When from this the outer bark is stripped, the ligneous substance is
found to be about three inches in thickness, and the central part is filled with pith,
which yields a meal or flour, resembling that procured from the acorn. The pith
is put into vessels filled with water, and is stirred about with a stick, in order that
the fibres and other impurities may rise to the top, and the pure farinaceous part
subside to the bottom. When this has been done, the water is poured off, and the
flour which remains, divested of all extraneous matter, is applied to use, by making
it into cakes and various kinds of pastry. Of this, which resembles barley bread
in appearance and taste, Marco Polo has frequently eaten, and some of it he
brought home with him to Venice. The wood of the tree, in thickness about three
inches (as has been mentioned), may be compared to iron in this respect, that
when thrown into water it immediately sinks. It admits of being split in an even
direction from one end to the other, like the bamboo cane. Of this the natives
make short lances; were they to be of any considerable length, their weight would
render it impossible to carry or to use them. They are sharpened at one end, and
rendered so hard by fire that they are capable of penetrating any sort of armour,
and in many respects are preferable to iron. What we have said on the subject
of this kingdom (one of the divisions of the island) is sufficient. Of the other
kingdoms composing the remaining part we shall not speak, because Marco Polo
did not visit them.

Of the Province of Maabar

The country produces no other grain than rice and sesame. The people go to
battle with lances and shields, but without clothing, and are a despicable war-
like race. They do not kill cattle nor any kind of animals for food, but when
desirous of eating the flesh of sheep or other beasts, or of birds, they procure the
Saracens, who are not under the influence of the same laws and customs, to per-
form the office. Both men and women wash their whole bodies in water twice
every day, that is, in the morning and the evening. Until this ablution has taken
place they neither eat nor drink; and the person who should neglect this observ-
ance, would be regarded as a heretic. It ought to be noticed, that in eating they
make use of the right hand only, nor do they ever touch their food with the left.
For every cleanly and delicate work they employ the former, and reserve the latter
for the base uses of personal abstinence, and other offices connected with the
animal functions. They drink out of a particular kind of vessel, and each individual
from his own, never making use of the drinking pot of another person. When they
drink they do not apply the vessel to the mouth, but hold it above the head, and
pour the liquor into the mouth, not suffering the vessel on any account to touch
the lips. In giving drink to a stranger, they do not hand their vessel to him, but,
if he is not provided with one of his own, pour the wine or other liquor into his
hands, from which he drinks it, as from a cup.

Offences in this country are punished with strict and exemplary justice, and
with regard to debtors the following customs prevail. If application for payment
shall have been repeatedly made by a creditor, and the debtor puts him off from
time to time with fallacious promises, the former may attach his person by drawing
a circle round him, from whence he dares not depart until he has satisfied his
creditor, either by payment, or by giving adequate security. Should he attempt
to make his escape, he renders himself liable to the punishment of death, as a
violator of the rules of justice. Messer Marco, when he was in this country on his
return homeward, happened to be an eye-witness of a remarkable transaction of
this nature. The king was indebted in a sum of money to a certain foreign mer-
chant, and although frequently importuned for payment, amused him for a long
time with vain assurances. One day when the king was riding on horseback, the
merchant took the opportunity of describing a circle round him and his horse.
As soon as the king perceived what had been done, he immediately ceased to
proceed, nor did he move from the spot until the demand of the merchant was
fully satisfied. The bystanders beheld what passed with admiration, and pro-
nounced that king to merit the title of most just, who himself submitted to the
laws of justice. [See Ocean of Story, Vol. iii. p. 201 et seq.]

These people abstain from drinking wine made from grapes; and should a person
be detected in the practice, so disreputable would it be held, that his evidence
would not be received in court. A similar prejudice exists against persons fre-
quenting the sea, who, they observe, can only be people of desperate fortunes, and
whose testimony, as such, ought not to be admitted. They do not hold fornication
to be a crime. The heat of the country is excessive, and the inhabitants on that
account go naked. There is no rain excepting in the months of June, July, and
August, and if it was not for the coolness imparted to the air during these three
months by the rain, it would be impossible to support life.

In this country there are many adepts in the science denominated physiognomy,
which teaches the knowledge of the nature and qualities of men, and whether they
tend to good or evil. These qualities are immediately discerned upon the appear-
ance of the man or woman. They also know what events are portended by meeting
certain beasts or birds. More attention is paid by these people to the flight of
birds than by any others in the world, and from thence they predict good or bad
fortune. In every day of the week there is one hour which they regard as unlucky,
and this they name chewach; thus, for example, on Monday the (canonical) hour
of mit-torce, on Tuesday the hour of tierce, on Wednesday the hour of none; and on these hours they do not make purchases, nor transact any kind of business, being persuaded that it would not be attended with success. In like manner they ascertain the qualities of every day throughout the year, which are described and noted in their books. They judge of the hour of the day by the length of a man's shadow when he stands erect. When an infant is born, be it a boy or a girl, the father or the mother makes a memorandum in writing of the day of the week on which the birth took place; also of the age of the moon, the name of the month, and the hour. This is done because every future act of their lives is regulated by astrology. As soon as a son attains the age of thirteen years, they set him at liberty, and no longer suffer him to be an inmate in his father's house; giving him to the amount, in their money, of twenty to twenty-four groats. Thus provided, they consider him as capable of gaining his own livelihood, by engaging in some kind of trade and thence deriving a profit. These boys never cease to run about in all directions during the whole course of the day, buying an article in one place, and selling it in another. At the season when the pearl fishery is going on, they frequent the beach, and make purchases from the fishermen or others, of five, six, or more (small) pearls, according to their means, carrying them afterwards to the merchants, who, on account of the heat of the sun, remain sitting in their houses, and to whom they say: "These pearls have cost us so much; pray allow such a profit on them as you may judge reasonable." The merchants then give something beyond the price at which they had been obtained. In this way likewise they deal in many other articles, and become excellent and most acute traders. When business is over for the day, they carry to their mothers the provisions necessary for their dinners, which they prepare and dress for them; but these never eat anything at their fathers' expense.

Not only in this kingdom, but throughout India in general, all the beasts and birds are unlike those of our own country, excepting the quails, which perfectly resemble ours; the others are all different. There are bats as large as vultures, and vultures as black as crows, and much larger than ours. Their flight is rapid, and they do not fail to seize their bird.

In their temples there are many idols, the forms of which represent them of the male and the female sex; and to these, fathers and mothers dedicate their daughters. Having been so dedicated, they are expected to attend whenever the priests of the convent require them to contribute to the gratification of the idol; and on such occasions they repair thither, singing and playing on instruments, and adding by their presence to the festivity. These young women are very numerous, and form large bands. Several times in the week they carry an offering of victuals to the idol to whose service they are devoted; and of this food they say the idol partakes. A table for the purpose is placed before it, and upon this the victuals are suffered to remain for the space of a full hour; during which the damsels never cease to
singing, and play, and exhibit wanton gestures. This lasts as long as a person of
condition would require for making a convenient meal. They then declare that
the spirit of the idol is content with its share of the entertainment provided, and,
ranging themselves around it, they proceed to eat in their turn; after which they
repair to their respective homes. The reason given for assembling the young
women, and performing the ceremonies that have been described, is this:—The
priests declare that the male divinity is out of humour with and incensed against
the female, refusing to have connexion or even to converse with her; and that if
some measure were not adopted to restore peace and harmony between them, all
the concerns of the monastery would go to ruin, as the grace and blessing of the
divinities would be withheld from them. For this purpose it is, they expect the
votaries to appear in a state of nudity, with only a cloth round their waists, and
in that state to chant hymns to the god and goddess. These people believe that
theformer often solaces himself with the latter. [See Ocean of Story, Vol. I. pp.
231—269.]

