NUMISMATIC CHRONICLE.

I.

ON SOME CELTIC RING-MONEY WITH POINTED ENDS, SIMILAR TO THE AFRICAN RING-CURRENCY.

Dear Sir,

I have read with very great pleasure, in the January number of the Numismatic Chronicle, a most interesting paper, "On the Jewel or Ring-money of the Interior of Africa," by W. B. Dickinson, Esq., of Leamington, on the presentation of two specimens of that currency, by Mr. Hampden and Mr. Dickinson, to the Numismatic Society.

Those rings (of which an engraving is given) possess a new feature, viz., the pointed ends, which Mr. Dickinson states, had not been previously noticed, as far as he was aware of, in the Celtic ring-money, so constantly discovered in Ireland, and which is also of great variety and form.

Specimens, however, of the Celtic ring-money of Ireland with the pointed ends, are known in this country.
I enclose you an engraving of a very curious specimen of such, in the form of an ear-ornament, which was discovered on the 15th of October, 1848, in a turf-bog (where it had lain for centuries undisturbed), in the neighbourhood of Macroom, county Cork, and is now in my collection. Its weight is two pennyweights, five grains, and it is of the purest gold. The spot in which it was discovered, is about four feet below the surface of the bog; and, as is generally the case in Ireland, no other article whatever was discovered with it, as stated to me by the person who found it. The workmanship is very rude, and evidently the production of an early and unskilful age. Though in the form of an ear-ornament, I cannot think it was ever used as such, as there is not the slightest sign or mark of wear or attrition near the points, which must have taken place had it ever been employed for such a purpose; but at the lower parts, and the sides about it, there are evident marks of its having been much used or in circulation; it wants but one grain to come under Sir William Betham's standard or graduated scale (viz. fifty-three grains, nine multiples of six being fifty-four). It has the appearance certainly of having lost that grain in the parts previously mentioned.

There is another specimen of the Celtic ring-money with pointed ends, in the collection of Redmond Anthony, Esq. of Piltown, county Kilkenny, which I have seen. It is a small and very neat one, found in the county of Dublin, a few years since: weight one pennyweight, two grains; the centre is carved in lines lengthways.
There is also a specimen with pointed ends in the collection of Robert Bateson, Esq., M.P., of Belvoir Park, county Antrim, found some years past, near Belfast, as communicated to me by James Carruthers, Esq. of Glennegagh, county Antrim, to whom it formerly belonged, and who has also very kindly sent me a sketch of it. It weighs four penny-weights, and bears a great resemblance to mine in the lower part, though otherwise different: it is more circular or crescent-like, as is Mr. Anthony's also.

A very respectable jeweller and silversmith of Cork has also informed me that he had one precisely similar to mine a few years since, but which he melted, being at the time much in want of fine gold.

These facts would shew that the pointed ends are not peculiar to the African ring-currency, but were also used in the Celtic ring-money of Ireland, and as such, would seem to indicate, or add another link to the eastern connection of Ireland in bygone days; for I consider the present form of the African ring-currency a continuation of an ancient form,—habits in those countries not suddenly or frequently changing, as with us,—and of the interior of which country, even in the present day, we know very little, and where few, if any, of the European customs have as yet penetrated.

I can hardly think that the penannular form,¹ in the

¹ The perfect ring has been generally considered as the emblem of eternity, having no beginning or end. Could it be possible
Celtic rings I have enumerated, was for the purpose of bending and unbending, either to try the purity of the metal, or for adapting to large or small fingers, as Mr. Dickinson supposes the object of that form in the African rings to be. The Celtic rings are much too solid for such a purpose. In my humble opinion, some other purpose in that form was originally intended, but what that may have been, I could barely take on me at present to say. Something may, however, hereafter turn up, which may throw more light on the subject than we now are aware of.

A friend has suggested to me, and I think with great probability of truth, that it is possible that the crescentic form has been given to these Celtic rings with a religious protective view. The worship of the moon is an idolatry of the most ancient date, and the crescent form may have been adopted to preserve, by its sacred character, the circulating medium from spoliation or debasement, in like manner as the ancient Greeks impressed the images of their gods upon their coins, as it is believed by many, in order to vouch for their purity and weight, and to secure them from damage. It also may have been given in consequence of, and to commemorate, the discovery "of sailing by night, and steering by the moon," which Sir William Betham so fully exemplifies in his "Etruria Celtica," such voyages being always undertaken with the "new moon."

Allow me, however, to add my full concurrence in Mr. Dickinson's opinions as to the jewel and ring-currency of ancient times; the many proofs of which he has with such
UNEDITED GREEK COINS.
zeal and intelligence so ably and convincingly brought forward, and which I think it would be almost as useless to add to, as it would be idle or vain to attempt to refute them.

Believe me, dear Sir,

Very faithfully, yours,

Edward Hoare.

Cork, January 20th, 1844.
To the Editor of the Numismatic Chronicle.

P.S. While on the subject of the Celtic gold ring-currency, I may as well state, that there is a very curious specimen, in the form of a horse-shoe, in the collection of Mr. Anthony, of Piltown. It weighs fifteen pennyweights, and was found in 1842, in the county of Clare.

II.

OBSERVATIONS ON SOME UNEEDITED COINS, PRINCIPALLY OF ASIA MINOR.

By Samuel Birch, Esq.

[Read before the Numismatic Society, 22nd February, 1844.]

The coins illustrated in the present paper are chiefly from the collection of Mr. Steuart, purchased by the Museum. They are all of great value to the cabinets of the Museum from their high state of preservation, and many of the unedited types are of more than usual interest. Mr. Doubleday, to whom the task devolved, in the first instance, of examining this collection, noted the new types, and com-
municated them to me, and I add the following observations on them. I have also added a few other coins, selected from our collection, which I have found in the course of my researches for other purposes.

**LAUS, LUCANIAE.**

ZAl. Human-headed bearded bull going to the left; head reverted; exergue an acorn.

R.—ZAl. Similar bull; no adjunct in the exergue. AR.5.

This coin only differs from others of this Lucanian town by the adjunct; but I have introduced it into my list, to shew that this bull is either the type of the Achelous, or else of the river Laus, from which the town took its name. The history of this town has already been given by M. Millingen. The coin is of the time of the original Achaean colonists, and prior to the subjugation of the state to the Lucanians, B.C. 390. The Achelous is mentioned by Sophocles, as assuming the shape of a bull, a serpent, and a human body, with a bulls' head, or horns. The reasons which induced the ancients to represent rivers as bulls with human heads, and as men with bulls' horns, I have already given elsewhere; and I may add to the authorities usually cited, that of ὁ βούκέρως Βρόχων, or "bull-horned Brychon."

---

1 Thus the Achelous, Ἀχελοῦς ἄθλον, is found on the coins of Metapontum. Millingen Anc. Unedit. Mon.; and Consid. sur la Num. de l'Anc. Ital., p.23.

3 ἄνδρευς κύρις βουκράνου. Trachiniae, l.12. Cf. Scholiast οὗ ποταμοῖ ταυρόκρανοι διενεφώντο, κ. τ. λ.; but this is not strictly true as regards works of art. The minotaur is the only type to which this epithet could be applied.

4 The other reading of the Trachiniae, ἄνδρεω ὑπὸ βοῦτρυφος.

5 Proceedings of Royal Soc. of Lit. 1843. Vase of Hercules and Achelous.
applied by Lycophron, in his Alexandra, to that river. The inscription on each side, Λας, the commencement of Λαδος,\textsuperscript{6} which is found occasionally divided on the two sides. The reason of the appearance of the acorn on the currency of Laus is unknown; and the name, the same as that of people, derived by etymologists from λάος, stones, might be connected with the Achæan legend of the oak, whence ants, the autochthonous Myrmidons, derived their origin. The river Laus divided Lucania from the Bruttii.

**PERGAMUS AND SARDIS.**

ΠΕΡΓΑΜΗΝΩΝ ΚΑΙ ΣΑΡΔΙΑΝΩΝ. Old bearded figure on the right, standing, and crowning another.

R.—ΣΕΒΑΣΤΟΝ ΚΕΦΑΛΙΩΝ ΓΡΑΜΜΑΤΕΥΩΝ. Di-style temple, in which is a figure standing, holding a lance. Ε. 4\textsuperscript{4}. (Pl. i. fig. 2).

The Σεβάστον is immediately over the temple, the rest diffused through the area. An unedited coin of Aezanes, in the same collection, subsequently cited, completely explains the meaning of the obverse of the present type. The two-aged figures represent the respective demi, or personified people of Pergamus and Sardis; one, in sign of an alliance, conferring a civic crown upon the other. The sepulchral stelæ of Asia Minor shew that these crowns were very liberally bestowed on citizens.\textsuperscript{7} The reverse

\textsuperscript{6} This was the ethnic name. Compare Ρηγιως, Νεοπολιτης, Συρακωσιος, Ναγιδικου, on their respective coins.

\textsuperscript{7} In this respect the type brings to our remembrance the statues of the demos of Syracuse crowning that of Rhodes. Polybius (Hist. v. fol. Par. 1609, p. 419), given the Rhodians by Hiero II. and Gelo II., and placed in the Deigma of Rhodes, and the decree of the Byzantians, in the Oratio De Corona, of Demosthenes, στάσαι δὲ καὶ εἰκόνας τρεῖς ἐκκαθαρίστηκης ἐν τῷ Βοσπορίχῳ στεφανούμενον τῶν ὅμων τῶν Ἀθηναίων ὑπὸ τῷ
bears testimony to the erection of a temple to Augustus, which is confirmed by Tacitus; since they alone, among the eleven cities, when contending for a similar honour to Tiberius, relied upon the ædes, or small chapel of Augustus erected by them. As on the occasion of this contention the people of Sardis and Pergamus were rivals, it is probable that the coin was not struck during the reign of Tiberius; and as a similar alliance of these two towns has been published by M. Mionnet, during the reign of Domitian, while a Claudius Cephalion was prætor, for the second time, under Hadrian; the true epoch to which the present coin should be assigned, is probably that of Domitian, or Nerva.

**EUMENIA PHRYGIA.**

**ΚΑΙΣΑΡ.** Head of Augustus to the right.

R.—ΟΥΑΛΕΡΙΟΣ ΖΜΕΡΤΟΠΙΣ ΕΥΜΕΝΕΩΝ. Bull going to the right. Æ. 4¼.

The name of the magistrate, probably an archépou, is new, and the type. It is, however, like all those under Augustus, without the titles of the emperor. The bull may refer to the river Glaucus, in whose vicinity it was located, or the Cludrus. Bulls were also sacred to Cybele, the national deity.

---

9 Suppl. v. 431.
12 Sestini, loc. cit and Mus. Fontana, tab. iii. 17, p. 114.
13 Pliny.
HIERAPOLIS.

ΔΗΜ(OC). Youthful head, with flowing hair, to the right, countermarked with a small figure.

R. — ΙΕΡΑΠ...Ν ΝΕΩΚΟΡΩΝ. Table, on which are placed two prize vases, beneath two diotas. Æ

The games celebrated in this city were the Pythian and Actian. The neocorate is common to the autonomous currency, and commences with Caracalla; those under the previous emperors being without it. This would bring down the autonomous coin to the epoch of Caracalla.

AEZANES PHYRGIE.

.....ΤΙΑΝΟΣ ΚΑΙΣΑΡ ΣΕΒ. ΓΕΡ. Bust of Domitian to the right.

R. — ΔΗΜΟΣ ΑΙΖΑΝΕΩΝ ΔΗΜΟΣ ΚΑΔΟΗΝΩΝ. The demi, represented with short dresses, and endromides on their feet, shaking hands; the one to the right holds a lance. Æ. (Pl. i. fig. 3).

The demi are represented as ancient Phrygians. Many of these alliances were merely honorary, and were generally engraved on columns, or stelæ, in the respective cities. These figures may have represented actual statues, like those on the coin of Pergamus and Sardis, already noticed.

DIONYSOPOLIS PHYRGIE.

ΙΟΥΛΙΑ ΔΟΜΝΑ ΣΕΒΑΣ. Bust of Julia Domna to the right.

R. — ΔΙΟΝΥΣΟΠΟΛΕΙΤΩΝ ΧΑΒΗΣ ΑΝΕΘΗΚΕΝ. Diana Lucifera holding in each hand a torch, full face; at her left side a smaller similar figure. Æ.

Independent of the fabric of the above coin, the following reason may be given for assigning it to the Phrygian, rather than the Mæsian city, viz.: the great prevalence of the formula ἀνεθήκε, in Phrygia; for out of thirty-two of these

14 Sestini, Classes Generales, p. 122.
legends, eleven are found on coins of Phrygia. The occurrence of a magistrate’s name is an additional argument in favour of its belonging to Phrygia, for we do not find any names on the coins of the Moesian town. The type of Diana Lucifera proves the worship of that goddess there.

**Tiberiopolis Phrygiae.**

**Antoninus Pius.**

1. **AYT. KAI. AΔP. ANTONINOC.** Head of Antoninus, laureated to the right.

   R.—**TIBΕΡΙΟ................ΗΝΩΝ.** The god Lunus standing, dressed in long garments reaching to the ankles; in his right hand a ball, in his left a long spear. ΑΕ.

**Gordianus Pius.**

2. **AYT. K. M. ANTO. ΓΩΡΔΙΑΝΟC.** Bust of Gordian, laureated to the right.

   R.—**TIBEΡΙΟΠΟΛΕΙΤΩΝ.** Male stag going to the right, and looking back. ΑΕ.

In No. 2, the engraver, by mistake, has, in the first instance, omitted the ΠΙ, and then put it in the area beneath the Ε and Ο. Little is known of this Phrygian town, except from geographers. It was in the vicinity of Eumenia. The stag on the reverse of the coin of Gordianus Pius probably alludes to the worship of Apollo and Diana which prevailed there. The latter both in her ordinary type, and in that of the Ephesian Diana.

**Bagæ Lydæ.**

**AYT. KA. CEΠΙΤ. CEΟΥΡΗPEC ΠΕΡ.** Bust of the emperor, in armour, to the right.

---

R.—ΕΙΙΙ ΠΑΙΟΥ ΑΡΧΟΝΤΟΚ ΒΑΡΗΝΩΝ. Figure on horseback, darting a javelin at three bearded barbarians, two of whom are fallen under the horse’s feet. A military figure, holding a spear and shield (Mars), precedes the figure on horseback; and Minerva, behind, assists with a spear and buckler. Æ. 10.

The present coin is probably intended to record the campaign of Severus in the East, when, attended by his sons Geta and Caracalla, he rapidly made himself master of Seleucia, Babylon, and Ctesiphon, and advanced far into the Parthian territories. The fallen figures are apparently Asiatic, and are represented as entirely overthrown by the emperor’s rapid attack. The figure in armour who precedes must be Mars Gradivus, the especial protector of the Roman power, while Minerva, typical of warlike foresight and success, or else Bellona, accompanies Mars. The same Caius, who was archon under Severus, appears on the contemporaneous coins of Geta, and on one autonomous type. Little is known of Bages.

BLAUNDUS LYDİÆ.
1. Old bearded head on a fillet.
R.—ΜΑΛΑΥΝΔΕΩΝ. Fortune standing; in her right hand a cornucopia; in her left a rudder. Æ. 3. (British Museum.)

TITUS.
2. TITOC KAICAP. Head of Titus, laureated to the right.
R.—ΚΑΛΑΥΔΙΟΤ ΦΟΙΝΙΩΝ ΜΑΚΕΔΟΝΩΝ ΒΑΛΟΥΝΔΕΩΝ. Ceres standing, to the left, holding in her right hand two spikes of corn; in her left, a wand. Æ. 4. (British Museum.)

---

19 Ex eccl. notitiis. Eckhel iii. 94. Cf. however, Cramer’s Asiatic Geogr. vol. i. 345.
CARACALLA.

3. AT. KAI. M. AY. ANTOINEINOC. Bust, in the paludamentum of the emperor, to the right.
R.—ΕΗΙ ΑΡ. Α. ΑΥΡ. ΤΕΙΜΟΘΕΟΥ ΒΑΑΥΝΑΕΩΝ. Hercules, seizing the triple Geryon, who is about to fall, holding his shield. The hero strikes him with his club. In the area, two zebus. ΑΕ. 12½. (British Museum.) (Pl. i. fig. 4.)

GALLUS.

4. A. K. ΠΟ. Τ. ΓΑΛΑΔΟC. Bust of Gallus, laureated to the right.
R.—ΕΗΙ ΑΡΧ. Α. ΑΥ. ΠΑΙΠΙΟΥ...ΥΝΑΕΩΝ. Horseman, holding in his right hand a ball; in his left a...... horse led by Mercury. ΑΕ. 12. (British Museum.)

The little that is known of the town of Blaundus, is chiefly enhanced by the medallic light thrown upon it by its interesting currency. It was previously known to have been a colony of Macedonians; but the coin, No. 2, proves that it was also connected with the Phœnicians, who, as they are first mentioned, had probably formed an earlier settlement. Although not perfectly distinct, the female figure is probably Demeter. No. 3, struck under the archonship of Aurelius Timotheus, offers the myth of Hercules and Geryon, treated in the Asiatic manner. It appears from Hecateus, that Geryon was king of the continent round Ambracia and Amphilochus, and not of any island beyond the sea named Erythia, nor of Iberia; and this version, which would so well account for the appearance of Geryon on the oldest fictile Greek vases, where he is generally represented as three Hellenic warriors, would also coincide with the supposition, that the myth formed part of the

20 Hecateus in Arrian, Exp. Alex. II. 16. According to Arrian, the Tyrian Hercules was worshipped at Tartessus.
21 De Witte, Description d'une Coll. des Vases peints. Svo. Par. 1837, pp. 81, 124, 139.
tradition of the Macedonian colonists, among whom the exploits of Hercules were held in national veneration. The later mythologists placed the scene of his exploits in Iberia, and the island of Erythia, near Gadeira, and described his form as a union of three human bodies (τριών ἔχων ἀνδρῶν συμφέρεσις σῶμα συνηγμένον εἰς ἐν κατὰ τὴν γαστέρα ἐσχίσμενον δὲ εἰς τρεῖς ἀπὸ λαγόνων τε καὶ μηρῶν), which is attested by all works of a late art. I will not insist here on the relation which Geryon bore to Pluto, the analogy of his name with that of Charon, and of his two-headed dog Orthros with that of Kerberos, or of the strange intermixture of the herds of Geryon and Hades (Pluto) at the river Anthemus; but it is singular that the oxen of Geryon are called Φονίκες βοῦς, “red,” or “Phœnician cows.” An enchorial tradition placed the sepulchre of Geryon at the Lydian town of Temenothyræ, so that it is not improbable that there may have been another scene of the exploit. The last type either represents Priam led by Mercury to the tent of Achilles, or else the emperor under the protection of this god advancing to the campaign.

ΜΕΟΝΙΑ ΛΥΔΙΔ.

ΝΕΡΩΝ ΚΑΙΣΑΡ. Head of Nero to the right.

R.—ΜΑΙΟΝΩΝ ΜΕΝΕΚΡΑΤΟΥ (area) ΝΑ ΤΙ. Veiled figure standing in a peplus, looking to the right. ΑΕ. 4 1/2.

A coin in a most beautiful state of preservation. The legend of the reverse, of course, reads Ἐπι Τιβέριου ΚλανδιοΥ Μενεκράτους Μαιόνων. The figure is probably Juno, or Agrippina Junior, then wife of Claudius, under the attri-

23 Apollod. loc. cit.
24 Paus. lib. i. Attic. According to the Greeks of Pontus, he went to Scythia (Herodot. iv. 8). Cf. Tret. Chil. iv., No. 176, for an account of trees distilling blood at his sepulchre.
butes of Juno. A coin of very inferior preservation already existed in the Museum, from Mr. Borrell's collection. The present, a perfect gem, is from that of Mr. Steuart.

SILANDUS LYDÌÆ.

1. Head of Hercules, to the right.
R.—ΣΙΛΑΝΔΗΕΩΝ. River god (Hermus), reclining to the left. Æ. 4.

COMMODUS.

2. ΑΥΤ(Ο) ΚΑΙ. ΑΥΡΗ…ΟΔΟΓ. Bust of the emperor, laureated in the paludamentum, to the right.
R.—ΕΠΙ ΨΤΡ. ΤΑ(Τ)ΙΑΝΟΥ ΣΙΛΑΝΔΕΩΝ. River god reclining, holding a branch and urn; before it another figure, kneeling, clasps a tree with the right hand, and holds a pedum in the left. Æ. 9.

LUCILLA.

3. ΕΕΒΑΕΘ ΔΟΥΚΙΑ. Head of Lucilla, to the right.
R.—ΣΙΛΑΝΔΕΩΝ. Female figure, completely veiled; on her head a calathus; at her left side an ear of corn. Æ. 5½.

Little or nothing is known of Silandus, now Silendi, from ancient authorities; and of the three types autonomous, the one represents the head attributed to Hercules; and the reverse, the Hermus, in whose valley the city was situated. The second type, that of Commodus, perhaps, presents some local myth connected with the same river; for Fauns, holding the pedum, or under trees, are not uncommon on Asiatic coins. Since, however, the artists frequently adopted, for reasons now unknown to us, general stories, and the hair of the figure, bound by a fillet, is long and unlike that of the Fauns, this type may be intended for Narcissus admiring himself in the waters of the fountain. The coins of this town, already published, were struck under the same Tatianus,25 who appears to have held the functions of

---

archon, or high-priest, and strategos, during this reign. The last type is that of a Greek deity, treated in the Asiatic style. Mionnet sometimes calls it the Samian Juno, and sometimes the image of Proserpine. Now since this is a common type of Sardis, and appears accompanied with the epithet Κόρηα, and Χρυσονθείνα, in reference to the game instituted in honour of Proserpine, or Pherephatta, and often with the attributes of an ear of corn and poppy, [Δημητριακῶν καρπῶν,] it is probable that this type was rather that of Ceres or Pherephatta, than of Juno, to whom it offers few points of relation. On a gem in the Museum, a female figure, similarly treated, is attended with the attributes of the Sun and Moon: in allusion, perhaps, to the enchoral worship of Dindymene, who, we know from Herodotus, had a temple at Sardes.

APHRODISIAS CARLE.

1. Bust of Eros to the right.
   R.—ΑΦΡΟΔΙΣΙΑ. ΙΕΩΝ. Rose. ΑΕ. 1. (British Museum).

2. ... ΔΗΜΟΧ. Bearded head, bound with a laurel, to the right.
   R.—ΑΦΡΟΔΙΣΙΑ. ΚΙΕΩΝ. Philosopher seated on a stool, draped from the waist, and the drapery passing over the left shoulder, extending right hand as if speaking. He places his left hand on the stool. ΑΕ. 5½. (British Museum.) (Pl. i. fig. 1.)

3. ΑΦΡΟΔΙΣΙΑΚΙΕΩΝ. Protome of Pallas, wearing the ægis, to the right.
   R.—ΑΠΟΛΛΩΝΙΟΝ ΤΙΟΝ ΑΦΡΟΔΙΣΙΑΚΙΕΩΝ. Ephesian Diana, full face, in a distyle Ionic temple; shield in the pediment; on one side of goddess a seated draped

---

29 Ἐν δὲ αὐτῇ (Σάρδηι) καὶ ἡρών ἐπιχωρίης θεῶν. Κυβῆβης. Herod. Terps. 102. This was burnt by the Athenians, and was the cause of the Persian war.
figure; on the other a bust, or Hermaic stele. A. 5.
(British Museum.)

No. 2 is a coin of more than ordinary interest, from the type of the reverse, which may, perhaps, enable us to add another personage to the Greek iconography. I believe that it represents Apollonius of Aphrodisias, whose works have unfortunately been lost, but scattered notices of which have been preserved. He was high priest probably of this very city; and as the officer under whom the currency was issued appears to have been an ἄρχερευς, this coin may have been issued during his high priesthood. His known works are: a treatise on the affairs of Caria (τὰ Καρίκα), eighteen books of which are cited by the author of the Etymologicum Magnum; and another on those of Tralles. There is also some reason for supposing that he wrote in Alexandria a general geography. He wrote also concerning Orpheus and his mysteries, and he has even been claimed as a Christian; but his office was rather that of high priest of Aphrodite, the characteristic deity of that city; or else of the Ephesian Diana, whose worship is proved by the type of the second coin which we have given.

The coin, No. 3, is probably of the period of the civil war, as Ἀπολλώνιος Ἐως, or Apollonius the younger, is found on the coins of the same city on reverses of Augustus.

and Livia. M. Millingen seems to incline to the opinion of the Abbé Belley, who conjectured the άνος to be in relation to the divinity, as 'Απολλώνιος άνος 'Αφροδίτης, "Apollo, the son of Venus," but a coin, in a far better state of preservation, belonging to a cabinet of a noble collection, has the completion of the legend 'Αφροδεσίεων in the exergue. The connection of Apollonius Molo, the tutor of Cicero, a native of Rhodes, to whom the coins in the inscription, No. 2, have been referred, is not distinctly proved.

