THE PAŃCATANTRA IN MODERN INDIAN FOLKLORE

W. NORMAN BROWN
UNIVERSITY OF PENNSYLVANIA

I. THE RELATION OF MODERN INDIAN FOLK-TALES TO LITERATURE

Brief Survey of published Indian Folk-tales

In 1868 Miss Frere published her book *Old Deccan Days*. This was the first collection of stories orally current among the people of India ever presented to the Occident. Three years later Mr. Thomas Steele included in the appendix to his metrical rendition of *The Kusa Jñatakaya* fourteen short household tales from Ceylon. That same year Mr. G. H. Damant began to publish folk stories of Bengal in the *Indian Antiquary*, and continued to do so until 1880. Meanwhile others occasionally reported oral tales in that periodical and in books dealing with the customs and manners, or history, of particular districts of India. The next book offered to the Western public, devoted exclusively to Indian folk stories, was Miss Stokes's *Indian Fairy Tales*, privately printed in 1879. In 1883 Mr. L. B. Day's *Folk-Tales of Bengal* appeared; and the next year Captain (now Lieutenant-Colonel) Temple issued the first volume of his three-volume work, *Legends of the Panjab*. The following year he and Mrs. F. A. Steel sent out *Wide-awake Stories*, most of the tales in which had previously been published in the *Indian Antiquary*. This book was epoch-making in the study of Hindu

---

1 In this essay I use the terms 'folk-tale' and 'folk story' as synonymous with 'oral' tale or story, that is, one reported orally from the folk, and contrasted with 'literary' tale or story, that is, one existing in a professed work of literature. This distinction, of course, deals not with the substance of the story but with the sort of fiction, whether oral or literary, in which the story appears. This limitation is perhaps arbitrary on my part, but it is at least convenient and is often matched in practice by others dealing with oral stories.

2 A few Indian oral tales had been published before this time in books of travel or description, for example in Mr. T. Bacon's *Oriental Annual* (1840), and Mrs. Postans' *Cutch* (1838). See my bibliography.
folk-tales, for in addition to a number of good stories it contained a classified list of most of the incidents found in a large part of the previously published tales. Since then the publication of Indian oral stories has been extensive and continuous to the present time. In 1914 there appeared the last volume of Mr. H. Parker's three-volume collection of *Village Folk-Tales of Ceylon*, the most important work yet published in this field, containing 266 stories and indicating parallels to many of those from other collections both oral and literary.

We have now in printed form accessible to Occidental readers, in round numbers, 3000 stories from India and the adjacent countries of Ceylon, Tibet, Burma, and the Malay Peninsula. These run the gamut of folk-tale types, including myths, place and hero legends, fables, drolls, *Märchen* of all sorts, cumulative stories,* and ballads. Altho the folk story material is not nearly exhausted, the number of tales reported is sufficiently large and representative to afford a working basis for the study of Indian folklore. Each new collection of tales that is published contains only a small amount of new material; the greater part repeats stories or motifs that have been previously reported.

Of these 3000 stories not all are oral tales. By a loose interpretation of the word, Indian "folklore" has been made to include some tales translated directly from literary texts. Those who have so offended are for the most part natives of the country. Pandit S. M. Natesa Sastri, for example, offers forty-five stories in his collection. One of these, which appears as No. 13 in *Tales of the Sun*, is in reality no oral tale but a translation of the Alakesakathā, a sixteenth century Tamil romance published by him in two other places as a piece of literature.* Other of his tales are evidently literary, as for instance No. 3, "The Soothsayer's Son." How many more are of this character I cannot say. The same remark applies to some of the stories found in Mr. G. R. Subramiah Pantalu's *Folklore of the Telugus*, of which, for instance, No. 41 is a translation of the entire first book of the Hitopadesha in some Telugu version. There is also a suspicious ring to many of Mr. Ramaswami Raju's *Indian Fables*,

---

*Such as the story of Henny Penny or the Old Woman at the Stiles.

some of which seem to be taken directly from literature, or if oral to have been ‘doctored’ by the compiler. The only European, so far as I know, who has done this is the Rev. A. Wood. As the second part of his *In and Out of Chanda* he publishes five stories which are called ‘a valuable contribution to our knowledge of Indian folklore.’ Four of these are probably translations from some Hindustani version of the Tutin-meh; they are at least good paraphrases of the Persian. The other is a translation of the *Vetâlapâñcavînâsati*-story of Šaṅka-cûda and Jimûtavâhana, taken, apparently, from a modern vernacular version. The remainder of the 3000 tales, however, are nearly all genuinely oral.

As is natural, some localities of India have been more thoroly explored by the story collectors than others. Ceylon leads at present in the number of tales reported, having about 310, thanks chiefly to the 263 stories contained in Mr. Parker’s three-volume work mentioned above. The Santal Parganas are second with about 230, of which Mr. C. H. Bompas’s *Folklore of the Santal Parganas* contains 185. The Panjab is third, being represented by approximately 200.

These stories are of interest from several points of view. To the general public they offer a large amount of entertaining reading, altho strict justice compels me to admit that on the whole they hardly equal Hindu literary stories when judged by the standards of fiction. Students of folk customs and practises and popular religion have often professed a deep interest in these oral tales, claiming that they throw light on ancient habits and beliefs. This opinion, I fear, is not too well justified. The customs and superstitions portrayed in them are as a rule either those existing at present or else pure myth, with the exception

---

*His work contains 266 stories, of which three are from South India.*

*There is nothing more common in Hindu folk-tales than the election of a king, when the throne is vacant, by either some or all of the Pañcâdivyani (five divinely guided instruments, state elephant, etc.; see Edgerton, *JAOS* 33. 158 ff.). And yet this was certainly never a Hindu custom in historical times, nor, I think we may safely say, in times prehistorical. Nor were Hindu kings ever more likely than those of other countries to show the generosity so often pictured in fairy tales, both oral and literary, of dividing their kingdoms with benefactors. These and many other incidents of constant occurrence in fiction are of purely imaginary existence as far as concerns real life.*
of those scattered instances where a literary story borrowed by
the folk is still so fresh in the popular memory as to preserve
incidents of the times past when that story received its literary
form. It can be said with truth, however, that there are many
customs and beliefs of the folk appearing in the oral fiction that
occur only rarely, if at all, in the literature.

Borrowing by folklore from literature

But while these oral tales are worthy of study as a separate
department of fiction, they are of more particular interest to us
here on account of the relation they bear to Hindu literature.
Folklorists would often give us to understand that oral and
literary fictions have separate traditions after a story has once
been received into literature from the folklore; that is, that oral
tales have had an independent and continuous existence from the
time of their birth in the distant past. They do, of course,
make some exceptions to this rule in a few isolated cases where
the reverse is so obvious as to be undeniable. Now, whether or
not this opinion is justified in other countries, it is not substanti-
ated in India. It is doubtless true that in the remote past many
stories had their origin among the illiterate folk, often in pre-
literary times, and were later taken into literature. It is also
just as true that many stories that appear in literature existed
there first and are not indebted to the folklore for their origin.

But leaving aside questions concerning the early history of
Hindu stories and dealing strictly with modern Indian fiction,
we find that folklore has frequently taken its material from
literature. This process has been so extensive that of the 3000
tales so far reported, all of which have been collected during the
past fifty years, at least half can be shown to be derived from
literary sources. This statement means that in the highly liter-
ary, altho illiterate, land of India oral tradition has in some

*A good illustration of this phenomenon is found in Parker, Village
Folk-Tales of Ceylon, 133, 348, where there is reference to kahāpāna, a
coin that has not been used in Ceylon since the eleventh century A. D.

*For example, the "life index" or "separable soul," a concept common
to untutored people of many parts of the world, which in India appears
in the folk-tales times without number, but in the classic fiction only rarely.
(I myself have observed it there only five times, and some of those instances
are doubtful.)
cases become gradually poorer until it has died, and has later been reborn from literature. In other cases stories have in all likelihood been carried by literary means to places where they did not exist previously, and have thus been implanted in the folklore. Let me illustrate this sort of borrowing by a few examples.

The first tale in Mr. Alexander Campbell's 'Santali Folk Tales' is entitled 'The Magic Lamp.' Briefly it is as follows. In the capital of a certain Rāja lived a poor widow with an only son. One day a merchant came to her home from a far country, claiming to be her brother-in-law. After staying with her a few days, he left, taking the son with him to look for golden flowers. They travelled a long weary journey. When they arrived at a certain hill the merchant heaped up a large quantity of firewood, and commanded the boy to blow on it. Altho he had no fire, by continued blowing the boy ignited the wood. When the fire was burnt out, a trapdoor appeared beneath the ashes. This the boy was compelled by his uncle to lift. Under it a lamp was burning, and beside the lamp lay a great number of golden flowers.

The merchant took the flowers and went away, but left the boy in the vault. When about to perish with hunger, the boy absent-mindedly rubbed the lamp with his ring. Immediately a fairy appeared, who released him from his prison. On arriving home he found no food in the house. He started to polish the lamp to sell it so that he might get money with which to purchase rice, when suddenly the fairy appeared again, and at his request brot him food. Having now learned the secret of the lamp, he obtained by means of it horses, much wealth, and finally the Rāja's daughter as his wife, providing for her a magnificent palace. One day while the newly-made prince was out hunting, the merchant came to the palace with new lamps to exchange for old. The princess gave him the magic lamp for a new one. The merchant rubbed the lamp, the fairy appeared, and the merchant commanded that the palace and the princess be moved to his own country. When this loss was discovered, the king was enraged, and commanded his son-in-law to restore the princess by the fourteenth day or suffer the punishment of death. On the thirteenth day the young man had found no trace of his wife. In despair he lay down to sleep, resigning
himself to his fate, when he accidentally rubbed his finger ring. A fairy appeared, and at his request transported him to his lost palace. Assuming the form of a dog, he entered it, and was recognized by his wife; and the two laid plans to recover the lamp, which the merchant wore suspended around his neck. At supper the princess killed him by giving him poisoned rice to eat. The two then took the lamp, rubbed it, and had themselves and the palace carried back to the city of the princess’s father. When the morning of the fourteenth day dawned, the Rāja saw the palace in its original place, found his daughter again, was delighted, and divided the kingdom with his son-in-law.

I need scarcely point out that this is the story of ‘Aladdin and the Wonderful Lamp,’ given almost exactly in the form familiar to all of us from childhood, with the exception of the omission of a few incidents and some changes in minor details. There can be no doubt, either, that this is a genuine folk story, genuine, that is, in the sense that it was taken directly from the lips of an untutored Santālī, for Mr. Campbell assures us by definite statement that it was. On the other hand we know that this story has not appeared elsewhere in Indian folklore, that the story itself is not Indic, that even many of the incidents in it, such as the coming of the fairy when the lamp is rubbed, are not Indic. The occurrence of it cannot possibly be due to original existence among the Santālīs. It is the familiar tale told to some of those people by a foreigner, and retold by them with modifications due to their own habits and mental paraphernalia, until it came to Mr. Campbell similar in outward appearance to the rest of the stories that he collected.

How folklore borrows from literature is shown more clearly perhaps by this illustration than by any other we have, not because the borrowing is more certain, but because the non-Indic character of the literary story makes its borrowing more easily seen. Just as surely borrowed, albeit a little less evidently so, because the story is Hindu, is a fable found on pages 33 and 200 of Rouse’s Talking Thrush, a retelling of fables collected by W. Crooke in the United Provinces of Agra and Oudh. The story was told by a brassfounder. It is entitled ‘The Camel’s Neck.’ A camel practises austerities. Bhagwān is pleased and shows himself to him. ‘Who are you?’ asks the camel. ‘I am the Lord of the Three Regions,’ answers the god. ‘Show me
your proper form," says the camel. Then Bhagwān appears in his fourhanded form (Caturbhujā), and the camel worships him. Bhagwān tells him to ask a boon. ‘Let my neck be a yojana long,’ the camels requests. With such a neck the lazy beast can now graze without moving his body. One day it rains. He puts his head and neck in a cave to get out of the wet. A pair of jackals also enter the cave, see the attractive flesh of the yojana-long neck, and begin to eat it. The camel curls his head around to see what is annoying him, but before he can get it back to the jackals, they have eaten enough to kill him.

At first sight, this fable might appear to be a pure creation of the folk mind. As a matter of fact it is nothing of the sort. In the Mahābhārata, Parva 12. 112, this story is given as follows—just as in The Talking Thrush, with only a few minor variations. In the Krita age there lived a camel who had recollection of all the acts of his former life. By observing vows and practising penances he obtained favor with the puissant Brahman, so that the god determined to grant him a boon. ‘Let my neck become long,’ asked the camel, ‘so that I may seize food even at the distance of a hundred yojanas.’ ‘Let it be so,’ said the god. The foolish animal became lazy, and from that day on never went out grazing. One day while his neck was extended a hundred yojanas, a great storm arose. The camel placed his head and a portion of his neck inside a cave to escape the storm. A pair of jackals also dragged themselves to that very cave and entered it for shelter. The jackals began to eat the neck. The camel, when he perceived that his neck was being eaten, strove to shorten it; but as he moved it up and down the jackals, without losing their hold upon it, continued to eat away. Within a short time the camel died. Then says the text:

evam durbuddhinaḥ prāptam uṣṭreṇa nidhanam tadā
alasyasya kramāt pāṣya mahāntam dosam āgatam.

(Mbh. Calcutta ed. 12. 112. 4189.)

‘Thus did that foolish camel meet with his death then. Behold, what a great evil followed in the train of idleness.’ Compare with this the verse of the Hindustāni oral tale:

Aśa dūkha mahān dekhyo phal kaisā bhayā?
Yāten uṃt ajān maran lāgyo niḥ karm se.
Idleness is a great fault; behold, what its fruit was;
By it the foolish camel met with death, owing to his own deeds.

The close agreement of these two versions, even down to the vernacular verse, which is evidently a paraphrase of the Sanskrit and even represents a number of Sanskrit words by their etymological equivalents, shows that the oral fable is nothing more than the old story of the Mahābhārata retold by the folk.

All the literatures of India—Sanskrit, Prākrit, Pāli, and vernacular—serve as sources from which the folklore may borrow; and also the literatures of neighboring countries, especially Persia. I give here an illustration from the Pāli. In Parker’s Village Folk-Tales of Ceylon, 3, 223, there occurs a story called ‘The Son and the Mother,’ belonging to the familiar ‘Biter Bit’ group. It is in summary as follows. A widow marries her son to the daughter of another widow, and all four live in the same house. The wife cultivates an extreme dislike for her mother-in-law, and proposes to her husband that they kill her. After long urging, she finally persuades him, and they plan to throw the old lady into the river. Now the two mothers sleep in the same room. At night, therefore, when they have retired to bed, the wife ties a string to the prospective victim’s cot so that she and her husband may be sure to get the right old woman. The husband, however, secretly changes the string to the other bed. Of course, then, they throw the wife’s mother into the river to the crocodiles. The next morning the wife discovers the mistake, but persists in her determination to destroy her mother-in-law. This time the plan is to burn her as a corpse. When night comes, they carry her to a pile of firewood they have collected by the side of an open grave. They have forgotten, however, to bring fire; and, since each is afraid to return home alone for it in the dark, they both go. About this time the widow awakes and sees the plot that has been laid for her. She quickly gets up, puts a real corpse on the pyre, and hides. When the couple return, they burn the corpse, and leave, satisfied now that the mother will never trouble them again. She, however, wanders about naked until she comes to a robbers’ cave. These take her for a Yaksani (ogress), and flee. They ask a Yakadurā (devil-doctor) to drive her from their cave.
When the Yakadurā comes, she assures him that she is a human being, and offers to prove the truth of her statement by rubbing tongues with him (Yaksanis have no tongues, so the story says). He extends his tongue, but she bites it off; and he, convinced that she is too powerful a Yaksani for him to contend with, runs away. Then the widow takes a large part of the robbers' goods, and returns to her son's home. To the surprised inquiries of the young people as to how she could return after being burnt, she replies that people burnt to death always receive goods in the next world, and that she has returned to share hers with them. The daughter-in-law now becomes greedy for heavenly wealth, too, and asks to be burnt. Her request is granted, but she, of course, never comes back. The mother and son live in ease on the goods taken from the robbers' cave, and at a later time the son marries another wife.

This story is nothing more than a verbal paraphrase of a story in Jātaka 432. Every incident as related above occurs in the Pāli, and the order of incidents is the same in both. The points in which the two differ are so slight that they would not appear in a summary. There is no need to relate the Jātaka tale, for it would agree exactly with the oral tale. It is evident that this longish and neat folk story is taken either directly from the Pāli or from the Sinhalese version of the Jātaka book.

In particular localities a single collection of stories or a romance may exercise an especially strong influence over the folklore, as in the Gilgit region of Kashmir, where a number of tales from the Alexander saga have been found orally current. Other instances of borrowing could be adduced in profusion, but those given are sufficient to illustrate the phenomenon.

The means by which the literary tales are carried into the folklore are many and varied. It is a well-known fact, for instance, that professional reciters of the epics penetrate to all

---

*See Haughton, *Sport and Folklore in the Himalayas*, pp. 96-103, 205.

*Frequently it is not the entire folk-tale that is borrowed, but only incidents or motifs. These might be termed story units, which any raconteur may combine at his pleasure in a story, thereby often creating a story that is original as far as concerns the whole, but secondary as concerns the 'units.' See Bloomfield, *JAOS* 36. 57, and Temple, in Steel and Temple, *Wide-awake Stories*, p. 356.*
parts of India, often making extended visits in single villages and giving lengthy recitations every evening. Further, learned men and priests who can read literary stories delight to repeat the tales to less cultured folk. In some sections of India there are professional story-tellers who retail their wares for a price. Travelling merchants and wandering śādhus are other agents for the spread of stories; and even Europeans have had a share in the work, sometimes thru religious propaganda, and sometimes thru the intercourse between their children and ayaḥs. These are the most obvious means, but there are doubtless others.

As is to be expected, various literatures have exerted especially strong influences over various parts of India. Sanskrit has been the most influential, if for no other reason than that it is the recognized literary vehicle par excellence of the larger part of India. In many cases it acts thru the medium of vernacular literatures, which are always potent in their native localities. Jainistic Sanskrit is remarkably well represented in the collections from Western and Central India. In Southern India the vast Tamil literature dominates the folklore. Pāli has considerable influence in the regions where Hinayāna Buddhism is the prevailing religion—Ceylon, Burma, and Siam—probably thru the spoken languages of those regions, into which many of the sacred books have been translated. It also shows its traces in Southern India, where it acts thru Tamil. Over all Northwestern and Northern India Persian literature has operated largely, and its force is felt as far east as Bengal and as far south as the Telugu country, altho with ever decreasing strength in ratio to the distance from Persia. In the Malay peninsula there is Arabic influence, originating in the Mohammedan sections there. The meager collections we have from Tibet strangely enough owe little to the sacred books of Mahāyāna Buddhism, but are indebted mostly to native Indian and Persian literatures. The reason for this may lie in the fact that most of the reported tales come from the section of Tibet thru which

---

6 In dealing with vernacular literary stories that are related to folk stories care must be taken to determine which is the parent. An instance where a late literary collection has taken a tale from the folklore is found in the Tamil-Malay Pasajja Tandaruns 1, 5 (see Hertel, Das Pañcatantra, pp. 295 and 299). This story from a Malay folk version of the Lion and the Hare has been borrowed by the compiler of that text.
runs the trade route from India to Lhasa. Christian religious literature has given much to the folklore of the Salsette and the Malabar coast.

The folk-tales that are independent of literature seem to be of fairly well defined types. All cumulative stories, most cosmological myths, the majority of place, but not hero, legends, many fairy stories and Märchen, and a large number of drolls, seem original among the folk. This statement, however, is not to be considered final, for with the increase of my opportunities to become acquainted with the large field of Hindu literature and that of adjacent countries, I find it ever more difficult to decide just what kinds of stories are independent.

The extent to which folklore as a whole has borrowed from literature is another question to which only a provisional answer can be given. After a study of the subject for several years, my present estimate is that somewhat over a half of the oral fiction can be shown to be thus secondary. But a complete perusal of all the literatures that have had access to India, if this were possible, would doubtless show the proportion to be much higher.

II. PAÑCATANTRA STORIES REPRESENTED IN HINDU FOLKLORE

At the close of the preceding section I made the statement that over a half of the stories contained in the published collections of Hindu oral tales can be shown to be derived from literary sources. To illustrate this point I am making an extensive investigation of the folk-tales, comparing them with parallel stories in the literature of India and those of other countries that have had an opportunity to influence Indian popular lore, and endeavoring to determine just what is the status of each folk-tale that thus comes under consideration. From time to time I hope to publish my results.

As a starting point for my investigations I have chosen to examine those oral stories that parallel the fables found in the older Indian versions of the Pañcatantra, that is to say, the

---

9. This remark applies to fairy stories in their complete form, not to the separate elements of which they are a combination.

10. This fact seems all the more remarkable when we recall that folk-tale collectors are often encouraged to reject stories which are obviously borrowed. See, for example, W. Crooke in the Indian Antiquary 22, p. 196.
Tantrākhyāyika, the versions contained in Somadeva’s Kathāsaritsāgara and Kṣemendra’s Brhatkathāmaṇjarī, the Southern Pañcatantra, Textus Simplicior, Pūrṇabhadra’s Pañcākhyānaka, and the Hitopadeśa. The majority of these Pañcatantra stories have numerous literary parallels, and I have used all of these that I know and have been able to see.

The folk-tales surveyed by me in pursuing this investigation are those referred to in my bibliography at the end of this paper. Unfortunately, as I indicate there, some of the books have not been accessible to me, but their number is not large and the consequent omissions will not be many. The most important works that I have not seen are Thornhill, Indian Fairy Tales; The Orientalist, vols. 3 and 4, and North Indian Notes and Queries. These and the other unexplored titles contain, I should guess, about 200 stories, not a very large fraction of the 3000 that have been published. One other book, Mackenzie’s Indian Fairy Tales, is so unsystematically compiled that I have not been able to use it.

Although I have treated the oral tales that duplicate stories in the entire five books of the Pañcatantra, the exigencies of space are such that at present only the part dealing with the first book can be published. At a later time I hope to present the remainder.

There are discussed in this paper 45 oral stories, of which 31 are traced to literary sources, 8 show themselves to be derived from literary sources which, however, have not yet come to my hand; and 6 appear to be independent. Three other stories are treated which appear in folk collections, but are themselves literary.

There is added here a table showing in summary the places where the folk-tales treated are published, the stories from the Pañcatantra cycle to which they are parallel, and the status of each story—whether borrowed or original.

---

44 For a bibliography of these and the later versions of the Pañcatantra, and their literary history, see Hertel, Das Pañcatantra, Leipzig, 1914, and Chauvin, Bibliographie des ouvrages arabes ou relatifs aux Arabes publiés dans l’Europe chrétienne de 1810 à 1885, vol. 2.

45 See my remark on this book in the bibliography.

46 The dissertation offered for my doctor’s degree included the treatment of all stories duplicated in the entire Pañcatantra and Hitopadeśa.

This table affords considerable evidence in support of the theory that it is the folk-tales and not the literary tales that are borrowed. It is always a literary version of wide currency in the region from which the oral tale is reported that is the nearest parallel to this oral tale and is selected as its source. These literary tales, however, have usually been imported into that region after having received their characteristic form elsewhere, and cannot, therefore, be considered as secondary to the folk stories. Rather the folk stories must be dependent upon them. Notice, for example, that Arabic or Persian tales appear as sources six times, and Pali stories five times.

III. DISCUSSION OF INDIVIDUAL STORIES

Before entering upon the treatment of the oral stories a few remarks of an explanatory nature should be made.

The stories are discussed under their Pañcatantra titles in the order of the fables in the older Indian versions of the Pañcatantra as given by Hertel, Das Pañcatantra, p. 12 ff.

The various stages of treatment of the stories in each section are as follows: First, references are given to the Pañcatantra texts in which the literary story appears. Next follow references to the oral stories. After this I give a summary of the Pañcatantra type of the story. Last of all comes the discussion of the individual folk-tales. This order of treatment is occasionally varied, but the variations are always indicated.

In discussing the stories I have not thought it my duty to give all the literary parallels. These are now generally well-known in consequence of their indication by Hertel at scattered places in his Das Pañcatantra and in his Tantrākhyāyika, Einleitung, p. 128 ff. I have referred to only those that seem to have a bearing upon the oral versions.

Nor have I anywhere in this essay given a bibliography of the various versions and texts of the Pañcatantra. These have been completely exploited by Hertel, Das Pañcatantra, Leipzig, B. Teunner, 1914; and Chanvin, Bibliographie des ouvrages

---

18 The single exception to this generality occurs in the case of a folk story reported in Pantalur, Folktale of the Telugus, of which the Kathāsaritsāgara furnishes the source, in all likelihood, however, acting thru some later and more familiar text.

2 JAOS 39
arabes ou relatifs aux Arabes publiés dans l'Europe chrétienne de 1810 à 1885, vol. 2.

Last of all I want to call particular attention to the fact that in this paper I am dealing only with stories appearing in the folklore that are paralleled in the older versions of the Pañca-tantra, not with motifs in the large. The distinction can be easily appreciated by glancing at the section devoted to the story of the Iron-eating Mice and comparing with the stories there treated the occurrences, listed in the footnote, of the same underlying psychic motif.

Folklore: Parker, Village Folk-Tales of Ceylon, 3, p. 22; Skeat, Fables and Folk-Tales from an Eastern Forest, p. 30.

Parker's story is as follows: A jackal, seeing a lion and bull friends, wishes to be admitted to their friendship, and approaches the bull with this end in view. The bull repels him, and to revenge himself the jackal brings about a quarrel between the two, telling the lion that the bull claims to be the more powerful, and the bull that the lion intends to kill him with his roar. The bull and the lion fight, with the result that the lion's roar kills the bull and the bull gores the lion to death.

This story is markedly different from that of the Pañca-tantra in which one of a pair of jackals, ministers of a lion, first welcomes a bull, and, later, jealous of the favor the lion shows him, estranges them. They fight and the lion kills the bull. It comes nearer a Buddhist story found in Jātaka 349, Schiefner, Tibetan Tales (Ralston's translation), p. 325, Jülg, Mongolische Mährchen, p. 172, Busk, Sagas from the Far East, p. 192; Chavannes, Cinq Centes Contes et Apologies II, p. 425. These literary tales and the oral tale differ from the Pañca-tantra stories in these respects: the lion and bull are friends before the jackal appears on the scene, and both are killed in the fight. The oral tale, however, disagrees with the Buddhist literary tale in these points: the jackal is not admitted to the friendship of the lion and the bull, and it is by roaring that the lion kills the bull. This widespread and ancient Buddhist literary story, however, is the source of the oral tale. The lion's roar that kills

18 A variant in which the attempted estrangement is not successful is found in Schiefner, l. c., p. 328, Chavannes, l. c. 2, p. 293, and Jātaka 361.
is of frequent occurrence in Buddhist literature, and has found its way into this story through the narrator's familiarity with it as the way par excellence for a lion to destroy his enemy. The only other notable difference lies in the first part of the oral tale, where the jackal makes overtures to the bull and is repelled. This is a folk substitution for the prelude to the literary tale which, being of secondary importance in the plot of the fable, has been forgotten. That the oral story is borrowed from the literary tale, and not the literary tale from the oral, seems self-evident here. It would be barely possible that the Sinhalese oral tale is responsible for the Pāli tale, but it is inconceivable that it should be the source of the ancient Tibetan tale mentioned above.

The Malay tale of Skeat is a queer jumble. The mousedeer sets the Wild Bull of the Clearing and the Bull of the Young Bush to fighting by alleging that each has slandered the other. The Bull of the Clearing slays his rival. The mousedeer has watched the battle from a seat on a white-ant hill, and the ants have burrowed into him so that he cannot rise. The victorious bull scatters the anthill and releases him. The mousedeer cuts the dead bull's throat, according to Mohammedan rites, and commences to flay the carcase. At this juncture a tiger approaches, and asks for some of the meat (evidently thinking that the mousedeer has slain the bull). He obtains his request on condition that he assist in the flaying. Rain falls, and the mousedeer sends the tiger to cut boughs with which to make a shelter. The tiger tries to clamber upon a raft in a river; but the bank is so slippery and his shoulders so wet with blood that he does not succeed. Noticing the mousedeer quivering, he says, 'What makes you shiver so?' The mousedeer replies fiercely, 'I am quivering with anticipation.' The tiger, fearing that the mousedeer means with anticipation of eating him, runs away.

Since other Malay tales are descended from Semitic sources, and since this story itself shows Moslem influences, such as the throat-cutting noted above, we may assume that it comes into

---

*See Jñātakas 152 and 241; Chavannes, *Cinq Centes Contes et Apologies* 2, p. 339; Parker, *Village Folk-Tales of Ceylon*, 1, p. 242.

* For example, the Malayan folk version of the Lion and the Hare treated below.
the folklore thru the Malayan Hikäyat Kalila dan Damina. In the folk treatment the lion and the bull, by a process of assimilation, have become two bulls. The account of their friendship has been omitted. The incident of the mousedeer stuck to the ant-hill is a touch of local humor. The rest of the story, the frightening of the strong tiger by the weak mousedeer, is an illustration of the motif of bluff."

2. *RAMS AND JACKAL*: Tantrākhyāyika I. 3b, and in all other older versions except Somadeva and Kṣemendra.

Two rams are fighting. A jackal sees the conflict and runs in between them to lick up the blood that flows from their heads. Failing to get out of their way, he is caught between them as they charge each other and is crushed to death.

In Smeaton's tale a black and a white buffalo graze together peacefully in a large plain. A hare tells each of them that the other is complaining of his fellow's greed for grass, and in this way sets them fighting. While they are goring each other, he skips from the head of one to the other, urging them to fight with greater fury. By a misstep he falls between their two heads just as they meet, and is killed.

This oral tale has no good literary parallel, and in its present form seems original. Certainly only the plot, and not the details, can be borrowed from literature. The incident of the two buffaloes who first graze together peacefully and are afterwards set at enmity by the hare reminds one of the Malayan oral version of the Lion and the Bull discussed above, and may possibly be a reflection of it. The hare is the 'clever animal' in Karen stories, and here plays that part by causing trouble between the two buffaloes. The story seems to be a combination of the Malayan tale mentioned and the story of the Rams and the Jackal.

3. *UNCHASTE WEAVER'S WIFE*: All older versions of the Pañcatantra as I. 3c or 4c, except in Somadeva and Kṣemendra; in Hitopadesa II. 5b.

Folklore: Bompas, *Folklore of the Santal Parganas*, p. 304.

A weaver one night catches his wife in the act of going to her lover, and ties her to a post. While the weaver is asleep,

*A paper by me discussing this motif will soon appear in print.*
a barber's wife, who acts as procuress, releases her and takes her place. The husband awakes and addresses some words to the substitute wife, but she, fearing discovery, does not reply. In anger he cuts off her nose. The real wife soon returns and exchanges places with her substitute. In the morning she makes a trick asseveration of truth by her chastity, calling upon the powers of Heaven to restore her nose if she be truly chaste. When the weaver sees his wife with her nose whole he thinks it has been restored by virtue of her chastity, is convinced that he has misjudged her, and begs her pardon. At this point the Hitopadesa story ends, but the other versions tell how the barber's wife fixes the blame for the loss of her nose upon her husband.

The folk story is part of a longer tale which is made up, like many other folk stories, of several small tales. A husband finds that his wife has illicit relations with a Jugì. He beats her. The Jugì hears the woman cry, and sends an old woman to summon her. The old woman takes the place of the wife, weeping and wailing in her stead, while the wife goes to the Jugì. The husband, irritated by the false wife's noise, rushes out of the house, and cuts off her nose. When the real wife returns she complains of the false charge her husband has brot against her. She then calls him to come and see the miracle that has taken place. He finds her with her face whole, repents of his conduct, and has full faith in her virtue. From the fact that the folk-tale ends here, as does the Hitopadesa, and since the Hitopadesa is the common Bengal version of the Pañcatantra, I conclude that it is the source of the oral story, acting through Sanskrit or vernacular text current in Bengal.

4. CROWS AND SNAKE: All older versions of the Pañcatantra except Somadeva, being Tantrākhyāyika 1. 4 etc.

Folklore: Ramaswami Raju, Indian Fables, p. 78.

A snake, living at the foot of a tree in which a family of crows have their nest, has a habit of devouring their young. To get

*The first part of the story is an account of the husband's discovery of his wife's infidelity. He locks her out of the house, whereupon she throws a large stone into a pool of water. When he hears the splash, he thinks she is drowning herself, and rushes out to save her. She quickly slips into the house herself, and locks out her husband. The next day he punishes her as told above.
rid of the enemy the male crow steals some jewelry and drops it down the snake’s hole. The owner has the hole dug up to recover his property, and while doing so kills the snake. In all literary versions except the Southern Pañcatantra and Hitopadesa the male crow consults his wise friend, the jackal, who suggests to him the stratagem by which the snake is destroyed.

In the oral story a serpent eats the young of a raven. The raven offers the serpent a portion of her daily food to secure immunity for her offspring; but the snake rejects the bargain, disdainfully the carrion on which the raven feeds. The raven, going to a palace, steals a bracelet belonging to the queen and drops it in the serpent’s hole. As the servants dig for the bracelet, the snake attacks them, and they kill it.

This oral story agrees with no literary version I have seen, the chief point of difference being the proposed bargain. In other respects (the kind of jewelry and place from which stolen) it agrees better with Tantrākhyāyika than with any other version, altho no mention is made in the popular story of the jackal as adviser, in which point it is similar to the Hitopadesa. The tale appears either to be descended from some literary version with which I am not familiar, or to have been deliberately modified by Ramaswami Raju in the retelling.

5. HERON AND CRAB: All Pañcatantra books (Tantrākhyāyika I. 5, etc.).

Folklore: Ramaswami Raju, Indian Fables, p. 88; Pantulu, Folklore of the Telugus (3d ed.) p. 47 (Indian Antiquary 26, p. 183); Steele, Kusa Jātakaya, p. 251; Parker, Village Folk-Tales of Ceylon, 1, p. 342 (three variants); Skeat, Fables and Folk-Tales from an Eastern Forest, p. 18.

A heron reports to a pond full of fish that destruction threatens them. In response to their alarmed inquiries as to how they may be saved, he offers to carry them to another pool. They agree, and he takes them away one at a time, not, however, to another pond, but to a tree where he eats them. Not content with the fish he tries the same trick on a crab. The latter, however, sees thru the deceit, and cuts the heron’s throat with his claws.

The literary versions may be divided into two classes: (1) those in which not all the fish in the pond are eaten by the heron, but some live to hear the crab tell of the villain’s destruction;
and (2) those in which no mention is made of any fish surviving or of the crab returning to them. The first class includes Tantrākhāyika, Tantrākhāyāna, Textus Simplicior, Pūrṇabhādra, and Kalila wa Dimna; the second includes Somadeva, Kṣemendra, Southern Pañcatantra, and Hitopadeśa. Two other versions are distinguished by an especial characteristic. In Jātaka 38 and Dubois’s Panacha-Tantra, p. 76, the heron points out or prophesies a drought and thus persuades the fish to leave their home, while in the other versions he claims to have overheard fishermen planning to fish out the pond.

Ramaswami Raju’s story agrees with those in class (1) noted above. It is an abbreviation of some one of them, just what one cannot even be surmised because Mr. Raju is unscientific enough not to give any indication as to the part of India from which his stories come.

Pantalu’s Telugu story belongs with Dubois’s tale, mentioned above. They agree even so far as to specify the same length of time for the duration of the drought prophesied, twelve years. The crab, however, is not mentioned in Pantalu’s story. It ends with the wicked crane enjoying his unholy feast. The folk-tale is a descendant of the one translated by Dubois, in which the point of the story, the punishment of the rascally crane, has been forgotten.

There are four Sinhalese folk versions of this tale, one in Steele’s work and three in Parker’s (see references above). For the sake of convenience I refer to Parker’s three variants as (1), (2), and (3). All of these come from the Jātaka story. In Steele, and in Parker (1) and (2), it is stated that the pond in which the fish live is drying up, just as in the Pāli tale. In Parker (1) the heron offers the fish as a reason for changing their home the small size of the hole in which they live. The hole is a folk substitution for the original lake which has been forgotten. Parker (1) is the only one of the four versions that retains the heron’s claim that he is living an ascetic life. Parker (2) and (3) describe how the fish send a scout to examine the new home. This incident is peculiar to the Jātaka among the literary texts; it describes the scout as large and one-eyed. The description is lacking in the oral tales. Parker (3) varies this point by having the heron devour the scout, instead of bringing him back to report. To excuse the failure of the scout to return,
the heron says that the first fish is so happy in his new quarters that he refuses to leave them. The correct conclusion of the tale, the killing of the heron by the crab, is found only in Steele and Parker (1). In Parker (3) both animals perish, and in Parker (2) the heron kills the crab. This latter case shows how unintelligently the folk can treat a story. The moral has quite vanished. A composite of these four Sinhalese folk tales would give the Jātaka story nearly as in the Pāli, and we may conclude that it is their source.

The Malayan tale of Skeat is also borrowed from the Jātaka, showing the characteristic features of that version, for in this oral tale the villain (a pelican) prophesies a drought and the fish send one of their number to examine the new pool.

6. LION AND HARE: All Pañcatantra books. (Tantrākyāyika I. 6, etc.)

Folklore: Rose, Talking Thrush, p. 130; Frere, Old Deccan Days (2d ed.), p. 156; Pantulu, Folklore of the Telugus (3d ed.), p. 9 (Indian Antiquary 26, p. 27); Butterworth, Zigzag Journeys in India, p. 16; Swynnerton, Romantic Tales from the Panjab with Indian Nights' Entertainment, p. 154; Ramaswami Raju, Indian Fables, p. 82; O'Connor, Folk-Tales from Tibet, p. 51; Parker, Village Folk-Tales of Ceylon, 2, p. 385; Skeat, Fables and Folk-Tales from an Eastern Forest, p. 28; Steel and Temple, Panjabi Tales, Indian Antiquary 12, p. 177 (2 versions); Dames, Balochi Tales, Folk-Lore 3, p. 517.

The lion terrorizes the other animals of the forest by the indiscriminate slaughter he makes among them. They persuade him to cease on condition that they supply him with one of their number every day. When it comes the hare's turn to be the lion's dinner, he plans to destroy the tyrant. He does not arrive in the lion's presence until late, and excuses himself by saying that another lion has detained him on the way. The first lion is angry, and demands to be shown his rival. The hare tells him to look down a certain well. He does so, mistakes his own reflection for the other lion, leaps at it, and is drowned.

The literary versions of this story naturally divide themselves into two classes: (1) those in which the hare says that he himself was appointed by the rest of the animals to be the lion's prey—these include all Indian Pañcatantra books except those noted in the next class; (2) those in which the hare says he was
sent with a second and fatter hare which was meant to be the lion's dinner but which has been seized by the other lion—these include Kalila wa Dimna (all versions), Pañcatikhyānavarttika 30, Pandja Tandaram (see Hertel, Das Pañcatanta, pp. 67 and 299). To class (2) belongs properly the story as told in the Jainistic Pañcatanta books, Textus Simplicior I. 8 and Pûrṇabhadrā I. 7. In these the hare says that he was sent in company with five other hares, evidently all to be eaten by the lion. The five are kept by the rival lion as hostages.

The folk stories are differentiated similarly. To class (1) belong those in Rouse, Frere, Butterworth, Raju, O'Connor, Parker, Steel and Temple (version 2), and Dames. To class (2) belong those in Pantalu, Swynnerton, Skeat, and Steel and Temple's Panjabi Stories (version 1).

Rouse's and Raju's stories are to all intents and purposes the same. The tyrant animal in Raju's tale is the tiger, which is interchangeable with the lion in folklore. Except for the fact that the folk-tales make no mention of any other hares than the one clever hare, this tale would represent an abbreviated version of Textus Simplicior or Pûrṇabhadrā. It cannot be from the Hitopadesa or any other version included in class (1), because it contains two details found in the Jainistic texts which do not appear in class (1): the hare says that the rival lion claims to be the real lord of the forest; and after the lion has been killed the other animals unite in singing the praises of their deliverer, the hare. These oral versions are either a folk working over of the Jainistic story from which mention of the other hares has been omitted, or a popular form of some literary descendant of the Jainistic tale that omits this detail.

Dames's story has the same origin as the two just treated. It agrees with Raju's story except in these three points: the clever animal is a fox, not a hare; the fox does not say that the other tiger claims to be king, but merely remarks that another tiger has come into the country and is even now sitting at home after enjoying a jackal; and after the fox has destroyed the tiger, and returned safe, he is called to account by the other animals who sent him for apparently not reporting to the tiger, at which time he tells how he killed the tiger.

Steel and Temple's second version also agrees well with Raju's tale except that the clever animal is a vixen, and that the vixen
tells the tiger that a similar agreement has been made by the animals with the tiger's brother. The tiger demands that the vixen show him his brother, and, of course, is shown his reflection in a well.

The Tibetan tale of O'Connor differs widely from all the other versions with which I am familiar. A hare is caught by a lion. He advises the lion to eat another and very large animal, larger even than the lion himself, and very dangerous, which lives in a water-tank. The lion compels the hare to lead him to this tank. On arriving there, goaded to fury by the cautions of the hare not to attack the ferocious beast in the tank, the lion leaps in and is drowned. The next day the hare tells the lioness that he has destroyed her mate. She chases him, and he leads her to a hole in the wall of an old castle, into which she rushes with so much momentum that she sticks there unable to get out, and eventually dies of starvation. This is the literary story very much changed by folk treatment, preserving only the main point of the literary tales and varying all the details. It is original.

Frere's and Butterworth's stories are identical, corresponding at times even in wording, and may be treated as one. The hero is a jackal. There is no mention of an agreement between the lion and the rest of the animals. The story opens with a reign of terror in which the lion slays all the wild beasts of the forest except two jackals. These elude him for some time, but are finally compelled to come to him. From then on the story is the same as that of Rouse or of Raju until the conclusion. Here the Frere-Butterworth tale tells how the jackals stoned the lion after he fell into the well. This folk-tale is a grandchild of the Jainistic texts, but thru some version which I do not know. The stoning of the lion is found in the literature in Dubois's Pontika-Tautra, p. 89, where all the animals roll large stones upon the lion. This latter version of the story is too far removed from the oral tale in other respects to be its source.

Parker's story is another familiar tale to which is appended

---

This manner of killing the lioness is found in Bompas's Folklore of the Santal Parganas, appendix ('Folklore of the Kolhan'), p. 456, where a jackal accomplishes the ruin of a tiger in exactly the same way. It seems probable that this incident in the Tibetan tale is an addition taken by the folk story-teller from the incident-collection of his own mind.
the trick employed by the hare against the lion. A bear finds a woman in the forest, and takes her to his cave. Her two brothers, tracing her by the crowing of a cock which she raises, take her away with the two children she has had by the bear. The bear follows them and asks the woman why she has left. She replies that a cleverer bear has called her, whereupon he wishes to see the cleverer bear, and she shows him his reflection in a well. He leaps at the reflection and is drowned. This is the familiar story of the woman who marries a wild animal, and is afterwards rescued from him, but in this case the narrator has extricated the woman from the animal’s power by using the trick belonging in the story of the lion and the hare. The folk-tale as a whole is original.

We now turn to those stories belonging to class (2). Swynnerton’s tale conforms closely to that of the Kalila wa Dimna, and is probably descended from the Anvar-i Suhaili I. 14. The differences between the two are slight and only in matters of detail; for example, the villain is a tiger, not a lion, a difference, as I have indicated above, that is no difference at all.

Pantalou’s tale is also from the Kalila wa Dimna in a much abbreviated form. It cannot have any relationship with Pahékhyánavárttika 30, the Indian representative of class (2), because in the latter no mention is made of the lion holding the hare in his arms as he looks at his reflection in the water. In the Telugu fable the clever animal is a fox. This version of the story has come into the Telugu country from the Northwest.

The story reported by Steel and Temple (1) is also from the Kalila wa Dimna, but its precise and immediate origin is not clear. A tiger catches a jackal. The jackal says, ‘You had better kill that tiger yonder before you eat me, lest he hunt your forest while you sleep.’ When he shows the tiger his reflection in the water, the tiger hesitates to attack. The jackal says, ‘He has caught a fine, fat jackal, tho.’ The tiger leaps in the well and is drowned. The last remark of the jackal shows that this story once knew the incident of the second jackal (or hare). This, however, has been lost, and the only trace we have of it is the jackal’s pointing out another of his own kind in the well.

Cf. Parker, Village Folk-Tales of Ceylon, 2, p. 388; Bompa, Folk-lore of the Sinhalese, p. 154, appendix (“Folklore of the Kollam”), p. 454; Kingscote, Tales of the Sun, p. 119.
The folk story is much shortened in other respects, too,—for example, by the omission of the account of an agreement between the tiger and the other animals.

The story from Malay in Skeat’s work is also from the Kalila wa Dimna, but thru the Malayan Hikayat Kalila dan Damina. The mousedeer, which is the clever animal in Malay stories, has not come himself to be eaten by the tiger, but apologizes to him with these words, ‘I could not bring you any of the other beasts because the way was blocked by a fat old tiger with a flying squirrel sitting astride its muzzle.’ When the tiger goes to look in the water the flying squirrel, who has come with the mousedeer, sits upon his muzzle, and the mousedeer upon his hind-quarters. Of course the tiger sees their reflection in the water as well as his own, and thinks he sees other animals. The incident is a reminiscence of the second hare in the Kalila wa Dimna. This oral story is a poor illustration of a popular form current in Malay which is represented in the Tamil-Malayan Pandja Tandaram (see Hertel, Das Pañcatantra, pp. 67, 295, and 299). There it is told of a lion and a mousedeer, in a form which more nearly resembles that of the Kalila wa Dimna. It is the story of the Hikayat Kalila dan Damina, modified by the folk and used by Abdullah bin Abdelkader in his Pandja Tandaram.

7. GRATEFUL ANIMALS, UNGRATEFUL MAN: Pürnabhādra I. 9, and versions dependent thereon (see Hertel, Das Pañcatantra, pp. 114, 135, 269, 305, 308, 322, and 343); Kalila wa Dimna (see Hertel, op. cit., pp. 371 and 424).34

Folklore: Flesson, Laos Folklore of Farther India, p. 95; Natesa Sastri, Folklore in Southern India, 1, p. 9 (also published in the Indian Antiquary 13, p. 256; Indian Folk-Tales, p. 8; Kingscote, Tales of the Sun, p. 11); Upreti, Proverbs and Folklore of Kumaon and Garhwal, p. 322; Damant, Bengali Folklore, in the Indian Antiquary 1, p. 118; Bomppas, Folklore of the Santal Parganas, p. 293; McNair and Barlow, Folk-Tales from the Indus Valley, in the Indian Antiquary 29, p. 403 (also published in their book, Oral Tradition from the Indus).

34 Also found in Buddhist literature: Jātaka 73; Bassavāhini 4; Chavannes, Cinq Centes Contes et Apologies, I, p. 87; Schiefner, Tibetan Tales (Baltos), p. 309; Karmaśatakā (see Benfey, Pāntchatarāṇa, 1, pp. 195 and 208); and Kathāsirasāgara (Tawney’s translation 3, p. 103). It appears also in Petit de la Croix, Mille et un Jours, jour 239 ff.
According to Purnabhadra a poor Brahman is driven from home by his wife with the injunction to secure means of sustenance for his family. He wanders in a wood, and while looking there for water finds a well into which have fallen a tiger, an ape, a snake, and a man (a goldsmith). All these he rescues, altho the animals warn against the ingratitude of mankind in general and goldsmiths in particular. On his way home the Brahman becomes hungry and thinks of the ape, who appears at once and presents him with fresh fruit. Similarly the tiger gives him jewels taken from a prince he has recently killed. The Brahman hastens to the city and takes these jewels to the goldsmith for appraisal. The latter at once recognizes the jewelry as his own handiwork, and to secure a reward accuses the Brahman before the King of murdering the prince. While bound and awaiting death the Brahman thinks of the snake, who comes immediately and takes steps to save his benefactor. He bites the chief queen, and she is cured only when the Brahman strokes her with his hand. The truth is now made manifest, the goldsmith is punished, and the Brahman is elevated to the place of minister.

Of the oral citations two are not folk productions but literary—Fleeson’s and Natesa’s tales. In a footnote Miss Fleeson says, ‘This only of the Folk Tales has been written before. It is taken from an ancient temple book and is well-known in all the Laos country.’ Natesa is not so frank about his story, but it is unquestionably literary. It is constructed around a Sanskrit verse susceptible of two interpretations, the pointing out of which double entendre furnishes the dénouement. Further the style of the narrative in general is distinctly literary, not oral.

Among the truly oral stories that of Upreti is similar to the Panchatantra versions rather than to those in Buddhist literature, and might be derived from any of these texts that has had access to the region of Kumam and Garhwal.

Damant’s story, which is merely an incident in a longer tale, has features that differentiate it from any literary version. It goes thus: A prince after several adventures meets and lives with a woman. Altho strictly enjoined not to go to the westernmost point of the surrounding country, he nevertheless journeys there one day, and finds in a well a man, a tiger, a snake, and a frog. He pulls out the tiger, who thanks him and advises him
not to rescue any creature without a tail. So also he saves the snake, who gives him the same counsel. Next he draws out the frog, a tailless animal, who spits at him for his pains, and last the man, also without a tail, who basely seizes his rescuer and throws him into the well. Alarmed by the prince's continued absence, the woman goes to seek him, and rescues him.

This oral story shows the familiar motif of 'Grateful animals, ungrateful man' treated in a new, but inferior, fashion; it appears to be original among the folk.

The story reported by Bompas has a setting similar to that published by Damant, but has some marked differences in other points. A ferryman walks in a forbidden direction (south). He rescues successively a cow from a pit, a buffalo from a bog, and a man from a well. The latter, however, ungratefully pushes his rescuer into the very well from which he has just been lifted. The ferryman is later saved by his wife, who scolds him, and the two then leave the country.

This version with the successive, rather than simultaneous, meeting with those in trouble comes closer to the Buddhist tale reported from Laos by Miss Fleson than to any other form I have encountered, but I do not feel that it is traceable to that source. It is a poor and abbreviated anecdote here, severely mutilated and with so many omissions and modifications as to be interesting chiefly as an illustration of the deterioration a good story may suffer among the folk.

The story given by McNair and Barlow is one of a series of anecdotes told about Sakhi, the pious Mussulman. He rescues a jackal and a snake from a well, and also, despite their cautions, a man. The snake shows his gratitude by spitting up a lump of gold and pointing out some herbs of marvelous medicinal value. Sakhi and the rescued man now travel on together, and when they arrive at a city this man, who is a prince, suddenly claims the gold and has Sakhi brot before the Kazi. The latter decides in favor of the prince, and has Sakhi sewn up in a raw calfskin and exposed to the sun as a thief. At this juncture the king of the country becomes afflicted with a terrible disease that cannot be cured until Sakhi applies the herbs shown him by the snake. He is rewarded with a half of the kingdom and the hand of the princess. Nothing more is said of the ungrateful man. The jackal afterwards shows his gratitude to Sakhi by
giving him a beautiful flower from a spot where the Panj Pir have prayed.

This too is a much mutilated version of the story, from which many important details have been lost. As striking an omission as any is the failure to state that the King’s disease has come upon him in consequence of the injustice suffered by Sakhi. There is no close literary parallel for this oral tale, but it shows so many touches of Mohammedanism that we may predicate some Mohammedan tale—that in the Kalila wa Dimna perhaps—as its starting point, altho the details that have been added and that give the story its individuality are original among the folk.

8. LOUSE AND FLEA: All Panchatantra versions (Tantrākhyāyika I. 7, etc.).

Folklore: Parker, Village Folk-Tales of Ceylon, 3, p. 30.

A louse inhabits the bed of a King. A flea comes there and insists on remaining in spite of the remonstrance of the louse. The flea nips the King so hard that he feels the bite. The bed is searched, the flea escapes, but the louse is found, convicted by circumstantial evidence, and killed.

The Sinhalese folk story could pass for a translation of the prose part of the story in Textus Simplicior I. 9, barring a few points that might be mistranslations. In Simplicior and in the oral tale a bug appears in place of the flea. Either the Sanskrit or some descendent of Simplicior has been given directly to the Sinhalese folk and collected by Parker before popular handling had deprived it of any of its distinguishing marks.

9. BLUE JACKAL: Tantrākhyāyika I. 8; Textus Simplicior I. 10; Purnabhadra I. 11.

A jackal falls into a dyer’s vat, and comes out blue. When he returns to the forest he claims to be appointed king of the animals and maintains this position as long as he keeps the jackals near him. But when he sends them away in his pride, the other animals recognize his true nature from his cry, which is no longer drowned in that of the other jackals, and kill him.

Miss Dracott’s story is as follows. A jackal is in the habit of going to a village every evening. One evening he puts his head in a vessel of indigo and it comes out dyed. On returning to
the jungle he so charms the other animals with his handsome appearance that they make him their king. At first the king keeps the jackals near him and his howling at night is unnoticed, but one day, becoming angry with some young jackals, he removes them from his neighborhood, and that night, when he howls, his true jackal nature is recognized. At once the other animals drive him out.

This is a popular version of Nakhshibi's Tutińâmeh 32. 1, Kadiri's version XVII (probably thru the Hindi Totâ Kâhâni), differing from it only in slight details. One of these is that the Persian makes the jackal king of his own species before he becomes king of the rest of the animals. The oral tale does not tell us this, but there seems to be a reminiscence of it in the statement that he kept the jackals near him. The Persian says that the king dismissed the jackals from his presence because he was ashamed of them; the oral tale says he dismissed them because he was angry with some young jackals.

The story in Knowles, *Dictionary of Kashmiri Proverbs*, goes thus. One night a jackal tumbled into a dyer's blue pot. On seeing his color he was afraid to return to his companions. Eventually he went to live on top of a high rock. The other animals got to know of the unusual-looking stranger and tendered the kingship to him. He was crowned, and all went well until evening. Then the other jackals howled, and he instinctively joined in with them. His true nature thus became apparent, and the lion, bear, and tiger killed him.

This oral story has lost the distinguishing marks of the various literary versions, and further has an addition which I have not seen elsewhere; namely, the jackal takes up his abode on a rock before he is seen by the other animals. This Kashmiri fable may be of independent existence among the folk, but I suggest that it has a prototype somewhere in Persian or Arabic literature.

Altho the tale in Knowles, *Folk-Tales of Kashmir*, has something in common with the story of the Blue Jackal, it is properly another fable, purely popular in character, of which a better illustration is given in Swynnerton's *Romantic Tales from the Punjab with Indian Nights' Entertainment*, p. 313. In the latter story some jackals find a bundle of papers, which suggests to them the election of a *lambardâr*. The fortunate (1) can-
didante is provided with the papers as evidence of his authority, and a basket is tied to his tail in lieu of a crown. Suddenly dogs attack the jackals. They all flee to their holes, but the lalmandār’s decoration prevents him from entering his, and the dogs catch and kill him. The point of the story is to show the perils that are attached to honor, and this same point is made in the Kashmiri tale of Knowles. The latter is rather different from the former and not so good. It is, in brief, as follows. All the animals had their respective kings. The jackals also elected one, choosing an old jackal, who ‘by way of distinction allowed his fur to be dyed blue, and an old broken winnowing fan to be fastened around his neck.’ One day a tiger came upon the king and many of his subjects. All escaped but His Majesty, who was unable to get thru the narrow entrance to his cave on account of the winnowing fan around his neck. The tiger tied him by a rope to his cave. Eventually the jackal escaped, but when his former subjects wanted him to reassume his position, he declined to encounter for the second time the risks attendant upon the honor. Knowles’s tale is clearly a poorly told version of the story given by Swynnerton.\(^2\) It illustrates how a storyteller who remembers only the theme and some of the incidents of a story supplies details from his imagination or his general stock of folk-tale incidents. The narrator has added to the story of the jackal as lalmandār the incident of the jackal dyed blue, using it, however, in a secondary and superficial way.

10. STRANDBIRD AND SEA: All Pañcatantra books (Tantrākhāyīka L 10, etc.).

Folklore: Manwaring, Marathi Proverbs, proverb 297, p. 41.
The folk tale is as follows. The eggs of a tilva (Skt. pīṭṭīka) are washed away by the sea. When the sea will not return them, the bird with the aid of her mate attempts to empty it by fling-

\(^2\) Still another and different version of this story appears in Upreti, Proverbs and Folklore of Kumaun and Garhwal, p. 127. A fox, finding a dead elephant, convinced the rest of his kind that he had slain it, at their request allowed them to eat of it, and was later chosen their king with the same Hathanalla (elephant-destroyer). He was seated on a throne made of grass and rags, which was tied to his tail, and he was carried around by the rest of the foxes. One day they all entered a sheepfold and the watchdogs were set upon them. All escaped except the King, who was hindered by the throne, and the dogs tore him to pieces.
ing aside the water with her beak. Nārada, the god of quarrels, learns of the affair, and instigates the eagle (Garuda) to help the tītīs. The eagle with his army of birds unites with the strandbirds. The fish fear that the sea will be emptied and appeal to Viṣṇu, who adjusts matters.

No Pañcatantra version to which I have access agrees in all important points with this tale, altho Pūrṇabhadra’s story comes closest to it. These differences, however, are to be found in his tale. (1) The sīṭṭīkās, not Nārada and Garuda, enlist the aid of all the birds against the sea; (2) they endeavor to fill the sea with stones, not to empty it; (3) a wise kavī, not Nārada, advises them to appeal to Garuda, king of the birds; (4) Garuda induces Viṣṇu to coerce the sea, and the fish do not beg him to settle matters. The first difference could very well be an omission in tradition, but the other points of disagreement betoken either a very wide divergence of the oral story from the form it had in its parent literary state, or descent from some later version of the Pañcatantra tale, or nearly complete folk existence.

Nirmala Pāthaka’s Old Marathi recension can not claim its fatherhood, for in its story no mention is made of Viṣṇu (Hertel, Das Pañcatantra, p. 277). Other versions from the Marathi section of India are not accessible to me, but it is not likely that any of them would agree with the oral story; and the third possible origin suggested (almost complete folk originality) seems correct.

11. THREE FISH: All versions of Pañcatantra (Pāyān-khyāyika I. 12, etc.; Hitopadesa IV. 2).

Folklore: Pantulu, Folklore of the Telugus (3rd ed.) p. 53 (Indian Antiquary 28, p. 224).

Three fish overhear fishermen planning to draw the lake in which they live. One leaves the lake; the second acts with presence of mind when he is caught and escapes; while the third, a fatalist, resigns himself without effort to destiny and perishes.

The folktale is as follows. Three fish live in a lake. One of these notices that the water is drying up and advises his companions to leave lest they all be caught by fishermen, but they refuse to go. He himself leaves. Later fishermen catch the two other fish. One ‘plays possum’ and jumps back into the water as soon as the fishers turn their backs, but the other makes a great commotion and is killed.
In all literary versions Anâgatavidhātry (the prudent fish) hears fishermen planning to draw the lake and advises flight. This incident evidently has been forgotten in the popular telling, where Anâgatavidhātry predicts danger, without being directly confronted by it. With the exception of this point, the oral tale agrees closely enough with any one of the literary versions to be derived from it, except Textus Simplicior, where both Anâgatavidhātry and Pratyutpamamati (the ready-witted fish) leave before the fishermen commence their labors, and the Mahâbhûrata, where the second fish bites the string on which the dead fish are strung as though he were himself caught and later slips off when an opportunity arises.

12. HAMSA & TURTLE: All versions of Pañcatantra (Tantârakhyâyika I. 11; etc.).

Folklore: Pieris, Sinhalese Folklore, in The Orientalist, 1, p. 134; Parker, Village Folk-Tales of Ceylon, 1, p. 234.

A tortoise, anxious to go to a strange pool with two kinsmen, friends of his, seizes a stick with his mouth, and in this way is carried by them thru the air. Forgetting himself, he opens his mouth to speak, loses his hold, and falls to the earth, where he is killed either by the force of the fall or by people there.

The only literary version that we need consider here is that of Dubois’s Pañcâ-Teatra, p. 109, since both of the oral stories mentioned are allied to it. The characteristic feature of this literary tale and the two folk-tales is that a fox (or jackal), not people, makes the remark that induces the tortoise to speak and therefore to fall, and immediately pounces upon the poor creature to eat him. The hard shell of the tortoise, however, baffles him; and at his victim’s own suggestion he carries him to the water to soften him, keeping a paw upon his back while submerged so that he may not escape. After soaking a while, the tortoise says that he is all soft except the spot on which the jackal’s foot is resting. The jackal lifts his foot, and the tortoise slips away to safety.

There are a number of points of difference between the various versions. Dubois calls the birds eagles, while the folk-tales call them cranes & storks; nor does he give a reason why
birds wish to leave their original home; but the folk-tales both state that the cause for making the change of residence is a drought which has dried up the water in the pond where the tortoise lives; and in a variant of Parker's the drought is said to have lasted seven years. Dubois's tale claims a friendship of long standing between the three animals, Parker's only proximity of residence, and Pieris's no more than a chance meeting at the time of trouble. The speeches of the jackal also vary in the three versions. These matters of difference are sufficient to show that Dubois's tale can not be regarded as the parent of the folk-tales. All three evidently point to a form of the story native to Southern India as such, which is yet to appear in the vernacular literature.  

In Pieris's tale the fox in an effort to recover the escaped tortoise seizes a Kekatiya yam that is floating on the water. In Parker's story the jackal takes hold of the turtle's leg, but is tricked into letting it go and seizing instead a Kejala (= Kekatiya) root. At this point Pieris's story ends; but Parker's continues with a long account of the efforts of all the jackals to get revenge on all the turtles, and their final discomfiture. The trick with the Kejala root occurs frequently in folk-tales and is purely an addition to this story. As Parker justly remarks, his story should end here as does that of Pieris, and the long account of the war between the turtles and the jackals is purely local.

Folklore: Parker, Village Folk-Tales of Ceylon, 2, p. 445, with a variant on p. 447.

Ceylon. Whether or not Pieris has mistranslated his animals' names cannot be ascertained; but if his designations are correct, they show his story to be nearer some mainland version than Parker's. The two stories, however, are the same.

* The Buddhist stories—Jātaka, No. 215; Chavannes, Cinq.Cents Contes et Apologues, 1, p. 404, and 2, p. 340, and p. 420; Julien, Les Avadana, 1, p. 71—are not similar to this version, and exclude the possibility that this form is peculiarly Buddhist.
* Frere, Old Deccan Days, p. 279; Gordon, Indian Folktales, p. 67; Steel and Temple, Wide-awake Stories, p. 245; Parker, Village Folk-Tales of Ceylon, 1, p. 381.
According to the literary types of the story, an elephant destroys the nest and eggs of a sparrow. The latter summons to her aid a bird with a sharp bill who plucks out the elephant's eyes, a fly that lays eggs in its eyesockets (or a bee that hums in its ears), and a frog that lures the thirsty elephant to a ditch into which it falls, eventually to die.

The oral story is a poor and confused representation of the literary tales. As given by Parker it goes thus. A lark lays her eggs on a path (cf. Dubois, *Pancha-Tantra*, p. 85). An elephant steps on the eggs and breaks them to pieces. She gets promises of assistance from a frog, a crow, and a bee. The frog jumps into a deep ditch and croaks. The elephant goes there to drink, falls into the ditch, and cannot escape. The crow pecks out its eyes, the bee beats (?) its head, and it dies. As can easily be seen, the order of incidents in the oral story is illogical. The logical order is that of the literary originals—the crow first blinds the elephant, then the gadfly (instead of the bee) buzzes at its ear, and finally the frog deceives it, injured as it is and maddened by the gadfly. The popular tale seems to be a corruption of *Jātaka* 357 and some Tamil story similar to that translated by Dubois.

The variant mentioned by Parker agrees, as far as can be judged from the remarks he makes about it, with *Jātaka* 357, the order of attack by the animals apparently being correct.

14. APE AND OFFICIOUS BIRD: Textus Simplicior I. 18 and IV. 11; Pūrṇabhadra IV. 9; Hitopadeśa III. 1.

---

41 In *Jātaka* 357 there is an introductory incident. A king elephant, the Bodhisattva, protects a quail and her offspring from 80,000 elephants. A rogue elephant, following the herd, destroys the quail's family, and is itself later destroyed by the quail and her allies.

42 In Parker's variant the nest with two young ones falls on the path. This variation seems to be purely local; for I have not seen it elsewhere.

43 The ditch is found in all the older versions of *Pañcatantra*. In Dubois it is a well into which the elephant falls. According to the *Jātaka* the frog tricks it into stepping over the edge of a precipice.

44 A blue-fly in Parker's variant.

45 This story is not to be confused with Textus Simplicior I. 17, and Pūrṇabhadra I. 25, on *Unwelcome Advice*, which is similar to the *Ape and the Officious Bird* in some respects, but is by no means the same, as Hertel might lead the unwary to think in his *Das Pañcatantra*, pp. 41, 322.

During a rain storm a bird sits unwet in her nest watching a monkey shiver. She twits him about his inability to build himself a house, altho equipped with hands like those of a man, while she has made herself a comfortable home with her bill. For these ill-advised remarks the monkey tears her nest to pieces.

Miss Dracott’s tale may be descended from any one of the literary versions, for it has none of the details that distinguish any one version from the rest.

Rouse’s story shows itself to be descended from the Hitopadeśa. It says that the bird’s nest was built in a *semal* (silk-cotton) tree, the very tree (*śāmali*) that is mentioned in the Hitopadeśa. All the other Pañcatantra versions that may have penetrated to this part of India either do not designate the kind of tree or call it a *śami* tree. The Hitopadeśa does not specify the kind of bird, but Rouse’s story makes it a crow. If the story were descended from Textus Simplicior or Pūrṇabhadra, it could not call the bird a crow, for in those texts the bird is named Śūcimukha (Needle-mouth), and is said to have a hanging nest. This description would naturally suggest some sort of bird like an oriole, or weaverbird, or bottle bird.**

Miss Taylor’s story shows clearly that its source is the version of Textus Simplicior or Pūrṇabhadra, for it specifically mentions the bird as a bottle bird.

The Sinhalese story follows the story of Textus Simplicior up to the point where the bird’s nest is destroyed. Then the bird (a weaverbird, *ploceus baya*) institutes proceedings against the

---

**The weaverbird or some bird that makes a similar nest is probably the bird about which this story is properly told. In the Siamese (Bastian in *Or. and Oec.* 3, p. 488), and in the Laotian (Brengues in *J.A* 1903, p. 384), the bird is a weaverbird, probably suggested by Textus Simplicior, etc. In the Pāli texts it is called *siāgīla* (Jātaka 321, and Dhammapada Commentary, Norman’s edition, 2, p. 22). This Konow (*JPTS* 1909, lexicon of Pāli-words beginning with S) translates etymologically ‘a kind of horned bird.’ Whatever the exact value of *siāgīla* may be linguistically, the bird itself seems, after looking at those other texts, to be a weaverbird, a bottle bird, or some other bird that weaves or sews its nest. If this bird is the one meant by the Pāli, the name *siāgīla* may refer to the tuft of feathers, in appearance perhaps suggesting a horn, which the male carries.
monkey, appealing to the king—monkey-king, Parker guesses. The monkey is about to be sentenced to punishment, when he directs the Mahārāja’s attention to a Jāk fruit which he has brought as a bribe. He is dismissed, and the bird rebuked.

The original of this Sinhalese tale is a Tamil story translated by E. J. Robinson in his Tales and Poems of South India, p. 309, culled from what literary source is not stated, but probably from the Kathāmañjari or Kathācintāmani. The bird is the ‘hanging-nest bird’ (weaverbird). After her nest is destroyed she goes to the judge of the country—we see now that Parker’s guess of monkey-king is wrong. At first, as in the Sinhalese oral tale, he is favorably disposed to the bird; but when the monkey says, ‘My Lord, you should look before and behind when speaking’ (Parker, ‘Then the Monkey said, “The action is coming to an end. Will, the Mahārāja be pleased to look behind me?”’), the judge sees a Jāk fruit, and decides in favor of the monkey, administering to the bird a rather long rebuke, shortened in Parker.

15. DUSTABUDDHI AND ABUDDHI: All versions of Pañcatantra (Tantrākhyāyika L 15, etc.).

Folklore: Pantalu, Folklore of the Telugus (3d ed.), p. 17 (Indian Antiquary 26, p. 55); Fleeser, Laos Folklore of Farther India, p. 108.

Two men, one honest and the other dishonest, bury their money under a tree. The dishonest man steals the money, accuses the honest (generally simpleminded) man of the crime, and calls upon the tree as a witness, having previously concealed his father there to play the part of the genius of the tree, and give testimony for him. The father is ‘smoked out’ and Dusṭabuddhi’s trickery is disclosed.

The chief literary versions of this story may be divided into two classes: (1) where the Judge smokes out the villain’s father (Somadeva, Kalila wa Dimna); and (2) where the honest man smokes out the villain’s father (Tantrākhyāyika, Southern Pañcatantra, Textus Simpliorior, Pūrnabhadra, Jātaka 98, Śukasaptati 50).

Pantalu’s story has the characteristics of the first class. The Syriac versions say that the two men found the money, the Kathāsaritsāgara that they obtained it by trading. The Telugu tale agrees in this point with the Kathāsaritsāgara. In the Kalila
wa Dimna the honest man is a simpleton, corresponding to Abuddhi of Tantrākhyāyika, etc.; Somadeva calls him Dharmabuddhi. Pantalu’s names for the two men are Durbuddhi and Subuddhi, which represent Somadeva’s names better than they do the Semitic names. It also agrees with the Kathāsaritsāgara against the Kalila wa Dimna in that the father dies, instead of escaping with punishment. The Telugu tale, therefore, is descended from that in the Kathāsaritsāgara, probably thru some other literary collection that has taken the story into the Telugu country.

The Laos tale collected by Miss Fleeson belongs to the second class, but differs widely from any literary version I know. A widow has taught her son and nephew the art of roguery. The two boys divide their gains equally, but the woman is dissatisfied with the arrangement. She tells the boys to make an offering to a spirit in a hollow tree before making the division, and conceals herself there to play the part of the spirit. She instructs them to make the division thus: to the widow’s son two parts, to the nephew one part. The nephew is enraged, and sets fire to the tree. Altho he recognizes his aunt’s voice calling for mercy, he will not own it, and she is burnt up with the tree. I have seen no literary version in which the mother of one of the disputants hides in the tree, or in which it is the parent who plans to get more than the just share of the money for the son. The oral tale is a version, somewhat mangled in its handling by the folk, whose antecedent is probably contained in the literature of Laos or the adjacent country.

16. **CRANES AND MONGOOSE**: All Paññatantra collections (Tantrākhyāyika I. 16, etc.).

The folk-tale goes thus. A family of cranes live in a tree. A cobra living in an ant-hill at the foot of the tree eats some of their eggs. To kill the cobra the cranes attract a mongoose there by strewing fish from his home to the ant-hill. The mongoose kills the snake, but also eats the young cranes.

In all the literary versions in which the mongoose eats the young of the cranes, a crab advises the crane what stratagem

---

n In Somadeva’s version and the Old Syriac the mongoose eats only the snake and its brood.
to employ, except in the Hitopadeśa, where another crane gives
the advice. Altho the folk-tale gives us to understand that the
crapes were the authors of the scheme, the fact that no literary
version of the Hitopadeśa is found in either Tamil or Malayalam
country makes it unlikely that it is the source of this oral tale.
I do not know the story in Pāli literature, and I am therefore
forced to conclude that it is derived from some version of the
Pañcatantra. It does not occur in Dubois’s Pantcha-Tantra,
but it is found in other Tamil versions (e.g. Graul’s, and Arden,
Tamil Reader, II, p. 96), and one of these is probably responsible
for the folk-tale. The oral story, which shows other evidences of
poor tradition, has lost the incident of the crane’s seeking advice,
nor is mention made of the mongoose’s killing the snake. The
latter omission, however, is purely careless, due evidently to the
story-teller’s haste to arrive at the unexpected outcome of the
crane’s revenge, that is, the destruction of his own offspring
whom he was endeavoring to preserve.

17. IRON-EATING MICE: All Pañcatantra versions (Tan-
trakhyāyika I.17, etc.); also Jātaka 218; Sukasaptati Simplicior
33, Kathāmaṇjari (among the tales about Mariyathay-Raman),
as given in F. J. Robinson’s Tales and Poems of South India, p.
281.

Folklore: Ganeshji Jethabhai’s Indian Folklore, p. 30;
Knowles, Dictionary of Kashmiri Proverbs, p. 199; Upreti,
Proverbs and Folklore of Kumaon and Garhwal, p. 403;
an approximation in O’Connor, Folk-Tales from Tibet, p. 23;
and Steele, Kusa Jatayaya, p. 250.

The story is constant in all these literary citations, the differ-
ences between the various versions being slight. A merchant
goes on a journey, entrusting his iron balances to a friend.
When he returns, the friend tells him that mice have eaten them
up, and the wronged merchant pretends to believe this prepos-
terous statement. He goes for a bath, and asks his friend to
send his son to him with the bathing appurtenances. When
the boy comes, he hides him, and tells the father that a hawk
has carried him away. The dishonest man sees that he has been
beaten at his own game, restores the weights, and gets back his
son.

Jethabhai’s story is as follows: A bānī leaves kankodi, soap
and iron with a merchant to sell. When he returns for his money, the merchant says that worms have carried off the kan-
kodi, the soap has rotted, and mice have eaten the iron. The
bania kidnaps the merchant's daughter as soon as he gets a
chance, and tells him that a kite has carried her away. The
merchant complains to the Kazi. The bania then states his
case, and as soon as he has obtained redress he restores the girl
to her father.

This version of the story, which may itself be literary, is an
amplification of the tale as given in Sukasaptati Simplicior, for
in no other version current in Western India does the offended
party carry off the child without having it bring him bathing
apparances. There have been added to the iron of the orig-
inal fable kankodi and soap; and instead of a boy it is a girl that
is kidnapped. No version of the Kalila wa Dimna can be the
parent of this tale, because in none of them is there an appeal
to the Kazi.

The story from Kashmir given by Knowles could be descended
from any one of a number of literary versions, but Knowles
himself gives its precise origin, saying, 'This proverb and story
is evidently translated from a Persian work "Chihil Qissa"
(i.e., forty stories), but it is very well known among the com-
mon folk of Kashmir.'

Uperti's tale corresponds with the outline of the literary texts
given above, with the difference, however, that the wronged
depositor carries off the child without having him bring bathing
apparances. This is the way the story is told in the Suk-
asaptati (see above) and the Bombay text of the Brhatkathama-
jari (see Hertel, Tautrakhnyaika, Einleitung, p. 134, note 1).
The Sukasaptati, thru a vernacular version, is the more likely
one of these two to be the source for the oral tale.

Among the rest of the occurrences of this motif, the nearest
approach to the literary stories is the Tibetan tale of O'Connor.
A man leaves a bag of gold-dust in the care of a friend. The
friend changes it for sand, and says that it has turned to this.
The dishonest man himself soon goes on a journey, and entrusts
his son to the other man. The latter at once gets a monkey, and

*W. Crooke says that Jethahal's work is a translation of a Gujerati
school book (Folk-Lore 15, p. 368).
teaches it to say, 'Worthy father, I am turned into this.' When the father asks for his son, he receives the monkey, being informed that his son has changed to this. The monkey verifies this claim by his own statement: 'Worthy father! I am turned into this.' An adjustment is then arranged. In the Sinhalese story of Steele it is a gold pumpkin which is alleged to have turned to brass. The trick with the monkey is used, but the monkey is not taught to say anything. These are the only two illustrations of this variation of the story of the 'Iron-eating Mice.' They are widely separated geographically, but it is significant that they both occur in Buddhist countries. The source of the story is probably to be found in the Buddhist literatures.

APPENDIX: BIBLIOGRAPHY OF INDIAN FOLK-TALES

In compiling this bibliography of Indian folk-tales I have endeavored to make it as complete as my resources would allow. It contains all the titles I have succeeded in collecting of books

---

"In Nakhshibi's Tatianamah 3, 1 (Kadiri 3), a similar trick is used by a carpenter who has been cheated by a goldsmith. The carpenter trains two bear cubs to get their food from the sleeves of a long coat on a wooden image he has made which exactly resembles the goldsmith. At the proper time he takes away the goldsmith's boys and substitutes the bears. This same story is found in Wood's In and Out of Chanda, p. 45, where it is either a translation or a paraphrase of the Tatianamah story, probably as given in the Hindi Toti Khâdâ.

"The motif of this story, one dishonest absurdity rebuked by another, is of frequent occurrence: Mahosadha Jâtaka (546); test 15 (Cambridge translation 6, p. 167); Schiefner, Tibetan Tales (Ralston's translation), p. 140; Hertel, Das Panchatantra, p. 145; Parker, Village Folk-Tales of Ceylon, 1, p. 228, 2, p. 8; Knowles, Folk-Tales of Kashmir, p. 407; Knowles, Dictionary of Kashmiri Proverbs, p. 31; Swynnerton, Romantic Tales from the Punjab, in Indian Nights' Entertainment, pp. 78, 312, 463; Hahn, Blicke in Die Geisteswelt des hindischen Kols, story 17; Rouze, Talking Thrush, pp. 21 and 199; Ramaswami Raju, Indian Fables, p. 45; Bompas, Folklore of the Santal Parganas, p. 49; D'Penha in Indian Antiquary 23, p. 136; Haughton, Sport and Folklore in the Himalaya, p. 294; Upreti, Proverbs and Folklore of Kumaun and Garhwal, p. 189. For further literary references, see Hertel, Tantrâkhyâyika, Einleitung, p. 124.

"I call attention to the statement I made at the beginning of this paper to the effect that I use 'folk-tale' and 'folk story' as synonymous with 'oral' tale or story, that is, one reported orally from the folk; and I contrast these terms with 'literary' tale or story, that is, one existing in
devoted exclusively to Hindu folk-tales; books of description, travel, or ethnology that contain tales; books dealing primarily with other phases of Indian folk-lore, such as customs and proverbs, that include stories also; and such periodicals as publish in their pages from time to time Indian oral stories. On account of my limited facilities it cannot represent a complete survey of the types of books just enumerated; but I do not think that much important material is unaccounted for other than the stories in The Orientalist, vols. 3 and 4, and in North Indian Notes and Queries, neither of which I have been able to examine. There are included also some titles of books said to contain oral tales which I have not been able to verify. Any such title is accompanied by a remark to that effect.

To render the bibliography more serviceable I have made it critical, not contenting myself with mentioning author, title, publisher, and date and place of publication, but adding remarks as to the number and character of the stories under each reference. Where any of these items is lacking the reason is inability to secure the information, except as regards the number of stories. Silence on that point means that only one or two stories are to be found under the reference, unless I state specifically that I have been unable to inspect the book mentioned.

To the best of my knowledge this is the first bibliography of Indian folk-tales of any size or with any claims to even approximate completeness that has been published. I hope that it may prove of value to all those who are interested in Indian folk-tales either as a part of universal folklore or as a separate department of Indology.

ALWIS, C. Sinhalese Folklore. Orientalist 1, p. 62.
ANDERSON, J. D. A collection of Kachahi folk-tales and rhymes, intended to be a supplement to the Rev. S. Endle's Kachahi grammar. Shillong, Assam Secretariat Printing Office. 1895. Sixteen stories.
BACON, T. The Oriental Annual, containing a series of Tales, Legends, and Historical Romances; vol. 2. London, C. Tilt; and Philadelphia, Carey and Hart. 1840. Contains a few folk stories.

a professed work of literature. This distinction refers, of course, not to the substance of the story but to the sort of fiction, whether oral or literary, in which it appears.

BARLOW. See M’NAIR and BARLOW.

BARNES, A. M. The Red Miriok: with Siam Folklore Stories collected by W. C. Griggs. Philadelphia. American Baptist Publication Society. 1903. The Red Miriok is an account of a child’s life in Korea, and is of no interest to folklore students. The latter half of the volume is composed of nine stories from the Shans.

BEAMES, J. Lake Legend of the Central Provinces. Indian Antiquary 1, p. 196.

BENNETT, W. C. A Legend of Balrampur. Indian Antiquary 1, p. 143.

BODDING, O. See BOMPAS, C. H.

BOMPAS, C. H. Folklore of the Santal Pargana. Collected by the Rev. O. Boddington and translated by C. H. Bompas. London, D. Nutt. 1909. Contains 135 Santal stories, with an appendix in which are twenty-two stories from the Kolhan—including fables, fairy tales, and cosmological legends. This is one of the most valuable of the Indian collections.

BURGESS, J. A Legend of Snake Worship from Bhunagar in Kâthiawâd. Indian Antiquary 1, p. 6.

A Legend of Kellir. Indian Antiquary 9, p. 80.

CHRISTIAN, J. Behar Proverbs, classified and arranged according to their subject matter, and translated into English with notes illustrating the Social Customs, Popular Superstitions, and Every-day Life of the People, and giving the Tales and Folklore on which they are founded. London, Kegan Paul, Trench, Trübner and Co. 1891. Sixteen stories, pp. 3, 7, 8, 57, 62, 80, 104, 116, 120, 127, 130, 136, 137, 167, 176, 204.

COCHRANE, W. W. See MILNE, Mrs. L., and COCHRANE, W. W.

