## THE STORY OF THE THIEF RAUHINEYA IN THE MAHAVIRACARITRA OF HEMACANDRA

HELEN M. JOHNSON JOHNS HOPKINS UNIVERSITY

WHEN I PUBLISHED the translation of Devamurti's Rauhineyacaritra in the Studies in Honor of Maurice Bloomfield, I expressed the hope that I should be able to supplement it later with additional material. This hope I succeeded in realizing; I have not only collected manuscript material for the Rauhineyacaritra, which simplifies many difficulties, but have found that this work was only an introduction to many others centering in this famous thief-hero.

Rauhineya seems to have been an especial favorite with the Jaina fletion writers, and his story in briefer form than the Rauhineya-caritra occurs as an episode in several other works. The chief author in whose works I actually found the Rauhineya episode is Hemacandra; but Jaina Sadhus told me that they knew of a yet earlier occurrence in a manuscript which has not been published and which they did not have, but which is certainly extant. I did not find this while I was in India, but I hope it may yet be located.

The statement made previously to the effect that Hemacandra "quoted" from the Räuhineyacaritra in his Commentary to the Yogaçastra must be corrected, in view of what I learned about the author Devamurti. The Jaina Sädhus are my authority for the fact that he was the author of a Sinhäsanadvätrinçikäkathä and of a Vikramacaritra, of which the date is 1440 A.D. The exact date of the Räuhineyacaritra they did not know.

The Räuhineya episode as given by Hemacandra in the Yogacastra commentary is almost identical with the first 110 clokus of the eleventh surga of his Mahāviracaritra, which occupies the tenth parva of the *Trisasticalākāpurusacaritra*. In this version, the first generation, Rūpyakhura and King Prasenajit, does not

<sup>&</sup>lt;sup>3</sup> New Haven, 1920; pages 159-195.

<sup>\*</sup>These two names refer to the same work. But the only Jainistic recension of that work known at present is attributed to one Keemankara Muni (Ind. Stud. 15, 188).—F. E.

appear. Crenika is reigning king, and Lohakhura terrorizes Rajagrha. Many episodes that occur in Devamurti's story do not, of course, appear in the shorter recension, and there is no reference to magic arts nor to the thieves as magicians-a theme which Devamurti ciaborates extensively.\* Rauhineya, indeed, is captured by soldiers rather ignominiously, like a very ordinary thief. With the exception of his capture, however, the episodes that occur in both accounts accord quite closely. The simpler tradition followed by Hemscandra seems to have been better known, or probably was made known by Hemacandra. The Parvusanāstāhnikavyākhyāna, a didactic work belonging to the fifteenth century, quotes the Rauhineva episode almost in Hemacandra's words; and the Upadecaprāsāda, a late didactic work, gives a short prose account evidently based on Hemacandra. The story of Räuhineva doubtless figures in the various Abhayakumāracaritras, since Abhaya played such an important part in Rauhineya's career. It has also been dramatized, in the Prabuddha Rauhineva, one of the manuscripts found a few years ago in Pattan by Mr. Dalal, published by the Atmananda Sabhā in Bhavnagar.\*

My translation of the eleventh sargs of the Mahāvīracarītra is from the text published by the Prasārak Sabhā in Bhavnagar. I examined seven manuscripts: two in the Bhandarkar Institute in Poona, 47 1260 designated as P1 and P2; two in the temple library in Baroda, B1 and B2; one obtained from the Prasārak Sabhā, designated as Bh.; and two lent by the Ācārya Dharma Sūri, M1 and M2. Of these M1 is probably the oldest. Certainly it, the two in Poona and the one in Bhavnagar are the most valuable. All these manuscripts are carefully written and comparatively free from scribal errors. There are, too, remarkably few textual variations. In the present article I have indicated the most important ones.

For most of my information in regard to Jaina literature, and the interpretation of Jaina terminology, I am indebted to the late

<sup>\*</sup>See now Professor Bloomfield's elaborate essay on "The Art of Stealing in Hindu Fiction," AJPh. 44. pp. 97-133 and 193-229; especially pp. 118-120.

<sup>\*</sup> See also the 81st story in Hemavijaya's Kathārutnākara, translated by Johannes Hertel (Munich 1920), vol. i, pp. 229 ff.—M. B1.

Acarya Vijaya Dharma Süri and his disciples, who gave me every assistance possible. Indeed, contrary to the general impression, I found the Jains everywhere most willing to give me access to their manuscripts, and to show me every courtesy. The Jains in Baroda and Bhavnagar were especially kind in doing everything possible

to facilitate my work.

There are many others in India, besides the Jains, to whom I am under obligations for assistance and encouragement; above all, to Dr. S. K. Belvalkar, of the Deccan College, Poona, who initiated me in manuscript work. His pupil, Mr. N. G. Suru, Mr. Nanavati, Minister of Commerce and Industry of Baroda, Mr. N. C. Dutt, State Librarian of Baroda, and Mr. A. J. Sunavala of Bhavnagar all aided me greatly in collecting material. I take this opportunity to express my gratitude to all who, by their courtesy and hospi-

## The Mahāvīraesritra: Sarga 11, 1-110

tality, made my stay in India pleasant and profitable.

Then the Blessed Vira, inspired by a desire to benefit humanity, wandered through various hamlets, towns and capital villages. At this time there was a thief, named Lohakhura, living in a cave in Mt. Väibhära near Räjagrha, who was a terrible man, and like quicksilver personified (in speed). During the festivals and similar functions on the part of the citizens of Räjagrha, he frequently seized the opportunity to commit outrages like a demon; and in consequence of carrying away property and enjoying other men's wives, he looked upon the city as a treasury, or indeed, his own house. Theft only, no other occupation, was a pleasure to him. Demons are pleased with no other food but flesh.

By his wife Rohini, he had a son Räuhineya who resembled him in person and character. When the father's death was near at hand, he summoned his son and said, "I shall give you some advice, if you will be sure to follow it." "Most certainly I shall follow your advice. Who on earth would disregard a father's teaching?" Räuhineya replied. Then, delighted by this speech, the thief Lohakhura, caressing his son, spoke solemnly as follows: "Do not listen to the speech of that Vira who gives instruction inside an assembly-hall (Samavasarana) built by the gods; but

<sup>\* (</sup>Stanza 10.) When a sage attains Kevala Jffana, the gods approach

rather, son, do as you please, without restraint." After he had given this advice, Lohakhura died.

Räuhineya attended to the funeral ceremonies of his father, and then practised theft unceasingly, as if a second Lohakhura had appeared. He guarded his father's advice, as if it were his very soul, and robbed the city Rājagrha, as if it were his own slave.

At this time, as he was wandering gradually through many towns and villages, Vira, the last Jina Arhat, surrounded by fourteen thousand great ascetics, setting his feet on beautiful golden lotuses put in motion by the gods, came there (to Rājagrha); and for the Lord Jina the Vaimanikas, the Jyotisikas, the Asuras, the Vyantaras and the (other) gods made an assembly-hall, where the Blessed Vira gave religious instruction in a voice adapted to every dialect and extending for a yojana." Then Rauhineya too, as he was on his way to Rajagrha, arrived in the vicinity of the assemblyhall which was in the middle of the road, and meditated to this effect; " If I go by that road, I shall hear Vira's discourse and my father's command will be broken. Yet there is no other road; so be it." With this reflection, he covered his ears with his hands, and quickly went on to Rajagrha. As he came and went every day in this manner, one day near the assembly-hall a thorn was broken off in his foot; and because of the pain in walking, he was not able to take a step without extracting the thorn imbedded in his foot. Thinking, "There is no other way," he took his hand from his ear. While he was extracting the thorn, he heard the voice of the All-Teacher: "The gods do not touch the earth with their feet, their eyes are unwinking, their wreaths are unwithered, their bodies are free from perspiration and dust." . "Alas! I have heard a great deal! Out upon it!" (he cried.) Quickly he pulled out the thorn, covered his ear with his hand, and departed in that manner.

him to receive religious instruction, and build an assembly hall for the purpose. For the sameouserous in detail, see Indian Antiquary, 40, pp. 125-130, 153-61.

<sup>\* (</sup>St. 17.) This is one of the twelve characteristics of an Arhat. Vira speaks in one dialect, but is understood by each one in his own dialect. His voice is audible for a yojana.

This theme, 'Characteristics of the Gods,' is common from Epic through all Hindu fiction, as a progressive motif; but it is, as far as I know, nowhere else made the cardinal moment of an independent and interesting story.—M. Bl.

Now, as the city was robbed daily by this thief, the leading \* merchants went to Crenika and announced: "While you are ruling, Your Majesty, we have no other fear; but, on the other hand, our property is seized and carried away by thieves who are not seen. as if by demons." The King indeed sympathized with them just as if they had been his relatives, and spoke angrily and haughtily to the chief of police: "Do you take pay from me, having turned thief, or having become (my) heir, since these men are robbed by thieves whom you ignore?" He replied, "Your Majesty, a certain thief, named Rauhineya, robs the citizens. He can not be caught, even when seen. He jumps from house to house like a monkey, and then easily gets over the wall with a leap like lightning. While we follow his track by the road, he disappears. Verily, lost by one step, he is lost by a hundred. I can neither kill nor catch this thief. Therefore, Your Majesty, take charge of this police-business yourself." Then the King, by raising an eyebrow, indicated to the prince a Abhayakumara 10 that he was to speak, and he said to the policeman: "Equip a force consisting of the four departments,11 and station it outside the city. When the thief goes inside, then surround the city. After he has been frightened inside, he will take the lightning-like jump and fall into the hands of the army, like a deer into a net. Led here by his own feet, as if by witnesses, the great thief must be captured by vigilant soldiers." The chief of police received instructions to this effect and went away. Being clever, he secretly armed the force and placed it, as he had been told.

On that day, Rauhineya came from another village and unknowingly entered the surrounded city, like an elephant into an elephant trap. The chief of police led the thief, captured and bound by these means, to the king and handed him over. "Just as the good deserve assistance, so the wicked deserve punishment. Therefore let him be punished." The King gave such orders. Then Abhaya said: "Verily, as he was caught without any stolen pro-

<sup>38</sup> Abhayakumāra, in the Crenika stories, is both the son and the chief minister of Crenika.—M. Bl.

<sup>&</sup>quot; Elephants, horses, chariots, men.

perty, he does not deserve punishment.19 After an investigation, he must be punished." Thereupon the King questioned him: "Where do you come from? What is your occupation? For what reason have you come here? Are you Rauhineva?" Terrified at hearing his own name, he said to the King: "I am Durgacanda, a householder in the village Cali. I came here on a matter of business, and my curiosity having been aroused, I stayed in a temple until late at night. As I was going to my own house, I was challenged by guards like demons, and jumped the wall. Verily, fear of one's life is a great fear. After I had escaped the guards in the city, I fell among the troops of guards outside, like a fish dropped by the hand of the fisherman into a net. Now, although innocent, I am led here bound like a thief. Thou essence of nife. consider." 13 Then the King sent him to prison, and at once sent a man to the village to make enquiries regarding his character. In the beginning (before this), the thief had forced the village to make an agreement. Even some thieves have amazing forethought for the future. When the village was questioned by the King's man in regard to his true character, the people said: "Durgacanda was a resident here, but has gone to another village." When this was reported by the man who had gone there, the son of Crenika thought: "Alas, even Brahma does not penetrate well-planned deceit."

Next, Abhaya prepared a seven-storied palace, ornamented with precious jewels, like unto a palace of the gods. Adorned with charming young women equal to Apsarases in beauty, it was looked upon as a piece of Indra's heaven that had fallen from the sky. A great festival with a concert rendered by a troupe of singers produced at once the magnificence of a real Gandharva city. Then Abhaya intoxicated the thief with wine, clothed him in the apparel of a god, and laid him on a couch. When he arose, the intoxication having passed away, he perceived immediately a divine splendor, unprecedented and amazing. In the meantime, groups of men and women, in accordance with Abhaya's instructions, said to him: "O Delight of the World, gain exceeding happiness in this

<sup>&</sup>quot; See AJPA, 44, 133,-M. BL

<sup>&</sup>lt;sup>18</sup> (Stanza 48.) Read nitisāra, with MSS. P2, Bh., M1, B1; Yogaçāstra Comm. 40. P1 has nitismara; B2 has nitisārah vicārayā.

way. In this great palace you have now become a god.14 You have become our muster; we are your slaves. Sport with these Apsarases at your pleasure, like Indra." They addressed him agreeably and coaxingly with this introductory speech. " Have I become a god?" While the thief reflected thus, they clapped their hands for a concert. At that point, a certain man carrying a gold scepter approached and abruptly demanded: "What means this, sirs! that you have started in this way?" They replied: "Doorkeeper, we have undertaken this to show our eleverness and accomplishments to our lord." He (the doorkeeper) said: "Show your accomplishments to your lord; but nevertheless, have him carry out the customs of heaven," 15 "What custom?" When the man heard this, he said angrily: "Have you forgotten even this? Whoever is brought here as a god, relates his own former actions, good and bad; then he may share the joys of heaven." "In the excitement of acquiring a lord, we forgot all this. Pardon us. Have the god carry out the practice of heaven," 18 they said. The doorkeeper said to Rauhineya: "Come, tell us your former deeds, good and had; then later enjoy the delights of heaven." Then the thief thought, " Is this thing true, or is it a trick planned by Abhaya to test me? How can I determine this?" As he was reflecting thus, he remembered the speech of the Jina that he heard when he extracted the thorn. "If the true nature of the gods as described by Vira 17 fits (them), I shall tell the truth; if not, I shall answer (falsely)." 18 Reflecting thus, he deliberately observed them as they touched the surface of the earth, impure from perspiration, with withered wreaths and winking eyes. Having detected the whole trick, the thief considered a reply.

The doorkeeper said: "Please tell the story to all the people of this heaven eager (to hear it)." Ranhineya then related: "In a former incarnation I gave gifts to worthy persons, and founded temples; I set up idols and worshipped them with eight-fold wor-

ship; "I performed pilgrimages and honored Gurus. I practised the conduct of the good, such as these things mentioned." After he had related this, he was commanded by the scepter-bearer: "Tell your bad deeds, also." "As the result of association with ascetics, I have never done anything wicked," Rāuhineya replied. The gate-keeper said: "A life passes according to several natures; so confess theft, adultery, and other things." "Would anyone guilty of such conduct reach heaven? Does a blind man climb a mountain?" answered Rāuhineya. They went and reported all this to Abhaya, and Abhaya reported it to King Grenika. "By such means it is not possible to determine who is a thief. Even if he is a thief, he must be released. The law can not be broken." So on the advice of the king, Abhaya released Rāuhineya. Sometimes even the wise are deceived by those elever in deceit.

Then the thief reflected: "Shame upon the teaching of my Father, by which for too long a time I have been defrauded of immortality, derived from the speech of the Jina. If the speech of the Lord had not entered the hollow of my ear, then I would have entered the realm of Yama (Pluto) as the result of many beatings," Verily, a cure for making me live—as if I had been a sick man-was produced, when I heard the speech of the Jina. even though by seeident. I wicked, alas! ignored the word of the Arhat, and took delight in the word of a thief for a long time. I cast aside mangoes for nimbas (a very bitter fruit)." If a part of his instruction bears such fruit, what will his teaching, regarded in its entirety, accomplish?" Reflecting thus, Rauhineya entered the presence of the Jina, bowed with reverence at his feet and made confession: "In the ocean of worldly existence of living creatures, an ocean filled with crocodiles in the form of terrible calamities, your voice extending for a yojana is a big ship. I was prevented from hearing your words for so long a time, and was deceived by my father, who was not a friend (to me), (though) thinking himself a friend. O Teacher of the three worlds, Protector of the three worlds, they are blessed who always as believers drink the

<sup>&</sup>lt;sup>18</sup> Namely, water, sandal, flowers with scent, incense, lamp of ghee, rice, sweets and other foods except green fruit, and green fruit.

<sup>\*\* (</sup>Stanza 84.) Mara, 'beating,' a meaning taken from the vernacular. Cf. Hertel, Bharatakadvätrimāikā, p. 54.

nectar of your speech with the cups of their ears; but I wicked, inattentive to your speech, O Jina, covered my ears and passed this place, alas! On one occasion, I heard one speech of yours, though unintentionally; by it, as if by a magic syllable, I was saved from a Rākṣasa of a king. As I was saved from death, so. Lord, save me from drowning in a whirlpool of the ocean of saṃṣāra, Lord of the world!" Then out of pity for him the Master gave him pure instruction in the duty of a Sādhu, which furnishes access to nirvāna.

After he was enlightened, Rāuhineya made obeisance, and spoke as follows: "Lord, please decide whether or not I am suitable for the duties of an ascetic." On being told "You are suitable," he said: "Lord, I am going to take the vow, but (first), I want to tell Crenika something." "Say what you have to say, without fear or hesitation." Addressed thus by Crenika, the sou of Lohakhura said: "Your Majesty, I whom you hear here am that Rāuhineya, the robber of your town, in accordance with the popular report. By one speech of the Jina, the eleverness of Ahhayakumāra, hard to cross, was crossed by me, as a river by a boat. I robbed this whole city of yours; it is not necessary to look for any other thief, o Royal Sun! Send some one so that I can show the plunder. Then I shall make my life fruitful by wandering as a mendicant."

At the command of Crenika, Abhaya himself rose and went with the thief, and the people of the town went along out of curiosity. Then the thief showed Abhaya the treasure concealed in mountains, rivers, bowers, cemeteries, and other places; and Abhaya distributed the treasure, all there was, to the people. There is no other course of conduct for ministers who know atti, and are not avaricious.

After he had told the whole truth and enlightened his own people, Ränhineya, believing, attached himself to the Jina. Then King Crenika performed the ceremony of going out (into homelessness), and Räuhineya took the vow of mendicancy at the feet of the exalted Vira. Beginning with the caturtha fast, for six mouths he performed wonderful penance for the destruction of karma.

<sup>25 (</sup>Stanza 108.) Caturtho means 'missing food for four times.' The first day the penitent has food once; the second day, no food; the third day, once.

Emaciated by penance and having accomplished complete destruction of the passions, he bade farewell to the exalted Vira and performed pādapopāgama <sup>23</sup> on the mountain. Pure in spirit, and remembering the namaskriyā <sup>24</sup> to the five spiritual dignitaries, Rāuhineya abandoned his body, and went to heaven, as a great Muni.

is (Stanza 109.) One of the forms of death. The person falls like a tree and dies as he falls.

<sup>34</sup> Namo 'rhatsiddhinaryopadhyayasarvasādhubhyab.

# SOME FEATURES OF THE SIAMESE SPEECH AND WRITING

### CORNELIUS B. BRADLEY UNIVERSITY OF CAMPORNIA

THE STAMESE is the southernmost outlier of the great family of the Chinese dialects. Its kinship with them is shown, first, by its monosyllabic vocabulary; and second, by the peculiar use it makes of tonal inflections of the voice, not as a part of its rhetorical apparatus, but as essential elements of individual words, quite as indispensable for their right enunciation and interpretation as are the consonants and vowels that make up their framework. Their kinship is further shown by a singular feature of the content and use of words in both-a quality which is often called their abstractness. To me, however, that term seems wholly inappropriate, for it seems to deny what is one of the most conspicuous features of both languages, namely their concreteness. The fact apparently is this: In both languages the words are symbols of concepts per se, being wholly devoid of inflectional apparatus to express and define their relations with other words in the sentence. They are therefore free to function in any syntactical relation not incompatible with their essential meaning. The very same thing has to a notable degree become not only possible but even common in modern English, as a result of the disappearance of the inflectional and derivational apparatus that formerly prevented nouns from taking on the functions of verbs, adjectives, and adverbs, and vice versa.

This feature of the Siamese language—and I imagine the same to be true of the Chinese—is directly associated with its monosyllabic vocabulary. A monosyllabic language cannot have either inflection or derivation without ceasing to be monosyllabic; nor

The Siamose is by no means absolutely monosyllabic. In it, as in other languages, words that are frequently associated together in speech tend to combine, forming first a recurrent phrase, then a quasi-compound, then a definite compound. The heavy stress that falls on the distinctive member presently obscures the other member, so that though it still forms a syllable, it is no longer recognizable as ever having been a separate word. Such dissyllable compounds are a common feature of the Siamsse vocabulary.

can it have distinguishable Parts of Speech other than Aristotle's two—Subject and Predicate; nor can it maintain any sharp distinction between Phrase, Clause, and Sentence. In English, for example, relative clauses are regularly introduced by words definitely specialized for the purpose of marking the relative function. But in Siamese the word equivalent to our relative who is a word which elsewhere means person; the word equivalent to our relative that, in other connections means place or position; the word for when means time or occasion; and so on. Statements so introduced have the sort of detachment that belongs to an 'aside' or a parenthetical remark. But the true relative clause is inwoven into the very texture of the sentence.

In speech of this sort all sentences are necessarily short; for proximity-or one might rather say juxtaposition-is the only means of indicating syntactical relations between words. Let me illustrate this point by turning a simple statement in English into the Siamese idiom, retaining, however, the English words. Let the sentence be: The old man that you saw yesterday was my father. This must first be stripped of all words unnecessary from the Siamese point of view, namely: the article the, the relative that; perhaps also the pronoun you and the copula was, unless these are emphatic. The inflected words saw and my are reduced to their type-forms see and me. The generalized word old, ambiguous in meaning and of unlimited dimension, must be replaced by the specific aged; and in the phrases old man and my father, the logical order, which our English inverts, must be restored. The Siamese statement would then read: Man aged see yesterday father me. What could be simpler? Its syntax is in fact that of the sign-language of deaf. mutes the world over.

An interesting feature of this syntax is the frequent use of a series of words that in our thought figure as verbs, to represent for example what appears to us as a single comprehensive action, such as we would represent by a single comprehensive verb, with a modifier if necessary. In Siamese, however, the verbs, as we call them, are all specific like the rest of the vocabulary. It therefore becomes necessary to use a separate word for each phase of the action, including also the speaker's relation to it in the matter of of position. Thus where we say Walk in, the Siamese must choose between Walk enter come and Walk enter go, according as the speaker's position is inside or outside the door. The idiom of the

'pidgin' English of all that eastern coast parallels the Siamese exactly. The ship-captain says to his boy: Go catchee fetchee makee look see, and the boy brings him the spy-glass. The Chinese cook in a San Francisco restaurant thus explains his method of dealing with eggs of an uncertain quality: Can fly, fly. No can fly, sclamble. Every word in these examples save only the negative no, is for us a verb.

Turning now to the features of difference between these two languages, the most important is no doubt the fundamental difference between their modes of writing. Siamese writing is an attempt, clumsy enough but surprisingly successful, to represent the sound of the spoken word. Chinese writing, as I understand, aims by various suggestions, often fanciful and far-fetched, to hint at the meaning of the written symbol. If the reader succeeds in guessing that, he is welcome to pronounce it in any manner that pleases him. One is at a loss to know whether we are to regard this as a revivalwith a difference-of the Pentecostal gift of tongues, whereby every man may read in his own speech whatever is written; or whether it be not rather a continuation of the curse of Babel to divide men further. Whatever it is, it is apparently the only survivor among civilized people of the ideographic and symbolic picture-writing which took the place of the rude scrawls of primitive man. It has been an anachronism in the world ever since the day when the canny Semite bethought him that the rude sketch of Aleph, the ox, might better be used to represent the initial sound of Aleph's name, and so increase its usefulness a thousand fold.

The question of the source whence the Siamese derived the art of writing was still in debate during the first decade of this century. The internal evidence—the number of its letters together with their remarkable classification and arrangement—made it certain that its ultimate source was in India. But because Buddhism had long been the established religion of Farther India, it was usually assumed that the art of writing came to Siam as it came earlier to Burma, the gift of Buddhist missionaries from Ceylon; and that its proximate source was the Pali, and not the Sanskrit.

During the first decade of this century the researches of French archaeologists in their newly acquired territory in Anam and Cambodia prompted me to look into the origin and development of alphabetic writing in Siam. The earliest known monument of that writing is a certain inscription on stone discovered some ninety years ago among the ruins of Sukhōthai the ancient capital of Lower Siam. In it the author, Prince Rām Khamhæng, claims to be the one who brought the art of writing into use in Siam. He says: "Heretofore there were none of these letters for writing Siamese speech. In 1205, year of the Goat (1283-84 A. D.) Prince Rām Khamhæng carnestly desired and longed for them, and put these Siamese letters into use. So now we have them because that Prince used them."

The Prince seems careful not to say that he invented or adapted them. That must have been the work of a gifted and trained scholar; for this seems to be the first recorded attempt to incorporate in the spelling of words the tonal system of a language like that of the Siamese. Indeed from what the Prince says elsewhere in this inscription we can pretty safely guess that the one who accomplished this task was none other than the honored and beloved scholar from Ligor whom the Prince "made Sangharaja, who knew the Tripitaka from beginning to end, learned above all others in the realm." Whoever he was, his scheme remains in use today practically unchanged.

But where did he get these characters? A study of the principal types of Indian alphabets from Asoka's time down to that of Ram Khamhang made it clear that the Sukhothai letters could not have been derived from any of them. A study then of Sanskrit inscriptions from Champa and Cambodia ranging from the sixth to the thirteenth centuries showed that the earlier alphabets of this series closely resembled the contemporary alphabets from India; while the later ones departed more and more from the forms then current in India, and approximated more and more toward the Sukhothai type; until in the very latest inscription from Angkor Wat-without date, but from internal evidence judged to be of the thirteenth century-there was found an alphabet practically identical with that of the Sukhothai inscription. Indeed the very differences between four or five of the Sukhothai letters and the corresponding ones from Angkor Wat serve to confirm the identity of their source. For they are seen to be characters that were purposely altered from the Cambodian originals to avoid confusion with other letters which they had come to resemble too closely."

<sup>\*</sup>Ct. Journal of the Siam Society, Vol. 5, part 9, 1900.

<sup>\*</sup>Cf. Transactions of the American Philological Association for 1912, p. 23.

During the brief period of the supremacy of the Sukhöthal line of princes, Ram Khamhæng's letters underwent such considerable change toward their present form that there can be no doubt that the modern Siamese writing is directly descended from them, even though there remains a gap of some two hundred years from which so far no record whatever has been secured.

#### THE ALPHABET

The Siamese alphabet, like its ancestors the Semitic and the Indian alphabets, includes consonants only. Vowels were an after-thought in all alphabetic writing in Asia. The consonant-sounds distinguished in Siamese speech are twenty-two, as shown in Table I below, listed there by orders and classes as in the Sanskrit from which they are derived. The Siamese has added but one new sound to the Sanskrit list, namely the spirant f. On the other hand thirteen of the Sanskrit consonant-sounds are unknown in Siamese speech. The letters for these sounds are still retained in the Siamese alphabet for use in writing loan-words from the Sanskrit and the Pali; but in pronunciation each one of them is identified with one or another of the related Siamese consonants.

TABLE I. The Consonant Sounds in Siamese Speech.

Palatals	C	ch				Sibilant	6		
Dentals	t	th	đ		n	Breathing	h		
Labials	P	ph	b	f	m	(Hottal Stop	v and	1 :	

The two strange characters at the bottom of the list call for some explanation. The first is the old Semitic pictograph of Aleph, the ox—the same which, inverted, heads all our European alphabets as a vowel. But throughout Southern Asia it still retains its original character as a true consonant sound—a voiceless stop like initial p, t, and k. Like these it represents the click of sudden

<sup>&</sup>quot;As the use of Ram Khamhang's letters spread northward toward the sources of the Menam River, there was developed a beautiful menumental script which continued in use in the northern monasteries almost down to our times. During the period of Burmese ascendancy in that region the round Burmese characters came into use for secular purposes. These are now being displaced by the standard Siamese characters throughout the area under Siamese control.

release of a closure in the air-passage. The other is the Sanskrit visarga, and it represents the corresponding snap of closure at the same point. The two therefore together form one complete consonant with two distinct phases, initial and final; and rightly the two should have been listed together under one symbol as one consonant, just as was done with p, t, and k. The operation of the two may be described as follows; for the Aleph phase contact takes place in the glottis itself, where the vocal chords are brought together and held tense and silent for an instant, until the accumulating air-pressure springs them suddenly apart, throwing them into immediate and strong vibration. The following vowel-note is thus launched forth with uncommon power and brilliance. Singers call this action "attack," and use it with fine effect. It is also frequently heard in the Cockney dialect where it takes the place of an h that has been dropped. The visarga phase is the reverse of the Aleph. While the chords are in full vibration sounding a vowel-note, they are abruptly silenced by swinging them suddenly together, thus completely closing the air-passage. Visarga is therefore a guillotine-stop, which with startling effectiveness beheads what would otherwise have been a final vowel. In Siamese the very same thing happens also to any vowel before final p, t, and k; though of course the contact then takes place in other parts of the vocal apparatus, where it can be easily observed. In English these consonants are audibly exploded before we pass on to the next word; but in Siamese there is no audible escape of breath after the closure. The Siamese says you, you, and yill precisely as the American street Arab says yep' for yes. In Siamese then these three consonants are also of the guillotine sort as well as risarga.

To facilitate reference and comparison there is shown in Table II the Sanskrit alphabet arranged in orders and classes according to the ancient scheme—a marvel of accurate analysis and grouping.

In Table III is shown the consonantal alphabet of present Siamese, romanized in general according to the scheme in use among European students of Siamese. I have, however, used italics for the thirteen letters not used in writing native Siamese words, but needed for transliterating Sanskrit and Pali. Dotted lines connecting the two letters of six pairs in the Table indicate that the right hand one is a new letter derived by some slight variation from its neighbor on the left. A seventh derivative—the second has not been derived from the h beside it, but from v in the group of Middle Letters, too distant to permit the use of the connecting line.

#### THE VOWELS

In Siamese there are eighteen vowels as against thirteen in Sanskrit. Our English language has five vowel letters; but each of these does duty for from two to five different vowel sounds, and these shade off into each other by such uncertain gradations that it is almost impossible to tell just how many vowel sounds we have. The Siamese vowels fall into three series as shown in Table IV, all diverging from a common center in the vowel \(\tilde{a}\), the most open one of them all. In each series the progress is steadily from open to close, but along different lines of closure, until at the end of each a point is reached beyond which further approximation results in closure on a consonant-sound. In each series the vowels are grouped in pairs of short and long, the short being also the more open in every pair except the first, where long \(\tilde{a}\), being the most open of all, must stand first. In their several series these vowels are accurately spaced like the semitones of the musical scale, and each is uttered

to designate this unfamiliar consonant-sound, hoping thereby to dissociate it entirely from the vowel a with which in most of our minds it is continually confused.

without slurring or vanish of any sort. Indeed they are so numerous and so accurately spaced that it is difficult to see how any one of them could perceptibly change in pitch without involving the whole in uncertainty and confusion such as perplexes our own vowel system. Nothing of that sort, however, seems to have happened in the six centuries since this scheme was put in operation.

TABLE IV. The Simple Vowels.\*

Most of these vowels are assumed by English-speaking people who encounter them to be identical with the corresponding vowels

in English. But a trained ear soon discovers that few of them are exactly like ours. Thus the Siamese long  $\bar{\epsilon}$  is held true to pitch to the very end, without any change in the position of the vocal organs; whereas the corresponding vowel in English speech is at the very least a full diphthong, as in they  $(e+\bar{\epsilon})$ , while in the London dialect the range is increased to cover the whole gamnifrom  $\bar{a}$  to  $\bar{\epsilon}$ —witness the Dāily Māil and the policeman's reassuring words at the street-crossing—"Don't be afraid, laidy." The very same thing happens to long  $\bar{o}$ , which none of us pronounce without  $\bar{a}^{\mu}$  for a vanish.

I do not cite these examples in criticism of any one's pronunciation. I am well aware that we all, east and west, are equally aberrant in these matters. And, after all, language is the most democratic institution in the whole world. Imperial Caesar himself could not give citizenship unto words. But I wish thus by contrast to call your attention to one of the most beautifully complete and accurate pieces of phonetic development to be found anywhere in the world. And the wonder of it grows when we reflect that it was not so planned by anybody, nor was the speech shaped to fit the scheme. On the contrary, the Thai rare itself, confined as it was within its monosyllabic word-form, was compelled to make use of every available resource to increase its word-list. One such resource was the addition of 'tones' to the hare frame-work of consonants and vowels. The other was the careful filling of the whole vowel-area with vowels accurately spaced—far enough apart to insure distinction between them, and near enough together so that no vacant spaces should be left. And the diphthongs, which we take up next, show an equally clear-cut and systematic arrangement.

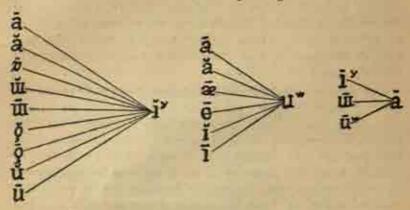

## THE DIPHTHONGS

A diphthong is a vocal glide starting from a definite point in the vocal field, and landing at another point far enough away to insure effective contrast. It is thus exactly like the portamento in vocal music. The Siamese diphthong is no uncertain and indefinite slip by which one vowel shifts 'unbeknownst' into a neighbor's place. It is rather a bold leap from end to end of either octave, or across the intervening space from one series to the other, as shown in Table V.

There are here eighteen diphthongs, all in perfectly symmetrical arrangement. Not quite all possible combinations are found in this

scheme, but all of these are in actual use. The lack of 'voice' noted in the consonantal group is more than made good here and in the tonal group. And to the 'tones' we are now come.

TABLE V. The Diphthongs.

THE TONES AND THEIR NOTATION IN WRITING

Intonations of the voice accompany all forms of speech. In most languages they constitute a rhetorical annotation to the phrase and sentence, marking the points of emphasis, lighting up the bare words with color and feeling, and sometimes accompanying the thought with music. Such intonations are of no fixed pattern, nor are they necessary for the right understanding of individual words. In certain languages, however-such as the Chinese and the Siamesc-these tonal inflections are of fixed form, and are essential elements of individual words, quite as necessary to the pronunciation and understanding of them as are the vowels and consonants that make up their articulate framework. Thus, for example, the simple syllable ad, when pronounced with five different intonations, becomes five different words, namely; with mid-rising tone, /na means thick; with circumflex, na means aunt; with mid-level tone - ni means rice-field; with low-level tone \_ ni means indeed; and with falling tone and means face." So far as I know, such

<sup>\*</sup>For the indication of these tones in the text I have used the excellent achieve of Sir George A. Grierson, set forth in his article 'On the Representation of Tones in Oriental Languages,' cf. Journal of the Royal Asiatic Society, Oct. 1920.

intonation of individual words is confined to monosyllabic languages, and in their case, as we have seen, resort to it may be necessary to provide a sufficient vocabulary. In Siamese there are five of these tones that may be applied to long vowels, namely the five just given in the illustrative examples above. Of each of the five the general figure or pattern of movement—that which distinguishes it as rising, falling, circumflex, and so on—is fixed, as is also the general relation of each figure to the central register of the individual voice. But the actual dimension of each movement—its height, its depth, and its reach—vary with the mood and the degree of emphasis of each utterance.

In Table VI below the five figures on the left show the general pattern of each of the five tones of long vowels, together with its position in the field of pitch. On the right are the two short tones of vowels syncopated by stop-consonants. Each of these figures is a generalization from a number of figures plotted from instrumental measurements of the pitch of the voice as ascertained from actual records.\*

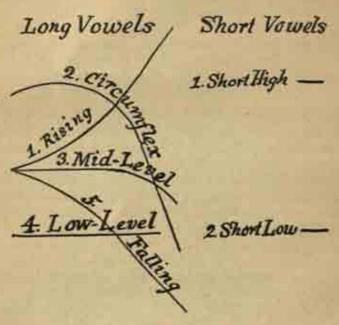

The most remarkable feature of Siamese writing, I suppose, is the scheme by which it indicates the intonation of most of its words by choice of the letters used in spelling them, so that the tone is incorporated into the very structure of the written word. This is made possible by the fact that many of its consonant-sounds have duplicate letters to represent them in writing. Though consonants are not vocal, and therefore cannot voice the intonation—a thing which is the function of the vowel alone—nevertheless they may be so sorted and used as to indicate the tones of the vowels and diphthongs with which they are associated. This has been so successfully accomplished that the intonation of perhaps two-thirds or more of all native Siamese words is distinctly indicated in their spelling. Two discritical marks suffice to determine the intonation of the remaining third. Before explaining how this is accomplished, let us note certain things that condition the process.

1. Every word in Siamese speech begins with a consonant, There is in it no such thing as an initial vowel. Every vowel that to an untrained ear seems to be initial is really introduced both in

For the process of measuring and plotting the tones of Publications in American Archaeology and Ethnology, Univ. of California, vol. II, No. 5, Oct. 1916.

speech and in writing by the consonant v. Similarly every word with a short vowel takes a consonant ending. Now the only consonant-sounds allowed to stand in final position are the three masals, m, n, and ng, with the four voiceless stops p, t, k, and visarga. When final, these stops are never exploded, as has already been explained. Other consonant-letters do sometimes appear in the final position, but this occurs regularly only in loan-words from the Sanskrit or Pali, which retain their original spelling. In pronunciation, however, all such final letters are identified with one or other of the consonant-sounds named above.

TABLE VI. The Tones.

2. Each consonant letter is endowed with an inherent tone of its own—a tone which it, being a consonant, cannot of itself voice, and therefore passes on to be voiced for it by its attendant vowel. The vowel will voice it perfectly provided it be a long vowel—that is, if it has time enough to execute the tonal figure properly; and provided also that the following consonant, if there be one, does not disturb the result by interference of its inherent

tone. Now when the Siamese alphabet is learned and recited, the names of all the letters are pronounced by the help of one and the same long vowel, o. It receives and voices in succession the tone supposedly inherent in each letter. While learning the alphabet, therefore, the Siamese child learns simultaneously and without analysis these four things: the name of each letter, its precise articulation, its place in the alphabetic sequence, and the particular tone that each letter imposes upon the long open  $\phi$  that voices them all. This last item perhaps may seem of no great importance. Barely two tones are involved in it-the mid-level and the hightogether with some forty consonant-letters. But note how the field widens when we reflect that every one of these letters will impose its inherent tone alike on any long vowel or any diphthong that follows it in an open syllable. Now there are nine such vowels and eighteen diphthongs, making in combination with these consonants a total of some eleven hundred possible syllables, the tone of every one of which is determined by what one has learned about the inherent tones of consonants while memorizing the alphabet. The scheme is in fact that of a mental card-catalogue applied to the immense and unsorted mass of words in the language. Each consonant letter heads a list of twenty-seven vocables of similar structure and identical intonation. The Siamese alphabet becomes thus a real syllabary, though not so designated.

We come now to the first listed syllabary. In it are included all the recognized combinations of each of these consonants with each of the simple vowels both long and short. It thus establishes an official vowel-sequence to parallel the consonant-sequence of the alphabet. And as before, the tone resulting from each combination of vowel and consonant is learned along with the other features of each vocable. This repeats, of course, in part, what was learned about the long-vowel combinations in learning the alphabet. But that is only good pedagogy; it not only reinforces what was taught before, but also incorporates with it new knowledge, and carries its application into a new field. In Syllabary I the first consonant is 'conjugated' thus:  $-k\bar{a}$ ,  $-k\bar{a}$ . The other consonants

<sup>\*</sup>The combination on here represents the Sanskrit assessor, a masslined wowel. Therefore it appears here in the vowel series. But in Siamese speech it has become a closed syllable with a final consonant m.

now follow in order with the same conjugation, each however with its own inherent intonation when the vowel is long, but with modified intonation when the vowel is short. For in this position the short vowels carry an unwritten visarga; every such syllable therefore is really closed, and not open as it seems to be. In this syllabary, it should be noted, we have added a new tone to our list—the short low tone.

Next in order come six syllabaries showing the spelling and the resulting intonation of all closed syllables with simple vowels both long and short—one syllabary for each of the six possible final consonants not counting visarga, which has been provided for elsewhere. The six fall into two distinct groups; three with final nasal consonants, and three with final stops. The vowel-sequence of Syllabary I is in general continued in both groups, with however a few necessary additions. Throughout the first, the intonation is confined to the two tones inherent in initial consonants, namely the rising and the mid-level; for the nasals are sonant and merely continue the inherent tone without altering it.

The second group—the one with final stop-consonants—introduces two new long tones caused by reaction of the initial and the final consonants on a long medial vowel. The first tone is the low-level one, and it occurs whenever in this syllabic combination the initial consonant is either a middle or a high-class letter; e. g.\_sōk, \_hēt. The second is the falling tone, and it occurs whenever in like circumstances the inital letter is of the low class; e. g. \_rōk, \_yōt. The two short tones, high and low, also appear in this syllabary, both of course only with short vowels—the high tone following low initials, and the low tone following the high initials. Examples are: 'rōt and 'yōt of the one, and \_sōk and \_hēt of the other.

The last syllabary supposedly deals with final diphthongs. Of these, as I have stated, I find but eighteen in present Siamese. But here are listed no less than thirty-three. The additions are in part variant spellings of syllables already included elsewhere; others are syllables with simple vowel-sounds and not diphthongs at all; and a number are syllables closed by visarga. So far as its organization is concerned, this syllabary is confused and unsatisfactory. But it does at least establish a definite and memorizable sequence, which is after all the important thing—a sequence which when once learned enables one in a moment to run down in memory and ascertain the precise spelling, pronunciation, and intonation of any one of the 1452 monsyllables included in it. The sum total of all syllables included in these lists amounts to nearly seven thousand possible words.<sup>10</sup>

At this point the regular study of the syllabaries usually comes to an end—but not the use of them. For there remain to be included within the scope of their application some three thousand vocables more, derived from 'conjugating' through all these sequences the various compound initials made up of the consonantstops plus 1, r, and w. Even so we are not yet at the end. There must be reckoned in also the tonal variants to be derived from the use of the discritical marks yet to be described. A conservative estimate of these additions would be perhaps five thousand more, bringing the grand total of possible vocables up to some twelve thousand.

The three following rules cover all the cases so far dealt with, namely those in which no discritical mark is needed to determine the tone—that is, in about three-fourths of all native Siamese words, and in practically all words of foreign origin that have become fully naturalized.

I. Any initial consonant will give its inherent tone—the tone in which its name is pronounced—to any final long vowel or diphthong that follows it; and also to any vowel long or short, or to any diphthong, in a syllable that ends in either of the nasals m, n, and ng; for these consonants are vocal, and continue the tone of the preceding vowel. (Cf. a and b of Classes 1 and 2 in Table VII below.)

II. Any initial letter of either the high or the middle class will give the low-level tone to any long vowel or diphthong that follows it in a syllable closed by any one of the consonant stops; and will give the corresponding short-low to any short vowel similarly placed. (Cf. ibid. c of Classes 1 and 2.)

III. Any low initial consonant will give the falling tone to any diphthong or long vowel in a syllable closed by a consonant-stop; but will give the short-high tone to any short vowel similarly placed. (Cf. ibid. Class 3, c and d.)

The writer cannot remember where or when he learned these syllabaries; but he stands ready to rapeat on demand any one of the sequences under any designated consonant in any one of the eight lists.

For visual summation of these principles, and for ready reference, there is given in Table VII a schematic presentation of all the various syllabic types included under the operation of these three rules, together with examples of the resulting tone under each type. In it the letters H, M, and L represent initial letters of the high, middle, and low classes respectively; the macron and the breve that follow these letters represent long and short vowels that follow these initials; N and S represent final masals and stops. In each example cited the tone resulting from that particular combination of consonants and vowel is indicated by a symbol prefixed to the initial letter of the word according to the scheme of Sir George A. Grierson already mentioned; namely : /indicates the mid-rising tone; the mid-falling tone; "the circumflex; -the mid-level; \_the low-level; The short-high; and \_the short-low. Each of these symbols is a rough approximation to the figure or pattern of movement of the voice as shown in Table VI. The level of its start and finish will roughly indicate its general position in the field of pitch.

#### TABLE VII.

Typical Syllabic Combinations and the Resulting Tones,

	1.	High Cla	ss Initials	
a.	H-	-khā	∕săn.	phin
ъ.	$H \stackrel{\vee}{-} N$	hin	hūang	/song

ø,	M — 8	pāk	_kō:	_dlip
	3.	Low Class	Initials	
a.	L-	—liii	—rēu	—wā
ъ.	L-N	_thin	_thong	wen
C.	L-S	rột	rik	thiap
d.	L v S	Tat	rāk	mět

#### THE DIACRITICAL MARKS

We come at length to the discritical marks, the function of which is to cause certain modifications of the tones imposed by the syllabic scheme, and thus increase its range. The two most important are named  $\_ik$  and  $-th\bar{o}$  after the Sanskrit numerals ika and dei, i. e. 1 and 2. Indeed in shape they so nearly resemble these figures of ours that 1 shall presently use ours to represent theirs in the list below.<sup>12</sup> They are written directly over the vowel which they are intended to modify.  $\_ik$  changes to the low-level both the rising tone of 1a and 1b in the syllabic scheme above, and the midlevel tone of 2a and 2b;  $-th\bar{o}$  changes the syllabic tones of these same four groups to the falling tone, but raises to the circumflex the mid-level tones of 3a and 3b.<sup>12</sup>

In the following scheme are shown the effects of these two diacritics on syllables of types a and b from each of the three letter classes of Table VII.

Withou	t Diacritic	Diacritic &	Diacritic the	
1 a	∕hä.	_bā	hå	
1 b	∕hūang	_hūang	hūang	
2 a	—kiii	_kiè	km	
2 b	—kōng	_kong	kong	
3 a	—rāi	, thi	~rāi	
3 8	—thōng	thong	⊃thong	

A glance at Table III will show that the letters of the low class outnumber those of the two other classes together. All the nasals and all the semivowels are found in the low class alone, thus destroying the balance of the whole tonal system. To remedy this

<sup>13</sup> These names indicate clearly their Indian derivation, but neither in shape nor in name do they resemble the corresponding numerals in use in Siam.

They are not applied to syllables of type c because in them the lowlevel and the falling tones are already represented syllabically; nor in type d because the short vowel does not afford them sufficient scope.

defect, and to render these low-class letters capable of service in the two higher groups, it was devised that one high-class letter—h—and one middle-class letter—v—be commissioned to act as ushers, introducing low-class semivowels and nasals whenever these are needed, and clothing them for the nonce with all the tonal powers and functions of the usher. The letters chosen were both in themselves unobtrusive and not likely to cause trouble by being mistaken for the real initials of the syllable. Thus was the disparity between the tonal classes effectively removed.

By way of bringing this intricate and tedious dissertation to an end, allow me to recite a short specimen of the thing itself—a Siamese "jaw-breaker" which, for ingenious bewilderment by means of homoiophones, I am sure does not fall behind our "Theophilus Thistle the Thistle-sifter," while in coloratura of intonation it certainly leaves that far behind,

## A NEW CENSUS OF THE MOSLEM WORLD

## SAMUEL M. ZWEMER NEW YORK CITY

A gensus of the number of Mohammedans in the world is desirable because the discrepancies in the different statistical surveys attempted by various authorities and hitherto published are as disconcerting as they are surprising. Most of the estimates, it is true, have been made by Western writers, but they have often repeated figures given by Moslems, or, in some case, by pro-Islamic orators who exaggerate totals. During the negotiations of the Peace Treaty of Sevres, for example, an Indian Mohammedan wrote an appeal on behalf of the 400,000,000 Moslems of the world! In the Revue du Monde Musulman, Vol. 4, pp. 770-798, there is a long review of a book Siyahat ul Kubra-The Great Travels-by Suleiman Chukri Bey, printed at St. Petersburg in 1907, in which this Moslem globe-trotter gives the total Moslem population of the world as 360,766,695 of which 10,719,658 are in Europe, 218,789,957 in Asia, 98,952,000 in Africa and 32,305,000 in the islands of the Indian Ocean! El Moayyad, a Cairo newspaper, dated 9th November 1909, gave the total population of the Moslem world as 270,000,000, but of these 40,000,000 were said to live in China, where we know there are less than 12,000,000. In another case to which the late Rev. H. H. Jessop, D. D., called attention, the Sublime Porte under the Hamidian Regime carefully copied a survey of the Moslem world published in the Missionary Review of the World in 1898, and gave it as an accurate census taken under the supervision of the Sultan and at his expense! His letter on the subject dated Beirut, October 15, 1900, reads:-

"I once translated your statistical summary of the number of Moslems in the world, 196,000,000, and showed it to the Mudir al Maarif. He took it and afterwards replied that it could not be published, as the Emperor William in Damascus had spoken publicly of the Moslems as 300,000,000! I told him the Emperor was simply quoting the exaggerated statement of a Moslem Sheikh at the dinner table, but the Mudir kept it and sent it to Constantinople and now it has come out as the official census made by the Sultan's Government and published by the Turk!"

The following table gives other more careful estimates from

various sources given in the order of totals, beginning with the highest estimate:-

Hubert Jansen, Verbreitung des Jalams (1898)	1259.680.672
C. H. Becker in Baedeker's Egypt (German edition)	,250,000,000
H. Wichman in Justus Perthes' Atlas, 1903.	240,000,000
The Mohammedan World of Today, Cairo Conference 1906	.232,996,170
Lawrence Martin, in Foreign Affairs, March, 1923	.230,000,000
Martin Hartmann, 1910	.223,985,780
Whitaker's Almanac, 1919 (English edition)	.221,825,000
Summary of the Moslem World, The Moslem World, April	
1014	.201,296,696
Lucknow Conference Report, 1911 estimate.	.200,000,000
S. M. Zwemer, in Missionary Review of the World, 1898	196,491,842
Encyclopaedia of Missions, 1904.	193,550,000
Allgemeine Missionzeitschrift, 1902	175,290,000
Brockhaus' Koneers, Lewikon, 1894.	175,000,000

The most detailed statistics can be found in Jansen, but they are not reliable and are generally over-estimated, especially in regard to Siam. China and the Philippine Islands as well as the former German Colonies in Africa and Abyssinia, where he finds no less than 800,000 Mohammedans. Generally speaking, the population of countries such as Morocco, Persia, Arabia, and Northern Equatorial Africa, (where there are large desert tracts) has been estimated too high.

In preparing our new estimate there are several large areas concerning which we are able to speak with much greater accuracy than was the case in the survey made before the World War of 1914. The China Continuation Committee Survey has given us careful statistics regarding China and census reports of more recent dates are now available for India, Malaysia, Egypt and several other countries.

The total of the Moslem world according to this new estimate is 234,814,989. Of these 105,723,000 are under the British rule and protection; and under other Western governments in possession of colonies are 94,482,077 in all.

### DISTRIBUTION BY GOVERNMENTS.

### Under British Rule or Occupation

In	Africa	28,910,000
In	Asia.	75.788.000
Īπ	Anstralia	25,000

105,723,000

Other Western Governments

In Africa:		
Belgium	1,764,000	
France	28,502,332	
Italy	1,659,000	
Portugal	239,000	
Spain	594,500	
Abyminia and Liberia	800,000	
In Asia, etc.:-	1000000	
United States and Moros	597,999	
Dutch	39,000,000	
French	341,860	
Russia (Asia and Europe)	15,320,000	
Europe (outside Turkey)	2,469,957	
Central and South America	193,429	
Comment of the Commen		94,482,07

This leaves in round numbers only 33,000,000 Mohammedans not under Western governments. Of this number, only 8,321,000 remain under Turkish Rule in what was once the Ottoman Empire or only a little over three per cent, of the whole Moslem world

population.

Another fact deserves attention. Professor Margoliouth states (Mohammedanism, p. 14) that "Islam in the main is a religion of the heat belt, the part of the earth's surface which lies between 30 degrees N. Latitude and 30 degrees S. Latitude with a mean temperature of 68° F.," and quotes Mr. Alleyn Ireland as saving: "During the past five hundred years the people of this belt have added nothing whatever to human advancement. Those natives of the tropics and sub-tropics who have not been under direct European influence have not during that time made a single contribution of the first importance to art, literature, science, manufacture or invention. They have not produced an engineer, or a chemist, er a biologist, or a historian or printer or a musician of the first rank." But a study of our statistics shows that such generalizations are rash, for Islam has extended far to the north and south of this heat belt and has outside this area a population of no less than 64,090,000. These are distributed as follows:-

In Morocco	5,000,000
Aleeria	5,000,000
Timis	1,890,000
P. Walteritte	3,000,000
Half of the Punjab	6,000,000

Russia	15,000,000
Three-quarters of Chius	8,000,000
Afghanistan	
Turkey in Asia	
Three-quarters of Persia	
Europe	
America	200,000

Total outside the Heat Belt. ..... 64,090,000

A much more important division of the Moslem world population than that by climate or even according to government is the classification of Moslems according to the character of their beliefs and practice.

Snouck Hurgronje, Warneck and Simon, for example, have conclusively shown that the Mohammedans of Malaysia are of animistic type and have little in common with Moslems as we know them in North Africa and Arabia. Of the total number who call themselves Moslems we must reckon, therefore, that perhaps sixty millions in Africa, Malaysia and part of India belong to this animistic type, or, in the words of Gottfried Simon, are really "heathen-Mohammedans." The Shiah sect in Persia and India is also a distinct group but does not count more than twelve millions. Perhaps from six to ten millions of the Moslem world population in Europe, South America, Algeria, Syria, Persia, Turkey, India and Egypt have so far adopted Western education and broken away from the old Islamic standards of the orthodox Traditions, that they should be separately classified as New Moslems. This would leave about one hundred and fifty million orthodox Moslems who follow the Sunna of the Prophet, and are therefore cognizant of the existence and the distinctions of the four great schools-Hanifi, Maliki, Shaf'i, Hanbali. The Hanifi are in the great majority and number perhaps ninety-three millions, chiefly in Turkey, India, Russia and Central Asia. The Maliki school is predominant in Upper Egypt and North Africa and numbers about twenty millions. The Shaf'i are found chiefly in Lower Egypt, Southern India, and Malaysia, numbering about thirty-five millions, while the Hanbali are found mostly in Central and Eastern Arabia and do not number over two millions altogether. From this school the Wahhabi and later the Akhwan movement sprang,

Another classification of Moslem population which is of considerable importance is that according to literacy. For two large areas

we have accurate returns, namely, British India and Egypt. For other lands we can only make estimates, based on investigations by missionaries and travellers. The figures of illiteracy for Egypt given according to the latest census indicate that of the Moslem population 9.9 per cent. of the men and 0.6 per cent. of the women can read. For India similar statistics are given in the census and are equally astounding in the revelation of the vast percentage of illiteracy. Based on these returns we have made estimates of other countries and the conclusion is that the total number of Moslems in the world able to read is less than eight million and of these less than 500,000 are women. These facts emphasize at once the intensive need of leadership for the educated classes of Islam and not less the inadequacy of the printed page to reach the masses unless supplemented by the living message in the vernacular speech.

The following table, which presents these facts in outline, provokes thought and lays before us at least one great factor in the problem of the Moslem world; because illiteracy, superstition and a high rate rate of infant mortality have been shown to be vitally and closely related in all lands.<sup>1</sup>

### PHONETIC LAW AND IMITATION

## E. H. STURTEVANT YALE UNIVERSITY

THE PROUDEST ACHIEVEMENT of linguistic science is the demonstration of the existence of regular phonetic laws. For example, while Middle Westerners pronounce a spirant r before a consonant, as in hard, hurt, horn, natives of the Southeastern states speak such words without an r-sound. The loss of the r is regular in two respects; it has been lost by all speakers of the dialect in question, and it has been lost in all words in which it formarly stood before a consonant; the process exhibits regularity as between speakers and regularity as between words. It has been found that change of sound usually works in this way, and it is assumed by many scholars that it always and necessarily works thus within the limits of a single dialect, within a given period of time, provided the phonetic conditions of the change are fully taken into account.

The reasons for this regularity are, however, not yet fully agreed upon. The matter has been discussed for more than forty years, and many solutions of the problem or of parts of it have been proposed, but there is apparently as much diversity of opinion now as at the beginning of the debate. In fact a distinguished scholar has remarked: "On this subject able men have made profound guesses, but only guesses after all."

The earliest attempt to explain the regularity of sound change was made by Herman Paul, whose Principien der Sprachgeschichte was published first in 1880, and in its fifth edition in 1920. According to Paul 2 we do not acquire and retain a memory picture of the motory sensations involved in the pronunciation of each separate word, but we remember instead the motory sensations connected with the production of each speech sound. Consequently, whenever we utter a given speech sound, in any word, the same mental picture of motory sensations comes to function.

\* Op. cif., pp. 49 ff.

Sütterlin, Werden und Wesen der Spracke, p. 34.

For this reason, Paul holds that it is impossible to change a sound in one word without changing it in every other word in which it occurs. This is his explanation of the regularity of sound change as between words. Furthermore, each group of motory sensations is associated with a corresponding memory picture of auditory sensations belonging to the same speech sound. The auditory images are, as it were, composite photographs of sounds produced by all the speakers in one's environment. It is this fact which hinds the several speakers of a community together and causes regularity as between speakers.

For a time this theory of Paul's seemed to be pretty generally accepted by the adherents of the school which held that sound change admits of no exception (the so-called young grammarians), but during the last twenty-five years dissent has occasionally been expressed, while latterly Paul is sometimes simply ignored, and even Brugmann, in his latest treatment of the question, differed from Paul in several vital respects.

Jespersen a long ago pointed out that since phonetic change usually affects a sound only in certain surroundings (s. g., in the South, r is lost only before a consonant and at the end of a word), we must assume a memory picture not for the motory sensations of each sound, but of each group of sounds. A similar but more far-reaching conclusion is necessary for phonetic reasons also. The movements necessary to the production of a sound differ with its surroundings. In pronouncing the r of part, the Middle Westerners must lift the tip of the tongue from the position which it occupies during the sound [a], namely near the middle of the floor of the mouth; but in pronouncing the same sound in horn he must lift it from a position somewhat further back, and at the same time he must eliminate the rounding of the lips which is involved in the sound [o]. Similarly, the r position in Middle

<sup>&</sup>lt;sup>4</sup>E. g. Wheeler, TAPA 32, pp. 9 L; Herzog, Streitfragen der romanischen Philologie, p. 21; Schrijnen-Fischer, Indogermanische Sprachwiasenschaft, p. 84.

<sup>\*</sup>E. g. Sapir, Language: an Introduction to the Study of Speech; Jesperson, Language: Its Nature, Development, and Origin.

<sup>\*</sup>Grundries\* I, pp. 63 ff.; Brugmann-Thumb, Griechische Grummatik\*, pp. 5 ff.

<sup>\*</sup> Techmer's Internationale Zeitschrift, 3, pp. 206 f.

Western part is followed by a further elevation of the tongue-tip until it touches the upper gum, and at the same time the vocal chords cease to vibrate; but in farm, the tongue-tip is lowered, the lips closed, and the nasal passage opened after the production of the r-sound, while the vibration of the vocal chords continues. We must then assume a separate memory picture of motory sensations for each sound in each of its possible combinations, and also for each possible variation of stress or pitch.

Furthermore the phenomena of assimilation and dissimilation prove that each speech sound stands in relation to other sounds at a considerable distance from it. While these do not, as a rule, affect the actual movements of the speech organs in the production of the sound in question, they do modify the psychological state which accompanies and determines the production of the sound. This psychological state includes a memory picture of motory sensations but is more complex than that, Brugmann notes that we have completely identical phonetic conditions only in the case of homonyms such as Greek rpsis, "three," and rpsis, "you tremble." As a matter of fact, the surrounding words may influence a sound, as in many lapses, such as Kelly and Sheets for Shelley and Keats, and in dialectic Greek arra under the influence of erra in counting. In short we can infer an identical psychological basis for a given speech sound only in case a sentence is repeated with identical tone, accent, and tempo, and while the speaker is in precisely the same physiological and mental condition.

As far as I can see, Paul's theory is psychologically justified only in so far as it coincides with the law of habit. Our actions, whether in speech or not, tend to run in grooves to a certain extent. But habit is a matter of association, and association is the basis of analogy. Clearly Paul's followers will get little comfort out of building their theory of phonetic change on that foundation!

Even if we should grant the validity of the theory of a separate memory picture of motory sensations for each speech sound, it does not provide a cause for phonetic change, but only an explanation for the regularity of whatever change may occur. Paul emphasizes the fact that speech sounds are subject to constant slight variations. Under ordinary conditions the average of the

Brugmann-Thumb, Griechische Grammatik, p. 9.

variations remains constant, but whenever the speakers vary from the average in one direction more than in another, the average is thereby moved in that direction. Paul \* leaves to the physiologists the investigation of the reasons for a tendency to vary in one direction rather than in another.

Now it is obvious that any cause of sound change which operates upon all members of a community alike can gradually deflect pronunciation in a given direction, and the resulting change of sound will of course be regular, whether Paul's theory of motory sensation be true or false. One wonders, therefore, why Paul's theory has survived so long. Not only is it demonstrably false, but it involves the assumption of causes of phonetic change which would of themselves explain the regularity of the change.

It is quite clear that all members of a community may be subjected to a given impulse toward phonetic change. A strong stress accept tends to shorten and weaken the unaccented sounds until they finally vanish. An example of a regular sound change produced in this way is the weakening of vowels in Latin under the influence of the prehistoric stress on initial syllables. Similarly, the rhythmic tendency operates on all speakers, and thus regulates the secondary accent in many languages, notably French.\* It is likely that several other general characteristics of pronunciation, such as the speed of utterance and the energy of articulation, may cause regular changes of sound. All of these, however, are only proximate causes: we have still to inquire why a strong stress accent should develop in certain languages at certain times, why articulation is more rapid and more energetic in one language than in another, or at one time than at another. For the great majority of phonetic changes, moreover, we cannot name even such proximate causes as these,

Hence there have been a number of attempts to explain soundchange by variations in climate, by migrations into regions with different elimatic conditions, by differences between the vocal organs of the young and of the old, by the use of the habits of

Principien der Sprachgeschichtet, p. 65.

<sup>\*</sup>See Rousselot, Les modifications phonétiques, p. 135; Passy, Petite phonétique comparée, pp. 34 ff.; van Ginneken, Principes de linguistique psychologique, pp. 296 ff.

articulation of one language in the pronunciation of another. No specific suggestion of this sort has been generally accepted, and all of those with which I am familiar have been adequately refuted.<sup>20</sup>

More insidious is the contention of Paul Passy," who says: "The reasons which cause the predominance of certain tendencies in a dialect are to be sought in the character, the conditions of life, the social habits, and the hereditary disposition of the community which speaks the dialect; but on this question, we can at present do no more than make vague suggestions or propose uncertain hypotheses." This point of view has been elaborated by Wundt,12 who insists particularly upon the extreme complication of the causes involved. While some of these unknown or partly known causes may operate uniformly upon all members of the community, it is perfectly clear that many of them affect only one speaker or a few speakers; idiosynerasies of individuals or of groups of individuals are common, whereas no man has observed a physical or mental peculiarity common to all speakers of a dialect which is not possessed also by speakers of neighboring dialects. Consequently the burden of proof rests upon those who would explain the regularity of phonetic change by the assumption of physiological and psychological factors, outside of the speech material itself (cf. above, p. 41), which operate uniformly upon a speech sound, in whatever word it occurs and whatever member of the community may be the speaker.

But even if we admit their existence, they can explain only a part of the regular phonetic changes—those, namely, which occur by a cumulation of minimal variations so slight that they are severally imperceptible. Paul 12 himself admits that his theory does not apply to those phonetic changes which take place suddenly without a series of intermediate steps being possible, and he mentions by way of illustration metathesis, assimilation, and dis-

similation. Various scholars \*\* have listed other changes which do not readily admit intermediate stages, such as kw > p, m > n, ks > s, k > f, k > v, k > f. Herzog, \*\* to be sure, maintains that there is no such thing as a sudden change, but that all changes of sound represent a summation of minimal variations. It is probably true that a series of intermediate stages between any two sounds can be imagined. For example, kw may conceivably change to p by way of kp, and ks to s by way of ks and ks. These elaborate conjectural schemes, however, seem unsatisfactory, and besides it is well known that sudden changes of sound do actually occur daily in the speech of every one of us. I refer to such lapses as feak and weeble for weak and feeble. Many scholars maintain that lapses cannot cause sound changes, but at any rate, they clearly show that a sudden change of sound is possible.

Furthermore, in the case of dissimilation, the assumption of gradual change will not save Herzog from the (fancied) difficulty which he is trying to avoid. For one of the two original sounds or sound groups remains unchanged and is ready to provoke a correction as soon as the change of the other has gone far enough to be perceptible. If we assume that the loss of aspiration in the first syllable of Greek \*6.69µµ was gradual, a time must nevertheless have come when the two stop sounds were perceptibly different, and thereupon we are confronted with the same situation as if we assume a sudden change. In either case it is necessary to admit that the production of a sound perceptibly different from the one intended did not provoke a correction.

But dissimilation may occur with complete regularity, as in the dissimilation of aspirates in Greek, which we have just used as an example, and in the corresponding change in Sanskrit. Paul notes the regularity of these two changes, and Brugmaun is inclined to assume regularity for sudden changes in general, Paul's theory, as we have seen, does not offer an explanation of such regularity, and neither does any theory which makes regular

<sup>11</sup> Grundries\*, I, p. 69.

sound changes due to some force or forces that constantly tend to deflect the pronunciation of a community in a given direction.

These theories fail also to account for numerous other facts in phonetic history. By way of example let us examine the change of English [a] to [b] after [w], as in war, warm, water, and quart 18 Shakespeare rimes watch with match, wanting with granting, war with bar, warm with harm, etc. An observer of about the middle of the eighteenth century records the rounded yowel [5] in ward, warm, want, wasp, wash, watch, but the unrounded vowel [a] in wabble, wad, wallop, etc. Another observer toward the close of the eighteenth century records the unrounded vowel in wash, water, wart, dwarf, and another of about the same date records the unrounded vowel in quality. Especially noteworthy is the fact that we find wash with rounded vowel about the middle of the century and the same word with the original unrounded vowel toward the close of the century. We have, then, in English of the eighteenth century irregularity both between words and between speakers in regard to this change. In present day British English, on the other hand, the irregularities have nearly all been eliminated. One may still hear unrounded [a] in qualm and possibly in a few other words; but in general the change has now become regular. We have a phonetic law in British English that [a] after [w] has become [o], except before back consonants and f. In American English there is still a good deal of irregularity.

It is, of course, possible that this change originated in a gradual and uniform shift in some local dialect and that the irregularity which we have observed was merely an incident of its spread to the standard language of all parts of England. Our present point is that the irregularity in standard English of the eighteenth century worked out to regularity in the nineteenth century.

The change of English [ju] to [u] after dentals has a similar but more complicated history. After r there is no longer any trace of the pronunciation [ju], except in weak syllables; but in the latter part of the eighteenth century there was much irregu-

<sup>&</sup>lt;sup>18</sup> This is an abridgment of the account in Jespersen, A Modern English Grammar, I, pp. 316 f.

<sup>15</sup> Jespersen, op. cit., I, pp. 381 ff.

larity. One writer merely condemns the pronunciation [u] as indolent and vulgar, but another recognizes [u] in cruciate, crucify, crude, true, and [ju] in crew, crucifix, cruel, etc. Likewise after I preceded by another consonant the eighteenth century vacillation between [ju] and [u] has now given way to uniformity. Where I is not preceded by another consonant the older pronunciation is still sometimes heard. Bernard Shaw 20 makes a character named Lucian distinguish a fine pronunciation of his name with [ju] from the ordinary pronunciation with [u]. After s and s there is still a good deal of inconsistency. After t, d, and a the older pronunciation is the common one in standard British English, although even in this position the change has worked out to substantial regularity in many parts of America.

It seems obvious that such phenomena as these are connected in some way with imitation, and there are many clear cases of the spread of a new sound by imitation. Bremer " describes the spread of Saxon o (from M. H. G. ou) in Vogtland, where it is supplanting the native & in such words as Köfman (Kaufmann) and lofn (laufen). Attic ++ for general Greek or (from \*j, xj, +j, and  $\theta j$ ) seems to have spread to the neighboring dialects of Euboea and Bocotia, and from Bocotia to Thessaly, long before Attic began its career as a common language for the Greek world.

Trautmann 25 undertook to show that the uvular r of French and German originated in Paris in the seventeenth century and spread from that one centre. It is far from certain that he is correct in this generalization; \*\* but his remarks about the gradual spread of the new sound in certain rural districts of Germany are extremely valuable. In 1880 he investigated the matter in 49 villages within three hours of Leipzig. He found that all the children used uvular r, many people from thirty to fifty years old used both uvular and lingual r, while very few persons over fifty used only uvular r. The farther from the city he went, the more

frequent lingual r became. While Trautmann was a student in the Gymnasium at Eisleben, the older people of the village all used lingual r. But his schoolmates used uvular r, and insisted upon it so strenuously that Trautmann often had to defend his lingual r with his fists.