**TABÆ CARiae.**

Old bearded head to the right.

**R.**—APTEMΩΝ ΠΑΠΠΟΥ ΑΡ. ΤΑΒΗΝΩΝ. Jupiter standing, profile to the right, holding on his left arm an eagle, and launching a thunderbolt with his right, which is raised. AR. 3.

This city having been already discussed in the Dissertation of Mr. Whittal, it is unnecessary to do more than notice the type, which presents some differences from the small brass coin published by that gentleman. The object on the left arm of Jupiter is his eagle; and a small bronze figure in the Museum represents him with the same bird. The word ΑΡ, probably the initial ΑΡΧ of 'Αρχάντος, is also additional on this coin; but is found on another drachm.

**Obv.**—Same head.

**R.**—APTEMΩΝ ΠΑΠΠΟΥ ΑΡ. ΤΑΒΗΝΩΝ. Diana, profile to the right, and holding a torch and bow.

**BUbastites Nomos.**

Head of Hadrian, laurelled, to the right.

**R.**—BOYBAC...She-cat, going to the right. Ἀ. 2¼.

---

39 Numism. Chron. Vol. III. p. 99, et seq. Tabæ was the Carian word for rock, and was founded by the hero Tabus. Cramer, Geogr. of Asia Minor, ii. 211.
Only one coin of this name has been edited, the one which appears in the work of M. Tochon D'Annecy, and is copied by M. Mionnet into his lists. It belongs to the French collection. The present coin, which represents a she-cat, identifies the animal seen upon the hand of the figure of that type to be a cat, as M. Tochon had conjectured; but as no coin of this type had come under my notice in our collections, and as the engraving in M. Tochon's work was not very distinct, owing to the small size of the object on the coin, I did not feel myself authorized, on a former occasion, to recognize this animal. The worship of the cat at Boubastis, the city of the Egyptian Pasht, or Diana, of which this animal was the living emblem, perfectly agrees with Egyptian tradition; but the remark of Stephanus Byzantinus, cited by M. Tochon, with regard to the Egyptians calling a cat Boubastos, is not agreeable to our knowledge of the Coptic, or the sacred language.

III.

ANCIENT "COYNING YRONS."

[Read before the Numismatic Society, January 25, 1844.]

Cursory Observations upon the Ancient Dies or Coining Irons for the Hammered Money, as used in England from the earliest period, from actual inspection of a considerable number of them accidentally discovered a few years back, in one of the Vaults of the Record Office, Westminster.

Although Ruding and others talk of the "Coyning Yrons," the "Stapells and Punzones," i.e. Standards and Puncheons,

40 Médaill es des Nomes de l'Égypte. 4to. Par. 1822. p. 172.
42 Βουβάστων τὸν ἀλουρον φάσα. Steph. Byz. de Urb. voce. This might refer to the deity Bubastus, a male type of Pasht.
43 In Coptic, and in hieroglyphics, a cat is ждє. Cf. Champollion, Gr. Eg. p. 83.
Dies, &c. for the Hammered Money, they, in no instance that I am aware of, describe their actual form, or the mode of their application, or speak of them as if they had seen them. I am aware it will be considered by some too trifling a subject for particular notice; yet still I have reason to believe there are many others who will appreciate, with pleasure, any circumstance, however trifling, which tends to illustrate the rise and progress of the numismatic art in this country, from the rude and barbarous state in which it existed two centuries ago, compared with the improved mode of coinage in use at the present time, with the perfect, beautiful, and expeditious machinery as employed in the Royal Mint.

About the end of December 1834, the periodicals of the day published the following brief account.

"Society of Antiquaries.—Sir Henry Ellis then read a communication from Sir Francis Palgrave to himself on some Numismatic Antiquities in his charge, as keeper of the Records of the Chapter of Westminster Abbey. His predecessors in this Office appear to have been Treasurers, or even Masters of the Mint to the Kings of England, from the time of Canute down to a comparatively recent date. And there now remain in the Office a great number of Dies and a Bag of Coins, the former being of various eras, and generally much worn, and the latter for the most part, counterfeits of the time of Henry VII. Two of the Coins, and impressions in Wax from some of the Dies accompanied this communication, from this sole representation, as Sir Francis himself remarks, of the Saxon Cabinet."

About the beginning of the year 1835, I was introduced to Sir Francis Palgrave, at the Record Office Treasury
of the Exchequer Chapter-House, Poets’ Corner, Westminster, who submitted to my inspection the coining irons above alluded to. They consisted of sixty-four standards, and one hundred and twenty-three trussells. The whole of them (with the exception of two or three that had been cleaned a little to impress the wax above-mentioned) were completely encrusted with a thick coat of rust. He also showed me a leathern bag, containing a great number of the counterfeit groats of Henry VII. They are cast in white metal (tin and lead). A specimen accompanies this paper.

The account which Sir F. Palgrave gave of them was, that they had been recently discovered in one of the vaults of the Record Office, amongst much lumber, together with the bag of coins, where they must have lain for ages. Sir Francis having expressed a wish for their preservation from further decay, and feeling considerable interest myself to assist in that object, I willingly undertook to clean them, and, as far as possible, prevent further corrosion; and for that purpose they were placed in my hands.

After much care and trouble, I succeeded in removing the impervious veil which the ruthless hand of time had so unsparingly spread over them, and was rewarded by finding that some few still sufficiently retained their impressions to be identified; but the greater part were so worn by use, and corroded by rust, as to be almost illegible. After having done all that appeared necessary for their preservation, I had a cabinet constructed, in which they were placed, and returned to Sir Francis.

These coining irons were for the silver monies of Edward III. and Henry VII.; viz. groat, half-ditto, and penny, mostly of the York mint. I shall now attempt to describe their appearance when delivered to me, and the
mode of their application, from observations and conclusions deduced from the appearance of the tools themselves, in the state in which the coiner had left them.

All the standards (see plate, fig. 1), or under-dies, have the impression of the obverse side of the coin engraved upon them; from which I conclude it was always engraved on the standard, or lower-die, in preference to the trussell; as by this means a more certain and perfect impression was obtained, on account of the greater steadiness of this die.

The trussell-puncheons, or upper dies, all have the impression of the reverse side of the coin engraved thereon. (See plate, fig. 2).

The standard, or lower-die, appears, from its formation, to have been strongly fixed into a block of wood or iron, by means of the square spike, or tang, which forms the lower part of this die.

The trussell-puncheon, or upper die, is a round punch, with the impression engraved on it, as before stated. When the blank piece of metal intended to be coined was laid carefully upon the standard or lower die, the trussell was then placed upon it, and probably held over it in a clipped or twisted hazel stick, held in the hand of the coiner, while a labourer struck the trussell with a sledge hammer; a similar practice being in use to the present time, by the smith, in the use of his small punches in the forging of iron.

The whole of these dies were much worn; and being considered unfit for further use, were returned to the Exchequer, and new ones obtained in lieu of them, as appears to have been the custom of that period.

The number of standards, compared with the trussells, found upon this occasion, seem to correspond exactly as to the proportion usually delivered to the different mints at that period; viz. about two trussells to one standard, the
greater portion of the labour being upon the trussell, or upper die, from the concussion of the repeated blows of the hammer; which is evidenced from the appearance of these dies, all the trussells having a *mushroom-top formed* by the *continued* beating of the hammer; many of them being also split, from the force of the blow in bringing up the impression, which at last, perhaps, was but imperfectly effected.

Several of these trussells had the *steel face* entirely broken off, from the force of the concussion; and many others were so much defaced about the table of the impression, that nothing remained to distinguish what coin they were intended for.

During the time these coining irons were in my possession, I attempted to take some impressions in silver; but I could not succeed so well as I hoped to have done, on account of the corroded and worn state of the dies.

The three impressions, which accompany this paper, are those struck by me in the dies of Edward III. The counterfeit coin is one of those found in the leathern-bag, before-mentioned.

*John Field.*

IV.

THOMAS SIMON AND THE ROETTIERS.

Sir,

I have been favoured by Peter Cunningham, Esq., of the Audit Office, with the sight of a document preserved among the records of that establishment, entitled an
Pl. II.  

ANCIENT COINING IRONS.

No. 1. The Standard or Lower Die.
No. 2. The Trussell Puncheon or Upper Die.

The drawing is one half the size of the original.

Published by the Numismatic Society 1844.
Obsidional Money of Landau.

London: Published by the Numismatic Society 1844.
"Accompt of Sir William Parkhurst, and Sir Anthony St. Leger, Knights Wardens of H. M. Mint, for payments and disbursements from 31 Dec. 1662 to 20 Dec. 1666."

Under the head of "Annuities and Speciall Warrants" occur the following items:—

"To Thomas Simonds, Graver, Annuity £50 for 3 years . . . . . £150 0 0

(In the margin) "N. B. deduct £12, 10s."

"Peter Blondeau, Engineer, Annuity £100 for 2 years . . . . . 200 0 0

"the three Roettiers, Gravers . . . . . 50 0 0"

Under the head of "Salaries" we have—

"To the Chief Graver at £30 for 4 years . . . 120 0 0

"Under Graver at £40 for 2\(\frac{1}{2}\) . . . 110 0 0"

These notices are interesting and useful, as evidence of a fact (the date of Simon's death), which from Vertue's time, until within the last two years, had baffled the researches of every antiquary. The discovery of Mrs. Simon's Petition\(^1\) to government, for money due to her "late husband," afforded inferential evidence that he died in 1665; the subsequent discovery of his Will,\(^2\) which was proved in August 1665, shewed that it was previous to that date; and now the payments above mentioned furnish proof that it occurred subsequent to 30th June of that year, for the deduction of 12l. 10s. (one quarter's pay) from the total amount of the three years' annuity, shews that he had entered on the third quarter of the third year (1665), but had not entered on the fourth, evidencing that he was living on the 1st July 1665, while the circumstance of the Will proves he had "departed this life" previous to, or very early in, August. Thus the period of his decease is

---

\(^1\) See Num. Chron. Vol. IV. p. 211.  
brought within as brief a compass, as the absence of any proof of the exact day could lead us to expect.

Another interesting fact is gathered from this "Accompt," viz. that Simon's "Annuity" was much greater than the joint pay of the three Roettiers; and we observe, that in addition to this, he was receiving other remuneration as graver, under the term of "Salary." 3

Thus we see Simon in receipt of his full pay at the mint, to the period of his death; and all the misrepresentations that have heretofore prevailed as to his being dismissed from his official employment, and superseded by the Roettiers, are by this, and the other authenticated papers alluded to, for ever and entirely dissipated.

Had Vertue, when he was compiling his account of the "Coins, Medals, and Great Seals of Thomas Simon," had access to these documents, throwing such light upon the very points where his keenest researches failed, how they would have gladdened the heart of that industrious artist and zealous antiquary.

B. N.

To the Editor of the Numismatic Chronicle.

---

3 Simon's "Salary" involves a question, Was he Chief or Under Graver? If the latter, the item of salary for two years and three quarters agrees with the period of the annuity; if Chief Graver, then the charge is for four years, which can only be made out by reckoning from 2nd June 1661, the date of his patent, as "one of His Majesties Chief Gravers," to July 1665, when he died, exactly four years. But then the "Accompt" only includes payments from 1662. Moreover, in Simon's patent of appointment, his salary is said to be £50; but the sums in the accompt are, for the Chief Graver £30, and the Under Graver £40, curious discrepancies, involving the fact of the Under Graver receiving more than the Chief.
V.

SIEGE-MONEY OF LANDAU.

[Read before the Numismatic Society, February 23, 1843.]

There are not less than four towns in Continental Europe, bearing the name of Landau; but the place of which we have now to treat comprises a city and a fortress in Rhenish Bavaria, in the district of Wissembourg, a tract of country formerly appertaining to France. Its position is on the left bank of the Rhine, in 49° 13' north lat., and 8° 10' east long. Being situated in the very heart of the country that was the chief theatre of operations during the war that was called the "war of succession," it was subjected to all the horrors and constant apprehensions which its locality necessarily entailed upon it; and within the space of eleven years it underwent no less than four sieges, being alternately taken and retaken by the hostile forces, its possession being considered a point of considerable importance, inasmuch as its situation rendered it the key to the States of Germany.

The first siege occurred in 1702, when the Margrave Louis of Baden, commanding the army of the Rhine under the emperor, and in conjunction with the troops of the associated circles, blockaded it in the month of June, and compelled it to surrender on the 10th of September following.

In 1703 it was besieged, and taken by a French army under Marshal Tallard, who had defeated, in an obstinate engagement at Spire, a division of the allies which had advanced under the Prince of Hesse, to relieve the town. It capitulated on the 17th November.

In 1704 it was again besieged, and after holding out for
two months, was retaken by the allies commanded by the emperor's son, the Archduke Joseph, the young king of the Romans. The garrison, under the command of Monsieur de Laubanie, made a determined resistance, but ineffectually. Several medals were struck on this occasion to commemorate the archduke's success.

The fourth siege took place in 1713, when Marshal Villars, the commander of the French forces, having taken Spire and Worms, and reduced Friburg, invested Landau in the month of June, and on the 21st August compelled the garrison, amounting to seven or eight thousand men, under the government of Prince Alexander of Wirtemberg, to capitulate.

Obsidional pieces were struck only during the first and last of these sieges. Monsieur de Melac, the French governor of the place during the siege of 1702, being in want of money for the garrison, melted his own plate, and had it coined into four and two livre pieces, of which the largest of the two pieces herewith exhibited is a specimen. It is stamped with the arms of the governor, and in a compartment below the arms is the name of the city, and the year of the siege. It was current for four livres and four sous. The fleurs de lis stamped around it, appear to have been intended as a protection against clipping, while they served as the obvious distinction of a French coin.

The smaller piece was coined during the siege of 1713, when the Prince of Wirtemberg was commander of the fortress. He struck a variety of pieces, both in silver and gold. It is stamped with the arms of the prince, surrounded by the initial letters C. A. H. Z. W., Carl Alexander Herzog Zu Wirtemberg, below which is the date 1713. In a compartment in the upper part of the coin we read "PRO CAESarc ET IMPerio;" and in another
compartment below, "BELagerd LANDAV. 2 florins 8x" (creutzers), or one rix dollar. In each corner is impressed the cypher of the prince, surmounted by a ducal coronet.

The rarity of these pieces, as well as their historical interest, may render them worthy of the notice of the Numismatic Society.

**VI.**

**TIN-MONEY OF THE TRADING PORTS OF THE BURMAN EMPIRE,**

[Read before the Numismatic Society, November 23, 1843.]

Clare Cottage, Priory Road, 
*November 4, 1843.*

**MY DEAR SIR,**

**DURING** a recent visit to Leamington, in Warwickshire, I met with, in the cabinet of Mr. Binley Dickinson (a member of the Numismatic Society), several specimens of the tin-money, which forms the common currency of the trading ports of the Burman empire; two of which pieces that gentleman has forwarded to me for presentation to the Society. The larger specimen is termed "Kabéan," but the denomination of the smaller piece I am unacquainted with.

One of these large tin-coins I presented to the Society in 1837; but Mr. Dickinson's specimen offers a remarkable difference in the type: for the animal, whether it be horse or buck, appears to be attached to a chariot, and bears a branch on its raised fore-foot, which will remind the collector of the Roman consular series of the biga of
branch-bearing centaurs, which forms a well-known device on the coins of the Aurelia family.

These Burmese coins appear of late years to have attracted some attention. They were noticed by Dr. Lee in his presidential address to the Society in 1837. Mr. Cullimore finds symbols upon them analogous to those found on Egyptian monuments; and Mr. Birch, of the British Museum, has, in a recent number of the Numismatic Chronicle, offered an elucidation of the inscription upon one of them; but his remarks scarcely apply to the coins before us, inasmuch as the letters, or characters, composing the inscription, differ very materially from those given in his statement. Many of the letters, or combinations of letters, which he adduces, are of a complicated and angular form, while those on our specimens are of a less elaborate and more circular character. After a close and minute examination, I can trace but three letters bearing any resemblance to those adduced by him, as a comparison of the following fac-simile, with those printed in his dissertation, will shew:—

\[\text{Image of inscription}\]

A specimen, from the cabinet of Mr. Walter Hawkins, is exhibited herewith, for the purposes of comparison. It will be seen that the letters differ very slightly from those on Mr. Dickinson's coin; but they appear to be inverted, and read the contrary way:—

\[\text{Image of inverted inscription}\]

This coin also differs from Mr. Dickinson's, in the absence of the pellets between the spokes of the wheel.
In the Asiatic Society's Burmese Alphabet are two letters, similar in form to a corresponding number on these coins, which have the sound of ḫa and bé; hence the supposition, that the name of the coin, Kabéan, might form a part of the inscription. A friend of the writer's was for some years employed in trading all along the coast of Tenasserim; and at Tavoy, Martaban, and Rangoon, as well as among the numerous islands adjacent, he found these tin Kabéans the universal and ready currency; and where transactions on a large scale occurred, the coins were not counted, but measured by the basket. The smaller piece was current only at Martaban.

Mr. Dickinson's letter to me, containing an interesting and learned dissertation on the origin and purport of the device on these coins, accompanies this, and may be laid before the Society.

I remain, my dear Sir,

Yours very sincerely,

B. Nightingale.

To J. Y. Akerman, Esq.
Hon. Sec. of the Numismatic Society.

VII.

TIN-MONEY OF THE TRADING PORTS OF THE BURMAN EMPIRE.

[Read before the Numismatic Society, November 23, 1843.]

Leamington, September 1, 1843.

My dear Sir,

When you did me the favour to call upon me in Leamington, you expressed some interest in four Burmese coins in my possession; two large ones of tin, and two small ones of potin, or mixed metal of some kind. As the larger coins varied in some respects from the Burmese coin, described by you to the Numismatic Society, in a letter dated
April 20, 1837; and as the smaller ones were new to you; you paid me the compliment to request that I would submit the coins to the Numismatic Society, of which I have the honour to be a member, together with the impressions which the examination of them had left upon my mind. I now beg to transmit to you one of each of the coins, and I shall feel obliged if you will lay them before the Numismatic Society; and verbally, or by this communication, submit also the following observations, if you should deem them worthy of such distinction.

I understand from you, that the Burmese coin which you exhibited to the Numismatic Society, bears on the obverse only an animal, with branching feet and tail, surrounded by a double ring, within which runs a circle of pellets or studs. My large coin, in addition to the animal, which supports a branch upon its upheld right forefoot, shows what I cannot help considering a rude representation, of a male or female figure, leaning over from a chariot, much in the style of the unskilful imitations of the Greek or Roman chariots of victory found upon ancient British coins. The conjunction of this chariot type with the wheel symbol on the reverse, has forcibly struck me, as showing in the East, a similar attempt at copying the coins of the classical ancients, as we find amongst the rude Britons; and as habits are of a more enduring character in the East, than amongst Europeans, it is not improbable that this Eastern type of modern coinage was, in its origin, of an era nearly contemporaneous with that of our early British coinage.

I shall not presume to say a word about the question of the inscription; the subject is at present between yourself and Mr. Birch; and therefore it needs not, as it could not have, any elucidation from my pen: but I would wish to
offer a few remarks upon the doubtful animal represented upon the obverse.

I cannot avoid fancying the branches about the head and legs of the animal, to have some allusion to the luminous rays of the sun or moon; and in this opinion I am strengthened by the descriptions of other coins of a nearly similar kind found in the East. Captain Cautley discovered in Behat, in the remains of a submerged town, coins of the following character. On one side a female figure clothed, holding in her right hand a stalk, with a large open flower on its summit: on her right side an animal standing, with a stout straight back or body, which might pass for that of a deer or horse, but that the head resembles that of a bird, and is surmounted by a radiated crest, which at first looks like horns. I quote from the description given in that esteemed periodical, the Journal of the Asiatic Society of Bengal; from whence I obtain also the following account. At Kanouj, Lieutenant Conolly found, amongst others, a coin, having on its reverse, with several symbols, a crescent, or new moon, and above it a small animal, apparently of the deer kind. Amongst the symbols is the tree-symbol, in the upraised foot of the deer, or antelope. It has been surmised that this deer animal is the antelope, or roe, attendant on Chandra, or the moon. Sir William Jones alludes to this attribute in his Hymn to Suria. I would here add, by way of parenthesis, can this have a common origin with the stag of Diana, and can the chariot be the copy of her chariot drawn by white stags? Major Moor, in his Hindu Pantheon, represents Mahadeva, or Siva, with an antelope in his hand, which he says is called Mrigu, or Sasin. "Siva," says Major Moor, "is Time, the Sun, Fire, the Destroyer, the Generator." Mahadeva has often the sol-
lunar emblem on his forehead. *Chandra, the kindred God,* or the Moon,¹ is represented drawn by a deer, but without the peculiar bird-like head, or rays.

From the above particulars, I am disposed to consider this bird-headed, head-and-leg-rayed, branch-bearing animal, an emblem of the sun or moon. I rather think, from the presence of the rays, of the former; and I imagine the figure altogether upon the obverse of the Burmese tin-coin, a representation of the Chariot of the Sun; or, it may be, of Mahadeva, in his sol-lunar character.

I am inclined to believe the chariot type borrowed, in the first instance, from ancient coins, from the following circumstance. The leaning-urgently-forward attitude of the figure in the chariot, so highly expressive of swift speed, is entirely at variance with the quiescent representation of objects adopted by rude nations, and evinces an origin from designs conceived and executed by a people of refined taste, and far advanced in the arts. And whence, it may be asked, had the rude Asiatics this type? The question may be answered by the reply which has been given to the same inquiry as to the rude Britons—from the Greeks. With his arms Alexander carried the arts of polished society, especially that of coinage, into the East, as we find from the long series of Bactrian, and other regal coins; and it strikes me it is not a very visionary opinion to suppose, that in the tin Burmese coin exhibited, we have an adaptation of the Greek chariot to the peculiar attributes of the Indian solar, or sol-lunar deity; and,

¹ "The classical ancients made the moon both male and female; and Deus Lunus was worshipped at Charræ, Edessa, and all over the East."—Jacob Bryant's *Analysis of Ancient Mythology,* vol. i. p. 314.
further, that this type may have been continued through many remote centuries to the present day.

I have little to say about the small coin, save that, like yours, it bears only the animal and wheel; which latter figure, however star-like in form, is, from the centre perforation, and from the general analogy of the coin to the tin-coin, easily recognised as intended for a wheel.

If you should consider the above remarks worthy of the time and attention of the Numismatic Society, I should feel obliged by your bringing them forward; and especially if you would add to them any additional matter, which may compensate for the paucity of my information.

Requesting you to pardon the trouble I am giving you, I beg to assure you that I am, my dear Sir,

Yours very truly,

W. B. Dickinson.

To Benjamin Nightingale, Esq.

VIII.

TIN-MONEY OF THE TRADING PORTS OF THE BURMAN EMPIRE.

[Read before the Numismatic Society, January 25, 1844.]

Sion College, January 13, 1844.

My dear Sir,

At the meeting of the Society, held November 23, 1843, a letter was read from Mr. Binley Dickinson, of Leamington, accompanying one from Mr. Nightingale. Mr. Dickinson presented to the Society two of the large tin-coins used in the ports of the Burmese empire, and there so common, that they are measured by basketfuls. These coins bear various inscriptions, and for the most part display an animal, with branching horns, on the obverse, and a wheel on the reverse. Mr. Dickinson himself, in the
observations which accompanied the coins, came to the conclusion, that the animal was designed, most probably, to represent the sol-lunar character of Mahadeva. Mr. Birch replied, that the ports where these coins were current were at too great a distance from any part where Brahminism was prevalent, and that it could hardly be expected that the coins should bear allusion to Brahminical legends—that the religion of the country was Budhuism, and the chief object of worship was Budhu, or Bodh, under the form of Gaudma. It may perhaps be agreeable to the Society to inspect the accompanying MS., in the illuminated parts of which the history of Gaudma is depicted, and in each stage of which that deity is accompanied by the sacred hind, an animal which makes a considerable figure in Burmese tradition. The MS. itself is the property of the Rev. John Bathurst Deane, M.A., F.S.A., who has kindly forwarded it to me, for the purpose of being laid before the Society.

I remain, my dear Sir,

Yours faithfully,

HENRY CHRISTMAS.

To CHARLES ROACH SMITH, F.S.A.
Hon. Sec. Num. Soc.

IX.

STYCAS FOUND AT YORK.