An Indian Ghost Story. Folklore 13, p. 280.
Folk-tales of Northern India. Indian Antiquary 35, pp. 142, 179.
Twenty-three good fables and fairy tales.
See also M’NAIR and BARLOW.
See also BOUSE, W. H. D.
DAMANT, G. H. Bengali Folklore. Indian Antiquary 1, pp. 115, 170, 218, 285, 344; 2, pp. 271, 357; 3, pp. 9, 820, 342; 4, pp. 54, 260; 6, p. 219; 9, p. 1. Twenty-two very good fables and fairy tales.
DAY, L. R. Folk-Tales of Bengal. London. Macmillan & Co., 1st ed. 1883; 2d ed. 1912. Twenty-two stories, of which nineteen are fairy tales, one a fable, one about thieves, and one about the fruits of rashness.
DEVI, S. The Orient Pearls; Indian Folk-lore. London. Macmillan and Co. 1915. Twenty-eight good stories, including fables and fairy tales.
DRACOTT, A. E. Simla Village Tales, or Folk Tales from the Himalayas. London. John Murray. 1906. Fifty-seven valuable anecdotes, fables, and fairy tales, most of them from near Simla, the others from down country.
DUBOIS, ABBÉ J. A. Moeurs, institutions et cérémonies des peuples de l’Inde. Paris. 1825. There are a number of stories in this work, most of them selected from the Pāñcatantra, and included by the author in his book, Le Pāñcatcha-Tantra. One of the others has the following footnote attached to it (Beauchamp’s edition of the later and complete text of the Abbé’s work, Oxford, Clarendon Press, 1897, vol. 2, p. 471, footnote): ‘I have included this little story in the collection of Hindu fiction, because I found it in the same book from which I extracted the others.’ This statement seems to show that those stories (Beauchamp’s ed., 2, p. 456 ff.) are literary.
ELLIOIIT', A. C. and ROSE, H. A. The Chuhas or Rat Children of Panjab and Shah Daullah. Indian Antiquary 38, p. 27.
FLEESON, K. N. Laos Folklore of Farther India. New York. Fleming & Revell Co. 1899. Forty-eight stories. This book is chiefly valuable as being our only representative from Laos.
FRERE, M. Old Deccan Days, or, Hindoo Fairy Legends, current in Southern India. London, John Murray, 1st ed., 1868; 2d ed. 1870; 3d ed. 1881. Also Philadelphia. Lippincott. 1868. Twenty-four first-rate fables and fairy tales. This book was the pioneer in the field of Indian folklore.
Besides the Philadelphia edition, another edition of this book was printed in America: Albany, J. McDonough, 1897.
A Danish translation made by L. Moltke. Hinduiske Eventyr. Copenhagen, Gyldendalske Boghandel. 1868.
Tamil Folklore. Orientalist 2, p. 22.
GORDON, E. M. Indian Folk Tales, being side-lights on village life in Bilaspore, Central Provinces. London. E. Stock. 1st ed. 1905; 2d ed. 1906. The title of this book is a misnomer. In its 104 pages are found only seven short stories, pp. 16, 57 ff.
GRIGGS. See BARNES, A. M.

HOUGHTON, B. Folk-tales. Indian Antiquary 22, pp. 78, 93, 284; 23, p. 36. Ten stories, one Lushai, one Arakan, eight Karen.

HUTTON, J. H. Folk-tales of the Angāmi Nāgas of Assam. Folk-lore 25, p. 476; 26, p. 82. Twenty-eight stories, the sum of our tales from these people.

JACOBS, J. Indian Fairy Tales. London. D. Nutt. 1892. Twenty-nine stories, selected from various Indian folk-tale collections published before 1892, also from the Jātaṅka Book, the Pañcatantra, and the Kathāsūrītāgama.

JAMES, K. Sinhalese story in Journal of the Royal Asiatic Society, Ceylon Branch, republished by J. P. Lewis. Orientalist 1, p. 190.

JETHABHAI, G. Indian Folk-lore. Limbdi. Jasswatinjhī Prask. 1923. This small book, which Mr. W. Crooke says is a translation of a Gujarati school book (Folk-lore 15, p. 368), contains 94 fables and anecdotes. Some of these are interesting, but the collection as a whole is of little importance.

KINCAID, C. A. Decem. Nursery Tales, or Fairy Tales from the South. London. Macmillan and Co. 1914. Twenty tales permeated with religious fervor, a number of them, like some of D. N. Neogi’s collection, told to spread the worship of certain divinities.

KINGSCOTE, Mrs. H. and Pandit NATESA SĀSTRI. Tales of the Sun. London. W. H. Allen. 1890. Twenty-six stories. Story 13 of this collection is the Alaksa Kathā, translated by Pandit Nāṭesā from an old Tamil Ms. and published by him under the title of The King and his Four Ministers, Madras, 1888; also included in W. A. Clouston’s Group of Eastern Romances and Stories (p. 193). Glasgow. 1889. Of the rest of the stories all but two (Nos. 22 and 29) were published by Nāṭesā Sāstṛ in the Indian Antiquary 13, 14, 16, 17, and 19; also in his Folklore in Southern India. (See under Nāṭesā Sāstṛ.)

Folk-Tales of Kashmir. London. Trübner and Co. 1st ed. 1888; 2nd ed. 1893. Sixty-four anecdotes, fables, fairy tales, and hero legends, of which nine appeared in the Indian Antiquary 14, pp. 26, 239; 15, pp. 74, 86, 157, 299, 328; 16, pp. 66, 185, 219. This collection is extremely valuable. The stories are representative of their classes and generally good. Many parallels are given.
KULASEKHARAM, R. Tales of Raja Birbal. Madras. G. A. Natesan and Co. No date, but in print at present. Twenty-four stories, of which some are good and others poor.
LANG, A. The Olive Fairy Book. London. Longmans, Green & Co. 1907. Ten of his stories, on pp. 64, 71, 103, 119, 144, 167, 188, 211, 234, 247, are from India, collected by Major Campbell, mostly from the Panjab.
LEITNER, C. W. Dardu Legends. Indian Antiquary 1, p. 84.
LEWIN, T. H. Progressive Exercises in the Lushai Grammar. Calcutta. 1891. One tale from this work is given by B. Houghton in Indian Antiquary 22, p. 78. I infer from Dr. Jacobs' remark on p. 232 of his Indian Fairy Tales that others are found there.
MACKENZIE, D. A. Indian Fairy Stories. London. Blackie. 1915. Twenty-three stories, assembled by the editor mostly from various literary or folk collections. Almost worthless to students of folklore, because no indication is given as to the source of the individual stories. Moreover, many of the stories are much changed by the editor in his retelling.
M'CULLOCH, W. Bengali Household Tales. London and New York. Hodder, Stoughton and Co. 1912. Twenty-eight tales of all kinds, intrinsically valuable, and accompanied by references to parallel stories in other Eastern collections, both oral and literary.

NARASIMMIYENGAR, V. N. The Legend of Bishya Srīlāga. Indian Antiquary 2, p. 140. The familiar story told by priests to enhance the sanctity of a shrine.

Legend relating to Grey Pumpkins. Indian Antiquary 3, p. 28.

NATESA SASTRI, Pandit S. M. Folklore in Southern India. Indian Antiquary 13, pp. 183, 226, 256, 262, 286; 14, pp. 77, 108, 134, 153; 15, p. 368; 16, pp. 31, 107, 139, 194, 214, 258, 293, 320; 17, pp. 202, 236, 259, 346; 18, pp. 57, 120, 348; 19, pp. 126, 275, 311; 20, pp. 78, 221, 315; 23, pp. 339, 385; 24, pp. 298, 356; 25, pp. 21, 312; 26, pp. 18, 80; 27, p. 165. Some of these tales were published as Folklore in Southern India, compiled and translated by Pandit Natēsā Sāstri. 4 parts. Bombay, Education Society's Press. 1884-1893. Twenty-four of them are found also in Kingscote's Tales of the Sun (q. v.). This collection contains altogether forty-five fables and fairy tales translated mostly from Tamil. The authenticity of many of them as oral tales, however, is doubtful on account of their evident literary style, while some are confessedly literary, as, for example, story No. 13 of Tales of the Sun, which is the Alakesa Katāh translated from a Tamil Ms. (see W. A. Clouston, A Group of Eastern Romances and Stories, introduction, p. xxix ff.).

Tales of Tennali Raman, the famous Court Jester of Southern India. Twenty-one amusing stories. Madras, Natesan and Co. An unverified title.

NEOGI, D. N. Tales, Sacred and Secular. Calcutta. P. Mukhopadhyay and Sons, 46 Boochu Chatterji St. 1912. The first half of this book is made up of twenty folk stories, of which a number are told to inculcate the worship of certain divinities.

The Sacred Tales have also been published separately, I am informed.

NORTH INDIAN NOTES AND QUERIES. The pages of this periodical contain many folk stories, but I have not succeeded in securing access to it, and can therefore give no report concerning its contents, except to say that some stories published in its pages which were collected by W. Crooke have been republished by W. H. D. Rouse in The Talking Thrush (q. v.).

ORIENTALIST. This periodical is in four volumes, but I have been able to see only the first two.

PANABOKKE, T. B. Sinhalese Folklore. Orientalist 2, p. 174. Two stories.

PARKER, H. Village Folk-Tales of Ceylon. 3 vols. London. Luzac and Co. 1910-1914. Contains 266 stories, many with variants. This monumental work is undoubtedly the best collection of Indian folk-tales we have. As a result of its publication the folklore of Ceylon is now more fully reported than that of any other district. Many parallels are given to other oral tales, also to the Kathāsārītāgāra, the Hitopadeśa, Dubois's Panteha-Tantra, the Jātaka book, and Chavannes's Cinq Cents Contes et Apologies. Each of the three volumes has a good index.

PIERIS, H. A. Sinhalese Folklore. Orientalist 1, pp. 134, 213. Two stories.

RAMASHWAMI RAJU, P. V. Indian Fables. London. S. Sonnenschein and Co. 1st ed. 1887; 2nd ed. 1901. Contains 106 fables. This work would be much more valuable if the collector had only told us where the stories were collected.

The Tales of the Sixty Mandarins. London and New York. Cassell and Co. No date but about 1886. Sixty stories gathered from many lands, of which eleven are from India, pp. 22, 26, 35, 39, 91, 97, 109, 123, 131, 203, 208. Some of these seem to be literary.

RAO, C. HAYAVADANA. Tales of Komati Wit and Wisdom. Madras. G. A. Natesan and Co. 1907. Twenty-four stories of which only about a half are good.

ROSARIO, A. de. Tamil Folklore. Orientalist 2, p. 182.

Legend of the Khan Khwas and Sher Shah, the Changalla (Mughal) at Delhi. Indian Antiquary 38, p. 113.

See also ELLIOTT and ROSE.

SARMA, Pandit B. D. A Folktales from Kumaon. Folklore 8, p. 181.

SENANAYAKA, A. M. A Collection of Sinhalese Proverbs, Maxima, Fables, etc., found in the 'Atita-Vāyikā-Dipaniya,' compiled and translated into English. Reviewed by W. White in the Orientalist 1, p. 236; and listed in Folk-Lore Record 4, p. 261. I know nothing more about this book, altho its title seems to show that the contents are literary, not oral.

SINHALESE FOLKLORE. Two unsigned stories under this title from the Literary Supplement to the Examiner. Orientalist 2, p. 147.

SIVASANKARAM, T. Telugu Folklore. Indian Antiquary 35, p. 31.

Fables and Folk-Tales from an Eastern Forest. Cambridge. University Press. 1901. Twenty-six stories, nearly all of them fables; mostly of high quality.

SRIKANTALIYAR, K. Folk-Tale about the Komattis. Indian Antiquary 21, p. 93.
STEEL, F. A. and TEMPLE, R. C. Panjab Stories. Indian Antiquary 9, pp. 205, 280, 302; 10, pp. 40, 80, 147, 228, 331, 347; 11, pp. 32, 73, 163, 236; 12, pp. 103, 173. Twenty-one good fables, fairy tales, and cumulative rhymes.

STEEL, T. Kusa-Jatayu, a Buddhist Legend. London, Trübner and Co. 1871. The appendix contains fourteen Sinhalese folk-tales, most of them good, and some of them not duplicated in Parker's Village Folk-Tales of Ceylon.

The Adventures of the Panjab Hero Râjâ Rasâlu and other Folk-Tales of the Panjab. Calcutta. W. Newman and Co. 1884. The stories of this collection are included in the following better known book.

Romantic Tales from the Panjab. London. A. Constable and Co. 1903. Romantic Tales from the Panjab, with Indian Nights' Entertainment. London. A. Constable and Co. 1908. An edition in one volume of the preceding works. Ninety-seven anecdotes, fables, fairy tales, and heroic legends, well selected and well told. The version of the Rasâlu legends is especially fine. Unfortunately no parallels are pointed out to any of the stories. A few of these stories appeared in the Journal of the Asiatic Society of Bengal 52, p. 81, and four of the Rasâlu legends in the Folklore Journal 1, p. 129.

TAYLOR, S. M. Indian Folk-tales. Folk-lore 6, p. 399; 7, p. 83. Thirteen stories from Bhopal.
TEMPLE, R. C. Legends of the Panjab. 3 volumes. Bombay, Education Society's Press; London, Trübner and Co. Vol. 1, 1884; vol. 2, 1885; vol. 3, 1900. Fifty-nine heroic and religious legends, translated from Panjabi verse. A very important collection. Some of the stories, in an abbreviated form, were included in Wide-awake Stories (see under Steel and Temple).

See also STEEL and TEMPLE.

THORBURN, S. S. Bannú; or, Our Afghan Frontier. London. Trübner. 1876. About fifty stories, mostly fables, are included in this work.

VENKETSWAMI. See VENKATASWAMI.

VISUVANATHAPILLAI, N. Tamil Folklore. Orientalist 2, p. 145.

WILLISTON, T. F. Hindu Tales Retold. Chicago. Rand, McNally and Co. 1917. Retelling for school use of a number of stories that seem to have been taken from various collections of Indian folk-tales.

WOOD, A. In and Out of Chanda. Edinburgh. Foreign Mission Board. 1906. Part ii of this book consists of five tales, which are styled 'a valuable contribution to our knowledge of Indian folklore.' Four of them are paraphrases, if not direct translations, of stories in the Tatinameh, probably through the Hindi Tatha Kahani. The other is a translation of the Vatālapānāvamāni story of Śaṅkacūḍa and Jīmātavāhana, doubtless from a vernacular version.
A POSSIBLE RESTORATION FROM A MIDDLE PERSIAN SOURCE OF THE ANSWER OF JESUS TO PILATE'S INQUIRY 'WHAT IS TRUTH!'

H. C. TOLMAN
VANDERBILT UNIVERSITY

The important discoveries of the Grünwedel-Le Coq expedition to Chinese Turkestan (Handschriftenreste in Estrangelschrift aus Turfan, F. W. K. Müller, 1904) have restored the lost Manichaean literature. These Middle Persian remains brought rich material for philological study which has not been overrated in the many discussions in which their linguistic value has occupied chief place. Of deep historical interest are fragments of an apparently archäologische Ueberlieferung from an Aramaic source of the Crucifixion (dārōbadagēstig) of Jesus (Tolman, PAPA 39. xlv ff.). They are not translations from the extra-Canonical Gospels, especially the Petrine Gospel, as Müller seems erroneously to infer. Although this tradition appears to touch at some points that preserved in the Gospel of the Pseudo-Peter, yet there is abundant evidence of its absolute independence. We note a striking absence of anachronisms which betray the apocryphal narratives; e. g. pad 'ēw Šambat, 'on one of the Sabbath', i. e. 'on the first day of the week' (wrongly an einem Sabbatstag, Bartholomae, Zum Air. Wb. p. 88) corresponding to the Hebrew בְּשָׁבוֹת in place of the apocryphal 'on the Lord's Day', Gospel of Peter, v. 35. Marked differences in phraseology from that of the tradition of the Canonical Gospels appear; e. g. pad mūrgvāg sar, 'at the beginning of the song of birds', describing the dawn of the day of Resurrection. Supplementary facts are recorded, e. g. the mention of Arsamah among the women at the tomb, qērd Maryam Sālōm 'ūf 'Arsani'āh.

In Fragment M. 18 occur three significant words: Rāstēft Bagpūhar 'ast which would naturally be rendered 'Truth is the Son of God'. Such a translation suggests that here may be preserved at least an echo of the reply made by Jesus to the familiar question of the Roman procurator, 'What is Truth!' The Manichaean tradition, like that of the Gospel of Peter,
seems to pervert the context of the immediately following declaration of Pilate respecting his innocence in the death of Jesus. The Petrine Gospel places it after the Crucifixion and the order of the Turfan fragment leads us to suppose that to the remembered words of Jesus the governor replied with the emphatic asseveration, kă 'az vanūh 'aj 'im Bappūhar gōkhān (gōkhān, Müller) ‘abēyūd ‘ahēm, 'I am indeed without part in the blood of this Son of God'. He then issues his command for strict secrecy: qatriyānān wā 'istratiyōtān 'aj Pilatis framān 'ōh padgrift kă 'im rāz ‘andarz darēd, 'as for the centurions and soldiers a command from Pilate was received for them to keep the order secret' (Tolman, Studies in Philology, 14. 4 ff.).

The tradition preserved in Mt. 27. 28 correctly places Pilate's repudiation of guilt at the time of the trial, during which, according to Jn. 18. 38, the Roman governor asks the memorable question and immediately proclaims that he finds no evidence of crime in the accused.

Let us briefly consider the word rāstēf of the significant phrase previously quoted. The Anc. Pers. rāsta occurs in N ṫa. 59 paḥīm tyām rāstām mā avarada, 'leave not the true path'. The translation bereit gemacht given by Bartholomae (Air. Wb. 1526) who has later modified this view (WZKM 22. 88) is not now confirmed by the history of the word in the Middle Persian. The coincidence of Iranian rāsta and rāsta is preserved in the Turfan MSS readings rāstiy, rāst, virāst, virāst. Neither can we accept the interpretation 'right' as might be suggested by the New Pers. rāst, Ossetic rast, rash, in which case the Turfan sentence would mean 'The Son of God is Rectitude'. That the fundamental signification of Anc. Pers. rāsta is 'true' and that this meaning continued through the later period is clearly seen in the use of rāst in the Turfan remains, e. g. M. 33: farah namāj 'ā marī Manī kē 'im rāz rāst vicēhād (vicēhād, Müller), 'glory, honor to Lord Mani, who will teach truly this secret.' In five places in the fragments of the recently published Sogdiānische Texte (Müller, 1913) it is interesting to compare the signification of rēštā, 'truly', (for ṣ < ā cf. YAv. tāvāh, 'strength', New Pers. tāv, tēv; Middle Pers. vācār, 'market', Kürd. bāzēr). These are Mt. 10. 23; 21. 31; 25. 40: [r]ēštā framāyamsaq zū gū-šmā, 'truly I say to you'; Jn. 5. 25; 16. 23: rēštā rēštā framāyamsaq, 'truly, truly I say'. Moreover
rēšṭyāq ‘truth’ occurs in three places: Lk. 12. 44, par rēšṭyāq, ‘in truth’; Lk. 16. 11, rēšṭyāq qū-šmāx-šā qē pēraṯqā, ‘who will entrust to you the truth?’; Lk. 24. 34, rēšṭyāq aḵāš, ‘in truth he is risen’.

The apparently adverbial use of rēšṭyāq in the last citation suggests the possibility of translating the Turfan phrase ‘truly he is the Son of God’. This interpretation would show closer connection with the Petrine tradition which sets Pilate’s protestation of innocence in answer to a similar confession provoked by the despair of the centurion’s party. But the text before rēšṭyāq is mutilated and allows the supplement of a preposition making the phrase equivalent to par rēšṭyāq, ‘in truth’ of Lk. 12. 44. The complete reading we may restore as follows: [par] rēšṭyāq aḵāš ma[χū xēpaṭaṁanṭā], ‘in truth our Lord is risen’.

It seems probable that the Middle Pers. rāštēft with no more certain evidence of its dependence on a preceding word is the subject of the phrase under discussion and forces Pilate to recall the answer of Jesus to his inquiry. The writer notes a parallel in the Fragments of the Manichaean Hymn Book (Mahrnāmag) published by Müller (Abhandlungen d. kgl. Preuss. Akad. d. W. 1912), 11. 309; 427:

’Asēd visidagān rāštēft.
Ascend ye chosen sons of Truth.

’Avarēd visidagān rāštēft.
Come ye chosen sons of Truth.

If rāštēft is to be thus taken in the Turfan fragment we can readily suppose that the original reply took the form ‘I am the Truth’. It is easy to understand how the substitution of Bagpūhar ‘Son of God’ for the personal pronoun would force its way into the later tradition.
BRIEF NOTES

The British General Staff Maps

Few recent aids to the orientalist equal in importance the new British General Staff Maps which have now reached Persia and are rapidly being extended eastward. Shortly before the Great War, the cartographers of the various civilized nations agreed to issue the sheets of a handy working map, to be published by the surveys of the staffs of their respective governments, on the scale of one to the million. At the outbreak of the war, but few sheets had been issued and therefore the geographical section of the British General Staff decided to undertake the task alone. The work has been done in haste and the sheets are not free from error, but they fill a serious gap and will form the basis of a world series of the utmost value.

The professed orientalist may be discouraged at the first glance. The scale is nearly seventeen times smaller than the inch to the mile map of Palestine made by the Ordnance Survey and two and a half times smaller than the Kiepert’s Kleinasiens, but the new map is not intended to take the place of such. No attempt is made to list all place names, in fact, there has been deliberate exclusion with the purpose of keeping the map clear. The archaeologist will accordingly miss the majority of ruined sites in which lies his chief interest. He will also regret a general principle, which we hope will be modified in a later and definitive issue, of giving only the official nomenclature, for, especially in the so-called Turkish speaking regions, to give the official nomenclature is to give Turkish corruptions of earlier names which are, in the majority, better known by their native forms to English-speaking peoples.

To the general student, its superlative value will be found in its representation of relief. For the first time, much of the Near East is contoured. To a certain extent, contours, even in color, have been attempted several times for Palestine, and we should not forget the excellent little map of Asia Minor, in reality covering the whole of Kiepert’s territory, by J. G. C. Anderson in the Murray series of classical maps edited by G. B. Grundy. The sheets are sold in two sets, one with the contours indicated
by the brown lines so familiar to us in the maps of our own Geological Survey, the other with the contours in colors and so much easier to understand quickly. Other natural features are given, as a rule, in minute detail and are the more easily grasped as they are not hidden by the mass of comparatively unimportant place names. The eastern sheets, notably the Tabriz and Baghdad ones, are full of new data, especially along the Turko-Persian frontier, delimited just before the outbreak of the war. As the series moves eastward and southward, this characteristic may be expected to increase in value.

Every orientalist who has wrestled with the problem of making oriental spelling as little repulsive as possible to the non-specialist and yet keeping as closely as may be to the correct transliteration, must protest vigorously against one backward step taken by the editors, who have made two letters grow where was one before by representing the well known sound, correctly represented by our j, as dj. Another sound, so we are told, found in Russian, is represented in the maps by ê, and as to give j to the oriental ê would cause confusion, orientalists seem doomed to be saddled with dj! Such procedure is contrary to the principles laid down by the British War Office and the Geographical Society, and seems to have been accepted largely if not entirely because of the usage of the British Museum.

The purpose of this notice would not be secured if it gave the impression of futility in map making. What we have is frankly a provisional edition, subject to change after the war. Under present circumstances, what we need most is not a complete repository of cartographical information for reference but a series of maps which at a glance shows what the general physiographic aspect of the country is and which can rapidly correlate history and geography, not the least the history and the political geography which are now in the making. For such a purpose, nothing can take the place of the General Staff maps.

A. T. OLMSTEAD

University of Illinois
NOTES OF THE SOCIETY

The Annual Meeting of the Society will be held on Wednesday, Thursday, and Friday, April 23, 24, and 25, 1919, in Philadelphia, Pa. It is expected that one session, probably that of Thursday afternoon, will be devoted not to the presentation of miscellaneous communications, but to discussion in open forum of some topic of general interest. Another session will be devoted, as usual, to the presentation of papers dealing with the history of religions and of papers of wider interest. For the names of the Committee of Arrangements, see the inside front cover of the JOURNAL.

The Annual Meeting of the Middle West Branch of the Society will be held at the University of Illinois, Urbana, Ill., February 28-March 1. The program will include a symposium on Reconstruction Problems of the Orient.

Notice is hereby given that the following amendments to the Constitution and By-Laws of the American Oriental Society will be proposed by Franklin Edgerton at the 1919 annual meeting.

1. Amend Article IX of the Constitution by striking out the words 'said meeting to be held in Massachusetts at least once in three years', so that the Article as amended shall read:

   ARTICLE IX. An Annual Meeting of the Society shall be held during Easter week, the days and place of the meeting to be determined by the Directors. One or more other meetings, at the discretion of the Directors, may also be held each year at such place and time as the Directors shall determine.

2. Amend Article I of By-Laws by striking out the words 'and it shall be his duty to keep, in a book provided for the purpose, a copy of his letters', so that the Article as amended shall read:

   * I. The Corresponding Secretary shall conduct the correspondence of the Society; and he shall notify the meetings in such manner as the President or the Board of Directors shall direct.

Motions to be presented to the American Oriental Society at its next meeting by Charles K. Lanman.

Resolved: That the proper repository of the manuscript books-of-record of the Society is the Society's Library.
(Received by the American Oriental Society: That, in arranging its program for future meetings, the Society considers that (except in the case of an occasional formal address) the normal method of laying Oriental topics before the assembly, be—not the reading of a prepared manuscript, but—a free oral presentation of the matter in a form which can be readily and easily comprehended by all who are present. And that, in cases where a member is unwilling to attempt this method, it shall be permissible to read from manuscript, but not for a time exceeding five minutes.)
NOTES OF OTHER SOCIETIES, ETC.

The American Philological Association, the Archaeological Institute of America and the Society of Biblical Literature and Exegesis held their annual meetings at Columbia University on December 26-28. The annual conference of Biblical Instructors in American Colleges and Secondary Schools was held at the same time. The institutions were hospitably entertained by Columbia University and President Butler. Of general interest was the joint session in the evening of the 27th when Prof. Howard Crosby Butler made an address on 'The Future Protection of the Historical Monuments of Nearer Asia.'

The officers of the previous year were in general continued. Prof. Mitchell Carroll was made Curator of the Washington offices, and Prof. G. M. Whicher General Secretary.

An interesting event in the program of the Society of Biblical Literature was a Symposium on Critical Method in the Study of the Old Testament. This was participated in by Prof. G. A. Barton with a 'Survey of the Results and Present Status of Critical Study'; Prof. K. Fullerton, on 'The Method and Scope of Documentary Analysis and Textual Criticism'; Prof. C. C. Torrey, on 'The Use of the Versions'; Prof. A. T. Olmstead, on 'Critical Method and the Utilization of Historical Data'; Prof. J. Morgenstern, on 'Critical Method and the Use of Archaeological Data.' The officers elected for the ensuing year are: Prof. E. J. Goodspeed, president; Prof. A. T. Clay, vice-president; Prof. H. J. Cadbury, recording secretary; Prof. M. L. Margolis, corresponding secretary; Prof. G. Dahl, treasurer.

The Managing Committee of the School of Oriental Research at Jerusalem met in connection with the above gatherings. It re-elected the present Executive Committee of the School, which took action on some important matters looking forward to the early opening of the School. Prof. W. H. Worrell of Hartford Seminary was elected Director. The Committee on the Babylonian School of Archaeology having elected Prof. A. T. Clay of Yale University as its first Annual Professor, Dr. Clay was appointed a member of the faculty of the School in Jeru-
salem. A Fellow will also probably be commissioned for this year. It is hoped that these gentlemen will be able to go to their posts in the coming year. Immediate steps are being taken to raise funds for placing the Jerusalem School on an adequate financial basis and to utilize the gift of Mrs. J. B. Nies for the erection of a building. The Archaeological Institute appropriated $1,000 for a fellowship and $500 for the Babylonian School of Archaeology. The School asks for the hearty cooperation of all interested in Oriental study. Communications should be addressed to Prof. J. A. Montgomery, chairman, University of Pennsylvania, Philadelphia, or Prof. G. A. Barton, secretary and treasurer, Bryn Mawr College, Bryn Mawr, Pa.

The following identical action has been taken by the National Institute of Arts and Letters, the Archaeological Institute of America, the American Philological Association, and this Society (acting through its Board of Directors):

Resolved: That it is urgently necessary that immediate steps should be taken to organize the control and protection of the historic monuments and objects of art of all periods in those parts of Nearer Asia which as the result of the war have come under the influence of the Associated Powers, and that the opportunity offered by the Peace Conference should be seized upon to put an end to the systematic neglect and destruction of historic monuments, to the commercialization of antiquities, and to the obstruction of legitimate scientific exploration and excavation, which have hitherto prevailed in countries under Turkish rule, and

That advantage of the present opportunity should be taken to call to the attention of the American representatives at the Peace Conference the importance of safeguarding American scientific interests in exploration and excavation, and the legitimate rights of American Museums.

The Council of the Archaeological Institute voted to ask Mr. William H. Buckler to act as its representative in calling the attention of the American Peace Commissioners to the matter of preserving the historical monuments in the Nearer East.
PERSONALIA

Prof. JULIUS WELLHAUSEN, of the University of Göttingen, an Honorary Member of this Society, died January 7, 1918.

The death is announced of the Rev. PÈRE JOSEPH GERMER-DURAND, of the Assumptionist Monastery, Jerusalem. A noted authority on Palestinian archaeology, his latest work was the excavation of the Assumptionist grounds on the Zion Hill.

Dr. W. F. ALBRIGHT, of John Hopkins University, has been appointed Fellow at the School in Jerusalem for 1919-20.

SPECIAL NOTICE TO CONTRIBUTORS

Owing to the greatly increased cost of publication, the Editors feel compelled to economize in every way possible. Believing that contributors do not always need or desire as many Reprints as it is customary to allow, they have decided that hereafter Reprints will be furnished only upon definite request from the author in advance. Fifty Reprints of articles are allowed, but in many cases authors may not desire so many copies. (For Brief Notes a smaller number of copies is allowed.) Accordingly hereafter Reprints will be furnished only upon previous notice as to number required.
SOME CRUCES IN THE LANGDON EPIC.

W. F. ABLRIGHT

JOHNS HOPKINS UNIVERSITY

I

Since Langdon's publication of the Sumerian Epic of Paradise, the Flood, and the Fall of Man in 1915, a very remarkable divergence of opinion in regard to its interpretation has arisen. Even the translations disagree to an extent which would have delighted the heart of Von Gutschmidt, the harsh censor of young Assyriology. There is, however, no excuse for discouragement; thanks to the efforts of a few scholars much has been accomplished already.\(^1\) In dealing with a loosely-jointed, composite production of a mythological nature, the best method of solution is philological, liberally assisted by comparative mythological data and analogies. To Jastrow's position of vantage in this field is largely due his success in elucidating difficult passages (e. g. obv. II, 20-32), and in comprehending the text as a whole. To Langdon's learning and experience in Sumeriology we surely owe enough; his moreover is the honor of having discovered and first translated the poem. Let us hope that AJSL\(^2\) 33. 245 is not meant to exclude the right of the κυνάγκα, λάθιαν ἅπαστες

---

\(^{1}\) For the bibliography see Barton, AJTh 21. 576, n. 2, and, in addition to the papers there listed, note: Scheil, Comptes rendus de l'Académie des Inscriptions, 1915, 526-537; Fossey, Revue Critique, 1917, 273-276; Langdon, ET 29. 218-221 (Feb. 1918).

\(^{2}\) Note the following abbreviations: AJSL = American Journal of Semitic Languages; AJTh = American Journal of Theology; ABKT = Haupt, Akkadische und Semitische Keilschrifttexte; BA = Beiträge zur Assyriologie; CT = Cuneiform Texts; ET = Expository Times; HGT = Poebel, Historical and Grammatical Texts; HW = Delitzsch, Assyrisches Handwörterbuch; JAOS = Journal of the American Oriental Society; JBL = Journal of Biblical Literature; KB = Keilinschriftliche Bibliothek; MVAG = Mitteilungen der Vorderasiatischen Gesellschaft; OLZ = Orientalistische Literaturzeitung; ET = Recueil de Travaux; SBP = Langdon, Sumerian and Babylonian Psalms; SEB = Langdon, Sumerian Epic of Paradise, etc.; SG = Delitzsch, Sumerische Grammatik; SGI = Delitzsch, Sumerisches Glossar; SLT = Langdon, Sumerian Liturgical Texts; VE = Vorderasiatische Bibliothek; ZA = Zeitschrift für Assyriologie.
In general, I am in accord with Jastrow's views of the character of our text, which evidently describes the return of life and fertility to the world at the beginning of our age. The central motive, about which the various myths revolve, is the divine gift of the inundation, a matter of fundamental importance in an alluvial country where the rainfall is so unsatisfactory as in Babylonia—averaging now about eight or nine inches a year at Baghdad, while the summer is quite rainless. Jastrow, Prince, and Barton are almost certainly correct in opposing Langdon's view that Tilmun is represented in the poem as the seat of paradise; it is, however, unmistakably regarded as the original home of the race.

*The Sumerians unquestionably had developed a theory of world ages, the prototype of the Indian yuga system. The starting point of the conception was probably the effort to harmonize conflicting cosmogonies, a difficulty bound to become serious in a country where every important city had in early times its own pantheon and liturgy. As I expect to treat the matter in a special paper, I will refer here only to the beginning of the fragmentary text discovered and edited by Poebel (HGT no. 1). Col. I, 2 ff. reads: nam-lu-gal-ma ga-lam-na-bit sa ga-ba-u-[iš-gi-gi], *Nin-tu-ra* šig-dim-dim-ma-ma šig-[šig-ga-bit(?)] ga-ba-ni-ti-gi-gi, uku kil-bi-ta ga-ba-ni-ti-gur-ru-il, uru ki-me-a-bi še-im-mi-in-daša, gissu (SGI 278-bi ši-ga-ba-ab-dub-šu = 'My mankind on its destruction I will [restore]; for (the sake of) Ninu my creation [after its over]throw(?) I will restore; I will restore the people to its settlements; let it build cities wherever their sites may be; its (or their) tabu (or the like) I will remove.' The rendering of the last line is somewhat subject to doubt; ši-dub means 'rest, and 'cause to rest, annul' (kuppuru; the original meaning may have been 'strike with fear, make motionless'; contrast SGI 344). Gissu, 'shadow' (GIš-GE = gislu), can hardly mean 'protection,' the usual metaphoric sense of the word, but rather means 'place under protection, whose violation is prohibited.' Frank is probably right (Religion, p. 108) in explaining AN-zil-lu, synonym of ikkibu, 'tabu' (a loan from Sum. (n)ig-gig >iğgiš) as gissu, 'the divine shadow,' though andalu, 'shadow, protection,' which resembles it superficially in form, cannot be so explained; for the meaning cf. the Jastrow fragment of the Etana myth, rev. 9, dišuša ša udasi asakku tākale = 'thou didst incur the guilt of transgression against the gods' (for the idiom note qarēt aššelu, 'slander,' and ikkiba aššelu, 'transgress'), where we find the dišuša glossed as 'the asakku demon.'—The 'restoration' in the Poebel text involves a previous extinction, complete or partial; cf. Barton AJTh 21. 575 f. (whose translation of 1.5 f. is grammatically impossible).

*See my article, The Mouth of the Rivers, to appear in AJSL.*
In this paper the following passages will be discussed in full: obv. II, 1-19; III, 9 ff. = 29 ff.; rev. II. Other passages will be touched on incidentally.

II

The first six lines of the second column contain an address of the goddess Ninella to her father and husband Enki, begging him to create the fecundating water, as her woman's heart longs for offspring. Lines 7-8 are apparently the joyful exclamation of a third person, who corresponds roughly to the Greek chorus, inserted in order to guide the mood of the audience and check interruption. In 9-11 Enki replies favorably to his daughter's request, and in 13-19 the consummation is described. The rest of the column gives a somewhat different version, emphasizing, as Jastrow has shown, the sexual aspect of the inundation. The same idea certainly lay behind our episode as well. The cuneiform text reads as follows:

\[ \text{gir}-\text{ma-an-gal-la-za a gé-im-to-é-dé}^8 \]
\[ \text{uru-zi a-gé-gál-la já-mu-ra-nag-nag} \]
\[ \text{Tilmun}^{11} \text{ a-gé-gál-la etc.} \]
\[ \text{dul a-šéš-a-su dul a-dúg-ga gé-im etc.} \]

5. \[ \text{uru-zi é-gú-kur-ra kalam-ma-ka gé-a} \]
\[ \text{Tilmun}^{12} \text{ é etc.} \]
\[ \text{i-ne-šú} \quad ^{2}\text{Babbar ud-dé-a} \]
\[ ^{2}\text{Babbar an-na gub-bi-e} \]
\[ \text{gir-du a-dú-EZEN-ki-na-ta} \]

10. \[ ^{3}\text{é-suḫur-sū} \quad ^{3}\text{Nanna-a-ta} \]
\[ \text{ka-a-ki-a-tāg-ta a-dúg-ki-ta mu-na-ra-gina} \]
\[ \text{gir-ma-an-gal-la-na a im-ta-é-dé} \]
\[ \text{uru-ni a-gé-gál-la-im-ta-nag-nag} \]
\[ \text{Tilmun}^{11} \text{ a-gé etc.} \]

15. \[ \text{dul a-šéš-a-ni a-dúg-ga na-nam} \]

\[ * \quad * \quad * \]

---

* The orthographic accents in the article are, so far as practicable, those of Delitzsch, who is, however, as niggardly in this respect as Langdon is prodigal.

* Dē is not a particle, but part of the verb é-dē, which may, as has been suggested, be connected with u-dē—hardly identical, in view of the fact that u-dē (SGI 45) is spelled ud-dē in 1. 7.

* So read now instead of ū by all scholars; for ū see below.
19. i-ne-šù 4Babbar ud-dé-a ur(6AR)-gé-na-nam-na =

"'From thy great twin sources (†) may the water come forth;
May thy city drink water in abundance;
May Tilmun (drink) water in abundance;
May thy well of brackish water be a well of sweet water;
5. May thy city be a house in which the land (i.e. people) is gathered;
May Tilmun be a house (in which the land is gathered).'"

"'Now, O sun, arise!
O sun, take thy place in heaven!"

"'From the place where the waters flow forth from their womb,
From the full store-house of the moon-god,
From the flowing springs of the earth, from the place of sweet water it shall come forth for thee.'"

From his great twin sources (†) the water came forth;
His city drank water in abundance;
Tilmun drank water in abundance;
His well of brackish water became indeed sweet water.

"• • •"

"Now, O sun, shine forth!'—Verily it was so.'

The word girmon is otherwise unknown, and Langdon leaves it, therefore, untranslated. Of the other suggestions one alone is to be seriously considered, Jastrow's 'reservoir,' which suits the context admirably. My suggestion is based upon an article to appear soon, entitled The Mouth of the Rivers, in which it is shown that id-ka-min-na means 'source of the two rivers,' instead

*This is the most accurate translation of a-šē. The contrast between a-šē and a-dag is paralleled in Mandaean literature by Nôma and Nôma.*

*The vernal sun is to set the appointed season for the arrival of the inundation, just as the daily revolution of the sun sets the time for the approach of the hurricane in the Deluge-poem, I. 87: addaš Samaš iškunu-lo, 'the sun set the appointed time.' As Haupt has emphasized, Samaš is not a deus ex machina, but merely the heavenly orb. Barton's view that the sun is to bring the water is unparalleled, and syntactically out of the question; cf. I. 19. The sun is mentioned after the inundation simply because it is required then to bring quick maturity to the crops; note the scenes representing fertilization of the date palm, where the two genii hold the winged solar disc over the tree with cords.*
of 'mouth (ostium) of the two rivers.' Girman will be a form like sagman, 'twins,' lit. 'two head,' a compound from kir (KA), 'mouth' (SGl 119) and man, 'two' (min, mun; see below); for gir and kir cf. gir and kir = nagarruru, 'run,' and gir and kir = qarazu, 'gnaw, break off' (SGl 92, 119). The interchange of surds and sonants is very common in Sumerian, although it is by no means free from the operation of the usual phonetic laws. The two mouths are the sources of the two rivers, for which the Babylonians, naturally enough, felt a superstitious reverence.

Line 9 is unquestionably difficult, but it is not so desperate as Barton thinks (AJTh 21, 550, n. 1); our rendering is based on a happy idea of his which he failed to follow up. As he suggested, EZEN is here probably equivalent to kirimmu, 'womb,' despite the fact that in his Babylonian Writing, 2. 91, 'womb' is included among the values belonging to the sign SAR. However, kirimmu must evidently be referred to EZEN, with the pronunciations šer and kēš (da), 'bind, enclose,' as the usual Sumerian equivalent of kirimmu is līru, meaning properly 'enclosure' (umâšu, abāru). Kirimmu itself may be derived from the stem kamāru-karāmu, 'cover, overwhelm'; cf. mod. Arab. kāmara, 'cover,' and Assy. nakrimânu, 'leather bag,' etc. The phrase dā-EZEN is difficult to separate from līru-du (paṭāru ša kir- immi), which, though used AŠKT 84, 41, pathologically, of rupture of the uterus (Haupt), was presumably also employed like Heb. לָשֶׁנֶת dā-ESZEN are to be understood in the light of such conceptions as the Kinderbrunnen in the lap of mother earth, the source of infants in folklore (Dieterich, Mutter Erde, pp. 18 ff., 125 f.). The mouth from which a river emerges may be regarded as the vulva or Muttermund of the earth. This idea and its converse, that

---

Footnote:

1 For kir, 'mouth, hole,' note also CT 18. 34e, 34-5, KA (kār) - AG A = parāšu, 'split' (فارس: urda = 'mouth of a river'), and KA - GAAR (kīgar). (AG A) = parāšu ša pilaqqi, 'split, said of a double-ax'; kīgar-kīš (AG) do also = quarda (SGl 118), perhaps (the equations are often loose) ' wielder of the battle-ax,' as 'warrior, hero.'

2 For ka and pā as 'river-source' see my article on the Mouth of the Rivers; for pā, 'vulva,' see CT 12. 36. 1 ff., where SAL + LAGAR, with the pronunciation mārub (lit. 'middle') = pām, also the equivalent of KA and TÉ + UNU. Since the same ideogram is rendered also by hīghu and urā, both names of the pudendum vulicere, there can be no possible doubt that pā has that meaning; cf. also Heb. פָּדֻת (pāt) 'vulva,' for *pātī, a feminine formation from pā.
the female vagina is a well or fountain, are found everywhere, and may be traced back to the beginnings of language. Thus we have *nagbu,* 'source,' and Heb. *neqebá,* 'female'; Heb. נָקָה and נָבָה, 'well,' applied to 'mistress' or 'wife' (Cant. 4. 12, 15; Ecc. 12. 1), while the cognate *by* is employed in Egyptian for 'vagina' (also 'shaft of mine,' etc.; the etymology is due to Ember); Sum. *bura,* 'river, river-head,' and 'vagina'; Sk. *jarta,* 'vulva,' Goth. *kilbei,* 'womb,' connected with Quelle, etc. Some examples in this category may, of course, have arisen through the accidents of semasiological development; cf. also on the conception the remarks of Eisler, *Weltanmantel und Himmeiszeit,* 2. 380, to be taken *cum grano salis.* Nidda *Jerúš.* 51 b says, commenting on Pr. 5: 18, that 'the menstrual blood comes from the fountain.' In view of line 10, where the water is further drawn from the storehouse (see below) of the moon-god, it is very tempting to see in our passage an allusion to a primitive theory, or rather fancy, seeing in the water of the rivers the menstrual flow from the lap of the earth-mother, which occurred with every new moon (see below). While the idea may seem grotesque to us, it is superior to the Egyptian fancy that the Nile was the semen produced by the continuous onanism of Osiris, a gross notion later softened to the more obscure but more decent formula that the river was the efflux of the god's body (see my article 'Gilgames and Engidu,' to appear in *JAOS*). The standard conception in both lands was, of course, that the river was the semen of the god of fertility, Osiris or Enki, etc., fecundating the earthmother, a process described most vividly in our text, as Jastrow has demonstrated, the coitus being circumstantially depicted, and gestation lasting for nine months, as the poet makes perfectly clear, thanks to his monthly bulletin. No student of the popular mind will be worried by the incompatibility of these different notions, as the most antipodal ideas often occur side by side in the same myth.—The syntax of our line is complex, but sound; it would be literally translated by 'foot-moving the water which opens the womb place its from.' For the construction cf. *SG* §§38e and 208; *as* is the retrospective pronoun, sometimes used to indicate a genitive chain, though Delitzsch's principal illustration, *id-ka-a-na-ta,* must be read *id-ka-min-na-ta,* the *as* being simply phonetic complement.

Following my suggestion that we might read *s-sugur* in line 10, Professor Jastrow kindly collated the text, and reached the
conclusion that this is the correct reading. ē-suḫur is given CT 12. 41, col. II, 27/8 as synonym of ē-ša-ĝé-dagul-[la], literally, 'house in which there is abundance,' i.e., 'store-house' (cf. SGI 254), both with the Semitic equivalent šakuru, evidently a loan from Sum. sugur, 'pot, amphora,' given in line 25 of the same vocabulary; ē-suḫur should be correctly ē-suḫur, an expression precisely like ē-gur = bit karē, 'granary,' lit. 'house of grain-jars'; šakuru would be a subadditional term like karū, which may mean 'granary' by itself. An etymology from suḫur, 'crown of a palm, beard, barbel,' etc. is clearly out of the question.12

The conception that the waters are confined in store-houses is found sporadically all over the Orient, but under the influence of Babylonian thought it became part of the stock in trade of Rabbinic and Syriac cosmography. We first find it in Ps. 33. 7, מ י מ כ ל נ ה נ ל ת ל ת ל ת ה ת (sic) 'He who gathers the waters of the sea as in a skin-bottle, who puts the subterranean (fresh) waters in store-houses.' In Enoch, 18. 1; 34-36; 41. 4; 60. 11-12, etc., the chambers or store-houses of all the elements are elaborately described, especially those of the

---

12 The primary meaning of sugur is foliage of a tree, crown of a palm, Akk. qimmat ıcy (especially of the tamarisk, ānu, and the palm, gišimmara). The earliest certain forms of the sign sugur (Barton, BA 9. 1. 95) almost certainly depict the crown of a palm (pace Barton, in the second part), as will be evident from the comparison of the stereotyped Assyrian pictures of palms; cf., e.g., Von Luschan, Die Ionische Säule, pp. 22-26. Qimmatu, 'crown of foliage,' is Ar. ٰقیمٰتَ, 'summit,' and must be separated from kimmatu, 'enclosure,' belonging with ٰکیمٰتَ, 'envelope.' SGI 253 sug(ur)-sug(ur) is given the values šummumu (Ar. ٰکیمٰتَ privative, 'deprive of foliage'), qadamu (ٰقیمٰتَ, 'sweep off, devour,' also privative), īkālu, 'devour,' and sug(q)urum, 'destroy,' values which explain the development of sug = saddā, nasāhu, 'tear out, destroy' (similarly ٰقیمٰتَ means 'tear out a plant' in modern Arabic). Sugur-su-liš = qimmatu, 'beard,' is lit. 'foliage hanging from the lip.' Holma has shown (Kleine Beiträge, p. 32) that the sugur-fish is the bearded carp, or barbel, which is, according to Layard (Nineveh and Babylon, p. 482), the principal fish of Babylonia, often attaining considerable size. Hence the sugur-fish was the emblem of Enki, along with the wild goat or ibex, the two being merged together as the goat fish, with the beard as the tertium comparationis. Frank's objections to Holma's discovery (ZA 29. 192 f.) are most unfortunate; he shows, however, that the Assyrian name of the fish was p/burādu, perhaps to be derived from pardu, 'be swift.'
winds, hail, mist, snow, and rain; cf. also Job 38. 22. In the Mandaean system (Brandt, Mandäische Religion, p. 63) the mystical vine of fertility, filled with water, is in the store-house of the upper world. For the Babylonians, of course, the store-house was in the lower world, in the bit apši.

Why is the store-house placed under the supervision of Nannar, the moon-god? The question is not so difficult to answer as it may appear at first sight. The conception that the moon is so intimately connected with the fertilizing waters that it might even be regarded as their source, was widely prevalent in the ancient world, and is, in fact, one of the most universal tenets of mythology, however much obscured. It takes root in a number of very obvious circumstances, such as the heavy condensation of dew on moonlight nights, a matter of real importance to pastoral peoples; Herse was the daughter of Zeus by Selene. From time immemorial the tides have been associated with the action of the moon by maritime peoples; the tides in the Persian Gulf are mentioned in the Bāndahiš. More arbitrary, but even more decisive was the belief that the lunar crescent was a bowl or basin containing the rains. When it tipped, the rains were fancied to be heavier; when it was level, it was a ‘dry moon,’ as is still the case today. Hence the rains which happened to fall during the time of new-moon were connected with it, and the new-moon was considered to be the rain-bringer (see below), a deduction quite as logical as the surviving superstition of the equinoctial storms.

In Indo-Iranian mythology the moon, Sōma-Haoma, and the waters were almost inseparably bound together. The remarkable development of the sōma theory has completely overshadowed the more primitive directness of association, but the latter still shimmers through in its original simplicity, thinly veiled by the metaphorical cloak. Out of the numerous illustrations given by Hillebrandt, Vedische Mythologie, pp. 355-385, we may mention Altarṣya-Brāhmaṇa, 8. 28, 15, ‘from the moon comes rain’; Rigveda 1. 105. 1, ‘in the waters is the moon’; the name Apāmnapāt, ‘son of the water,’ primarily the name of a vegetation spirit, but later applied to the moon or Sōma. The Iranian goddess of water, Ardvisūra Anāhita, was probably lunar on her celestial side, just as Mithra was the sun. It is noteworthy that

—Cf. Lydus, De Mensibus, 4. 21: ἀλλ' καὶ Ζελήνη μὴν θεόκράτη, οὔ τινι ἱματι πολλὸς νεμαγμένοι.
not only the great water source but also the lesser springs were associated by the Persians with the moon, a fact that attracted the attention of the great geographer, Yaqût, who gives a list of place-names containing the element ماه 'moon' (IV, 406), explaining it as follows (407, 4 ff.): تقدمت الاساساء ان ماه الذي هو اسم القمر انها يفاعبوها على اسم كل بلد ذي خصب لان القمر هو الموتري في الانواء، والبيئات التي منها المخصب. i.e., the element ماه is prefixed to the names of fertile places because the moon exerts an influence over the dews and waters from which fertility is derived. The American Indians similarly regard the moon as a water-giver, identifying her with the goddess of water. The Sioux are said to imagine the moon to be a woman carrying a bucket of water (see the citations in Roscher, art. 'Men,' 2. 2765).

As might be expected, therefore, the Egyptians referred the inundations of the Nile to lunar influence. To be sure, the Egyptian moon had to share honors with Sirius, etc., just as the Iranians turned in the Avestan system to Tistrya. Frazer, however, Adonis, Attis, and Osiris, 2. 129 ff., is entirely wrong in maintaining that the relation between the moon, Osiris, and the Nile is late and philosophical. On the contrary, the philosophical theories are merely introduced to place the ineradicable belief in lunar influence on a scientific basis. The fancy that the Nile-bull Apis was begotten by the moon (see below) can hardly be called late and philosophical. When Plutarch, De Isid. et Osir. 43, says, οἰοντα δὲ πρὸς τὰ φωτα τῆς σελήνης ἔχεν τῶν λόγων τοῦ Νελού τὰς διαβάσας, he is reflecting a native view going back into primitive times; cf. also Chassinat, RT 38. 43 f., and 47. 15

14 Their fluctuation in flow was associated with the lunar phases, a conception which survived in the philosophical fancy that the sun derived its refugence from the sea, while the moon’s softer light reflected the placidity of springs and ponds; cf. Plutarch, De Isid. et Osir. 41: Οἰ δὲ Στρατιος τὸν μὲθ ἰδιον ἐν ταλάντημα ἀκτόστισι καὶ τιθημοικα πασί, τὴ δὲ σελήνη τὰ σφυριὰ καὶ λυμαία κατα τρόπον ἄσκεπης καὶ μαλακὴν ἀναφορὰς.

15 I hope to show elsewhere that Osiris was fundamentally a lunar divinity, a conception still found in classical times, though very much obscured. The Egyptian celebration of Osiris’ entrance into the moon cannot be tossed aside lightly as ‘a late philosophical theory,’ according to Frazer’s superficial method of dealing with annoying facts. To his vast learning and phenomenal industry we owe very much indeed, but no one man can solve the infinity of problems which arise in our science, as Sir James seems to
So it is also in Mesopotamia. In the interesting hymn to the moon, CT 15. 17. 16b, the poet exclaims, ‘a-a ḫNan-nar ma-dim a-gé-a di-riq-ga-zu-dé—kuq18-gi ḫBuranunu a im-si ḫNan-nar ḫPá-bil-łę-q a im-si ḫNan-nar bu-nin-maḥ bu-nin-banda a im-si ḫNan-nar = ’Father Nan-nar, when like a ship upon the flood thou dost float * * * the pure river Euphrates fills with water, O Nan-nar, the canal Pabilluq, the large ponds, the small ponds, etc.’ The inference here is unmistakable; in other cases we must remember that the Sin of Ur is one of the best illustrations of the syncretism by which a god standing at the head of a local pantheon was enriched with the functions and attributes of other deities. On a cylinder figured in Ward, no. 652, the lunar-god-dess A’a, identified by the accompanying name, holds the spouting vase from which the rivers flow (see my above-mentioned article), while the crescent moon floats overhead.

The foregoing material could easily be swollen; there is no lack of data bearing on the subject. The illustrations given are, however, surely sufficient to establish the reasonableness of my interpretation, as well as to pave the way for a plausible explanation of the next crux in our poem.

III

It is hardly likely that there is an organic connection between col. III, 1-8 = 21-28 and the following episode, which Langdon has made the pivot of his deluge hypothesis. On the other hand, 1-8 fits in very well with 39 ff. The alternation may be explained as an artistic tendency of the same nature as the complicated counterpoint and interplay of motives found in modern music; the poem was designed for antiphonal chanting in the liturgy. We may, therefore, distinguish two main divisions in our epic, dovetailed together in the middle, but without any real community of motive. The first part, including the first two columns, and lines 9-20 = 29-38 of the third is devoted to the genesis of fertility and the origin of the inundation; the second part, comprising the remainder of the text, is devoted to the introduction of culture by the hero Summn (see below), and the consequent Fall of man, to be discussed in the next section of our study.

Imagine. Osiris is Tammuz; but Osiris was not Tammuz originally—nor was he a deified king. The real Egyptian Tammuz was the shepherd (ḥfrey) Bitis (along with others, unknown to us); Osiris is a usurper.

*For reading ku(p) instead of anu[ṃ] see Luckenbill, AJSL 33, 187.
The passage in which we are now interested, ll. 9 ff., holds the same position relative to the account of the inundation as does the sexual union in the preceding column, and is hence likely to stand in a somewhat similar causal relation to the inundation. We may read it as follows:

9. lugal-mu ni-dirig-ga-ri ni-dirig-ga-ri
   gir-mi āš-a såš-ma-a ne-in-gub
   min-gu-ma šuššana im"-ma nam-mi-in-gin

12. gab im-ma-an-tab gibîl im-ma-an-su-ub
   En-ki-gē a-šāg-ga ba-ni-in-ri
   a-šāg-ga šu-ba-ni-in-ti a En-ki-ga-ka =

9. 'My king, invested with surpassing majesty,
   His foot first in the bark set;
   Then he caused it to move, sinking one-third (of its depth);

12. He caused the prow to gleam forth, anew he caused it to shine,
   By Enki the fields were inundated;
   The fields received the waters of Enki.'

Of the renderings hitherto proposed for line 9, only the latest of Langdon's can be accepted (cf. AJSL 33. 125); ni-dirig-ga-ri would be in Assyr. puluštā atarta ramû, like ni-su-zi-ri (CT 16. 42. 12) = puluštā šalummata ramû.

Thanks to the improved readings of Jastrow, Chiera, and Barton, some sense can be made out of line 11. Min-gu-ma is to be taken as the equivalent of min-kam-ma; indeed, Jastrow (ibid. p. 126) states that the reading kam-ma is possible. Langdon, SLT no. 21, col. II, 9 (cf. also col. I, 4) offers min-gu-ma, used apparently like min-kam-ma, 'in the second place, next, further' (Sem. šāniti"), found, e. g., Poebel, HGT no. 20, rev. 14; no. 15, obv. 3; SLT no. 5, obv. 3; Gudea, Cyl. A, VIII, 2; IX, 5, etc.; V, 2, and VI, 3 are doubtful, as the min-kam-(ma) may refer to the second god. Aš-a evidently corresponds to āš-ām, 'firstly,' and does not mean either 'alone,' or 'at once,' as suggested by the other expositors. It may be that min-gu-ma was read mun-

"Siga Eāš = pigrī, 'sink, be submerged, inundate'; for the reading im see CT 24. 18. 17, CT 18. 32. 30. The Semitic equivalent šanā (HW 675 b), 'to inundate,' etc., is Ar. ɪn, 'irrigate,' and has no connection with šalā, the Ar. ɪn, as shown by Haupt, AJSL 33. 48.
guma, as the word 'two' in Sumerian was either min, man, or mun ('seven' = 'two and five' is i-min or u-mun).

Chiera and Jastrow read šanabi, 'two-thirds,' instead of šušana, which is the correct reading, according to Barton (loc. cit. p. 584, n. 2); see AJSL 33. 126. A passenger vessel might sink one-third where a freighter would sink two-thirds, as is expressly stated in the Deluge-poem. Barton's explanation of šušaša as the god Samaš is evidently a dernier ressort, while a rendering 'two streams' for the preceding group is pure conjecture. I see no reason for a mythological interpretation of the line.

On the other hand, the next line seems to require an astral exegesis; the present translations are in every respect unsatisfactory, owing to the persistent effort to justify the rendering 'fire,' or the like, for GIBIL. Sum. gab, 'breast, front,' is used for 'prow,' like Eg. h'ti, 'breast, front' (cf. also h'tišt, the cable attached to the prow, Shipwrecked Sailor, I. 4); not the words for elippu māhītu (سفيحة ماهر) šu-ma-gab-šub-gā, 'the ship cleaving with its prow' (CT 18. 34. 33c, šu-gā = naqāru ša ašmī, 'to cleave, said of stone') and šu-ma-gab-ri-a-ni, 'the ship which encounters (the current); cf. gab-ri, gab-ri-a-ni, 'opposition'. Tab is commonly employed of the shining forth of the new-moon (šamāfu ša aṣqari); cf., e.g., Kugler, Sternkunde, 1. 278. Sub is similarly used of the shining forth of the stars (cf. Langdon, AJSL 33. 48 ff.); sub-sub (Br. 206, etc.) is the regular expression for the completion of the horns of the lunar crescent; for the various writings of the word sub, šub, 'shine, be bright,' see SGL 269. Gībil may be used pregnantly for uš-sar-gībil, 'new-moon,' like the Greek ἰέβα, but, with our present knowledge, it is more systematic to render it as we have. The construction of gībil is the same as in Gudea, Statue B, III, 12, etc., where gībil im-ma-ta-lāl corresponds to an Assyrian eṣšūti icaid (contrast VB 1); Gudea purified the city and reconsecrated it. In both cases gībil is an adjective agreeing with the object of the verb; hence the bi is omitted. The pure adverb, gībil-bi, is found, for instance, in Cyl. A, XIX, 22, lū-tur gībil-bi š-dū-dim = 'like a young man who newly (i.e., for the first time) builds a house.' The expression gab—tab occurs SLT no. 14, rev. 2, e(KA18)-gar (omitted in Langdon's copy) Šag-ga gab-na

18 See K4378 (AL 86 ff.), col. VI, 11 ff.
19 KA-GAR = epiīru (SGL 81) is evidently to be read egar (cf. Esir = KA-Di, SLT 177, n. 5; e = ešmi, 'word') epiīru, which cannot be com-
im-mi-tab (intrans.—note absence of n, which Poebel has shown in his Grammatical Texts to be a transitive-causative particle), 'propitious thoughts shone in her() breast'; cf. banu egirru'a, 'my thoughts were bright' (i.e., cheerful—HW 18a), for which we might say 'Merry thoughts danced (or sparkled) in my mind.' Tab can hardly be rendered 'multiply' (daḫ) with Langdon. In a tantalizing fragment published by Langdon, Liturgies, no. 52, we read (2 fl.) [ ] įgi im-ma-an [ ] šu mu-un-ni-in [ ] gab im-ma-an [ ] įgi im-ma-an [sum? ——]. Since this bit of tablet also contains the verb da-lal, so important for the elucidation of our text (see below), scholars should be on the lookout for additional fragments.

The passage thus describes the appearance of the new-moon at the season of inundation, the significance of which has been already pointed out. It is no objection that Enki is represented as riding in Nannar's boat; the spheres of the gods constantly overlap; Hommel believes that there is a special connection between Enki and Enzu, but his reasons, as set forth by Förtsch (MVAG 19. 45), are not particularly happy. There can be no doubt that Langdon is correct in maintaining that the syncretism of the last Sumerian period culminated in a strong philosophical movement toward pantheism, which received a powerful setback in the dark ages following the downfall of the first dynasty. Thus, in our text, Ninella, Nintu, Ninsar, Ninkurra, and Ninguarsag are tacitly identified; even Enki and Enlil are not clearly separated. Babbar is merely the sun, playing no independent rôle (see above)—the same seems to be true of the moon, which becomes Enki's celestial bark. For his subterranean voyages the god may have had another vessel. The waters of Enki are derived from Nannar's reservoir without inconsistency, because Nannar is only a form of Enki, after all. In fairness to the writers of our text, we should not impute to them such gross inconsequences as are found, for example, in such variegated collections as the Book of the Dead. It is quite unnecessary to draw for an explanation on astrology, where (IHR. 55. 3, 1. 4) the moon is placed under the jurisdiction of Ea during the second bamuṣu of the month, when it is shaped like a kidney.

The best commentary on our passage is provided by an episode in the inscriptions of Gudea. Gudea prays to Ningirsu that his mother, the goddess Ninâ, may come to interpret his dream.

bined with ūgarsu, 'plan,' from egēra, 'bind' (cf. Langdon, AJSL 34. 307), like kapādu, primarily also 'to bind.'
Upon the intercession (implied) of the god, she immediately sets out (Cyl. A, col. II, 4-6):

mā-gur(TÉgunu)-ra-na gir-nam"-mi-gub
uru-ni Ninâ-šâ "Ninâ-du-a mâ mu-ni-ri
id gibil-gul-lâ-e kûr-tur ni-si-û-e =

In her lunar bark" she set foot;
To her city Ninâ, on the river flowing to Ninâ, the ship departed,

"The definite principle should be established that nam is positive (corresponding to Assyrian emphatic lâ) except where used as a prohibitive like harû (cf. Assyrian d with perfect as preceptive, and lâ with present as pure prohibitive); the apparent exceptions rest upon misinterpretation, either by Akkadian or modern scholars. Cf. SG §§ 92, 100, 160, 176; Witzel, BA 8. 5. 102 f., OLZ 18. 365, n. 1 (observe, however, that the two can usually be readily distinguished). The pivot of the discussion has been the beginning of Cyl. A of Gudea, studied recently by Witzel (loc. cit.), who reached the conclusion that nam here is positive (the prohibitive force is excluded), and Knoeser, ZA 29. 159 f. (K.'s view that Gudea A, VIII, 1-14 describes a royal inundation seems to me most happy; the corrections of Witzel, ZA 29. 101 ff. are in general valid, but his attitude is markedly captions), who returns to the old viewpoint, maintaining that the water of the Tigris is so brackish that it cannot be described as a dâg-qa. However, the lower course of the river is not nearly so brackish as the upper part, and during an inundation becomes quite sweet. An army medical officer during the recent campaign complained that the water 'is not a very healthy drink at the best of times,' but he was referring to the rich mud held in solution, on account of which the Sumerians called it the dê-ma-al-lu-dûr, 'abounding in fertility' (Reisner, SBR no. 38, 24-3), and the Akkadians termed it the lâbil-si begalû. This is the force of a dâg-qa; Witzel's rendering 'Wassercarguse' is impossible, because dâg = rû is refers only to sexual intercourse. In fact this is a characteristic sample of his latest defense of his view, OLZ 18. 361-7. Aside from the misconception of the force of nam, Thureau-Dangin's translation is still the best. W.'s explanation of me - parça is little short of fanciful; uru-me-a is surely to be translated with Delitzsch, SG 41, 'in our city,' L. 9, lâ-lEa-ul-lu-qa ùIdina-ás dâ-ga-qa asu-tum is to be rendered, 'The flood of Enlil in the Tigris (SG 62e) brought down sweet water (see above).' Lines 10 ff., ë-ê inqul-bi qa-bo-ê ë-ni-ânu ma-bi an-ê-a pâ-ê-mu-ug-ê pâ-te-si lâ-galug-dagal-kam gâlûg ni-gâ-ê-ga = 'To proclaim (the glory of) the temple and king, and to make the Enlil and the (divine) deities renowned in heaven and earth, the potesa, a man endowed with profound wisdom, applied his attention.' As shown by the very first lines, the building of the temple is (theoretically) a mark of gratitude for the favor of the gods, not a propitiatory offering for their anger.

The mā-gur is, primarily at least, specifically lunar, as I hope to show elsewhere, for reasons not dependent on the constant association of the maturu with Sin.
The river, in newness of joy, morning and evening being propitious.'

In the meantime Gudea goes to Ningirsu again, and also to Gatunudug, praying that the goddess may be propitious. In col. IV, 3-4 we learn that Ninâ has reached her city, whereupon Gudea presents himself before her for the interpretation of his vision:

\[
\text{mā-gur-ra-na gir-nam-mi-gub} \\
\text{uru-ni Ninâ-Šâ kar-Ninâ-ge mâ ne-uš} =
\]

'In her lunar bark she set foot;
To her city Ninâ, at the quay of Ninâ, the ship arrived.'

Of course, the \textit{deus ex machina} is not merely a poetic or ecclesiastical fiction; the image of the goddess was probably placed in her cult-bark, and taken in procession with appropriate ceremonial, unknown to us. From col. X, 17-18, we may gain an idea of the importance of the neomeny festival, which may play a rôle here. It is very likely that Gudea began to build the temple at the new-moon preceding the inundation; cf. col. XI, 4-24: ē-nimnu ē-nam-lugal-mu sib-zid Gû-dê-a ud šú-zid maši-
tum-da an-šu im a-e gû-ba-dé — e-pâ gû-bi ma-ra-ab-zi-sî —
ē-im-mer-e ėar-sag-ki-el-ta im si-ma-ra-ab-sâ-e kalam-e zi-sâg-gâl
ù-ma-sum = "On the day that the faithful shepherd Gudea puts a steadfast hand to the (building of the) Eninnu, my royal house, in heaven a wind will announce (the coming of) water ** * the irrigating ditches and canals will be flooded for thee ** * from the house of the storm in the pure mountains I will send thee a wind, and will give the land life." If further cuneiform parallels are demanded, I will refer the sceptic to the text \textit{CT} 15, 17, already cited.

IV

From rev. II (see below) it seems that the mother-goddess demanded or expected some reward for her complaisance and her submission to the trials of maternity. I am inclined to see in the episode obv. III, 1-8 — 21-28, to which 39 ff. may be added (see above), the reflexion of a version different from the account in rev. III. Owing to the lacunae in our text, it is quite impossible to determine to what extent the two were harmonized. It is at least unsafe to interpret the one without the other.

The situation in which we find ourselves at the beginning of obv. III is not particularly clear. The goddess, after bearing
life, is found on the bank of the river where Enki first came to her. Then—

``Nin-sar gu-id-da-ga-sù mi-ni-tû-bi
En-ki-gà mà-zz-ra im-da-lát e-ne im-da-lát e-ne
sukkal-a-ni Isimu NE 22 gu-mu-na-dê-e
là-da šag-ga e-ne nu-mu-un su-ub-bi, etc. =

`Ninsar called him to the bank of the river.'
``By Enki he was granted 22 to me.'
His vizier Isimu—addressed her:
``The son of man, excellent is he, a pure offspring.''

It is not necessary to take up space here with the antiphonal (†) repetitions. The goddess evidently has been piqued by the failure of her consort to fulfill his promises, and in the master's absence turns to the man, who may have been considered the former's spokesman, just as Hermes was the mouthpiece of Zeus. Isimu seems to hesitate at the idea of delivering the pure 'son of man' into the fickle hands of the goddess, notorious, as we learn in the sixth tablet of the Gilgamesh epic, for the ruin of all her lovers. From 39 ff. it becomes reasonably certain that by the 'son of man' TAG-KU is meant. The appellative là-da is probably to be explained like the epithet applied to Adapa, a figure in some respects very much like TAG-KU, zêr amêlâti, 'offspring of mankind,' i. e. 'mortal.' It is very probable that the expression developed, on account of its sententious quality, a certain mystical value when applied to hero-saviors of the Tammuz type, in view of the fact that it clearly has this force in the Jewish apocalypses, but it is not safe to assume it for the Sumerian period.

Both Barton 28 and Langdon 27 have independently reached the

---

28 Chiera wishes to read ZUK (ambar; M 7844, ambar = appa[ru]), and in the Yale Syl. 49, [a]mbar = apparu), 'marsh,' but after a prolonged wrestle I gave it up as impossible; cf. Jastrow, op. cit., p. 122.
27 Prince renders 'thus,' which is quite reasonable, though not certain; ne-e means 'this.'
28 Or, 'Ninsar spoke on the bank of the river.'
27 Da-lát is probably to be explained as 'bind upon, charge with, bestow upon, grant.' CT 17. 36. 22, a-na ṭa-ba-ag-a-en mia-e da-da-lát-e may be rendered, 'What thou doest, it shall be incumbent upon me.' As Delitzsch points out (SGJ 188), the Semitic jâl kullâma is erroneous, but 'darum achte ich' is not much better. In the Poebel Deluge tablet, col. VI, da-da-lát seems to mean 'reconcile' (from conciliare, 'bring together, unite').

Some Cruses in the Langdton Epic 81

conclusion that TAG-KU is a Tammuz, a result which seems to me unavoidable. Since Tagtug is out of the question, and Takku is hardly more satisfactory, Sum-mu may be suggested as a tentative reading. Sum = ūbātu is the regular word used for the sacrifice of the god Lamga (a common name of Tammuz26), from whose blood men were created; cf. SEP 23 ff., especially 26, 1. 22, and Ebeling no. 4, obv. 25 f., 4Lamga 4Lamga im-ma-an-šum-en-ze-en múd-múd-e-ne nam-lù-gál-šu mú-mú-e-ne = 'The Lamga gods (!) shall ye slay—with their blood create mankind' (Akkadian inexact, Lamga Lamga i-nibhu aha dāmēšunu i-nibnā amē-lūtu). It is true that KU = mu in the special meaning ūbātu, 'garment,' and, so far as I know, is not used elsewhere as phonetic complement. However, since both mu = ūbātu and mu (KA + ZID) = ūnmu, 'grind,' interchange with the ordinary sign mu (SGL 188), we may be permitted to see in the writing an allusion to the grinding of the god in a mill as Ašnan (cf. Barton, loc. cit.), which became the orthodox fate of Tammuz in the Harranian system. Summu would then be, ₇arm, ṣepḫ, the god who 'died that man might live' in the late Sumerian theological system. At present, however, the reading Summu is only another possibility.

Despite the scruples of Enki and his vizier, Isinmu, in 39 ff., we find TAG-KU appearing before the goddess:

4TAG-KU sal-ni-dim in [ ]
4Nin-tu-ri 4TAG-KU- ra gū-mu-na-dé-[e]
na-qa-e-ri na-ri-mu [ ]
enim qa-ra-ab-duq enim28-mu [ ]
lù-dš-ám má-ra im-da-lál
4En-ki-gè má-ra im-da-lál =
'Summu (†) paid obeisance'29 [ ]

26 Lamga ammu sa-ḫdr, 'Lamga lord of the net,' a common title of Tammuz. As the name means 'artisan, carpenter' (<naggar < Sem. naggaru = Eg. ngr), one thinks of ḍDamu la sa-kud-da ša-ki-da-gē, 'Tammuz who binds together broken ligaments' (as god of healing), which reminds one that in the Pyr. Texts Dhišt (Thoth) is the ngr who puts the bones of the dead king together again. Another moon-god, Sin, is the lamga-gal-an-ša-gē, 'the great carpenter of heaven.' Here are a number of puzzling associations to be emendated.

28 Langdon (SEP) and Prince read KA once too often.

29 The verb sal-dim may be explained on the basis of dim(PAP + PAP) = šadág, 'fasten, bind, subjugate,' (nu-dim-ma = lā saŋqu, 'intractable'); sal-dim would mean 'be tractable as a woman, pay homage'; cf. sal-duq, 'be kind to,' and sal-ḫa-gē, 'chatter.'
Nin-tu addressed Summu (†):
"I will purify thee; my purification [ ]
Somewhat I will say to thee; my words [ ]
One man has been granted to me;
By Enki he was granted to me." ¹

In rev. I ¹¹ TAG-KU appears as the intermediary between men and the gods, buying edible plants for a price (šám-šu)—it is not stated what the price was, though we may suspect it to have been his own life. At all events we hear nothing further about his fortunes.

Rev. II, 15 we come upon the goddess complaining again about deferred promises, this time because certain plants seem to be withheld from her. Iaimu replies:

\[ ú ma-e nam-bi li-ne-kud-da^{22} = \]
"As for the plants, I have determined their destiny."

At this information Ningarsag (as the goddess is now called) exclaims in surprise:

\[ a-na-âm ne-e a-na-âm ne-e = \]
"What’s this, what’s this?"

The vizier now gives the list of the plants in detail, making it perfectly clear that they are set aside for the usufruct of man. The disappointed goddess vents her wrath on the innocent cause of her chagrin, man, presumably not daring to curse Enki, her lord:

\[ Ñin-ñar-sag-pá-gè mu ÑEn-ki nam-erim ba-an-kud = \]
"By Ningarsag, on account of Enki, a curse was uttered."

The import of the curse has been the subject of much discussion; we may best render, ‘The fulness (lit. face) of life until he (finally) dies let him not see.’ The meaning is evidently that

⁴ For the best treatment cf. Jastrow, op. cit. p. 131 f.
²² So Jastrow and Chiera: TARK-da. If this is correct, li-kud must be a synonym of li-tar, since both tar and kud share the meanings pards, etc. Li-tar has three principal meanings: arkatam pardsu, a literal rendering of li-li-tar, ‘to determine what is behind a thing, investigate (in legal parance)’; pagdu, inspect, take care of; sa’du, ‘consult, decide.’ There is no li, ‘to ask’ (SGI 170); en-me-li is ‘the priest who declares mysteries.’
²² For mu — nisšam cf. SG. 81. For the expression, cf., e. g., CT 15. 4. 12: šarrum šat-abbītu līplāḥku, ‘May the king revere thee on account of his fathers.’ The translation ‘in the name of’ is also possible, but is difficult to explain.
man is to be subject thereafter to the inroads of disease and senescence, to which he will eventually succumb. Other translations and interpretations do justice neither to the style nor to the exigencies of grammar. If our exegesis is correct, the Sumerian Fall was brought about by the pique of the mother-goddess, and was in no sense the fault of man. With Jastrow’s remarks on p. 137 of his above-cited article I am heartily in accord.

Failing, however, to be appeased by her act of spite, Ningarsag threw herself on the ground and sulked, renewing her plaint that she had received no reward for her child-bearing, whereupon Enlil (now introduced as her traditional spouse) consoled her with the words:

\[
\text{za-e } \text{Nin-\text{gar-sag-gâ } mu-e-du-mu-un-nam} \\
\text{uru-má-a giš-má } \text{ga-ri-dú mu-zu ĝé-pâd-di =}
\]

‘Thou Ningarsag hast borne me children; 
In my city a creature I will make for thee, to be called by thy name.’

Enlil then proceeds to create this being in the city of their joint cult, and dedicates him to the service of the mother-goddess (\textit{mu-pá} often means ‘dedicate’):

\[
\text{\textit{gu}}(\uparrow)\text{-a } \text{sag-ni diš-âm im-ma-an-peš-peš} \\
\text{šà}^{29} \text{ni diš-âm im-ma-an-bûr-bûr} \\
\text{iği-ni diš-âm isê-ne-in-gar =}
\]

‘Splendidly (\uparrow) his head as one unique he made broad; 
His heart as one unique he expanded; 
His eyes as one unique he enlightened.’

This unique being, devoted to the service of the mother-goddess, is clearly a cinaeus; to me this seems the only possible conclusion. Every year the predominant rôle of the eunuch priest, \textit{UR-SAL} (i.e. harem-attendant) = \textit{assinnu}, \textit{kûr-gar-ra} = \textit{kurgarû}, and \textit{kalû} (a Semitic word derived from \textit{kalû}, ‘prevent,’ perhaps as one excluded from sexual intercourse; cf. \textit{nu-giš, ‘harlot,’ prop. ‘not inaccessible’}), in Babylonian religion becomes plainer. There can be little doubt that the \textit{kûrgarû} and their

---

\*\*Langdon’s explanation of \textit{peš-mâ} by \textit{šiknatu} (i.e. \textit{šiku} or \textit{šikîtu}; there is no sing. \textit{šiknatu}), ‘creature,’ is surely correct.

\*\*\*For \textit{peš} (\textit{su} + \textit{KAD}) = \textit{rapâku, napâku, paçdû} (\textit{قصد}), ‘widen out, open up,’ see \textit{SGI} 74 f.

\*\*\*\*Perhaps instead of \textit{šd} (Barton) we may read \textit{PI = gdîtu}, ‘ear, referring \textit{bûr} to \textit{dwr(U)} = \textit{rapâ} usu, etc., ‘of keen intelligence.’
ilk were as common in Ereck as in Cappadocian Comana in later times. Our episode is therefore an aetiologival myth explaining the origin of the guild of Galli, to be compared in some respects to Lucian's famous story of Combabas in his treatise De Syria deo, now admitted to be a genuine production of his youth.

Our results are corroborated, I believe, by another aetiologival myth explaining the origin of the cinaedi, in the Descent of Istar. The goddess of fecundity goes down to Hades to bring back the dead lord of vegetation, Tammuz, but is imprisoned in the underworld by Ereshkigal. Things come to such a desperate pass on earth, production ceasing and social ties being dissolved, that Ea (Enki) creates a cinaedus, Agašunamer (called Agašmer in the Ebeling recension), and sends him down to Hades with the injunction (CT 15. 46, rev. 13 ff.): "Go, Agašunamer, direct thyself to the gate of the Land of No-return; may the seven gates of Hades be opened before thee. Let Ereshkigal see thee and rejoice at thy coming." Conjure her by the great gods; lift thy head and look at the halciqqu skin (saying), 'My lady, let them give me the halciqqu skin that I may drink therefrom.' The mission was duly executed, but Ereshkigal, who understood perfectly that the water of life was destined for Istar, became very angry, and cursed the eunuch:

alka Agašunamer luzirka izra rubá
akalē spinē āli tū-akalka
ḫabanāt āli tū-mallītka
çili dūri tū-munazzuka
askuppāt tū-mūšabāka
šakru u zamū limḫaṣu litka.

The Aššur recension runs somewhat differently:

*The reason for Ereshkigal's rejoicing, delicately alluded to rev. 16, 'After her desire has been appeased, and her heart has become merry,' is given more bluntly by Lucian, De deo Syria 22: γιναίκα Γάλλως ἐσάνθωντα, σα γενούτα Γάλλω ἐσανθωντα, ἵλοτεβίκες οἱ νόται, ἀλλὰ σαης τῷ χρώμα οὕτοι λέγεται.*

"Halciqqu may represent a Sumerian expression *gal-zigā, 'allotment (gal = zita, sdru, pirisu) of life.' The Babylonian skin-bottle might have corresponded originally to the waters of life in the underworld (the ateb), imagined as confined in a water-skin; cf. Ps. 33. 7 (emended text). This explanation is doubtful, but it is at any rate better than the philosophical somersault indulged in AJSL 34. 28 (for gallus cf. JAOS 30. 231, on line 173)."
Of the two, the Ninevite is distinctly the better, not only in orthography, but also in adhering more closely to the Babylonian prototype. We may render it:

"I will curse thee with a great curse.
The water-works of the city shall be thy food;
The garbage-pots* of the city shall be thy drink;
The shadow of the wall shall be thy resting-place;
The threshold shall be thy abode;
The drunkard and the outcast** shall smite thy cheek."

This curse obviously alludes to the wretched lot of an old man longer able to ply his trade of lust, dragging his debauched body around, despised by all and befriended by none. His food and drink come from the garbage pail and the irrigating ditch; he is too poor to patronize the water-seller. During the day he crouches in the shade of some wall; at night he curls up in some doorway. Surely he is the most despicable of mortals: "Par- cius quietum juvenes fenestras."

The comparison of the two recensions of our passage is most instructive. The number of lines is the same, but the editors of the Assur text have suppressed the last line, being too picturesque and vivid, and have replaced it with a platitude, "I will give thee a destiny never to be forgotten." Observing that the tendency of revision in our text is toward obscurity, we will further note that the second and the third lines have been mixed—with evident intention, as both recensions agree. At present the curse is too much like the trick conditions cited by

* "Hubatu and šubmusu, 'pot,' belong with ħāmîn, 'hide something in one's garment,' an extended form of ħāmîn; ħātîn, 'store away' (cf. ħāmîn, Qāsi, Qāsa, etc.), whence ħābîtu, 'amphora' (Haupt, O.L.Z. 18, 296 f.); cf. Ar. ḫubsa, 'food hidden in the folds of a garment.'

** "From zamū, 'exclude, prohibit'; for the force cf. ḥāmîn and ḥāmîn.
Bloomfield, *JAOS* 36. 65 ff.; in accord with the concreteness of the last line, the primary reading of these two must have been:

"The garbage-pots of the city shall be thy food;
The water-works of the city shall be thy drink."

The original writer had a very low opinion of the einaedi, and did not hesitate to express it rather bluntly. His successors, however, objected to the impious attack on the holy priests of Istar, or perhaps feared that it might be misunderstood by the godless, so introduced a few changes, which have succeeded admirably in mystifying scholars, who have generally regarded Aqšunamer as a ghost like the unburied shades of GE XII, col. VI, 11 f., whose food is šikulatu diqari kusipat akali ša ina suqinadā, 'food (left) in pots, pieces of bread lying in the street.'