In view of these and many similar facts, it is not strange that certain scholars have assigned imitation a prominent rôle in phonetic change. As early as 1879, Osthoff 28 mentioned imitation as an important factor. Five years later, Friedrich Müller 28 suggested the parallelism between fashion and phonetic law. But he found few followers, because phonetic change was supposed to take place without the consciousness of the speakers, while fashion was thought to spread by intentional and self-conscious imitation. Since the appearance of Tarde's great work on imitation 27 it is clear both that imitation may be unconscious quite as well as conscious, and that the distinction between unconscious and conscious imitation is of little importance. Building upon the foundation laid by Tarde, Oertel 28 made imitation solely responsible for the spread of phonetic change through the community. He thus accounted for its regularity as between speakers.

Oertel did not attempt to account for the regularity of phonetic law as between words. A change of meaning or an analogical change of sound spreads by imitation to all members of the community without affecting any word but the one in which it originates. Why, then, do certain changes of sound spread from word to word until they include every instance of the original sound or sound group under certain phonetic conditions? The answer to this question was given by Wheeler in a paper read before the American Philological Association in 1901. When one hears an unfamiliar pronunciation of a familiar word, one gets a double sound image.

<sup>\*\*</sup> Das physiologische und psychologische Moment in der sprachlichen Formenbildung, pp. 20 ff.

<sup>&</sup>quot;Techmer's Internationals Zeitschrift, I, p. 213.

at Less lois de Fimitation, translated by Mrs. Parsons under the title Leme of Imitation,

<sup>\*\*</sup> Lectures on the Study of Language, pp. 134-188 and especially 269-273.

\*\* TAPA 32, pp. 5 ff. Wheeler's article has been cited with approval by Thurmyson, Die Etymologie, pp. 17, 35; Delbrück, Annalen der Naturphilosophie, 1, pp. 290 f.; Einleitung in das Studium der indogermanischen Sprachen', p. 158; Jesperson, Language, p. 293.

If he comes to imitate the new sound, either from a deliberate preference or simply because man tends to harmonize with his environment, that involves choosing the new as against the old. When familiar associations suggest the old sound in certain words, one nevertheless produces the new sound which has been heard in these words. It may therefore happen that when the old sound is about to be spoken in another word the new sound will suggest itself, although it has never been heard in that word. Thus additional words tend to be affected as the change spreads from speaker to speaker, until all possible words and all the speakers of the community have gone over to the new fashion.

Wheeler worked out his theory in connection with the variation between [u] and [ju] after a dental in American English. "In my own native dialect," he says (p. 14), "I pronounced new as [nu].30 I have found myself in later years inclined to say [nju]. especially when speaking carefully and particularly in public; so also [tjuzdi]. There has developed itself in connection with these and other words a dual sound image [u] and [ju] of such validity that whenever [u] is to be formed after a dental (alveolar) explosive or nasal, the alternative [ju] is likely to present itself and create the effect of momentary uncertainty. Less frequently than in new and Tuesday, the [j] intrudes itself in tune, duty, due, dew, tumor, tube, tutor, etc.; but under special provocation I am liable to use it in any of these, and have even caught myself, when in a mood of utmost precision, passing beyond the bounds of imitative adoption of the new sound over into self-annexed territory, and creating [dju] (do) and [tju] (two)."

Similar cases of "over-correction" are common wherever speakers of dialect learn a standard language. Many American dialects have final unaccented [i] for standard English [a] in such words as America, Indiana, Nebraska, piano, sofa; and the correction of this pronunciation leads many to say [doila] for doily, [præra] for prairie, [mizura] for Missouri, [sinsinæta] for Cincinnati, etc. Berliners who normally use [j] for standard German [g] "will sometimes, when trying to talk correctly, say getzt, gahr for jetzt, jahr." An Alemannian child who learns

<sup>\*\*</sup> I have substituted for Wheeler's symbols those used elsewhere in this article.

<sup>&</sup>quot; Jespersen, Language, p. 294.

standard German has to substitute the diphthong [ail] for dialectic [i-] in many words, and consequently most of them say [papair] for Papier, or the like." In the first century before Christ standard Latin pronunciation distinguished the aspirates of Greek loanwords from the native Latin fortes, and the effort to acquire this pronunciation led to the use of aspirates in certain Latin words, such as pulcher, Cetheque, triumphus. The Arrius of Catullus' famous epigram (laxxiv) even said chommoda.33 Similarly the reaction against rustic ō for Urban Latin au led Vespasian to call a certain Florus Flaurus, and induced the epigraphical forms scauria for oxogie and questia for ostia. 14

The process is not confined to the learning of a standard language; it is likely to occur wherever a speaker imitates an unaccustomed pronunciation. Particularly instructive is the case, reported by Grammont, as of a two-year-old boy whose speech was otherwise fairly correct, but who, in conversation with his younger sister, regularly employed [j] for [r], because she made this substitution in certain words.

But, say those who will not desert the dogmas of the "young grammarians," all this material is totally irrelevant; it belongs in the chapter on dialect mixture, and has no bearing upon the change of sound in the normal development of a language. 36 One. must admit, of course, that any such process may be called dislect mixture. Even the two-year-old who accommodated his speech to that of his younger sister may be said to have adopted her dialect with variations, and whenever a new pronunciation arises from any source or cause whatever we may say that we have a new dialect. Schuchardt," probably the greatest of all the opponents of the "young grammarians," says, "I assume language mixture even within the most homogeneous linguistic community." Brugmann " notes that one cannot satisfactorily define the limits

of a dialect, and that the influence of one individual's speech upon another's is not essentially different from the influence of the speech of one group upon that of another.

Even if we had to assume contact of two fairly distinct dialects in order to explain regular sound change, that would cause no difficulty. In every community there are two or more class dialects, and, even in so uniform a linguistic area as the United States, one need not travel far to detect some differences of pronunciation. In earlier times dialectic divergence was undoubtedly greater and the dialectic units much smaller than at present. Not only does the intensified intercourse of modern times make possible the spread of common languages over enormous regions, but it also tends to check the splitting of local dialects. Formerly dialect mixture was therefore even more common than it is today.

Dialect mixture, however, is not the only possible source of the double auditory image which leads to the spread of a change from word to word. In Southern England and in New England final r is lost before an initial consonant but retained before an initial vowel of the next word, to so that many words have two forms, as here below [his bilou] -here and there [hior on Ses], dear Paul [dis pol] -dear Ann [diar mn], better paid [bets peid] - better off [betor of], more meat [mo mit] -more of that [mor ov &cet], for west [fa west]-for away [far awei]. The double image thus acquired often induces an unetymological r after final vowels when the next word begins with a vowel, as in idear of, lawr of, etc. The process can be stated in the form of a problem in proportion, just as though it were due to analogy; [his] + consonant : [hior] + vowel = [aidio] + consonant; [aidior] + vowel. difference from ordinary analogy is that the meaning of the words does not come into play. We have here a case of purely formal analogy.41

As a new pronunciation spreads from word to word there may come a time when the old pronunciation is too rare to give adequate practice in forming the sound group concerned, and so a

<sup>\*\*</sup> The contrary has sometimes been assumed. See e. g., Bloomfield, AJP 5, p. 182, and cf. Wheeler, TAPA 32, pp. 11 ff.

<sup>&</sup>quot; Jespersen, A Modern English Grammar, I, pp. 370 ff.

<sup>&</sup>quot; Ct. Schuchardt, Cher die Lantgesetze pp. 7 f.

generation grows up which finds that sound group difficult.<sup>42</sup>
Thereupon the new sound is substituted for the old in all its
occurrences, just as one who learns a foreign language substitutes
his familiar articulations for those of the foreign language. The
sound group [rju] under the accent was formerly common in
English, but it is no longer habitual and we can produce it only
with some difficulty. It is scarcely conceivable that the group
should be discovered in any word in present day English, unless
in some local dialect which may have retained it in a number of
words.

We cannot maintain, however, that the spread of a sound from word to word must always reach this goal. In the conflict between the new pronunciation and the old, the old may finally prevail, so that the net result of the process is to leave things as they were. An excellent example of this is furnished by the history of aspirates in Latin, to which we alluded above (p. 48). After aspiration had become so common that even Cicero felt compelled to say pulcher, Cethegus, triumphus, and Carthago, the tendency shortly set in the other direction. Quintilian implies that the pronunciation was less common in his day than it had been, and Aulus Gellius cites several words with aspirates from the "ancients." The Romance languages show no traces of the phenomenon. In this case, then, no less than when a new articulation drives out an old, the disfavored pronunciation was banished from the language, and there was no chance for an exception to the law.

In French of the sixteenth century there was an extensive confusion between r and z (i. e., s between vowels). Our authorities preserve more examples of the change from r to z than of z to r; but they give also several instances of the reactionary (corrective) change. Thus pere and mere became pese and mess, but cousin became courin. The temporary confusion was ended by the re-establishment of the original distinction, but one word at least has survived in both forms; chaise beside chairs owes its z to the sixteenth century confusion. Similarly the confusion of v and we

<sup>&</sup>quot;On the importance of habit in the production of speech sounds, see Ocrtel, Lectures on the Study of Language, pp. 218 ff.

<sup>\*\*</sup> So Sievers, Grundrige der Phonetile, p. 258.

<sup>&</sup>quot; See Nyrop, Grammaire historique de la langue Française", 1, pp. 346 ff. and references.

in Cockney English of the early nineteenth century a has been ended and both consonants are used by Cockneys as by other English speakers. It would have been possible for one or more words permanently to get a new form in the course of such devel-

opment, but none has been observed.

There are, then, two ways in which phonetic change is known to become regular. (1) When a speaker is familiar with two different pronunciations of a word or a group of words he is likely to extend the variation to other words in which he has never heard it; that is, he will substitute pronunciation B for pronunciation A in words in which only pronunciation A has hitherto been heard, or else he will extend pronunciation A in a similar way. Such variation continues until either the new pronunciation or the old has become nearly or quite universal—quite universal if the disfavored sound or sound group becomes unusual. Such a double sound image is most frequently acquired by dialect mixture, but it may result from the imitation of any individual peculiarity of pronunciation, and in some cases it may come from sentence doublets.

(3) A strong stress accent, rapid or energetic articulation, and some other general features of pronunciation tend to produce certain gradual changes in all members of a linguistic community. No doubt some speakers yield to such tendencies more readily than others, but constant intercourse tends to hold all speakers of a dialect together. We may assume that under an impulse of this sort an entire community may undergo a change simultaneously, but there is no reason for supposing that it is a common occurrence. Furthermore, the underlying cause, i. e., the accent or the mode of articulation, must have originated in a regular change of sound, and, as far as we know, there was no way in which this could spread from speaker to speaker and from word to word, except by imitation in the manner sketched above.

If we are right in our explanation of the regularity of sound change, it is necessary to modify certain statements about phonetic law which have been often repeated. In the first place, it is not true that phonetic changes must take place without the knowledge of the speakers. It is perfectly clear that while they were going on

<sup>44</sup> Jespersen, A Modern Huglish Grammar, I. pp. 385 f.

some of the changes described above were known to some at least of the speakers concerned. We have actual records from English writers of the eighteenth century of the variation between [wa] and [wo], and of the variation between [ju] and [u] in classes of words in which the change is now complete and regular. The whole process is a matter of imitation, and, as with imitation itself, the self-consciousness of the subject, while quite possible, is altogether irrelevant. It does not follow that we must return to the teleological conceptions of the early comparative philologists. It is still true that no new pronunciation is purposely originated; we are here discussing only the spread of speech sounds, or secondary change, as Oertel has well named it.

In the second place, it is quite possible for the requirement of intelligibility to hinder the spread of a new articulation. This does not mean that a speaker says to himself: "I will not pronounce thus and so, because I may not be understood." He will at first use the new pronunciation as well where it causes the loss of a useful linguistic distinction as elsewhere; but when he is not understood and is asked to repeat his sentence, he will substitute the alternative pronunciation. Whenever in the rough and ready experimentation that all speaking involves one of two alternative pronunciations proves to carry the meaning and the other not, there can be no question which will finally be preferred.

This change of theory does not imply any great deviation from the present practice of all historical grammarians. It is customary to say that the  $\sigma$  of Greek theore, etc., was restored by the analogy of that the  $\sigma$  of theore was preserved from change by the analogy of sorists from consonant stems and by the need of  $\sigma$  to make the forms readily intelligible. Quite possibly the need to be understood has in some cases operated without the assistance of analogy, but I do not know of such a case.

In the third place, exceptions to phonetic laws are possible. If a phonetic change virtually banishes a sound or a sound group from a dialect, it cannot survive in a few words; such a phonetic law

<sup>\*\*</sup> So Jespersen, Techmer's Internationale Zeitschrift, 3, pp. 203 f., Language, p. 287; Sechebaye, Programme et methodes de la linguistique théorique, pp. 175 fl. Cf. Sapir, Language, pp. 196 fl.

may not have exceptions. But an abortive phonetic change may leave some traces in the shape of words which show an irregular (sporadic!) change. Jespersen at lists several fairly clear exceptions to phonetic law, and they must apparently be explained in some such way as we employed above for French chaise.

There is, however, perfectly sound reason why we must retain the strict method which was brought to its full development by the "young grammarians." Except where the linguistic record is particularly full, as it is for the more important European languages in recent centuries, it is impossible to trace any but the regular phonetic developments. Undoubtedly there have always been exceptional changes alongside of these; but we cannot detect them with the means now available. Consequently no etymology can be considered plausible if it involves an exception to a phonetic law, unless the word in question can be traced back by a practically complete record to a point before the irregularity arose. Thus we can trace French chaise back to the time of its derivation from chaire, and Modern High German Neffe with short vowel to a period prior to the lengthening of short accented vowels which were not followed by two or more consonants.

The foregoing remarks have been restricted to the share which imitation has in making phonetic change regular. It has not seemed necessary to examine Sapir's \*\* theory of "drift," or Jespersen's \*\* revival of the old doctrine that phonetic change is largely due to the universal human tendency to avoid effort. Both of these theories are attractive and they are entirely in harmony with the views here set forth; but it seemed simpler not to bring them into the discussion.

### TAK-KU A FEMALE DEFTY

#### EDWARD CHIERA

#### UNIVERSITY OF PENNSYLVANIA

In the issue of the AJSL for April 1923 appeared a critical note by Langdon entitled "Tag-tug a Male Deity." The article opens in this way: "An effort has been made in certain articles to prove, on the basis of a late Assur Syllabary, that the ancient deified king Tag-tug or Utu was a female."

I had published in the AJSL for October 1922 an article entitled: "A Sumerian Tablet Relating to the Fall of Man," in which I referred to the Assur syllabary and also denied the possibility of any connection between "TAK-KU and "Ziu-suddu. Since this last affirmation appears to have been objectionable to Langdon, I have good reason to believe that his note is especially aimed at me. In any case, I am of the opinion that "TAK-KU was a woman and that "Ziu-suddu had no closer relationship to her than that which we all have with our mother Eve.

In my article in the AJSL I had not embarked upon a discussion of this subject because I fully believed that, in the face of later evidence, Langdon would abandon his earlier stand. In the present state of Sumerian knowledge, I do not think it is fair to reproach a writer for views he may have expressed years before, especially when new documents have appeared which have given additional help toward the right interpretation. In order that we may not ignore all later evidence, let us review all the facts in the case.

Attention was first called to "TAK-KU when this personage was found mentioned in a legendary tablet which Langdon misnamed "The Sumerian Epic of Paradise, the Flood and Fall of Man." As we all know, one of the characteristics of the Sumerian language is that it generally fails to differentiate between masculine and feminine genders. I am therefore greatly surprised when I find Langdon asserting that "in the Epic of Paradise "Tag-tug is invariably referred to as a man. We find him addressed as au-git-sar or aukaribu 'gardener.' The scribe would have indicated the gender if he meant 'female gardener.'

Now, in the case of a well-known personage like \*TAK-KU, this is just what the scribe would not have done. Langdon has read too much Sumerian not to know this, and I think that, on second thought, he will be very glad to take back his statement. But still more shaky is his second assertion that in the Epic \*TAK-KU is referred to as "this pious son of man." The line which he quotes is badly destroyed and his translation, which is more than doubtful, rests entirely on his own interpretation of the tablet. But even granting, for the sake of argument, both translation and reference, this would not help him at all in proving his point.

There is in the "Epic" only one expression which might give us a clue toward determining whether "TAK-KU was a man or a woman, and that is the appellative sal-mi-dim, was sometimes follows the name of this personage. I believe that sal has to be translated "the woman." But, be that as it may, I am quite safe in asserting that the Epic leaves this question absolutely unsettled.

Things were at this point when Schroeder published two syllabaries from Assur (Keilschrifttexte verschiedenen Inhalts, III, 63. 65) which give the equation \*TAK-KU = mårat \*anim, i. e. "\*TAK-KU = the daughter of the god Ann." What marvel that scholars have accepted this statement as the first and only evidence on this obscure point? But Langdon brushes this aside without hesitation. He tells us that "the evidence of this syllabary obviously rests upon a false copy of the Assur scribe. In the Weld-Blundell Collection of the Ashmolean Museum there is an earlier copy of the syllabary in question which has \*nin-tag-tug = mårat Anim."

But is Langdon certain that the statements of the Assur syllabaries "obviously" rest upon a scribal error? As a general rule, I do not like to charge the poor scribes with too many sins. I always start with the assumption that an error is more likely to be found in the interpretation than in the text. Have we here a textual error or an error of judgment?

If we had two absolutely identical lists of names and in one of them we found "TAK-KU while the other had "NIN-TAK-KU, all the rest of the lists being alike, the first and most natural inference would be that we are confronted by two variant spellings of the same name. I have prepared for publication hundreds of such lists and have always classed such differences in writing as variants, without accusing either scribe of error. In fact, such variants are always welcome for the help they generally give in the interpretation of the words in question.

All other things being equal, the difference in the syllabaries would simply prove that "TAK-KU and "NIN-TAK-KU are one and the same person. But the first natural inference is greatly corroborated by the fact that both "TAK-KU and "NIN-TAK-KU are followed by the same appellative "daughter of Anu." If they were husband and wife, as Langdon wants to make them, how could both of them be "daughters" of the same god?

Langdon accuses the Assur syllabaries of error, but does not point out where the error is. It cannot certainly be in the explanatory column which reads "daughter of Anu," because that is the same in all syllabaries. The error must therefore be in the omission of the NIN, so that the Assur text should have read, like the Weld-Blundell syllabary, "NIN-TAK-KU — marat \* anim.

If this be so, why reproach scholars for not having recognized the fact that the Assur texts contained an error? No one knew of the existence of this "NIN-TAK-KU before, while "TAK-KU was already known. How could one change the known into the unknown form? But there is more. In my article in the AJSL I had called attention to an unpublished list of gods (CBS 11889) belonging to the Nippur collection and there "TAK-KU is found, but not followed by his supposed wife. The list is certainly old, dating about 2200 s.c. Does Langdon want to change that also to "NIN-TAK-KU, and thus exclude "TAK-KU from all syllabaries, substituting for his name that of his supposed wife?

But all this he ignores, because he would establish a status for his newly-discovered goddess; "The new syllabaries prove that "Tag-tug was associated with a woman, at any rate by the theologians, and when they devised a wife for him her name was naturally "Nin-tag-tug, or Belit Tagtug, 'the mistress Tag-tug.'" This statement would have been perfectly justified if his new syllabary read:

\*TAK-KU

Unfortunately for his argument the new syllabary has only \*NIN-TAK-KU = marat anim, and this is too small a foundation for all his inferences.

<sup>4</sup> NIN-TAK-KU DAM-BI-SAL - marat 4 anim.

The name \*NIN-TAK-KU does not appear to be the original name of the wife of \*TAK-KU, still granting, for the sake of argument, \*TAK-KU to be a man. Langdon himself felt the objection when he qualified his statement by saying that this wife had been devised for him by the theologians. If, as the name suggests, \*NIN-TAK-KU had such little individuality of her own as to be simply called by the name of her supposed husband, then we should expect his name to precede her own in all syllabaries.

Moreover, if she was really so unimportant, why call her the daughter of the god Anu, the greatest of the gods? And what greater honor could the "husband" possess? And why relegate \*TAK-KU to the condition of "prince consort" when it is he alone, and not his wife, that is met with in old legends? And if, as Langdon admits, this wife has probably been devised for him by the late theologians, to which of the two originally belonged the appellative "daughter of Anu"? Certainly not to the wife, who had not yet been devised.

It is of course possible to credit the theologians also with the invention of the relationship to Anu of this newly-invented NIN-TAK-KU. Kings and heroes have been deified quite often, and have become members of the regular pantheon. But these personages had really existed, at least in legend, and had done something worthy of recognition. But what would be the purpose

in deifying a newly invented goddess?

It would, on the other hand, be perfectly logical to suppose that the theologians wanted to claim a divine origin for "TAK-KU and that originally he was not considered to have been in any special relationship with Anu. And, after all, is Langdon certain that "NIN-TAK-KU must be the wife of "TAK-KU? Is "NIN-IB the wife of "IB? If the name of a god begins with the element NIN all we can deduce from the fact is that the name is probably feminine, or was originally feminine.

All things considered, I do not think there is any error in either one of the two syllabaries in question, and I note with satisfaction the new variant "NIN-TAK-KU = "TAK-KU. I find here additional proof, if any were needed, that I was right in claiming

"TAK-KU to be a female deity.

After all this, the identification of "TAK-KU with "Zin-suddu,

the hero of the Sumerian deluge story, naturally falls of itself. We cannot identify a woman with a man. But let us see if this identification would have any possibility of standing, irrespective of any question of difference in sex.

As I had occasion to point out, "TAK-KU was first known in the so-called Epic of Paradise. It is manifestly impossible to discuss here in detail Langdon's interpretation of the tablet as against those of practically all other scholars. I may simply note that a worse misnomer for the tablet could not have been found. Langdon calls it: "The Epic of Paradise, the Flood and the Fall of Man." Let us begin with the article. How does Langdon know that this is the only epic treating of these subjects? At least the "Zin-suddu legend was already well known, and indications of the existence of the Paradise and Fall stories were not lacking. Can we speak now of "the" Sumerian creation story? Secondly, the tablet contains nothing of epic character: it is pure legend. And as for the three chief points of interest, the Paradise, Deluge and Fall of Man, we may discuss them summarily.

If we mean by Paradise a place where humanity enjoyed perfect bliss, as in the traditional view of the Garden of Eden before the Fall, then I am certain that in Langdon's tablet we have no description of Paradise. Moreover, as far as we know, the Babylonians did not believe in a Paradise of that kind, but thought that humanity had started in a savage condition. And we can go a step further and say that such an idea of Paradise did not even exist among the Hebrews, because the biblical account, when examined carefully, differs greatly from its original interpretation (cf. my article in the Outlook for Jan. 3, 1923).

I have granted to Langdon that in his tablet there is a reference to the Fall; but this is only a question of personal interpretation, because the tablet is broken at that very interesting point. But, in order to find in the tablet a reference to the deluge, Langdon has to force the meaning of very clear and well preserved passages. Jastrow was the first to point out that the period of nine months, instead of referring to the duration of the deluge, clearly points to the period of pregnancy in woman, and that the whole "deluge" episode resolves itself into a fertilization myth by the marriage of two gods (cp. 'Sumerian Views of Beginnings,' in AJSL, Jan. 1917).

Once the existence of a Deluge episode in Langdon's tablet is denied, the last line of defense for the proposed identification naturally goes. The first had been abandoned long ago. In the form tag-tug Langdon wanted to find a reduplication of the sign tug, which means nāhu " to pacify." The name Noah comes from the same root, hence the two names are identical. So many have been the objections to this argument that Langdon has wisely withdrawn it. Why not then take back also the strange statement that Noah was the protagonist of the fall? If mankind had not yet, in the days of Noah, eaten of the fruit of the tree of knowledge, then the very motive for sending a deluge would have been wanting.

But Langdon ignored another bit of evidence which would have been decisive, had he given it due consideration. If a TAK-KU is the hero of the deluge, he cannot also be the protagonist of the Fall, granting this to have occurred at the very beginning of human history. That would give us the deluge immediately after the Fall, that is at a time when there was no sinful mankind to be destroyed, except the first progenitors who are supposed to have

escaped in a boat.

And we have actual proof that <sup>4</sup>TAK-KU was the first reasoning human being, mentioned at the very beginning of human history. In a legendary tablet published by Prof. Barton (Babylonian Inscriptions, No. 11) we have again a description of conditions as they existed at the very beginning. Here, however, the language is less poetical and much plainer, so that there is no doubt that, when <sup>4</sup>TAK-KU enters upon the scene, there existed no domesticated animals and no cultivated plants. Human beings appear to have roamed about with the animals in a savage condition, and it is to <sup>4</sup>TAK-KU that credit is given for beginning the work of civilization. I have been fortunate in finding several other tablets which complete and continue that very interesting story, but what Prof. Barton had published should have been sufficient to prove to Langdon that <sup>4</sup>TAK-KU had nothing to do with <sup>4</sup>Ziu-suddu.

Summing up the argument I maintain that \*TAK-KU is a female deity because: (1) Two Assyrian syllabaries clearly state that she is the daughter of the god Anu. (2) The Weld-Blundell

Syllabary gives us a secondary form of her name composed with the element NIN.

I also deny any connection between \*TAK-KU and \*Ziu-suddu, the hero of the Deluge, for the following reasons: (1) There is no mention of the Deluge in Langdon's tablet, and therefore there is no basis for the identification. (2) It is illogical to place the Fall and the Deluge episodes at the same period of time. (3) \*TAK-KU is a woman and \*Ziu-suddu a man.

To make his work complete, Langdon in his note identifies a NIN-TAK-KU, the supposed wife of a TAK-KU, with the wife of a Ziu-suddu. This can be disposed of very briefly, because all the arguments which have been brought against the first identification are valid against the second. Add to this that a NIN-TAK-KU, being a creation of the late theologians, cannot have been the wife of an historical personage, and that we happen to know precisely nothing about this Mrs. Ziu-suddu. What good would it do to identify anyone with her?

## CONTRIBUTIONS TO THE KNOWLEDGE OF MANICHAEISM

## A. V. WILLIAMS JACKSON COLUMBIA UNIVERSITY

# 1. Rämrätükh as a Designation of the Mother of Life.

In Manichaeism we are familiar with the figure of the great mother-goddess, the Mother of Life (or, more exactly, Mother of the Living), who is found likewise in the earlier Gnostic systems. The triume relationship of a Father God, Mother Goddess, and Son is recognizable, and is familiar elsewhere. In the Greek and Latin writings dealing with the Religion of Mani and in the Gnostics the mother is spoken of as i Mirrip via Zwis, Mater Vitae (or as i Mirrip via Zwis, Mater Vitae (or as i Mirrip via Zwis, Mater Vitae (or as alluded to several times as the 'Mother of Life' (or 'Mother of the Living'), Emmā de Hayyê'; and in the Arabic chapter on Mānī's teaching in an-Nadim's Fihrist she is called both the 'Mother of Life' (Umm-al-Hayāh) and 'Mother of the Living' (Umm-al-Ahyā').

When the remains of actual Manichaean documents were discovered, a score or more years ago in the Oasis of Turfan, Eastern Turkistan, it was interesting to find among these Fragments in several languages allusions to this divine mother. Thus, in the Fragments which are written in the Middle Persian form that is

Regarding the latter point consult Bousset, Hauptprobleme der Gaosis, p. 1-83; Idem, art. 'Gnosticism,' in Encycl. Brit. 12, 155-156; and also art. 'Groat Mother of the Goda' (by G. Showerman, Encycl. Brit. 12, 401-403).

\* See Chavannes and Pelliot, Un Truité manichéen retrouvé en Chine, in Journal Asiatique, 1911, p. 511, with note 1, and p. 515, 525. Being interested in understanding the force and meaning of the first word (Shus) I have asked for information from my kind Simologist friends. Professor Pelliot personally tells me that there is no doubt that show ('chan') is an attribute of the Mother, and he translates by 'In Mère excellente.' I have furthermore had the advantage of conferring with my Chinese pupil, Mr. Ti-Shan Hall, regarding the pregnant signification of this adjective. Mr. Hall informs me that the meaning of show was 'anspicious,' and he adds that in the first Chinese dictionary (Shoh-wen), written early in the Han Dynasty, the word is given with the explanation 'ampleious' (see Shoh-wen Ch'ai Tze, vol. 2, p. 13 b, Shanghai, 1923, Chung Hwa Book Company). He furthermore tells me that in the Great Dictionary of the Chinese public, Shanghal, 1915, under the division "k'ou" ('mouth') there are numerous meanings recorded as appearing in the Classics. The commonest ones (listed with their sources) are the following: '(1) Happy, (2) Excellent, (3) Good, (4) Virtuous, (5) Peaceful, (6) Merciful, (7) Grest, (9) Pleasing, (14) Friendly, Mr. Thomas F. Carter, my colleague and former student, similarly mys that the idea conveyed by the adjective is approximately; 'good, kind, lowing, righteous,' like the Greek ayades in its various shadings of meaning. Our Columbia professor in Chinese, Profemor Lucius C. Porter, has likewise drawn my attention to the idea of 'good' (as opposed to evil) as a fundamental definition of show in one of the native dictionaries, the association of the ideas of 'auspicious' and 'good' being a natural one. He has likewise referred me to Williams, Chinese English Dictionary, p. 752, where, among the primary significa-

Now in one of the Turfan Middle Persian Fragments (M. 172 recto I. 13-18), which is written both in Turfan Pahlavi and in a Pahlavi 'dialect'-gloss that accompanies the former, we have a special name added in the 'dialect'-gloss as a further designation of the Mother Goddess; it is Ramratubh. The content of the passage itself may briefly be summarized thus: it gives an ascription of praise to several of the divine beings, adding their titles in the gloss. Among those mentioned in succession are the 'Father' (whose name is dialectically glossed as 'God Zarvān, Zarvāßayīy), the 'Mother' (glossed as Ramratukh Bayiy), and the 'Son' (originally Primal Man, who is glossed as Jesus, Yesuviy).10 The precise meaning of the name Ramrafakh (the appended word Bayly being 'Goddess'), as applied to the Mother of Life in this gloss, has long been a problem. A suggestion is here put forward, which may possibly help towards the solution of the crux.

The Middle Persian word Ramratukh is to be divided, I believe, as Ram-ratūkh (Ram-ratūx). The first element is manifestly the familiar Pahlavi rām, NP, rām, 'joy, gladness, happiness,' which is well known in derivatives, like Phl. rāmišn, and found equally in Avestan as raman-, 'rest, joy,' from the root ram-, 'to rest, repose." The second element (rātūkh) appears to be a 'dialectic' abstract, formed from the noun and adjective Phl. rat (rad), 'giver, liberal, generous,' which abstract itself appears in ordinary Pahlavi as rath (radia), 'generosity, liberality, bountecusness, benevolence." The formative ending -ukh is doubtless a 'dialectic' variation of the ordinary -ih, which is common enough as an abstract termination in the Pahlavi Books, and is

tions, are set down 'good from principle, virtuous, meek, docile, skilful.' This information at best helps to make non-Sinologists acquainted with the gamut run by the word under consideration.

<sup>\*</sup> See Müller, op. cit, p. 101, 102.

<sup>25</sup> The role of the celestial Jesus as a fulfilment of that of Primal Man is recognized elsewhere in Manichaelem. It is implied, for example, in Theodore bar Khoni, tr. Poguon, p. 191-193; also in an-Nadim's Fihrist, tr. Flugel, Mani, p. 91: and consult especially Reitzenstein, Das iraniache Erlösungsmysterium, p. 154; idem, Das mandaische Buch des Herrn der Griss, p. 90.

<sup>11</sup> Consult Bartholomae, Altiranisches Wörterbuch, col. 1511, 1524.

<sup>\*\*</sup> See West and Haug, Glossery of the Arda Viraf, p. 130; and cf. S. D. Bharucha, Pahlavi-Patrud-English Glossary, p. 258, Bombay, 1912.

there sometimes written as a graph (~). The meaning of this compounded name Rāmrāṭūkh would therefore be literally 'Joy-givingness,' Liberality of Joy,' and Rāmrāṭūkh βαγίγ would be the 'Goddess of the Bounteousness of Joy'—a title well suited to the Mother of Life, whose true office is to dispense happiness.

Additional support for the proposed etymology of this epithet Rāmrātūkh, applied to the Mother as the one who imparts joy, is afforded by two passages in the Fihrist, to which I would call attention in this connection.

The first of these is found in the section of the Fibrist edited by Flügel, Mani, p. 55, l. 3, in which she is personified under the name of 'Joyousness' (Arabic Bahjah), which he renders as 'Fröhlichkeit' (op. cit. p. 88, l. 10).13 Although Flügel was doubtful in his notes (p. 208 n. 110) as to what identification to suggest for 'Fröhlichkeit,' he had an inkling that the name might possibly be used to designate the 'Mutter des Lebens.' The times have since given proof that this surmise was correct. The context of the passage itself showed that the personage personified as 'Joyousness was directly associated with the Living Spirit in rescuing Primal Man after he had been overcome by the Powers of Darkness, We now know from the Syriac Scholia of Theodore bar Khoni and from the Manichsean documents later available in the older Turkish and Chinese, that it actually was the Mother Goddess who was thus united with the Living Spirit in Primal Man's deliverance.18 Consequently there can remain no doubt that 'Joyonsness' (" Fröhlichkeit") in this particular passage of the Fibrist is, like Ramratukh, a designation for the joyous Mother of Life.

The second passage in the same Arabic work is one for which a new interpretation can be offered in the light already thrown upon the subject. This passage (Flügel, Mani, text p. 54, l. 5, transl. p. 87, l. 19) relates to an earlier stage in the conflict between

Arabico-Latinum, I. p. 64, and cf. also Steingass, Pers. Eng. Dict. p. 210, s. v. bahjah (Arabic), 'gladness, cherfulness, joyfulness.' No departure from the text of our passage is made in the large edition of the Fibrist by Fingel-Roediger-Mülfer, p. 329, l. 29; Leipzig, 1871.

<sup>&</sup>lt;sup>18</sup> See Theodore har Khoni, tr. Pognou, p. 188; Turkish Frag. T. H. D. 173 b, recto II. 16-29, verso II. 1-4 (Le Coq. Türk, Mon. 1, p. 13-14, cf. p. 40-41); furthermore, the Chinese Treatise tr. Chavannes and Pelliot, JA. 1911, p. 510-514. Cf. also Alfaric, Les Écritures manichéennes, 2, 215, n. 2.

Light and Darkness, namely, that moment when the King of Light, as God, evolves a plan for bringing Primal Man into being. This he does, in combination with other spiritual aids, by evoking or creating Primal Man through the agency of a power that is ordinarily translated as the 'Geist seiner Rechten'-so Flügel, reading the Arabic adjective as yamnah.18 But instead of so reading the Arabic word I should prefer to point it as yumnah, 'happiness, felicity ' 30 and should accordingly suggest that the sentence means: 'He (i. e. the Godhead) begat by His Spirit of Happiness.' This would be simply another way of expressing the attribute ' Joyousness,' as applied above to the Mother of the Living, whom scholars believe to be intended here.17 The idea for such an interpretation I owe to my former pupil Mr. Anis E. Khuri, now Professor in the American University of Beirut, Syria, who, without having any previous acquaintance with Manichaeism, translated the Arabic phrase at once as 'by his spirit of bliss,' Quite independently my Assistant, Dr. Yohannan, likewise rendered it offhand as 'blessed (or beatific) spirit.' So much from authorities outside, As a result, the suggestion tentatively presented regarding the interpretation of this second passage seems worth taking into consideration.

<sup>&</sup>lt;sup>18</sup> See Flügel, p. 87 and p. 199, n. 1; he is followed by Kessler, Moni, p. 389, and by scholars in general.

<sup>\*\*</sup> For Arabic pumnah see Freytag, Lex. Arabico-Latinum, 4, p. 524, 'felicitas, prosperitas'; cf. Steingass, Pers. Eng. Dict. p. 1586, 'happiness,

prosperity." 22 See Bousset, Hauptproblems, p. 177, 178; Legge, Forcrunners und Ricals of Christianity, 2. 293, n. 1, 'Spirit of the Right [Hand],' where an Egyptian idea is suggested. Flügel, Moni, p. 199, n. 90, himself acknowledges that this 'Geist der Rechten' is not mentioned elsewhere (nirgends genannt; in the Fibrist and that we look for it later in vain (spater vergebens). In putting forward the proposed interpretation as 'Spirit of Happiness,' I have by no means neglected carefully to consider TPhl. dašneršdag'an, 'soms of the right' in M. 4 f., line 14 (= Mü. 2 p. 58, duly consulting Müller's references; cf. also p. 57 dain); nor, may be added, have I forgotten such passages as Acta Archelai, ch. 7, # 4-5 (ed. Beeson, p. 10-11) regarding the Manichseans giving the right hand in greeting, and also the phrase of St. Augustine, Epist, Fund., ch. 11, § 13, 'may the right hand of light protect you.' Due attention has been given likewise to some general allusions to 'the right' in Bousset, Hauptprob-Ieme, p. 346; Legge, Rivels and Forerunners, 2, 164. Such references are included here to show that they have not been overlooked.

In view of all that has been brought forward there appear to be good grounds for accepting the proposed etymology of the name of the goddess Rāmrāṭūkh as meaning the very 'Liberality of Gladness,' or 'Bounteousness of Joy,' when applied to the Mother in the 'dialectic' Turfan Fragment. Mānī's poetic imagination had a fancy for such highly-colored titles; witness his Adamas Hero, King of Honor, Splenditenens (Φεγγοκάτοχος), Maiden of Light, and the rest.

# The Problematic 'Nahnahah' as applied to the Mother of the Living in the Fihrist.

The Arabic account of the return of the pure soul of the Manichaean Elect, by several stages, to the supernal realm of Light, as given by an-Nadim in the Fihrist, describes the Elect as first 'ascending by the Column of Praise (Milky Way) to the sphere of the Moon, and to the Primal Man (i. e. who is in the Sun), and to the —?— Mother of the Living, to where first he was in

the Paradises of Light," 18

The word here marked as '--?-,' which precedes the Mother of Life, is a designation of some sort, whether nominal or adjectival. Flügel, in his translation (Mani, p. 100), renders it as a proper name—'zu der Nahnaha der Mutter der Lebendigen.' In commenting upon this passage, Flügel (p. 343) simply says: 'Nahnaha, ein Wort, das in seiner einfachen Uebersetzung die Abwendung des Bösen bedeutet.' So great is Flügel's authority that he has been generally followed by other writers in regarding the word as a proper name.' The only hint of hesitation expressed on the subject, so far as I have found, is an incidental intimation by Chavannes and Pelliot when touching, in a footnote, upon the designation of the Mother in the Chinese Manichaean Treatise." They mention this Fibrist passage with a slight qualification as to 'le nom de Nahnaha, que Flügel traduit hypothétiquement par "Abwendung der Bösen." That is all they remark.

<sup>&</sup>quot;See Flügel, Mani, text p. 70 Il. 6-8, transl. p. 100 Il. 27-30; and large edition of the Pihrist by Flügel-Roediger-Müller, Kitab al-Fihrist, 1. p. 335 l. 15; of, notes in vol. 2, p. 172.

<sup>2\*</sup> Thus also 'Nahnaha' in the translation of this passage by Kessler, Mass, p. 399; similarly other later writers.

<sup>\*\*</sup> Chavannes and Pelliot, JA. 1911, p. 511, n. 1. end.

As a student of Manichaeism, though not an Arabist, I have long felt uncertain as to whether, if really a proper name, such a designation as the 'Averting (of Evil)' was an appropriate one for the character of the Mother Goddess in the Religion of Mani, or whether some other reading of the Arabic letters than Nahnahah might not be possible. Accordingly I had recourse to my friend and colleague Professor Richard Gottheil for help in the matter.

He carefully examined with me the variants in the three manuscripts noted in Flügel, p. 70, n. 9, finding no additional ones recorded in the large edition of the Fihrist by Flügel-Roediger-Müller, 1, p. 335 and 2, p. 172. It became clear that Flügel (apparently following Ms. C, since no comment is made) had based his reading and interpretation of 'Nahnahah,' as a nomen proprium, upon the Arabic verb nahnah, 'depulit, retinuit (aliquem a re),' for which verb, indeed, there is good authority in the older Arabic lexicographers." Yet I still felt misgivings as to the reading and explanation adopted by Flügel, because it seemed to me non-Manichaean in spirit. A further study then followed with regard to the variants recorded in Flügel's footnotes concerning the three other manuscripts (Hammer-Purgstall, Leyden, Vienna). These furnish: H. 4441, L. augul, V. augul . Doctor Gottheil observed that the unpointed word in manuscript V. can be read as al-bahiyyah, the form bahiyyah being a well-known adjective that denotes 'possessing the quality of beauty or goodliness, shining, brilliant, radiant." Further support for this reading is given by the Leyden manuscript (L.), which explicitly marks the letters as b h i m(1) h, and can be read as bahiyyah by omitting the m as excrescent.

On the basis of these conferences with my colleague I venture to offer, tentatively, the suggestion that we should consider the designation in question as an adjective, not as a proper name, and adopt the reading al-bahiyyah, 'the beautiful, goodly, shining, brilliant,

See Freytag, Lexicon, vol. 4, p. 347 (citations from Arab lexicographers); De Goeje, Glosswins (Tabart), p. 532 (two citations, one being from an old Diwan); Wahrmund, Handwörterbuch Arab. Deutsch, 2, p. 1675, aahnah, 'abhalten.'

<sup>\*\*</sup> See Freytag, Lexicon, I. p. 168, buhi, adj. 'pulcher, nitens, splendens'; behā', noun, 'pulchritudo, splender'; also verb baha, 'nituit, micat'; cf. Wahrmund, Handscorterbuch Arab, Deutsch., 1. p. 267, 'in schönheit ginnrend'; see likewise Lane, Arab, Eng. Dict. 1, p. 270 (adj.), 269 (verb).

radiant.' Probably 'radiant' will best suit the Manichaean sense. In translating such terms from the Arabic we need to take into account the atmosphere involved. But it will remain for others more qualified than myself to decide whether we are ultimately entitled to say Exit' Nahnaha' as 'Mutter der Lebendigen,' and Enter' the Radiant Mother of the Living,' thus bedecked for the role.

Addendum. One point more in this connection. The interpretation proposed, as giving an adjectival epithet to the Mother of the Living, may possibly help to throw some light on the meaning of the problematic Turkish adjective ögütmis (or ggütmis) applied to the Mother (og, og) in one of the Turkish Manichaean Fragments from Khocho. In Frag. T. H. D. 176 recto, l. 14-15 (- Le Coq. Türkische Manichaica aus Chotscho, 3, p. 15) there occurs the phrase ogütmis eg, which Le Coq renders by 'die "gepriesene Mutter (-Gottheit),' leaving the translation of the adjective ' gepriesene' as uncertain. Andreas, in a later rendering of the same passage, takes the attribute in question as a participial adjective (but adds an interrogation mark) and translates as 'die Mutter, welche sie [die Tochter des Lichts] gebiert (?) ." The query now raised is a double one. Can we perhaps associate this debatable Turkish epithet in some way with the meaning suggested for the Arabic above? Or can we connect its meaning in some manner with that implied in the previous discussion of Ramnatukh and the footnote concerning the Chinese Shan? Specialists in those fields must decide.

### 3. The Manichaean 'Seals'.

Mani's religion enjoined upon its followers a belief in and the keeping of certain 'seals' as consecrated symbols of the faith. These seals are seven in number, as can now be shown. With three of them (moral) we have long been familiar as the Three Seals of the mouth, hand, and bosom, to be observed in the daily conduct of practical life. But until the Turfan texts became available it was not known that there were four additional seals, spiritual or doctrinal in their nature, the belief in which as articles of faith was to be accepted by the Manichsean before entering into the

<sup>25</sup> See Andreaa cited in Reitzenstein, Das Mandäische Buch des Herrn der Grösse, p. 52.

religion. Drawing upon these texts from Eastern Turkistan, and supplementing them from other sources, the present section of the paper will be devoted to calling attention to this fourfold group in particular, and then to discussing also the well-known group of three in somewhat less detail.

(a) These four doctrinal seals, which first came to notice through the discovery of the Manichaean documents themselves, are called the 'Four Bright Seals,' emblematic of true faith. The passage in which they are particularly referred to is found in the Turkish Manichaean Confession-prayer, where the faithful repeats the following words:

'Four Bright Seals (tort y(a)ruk tamya) have we sealed in our hearts. (1) One is Love, (and that is) the seal of Azrua the God. (2) The second (is) Faith, the seal of the God of the Sun and the Moon. (3) The third is the Fear of God, (and this is) the seal of the Fivefold God (i. e. Primal Man, Ormazd). (4) The fourth is the wise Knowledge, the seal of the Burkhans (or Divine Revealers of Religion)."

The four seals of doctrine therefore comprise (1) love for the Godhead, (2) faith in the Sun and Moon as the great orbs of light, (3) reverence for Primal Man as a celestial power, (4) belief in the existence of Divine Messengers who, from time to time, bring inspired knowledge to the world.

A ray of light breaks in. The four spiritual seals betoken the fourfold majesty of the Father God in his divine aspects (rdr resparsed majesty of the Father God in his divine aspects (rdr resparsed majesty of the Father God in his divine aspects (rdr resparsed majesty), as so named in the Greek Formula of Abjuration to be recited by Manichaeans on their conversion to Christianity. Further elucidation is obtained when these four seals are brought into connection with a Turfan Pahlavi Fragment that refers to '(1) God Zarvan, (2) Light, (3) Power, (4) Wisdom,' and also into connection with a similar one in a Turkish Manichaean Fragment of like content. But this point is not elaborated here because it will be discussed, with spe-

<sup>\*\*</sup> See Le Coq. Khuastuanift, II. 177-183 (JRAS. 1911, p. 291-292); id. German edition, Chuastuanift, p. 17, I. 15-18 (Abh. kyl. Preuss. Ak. Wisz., Berlin, 1911, p. 17).

cific references, in my forthcoming volume devoted to Manichaeism. Sufficient here to have drawn attention to the connection.25

A proper understanding of these Four Bright Seals as spiritual and as doctrines of faith helps to throw added light on a passage in the Fihrist which sums up the spiritual precepts that Mānī gave as (four) articles of faith, besides the three seals of conduct and the ten commandments, in the following words:

'The Belief in the Four Great-majesties (lit. 'Great-nesses'), and (4) his Wisdom. Now, (1) God, whose name be glorious, is the King of the Paradises of Light; (2) his Light (is) the Sun and the Moon; (3) his Power (is) the Five Angels, namely, the Zephyr, Wind, Light, Water, and Fire; (4) his Wisdom, the Holy Religion.' [This latter is further explained by special reference to the revealers and exemplars of the faith].27

The application of this Arabic passage is quite obvious in view of what has been brought out above.

The explanation offered above appears to dispose of the uncertainty which puzzled Le Coq in regard to the number 'four' (in contrast to the familiar 'three' seals) when dealing with the Turkish passage (see Le Coq. Khuustunwift, p. 303, n. 34). I have since found that Alfaric, Les Ecritures, 2. 56-57, holds a view similar to my own. Differently, Legge, Forerunners and Ricals, 2. 343; compare furthermore Reitzenstein, Iran. Erlös, p. 203-204.

<sup>&</sup>lt;sup>48</sup> The Four Great-majestics are the same as that in the grouping given also just above. Besides these four, Manichaeiam recognizes also ten and twelve great majestic essences, see Fifigel, Mani, p. 272, n. 198, p. 274, n. 203.

<sup>&</sup>quot;See Flügel, Moni, p. 64 (text), 95 (transl.); large edition of the Fibrist, 1, p. 333.

<sup>25</sup> Pelliot, JA, 1913, p. 116, who adds (note 3), 'Nous Ignorous abso-

the enumeration of the four is missing, because the rest of the text is lost, it is nevertheless certain that we can supply the general contents of the lacuna by referring to the material in the various quotations which have been cited above. So much for the luminous Four Seals of doctrine.

(b) We may now turn briefly to the familiar Three Seals, which are ethical and practical in their nature as relating to the conduct of the body. These are not only now found referred to in the actual Manichaean documents, but they have previously been known through allusions in Christian and Muhammedan writers.

Thus, through Saint Augustine we are well acquainted with these tria signacula as 'the seals of the mouth, hand, and bosom'—oris, manus (or manuum), sinus.29 In an-Nadim's Fihrist they are grouped simply as the 'Three Seals' (thalath khawātim),20 although, in the same work, the author makes mention likewise of a special Epistle by Mani on the 'Seal of the Mouth.' 21

In the Turfan Pahlavi Fragments themselves, as far as published, there are two allusions to the Manichaean Scals. One of these (M. 32 recto, l. 6-7) refers to 'the complete scal of my hand, mouth, and thought.' The other (S. 9 recto b, lines 19-21), in the Petrograd collection, alludes to the soul, which has been imprisoned in darkness, as being led to believe on Ohrmazd (Primal Man) and to 'accept most actively every injunction, commandment, and the scal of perfect peace.' In the Turkish

lument ce que sont ces "corps de la Loi." [Postscript. I have since found that my interpretation of this point, which was independently reached, Feb. 27, 1923, and brought out in a brief oral communication at the Centenary Celebration of the Royal Asiatic Society in July of that year, had been anticipated by Alfaric, Les Scritures, 2. 56. So much the better for such admirable support.]

<sup>&</sup>lt;sup>38</sup> Augustine, De Moribus Monichocorum, ch. 10, § 19, and ch. 11-19 (§ 20-73), where the great Church Father discusses these. A fuller treatment of this subject is omitted for the present, being reserved for treatment elsewhere.

<sup>\*\*</sup> See Fingel, p. 64, l. 5 (text); p. 95, l. 20 (transl.); cf. also p. 41, 281, 280-201.

<sup>\*\*</sup> Flingel, p. 74, 1, 1 (khātam-al-fam); p. 103 (§ 13); Kessler, p. 216.

<sup>35</sup> M. 32 recto. 1, 6-7 (= Mü. 2. p. 63), mühr 'ispürig éé man dast rümb 'üd 'andeilin.

<sup>&</sup>quot;S. 32 recto b, limes 19-21 (Salemann, Manichaice, 2, p. 9), hare cisp-to anders 'ad formen 'ad mahr 'I sweeth contaith patterift and.

Manichaen Confession-prayer (II. 320-321) these ethical symbols are likewise called the 'Three Seals' (āc t(a) mya), when the Auditor accepts the articles of 'the Ten Commandments, the Seven Alms, the Three Seals'; 24 and they are furthermore implied in a passage in the same Confession-prayer which refers to keeping the Ten Commandments, 'three with the mouth, three with the heart, three with the hand, and one with the whole self.' 25

In this connection it may be stated that the conception of the three seals, while corresponding in idea to the Zoroastrian injunction to preserve purity in 'thought, word, and dead' or to the Buddhistic precepts regarding 'body, speech, and thought,' may have been a wholly natural one, and not due to any special outside influence upon Mani.<sup>28</sup>

To sum up. Sufficient evidence has been adduced to show the existence of the doctrine of seven seals in Manichaeism: four spiritual, as tenets of faith; and three moral, as standards of conduct. Emphasis, in conclusion, must be laid on the fact that Hearers and Elect alike were expected both to accept the four bright seals of faith and to observe the three moral seals in practice. This implied a high standard of living if they were truly conformed to.

#### BRIEF NOTE

### A Pālism in Buddhist Sanskrit

In JAOS 43, 410 ff, we established the technical meaning of adisati, anvadisati, anudisati, and uddisati in the Peta-Vatthu as signifying 'to make over, to transfer or ascribe, or to give a gift in the name of.' We pointed out that adisati, anvadisati, and uddisati are used with the accusative of the gift and the genitive or dative of the person who is benefited spiritually or to whom the merit is transferred.

It may be of interest also to note a similar use of the root dis and a-dis in the Avadanasataka, Book V, which in Sanskrit describes the torments of the pretas. This idiom can be understood only in the light of what has been proved in the aforementioned article: in other words we are confronted with a Palism. Now it seems that the Sanskrit writer felt that he was employing a foreign expression, since for the sake of clearness he used namna with the genitive of the person in whose name the gift was presented instead of the dative of the person who was to be benefited; at the same time, however, he retained this technical Pali use of dis and a-dis. In the Peta-Vatthu this idiom was amplified only once (II, 8, 8) by the insertion of hitaya with the genitive of the person benefited. Judging from this single instance as contrasted with the other numerous examples with the dative or genitive of the person, we inferred (JAOS 43, 411) that the original idiom in Pali was the verb with the accusative of the gift and the dative or genitive of the person to whom the merit was transferred. With this fact in mind we are safe in assuming that while employing a Palism, the Sanskrit writer tried to make this technical religious meaning clear by the addition of namna with the genitive.

Let us now examine these Palisms in the Avadanasataka.

In V, 5, five hundred pretas besought Mahāmāudgalyāyana to vizit their kinsmen and persuade them to give donations in their name. In this connexion the ghosts said: buddhapramukham bhikṣusangham bhojayitvāsmākam nāmnā dakṣiṇādešanām kāra-yitvā cāsmākam pretayoner mokṣah syād iti: "Induce them to feed the Chapter of monks presided over by the Buddha and to

present a gift in our name; then we shall be free from the preta existence."

In V. 6, a preti, the mother of Uttara, in asking her son for aid, savs: mama nāmnā buddhapramukham bhiksusangham bhojaya daksinām ādešava dešanām ca kārapa; evam pretayoner mama moksah suād iti: "In my name cause (my kinsfolk) to give a meal to the Chapter of monks presided over by the Buddha; induce them to make over the merit of the gift, yea persuade them to make a transfer; in that way I shall be freed from the preta existence." In continuing the story, we read: tata āyusmān uttaro buddhapramukham bhiksusangham pranitenaharena samtarpya pretya nāmnā daksinādešanām kārayāmāsa: "After the venerable Uttara had brought food and refreshed the Chapter of monks presided over by the Buddha, he made over to the prett the virtue of the gift (or gave the gift in the name of the prett)." The Buddha then confirms or reënforces this transfer of merit (bhagavāns ca pañcañgopetena svarena svayam eva daksinadesanam ādišati), saving:

> ito dänād dhi gat puņyam tat pretīm anugacchatu uttisthatām ksipram iyam pretalokāt sudāruņād iti:

"Verily, whatever good is derived from this gift, let that go to the credit of the prefi; may she quickly rise from the exceedingly terrible preta world."

Here the transfer of merit is described without the root dis, and consequently we feel that we have found the correct interpretation of the above passages.

In this connexion let us compare Peta-Vatthu IV, 1, 51-52, where the king says (51);

Tam disvā samvegamalattham bhante tappaccayā cāham dadāmi dānam patiganha bhante vatthayugāni aṭṭha yakkhass' im' āgacchantu dakkhināyo:

"Reverend sir, I saw him in terror and in sin; therefore I give a gift. Lord, accept eight pair of garments, and let these presents go to the credit of the yakkha." The ascetic replied (52):

> Addhā ki dānam bahudhā pasattham dadato ca te akkhayadhammam atthu

paţigganhāmi te vatthayugāni aţtha yakkhass' im' āgacchantu dakkhināyo;

"Surely the gift in many ways is acceptable, and may it have endless virtue for you, the giver. I accept from you the eight pair of garments; may these presents redound to the credit of the yakkha."

It is interesting to note that the two languages use the root gam in describing the transfer of merit, when the technical idiom is not employed. Although the Peta-Vatthu uses ā-gam with the genitive or dative, while the Avadānasataka has anu-gam with the accusative, nevertheless a common mode of thought underlies the two expressions. In these technical phrases of the Avadānasataka where we meet the root dis, we detect a Pālism, but this does not mean that the Sanskrit author was translating from a Pāli original. We should rather infer that these terms were in current use by the Buddhists long before these works were composed.

### REVIEWS OF BOOKS

Les théories diplomatiques de l'Inde ancienne et l'Arthcostra-Par Kalidas Nag, docteur en lettres. Paris: Jean Maison-Neuve & Fils, 1923. 149 pp.

One has long been accustomed to the fluent English of the native Hindu scholar but it is somewhat unusual to find a thesis on Sanskrit literature written by one who writes French as easily as he speaks Bengalese. Dr. Kâlidâs Nâg, already an M. A. of Calcutta University, has completed his academic training as a pupil of Professor Sylvain Lévi and published what is presumably his doctor-dissertation in a revised form under the able guidance of the distinguished French Sanskritist. The subject of this work is one that has been much discussed in recent years and has laid the foundation for a number of more ambitious volumes such as Professor Upendra Nath Ghoenal's History of Hindu Political Theories and Dr. Raychaudhuri's Political History of Ancient India, not to speak of the many essays in English and German on the same question of the polity of the ancient Hindus, as taught under the name of Arthasastra by Kautilya. If these other modern books have a wider theme they yet depend for their value mainly on the correct understanding of this ancient text, as that in turn depends for its historical worth on the question whether it is really the product of the fourth century B. C. and from the hand of the minister of Candragupta. Dr. Nag, in the present modest volume, gives a very complete summary of the political theories of Kautilya regarded not as a sudden phenomenon but as a logical continuation and development of views held in older times, as a link, in fact, between the Vedic period and the later age, which really preserves the Kautilya tradition. The author thus has occasion to depict the political views found in quite a wide range of Sanskrit literature and his introduction will be of interest to all historical students. In judging the disputed points in reference to Kautilva himself, the sanity and scholarship to be expected of a pupil of Sylvain Lévi are well shown. Dr. Nag reasonably urges that in Kautilya we have no Hindu Machiavelli but a writer whose first care is the state controlled in the interest of morality in so far as the usual rules of morality can be carried out. The author is duly

impressed by the marks of more recent date in parts of the Arthasastra and it is to his credit as a Hindu that he has resisted the natural temptation to over-estimate the historical value of his chosen author as handed down in the Arthasastra's present form: "Dès lors, nous devons renoncer à l'idée que l'Arthasastra soit sorti tout entier de la tête de Kautilya comme Minerva de celle de Zeus, et qu'il ait été écrit pour le seul Candragupta." The author's identification of the epic Kanika with Canakya deserves favorable consideration. The praiseworthy little book concludes with a list of political terms found in Sanskrit inscriptions.

E. WASHBURN HOPKINS.

Das antike Seewesen. Von August Kösten. Erste Auflage, mit 104 Abbildungen im Text und auf Tafeln. Berlin: Schoerz und Parrhysius, 1923. 254 pp. Price for foreign countries, 15 Swiss francs.

Dr. Köster combines a first-hand knowledge of modern navigation with a long and thorough archeological training. His book gives a clear account of the development of navigation on and near the ancient Mediterranean. It is especially pleasing to me to find that, without having seen my article in AJSL for January 1923, he has reached conclusions practically identical with mine on the structural origin of the Nile boat.

"Navigation is as old as humanity." It has been invented many times in many different quarters, and its beginnings are lost before the beginning not merely of history but of archeology. For instance, at the earliest times of which we have knowledge, both the Egyptians and the Cretans possessed wooden ships, and the ships of the two peoples differed markedly from one another in structure. The Phenicians learned ship-building and navigation first from the Egyptians, and did not become notable mariners until the latter part of the second millennium B. C., when Egyptian shipping declined; they seem also to have learned some valuable lessons from the Aegean peoples and from the Assyro-Babylonians. On the Tigris and Euphrates, river navigation reached a high development in very early times, but Köster does not believe that the Sumerians or the Babylonians ever developed a marine com-

merce. When the Greeks arrived on the coast of the Aegean, they learned ship-building and navigation from the Cretans. Köster follows out in detail the development which shipping underwent in the hands of the Greeks. He also deals with the first efforts of the Romans to develop a navy in their conflict with the Carthaginians; and he devotes brief sections to such matters as lighthouses and piracy.

The only point on which I find myself in serious disagreement with Köster is his explanation of the 6600 and \(\lambda\theta\)os of Herodotus II, 96, which he takes quite in the sense intended by Herodotus. Köster promises a discussion of this point in the Jahrbuch des deutschen archäologischen Instituts for 1923; in the meantime I must still hold to the opinion put forward by Assmann in Hermes 31 (1896) pp. 182-184.

There are a few mistakes due perhaps to haste. On p. 15, the reader would get the impression that Sahure lived more recently than Isesi.1 On p. 43, the "Grabschrift des Chenticheti" is surely a mistaken reference to the inscription of Khnumhoten in the tomb of Khui (Sethe, Urkunden des alten Reichs, p. 140-141) and the total of eleven voyages includes voyages to Byblos as well as to Punt (Zeitschrift für ägyptische Sprache, 45 [1908] p. 10). At the bottom of p. 22 the misprint " Segelschiffe" (for Seeschiffe) might possibly confuse a beginner.

The book contains an excellent index, but neither a table of contents nor a list of plates; the plates, being scattered thru the text, are not easy to locate when referred to merely by number. The illustrations themselves are well chosen, and in general well reproduced, but there are some unfortunate exceptions: Hatshepsut's Punt ships are reproduced after Dümichen, and the Medinet. Habu ships after Champollion.2

The defects which I have mentioned are of small importance, Dr. Köster has thought out his subject as only an archeologist who knows the sea could do. He writes clearly; he avoids nautical

I know of no reason to suppose that the rope girdle persisted longer on the sen-going ships of the Egyptions than on Nile houts.

<sup>\*</sup> The only usable publications of the Medinet Habu scene, so far as I know, are Mariette, Voyage dans la Haute-Egypte, Vol. II, pl. 55 (2d ed., 1893) und Bissing, Denkmäler ägyptischer Sculptur, pl. 94 A and B. Mariette reproduced only a fraction of the scene.

terms when he can, and those which he must use he explains in words which anyone can understand. His book will have great value both as an introduction to the subject and as a work of reference.

WILLIAM F. EDGERTON.

Columbia University.

## MINOR NOTICES

Altindische Politik. Eine Uebersicht auf Grund der Quellen. Von Alfred Hillebrandt. Jena: Gustav Fischen, 1923. xii + 211 pp.

A handy compendium of both theoretical and practical statecraft in India as presented in the Kautiliya Arthasastra and the Hindu epic. The special value of the book lies in its extensive exploitation of the epic sources, especially those found in the twelfth book of the Mahābhārata; they are here collated with the materials of the Kāutiliya in a much more complete way than ever before. Later sources are not used. The exposition is characterized by the clarity and intelligence which are to be expected in any work from the distinguisht author's pen. He still helds to his previously exprest view that the Kāutiliya was not composed by the famous minister of Candragupta, but was a product of his school.

Thomas William Rhys Davids, 1843-1922. [By R. Chalmers.]
From the Proceedings of the British Academy, Vol. X.
London: Published for the British Academy by Humphery
Millford, Oxford University Press. [1923.] 5 pp.
Biographical sketch of the great Pali scholar.

Irrigation in India. By D. G. Harris. [India of To-day. Volume II.] London: Humphrey Milford; New York: Oxford University Press, American Branch; 1923. 102 pp. Price \$1.00.

Survey of (mainly governmental) irrigation in India, principally that carried out in the nineteenth and twentieth centuries, and that planned for the immediate future. A Practical Kurdish Grammar. By L. O. Fossum. Inter-Synodal Evangelical Lutheran Orient-Mission Society (printed by the AUGSBURG PUBLISHING HOUSE, Minneapolis, Minnesota). 1919. 279 pp.

This book, devoted to Kurdish as spoken in Suj Bulak and Sulaimania, may profitably be used in connexion with Sozne's Grammar of the Kurmanji or Kurdish Language (London, 1913). since the two grammars supplement one another.

L. H. G.

#### NOTES OF THE SOCIETY

The December number of the Journal (Volume 43, Number 5) has been delayed; it should reach members and subscribers about the time that this issue is received, or shortly after.

The Executive Committee by unanimous vote has elected the following to membership in the Society:

Prof. Ralph K. Hickok Pres. Frederick Lent.

Rev. Ralph B. Nesbitt Prof. E. H. Sturtevant

Prof. Nicholas Martinovitch Jainacharya Vijaya Indra Suri

### PERSONALIA

Dr. WILLIAM F. EDGERTON, lately of the University of Chicago, has been appointed Assistant Professor of Ancient History in the University of Louisville (Kentucky).

# MAGADHI AND ARDHAMAGADHI

# WALTER EUGENE CLARK UNIVERSITY OF CHICAGO

## 1. Statement of the Problem

Lassen, tried to prove that the Präkrit dialect spoken in the Prabodhacandrodaya by the Digambara Jain monk, by the Pupil of the Cărvāka, and by the Messenger from Orissa, is Ardhamāgadhī. According to Pischel, the dialect spoken by these is Māgadhī and there is no trace of Ardhamāgadhī here or in any other Sanskrit drama. Pischel's statement has met with almost universal acceptance. Jain monks appear on the stage in the Prabodhacandrodaya (Act 3), in the Mudrārākṣasa, in the Laṭakamelaka, in the Amrtodaya, and in the Vidyāparinaya. According to tradition the language of the old Jain Suttas was Ārṣa, which is also called Ardhamāgadhī. The canonical books of the Svetāmbara Jains are in this same language. Their non-canonical books are in Jain

1 Institutiones linguae pracriticae, p. 410 ff. and App., pp. 39, 61. Fol.

lowed by Bhandarkar, Wilson Philological Lectures, p. 78.

\*Also the few brief phrases spoken by the Jain Faith, by the Buddhist Faith, and by the Kapülika Faith. Lassen saw Ardhamagadhi in the Mudrārākṣasa and in the Dhūrtasamāgama too. Grill (pp. 139-40) also tried to prove the use of Ardhamagadhi in the Venisamhāra. Markandeya, Prākṛtasarvasea 12.38 (ed. Vizagapatam), quotes a passage from the third act of the Venisamhāra as Ardhamāgadhi.

"Grammatik der Präkrit-Spraches, p. 10. "Von AMg. findet sich in den Dramen keine Spur." Konow (Das indische Drama, p. 17) agrees, but makes an exception for the Turfan fragments edited by Lüders, Bruschstücke buddhistischer Dramen, and possibly for Bhäsa's Karuahhära. Both of these texts were unknown to Pischel. Printz, Rhäsa's Präkrit, p. 6, admits Arihamägsdhi in Bhäsa's Karuabhära, but "nur als Notbebell."

<sup>\*</sup> Ed. Hillebrandt, pp. 116-9, 122-6, 129-33.

<sup>\*</sup> Ed. Kavyamālā 20 (1889), pp. 12 ff., 25 ff.

<sup>\*</sup> Ed. Kävyamälä 59 (1897), p. 66. Called Arhatsiddhanta.

<sup>&</sup>lt;sup>2</sup> Ed. Kävyamälä 39 (1893), p. 40. Called Vivusanasiddhänta. The language is Sanskrit. No Präkrit is used in this drama.

<sup>\*</sup> Pischel, Grammatik, p. 15 ff.

Māhārāstrī. All the Jain monks who appear on the stage are Digambara, except possibly in the Amrtodaya. They all speak Prakrit except in the Vidyaparinava. Converning the dialect in which the books of the Digambara Jains are written our knowledge is, as yet, very limited. Pischel (p. 20) calls it Jain Saurasenī, but remarks that it shows a mixture of forms from Maharastri, Ardhamagadhi, and Sauraseni. Did the authors of our dramas make any effort to approximate to the language of the Digambara books? Did they lump the Jains all together and try to approximate to the language of the Svetämbara canonical books? Did they, as a result of the later dramatic convention which prescribed Magadhi for all the lower characters, make the despised heretics speak merely a conventionalized Magadhi which had little resemblance to the dialects actually used by the Jains? Must we restrict the term Ardhamagadhi to the Arsa of the Svetämbara Jains, or may we use it in a generalized sense as referring to any dramatic dialect which combines Magadhi elements with Sauraseni elements?