Sir,—Since the finding of the York stycas, which abound in coins of the prince and prelate, Osberht and Vulfhere, not one of which were met with in the discovery at Hexham, other types and varieties have turned up at York, very interesting to the numismatist.
A correspondent of mine has favoured me with some account of the examination of a considerable number belonging to the museum at York, not the least singular of which is a coin inscribed _Aeiltred R._ Edilred Rex. The _Aeiltred_, he says, consists of rather rudely formed letters. The varieties of this type have been hitherto found difficult to appropriate with certainty. Indeed, the supposed conjunction of Eanred and Edilred on some of those pieces is problematical. The coins of this fabric, in my possession, read thus:—

\[\text{ÆILRED R. = EANRED.} \]
\[\text{ÆILRED R. = EANRED.} \]
\[\text{ÆILRED R. = ÆNRED.} \]
\[\text{ÆILRED R. = EANRE.} \]
\[\text{ÆILRED R. = EAN+RED.} \]
\[\text{ÆILRED R. = LEOFDEcN.} \]

But I find a coin already published from the Hexham series, in the _Archæologia_ (vol. xxv. Pl. 51. p. 306. No. 314), headed (erroneously) _ÆILREDA_, which is clearly the same coin as the supposed new type of my correspondent found at York, reading _EDILRED REX = AEILRED R._ only advancing us a step or two to leave us in the same perplexity; and I fear we must remain so, until those other coins found amongst the Hexham hoard, some of undecided appropriation, and others not hitherto noticed, are in some way disposed of—such coins as _EDILVEARD, HERRETH, CUNULF._ And along with these I have three coins, the obverse all from the same die, reading _EDILREDD REX_, the reverses all differing. One reads _FORDRED_, another _BRODER_, and the third _EDILVERLD_, proving the same regal die to have been of access to each of those moneyers; and on strict examination of the coins, this system runs through the whole series, to a greater or
less extent. The letters, too, frequently on both sides of
the coin, exhibit a marked difference in the formation and
workmanship, although the moneyers, Vilheah, Vendle-
berht, Cunulf, Eadvini, and Folcnod, are certainly an
exception to this fact.

I have another unpublished styca found at Hexham,
inscribed EANBALD, with a pelleted circle, and a cross in
the centre. On the other side AEDILRED, without the
cross, in the absence of title to either, perhaps struck on
the joint authority of both king and bishops. Contempo-
rary with the reigning prince, we have generally the coins
of the archbishops, evidencing the privilege given to that
influential class, whose members monopolised the entire
literature, and probably the practised arts of the day, sig-
nally qualifying them to perform such duties as the fabri-
cating and striking of the coins in question.

The precinct of the church has for the most part been
the place of discovery of those pieces. As several of those
stycas named have not been published, their connection
with those of uncertain appropriation induced me to
hazard these few remarks, in the hope that they may assist
others more competent to clear away the difficulties that
still hang about these interesting coins. I am, &c.

Joseph Fairless.

Hexham, February 12, 1844.
MISCELLANEA.

"AN OLLA PODRIDA; OR SCRAPS, NUMISMATIC, ANTI-
QUARIAN, AND LITERARY." BY RICHARD SAINTHILL, OF
TOPSHAM, DEVON.

The limited space of the Numismatic Chronicle forbids an ex-
tended notice or review of Numismatic books; and the present
handsome volume (printed for private distribution only, and
liberally presented by the author to his friends) might be con-
sidered on that account as scarcely coming within the notice of
the reviewer; but its appearance has led to a train of reflections,
in which the recollection of what has been done by the little band
of numismatists on the other side of the Irish Channel, has sug-
gested a comparison with what has been done, or rather with what
has not been done, in England. The fact is, that in England,
with a few honourable exceptions, coins are collected, and often
hidden away for nearly half a century. In Ireland they are
examined, studied, and illustrated. Here, it is "self-love," as
gentle Pinkerton phrased it, "indulged in the extreme;" a veri-
fication of the sneer of Voltaire, that every man is greedy of
something. Of course this feeling grows with age, till the man
thus afflicted thinks of nothing else but the acquisition of some-
thing which another does not possess; nay, he will even go so far
as to buy, at exorbitant prices, two coins of the same description,
because a brother collector shall not boast of one. We knew a
collector, who was a singular example of this most odious form of
second childishness. He bought and hoarded for years, but as
for the illustration of a coin, he would have begrudged the out-
lay of the smallest piece of money for such a purpose. He is
not alone in the list of "collectors" (and let us draw a wide
distinction between this designation, and the honoured one of
"numismatist," who, though not blessed with the pen of a ready
writer, may, in many ways, promote numismatic science): two
other "collectors" could be named as belonging to the same
category; for though they amassed a princely collection of
ancient coins, we have no record of their having expended,

1 Vide, inter alia, the works of Mr. Lindsay, and the sound
and excellent papers of Dr. A. Smith.
2 We could give several anecdotes in illustration of this feeling,
but it is not our province to chronicle such amiable traits.
in the whole course of their lives, a single farthing in the promotion of numismatic studies. To return to the volume which has led to these remarks: it contains, as its name expresses, a collection of scraps, consisting of contributions to newspapers and periodicals for many years past, illustrated by plates of coins, among which is a very interesting one, illustrating the history of the mint of Exeter, and portraits of individuals distinguished for their attachment to numismatic pursuits. Even the hyper-enthusiasm of Mr. Sainthill on some of his favourite topics, evinces the ardour with which he has applied himself to the investigation of numismatic remains, the most lasting and the most significant of all ancient monuments, though we think the re-publication of some of the letters relating to the officers of the mint, which appeared a few years since in the newspapers, might have been omitted: people are heartily tired of the abuse of one party, and the fulsome adulation of the other, and we sincerely hope the subject may not be revived in our days. We have no intention of entering into a critical notice of the contents of the volume, which contains a vast quantity of interesting matter relating to numismatics and numismatists; but we may be permitted to observe in regard to the triangle on the Irish coins of Henry III. and the Edwards, that many further proofs of its signification, of a much earlier date, might be cited; and that, so far from marveling at the idea of its symbolising the Trinity, the wonder is that people could be found to suppose, for one single moment, that it signified any thing else.

Unpublished Penny of Ethelstan I. of East Anglia.

It appears to be now generally admitted, that Ethelstan, son of the chief monarch Egbert, and brother to Ethelwulf, reigned over East Anglia, from about the year 828 to about 841; and to him are assigned the greater part, if not the whole, of the coins attributed by Mr. Hawkins and his predecessors to Guthrum, the Dane, who was baptised in 878, by the name of Ethelstan, on his conversion to Christianity. A portion also of the pennies figured by Mr. Hawkins among the coins of the sole monarch Athelstan, are also transferred to Ethelstan I. of East Anglia.1

Already there are ten distinct types of the coins of this king described by Mr. Lindsay, in his excellent work, "A View of the Coinage of the Heptarchy,"2 and a well preserved penny of this monarch, somewhat differing from any hitherto noticed, having lately fallen into my possession, I inclose you an impression, and hope this short notice may not prove uninteresting to the lovers of Anglo-Saxon coins.

---

1 Silver coins of England, figs. 188, 189, 190.  
2 See p. 54.
The obverse presents the letter 'Α', with a short line over the upper part, and a pellet on each side, all inclosed in an inner moniliform circle. Legend, ΕΦΕΛΠΤΑΓΝΙ+ Ρ.—A cross potent, in a similar inner circle. Legend, ΝΑΙΡΑΕ+Ο ΗΔΟ. The last letter has a rather straight stroke to the left, so as to resemble a D. Weight, 19 grains.

JOSEPH KENYON.

WORCESTER PENNY OF ALFRED.—In the sixteenth number of the Numismatic Chronicle, Mr. Hawkins notices two coins from the Cuerdale deposit, which, in the arrangement of the legends, resemble the Oxford type of Alfred, each bearing a name perhaps intended for that monarch; but with respect to the rest, he observes, "It were hopeless to guess what may be the meaning or intention of the other characters."

A penny of a similar type, lately washed up by the silvery stream of the Ribble, fell into my hands; and, being less blundered in the legends than those just alluded to, it presents a fairer chance for appropriation. The middle line of the obverse reads ELFRID, differing from the one engraved by Mr. Hawkins in the third letter, which in his figure is an inverted L. The first and third lines are VIRI similar to those on the figure quoted. The reverse differs totally, and furnishes in two lines, the name and addition of the Oxford moneyer, BERHV. Between the lines are three crosses, and four pellets above and below, disposed in a cruciform manner.

Notwithstanding the similarity of type, and the name of the moneyer, I think few numismatists will feel disposed to consider this an Oxford penny, and that the letters VIRICIRISI are put by mistake for ORSNAFORDA. In the reign of Athelstau, the chief monarch, we find coins with VERI struck at Worcester. The same mint is designated in the reign of Cnut by VVIRI; in that of Edward the Confessor by VVIIHRE; in those of Harold II. and William I. in a similar manner; and in that of Henry III. by VVIRIL; besides numerous other methods of spelling in these and other reigns, identical with, or more or less resembling, the first line on the coin in question.

I submit, then, to the judgment of more skilful numismatists, that there can be scarcely any doubt of the place of mintage on the three coins in question being Worcester. The name of the mint is certainly in a more lengthened form than the various

1 Vol. V. page 19. 2 Pl. ii. fig. 25. loc. cit.
abbreviations afterwards used; but much less changed than ORSNAFORDA, which, in the time of Edgar, becomes OX, retaining only a single letter of the word used in the time of Alfred; and it may not be irrelevant to notice, that the ancient Anglo-Saxon name of this city, Wigraceaster, was subsequently shortened to Wigraceaster and Wigraminstre.

I am aware that slight objections may be raised against the claim of the Worcester mint, from the similarity of the type to that of Oxford, and from the identity of the moneyer. It may, however, be observed, that the Exeter and Winchester pennies of Alfred are not only of the same type, but evidently the work of the same moneyer; and the proximity of Oxford and Worcester will render it not improbable, that the mints of these two cities were under the control of the same moneyer.

JOSEPH KENYON.

The object of this dissertation of the Cavalier S. Quintino, of Turin, already known as an investigator of ancient numismatic and Egyptian antiquities, is to encourage, or attract numismatic students to the consideration of the coins of the middle ages, which have been lately so successfully revived by MM. Longperrier and De Sauley, and the writers of the “Révue Numismatique” in France, and by some of the Italian and German archaeologists. In England, the study of our own coinage has ever held a predominant place, from the time of Thoresby to the present day. St. Quintino edits, for the first time, the following types of Ardoir.

1.—+ BERENGARIVS, in centre, in an engraved ring, REX.

R.—PA + XLΔERTVS R + X, engraved ring. (Pl. PIA fig. 1.)

2.—Δ R + INCRAICIAD’I REX, in two engraved rings.

O (Pl. fig. 3.)

R.—PA + CIVITAS CLORIO.
MISCELLANEA.

3. — Δρ
   O
   R. — ΠΑ IMPERATOR +.
   I

4. — Δρ
   O
   R. — ΠΙ CIVITS CLORIO +.
   Λ

The above coins, which only differ by the name of Ardoin being given as Ardo Ardoin, or Ardoineus, and by the barbarous Latin of Regem in one instance, are attributed by the writer to Ardoine, Marquis of Ivrea, who was elected by the Italian princes in the seventh year of the eleventh century to the dignity of king of Italy. The title of Imperator, on No. 3, he would not refer to the king Ardoin, who does not appear to have had that title, but that of Caesar (cf. Arnolf’s Hist. Med. i. c. 14), but to Otho III. The denarius (No. 1) is equally remarkable and rare with those of Ardoin, being one of Berengarius II. and Adalbert, who were elected and crowned kings of Italy in Pavia, on the 15th December A.D. 950, in which respect they have imitated the type of their predecessors, Hugo and Lotharius, father and son, who struck a denarius with their joint names, and the inscription “XTIANA RELIGIO”—“the last remembrance,” says S. St. Quintino, “of the sway of the descendants of Charlemagne in our country.” The penny of Berengarius and Adalbert is in the collection of the Vatican. With these coins he has also published two others of Otho III., from which Ardoin has copied his reverse of the CIVITAS GLORIOSA PAPIA, the renowned city of Pavia; and (4.) on the obverse, OTTO + M TERCVS; and one OTTO M TERCVS, with the reverse PAPIA INPERATOR. The formula, in fact, of all these Italian coins, is taken from the titles of the house of Charlemagne, and the Frank coinage; “In Dei Gratia Rex,” being copied from those of Charles the Bold. We have not here noticed the supposed relationship of Ardoin and Berengarius, given at great length by the author; which is a point rather for the critical inquirer into Italian history and biography, than for the illustrator of numismatic legends. The coins illustrated in the second paper are two taken from a plate engraved by Nicoli Congenie of Naples, who had intended to publish a collection of all the coins minted in Greece in the Tournois type, but whose labours were overtaken by death, and his collection dispersed.

VOL. VII.
S. St. Quintino suggests, that the denarii reading G. PRINCEPS and THEBE CIVIS, with the Tournois type, are to be assigned to Guido II. duke of Athens, A.D. 1304-8, and not to Geoffrey di Villardoni, or Guillaume II., his successor, as supposed by Marchant and De Saulcy. The records of the mint at Naples make mention of the orders to employ the Tournois type on the currency of Clarence; and the one published by S. Hunter completely justifies the reading.

+TVRONVS CIVI. The city of Tours, a cross.
R.—DCLARENTIA. Tower of Tours, silver.

The reading of the reverse is apparently De Clarentia, "of Clarence." The other two are—

1.—+ "ANGELVS SAB" C. Cross.
R.—. + NFOPATRIE. Tower of Tours.

2.—+ ANGELVS SAB. C. Cross.
R.—DENLAPATRAF. Tower of Tours.—(Cabinet of Prn. Spinelli, S. Georgia.)

The city of Neopatra mentioned, is one at the base of the mountains of Locris, in the plain between them and Thermopolis, and the capital of the states left in 1264 by Michel Angelus Comnenus, the despotes of Epirus and Ætolia, to John, his younger bastard son. "It is not to be confounded," S. St. Quintino observes, "with the ancient Patræ, the Colonia Patronius of the Romans in the Peloponesus, which was under episcopal government." The name of the second city he would read Lapetra, mentioned by Dufresne (Op. lib. vii. n. 21), as taken by the Spaniards about 1312, when they became masters of the duchy of Athens, under the name Château de Lapator, perhaps the Lapathos of Livy (xlv. n. 2, 6). The Angelus mentioned on the obverse he supposes to be Angelus Johannes, who was appointed over Ætolia and Thessaly by Johannes Cantacugenus, when the Spaniards had been chased from Thessaly (Cf. Cantac. Hist. ii. c. 27; iii. 53, and lib. iv. 32; iii. 27, 32: xiii. c. 3. and 6; and Greg. xiii. 6); and the type probably imitated by him from the Catalan currency. He died 1347. The SAB. C. was read Sabaudiae Comes by Cangenie. Quintino proposes no satisfactory explanation why it should not be so, neither does he explain the F at the end of the legend. We must confess that we are not satisfied with the account of this last coin, which, supposing the F to be an imperfect E, would read Denarius Lapatæ. The above forms the substance of an elaborate paper in ser. ii. vol. v. of the Memoirs of the Royal Academy of Tours.

S. B.
MISCELLANEA.

TIN MEDAL FROM CHA POO, IN THE PROVINCE OF CHE KEANG.—Dr. John Brush, of the Scots Greys, has presented to the British Museum a singular Chinese medal made of tin, and found at Chā Poo, in the province of Chē Keang, the seat of the late war with China. It is imitated from a Spanish dollar of Charles III. or IV., and has upon one side $\frac{1}{3} \frac{3}{8} \frac{3}{8}$ ERVTQVE VN $\frac{3}{8} \frac{3}{8}$ M SHDK 29, an imitation of the legend VTRARQVE VNUM, 1762; the pillars of Hercules, and the two hemispheres, much more rudely copied than is usual; and on the reverse a Chinese junk with high bulwarks, and two masts with square mat sails, and a Chinese sailor seated in the stern sheets, holding the ropes. In the area is TAE FING, Peace and Plenty, a name assumed for the epochs of their reigns by many of the old monarchs of China, and also that of several towns in the empire, but probably, in the present instance, a term applied to some event comparatively recent, the characters being in the most modern hand.

S. B.

DISCOVERY OF ROMAN COINS AT SHOTOVER.—In the month of May 1842, the wheel of a waggon, which was passing along the side of a little copse on the estate of George V. Drury, Esq. at Shotover, near Oxford, broke into an urn, or jar, containing 560 (perhaps even more) Roman coins. From a list given to me they appear to have been of the following emperors, &c.

Antoninus
Aurelianus
Carusius
Claudius
Claudius Gothicus
Florianus
Gallienus
Gratianus
Maximilianus
Postumus
Probus
Salonia (wife of Gallienus)
Tacitus
Tetricus
Victorinus

many of them in good preservation.

There have been found in this neighbourhood, at different times, coins of Maximian, Constantine, Domitian, and Claudius Gothicus (2) One of Vespasian was picked up at Drunshill, near Wood Eaton, in 1841; and one of Nero, near the Roman road which goes from Otmoor, in the last year.

THOMAS SIMON.—Among the letters patent passed under the Great Seal of Oliver Cromwell, is the following, regarding a name so celebrated with collectors of coins and medals, date July 9, 1656. “Tho. Symon as cheife Engraver of ye iron of and for the mony of his Highnes xxx£ per ann. payable quarterly and commencing from the 25th of March 1655; and as
Meddall Maker to his Highnes £13. 6. 8 payable and commenceing as afores'd," &c.

**Curious Error on a Dutch Duyt.—ZEELANDIA, 1754. R.—LVCTOR ET EMENTOR.** Arms of Zeeland. This singular duyt of Zeeland bears the above legend on the reverse, instead of the usual LVCTOR ET EMERGO, *I struggle and emerge*, which refers to the lion coming out of the water on their shield. This curious error of the mint of Zeeland has never yet, that we are aware of, been explained. Can any of our correspondents inform us about it?

**Gold British Coins found at Banbury.**—An anonymous correspondent has addressed a letter to the Gentleman's Magazine, on the coins referred to in the proceedings of the Numismatic Society, cited in the Gentleman's Magazine of January, relative to the gold coin, *Obv.—Ear of corn. R.—QVANTEG. A horse. He reads QVANTE only on Mr. Beesley's coin. This coin, which has been engraved in the Numismatic Journal (Vol. I. p. 223, No. VIII.), and in the last edition of Ruding, as with a fern leaf on the obverse, he considers an ear of corn, and would refer the inscription QVANTE, as a form of CANTI, for Kent.—*Gentleman's Magazine, July, 1843*, p. 39.
X.

UNEDITED AUTONOMOUS AND IMPERIAL GREEK COINS.

BY H. P. BORRELL, ESQ.

[Read before the Numismatic Society, 28th March, 1844.]

AEGAE, IN AEOLIA.

No. 1.—Goat’s head and neck to the right.

R.—Two lozenge-shaped indentures. AR. 2. 12 1/2 grs.

(My cabinet, and Brit. Mus.)

2.—Helmeted head of Pallas to the right.

R.—ΑΙΤΑΕ. Goat’s head, as the preceding. AR. 3. 32 3/10 grs. (My cabinet.)

3.—Another similar. AR. 2. 27 1/2 grs. (My cabinet.)

4.—ΙΕΠΑ. ΚΥΝΚΛΛΗΤΟΣ. Youthful naked head to the right.

(My cabinet.)

Aegae was one of the minor towns of Aeolia, founded 129 years after the siege of Troy, and belonged to the Aeolian confederation.

Silver coins of this city are of great rarity; none similar to those described above have yet been published. No. 1 is of primitive fabric, and is without legend; it was discovered with a few others between Myrina and Cyme, somewhere near where Aegae must have stood. The lozenge form of the indentures is not unfrequently seen on the most ancient money of this and the adjoining provinces.

1 Plutarch, in vit. Themist. 2 Euseb. Chron. lib. ii. p. 100.
3 Herodot. lib. i. c. 149, 150.

VOL. VII.
Nos. 2 and 3 differ from each other merely by their weight; they are of more modern date, when the art of engraving was advancing towards perfection.

Although an autonomous coin, and the only one yet cited with a magistrate's name, No. 6 was most probably struck during the Roman domination, even as low down as the reign of Septimus Severus, as the same name of the στρατηγός, or praetor, Apollodorus, occurs on a coin of Julia Domna, cited by Sestini.⁴

CYME, IN AEOLIA.

No. 1.—Fore part of a horse to the right.

R.—Head of Hercules covered with lion's skin; below, a club, the whole incuse. EL. 1½. 38½ grs. (My cabinet.)

Another specimen, and the only one which ever came under my notice, was in the collection I ceded to the Bank of England. The type of the half-horse was used also by the Atarneans of Mysia, and the correctness of its classification to Cyme must be received with doubt. The same incuse head of Hercules occurs on another coin in Electrum, ascribed by Sestini to Abydus.⁵

No. 2.—Eagle's head to the left.

R.—Rude indented square. AR. 1. 9½ grs. (My cabinet, and Brit. Mus.)

3.—KY. Eagle's head to the right.

R.—Four triangular indentures, placed in the form of the sails of a windmill. AR. 1. 6½ grs. (Same cabinets.)

These two small primitive coins mutually illustrate each other: they are of much earlier date than any yet published; and as Cyme was an important city, we may expect

---

to find larger specimens of the same epoch. The eagle
alludes to Jupiter, whose worship was established here, as
we learn from Herodotus⁶ that in consequence of an oracle
of that god, a colony was sent from Cyme to found the city
of Smyrna.

No. 4.—Eagle looking backward; in the field the monogram ρ².

R.—Fore part of a horse to the right; below, an ear of
barley. A.R. 31½ grs. (Bank of England.)

The above differs from a coin in Mionnet only by the
monogram and the accessory symbol of the ear of barley.

No. 5.—ΟΜΗΡΟC. Homer sitting, facing the right.

R.—KYMAIΩN inscribed in three lines, within a wreath
of oak leaves. ΑΕ. 5. (My cabinet.)

None of the cities connected with the history of Homer
had a better claim to represent his effigy on their money
than Cyme, which was the place of nativity of his mother
Crytheis;⁷ and Smyrna, where it is presumed he was born,
was then building by a colony of Cymean citizens.⁸

Another coin of Cyme, on which is seen a sitting figure
of the great poet, is in the French National Museum, and
bears on the reverse his mother, with the legend, ΚΡΗΘΗΙΚ
KYMAIΩΝ.⁹ Both these coins I believe to be unique: that
of mine resembles in every respect a coin struck at
Smyrna, on the reverse of which is the name of the city
also in three lines; they were probably struck to com-
memorate some particular festival celebrated in these cities
to his honour.

⁸ Herodotus, in vit. Hom. c. 3.
No. 6.—ΙΕΡΑ ΚΥΝΚΑΗΤΟΣ. Head of the Senate to the right.
R.—CT. AY. ΕΛΙΠΙΔΗΦΟΡΟΥ ΚΥΜΑΙ. The genius of the city standing, clad in a short tunic; a globe in his right hand and a trident in his left. ΑΕ. 6. (My cabinet, and Brit. Mus.)

I presume the figure on the reverse of this coin is intended for the genius of the city, as I find it repeated on a coin of Nero, published by Mionnet, on which we read, ΚΥΜΗ ΑΙΩΛΙΚ; and again, on another of Valerianus, Sen., in whose reign my coin was most probably struck, as on it occurs the name of the Praetor, Aurelius Elpidephorus.

No. 7.—ΘΕΩΝ ΝΕΡΩΝΑ ΚΥΜΑΙΩΝ. Laureated head of Nero.
R.—ΘΕΩΝ ΑΓΩΠΠΙΝΑΝ. Veiled head of Agrippina as Ceres, crowned with ears of corn, to the right. ΑΕ. 4. (Same cabinet.)

No Numismatic writers have hitherto noticed a coin of Cyme with the head of the mother of Nero. The following reverse on a coin of Tranquillina is also unedited.

No. 8.—ΦΟΥΡΙΑ ΤΡΑΝΚΥΛΛΕΙΝΑ ΚΕΒ. Head of Tranquillina, wife of Gordianus Pius, to the right.
R.—Ε. ΑΥΡ. ΑΣΚΑΛΗΠΙΑΚΟΥ Γ. Β. ΚΥΜΑΙΩΝ. Diana of Ephesus with her usual attributes. ΑΕ. 4. (British Museum.)

ΑEsclapius is here styled Πράμματες or Scribe for the second time, a title which appears for the first time on the coins of this city.

No. 9.—Α. Κ. ΠΟ. ΑΙΚΙ. ΟΥΛΕΠΙΑΝΟΣ. Laureated head of Valerianus, Sen., to the right.
R.—ΕΠΙ. ΑΥΡ. ΕΛΙΠΙΔΗΦΟΡΟΥ ΝΕ. ΚΥΜΑΙΩΝ. ΑEsclapius and Hygæa standing, facing each other. ΑΕ. 10. (Bank of England.)

UNEDITED GREEK COINS.

No. 10.—A. K. Π. ΑΙΚΗ. ΟΥΑΛΕΡΙΑΝΟΣ. Laureated head of Valerianus, Jun., to the right.

R.—ΕΠΙ. ΑΥΡ. ΕΛΙΠΗΔΗΦΟΙΡΟΥ ΚΥΜΑΙΩΝ. Naked figure of one of the Dioscuri standing, holding a horse by the bridle. Æ. 10. (Bank of England.)