Figulla has tried to analyze the sources of the *Descent of Istar* (*OLZ* 15, 433-441). While he has made some useful and interesting suggestions, his method does not commend itself, and the results cannot be maintained after the discovery of the Sumerian original (*Poebel, Historical Texts*, no. 23); Papsukal and Belili are Sumerian, not Elamite. He is unquestionably right in associating Aqšunamer with Tammuz, but the former is not a parallel to the latter, but a pale reflex, serving the purposes of the myth in an entirely different capacity. Figulla's view that Tammuz went down to Hades to rescue Istar is reversing the order of events. It is undeniably true that the early Sumerians, and even the Semites, conceived the deity of vegetation as a being of rather indefinite sex, often androgynous, like the vegetation which he represented, and shifting gender at will, but under the hands of the priests the myths regarding him were molded in more definite lines. Both Tammuz and Istar, as vegetation-gods, spend part of the year in the underworld, but the theologians afterwards marked out their respective territories, making Istar the patron of plant-life and fecundity in general, and referring her visit to the underworld to her love for the dead favorite. At the same time, the more primitive conception, according to which Istar herself is imprisoned in the underworld, is retained.

The clue to the origin of the Aqšunamer myth is found in the name, 'His rising is brilliant,' which cannot be separated from Namraĝit and Čisunamrat, names of the crescent moon (aqaru) with the same meaning.4 What connection can there

---

4The Sumerian equivalent of aqaru and Namraģit is either ud-sar (-gibil), which Delitzsch (*SGI* 234) explains like pu-t, 'glänzend in die Erscheinung
possibly be between the moon and a mythical eunuch-priest? The answer is furnished by Egyptian mythology, where the moon as k'ny pt, 'bull of heaven,' is, according to the hieroglyphs, 'bull in rut' during the first half of the month, and 'castrated bull' during the second half (cf. Brugsch, *Agyptologie*, p. 331). Since the waxing moon was the symbol and index of virility and fecundity, whence it was represented as a bull (bûru eqdu, etc.) or an ass, the conception of the emasculation of the waning moon was perfectly natural, especially in a land where religious castration played so important a rôle as in Babylonia. We are fortunately in a position to demonstrate the existence of the conception in Mesopotamia by independent evidence. According to a ritual for lunar eclipses, KB 6. 2. 42 ff. (cf. also Frank, *Religion*, pp. 118 ff.), if an eclipse occurs in Adar, the king is to touch the head of an assinnu, which will give him the power to conquer his foes (rev. 14). In Iyyar the king was instructed to look at a kurgarû (Gallus), who would thereupon pray on behalf of the king. The primary significance of this curious ritual appears from the prescription for Ab, when the king was required to kiss the face of an old woman. As may be seen from the formula lunnu ippafar, 'the evil will be averted,' the original purpose of all this rite was to turn away the harm that might come to the land from the threatened destruction of treten,' or dî-suGUUS (DUgunsu)-bar (UD)-ra. Saba, in view of the writing dî-DU-ar (see Hilprecht *Assyr. Vol.*, p. 420, n. 12), proposes to read dî-gu(h)-ar, which is hardly probable. The correct writing is dî-kâš (the gloss in, CT 24. 15. 17 = 20. 10 is almost certainly erroneous; for KAS = im see above)-bar (UD)-ra, which may mean, 'The one who makes decisions' (ka-dî-bar = purussû pardû); Sum. kašbar can hardly be separated from kašpar in the Elamite divine name Amman-kašpar, which may correspond to a Sum. *Amman-ka-dî-bar = Samaš pârus purussû*; IVR 9. 46 the moon-god is called amma ka-dî-bar-ra an-ki-a, 'Lord who makes the decisions of heaven and earth.' Just as the fire-god Gîbara becomes *Gîbara, *Gîbûra, Girû, so Akkašbar might be simplified to *Akašbar, *Ašbar, which the Akkadians perhaps associated with naqdu, 'be exalted,' by popular etymology.

I have treated this conception for Babylonia in an article to appear in this *JOURNAL*, entitled *Gügamal and Impidu*. The Egyptian fancy that the moon is a fecundating bull is reflected in the story of the generation of Apis, Plutarch, *Isis*, 43, *ôs wâr u-tpârû, ygmâtâ, dô tēl šûluq, sai kârû-râ tôt šûlmû (in heat).

*See my article cited in the previous note.*

*So interpret with Frank.*

*So Jensen; Frank's derivation of ka-rû-tk from našâku, isarak, is impossible. The s is an Assyrian dialecticism.*
the moon. Hence the ritual had as its first object the restoration of the moon, an aim no longer attained by such primitive devices as noise, but secured by the more mysterious and efficacious means of magic. In another study evidence has been collected showing that the analogy between the monthly lunar obscuration and the lunar eclipse is closely paralleled by the conceptions of lunar mythology. The eclipse was simply an irregular and alarmingly rapid repetition of the monthly phenomenon. The basis of the ceremonies mentioned was, therefore, that the king should, by the royal touch, communicate some of his virtue to the eunuch or old woman, and thereby, through the medium of sympathetic magic, induce the gods to revivify the dwindling moon (senescent or emasculated, both ideas which survive most explicitly in Egyptian mythology, which was much more primitive than Babylonian).

From the standpoint of comparative religion, the conception of the eunuch-moon descending into Hades for three days (the umâibubbûli) to rescue the goddess of life, and thereby save a dying world, is most interesting. The doctrine must have become very important in the late Mesopotamian Gnosis, of which we know so little—‘die Volksreligion lebt in der Mystik wieder’ (Dieterich, Mutter Erde*, p. 37). Let us, however, turn back to less dangerous and more productive fields. As above noted, Açušnumamer is a reflection of Tammuz, standing in the same relation to him as the Galli stood to Attis. This is not the place to discuss the origin of ritual castration, except in its mythological aspects. The Galli are the representatives of the god, who, according to the most popular theory, emasculated himself to preserve his chastity.48 In an older theory, he made a sacrifice of his own fecundity in order that nature might be fecundated, a view which proved too abstract for the masses, and was perpetuated by the theologians. From the purely mythological point of view, however, the self-mutilating god of fertility is the waning moon—in both Babylonian and Egyptian mythology the moon is αὐτάρκης and αὐτογέννητος. So also the mutilation and dissection of the body of Osiris into fourteen

---

*For the variations of this myth see my article, Historical and Mythical Elements in the Story of Joseph, to appear in JBL.
pieces by Set refers to the progressive mutilation of the waning moon, as expressly reported by Plutarch (De Isid. et Osir. 42: Τὸν δ’ ἔλεγε δεικτόναρα μίρη τοῖς Ὀσιρίδοις δαπανάην αὐτήν τετράς, ἐν ἑλένεμα μετὰ ταυσίλλην ἀχρον νομεῖται τὸ ἔστρον), who here, as often elsewhere, hands down material of great value, despite Frazer’s caveat (see above); the Egyptian priests hung on to the most primitive ideas with astonishing tenacity. Similarly, it is almost impossible to escape the conviction that the bark or coffin of Tammuz and Osiris goes back ultimately to the lunar bark, which for three days is entirely submerged—the mā-su(d)-a ‘submerged boat,’ of Tammuz. Naturally the goddess of fertility also has a mā-su(d)-a, just as she possesses the specifically lunar mā-gur (see above, and Langdon, Tammuz and Ishtar, p. 58) The ark-coffin of Osiris, in which he is thrown into the Nile after reigning 28 years, is also a lunar bark, since Osiris himself is primarily lunar (see above). As Chassinat, however, points out, for entirely different reasons, Osiris-Apis really ruled (or lived) only 25 or 26 years, corresponding exactly to the number of days during which the moon is visible. Such transferences of myths, functions and attributes from one god to another related one, or from one sphere of a god’s activity to another, can surely occasion no surprise, at our present level of knowledge. While far from being a lunar mythologist, I cannot but consider it unfortunate that Assyriologists have not looked for more traces of lunar myths in their rich field.

While the collateral evidence for the association of the moon with (the god of) fertility is very extensive (see above, and my article Gilgames and Engidu, to appear in this JOURNAL), the only direct proof of an explicit parallelism between the lunar cycle and the growth of vegetation comes, curiously enough, from Jewish sources. Genesis Rabba, 16, 3, says of the fertility of the Euphrates Valley: אַרְבָּא נִטַּע בַּכָּנָה וְהֵי יֵעַרְתָּ הָלָשְׁשֵׁים יוֹם שָׁרוּתוּ בֵּי יִרְכָּה וְהֵי יוֹמָה תַּמְרֵית הָלָשְׁשֵׁים ייָם נָשָׁע אִם עֵמָיו יֵעַרְתָּ הָלָשְׁשֵׁים יוֹם שָׁרוּתוּ בֵּי יִרְכָּהまとめ。“If a man plants a garden in me, it produces in thirty days (a lunar month); if one sows in me, the sprout appears in three days (the time of the moon’s burial equated to the time of burial of the seed).” The myth of the resurrection of the buried seed in three days is not

*Plutarch, ibid. 13.

*ET 38: 33.
uncommon in subtropical countries; I remember as a boy reading in a mission journal of a beautiful case from Paraguay, where the maize-hero rose after three days burial to save the people during a famine.

As a result of these conceptions the moon was thought to play some part in the resurrection of vegetation, and was hence the natural agent sent down to the underworld\(^6\) during the period of lunar darkness (in the spring!) to bring to life the goddess of fertility. Since the moon is the astral receptacle of the water of life, other associations may have arisen, whose cumulative effect established the myth on a firm basis. As noted already, however, the curse of Ereškigal is not astral at all, but refers solely to the envoy of the gods as a cinaedus.

If any problems have been solved in the foregoing study, it has been solely because of the combination of the philological method with the comparative mythological. So far as possible both must be given their rights, while kept rigidly within bounds at the same time. Otherwise, it is evident, the results are likely to be defective or distorted. While our knowledge of Sumerian and even of Assyrian is imperfect, we must know what to expect, placing ourselves, so far as practicable, in the milieu of the times; if, on the other hand, we tackle the texts from the comparative angle, without an adequate philological equipment, the results are usually worthless, except as collections of illustrative material.

---

\(^6\) The sojourn of the moon in the underworld seems to have played a much more important rôle in mythology than we are accustomed to think, though it appears more rarely, as befits its erratic character, than the daily passage of the sun through the underworld. Μή καραγέλας (cf. Roscher, 2. 999 and 2750) is a title referring probably to the god's stay in the underworld during the three days of invisibility. Cf. also Plutarch's curious story of Timarchus (De genio Socratis, 22), where the moon is overtaken by the Styx during lunar eclipse, θαυμάζει τειχώνοις οἶξα. The conceit is certainly drawn from an older source.
ORIGIN OF MAS OR BAR AND THE DEVELOPMENT OF ITS MEANING$^1$

JAMES B. NIES

BROOKLYN, N. Y.

The sign $\text{MAS} = \text{T}$, in its archaic form $\mathfrak{T}$, was a cross. This symbol, which was sacred in pre-Christian as well as in Christian times, led to so many developments, magical, religious, and astronomical, among the various races of antiquity, that it would lead too far afield to consider it in this aspect, except in so far as this character of the $\text{MAS}$ sign will help us understand the enormous linguistic development to which it gave rise and the processes of suggestion through which they were evolved.

The sign also had the value $\text{BAR}$, but this value, later on, I believe, came to be chiefly, though not exclusively, attached to the form $\text{T}$—archaic $\text{T}$, so that, though in some cases, such as $\text{T}$ ‘twin’ 175, 181; $\text{T}$ ‘companion’ 183; $\text{T}$ ‘bright’ 20, 103; $\text{T}$ ‘shine’ 46; $\text{T}$ ‘half’ 106, 169; $\text{T}$ ‘cut in two’ 33; $\text{T}$ ‘section’ 101; $\text{T}$ ‘separation’ 120; $\text{T}$ ‘chief’ 15; $\text{T}$ ‘strong’ 17; $\text{T}$ ‘dwell’ 14; $\text{T}$ ‘dwelling’ 180 (numbers refer to B. W. 77), they have the same signification, there gradually gathered around each certain meanings mutually exclusive. The fact is, as we shall see, two pictographs represented two kinds of tools for producing the same result.

Previous views on the origin of $\text{MAS}$ may be found summarized in Barton’s Babylonian Writing, 2. 45. They all ascribe several origins to the sign, a view which the writer also held until convinced of its incorrectness. To claim that all the 166 known Semitic equivalents can be explained through this new theory would be to claim too much, but that an overwhelming number can be so explained is beyond doubt.

The principal meanings of $\text{MAS}$ and $\text{BAR}$ as given in Sumerian vocabularies, cf. Delitzsch, Sumerische Sprachlehre, are:

---

$^1$ Semitic equivalents, their sources and all but a few of the translations in this paper are taken from Prof. George A. Barton’s indispensable Babylonian Writing, part II, under sign 77.
MAS. "clear, pure; first, chief; twin."
BAR. "decide, divide, half, bind, surround, side."

There are, however, other meanings such as 'fire, magic, conjurer,' which have been considered secondary.

Now if we can find in our sign the pictograph of some primitive article of universal use from which the ideas underlying these meanings could have arisen, and if we can show, among primitive races recent and living, a use of this tool with notions attached to it similar to those found in Babylonian syllabaries, it is very likely that we have the conditions necessary to solve the problem. Such an article I believe will be found in the most primitive form of fire sticks and fire drills and the ideas associated with them. If this be so, it will not be necessary to suppose more than one pictograph from which almost all the meanings were derived.

In order to show that a connection of ideas exists between practically all the chief meanings of MAS or BAR, it will be necessary to consider the nature and uses of fire-sticks and the accounts we have of their use among the ancients and among present day primitive people. By consulting the index to the 3d edition of Frazer's *Golden Bough*, also the article on 'Fire' in 11th Britannica, and particularly E. B. Tylor's *Researches in the Early History of Mankind*, page 238 ff., we shall find abundant illustrations of kindling fire by wood friction.

In the Britannica we read: 'In Cochin China two pieces of bamboo are considered sufficient [to produce fire], the silicious character of the outside layer rendering it as good as native flint,' i.e. one piece of bamboo was simply rubbed across the other until fire was produced.

Tylor, on 252, states: 'In East Asia and in Great Malay, Islands of Borneo and Sumatra, Marsden says he has seen fire produced by rubbing one bit of bamboo with a sharp edge across another.'

Bamboo exists in Babylonia and was probably known to the Sumerians in their primitive habitat. If used in this way the act of making fire would form a MAS (i.e. a cross) of the sticks, which was doubtless the most primitive method of making fire.

Tylor, in a series of graphics, shows in addition three other methods of producing fire by friction of wood: one is by the
stick and groove; another by rotation of a pointed stick, like an arrow shaft, in a round hole made near the end of another stick or piece of wood; and, finally, rotation by a string or bow-drill.

Attention is called here especially to the second of these methods, i. e. the rotation of a pointed stick in a hole near the end of another stick. The Bushman of Australia squats on one end of the second stick and twirls the other rapidly between the palms of his hands until fire is produced and caught in some tinder by another Bushman, who then blows it into a flame.

Now such a tool, if pictured, would look like $\overline{BAR} = \underline{1}$, or $\underline{1}$ and being merely an advance on the simpler $MA\overline{SH} = \underline{+}$, would originally convey the same ideas. Why Babylonians, in the course of time, gradually attached one set of meanings to $MA\overline{SH}$ and another set to $BAR$ cannot be answered, but the process of suggestion that caused the different classes of meanings to arise from the primitive fire-stick or drill is not so difficult to understand, if we bear in mind that we are dealing with habits and thinking of primitive man, to whom the making of fire was a magic act and would seem like drawing light and heat from the sun or from heaven. In fact we know that the making of new fire was performed by the magician, and later, for religion, by the priest.

So far as we know, man has known how to produce fire since diluvial times. Pieces of charcoal and burnt bones have been found in diluvial limestone caverns with the relics of the mammoth and the cave bear.

Osborn, in *Men of the Old Stone Age*, p. 165, says: 'The first positive evidences of the use of fire are layers of charred wood and bones frequently found in the industrial deposits of early Acheulean times; not less than 50,000 years ago.'

*Homo sapiens* seems always and everywhere to have known the art of making fire, and it is no wonder that a symbol so long in use should, in the course of ages, have suggested many things which it was supposed to be and to effect.

Thirteen meanings, such as $\overline{isu}$ 'wood,' $\overline{tu'amu}$ 'twins,' $\overline{kadadu}$ 'bow down,' $\overline{g\overline{a}taritu}$ 'a reed that fits in,' could be derived from the simple bamboo sticks or the fire drill and the way in which they were used. Here may be added also $\underline{1} = \underline{\overline{\text{aw}kilallan}}$, 'the double god' (the two sacred sticks†).
Thirty-six equivalents would be suggested by the effect produced, i.e., fire and known effects of light and heat on vegetation. Some of these are nūru ‘fire, light’; šēmtu ‘flame’; kabābu ša "ūāti ‘to kindle,’ said of a fire; barāru ‘shine’; mašū ‘be bright’; šīru ‘morning’; šamšu ‘sun’; naṣālu ‘look, see’; uṣṣubu (BAR) ‘sprout’; ibbu (MAS) ‘fruit.’ These and 26 other words not including the gods Šî = Nergal, a sun god (midday sun) = Ninib, the eastern sun, = Gibil, the fire god, and some others into the composition of which MAS or BAR enter such as Šamaš, dMu-ba-re = dGiš-bar, etc., show clearly that fire and the making of fire was an original, inherent meaning of MAS.

We come now to the question, How did prehistoric men reason about fire? To what source did they ascribe it? How did they explain the process necessary to obtain it? They knew nothing of the laws of physics, and investigations among primitives prove that, in the earliest stage of spiritual development, they are thoroughly animistic and ascribe objects and events they do not understand to supernatural causes.

That this was the case with fire we have abundant proofs, both in ancient myths, such as that of Prometheus, who was said to have brought stolen fire to mankind from Olympus in a hollow reed, and among modern savages and ancient cults such as those of India.

Frazer in Spirits of the Corn and the Wild, 265, tells us that the Caffres, at their festival of the new fruits, insisted these must be cooked with new fire before a general use of them was allowed. This new, sacred fire was kindled by the friction of two sticks of the Usuati tree, prepared by the sorcerer. When the magician has lit the new fire he hands the fire sticks back to the chief, for no other hand may touch them.

Again Frazer 2, ch. 15, ‘Magic Art,’ says: ‘The sticks among the Herero were held to be sacred and were guarded by the chief in whose family they were hereditary and near whose house the

It is a confirmation of the connection of sun and heat with sprouting that we find in BW 2, 337, UD = handbu ‘sprout’ and 266, BUKU = inbu ‘fruit’ (result of sprouting), for the pictograph of UD was a rising sun and BUKU was, as Barton suggests from Dr. Ward’s SCWA p. 394, ‘an old sun symbol,’ namely a cross, usually represented on Babylonian seals and monuments by the four-pointed star.
perpetual fire was kept burning. If this fire by any accident was extinguished, or if new fire was to be made, these sticks were called into requisition. As for the use of a sacred, perpetual fire and new fire in religion, it will only be necessary to mention the perpetual fire kept up by the vestals in Rome where, if by any accident the fire was extinguished, a new one was made according to a regular ritual, not with flint and steel which the Romans knew, but by the fire-drill consisting of two pieces of wood.

We know that in Egypt, Babylonia, and Greece, as well as among the Aztecs and Incas, there were temples with perpetual fires, survivals of which we have still with us in the eternal lamps of the synagogues and the perpetual lights in Roman Catholic, Greek and High Episcopal churches.

As for the new fire and the sacred significance attached to it, I believe we have a survival of it in the Easter Eve Holy Fire of the Church of the Holy Sepulchre, which was originally no doubt new fire produced by wood friction and believed to be from heaven, as many of the Russian pilgrims who take it all the way back to Russia to light anew sanctuary lamps of their home churches believe it to be to-day.

Tylor, *Anthropology*, p. 16, tells us that in India 'though people have for ages kindled fire for practical use with the flint and steel, yet the Brahmans, to make the sacred fire for the daily sacrifice, still use the barbaric art of violently boring a pointed stick into another piece of wood till a spark comes. Asked why they thus waste their labor when they know better, they answer that they do it to get pure and holy fire.' Once more, Frazer, 'Magic Art,' p. 253, says: 'At Port Stevens, in New South Wales, the medicine-men used to drive away rain by throwing fire-sticks into the air, while at the same time they puffed and shouted.'

From all this it will be seen that, if I am right in my theory that the sign MAS arose from the crossed fire-sticks, there is a connection between that sign and magic because of the supposed heavenly origin of the fire and the supernatural power of the sorcerer who could call that fire down.

When, later, magic gave place to religion, when the diviner and the astrologer took the place of the magician, remembering that the new fire was made to the accompaniment first of ineas-
tations and then of prayers, we should expect exactly such meanings as we find attached to this sign.

We have already considered the meanings derived from the tools or fire-sticks, and those from the effect of using them. In addition to these are such as are derived from the supposed origin and nature of the fire.

As fire was thought to be brought down from the sun, or from heaven, the act of bringing it down was looked upon as magic and the man who brought it down as a magician. It has been abundantly shown by Frazer and others, that among primitive savages no one in the tribe had a more influential position than the sorcerer or magician. Hence we are not surprised to find meanings for MAŠ arising from the position in the tribe of magicians, diviners and priests who called down the heavenly fire and by its means, through fire gods, were able to control and banish evil spirits as well as procure blessings for mankind.

Thus we have: amēlāšipu ‘exorcist’; barū ‘a seer’; mašmašu ‘conjurer’; massu bitu ‘the massu (priest) of the temple,’ who may have made the new fire; zanāma ‘rain.’

Then, as indicating something sacred, or taboo: aḫū ‘strange, hostile’; balū and bēltu ‘fright, terror’; amēlāširu (BAR) ‘adversary’; ka-pāru ‘ruin’; lā šanāku ‘not oppress.’

As results of divination: kašādu ‘capture’; mašāru (BAR) ‘lead, send away’ (bad spirits†); nussu ‘separation’; palāhu ‘fear’; takāpu ‘overpower’†; kābātu ‘liver’ (cf. liver divination); zāru ‘hate,’ whose seat is in the liver; zukkū ‘pure, clean’ (from zakāti? Piel†).

We have also cosmological ideas, as the sign MAŠ divided the zodiac into quarters, such as maššu ‘midst’; šaddu ‘be wide, large’; paddānu ‘road.’ There are 24 more MAŠ and BAR equivalents which I have placed under the general head of magic.

The meanings thus far seem to show that the signs MAŠ or BAR were pietographs of a pair of fire-sticks, that they meant fire and that this fire was magical and sacred. The act of producing fire by friction of wood was thus an act of magic and later of divination.

With this meaning attached to the sign in the Babylonian mind it was perfectly natural that, in the course of time, there should develop a large number of derived, associated or suggested mean-
ings so that in *MAŠ* and *BAR* we have the root of all or almost all of the 166 known equivalents.

The magician among primitive savages was and is the chief man of the tribe. Hence *ašaridu* 'first, chief'; and by association, *ezzu* 'strong'; *enitu* 'lordship'; *urigallu* 'elder brother'; *sēru* 'high, lofty' (possibly cosmological); *šutqu* 'renowned.'

Again with the incantations and ritual associated with fire and the fire gods we find formulas and hymns for binding and banishing evil spirits. Hence a large group of secondary meanings which became conventionalized and led to developments in which all resemblance to the original meaning of the sign is lost: as *BAR = kamû* 'bind' 'seize' 'lead captive,' *itiatu* and other words signifying 'enclosure, boundary, section, portion'; *maḫazu* 'city,' i. e. an enclosed place; *āšibu* 'dwell'; *kimtu* 'kindred, family'; and *sinidu* 'yoke.'

From 'bind, surround' were derived such meanings as *āhū* and *pūdu* 'side'; *arkātu* 'behind, after'; *ahuru* 'westward'; *ābrū* 'future'; *ṣētu* 'exit,' i. e. outside; *sumru* 'body,' i. e. outside of a man; and *pagru* 'corpse,' i. e. separated because taboo.

Perhaps the chief function of a diviner was to interpret omens and give decisions. A decision implies a division of possibilities, accordingly we have *MAŠ = parušu, mērišu, tišmittu*, meaning 'decision.'

While it is possible that such meanings as *sunnu* 'one half,' *uššuru* 'cut in two,' and others signifying 'half, divide, separate,' originated in the cutting across each other of the sticks to produce fire, it seems more reasonable to suppose they were derived from the idea of 'decision,' from which would also arise such words as *ħasū* 'think, remember'; *šabru* 'understanding'; and *bitramu* 'a fox?' possibly from its cunning; *galalu* 'small,' and *kišitu* 'fodder,' perhaps were also suggested by 'divide.' Whether *karašātu* and other words for sacrificial vessels were due to association with the fire ritual I cannot say, but it seems so.

Besides the above groups of equivalents for *MAŠ* and *BAR* there is a group meaning 'produce, increase, wages, cattle,' evidently due to a confusion of *††* with *††††* which had a different origin. *Šipru ša izzuri* 'claw, of a bird,' arose from a supposed resemblance of the sign to birds' claws. There are, in
addition, twenty equivalents of doubtful or unknown meanings which I have, of course, omitted.

On the whole it seems reasonable to conclude that MAS or BAR and its meanings originated in a pietograph of fire-sticks.

The following note contains remarks made, after the reading of the paper, by Professor Julian Morgenstern:

**Remarks by Dr. Julian Morgenstern.**

Dr. Nies' chain of argument, it would seem, would be rounded out, if it could be shown that the practice of kindling new fires on appropriate occasions was practiced by Semitic peoples in general, and by the Babylonians in particular.

Dr. Nies has correctly referred to the ceremony of the descent of the sacred fire in the Church of the Sepulchre at Jerusalem on the late afternoon before Easter Sunday. On this occasion, not only are the lights in the church extinguished and then rekindled from the new fire, but also in Christian homes and sanctuaries throughout the land, fires are extinguished, to be rekindled from the new fire from the Church of the Sepulchre, ceremoniously brought by runners, carefully selected for this task (cf. the detailed description in Wilson, *Pleasant Life in the Holy Land*, 45f.). In a paper, as yet unpublished, I have collected abundant evidence that this supposed descent of fire from heaven, and the kindling therefrom of new fires upon the altar of temples, were ancient Semitic new year rites. For this reason temples seem to have been dedicated regularly at the new year festival.

Thus Solomon's temple was dedicated at the Succoth festival (I Ki. 8). The dedicatory rites obviously culminated on the eighth day of the festival, the pre-exilic new year's day (cf. my *Two Ancient Israelite Agricultural Festivals*, JQR (new series), 8 (1917), 42). On this day the *kobed Yahweh*, the fiery form supposed to be assumed by the Deity, according to the theology of the Priestly Code, when revealing himself to mortals (cf. my *Biblical Theophanies*, ZA 25, 151), filled the temple, so that the priests could not remain there (I Ki. 8, 10f.).

Likewise in the Pg account of the dedication of the tabernacle in the wilderness, the culminating rites of the descent of fire from the *kobed Yahweh* and the miraculous kindling of the sacred flame upon the altar, took place upon the eighth day of the dedicatory exercises, manifestly coincident with the eighth day of the festival (Lev. 9, 1 and 24). Since in Lev. 16 the legislation for the tenth day of the seventh month, the late, post-exilic Day of Atonement, but the pre-exilic new year's day, followed in Pg immediately after the account of the dedication of the tabernacle in the wilderness, the consecration of Aaron and his sons, and the death of the two sons of Aaron, because they brought *strange* fire, i. e. fire not from off the altar, and therefore not emanating from the *kobed Yahweh*, it may be inferred that this eight-day dedication period was coincident with the early Succoth-new year festival from the 3rd through the 10th of the seventh month, and that, here
too, the descent of fire, the culminating dedicatory rite, was on the new year's day. Secondary priestly tradition, probably under Babylonian influence, transferred the date of dedication of the tabernacle from the Succoth-festival to the first eight days of Nisan (Ex. 40, 1).

It is interesting to note in this connection that Clay, Miscellaneous Inscriptions in the Yale Babylonian Collection (Yale Oriental Series—Babylonian Texta), no. 52, pp. 81ff., records the dedication of a temple at Erech in 244 B.C., which culminated with the entrance of Anum and Antum into the shrine on the 8th of Nisan. It may be inferred that the full dedication celebration lasted from the 1st through the 8th of Nisan. In other words, this temple, too, was probably dedicated at the Babylonian new year period. The ceremonial entrance of the gods and goddesses into their sacred shrines seems to have been an important rite of the celebration of the Babylonian sag-suk or new year festival. Gudea, too, dedicated at least one, and probably more temples upon the sag-suk festival: Statue B, VII, 26-36 (Jensen, KB 3°, 40-41; Thureau-Dangin, PAB 1, 72-73); VIII, 11; XXIII, 4; Statue G, II, 1ff.; III, 5ff. (Jensen 60-61; Thureau-Dangin, 84-85); Cyl. B. III, 5ff. (Thureau-Dangin, 124-125); XVII, 18ff. (Thureau-Dangin, 138-139). The dedication ceremonies continued for seven days. During the festival week the servant was equal to his master and rejoiced along with him just as at the Biblical Succoth-festival. The first month was called by Gudea ITU-E-BA, the Month of the Temple (Cyl. B, III, 7). In other words, this seems to have been the regular annual season for temple-dedications in Babylon. Probably at this season the new fire was kindled in the temples, and may even have been thought to have descended from heaven on the new year's day.

It is possibly significant too that in the old Sumerian list of months Ab was called ITU-NE-NE-GAR, the month of making fires (Delitzsch, Less-stücke², 114; Brünnow, List, 4621). All this would tend to indicate that the kindling of sacred fires was an ancient and established religious ceremony in Babylon.
PROSELYTING THE ASURAS
(A NOTE ON RIG VEDA 10. 124)

W. NORMAN BROWN
UNIVERSITY OF PENNSYLVANIA

THE HYMN RIG VEDA 10, 124 has always puzzled scholars and its treatments have been varied. Its difficulties are so unusual that I suggest a new interpretation only with the greatest diffidence.

There seems to be unanimous assent to the theory that it is a dialog containing an invitation from Indra to Agni to leave the Asuras and serve at the sacrifice of the Devas, and an acceptance in reply by Agni. Beyond this point interpretations disagree. I shall not review them all here, but shall mention only such points as bear on my own interpretation.

The first question concerns the Asura pítr mentioned in vs. 3. This title is usually applied in the Rig Veda to Varuna or Dyauis, and might allude to Rudra. This fact probably more than any other has led many scholars to connect the hymn with the ‘Indra-Varuna conflict’; and Bergaigne has maintained unhesitatingly and with considerable supporting evidence that here Asura pítr, Varuna, and Vṛtra are one and the same. This theory, however, has not been adopted by later scholars, for it requires a strong effort of the will to identify two characters so extremely dissimilar in the Veda as are Varuna and Vṛtra. Goldner thinks that the Asura pítr is Vṛtra, an opinion rejected by

1 For a bibliography of this hymn see Oldenberg, Rigveda. Textkritische und exegetische Noten 2. 542. Add to it Hildebrandt, Lieder des Rigveda, p. 21.
2 It hardly seems likely that Varuna is meant, since he himself receives an invitation from Indra in vs. 5. Dyauis and Rudra would have no significance here, for neither one of them is so much as alluded to in any other part of the hymn. The suggestion of Rudra offers some allurement in that the Asura pítr is described as ēvā (vs. 2), Rudra’s prevailing name in later times. Further, Rudra seems to have an ‘Asurisch’ character in the bad sense of the word (see Segerstedt, Revue de l’histoire des religions, 57. 174 ff.).
3 La religion védique, 3. 145 ff.
4 Pischel and Goldner, Vedische Studien, 2. 298.
Hillebrandt, who claims that in the Rig Veda Vṛtra is never an Asura. I cannot see why he should speak so positively, for while Asura is not applied to Vṛtra as an epithet, he surely must concede that even in this hymn Vṛtra is on the side of the Asuras, and that he often falls into a class with the other enemies of Indra some of whom are called Asuras, while of course in later times he is often an Asura and occasionally appears at the head of the Asuras, as Hillebrandt himself notes. Altho it cannot be positively demonstrated that Asura pitr here indicates Vṛtra, there are negative reasons for believing so. If we assign this part to Vṛtra the allusions to Varuna by name no longer become so hard to interpret as when we assign it to Varuna himself. Nor does the Asura pitr then have the colorless and superfluous part in the hymn that he plays if considered to be Dyaus or Rudra.

The story alluded to by the hymn seems to come from a period in Vedic that when the conflict between the Asuras and the Devas was clearly recognized. Indra, the chief of the Devas, is joined by Agni, Varuna, and Soma, who desert the Asuras. Geldner adduces a legend from the Tātītīriya Sāphita 2. 5. 1 and 2, which tells how Tvaṣṭr, eager to revenge his son Viśvarūpa whom Indra had killed, created Vṛtra by means of a Soma sacrifice. Indra was about to hurl his vājra at Vṛtra, when Agni and Soma, who were within Vṛtra, called to him to stay his hand. Hereupon he invited them to come out of Vṛtra and join his side; and when their defection had been successfully accomplished he slew Vṛtra. This story, I believe, has some points of agreement with the myth referred to in our hymn, but is not the same.

Our hymn appears to me to concern a general conflict between the Devas and the Asuras, not an individual affair of Indra with Vṛtra. These two, however, are leaders of their respective sides.

---

*Vedische Mythologie, 3. 68.
*E. g. Pipra in Rig Veda 10. 138. 3. Indra’s enemies, the Adevas, are called Asuras in Rig Veda 8. 85. 9; and the enemies of the Devas are so termed in Rig Veda 10. 53. 4, and 10. 157. 4. Svarabhānu and Namuei, foes of Indra, are described by the adjective asūrd in Rig Veda 5. 40. 5 and 9, and 10. 131. 4. See also v. Brădke, Dyaus Asura, p. 22.

*Vedische Studien, 2. 292 ff.
Agni, Varuna, and Soma were Asuras. In vs. 1 Indra invites Agni to leave the Asura pīṭṛ (Vṛtra). Agni accepts in vs. 2; whereupon in vs. 3 Varuna, too, deserts the Asuras without invitation, and in vs. 4 Soma follows. In vss. 5 and 6 Indra calls encouragingly to Varuna and Soma in terms of invitation and reward. In vss. 7, 8, and 9 the singer lauds the results of Indra's superiority and the friendship of those Asuras who have joined the Devas. I now translate the hymn:

1. (Indra, speaking for the Devas:) Come hither, Agni, to this our sacrifice, of five ways, three-fold, and seven-threaded. Be our oblation-bearer, our leader too! Long, too long hast thou lain in darkness.

2. (Agni:) Leaving the Non-Deva secretly and by hidden ways, as a Deva, foresighted, I go to immortality. When him (the) gracious I ungraciously desert, I go from my natural friends to a strange household.

3. (Varuna:) Seeing (that) the guest (i.e. Agni) is now of the other branch, I measure out many ordinances of the sacrifice. I say farewell to the Asura Father, I go from the portion that is without sacrifice to that which has the sacrifice.

4. (Soma:) Many years have I passed within him. (Now) I have chosen Indra and desert the father. Agni, Soma, and

---

* The character of these gods as Asuras in the benevolent use of the word can be easily seen by glancing at v. Bradke, Dyana Asura, pp. 120-122, and the passages to which reference is made there. This frequent character of benevolent Asuras leads to their temporary association here with the malevolent Asuras.

* The Asura pīṭṛ, Vṛtra.

* The Asuras.

* The Devas.

That is: seeing that the guest, Agni (Ātithi is a frequent epithet of Agni), has now gone over to the other branch (the Devas). Agni's changed allegiance means that henceforth the Asuras will be əyəjəśva (without sacrifice) and the Devas will be əyəjəśva (with sacrifice). As Dr. Edgerton aptly puts it: Ubi Agnis; ibi yajñas.

* Pīṭṛ sometimes means protector or guardian (see Grassmann, Wörterbuch, s. v. 9). Asura pīṭṛ may mean only 'Chief Asura,' the head of the Asura forces. This epithet would fit Vṛtra here better than 'father' (gesitor).

* Vṛtra, like Indra, is aided by drinking Soma. See Goldner, l. c. p. 290, note 1.
Varuna—they fall away (from the side of the Asuras). Rule changes. Therefore I come to aid.

5. (Indra to Varuna:) Without magic resources will those Asuras become, if you, Varuna, bestow your love on me. Separating the false from the true, O King, come rule my kingdom.

6. (Indra to Soma:) Here has been the light of Heaven: here welfare: here light and the broad mid-air. Let us two kill Vṛtra! Come forth, Soma! You who are yourself oblation we worship with oblation.

7. (Singer:) The wise one by his wisdom has put his mark upon the Heaven; without the use of force Varuna made flow the waters. Producing happiness, like wives, these glistening streams carry his color.

8. They follow his supreme power (indriyām). He rules them who revel in their native power. Like subjects with loyal allegiance to their king, they have forsaken Vṛtra with loathing.

9. The companion of those full of loathing they have called a swan living in friendship with the Heavenly waters. By their mediation the poets have seen Indra dancing to the anuṣṭūbh.

A possible objection to this interpretation may be raised on the grounds that Varuna and Soma are pictured as receiving their invitations after they have already come over to the side of Indra and the Devas. This anachronism, however, is not real. Indra’s words in vss. 5 and 6 are not to be understood as inducements or bribes to desert the Asuras; rather they are rewards for services already rendered.

*Bṛāḍa (form, here translated mark), and vātra (color) are synonymous in this passage, both meaning distinguishing mark of ownership. Indra’s color is perhaps the color of the Aryas in contrast with the color of the Dāsas, which would in that case be ascribed to Vṛtra and the Asuras. Cf. Rig Veda 19. 71. 2, where Soma throws off the asuryā vātra.
PRĀNA AND APĀNA

GEORGE WILLIAM BROWN
TRANSTYLANIA COLLEGE, LEXINGTON, KENTUCKY

Much confusion reigns in regard to the meaning of the two words prāna and apāna. One set of scholars, led by Böhtlingk, understands prāna to have meant originally inbreathing, and apāna to have meant outbreathing. Another school, following Deussen, insists that originally prāna meant outbreathing and apāna inbreathing. All agree that in later times these two words may mean air located and functioning in the upper and lower parts of the body respectively. The object of this paper is to inquire what grounds there are for supposing that the words ever have meanings different from their current meanings.

First, the words may be considered from an etymological standpoint. It is always assumed that prāna and apāna were the first of the group of breath-words to appear, and that, consequently, whenever they are used together, they mean inbreathing and outbreathing. This is a mere assumption which has no evidence to support it. On the contrary, the evidence is against it. Of the five breath-words, prāna alone appears a few times in the Rig-Veda; apāna is not found, but the compound verb apānīti is found a single time in a very obscure passage. The word prāna seems to have the general meaning of breath, which it may always express. The other four words, apāna, vyāna, samāna, and udāna, appear simultaneously in the Atharva and Yajur Vedas. If then, prāna and apāna mean inbreathing and outbreathing, what sort of breathing does the equally old vyāna, to say nothing of samāna and udāna, represent? It is nowhere suggested that vyāna, which is very common in the Vedas, means holding the breath or non-breathing; it is always looked on as air, and usually moving air. The terms samāna and udāna are less common than the other words, yet they too mean moving air. This makes it doubtful whether we can translate the breath-words by breath, expiration, respiration, conspiration, perspiration—inbreathing, outbreathing, upbreathing, throughbreathing, and the like—as Whitney does in his translation of the Atharva-Veda (AV. 10. 2. 13; 11. 8. 4; etc.).
Prāṇa and Apāna

Etymologically, it is extremely difficult to conceive of either prāṇa or apāṇa as meaning incoming breath. Both pra and apa, as is well known, imply outgoing activity, the distinction being, when they are contrasted, that pra implies a forward activity, and apa—activity directed backward. Apart from these breath-words, I know of no instance in composition where apa is translated 'in.' I believe that such a force is equally strange to pra, tho its use as an intensive would be more apt to lead to such a use than the narrower apa.

The related compound verbs add very little to clearing up the subject. The explanation yah prāniti sa prānāḥ, yo 'pāniti so 'pānāḥ is typical of many passages, where any meaning that would suit the noun also suits the verb, and the usage is simply that of a denominative. A confusing element is sometimes introduced by the efforts of Hindu commentators to clear up the meanings of such words. Compounds of śvās, especially ucchvas and niḥśvas, are used in the exegesis, and as both these words may mean either inbreathing or outbreathing, any interpretation based on them has to be received with a great deal of caution.

Leaving the etymological field, we may consider the breath words inductively. The current conception of the meaning of prāṇa and apāṇa is thus set forth in a Hindi glossary to the Amarakośa: ārdhay ke vāyu kā nām, prāṇa; gudā ke vāyu kā nām, apāṇa; 'the name of the air in the heart (thoracic region), is prāṇa; the name of the air in the region of the lower intestines is apāṇa.' According to the same authority, samāṇa is located in the navel, udāna in the neck, and vyāna circulates throughout the entire body. Both the location and the functions of these airs are the same as what is taught in some of the earlier Upanishads, as will be shown later. It should be noted that these words are not primarily action-nouns here; they refer primarily to air located in different parts of the body. The problem before us is to find out how far these ideas, at least in regard to prāṇa and apāṇa, may be traced.

I wish first to quote a few references from the commentary on the Atharva Veda. On AV. 2. 16. 1 we find prāg ārdhva-mukho 'nīti cēṣṭāta iti prāṇah; apā 'nīti avānāmekha cēṣṭāta ɪtʏ apāṇah, that is, prāṇa, directed upward, breathes forward; apāṇa, directed downward, breathes back or away. On AV. 7. 53 (55). 2 we find: Prānītiḥ prāṇah, nāsikāvivarād bahir nirgacchan
vāyuḥ. Apānīti, apānāḥ, rīdayasya adhobhāge sauscaram vāyuḥ. That is, ‘Prāṇa is the air which passes out thru the nostrils; apāna is that which circulates in the part below the heart (or the lower part of the heart).’ This seems to be the fundamental distinction throughout. The heart is the center, and directional prefixes pra and ape indicate the direction taken by the respective breaths, with the heart as a center. In the commentary on AV. 18. 2. 46, prāṇa is described in essentially the same way. It further says, antar gacchan (vāyuḥ) apānāḥ. If the commentator had meant that apāna was incoming breath, he would probably have said āsaraṇa instead of gacchan, in order to balance the nāsaraṇa used in connection with prāṇa. Moreover he follows by describing vyāna as in between, madhyasthāḥ, breathing the food to all parts of the body. Hence we have as before, prāṇa in the upper part of the body, going forth from the heart as a center, apāna within the lower parts of the body, and vyāna in between them. Antar must be taken here to refer to the bowel region; cf. antra, intestine.

The scholiast on T. S. 1. 6. 3. 3 has, Eka eva vāyuḥ śarīragata-sthānabhedāt kāryabhedāc ca prānādināmbhir bhidyate. Sthānabhedah kaścid utkhaḥ:

Hṛdi prāṇo gude 'pānāḥ samāno nabhisaūkhithāḥ.
Udānāḥ kauṭhadeśattho, vyānāḥ sarvaśurāgukha. iti. Ucchvāsaṁadhvāsam prāṇavyāpārāḥ. Malamātrayor adhakpātānām apāṇavyāpārāḥ: 'A single air: penetrating the body is distinguished by prāṇa and other names according to difference in locality and function. Concerning difference in locality it is said by some:

Prāṇa is located in the heart, apāna in the lower intestines, and vyāna in the navel; udāna is located in the region of the throat, vyāsa penetrates the entire body.
The function of prāṇa is inhreathing and outbreathing. The function of apāna is the ejection of ordure and urine. Certainly the meanings of the two words are brought out very distinctly here. The passage in T. S. 1. 1. 6 is a little less clear, but the meaning can be harmonized with this. But Caland, in ZDMG 1901 pp. 261 ff., does not do this—he is busy trying to prove that apāna means inhreathing. He also quotes from Rudradatta on Āpas. Srāuta Sūt. 12. 8. 6, Prāṇataḥ, bahīrgatavāyuṇāḥ; apānataḥ,
pratyâhrtavâyuna. The meaning is not that \textit{apâna} is inbreathing, but that it is the functioning of air which has been drawn within the body. Caland fails to note that the very next words are \textit{vyânatâ, madhye dhârâyata}, indicating that \textit{vyâna} is placed between the two other airs. His other citations tend to prove that \textit{apâna} is air located in the abdominal regions rather than air entering the lungs. In his anxiety to prove his thesis, he takes \textit{nâhâvasati} to mean inbreathing, but \textit{asunâhâvasati} to mean outbreathing. He notes that \textit{avâniti} is used in the sense of \textit{apâniti} (as it is in \textit{Ś. B.}) Of course this makes the case stronger for considering \textit{apâna} as the abdominal breath.

Deussen, trying to prove that \textit{apâna} is inbreathing, relies on a single passage from Śaṅkara. Manifestly, before accepting this we ought to examine all the references of Śaṅkara to this word. His scholi on \textit{Prâśna-Up. 4. 3} throws no light on the subject. But on Ch. Up. 5. 13. 1, 3, he describes \textit{prāśa} as the special air located in the forward chamber of the heart and breathing forward, while \textit{apâna} is in the posterior chamber and breathes downward, and carries off the excrements. It may be mentioned here that heart, \textit{krdaya}, is a term of wide significance in the Upanishads, including the lungs and probably some other organs as well as the heart. There is no other word for the human lungs in all Upanishad literature.

On Brh. Ār. Up. 1. 5. 3 Śaṅkara teaches that \textit{prâna}, as an activity of the heart, functions in the mouth and nose; \textit{apâna} functions downward, carrying off the excrements. With these statements agree his comments on Brh. Ār. Up. 3. 4. 1; 3. 9. 26; \textit{Prâśna 3. 4, 5}; 4. 3; \textit{Kathā 5. 3}.

The scholiast on Ch. Up. 1. 3. 3 is the one on which Deussen relies. It reads, \textit{Yad vai puruṣah prânît\textit{vi} mukhan\textit{ásikh̄bhyām vāyum bhakir nāhārayati so prānâkkhyo vāyov vṛttivīśeṣak. Yad apâniti apaśivasati tābh̄yām eva antarakṣati vāyum so 'pāno 'pānâkkhyo vṛttih.} It seems reasonable to suggest that this passage ought to be interpreted in the light of what the same writer clearly says in other places, and that we ought to understand \textit{antar} here to refer to drawing the air into the interior of the body, and not to have reference to mere inhaling. To do this will be doing no violence to the meaning of the particle or the passage.
Turning to the Upanishads, which are the most important writings for our purpose, we take first the late Yoga Upanishads. These recognize from five to fourteen special breaths, to each of which a name is given and a function assigned. In many cases imaginary arterial systems have been devised wherein these airs circulate. Prāṇa is always the chief breath, being just what we mean by breath in English. Apāna is regularly a special air (vāyuviśesah) which carries off the excrements. Prāṇa is in the heart, mouth and nose; it goes to the navel and there meets with apāna, which circulates in the lower intestines, thighs, abdomen, and lower parts of the body generally. (Śaṇ. 1. 4; Śrīj. 4. 23 ff.; Triś. 75, and numerous others.) The airs meet in the navel, instead of the heart, in these books, because to the yogins the navel, and not the heart, is the center of the body and the system of breaths. Very numerous passages speak of drawing up apāna and uniting it with prāṇa, thus restraining both—one of the chief exercises in Yoga.

The Atharvāṇa Upanishads, published by Roer and translated by Deussen, form an older class than those just mentioned. They have less to say about the breaths than either the earlier or the later Upanishads. Still, the locality of the breaths is discussed in Amrtabindu 35 ff. Prāṇa is in the hṛdaya, or heart and lungs, apāna in the gudā or lower intestinal region. Samāna is in the navel, udāna in the neck, vyāna diffused throughout the body. All the other statements in these Upanishads conform to this classification. For instance, apāna is used in Garbha 1 for the rectum, and in Sannyāsa for the navel, showing how fixed was the idea that the air apāna dwelt in the lower part of the body.

Taking up an older class of Upanishads, we find a description of the vital airs in Mait. 2. 6. Prajāpati tries to enter the body, but can not do so until he divides himself into the five vital airs. Of these, prāṇa is the one which rises upward, ārdhvaṃ utkramaṃ. Apāna moves about below—avān saṃkrāmati. Apāna can not mean inbreathing here, for it is said to receive the refuse of the food eaten. It is evident that the directional prefixes pre and apa are here used with relation to the heart; prāṇa rises above it and apāna circulates below it. The very earliest systematic description of the breaths is found in Praṇa 2. 3, and is quite similar to the above. Prāṇa as king gives
orders to the other breaths, assigning them to different parts of the body. He retains for himself the seven openings of the head, mouth, nose, eyes, and ears, assigns to apāna the lowest parts of the body, pāyu and upastha. The other airs are treated as usual.

It is clear therefore that in the time of Praśna, which is fairly early, prāna meant air in the parts of the body anterior to and above the heart, while apāna meant air below and posterior to it. Reasons for this were twofold. First vital activities were supposed to be carried on by air. Because the functions of the stomach, bowels, and kidneys were so different from those of the lungs, the air operating in these parts was considered a different one from that operating in the upper part of the body. Second, air or gaa is actually present in the viscera, and we can not imagine a time when the Hindus were not cognizant of the fact. Āpāniti is just the word we should expect for the passage of this air; it was so used and no other word seems to have been used. It would seem that the movements of the abdomen connected with breathing were associated with apāna, while the observation of the settling of the abdomen after death, the activity of the bowels, and other phenomena occurring after the cessation of respiration—things easily noted in connection with both human beings and sacrificial animals—would have fixed the idea, in an earlier age than that of the Upanishads, that this special air was a peculiarly vital one, and carried on its activities, at least in some cases, even after prāna had departed, and hence was in a measure independent of it.

In this connection we may note Ait. Up. 1. 4; 2. 4; one of the oldest, if not the oldest, of the Upanishads. Prāna bursts forth from the nostrils of the primal man. From the navel comes forth apāna, and from apāna death. From this same Upanishad we learn that Prajāpati tried to grasp food with prāna and various organs, but was unable to do so. He succeeded with apāna. So we find the idea fixed at the beginning of the Upanishad period, that prāna is the air in the nasal region, and apāna the air in the abdominal region.

In no literature older than Praśna is there a systematic description of the breaths, but there are many valuable hints. Katha 3. 3 can be satisfactorily explained only on the basis of what has been said above. Ērdhvam prānām unnayati, apānām
prātyākasya ayati, madhye vāmanam āśīram, viśve devī upāsate.
It is evident that this dwarf whom all the gods-worship is seated in the midst of the body, the heart, sending prāṇa forward, and apāna in the opposite direction.

Both Brh. Ār. and Ch. recognize the five breaths, but do not try to define them. Their indirect testimony confirms what the later Upanishads testify, since in several passages prāṇa is correlated with directional words which mean upwards or forwards, while apāna is always associated with words meaning downward or back, implying that these breaths function in those directions. The disputed passage in Brh. Ār. Up. 3. 2. 2 is the only one in the entire range of Upanishad literature which does not agree with the idea that apāna is the breath in the lower or abdominal parts. Deussen relies on it as his chief passage in proving that apāna means inbreathing. The passage is, prāṇo vai grahaḥ, so ‘pānamlgrahena gṛiha ’pānena hi gandrāṇa jigratā. Even Deussen is compelled to admit that this passage is corrupt, and the mistake is not due to the original writer (Philosophy of the Upanishads, Eng. Trans. pp. 277, 278). The reasons for emending the passage are, first, it does not conform to the norm of the seven otherwise exactly similar passages immediately following this. Second, it makes apāna mean both sense of smell and odor, which is nonsense. Third, as the passage opens with prāṇa as a graha or sense, prāṇa must necessarily do the smelling. Fourth, it identifies prāṇa and apāna; this may be done when apāna is one of the five prānas but at no other time. Hence Boehtlingk, on grounds independent of the meaning of prāṇa and apāna, correctly emends the passage by supplying gandrāṇa in the first and prāṇena in the second place where apāna appears in the above citation. This makes prāṇa the breath which presides over smelling, agreeing with Kaus. 3. 6. 7, which states that by prāṇa one attains all odors. Ch. 1. 3. 2 also states that the nasal prāṇa smells both good and bad odors.

Saṅkara’s explanation from the comm. on Brh. Ār. Up. is instructive, and tells us how such a passage might be preserved. He begins by saying, as he does on Ch. 1. 7. 1, and Kena 8, that, as a matter of fact, prāṇa is the sense of smell—prāṇa iti gandrāṇam ucyate. He then goes on to say that as odor is conveyed by apāna, apāna is used here instead of odor. Then by
implied metonomy, since some odor is apāna, it is said that one smells all odors by apāna. This is a characteristic bit of Hindu mental gymnastics.

The conclusion from the Upanishad passages is that, except in this one questioned and undoubtedly corrupt passage, prāna always means thoracic air or breath, and apāna abdominal air or breath. The heart, or in some cases the navel, is the center from which breath activities are reckoned.

Not much can be learned from the Sūtras. Pār. Grh. Sūt. 1. 19. 4, quoted by Caland to prove that apāna means inbreathing, is better interpreted in the manner here suggested. Making prāna mean outbreathing and saying that one enjoys food with it, is nonsense. Prāna operating above the heart and swallowing, and apāna producing smell, give clearer sense.

Passages in Aitareya Brāhmaṇa agree with this. Others in the Śatapatha Brāhmaṇa are of the same tenor. In S. B. 7. 1. 2. 14 the avān prānas clearly exercise excretory functions. Avān prānas in this book is equivalent to apāna. Prāna enters into the other airs. (11. 5. 3. 8-10.) This implies that the air for all the breaths is drawn into the body as prāna. In many cases the airs are correlated with directional words, prāna always being associated with words implying a locality before the center, and apāna with words implying a locality back or below. 8. 5. 1. 14 is quite clear when prāna is understood as thoracic and apāna abdominal breath. For with prāna one drives off the evil in front and with apāna the evil behind. The only place in the Brāhmaṇas which is not in harmony with this is Jaim. Up. Br. 1. 18. 5, where we have the expression that one smells with apāna. This occurs in a version of the several times repeated story of the gods overcoming the asuras by singing the udgītha with prāna. As this account differs in this respect from the accounts in Brh. Ār. Up. and Ch. Up. as well as from another account of the same event in the Jaim. Up. Br. itself, it is open to grave suspicion. Otherwise it may be explained by the same sort of verbal gymnastics we have seen Śankara use. In another passage in Jaim. Up. Br. we must translate with Oertel, 'He does not exhal e an evil odor with apāna', and not with Caland, 'He does not smell an evil odor' (JAOS 15. 243; ZDMG 1901, 261 ff.).

Understanding prāna to mean thoracic and apāna abdominal
breath makes several passages in the Atharva Veda clearer. Thus 13. 3. 4, *yah prānena dyāvāprthivī tarpayati, apānena samudrasya jāṭharam yah pipartī*, should be translated, 'Who satisfies heaven and earth with the breath from his lungs, who fills the belly of the sea with his abdominal breath.' Since *vyāna* is quite common in this Veda, and all the other common breaths are known substantially as in later times, there is every reason for thinking that the breath words were defined in the time of the Atharva Veda substantially as they are today. The only passages which give any trouble with this interpretation are those passages where *apāna* is used in the plural, but this trouble would occur whatever meaning is given to *apāna*.

The conclusion is that *prāna* and *apāna* should consistently be translated as thoracic and abdominal breaths respectively. This is to be maintained because of the etymological signification of the words, referring respectively to air anterior to and posterior to the heart; because the assumption that one word means inbreathing and the other outbreathing has nothing to warrant it; because when these meanings are suggested, equally great scholars take opposite views, suggesting that both sides may be wrong; because, after *prāna*, the other four breath words appear simultaneously, with well defined functions and localities; because these meanings are explicitly attested by both old and recent authorities, distinctly implied in the most ancient writings, and nowhere seriously contradicted; and because they fit practically every instance where the words occur, and do not involve one in contradictions and changes.
TWO POPULAR RELIGIOUS POEMS IN THE AZERBAIJANI DIALECT

CLARA C. EDWARDS

HAMADAN, PERSIA

The strong poetic spirit of the Persians finds an opportunity for expression in the month of Moharram, when all Shiah Mohammedans mourn the death of Imam Hussein, with his seventy followers, on the plain of Kerbela. During the first ten days of the month, meetings are held every evening in mosques and private houses, where weeping companies listen to recitations of the life and death of the martyrs, embroidered with an infinite variety of fantastic legend. On Ashura, the tenth day of the month, a play portraying the whole tragedy of Kerbela is produced in the courtyards of the mosques. In all these plays and recitations, poetry has a prominent part. At the evening meetings, a rūz-i-khānī (‘reciter of misfortunes’) often tells the story in a poetic version of his own; or he will declaim a famous poem—perhaps the lament of Hussein’s wife Zeinab over the death of her husband. The passion-play is all in poetry and is constantly changing. There are set speeches in Persian and Arabic for the principal characters, but the minor parts are changed from year to year and from place to place at the will of the producers of the play.

In Tabriz, although the people speak a dialect of Turkish called Azerbaijani, the poetry of the rūz-i-khānīs and of the plays is Persian, a language of greater dignity than that used by the people. There is, however, a large body of popular Azerbaijani poetry composed for use at this time. During the first days of Moharram, the streets are crowded with religious processions: confused masses of men and boys beating their breasts with their hands or their backs with steel chains, and cutting their foreheads with knives, and others dressed to represent characters in the tragedy of Kerbela. Nearly all are shouting or chanting. A procession is arranged from each district of the city, and every year the different districts vie with one another in the composi-

\[\text{رضه خوان}^1\]
tion of new poems in Azerbaijani to be recited as their processions march through the streets. Sometimes one of these poems will catch the fancy of the crowd and will become a feature of the processions, familiar to all and recited year by year. When I was in Tabriz in the autumn of 1915, I noted down two which had thus become popular. I give the words of the original in Roman letters, as I took them from the mouth of a Tabrizi Mirza, rendering his pronunciation as closely as I can.

I. ZUL JENAH

Zûl Jenâh ("the Two-Winged") was Imam Hussein's favorite horse. It had belonged to Mohammed himself, who left it to Ali, from whom it was handed down to Hassan and to Hussein. On the tragic day of Kerbelâ, when all his followers had been killed, Hussein mounted Zûl Jenâh and rode out alone against his enemies. He slew great numbers of them, but in the end was overcome by his wounds and fell from his horse. Zûl Jenâh stood by its master's body and, lowering its head, dipped its mane and forelock in the Imam's blood. It then galloped off to the place of the tents, where the women and children were waiting for the outcome of the battle. By neighing and nodding its head toward the place where Hussein lay, it conveyed the news of his death.

In the procession, Zûl Jenâh is represented by a white horse covered with a red-spotted white cloth. (The red spots, of course, represent the blood from the wounds of Hussein.) The horse is accompanied by a number of men who recite the following verses, gazing at it with expressions of deepest grief and anxiety. After the recitation of the poem, they gather about the horse to stroke and fondle it.

| Nâdân sheikh chekërsên | Why do you neigh,        | [battle,        |
| Gûz meidanë tikërsên | Why do you fix your eye on the field of |
| Mâgâr bâbâm ülûb di | Unless our father is dead? |
| Sënna qurbân Zul Jenâh | May we be your sacrifice, Zûl Jenâh! |

| Nâdân kâkilun yâni | Why is your mane on the side |
| Alvân olmush bir yâni | Stained with color on one side, |
| Mâgâr bâbâm ülûb di | Unless our father is dead? |
| Sënna qurbân Zul Jenâh | May we be your sacrifice, Zûl Jenâh! |
**Fātima nūr-ī aini**  The light of Fatima's eyes,

**Imām-i-sūqil aini**  The leader of both worlds,

**Ājāb gītān Hussein**  It is strange that you have (not) brought

**Sēnna qurbān, Zul Jēnah! May we be your sacrifice, Zūl Jenāh!**

II. THE LION OF KERBELA

When Hussein and his followers lay dead and dying on the field, their slayers were about to ride over them, trampling them under their horses' feet. But Fizeh Khātān, a negress who had been the slave of Fatima, prayed that a lion might be sent to protect them. The lion came, and the frightened horses ran from it, refusing to trample on the corpses of the martyrs. Every year in Tabriz a lion is carried about in the Moharram processions and is treated with reverence. In accord with the usual practice of the Persians, who with childlike faith are ready to accept the commonest thing as emblem of a greater, the 'lion' is usually a moth-eaten wolf-skin, badly stuffed. When I first saw it, I took it for a dog! Many poems are addressed to the lion, of which the following is one of the best known:

**Ei shir, yētish bügün hērâyē**  O Lion, come today to our help,

**Imdād eile āl-ī Mustāfāyē**  Help the children of Muṣṭafa!

**Ei shir bū gunde bāsha vur yān**  O Lion, strike your head today, burn it!

**Māḥlūq-i-jēhān olub ĕrāsān**  The people of the world are terrified.

**Ekkēr di olān gāninā galtān**  This is Akbar, stained with blood.

**Ot sāldi màqām-i-āmbēyāyē**  He set fire to the place of the prophets.\(^2\)

**Ei shir, yētish bügün hērâyē,**  O Lion, come today to our help,

**Imdād eile āl-ī Mustāfāyē**  Help the children of Muṣṭafa!

**Ei shir bū Qāşim-i-jēvān dur**  O Lion, this is the young Qāsim,

**Xldā yākhīlān kānāsā qān dur**  The henna which colors his hand is blood.

**Ašākē chēhūb nā āl ŏmān dur**  What a cry 'Alas!' has started to the skies!

**Olād-i Ali dūshūb bèlāyē**  The children of Ali have met disaster.

**Ei shir, yētish bügün, etc.**  O Lion, come today, etc.

---

\(^1\)I have never seen the lion represented either in Teheran or Hamadan, where I have seen many Moharram processions.

\(^2\)'He set fire to the place of the prophets'; i.e. his death was a great sorrow to the prophets.
Come, pass by the place of slaughter,
Look at the corpses of the martyrs.
Go to the Lion of God, tell him.*
Beg him to come to Kerbela.
O Lion, come today, etc.

This child 'Asqar, a nursing,
The arrow has torn his throat.
Look at his condition.
His father threw his blood into the air.5
O Lion, come today, etc.

Look at Zainab, shelterless.
Shimr fired all the tents.
They killed the king who had no shelter.
Curses on the shameless people!
O Lion, come today, etc.

Look at the hill of Minah, flowing with
[blood.*

The mourners have made many wailings.
The young men coming to Qasim's wedding*
Are all guests at this bloody mourning.
O Lion, come today to our help,
Help the children of Mustafa!

* The Lion of God = 'All.
* The story is that Hussein took the baby 'Asqar in his arms and went to his enemies to beg that he might at least get water from the river for this child. For reply, an arrow was shot which lodged in the infant's throat. As the blood poured forth, the father caught some of it in his hand and tossed it in the air, calling on God to witness the cruel deed.
* The plain of Kerbela, flowing with the blood of the martyrs, is here compared to the hill of Minah, near Mecca, where each pilgrim sacrifices a lamb or a sheep.
* The 10th of Moharram was the day of Qasim's wedding.
PRE-ARYAN ORIGINS OF THE PERSIAN PERFECT

ALBERT J. CARNOY

UNIVERSITY OF CALIFORNIA

The discoveries of recent years tend more and more to demonstrate that the invasion of Asia Minor by the Indo-Europeans was a slow process of infiltration which began at a much earlier period than is generally admitted. In his startling little book, *The War and the Bagdad Railway*, Dr. Jastrow has emphasized the composite nature of the Hittite nation. While the reading of their inscriptions by Hrozny and other scholars has almost conclusively shown that they spoke an Indo-European language, their physical type is clearly Mongoloid, as is shown by their representations both on their own sculptures and on Egyptian monuments. They had high cheek-bones and retreating foreheads in the manner of the Tartar races (Jastrow, *op. cit.*, p. 37). This is true in our times of the Armenians, who much resemble the ancient Hittites, and who are still in immediate contact with the remnants of the same races in the Caucasus. There is every reason to believe that in Kurdistan and in the Median mountains a similar amalgamation took place. The constitution of the Median empire was a sudden one, but Aryan tribes were for centuries in contact with the Assyro-Babylonians before the times when the Medes became really dangerous. Their power was preceded by that of the Chaldees, whose language, according to Hommel (*Grund. der Geog. u. Gesch. des alten Orients.*, p. 38 f.), shows resemblances with those of the Northern Caucasian peoples. These Chaldees, who lived around Ararat and Lake Urmiah, were gradually absorbed by the Indo-Europeans. Their Aryanization was preceded by a period of amalgamation, during which the worship of their national god Chaldi became associated with that of the Iranian deity Bagmashtu (Praske, *Gesch. Med. u. Pers.*, p. 65 ff.). The appearance of the Persians in Southern Iran was not sudden, either, and cannot have taken place without the absorption of Elamitic populations. Till the ethnology of these important regions is more advanced, it will not be altogether devoid of interest to look for pre-Aryan and more specifically Caucasian influence on the language of the Ira-
nians, the more so because one is invited to that kind of research by the existence of traces of pre-Aryan languages, both in the languages of India (the cerebral consonants, the nominal constructions, etc.), and in Armenian (the plurals in kh or in er, the alteration of the consonantic system, the loss of the genders, etc.).

The most remarkable innovation in the morphology of Old and Modern Persian, as compared to Indo-European, is the creation of a periphrastic perfect.

As is well known, the Slavonic languages have also developed a participial perfect in -lo: Russ. znal, znala, znalо 'I knew' (the verb быт’ 'to be' being understood). But in this formation the participle is active, while in Iranian the construction is originally passive. Its beginnings are found in the Old Persian inscriptions. Thus, Bh. 1. 27: imad tyad mana kartam pasuvaq yodā xōyabiyaq abovam, 'this is what was done by me, since I became king,' instead of 'this is what I did' or 'I have done.'

—Bh. 2. 27: avadāsām hamaranam kartam, 'there the battle made by them (was).

Frequent in Pahlavi are sentences like Av. I. 1: Zartāš dīn dar gihān ravāk bi-kart, 'by Zoroaster the law, going (i. e. available) in the world, (was) made.'—Ib. VI. 3: Apaṃ purṣit men (=az) Srōš, 'and by me asked (was) from Sraoša.'

The genitive case is used for the agent, a circumstance which contributed not a little to the victory of that case as universal case in Modern Persian.

This introduction of a passive construction as the normal expression of the perfect is quite isolated in the history of the Indo-European languages, in which the tendency is definitely against the passive voice.

This circumstance makes more noteworthy the coincidence that this type of construction happens to be quite general in the non-Aryan languages bordering on Iran. The Caucasian languages, namely, use a passive construction as the perfect of transitive verbs. In the specimens of the language of the Avars given by Friedrich Miller (Grund. Sprachw. III., 2ª Abt., p. 75), one finds, e. g.: Muhammed-isa b-atsana dije ungo 'etāk, 'by Mohammed brought to me four apples (were) = Mohammed brought me four apples.'—Allah-az ha-b-una duniāl, 'by God created world = God created the world.' In Hyrcanian, one says
Pre-Aryan Origins of the Persian Perfect

(hit kuni dawasi-w iqull, 'he by thee rich made is — thou makest him rich.') In Nakhtshnoi the syntax is very similar (ib., p. 175): do-šièh bēr-š-ña xallar luo, 'by father to his children bread is given — the father gives bread to his children.' In Georgian (South Caucasie), besides active turns like 'I hear, we hear,' we find passive constructions with the dative, 'there is hearing to me, there is hearing to us,' etc. (ib., p. 199).

While instrumentals or datives are thus generally used for the agent, the genitive also is found, e.g., in Kasikumuk (ib., p. 94): tšha xutsunal tshusa xatri duylai duri, 'of the neighbor the new houses are sold — the neighbor sold the new houses.'—tanad arsna tšaba nits biukhundil, 'of his son an ox was slain — his son slew an ox.'

This genitival turn is the nearest to the Persian perfect. At first sight the use of the genitive in these turns might seem surprising. Therefore a few words to justify it in the light of general linguistics will not be out of place here. The psychological explanation of the usage is to be found in the perfective nature of the construction. It refers to an achieved state of things, to a situation which benefits somebody, generally the agent who produced it. It appears to him, therefore, as an element at his disposal, a gain, a possession. Many languages have an active equivalent of this turn of expression, in which the verb 'to have' is used to express the relation of the subject to the state of things which he has created for his own benefit.

This, of course, is the origin of the Vulgar Latin and Romance perfect. This verbal form developed from a construction that hardly suggests a tense or an aspect of the verb. It is found in various languages. Originally it merely refers to a state of things, favorable or detrimental, with which a person is confronted. In Latin it occurred in sentences like these: Cic. Fam. 9. 2. 3, habet novem paratum.—Cic. Fam. 2. 18. 2, tres fratres ... te nolo habere iratos. At this stage, the construction might be considered as a special form of the so-called 'applicative voice,' found in many languages and presenting a fact in reference to the person interested in it (pragmatic construction). Soon it comes to be used in cases in which the subject was the producer of the state of things concerned, as: Columella 5. 10.
16. *Si iam arborem satam habueris... serito.*—Marc. Empir. 25. 172. 41, *... ut paratum habeas medicamentum.*

In the modern languages, as is well known, this construction has developed into a regular past tense in which only the production of the action is considered. In French *j'ai cueilli des fleurs,* the point is no longer that picked flowers are at my disposal, but that I have actually some time ago achieved the action of picking flowers, though in *les fleurs que j'ai cueillies* the congruence of the participle with the noun is a survival of the older point of view.

It is interesting to observe that, in Romance, we find constructions with 'to have' analogous to those which we quoted from Latin writers, and that they also show a tendency to develop into a perfect. French *j'ai une dent gâtée, j'ai deux maisons brûlées,* and Spanish *tengo a mi madre enferma,* 'my mother is sick,' are sentences referring to situations and not to real possessions. In Spanish, the *tener-construction* may be used with a participle in a manner that borders on a perfect and recalls *ut paratum habeas medicamentum* of Marcus Empiricus. Thus, *tengo las cartas escritas,* 'I have the letters written'; *tiene la lampara encendida,* 'he has the lamp lighted.'

This shows that it is quite in conformity with our linguistic instinct to regard a durable state of things, resulting from the activity of an agent, as a possession of that agent, so that the use of 'to have' in that case is quite normal and persists when the construction has become a mere perfect. The use of a genitive in Persian is the exact passive equivalent of that active turn. Hence, interesting as this circumstance is from the psychological point of view, it does not constitute the originality of the Iranian periphrastic perfect. This lies in its passive nature. And to it there are parallels at hand, not in the Indo-European languages, but precisely in those of the non-Aryan tribes which preceded the Iranians in the regions occupied by them at the beginning of their history. It is, therefore, not unreasonable to suppose that the development of this construction was promoted by the ancient habits of those who mingled with the Aryan invaders.1

1 It might be objected that in classical Sanskrit it is not uncommon to find constructions resembling the 'was done by me' of Old Persian inscrip-
tions. The latter turn, instead of being typical of Persian, and due to a special influence, would then appear as only one aspect of a general tendency in the Indo-Iranian languages. Since, however, these expressions are not found in the Vedic language, there is a wide gap which makes it difficult to admit that there is a connection between the Iranian and the Indian constructions, unless one believes that the germs of the development are old and have worked in some underground way for centuries. Moreover, the passive turns in Sanskrit never was so generally prevalent as was the case with the Persian perfect. They are evidently only an aspect of the nominal-participial construction, which became so frequent in classical Sanskrit that in some texts (e.g., the Sūtras) one often finds long passages with no other personal verbs than the copula asti or bhave; and even the copula may be understood.

This extensive use of participles must needs in many cases have favored the passive turn as the most convenient. This construction therefore should be considered merely as a secondary development of the participial construction. The exceptional success of this rather clumsy type of syntax in late Sanskrit is generally ascribed to the influence of the pre-Aryan languages of India. The absence of relatives and their replacement by participles are characteristic features of those languages. Friedrich Müller (op. cit., III. 1, p. 197) gives in support of this statement sentences in Dravidian such as ama gaṇḍa bāḍitānam, 'he having seen spoke'; uḍa anda pūndātraṇī kketṭu vāḍitānu-crudāṇāṁ, 'he this lecture having heard and read, wrote.'
BRIEF NOTES

The oldest monumental evidence of a dome-structure

Prof. C. C. Torrey in a lecture delivered on December 7, 1918 in the University Museum at Philadelphia on 'The Glories of Mohammedan Art,' gave as a very early example of dome-structures in the Near East an Assyrian monumental representation of such a structure. I have since found an instance of such a structure which reaches back to pre-dynastic times in Egypt. I refer the reader to Jean Capart's Les débuts de l'art en Égypte, pl. 1, facing page 223. In the upper right corner of the 'Palette en schiste avec scènes de chasse' is the representation of one of the oldest known temples in Egypt. The palette itself may be dated, roughly speaking, about 4000 B. C. I give here an enlarged copy of the interesting temple-structure, which plainly shows the dome. Notice that the lines in the dome represent the material out of which the structure is made, i. e., reeds. But this material is hardly original to this kind of structure, and in my opinion the dome must have originated in a country where there existed much rainfall and in which the mason's material consisted primarily of clay. It seems that an eminently practical view-point invented this dome-form. In order to protect the roof more thoroughly against the down-pouring rain, the clay-roof instead of being made flat received this kind of form. No archaeological material from the country of the Euphrates and Tigris valley which would illustrate the occurrence of this structure also in that country has yet been discovered, but I may venture to say that it is not altogether impossible that the pre-dynastic Egyptian dome-structure ultimately goes back to Babylonia.

Proceedings

of the

Middle West Branch of the
American Oriental Society

at the meeting at Urbana, Illinois, 1919

The third annual meeting of the Middle West Branch was held at the University of Illinois, Urbana, Ill., Feb. 28-March 1, 1919. In spite of the influenza which had caused the suspension of meetings of other learned societies and of the absence of some of our members in France, the following were present: Allen, Bloomfield, Breasted, Brown, Buttenwieser, Clark, Eiselen, Fay, Kelley, Luckenbill, Mercer, Molynieux, Morgenstern, Olmstead, Smith, Wolfenson, of whom fifteen came from out of town. Headquarters were established at the University Club, and the members were in constant touch during the entire meeting. The social side was unusually well developed. At noon on Friday, one of the University faculty entertained members interested in Indo-European subjects in honor of one of their number; at the same time, those interested in the Near East lunched informally together. The evening saw an informal dinner of those interested in the Bible. Saturday noon the local members entertained the visitors at luncheon. The Secretary-Treasurer gave a smoker Friday after the evening session. Finally, the local Menorah Society entertained the visiting Jewish members Saturday evening. Here too may be noted the inspection of the Oriental Museum, the Museum of Classical Art and Archaeology, and the Museum of European Culture, guided by their respective curators.

In the absence of certain scheduled speakers, those who spoke were granted ample time and there was in general animated discussion. As few of those on the program handed the secretary written abstracts, the report must be somewhat uneven. In the evening session of Friday, President Edmund J. James, of the University of Illinois, briefly welcomed the visiting members.
pointed out the surprising interest felt in the Middle West for eastern subjects, and described the beginning of Oriental work at the University.

Professor Morgenstern followed with the Presidential Address, 'World-Empire and World-Brotherhood.'

The conception of a world-empire was born in the minds of Assyrian kings. The monarchs from Tiglath-pileser IV to Ashurbanipal carried it to realization. But it was short-lived, as were its successors, the Neo-Babylonian world-empire, the Persian Empire, and those of Alexander and of the Seleucids. The Roman world-empire endured longer, but it perished eventually. The idea of world-empire was revived by Charlemagne in 800 A.D., and again by Otto I of Germany in 962, and from him descended in direct line to the Hohenzollerns. The idea of world-brotherhood and world-peace was conceived by the prophets of Israel, largely in answer to Assyrian and Babylonian conquest, and because of the realization of the role which it, a little state, was destined to play in history. It found its most complete and lofty expression in Isaiah 2, 2-4 and Micah 4, 1-4. Christianity, with its gospel of 'Peace on earth; good-will to men,' made the doctrine of world-brotherhood and world-peace universal, and the foundation of modern civilization. The ideal was passed to the United States, which championed it in all the deliberations and plans of the Allies. It has made us a nation with a conscience. It is the basic principle of the League of Nations idea, which our country has offered to the world as its solution of the problem of war and peace. Its only feasible program is that first advanced by Israel's earliest prophets.

The presidential address was followed by an elaborate illustrated discussion of the 'Antiquity of Man in the Orient,' by Professor J. H. Breasted of the University of Chicago, the President of the national organization.

The survey was almost entirely confined to Egypt, as little has been done elsewhere. The geology of Egypt was quite different in earliest times, and in the different levels can be found evidence of the various ages. The evolution of man can be traced step by step, from the earliest palaeolithic times to the beginning of written history.

In the field of Indo-European Studies, Professor Edwin W. Fay, University of Texas, discussed 'Phonetic and Morphological Notes in Sanskrit.'

Some nasals in the neuter plurals do not appear in the singular. Thurneysen thought they were derived from the nasals in the participle of the verb 'to be.' It is rather due to synchysis, a term preferable to syncretism, the mingling of two alternate endings.

Professor Geo. William Brown, Transylvania College, read a paper on 'The Source of Indian Philosophical Ideas.'
We cannot maintain the view that Indian life and thot are almost entirely evolved from the culture of the Aryan invaders. Ethnology goes to show that the main element in the population was non-Aryan. Ancient commerce was carried on mainly with the non-Aryan. Early history reveals non-Aryan kingdoms on a par with those of the Aryan community. These things, as well as the usual analogy of history, lead us to expect that the non-Aryan mind must have contributed largely to Indian culture subsequent to the Aryan invasion. An investigation of the fundamentals of later Indian religion and philosophy tends to show that the present culture of India owes more to the non-Aryan than to the Aryan source. The fundamental conceptions of Indian philosophy, and therefore of Hinduism, are the universal presence of spirits in all things, animate and inanimate, and the transmigration of these spirits from one body to another. These are essentially animistic conceptions, and animism is, and, so far as all evidence goes to show, always has been the characteristic of the Dravidian peoples. The various schools of Indian philosophy evolved according to the views taken in regard to questions connected with the two fundamentals mentioned above. Are there many spirits, or is there only one, having multiform appearance? Nāyāya and Sāṁkhya say there are many, Vedānta says there is but one. Is the non-spiritual part of the universe an equality with the spiritual? Practically all agree that it is not, but divide on the degree or difference. Sāṁkhya says the universe is real, evolved from preexistent prakṛti. Vaiśeṣika introduces atoms, which are also eternal. All these questions and their solutions are natural outgrowths of non-Aryan animism. Buddhism and Jainism are not really Aryan religions. They are rather Dravidian reactions against the Aryan ritual and system of nature gods. Writers on Indian religion and philosophy grudgingly admit that the fundamental things named above, and many other elements in modern Indian culture, come from the Dravidian side, but have never carried out their admissions to the logical and inevitable result. When this is done it is evident that for centuries Indian religion and philosophy have owed more to the Dravidians than to the Aryans, and that it is in their ideas that one must seek for the origins of Indian philosophy.

Two papers in which Indo-European scholars threw welcome light on Biblical problems furnish the transition to the Near East. Professor H. C. Tolman of Vanderbilt University sent a phonetic treatment of words occurring in Biblical Aramaic which seem clearly to be borrowed from Iranian sources.

'The Sandal Wood and Peacocks of Ophir' were shown, by Professor Walter E. Clark, University of Chicago, by means of a wealth of detail from the versions and through a study of trade conditions, to be impossible translations. The peacock was not known in the Near East until late, and there is no proof of direct trade with India at anything like so early a date.
Biblical subjects were also presented by Professor J. M. P. Smith, University of Chicago, and Professor Moses Buttenwieser, of Hebrew Union College. The former proved the 'Conservatism of Early Prophecy' by various passages, and showed how a change was necessitated by the failure of its political policy towards Assyria. The latter, in 'Blood Revenge and Burial Rites in Ancient Israel' (forwarded to the Editors), used the comparative method and the data available from the customs of early or primitive peoples. Professor G. L. Robinson, McCormick Theological Seminary, described the Land of Edom in some detail, the character of the country, and above all the roads. 'The Emphatic Sounds in the Semitic Languages' were discussed by Professor L. B. Wolfenson, University of Wisconsin, with illustrations from other languages, including Sanskrit. A plea was made for a rational method of teaching these sounds in the light of modern phonetic knowledge.

Professor S. A. B. Mercer, Western Theological Seminary, presented the main portions of a paper on 'Assyrian Morals,' which followed up his preceding studies on the morals of the Sumerians, Babylonians, and Egyptians.

Professor D. D. Luckenbill, University of Chicago, read a paper on 'Assyrian Treatment of Non-Combatants.'

Papers on modern phases were absent because of the presence of three of our members in Paris, but we were fortunate to have with us Dr. E. B. Haskell, for a quarter of a century a missionary in Salonika and Philippopolis, who described the Balkan situation informally. At the smoker, reconstruction in the Near East was discussed informally, following the lead of Professor F. H. Newell, University of Illinois, who has been in charge of the preliminary work of post-war reconstruction in Turkey.