## The Māgadhī Dialeci in Vararuci, Hemacandra, Kramadīšvara, and Mārkandeya.

Vararuci \* describes only four Prakrit dialects: Maharastri, Paiśācī, Māgadhī, and Śaurasenī. He states that Māgadhī is the language of the Magadhas and that its original is Saurasenl. This statement does not imply that Vararuci thought that Magadhi was derived linguistically from Sauraseni. It is made only for the practical purposes of grammatical description, and implies only that the dialect agrees with the rules given for Sauraseni except in the cases noted in the following specific rules.10 It seems to be equivalent to the more definite statement of Hemacandra (4, 302) śesam śaurasenivat. The rule of Vararuci (12, 32) śesam māhārastricut at the end of the section on Saursseni applies only to this section, not to the preceding sections on Paisaci and Magadhi as well. It is curious that Vararuci, who says that Paisaci and Magadhi are based on Sauraseni, does not place these sections (ten and eleven) after section twelve. Hemacandra has the natural and logical order.

<sup>\*</sup> Cowell, The Prakrita-Prakela of Vararuci. Edition of 1854. Magadhi is described in section 11.

See Senart, Les Inscriptions de Piyadasi, IL-516-7; Gawroński, ZVS 44, 271.

# Vararnei gives the following special rules for Māgadhī:

- 1. I is substituted for a and a.
- 2. y is substituted for j.
- The palatal letters are pronounced with but a very slight contact of the tongue with the roof of the mouth (if the conjectural emendation is correct).
- 4. hadakka is substituted for hydays.
- 5. wy is substituted for ry and rj.
- 0. sk is substituted for kg.
- 7. hake, hage, and ahake are substituted for aham.
- 8. The nominative singular of nouns in a ends in i, e, or a.
- 9. The nominative singular of nouns in to ends in u, i, c, or c.
- ke may optionally be substituted for the ending of the genitive singular, and before it the vowel is lengthened.
- 11. The vocative singular of nouns in a ends in a.
- 12. cistha is substituted for cittha.
- da is substituted for to in the past passive participles of kr, sar, and sam.
- 14. doni is substituted for the gerund ending red.
- 15. sidla, siale, or sidlake are substituted for sygala.

# Hemacandra (4.287-303) gives the following rules for Magadhi:

- 1. The nominative singular of masculine nouns in a ends in c.
- I and s are substituted for r and s. Since he starts from the Prakrit form and not from the Sanskrit form the change of s to s is included.
- 3. s and s in consonant groups become s, except in the word grisma.
- 4. He and othe become sto.
- 5. sthe and rthe become sta.
- 6. y is substituted for j and dy.
- T. nya, nya, jaa, and aja become asa.
- 8. razāndi is substituted for erajati.
- 9. cch, except when initial, becomes sec.
- 10. ksa, when not initial, becomes jihvamāliya plns k.
- 11. Age becomes ske in the words preks and donks.
- 12. cisths is substituted for citthe.
- 13. The genitive singular of words in a or a may end in aha.
- 14. The genitive plural of words in a or a may end in also with anundailes at the end.
- 15. Auge is substituted for aham and rayam.

Kramadiśvara's rules for Māgadhī, as given by Lassen (p. 393) from a very unsatisfactory manuscript, are as follows:

- 1. s is substituted for s and s.
- o r becomes L

- yapacacargayuktā manāg uccāryāḥ. The reading is very doubtful, but this seems to correspond in some way to the third rule of Vararuci given above. See Cowell ad Ioc. and Grierson JRAS 1913, 391-6.
- 4. hadakka is substituted for hydaya.
- 5. j becomes y.
- 6. dani is substituted for the gerund ending ted.
- 7. mid is substituted for the ending to of the past passive participle.
- 8. The vocative ends in d.
- 2. The nominative plural ends in the or d.
- 10. citthe is substituted for the root sthe.
- 11. hake and hage are substituted for aham.

Mārkandeya (chapter 12) gives the following rules for Māgadhī:

- 1. # is substituted for s and s.
- 2. I may optionally be substituted for r.
- 3. kkh becomes &k except in the word &khu.
- 4. f becomes dh in the word wassti.
- # is substituted for the first letter in the combinations tt, tth, tt, tth, and cch.
- 6. bu of bubhuked is dropped.
- h is substituted for dh. The commentary adds "when not initial" and says that th is sometimes changed to h.
- 8. gomika is used for gauravita,
- 9. cooks is used for cayaspa.
- 10. sidle is used for syale.
- 11. kosana etc. are used for kosna and other compounds of used.
- 12. hadakka is substituted for hydaya.
- 13. marchika is used for sadty.
- 14. majau ca (du) cont.
- 15. good is used for gasand.
- 16. pierare is used for pidecake.
- 17. maion is used for vykya.
- 18. Indana is used for raina.
- 10. y is prefixed to e and i.
- 20. Refore the suffix ka the vowel is optionally lengthened.
- 21. star is optionally substituted for the gerund ending red.
- 22 &ve cid it. The commentary says kteūsthāne syūt and quotes from the sixth act of the sākuntala pasumāli kaicāi. There seems to be some confusion here.
- 23. u takes the place of are or apa.
- 24. e or i takes the place of a in the nominative singular masculine.
- 25. The vocative masculine often ends in e or o.
- 26, 8 may be used in the vocative (dksepe).
- 27. As may be used optionally in the genitive and before it the vowel is lengthened.

- 28. hakke, hake, hagge, hage, haga are used for aham.
- 29, tumbam or tumbe are used for yuşman.
- 30. Scinta is used for cittha.
- 31. bhaciadi or bhuciadi are used for bharisyati.
- 32. kg, mg, and gam take do in the past passive participle; sometimes do.
- 33. Case endings are often dropped or interchanged.
- 34. The personal endings of verbs sometimes have the final vowel lengthened. The commentary gives osuladha as an example.

The two sets of rules given by Vararuci and Hemacandra agree in the following particulars:

- 1. The substitution of \$ for a and s.
- The substitution of y for j. Vararuci's rule for the change of ry and rj to yy is included in Hemacandra's rule.
- The change of kes to ske in the words preke and deaks. Vararuci makes the change universal. Hemacandra, in all other cases, prescribes fibromelly plus k.
- 4. The substitution of hage for ahosh.
- 5. The nominative singular masculine in e.
- 6. The genitive singular in aka.
- 7. The substitution of cistha for cittha.

In all other particulars the two sets of rules are different, and Hemacandra has several most remarkable and puzzling additions. Note especially that Vararuci gives no rule for the change of r to I. And yet the presence of I is universally regarded as one of the surest indications of Magadhi. Bloch 11 suggests that some rules may have fallen out of our manuscripts of Bhāmaha's commentary to Vararuci, and that this particular rule may have been one of those lost in the mechanical process of manuscript copying. He points out that in an anonymous commentary to Vararuci some rules are omitted which are given in Bhamaha, some are given in a different order, some differ in content and verbal expression, and that in some manuscripts of Bhāmaha's commentary many of the rules are omitted.12 The anonymous commentary (Prakrtamanjari) has since been edited by the Nirnayasagara Press. The author was a South Indian and later in date than Bhāmaha. His text of Vararuci differs considerably from the text given by Cowell. Unfortunately the text extends only to the end

<sup>11</sup> Vararuci und Hemacandra, pp. 23, 28.

<sup>&</sup>lt;sup>28</sup> See also Pischel, Grammatik, p. 35 and De Grammaticis Pracriticis, pp. 10-16.

of section eight. It gives no help for the section on Magadhi. The text of Vararuci is in an unsatisfactory condition, but this particular rule for the change of r to I is not found in any of the manuscripts yet collated. The corruption, if there is one, must be a very old one. Bloch (op. cit., pp. 28-9) appeals to Kramadisvara in support of his assumption that a rule for the change of r to I may have been lost in the text of Vararuci. Kramadiśvara gives a separate rule for the change of r to I. He seems to have made use of Vararuci, but it is certain that he used other sources as well.13 The evidence is not sufficient to prove the loss of a sūtra in Vararuci. Lassen 14 also thinks that the omission is due to a scribal error, and remarks that the letter I occurs in several examples which are given in illustration of the rules. The examples, however, are found in the commentary of Bhamaha. They are not conclusive for Vararuci himself. Forms of I might easily have crept into the text of the commentary later even though no specific rule was present in the text of Vararuci. Lassen 15 too appeals to Kramadisvara for corroboration. Kramadisvara has no rule to prescribe the nominative singular in e. The manuscripts are so bad and the text is so uncertain that it is quite possible that a rule has dropped out, especially as such a rule is given in a following sutra which deals with Sabari, a dialect which is based on Magadhi. But the loss of a rule in Kramadiśvara does not prove the loss of a rule in Vararuci.

We do not know the source or sources from which Vararuci derived his rules for Māgadhī. We do not know the date of Vararuci. We do not know whether his work is based on earlier grammarians or whether it is based directly on such literature as was known to him. We do not know whether his rules or the rules of his predecessors, if there are any, were already partly artificial or whether they actually reflected the dialect spoken in Magadha. Senart remarks 18 that the selection by Vararuci of Māhārāstrī, Māgadhī, and Saurasenī (Paišācī may be added) as the principal Prākrit dialects argues for the development in these particular localities of a literature in Prākrit. Bloch 12 argues that the Māhā-

<sup>13</sup> See Pischel, Grammatik, p. 41; Lussen, Institutiones, App. p. 40 ff.

<sup>&</sup>quot; Institutiones, pp. 395-6.

<sup>16</sup> Institutiones, p. 394.

<sup>17</sup> Vararuci and Hemacandro, pp. 10-12.

răștri of Vararuci was based on a well developed literature, as attested by Hala. The lost Brhatkatha proves that there was a literature in Paisaci. No literature has been preserved in Sauraseni and Magadhi, but the traditions concerning the old Buddhist books prove that there was a literature in Magadhi at least. Yet it is doubtful to me whether Vararuci intended to describe Paisaci and Māgadhī as languages actually spoken and possessing a large literature. It is likely that spoken and literary Paisaci and Magadhi would have differed from Maharastri and Sauraseni to a much greater degree than the few rules given by Vararuci would indicate. He seems to give only a few conspicuous features of the two dialects as used more or less artificially in dramas. The dialects as described by him seem already to have become stereotyped to a considerable degree. The earlier dramatists from the parts of the country with which Vararuci was familiar may have picked out only a few of the most striking features of the language of Magadha for dramatic purposes. Later grammarians who lived in distant places may have added elements which were not really characteristic of the speech of Magadha and some of their rules may be based merely on the readings of corrupted manuscripts or on later linguistic developments. Much depends on the locality in which the early dramas and grammatical works were composed, and the more or less detailed knowledge which their authors really had of the language of Magadha. It seems to me certain that the grammatical tradition and the dramatic usage of Magadhi grew up outside of Magadha. The dialect on which the rules of Vararuci were based may possibly have belonged to a part of the country where r was not changed to i. The va of Markandeya's rule seems to make the change of r to I only optional, but the hearing of his statement on the problem as a whole is uncertain. Until all the manuscript material which is available for the text of the grammarians has been carefully worked over the hypothesis of scribal omissions, based on the theory of a unified grammatical tradition, is hazardous. We have no reason to assume that from Vararuci on the grammatical tradition was unanimous. Pischel 18 makes the very categorical statement; "Alle Grammatiker von Vr. an sind in der Hauptsache einig." Certainly this underestimates the important discrepancies between Vararuci, Hemncandra, Kra-

<sup>10</sup> Grammatik, p. 23.

madisvaru, and Mārkaņdeya in the matter of Māgadhī. It has not been proved that there was a uniform tradition for Māgadhī which is reflected correctly in Hemacandra, and incorrectly in Vararuci because of the omission of rules in the process of manuscript copying. For example:

- The rule for the change of rtha to sta occurs, according to Pischel (p. 200), only in Hemacandra and in Namisādhu (to Rudraţa, Kāvyālamkāra 2, 12).
- The rule for the change of ccha to sca (p. 165) only in Hemacandra and Namisādhu.
- The rule for the change of ska and skha to ska and skha (p. 207) only in Hemacandra. Namisādhu gives ška and škha.
- The rule for the change of sfa and stha to sta (p. 207) only in Hemacandra. Namisādhu gives sta and stha.
- The rule for the change of stha to sta (p. 213) only in Hemacandra and Namisādhu.
- The rules by which spa and spha change to spa and spha while spa and spha remain (pp. 210, 214) only in Hemacandra. Namisādhu gives špa and špha.
- The rule for the change of the to sta (p. 188) only in Hemacandra.

Namisādhu was evidently a Jain like Hemacandra. His commentary was composed in 1068 A. D. according to the note on the first page of the Kāvyamālā edition. If that is correct he is earlier than Hemacandra and Hemacandra is not personally responsible for all of these additional rules. He was following some earlier tradition current in Western India. 10

These rules are found also in Trivikrama, Sinharāja, Laksmidhara, Appayadikṣita and others who are directly dependent on Hemacandra. They are not found in Vararuci or in Kramadišvara who was, in the main, independent of Hemacandra. See Zacharine BB 5.26 and Pischel, Gramssatik, p. 41. Mārkandeys is much closer to Vararuci than to Hemacandra. Namisādhu, except for s in the place of s in the cases noted above, agrees in the main with the rules of Hemacandra. Rules 4, 12, 13, 14 of Hemacandra are omitted, but Namisādhu states that he is not giving a complete account of Māgadhi. Namisādhu and Hemacandra represent practically the same tradition. According to the Prākṛtakalpalatikā, as quoted by Rishikesh Sastri. A Prakrita Grammer, p. 61, s and s as conjunct consonants become s.

<sup>&</sup>quot;According to Peterson, Third Report, p. 344 the Präkrtacandrikā of

For the change of r to ! Pischel (p. 178) refers to Canda, Hemacandra, Kramadišvara, Mārkandeya, Namisādhu, and Simhadevagami. For the change of s to s Pischel (p. 163) refers to Vararuci, Canda, Hemacandra, Kramadiśvara, Mārkandeya, and Namisādhu. Surely there should be no talk of uniformity in connection with the list of rules given above from Hemacandra and Namisādhu. And yet Pischel (p. 200) recommends that these rules of the grammarians (sic) be followed for Magadhi against all the manuscripts and against Vararuei, Kramadisvara, and Markandeva. These three grammarians prove that there was a tradition very different from that followed by Hemacandra and carried on by his followers. It seems clear, as Grierson points out JRAS 1921, 425-6, that there was an Eastern and a Western school of Prakrit grammarians. But in each school the individual authors differ so much in little details that there is about as much confusion among them as there is in the manuscripts of the dramas themselves.

Simhadevagani to Vägbhatālamkāra 2.2 gives the following rules for Māgadhī:

1. The change of r to L

2. The nominative in c.

3. The substitution of hage for aham.

4. The substitution of citthe for tisthe.

5. The change of a to u.

Further he gives lukkha for rūkṣa. This is contrary to the rule of Hemacandra. The rule for the change of n to n is remarkable. It cannot be accounted for by manuscript corruption because the example yathā taruṇasthale taluna proves conclusively that the change of n to n must be meant. According to the grammarians the change of n to n is characteristic of Paiṣācī. Is Simhadevagani confusing Paiṣācī with Māgadhī? He gives no rule for the change of s to s, an extremely important rule which could hardly have been omitted even in the most superficial treatment of the Māgadhī dialect if he had regarded it as universally valid for the particular dialect which he meant to describe. The Kāryamālā edition gives in an example. This is corroborative testimony, but incon-

Krsnapandita has the following: jihrāmāliyas ca kvacie chaurasenyādau rakņyate. takṣah tahko. šakāruš ca māgudhyāsis vakņyute. pathā pakṣah paško. lākṣā lāthā. For kṣa in Māgadht Vararuci gives sku. Hemacandra gives sku in the two words prekṣ and doakṣ, elsewhere jihrāmāliya pins k. A rule for āk in Saurasent is found nowhere else so far as I know.

clusive without a full report of manuscript readings. Năndillagopa în his commentary to the Prabodhacandrodaya (Nîrnayasăgara edition, p. 72), on the authority of Candrasena and others, apparently regards the substitution of s for s in Māgadhī as optional. Did Simhadevagaņi have the same idea in mind?

There is a strange but important statement in Rajašekhara's Kāvvamīmānsā (Gaekwad's Oriental Series, Vol. 1, pp. xxii, 50) to the effect that Sisunaga, king of Magadha, prohibited in his harem the use of cerebrals except n, and of i, s, h, and ks. The passage reads as follows: śrūyate hi magadhesu śiśunāgo nāma rājā, tena duruccārān astau varnān apāsya svāntahpura eva pravarttito niyamah, takārādayas catvāro mūrddhanyās trtiyavarjam üsmänas trayah ksakāras ceti. It is quite possible that even in a later period such commands of a king might affect not only the language of his harem but also that of his courtiers and of poets who composed dramas to be enacted in his palace. Such usage might even be reflected in the Prakrit grammarians. Whether the statement is absolutely true or not makes little difference. There was such a tradition. It opens up wide possibilities, as vet unthought of, of the varieties of pronunciation which may be expected in the case of any of the Prakrit dialects.

From Vararuci on the grammatical tradition concerning the change of s to s in Magadhi is unanimous. Some of the commentators take it as merely optional and possibly Simhadevagani did not recognize it as universal. The Asoka inscriptions seem to prove that the official language of Magadha in the third century B. C. had s, not s. Could the prohibition of Sisunaga, if the story is correct, have anything to do with the continuance of such usage at court, and did the popular language have s?

Windisch, 22 basing his conclusion on the inscriptions of Asoka, urges that the use of \$\delta\$ for \$\delta\$ in the dramas is a later development. If so did the prevalence of the letter \$\delta\$ in the language of the Sakāra, which is based on Māgadhī, 22 have anything to do with the extension of \$\delta\$ in the later dramas and grammatical works? Gawroński, 22 who regards the \$\delta\$ of the Sakāra as merely an individual

<sup>21</sup> Actes du XIVe Congrès International des Orientalistes, L. 279.

<sup>&</sup>lt;sup>15</sup> Lassen, Institutiones, p. 422 ff.; Pischel, Grommatik, p. 24; Grierson, JRAS 1918, 494, 499; Gawroński, ZVS 44, 271-4.

<sup>\*\*</sup> ZVS 44. 271-4.

lisping, suggests that the lisping of this character may have spread mechanically through the other Magadhi parts of the manuscripts of the Mrcchakatika. Further, he argues against Windisch that the s of dramatic Magadhī is too peculiar a feature to have developed in a purely literary way.20 At present no definite answer to the question can be given.

Pischel (p. 21) remarks: "Im übrigen weichen Vr. und He. stark von einander ab, was sich zum grössten Teile daraus erklärt, dass He. auch die Sauraseni der Digambara berücksichtigt hat, deren Eigenheiten die Jaina auf die S. der Dramen übertragen haben, wodurch sie dieselbe trübten und auf spätere Autoren irreleitend wirkten." Is it not possible that the same bad influence may have affected Hemacandra's Magadhi? Why insist that Hemacandra's rules for Magadhi must be followed in all their details even against all the manuscripts and many of the grammarians? The value ascribed by Pischel to Hemacandra in the development of Prakrit Grammar and in the usage of the dramatists is as much exaggerated as was the importance ascribed by Deussen to Sankara's advaita in the history of the Vedanta.

In addition to the four dialects treated by Vararuei Hemacandra treats Culikāpaišācika and Apabhramša. He refers also to Ārṣa, by which he means the Ardhamagadhi of the canonical books of the Svetambara Jains, but gives no rules for the constitution of that dialect because he considers it to be an independent language which follows rules of its own.25

On what are the additional rules of Hemacandra based? Even if he knew the rules of Vararuci,28 a matter which is not absolutely certain, he clearly made use of other sources. Pischel makes the following criticism of Hemacandra's scholarly method: "Er war ein compilator der schlimmsten art, der seine vorgänger in rücksichtslosester weise geplündert hat und dessen werke flüchtigkeiten aller art enthalten. Ihm fehlte jede spur wissenschaftlicher kritik und jede belesenheit in der literatur." If the rules of Vararaci and of Hemacandra were based on any unified gram-

<sup>11</sup> Hemacanden's Grammatik der Prakritsprachen II. p. vi. Reiterated in Grammatik der Prükrit-Spracken, p. 46.

matical tradition or on any consistent usage by writers of dramas it is hard to see how such great discrepancies could have resulted. Senart 28 points out, for instance, that only in the Girnar inscriptions of Asoka is the writing sta found. These inscriptions come from the extreme west of India. It is likely that the rule of Hemacandra by which tta and stha become sta (and perhaps other rules too) preserves a local peculiarity which is not to be ascribed to Magadhi in general. Bloch points out 29 that Hemacandra in his treatment of Mühürästri prescribes two Jain peculiarities, the vairuti (1, 180) and the use of a for a as initial (1, 229). These are not mentioned by Vararuci. There is no proof that at an early date there was any consistent dramatic usage or consistent grammatical tradition for Magadhi. Capeller's remark 20 " Ich glaube nicht, dass den Dichtern für das Präkrit so bestimmte Regeln vorschwebten wie für das Sanskrit, und auch hier stehen sie ja bekanntlich im Widerspruch mit Pāṇini" is, I think, especially true of Magadhi.

Until we know more about the predecessors of Hemacandra, where his additional rules came from and their date, and how far particular authors really tried to follow the grammatical treatises it is surely unscholarly to follow the Māgadhī rules of Hemacandra and his followers, especially in the case of dramas like the Prabodhacandrodaya which antedate Hemacandra. Nor is it scholarly to follow even the simpler rules of Vararaci or some other set of rules. An author may have followed some treatise which is no longer extant or he may have had only a smattering of Prākrit picked up from the usage in other dramas and not based strictly on any detailed set of rules. Why edit a drama by an Eastern author according to the rules of a Western grammarian?

Konow " has pointed out the fact that Rājašekhara confused Māhārāstrī and Saurasenī forms, and that the manuscripts are not

entirely to blame for the confusion. Markandeya " remarks that when d is kept in Rajasekhara the author is wrong, not the gram-

marian. So too Somadeva, in the Lalitavigraharajanataka, often confuses the dialects even though his Magadhi does conform closely to the rules of Namisadhu and of Hemacandra. In the use of \$ instead of s in consonant groups he agrees with Namisadhu, not with Hemacandra.\*\* Here there can be no question of manuscript corruption and the stone-cutter cannot be responsible for all the mistakes. There was doubtless the same inconsistency to an even greater degree in many other and earlier dramas. All that Somadeva's use of Magadhi proves is that he personally made an effort to follow some set of rules pretty closely. In each case the greater or less approximation of the Prakrit dialects employed in the dramas to the theoretical grammatical norm depended on the greater or less knowledge of the author.

# 3. Bhāṣās and Vibhāsās,

That Vararuci and Hemacandra intended to describe only dialects which were really distinctive is proved by the fact that they make no mention of the Vibhāṣās. Yet these are specifically referred to and briefly described by Bharata.34 He is followed by Markandeva,33 by the Prakṛtacandrika,s by Pṛthvidhara in the preface to the Mrcchakatikā, and by the Prakrtakalpataru of Rama-Sarman (Tarkavāgīša), as who remarks that the Vibhāsās cannot be called Apabhramsa if they are used in dramatic works.29 Most of them are described in the Sähityadarpana (6, 162 ff.). Dandin (in the Kāvyadarśa), like Vararuci and Hemacandra, does not distinguish the Bhāṣās from the Vibhāṣās. He says (1.32) that a literary work may be composed in Sanskrit, Präkrit, Apabhranisa, or in a mixed language. In 31 and 37 it is stated that dramas are composed in this mixed language. In 34 he describes Måhårästri as the most important Prakrit dialect, but in 35 says that Sauraseni, Gaudi, Lati etc., are also used. He does not pick out Magadhi

<sup>11</sup> Pischel, Grammatik, pp. 8-9; Konow, GGA 1894. 479 ff.

<sup>\*\*</sup> Natyasates (ed. Kavyamala) 17, 48 ff.

<sup>&</sup>quot; Pischel, Grammatik, p. 2.

as worthy of especial mention, unless, as is likely, Gaudi is to be taken as equivalent to Magadhi.

Grierson (JRAS 1918, 489 ff.) concludes that a Vibhāsā is a corrupt form of one or more of the standard Präkrit dialects, which is employed only in dramas, and is there allotted to some special character. Since they are not pure and standard dialects they are not treated by Vararuci and Hemacandra. But the passage of Bharata proves that they were recognized at an early date as being employed on the stage, and later grammarians like Markandeva incorporated an account of them into their general treatises on Präkrit. There is naturally no detailed discussion of them in Bharata. Much latitude must have been allowed to the individual dramatist in the case of these mixed dialects. For them the dramatists, even if they did know the rules of Vararuci or of Hemacandra or of some other grammarian for the standard dialects. had no grammatical norm, or at the most only vague suggestions. We have no proof at all that such modified or mixed dialects were not employed and there is consequently no reason for standardizing all the dramatic Prakrit to the norm of Maharastri, Sauraseni, and Magadhi. Bloch 46 and Gawroński 41 argue against Prthyidhara in his efforts to prove the use of these Vibhāsās in the Mrcchakatika. Pischel " upholds him. In my opinion Bloch and Gawrenski go much too far. The Vibhāsās do group themselves into two classes, those based on Magadhi and those based on Sauraseni. but that is no reason at all for treating them as Magadhi and Sauraseni. There may well be some basis of truth in Prthvidhara's contention, even though his late analysis may not represent exactly the intention of the author of the play. The question cannot be answered until an exhaustive examination of all the manuscripts has been made; perhaps not even then.

Note the following passages:

Bharata 17, 46-7;

saurasenam samāšritya bhāsā kāryā tu nājake athavā chandatah kāryā dešabhāsā prayoktrbhih nānādešasamuttham hi kāvyam bhavati nājake

<sup>\*\*</sup> Vararuci und Hemacandra, p. 4.

<sup>41</sup> ZVH 44, 247-74.

<sup>43</sup> Grammatik, p. 24 ff.

Dašarūpaka 2. 66:

yaddešam nicapātram yat taddešam tasya bhāṣitam

Sāhityadarpaņa 6. 168:

yaddesyam nicapātram tu taddesyam tasya bhāsitam

We have no reason to question these statements which depict a perfectly natural state of affairs, so or to deny that characters on the stage may have spoken local dialects which had various admixtures of the standard dialects. The older grammarians made no effort to codify and fix these local and mixed dialects. Some of the later grammarians did try to codify even these. The argumentum exsilentio from Vararuci and Hemacandra cannot prove that such local and mixed dialects were not used in the dramas and that the statement of Bharata is valueless.

# 4. The Prakrit Passages as Preserved in our Manuscripts.

The Präkrit passages of our manuscripts are much more corrupt than are the Sanskrit passages. The most superficial comparison of the different versions of the same Präkrit passage in a number of manuscripts shows clearly the impossibility of accurately restoring the archetype in every detail. Many of the scribes had little or no knowledge of Präkrit and could not follow the meaning of what they were copying; many had only a smattering of the most commonly used dialects Mähäräṣṭrī and Saurasenī. There would be a natural tendency to level less familiar forms and dialects, to reduce them to the more common norms. On the other hand some scribes and commentators, who did not know Prākrit grammar, replaced the forms they found by forms which corresponded with the particular set of rules they happened to know.

Should we base our text wholly on the manuscripts, applying to them as careful a philological criticism as possible, or should we make a uniform text based on the grammarians, or rather of some grammarian? If we choose the second alternative, should we, in the case of the Prabodhacandrodaya, follow the rules of Vararuci in the Māgadhi passages, or the very different rules of Hemacandra which are later in date than Krsnamiśra?

<sup>\*\*</sup> Bhandarkar, Wilson Philological Lectures, pp. 75-8.

### 5. The Magadhi Passages in our Manuscripts.

The only Magadhi rules of the grammarians which are followed with any consistency at all by our manuscripts are the change of r to I, the nominative in e, and the substitution of hage for aham; to some extent also the rules for the change of s to s and for the vocative in a. This almost complete obliteration of the other Magadhi rules of Vararuci and Hemacandra is regarded by Pischel " as the result of manuscript corruption, of the tendency on the part of copyists to substitute the more familiar Sauraseni or Māhārāstrī forms for the much rarer Magadhi forms. The passages in Magadhi known to Pischel were few, and with the exception of the Mrcchakatika, the Mudraraksasa, the Venisamhara, and the Prabodhacandrodaya were all short. Important additions of long passages unknown to Pischel are given here in note 44. Pischel, in the course of his book, repeatedly emphasizes his supposition that those manuscripts which sporadically preserve traces of the more recondite Magadhi rules of the grammarians, especially those of Hemacandra, are to be regarded as good manuscripts. Such preservation of grammatical rules seems to be his chief criterion as to the goodness or badness of a manuscript.

Hillebrandt, in the preface to his edition of the Mudrārākṣasa (p. ii), triumphantly remarks that two or three of his South Indian manuscripts do give, in a few cases, forms which do correspond to the more recondite rules of the grammarians.45 46 Of all

<sup>\*\*</sup> Grammatik, p. 23. Pischel gives there a list of all the passages in our dramas which seem to be in Magadhi. The following important passages, unknown to Pischel, are to be added; Lüders, Bruchstücke buddhiatischer Dramen, pp. 34-42; Bhasa's Pascardru, p. 20 ff. (Vrddhagopālika, Gomitraka, and other herdsmen); Bhūsa's Kursubhāra, p. 78 ff. (Indra in disguise); Bhūsa's Prutijāāyaugandhardyasa, p. 41 ff. (Unmattaka); Bhāsa's Cērudotta (Sakāra); Bhāsa's Bālacarita, pp. 8 ff., 34 ff., 48 ff., 59 ff. (Nandagopa, Vrddhagopālika, Dāmaka, the wrestlers Cantra and Mustika, Sarvah); Mattacilasaprahasana (Trivandrum Sanskrit Series 55), p. 24 ff. (Unmattaka); Dhurmonijaya (edited by Gopal Narayen, Bombay), p. 50 ff. (Krostapála and two foot-soldiers); Moharajapardjaya (Gaskwad's Oriental Series 9), pp. 78 ff., 96 ff. (two footsoldiers, a man, Sûnă and Màri, and fisherman behind the scenes); Hommiramadamardana (Gaekwad's Oriental Series 10), p. 34 ff. (Mleccha king and his minister, a spy dressed as a Turuşka); Subhadrādāanamjaya (Trivandrum Sanskrit Series 13), p. 127 ff. (herdsmen); Tapatlaumvorana (Trivandrum Sanskrit Series 11), pp. 143 ff., 194, 203, 207. " See also Hillebrandt in Göttinger Nachrichten 1905, 430.

MSS, only B generally gives the Magadhi words in their characteristic shape, viz. with s instead of s, s; l instead of r: hage instead of aham, and the Nominative case ending in e, while it fails to exhibit some other more striking peculiarities. But N shows, at least once, that we have to write gasca, 126, 19; B has once agascadi, 101, 2, and thereby we are led to suppose that the disappearance of similar forms is due to the copyists, who are always inclined to substitute more popular forms for those of rare occurrence." Moreover, one Mysore manuscript (C 858) "gives the Magadhi in perfect accordance with the rules of the grammarians," but this manuscript is modern and the marginal addition of rules from Hemacandra proves that it has undergone a revision which brought the Magadhi passages into accord with the rules of Hemacandra. How can we be absolutely sure that the two forms in B and N really represent the preservation of archetypal forms? They may go back only to some revised manuscript, not to the archetype. It is hazardous to generalize from them alone. "But I do not think that the same holds good with respect to another MS, of the same library, (Mys.) No. 939, written in Telugu characters and exhibiting all the characteristic features of the Magadhi dialect to an unexpected extent." "I do not mean to say that the influence of grammatical works is quite excluded, but the fact that in one original manuscript true old Māgadhī forms do appear, seems to me at least worth being taken notice of." Hillebrandt gives no date for this manuscript, and there is no proof that it has not undergone a process of revision. What does he mean by calling it an "original manuscript"? How does he know that Hemacandra and other late grammarians really give us "true old Magadhi forms "? That is precisely the point which needs to be proved. The very fact that the rules of Hemacandra are followed with such great regularity in this particular manuscript while all the other manuscripts in which any of the more recondite Magadhi forms do occur show them only sporadically makes Hillebrandt's contention very doubtful to say the lesst.

## 6. Magadhi in the Prabodhacandrodaya.

Of my manuscripts of this drama only two, se both southern,

<sup>&</sup>quot;K which is number 4138 of the Catalogue of Sanskrit Manuscripts in the Library of the India Office. It dates from the second half of the

show the change of a to s. The Madras edition, which is based on southern manuscripts, has a pretty consistently in the speeches of the Digambara, but writes s in the speeches of the Pupil and of the Messenger. There is nothing to show how much is due to revision by the editor. K originally had only s, but someone deliberately went through the manuscript and revised the Magadhi passages, correcting every Magadhi s that his eve hit upon to s. Some escaped, but as a proof of the mechanical nature of the process s in Saurasenl passages has in some cases been corrected to \$. Further, my manuscripts of the commentary of Subrahmanya 47 show that this commentator revised the Prakrit passages to the norm of some grammarian. He frequently quotes Prakrit rules. All those which I have been able to verify agree with the rules as given by Trivikrama and his followers. It would seem that in southern India much study was devoted to Prakrit grammar and that the Präkrit passages of our dramas were subjected to a thorough revision there. When so-called correct Magadhi is found in southern manuscripts I am very suspicious of a deliberate revision. In copies made from these manuscripts by ignorant scribes a process of levelling might again take place. There are examples of such levelling in the manuscripts of Subrahmanya. A so-called correct old Magadhi form is just as likely to go back only to a revised manuscript as to the archetype. It is suspected, and with good reason, that in general the later manuscripts give better Prakrit, that is to say better from the point of view of the rules of Hemacandra and other grammarians, than do the earlier manuscripts.48

It seems to me more than a mere coincidence that the manuscripts of the Prabodhaeandrodaya show much the same phenomenon as do the manuscripts of the Mudrārākṣasa. Only a few of the southern manuscripts make even an approximation to the rules of Hemacandra and his followers, and in the case of each drama at

eighteenth century and is written in Devanagari. L which is also an India Office manuscript (Burnell 273). Dated Samvat 1862 and written in Telugu characters.

<sup>&</sup>quot;Manuscript 4B-7-18 of the Madras Government Library (12560 of the Descriptive Catalogue). Manuscript 11a of the Mysore Government Library.

<sup>\*\*</sup> Hertel ZDMG 64, 634,

least one of these manuscripts can be proved to have been revised deliberately. In the case of the Prabodhacandrodaya too a commentator systematically revised the Māgadhī to correspond to the rules of some grammarian. Recent manuscripts which are in accord with Hemacandra and his followers prove nothing. I would like to see a really old manuscript in such accord, especially one from northern India.

My manuscripts of the Prabodhacandrodaya taken as a whole do have in the Magadhi passages in a majority of the cases I for r. the nominative in e, hage for aham, and occasionally the vocative in a, but except in the case of two southern manuscripts (and the Madras edition) nowhere do they show the change of s to s, and nowhere do they (including even these southern manuscripts) show any trace of the more recondite rules of Hemacandra. Occasionally & is found but only as the preservation of a Sanskrit &. Such mechanical preservation of Sanskrit & proves nothing about Magadhi é. Sauraseni is the prevailing dialect in the Prabodhacandrodaya and there would naturally be a tendency in the course of repeated copying to supplant the more unusual Magadhi forms by the better known and more familiar Sauraseni ones. But why should every s be conformed to Sauraseni s by the copyists while in most cases I and s are preserved? This can hardly be due to a mere chance. Surely I and e are just as repugnant to Sauraseni as is s. I cannot explain the discrepancy by any process of mere manuscript corruption. Is it scholarly to apply the rule for the change of s to s and all the other rules of Hemacandra against the unanimous manuscript tradition? The greatest uniformity is shown in the writing of I. There is more hesitation in the matter of e and o. In a few places practically all the manuscripts have o. and o may be the correct reading. In most places practically all the manuscripts have e. Especially strong is the agreement in the case of certain words such as ese, bhattake, läule, pulise, elise. In the case of the word bhikkhull there is great uniformity in writing A, but in the case of some other words like mukkha there is uniformity in writing a. Such a state of affairs can hardly be explained by any mechanical process of manuscript corruption. Why should manuscript corruption be so completely successful in some places, while in many other places it failed completely to change the Magadhi form to Sauraseni?

## 7. Māgadhī in the Lalifavigraharājanāṭaka.

Much has been made of the fact that fragments of a drama proserved on stone at Aimere 49 reflect with considerable accuracy the Magadhi rules of the grammarians. It is uncertain whether the author knew the rules of Hemacandra or not.30 At any rate he knew some set of rules which gave the Magadhi in much the same form given by Hemacandra. In the treatment of s in consonant groups he agrees with Namisadhu, not with Hemacandra. Pischel remarks: 11 "Trotz aller Fehler sind diese Bruchstücke von grösster Wichtigkeit für die Mägadhi, die nur hier uns in einer Gestalt überliefert ist, die mit den Regeln der Grammatiker übereinstimmnt." Konow says: 32 "Die Formen unserer Inschrift sind vor allem von dem grössten Interesse für die Mügadhi, wo bis jetzt die Verwirrung am grössten war, und sie beweisen hier unwiderleglich, das die Regeln der Grammatiker nicht aus der Laft gegriffen sind." The rules of the grammarians, to be sure, are not all based on imagination, but this inscription proves nothing concerning a unified dramatic usage in the case of Magadhi or concerning the universal validity of the rules of the grammarians. It proves only that this particular author conformed his Magadhi to the detailed rules of some grammarian. It does not prove that the Magadhi passages of all our manuscripts have been fundamentally changed by a process of manuscript corruption, and that they, in the twelfth century or earlier, conformed to the rules of any of the grammarians. Each author must be judged on his own merits.

# 8. Māgadhī in the Lafakamelaka.

In this twelfth century drama by Samkhadhara, \*\* a Digambara monk appears on the stage (pp. 12 ff., 25 ff.). The editor used three manuscripts. He consistently writes l, gives hage for ahads, in some cases the vocative in a, gives both s and o in the nomina-

<sup>\*\*</sup> Edited by Kielhorn in Göttinger Nachrichten 1893, 552 ff. Cf. Pischel, Grammatik, p. 8.

<sup>\*\*</sup> Cf. Konow, Karpiramanjari, p. 204; Pischel, Grammatik, p. 6; Gawronski, ZVS 44.281.

<sup>21</sup> Grammatik, p. 9.

<sup>&</sup>quot; GGA 1894. 481.

<sup>\*\*</sup> See Peterson, Second Report, pp. 57, 122 and Third Report, p. 21. The drams is edited in the Kavyamala 20 (1889).

tive, but never writes s and never follows any of the other rules of the grammarians. He reports no manuscript variants on these points. This edition reflects almost exactly the same state of affairs found in my manuscript of the Prabodhacandrodaya. In default of a really critical edition the evidence cannot be pressed too far.

## 9. Māgadhī in the Amrtodaya.

On page 66 of the Kävyamälä edition of this drama a Jain monk appears. The editor varies between l and r (mostly l), gives the nominative in e, the genitive in aha, varies between s and s and s, and once gives pudde for putrah, but gives no indications of the other more technical rules of the grammarians.

## 10. Magadhi in Bhasa.

In the Pratijnavaugandharavana and the Carudatta the text usually has I and s and e, but s and o are given occasionally. In the Balacarita and the Pancaratra the text has I and g and o for the most part, but s and s and r are given occasionally. In the Karnabhāra the editor gives s and e in the speeches of Indra in disguise, but varies between r and I. In the speeches of the wrestlers Canura and Mustika (Balacarita, p. 59) l and one locative singular in ammi in a verse are the only traits which distinguish the language from Sauraseni. Printz (Bhāsa's Prākrit, p. 6) decides, with some hesitation, to treat the first two groups of passages together as representing one dialect. He calls the last two groups of short speeches Ardhamagadhi, but "nur als Notbehelf." If any reliance at all is to be placed upon the manuscripts three or four different dialects were intended. It is clearly impossible to reduce the Prakrit of Bhasa to the grammatical norms of Sauraseni and Magadhi. It seems certain that mixed dialects or Vibhāsās were intended by the author. There is no trace of the peculiar rules of Hemacandra discussed above.

In spite of the strong evidence which has been adduced in favor of the authenticity and early date of these dramas I am not yet absolutely convinced of its validity. The arguments drawn from the Präkrit passages by Lesný (ZDMG 72, 203-8), Sukthankar (JAOS 40, 250-9 and 42, 62-4), and Printz (Bhāsa's Prākrit, pp. 5-6) are very weak. The editions are based on scanty manuscript material and all of it is southern. We need much more work on

the southern Prakrit grammarians, on the southern manuscripts, and on the usage of southern authors before we can be certain that any particular form is really proof of an early date. I suspect that many so-called early forms were in good use in the south at a comparatively late date. Note in connection with Sukthankar's list the following "archaisms" picked from some of the later texts in the course of a casual reading; furam Tapatisamvarana 35, 5, 77, 2, 78, 5 etc., Subhadradhanañjaya 32, 3, 83, 5, 134, 8, 162, 3, 170, 4 etc., Mattavilāsaprahasana 6, 11, 19, 11; and in the neuter plural is used frequently in the Tapatisamvarana, the Subhadradhanañiava, and the Mattavilasaprahasana 16, 8; ahmāam Mattavilāsaprabasana 9, 1, 19, 14, 24, 1 (amhanam 26, 3); ahake Tapatisamvarana 143, 2 and Subhadradhananjava 134.3,8; gacchiya Hammiramadamardana 34.17; kalia or karia Tapatisamvarana 204. 4 and Subhadradhananjava 15, 6, 80. 8, 18, 9, 107, 3, 135, 9; kissa Mattavilisaprahasana 27, 14; dma Tapatisamvarana 32. 4. Subhadradhanañjava 57. 6. In the Trivandrum edition of the Nagananda (p. 111) and the Punjab University edition (p. 63) karia is given in place of kadua of Paraniape's edition (p. 29). This list could be extended greatly, I think, by a careful search of southern editions and manuscripts. Is the manuscript evidence really sufficient to prove that the forms in the so-called Bhasa listed by Sukthankar are really "archaisms"? It seems to me that the present material is too scanty and uncertain to warrant any categorical conclusions. Note also the Magadhi Apabhramsa forms in the Pancaratra, p. 22 referred to by Printz. p. 27.

### 11. Mügadhi in the Hammiramadamardana of Jayasinhasüri.

This drama was written in Gujarat between Samvat 1276 and 1286. The edition is based on a very old palm-lenf manuscript dated Samvat 1286. This manuscript, if not actually the original, is so near to the original that very little manuscript corruption can have taken place.

The text (Gaekwad's Oriental Series 10) gives hage, but varies between r and l, e and o, and s and ŝ. It gives tth for stha, kk for sk and kkh for ks. Once (p. 34) it gives st (bhasta for bhatta) and once (p. 36) sk for ks (laškijjate for raksisyate). It frequently has k for g, t for d, p for b etc. These are peculiarities of Paisacl. In the speeches of the spy it consistently gives l and e

but varies between s and s. In some words it has g for k. Once it has the genitive plural in āham and once the locative singular in ammi. It must be remembered that the drama comes from Gujarat where Jainism and the authority of Hemacandra were strong. It is very significant that such an old manuscript of a drama by an author who lived in a part of the country where Hemacandra's influence must have been very strong does not follow the grammatical norm of Hemacandra more closely. The text merits careful study. Manuscript corruption is in this case a most improbable explanation. It seems clear to me that we have here conclusive proof that the author really intended to use mixed dialects or Vibhāṣās. His Māgadhī cannot be reduced to the norm of Hemacandra. Especially noteworthy are the traces of Paiṣācī in the language of the mleccha king Mīlacchrīkara and of his minister Gorī Isap.

#### 12. Māgadhī in the Moharājaparājaya of Yaśahpāla.

This drama (Gaekwad's Oriental Series 9) was written in Gujarat between 1229 and 1232 A. D. One of the manuscripts seems to date from the middle of the thirteenth century. As in the case of the Hammīramadamardana the manuscript is not far removed in date from the actual date of the composition of the drama. The edition has I and hage, but varies between s and i, and between e and o. It has tth for sth, ech for ech, and tth for st against Hemacandra, but repeatedly it gives the form bhasfake. On p. 97 it has hitapakani, a form prescribed by Hemacandra (4.310), by Mārkandeya (19.11), and by other grammarians for Paišācī. It also has the change of k to g and of d to t. The Prākrit of this drama too is worthy of careful study. Here too manuscript corruption is an impossible explanation.

#### 13. Magadhi in Some of the Other Dramas.

The Trivandrum edition of the Subhadradhananjaya of Kulasekharavarma, written in the south between the tenth and the twelfth centuries, and based entirely on southern manuscripts, gives i, s, a in the vocative, e in the nominative, and ahake. No important manuscript variants are reported and none of the recondite forms of Hemacandra and his followers are found.

The Trivandrum edition of the Mattaviläsaprahasana which was

written in the seventh century A. D. by some king of the Pallava dynasty has  $\delta$ , l,  $\sigma$  (sometimes  $\sigma$ ), but gives no indication of the other rules of Hemacandra.

The Trivandrum edition of the Tapatisamvarana of Kulašekharavarma has I, s, e and ahake. The other rules of Hemacandra are not followed.

#### 14. Magadhi in the Quotations of Hemacandra.

Hemacandra (4, 302) gives examples of Magadhi to exemplify his rules. He quotes the Venisamhars, the Mudraraksasa, and the Sakuntelä.\*\* Bloch remarks: 12 "Textkritisch ist der wert dieser citate äussert gering: Hem, citierte meist nur aus dem gedächtnis und fast überall, wo er von unseren has, abweicht, sind seine lesarten die schlechtern." Pischel remarks: 58 "He, fand diese Eigenheiten nach 4, 302 in Mudrar., Sak., Venis., wo unsere Handschriften sie nur zum kleinen Teile haben, und die Handschriften He,'s sogar an dieser Stelle dagegen fehlen." It is by no means certain that these quotations in Hemacandra have any decisive value for the problem now under discussion. Hemacandra may have used manuscripts, or quoted from memory from manuscripts which had already undergone more or less revision, or, as many of the commentators have done, he may have assumed that the forms which he found were wrong and may have revised them himself to fit his rules. It cannot be assumed as certain that a form as quoted by Hemacandra really represents the archetype. Even if he were right in the matter of the three dramas quoted it does not follow that his authority is to be extended to all other dramas.

#### 15. Magadhi in the Fragments of Buddhist Dramas Edited by Lüders.

Recently fragments of Buddhist dramas were discovered in Turkestan. They are dated by Lüders st in the first or second century A. D. Three Präkrit dislects are employed. One is an

<sup>\*\*</sup> Pischel, ad loc.

<sup>\*\*</sup> Vararuci und Hemacandra, p. 5.

<sup>\*\*</sup> Grammatik, p. 23.

<sup>\*\*</sup> Bruchstücke buddhistischer Dramen, Berlin, 1911. Asvaghosa was the author of one of the dramas and may have been the author of all of them, although that has not been proved definitely. See Lüders, op. oit., p. 65 and Sitzungsberichte Berl. Akad. 1911, p. 409.

old form of Sauraseni. The second is characterized by the change of r to I, the change of s to s, and the nominative in e. Lüders names this Alt-Magadhi. The third is characterized by the change of r to I, and by the nominative in s, but s does not change to s. Lüders names this Alt-Ardhamagadhi, and remarks (p. 40) that this dialect is very close to the dialect in which most of the Asoka inscriptions are written. In the case of these fragments it can be no mere chance, no mere process of manuscript corruption which has brought about the consistent difference of treatment in the same manuscript. A differentiation of dialects was clearly intended by the author. Curiously enough this third dislect corresponds closely in essentials to the language of the so-called Magadhi passages of the Prabodhacandrodava, at least if any weight is to be laid on the consistent manuscript tradition in the case of that drama. Note especially that none of the recondite rules of Hemacandra are observed in these fragments. There is here positive proof that more than one form of Magadhi was used in the dramas at an early date. I think that such a usage was continued in the later centuries.

#### 16. What is Ardhamāgadhi?

- Vararuci, who treats only the four standard dialects Māhārāṣṭrī, Paiśācī, Māgadhī, and Saurasenī, does not mention Ardhamāgadhī.
- 2. Hemacandra adds to these Cülikapaisācika and Apabhranisa. But in 4, 287 he remarks that Ardhamāgadhī (by which he means Ārṣa, the language of the canonical books of the Svetāmbara Jains) follows its own rules and not those which are given for Māgadhī. Further, in 1, 3 he remarks that in Ārṣa all the rules of his grammar are subject to exceptions and in 2, 175 says that the preceding restrictions do not apply to Ārṣa since in that dialect everything is permitted.<sup>33</sup> The followers of Hemacandra do not deal with Ardhamāgadhī.<sup>23</sup> Pischel remarks (note on Hemacandra 4, 287);

#### 3. Märkandeya 1. 5 says:

Der name Ardhamägadhi hat offenbar zu verschiedenen zeiten verschiedene dialecte bezeichnet."

<sup>&</sup>quot; Pischel, Grammatik, pp. 13-14.

<sup>13</sup> Pischel, Grammatik, p. 2.

#### mahārāṣṭrī šaurasenī prācyāvantī ca māgadhī iti pañcavidhā bhāsā yuktā na punar aṣṭadhā

and continues in the commentary tenaiva śaurasenyā adūratve māgadhy evārdhamāgadhī ity uktatvāt. dākṣiṇātyāyās ca lakṣaṇā-karaṇāt. bāhlīkyās ca rephasya latvamātrena bhedāt. āvantyām evāntarbhāvāt iti bhāvaḥ. Ardhamāgadhī is excluded as being only a Māgadhī which is not far different from Saurasenī and it is not reckoned among the Vibhāṣās. But evidently some writers did class it as a bhāṣā. In 12.38 Mārkandeya at the end of the section on Māgadhī says śaurasenyā adūratvād iyam evārdhamāgadhī. Mārkandeya's description of Ardhamāgadhī exactly fits the dialect which I think is used in the Prabodhacandrodaya.

- 4. Kramadiśvara has the statement i māhārāṣṭrīmiśrārdhamā-gadhī and Lassen (pp. 393, 401) reports from a bad manuscript a brief passage dealing with Ardhamāgadhī. If this jumbled passage of rules and examples really is intended as a description of Ardhamāgadhī that dialect is marked in Kramadiśvara's estimation by the following peculiarities:
  - 1. The change of a and a to d.
  - 2. The change of r to t.
  - 3. The gerund in dani.
  - 4. The nominative plural in aku.
  - 5. The substitution of hake for aham.
  - 6. The change of sta and sthe to tthe.
  - 7. citthadi for zigthati.
  - 8. The past passive participle in mid.
  - The optional endings e or i in the nominative singular. In the one example given makátāo the ending is o.

<sup>\*\*</sup> Pischel, Grummatik, p. 32 and De Grammaticis Pracriticis, pp. 1-2 remarks that Märkandeya alone of the Präkrit grammarians quotes Bharata, See 12.38 comm. For Märkandeya's treatment of the Bhāṣās see also Grierson, JRAS 1018, 493-4.

Elassen, Institutiones, pp. 17, 393, 401. For Kramadiivara and his sources see Pischel, De Grammaticis Pracviticis, p. 16 and Grammatic, p. 41; Bloch, Vararuci und Hemscandra, pp. 28-9; Zachariae, BB 5.26-7. It is by no means certain that he followed the rules of Hemscandra or even that he is later than Hemscandra. He does seem to have followed Vararuci pretty closely, but there are discrepancies which prove that he had other sources too. In his brief statement with reference to Ardhamāgadhi he is clearly independent of both Vararuci and Hemscandra since neither describes that dialect.

At any rate by Ardhamagadhi he does not mean the Arsa of the Jains.

- 5. Rāmatarkavāgīša in his Prākṛtakalpataru <sup>42</sup> says that Ardhamāgadhī is not very different from Māgadhī, but in opposition to Mārkandeya he classes it among the Bhāsās as follows: Māhārāstrī, Saurusenī, Māgadhī, Ardhamāgadhī and Dākṣinātyā.
- 6. Peterson <sup>13</sup> describes as follows a set of anonymous Prâkrit Sûtras: "The Prâkritasûtra which follows is in two parts, one treating of Prâkrit generally, with the exception of the Paiŝāci dialect or a Paiŝāchīvarjaprākritasûtra, the other dealing separately with the Saurasenī dialect, Māgadhī in its two varieties, and the Paiŝāchī and Apabhramsa tongues." Is Ardhamāgadhī one of the two kinds of Māgadhī?
- Bharata (17.48) remarks: māgadhy avantijā prācyā śūraseny ardhamāgadhī bāhlīkā dāksinātyā ca sapla bhāsāh prakīrtilāh.<sup>64</sup>
- The Sähityadarpana (6.160) names Ardhamagadhi as a dialect spoken by cetain definite characters on the stage.
- The Präkṛtacandrikā of Kṛṣṇapaṇḍita (in Peterson, Third Report, p. 346) has in a corrupt passage:

māhārāstrī tathāvantī šauraseny ardhamāgadhi bāhlīkī māgadhī caivety astaitā dāksiņātyajāh.

Pischel remarks (p. 2) that all the grammarians regarded Māhārāṣṭrī, Ṣaurasenī, Māgadhī, and Paišācī as Prākrit languages. Beyond that opinions differed. There was much dispute as to which dialects were to be considered as Bhāṣās, which as Vibhāṣās, \*\* which as Apabhramsas, and which as merely mixed dialects without marked peculiarities of their own. But there is ample evidence to prove that some authorities even considered Ardhamāgadhī to be a Bhāṣā, and there is certain proof that their

<sup>&</sup>lt;sup>43</sup> Lassen, Institutiones, pp. 20-1. See also Muir, OST II. 346 and Autrecht, Cat. Oxon., p. 181.

<sup>&</sup>quot;Third Report, pp. 21, 340.

<sup>\*\*</sup> Quoted by Prihvidhara to Mrcchakatikā (ed. Sarmā Sāstrī and Parab, p. 1). Lalla Diksita quotes the same (Godabole's edition, p. 1).
\*\* Por a full account of these see Grierson, JRAS 1918, 489 ff.

Ardhamagadhi did not mean the Ardhamagadhi of the Jains. It seems to me certain that Markandeva and the other authors who recognize Ardhamilgadhi refer to a dialect which was employed on the stage. In spite of its exclusion by Vararuci, Hemacandra and others it may have been widely used in the dramas for certain characters.66 All that it is allowable to infer from the grammarians is that some of them did not regard Ardhamagadhi as a Bhāsā, not that they denied its use in dramatic works. The fact that Markandeva felt it necessary to mention Ardhamagadhi and to exclude it proves that some authorities even regarded it as a main dialect. The passage of Bharata proves that at one time it was employed in dramas. Whether the later passages which referto it merely copy Bharata or whether we are to infer from them that even at a later date it was still employed in dramas is uncertain. I incline emphatically to the latter view. Pischel makes the mistake of assuming that the Ardhamagadhi of the grammarians (in spite of the statement, quoted above, that the term Ardhamagadhi referred at different times to very different dialects) must correspond exactly to the Ardhamagadhi or Arsa of the canonical books of the Svetämbara Jains. This is certainly too narrow a view.

<sup>44</sup> Bloch, Vararuci und Hemacandro, p. 4 and Gawroński, ZVS 44, 247 ff. argue against Pischel, Grammatik, p. 24 ff. that Priheidhara is wrong in his assumption that seven dialects are used in the Mrechakatika. Prthytdhara's somewhat confused account is as follows (Sarmā Sastri and Parab. p. 1): nājakādau bahuprakāraprāketaprapašcesu catasra era bhāsāk pravnigante inurasenyavantikapracydmigadkyah, apabhramiuprapancenu cutara era hadyak prayujyante inkaricandalliabaridhakkadeliyak. He thinks that all of these are used in the Mycchakatika except Sahari. Then he quotes Bharata (17.48) to the effect that there are seven bhasas in Prükrit, namely Magadhi, Avantija, Pracya, Sauraseni, Ardhamagadhi, Balhika, and Daksipatya. Then he remarks that Maharastri etc. are used in Kāvyas and continues opabhremie inkārābhiracāndālainbaradrāvidodrajāh hinā vanecarānāti ca vibhānāh supta kirtitāh (Bharata 17, 49 with slight variations). He quotes Bharnta but follows the other division into four baseds and four forms of Apabhramsas. We cannot trust the accuracy of his distribution of the dialects, but there may be a large amount of truth in his general contention, even though he schematically tries to make the passages of the drama fit the definitions of the authority which he follows. Lalla Dikaita (Godabole's edition, p. 1) agrees verbally with Prihvidhara.

Hoernle remarks; et "Ardhamagadhi is described as a mixture of Magadhi and Sauraseni (or Maharastri); it follows that it must have been spoken to the west of Magadhi, that is, in the Banaras district; it corresponds, therefore, to the Bhojpuri or the E. H. proper." Similarly Grierson as argues that Ardhamagadhi was a local dielect spoken in the district around Allahabad where Sauraseni and Magadhi overlapped. Recently he has repeated the same theory much more emphatically " in his statement that Ardhamagadhi was a mixed language spoken in a district corresponding to the present Oudh, and that Eastern Hindi is descended from it. Senart emphatically denies to and Pischel doubts 11 that Ardhamāgadhī was ever a local dialect. Gawroński savs 12 that the grammarians are too schematic, that they distinguish too many dialects, but that they also deny dialects which we know existed: "So ist z. B. nach Märkandeva Ardhamägadhī - Māgadhī, natürlich falsch." He makes the mistake of assuming that Markandeva must have mean by Ardhamagadhi the language of the canonical books of the Svetambara Jains. It is, however, clear that Markandeva used the word in a very different sense from that and that he referred to a mixed dialect used on the stage. His statement is perfectly correct.

It is important to note that all the inscriptions of Ašoka except those in the extreme west have l, e, and s. These same features are found in one of the dialects employed in the early dramatic fragments edited by Lüders \*\* and. if I am not mistaken, in the language of the Digambara monk in the Prabodhacandrodaya.

<sup>\*\*</sup>Bruchstücke buddhistischer Dramen, p. 40. Lüders points out the similarity between the dialoct of these fragments and the inscriptions of Asoka, but (p. 42) relying on the authority of Pischel states that Ardhamāgadhī was not employed in the later dramas. I am convinced that it continued to be used.

This dialect which has I and e but uses a and which I would name Ardhamagadhi in the broadest sense of the word, is spoken in the Prabodhacandrodaya by the Digambara monk, by the Messenger from Orissa, and by the Pupil of the Carvaka. I can make no distinction between the dialects of these three characters as they are reflected in our present manuscripts. They are all heretics. We should naturally expect Svetämbara Jains in the dramas to speak Ardhamagadhi in the narrow sense of the word, and possibly by a natural extension, the Digambaras and other heretics might be made to speak the same dialect. But there is no case of the use of Ardhamilgadhi in this restricted Jain sense of the word in our dramas. No Svetāmbara Jains appear on the stage. The early literature of the Digambaras is so little known that not even a guess may be hazarded as to the approximation of its language to the Ardhamagadhi of our dramas. May it not be that the Hindus picked out for dramatic purposes a few very noticeable characteristics of the Jain dialects and were satisfied with that as giving enough flavor to the speech of the despised heretics without trying to copy all the details of their language? How much familiarity did the writers of drama actually have with the Jain books? The language of the Jains was not treated at all by the Prakrit grammarians. I doubt whether the dramatists made any effort at all to approximate to the language of the Jains. I am inclined to think that they merely followed an old convention that low characters should speak local or mixed dialects (Vibhāṣās) and that in the language of such low characters no effort was made to represent accurately the language of any particular locality or of any particular group such as the Jains. A few general characteristics were used to color the language.

## 17. What Characters Speak Magadht and Ardhamagadhi According to the Grammarians and the Treatises on Dramatic Theory?

Bharata (17.48-9) names seven Bhāṣās and seven Vibhāṣās. Then (17.50 ff.) he gives directions for the use of these dialects. The distribution is based partly on the locality from which the character comes, partly on his occupation. Then (17.58 ff.) he continues with the statement that one should employ e frequently in the speech of those who live in the region between the Ganges and the ocean, a frequently in the speech of those who live in the

region between the Vindhyas and the ocean, c frequently in the speech of those who live in Surastra, Avanti, Vetravati, and the North, u frequently in the speech of those who live in the Himalayas, in Sindh, and in Sauvira, t in the speech of those who live in Arbuda and on the banks of the river Carmanvati. What is the meaning of this curious passage? Pischel, Grammatik, p. 24 gives it up with the statement "damit ist nichts anzufangen."

The Daśarūpaka (2, 66) and the Sāhitvadarpana (6, 168) repeat the statement of Bharata (17, 46-7) that characters should be made to speak the language of the part of the country from which they come. It is impossible at present to estimate the exact value of these statements, but it seems to me that they represent a perfectly natural state of affairs and that they are not based on purely artificial speculation. Why press the rules of Vararuci, Hemacandra and other grammarians and discard entirely the statements of those writers who deal directly and in detail with the theory and practice of the drama? Why must each of the Prakrit dialects be regarded as rigidly uniform? There were doubtless many varieties of Māgadhī, Saurasenī, and Paišācī. It was only the weight of some authority and tradition political, religious or grammatical which could lead to a greater standardization of dialect as in the case of Pali and the Jain dialects. Eventually the loose dialects used on the early stage were standardized in somewhat different ways by different grammarians. The later writers would naturally use fewer dialects and be more consistent in their treatment of them, but even for the later dramatists there can be no talk of absolute uniformity.

Muir's remark: 78 "The rules here given are quite artificial, as it would be absurd to suppose that different classes of persons living in the same locality, as most of the dramatic persons would do, could each speak different dialects, and that, too, dialects of other and perhaps distant provinces" is far from the mark. Probably in most dramas only one or two dialects would be used, but in such dramas as did bring onto the stage men from other localities or men from lower walks of life it is perfectly natural to suppose that their speech would be differentiated in some way. There is no need to assume a complete copying of the speech of other and distant localities. As Bharata suggests even the use of a single letter

<sup>72</sup> Original Sanskrit Texts II. 51.

would be enough to suggest a strauge dialect and to impart an individual flavor. Further, in the large cities where the dramas were produced there would naturally be men from many different parts of the country. City life in ancient India was much more cosmopolitan than is usually assumed. Moreover the minor dialects used on the stage were practically uniform in grammatical structure and vocabulary. They are, on the whole, differentiated merely by differences of pronunciation of single letters or groups of letters.

As to the use of Magadhi and Ardhamagadhi Bharata (17, 50) has:

mägadhi tu narendrāņām antahpuranivāsinām 74 ceļānām rājaputrāņām šresthinām cārdhamāgadhi.

Dašarūpaka (2.65) has: pišācātyantanicādau paišācani māgadham tathā.

Sähityadarpana (6. 160) has:

atroktā māgadhī bhāṣā rājāntahpuracārinām ceļānām rājaputrāņām šresthānām cārāhamāgadhī. 72

Kohala apud Mārkandeya (12.1) says that Māgadhī is spoken by Rāksasas, Bhiksus, Ksapanakas, Servants etc. 78

Mārkandeya (12.38 commentary) remarks rākṣasiśreṣṭhiceṭānukarmyāder ardhamāgadhīti bharataḥ. I cannot find the quotation in Bharata.

The Prakṛtacandrikā (Peterson, Third Report, p. 348) has:

mägadhi rāksasādinām antahpuranivāsinām cetānām rājaputrāņām śresthinām cārdhamāgadhi.

The Sarasvatikanthābharana (2.9) has:

<sup>&</sup>quot;\* For definitions of "those who live in the women's apartments " see Pischel, Grammarik, p. 22.

The commentator (Nirnayanigara Press edition, p. 316) has: sta evanarpharapharadau rajaputrosyapi ramacandrader uttamakaryakaritema samakrienaisa vyasaharo curnitah, na te ardhamagadhya. The Prakriacandrika (Peterson, Third Report, p. 348) has a stanza very similar to those of Bharata and the Sahityadarpana.

<sup>&</sup>lt;sup>18</sup> See Pischel, Grammatik, p. 22. For Kohala see Pischel, Grammatik, pp. 32-3; Weber, Indische Studien S. 273 and Indische Streifen 2. 59.

devādyāh samskrtam prāhuh prākrtam kinnarādayah paišācādyam pišācādyā māgadham hinojātayah."

The Sadbhāṣācandrikā of Lakṣmīdhara (Bombay Sanskrit Series edition, p. 5) has:

chadmalingavatām tadvaj jainānām iti kecane adhame madhyame vāpi šaurasenī prayujyate dhīvarādyatinīcesu māgadhī viniyujyate raksahpišācanīcesu paišācīdvitayam bhavet apabhramšas tu candālayavanādisu yujyate nātakādāv apabhramšavinyāsasyāsahisnavah anye candālakādīnām māgadhyādi prayunjate sarvesām kāranavašāt kāryo bhāsāvyatikramah

The Prakṛtamaṇidīpa of Appayyadīkṣita (copy of Mysore manuscript, p. 40 b) describes Māgadhī as kirātādinikṛṣṭajātiprayojyā bhāsa.

The Rasarnavasudhākara (Trivandrum Sanskrit Series 50, 299) quotes the same stanzas given above from the Saḍbhāṣācandrikā.

Rāmadāsa in his commentary to the Prabodhacandrodaya says: \*\*
bhiksuksapanakarākṣasānlaḥ puravāsiceļakādīnām māgadhīty uktam anyatra.

In some authorities a gradual schematization seems to have taken place by which Ardhamägadhi was excluded from the dramas, and by which Mägadhi was definitely prescribed for all characters of low rank. This can hardly reflect the original usage. It bears all the marks of a later schematic simplification.

In some authorities the idea of Ardhamagadhi and of other local and mixed dialects persisted. Most dramas doubtless employed only the three main dialects and the use of these was more and more conventionalized according to the rank of the characters, but it is very probable that many of the old dramas and some of the later ones did make use of local and mixed dialects. We must judge each writer on his own merits, and in default of other evi-

<sup>&</sup>lt;sup>10</sup> Kavyamala edition. Cf. Pischel, Grammatik, p. 23. In an example of Magadhi given to 2.17 l, e, and i are printed. The same stanza concerning the use of the dialects is given in the Alamkarašekhara (Kāvyamalā edition, p. 5) with slight variation.

<sup>&</sup>quot;Nirnayasagara Press edition, p. 100. Exactly the same quotation is given by Ganesa in his commentary on the same play (Harvard manuscript 1784, folio 21 recto).

dence the criterion must not be Hemacandra but the manuscripts of each particular drama even though a process of levelling may have taken place in them. Each commentator of course, if he made any pretence to erudition, would try to make the dialects fit into the norm of the technical books on dramatic theory which he himself happened to know. The authority of the late commentators can be of little value for an estimation of the original usage of the author himself.

Bharata gives no definite statement as to the dialect to be employed in the case of Buddhish and Jain monks. He has only (17, 34-5):

> vyājalingapratisthānām śramanānām tapasvinām bhiksucakravaranānām prākrtam samprayojayst.

But later in his more detailed description of the Bhasas and Vibhasas he makes no mention of these characters and gives no directions concerning the particular dialect which they are to speak. Kohala prescribes Magadhi for Buddhist and Jain monks. Ramadasa and the Sadbhasacandrika also find some authority for Magadhi as the dialect to be used by Jain monks. In the Prabodhacandrodaya the Jain monk, the pupil of the Carvaka and the messenger from Orissa speak Prakrit while the Buddhist monk, the Carvaka and the Kāpālika speak Sanskrit; in the Latakamelaka the Digambara speaks Präkrit; in the Mattaviläsaprahasana the Kapāli speaks Sanskrit and the Buddhist monk speaks Prākrit; in the Moharajaparajaya the Kapalika and the Nastika speak Prakrit; in the Amrtodava the Buddhamarga speaks Sanskrit while the Arhatsiddhanta and the Mahavratakapalika speak Prakrit; in the Mrcchakatikā the Bhiksu speaks Prākrit; in the Mudrārāksasa the Ksapanaka speaks Prakrit; in the Vidvaparinaya (which is all in Sanskrit) the Lokavatasiddhanta, the Buddhist System, the Vivasanasiddhanta, and the Somasiddhanta speak Sanskrit. cases the Prakrit is Magadhi or some form of Magadhi.

#### The Dialects of the Prabodhacandrodaya According to the Commentators on that Drama;

So far as my manuscripts go I can make no clear distinction between the language of the Jain monk and that of the Messenger from Orissa and the Pupil of the Cārvāka. Subrahmanya remarks that the Carvaka speaks Sanskrit while his pupil speaks Prakrit because, as compared to his pupil, the Carvaka is of higher rank. In support of this assertion he quotes from the Sahityadarpana as follows:

> guņapradhānabhāvena samājo yadi nīcayoh pradhānah samskelam brūyāt prākelam tv itaro vadet.