MYRNA, IN AEOLIA.

No. 1.—ΑΥΤ. ΚΑΙ. Α. ΕΠΙ. ΕΩΥΨΗΡΟΣ ΠΕΡ. ΙΟΥ. ΔΩΜΝΑ ΕΒΑΚΤΗ. Heads of Septimus Severus and Julia Domna facing each other, that of Severus laureated.

R. — ΕΠΙ. ΚΤΡ. ΕΥΠΗΙΚΙΟΤΟΥ ΤΟΥ ΑΤΤΑΛΟΥ ΜΥΡΙΝΑΙΩΝ. Hexastyle temple, in which is a standing figure; a patera in right hand and a branch in left. Æ. 11.

This unedited medallion of Septimus Severus and his empress is remarkable for its superior fabric and the beauty of its preservation. It passed from my collection into that of the Bibliothèque Royale, at Paris.

NEONTICHOS, IN AEOLIA.

No. 1.—Helmeted head of Pallas to the right.

R.—ΝΕ, in monogram (no type). Æ. 1. (Brit. Mus.)

Neontichos was the earliest establishment of the Aeolians in Asia.

Formerly, the small copper coins exhibiting for type the head of Pallas, with an owl on the reverse, and NE in monogram, were attributed to the island of Nea, near the coast of Thrace. Cousiniry, having affirmed that they are mostly found in Aeolia, they are generally admitted to belong to Neontichos. I approve of this restitution, and confirm M. Cousiniry’s observation; they have been brought to me from Aeolia and Mysia, with coins of Temnus, Cyme, Larissa, Elaea, Myrina, and Pergamus. With the owl on the reverse, the coins of Neontichos are not uncommon; but that described above is the only one I
ever met with, presenting merely the monogram of
the name of the city, and no other symbol.

TEMNUS, IN AEOLIA.

No. 1.—Laureated head of Apollo, to the right.

R.—TA. AM. Vase, between four bunches of grapes.
AR. 2. 27½ grs. (From my cabinet, in Brit. Mus.)

This silver coin of Temnus is probably unique, none in
that metal having yet been noticed by Numismatic writers.
The head of Apollo is in the same style as on coins of
Aegae, Larissa, Myrina, etc., cities in the same province;
perhaps, Apollo surnamed Cillaeus, who was honoured with
the special worship of all the people of Aeolian origin. On
the reverse the devices, a vase and bunches of grapes, are
symbols of Bacchus, and of frequent occurrence on the
copper money of this city.

No. 2.—THMNITΩN. Apollo, in female attire, standing; his
left arm leaning on a column.

(Brit. Mus., from my cabinet.)

This coin, which is beautifully preserved and the legend
perfect, serves to correct an error Sestini has fallen into,
who publishes a coin from the Cousinery collection offering
precisely the same type, which he describes as follows:

ΜΑΣΤΑΥΡΕΙΤΩΝ. Apollo stolatus stans, S. cubito
columnae innititur.

R.—ΕΠΙ. ΖΩΙΑΟΥ. Fluvius decumbens. ΑΕ. See also
Mionnet, tom. iv. p. 88, No. 455.

There can be no doubt of the identity of the two coins,
and Sestini was most likely misled by M. Cousinery's
manuscript catalogue, which abounds with errors.

I cannot allow the present opportunity to escape without

12 Descriz. p. 430.
pointing out another error in Sestini. In his Lett. Num. tom. iv. p. 112, he notices the following coin.\textsuperscript{13}

ACINIOC ΓΑΛΛΟC. Caput Asinii Galli, nudum.

A second example of the same coin, the legend being more perfect, reading ..ACINIOC ΓΑΛΛΟC ΥΠΙΑΤΟC, and on the reverse, ΑΠΟΔΔΔΑC ΦΑΝΙΟΥ TAMNITAN, he classes to Augustus.\textsuperscript{14} Asinius Gallus, who was consul with Marcus Censorinus, in the year of Rome 745, was not of sufficient importance to appear on the money of the dependencies of the empire; it is the portrait of Augustus which is intended in both cases.

Another imperfect coin of Augustus, struck at Temnus, is ranged by Eckhel, in his Num. Vet. pl. xi. No. 14, p. 190, and Mionnet, Supp. tom. v. p. 236, No. 1890, amongst the coins of Prusias ad Hypium; he reads erroneously—

KAICAP CЄΒΑΣΤΟC Π..ΟΥΙΑΙΑC ΥΠΙΩ.
R.—ΑΠΩΔΔΑC.....ΝΙΟΥ ΤΑΜ...ΤΑ.

It is the same which is correctly described in Mionnet, tom. iii. p. 28, No. 167, under Temnus, as follows—

KAICAP CЄΒΑΣΤΟC ΠΛΟΥΙΑΙΑC ΥΠΙΑΤ. Tête d'Auguste jeune.
R.—ΑΠΩΔΔΑC ΦΑΝΙΟΥ TAMNITAN.

I have a beautiful specimen of this coin, and can vouch for the correctness of the latter version.

LESBOS, INSULA.

The cities of Lesbos offer a rich and remarkable series of primitive coins, but many are difficult to class with any

\textsuperscript{13} See also Mionnet, Supp. tom. vi. p. 41, No. 260.
degree of certainty. I have collected together a number of useful materials and observations, which, when properly matured, I propose communicating in a separate notice.

**ERESUS, IN LESBO INSULA.**

No. 1.—Head of Mercury wearing the *pileus*, to the right.

R. — ΕΡΕΣ. Female head to the right. ΑΕ. 3. (*Brit. Mus., from my cabinet.*)

2.—Same head.

R. — ΕΡΕΣ. Grain of barley. ΑΕ. 1. (*Same cabinet.*)

3.—ΑΥΤ. Κ. Μ. ΙΟΥΛ. ΦΙΑΙΠΠΟΣ. Laureated head of Philippus, Σεν.

R. — ΕΠΙ. ΣΤΡΑ. ΑΥΡ. ΓΑΜΙΚΟΥ Β. ΕΡΕΣΙΩ. Pallas standing; a victory in her right hand, and the hasta in her left. ΑΕ. 9. (*Bank of England, from my cabinet.*)

4.—Μ. ΙΟΥΛ. ΦΙΑΙΠΠΟΣ Κ. Laureated head of Philippus, Jun., to the right.

R. — ΕΠΙ. ΣΤΡ. ΓΑΜΙΚΟ ΕΡΕΣΙΩ. ΑΕ. 6. (My cabinet.)

Sestini has proved the inaccuracy in the classification to Eresus of those coins, in silver and copper, bearing for type *Obv.* head of Ceres, and on *Rev.* ΕΡ in monogram, within a wreath of corn; he restores them to Eretria in Euboea. The four coins above described are indubitably of this city, and are unpublished.

**METHYMNA, IN LESBO INSULA.**

No. 1.—Helmeted head of Pallas, to the left.

R. — ΕΡΕΣ, and a diota; the whole within a sunk square. ΑΕ. 3. 48½ grs. (*Brit. Mus., from my cabinet.*)

2.—Bust of Pallas, to the right.

R. — ΜΗΘΥΜΜΑΙΩΝ. Fortune standing. ΑΕ. 4. (*Same cabinet.*)

The types of these autonomous coins of Methymna are
new. Several primitive coins of the same city I reserve for another opportunity.

No. 3.—AYT...AYP. KOMODA...... Laureated head of Commodus, to the right.

R. —ΕΠΙ...ΚΑΔΑΣ...ΜΗΘΟΥΜΝΑΙΩΝ. Armed warrior, standing between Pallas and another female figure. ΑΕ. 10. (Bank of England, from my cabinet.)

4.—AYT. K. MAP. AY. ΑΝΤΩΝΕΙΝΟΣ. Laureated head of Caracalla, to the right.

R. —ΕΠΙ. ΑΓΡ. ΤΙΜΙΟΥ. ΜΗΘΟΥΜΝΑΙΩΝ. The emperor as Bacchus, a thyrsus in his left hand, in a car drawn by two panthers, preceded by a female figure: on one side of the car is a satyr, and on the other, near the panther, Pan or Silenus. ΑΕ. 9. (Same cab., from same.)

A similar coin to the last, but with the inscription imperfect and incorrectly rendered, is published by Sestini in his Descriz. del Mus. Fontana, pars ii. p. 43, pl. vii. fig. 3; et pars iii. p. 58, No. 2; and Mionnet, Supp. tom. vi. p. 56, No. 34.

MITYLENE, IN LESBO INSULA.

No. 1.—Female head, three-quarter face, bound with a double fillet.

R. —Μ. Bull’s head to the left; the whole in a sunk square. EL. 1 1⁄4. 39 9/10 grs. (My cabinet.)

2.—Bull’s head, to the right.

R. —Μ, and three laurel leaves; the whole in a sunk square. AR. 1 3⁄4. (Bib. Royale, Paris, from my cab.)

3.—Head of Apollo, laureate, to the left.

R. —ΜΥΤΗ. Lion’s head in profile; the whole in a sunk square. AR. 1 3⁄4. 15 grs. (My cabinet.)

4.—ΜΥΤΗ. Lyre.

R. —Lyre, of a different form. AR. 3⁄4. 7 1⁄2 grs. (My cabinet; one in Bank of England weighs 8 grs.)

5.—Laureated head of Apollo, to the right.

R. —ΜΥΤΗ. Female head, to the right. AR. 1 3⁄4. 19 1⁄2 grs. (Bank of England, from my cabinet.)
No. 6.—Another, behind the female head a *diota*. AR. 1½. 19 grs. (*My cabinet.*)

7.—Laureated head of Apollo, with long flowing hair.

R.—MYTI. A lyre; in the field a thyrsus; the whole within a square formed by four bars. AR. 6. 166½ grs. (*Bank of England, from my cabinet.*)

8.—Another as last, uncertain symbol in the field. AR. 6. 169 grs. (*Same cabinet.*)

The first coin in this list is in Electrum, of beautiful fabric, and may be safely assigned to Mitylene. The others exhibit types or symbols differing from any before published.

No. 9.—ΨΑΠΦΩ (sic). Head of Sapho to the right, bound with a plain fillet.

Pollux\(^{15}\) informs us that the Mitylenians struck money with the portrait of Sapho; but it is only of late that any coins bearing her name have been discovered: they were unknown to Eckhel and the contemporaneous writers. The variety in the orthography of the name of this celebrated female, employed on ancient coins and other monuments which have reached us, is remarkable: most of the ancient authors write ΣΑΠΦΩ. On an ill-preserved coin published by Sestini,\(^{16}\) and engraved by Gessner,\(^{17}\) from the Pauw collection, and now in the royal collection at Berlin, before a seated figure holding a lyre is the legend ΣΑΦΩ; and on two other coins, cited also by Sestini,\(^{18}\) we find the name ΣΑΦΟΥΣ, whilst on my coin is ΨΑΠΦΩ. To these may be added the variety ΖΑΦΩ, accompanying her figure on the celebrated vase found at Agrigentum, published by M. Steinbüchel, of Vienna.

---

\(^{15}\) Onomasticon, lib. ix.

\(^{17}\) Viri Illustr. tab. iv. fig. 23.

The history of Sapho is too well known to require any comment here; but, perhaps, it will not be out of place to remark, that many of the romantic actions attributed to her never actually occurred, and much confusion has been apparently occasioned by the admixture of the history of two females of the same name. Visconti\textsuperscript{19} has satisfactorily proved, on the authority of an ancient writer, the existence of these two persons; both Lesbians, though of different cities; both celebrated, though not equally so, in the annals of their respective eras. One (the poetess) was born at Mitylene 612 years B.C.; she is the Sapho mentioned by Herodotus\textsuperscript{20} and the earlier writers, and who is represented on the coin before us. The other was a native of Eresus, as we are told by Athenæus;\textsuperscript{21} she was a courtesan, and although the exact date of her birth is uncertain, there is little doubt it occurred several centuries posterior to that of her namesake of Mitylene. This Sapho (the Eresian) is indebted for her celebrity and the sympathies of posterity to the verses of Ovid, which record her unfortunate passion for Phaon, and her tragical though heroic death; although there is another example in Lais of Corinth, a female of similar manners to the lover of Phaon being represented on the money of her native city, yet it must appear singular that any cultivated people should bestow public honour on such a woman as the Eresian Sapho. These remarks refer to the coin published by M. Allier de Hauteroche,\textsuperscript{22} struck under the Roman emperor Commodus at Eresus. On the reverse of this coin is exhibited a female portrait and the legend \textit{CAΠΦΩ EPECI},

\textsuperscript{19} Iconogr. Grec. tom. i. p. 69.\textsuperscript{20} Lib. ii. cap. 135.\textsuperscript{21} Lib. xiii. p. 596, ed. Casaub.\textsuperscript{22} Notice sur la Courtisanne Sapho née à Eresos, lue à la Société Asiatique; and Mionnet, Supp. tom vi. p. 54, No. 23.
which M. de Hauteroche supposes is intended for the Eresian Sapho mentioned by Athenæus. Doubt was never absent from my mind that this attribution was admissible, but since I became possessor of the coin of Mitylene described above, and thereby obtained an opportunity of making a comparison, I feel persuaded that the same portrait is intended on both these coins, and that it is the poetess and not the courtesan, who is represented on M. de Hauteroche's coin of Eresus. That the Eresians should impress their money with the effigy of the Mitylenian Sapho is less singular than that they should with that of their towns-woman, whose celebrity, as before observed, was of a character little calculated to deserve that honour, and there is nothing repugnant to probability that the poetess should appear on the money of the Eresians; for, although a native of Mitylene, she was a Lesbian, and is often called the "Lesbian Muse," and the people of every city in the island would participate in the glory of acknowledging her their country-woman, and feel interested in honouring her memory.

With regard to the Eresian Sapho, without Athenæus we might still have remained ignorant of her existence, and even now, when brought to light by the researches of the learned, her fame reposes on the most objectionable actions attributed to her namesake; for it is evident that these acts belong to the history of the courtesan, and Ovid availed himself of the licence allowed to poets, to unite the history of both these celebrated females, to increase and diversify the interest in his heroine.

The head-dress of the portrait of my coin differs from that of M. de Hauteroche; on his there is no fillet, and the hair is collected around the head and knotted in a bunch at the crown, an arrangement probably in both cases
in accordance with the taste of the period when the coins were struck; or they might have been copied from different models. Her effigies were doubtless numerous in Lesbos as they were all over Greece. History records two examples; one, a bronze statue, the work of Silanion, in the Prytanion of Syracuse, removed by Verres, and a picture painted by Leon mentioned by Pliny.

No. 10.—ΔΕΩΒΩΝΑΣ ΗΠΟΣ ΝΕΩΣ. Portrait of Lesbonax as Bacchus, crowned with ivy, to the right.

R.—ΜΥΤΙΑΗΝΑΙΩΝ. Ceres standing; a bunch of poppies in her extended right hand, and a long torch, or perhaps the hasta, in her left. ΑΕ. 7. (Bank of England, from my cabinet.)

We have here the portrait of Lesbonax, a Mitylenian philosopher, who flourished in the first century of our era; he is represented under the effigy of Bacchus Brisæus. A similar coin, but with a different subject on the reverse, was first published by Cary, and again by Sestini; its authenticity was, however, suspected till very lately, but other coins of undoubted antiquity have subsequently been discovered.

No. 11.—ΘΕΟΣ ΑΜΜΩΝ. Bearded head of Jupiter Ammon, to the right.

R.—ΕΠΠ. ΤΡΠ. ΒΑΛ. ΑΡΙΚΤΟΜΑΧΟΥ ΜΥΤΙΑΗΝΑΙΩΝ. Cybele sitting, to the right. ΑΕ. 9. (Bank of England, from my cabinet.)

12.—ΘΕΟΣ ΑΜΜΩΝ. Head, as last.

R.—ΕΠΠ. ΤΡΠ. ΒΑΛ. ΑΡΙΚΤΟΜΑΧΟΥ ΜΥΤΙΑΗΝΑΙΩΝ. ΑΕsculapius and Hygeia standing, with their usual attributes. ΑΕ. 9. (Same cabinet, from same.)

23 Cicero, Verres, iv. 57.
24 Cap. xl.
25 Dissert. sur la Fond. de la Ville de Marseille, p. 131.
These two unedited coins come under the denomination of "autonomous," but were certainly minted under the Roman empire, as late as the reign of Valerianus, Sen., on whose coins, struck at this city, is the same name of the prætor Valerianus Aristomachus. The worship of Æsculapius was probably introduced into Lesbos from Pergamus. With the people of that city the Mitylenians were always on friendly terms.

No. 13.—ΠΡΟΘ ΑΕΣΒΟΥ ΜΥΤΙΑΘΝ. Turreted female head, to the right.

R.—ΕΠΙ. ΣΤΡ. ΒΑΑ. ΑΡΙΣΤΟΜΑΧΟΥ ΜΥΤΙΑΘΝΑΙΩΝ. Jupiter and Cybele standing. Æ. 10. (Same cabinet.)

14.—Same head and legend.

R.—ΕΠΙ. Σ. ΒΑΑ. ΑΡΙΣΤΟΜΑΧΟΥ ΜΥΤΙΑΘΝΑΙΩΝ ΚΑΙ ΠΕΡΓΑΜΗΝ ΟΜΟΝΟΙΑ. Mitylene and Pergamus personified by two females wearing turreted crowns, standing, presenting to each other the patron deities of their respective cities, which they hold in their right hands. Æ. 9. (Same cabinet.)

The legend on the obverse of the two preceding coins bears testimony to the consideration Mitylene enjoyed over the other cities of Lesbos. The latter refers to an alliance, probably of a religious nature, between Mitylene and Pergamus.

No. 15.—ϹΕΥϹ ΒΟΥΛΑΙΟϹ. Bearded naked bust of Jupiter to the left.

R.—ΕΠΙ. ΣΤΡ. ΒΑΑ. ΑΡΙΣΤΟΜΑΧΟΥ ΜΥΤΙΑΘΝΑΙΩΝ. Æsculapius seated to the left a patera in his extended right hand, and a long knotted club in his left; before him, a serpent. Æ. 18. (Same cabinet, from same.)

This is a beautiful medallion, in the finest possible preservation, and of most excellent execution for the period; which, with the four preceding coins, was struck during the reign of Valerianus, Sen., as it exhibits the same prætor's name, Valerianus Aristomachus. Jupiter, whose
bust appears on the obverse, is surnamed "Boulaeus," or the Councillor, ΖΕΥΣ ΒΟΥΛΑΙΟΣ. There was a statue of this Jupiter at Athens. Two or three other medallions, with the head of Jupiter the Councillor, but with different reverses, are noticed by Eckhel and other numismatic writers.

No. 16.—ΦΑΥΣΤΕΙΝΑ ΣΕΒΑΣΤΗ. Profile of the younger Faustina to the right.
R.—ΕΠΙ. ΣΤΡ. ΠΟΜ. ΤΡΥΦΩΝΙΑΝΟΥ ΜΥΤΙΑ. Diana in a car, drawn by two stags. Æ. 9. (Same cabinet, from same.)

No coins have yet been noticed of the younger Faustina struck at Mitylene. The name of the prætor Tryphonianus appears on the money both of Marcus Aurelius and of Lucius Verus.

No. 17.—ΚΡΙΣΙΠΠΙΝΑ ΣΕΒΑΣΤΗ. Head of Crispina to the right.
R.—ΕΠΙ. ΣΤΡ. ΦΟΥ. ΔΙΟΝΥΣΙΟΥ ΜΥΤΙΑΗ. Bacchan and Ceres standing before an altar. Æ. 10. (Same cabinet, from same.)

18.—ΔΥΟΥ. ΣΕΠΙΤΙΜΟΣ ΓΕΤΑΚ ΚΑΙΚΑΡ. Naked bust of Geta to the left.
R.—ΕΠΙ. ΣΤΡΑΙΟ ΙΟΥΑΙ ΑΕΟΝΤΕΩΣ ΜΥΤΙΑΗ-NAIΩΝ. Caracalla and Geta standing, holding each other by the hand; the former crowned by a standing figure of Victory, and the latter by a seated figure of Cybele. Æ. 10. (Same cabinet, from same.)

19.—ΑΥΤ. Κ. Μ. ΑΥΡ. ΑΝΤΩΝΕΙΝΟΣ. Laureated head of Caracalla to the right.
R.—ΕΠΙ. ΣΤΡ. ΑΥ. ΠΟ. IO. ΑΕΟΝΤΕΩΣ ΜΥΤΙΑΗΝAIΩΝ. Bacchus and Apollo standing. Æ. 10. (Same cabinet, from same.)

20.—ΙΟΥΛ. ΑΥΤΟΥ ΜΑΜΕΑ ΣΕΒ. Head of Julia Ma- maea to the right.
R.—ΣΤΡ. ΑΥ. ΠΡΟΣΔΕΚΤΟΥ ΠΑΡ. ΜΥΤΙΑΗΝAIΩΝ. Equestrian at full speed; on the ground, a dead warrior and a shield. Æ. 10. (Same cabinet, from same.)

28 Pausanias, lib. i. cap. 3.
No Grecian city was more attentive in rendering homage to the masters of the universe and the members of their families than Mitylene. A complete series of the Roman emperors may almost be formed from Augustus to Gallienus; and many portraits may be found which rarely occur elsewhere.

All the imperial coins in this list came into my possession, with nearly four hundred others, in 1825. With few exceptions, they consisted of large brass coins of the emperors from Antoninus Pius to Gallienus, and were found at Mitylene. Besides the Lesbian cities of Mitylene, Methymna, and Eresus, there were numerous coins of cities of Ionia, Æolia, and Mysia.

NASI VEL NAPI, IN LESBO INSULA.

No. 1.—Laureated head of Apollo to the left.
   R.—NAXI. Lyre; in the field, a palm branch. Æ. 4. (British Museum, from my cabinet.)

2.—Same head to the right.
   R.—NAXE. Panther walking to the right. Æ. 1. (Same cabinet, from same.)

3.—Same head as preceding.
   R.—NAXI ΔIONY. Tripod. Æ. 4. (Same cabinet, from same.)

4.—Same head.
   R.—NAXI. Dolphin; below, palm branch. Æ. 5. (My cabinet.)

Scylax and Pomp. Mela state there were but five cities in the island of Lesbos; but Pliny mentions eight, namely, Pyrrha, Eresus, Antissa, Arisba, Methymna, Hiera, Agamede, and Mitylene. Besides these, Strabo and Stephanus add another, which they write Nape (Nαπη),\(^{29}\) situated,

---

according to Strabo, in the district of Methymna. As the four coins described above are evidently of Lesbian origin (for, independently of the similarity in the style of work with coins of other cities in the island, they were all procured there), it is to be inferred that the orthography, *Nape*, is corrupt; and that we should read, in ancient writers, *Nαση*, as doubtless the ΝΑΣΙ on the coins is, the abbreviation for ΝΑΣΙΩΝ. It is hardly necessary to remark, that the silver coin published by Mionnet,\(^{30}\) from the Cousinery collection, on which that numismatist read ΝΑΠΙ, is incorrect. A similar one is now before me, in fine preservation, on which the legend is ΝΑΣΙ; and another is amongst the coins I ceded to the Bank of England.

**PYRRHA, IN LESBO INSULA.**

No. 1.—Female head, bound with a fillet, to the left.

R.—ΠΥΡΡ. A goat standing to the left. "Ε. 2. (*My cabinet: another in British Museum.*)

2.—Same head.

R.—ΠΥΡΡ. Goat as last, before an altar. "Ε. 2. (*My cabinet.*)

Geographers mention no less than nine cities of ancient Greece of the name of Pyrrha; but I have no hesitation in assigning my two coins to the city of that name in the island of Lesbos, where they and a few more were actually found, and of which no money has hitherto been noticed by numismatic authors. I might, however, except a coin in the Hunterian collection,\(^{31}\) attributed to Pylos, which I strongly suspect should be read ΠΥΡ. or ΠΥΡΡ., instead of ΠΥΛ.; in other respects the coins are exactly alike. The female head is probably of Ceres, and the goat is a symbol

---

\(^{30}\) Tom. iii. p. 60, No. 188.

\(^{31}\) Coombe, Vet. Pop. et Urb. Tab. xlv. fig. 8.
of Bacchus, or of the mountainous nature of the country: to this day the vicinity of Pyrrha is famous for numerous flocks of these animals.

Although Pyrrha is ranked amongst the five principal cities of Lesbos, it has seldom figured in history for anything remarkable. It was situated on the west coast of the island, on the gulf of the same name, Pyrrheaum Euripum, distant 100 stades from Cape Malia, and 80 from Mitylene, between Eresus and the promontory Sigæum. Pomponius Mela and Thucydides write the name Pyrrha, but these coins show those authors are more correct who write Pyrrha.

IONIA.

ARSINOE, IN IONIA.

See my article in the Numismatic Chronicle, vol. ii. p. 177, entitled, "Restitution to the city of Ephesus (when called Arsinoe) of the coins hitherto attributed to Arsinoe in Cyrenaica, and to Arsinoe in Cilicia."