Two brief business meetings were held. The secretary's report showed that the society was more than holding its own. On nomination from the floor, Professors Mercer, Smith, and Fay were elected a Nominating Committee. Professor Mercer reported for the Committee the following list of Nominations: President, Professor Leroy Waterman, University of Michigan; Vice President, Professor G. M. Bolling, Ohio State University; Secretary-Treasurer, Professor A. T. Olmstead, University of Illinois; Executive Committee, Professor Julian Morgenstern,
Hebrew Union College; Professor F. C. Eiselen, Garrett Biblical Institute. On motion of Professor Breasted, the nominations were approved. Professor Eiselen invited the members to meet next year with Northwestern University and Garrett Theological Institute. On motion of Professor Smith, this was accepted. Professor Wolfenson invited the members to meet with the University of Wisconsin the year following, but no formal motion was made. On motion of Professor Buttenwieser, the branch approved in principle a League of Nations. On motion of Professor Breasted, the branch expressed its thanks to the University of Illinois, to President James, and to the Secretary-Treasurer and Mrs. Olmstead, for the various hospitalities.

A T. OLmSTEAD,
Secretary-Treasurer.

NOTES OF OTHER SOCIETIES, ETC.

The London Times of January 31 reports a paper read the evening before at the Society of Antiquaries by Captain R. Campbell Thompson on the excavations which he had conducted by orders of the War Office on behalf of the British Museum at Abu Shahrain in Mesopotamia, the ancient Eridu. Captain Thompson, who is connected with the British Expeditionary Force, started work in April, 1918. We quote as follows:

"The results were of the highest importance for Babylonian pre-history, which has hitherto been the subject of scant attention, owing to lack of evidence. Indeed, it is not uncommon to find historians hinting that there was no Neolithic period in Babylonia. However this may be, the very numerous chipped and ground celts and axeheads of stone and the large quantity of flakes, knives, etc., of flint, obsidian, and crystal found at Abu Shahrain show that the earliest inhabitants relied on stone for their weapons, particularly as no metal contemporary with these was discovered. But more important still is the pottery, which is of buff, wheel-turned clay, painted with geometric designs in black, exactly of the same kind as that occurring in the lowest stratum (20 to 25 metres depth) found at Susa by M. De Morgan,
proving that primitive men in both places were of the same character. Writing was unknown to the earliest men of Eridu, but their skill in working clay and stone shows that they were fairly civilized when they migrated thither from whatever may have been their earliest home. Lack of metals compelled them to make even their sickles of baked clay, and these occur so frequently as to show that the early men there depended greatly on cereals for their food, while the freshwater mussel shells appearing in low strata indicate that at that time the Euphrates, which must have flowed close by, was counted as a source of supply. It is probable, therefore, that these are relics of pre-Sumerian man, who occupied the lower part of Southern Mesopotamia before the Sumerian migration thither."
PROCEEDINGS
OF THE
AMERICAN ORIENTAL SOCIETY
AT THE MEETING IN PHILADELPHIA, PA., 1919

The annual sessions of the Society, forming its one hundred and thirty-first regular meeting, were held in Philadelphia, Pa., at the University of Pennsylvania and the Dropsie College for Hebrew and Cognate Learning, on Wednesday, Thursday, and Friday of Easter Week, April 23, 24, and 25, 1919.

The following members were present at one or more of the sessions:

Abbott
Abbott, Mrs.
Albright
Allard, Miss
Arnold
Barrett
Barton
Bates, Mrs.
Bender
Benzo
Bloomfield, M.
Breasted
Brown, W. N.
Butin
Calhoun

Williams, T.
Wood, II.
Worrell

THE FIRST SESSION

The first session was held on Wednesday afternoon, beginning at 3:10 p. m., in Price Hall, of the University of Pennsylvania Law School, the President, Professor Breasted, being in the chair.

As the Recording Secretarieship was vacant through the resignation of Dr. Haas, Professor R. G. Kent was appointed Recording Secretary for the meeting. The reading of the Proceedings
of the meeting in New Haven, 1918, was dispensed with, as they had already been published in the Journal (38. 320-37). There being no corrections, they were approved as printed.

Professor Jastrow, as Chairman of the Committee on Arrangements, presented the report of the Committee in the form of a printed program. The following sessions were appointed for Thursday morning at half past nine, Thursday afternoon at a quarter to two, Friday morning at half past nine, and Friday afternoon at two. The session of Thursday afternoon was to be devoted to a special program, including the president's address, and two symposia, the first on the Need of a School of Living Oriental Languages, and the second on the Outlook for Oriental Studies in American Universities. The session of Friday afternoon was to be devoted to the presentation of papers on the historical study of religions, and papers of a more general character. It was announced that there would be an informal social gathering of the members at the Art Alliance, 1823 Walnut Street, at 8:30 P.M. on Wednesday; that the Provost of the University of Pennsylvania would entertain the members at luncheon in Houston Hall, on Thursday at 1 P.M.; that the annual Subscription Dinner would take place at the Art Alliance, on Thursday evening, at 7:00 P.M. (later changed to 7:30 P.M.); and that Dropsie College would entertain the members at luncheon on Friday at 1 P.M.

REPORT OF THE CORRESPONDING SECRETARY

The Corresponding Secretary, Professor Franklin Edgerton, presented the following report:

The affairs of the Society continue to prosper. Interest in our meetings grows from year to year, and is now so great that the number of papers presented is even somewhat embarrassing. Last year the Directors voted to limit the time allotted to each paper at the meetings to fifteen minutes, instead of twenty, as heretofore. Even with this limitation, the number of papers offered makes it difficult to finish the program in the time to which the meetings have usually been limited. The Secretary feels it his duty to call the attention of the members to this condition, and to suggest that they consider the problem of relieving this congestion. Several proposals have been made to deal with the matter.

It has been suggested that at one session the Society might divide itself into two groups, an Indo-European and a Semitic group, papers of more technical character to be presented at this session. Against this it is urged
that—in Professor Lanman’s words—’a generous and sympathetic interest on the part of each element of the Society in the work of the other should be maintained and quickened.’ The Secretary feels personally that this is a strong, and in fact a conclusive, objection to this plan.

Again it has been suggested that the committee on the program should be empowered to select from the papers offered such as seem most suitable for presentation, and should exclude others. The Secretary is even more strongly opposed to this proposal, for several reasons. No program committee could, without supernatural aid, decide fairly and justly what papers should and what should not be presented. It is often impossible, even with the aid of an abstract, to tell how suitable for presentation a paper will be. Much depends on the fact and skill of the author. Invidious distinctions, not in any way connected with the intrinsic merits of the papers offered, would be bound to creep into the matter. Papers by young and unknown authors would tend to be supprest, tho they would often be most worthy of presentation, and papers by members of prominence and distinction would in practice never be excluded, tho prominence and distinction do not, as a matter of fact, constitute any guarantee that their possessors will always say something that is worthy of attention.

It has also been suggested that the time-limit of papers should be still further reduced, to ten or if necessary even to five minutes. This would mean in many, if not most, cases that papers would be limited to a bare statement of the author’s conclusions without any attempt to indicate the basis for them. Such an authoritative ipse dixit is not the sort of thing that our society should encourage. What we want is not a papal bull declaring ‘I believe so and so.’ We want to know the grounds for the belief, and the operations of the author’s mind in reaching the belief. It would probably seldom be possible to present any adequate defense of a proposition of any magnitude within less than fifteen minutes. Indeed, the Secretary personally believes that the former time-limit of twenty minutes, which is that usually allowed by scientific societies in this country, is none too long. It would, in the Secretary’s opinion, be better not to have a paper presented at all than to have it presented in the form of a mere barren statement of conclusions, with no argument to back it up.

Another attempt to deal with this situation is represented by the resolution which Professor Lanman has announced his intention of introducing at this meeting. The resolution has at the same time certain other aims, with which most members will probably feel a general sympathy, altho the Secretary feels personally that the form of Professor Lanman’s resolution is rather over-drastic. Even if the resolution should pass, however, it would probably not effect a sufficient saving of time to meet the situation; the programs would still, in the Secretary’s opinion, remain over-crowded.

Finally, there remains to consider the possibility of making the sessions a trifle longer than has heretofore been customary. If it were generally understood that the meetings should, or if necessary might, be made to cover three full days, that is six sessions, there is little doubt that this would give time for the presentation of all papers which are likely to be offered,
at least for some years to come. Three days is no more time than is allotted to the sessions of most learned societies in this country, and probably most of our members would not find the time excessively long. Those who do find it too long would of course be at liberty to attend only part of the sessions, as in fact some do at present. The social side of our meetings is so well developed and so agreeable that those who attend them seldom feel any anxiety to leave before the end, and the Secretary believes that this slight extension of the time of the sessions would not diminish the pleasure derived from the meetings. He also feels that this manner of extending the sessions would be better than, for instance, attempting to hold evening meetings for the presentation of papers, which would mean the abandonment of either the informal gathering or the dinner—both of which are characteristic and very agreeable features of our meetings, which most members would probably dislike to give up.

The Secretary has to report the death of one honorary and five corporate members.

Professor Julius Wellhausen, of the University of Göttingen, the distinguished Biblical scholar, died January 7, 1918; owing to the war, his death was reported in this country only a few months ago. He was made an honorary member of our society in 1902.

Dr. A. F. Rudolf Hoernle, of Oxford, England, died on November 11, 1918—the day of the signing of the armistice which ended the great war. He was a life member of our society, which he joined in 1893. His notable contributions to science, particularly to our knowledge of Indian medicine, and his publication of the famous Bower manuscript, long held to be the oldest known Indian manuscript, have made him one of the best-known Indologists of the world.

One of our senior members, Mr. Robert M. Olyphant of New York, who joined the society in 1861, died at his home on May 3, 1918.

Professor Jens I. Westergaard, of Harvard University, died at his home in Cambridge on September 17, 1918. He joined the society in 1903. He was an authority on International Law, and had been official adviser to the government of Siam, with the rank of Minister Plenipotentiary. He was chosen to represent Siam in the peace negotiations following the great war.

Mr. Francis A. Cunningham, of Merchantville, N. J., died on February 21, 1919. He was for a number of years a regular attendant at our meetings, and was particularly interested in Egyptology. He joined the society in 1910.

The Rev. Paul W. Sims, who was elected to the society only last year (1918), died at Johnstown, Pa., on September 28, 1918.

The close of the war brings with it a new world situation full of problems for all of us, not only as citizens of our country and of the world, but as Orientalists. Especially acute and important, of course, are the problems connected with the future of work in the Near East. As the Secretary's professional interests are not immediately connected with that field, he feels hardly competent to go into these problems. Fortunately it is the
less necessary to do so since they will be most competently and authorita-
tively dealt with by our President in his annual address. Their importance
must be self-evident to all.

Certain other problems, equally important and more exclusively American,
will be called to the attention of the Society at the 'symposium' tomorrow
afternoon. The question of an American school of living Oriental languages
has repeatedly come up in the past. We hope this time not only to bring it
up, but to bring it to fruition. The time is certainly more than ripe. All
important countries of Europe have long since recognized the practical
value for governmental and commercial purposes of training men in a knowledge
of Eastern languages and cultures. Our own country should lag behind
no longer. That the importance of the matter is recognized in official
circles in Washington is indicated by the interest shown in our symposium
by Mr. Phillips and Mr. Carr.

Intimately connected with this question is the general question of the future
of oriental studies in this country. Often as this subject has been brought in the past, the need for further clarification of it is constantly being brought home to most of us in numerous ways. The gentlemen who have been selected to lead the discussion of this matter are sure to have something worth while to propose; and it is hoped that their proposals will be carefully considered and thoroughly discussed, both in the meeting and afterwards.

The report of the Corresponding Secretary was upon motion accepted, and Professor Müller spoke briefly of the late Mr. Cunningham and of his studies.

The Corresponding Secretary then read the resolution offered by Professor Lanman, who could not be present, as follows:

Within the last few decades, the number of communications offered for presentation at meetings of the American Oriental Society has increased from half-a-dozen or less to half-a-hundred or more. It has manifestly become neither feasible nor desirable to bring before the Society in fifty brief allotted periods of twenty minutes each or less, fifty masses of technical details. To accomplish so much at one sitting, it has been suggested that the Society be split into separate Semitic and Indo-European sections. It is far more important that a generous and sympathetic interest on the part of each element of the Society in the work of the other should be maintained and quickened.

Not only the teachings of modern psychology, but also those of every-day experience, show that the very act of reading (except in the case of very unusually stirring matter and of rarely gifted readers) is distinctly and incontestably a hypnotizing process. The reading of such details, with references to book and chapter and verse, and to volumes and pages of other writings by the reader on related subjects, may perhaps be called successful as a futile display of praiseworthy erudition; but the impression left on the hearer is not an inspiring one. It is often little else than that of transparently vainglorious display. Such performances, the Society ought, for the good of all—hearers and readers alike—positively to discourage.
With the revolving years, it has come to pass that no scholar has even the right to spend his time and his learning upon matters which have not some relation—direct or indirect—to the spiritual progress of mankind. It is not only his privilege, but also his duty, to tell in comprehensible language what that relation is, what he is trying to do, and why he is trying to do it. This it is which will interest and stimulate, quicken and inspire. And such inspiration, the delightful and encouraging sympathy that come from direct personal intercourse with men who are brothers in the spirit, should be the dominant objects of our meetings. They ought never to be lost out of sight.

Therefore, be it resolved by the American Oriental Society: That, in arranging its program for future meetings, the Society considers that (except in the case of an occasional formal address) the normal method of laying Oriental topics before the assembly, be—not the reading of a prepared manuscript, but—a free oral presentation of the matter in a form which can be readily and easily comprehended by all who are present. And that, in cases where a member is unwilling to attempt this method, it shall be permissible to read from manuscript, but not for a time exceeding five minutes.

On motion, it was voted to lay the motion on the table.

On motion of Professor Edgerton, properly seconded, it was voted, after considerable discussion and slight amendment, as follows:

Resolved, that the Society's annual meeting should be made to cover three full days, with two sessions for business and the presentation of papers each day; the first session to begin about eleven o'clock on the morning of the first day, and the last session to continue until five or six o'clock on the afternoon of the third day, except when the number of papers to be presented is so small as to make a shorter time sufficient for their presentation; and further

Resolved, that the outside limit of time for the presentation of papers at the meetings be fifteen minutes, but that members be urged to economize the time of the Society by presenting their communications in as short a time as is consistent with a scholarly defense of their theses.

REPORT OF THE TREASURER

The Treasurer, Professor Albert T. Clay, presented the following report, along with that of the Auditing Committee:

RECEIPTS AND EXPENDITURES FOR THE YEAR ENDING DEC. 31, 1918

Receipts

printing 7.50 2,549.45
Draft from India credited twice 25.00
Balance, Dec. 31, 1918 2,326.83

$6,027.59

In addition to the balance of $3,326.83 deposited with Yale University, the Treasurer of that institution holds for the Treasurer of the Society the four bonds listed as contributing toward the receipts.

The capitalized funds of the Society are as follows:
- Charles W. Bradley Fund $3,000.00
- Alexander I. Coheal Fund 1,500.00
- William Dwight Whitney Fund 1,000.00
- Life Membership Fund 2,150.00

$7,650.00

The Corresponding Secretary reports that of the $25.00 allotted to him for expenses there remained in his hands on April 22, 1919, an unexpended balance of $4.51.
REPORT OF THE AUDITING COMMITTEE

We hereby certify that we have examined the account of the Treasurer of the Society, and have found the same correct, and that the foregoing account is in conformity therewith. We have also compared the entries with the vouchers and the account book as held for the Society by the Treasurer of Yale University, and have found all correct.

E. Washburn Hopkins,  
Frederick Wells Williams,  
Auditors.

New Haven, April 16, 1919.

On motion, the Treasurer’s report and that of the Auditing Committee were accepted.

REPORT OF THE LIBRARIAN

The Librarian, Professor Albert T. Clay, presented the following report, which was upon motion accepted:

During the year the accessions, including the current periodicals, have been catalogued and put upon the shelves of the Library.

The requests for books on the part of members of the Society have increased considerably. In a number of instances Yale Library very kindly loaned the desired works when the Society’s Library did not possess them.

Owing to conditions during the past year it seemed advisable to postpone for the time being our efforts in connection with the printing of the catalogue. Recently, however, the matter has again been taken up, and with the help of Professor Andrew Keogh, the Librarian of Yale University, it is hoped to finish this undertaking. Moreover, it is also hoped that the generous gifts of our fellow-members, Mrs. J. B. Nies and Professor J. E. Jewett, towards the expenses of publication, which were announced last year, will be supplemented.

Following is a list of the accessions to the Library, not including the regular publications:

Benny Kumar Sarkar. The folk-element in Hindu culture. 1917.
Benny Kumar Sarkar. Hindu achievements in exact science. 1918.
Boss, F. Kutenai tales. 1918.
Brandstetter, R. Die Reduplikation in den indischen, indonesischen und indogermanischen Sprachen. 1917.
Proceedings 137

Coomaraswamy, Ananda. The dance of Siva; fourteen Indian essays. 1918.

Cordier, H. Édouard Chavannes. 1918.

Cousens, H. Bijapur and its architectural remains. 1916. (Archaeological survey of India, v. 37, Imperial series.)

Densmore, F. Teton Sioux music. 1918.

The Dinkard, the original Pahlavi text of the 2d pt. of Bk. VIII, with its transliteration in Roman characters, translations into English and Gujarati [etc.] v. 16. 1917.

Erach Minocher Lala. Knights of Bihistoon. 1916.

Farabee, W. C. The central Arawaks. 1918. (Univ. of Penn. Univ. museum. Anthropological publications, v. 9.)

The Holy Scriptures according to the Masoretic text. A new translation. 1917.

Hrdlicka, A. Recent discoveries attributed to early man in America. 1918.

Kaye, G. R. The astronomical observations of Jai Singh. 1918.

Kohlri, K. Jewish theology systematically and historically considered. 1918.

Maneckji Bejani Pithawalla. Steps to prophet Zaroster. 1916.

Mercee, S. A. B. A Sumero-Babylonian sign list. 1918.

Nolz, W. F. The Masoretic text of Nahum critically compared with the ancient versions. 1909.

Palestine exploration fund. Annual report . . . for the year 1916-17. 2 v.

Pratt, I. A. Assyria and Babylonia; a list of references in the New York Public Library. 1918.

Quackenbos, G P., ed. The Sanskrit poems of Mayura. 1917. (Columbia univ. Indo-Iranian series, v. 9.)

Société d'études océaniennes (Polynésie orientale) no. 3. Mars. 1918.

The Toyo-Gakuho. Reports of the investigations of the Oriental society, v. 8, no. 1, 3; May, 1918, Sept. 1918: and v. 9, no. 1; Feb. 1919.

Worrell, W. H. Zur Aussprache des arabischen ì und â. (Vox, 1914, Heft 2.)

The following are all Siamese texts:

An account of a royal cremation during the time of Ayuddhya. With a preface by H. R. H. Prince Damrong Rajanubhab. B. E. 2459.

A collection of poetical works to the glory of our lord the Buddha, of the Devatas, of the Royal elephants, etc. With a preface by H. R. H. Prince Damrong Rajanubhab. B. E. 2457.

A collection of "Sakrava"—Songs improvised on certain occasions in presence of H. M. King Chulalongkorn. With a preface by H. R. H. Prince Damrong Rajanubhab. B. E. 2461.

An historical sketch of the chief monasteries of Siam. With a preface by H. R. H. Prince Damrong Rajanubhab. B. E. 2457.

Historical sketch of the national library. With a preface by H. R. H. Prince Damrong Rajanubhab. B. E. 2459.

The Jātaka, or, Stories of the Buddha's former births, tr. from the Pāli into Siamese. Book 1, v. 3-5; Book 3, pt. 1, 4-5. B. E. 2460-61. With a preface by H. R. H. Prince Damrong Rajanubhab.

Evidence regarding Ayuddhya; given by Khun Luang Ha Vat to the King of Ava. With a preface by H. R. H. Prince Damrong Rajanubhab. B. E. 2459.

Proceedings

History of the holy image called Phra Buddha Jinaraj, by H. M. King Chulalongkorn. With a preface by H. R. H. Prince Damrong Rajanubhab. B. E. 2460.

A record of the military expedition against Chiang Tung. With a preface by H. R. H. Prince Damrong Rajanubhab. B. E. 2459.

A record of the voyage of H. M. the late king to Singapore, Batavia and India. With a preface by H. R. H. Prince Damrong Rajanubhab. B. E. 2460.

Royal edicts of H. M. the late king. With a preface by H. R. H. Prince Damrong Rajanubhab. B. E. 2458.

A sermon; being a translation of Āyāsana sutta. Tr. from the Pāli by Somdet Phra Sangharaj Pussadeb (Vat Rajaprādit). With a preface by H. R. H. Prince Damrong Rajanubhab. B. E. 2461.

A sermon; being a translation of Cūḷañjñāsankhāyana. Tr. from the Pāli by Somdet Phra Sangharaj Pussadeb (Vat Rajaprādit). With a preface by H. R. H. Prince Damrong Rajanubhab. B. E. 2461.

A sermon; being a translation of Dhammacetiya suitta. Tr. from the Pāli into Siamese by Somdet Phra Sangharaj Pussadeb (Vat Rajaprādit). With a preface by H. R. H. Prince Damrong Rajanubhab. B. E. 2460.

A sermon; being a translation of Sabbaśāmaśānaśāsani and Ěkkaṇṭhapātipāṇaṇāsānī from the Pāli by Somdet Phra Sangharaj Pussadeb (Vat Rajaprādit). With a preface by H. R. H. Prince Damrong Rajanubhab. B. E. 2461.

A sermon on the ten duties of sovereigns, illustrated by some examples taken out of the history of Siam. With a preface by H. R. H. Prince Damrong Rajanubhab. B. E. 2458.

The story of Imao according to the theatrical version. With a preface by H. R. H. Prince Damrong Rajanubhab. B. E. 2460.

Proceedings

The life of Vessantara according to the Siamese official version. With a preface by H. R. H. Prince Damrong Rajanubhab. B. E. 2460.

REPORT OF THE EDITORS OF THE JOURNAL

Professor James A. Montgomery, as Senior Editor of the JOURNAL, presented the following report of the Editors, which was upon motion accepted by the Society:

With the year 1918 we have made the year of the JOURNAL correspond with the calendar year. The issue in five Parts has been continued with satisfaction. Much delay has been experienced in getting the Parts out on time, but with the new year this tardiness has been corrected and we hope now to keep to our schedule. The reduced size of the volume and economies have considerably lessened the bill for printing. No alleviation in printing costs is yet in sight, but we hope that with the better financial confidence to be expected after the War we may feel authorized to enlarge the volume towards its former size.

We note with pleasure the very satisfactory arrangement which has been made with the Yale University Press as our Publishers. The connection is useful and profitable and also gives us a standing in the publishing world.

JAMES A. MONTGOMERY,
FRANKLIN EDGERTON,
Editors.

ELECTION OF MEMBERS

The following persons, recommended by the Directors, were elected members of the Society; the list includes some elected at a later session:

HONORARY MEMBER

CORPORATE MEMBERS
Miss Beatrice Allard, Prof. Max Handman,
Prof. F. C. Duncalf, Rev. Lewis Hodous,
Dr. Giuseppe Furlani, Rev. E. P. Janvier,
Miss Alice Gilpin, Mr. R. F. Johnston,
Dr. B. Halper, Mrs. Fletcher Ladd,
Dr. James P. Marsh,
Mr. R. D. Messuyeh,
Mr. George Tyler Molyneux,
Mrs. Charles F. Norton,
Mr. Charles Martyn Pryme,
Mr. Harry L. Rosen,
Mr. William Bacon Scofield,

Mr. Victor Segalen,
Rev. William Shellabear,
Mr. M. T. Sterelny,
Mrs. W. Yorke Stevenson,
Prof. F. J. Teggart,
Mr. Herbert E. Winlock,
Mr. Howland Wood.

Professor Jewett, for the Committee on Nominations, asked and received permission to report at a later session.

At this point, the reading of papers was begun, as follows:

Miss L. C. G. Grieve, of Ocean Grove, N. J.: India as a factor in American literature.

A brief review of the various classes of literature in America, in which India—the land, the people, its history, etc.—is a prominent subject; and conclusions drawn therefrom.

On motion of Professor Edgerton, properly seconded, it was voted to amend

Article IX of the Constitution by striking out the words 'said meeting to be held in Massachusetts at least once in three years,' so that the Article as amended shall read:

Article IX. An Annual Meeting of the Society shall be held during Easter week, the days and place of the meeting to be determined by the Directors. One or more other meetings, at the discretion of the Directors, may also be held each year at such place and time as the Directors shall determine;

and to amend Article I of the By-Laws by striking out the words 'and it shall be his duty to keep, in a book provided for the purpose, a copy of his letters,' so that the Article as amended shall read:

I. The Corresponding Secretary shall conduct the correspondence of the Society; and he shall notify the meetings in such manner as the President or the Board of Directors shall direct.

The purpose of the first amendment was to render effective the privilege obtained by the amending of the Society's Charter (see the Journal, 38, 321-22); that of the second was to remove a dead-letter law.

The Society then adjourned for the day, at 5:20 p. m.

THE SECOND SESSION

The second session of the Society was called to order by President Breasted at 9:33 o'clock on Thursday morning, in Price
Hall of the University of Pennsylvania Law School, and the presentation of papers was at once begun:

Rev. G. S. KUMH, of Yale University: *Kitab al-Haidah wal Itidar,* or the Book of Evasion and Apology.

This is one of the Landberg collection of Arabic manuscripts in the Library of Yale University. It comes from Abbaside Bagdad. The name of the author is Abd al-'Axiz bin-Yahya al-Makki al-Kinani. The text is a polemic against the Mutazilites who preached the doctrine of the 'created Koran' as ever against the orthodox doctrine of the 'unoriginate and eternal Koran.' It is claimed that this book was delivered in the form of a disputation in the presence of the great Abbaside caliph al-Mamun during the period of the Mutazilite inquisition.

Professor A. EXKES, of Johns Hopkins University: Semito-Egyptian Words. Discussion by Dr. Albright and Professor Breasted.

Since the last meeting of the Society the stock of Semito-Egyptian words has been increased by about 500. Semito-Egyptian phonetics appear now in a much clearer light. Semitic L appears in old Egyptian as s, not as r. The 'snake' in the Egyptian alphabet has the value of g (palatalized g), and etymologically it answers to both, Gudd and Gnes. A few new Semito-Egyptian words: njt 'rescue': Arab. naga; py 'stretch,' qrt 'bow': Arab. faggul 'bow,' stretch (bow-string); xtt 'shuttle': Arab. nova 'weave'; xtt 'phallus'; Assy. mutta 'front,' muttal 'in front,' Arab. muttatt 'relationship,' Heb. mathem 'men'; agr 'flag'; Sem. stem akh; etc.

Professor L. C. BARRÉ, of Trinity College: The Kashmir Atharva Veda, Book Seven.

Miss RUTH NORTON, of Johns Hopkins University: The Life-Index in Hindu Fiction. Remarks by Dr. W. N. Brown.

We may distinguish two leading categories of this motif, terming them active and passive. The active index is some object, bird or bee or inanimate object, on which the life of a man or demon depends; destruction of the index involves destruction of the owner. The passive index is merely some token, often a plant, which signifies to a friend the illness, danger, or death of the bestower by some change of condition. The two are often used to advantage in the same story. A further type, tho small in scope, is the faith token. Life-index motif is widely disseminated in Hindu folklore, yet almost totally absent in literature.

Professor PAUL HAUFF, of Johns Hopkins University: (a) Ox and ass at the Nativity; (b) Nehemiah's night-ride; (c) The passage hawk; (d) Accadian and Sumerian. Discussion by Professor Jaastrow and author of the paper.
(a) ‘Ox and Ass at the Nativity. The Evangelium Pseudo-Matthaei says that when Mary placed the Babe in the manger, ox and ass worshiped him, thus fulfilling the prophecies in Is. 1. 3 and Hab. 3. 2 where bi-gōre shanām hawayeth is supposed to mean in medio duorum animalium. This, however, would be in Hebrew: bēn shātām hayyyoth, not bi-gōre shūnām hayyiym. We must read bi-gōre shanām, ‘in the (next) few years’ (cf. miq-qarōe ‘soon’ Ezek. 7. 8). The poet asks that Jhvh should in wrath (i. e., the Syrian persecution) remember mercy and manifest himself in the near future.

(b) Nehemiah’s Night-ride. Nehemiah went from the Valley Gate (in the southern wall) toward the Dragon Well, i. e., the Mamilla Pool NW of the Jaffa Gate; and after he had returned to the Valley Gate, he went toward the Fountain Gate at the southeastern corner of Jerusalem; finally he went north in the Kidron Valley to inspect the eastern wall. The Dragon Well is identical with the Serpent Pool of Josephus and the Azal (at the head of the Valley of Hinnom) of Zech. 14. 5. Arab. qūl means serpents. LXX has θῆσαν in Neh. 2. 13, and the Vulgate: et et.

(c) The Passage Hawk. For bi-nog ‘awdr in Zeph. 2. 2, which is supposed to mean he passed as the chaff, LXX reads bi-nog ‘ōvēr. This, however, does not mean אביד נוֹג פָּרָהשׁנָא, but like a passage hawk (Job 39. 26). Instead of the first hemistich bi-tērm lēdhēth hōg, which is supposed to mean before the decree bring forth, we must read bi-tērm rēdhēth hōg, before Fate descend. The preceding line of this euphemistic liturgical appendix should be read and translated: Hithqōshūshā wa-qōdēdā lē-Yahwe hag-gōy han-nikōl, ‘bow yourselves and bend to Jhvh, ye sinful people.’

(d) Accadian and Sumerian. Sayce (1870) and Lenormant (1873) called the non-Semitic language of Babylonia Accadian, while Oppert (1868) used the name Sumerian, adding that the term Accadian could denote only the Semitic Assyro-Babylonian. Oppert was right; but it is necessary to substitute Accadian for Assyrian. The older form of the non-Semitic Sumerian, which we find in the cuneiform litanies, may be called the litanic dialect, just as we speak of the Vedic and Gāthā dialects. The native name enu-su’u means language of enlargement, i. e., release from distress (cf. Esth. 4. 14) and alludes to its use in the litanies and penitential psalms.

Dr. W. N. Rewyx, of the University of Pennsylvania: Escaping one’s fate: a Hindu paradox illustrated from fiction. Remarks by Dr. Abbott and Professor Kent.

The Hindus are justly shot to believe that man’s fate is inevitable, whether it results from previous Karma or from the decree of an arbitrary deity. But there are a comparatively few people in India who rebel against this dictum, and fiction offers illustrations of three ways to escape fate. Human shrewdness may trick fate; the grace of some god may save a worshipper from destined misfortune; or a
man's acts may so mitigate the lot assigned him at birth that the terms are fulfilled in word only, not in spirit.

Mrs. A. H. Saunders, of New York City: Portrait painting as a dramatic device in Sanskrit plays. Remarks by Professor Bloomfield.

Some plays in which portrait painting is used as a dramatic device. Used to bring the hero and heroine together. Portraits almost always painted by one of the lovers. Where in the plays the painting occurs. In what manner it is introduced. Method of painting, material used, etc.

Dr. E. Cheke, of the University of Pennsylvania: Akkadian and Sumerian personal names. Discussion by Professors Clay and Haupt and the author of the paper.

Rules which help in distinguishing names of the two languages, wherever difficulty arises. Many Akkadian names appear in early documents in such a form as to be practically indistinguishable from the Sumerian names. This is because many phonetic values, which have hitherto been considered purely Sumerian, are also used in the formation of the Akkadian names.

At 12:08 P. M. the Society took a recess until the afternoon session.

THE THIRD SESSION

The third session was called to order by the President at 2:05 P. M. on Thursday, in the Auditorium of Houston Hall, University of Pennsylvania.

Mrs. William Albert Wood, of the Women's Committee, briefly addressed the gathering on behalf of the Victory Loan.

This was followed by an address of welcome on the part of the University of Pennsylvania, by Vice-Provost Josiah H. Penniman, in the absence of Provost Edgar Fuhs Smith.

Professor James H. Breasted, as President of the Society, then delivered the annual presidential address, upon "The Place of the Near Orient in the Career of Man, and the Coming Task of the Orientalist." [Printed in this Part of the Journal, 39.]

The next was a symposium on "The Need for a School of Living Oriental Languages," the speakers being Dr. Talcott Williams, Director of the Pulitzer School of Journalism of Columbia University; Professor W. H. Worrell, of the Kennedy School of Missions, Hartford, Connecticut, and the next Director
of the American School of Oriental Research in Jerusalem; Mr. W. H. Schoff, Secretary of the Philadelphia Museums; Hon. William Phillips, Assistant Secretary of State of the United States of America, whose paper was in his unavoidable absence read by Professor Jastrow. The Hon. Wilbur J. Carr, Director of the Consular Service at Washington, also had been expected to speak, but was unable to be present, and by telegram expressed his hearty approval of the proposal. At the conclusion of the addresses, Professor A. V. Williams Jackson of Columbia University presented a set of resolutions, which had previously received the endorsement of the Board of Directors of the Society. These resolutions were by vote adopted, as follows:

WHEREAS: Owing to the fact that the connection between America and the East is growing closer every day and has been still more emphasized by events in the recent war, it is desirable that young men who are going to the Orient in Consular Service, or for purposes of commerce, should have a knowledge in advance of the languages and conditions of the countries in which their activities are to be engaged;

AND WHEREAS: There are already existing in various European centers special schools for such training, as for example the École des langues orientales vivantes, at Paris:

BE IT THEREFORE RESOLVED: That the American Oriental Society at an official session of its annual meeting held at Philadelphia, April 24, 1919, declares that it is highly desirable that such a School of Modern Oriental Languages be established in the United States of America, under government auspices, at Washington or elsewhere.

AND BE IT FURTHER RESOLVED: That copies of said resolution concerning the desirability of establishing such a school be sent to the President of the United States, to the Secretary of State, and to the Chairman of the Senate Committee on Foreign Relations.

FURTHERMORE BE IT RESOLVED: That copies of the same resolution be sent to Chambers of Commerce throughout the country for their endorsement.

ELECTION OF OFFICERS FOR 1919-1920

Professor Jewett, for the Committee on Nomination of Officers, now reported as follows:

For President—Professor Charles Rockwell Lanman, of Harvard University.

For Vice-Presidents—Professor Richard J. H. Gottheil, of Columbia University; Professor A. V. Williams Jackson, of Columbia University; Professor Leroy Waterman, of the University of Michigan.
Proceedings

For Corresponding Secretary—Dr. Charles J. Ogden, of New York City.
For Recording Secretary—Professor LeRoy Carr Barret, of Trinity College.
For Treasurer—Professor Albert T. Clay, of Yale University.
For Librarian—Professor Albert T. Clay, of Yale University.
For Editors of the Journal—Professor James A. Montgomery, of the University of Pennsylvania; Professor Franklin Edgerton, of the University of Pennsylvania.
For Directors, term expiring 1922—Professor James Henry Breasted, of the University of Chicago; Professor Morris Jastrow, Jr., of the University of Pennsylvania; Professor David G. Lyon, of Harvard University.

The officers thus nominated were duly elected.

There followed a symposium on 'The Outlook for Oriental Studies in American Universities,' the speakers being Professor Maurice Bloomfield of Johns Hopkins University, on Indo-Iranian Studies, and Professor Morris Jastrow, Jr., of the University of Pennsylvania, on Semitic Studies; and, more briefly, Professor J. H. Breasted of the University of Chicago. On motion of Professor Jastrow, properly seconded, it was voted to approve and to refer to the Board of Directors the following suggestions:

1. The preparation of a statement setting forth the scope, character, aims and purposes of Oriental studies, to be presented to institutions at which such studies are not represented.

2. To consider the advisability of preparing a plan for archaeological exploration in the Near East, such plan to be presented at as early a period as possible to the Carnegie Institution.

3. To consider the advisability of forming a National Academy for the Humanities and, if in the judgment of the Directors the effort to form such an Academy should be made, to authorize them to appoint a committee to co-operate with such organizations as the Archaeological Institute of America, the American Historical Association, the American Philosophical Association, the American Philological Association, the Modern Language Association, and other societies covering the Humanities, and to take such other steps as in their judgment may seem advisable.

President Breasted then stated that the Board of Directors by a postal ballot had joined with various Museums and similar interested institutions in a resolution urging the Peace Conference in Paris to embody, in the terms of peace, the protection of antiquities in the former Ottoman Empire, together with provisions for fair and equal treatment of all adequately equipped expeditions for excavation and research; and that a committee
of the Peace Conference had been appointed and was reporting
back to the Conference provisions which were entirely satisfac-
tory.
At 5:00 o'clock the Society adjourned for the day.

THE FOURTH SESSION

The fourth session was called to order by President Breasted
at 9:45 o'clock on Friday morning, in the auditorium of the
Dropsie College for Hebrew and Cognate Learning.

The President announced that the next meeting of the Society
would be held at Cornell University, Ithaca, New York, on Tues-
day, Wednesday, and Thursday of Easter week, April 6, 7, and
8, 1920. Certain additional nominees for membership, included
in the list already given, were duly elected.

The Corresponding Secretary reported also two amendments
to the Constitution and By-Laws, approved by the Board of
Directors and referred to the Society for final action, as follows:
That Article III of the Constitution be amended to read: "The
membership of the Society shall consist of Corporate Members,
Honorary Members, and Honorary Associates."

That the opening words of By-Law VII be amended to read:
"All members shall receive a copy" etc.

The purpose of these amendments was to create a new class of
membership among men prominent in the public life of the
country, whose interest should be enlisted in promoting the work
of the Society. By motion, the amendments were adopted.

The reading of papers was then resumed:
Professor M. L. Margolis, of the Dropsie College: Two emendations in
the Old Testament. Remarks by Professor Haupt.
Isa. 43. 12 l. תִּירָעֲשׂ תְחִירָעֲשׂ ; Prov. 25. 8 l. הָּשֹׁן pro נָשֹׁן.
Professor R. F. Dougherty, of Goucher College: New cuneiform refer-
ces to Belshazzar.

Nine tablets in the Yale Babylonian Collection, dated in the reign
of Nabonidus, indicate the prominence of Belshazzar in affairs at
Ecbat. Two texts place him on an equality with his father in oaths.
He had pastoral and agricultural interests and exercised some jurisdiction
in temple matters, at the same time paying a tithe to Æanna. A
receipt for his tithe is contained in the Goucher College Babylonian
Collection.

Professor Leroy Waterman, of the University of Michigan: The curse
in the paradise epic. [To be printed in the Journal.]
Rev. H. Linfield, of the Dropsie College: The dependence of the Talmudic principle of namakhto on Babylonian law. [To be printed in the JOURNAL.] Remarks by Professor Morgenstern.

Professor J. D. Prince, of Columbia University: Some Sumerian word formations. [To be printed in the JOURNAL.] Remarks by Professor Haupt, Dr. Albright, Professor Kent, and the author of the paper.

Professor A. V. W. Jackson, of Columbia University: From diary notes made in Mesopotamia and on a fourth journey to Persia. Remarks by Professor Gottheil and the author of the paper.

Memorandum regarding the tomb of Ezra on the Tigris; the Arch of Ctesiphon near Bagdad; the ruins of Ksar-i Shirin in Western Persia; and the Grave of Baba Tahir, the eleventh century Persian quatrains poet, at Hamadan.

Professor R. J. H. Gottheil, of Columbia University: Ibn al-Wasiti's controversial treatise against non-believers.

Professor G. S. Duncan, of the American University, Washington: The future life in the oldest Egyptian texts.

The oldest Egyptian inscriptions (4000 B. C.) contain a well-developed future life in eastern sky surrounded by water and reached by rafts and boats. It is a glorified Egypt with reeds, flowers, trees, fields, lakes, and rivers. Entrance is conditioned on ceremonial and ethical purity. The chief food is bread, beer, geese, and oxen. The heavenly occupation is serving the gods. Resurrection of the body and immortality are taught in clearest terms. 'Horus has united for thee thy members.' 'Thou hast departed that thou mightest live.' Monotheism is taught with Re as supreme god. Set is the evil doer, the Satan.

Professor Franklin Edgerton, of the University of Pennsylvania: The philosophical materials of the Atharva Veda. Remarks by Professor Bloomfield and the author of the paper.

The connecting link between Vedic philosophy and magic, and therefore the reason for the presence of the philosophical materials in the AV., is to be found in their common aim, viz., the attainment of practical, worldly ends by means of mystic, esoteric (or magic) knowledge. The Atharva Vedic hymns therefore have a natural and proper place in the collection from the start and are not forced intrusions in any sense. The Atharva Vedic ritual texts support this view. The practical aims of 'higher that' as prominent even in the Upanishads, the culmination of Vedic philosophy.

When Professor Edgerton rose to read his paper a rising vote of appreciation was tendered to him by the Society for his unfailing services as Corresponding Secretary during the past four years, from which position he was by his own desire retiring.

The President then announced the membership of certain committees:
On Arrangements for the Next Meeting: Professor Nathaniel Schmidt, Chairman; Professors R. J. H. Gottheil and Leroy Waterman, and the Corresponding Secretary.

On Nomination of Officers for 1920-21: Rev. Dr. J. B. Nies, Chairman; Professor J. D. Prince; and Mr. E. T. Newell.

The Auditing Committee: Professors E. W. Hopkins and F. W. Williams.

On motion, it was voted to extend a vote of thanks to the authorities of the University of Pennsylvania and to those of the Dropsie College for Hebrew and Cognate Learning, for their generous hospitality to the Society during the meeting.

At 12:30 o’clock the Society took a recess until the afternoon session.

THE FIFTH SESSION

The fifth and last session of the meeting of 1919 was held at the Dropsie College on the afternoon of Friday, beginning at 2:33 o’clock, with President Breasted in the chair. The reading of papers was at once begun:

Professor Julian Morgenstern, of the Hebrew Union College; Holy Cross Day. Remarks by Rev. Dr. Nies, Professors Jastrow and Müller, Rev. Dr. Kyle, and the author of the paper.

This festival is celebrated on September 14th (old style) in the Eastern Church. It commemorates, supposedly, the finding of the Cross on September 14, 326 A.D. On this same day the Church of the Anastasis and that of Golgotha Ad Crucem, both upon Calvary, were dedicated. The festival is popularly celebrated by kindling huge bonfires and by other curious rites. It is unquestionably a survival of an ancient, Semitic, equinoctial festival, which marked, in many localities, the beginning of the new year. The ceremonies were frequently of a Saturnalian character. It was customary to dedicate new sanctuaries upon this festival and to call down fire from heaven.

His translation—alone—of the entire Old Testament into the Mandarin language. His translation—alone—of the entire Bible into High Wen-li. His translation of the Prayer-Book into High Wen-li. Reasons for putting the Bible into High Wen-li. His revisions of this book, made under enormous difficulties, and in his invalid’s chair, with the use of one finger, only, for typewriting. His courageous journey to China, and to Japan, in this helpless condition, in order to have his book printed.
Proceedings

Rev. Dr. J. E. Abbott, of Summit, N. J.: Bhānudās, the Maratha poet-saint. Remarks by Professors M. Bloomfield and Müller.

Between Dnyaneshvar, the first of the Maratha saint-poets, A. D. 1290, and Eknath, 1548-1609, comes the minor saint-poet Bhānudās, great-grandfather of Eknath. The traditional story of his life as preserved by Mahipati in Bhaktavaya, chap. 42, 43, and Bhaktalilamrita 18 is exceedingly interesting. He appears as religiously inclined from childhood, and later as the honest merchant who would die rather than tell a lie, and who adopted the system of the ‘fixed price,’ with great success. From this life he, however, retired to a religious life. He brought back from Vijayanagara the image of Vithoba that the king of Vijayanagara had taken away from Pandharpur. Historical evidence of this event is lacking. About a hundred of his Abhangs are extant.

Professor M. Bloomfield, of Johns Hopkins University. The dohada, or craving of pregnant women: a motif of Hindu fiction. [To be printed in the Journal.] Discussion by Professor Edgerton.

Rev. Dr. John P. Peters, of New York City: The home of the Semites. [To be printed in the Journal.] Discussion by Professor Jastrow, Breasted, and Müller. Such interest was aroused that the Directors were requested to consider the feasibility of appointing a symposium on this topic as a feature of the program of the next meeting.

Dr. W. F. Albright, of Johns Hopkins University: Menes and Narāmain. Mani of Magan, defeated by Naramsin of Akkad, is Menes (Mani) of Egypt. All lines of investigation, historical, geographical, chronological, and archaeological, converge in support of this thesis. Orman = Armenia; Tibar = Anti-Taurus; Ibla = Gibla (Ghila); Iarmuti = Philistia; Magan = Ma’an (oldest West-Semitic name of Egypt). The accession of Menes may be placed cir. 2950 B. C., the introduction of the calendar 2780, in perfect agreement with our present Egyptian material. The dynasty of Akkad is to be dated 3000-2800 B. C., in accordance with the latest discoveries. The history of ancient civilization now appears in a clearer light.

Professor Roland G. Kent, of the University of Pennsylvania: Cattle-tending and agriculture in the Avesta. [To be printed in the Journal.]

Mr. W. H. Schorff, of the Philadelphia Commercial Museum: Biblical foreign trade chapters.

The President announced that the following papers, offered on the program, but not read because of the absence of their authors or for the lack of time, were formally presented by title:

Dr. W. F. Albright, of Johns Hopkins University: (a) The cuneiform prototype of Hidr-Ellas, and the Messinian expectation; (b) The Mesopotamian origin of the Gnostic Sophin.

Professor L. C. Basset, of Trinity College: Pāippalāda and Rigveda.

Professor G. A. Barton, of Bryn Mawr College: On Babylonian parallels to Genesis 2 and 3.
Professor F. R. Blake, of Johns Hopkins University: The languages of the Moros of the Philippine Islands.

Professor M. Bloomfield, of Johns Hopkins University: The mind as wish-car in the Veda. [To be printed in the JOURNAL.]

Dr. W. N. Brown, of the University of Pennsylvania: The wandering skull: new light on Tantrākhyāna 29.

Professor C. E. Conant, of the University of Chattanooga: Long consonants in Itanak (Philippines).

Dr. I. Efron, of Baltimore: An emendation to Is. 63. 5.

Rev. E. Gavin, of Cambridge, Mass.: The 'sleep of the soul' in early Syrian teachings: its affiliations and origins.

Professor C. R. Lanman, of Harvard University: (a) The Sanskrit mutes called mādhyama, that is, domal: with a history and criticism of a century-old error; (b) The Harvard Oriental Series and the War.

Rev. H. Lintme, of Dropsie College: The words 'mouth' and 'tongue' as roots in Semitic languages.

Dr. C. J. Ouden, of New York City: The supposed Hindu dynasty of Bhatinda.

Dr. J. J. Price, of Plainfield, N. J.: (a) Arabic superstitions before Mohammed; (b) Arabic parallels to Rabbinic literature; (c) Buddhism in China.

Dr. J. E. Snyder, of Johns Hopkins University: The paronomasies in Zeph. 2. 4.

Professor C. C. Torrey, of Yale University: The Arab poet called Girān al-'Aud.

At 4:48 o'clock the Society adjourned, to meet again in Ithaca on April 6, 1920.

IMPORTANT ACTIONS TAKEN BY THE BOARD OF DIRECTORS AT THE PHILADELPHIA MEETING
April 23-25, 1919

In view of the fact that an unusual volume of important business was transacted by the Board of Directors at the Philadelphia meeting, the editors of the Journal and the secretaries have urged that all such matters of interest to the members, in so far as they are not fully set forth in the published proceedings of the meeting, should be briefly presented in a statement by the outgoing president.

In accordance with the resolutions adopted by the society urging the importance of establishing a School of Modern Oriental
Languages, the Directors voted to appoint a committee of seven to push the project in every possible way. The following compose this committee: Messrs. Prince (chairman), Talecott Williams, Adler, Torrey, Jackson, Jastrow, Breasted.

The Directors unanimously agreed that a vigorous campaign for new members was highly desirable. Prof. Julian Morgenstern was appointed chairman of a committee to take up this work, with the request to nominate and appoint three additional members of his committee. This new organ is to be called the Standing Committee on the Enlargement of Membership and Resources, and it will direct its appeal to all cultured and enlightened people of the country, to join our society and aid in its support.

The Society feels the need of such support more especially for its very scanty publication account, which has for years struggled along on very meagre resources. It was therefore voted to request the treasurer to include on his bills a suggestion that members add to their dues a contribution toward the support of special publications.

In accordance with this effort it was likewise voted that the Directors go on record as advising the Society as soon as possible to reserve the income from the present Trust Funds exclusively for special publications, rather than to use such income for current expenses as at present.

Similarly the Directors expressed their further sense of the importance of supporting our publication enterprises by voting that the former Committee on Publication be discharged and a new committee with the same powers be appointed. This new committee on Publication now includes the following members: Messrs. Jastrow (chairman), Clay, Jewett, Nies, and Talecott Williams.

In order to be able to associate with the work of the Society influential men in public life, who would consent to further the interests of the Society by such association, the Directors voted to appoint a committee of three to consider nominations for a new class of honorary members, the new members to be termed 'Honorary Associates,' and to report at the next annual meeting. This committee includes Messrs. Montgomery (chairman), Haupt, and R. G. Kent.
In view of the fact that there are many educational institutions in the United States which possess no departments or individual teachers offering courses for the study of oriental languages and civilizations, the Directors voted that a committee of three be appointed to prepare a statement setting forth the scope, character, aims, and purposes of oriental studies, said statement to be submitted to the Board of Directors for approval and modifications, and to be signed by them and presented to educational institutions at which such studies are not represented. The members of this committee are Messrs. R. G. Kent (chairman), Jastrow, and Barret.

The emancipation of the Near East from the rule of the Ottoman Empire offers such an unparalleled opportunity for excavation and exploration that the Directors voted to appoint a committee of five to prepare a plan for archaeological exploration in the Near East, such plan to be presented at as early a period as possible to the Carnegie Institution of Washington.

With similar purposes in view the Directors also voted to appoint a Committee to Further the Interests of the American School in Jerusalem. The members of this latter committee are Messrs. Montgomery (chairman), Barton and Clay.

The lack of a national organization of all American scholars representing research in humanistic science is a serious obstacle to the progress of such research, and especially to efforts looking toward securing the funds for proper support of humanistic science. For example there was no nationally representative body of humanistic scholars to present to our Peace Commissioners in Paris the cause of scientific research in the territory of the defunct Ottoman Empire, as administered by its future mandatories. In view of this situation the Directors voted to appoint a committee of three to consider the proper course of action in proceeding to the formation of a National Academy of Humanistic Science. This committee consists of Messrs. Breasted (chairman), Bloomfield, Jastrow.

The Directors voted to pay the annual subvention of fifty dollars to the Encyclopaedia of Islam for the years 1918 and 1919.

The President called the attention of the Directors to the difficulties confronting the executive officer in securing any action
of the Directors or of the Society during the intervals between
the annual sessions. It is not too much to say that as far as all
official functions other than editing and carrying on correspond-
ence by the President and Secretaries are concerned, the Society
is practically dead for about fifty-one and a half weeks in the
year. This situation is rendered the more difficult by the cus-
ton of a rotating presidency, and in years when the correspond-
ing secretary also lays down his office, even the slight continuity
from one annual meeting to the next is completely broken. In
view of these conditions the proposal was made that an Executive
Council with a reasonably permanent membership, so located
that it might easily and readily assemble at any time during the
year, be created, with power to take official action on matters
demanding speedy decision; and it was voted that a committee
of two be appointed to consider the question of such an Execu-
tive Council and to draft suitable amendments to the Constitu-
tion and By-Laws for putting it into operation, if the project
should ultimately be approved. The members of this committee
are Messrs. Edgerton and Barret.

In preparing the above statement may I express my indebted-
ness to the very efficient services of the Scribe of the Directors,
Prof. R. G. Kent, on whose records this summary is based.

I am sure that I express the feeling of the Directors in stating
that the future of the American Oriental Society never looked
brighter, and that the important actions taken at the Philadel-
phia meeting give promise of a greatly enlarged field of usefule-
ness and influence for the Society. It is a pleasant duty to
indicate in closing that the greater part of the constructive pro-
gram adopted at the Philadelphia meeting was due to the aggres-
sive and efficient local committee in charge of the program.

JAMES HENRY BREASTED
CONSTITUTION AND BY-LAWS
OF THE
AMERICAN ORIENTAL SOCIETY

With Amendments of 1897, 1911, 1915, 1917, and 1919

CONSTITUTION

ARTICLE I. This Society shall be called the AMERICAN ORIENTAL SOCIETY.

ARTICLE II. The objects contemplated by this Society shall be:—

1. The cultivation of learning in the Asiatic, African, and Polynesian languages, as well as the encouragement of researches of any sort by which the knowledge of the East may be promoted.

2. The cultivation of a taste for Oriental studies in this country.

3. The publication of memoirs, translations, vocabularies, and other communications, presented to the Society, which may be valuable with reference to the before-mentioned objects.

4. The collection of a library and cabinet.

ARTICLE III. The membership of the Society shall consist of corporate members, honorary members, and honorary associates.

ARTICLE IV. All candidates for membership must be proposed by the Directors, at some stated meeting of the Society, and no person shall be elected a member of either class without receiving the votes of as many as three-fourths of all the members present at the meeting.

ARTICLE V. The government of the Society shall consist of a President, three Vice-Presidents, a Corresponding Secretary, a Recording Secretary, a Treasurer, a Librarian, two Editors of the Journal, and nine Directors. The officers shall be elected at the annual meeting, by ballot, for a term of one year. The Directors shall consist of three groups of three members each, one group to be elected each year at the annual meeting for a term of three years. No Director shall be eligible for immediate re-election as Director, tho he may be chosen as an officer of the Society.

ARTICLE VI. The President and Vice-Presidents shall perform the customary duties of such officers, and shall be ex officio members of the Board of Directors.

ARTICLE VII. The Secretaries, the Treasurer, the Librarian, and the two Editors of the Journal shall be ex officio members of the Board of Directors, and shall perform their respective duties under the superintendence of said Board.
ARTICLE VIII. It shall be the duty of the Board of Directors to regulate the financial concerns of the Society, to superintend its publications, to carry into effect the resolutions and orders of the Society, and to exercise a general superintendence over its affairs. Five Directors at any regular meeting shall be a quorum for doing business.

ARTICLE IX. An Annual meeting of the Society shall be held during Easter week, the days and place of the meeting to be determined by the Directors. One or more other meetings, at the discretion of the Directors, may also be held each year at such place and time as the Directors shall determine.

ARTICLE X. This Constitution may be amended, on a recommendation of the Directors, by a vote of three-fourths of the members present at an annual meeting.

BY-LAWS

I. The Corresponding Secretary shall conduct the correspondence of the Society; and he shall notify the meetings in such manner as the President or the Board of Directors shall direct.

II. The Recording Secretary shall keep a record of the proceedings of the Society in a book provided for the purpose.

III. a. The Treasurer shall have charge of the funds of the Society; and his investments, deposits, and payments shall be made under the superintendence of the Board of Directors. At each annual meeting he shall report the state of the finances, with a brief summary of the receipts and payments of the previous year.

III. b. After December 31, 1896, the fiscal year of the Society shall correspond with the calendar year.

III. c. At each annual business meeting in Easter week, the President shall appoint an auditing committee of two men—preferably men residing in or near the town where the Treasurer lives—to examine the Treasurer's accounts and vouchers, and to inspect the evidences of the Society's property, and to see that the funds called for by his balances are in his hands. The Committee shall perform this duty as soon as possible after the New Year's day succeeding their appointment, and shall report their findings to the Society at the next annual business meeting thereafter. If these findings are satisfactory, the Treasurer shall receive his acquaintanceship by a certificate to that effect, which shall be recorded in the Treasurer's book, and published in the Proceedings.

IV. The Librarian shall keep a catalogue of all books belonging to the Society, with the names of the donors, if they are presented, and shall at each annual meeting make a report of the accessions to the library during the previous year, and shall be further guided in the discharge of his duties by such rules as the Directors shall prescribe.

V. All papers read before the Society, and all manuscripts deposited by authors for publication, or for other purposes, shall be at the disposal of the Board of Directors, unless notice to the contrary is given to the Editors at the time of presentation.

VI. Each corporate member shall pay into the treasury of the Society an
annual assessment of five dollars; but a donation at any one time of seventy-five dollars shall exempt from obligation to make this payment.

VII. All members shall be entitled to a copy of all the publications of the Society issued during their membership, and shall also have the privilege of taking a copy of those previously published, so far as the Society can supply them, at half the ordinary selling price.

VIII. Candidates for membership who have been elected by the Society shall qualify as members by payment of the first annual assessment within one month from the time when notice of such election is mailed to them. A failure so to qualify shall be construed as a refusal to become a member. If any corporate member shall for two years fail to pay his assessments, his name may, at the discretion of the Directors, be dropped from the list of members of the Society.

IX. Six members shall form a quorum for doing business, and three to adjourn.

SUPPLEMENTARY BY-LAWS

I. FOR THE LIBRARY

1. The Library shall be accessible for consultation to all members of the Society, at such times as the Library of Yale College, with which it is deposited, shall be open for a similar purpose; further, to such persons as shall receive the permission of the Librarian, or of the Librarian or Assistant Librarian of Yale College.

2. Any member shall be allowed to draw books from the Library upon the following conditions: he shall give his receipt for them to the Librarian, pledging himself to make good any detriment the Library may suffer from their loss or injury, the amount of said detriment to be determined by the Librarian, with the assistance of the President, or of a Vice-President; and he shall return them within a time not exceeding three months from that of their reception, unless by special agreement with the Librarian this term shall be extended.

3. Persons not members may also, on special grounds, and at the discretion of the Librarian, be allowed to take and use the Society’s books, upon depositing with the Librarian a sufficient security that they shall be duly returned in good condition, or their loss or damage fully compensated.

II. ON THE ORGANIZATION OF BRANCHES

1. To provide for scientific meetings of groups of members living at too great a distance to attend the annual sessions of the Society, branches may be organized with the approval of the Directors. The details of organization are to be left to those forming a branch thus authorized, subject to formal ratification by the Directors.

2. Upon the formation of a branch, the officers chosen shall have the right to propose for corporate membership in the Society such persons as may seem eligible to them, and, pending ratification according to Article IV of the Constitution, these candidates shall receive the Journal and all notices issued by the Society.
3. The annual fee of the members of a branch shall be collected by the Treasurer of the Society, in the usual manner, and in order to defray the current expenses of a branch the Directors shall authorize the Treasurer of the Society to forward from time to time to the duly authorized officer of the branch such sums as may seem proper to the Treasurer. The accounts of the Treasurer of the branch shall be audited annually and a statement of the audit shall be sent to the Treasurer of the Society to be included in his annual report.

4. The President and Secretary of any branch duly authorized as provided under Section 1 shall have the right to sit ex officio with the Directors at their meetings and to take part in their deliberations.
THE PLACE OF THE NEAR ORIENT IN THE CAREER OF MAN AND THE TASK OF THE AMERICAN ORIENTALIST*

JAMES HENRY BREasted
UNIVERSITY OF CHICAGO

Under the present arrangement of a rotating presidency, the American orientalist, at least once in his life, is vouchsafed the opportunity of unburdening his soul to his fellow orientalists at unrestricted length, in complacent emancipation from the terrors of the presidential stop-watch, which he himself at the same time is privileged to wield against his colleagues with the retaliatory rigor of the oriental lex talionis.

Following a precedent set by my distinguished predecessor, I am moved to speak today rather by the contemplation of the extraordinary situation in which students of the Orient now find themselves, than by the availability of some particular chapter or fragment of my own researches. For we are confronted today by a responsibility and an opportunity far surpassing in scope and promise anything which even our ardent American imagination of a year ago could have compassed or conceived. In a recent letter from Sir William Ramsay, in response to some suggestions which I had sent him regarding Asia Minor, he refers to the future government of Turkey in these words: 'I have always been much inclined to believe in harnessing America to this business. . . . I should like to see the administration of Turkey put into the hands of an advisory board consisting of men who know something about the country, its history, and its future possibilities. If I were asked, I could name the proper person as chairman, and he is an American . . . an American archaeologist and diplomatist combined.'

Leaving to more competent hands the problems of the well-being and happiness of the peoples living in the former Ottoman Empire, I find in Sir William Ramsay's proposal of an American archaeologist for a position of responsibility in the government of a large section of the Near East a suggestion of the vast extent

* Presidential address delivered before the American Oriental Society in Philadelphia, April 24th, 1919.
of the obligation and the boundlessness of the opportunity now confronting American orientalists who are equipped to carry on researches in these birth-lands of religion and civilization.

Our responsibility as students of man is measured chiefly by the importance of early oriental civilization in the history of mankind viewed as a whole. It has long seemed to me that the commanding position of the lands of the Near East in the career of man has been largely obscured by our failure to view them in a deep and broad perspective of world history. It is only as we look far abroad, over many other social groups, that we can properly discern the genetic position of the cultures of the Near East; and we find them unexpectedly intelligible and surprisingly illuminated by the study of analogous situations elsewhere.

Professor F. J. Teggart of the University of California has recently written a very useful and penetrating essay in which this matter is touched upon. He complains of us orientalists that the investigator has limited his observation to the lands of the Nearer East.\(^1\) I have read this statement with much satisfaction, because it accords entirely with my own experience. In endeavoring to make some of the cultural developments in the Near East intelligible to American high school boys and girls, I found admirable materials among the culture traits of the New World. Early Babylonian and Egyptian year-names and the beginnings of early oriental chronology find their best illustration and explanation in such things as the list of year-names recorded in a long series of seventy-one pictures on a buffalo hide made by Lone Dog, a Dakota Indian chief. Similarly the earliest efforts at writing in its pictographic stage may be found exemplified with wonderful clearness and interest in a North American Indian's autobiography narrated in a series of paintings on a buffalo skin which Col. Roosevelt once showed me hanging just inside his door at Sagamore Hill.\(^2\) Such analogous individual culture traits, of which there are many, and which others have observed before, led me to look into the larger aspects of the physical situation of western culture as compared with that of our Near Eastern world.

---

It is now evident that there are only two regions on the globe in which man has risen from Stone Age savagery to the possession of agriculture, metals, and writing. The independence of these two regions in making these cultural conquests has been conclusively demonstrated. They are geographically widely separated. One of them is in the New World and the other in the Old, and each of them lies along, or on both sides of, a great inter-continental bridge, one joining the two Americas, the other connecting Africa and Eurasia. It necessarily lies outside the scope of this address to discuss what geographical significance there may be in the fact that, in both the Old World and the New, the bridge between the continents formed the center around which took place the development and diffusion of the highest civilization at first attained in either hemisphere.

An examination of the culture situation of the western world as a whole in pre-Columbian times is very instructive. In making a comprehensive reconstruction of the career of man in the New World the Americanists have enjoyed enviable freedom from traditional prejudices like those of the old-school classicists, who felt it sacrilege to acknowledge the share of the Orient in the history of civilization, or those of the Egyptologists and Assyriologists, who are often more interested in proving the shores of the Nile or of the Euphrates to have been the oldest home of civilization than to establish the facts, whatever the result. To the Americanist it is evident that a culture trait of some complexity, like the cultivation of maize, when it is found continuously distributed over a wide area, has been so distributed by a process of diffusion from a common center, and that under such circumstances we cannot assume independent invention. Without any preconceptions or inherited prejudices he may then proceed to find the center of diffusion for each such cultural conquest. If he finds the lines of diffusion of the most important culture traits persistently converging on the same center, he concludes that this focus was the original home of civiliza-

*An admirable reconstruction of this kind has been put together in an exceedingly useful book by Clark Wissler, The American Indian, New York, 1917, to which the above summary is much indebted.

tion in the New World. By this process he has shown that maize has descended from a wild grass in the Maya region of Yucatan, whence it passed far across both continents from one hunting tribe to another as far as the habitat of each tribe permitted. Similarly the whole cotton complex, including the loom and upward weaving, spread from the middle region of America both northward and southward. 'The distribution of pottery was still in progress at the opening of the period of discovery' by European explorers in North America, and the inference is a fair one, according to Wissler, 'that it was distributed from the south,' for, as he remarks, 'as we know that maize came up from the south, it is reasonable to suppose that pottery came by the same road.' Similarly it was only the peoples on and around the inter-continental bridge who developed metallurgy, or who possessed the social and administrative organization to practice irrigation on a remarkably extensive scale. Many of the characteristics of the elaborate ritualism of the New World likewise spread from the middle region, especially from the Maya and Inca centers. In the central region also we find the only writing, just in course of transition from the pietographie to the phonetic stage. It spread northward into Mexico, but did not penetrate into South America, which never possessed writing.

Here then we find disclosed in the Western World a nucleus of civilization occupying the middle region of the two continents,—a nucleus which led the cultural development of the entire Western Hemisphere. The leaders in this group were chiefly three peoples: the Maya of Yucatan, the Nahua of Mexico (including especially the Aztec), and finally the Inca of Peru. As over against the other peoples of the Western World, this group as a whole was immeasurably superior; while as compared with each other, the three members of the group differed greatly. The Maya of Yucatan may have been the original path-finders leading the other two; but it is very important to note that there

2 Wissler, op. cit., pp. 49-59.
3 Ibid. p. 68.
4 Ibid. p. 67.
5 Ibid. p. 69.
6 Ibid. p. 190.
was undoubtedly much interchange of mutual influences among
the three, and that the other two in some particulars outdis-
tanced the Maya. Thus, while the Maya never advanced to the
production of copper tools, but put up all their great stone
structures with only stone tools, the Aztec culture and especially
the Inca of Peru had begun the production and use of copper or
bronze implements. Similarly the Inca culture made itself so
superior in decorative art that it became the center to which all
the contiguous cultures were inferior.

The lack of writing throughout most of the territory of the
New World has saved the Americanists from the regrettable
narrowness, limitations, and often pedantry, of the old time
philologist. To be sure, linguistic documents available in
modern copies, transcripts, and treatises, besides the original
inscriptions, have furnished the Americanists with an insur-
mountable mass of materials for philological investigation of the
New World, and there have been sharp rivalries here between
the linguist, the archaeologist, the ethnologist, and the physical
anthropologist. All these lines of investigation therefore, and
many others, have been indefatigably pursued, and an enormous
body of observations and results representing them all has been
built up by our Americanists. Neither have these results been
kept in water-tight compartments, but the whole body of evi-
dence, from whatever source or of whatever character, has been
brought to bear on the career of man in the New World.

Turning from a situation like this, embracing both the conti-
nents of the Western Hemisphere, we may apply its lessons very
instructively to the Old World. For the Old World is itself
made up of two continents, Africa and Eurasia, and as we have
already remarked, the earliest civilizations arose and spread on
both sides of the inter-continental bridge between them. That
the same processes of diffusion across and on both sides of the
bridge, which the Americanist finds in the New World, were
going on for thousands of years in the Old World, no one can
doubt. But the situation in America has thus far required little
consideration of the time element, a factor to which the Ameri-
canist is now beginning to devote some attention,²⁴ whereas in

²⁴See E. Sapir, *Time Perspective in Aboriginal American Culture*, Canada,
the work of the orientalist the time element has been perhaps the most obvious factor of all. For as far back as some six thousand years ago, that is early in the fourth millennium B. C., the peoples on the Nile and the Euphrates had reached essentially the same stage of culture attained by the Maya, Aztec, and Inca.

Grouped about the Old World inter-continental bridge from the Nile to the Euphrates, we have therefore a nucleus of cultures which after 4000 B. C. had reached about the same point of advancement as that attained in 1492 A. D. by the New World group in an analogous situation. Each group in its respective situation was the sole nucleus of civilization, and was far superior to the less advanced cultures stretching far across the great outlying continental areas. The diffusion of culture from the New World group, northward and southward across both continents, continuing as it did down into our own times, is like a laboratory experiment in human experience, set going for the benefit of us orientalists, and demonstrating to us what must have been going on around the Egypto-Babylonian group for thousands of years before the age of written documents. This conclusion is confirmed as we examine the relation of the Egypto-Babylonian group to prehistoric man round about it.

The discoveries of the last twenty-five years have revealed to us the career of prehistoric man, especially in Europe, so that its successive stages, clearly differentiated and stratigraphically observable, have been arranged in unquestionable chronological sequence through probably not less than 50,000 and perhaps nearly 150,000 years of struggle with the material world,—a struggle whose progress has left behind a long trail of ever more carefully wrought implements, at first of stone, and later of bone, horn, ivory, wood, and eventually copper. These remains not only carry us through age after age of cultural development on the part of man, but also of successive geological processes and changes in climate which have fashioned the present surface of the earth.

We see the hunters of prehistoric Europe wandering through the tropical forests, especially in the regions which are now France and Spain, but also across the land-bridges at Gibraltar and Sicily, which connected Europe and Africa until far down in the Neolithic Age. This intimate connection between southern Europe and northern Africa made culture diffusion
across the Mediterranean easy, and before the end of the Quaternary Age the entire Mediterranean was fringed with communities of paleolithic hunters. Today their weapons of flint are found encircling practically the whole Mediterranean.

This fact brings the Near East into the great current of prehistoric life. Whether the rate of advance was uniform and the successive stages therefore contemporaneous at first all around the Mediterranean is uncertain. If compared with the southern shores of the Mediterranean, Europe was undoubtedly at a serious disadvantage, as the northern mantle of ice crept southward and thousands of years of rigorous cold set in. It is now evident that the south-eastern corner of the Mediterranean eventually drew away from prehistoric Europe, and probably from prehistoric Asia also. The great Pleiocene rift in north-eastern Africa, which we call Egypt, furnished a home in every way so sheltered, so generously supplied by nature, and in climate so benign, that it enabled the savage Stone Age hunters of the Sahara, who had taken refuge there in Quaternary times, to leave Europe far behind in the advance toward civilization. As the Euphrates valley followed in this advance, it was in touch with the Nile culture, and there thus grew up the Egypto-Babylonian culture-nucleus on both sides of the inter-continental bridge connecting Africa and Eurasia.

Elsewhere, throughout the great prehistoric world of Africa and Eurasia, there was no culture higher than that of the savage or barbarous Neolithic hunting peoples, like those of the American continents on both sides of the central culture-nucleus. It is true that an enormous amount of detailed research remains to be done in the study of man's career in the eastern hemisphere, but enough has already been done to reveal the general situation. Long after the Egypto-Babylonian group at the nexus of the two continents had gained metal, writing, and highly developed government, the surrounding peoples far back into Africa and Eurasia had not yet gained these fundamental elements of civili-
zation and were still in a primitive stage of culture development. As we move out from the Egypto-Babylonian group the culture level declines and civilization fades and disappears.

The only other center of culture which might be compared in age with the Egypto-Babylonian group is China. Regarding the age of Chinese culture, however, there is wide misapprehension. The oldest contemporary annals of China written on wood and bamboo date from the second century B. C., and the shamanistic texts on bone, the oldest writing discovered in China, are dated by Laufer, as he has kindly informed me, in the second millennium B. C. The oldest dated specimens of bronze made by the Chinese belong in the latter part of the second millennium, and not one is safely datable earlier than the thirteenth century B. C. China's remarkable list of civilized contributions to the western world is very late. This is well illustrated by China's splendid gift of porcelain to the nations of the west after the development of modern sea trade with Chinese ports. The production of porcelain was an art which grew out of a knowledge not only of pottery but also of glass and glaze. The latter arose in Egypt as early as the thirty-fifth century B. C., and, spreading rather slowly to Western Asia, did not reach China until Hellenistic times, 'in the second century B. C. or earlier.'

The evidence all points to the conclusion that Chinese culture developed immensely later than that of the Egypto-Babylonian group, and there are few if any competent Sinologists who would dissent from this conclusion. While it is evident that China passed through a long development in detachment from the Western Asiatic world, nevertheless as Laufer has well stated, 'the conviction is gaining ground... that Chinese culture in its material and economic foundation, has a common root with our own.' He would place this common source somewhere in Western Asia, without venturing to mention any particular geographical region. For myself I cannot doubt where this western source is to be placed. We must find it in the Egypto-Babylonian group; for the excavations in the regions of Asia surrounding this group, in Asia Minor, Turkestan, and Elam.

(Persia); have disclosed very clearly the later and inferior character of the cultures there, and the direction of the culture drift; although the excessively early and totally ungrounded chronology set up by deMorgan and Pumpelly has obscured the real situation and misled many (see Thureau-Dangin’s chronology below, note 21).

It is therefore quite possible to indicate in very general terms the relation of the Egypto-Babylonian group to the vast undeveloped prehistoric world of savagery and barbarism which, in the fourth and fifth millenniums before Christ, extended from the Atlantic across Africa and Eurasia to the Indian and Pacific Oceans. In the midst of this far-reaching wilderness of primitive life there was a single oasis of advanced culture from which the forces of civilization gradually diffused a higher type of life among the surrounding peoples. The movement of such influences, and the detachment of the group which eventually carried agriculture and cattle-breeding into China, lie so far back in the prehistoric age, that the practice of milking and of weaving wool had not yet developed. Of such movements we shall never learn very much. On the other hand the process of diffusion continued far down into the historic age, and much of it therefore took place almost under our eyes.

Thus the excavations in Crete, especially the brilliant discoveries of Sir Arthur Evans, enable us to watch the course of cultural diffusion Europeward after civilization arose in the Egypto-Babylonian group. The drift of oriental civilization toward Europe is now clearly observable. Sir Arthur Evans has remarked: “Ancient Egypt itself can no longer be regarded as something apart from general human history.” The same statement may be made of Babylonia also, as a member of the Egypto-Babylonian group, though the civilization of Babylonia was retarded in reaching the Aegean world, because it did not lie on the Mediterranean as did Egypt, with the island outposts of south-eastern Europe just opposite.

Much of the culture drift from the Egypto-Babylonian group

---

8 B. Laufer, l. c.
Asiaward took place also in the full light of the historic age. This is far too large a subject to be discussed here, but such obvious later examples as the borrowing of writing by the Iranians and East Indians, or the eastward expansion of the art of glazing just mentioned, will occur to all. This whole question of the relation of the Egypto-Babylonian group to the surrounding culture in Asia is of fundamental importance. There is a great fringe of Asiatic peoples, often politically and always culturally dependent on the Egypto-Babylonian group, which we have hardly begun to investigate. DeMorgan in Elam on the east, Pumphelly in West Turkestan on the north, a number of investigators in Asia Minor, lamentably incomplete and out-of-date researches in Phoenicia since Renan, and a series of well-conducted excavations in Palestine,—all these endeavors have raised almost as many problems as they have solved. Enough has been done, however, to demonstrate that the ancient civilizations of the Near East which we have called the Egypto-Babylonian group (including in this term the derived and dependent contiguous cultures) occupy a unique and commanding position as the earliest center of the diffusion of civilization in the long course of human development.

From these civilizations as our base we are able to push backward up the centuries and connect with the prehistoric stages which preceded civilization and developed into it; while in the other direction we may follow down the centuries from the civilizations of the Near East to the Neolithic barbarism of Europe which was stimulated into civilized life by the cultural influences from the other shores of the Mediterranean. In this vast cultural synthesis, embracing the whole known career of man, the civilizations of the Near Orient are like the keystone of the arch, with prehistoric man on one side and civilized Europe on the other.

We have thus articulated with the career of man as a whole the great nucleus of early civilizations around the inter-continental bridge, and in so doing we discern this Egypto-Babylonian group not only as the culmination of an enormously long prehistoric development going before, but also as the stimulating force which set going and long contributed to the secondary civilization of Europe. The investigation of the various stages in
the course of the process by which the Egypto-Babylonian group influenced the great world around it is still hardly begun. Similarly the course of the development within the group itself, and the relation to each other of the two leading members of the group, Egypt and Babylonia, make up a formidable series of problems almost untouched. The process of diffusion within the Egypto-Babylonian group, although retarded by the great expanse of Arabian desert thrust northward like a separating wedge between them, must have been going on from the remotest times. It is in dealing with this very problem that the current methods of oriental science have been characteristically exhibited.

Thus we find Hommel deriving Egyptian writing from that of Babylonia, and deMorgan following Hommel’s conclusions as if they had become accepted scientific demonstrations. It seems never to have occurred to either of these investigators to examine Egyptian writing with reference to the environment in the midst of which it was being used. Egyptian writing is both a zoological and a botanical garden of fauna and flora peculiar to north-eastern Africa. It is likewise a workshop of tools and implements of exclusively Nilotic character. But having set up a superficial comparison between Babylonian and Egyptian writing, and having discovered a forced resemblance between two or three Babylonian and Egyptian signs, these scholars regard this flimsy evidence as sufficient to prove the Babylonian origin of Egyptian writing. Wherein lies the difficulty? The discernment of the truth demands a slight knowledge of the botany and zoology, and of the arts and crafts of the Nile valley; but these are things which lie quite outside of the grammar and the dictionary, or the philological apparatus with which the orientalist is frequently so exclusively armed and equipped.

The heavy burden of recovering and mastering the lost oriental languages has made us orientalists chiefly philologists and verbalists, equipped to utilize written documents, and a little perplexed and bewildered in the presence of other kinds of evidence. Our enormous philological task has led us to regard even the written documents rather as materials for building up the dictionary and grammar than as historical sources. As a fellow-sufferer from this too exclusively philological discipline, let me make it clear that I am not inviting my colleagues to this con-
fessional without being painfully aware that I must also kneel there myself! With an equipment like this we bear the responsibility of investigating a vast complex of civilizations, each of which has left behind enormous bodies of evidence not in written form, to say nothing of still surviving and little altered physical situations, the habitats environing these civilizations, all equally demanding investigation in many different and highly important respects. For example, the methods of the Americanists, which would have involved some attention to the difference between the flora and fauna of Asia and those of the Nile valley, would have spared us Hommel's unhappy theory of the Asiatic origin of Egyptian writing. Although Hommel's method was fundamentally wrong, nevertheless he was assuming with propriety the process of diffusion among the members of the Egypto-Babylonian group. To trace this diffusion successfully however will first require what has not yet been done, viz. the thorough and systematic investigation by itself of each culture of the group, employing all the available evidence, of whatever nature it may be, which is still observable in the habitat of each culture, just as the Americanists have been doing for North and South America. Let us glance for a moment at the different lines of the highly diversified evidence.

The most obvious is of course written evidence, which we have been employing to the exclusion of nearly everything else. We may therefore pass on from such evidence to that of archaeology already mentioned. The conscientious utilization of all archaeological evidence is a matter of surprisingly recent date. The classical archaeologists of the German expedition which excavated Olympia found prehistoric bronzes which they threw aside with indifference and finally left lying on a rubbish heap, where they were noticed by Sophus Müller, who rescued them and carried them to Copenhagen. There they are now preserved in the national museum. Such limited vision, which could find nothing of importance in prehistoric bronzes, has been all too prevalent in oriental research. One of the leading orientalists of Europe not so many years ago inspected a fine old Babylonian bronze statuette brought to him by an antiquity dealer, and refused to purchase it for the museum under his charge, with the remark, 'There is no inscription on it.' The evidence which it furnished, in the realm of form, technique, craftsmanship, cos-
tume, weapons, and the like, spoke a language with which he was not familiar.

How many Aegean archaeologists are at present, or in normal times would be, busily engaged in putting together the materials which will exhibit the transition from the old pre-Greek Aegean civilization, across the gap caused by the intrusion of the Greek barbarians, to the rise of Greek civilization after 800 B. C.? Have we any orientalists piecing together the archaeological evidence which undoubtedly would greatly aid in tracing the transition from the crude art of Urnina in Sumerian Lagash to the marvelous sculpture of Sargon and Naramsin at Semitic Akkad? All honor to the memory of Dr. Ward for the monumental repertoire of the lapidary art of Western Asia which he gave us. But his work is not, and probably was not intended to be, a stylistic study of the wonderful heraldic art of Babylonia, and for such studies we are still dependent upon classical archaeologists like Furtwängler and the younger Curtius, both of whom deplore the lack of such investigations by orientalists themselves.17

As a matter of history the archaeologist has not received a very hospitable reception in the ranks of orientalists. One recalls the somewhat brusque notice served on the prehistoric archaeologists by Lepsius when they presumed to invade the Nile valley and reported the presence of Stone Age man there. Or similarly the sarcastic reception accorded Puchstein, a classical archaeologist, forsooth, who, without any knowledge of Assyrian grammar, had the effrontery to invade the realm of Assyrian architecture, and the audacity to assume that he could understand architectural forms even when they arose on the shores of the Tigris! If the archaeologist is now finding himself somewhat more at home on the Nile than on the Tigris and Euphrates, that is in some measure due to the rapprochement between the classical archaeologists and the Egyptologists inevitably resulting from the disclosure of the intimate relations between the Aegean and the Nile as revealed by the excavations in Crete. Nevertheless even the preliminary special investigations in Egyptian archaeology

are still so largely lacking that there are few men who would now venture to write a handbook of the subject like any one of a dozen on Greek archaeology.

Thus on both sides of the continental bridge the necessary fundamental archaeological investigations indispensable to a final comparison of the Babylonian and Egyptian cultures are largely lacking. Ask any one of a number of simple questions in the archaeological history of Western Asia and the answer is wanting. For example, when was the potter's wheel introduced into Babylonia? If we turn to Handcock's *Mesopotamian Archaeology* we find that all the information available to the author in discussing this fundamentally important matter was a statement from the archaeologically tenuous report of the last American expedition at Bisnya. A year after Handcock's book appeared, Koldewey included some useful remarks on the subject in his popular book on Babylon, but we are still ignorant of the date when the potter's wheel was first used in Babylonia.

As we now know that the potter's wheel appeared in Egypt in the early dynasties (at the latest the Third Dynasty, 30th century B.C.), the establishment of the date of its appearance in Babylonia would furnish a chronological comparison of the highest importance. If the Babylonian date should be later than that of the Egyptian potter's wheel, it would confirm the present indication already furnished by the Babylonian lapidary's adoption of the Egyptian bow-drill, viz. that the machine with revolving vertical shaft, including the crank-shaft drill, the bow-drill, and the potter's wheel, were of Egyptian origin and penetrated thence into Asia.