I have not been able to find this quotation in the text of the Sahitvadarpana. It is curious that the heretic Buddhist and the heretic Kāpālika both speak Sanskrit. Surely the Kāpālika could not have been regarded as a higher character than the Digambara Jain and have been made to speak Sanskrit for that reason. Clearly Krsnamiśra was not following rigorously the rule of some authorities that all low characters should be made to speak Magadhi. During the later period of Buddhism in India the Buddhists used Sanskrit in their literature. Is that the reason for making the Buddhist monk speak Sanskrit? What language did the Kapalikas employ? Was it also Sanskrit and is that the reason for making the Kapalika speak Sanskrit? Was the Jain monk made to speak Ardhamāgadhī because one of the Jain languages was a form of Ardhamagadhi? Is the author really following some scheme based on the languages actually used by the sects in question?

Năndillagopa " says that the language of the Pupil of the Cârvāka is Māgadhī and continues: eso palamapulisassa ity atru pumselatah iti sūtrena ekārah, pumsyelatah, māgadhyām bhā,āyām pumsi pumlinge atah akārasya et ekārādeša bhavatīti litvābhityām yady api šeh šantisūtrena māgadhyām bhāsāyām šakūrādeše prāpte pulli šabde iti prāptau māgadhyām šaurasenīvad iti šakārādešasya vikalpu iti candrasenādaya āhur iti na dosah, ro lah iti sūtrena māgadhyām rasya lakārādeša iti rūpasiddhih, evam uttaratra māgadhibhāsāyām vijāeyam. No trust can be placed on the readings given by the Bombay edition, but in default of manuscripts of the commentary the passage must be taken as printed. I do not know from what author the Prākrit rules are taken. The first one is very similar to the rule sau pumsyelatah of Trivikrama and his followers. The rule ro lah is given by Kramadīšvara (Lassen, Institutiones, p. 393). In Trivikrama and his followers the

<sup>\*</sup> Nirnayashgara Press edition of the Prahodhacandrodaya, p. 72.

changes of r to l and of s to s are given in one and the same rule. They do, however, give ro lab for Cūlikapaišācī. Nāndillagopa is probably using some author who is unknown to us.

Clearly he recognizes the nominative singular masculine in e. Eso of the text must therefore be changed to ese. He also recognizes the change of r to l. He quotes a rule for the change of s to s, but relying on the authority of certain grammarians who interpreted the rule magadhyam saurasenicat to mean that the change of s to s is merely optional in Magadhi he apparently means to read everywhere s in Magadhi of the Prabodhacandrodaya. The manuscripts which he had before him must therefore have had s. They corroborate the evidence of the manuscripts which I have used. He says nothing about the dialect of the Messenger from Orissa. On page 100 he says that the first part of the speech of the Digambara monk is Magadhi, but on page 102 he states that the stanza at the end of the same speech is Paisaci. He continues no nanoh paiśācyām iti sūtrena nakārasya nakārādešo bhavati. kesain magadhivat. This seems to be corrupt for Vararuci, Hemacandra, Trivikrama, Simharaja, Laksmīdhara, and Mārkandeya give as characteristic of Paisaci the change of n to n. What of the other rules of the grammarians for Paissei? Nandillagopa seems to imply that this change alone differentiates Paisacl from Magadhi. Some of the later commentators seem to have taken the most surprising liberties with the rules of the grammarians. Was this due to the fact that they felt that they must pay some attention to the text which they found before them in the manuscripts, that they hesitated to make wholesale changes in order to bring it into agreement with the grammarians and so forced the rules of the grammarians into agreement with the manuscripts? On the other hand some of the commentators did so revise the text and did try to bring it into agreement with the rules of the grammarians.

Rāmadāsa \*2 says that the Digambara monk speaks Māgadhī and

<sup>\*\*</sup>Nirnayasāgara Press edition, p. 100. Pischel, Grammatik, p. 16 quotes only Rāmadāsa of the commentators on the Prabodhacandrodaya in corroboration of his opinion that the dialect of the Digambara is Māgadhi. The authority of Rāmadāsa is no greater than that of the other commentators and as Nāṇḍillagopa's attitude towards Māgadhi in the matter of s and s shows the mere statement of a commentator that a dialect is Māgadhi means little.

continues: bhikşukşapanakarākşasāntahpuravāsicetakādināin māgadhīty uktam anyatra.

Maheśvara \*\* regards all three dialects as Paiśāci, but gives no details.

Ganesa says 34 that the Digambara speaks Māgadhī and gives the same quotation which is given by Rāmadāsa. He says nothing about the dialect of the Pupil and of the Messenger.

Rucika 85 (folio 38 recto) says that the speech of the Pupil is Paisaciki. He continues; ese esah, ala sor idetau pumsity etvam, sašo sa iti šakārah, pulišatthe purusārthah, puruse ror nityam (?) iteam iti ukārasyākārah. He recognizes the change of r to l, the change of s to s, and the nominative in s in his Paisaciki, but changes rth to tth. On folio 39 recto he calls the speech of the Messenger paiśāciki (lekhahastasya nicapātratvāt). Then he quotes from the Prakrtamuktavali, but the text is so uncertain that I refrain from trying to reproduce it. Apparently he thinks that this particular dialect is that of Odradesa, an easy guess since the Messenger comes from Orissa. He reads hakke, gives a rule for smi and rules for the formation of bhattakehim. Folio 53 verso he remarks of a speech of the Digambara monk paisacim bhasam. Folio 51 verso he gives the form satthagadam in his Paisaci. The s is probably to be corrected to s in agreement with the rule which he gave above.

Subrahmanya (46a) says of the speech of the Pupil atinicapātratvād asya māgadhī bhāsā, cārvākasya nīcatve 'pi šisyāpeksayā
pradhānatvena samskṛtam. He recognizes the change of r to l,
the change of s to ś, and the nominative in e, but remarks bhāsāvyatyena vā bāhulakatvena vā jayadyām ya iti māgadhasūtreņa
yakārābhāve dyayyaryām ja iti dyasya jah. Apparently he thinks
that the Messenger speaks Māgadhī (48) to judge by a rule which
he gives for hage which corresponds with Simharāja 19.14. On
p. 59 he says that the Digambara speaks Māgadhī. He knew the
convention that very low characters should be made to speak Māgadhī. For Māgadhī he follows some adherent of Trivikrama and
applies the rules consistently except for the change of j to y.

<sup>60</sup> Calcutta edition of Vidyasagura, pp. 36, 39, 55.

<sup>\*\*</sup> Harvard manuscript 1784, folio 21 recto.

<sup>\*\*</sup> No. 66 of the List of Selected Sanskrit Manuscripts from the Nepal Durbar Library sent to Oxford. No. 56 of the new numbering.

Does this divergence and hesitation of the commentators go back to the statement of the Dasaronaka (2, 60) that persons of especially low rank should be made to speak Paisact or Magadht? Only Năndillagona actually quotes one rule for Paisaci, but implies clearly that in his opinion this one rule was the only one which differentiated Paisaci from Magadhi. Rucika seems to give Magadhī rules even though he calls the dialect Paisaci. The commentators' conception of the difference between Paisaci and Maeadhi must have been very hazy and very little importance is to be attached to their statements, but the strong tendency on their part to see Paisaci in the dramas is important. Important also is the fact that Nandillagopa regard s as optionally permissible in Magadhi. I can interpret this only on the ground that he found the manuscript tradition strongly in favor of s. No certain Paisaci passages are found in our dramas, at least none which correspond in detail with the rules of the grammarians. However the Moharājaparājaya and the Hammiramadamardana do have passages which show traces of Puisaci elements. Were Paisaci dialects really used in the dramas and must we revise our notions as to the character of such dramatic Paisact? Why did Vararuci devote attention to Paisaci. Did he regard it as a literary language but one which was not employed in dramas? Several good authorities prescribe its use in the drama. Was it once present in them and has it since been levelled to the norm of Magadhi? Or did the commentators merely follow the statement of the Dasarūpaka and take advantage of its option to read Paisaci into the dramas? I am inclined to think that Paisaci or at least dialects with some Paisaci elements in them were used freely in the dramas. Note the curious passage of the Prakrtakalpataru quoted by Lassen (Appendix, p. 6): matam magadham nama paisacikam yada magadhānām jāyeta bhāsā, atha brāvradam nāma paikācikam tatpadānām yada samskrtair miśrana syat.

#### 19. The Manuscripts Versus the Grammarians.

Bloch \*\* after a careful study of Vararuci and Hemacandra laid down the following principles. 1. The Präkrit grammarians are of value to us only because of the fact that we do not have manu-

<sup>\*\*</sup> Vararuci und Hemacandra, p. 48.

scripts of the dramas from so old a date. 2. The only control for the correctness of their statements is furnished by the manuscripts. 3. Any statement in them which is at variance with the evidence of our manuscripts is to be regarded as false until it is confirmed by good manuscripts. 4. Das argumentum ex silentio vilt bei keinem Pkt.-grammatiker. Pischel, in his monumental Grammatik der Prükrit-Sprachen, took the sharpest exception to these conclusions and since that time many editors have followed his authority in restoring everywhere a Normal-Präkrit strictly in accordance with the grammarians (chiefly Hemacandra), even against the evidence of all the manuscripts. Pischel made a very careful study of the grammarians but only a superficial study of the manuscripts themselves. Only a few of the older and better manuscripts have been carefully collated and fully reported in critical editions. It is premature to set up such drastic rules until all the good manuscripts have been studied carefully. Pischel expressed himself as follows (p. 23): "Und doch kann es keinem Zweifel unterliegen, dass diese, wie alle andern Regeln der Grammatiker, gegen die Handschriften durchzuführen ist; " and (p. 46) " Nicht die Grammatiker sind nach den Handschriften sondern die Handschriften nach den Grammatikern zu verbessern." Compare Hillebrandt (Mudrārāksasa, pp. ii-iii) : "At all events, by following the manuscripts and their varying practice, we are constantly troubled by the feeling of inconsistency." But is the only object of the editor that of getting a consistent text? Surely the "feeling of inconsistency" should not trouble the scholar who is chiefly interested in tracing the linguistic development of the language and the process of the grammatical elaboration of the rules of the grammarians. If we proceed as Hillebrandt does when he makes the following statement: "For this reason it will not be considered too bold to restore the Magadhi dialect throughout even where the manuscripts fail to guide us," if we consistently follow Hemacandra, and ignore the manuscripts or place their readings in a footnote or appendix, we tend to obscure all the scholarly problems and to perpetuate a most doubtful generalization. The manuscripts are bad and require the most careful criticism, but on the other hand many of the grammatical rules are clearly based on generalizations which never were valid for all the writers of Sanskrit dramas. I agree emphatically with the statement of Windisch: \*\* "eine rücksichtslose Regelung der Texte nach diesen Angaben der Grammatiker wäre auch sehr bedenklich, würde wohl zu einer Grammatikerrezension von zweifelhaftem Werte führen, aber schwerlich zu einem Texte, der dem des Dichters nahe käme." Each author must be judged on his own merits and for that the manuscripts are the only safe criterion, not the grammarians. Some authors may really have followed the rules of the grammarians for Māgadhī and for the Vibhāsās, but that fact can be determined only from the manuscripts.

The evidence which is available to prove that during the later period there was much learned revision of the Prakrit passages of our manuscripts of the dramas, especially in southern India, should make us careful in our treatment of the Normal-Prakrit found in such manuscripts. There were many works on Prakrit grammar now known to us only by name or by quotations in commentaries. If we judge these on the basis of the treatises known to us they did not agree in all details and did not represent a uniform tradition. Each commentator treated the text according to the particular set of rules which he himself knew. Some did violence to the grammarians in favor of the manuscript text which they found, some completely revised the text in order to make it fit the rules of the grammarians. There is no certainty that such normalized forms in the text or in the commentaries really represent the forms of the archetype. The older the drama the more I hesitate to follow the grammarians. It may be impossible to restore the original text but that is no reason for having recourse to a fallacions method. Pischel's overestimation of the value of Hemacandra is quite parallel to his overestimation of the value of Yaska and Sayana for the interpretation of the Rig Veda.

As I look over the Magadhi passages listed by Pischel and the long additional passages given in note 44 I feel sure that they are not all to be reduced to the norm for Magadhi demanded by Pischel. Clearly the Vibhāsās continued to be used. There are indications of Ardhamagadhī and of Paišācī. I feel confident that Krsnamiśra at any rate did not use ś, śca, sta, sk, and y.

It seems clear from the treatment of Magadhi in the grammarians that the dramatic and grammatical traditions had their origin and development outside of Magadha. All through the later works

<sup>&</sup>quot; LC 1901, 490.

of Indian literature we find references to Magadha as a country inhabited largely by heretics and miscchas. Hence the prescription of Māgadhi for characters of low rank and the comparatively few rules given for its formation. These rules cannot be intended to give a full and complete description of the language spoken in Magadha. They give only a few of its real or supposed characteristics and describe merely a conventionalized dialect used for dramatic purposes.

#### THE NABOPOLASSAR CHRONICLE

#### IRA MAURICE PRICE UNIVERSITY OF CRICAGO

THE MOST IMPORTANT CHRONOLOGICAL FINDS in the realm of historical cuneiform literature are the chronicles. They fix for us the exact dates of certain events in the annals of the periods to which they belong. Practically every document of this character that has come to light has established some hitherto unknown fact.

The latest published acquisition of this kind falls within the reign of Nabopolassar, King of Babylon (625-605 B. C.) and covers the tenth to the seventeenth years of his reign (616-609 B. C.). This bit of a chronicle is found on one tablet and sheds its light in the midst of a period that has been largely veiled in mystery. Indeed, for the stretch of time from 637 B. C. down through the fall of Nineveh our information has been gathered mainly from cuneiform contracts, many of them mere fragments, from the prophets of the Old Testament, and from a galaxy of classical writers both Greek and Roman, who lived not less than 200 years later than the events they described. Thus, the last years of the Assyrian empire have been hidden behind the mists of the legendary reports of the classicists from Herodotus to Eusebius, the imprecations and denunciations of the Old Testament prophets, a few dated contract tablets, and the commutable statements of Nabonidus in his descriptions of the national conflicts of this period.

The last thirty years of the Assyrian empire have been so slightly understood that not even the succession and death of the Assyrian kings could be fixed. The last eleven or twelve years (637-626 B.C.) of Ashurbanipal, the greatest ancient royal patron of literature, are still enveloped in mystery. Even the order of his successors on the throne, and their means of securing it, have been matters of controversy. Multiple inferences, deductions and conjectures have grown up around the reign of Nabopolassar from his first to his twenty-first, or last year. But our crowning ignorance of this period was that of the international situation.

Evidently Assyria was waning. Babylon, a former province of Assyria, was longing for independence; Egypt, formerly a vassal of Assyria, cast wistful eyes towards southwestern Asia; the Medes of the mountainous country of the North and Northeast were threatening their former invader, Assyria; and the Scythian hordes in the far north, according to Herodotus, had already made themselves feared in the countries to the south of them, and the Hebrews in Palestine were a kind of pawn between Asia and Egypt. The precise political relations of these different peoples have been an unsolved riddle.

The tablet that contains this chronicle was discovered in the British Museum by C. J. Gadd, an assistant in the department of Egyptian and Assyrian Antiquities. If complete it would consist of 75 lines of cuneiform text, devoted to eight years (616-609 B. C.) but its breaks are so considerable that they reduce its real value as a contribution to that dark period.

The Chronicle begins with the tenth year (616 B. C.) of Nabopolassar, here also called "the King of Akkad," that is, North
Babylonia. This king Nabopolassar either had been assigned by
the new King of Assyria to the regency of Babylon in 625 B.
C. or he had ambitiously seized control of that city and province.
Of the 56 or 57 contract tablets dated in Nabopolassar's reign,
every one of his 21 years is mentioned except 1, 3, and 4. Only
nineteen, however, give the place of the drawing up of the contract: ten were written in Babylon, six in Sippar, one in Borsippa, one in Dilbat and one in Pahhirtu. The earliest known
date of Nabopolassar in Sippar is his twelfth year, that is 614
B. C. His sway over that city must have begun prior to that date,
indicating the expansion of his realm probably before the date of
the opening of the Chronicle.

I shall not give a detailed translation of the text, but point out the trend of events as they are recorded by the chronicler.

The Chronicle as already stated opens at the tenth year of Nabopolassar (616 B. C.), and specifies that he mustered the army of Akkad in the month Iyyar, the second month (May) and marched up along the banks of the Euphrates to two Aramaean districts already named in other Assyrian annals, Suhu and Hindam, which willingly submitted without a stroke to a new overlord in

<sup>&</sup>lt;sup>2</sup> The Fall of Nisevek, By C. J. Gadd, British Museum, London, England, 1983.

<sup>\*</sup>Tiglathpileser I and Ashurnasirapal.

place of Assyria. Report reached the Babylonian King that the army of Assyria was in the city of Qablinu, not far distant. Nabopolassar, after nearly three months delay, attacked, defeated and routed it with its allies the Mannaeans, and took large numbers of prisoners. His victory extended to the towns of Manê, Sahiru and Balihu, from which his troops carried away great quantities of booty, many captives, and the natives' gods. The Chronicle says that in Elul (September) the King of Akkad and his army turned back, and on their way carried off the plunder of the city of Qablinu. The real reason for the return appears in the following line. "In the month of Tisri the army of Egypt and the army of Assyria marched after (—pursued) the King of Akkad as far as the city of Qablinu," but did not overtake him, for he made good his escape to Babylon.

The most startling fact here is that Egypt, over which Psammetichus I is still king, and a former vassal of Assyria, is now an ally of her former overlord, and in 616 B. C. sent an army to his support against the Babylonian rebels, and quite as likely to aid in holding back the peoples of the north whose invasions into the south might later reach the land of the Nile.

The chronicler beelouds the real result of this sudden attack of the allies by abruptly introducing a drive by the army of Akkad into territory east of the Tigris river to the city of Madanu of the district of Araphu where Nabopolassar routed an army of Assyria,—probably the Tigris division—and drove it back to the lower Zab river, captured large numbers of prisoners and animals, crossed the Tigris, and reached Babylon. At any rate the year ended with a successful campaign.

The eleventh year (615 B. C.) saw the army of Akkad striking at the Tigris region—really a safe distance from the allied armies in the Mesopotamian Northwest. Nabopolassar boldly assaulted Ashur, the ancient capital, but he could not take it. The King of Assyria (Sin-shar-ishkun) with his army relieved Ashur, and pursued the King of Akkad along the banks of the Tigris until the Babylonians took hasty refuge in the fortress of Takritain, to which the Assyrians laid siege. The chronicler relates that the pursuers raised the siege at the end of ten days, and returned to their (the Assyrians') land. The real fact appears in the next line,

that the Medes of the Northland were beginning their descent upon Assyrian territory east of the Tigris—their first mention in this document though the numerous references in classical writers would indicate that this was not their first invasion of the Assyrian empire.

In the twelfth year (614 B. C.) the Medes appeared against Ninevel. (A serious break in the text leaves only a doubtful statement). Apparently their only victory was over a small town near Ninevel. Obviously unsuccessful here, they marched down the Tigris and assaulted Ashur, and (on a broken text) seem to have captured it, making carnage of the great men and taking prisoners. Nabopolassar came to their aid but too late to share in the victory. Remnants of signs seem to indicate that King Kyaxares of the Medes and Nabopolassar met here face to face and "friendship and alliance they established together," after which each king returned to his home-land.

In the thirteenth year (613 B. C.) Nabopolassar turned his army against the unfaithful Aramaeans of Suhu on the Euphrates, and captured two island towns in the Euphrates river, without any interference on the part of the Assyrian army, which may have been fully occupied on the Tigris.

The events of the fourteenth year (612 B. C.) are described in fifteen lines of text, not one of which is complete. And it is on this year's annals that Gadd bases his main thesis for the new date of the fall of Nineveh. Many of the lines are badly broken, and the information we have is fragmentary. Even the number four-teen, specifying the year of Nabopolassar's reign, is missing in the chronicler's text.

The importance of this year's narrative in the discussion leads me to indicate somewhat in detail its broken character. The year begins (line 38) "The King of Akkad mustered his army"....

(break).... "the King of the Umman-Manda to meet the King of Akkad" (39) (break).... "they met one with the other" (40) "The King of Akkad"....(break).... "and"... "tar" (— [Kyaxa]res?)... "he made to cross" (41) "by the bank of of the Tigris they marched".... (break).... (a trace only of the second syllable li of e-li="against" and a mere trace possibly of the sign for) "Ni[neveh]... (break)... "they".... (42) "From the month of Sivan to the

month of Ab" . . . . (break) . . . (43) "A mighty assault they made upon the city, and in the month of Ab " . . . . . " they made" . . . . "of the great ones." (44) "At that time Sinshar-ishkun, King of Assyria" . . . . (break) . . . . (45) "The spoil of the city, beyond computation, they plundered, and" . . . (break) . . . . the city into a mound and a rufin] . . . . . (break) . . . (46) "Of Assyria before the king escaped (or feared) and the forces of the King of Akkad" . . . . (long break) . . . . (47) "In the month of Elul, the 20th day, Kyaxares and his army returned to his land, and the King of Akkad back" . . . . (break) . . . . . (48) "they went to the city of Nisibis, and the prisoners and" . . . . (break) . . . . (49) "and of the land of Rusapu they brought to Nineveh before the face of the King of Akkad. In the month " . . . . (50) "in the city of Harran, for the sovereignty of the land of Assyria sat upon the throne. Until the month of " . . . . (51) "in Nineveh" . . . . (break) . . . " from the 20th of the month" . . . . "the king" .... (52) "also in the month of Tisri in the city of " .....

These fragments of lines and text make no connected or even semi-connected narrative. Gadd had no duplicate text with which to fill the breaks. In his dismay he turned to the reports of the classical writers and the Old Testament to piece out his arguments for his thesis. By translating "Umman-Manda" in this connection, "Scythians," he finds the forces of three allies united in the assault upon the city, viz., Scythians, Medes and Babylonians, But I find no warrant in the Chronicle for such a translation of "Umman-Manda," who, in all other occurrences, seem to have been Medes. The name of the city upon which the assault was made is broken out, but from the subsequent narrative may have been Nineveh. At least, the fragmentary text mentions that prisoners and probably booty captured in neighboring provinces were brought before Nabopolassar in Nineveh, which could not have been reduced wholly to a mound and a ruin.

No word is found as to the fate of Sin-shar-ishkun, King of Assyria, though Gadd says (p. 13) "the end of Sin-shar-ishkun is expressly indicated." Interentially we conclude that a part of the Assyrian army either escaped to the adjoining provinces, or fled westward, to the Euphrates region. At any rate, the chronicler states that some one representing the sovereignty of Assyria sat on the throne in Harran, their western capital. It may be that Assyria's armies were not concentrated at any one point, but were stationed at strategic centres in the East and West.

That the fall of Nineveh occurred in 612 B. C. is an inference, and a deduction from the fragments of the text of that year and from subsequent events mentioned in the Chronicle, rather than from any direct statement. The reports of the Old Testament prophets and classical writers have no real chronological value, but are commutable, and as serviceable for locating Nineveh's fall in 606-607 as in 612 B. C.

The events of the fifteenth year (611 B. C.) are covered by five broken lines. Nabopolassar attempted no great campaign, probably because he was unable to face the Assyrian army of the region of the Euphrates. He is reported to have captured one minor city, Rugguliti, and to have returned (retreated?) to his own land.

The next year (seventeenth, 609 B. C.) witnesses a rejuvenation of the Assyrian power. In the spring Ashur-uballit, King of Assyria, with a great army of Egyptians, crossed the Euphrates and marched upon Harran, now held by a garrison of Nabopolassar. The broken character of the text recites that Nabopolassar came to the aid and rescue of his troops, that a battle took place, but the outcome of the clash between the armies is lost in the broken spaces of the tablet. At any rate Nabopolassar is said to have returned to his land, whether victor or vanquished we have no record to tell us.

The next year (608 B. C.) we find in the "catchline" for the succeeding tablet that Nabopolassar mustered his army for another campaign.—Here ends this Chronicle.

We can imagine the Egyptian army of Necho II, who killed Josiah on his campaign, rushing northward to the assistance of his Asiatic ally, Ashur-uballit of Assyria, against the Babylonian invaders. Doubtless the combined armies of Egypt and Assyria held their ground in northwestern Mesopotamia until the great battle of Carchemish in 605 B. C. where Nebuchadrezzar with the Babylonian army crushed the Assyrians as a political entity, while the Egyptian army with the Babylonians in pursuit escaped down the east coast of the Mediterranean Sea to their home-land.

With all its defects this Chronicle is a splendid easis in the desert of Assyria's last years of existence, and of Babylon's beginnings as a new empire.

Its best contributions to that period are:

- The determination of the names and the order of the last kings of the waning Assyrian empire, following Ashurbanipal (668-626 B. C.). They were (1) Ashur-etil-ilâni, ruling about four years (626-622 B. C.); (2) Sin-shar-ishkun, ruling about seven years (620-612 B. C.; both sons of Ashurbanipal); (3) Ashur-uballit, ruling about seven years (612-605 B. C.). Either just before or just after Ashur-etil-ilâni, an officer, Sin-shum-lishir, usurped the throne for a year or two.
- Nabopolassar was not a subject of Assyria through practically his twenty-one years of reign, but was ruler of Babylon and Sippar, and was openly attacking the Assyrians at least in the tenth year (616 B.C.) after his accession to the headship of Babylon.
- 3. The political situation of Western Asia is shown to have been as follows: Assyria and Egypt (Assyria's former subject) were effective military allies, at least during the period of this Chronicle, in the territory of northwestern Mesopotamia. There is no evidence, however, in this document, that the Egyptian army took any part in the defense of Assyria in the Tigris region, but rather that it limited its activities to the Euphrates valley.
- 4. The formal alliance of the Babylonians and Medes seems to have been consummated after the fall of Ashur in 614 B. C. Their cooperation both in the Tigris and Euphrates regions was the dismay of Assyria.

- Inferentially Nineveh and its neighboring Assyrian cities fell in 612 B, C., after which the struggle for Assyria's existence was transferred to northwestern Mesopotamia.
- 6. The final collapse of the Assyrian empire was not, as formerly supposed, the fall of Nineveh, but was probably the overthrow of the armies of the Egyptian and Assyrian allies at Carchemish in 605 B. C. by the same combined troops that destroyed Nineveh in 612 B. C.

It should be added further that the disclosures of this one tablet of chronicles seem to present no insoluble difficulties in the interpretation of the historical and prophetic narratives of the Old Testament, but rather to inject into them a more vivid realization of the political background of the messages that belong to the later years of the Kingdom of Judah.

## A NOTE ON THE MARSH ARABS OF LOWER IRAQ

#### REUBEN LEVY UNIVERSITY OF OXFORD

Some four years ago, while serving in the Revenue Department of the Iraq Government, I had occasion to spend six months in the marsh lands south of ancient Babylon. In the great series of swamps and shallow lakes (the best known being the Hammar Lake) that have for centuries covered many hundred square miles of once fertile land, are harboured a number of tribes who are for the sake of convenience called Marsh Arabs by us, though the Bedawin Arabs, and even town Arabs, refuse to recognise them as fellow Arabs and cognate with themselves. They call them Ma'dan, which is a name applied to all keepers of water-buffalo, and regard them as of very inferior stock to themselves. This attitude of the Arab is no new one, for the Arab historian has very rarely consented even to mention their name, considering them beneath the attention of serious-minded men. They live for the most part in reed huts on patches of land that just peep up above the surface of the water, and, as may be imagined, in flood time they are generally compelled to move camp and re-erect their reed huts wherever they can find any land. Their livelihood is exceedingly meagre. Any money they make is derived from the making of reed mats, and from a little cultivation of wheat, barley. rice, etc. Generally they live on rice (which is their staple), on fish, buffalo-milk, and occasional water-fowl which they trap or shoot. It is not without reason that their neighbours look upon them with scorn not unmixed with fear. Apart from their outlandish manner of life they are hardened thieves and cut-throats. In the days of the Turks their main business was piracy, holding up for blackmail any ships that were going up-stream with merchandise or passengers. Pilgrims to the Holy Cities of Nejaf and Kerbelah were treated with as little respect as government officials. Sir William Willcocks tells in one of his books how he was held up on his way to survey the site for the great dam near Hillah, that he was to build for the Turkish government. During the last war they looted indiscriminately from Turkish and British camps, and sat on the fence for a long time to see which side would win before deciding finally that the British were in possession, for a time at

any rate.

The Marsh Arabs are generally leaner, fiercer-looking, and paler than the Araba. They are nearly all Shi's and have occasional villages of Saivids, known as "Mirzas," settled amongst them. These Mirzas are fanatical holy men who have come from Persia within the last hundred years or so, and have found congenial society amongst the marshmen. They still look Persian, though they have forgotten their native tongue and speak nothing but Arabic. In spite of the presence of these Mirzas amongst them, the marshmen very seldom bear Muslim names. Curious as it may seem, even the names Muhammad and 'Ali are very rare amongst them. Many of the men bear animal names, insect names, and even names of inanimate objects. For instance: Kulaib, "little dog"; Farhud, "young camel," son of Mughashghash (?), "the deceived"; Miz'al, "one made swift," son of Basharah, "evangel"; Manshad, "reciting," or "reciter"; Barghash, "fly"; Barghath, "flea"; Mizbil, "manurer," One man, whose name was 'Ali, had a father named Dabbus, or "the pin," and another, a local shaikh called Salim, had a father called Khayyūn, "the perfidious." Another was Shawai, the "roaster" (?). These are not nicknames, but ordinary every-day appellations, and of a kind not ordinarily encountered amongst Arabs.

These differences between the marshmen and their neighbours, together with the fact that they are regarded as of inferior stock, are of some significance for our present purpose. There is agreement among historians that these marshes between the cities of Wasit and Basrah were inhabited at the beginning of the Muhammadan era by a people known to the Arabs as the Zutt, i. e. gypsies. There is also a consistent tradition that during the wars between Yazdigird III, the last Persian king, and the newly converted Arab Muslims, a number of Indian warriors fought with the Persian army, but became Muhammadans as soon as they found the latter were victorious, and then attached themselves to the Arab armies. These Indians, it is generally maintained, were the Zutt, who settled in the marshes, having come originally from the marsh lands of the Indus, where they kept buffaloes, and lived in

the same way as the Marsh Arabs of to-day.

It is a commonplace now among the scholars who have dealt with the question that the gypsies came from some province of North West India. The researches of de Goeje and others show that the Zutt, who are identified with the gypsies, are the Jats, and these, according to some writers, are to be identified with the ancient Getae. "There is strong reason," says the Encyclopaedia Britannica article on the Jats, "to believe them to be a degraded tribe of Rajputs whose Scythic origin has also been maintained."

These Jats, whose name was corrupted by the Arabs into Zutt, are, one may venture to suggest, those who wandered into Persia under the Sassanians and remained until the prospect of plunder sent them westward to attack the Arabs. The exact reason for their coming to Persia is doubtful. De Goeje, in his "Mémoire sur les migrations des Tsiganes à travers l'Asie," quotes first from the Persian historian Hamza of Ispahan. This tenth-century authority in his "Annals of the kings, and prophets of the earth," 1 tells us that the Persian king Bahram Gür (the Wild Ass, A. D. 420-439, son of Yazdigird I) once enacted that his employees were to work for half the day only. They were to spend the rest of their time in feasting and listening to music, and they were particularly enjoined not to neglect the music. One day he came upon a company of his men drinking in solemn silence, and when he asked the reason he was told that no musicians were to be had even for a hundred dirhams a night. He at once called for pen and ink and wrote to India for some musicians, who came in due course, to the number of 12,000 men. He dispersed these amongst the cities of his empire, where they settled down and married and became the ancestors of the Zutt.

There is also an account, given in Firdawsi's Shahnama, of 10,000 Indians who were invited as musicians by Bahram Gür. But they refused to settle down and became "wanderers upon the earth, neighbours and travelling companions of the dog and the wolf, and ever upon the road for their own thievish purposes." Firdawsi calls them Lüris, and it is more than probable that these Lüris are the ancestors of the Lürs who inhabit the mountainous district in the South West of Persia, Lüristan. The Lürs and the Zutt have much in common in appearance, habits, and customs, and it is probable that they are in part of the same Jat stock. There is subsequent mention of the Zutt during and after the reign of Ma'mün, when they terrorised lower Iraq and were only subdued

Ed. Gottwaldt, 1844, pp. 54 f.

when a number of them were deported to Khaniqin by Ujaif, the general of the Caliph Mutasim, in 834 A. D.

According to Gaster in his article in the eleventh edition of the Encyclopaedia Britannica, one of the main problems with regard to the gypsies is the route by which the first wave of them moved from India. It is practically certain that they originated in India and wandered through Persia, where they did not stay long enough to add much Persian to their vocabulary. They then appear in Armenia, as is evident from traces of Armenian in the language of the European gypsies. De Goeje maintains that they had travelled via Arabia, but Gaster denies this, though he offers no alternative. The solution suggested here is that they came through the marshes of southern Iraq and then wandered north and east to Armenia, and so to Asia Minor or Rum, whence, according to Gaster, they derive the name Rom or Romany, which the European gypsies apply to themselves.

It is impossible, of course, finally to identify the Marsh Arabs with the gypsies until anthropological researches have been made there. I cannot speak of their musical capabilities, and there would seem to be no Aryan traces in the language of the marshmen, who all speak a debased form of Arabic. There is sufficient evidence, however, to make the suggestion a possible one.

# THE FORTHCOMING TAMIL LEXICON

#### J. S. CHANDLER KODAIKANAL, SOUTH INDIA

AT PRESENT the best Tamil dictionary is the Tamil-English Dictionary of Dr. Winslow, a missionary of the American Board of Commissioners for Foreign Missions, who carried on his literary work first in Ceylon, and then in Madras. It was brought out in 1862 by the American Mission Press in Madras, which still continues under the name, The Madras Diocesan Press.

Winslow's Dictionary contains 67,452 words, and is superior to any dictionary published since it came out. But it is out of print. The copyright is held by the American Ceylon Mission, of which Winslow was originally a member. For a time the Mission held a small fund for the purpose of revising the work when it should need revision. But that fund was deposited with Arbuthnot & Co.

and was lost when they failed.

In 1905 the Ceylon Mission and its associates in the work of Tamil Christian literature approached the Madras Branch of the Christian Literature Society for India with reference to a revision of Winslow's Dictionary. Of course they had no money, and further they said, "We have not . . . any scholar here who could be entrusted with the work; for that we must look to India." They did ask that "the work of printing be done in Ceylon by the American Mission."

In the meantime Dr. Pope had retired from India and was issuing his series of Tamil classics from Oxford. When he learned of this movement in India it interested him greatly, for he had accumulated, as he said, "great stores of material for an exhaustive Lexicon of the Tamil language." He proposed that a competent editor be sent to Oxford to assist him in bringing out a "really useful re-issue of Dr. Winslow's book."

These movements awakened much interest in the Government of Madras, the University of Madras and individual scholars, Indian and foreign. Various suggestions were offered by scholars in India and by Dr. Pope. But in 1907 Dr. Pope died, and the whole matter hung fire until 1911. By that time Dr. Pope's materials had been brought out to Madras and deposited in the Oriental Manuscript Library by his son, and he expressed his willingness to make his father's materials available for the work of a new dictionary.

The way was thus prepared for new proposals. The writer approached the Government of Madras with his plan, and it was approved January 16, 1911. In accordance therewith a representative committee of five was appointed, one each by the Government, the University of Madres, the Madura Tamil Sangam, the Missionary body of Ceylon and the Missionary body of South India. The writer was appointed to represent the Missionary body of South India, and was also asked to devote his whole time to the editorship of the work. Deliberations as to details occupied two years, in which the Madras Government decided to entrust the work of supervision to the University of Madras. The Government allotted to the work a lakh of rupees (\$30,000), with the expectation that it would take about five years. The Syndicate of the University accepted the appointees on the Lexicon Committee, not as representatives, but as individuals, and later on modified the structure of the Committee.

Under these auspices the actual literary work commenced on the first day of January 1913. The staff has consisted of three Pandits, viz. one in Tamil, one in Sanskrit, and one in other languages, as Urdu, and Dravidian languages other than Tamil. The most important of these is the Tamil Pandit, and the learned Tamil scholar secured for this post has worked in the office from the beginning, and is still at it. His name is M. Raghavaiyangar, Vitvan of Ramnad, a Brahman with thorough training in Tamil, vigorous in body and alert in mind. Three writers, two of them typists, have recorded the work done. One of the two type-writers has a Tamil keyboard, made by Yost, the first one ever used in a public office.

The first business of the staff in 1913 was to gather materials. A library of all Tamil classic writings was purchased. Existing dictionaries were secured, and these were not few. These included: Winslow; Pope's materials, already described; Malabar-English and English-Malabar Dictionaries prepared in the 18th century by Fabricius, "Malabar" being the name for Tamil; Rottler's Dictionary, the basis of Winslow's work; Old Glossary of 58,000 words published in Jaffna; English-Tamil Dictionary of legal terms by a Madura barrister.

The MSS, of the Oriental Manuscript Library were available for examination, and the Pandits have made extensive researches in the unpublished MSS. A few such MSS, were also purchased,

Individuals and groups of individuals have contributed much

valuable material. For instance, Judge Sidney Roberts, 1. C. S., being well versed in Tamil, kept a writer in every court under his personal jurisdiction to record unusual words and expressions uttered by witnesses. These were passed over to me for use in the preparation of the new Lexicon.

Dr. James E. Tracy, since deceased, gave us his Tamil Syno-

nyms in MS.

The Port Officer at Pamban, on the Island of Rameswaram, took me in his launch to a native brig in the harbor, to which he had summoned a dozen or more of his pilots and others from the small shipping at anchor, and we went over the whole vessel recording the name of every part of the same, and its equipment.

The commander of the brig was one of two brothers, each in charge of a brig. Both were present, and they became so much interested in the work of securing materials for the Lexicon that they went home and sent me long lists of words peculiar to their caste. They were Roman Catholics of the Paravar Caste, which comprises the fishermen of the whole coast of India opposite Ceylon. They were converted through the efforts of Xavier when the Portuguese delivered them from the tyranny of the Muhammadan invaders of South India. Their vernacular is a patois of Tamil affected by nautical and Christian influences.

Dr. Winslow marked about 3,000 words in his Dictionary as "provincial," and explained the term as meaning that most of them were peculiar to Jaffna. These words were all studied by a small group of scholars in Jaffna, including Moottootamby Pillai, author of an English-Tamil dictionary, Pandit Kumarasamy Pillai, and Professor Hudson of Jaffna College, a Ceylonese. They found 97% of the words in current use, and their decision has been accepted as final in determining their place in the Lexicon.

For several years the Syndicate of the University exercised its supervision chiefly through the Tamil Lexicon Committee of five members, without involving the University in any expenditure of funds, as no funds were available for this purpose.

Funds at last became available in an interesting manner. A class of Readers had been established to train a few graduates of the University in comparative Dravidian studies, and these had completed a course under Dr. Collins, a University Professor. The class had been disbanded, and the funds thus spent were used for the work on the new Lexicon. This opportunity led to the enlarge-

ment of the Committee and the staff, and involved the continuance of the work for a longer time than five years. Had these funds been secured earlier, and a competent Sanskritist added to the staff, the revision of Sanskritic words now going on could have been maintained along with the progress of the work.

I gave nine years to the work, and in this time prepared the MS, for some \$1,000 words averaging two definitions to a word. These included the whole Tamil alphabet, from the vowel a to the last of the Grantha letters adopted by Tamil, viz. h. Arrangements were also made with the Madras Diocesau Press for printing. The Syndicate kindly invited me to continue the work until it should be brought to an end, but I felt that it would not be wise to let that satisfaction entice me beyond the strength allotted to one who had passed the Psalmist's three-score years and ten.

The final revision of the MS. as sent to the press, and the reading of proof, are going on, and I have just received the final proof of the first 104 pages. The type used is pica; the pages are of quarto size, and contain two columns to the page.

The Government of Madras has given to the University the

copyright.

Dr. Collins and his class of Readers have been of material assistance to this Lexicon. He was for several years a member of the Tamil Lexicon Committee. One of his Readers was an Associate Editor for some years, and when I retired he was appointed Editor. After two years he has just retired and another of the Readers succeeds him.

In 1905 the American Ceylon Mission stipulated that, if Winslow's Dictionary were revised, it should be done by an Indian assisted by a Jaffna man. The present Editor of the new Lexicon is an Indian, and a Jaffna man is appointed Additional Editor. The Madras Diocesan Press is the same Press that printed Winslow's Dictionary under the name, American Mission Press.

Tamil is the tongue of more than twenty millions of people, and it has a fine classical literature, including its own version of the Ramayanam. It has a large body of Sanskrit words adopted into it with or without change. Its administrative and governmental terms are largely Urdu. Other languages have also contributed to it and enriched it. All non-Tamil words are indicated in the Lexicon by the asterisk before each word. Derivations, quotations and other references are freely interspersed.

May the Lexicon promote the study of Tamil in America.

# REVIEWS OF BOOKS

Persian Literature. An introduction. By Reuben Levy, M. A., Lecturer in Persian in the University of Oxford. London: Oxford University Press; New York: Oxford University Press, American Branch; 1923. 112 pp. Price \$1.

This is a good little book to place in the hands of anyone who wishes to have a brief outline of Persian literature from the earliest times to the present day. It forms one of the Oxford Language and Literature Series of small manuals which are being edited by the Clarendon Press under the general editorship of Mr. C. T. Onions, of the University of Oxford, where Mr. Levy is Lecturer in Persian.

As author, Mr. Levy has skilfully accomplished the task of bringing his excellent sketch of the literary output of Iran, from its beginnings, within the scope of a few more than a hundred pages, including a useful Bibliography. The famous Persian poets receive appropriate treatment, while the prose writers are brought out in their proper perspective. He is quite right, moreover, in laying stress (p. 83) on the fact that the renowned poet Jami is not (as is often said) 'the last great classical poet,' although justly ranking highest amongst the more recent poets of modern Persia,

In support of his justifiable contention, some welcome material has been added (pp. 86-103) with regard to the literature of 'Modern Persia,' whose poetry still shows traces of the Sūfī tinge. One might wish that space had been allowed him to elaborate the modern movements still more fully. A good point is made in this section by drawing attention to the Ta'ziyas, or native 'Passion Plays,' which, while religious rather than literary, represent a distinct phase of the ever-growing national feeling in Persia.

Throughout the book are scattered a goodly number of original translations to illustrate the style of the best-known Persian authors. Verse is mainly translated into prose, though a line-for-line arrangement has been adopted, so as to indicate the poetic source. Sometimes a rhymed free-verse is used. Exceptionally, as in the case of Hāfiz, both a rhymed and metrical form has been successfully employed to convey a real impression of the lyrical tone. It would have been well to have had more of these attractive

renderings that serve best to interpret the refinement in form

which is one of the beauties of Persian poetry.

This slight comment is after all a compliment, and is not intended in any way to detract from the admirable service which Mr. Levy's book will perform in making better known to English readers the literature of the Land of the Nightingale and the Rose.

A. V. WILLIAMS JACKSON.

Columbia University.

Das Śrāuta-sūtra des Apastamba, aus dem Sanskrit übersetzt von Dr. W. Caland. 1-7 Buch. Quellen der Religions-Geschichte. Göttingen: Vandenhoeck & Ruprecht, 1921. 270 pp.

The announced purpose of this series of source books in the history of religions is to make accessible a comprehensive and reliable body of primary material for workers in that field of study. This volume is a portion of a work which will be the first translation of an entire Srauta-sutra, i. e. book of instructions for the performance of certain Vedic sacrifices as conducted by specially qualified Brahman priests on behalf of the "sacrificer," commonly a rich and prominent individual, the number of priests engaged in the ceremonies varying from one to sixteen. In the Srauta rites three sacred fires were necessary, in contrast to the one fire in the domestic rites.

The oldest and most important parts of the Veda (in the wider sense) are the collections of hymns and formulae which accompanied the sacrificial activities, and there arose such specialization that certain priests recited only from certain collections. The text translated by Prof. Caland sets forth the use of the Veda of formulae (Yajur-Veda), and it is more interesting than others of its sort in that it quotes verses and formulae from the texts of other schools than that to which it strictly belongs. The general relationship of schools and texts is briefly and clearly set forth in the short introduction, along with the statement of some problems connected with that relationship.

A stitra text was made to be memorized and is therefore extremely compressed; when a verse or formula is mentioned only the first word or so is ordinarily quoted: Prof. Caland's translation gives the entire quotation and further than that it expands the compressed phraseology into reasonably full modern phrases and clauses, thus becoming a sort of commentary: and further, after nearly every sutra the translator has some lines of comment or explanation and references in modern mode to locate the quotations. Particularly important is the inclusion of apposite passages from the Brāhmaṇas; roughly speaking the Sutra texts summarize the Brāhmaṇas.

Prof. Caland has worked for a number of years on Vedic ritual texts both as editor and commentator, and after such experience one would expect from him a well considered and carefully wrought translation: such this seems to be. There can be no question of style for Sutra texts have no more style than stage directions or directions for knitting: the translator's task is just to make the meaning clear and that is not always possible. In this regard Prof. Caland has been duly cautious.

Sanskritists will welcome this work and find it useful; but as part of the Series in which it appears it makes a wider appeal, furnishing material for the study of sacrifice. No description of any ritual of sacrifice can compare with the Srauta-sutras, and probably no ritual was ever so thoroughly wrought out as that described by them: the sacrifice had become a performance regarded as a "cosmic power of the highest potency," potent to compel inevitably the desired result, and it was even said that by the power of the sacrifice the gods had become gods. This elaborate sacrifice was of course very far from primitive and elementary sacrifice, but some of the fundamentals are still in it. Thus the propitiatory element in sacrifice will be evident to any reader of this book; certainly it is clear in the chapters which describe the offering of first-fruits and the animal sacrifice, and in connection with the latter one is reminded of features of the sacrifices performed today in the villages of India to propitiate their village deities.

Trinity College.

LEROY C. BARRET.

Liefuvių kalbos žodynas. Sudarė K. Būga. 1 sąsiuvinis. Kaunas [Kovno]: Švietimo Ministerija, 1924. lxiv + 80 pp. \$1.20.

The first fascicle of a monumental Lithuanian dictionary, published by the Lithuanian Ministry of Education. The completed

work will comprise six or seven volumes of seven or eight hundred pages each, and will absorb practically all that is of value in previous dictionaries. It includes variant forms; dialectic distinctions; word-histories and semantic developments, with detailed citation of sources; illustrative quotations; etymologies; a chapter on accent; an account of the Baltic peoples and their languages; and an extensive bibliography.

H. H. B.

# PERSONALIA

Professor Max L. Margollis, of the Dropsie College, will be Annual Professor at the School in Jerusalem for 1924-5, and has already sailed to take up his duties.

Professor Edward Chiera, of the University of Pennsylvania, will be Annual Professor in charge of the School at Bagdad for 1924-5.

Dr. TRUMAN MICHELSON, of the Bureau of American Ethnology and George Washington University, has been re-elected president of the Anthropological Society of Washington, D. C.

### PROCEEDINGS

#### OF THE

# American Oriental Society

AT THE MEETING IN NEW YORK CITY, 1924

The annual sessions of the Society, forming its one hundred and thirty-sixth meeting, were held in New York City at Columbia University and the Jewish Theological Seminary, on Tuesday, Wednesday, and Thursday of Easter week, April 22, 23, 24, 1924.

The following members were present at one or more sessions:

Abbott	Hardy	Newell
Adler	Haupt	Obermann
Archer.	Hewes	Ogden, C. J.
Barret	Hock	Olmstead
Barton	Hopkins	Pavry
Bates, Mrs.	Hosehunder	Pelliot
Bender	Hume, R. E.	Perry
Breasted	Husik	Porter, L. C.
Brockwell	Hussey, Miss	Price
Bull	Jackson, A. V. W.	Reich
Butin	Jackson, Mrs.	Reilly
Campbell, J.	Jones, Mrs.	Rudolph, Miss
Carter	Kalmykow	Sanders, F. K.
Chandler	Kent, R. G.	Saunders, Mrs.
Chapman	Lanman	Schmidt
Chiera	Lea, J. W.	Schoff
Clay	Lhevinne	Sharenkoff
Cornuelle	Linfield	Smith, H. P.
Davidson	Malter	Solomon, E.
DeLong	Mann	Steele
Dhalla	Manning	Sturtevant
Edgerton, F.	Marcus, J.	Thucker
Edgerton, W. F.	Mareus, R.	Thompson, W. G.
Efros	Margolis, E.	Torrey
Elzas	Margolis, M. L.	Tsanoff
Ember	Martinovitch	Uhl
Englow	Marx, A.	von der Osten
Fagnani	Matthews, I. G.	Ware
Finkelstein	Matthews, J. B.	Williams, T.
Gellot	Montgomery	Wood, H.
Gottheil	Morgenstern	Wood, I. P.
Grieve, Miss	Muse-Arnolt	Yohannan
Handy		Total,

#### THE FIRST SESSION

At 11.00 a.m. on Tuesday the first session was called to order by President Cyrus Adler. The reading of the proceedings at Princeton was dispensed with as they were already in print (JOURNAL 43, 149-171): there were no corrections and they were

approved.

Professor Gottheil, as Chairman of the Committee on Arrangements, presented its report in the form of a printed program. The succeeding sessions were appointed for Tuesday at 2.30 p. m., Wednesday at 9.30 a. m., Wednesday at 2.30 p. m., Thursday at 9.30 a. m., and Thursday at 2.30 p. m. It was announced that the New York Oriental Club invited the members to an informal gathering in Philosophy Hall on Tuesday evening; that the local members of this Society invited the members to a luncheon at the Columbia Faculty House on Wednesday at 1.00 o'clock; that the annual subscription dinner would be held at the Hotel Marseilles on Wednesday evening at 7.30 o'clock; and that the Jewish Theological Seminary invited the members to luncheon on Thursday at 1.00 o'clock.

# REPORT OF THE CORRESPONDING SECRETARY

The Corresponding Secretary, Dr. C. J. Ogden, presented the following report:

In beginning this report it is appropriate to mention those events which have concerned the Society in its corporate character. Of these the chief was undoubtedly the Centenary Meeting of the Royal Asiatic Society of Great Britain and Ireland, held in London on July 17 to 20, 1923. The American Oriental Society was officially represented by Dr. Abbott, Professor Breasted, Dr. Bull, Professor Clay, and Professor A. V. Williams Jackson. Professors Gottheil and Lanman, who had expected to attend, were unavoidably detained. The greetings of this Society were presented thru our delegates and also in an address of welcome written by Professor Hopkins. We were also invited to send delegates to the International Congress of the History of Religious, which met in Paris in October last; but it was not possible to find any of our members whose duties permitted them to be present. In the United States, the Society, by authorimtion of the Executive Committee, took part in the Conference on the Philological Sciences which was held at Cincinnati on December 31, 1923, in connection with the meeting of the American Association for the Advancement of Science. Professor Roland G. Kent acted as our delegate on the Indo-Iranian side, but unfortunately we could not secure the attendance of a representative of Semitic philology.

The internal activity of the Society may be conveniently, if inexactly, measured by the statistics of the corporate membership. Forty such members were elected at the last annual meeting or by the Executive Committee subsequently, and one other was reinstated. Fourteen corporate members have died, twenty-seven have resigned, and eight have been stricken from the list, so that there is a net loss of eight for the year. This showing is not a reason for discouragement; for, in view of the unusually large accessions in 1920 and 1921, a certain reaction was inevitable, and we have done well in practically holding our own.

It will have been noticed that our losses by death were unusually severs, and a few moments may well be spent in the commemoration of our deceased members.

Hon. Warren G. Harding, late President of the United States, who was an Honorary Associate of this Society, should not only be remembered by us as Americans, but have a special tribute of regard from Orientalists for his efforts to establish enduring peace and good will in the Far East thru the summoning of the International Conference at Washington in 1921, Elected in 1922. Died August 2, 1923.

Dr. Charles Simon Clemmont-Ganneau, an Honorary Member of our Society, had been since 1890 professor of epigraphy and Semitic antiquities at the Collège de France. He was born in 1840, and in his earlier career, from 1873 onwards, had conducted various scientific missions to Palestine and the other countries of the Eastern Mediterranean. He was recognized as a leader in Semitic archeological research, and the results of his scholarship are perpetuated in his *Études d'archéologie orientale* (2 vols., 1895-1897) and his great Recueil d'archéologie orientale (7 vols., 1888-1906). He was elected to membership in 1909, and died February 15, 1923, the news of his death, however, not being received until after our last annual meeting.

Dr. Basil Lanneau Gilderslerve, of Baltimore, professor of Greek at the University of Virginia from 1856 to 1876, and at the Johns Hopkins University from 1876 until his retirement in 1915, founder and long the editor of the American Journal of Philology, was the dean of American classicists and indeed a commanding figure amid all the humanistic scholars of his generation. His achievements and character have been appraised by his co-workers; but it is appropriate here to call attention to his long connection with this Society, for over sixty years, as a token of the fraternal oneness of philologists in the wider as well as the narrower sense of the term. Elected in 1858, he had been for a decade our senior member in point of service. Died January 9, 1924.

Mr. Henry B. Wirron, of Hamilton, Ontario, was another member who, the not personally active in the affairs of the Society, had faithfully supported its work for well-nigh forty years thru his interest in Sanskrit studies. Elected in 1885. Died in 1922.

Hon. MAYER SULTREGER, long eminent in the judiciary of Philadelphia, united broad eniture with legal learning and was especially interested in the political and legal antiquities of the Jewish people, a subject on which

he had published several books. He was active in educational and philanthropic affairs and was a Vice-President of the Dropsic College. Elected in 1888. Died April 20, 1923.

Mrs. Many H. Moose, wife of Professor George Foot Moore of Harvard University, manifested her own interest in the work of the Society by the preparation of the Index to the first twenty volumes of the JOURNAL. In recognition of this service she was elected a life member in 1902. Died April 16, 1924.

Rev. Dr. Martin A. Meyes, rabbi of Temple Emanu-El in San Francisco, and lecturer in the University of California, was the first holder of the Thayer Fellowship in the American School of Oriental Research in Jerusalem (1901-1902) and published A History of the City of Gora as his doctoral dissertation at Columbia University (1907). His later activities were centred in his pastorates and in civic and communal work. Elected in 1906. Died June 26, 1923.

Rev. Dr. FREDERICK A. VANDERBURGH, assistant pastor of the Judson Memorial Baptist Church in New York City, and lecturer in Semitics at Columbia University, took up the study of Assyriology late in life but became an effective and devoted laborer in that field. He had attended a number of our meetings and had contributed to our proceedings on several occasions. Elected in 1908. Died October 29, 1923.

Rev. FRANCIS J. PURTKIL, formerly professor of Greek and Holy Scripture at St. Charles' Seminary, Overbrook, Pa., and latterly rector of the Roman Catholic parish at Ardmore, Pa., interested himself in Oriental languages and archeology both as scholar and as teacher and lecturer. Elected in 1916. Died December 11, 1923.

Rev. Dr. Hennert Cushing Tolman, of Nashville, Tenn., professor of Greek at Vanderhilt University since 1894, and Dean of the College of Arts and Science since 1914, was well-known also as an Orientalist thru his studies in the Old Persian language and inscriptions. More recently he had begun to investigate Middle Persian as well. Among his published works, his Ascient Persian Lexicon (1908) and his Cunciform Supplement (1910) have been especial boons to American scholarship. He was chief editor of the Vanderbilt Oriental Series (9 vols.) and contributed many articles to the American Journal of Philology and to our Journal. Elected in 1917. Died November 24, 1923.

Dr. Benzios Halper, of Philadelphia, associate professor of cognate languages in the Dropsic College for Hebrew and Cognate Learning, and for eight years editor of the Jewish Publication Society, had gained distinction among Jewish scholars as a philologist and as an authority upon Judseo-Arabic literature and medieval Hebrew poetry. His real for learning and his productive scholarship, manifested thru his work in America during the last twelve years, make his death in the prime of life a cause of keen regret. Elected in 1919. Died March 21, 1924.

Mr. Daniel Pelxotto Hars, a descendant of the oldest Jewish families in the United States, was among the best-known members of the New York City bar and took a prominent part in social and charitable work among his coreligionists. He was also actively interested in the leading Jewish institutions of learning as an officer and a supporter. Elected in 1920. Died November 24, 1923.

Rev. Alexandra D. Hail was a missionary in Japan and was head of the Osaka Theological Training School. Elected in 1921. Died in June, 1923.

Rev. Dr. Philip Starrond Moxom, pastor emeritus of the South Congregational Church of Springfield, Mass., had taken part in many international conferences and was an ardent promoter of the cause of world peace. A man of many and varied interests, he was widely known as preacher, lecturer, and author. A member from 1808 to 1907. Re-elected in 1921. Died August 13, 1923.

Dr. ARTHUR LINCOLN FROTHINGHAM, of Princeton, N. J., professor of archeology and related subjects at Princeton University from 1887 to 1906, and founder of the American Journal of Archaeology, is best known for his researches in Roman and medieval Italian archeology, recorded in his Monuments of Christian Rome (1908) and in other works. In his earlier career, however, he was interested in Oriental studies and particularly in Syriac literature, on which subject he wrote several monographs and contributed papers to the proceedings of this Society. A member from 1885 to 1903. Re-elected in 1923. Died July 28, 1923.

Mrs. Willer H. Schorv, of Cynwyd, Pa., had often attended the meetings of the Society in company with her husband and last year formally joined our membership. Those who were privileged to feel the influence of her gracious personality will lament that her presence is withdrawn from us. Elected in 1923. Died February 10, 1924.

Upon motion, the report of the Corresponding Secretary was accepted.

Tribute was paid to deceased members, to Basil L. Gildersleeve by Professor Haupt, to Herbert C. Tolman by Professor Jackson.

#### REPORT OF THE TREASURER

The Treasurer, Professor J. C. Archer, presented his report and that of the Auditing Committee;

RECEIPTS AND EXPENDITURES FOR THE YEAR ENDING DECEMBER 31, 1923

The foregoing funds, the interest on which is used for publication purposes, are represented in the assets of the Society held by Yale University for the Treasurer of the Society. Said assets were, on January 1st, 1924, as follows:

#### REPORT OF AUDITING COMMITTEE

We hereby certify that we have examined the account of the Treasurer of the Society, and have found the same correct, and that the foregoing account is in conformity therewith. We have also compared the entries with the vouchers and the account book as held for the Society by the Treasurer of Yale University and have found all correct.

> F. W. WILLIAMS, CHARLES C. TORREY. Auditors.

Upon motion the reports of the Treasurer and the Auditing Committee were accepted.

#### REPORT OF THE LIBRARIAN

The Librarian, Professor A. T. Clay, presented his report and upon motion it was accepted:

#### LIST OF ACCESSIONS FOR THE YEAR 1923-24

Abbott, J. E. The discovery of the original Devanagari text of the Christian Purana of Thomas Stevens. [1923].

Acrostic verses composed by ancient poets. With a preface by H. R. H. Prince Damrong Rajanubhab. B. E. 2466.

Amriananda Natha. The Yogini Hrdaya Dipikā (with text) of Amriananda Natha. Ed. with introduction by Gopi Nath Kaviraj. 1923. (The Princess of Wales Saraswati Bhavana texts. No. 7, Part 1.)

Anandarasiga Pillai. The diary of Ananda Ranga Pillai. Tr. from the Tamil. Ed. by H. Dodwell. v. VIII. 1922.

Ancient times (Tr. from the English of Professor J. H. Breasted), B. E. 2466.

Archiv für Kellschriftforschung. L Bd., Heft 1-2. 1923.

Asterie. Carmen in certamine poetico hoeufftiano aureo . . . praemio carmina laudata. 1921.

Bamanji Nasarvanji Dhabhar. Descriptive catalogue of all manuscripts in the first Dastur Meherji Rana library, Navsari. Prepared by Bamanji Nasarvanji Dhabhar. 1923.

Basset, R. Mélanges africains et orientaux. 1915.

Baumstark, A. Geschichte der syrischen Literatur, mit Ausschluss der ehristlich-palitatinensischen Texte. 1922.

- Bhatta Vādindra. The Rassara of Bhatta Vādindra. Ed. by Gopinātha Kavīrāja. 1922. (The Princess of Wales Saraswati Bhavana texts. No. 5.)

# REPORT OF THE EDITORS OF THE JOURNAL

Professor F. Edgerton, Senior Editor of the JOURNAL, presented the report of the Editors, and upon motion it was accepted:

During the year since our last report, Volume 42 has been completed by the issuance of its second half in June, 1923; four parts of Volume 43 have been issued, and the fifth and last part has been printed and is about to be issued at this writing; and the first part of Volume 44 has been issued. Volume 44 will be issued in four quarterly parts.

The printing of Volume 44 has been awarded to Messrs. J. H. Furst Co. of Baltimore, who are doing it very satisfactorily. The editors hope and believe that no further changes of printers will be necessary for some time.

Dr. R. K. Yerkes has completed the Index to Volumes 21-40 and it is hoped that it will be issued during the coming year.

The new department of Reviews of Books has, in the opinion of the editors, increased the interest and value of the Journal. As this new departure becomes better known, and more books are sent to the editors for review, it is hoped that it will grow in importance. We bespeak once more the cooperation of American scholars in this venture, which cannot succeed without the aid of competent reviewers.

FRANKLIN EDGERTON, MAX L. MARGOLIS, Editore.

# REPORT OF THE EXECUTIVE COMMITTEE

The Corresponding Secretary, Dr. C. J. Ogden, presented the report of the Executive Committee as printed in the Journal (43. 351 and 436), and upon motion it was accepted.

At this point the order of business was suspended and President Nicholas Murray Butler of Columbia University made a brief address welcoming the Society to New York and to Columbia.

# REPORT OF THE COMMITTEE ON ENLARGEMENT OF MEMBERSHIP AND RESOURCES

Dr. F. K. Sanders, as Chairman of the Committee on Enlargement of Membership and Resources presented the following report:

The Committee on the Enlargement of Membership and Resources reports that definite progress has been made on the task in which the Committee has been engaged for the past year of enlisting for membership a number of those who, while not being adequately trained for the technical tasks of productive Oriental scholarship, are yet heartily in sympathy with the aims of the Society, desirous to further these aims personally, and ready to undertake some line of investigation for which their occupation and their location will give them special advantage.

The Committee presents for the approval of the Society a twelve page pamphlet containing hints for those willing to undertake investigations along varied lines and to report their results to the Society, which is to be distributed widely to missionaries, consular agents and business agents in the Orient,

The report was accepted and much interest was expressed in the plan.

# ELECTION OF MEMBERS

On recommendation of the Directors the following persons were duly elected corporate members of the Society (the list includes the names of several persons elected at a later session):

Rabbi Julius Berger
Dr. Aaron Brav
Dean Oswald E. Brown
Mrs. Harold Chartier
Rabbi Gresham George Fox
Dr. E. S. Craighill Handy
Mr. Edward Rochis Hardy, Jr.
Rabbi Dr. Leo Jung
Mr. Vahan H. Kalenderian

Mr. Andrew D. Kalmykow Dr. George Alexander Kohut Rev. Dr. Nathan Krass Mr. L. B. Langley Mr. John W. Lea Mr. A. J. Levy Mr. Reuben Levy Mr. Jacques Malakis Rabbi Joseph Marcus Rabbi Dr. Elias Margolis Prof. Alexander Marx Rev. Joseph Brown Matthews Mr. P. J. P. Oscarson Rev. Dr. Theodore Peterson Mrs. Frederick W. Pratt Mr. Walter Alfred Roselle Mr. Lessing J. Rosenwald Hon, L. D. Samikannu Pillai Prof. Henry A. Sanders Prof. Kenneth James Saunders Mr. Vladimir A. Tsamoff Mr. Hans Henning von der Osten Mr. John A. Wilson Dr. W. Wovschin

[Total: 33]

At this point President Cyrus Adler delivered an address entitled "Orient and Occident, a Plea for an Understanding."

#### ELECTION OF OFFICERS

Professor Barton, for the Committee on the Nomination of Officers for 1924, reported nominations for the several offices as follows:

President: Prof. ALBERT T. CLAY
Vice-Presidents: Prof. E. W. HOPKINS

President JULIAN MORGENSTERN

Corresponding Secretary: Dr. Charles J. Ogden
Recording Secretary: Prof. Leroy C. Barret
Treasurer: Prof. John C. Archer

Librarian: Prof. Charles C. Torrey Editors: Prof. Franklin Edgerton

Prof. James A. Montgomery Directors, term expiring in Prof. Charles R. Lanman

1927: Prof. A. V. W. Jackson Prof. Roland G. Kent

The officers nominated were duly elected. The session adjourned at 12.50 p. m.

# THE SECOND SESSION

The second session was called to order at 2.33 p. m. on Tuesday; the reading of papers was immediately begun.

Professor NATHANIEL SCHMINT, of Cornell University: The Manuscripts of Ilm Khaldun.

Rev. Dr. Justin E. Absort, of Summit, N. J.: The Original Sources of our Knowledge of the Maratha King Sivaji.

The historians to whom we are most indebted for our knowledge of

the Maratha king Sivaji are Hobert Orme, official historian to the East India Company, Historical Pragments of the Mogal Empire, 1st Ed., 1782; James Grant Duff, History of the Maratha, 1826; H. G. Rawlinson, Shiroji the Maratha, Oxford, 1915; Kincaid and Parasnis, A History of the Maratha People, Oxford, 1918; Jadinath Sarkar, Shiroji and his Times, Calcutta, 1919. These historians acquaint us with the original sources used by them in the compilation of their works. But not one has used all the original sources now available. Orme was unacquainted with the Indian sources, and the later historians have not used all available European ones. Some indeed have only just come to light. A list of all now known original sources is therefore desirable, and such a list, as complete as I have been able to make it, accompanies this paper.

Professor George A. Barron, of the University of Pennsylvania: (a) The Claims of Pan-Amurrism; (b) A New Inscription of Libit-Ishtar; (c) Lexicographical Notes. Remarks by Professors Clay, Torrey, Dr. Chapman, and the author.

- (a) This paper presents a number of reasons from historical, religious, and linguistic evidence to disprove the claims that Amurru was the cradle land of the Semites, who were powerful and civilized in the fourth millenium B. C., that the first dynasty recorded in the Babylonian sources reigned in Aleppo, and that Amurru was the place of origin of the oldest Biblical tradition. Beasons are given for dissenting from all these hypotheses.
- (b) Mrs. E. F. Platt, of New Britain, Conn., possesses a stone which is a natural combination of chalcedony and agate, which once evidently formed an idol's eye. It bears an inscription to the goddess Nin-lii to whom it was dedicated by Libit-Ishtar.
- (c) In the Assyrian laws (Schroeder, KTA, p. 3, Kol. ii, 80), i-ga-ad-di-mu-nā is to be connected with the Talmudie 272 "cut-off," and rendered "they shall crop him." (2) In the same code (Ibid. p. 16, Kol. iv, 12) us-an-am-mi-ih is connected with the Arabic samaha, "be high," "lofty," and in connection with ta-ha-ma rubu-a ia-a tap-po-i-ia, which precedes, should be translated "carries up his boundary greatly on to that which is his neighbor'a." (3) In the same code (Ibid. p. 18, Kol. vii. 12) it-tum-ru-a-ak is to be connected with the Talmudic root 2702 "to brighten." "cleanse," and be rendered "he shall be forgiven."

Mr. REUBEN LEVY, of the University of Oxford: A Note on the Marsh Arabs of Lower Iraq.

This paper attempts to show that the Marsh Arabi and the Gypsies have much in common and may be identical in origin.

Professor RICHARD GOTTHELL, of Columbia University: Arabic Lexicography: a statement of our difficulties and a suggestion. Remarks by Professor Ember and Dr. Talcott Williams.

Professor LeRox C. Barrer, of Trinity College: The Kashmirian Atharva Veds, Book Eleven.

Professor CHARLES R. LANNAN, of Harvard University: Whitney's

Material relating to the Atharva Veda.

Upon the death of Mr. Whitney and the taking over of his copy of the AV. translation and commentary, it was needful to ask Mrs. Whitney for the loan of certain printed books and manuscripts. A list of these should now be recorded in the Journal, so that future scholars may know about their existence and the place of their custody. The one of most value is Whitney's Index Verborum of the AV. Sankits, a great quarto of 1721 pages, heautifully written in his own hand. This gives the context for each word at each occurrence, and is therefore fuller than the portion published in 1881 as Vol. 12 of the Journal. There are also 251 pages of exceptical notes on the text of the AV., in the handwriting of Rudolf Roth. It is matter for careful consideration whether these two MS. rolumes should not be printed in full.