CLAZOMENE, IN IONIA.

No. 1.—Laureated head of Apollo, front face.

R.—ὙΠΑΚΛΕΥ...ΚΑΑΖΟ. A swan standing to the left, his wings expanded, and his head turned backward. AR. 7. 250½ grs. (My cabinet.)

The smaller silver coins of Clazomene, offering the same type as the above, are not uncommon; but of this magnitude and weight none have yet been published.

No. 2.—Δ. ΑΥ. ΚΟΜΟΔΟϹ ΚΑΙϹΑΡ. Naked youthful head of Commodus to the right.

R.—ΚΑΑΖΟΜΕΝΙΩΝ. The philosopher Anaxagoras

---

standing, wearing the *pallium*; a globe in his right hand, his left foot resting on a cippus. *Æ. 4. (British Museum, from my cabinet.)*

It is generally acknowledged that Visconti is correct in his opinion that it is the philosopher Anaxagoras on an autonomous coin he publishes, and there can be no doubt the same personage who is represented upon this unedited coin of Commodus. He is here seen bearing the same symbol, and in similar costume, as Hipparchus on the money of the Niceans, and Pythagoras on that of the Samians.

Anaxagoras, who studied philosophy at Athens, was the disciple of Anaximenes, and preceptor of Socrates, Euripides, and Pericles; the last often consulted him on matters of importance. Anaxagoras was banished Athens on account of his doctrines; or rather, as some suppose, the charges were invented by the enemies of Pericles. He retired to Lampsacus, where he died B.C. 488, in the 72nd year of his age.

**EPHESUS, IN IONIA.**

No. 1.—Lion's skin on a club, within a wreath of vine leaves.

R. — *ΕΦΕ*. Bunch of grapes on vine leaves; in the field,
A. AR. 4. (My cabinet.)

Here is another specimen of a subdivision of a cistophorus struck at Ephesus, similar in type to one I have described amongst my unedited coins of Pergamus, and to those of Tralles and Nysa, given for the first time by Mionnet. I believe it to be unique.

---

33 Iconograph. Grec. Suppt. p. 6, pl. 'A. No. 2.
ERYTHRÆ, IN IONIA.

No. 1.—A full-blown rose, front view.
R.—Two parallel indented squares. AV. 2. 40 grs.
(\textit{Bank of England, from my cabinet.})

I have ventured to assign this anepigraphic and very primitive gold coin to Erythrae, firstly, on account of its having been procured by myself from a peasant, who found it in cultivating a vineyard on the actual site of the ancient city; and, secondly, because the figure of a full-blown rose is seen on some of the silver coins of a later period of Erythrae.

No. 2.—Helmeted head of Pallas to the right.
R.—E. and the monogram Ω. (No type.) AR. 1. 13 3/4 grs.
3.—Radiated head of Apollo, front face.
R.—E. MHNKPATH... in four lines, occupying the whole of the field. Α. 1 1/4.
4.—ΕΡΥΘΡΑΙ. Helmeted head of Pallas to the right.
R.—...ΑΙΚΧΡΙΩΝ. Four ears of corn. Α. 3.
5.—ΕΡΥΘ. Head as the preceding.
R.—Bunch of poppies and ears of corn. Α. 3.
6.—ΕΡΥΘΡΑΙ. Turreted female head.
R.—ΕΡΥΘΡΑΙΩΝ. Basket, containing four ears of corn. Α. 3.
7.—ΔΗΜΟΣ ΕΡΥΘΡΑ. Bearded head with diadem to the right.
R.—ΕΡΥΘΡΑΙΩ...A. ΚΑ. Pallas standing to the left, a patera in right hand, and shield in left. Α. 4.
8.—ΙΕΡΑ ΚΥΝΑΗΤΟΣ. Youthful head of the senate.
R.—ΕΠΙ. ΚΤΡ. ΚΑ. ΚΕΚΟΥΝΔΟΥ ΕΡΥΘΡΑΙΩΝ. Hercules naked, standing; a club in his right hand, and the lion’s skin over his arm. Α. 6 1/4.
9.—ΚΑΙΤΑΡ ΑΥΡΑΙΟΣ. Naked head of Marcus Aurelius to the right.
R.—ΕΠΙ. ΚΤΡ. ΚΟΥΗΝΔΟΥ ΕΡΥΘΡΑΙΩΝ. Naked figure of Hercules standing in a temple, his club uplifted in his right hand, and an arrow in his left. Α. 10.
The whole of the preceding coins of Erythrae have passed from my collection either into the British Museum or into the Bank of England; their types and legends offer nothing peculiarly remarkable, their only merit consists in their being unedited.

To this city (Erythrae) Mionnet has assigned a remarkable di-stater, which he describes as follows:—

ΦΑΝΝΟΖΕΜΙΣ ΕΠΥ. (En grec ancien, retrograde) un cerf d'une espèce très voisine de l'élan, marchant à dr., la tête inclinée; dessous, le monogram, (586.)

R.—Aire en creux de forme oblongue et disposée en croix, avec des ornementes irréguliers dans l'intérieur.35 EL. 6. (Supp. vi. p. 213, No. 896.)

This unique coin I brought to Europe from Smyrna, in 1825, and it is now in the Bank of England. On my route to London, through Paris, I allowed M. Mionnet to take an impression of it; and I understood ultimately that it was the suggestion of M. Allier de Hauteroche, that decided M. Mionnet to class it to Erythrae. As I have a cast of the coin now before me, I confess I cannot read the legend as it appears in the above description; the type is of archaic fabric as well as the formation of the letters composing the legend. It is but a feeble foundation for supposing it of Erythrae because the name "Phannozemis" happens to occur on a silver coin of the same city, evidently struck three centuries later.

In my original catalogue, this curious coin is ranged amongst the "Uncertain," and the legend has hitherto remained indecipherable.

35 Mr. Weston has noticed this coin in his Historic Notices of Towns in Greece, etc., Addenda, p. 162; he presumes it to belong to Physcus, in Caria, a classification equally inadmissible as that of M. Mionnet.
LEBEDUS, IN IONIA.

No. 1.—Helmed head of Pallas, to the left.

R.—ΔE. ANAK. An owl; in the field, prow of a galley. AR. 2. 23 grs. (Bank of England, from my cabinet.)

2.—Head, as the preceding.

R.—ΔE. ΗΓΙΑ. Type as the preceding. AR. 2. 22½ grs. (British Museum, from my cabinet.)

3.—Head, as the preceding.

R.—ΔE. ΠΙΑΣ. Type as before. AR. 2. 20 grs. (Idem, from same cabinet.)

4.—Head, as the preceding.

R.—ΔE. ΚΑΛΙΣΤΟ. Type as before. AR. 2. 21½ grs. (My cabinet.)

5.—Pallas standing, to the left; a shield on her left arm, and a spear over her shoulder.

R.—ΔΕΒΙΔΕΩΝ...ΟΔΟ...Thyrsus and cistus. Ε. 4. (Bank of England, from my cabinet.)

Silver coins of Lebedus are excessively rare: those of the small dimensions, like the four described above, exhibit names of magistrates different from any yet published.

LEUCE, IN IONIA.

No. 1.—Helmed head, front face of Pallas, with necklace.

R.—ΔΕΥ. Lion standing, to the left; looking backward. Ε. 2. (British Museum, from my cabinet.)

Tachas, a Persian rebel, founded the town of Leuce in the second year of the ninety-third Olympiad, but dying ere his undertaking was completed, its possession was disputed by the Clazomenians and Cymeans. The oracle at Delphi, to whom their respective claims were referred, decreed the exclusive right of it to those of the two parties who should first offer sacrifice there in the temple of Apollo. The Clazomenians, though more distant, were

36 Diod. Sic. lib. xv.
more alert, and fulfilled the commands of the Pythia before their adversaries; and the town being awarded to them, they took immediate possession, and established in it a colony of their own people.

At first view, this singular coin might be mistaken for one of Miletus, the lion looking backward being a device constantly employed on the money of that city; but, as the accessory symbol of the star as well as the monogram composing the initial letters of the name of Miletus are omitted, and are replaced by those of Leuce, I consider that my classification may be accepted.

The star on the coins of Miletus associated with the lion, as well as when it appears alone, as on the coins of Gambrium, Colona, and Thymbria, refers to the worship of Apollo; so does the lion itself: it is, therefore, a suitable type for the money of Leuce, as it would appear that Apollo was the chief deity or patron of the place, since it was in his temple the Pythia commanded the sacrifice alluded to above. The obverse exhibits a head of Pallas, front face, precisely in the same style as she is represented on some of the copper money of Clazomene, and very different to any thing to be observed on the currency of Miletus.

MAGNESIA, IN IONIA.

No. 1.—Horsem an at full speed, to the right; a lance in his right hand.

R.—ΜΑΓΝ. ΔΙΟΝΥΣΙΟΣ ΙΚΕ. Bull butting; in the field, a flower; the whole encircled by the Meander. AR. 5. 86 grs. (My cabinet.)

2.—Helmed head of Pallas, to the right.

R.—ΜΑ. Trident; the whole encircled by the Meander. AR. 1. 11½ grs. (British Museum, from my cabinet.)

It is sometimes difficult to distinguish the coins of the
three cities of Magnesia, situated in Ionia, Lydia, and Thessaly; those, as on the two above, on which are represented the windings of the Meander, admit of no doubt. They both differ from those already published.

**MILETUS, IN IONIA.**

Laureated head of Diana, to the right; bow and quiver over her shoulder.

_R._—...ΣΙΟΝ ΒΙΩΝ. Lion, walking from left to right, looking backward at a star. _AV._ 4. 130½ grs.

Although Miletus was one of the most important Ionian cities, it is remarkable that this is the only gold coin yet discovered; it differs from the well-known silver coins, by the head of Diana on the obverse instead of Apollo; her worship was united with that of her twin brother at Didymi. This Numismatic treasure was procured in Smyrna, in 1829, and is now in the collection of the Bank of England.

**NEAPOLIS, IN IONIA.**

Female head, probably of Juno, wearing an elevated diadem, to the left.

_R._—ΝΕΑΠΟΛΙΤΩΝ. Neptune sitting on a rock, to the right; in his extended right hand is a dolphin; a trident in his left, which he holds across his shoulder; in the field, a small dolphin in countermark. _Æ._ 5. (Bank of England, from my cabinet.)

The only autonomous coin assigned to this city was first published in the catalogue of the Earl of Pembroke's collection; the head on which, though front face instead of in profile, would seem to be that of Juno Moneta, whose worship was probably introduced from Samos, opposite to which island Neapolis is situated. As Neapolis was a maritime city, and not far from Panionium, where festivals were celebrated in honor of Neptune by the united cities
of Ionia, the inhabitants had a double motive for impressing their money with the figure of that deity.

I procured this coin from Scalanova, a modern town not far from the site of the ancient Neapolis, of which no vestiges remain.

**PHYGELA, IN IONIA.**

Head of Diana Munychia, front face, wearing an elevated diadem.

R.—ΦΥΓ. Bull, butting, to the left; the whole within a wreath of myrtle. Ἔ. 4. (Brit. Mus., from my cab.)

This coin exhibits no difference from those already published, excepting in the present instance the subject on the reverse is encircled with a wreath of myrtle.

**PRIENE, IN IONIA.**

No. 1.—Helmed head of Minerva Polias, to the left.

R.—ΠΡΙΗ. ΒΙΑΣ. and a trident; the whole encircled by the Meander. AR. 4. 71½ grs. (Brit. Mus., from my cab.)

2.—Another, as the preceding, but with ΠΡΙΗ. ΙΩΙΑΟ. AR. 4. 73½ grs. (Bank of England, from same.)

3.—Another, as the preceding, but with ΠΡΙΗ. ΕΠΑΜ. Alt. 4. 76½ grs. (My cabinet.)

4.—Head, as the preceding.

R.—ΠΡΙΗ....Hippocampus. AR. 3. 58 grs.

5.—Same head.

R.—ΠΡΙΗ. ΔΗΜΗΤΡΙΟΣ. Owl on a diota, within an olive wreath.

With the exception of No. 4, the above offer nothing peculiar; the magistrates' names are new.

Priene was one of the confederate Ionian cities which offered sacrifices to Neptune at Panionium, which accounts for the devices exhibited on these coins—the trident and the hippocampus. Eratosthenes, cited by Strabo, mentions
that the statue of Neptune Heliconius, so called from Helice in the Peloponnesus, from whence the Prienians derived their origin, was represented with a hippocampus in his hand.

**Smyrna, in Ionia.**

No. 1.—Cista or mystic chest of Bacchus, out of which a serpent is protruding, within a wreath of ivy.

R.—Two serpents interlaced, between them a bow and quiver, in the field ZMYP, the letter A, and a female head with turreted crown. AR. 8. 182⁵⁄₄ grs.

Previous to the discovery of this unique coin, numismatists were ignorant of the Smyrnians having joined the people of other Asiatic cities who fabricated the description of money called Cistophori. It was procured at Smyrna in 1824, and is now in the collection of the Bank of England.

**Teos, in Ionia.**

No. 1.—Griffin with expanded wings, sitting, his right fore paw lifted up; to the left.

R.—A sunk circle, divided into four equal compartments by a cross. AV. 1⁴⁄₅. 29 grs. (Bank of England, from my cabinet.)

In the absence of a legend, it is the style of work and the locality of its discovery which induces me to assign this small gold coin to Teos in preference to Abdera; it is unique of this size.

No. 2.—Griffin, as last, sitting on a plinth ornamented with dots.

R.—Indented square divided by a double cross. AR. 5. 176⁴⁄₅ grs. (Same cabinet, from same.)

3.—THI. Griffin, his right fore paw lifted up; in the field, a grain of barley.

R.—Indented square divided into four equal compartments. AR. 6. 180⁹⁄₁₀ grs. (My cabinet.)
No. 4.—THION. Griffin, in a sitting posture, to the right; his wings rounded at the extremities; in the field, a grain of barley.

R. — Rude indented square divided into four unequal parts. AR. 6. 168 grs. (Bank of England, from my cabinet.)

5.—Griffin as No. 1; before, the letter T and a globula.

R. — Indented square divided into four parts. AR. 2. 28½ grs. (Same cabinet, from same.)

6.—Griffin as last.

R. — Indented square as last. AR. 1. 5½ grs. (Same cabinet, from same.)

Nothing peculiar is exhibited in the five preceding coins of Teos, excepting their types or symbols offer some trifling varieties compared with those previously described by numismatic writers.

TEOS IN IONIA, AND LEBEDUS IN IONIA.

No. 1.—Griffin, to the right, his left fore paw lifted up, in a sunk square.

R. — Two rams’ heads facing each other, in the act of butting. AR. 1. 9 grs. (British Museum, from my cab.)

The obverse side of this diminutive coin exhibits the usual type of Teos, the reverse (without legend) offers two rams’ heads in the act of butting. This device is new on the money of Teos, but is seen upon a coin in electrum which Sestini\(^{37}\) assigns to Lebedus. Should he be correct, it may be concluded that the coin in question was struck to record an alliance between Teos and Lebedus, both of them cities of the Ionian confederation. Another coin in my possession, which is also published by Sestini,\(^{38}\) exhibits the griffin on one side, and a single ram’s head on the other; this I take

\(^{38}\) Desc. del Mus. Hederv. tom. ii. page 201, No. 15; Mionnet, Supp. tom. vi. page 376, No. 1892.
to allude to a tacit alliance between Teos and Clazomene. A third example of a monetary union between two Ionian cities, is that which offers the winged wild boar in connection with the lion's head on the opposite side, with or without the letters 'ΣΑ'; denoting evidently, by their respective symbols, the cities of Clazomene and Samos.  

**SAMOS, INSULA.**

No. 1.—Fore part of a bull to the right, his head turned to the left.

My assignment of this double stater to Samos reposes solely on the place of its discovery: it was found at Samos but procured at Smyrna.

No. 2.—Skin of lion's head, front face.

R.—Bull's head within a granulated square. A.R. 5. 200½ grs.

3.—Same head.

R.—ΣΑ. Fore part of a bull without the legs, to the right; the whole in a sunk circle. A.R. 6. 202½ grs.

4.—Another as last, above the bull an astragalus. A.R. 5. 201 grs.

5.—Another as last, behind the bull a laurel branch. A.R. 5. 202½ grs.

6.—Another as last, behind the bull is a bird. A.R. 5. 204½ grs.

7.—Another as last, behind the bull is a fish. A.R. 5. 201½ grs.

8.—Another as last, above the bull an uncertain animal. A.R. 5. 203½ grs.

---

39 To these may be added a coin described in Mionnet, tom. iii. page 265, No. 2, with the usual devices of Clazomene and Chios.
No. 9.—Another as last, above the bull is a wheel. AR. 6. 201½ grs.
10.—Another as last, above the bull a leaf. AR. 5. 200 grs.
11.—Another as last; behind the bull a prow of a galley. AR. 6. 199 grs.
12.—Another as last; above the bull, ΣΑΜΙΟΝ. AR. 6. 196½ grs.
13.—Head as last.
   R.—Fore part of a bull, his right fore leg doubled under him; in the field ΣΑ, the letter Γ; and behind, a laurel branch; the whole within a flat sunk square. AR. 6. 200½ grs.
14.—Another as last, but with the letter Η in the field. AR. 6. 201¼ grs.
15.—Another; in the field, the letter Θ. AR. 6. 202½ grs.
16.—Another; in the field, the letter Κ. AR. 6. 204¼ grs.
17.—Another; in the field is the head of a lioness or a panther. AR. 6. 203½ grs.

Most of these coins are of early fabric; they offer adjuncts which differ from the rich series already published. The last coin is remarkable: it presents the head of some animal, either a lioness or a panther, in the field; the same head occurs as a principal type on a very small unedited coin described lower down under No. 29. The prow of a galley on No. 11 is also repeated as a principal type upon coins of this island, of which numerous examples have come under my notice, and are described in Mionnet, Supp. vi. p. 409, No. 148; and Damersan, Descr. du Cab. Allier de Hauteroche, pl. xvi. fig. 13.

It is worthy of remark, that the ancients frequently employed the principal symbols of this smaller coin as adjuncts on the larger. I once was shown a remarkable series of coins found by a particular friend of mine; it was composed of about seventy Athenian tetradrachms, and as many cop-
per coins; the principal types on the latter, without exception, were transferred as adjuncts on the tetradrachms.

No. 18.—Obverse as the preceding.

R.—ΣA. Fore part of a bull as last; behind, the laurel branch; the whole in a sunk square. Without the square are the letters ΑΘΕΝ. AR. 6. 202 grs.

This coin exhibits an interesting feature: the letters ΑΘΕΝ are outside the square; an unusual peculiarity. At first sight, it would be supposed the Samians had re-struck a coin of Athens with their own devices, and that the original legend had not been obliterated by the new impression; similar examples are not uncommon upon ancient coins. To this conjecture there are irreconcilable objections. 1st. The weight is less by above one third than the Athenian tetradrachm, nor is there any analogy with any other known coins of Athens. 2nd. The formation of the alpha on my coin differs from that employed on the Athenian coin of the same age; on these last the middle bar, commencing at the middle of the left limb, slants angularly to the bottom of the right, thus Α, whilst on the coin before us it runs straight across Α. 3rd. The old Athenian money invariably read ΑΘΕ, and never ΑΘΕΝ. Notwithstanding the peculiarity of the case, it becomes a matter of enquiry what can be the meaning of these letters; and nothing more probable can be conjectured in explanation, than by supposing it was purposely struck to record some historical fact in which the two people were mutually interested. This hypothesis being conceded, it may have originated at that period when the Athenians sided with the Samian democracy, when the former interfered in the war between Samos and Miletus.40

40 Thucydides, lib. i. cap. 115.
Another alliance between Samos and Athens occurred after the battle of Mycale, which is mentioned by Herodotus; but this is too early for the fabric of my coin. The most probable event, however, and the only remaining instance noticed by ancient writers, that could have given rise to the mintage of money at Samos, on which allusion to Athens might be expected, is that which, though unrecorded by Thucydides, is found in Strabo and Heraclides of Pontus. They inform us that a colony of 2,000 Athenians were sent to divide the Samian lands, when these islanders were reduced to accept a humiliating peace after their total defeat by Pericles; this event occurred in the last year of the 84th Olympiad or B.C. 441, a date which agrees perfectly with the apparent age of the coin. I have thrown out the preceding suggestions; but after all there is something so unusually strange in the position occupied by the supplementary legend on the coin, that I confess myself dissatisfied with my own attempts to reconcile what appears to me a mystery; and I consequently leave the final decision of the question to more acute and able hands.

No. 19.—Head as preceding.

R.—Fore part of a bull as last, the neck ornamented with a sort of collar of net work; behind, a laurel branch; above, ΣΛ; the whole in a sunk square. AR. 6. 202½ grs.

The execution of this coin is in superior style, and marks an epoch when the art of engraving approached to perfection in this island.

41 Lib. ix. cap. 106.
42 Strabo, lib. xiv. p. 638; and Heraclides Pont. περὶ πολιτείων, edit. Coray. p. 211.
No. 20.—Another, as the preceding.

R.—ΔΗΜΗΤΡΙ. ΑΝΤΙΑ... ΣΑ. Fore part of a bull, wearing an ornamental collar, as No. 19; behind, a laurel branch; the whole in a sunk square. AR. 6. 254½ grs.

Although the weight of this coin differs materially from any other coin of Samos, yet there is nothing in its appearance to justify the slightest suspicion of its authenticity.

No. 21.—Head, as last.

R.—ΣΑ. ΠΙΓΕΝΗΣ. Fore part of a bull, his legs doubled under him; in the field, a laurel branch. AR. 4. 101 grs.

22.—Another.

R.—ΣΑ. ΛΟΧ. Fore part of a bull, as last; the whole in a sunk square. AR. 2. 26 grs.

23.—Another.

R.—Fore part of a bull, without legs; no legend or symbols; in a sunk square. AR. 2. 7½ grs.

24.—Fore part of a bull, to the left.

R.—Type of obverse repeated, in a sunk square. AR. 2¼. 32½ grs.

25.—Lion’s head in profile, to the right, the mouth open; in a deep square.

R.—A winged boar. AR. 1¼. 19 grs.

26.—Another; above the lion’s head an olive branch; in a sunk square.

R.—As last. AR. 1¼. 19 grs.

27.—ΣΑ (retrograde). Lion’s head, as last; in a sunk square.

R.—As last. AR. 1¼. 19½ grs.

28.—Lion’s head, as last; behind, ΣΑ.; below, a laurel branch; the whole within a sunk square.

R.—As last. AR. 1¼. 18¾ grs.

All these coins, exhibiting a lion’s head in profile, and the winged wild boar on the reverse, I presume were struck
on the occasion of some alliance between the Samians and Clazomenians.

No. 29.—Head of a lioness, or panther, in profile, to the left.
    R.—Ram’s head, to the right, in a deep sunk square. AR. 1. $15\frac{8}{10}$ grs.

30.—The same; but the sunk square ornamented internally with a granulated border. AR. 1. $17\frac{8}{4}$ grs.

31.—The same; excepting the type of reverse is in a slightly sunk circle. AR. 1. $13\frac{3}{10}$ grs.

32.—Panther’s head, as the preceding.
    R.—Ram’s head, to the right; above, ΣΑ.; below, a laurel branch (*no square*). AR. 1. $13\frac{4}{5}$ grs.

The four last coins are those I alluded to in my remarks on No. 17, upon which precisely the same panther’s head appears as an adjunct; the two first, Nos. 29 and 30, are of much earlier fabric than the two which follow.

No. 33.—Diota in a deep sunk square.
    R.—Prow of a galley. AR. 1. $8\frac{1}{5}$ grs.

34.—Diota between the letters ΣΑ. and a laurel branch.
    R.—Prow of a galley. AR. 1. $11\frac{1}{4}$ grs.

35.—Lion’s head, front face.
    R.—ΣΑ. Prow of a galley. AR. 1. $16\frac{3}{10}$ grs.

36.—Head of Juno, to the right.
    R.—ΣΑΜΙΩΝ. Prow of a galley. AR. 2. $14\frac{5}{10}$ grs.

As the whole of these thirty-six coins of Samos have passed from my collection to the British Museum, I considered it useless to cite that cabinet after the description of every separate coin. So many unpublished silver coins as are here enumerated, is sufficient proof of the numismatic riches of an island at this day so unimportant.

H. P. Borrell.
NEW PROPOSED READING OF CERTAIN COINS OF CUNOBELIN.

[Read before the Numismatic Society, April 25, 1844.]

My dear Sir,

May I beg the favour of your communicating to the Numismatic Society a discovery which I believe I am the first to have made, relative to the reading of the coins of Cunobelin? Having latey had occasion to examine, with my colleague, Mr. Fitz-Gerald, some of the coins of this prince, I believe I can now offer to the Numismatic Society a probable solution of the meaning of the hitherto obscure and difficult word Tascia, or Tuscia, on the money of this monarch. My reading is based upon three coins, impressions of which accompany the present letter, and which I beg the favour of your laying before the Numismatic Society.