The natives make use of a kind of bedstead, or cot, of very light cane-work, so
ingeniously contrived that when they repose on them, and are inclined to sleep,
they can draw close the curtains about them by pulling a string. This they do in
order to exclude the tarantulas, which bite grievously, as well as to prevent their
being annoyed by fleas and other small vermin; whilst at the same time the air,
so necessary for mitigating the excessive heat, is not excluded. Indulgences of this
nature, however, are enjoyed only by persons of rank and fortune; others of the
inferior class lie in the open streets. [A large portion of the above is also found
in Z; see B. pp. 182—185.]

[Fromston, Ch. 113, p. 106. See Appendix I. Note 435, p. 256.]

Of the island of Zeilan (Ceylon)

I am unwilling to pass over certain particulars which I omitted when before
speaking of the island of Zeilan, and which I learned when I visited that country
in my homeward voyage. In this island there is a very high mountain, so rocky
and precipitous that the ascent to the top is impracticable, as it is said, excepting
by the assistance of iron chains employed for that purpose. By means of these
some persons attain the summit, where the tomb of Adam, our first parent, is
reported to be found. Such is the account given by the Saracens. But the idolaters
assert that it contains the body of Sogomon-barchan, the founder of their religious
system, and whom they revere as a holy personage. He was the son of a king of the
island, who devoted himself to an ascetic life, refusing to accept of kingdoms or
any other worldly possessions, although his father endeavoured, by the allurements
of women, and every other imaginable gratification, to divert him from the resolution he had adopted. Every attempt to dissuade him was in vain, and the young man fled privately to this lofty mountain, where, in the observance of celibacy and strict abstinence, he at length terminated his mortal career. By the idolaters he is regarded as a saint. The father, distracted with the most poignant grief, caused an image to be formed of gold and precious stones, bearing the resemblance of his son, and required that all the inhabitants of the island should honour and worship it as a deity. Such was the origin of the worship of idols in that country; but Ségonon-barchan is still regarded as superior to every other. In consequence of this belief, people flock from various distant parts in pilgrimage to the mountain on which he was buried. Some of his hair, his teeth, and the basin he made use of, are still preserved, and shown with much ceremony. The Saracens, on the other hand, maintain that these belonged to the prophet Adam, and are in like manner led by devotion to visit the mountain.

It happened that, in the year 1281, the Grand Khan heard from certain Saracens who had been upon the spot, the name of these relics belonging to our first parent, and felt so strong a desire to possess them, that he was induced to send an embassy to demand them of the king of Zeilan. After a long and tedious journey, his ambassadors at length reached the place of their destination, and obtained from the king two large back-teeth, together with some of the hair, and a handsome vessel of porphyry. When the Grand Khan received intelligence of the approach of the messengers, on their return with such valuable curiosities, he ordered all the people of Kanbalu to march out of the city to meet them, and they were conducted to his presence with great pomp and solemnity. Having mentioned these particulars respecting the mountain of Zeilan, we shall return to the kingdom of Maabar, and speak of the city of Kael.

[Omitted in Firouzban. See Appendix I, Note 433, p. 230.]

Of the City of Kael

Kael is a considerable city, governed by Astiar, one of the four brothers, kings of the country of Maabar, who is rich in gold and jewels, and preserves his country in a state of profound peace. On this account it is a favourite place of resort for foreign merchants, who are well received and treated by the king. Accordingly all the ships coming from the west—as fromOrmuz, Chisti, Adem, and various parts of Arabia—laden with merchandise and horses, make this port, which is besides well situated for commerce. The prince maintains in the most splendid manner not fewer than three hundred women.
All the people of this city, as well as the natives of India in general, are addicted to the custom of having continually in their mouths the leaf called *tembul*; which they do, partly from habit, and partly from the gratification it affords. Upon chewing it, they spit out the saliva to which it gives occasion. Persons of rank have the leaf prepared with camphor and other aromatic drugs, and also with a mixture of quick lime. I have been told that it is extremely conducive to health. If it is an object with any man to affront another in the grossest and most contemptuous manner, he spits the juice of this masticated leaf in his face. Thus insulted, the injured party hastens to the presence of the king, states the circumstances of his grievance, and declares his willingness to decide the quarrel by combat. The king thereupon furnishes them with arms, consisting of a sword and small shield; and all the people assemble to be spectators of the conflict, which lasts till one of them remains dead on the field. They are, however, forbidden to wound with the point of the sword. [See Ocean of Story, Vol. VIII, pp. 237–319.]

[Omitted in Frankish. See Appendix I. Note 465, p. 456.]

The Ramusian chapter-headings are given consecutively:

CHAPTER 41

Of the City of Escier

The ruler of this city is a Mahometan, who governs it with exemplary justice, under the superior authority of the sultan of Aden. Its distance from thence is about forty miles to the south-east. Subordinate to it there are many towns and castles. Its port is good, and it is visited by many trading ships from India, which carry back a number of excellent horses, highly esteemed in that country, and sold there at considerable prices.

This district produces a large quantity of white frankincense of the first quality, which distils, drop by drop, from a certain small tree that resembles the fir. The people occasionally tap the tree, or pare away the bark, and from the incision the frankincense gradually exudes, which afterwards becomes hard. Even when an incision is not made, an exudation is perceived to take place, in consequence of the excessive heat of the climate. There are also many palm-trees, which produce good dates in abundance. No grain excepting rice and millet is cultivated in this country, and it becomes necessary to obtain supplies from other parts. There is no wine made from grapes; but they prepare a liquor from rice, sugar, and dates, that is a delicious beverage. They have a small breed of sheep, the ears of which are not situated like those in others of the species; two small horns growing in the
place of them, and lower down, towards the nose, there are two orifices that serve the purpose of ears.

These people are great fishermen, and catch the tunny in such numbers, that two may be purchased for a Venetian groat. They dry them in the sun; and as, by reason of the extreme heat, the country is in a manner burnt up, and no sort of vegetable is to be seen, they accustom their cattle, cows, sheep, camels, and horses, to feed upon dried fish, which being regularly served to them, they eat without any signs of dislike. The fish used for this purpose are of a small kind, which they take in vast quantities during the months of March, April, and May; and when dried, they lay up in their houses for the food of their cattle. These will also feed upon the fresh fish, but are more accustomed to eat them in the dried state. In consequence also of the scarcity of grain, the natives make a kind of biscuit of the substance of the larger fish, in the following manner: they chop it into very small particles, and moisten the preparation with a liquor rendered thick and adhesive by a mixture of flour, which gives to the whole the consistence of paste. This they form into a kind of bread, which they dry and harden by exposure to a burning sun. A stock of this biscuit is laid up to serve them for the year's consumption. The frankincense before mentioned is so cheap in the country as to be purchased by the governor at the rate of ten besants [gold duccats] the quintal, who sells it again to the merchants at forty besants. This he does under the direction of the soldan of Aden, who monopolises all that is produced in the district at the above price, and derives a large profit from the re-sale. Nothing further presenting itself at this place, we shall now speak of the city of Dulfar.