Professor Ina M. Price, of the University of Chicago: The Nabopolassar Chronicle. [Printed in the JOHNAL, 44, 122 ff.] Remarks by Professor Olmstead, Dr. Chapman, and Dr. Yohannan.

Professor CHARLES C. TORREY, of Yale University: 'Cast it unto the Potter' (Zech. 11: 13).

Professor Paul Haupt, of the Johns Hopkins University: (a) The Historical Nucleus of Esther; (b) The Servant of Jhvh; (c) Arabic Hypocoristics and Heb. Jeshurun; (d) Epenthesis of i in Old Persian. Remarks by Professor Kent.

- (a) The pogrom organized in Est. 3, 13 was not planned under the reign of Artaxerxes II (405-359). It was not due to the refusal of the Jews to worship Analtis. Nor does the golden image in Dan. 3, 1 refer to that goddess (contrast 1 Mac. 1, 54). The historical nucleus of the massacre described in Est. 9, 16 is found in 1 Mac. 11, 47 (JBL 38, 1604). For Haman's attempt to extirpate the Jews cf. 1 Mac. 3, 35, 52; 5, 1, 9, 14; 12, 53; 13, 6; 2 Mac. 5, 14; and for Est. 9, 10, 15 cf. 1 Mac. 4, 16; contrast 11, 48, 51.
- (b) Is. 53, 4 means: The Servant of Juvu (which is a collective term for the faithful Jews at the beginning of the Maccabean period) had to endure all the sufferings we inflicted on him. In the following verse proselytes say: It was our fault (nostrum cifium fuil) that they were mangled (contrast GB<sup>16</sup> 234, I. 10; JAOS 38, 3291; JBL 39, 158) and crushed, but the chastisement they gave us had a salutary effect on us (read: u-mskere ii-iiomenu 'aldau) and when the Maccabers beat us, we were cured; our eyes were opened, and we saw that Judaism was the true religion.
- (c) We say Sammy or Sam for Samuel, Bob for Robert, Dick for Richard. In Arabic we find Quddar and 'Abbad for Abd-el-Kader and Abdallah, respectively; Michael and Gabriel appear as Maxwal and

Jabbur (VG 3634). Heb. Samma' (as well as Samuel whose original pronunciation may have been Sammal; cf. Yiddish Smal) may be a pet name for Ishmael; cf. Arab. Sumafus for Sumafilu < Isma'ilu (Vernier § 213). The original form of the diminutive fu'dil was fu'di (JBL 34, 744). Heb. Jeshurun may be a hypocoristic for Iiéra'él (which was still pronounced with é c. B. C. 850; cf. JBL 37, 225; 36, 141) although popular etymology combined it with iasar ('AZO: à sidés). For the final n cf. the modern names Bétin and Zer'in for Bethel and Jexreel.

(d) In one of the inscriptions at Nagš-i-Rustam the lancebearer of Darius Hystaspis is called Pātišugariš, a Patischerian. The Babylonian text has Paiddikruriš which shows that OP pāti was pronounced paidi with epenthesis of i as in Avestan (for the dd see ZA 2, 264i). Esarhaddon calls this region: Putuš'arra (< Patušudra) i. c. Nishapur with the famous turquoise mines (Ass. šad ukni) on the southern slopes of Mt. Ali Mirsai, some 30 m. NW of Nishapur, the home of Omar Khayyam. The cuneiform name of this peak is Būkn (< Uikn) > uknū > kourse (cf. Uātāspa < Uištāspa and Uštāna < Uištāna). Pādišruār means over against or in front of, i. c. cast (cf. Heb. qidmāt) of Choara (Plin. 6, 44).

Professor N. Martinovirch, of New York City; The Manuscripts of the Turkish Poeters Mihri-Khatun. [To be printed in the JOURNAL.] Remarks by Professor Gottheil.

The session adjourned at 5.38 p. m.

# THE THIRD SESSION

The third session was called to order at 9.40 a. m. on Wednesday; the reading of papers was immediately begun.

Professor C. A. BRODE BROCKWELL, of McGill University: Calculation by Deficients.

Ancient Mediterranean dates appear to be so greatly in excess of reality because computed on units much larger than those of modern arithmetic. As modern arithmetic did not exist as recently as 1500 A.D., it supplies no criteria of the accuracy or inaccuracy of ancient numbers. Ancient numbers, which are based on mathematical concepts without analogy in modern arithmetic, belong to stages of arithmetical evolution to which I have already given the name of "compound-reckoning." One of the most important aspects of compound-reckoning is the principle of "calculation by deficients" to which Ibn Exra bears unambiguous testimony.

Dr. CLARENCE A. MANNING, of Columbia University: The Legend of Kostryuk. [To be printed in the JOURNAL.]

Dr. William J. Charman, of Hartford Theological Seminary: (a) The Problem of Inconsequent Post-Dating in 2 Kings 15: 17, 23, etc.; (b) The Fifth Century Aramaic Transcription of the Name Sennacherib. Remarks by Professors Haupt and Brockwell and President Adler.

(a) The synchronisms, 2 Kings 17: 6; 18: 9, 10, show that the first of Hosea's reign cannot be placed earlier than 729 B. C. Tiglathpileser reigned two years as king of Babylon, 728-7 B. C., dying in the month Tebet, i. e. January 726 B. C. It follows that the dated notices of Assyrian Canon must be reduced to agree with the above facts.

The anomalous use of the Name Pul(u) in 2 Kings 15: 20 indicates that we here have to do with a later insertion. Menahem and his son were ignored as usurpers by Pekah, and apparently by the annalists of the southern kingdom as well.

(b) The name occurs in the Elephantine papyri 40, 3, 4 bis, 14, 15: and 41, 11. A comparison of the Massoretic points with the very early Greek transcription in Hdt. II, 141 shows that the fifth century pronunciation was either Sanaharib' or Sanah'arib. The accuracy with which Herodotus has preserved the Aramaic vocalisation proves that the story was borrowed from the Aramaean Diaspora, and that the identification of Sennacherib's antagonist with the 'priest' of Memphia is a secondary feature.

Dr. ISBARL EFROS, of Baltimore Hebrew College: Textual Notes on the Hebrew Bible.

Professor Julian J. Obermann, of the Jewish Institute of Religion: The Impersonalia from a Semitic Standpoint. Remarks by Professors Gottheil, Haupt, and Brockwell.

This paper deals with the problem of the subjectless sentence as seen from the viewpoint of Semitic speech. It starts with a brief presentation of the psychological and syntactical peculiarities of the Semitic verbal sentence and shows then that the so-called Impersonalia, usually regarded as linguistically abnormal appear in the realm of Semitic languages as quite natural and even dominating. Ultimately it becomes clear that the "problem" of the phenomenon in question, in the last analysis, goes back to a confusion between sentence and judgment, between the parts of grammar and the categories of logic.

Professor ROLAND G. KENT, of the University of Pennsylvania: Certain Personal Pronouns in Indo-Iranian.

This paper is an attempt to show that the gh (Skt. h in mahyam) in the dative singular of the first personal pronoun is not original, but replaced an earlier bh, which is represented in Iranian forms; and other matters to which this leads. Finally, an interpretation is given of Avestan 6ecc, Yasna 34. 11, as an infinitive or as dative of a root noun to the root top., 'potentem esse.'

Professor EDWARD CHIERA, of the University of Permsylvania: New Finds in the Sumerian Field. Remarks by Professor Barton.

From the library discovered at Nippur, we are getting such a large number of legendary and mythological texts that we are safe in predicting that Sumerian mythology, once completed, will not be second in extent and importance to Greek mythology. Among the recent finds in the Nippur collections are: a long legend of Lugal-banda and the Zu-bird, the Sumerian originals of the Gilgamesh epic, several Sumerian tablets on the descent of Ishtar into the underworld, a legendary series describing the origins of civilization, new creation stories, and the like.

Professor Pranklin Edgerton, of the University of Pennsylvania: Notes on Jaina Mähäräetri. Remarks by Professor Lanman, Dr. Abbott, and Miss Griere.

Gleanings from some years of class-work in Jacobi's Ausgewählte Erzählungen. - 1. Vedic words not found in Classical Sanskrit: khambka "pillar" = skambha (J. stambha); thama "station" = sthaman (Skt. only in meaning "power"); casima "dwelling" = vasman,-2, kammana = karman " medical treatment " (so in Caraka), and mili = milia " root-doctor," 56, 31 ("The conversation of the clever is true physicking, and what is the use of root-doctors!") .hakkai, "to call 'whoa! ' to an elephant" (see esp. 16, 22; J. "hindern": H. nisedhati is a secondary and loose definition). hukkarai ditto (not akaravati) .- khamei 25, 15 (ksam, cans.) = " my goodby" (cf. Russian prostit's'a, do. lit. "excuse oneself") .- niyanta, " seeing," pres. ppl. to at with meaning due to netra, nayana, "eye" .vaocha-tthala = \*sthala, "place " (J. \*tala) .-- vaccai "gehen, wandern " = ertyate, pass, to ert.-succaviya " seen " belongs with J.'s other succeeive " bowahrheiten " (ppl. of satydpayati); ef. Ger. senhrnehmen. Etc.; other semantic and etymological notes. - 3. Omissions in the Glossary.

Professor Aaron Emiser, of the Johns Hopkins University: Echnaton and Moses. Remarks by President Morgenstern and the author.

There is no connection whatsoever between the solar monotheism of Echnaton (= \(\frac{1}{2}\hbeta-n\). The Solar Disk is pleased) and the monotheism of Moses. Juvu has no solar features, nor any other features in common with Aton. Monotheism may develop independently in different places. The importance of the religious revolution inaugurated by Echnaton has been greatly exaggerated. The connection between Atonism and Jahvism is impossible also for chronological reasons. The exodus took place two centuries before the time of Echnaton. The biblical account of the exodus is the Hebrew version of the expulsion of the Hyksos in 1580 B. C. The Hebrews were not identical with the Hyksos, but were part of them.

The session adjourned at 12.33 p. m.

# THE FOURTH SESSION

The fourth session was called to order at 2.30 p. m. on Wednesday; the reading of papers was immediately begun. Dr. NATHANIEL RIGH, of the University Museum, Philadelphia: Solar Monotheism. Remarks by Professor Breasted.

The Egyptian forerunners. Short discussion of Ikhnaton's religion. His hereditary and individual qualities. Foreign motives and influences.

Rev. Dr. John S. Chandler, of Kodaikanal, India: (a) The Forthcoming Tamil Lexicon; (b) Names of God in the Tamil Language which denote His Oneness. [To be printed in the Journal.] Remarks by Dr. Abbott.

Professor J. A. Montgomery, of the University of Pennsylvania: The Testimony of the Aramaic Dialects to Oriental Thought and Religion.

In consequence of the sparse remains of Pagsa literature in the Aramaic dialects the place of the latter as media of the culture and thought of a large part of the Near Orient for some centuries has been overlooked. The Aramaic deserves study of its vocabulary for the light it may throw upon the ancient Aramaic culture. As examples: the Hebrew 'eléhim borrowed from the Aramaic 'eléhim; térté conscience'; etc.

At this point Professor Lanman received the privilege of the floor by unanimous consent and speaking in behalf of the Directors proposed the election of Professor Paul Pelliot of the Collège de France as an honorary member of the Society; he was duly elected, and being present made a brief speech expressing appreciation of the honor paid to him and to his native land.

Professor Paul Pellior, of the Collège de France: A New Manichaean Manuscript in Chinese,

Professor A. V. WILLIAMS JACKSON, of Columbia University: The Doctrine of Metempsychosis in Manichaeiam.

The paper brings together all the available material relating to the subject in Muhammadan and Christian sources, and supplements these by references gathered from the remains of actual Manichaean documents. We are justified in believing that Mani himself recognized the doctrine as a tenet of his religion and taught that a retribution through some form of metempsychosis was in store for less faithful Auditors and inveterate Sinners. He may first have derived the idea from Hellenistic notions floating in the air in Mesopotamia, but its development was certainly fostered through his long sojourn in the East (including Hindustan according to a tradition), particularly as Indian ideas were then current in Central Asia.

Professor A. T. OLMETEAD, of the University of Illinois: The Earlier Religions of Canaan.

President JULIAN MONGENSTERN, of the Hebrew Union College: The Return of the Dead in Early Semitic Religion. Professor E. Washingen Horkins, of Yale University: (a) Priestly Penance and Legal Penalty; (b) Words of Defamation in Hindu Law. [To be printed in the JOCENAL.]

Professor Romerr E. Hume, of Union Theological Seminary: Miracles in the Canonical Scriptures of Buddhism.

Although the philosophic basis of Buddhism is entirely unfavorable to miracles, and Buddha's own position is against the ostentations display of such powers, the canonical texts in a number of instances represent him as performing miracles for altruistic or apologetic purposes, and even for self-benefitting or thaumaturgic ends. In the non-canonical books numerons wonders are associated with him. Neither Buddha nor the Buddhist writings had any interest in problems of historicity, scientific causation, or philosophic law, though the Chinese Life (1. 38) states that Buddha was "born contrary to laws of Nature" (SBE, 19, 7). There is the same conflict of evidence in Buddhism as in other religions; whether the Divine is to be seen in the ordinary, the law-abiding, the self-controlled, and especially the self-gratifying, and especially the thaumaturgic.

Professor A. T. CLAY, of Yale University: The Expedition of the Bagdad School.

A description of a portion of the speaker's trip through Syria, Mesopotamia, and Iraq (Babylonia and Assyria) in the latter part of 1923.

The session adjourned at 6.15 p. m.

# THE FIFTH SESSION

The fifth session was called to order at the Jewish Theological Seminary on Thursday morning at 9.48 a. m.

The Corresponding Secretary, Dr. C. J. Ogden, reported that the Directors had voted to accept the invitation of Yale University to meet in New Haven during Easter Week 1925, the exact days to be fixed by the Executive Committee.

On recommendation of the Directors it was voted to amend Article V, Section 1, of the Constitution so as to read:

ABTICLE V. Section 1. The government of the Society shall consist of a President, three Vice-Presidents, a Corresponding Secretary, a Recording Secretary, a Treasurer, a Librarian, two Editors of the Journal, the President and the Secretary of any duly authorized branch of the Society, and nine Directors. The officers of the Society shall be elected at the annual meeting, by ballot, for a term of one year. The Directors shall consist of three groups of three members each, one group to be elected each year at the annual meeting for a term of three years. No Director shall be eligible for immediate re-election as Director, the he may be chosen as an officer of the Society.

Also to renumber the present Article X of the Constitution as Article XI, and to add a new Article X, to read as follows:

ARTICLE X. To provide for scientific meetings of groups of members living at too great a distance to attend the annual sessions of the Society, branches may be organized with the approval of the Directors. The details of organization are to be left to those forming a branch thus authorized, subject to formal ratification by the Directors.

On recommendation of the Directors it was voted to amend Supplementary By-Laws II, On the Organization of Branches, so as to read:

- I. Upon the formation of a branch, as provided in the Constitution, the officers chosen shall have the right to propose for corporate membership in the Society such persons as may seem eligible to them, and, pending ratification according to Article IV of the Constitution, these candidates shall receive the JOURNAL and all notices issued by the Society.
- 2. The annual fee of the members of a branch shall be collected by the Treasurer of the Society, in the usual manner, and in order to defray the current expenses of a branch the Directors shall authorize the Treasurer of the Society to forward from time to time to the duly authorized officer of the branch such sums as may seem proper to the Treasurer. The accounts of the Treasurer of the branch shall be audited annually and a statement of the audit shall be sent to the Treasurer of the Society to be included in his annual report.

The Committee on Occasional Publications made a report of progress in regard to Blake's Grammar of the Tagalog Language and Edgerton's Pañcatantra Reconstructed; the printing of these books is proceeding rapidly.

Several persons, whose names are included in the list above, were elected corporate members of the Society.

It was voted: that the proposal to grant a subvention to Fischer's Arabic Lexicon be referred to the Directors.

Professor R. G. Kent reported informally concerning his activities as the Society's delegate to the American Association for the Advancement of Science.

The following resolution was adopted unanimously:

Resolved: that the American Oriental Society hereby express its sincere appreciation of the munifold hospitality received during its meeting in New York. We thank in particular the President of Columbia University for his invitation to hold our sessions at the University and for the per-

sonal greeting that he extended, and through him also the officers of administration who in many ways provided for our comfort. We likewise thank the Jewish Theological Seminary of America for its hospitality during the third day of our meeting and at huncheon. To the Librarian of the Seminary, Professor Marx we are especially indebted for the exhibition of books and manuscripts which he arranged. We wish also to acknowledge the kindness of the New York Oriental Club in tendering the reception on Tuesday evening, and to place on record our appreciation of the abounding courtesies of our own local members. We would mention especially Professor Gottheil, Professor Davidson, Mrs. Jackson, and the other members of the local Committee; but we desire all those who welcomed us to be sharers in our gratitude.

The President announced the following appointments:

Committee on Arrangements for the meeting in New Haven in 1925: Professors Hopkins, Torrey, Archer, and the Corresponding Secretary.

Committee on Nomination of Officers for 1925: Professors Schmidt, Butin, and DeLong.

Auditors: Professors Torrey and F. W. Williams.

It was voted: that the President appoint a committee of three, of whom the Corresponding Secretary shall be one, to consider the method of arranging the program of the annual meeting; that the committee report to the Directors and they in turn to the Society.

At this point the reading of papers was begun.

Professor Israel Davidson, of the Jewish Theological Seminary: A Fragment of a Book of Makamat by Abraham ben Samuel Ibn Hasdal.

The presenter of the paper has recently discovered, in the Genizah, a lost book of Hebrew poetry by this well-known Hebrew author, in the style of the Makamat of Hariri.

Rev. THOMAS F. CARTER, of Columbia University: The Chinese Background of the European Invention of Printing.

Dr. Luntow S. Bull, of the Metropolitan Museum of Art: A New Egyptian Vizier of the Middle Kingdom.

An XI Dynasty rock tomb on the north side of the bay in the cliffs at Deir el-Bahri, Thebes, has recently been cleared by the Metropolitan Museum Expedition. Owing to the wretched quality of the limestone and to ancient and modern plunderers all inscriptional material has vanished except portions of the mortuary formulae painted on the interior of the limestone sarcophagus. These inscriptions have suffered severaly from fire used in burning the inner coffin and the mummy in the search for treasure. Careful examination of the fragmentary titles of the owner, whose name was Ipy, has disclosed that

he was Vizier, i. e. the chief minister of the kingdom, and that he also hore the titles 'Chief Judge' and 'Ruler of the (Royal) City,' which were attached by custom to the office of Vizier. The tomb almost certainly belongs to the reign of Mentuhotep III (21st century B.C.).

Professor Louis Ginzered, of the Jewish Theological Seminary: Jewish and Babylonian Law.

Rev. Dr. AIMAHAM YOHANNAN, of Columbia University: A Note on Manichaelam in the Syriac Scholia of Theodore Bar Khoni.

Mrs. Vinsinia Saundens, of New York City: Magic in the Sanskrit Drama. Remarks by Dr. Ogden and Professor Edgerton.

This paper deals with the different types of magic in the drama and the manner in which it is used to further the plot.

Professor J. DYNELEY PRINCE, of Columbia University (U. S. Minister to Denmark): Gipsy Language in Denmark.

A few paragraphs of this paper were read by President Adler.

The session adjourned at 12.30 p. m.

## THE SIXTH SESSION

The sixth session was called to order at 2.20 o'clock on Thursday afternoon by Professor Haupt in the absence of the President; the reading of papers was immediately resumed.

Mr. Andrew D. Kalmyrow, of New York City: Iranians and Slave in South Russia. [To be printed in the Journal.] Remarks by Professor Jackson and Dr. Ogden.

Professor A. V. Williams Jackson, of New York City: Brief Iranian Notes. Remarks by Dr. Ogden, Mr. Ware, Dr. Uhl, and Professor Haupt.

A philological discussion of Avestan arcuto, Old Persian abicuri-, and the word tacgird in the Turkish Manichaean Fragment T. M. 423 c.

The following papers were read by title.

Dr. David L Macher, of the Department of Pharmacology, Johns Hopkins University: A Scientific Appreciation of the Biblical References to Menstruction.

The author of this paper, in connection with developing a new branch of science, to be known as "Phyto-Pharmacology," or the effects of drugs and poisons on plants, found that plant protoplasm is often much more sensitive than animal protoplasm is to the effects of poisons of animal origin. This method of study was applied concerning the poison of menatruation. The purely scientific data obtained by the author not only prove the existence of a menatrual poison, but substantiate also to a surprising extent all the notions concerning contagion by touch, etc., mentioned in this connection in ancient literature and more particularly in the Bible.

Professor Maurice Bloomfield, of the Johns Hopkins University: On the Mallinatha Caritra, the chronicle of the woman Malli, the 19th Tirthunkara, or Savior, of the Jainas.

A full account of this Jina, who is the only woman among the 24 traditional Saviors. It is based upon Vijayacandrasūri's Mallinātha Caritra, which, like many other Jaina works, has passed thru the skilful hands of the famous redactor Pradyumnasūri, or Pradyumnācārya. In its present form it is a Mahākāvya, or 'Great Epic,' narrating the prebirth, life in the present existence, and stories connected with that Savior. The present elaboration by the writer is on parallel lines with his Life and Stories of the Jaina Savior Pārçuanātha (the 23d, or penultimate Jina), published in Baltimore by the Johns Hopkins Press in 1919.

Professor Frank Gavin, of the General Theological Seminary: Some Notes on Early Christian Baptism. [To be printed in the JOURNAL]

Dr. HENRY S. GRHMAN, of the University of Pennsylvania: The Buddhist Purgatory.

The spirits of the departed are known as petas. They appear both day and night at the places where they had lived or had their activities. Torments of these spirits described in Peta-Vatthu. Punishment bears a similarity to the offence committed in thought, word, or deed. Also cases of partial reward and partial punishment. Appearance, nature of misery, and cause of sufferings of petas discussed. The conspicuous part that the transfer of merit plays. Buddhism encourages the monastic life, which of course necessitates liberality on the part of the friars' friends and fellow-countrymen. Many a man or woman had to pay the penalty for niggardliness.

Rev. Dr. WILLIAM ROSENAU, of the Johns Hopkins University: Biblical Passages in the Jewish Liturgy.

Words when taken out of their context have a meaning oft not originally intended. This is noted in prayers recited and sermons preached—not to mention general literature. The Jewish Liturgy may for this reason be said to be responsible for strange applications and interpretations of Biblical texts. To illustrate: the opening section of the classic Synagogue ritual reads; "How goodly are thy tents, O Jacob, and thy tabernacles, O Israel! "—as though Bileam, who is reported to have uttered these words (Num. 24: 51), referred them, like the liturgists, to the House of God, frequently called "Tent." as in the phrase "Tent of Meeting," and also designated "Tabernacle," as in the phrase found in Ex. 25:0, et al., when in reality Bileam alluded to the homes of Israel, and perhaps included the atmosphere they possessed.

Mr. S. B. FINESINGER, of the Johns Hopkins University: (a) Heb. 'acce. ue-azild and 'er ue-'one; (b) The Egyptian Prototype of nablium.

(a) Heb, 'actir pë-'azib does not mean shut up and freed or under taboo and free from it or bondman and freeman or married and unmarried or under and over age or pure and impure (AT\* 1, 321, h) but, according to Haupt, affluent (cf. Arab. oddira bi-'l-mali) and destitute. Heb. 'agert, on the other hand, corresponds to Arab. 'urd (JAOS 42, 376). In Mal, 2, 12 we must read, according to Haupt, 'adir pe'one, not 'unne (GK# 52, s) or 'ane or 'ant (cf. WdG 1, 136, B: JBL 26, 42; VG 577).

(b) Heb, which musical instrument, which appears in Greek as nablion and in Latin as nablium, is not, as Wellhausen thought, the same as nébel = water-skin, nor as Brugsch thought, the equivalent of Egyptian afr - lute. There is in Egyptian no lute called afr. The Egyptian equivalent is bin t, where t is the feminine ending, and t represents original L. For Egyptian ( Semitic I, of 16 < 16 < 16, Heb, 16b, heart. Thus bin < bin < abl. That bin f means harp can be seen from the harn determinative, with which it is often written.

Mr. A. J. LEVY, of the Johns Hopkins University; (a) Sumerian and Turkish; (b) mispad ra'ab, 'famine-food,' Deut. 32; 24.

(a) The theory (JRAS, 1916, p. 53; cf. JAOS 13, ecxlix; GGAO 34) that Sumerian is allied to Georgian (Karthli) is not contested by Theo. Kluge, Welcher Sprachengruppe ist das Sumerische anzugliedern? (Leipsic, 1921) although he thinks that Sumerian recalls the languages spoken in the Sudan (cf. ZDMG 63, 526, 1. 19). He endorses Haupt's view (SFG vi; cf. CV 48) that Sumerian is not an Altaic language (contrast GGAO 21; ZA 25, 90). Words like Sum. ada, father; ame, mother (Turk, atd, and) prove nothing; and Sum, es, three; dingir, god; giga-gim, like the night, etc. . . . (Turk, ac, teari, gijdh-gihi) are accidental coincidences.

(b) In Deut. 32, 24 we must read, according to Haupt, mirgid, provisions, stores, fare, which is to be substituted also (AJSL 26, 11) for mird (Ps. 144, 13) and marôr (Ob. 7) as well as mezarim (Job 37, 9). We find the same mistake (mérora for mirpada) in Kelim 20, 1. In Is. 5, 13 we must read meté ro'db, starved with hunger; to starce means orig, to die (Ger. sterben). For mizuad ra'db cf. labm labe, also lahm ha acabim and lahm dim's (BA, 4, 584). Famine-food, plague-bread, virulent pestilence is a gloss to the preced-

ing verse.

Rev. Enwann R. HAMME, of Reinterstown, Md.: (a) The f in the Hebrew Hif'll: (b) The Original Meaning of Heb. bard, ' create.'

(a) The i in the Habrew Hif'll is not transferred from the i in the Hifts of the cerba medias w (GK# 1514; BuL § 46, b); but, according to Haupt, the perfect is based on the inf. hagtil, a form like the inf. Pi'el tagtil (JBL 38, 1864; VG 3854). In Assyrian the permansive (which corresponds to the Hebrew perfect; contrast VG 569)

is identical with the infinitive in all the conjugations except the Qul, where it is derived from the intransitive participle (AG\* 260, 242). Contrast Actes du Sixième Congrès International des Orientalistes, 2, 530 (Leyden, 1885).

(b) Heb, bard, create, is, according to Haupt, connected with bar, clear, pure; cf. Arab. bdhir, Eth. bérüh, Ass. band (ZA. 3, 58); Heb. béré means to clear of trees, Ger. lichten; our to clean land means to clear of weeds. For Heb, bén, between (Ass. béru) cf. our in the clear, Ger. im Lichten, and Lat. lumen, internal space. Also the primary connotation of Ass. béru, double-league (ZA 25, 386) is space. Heb. bard, create, means orig. make a clean job, Ger. saubere Arbeit (ZA 30, 61; JBL 39, 154). Heb, band, build, is a doublet of bard, just as Aram. bar, son, is a doublet of bis (contrast AJSL 1, 224; JBL 36, 78m) while bar, field, corresponds to το καθαρόν (contrast JBL 36, 255) and barf, fat (cf. meri, Arab. parij, hábir) to λεκαρόν, nitidus.

Professor Isabour Lieuvinne, of Temple University: Gleanings from Old Latin Glossaries.

The substance of this paper is to prove a number of Latin words, unrecorded in Dictionaries, but found by me in Old Glossaries (pub. in Goetz Corpus), and furthermore corroborated by the Romance languages. These forms are:—Septembriu—Octobriu—Subilare—Cappulare—Semare—and others.

Aside from discussing these forms I hope to establish the place of provenance of three glossaries Cod. Vatic. 332' (VII c., oldest extant gloss.), Gloss. Affatim (VIII c.) and Cod. Sangall. 912, all published in Corp. Gloss. Latin. Vol. IV.

Professor J. A. Montgoment, of the University of Pennsylvania: hargisa, Daniel 6: 7, 12, 16, a word of kaleidoscopic interpretations.

The Greek translates by 'came' and 'watched'; the Syrinc by 'came,' 'watched' and 'cried out'; the Vulgate by surripucrant, curiosius inquirentes, and intelligentes; the English versions vary between 'assembled' and 'rushed tumultuously.' The word means 'act in concord,' cf. the Hebrow and Greek to Ps. 55<sup>13</sup>; the use of the verb in Peshitta to Acts 57 'be privy'; and the enigmatic hamônô'it in Sachau's papyrus no. 1, line 5; etc.

Rev. Dr. WILLIAM ROSENAU, of the Johns Hopkins University; Talmudic Connotations of Abb, 'Father.'

Primarily, Abh means 'Father.' Its derived significations in pecuilar combinations when applied to persons are: authority, head of guild, possessor of wide experience, presiding officer of court, and reductor or editor. Again, Abh is often used as signifying source, reality, principal rule, distinct foundation. The application of the plural of Abh is noteworthy. In specific connections it may mean ancestors, benedictions, first transmitters of traditions, fundamental groups of work, states of uncleanliness, and damages. The underlying psychology of the large variety of connotations which ASA has is not always obvious,

Professor Maurice Bloomfield, of the Johns Hopkins University: On Two Alleged Stanzas in Päišäei Präkrit.

In Ajitaprabhasūri's Sāntināthu Caritra 4, 83, 84, two Pišūcas, or demons, are overheard to speak in their own language, said to be Pāišāci (pēišāci bhūjā), the language in which Gunāḍhya composed the Brhatkathā. This is the first alleged occurrence of Pāišāci in Hindu literature. The stantas are compared with the grammatical reports on that language, and the question is raised whether the two obviously Prūkrit stantas are really Pāišāci.

Dr. NATHANIEL REICH, of the University Museum, Philadelphia: Marriage and Divorce in Ancient Egypt.

Bachelorhood in Ancient Egypt. A marriage contract in the University Museum, 263 B. C. The equal rights of the ancient Egyptian women. A marriage contract rendered by the woman to the man. A divorce in the U. M., 283 B. C. An Egyptian romance illustrating matrimonial rights. Another marriage contract in the U. M., 224 B. C. Short comparison of the status of women and of marriage in the Hammurabi Code, the Aramaic papyri of Assuan, the Bible, the Talmud, the Syrian Law Code, and the Koran with that of the Greeks and Romans.

Professor A. T. CLAY, of Yale University: The Fertility of the Euphrates Valley.

Dr. Frank R. Blake, of the Johns Hopkins University: (a) The Department of Philippine Languages at the University of the Philippines; (b) Collection of Material on the Interrogative Sentence in the Philippine Dialects; (c) Distributive Expressions in Ethiopic.

- (a) The department of Philippine languages at the University of the Philippines in Manila was organized during the past year and put under the charge of Prof. Otto Scheerer, one of the chief authorities on Philippine linguistics in the Islands. The courses so far given have been of a general linguistic and comparative grammatical character, and have been attended by a number of native students. Courses in the scientific and practical study of the chief native idioms will probably be introduced later. A number of my Philippine articles, published in the Journal, are being used as textbooks.
- (b) In pursuance of the work in long-distance collection of Philippins linguistic material, which I briefly described in JAOS, 42, 399 (1922), a second questionnaire, on the Interrogative Sentance, has since been distributed, and of about 75 copies sent out nearly 50 have been answered and returned. Most of these deal with the seven principal languages, Tagalog, Bisaya, Iloko, Bikol, Pangasinan, Pampanga, and Ibanag (more than half being devoted to the numerous dialects).

of Bisaya); but there are also a number dealing with some of the lesser-known idloms, viz., Yogad, Gaddang, Nahaloi, Magindanaw, and Knyono. The idea of this undertaking is to provide the material for a "Comparative Grammar of the Philippine Languages."

(e) Distributive expressions in Ethiopic are based on expressions in which the word to be distributed or the phrase in which it occurred was repeated, e. g., be'est be'est, 'every man,' zu-'dmat zu-'dmat,' of every year.' These original expressions have been superseded almost entirely by those in which the preposition or case-sign before the word is repeated, e. g., zaza-'dmat. The numerous constructions developed secondarily out of these repeated particles, e. g., baba, 'in every,' which has become simply distributive and may be used with a noun in any case, form the subject of the present paper.

Professor R. P. Douanezerr, of Goucher College: Labor in Babylonia in the Sixth Century B. C.

There are many records which indicate that there were different sources for the supply of labor in all periods of Babylonian history. The records are especially complete for the Neo-Babylonian period, during which the following classes of labor existed: (a) slave labor, (b) consecrated labor, (c) military labor, (d) hired labor, (e) skilled labor.

Dr. Geonge C. O. Haan, of New York City: Names of Avestan Demons in the Manichaean Fragments from Turian.

The names of certain of the demonic beings of the Avesta are found likewise in the Middle Persian and other Manichaean Fragments discovered at Turfan. Aside from the common noun deca, 'demons' (Av. dasea-), there occur also, in the fragments thus far publisht, the following: Abarmes (= Av. Asia Mainyu); Asidabay (= Av. Asia Dahāka); Āz (= Av. Āzi); Dūšyāriy (= Av. Dužyāriya); Parīgān, plural (cf. Av. Pairīkā); Mazan, Mazanān (cf. Av. Māzainya).

Mr. Jal Dasrus C. Paver, of Columbia University: Neryosang and Other Old Parsi Sanskritists.

The Sanskrit writings of the Parsis are mainly translations of the Pahlavi version of the Avesta or of Pahlavi-Pazand works. The majority of these are by the well-known Dastur Neryosang, who flour-ished in the latter part of the twelfth century A.D. A study of Avestan-Pahlavi-Sanskrit manuscripts further reveals the names of three others besides Neryosang, who deserve mention. The first, Dinidara Bahman, according to the manuscript H., is the reputed translator of the Pazand Marriage Benediction. The second, Mobbl Chanda is the author of a small treatise on the Parsi Calendar, Chanda Prukāš, according to the manuscript K., The question as to the third, Akō Adhyārā, is left for future consideration. According to the manuscript EMU., he is said to be the author of the much discussed Sixteen Slokes, describing the religion and customs of the Parsis.

Mr. PAUL POPENUE, of Coachella, Cal.: 'Your Paternal Aunt the Date-Palm.'

Created, according to Muhammad, from the earth left over after the creation of Adam, and therefore akin to man, the date palm was venerated in the Orient throughout early history. Botanical evidence indicates that it is a native of the eastern shore of the Persian Gulf, though it is not now to be found wild anywhere. Its cult apparently began in the Tigris-Euphrates delta, spread northward, and was carried by Phoenicians to all the shores of the Mediterranean. It is traceable in most of the religions of that region, its first appearance in the Bible being as the Tree of Life in the Garden of Eden. Oriental Christians had an apocryphal legend (later circulated by Muhammad in the Koran) that Jesus was born under a date palm—just as Apollo had been, centuries earlier. Egypt alone seems to have been little infinenced by the cult, which had largely died out everywhere before 1,000 A. D.

Mr. James R. Ware, of the University of Pounsylvania: Old Persian nipa@drayam.

The ordinary explanation of this form as an intensive falls adequately to account for the vowel d of the supposedly reduplicated syllable, since that vowel should have been assimilated to the vowel of the root syllable. We might consider the form as the result of contamination with "niyaddrayam, discussed below. It is better, however, to treat niyaddrayam as a causative which has suffered contamination with a word of similar formation and meaning, "niyaddrayam. From a comparison with the Skt. we should expect a causative of niyéri to appear in the first person singular Imperfect Indic as "niyaddrayam. Contamination with "niyaddrayam would give a niyadrayam and so dispense with the repetition of the ye-which was evidently distasteful to the Indo-Iranian speaking peoples.

The Society adjourned at 2.57 p. m. to meet in New Haven in 1925.

#### PROCEEDINGS

OF THE

# MIDDLE WEST BRANCH

OF THE

# American Oriental Society

AT ITS EIGHTH ANNUAL MEETING

ANN ARBOR, MICHIGAN, 1924

In accordance with action taken by the Executive Committee of the Branch after consultation with its membership, an invitation from the University of Michigan was accepted and the 1924 meeting was held at Ann Arbor on March 28 and 29. The Central Section of the American Anthropological Association kindly arranged to hold its annual meeting at the same time and place. So the two societies enjoyed in common a dinner and reception Friday evening and a luncheon Saturday noon as guests of the University. The Friday evening and Saturday afternoon sessions were also held jointly.

The following members of our Society were present:

Allen	Lybyer	Sellers
Bonner	Moek	Smith, J. M. P.
Brown, G. W.	Nykl	Waterman
Buttenweiser	Olmstead	Wolfenson.
Clark	Paul	Trong and the same of the same
Pullarton	Delaw	

Two candidates for membership were also in attendance:
Sanders, Henry A. Wilson, John A.

At the Friday afternoon session a nominating committee consisting of Professors Bonner, J. M. P. Smith, and Olmstead was chosen by nominations from the floor and was instructed to report on Saturday morning. Professor Albert H. Lybyer read his paper: Current Political Changes in the Islamic World. (To be published in *Current History*.) Professors Campbell. Bonner and Henry A. Sanders, assisted by other members of the Departments of Greek and Latin, then exhibited the University's large and choice collection of papyri and manuscripts.

After the joint dinner at the Michigan Union, members of the two societies were officially welcomed at the Friday evening session by Dr. Alexander D. Ruthven, Director of the Museum of Zoology, in behalf of the University. His talk: The History of Anthropology at the University of Michigan, explained the growth of the institution's museum resources and the administrative developments which had led in 1922 to the establishment of a separate Museum of Anthropology coordinate with, but not yet as large as, the Museum of Zoology. Two papers followed:

Colonel O. T. Honson, of Cambridge University: The Belief in Reincarnation and its Relation to Social Structure and the Cycle of Life Customs.

Belief in reincarnation affects fundamentally even the choice of name at birth, as well as funeral and marriage rites, etc. Examples cited were chosen largely from various regions of India.

Professor Ina M. Price, of the University of Chicago: Boats and Ships in Early Babylonia (illustrated).

The elaborate canal system of carly Babylonia, and the numerous references in Sumerian and early Babylonian inscriptions, establish the fact that water transportation by boat, float and raft existed in the earliest periods of myth, legend and history. Representations of primitive boats of various patterns and forms are found on seal-cylinders dating from 3500 B. C. down into the later historical periods. These simple vessels were made of reeds, wood, and skins (inflated) as the booyant factors under rafts and barges. They were round, elongated or flat, and not until the seventh century B. C. equipped with sails, and then only in imitation of the Phosnicians. They were only suitable for inland service, and not for the sea or ocean.

The joint evening session then adjourned to the University Club for a reception and smoker.

Saturday was devoted almost wholly to papers:

Professor D. D. LUCKENBILL, of the University of Chicago: The Pronunciation of the Name of the God of Israel. (Read by Professor J. M. P. Smith.) Remarks by Professors Bonner, Olmstead, and J. M. P. Smith. (To be published in AJSL.)

Professor HENRY A. SANDERS, of the University of Michigan: The Text Character of the Berlin Genesis. Remarks by Professor Olmstead.

The papyrus was purchased by the Preuseische Staatsbibliothek in 1906. It is in parts quite fragmentary and ends at XXXV, S. The writing is a cursive of the late third century and the beokform was intended, though it was certainly never bound. Peculiar errors and abbreviations make it an interesting manuscript palaeographically.

It shows great individuality is text, having some 240 variants sot elsewhere reported. It is much closer to the minuscule manuscripts given by Brook & McLean than to the uncials. Of the uncials E. agrees best and A. least. Of the groups of minuscule manuscripts

which stand in close relationship, that consisting of b, w, 108, is easily first, while the groups d, p, and I, i, r, contend for second place. The group q, u, (v) may also be mentioned.

Professor THEOPHILE J. MIEK, of the University of Toronto: Some Notes on Cantieles. Remarks by Professors Wolfenson and Waterman.

Additional support for the conclusion reached in the author's "Canticles and the Tammuz Cult" (AJSL, October 1922) is found in the vocabulary of Canticles; for Babylonian parallels show that its terminology is religious rather than secular. Many Araş Aryopers in the document are also explicable from the Assyro-Babylonian.

Professor Kemper Fullerron, of Oberlin Theological Seminary; Isaiah 8: 5-10. Remarks by Professors Buttenweiser and Olmstead. (To be published in JBL.)

Professor A. T. Olmstead, of the University of Illinois: The First Chapter of Second Isalah. Remarks by Professors Buttenweiser and Fullerton.

Upon omitting Isaiah 36-39, a striking continuity between chapters 35 and 40 is apparent. Moreover, 87% of the vocabulary of 35: 1-9 is found in the recognized work of Second Isaiah. The writer of 35 was clearly in Babylon. His "highway" was the straight road leading to the Ishtar Gate; the "lion" and the "ravenous heast" were the glazed lions and sirrushes that lined it.

At this point a five-minute recess was taken, followed by a brief business meeting.

The Secretary's minutes of the previous meeting, as printed in the JOURNAL (43, 172-176), were accepted.

The Nominating Committee reported as its choices for the coming year:

President: Professor Kemper Fullerton, Oberlin Theological Seminary.

Vice-President: Professor Campbell Bonner, University of Michigan.

Secretary and Treasurer: Professor T. George Allen, University of Chicago.

Executive Committee: the officers, az officio, and Professors Leslie Elmer Fuller, Garrett Biblical Institute, and Ira M. Price, University of Chicago.

It was moved by Professor J. M. P. Smith, seconded by Professor Wolfenson, and carried that the Secretary cast a unanimous ballot for the foregoing, who were thereupon declared elected.

Professor Fullerton offered the following resolution, which was unanimously adopted: The Middle West Branch of the American Oriental Society wishes to express its sincere thanks for the generous hospitality extended to us by the University of Michigan and in particular to Professors Waterman, Bonner, and Sanders, whose courtesy has done so much to make our visit profitable and pleasant.

The Society feels the increasing value of coming into direct contact with the work done by its various members in the institutions which they represent. It is believed that no better way can be devised to kindle a generous rivalry in advancing the common work to which we are all devoting our

lives.

An invitation from Dean Frederick C. Eiselen to hold our next meeting at Evanston was accepted upon motion by Professor Olmstead, seconded by Professor J. M. P. Smith. The date for the meeting was left by vote to the new Executive Committee. The reading of papers was then resumed.

Professor Moses Burrenweisen, of Hebrew Union College: The Date and Character of Ezekiel's Prophecies.

Written after the Captivity; shows affinities with visionary voyages etc. in apocalyptic literature.

Professor J. M. P. SMITH, of the University of Chicago: Isaiah and Sennacherila.

Though the biblical accounts of Sennacherib's dealings with Hezekiah in II. Kings 18-19 (two strands) and again in Isaiah 36-37 suggest two campaigns, Sennacherib's own story (on the Taylor prism in the British Museum and again on the University of Chicago prism) leaves only one possible. Isaiah's attitude is clearly that submission to Assyria is necessary.

After a joint luncheon at the Michigan Union, the reading of papers continued in a joint session.

Professor Ovid R. Sellers, of McCormick Theological Seminary: The Scale in Egyptian music. Remarks by Professors Sanders, Allen, and Weed.

There is some indication of a diatonic scale in Egyptian music. The harp with three strings and the double clarinet, or small fints, with four holes in each tube may have been instruments merely for accompaniment. The long flute, two of which are in most orchestras shown in the monuments, probably had three holes and was capable of producing a tetrachord. Thus two of these instruments may have been complementary, together sounding a seven-tone scale. Some oboes of the Empire have six holes, two of which would have been superfluous had the Egyptians been restricted to five tones.

Remarks by Professors Buttenweiser and Wolfenson and Dr. Bartlett.

Professor Walter E. Clark, of the University of Chicago: The Purhass.

A statement of the nature and content of the Purhas, the problem

of their date and composition, and of their value for the study of Indian mythology, religion, and history. They have received much less attention than they deserve.

Professor Clark has begun a systematic reading of the Puranas in our present uncritical editions and an indexing of all material which seems important. His aim in the first place is that of writing a "Mythology of the Puranas" and secondarily that of compiling material which will make it possible to list all parallel passages and borrowings in the hope that eventually it may be possible to eliminate the later passages of various types and to delimit more closely the original nucleus. He thought that a study of the Baliness Brahmanda Purana might throw much light on the problem and expressed the hope that Tibetan translations of one or more Puranas might be found. Eventually critical editions based on complete manuscript material must be made but he feels that something of value can be obtained from the present uncritical editions.

Professor Lenor Waterman, of the University of Michigan: Abbreviated Ideograms in the Assyrian Letter Literature. Remarks by Professors Allen and Sanders.

Simplification by emission of determinatives or by use of only one member of a compound ideogram is frequent wherever the recipient is presumed to be sufficiently familiar with the subject matter.

Professor CAMPHELL BONNER, of the University of Michigan: A Problem in the History of a Legend. Remarks by Dr. Mason.

Theme of gaining quick death at hands of captors by a trick of pretended magic, traced through early Christian legends and down to use in an Alaskan Indian story by Jack London. Suggestions on unnoticed occurrences of the theme are invited.

Professor A. T. Olmstran, of the University of Illinois: The Earliest Religious of Canaan.

There was a "neolithic agricultural" religion in the Near East as a whole (including Greece) before the Semites.

The exigencies of train schedules required adjournment at this point. The following papers were presented by title only:

Professor D. D. Luckenmal, of the University of Chicago: The Egyptian Earth God in Cuneiform. (To be published in AJSL.)

Dr. Caroline Ransom Williams, of Toledo: Women's Cylindrical

Professor Moses Buttenweisen, of Hebrew Union College: The Image of Nebuchadnezur's Dream.

Professor Martin Sprengling, of the University of Chicago: (a) The Origins of the Court Mosque; (b) A Modern Druse Catechism.

T. George Allen, Secretary.

## EAST AND WEST 1

### CYRUS ADLER

### THE DROPSIE COLLEGE

As THE SOCIETY did me the honor to elect me President at a meeting at which I was unable to be present, this is the first opportunity that I have had to express to the members my thanks for the distinguished honor which they have conferred upon me. I am but too well aware that the honor was not deserved, and ascribe it to your indulgence and the fact that I have been for forty years continuously one of your body. To grow old is not in itself a merit, but by common consent years confer a privilege which may or may not be wisely exercised. I have learned from my contact with the more or less permanent officers of the Society that one of the principal duties of the presiding officer is to deliver the annual address, thus rendering to the members a quid pro quo. Whether I shall be able to do this or not, you are to be the judges. But it seems to me that if I were to be of any service to you at all, it would be by giving you the benefit, if benefit there be, of a rather extended observation of men and things in so far as these observations might immediately or remotely relate themselves to an Orientalist.

A young friend of mine, who in his early years evinced a very considerable literary talent and bestowed his abilities in an editorial capacity upon several of the important publications of this country, came to the conclusion a few years ago that as all of these things were money-making anyhow, he might as well devote his literary talents to the profitable business of advertising. In talking over with me the other day the theory of advertising he asserted that, in America at least, the first thing necessary was to get a slogan and then keep on repeating it, because, he said, the American man rules his life by slogans. The fact that a certain man could get to be known to people as "Teddy" and "The Man with the Big Stick" was to his mind the reason for the great popularity of Mr. Roosevelt and intimate feeling toward him of

Presidential Address delivered before the Society at New York, April 22, 1924.

millions of Americans, who of course had never seen him. You may be wondering what relationship this apparently dippant introduction can have to the work of such a dignified Society as ours or to the very large theme which the Secretary insisted upon

putting down on the programme.

Somewhat over one hundred and fifty years ago Bishop Berkeley wrote the sentence "Westward the course of Empire takes its way." In the middle of the nineteenth century the Poet Laureate Alfred Tennyson proclaimed "Better fifty years of Europe than a cycle of Cathay," and the uncrowned English poet Kipling has powerfully affected the minds of all English reading people by the verse "For East is East and West is West and never the twain shall meet." Although the poem which this quotation opens has an entirely different philosophy, these are the lines which linger in the minds of men. In other words, these are some of the slogans which have determined the attitude of the Occident toward the Orient.

But why should fifty years of Europe be better than a cycle of Cathay or why should the twain never meet? What is this difference between Occident and Orient, between East and West, that should mark them off the one from the other so completely? The civilization from which Europe and America derive flourished in historic times about the shores of the Mediterranean, and there are parts of the Mediterranean which are not as broad as some of our great rivers. Surely the Bosphorus, which separates Europe from Asia at a given point, does not hold within itself the magic that makes those who live on the European shore one breed of men and those who live on the Asiatic another. And at the other end of the Mediterranean, the distance between Gibraltar and Tangier. between Europe and Africa, is not sufficient to make the dividing line. There is no climatic or other difference between the north shores of the Mediterranean and the south shores of the Mediterranean that would justify the statement "Never the twain shall meet," but men in America, and probably in England, if not in the whole Western world, have had the idea from these slogans and flashes of poetry that not only are they something different but something superior. Superiority is not a good method of approach either for knowledge or understanding; the gates of learning must be entered with humility.

The Orientals feel this assumption of superiority most keenly. The story may be apocryphal, but I recall being told that shortly before the close of the Russo-Japanese War, a distinguished French statesman undertook to compliment the Japanese Ambassador in Paris upon the great strides which his nation had made and the Ambassador replied "Twenty-five years ago you knew us by good-looking silks and charming lacquer ware which we sent to your country for sale, and then you called us semi-civilized; but now that we have learned to kill as you do, you consider us civilized."

Or let me take another example—an entirely different example of what I mean. It was the talk during the World War and especially toward its conclusion that whoever stood to win, Turkey would lose. If the Allies won, the Turks certainly would disappear, and if the Central Powers won, the Turks would become virtually vassals to Germany. Now the actual result seems to be that of all the powers that were engaged in the War, Turkey is the only one that really won anything; so it does not appear that this superiority of the Western man always works out when he is put in contact with the Eastern man.

It might therefore be in the interest of the Occident if it discarded the notion of Bishop Berkeley and were not so sure that the course of Empire always went westward—if it inquired into the intellectual and material pleasures of Cathay and possibly made a new choice as between living fifty years in present day Europe or one thousand years in some Eastern land, and if, at least looking upon nature itself, which in certain portions of the globe has brought East and West within a stone's throw, it endeavored to find some method whereby minds could meet at least as closely as have continents.

It would seem to me that such a purpose might well fall within the scope of a Society which bears so distinguished a name as does the American Oriental Society; that this Society might concern itself with other subjects than the philological ones which mostly occupy the attention of its members. I do not wish to be understood as casting the slightest discredit upon philological subjects, but I wonder whether the very knowledge which our philologists, many of whom are deep thinkers, our historians, many of whom have a philosophic turn of mind, our students of religion who understand the psychology of peoples, could not also be utilized toward a knowledge of the institutions and the process of development of these Oriental nations and toward translating them, as it were, to the western world for purposes of better understanding.

In the early days of this Society, such subjects formed a proper part of our meetings and our proceedings, and I dare say had their influence. When I received the programme of this meeting and looked over the list of papers that had been announced, I wondered that no one of our Arabists should have thought of discussing here an institution like the Caliphate. If we may believe the newspapers, and I dare say in this regard we may, a tremendous revolution has just taken place in what was the Ottoman Empire, a revolution which will affect at least two hundred million people. The institution of the Caliphate, which according to the books goes back to Mohammed and was the source of controversy among the different Mohammedan powers for hundreds of years, was claimed and defended with reasonable success by the Turks in their seat at Constantinople and was an instrument which as much as the jealousy of the European powers prevented the so-called " sick man" of Europe from being carried to the morgue. It was, during the term of President McKinley, even invoked by our own Government and proved of such efficacy that it prevented a formidable revolt of the Moros in the Philippine Islands. Yet no one of us appears to have any light to shed upon the origin of this Institution, its history and development, the result of the abdication of the Turks of this great power and the future religious and political development that may be expected concerning it. It is true that my distinguished predecessor, Doctor Talcott Williams, took the Caliphate as the theme of the presidential address in 1921, but to my knowledge this address has not been published.

I think you all know that something important has been going on among the millions of India. Is it really only as represented, a nationalistic movement—"India for the Indians"? Is it due to the fact that having been told for a long time that they are one of the white man's burdens they desire to relieve the white man of the burden? Or is there a great revolution in preparation against the caste system of India? Or are all these causes operating? Surely such a question is of high importance for the politics of the world today, as it may be at some future time for its history. Have we no students who would turn their attention

tion to current literature in these Oriental tongues and render them accessible as a matter of interest and curiosity, and also as a matter of vital moment, to men in the West? Students in English literature do not refuse to take cognizance of the literary products of the day. Why should students of Oriental literature do so?

While it may be doubted whether the agitation was real, certainly the question of Shantung at the Peace Conference was made much ado of in this country, and ostensibly at least was one of the prime reasons for our refusal to assent to the Treaty of Versailles. It was held up as a horrible example of the injustice of that Treaty. During that violent controversy, I do not recall that any study of the subject was made by an Orientalist or from the point of view of a man who had real knowledge of either the Chinese people or the Japanese people. It was all left to the amateur Orientalists who write for the newspapers, politicians who were working from other motives, and the propagandists who had axes of their own to grind.

I feel that it is an attitude of this sort which prevents a group of men like the American Oriental Society from asserting and securing their rightful position in the Nation, and I say this not because I think the Orientalists need the position, but because I think the Nation needs their knowledge and advice.

Everyone recognizes that the physical scientist has his place in the national economy. No one would think of starting a hygienic laboratory or conducting any one of the branches of the government that have to do with the physical and biological sciences without calling upon their representatives for information, but apparently it never would occur to the government to seek the advice of this body to deal with their intricate and difficult problems which have to do with lands and peoples about whom we have special knowledge. I am sure that any student of Japan could tell the wise men at Washington that no amount of economic reciprocity, expressions of kind feeling or even the noble charity which was extended to Japan after the great earthquake would compensate that proud nation for legislation that would in their opinion stamp them as inferiors, and that the peace of the world, if not at the moment, may, in the future, depend upon the interpretation by our Government of the actual state of mind of the Japanese nation.

There are three bulky quarto volumes which were issued by order of the Government of the United States in 1856. They contain the narrative of the expedition of an American squadron to the China Seas and Japan in the years 1852, 1853, and 1854, under command of Commodore M. C. Perry of the United States Navy. An examination of these volumes just at the present time and a bringing of their contents to the attention of thinking Americans would certainly not be without value. Japan had steadily resisted entering into relationship with other nations. She desired to be let alone. Every European nation had endeavored to force her into trading. The Dutch alone apparently had had some, but very limited, success. America was determined, to use the words of the Commodore, to break through the barriers of "this self-isolated kingdom." And when his mission had succeeded, in good American sailor style, he writes: "It was reserved for our own, the youngest of nations, to break down at last the barrier with which this singular people had surrounded themselves; and to be the first, in modern times, to establish with them a treaty of friendship and trade which (already copied as far as was possible by other governments) is to form, as we hope, the initiatory step in the introduction of Japan into the circle of commercial nations."

Commodore Perry signed this treaty on behalf of the United States on the last day of March, 1854, just about seventy years ago. Although there was an occasion, it was no accident that it was just about the middle of the 19th century that our country sought to open up relations with this "self-isolated kingdom." For following the Mexican War there had been a transfer to the United States of the Territory of California, and this vigorous young child of America had hardly begun to walk when it looked across the Pacific for advantageous trade relationships. I wonder whether it is not a patriotic duty to bring such matters to mind at the present moment.

Or let me return for a moment to the Turks. When the Peace Conference at Versailles had sat for months and months, it adjourned without settling the Eastern question. It was no more difficult than the other questions they had to settle, but the real fact was that they did not have the people who knew about it. As far as I can recall, amidst the large collection of experts that were assembled by this country to take to Paris, there was not a single one who had set foot upon Oriental soil except possibly as a tourist, and I am not even sure of that. The result of this unsettled state of the condition of Turkey was the subsequent ill-advised attack of Greece upon the Turks, since for these powers the War was not ended, the triumph of the Turks, and a complete surrender to them by a war-weary world of the things that the great powers had most emphatically stated would never be granted to the Turks. Any real student of Near Eastern affairs could have informed the statesmen of the great powers early in 1919 that their plan of removing the Turk to a small undefined section of Asia Minor was bound to fail. But it took the Conferences of San Remo in 1920 and Lausanne in 1922-23 to convince the Western world that the Eastern man was still to be reckoned with. I am credibly informed that when the subject of Mosul and incidentally its oil deposits came before these assemblages, the great statesmen did not even know where Mosul was.

For this ignorance they are not to be blamed entirely. I think it is our fault—the fault of a Society like this which is keeping its studies within too limited a scope or has not time to apply them

to the conditions of the world at the present day.

The American Oriental Society had its origin in a meeting held in August, 1842, in the office of John Pickering of Boston. John Pickering himself was not an Orientalist. He was a lawyer, he had diplomatic experience, and he was a student of the languages of the North American Indians. His definite contribution to knowledge was a Greek Dictionary. At the time that the Society was founded, its purposes were stated to be the "cultivation of learning in the Asiatic, African and Polynesian languages." But within a few years, this definite linguistic attitude of the young organization did not appear to suit the members; the Constitution was re-drafted, and the provision was added that its purposes, beside the linguistic ones already named, should be the "encouragement of researches of any sort by which the knowledge of the East may be promoted" and the "cultivation of a taste for Oriental studies in this country"; and these, as far as I know, are still the expressed purposes of the American Oriental Society.

It is interesting to see how in the early years and indeed for quite a number of years one or another of our members did keep us in contact with the actual happenings of the East and its relationship to the Western world. In one of our volumes I find a paper discussing the mode of applying the telegraph in connection with the Chinese language, and in another a study of the state and prospects of the English language in India. Men connected with our consular and diplomatic service, notably John P. Brown, for so many years the dragoman of the United States Legation at Constantinople, used to keep us au courant of the important documents that were issued by the Turkish or other governments. Even in the time of most of us, I may recall the contributions to this Society on Korea in its relation to China, as well as on other subjects, of W. W. Rockhill, whose career in the Department of State and in the diplomatic service of the United States is unequalled in its length and variety. Subjects in the physical sciences which might have a bearing upon Oriental history or the interpretation of documents were considered within our scope, and such a paper as "Traces of Glacial Action on the Flank of Mount Lebanon" was actually admitted to our Journal. Pickering himself proclaimed in his very first address as one of the general purposes of the Society the contribution of studies and memoirs which would result in the completion of the general ethnography of the globe.

I fully believe that the archaeologist or the philologist is justified by his own studies, but I have never understood that our Society was limited to these. If we were, we might have taken part in the newer alignments of scholars subsequent to our foundation. The philological papers might go to the American Philological Association, which by name at least is not limited to Greek and Latin. The papers on modern Oriental dislects might go to the Modern Language Association, for Arabic is a modern language as well as French; and of course there would be the American Institute of Archaeology for papers coming within that field. But we are the American Oriental Society, and it seems to me that everything that pertains to the Orient, ancient or modern, linguistic or historical, political or economic, should be made the subject of investigation and discussion. Information radiating from our membership ought be put at the service of the state, not only our state, but all other states.

Our membership has been during a number of years intelligently enlarged, under the direction of several capable chairmen. Beside the technical scholars in our colleges and universities it ought to. and probably does in some minor degree, include the men of affairs, members of our diplomatic and consular services who have been stationed in the East or who have had special opportunities of studying the East, men who are engaged in commerce and stationed in these countries, missionaries who have had long experience in various countries and special opportunities for getting acquainted with the social, literary, and economic conditions. But once having secured the membership of such men and women, we ought to show them the further hospitality of indicating that we have room for them in our programmes and the desire to secure the information which they possess and a belief in its importance by giving it a reasonable place in the publications of our Society.

If our group would adopt an attitude of this sort, the knowledge brought together would then be subjected to the process of culgarization, percolate to the people and to their leaders, if they have any, and ultimately, just because it is knowledge that makes men humble, that makes them tolerant, and makes them understand one the other, the Society might help to bring about an understanding between the East and West, which I believe to be so necessary for the happiness and the peace of the world and which I believe every civilized man owes to himself. Ordinarily the human mind balks at nothing. It is willing to measure stars millions of miles away, to dig into the bowels of the earth for strata which it claims to be millions of years old, to knock at the door of all the mysteries of the universe. Is it possible that men are unable or unwilling to understand their own kind just because they live across the Ocean or on another continent? It is time to put an end to the artificial barriers which slogans and pseudoethnologists have erected among men. The Orientalists of America. should seek to obtain and suread abroad a real knowledge of that vast geographical area which is within their purview. If you gentlemen of the American Oriental Society will take up the task you will justify a genuine Oriental attitude to which I am sure the Occident will also subscribe: "the Disciples of the Wise bring peace into the world,"

### THE SO-CALLED FERTILE CRESCENT AND DESERT BAY

# ALBERT T. CLAY YALE UNIVERSITY

Some years ago a geographical term was coined in connection with the description of Syria and Mesopotamia in ancient times, known as "the fertile crescent, the shores of the desert bay," which has since been extensively used in text books of ancient history. Prof. James H. Breasted, who is credited with having introduced the term, says: "This fertile crescent is approximately a semicircle, with the open side toward the south, having the west end at the southeast corner of the Mediterranean, the center directly north of Arabia, and the east end at the north end of the Persian Gulf. . . . This great semi-circle, for lack of a name, may be called the fertile crescent. It may also be likened to the shores of a desert bay, upon which the mountains behind look down-a bay, not of water but of sandy waste, some five hundred miles across, forming a northern extension of the Arabian desert, and sweeping as far north as the latitude of the northeast corner of the Mediterranean [i. e. about 37°]. This desert bay is a limestone plateau of some height-too high to be watered by the Tigris and the Euphrates which have cut canyons obliquely across it." Prof. Breasted's man shows about one hundred and fifty miles of territory through which the Tigris flows, and about four hundred through which the Euphrates flows, in the so-called "desert bay." 1

In recent years I have been interested in the history and geography of this land, called in ancient times Amurru, the land of the Amorites, which includes the country extending from Babylonia to the Mediterranean. In 1919 I published a work entitled The Empire of the Amorites, in which an effort was made to reconstruct the history of Amurru, and to show not only that its civilization had a great antiquity, but that the Amorites had a capital in the fourth millennium B. C., at Mari, on the Euphrates, in the very heart of the so-called "desert bay," which was powerful enough to rule Babylonia. The evidence I had at the time to prove the existence of such an empire was fragmentary, and very

<sup>&</sup>lt;sup>2</sup> See Ancient Times, A History of the Early World, 101 f., and Outlines of European History, 56 f.

slight; but nevertheless I felt that it was quite sufficient, and this

has since been proved correct.

In the spring which followed the appearance of this work, a party of travelers, led by Professor Breasted, and known as the American Scientific Expedition, passed up the Euphrates valley from Iraq to Aleppo. In view of the geographical term he introduced we note with interest what Professor Breasted has to say concerning the fertility of the valley, and concerning the kingdom of the American, which I claimed had existed in ancient times on the Euphrates. His views are expressed in captions beneath three photographs taken by D. D. L. (i. e. Luckenbill), and published in the American Journal of Semilic Languages (vol. 38, 233 ff.), as follows:

Fig. 24.—The Fields of Anah on the Upper Euphrates.

This narrow fringe of vegetation, extending for several miles along the river at 'Anah and watered by the irrigation wheels seen in the foreground, is very exceptional. The alluvial flats between the banks of the Euphrates and the cliffs of the desert plateau are for the most part arid desert like the plateau above or disappear altogether. Compare Figure 30. Or. Inst. photo. No. 7332 by D. D. L.

Fig. 36.—A Typical Euphrates Landscape above Sälihtyah.

Showing how the cliffs of the desert plateau approach the river, leaving too narrow a margin for the support of an agricultural population. The irrigation waterwheels, of which one is seen on each shore, are very rare for the entire stretch from Hit to Meskenah. It is evident that this region never has supported a settled agricultural population large enough to develop a great nation or any degree of political power arising from so scanty a material basis. Or. Inst. photo. No. 7320 by D. D. L.

Fig. 32.—The Head of our Wagon Caravan and the Cliffs of the Euphrates Valley above Salihtyah on the Upper Euphrates.

The valley floor between the foot of the cliffs and the river margin (just behind the observer) is arid desert like the platean above. This is typical of the Euphrates Valley, between Hit and Meskenah. When cliffs approached too closely to the water's edge to permit passage it was necessary to ascend the platean, where the journey was often seriously delayed by wadis like Figure 31. Or. Inst. photo, No. 7412 by D. D. L.

These remarks are in strict accord with the writer's ideas concerning the so-called "fertile crescent, the shores of the desert bay." There are few other comments on the trip up the valley in his brief report, which is devoted largely to the mishaps along the route, the dangers incurred, and the persons met. It is also Luckenbill's idea that "whatever prosperity Syria may have possessed from time to time in the course of her history, it rested, not upon broad acres of arable land, but upon her strategic position commercially." \*

It must be conceded that it is an interesting coincidence that at the very time Professor Breasted first published his brief report of "The University of Chicago Expedition to the Near East," Doctor Legrain of the University of Pennsylvania published a fragment of a dynastic list, which showed, just as I had maintained, that the Amorite city Mari, on the Euphrates, ruled Babylonia in the fourth millennium B. C., which of course places the existence of such a kingdom and an empire beyond any further cavil. Let us now ascertain whether there was sufficient "material basis" to support the kingdom which the inscriptions tell us existed along the valley.

In the autumn of last year, 1923, having been commissioned to inaugurate the new American School of Oriental Research at Bagdad, the opportunity presented itself to study the agricultural possibilities of Syria and Mesopotamia, especially of the Euphrates valley, and to note the size and extent of the mounds covering the cities of the ancient past. Accordingly, the First Expedition of the Bagdad School was organized, and six archæologists left Jerusalem for a general survey of the land. They were, besides the writer, Dr. and Mrs. E. L. Hewett, Dr. J. L. Magnes, and two Yale students, Messrs, W. D. Carroll and Prescott Childs.

We visited the excavations conducted by the French archaeologist Montet at Byblos, and studied a large number of the mounds of Syria, including ancient Kedesh, where excavations had also been conducted by the French. We passed through the Beqa or Coele-Syria, to Aleppo, also through the region north of the city as far as Carchemish, and eastward to the Euphrates. We descended the Euphrates valley to Bagdad, studying its agricultural possibilities. We went up the Tigris as far as ancient Nineveh and Erbil, out in the desert as far as El Hatra, and down the

<sup>\*</sup> AJSL., 1923, p. 5.

<sup>\*</sup> Museum Journal, December, 1920.

Euphrates to Başra, near the Persian Gulf. We will, however, confine ourselves here to the region that has been designated "the

desert bay," considering first the Euphrates valley.

There are records of several expeditions that descended and ascended the Euphrates valley, among which the most important for our purpose are the following. First and foremost is that of the survey of the river, which took place in the years 1835-7, by Lieutenant-Colonel Chesney.\* Other explorers who have left records that might be mentioned are Joseph Cernik, 1872-3; \* Lady Anne Blunt, 1877; \* William Hayes Ward, Director of the Wolfe Expedition to Babylonia, 1885; \* John P. Peters, Director of the Nippur Expedition, 1888-90; \* Eduard Sachau, in 1883 and 1897; \* Max von Oppenheim, 1899; \* and Gertrude L. Bell, 1910.\* We have besides these records also a series of important maps.\*

The records of most of those mentioned show that the many ruins to be seen along the route,—Amorite, Greek, Roman, and Arabic, have been uppermost in interest; it is only occasionally that comments have been made upon the fertility of the valley. We also were interested in ruins, but we paid especial attention to the tells and the agricultural areas along the route. We will begin our description of the agricultural possibilities of the valley from Meskenah on the Euphrates, which we reached, on our journey from Aleppo, after cutting across the fertile region, covered with tells.

Our descent was along the right bank, although we visited the left bank at no less than four points. As we proceeded, we passed many ruins, sometimes on one side of the river, sometimes on the

other, and a great many tells. At some points the road runs upon the plateau, or desert, through which the valley plain was cut by the river; at others, the road runs on the valley plain.

It is quite true that Professor Breasted found "the alluvial flats between the bank of the Euphrates and the cliffs of the desert plateau" appearing like the arid desert of the plateau above, to which he referred twice in the three captions quoted above, as being "typical of the Euphrates valley between Hit and Meskenah;" but let me ask, did he not find fertile Babylonia looking exactly the same at that time? I also went through Iraq in 1923 at the time the American Scientific Expedition passed through the country, and as I have elsewhere stated, "the rains of Babylonia had not sufficed to bring out the ordinary verdure, leaving the land even in the spring looking like a desert."