No. 1.—CVNO. in a square; the whole in a double wreath.

R.—TASC. F. Pegasus, galloping to right. AR. 1. (Unedited.) Fig. 1.

2.—CVNOBELIN. Unbearded head galeated.¹

R.—TASCHIOVANI F. Boar running to left. Æ. 2½. Fig. 2. (Ruding's Ann. of Coinage, Pl. v. fig. 23.) (British Museum.)

3.—CVNOBELIN...² Head laureated to left.

R.—TASCHIOVANI F. Centaur, gradient to right, blowing a horn. Æ. 3. (Ibid. fig. 17.) (Brit. Mus.) Fig. 4.

² Ibid. No. 27.
Coins of Cunobelin.
No. 4.—CVNOBEL. Unbearded head galeated, to the left.

R.—TASC. FIIL. (?) Boar biting a snake, to the left.

Æ.3½. (Cabinet of Mr. Wigan, Clare House; E. Malling.) Unedited. Fig. 3.

In the first place, the coin, No. 1, which was found at Sandy in Bedfordshire, in 1837, reads most distinctly TASC, then a period, and F. Nos. 2 and 3 have been rendered, by Taylor, Combe, and Ruding, CUNOBELINI, in the genitive, on the obverse; but the last letter is wanting, and may be a U, since on all the coins where the legend is distinct and full we have CVNOBELINVS REX. It is not necessary for the argument that the obverse should read CVNOBELINVS, but, at the same time, such a reading appears to me preferable. The reverse of No. 2 is unequivocally TASCIIOVANI, with two i’s in the centre, and not TASCIONOVA, as conjectured by Ruding. On the last coin (3.) the reading is clear; and even if there could be any doubt as to the last letter, the presence of the period, and the legend of No. 1, settles the question. I consequently read, “Cunobelinus Tasciovani filius,” “Cunobelin, son of Tasciovan;” for there is no point or division on No. 3 in the word “Tasciovani,” and on any other hypothesis the legend on No. 1 is not easy of explanation. The reading of the last coin, communicated to me by Mr. Haigh, and an inspection of which I owe to the liberality of Mr. Wigan, is TASC. FI., ends with an uncertain letter resembling a B or R, but which, having been submitted to the inspection of the first numismatists in London, is considered a perpendicular stroke, honey-combed. This formula is justified by the British coins, hitherto attributed to

---

3 While examining the preceding, Mr. Fitz-Gerald found for me No. 1, which he thought would assist me.

Comius,\textsuperscript{5} reading COMIF on the obverse, and EPPILLVS (Epillus) on the reverse, which I should attribute, not as M. de la Saussaye has done, to Comius himself, but to his son Epillus. As the numismatic evidence of the mint of Cunobelin shows that his currency was probably the product of Roman or at least Anglo-Roman workmen, and as many of his types can be traced to the Roman currency,\textsuperscript{6} it is not rash to suggest, that he may have used the Latin formula, "Cæsar divi f.," of his imperial patron, and applied it to his own coins. The various chroniclers represent him as contemporary with Augustus, and even brought up at his court; while it appears, from the evidence of Suetonius, Tacitus, and Dio, that the strictest relations existed between the successors of the so-called Cassivellanus and those of Cæsar. The conjectures of antiquaries for two centuries, that this legend referred to the taxatio; the suggestion that it meant the Tascodunitari Cononiensis, a people of Narbonnese Gaul; or the Tascoduni Tarucunienses,\textsuperscript{7} must, I propose, be altogether abandoned, and that, which now appears to all candid minds the true meaning of the word, be adopted. I therefore suggest, that all the coins of Cunobelin with Tasciovaní, or any of its contractions, be referred to the three legends which I have given, and be read "Cunobelinus, son of Tasciovanus," "Cunobelin the king, son of Tasciovanus." But I do not stop here. I find in the British series several coins, chiefly

\textsuperscript{5} Taylor, Combe, loc. cit., pl. i. fig. 11.
\textsuperscript{6} Cf. Ruding, loc. cit.
\textsuperscript{7} See Ruding, loc. cit.; Camden, on the authority of Dr. Powel; Gough's Britannia, vol. i. p. 65; Baxter's Glossary in voce Tascio; Carte's History of England, vol. i. p. 98; Pettigal's Dissertation on the Tascia; and all modern writers on British coins of Cunobelin; Wise, Numi. in Scrin. Bodl. Record, p. 226.
in silver, reading TASC on one side and VER on the other. It has been usual to refer these coins to Cunobelin: but here, at least, from the evidence before us, we must read Tasciovani, or Tasciovanus, and on the reverse Verlamio, or St. Alban's, assigning these coins to Tasciovanus himself. This will at once reduce the mintage of Cunobelin to one locality, Camulodunum, which we know was his capital, and place the mint of Tasciovanus at St. Alban's.

Having disposed of the monumental evidence, I will now consider the historical evidence as to the name Tasciovanus. I have been unsuccessful in my researches to discover it in the classical authorities. It seems, however, analogous in its commencement to Tasgetus and Taximagulus, the king of Kent who attacked Cæsar, and whose name is uniformly thus written in all our best MSS. of Cæsar, as well as given in the best editions. The latter part of the name is Roman, similar to that of Cassivel-anus, and apparently constructed on the final portion of the same word. The chroniclers, Bede and Gildas, do not name the father of Cunobelin; but Geoffrey of Monmouth, and those who trace the succession from Brute, call the predecessor of Cunobelin, Tenuantius, Themantius, Theomantius, Cennancius, and Tennancius, Tudor Belin, and Tubelin. A slight change of orthography would reduce this word to Tasciovanus; and I find, on examination, that much of their accounts coincide with those of the Roman historians under the empire, while their transcription of proper names differs, in some instances, as much as Tenancius from Tasciovanus. Is it possible that in the name Tasciovanus lies the disputed Cassivelanus? His era would be sufficiently near that of the great prince; and Cunobelin might have asserted upon his coins his right to the succession, in the same manner as Augustus did from Julius Cæsar.
The descent of Tasciovanus is, however, conjectured (not proved) from Cassivelanus, except on the authority of the chroniclers and their Tenanciusis, the father of Cymbelin; while the appearance of SEGO on the reverse of his currency, a name attributed by some to the king of Kent, who passes under the name of Segonax, would suggest the possibility of his descent from that king. The VER on his reverses is supposed to be the Verlamio, or Verulamium (St. Alban’s); and the SEGO has been attributed to Segonax, and lately, by Mr. Haigh, to Segontium; the VRICON would seem, from the coin edited by Mr. Akerman, to be correctly TASCIOV. RICON, as the R, in his coin, begins the line. It is attributed by Mr. Haigh to Uriconium. Of the coins of Cunobelinus there are four classes: 1. Those with his name full, or abridged; 2. Those with his name in full, “Cunobelinus rex Tasciovanii filius;” 3. Those reading Cunobelinus, nearly or completely, and Camuloduno, or St. Alban’s; 4. Those reading Cunobelinus and Solido, an ambiguous word, which might be the name of a town, like Verlamio, in the ablative.

Yours very sincerely,

Samuel Birch.

Charles Roach Smith, Esq.,
Secretary to the Numismatic Society,
etc. etc. etc.

** After the reading of my Paper, I received, through the kindness of Mr. Huxtable and Mr. Wigan, the legends of several unedited coins, which I have incorporated in my list; and if the reading TASC.FIR on Mr. Wigan's coin, subsequently communicated, should prove correct, although Mr. Wigan and others have ingeniously proposed *filius Regis* or *Rex*, the perfect solution of these legends is yet to be awaited.
XII.

ON BULLION CURRENCY.

There are many habits of society to which we are so much familiarised by constant use, that we hardly ever reflect upon their origin or peculiarities. Amongst these may be ranked the use of the precious metals, silver and gold, as media of exchange, and representatives of property. We learn from that abundant fountain of secular information, as well as spiritual knowledge, the Bible, that silver and gold were generally used as exchangeable media very early after the flood; certainly during the life-time of one of the antediluvians, namely, Shem. The first mention made of silver and gold is in the instance of Abraham, who is stated, when he came back from Egypt, to have been "very rich in cattle, in silver, and in gold" (Gen. xiii. 2). This was in the year B.C. 1918, or 430 years after the flood. Though silver and gold are only spoken of in the above passage as riches generally, yet twenty years after we find silver mentioned as a medium of exchange. In Gen. xvii. 13 we have the following passage, "He that is born in thy house, and he that is bought with thy money," etc. The word rendered here "money," in the original implies silver; so that we have in the account a distinct reference to the use of silver as a medium of exchange. In Gen. xx. 16, Abimelech, king of Gerar, is stated to have given Abraham "a thousand pieces of silver;" and although the account does not advance the history of silver in its specific pecuniary character, yet it points out its general adoption as an
article of wealth. But the full and explicit explanation of the pecuniary value of silver is not long delayed in the Bible history; for in Gen. xxiii. we have an exact statement of a payment in silver, and of the quantities of computation, of the manner in which it was estimated, and of its general circulation. In the purchase of the cave and field of Machpelah, "Abraham weighed to Ephron the silver, which he had named in the audience of the sons of Heth, four hundred shekels of silver, current money with the merchant." Here is a payment for land in silver, computed by shekels, estimated by weighing, and acknowledged of general currency in the commercial world. How far this currency extended we may surmise by the sale of Joseph to the Ishmaelites, who "came from Gilead with their camels bearing spicery and balm and myrrh, going to carry it down to Egypt" (Gen. xxxvii. 25). Joseph was sold to them for "twenty pieces of silver." The Ishmaelites, here mentioned, evidently bore with them silver as an exchangeable medium, current all the way from Gilead to Egypt. The purchase of Joseph was 131 years only after the purchase of the cave of Machpelah, which took place B.C. 1860, or after the flood 488 years, and, as Shem lived 502 years after that event, fourteen years before the death of that ante-diluvian as well as post-diluvian patriarch. It is not my intention at present to discuss the form in which silver was used as money, but only to establish that it was so used. But I would wish to observe, that, early as this pecuniary use of silver is noticed, it is only incidentally mentioned in the general description of more important circumstances, and spoken of, not as a new or unusual mode of payment, but as one of common and regularly established usage. It may have been of long and ancient adoption at the time when Abraham bought the sepulchre of the children of Heth;
and it will appear probable that it was so, from the following reasons. If we reflect upon the fact of the establishment of a general exchangeable medium, we shall discover that many particulars would have to be adjusted, which could not be definitely settled till after much experience. The very outset of the invention of a medium of exchange, instead of the practice of barter, would itself be a change almost as important as the change from writing to printing, and would require a greater previous assent on the part of society than the typographical art. After this, the selection of a medium would be a difficult point; and a still more intricate question would be, the fixing a specific value upon that medium, and a mode by which the quantity and quality of that medium could be ascertained. These particulars would need much time and regulation before they would be finally, generally, and currently established. Indeed, so great are these difficulties, that we can scarcely imagine them superable, except in a state of society in which the two incongruous circumstances of limited extent and high civilisation met. These circumstances were never found together, in relation to the whole world, but at a period shortly after the flood. The Noachic family would descend from the ark with the accumulated information of the ante-diluvian world; and whilst yet the families of the earth were either undispersed, or not widely separated, we may suppose the important and convenient habit of a specific exchangeable medium, of a generally acknowledged value, might be established; and, we may almost say, could alone then be at once settled. Great as was the change from pieces of bullion needing weighing, to coined money passable by tale, yet certainly much greater was the change from barter to a metallic medium, superseding the necessity of seeking parties having a super-
fluence of the article an individual might want, and which parties might be willing to exchange that article for the exact superfluity of another production which the said individual might possess. From weighing these various considerations, and looking at the regular, well-understood, and generally-recognised silver medium in the time of Abraham, we shall see good reason for believing that such medium must have existed for a long time before the purchase by Abraham. And if we carefully examine into the condition of the children of Heth, we shall find a state of society calling for all the conveniences of a highly civilised people; amongst the rest, of an exchangeable medium. When the negotiation is commenced, it is with a degree of courtesy only found in communities advanced in the scale of civilisation. Abraham is addressed as a "mighty prince," and spoken to with the reverence due to such a station. Nor are the children of Heth less esteemed by Abraham, for he "bows himself" before them. The various families of the city had their private sepulchres: "none of us shall withhold from thee his sepulchre." These sepulchres, too, were large ones; for that of Ephron was large enough to hold the remains of several generations of the patriarchs. The people were wealthy, also; for Ephron, though not spoken of as superior to his countrymen generally, offers to bestow his sepulchre upon Abraham as a gift, though worth 400 shekels of silver, amounting to £50 of our money, without reckoning the difference of value between our times and theirs. The children of Heth recognised the rights of property, and were careful to maintain them; for the conveyance of the cave and field of Machpelah, though not made by a written record, was accompanied by a minuteness of description as to locality and appurtenances, and a carefulness as to uses and attestations, not to be met with except amongst
a refined community. The property is described as the "field of Ephron," from whom the title was to be derived; and the situation is minutely stated, "in Machpelah, before Mamre," which has another name, also specified, "the same is Hebron," being "in the land of Canaan." Then the appurtenances are, "the cave therein," and all the trees in the field, and "in all the borders round about." The uses are also stated, "for a possession of a burying place;" and the whole is "made sure unto Abraham for a possession" before witnesses, "in the presence of the children of Heth;" and the place where the transfer is made is also given, "at the gate of the city." Hebron was evidently a place requiring so many of the luxuries of life as to be visited by "merchants," with whom their money, "silver," was "current." I have dwelt at length upon the above particulars, as the condition and circumstances of life in which metallic currency is first discovered in the records of history, may tend materially to explain the causes of its adoption. The inference from the whole is—that civilisation was in a highly advanced state—that barter had become so inconvenient a mode of supplying the wants of the people, that a conventional medium, of a compact and carriageable form or character, had become requisite—that the metals, silver and gold, as being from their greater rarity more valuable, and from their nature less destructible and more workable than other metals, were selected—and that these metals were estimated by weight, according to a generally admitted value per given weight. Either this description of medium had been agreed upon, as to species and relative value, at a time when the families of the world were few, and when such arrangement could be easily made; or, from the settled and generally understood form in which we find it at the
time when Abraham bought the cave and field of Machpelah from Ephron, it must have existed a long time previously, in order to overcome the many difficulties which must have presented themselves in establishing the custom of exchanging articles of necessity and utility for an article not useful for food or clothing, and little available for the formation of instruments of service, and which could only be looked upon as a representative of property. Either case will lead us to the conclusion, that silver and gold were adopted as the media of exchange very early after the flood.

In another place I have entered upon the subject of the adoption of the form of jewel ornaments, as a shape in which bullion, intended for an exchangeable medium, might be conveniently and safely carried about, combining at the same time the advantage of ornament. The Bible account of the specific weight of the jewels given by Abraham's servant to Rebekah, proves that such jewels were either made to a given weight, or when made were carefully weighed, that the owner might know the value of his ornaments in case of using them as money. And that the Egyptians kept their bullion medium in jewels, is not only evident from the pictorial representations of weighing rings of silver and gold, marked as money in Sir Gardner Wilkinson's plates, copied from the catacombs; but also is indicated by the fact of the Israelites having, at their exodus from Egypt, borrowed "jewels of silver and jewels of gold" from their oppressors, which "spoiled," or ruined "the Egyptians." But in whatsoever form bullion was kept for exchange, it was estimated by weight, amongst the Jews and other nations, till the introduction of metallic money. Of this we have direct evidence, as to the Jews, in the Bible. In Jeremiah ch. xxxii. the prophet speaks of
buying a field in Anathoth of Hanameel, his uncle's son, for seventeen shekels of silver, which he "weighed to him in the balances." This was as late as the year B.C. 590, when coinage had been invented, and adopted by many nations.

But, though silver was weighed in monetary transactions, whether in the shape of ornaments or otherwise, there is reason to believe that the Jewish nation had a kind of piece money as early as between eight and nine hundred years before the Christian æra. I do not form this inference from the use of the word piece, or pieces (because, being given in italics in our translation of the Bible, it is to be understood the words are interpolated for the sake of rendering the passages intelligible, and are not to be found in the original), but from evidence of a much stronger kind. In 2 Kings ch.xii. we read, that, when a collection was made for the reparation of the temple, "Jehoiada the priest took a chest, and bored a hole in the lid of it, and set it beside the altar, on the right side as one cometh into the house of the Lord; and the priests that kept the door put therein all the money that was brought into the house of the Lord. And it was so, when they saw there was much money in the chest, that the king's scribe and the high priest came up, and they put up in bags, and told the money that was found in the house of the Lord." Here we have a regular money-box, no doubt with a hole sufficiently large to admit the pieces, but not to allow the hand to be introduced to take them out; for it seems it needed the king's scribe and the high priest to take the money out. The telling of the money does not imply that there was no weighing; for, in Ezra ch. viii., we read that the vessels brought back from Babylon were recorded by number and weight—"By number and by weight of every one; and all the weight
was written at that time.” It must be observed also, that the money was first put into bags, and then told, as though weighed in the bags, and the amount or weight told or reckoned. This is further proved to be the mode of telling, by passages in 1 Esdras ch. viii., in which it is stated that Artaxerxes had given to the Jews “six hundred and sixty talents of silver, and silver vessels of an hundred talents, and an hundred talents of gold, and twenty golden vessels” (verses 56, 57), the silver and gold being given specifically “for (the purchase of) bullocks, rams, and lambs;” and “the gold and the silver that was weighed was delivered in the house of the Lord *** all was delivered them by number and weight. And all the weight of them was written up the same hour.” This was in the year B.C. 457, within 125 years of the Grecian domination.

It appears that, when money was collected and paid into the treasury, it was melted down before re-issue; for in 2 Kings ch. xxii. we have this passage, “Shaphan the scribe came to the king (Josiah), and brought the king word again, and said, Thy servants have gathered the money that was found in the house, and have delivered it into the hand of them that do the work, that have oversight of the house of the Lord.” It is to be noticed, that the word “gathered,” in the text, is given in the margin “melted”;¹ and the

¹ The Hebrew word used for this doubly-rendered term, I am informed, comes from נָתַח (Nathak), “was poured out, was melted”; and is the same word as used in Ezekiel ch. xxii. 20—22, for “melt, melted,” in reference to metals: “As they gather silver, and brass, and iron, and lead, and tin, into the midst of the furnace, to blow upon it, to melt it,” etc. It is also to be noticed, that the Septuagint version renders the word in question, by ἐξωνευσάω, from χωνεῖο, contracted from χονεῖο, to melt or cast metal, to form of cast metal (Passow's Lex.), and adopts the same Greek word in the passages cited above from Ezekiel, for the Hebrew word rendered in English “melt, melted”; so that it
words would run, that "thy servants have melted the money." This event occurred B.C. 624, just eighteen years before the Babylonish captivity. It may be imagined by some that the word *melted* is only a form of speech, used for collecting together, and continued in that sense when melting was no longer practised, as the Romans used the word "impendere," for *to pay*, long after money was paid by count, being continued from the time when the *as*, or *aes*, was *weighed* to another in the payment for articles. But this idea cannot be maintained; for, as the passage I have cited from Jeremiah proves that the word *weigh*, as used in Zechariah ch. xi. "So they weighed for my price thirty *pieces* of silver," does not mean simply *to pay*, but to "*weigh* and pay"; so we have a passage in Herodotus which so completely explains the matter literally, that it leaves no question upon the subject. In the book Thalia, sec. xcvi., we have this statement: "The manner in which the king (Darius, son of Hystaspes,) deposited these riches in his treasury, was this—the gold and silver was *melted*, and poured into earthen vessels; the vessel, when full, was removed, leaving the metal in a mass. When any was wanted, such a piece was broken off as the contingency required." This Darius reigned from the year B.C. 521 to 485, only about a century removed from the time of Josiah, and but a few years anterior to the time of Esdras. The passages prove that medallic money was not used by the Jews at the period of 624 years B.C., nor by the Persians more than a hundred and fifty years later; but they go far to prove also, that bullion was paid into both treasuries in

is evident it was the impression of the LXX. that the Hebrew word did not mean simply "*to gather,*" or "*pour out,*" pieces from one vessel to another, but actually to melt down, or cast the pieces, or money, into a mass.

**VOL. VII.**
small pieces, which were melted down before re-issuing; and, taken in context with the passage as to Jehoiada's chest with a hole in the lid, they lead to the belief that, before so re-issuing, the bullion was weighed, melted, and cast into pieces of a given weight; in the instance of the Jews, probably of a shekel weight, or even less.

This custom of melting down bullion before re-issuing, which the necessity of the case would require to be re-issued in quantities of weight convenient for the payment of workmen, soldiers, or others, may have led, and there is much reason to think did lead, to the stamping the pieces of bullion with an impress, which might at the same time be a warrant for the weight and purity of the piece (superseding the necessity of weighing in the transactions of business), and, by its religious import, be a safeguard against spoliation and debasement.

XIII.

ON THE TERM "BAR," EMPLOYED IN AFRICAN EXCHANGE COMPUTATION.

[Read before the Numismatic Society, February 22, 1844.]

Dear Sir,

Since the publication of the January number of the "Numismatic Chronicle," in which appeared a communication which I had the honour to make to the Numismatic Society, upon the subject of African Ring Money and Jewel Currency, I have received from my venerable and excellent
friend, Mr. Clarkson, the early and distinguished advocate of slave emancipation, a note in explanation of the origin of the term "Bar," employed in African exchange computation. This explanation, as it may be interesting to some who seek to discover the origin of terms in pecuniary media, I beg respectfully to state in Mr. Clarkson's own words.

"You ask, in your little Essay, 'Can it be that the term Bar arises from a length of twisted gold, weighing about twelve grains, or worth about two shillings?' I apprehend not; but it arose, I believe, from a bar of iron; bars of iron being the great article, the principal article of traffic, all the way from the river Senegal, where the slave trade began, including the Gambia, Rio Nunez, and Sierra Leone rivers, and all the windward coasts, as far as the beginning of the Gold coast. Throughout all this immense tract, bars of iron were the principal articles of trade in a cargo, to supply the African blacksmith of the coast, as well as of the interior; and hence, in time, as there must be some way of measuring the value of things, the value of a bar of iron was agreed upon between the natives and the whites, to be what you call the unit of computation for all goods, whether English merchandise, or slaves. Every slave, according to age and quality, whether man, woman, or child, was valued at so many bars each; and every piece of Manchester goods, or a barrel of gunpowder, or a cutlas, was valued at so many bars. Also, some things were worth only a bar; others only half a bar. But bars were not at that time the unit of computation for all parts of the coast of Africa, but only from the Senegal to the beginning of the Gold coast, a coast of 2000 miles. Here a new medium of exchange, under a new name, prevailed. The people of this part of
the coast, that is, of the Gold coast and Whydah, gave to their unit of computation the name of 'Ounce,' because the principal article of the native trade produce there was at that time gold dust, which was weighed by the ounce. There a slave was valued at so many 'ounces.' The people of Calabar (but why, I know not), reckoned by 'Coppers'; the people of Benin, by 'Pawns'; and the people of Angola, by what are called 'Pieces.' Cowries, however, or little shells, go, I believe, throughout Africa, for money."

Mr. Clarkson says, he does not know how the term "Pawn" arose. I am informed, that, "from time immemorial, it was the custom, on the Gold coast, and at Whydah, for the natives who were poor, but wanted goods, to pawn themselves for such goods; that is, to work for the men who supplied them with goods till they redeemed themselves; but, if they could not redeem themselves, then, to pay their debts, they either became his slaves, or were sold by him to merchants." The "bars," I am told, vary in price according to the market, and other circumstances.

Though the above explanation tends to dissipate a conjecture which I had loosely thrown out, and though I am on that account the more anxious to communicate it, yet it does not, in my opinion, at all interfere with the question of Ring Money, and Jewel Currency, as at present practised by traders from the interior of Africa; and which, through various periods and nations, may be traced to the earliest periods of authentic history.

I would wish to be allowed to avail myself of this opportunity, to make a few remarks additional to my recent paper upon Ring Money and Jewel Currency, as corroborative of the views therein advanced.
I stated that there was much reason for believing that the ear-ring, or more properly ring of gold, presented to Job, was given as an available medium of exchange. This opinion is singularly borne out by the Greek rendering of the term in the Septuagint translation. We may fairly suppose that the translators, in rendering the passage, used those Greek words which they considered most nearly expressed to the Greeks the true sense of the original words, בְּן בַּעַע (nezem zahav), and the words they used were τετράδραχμον χρυσοῦ, "a tetradrachm of gold." The Hebrew translators, therefore, have left us their opinion of the character of the rings of gold given to Job, namely, that they were equivalent to money of their day.