CHAPTER 42

Of the City of Dulfar

Dulfar is a large and respectable city or town, at the distance of twenty miles from Escier, in a south-easterly direction. Its inhabitants are Mahometans, and its ruler also is a subject of the soldan of Aden. This place lies near the sea, and has a good port, frequented by many ships. Numbers of Arabian horses are collected here from the inland country, which the merchants buy up and carry to India, where they gain considerably by disposing of them. Frankincense is likewise produced here, and purchased by the merchants. Dulfar has other towns and castles under its jurisdiction. We shall now speak of the gulf of Kalayati.

CHAPTER 43

Of the City of Kalayati

Kalayati is a large town situated near a gulf which has the name of Kalatu, distant from Dulfar about fifty miles towards the south-east. The people are followers of the law of Mahomet, and are subjects to the melik of Ormus, who,
when he is attacked and hard pressed by another power, has recourse to the protection afforded by this city, which is so strong in itself, and so advantageously situated, that it has never yet been taken by an enemy. The country around it not yielding any kind of grain, it is imported from other districts. Its harbour is good, and many trading ships arrive there from India, which sell their piece-goods and spiceries to great advantage, the demand being considerable for the supply of towns and castles lying at a distance from the coast. These likewise carry away freights of horses, which they sell advantageously in India.

The fortress is so situated at the entrance of the gulf of Kalatu, that no vessel can come in or depart without its permission. Occasionally it happens that the melik of this city, who is under certain engagements with, and is tributary to the king of Kermain, throws off his allegiance in consequence of the latter's imposing some unusual contribution. Upon his refusing to pay the demand, and an army being sent to compel him, he departs from Ormus, and makes his stand at Kalayati, where he has it in his power to prevent any ship from entering or sailing. By this obstruction of the trade the king of Kermain is deprived of his duties, and being thereby much injured in his revenue, is constrained to accommodate the dispute with the melik. The strong castle at this place constitutes, as it were, the key, not only of the gulf, but also of the sea itself, as from thence the ships that pass can at all times be discovered. The inhabitants in general of this country subsist upon dates and upon fish, either fresh or salted, having constantly a large supply of both; but persons of rank, and those who can afford it, obtain corn for their use from other parts. Upon leaving Kalayati, and proceeding three hundred miles towards the north-east, you reach the island of Ormus.

CHAPTER 44

Of Ormus

Upon the island of Ormus there is a handsome and large city, built close to the sea. It is governed by a melik, which is a title equivalent to that of lord of the marches with us, and he has many towns and castles under his authority. The inhabitants are Saracens, all of them professing the faith of Mahomet. The heat that reigns here is extreme; but in every house they are provided with ventilators, by means of which they introduce air to the different floors, and into every apartment, at pleasure. Without this resource it would be impossible to live in the place. We shall not now say more of this city, as in a former book we have given an account of it, together with Kisi and Kerman.

Having thus treated sufficiently at length of those provinces and cities of the Greater India which are situated near the sea-coast, as well as of some of the countries of Ethiopia, termed the Middle India, I shall now, before I bring the
work to a conclusion, step back, in order to notice some regions lying towards the north, which I omitted to speak of in the preceding books.

It should be known, therefore, that in the northern parts of the world there dwell many Tartars, under a chief of the name of Kaidu, who is of the race of Jengiz-khan, and nearly related to Kublaï, the Grand Khan. He is not the subject of any other prince. The people observe the usages and manners of their ancestors, and are regarded as genuine Tartars. These Tartars are idolators, and worship a god whom they call Naagai, that is, the god of earth, because they think and believe that this their god has dominion over the earth, and over all things that are born of it; and to this their false god they make idols and images of felt, as is described in a former book. Their king and his armies do not shut themselves up in castles or strong places, nor even in towns; but at all times remain in the open plains, the valleys, or the woods, with which this region abounds. They have no corn of any kind, but subsist upon flesh and milk, and live amongst each other in perfect harmony; their king, to whom they all pay implicit obedience, having no object dearer to him than that of preserving peace and union amongst his subjects, which is the essential duty of a sovereign. They possess vast herds of horses, cows, sheep, and other domestic animals. In these northern districts are found bears of a white colour, and of prodigious size, being for the most part about twenty spans in length. There are foxes also whose furs are entirely black, wild asses in great numbers, and certain small animals named ronces, which have most delicate furs, and by our people are called zibelines or sables. Besides these there are various small beasts of the marten or weasel kind, and those which bear the name of Pharaoh's mice. The swarms of the latter are incredible; but the Tartars employ such ingenious contrivances for catching them, that none can escape their hands.

In order to reach the country inhabited by these people, it is necessary to perform a journey of fourteen days across a wide plain, entirely uninhabited and desert—a state that is occasioned by innumerable collections of water and springs, that render it an entire marsh. This, in consequence of the long duration of the cold season, is frozen over, excepting for a few months of the year, when the sun dissolves the ice, and turns the soil to mud, over which it is more difficult and fatiguing to travel than when the whole is frozen. For the purpose, however, of enabling the merchants to frequent their country, and purchase their furs, in which all their trade consists, these people have exerted themselves to render the marshy desert passable for travellers, by erecting at the end of each day's stage a wooden house, raised some height above the ground, where persons are stationed, whose business it is to receive and accommodate the merchants, and on the following day to conduct them to the next station of this kind; and thus they proceed from stage to stage, until they have effected the passage of the desert. In order to travel over the frozen surface of the ground, they construct a sort of vehicle, not unlike that made use of by the natives of the steep and almost inaccessible mountains in the
vicinity of our own country, and which is termed a *tragula* or sledge. It is without wheels, is flat at bottom, but rises with a semi-circular curve in front, by which construction it is fitted for running easily upon the ice. For drawing these small carriages they keep in readiness certain animals resembling dogs, and which may be called such, although they approach to the size of asses. They are very strong and inured to the draught. Six of them, in couples, are harnessed to each carriage, which contains only the driver who manages the dogs, and one merchant, with his package of goods. When the day's journey has been performed he quits it, together with that set of dogs, and thus changing both, from day to day, he at length accomplishes his journey across the desert, and afterwards carries with him (in his return) the furs that find their way, for sale, to our part of the world.

32. The following chapters are taken from Wright's edition of *Marsden*, pp. 453-471, where they form Chs. xlvi–lxxi. They are not in *Ramusio*, but are found in the French editions.

Pauthier and Yule made them into Book iv, while in *Benedetto* they occupy chapters cc–cxxxiv. The "Conclusion" is from the Crusca version (see Y. Vol. ii, pp. 500, 501).