We are similarly ignorant of the date of the appearance of the composite bow in Asia, a weapon which has a record of shooting nearly fifteen hundred feet, and which must have revolution-

---

*See S. T. Pope, 'Yahi Archery' (in *University of Calif. Publ. in American Archaeology*, 15, No. 3, p. 125) who cites a record of 459 yards made in 1914 "with a very old Turkish composite bow," also *Badminton Library*, volume on Archery by C. J. Longman, who gives 482 yards as an authenticated record for the long-distance capacity of a composite bow in the hands of a Turk. This exceeds the maximum record of the simple long bow (360 yards) by nearly 35%, and its *average* record by probably over 100%.
ized ancient warfare like the introduction of the modern high-power rifle. It appears in Egypt in the sixteenth century B. C., and eventually passed clear across Asia into Alaska and down the Pacific coast of America to southern California, where it disappears.

The significance of the dates when a given cultural attainment appears in a succession of contiguous regions is strikingly brought out by a series of sequence maps each showing the distribution of a culture trait at a particular date. Thus in a map showing by means of shading the distribution of the art of glaze, only Egypt would be shaded in the thirty-fifth century B. C.; a map of the twenty-fifth century might possibly extend the shading to Crete; the fifteenth century would show the shading in Egypt, Crete, Syria, and perhaps Assyria; the eighth century would show it in Egypt, Syria, Mesopotamia, and probably Babylonia; the fifth century would add Persia, and the second century even China. Until the archaeological investigation of the different centers in the Egypto-Babylonian group has gone far enough to enable us to build up sequence maps of this kind showing the diffusion of the fundamentals of civilization, we shall not be able to demonstrate the direction of diffusion as between Babylonia and Egypt, nor to determine which of these two great cultures was the original center.

Such a comparison will require also the recovery of the prehistoric culture of Babylonia. The discovery of the prehistoric cemeteries of Egypt twenty-five years ago, and the subsequent study of the archaeological evidence which they contain, have disclosed to us a culture development reaching back a thousand years earlier than the oldest remains yet found in Babylonia, which it is now evident belong in the thirty-first or thirty-second centuries B. C. We still lack the prehistoric development of Babylonian culture, but the primitive character of Sumerian

---

It is evident that the forms of glass found by Koldewey at Babylon are Egyptian and must have been at first imported. Exactly when the manufacture of glazed ware and glass began in Babylonia is still unsettled.

This is on the basis of the reconstructed Babylonian chronology of which the latest and most carefully documented statement has been furnished by Thureau-Dangin, in *La chronologie des dynasties de Sumer et d'Accad*, Paris, Leroux, 1918.
art in the thirtieth century B. C., as disclosed for example in the
reliefs of Urnina, which are not as good as those of the Maya of
Yucatan at a practically Stone Age stage of culture, shows that
the beginnings of the civilized stage in Babylonia are not likely
to have gone back very far in the fourth millennium B. C.22

Besides archaeological researches there are other lines of
investigation quite indispensable to a solution of our great prob-
lems, and a very important place among these belongs to physical
anthropology. Much discredit has of late been thrown upon
statistics like those of brachycephaly and dolichocephaly, and I
have heard and read remarks calculated to discredit all work in
physical anthropology. But such research is not to be limited
to craniometry, and important additional criteria are now being
developed by physical anthropologists. Moreover it should not
be forgotten that even the problems of culture may be most
unexpectedly illuminated by a series of human bodies, especially
if they are well preserved, as in the Nile valley. The earliest
prehistoric graves of Egypt contain bodies which display the
practice of circumcision, thus dating this custom in Egypt as
far back as the Fifth Millennium before Christ, and probably
establishing that country as the original home of the practice.23
In the alimentary tracts of practically all of these earliest bodies
of prehistoric Egypt investigation has demonstrated the presence
of barley, while about ten per cent contain also millet.24 These
are the earliest known examples of domesticated grains, and the

22 At this point the cultures of the Nile and of the Euphrates display
plentiful archaeological evidences of diffusion from one to the other.
Besides the hackneyed examples of the pear-shaped mace head and the
cylinder seal, there is the use of animal and human figures as decorative
motives in balanced, responsive, or antithetic arrangement. The earliest
Egyptian examples are far older than those of Babylonia; but as Curtius has
remarked (‘Studien zur Geschichte der alterorientalischen Kunst,’ Sitzungs-
ber. der kgl. Bayer. Akad. 1912, 7te Abhandlung), the Babylonian
lapidaries, in their marvelous decorative art, have made much more whole-
hearted, powerful, vigorous, and effective use of this heraldic decorative
style than have the Egyptians.

24 Netolitsky, ‘Neue Funde prahistorischer Nahrungs- und Hellmittel,’

ion du soixante-quinzième anniversaire de sa fondation, pp. 225 ff.; Hrozny,
Getreide, p. 181.
point I wish to make here is that these significant discoveries in human culture were made on or in human bodies. Similarly such bodies offer our earliest materials for the study of disease among civilized peoples, the rise of the practice of surgery and dentistry, etc. Yet the ancient human bodies discovered by the last American expedition in Babylonia were thrown out on the rubbish heaps, as unworthy of preservation.

We have just referred to the domestication of grains, a matter which suggests the importance of botany and the whole range of vegetable life in the study of any ancient people. Fewer areas of the natural world have been more completely ignored by oriental research. Schweinfurth deplores the lack of interest in such studies among students of the ancient world. Hrozny calls attention to an effort by one of his colleagues to identify an ancient Assyro-Babylonian sign for grain as a designation for maize, a cereal which did not reach the old world, as most of our children find out in kindergarten, until after the discovery of America! Koernicke, the great specialist in cereals, urged upon the learned societies of Europe the importance of botanical investigation in the ancient lands of the Near East, and for many years endeavored to secure their support for a botanical expedition there, but without success. For lack of such support it was not until 1906 that, under instructions from Schweinfurth and Koernicke, the wild ancestor of domestic wheat was found in Palestine by Aaronsohn. This discovery demonstrates at once that the domestication of the wild grasses from which our

---

cereals are descended took place in the region of the inter-continental bridge, and was the work of the peoples of the Egypto-Babylonian group. For the wild wheat or emmer (Triticum dicoccum dicoccoides, or better hermonis, Cook), is always found in company with wild barley (Hordeum spontaneum), while wild rye (Secale montanum) and wild oats (Avena strigosa) are found in the same region, the last in Egypt. There can be no doubt that the occurrence of all these wild ancestors of our leading cereals in this region indicates where they were domesticated. The settlement of this question is another fatal blow to the theory of western origins set forth in S. Reinach’s very able essay Le Mirage Oriental.

Whether the rise of agriculture took place in Babylonia or Egypt is still an unsettled question. Hrozný has made the interesting observation that the Babylonian word for emmer, or split wheat, the earliest form of cultivated wheat, viz. ṣubṭutu, is the same as its Egyptian name, bodedi (boṭet). Hrozný concludes at once that the Egyptians borrowed it from Babylonia. But the word is as old in Egyptian documents as in those of Babylonia, while the thing it designates can be traced back in Egypt to a point a thousand years earlier than as yet in Babylonia. The evidence thus far available therefore is more favorable to a diffusion from the Nile to the Euphrates than the reverse. It can be demonstrated also that the Egyptians devised the plow by an adaptation of the hoe, showing that the plow grew up in the course of the evolution of the Egyptian wheat and barley complex as a Nilotic product.

The consideration of the plow, involving a draught animal, raises the whole question of animal life and its far-reaching importance for the investigation of the ancient world. Yet what have we orientalists accomplished in the utilization of the vast

---

**Although wild emmer has not yet been found in north-eastern Africa, it should be noted that botanical exploration there is still far from complete, and the nummulitic limestone crevices where Aaronsohn commonly found his wild emmer growing abounded in the limestone river terraces of the prehistoric Nile.

*See demonstration in the author’s William Ellery Hale Lectures, soon to be published in the Scientific Monthly.
body of evidence available in the fauna of the monuments? The only comprehensive treatises available are those of specialists in animal husbandry, general zoologists, and palaeontologists. These students of the natural world, however great their ability, have not commanded the monumental material which would enable them to reach final results.\textsuperscript{9} The investigations of Duerst, based on insufficient materials, and much affected by the now discredited older chronology of Western Asia, especially the excessive dates computed by deMorgan, have led him to find the origin of the leading domestic animals in Asia. Later investigations by the very able Frenchmen, Lortet and Gaillard, covering a larger body of ancient remains than have ever before been at the disposal of any scientist, have shown that Duerst's alleged demonstration of an Asiatic origin of the domestic cattle of Egypt is without foundation. Hilzheimer has recently identified the wild ancestor of the long-horned cattle of Egypt (\textit{Bos africanus}) on monuments from more recent excavations\textsuperscript{10} not known to Duerst. In confirmation of Hilzheimer came news of the fact that a portion of the actual skull of the wild ancestor, the urus (\textit{Bos primigenius}) of pleistocene age, had been found in Egypt. As Lortet concludes, therefore, there is no occasion to seek the wild ancestors of the earliest domestic animals of ancient Egypt in Asia. They lived in Africa and were domesticated in the lower Nile valley at an enormously remote date. They are shown already domesticated on monuments as old as the middle of the Fourth Millennium B.C.

This is far too large a subject to be discussed, as I am obliged to do it here, in a paragraph, and I hope to return to it elsewhere with sufficient space to employ all the available monumental material, which is exceedingly interesting and significant. The discovery of the skull of the urus just mentioned suggests the importance of geology in our researches. The exploration of

\textsuperscript{10} Hilzheimer, in Borchardt, \textit{Das Grabdenkmal des Koenigs Sa'-hu-Re'}, vol. 2, Text, pp. 173-175.
the pleistocene river terraces of Egypt has hardly begun, and we
know almost nothing of what they may contain of animal and
human remains. But a beginning has been made, and the
researches of Blanckenhorn on the geology of the Nile rift have
furnished a sound basis for further investigation.\(^{25}\) On the
other hand the inaccessibility and insecurity of the Euphrates
and Tigris regions hitherto have so retarded such investigation
in these two river valleys that their detailed geology is quite
unknown. Not only the buried evidence of the Tigris and
Euphrates river terraces, but even the surface evidence, still
remains absolutely untouched.\(^{26}\) Along these terraces, either on
or under the surface, must be found the bodies and the works of
men, and the bones of animals, which will enable us to recover
the lost prehistoric chapters of the human career in Western
Asia. It is important to notice that the prehistoric burials
which have revealed the pre-dynastic culture of the fourth and
fifth millenniums in the Nile valley were not found in the allu-
vium, but alongside it in the river terraces. Who knows what
these terraces may yet yield along the two rivers?\(^{27}\)

It should be remembered also that pottery and other evidences
of human handicrafts have been found by borings in the lower
levels of the Egyptian alluvium as deep as 35, 71, and 87 feet.\(^{28}\)
These remains must date from the Glacial Age (of Europe),
thousands of years before the earliest prehistoric cemeteries of
Egypt. The alluvium of Babylonia, like that of Egypt, being
the latest geological creation of the river, is intimately involved
in the career of the prehistoric men who dwelt upon it, and it
is highly important to determine the age of the venerable Plain
of Shinar, as the Hebrews called earliest Babylonia. Based on
the evidence that Eridu was a sea-port some four thousand years
ago, though it is now perhaps a hundred and twenty-five miles
from the Persian Gulf, one may calculate that about 7000 B. C.

---

\(^{25}\) A convenient summary of his volume on the subject will be found in
an essay by Blanckenhorn, 'Die Geschichte des Nil-Stroms in der Tertär-
und Quartär-Perioden,' etc., *Zeitschr. d. Gesell. f. Erdkunde*, 1902, pp. 694-722,
753-762.

\(^{26}\) Hornerr, 'An Account of Some Recent Researches Near Cairo, Phil.
the Babylonian plain was just beginning to form, and the site of later Babylon did not yet exist. I have been using this computation in university lectures for several years past as an obvious fact and the same observation has now been published by Petrie. On the other hand Sir William Wylcocks has recently called attention to the fact that Eridu, though long an inland river town, might have been a sea-port on the river, like Bosra, and the fact that it was a port four thousand years ago does not show that it was on the Persian Gulf at that time. In response to my query regarding the distribution of the alluvium which had come down around Eridu in the last four thousand years, Sir William has very kindly written me explaining that in his judgment the delta had expanded sidewise [meaning, I take it, as one opens a lady's fan] and not by advance of the shore-line parallel with itself. This would complicate such calculations as the one just offered. It is evident that the final resolution of this important problem will require the collection and critical scrutiny of all the documentary evidence available, combined with an exhaustive examination of the region by a specialist in recent and surface geology, who should also be familiar with the valuable observations which the long experience of Sir William Wylcocks with the rivers of the Orient has so thoroughly equipped him to make.

The hydrography of the Near East is also a problem of the greatest importance in our researches. There seems to be an impression that any country in a region of rainy winter and dry summer must necessarily resort to irrigation,—a supposition of course disproved by northern Mediterranean countries like Greece, where grain has always been cultivated and brought to harvest without irrigation. An eminent orientalist refers to the 'heavy rainfall' of Babylonia, whereas it was the fact of a rainfall of less than three inches which inexorably forced the early Sumerians to resort to irrigation. The necessity of controlling the floods for the purposes of agriculture thus became the most influential factor in their material life, and of course profoundly

** Sir Wm. Wylcocks, From the Garden of Eden to the Crossing of Jordan, French Institute, Cairo, 1918.
modified their traditions, their religion, and their whole conception of life.  

As we look out over the eastern hemisphere, with its great central nucleus of Egypto-Babylonian culture on each side of the inter-continental bridge, and realize that throughout these birth-lands of civilization both the life of man, and the nature and characteristics of his habitat always conditioning that life, are now opened to unrestricted investigation by the collapse of the Ottoman Empire, it is evident that we need the assistance of men thoroughly trained in archaeology, physical anthropology, botany, paleontology, geology, meteorology, and anthropo-geography. These men cannot of course all be orientalists, nor do they need to be so. But one or more such men should at different times accompany every American expedition which goes into the field. There is little doubt that the universities would be willing to contribute the services of natural scientists, who would gladly cooperate, and, as expedition members under no expense, would give us their needed aid from season to season. Only in this way shall we accomplish in the Old World what the Americanists are so successfully doing for the New.

Finally may I offer a few further constructive suggestions? The departments of oriental studies which the American universities are now maintaining are built up, as we all know, on the model of a traditional department of Greek or Latin organized to teach languages. The futility of such an arrangement is evident when it is recognized that we are engaged not only in teaching oriental languages, but also in recovering a great group of lost civilizations. It is obvious that the orientalist who is a university teacher is as unable to meet the requirements of his science single-handed as the astronomer would be to study the skies without his observatory or his staff of assistants. He cannot do his work without a properly equipped building, which should be a veritable laboratory of systematic oriental research, containing all the available evidence of every kind and character, whether in originals or reproductions, in photographs, hand copies, drawings, surveys, maps, plans, note-books, and journals.

—See Ellsworth Huntington’s valuable contributions to this subject in ‘The Pulse of Asia’ and various monographs.
filed in systematically arranged archives. This equipment is as necessary to a proper study of the career of man as an astronomical observatory with its files of observations, computations, and negatives to an investigation of the career of the universe. It is evident that, wherever possible, not only the methods but especially the equipment of natural science should be applied to our study of man in the Orient, because not only the vast body of documents which he has himself left behind, but also all data and observations revealing the conditions of his life, must be systematically gathered, filed, and housed together, as are the data of the astronomer.

As a whole such an institution might be known as the Oriental Institute. In cooperation with the director of the institute the members of the oriental department should all have their individual workshops in the building, like the staff of an observatory, and liberal provision should be made for clerical help in accessioning, filing, recording, copying, and editing for publication. A modern photographic equipment with dark-rooms and apparatus for projection and copying should form a part of the whole plant. Combined with this should be a draughting room with at least one skilled draughtsman for preparing maps, plans, diagrams, and fac-similes. Young men and women holding departmental fellowships might make a part of this personnel, but stipends for young assistants already in possession of the doctorate should also be made available. Through the generosity of Mr. John D. Rockefeller, Jr. and the sympathetic cooperation of President Harry Pratt Judson, the Board of Trustees of the University of Chicago have just founded an Oriental Institute which will endeavor to carry out a program for the collection, organization and study of evidence such as that just suggested. The Institute will be housed in the Haskell Oriental Museum, which will thus become a kind of historical laboratory, with ample room for the installation of the equipment and arrangements above enumerated. Besides the necessary clerical help, its staff will be made up of the members of the Department of Oriental Languages of the University of Chicago.*

*It was not yet possible to announce Mr. Rockefeller's gift and the organization of the new Oriental Institute at the time when this address was delivered, and it here forms a later insertion. A fuller announcement will be found in the American Journal of Semitic Languages, July, 1919.
The Oriental Institute should maintain close relations with the scientific departments of the university, and should include in its records and its files data furnishing full information along the lines of natural science already discussed in this address. At the same time the small group of universities capable of maintaining these Oriental Institutes should cooperate, and each institute should make every effort to supplement the work of the others and avoid unnecessary duplication, just as we find the various astronomical observatories of the country are doing.

The astronomer is often required to visit distant regions to make his observations. This is constantly true of the orientalist. The budget of the institute should therefore make liberal provision for traveling expenses for an annual visit by the director or one of his assistants to the lands of the Near East. The essential additions to the archives of the institute which would result are so obviously necessary that they furnish every motive for granting the orientalist sufficient freedom from a teaching programme to enable him to make periodic visits to the East.

The presence of these orientalists in the regions where the great problems of future humanistic research are to be solved might be of essential value to a comprehensive organization, effected for systematized investigation in the lands of the Near East, having a fully developed staff and a permanent home there. For it is evident that to do this work in statesmanlike recognition of all the requirements, to organize the attack along all the lines of investigation demanded by the situation, it will be necessary to establish a permanent American Institute in the Near East with two branches working in close cooperation: one in Asia and the other in the Nile valley.

The Asiatic headquarters should carry on a comprehensive campaign of investigation, excavating wherever necessary in Babylonia and Assyria, but also in the contiguous regions of the dependent and derived cultures. Our responsibility for research in Palestine will be met by the new American School of Oriental Research in Jerusalem. Syria furthermore is a region dotted with a surprisingly large number of buried cities, which have been almost completely neglected, although they are likely to furnish decisive bodies of evidence in tracing the diffusion of culture from Babylonia and Egypt to Asia Minor. Simi-
larly Asia Minor itself should be a prime object of attack, not only in clearing up the problem of the Hittites, but also as a channel of connection by which early oriental civilization passed into Europe. Indeed the correlation of the whole ancient Near East with the development of early Europe should be one of the leading tasks of the enterprise.

While recognizing, as I have done, the fundamental importance of all researches in natural science, anthropology, archaeology, etc., which can in any way throw light on the course of human development, it would at the same time be an unjust distortion of the situation not to include also in the work of the suggested American Institute the vast mass of written evidence. There is crying necessity for a systematically organized effort to save all the inscribed monuments and written documents from destruction, and to publish them in a final and permanent corpus. A carefully developed subdivision of the American Institute should be organized especially for this work and generously supported.

Space and time will not permit even a sketch of the organization of the suggested American Institute in the Near East, but I believe that the project can be so draughted as to command the respect and support of the administrators of our great financial foundations. As we have seen, it is only in the Near East that the lacking stages in our knowledge of the human career, the stages which carried man out of savagery and far along into the age of civilization, can be recovered and restored to their proper place in a great synthesis of the developing universe which the progress of scientific research is now making it possible to build up.

Would not our astronomers all agree that it is as important to trace the path along which our father Man has struggled up from savagery to civilization as to determine the orbit of any celestial body? Would not our paleontologists acquiesce in the statement that an endeavor to reconstruct and recover the lost chapters of man's story is as worthy of support as the effort to recover every stage in the development of a creature little larger than a rabbit until he expands to the proportions of a horse? It is a pleasure to record that when I submitted this question to Dr. R. S. Woodward, President of the Carnegie Institution of Wash-
ington, he cordially assented, but added that he regarded the suggested investigation of man as the *more important.*

In seeking support for oriental research, therefore, the worth and dignity of our great task should move us to claim all that is conceded to the natural sciences. Are we not engaged upon later phases of the same vast process of development which they are investigating? Taine, the greatest of the French historians, has remarked in one of his published letters, 'I love history because it shows me the birth and progress of justice; and I find it all the more beautiful in that I see in it the ultimate development of nature.' Our endeavors to recover the lost stages in the career of man therefore follow in unbroken sequence the researches of natural science.

To us, who are the youngest children of time, it must always be not only a matter of vital human interest, but likewise a tribute of filial piety, to raise the misty curtain of the years and to peer behind into the far-off ages, whence, in the course of this development, our European ancestors first received their precious legacy of civilization; and in this crusade of modern scientific endeavor in the Near East we know what the first crusaders could not yet discern, that we are returning to ancestral shores.

*Since the conversation mentioned above, Dr. Woodward has kindly written me, reiterating his reply to my question, and discussing the whole question of humanistic research with great cogency and penetration.*
THE NEED OF AN AMERICAN SCHOOL OF LIVING ORIENTAL LANGUAGES

WILLIAM PHILLIPS
ASSISTANT SECRETARY OF STATE

Mr. President and Members of the American Oriental Society:

I regret very keenly that owing to circumstances beyond my control, I cannot have the pleasure of addressing you in person and expressing the deep interest of the Department of State in the proposal to establish a school for Living Oriental Languages.

The war has taught us, among many things, that our whole conception of the world must undergo a radical change. No longer can forty odd separate nations lead their separate lives, cherish their individual ambitions, regardless of consequences, and forcibly disagree whenever they feel in a petulant state of mind. Modern warfare is too terrible a sacrifice, and the principle of the League of Nations is being hailed as the guiding influence which ultimately will bind all the nations of the world into strong and virile friendship. The intention of the framers of the League is to establish a machine which will have as its object the harmonizing of the divergent interests of nations, the recommending of a practical remedy for disputes, and, in a hundred ways, the drawing of the nations of the earth into a more sympathetic relationship. Taking for granted that the principle of the League of Nations will be adopted, it becomes the duty of Americans to prepare themselves for the responsibilities that America must assume in world affairs.

Our educational institutions have comforted themselves that they were performing their whole duty by encouraging the study of modern European languages on the theory, I suppose, that the life of this country is identified principally with that of Europe and Latin America. If they would stop to think that less than half the peoples of the earth speak modern European languages and that our nearest neighbors on the west are the great countries of Japan and China, with populations approximately of four hundred millions, they would realize that with-
out the study of Oriental languages, they are not performing their full duties to the coming generation of American students. Why are we so blind to the fact that our relations with Japan and China must necessarily grow closer and more intimate and that without a knowledge of the Japanese and Chinese languages we cannot do our part in cementing these relations? A leading Japanese said recently at a semi-official banquet in Tokyo: ‘We understand Americans but America does not understand us. We have thousands of young men who have been educated in American schools and colleges, while you Americans have scarcely a half-dozen men who know enough of the Japanese language to understand Japanese thought at first hand.’ America has capital and skilled talent, but she has comparatively few men who can put her in real and intelligent contact with every day life of the Far East.

Let us discuss for a moment the practical benefits to the Government that would follow the establishment in the United States of a school or schools for Oriental languages. Because there are no institutions in this country that teach Japanese, Chinese, Turkish or Arabic languages, Congress has made appropriation for the establishment in Peking, Tokyo and Constantinople of what might be called ‘schools’ attached to our Diplomatic Missions in these Capitals, and young men who have passed a general examination on other subjects in Washington, are sent there to learn the languages of the country and ultimately to enter the Consular Service. It is not a very alluring prospect. The majority of students who apply for positions of ‘Student Interpreter,’ as we call them, have no previous knowledge of the East and little idea of the difficulties of acquiring an Oriental language. Naturally some are tempted by a system which allows them to live the attractive life of a student in the East at Government expense. Not unnaturally after a year or two the charm may wear off and the young man who has been provided for by a well-meaning Government, may decide that he is better fitted for other lines of work. American business houses with connections in the East are near at hand with dazzling salaries and the Government, therefore, is always liable to lose many of its young students before they have given back in service the Government funds which have been expended on their education.
Furthermore there are very few native teachers in the Orient who know enough of the English language to explain to beginners the fine points of Oriental languages and much time necessarily is lost to the student because of his difficulty in understanding his teacher. And so we in the Department have come to believe that a preliminary study of Oriental languages at home would be a far more economical method of training our officers than the present system, which allows of no return to the Government until after a minimum of two years of training in Oriental countries.

The reasons which make it necessary for Government agents to know the languages of the Orient apply equally to persons who are engaged in cultivating the extension of commerce between the United States and the countries of the Orient. A prosperous trade between two countries in itself cements the relations of those countries. Naturally, therefore, this Government is deeply interested in the extension of trans-Pacific commerce and is concerned when development of American enterprise is conducted in an unintelligent manner and in a way which does not command the sympathetic respect of the people of the Oriental countries. The lack of Americans who know Oriental languages is not merely a simple and negative handicap to American business and to the permanency of all kinds of American influence in those countries; rather it doubles the effectiveness of our great competitors by making it easier and more natural for Oriental countries to deal with them than with us.

In conclusion let me emphasize that the State Department is deeply interested in encouraging the study of Oriental languages in this country, believing that our relations with Oriental countries will be vastly benefited thereby and that many international problems which now seem difficult of adjustment will no longer be ‘problems’ when discussed in the light of mutual understanding. The Department would welcome the establishment of such a school as is now contemplated and would send to it embryo diplomatic and consular officers who are at present forced to undergo their schooling in Eastern Capitals. Such an institution would not only be of practical use to the Government but would serve as a powerful stimulus to the youth of the country in turning their thoughts to the great unknown East.
It would aid greatly in bringing about a closer understanding between America and the Orient and a deeper interest in the welfare of Asiatic peoples. It would develop a desire to exchange ideas and thought across the Pacific and this interchange would assure for all future times a spirit of firm friendship based on mutual respect and sympathy. In this way can America accomplish her ideals.
AN ACCOUNT OF SCHOOLS FOR LIVING ORIENTAL LANGUAGES ESTABLISHED IN EUROPE

WILLIAM H. WORRELL.

KENNEBDY SCHOOL OF MISSIONS, HARTFORD, CONN.

The materials for an account of schools of living Oriental languages in Europe are not abundant, and not easily disengaged from others relating to similar movements and undertakings, such as the pursuit of Orientalistic studies in the spirit of philology or exegesis, with emphasis upon the classical languages, or the rigidly classical preparation of men for the work of printing Oriental liturgies and carrying them to the East with missionary enterprise; or the efforts of individuals who followed similar objects, with more or less interest in the spoken idioms, but without producing schools. It is not always possible to learn from the records of early efforts, or of the early stages of existing institutions, whether they might properly be called schools of living Oriental languages. To earn that name a school must, I take it, teach languages actually in use in the Orient, and teach them so that they may be of use. In some of the Oriental departments the classical idiom shades off by many stages into the vernacular, and all have to be studied, as with Arabic in all Arabic-speaking lands. In other departments there

\footnote{1}{For a number of years there has been a noticeable tendency in America toward closing the gap between 'Oriental' and European 'Modern' languages, and toward more practical methods of instruction in all languages.}

\footnote{2}{In the Middle Ages Hebrew and Arabic were known to individual Christian scholars who doubtless pursued them in this spirit, though often by very modern methods.}

\footnote{3}{The Sacra Congregatio de Propaganda Fide, founded 1622 by Pope Gregory XV, and the Collegium Urbanum de Propaganda Fide, founded 1627 by Pope Urban VIII, are devoted to the education of missionaries and the printing of religious books in Oriental languages.}

\footnote{4}{Raymond Lull, a Catalan missionary of the xilith century, proposed that Arabic chairs be established for the training of missionaries, but without immediate effect.}

\footnote{5}{The term 'Oriental' with its derivatives has been extended to cover all lands and languages but those of Europe and America.}
is little connection between the classical and the vernacular, or none at all, and little or no popular knowledge of the classical, as with Ge’ez and Amharic in Abyssinia, and Coptic and Arabic in Egypt. These languages are dead and belong only secondarily to such a school. Again, if it is the vernacular that is taught, it must be so taught that the successful pupil can use it as well as understand it, know it as well as know about it. Lastly, there are schools devoted to the study of the Orient, or to the training of Orientals in Europe, in which language study is subordinate or non-existent, and which therefore are apart from the present subject.⁸

Humanism, which in its later stages carried the attention of Europe from classical studies over into Semitic, aroused great interest in the past of these Oriental lands and their peoples, and gave birth to institutions which down to the present are worthy custodians of that rather antiquarian tradition.⁷ But the forces which produced centres of study of the modern Orient were others: mainly government and commerce, not without the influence, however, of the missions motif, already mentioned. How far back in the past these first made themselves felt is difficult to say.⁹ In the case of France one is struck with the romantic tone which pervades all her dealings, governmental or otherwise, with the nearer East, her peculiar rapport and inner harmony with it, her intense interest, making her from the first sensitive to the charm of the spoken word, the living population and its lore. How different, on the other hand, has been the attitude of that great custodian Great Britain, and the effect of her contact with the East. A few very great scholars are not lacking.

---

⁸As, e. g., the Ecole pratique coloniale of Havre, or the Deutsche Kolonialschule of Witzenhausen.
⁹The Arabic school of Leyden, and after it that of Oxford, were founded in the xvith century. There seems to have been a school at Rome even before these, in connection with the Medicean Press.
⁹In the xviiith century French jeunes des langues were sent by the government to the near East. How long this had been going on is seen from Langlée’s (q. v. infra) statement that the dialogues which he added to Savary’s grammar had been used for a long time by dragmans in the Levant. Their fixed form and wide distribution is shown by the further mention of two manuscript copies which Langlée had seen under very different circumstances.
There are queer fraternities among folk who should know better. But no serious and intelligent interest has been displayed, to say nothing of intelligent romanticism, by that government which so well rules its millions of highly interesting Oriental people. The Foreign Office, except in the recent occupation of Palestine, has avoided if not distrusted the orientalist. Germany’s interest in the modern Orient, while surely not unromantic, has been, unlike either of the others, a conscious striving for practical political ends through the application of scientific knowledge to technical training. With Russia and Austria we have Oriental interests springing from internal conditions of semi-Oriental states, and their immediate contact with Orientals in neighboring lands.

The first practical school of living Oriental languages established in Europe seems to have been the Regio Instituto Orientale, of Naples, begun in 1727 and renewed in 1888. At present it offers Arabic, Turkish, Persian, Modern Greek, Albanian, Amharic, Chinese, Japanese, Russian, English, and lectures on Italy’s relations with the East.

The second to be established is the Kaiserliche und Königliche Konsularakademie, of Vienna, which dates from 1754. Its purpose is expressly the training of consuls for Oriental and Occidental service. It offers Arabic, Turkish, Persian, Chinese, Russian, French, English, Italian, German, and extensive military and juridical realia. In 1914 it had fifty-three students.

The third of such schools is the famous École des langues orientales vivantes, of Paris. It was established by government decree on March thirtyeth, 1795, for the training of consular students and interpreters, other government functionaries, and commercial agents, with duties in the Orient. A beginning was

---

*The advance through the Holy Land and the taking of Jerusalem were carried out under the direction of scholars advisory to the British Government.

*Minerva, 1911 and 1914, has been the chief source for these data. In the former will be found full accounts of the history and organization of the institutions.

*I. e.: in 1913-14, before the outbreak of the War.

*A monument to the interest then shown in Arabic dialects is the Kurzgefasste Grammatik der Vulgärarabischen Sprache, 1869, by A. Hassan, then professor of colloquial Arabic.
made with Arabic,\textsuperscript{12} Persian,\textsuperscript{14} Turkish,\textsuperscript{13} and Malay;\textsuperscript{15} and in 1832 extensive additions were permitted, leading to the present curriculum including, besides the languages mentioned, the Arabic dialects, Modern Greek, Armenian, Hova, Sudanese, Hindustani, Tamil, Chinese, Japanese, Siamese, Annamite, Javanese, Rumanian, Russian, and realia. A reformation and return to first principles was found necessary in 1869, after the work had become rather too philological. Frenchmen of twenty-four years or more who are bachelors of letters or of science are offered admission into the academic section; others, who have not enjoyed university training, are permitted to study in the commercial section. Répétiteurs, natives of the respective countries, drill students in sounds, conversation, and reading aloud. The lectures are all public et gratis, and are so arranged as to occur usually three times a week, in two semesters; and attendance by diploma students is strictly required. The director is appointed from the faculty every five years by the Minister of Public Instruction. In 1914 the attendance was fifty students and seventy-five auditors.\textsuperscript{16}

The fourth institution of which I find any record is the Lazarev Ecclesiastical-Academic Institute for Oriental Languages, of Moscow, which was founded in 1815, and which teaches

\textsuperscript{12} Given by de Sacy.
\textsuperscript{13} Given by Dom Raphaël.
\textsuperscript{14} Given by Langlès.
\textsuperscript{15} The early days of the École des langues orientales vivantes have left important literary remains. In 1784 D. Savary presented to the French government for publication a work entitled Grammatiae Linguae Arabicae Vulgari necnon Literaria. It appeared posthumously after many delays, in the year 1813, under the editorship of Langlès, who has been mentioned as Professor of Malay and Turkish. Its importance lies in the fact that it was devoted chiefly to spoken Arabic, that it foreshadowed the modern direct and conversational methods, abounding in materials such as the dialogues above mentioned (n. 8), that it taught a careful pronunciation by means of transliteration, and that it exhibited a thoroughly modern interest in folklore. Some progress over the mixed language of the current dragoon's drill-book (vid. n. 8) was attained through the revision of the latter for Langlès by the Copt Michail Sabbag. In 1810 appeared Sylvastre de Sacy's Grammaire arabe à l'usage des élèves de l'École spéciale des langues Orientales vivantes. In its second edition (1831) it became the corner-stone of a great school of Arabic grammar.
the languages of the adjacent Muslim peoples, with law, French and Russian.\textsuperscript{17}

The fifth institution to be founded was the \textit{Kaiserlich-Königliche Öffentliche Lehranstalt für orientalische Sprachen}, of Vienna, dating from 1851. It was reorganized in 1873, and now devotes itself to the practical study of Arabic, Persian, Turkish, Serbian, Russian, Greek and Albanian. In 1914 there was an attendance, including ladies, of 216 students.

With the sixth recorded institution Germany appears in 1887. This is the \textit{Seminar für orientalische Sprachen}, in Berlin, best known of them all to American scholars. It is remarkable both for the extent of its curriculum and for the large number of its students and auditors. In 1914 it taught classical Arabic, an introduction to Arabic dialects, Syrian colloquial Arabic, Egyptian colloquial Arabic, Moroccan colloquial Arabic, Persian, Turkish, Hindustani, Gujerati, Chinese, Japanese, Suahele, Ewe, Jaunde, Ethiopic, Amharic, Russian, Greek, Rumanian, English, French, and Spanish, besides Islam and \textit{realia} of Asiatic and African countries. There were in 1914, including ladies and visitors, 279 students.\textsuperscript{18}

The \textit{Königlich-ungarische orientalische Handelsakademie}, of Budapest, founded in 1891 (or in 1883\textsuperscript{1}), possesses a phonetic laboratory, which permits the inference that it offers instruction in living Oriental languages. It offers a two years’ course to forty students only.

Eighth on the list is the \textit{Hamburgisches Kolonialinstitut}, founded in 1908,\textsuperscript{19} rightly regarded as a model institution. Behind it were the motifs of colonial propaganda within Ger-

\textsuperscript{17} As we learn from the title page of the \textit{Traité de la langue Arabe vulgaire}, by the \textit{Sheich Mouhammad Ayyad al-Tantavy} (1848), the latter was at that time \textquoteleft Professeur de langue Arabe à l’Institut des langues Orientales de St. Pétersbourg,\textquoteright and that he was employed by the Imperial University. It seems probable therefore that the \textquoteleft Institut\textquoteright was not a separate institution but a part of the University. There is no record of this in \textit{Minarets}. The \textquoteleft Oriental Faculty\textquoteright now offers, besides the dead Oriental languages, Georgian, Armenian, Turko-tatar, Persian, Arabic, Chinese, Mongol, Japanese, and Korean, besides Oriental History.

\textsuperscript{18} The \textit{Mitteilungen} and \textit{Lehrbücher} issued by the \textit{Seminar} contain important scientific contributions.

\textsuperscript{19} An account of the institution by the present writer will be found in \textit{The Moslem World}, vol. 4, 1914, pp. 303 ff.
many and, quite naturally, German propaganda abroad. It opened its doors to all Germans who were training for foreign service, and to foreign students from all parts of the world. The organization was effected by combining the different Vorlesungswesen of Hamburg under the patronage of Edmund Siemers and Alfred Beit, private citizens of that small commercial city-state. Its work is carried on through various seminars, such as the Seminar für Geschichte und Kunde des Orients (founded 1908), the Seminar für Nationalökonomie und Kolonialpolitik (founded 1908), the Orientalisches Seminar (founded 1910), and the Seminar für Kolonialsprachen. There is a department of the Modern Orient, of Eastern Asia, and of Africa, each having a professor, instructors, native assistants, and books and apparatus. The large phonetic laboratory serves all departments, and the ships from foreign ports are able to supply gewährleute from many lands. The realia include philosophy, jurisprudence, political science, history, geography, cooking, swimming, and a variety of homely arts. The language instruction, except in one department, is of the most modern type, and emphasizes the study of sounds, the appeal to the ear rather than to the eye, and the memorizing of material, rather than the minute analysis of grammatical phenomena. It places the theoretical instruction and general oversight in the hands of a European professor, and the drill work in the hands of European subordinate instructors and foreign sprachhelfen. Recording and reproducing instruments are extensively employed, both for otherwise unavailable material and for the repetition of instruction. The Hamburgisches Kolonialinstitut has rendered great service to German realpolitik and German commerce. Its strongest feature has been the department of African languages headed by Carl Meinhoff, the founder of a remarkable school of Hamitic philology. It is safe to say that there is nowhere else in the world any such equipment for the practical and theoretical study of African languages.

The ninth institution to be mentioned is the Practical Oriental Academy, of Petrograd, founded in 1909, after it had developed

---

46 The Hamburg school devotes itself largely, though not entirely, to those African languages which Meinhoff classifies as Hamitic. The Sudanic languages have found a specialist representative in Westermann of the Berlin Seminar für orientalische Sprachen.
out of various courses begun by the Imperial Society for Oriental Studies, which dates from 1906. It offers, besides the Moslem and Christian languages to the south, also those to the east, including Chinese and Japanese; but also French and English, and the general subjects: Islam, geography, Oriental jurisprudence, international politics, and administrative science. The course runs but two semesters. In 1913 there were 102 students.

Last of all the European powers and peoples to become interested in practical instruction in living Oriental languages have been the British government and the English people. As the tenth and last of the establishments is to be mentioned The School of Oriental Studies, London Institution, founded on February 23, 1917. Its charter of incorporation states that the purposes of the school are: "to be a school of Oriental Studies in the University of London, to give instruction in the languages of Eastern and African peoples, ancient and modern, and in the literature, history, religion, and customs of these peoples, especially with a view to the needs of persons about to proceed to the East or to Africa for the pursuit of study and research, commerce, or a profession." It is hardly fair to ask what has been accomplished by this school, born in the most desperate crisis of modern civilization. It is product of the War, a symbol of changed or changing policy, and a promise for the future. Fortunate it is for Great Britain and for all, that Germany's failure and fall were not attributed to her excellent technical training, nor Britain's conspicuous success attributed to her comparative lack of the same.

An account of the long struggle for recognition of the claims of these studies in England will be found in the Bulletin of the School of Oriental Studies, London Institution, published by the School, Finsbury Circus, E. C., 1917. John B. Gilchrist in 1813 founded in Leicester Square the Oriental Institution, under the patronage of the East India Company and chiefly devoted to the study of Hindustani by medical students; but it survived only eight years. Dr. Robert Morrison's Language Institution, London, teaching Chinese, Sanskrit, and Bengali, was founded in 1825 and lived only three years. Of course University College and King's College have taught Hindustani, Arabic, and other Oriental languages since the beginning of the nineteenth century. Under the title School of Modern Oriental Languages, courses of instruction in Arabic, Persian, Farsi, Sanskrit, Hindustani, Bengali, Marathi, and Tamil, are given in University College, and Buremese, Modern Greek, Chinese, Russian, Turkish, Swahili, Malay, Japanese, Arabic, Hausa, Zulu and South African Languages in King's College.
THE DD-EMBLEM OF OSIRIS

H. F. LUTZ

UNIVERSITY OF PENNSYLVANIA

The exact significance of the emblem of Osiris, the so-called DD-emblem, which figures so prominently among the Egyptians as an amulet, has so far escaped a satisfactory answer. In the latest book that touches on this question, the author states in a note (see W. Max Müller, Egyptian Mythology, p. 385, note 3), 'it may have been merely an old architectural experiment without any original religious meaning.' The other question which Müller raises, whether the DD-emblem was originally attached to the city of Busiris, or to the city-god, will find its answer when a correct explanation of what that sign originally represented shall have been given. As long as one considers it to represent a pillar, the possibility of the sign embodying the emblem of the city of DDu is obvious. This investigation which takes up this question once more, will try to show that the DD-emblem must be considered as one to which an originally religious meaning was attached, a meaning however which was lost among the Egyptians in a very remote time. From Egypt itself we receive no light which would enable us to get the satisfactory answer. We have to go outside of Egypt, that is to Babylonia to get this information.

To the later Egyptians the DD-emblem was a sign which commemorated the resurrection of the god Osiris. As an amulet it was considered to procure three things needful to their dead. Placed around the neck of the dead, the deceased person entered through the gates of, and became glorified in, Duat, and he was assured of his sustenance in the other world, being given bread, cakes, quantities of fleshy on the altars of Re’, or as a variant has it, of Osiris the good Being. See the 155th chapter of the Book of the Dead, which deals with the DD-amulet. The Egyptians themselves held that the DD-emblem signified or symbolized the backbone of Osiris. Scholars regarded it either as a pillar, or as a representation of the universe—the four horizontal lines representing four worlds placed above each other. Again it was conjectured that it must represent a work-stand upon
which the stone-mason used to lay his tools. Still another interpretation saw in the ḫd-emblem either an altar of four altar-plates topped in layers, or a nilometer. That view finally, which saw therein a branchless tree-stump, seems to come nearest to a right interpretation. In so far at least as that explanation connected the emblem with a plant, it was, it seems, entirely correct, for we naturally expect that a god such as Osiris, who figures so prominently as a nature-god, or as a vegetation-god, should in some way have as his most fitting emblem some kind of a plant. Plant-life more than any other life also exemplifies best the change in nature. Osiris’s chief characteristic was that of a god of the change of nature, probably first only of vegetation and later of the change in nature in the widest sense. To express this in reference to the Sumero-Babylonian mythology, before Osiris became the Egyptian Dumuzu, he must have been an Egyptian Asar. Scholars for quite some time back have pointed out the similarity of the ideographic writing of the names of the Sumerian Asar and the Egyptian Wēr, that is, both containing the sign for ‘place’ plus the sign for ‘eye.’ But not only is the ideographic writing the same, but there is also a similarity in pronouncing that ideographic writing, for a gloss gives the cuneiform reading of that sign as a-sa-ra (Coptic οὔκπε). If we would have to stop here with the enumeration of these two identities, we would only be justified in saying that this is a mere accidental coincidence. But we can go farther. Not only are the ideographic writing and the pronunciation the same in both instances, but there is also an agreement in the additional appellations given to both divine names. The Sumerian divine name is always written ḏi-nir-Asar ṭu-dug. Yet ṭu-dug obviously does not belong to the name proper, but is only an appellative, i.e., ‘Asar, the good Being.’ I wish to point out here, as I have not seen it mentioned in this connection, that the writing of ṭu-dug has its exact equivalent in the by-name of Osiris, wan nfrw, i.e., ‘the one who is good,’ or ‘the good Being,’ Coptic οὔκνόπε. For the repeated occurrence of the

1 The final u in Wēr wan nfrw is due to the fact that the Egyptians regarded this name as a unit, and therefore affixed the u so common in the names of Egyptian gods. In the nom. pers. ḫwmt (Lidbarski, HNKE p. 223) the final u is dropped, as it is sometimes omitted also in Egyptian inscriptions.
name Wsr unn nfrw see the Book of the Dead, chapters 42, 43, 70, 92, 100, 129, 145, 146 and 155, etc. We have therefore in the Sumerian as well as in the Egyptian nomenclature a complete parallel. Again, when we read for instance passages such as that in chapter 146 of the Book of the Dead, Wsr unn nfrw m3t-nfrw Sc Gb ms n Nu.t, we are able to translate this Egyptian sentence back into Sumerian without any change in the personages, namely, dingir Asur lu-dug dumu dingir Enki-ka-ge u-tud-da dingir Damgalunnna-ge. The remark which Müller (Egyptian Mythology, p. 41) makes concerning Nut, 'We should expect her to be Nun's consort, but she is seldom associated with him ... she is, instead, the wife of the earth-god, by whom she gives birth to the sun each morning,' holds good also of Dangalunnna, who instead of being associated with Nun, is the wife of the original Sumerian earth-god Enki. Both therefore, Asar and Wsr, have as their father the earth-god and as their mother the female counterpart of the abyss. The identities in name and parentage will allow us also some important conclusions as to the respective emblems of Asar and Wsr later on.

Before doing this however, I wish briefly to sketch what the inscriptions say of this interesting divinity Asar. In bilingual inscriptions this god is identified with Marduk. The identification of these undoubtedly different gods must belong to the time when the sun-worship was changed from the autumnal to the vernal equinox. To express this historically is not easy at present, but it may be possible that the beginning of the astronomical spring as the probable commencement of the year may perhaps reach as far back as the time of the kings of Ur. That Asar originally was a sun-god who represented the winter-, or autumn-sun, seems to be implied in such passages as Reissner, Hymn No. 1, lines 25 and 29, in which passages it is said of Asar: enim dingir Asar lu-dug sol pu-se-bo mu-(ni-ib-su-sug), which the Semitic translates: amat inu Marduk ebura ina si (manišu úšabbī), i.e., 'The word Asar, the good Being, floods the harvest with its ripe field-products.' There is obviously a contradiction in the statement of this hymn. How is it possible to call a divinity a good Being, who is instrumental in ruining the crops of the harvest-fields? Now line 29 of the same hymn reads: enim dingir Asar lu-dug gal-dug a-maḫ-am kar (ašaša), with Semitic rendering: amat inu Marduk butuktum ša k(ár) ūša-
that is, 'the word of Asar, the good Being, is a flood which tears away the dike.' These two lines show that Asar was a sun-god of the winter time. But it also shows that Asar, to be true to his appellation, the good Being, must have come from a country where the autumnal equinox was beneficial to the land. This was not the case in Babylonia. Here Asar, no longer a good god, would become a god of destruction, if he remained a sun-god of the autumnal equinox. He therefore changed to a sun-god of the vernal equinox, but when this change took place, it seems also a slight change in his name was made at the same time. Asar was henceforth called Marduk. In the name Marduk itself we still can recognize the old appellation of Asar; lù-dug, for the syllable mar in Marduk contains probably the lù in lù-dug, as lù could also be pronounced mulu, which passed into muru, mur and thence into mar. The duk is clearly recognizable as standing for the Sumerian dug. If it is true that Marduk stands for mulu-dug or lù-dug, then the attribute of Asar has survived in this name. In this case we are not even compelled to suppose that a merging of two different gods has taken place.

Prof. M. Jastrow in a recent article ('Sumerian and Akkadian Views of Beginnings,' JAOS 36. 277) sees in the story of Marduk's conquest of Tiamat an original nature-myth, which presented the story of the change of season from the winter or rainy season to the spring season. For the Sumerian view of yearly orientation, as must have been held originally by these people, it is interesting to note in this connection what the author says on p. 293. I shall give the passage in his own words: 'The world . . . is pictured as beginning in the fall when the rains set in, and not in the spring when the storms and rains cease. Such a condition is apt to prevail in mountainous districts where the streams are low or entirely dried up in the dry season and depend upon the rains to fill them again, in contrast to a mountainless plain like the Euphrates Valley, where the streams, fed from their sources, flow in abundance during the entire year and during the rainy season over-flow and cause inundations.' In view of the fact that creation falls in the winter season, this fact in itself justifies us in concluding that the Sumerian year originally began in that season.

Asar is most commonly known to us as a god who shows his kindness (lù-dug) toward suffering mankind and who relieves
them of their diseases and the attacks of evil spirits. The standing phrase in incantation texts: 'Asar, the good Being, saw him and unto the house of his father Enki he entered,' seems to have some reference to his ideogram which contains the sign igi, 'eye.' Originally it seems the ideogram had reference only to the 'place of the eye,' that is, 'the sun's eye,' that is, the sun. The sun-god sees everything and therefore knows all things, and as the power of light is also the power of goodness and every blessing and the enemy of darkness and all evil spirits that roam in darkness. In Tablet iii of the utukki limnútí series Asar is therefore called a god that blesses — dingir silim-ma-mu dingir Asar šu-diug, cf. CT 16, pl. viii. But as a sun-god Asar is also a god who affects nature, and, from the passage quoted from the hymn published by Reissner, it can be gathered that Asar was in some way connected with irrigation and vegetation. The most evident proof that Asar was originally a vegetation-god is given us in the initial lines of the seventh tablet of Creation. The two lines that interest us here only are as follows: ṣe Aṣar-ri ša-riq mi-rīš-
(ti mu-kiš ra-ti) ba-nu-ú še-am u ki-e mu-š(e-ši ur-qi-ti)—
'O Asar, bestower of planting, founder of sowing, maker of grain
and plants, who caused the green herb to come forth.' It is

*Cf. also King, Magic, No. 12, line 30: ḫa-a-ad ḫa-ta-mu-an ư ḫa-La-
bar(?); ba-nu-ú še-am u ki-e mu-diš-tu-ú summajatu, 'who bestows corn
and grain (?) who creates wheat and barley, who renews the green herb.*
therefore not merely accidental but only shows more clearly that Asar was a vegetation-god when in the rock-relief of Sanherib near Bavian this Assyrian representation which pictures the different emblems of the twelve great gods, has the form as in Figure 1, that is a plant, most probably, to judge from the figure, a conventionalized picture of the most valued plant in old Babylonia, a young palm-tree. This sign was however generally explained as being the 'spear-head' of Marduk and therefore symbolizing the kakku, the weapon of Marduk. On the Asarhaddon stele of Sendschirli this emblem of Marduk has the form as in Figure 2, which of all other representations of the emblem comes closest to that of Sanherib. The emblem on the Sargon stele of Cyprus, which equals the one given in the rock-relief of Asarhaddon at Nahr el Kelb, varies somewhat (see Fig. 3). Finally on the Cassite boundary-stones we have forms as in Figures 4 and 5 (see Hinke, A New Boundary Stone, pp. 91 and 94). K. Franck, Bilder und Symbole babylonisch-assyrischer Götter, pp. 22-24, is inclined to see in these representations the weapon of Marduk, a lance.

Of all the representations given, it is advisable to pay most attention to the one which is obviously the best. That is undoubtedly the one on the rock-relief of Sanherib near Bavian. This seems to come nearer to a tree than a lance or a spear-head. But also in each of the other cases there is nothing which would hinder us from seeing the picture of a tree in them. Compare for instance the hieroglyph of the _userdata tree which is used as the determinative for trees in general.

Before we go on it is necessary to clear up a certain misunderstanding. This has reference to the so-called 'weapons' of the gods. Here we have not to think of real weapons, say a spear, a lance, a bow, but simply of the divine emblem. III Raw. 69. 3. 75-83 gives a list of such emblems of gods. It is interesting to note that a few of the names of the so-called weapons stand in etymological relation to plants. The kakku of Ninib is called hibinu, which is related to habin = thornbush. The kakku of Nabu is the it-it-tum, which is related to šišu = nettle. Another kakku is named puqut-(tum), which equals puqdatu or puquttu of similar meaning. Of interest to us here is the name of the kakku of Marduk. It is called in this list qa-qual-tu. Hinke did not recognize in this connection that also this
word is etymologically connected with the name of a plant. He referred to CT 17, 35, 79 where we have qa-qul-ti la pa-te-e = 'a closed vessel,' but otherwise left the connection with other words unexplained. But qa-qultu is surely related to qa-qul(l)u. Meissner in ZA 6. 293 identified qa-qulum with the Syriac kākōlā = ammonum cardamomum, Löw n. 296. Qa-qulum equals mangu and šāmešu. If mangu has any relation to mangu, this would fit into our thesis most perfectly, as we know that the latter represents some part of the date-palm. Such a connection between mangu and mangu is possible, but cannot be proved now. For our purpose suffice it to say that the kākāk of Marduk is called qa-qultu, which word is related to a plant-name, a plant which by its equation with others may have some reference to the palm-tree or a part thereof. On the other hand the custom of calling certain plants kākē ša ilāni points to the fact that by that expression the Babylonians did not primarily mean the weapons of the gods, but their emblems. Weapons are not made of wood or of plants, but either of stone or else of metal. That kākāk stands for emblem is further shown in those cases where certain stars are spoken of as being the kākāk of the gods. For the use of kākāk as weapon as well as emblem, or coat-of-arms, compare here the relation of the German words 'Waffen' and 'Wappen.' Marduk's weapon with which he slew Tiamat was the miffu. But he also is equipped with the bow (qaštū) and the mutmulu武器, which is either a lance or an arrow, more probably the former. We have here our choice to determine which weapon was Marduk's weapon in particular. Perhaps after all none was his particular weapon at all, but only one object was his emblem. This emblem of Marduk was the qa-qultu-plant. Although preserved to us from a later time, this emblem must be very old, it must have come down from a time in which Marduk must have been held in greater esteem as a god connected with vegetation than he seems to have been in later times. I can only think in this connection of the possi-

*Mangagu apparently represents the diminutive of mangu. Cf. Assyrian sāqu = suqāq 'a small street.' For other instances of the usage to express the diminutive consonantically through reduplication, compare Neo-Hebrew busulēl, 'a little onion' (Siegfr. §53) and Syriac pārtalā, 'bread-crumg' (Nödeke §122). Cf. also adāmdām 'a little red, pink.'
bility that the emblem was originally that of Asar, and that in the time of the complete merging of these divinities Marduk took this emblem to himself.

If this was the case, it would then seem most plausible, in view of the identity of the names of Asar and Wār and their identical meaning (lû-dug, wnn nfrwe) that we may conjecture that both gods had at some time also the same emblem. And indeed it does not require a great stretch of imagination to see in the Ḍd sign either a corruption, on account of later misunderstand-

![Fig. 6](image1.png)  ![Fig. 7](image2.png)  ![Fig. 8](image3.png)

ing, of the original as given us in Figure 1, or else that it pictured the palm-tree, if the qaqltu should be such, which might have been simplified to the sign in Figure 6, four horizontal lines representing originally probably four rows of palm-leaves. It is strange that as late as the 25th Dynasty there appears a new hieroglyphic form of the Ḍd sign (see Fig. 7), which speaks favorably for our view that the Ḍd-emblem of Osiris is a palm-tree.

The picture of Osiris (Fig. 8) which was taken to be ‘Osiris in his pillar’ is therefore to be placed in the same category as all those pictures, which show Osiris hidden or standing in a tree. However, it is very doubtful whether the oldest representation signified the celestial tree. There was most probably no cosmo-
gonic conception at all contained in this picture, but it simply stood for the original conception of Osiris as being a vegetation-god in Busiris. The custom of planting 365 trees, as it is said, around certain of his temples is also significant. This custom shows Osiris as the god of changing time and of the year, but here also the tree as the emblem of Osiris crops out again.

If we admit that there is a striking similarity between the Sumerian Asar and the Egyptian Wṣr, this admission may perhaps lead to an interesting question as to how far the so-called 'Southern' elements in the Osiris-myth have any connection with the interesting figure of Asar, of whom we have not yet sufficient cuneiform material to draw upon more fully. But suffice it to say at present that the 'Southern' elements in the Osiris legend may not be due to a later confusion at all, a confusion which was brought about through a Southern deity of similar attributes to those of Osiris, but that Osiris himself may have changed from a 'Southerner' to a 'Northern Semito-Libyan' deity, or to express it in other words, Osiris seems to have been first an Asar lû-dug, and later developed into a Tammanz. I do not thereby wish to give the impression that the Asar myth was the original one and was borrowed by the Egyptians from the Sumerians. It is more probable that the Sumerians as well as the Egyptians got this mythological figure from a third source.

*The Osrian cycle offers in the story of the slaying of the serpent Apep-Tiamat at the new-year's day another instance which connects Osiris with Asar lû-dug. Cf. Sitzungsberichte of the Berlin Academy, 47, 1910, p. 292 ff. and Müller, Mythology, p. 108.

*The name Asar is not Sumerian and neither is Wṣr Egyptian. But Asar may well be the name of a West-Semitic deity. I think it is possible to show that there is a strong probability that the original home of Asar was Amuru.

Asar is the male counterpart of Aštar, Ištar, which latter forms exhibit the infixed fem. t. Later when this infixed fem. was no more understood as such, a second feminine mark was suffixed, Aštaratu, ph. 'ātrt, e.g. 'ātrati 'Aṣṣaratu. South Arabian retains the original form ḍh- ḍh- ḍh-. In connecting Asar with Ištar, as must be done, it is easy to understand the nature of this god. Like Ištar, out of which Asar developed and became differentiated, he was originally, because being at some time identical with her, a god of love and fertility. Since their differentiation, however, the male divinity was no more brought into sexual
In the same way as Asar the son of Enki is the creator of the world, which position Marduk took over at the time of the merging of these two divinities, we should also expect that Osiris the son of Geb figured originally in the same capacity. And indeed the Egyptian inscriptions are not entirely silent on this matter. There lingered on into the time of the 18th Dynasty the idea of Osiris as creator, which found expression in a hymn to Osiris (cf. Chabas, 'Hymne à Osiris,' in Revue Archéologique, 14e année, 1857, pp. 65 ff.). Osiris is spoken of in the following words: \( \text{ir-nf} \ \text{t}^2 \ \text{pn} \ \text{m} \ \text{f} \ \text{m} \ \text{w-f} \ \text{f} \ \text{w-f} \ \text{sm-f} \ \text{mnmt-l-f} \ \text{nb-t} \ \text{pj} \ \text{nb-t} \ \text{hnn} \ \text{nb-t} \ \text{qdwrt-l-f} \ \text{wlt-f}, \) i.e. 'he made this earth with his hand, its water, its air, its plants, all its cattle, all flying birds, its reptiles, its quadrupeds.' Wiedemann, in Religion of the Ancient Egyptians, p. 213, remarks on this passage that the hymn 'thus (is) assigning to him (Osiris) the same work which according to the usual acceptation had been carried out by Râ, and (is) placing him in a position which is not in logical harmony with that which he occupies in the myth.' This position of Osiris is easily explained as being due to the fact that Osiris is a composite character, an Asar lû-dug as well as a Tammuz.

relations, but his nature was enlarged into a god of goodness in general and of fertility in the whole realm of nature. Hence his epithet 'the good Being.'
NOTES ON INDO-IRANIAN WORDS

Edwin W. Fay
University of Texas

1. Sanskrit cātaka-, cucculas melanoleuca.

An Indo-European root kē(1), to cry out, call, summon, is attested in Lat. ciēre (kyē) and in ac-ciēre (ēs); cf. with d-extension kōm in Gothic hōitan, to call. This is the root of cātaka-(kē) and of κωτήλως (kō), chattering, twittering: Lat. coturnix, quail or call-bird (for the posterior cf. δραγός). The call-note of the quail is made a matter of special note, e.g. in the Encyclopaedia Britannica. No weight is to be given to cocturnix in MSS. This spelling was due to monkish reminiscence of the quails of Exodus, and belonged to the time when writers of Latin manuscripts pronounced a word like octo as otto.

2. The Sanskrit compound adverb prād-udaj, hervor.

Here prād = Lat. prōd, forth and us = ud-s, out. This Sutra and Epic word is no less likely to be of Indo-European provenance than lexical Sanskrit parut: xipīm.

3. Sanskrit sahā, with.

This preverb arose from compounds with imperative prius saha = ikī, as in ikī-kollōs, glutinous (having glue), ikī-kōlōm, sensible (having mind). Similarly Skr. sahā-patī = having the wife (along), accompanied by the wife. There was competition between sahā and Indo-Iranian sadha (Gāthic Avestan kadā).

4. Sanskrit hodha-, stolen property.

This is a false discomposited from sahodhā = saha + udha-, thief, i.e. having stolen (property), by false analysis sa-hodha-, with stolen property.

5. Avestan pūtrā, gravida; adjectives direct from nouns.

In the Avesta the word for 'son' also means 'with child.' It is not necessary to invent a suppressed suffix, as Bartholomae has done to account for this; cf. Lat. vetus, old: pēros, year. Horace has patruae (fem. gen.), belonging to the patruus; and fabulae, fabled, not different from the plural of fabula, a fable.

The prius belongs with var, rain; the posteriorius, (a)ka-, means flowing. Thus the kidneys are water-pourers. Any priest or butcher on cutting the ureters (ducts leading from the kidneys to the bladder) might have given the name. For the root wer, to flow, see Walde's lexicon s. v. urina. Lat. vō(n)sica, bladder, if with adventitious n (cf. tensusurus; and note the collocation of vesica with venter in Plautus' Persa, 98), may come from vēs-ti, water-holder; cf. Skr. udā-dhī, water-holder, ocean. The Latin word for kidneys, renes, has lost an initial v; original vrenes meant pourers.

7. The Indo-Iranian 'root' var, broad.

The sense of broad in this root, taken representatively, of course, is a development from vārūna-, sky. In O̱pavōs we are to recognize as ophē, i.e. qui mingit. On the root wer, to pour, see the last number. From O̱pavōs the root wer developed the sense of to cover; and this connotation predominates in Skr. Vārūna-ś, the encompassing (sky).
NOTES OF THE SOCIETY

A Joint Meeting of the Royal Asiatic Society of Great Britain and Ireland and the Société Asiatique will be held in London on September 3-6, 1919. This note serves as a general advertisement to all members of the American Oriental Society inviting them to attend, and it is hoped that the President of the Society can ensure the attendance of some delegates. Anyone planning to attend can obtain later and fuller information by communicating with Prof. Charles R. Lanman, 9 Farrar St., Cambridge, Mass.

PERSONALIA

Prof. Wm. H. Worrell, Director of the American School in Jerusalem, expects to start for his post on July 19, taking boat to England. His Associate, Prof. A. T. Clay, will sail on July 12. In London they will take up negotiations with the British School of Archaeology in Jerusalem looking towards close cooperation, and they will confer in Paris with the French societies and scholars interested in oriental research. After that they will proceed, as rapidly as political conditions allow, to Jerusalem.

Prof. A. Calvo, Professor at the University of Louvain and at the University of California (formerly at the University of Pennsylvania), has returned for the time being to Louvain, where his address is 9 Rue des Joyeuses Entrées.

Mr. Leon Dominian has been assigned to duty at the Peace Conference in Paris. His address is care of the American Commission to Negotiate Peace, Hotel Crillon, Paris.
SÄKADVĪPA AND SVETADVĪPA

WALTER EUGENE CLARK.
THE UNIVERSITY OF CHICAGO

The superficial nature of Garbe’s recent discussion of Svetadvipa has induced me to make an effort to collect all the available evidence that has a bearing on the problem. Svetadvipa has been as mobile as were the mountains before Indra clipped their wings. It has been located by Wilford in England (Albion), by Weber in Alexandria, by Lassen in Parthia, by Gerini in Cambodia and Siam, by Kennedy in Bactria or in the

* JEA 1907. 482. As Garbe (op. cit. 196) has pointed out, Kennedy’s suggestion that the name Milk Sea is derived from the ‘abundance of fresh sea’ at Issyk-kul is an error. The name means ‘Warm Lake,’ and the lake does not freeze over during the winter. [Berthold Laufer has given me the following note: ‘The Issyk-kul was known to the Chinese in the T’ang period (618-906 A. D.) under the name 50 hai, that is, “Warm Sea.” Tu Huan, a famous author of the eighth century, explains the name as follows: “Although the country is cold, the lake does not freeze, hence its name.” Cf. Hirth, Nachworte zur Inschrift des Tonjukuk, p. 71 (in Radloff, Alttürkische Inschriften der Mongolen, 2. 1899). This name is also found in Buddhist literature. In a Chinese Buddhist work dealing
vicinity of Issyk-kul, by Garbe* in the neighborhood of Lake

with cosmography and entitled Fa kie nuan li t'u, compiled by the éroman Sen Chao (Sen Cao), there is a crude map of the universe surrounded by the ocean, the Himālaya being in the center, north of it Lake Anavatapta, farther north a mountain-chain not named, north of the latter the "Warm Sea," north-east of the latter a "Fragrant Sea" (Huang ho). Further, the accounts are unanimous in locating Svetadvipa north of the Milk Sea. Therefore Kennedy's assertion that the Nestorian communities were numerous around the southern shores of the lake is worthless as an argument for the identity of the two. Moreover, it is not enough to assert that Nestorian communities were numerous there. It is necessary to prove that such was the case in the sixth century A. D. The fact that Huan Tsang (Watters, I. 67-8), who passed by the southern shores of Issyk-kul during the seventh century, A. D., knew nothing of Christian communities there or elsewhere in Central Asia, militates against the assumption that Nestorian communities flourished there in the sixth century. Christian communities flourishing enough to have served as the basis of Mahábharata 12. 335-6 would surely have struck his attention. For the whole problem see Lauffer, American Anthropologist, 1916. 572-3 and Pelliot, 'Chrétien d'Asie centrale et d'Extrême-Orient,' T'oung Pao, 1914. 623-44. Pelliot points out that although there were Nestorian bishops in Merv and Herat early in the fifth century there is no inscriptive evidence for Christians in Transoxiana until the first half of the seventh century.

*There is not the slightest definite evidence that there were Christian communities near Balkhash in the sixth century A. D. Garbe (op. cit. 198) quotes Nöldeke to the effect that there is abundant inscriptive evidence for Nestorian settlements near Balkhash during the thirteenth and fourteenth centuries. [Lauffer refers me to Chwolson, 'Syrisch-Nestorianische Grabhalschriften aus Semirjetschino, Mémo. de l'Acad. de St-Pé., 34. 1886, and same, Neue Folge, 1897.] From this he argues that Balkhash must have been an important Nestorian center in the sixth century. It is like arguing that Berlin must have been a great city in the time of Caesar because it still is a great city. Moreover, Svetadvipa is described as being more than 32,000 yojanas north of Meru. Meru itself is a vast distance north of India. Yojana is an indefinite term, but the long yojana seems to have been about nine miles, the short yojana about four and a half miles. Cf. Fleet, JEAS 1906. 1011 ff. and 1912. 337, 462-3. Even if we take the short yojana it is, as Garbe says, an 'ungeheure Entfernung.' Balkhash is hardly more than 250 miles north of Issyk-kul. How that short distance can appreciably lessen the 'ungeheure Entfernung,' which, according to Garbe, invalidates the identification with Issyk-kul, is a puzzle to me. The distance was never traversed by human feet. It was always traveled through the air, in a moment, by the yuga-power of the saint. Keith, Indian Mythology, in The Mythology of All Races (ed. L. H. Gray; Marshall Jones and Company, Boston, 1917), vol. 6, pp. 170-7, is inclined to follow Garbe's conclusions.
Sākadevi and Śvetadevi

Balkhash, by Hopkins⁸ in Kashmir, by Grierson¹⁰ somewhere north of the Hindu Kush, by Lacôte¹¹ in Bactria, by Vans Kennedy,¹² Muir,¹³ Barth,¹⁴ Hopkins,¹⁵ Charpentier,¹⁶ Telang,¹⁷ Garbe¹⁸ (in his first discussion), Tiele,¹⁹ Senart,²⁰ Holtzmann,²¹a Frazer,²²a Bhandarkar,²³a Howells,²⁴d Lauffer,²¹b Pelliot,²²b and others in the realm of fancy. Nowhere is there an impartial summary of all the evidence that bears on the problem.

It has been shown by Hopkins²²b that the earliest Hindu conception of the earth, when the geographical horizon first extended beyond the bounds of India and the Hindus first became cognizant of land to the north and east and west, was that of four dvīpas (Jambu, Uttarakuru, Ketumāla, Bhadrāśva)²⁴ partially

³⁸ So named in Mhb. 6. 6. 13 and by the unanimous Puranic tradition, which in spite of the development of an enlarged, fanciful, theoretic, geography, kept as the basis for the descriptiion of Jambudvīpa the older conception. Cf. Vāyu 34. 57; Matsya 113. 44; Mārkandeya 54. 14 and 59. 1, 4, 12, and 18; Viṣṇu 2. 2. 38. Ketumāla is mentioned in the Kathāsaritsāgara (48. 77), but the names of the Puranic concentric dvīpas are unknown.
surrounded by four seas. These four countries were grouped around Meru (south, north, west, and east, respectively) like the petals of a lotus.

Similarly the Harivamśa names Uttarakuru, Bhadrāśva, Ketumāla, and Jambudvipa. In two of the passages 'the region of Yama' is substituted for the southern Jambudvipa. Although seven dvīpas and seven seas are mentioned in several passages, nowhere is a single one of the Puranic dvīpas named; whereas the names of the 'four dvīpas' are given.

Mbh. 12. 14. 21-5 has a variant account. It is there stated that Yuddhiṣṭhira formerly ruled Jambudvipa, Krauṇḍadvipa like unto Jambudvipa and situated west of Meru, Śākadvipa like...

to that text. Ketumāla is also the name of a firsha in Mbh. 3. 89. 15. Although there are discrepancies and somewhat variant theories in the different Purānas the following account from the Vishnu (trans. Wilson, II. 113-16) is typical. In the center of Jambudviṇa, the concept of which has been enlarged to include all of the central continent, is Mt. Meru. South of this are the mountain-ranges Himavat, Hemakūṭa, and Nisadhī. North of it are the mountain-ranges Nila, Śvetā, and Śrīgīm. All of these mountains extend from the ocean on the east to the ocean on the west. Enclosed by these mountains (proceeding from south to north) are the varas Kimpurvasa, Harivarṣa, Hāvyā, Kumbhaka, and Hirānmayā. North and south of these lie Uttarakuru and Bāratavarṣa. To the east and west of Hāvyā are Bhadrāśva and Ketumāla. These make up the nine varas of Jambudvipa. The confused account of Mbh. 6. 8-8, although it differs in details, agrees in essentials. The northern crescent-shaped varas is named Airāvata (6. 6. 37-9). The Uttarakurus are located just north of Meru (6. 7. 2), although in 6. 6. 13 Uttarakuru is one of the four great dvīpas along with Jambu, Bhadrāśva, and Ketumāla. North of Airāvata is the Milk Ocean, but in another (later?) passage (6. 11. 6) Jambudvipa is described as surrounded by the ocean of salt water, and the Milk Ocean is said to surround Śākadvipa (6. 11. 10).

* For the four oceans see Hopkins JAOS 1910. 371 and Epic Mythology, p. 122. Compare Harivamśa 220 (2. 370): 'Il voulut que la terre eût quatre faces, et quatre mers pour bornes': 70 (1. 303) where four oceans are referred to along with four castes, four ages, and 'quatre holocaustes'; 44 (1. 205) Varuna is described as surrounded by the four oceans.

** See 143 (2. 88); 148 (2. 115); 149 (2. 120).

*** 'Seven dvīpas' 4 (1. 26); 33 (1. 154-5. 167); 149 (2. 120); 148 (2. 116); 'seven dvīpas and seven seas' 30 (1. 126). Are the seven dvīpas and seven seas of the Harivamśa merely conventional, or is the Puranic geography implied? I am inclined to the former view. For the conventional use of seven in the Mahābhārata see Hopkins JAOS 1910. 370-1.

The Bombay and Calcutta editions read adhareṇa (Nilak.: pācimata).
unto Krauśadvipa and situated east of Meru, and Bhadrāśva equal in size to Śakadvipa and situated north of Meru.

Hopkins' conclusions are corroborated by the earliest Buddhist cosmology. In both the northern and southern texts the original conception has been overlaid by later Puranic speculation, but the theory of concentric duśpas is clearly secondary. Especially noteworthy are the passages of the Mahāvastu and the Lalitavistara which know only the four duśpas Jambu, Purvavideha, Aparagodāniya, and Uttarakuru (grouped around Meru to the south, east, west, and north, respectively, and constituting the whole world 'lokadhātu'), and give no hint of the Puranic geography. They represent an older period than does Mbh. 6. 5-12 in its present form. The general conception is the same; the particular names vary.

It is noteworthy that the sober geography of the Sūryasiddhānta (12. 38-40) is based entirely on this earlier conception.

But the Kumbakonam edition (12. 14. 63) reads aprānea, which the context calls for. There is no evidence to support the rendering of adhāraya by 'west.'

This passage seems to be unique in locating Krauśadvipa in the west and Bhadrāśva in the north. That it is not a late vagary is shown by the fact, which I hope to be able to prove later, that Śakadvipa was originally located in the east. Mbh. 6. 12 locates Krauśadvipa in the west. For Krauśa as a northern mountain see Hopkins JAOS 1910. 358-9; Brhatasmhīta 14. 24; Rāmāyana 4. 43. 25. The Brhatasmhīta 14. 13 and Mārkandeya 58. 23 (cf. note of Pargiter) locate a Krauśadvipa in the southern part of India, but the relation of this Krauśadvipa to the northern one is problematical. The Harivamsa 118 (1. 596); 198 (2. 303) has a Mt. Krauśa, in the north apparently, and a Krauśa in the south 95 (1. 406. 409). Kern (note on Brhatasmhīta 9. 11) traces the name Bhadrāśva back to Big Veda 1. 115. 2-3. Mt. Krauśa appears first in Taittirīya Aranyaka 1. 31. 2.

See Hardy, Manual of Buddhism, pp. 3, 4, 12, and Legends and Theories of the Buddhists, p. 80 ff. (especially p. 85); Gogerly, Collected Works, I. 20. 74 note; Kern, Der Buddhismus, pp. 369-71; Childers s. v. Mahātipo; Watters, On Yuan Cheung's Travels in India, 1. 31-2; Mahāvastu (ed. Snart) I. 6. 2; 1. 40. 6; 2. 63. 6; 2. 158. 18 to 159. 1; 3. 378. 2; Lalitavistara (ed. Lefmann), p. 19, 15-16 and p. 149, 19 ff.; Weber, Indische Studien, 3. 123, 148; Abel-Rémusat, Klapproth, and Landresse, For Kone Kā, p. 81; Pulé, 'La Cartografia antica dell' India,' Studi Italiani di Filologia Indo-Iranica, 4 (1901). 23-4. Hopkins' statement (JAOS 1910. 374), 'Buddhistic world-theories are too late to be of much importance in this regard,' needs modification.

Translated by Burgess and Whitney JAOS 6. 390.
The Jain texts, in general, seem to be closer to the Puranic conception than are the Buddhist texts, but the oldest texts need further investigation in this regard. Some texts give eight or nine, some as many as nineteen dvīpas. The names and the order of such elements as agree with Puranic elements differ considerably from the names and order of the Puranic tradition, which is itself not always consistent; but many elements are common to both traditions. There are, however, traces of a tradition intermediate between the theory of four dvīpas, as outlined above, and the Puranic theory of several concentric dvīpas. Weber describes (IA 30, 243-4) a theory of two concentric oceans and three (or two and a half) dvīpas. In the centre is Jambudvīpa divided by six parallel mountain-ranges into seven regions. The mountains, from south to north, are named Himavat, Mahāhimavat, Nisadha, Nilavata, Rūpya, and Śikharin. The regions, from south to north, are Bhārata, Haimavata, Harivāra, Videhaka, Ramyaka, Airanyavata, and Airāvata. Surrounding Jambudvīpa is the ocean of salt water. Then comes Dhātakikhaṇḍa (or Dhātukikhaṇḍa) surrounded by an ocean of fresh water. Then comes Puṣkaradvīpa, the outer half of which is shut off by the Mānasottara mountains which cause perpetual darkness there. The outer half of Puṣkaradvīpa is named Mahā-

---

---
The earliest Jain cosmography deserves a closer study and comparison with early Buddhist and Hindu cosmography.

In its description of Sudarśana (evidently equivalent to Jambudvīpa) the Kumbakonam edition (6.5.17) has the words:

\[ \text{dvirāṃśas tu tataḥ plakṣo dvirāṃśah sālmalir mahān} \\
\text{dvirāṃśah pippalas tasya dvirāṃśas ca kuśo mahān.} \]

The Bombay and Calcutta editions omit the first line and read: dvirāṃśe pippalas tatra dvirāṃśe ca saśo mahān. In 6.6.2 all three editions read Pippala and Saśa. In 6.6.13 all three editions have Bhadrāśva, Ketumāla, Jambudvīpa, and Uttarākura. Noteworthy is the intrusion in the Kumbakonam edition of Plakṣa, Sālmalī, and Kuśa in a description of Jambudvīpa. Plakṣa, so far as I know, is mentioned nowhere else in the Epic except in this passage of the Kumbakonam edition. The context does not support the Kumbakonam reading, but these particular names would hardly have been used, even in a late interpolation, after they had become crystallized as names of concentric dvīpas. They are named here as parts of Jambudvīpa, not as independent dvīpas. If the line is an interpolation it seems to come from a period earlier than the Puranic geography.

Intermediate between the simple conception of four dvīpas grouped around Meru and the Puranic theory of seven dvīpas surrounded by and surrounding seven concentric oceans (Jambu,

\( ^{6} \text{Vishnu 2.4.73-74 gives Mahāvīra as the name of the outer half of Puskara-dvīpa. Wilson (2.201) has Mahāvīra, but reports that most of the manuscripts read Mahāvīta. Vāyu 33.14-15 and 49.119; Matsya 123.17; Mārkandeya 53.19; Kārma 50.5 read Mahāvīta, although some manuscripts have Mahāvīra. Varāha, p. 330,16 has Mahāvīti. Is the right reading Mahāvīra? Harivaṃśa does not know a Puskara-dvīpa, but locates a Mt. Puskara in the north: 221 (2.272) and 231 (2.402). Cf. Mbh. 6.12.34.} \)

\( ^{7} \text{Taittiriya Aranyakā names a Mt. Sudarśana (1.31.2). Bāmāyaṇa 4.40.61 mentions a Sudarśana-dvīpa, and 4.43.16 locates a Mt. Sudarśana in the north.} \)

\( ^{8} \text{Plakṣa is the fig-tree (Ficus indica). Names compounded with Plakṣa are commonly employed to designate the river Sarasvati, and Plakṣavataraṇa is the name of the place where the Sarasvati breaks through the Himālayas. In Vāyu 46.4 and Matsya 114.64 Plakṣa is the name of a part of Kimpuruṣa, so called because of a Plakṣa tree. Gerini, Researches on Ptolemy's Geography of Eastern Asia, pp. 39-43, makes an effort to connect the name of Plakṣa with Balakṣa or Plakṣa 'white, silver' and to locate it in Arakan and Burma.} \)
Plakṣa, Śālmalī, Kuśa, Krauṇḍa, Sāka, and Puṣkara surrounded respectively by the oceans of salt water, sugar-cane juice, wine, clarified butter, milk, curds, and fresh water) is the description of Mbh. 6. 11-12. In 6. 11. 1-3, after a description of Jambudvīpa has been given, Dhṛtarāṣṭra asks Saiñjaya for a description of Śāka, Kuśa, Śālmalī, and Krauṇḍa. In 6. 11. 4 is the statement: 'O king, this world is composed of very many dvīpas, but I shall describe to you only seven dvīpas and also the sun and the moon and the planets.' After a brief description of Jambudvīpa comes a description of Śākadvīpa which is surrounded on all sides by the Milk Sea (6. 11. 10), but no statement is made as to its direction from Jambudvīpa. Then in 6. 12. 1 is the statement: uttaraśca ca kauravya dvīpeṣu śrīyate kathā. evam tatra mahārāja bruvatāḥ ca nihodha me. Then the oceans of clarified butter, curds, wine, and water, and the dvīpas Kuśa, Śālmalī, and Krauṇḍa are enumerated. In verse 24 is the statement: 'In Puṣkaradvīpa there is a mountain called Puṣkara full of gems and jewels' and in verse 26 it is stated that 'various gems come thither from Jambudvīpa.' No specific ocean is mentioned in connection with it, and there is no direct statement to the effect that it is situated in the north. But in verse three it is said that the dvīpas double in size as one goes north and that they are surrounded by these oceans. That seemingly makes it necessary to include Puṣkara among the northern dvīpas and to connect it with the ocean of fresh water. Yet in verse four it is said that in 'the middle dvīpa' (that rules out Puṣkara the fourth) is a large mountain named Gaura, and that in the paścima dvīpa is

---

*Gerini (loc. cit. pp. 39-43, 80-1, 670-3, 244, 164-7, 249) thinks that these are all historical and locates the last six in Indo-China and the far east.

*For references to 'many dvīpas' see Hopkins JAOS 1910. 379-2. The number seven is not to be taken too literally. Cf. 1. 75. 19, Purāṇas 'had sway over thirteen dvīpas of the sea'; 3. 3. 52 'the whole earth with her thirteen dvīpas'; 3. 134. 20 'thirteen dvīpas exist on earth'; 7. 70. 15 refers to eighteen dvīpas; 12. 14. 25, after the statement that the king had conquered Bhadrāśva, Kētumāla, Bhārat, and Uttarakuru it is said that he penetrated the ocean and ruled the populous dvīpas and antaravātī dvīpas. It seems clear that these passages describe the whole earth and have no knowledge of concentric dvīpas.

*Compare Vāyu 49. 137.