There is a fertile fringe along the river at most points. About four miles above Raqqa we came to an agricultural area of about twenty-five square miles, through which we passed to reach the ferry in order to cross the river to that town. Parts of this great area were covered with grass so tall that it was impossible to see a hole into which one of our cars fell, when a spring was broken. We seemed to have seen the valley with eyes quite different from those of other travellers.

On the left side of the river, opposite to this area, about four miles above Raqqa, Miss Bell tells us there are "two dykes which appear to be loop canals from the Euphrates, and must therefore have formed part of an extensive system of irrigation" (p. 54). Immediately north of Raqqa there is a large agricultural area through which a canal, now dry, passed, and also an area below Raqqa for about ten miles, through which four branches of the Balikh river passed. The extent and character of the agricultural area on either side of the Balikh must have been considerable as indicated by the number of tells shown on the maps.

From Raqqa to Der, a distance of about fifty miles, many modern villages can be seen, and also many ruins of fortresses and cities, besides more than a dozen tells, and traces of ancient canals.

On the left bank between Der and the mouth of the Khabur, a stretch of about twenty miles, there is an agricultural fringe averaging about a mile wide. On the right bank I should estimate

<sup>13</sup> The Origin of Biblical Traditions, pp. 78 f.

there is an area, which was doubtless cultivated in ancient times, of about two hundred square miles. In former ages, the kingdom of Khana, mentioned in the inscriptions from about 2000 B. C., embraced this district, in the region about the mouth of the Khabur. The maps at our disposal show that the Khabur is not only lined with modern villages, but with tells, covering cities of the past. This and the Balikh run through the so-called "desert

bay."

From the Khabur river, including the region down to El Kaim, a distance of about sixty miles, we come to the heart of the valley, where in very ancient times, as I have mentioned above, according to the inscriptions, there was a great centre of the Amorites which played an important rôle in the politics and religion of Western Asia. It was especially gratifying that the opportunity had at last arrived when I could ascertain whether I was justified in identifying Merra, with Mari, 14 also written Mera, Maeri, and Mar, and in holding, on a basis of what the inscriptions and the records of explorers tell us, that this valley had produced a great civilization in ancient times. Let us first consider the left bank of the river from the Khabur.

The maps of the valley's left bank show a canal called the Dawwarin, which leaves the Khabur about twelve miles above the Euphrates, and which empties into that river at Werdi, near Abu Kemal. Naturally, this canal was not dug to supply the Euphrates with water, but to irrigate the vast territory on its left bank.

Miss Bell, in her account of this side of the river, after leaving the Khabur, tells us, that between the Euphrates and this canal she passed over conduits "across ground that was almost absolutely level." She says, "The whole of this region must once have been occupied and it had also been thickly populated." She thinks the disappearance of the settled population dates from the terrible disaster of the Mongol invasion (p. 78). This aspect of the valley is, of course, quite different from that referred to above.

The maps show low sand hills along the river opposite Salihiya, upon which Miss Bell comments as follows: "We entered a long stretch of sand heaped up into little hills which were held together by tamarisk thickets; it is apt to be submerged when the river is

<sup>14</sup> Miscellaneous Inscriptions, p. 4; Empire of the Amorites, p. 108 f.

high" (p. 80). The picture beneath which is found one of the three captions, above quoted, is taken of these little hills. The canal mentioned above is to be found in the extended agricultural area behind this thicket and sand hills. There are four large tells a little below this point, also on the left bank of the river. When this great area has been fully explored, it will doubtless be found that the canal Dawwarin, which emptied into the Euphrates at Werdi, is lined with mounds.

At Irzi, below Werdi, the cliffs come close to the stream, leaving only a narrow strip for cultivation. Upon these cliffs, about a hundred and fifty feet above the water, are to be seen numerous ruins. Our expedition, accompanied by the Mudir of Abu Kemal, crossed the Euphrates and visited this site. We found the isolated tower-tombs, mentioned by other explorers, extending over this high rock plateau. It apparently had been, as has been suggested by others, the necropolis of a nearby city; although the Arabs who accompanied us tried to assure us that if we excavated in the plateau we would find houses. The absence of city walls, however, made it appear to us doubtful whether Irzi had ever been an inhabited city.

Below Irzi, the cliffs recede from the river, and leave another good-sized agricultural area before returning again to the Euphrates at El Kaim, where the cliffs on the right bank also come close to the river. The agricultural area on the left bank of the Euphrates from the river Khabur to El Kaim, through which the canal flowed, seems to be about four hundred square miles.

Returning to the right bank of the Euphrates, directly opposite the mouth of the Khabur, the valley is about a mile wide, at Mayadin it is about four miles wide, which is about the average for a stretch of about thirty miles below the Khabur, until within a few miles of Salihiya. In other words, there are about one hundred and twenty square miles of alluvial flats in this section between the cliffs of the river.

Ainsworth tells us that at his time Mayadin could boast of about five hundred houses along the river. He says: "The level and well cultivated plain on which it was situated was formerly separated from the cliffs in the background by a canal, or, from the physical aspect of things, this may have been the ancient bed of the river, and afterward a canal. Idrisi notices such a canal as being derived from the river at Rahabah, and which divided itself into various branches in the interior." From Mayadin, Ainsworth says, he went "across well irrigated fields" to Rahabah, located on the edge of the cliff about four miles from Mayadin.<sup>13</sup>

The maps of this great area show not only large canals, but also dry beds of the Euphrates. About midway in this stretch we left the road and cut across fields in our desire to visit Isharah along the Euphrates, about four miles away. When we reached a point about a mile from the town, our cars could no longer cross the canals and irrigating ditches which at present are in use; and we had to walk the balance of the way across fields. Quite a different experience than that which the American Scientific Expedition had! Isharah, which is built upon a tell of considerable height above the river, is considered by scholars to be the site of Tirqa, a capital of the kingdom of Khana, and the home of the god Dagon.

About seven miles below 'Isharah, we left this long stretch of valley plain of about thirty miles, and ascended to the desert which ran at this point close to the river. After traveling about four miles, we came to the cliff upon which Sālihiya was built, which in ancient times was called Dura, or Dura of Nicanor. This ruin came into the archæological limelight about four years ago when an English officer, Major Wright-Warren, discovered and excavated some remarkable paintings, which have since been published by Professor Breasted. Last year Professor Franz Cumont found additional paintings; and on the day we arrived at his camp this year, he was uncovering others. Sālihiya is opposite "the little hills" with tamarisk thickets, referred to above.

About four miles below Sålihiya, the desert again recedes from the river, and we have the beginning of another stretch of over thirty miles, and an average of about five miles wide, making an area of over one hundred and fifty square miles of agricultural territory, and a total area on the right bank from the Khabur to El Kaim of three hundred square miles; including both banks we have over seven hundred square miles. It is in this region that an ancient writer tells us the walled city Merra was located.

Isidore of Charax has handed down an account of the overland trade route between the Levant and India in the first century B. C., which followed the Euphrates. He named a number of stations

<sup>16</sup> A Personal Narvative of the Euphrates Expedition, I, 371 f.

and gave the distances between them. From the river Aburas (that is, the Khabur), he tells us, it was four schoeni to the village Asich. (A schoenus is about five and one-half kilometers.) From Asich, it was six to the city Dura Nicanoris, which was founded by the Macedonians, also called by the Greeks, Europus. This is Salihiya. He further writes: "Then Merra a fortified place, a walled village, five schoeni." This, as stated, is the Mera of the Code of Hammurabi, also written Mari, Mar and Maeri. From Merra to Anatho an island, which is now identified with 'Anah, Isidore says there were twenty-two schoeni, making twenty-seven from Dura to 'Anah. He gives thirty schoeni between 'Anah and Hit. The map shows that these measurements are proportionately approximate.

Some scholars have identified Irzi as Merra, but, for reasons above mentioned, this does not seem possible. I have heretofore suggested that Werdi might represent the site of the city. Werdi is thought to be the Corsote of Xenophon, who referred to it as a large deserted city which was entirely surrounded by the Masca, and where Cyrus passed three days on his march against Artaxerxes, his brother (Anab. I, 5, 9.). On a visit paid to the site we found ruins in the river, which may have been part of an ancient bridge, besides other vestiges of ancient times; but we did not find a tell of any imposing size; and we concluded that if Merra was in the immediate vicinity its remains must have been largely washed away since the time of Isidore,

About five miles below Werdi, but on the right side of the river, we came upon what appeared to be the most imposing mounds along the Euphrates. Although the ruins of Anka are indicated on maps of the valley, they came upon us as a distinct surprise, reminding us of such ruins as Nineveh, Der, etc. The walls were clearly marked by mounds about twenty-five feet high, with towers at intervals and at the corners, some of which were partially uncovered. In the description of the city by Doctors Ward and Peters, the southern wall is said to be about twelve hundred paces long; and the west wall running at right angles, ending in a mound where the palaces and important buildings of the city were located, is said to about nine hundred paces long. The river now lies at some distance from the ruins; but it, or a branch, apparently passed through the city in ancient times. There are indications

of recent excavations along the wall, which may be the work of natives in order to secure building bricks. If the ruins called Anka were farther up the stream, I should feel inclined to suggest

that they might represent the ancient Merra.

A little above Werdi, also on the right bank of the river, and probably nearer the place where Merra was located, according to Isidore's measurements, is Tell Medkuk; and a little farther Tell Hariri. Doctor Ward informs us that a wall ran off from the latter in a circular form, and came around to a large hill of pebbles, pottery, alabaster walls, etc. He says "Hariri was the site of a very considerable city;" and "The walls did not go around to Medkuk which is more than a mile away." Medkuk is usually found on maps of the district, but Hariri is not. As I said, the distances given by Isidore between his stations are all that we have to go by, and they seem to point to Merra being in this vicinity. However, excavations will doubtless be necessary before the site of Merra is definitely located.

We regretted exceedingly that we had arranged a schedule with the owners of the automobiles, who were anxious to complete their journey, for we should have greatly desired to tarry longer in this remarkable agricultural area, extending for sixty miles from the Khabur to El Kaim. But by a strange misfortune in crossing the desert from Bagdad, we returned to this region. Instead of crossing at a point about ninety miles from Abu Kemal, our guide took us within nine of that town, when our automobiles plunged over what proved to be the cliff of the Euphrates into the valley plain about eighteen feet below the plateau.

In going to Abu Kemal from the precipice over which we fell, we had to cross over very uneven ground, which had been caused by the digging of canals and irrigating ditches of former ages, until finally we reached the fields which are used at the present time.

Doctor Ward has given in his diary some interesting comments on this locality. After leaving El Kaim, in coming up the river, he says: "The forage is better, the valley wider, not much cultivated, but near Abu Kemal are good fields. The bushes are larger and more abundant, almost like trees, with great trunks and abundant branches, making a clump of matrimony vine or tamarisk.

<sup>\*</sup> See Ward's Diary in Peters's Nippur, I, 364 f.

The soil often seems to hold water well, and the trees form big hillocks about them." 17

Unfortunately on our return visit to this locality we were more concerned with broken ribs and arms, and how to reach a hospital, than we were to increase our knowledge of the fertility of the valley. Nevertheless the ill wind blew some good, in that we became acquainted with the agricultural area south of Abu Kemal.

It was in this great agricultural area of more than seven hundred square miles, of alluvial flats, from the Khabur to El Kaim, without taking into consideration the almost limitless pastoral lands on either side of the river in ancient times when the climate was different, that the city Mari, the capital of Babylonia in the fourth millennium B. C., flourished prior to its destruction by Hammurabi, about 2000 B. C. It was this district also whence the worship of Dagon, Amurru, or Uru, and other deities, radiated throughout the Near East, and where doubtless the Semites had learned how to dig canals, build dikes, and store water for irrigation purposes, before they moved down the Euphrates into that great alluvial plain we know as Babylonia.

In the section of the valley below El Kaim, we found some wonderful stretches of agricultural fringe along the banks before we approached the neighborhood of 'Anah. The travellers are many who have commented upon the date groves along the river, through which the road passes for miles, before reaching the heart of the city of 'Anah. The orchards, fields of cotton, gardens of every description, clearly show that prosperity is bountiful in this region.

On the region between 'Anah and Hit, Sir William Willcocks, the distinguished engineer, says: "Though to-day, owing to the degradation of the cataracts—a degradation whose steady progress was noticed by the writers of the Augustan age—water-wheels are necessary to irrigate gardens, the benches of river deposit above the highest floods of our time prove that in days not very remote the water led off from above the cataracts irrigated with free flow gardens situated a little down-stream of them and out of reach of the floods. Such was the Garden of Eden of the Bible." Some miles beyond Hit we come to the open plain, and we are in that

<sup>17</sup> Ibid., p. 364.

<sup>18</sup> The Garden of Eden, Cairo, 1918.

great alluvium known in ancient times as Uri and Engi, later Akkad and Sumer, Kar Duniash, Babylonia, and now Iraq.

The explorer and traveller naturally observe that in many places, even in flood season, the Euphrates will inundate at the present time only a portion of the extended alluvial flats which the river has made by cutting its way through the plain. The degradation caused by floods, rising annually about twenty feet, has been going on for thousands of years, and the river has carried its silt down to the alluvial plain of Babylonia. Naturally the channel of the river has become deeper and deeper. This of course can be overcome by the construction of great storage basins which fill in flood season, and also by the cutting of canals at points farther up the river, as did the Egyptians along the Nile, five thousand years ago. To what extent these alluvial plains were inundated by a natural flow when Mari was capital of Amurru and Babylonia, five thousand years ago, and how many of the numerous wadis which empty into the Euphrates were perennial streams in ancient times, is impossible, of course, to determine.

As we descended the valley, again and again members of our expedition commented upon the great agricultural asset the present governments of Syria and Iraq have in this valley; or to use the words of Miss Bell, who with the eye of a typical Britisher, in commenting on a section of the left bank above Meskenah, said: "the majestic presence of the river in the midst of uncultivated lands, which, with the help of its waters, would need so little labour to make them productive, takes a singular hold on the imagination" (p. 47). To include the Euphrates valley in the so-called "desert bay" would be equivalent to including the Nile Valley in the Sahara desert, the difference, however, being that unlike the Sahara, Mesopotamia was not a desert in ancient times.

It is not improbable, since we know that the climate has changed within the past two thousand years, 19 that practically the entire area of many thousand miles of Mesopotamia north of the river was fertile, or at least was a great pastoral territory. The map of the Royal Geographic Society records the vast region north of the eastern stretch of the valley, and it also records only a single traveller, Musil, 20 as having passed through it, in 1912.

<sup>18</sup> See Huntington, Palestine and its Transformation, 1911; and Climatic Changes: Their nature and causes, 1929.

<sup>20</sup> Zur Zeitgeschichte von Arabien, 1918.

We also studied the Tigris area which is included in the "desert bay." Our expedition left the road at a point between Mosal and Sherghat, and went out to El Hatra, about thirty-five miles from the river, and we returned to Sherghat by a different route. Kal'at Sherghat is the ancient city of Ashur. Both of these sites, namely Kal'at Sherghat and El Hatra, appear in the so-called "desert bay." We found the region about Sherghat to be quite fertile; and in going to El Hatra, we crossed several dry rivers and even a perennial stream, and passed a number of tells and other vestiges of antiquity, showing that this part of the "desert bay" was also habitable in ancient times. This was also the experience of Lady Anne Bhint, who crossed from Sherghat to El Hatra, and thence to Der. She found that "all the country between the Sersar and the Tigris is intersected with ravines and deep wadys, well watered and rich in grass." She said the perennial Sersar "flowed down a well-defined valley meandering through rich pasture, and its banks are fringed with pollard willows, just as one may see many a stream in England" (p. 197).

We were in this district at the end of the dry season, in November, when we found the country occupied by many Bedouin tribes of the Shammar Arabs, grazing their flocks. In her journey between El Hatra and Der, Lady Blunt found tells, lakes and many dry rivers. One only needs to examine Kiepert's "Karte von Kleinssien," constructed on the data gathered by a few travellers, Layard, Blunt, Sachau, von Oppenheim, Forbes, and Haussknecht, who made journeys through, or rather cut across, the five thousand square miles, more or less, of Mesopotamian territory, to see what a large number of tells, ruins, rivers, and springs, have already been recorded in the region south of 37° latitude, or from 36° 5′ latitude, where the so-called "desert bay" begins. Wherever they went, they found the country covered with rivers and tells; and yet but a very small fraction of the vast territory has been explored.

The Khabur and the Balikh rivers, which flowed through this region southward to the Euphrates, were augmented by numerous streams, some of these at present containing water, while others are dry. Today the Balikh river at the end of summer is almost dry at its mouth. In commenting upon the Khabur and its tributaries an Arab writer says, it is "such as not to be found in all the land of the Moslems for there are more than three hundred

pure running fountains." Certainly the Hebrew writers and redactors of the Old Testament would have made themselves ridiculous in the eyes of their intelligent contemporaries by placing "the Garden of Eden" in this region, if it were a "desert bay."

And what is true of the region north of the Euphrates, is true of the land lying to the west of the river. There are dry beds of rivers and streams with sand and pebble bottoms in which, at present, water is not seen from one end of the year to the other; even many of these streams are spanned by well constructed bridges. There are well-heads, spring-houses, in which water formerly gushed from the earth, some even containing inscriptions; but where water does not exist today. Even in the flat and once fertile plateau, which was thickly inhabited, there are no signs of irrigation having been practiced, showing that there was once sufficient rain to make the country habitable.

There are reasons for believing that great forests existed in certain regions, where today the tree and the vine could not secure a footing, for the hills are denuded of their soil. In the district between Aleppo and Carchemish we counted no less than sixteen tells in sight at one point. But this land which the Greeks and the Romans found so profitable to develop, is now largely a waste; and it is difficult to appreciate, from what we see at present, what certain ancient writers tell us about the land; for example Cicero, who said that "the country is so rich and so productive that in the fertility of its soil, and in the variety of its fruits, and in the vastness of its pasture lands, and in the multitude of all things which are matters of exploitation it is greatly superior to all other countries" (Manilian Law, vi).

Naturally, a portion of the area between the mountains and the river, especially the northern part of Syria, is included in the so-called "fertile crescent." But let us note what the late Professor Howard Crosby Butler of Princeton, who perhaps knew more about Syria than any other European or American, had to say about the desert region toward the Euphrates bend. "Beyond this narrow fertile strip the soil grows dryer and more barren, until presently another kind of desert is reached, an undulating waste of dead soil. Few walls or towers or arches rise to break the monotony of the

as See Butler, "Desert Syria, the Lund of a Lost Civilization," The Geographical Review, 1920, pp. 77 ff.

unbroken landscape, but the careful explorer will find on closer examination that this region was more thickly populated in antiquity than the hill country to the west." And concerning the entire vast area from the mountains eastward, he writes: "It has been found that practically all of the wide area lying between the coast range of the Eastern Mediterranean and the Euphrates appearing upon the maps as the Syrian desert, an area embracing somewhat more than twenty thousand square miles, was more thickly populated than any area of similar dimensions in England or in the United States is today, if we exclude the immediate vicinity of the large modern cities. . . . The history of the country gathered in fragments from the Holy Scriptures and from the written records of the ancient Egyptians and Assyrians, plainly indicates that the region was occupied by a civilized and organized society in the earliest days of man's civilized state."

In travelling between Der through Palmyra to Damascus, our observations confirmed this. We crossed many dry wadis, saw many tells, and even sections where desiccation due to the change of climate has not been effective in driving away the people. In fact we passed through some very fertile areas.

The exploration of what is now called the Syrian Desert, north, east, and west of the Euphrates, will make it more and more impossible to relegate traditions concerning the ancestral home of the Hebrews and their migrations to myth. The excavation of a few of the thousands of sites in this great Mesopotamian area will show that the habitable portions of the country were very vast, and will also doubtless show, although the country was ruled at times by the Egyptian, Babylonian, Hittite, Mitannean, Persian, Greek, Roman, Arab—that the inhabitants of the entire region from the dawn of history were largely Semitic. But let me add, whether this will prove to be the cradle and ultimate home of the Semites, is a question I have not discussed.

The "fertile crescent, the shores of the desert bay" could be appropriately used as a description of the Near East at the present time if the Euphrates, Khabur and other valleys were excluded from the "desert bay," and Babylonia transferred to it, for Babylonia is more of a desert land without irrigation than is Mesopotamia. "The fertile crescent, the shores of the desert bay" for

<sup>#</sup> Ibid.

ancient times is, in short, an incorrect and misleading term. It is due to a lack of knowledge of the physical and historical geography of Syria and Mesopotamia. This lack of knowledge is responsible also, in a large measure, for certain baseless theories being widely accepted, such as the finding of the origin of the Hebrews in southern Arabia; making the Semites living in Syria and Mesopotamia in the early period semi-barbarous; and dismissing to the realm of myth the traditions handed down by the Hebrews concerning their ancestral home in Aram. But then, these are simply theories—and theories in support of which there are no traditions, historical and archæological facts, or, in truth, anything else but other theories.

### ON PALSE ASCETICS AND NUNS IN HINDU FICTION

### MAURICE BLOOMFIELD

#### JOHNS HOPKINS UNIVERSITY

TO A CONSIDERABLE EXTENT the place occupied in Western Oriental and European fiction by evil magicians and wizards is held in India by mendicant ascetics, especially of the class who worship Civa and his consort Käli (Durga, Uma, Candi, Karala, Camunda, and many other names). In accordance with the character and needs of these gods, their ascetic devotees are engaged in cruel practices, especially human sacrifice. The reward for these is, as a rule, the acquisition of some magic science (vidya) which confers upon the ascetics superhuman power, or puts them in possession of gold. They carry a garland of skulls and a rosary, are smeared with the ashes of dead bodies, live in cemeteries, and are distinguished by many other outward signs of their calling. Civahimself is an ascetic. He, as well as his horrible consort, require human sacrifice, wear garlands of human skulls, and drink wine from these skulls. Hence both Civa and his ascetic followers are designated as Kapālin 'Skull-carrier,' the latter also as Kāpālika, Worshipers of Kapalin (Civa), the Skull-carrier.' They have also the names Pacupata, 'devotees of Pacupati (Civa)'; Caiva. 'devotees of Civa'; Mahavratin, 'performing great vows'; and others. The name Mahavratin is especially common in the Kathasaritsagara. In a copper-plate charter of Nagavardhana, nefew of Pulakecin II, of Maharastra (610-639 A. D.), a grant is recorded of a village near Igatpuri in the Nasik district for the worship of the god Kāpālecvara 'Lord of the Kāpālas,' or, 'Wearer of garlands of skulls,' and for the maintenance of the Mahavratins residing in the temple; see for this and other matters connected with this theme, R. G. Bhandarkar, Väisnavism, Cäivism etc., pp. 117ff.: 127 ff.

Why Civa and Durga should require human sacrifices is not clear beyond the intrinsic horrors of the old Rudra-Civa worship, with its orginatic and cannibalistic tendencies. No less classical a composition than Bhavabhūti's drama Mālatīmādhavam intro-

<sup>&</sup>lt;sup>3</sup> See the recent exposition of this theme in Ernst Arbman, Ruden, Uppsula, 1922.

duces an attempt by a Kapalin named Aghoraghanta, 'Oiva's Bell,' to sacrifice to Camunda, a form of Durga, the noble lady Malati, procured for the purpose by a female pupil of his, significantly named Kapālakundalā, 'Wearing skulls as earrings.' The scene is laid (Act fifth) inside of a temple of Camunda, situated in a foul-smelling cemetery peopled by a host of skeleton goblins, their fleshless bones bound only by their sinews within their black and shriveled skins, vast blood-dripping tongues lolling from their iaws. The horrible get-up of both Camunda and her priestess Kanālakundalā is described with sultry imaginativeness; skulls figure in both. 'Every skull that gems thy necklace laughs with horrid life, says Kapālakundalā, describing Cāmundā. Kapālakundalā also tells rather vaguely why Mālatī is to be sacrificed: My wise teacher Aghoraghanta calls me to aid him in the powerful rite that ends his toils; to-day he offers the gem of womankind, a victim to the goddess.' In Parcyanatha Caritra 2, 288 Kali praises a Kāpālika who is ever collecting skulls for her, and is just about to achieve the 108th skull by whose means she is to fulfil her purpose," Very lurid and offensive descriptions of these Durga temples destined for human sacrifice may be found in connection with the practices of the so-called Käula or Mahākāula, a Civaitie sect of the Caktas; see Suali, 'Analise dell' Adicvara Caritra.' Studi Italiani di Filologia Indo-Iranica, vol. 7 (p. 6 of the reprint); \* Hertel, Jinakirti's Geschichte von Pala und Gopala, pp. 81, 91 (cf. 142); Samvaktvakāumudī, p. 15; cf. Bhandarkar, l. c. p. 147.

The story finds the Kāpālikas, as a rule, looking for a victim which they intend to sacrifice in a cemetery or in a Durgā temple, in order that a particular vidyā (siddhī), 'Magic Science,' which they crave, may accrue to them. It is not quite clear why these vidyās present themselves automatically, as it were, as the fruit of human sacrifice. Kathās 20, 104 states explicitly that human flesh confers the power to fly. In the story of Ambada human sacrifice

<sup>\*</sup>With the Jaimas the name Kāpālika itself is anothema. Significantly the Arhat Monk Pārçvanātha is characterized as a non-Kapālin, 'whose face frightens not, who carries neither skull nor resary in his hand, who wears no necklace of bones or serpents, and is not smeared with ashes': The Amhada story, translated by Charlotte Krause, Indische Ermihler, Band 4, p. 124 (Leipzig 1922).

<sup>\*</sup> kāulu = krūrakarman,

is bartered directly for magic power; see Charlotte Krause, L. c. p. 56. The Kāpālikas are depicted, further, as falling from grace thru the lure of beautiful women, and other worldly desires. Tho they exercise skill and cruelty, the story regularly shows them foiled in their purposes of whatsoever kind. When these ascetica try to inveigle their victims, or to satisfy their lusts in any way, they use their holy calling as a mantle, with which to cloak their designs; this trait, construed as hypocrisy, is seized upon by the story tellers as the constant psychic motif of this class of stories, no matter how various are the incidents which they entwine with this prime idea. The wickedness of these ascetics is also connected with the idea of foolishness in the type of 'noodle-stories,' such as the Bharatakadvātrincikā, where these Civaitic ascetics are shown to be foolish, illiterate, voracious, lecherous, and scoundrelly.4 In Buddhist Literature also the monks frequently fall from grace, and are then described as afflicted with the same blend of perversities. And we may remark that the Thakas, or Thags (Thugs), who sacrifice men to Durga, are also described as stingy and foolish, showing that the ideas of fool and knave are no less definitely connected in India than in the Salemonic proverbs.5

The female counterpart of the Kāpālika is the Buddhist and Jainist nun or sister (parivrājikā, arhantikā) whose business in fiction is to figure as a pander, go-between, and deviser of cunning tricks. The outcome is, in general, as follows: In Buddhist and Jaina texts the profession of Kāpālika is looked upon as low and rascally. Tit for tat, Brahmanical texts take it out on the Buddhist and Jaina nuns, there being no Brahmanical nuns. As an illustration of the settled contempt for Kāpālikas we may take the Jaina storiette, Kathākoça, p. 5, where rebirth as a Kāpālika is regarded as punishment in the sequel of bad karma: One day, as king Devapāla approaches, in the company of his queen, the temple of the Jina, they are met by a Kāpālika, carrying a bundle of wood on his head. The queen faints at the sight. Later on she

<sup>\*</sup>See Hertel, Indische Märchen, p. 376. The text of this collection in the same author's recent edition, Bharufakadeātriāçikā (Leipzig, 1922); a translation in 'Zwei Indische Narrenbücher,' Indische Erzähler, Band 5 (Leipzig, 1922), pp. 19 ff.

See Mironow, Die Dharmaparikyd des Amitapati, pp. 8, 36; the author in Proceedings of the American Philosophical Society, vol. 52 (1913), pp. 641 ff.

explains that in a former birth she was a Pulindi (wife of a Pulinda, or robber), and that the Kāpālika was her husband. Bidden by a holy man, she took upon herself a vow, in consequence of which she was reborn as Devapāla's chief queen. But her husband did not take the vow, and was reborn as a Kāpālika.

As far as fiction is concerned, the theme next broadens out a good deal by introducing all sorts of people who are not ascetics at all, but sham the get-up and behavior of ascetics for all sorts of nefarious purposes. Thieves do this so regularly as to make it a shrewd guess that the Steya-Castra, or Thieves' Manual, if ever found, will contain one or more sutras recommending thieves to operate in the guise of a Kāpālika, Pāçupata, or Parivrājaka." Most important is the following: The last mentioned idea is exported from human affairs into the field of beast-fable, so that there is scarcely ever an animal, which wishes to eat or injure another animal, that does not appear in the rôle of sham ascetic. The Timi-fish who lives in sacred waters, practising the vow of silence, devours his own kind, and the heron who is the animal ascetic par excellence," in turn devours the Timi-fish (Böhtlingk's Indische Sprüche, 2573, 2575). Tiger and cat; heron and crow; jackal and monkey appear in turn (sometimes interchangeably) in this rôle, victimizing both men and animals.

In the final outcome our fiction presents itself under three main heads: First, ascetics, cruel and deceitful by dint of the demands of their profession. Second, ascetics who fall from grace and violate their profession. Third, sham ascetics. These main forms shape themselves into the following six classes of stories for convenient practical treatment:

- i. Stories of ascetics who practice atrocities ex professo.
- ii. Stories of wicked ascetics smitten by love.
- iii. Stories of greedy, gluttonous, or otherwise vicious ascetics.
- iv. Stories of rogues who sham asceticism.

<sup>\*</sup>See my essay, 'On the Art of Stealing in Hindu Fiction,' AJPh. 44, 121. For the way in which thieves manage to cast suspicion on sincere devotees see 65. pp. 121 ff. Already Mahabh. 1. 5500; 12. 5292°, 5593° advises rascals first to breed confidence by building the sacred fire, by sacrifices, by plous demeanor, by silence, by wearing the ascetic's red robe, braids, and antelope's skin; and then to fall like a wolf upon the confiding victim. 

\*See the author, AJPh. 40, pp. 10 ff.

- v. Stories of animals in the beast-fable which sham asceticism.
- vi. Stories of wicked female ascetics.

Before passing on to these stories there is another preliminary matter which requires separate and collective treatment. stories have a way of dwelling with unction that thinly disguises irony upon the monkish dress, the technical parafernalia, and the godly behavior of such people, making the good guess that precisely such descriptions will set off best the rascally doings of them that display this holiness. It is done very cleverly, with distinct ironic intention, but this does not compare with the really artful skill with which these descriptions are carried into the domain of the beast fable when it is question of one animal tricking another. E. g., the animal stands on its two hind legs, to match the human ascetic's standing on one foot; " it puts on the ascetic's bark garment or holds sacred grass in its forepaws; it almost always worships the sun; and it recites sacred or moral stanzas. Both with man and animal these mock descriptions of ascetic get-up figure so largely as to show them to be the reflex of a settled scepticism as to the sincerity or efficacy of such professions in general, to dashed strongly with contempt in the mind at least of the intellectual story-teller if not altogether in the mind of the average listener to such stories. It must be understood, however, that this attitude of mind does not exclude faith in really sincere professors of these practices, as shown by every other page of Hindu literature. In spite of their evil ways the populace stands in awe of and shows honor to the profession; cf. Schmidt, l. c. p. 17.

We have from the pen of Anandagiri, pupil and biographer of the great Camkarācārya in his Camkaravijāya, one description (out of many) of the standard get-up of the Kāpālika, bits of which constantly are verified by the more hap-hazard descriptions of the same gentry in fiction: His body is smeared with ashes from a funeral pyre, around his neck hangs a string of human

<sup>\*</sup> Mahahh. 13. 1798 pokes fun at one who stands on one foot for even as much as a thousand ages (yugasahasram).

This feature receives, as it were, mock canonization in the title of 175th Jataka (Adiccupatthana Jataka). See for this feature, Richard Schmidt, Fakire and Fakirtum im alten and modernen Indien, pp. 152, 158, 167.

<sup>&</sup>lt;sup>19</sup> Dress does not make a Yogin; and there are many shams; see Schmidt, 4, e., pp. 15, 21, 183.

skulls, his forehead is streaked with a black line, his hair is twisted into a matted braid, his loins are clothed with a tiger's skin, a hollow skull is in his left hand (for a cup), and in his right hand he carries a bell which he rings incessantly, etc. Accordingly in Kathās, 24, 82 ff, the thief Civa (dig at the god who stands sponsor to this type of ascetic life) goes with his pal Madhava to Ujjavini, where the precious pair successfully pass a gold brick off on the greedy Purchita Camkarasyamin, chaplain of the king. Civa's rôle is that of religious ascetic. He takes up his quarters in a hut on the banks of the Sipra river; in this hut he places, so that they can be seen by day, sacred darbha grass, a vessel for begging, and a deer-skin. In the morning he anoints his body with thick clayas if testing beforehand his destined smearing with the mud of the hell Avici. Plunging into the water of the river, he remains a long time with his head downward—as if rehearsing beforehand his coming descent to hell, the result of his evil actions. Rising from his bath he remains a long time looking up toward the sunas if showing that he deserves to be impaled. Then he goes into the presence of the god and making rings of kuça grass 11 and muttering prayers, he remains sitting in the posture called Padmasana,12 with a hypocritical cunning face. From time to time he makes an offering to Visnu, having gathered white flowerseven as he takes captive the simple hearts of the good by his villainy. Then he mutters prayers and sits in prolonged meditation. Next day, clothed in the skin of a black antelope, staff in hand, he wanders about the city, and observing a strict silence he takes three handfuls of rice from Brahmans' houses, divides them in three parts, gives one part to the crows (ball-offering), one part to a guest, and with the third part fills his maw. He remains for a long time counting his beads and muttering prayers, but in the night, when alone, he thinks over the weak points of his fellowmen. Thus he gains, as exceedingly self-denying hermit, complete ascendancy over the minds of the citizens.

\*\* Rings of this sacred grass are worn on the fingers at sacrifice.

<sup>18</sup> This ascetic posture is described by Tawney in his Translation, vol. 1, p. 197, note: Sitting with the thighs crossed, with one hand resting on the left thigh, the other held up with the thumb upon the heart, and the eyes directed to the tip of the nose. The word occurs also in Mallinatha Caritra 2. 23; 8. 377 (padmäsanäsīnam gurum). Cf. Schmidt, I. c., pp. 59, 235, and p. 28, where there is a picture of the padmäsana posture.

Even more subtly Daçakumāracarita ii. 44 ff. tells how Mantragupta, wishing to gain the reputation that he is able to drive out Yakṣas, goes about the business of fake ascetic. He puts on the braids of a real Kāpālika ascetic, whom he has previously slain, 22 envelops himself in a garment made of a mass of patches, and sleeps on the bare ground. He gathers pupils about him whom he treats so well that they spread a great report of his holiness. The people are led to believe that he has Veda, Upaniṣad, and Vedānga on the string; that he can unravel tangled cases of law by his knowledge of the Çāstras; that he is truthful, and pitiful. By contact with him the purposes of religion are soon attained. Grains of dust from his feet cure ills that have long baffled physicians. His foot-water drives away demons that have resisted all conjurors. And he is withal free from all conceit—all this in the minds of the gullible.

In Setaketu Jātaka (377) a band of ascetics, living in the king's park, are about to be saluted by the king. Their leader, Setaketu, addresses them: 'Sirs, the king is coming to-day; now by once conciliating kings a man may live happily all the years of his life. So now some of you do the swinging penance; some lie on thorn-beds; some undergo the five-fire-penance; some practise the mortification by squatting; some the act of diving; and some repeat texts.' Setaketu himself, at the door of the hut on a chair with a head-rest, puts a book with a brilliant colored wrapping on a painted stand, and explains texts to four or five intelligent pupils. In Kāsāva Jātaka (221) a sham ascetic clothes himself in a yellow robe, puts on the guise of a Paccekabuddha, with a covering about his head. In Kuhaka Jātaka (89) figures a shifty rascal of an

<sup>15</sup> See the story in the sequel.

<sup>\*\*</sup>This ancient Upanişad name (Qvetaketu) as a dig against Brahmanical asceticism.

<sup>&</sup>lt;sup>14</sup> Pictures of ascetics doing penance on thorns may be seen in the Rev. W. M. Zumbro's article in The National Geographic Magazine, vol. 24, nr. 12, pp. 1268, 1269, 1270, 1279.

<sup>&</sup>lt;sup>18</sup> A reproduction of this penance (paficagnitapas), ibid., p. 1288. Mentioned also Jataka 487; Parçvanatha 6. 52; and in the story of the merchant Campaka, p. 48 (Hertel, Indisohe Ernöhler, Band 7; Leipzig 1922). The penance consists of sitting between four fires, the sun burning down upon the head as the fifth. Cf. Schmidt, L.c., pp. 17, 158, 168, 181.

ascetic of the class which wears long matted hair.17 In Dhajavihetha Jataka (39) a sham ascetic, who misconducts himself by night, stands by day in a cemetery on one foot worshiping the sun. In Hemavijaya's Kathāratnākara, Story 64, a fake ascetic hangs about his neck a garland of antelopes' horns; puts shoes on his feet; carries in his hand a long trident; ties various roots to his head; daubs his body with a thick crust of ashes; dresses in crazyquilt cloth; and has his ears hung with symbolic figures of crystal. In Devendra's Māhārāstrī Tales, Jacobi, Ausgewählte Erzühlungen, p. 80, lines I ff., a Pācupata ascetic, who is really a highway robber, is adorned with diadems of long matted hair; his limbs are strewn with ashes; in his fist he holds the trident; he is encircled with evil-averting amulets; his fingers are busy with his hermit's token. In the same collection, p. 67, lines 20 ff., a religious mendicant who is really a thief, muttering and mumbling (verses), carries a bunch of three staves (tridanda) from which, after sunset, he pulls out a sword. In Kathas. 26, 196 a wicked Mahāvratin ascetic named Jālapāda, mutters spells in a corner of an empty temple. In Kathās, 33, 134 a Brahman makes an impression because he lives on rice in the husk. In Kathākoça, p. 130, a handsome, erotic ascetic with matted hair, named Suçarman, a sweet speaker, quick in inventing answers to suit the occasion, practises his tricks for his purposes. In Māhārāstrī Tales, p. 10, line 6, Varadhanu under cover of the dress of a Kāpālika ascetic rescues his banished mother, disguising in this instance for a worthy purpose. Thieves regularly disguise themselves as ascetics, and are just as regularly found out; see, e. g., Pärgvanātha Caritra 6. 139; cf. the statement above.

In Hemavijaya's Kathāratnākara, Story 133, the king's fool, Bhīma, dresses up as Çiva himself, in order to trick his master. He wears an ornament of serpents made of leather; has a third eye painted with soap-stone on his forehead; holds a trident in his fist; carries a cunningly designed lute; has a mass of braids piled like a diadem on his head; puts on a black cloth like an elefant's skin; daubs his body with ashes; and has a garland of skulls hanging about his neck. This is really also the ideal Kāpālika costume.

Occasionally the slur that is implied by these get-ups is cast

<sup>&</sup>lt;sup>17</sup> This resent is probably a Bharataka; see the frontispiece in Hertel's Zwei Indische Narrenbücher, Indische Braühler, Band V (Leipzig, 1922).

upon nuns or female ascetics, tho their dress and behavior do not elicit quite as pronounced satire. In Kathās. 13. 88 a female ascetic, Yogakarandikā, 'Chest of magic,' living in a sanctuary of Buddha, acts as a procuress; and in Daçakumāracarita ii. 37, a nun (gramanikā), named Arhantikā 'Savioress,' who is later on described as nirgranthikā 'fetterless,' acts a go-between for a lewd pair. Arhantikā and nirgranthikā are Jāina terms; it is therefore clear that Brahmanical texts have it in for the Buddhist and the Jāina nun impartially.

But the satire on outward show of hypocritical saintliness bites most pungently in the beast fable. 'Wolf in monk's cassock' is known the world over," but nowhere does the undercurrent of suspicion and contempt of ascetics run stronger than in the descriptions of the get-up and behavior of the beasts in the Hindu fable. It begins in Mahābhārata 2. 41. 30 ff. — 1463 ff. in the fable of the preaching (dharmavāk) hansa bird which eats the eggs, placed by other birds in its keeping. Of the feline species the cat persists as the typical sham ascetic, beginning, once more, with Mahābh. 5. 160. 15-43 — 5421-49, where birds and mice entrust their safety to a cat that preaches the law on the shore of the Ganga, holding high its paw (urdhvabāhu). In Manu 4. 30, 192, 195, 196; Visnu 93. 9, cats and herons (see below) are the typical hypocrites.

In Pancatantra 3. 2 (Kosegarten's text) the cat Dadhikarna stands as ascetic on the bank of a river, holding a handful of sacred grass, furnished with the twelve sacred spots, one eye shut, touching the ground only with half a foot, its face turned towards the sun, preaching good conduct, and abstention from animal sacrifice. In the Bühler-Kielhorn edition the cat's name is Tikanadanstra, 'Sharp-tooth,' and the cat's behavior is not very different. More briefly, but to the same point, Tantrākhyāyika 3. 4 (p. 102); Pürnabhadra 3, 3 (p. 190). In Hitopadeça 1, 4 the sham ascetic cat Dirghakarna describes himself as living on the banks of the Ganga, as constantly taking baths, as abstaining from flesh, and as performing in chastity the holy vow called candravana, so that even the birds are ecstatic in his praise. He has come to learn the holy life from the venerable, blind old vulture Jaradgava. In Bijāra Jātaka (128) the prose unaccountably substitutes a jackal for the cat, which latter is clearly the original subject, as is indi-

<sup>15</sup> See, e. g. Weber, Indische Studien, iii, pp. 363 ff.

cated by both the title and the poetic stanza at the end. 'Godly is my name,' saith the jackal. 'Why do you stand on one leg?' 'Because, if I stood on all four at once, the earth would not bear my weight. That is why I stand on one leg only.' 'Why do you keep your mouth open?' 'To take the air. It is my only food.' 'And why do you face the sun?' 'To worship him.' See also Julien, Les Avadānas, vol. ii, pp. 152 ff.; Ralston, Tibetan Tales, p. 344. Patterned after the cat is that greater feline, the old tiger in Hitopadeça 1. 2, which stands on the banks of the lake, performing lustrations, holding sacred grass in his paw, and offering, from sheer wishlessness, the present of a golden bracelet to the passing traveler whom he subsequently eats.

Other quadrupeds figure as sham ascetics: The jackal, Aggika Jätaka (129), who has his hair singed off his body by a forest-fire, so that he is left perfectly bald, except for a tuft like a scalp-knot where the crown of his head is pressed against a tree. Drinking from a pool he catches sight of his top-knot, reflected in the water, and exclaims: 'At last I've got wherewithal to go to market.' He then poses as Bharadvaja (ancient sacred name), votary of the Fire-God. Accident also furnishes a cat with the trade-mark of ascetic. very drolly, in the Gujarātī Pancākhyānavārttika, nr. 6 (see Hertel, Das Pañcalantro, p. 140): a cat sticks his head into a butter pot belonging to a dealer, and cannot get it out again. The dealer, out of pity, breaks the pot, but its rim remains on the neck of the animal as a mark of monkhood. In Vaka Jataka (300) a wolf living on a rock is surrounded by the winter floods, and, to make the best of a bad business, resolves to keep the fast (uposatha). In Adiccupatthana Jataka (175) a monkey, in order to obtain food, puts on the airs of a holy man, seeking alms, and worshiping the sun. The same species in Makkata Jātaka (173) during a cold rain spies from the outside of a hut a nice fire inside, and, in order to be welcome inside, puts on the bark dress of a dead ascetic, and lifts up his basket and crooked stick. Similarly Kapi Jataka (252).

In the bird world, the heron figures as the typical sham ascetic by side of the mammal cat. He lives on the lake shore; his neck is

<sup>28</sup> Cf. the story of the boy-ascetic Dhruva (Vişnu Purana I. 11, 12) whose spiritual power became so great that the earth could not bear his burden, and Visnu had to place him in the heavens as the polar star (dhruva).

curved; he stands on one foot. These features belong, I believe, to the natural history of the baka, who probably differs little from our pelican. They are well calculated to have originated the fancy that he is a true ascetic, as well as a sham ascetic, the latter because he lusts after fish; see the author in AJPh. 40. 10. There is but a solitary detailed description of another bird as sham ascetic, in Dhammadhaja Jātaka (384), so namely a 'travelled crow' whose asceticism is mocked in precisely the same terms as that of the jackal (or cat) in Bilāra Jātaka, above.

We come now to the classified stories, in the arrangement proposed above:

### I. Stories of ascetics who practize atrocities ex professo

In Bhavabhūti's Mālatīmādhava a woman Kapālakuṇḍalā, wearing a garland of human skulls, kidnaps the heroine Mālatī in the
dead of the night, and places her before the image of Cāmuṇḍā
in a temple near the cemetery, to be killed and sacrificed to the
goddess by the Kāpālika Aghoraghaṇṭa, Kapālakuṇḍalā's preceptor. She is rescued by the hero Mādhava who slays Aghoraghaṇṭa.

In Daçakumāracarita ii, p. 41 ff. Mantragupta begins his adventures in a cemetery near the city of the Kalingas. There he overhears a couple of demonic servitors complain that their rascally master, an evil but powerful wizard, was just then disturbing their love passages with an order to fetch for him Kanakalekha, the daughter of Kardana, the king of the Kalingas. Mantragupta comes upon this wizard who is a Kāpālika: his body is ornamented with glittering pieces of skulls; he is smeared with ashes of funeral fires; he wears braids that look like a streak of lightning; with his left hand he is sacrificing steadily into a fierce fire crackling sesame and mustard. In front of him stands one of the aforementioned servants with folded hands, saying: 'Issue your command; wherewith can I serve you?' He is told to fetch the princess Kanakalekhā, and does so. Frightened and in tears, she keeps crying, 'Woe me, father, woe me, mother,' as the Kapalika holds her by her thick hair, upon which the garland has become crumpled and withered. As he is about to chop off her head with a stone-whetted sword, Mantragupta, quick as a flash, snatches the

<sup>\*</sup> See Morris, Polk-Lore Journal, 2, 304.

sword out of his hands, cuts off his head with its thick matted hair, and throws it into the cleft of a hollow tree. The servitor is rejoiced at the death of his cruel master and offers gratefully to do Mantragupta's bidding. He tells him to carry the princess back to her home.

The the rest of the story involves the trick of a sham ascetic (class iv), and that too, the most ingenious one of all, we may record it in its own connection. In accord with the settled conventions of Hindu literature Kanakalekhā promptly falls in love with Mantragupta, and begs him, that has just saved her life, not to expose her to the danger of death from love. She invites him to come with her, relying on the tried discretion of her attendants. Mantragupta passes blissful days with her. Now her father, who happens to be sporting in a grove on the shore of the sea, is attacked and captured by the Andhra king Javasinha. The latter then sues for Kanakalekhā's hand, tho he has been led to believe that she is possessed by a Yaksa (demon) who allows no other man access. Mantragupta fetches the matted braids off the head of the Kāpālika whom he has slain and, as sham ascetic, establishes for himself a great reputation, as sketched above. Javasinha craves his magic, wherewith to drive out the Yaksa. Mantragupta, pretending that the task presents great difficulties, asks for three days in which to prepare. These he uses to dig a cave connected with the shore of a lake. He then advises the king to dive into the lake and stay at the bottom as long as possible: he would then emerge from the lake in a rejuvenated and beautiful form, in the face of which the Yaksa would retreat from the princess. Mantragupta hides in the cave; kills the king; stows him away in the cave; and, in the morning, presents himself on the throne as king Jayasinha rejuvenated." He marries the princess and releases her father.

Stories of wicked Kāpālikas who intend to offer a human sacrifice frequently introduce a trick by which the intended victim asks the Kāpālika 'to show him how '22 he must behave in order

<sup>&</sup>lt;sup>21</sup> Rejuvenation (quekbronn) and trick-rejuvenation (killing the person to be rejuvenated) are settled fiction motifs. Instances of the latter Kathās. 40. 61 ff.; Daçakumāracarita 3 (end of Upahāravarman's story).

<sup>\*\*</sup>This important motif not only persists in the Kapalika stories, but occurs also in other sieres of narration; see, e. g. Kathas. 13. 91 ff.; South-

to be properly immolated. Thus Kathūs. 38, 47 ff. a mendicant, named Prapaneabuddhi, presents every day a box to king Vikramaditys. One day the king drops the box which bursts open and discloses a jewel. On investigation all the previous boxes are found each to contain a jewel. The king asks the mendicant (here called cramana, with slur on Buddhist monks) to explain his generosity. The mendicant replies: 'On the fourteenth day of the black fortnight 23 now approaching I have to perform a certain incantation at night-fall in a cemetery outside this town. I desire you, my hero, to take part, for obstacles are easily swept away by the aid of a hero.' The king consents, but at the appointed time the adorable Hari appears to him in a dream, saving: "My son, this Prapancabuddhi ('Deceitful-minded') is rightly named, for he means to offer you up as a victim. So do not do what he tells you to do, but say to him, you do it first, and when I have learned the way, I will do it. Then slav him, and you will obtain the power that he desires to obtain.' At the appointed time, the king, sword in hand, enters the cemetery where the Kāpālika has just performed the 'circle incantation.' He welcomes the king with the words: 'King, close your eyes, and fall at full length on the ground face downwards, and in this way both of us will attain our ends.' The king answers: 'Do it yourself first. Show me how to do it, and after I have learned, I will do precisely as you do.' The foolish knave falls on the earth; Vikramāditya cuts off his head, and is rewarded with the power of going thru the air.

King Vikrama figures quite regularly in this Kāpālika adventure. Thus in the version of Vikrama Carita as presented by Lescallier (Le Trône Enchanté, pp. 177 ff., xth story): King Bekemeradjet loses his way while hunting, meets an old woman about to load a bundle of fagots on her head, and essays to help her. Out of gratitude she tells him of a queen Abnouly, whom Bekemeradjet decides to find. He travels until he comes to a place which is studded with human skulls. One of them bursts out laughing; 24 the king asks, why this merriment? The head replies:

ern Textus Simplicior of Panestantra, ZMDG. 56, 32, 42; cf. Benfey, Pencotantra 1, 113 ff., 609.

For this date see Bhandarkar, I. c., p. 118. In the Amhada story, I. c., p. 56 the same date is given, but in the same story, p. 107, such a sacrifice is undertaken on the evening of the eighth day of the half-month.

<sup>&</sup>quot; The laugh-motif: see JAOS. 36, pp. 79 ff.

'I laugh, because in a few hours your head will keep company with ours. A short distance from here lives a demon in the guise of a Djogui (Yogin). He addresses passers-by pleasantly, and tells them that he will show them a curious thing. He tells them to take an iron cauldron full of black peas, put it upon a fire, and let him know when it is boiling. Then the demon throws them into the cauldron, eats them, and throws the heads upon the ground." The skull then advises him to request the demon, at the crucial point, to show him how to do it, and to throw him into the kettle. Then he is to take some of the peas and scatter them upon the skulls; they will return to life, and become his servants. All this happens as prescribed, and, after other adventures, Vikrama, aided by his newly acquired friends, obtains the queen Abnouly. In Weber's analysis of the mss, and contents of Vikrama Carita (Sinhäsanadvātrincikā) this story is given in Jainistic Sanskrit, and compared with the well-known climax in the widely propagated marchen of Hänsel und Gretel; 26 see Indische Studien 15, 211, 215 ff., 235. 277 ff. The wizard here is a Digambara Yogin (with obvious dig at that Jaina sect); the reward of the king consists of the eight mahasiddhi (Yoga arts), and a gold-man into which the body of the magician has turned.

The 'show me how' motif occurs once more in the Vetāla stories 24, 25; Kathās. 98. 69 ff.; 99. 15 ff.; Baitāl Pachīsī 25 (Oesterley, pp. 169, 180): The Vetāla, pleased with Vikrama's courage in his attempts to fetch the corpse for the Kāpālika, warns him: 'That wicked mendicant for whom you have fetched this human corpse, wishing to offer you as a victim, will say to you: "King, prostrate yourself on the ground in such a way that eight limbs will touch it!" Then, great King, you must say to that ascetie: "Show me first how to do it, and I will do it as you do." Then he will fling himself on the ground, and show you how to perform the prostration, and that moment you must cut off his head with the sword.' In due course Vikrama cuts off the head of the ascetic, and he tears and drags the lotus of his heart out of his inside.

In Neogi, Tales Sacred and Secular, pp. 86 ff., the story is told

<sup>\*\*</sup>The magician Raudrakşa decides to ask the 'all-giving' (sarvamdada)

King Candraprabha for his head, in Divyavadana, p. 320; the king complies with his wish in the sequel.

<sup>\*\*</sup> Cf. Benfey, Paicatantra L 256.

in the manner of Lescallier, interlaced with certain popular romantic motifs: A Yogin contracts with a childless king to procure for him children by each of his three wives, on the condition that one of the royal children shall be his. In proper time he carries off the youngest prince to his abode in the forest. While roaming there, the prince meets a fair damsel who informs him that the Yogin is a Tantrika who offers human flesh to the goddess Kalī. She points to a mass of dead bodies whose heads laugh long and loud in his face. The Yogin conducts the prince to a cemetery, where an image is set up, and commands him to prostrate himself before the altar. The prince says: 'I am the son of a king, and do not know how to prostrate myself; show me how to do it.' The Tantrika complies; the prince cuts off his head; the corpses all are made alive again by showering upon their heads flowers and belleaves from the altar; and the prince marries the damsel.

In Pargyanatha Caritra 2, 199 ff. the pious prince Bhima (Bhimasena), who is traveling with his friend Matisagara, is approached by a Kāpālika who confides to him that he is in possession of a magic science (vidyā) called 'World-shaking' (bhuvanaksobhini), which he had cultivated for twelve years, but that it still requires a final performance in a cemetery. For this he needs Bhīma as his aid. Matisāgara warns Bhīma not to mix hīmself up with a rogue, but the prince, confident of his own virtue (dharma), persists in cooperating with the ascetic. They arrive at the cemetery, where the Kāpālika, after drawing a circle and adoring some divinity, attempts to prepare Bhima's hair-lock prior to cutting off his head. Bhims sees thru the deceit, tells him that courage alone is his top-knot, or and to proceed with his business. The rogue then, realizing that his trick is not working, prepares to cut off Bhima's head by force, and, by way of preliminary, makes the whole world shake by his terrible doings. Bhims stands undaunted. The ascetic then promises that, if he will freely give his head, he will be born to bliss in the next world. In the end Bhims jumps upon the shoulders of the Kāpālika who flies up in the air and shakes Bhīma off. As he fulls, a Yakşini (Siren) receives him in her folded hands, and takes him to her house. Later on Bhīma comes upon a temple of Kālikā (Durgā), built or adorned with men's bones, skulls etc., in whose centre stands a frightful

ar muma sattvam eva çikhābandhah.

image of the divinity. There he sees the Kāpālika holding Matisāgara by the hair, saying to him: 'Unhappy wretch, think now
of thy favorite divinity, before I cut off thy head in honor of
this Kālikā!' Bhīma springs upon him, but just as he is about
to kill him, Kālikā intercedes for her 'child' that is forever collecting skulls for her, the present being the 108th skull, by whose
means she will fulfil her purpose. Bhīma, in true Jinistic spirit,
spares the Kāpālika and converts Kālikā from her evil ways.

In Kathās, 26, 193 ff. Devadatta, a gambler of good family who has lost his all, resorts to a Mahävratin, named Jālapāda, who proposes to help him if he will take part in a magic ceremony. He takes him to a cemetery, and bids him worship the tree-goddess Vidyutprabhā. While he does so, one day the tree bursts open, whereupon a nymf conducts him thru the middle of that tree to the goddess, whom he marries. Vidyutprabhā becomes pregnant, and the ascetic bids Devadatta cut her open and bring him the embryo. Naturally he refuses, but Vidyutprabhā herself performs the operation, in order to end a curse in consequence of which she, a Vidvadhari, had been turned into a Yakşi." He carries the embryo to the ascetic, who eats it and turns into an air-going Vidyadhara. Devadatta realizes that he has been deceived by the ascetic, and engages a Vetāla,29\* in order to revenge himself. On the shoulders of the Vetāla he flies up to the palace of the Vidyādharas, where he finds the ascetic seated as king upon a jeweled throne, endeavoring to induce Vidyutprabha, who has returned to her Vidyadhari state, to marry him. He attacks and conquers the ascetic, but he spares his life. Durgă appears, expresses her admiration of his courage, and makes him Vidvadhara king. He is reunited with Vidyutprabhā; the Vetāla carries the ascetic back to earth, his splendor fallen from him.

In Parcyanatha Caritra 3. 903 ff., quite exceptionally, a Vidyadharī practices human sacrifice, in order to obtain a magic vidyā. It is not clear why a Vidyādharī should do this, for she is by the very terms of her name a 'Science-holder.' There seems to be

<sup>\*\*</sup> Frequent idea: see, c. g. Prabandacintamani (Tawney's Translation), pp. 32, 35, 123, 177.

<sup>\*\*</sup> A demonic female inferior to the heaven-dwelling Vidyadhari.

<sup>&</sup>lt;sup>204</sup> A type of demonic being who often appears as servitor; so, c. g., Vikrama's vetāla, named Agnicikha, in Vikrama Carita, etc.

some displacement in the story, which runs as follows: King Hariccandra has by the decree of fate sunk to the station of caretaker of a cemetery. He hears there the lament of a woman, and, when he asks her why, she points to a noble man hanging head down from the branch of a banyan tree. The man turns out to be her husband, Mahäsena, son of Candraçekhara, the ruler of the land, carried off by the Vidyādhari, who desires to sacrifice him in order that the science 'All-conquering' (viçvavaçikāra-vidyā) may be kind and liberal to her. Hariccandra out of pity for the wife takes the place of the victim. The demoness begins to cut off Hariccandra's flesh, but the cry of a jackal arouses an ascetic who rages over the desecration of his hermitage, whereupon the Vidyādhari vanishes with her retinue.

#### II. Stories of wicked ascetics smitten by love

The preceding stories exhibit the ascetic in his quasi-legitimate pursuit of obtaining victims for his cruel divinity, and, generally speaking, a reward in the form of some kind of magic power. But ascetics are lewd as well as power-loving. Kāpālikas carry off maidens in Mallinatha Caritra 1. 72 ff.; Story of Ambada, I. c., p. 106. Bald, braided ascetics have to be kept from intercourse with the slave-girls of the harem; see Otto Stein, Megasthenes und Kautilya, p. 107; and according to Manu 7, 363 female ascetics are in similar disrepute. 30 Accordingly there is a settled type of story in which ascetics are smitten by the arrow of the bodiless god. Being, in theory, immune to the lure of women, and, therefore, ineligible as lovers and husbands, they are driven by their evil instincts to resort to some crafty device to obtain their end. The story gloats unctuously over their failure and discomfiture. In the following versions of one and the same story, the 'box-on-river' motif at enters. In Kathas. 15. 30 ff., an ascetic described as

<sup>\*\*</sup> See Bühler's note to his translation of this passage, SBE. 35, p. 317.

A preliminary hibliography of this important fiction theme may be stated briefly: Jacobi, Das Mahabharata, pp. 13, 57; ZDMG. 65, 426, 438; 450; Ind. Antiquory 30, 297 (his); Hertel, Das Pascatantra, p. 282; Indische Märchen, pp. 155, 201, 227; Translation of Kathāratnākara, vol. 2, p. 35; Translation of Kanfmann Tschampaka (Indische Erzöhler, Band 7, Leipzig, 1922), p. 23; Tawney, Translation of Kathāsaritsāgara, vol. 2, p. 629; Charpentier, Paccekubuddhageschichtes, p. 125; Charlotte

'silent' (māunavratah pravrājakah) comes to a merchant's house for alms, and sees there the merchant's beautiful daughter. He breaks out in the exclamation, 'Ah, alas, alas!' Whereupon the merchant asks him why he, the bound by silence, had said what he had said. The ascetic pretends to foresee that the marriage of the maid will destroy her father and his family. By request, he advises the merchant to place his daughter by night in a box, on the top of which there must be a light, and set her adrift on the Ganges. The merchant does so. The ascetic bids his pupils bring it secretly, but not to open it even if they hear a noise inside. In the mean time a prince goes to bathe in the river, fishes out the box, opens it, and immediately marries the heart-enchanting maid. And he sets the box adrift again on the Ganges, exactly as it was before, but placing a fierce monkey inside. The pupils bring the box to the ascetic, who pretends to be about to perform incantations with it. He takes the box to the top of a monastery, and when he opens it the monkey tears off his nose and ears, so that he becomes an object of derision. Essentially the same story in Ksemendra's Brhatkathāmañjarī iii. 36 ff.

In Kathākoça, pp. 130 ff. a 'handsome ascetic with matted hair,' named Suçarman, a sweet speaker, skilled in prognostics, dines one day with the merchant Gañgāditya who has two beautiful daughters, Jayā and Vijayā. He cannot eat for lusting after them. The merchant, on quizzing him, learns that his daughters will destroy the paternal family. The ascetic suggests their exposure in a box on the river, and the story develops on lines parallel with the preceding. Again this story, with names changed, occurs as the second of the Bharatakadvātrinçikā. Hertel, Pāla und Gopāla, p. 70, reports from the Pāpabuddhimpa-Dharmabuddhimantrikathā an echo of the same idea: King Bhīmasena entertains an ascetic who falls in love with the king's lovely daughter. By night he tries to visit her, and is impaled for his crime. The story is reported also from South-India (much changed and with extraneous additions) in The Orientalist, vol. 2, p. 146.

There are, next, two stories of the practices of lewd ascetics

Krause, Die Abenteuer Ambada's (Indische Erzähler, Band 4, Leipzig, 1922), p. 104; Kunāla Jūtaka 536 (Faushöll, p. 444); Dhammapada Commentary, xxvi. 33°; Paricistaparvan 2, 224 ff.; Kathākoça, pp. 133 note, 148; Ralston, Tibetan Tales, p. 92; Parker, Village Folk-Tales of Cepton.

without the box-on-river device: Kathās. 121. 3 ff.; Mallinātha Caritra 1. 29 ff.;

In Kathās, 121, 3 ff. Madanamañjari, daughter of Dundubhi, king of the Yaksas, and wife of Manibhadra, brother of no less than the god Kuvera, is seen by a wicked Kāpālika " at the moment when she wakes from sleep in a garden of Ujjavini. Consumed with love he goes to a cemetery to practise magic to draw her to him. Madanamanjari, becoming aware of his intentions. complains to her husband who tells Kuvera, and he in turn complains to Brahmā. The supreme god advises her to invoke the paladin king Vikramaditya when she feels herself drawn along by the Kāpālika's spell. She is, indeed, dragged by the spell, and reaches the cemetery in an agony of terror. The Kāpālika goes off to rinse his mouth in a river near-by. Then she calls, 'Deliver me, noble king Vikramāditva! See, protecting talisman of the world, this Kāpālika is bent on outraging by force, in your realm, me a chaste matron!' Vikramāditya summons his trusty servitor, the Vetāla Agnicikha, who seizes the Kāpālika by the legs, whirls him around in the air, and dashes him down on the earth, so as to crush at one blow his body and his aspirations.

The story Mallinatha Caritra 1. 29 ff. runs as follows: Prince Ratnacandra (or Ratnendu) wanders in a forest, where he hears the walls of a maiden. After appealing to father and mother she cries out: 'Ratnacandra, why do you not save me? A profet predicted to my father that you would become my husband. Are you asleep or confused in mind?' Ratnacandra runs up, sword in hand, and comes upon the maid, standing, bound hands and feet, by the side of a coal-basin, a karavira wreath "" upon her head. By her side stands a Kapālin ascetic (Yogin) with raised sword. After upbraiding the ascetic, who returns in kind, they come to blows, and the ascetic is killed.

Ratnacandra cuts the maiden's bonds. She tells him that she is Padmalocana, daughter of king Çankha of Campa, by his wife Padmalekha. When she has reached adolescence an augur, Cubha

vol. 1, p. 108; Frere, Old Deccan Days, p. 253; The Orientalist, vol. 2, p. 145 ff.

<sup>\*\*</sup> khanda kāpālika: the word khanda, which makes no real sense, suggest pākhanda — pāṣanda, 'hypocrite,' but this does not fit into the metre.
\*\*\* The wreath of death: AJPh. 44, 228

by name, reveals that she will marry Ratnacandra, son of the king of Candrapura. Her father promptly sends his Purchita, named Mitrabhūti, to sue for Ratnacandra. But the Kapālin, spying her at her lattice window, as she is playing with boy dolls, carries her off to the forest. She professes, further, to be in danger from a pupil of the Kapālin, gone to fetch fire-wood, and bids him take her away. They travel toward a mountain, are overtaken by night, and Ratnacandra puts her to sleep in the hollow of a bamboo-tree, and watches outside. The Kapalin's pupil fabricates by magic a back-door to the bamboo-tree, carries her off, and threatens her, the murderess of his Guru. She feigns to be in love with the pupil, but holds him in check by pretending that a friend of hers, Devacri by name, is at a hermitage, and that the two of them had made a compact to marry the same man, who should then live in bliss with them, as Manmatha, the God of Love, lives with Priti and Rati. The pupil brings her, held like a doe in the grip of a lion, to the hermitage, and is there beaten off by the fists and staffs of two ascetics. Padmalocana returns home. Later Ratnacandra arrives at the same hermitage, and is told Padmalocana's fate. He follows her and is duly married to her by king Cankha, in accordance with the prediction of the augur.

Otherwise the type of lewd ascetic appears in Dhajavihetha Jātaka (391): A wizard ascetic stands by day in a cemetery on one foot, worshiping the sun. By night, using his magic, he flies up, enters the royal chamber, and corrupts the chief queen of the king of Benares. The queen herself goes to the king, and, after consulting with him, marks the ascetic with her five fingers in vermillion. The ascetic is recognized; the king thinks angrily that the Buddhist brethren in general go about by day in ascetics' garb and misconduct themselves by night. He, therefore, issues a proclamation by beat of drum that all Brethren must depart from his kingdom. As a result there are no righteous Buddhists or Brahmans to teach the people, and never get they birth in heaven. The Bodhisat who was then going thru an existence as Sakka in heaven descends and fetches a venerable Paccekabuddha whom he himself, in the guise of a young pupil, reveres ardently in the sight of the people of the city. The king is converted by having pointed out to him that there are true as well as sham ascetics, and that the merit of venerating the true leads to heaven.

III. Stories of greedy, gluttonous, or otherwise vicious ascetics

Greed for gold, gluttony, and sundry other vices are standard qualities of ascetics, monks, and other religious folk. In a group of related stories the object of asceties' desire is a 'gold-man': if you cut off the limbs of such a 'gold-man' they grow again every day: 33 see Hemavijava's Katharatnakara, story 187 (Hertel's Translation, vol. 2, p. 195); Dharmacandra's Malavasundarikathoddhara, translated by Hertel, Indische Marchen, pp. 235 ff.; and Charlotte Krause's, 'Die Abenteuer Ambada's,' Indische Novellen i (Leipzig 1922), pp. 106 ff.34 For the point in hand it will suffice to report Hemavijaya's story: Prince Sudarcana and the lovely merchant's daughter Padmä, in mutual love, make an appointment outside town under a certain fig-tree. A serpent in the hollow of the tree, seeing Padma's braid, thinks it another serpent, and bites Padmā in the head, so that she falls dead. Sudarcana gathers wood into a pyre, places Padmā's corpse upon it, and goes to get a burning fagot from a fire at a distance. At the fire sits a Yogin who perceives that Sudarcana has the 32 good characteristics, and decides to sacrifice him in the fire in order to obtain a gold-man. He engages the prince to help him, and ties a black thread around his neck which changes the prince into a serpent. In the meantime fate has it that a piece of 'snake-wort' has gotten into the funeral pyre of the princess; this frees her from the serpent's poison. When, alive again, she does not see the prince, she returns to the city, but is taken by the police under suspicion that she is a witch who is causing a pestilence, raging at that time among the children of the city. Brought before the king she asseverates her innocence, and offers to undergo either the fire ordeal, the water ordeal, or the serpent ordeal. The king decides upon the last. It happens that the serpent into which the prince has been turned by the wizard is brought for the purpose. In the presence of all the city she sticks her hand into the snake-pot, The serpent allows her to grasp him, as the a garland of flowers. She removes the black thread around his hood, and lo, prince

<sup>&</sup>lt;sup>65</sup> A preliminary collection of material for this interesting and universal motif in my Life of Pargonnatha, p. 202.