CHAPTER 47

Of Great Turkey

In Great Turkey there is a king called Kaidu, who is the nephew of the Grand Khan, for he was son of the son of Giagatai, who was brother to the Grand Khan. He possesses many cities and castles, and is a very great lord. He is Tartar, and his men also are Tartar, and they are good warriors, which is no wonder, for they are all men brought up to war; and I tell you that this Kaidu never gave obedience to the Grand Khan, without first making great war. And you must know that this Great Turkey lies to the north-west when we leave Ormus, by the way already mentioned. Great Turkey is beyond the river Ion, and stretches out northward to the territory of the Grand Khan. This Kaidu has already fought many battles with the people of the Grand Khan, and I will relate to you how he came to quarrel with him. You must know for a truth that Kaidu sent word one day to the Grand Khan that he wanted his part of what they had obtained by conquest, claiming a part of the province of Cathay and of that of Manji. The Grand Khan told him that he was quite willing to give him his share, as he had done to his other sons, if he, on his part, would repair to his court and attend his council as often as he sent for him; and the Grand Khan willed further, that he should obey him like the others his sons and his barons; and on this condition the Grand Khan said that he would give him part of their conquest (of China). Kaidu, who distrusted his uncle the Grand Khan, rejected this condition, saying that he was willing to
yield him obedience in his own country, but that he would not go to his court for any consideration, as he feared lest he should be put to death. Thus originated the quarrel between the Grand Khan and Kaidu, which led to a great war, and there were many great battles between them. And the Grand Khan posted an army round the kingdom of Kaidu, to prevent him or his people from committing any injury to his territory or people. But, in spite of all these precautions of the Grand Khan, Kaidu invaded his territory, and fought many times with the forces sent to oppose him. Now king Kaidu, by exerting himself, could bring into the field a hundred thousand horsemen, all good men, and well trained to war and battle. And moreover he has with him many barons of the lineage of the emperor, that is of Jengis-khan, who was the founder of the empire. We will now proceed to narrate certain battles between Kaidu and the Grand Khan’s people; but first we will describe their mode of fighting. When they go to war, each is obliged to carry with him sixty arrows, thirty of which are of a smaller size, intended for shooting at a distance, but the other thirty are larger, and have a broad blade; these they use near at hand, and strike their enemies in the faces and arms, and cut the strings of their bows, and do great damage with them. And when they have discharged all their arrows, they take their swords and maces, and give one another heavy blows with them.

In the year 1266, this king Kaidu, with his cousins, one of whom was called Jesudar, assembled a vast number of people, and attacked two of the Grand Khan’s barons, who also were cousins of king Kaidu, though they held their lands of the Grand Khan. One of these was named Tibai or Ciban. They were sons of Cia-gatal, who had received Christian baptism, and was own brother to the Grand Khan Kublai. Well, Kaidu with his people fought with these his two cousins, who also had a great army, for on both sides there were about a hundred thousand horsemen. They fought very hard together, and there were many slain on both sides; but at last king Kaidu gained the victory, and did great damage to the others. But the two brothers, the cousins of king Kaidu, escaped without hurt, for they had good horses, which bore them away with great swiftness. Having thus gained the victory, Kaidu’s pride and arrogance increased; and he returned into his own country, where he remained full two years in peace, without any hostilities between him and the Grand Khan. But at the end of two years Kaidu again assembled a great army. He knew that the Grand Khan’s son, named Nomogan, was at Caracorum, and that with him was George the grandson of Prester John, which two barons had also a very great army of horsemen. King Kaidu, having assembled his host, marched from his own country, and, without any occurrence worth mentioning, arrived in the neighbourhood of Caracorum, where the two barons, the son of the Grand Khan and the grandson of Prester John, were with their army. The latter, instead of being frightened, prepared to meet them with the utmost ardour and courage; and having assembled their whole army, which
consisted of not less than sixty thousand horsemen, they marched out and established their camp very well and orderly at a distance of about ten miles from king Kaidu, who was encamped with his men in the same plain. Each party remained in their camp till the third day, preparing for battle in the best way they could, for their numbers were about equal, neither exceeding sixty thousand horsemen, well armed with bows and arrows, and a sword, mace, and shield to each. Both armies were divided into six squadrons of ten thousand men each, and each having its commander. And when the two armies were drawn up in the field, and waited only for the signal to be given by sounding the nacar, they sang and sounded their instruments of music in such a manner that it was wonderful to hear. For the Tartars are not allowed to commence a battle till they hear the nacars of their lord begin to sound, but the moment it sounds they begin to fight; and it is their custom, while thus waiting the signal of battle, to sing and sound their two-corded instruments very sweetly, and make great solace. As soon as the sound of the nacars was heard, the battle began, and they put their hands to their bows, and placed the arrows to the strings. In an instant the air was filled with arrows like rain, and you might see many a man and many a horse struck down dead, and the shouting and the noise of the battle was so great, that one could hardly have heard God’s thunder. In truth, they fought like mortal enemies. And truly, as long as they had any arrows left, those who were able ceased not to shoot; but so many were slain and mortally wounded, that the battle commenced propitiously for neither party. And when they had exhausted their arrows, they placed the bows in their cases, and seized their swords and maces, and, rushing upon each other, began to give terrible blows with them. Thus they began a very fierce and dreadful battle, with such execution upon each other, that the ground was soon covered with corpses. Kaidu especially performed great feats of arms, and but for his personal prowess, which restored courage to his followers, they were several times nearly defeated. And on the other side, the son of the Grand Khan and the grandson of Prester John also behaved themselves with great bravery. In a word, this was one of the most sanguinary battles that had ever taken place among the Tartars; for it lasted till nightfall; and in spite of all their efforts, neither party could drive the other from the field, which was covered with so many corpses that it was pity to see, and many a lady that day was made a widow, and many a child an orphan. And when the sun set, both parties gave over fighting, and returned to their several camps to repose during the night. Next morning, king Kaidu, who had received information that the Grand Khan had sent a very powerful army against him, put his men under arms at daybreak, and, all having mounted, he ordered them to proceed homewards. Their opponents were so weary with the previous day’s battle, that they made no attempt to follow them, but let them go without molestation. Kaidu’s men continued their retreat, until they came to Samarcand, in Great Turkey.
What the Grand Khan said of the injuries done to him by Kaidu

Now the Grand Khan was greatly enraged against Kaidu, who was always doing so much injury to his people and his territory, and he said in himself, that if he had not been his nephew, he should not have escaped an evil death. But his feelings of relationship hindered him from destroying him and his land; and thus Kaidu escaped from the hands of the Grand Khan. We will now leave this matter, and we will tell you a strange history of king Kaidu's daughter.