*Although six mountains are enumerated in Kuśa and in Krauṇḍa only Mt. Gaura is mentioned in connection with Śālmalī.
a large mountain named Krishna⁴⁸ which is a favorite abode of Nārāyana. Paścima usually means 'western,' which seems out of place here. Yet Krishna is not enumerated among the six mountains of Krauñcadvīpa, nor is it mentioned in the description of Puṣkaradvīpa. The dilemma is one from which there is no escape on the basis of our uncritical editions of the Mahābhārata. The matter is further complicated by the fact that in the request for information only Śakadvīpa, Kuśadvīpa, Śāmaldvīpa, and Krauñcadvīpa are named. They with Jambu make five. In 6. 11. 4 a description of seven was promised, but only six are actually described. A description of Puṣkaradvīpa, not asked for, is given, and in both request and answer Plakaśadvīpa is omitted.⁴⁹ Surely the number seven is not to be taken literally. The description of Śakadvīpa is so clearly marked off from that of the dvīpas which are said to be situated in the north that there is no necessary reason for believing that it too was located in the north. More details are given about it than about the other dvīpas. The names of four castes there are given. This detail is extended by the Purāṇas to the other dvīpas also. Its seven mountains, including Meru,⁵⁰ seem to be modelled on the seven kulaparvatas of Jambudvīpa. It is described in second place, and seems to be more historical than the other dvīpas.

Significant is the fact that, while the Mahābhārata states that the dvīpas are surrounded by oceans, nowhere is it stated that the dvīpas surround the oceans.⁵¹ The Mahābhārata does not know the theory of concentric circles of land. Its dvīpas are really islands. The Puranic theory may be due merely to a misunder-

* Vāyu 44. 4; Mārkandeya 59. 12 locate a Mt. Krishna in the west in Ketumāla. Mārkandeya 55. 10 describes a Mt. Krishna west of Meru.
* Pulle op. cit. 17-19 makes the number described to be seven by including Gomanta, but Gomanta is plainly only one of the six mountains of Kuṣadvīpa (not of Krauñcadvīpa as stated by Sørensen, Index to the Names in the Mahābhārata s. v.,) and Puṣkara, not Gomanta, is surrounded by the ocean of fresh water. Cf. Mt. Gomanta in Brāhmaṇīta, 16. 27.
* Compare Vāyu 49. 78; Matsya 122. 8.
* See Hopkins JAOS 1910. 368 note. For the Puranic descriptions see for instance Matsya 122. 3, 49, 79, 92, and 123. 1, 12-13; Vāyu 49. 2, 30, 47, 60, 75, 105. Phrases of the following type are employed: tadāvītaḥ samudra gāṇa dvīpam lavanodakah. Mbh. 6. 5. 15; 6. 11. 10; 6. 12. 8 has only the words lavanena samudraṇa somanātā pariśārītaḥ; kāśyoda bharaṇasrīsaṇa somanātā pariśārītaḥ; samudraṇa pariśārītah.
standing of this passage of the Mahābhārata, or distant islands and peninsulas such as Inde-China, Java, Sumatra, and Arabia may have been regarded as forming circles of land around India. Is the number seven taken from the number of the planets as Weber has suggested? In

The seven karshvas of the Avesta (cf. especially Bundahish 11-12; but the idea occurs as early as Ys. 32, 3) seem to be too late to be the source of the Indian conception. See Grundriss der iranischen Philologie, 2. 673; Justi, Handbuch, s. v.; Geiger, The Civilization of the Eastern Iranians, 1. 130 note; Weber, Indische Skizzen, p. 108; Spiegel, "Über das Zendavesta," ZDMG 6. 85-6.

See Bhāskara, Golādhyāya (3. 21-44) of the Siddhānta-śiromani as quoted by Wilson, The Vishnu Purāṇa, 2. 119; Matsya 122. 1; Varāha 86; Yogāvatīśa 3. 25. 15; 3. 73. 53; 6 (Uttarārāhā), 183. 60. Bhāskara, loc. cit.; Matsya 123. 1; Varāha 89; Yogāvatīśa 3. 73. 54 and 6 (Uttarārāhā), 134. 54 and 183. 65 have Gomeda in sixth place and omit Plaksa. This may be accounted for by the fact that Vāyu 49. 6; Vishnu 2. 4. 7; Kūrma 49. 3 give Gomeda as the name of a mountain or district of Plakṣadvīpa. Vāyu 45. 51-60 describes a Candradvīpa to the south of the Uttarārāhā as 'a great dvīpa, the abode of the gods' and continues: paścimena tu dvipasya paścimasya prakṛitrahitam caturojaṇasaḥsaṃram samatītya mahodadhiṃ dalaṃyojanasaḥsaraṃ sumantu parimandalam dvipasā bhadrakāram nāma. Mārkandeya 59. 28 after describing the Uttarārāhā says that in the ocean are the islands Candradvīpa, Bhadradvīpa, and Punya. Liṅga (according to Mitra, Notices of Sanskrit Manuscripts, 3. 215) describes a Candradvīpa and a Sakradvīpa. Varāha 84 (pp. 363-4) after a description of the Uttarārāhā has: tasyāvaiśa dvipasya paścimena caturojaṇasaḥsaraṃ atikramya devalokāḥ candradvīpa bhavati yo janojaṇasaḥsaraṃparimandalaḥ. In this are the mountains Candrakānta and Suryakānta. Then it describes a Śuryadvīpa as situated north of Uttarārāhā, and west of that (paścimena) the dvīpa Bhadrakānta. Kūrma also (47. 6) describes a Candradvīpa in connection with Uttarārāhā. Mārkandeya 59. 22 and Vāyu 45. 25 locate the mountains Candrakānta and Suryakānta in Uttarārāhā. Vāyu 49. 7; Vishnu 2. 4. 7; Kūrma 49. 3 locate a Mt. Candra in Plakṣadvīpa. What is the relation of Candradvīpa and Śuryadvīpa to the Śrīndvī and Candadvī of the Jainā? (cf. Weber, Indische Studien, 16. 391 and Warren, JAOS 26. 92). It is to be noted that the Romakasiddhānta (Aufrecht, Cst. 338b. 6) names the dvīpas Jamba, Kuśa, Candra, Śāmala, Plaksa, Gomeda, and Pusakara, with the substitution of Candra and Gomeda for Kraunas and Śāka. What is the relation of Candradvīpa to Śvetadvīpa and to Somagiri of the Rāmāyana? Kūrma 45. 2. 40 names the dvīpas Jamba, Plaksa, Śāmala, Kuśa, Kraunas, Śāka and Pusakara; but 49. 1 describes the Milk Sea as surrounding Jambudvīpa,
the passage just quoted from the Mahābhārata Sākadvipa is described in second place and more details are given about it than about the other dvīpas.

If the Sākadvipa of Mbh. 6. 11 is not to be located in the north are there any clues as to its probable location? Mbh. 12. 14. 23 (quoted above) unequivocally locates Sākadvipa east of Meru. A passage of Bhāskara says:"

Venerable teachers have stated that JambudvIPA embraces the whole northern hemisphere lying to the north of the salt sea, and that the other six dvīpas, and the (seven) Seas, viz., those of salt, milk, etc., are all situated in the southern hemisphere. To the south of the equator lies the salt sea, and to the south of it, the sea of milk, whence sprang the nectar, the moon, and the (goddess) Śrī and where the omnipresent Vāsudeva, to whose lotos-feet Brahmā and all the gods bow in reverence, holds his favorite residence. Beyond the sea of milk lie, in succession, the seas of curds, clarified butter, sugarcane juice, and wine, and, last of all, that of sweet water, which surrounds Vadavānala."

Even more significant is the important passage of Rāmāyana 4. 40 in which is given a long description of the journey that is to be made by the monkeys eastward (verses 19, 54) in search of Sītā."

It is there said that the searchers, after leaving India,

whereas in 50. 1 the Milk Sea is said to surround Sākadvipa. Further, in 49 (p. 429, 3) are the words Sākadvipaṃ samādyitya keśrodhayā śagurāh sātilah Śvetadvipaṃ ca tanmadhye nārāyanaparīṇām. A long description of Śvetadvipa and the worship of Nārāyaṇa practised there follows. Then 50. 1 continues: Sākadvipyam vistarāt dvipaṇaṃ vyavasthitah kośāntavavani samādyitya deśam puṣkarasamajñitam as though Śvetadvipa had not been mentioned. Why the unmotivated intrusion of Śvetadvipa? The manuscripts of the Kūmaṇa described by Mitra, Notices of Sanskrit Manuscripts, 3. 275-9 and by Weber, Verzeichniss Berl. 1. 128 seem to differ from this edition. Yogavāsiṣṭha 3. 73. 33-8 gives the deśams as Jambu, Śaka, Kuśa, Śveta, Kraunca, Gomeida, and Puṣkara; 6 (Uttarārdha). 183. 60 ff. has Jambu, Śaka, Kuśa, Kraunca, Sāmall, Gomeida, and Puṣkara. So 3. 25. 15, except that Plakas is substituted for Gomeida. The Nāradapañcāstra 2. 2. 84-91 (according to Weber, 'Die Rāma-Tāpaniya-Upanishad,' Abhandlungen Berl. Acad. 1864. 378 note) describes Śvetadvipa as an upadeśa of Sāmalldvipa.

As quoted by Wilson, The Vishnu Purāṇa, 2, 110-1.

*The passage is referred to by Barnett, The Antiquities of India, pp. 200-1 and by Mookerji, A History of Indian Shipping, pp. 55-6. Extensive use has been made of it by Gerin, Researches on Ptolemy's Geography of Eastern Asia, pp. 725-6 and often.
will first come to Yavadvipa (probably Java) samparājyopaśobhitam and Suvarnarūpyakadvipam suvarnakarṇamanditam; then to a mountain named Śiśira; then to a river raktajalām sūnakhyam sīkravāhinam; then to an ocean kālameghaprātimam; then to an ocean raktajalām lohitam nāma where there is a kūṭāśālmalī; then to the pāṇḍurameghāḥkāṃ kṣirodam in the midst of which is a mountain (mahan śveca rṣabhō nāma peratah) on which is a lake named Sudarśana; then to the jalodanī sāgaram in which is the Hayamukha (whirlpool). On the northern shore of this ocean is a mountain jātarūpaśīlo nāma sukhamān kanakaprabhak and beyond this, in the east, the Udayagiri, one peak of which is named Saumānasa. In Gorresio's edition, which differs considerably from the above account, the stages of the journey are marked by the following names: Jaladvipa, Ganadvipa, Jambudvipa, Śiśira, Kālodaka, Lohita (with the kūṭāśālmalī), Mt. Gośriga, Kṣiroda (with Mt. Amśumatā and Lake Sudarśana), Ghrāda, Jātarūpaśīla, Udayagiri, and Saumānasa. The first three names are puzzling. The ocean Kālameghaprātimam or Kālodaka is comparable to the Kālodaka, which, in some Jain accounts, surrounds the second dvipa Dhātaki. Lohita is comparable to the red ocean of wine (surā) which sur-

* Probably Sumatra. At any rate it corresponds to the later Suvarnabhūmi. The commentator takes the word as a deśadāsa containing two names.

* Harivamśa 220 (2. 370) gives this as the name of a mountain in the east. In Vṛṣṇi 3. 82-8 it is the name of a district in Plākṣadvipa; in Viṣṇu 2. 2. 26 and Bhāgavata 5. 16. 27 the name of a mountain near Mt. Meru; in Varāha (p. 331, 1, 7) the name of a prince of Śakadvipa.

* Compare Rāmacarīya 4. 46. 15: 'Having gone to the eastern region I beheld the Milk Ocean, the constant abode of the Apsarasas.' Harivamśa 231 (2. 401) mentions the Milk Ocean in the east in connection with the red ocean Lohitya and Mt. Udaya.

* Harivamśa 220 (2. 370) locates Udayagiri and Mt. Saumānasa in the east.

rounds Śālmalidvīpa; the mention of the kūṭāgālī makes the identification certain. Kṣiroda is comparable to the Milk Ocean which surrounds Śākadvīpa. The Ghrtodā is comparable to the Ghrtodā which surrounds Kuśadvīpa. Jalodā is comparable to the ocean of fresh water which surrounds Puṣkaradvīpa. Hayamukha is the same as the Vādavāmukha or Vādavāmala of Mbh. and the Purāṇas. The passage seems to be old, older even than the geographical passage of Mbh. 6. It probably reflects travellers' tales of voyages to the east. Note also that Rāmayana 4. 42. 38 locates Meru in the west, not in the north. Contrast with 4. 40 the late passage printed at the bottom of the page in the Bombay edition after 7. 37, which mentions Svetadvīpa and refers to 'the earth with its seven dvipas and seas.'

In Jātaka 463 is a description of a voyage made by a ship from Bharukaccha. After a favorable voyage of seven days it is carried away by a storm. At the end of four months it came to the Khuramāla sea (so called because it was full of great fish which stuck their sharp, razor-like snouts above the water); then it passed through the seas named Aggimāla (blazing like fire), Dadhimāla (the color of curds), Nilavannakusāmāla or Kusāmāla (the color of kusa grass), Nalamāla (red like coral, according to the scholiast), and came to the Valabhamukha.

---

*Nowhere do I find the name Rasāha connected with Śākadvīpa and the Milk Ocean, but Mbh. 5. 112. 22 and 5. 113. 1 locate a Mt. Rasāha in the east (5. 112. 1-2), across the ocean. In Mbh. and the Purāṇas it is the name of a mountain in India and of a mountain north of Meru. Cf. Wilson, The Vishnu Purana, 2. 117, 141 note. Vāyu 49. 11 locates a Mt. Rasāha in Plākadvīpa. Rāmayana 4. 41. 40 and Harivamsa 220 (2. 371) locate it in the south. In Kathāsārītāta 54. 16 Rasāha is the name of a mountain in Nārikaladvīpa (located by the Brhatashirha in the southeast).

*Hopkins, The Great Epic, p. 72, thinks that this obviously late passage is copied from Mbh. 12.

*By a curious coincidence the mediaeval traveller Maricoulli (Yule-Cordier, Cathay and the Way Thither, 3. 231), who voyaged from China to India, describes a sea which blazed like fire: 'The sea as if in flames, and fire-splitting dragons flying by.'

*Mbh. 6. 12. 9 describes a mountain in Kuśadvīpa as abounding in coral.

*For this whole passage see Hardy, Manual of Buddhism, p. 13.
Dadhimāla is comparable to the Puranic ocean of curds. Kusamāla is comparable to the Puranic Kuśadvīpa. Nalamāla is comparable to the Puranic red ocean of wine. Valabhamukha is the same as the Hayamukha of the Rāmāyana. This Jātaka also is evidently based on travellers' tales, and contains early elements. This is much more probable than the opposite conclusion, namely, that we have here reminiscences of the Puranic descriptions made still more mythical. The direction of the voyage is not given, but if the comparison with the account in the Rāmāyana has any validity it may well have been to the east.

Further, Varāhamihira (sixth century A. D.) in the Brhat-saṁhitā 14. 6 locates the Milk Ocean in the east.\(^{22}\)

Mbh. 6. 6. 55 describes Kaśyapadvīpa and Nāgadvīpa as forming the two ears of Saśa 'the hare' (a portion of Jambudvīpa), with the statement that they are situated in the north and south respectively. The Kumbakonam edition reads Śākadvīpa for Nāgadvīpa. The fact that in the Purāṇas Nāgadvīpa is regularly described as one of the nine varṣas of Bhāratavarṣa militates against the reading of the Kumbakonam edition,\(^{23}\) yet even so Śākadvīpa would hardly have been inserted in the southern text if Śākadvīpa were regarded as one of the concentric dvīpas. Kaśyapadvīpa does not seem to occur in the Puranic tradition.

There is enough evidence, I think, to lead to the conclusion that Śākadvīpa and a Milk Ocean were at an early date located in the east or south. The name originally had nothing to do with Śaka 'Scythian.'\(^{24}\) That connection was due to a later confusion. There is no reason at all for doubting the unanimous testimony of Mbh. and the Purāṇas that the dvīpas were named from trees and plants, except Krauñcadvīpa which was named

---

\(^{22}\) Karn (note ad loc.) thinks that the Gaurus, 'the Whites,' of Brhat-saṁhitā 14. 7 are to be connected with Svetaadvīpa.

\(^{23}\) For Nāgadvīpa see Vāyu 45. 79; Matsya 114. 8; Mārkandeya 57. 7; Vishnu 2. 3. 7.

\(^{24}\) Weber, 'Über die Magavyakti,' Monatsberichte Berl. Akad. 1879. 456, n. 2, accepts the Puranic etymologies for all the other names, but sees in Śākadvīpa (and Svetaadvīpa) names of 'politische Bedeutung.' See also Banerji IA 1908. 42. The arguments of Spooner JEAS 1915. 437-40 and of Hewitt, The Ruling Races of Prehistoric Times, p. 146 (who connects Śāka with the 'wet lands' of northern India) lack any solid foundation.
from Mt. Kraunca. The Mahabharata and the Puranas frequently name the Sakas as a barbarian tribe dwelling in the north or north-west, but nowhere do they connect the Sakas with Sakadvipa. Even if Sakya, the name of the clan in which Buddha was born, is to be connected with the name of the Saka tree, as Fleet argues with great probability, it proves nothing as to the origin of the name Sakadvipa. The teak tree is indigenous to both peninsulas of India. Granted an early acquaintance with Indo-China, the tradition which connects the name Sakadvipa with the Saka tree and with the east, is more credible than the later tradition which derives the name from that of a tribe in the north-west where there are no Saka trees. Granted that there are Saka trees in north-eastern India south of the Himalayas, granted that it could be proved, as has not yet been done by Hewitt or Spooner, that Sakas or Persians or other tribes from the far north-west invaded north-eastern India and settled there, there is not a scrap of evidence to prove that the name Sakadvipa was originally applied to that country or to any other part of India.

See for instance Mbh. 6. 7. 20; 6. 11. 27-8; 6. 12. 6-7; Vayu 35. 32; 49. 27. 44. 45. 61. 132-5; Matsya 114. 75; 122. 27. 81; 123. 36-9; Bhagavata 5. 20. 2. 8. 13. 18. 24. 30; Vishnu 2. 2. 18; 2. 4. 18. 33. 44. Compare Hopkins JAOS 1910. 353-4.

See for instance Ramayana 4. 43. 12; Mbh. 2. 32. 17; Vayu 45. 116; Matsya 114. 41; Markandeya 59. 14. Although Mbh. 2. 32. 17 locates the Sakas in the west, a neighboring passage 2. 30. 14 places the Sakas and other barbarians in the east. The same, apparently, is true of 2. 52. 16. See the note of Pargiter to Markandeya 58. 6. Are these the Buddhist Sakas or the Burmese Saks or Sakai? See Gerini, op. cit. 165-7, 255 note, 254 note. Yogavasishtha 6 (Uttarartha), 112. 28 and 124. 17 definitely locates the Sakas or Saka in the east. As I have no access to an edition of the text I quote from the loose translation of Mitra, who gives both acas and aks. Yet another passage (ibid. 123. 7 ff.) seems to locate Uttarakuru in the north, Kuaka and Salmali in the west (126. 19 refers Salmali to the south), Saka in the south, and Kraunca in the east. This text (3. 35. 15; 3. 73. 52; 6 (Uttarartha). 126. 9 and 183. 2) clearly refers to seven concentric dvipas and oceans, although 3. 59. 12 speaks of the four oceans. People living in one of the circular dvipas might be located in the north, south, east, or west; yet the fact that in two passages the acas or aks are located in the east is significant.

JRA 1906. 163. The conclusions drawn from this by Spooner in The Zoroastrian Period of Indian History, JRA 1915, are surely fallacious.
Mbh. 6. 11, 36-8 gives the names of four castes in Sākadvipa, but gives no names for castes in any of the other dvīpas. The last two names Mānasā and Mandaga cause no difficulty; the texts all agree. The Bombay and Kumbakonam editions have Maṅga for the first and Maśaka for the second. The Calcutta edition has Mrga for the first and Maśaka for the second. Hall, in a note to Wilson, The Vishnu Purana, 2. 199-200, reports that three of his manuscripts of that Purāṇa have Mrga in both occurrences of the name, two have Mārga in the first and Maga in the second, the rest, 'a preponderant number,' have Maga in both places. The Vāyu, Matsya, and Mārkandeya do not give the names at all. The Kūrma 49 (p. 419, l. 14) has Maga and Magadhā in four manuscripts, Mrga and Magadhā (the text reading) in the other four. The Brahma 20. 71 has Maga and Māṣadha. The Bhāgavata 5. 20. 28, following a variant tradition, has Rātrata, Satyavrata, Dānavrata, and Anuvrata.\footnote{The Kūrma like the Bhāgavata and the Vishnu gives a list of castes for all the dvīpas. The Kūrma and Vishnu agree for the most part. The Bhāgavata is entirely different. The working out of names for all the castes of all the dvīpas seems to be a late development based on the names given by the Mahābhārata for Sākadvipa.}

The Khalnakātraśaapiṭkā\footnote{Weber, Monatsberichte Berl. Akad. 1886. 53; but see pp. 55, 59, 62.} follows the Bhāgavata for the castes of Sākadvīpa, and locates the Magas, Masakas, Mānasas, and Mandagas in Plakkadvīpa. The Magavyakti\footnote{Weber, Monatsberichte Berl. Akad. 1879. 455.} and the Śāṃvacijaya\footnote{Weber, Monatsberichte Berl. Akad. 1886. 32. Cf. Bhandarkar IA 1911. 17-8.} have Maga, Māna (or Magasa), Mānasā, and Mandaga. The Bhavisya\footnote{Aufrecht, Cat. Ocor. 33a. 14.} has Maga, Magasa, Mānasā, and Mandaga. Alberuni,\footnote{Translated by Sachau, 1. 235.} quoting from the Vishnū as known in his time, gives Mrga, Māgardha, Mānasā, and Mandaga. Unless a careful examination of the oldest and best manuscripts of the Mahābhārata shows that Maga is the probable reading there is no reason at all for changing Mrga or Maṅga to Maga.\footnote{Weber, Monatsberichte Berl. Akad. 1879. 456 note, says 'dafür ist natürlich Maga zu lesen' and 'dass die Bombay Ausgabe Maṅga hat, will nichts besagen,' and Indische Studien, p. 106 note: 'Maga (so ist zu lesen statt Mrga).'}
corruption of the text be involved it is vastly easier (considering the peculiar character of the Devanāgarī alphabet) to explain the dropping of ṛ or ū than the addition of the same letters. The dropping might have been accidental; the addition seems to have been intentional. Is it not significant that there are no variants for the last two names? The Mahābhārata and the Harivāmaṇa, even in late passages, make no mention of the Magas. So far as I know, the earliest passages in which the Magas are mentioned are in Varāhamihira's Brāhmaṇaḥhitā 58. 46-8 and 60. 19. 78

In the geographical passage Mbh. 6. 5-12 Svetadvipa is not mentioned. Mbh. 12. 335. 8-9 describes Śvetadvipa as a large dvipa in the north, distant more than 32,000 yojanas from Meru, and situated in the Milk Ocean. Mbh. 12. 336. 23 describes Ekata, Dvita, and Trita as practising penances north of Meru on the shores of a Milk Ocean, and in verse 27 Śvetadvipa is said to lie on the northern shores of this Milk Ocean. Compare with this the parallel passage Mbh. 6. 8. 10-11 in which the northern ṛṣa Airāvata is said to stretch to the ocean, and verse 15 which states that Hari dwells north of the Milk Ocean. 78 However, in Mbh. 6. 11. 6 Jambudvipa is said to be surrounded by an ocean of salt water double its own extent, 77 and in verse 10 Sākadvipa is described as surrounded by a Milk Ocean. Mbh. 12. 336. 23-7 agrees exactly with 6. 8. 10-15, but cannot be brought into agreement with 6. 11. 10. All that is lacking in 6. 8. 10-15 is the name Svetadvipa. It is natural to draw the conclusion that the later passage has merely superimposed bhakti ideas upon an older mythical conception, and given the name Śvetadvipa to Hari's abode. The conclusion that Mbh. 12. 335-6

his argument and the fact that they deliberately aim at a glorification of the Sākadvipīya Brahmins and a connection of them with Magadha (Weber, ibid. 1889. 47 and note, 54, n. 2) such a conclusion is arbitrary and absurd.

77 Compare Harivāmaṇa 233 (2. 405) which relates that Vishnu returned to his abode on the northern shores of the Milk Ocean.

76 Compare the Uttarākhanda of the Padma (257. 120) which describes Śvetadvipa as situated north of the Toyādbhī.
is based on old mythical conceptions is corroborated by the following passages. In Rāmāyana 4. 43. 53 the monkeys in the course of their search for Sītā in the north come to the shores of the ocean. They are told there that to the north lies the ocean, that in the midst of this the great golden mountain Somagiri is situated, and that on this mountain the lord of the gods (bhagavān viśvātmā sambhur ekādaśātmako brahmā devēśah) dwells with the Brahmarṣis. You cannot travel to the north of the Uttarakurus. That region is untroudden by the steps of any living beings. Somagiri is difficult of access even to the gods themselves. Gorresio's edition has the additional words: 'Only those who have gone to the world of Indra, of Brahmā, to heaven have seen Somagiri.' Further, Mbh. 2. 28. 9-12 describes how Arjuna in his career of conquest penetrated far north to the Uttarakurus. There he was told: 'He that enters this country—if he is human—is sure to perish. He who shall enter this country must be more than man. Even if you did enter you could see nothing here, for nothing here can be seen with human eyes. He would be blinded by the god-glory just as the sages of Mbh. 12. 336 were. Moreover, Aitareya Brāhmaṇa 8. 23 describes how king Bharata conquered the whole earth except Uttarakuru. There he was told: 'This is the land of the gods; no mortal can conquer it.' Harivaṃśa 169 (2. 186-8) relates that Krishna, Arjuna, and a Brahman mounted a chariot and journeyed north. After passing a multitude of mountains, rivers, and forests they came to an ocean. At the command of

---

28 This passage is parallel to Mbh. 6. 8. 10-15. The Milk Ocean is not mentioned. Harivaṃśa 220 (2. 372) locates in the north a Mt. Saumya, the light of which replaces the light of the sun just as in Rāmāyana 4. 43. 54. Compare Mbh. 13. 165. 33 'sacred Somagiri.'

29 Compare Mbh. 5. 14. 6-9, which describes the search of Indrāni for Indra, who had fled after the slaying of Vṛtra: 'Having traversed many divine forests, and many mountains, and having crossed the Himavat, she reached the northern side of it. And having crossed an ocean which extended over many yojanas she came to a large dvipa, which was covered with trees and creepers. There she saw a beautiful, heavenly lake frequented by many birds, a hundred yojanas long and as many broad. There she saw, O son of Bharata, thousands of beautiful lotuses of five colors, full-blown, and around which bees hummed. Indra was there discovered hidden in a lotus stalk. The hiding-place is usually located in Lake Mānas. Cf. Mbh. 12. 342. 42. What ocean is meant in these passages?
Krishna the ocean opened and allowed them to pass through as though on dry land. They then passed Mt. Gandhamādana and came to the seven mountains Jayanta, Vijayanta, Nila, Rajata, Meru, Kailāsa, and Indrakūṭa. At the will of Krishna they disappeared and opened a way. The chariot passed through them as the sun passes through clouds. Then they came to a thick mist. Here the horses came to a halt, unable to proceed farther. Krishna struck the mist with his cakra and the air cleared. Arjuna saw on all sides a marvellous light. Krishna left Arjuna and the Brahman, and entered into the great light. He returned with the children of the Brahman; and in an instant they were back in Dvāravatī. Krishna later explained to Arjuna that the great light was he himself (Krishna). * In penetrating it mortals wise in yoga reach final emancipation.* Mbh. 5. 111. 1-6 has the following striking passage: ‘Since a man is absolved from his sins in this quarter and since he attains salvation here, it is called North (uttara), O twice-born one, from its power of absolution (uttarāna). And since the north, which is the region of gold, stretches between the east and the west therefore is it called the central region. In this northern region, which is the best, none that is not tranquil, none that has not brought his soul under control, and none that is vicious, lives. Here lives Nārāyaṇa and the victorious Krishna, that best among men, in the hermitage of Badari, and so does the eternal Brahmā. Here on the breast of the Himavat lives Mahēśvara who is endued with effulgence like that of the fire which blazes at the termination of each Yuga. He is invis-

---

38 Compare Mbh. 12. 333. 10.
39 Compare Mbh. 13. 14. 382-3. Vishnu relates that after he had performed severe penances he saw a great light ‘that seemed to be as dazzling as that of a thousand suns.’ In the center of this he saw a cloud which looked like a mass of blue hills, and within the cloud was Maḥādeva of dazzling splendor. In Mbh. 12. 336. 39-40 also Vishnu appears in the midst of a great light which seemed ‘like the effulgence of a thousand suns.’
40 Compare Mbh. 12. 334. 16-18 which relates that Krishna, Hari, Nara, and Nārāyaṇa were once in one form, but now are four. Nara and Nārāyaṇa are now dwelling in the hermitage of Bādari (at the source of the Ganges). Krishna and Hari also lived there formerly. It is clear from this and what follows that the original single form of Vishnu is to be found farther north. It is taken farther and farther away from the world of reality.
ible to the munis, and to the gods, including Vâsava, the Gandharvas, the Yakšas, and the Siddhas. He is visible only to Nara and Nârâyana. Here lives the eternal Vishnu of a thousand eyes, a thousand feet, and a thousand heads who appears one by the power of illusion.' Mbh. 3, 163, 17-24 tells that the place where Nârâyana resides is invisible even to the gods. It is situated to the east of Mena: yatayas tatra gacchanti bhaktyâ nârâyano nâryâma karvin, pareṇa tapasâ yuktâ bhûvatâh karmabhûk ābhâsâh, yogasiddhâ mahâtmânās tamamohavivarjitaḥ. Mbh. 3, 43, 4-6 describes a journey to Amaravati, the city of Indra. It represents an older conception before that was overlaid with the bhakti ideas. 'None but those who have performed penances, and poured libations on fire, can behold it. That place is for the performers of pious deeds, not for those who have turned their faces from the field of battle. It is invisible to those who have not celebrated sacrifices or performed penances; to those who have turned away from the Veda and the Sruti; to those who have not bathed in sacred waters; to those who are not distinguished for sacrifices and gifts. Those who have put obstacles in the way of the performers of sacrifice, who are mean, who are addicted to drinking, who have violated their preceptor's bed, who have eaten meat, who are wicked-minded, are not able to see it.' See also Mbh. 3, 146, 92-3 atah param agamyo 'yam parvatah sudhurûrahah. vinâ siddhasattvam vîra gatir atra na vidyata, devalokasya naro 'yam agamyo mânusâh sadhâ; 3, 159, 22 na cûpy atah param sâyam gantum bhavatasaityamâh, vihâro hy atra devânâm amânuṣagatish tu sâ; 5, 111, 19-20 naitat kenacid anuṣrava devapûrvam devam suvâsebhâ ye nârâyanaṁ devam naraṁ vâ jîvam anyayam. The Sûryasiddhânta 12, 41 (cf. Wilson, The Vishnu Purana, II. 207) states that 'Northward, in the elime Kuru, is declared to be the city called that of the Perfected (siddha); in it dwell the magnanimous Perfected, free from trouble.' Passages which describe the perfection of the inhabitants of Uttarakuru, or which call the north puṇyas could be multiplied, but these are enough for my purpose. Such passages, which obviously fall into the same category as Mbh. 12.

*Compare Mbh. 5, 111, 19-20 and 12, 344, 4 where Nara and Nârâyana declare that no one but they can reach that place where dwells the original form of Vishnu. A way was later found through bhakti by which all bhākṣas could go to the realm of Vishnu.
335-6, have never been discussed by those who have tried to prove Christian influence on the Śvetadvipa story. They prove clearly an early conception (long before any possibility of Christian influence) of a wonderful and mysterious god-land in the far north. The earlier way of reaching it, as is apparent from the description of Indra's city Amaravati, was through sacrifices and penances. These gradually gave way to the developing bhakti ideals. This god-land was located farther and farther away in the north beyond the bounds of the world of reality. All the Mbh. 12. 335-6 did was to name Nārāyaṇa definitely as the supreme god, and to connect with him the bhakti ideas.

Moreover, there are Buddhist accounts of a wonderful lake Anavatapta located in the far north. It could be reached only by those who had supernatural powers, the faculty of transporting themselves at will by magic. Here Buddha and the Buddhist saints were wont to transport themselves from India, through the air, in the twinkling of an eye, just as in the Hindu stories the great sages transported themselves through the air to Śvetadvipa to see Vishnu. There burned incense which released all the world from the consequences of sin. There too was a goodly palace, and all about were strange trees and flowers, through which breathed fragrant airs, and birds with plaintive songs made harmony. The Buddhist descriptions of Sukhāvati also, I suspect, fall into this same category. Should not these passages which describe a purely mythical god-land in the north be taken into account by those who argue for Christian influence on the Śvetadvipa story?

Whence came the conception of a Milk Ocean in the north is not certain. What is its relation to the Milk Ocean in the east? In the latter case it may be merely metaphorical, based on the color of some actual ocean. In the former case it seems to be entirely mythical. Śākadvipa and Śvetadvipa, in spite of the fact that both are connected with a Milk Ocean, seem to be independent in origin. Is the Milk Ocean in the north related in any way to the conception that in Uttarakuru are Kṣīra trees and rivers and lakes of milk?

---

82 See Watters, On Yuan Cheung's Travels in India, 1. 35.
83 Must we regard this too as Christian incense? Surely not.
84 See Mbh. 6. 7. 4-5; Vāyu 45. 14, 27; Matsya 113, 71; Mārkaṇḍeya 39. 24-5; Varāha 84 (p. 363, 1. 5-6).
The word *dvipa* at the end of the compound lost its original meaning of 'island,'" for some of the late texts locate a Śveta-
dvipa near Benares or in Gujarat." That is due merely to the
copying of a name which had become stereotyped as the name of
a dwelling place of Vishnu.

I cannot agree with Grierson (IA 1908, 373) that Mbh. 12.
192. 7-19, which describes a marvellous country north of the
Himālayas, shows traces of Christian influence. The passage
reads: 'On the northern side of the Himavat, which is sacred
and possessed of every good quality, there is a region that is
sacred, blessed, and highly desirable. That region is called the
other world (para lokah). The men who inhabit that region are
righteous in act, pious, of pure hearts, free from greed and
infatuation, and not subject to afflictions of any kind. That
region is like unto heaven. Death comes there at the proper
season. Diseases never touch the inhabitants. Nobody
cherishes any desire for the wives of others. Everyone is devoted
to his own wife. These people do not kill one another, or covet
the property of others. There no sin occurs, no doubt arises.
There the fruits of religious acts are visible. There some enjoy
seats and drinks and food, and live within palaces and mansions.
Some are adorned with golden ornaments, and are surrounded
by every article of enjoyment. There are some who eat very
abstemiously, merely for the sake of keeping body and soul
together. Some, with great toil, seek to restrain the life-
breaths.—The northern region of the earth is highly auspicious
and sacred. Those belonging to this region (that we inhabit)
who are doers of righteousness are reborn in that region.' This,
in essentials, agrees with the descriptions of the inhabitants of
Uttarākuru. Does not this passage too fall into the same cate-
gory as the passages just quoted which describe a wonderful god-
land in the north?

Mbh. 12. 335-6 (and the following chapters) may be compara-
tively late, but the only reason for ascribing them to as late a

---

*See Märkundeya (trans. Pargiter), p. 364, note, for *dvipa* as equivalent
to 'coast,' the land between two rivers; and Hopkins JAOS 1910, 371 note.

*Sambhalagrámamāhātmya* (chapter 5) of the Skanda (Mitra, Notices of
Sanskrit Manuscripts, 5, 69; Wilford, Asiatic Researches 11. 88; Aufrecht,
Cat. Oxon. 73b. 12); Nagarakhanda of the Skanda (Wilford, Asiatic
Researches, 11. 87); Kāśikhanda of the Skanda (Aufrecht, Cat. Oxon. 71a.
13; Wilford, Asiatic Researches, 11. 88).
date as 600 A. D.," is the desire of bringing them into connection with Christian communities in Central Asia.

What are the elements in the description of Svetadvipa in Mbh. 12. 335-6 which have led so many to argue for Christian influence? In Mbh. 12. 334. 8-9, 18 it is related that the one original form of Narayana took birth in the quadruple form of Nara, Narayana, Hari, and Krishna. The first two took up their abode in the hermitage of Badari, and practised penances there.86a They were still there when Narada came to visit them. Hari and Krishna also formerly dwelt there, but they were no longer there at the time of Narada's visit. After a conversation with Narayana, Narada (12. 335. 2) declared his intention of going to see the original form of Narayana. Possessed as he was of great yoga-powers he soared into the sky and reached the summit of Meru. As he rested there he cast his eyes towards the north-west and beheld in the Milk Ocean the great island Svetadvipa, more than 32,000 yojanas distant from Meru. The inhabitants of Svetadvipa are then described as follows: 1. They have no senses. 2. They live without taking food of any kind. 3. Their eyes are winkless. 4. They always emit excellent perfumes. 5. Their complexions are white. 6. They are cleansed from every sin. 7. They blast the eyes of those sinners who look at them. 8. Their bones and bodies are as hard as diamonds. 9. They are beyond good and evil; they regard dharma and adharma in the same light. 10. They look as though they were of celestial origin. 11. All of them have auspicious marks and are possessed of great strength. 12. Their heads seem to be like umbrellas. 13. Their voices are deep like the thunder of the clouds. 14. Each of them has four symmetrical (sama) muskas. 15. The soles of their feet are marked by hundreds of lines. 16. They have six white teeth (danta) and eight large teeth (damisfra). 17. They have many tongues with which they seem to lick the sun.—Then is given the story of the king Uparicāra and the seven sages. The sages, after they had performed long penances, and after they had worshipped Narayana, composed a religious treatise 'consistent with the four Vedas.' To them

86a Garbe, Indien und das Christentum, p. 192.
86b Compare जाके कुंकुमांये of 12. 334. 10 with the same words of 6. 8. 15.
86c Fajra may refer to the 'thunder-bolt.'
Nārāyana then said: 'Excellent is this treatise that ye have composed consisting of a hundred thousand verses.—In complete accordence with the four Vedas—this treatise of yours will be an authority in all the worlds as regards both Pravṛtti and Nivṛtti.' There is not a trace of Christian influence in the whole chapter. The inhabitants of Śvetadvipa belong to the type of the Hindu emancipated saint, plunged in contemplation, the senses withdrawn from worldly things, subsisting on little or (theoretically) no food. One of the five common marks by which the gods may be recognized is that their eyes are winkless. Fragrant perfumes are characteristic of the gods and of godmen. A bright light radiates from the saint. Auspicious marks on body and limbs are characteristic of the gods and great saints. The significance of the umbrella-shaped heads, and of the teeth and 'damśṭra' is doubtful. The word muska regularly means 'testicle.' Nilakantha on 12. 335. 11 gives for muska the optional interpretation 'arm,' but as yet there seems to be no other authority for that meaning.** However, in what may be a reflection of this passage in Kathāsaritsāgara 115. 102 it is said: 'When Brahmā and Indra and Brhaspati had deliberated together to this effect, they ascended a chariot of swans and went to Śvetadvipa, where all the inhabitants carried the conch, discus, lotus, and club, and had four arms, being assimilated to Vishnu in appearance as they were devoted to him in heart.' Kennedy (J. R. A. S. 1907. 482) believes that 12. 335 is later than 12. 336; probably because of the fact that in 12. 336 it is clearly implied that the bhakti teachings in all their perfection were not yet known to India, whereas in chapter 335 the composition, in India, of a treatise dealing with bhakti is described. Against this conclusion it may be urged that if Christian influence be involved it ought to be traceable more clearly in the later passage 12. 335 than in the earlier passage 12. 336. If there was but one journey to Central Asia to the home of Christian bhakti it seems impossible to explain the far reaching influence of bhakti.

**Telang, in a note to 12. 336. 11 (in Roy's translation), seems inclined to follow Nilakantha in taking the word in the sense of 'arm.' In the parallel passage 12. 343. 36 the Calcutta edition reads astabha jau in the place of astadamśtra. Roy translates 'four arms,' and Telang remarks that if we accept the reading of the Calcutta edition the word muska becomes clear. I fail to see the logic of this remark or of Roy's translation.
Sākadvipa and Śvetadvipa

from the confused accounts of the first and only travellers. If there was further communication with the supposed Christian communities of Central Asia, and if the bhakti movement in India received any vital help from such communication, the later passages ought to show a deeper and deeper knowledge of Christianity, instead of becoming more and more mythical in their description of the Christian inhabitants of Śvetadvipa. If the journey (or journeys) was a real one to Central Asia, why are the voyagers always the purely mythical sages Nārada, and Ekata, Dvita, and Trita? The very names argue strongly against the historicity of the journey. The only element in 12. 335 which can possibly be used to argue Christian influence is the whiteness of complexion of the inhabitants of Śvetadvipa. But always in India things connected with Vishnu, and with the gods in general, are described as bright, light, white. Whiteness of complexion, in the light of the passages given below, is no proof of Christian influence.\(^*\) The whiteness of the complexion of its inhabitants was surely not the point of departure for the name Śvetadvipa. The whole description merely implies that the people of Śvetadvipa were god-like, and the type of god is distinctively an Indian one.\(^*\)

Mbh. 12. 336 relates how the sages Ekata, Dvita, and Trita had performed penances for thousands of years in the country north of Meru, on the shores of the ocean, for the purpose of beholding

\(^*\)Mbh. 6. 8. 12-14 describes the inhabitants of Airāvata as having the color and fragrance of the lotus, as winkleless, as taking no food, as completely self-controlled, as having descended from the land of the celestials, as sinless. Mbh. 6. 7. 10 describes the inhabitants of Bhadrāvā as white; 6. 12. 16, 23 describes the inhabitants of Kuśadvipa as white; 6. 11. 22 states that there are white men and black men in all the dvipas. Vāyu 43. 7 locates white men in Bhadrāvā east of Meru. Vāyu 49. 55, 68 describes the inhabitants of Kuśadvipa and of Krauṇḍadvipa as gauroprayaḥ. The statement of Mbh. 12. 345. 85 that the Ekāta doctrine is followed by 'the Whites and by Yatis' is not sufficient to prove that the 'Whites' were any historical people of Central Asia, even though the interpretation of the commentator gṛhaṭhādīnaṁ yatindrāṁ kṣaṇādākhārīdānā is very unlikely. The Brāhmaṇa 14. 7 locates the Gauras, 'Whites,' in the east.

\(^*\)In the Buddhist descriptions of Sakkāvatī in the Sakkāvatīvyūha (trans. SBE 49) the inhabitants of that blessed land are said to be like the gods, to have bodies as strong as diamonds, to emit excellent perfumes, to need no food, to be sinless, and absolutely truthful, to bear on their hands and feet all sorts of auspicious marks, to be purified from all sin.
the real form of Nārāyana. A voice from heaven told them that on the northern shores of the Milk Ocean was Śvetadvipa. 'The men who inhabit that island have complexions as white as the rays of the moon and are devoted to Nārāyana. Worshippers of that best of all Beings, they are devoted to him with their whole souls. They all enter into that eternal and illustrious deity of a thousand rays. They are divested of senses. They eat no food. Their eyes are winkless. Their bodies always give forth a fragrance. The inhabitants of Śvetadvipa believe and worship only one god. Go thither, ye ascetics, for there I have revealed myself.' They went, but arrived there they could see nothing; they were blinded by the energy of the great deity. To acquire greater holiness they performed penances for a hundred years. Then they beheld men who were white in color like the moon, and possessed of every mark of blessedness. 'Their hands were always joined in prayer. The faces of some were turned toward the north, and of some toward the east. They were engaged in silently thinking upon Brahman. The japa performed by these high-souled persons was a mental japa. Hari became highly pleased with them since their hearts were entirely set upon him. The effulgence which was emitted by each of these men resembled the splendor which the sun assumes when the time comes for the dissolution of the universe.—All the inhabitants were perfectly equal in energy. There was no superiority or inferiority among them.' Suddenly the pilgrims beheld a light like the concentrated effulgence of a thousand suns. The people all ran towards the light, their hands joined in a reverential attitude, full of joy, uttering the one word namas (we bow to Thee). The pilgrims then heard a loud cry uttered by the people as though they were occupied in offering a sacrifice to the great God, but they themselves were deprived of their senses by his energy, so that they could not see or feel anything. They heard only the words: 'Victory to thee, O thou of eyes like lotus-petals! Salutations to thee, O creator of the universe! Salutations to thee, O Hṛṣikeśa, O foremost of beings, thou who art the first-born!' A breeze wafted the fragrance of celestial flowers. 'Without doubt Hari appeared in that place whence the sound arose. As regards ourselves, stupefied by his illusion, we could not see him.' The thousands of men did not honor the pilgrims by a glance or a nod. Then a voice was heard saying:
'These white men who are divested of all outer senses are able to behold Nārāyana. Only those who are looked upon by these white men are able to behold the great God. Go hence, ye munīs, to the place whence ye have come. That great deity is not able to be seen by one who is destitute of devotion.' He could be seen only by those who through long ages have devoted themselves wholly to him. They are told that they had a great duty to perform in spreading the true religion during the coming Treta age. Commenting on this passage Grierson (JRAS 1907. 316) says: 'Is not this just the account that would be given by a devoutly-disposed stranger of the gorgeous ceremonies of some of the ancient Eastern Christian congregations—the universal equality; the proclamation of monotheism; the necessity of purity for seeing God; the great church into which God, visible only to the eyes of faith, Himself descended; the adoration of the First-born; the silent prayer; the bursting forth of the loud Gloria in excelsis; the melodious chant of the eucharistic ritual.—The pilgrims tell the story of a state of affairs existing outside of India, and for which India was not yet ripe. It was here, they were told, that perfect bhakti existed, and from here it must be brought to India. It came.' Not a word of exact description of any great church buildings in Central Asia; not a word of exact description of the alleged gorgeous Christian ceremonies in Central Asia at this period. The equality of the worshippers is no sign of Christian influence. Equality, actual or theoretical, was not unknown to early Buddhism and to other Indian sects. There are no castes in heaven. None of the other elements in the description are any more characteristic of Christianity than they are of Hinduism. The beginnings of bhakti go far back into the pre-Christian period, long before there can be any question of Christian influence. If the ideals expressed in these passages were entirely new in India, if they bore any marked

---

[Compare Vāyu 33. 49 for a description of life in Kimpurṣa, and the seven other varṣas, omitting the Bhāratavāra: dharmaḥ dharma 'tvā na te vāvāśa vāvāśa vāvāśa. Mbh. 12. 188. 10 states that originally there existed only one caste, the Brahman. Differences arose through men's works. Going to Nārāyana's abode naturally implied a return to this original perfect state where there was no caste or inequality.

Grierson's statement (JRAS 1907. 313): 'Suddenly, like a flash of lightning, there came upon all this darkness a new idea' has been later much modified in his article Bhaktamārga in ERE. See the evidence collected by]
resemblance to any specifically Christian points of doctrine, if they were not imbedded in a mass of stereotyped Indian mythology, we might be tempted to press the vague general Christian parallels. Those who argue for Christian influence give us nothing but loose, general similarities such as the older workers in folk-lore thought to be sufficient to prove that one fable had been borrowed from another. On the other hand we have in India in many passages, some of which have been referred to above, the conception of a wonderful, mysterious god-land in the north, inhabited by people who are assimilated in type to the varying conception of the Indian gods. The only names of travellers to this wonder-land are those of old mythical Indian sages. In the light of these mythical elements is it not likely that the mythical elements in the description of Śvetadvīpa are original; that the Mahābhārata in developing the bhakti ideas merely made Vishnu sponsor for them and located his abode in the old northern god-land? Even if it could be proved, as has not been done, that Central Asia swarmed with Nestorians in the sixth century A. D., the evidence of the Mahābhārata is not enough to prove that the Hindus knew these Christians or borrowed anything from them.

Mbh. 12. 338 tells again of a journey made by Nāryāna to Śvetadvīpa. He addressed to Nāryāna a long hymn which is typically Indian, devoid of any distinctively Christian elements. Thereupon Nāryāna revealed himself to Nāryāna. The description of Vishnu’s form is entirely Indian. Nāryāna delivered a discourse on bhakti, the background of which is Śāṅkhyā and Yoga with all their Indian technicalities. There is not a trace of Christian philosophy or theology.

Mbh. 12. 343 relates that Nāryāna returned from Śvetadvīpa to the hermitage of Badari where the sages Nara and Nāryāna were. ‘Both of them bore on their chests the mark called the Śrīvatsa, and both had matted locks. The light which radiated from them was greater than the light of the sun. Their palms bore the mark called the swan’s foot. The soles of their feet bore the mark of the discus. Their chests were very broad, and their arms reached to their knees. Each of them had four

Bhandarkar, Vaishnavism, Saivism, and Minor Religious Systems. The theory that the bhakti movement in India originated through contact with Christian communities in Central Asia can no longer be maintained. The only question at issue is whether Christian ideas later merged with the bhakti stream.
mū̄kas. Each of them had sixty teeth (danta) and eight dānisťras." Their voices were as deep as the thunder of the clouds. Their faces were handsome; their foreheads broad; their brows, cheeks, and noses were beautiful; their heads were like umbrellas. As he gazed at them Nārada thought that they seemed to resemble in appearance the men he had seen in Śvetadvipa. Here too the purely mythical character of the description is apparent.

In the later texts, whether they all copy the twelfth book of the Mahābhārata or whether they draw from a widely diffused belief, it became a commonplace of thought that the real home of Vishnu was in Śvetadvipa, although there seems to be a tendency to remove Śvetadvipa still farther away from the world of reality by locating it beyond the Lokāloka mountains. Still later Śvetadvipa was brought into connection with Rāma. The Pātālakhandha of the Padma (according to Wilford) describes Śvetadvipa as the home of a subordinate form of Vishnu; his real home is in Mahārajatabhūmi beyond the Lokāloka mountains in Nārāyanapura which is as resplendent as 100,000 suns. The Kūrma 49 (p. 420 ff.) gives a long account of Śvetadvipa and the devotion of its inhabitants to Vishnu. The Uttarakhanda of the Padma (257, 44, 120-55) has a long description of Vishnu's dwelling in Śvetadvipa on the northern shores of the Toyādhi. The Utkalakhanda of the Skanda describes how the Vātā tree of Śvetadvipa is a single hair of Vishnu which fell to the ground, and relates how it was miraculously transported to Utkala. The Sahyādrikhanda of the Skanda locates the abode of Hari north of the Milk Ocean. The Prakrtikhandha of the Brahma-

vaivarta\textsuperscript{101} has a Svētadvipa\textsuperscript{ā} vīśnour āgamanādikathanam. The Kṛṣṇajanamakhandha of the Brāhmaṇa-vai carta\textsuperscript{102} is full of references to Svētadvipa. The Ganesa Purāṇa\textsuperscript{103} locates one paradise of that god, who is identified with Viśnu, in Svētadvipa, another in the Ikṣu ocean, and connects Rāma and the dwarf avatar with Svētadvipa. The Viśnu-dharmottara\textsuperscript{104} and the Gargācāryasamhitā\textsuperscript{105} call Viśnu Svētadvipa-dhipa. The Rājatarangoṇi 3. 471 and 8. 2435 refers to Svētadvipa as a place of deliverance.\textsuperscript{106} The Varāha 2. 63 and 66. 3 relates journeys of Nārada to Svētadvipa,\textsuperscript{107} and 138. 93 declares that the good go to Svētadvipa as a place of everlasting happiness.\textsuperscript{108}

Going back to the tradition of the Bhavisya\textsuperscript{109} is the idea that certain Brāhmans named Magas, the so-called Śākadvipa Brāhmans, came from Śākadvipa to India. The reference clearly is to the coming of the Zoroastrian sun-worshippers from Persia to India. Maga has been taken as the Mahābhārata reading for the name of the Brāhman caste of Śākadvipa, and Śākadvipa has, apparently, been brought into connection with the Sakas. All the texts, however, which relate to these Śākadvipa Brāhmans are too late to have any bearing on the problem of the origin of the name, or on the problem of the original location of Śākadvipa.\textsuperscript{110}

\textsuperscript{110} See Weber, 'Über die Magavyakti,' Monatssberichte Berl. Akad. 1879. 446 ff.; 'Über zwei Parteischriften zu Gunsten der Maga resp. Śākadvipa
The Kathāsarsūtsāgara mentions Śvetadvipa briefly in several passages:

17. 8 'Vishnu, who knoweth all, dwelling in the Milk Ocean, gave the following command to Nārada, an excellent hermit, who came to visit him'; 63. 54 'There is a region in the south of the Himalaya, called Kashmir—where Śiva and Vishnu, as self-existent deities, inhabit a hundred shrines, forgetting their happy homes in Kailāsa and Śvetadvipa'; 67. 96 'When the rṣi Mātāṅga had said this, he performed the ceremony of bathing and other ceremonies, and went to Śvetadvipa through the air to visit the shrine of Vishnu'; 101. 259 'Then the hermit Mātāṅga . . . said to that prince, "My son, I must today go for a certain affair to Śvetadvipa"'; 115. 101 'When Brahmā, Indra, and Bṛhaspati had deliberated together to this effect, they ascended a chariot of swans, and went to Śvetadvipa; where all the inhabitants carried the couch, discus, lotus, and club, and had four arms, being assimilated to Vishnu in appearance as they were devoted to him in heart.' There they saw the god in a palace composed of splendid jewels, reposing on the serpent Sesa, having his feet adored by Laksīṇī; 120. 67 'Surely his glory furnished the Disposer with the material out of which he built up the White Island, the Sea of Milk, Mount Kailāsa, and the Himalayas.' Chapter 54 contains a long story about a visit made to Vishnu in Śvetadvipa. In the Brhatkathāmanāṭjari this is reflected only in the few verses, 15. 192-201. It is lacking in the Brhatkathaślokasaṃgraha, at least in the fragment known at present. Naravāhana-datta, on a hunting expedition, came to a beautiful lake where he saw four men, of heavenly appearance, dressed in heavenly garments, adorned with heavenly jewels, engaged in picking golden lotuses. They told him that there was in the midst of the sea a great island named Nārikela. There they lived on four

Hopkins' statement (J.AOS 1910. 372) that Śvetadvipa is referred to only in the Mahābhārata, the Harivamsa, and the Purāṇas needs modification.

Cf. 55. 54-6. Identified by Tawney (1. 525 note), and by LaCroix, Guṇḍāyā et le Brhatkathā, p. 95, with Ceylon; by Gorini, Researches on Ptolemy's Geography of Eastern Asia, p. 807, with the Nicobars; by
mountains named Mainâka, Vṛṣabha, Cakra, and Balâhaka.\footnote{Mbh. 6. 12. 18 locates Mainâka in Kramâcadvipa; 3. 89. 11 locates it in the west. Mainâga first occurs in Tirittiriya Aranyaka 1. 31. 2. For Mainâka in the north see Hopkins JASO 1910. 359, 365 and Epic Mythology, p. 9. See also the note of Pargiter to Mârkandeya 57. 13, Vishnau 2. 4. 26; Vâyu 49. 34; Matsya 122. 55; Kûrma 49 (p. 416, 1. 16); locate Balâhaka in Sâmillâvipa or Kusaâvipa. Cf. Lacroê, Guândhiya et le Brhatsûkhâ, pp. 139-40. Matsya 121. 72 gives the four names together as mountains in Jambûvîpa. Vâyu 47. 73 has: vâkro (cakro!) balâhaka caica mainâka caica paramah âhyâtâ te mahââstâh samudrânam jageqanâi prati and 47. 72 refers to Vrâsha. Harivâmsha 229 (2. 371) locates Vrâsha and Mainâka in the south. Is the eastern mountain Vrâsha? of MBH. 5. 112. 22 and 3. 118. 1 the same?} They were gathering the lotuses in order to present them to the god, the husband of Sri, in Śvetadvîpa. 'For we are all of us devoted to him, and it is by his favor that we possess rule over these mountains of ours, and prosperity accompanied with supernatural power.'\footnote{Compare Kathâsûtraisâgara 17. 10, where Vishnau, in like manner, sends Nârada to Indra to get back the Apsaras Urvâsî for Purûravas.} They carried him with them through the air to Śvetadvîpa. He praised Vishnau with a hymn (a Nârâyana-stuti) and was well received by the god, who dispatched Nârada to Indra to demand back four of his Apsarasas, which he then bestowed on Narâvâhanadatta.\footnote{Wilford, Asiatic Researches, 10. 150 with Sumatra. Ceylon cannot be correct. The Brhatsûkhâ (14. 9) of Varâhämihira locates Narâikela in the southeast, but locates Ceylon (14. 11) in the south, thereby clearly distinguishing them. Yogavaisesha 6 (Uttarârâha), 123. 14 locates the country of the coconuts in the east. See also Watters, On Yuan Choung's Travels in India, 2. 236 and Mârkandeya 53. 17. [Laufer has given me the following note: 'The Narâikâdâvâpa of Huân Tsâng (Julieu, Mémôires, 2. 144) has been identified with the Nicobaras by H. Yule, Marco Polo, 2. 397 and Hobson-Jobson, s. v. Nicobar. Ibn Sa'id (thirteenth century) mentions Coconut Islands as a group of numerous islands which form part of the government of Sirândih (Ceylon). Cf. Ferrand, Textes relatifs à l'Extrême-Orient, p. 339. The name Noveuran or Neocuran in Marco Polo is perhaps corrupted from Närâikela, but this is doubtful. On the other hand we must not lose sight of the fact that Huân Tsâng's data are legendary, and that he locates the Coconut Islands several thousand li south of Ceylon. There is no island south of Ceylon; the Nicobars are only four days' journey east of Ceylon.']} Narâvâhanadatta and his four companions returned to Narâikela with the four heavenly maidens. After spending four days on the wonderful mountains of Narâikela sporting with the Apsarasas, Narâvâhanadatta

Walter Eugene Clark
returned to his own city. Lacôte argues that the Brhatkathā and Mbh. 12. 335-6 made use of a common source, a story which contained a description of a journey to Christian communities in Central Asia.114 The Brhatkathā omitted the description of the people and the religious elements, and added the four Apsarasas. I can see nothing at all in favor of such a conclusion. The only points of similarity between the two stories are that the journey is to Śvetadvipa, and that both contain a Nārāyanastuti. In the Brhatkathāmaṇḍājari (15. 195-201) the Nārāyanastuti is very brief. In the Brhatkathālokaśāṅgraha there are several Nārāyanastutis (cf. Lacôte, pp. 172, 177, 212) given in altogether different contexts, not connected with a journey to Śvetadvipa. The only resemblance between the hymns is that they are hymns to Vishnu. There are no specific details which could lead one to believe that they are based on a common source, a hymn marked by Christian influence. They differ in no respect from the many hymns scattered through the Epic and the Purāṇas; they are Indian in every detail.114 If the travellers did not understand anything of what they saw and gave an account which could be reflected in the form represented by this story of the Kathāsaritsāgara, there is no possibility that the description could have had any vital influence on the bhakti movement represented by the passages of the Mahābhārata. Lacôte also argues (p. 95) that Śvetadvipa must be far away from Nārikela, in the north, because Vishnu has 'pour ainsi dire, sous la main, les quatre apsaras qu’il offre à Naravāhanadatta'.
and because Naravāhanadatta on his journey from Nārikela to Śvetadvipa passes the city of Kauśāmbī. So far as I can see the text nowhere states that the latter was the case. Mern is a favorite abode of Indra, but Indra presides over the east and his city Anaravati is situated in the east. To those who possess the supernatural power of travelling through the air near and far have no meaning. Kern (note to Brhatkathā 14. 7) thinks that Śvetadvipa is near Nārikela, and argues that the Gauras, 'white men,' of 14. 7 are the inhabitants of Śvetadvipa. This too is mere conjecture, based on no more tangible evidence than is Lacôte's conjecture. There is no evidence in the passage to prove where Śvetadvipa was situated. If anything is to be inferred from this passage, considering the Apsarasas and the entire lack of religious bhakti elements, it is that the mythical elements are original in the Śvetadvipa stories. The two Śvetadvipas differ toto caelo. It is most unlikely that the Brhatkathā made use of a travellers' tale which described a journey to Christian communities in Central Asia. If the account of such a journey gave much space to religious elements it is difficult to explain the form it took in the Brhatkathā; if the travellers did not understand anything of what they saw it is difficult to explain the wide influence of the supposed Christian bhakti elements. If we assume that the underlying elements are mythical the relation of the two narratives becomes clear and natural.

The Kathāsaritsāgara (48. 77) knows Ketumāla but does not know the names of any of the Puranic daipas. Its geography represents an early stage comparable to that of the Rāmāyana and the Jātakas.

A collection and index of the extra-Indian geographical names from the Mahābhārata, the Rāmāyana, the Harivaniśa, the Purānas, the Buddhist and Jain texts, and other early treatises would be sure to lead to valuable conclusions.

[Since the above article was handed in during the summer of 1918 Sylvain Lévi has discussed Rāmāyana 4. 40 and Jātaka 483 in a long article published in the Journal asiatique 1918. 1. ff. Much new material is given from Chinese Buddhist texts. See also Vidyābhūṣana (JASB 1902. 150 ff.) for an effort to identify Maga with the Magos of Ptolemy, Mrga with Maryana, Mājaka with the Moisoka of Hyrkania, and to locate the Uttarakurus in Eastern Turkestan.]
THE HOME OF THE SEMITES

JOHN P. PETERS

NEW YORK CITY

ACCORDING TO THE PREVALENT VIEW the home of the Semites is Arabia, which has been like a seething caldron, boiling over at intervals and emitting its surplus population in successive eruptions, poured out as the lid was forced up. This theory, which has been worked out with beautiful symmetry, is represented in almost all the histories of Hither Asia of the last quarter or even half century, and I have myself presented it as established fact in my writings. Indeed it seemed to me that additional incidental evidence for this theory was found in the fact that as the successive waves of invasion poured northward the invaders displayed a linguistic connection with those ahead as well as with those behind. So inscriptions found in northern Syria seemed to show that the Aramaeans in the forefront of the great Aramaean wave of invasion adopted in part the language of the preceding Semitic emigrants, while the Hebrews, Moabites, and kindred peoples, Aramaean in race, spoke a language practically identical with that of the Canaanites. Similarly, while the Nabataeans were Arabs, their language was a variant of the Aramaean of the preceding wave of emigration.

The first Semitic eruption from Arabia, according to the prevalent view, took place in the fourth millennium B.C., resulting in the establishment of the Babylonian-Semites on the east, and of the Semitic peoples in northern Syria on the west; the wave of emigration from Arabia, divided by the desert, pouring up on both east and west. Somewhere toward the middle of the third millennium B.C. came another wave of invasion, which occupied Canaan, and strengthened and modified the Semitic element in Babylonia. A thousand years later came the Aramaeans, occupying Palestine, east and west of the Jordan, in the four nationalities of Hebrews, Ammonites, Moabites, and Edomites.

1 Of course, if they came from the north, as I now believe, this argument reversed would be equally as effective.
pushing northward over Syria, homing in Mesopotamia, and drifting into Babylonia; becoming ultimately, so far as language and culture were concerned, the dominant element from the Persian mountains to the Mediterranean, extending northward to the Taurus mountains, and even pressing into Asia Minor at points.

About a thousand years after came a new invasion, beginning with the Nabataeans, who were followed by the Lakhmids on the east and the Ghassanids on the west, this Arabian movement culminating over a thousand years later, in the 7th Christian century, in the great Mohammedan eruption of Arabs, which conquered and ruled Asia, south of the Taurus mountains, to and into India, all Egypt and northern Africa, with the Iberian peninsula in Europe, and occupied linguistically Hither Asia south of the Taurus, with points projecting here and there into Asia Minor itself. Since that date there has been no great eruption from Arabia, but there have been migrations northward of Arabic tribes, resulting not in permanent settlement, but in the occupation of parts of Mesopotamia, Syria and Babylonia by nomadic populations.

It has been argued as a general proposition that it is the nomadic peoples who migrate and overrun civilized lands; and Central Asia and Arabia have been regarded as the typical nomadic regions from which from time immemorial peoples have migrated in every direction. In connection with this theory it has been supposed that the nomadic populations of Central Asia and Arabia have been pushed out from the territories occupied by them because of over-crowding, that the homeland provided too scant support for the increasing number of men and flocks and herds. There has been a tendency to assume also that all folk migrations are simply economic in cause and character. Now over-crowding takes place as readily, perhaps more readily, in settled regions than in nomadic. Undoubtedly nomadic peoples have a natural tendency to migrate, but when we come to consider the great folk movements of which we have knowledge it is plain that the peoples who have taken part in many of them are in no sense nomadic. Also migrations as we know them are by no means always due to economic causes. So, the lust of conquest, while it has, it is true, an economic side, we should scarcely count as an economic cause. That is to say, peoples who,
actuated by the lust of conquest, overrun and conquer neighboring countries, do not necessarily do so because their own homes have proved too narrow. They desire to seize what some one else possesses, but they are not compelled to leave their own homes because of any need of space or sustenance. We have a record of almost perpetual movements in Asia Minor, in and out, and those whose causes we can trace are due in many cases to the lust of conquest. Very few are nomadic in any sense, that is invasions of nomadic people. The people whom we know as invaders of Asia Minor from the earliest times were generally in a state of civilization far above the nomadic. The same is true of European invasions and folk movements. There the pressure has been in the latter ages generally from the east towards the west, but there seems to be evidence that at an earlier period there were great movements from the west eastward. As late as the third century B. C., we find Gauls migrating eastward and descending into Asia Minor, and during and since the Middle Ages Germans have been pushing eastward into Slavic lands. Many migrations and folk movements have been due to the lust of conquest; some originate in the spirit of adventure or enterprise. Religion too has played its part in migration. This is strikingly true of the great Mohammedan invasions. It is true of the movements of the European peoples into Eastern Europe and Asia in the Crusaders' time. It is true to some extent of the movements of European peoples westward to America and southward into Africa. A desire to escape oppressive conditions, love of freedom, the spirit of nationality,—all these causes have played a part from the most remote time in folk movements. Change of environment produced by natural causes is another motive of migration. Desiccation of a land, or other physical phenomena producing change of climate, may so affect living conditions as to induce the inhabitants to emigrate. It seems probable that such causes were effective in promoting not a few prehistoric and later migrations out of and into Central Asia and Arabia, but we have no historic evidence of this. If a people in a nomadic condition of civilization migrates the migration tends to be in general small, as in the case of nomadic tribes of Indians in this country, or of Turcoman tribes such as we still find migrating in parts of Asia Minor, northern Syria, and Central Asia, or like those migrations of Arabian tribes which are con-
tinually taking place. We do know, it is true, of not a few great invasions of nomadic peoples, but as a rule such invasions do not result in permanent settlements, or the establishment of stable kingdoms. On the other hand, when peoples in a somewhat higher state of civilization, owners of cattle, used to the cultivation of the ground, to life in villages and towns, to some sort of community organization, overran a richer people of a higher civilization, they more readily establish on the basis of that civilization new states, a new culture, and a new civilization.

Our actual knowledge of migrations out of Arabia shows us, it is true, the establishment by some of the emigrants of fairly stable kingdoms, as in the case of the Nabataeans, the Ghassanids, and the Lakhmids, and later in the case of the great Mohammedan movement. But to what extent were these movements nomadic? Arabia was in part certainly inhabited by peoples living under settled conditions, and the leaders in the Mohammedan movement were men used to a settled and fairly civilized life. The later movements of Bedouin tribes from Arabia have resulted in no stable settlements; they have simply overrun half-occupied territories and continue to roam there as Bedouin. So much for the general theory of the nomadic origin of folk movements.

Let us now examine what evidence we actually possess with regard to the movements of Semitic peoples from the earliest times onward. So far as Semitic migrations are concerned the facts which have gradually accumulated seem to militate against the theory of Semitic migrations from Arabia before the Nabataean movement. According to the Biblical records and traditions the Aramaeans, who were the ancestors of the Hebrew peoples, came from the north. So Israelite tradition claimed Mesopotamia, the country beyond the Euphrates northward, as the ancestral home of Israel. It is true that according to Hebrew legend the Israelites migrated into Palestine from Egypt, but those same legends consistently aver that their ancestors and those of the nations to which they acknowledged the closest kinship, Ammon, Moab and Edom, originally came from the north, namely from Mesopotamia, passing thru Palestine into Egypt, and that their home was not the desert of Arabia, the country southward and southeastward of Palestine, but a country far away in the opposite direction. They do, it is true, acknowledge kinship with the Midianites, various nomadic or semi-nomadic
tribes southward and eastward of Palestine, extending into and beyond the Sinaitic peninsula. Their traditions narrate that for a period, a long generation their tradition makes it, they also themselves inhabited those regions and were nomadic, and that they were in intimate relation, sometimes friendly, sometimes hostile, with these various tribes whom they counted descendants like themselves of the Mesopotamian ancestor. After they became a settled people dwelling in Palestine these nomadic kinsmen eastward and southward of Edom, Moab, and Ammon on the borders of the desert became foes, and we have records of contests with them owing to their forays; but they appear as marauders overrunning and devastating the country when it is weak and disunited, like hordes of locusts, rather than as conquerors taking possession of it for permanent occupation.

The Hebrews, altho speaking a Canaanite language, claim to be alien to the Canaanites, and it is interesting to observe that they not only do not recognize common race ancestry with the latter, but that they even connect the Canaanites in race ancestry with Egypt, as over against their own Semitic forbears. As already stated, their traditions carried the record of their Aramaean ancestry back to Mesopotamia; but the origin of the Aramaeans themselves they referred to a still more remote region. So the prophet Amos, writing in the middle of the 8th century B.C., speaks of the Aramaean homeland as Kir, which is clearly far away to the northeast, as shown by references in other writings. It used to be the fashion to doubt such historical geographical references, but our experience in latter years has taught us more respect for the traditions therein represented, and it has been shown that Amos certainly possessed a very fair fund of information as to historical and geographical facts, as for instance in his statement that the Philistines came from Kaphtor. Moreover Amos' statement seems to find corroboration from other sources.

The Hebrew flood story describes the ark as landing on the mountains of the far north or east, perhaps in the Armenian territory northward of Assyria, or eastward in the Zagros mountains, where the Babylonian ark mountain Nisir was located. From this region Noah's sons, of whom Shem, the ancestor of the Hebrews, was one, went forth to people the earth. To the northeast, far away in the mountains, then, was the home of the
Semites. And confirming this was the Hebrew story of Eden. In the mountains of the north, where were the mysterious sources of the Tigris and Euphrates, was the original habitat of man. From the annals of Ashur-nazir-pal, a century and more before the time of Amos, we learn that the Aramaeans did at that date occupy the territory to the north and east of Assyria, including Nisir, the mountain of the Babylonian ark. A half a century after Amos, Isaiah mentions the men of Kir as constituting part of the Assyrian army of invasion, naming them with the men of Elam, apparently as coming from the most distant regions of the mountains eastward of the Assyrian empire. In Ashur-bani-pal’s inscriptions, half a century later still, Aramaeans are along the edge of the Zagros mountains, eastward of Babylonia, and pushing into that country. Apparently during this period of two centuries and over they are being pushed down along the eastern mountains from a point northward and eastward of Assyria to a point much further south.

Somewhere in the 6th century B.C. we meet the first beginning, according to the Biblical record, of pressure from the south northward. On the return of the Israelites from captivity and the re-establishment of a Judæan state after the captivity, the Edomites are found occupying the southern portion of what was formerly Judæa, with the important towns of Hebron and Marissa, the Nabataeans from northern Arabia having pushed them out of their old territory southward and southeastward of Judah. Gradually the Nabataeans moved northward, until in the first Christian century the Nabataean kingdom extended from somewhere north of Damascus southward well into Arabia, and from a little east of the Jordan to the Euphrates.

So much we find in the Bible with regard to the movements of Semitic peoples into or about Palestine. From other sources we learn of an Arabian invasion immediately following the Nabataean, resulting in the establishment of the Ghassanid kingdom in the Hauran, west of the Syrian desert, and of the kingdom of the Lakhmids, with Hira as its capital, eastward of the desert, on the borders of Babylonia. Here we have, in point of fact, commencing about the 6th century B.C., a succession of invasions or race movements out of Arabia, dividing at the Syrian desert, advancing northward to east and west of that, and culminating in the great Mohammedan eruption of the 7th century.
A. D.; since which time there have been lesser tribal migrations of Bedouin Arabs, like the Anazeh, Shammar, Montefich and others, but at no time any considerable invasion resulting in real conquest or settled occupation of any of the regions northward of Arabia.

After the middle or close of the 8th century B. C. the pressure of actual physical Aramaean invasion from the north, which partly synchronized with, partly followed, a similar Hittite movement, appears to abate, so far as Palestine is concerned, the cause of its abatement being the final conquest of the entire westland by Assyria. Down to this time, the time of the Assyrian conquest at the close of the 8th century, the Hebrew records represent the Aramaeans as exerting a continual pressure from the north. Later than this we have no evidence from the Bible of the movement southward of conquering Aramaean peoples, but long after the actual physical pressure of conquering invasion ceases the Aramaic language and culture continue to press southward, aramanizing Palestine with all the surrounding regions, until in the beginning of the 7th century of our era the whole country north of the Hejaz and the Persian Gulf speaks some form of Aramaic.

From Babylonian sources the earliest records, beginning about the commencement of the third millennium B. C., show us the southern part of Babylonia occupied by Sumerians. These are closely connected, apparently, with populations to the southeast on the Elamite plain in modern Persia, who used the same script, shared the same civilization, and struggled with the Sumerian Babylonians for a millennium or more for the hegemony. There is evidently a close relation between the southern Babylonian and the Elamite countries and civilizations, and one gets the impression of a pressure outward from Elam rather than inward from Babylonia. Quite early we find Semites settled in northern Babylonia, and pressing southward. These Semites seem to be in touch with Semitic populations northwestward up the Euphrates in Mesopotamia and in Syria. Throughout the 3rd millennium the strength of the Semitic element increases, and by its close we find Babylonia dominated by Semites, a strong Semitic state, Assyria, northward on the Tigris, and a Semitic Babylonian culture and civilization extending over all Hither Asia south of the Taurus, and beyond the Taurus into Cappadocia in Asia
Minor. It seems clear that the Semites thru all this period are a northern people who are pressing southward as conquerors and invaders, and at the same time are absorbing and modifying the civilization of the Sumerians on the south. The second millennium reveals a continued pressure of invasions from the north, a considerable portion of which, however, are non-Semitic, originating in Asia Minor, such as the Hittite and Mitannian movements, and perhaps the Cassite invasion. Throuth this period the Semitic state of Assyria was increasing and consolidating its power, apparently enabled to do so by its geographical and strategical position in relation to the Semitic populations. Conquered at times, with considerable ups and downs, it nevertheless not only held its own in the folk movements of that period, but also extended its power southward, so that at the close of the millennium it dominated and controlled all Babylonia. During the latter part of this millennium and the first centuries of the first millennium both Assyrian and Babylonian inscriptions show us the Aramaeans occupying parts of Syria and all of Mesopotamia on the west and pressing southeastward on Babylonia, and also Aramaeans occupying the mountainous regions to the northwest, north and east of Assyria, and pressing into Babylonia from some point or points eastward of the Tigris and northeast and east of Babylonia. Indeed from the inscriptions it would seem as tho the pressure of invading Aramaeans was strongest from this direction.

The annals of Ashur-nazir-pal, in the first half of the 9th century, give us the fullest information with regard to these Aramaean states. Assyria itself in his day was a wedge pushed northward into Aramaean territory. Aramaean states are mentioned in his annals beyond Diarbekir to the northwest (i.e. directly northward of Mesopotamia), in Asia Minor. Immediately to the north of Assyria were the Nairi, Aramaean peoples, who became a bone of contention between Armenians and Assyrians. To the east and southeast also, stretching well into the mountains, were Aramaean states, some of which proved stout opponents of the Assyrian armies. In these Aramaean countries was included, according to Ashur-nazir-pal's records, Mt. Nisir, on which, according to Babylonian story, the ark rested; which may, as pointed out, be regarded as a confirmation of the Biblical record of the home of the Aramaeans. Clearly pressure of
invasion from the north, which resulted later in the establishment of the powerful kingdom of Urardhu, extending from Lake Urumia on the east to Cappadocia on the west, was pushing Aramaeans southward from Cappadocia to the Persian mountains, and it was to stem this movement that some at least of Ashurnazir-pal's campaigns were directed. Assyria itself was able to resist the pressure, but in doing so it pushed the invading hordes to east and west, until it was itself finally surrounded by Aramaean peoples.  

In Armenia itself during the ninth and following centuries the records reveal various movements of populations. There was established the strong native kingdom of Urardhu, already referred to, the inscriptions from which are first in the Assyrian language, later in Alarodian, neither Semitic nor Indo-European, with which Assyria struggles for centuries, finally conquering it, and thus preparing the way, apparently, for the invasion and conquest of the country by the Indo-European Armenians, just as the devastation and conquest of Elam by Ashur-bani-pal prepared the way for the conquest of that country by the Persians, this permanent movement of Indo-European peoples from the east westward being preceded and prepared for by the great invasion of nomadic Seythian hordes toward the close of the 7th century B.C.  

In Ashur-bani-pal's time, two centuries and more after Ashurnazir-pal, the Aramaeans, moving downward along the edge of the Persian mountains, had pushed well southward into Babylonia, and their language had become a lingua franca from the Mediterranean to the Persian mountains. It is from the records of Ashur-bani-pal's campaigns that we first get a suggestion of the commencement of pressure northward from Arabia, in that he conducts campaigns against Arabian kings or chiefs. Certainly his treatment of the country from the Mediterranean to the Persian mountains, and into Elam, by creating a void, tended to invite invasion from that direction; but it was not 

---

2 Olmstead in this Journal, vol. 38, discussing the geography of these campaigns, says that the existence of these states points "to Aramaic infiltration far within the mountains." He is obsessed with the old theory of Semitic waves northward from Arabia; his own evidence shows clearly an opposite movement from Asia Minor downward.
until a century later, after the Persian conquest, that we have the first evidence of a movement northward in force out of Arabia, both on the east and the west, the Nabataean movement. Such historical evidence as we possess, from Palestine on the west and Babylonia in the east, would indicate for all the Semitic invasions prior to this a northern, not a southern origin.

Turning to the linguistic evidence, we find a sharp distinction between the north Semitic and the south Semitic language groups, Babylonian-Assyrian, Aramaean-Syrian and Canaanite-Hebrew constituting one group, much more closely related to one another than to the south Semitic languages, that is the north and south Arabian tongues with Ethiopic. These latter constitute a group not so closely allied to one another perhaps as are the languages of the north Semitic group, but nevertheless much more closely allied to one another than to any of the languages of that group. There is a sharp distinction between the two groups, north Semitic and south Semitic, evidence of a long period during which the south Semitic languages and the north Semitic languages developed independently. Clearly the northern and the southern Semites must have been separated one from another as groups, not as individual peoples, at an early period. The prevalent Arabic theory of the home of the Semites, the theory that all these nations, Babylonians, Canaanites, Aramaeans, and Arabs migrated out of Arabia northward in successive waves, gives no room for such separation of the south Semitic and north Semitic groups as the linguistic facts demand. What those facts seem to suggest is that at some early period either a body of Semites wandering southward from the north into Arabia were then cut off for a very long period from the Semites of the north by physical and other obstacles which prevented any practical communication; or that at some very early period a body of Semites wandering out of Arabia northward were then cut off from their southern kinsfolk for a long period. However it took place, the evidence of language seems to show that there was such a separation at a very early date extending over a prolonged period, during which took place the differentiation into different peoples of the northern group—Babylonian-Assyrian, Syrian-Aramaean, Canaanite-Hebrew—and the similar differentiation of the south Semitic group into its various peoples and languages.
Such knowledge of the early history of the Semites as we now possess seems to show that there was in fact such a division between north and south. Until about 2500 B.C., we find the Sumerians in possession of southern Babylonia, and Palestine occupied by a non-Semitic people, partly, if not altogether, troglodytic and at a relatively low level of civilization. At that time the records show that Semites inhabited northern Babylonia and stretched northwestward up the Euphrates into Syria. The indications are that Aleppo was a center of the civilized region occupied by Semites, and perhaps that civilization extended southward as far as Damascus. We are not able to say certainly that Semites inhabited Assyria at that time, or the regions northward of it. The Assyrian kingdom had not yet come into existence. Neither are we able to say from the records that Semites extended northward beyond the Taurus into Asia Minor. Before 2500 B.C., there is evidence of a barrier between the Semites of the south, who from Egyptian sources we have every reason to believe occupied Arabia, and the Semites of the north. In the center, northward of Arabia, lay a desert region. On both sides of that desert region, in southern Babylonia and southern Palestine, were territories occupied by non-Semitic peoples, the highly civilized and developed Sumerians in southern Babylonia, a non-Semitic and uncivilized or semi-civilized people in Palestine, while the Egyptians occupied or controlled the Sinaiite peninsula.

About 2500 B.C., according to the evidence of archaeology and inscriptions alike, the Semites took possession of Palestine. Apparently they came down from the north. Dr. Clay has emphasized very strongly the importance of the Semitic civilization of the west at this time and even earlier, that the Semitic power of the west was not secondary to and derived from that of Babylonia, but rather the reverse, that Semites from Amurru were moving downward into Babylonia from the west and northwest along the Euphrates valley from a very early period. After 2500 B.C., their power in Babylonia was greatly enhanced and by the middle of the latter half of the third millennium we find the region from the Mediterranean to the Persian Gulf practically unified in civilization, and the Babylonian script and culture reaching well into Central Asia Minor, as evidenced by the number of Babylonian tablets found in Cappadocia, which show a local development of civilization identical with that of Baby-
lia. Whether there was there a Semitic population we cannot
as yet say certainly, but Semitic names occur in the inscriptions,
and the Cappadocians seem to have been at least sharers of the
civilization extending down the Euphrates to Babylonia.