<sup>34</sup> Obtaining the 'gold-man' is also one of the aims of the ascetic who induces King Vikrama to undertake the Vetāla adventure; see above.

Sudarçana, in all his glory, stands before the eyes of his father. Needless to say, the happy pair are united in wedlock. In the Ambada story the Yogin actually succeeds in turning a king into a gold-man; in the Malayasundari story the Yogin himself is finally turned into a gold-man.

Hemavijaya, story 40, tells of two rich brothers, Bhima and Sima, the latter of whom, against the former's protests, makes friends with an ascetic by the name of Sundara. Sundara invites Sima, who wears much jewelry which the ascetic craves, to a feast, during which he sets before him a poisoned pancake. Bhima, who has come there to protect Sima, notices that a monkey defecates at the sight of the pancake—a sure sign that it is poisoned. Bhima dissolves the poisoned pancake in water and shows that it contains poison, beats the ascetic, and drives him out of the village.

Hemavijaya's clever story, 69, has it in, once more, for money-greedy ascetics: A Brahman, named Gangadatta, in possession of five jewels, arrives at the city Dambhadatta, from which he wishes to make a pilgrimage to an idol of Baladeva, situated upon the mountain Tungagiri. He, therefore, looks for some person with whom he may leave the jewels in trust, until his return. Various people notice him. A merchant selling butter to a servant maid gives her overweight; her mistress sends back the surplus by the same maid, who then says in the presence of the Brahman: "We do not accept overweight of butter." The Brahman thinks he will make that honest woman fiduciary, and goes to her house.

While there a pupil of a Yogin comes to beg. The woman, in order to gain the Brahman's confidence, gives the pupil excessive alms, which he brings to his teacher. The teacher, guessing that she is displaying virtue before a stranger, sends back the excessive alms. When the Brahman notices this he deposits his jewels with the Yogin. On the return from his pilgrimage the Yogin denies the deposit. A hetaera named Smarasundari, hearing him be-

Two interesting stanzas describe the behavior of a large number of animals at the sight of poisoned food. In them figures the cakoraka bird (partridge) whose eyes turn red on such occasions. This bird is kept regularly in royal households, to prevent the poisoning of kings; see, e. g., Samarādityasankkepa 4, 338; Cālibhadra Caritra 5, 167.

<sup>\*\*</sup>This trick is not uncommon; e. g., in Campakacresthikathānakam; see last Hertel, Indische Erzähler, vol. 7, p. 48 ff., where this same story is told in a much changed and amplified form.

wail his loss, decides to help him. She bids the Brahman come to the house of the Yogin after she herself has gone there. She fills five beautiful trunks with bones, carefully locks them, and has them taken to the Yogin, to whom she says: 'To-day I have received the news that my ships have been wrecked, and I am afraid that my creditors will seize all my property; please, therefore, keep these five trunks for me.' At that point the Brahman arrives and asks for his jewels. The Yogin, deciding to hold on to the trunks, hands back the Brahman his jewels.

Covetous ascetics figure widely in Buddhist narrative. In Somanassa Jataka (505) a troop of ascetics has been entertained by king Renu. On returning to the Himālavas to their austerities they converse about the childlessness of the king, and their leader, Maharakkhita, predicts that a son of the gods will descend and be conceived by Sudhamma, the queen consort, on that very night. One in their midst runs back and tells the king. The king assigns to him a place in his park, as one of the king's household. The queen bears a prince, Somanassa Kumara. Now the sham ascetic plants vegetables, pot-herbs, and runners, sells them in the market, and amasses wealth. When the prince (Bodhisat) is seven years old, the king goes out to quell a rebellion. The prince surprises the ascetic with his garments rolled up, holding a waterjar in each hand, watering his plants. He rebukes him, and goes off without salute. The king also, in time, is convinced of the ascetic's worldliness. The prince determines that, as long as there is an ignorant fool in the king's household, the best thing to do is to go to the Himālayas, and embrace the religious life.

In Kuhaka Jātaka (89) a shifty rascal of an ascetic, of the class which wears long, matted hair, lives in a certain village. The squire of the village builds for him a hut, and feeds him at his own house. Afraid of robbers, the squire brings 100 pieces of gold to the hermitage, there buries them, and asks the ascetic to keep watch over them. The ascetic digs up the gold, buries it by the wayside, and, next day, says to the squire: 'It is now a long time, Sir, since I began to be supported by you, and to live in one place is like living in the world'—which is forbidden to professed ascetics. He departs, but returns after a little, and, when asked by the squire for the reason, he says: 'A straw from your roof, sir, has stuck in my hair; and, as we ascetics may not take any-

thing which is not bestowed upon us, I have brought it back to you.' A traveling trader (Bodhisat) overhears, becomes suspicious, cross-examines the squire, and is told about the 100 pieces. When they do not find them in their place, they pursue, catch, and punish the hypocrite.<sup>27</sup>

In addition to covetousness Buddhist texts reprobate gluttony and its attendant rude manners or even cruelties by means of stories in which figure ascetics that are so only in name.28 In Komāvaputta Jātaka (299) there are some frivolous asceties in the Himalayas who keep fetching fruits to eat from the forest, and afterwards spend their time laughing and joking together. They also keep a monkey, rude-mannered like themselves, which furnishes them no end of amusement by his grimaces and his antics. When they go away to get salt and condiments, the Bodhisat, in the person of a young Brahman ascetic, lives in their dwelling. He teaches the monkey to behave properly, whereat the other ascetics, when they return, are intrigued. Both Bodhisat and monkey reprove them. Similarly in Ambacora Jataka (344) a knavish ascetic builds a hut in a mango orchard, eats the fruit, and gains his livelihood by various worldly practices. The Bodhisat in the person of Sakka knocks down the fruit, makes out that they have been plundered by thieves, and drives the sinner from the place. In Godha Jātaka (138) a weak-kneed ascetic in a hermitage conceives the desire to eat lizard-flesh properly seasoned. A lizard

<sup>&</sup>lt;sup>ar</sup> Cf. the faintly assonant story, Kathas. 33. 133 ff., where a strange Brahman arrives in Cravastl, and, because he lives on rice in the husk, is made much of by the merchants of that city. He accumulates 1000 dinars which he buries under a tree. Some one digs up his treasure, but it is restored by the king's device.

<sup>&</sup>quot;This type of story is certainly characteristic of Buddhist fiction and morality, as contrasted with both Brahmanical and Jaina narrative, which says little, if anything, about giuttonous ascetics. The story Tanträkhyäyika 2. I tells how the monk Jūtakarna, 'Braid-at-the-ear' (in other versions Tāmracūda, etc.) hangs up high his alms pot full of cooked food, and lies half awake during the night swinging a bamboo rod to protect the pot from marauding mice. He is reproved by his guest Brhatsphij who is sleeping on the same couch with himself, and to whose narrative of wanderings he is giving but half an ear on account of his preoccupation with the alms pot. The Jaina Yatis are abstenious ex professo; starvation is the prime method which they employ to destroy their karma. It would be a contradiction in terms for them to be greedy for food.

neighbor (the Bodhisat) approaches him as he is sitting at the door of his hut with a mallet hidden under his vellow robe. Snuffing up the wind blowing towards him from the hermit's cell, the Bodhisat smells lizard's flesh which the ascetic has previously eaten, and retires. The ascetic throws his mallet at the lizard, hitting the tip of his tail, and is rebuked in a stanza which describes a typical hypocritical ascetic. Very like is another Godha Jātaka (325). Again in Romaka Jātaka (277) another weak brother obtains some pigeon flesh, is taken with its flavor, and decides to kill the pigeons picking food about his cave. He hides a staff in his robe, and sits down in front of his cave. But the Bodhisat, born among the pigeons, spies out the wicked thing the ascetic would be at, and warns the flock away. The hermit tries words of honey, but the Bodhisat tells him that he is found out. The ascetic throws his staff at the Bodhisat, misses, and exclaims: "I've missed you!" "You have missed me, but you shall not miss the four hells. If you stay here, I shall call the villagers.' The ascetic moves away. This last Jataka is the source of the 10th . story in the Siamese Paksi Pakaranam; see Hertel, Das Pañçatantra, p. 349. More elaborately Tittira Jätaka (438)28 turns against the Bhikkhus' besetting sin of gluttony: A learned partridge, after the death of a Teacher in the Himalava mountains, takes upon himself the instruction of his pupils. The pupils, invited home by their parents to a festival, leave the partridge, who lives in a golden cage, in the care of a lizard. A wicked ascetic comes there, kills the partridge, two children of the lizard, a cow, and a calf, eats them, and lies grunting, asleep at the foot of a tree. A tree sprite tells the lizard, distrest over the loss of his children, to bite the ascetic in the neck while he is asleep. The lizard is afraid to do so, but a tiger and a lion, friends of the partridge, come there and find some of the feathers of the partridge in the matted locks of the ascetic, whereupon the tiger tears him to pieces. This Jataka is the source of the 13th story in the Siamese Paksi Pakaranam; see Hertel, Das Pañcatantra, p. 349.

In a yet more vivid story, Vaddhaki-Sükara Jātaka (283)\*\* a carpenter who happens to have found a young boar in a pit takes

<sup>\*\*</sup> Cf. Folk-Lore Journal 3. 34.

<sup>&</sup>quot;Cf. Jataka 492; Folk-Lore Journal 4, 38; Parker, Village Folk-Tales of Ceylon, vol. 1, pp. 370 ff.

him home, brings him up, and teaches him many accomplishments. In time the carpenter, afraid that somebody might make a feast of the boar, returns him to the forest where he soon joins his kind. His relatives are living in great terror of a tiger which keeps decimating them day by day. Then the young boar teaches the other boars to fight in serried mass, scientifically, in the three kinds of battle-array called padumavyūho 'lotus array,' cakkavyūho, 'wheel array,' and sakatavyūho, 'wagon array,' so that the tiger becomes afraid. He consults a wicked ascetic who is in the habit of sharing the tiger's prey. The ascetic encourages him: 'One roar, and one spring will frighten the boars out of their wits, and send them helter-skelter!' The tiger makes the attack, but falls into a pit dug under the instructions of the trained boar, and is eaten up. The boars, still uneasy about the ascetic who may send other tigers after them, are led by their general against him. He climbs a tree. but by the strategy of their leader the tree is brought to a fall, and the ascetic, in turn, is eaten by the boars.

An impressive account of a wicked ascetic who practises treachery upon a confiding friend, apparently for treachery's sake, is furnished by Pandara Jataka (512): The ascetic is known by the name of the Karambiya ascetic; as such he is honored and pampered by the people. Also, both a snake king, whose name is Pandara, and a Garuda hird king come to pay their respects to him. One day the Garuda appeals to the sham religious to help him in his people's fights (based on congenital enmity) against the serpents. The ascetic consents to wheedle out of the serpent king the secret of his success. With some effort, and promising discretion, he persuades Pandara to tell him that the serpents make themselves heavy by swallowing a stone. The Garudas seize the serpents by the head, and, while they try to lift them up, the water streams from them, and they drop dead. If but the foolish creatures would seize them by the tail, the stone would drop out, and they would carry the serpents off. Thereupon the Garuda seizes Pandara by the tail, and flies up in the air with him. During this flight Pandara, sorely lamenting, excoriates in eight stanzas of poetry the treachery of the unscrupulous sham. As the result of reciprocal wise and moral saws, bird and snake are reconciled. Pandara then seizes the ascetic: his head splits, and he goes to the Avici hell.

Finally, in Setaketu Jātaka (377) the worldly behavior of a band of ascetics, instructed by a Brahman by the name of Setaketu (Cvetaketu), is rebuked. When the king proposes to salute them Setaketu tells them that by conciliating kings a man may live happily all the years of his life. He then tells some of them to do the swinging penance, etc., as described above. They are rebuked and refuted by the king's family priest, and turned into laymen with shields and weapons, as Superior Officers attendant on the king's person. The Jātaka is reminiscent of the Upaniṣads: Before turning ascetic Setaketu has been instructed and humiliated by a Caṇḍāla whom he is trying to contemn, but who is wiser than himself, a Brahman.<sup>41</sup> This Caṇḍāla, who has previously overcome Setaketu in a brahmodya contest, rather echoes Satyakāma, the son of Jabālā in Chāndogya Upaniṣad 4. 4.

#### IV. Stories of rogues who sham asceticism

In the preceding stories we deal with professional ascetics, either practising the permissible cruel rites of their particular sect, or recreant to their implied vows of chastity, greedlessness, or rectitude in general. In addition a wide field of story opportunity presents itself in the performances of a large class of rogues who, in real life, assume the guise of ascetics under which they conveniently practise forbidden trades, or carry out nefarious schemes. Thieves and robbers regularly carry on their operations in the dress-up of ascetics and mendicants; see, e. g. Pārgvanātha Caritra 8. 139, and see my essay on the 'Art of Thieving,' AJPh. 44. 121. How the thieves Giva and Mādhava employ this device in Kathās. 24. 82 fl. to pass off fake jewels, as a sort of gold brick, on the greedy but unsuspecting Purchita of the king of Ujjayinī, is told there on pp. 210 ff., being an excellent, the rather extreme illustration of sham asceticism.

In Hemavijaya, Kathāratnākara, story 2 (Hertel's Translation, vol. 1, p. 10), a particularly precious rascal of fake ascetic persifiages the profession of ascetic, who must not do injury to living things; must not drink and be lecherous; must be informed with kindness (māitrī); must not be trickster, gambler or thief, as follows: King Crenika sees this sham ascetic, his upper garment

<sup>4)</sup> Cf. Fick, Die Sociole Gliederung im nordüstlichen Indien, pp. 26 ff.

loose, catching fish, and the following repartee ensues between the two: 'Your garment, Teacher, is loose!'—'It serves me as not to catch fish with.'—'You eat fish?'—'As food with brandy.'—'You drink brandy?'—'With the harlot.'—'You go to the harlot?'—'After having placed my foot on the necks of my enemies.'—'You have enemies?'—'Because I am a rascal.'—'You are a thief?'—'In order to be able to gamble.'—'You are a gambler; how is that possible?'—'Oh, I am a whoreson.'

In this way it may come to pass that really sincere ascetic devotees are occasionally suspected of sham without any reason, paying the penalty for the ill savor of the profession. In Kathas, 24, 205 ff. the Brahman ascetic Harasvämin, living in a hut on the shore of the Ganges, has gained the people's respect by his surprisingly rigid asceticism. A wicked man who cannot tolerate his virtue, seeing him from a distance, as he is on his way to beg, cries out: Do you know what a hypocritical ascetic that is? It is he that has eaten up all the children in this town!' As this rumor spreads the Brahmans, afraid that their offspring will be destroyed, decide to banish him, and send word to that effect. Harasvamin, astonished, goes to the Brahmans to reassure them, but they flee up to the top of their monastery. From below he calls the Brahmans one by one by name and says to them: 'What delusion is this, Bruhmans? Why do you not ascertain how many children I have eaten, and whose?' The Brahmans compare notes, and find that all their children are alive.42 With difficulty Harasvamin is prevailed upon to live with this people.

The impressive story of Mandavya-of-the-Peg, in Kanhadipāyana Jātaka (444), shows us a guileless and high-minded ascetic, who falls under suspicion, when a thief, pursued hotly, deposits his loot by his side. Condemned and impaled, his noble spirit saves him from ill-feeling against those who had seized him, or the king who had judged him rashly. A friend of his, Dīpāyana, sits down by the stake, because the shadow of one so virtuous is delightful,

This motif, which may pass under the name 'Dame Rumor,' is frequent and important. It begins with Mahahhārata (Jacobi, p. 48). See also Kathās. 67. 54; Pārçvanātha 2. 557; 8. 153; Kalyānadhamma Jātaka (171); Daddabha Jātaka (322); Divyāvadāna, p. 585; Ralston, Tibetan Talez, p. 296; Hemzvijnya, Kathāratnākara, story 133 (rumor that one has died).

and is sprinkled with drops of blood from the sufferer on the stake. He is afterwards released from his torture. See AJPh. 44, 124 ff.

A favorite type of sham asceticism shows an ardent lover assuming the ascetic's guise, in order to win or carry off his lady love. We have encountered this fase once, above in the story of Mantragupta, Daçakumāracarita ii. 41 ff. In Kathās. 75. 59 ff., Vetālapaficavificati 1. Prince Vairamukuta, while hunting, comes to a lake where he sees a beautiful maiden, Padmāvatī, with whom he promptly falls in love. The maiden signals to him that the shafts of the God of Love have struck her as well. By means of a gobetween and the devices of his fidus Achates, the minister's son Buddhaçarira, he obtains access to the maiden's chamber, and marries her by the Gandharva rite. It is now question of getting the newly married wife away from her home, where she is guarded isalously. Buddhacarira advises the prince to repair to Padmāvati's palace by night, get her drunk, steal her jewels, and then mark her hip with a red-hot spike. The pair then disguise themselves, Buddhaçarira as an ascetie; Vajramukuta as his disciple. Vairamukuta takes Padmāvati's necklace to the market to sell for an exorbitant price, which no one will pay. He is, as intended, arrested by the police, and accounts for the necklace by saving that his spiritual preceptor gave it to him. Buddhaçarira, the fake ascetic, is cited before the magistrate. He pretends that he had seen one night in the cemetery a band of witches; that one of them attacked him; that he took from her the necklace and branded her. The necklace is recognized as belonging to Padmavati; she is therefore regarded as a witch, and banished from the city. The prince in this way is enabled to carry her off.

Essentially the same story occurs twice more, in Daçakumāracarita, ii. 36 ff., and in Kathākoça pp. 152 ff., but in the last without the ascetic device. <sup>12</sup> In Daçakumāracarita a rake by the name of Kalahakanthaka ('Quarrel-thorn') falls in love with Nitambavatī, the wife of an elderly merchant of Ujjayinī, named Anantakīrti. He obtains the position of care-taker of the cemetery, and

<sup>&</sup>lt;sup>48</sup> Charging a woman with being a Rākṣasī by the trick just described, or by smearing her mouth with blood, and by other devices is a frequent motif, to be elaborated in the future. So below, p. 240; the note on p. 98 of my 'Life of Pārçvanātha'; Tawney's Translation of Kathāsarītsāgara, i. 576; ii. 631; Hertel, Indiache Märchen, p. 241 (cf. p. 287).

from there sends an elderly Jaina nun (gramanika or nirgranthikā), named Arhantikā, as love's messenger to Nitambavati. He pretends to be a holy man, able to procure offspring for her: she must come that night to a grove and place her foot in his hand, whereupon he would pronounce charms over it which would procure the desired result. Nitambayati does so; the fake ascetic pulls an anklet from her foot, marks her thigh with a knife, and runs off. The rogue then offers the anklet to her husband for sale. When he suspects his wife the rogue claims that he, while on attendance in the cemetery, had on the previous night seen a beautiful woman drag a corpse from a pyre. He had leapt upon her, had accidentally scratched her with his knife, and she had then fled, dropping the anklet. Nitambavati is thus convicted of being a witch (cakini), is exiled, and attempts to hang herself by night in the cemetery. There Kalahakantha falls at her feet, reveals the plot which he has executed for the love of her, and induces her, who has no other refuge, to consent to his wishes.

Greed is ever akin to lust, and meets with the same kind of punishment. In Kāsāva Jātaka (221) a poor man of Benares, seeing ivory workers in the ivory bazaar making bangles and trinkets, decides to become an ivory-hunter. He takes a weapon, clothes himself in a yellow robe, puts on the guise of Pacceka-buddha, with a covering band about his head, and takes his stand in the path of a large troop of elefants, as one of whom the Bodhisat had come into the world. He keeps on slaying, day by day, the last of the troop, so that they become fewer and fewer. The Bodhisat perceives the reason. So, one day, he sends the other elefants ahead of him, and follows after. The fake ascetic makes a rush at him with his weapon. The Bodhisat stretches out his trunk to kill, but seeing his yellow ascetic's robe, he rebukes him both in prose and poetry, and bids him never come there again, else he should die for it.

A grafic description of a robber chief, who operates in the makeup of a Pāçupata ascetic, is furnished by the story of Agadadatta, stanzas 208 ff.\* Agadadatta meets in his travels a splendid Pāçupata ascetic whose get-up has been described above. The ascetic offers to travel with Agadadatta to Sankhapura to visit the places of pilgrimage. He offers to put some gold in Agadadatta's

<sup>\*</sup>See Jacobi, Ausgewählte Erzehlungen in Makarastri, p. 80, lines 1 ff.

keeping, whereupon they travel together. But Agadadatta has his suspicions. When they come to a forest the ascetic pretends that certain rich cowherds, his friends, will show them hospitality. The Pāçupata goes off, and returns with pails filled with poisoned rice in milk, ghee, and sour milk. Agadadatta pleads indisposition and declines to eat, at the same time warning his companions by a sign. But they eat the poisoned viands, and fall unconscious. Then the ascetic discharges a shower of arrows upon Agadadatta, which he dodges, in his turn hitting the ascetic with a crescent-headed arrow. He falls to the ground, and before expiring, confesses that he is the invincible robber Dujjohana, and then instructs him how he may obtain his beautiful wife and treasures in a cave.

Rarely the guise of ascetic is assumed for a good purpose. In the Bambhadatta story, Jacobi, l. c., p. 10, lines 6 ff., Varadhanu rescues his mother who has been banished to a Candāla village by assuming the dress of a Kāpālika, and deceiving the village magistrate.

#### V. Stories of animals in the beast fable which sham asceticism

The type of hypocritical animal ascetic is set once for all by the story of the ascetic cut in Mahabharata 5, 160, 15-43 - 5421-49, told there with epic breadth and unction. The cat, no longer in business (niccestali sarvakarmasu), stands, with forepaws held high, on the shore of the Ganges, professing to have attained mental purity (manahquddhi), and preaching. The cat's fame as an ascetic is spread far and wide by the birds which he has been in the habit of eating; indeed they entrust the care of their young to his keep. Then the mice, realizing that they are beset by many enemies, come there, thinking that a protecting 'Uncle' (matula) has arisen unto them in the person of the cat. The cat accepts the office, but, feigning exhaustion from ascetic practices, induces the mice to conduct him to the river to perform his lustrations. Gradually the cat grows fatter and fatter; the number of the mice keeps dwindling. A mouse named Dindika offers to act as rear guard for the mice, but is never heard of again. At last an

<sup>&</sup>quot;For more tricks of thieves and robbers gotten up as ascetics, see AJPA. 44. 121.

old mouse Kokila by name tells the mice that their 'Uncle' is a deceiver and that long-haired animals are never vegetarians, whereupon the mice scutter away.\*\*

The fable recurs as Bilāra Jātaka (128) in whose prose a jackal figures in the place of the cat. Both title and introductory stanza show that the original version also intends a cat. The Bodhisat is born among a troop of rats. The jackal takes up his stand near their home and shams ascetism, here described with great humor (see above). Morning and evening the rats come to pay their respects to the saintly jackal, and, as they depart, he always catches and devours the last of the troop, wipes his lips, and looks as tho nothing had happened. As the rate grow fewer and fewer, the Bodhisat suspects, places himself in the rear, and when the jackal makes a spring at him, exclaims, 'So this is your saintliness, you hypocrite and rascal,' springs at his throat and bites his windpipe asunder. Back troop the other rats and gobble up the body of the jackal with a 'crunch, crunch, crunch.' This is the source of Siamese Paksi Pakaranam xv, summarized by Hertel, Das Pañcatantra, p. 350. It occurs also in the Gujarātī Pañcākhyānavārttika, nr. 6; see Hertel, ibid. p. 140 (with bibliografic notes).

The story is treated a second time, with a jackal as sham ascetic, in Aggika Jātaka (129). Both Jātakas are clever in their descriptions of the antics played by the hypocritical animal in his rôle. In the present instance the jackal happens to have all the hair singed off his body by a forest-fire, except for a tuft like a scalp-knot which makes him look like a Buddhist brother. 'At last I've got wherewithal to go to market,' he exclaims, and assumes the part of Bharadvāja, votary of the Fire-God. This accidental preparation is probably borrowed from the fable of the blue jackal. The story is again told of a cat, named Agnija, in Ralston, Tibetan Tales, p. 344.

In Pañcatantra 3. 2 (Kosegarten and Bühler-Kielhorn; Tantrākhyšyika 3. 4; Pūrṇabhadra 3. 3, etc.) a cat, variously named, arbitrates the quarrel of a partridge and a hare. During a pro-

<sup>\*\*</sup> For Western relations of this fable see Benfey, Das Pañcatantra, 1. 352; cf. Weber, Indiante Studien, 3. 365.

<sup>&</sup>quot;The original name was unquestionably Dadhikarna, 'Curd-ear' (retained in Southern Pancatantra a, Pürp., and Ksemendra); see Edgerton, Panchatantra Reconstructed, 2, p. 163.—F. E.

longed absence of the partridge from his habitat, the hollow of a fig-tree, a hare occupies his home. When the partridge returns, plump from eating much rice, he arraigns the hare as an usurper. The hare defends his squatter's rights so tenaciously that they finally decide to submit their case to the arbitrament of an ascetic cat. This feline is living on an island of the holy Ganges in penance, asceticism, vows, and profound meditation, full of pity for living creatures. The outward behavior of this cat is as described above (p. 232). The disputants try to present their case from a distance, but the cat invites them to his bosom, because he is old and somewhat deaf. They so seat themselves, whereupon he seizes one of them with his claw, the other with his saw-like fangs, and kills them. Once more the cat figures as sham ascetic in Hitopadeca 1, 5: A blind vulture, Jaradgava, living on a figtree, is supported by alms of the other birds. The cat Dirghakarna comes there to eat the young of the birds, but is frightened at the sight of Jaradgava. The cat shams asceticism: 'I live there on the shore of the Ganges, constantly take baths, abstain from meat, and am practising the vow of chastity, called candrayana. There the birds are ever lauding you (namely, Jaradgava), as versed in religion and wisdom; therefore I am come to hear you preach the law.' Dîrghakarna, having thus established his character, remains living in the hollow of the tree and feasts upon the young of the birds, until the birds become suspicious. Then he flees. When the birds find the hollow full of the bones of their young they unite in an attack upon Jaradgava, and kill him.

That greater feline, the tiger, also does not disdain to enact the role of sham ascetic. In Hitopadeça 1. 3 a tiger shamming asceticism on the shore of a lake holds out a golden bracelet, offering it as a free gift to a passing wayfarer. After a to and fro of suspicion on the part of the traveler, and cant on the part of the tiger, the former enters the lake to bathe prior to receiving the bracelet, sinks into its marshy bottom, and is consumed by the tiger.

In one instance a Buddhist text adroitly employs the motif to show that it requires character to sustain the life of a holy ascetic; he who tries and falls short lays himself open to the charge of hypocrisy. In Vaka Jätaka (300) a wolf living on a rock by the Ganges, happening to be surrounded by the winter-floods, decides to play ascetic " by undergoing an uposatha, or sabbath fast (which in this instance is compulsory, be it noted). The god Sakka (the Bodhisat), sensing his hypocrisy, takes the shape of a wild goat and tantalizes the wolf, who thinks he will make a sabbath of another kind of the goat, by jumping about him, and keeping just out of reach. The wolf lies down, saying, 'Well, my sabbath is not broken after all!' Sakka reveals himself to him and chides him with wise saws: 'Persons in this world of ours that make resolves beyond their power swerve from their purpose, as did the wolf as soon as he saw the goat appear.'

More baldly and mechanically three Jatakas show a monkey as sham ascetic, illustrating false Brothers and rogues in general. In Makkata Jataka (173) a widowed anchorite warms himself by the fire, his young son by his side. It is rainy and cold. A monkey outside spies the fire, but is afraid that he will be ejected, if he goes inside. So he puts on the bark dress of a dead anchorite, lifts his basket and crooked stick, and takes his stand by the but door. The boy asks his father to invite him in. But the father (Bodhisat) recognizes him as a monkey, and scares him off with a fire-brand. The same story with different embroidery in Kapi Jātaka (250). In Adiccupatthana Jataka (175) the antics of a sham ascetic monkey are described with real the rather cliché humor (putting on the airs of a holy man, seeking alms, and worshiping the sun). The people think, 'There is no tribe of animals but hath its virtuous one: see how this wretched monkey here stands worshiping the sun!' He is exposed by the Bodhisat and driven away.

From olden times comes also the preaching hansa bird, Mahābh, 2, 41, 30 ff. — 1463 ff., whom the other birds finally find out and kill (see above, p. 210). A single other bird, a 'traveled crow,' is exhibited in this rôle, in Dhammadhaja Jātaka (384). Certain merchants get a traveled crow, start on a voyage, and are wrecked. The crow reaches an island, and exclaims: 'Here is a great flock of birds, I can eat their eggs and young.' He alights, and shams asceticism very elaborately, preaching a sermon. The birds put their young and eggs in his charge. When they go to their

<sup>\*\*</sup> This is, without figure of speech, 'the wolf in the monk's cassock '; see Mahavagga i. 31, 3 ff.; Folk-Lore Journal 3, 359; Morris in Contemporary Review 29, 739.

<sup>&</sup>quot; Cf. Bävern Jataka (339).

feeding ground, the crow eats their eggs and young. The birds' leader (Bodhisat) suspects, hides, and catches him in the act. Under his direction the birds fall upon the crow and kill him.

#### VI. Stories of wicked female ascetics

The atmosphere of suspicion and dislike which surrounds the person of the male ascetic settles also, to a certain extent, upon the nun or female ascetic. There are, to be sure, sincere and disinterested persons of this kind, as when queen Dhanavati in Kathās. 107. 63 is described as a strict votary, possessing divine knowledge, wearing the rosary, and drest in the skin of the black antelope. However in Brahmanical writings the word parivrājikā or gramanikā, 'nun,' refers, as a rule, to Buddhist or Jainist sisters, and is not conceived in a friendly spirit. These appear almost invariably as bawds or go-betweens, minor figures in love's drama. Sometimes they are engaged in independent, magic practices, but this field is, in the main, preëmpted by witches, called Rākṣasī, Çākinī, Dākinī etc.

A single time the conflict between ascetic profession and worldly inclination on the part of a Jaina nun is described impressively, but with hostile intention against the extreme rigors of the Jain heresy, in Kunāla Jātaka (536; Fausböll 5, 427 ff.). The entire Jätaka is a diatribe on the instability of womankind. A white nun (setasamanī, i. e. a Cvetāmbara Jaina nun), named Saccatapāvi, 'True Ascetic,' lives in a hut of leaves in a cemetery, in severe fast, worshiping the sun, so much honored by the people that if any one stumbles, sneezes, or vomits, the evil omen is averted by exclaiming, 'Hail to Saccatapavi.' A party of goldsmiths " come into her neighborhood for a drunken carouse in the woods. One of the goldsmiths, in vomiting, says, 'Hail to Saccatapāvi,' but is rebuked by a wise man in their midst: 'Alas, blind fool, you are paying honor to a fickle-minded woman!' He then lays a wager for a thousand crowns, that, on the seventh day, seated in this very spot, he will deliver Saccatapavi in gay apparel. merry with strong drink. Disguised as an ascetic, he makes his

<sup>&</sup>lt;sup>29</sup> Cf. Manu 8, 363; Hemavijaya, Kathūratnākara, story 2 (Hertel's Translation, vol. i, p. 11).

<sup>\*4</sup> Goldsmiths are in evil repute; see the author in AJPA. 44. 106 ff.

way into the cemetery, and stands worshiping the Sun not far from the nun's abode. After first repelling her advances, he gradually tricks her into friendly relations, to the point where the following conversation takes place: 'Sister, have you attained to a holy calm?' 'I have not, Sir. Have you?' 'Neither have we. We get, Sister, neither the joy of sensual pleasure, nor the bliss of renunciation. What is it to us that hell is hot? Let us follow in the way of the multitude: I will become a house-holder prosperous with my inheritance from my mother.' They take up with one another; he brings her to the city; plies her with drink; hands her over to his friends the worse for liquor; and wins his bet.

Far more degraded, nay villainous is the conduct of that nun whose names are respectively given as Sundarī or Ciñcā Māṇavikā in the stories of the present, introductory to Jātakas 285 and 472. It is not stated expressly anywhere whether this sister or wandering nun was Buddhist or Jaina, but more likely she is regarded as being of the latter persuasion, because she performs her atrocious service in the interest of heretics. Namely, these are jealous of the gain and honor that are being bestowed upon the Exalted One, the monk Gotama. Now Ciñcā Māṇavikā was fair, and full of grace; from her body shone rays of brilliancy. The heretics decide to cast thru her reproach upon Gotama, and she falls in with their scheme.

When the residents of Savatthi are returning from Jetavana, where they have been listening to Gotama's exposition of the Law, she walks in the direction of Jetavana dressed in a robe dyed in cochineal, and with fragrant garlands in her hands. Asked where she is going she replies, 'What have you to do with my goings and comings?' She spends the night in the heretics' monastery near Jetavana, and in the morning meets the people as the she had spent the night in Jetavana itself. This she keeps doing for six weeks, at the end of which, when again asked, she declares that she has spent the night in Jetavana, with Gotama, the ascetic, in one fragrant cell. When three or four months have gone by, she wraps her belly with bandages, and goes about saying that she has conceived a child by the monk Gotama. When eight or nine

<sup>\*\*</sup> These stories occur also in Dhammapada Comm. 22. I and 13. 9. See Burlingame, Buddhist Legenda, vol. 3, pp. 189 ff. and 19 ff. with valuable hibliographical notes.

months have gone by, she fastens a disk of wood to her belly; pounds her arms and feet and back with the jawbone of an ox until they are swollen; and acts as the she were fysically exhausted. In this condition she goes to the Hall of Truth and publicly accuses the Tathagata of being a roue who knows how to take his pleasure, but does not look after the child he has begotten.

The Buddha stops his discourse, and roaring like a lion, cries out, 'Sister, as to whether what you have said be true or false, that is something which only you and I know.' 'Yes, mighty monk, but who are to decide between the truth and the falsehood of what is known only to you and to me?' The throne of the god Sakka shows sign of heat; Sakka ponders the cause and becomes aware that Ciñca Manavika is falsely accusing the Tathagata. He sets out with four divinities who have turned into mice. They bite thru the cords with which she has tied the disk of wood about her body; a wind blows up the garment which she has wrapped about her; and the disk of wood falls upon her foot cutting off her toes. The people cry out, 'A hag is reviling the Supremaly Enlightened.' They spit on her head, and with clods and sticks drive her out of Jetavana. The earth splits and she is swallowed up in the fires of the Avici hell. The denouement in the Sundari version brings destruction not only to Sundari but also to the heretics.

Female ascetics, nuns, or other religious women figure for the most part in love-affairs as go-betweens and abettors of amorous couples, and thus on the one hand touch upon the odious profession of the bawd (kuttani, or kuttini). On the other hand they merge with the type of devoted nurse, old woman pander, and witch. In the literature of the Kamaçastra (love treatise) which deals systematically with the kind of women who are to be employed as duti. 'love's messenger,' or 'go-between,' (servus currens) the nun (parivrājikā) figures quite regularly; see Richard Schmidt, Beitrage sur indischen Erotik, pp. 740, 774, 777, 781, 816. In Kathas, 32, 126, 127 it is said that 'these hypocritical female asceties, creeping unforbidden into houses, skilled in deceptions, will stick at no deed whatsoever.' Brahmanical texts love to cast a slur upon these people by making them out to be Buddhist or Jaina nuns. Thus in Kathās. 13, 88 there is a female ascetic. Yogakarandikā, 'Witches' Kettle,' who lives in a sanctuary of Buddha (Sugata). In Daçakumāracarita ii. 33 figures the nun (çramanıkā), named Arhantikā, and described on the next page as nirgranthikā 'free from the fetters (of existence)': she seems to be a Jaina nun. In the same text, ii. 55, figures as pander a female Buddhist mendicant (çākyabhikṣukī), named Dharmarakṣitā.\*\* Once more an undefined female ascetic sneaks as pander with perfumes and wreaths up to a woman whom she intends to corrupt, Daçakumāracarita ii, p. 66 ff. In Divyāvadāna, pp. 254 ff., a procuress defined as vrddhayuvatī, 'midwife,' brings about incestuous union between a mother and son. In Pariçiṣṭaparvan 2. 469 a pander nun is described as the family divinity of lewd women.\*\*

As a rule the stories exhibit this type of females as mercenary, yet occasionally their conduct enacts the adage that all the world loves a lover. In Paricistaparvan 2, 469 ff, a youth, in love with Durgila, the unchaste and cunning wife of the son of a goldsmith, wins the good graces of a nun by pampering her with food and other gifts. She goes to Durgila and tells her how much the beautiful youth is longing for her. Durgila, feigning to be outraged at the proposition, drives the nun out, and hits her on the back with her hand which happens to be black with the soot of pots and kettles which she is cleansing. The cunning youth interprets the black marks of the five fingers to mean the fifth night of the dark half of the month. He prevails upon the nun to go once more; Durgila drives her out again thru the back door into an açoka grove. There the youth fulfils the assignation on the appointed night. Very similarly in Kathas. 75, 99 ff. Prince Vajramukuta, in love with Padmāvatī, bribes an old duenna of hers to carry his love message. Padmävatī strikes the duenma's two cheeks with camfor, which means 'Wait for these remaining ten moonlight nights of the bright fortnight, for they are unfavorable to an assignation.' When the duenna goes a second time. Padmavati places the impression of her three fingers marked with red dye on her breast, which means, 'I cannot receive you for three nights.' The duenna goes a third time. A mad elefant

<sup>22</sup> Cf. the name of the Buddhist Eider Dhammagutta at the end of Hatthipala Jataka (509).

<sup>\*\*</sup> Hertel, Translation, p. 95, renders punceall-kuladevatam, not quite correctly, by 'die schutzgöttin der familie männersüchtiger frauen.'

happens to be running amuck in the city, so Padmävatī tells the duenna: 'You must not go by the public road, which is rendered unsafe by the elefant, so we will let you down into the garden, there you must get up a tree, cross the wall, and go to your own house.' The prince takes the same road to enter Padmävati's chamber and there marries her by the Gandharva rite. In Mudupāni Jātaka (262), where a nurse is bribed in the manner of a pander nun, the inamorata also conveys information to her lover by sign-language, to wit:

'A soft hand, and a well-trained elefant, And a black rain-cloud, gives you what you want?'

The king, father of the maiden, never lets her either out of his eyes, nor out of his hand. When the girl wishes to bathe the king is in the habit of placing her on a lotus ornament outside the window, to bathe in the rain. The maiden chooses a rainy night in the dark half of the month. Her lover comes there with an elefant and a beautiful soft-handed (mudu-pāṇi) boy, loosens the bangles off the princess' arm, and fastens them on the arm of the boy. The princess substitutes the boy's hand for her own which the king is ever grasping, and goes off with her lover on the elefant. The king realizes that it is impossible to guard a woman, gives her in marriage to her lover, and makes him viceroy.

The Rākṣasī-trick is practised by a nun, Kathās. 32. 99 ff., just as it is by sham ascetics (above). Drdhavarman, king of Madhyadeça, marries Kadalīgarbhā, nymf daughter of the great hermit Maūkanaka. When the royal pair are settled at home, the king remains exclusively attached to Kadalīgarbhā. The principal queen resorts to a female ascetic, who, in turn, consults a barber, and on his advice places at night hands, feet, and other limbs in the chamber of Kadalīgarbhā. The king thinks her a witch, abandons her, and she goes back to her paternal hermitage by the road of mustard-seeds, now grown up, which she had scattered on the way to the palace. Her father, Maūkanaka, by the power of

es For the barber as typical villain see my 'Life of Parcyanatha,' pp. 33 ff., 202.

<sup>\*\*</sup> Finding the way back, or pointing out the way, is a frequent motif, especially in folklore. See Tawney's Translation of Kathasaritsagara, vol. 1, pp. 290, 576; Jatakas 61, 435; Kathakora, pp. 105, 109; Old Decom

contemplation, sees thru the plot, and easily induces the king to restore her to her former station as favorite queen. In Kathākoça, pp. 98 ff. this story in a more elaborate form makes a witch named Sulasā take the place of the female ascetic. The princess finds the way back to her native hermitage by sahakāra trees which she has sown on the road to her husband's palace. Cf. also Kathākoça, p. 116.

In Kathās, 13. 54 ff. four young merchants plan the corruption of Devasmitā, faithful wife of the absent merchant Guhasena. They resort to the Buddhist nun Yogakarandikā who insinuates herself into Devasmitā's confidence. She throws pepper into the eyes of a bitch whom she takes with her to Devasmitā and explains the dog's tears 'because in a former birth, as the wife of a Brahman, she had cheated the elements and the senses, having thru ignorance confined all her attentions to the preservation of her character.' But Devasmitā 'is on'; gets the four merchants, one after another, to come to her, drugs them with dattūra, and brands them with a dog-foot.<sup>67</sup> She cuts off the nose and ears of the female ascetic, and is, finally, reunited with her husband.

In Daçakumāracarita ii Prince Apahāravarman employs a Buddhist nun, named Dharmarakṣitā, one of the chief procuresses of the hetaera Kāmamañjarī, by plying her with garments and food, to act as go-between in an affair which secures him the hand of Rājamañjarī. In the third story of the same text Prince Upahāravarman sends his portrait by an old female ascetic to Queen Kalpasundarī, wedded to an ugly, unfaithful, and malevolent king Vikaṭavarman. The queen falls violently in love with the picture, and desires an assignation on that very same day. By means of a spring-board Upahāravarman gets into the garden of the harem, unites himself with Kalpasundarī, and arranges with her for the destruction of the king and usurpation of the throne. In the sixth story of the same text (Nitambavatī, above, p. 230 f.), the Jaina nun Arhantikā figures as go-between.

A more benign aspect of a female ascetic, acting as a harmless

Days, pp. 82, 87, 200; Parker, Village Folk-Tales of Cepton, 1, 122, 126, 128, 373. Cf. Benfey, Pascatantra, I, 488. For finding the place where another person has buried treasure see Hemavijaya, Kathāratnākara, story 61; Day, Folk-Tales of Bengal, p. 166.

<sup>&</sup>quot;See my 'Life of Parcvanatha,' p. 59 note.

go-between, is revealed in the picture and dream story, Kathas. 122. 20 ff., in which king Vikramaditya marries the man-hating amazon Malayavati. The king has seen her picture, and dreams that he has crossed the sea and entered a beautiful city. There he sees many armed maidens who raise the cry, 'Kill, kill!' But a female ascetic hides him in her house, explains that he has come to the city of the man-hating princess Malayavati; and disguises him in female garb. The princess, at the head of her maidens, arrives and says: 'We saw some male enter here.' The ascetic shows her Vikrama, saying, 'I know of no male; here is my sister's daughter, who is with me as my guest.' At the sight of Vikrama the princess forgets her dislike of men, is overcome with love, and invites Vikrama to live with her in her palace. In a game of marrying her maidens to one another the maidens 'marry' Malavavati to Vikrama. At night, in the bridal chamber, she throws her arms around Vikrama's neck, and he tells her who he is. At this moment 'the cock crows,' that is, the watchman wakes Vikrama up, but after a period of desperate longing, he is in the end united with the flesh and blood Malayavati.

A story of a sham nun from very secular life indeed is that of the hetaera Kāmapatākā in Hemavijaya, story 176. King Candrapradyota has been tricked by Abhaya, son and minister of king Crenika of Rājagrha. He asks his assembled court whether any one there is able to deliver up to him Abhaya in fetters. The courtezan Kāmapatākā undertakes the task. Together with two others of the same class she makes a pilgrimage to Rājagrha where she worships the Jina in all temples and shams the life of a nun. Abhaya takes notice, and invites her to a meal which she and her sister shams eat with every regard to Jaina restrictions. In turn Abhaya accepts her invitation to dinner at her inn; she dopes him with dattūra; fetters him; and delivers him on a wagon into Candrapradyota's hands.

<sup>34</sup> Picture and dream loves are very frequent in fiction and drama; cf. Tawney's note to II. 588.

## PRIESTLY PENANCE AND LEGAL PENALTY

# E. WASHBURN HOPKINS YALE UNIVERSITY

IN Narada's Law-Book, 15, 19, occurs this rule:

na kilbişena pavadec chāstratah kṛtapāvanam na rājāā dhṛtadaṇḍam ca

"One should not tax with his crime a man who, in accordance with the codes, has performed purification or has been punished by the king." Here we have an antithesis which characterizes all the Sanskrit books of law, as dharma is toosely translated. Criminal law in particular appears to be a matter adjusted by priestly penance as well as by legal penalty. But to a certain extent there are clear lines of demarcation between the two systems. That the king in person executes not only the law but the criminal, is the old theory of Hindu law. The criminal par excellence is the robber or thief. Murder at an early period was punished by weregeld, a compensatory payment made to the family, which later became a fine. It disturbed the family rather than the State and was not a matter of royal concern. But theft or robbery (the two are not distinguished at first) is one of the first crimes recognized as of public importance and through every legal code flits the figure of the "thief with loosened hair," who by agreement of all the lawmakers must go to the king and be slain by the king in person. The details differ but, till the latest code, when, instead of killing the thief, the king may "hit him gently," the procedure is about the same. The thief (caught with the goods) is to carry with him a club with which the king smites and kills him; if the king fails to do this, he himself incurs the sin (demerit) of the thief and must perform a penance for neglect of duty.1

A later limitation describes the thief as one who has stolen gold

<sup>\*</sup>Ap. 1, 25, 4-6: "The king shall hit the thief with the club; if the thief dies, his crime is expiated; if forgiven by the king, the guilt falls on the one who forgives him. Or, the thief may throw himself into fire and be freed from guilt by death" (cadhe mokeat; anujactarum enat sprint; agniss of pravidet, etc. Compare G. 12, 43-45; aghisma enated rojd, "the king is guilty if he does not kill" (the thief).

or, more particularly, gold belonging to a priest; and the king may give the weapon to the thief, with which he shall kill himself (an awkward thing to do!); then, through this suicide or through suicide by fire, the thief "frees himself of sin." Thus Vas. 20, 41-42: "If a man has stolen gold belonging to a Brahman, he shall run with flying hair to the king (saving), 'Sir, I am a thief; punish me.' Then the king shall give him a weapon of udumbara wood, wherewith the thief shall kill himself. It is declared (in the Veda) that he becomes pure after death. Or . . . he may burn himself." Manu, 8, 314, seq., gives in one place the simpler old rule: A thief must carry with him a club or staff of khadira wood or a sharp spear or an iron staff and the king is to punish him or take upon himself the thief's guilt; then, in 11, 100, the same author says: "A Brahman who has stolen the gold (of a Brahman) shall go to the king and say 'Punish me' and the king, taking from him the club, shall strike him once. By the blow the thief becomes pure. Or a Brahman may purify himself by austerities." Visnu makes the theft one of gold (of a priest) and implies, as do other authorities, that the king may kill the thief (Vi. 52, 1 seq.). Nārada, Parišista, 47, says that the king should merely touch the thief, raja tatah språed enam, since he becomes free from guilt by confession. The commentators generally read back into the older text the limitation of the later; yet it is clear that originally the king in person kills any thief. But Manu 9, 276, enjoins that the king shall have robbers ("who steal at night by breaking through a wall ") impaled, nivesayet, after their hands have been cut off. and it is doubtless true that in many of these rules for punishment and execution, hanyat, 'kill' and ghatayet, 'cause to be killed,' mean the same. Compare uppo hanyat, ghatayet, hanyad ikvaru all together in M. 9, 269, seq. Visnu says ugran ugresu (niyuniita; Vi. 3, 20), that is, the king is to employ rough men for his rough work," and in the developed civilization of the later time the king's handling of a thief becomes more and more a formality. But the

<sup>\*</sup>Brahmanasucarnaharanāt . idstu bhavān iti, tasmāi rājāu 'dumbaram iastram dadyāt . maranāt pūto bhavatī 'ti vijāāyate; niekālako vā . . ātminam abhidāhayet. So Yāj. 3, 257, brāhmanasvarnahārī.

<sup>\*</sup>Compare Vi. 16, 11 codhyaphātifeam candalanām, and M. 10, 56: Men of the low castes called Candalas and Svapacas "shall kill those who, in accordance with the king's command, are to be killed."

king even later is still personally the executive in the imposition of fines, as in the administration of justice generally, even when he deputes to his officials the burden of his work. The king "shall have a goldsmith (who defrauds his customers) cut to pieces with razors" (M. 9, 292), as "the king shall have the punishment arranged" for the theft of agricultural implements, raja dandam prakal payer; also in person "the king shall restrain thieves," that is, see to it that they are restrained, and "the king shall himself do (over again) what his ministers or judges have done wrongly and fine them the highest fine" (for their errors), as Manu says, 9, 312 and 234. The king has to pay out of his own treasury the value of all stolen property not recovered (G. 10, 47) and the king's officers appointed over towns must in the same way pay for what is stolen under their jurisdiction (Ap. 2, 26, 8). If a murder or robbery occurs, the blame lies with the officers unless it becomes clear that the criminal is from another district (Yaj. 2. \$71, seq.). Impalement for horse-thieves and house-breakers, cutting off of fingers in the case of convicted cut-purses, etc., are to be seen to by the king, who "shall cause a thief to return stolen property and inflict punishment of various sorts," unless the thief be a priest, in which case the king shall brand and banish him from his realm, svarāstrād vipravāsayet (ibid. 270).

In all these multifarious cares the priests have nothing to do except to advise the king and receive the fines paid by murderers and other "great sinners," which it is unlawful for the king to receive (M. 9, 243). But it is in connection with these great sinners (criminals), a semi-technical term of priestly origin for those who commit capital crimes, that we find the following injunction (M. 9, 236): "Let the king inflict corporal punishment and just fines upon great criminals, if they do not perform a penance." The corporal punishment is inflicted by branding on the forehead these great criminals (the slaver of a priest, an Aryan who drinks rice-brandy, the thief [of a priest's gold], and he who commits adultery with his teacher's wife are the "great criminals") and they are then to be outcasted, that is, deprived of all intercourse with decent people. But if they perform the penance prescribed, they are not to be branded but to pay the highest fine (one thousand coppers); only, again, the priest is to pay but half that amount ("if his sin is unintentional" says the scholiast) or, if he sins intentionally (?), the priest is to be banished with his property. Men of other castes who perform penance have their whole property confiscated if they have sinned unintentionally, and are branded and banished if they have sinned intentionally. The scholiast also thinks there is a distinction to be observed between light and grave offences (depending on the circumstances in which the crime is committed). But the scholiast does not make the matter too clear and for the present purpose the meaning in detail is unimportant. What is important is that in this injunction we have a clear case of the interaction of priestly and legal rule and punishment. The older decree is unquestionably that of Baudhāyana, 1, 18, 18: "If a Brahman has slain a Brahman, has violated his teacher's couch, has stolen the gold (of a Brahman), or has drunk rice-brandy, then (the king) shall brand him on the forehead [with an appropriate mark] and banish him from his realm." Quite apart from this rule are priestly penances (3, 7, 1, seq., from Taitt. Aran. 2, 8, 1, seq.). Visnu, 5, 1, seq., says that great criminals, with the exception of Brahmans," are to be put to death, but a Brahman, for whom corporal punishment is illegal, must be branded and turned out of his own district, svadeśa; but G. 27, 16, say that penances free from all guilt, including that attaching to great crimes, mahāpālaka, though in 26, 22 and before this, in 21, 1 (he includes others) he says that such criminals become outcasts and that the chief of these crimes cannot be expirited, anirdesyani. It is said in Manu 11, 90, that there is no expiation (atonement) for murdering a Brahman and the penances prescribed in the legal codes for one who has committed a great crime are in reality equivalent to a sentence of death. For example, for violating the teacher's couch one must confess the crime and die by one's own hand (M. 11, 104, seq.). So Apastamba, 1, 25, 1, seq., says that one who drinks rice-brandy shall drink exceedingly hot liquor, so that he dies, surapo 'quisparsam suram pibet. But such death by priestly penance is utterly unknown in

<sup>\*</sup>Vi. 5, 1: atho makapatakino brahmanararjam sarre radhyak; 2, no sarro brahmanasya dandak; 3, svadešad brahmanasya kritakam vicasayat. Jolly, in SBE. VII, p. 24, has omitted in his translation the all-important brahmanavarjam. Visnu still uses, as he inherits, the personal injunction, 5, 9, rājā hanyat (from M. 9, 232); but also independently; 72, tādrādes ees cā kuryāt, "the king shall do the same to him," who has gouged out another's eyes (or imprison him for life).

the codes that have nothing to do with law but are evolved as priestly discipline. In the Sāmavidhāna-Brāhmana, for example, there are penances for abuse and assault and theft and murder, but the hardest of these is a fast accompanied by expiatory psalms sung in atonement, or living (in or) beside water, udake, fasting and singing a psalm. Death is not expected as a result of any of these priestly penances (cf. M. 11, 88 with Sāmavidh. I, 7, 5). For amiting a Brahman and drawing blood, the code prescribes the severe combination of the krechra and atikrechra penances, but the priestly Vidhāna says that atonement is made by singing the psalm verse SV. 2, 86 (Vidh. 1, 7, 4; M. 11, 209).

It might be thought, in the frequent absence of any mention of the agent, that the priest imposes the penalty of fines in the codes, especially as the king acts always under advice from the priests; but that is not the case, and the codes supply the deficiency enough to show that the punisher is the king himself, either in person or as authority. For example, in M. 8, 191, it is said that two criminals (who refuse to return a deposit or falsely claim to have made one) "should be punished like thieves," cauravac chasyau and Visnu, on the same topic, says rājāā cauravac chasyau. In short, the whole criminal procedure is carried out by the king, or through his agents. But in giving the option of penalty or penance the priestly rules have become amalgamated with those of the court.

Criminal law, dandavidhi, has thus been combined from two entirely different sources, one that of the king with his danda and dama (corporal punishment and fine) acting as guardian of his people and executive, the other, apart from the king, of the priests, who made for offences their own rules (laws) and penances, prayascitta (-citti), which vary from slight to severe religious exercises, such as fasting and singing (repeating) certain texts magically potent to relieve a sufferer of sorrow or sin. Now these prayascitta are intended originally only for the priests and even in the codes most of the rules and exceptions implying such punishment are really meant for the priests, who alone are in a position to carry out the singing and reciting required. Moreover, even in smaller matters, such as the "rules for a householder" (Snātaka), the codes are not meant for the mass of people, the Vaisyas, but are composed for priests and warriors alone. It is a work of

supererogation if a Vaisya follows them; it will be well for him to do so but he is blameless if he does not pay any attention to them. In the same way, the priestly rules were for a restricted class. In the Vidhana they are for the priest only; but in the law-codes they supplant the royal criminal code, primarily in the case of priests; but, secondarily, by an extension of this exemption, they are applied to others. But in that case it was obvious that penances to be effective must be equal to the legal penalties, and in this way were introduced the horrible penances entailing death, which are really legal punishments, only they are still called penances. They differ too from the legal penalties in this, that they are selfinflicted, whereas the legal penalties are punishments (impaling, imprisonment, mutilation, etc.) inflicted by others, though, as we have seen, an occasional option is introduced and, for example, the thief may commit suicide by burning himself to death instead of being killed by another.

Now there is little direct indication of how these two systems have amalgamated. There are really three, but since the code of penances for priests alone remains without legal force, as a manual of atonements made by priests for priests, it may here be left out of sight, except to remark that (as everyone knows) out of these priestly rules many have been incorporated in effect, rarely in the same words, into the codes, and a whole chapter of this material has been fastened on to the code of Gautama (who, however, probably did not have this at all in his original work). But how are we to imagine the mutual relations of king and priest in making up a code such as now exists in most of our texts? The word vrala means the law as an observance to be followed both in religious and in criminal cases, as in G. 24, 10, tadorata eva means that one shall follow the penance described in the case of capital crimes. This is the meaning of the words, dvau loke dhylavralau in G. 8, 1, "two men uphold the laws in this world" (the king and the priest), and it is in allusion to this bipartite division of the executive power that the same author says (11, 31) that since people who commit crimes (go wrong) are destroyed (hereafter) therefore tan acaryopadeso dandas ca palayati, " the injunctions of the priestly teacher and the penalty (inflicted by the king) protect

<sup>\*</sup> Compare the Comm. to Gantama, 9, 1, cited by Bühler. The penance is fasting.

them," that is, they are guarded from wrong-doing by the priest's injunction (as to what penance to perform) as well as by the corporal punishment inflicted by the king. On the one hand is the old and natural rule of those governed by a king, calatas cai 'nān svadharme sthāpayet, "the king should lead back to their duty those who err" (G. 11, 10), and on the other the dharmopadesa or instruction in regard to law which belongs to the priest and is severely punished if undertaken by one of low caste (M. 8, 272) and may be exercised only by a priest well versed in ancient lore (M. 12, 106).

That the two passages cited above really belong together is shown by a verse in the Nărada Smṛti, 15, 20, which practically combines them thus:

> loke 'smin dvāv avaktavyāv avadhyāu ca prakīrtitāu brūhmanas cāi 'va rājā ca tāu hī 'dam bibhrato jagat

"Two persons, a Brahman and a king, are declared to be exempt from censure and from corporal punishment in this world, for these two sustain the visible world." (Cf. G. 11, 32, rājācāryāv anindyāu, "king and Brahman are not to be censured".)

The law itself in these passages looks upon the system of priestly penances as one branch of the code of criminal law, as on the other hand, the priests do not refuse allegiance to the criminal code as carried out by the king. There are, on the one hand, explicit traditional laws dealing with the proper punishment of criminals in the good old way, where, as in non-criminal law, precedent served as authority. For example, in civil law, in the matter of inheritance, Manu's precedent in "dividing his property among his sons" made law. But there are also, in all law, many "cases of doubt" and "cases not mentioned" (as they are termed), and in regard to these we may see how the two systems of authority unite. Yai, 3, 301, says that in criminal cases, one shall perform a penance as set by the Assembly, or, if his crime is not known, he shall (for his own moral and religious satisfaction) perform a secret penance. Manu, 11, 248, also gives penances for secret sins. The Assembly is defined by Manu, 12, 110, as consisting of three to ten persons learned in the Vedas, etc., the attributes of those who make the Assembly, parisad, applying only to members of the priestly caste, and thus differing from those characterizing the king's ministers and councillors. The purpose of the Assembly is to lay down the law, dharma, in "cases not mentioned," anamnatesu (M. 12, 108) or "in cases where there is a difference of opinion" (G. 28, 50, eigratipattāu), withal not only in matters of penance but in regard to any point of law, as is clear from the position of this rule in the code of Gautama.

Moreover, this assembly of from three to ten may consist at a pinch of only one priest and it is significant that the language used in regard to the making of laws by the king and by the Assembly, even when represented by only one priest, is virtually identical. Thus compare these parallel passages: "That which the king shall decree, vyavasyet, to be law, let no man violate," tam dharmam na vicallayet (M. 7, 13); and "That which the priests' Assembly shall ordain, parikalpayet, as law, let no man violate," tam dharmam na vicallayet (M. 12, 110); and further: "That which even one Brahman learned in the Vedas shall decree to be law must be considered to have supreme legal force," eko 'pi vedavid dharmam yam vyavasyed dvijottamah, sa vijñeyah paro dharmah (ibid. 113).

But the laws thus made by the priest for the king in special cases are at once imbued with the force of precedent and so become part of the traditional code. Thus in Manu 8, 324, the law as to stealing large animals is left to be adjusted by the king: "For stealing large animals . . the king (in person) shall adjust the penalty, after considering the occasion and the purpose" of the theft, kālam āsādya kāryam ca dandam rājā prakalpayet; but in Vi. 5, 77, seq., it is stated as the law that a man who has stolen a cow, horse, camel, or elephant (large animals) shall have one hand or one foot cut off. The king no longer has to adjust the penalty; the priest has already generalized the law and laid down the punishment. Again, it is interesting to see that precisely the same formula is used in this matter of adjusting penalties as in adjusting penances. Thus in Manu 11, 210: "For the removal of offences for which no expiation has been prescribed one shall adjust, prakalpayet, a penance after considering the (offender's) ability and the (nature of the) offence." Compare Yaj., 294, prayasciffam prakalpyam syat: "Penance shall be adjusted, where no expiation is mentioned, after careful investigation of place, time, age, and offence"; and, again, M. 8, 126: "The king should inflict punishment, danda, after considering the purpose, place, time,

and ability of the criminal." Compare Vi. 5, 194, jaatva jätim dhanam vayah, dandam prakalpayed raja.

Which set of rules and formulas, those of the king or those of the priest, is older, cannot be absolutely determined. But it may be assumed that royal punishment for theft and the law of weregeld are Vedic and probably still older, while on the other hand the laws of penance that have in part been incorporated into the codes from Vedic literature and may in part have come from the period of Indo-Iranian unity, have just as good a claim to be considered primitive law." The two developments ran on side by side and had so much in common that the words for penalty and penance were interchanged, while each system made the same distinction between intentional and unintentional sins (crimes), each increased the punishment in the case of repeated misdemeanors and allotted the punishment by the same formula ("after considering time and place," etc.). According to the legal code, the sinner (criminal) may be "purified" by either standard, either performing a penance or submitting to legal punishment, or, in some cases, he may be obliged to undergo both penalties.7 Yet one penalty or penance usually sufficed and in cases where the criminal could not perform a penance (usually this would be anyone except a priest) the legal penalty alone could be exacted. A slave, for example, had to suffer the legal punishment (if he insulted a superior, the offending member was cut off) and by the time the penances were made to fit into the law the severity of the death-penance made it a matter of indifference whether one died by "penance" or by official "corporal punishment." Most offences anyway were productive of fines in the course of time, which, except in the case of fines received from "great sinners," went into the king's treasury (otherwise to the priests, or they were sacrificed to the god of water as purificatory). Apparently the king and his laws of custom (still of

<sup>&</sup>quot;The Vājasaneyi Sanhitā has a prayer to Atonement (penance). Some of the code-rules come direct from the (Taitt.) Brāhmaņa period. Compare also the many correspondences between the codes and the Sāmavidhāna Brāhmaṇa, but especially the order of allotment of penalties in the case of "untruths regarding a man," cattle, etc. as compared with the same order in the Zoroastrian Vendidad. Tāitt. Br. 3, 2, 8, 11 is in Ap. 2, 22, etc. For the correspondences, see Spiegel, Konow (in Sāmavidh.), and Jolly, Recht sad Sitte, pp. 116 and 142.

<sup>&#</sup>x27; Jolly, op. cit., p. 121, seq.

course unwritten), which called for corporal punishment, later for fines, first began to be operative in regard to cases of theft and robbery. Other wrong-doing such as murder, adultery, insults, arson, etc., was left to the injured family or individual to adjust (arson, in Visnu's code, is still a private matter punishable by private homicide which is legally justified) and was eventually formulated by the priest as "sin" deserving of such and such a punishment. The priests then incorporated these rulings into, or rather added them to, the code of Good Form or Law which they had already elaborated apart from the "house-hold rules" on the one hand and "penance-rules for priests" on the other. Both systems arose naturally and there is no need to assume that the legal penalty was in itself a later product than the code of priestly penances. But the kingly code was later formulated and expressed in didactic sentences. We can see this plainly in the rules concerning the king himself. At first there were brief and rather naive statements as to how a king should act in time of war and peace; then more attention was paid to criminal jurisprudence and the laws made on this subject were made part of the royal laws. Finally the laws in regard to inheritance, property in general, in a word civil law, were added and the rest of the melange drops away and there emerges a real code of civil law. But the inroad of the priest upon the royal right of punishment is very marked and even to the end the former maintained his independent right to substitute penances for (legal) penalties, as he succeeded also in diverting to himself the payment of weregeld and other fines for great crimes. The instruction, upadesa, of the priest always determined the action of the king in later times, since it was part of the law that he should never be without priestly advisors." The king's first duty is "to protect his people" and it was always understood that part of that protection lay in upholding the laws of families and guilds and castes. The priestly caste was itself a sort of guild as well as caste and its privilege was to carry out under the king's protection its office of "giving instruction." As

<sup>\*</sup>Compare Vi. 5, 194: dandam prakalpayed rajd sammantrys brakmandih saha, "(considering the offender's caste, ago, etc.,) after consultation with the priests the king should adjust the penalty" (for crimes, aparadhequs). Manu 8, 126, gives the same rule, but without mentioning the consultation with the priests.

it gave instruction in regard to penances, it was the king's duty to see that these penances were performed. Now there is one (unique) passage in the law-books which reveals just what happens when a recalcitrant sinner (criminal) refuses to submit to the penance or penalty which the spiritual teacher has imposed. It is of such surpassing interest that it is worth while to translate it in its entirety (Ap. 2, 10, 12, seq.):

"The corrector (priest) shall order those who have done wrong to perform a penance (sasta nirvesam upadiset) in accordance with their acts and with what has been declared (in the priestly rules). If they disobey his order (sastram, the same word as that used of a king), he shall make them go to the king and the king shall send them to his chaplain (purohita, who must be) skilled in law and worldly affairs (dharmarthakusalam). This chaplain shall compel (niguingal) the members of the Brahman caste (if the sinners are of that caste) and make them (perform the indicated penance) by force and by any means of restraint (imprisonment, etc.), barring the infliction of corporal punishment and servitude (in the case of priests); but in the case of all other castes, the king, after carefully examining their actions, shall punish (such sinners) even by deprivation of life (pranaviprayogat), though in doubtful cases (where the offence is not proved), the king should not punish them (na dandam kuryāt) until he has carefully investigated their case by means of ordeals and questionings (daivapraśnebhyah). But (when his examination is concluded) the king should proceed to punish them." By the rule of ibid. 2, 29, 6, the experts who try doubtful cases employ such means as "signs and ordeals" to extract the truth (samdehe lingato dairene 'ti vicitya). According to G. 12, 27, the penalty for disobeying the priest's instructions was no light matter: " For not doing as prescribed or for doing as forbidden, pratisiddhaseväyām, a man's property should be taken away from him, except his clothes and food." Apastamba gives as the penalty for one who violates any rule (of caste or order) 'imprisonment until amendment,' samāpatti, and banishment in case one refuses to amend his ways. But in all except capital crimes the intercession of a spiritual teacher, a sacrificial priest, a Snataka, or a prince, raja, might serve to mitigate deserved punishment to a lighter form of punishment (ācārya etvik snātako rājeti trānam squr anyato vadhyat, Ap. 2, 27, 18-20). On this point Gautama

says: "The penalty should be regulated according to the person, his ability, and the (circumstances and) repetition of the crime; or pardon (may be granted) in accordance with the decision of an assembly of the priests" (anujūānam vā vedavitsamavāyavacanāt, "learned in the Veda," G. 12, 51-52).

In regard to the chaplain's competence to decide cases of penalty and penance, it must be remembered that this priest must be well versed not only in Vedic lore but in legal and business matters. Visnu says of such a priest: "The king should choose as a chaplain a man skilled in the Vedas, in the epic, in law-codes, and in worldly knowledge, of good family, physically without defects, and of austere virtue."

There was no wrong, from slight errors of conduct to murder and treason, for which the completed criminal code did not seek to find an appropriate penance or penalty. But in case no provision had been made for his case, the injured party had only to bring the matter to the attention of the priest or go direct to the king (rajanum abhigacchet or iyat)18 to get satisfaction. It is not till Nārada's day that any provision is made for a man's taking it upon himself to punish another for a wanton insult. The old code provided for two cases in which one might of one's own initiative get satisfaction without recourse to the courts. One of these was where a man recovered property which had been loaned: "He who recovers his own property (loaned to another) by any means he can, should not be reproved by the king," na rājāo vācyah syāt (Vi. 6, 18).11 The other case has to do with killing in self-defence. The later codes elaborated the idea that one who killed in battle or killed an assassin was morally and legally blameless, until in Visnu this reaches the formulated permission to kill almost anyone that endangered another's life, property, or weal. Still called "as-

<sup>\*</sup>Vi. 3, 70: vedetihāsadharmaiāstrārthākuialam kulinam avyangam tapasvinam purohitam os varayet (worldly knowledge is useful, practical, knowledge of affairs).

<sup>16</sup> VI. 6, 19 and 20; Yaj. 2, 40 (compare M. 8, 176). To "go to the king" means to seek justice from him; if a man without reason brings a suit to the king he is punished.