Of the daughter of King Kaidu, how strong and valiant she was

You must know, then, that king Kaidu had a daughter named, in the Tartar language, Aigiarim, which means shining moon. This damsel was so strong, that there was no young man in the whole kingdom who could overcome her, but she vanquished them all. Her father the king wished to marry her; but she declined, saying, that she would never take a husband till she met with some gentleman who should conquer her by force, upon which the king, her father, gave her a written promise that she might marry at her own will. She now caused it to be proclaimed in different parts of the world, that if any young man would come and try strength with her, and should overcome her by force, she would accept him for her husband. This proclamation was no sooner made, than many came from all parts to try their fortune. The trial was made with great solemnity. The king took his place in the principal hall of the palace, with a large company of men and women; then came the king's daughter, in a dress of cendal, very richly adorned, into the middle of the hall; and next came the young man, also in a dress of cendal. The agreement was, that if the young man overcame her so as to throw her by force to the ground, he was to have her for wife; but if, on the contrary, he should be overcome by the king's daughter, he was to forfeit to her a hundred horses. In this manner the damsel gained more than ten thousand horses, for she could meet with no one able to conquer her, which was no wonder, for she was so well-made in all her limbs, and so tall and strongly built, that she might almost be taken for a giantess. At last, about the year 1280, there came the son of a rich king, who was very beautiful and young; he was accompanied with a very fine retinue, and brought with him a thousand beautiful horses. Immediately on his arrival, he announced that he was come to try his strength with the lady. King Kaidu received him very gladly, for he was very desirous to have this youth for his son-in-law, knowing him to be the son of the king of Pamar; on which account, Kaidu privately told his daughter
that he wished her on this occasion to let herself be vanquished. But she said she would not do so for anything in the world. Thereupon the king and queen took their places in the hall, with a great attendance of both sexes, and the king's daughter presented herself as usual, and also the king's son, who was remarkable no less for his beauty than for his great strength. Now when they were brought into the hall, it was, on account of the superior rank of the claimant, agreed as the conditions of the trial, that if the young prince were conquered, he should forfeit the thousand horses he had brought with him as his stake. This agreement having been made, the wrestling began; and all who were there, including the king and queen, wished heartily that the prince might be the victor, that he might be the husband of the princess. But, contrary to their hopes, after much pulling and tugging, the king's daughter gained the victory, and the young prince was thrown on the pavement of the palace, and lost his thousand horses. There was not one person in the whole hall who did not lament his defeat. After this the king took his daughter with him into many battles, and not a cavalier in the host displayed so much valour; and at last the damsel rushed into the midst of the enemy, and seizing upon a horseman, carried him off to her own people. We will now quit this episode, and proceed to relate a great battle which fell out between Kaidu and Argon, the son of Abaga the lord of the east. [For the amazon, see Chauvin, Bib. des Ouvrages Arabes, vi, p. 112, viii, p. 55; and Clouston, Book of Sindibad, pp. 342 et seq.]

CHAPTER 59

How Abaga sent Argon his son with an army

Now Abaga, the lord of the east, held many provinces and many lands, which bordered on the territory of king Kaidu, on the side towards the tree which is called in the book of Alexander, Arbor Secco. And Abaga, in consequence of the damages done to his lands by king Kaidu, sent his son Argon with a very great number of horsemen into the country of Arbor Secco, as far as the river Ion, where they remained to protect the country against king Kaidu's people. In this manner Argon and his men remained in the plain of the Arbor Secco, and garrisoned many cities and castles thereabouts. Thereupon king Kaidu assembled a great number of horsemen, and gave the command of them to his brother Barac, a prudent and brave man, with orders to fight Argon. Barac promised to fulfil his commandment, and to do his best against Argon and his army; and he marched with his army, which was a very numerous one, and proceeded for many days without meeting with any accident worth mentioning, till he reached the river Ion, where he was only ten miles distant from the army of Argon. Both sides immediately prepared for battle, and in a very fierce engagement, which took place three days afterwards, the army of Barac was overpowered, and pursued with great slaughter over the river.
APPENDIX II

CHAPTER 31

How Argon succeeded his father in the sovereignty

Soon after this victory, Argon received intelligence that his father Abaga was dead, for which he was very sorrowful, and he set out with all his host on his way to his father’s court, a distance of forty days’ journey, in order to receive the sovereignty. Now Abaga had a brother named Acomat Soldan, who had become a Saracen, and who no sooner heard of his brother Abaga’s death, than he formed the design of seizing the succession for himself, considering that Argon was at too great a distance to prevent him. He therefore collected a powerful army, went direct to the court of his brother Abaga, and seized upon the sovereignty. There he found such an immense quantity of treasure as could hardly be believed, and by distributing this very lavishly among Abaga’s barons and knights, he gained so far upon their hearts, that they declared they would have no other lord but him. Moreover, Acomat Soldan showed himself a very good lord, and made himself beloved by everybody. But he had not long enjoyed his usurped power, when news came that Argon was approaching with a very great host. Acomat showed no alarm, but courageously summoned his barons and others, and within a week he had assembled a vast number of cavalry, who all declared that they were ready to march against Argon, and that they desired nothing more than to take him and put him to death.

CHAPTER 32

How Acomat went with his host to fight Argon

When Acomat Soldan had collected full sixty thousand horsemen, he set out on his way to encounter Argon and his people, and at the end of ten days’ march he halted, having received intelligence that the enemy was only five days’ march from him, and equal in number to his own army. Then Acomat established his camp in a very great and fair plain, and announced his intention of awaiting his enemy there, as a favourable place for giving battle. As soon as he arranged his camp, he called together his people, and addressed them as follows: “Lords,” said he, “you know well how I ought to be liege lord of all which my brother Abaga held, because I was the son of his father, and I assisted in the conquest of all the lands and territories we possess. It is true that Argon was the son of my brother Abaga, and that some pretend that the succession would go of right to him; but, with all respect to those who hold this opinion, I say that they are in the wrong, for as his father held the whole of so great a lordship, it is but just that I should have it after his death, who ought rightly to have had half of it during his life, though by my generosity he was allowed to retain the whole. But since it is as I tell you, pray, let us defend our right against Argon, that the kingdom and lordship may remain to us all; for I assure you that all I desire for myself is the
honour and renown, while you have the profit and the goods and lordships through all our lands and provinces. I will say no more, for I know that you are wise men and love justice, and that you will act for the honour and good of us all." When he had ended, all the barons, and knights, and others who were there, replied with one accord that they would not desert him as long as they had life in their bodies, and that they would aid him against all men whatever, and especially against Argon, adding that they feared not but they should take him and deliver him into his hands. After this, Acomat and his army remained in their camp, waiting the approach of the enemy.

CHAPTER 35

How Argon held council with his Barons before encountering Acomat

To return to Argon; as soon as he received certain intelligence of the movements of Acomat, and knew that he was encamped with so large an army, he was greatly affected, but he thought it wise to show courage and ardour before his men. Having called all his barons and wise counsellors into his tent, for he was encamped also in a very far spot, he addressed them as follows: "Fair brothers and friends," said he, "you know well how tenderly my father loved you; while alive he treated you as brothers and sons, and you know in how many battles you were with him, and how you helped him to conquer the land he possessed. You know, too, that I am the son of him who loved you so much, and I myself love you as though you were my own body. It is just and right, therefore, that you aid me against him who comes contrary to justice and right to disinherit us of our land. And you know further how he is not of our law, but that he has abandoned it, and has become a Saracen and worships Mahomet, and it would ill become us to let Saracens have lordship over Tartars. Now, fair brethren and friends, all these reasons ought to give you courage and will to do your utmost to prevent such an occurrence; wherefore I implore each of you to show himself a valiant man, and to put forth all his ardour that we may conquer in the battle, and that the sovereignty may belong to you and not to Saracens. And truly every one ought to reckon on victory, since justice is on our side, and our enemies are in the wrong. I will say no more, but again to implore every one of you to do his duty."

CHAPTER 36

How the Barons replied to Argon

When the barons and knights who were present had heard Argon's address, each resolved that he would prefer death in the battle to defeat; and while they stood silent, reflecting on his words, one of the great barons rose and spoke thus: "Fair sir Argon, fair sir Argon," said he; "we know well that what you have said to
APPENDIX II

us is the truth, and therefore I will be spokesman for all your men who are with you to fight this battle, and tell you openly that we will not fail you as long as we have life in our bodies, and that we would rather all die than not obtain the victory. We feel confident that we shall vanquish your enemies, on account of the justice of our cause, and the wrong which they have done; and therefore I counsel that we proceed at once against them, and I pray all our companions to acquit themselves in such a manner in this battle, that all the world shall talk of them." When this man had ended, all the others declared that they were of his opinion, and the whole army clamoured to be led against the enemy without delay. Accordingly, early next morning, Argon and his people began their march with very resolute hearts, and when they reached the extensive plain in which Acomat was encamped, they established their camp in good order at a distance of about ten miles from him. As soon as he had encamped, Argon sent two trusty messengers on a mission to his uncle.