Of the existence of a Semitic population further eastward in
Armenia from an early time we have ethnological evidence in
the modern Armenians. The Armenian language belongs to the
Indo-European family of languages. The same is not true of the
Armenian people. It requires no great observation to determine
from their physical characteristics and appearance that the
Armenian and the Jew stand very close to one another. Indeed
it takes considerable discernment to distinguish one from the
other. It is true that one notices in both peoples many dissimilar
individuals. Among the Armenians with whom I was thrown
I noted occasionally persons of distinctly Indo-European type,
some of whom I might have mistaken for inhabitants of India,
and others who were Tatar-Mongolian in form and feature; but
the typical Armenian was scarcely distinguishable from the
typical Jew; and both presented the same characteristics which
are so apparent in the Assyrian sculptures. Indeed those
sculptures might very well pass for representations either of the
Jews or of the Armenians of to-day. I have had some curious
illustrations of this in actual experience. Also I have been
interested and amused to observe that while Arabs, themselves
Semitic, could detect a Jew as not being an Arab, merely from
his physical appearance, they could not discriminate between
Armenian and Jew any more than I was able to do. Not only are
the Armenians and Jews alike in appearance however; the like-
ness between them in mental and moral attributes, and in a
curious race persistence, has been commented upon by most
diverse observers. The Armenian country has been overrun and
invaded from the earliest time of which we have any knowledge
by peoples of all sorts of races and nationalities, but apparently
that has happened there which has happened in some other
regions, that an underlying race, altho conquered and assimilated
by its conquerors so far as language or even religion and civiliza-
tion are concerned, has retained thru all its primitive type,
and indeed has absorbed into itself its conquerors. The Arme-
nians, speaking an Indo-European language, but so strikingly
Hebraic in appearance, are the best evidence which can be given
that Armenia was originally a Semitic country, even tho' later we find the Asianic Urardhian or Alarodian and the Indo-European Armenian languages spoken there. The resemblance of the Jew to the Assyrian and the Armenian, the one at the extreme southwest, the other at the extreme northeast, gives us some evidence of the limits of the northern Semites, who are distinguished from the southern Semites in type as in language.  

Since the Mohammedan invasion the southern Semites have pushed northward, and we have the south Semitic type to-day predominating throughout Syria, Mesopotamia and Babylonia, up to or almost up to the Taurus mountains, throughout the region where we also have the Arabic language in use. But the Jew and the Armenian still testify to the old type of the Aramaean Semites, the one lingering in the old homeland, the other scattered pretty much over the world, but persistent in the maintenance of the racial national type.

It seems to me that the evidence at present in hand would indicate Asia Minor, including Armenia, or Asia Minor and the country south of it from the Taurus mountains to the Euphrates, as the homeland of the Semites. From this at some very early period moved southward the southern Semites, pushing into Africa to combine with a white race of the north, and a dark negroid race of the south, to form the Egyptian people, at the same time pushing down into Arabia where, in the south especially, they developed later kingdoms of high culture and much wealth, and across the straits of Bab-el-Mandeb into Ethiopia. Semites who kept together and moved downward into Arabia were absolutely shut off and sealed up for a long period in the Arabian peninsula. This could easily happen, because the desirable lands were southward, where the rich and cultured states developed, while the northern lands were relatively barren or actual desert, not inviting in the same way settled and permanent occupation. Even in historic times, it would seem from the Arabian inscriptions of the first millennium B.C., the wealth of

*It has been suggested that the Hittite sculptures show the same Armenian Assyrian-Jewish type. I should not be surprised if the Hittites proved to be of the same stock, Asia Minor Semites, Aramaeans, dominated by Indo-European invaders, just as the Gauls later dominated a considerable part of Asia Minor; but from the rude conventionalism of their sculptures I do not feel that we can argue with the same security as we can from the Assyrian sculptures.*
those southern regions still tempted the men of the north, so that what movement there was continued to be southward, the north being incapable of supporting a large population. Moreover two great powers early developed to the northeast and the northwest, setting a barrier against northern migration, on the east the Sumerian, and apparently kindred Elamite, kingdoms, in southern Babylonia and the adjacent plain, extending their conquering expeditions far to the west and north, and on the west Egypt, occupying or dominating also the Sinaitic peninsula eastward. These two, with the desert region in between, eventually bottled up the southern Semites in Arabia, leaving them to develop among themselves, according to the nature of the land occupied, two fairly different types of language and civilization, the northern and the southern Arabian.

This occupation of Arabia and isolation of the southern Semites must have taken place very early, for before the close of the fourth millennium the Egyptian people had been formed by the amalgamation above referred to, and by the beginning of the third millennium a strong Egypt had come into existence, exploiting Sinai, taking an exclusive attitude toward foreigners, and regarding with contempt the few and mean uncivilized peoples on their eastern border. The Sumerian peoples in Babylonia had come to maturity about the same time.

As already pointed out, in the beginning of the third millennium B.C. we find Semites pressing down from the north and northwest upon the Sumerians, and pushing southward still more rapidly and effectively beyond the Syrian desert to the west. By about 2500 B.C. these latter had occupied Palestine and reached the Egyptian border. Nor did they stop here. Apparently for a time they overran and overwhelmed Egypt itself. At least at this time comes a gap in Egyptian history, representing seemingly the overthrow of the Egyptian power by some foreign invasion. In the immediately following centuries the Semites also finally overthrew the Sumerian power of southern Babylonia, and absorbed or amalgamated with the Sumerian culture of that region. By the end of the third millennium a Semitic empire or rather a congeries of Semitic states and nations stretched from the Mediterranean eastward to the Persian mountains, and from the Taurus mountains and beyond southward to the borders of Egypt and the Persian Gulf.
About or shortly after 2000 B.C. new folk movements begin to make themselves felt first in Asia Minor. Indo-European peoples, on the move eastward apparently, invade Asia Minor. On the extreme west they attack and ultimately overturn the old Aegean civilization in the Troad. Farther east they appear as Hittites, with their capital at Boghaz Keui, occupying Cappadocia and pressing downward into Syria, some even reaching the extreme southern limits of Palestine. Further east, as the Mitanni, they pour out of the mountains and establish a kingdom in Mesopotamia; while still further eastward perhaps as Cassites, but much more mixed with foreign elements, they conquer Babylonia and establish a dynasty there. All these three last named, Hittites, Mitanni, and Cassites, are apparently Indo-European, at least as to their dynasties and the governing class, but not necessarily in the bulk of their population. They are Indo-European very much in the sense that the various Norse settlements in France, Sicily, and ultimately in England were Norse. What they actually accomplished is curiously like what those 20,000 Gauls accomplished who invaded Asia Minor in the 3d century B.C. and left on the whole country an impression which lasted the better part of a millennium. It would appear from what little we know of early Indo-European history that these invading and conquering Indo-Europeans of the early centuries of the second pre-Christian millennium in Asia Minor were parts of the great folk movement which ultimately overran Persia and northern India, and then much later flooded backward from the East into hither Asia as Persians and Armenians. The invasions of the second millennium came from the north and west. These invaders were branches or divisions of a great mass on the move, which pushed southward into and ultimately thru Asia Minor at various points. In doing this they naturally dislodged other peoples inhabiting Asia Minor, among them the Aramaeans, driving them before them and carrying them with them into Syria and Mesopotamia, sometimes as settlers, sometimes as nomads or semi-nomads. This movement of Aramaeans southward, due to pressure from the north, commencing with the Indo-European invasion of the first half of the second millennium, continued, as we have seen from Ashur-nazir-pal’s annals, for over a millennium. With the Indo-European invaders of the
first half of the second millennium seems to have come the horse as a part of their fighting equipment, giving them an advantage over more highly civilized peoples whom they found in their way, as the use of iron gave to the Indo-European invaders of some centuries later an advantage over the invaded states of the Aegean, Egyptian, Syrian, and Babylonian civilizations of that period. The Hittites in small bands pushed thru Asia Minor, across the Taurus into Syria, and, as we learn from the Biblical records, into the extreme southern part of Palestine. By these Indo-European invasions numerous Semitic states and nations were dislocated and pushed southward, as already pointed out, to dislocate other states in their turn, until finally all the Semitic nationalities, with the exception of Assyria and Babylonia, were overrun and conquered and their populations amalgamated or forced to flee southward. Even Assyria and Babylonia were for a time submerged, and an Indo-European dynasty was established in the latter, if in fact the Cassite conquerors were Indo-Europeans. Mesopotamia, as noted, came under the sway of invaders who were in their governing classes at least Indo-European, and Hittite states, Indo-European in the same sense, were established in northern Syria. Large Semitic populations driven southward in this way migrated to the borders of Egypt. Conquered by the Indo-European invaders they had adopted from their conquerors certain of their tools, and among other things apparently the horse. Horses and chariots gave them the superiority over the Egyptians, which enabled them, in the form of the Hyksos, not only to invade but to conquer Egypt. Assyria, Babylonia, and Egypt, being already highly organized states, retained their identity thru these invasions and conquests, and in time amalgamated or expelled the invaders. Egypt became by the necessities of its great struggle for deliverance for a time a military and conquering nation, and, having expelled the Hyksos, itself invaded Asia, pushing northward to meet the Hittite empire in northern Syria, and the Mitanni in Mesopotamia. There ensued a couple of centuries of great brilliance, and then after this relatively brief period of great empires of high culture occupying a broad belt, approximately following indefinitely east and west the northern and southern lines of the Mediterranean nations, there commences in the 14th pre-Christian century a period of general disturbance, resulting from new
folk movements from the north, partly Indo-European, partly Asianic, which affect the whole Mediterranean and Aegean area, with Asia Minor and parts southward. When after those dark ages the curtain again lifts, toward the close of the second millennium, Egypt has been driven back within its own borders, the civilized Aegean states have vanished, giving way to semi-civilized Indo-European peoples, fragments of the former lingering on, in the shape of the Philistines on the south Palestinian coast and perhaps the Etruscans in Italy. The empire of the Hittites in Asia Minor has disappeared, and the greater part of Asia Minor and Armenia is occupied by various nations speaking Asianic languages, who are crowding the remaining Aramaeans southward; Assyria and Babylonia are thoroughly Semitic states, the former dominant. Mesopotamia is Aramaean, and so is all Syria to and below Damascus, with the exception of some Hittite fragments, notably the kingdom of Carchemish in northern Syria. Northward and eastward of Assyria, however, being pressed southward by pressure from above, are still numerous Aramaean peoples and tribes. Along the Syrian coast and in Palestine are a number of states and cities using the Canaanite-Phoenician tongue, the Hebrews and their kindred peoples to the east and south, however, claiming to be Aramaean by race. In southern Arabia and to some extent along the west coast are rich and highly civilized Arabian kingdoms.

From this time on until the Persian conquest Hither Asia south of Asia Minor is Semitic. Asia Minor, linguistically at least, is in general non-Semitic. Arabia is still fairly well shut off from the Semitic populations to the north, altho South Arabia is commercially in communication with them. In the seventh century we find the Assyrians conducting campaigns against Arabic kings or chiefs in northern Arabia, suggesting that possibly that movement from Arabia northward was beginning which first makes itself clearly discernible, however, in the Nabataean migration of a century or two later. During all this period, and until the Nabataean movement developed, the Aramaeans were pushing southward on both east and west, permeating Assyria and Babylonia, and occupying parts of northern Arabia, and, as already pointed out, Aramaic culture and the Aramaean tongue continued to advance and spread for almost a thousand years more, until, just before the Arabian conquest in the 7th
century A. D., Aramaean was the *lingua franca* of all hither Asia.

The evidence now available, linguistically, archaeologically, and from historical records, seems to show that the home of the Semites was not to the south in Arabia, but to the north in Asia Minor and regions eastward of that. From the very earliest times we find the Semites pressing southward. Their earliest homeland as a civilized people of record is just southward of the Taurus, from northern Babylonia westward into Syria. The indications are that at that period they had already begun to move southward, and their original home was probably still farther to the north and east. Armenia would appear to have been a part of that original homeland.
THE VEDIC POSTERIUS -PITVAM, COVER (NIGHT)

EDWIN W. FAY
UNIVERSITY OF TEXAS

The words prapitvām, āpitvām, and abhipitvām must all be compounds, and their analysis as such is very simple. The posterius -pitvām, quasi 'tectum,' is derived from the root ṛō(t) '(pro-) tegere,' but in Greek ποῖμα we have the concrete sense of 'lid, cover.' From the sense of 'cover' -pitvām developed the sense of 'night.' The conception is familiar. We have in Isaiah (60.2), 'Darkness shall cover the earth.' Shakespeare may be cited for 'Night is fled, Whose pitchy mantle over-veil'd the earth'; and for 'Well cover'd with the night's black mantle.' In the Iliad (5.23) Homer has the same figure. Prellwitz is undoubtedly right when, in his Greek lexicon, he connects ὀσίμα 'shelter,' generalized from 'cover,' with Skr. kṣāp, Av. zāap 'night.' In Skr. abhi-pitvām 'evening' and ā-pitvām (cf. Av. ā-xāpan- 'evening twilight') we have the sense of 'sub noctem' (close to night), while pra-pitvām (cf. pra-doṣām 'at eve'), which originally meant 'ante noctem' (=twilight), was allocated, thanks to the frequent connotation of pra- in other time words (πρῶτον 'mane'), to the sense of 'morning twilight.' These words are cognate with Lat. o-pā-cus, dark, shadowy (see JAOS 34.336, n. 1).

In āpitvām we have the IE. preverb ā, which I am always disposed to speak of as Brugmann's ā (see Gr. 2. 2, §634). In spite of all the exaggerated use to which Brugmann puts it, as in ἑποσ (l. c.), its reality is not to be doubted.

To get the Vedic usage of pra-pitvām settled right I have consulted, besides the lexica, the versions of Griffith, Ludwig, and Grassmann. Ludwig, who etymologizes prapitvām on Lat. prope 'near,' translates everywhere as if in terms of propinquitas or appropinquatio. This erroneous definition seems supported by

---

1 Cf. AJF 27.308, n. 2, in which I refer to Bloomfield's different explanation of pitéd.
RV. 3. 53. 24, where the seer is eulogizing the prowess of the Bharatás, famed as horsemen. He says:

*apapitvāṁ cikitur nā prapitvāṁ*

and Ludwig, in common with all other authorities, renders by 'These Bharatás think *<not>* on the far and not on the near.' This is erroneous. The sense is: 'They reck of uncovering (i.e. open fight) and not of cover (fighting behind ramparts).'-In 5. 31. 7, which relates the slaying of Sūgna, demon of drouth, by Indra, where Griffith renders *prapitvāṁ yānaḥ* by 'drawing nigh' (Ludwig's 'zu leibe ihm gehend' is not meant to be different), even Grassmann renders by 'vorwärts-eilend.' The phrase means in propugnaculum <hostile> iens, said of Indra advancing upon the hiding place of the demon. Note Skr. pā-tāla-m, underground hiding or residence of serpents or demons.—In three passages (1. 159. 7; 4. 16. 12; 7. 41. 4), thanks in two of them to construction with the genitive of the word for 'day,' Ludwig's versions, harmonizing with Grassmann's and Griffith's, imply 'at dawn.' In all the passages where Griffith recognizes 'prope' Grassmann, to the improvement of the sense, admits 'dawn.' In 1. 104. 1, *vastor ... prapitvē* either means 'luci ... mane' (tautological), or 'at dawn of morn.'—In 10. 73. 2, as Grassmann sees, dhvāntāt prapitvāt means 'ex tenetriosa mane.'—In 4. 16. 12, the slaying of Sūgna at dawn (*prapitvē āhnah 'beim nahen des tages,' Ludwig) is admitted by all the translators. We can hardly refuse in 6. 31. 3, in a description of the same act, to render *prapitvē* alone by 'mane'; and even in 5. 31. 7, *prapitvāmah yānaḥ, prapitvām* (acc.; cf. pradosām 'at eve') may be used in the sense of 'mane.' My results for *prapitvām* are that in RV. 3. 53. 24 and 5. 31. 7 it means 'hiding, shelter, cover'; in all other cases it means 'twilight,' from 'cover of night,' with a general, but not exclusive, application to the morning twilight. In recasting the definitions of the second Petersburg lexicon, viz. (1) abitus, (2) fuga, (3) recessus, (4) vesper, we must start from original 'protectus,' with connotation of (a) 'recessus' and (b) 'shelter of the night, twilight' (in RV. 8. 1. 29, see below); generally, but not exclusively, 'morning.' The senses 'fuga' (receptus) and 'abitus' are mere nuances of 'recessus.'
Excursus on the sept of English *evening*.

In his entry under Germ. *abend* Kluge writes as pre-Germanic primates (1) *ēpni̯o̯-; (2) *ēpt̮o̯n̮-, in O.Norse *optann*; (3) *ēpt̮o̯n̮-, in O.Eng. *afen*. No cognates out of the Teutonic group have ever been pointed out. The Rig Veda has a clear cognate, however, in *āpitvām* ‘evening.’

The first explanation would be to derive all the cognates from the root *ēp*. This appears as *ēp* in Latin *āpere*, ‘to bind’ (pf. *co-ēpi*), and I have before now thought of ‘night’ as the ‘binder,’ cf. *night rāma* θέων... καί ἀνδρῶν (Iliad 14. 259).

A second definition, cleaving still to the root *ēp*, is suggested by the fact that the Greeks, in the word *ēphērē* (Hesiod), designated night as the ‘kindly’ time. Accordingly, Skr. *āpi-tvām* would lend itself to explanation as an abstract to *āpi* ‘verbündet, freund,’ certainly cognate with Homeric *ηπιως* ‘friendly.’ The root *ēp* ‘to bind’ is certain in *ηπιως*, ‘mender’; cf., with the 5-grade, the synonymous *ēphēra*.

Neither of these definitions seems admissible on account of Skr. *abhī-pitvām* and *pra-pitvām*, which latter, combined with the adjective *āpi-sarvarā-m* ‘verging on night’ (applicable both to morning and evening), does mean ‘evening’ once (RV. 8. 1. 29), but elsewhere, when a time word, means ‘morning.’ This all the lexicographers and translators of the Rig Veda have seen, save only the great authority of the second Petersburg Lexicon (followed by Monier Williams), which here has gone wrong—misled, I take it, by the instance with *āpiṣavvarā* (locative). This was because *āpiṣavvarā* usually means ‘at dawn’ (Lat. *mane*). The truth is that *āpi*- in the compound signified ‘close to’; cf. Lat. *sub*, used to mean ‘just before’ in *sub noctem*, but also ‘just after’ in *sub luce<ṃ*>., cf. the note of Weissenborn-Müller on Lívy 25. 24. 7. But it also means that *pra-pitvām* originally meant ‘twilight,’ but was subsequently allocated to the dawn, thanks to the syllable *pra- ‘before,’ cf. Skr. *prātār* and *pra-ge ‘mane.’

*Lost, misguided by Brugmann, Gr. 2. 2. 616, one divide *ē-mor* and go on to connect with Lat. *pius*, let me note that *pius* is properly to be explained, after Wiedemann, as ‘protesting’ (*AJP* 37. 172); while the verb *piere* means ‘to offer fat’ (*ib. 162*).
After this necessary explanation of Skr. ā-pitvām and -pit-
vām, quasi 'night,' let us return to our Indo-European primates.

1. ē-p-ntō- is a compound, with reduction of ē in composition
to zero (see Bartholomae's rule in IF 7, 70; 10, 197), of e + pa-
nto. In pa-nto- we have the extension of a participle pa-nty-
(: pō : Lat. dant : dō) by the declension exponent o. Cf. with
strong stem Skr. pānta 'potion,' from the homonymous root pō,
type of Lat. ventus 'wind,' Skr. dānta- : dānt- 'tooth.'

2. ēptōn-/ēptōn-, wherein pa is again reduced in composition
to p. For the suffix ten see the data in Brugmann's Grundriss
2. 1. §222.

3. ēptvōm in Skr. ēpitvām contains in pi the weakest vocal-
ilism of the root pō. With -tvōm cf. the cognate suffix in Goth.
āk-tādō 'dawn' and in Skr. vās-tu- 'morning.'
PHONETIC RELATIONS IN SUMERIAN

J. Dyneley Prince
Columbia University

It is becoming more and more evident from a careful examination of the Sumerian vocabulary as set forth, for example, in Delitzsch's 'Sumerisches Glossar'¹ and previously in my MSL² that many phenomena which were formerly regarded as phonetic changes occurring dialectically within the language are really nothing more than the results of imperfect attempts to represent by means of Cuneiform characters a system of phoneties for which the Cuneiform signs had no real equivalents.

It will be apparent from an examination of the following table (A), of possible consonantal variants, and also the table (B), of the vocalic variation in the Cuneiform texts, that, while some of the changes may be real dialectic differentiations,³ the inference is in favor of the theory that most of them were probably mere graphic differences; thus, the equations $g-\dot{g} = g-r$ (guttural $r$) is a certain indication of the possible guttural character of $g$, as well as of the well known guttural $\dot{g}$, while $g-k$ (probably = nasal $k$; cf. $k-n$) and $g-m$, $g-n$ demonstrate that there was also in Sumerian a nasal $ng$ represented in various ways. The feeble nasal character of the Sumerian $m$ has long been recognized (cf. MSL x). That there was a cerebral $r$, as well as a guttural $r$, seems equally clear from the equation $d-l-n-r$, where the equation of the $l$ appears to point to a thick $d$-like $l$, as in Russian lob 'forehead.' This $n = d-l-r$ was probably not the nasal $ng$ but plain liquid $n$. The equations $n-\dot{s}$, $n-z$ are very curious. They are, however, paralleled in modern Chinese phonetics; thus, Peking žen, Hakka nyin, Fuchow nöng, Ningpo žing and nying, Wônchow zang, nang, all = 'man'; similarly, Peking ji̇h, Ningpo

¹Friedrich Delitzsch, Sumerisches Glossar, Leipzig, 1914, and cf. especially my paper JAOS 34, 321-328.
²Materials for a Sumerian Lexicon, Leipzig, 1908.
³For the five eme's or dialects, viz., eme-so (or eme-gal); eme-sukudda; eme-su-å; eme-le-na; eme-si-di, see Delitzsch, Sumerische Grammatik, p. 21, and Prince, AJSL 23, 209-210; also AJSL 31, 71 and 28, 67-68.
jeh and nyih = ‘sun’ (H. A. Giles, Chinese and English Dictionary, Nos. 5624, 579). This Sumerian n which could be represented by ẑ must have been a palatalized nasal, while the ẑ was probably not a pure sh, as in English, but a palatalized i similar to the present pronunciation of Swedish sj, as in sjus ‘seven’ (almost whyu). There is only a very slight tongue movement between a palatal nasal and a palatal sibilant (MSL p. xii).

The equitiam r-ẑ is not an unusual development; for example, the final r in the modern Osmani Turkish as well as in the Iranian Armenian is pronounced rz with a very slight sibilant ending; cf. for a marked r + sibilant, the complete assimilation of r and z in the Bohemian sibilant r, as in reznik ‘butcher.’ That ẑ = i and ẑ = ẑ and conversely is not surprising, as Hebrew כ and ח interchange, while in the modern English dialect of Somersetshire z takes the place of s throughout. The interchange of s, ẑ and t (s-ẑ; t-ẑ) is a well known phenomenon based upon the aspiration of t (t = dh = s), as in Ashkenazi Hebrew sav = tou (טוע).

This analysis would then give the following provisional statement of some of the actual Sumerian consonants:

**Cerebrai**: r = d represents a cerebral r as in Urdu ڑ.

**Dentals**: t-dh-s; cf. Greek θ = Sumerian itu, ‘month,’ showing the intermediate between t and s; cf. Cerebrai.

**Gutturals**: g-g-r (guttural) = Arabic خ.

**Labials**: b-p-m-w = a medial b verging between w and a light f; probably similar to Spanish b; cf. = Sumerian burya-muru, Br. 10242/3 (MSL x); ba = mu, VR 28. 29a and especially cf. Greek Διδωθερ = Dilbat ‘the Venus-star’ (Prince, Daniel, 226) and Greek συνοσβαβαί = mulubabhar, showing the labial pronunciation of Sumerian b.

**Linguals**: l-d = a thick l as in Russian and the original pro-

---

1 It is clear that Sumerian was read aloud probably ritually until a very late date, because we have a number of pure Sumerian words in Greek transliteration all of which are given by Leander, Sumerische Lesevorder, and commented on MSL pp. ix-x. While it is true that these Greek transcriptions represent a late ritual pronunciation of Sumerian, there is no reason to doubt that even at this period the general phonetic tradition was correct, as Sumerian had been carefully preserved and cultivated in the temples by a numerous conservative priesthood.
nunciation of Polish barred l; now, however, commonly pronounced w; cf. Norwegian dialectic kodla = kolla 'call.'

l-n = probably a palatalized light l similar to German l. Persons with speech-defects sometimes pronounce nkh in English instead of l, as night for 'light': Nhivington for 'Livingston,' etc. The writer has heard this unconscious change. For l-n, cf. Greek Νηρός = Sumerian Enlid.

NASALS: g = nasal k = m-n = ng. It should be noted, however, that k also represented a real k, as Greek Ἑρέκκιαλ = Ereškigal (Jensen, KB 6. 82; Zimmern, KAT 583), unless indeed the Greeks could not represent the nasal k, except by means of their own k(†). Cf. also Greek κευσάρης = ki-šar 'the lower universe' and Greek Σαγαζ = sagaz.

n-š seems to indicate a dental n, as in later Cornish widn 'one'; a common interchange.

n-ś a nasal palatal sgh; see above and also Dentals.

SIMILANTS: s-ś; note Greek Ἑρέκκιαλ = Ereškigal, cited above sub Nasals. This is a usual Sumerian phonetic interchange and probably represented in Sumerian a palatalized sj, as in Swedish sj in sjuk 'sick' = sgh (see above), which would be likely to be represented as either s or ū in Cuneiform.

s-ż; cf. Greek Σαγαζ = sagaz.

Our attempt to define the exact character of the Sumerian vowels is even more uncertain. Here evidently a-e-i-u could each stand in place of any vowel, a significant fact which leads to the conclusion that many Sumerian vowels were not reducible to the Cuneiform system. Any one of the Cuneiform vowels a-e-i-u might readily have been used to indicate the indeterminate vowel seen in English but and represented in a longer aspect by the Rumanian ă, ă and the Bulgarian smothered u. The Hebrew Sh'vav mobile and the ă in before in English represent the shorter form of this same vowel-sound which was most probably a very common Sumerian vowel. On the other hand, we may not doubt the existence of clear Sumerian vowels, because a-a, e-e, i-i and u-u all occur, evidently intended to represent a, e, i, u. We have comparatively little light on this subject except from the Semitized Sumerian loanwords and the few Greek transliterations of Sumerian words cited above, all of which show that there were clear vowels in Sumerian, as well as indeterminate vowel-sounds,
The verb-prefixes, varying as they do vocally, are, on the other hand, a fairly sure indication of the presence of indeterminate vowels in these preformatives; thus, ne, ni; ba, bi; mu, ma, mi; mun, man; in, an; ab, ib, ub; am, im, um are in all probability not directive prefixes, as I formerly thought, but merely vocalic attempts on the part of Cuneiform scribes to represent the indeterminate vowel: nū, bū, mū, ūn, ūb, ūm. If this is so, the Sumerian verbal system is greatly simplified for modern scholars, as the necessity ceases for regarding these a-i-u-variants as having some subtle undiscovered force. The importance of a still closer phonetic study of Sumerian cannot, therefore, be overlooked, as these phonetics have the most direct bearing on the formation of the entire vocabulary.

In a previous paper, I have pointed out the probable existence of tones in Sumerian similar to those existing in modern Chinese. While I still must adhere to this theory as one aid towards the explanation of the many meanings seen in the Sumerian vocabularies attached to apparently the same vocable, the uncertain character of Sumerian vowel-values, as well as the possibilities of variant consonantal values, indicated above, now give us a far wider range of possible sound-variation in any given vocable; thus, the syllable ba, for example, might have been pronounced ba, pa, wa, fa, so far as consonantal variation goes, and also bū, wū, fū and even bū, pā, wā, fā, thus giving twelve conceivable phonetic possibilities to which different meanings might have been attached. In this way, it will be seen that the tone-theory is no longer so necessary as it seemed at first. A further study of the following tables of consonantal and vocalic possibilities will demonstrate this point more satisfactorily.

Furthermore, the interrelationship of Sumerian words and combinations should be examined much more carefully than has hitherto been done, for example, in Delitzsch's Glossary, where the author pays comparatively little attention to the connections between allied stems. In the following brief Comparative Glossary (C) I have given a few such comparisons of allied stems and meanings, arranged in such a way as to set forth probable phonetic interrelationships. Work of this kind should be done

---

*AJSL 31. 68.*
throughout the entire Sumerian vocabulary, so far as we have it at present. Especial attention should also be directed to the existence of a number of synonymous combinations, which are in reality an extension of reduplication; thus, in the list given below: *gibil* 'fire,' in which *gi* and *bil* each = 'fire'; *a-za-lu-lu = tonešiti* 'people,' where *a* is the abstract vowel-prefix + *za* 'man' + reduplicated *lu* also = 'man.' Precisely the same phenomenon is seen in Chinese, as in *me-li,* 'beautiful,' where *me* and *li* each = 'beautiful'; *kwah-kwū,* 'wide' (*kwah,* 'wide' + *kwū,* 'wide'); *shu-mu* 'tree' (*shu,* 'tree' + *mu,* 'tree'), etc. This peculiarity is indicative of a tendency towards bisyllabism in a primitively monosyllabic language and may be compared with the similar tendency towards triliteralism in Semitic, which, from what was probably an originally biliteral system, produced an almost uniform triliteral development.

It is very dangerous to attempt to associate Sumerian words with similar vocables and meanings in modern idioms, tempting as it often may appear. Such comparisons are based on what is probably nothing more than mere accidental resemblance and should not be regarded seriously from a philological point of view, although on the strength of such fortuitous resemblances Sumerian has been variously assigned to Semitic, Indo-Germanic, and Ugro-Altaic connections.

It is quite possible that an investigation along the lines herein indicated may force us to the conclusion that the Cuneiform system of writing could not have had a Sumerian origin, inasmuch as the Sumerian phonetics apparently differ so greatly from those of the Cuneiform signs, so far as we know their exact sound-values. It certainly seems clear that the Cuneiform characters were insufficient to indicate the Sumerian phonetics, a theory which is suggested by the many different methods of representing what is evidently the same Sumerian word. Indeed, in many instances, it would seem as if the earlier Cuneiform scribes heard the Sumerian sounds inaccurately and

---

*Note as curiosities merely; seemingly Indo-Germanic: *aša* 'ass'; *ti* 'eye'; *uru,* or 'vir'; *kud* 'cut'; *tar* 'tear'; *dur* 'deer'; *dad* 'good'; seemingly Turkic: *ama* mother (*Magyar anya*); *sug,* *su* 'water'; *balag,* referred to *balašika* 'three-stringed instrument,' a Tatar word in Russian; *dur* 'dwell,' etc.
recorded them to the best of their personal ability, which record then became conventionalized and handed down as various styles (= *eme’s or ‘dialects’). Any person who has had experience in working out the transcriptions of modern untrained recorders of, for example, North American Indian languages will at once see the force of such a suggestion. Ten such unskilled recorders will produce very often ten different phonetic records for the same difficult or unclear vocable.

It is as yet too early in the study of this field to decide definitely as to the origin of the Cuneiform writing, but the probabilities are, in my opinion, distinctly in favor of its non-Sumerian, possibly Semitic origin.

A. CONSONANTAL VARIANTS

b-p: abba-apin (Water);* bül-pirig (Fire). Labial.
g-g: ge-gen (Small). Guttural.
g-k: ga-kal (Big, Woman); gi-ki (Place). Probably nasal (cf. k-n).
g-m: geš-muš (Man); nergal-šerald (Big). Nasal.
g-n: gi-ni (Man). Nasal.
g-r: siš-sir (Fire). Guttural.
g-š: uš-uš (Man). Probably nasal.
d-l-n-r: (a) ir-el (Big); (b) di-ne (Fire); (c) id-ir (Water);
kud-kur (Cut); (d) ir-ra-du (Go). Cerebral—lingual nasal (cf. l-r).
g-ğ (g-ğ).
k-ğ (g-k).
k-n: ukku-unu (Man). Nasal (cf. g-k).
l-d (d-l).
m-g (g-m).
n-d (d-n).
n-ğ (g-n).

n-r: nun-nir (Big). Nasal-lingual.
n-̄š: nergal-šerald (Big); cf. also nad-šad = KUR, Br. 7387/8;
na-ša = SA, Br. 7045/6 and see below n-ž. Nasal.
n-ž: na-za (Man); see n-š. Nasal.

*References to the meanings in Glossary C.
p-b (b-p).

r-d (d-r).

r-g (g-r).

r-l: ur-il (Big).

r-s: ur-us (Man, Water); rin-sen (Fire). Sibilant.

s-s: sir-sir = šen (Fire); sal-sal (Woman). Sibilant.

s-t: sar-tar (Cut); sir-tur (Small). Aspiration; cf. t-z.

s-z: sig-sir-ser = zag-zi (Fire); ser-ser (Small).

s-g (g-s).

s-n (n-s).

s-s (s-s).

s-t (t-s).

1-t: tur-ser (Small). Aspiration; cf. s-t.

s-n (n-s).

s-z (s-z).

s-t (t-s).

B. Vowel Variants

a-i: zag-sig; ra-ri (Go).

a-e: (Water); sig-sen (Fire).

a-u: ra-du (Go).

e-i: ser-sir (Small).

e-u: zer-zur (Small).

i-a (a-i).

i-e (e-i).

u-a (a-u).

u-e (e-u).

In this connection, note also that a, i, e, u all interchange in expressing the idea 'Speak,' q.v.

C. Comparative Glossary

Big

A. Nasal g and k-stems.

gal (76-77)* 'big, large,' ES mal (263) in šermal (see below);
kal (113) 'firm, strong' (see Woman, B, below).

*The references in parenthesis are to the pages of Delitzsch, Sumerisches Glossar (in Arabic numerals), and to the number of the stem in question, op. cit. (in Roman numerals).
B. Nasal n-?, stems.

Nun (207) = raḫu; rubû 'big, prince'; nûn (204) 'lady' and 'lord' (ambigen); 'great'; nir (202) 'very large' = etellu 'great one.' This -ir-stem may be connected with el 'be high' (see High), and cf. ni-il (199) = mutellu 'lofty one.' Note here ES šermal 'mighty one' = EK nergal.

C. dim-stem.

dim (V 139) = raḫu 'great'; another stem (see Fire and Light).

Cut

A. k-g-stems.

kud (I, 126) = parâsu 'separate, cut'; kid (II, 118) 'slit, split' (see Woman); kâr (II, 119) = gacâcu 'cut off'; also kirrud (119) = zurru 'hole.' Probably kur (I, 127) 'other, to separate' belongs here. Certainly gir (I, 91) pațru 'dagger' and gir (VI, 92) 'cut off clay,' together with girin (93) 'sherd,' must be classified in this category, as well as gur (XI, 110) and gurû-sîr = kacâcu (110) 'cut'; gurû-du (111) 'cut through.' This gurûš is not to be confused with gurûš (111) = edlu 'man, lord.' Note here also gur (VII) 'harvest' and ugor (110) 'sword'; abstr. u + gir.

B. tar-stem.

Note that tar (I, 155) = parâsu, pururru 'break, cut off' is a totally different stem, although a value of the same ideogram as kud. Perhaps tar = sar (II, 214) = šarađu 'drive away' and šurrû 'remove,' also zağ (222) = šerû 'remove.'

Father

A. ab-stems.

ab (4) 'father'; probably = Sem. abu, as most scholars think, but note pab (72) 'father, man' and 'brother.' Is this pab the result of a reduplication of ab-ab?

B. ad-stems.

ad (8) 'father,' from quite a different stem: ad = malâku 'decide.' This ad is the regular word for 'father' and appears frequently in prolongation with the pronominal suffix as ad-damu 'my father.' I have suggested in the Columbia University Assyrian Seminar that addamu 'my father' and ama 'mother' suggested the Hebrew forms דִּבַּק and מָרִי, since there is no
satisfactory Semitic derivation for דַּנָא and הָנַנ itself may be a popular etymology from הָנַנ.

Fire and Light

A. d-n-l-stems (cf. B, below).

di/e (135) = nabātu 'shine,' whence de-dal (135) = šittallum 'flame' = 'flying (dal) fire' (da); ne = nī-e (206) = hinānu 'brassier.' Possibly this n-stem is connected with na in na-ri (197) 'cleanse'; also na-ri-gar (119) and with the l-stems, seen in lağ, lāg (168) 'shine'; zolag (222), but not with zalag (222) 'blow.' Note also here luğ (174) 'wash.' Delitzsch connects dīgir (ES dimer), digir 'god' with this di/e-stem = 'shining being,' but dīgir, dimmer may be a combination of dim (V, 139) = rabē 'great' + the stem-element ur, er of urum, erum, ere (51) 'man, person.'

B. z-s-s-stems.

This group is undoubtedly phonetically connected with A, above.

zāg with abstr. a: a-zāg (15), the usual word for ēllu 'bright, shining, holy.' With this must be correlated izī (27), the usual word for fire: abstr. i + zi (IV, 223) = namāru 'shine.' This izī 'fire' has no connection with izī (27) 'wall' (iğāru), from zi (225) = kānu 'establish firmly'; zi (II, 223) 'enclosure,' which is quite a different root from the fire-stem zi. To za(g) fire belongs probably also zāg (V, 220) 'honey' (dīspu) 'shining liquid' (thus Delitzsch); zalag (221); zalag (222) = namāru; cf. in-ud-sal-la (II, 218) 'morning'; zalar (219) namaru (r = ţ).

With these z-stems must also be classified sīg (IV, 242) pure; sīr (II, 245) = nūru 'light'; šen (I, 264) = ebbu; cf. šennu (264) 'holy' (shining) one'; 'priest of Ea.' Here also belongs rīn (178) = ēllu; š = r.

The words for 'heaven' zigara, zigarum (224) and zikum (225) possibly also zikura (225) 'earth,' all meaning apparently 'lofty place,' probably do not belong here, but are loan-words from Sem. zaqar 'be high, lofty.'

Note that azag (15) = ID-PA, the name of a disease, possibly leprosy, has no connection with azag 'shining, holy,' although some scholars have made this association.
A here = 'side, power' + zag, sig (II, 239) 'smite.' This 
zag, therefore = 'destruction of power,' or 'strength' and is 
cognate with esig = DAN (36) = dannu 'powerful.' These 
terms might well have been applied to any severe illness.

C. gibil and k(g)-stems; (p, b-stems).

It is highly probable that in gibil (I, 86) = qilatum, the first 
element gi is cognate with ku (V, 125) = ellu 'bright'; kun (I, 
129) = navorum 'shine'; kur (VII, 128) 'bake'; gud (215) = 
ellu also belongs here and of course kubbar (125) 'silver' (both 
ku and babbar 'shining'). With these k-stems, cf. kaš (I, 116) = 
škaru 'liquor'; (II, 116) = šinatum 'urine' (acid); also kis 
(121), kis = kaš; III = lásimu 'fiery.' All these kaš-stems 
indicate heat and, in fact, kaš may be cognate or a variant of 
kun, kur; r = š = n with obscured vowel.

The bil in gibil = bi, bil (68) = qalū 'burn,' so that the word 
gibil is probably a combination of two elements, both meaning 
fire, cf. ku-babbar cited just above. Such tautology is quite common 
in modern Chinese combinations (see above Introduction). 
With this bi, bil, cf. also pirig (74) = namrum = pir-ig and bu 
(III, 69) = napāxu 'glow.'

Go

A. r-d-stems.

ir (23) = alāku 'go'; ra (174) = alāku; ri (175) = alāku, with 
which are cognate the d-stems: du (141) = alaku; II = nasā 
'fetch, bring'; di (135) and di-di. Here also belongs the usual 
gin (93) 'go' and ge (98) 'go, turn, bring back,' with which 
must be associated gur (I, 109) 'turn, run.' The g in these stems 
was clearly nasal ng. With gin, ge must be grouped nīgin (200), 
ni-ni (204) 'go around, surround.'

Note that ri (II, 177) given as 'blow' by Delitzsch in the 
phrase: im-gul-bi-ta mu-un-da-ru-uš means simply 'go,' i. e., 
'with the evil wind they go.'

B. l-stems.

lūg-luğ (169) 'lead' is from quite a different root.

Hear

A. gi-šg-stems.

gi/šg-tug (97) hear; the usual expression; lit. 'have ear, hear.' 
The stem šeg, še (I, 262) = šemû, magûru 'hear, be favorable'
is possibly a metathesis of gi/eš, perhaps arising from a reduplication giš-giš = šg = šeg (=)
B. The stem bur (I, 70) also = ušnu 'ear,' an entirely different root.

High

A. n-stems.

an (12) 'high, heaven; broad' ( cf. II, 13; anu (14) 'ear of grain'; syn. eššu (37); en = an 'high' + še 'grain.' This eššu seems to indicate that the -n of an was nasal and hence easily assimilated; cf. anšu (14) 'ass,' where the apparently pure a does not coalesce with the š. Note also en (34) 'be high; lord'; i (17) = nādu 'exalted' for in and u (21) = našu 'lift up.' In this connection should also be compared na (195) = elu high. It is not probable that u (21) 'high' is a loan-word from Sem. elu (_processes).

B. gr-stems.

gur (II, 109) = našu 'lift up;' whence probably gur (III, 110) 'bend' and gur (V, 110) 'to measure,' and from this last gur (VI, 110) 'bucket, pail;' 'a measure.' Note also here gur (VII, 110) 'harvest' = 'lifting, gathering.'

Little (see small)

Man, People

A. l-n-stems.

lu (171) = nu (206) 'man, person,' cognate with ni (199) 'self, person' = ramānu; cf. here ni-ta(g) (201) = male and ni-d (202) 'slave, servant'; syn. uš, g. v., below. Here belong also na (195) and za (218) = amēlu 'man' (n = z) and as a variant of ni, cf. gi (86) and gi/eš (I, 95) = ES mu, muš, representing nasal g in these stems. Note also gu (105) = ašārēdu 'leader, chief' (see B, below). It is highly likely that all these l-n-g-stems are connected in meaning with nu (II, 206) 'beget' and 'seed' (zēru).

Connected with lu is, of course, azabulu (15): abstr. a + za 'man' + lu-lu; the whole = tenešēti 'mankind.'

With the nasal g-stems must probably be associated uk, uku (42) = nišu 'people.' A proof of the nasal character of the k in uku is seen in the variant unu (53) 'people; dwelling' (= ungu).
B. *uš*-ur-stems.

*uš* (58) for *muš* = *gī/ēš* ‘man’ connected with *uš* (I, 57) ‘flow, seed’ in generation. This *uš* appears apparently also in *gurus* (111) = *ēdūm*; cf. *gur* (II, 109) ‘exalt, lift up,’ but is not connected with *uš* (58) = *mušu* ‘death’ which may be a softening to *š* of the *g* in the supposed form (*u*)*g* (42) = *mūtum*. The form *uš* ‘man’ is clearly cognate with *ur* (I, 47) = *amēlu*; also *urum, erum, ere* from original *ōrōm* (Delitzsch); *r* = *š*, passim.

The word *ur* (II, 47) ‘dog’ has evidently another derivation and must have been uttered with another tone or quantity.

It is evident that between all the *man*-stems there is a phonetic connection viz., *lu-nu-gi(ngi)-gi/ēš(ngi/ēš)*-*uš-ur*, i.e., that *l-n-g* (*ng*) interchange and that this consonantional preformative of the root is omitted before the words *uš-ur*. The ES forms *mu*, *muš*, whence also *me* ‘man’ are, of course, mere phonetic variants of *gu*, *gi/ēš*, *gu*.

**Place**

All *k-ng*-stems.

*ki* (116-117) = *mātum* ‘land’; *kin* (119) and the nasal *gi* (86) = *mātum*. This *ki*-stem is the usual word and means ‘place, earth, land’; cf. *kingi* ‘Land of Sumer’ (121); see Prince, *AJS* 28. 67 = Heb. יֵלֶש*. That the initial *k* of *ki*, *kin* was probably nasal is seen from the vocable *ni-in* (205) = *mi-im* (184), both meaning ‘land,’ and evidently attempts to indicate the nasal *ng*; i.e., *nin-mim* = *nging* = *kin*. This same *kin-king*-stem is seen also in *kalam* (114) = ES *kanagga* (115) (= *kanagga*, or = *kangag*).

**See**

*igi* (18-19) = ES *ide* ‘eye.’ There is apparently no direct word for ‘see,’ which is expressed by compounding *igi* with various verbal roots, as *igi-du* ‘go with eye’; *igi-tug* ‘have eye’; *igi-bar* ‘separate with eye’ = ‘distinguish’; *igi-si* ‘fill eye’; also *igi-lal* ‘fill eye’; *igi-dab* ‘eye seize’ = *di₅b* (135) = *cabūtu*.

**Seed**

*nu* (II, 206) ‘beget; seed’ = *banu* and *zēru*; hence *numa* (207) = *zēru* ‘seed’ = *nu* ‘seed’ + *mun*, perhaps the same *mun* as that in *umna* ‘water-hole’; *u* + *mun* (?) cf. Water. Here
undoubtedly belongs nunuz (207), the exact meaning of which is not clear, but which appears to indicate disintegration, spoiling, fermentation; cf. pilu ša școur, perhaps 'moul't, said of a bird, and pilu ša šikari 'ferment,' said of wine; cf. CT 15. 22, obv. 1-7: a nunuz-sa ‘alas, it is defiled’ or ‘spoiled,’ said of a city and temple and in parallelism with bar-nu ba-e-gâ-dm ‘my dwelling is laid low.’ Of course, it is possible that nunuz-sa in this passage may refer to offspring, a meaning which would be in association with the idea of fermentation, breeding, but nunuz, as Delitzsch points out (208), is primarily a color-word of a meaning similar to sûmu ‘dark colored.’

It is probable that nunus is connected with nu = numun ‘seed’ above and also with nun (207) = qalâpu ‘peel’ (not cognate with nun ‘great,’ q. v., but with nu ‘seed’); nun = nu-nu ‘to seed off, peel off.’ Nunus itself may be a combination of this nun ‘peel’ +uzu ‘skin, rind’ = ‘the peeling off of the skin’ or ‘rind’ and hence, ‘spoil, ferment.’ Nunus also = ‘sour milk’ in CT 15. 10, obv. 12 (ga nunus-dm).

Small

A. t-s-e-stems.

tur (162) ‘little, young, weak;’ tura (163) ‘sickness, weakness.’ Hence sur (II, 251); sir (III, 246) = nunušu; ser in ğenzer, q. v.

B. ge, ğen-stems.

gi, ğen (102) ‘little’; ğenzer (214) ‘little, small!’; this zer = sur, sir, tur in A above. Cf. here also gan in gan-buru-da (17) ‘hole’ = ‘little aperture’; bur (71) = paširu ‘explain, disintegrate’; cf. bar (64) = paširu ‘separate.’ The ge, ğen-stem appears also in gome ‘woman;’ ge + eme ‘little female;’ see Woman.

C. banda (67) = šerru, cixru ‘little.’ This is quite a different banda from banda, I and III, respectively = takširu possibly ‘support,’ and tašimtu ‘sense, prudence.’ Perhaps giš-pen (74) = kašum ‘bow’ (weapon) is connected with banda, I = takširu.

Speak

A. Vowel roots.

These are evidently apocopated forms of B, q. v. below.
a (2) 'Oh' (interjection); i-i (17) 'lament'; i-nim 'lamentation,' passim; e (29) = qabû 'speak, cry out'; u, ua, us, uai (40) 'cry of woe.'

B. m-stems corresponding to A above.

ma (179) 'call'; me (I, 184) = qâlu 'voice'; 'to call,' whence also eme (34) 'tongue, language,' passim: abstr. e + me 'tongue, speech'; mu (I, 187) 'name': 'the thing called'; mu (VIII, 187) 'sing, call.'

It will be observed that the m-stems correspond exactly to the vowel stems in A, indicating the ellipsis of the weak initial m (w).

Water

A. Vowel stems, b(p) and r-d-s.

a (5) 'water,' probably shortened form of ab (5) 'sea,' as in a-ab-ba: a + aba; abcu (5) 'ocean, abyss' (see B, below).

e (I, 29) = iku 'water-course'; note ega = a-ge-a perhaps 'black water' (Delitzsch), whence probably the -k- of Sem. loanword iku, from ega (1). The Sem. form is iku and not iku (iqu), with Delitzsch.

i, id; id(i) 'river'; cf. id, id-il (273), from the idea 'flow'; ir, er (24) 'weep'; i + r 'going (r) of water' (i). Here r and d and r and s seem to interchange. Note that u 'water' seems to appear in umun (52) 'water-hole' (1). us (II, 57) 'flow' must belong here, as r and s may interchange.

Note that the b(p) -stem for 'water' also appears in apin (5) = narâbû 'water-vessel.' This is not a + pin (Delitzsch), but more probably ap (= ab) 'water' + formative -in (D. Gr. § 196). With this compare also pu (V, 71) 'canal': pa-ap-ab-abba.

B. su(zu) -stems.

sun, su (II, 250) 'sprinkle; sink under water'; sun (253) = narâbû 'water-vessel'; sug (248) 'pool, marsh'; cf. sur (VII, 252) = birûtum 'well, pit.'

It should be observed that the zu in abzu and arazu (10) 'weeping' is probably the zu-su-element, seen in the above stems, which undoubtedly connote 'water.' It is possible that sud, sun, sug, sur above are all variants of the same consonantal ending, i. e., r-r-ù, in the one case, and n-nasal in the case of sun. It has already been noted that n and ù may interchange. If this is so,
Phonetic Relations in Sumerian

su and ir, er, uš (under A, above) may be an instance of metathesis.

A. m-stems.

ama (11) 'mother, womb,' whence probably am (11) = maštaku 'chamber, extensive space'; gene (191) 'woman'; ge 'little' (see Small) + eme (34) 'pregnant woman'; also = atānu 'she-ass,' i.e., any female; me (185) 'mother'; um (11) 'mother'; this seems like a Semitic vowel on the analogy of Sem. ummu 'mother,' but it is probably only another vocalic u-variant. Note that no ma-form has been found as yet.

B. kel-stem.

The Sumerian word for 'girl' is kel (ki-el) = Sem. amtu 'maid, maiden,' which Delitzsch renders as ašru(ki) ellu (el) 'pure place,' but this seems too fanciful. It is much more likely that kel is a physical allusion to the pudendum muliebre and is cognate with kid (II, 118) 'slit' and also with kal (279) = batultu 'virgin,' which kal clearly = gal (III, 78) = pīṭā 'open.' This gal-kal is probably really gal = rabā 'large' (see Big) which may be connected with the idea 'cut apart;' hence 'extend, make big.'

C. sal-stem.

sal (233) = uru 'pudendum muliebre,' with which is connected sal (233) = rapāsu 'broad, wide'; cf. just above ama and am. This is probably the sal in Eme-sal 'women's speech.' Delitzsch (Gr. p. 21) does not believe that sal means 'woman,' but we find the equation sal = zinnītu 'woman,' Br. 10920; that is, the sign for woman has the value sal, Br. 10916, and this sign also = zinnītu. It is probable that this sal = sil (244) = šalātu 'slit, split' and is an allusion like kel (ki-el) to the pudendum muliebre. This same woman-sign has also the value gal (see above) which was chosen by Delitzsch instead of sal in his reading Eme-gal for Eme-sal.

I still see no reason to depart from my interpretation that Eme-sal means 'woman's speech,' or 'softer idiom' (AJSL 31. 72).

It is quite possible that sal, which also has the variant ša-ul, Br. 10917, is an etymological variant of kel = ki-el = kid = gal, discussed sub B, just above, as the nasal g could interchange with s, š.
THE MIND AS WISH-CAR IN THE VEDA

MAURICE BLOOMFIELD
JOHNS HOPKINS UNIVERSITY

The subject of this paper hinges on RV. 1. 32. 8, \textit{mano rûhānā āti yanty} (sc. \textit{vitrām}) \textit{āpah}. The passage has been discussed in a lively fashion (and misunderstood) for about seventy years, so that it may not be amiss to recall briefly the principal points of view under which it has been treated. The Pet. Lex., under \textit{ruh}, starts with the suggestion that its two difficult words, \textit{mano rûhānā}, mean 'etwa, ihrem willen erreichend.' Grassmann, in his Lexicon, s. vs. \textit{mánas 18} and \textit{rûkāna}, treats the passage as doubtful, but in his Translation, vol. 2, p. 34, ventures on 'lustig steigend,' explaining on p. 505 that he is taking \textit{mánaś} adverbially in the sense of \textit{mánasā}. This idea, accepted for a time by others, more or less enthusiastically or doubtfully, seems to break down in the end through the growing conviction that \textit{mano} is accusative, governed by \textit{rûhānā}, which really cannot get along without an accusative. Thus Ludwig, 964 (as others after him), 'Ihn . . . ein herz sich fassend, uberschreiten die wasser' (comparing, not very aptly, SB. 3. 9. 4. 14, \textit{tā ha svam eva vaśam cērūh}). In \textit{ZDMG} xxxv. 717 comes Pischele's memorable emendation to \textit{mánor úhānā(h)}, in the sense of 'flowing for Manu'; its fitness impresses, almost to this day, Oldenberg, who supports it with additional reasons in his \textit{Rigveda Noten}, 1. 33. Geldner, in his RV. Glossary, takes \textit{ruh} in the sense of \textit{rudh}, 'shut off'; in connection with \textit{mánas}, 'shut off one's heart,' 'be hard-hearted.' And finally Pischele, whose emendation has in the meantime been criticized by Ludwig, \textit{Der Rig-Veda}, vol. 5, p. 471, gives up, reluctantly we may suppose, \textit{mánor úhānā(h)}, and refers to the expressions \textit{samāruruhur álmanam}, and \textit{jñānam árohati pṛajñāh}, \textit{Buddhacarita} 4. 24, 12. 59, which would seem to point to the meaning 'take heart,' 'determine,' for \textit{mano rukh}.

I refrain from criticizing any of these views in the hope that mine will commend itself. The expression \textit{mano rûkānāh} is primarily to be taken in its most literal sense, 'mounting their mind.' There exists a Hindu notion that the mind is the vehicle
of desire. You mount your mind or wish-car and reach your destination, that is to say, the object of your desire. From this arises a part equation between manas and kāma, so that either of them indifferently may be mounted and ridden to the goal. And, vice versa, manas, which is primarily merely the vehicle of desire, turns almost into a synonym of kāma, 'desire.' The close connection between the two words begins in RV., e. g. 8. 24. 6, ā smā kāmān jariitār ā mānak prṣa, 'fulfil the desire, fulfil the mind of the poet.' As a rule, instead of this complete coordination, desire in some way depends upon mind, a fecund idea for philosophical speculation. In RV. 10. 129. 4 desire (kāma) is the first seed of the mind; in NṛP. 1. 1, desire arises in the mind; in BrhU. 3. 2. 7, by means of the mind one exercises desire.

In SB. 2. 1. 2. 7 we have desire (kāma) as the vehicle. 'Under the star Rohini the cattle set up their fires, thinking that they might mount the desire of men' (kāmān rokeme 'ti), i. e., obtain the same objects as men. The expression kāmān ruh is exceptional, but the idea that the mind is the wish-car is habitual, tho not much expressed in the set frase mano ruh. But we have it, clearly enuf, tho in paraphrase, once more in RV. 10. 85. 12, āno manasmōyamā sūryādrohat prayati pātīm, 'Sūryā mounted her mind-car when she went forth to her husband' ; cf. stanza 10. Very fitly Deussen in his Translation of KaūśU. 3. 6 comments, 'Durch das Bewusstsein das manas besteigend, gelangt man durch das manas zu allen Gedanken (und Begierden erregenden Objekten); see Sechzig Upanishads des Veda, p. 48. The same idea is stated negatively in Viṣṇusmṛti 72. 6: 'The man who rides (as it were) in a chariot drawn by his five senses and directed by his mind (as the charioteer), who keeps it on the path of the virtuous, can never be overcome by his enemies (lust, wrath, and greed)' That is to say, the man who rides upon a car of good desires will never arrive at lust, etc. See Jolly's Translation, SBE vii. 231. The idea is from Kathop. 3. 5, and

' The suffix -maya, as I shall show elsewhere, is the word māyā 'semblance,' in composition. It changes into -maya under the influence of the much favored rhythm of the lumbic dipody, which, as I have shown often, is no respecter of etymological quantities: manasmaya, aynasmaya, admanmaya, nadhasmaya, "mrmaya, " gomaya, " kimmaya, etc.
correlatively MāitrU. 2. 6. In PrāṇāgU. 4 the psycho-fysical 
constituents of human personality are made to correspond to a 
sacrifice with its priests and utensils. The mind is made to 
correspond to the car of the sacrifice (mano rathak). When a 
car is said, in the RV., or elsewhere, to be swift, the comparison 
is with mind, of all swift things, manojavas, manoju, or even 
manaso javīyān; cf. Kenop. 1, kenesitaṁ patati presitaṁ manah.

Out of this batch of ideas, not too extensive nor over definite, 
developes at some later time the compound manoratha 'desire.' 
I cannot quote this word earlier than the epics, which means a 
certain break in the tradition of its development. This may 
account for the Pet. Lex.'s unfortunate assumption in its behalf 
of a word ratha in the sense of 'desire' (so also tentatively for 
rathaspati, and partly for rathajit). Since the accent of the 
word is not reported, we may only guess that it was manoratha, 
bahuvrīhi, 'having the mind for its car,' i. e., kāma. This 
reflects perfectly the Vedie idea, that he who desires uses the 
swift mind as a car to travel to the wish goal. Thus RV. 1. 32. 8b 
means 'The waters, mounting their mind as wish-car (i. e. obtaining 
the opportunity to practise their desire), pass over (prostrate) Vṛtra.'

There come to mind the enigmatic epithets rathajit and rāthā-
jiteyā of the Apsarases, or heavenly nyms, in AV. 6. 130. 1. It 
would seem that ratha is here brachylogy for what is later 
manoratha, and that rathajit means 'surpassing desire,' rātha-
jiteyā 'born of (Apsaras) surpassing desire.' Roth, pace his 
misleading derivation of ratha from √ram 'love,' was not a long 
way from this interpretation, when he rendered in Pet. Lex. 2. 
rathajit by 'Zuneigung gewinnend, liebreizend,' but what he 
says on the subject is made nugatory by his derivation of ratha 
in the sense of 'love' from ram, 'to love.'
BRIEF NOTES

A Library of Ancient Inscriptions

The Yale University Press has announced the preparation by Semitic scholars of a Series to be known as 'A Library of Ancient Semitic Inscriptions' in transliteration and translation. The tentative list of subjects and authors given below shows that it will be distinctively an American enterprise. It is fully expected that several of the volumes will appear in 1920.

North Semitic Inscriptions: C. C. Torrey, Yale Univ.
South Arabian Inscriptions: J. A. Montgomery, Univ. of Pennsylvania.
Sumerian and Akkadian Royal Inscriptions: G. A. Barton, Bryn Mawr Coll.

Inscriptions of Gudea: I. M. Price, Univ. of Chicago.
Babylonian Royal Inscriptions: T. J. Meek, Meadville Seminary.
Assyrian Historical Inscriptions (To Ashur-nirari): D. D. Luckenbill, Univ. of Chicago.
Assyrian Historical Inscriptions (Tiglath-Pileser IV to Sennacherib): A. T. Olmstead, Univ. of Illinois.
Assyrian Historical Inscriptions (Esarhaddon to end): J. Hoschander, Dropsie Coll.

Sumerian Cosmogony and Lamentation Texts: E. Chiera, Univ. of Pennsylvania.

Gilgamesh Epic and Other Assyro-Babylonian Legends: P. Haupt, Johns Hopkins Univ.
Tammuz and Ishtar Texts: W. F. Albright, Johns Hopkins Univ.
Omen and Astrological Texts: M. Jastrow, Univ. of Pennsylvania.
Incantation and Medical Texts: H. F. Lutz, Univ. of Pennsylvania.

Letters of the Early Babylonians: L. Waterman, Univ. of Michigan.
Amarna Letters: S. A. B. Mercer, Western Theological Seminary.
Assyrian and Neo-Babylonian Letters: S. C. Ylvisaker, Luther Coll.
Babylonian Boundary Stones, Charters and Grants: W. J. Hinke, Auburn Seminary.
Sumerian Contracts: C. E. Keiser, Yale Univ.
First Dynasty Contracts: E. M. Grice, Yale Univ.
Assyrian Contracts: G. S. Duncan, American Univ.
Neo-Babylonian Contracts: R. P. Dougherty, Goucher Coll.
Contracts of the Persian and Greek Periods and Legal Codes: A. T. Clay, Yale Univ.

Ascalabotes fascicularis in old Babylonian medicine

K 9283 is proof of old Babylonian applied zoology. It is a fragment bearing the particular Babylonian writing of three columns in mutilated condition. The reverse bears a few signs of the third column. It resembles medieval European texts of similar contents. The medieval texts mentioned principally in this regard: mad dog, snake, gecko (stellio) and spider. The spider is an evident substitute for the Babylonian scorpion. The Babylonian superstitious texts deal much with the appearance and locomotion of scorpions.

K 9283 contains in the first column remedies. The second column tells of the venomous animals, against which they may be useful. The third column gives the advice for application.

The lines 1 to 4 and 11 show the mad dog, the lines 5 to 11 the snake and 14 to 16 the scorpion. The lines 12 to 13 concern evidently the gecko (Ascalabotes fascicularis). The cuneiform sign is the Sumerian MIR. It is pronounced in Accadian language: agû, 'crown,' izzu, 'powerful' and agâgu, 'to be angry.' The animal may have been called igigu in Accadian and mir in Sumerian. The classic Romans called it stellio. The medieval language of southern Europe adopted the name gecko loaned from the Arabians. Gecko is apparently a derivative of supposed Accadian igigu. Igigu, i.e. the choleric animal, was a very fitting name for this animal, which is very excitabile and is ready to fight with others of his species as well as with other beings. The hurt of a gecko was called 'stroke of the gecko.' This is exactly what the old Romans and medieval people believed; the gecko was believed to be very venomous and able
to hurt by a poisonous paw stroke. Many species of gecko are known. *Ascalabotes fascicularis* of modern zoology is particularly concerned.

The northern European medieval superstition has often substituted the salamander for the gecko. The salamander appears as incarnation of subordinate deities of the earth. He sometimes watches the ores of the earth according to superstitions belief. In other cases the toad is the European substitute for the gecko.

New York City.

FELIX VON OEPELE

The names of God in Tamil

The Reverend J. S. Chandler, of Sunny\s\ide, Bayapettah, Madras, reports that he has nearly fini\sh\t his monumental Tamil Lexicon, and hopes that it will be complete before the end of 1920. Mr. Chandler visited this country in 1915, traveling about in the interests of his great work, and visiting most of the leading Indologists of the country, who will surely be interested to hear of the approaching completion of his labors.

Mr. Chandler also sends some remarks on the names for God in Tamil. Many of these names are Sanskrit loan-words, but many others are pure Tamil, while some compound names are made up of both Sanskrit and Tamil elements. The meanings of the names show the great variety of aspect which is to be expected in any Indian vernacular. Some are pantheistic (the One, the Absolute, the Self-existent, etc.); others deal with God's attributes in negativ or positiv terms, and with His relation to the world as Creator, Ruler, Helper, Light, etc. It may be said that the meanings run the gamut of the conceptions of Deity familiar to students of Hinduism in general.

The 'root' myakṣ in the Rig Veda

The lexical definitions of *myakṣ* are hopeless, but Whitney, in his *Roots* etc., does put a judicious question mark after 'be situated.' The nearest of kin is Av.-*myā\s\aitē* (duo inter se miscent, i.e., sese coniungunt, unite). The root was *mē* (i) -k. Skr. *miṣrā*, lengthened from *mē* (to mix one thing with another, exchange) in Lat. *mi\s\us tu\s\us*. In *myās- my* comes from the interplay of a lost *mya\i ti* (Sk. *dyā\i ti: de\i*) on forms of *mās*. In
Skr. myaks we have an s-extension of Indo-Iranian myâk’. For â we may provisionally cite Wackernagel, *Al. Gram.* § 5a.—The root mé is also to be written with ê.

The Rigvedie usage of myaks, to adopt a classification somewhat after Griffith, whose translation of the Rig Veda is often a judicious compromise between the versions of Ludwig and Grassmann (hopelessly wrong for myaks), is as follows:

A. Sense approximate to 'cling close,' i.e. se commiscere, coniungere (to mix with or in):

1.107.3* minyâka sêgu = commiscuit <se> in quibus (has joined or united with).

5.58.3* évâdu matyâ marîtah sán mimikshuh = suh mente M. <se> coniungunt (are united with; Griffith, cling firm).

6.29.2* d yâsmin hâste nàryâ mimikshuh = in cùna manu hómini <se> miscuerunt (have joined, grouped themselves).

6.50.3* minyâca sêgu redasī = <se> commiscuit (has joined) in quibus R.

B. Slightly different shadings in Griffith.

1.165.1ab kâyâ sabha . . . Marîtah sán mimikshuh = quo splendore M. <se> commiscuerunt (Griffith, are jointly invested; rather = sese ornarunt, cf. 1.157.6, below).

1.169.3* dm(6) guk sâ tâ in hra yêh asemé = commisceret <se> (i.e. took part; Griffith, sat firm) illa tam-hasta nobis (i.e. nostrâ causâ). But note that miscceo and myâké often = pugnare.

6.11.5* ámyaksì sàdma sàdane prthiyâh = commiserat <se> (Griffith, firm is based; rather est coniuncta, or utouches) ars in sede terresa.

10.44.2* minyâka râjro vrupax gâbharata = miscuit <se> (i.e. was clutched; Griffith, firmly grasped) fulmen—in palmâ.

C. Miscellaneous.

2.23.6* áp vâ myaxa变异a bhuyâsam mett = [a] bene-seiunge (i.e. disjoin, separate) terrorem <a> me.

1.57.6* śrīyās kām bhūsabhâh sám mimiksiā = splendoris gratiâ radiis <se> commiscerunt. Eanius is cited for templum commixta (i.e. ornata) stella.

In conclusion I add that the root mé(i)k² (to mix), in its weakest grade mek¹, appears in the seot of mācra with the specialized sense of 'to knead; and it appears in reduplication (with k, not k¹) in Lith. mînkytis. I believe with Pedersen (KZ 36.76 sq.) that IE. o was an o-sound, and here raise the question whether in mé(i)k²: mek one of the conditions (ê or a) for the variation k¹: k manifests itself.

EDWIN W. FAY
A New Babylonian Parallel to a Part of Genesis 3

Babylonian parallels to parts of the story of Genesis 2 and 3 have been known for some years. For example the creation of man from the dust of the earth by Yahweh is paralleled by the creation of Engidu from clay in the first tablet of the Gilgamesh-epic. The account of Adam and Eve eating of the forbidden fruit and so failing of immortality is in a way paralleled by the Adapa myth in which Ea by deceit prevented Adapa from eating of certain food and thus failing to obtain immortality.

Other elements of the Biblical account are now made accessible to scholars in the second tablet of the Gilgamesh epic published by Langdon (S. Langdon, The Epic of Gilgamesh, Philadelphia, 1917). In the Biblical story Adam and Eve ate of the forbidden fruit, became conscious that they were naked, after which Yahweh made for them coats of skin and clothed them. It has been recognized by several scholars that the forbidden fruit was probably sexual intercourse (cf. the writer's Semitic Origins, p. 93 ff.). In col. ii of the tablet published by Langdon, Engidu, whom the goddess Aruru had created from clay, is represented as a wild man who consorted with animals. He was nude, his body was covered with hair, and he was utterly uncivilized. A hierodule of Ishtar went to him, threw aside her garments and displayed her charms. Engidu was won from the company of his animals and cohabited with her for six days and seven nights. The hierodule then persuaded Engidu to return with her to Erech, and, before the poem tells of the start for the city, we read (col. ii, 27 ff.)

She stripped off one garment.
She clothed him with it;
With another garment
Herself she clothed.

As in the Biblical story, knowledge brought by a realization of sex was followed by the assumption of clothing. We thus have another element of the Biblical narrative supplied by Babylonian story.

George A. Barton

Bryn Mawr College
PERSONALIA

Professor W. Max Müller, of the University of Pennsylvania, died suddenly July 12, aged 57 years. He had almost completed reading the proofs of the third volume of his *Egyptological Researches* for the Carnegie Institute. He also left complete notes for a revised edition in English of his *Asien und Europa*, and in such a condition that it is hoped that it can be published.

Director William H. Worrell and Professor Albert T. Clay, of the American School of Oriental Research in Jerusalem, arrived in London in July, and have since been in active conference with the scholars and patrons interested in the proposed British School of Archaeology in Palestine. The difficulties of travel to the Orient are very great, but the two scholars hope to reach Jerusalem in October. They report that the British School has been very generously underwritten. Its Director will be Professor John Garstang, of the University of Liverpool.

An initial expedition of the Oriental Institute of the University of Chicago (see for its programme *The American Journal of Semitic Languages and Literatures*, the current volume, pp. 196 ff.) will be undertaken this winter. The Director, Professor James H. Breasted, sailed for England in August and from there plans to go to Egypt for the winter to study the archaeological situation. In the spring he will be joined by Professor Daniel D. Luckenbill, Mr. Ludlow S. Bull, and Mr. William F. Edgerton, of the University of Chicago, and they will make a rapid archaeological survey of Syria, Assyria, and Mesopotamia.

The address of Rev. Georges S. Kukhi is Care of Prof. Ibrahim Zaky, Darb Mustafa, Haret el-Hariry, 2, Cairo, Egypt.

The Rev. Dr. John P. Peters has accepted election to the Professorship of the New Testament at the University of the South. He has been given an extended leave of absence and plans to devote the coming year to a journey in the Near East, especially Palestine and Mesopotamia.

Professor Crawford Howell Toy, of Harvard University, died at Cambridge, Mass. on May 12, in his 84th year.
A SHORT PHYSIOGNOMIC TREATISE IN THE
SYRIAC LANGUAGE

GIUSEPPE FURLANI

ROME, ITALY

Up to now only one physiognomic treatise in the Syriac language has been made public.

It forms the XXth chapter of the *Laughable Stories* collected by Mar Gregory John Bar Hebraeus, and has been published on pp. 149-156 of the edition of this last named work, by E. A. Budge (London, 1897); an English version is to be found on pp. 177-185 of the same book. Morales had published previously some extracts also of this chapter of the *Laughable Stories*, from the Syriac MS. 173 of the Vatican Library in *ZDMG* 40, pp. 410-456. In this MS. the chapter bears the title ܐܒܪcommend ܡܓܚܕ ethers ܦܝܫܝܚܘܢܝܬܝܣܛܝܚܥ. In the edition of Budge the title runs ܐܒܪcommend ܡܓܓܝܐܝܝܚܐ ܡܛܝܚܥ. Another MS. has ܐܒܪcommend ܡܓܓܝܐܝܝܚܐ ܡܛܝܚܥ. Another MS. has ܐܒܪcommend ܡܓܓܝܐܝܝܒܕܝ�� ܡܛܝܚܥ.

The treatise does not correspond to any of the physiognomic tracts in the Greek, Latin, and Arabic languages collected and published by R. Foerster in *Scriptores physiognomici Graeci et Latini*, Lipsiae 1892, I-II volumes. However it shows a certain resemblance to the treatise attributed by Foerster to Pseudo-Polemon (ed. Foerster, *l.c.*, v. I, p. 298-426).

The divergence between the two treatises lies in the different length. Besides that we must remark that the Syriac tract is most probably a translation from an Arabic treatise, which in its turn has been translated from some Greek or Byzantine original, now lost; as only the treatises collected by Foerster have survived. There is no doubt, therefore, that through this physiognomic treatise, embodied in Bar Hebraeus' renowned work on witticism, we are able to reconstruct a new type of Greek physiognomic tract, which bears a certain resemblance to Pseudo-Polemon, and represents, in my opinion, a state anterior to that of the author just mentioned.

I have found another physiognomic treatise in the Syriac language on ff. 9v and 9r of the Syriac MS. or 5442 of the British Museum (G. Margoliouth, *Descriptive List of Syriac and Karshuni MSS. in the British Museum acquired since 1873*, London, 1899, p. 49).
This MS. is mostly a collection of works on astrology, derived entirely from a Greek original and is written in a very peculiar and confused hand. It is on paper, contains 153 folios, and is in small 4°. It belongs probably to the XVIth or XVIIth centuries. The text is in very poor condition.

**TRANSLATION**

**Signification of Characters**

1. This is a bald-headed (man), who has between his shoulder-blades a bone standing upright. Such (a man) is perverted, (a man) who does not stand by one word, and in whom there is no truth, and (who) is unfaithful even to God.

2. The fat ones, and those with a great body, are frivolous. They always mourn and are far from fear.

3. Those whose bodies and legs are long and have no hair are false and constantly swear false oaths.

4. And those who shake their heads, although there is no movement in them, are thinking bad thoughts, and are hatching bad plots.
5. And those who have stiff legs are bad...suddenly they get excited and are unfaithful.

6. And those whose finger nails are wasting away are seeking lust.

7. Those who are tall, thin, and whose head is a little compressed, are rich and do not converse with women.

8. Those whose eyes are small and blue, and are not able to look at the sky, are bad, and are having bad thoughts, and the middle (†)...contentious, rebellious.

9. Those who are big, and whose bodies are withered, and whose eyebrows are strong, curse one another, are seeking lust, are thieves, commit adultery, and there is no fear of God in them.

As to the Syriac text, I have to remark that the MS. has in the title instead of لحکیمیات. But لحکیمیات does not mean anything in this connection, as it is impossible for me to conceive what relation there can be between a physiognomical treatise and foxes. I have therefore assumed that لحکیمیات is a corruption of some other word, probably of لودلیکیات which has sometimes, according to Brockelmann (Lexicon Syriacum, Berlin 1895, p. 402), also the meaning of indoles, qualities of the mind and character, being the plural femininis generis of لودلیکیات derived from the well known Syriac root مل which means rectus fuit, stabilis fuit, that which is settled, stable, steady, fixed, firm, steadfast, in opposition to what is changeable. The qualities of the mind and character of a person are something that is ingrained in his nature, and depend on his whole physical and psychical structure and constitution, and are unchangeable, fixed and stable. Such qualities can therefore be called appropriately لودلیکیات in the Syriac language. Brockelmann quotes in the Syriac language, only two passages from Syriac authors, purporting to bear this meaning of لودلیکیات:

1. لودلیکیات (W. Wright, The Book of Kalilah and Dimnah translated from Arabic into Syriac, Oxford-London, 1884, p. 390, l. 25). On page 58, l. 18, of the same book, occurs the passage لودلیکیات bearing the same meaning, but it is not quoted by Brockelmann.

2. لودلیکیات (W. Wright, The Book of Kalilah and Dimnah translated from Arabic into Syriac, Oxford-London, 1884, p. 390, l. 25). On page 58, l. 18, of the same book, occurs the passage لودلیکیات bearing the same meaning, but it is not quoted by Brockelmann.
Giuseppe Furlani

(The Book of Governors, the Historia Monastica of Thomas, Bishop of Marga, edited by E. A. Wallis Budge, London, 1893, Vol. I, p. 346, l. 15.) In the English translation of the editor, i.e. Vol. II, p. 627: "What wise man ever possessed the ready disposition [to receive] all men like unto him? For those who had never seen him distinguished and recognized him at once from the report of his characteristic qualities, the agreeable appearance, the gentle word, the measured step, the bent head with his gaze fixed upon the ground, and his stooping position, when meditating upon the Holy Scriptures, at such times as he was free from the service of the monastery." In this passage ( latina ) means, therefore, not qualities of the mind and character, but only exterior characteristics, viz. the appearance, the step, the position, etc., certain qualities, therefore—provided we can call them so—which can be reckoned rather among the σωφία (Aristotle, Physiognomika, ed. R. Foerster in Scriptores, etc., p. 85 [p. 805 ed. Bekker] et passim)—in Syriac ( latina ), as we shall see later on, of Greek physiognomical science, and not among those which correspond to the σοφία in the mind of a person, τα ἐν τῇ δικαιοτίᾳ as Aristotle (Foerster, i.e. p. 16) is supposed to have written. The latter are the indoles, which are the cause of τα ρωμά πνευμάτων, the objects of physiognomical science. ( latina ) cannot therefore have this special meaning in our title, as our treatise is a collection of signs on or of characteristic qualities of the mind and character.

The same Thomas of Marga employs ( latina ) in the same book in the meaning of indoles. Vol. I, p. 292, l. 4: ( latina ); Vol. II, 521: "And because I am a man lacking all wisdom...." I should prefer to translate all good qualities of mind and character. Vol. I, p. 325: ( latina ); ( latina ); ( latina ); ( latina ); ( latina ); ( latina ); ( latina ); ( latina ); ( latina ); ( latina ). Vol. II, 569. "From these, according to what say the holy writers on the ascetic and monastic life, is propagated in the God-loving heart every work upon which as by stories the spiritual building riseth." It is clear that ( latina ) has not the meaning of work, but of good qualities of the mind and character.

The Thesaurus Syriacus of R. Payne Smith does not register this meaning of ( latina ), ( Vol. II, col. 4488), although some of the passages quoted there could be easily and correctly interpreted in this sense: ( latina ); ( latina ); ( latina ); ( latina ); ( Sancti Ephraem hymni et sermones, ed. Lamy I 229); quantum
vis caecis praeposterae videantur Dei dispositiones. It would be better to say the characteristic qualities of the Godhead.

Sancti Ephraem Syri opera omnia, ed. Assemaniis III 210 t: "Ex-pia precor animos scelerum conscientia oppressos, nullaque post hoc concede maculari culpa, dirutos muros restitue, tuoque adver-sus oppugnatores praeidio in posterum praesta tutos. Quae-cumque nobis bene constituta sunt expolire et ornare, ne, quaeco, absistas, donec ad primum, quem dedisti, decorem, reducas." I think there is no doubt that אגד has here the meaning of in-doles and not of that quaecumque nobis bene constituta sunt.

Ebed-Jesu Sobsens Carmina Selecta ex libro Paradisus Eden, ed. H. Gismondi, Berghi 1888, p. 47: "Cansiones meae conversae fuerunt in lamentationes, et mors corrumpit (corpora) affabre constructa, et commutavit gaudium meum in moerorem et pobu-lum vermissum factus sum." It would fit better, I think, the thoughts and sentiments of 'Abhd-'Isho, if we translated אגד with good qualities of mind and character.

No more proof, it seems to me, is needed to demonstrate that in Syriac literature we meet with the word אגד also in the sense of qualities of mind and character. My emendation of אגד into אגד is therefore on that account at least possible. It very probably hits the truth, as this meaning of אגד fits very well in the context.

But this is not the only word I have changed in the title. The MS. has instead of אגד. But אגד only can be the translation of the corresponding Greek word σημαία or σημείωσις; that is signs or significations. At first sight everybody would of course translate אגד of the MS. with treatise. But אגד has never this meaning. אגד or אגד, a Shaphel form of אגד, has, according to the Thesaurus Syriacus (Col. 1562-1563), the meanings of

1. signum, indicium, symbolum, σημαία, σημείωσις, σύμβολον, σημεῖον;
2. significatio, notificatio, indicatio, narratio, notitia, demonstratio;
3. consuetudo, familiaritas;
4. catalogus, index;
5. praedicatio.

It would be, therefore, very tempting to give to ἦς the meaning of significatio, notificatio, etc., but similar treatises of astrological and palmomantical content have almost always ἦς corresponding exactly to ὑποκοινωνία or ὑποθεματική.

Broekelmann (Lexicon Syriacum 145) registers also the meaning portentum, quoting the Syriac version of Pseudo-Callisthenes, ed. Budge, 1899, pp. 8-17.

Broekelmann’s quotation, however, is incorrect. ἦς in the passage cited must be corrected. We have to read ἦς, that is ἐντολή of the Greek original. See Lc. p. 50 note. Portent in the translation of Budge is the English version of ὑς and not of ἦς.

2. ἦς. I think that ἦς referred to a picture in the manuscript.

2. ἦς, the MS. has ἦς (?).
3. ἦς, MS. ἦς.
6. ἦς, MS. ἦς.
11. ἦς, MS. ἦς (?).
15. MS. ἦς, perhaps ἦς, but I do not see what meaning ἦς can have in this context.
16. ἦς, MS. ἦς.
16. ἦς, MS. ἦς.
1. ἦς, MS. ἦς.
6. MS. ἦς, I am not able to suggest a correction.
7. ἦς, MS. ἦς.
8. ἦς, MS. ἦς.
6. ἦς, MS. ἦς.

I thank Professor R. Gottheil, of Columbia University, New York City, for having made it possible for me to see some of the books quoted, in the New York Public Library, and in the Columbia University Library, during my stay in New York.

[The Editors have also to thank Professor Gottheil for preparing the manuscript for the press.]
A DEMOTIC FOLK-TALE THE BASIS OF GOETHE’S ‘DER ZAUBERLEHRING’

GERARD ALSTON REICHLING
NEW YORK CITY

This curious and significant ballad, which Goethe wrote about the same time that he produced ‘Die Braut von Korinth’ (4-6 June, 1797) and ‘Der Gott und die Bajadere’ (9 June, 1797), is exactly paralleled by the prose story from Lucian’s Philopseudes1 (§ § 33-37), Φιλοφάσις Ἐπιτουσίων.

Dünitzer2 has pointed out that the plot of ‘Die Braut von Korinth’ strongly resembles the fragmentary ghost-story which begins the Περί Θυμωσίων of Phlegon of Tralles,3 and the origin of ‘Der Gott und die Bajadere’ is manifestly a legend concerning Indra, for whom Goethe substitutes Śiva4 (Mahādeva = Śiva). So we should not hesitate to look far afield for the strange story which Goethe has versified in ‘Der Zaublerlehring.’

In the following comparison I have written opposite the German verses of the ballad some of the most obvious analogies from the Greek prose tale. A careful perusal of the two texts will convince any reader that they treat of exactly the same topic. The number of textual correspondences could easily be increased and the stories are certainly the same.