There is reason for supposing that the Israelites had their ornaments of the ring kind, used as money, either made of a specific weight, or, when made, carefully weighed, to estimate their value, for purposes of exchange at the standard value per given weight; thus affording to the possessor a knowledge of the amount of his medial property in the intercourse of business, should he by chance be unprovided with balances to estimate their worth. Of this we have an example in the instance of the presents given by Abraham's servant to Rebekah, mentioned in Genesis xxiv. 22: "And it came to pass, as the camels had done drinking, that the man took a golden earring of half a shekel weight (in the margin, 'jewel for the forehead'), and two bracelets for her hands of ten shekels weight of gold." In the "Song of the Traveller," from the Anglo-Saxon Poems of Mr. Conybeare, I pointed out a similar estimation of the weight or value of an armilla.

I have to add another modern instance of Ring, or
Jewel Currency, communicated to me by my friend, Lieut. Charles Cruttenden, I. N., now Assistant Political Agent at Aden.

Mr. Cruttenden says, "During the time that the Paliniurus was employed in surveying the island of Socotra, I accompanied Lieut. Wellstead in a tour over the island, particularly among the higher range of mountains, inhabited solely by a race of Bedouin Arabs, who spoke a language peculiarly their own, and lived distinct from the town Arabs, who resided on the sea coast. Having only dollars with us, we were for some time puzzled how to find a circulating medium, as the articles of food we should require would rarely amount to such a sum. After some enquiry, we were told by one of the hill tribes, that if we took with us silver ear rings, or rings for the fingers, we should experience no difficulty. We therefore had a number of dollars melted down, and made into ornaments, which, on the island, were considered equivalent to a quarter dollar. Furnished thus, we were enabled to make bargains with the natives for every thing we required; the people invariably (on the hills) preferring these ornaments to German crowns. In Socotra the town Arabs, as well as the trading merchants, barter these articles of ornament for aloes, dragon's blood, etc."

I have heard that penannular pointed rings have recently been found in Ireland, their workmanship bespeaking a very rude state of the arts at the time of their fabrication; but, as I understand a communication upon the subject either has been, or is likely to be, made to the Numismatic Society, I forbear further allusion to them.

Should you deem the above observations to possess sufficient interest to be submitted to the Numismatic

STYCAS FOUND AT YORK.
Society, I should feel honoured by your bringing them forward upon a suitable opportunity.

Believe me to remain, my dear Sir,
Your obliged and faithful Servant,
WM. BINLEY DICKINSON.

To C. R. SMITH, Esq.,
Honorary Secretary to the Numismatic Society.

XIV.

ON SOME ANGLO-SAXON STYCAS DISCOVERED AT YORK.

BY C. ROACH SMITH, ESQ., SEC. NUM. SOC.

[Read before the Numismatic Society, May 25th, 1843.]

About a year and a half or two years since, a large quantity of stycas were discovered during the progress of an excavation for the foundation of a building. It was said they amounted to some thousands, but it is impossible to depend in such cases upon mere report; it is certain a very considerable number have been dispersed, and I believe up to the present time no one has taken the trouble to publish the result of any examination that may have been made of any portion of the coins.

Through the liberality of Robert Davies, Esq., F.S.A., and George Townsend Andrews, Esq., I have been enabled to investigate between three and four hundred, including a few in the possession of Edward Joseph Powell, Esq., a member of our Society. It is unfortunate, that when similar discoveries of coins are made, there should not be a more extended disposition to render them more available to numismatic inquiry, which cannot be better promoted than by being afforded opportunities of examining large
quantities of coins in the mass, as, from comparison of many specimens, in some instances, coins badly struck or designed can alone be interpreted; beside the chance of securing rare and unknown coins, there is a certainty, when an intact mass of coins is examined, of ascertaining the period of deposit, and a probability of eliciting information on collateral circumstances.

The 365 stycas I have examined, commence with Eanred, A.D. 808—840, and finish with Osbercht, A.D. 848—867. There are 66 of Eanred, 226 of Ethelred, 5 of Redulf, and 12 of Osbercht. Of the Archbishops of York, there are, 1 of Eanbad, 30 of Vigmund, and 3 of Wulfhere. It is remarkable, how nearly in proportion the seven different coinages accord with those found at Kirk Oswald, in Cumberland, in 1808, of which there were, 99 of Eanred, 350 of Ethelred, 14 of Redulf, 15 of Osbercht, 1 of Eanbad, 58 of Vigmund, and 5 of Wulfhere;¹ and a like numerical accordance may be noticed between the various divisions of the coins of these two discoveries and those of Hexham, the subject of an elaborate and able paper by John Adamson, Esq., published and copiously illustrated by the Society of Antiquaries, in the twenty-fifth volume of the Archaeologia. No specimens, however, of the coins of Osbercht, were found among the Hexham stycas; and the single coin which Mr. Adamson is inclined to give to Aella, who usurped the Northumbrian throne in 862, on the banishment of Osbercht, may probably belong to one of his predecessors or their moneyers, especially as no other coins seem to confirm the appropriation of this isolated specimen, and none in the collection under consideration, which contains coins of Aella's contemporary Osbercht, can be assigned to the former.

¹ Ruding, vol. i. p. 111.
Among the York stycas there are many which, in some minute particulars, such as the central ornaments, or the arrangement and forms of letters, differ from those discovered at Hexham, and the names of a few new moneyers occur. In the Hexham hoard, Runic letters appear on one of the coins of Eanred of the moneyer Brother: I have noticed one similar among these. For the present purpose it will be sufficient to give a list of the coins, without describing their many varieties with regard to marks and ornaments; but I may call attention to some, seven in number, which read EDILREAD, Pl. vi. Figs. 1, 2, 3, a new spelling of the word; to five of a new type reading EA+D: AILE, Pl. vi. Figs. 1—5; and to one specimen, EVXDIRE. Should any further portion of the coins, as yet unexamined, be brought before us, it may be worth while to go carefully over the whole, and publish the unedited varieties; if, on the contrary, the present possessors may be disposed to undertake the pleasing task, my more extended notes are at their service.

The concealment of these stycas probably took place about the year 867, after the battle with the Danes, which proved fatal to Osbercht and Aella. The Saxon chronicle, under the year 867, states—"This year the army (namely the Danes) went from the East Angles over the mouth of the Humber, to the Northumbrians, as far as York. And there was much dissension in that nation among themselves; they had deposed their king Osbert, and had admitted Aella, who had no natural claim. Late in the year, however, they returned to their allegiance, and they were now fighting against the common enemy, having collected a vast force, with which they fought the army at York; and breaking open the town, some of them entered in. Then there was an immense slaughter of the Northumbrians,

VOL. VII.
some within and some without; and both the kings were slain on the spot."  

The monk of Chester states that the Danes remained at York a year; by the Saxon Chronicle it appears that they departed after the battle, and returned to York the year following.

Carried up 678 Total 866

"Of these last, one is probably of Elfwald, and two of Eardwulf (EARDVV RE). Two read HOAVD RE; several EDRED M RE; and a large number have the names of two moneyers. There are several varieties of that curious reading EV+DEIVE; but not one of EVXDI RE, which seems allied to it."

Mr. Haigh is about to publish a work on the Anglo-Saxon coinage, which, let us hope, will be received by the numismatist and general historian with that extent of patronage the known merits of the author demand. In it these stycas will receive particular notice; and, probably, a new appropriation will be offered or established for some.

C. R. S.
MISCELLANEA.

LETTER FROM THOMAS WOODS TO DR. SLOANE (OBLIGINGLY COMMUNICATED BY SIR HENRY ELLIS).
[MS. Sloan. 4066. art. 70. Orig.]

Sir,

Mr. Roettier: who graves and coins my Copper Medalls is at present out of his imploymet in the Mint, and Mr. Harris is in his room.

But I believe, it will be rather better for my affaire, for if he be tacket off, the coinidge of the money, he will have the more leasure to worke for me. I doe not doubt but to get a Worke Room and Press in the Mint to coin my Medalls only, and by that meanes the two Roettiers will doe me duble the business. I must tacek in some Partners to assist me in it. I have already proposed to pay the King at Tenth part of the reall profite, and there will be advantage enough beside. I will lay downe Proposals, and will referr them to be altrwed, by Mr. Lamb Gouldsmith and Mr. Charlton gentleman of the Temple, who are the most competent Judges of this affaire.

Sir pray communicate this, and if your selfe or any other Gentleman of the Society will please to be concerned let me know.

Your most humble Servant,

THO. WOODS.

March 8th, 1696.

To : Docter Slone
    Present.

To be left at the Temple

CURIOUS COIN.—" Some years ago there was found, at Bornholm, a Cufish coin, on which were cut several Runic inscriptions. Although the impression has, by means of the inscriptions, been rendered indistinct, yet Mr. Lindberg, who has made the attempt to examine the design, thinks that he is correct in reading the name El Mutavekkil al Allah, one of the caliphs of the dynasty of the Abbassides; and, in respect to the coinage date, he thinks that two hundred and thirty may with certainty be read, but in regard to the concluding unit, this cannot be read with certainty, although it appears to be one, thus making the date 231. This coin has therefore been struck about A.D. 845, or a few years later. The place of coinage is almost entirely illegible, but
possibly may be *Bocchara*. After a comparison of the several Runic inscriptions, Professor Magnusen is of opinion, that this piece of money has, in the first place, belonged to *Eyulf Einarson*, of Mödruvellir, in *Iceland*, who held a public meeting for the purpose of alleviating the dreadful famine which prevailed over the whole of Iceland in the year 975, on which occasion, as the Sagas show, he rendered important service to the community. From him this coin came into the possession of *Danr*, an East- mann, probably a Danish merchant, and the inscribed runes seem to contain the prayer, that the god of gods, *Tēr āia*, would grant him a fortunate voyage. Some inscriptions in *Anglo-Saxon runes*, and of a later date, have been probably cut in *Denmark* and *England*.”—*Memoirs of the Society of Northern Antiquaries*.

**CORRESPONDENCE.**

Our valued correspondent, speaking of the honours rendered to the Eresian Sapho (page 55), appears to have forgotten the scenes enacted in the public worship of Venus, as described by Herodotus; the fable of the abominable association of Jupiter and Ganymede, the odious realities of Hadrian and Antinoëus, and the thousand other monstrosities of heathen mythology, to say nothing of the obscene representations, the *sujets libres*, as our French neighbours apologetically style them, on the current money of some cities of antiquity. When these are taken into consideration, the public honours rendered to a prostitute by a Greek city, in an age of polygamy and polytheism, will excite no wonder. It is lamentably true that, even in our own time, if *éclat* can only be given to vice of almost any kind, it will become a marvel; and marvelling is much akin to admiration. Do we not often see the portraits of women of notoriously impure lives in the print shops; and is not that of the concubine of a late "noble" poet to be found even in ladies' scrap-books at this very hour? Nay, it is notorious that the, print in question was actually engraved for one of the mawkish "Annuals" as a companion portrait to that of the poet! This, however, was found to be too dangerous, even for an age craving for novelty, and the design was abandoned, yet the plate was not destroyed; impressions of it inundated the town, and are still to be found in almost every portfolio of prints.
XV.

NOTE ON SOME TYPES OF TARENTUM.

BY SAMUEL BIRCH, ESQ.

The early coins of Tarentum, with a youth seated upon a dolphin, accompanied by different symbols, and the legend ΤΑΡΑΣ, or ΤΑΡΑΝΤΙΝΩΝ, are supposed to represent the hero Taras, the son of Poseidon, and a nymph of the country, the eponymous founder of the state. With the extended knowledge of types now possessed, it is necessary to distinguish the legend ΤΑΡΑΣ from the figure, for the same word is found with a marine horse;¹ and it consequently designates the city and not the hero.² When, therefore, the name of the state and of the eponymous hero occur in the nominative on the coins, it is not necessarily that of the personage, but rather of the city itself. It would appear that Taras was the name of a river from which the Lacedaemonians under Phalanthus named their new city,³ and, although never represented either as βουκέρως or ταυρόκρανος, yet the fact of most of the rivers being the children of Oceanos and Poseidon, the termination resembling that of the Hypsas, the Gelas, and the Thoas, all easily derived from the qualities of rivers, suggests that the stream and the hero might be here found personified. The etymology of the word Τάρας I have already pointed out as derived from ταράσ-σευ, ‘to trouble,’ and not from ταυρέλος. And this word is found in composition as πολυταράξος, applied to

¹ Carelli, Pl. 178.
² This important rule restores to Apollo the type conjectured to be the hero Zacynthus. Num. Chron. Vol. I. pp. 250—251.
³ Paus. Phoc. x.
Poseidon; for the Scholiast of the Alexipharmacca of Nicander, commenting upon the term τοῦστροφίζοσ, as applied to the sea (ἀλος) by that writer, states, τοῦστροφίζοο, τῆς τοῦτο ἑρμήν τὰς ναύς ὃ ἐστιν παράσσειν, a passage which at once connects Taras and Poseidon. The type usually assigned to Taras is rather that of the Lacedaemonian Phalanthus, the founder of the state, near whose statue at Phocis was a dolphin, because once carried, like Arion, by that fish; and although Pausanias may have mistaken the two statues of Taras and Phalanthus, the reputed and actual founder, yet the tradition finds its parallel in the story of Arion, the Corinthian types of Melicerta, in that of the body of Hesiod brought back by dolphins, and in the peculiar tradition of the city of Iasus. On the other hand, the dolphin appears in many instances connected with the river as well as the ocean divinities, while, on the Galassi vase, the monarch stream of northern Greece, the Acheloüs, assumes the body of a dolphin to struggle with Hercules.

The reverse of many of these coins represents a youth mounted upon a horse, at times naked, but sometimes clad in a Greek panoply. This is generally supposed to apply to the great excellence of the Tarentines in horses and riding, especially in riding in armour, ἐνὀπλιος ἵππηλασία.

4 Schneider, 8vo. Halæs. 1792, p. 30. 5 Phoc. lib. x.
8 According to Aristotle, the type of the coins of Tarentum was the hero Taras riding on a dolphin (Pollux, Onom. lib. vi. p. 280); Tzetzes, loc. cit., alludes to a youth riding on a dolphin, at the city of Dicearchia (Puteoli), in Italy, and also at Alexandria.
10 Eustath. ad Dionys. Perieg. v. 376.
A more particular explanation may be given to these figures. The statues sculptured by Onatas, of Ægina, and Calynthus, represented on horseback and on foot the exploits of Taras and Phalanthus against Opis, king of the Iapyges, assisting the Peucetii.\textsuperscript{11} The uncertain genius of the Greek horse race named Taraxippus, found at Nemæa and Olympia, and considered very justly by Pausanias to be a surname of Poseidon Hippios,\textsuperscript{12} renders it more than probable that on the reverses of these types is the \textit{Tapâs Ἰππίως}, the Equestrian Taras, or horse-subduing Neptune, for the appellatives of this god ultimately became personified, and that, as the obverse presents the Ocean, so the reverse the Equestrian divinity, the particular objects of worship to the Tarentines, whose offering from the spoils of victory in the waters of Croton, was consecrated to games in honor of the gods of the sea and those of horses.\textsuperscript{13} The epoch of these coins, that of Pyrrhus, 282 B.C., is proved by the adjunct of an elephant; an animal which was of essential service to the Tarentines and their royal ally against the Romans, never seen by the Greeks before the Macedonian invasion of Asia,\textsuperscript{14} and probably not by the Italian Greeks till the landing of Pyrrhus.

XVI.

ON THE COIN ATTRIBUTED BY MR. BORRELL TO ALEXANDER OF PHÆRAE.

My dear Sir,

The identical coin published by Mr. Borrell in the "Numismatic Chronicle" for this quarter, [see plate, fig. 1] has been recently purchased for the British Museum at the sale of the collection of the late Mr. Thomas, into whose hands it must have passed after Mr. Borrell lost sight of it at Constantinople. In drawing up the catalogue for that sale, my friend and colleague Mr. Burgon, from the general resemblance of this coin in fabric, weight, style, and type to those of the kings of Pæonia, was induced to place it in that dynasty, hoping, in the course of future enquiry, to find elsewhere historical proof of the existence of a Pæonian monarch of the name of Alexander. No such evidence has as yet been brought to light, though the scanty fragments of Pæonian history have been collected and examined not only by successive numismatists, but also, in the fullest manner, by Droysen,¹ an historian of the most acute and laborious research; and this attribution, like that of the coins of Lyceius in the same regal series, must therefore rest entirely on the numismatic evidence of similarity in the mintage. Relying entirely on such resemblance, Eckhel² conceived Patraeus to belong to the same dynasty as Audoleon, since which time the judgment of the great numismatist has been certified by the discovery of an inscription³ at Athens in which "Audoleon, king of the

Pæonians," is called the son of Patraus. Even without this instance, there would be nothing improbable in the supposition that, in a country of which but little is recorded in history, a king who struck coins should, like Queen Philistis in Sicily, be nowhere mentioned by the writers of antiquity; the attribution would be at least as certain as that of the coins of Lyceius; but, after a very careful comparison with all the silver Pæonian coins in the collection of the British Museum, it appears that the Alexander is executed by a more refined hand than any of the coins of either Patraus or Audoleon, which are all more or less the work of an ignorant imitator of Greek art. This difference might be accounted for by supposing that the finer coin was struck by Alexander the Great, to whom there can be little doubt that Pæonia was subject, and that it was rudely imitated in the subsequent coinages of the native princes, Patraus and Audoleon; but such an attribution would be too much at variance with the whole character of the mintage of the Macedonian kings to be entitled to any consideration.

On the other hand it must be admitted that Mr. Borrell's theory is strengthened by a comparison of the types of the Alexader with those of the general silver coinage of Thessaly. The head on the obverse much resembles those on the coins of Larissa, and still more strikingly that on a silver coin of Philippopolis recently purchased at the sale of Mr. Thomas's collection for the British Museum. The horseman with a spear couched is a very common Thessalian

---

4 Fig. 2 on the plate is the finest Patraus in the Museum collection.
5 Diodor. xvi. 4; xvii. 8; Arrian ii. 9; iii. 12.
6 As, according to Droysen's Chronology, might be the case. Zimmermann, Zeitschrift, loc. cit.
type, though not according in the details of the armour with the figure on the coin of Alexander.

It may be further remarked, that on the flank of the horse on this coin is an object which, upon a very careful examination, appears to be the same battle-axe which occurs in the field. It is not desirable, in the interpretation of types, to attach too important a meaning to adjuncts, even when so emphatically repeated as in this case, but, if the coin be rightly assigned by Mr. Borrell, the mention of πέλεκυς in the following passage is at least a curious coincidence. Θεόπτομπος φησιν Ἀλέξανδρον Φεραῖον Διώνυσον τὸν ἐν Παγασαῖς, ὃς ἐκαλεῖτο πέλεκυς, εὑσεβεῖν διαφόρως. Καπανωτωθέντος δὲ Ἀλέξανδρο, Διώνυσος ὄναρ ἐπιτάσ τιν τῶν ἄλεων ἐκέλευσεν ἀναλαβεῖν τὸν φορμὸν τῶν ὄστῶν ὑπὲρ ἄπελθων ἐς Κράνυνα τοῖς οἰκείοις ἀπέδωκεν, οἱ δὲ ἔθαψαν. Schol. in Hom. II. Bekker, Berol. 1825, Ω. 428.

Whether the deity here mentioned is the personage who appears on many vases, in the most intimate connection with Dionysos, and whom M. Gerhard calls the Bacchic Hephaestos (Auserlesene Vasenbilder, p. 186; see ibid. p. 150); and whether the coins published under Maronea (Mionnet, Supp. ii. p. 338, No. 837) represent this union of the two deities by the types of the vine on the obverse, and

8 Πέλεκυς in the text. I have adopted Meineke's correction, Quest. Scen. iii. p. 47.

9 Compare Lenormant and De Witte, Monumens Céramogr. (Hephaéstos), Paris, 1888.

10 Attributed to Amadocus and Teres, kings of Thrace, Trésor de Numism. et de Glypt. Numism. des Rois Grecs. p. 5. I am indebted to Mr. Burgou for this illustration, and the figure on the vases cited above was first pointed out to me by Mr. Hawkins. I may add that, on the coins of Lipara, Hephaestos appears seated, with a hammer in one hand and a diota in the other. Eckhel mentions the type of Bacchus with the thyrsus on the same coins. Doct. Num. Vet. i. 270.
battle-axe on the reverse; are questions which I leave to more experienced archaeologists to determine. The only other coin of Thessaly on which I find the battle-axe is that of Larissa, published by Mr. Birch (Num. Chron. Vol. I. p. 230). The hero Aleuas, whose head it there accompanies as an adjunct, is also considered by M. de Witte to be connected with Hephaestos (Revue Numismatique, 1842, p. 77).

It may be urged against Mr. Borrell's theory, that the copper coin\(^{11}\) struck by Alexander the Thessalian tyrant is, as might naturally be expected, almost identical in type and mintage with those of Pherae, while the silver coin we are here discussing has no kind of resemblance to any of these. But it does not necessarily follow that the silver and copper coinage of a prince would always exhibit the same fabric, still less type, nor is it impossible that Alexander may have struck this silver coin in some other town of Thessaly.

In a case almost entirely dependent on minute resemblances of art and fabric, when two numismatists of the greatest practical experience, and most approved judgment are not agreed, I forbear to offer any opinion of my own in a letter chiefly intended to complete Mr. Borrell's record of this unique coin.

I will conclude by expressing a hope that some fortunate discovery, like that of the inscription relating to Patraus, may settle this doubtful attribution and decide between the rival claims of Thessaly and Pæonia.

I remain, my dear Sir,

Yours very truly,

Charles Newton.

\(^{11}\) Formerly in Mr. Burgon's cabinet, now in the British Museum; compare the Teisiphon, Mommsen, Supp. iii. p. 309, No. 272.
PROPOSED ATTRIBUTION TO ALLARIA IN CRETE,
OF A COIN AT PRESENT AScriBED TO LACE-
DAEMON.

Head of Pallas to the right, in Corinthian helmet.

Rk.—ΑΛ (retrograde). Hercules, to the left, seated on a rock, covered with the lion’s skin; right hand resting on his club. AR. weight, \( 235 \frac{2}{10} \) grs. (rubbed). Brit. Mus.

This tetradrachm, formerly placed under Lamia in Thessaly, and then by Eckhel under Lacedaemon (Doct. Num. Vet. ii. 279), has been again conjecturally assigned by Mr. Borrell (Numis. Chron. Vol. VI. p. 138) to Lamia; neither of these attributions being strongly supported, I have the less scruple in proposing a new one—to Allaria in Crete. Of this place, a silver coin in the collection of the British Museum is engraved in the accompanying plate [fig. 3], which, in style and fabric, exactly resembles the tetradrachm described above, the only difference in type being, that the Hercules on the reverse is standing, not seated on a rock; and from the legend—ΑΛΑΡΙΩΣΑ [N]—of the smaller coin [fig. 4], which, as may be seen by reference to the plate, is written retrograde, we perceive the inscription ΛΛ of the tetradrachm to be the two first letters of the same name, also written retrograde.

The coins of Allaria are of such extreme rarity,\(^1\) that this tetradrachm, presenting a variety in type, weight, and

---

\(^1\) Only one other specimen besides the one here engraved is placed under Allaria in the collection of the British Museum, and one other, identical with these two in size and type, exists in the Bibliothèque du Roi at Paris. In the Synopsis of the Imperial Collection at Vienna, published by Arnaud, in 1837, the name of Allaria does not occur.
legend, is an important accession to their number, while its transfer, if allowed, must make the question more than ever doubtful, whether Lacedaemon ever struck silver money except in connection with the Achæan league; for none, I believe, has been ever assigned to that town except this coin, the one of Areus (Mionnet, ii. p. 222, No. 63), now generally admitted to be a forgery, one described in Mionnet (Supp. iv. p. 220, No. 1), and considered by Mr. Borrell to be a coin of Patraus, king of Pæonia, or of some Thessalian city (Num. Chron. loc. cit.), and the coin given to Cleomenes III., which is attributed to that king on slender grounds.  On this subject I hope to say more in a future paper. I have nothing to add to the slight notice of Allaria in Eckhel, except that it is placed by Hoek, "Kreta," vol. i. p. 425, at the eastern extremity of the island, near Olerus, and that the inscription relative to an alliance with the Parians, published by Chishull, is to be found in Boeckh, "Corpus Inscript." vol. ii. p. 418.

Charles Newton.

XVIII.

UNEDITED AUTONOMOUS AND IMPERIAL GREEK COINS.

By H. P. Borrell, Esq.

[Read before the Numismatic Society, 29th November, 1844.]

AENIANES IN THESSALIA.

In the Numismatic Chronicle is a notice of mine, explaining the subject of the type on some of the coins of the

2 Trésor de Numis. et Glypt. Ire partie, p. 47.
3 Since the above was printed, I have seen in the collection of the United Service Museum, two silver coins of Phalasarna, also a Cretan town, both of the same age and type; one of which is inscribed ΔΦ, the other ΦΔ. This illustration is important, as it proves the use in Crete of the monosyllabic and retrograde legend, which I propose to read on the tetradrachm.