CHAPTER 55

How Argon sent his messengers to Acomat

When these two trusty messengers, who were men of very advanced age, arrived at the enemy's camp, they dismounted at Acomat's tent, where he was attended by a great company of his barons, and having entered it, they saluted him courteously. Acomat, who knew them well, received them with the same courtesy, told them they were welcome, and made them sit down before him. After they had remained seated a short space, one of the messengers rose up on his feet and delivered his message as follows: "Fair sir Acomat," said he, "your nephew Argon wonders much at your conduct in taking from him his sovereignty, and now again in coming to engage him in mortal combat; truly this is not well, nor have you acted as a good uncle ought to act towards his nephew. Wherefore he informs you by us that he prays you gently, as that good uncle and father, that you restore him his right, so that there be no battle between you, and he will show you all honour, and you shall be lord of all his land under him. This is the message which your nephew sends you by us."

CHAPTER 56

Acomat's reply to the message of Argon

When Acomat Soldan had heard the message of his nephew Argon, he replied as follows: "Sir Messenger," said he, "what my nephew says amounts to nothing, for the land is mine and not his; I conquered it as well as his father; and therefore tell my nephew that if he will, I will make him a great lord, and I will give him land enough, and he shall be as my son, and the highest in rank after me. And if
he will not, you may assure him that I will do all in my power to put him to death. Now this is what I will do for my nephew, and no other thing or other arrangement shall you ever have from me." When Acomat had concluded, the messengers asked again, "Is this all the answer which we shall have?" "Yes," said he, "you shall have no other as long as I live." The messengers immediately departed, and riding as fast as they could to Argon's camp, dismounted at his tent and told him all that had passed. When Argon heard his uncle's message, he was so enraged, that he exclaimed in the hearing of all who were near him, "Since I have received such injury and insult from my uncle, I will never live or hold land if I do not take such vengeance that all the world shall talk of it!" After these words, he addressed his barons and knights: "Now we have nothing to do but to go forth as quickly as we can and put these faithless traitors to death; and it is my will that we attack them to-morrow morning, and do our utmost to destroy them." All that night they made preparations for battle; and Acomat Soldan, who knew well by his spies what were Argon's designs, prepared for battle also, and admonished his people to demean themselves with valour.

CHAPTER 57

The battle between Argon and Acomat

Next morning, Argon, having called his men to arms and drawn them up skilfully in order of battle, addressed to them an encouraging admonition, after which they advanced towards the enemy. Acomat had done the same, and the two armies met on their way and engaged without further parley. The battle began with a shower of arrows so thick that it seemed like rain from heaven, and you might see everywhere the riders cast from the horses, and the cries and groans of those who lay on the earth mortally wounded were dreadful to hear. When they had exhausted their arrows, they took to their swords and clubs, and the battle became so fierce and the noise so great that you could hardly have heard God's thunder. The slaughter was very great on both sides; but at last, though Argon himself displayed extraordinary valour, and set an example to all his men, it was in vain, for fortune turned against him, and his men were compelled to fly, closely pursued by Acomat and his men, who made great havoc of them. And in the flight Argon himself was captured, upon which the pursuit was abandoned, and the victors returned to their camp and tents, glad beyond measure. Acomat caused his nephew, Argon, to be confined and closely guarded, and, being a man given to his pleasures, he returned to his court to enjoy the society of the fair ladies who were there, leaving the command of the army to a great melic, or chief, with strict orders to keep Argon closely guarded, and to follow him to court by short marches, so as not to fatigue his men.
APPENDIX II

CHAPTER 38

How Argon was liberated

Now it happened that a great Tartar baron, who was of great age, took pity on Argon, and said in himself that it was a great wickedness and disloyalty thus to hold their lord a prisoner, and that he would do his best to set him free. He began by persuading many other barons to adopt the same sentiments, and his personal influence, on account of his age and known character for justice and wisdom, was so great, that he easily gained them over to the enterprise, and they promised to be directed by him. The name of the leader of this enterprise was Boga, and the chief of his fellow-conspirators were named Elcidai, Togan, Tegana, Taga, Tiar Oulatai, and Samagar. With these, Boga went to the tent where Argon was confined, and told him that they repented of the part they had taken against him, and that in reparation of their error they had come to set him free and take him for their lord.

CHAPTER 39

How Argon recovered the sovereignty

When Argon heard Boga's words, he thought at first that they came to mock him, and was very angry and cross. "Faith sirs," said he, "you sin greatly in making me an object of mockery, and ought to be satisfied with the wrong you have already done me in imprisoning your rightful lord. You know that you are behaving wrongfully, and therefore I pray go your way and mock me no more." "Faith Sir Argon," said Boga, "be assured that we are not mocking you at all, but what we say is quite true, and we swear to it upon our faith." Then all the barons took an oath that they would hold him for their lord. And Argon on his side swore that he would never trouble them for what was past, but that he would hold them all as dear as his father Abaga had done. And as soon as these mutual oaths had been taken, they took Argon out of prison, and received him as their lord. Then Argon told them to shoot their arrows at the tent in which the melic who had the command of the army was, and they did so, and thus the melic was slain. This melic was named Soldan, and was the greatest lord after Acomat. Thus Argon recovered the sovereignty.

CHAPTER 40

How Argon caused his Uncle Acomat to be put to death

And when Argon found that he was assured of the sovereignty, he gave orders to the army to commence its march towards the court. It happened one day that Acomat was at court in his principal palace making great festivity, when a messenger came to him and said: "Sir, I bring you news, not such as I would, but very evil. Know that the barons have delivered Argon and raised him to the sovereignty,
and have slain Soldan, your dear friend; and I assure you that they are hastening hither to take and slay you; take counsel immediately what is best to be done." When Acomat heard this, he was at first so overcome with astonishment and fear that he knew not what to do or say; but at last, like a brave and prudent man, he told the messenger to mention the news to no one, and hastily ordered his most trusty followers to arm and mount their horses; telling nobody whither he was going, he took the route to go to the Sultan of Babilonia, believing that there his life would be safe. At the end of six days he arrived at a pass which could not be avoided, the keeper of which knew that it was Acomat, and perceived that he was seeking safety by flight. This man determined to take him, which he might easily do, as he was slightly attended. When Acomat was thus arrested, he made great entreaty, and offered great treasure to be allowed to go free; but the keeper of the pass, who was a zealous partizan of Argon, replied that all the treasure in the world should not hinder him from doing his duty towards his rightful lord. He accordingly placed Acomat under a strong guard, and marching with him to the court, arrived there just three days after Argon had taken possession of it, who was greatly mortified that Acomat had escaped. When therefore Acomat was delivered to him a prisoner, he was in the greatest joy imaginable, and commanding the army to be assembled immediately, without consulting with anybody, he ordered one of his men to slay his uncle, and to throw his body into such place as it would never be seen again, which order was immediately executed. Thus ended the affair between Argon and his uncle Acomat.