A creditor may legally recover occording as he will," probably referring to the practice of door-sitting, or forcing the debtor to pay by working on his fear of ghosts.

sassin " (the technical legal term that gave immunity for killing) any man might be slain with impunity who threatened with sword, poison, fire, with a curse, or a deadly Atharva Veda magic rite, as also an informer (who was likely to endanger one's life) with the king, or one who transgressed with a man's wife, and even such people as stole one's fame or wealth or took away one's religious merit (by impairing the use of a sacred pool made by the victim) or (landed) property.<sup>12</sup>

In line with this freedom of individual action, Nārada provides also for a less dangerous form of attack: "If a man of the lowest caste (such as those whose business it is to execute criminals, p. 244, note 3) or an outcast . . offend a superior, he shall be punished (by that superior) on the spot by a whipping (given him by the superior) . . If such a low person insult (a superior), the man insulted should himself punish (vinayam kuryāt) that low man and the king has nothing to do with the punishment. . . But if the superior man is unable to whip the low man, the king should have punishment inflicted upon him." 18

The priest in adjusting penalties gave his mandate, except where, as in the case of the thief caught with the goods, the king knew his part in advance. There was at first no formal distinction between a sin and a crime and the wide difference of opinion in regard to the proper way to treat intentional, as differentiated from unintentional, wrong-doing shows that it was a long time before any real distinction was made between culps and dolus. What gave such great weight to the code of Manu was that for the first time it attempted to make an extended survey of legal matters under eighteen titles of law and so blazed the way for further clarification in subsequent codes. Although these eighteen titles have been severely criticized, they mark really a great advance. It may be worth while to mention them here in order to show in what state was the "law" (that is, the code of right and wrong) when the administration of law began to settle into grooves for itself, instead of being a mere sub-division of the priestly rules of

<sup>&</sup>lt;sup>18</sup> Vi. 5, 191: udyatāsivijāgnim ca šāpodyatakaram tathā, ātharvasema hantāram pišunam cāi 'ca rājasu, (192) hāāryātikramasam cāi 'ca cīdyāt saptātatāyinah, yašovittaharān anyān āhur dharmārthahārakān.

<sup>\*\*</sup> Nar. 15, 11-14, ghatayed raje; the ghata, blow, is explained as taganam, whipping.

behavior for priests. These titles are: non-payment of debta; pledges; sale without ownership; partnership and non-delivery of what has been given; non-payment of wages; breach of contract (or, breach of guild rules); revocation of sale and purchase; disputes between master and servant; boundary-disputes; assault and slander; theft; violence; adultery; the law between man and wife; partition; dicing and betting on (fights between) animals. "These (the author concludes) are the eighteen topics which occur in the settlement of disputes here (on earth). Let him (the king), relying on the eternal law, determine the affairs of men who mostly dispute about these topics. But when he does not inspect such affairs himself let him appoint to inspect them a learned priest. When the king attends to his (legal) affairs he should be accompanied by three priests as members of his court." 14 In the early 'law' manuals, civil and criminal law together make only a small fraction of the whole and these topics are briefly and confusedly mingled, but both together take far less space than the rules for students and for religious penances.

"The spiritual teacher is the recognized corrector, sastar, of worthy Aryans, while the corrector of criminals (evil-souled) is the king, but the corrector of those who sin in secret is the god of hell." So says a verse imputed to Nārada.<sup>15</sup> But the priest must not be thought to have evaded his own responsibilities in fashioning the law for his people. He gave precedence to his own caste and exempted it from capital punishment and from slavery (as penalties for crime), but he did not assume even the right to lay fines paid as penalties. The priest may only reprove and name the penance to be performed; the king alone may inflict punishment and designate the fine.<sup>18</sup> It is also to the honor of the priest that

<sup>\*\*</sup> Manu, 8, 3-11. In the earlier code of Cautama only fifty two short clauses are devoted to civil and criminal law altogether. Of these, four-teen have to do with abuse (insults) and stand at the head of the list, followed at intervals by eight short clauses on theft (15-18, 43-44, and association with thieves, 49-50), eight on damage by cattle, eight on legal interest, three on adverse possession, three on debts and deposits, two on punishment in the case of priests, and two on modification of penalty and pardon. The text of the whole discussion (on criminal and civil law) could be printed on a page of this Jounnal.

<sup>&</sup>lt;sup>18</sup> Nar. Paris. 50. For dimutal as worthy Aryans, see G. 9, 62 and VI. 51, 66. It rather implies a priest; cf. M. 5, 43.

<sup>58</sup> Byhaspati, Smrti, 27, 8.

he enunciated the doctrine, which bore hard on his own caste, that "knowledge makes a difference," that is, the higher his caste the greater is the guilt of the offender. In a case of theft, for example, the sin of a priest is reckoned as much more than that of an (ignorant) man of the lowest caste. "For those who know, the greater is the guilt," vidyā 'pi ca višesena vidvatsv abhyadhikam bhavst." This means that the Brahman who steals has to pay back double as much as a man of the next lower caste, and so on down, so that, while a slave has to repay eight times the value of what he has stolen, a priest has to pay sixty-four times as much "or even more," as Mañu pitilessiy adds."

<sup>&</sup>quot;Nar. loc. eit. 52; compare also, in reference to the king as a possible criminal (Manu, 8, 335-336): "If father, teacher, friend, mother, wife, son, or domestic priest fail to attend to their duties, they should not go unpunished by the king. In any case where a private individual would be fined a copper, in that case the king ought to be fined a thousand: so stands the law."

<sup>&</sup>lt;sup>18</sup> M. 8, 338; cf. G. 12, 15; astapadyam steyakilbisum sidrasys. 17, viduso 'tikrame dandabhayastram. The thief "taken with the goods" is sahodha (M. 9, 270; Vas. 19, 39). According to Nar. 14, 18, the discovery of the goods on a man proven that he is a thief and extravagant living proves that he has the goods, sahodhagrahandt steyam hodham atyupabhogatab. The expression sahodha does not occur (in this sense) in Gautama or Apastamba.

## THE KASHMIRIAN ATHARVA VEDA, BOOK ELEVEN EDITED WITH CRITICAL NOTES

#### LEROY CARE BARRET

TRINITY COLLEGE, HARTFORD, CONNECTIOUT

#### Introduction

THE ELEVENTH BOOK of the Päippaläda herewith presented is the shortest published and one of the three shortest in the manuscript: it contains nothing of unusual interest. The material is presented in the same manner as in previous books.

Of the ms.—This eleventh book in the Kashmir ms begins f138b8 and ends f141b6, covering three folios. There is no defacement of the ms: the pages have 20 lines each.

Punctuation, numbers, etc.—Punctuation is more regular than in most of the books previously edited, and the stanzas are numbered regularly for the first time since Book One. All the stanzas of three hymns are correctly numbered, in another there is only one mistake, and in the other three hymns there is confusion. There are only seven hymns (kāndas) in this book, and no sign of grouping these into anuvākas: only at the end of hymns three, four and five does a numeral appear to indicate the kānda number; space is left for it after hymn seven. There are only a few corrections marginal or interlinear: in the left margin opposite the end of hymn five is "ūrjasam reā" and a star. Accents are marked on all but the first stanza of hymn six, a hymn which appears in RV and a number of other texts. Accents have been almost entirely lacking in the ms since Book One (cf. JAOS 30, 189).

Extent of the book.—The book has seven hymns, all metrical. If there is a normal number of stanzas it is 14, as three of the hymns have 14 stanzas. The facts are set forth in the following table:

1	hymn	has	5 stt	-	5	stanzas
1	-40	65	10		10	tt
1	-66	66	11	_	11	éé
1	AE .	tt	12	-	13	a
3	hymna	have	14 sti	each-	43	· ·

7 hymns have

80 stanzas

New and old material.—Two of the hymns in this book are \$19.34 and 35; one is part of RV 10.97; we may fairly count 52 stanzas as new material.

# ATHARVA-VEDA PÄIPPALÄDA-ŠÄKHÄ BOOK ELEVEN

For the hymn read: vrsa te ham vrsanvantyai garbham dadhami yenyam | yadi devaparisthita prajam tokam na vindase z 1 z dhătă te tam sinivali varunăni pra vacchati | pumănsam putram indrānī İsatatāyām dadhātu te z 2 z samvrktas te vaksanāsu garbhas pumsām pumān kṛtah | sarvāngas tānvo jāyatām agnīr vāranyor vrttibhih z 3 z gambhīram karmanyam prastham tān vadhrīn sarvăn krnomi | ătmanas te lohităd garbhas sam vartatăm vrsākapeh z 4 z tvastă pińśatu te prajām dhātā tokam dadhātu te | rākā sīvyac ca sûcyā bhūtasyeśānā bhuvanasya devī z 5 z sinīvālīm anumatim rākām gungum sarasvatīm devānām patnī yā devindrānīm avase huve z 6 z abhijātā vrddhagarbhā aristāsti vīrasūr vā | vi jāvatām pra jāyatām bahvī bhavatu putrinī z 7 z parisrutam garbham dhehi māsyāh pra cyosta lohitam | anūnah pūrņo jāyatām †asthāpū 'nandho 'piśacadhītah z 8 z tvam dadhāsi dvipade catuspade garbham prajam ejate višvarūpa | kanikradad vrsabho †vidumopā prajāpate tanvām dhehi garbham z 9 z abhikrandan stanavan dhehi garbham vidyotamānas pavamāno 'vibhih | parjanyemām pṛthivīm retasāvithāpām rasenāusadhīnām pašūnām z 10 z ā te navāmi vrşānam yaş prajānām prajāpatih | sa te dadhyāt trtīyam garbham yonyam vijam prajam z 11 z ye vrsano garbhamkrta rtvivanam sumedhasah | tāńs te hvayāmi (sūtave) tad u te sampadyatām z 12 z agnes te tvastur varuņād indrāt somād vrhaspateh | putrain te putrakāmāyāi devebbyo nir mame prajām z 13 z angād-angāt sam sravatu tad yonau prati tisthatu | praja te vaksana savat tam te bijam nir ühatu z 14 z 1 z

Over sravatu in f139a10 is written in small characters bhavatu. A stanza in MG. 2. 18. 2 is similar to our st 7; in a it has abhinnanda but I can get nothing similar to that out of our ms reading; Knauer's edition leaves a hiatus between padas a and b, and I have done the same; in b MG has arista virasuvari, and in d iyam bhavatu tokini. With our 8cd of ApMB 1. 13. 1cd and HG 1. 25. 1cd. With 9c of RV 5. 83. 1c which ends with jiradanuh, and with 10a of RV 5. 83. 7a. In 14c I have accepted vakṣāṇā as a participle of vakṣ, but it is anomalous; it might be better to read vakṣaṇāsu yā; 14d does not yield a very good meaning.

9

In the top margin of f140a stands "z 1 z 3 z" indicating the end of the hymn. The "15" at the end of st 1 indicates mistakenly the inclusion of the stanza in the preceding hymn; our st 2 is numbered correctly, but note irregular numbering after st 4. The text here given varies in places from that of the vulgate; the trouble-some passages are fully treated in Whitney's Translation. It should be remembered that there is reason for believing that S Bk 19 was drawn from Pāipp, in which case we do not have two independent texts to work with.

In st 3a I have emended as suggested by Whitney; in 5a since Paipp and the commentator on S have psnavo we must deal with that; at Edgerton's suggestion I accept it; "ye" of the ms suggests a following initial consonant or short a, and that has led me to consider ye 'disnavo. In 5b I suggest a form similar to that given by SPP but closer to our ms. The relationship of S Bk 19 and Paipp has the same bearing on the problem here as in the preceding hymn.

5

[f140a9] prati grhāni prthiviniyatam etad ājyasya [10] mathitam šarīram mām dhanum asya dātus tvam rakṣa barhiṣyā yathāsat. z 1 z

Read imam dhenum in c: pada a seems possible altho the subjunctive grhani is not quotable, and I have thought that perhaps grahani and ni dhattam might better be read.

[11] uta tvāhur varuņasya pattrim atho tvāhur aditim višvarūpām adhijarā- [12] yum āghāre havyavāham agnāv asyā mahimānam juhomi z 2 z

Read patnim in pada a, "rūpām in c; atho would be better in a.

sa saha-[13] svan tamtum anvätatänah so gniştomän dašatam samāpa adhijarāyum [14] savatsān yo dadāti tam vāi devāh svar ārohayanti z 3 z

In pāda a read sahasvān tantum "tatāna, in b 'gni", in c savatsām, in d ārohayanti.

adhijarāyu [15] svar ārohayanty anena dattāh sudughā vayodhāh sahasmāi duhām [16] šatadhāram akṣatam amumṣmimn loke yuga uttarasmin. z 4 z

Read adhijarāyus ° ārohayaty in a, dattā in b; Ś 18. 4. 50b reads as suggested here, but daksiņā is the noun. In pādas cd read saho 'smāi duhām' ° aksitam amuşmin.

pürvavatsena [17] sü vatsini gäuryenasyä vatso ajara juräyuvat. trityam mänsam [18] parininditam yat tasmäd devä adhijaräyam ähuh 5 z

In ab we should probably read gaur yenasya, but we should consider also gaurenasya. In d read adhijarayum.

ā dhāvaya [19] šavasā vāvrdhāno ntarā tvak sruvāde smāi | imam indra mahatā me [20] ni raksa sam prajayā tatvā sam balena z 6 z

In pada b the only suggestion I can make is to read 'ntara tvak sruva adadhe 'smai; but there is nothing compelling about this. In e read vi.

durvedāvasthād dha-[f140b] hudhā parastād višve devāh prati pašyanty āyatīm yā bhadrā yā sarvatah samīcī-[2] s sedāhur bhavatu me jarāyuh z 7 z In påda a read °āvastād bahudhā, in b āyatīm, in c samīcī : for d Edgerton suggests sed āhur bhavatu me 'jarāyuh.

grstam dhenum adhijarāyum svadhām krņvānah [3] pra dadhātu vrahmane sahasmāi duhām sahasudhāram akṣatam amuṣmimn loke para- [4] me vyoman.

The margin gives the numeral "8." In pāda a read gṛṣṭiṁ, in b dadātu, in cd saho 'smāi duhāṁ sahasradhāram akṣitam amuṣmin.

vatšam jarāyus pradadas piyūsam yo no dadhātu sudughām a dhenum | [5] tasya devāpi vavarta āyuh sā rohatu sukrtām a lokam.

In pāda read jarāyu pradadat, in b dadāti and u dhenum: in c devā api vavarttāyuh, in d sa āro° and u lokam. \$ 9.9.4c is somewhat similar to pāda a.

The margin gives the numeral "9,"

parīvālām adhijarā- [6] yum nadhā jīvo yadadām da pra etām syonām sagmām sivā siveha sā no hinsir ha- [7] sā dāivyena z 10 z

For the first two pādas I can make no helpful suggestion; in c I would read śivām śiveha, in d mā no and mahasā.

bhadrakıtam sukrtam ādišam bhuva saram bhuvam prati grhnāsy āya-[8] tīm | ghṛtaśriyam nabhamī samvasāno devān manuṣyāmn asurān atarhī | 11 z

With bhuvam sarām and āyatīm the first two pādas can stand. Read nabhasī in c, manuṣyān in d and probably utarṣīn: this will bring d into close agreement with S 8. 9. 24d.

pañca [9] devâș praviștavanta etăm itras tvaștă varuno mittro agnih | te sarve savitur mahya- [10] m etâm teha fivam pratiranta âyuh z 12 z

Read indras and mitro in pada b, and probably savisur in c: in d ta iha. The past ppl act is rather surprising here if it is really correct.

kašyapo yam jamadagnir vasistha 15a-[11] yo yunasya sanur agra etām | bharadvājo grāutamo artviramnah syonan visvāmi-[12] ttro dadusas pratirānty āyuh z 18 z

Read 'yam in pāda a, in b senur and etām, but I cannot solve yunasya: in c read gotamo and possibly atrivantah or even atharvāṇah; in d syonam viśvāmitro, and pratiranty. Edgerton suggests atris kaṇvah for "artviramnah." ūrjam devebhyas subhaga ūrjam manusyā uta | [13] ūrjam pitrbhyo aghna ūrjam dadhatu mā viša z 5 z

The only satisfactory procedure here seems to me to be to place the second pada at the end; then imitating Kaus 89.12 we can write a fairly good stanza, thus: ūrjam devebbyas subhaga ūrjam pitrbhyo agrhņām | ūrjam dadhatu mā viša ūrjam manusyā uta z 14 z 5 z. In c dadatu me would seem better.

In the left margin opposite this stanza is ūrjasam ṛcā.

For this hymn of also VS 12.75 ff; TS 4.2.6.1; MS 2.7.13; KS 16.13; our text agrees now with one now with another of these: but for 10d I find no parallel. It seems clear enough that the next hymn begins as given below but the extra pada in st 11 here makes me suspect that some stanzas of this hymn have been lost. It is noteworthy that the ms accents these stanzas (except the first), and that this is the longest passage accented since Book 2.

#### 7

[f141a9] ahijambhas carāmasi | muṣkāvarho gavām iva | kilā upasrjam [10] harmi upastambhe prdākvam z

Read in pāda a °jambhāś and remove colon; read °barho in b, upasrjan hanmy in c, and prdākvam in d.

ye ke celam apāšvesur vā trindamīte nisada-[11] lain nepa šrī pāpate grhaķ

This seems to be intended as a complete stanza but I can see nothing in it except perhaps is va followed by a form of  $\sqrt{\text{trd}}$  or of  $\sqrt{\text{trh}}$ .

ašchinnam tvā vāto hantv ašchinnam abhi varşatu | ā [12] kulena bhesajena tenāhīn jabhayāmasi | sašcet tannām akṣakaḥ šayanānn a- [13] rasān aka z

In pāda a I would read āchinnam, in b āchinnam, in d jambho. It is not wholly clear that the next two pādas belong to this stanza: in e perhaps tanvām is meant; in f read śsyanāń and akaḥ, which perhaps is also at the end of e; I cannot restore pāda e.

asitāharām visam ubhayos svajasya ca | adhikrasya yā ro- [14] pis tāy ito vi nayāmasi |

In pada a read asitasyaharam; b as here is \$ 10.4.10b; in c the

name of a snake should stand, and adhivakrasya might be acceptable, or dadhivaktrasya; in d read ta.

idam pāidvo ajāyate idam asya vivartanam | [15] idam kanikrado mago dviṣate tu parāvasam. z

In pādas ab read ajāyatedam, and cf S 10. 4. 7ab; in c we might read magho, and d can stand if parāvasam is acceptable (perhaps—parāyaṇam in S 10. 4. 7b).

vişücinām vātā vahan-[16] tu višvag varsantu vṛṣṭayaḥ višvag viṣa pra meha tvam šatadhāra ivāvaṭaḥ | 8 ||

In pada a read visuein and vahantu, in b and c visvag, and in c visam. This is stanza 6.

[17] niratam haritas srja mittro vartayate ratham | tenapi lalhiya tena pi- [18] yüşam nahinapinah |

In padas ab read srjan mitro; I have no suggestion for cd. Edgerton would suggest ahinasanam at the end of d.

yenendrajasya yena nymno yena vyttram parabhinah [19] tena satakrato tvam aher jätäni jambhayam z 2 z

For pada a here I would suggest yenendrajasya nympam, in b vytram \*\*bhinat, in d jambhayah.

praty amodalaş prihi-[20] vi prati dyduş prati süryah paidvo yad asvamata krandenahin apāva-[f141b] pat. rajjuš ca daršvatī z šere payantiş prihivim anu z 4 z

Read amodata in a, place colon after süryah and also after apāvapat. In e I think we have to read datvatī, and with 'payantīs in f the two pādas will be readable even with rajjuš singular. Delete "z" in e.

āpo jiryante [2] nāmīta māindrāņi avidhavābhavat, natvāmaste vikvag viņam akhānam iva sā-[3] yakam, z 5 z

In ab we may probably read namrata sendrany; in c nudamas to seems possible, followed by visyag; for akhanam we might read akhanam; or perhaps akhanam: the stanza seems to be a patch-work and not at all clear.

indrāgnī mittrāvarunas tvastāram aditim bhagam | hvayam arvantam [4] pāidvam mā nayam puruse visat.

In pāda a read °varuņā, in c hvayāmo 'rvañcam, for d mā no 'yam puruṣo riṣat.

sadyo jāto kanikradat. | solvo dya dhūnatas krandenā- [5] švasya vājino hanyantv āhaya pṛthak. z 6 zz zz ity atharvaṇipāi- [6] paladayāš šākhāyām ekādušo dhyāyas samāptāh zz zz

Read: sadyo jāto 'kanikradat sa ulvo 'dhy adhūnuta | krandenā-

śvasya väjino hanyantahayah pṛthak z 12 z 7 z

ity atharvanikapāippalādāyām šākhāyām ekādašo 'dhyāyas samāptah zz zz

In pada d we might let hanyantv stand reading after it ahayah.

#### BRIEF NOTES

A New Manuscript of Ali Riza Abbasi

The famous Persian painter of the first half of the 17th century, Ali Riza Abbasi, is well known as a miniaturist in his native country and in Europe. That is very natural because a great quantity of his miniatures and drawings have been preserved until our time. For this reason, we have in European technical literature many works dealing with his painting.

But Ali Riza's ability as a calligrapher, celebrated in his time, is less known to us in consequence of the rarity of the manuscripts written by his hand. Of complete manuscripts we have only three, which are in the Russian Public Library at Petersburg (Dorn, Catalogue, p. 290, N 302; Dorn, Mélanges Asiatiques, VI, pp. 97 and 103, Nos. 3 and 18) and one separate sheet in the British Museum (Rieu, Catalogue of the Persian Manuscripts in the Brit-

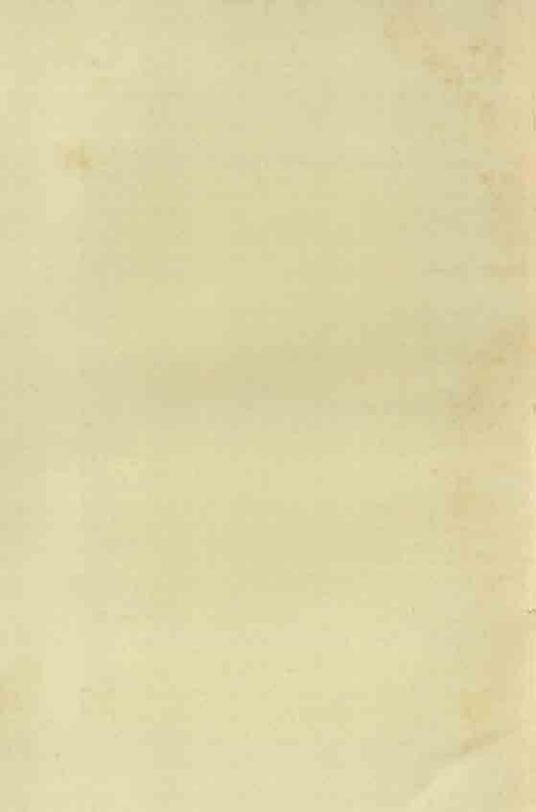

ish Museum, Vol. 2, p. 782, Add. 23609).

I am very happy to call attention to a fourth manuscript book by our calligrapher, which is in the possession of the Metropolitan Museum of Art, New York. This manuscript contains the Mesnevi (poem) "Ferhad and Shirin" of Vahshi, a mediocre Persian poet of the 16th century. He was born in Bank, Kirman, spent nearly the whole of his life in Yazd, and died there about 1583 A. D. His love-story of Ferhad and Shirin is an imitation of Nizami's poem "Khosraw and Shirin" and is written in the same metre. hazaj. "Ferhad and Shirin" was left unfinished by the author (Rieu, op. cit. Vol. 2, p. 663). Manuscript copies of this work are not uncommon; for instance, the British Museum possesses five (Or. 318, Or. 326, Add. 6634, Add. 7721, Suppl. 308; see Rieu, Catalogue), and in other European libraries there are many others. Moreover, this poem has been lithographed twice in Teheran (A. H. 1263 and 1275 - a. p. 1847 and 1858), once in Calcutta (A. H. 1249 - A. D. 1833) and twice in Bombay (A. H. 1274 and 1312 -

<sup>&</sup>lt;sup>3</sup> For instance: F. Sarre, "Rira Abbasi, ein persischer Miniaturmaler," Kunst und Künstler, October 1910; J. von Karabasek, "Riza-i Abbasi, ein persischer Miniaturmaler," Sitzungeber, d. K. Akademie d. Wies, zu Wien, philos. histor. Klasse, B. 167, Abh. 1, 1911; F. Sarre-E. Mittwoch, "Zu Josef von Karabasek 'Riza-i Abbasi," Der Islam, 2, 196; F. R. Martin, The Miniature Pointing and Painters in Persia, India, and Turkey, London 1912; F. Sarre-E. Mittwoch, Zeichnungen von Riza Abbasi, München 1914; and so on.

The last line contains the signature of Ali Riza Abbasi.

A. D. 1857 and 1894). The last edition we have in the New York

Central Public Library (\*OMO).

Our manuscript (Access, No. 23.28) is the gift of Dr. Vladimir G. Simkhovitch, who bought it in New York of Riza Khan Monif, whose father was once governor of one of the Persian provinces. The size of the manuscript in binding is 97% x 61% in., without binding 93% x 57% in.; written space 63% x 35% in. The binding is of mediocre quality, tooled brown leather slightly embossed with gold and decorated with a design impressed upon the leather and gilded.

There are 44 folios. The writing is Nastaliq, 12 lines to a page in two columns with salmon outline and narrow bands of blue, gold, red and green colors. The outer border of the pages is light blue. The paper of the text, gined upon the blue space, is cream colored with gold specks. The writing, careless enough, very often without discritical points, is in black ink, but the titles are in red. The title-page of the manuscript (fol. 1b) is decorated in the upper part with floral arabesques in blue, red, and yellow on gold and dark blue backgrounds. Fol. 2a is decorated with animal scenes in gold on a broad light-blue border.

On the last page, 44a, after the verses we find this line: "Ali Riza Abbasi, the poor, has written it." In this line lies the whole value of our manuscript, because, as I mentioned above, it is the fourth of the known works of Ali Riza, as calligrapher. The evidence of this sentence is confirmed by the signature, which may be seen in the accompanying photograph; it agrees in every respect

with Ali's well-known signature.

I am much obliged to Mr. J. Breck, Curator of the Department of Decorative Arts of the Metropolitan Museum of Art, New York, for his kind permission to publish this photograph.

## Lexicographical notes

The grammar and lexicography of the Assyrian code of laws deserves fuller study than it has yet received. The following suggestions are but a small contribution to the subject.

In Schroeder's Keilschrifttexte aus Assur, p. 3, kol. ii, L 80

the word i-ga-ad-di-mu-us has caused difficulty. It occurs in the statement of the punishments inflicted upon a man who has slandered another man's wife. Jastrow (JAOS 41. 20) rendered it "they summon him," taking it from the stem DD. This seems inappropriate, however, as the preceding clause reads, "they shall give him forty strokes." If they have to whip him, they do not need to summon him. Scheil, (Lois assyriennes, p. 21) rendered "on le coupera (châtera?)." I would take the verb from DD; as Scheil evidently did, which is used in the Mishna and Talmud in the sense of "cut" (Jastrow, Talmudic Dictionary, p. 213), and render "they shall crop" or "mutilate him."

- 2. In the same code (Schroeder, op. cit. p. 16, kol. iv, 12) the phrase sum-ma amelu ta-hu-ù-ma raba-a sa-a tap-pa-i-su uc-sa-ammi-ih is not easy to translate. Jastrow took it from samihu 'to add,' translating "if a man extends a large boundary from his companion" (ibid. p. 54). Scheil (op. cit. pp. 95 ff.) translated "Si quelqu'um la grande limite (du champ) de son voisin a réduit," giving to the verb a meaning the exact opposite of that given by Jastrow. I propose to connect the verb with the Arabic root samaha, 'be high,' 'lofty,' with which the meaning 'add,' recognized by Muss-Arnolt (Dictionary, 766a) shows that it is akin, and render "If a man carries up a boundary greatly on to that which is his neighbor's."
- 3. On page 18 of the same text, kol. vii, it-tam-ra-a-ak is an unusual word. It occurs in a passage relating to the working of the field of one's neighbor, but the beginnings of all the lines are broken away. Jastrow did not attempt to translate it. Scheil translates (op. cit. p. 109), "il est redevable." I propose to connect it with the Talmudic page (Jastrow, Dictionary, 846b), 'to brighten,' cleanse,' and render "he shall be forgiven." So far as one can tell from the broken lines, this would suit the context.

### THE HISTORY OF THE CANON OF THE CHINESE CLASSICS

# HSU TI-SHAN PERING UNIVERSITY

Chapter 1: The Names of the Classics during the Chou Dynasty.

A COLLECTION of bamboo slips bound with a cord and prepared for writing is called a  $Ts'\tilde{e}$ , (間). The old form of this character is ), indicating five bamboo slips bound together with two strings. The Shuo-wen (政文) dictionary (written about 100 A. D.) uses the word Fu-Ming (符合), a warrant or commission, to explain the character  $Ts'\tilde{e}$ , saying that the feudal princes received the  $Ts'\tilde{e}$  from the king. The character is sometimes written \$\vec{a}{2}\$, which is also pronounced  $Ts'\tilde{e}$ .

The Ta's is a warrant from the king. When bamboo slips were called Ts'e, they were important governmental documents sent to fendal princes as announcements or commands, ordering the princes to do certain things for the king. This explanation is clearly stated in the book Shih-ming (\$ %, the Explanation of Words) in the chapter Shih-shu-ch'i (譯書 製, Explanation of Documents). Here it is explained that Ts'e is a commission from one of higher rank investing one of lower rank with authority. The length of each slip in a Ts'é must be exactly two feet four inches. So in the preface of the Analects of Confucius it is stated that the Ch'un-ch'iu (表 秋, Spring and Autumn Annals) is written on slips two feet four inches in length. To record less important events there were used instead of Ts's objects known as Chien ( if single bamboo slips) and Tu ( if writing boards of wood). In the I-Li in the chapter entitled Ping-li-chi (m) m m), or Rite of Betrothal, it is stated: "If any event requires a hundred characters or more, it must be written on Ts's; if less than a hundred characters are required, then it should be written on Fang ( 1, small tablets of wood). The Tro-chuan (左 傳, a commentary on the Spring and Autumn Annals) says: "When a state is exterminated, unless the victor-

<sup>\*</sup>A horrowed word; its original form is and means a whip.

ious general reports to the royal court that his enemy has been defeated and that he has gained the victory, the event should not be written on Ts'ë." It is also stated in the Preface of the Tso-chuan: "Important events should be written on Ts'ë, and more usual affairs on Chien or Tu."

According to the annotations (Shu E) of the Preface of the Tso-chuan, the difference between Chien and Ts'ê is that Chien is a single slip, not bound by any cord, and that a Ts'ê consists of several Chien bound together. A large quantity of Ts'ê would be known as Tien (A). Whenever the king bestowed upon a prince authority over a vassal state, it was necessary that the master of oracles (R. Chu), priests (R. Tsung), diviners (Pu), and historiographers (PShih, sometimes translated scribes) should be present, and should have with them all important documents, both Tien and Ts'ê. All successful policies of ancient rulers were recorded on such Tien and Ts'ê, in order that state princes should have such writings as models.

These feudal princes preserved the documents which they received from the royal court and respected them almost as holy scriptures. They were often placed on a small bench  $(\not\subset chi)$  in order to prevent the lacquer characters from being defaced and to prevent the string which bound the slips together from being broken. The Shuo-wen dictionary explains the word Tien  $(\not\subset chi)$  as the books of the Five Rulers. According to this dictionary the character indicates a  $Ts'\hat{e}$   $(\not\subset chi)$  placed on a bench  $(\not\subset chi)$  in order properly to preserve the bamboo slips.

A Tien contained a very large number of slips and was heavy. It could not easily be moved. The classics were originally considered to be government records which were kept in the various states as model codes. In the preface of the biography of Confucian scholars in the History of the Han dynasty(漢書儒林傳, Han-shu ru-lin chuan) it is stated that "the Liu-i(六 森) or Six Departments of Arts are the Tien or Chih (籍, records), containing royal announcements." The term Liu-tien (六 典, six sorts of documents) in the Chou-li (周 禮) was explained by a commentator as Ch'ang (常, constant, or constant procedure), Ching (經, principle or canon), and Fa (法, law, code, or method).

<sup>\*</sup> See the chuan of Yun Kung (11th year).

It is usually considered that all documents before the time of Confucius may be called Tien. Those Tien which were kept at the royal court were called Li-ching (元 经), the ritual canon, for they contained the constant principle by which the king was supposed to govern his realm. When these Tien were preserved by the feudal princes, they were called Li-fa (元 法), Ritual Code, for they were kept by these princes as formal codes for the governing of their states. The Tso-chuan records that as Han Hsūan-tzū (韓宮子) went to the state of Lu and was reading the illustration of the Diagrams of the Book of Changes (I-hsiang) and the Spring and Autumn Annals, he spoke approvingly and said: "All the rites (li, 他) of Chon are observed in the Duchy of Lu." He called the Book of Changes and the Spring and Autumn Annals by the appellation Li. From this it seems evident that all of the classics were commonly called by this name.

The term Wen (文, literature) is often used by Confucius to indicate the ancient documents. In the Analects there are numerous examples of this. Confucius says for instance: " If you have a reserve of energy beside what is needed for your daily tasks, then study the Wen." The commentator, in explaining this passage, says that the Wen means "the literature bequeathed from ancient periods." In another note this "bequeathed" literature is explained as referring to the six classics. The classics were sometimes called "the literature bequeathed by ancient rulers." Confucius said: "A princely man must have extensive learning in literature (Wen) "; also "Since the death of King Wen has literature (Wen) remained here?". The commentary on this passage states, "The Master is instructing his disciples in four things, 'Laterature' (Wen), 'Conduct,' 'Loyalty,' and 'Faithfulness.' Here again Wen is explained as "literature bequeathed by the ancient rulers."

Most of the literature that was thus bequeathed and handed down by tradition consisted of government records. They were studied by the scribes for the purpose of understanding how to follow the example of the past, and how, by this study, to solve the problems of the present. So these documents were the text books of the ancient schools. During the Chou dynasty the classics were often called by the name Shu (後). The literal meaning of this word is "district roads," but here it means "tech-

mique." A chapter in the Li-chi called The Regulation for Kings Wang-chih (王 制), makes the statement: "The Grand Musician studies the Four Shu (四 衛) and establishes the four kinds of instruction. He supplies the Book of Odes, the Canon of History, the Book of Rites, and the Book of Music for the instruction of pupils." Here the name Shu is given to all the classics. So Lü-shih ch'un-ch'iu (呂氏春秋) states that both Confucius and Mo-Ti are men who honor the study of the Shu of the ancient rulers.

A document which leads people along the way of success may be said to correspond to a district road which gives the right direction to a city. Through this figure of speech a new term Tao-shu arose (道 後). Tao means either a way, or to lead, indicating that the classics are a highway, or that they lead one along the right way. Chuang-tzû says: "The men of old times have said that there is a Tao-shu, but in what does it really consist? It is omnipresent. If it consists of the Book of Odes, the Canon of History, the Book of Rites, and the Book of Music, most of the scholars of the state of Lu and Tsou and the 'Red-Girdle Sires' can understand it thoroughly. The Odes show the way of explaining the will; the Canon explains events; the Rites explain conduct; the Book of Music explains peace; the Book of Changes explains the positive and negative principles; and the Spring and Autumn Annals explain obligations (名 分, Ming fen)." Chuang-tzű, being a Taoist philosopher, naturally gives a very wide scope to the term Tao-shu, but it is usually applied to the classics as a whole.

<sup>\*</sup> See Tieu-hain-pien, Book of Chuang-tzil.

(八 紫, the eight comprehensions)." A work on the geography of the nine divisions of the Empire (Chiu-chou, 九 州) is called the Chiu-ch'iu (九 丘). Ch'iu (丘), means to gather together, and implies that all the products, customs and phases of climate of the nine divisions of the Empire are gathered together in this book.

It is here to be noted that some of the books in this ancient period were not included under the name Ching (報). use of the name Ching is not earlier than the Chou Dynasty. Chih-chang (尹 知 章), in commenting on the phrase Szű-ching (四 輕, four classics) in the book of Kuan-tzu (管 子), says that the Book of Odes, the Book of History, the Book of Rites, and the Book of Music are called the Szü-ching or Four Classics. Moreover, Cheng K'ang-ch'eng (節 康 成), in commenting on Confucius's phrase "a princely man considers the Ching-luen" (# th), in the Interpretation of the Tuan Trigram of the Book of Changes, states that the phrase Ching-luen means "the discussions of the Book of History, the Book of Rites and the Book of Music for carrying on political affairs." In Hsün-tsu's (首子) Ch'uenhsuch-pien (數學質), we find the sentence: "Its course begins with reciting the Ching and ends with reading the Book of Rites." The word Ching is explained also by Yang Liang (組 校), who says it means the Book of Odes and the Book of History. From these statements by various commentators and from the phrase W ching (離 課), a phrase which has to do with the punctuation of the classics, in the Hsiieh-chi (書 記), a section of the Book of Rites, it would seem that whatever documents were used for study in schools were called ching. The original meaning of the word ching according to the Shuo-wen (a dictionary of the first century A. D.) is to weave, or, in other words, to string together, bamboo slips. Later, the word was used as synonymous with the characters tien (典), chang (常), tao (道), li (理), and so forth.

The practice of using the term ching for the classics in general is taken from a chapter in the Li-chi (Book of Rites), called Ching-chiai (經濟), which is interpreted to mean an explanation of the classics. It is said here that documents used for school text books have the right to be called ching. In the Ching-chini there are six books of ching listed, the Book of Odes, the Book

of History, the Book of Changes, the Book of Music, the Book of Rites, and the Spring and Autumn Annals. It is known that before the time of Confucins only four books were considered as school text books. The Book of Changes and the Spring and Autumn Annals were not included. These two books were kept by the grand historiographers in the Royal Court and the Courts of the leading states. The Ching-chiai, being written long after the time of Confucius, included these two additional books of ching. However, according to Kwan-tzu, there were still other books taught in the schools of the state of Ch'i. In addition to the Book of Odes there was a book on the Calendar, or Time, (85), a book on Divination ( 6), and a book called the Book of Hsing' (%), which may perhaps be translated 'investigation of social events." This leads us to wonder whether the information which we have with regard to the educational system of the Chou Dynasty is very complete, and whether that education was as uniform as is sometimes supposed. Ch'i and Lu were the two most civilized states of the time, yet the school curricula of these two states were quite different. So far as we can see, every state in the Middle Kingdom had the first four classics as a definite part of the curriculum, and in addition to these others were added in different states, either as a part of the ordinary curriculum or for special study at the residence of the officer in charge of education. This means that while the Four Classics had to be studied everywhere uniformly, others could be added according to the particular needs of various states.

On the other hand the word ching is sometimes explained as being synonymous with the word shu (義), which means 'a street.' Such documents are considered as ways to efficiency as city streets are ways by which the citizen reaches his desired destination.

Before the time of Confucius' revision, all the classics seem to have been considered as of equal value. The number of documents to be included in each one of these classics was apparently settled by Confucius. There are two sections in the Book of Chuang-txǔ, in which Confucius's work on the classics is considered. The one passage (in the chapter T'ien-tao, 天 道) states that Confucius interpreted the Twelve Classics. The other pas-

<sup>\*</sup>See Chapter on Shan-ch'uen-shu-p'ien, in Kuan-tzu (山 權 数 篇).

sage in the chapter T'ien-yūn (天 運) reports Confucius' statement to Lao-tzū: "I, K'ung Ch'in (Confucius), have revised the Odes, the Book of History, the Book of Rites, the Book of Music, the Book of Changes, and the Spring and Autumn Annals,—the Six Classics." What was meant by the Twelve Classics in the first quotation is unknown. Some scholars explain it as the Six Classics and the Six Apocalyptic Books; others as the Book of Changes, the Shang-ching, Hsia-ching, and the Ten Wings. The Six Classics were clearly enumerated by the Master. He considered these to be the six because they contained the principles of the way of the ancient rulers (Wang-tao, 王道). So he believed that these Six Books should be read in all schools.

# Chapter H: The Canon after the Chou Dynasty.

During the persecution that took place under the Ts'in Dynasty the Six Classics were scattered and almost all extant copies were destroyed in the burning of the books. When the scholars of the Han Dynasty began to reconstruct the canon, they were possessed by an idea that everything must fit into a category represented by the number five. There were five elements,-metal, wood, water, fire and earth; five constant virtues,-humility, rectitude, courtesy, knowledge and faith; five relationships, and a whole series of other fives. In order to fit the classics into the same plan and to make them correspond to the Five Constant Virtues, one of the six must be dropped. The I-wen-chih (嘉文志), the record of literature in the Book of Han, dropped out the Book of Changes, saying: "The purpose of music is to make peace and harmony of spirit. It is the expression of humanity or benevolence. The Book of Odes exemplifies rectitude or righteousness. The Book of Rites shows dignity and manifests courtesy. The Canon of History displays knowledge and widens human understanding. The Spring and Autumn Annals is the foundation of faith, for it is our criterion for judgment. These five correspond to the Five Constant Virtues. The Book of Changes is the source of them all. It is, therefore, not included in the five," Pai-hu-t'ung-teh-luen (白虎通德論)," Dis-

<sup>&</sup>quot;Usually called Pai-hu-t'ung, written by Pan Ku, the anthor of 'The Book of Ran'

cussion of the Universal Virtues at the White Tiger Hall," made two enumerations of the Five Classics. In the one be (Pan Ku) omitted the Spring and Autumn Annals, in the other the Book of Music. He says: "As there are Five Constant Virtues, so there are Five Classics. Music manifests benevolence. The Book of History manifests righteousness. The Rites manifest courtesy. The Book of Changes manifests knowledge. And the Odes manifest faith. The Five Feelings and the Five Constant Virtues in human nature could not of themselves attain to completeness. The sage, therefore, brought together the doctrines of the Five Rulers in Heaven in order to teach people how to fulfil the Five Virtues." Yang Hsiung (地雄) in his book Fa-yes (注音) makes the statement: "For explaining Heaven there is nothing clearer than the Book of Changes. For judging affairs the Book of History is the clearest book. For explaining dignity the Book of Rites is the best. For explaining the will there is no book better than the Odes. And for explaining civil relations the Spring and Autumn Annals is of all books the most distinct." It was considered quite reasonable to omit the Book of Music, as the Ts'u-hsueh-chi (初 學 記) makes the statement: "The Book of Changes, the Book of History, the Odes. the Book of Rites, the Book of Music, and the Spring and Autumn Annals were counted in ancient times as the Six Classics. After the books were burnt during the Ts'in Dynasty, the Book of Music disappeared. So now we have the Book of Changes, the Odes, the Book of History, the Book of Rites, and the Spring and Autumn Annals; these are the Five Classics."

The term Liu-i, or the Six Departments of Arts, was borrowed by the scholars of the Han Dynasty from an old term, which had meant in earlier times the Six Arts of the lower schools. These were propriety, music, archery, chariot-driving, language, and mathematics. The term Ta-i (大事), or 'Great Arts' had previously been applied to the classics, but had never been much used before the time of the Han Dynasty. The term Ta-i had been used as the antithesis of Hsiao-i, small or junior arts. Under the Han Dynasty there were a number of teachers of the classics, who went by the name of Po-shih (博士), who taught young pupils according to the manner that was in vogue in the Junior schools of the Chou Dynasty. It was for this reason that the

term Liu-i was used for the text books. The second word of this phrase I (8) was formerly written nich (4). According to the Shuo-wen Dictionary the word nich means the bull's-eye of a target. The idea was that teachers in educating their pupils must have an aim and therefore the word nich, target, was applied. By a phonetic change this was later modified to i.

The ching, as we have seen, were the text books used in schools. In addition to these, books of commentaries for the use of teachers came gradually to be prepared. Some of these books of commentaries became very popular, and were established as important works. They were called chuan (M). Almost every classic has its chuan. In the Kung-yang chuan (公全 旗) we read "the host studied the punctuation, then asked for the chuan" ( 1 ). The word chuan means a commentary and it was always a commentary written after the work was complete. For instance, when the sentence appears in the Analects, "Do you not study the chuan?" the scholars of Lu interpreted the question as meaning, "Do you not study the short slips of bamboo?" Short slips of bamboo were therefore called chuan. According to the Shuo-wen the word chuan meant a bamboo slip six inches long. On the one hand, therefore, the difference between ching and chuan is the fact that, as Po-Wu chi (情動 志) states it, "ching are composed by the sages, while chuan scarcely ever record the words of the greatest men." On the other hand the difference is also in the length of the slips. As a commentary for the use of teachers was considered inferior to the original text of a classic or a government document, such a commentary could not be written on ts'ê (III), or long slips, but must be written on chuan. The word chuan, therefore, which originally had the meaning of short bamboo slips, came to mean commentaries and later had a verbal significance,-to hand down, interpret or record.

There were many chuan in existence before the time of Confucius. Mencius often speaks of different matters as referred to in the chuan. Although it is impossible to say that the chuan referred to in Mencius were necessarily written before the time of Confucius, we have indication of this fact in Sze-ma Ch'ion's History where it is stated that Confucius wrote a preface for the chuan of the Canon of History. Mo Ti frequently quotes from the chuan to substantiate his statements and often even introduces his quotations with the phrase chuan yueh (as stated in the chuan). In the general commentary of the Canon of History (运 書 大 傳) this same phrase chuan yueh is used by Fu Shên This same phrase occurs in many ancient books. According to tradition the Sang-fu-chuan (表 康 傳), a commentary on the Book of Mourning, was written by Trū Hsia, a disciple of Confucius. Even in this book the phrase chuan yūch frequently occurs. Sze-ma Chien makes the surprising statement that there were more than ten thousand different commentaries, or chuan, of the Six Classics. (It must here be remembered that the term 'ten thousand' is often used loosely in Chinese like the English word 'myriad.') There is a great variety of chuan. They consist of general commentaries, prefaces, descriptions, and appendices.

During the early part of the Han Dynasty, scholars, as we have seen, were including the Book of Filial Piety (孝智) and the Analects (Luen Yu) in the Six Departments of Arts, but they still refused to dignify these two books with the term ching. The Chou Li and the I Li were considered ching, and the Li Chi was a commentary (chuan) of the Chou Li and the I Li. The commentaries of Tso Chiu-ming, K'ung Yang-kao, and Ku Liangchi were considered the chuan of the Spring and Autumn Annals (表 教). In the same way the Ten Wings were considered the chuan of the Book of Changes, and the Er-va (# 18) was the chuan of the Odes and the Canon of History. The Book of Mencius belonged to the Works of the Masters. These were not at this time accepted as ching, but later they came to be so considered. In the Book of the Later Han Dynasty (後 漢書) and in the Record of the Three Kingdoms (三 國 ま) the term 'Seven Classics' (上 篇) is found.

This is explained by the fact that during the Early Han Dynasty the Analects were included with the Six Classics, thus making seven, while during the later Han Dynasty, the Book of Filial Piety (孝 經) was substituted for the Book of Music. In the preface of the Analects it is said: "The Book of Filial Piety was written on twelve-inch bamboo slips, while the slips on which the Analects were written were only eight inches in length." These two books, therefore, could not in the early period have been considered ching, for ching were necessarily written on twenty-four inch slips. On the other hand they were written

by disciples of the Master, and the slips, while not twenty-four inches long, were yet longer than those on which the chuan were written.

When we come to the T'ang Dynasty, we find Nine Classics (九 資) referred to. In the Book of T'ang it is said that Ch'u Sui-liang designated Ku Na-lü as the keeper of the Nine Classics. The Nine Classics here referred to were the Book of Changes, the Odes, and the Book of History; the Chou Li, the I Li, and the Li Chi; and the Three chuan (Tso chuan, Kung-yang chuan, and Ku-liang chuan) of the Spring and Autumn Annals.

Piety, the Er-ya and Mencius were added, and the term 'Thirteen Classics' came to be used. Later under the influence of the philosophers of this time, the two Ch'engs and Chu Hsi, two chapters, the Doctrine of the Mean (中間), and the Great Learning (大學), were taken from the Li Chi and made into separate books. These two, with the Analects and Mencius, then came to be regarded as the Four Books or the Four Books of the Masters. Since that time every student beginning the study of the Chinese classics reads the Four Books as the first part of his work. There were a few scholars who added to the Thirteen Classics the Ta-t'ai-li-chi (大数面配), making the total fourteen, but this arrangement did not last long.

The order of the classics was fixed during the Tang Dynasty by Ln Tê-ming (随 德 明), who gave his opinion in the book entifled Ching-tien-shih-wen (据 桌 釋 文). According to his arrangement, the Book of Changes, being handed down from the time of Fu Hsi and being the source of civilization, is naturally the first. The Book of History, beginning as it does at the end of the period of the Five Rulers, follows the Book of Changes. The Mao-shih (the Book of Odes as arranged by the critical School of Mao) contains some poems of the Shang period, and so must rank third. The three books on Rites, the Chou Li, the I Li, and the Li Chi were composed during the early part of the Chon Dynasty and must therefore come next. Next follows the Spring and Autumn Annals, because it was written by Confucius; and following that its three commentaries in their natural order of sequence. The Book of Filial Piety, being also a composition of Confucius but not as important as the Spring and Autumn

Annals (which contains the teaching of the Duke of Chou), comes next in order following the commentaries of the Annals and preceding the Analects. Curiously enough the Books of Lao-tzu and Chuang-tzu follow the Analects, as the Court during the T'ang Dynasty favored Taoism and included these books in the canon. The list ends finally with the Er-ya, Mencius being entirely omitted to make room for the two Taoist books mentioned above.

## BRIEF NOTE

Old Persian niya6 arayam, Bh. 1. 64

This form is a area Acyonor in the Old Persian inscriptions. Its meaning, "I restored," is nowhere questioned, but the explanations offered of its morphology seem to me insufficient. Bartholomae savs in Grundriss d. iran. Philologic, I. 1. p. 56: "Die Reduplication enthalt zwei Wurzelconsonanten mit a (idg. 8) dahinter. jAw. fra-yrayraye'ti (wofür wohl yrayrayc zu lesen, . . ): gr. bypnyopbe. Daneben findet sich frdyraraye'ti, das sich dazu etwa verhalten wird, wie lat, scicidit zu got, skaiskaib. Analog erklärt sich jAw. ni-srārayā und ap. niy-a-6 ārayam, die zu jAw. nistrinao'ti gehören." Johnson also in his Historical Grammar of the Ancient Persian Language, § 449, classifies this form as an Intensive, and in § 363 says that the present system reduplication in Old Persian shows either i of I. E. or has a representing I. E. e.1 He quotes the forms of  $\sqrt{stha}$  and  $\sqrt{da}$  (thruout this paper roots are quoted in their Sanskrit form) respectively as supporting his statement. Meillet in his Grammaire du Vieux Perse (p. 104) says of 6'draya-, which he transcribes cdraya-: "Il s'agit évidemment d'une formation à redoublement,"

The difficulty lies in the -t- of the reduplicated syllable. Meillet was apparently attempting to do away with this obstacle when he suggested (l. c.) that θ'āraya- might equally well be a formation on a root cognate with Skt.  $\sqrt{tra}$  "rescue." This would be a sufficient explanation for the Old Persian form if it were not for the YAv. nisrārayā." tr would appear in Avestan as θr, cf. O. P. puθra and YAv. puθra with Skt. putra. We must cling to the usual etymology.

In Sanskrit all verbs of the third class show an i-vowel in the reduplicated syllable or else the weak grade of the root vowel. It is, of course, a generally accepted fact that the normal vowel of present reduplication is I. E. i while the vowel of perfect reduplication is I. E. e. If, therefore, a word shows a deviation from this

This same statement is also made for Indo-Iranian in other places: Brugmann, Grundriss d. vergleich, Grum. d. indoger. Spruchen II<sup>1</sup>, \$555 and 556; KVG, \$641; Thumb, Hdb. d. Sanakrit, \$450 (Brugmann, L. c., is not so sure in regard to sécheft us is Thumb); Reichelt, Ascestisches Elementarbuch, \$181.

At the same time he lists this form under the formative -aga-

Reichelt also, op. cit., § 196j, classes this as an Intensive.

mode, its peculiarity must be explained, if possible, by some special influence, rather than referred to an inherited difference. All the accounts of present reduplication speak of a reduplicating vowel e in addition to the regular i, and quote, as a rule, to support the statement the Sanskrit forms dadhāti and dadāti. What we have, however, in the presents of  $\sqrt{dha}$  and  $\sqrt{da}$  and in all other deviations from the normal vowel of reduplicated syllables is assimilation of the vowel of the reduplicated syllable to the vowel of the root syllable. This is the phenomenon attested to by Lith. diffste and O. Slav. daste; why explain these forms as arising from an "Umbildung von uridg. \*de-dō-mi," as Brugmann does in KVG, § 641, rather than from an "Umbildung" of L. E. \*di-do-mi, the existence of which is proved by Gk. & Furthermore, all the Intensive stems on roots whose radical vowel is a appear in Skt, with e = p. I. Ir. ai in the reduplicated syllable (cf. veretti from \vid and seseti from \vii). We should, therefore, expect to find in the word under discussion a form \*niya6'airayam.\*

The forms niya6\*drayam and nisrdraya, however, are not necessarily to be explained as Intensives. They may be causatives owing their peculiar formation to contamination with a word of similar meaning and form. Since  $\sqrt{sri}$  is transitive a causative formation on it will not change the meaning. "I leaned something down" and "I caused" or "had somebody lean something down" are essentially equivalent. Therefore, there can be no objection from the standpoint of meaning to taking the forms under discussion as causatives.

The Skt. √sri has a causative śrāpayati with a form śrāyayati quoted by the grammarians." Correspondents to these causative formations are nowhere quoted for Iranian." Nevertheless, I feel

<sup>\*</sup>Accepting the explanation of Bartholomae and others for the consonantism.

The type of formation shown by irdyspati is found in Skt. for the following roots in -i; i (go), ci (gather), ami, and si. It is quoted by the grammarians and lexicographers for: ci, jri, vi (weave), ici, si, and hi. The type shown by irdpoputi is found for: i (go), ji (conquer), mi (damago), and smi, ami quoted for: ci (gather) and mi (fix). Skt. kri (possess) shows kyayaya and kyapayat, kyi (destroy) shows kyayayati and kyapayati. For Skt. ci a form repaya is also quoted.

<sup>\*</sup>Bartholomae in Grd. d. iran. Philologie, I. 1. p. 84, states that causative formations like Skt. sthöpayati are not found in Iranian. He considers fruidupayetti (Yt. 8, 23) corrupt.

justified because of the Sanskrit in assuming a form \*niyaθ'āyayam." A word similar to this in form and meaning \*would be \*niyadārayam.\* This form, also transitive, would mean: "I held something down," that is, "I maintained" or "established it," or "I had it established." The fact that the type of causative formation quoted above for Skt. √srī is not found in Iranian, and that Sanskrit shows a tendency to substitute a p for the first y, goes to show that the repetition of the syllable ya was disliked. It seems very likely, therefore, that a form \*niyaθ'āyayam, which was destined to disapppear, could easily be transformed, under the influence of a word of similar formation and meaning, \*niyadārayam, to niyaθ'ārayam."

Lehigh University.

JAMES R. WARE.

#### REVIEWS OF BOOKS

Oxford Editions of Cuneiform Inscriptions. Vol. I: Sumerian and Semitic Religious and Historical Texts. Vol. II: Historical Inscriptions, containing principally the Chronological Prism, W-B. 444. By S. Langdon, M. A. London: Oxford University Press; 1923, iv + 60 pp. + 45 plates and iii + 36 pp. + 7 plates.

These are the first volumes of an important series of texts, known as the Oxford Editions of Cuneiform Inscriptions (var., Texts), edited under the direction of Professor Langdon. The

The p-causative is the result of analogical extension and peculiar to Skt., cf. Gdr, d. iron. Philologic, I. 1. p. 84, \$ 151b (next to last paragraph).

\*The possibility of the semantic equivalence of these two words is seen in Ski, where the Petersburg Lexicon gives niveri = etwa niederlegen and sivdhy = niederlegen in, bewahren, behalten.

\*Altho a causative formation for as \( \frac{dh'}{dh'} \) is not quoted for Iranian, the causative is found for the simple root (cf. O. P. \( \frac{daraydmiy}{damiy} \) and \( addroye\).

There can be, therefore, no valid objection to the same formation in the compound.

If some should still insist on calling this form an Intensive, contamination with a \*nigodorayom would give an explanation for the peculiar d. Such was the explanation that I was offering for the form until Professor B. G. Kent suggested that it might very probably be a causative. The latter is, I believe, the true explanation. The writer's thanks are due to Professor F. Edgerton for helpful suggestions, as well as to Professor Kent.

Series contemplates the publication of the tublets presented to the University by Mr. H. Weld-Blundell of Queen's College and the material that may accrue to the University from the excavations of the Oxford-Field Museum expedition to Kish under the direction of Professor Langdon and financed jointly by Mr. Weld-Blundell and the Field Museum of Chicago.

All the texts in the first volume (22 in number) are from the Weld-Blundell collection in the Ashmolean Museum with the exception of two, one of which is from the Stevenson collection and the other is in the hands of a dealer in antiquities. The texts are of a miscellaneous character, religious and historical, and date all the way from the early Sumerian period to the late Babylonian. The majority of them are early. In the case of six the cuneiform text only is published, but all the others are completely edited, either here or elsewhere. There is nothing startlingly new in the texts, but they are all of them valuable for our understanding of the religion and history of Babylonia. Their publication could not have been put into more competent hands. At the same time one cannot but wish that Langdon would take the time and patience to do his work more carefully and consistently. There is probably no better Assyriologist today, but he continually leaves himself open to attack by his hasty writing and the reader is severely tried by the inconsistency of his renderings and the awkwardness of his expressions, which are sometimes no more intelligible than the original. At the same time we must be grateful for the untiring labors of a great scholar, who, if not always reliable, is at any rate suggestive and has put at our disposal a vast array. of material.

On one point in the present volume, to mention no others, the reviewer would venture to take issue with the author. On page 50, note 1, he rejects the well authenticated reading Lugal-marda for Lugal-TUR-da on the ground that it is probably a late Semitic interpretation and that Schroeder, KAV, 46, 15 read probably [lu-gal-ba-a]n-da and yet on the basis of this same text, line 9, he reads Il-ba-ba (clearly a late Semitic interpretation) in place of the earlier Za-mâ-mâ (var., gâ), line 6. Not only is he inconsistent here, but his reading of line 15 is very questionable. The third column of this line says that the sign in question is the dusign and the same column in line 17 says that it is the maru-sign.

These are manifestly variant names of the same sign and do not

suggest different values.

In the second volume Langdon publishes four texts that are of very great historical importance. One is supremely valuable. It is a large rectangular clay prism, inscribed with two columns on each side, and is in almost perfect condition. The tablet purports to give a complete list of all the dynasties and kings who ruled in Babylonia before and after the flood down to Sin-magir, the second to the last king of the Isin dynasty. A smaller tablet gives a list of the kings before the flood. These tablets, together with those already published by Poebel and Legrain, now give us the complete chronological scheme of the early Babylonians for both the ante-diluvian and post-diluvian periods down to the end of the Isin dynasty. It only remains to harmonize the various lists and to determine how much overlapping of dynasties there was. This Langdon attempts to do and although in the nature of the case his work is much of it tentative, it is probably as nearly correct as we can at present determine. For his reckoning of dates he takes as his starting-point the date early established by Kugler for the beginning of the First Babylonian Dynasty, viz. 2225 B. C. In a brief introduction he discusses the much later date more recently advanced by Kugler and with good reason, we believe, rejects it. In this he has the support of the careful calculations of the Oxford astronomer, Fotheringham, who asserts that Kugler's late date is astronomically impossible. Fotheringham, however, would reduce Kugler's earlier date by 56 years on the basis of more accurate and scientific calculations.

A third text in the volume is a historical inscription of Sinidinnam. It is a hollow barrel-shaped cylinder, containing two columns of writing in Sumerian, 79 lines in all. It is one of the best of the few inscriptions of this king that are known to us. It was written to commemorate the excavation of the Tigris for the water-supply of Larsa (Langdon, Ellasar). The tablet is still in the bands of an antiquity dealer.

The remaining text is a fragment of a tablet that manifestly contained a portion of the annals of the reign of Hammurabi. It is much to be regretted that the tablet is so fragmentary because much more historical information for the various years is given than in the ordinary date formulae.

The only defect of the volume is that it was written too hurriedly, but for this the author in the present instance has some excuse. There are a considerable number of typographical errors; capital is always spelled capital; dIM is translated Immer in one place and Ramman in another; dBabbar (also written elsewhere #U(u) appears as both Babbar and Shamash in the translation of the same text; and the renderings in a number of places could have been improved, e. g. the sentence "At Kish Kug-Bau a female wine seller established the foundation of Kish and became king" (p. 15) would appear better as "At Kish Kug-Bau, a barmaid, established the foundation of Kish and became queen" (or a truer translation of the genderless lugal would be monarch). These and similar shortcomings are, however, of a very minor character and detract little from the inherent value of the volume. There are other important historical inscriptions in the Weld-Blundell collection and we await with keen anticipation their publication.

THEOPHILE J. MEER.

The University of Toronto.

## MINOR NOTICES

My Nestorian Adventure. By FRITZ HOLM. New York: FLEM-ING H. REVELL, 1923. 250 pp.

A popular account of a trip from the coast to Sian-fu, for the purpose of obtaining a replica of the famous Nestorian tablet. From a scholarly and scientific point of view the book is negligible.

Burma, from the earliest times to the present day. By Sir J. G. Scott, K. C. I. E., Burma Political Service (retired). New York: Alfred A. Knopf, 1924. xii + 372 pp.

A popular relation, undocumented, and with a scanty index, of the history of Burma. The major part treats of the times since relations with Europe began. Early history is necessarily based mainly on native sources, which may excuse, but does not obliterate, the fact that this part of the book is obscure. The usual psychology of the colonial official is much in evidence in all parts.

Lotuses of the Mahayana. Edited by Kenneth Saunders. (Wis-

dom of the East Series). London: John Murray, 1924. 63 pp.

A collection of Mahāyāna aphorisms drawn from many sources, mainly Indian, a few Japanese.

Al-maira' 'allafahu al-kass Bûlus Sabat (The Crossroads), by Père Paul Shath. [Cairo?] 1924. 210 pp.

This well printed volume is a collection of lectures delivered by the reverend author in Egypt and Syria with the purpose of bringing Muslims and Christians to a common understanding. It is an apology for the Christian faith, beginning with the testimonies to the Christians in the Koran, proceeding to the arguments for the Christian faith, concluding with a résumé of the Gospel story of the Lord. Of general interest is the announcement made in the book of the coming publication in Paris of the titles of some 1500 MSS, Syriac and Arabic, collected by the author, and assembled in his own library in Aleppo. There will be accompanying notes on the MSS and essays at translation.

### NOTES OF THE SOCIETY

At a meeting of the Executive Committee held on October 11, 1924, it was voted that the following resolution be submitted to the Board of Directors by correspondence, with the recommendation that it be adopted:

"In consideration of the provision of a special room in the Sterling Memorial Library sufficient for the housing of the Soclety's Library and for its future needs, and provided with appropriate facilities for study, the Directors hereby agree to leave the Society's Library on permanent deposit at Yale University."

This resolution has subsequently been approved by a majority of the Directors, and is therefore formally adopted.

At the same meeting the Executive Committee voted:

That \$100 be appropriated, in addition to the amount provided in the Budget, for binding Blake's Grammar of the Tagalog Language.

That, subject to the approval of the Board of Directors, the Yale University Press be allowed 25% commissions on publications sold thru it since February, 1924; and that the Librarian be recommended to arrange with the Yale University Press a reasonable compensation for its services in distributing the publications of the Society otherwise than by sale.

That \$200 be appropriated as compensation to Dr. Yerkes for his services in preparing the Index to Volumes 21-40 of the JOURNAL.

That Dr. Fischer be informed that the financial situation of the Society does not permit the grant of a subvention to his Arabic Dictionary at the present time.

That the next annual meeting (in New Haven) be held on Tuesday, Wednesday, and Thursday, of Easter Week, April 14, 15, and 16, 1925.

That Professor Albert T. Clay be elected as delegate of the Society to the American Council of Learned Societies for the term expiring in 1928. The Executive Committee has also, by unanimous vote, elected the following to membership in the Society:

Dr. J. H. Ingram

Prof. M. J. Wyngaarden

The Committee on Publications announces that Volume 1 of the new American Oriental Series (A Grammar of the Tagalog Language, by Dr. Frank R. Blake) is nearly ready; and that Volumes 2 and 3 have been issued, under the following title: The Panchatantra Reconstructed. An attempt to establish the lost original Sanskrit text of the most famous of Indian story-collections. Text, Critical Apparatus, Introduction, Translation, By Franklin Edgerton, Assistant Professor of Sanskrit in the University of Pennsylvania. 2 vols. American Oriental Society, New Haven, 1924. Price, 88.00, bound in cloth.

# NOTES OF OTHER SOCIETIES, ETC.

The management of Mineren has founded a periodical, edited by Dr. G. Litdike, the editor of Mineren, and entitled Mineren-Zeitschrift, Nachrichten für die gelehrte Welt. The first issue has appeared under date of September 6, 1924. The publishers are Walter de Gruyter à Co., Rerlin W. 10. This journal is to contain news of general interest to scholars, notes of learned societies all over the world, book reviews, etc. At present it is proposed to issue it every other mouth. The price per year (six issues) is Ten Marks; for subscribers to the Deutsche Literaturzeitung, 8.50 Marks. Among the articles in the first issue are: Karl H. Meyer, Die alavistischen Studien nach dem Kriege; "W.", Aus dem wissenschaftlichen Leben Leuingrads (Peterburgs); F. D. O'Byrne, Keltie Learning at its Fount; S. N. Dasgupta, India through some of her typical educational Institutions; M. Winternitz, Die internationale Universität Rabindranath Tagores in Santiniketan.

## PERSONALIA

Mr. Jar Dastur C. Pavar has been appointed Lecturer in Indo-Iranian Languages at Columbia University for 1924-5, and is conducting courses in the Religious History of Persia and in Indie and Persian Languages.

## LIST OF MEMBERS

The number placed after the address indicates the year of election.

† designates numbers deceased during the past year.

### HONORARY MEMBERS

Prof. THEODOR NOLDEKE, Ettlingerstr. 53, Karlsruhe, Germany. 1878.

Sir Ramkeishna Gopal Bhandarkar, K.C.I.E., Decean College, Poona, India, 1887.

Prof. Eucam Sachau, University of Berlin, Germany. (Wormserstr. 12,W.)
1887.

Prof. Ionazio Guint, University of Rome, Italy. (Via Botteghe Oscure 24.) 1893.

Prof. Aschmann H. Savce, University of Oxford, England. 1893.

Prof. Richand v. Garne, University of Thbingen, Germany. (Waldhäuserstr. 14.) 1902.

# INDEX TO VOLUMES 21-40 OF THE JOURNAL

Compiled by

ROYDEN KEITH YERKES UNIVERSITY OF PENNSYLVANIA

#### PREPACE

THE INDEX to the first twenty volumes of the JAOS edited by Dr. Moore and published some twenty years ago forms the general model upon which the present Index is made. There are certain changes which I have made largely in the interest of simplification.

The first part of the Index I have called General Index, including subjects and words, except Hebrew words which for obvious reasons are grouped by themselves. This list includes only those Hebrew words upon which there is real discussion.

The Index of passages from Oriental Literature includes as far as possible every passage to which reference of any kind is made, whether long or short. Naturally there are included many references which simply refer to the passages in question as well as other references which are by way of discussion. The inclusion of every reference has made it unnecessary for the editor to decide whether a particular reference should or should not be quoted.

The Index of texts, translations and illustrations needs a word of explanation. For the most part the texts and translations are the same; but there are texts which are not translated and translations for which texts are not given. Therefore it has been thought better, at the risk of duplication, to make separate lists of texts, of translations, and of illustrations.

The volume numbers are printed in heavy-faced type and the page numbers in light-faced type.

I wish to express my great appreciation to the editors of the Journal, Dr. James Alan Montgomery and Dr. Franklin Edgerton, for their assistance in preparation of the copy, their uniform courtesy, and for their patience with the unavoidable delays which have deferred the completion of the Index.

R. K. Y.