As can be ascertained from the early part of Lucian’s narrative this usually well-informed writer derives the anecdote from Egypt. From works like Περί τῆς Συρίας Ἡθῶν we see that Lucian was a deep student of folk-lore and an accurate one. There is no reason to doubt him here despite his own scepticism as to supernatural matters. The raconteur of the Greek story tells us he experienced the adventures related as a young man, while travelling in Egypt to broaden his mind.

2 Erläuterungen zu den deutschen Klassikern, von Heinrich Dünitzer: Goethes Balladen und Gedichte.
He went up the Nile to Coptos after 'taking in' the vocal colossal of Memnon, and was doubtless prepared for anything after experiencing the then inexplicable effects of the sun's rays on the eroded granite or diorite of the mighty images. A man from Memphis, clean shaven, in scrupulously neat linen, intellectual, speaking barbarous Greek, falls in with the hero on the river-boat. Our young friend has heard tall tales as to the wondrous doings of this 'sacred priest' (ἱερογλυφόμενος) or scribe. He is said to have mastered all the lore of Egypt, to have lived years in the subterranean shrines, and to have been specially instructed by Isis. His name is Πασιφαή, probably Greek for something like Neb-Sekhem, 'lord of power,' 'all powerful.' He swims unharmed among the crocodiles, straddles them in the water, and they fawn about him like pet dogs. For they as well as he are sacred to Sebk, Khons or Khnum, lord of the cool waters.

Gradually priest and tourist become acquainted and the former reveals the arcana of Egyptian cosmogony to the latter. Then he invites the young man to his subterranean cell, urging him to leave all the servants behind in Memphis as they will not need them in his subterranean abode. Then the hocus-pocus immortalized by Goethe begins. The hierophant takes the bolt of the door of the underground dwelling, the broom or the pestle, decks it out with rags, pronounces an incantation and lo! we have a perfectly good hewer of wood and drawer of water, waiter, or what not, who serves us noiselessly and swiftly.

Despite the priest's jealousy our hero learns part of the incantation (it is trisyllabic) and, when the master is out, determines to try his power. He repeats the syllables over the pestle or broom decked out as described, and the water-carrier works with vim, until the inundation threatens to sweep the house or dwelling away. Now, as in Goethe, he tries to stop the zealous automaton, but, not knowing the counter-charm, his words have no effect. He becomes excited and tries violence, seizing an ax and splitting the automaton in two. This method of 'simple fission' multiplies the malign activity of the object just as in the case of a bacillus. Two inundators in place of one! But lo! the master returns in time, perceives the situation, reverses the charm with the virtuosity of a true wizard, and vanishes into thin air.
A Demotic Folk-Tale

The above is a free paraphrase of Lucian's story. A study of the Greek text and the German ballad will demonstrate the legitimacy of a close comparison. Critical elements, like the absence of the master, the decking out of the broom in rags, the man-like automaton, fetching and carrying, the inundation, the assault with the ax, the intervention of the master are common to Lucian and Goethe and prove that the plot is the same.

Now in the demotic stories of Khamuas (edited by Griffiths), the voyages up the Nile from Memphis to Coptos, where is the great temple of Isis and Harpoerates as well as the numerous tombs, figure largely, while the magical performances of Setno, Ne-Nefer-ka-Ptah and other characters in this region are as improbable as the adventure of Lucian's raconteur which has been made familiar to the modern world by Goethe.

Among other things Setno gradually sinks into the earth after losing his game to Ne-Nefer-ka-Ptah, Ahure vanishes, the Ethiopian wizard and Negress cause the heavens to turn blood-red, a great block of granite floats over the head of Pharaoh, etc., reminding one of Moses and the wizards. After the Ethiopian has produced flames in the palace, for instance, Hor, the son of Panoshe, brings on an inundation to extinguish them.

At the time of writing I have not been able to investigate the great Demotic Corpus of Spiegelberg but I have no doubt from the above story from Lucian that some Demotic scholar will unearth a magical text treating of the automaton-theme at the basis of Goethe's ballad. It has been my intention here only to call attention to the probable provenience of the magical legend handled so wonderfully by Goethe. The comparison with Lucian's story is new as far as I know. As to the trisyllabic incantation, we learn from Erman and Reitzenstein that such formulas as Serapis, Sokar (Demotic from Skr, god of silence), were common in Demotic incantations.

* F. L. Griffiths, Stories of the High Priests of Memphis; second story, sub 9a.
* Spiegelberg, Demotische Studien, contains among other things fragments of a demotic Velkepos strongly reminiscent in parts of the Homeric poems (so-called 'Patriastic Cycle').
* Erman, Geschichte Aegypten, p. 128.
* Reitzenstein, Poimandres, e. §, p. 93, 104, 184-5, etc.
Gerard Alston Reichling

Der Zauberlehrling.

Hat der alte Hexenmeister
Sich doch einmal wegbegaben!
Und nun sollen seine Geister
Auch nach meinen Willen leben.

Seine Wort' und Werke
Markt' ich und den Bruch,
Und mit Geistesstärke
Tu' ich Wunder auch.

Und nun komm, du alter Besen,
Nimm die schlechten Lumpenhüllen!
Bist schon lange Knecht gewesen;
Nun erfülle meinen Willen!

Auf zwei Beinen stehe,
Oben sei ein Kopf!
Eile nun und gehe
Mit dem Wasserkopf!

Soll das ganze Haus erschaffen?
Seh' ich über jede Schrelle
Doch schon Wasserströme laufen.
Ein verruchter Besen,
Der nicht hören will!
Stock, der du gewesen,
Mit dem scharfen Beile spalten.
Seht, da kommt er schleppend wieder!
Wie ich mich nur auf dich werfe,
Gleich, o Kobold, liegst du nieder;
Knochend träft die glatte Schärfe.
Wahrlich, brav getroffen!
Seht, er ist entweil!
Und nun kann ich hoffen,
Und ich atme frei!
Wehe! wehe!
Belde Telle
Stehn in Elle
Schon als Knechte
Vōllig fertig in die Höhe!

'In diei Ecke,
Besen! Besen!
Seid's gewesen.
Denn als Geister
Ruft euch nur, zu seinem Zwecke,
Erst hervor der alte Meister.'

καὶ ὁ μὲν ὑπέστη

PORTRAIT PAINTING AS A DRAMATIC DEVICE IN
SANSKRIT PLAYS

VIRGINIA SAUNDERS
NEW YORK CITY

JUDGING FROM THE MANY INSTANCES of portrait painting in Sanskrit literature, the art was apparently a very common accomplishment. It is interesting to examine the extensive use to which it has been put as a dramatic device in the plays. Kālidāsa employs it in Śakuntalā and Mālavikāgnimitra; Bhavabhūti, in Mālatimādhava and the Uttara-rāma-carita, Harṣa in Ratnāvali and Nāgānanda, and Rājaśekhara in Viddhaśālibhāṇijīka.

In Mālavikāgnimitra¹ the actual episode of the painted portrait takes place the day before the play opens, but the retelling of the occurrence by one maid to another serves to introduce the plot which is in most part developed from it. The previous day the Queen had gone to the picture-gallery to inspect a recently finished picture which had been painted by a court painter. It was a group, the Queen surrounded by her attendants, among them Mālavikā. As the Queen is looking at the picture the King comes into the room and seats himself beside her. When he sees Mālavikā in the picture he asks, ‘What is the name of the girl, that I have not seen before, standing near you in the picture?’ The Queen pays no attention to him and he repeats his question. Still she does not answer, but her young sister finally volunteers the information that it is Mālavikā. The King makes a mental note of this fact, and the Queen very shortly has cause to regret ever having had the picture painted.

In Śakuntalā² the purpose of the painting is quite different, and yet it serves to assist in the reuniting of the King and his lost beloved. In Act 6, Sānumatī, a nymph, is sent by Śakuntalā’s celestial mother to discover the real state of the King’s

feelings. The King, in his despair over the loss of Śakuntalā, has painted a portrait of her as he first saw her at the hermitage. The nymph makes herself invisible and watches his actions and listens to his lamenting as he gazes upon the portrait. There is no doubt in the nymph's mind after this scene, and we have every reason to think that upon her report to the mother of Śakuntalā that celestial lady was quite willing that her daughter should again be united to her husband.

In Act 2 of Ratnāvalī the heroine, Sāgarikā, paints the portrait of the King on a tablet in order to soothe her secret longings for his love. One of the Queen's maids, who is a friend of Sāgarikā, discovers her with the picture and in turn paints her portrait beside that of the King. The two girls are frightened away by a monkey and in their haste leave the painted tablet in the summerhouse. A little later it is found by the King and the Vidūshaka and, of course, the King is at once smitten with overpowering love. The Queen, unfortunately for the lovers, has selected just this time to come to the summer-house. The Vidūshaka hides the tablet under his garment and later drops it in front of the Queen, pretending it is an accident. The Queen sees the two portraits and takes in the whole situation at a glance. Her anger brings a train of events which finally result in the imprisonment of the heroine till the end of the play. Then it is revealed that she is of high birth and may legitimately marry the King.

The portrait is almost the cause of a tragedy in Act 2 of the Nāgānanda. The heroine, concealed behind an āsokā tree near a sandal-creeper, sees the Prince, with whom she has fallen so violently in love, drawing a portrait upon a moonstone seat. The Prince talks to the Vidūshaka of his love for the maiden he has drawn, and the heroine, thinking he has placed his affections upon some other maiden, tries to hang herself with the end of a creeper. The Prince hears the cries of a serving maid and reaches the spot in time. When he learns of the attempted suicide he leads the heroine to the moonstone seat and shows her her own portrait, which quite convinces her of his love.

*Tr. and ed. Sri Chandra Chakravarti (1902), pp. 95-191.
We have two portraits in Mālatimādhava. Each of the lovers is portrayed by the other.

The fathers of the youth and maiden have been life-long friends and have agreed that when their children grow up they shall be united in marriage. When the play opens the King has just demanded of his minister, Mālati’s father, that the girl be given in marriage to his favorite. In order not to incur the displeasure of his sovereign, the father, with the help of the girl’s nurse, devises a plan whereby the youthful pair may be thrown together and fall in love of their own accord. Then by seeming to comply with the King’s command he hopes to force Mālati and Mādhava into a marriage without his consent. In this way he will be blameless in the King’s eyes.

As Mālati’s nurse, who is a Buddhist priestess, is also Mādhava’s preceptress, this plan is comparatively easy. Mādhava is sent frequently on errands past Mālati’s home. They see each other and the attraction is mutual, but each is ignorant of the state of the other’s feelings. Mālati paints a picture of the youth to console herself. Her foster sister, who is in the scheme of the father and nurse, manages to have the picture shown to Mādhava by his servant. He cannot doubt the reason for Mālati’s making the portrait and is easily persuaded by his friend to paint one of her. When a maid comes to demand the return of the picture made by Mālati, the one Mādhava has just painted is given her instead. She takes this to her mistress and the understanding is complete. The trials do not end here but the portraits have served to assure the lovers that their love is mutual.

Even in the Uttara-rāma-carita where, at first thought, we should scarcely expect it, we find painting used, quite differently, it is true, but still in a definite way as a device. It is through seeing the experiences of Rāma and herself portrayed upon the walls of the garden, that Sītā becomes filled with longing to wander in the forest and bathe in the Ganges. Thus, through this journey to satisfy her longing, her exile is easily accomplished.

In the Viddha-sālabhaṇḍikā¹ of Rājaśekhara the King sees a beautiful maiden in a dream, or rather sees her in his apartment and thinks he is dreaming. The next morning, to calm his mind distracted by the vividness of the supposed dream, the Vidūshaka takes him to the picture gallery. There he sees two portraits and a statue of the maiden he beheld the night before. He believes now that the dream-maiden is real, and sets about to find her.

The three plays, Vikramorvaśī, Mrccaḥaṭikā and Karpūramaṇjarī have each a mention of a portrait, but they are not used as a dramatic device.

In Vikramorvaśī² the Vidūshaka suggests to the King that he paint a portrait of the nymph, but the King replies that it would do no good as his eyes are so filled with tears that he could not see it.

At the beginning of Act 2 of the Mrccaḥaṭikā³ Vasantasena is discovered painting a picture of Cārudatta; at the beginning of Act 4 she is discovered gazing upon it, but it is not used to develop the plot.

In Act 2 of Karpūramaṇjarī⁴ the King states that he cannot paint a picture without the heroine appearing upon it.

I have used the word painting rather broadly, as the work was not always done with brushes and wet paints, but sometimes with pieces of colored earth or a colored drawing pencil. But the verb likk is used when either a brush or pencil is employed for putting on the colors.

BLOOD REVENGE AND BURIAL RITES IN ANCIENT ISRAEL

Moses Buttenwieser

Hebrew Union College, Cincinnati, Ohio

Goethe, in speaking of laws and legal rights, says that they are transmitted from age to age like an eternal disease. I have often wondered if Goethe, were he living today, would not extend his remark to some of our most firmly rooted Biblical theories, which for over half a century have found their way from one Biblical commentary or textbook into another, without their validity ever being questioned. One of these theories pertains to the condition under which a murder is supposed to have been subject to blood-revenge. Biblical scholars have been wont to hold that in ancient Israel bloodshed called for vengeance only when the murdered person was left unburied, or, in Biblical phraseology, when his blood was left uncovered, unabsorbed by the earth. Conspicuous in the confusion caused by this erroneous view is the prevailing interpretation of Job 16. 18:

אָרְפִּי אָלָה הָבַשְׁתִּי וַיָּלִי מִכָּה בַּלַּעְקַהו

The first part of this verse, 'Let not earth cover my blood,' is invariably explained to mean that Job prays that, when he dies, his blood, i. e. his body, may be left unburied to appeal to Heaven for vengeance for his premature and unjust death. In line with this interpretation the second part of the verse is as a rule translated: 'And let my cry have no resting-place,' and is explained to mean that Job prays that his post mortem cry for vengeance may not be intercepted, but that it may penetrate unto God. This translation of the second half-verse, it may readily be seen, is unfounded, for in addition to the fact that the interpretation reads far more into resting-place than the word can possibly imply, there is the far weightier objection that does not mean resting-place at all, either in Hebrew or in any of the cognate languages. The translation of the AV 'And let my cry have no place,' is decidedly superior to that adopted by the RV and the exegetes. But this is a minor point compared with the fact that, even if the notion on which
the prevailing interpretation of the verse is based were a real, instead of a purely imaginary one, it would have no relevancy to the case in question; for since Job was threatened, not with a violent, but with a natural death, from disease at the hand of God, it is obvious that his death, however premature and unjust, was not a case for blood-revenge. It is absurd to represent Job as appealing to God to avenge his unjust death—avenge it on whom! on God Himself? The situation would be quite different from that met with later on in the chapter where Job, praying for his vindication, appeals from the God who has mercilessly smitten him to the God of love and compassion—the God of his faith. The decisive point is that neither in Israel nor among any other people of ancient times did the notion exist that violent death called for vengeance only as long as the blood remained uncovered, or, what is the same thing, as long as the slain one was left unburied.

As in pre-Mohammedan Arabia, so in Israel, blood-revenge was sought for those slain in blood-feuds or for those deliberately murdered (and at one time also for those killed without premeditation or design), irrespective of whether the slain person was duly buried or not. Thus Joab avenged the blood of his brother Asahel on Abner after Asahel's remains had been buried. Further, David on his death-bed enjoined upon Solomon to avenge the blood of Abner (slain thirty years previously), and of Amasa, on their slayer Joab (for David himself it would have been too risky a matter to seek vengeance for either of them); yet of Abner we are told that he was buried immediately after his death, and moreover that the burial ceremonies were performed by the king and the entire nation. Note finally that in the story of Genesis about Cain's being called to account for the blood of his brother crying for vengeance, commonly quoted in support of the prevailing interpretation of Job 16, 18, the very opposite is stated, that Abel's blood had been absorbed by the earth: 'Be thou cursed from the ground which opened its mouth to receive the blood of thy brother from thy hands' (Gen. 4. 10-11).

Of the abundant proof to the same effect in Arabic literature

---

1 Cf. 2 Sam. 2. 14-22; 3. 27, 30.

2 Cf. 2 Sam. 3. 29 f., 31-39; 1 KI. 2. 5 f., 31 ff.
it will suffice to mention: (1) the instances narrated in *Sirat Antar* of the custom of killing prisoners from the hostile tribe on the grave of a slain kinsman in revenge for his death. (2) The notion that the grave of a slain person remains dark as long as his death has not been avenged, but that when avenged it becomes bright. This notion is referred to in the following verses from Hamāsa:

'Abdallah, when his day of death came,
Sent his kinsmen word:
Accept no blood-money from them for my murder,
Accept neither foals nor calves from them,
That I may not be left in a dark house (*fi baštīn mušlimīn*)
on Sa'da."

(3) And finally we have to mention a notion that supplements the preceding one—a notion very common in Arabic literature—that the body of a slain person whose death has not been avenged is turned to a bird (called *hāmat*) which at night-time cries at, or from, his grave: 'Give me to drink, give me to drink!' (viz., vengeance-blood), and which flies away as soon as its thirst for vengeance has been satisfied.4

It will be noted that the lines cited from *Hamāsa* 1, p. 106 f., mention expressly that Abdallah, whose blood-revenge is urged, rests in his grave on Sa'da. Still more explicit (to mention one of the many other examples to this effect) is the poem of Miswar ben Sijada (*ib*. p. 119 f.). The poet begins by stating

4 (G. L. Goldziher, *Muhammedanische Studien*, 1, pp. 243 ff. and 245 ff. The fact that these instances suffer from exaggeration as to the number of the prisoners killed does not invalidate their bearing on the question at issue.

*G. G. Freytag, Hamāsa Carmina*, 1, p. 106, v. 4; p. 107, v. 1. The proper meaning of *bašt* in the last verse is 'grave'; Arabic has this specific meaning of *bašt* in common with all other Semitic languages.

4 *Cf. Hamāsa*, 1, p. 453, v. 7, and Freytag’s exhaustive comments on both this verse and on 490, v. 1 in *vols. 2*, pt. 2, p. 164 f., and p. 72, where Freytag cites Firūzābādī’s elucidation of the notion underlying the death-bird called *hāmat*; *cf.* also 1, p. 350, v. 6, where this notion is referred to again. Doughty, *Arabia Deserta*, 1, 168, and Wellhausen, *Revue des Arabischen Studien*, 2d ed., p. 185, confound the death-bird *hāmat*, which interests us here, with the death-bird named *sada*. The latter was believed to issue from the head, or rather the brain (the seat of the soul) of a dead person after the body had decomposed.
circumstantially that his father, whose death he is determined to avenge, lies on Mt. Kuwaikib in his grave duly built of earth and stones.

The two Arabic notions mentioned a moment ago, regarding the slain whose death has not been avenged, are of importance as showing that blood-revenge among the Semites was governed by the same primitive belief as in ancient Greece—the belief that the souls of those who have met a violent death, the *bd_nbhrn* as they are called in late Greek literature, cannot find rest in the nether world, but are condemned to haunt the earth as wretched spirits until their death has been duly avenged on their slayers. Though we have no express statement to that effect, there can be no doubt that the same belief prevailed in Israel, the more so since there is a striking similarity between the Israelitish and Greek practices pertaining to blood-revenge, as also between the burial rites of the two countries. This similarity is not at all surprising when we remember that these rites and beliefs belong to the stock of religious notions and practices common to all nations. The differences are not essential; they pertain merely to the local coloring.

In proof of my thesis the following particulars may be pointed out. In both Greece and Israel the right, or rather the duty, of seeking blood-revenge was primarily incumbent on the next of kin of the murdered person, but in course of time it became the prerogative of the state. It is important to note, however, that the state did not exercise this right, any more than the next of kin had done, with a view to satisfying offended justice, but solely for the purpose of appeasing the unhappy spirit of the slain one and stilling its thirst for vengeance. In both countries, the prime interest of the state in exercising control over blood-revenge was to determine whether a murder was a premeditated act of malice, or whether it was purely involuntary and accidental. As long as blood-revenge was the exclusive right of the kin of the person killed, the motive and circumstances of the homicide were negligible factors; the mere fact of being responsible, however unwittingly, for the person's death constituted a lawful case for blood-revenge, as we know

*See below, p. 311.*
from Homer in the case of Greece,\textsuperscript{7} and from the Deuteronomic and Priestly homicidal laws in the case of Israel,\textsuperscript{8} not to speak of the abundant evidence to the same effect in Arabian history.

To remedy this evil, the baneful consequences of which are strikingly illustrated in the continuous blood-feuds of early Arabia, the state instituted trial for murder. This meant in Greece\textsuperscript{9} and Israel\textsuperscript{10} alike that thenceforward the punishment for accidental homicide was temporary exile, but in the case of wilful murder and manslaughter the right to take blood-revenge was still conceded to the next of kin.\textsuperscript{11} This shows that the duty of blood-revenge was as binding as ever—a conclusion which is further borne out by the regulations pertaining to homicide in the Biblical laws I mentioned a moment ago. It is specified that, if the person guilty of accidental homicide left his place of exile before the expiration of his term, the victim’s next of kin might legitimately kill him.\textsuperscript{12} And from another specification it is to be inferred that the next of kin was not held accountable if he took blood-revenge on the involuntary slayer before he surrendered to the court of justice.\textsuperscript{13} That in Greece, too, the kinsmen of the one accidentally slain were free to take vengeance if the slayer returned from exile before his term was up, may be deduced from the fact that at the expiration of his term they were obliged to forgive him and to permit his return to the country.\textsuperscript{14} The one point in which the Greek

\textsuperscript{1} See E. Rohde, Psyche, Secten cult und Unsterblichkeitsglaube der Griechen, 4th ed., I. 260 ff., 265.

\textsuperscript{2} Cf. Nu. 35. 24-27; Deut. 19. 6; Josh. 20. 3 ff.

\textsuperscript{3} See Rohde, op. cit. I. 266.

\textsuperscript{4} See Nu. ib. vv. 22-25, 28; Deut. ib. vv. 4 f.; Josh. ib. vv. 2-6. Cf. also below, note 25, where it will be shown that banishment of the slayer from his home-community to one of the refugee-cities is to be classed as exile.

\textsuperscript{5} See Nu. ib. vv. 16-21; Deut. ib. vv. 11-12. Of the older sources which contain evidence that taking blood-revenge was primarily the right of the next of kin, compare especially 2 Sam. 14. 6-11. In Greece the old right of the kinsmen to blood-revenge was recognized to the extent of allowing them to act as a sort of prosecuting attorney in the murder-trial; see Rohde, op. cit. I. 263 ff., 265.

\textsuperscript{6} See Nu. ib. vv. 26-27.

\textsuperscript{7} See Deut. ib. v. 6.

\textsuperscript{8} See Philipp, Areopag und Epheten, p. 115 f., and Rohde, I. c.
and the Hebrew homicidal law differed was that while the former allowed the kin of the person killed to grant his slayer immediate pardon and release from exile, whether with or without payment of blood-money,16 the latter interdicted this practice.17 Both laws had the same provision that in case of deliberate murder and manslaughter the crime should be expiated by the blood of the murderer; under no condition should blood-money be accepted.18 By this prohibition the older practice of accepting blood-money for wilful murder was made unlawful. This practice prevailed in the Greece of Homeric times,19 and evidently also in the Israel of preéxilic times, as may be concluded from the emphatic refusal of the Gibeonites to accept blood-money for the crime perpetrated on them by Saul.20 Arabic literature too is full of references to this practice,21 which, in fact, was common to all peoples of ancient times. The motive by which the lawgivers were actuated in abolishing the older practice is expressed in the homicidal law of the Priestly Code: 'Ye shall not desecrate the land wherein ye live, for bloodshed desecrates the land; and no expiation can be made for the land for the blood shed in it except by the blood of him who shed it; nor shall ye defile the land in which ye live, wherein I abide.'22 It was the conse-

16 See Rohde, op. cit. 1. 266.
17 See Nu. 35. v. 32.
18 See Rohde, op. cit. 1. 266; Nu. 35. v. 31.
19 See Rohde, op. cit. 1. 261 f.
20 See 2 Sam. 21. 4. This is the meaning of the generally incorrectly translated יִשַּׁבֶּךָ דִּבֵּר יִשְׁמָאָל בְּגִבְרֵי יִשְׂרָאֵל תּוֹלִיד דְּבֵר יִשְׁמָאָל. 'Silver or gold cannot appease us in our feud with Saul and his house;' note the continuation יִשְׁמָאָל. 'nor can any man in Israel (at large) appease us;' יִשְׁמָאָל יָשָׁן דְּבֵר יִשְׂרָאֵל are qualifiers of יִשַּׁבֶּךָ; as to another example of יִשַּׁבֶּךָ with similar meaning, cf. Jer. 8. 17 יַשְּבֹּךְ בְּמֵיהַ דִּשְׁהָה יִשְׂרָאֵל 'against which no charm will avail.'
21 Cf. e. g. the verses cited above, p. 305 from Hamāsa, 1. 106 f., also the poem referred to of Miswar b. Sijada (ib. 119 f.). Refusing the sevenfold blood-money offered him for his father's death by Salhido b. Alhaz, Miswar declares that it would be disgraceful were he to accept the blood-price from him whom his filial duty demands that he kill. In a similar strain acceptance of blood-money is spoken of Hamāsa, 1. 105, v. 2; 106, vv. 2-3; 224, l. 22 (schol.); and 236, l. 4 (schol.).
22 Nu. 35. v. 33 f. That יִשְׁמָאָל means 'desecrate' or 'put the stigma of sacrilegiousness on' (the land), and not 'pollute,' follows from the
quences of unexpiated blood-guilt which the people feared in Greece and Israel alike. The whole country might be visited with calamity if bloodshed were not duly avenged. The Books of Samuel tell that the land suffered famine for three years because of Saul's unavenged murder of the Gibeonites, 2 Sam. 21. 1-6. Further light is shed on this point by Greek sources. Both in early and in later Greek literature, the belief is met with that the soul of the murdered person, prevented from entering the realm of Hades and compelled to haunt the earth, wreaks its wrath on all those who should have avenged the crime committed against it, but who did not. Greek literature is full of stories of the afflicts visited on people by those incensed spirits; their wrath was believed to remain active even for generations.\(^{32}\) The real import of our verses from the homicidal law of the Priestly Code will now be seen. In Israel as well as in Greece the prosecution and punishment for murder and manslaughter was at bottom a religious act.\(^{33}\) The view expressed in the two verses that bloodshed defiles the land we find more explicitly stated in the works of the Greek orator Antipho: 'The μάναρα of blood-guilt,' he says, 'pollutes the entire city; the murderer defiles by his presence all those who sit with him at the same table or live with him under the same roof, also the sanctuaries which he enters; in consequence dearth (δόρρα) and disaster (δεστυργίας πράξεων) will befall the city.'\(^{34}\) Note that, as in the Biblical account of the suffering caused the land on account of Saul's blood-guilt against the Gibeonites, so in Antipho dearth is specifically mentioned as a consequence of unexpiated bloodshed. It is not possible here to enter into a full discussion of this idea. It can only be briefly mentioned that as in Greece, so among the Semites, the notions and practices pertaining to burial and bloodshed find their ultimate explanation in a once existent worship of

---

\(^{32}\) See Rohde, op. cit., 1, pp. 264 ff., 269 ff., 275 ff.

\(^{33}\) This character of the Greek murder trial has been duly pointed out by Rohde, op. cit., 1, 267-275.

\(^{34}\) Quoted by Rohde, op. cit., 1, 275, note 2.
chthonic gods, chief among whom was Gaea or Mother Earth. She was dispenser of the produce of the soil and of life in general; above all it was her province to receive back into her lap the spirits of the deceased. On all those who either directly or indirectly prevented any of her children on their death from entering her realm she (in unison with the other chthonic gods) wreaked vengeance by withholding the blessings of the soil.  

We can now understand also the significance of the piacular sacrifice which, in case of an untraced murder, the Deuteronomie Law prescribed for the city nearest to the place where the body was found (Deut. 21. 1-9). The heifer was no doubt a substitute for the unknown murderer, offered at the same time to the spirit of the slain one and to the incensed god to appease their wrath. The uncultivated ravine with its perennial stream,

For the fuller material bearing on this point, see Rohde, op. cit., 1. pp. 205-212, 246 f., 272 f.; A. Dieterich, *Mutter Erde*, pp. 35 ff., 42-54, 65-69, 73-79, 83 f. When I read this paper at the meeting of the Middle West Branch of the American Oriental Society at Urbana, III., my attention was drawn by my friend and colleague, Prof. Morgenstern, to the fact that valuable material on this point is found also in J. G. Frazer, *Folklore in the Old Testament* (1918), 1, 79-85. Frazer remarks in regard to the curse of Cain—'Cursed be thou from the ground...; when thou tillest the ground, it shall not henceforth yield unto thee its strength; a fugitive and vagrant shalt thou be on earth.'—: 'The implication apparently is that the earth, polluted by blood and offended by his crime, would refuse to allow the seed sown by the murderer to germinate and bear fruit; nay, that it would expel him from the cultivated soil on which he had hitherto prospered, and drive him out into the barren wilderness, there to roam a houseless and hungry vagabond' (p. 82 f.). It seems to me, however, that Frazer, carries this point somewhat too far. As to the geographical limits of the expulsion from the country, in this, as well as in the other interesting parallel cases quoted by him, it is important to remember that, like all other gods, the Mother Earth-goddess (as Rohde, p. 204, and Dieterich, p. 79, point out) was primarily a mere local deity whose domain did not extend beyond the confines of any certain province or locality. And since her sphere of dominion was thus locally confined, it follows also that the banishment of an involuntary manslayer from his community to one of the refuge-cities in Israel is properly to be classed, as I have classed it above, with exile from the country. Fraser fails to see the significance of the Biblical expression, 'the blood of thy brother,' in Gen. 4. 10, and other similar passages; and also, strange to say, he repeats the erroneous view which, owing to their misinterpretation of Job 16. 18, Es. 24. 7-8, etc., prevails among Biblical scholars regarding blood-revenge (see p. 101 f.).
Biblical scholars rightly hold, must at one time have been the sacred ground of a deity. Another object of the ceremony was to serve as a purification rite for the community imperilled by the murder. By their declaration that they were innocent of complicity or even of any knowledge of the crime, the elders cleared themselves of all guilt, in order to avert calamity from their community.

In proof of the second part of my thesis, the similarity of the Greek and the Hebrew, or, I might say, the Semitic, burial rites, as well as in further refutation of the prevailing interpretation of Job 16. 18, I may refer to the notion common to both Greece and Israel, that to leave a dead body unburied was a flagrant religious offense. The reason for this notion is explicitly stated in Greek literature. Like the souls of the βασσάναρον, the souls of the ἄραφος, 'unburied bodies,' it was thought, could not find rest in the nether world, but were obliged to haunt the earth, and vented their wrath on the land in which they were retained against their will. The denial of burial, Isocrates says therefore, 'is more calamitous for those who refuse it than for the bodies left unburied.'

Equally explicit is Babylonian and Assyrian literature on this point. Among the dreaded Utukki limnuti, 'Evil Spirits,' which were thought to haunt mankind and to work all sorts of evil until they were laid to rest by exorcism, there figured prominently the Ekimmu or 'Departed Spirits.' There were three distinct classes of Ekimmu: (a) spirits compelled to return from the nether world to earth because their descendants ceased making offerings and libations to them; (b) spirits of those that met with a violent or premature death; (c) and spirits of unburied bodies (of special interest to us at this point), which are spoken of in the following texts.

*Cf. among others A. Bertholet, Deuteronomium, p. 65; B. Stade, Biblische Theologie des Alten Testaments, p. 107.

*3 In Greece too those that met with an untimely death, ἀναφορά, shared the fate of the βασσάναρον and the ἄραφος. See Rohde, op. cit., 2. 83, 411 ff.

'Whether it be one (i. e. an Ekimmu) that was cast out in the open field, 
Whether it be one that was cast out in the open field and was not covered with earth, ... 
Whether it be one that on a boat met death in the water,'
Whether it be an unburied Ekimmu;'

(Incantation) 'Against him that was thrown in a ditch, 
Uncovered by a grave,
Against a ghost that has not obtained rest,
(The body) of which was cast out without being covered,
Whose head was not covered with earth,
The king’s son (or the person) that lies in the open field,
Or that was cast out on a heap of debris,
Against the hero who was slain with the sword.'

And in the conclusion of the epic of Gilgamish we read:
'He whose body was cast out in the open field—
Thou and I have seen such—
His spirit cannot find rest in the earth.'

The Utukki limnati literature of Babylonia and Assyria shows, as Jastrow rightly emphasizes, 'that an unburied body was considered to be not only a curse to the deceased person, but also a peril to the living. The wandering ghost of the unburied person was thought to wreak vengeance on the living by causing all sorts of evil.'

There is ample proof that this view was fully shared by Israel. Just as in Greece, executed criminals might be left unburied only temporarily, because of the danger the country

*Also in Greece a drowned person whose body was not removed from the water was considered to be unburied. When after the naval battle at Arginusae the bodies of the fallen warriors were not taken out of the water for burial, the people were so incensed that they put six Athenian commanders to death.

*The omitted line Jastrow reads purusu la wparris, 'Dessen Entscheidung—i. e. Recht—[nicht ausgeführt ist],' and explains it to mean 'dass dem Toten das ihm zukommende Recht, würdig bestattet zu werden, nicht gewährt worden ist.' If this reading and interpretation is correct, Soph. Ant. 1071, decres ouvros, 'a corpse with all the rites unpaid,' may be referred to for comparison.
had to fear from unburied bodies, so in the Deuteronomic Code it was laid down as law that the body of a criminal be not left hanging over night, but that it be buried the same day, the reason given for this law being that 'A body left hanging brings down the curse of God' (Deut. 21. 23). Further, the Books of Samuel narrate that, because the bones of Saul and Jonathan were left unburied, the country was overtaken by calamity, which did not pass until their bones were duly buried. To be left unburied is viewed as a terrible curse throughout Old Testament literature, in the canonical and non-canonical books alike. The duty of burial was regarded as such a sacred one that, in the Book of Tobit, Tobit, in defiance of the interdict of King Sennacherib, buries the bodies of his slain coreligionists at the risk of his life, just as in a similar situation Antigone does in the Greek drama. To what extremes the people went in the matter of burial may best be seen from the fact that it was made obligatory to pour the blood of a slaughtered animal upon the ground (for absorption by the earth) and, in addition, to cover it with earth (unless the blood of the animal was sacrificed unto God on the altar), 'the blood,' as the law explains, 'being the seat of the soul of every being.'

Of the two passages, Is. 26. 21 and Ex. 24. 7-8, generally referred to in support of the mistaken interpretation of our Job passage, 'Let not earth cover my blood,' the former, Is. 26. 21, has no bearing whatever on the question under discussion. The clue to its meaning is furnished by v. 19, in which the hope is expressed for the resurrection of the nation's dead. Verse 21, 'For Yahwe will come forth out of his place to punish the inhabitants of the earth for their guilt, and the earth will disclose its blood (םֵשֶׁל הָאָדָם) and will no more cover its slain,'

---

*See Rohde, op. cit. 1. 217, note 4.
*2 Sam. 21. 12-14. In vv. 1-14 two stories have become fused—the story of the visitation of the country with famine because of the blood-guilt incurred by Saul against the Gibeonites, and the story of the visitation of the country with a calamity, not specified in the present text, because the bones of Saul and Jonathan were left unburied.
* Cf. 2 Ki. 9. 10, 34-37; Is. 14. 19; Jer. 7. 33, 8. 1 f., 9. 21, 14. 16, 18. 4 ff., 22. 13, 25. 33; Ez. 29. 5; Ps. 79. 2 f.; 2 Macc. 5. 10, 9. 15, 13. 7; Jubil. 23. 23; 1 Enoch 98. 13.
*Tobit 1. 13 f., 2. 3-8.
*Lev. 17. 13 f.; Dent. 12. 16, 23 f.
says that when God appears to sit in judgment over the world-powers, the Jewish martyrs will rise from their grave to prefer accusations against their slayers. As a matter of fact, this interpretation is given by a number of scholars, but, strange to say, the same scholars combine with it the mistaken interpretation, apparently oblivious to the fact that logically the one interpretation excludes the other. Conclusive proof of this is that for הַנְּפִלָּה the text originally read הַנְּפִלָא, as may be deduced from στριφέω of G. 'The earth will open its mouth' is a more satisfactory reading from every point of view.

Ez. 24. 7.8 is not quite so simple. In putting these verses into English I am obliged to depart from the order of the clauses in Hebrew and to translate v. 7b after 7a, in order to bring out the sense:

'For her blood is in her midst; not on the ground, to be covered with earth, has she poured it, but on the bare rock has she put it to stir up wrath—i.e. divine wrath—to take vengeance. I have put her blood on the bare rock that it may not be covered.'

The only point that cannot be definitely settled is what circumstances are referred to by 'Her blood is in her midst.' Owing to the general obscurity of vv. 1-14 and to the fact that it is doubtful whether vv. 7-8 are an integral part of them, it cannot be ascertained whether by 'her blood is in her midst' the author has reference to blood-guilt or to the victims of the catastrophe of the year 597 or 586 B. C., as the case may be, though the use of the singular בָּרָה might be considered as an argument in favor of the latter. Note that in Ez. 21. 37 the same expression is used in connection with the end which Moab is to meet with on his own soil; cf. also Jer. 14. 16, 16. 4, and other similar passages. However, the exact reference in 'Her blood is in her midst' is after all immaterial for our purposes; the main thing is that, in the light of what has been pointed

---

*See Hitzig, Jeesia; Frz. Delitzsch, Das Buch Jeesia; Smend, Anmerkungen zu Jeesia 24-27 (in ZAW 4. 188 f.); and Dillmann-Kittel, Jeesia, 6th ed.

*Of. Rothstein in Kantzsch, Die Heilige Schrift des Alt. Test. 3d ed. 1. 883 f., where these two points are discussed at length.

*Even 'Thy blood shall lie in thy land' of this verse has been interpreted by some scholars in line with the mistaken notion under discussion.
out about blood-revenge and the sacredness of the duty of burial in ancient times, the rest of vv. 7-8 admits of but one interpretation. Ezekiel means to point out that the blood, i. e. the bodies, of those of the people who died, or, it may have been, were slain, have flagrantly been left uncovered with earth, so that the divine wrath must be stirred to take vengeance. The mistake in the current interpretation is due to the failure of the scholars to take cognizance of the grammatical construction: In v. 8a לָלַנְכָּם נַכְבּ is not coordinate with but subordinate to רַתְוָלָה as the RV rightly takes it, and as it was in fact understood by G: τῶν ἁρπαγμάτων θημόν δὲ ἴππον θρόνον ἱδονήματος; and furthermore, this halfverse, in accordance with G, is to be construed with v. 7, not with 8b. The afterthought of v. 8b which ascribes to Yahwe the flagrant offense spoken of in these verses is in harmony with Ezekiel's theological reasoning in general—a point on which Biblical scholars are agreed, so that it requires no discussion here. With the phrase לָלַנְכָּם נַכְבּ 'to stir up wrath to take vengeance,' Iliad 22. 335-358 and Odyssey 11. 51-73 may be compared. In the former, the dying Hector, having vainly implored Achilles not to throw his corpse to the dogs and carrion birds, but to return it to his kin for burial, warns him μὴ τοι τοι θεῶν μὴν γίνωμαι, 'Let me not become a cause of wrath to thee'—i. e. in case Achilles carries out his threat; and in the latter, the shade of Elpenor, in adjuring Odysseus not to leave his body on the Aeacian Island without burial, expresses the identical warning. In both Ezekiel and Homer the reference is to the divine wrath roused to vengeance by the sacrilege of leaving the bodies unburied.

We may now consider the real meaning of Job 16. 18a, יִשְׁכָּנוּ בְּאֶלֶף יִשְׂרָאֵל 'Let not earth cover my blood.' The meaning of these words is very plain, when it is remembered that the blood was thought to be the seat of life, or of the soul, of every being, and that accordingly דָּם occurs in Gen. 9. 4, and Lev. 17. 14, and also Deut. 27. 25, as an equivalent term of נָפשׁ, meaning 'life,' 'person,' 'self.' It is in this same sense that it is used here in Job. Similarly דָּם is used Ps. 72. 14 'May their life (יָבֹא) be precious in his eyes,' as is shown by בְּאֶלֶף of the parallel clause, and again Ps. 30. 10, 'What profit is

*See below, p. 316.
there if my life is sacrificed (לברון); and finally 1 Sam. 26. 20, ילב דחי ארצרה מנהר מני דוות, which, without the prepositional phrase, is as we shall see presently, an equivalent phrase of נער אל חללים יר. Neither in Ps. 30. 10 and 72. 14 nor in 1 Sam. 26. 20 does im imply a violent death. In 1 Sam. 26. 20 David does not express the fear that if he were to be killed in a foreign land there would be none to avenge his blood (as the verse is generally explained), but expresses the wish that he may not die in a foreign land. Not to be buried in one’s native country was in ancient Greece, we know, considered a terrible punishment, for the reason that only in one’s native land, the domain of the native gods, was it possible for those burial rites to be performed which were held essential for the soul’s rest in the nether world. This belief explains why among the Greeks the remains of persons that died in a foreign country were so often taken home to Greece for interment. That this belief was shared by ancient Israel is shown not only by David’s appeal to Saul in the passage under discussion, but by the requests of Jacob and Joseph in the story of the Patriarchs—in the one case, that his remains be not buried in Egypt, and in the other, that they be not left there, but in both that they be taken to Canaan for burial. Among the Bedouin of Arabia Petraea, where so many primitive beliefs and customs have been preserved unchanged, this notion prevails up to the present day. Proof of this I find in two funeral songs published some ten years ago by A. Musil; in the one the person slain in a foreign land is addressed as follows: ‘Return to your native land, do not die in a foreign country;’ and in the other the person that met with such a fate exclaims: ‘I must die far from home, but my kinsfolk are numerous, and by courage and sacrifice they will bring my body home.’

* The preposition ב is of price; יllib of this example is akin to שור ‘at the risk,’ and יליב the peril of his life,’ 1 Ki. 2. 23 and Pr. 7. 28 respectively, et al. 27 with the meaning ‘life’ is found also in Talmudic Aramaic and Neo-Hebraic (see Levy, Neuhebräisches Wörterbuch, s. v.) and in Arabic (see Dony, Supplément aux Dictionnaires Arabes, s. v.).

*4 See Rohde, op. cit. p. 217, n. 2.

*5 Arabia Petraea, 5. 340.
\( \text{אַל יְלֹּכֶנִי אֶרֶץ} \) means 'Let me not sink into the grave,' i.e., let me not die. The expression belongs in the category of stock phrases not limited to Hebrew and Semitic languages, but common also to Indo-European languages; its Greek equivalent is γαῖαν or χθόνα δίνω, 'to sink into the earth,' or 'to go to the grave.' A similar stock phrase is \( \text{אַל יְדָעֵנִי כִּי יָמִין} \) meaning 'let me not (die and) be laid in the earth;' of its numerous Greek equivalents may be mentioned δῶμαι κάθε γαῖα, 'Where the earth covered him,' meaning 'where he was buried'—a meaning, which, as Merry and Riddel point out, is settled beyond doubt, first of all, by the use of the aorist, and further, by the continuation, καὶ δὲ τοὺς τάφους ἐνίκεισαν; ἐν χθόνοι κεκεκάθημεν, 'to be buried;' χθονῖ γαῖα καλύφαμ,'(up to the time) when I shall have my body covered with earth,' i.e., until I am dead;' Eteocles ... καὶ χθονὸς ἐκρυαμεί, 'he buried Eteocles;' and ὅσιος (ellipsis for ὅσιος κραφᾶμοι), 'one dead and buried.'

As an equivalent to the last phrase we may consider Arabic ganūn (verb adjective of ganna, 'to cover,' used as a collective), 'those dead and in the grave.'

Of other Arabic equivalents of \( \text{אַל יְדָעֵנִי כִּי יָמִין} \) I shall mention:

\[ \text{لَعَمَّيُ لَـا عَـدِيُّ يَـأْتُشَّا مَـا} \ ] ~ 'aganna,

'Woe unto Mother Earth' because of that precious body which she covers.

* IL. 6. 10 and 411.
* Od. 3. 16.
* Cf. Homer's Odyssey, ed. by W. W. Merry and J. Riddel, ad loc.
* Aesch. Theb. 588.
* Pind. N. S. 65.
* Soph. Ant. 24 f.
* Xen. Cyr. 4. 6. 5.
* Amr. v. 20. Cf. Septem Mo'allakat, ed. F. A. Arnold, Zaussi's comments on the phrase; Th. Nöldeke, Fünf Mo'allakat, I, p. 36; and the Arabic Lexica of Freytag and of Lane, s. v. جَنِين.

* Hamūsa, 457, v. 3. The customary explanation of 'umm, 'abode,' 'place,' 'sepulchre,' (cf. Freytag in both his commentary and Lexicon Arabicum, and also Lane, Arabic Dictionary) is wrong. The real explanation is furnished by the kindred expression ِنَّيِّ ِنَّيِّ ِنَّيِّ (Sir. 40. 1), which is said of the earth, and which has especial weight for us here since the sentence in which it occurs speaks, like our Arabic verse, of man's return.
(Where the road approaches Mt. Al-Hasan;)
yā'ānu ātān yārayāku ṭammata,
'What a man they covered there,
(The while their hands heaped dust on him;)
and the two interesting prepositional phrases fūkahu l-ardu,
'covered with earth' and man takta 'l-turābi, 'one that is
beneath the dust,' both equivalent to our 'laid beneath the sod.'
As in the case of yārayaḥu, Ḥamāsā, 477, v. 6, and also of
gasāna 'Amr, v. 20, so in Gen. 37. 26 by itself
(without ʾāl ʾor ʾāl), means 'bury him.'

ing or being laid to rest, at depth, in the lap of the earth ʾĀl ʾor ʾāl
(ʾāl ʾor ʾāl). We have thus in Arabic, too, an interesting example of the
universal phrase Mother Earth and the religious notion underlying it.
D. 477, v. 6.
Matammin's Elegy in Th. Nöldeke, Beiträge zur Kenntnis der Poesie
Hamāsā, 373, v. 3.
The various interpretations given of this last phrase show that
modern scholars have been at sea regarding it. Following the traditional
translation, 'conceal his blood' (RV), 'sein Blut verbergen' (Luther),
eclausurium sanguinem iepius (Vulg.), which evidently has its basis in the
misunderstood ʾpāʾār of G, Knobel, Delitzsch, and Dillmann interpret
the phrase to mean 'durch Verscharren des Bluts den Mord verheimlichen;'
Wellhausen, Composition des Hexateuchs, p. 58, explains it as 'ihn ohne
Blutvergissmein umbringen'; Holzinger, Ryle, and Skinner interpret it in
line with the erroneous interpretation of Job 16. 18; and Procksch, Genesis,
p. 220, attempts a combination of the latter interpretation with that of
Delitzsch, Dillmann, etc. He says: "'Blut zu schütten,' sodass es nicht
am Ruche schreien kann, und keinen Zeugen hat (Ge. 4. 10, Hi. 16. 18)
bedeutet 'einen heimlichen Mord begeben' gegenüber ehrlicher Blut-
rache. Bruderblut, das nicht 'angeschütet' ist, rührt sich um Leben des
Mörder (2 Sa. 11').—2 Sam. 14 contains, however, nothing to bear out
Procksch's contention.

The only exception is Fr. Schwally, who, in Das Leben nach dem Tode,
1892, p. 52, rightly remarks: "Die Phrase ʾāl ʾor ʾāl bedeutet... lediglich
der ordnungsgemässen Vollzug der Bestattung des Ermordeten."
He invalidates his explanation, however, by adding: 'Unschuldig
gewasenes Blut, d. h. die in ihm befindliche Seele, schreit, wenn es nicht
bedeckt wird, zum Himmel um Rache, Gen. 4. 10, Ez. 24. 7, Jes. 26. 21,
Hib 16. 18, Henoq 47. 1, 2, 4, bedecktes Blut dagegen nicht' (p. 53).
It should be added that 1 Enoch 47. 1 ff., 4, which Schwally quotes as an
additional reference, contain nothing that would prove his contention.
The verses read: 'And in those days shall have ascended the prayer of the
righteous, and the blood of the righteous from the earth before the Lord
of Spirits. In those days the holy ones who dwell above in the heaven
The origin of the second group of phrases is to be sought, it seems to me, not so much in the fact that interment was the oldest method of burial the world over, as in the universal practice that went with it of imbedding the body in a layer of gravel and clay, and of covering it with clay and gravel, or with sand and dust, even when placed in an urn or immured. This practice prevailed in Greece in the Mycenaean Age as well as throughout Northern Europe in prehistoric times; and the excavations of recent years have shown that it was also common in Canaan for over a thousand years prior to its conquest by Israel, and that it continued to prevail among the conquerors throughout pre-exilic times, if not throughout their entire history.

To this at one time foremost burial rite is traceable the later custom of throwing dust on the body even before it is laid in the grave. Evidence of the existence of this custom among the Arabs is found in Hamāsa, 423, vv. 1-3:

> In Beidha there lies one that is dead,
> . . . His uncle's daughters stand around him,
> . . . They throw the dust on him with their hands;
> Their throwing dust on him is not inspired by hatred; also in Ḥariri:

shall unite with one voice and supplicate and pray and praise and give thanks and bless the name of the Lord of Spirits on behalf of the blood of the righteous which has been shed, and that the prayer of the righteous may not be in vain before the Lord of Spirits; that justice may be done unto them, and that they may not have to be longsuffering forever. And the hearts of the holy ones were filled with joy because the number of the righteous had been completed, and the prayer of the righteous had been heard, and the blood of the righteous been requited before the Lord of Spirits.

* Occasionally these are found mixed with cinders and ashes.

* Cf. Rohde, op. cit. 1, 33 f.

* Their throwing dust on him is not inspired by hatred' receives its point from the fact that throwing dust at a living person is equivalent to cursing him. Thus Shimeî, cursing David, threw dust and stones at him (2 Sam. 16, 5 f.).

* Ed. de Sacy, p. 107, verse 2 of the Elegy of Abul-Atahijja.
'Alas! must I wrap thee in the shroud,  
And throw dust on thee with my hands.'

The custom prevailed also in Greece. Thus when King Creon interdicted the burial of Polynices, Antigone defied the king and fulfilled her sacred duty to her brother by bestrewing his body with fine dust. Antigone's act is spoken of in the drama as ἔτινειρὸν τεις θάλας, in explanation of which D'Ooge aptly remarks: 'To strew the body with dust was the essential part of burial, and in the view of the ancients had the same value for the spirits of the departed as burial with full rites.' In the light of this significance of the rite is to be viewed the Athenian law which made it incumbent upon any one who found an unburied corpse to throw some earth or dust on it and which pronounced accursed (ἰμαγία) him who failed to do so. In such cases the custom (no doubt general), was to throw three handfuls of dust on the corpse: iniecto ter pulvere currus.

Another relic of the burial method in the remote ages of history is the custom prevailing among the present day Bedouin of Arabia Petraea of spreading on the bottom of a grave gravel and dust, taken from the place where the person died, and of laying the body on top of it; or of placing a pillow filled with dust under the head of the body. And a vestige of this old burial method may be seen in the world-wide custom which has persisted even to the present day for the friends of the deceased to throw a few elods of earth on the coffin after it has been lowered into the grave.

---

"Horace Od. 1. 28. 36.

"As in ancient times, even so today, coffins are unknown in Arabia and other Oriental countries. To bury the dead without coffins was at one time a Greek custom, too; it prevailed throughout the Mycenaean Age as well as in the early Attic period (also in Etruria this custom was common); cf. Rohde, op. cit., p. 226 f.

"See Musil, op. cit., 3. 424 f."
The meaning of the second part of Job 16. 18, לָּא יִהְיֶה מַכְוָה הַגַָּּגָּה is as simple as the first part. מַכְוָה means 'place for,' 'room for;' or 'occasion for;' with this meaning סֹאַר לָּא מַכְוָה לַכַּלְכָּל occurs again Sir. 4. 5, 'Give him no occasion for cursing thee.' This meaning of מַכְוָה requires no further discussion, as it has its exact analogon in English, place for, or room for, in Greek ῥήτος, and in many other languages. The translation of Job 16. 18b is 'Let there be no occasion for my outcry.' Instead of the unnatural prayer which the prevailing interpretation carried into the verse, the prayer which Job really utters is the simplest, the most natural, that can be imagined. He prays that he may be saved from the grave, so that there may be no place any more for his complaint that, notwithstanding his blameless life, he has been stricken with death.
THE CURSE IN THE 'PARADISE EPIC'

LEBOY WATERMAN

UNIVERSITY OF MICHIGAN

Whether in 'Paradise' or in the legends of the workaday world, the curse of the gods is, by all of its presuppositions, pivotal and normative. It is fundamental, therefore, that it be stated in clear and unmistakable language. Failure in this regard automatically eliminates unity wherever the curse is involved, since neither its prelude nor its sequel can be properly explained or related no matter how obvious either may be in itself. To state this otherwise, failure to relate the curse normatively to its context is prima facie evidence of a misapprehension of the curse itself or of the context, or both.

In spite of the fragmentary condition of the original of Langdon's so-called 'Epic of Paradise,' and the numerous divergences of reading made by experts after repeated collations, coupled with the shifting uncertainties of unilingual Sumerian interpretation thus far, there is a surprising consensus of opinion as to the general scheme of its contents. By virtual unanimity of opinion the text falls into two general divisions. The first consists of early myths dealing with the rise of agriculture and extends as far as Rev. ii. 38. The remainder deals with a divine curse and a sequel wherein new gods for the alleviation of disease are introduced and invoked.

It is clear that the two parts are very diverse, although each has a distinct uniformity of its own. It is equally evident that the curse marks their separation. The unity of the whole is not clear on any theory so far proposed, and the lack of unity may be stated as consisting primarily in failure to relate the context integrally to the curse. If this were all, then an hypothesis of unity might not be worth pursuing farther; but another fact significantly urges in the same direction. The curse itself has not yet been cleared of ambiguity by any interpretation so far available.

To begin with, the reason for the curse is not stated. Langdon's earlier theory that it was due to eating from a plant forbidden in the text has been given up by him although the assumption that such a transgression took place, nevertheless,
was almost immediately posited by him for other reasons, but without proof. It is obvious that the curse might be attributed to the caprice of the gods, in which case no explanation is necessary or to be expected, but if correct, it summarily disposes of the 'official' interpretation, there being no divine command, nor sin nor fall nor penalty. If the curse meant the loss of immortality, as more generally assumed, then at least the jealousy of the gods is involved and this should either be stated or so clearly implied as to exclude other motives. The entire absence of this feature would, in itself, seriously compromise this interpretation.

In the second place the relation of the curse to the sequel is particularly obscure. This is undoubtedly due in part to the unsatisfactory state of the text that immediately follows, but even more hinges on the curse itself. If the curse meant that man was to die, it is not at all clear why during the remainder of the narrative gods and men should be so contentedly occupied with the presentation of certain new gods of disease, without further explanation. Granted that the palliation of disease might well be recorded as a special divine intervention, it does not in the slightest alter the curse in that case, nor does it claim to do so. Again it does not certainly put off the evil day, for it is a not uncommon experience that invalids outlive the robust of the same generation; and besides there are many other even more dangerous hazards such as war, flood, and famine, that frequently curtail life to a much greater extent, yet none of these dangers are provided against. The one thing that the provisions against disease certainly do is to relieve physical ills; but, if this does not signify a curtailment of the curse in some definite way, it is difficult to see what integral relation the section can have to the curse.

Thirdly, if the second part be taken as normative and hence the entire work be regarded as an incantation text, this reduces the bulk of the narrative to an introduction that can be called such only because it happens to stand first.

May these incongruities be due to a misapprehension of the curse? What does the curse signify in itself, as its most natural sense? Fortunately there is no doubt at this point as to the reading (Rev. ii. 38). Everything hinges on the rendering of the particle $ea-naa$. Is it ever allowable to translate it 'when'?
It is agreed by all that it normally means 'until' and only the necessities of the context permit the use of 'when'; but being in a curse that is itself normative for the context, the most usual meaning is to be preferred. Accordingly it reads: 'The face of life until he dies, he shall not see.' It has been objected that this rendering, which is Langdon's, makes no sense because until man dies, being alive, he would be seeing the face of life, which can accordingly only mean 'live' (JAOS 36, 272). Undoubtedly it signifies to live, but to behold a person's face as a mark of the highest personal favor is too common a Semitic figure to call for extended comment. 2 Sam. 14. 24-33 will serve as illustration. Absalom's permission to return from Geshur was so far from complete restoration that he came to prefer exile or death rather than continue its provisions without seeing the face of the king. Accordingly, to behold the face of life is to enjoy its fullest favor, which not only includes, but expresses perfect health, and failure to behold the face of life will as inevitably involve bodily weakness and illness. If the writer desired to state the curse of ill-health and disease, he could scarcely have chosen more forceful language. In so far as the meaning 'when' is allowable, in the sense of 'at the time when,' it is at any rate of insufficient force in this instance, for the curse in order to be efficacious cannot be conceived as occupying itself solely with the moment of death. In reality 'when' here can only mean from the moment of death onward, that is, it properly signifies 'after' in this context (AJTH 21. 590), but as the basic idea in en-anu is duration (Sumer. Gloss. p. 35) a meaning 'after' will doubtless not be pressed.

The curse as rendered above offers no evidence of a curtailment of man's longevity. One could with equal propriety assume that men were to live even longer in order that the gods might extend the application of ill health. Secondly, this rendering gives no hint of a loss of immortality, but in this respect might very well imply that men were eventually to become immortal (AJSL 33. 136). It contains no reference to disobedience or a Fall, and it offers no new edict with respect to death, nor does it hint at mortality as a curse. Its attitude here is the same as in the oldest stratum of Gen. 3; of course man will die.
The most natural and unambiguous meaning of the line confines itself to the application of disease, and with this meaning the remainder of the text becomes integral without further ado, confined as it is to a representative list of ailments and their respective divine physicians.

We may now consider the relation of the curse to the work as a whole, and thus viewed our text seeks to account for and then to ward off the evil effects of the multitude of diseases bred in the Babylonian plain. These ever present ills went back to immemorial antiquity. They were as old as man in that valley. There, when the world was young, when only the gods inhabited it, Sumerian men came upon the scene; and in order to provide for human welfare, the gods by beneficent inundations and by teaching men the art of agriculture, inaugurated civilized life. Then it was, also, that the curse of disease was pronounced, a most striking as well as serious phenomenon for the Sumerians, coming as they perhaps did from a mountainous region. Every British soldier who has passed through the recent Mesopotamian campaign would readily appreciate the curse of En-ki. (The alternative rendering that would make the curse originate not with En-ki but with Nin-ḫar-sag has the difficulty of making the goddess jealous of her offspring (AJTh 21. 590) for which there is no evidence in the text as preserved, while in the sequel she is the only one who brings about an alleviation of man’s lot.) Such an elaborate setting of the curse would not be worth the breath it takes to picture were it not to be followed by substantial alleviation, and accordingly it is agreed on all hands that starting with the protest of Nin-ḫar-sag, the Red Cross work of the gods is adequately organized to alleviate the ills of mankind.

It is reasonably clear that the eight new deities who hold sway over as many diseases are themselves the offspring of Nin-ḫar-sag (cf. AJTh 21. 591), who introduces them to suffering humanity. Indeed is it not meant to be understood from the word play between the names of these new gods and their homeopathic specialties (Dazima for ḏazī, Nazi for nāzi etc.) that

1 I was unable to consult Dr. Albright’s article JAdO 39. 65 ff. before the present paper had gone to the printer.
Nin-ljar-sag could be confidently expected to produce a ‘Nin-flu-en-za’ when the occasion arose. This means more than an alleviation of the curse. It provides for its theoretical annulment. Hence we have a real sequel and the whole is an organic unity, that is, from the standpoint of the curse, when once the latter is freed from ambiguity and late theology.

This conclusion would, I am convinced, have been evident to the pioneer workers on this text, upon whose combined labors our present knowledge as to its meaning rests, had it not been for the damaged and enigmatical passage immediately following the curse. I desire to apply the viewpoint stated above to this section, not with the hope of definitely solving its enigmas; there are too many unknown quantities involved for that; but at least for the purpose of stating the lines along which it should, perhaps, proceed, in view of the nature of the whole.

 Granted that Nin-ljar-sag, the Divine Mother of mankind, although voicing the curse, yet understood it as essentially hostile to her own interests, her appeal to Enlil becomes significant. Rev. ii. 41: ‘I have borne thee children, what is my reward?’ What is her concern, and what does ‘reward’ here involve? If the curse were her very own, then she already has her reward in its fulfillment, and her appeal to Enlil is out of place. Only on the supposition that it is against her interests does the appeal have point. She speaks as a mother, who therefore has a right to a reward from the husband, but she also speaks as a mother about to be bereaved. Nothing in the curse implies that she should cease to have offspring and hence her title of the Great Mother was not outwardly affected, yet her language distinctly implies that as matters now stand her child-bearing has been in vain. That is, the curse annuls her motherhood. This apparent discrepancy disappears in the recognition that motherhood is more than child-bearing. Under the curse her offspring are to pine and suffer beyond her power to help. All her beneficent motherly care for them was put in jeopardy. The appreciation of the mother instinct is finely drawn here. The pain of motherhood is vain if it brings forth offspring only to suffer relentless pain.

With this as her concern, it is possible to define the only reward that could have a bearing in the case and this can be very simply stated. The reward must save her motherhood in
the sense of sheltering nurture as well as child-bearing, but this can only be accomplished in the circumstances by obviating the curse. These considerations, if valid, would determine the lines along which the puzzling passage Rev. ii. 44 must be worked out. In the preceding line Enlil recognizes the motherhood of the goddess and therefore her right to a reward; and then in l. 44 he applies an epithet to her by which she is to be especially known in Nippur; and in view of the preceding it cannot fail to confirm her motherhood for the future. Such renderings as 'two creatures I will make for thee,' or 'two thrones,' etc., lack not in grammar but in meaning. I must leave the final solution of this delicate problem to my betters in Sumerian finesse, but merely not to seem to dodge the issue I would suggest as another possibility 'double source producing flowing (i.e. abundant) milk shall thy name be called' (Igiš-mul-qa-ri-du). In which case we should have an epithet that emphatically confirmed the sheltering nurture denied by the curse to the goddess, at whose breasts mankind had been nourished and was still to find fulness of life.

Rev. ii. 45-47 immediately following are most difficult and the translation in part conjectural. Langdon's attempt to make them refer to the god of vegetation, who does not otherwise appear in this column, only shows the desperate straits of the interpreter. The position of the lines makes it natural for them to be epexegetical to the epithet in l. 44, continuing the speech of Enlil, with Nin-ḫar-sag as the active subject and mankind the object. With all reserve I would suggest: (45) 'In pain his head she alone fashions, (46) His mouth she alone causes to speak, (47) His eye she alone shall fill with light.' All three lines deal with Nin-ḫar-sag's functions as the great Mother: first that of child-bearing; second, nurture; third, motherly care that assures complete fulness of life, poetically described as 'filling the eye with light,' a phrase in significant contrast with 'not seeing the face of life,' and intentionally so, for such fulness of life in the gift of Nin-ḫar-sag assures the triumph over the curse. If it be objected that these lines might as readily be construed as all referring to birth functions, this need not be

*For the readings involved here, cf. my forthcoming review of Langdon's 'Epic' in AJSL.
denied. Indeed they may have originally meant exactly that, having been taken, perchance, from some older ritual in praise of the mother goddess; but their utterance by Enlil at this juncture certifies, as the sequel clearly shows, a much wider application, namely, one that covers the whole course of man.

How Enlil’s promise was fulfilled was once told in full in Rev. i, ii. From what now remains, the new deities that here appear are best described as the latest offspring of Enlil and Nin-šar-sag. Their function was to bring relief from the curse of disease which had been laid upon Nin-šar-sag’s other progeny. Thus by her motherhood her motherhood was preserved, in spite of En-ki. So ran one canto in the great Hallel of Enlil and Ninlil in Nippur in the best days of Sumer. Stated in everyday language, the Sumerians after a hard struggle gradually became acclimated in the Babylonian plain, and gave the glory to their old mountain gods.
CATTLE-TENDING AND AGRICULTURE IN THE
AVESTA

ROLAND G. KENT
UNIVERSITY OF PENNSYLVANIA

IN THE ACCOUNTS of the religion of Zoroaster and of the people among whom he expounded his new faith, we find the statement that the Persians were at that time a people who not only had herds and flocks, but tilled the soil as well. For convenience, I condense somewhat from the chapter on Agriculture in Geiger's Civilization of the Eastern Iranians:¹

Only the cultivated ground is the property of Mazda. Regions devoid of cultivation are haunted by evil spirits. Therefore, wherever a follower of the Avestan religion settles, it is his first duty to render the soil productive. It is a triumph of the good cause whenever a portion of land is by irrigation wrung from the death-like desert and made productive. The draining of swamps, which was necessary in some parts of Persia, was equally as meritorious as irrigation. The religion of Mazda invites its adherents to ceaseless activity in agriculture no less than in other pursuits. It bids them fight against sterility and barrenness, and create instead of them affluence and culture. The genius of the earth is said to rejoice when the earth is tilled and corn is produced, and to mourn when it remains sterile. The earth is like a woman, who misses her vocation when she grows old childless, but who is proud in happiness and beauty when healthy sons owe their lives to her. Besides the cultivation of grain, there are indications that hay was grown as winter fodder for the cattle, and that fruit-bearing plants were cultivated; whether the last included fruit-trees, cannot be determined. Nothing which we can infer from the Avesta as to the agricultural practices of the ancient Iranians is inconsistent with the present-day practices, and many of the present-day peculiarities are seen to be of very ancient origin.²

¹Wilhelm Geiger, Civilization of the Eastern Iranians in Ancient Times, translated by Darab Dastur Peshotan Sanjana (1885), 196-211.
²See especially Vd. 3; 5, 5; 6, 6; 9, 53-57; 14, 12; 17, 3. Many of the passages cited by Geiger i. e. can no longer be interpreted as containing all
But none of the specifically agricultural passages of the Avesta occur in its oldest portions, the Gāthās and the sacred prayers, which are distinguishable by their linguistic peculiarities as well as to a certain extent by their subject matter. We find in them the Ox-Creator (gaōna taša) (Yn. 29. 2; 31. 9; 46. 9), the Ox-Soul pleading for a protector against the Raiding Violence (ašma) of the robber hordes from the North, the appointment of Zarathushtra to this service (Yn. 29), and the Prophet’s constant exhortation to the people to care for the cattle and for the pastures and to defend their herds against the evil followers of the Druj. But there is in these Gāthās not one word which is of a distinctly agricultural meaning. Plants (urvarā) are indeed mentioned (Yn. 44. 4; 51. 7), but obviously as intended for the food of cattle (Yn. 48. 6).

The technical terminology of cattle-tending, as found in the Gāthās, is quite simple, and does not suggest the tillage of the soil. From a root which is manifestly connected with the German Weide, we find vāstār- ‘herdsman’ (Yn. 29. 1), also in the figurative sense which English ‘shepherd’ has acquired (Yn. 27. 13); vāstrā- ‘pasture,’ either as fodder (Yn. 29. 2) or as land; vāstrya- ‘pertaining to pasturing’ (Yn. 29. 1; 33. 6), or, as substantivized adjective, ‘he who practises the pasturing <of cattle>’ (Yn. 29. 6; 31. 9 bis, 10, 15; 51. 5; 53. 4); vāstrāvastavat- ‘provided with pasture’ (Yn. 48. 11; 50. 2). Another root (seemingly identical with that in Skt. pasā-, Av. pasav-, Lat. pascu or pescu, Germ. Vieh) appears in the verb fāvav- ‘to feed or fatten <cattle>’ (Yn. 48. 5), with a present participle fāvavat- ‘cattle-fattening, cattle-tending’ (Yn. 29. 5; 49. 4); in

the significance which he puts into them. As a corrective one may consult Fritz Wolff, Avesta, die heiligen Bücher der Persern übersetzt (1910), and Chr. Bartholomae, Altiranisches Wörterbuch (1904).

*Yn. 31. 15; 33. 4-6; 34. 5, 14; 44. 20; 49. 4; 51. 5, 14; etc. The texts are conveniently accessible in English in J. H. Moulton, Early Zoroastrians (1915), 343-350 and in German in Chr. Bartholomae, Die Gāthā’s des Avesta (1903).

*Vide Bartholomae, AFW. 1413-1417.

*Yn. 32. 10; 33. 2, 4; 44. 20; 57. 2; 51. 14. Bartholomae’s ‘Weide- wirtschaft, überh. Landwirtschaft’ (AFW. 1414) is not necessitated by any one of the three passages which he cites; in Yn. 44. 20 and 51. 14, the word may perfectly well mean simply ‘the pasture land,’ and in Yn. 38. 4 it denotes the personification of the pasture land.
one passage this participle is used as an adjective to vāstrya- (Yn. 31. 10), while in another place it is a substantive coordinate with vāstrya- (Yn. 29. 6).

If we turn next to the second-oldest portion of the Avesta, the so-called Sevenfold Gāthā (Yn. 35. 3 to 41. 6), we find there mention of cattle and their pasturage (Yn. 35. 4, 7; 37. 1-2), of the domestic animals (Yn. 39. 1), of the useful wild animals (Yn. 39. 2), of plants (Yn. 37. 1) and of water (Yn. 37. 1; 38. 3)—but again there is nothing which is conclusively agricultural rather than pastoral.

There are certain other chapters of the Yasna which show by their language a certain antiquity, but are proved by their defective syntax to be of later date. In them we find mention of cattle and of cattle-pasturing (Yn. 12. 2, 3, 7; 13. 2; 58. 4), of domestic animals (Yn. 58. 6), of plants (Yn. 12. 7), and of good water (Yn. 58. 2-4)—but still nothing decisively of agricultural nature.

In the remaining or later portions of the Avesta are found the passages on which Geiger based his account of agriculture among the ancient Iranians, or, at least, all the passages which still have assured relevancy to the subject, in view of the present status of the interpretation.

But in order to draw proper inferences from these facts, one must bear in mind the history of those texts which make up the Avesta, as actually preserved to us at the present time. Whatever the date of Zarathushtra may have been, the Holy Scriptures of the faith which he founded were preserved apparently without loss until the conquest of Persia by Alexander. In the confusion of that time, according to the story, the authoritative copy de luxe was destroyed by the invaders. The Zoroastrian faith went into an eclipse from which it emerged only in the third century of the Christian era, when the Sassanian line came to the royal throne. Under the direction of the rulers of this dynasty, the scattered Avestan texts, some presumably in fragmentary manuscripts and others preserved merely by oral tradition, were reassembled and edited into a reasonable unity. A portion only of this has come down to us, since far the larger part was lost at the time of the Mohammedan conquest of the

*Yn. 12, 13, 14, 56, 58; cf. Reichelt, Avestisches Elementarbuch, § 11.
seventh century, and in later centuries when the Zoroastrians were striving to preserve their religious independence.

The Sassanian redaction of the Avesta did not however fairly represent the preachings of Zarathushtra. Even before the Greek conquest, the monotheism of the faith had been impaired by the introduction of Anahita and Mithra to share the honors of Ahuramazdah; and at some period, not precisely definable, the haoma-orgies against which Zarathushtra protested with utmost vigor (Ys. 32. 14; 48. 10), were foisted upon the new religion, and exposure of dead bodies to be devoured by birds and beasts replaced ordinary burial. This is not the place to go into detail upon the changes suffered by the faith after the time of its Prophet; all this has been admirably done by Moulton. We must bear in mind, for the present purpose, merely that we cannot rely upon anything but the Gāthās and the oldest prayers to give us evidence on the original doctrines.

Now, as we have seen, the oldest parts of the Avesta are absolutely barren of references to agriculture. When plants are mentioned, it is in such a combination as 'cattle, water, and plants,' which seems rather to suggest that the vegetation spoken of is that of the pasture-lands; though this, it should be admitted, is not necessarily so. On the other hand, we must not hastily conclude that the early Iranians, to whom Zarathushtra preached his sermons, were a purely pastoral people who had no acquaintance with the tilling of the soil. The common vocabulary of the Indo-Europeans and prehistoric archaeology indicate that the folk of the hypothetical Indo-European unity cultivated one or more of the cereal grains, and we must not assume for the Iranians an entire regression from that status. In the Gāthās we find a fourfold division of the people into local units, namely the home, the clan, the district, the land (domâna-, vîs-, zōbra-, dahyu-, Ys. 31. 18), and a threefold social division into xvačē-, varzōna-, airyaman-, of somewhat puzzling interpretation; these divisions distinctly imply a fairly complex civilization, which could hardly be still in the purely pastoral stage.

*J. H. Moulton, Early Zoroastrianism (1913).
1Ys. 32. 1; 33. 4. Cf. Moulton, op. cit., 355, lta. 2.
My conclusion is therefore as follows: The people to whom Zarathushtra was preaching were a people whose herds and flocks were their main reliance, although agriculture was practised to a certain degree. But the herds were endangered by the raids of the lawless tribes to the North, and a perilous economic situation was arising. Zarathushtra appreciated the situation, and preached a reformed religion, basing its practical tenets on the care and defense of the cattle. The agricultural situation was not a serious one, and therefore received no attention from him. The Zoroastrian or Mazdayasnian religion was proclaimed to meet an economic crisis.

Not that the Prophet himself would thus have conceived it. He preached good deeds, good thoughts, good words, and set up a high standard of spiritual excellence; yet the practical expression of it all was found in the protection of the cattle. Quite naturally, with the increasing importance of agriculture in the region, the laws of the faith received accretions which tended to promote the cultivation of the fields; of this character are the Avestan passages which reflect agriculture.
NOTES OF THE SOCIETY

The Editors express their thanks to the Mergenthaler Linotype Company of New York for their courtesy in setting up, gratuitously, the paper by Dr. Furlani on a Syriac text, appearing in this Part. The Mergenthaler Company desired to present to the scholarly world a specimen of the linotype process in Oriental types. Their types include Hebrew, Arabic, Syriac (both Estranghelio and Serto), and Turkish, and they are working at a complete representation of the Hebrew, including vowel points, accents, etc.

The Annual Meeting of the Middle West Branch of the Society will be held at the Garrett Theological Seminary, Evanston, Ill., on February 21-22.

An organized effort is being made in this country to collect books, especially books of scholarly and scientific value, to replace the collection lost by the University of Louvain when its library was destroyed during the war. The American Oriental Society, along with other learned societies, has been asked to cooperate in the work. The Editors are very glad to call the attention of members to this most laudable undertaking, feeling sure that all of them will be glad to help in it if they can. It is suggested that many individuals and libraries will probably have duplicate copies of books, which could be donated without serious inconvenience; and some individuals may feel like contributing from their own collections books to which they might find access in other public or private libraries. Books, and inquiries on the subject, should be addressed to The Librarian, Library of Congress, Washington, D. C.

NOTES OF OTHER SOCIETIES, ETC.

A Joint Session of the Royal Asiatic Society and the Société Asiatique, participated in by representatives of the American Oriental Society and the Scuola Orientale of the University of Rome, was held in London September 3-6. The members of the Société Asiatique present were MM. Senart (president), Anesaki, Bacot, Casset, Boyer, Clermont-Ganneau, Cordier, Danon, Dautremer, Finot, Gaudefroy-Demombynes, Sylvain Lévi, Massigny, Moret, Pelliot, Roessé, Sidersky, Thureau-Dangin, Mme. Le Lasserre, Miles. Getty, Karpelés. Other Continental scholars present were Dr. Furlani (Italy), Professors Konow (Norway),
Naville (Switzerland), Vogel (Holland). Members of the American Oriental Society present were Professor J. H. Woods, representing the President of the Society; Professors Breasted, Clay, Mercer, Worrell, Yohannan.

The meetings were held in both joint and separate sections. In addition to the business meetings and the several meetings devoted to social intercourse and hospitality, the following papers were read:

Sir Charles Lyall: Some recent editions of old Arabic poetry.

Prof. Corner: Vingt ans d'études chinoises.

Prof. A. T. Clay: Semitic studies in America.

Prof. Finot: Les études indo-chinoises.

M. D. Sumerley: Orientalisme et astronomie.

Prof. Mariolouch: The historical context of the Dīwān of Bahtıri.

Dr. H. A. Nicholson: The Asār-i-Khud, a Moslem poet's interpretation of Vitalism, by Sheikh Muhammad Iqbal of Lahore.

Dr. M. Gaster: Organization of archaeological researches in Asia Minor.

Prof. Macdonell: Notes on Sanskrit studies at the present time.

Prof. Poussin: A few remarks on the Pall and Sanskrit Canons.

Prof. Rapson: Notes on the history of the word drachme.

Dr. Parquem: The historical position of Rāmānanda.

M. Pelliot: Le texte mongole de l'histoire secrète des Mongols.

Mr. Hopkins: Notes on the art of the Shang dynasty miniatures.

M. Danon: (1) Légendes turques sur les Kásil-Baches.

(2) Fragments de versions turques de la Bible.

Prof. A. T. Clay: The empire of the Amerites.

Dr. Cowley: On a passage in the Moabite Stone and the form of the divine name.

M. Clermont-Ganneau: A Jewish inscription on a mosaic found during the war.

Prof. Burnitt: Notes on the Table of Nations (Genesis xi).

Mr. Krenkow: The poetical remains of Muzāhīm al-Uqāfī.

Ms. Vincent Smith: Mr. Jayaswal's paper on statues of two Saisumāga kings.

Mr. F. W. Thomas: Some remarks on Indian cosmography.

Prof. Vogel: A British school of Indian studies in India.

Sir George Grierson: Gramophone Illustrations of Indian dialects.

Ms. R. Campbell Thompson: Pictures of ancient Mesopotamia.

Director Wm. H. Worrell and Prof. A. T. Clay, of the American School of Oriental Research in Jerusalem, sailed for Europe in July. In London they were in active conference with the representatives of the new British School of Archaeology in Palestine and other scholars interested in Oriental archaeology. As a result of these negotiations a concordat was drawn up by
the representatives of the two Schools, proposing the closest cooperation possible in archaeological endeavors, and combination in certain particulars of work, at the same time leaving the identity of the institutions undisturbed. This plan was referred to the Executive Committee of the American School, which in October ratified it. Certain French scholars, present at the meeting of the Joint Oriental Societies, also took part in these negotiations, namely MM. Senart and Sylvain Lévi, and later Professor Clay had a conference with these and other French orientalists in Paris, with the result that the French are considering the establishment of a School in Palestine which will also participate in the above arrangement. Plans for a joint British and American School at Bagdad were also favorably considered.

Director Worrell reached Jerusalem October 7, and Professor Clay expected soon to join him. Dr. W. F. Albright, Fellow of the School, sailed for the Mediterranean November 7, and the Rev. Dr. Peters expected to reach Jerusalem by the end of November. He will serve as a Lecturer in the School.

The staff of the British School consists of Prof. J. Garstang, Director; Mr. Phythian-Adams, his assistant; Mr. C. Leonard Woolley, curator of the museum; and Mr. Makay, the British Inspector of Antiquities.

PERSONALIA

PROFESSOR ERNST WINDISCH, of the University of Leipzig, an Honorary Member of this Society, died on October 30, 1918. On account of the war, news of his death only recently reached this country.

PROFESSOR LEONARD W. KING, of the British Museum and King’s College, London, and an Honorary Member of this Society, died on August 20, 1919.

MRS. JAMES B. NIES, of Brooklyn, a Life Member of this Society and a generous contributor to its causes, died on September 16, 1919. Her intention to contribute $50,000 for a building for the American School of Oriental Research in Jerusalem will be carried out by her husband and executor, the Rev. Dr. Nies.
LIST OF MEMBERS

The number placed after the address indicates the year of election.
+ designates members deceased during the past year.

HONORARY MEMBERS

Sir RAMKISHNA GOPAL BHANDARKAR, C.I.E., Deccan College, Poona, India. 1887.
Prof. CHARLES CLERMONT-GANNEAU, 1 Avenue de l'Alma, Paris. 1909.
Prof. T. W. REYS DAVIDS, Cotterstock, Chipstead, Surrey, England. 1907.
Prof. BERTHOLD DELBRÜCK, University of Jena, Germany. 1878.
Prof. FRIEDRICH DELITESCH, University of Berlin, Germany. 1893.
Prof. ADOLPH EHRMAN, Berlin-Steglitz-Dahlem, Germany, Peter Lennéstr. 72. 1903.
Prof. RICHARD GARBE, University of Tübingen, Germany. (Biesinger Str. 14.) 1902.
Prof. KARL F. GEDEKE, University of Marburg, Germany. 1905.
Prof. IGNÁZ GÖLDEINEH, vii Hollo-Uleza 4, Budapest, Hungary. 1906.
Prof. IGNAZIO GUIDI, University of Rome, Italy. (Via Botteghe Oscure 24.) 1893.
Prof. HERMANN JACOBI, University of Bonn, 59 Niebuhrstrasse, Bonn, Germany. 1909.
Prof. SYLVAIN LÉVI, Collège de France, Paris. (9 Rue Guy-de-la-Brosse, Paris, Ve.) 1917.
Prof. ARTHUR ANTHONY MACDONELL, University of Oxford, England. 1918.
Prof. EDUARD MEYER, University of Berlin, Germany. (Gross-Lichterfelde-West, Mommsenstr. 7.) 1908.
Prof. THEODOR NÖLDEKE, University of Strassburg, Alsace. 1878.
Prof. HERMANN OLDENBURG, University of Göttingen, Germany. (27/29 Nikolausberger Weg.) 1910.
Prof. EDUARD SACHAU, University of Berlin, Germany. (Wormserstr. 12, W.) 1887.
EMILE SENART, Membre de l'Institut de France, 18 Rue François Ier, Paris, France. 1908.
Prof. C. SNOECK HUMBOO, University of Leiden, Netherlands. (Witte Singel 84a.) 1914.
FRANÇOIS THUREAU-DANGIN, Musée du Louvre, Paris, France. 1918.