CHAPTER 61

The death of Argon

When Argon had done all this, and had taken possession of the principal palace with the sovereignty, all the barons who had been in subjection to his father came to perform their homages as to their lord, and obeyed it as such in everything. And after this, Argon sent Casan, his son, with full thirty thousand horsemen, to the Arbor Secco, which is in that country, to protect his land and people. Argon thus recovered his sovereignty in the year 1286 of the incarnation of Jesus Christ, and Acomat had held the sovereignty two years. Argon reigned six years, at the end of which he died, as was generally said, by poison.

CHAPTER 62

How Quiacatu seized upon the sovereignty after the death of Argon

When Argon was dead, his uncle, named Quiacatu, seized upon the sovereignty, which he was enabled to do with the more ease in consequence of Casan being so far distant as the Arbor Secco. Casan was greatly angered when he heard of the
death of his father and of the usurpation of Quiacatu, but he could not leave his
post at that moment for fear of his enemies. He threatened, however, that he
would find the occasion to revenge himself as signally as his father had done upon
Acomat. Quiacatu held the sovereignty, and all were obedient to him except
those who were with Casan; and he took the wife of his nephew Argon and held
her as his own, and enjoyed himself much with the ladies, for he was excessively
given to his pleasures. Quiacatu held the sovereignty two years, at the end of which
he was carried off by poison.

CHAPTER 63

How Baidu seized upon the sovereignty after
the death of Quiacatu

When Quiacatu was dead, Baidu, who was his uncle, and a Christian, seized
upon the sovereignty, and all obeyed him except Casan and the army with him.
This occurred in the year 1294. When Casan learnt what had occurred, he was
more furious against Baidu than he had been against Quiacatu, and, threatening
to take such vengeance on him as should be talked of by everybody, he resolved
that he would delay no longer, but march immediately against him. He accord-
ingly provisioned his army, and commenced his march. When Baidu knew for
certain that Casan was coming against him, he assembled a vast number of men,
and marched forwards full ten days, and then encamped and waited for him to
give battle. On the second day Casan appeared, and immediately there began
a fierce battle, which ended in the entire defeat of Baidu, who was slain in the
combat. Casan now assumed the sovereignty, and began his reign in the year
1294 of the Incarnation. Thus did the kingdom of the Eastern Tartars descend
from Abaga to Casan, who now reigns.

CHAPTER 64

Of the Lords of the Tartars of the West

The first lord of the Tartars of the West was Sain, who was a very great and
powerful king. He conquered Russia, and Comania, and Alania, and Lac, and
Mengiar, and Zic, and Gucia, and Gazaria. All these provinces were conquered
by king Sain. Before this conquest, they were all Comanians, but they were not
under one government; and through their want of union they lost their lands, and
were dispersed into different parts of the world; and those who remained were all
in a state of servitude to king Sain. After king Sain reigned king Patu, after him
king Berca, next king Mungleteemur, then king Totamongur, and lastly Toctai, who
now reigns. Having thus given you a list of the kings of the Tartars of the West,
we will tell you of a great battle that fell out between Alan, the lord of the East,
and Berca, the lord of the West, as well as the cause of the battle, and its result.
APPENDIX II

CHAPTER 65

Of the war between Alau and Berca, and the battle they fought

In the year 1261 there arose a great quarrel between king Alau, lord of the Tartars of the East, and Berca, king of the Tartars of the West, on account of a province which bordered on each of their territories, which both claimed, and each was too proud to yield it to the other. They mutually defied each other, each declaring that he would go and take it, and he would see who dared hinder him. When things had come to this point, each summoned his followers to his banner, and they exerted themselves to such a degree that within six months each had assembled full three hundred thousand horsemen, very well furnished with all things appertaining to war according to their usage. Alau, lord of the East, now began his march with all his forces, and they rode many days without meeting with any adventure worth mentioning. At length they reached an extensive plain, situated between the Iron Gates and the Sea of Sarain, in which they encamped in good order, and there was many a rich pavilion and tent. And there Alau said he would wait to see what course Berca would follow, as this spot was on the borders of the two territories.

CHAPTER 66

How Berca and his host went to meet Alau

Now when king Berca had made all his preparations, and knew that Alau was on his march, he also set out on his way, and in due time reached the same plain where his enemies awaited him, and encamped at about ten miles' distance from him. Berca’s camp was quite as richly decked out as that of Alau, and his army was more numerous, for it numbered full three hundred and fifty thousand horsemen. The two armies rested two days, during which Berca called his people together, and addressed them as follows: "Fair sirs," said he, "you know certainly that since I came into possession of the land I have loved you like brothers and sons, and many of you have been in many great battles with me, and you have assisted me to conquer a great part of the lands we hold. You know that I share everything I have with you, and you ought in return to do your best to support my honour, which hitherto you have done. You know what a great and powerful man Alau is, and how in this quarrel he is in the wrong, and we are in the right, and each of you ought to feel assured that we shall conquer him in battle, especially as our number exceeds his; for we know for certain that he has only three hundred thousand horsemen, while we have three hundred and fifty thousand as good men as his and better. For all these reasons, then, you must see clearly that we shall gain the day, but since we have come so great a distance only to fight this battle,
it is my will that we give battle three days hence, and we will proceed so prudently and in such good order that we cannot fail of success, and I pray you all to show yourselves on this occasion men of courage, so that all the world shall talk of your deeds. I say no more than that I expect every one of you to be well prepared for the day appointed."

CHAPTER 67

Alau's address to his men

When Alau knew certainly that Berca was come with so great an army, he also assembled his chiefs, and addressed them as follows: "Fair brothers, and sons, and friends," said he, "you know that all my life I have prized you and assisted you, and hitherto you have assisted me to conquer in many battles, nor ever were you in any battle where we failed to obtain the victory, and for that reason are we come here to fight this great man Berca; and I know well that he has more men than we have, but they are not so good, and I doubt not but we shall put them all to flight and discomfiture. We know by our spy that they intend to give us battle three days hence, of which I am very glad, and I pray you all to be ready on that day, and to demean yourselves as you used to do. One thing only I wish to impress upon you, that it is better to die on the field in maintaining our honour, than to suffer discomfiture; so let each of you fight so that our honour may be safe, and our enemies discomfited and slain."

Thus each of the kings encouraged his men, and waited for the day of the battle, and all prepared for it in the best way they could.

CHAPTER 68

Of the great battle between Alau and Berca

When the day fixed for the battle arrived, Alau rose early in the morning, and called his men to arms, and marshalled his army with the utmost skill. He divided it into thirty squadrons, each squadron consisting of ten thousand horsemen; and to each he gave a good leader and a good captain. And when all this was duly arranged, he ordered his troops to advance, which they did at a slow pace, until they came half way between the two camps, where they halted and waited for the enemy. On the other side, king Berca had drawn up his army, which was arranged in thirty-five squadrons, exactly in the same manner as that of Alau's, and he also ordered his men to advance, which they did within half-a-mile of the others. There they made a short halt, and then they moved forward again till they came to the distance of about two arbales' shots of each other. It was a fair plain, and wonderfully extensive, as it ought to be, when so many thousands of men were marshalled in hostile array, under the two most powerful warriors in the world, who moreover were near kinsmen, for they were both of the imperial lineage of Jengiz-khan.
After the two armies had remained a short while in face of each other, the nacars at length sounded, upon which both armies let fly such a shower of arrows at each other that you could hardly see the sky, and many were slain, man and horse. When all their arrows were exhausted, they engaged with swords and maces, and then the battle was so fierce that the noise was louder than the thunder of heaven, and the ground was covered with corpses and reddened with blood. Both the kings distinguished themselves by their valour, and their men were not backward in imitating their example. The battle continued in this manner till dusk, when Berca began to give way, and fled; and Alau's men pursued furiously, cutting down and slaying without mercy. After they had pursued a short distance, Alau recalled them, and they returned to their tents, laid aside their arms, and dressed their wounds; and they were so weary with fighting, that they gladly sought repose. Next morning Alau ordered the bodies of the dead to be buried, enemies as well as friends, and the loss was so great on both sides that it would be impossible to describe it. After this was done, Alau returned to his country with all his men who had survived the battle.

CHAPTER 69

How Totamangu was Lord of the Tartars of the West

You must know that in the West there was a king of the Tartars named Mongutemur, and the sovereignty descended to Tolobuga, who was a young bachelor, and a very powerful man, named Totamangu, slew Tolobuga, with the assistance of another king of the Tartars, named Nogai. Thus Totamangu obtained the sovereignty by the aid of Nogai, and, after a short reign, he died, and Toctai, a very able and prudent man, was chosen king. Meanwhile the two sons of Tolobuga had grown to be now capable of bearing arms, and they were wise and prudent. The two brothers assembled a very fair company, and went to the court of Toctai, and presented themselves with so much courtesy and humility on their knees that Toctai welcomed them, and told them to stand up. Then the eldest said to the king, "Fair sir Toctai, I will tell you in the best way I can why we are come to court. You know that we are the sons of Tolobuga, who was slain by Totamangu and Nogai. Of Totamangu, I have nothing to say, since he is dead; but we claim justice on Nogai for the slaughter of our father, and we pray you as a righteous lord to grant it us. This is the object of our visit to your court."

CHAPTER 70

How Toctai sent for Nogai to Court

When Toctai had heard the youth, he knew that what he said was true, and he replied, "Fair friend, I will willingly yield to your demand of justice upon Nogai,

These are the same names as spelt Mungletemur and Totamongur in Ch. 64, p. 336.
and for that purpose we will summon him to court, and do everything which justice shall require." Then Toctai sends two messengers to Nogai, and ordered him to come to court to answer to the sons of Tolobuga for the death of their father; but Nogai laughed at the message, and told the messengers he would not go. When Toctai heard Nogai's message, he was greatly enraged, and said in the hearing of all who were about him, "With the aid of God, either Nogai shall come before me to do justice to the sons of Tolobuga, or I will go against him with all my men and destroy him." He then sent two other messengers, who rode in all haste to the court of Nogai, and on their arrival they presented themselves before him and saluted him very courteously, and Nogai told them they were welcome. Then one of the messengers said: "Fair sir, Toctai sends you word that if you do not come to his court to render justice to the sons of Tolobuga, he will come against you with all his host, and do you all the hurt he can both to your property and person; therefore resolve what course you will pursue, and return him an answer by us." When Nogai heard Toctai's message, he was very angry, and replied to the messenger as follows: "Sir messenger," said he, "now return to your lord and tell him from me, that I have small fear of his hostility; and tell him further, that if he should come against me, I will wait for him at the entrance of my territory, for I will meet him half way. This is the message you shall carry back to your lord." The messenger hastened back, and when Toctai received this answer, he immediately sent his messengers to all parts which were under his rule, and summoned his people to be ready to go with him against king Nogai, and he had soon collected a great army. When Nogai knew certainly that Toctai was preparing to come against him with so large a host, he also made great preparation, but not so great as Toctai, because, though a great and powerful king, he was not so great or powerful as the other.

CHAPTER 71

How Toctai proceeded against Nogai

When Toctai's army was ready, he commenced his march at the head of two hundred thousand horsemen, and in due time reached the fine and extensive plain of Nerghi, where he encamped to wait for his opponent. With him were the two sons of Tolobuga, who had come with a fair company of horsemen to avenge the death of their father. Nogai also was on his march, with a hundred and fifty thousand horsemen, all young and brave men, and much better soldiers than those of Toctai. He arrived in the plain where Toctai was encamped two days after him, and established his camp at a distance of ten miles from him. Then king Toctai assembled his chiefs, and said to them: "Sirs, we are come here to fight king Nogai and his men, and we have great reason to do so, for you know that all this hatred and rancour has arisen from Nogai's refusal to do justice to the sons of Tolobuga; and since our cause is just, we have every reason to hope for victory. Be therefore
of good hope; but at all events I know that you are all brave men, and that you will do your best to destroy our enemies." Nogai also addressed his men in the following terms: "Fair brothers and friends," said he, "you know that we have gained many great and hard fought battles, and that we have overcome better men than these. Therefore be of good cheer. We have right on our side; for you know well that Toctai was not my superior to summon me to his court to do justice to others. I will only further urge you to demean yourselves so in this battle that we shall be talked of everywhere, and that ourselves and our heirs will be the more respected for it." Next day they prepared for battle. Toctai drew up his army in twenty squadrons, each with a good leader and captain, and Nogai's army was formed in fifteen squadrons. After a long and desperate battle, in which the two kings, as well as the two sons of Tolobuga, distinguished themselves by their reckless valour, the army of Toctai was entirely defeated, and pursued from the field with great slaughter by Nogai's men, who, though less numerous, were much better soldiers than their opponents. Full sixty thousand men were slain in this battle, but king Toctai, as well as the two sons of Tolobuga, escaped.

Conclusion

And now ye have heard all that we can tell you about the Tartars and the Saracens and their customs, and likewise about the other countries of the world as far as our researches and information extend. Only we have said nothing whatever about the Greater Sea and the provinces that lie round it, although we know it thoroughly. But it seems to me a needless and useless task to speak about places which are visited by people every day. For there are so many who sail all about that sea constantly, Venetians, and Genoese, and Pisans, and many others, that everybody knows all about it, and that is the reason that I pass it over and say nothing of it.

Of the manner in which we took our departure from the Court of the Great Khan you have heard at the beginning of the Book, in that chapter where we told you of all the vexation and trouble that Messer Maffeo and Messer Nicolo and Messer Marco had about getting the Great Khan's leave to go; and in the same chapter is related the lucky chance that led to our departure. And you may be sure that but for that lucky chance, we should never have got away in spite of all our trouble, and never have got back to our country again. But I believe it was God's pleasure that we should get back in order that people might learn about the things that the world contains. For according to what has been said in the introduction at the beginning of the Book, there never was a man, be he Christian or Saracen or Tartar or Heathen, who ever travelled over so much of the world as did that noble and illustrious citizen of the City of Venice, Messer Marco the son of Messer Nicolo Polo.

Thanks be to God! Amen! Amen!
INDEX

The place-names are indexed in most cases under their modern forms

Abaga, 258; ruler of provinces bordering upon those of Kaidu, 329; sends his son Arghun with an army which engages and defeats one sent by Kaidu, 329; his death, 330

Abashya, see Abyssinia

Abatan, captain of Grand Khan's expedition against Japan, 99, 100, 238; his fate, 239

Abbott and Smith's route from Kirman to the coast, xxxvi