1 Vol. ii. p. 149.
Aenianes. Since then I find in a recent writer,² that M. Brönsted, in a work on the same subject, had stated my views.³ Never having seen his publication, I have never till now noticed this circumstance, but must here express my surprise that he should have omitted to mention that the true explanation of this type originated with me; that I communicated my manuscript to him in 1827; and that it was subsequently read before the Society of Antiquaries, by E. Hawkins, Esq., in 1831-2.

Without imputing to the learned Danish archæologist any desire of appropriating to himself this trifling discovery, yet the merit, if it deserves any, I conceive is justly due to me.

I take this opportunity for pointing out a typographical error in the Numismatic Chronicle; the name of the national hero of the Aenianes is there printed Phemios, instead of Phenikos.

**CRANNON IN THESSALIA.**

A naked figure with the causia suspended from the back of the neck, seizing a furious bull, of which only the fore part is visible; in the field, fragments of two or three letters of archaic form.

R.—KPANO. The fore-part of a horse at full speed, the bridle dragging on the ground; behind, a trident; the whole in a deep sunk square. AR. 3. 45½ grs. (My cabinet.)

Sestini⁴ has published a larger coin in the same metal, similar in type to this of mine, excepting that on his the animals on either side are entire; this was the only silver coin known of this city in his time.

We know but little of the early history of Crannon, which was situated, according to Stephanus, in the Pelas-

---
² Memoires de Numismatique et d'Antiquité, par M. Raoul-Rochette, Paris, 1840, p.125.
³ Voyages et Recherches dans la Grèce, tom. ii. vignette 48.
giotis, about 100 stades from Gyrton.\textsuperscript{5} It was taken by Antiochus the Great, king of Syria, and afterwards by the Romans when at war with Perseus of Macedon.\textsuperscript{6}

Numismatic writers differ in opinion with regard to the meaning of the types represented on these coins, which also are found without variation on the money of Larissa, Pherae, Pellinna, Perhraebia, Pharcadon, and Tricca, all towns of Thessalia. Eckhel\textsuperscript{7} considers they allude to the address with which the Thessalians could arrest the course of the most furious bull, and their skill in the management of the horse.

**Cierium in Thessalia.**

Laureated juvenile profile to the right.

\textit{R. — ΚΙΕΡΙΕΩΝ.} Jupiter standing, hurling thunder with his right hand, and an eagle with his left; before him is a small figure of a dancing satyr. \textit{Æ. 4.} (\textit{My cabinet.})

No copper money of Cierium has yet been described,\textsuperscript{8} and I believe only a single one in silver.\textsuperscript{9} A similar coin to mine is, I strongly suspect, erroneously classed to Cius in Bithynia by Pellerin.\textsuperscript{10}

Cierium is only mentioned by Stephanus; it bore the more ancient name of Arne, and was founded by a colony from Boeotia.

\textsuperscript{5} Strabo, lib. vii. cap. ult. \hfill \textsuperscript{6} Livy, lib. xxxvi. cap. 10.

\textsuperscript{7} Doct. Num. Vet. tom. ii. \hfill \textsuperscript{8} Both Sestini and Mionnet mention copper coins, but without describing them.

\textsuperscript{9} Du Mersan, Descrip. des Méd. Ant. de feu M. Allier de Hauteroche, p. 38; Mionnet, Supp. tom. iii. p. 280, No. 128.

\textsuperscript{10} Rec. de Méd. de Peupl. et de Villes, tom. ii. p. 24, Pl. 41, No. 13. I have since found that Mr. Millingen has published some singular coins of this city in his "Ancient Coins of Greek Cities and Kings;" amongst others, one in copper in every respect the same as the above, but instead of a figure of a satyr, Mr. M. has remarked on his coin a nymph. On my coin, the satyr is clearly distinguishable.
NUMISMATIC CHRONICLE.

CTIMENE IN THESSALIA.

Combe, in the Hunterian Catalogue (p. 117, tab. xxii. fig. 15), assigns a coin to this city, which certainly belongs to Aninesum in Lydia. The word KTIMENOL has no reference to the town, but is merely a magistrate’s name. I also very much doubt the correctness of the attribution of two other coins to this city by Sestini; one in his Lett. Num. continuaz. tom. ii. p. 12, and the other in Lett. Num. tom. viii. p. 42. Both are cited by Mionnet, Supp. tom. iii. p. 282, Nos. 134, 135. I am of opinion that we have still to look for coins of Ctimene.

EURYMNÆ IN THESSALIA.¹¹

Head of Bacchus in profile, crowned with ivy, to the right.
R.—EYPYMNÆINWN. A vine with fruit and branches, between a Diota and a dolphin. Æ. 4½.

I have the honour of introducing, for the first time in Numismatic geography, the present coin of Eurymenæ. It is, fortunately, in a fine state of preservation, and more pains appear to have been taken with its fabrication and style of work than is generally observed on the copper money of this province. It was procured for me in 1837, at Larissa, and now ornaments the magnificent Royal collection at Paris.

On the obverse side of this unique coin is the head of Bacchus; the vine on the reverse refers to the same deity, and bears a strong resemblance to the type on some of the coins of Maronea.

Eurymenæ was one of the towns claimed by the Aetolians

¹¹ We presume that it has escaped Mr. Borrell’s observation, that this coin has been published by M. de Longpréier, Rev. Numis. 1843, p. 244, and is further noticed by M. de Writte, ibid. p. 323. M. de Longpréier gives the size 6, instead of 4½.

—Editor.
from Philip V. of Macedonia. It appears to be the same as the Erymnae of Strabo, Pliny, and Scylax. The legend on the coin proves the orthography of Livy to be the most correct.

**HISTIÆOTIS IN THESSALIA.**

**LAMIA IN THESSALIA.**

No. 1.—Female profile bound with a fillet, ear-rings, to the right.  
R.—ΔΑΜΙΕΩΝ. Naked figure of Hercules, seated on a rock, to the left; in his right hand he holds a bow within a quiver, his left resting on the rock.  
A.R. 5. 85 3/4 grs.  
(British Museum, from my cabinet.)

The figure of Hercules on the reverse of this beautiful unedited coin of Lamia, is not very unlike that of the same hero on a tetradrachm in Dutens, excepting that he is there represented holding a club instead of a bow in a quiver. In other respects, the attitude and apparently the style of execution is the same. On Dutens' coin there are only the initial letters ΛΑ, from which that numismatist imagined it was struck by the Lacedaemonians, but as these letters are also the initials of Lamia, I am strongly inclined to believe that it owes its origin not to the Lacedaemonians but to the Lamians, as some authors, I find, have already suspected. The obverse of this coin presents a helmeted profile of Pallas, whilst on mine is represented a beautiful female head, wearing a simple fillet and rich ear-ring; her hair gracefully descends on her neck, as is usual on the effigy of Apollo. I am at a loss to decide to what deity these features and ornaments can apply; one might be disposed to imagine the artist had in view some

---

12 Livy, lib. xxxix. cap. 25.  
13 Lib. ix. p. 44.  
14 Lib. iv. cap. 9.  
15 p. 24.  
16 Explication de quelque Médaillés, p. 37, Pl. 1, No. 9; Mionnet, tom. ii. p. 217, No. 10.
celebrated female, or perhaps a nymph; the presence of the ear-rings is sufficient to shew that the figure is not meant for Apollo. The figure of Hercules on the reverse is naked; he is seated on a rock. The bow, which partially protrudes from the quiver, corresponds in its form with that weapon seen in his hand on the copper coins of Lamia, where he is standing and aiming an arrow, probably alluding to his sixth labour; his posture on my coin would seem to imply repose after its completion.

Another coin, attributed first to Areus king of Sparta, and afterwards to Cleomenes III. of the same country, may with much more propriety be classed to Lamia. It is described as follows:—

No. 2. Tête d’un roi, ceinte d’un diadème, à gauche.
R.—AA. Pallas debout, vêtue d’une longue robe, lançant un javelot de la main droite, et tenant de la gauche une chèvre; dans le champ, une couronne de laurier.\(^{17}\) AR. 8.

Instead of a portrait of either Areus or of Cleomenes, it is more probably that of a Macedonian prince. Dutens suggested this opinion, which was opposed by the learned Eckhel,\(^{18}\) because, says the latter author, there is no recorded fact in history to justify it; but as the arguments of both these numismatists referred to the portrait alone, neither of them doubting the attribution of the coin to Lacedaemonia, Eckhel’s objection was plausible and consistent. If, then, the coin in question is no longer to be considered an historical monument of Sparta, but is to be restored to Lamia, as I propose, the different opinions are reconciled. I abstain from the attempt of deciding to which of the Macedonian kings the portrait should be

assigned; but it is evident that the coin was struck during
the reigns between Alexander the Great and Perseus.
Equally incompetent am I to offer any remarks to show
how far the mythological subject on the reverse of the
coin applies to the new classification I propose in oppo-
sition to the learned dissertation of Visconti. I leave this
important task to others more skilful in history and my-
thology than myself. Even the sagacious Visconti appears
to have had misgivings as to the propriety of the attribution
of this coin to Lacedaemonia: he says, "Cependant comme
il y a d’autres villes Grecques dont le nom commence par
les mêmes lettres (AA), et qui les ont employées pour
marque de leur monnoie, il est nécessaire de bien
constater que la médaille a été frappée à Sparte, avant
d’examiner quel peut être le roi sans lequel elle l’a été, et
dont elle représente le portrait." 19

Lamia was a city of Thessalia, situated about thirty
stades from the river Sperchius in Phthiotis. 20 It became
renowned in history on account of the siege it sustained by
the confederate Greeks, when Antipater, after his defeat
by Leosthenes, fled there with the remainder of his forces.
Livy informs us it was again besieged by Philip, son of Demet-
rius; on which occasion it was relieved by the Romans.

ALEXANDER, TYRANT OF PHERÆ.

No. 1.—Female head, nearly full face, long flowing hair, ear-rings
and necklace. To the right is a lighted torch.

R.—ΑΛΕΞΑΝΔΡΟΥ. Horseman with helmet and cuirass,
armed with a long lance held horizontally; going at a
quick pace from left to right. Below the horse is the
bipennis. 21 AR. 6. 183. 3/10 grs.

21 This beautiful, and I believe unique, medallion was shown
me many years ago by a friend, who allowed me to take a cast
from it. I have every reason for believing it was destroyed in
the great fire which consumed Pera in Constantinople in 1832. [It
is now in the British Museum; see Mr. Newton’s letter, p. 110,
supra.—Editor.]
No. 2.—Female head in profile to the right, with necklace and ear-rings. A small hand projecting from the neck, holding a lighted torch.

R.—ΑΑΕΞΑΝΔΡΟΥ. Lion’s head to the right, the mouth open and tongue protruding; below, the bipennis. AR. 4. 88.\(\frac{4}{9}\) grs.\(^{22}\)

Alexander, the Tagus or tyrant of Pherae in Thessaly, was contemporary with Amyntas II., king of Macedonia. He is reported to have been both cruel and rapacious. His reign, which was of eleven years’ duration, terminated by assassination, in which his wife and brother-in-law were the chief conspirators. The latter, named Tisiphonus, was raised to the vacant dignity.

I am by no means inclined to admit the propriety of assigning to this prince the coin Sestini\(^{23}\) published from the collection of Bertholdy of Berlin, of which another nearly similar is engraved by Neumann,\(^{24}\) amongst his incerti. On the contrary, I consider the two beautiful coins described above as the sole monuments of Alexander that have descended to us, both being, at all events, unedited, if not unique.\(^{25}\)

\(^{22}\) Originally in my collection, afterwards in that of J. R. Steuart, Esq., and now possessed by the Duke de Luynes.

\(^{23}\) Lett. Num. tom. viii. p. 188, Pl.vi. fig.10.

\(^{24}\) Num. Vet. part II. tab. vi. fig. 7.

\(^{25}\) Mr. Newton informs me that two coins, with the type of No. 2 above, are in the British Museum; one described R. P, Knight’s Num. Vet. p 119, E.1, under Antandrus in Mysia, the other supplying the remainder of the legend; neither has the bipennis, but on both, in front of the head, is an object which may be what Mr. Borrell describes, “a torch held by a small hand,” though it has rather the appearance of a branch. The fabric is not unlike that of the coin described above, No. 1, but is somewhat harder. Mr. Newton further states, that in his letter in this number, p. 110, he has omitted to notice the remarkable coincidence of the bipennis on the coin published above, No. 2, having only had the opportunity of making a hasty and partial examination of Mr. Borrell’s paper before it was printed.—\textit{Editor}. 
A long time elapsed before I could determine to what prince of the name of Alexander I might appropriate the tetradrachm No. 1. It was only at a much later period, and when I became possessed of No. 2, that, in my own mind, the problem could be satisfactorily solved, not only by a comparison of the two coins together, but of each coin again separately with others of the city of Pheræ, which was the capital of the dominions of this Alexander in Thessaly. The first coin which I select as illustrative of No. 1, is the following, cited by Mionnet. 26

Tête laurée d'Apollon, vue de face; dans le champ à gauche, un poisson.
R.—ΦΕΠΑΙΩΝ. Femme assise sur un cheval allant au galop à droite, tenant transversalement un flambeau.
AR. 3.

Here we have a head front face on the obverse, but, in his description, Mionnet has made two considerable errors, which induces me to suppose he copied from an imperfect coin. The head is not of Apollo, but of a female, and the adjunct symbol in the field is not a fish, but a flambeau. This I have ascertained beyond doubt, having before me a fine example of the same coin. Whoever this female deity may be, whose head, connected with the flambeau, occupies the obverse, I presume she is again figured on the reverse, where she has a flambeau, and is seated on horseback. Again, looking at the style of work as the same, I have no hesitation in bringing it forward in support of my proposition, and in proof of the Thessalian origin of my medallion.

Another coin in the Royal Library at Paris equally illustrates the reverse of my No. 2. Here is the description:—

26 Suppt. iii. p. 305. No. 252.
Tête de Lion à droite, tirant la langue; dessous, Α.

The lions’ heads, although by no means an uncommon type upon Greek coins, yet differ materially when they belong to different cities. In this case they are exactly alike. The female on horseback with a flambeau is also here repeated on the reverse; I, therefore, consider there is sufficient evidence to justify my proposition.

TRICCA IN THESSALIA.

Horse, walking from right to left.
R.—ΤΠΙΚΚΑΙΟΝ. Female standing, playing with a ball. AR. 2. 12 grs. (British Museum, from my cabinet).

On the money of Larissa the type of a nymph playing with the sphæra, or ball, is of frequent occurrence. It is new on the coins of Tricca.

Tricca could boast of its remote antiquity. Homer speaks of some of its inhabitants who were present at the siege of Troy. It contained a temple of Æsculapius nearly equal in renown to that at Epidaurus.

PEPARETHUS INSULA.

Veiled female head (Ceres) to the right.
R.—ΠΕΠΑ. Thyrsus. Æ. 2. (My cabinet.)

The symbols on this coin are new: they refer to the worship of Bacchus and Ceres, deities to whom the inhabitants of Peparethus were singularly indebted. Although but twenty miles in circumference, it was the most fertile of the numerous small islands on the Thessalian coast. Its wine was much esteemed. Apollodorus, physician to one of the Ptolemies, kings of Egypt, recommended it in pre-
ference to any other. The olives were in no less repute: they are praised by Ovid.

The coin attributed by Mionnet to this island (tom. ii. p. 27, No. 87), and another (in Supp. iii. p. 11, Nos. 3 and 4), are of Pellene in Achaia. See my notice on the coins of Pellene, in the Numismatic Chronicle, vol. ii. p. 237.

**Sciathus Insula.**

Naked female head, to the right.

R. — ΣΚΙΑΘ. Caduceus. In the field a tripod. ΑΕ. 3. (My cabinet.)

The tripod in the field is the only peculiarity which distinguishes the present coin from others already edited.

Christopher Ramus assigns a coin to this island on which are the letters ΣΚ, which Mionnet is inclined to consider as more properly belonging to Scotusa. As an impression of a similar coin has lately been sent me with ΣΚΙ, there is no doubt that the opinion of Ramus is preferable.

**Aleta, or Aletta in Illyria.**

Sestini cites a coin from the Fontana collection, which he ascribes to Aleta, or Aletta, a town in Illyria. Mionnet proposes transferring it to the ΑΕtolians. A similar coin is now before me, on which I read ΗΡΑΚΛΕΩΤΩΝ; it is,

25 Pliny, Hist. Nat. lib. 14, cap. 7. 26 Metamorph. lib. 7. 470. 27 A duplicate of this coin exists in the British Museum from my former collection. They were found together.

29 Supp. iii. p. 312, No. 9. The same author, loc. cit. No. 10, classes a coin to Sciathus. The legend is very imperfect, but the types are the same as on the coins of Crannon, and I conceive it belongs to that place.

30 Descrip. del Mus. Fontana, p. 28, tab. i. fig. 5.

therefore, to be presumed that Sestini must have copied from an incomplete and badly preserved coin, when he read ΑΛΛΕΤΩΝ. Aleta, consequently, for the present must be withdrawn from the list of numismatic cities.

APOLLONIA IN ILLYRIA.

No. 1.—ἈΡΩΝ. Helmeted head of Pallas to the right.

R.—ἈΠΟΛΛΩΝΙΑΤΑΝ. An obelisk, or meta. AR. 4. 49 grs. (My cabinet.)

2.—ἈΠΟΛΑΡΙΣΩΝ. Cavern for the flocks of Apollo.

3.—ἈΠΟΛΑΧΑΙΡΗΝΟΣ. Cavern as last; within is a small flaming mount, and the pedum.

R.—ΔΙΒΑΤΙΟΣ. Cow suckling a calf. AR. 4. 42½ grs.

4.—ΑΝΕΑ. A flaming mount.

R.—ἈΠΟΛΛΩΝΙΑΤΑΝ. A pedum. AR. 2. 17½ grs.

The coins of Apollonia are abundant, and offer but little variety as to their types. The first in the above list is new in silver. No. 2. is a specimen of a vast number, differing from each other merely by a variety of names; but this deserves notice, from having, in addition to the usual type, the head of Apollo above, and the pedum below, as adjuncts. This peculiar type numismatists have imagined to represent the garden of Alcinous, Alcinous being one of the ancient kings of Phæacia or Coreys, whence the Apolloniatae were originally a colony; but I am disposed to consider that the types on both sides of these coins admit of a more satisfactory explanation, which I shall attempt to prove. In the first place, Herodotus speaks of certain

33 Lib. ix. cap. 92.
flocks\textsuperscript{34} which fed on the banks of the Aōus, a river which rises at Mount Lacon, and passes through Apollonia. At night, he says, they were guarded in a cavern, some distance from the city, by one of the citizens, annually chosen from those most distinguished for their birth or riches. To these flocks, adds the same historian, the Apolloniatæ pay the greatest veneration, on account of an ancient oracle; and their pious devotion may be estimated by the fact of their punishing one of the illustrious herdsmen, named Evenius, with the loss of sight, for suffering a part of the cattle under his charge to be devoured by wild beasts whilst he was asleep. The severe punishment of Evenius incensed the gods against the Apolloniatæ; for, after that event, the sacred flocks ceased to bring forth, and the land became sterile. It was not till satisfactory atonement had been made, that the calamity subsided. After the happy change from famine and misery to abundance and prosperity, it is by no means astonishing that the people, grateful for the relief, should commemorate their good fortune in every possible manner, and, amongst others, that we should find traces of it on their money; and in that case, what more appropriate device could be imagined to mark the nature of the circumstance, than what we find on their coins, a cow suckling her young—indicating that the flocks had recovered from their sterility, and the earth regained its fertility, after the cessation of the ravages brought on the country by the vengeance of the offended deities.

The device on the opposite side of the coin, in my opinion, seems to corroborate and justify this hypothesis. Here we find a square, filled up with angular ornaments,

\textsuperscript{34} Herodotus writes \textit{προβατα}, rendered \textit{sheep} by Beloe. Larcher makes it \textit{troupeaux}; but, in a note, he remarks that the word admits of extension, and is better expressed by \textit{Bétail}, or \textit{cattle}.  

regular and almost invariable in form, which, as it bears some resemblance to a diagram of a garden, as before stated, induced numismatists to infer that it represented the garden of Alcinous. It is true these gardens were famed in history; but when, on the one hand, is considered the improbability of the people of Apollonia feeling so deep an interest in what did not immediately concern them, and, on the other, that these gardens were destitute of any mythological allusion even to the Corcyreans themselves, the explanation may be reasonably rejected. Herodotus says, the sacred flocks of Apollo were fed by day on the banks of the Aous, but that at night they were conducted for shelter to a cavern at some distance from the city. The cavern, whether artificial or natural, was doubtless considered a place of sanctity, and was worthy the purpose for which it was used: may not the type, therefore, be intended to represent a plan of this cavern? I presume it does; and I find a further confirmation of this position in the accessory symbols observed on the coins I cite. In the first instance, on the obverse of No. 2, above the principal type of the cow and calf, is a small radiated head of Apollo: this is probably placed there to denote the particular deity to whom the animals were consecrated; and the pedum, or shepherd's crook, which is below, was, as it is natural to suppose, the staff of office of the illustrious person who had charge of them. This further leads us to the conclusion, that the names which occur in such varieties may be those of the individuals who held the important and distinguished post of guardian of the sacred flocks during the year when the coin was struck, as that is placed of Nicander upon the one in question.

The preceding remarks are still further illustrated by a reference to the coins which follow under Nos. 3 and 4.
On the No. 3. is seen the same square as on the No. 2; but instead of the usual ornaments within it, resembling (according to my view) separations or partitions for the accommodation of the animals, is a small flaming mount, as it is called by numismatists, and the staff or crook, whilst on No. 4. is simply a flaming mount on one side and the pedum on the other side of the coin. The shepherd’s pedum refers here again, as I have just stated, to the office of guardian of the flocks; and the flaming mount probably alludes to the common practice of lighting fires during the night at the cavern’s mouth, for the protection of the cattle against wild beasts, to avoid a repetition of the accident which occurred to Evenius.

Another coin of Apollonia, though offering a type entirely different, seems to refer to the same subject. It is published in several numismatic works. I select the first which comes to hand, as follows:—

ἈΓΩΝΙΩΠΟΥ. Head of Apollo to the right.

The coins bearing this peculiar device are certainly of a more recent period than those with the cavern; but it appears to be a continuation of the same subject. It favours the idea that certain religious ceremonies were periodically performed in honour of Apollo and the sacred flocks. The fire would here indicate the spot where these ceremonies were performed, and the females, either priestesses, or, more probably, nymphs, or genii presumed to preside over the locality.

Plausible as this explanation appears, it may be objected to by some, on the grounds that the same principal devices are repeated on the money of the Epidamnians or Dyrra-
chians, and on that of the Corecyreans. It is well known that the Apolloniatæ and the Epidamnians both derived their origin from Corecyra; but if the subject was of local interest to the Corecyreans, as it would be were it intended for the gardens of Alcinous, why should it be adopted by their colonies? I think, however, we may overcome this difficulty, by showing the possibility that the custom of maintaining flocks in honour of the gods, and specially consecrated to them, may have derived its origin in Corecyra, and have been thence carried by the emigrants to the two colonies, a conclusion which the testimony of Herodotus appears to justify. As has been already stated at the commencement of this notice, the historian remarks that the Apolloniatæ pay the greatest veneration to the sacred flocks, on account of an ancient oracle. Now if Deiphonius, the soothsayer who accompanied the Greeks at the battle of Mycale, which was fought 479 years B.C., was, as we are informed, son of the Evenius who was punished with the loss of sight, Evenius himself most probably flourished at about 500 years B.C.; and as Apollonia was founded by a colony from Corecyra only 580 B.C., when Periander ruled at Corinth, it becomes nearly evident that the religious custom was introduced by the colonists from the metropolis, otherwise Herodotus would not be justified in speaking of an ancient oracle; so ancient, indeed, that we are led to suppose all record of the original motive of the institution had been forgotten.

Lastly, it may be inferred, that the flocks both of Corecyra and Epidamnus were less exposed, or better guarded than those of Apollonia; for in no one instance do we find upon

35 According to Herodotus, loc. cit., the gods accorded the gift of divination to Evenius and to his descendants, to make amends for his cruel treatment by his countrymen.
the money of the mother or sister city any indication of the fire, proving that the motive of that additional symbol was local, and concerned the Apolloniatae merely, in consequence of the misfortune which occurred to them in particular.

It may be argued, why is the historian silent as regards the institution of the same kind which existed in the two cities mentioned above? It is my opinion, that the custom was not one of an extraordinary nature, so as to merit particular notice; and, in fact, we should still be unacquainted with the sacred flocks of Apollonia, were it not for the punishment of Evenius, which led to serious results. That the custom was not confined to the three cities enumerated I think highly probable; for many coins bearing for type a cow suckling a calf (in precisely the same attitude as on those described), and on the reverse an indented square, have come under my notice. Most of these, by their fabric, appear of remote antiquity, without legend, and are constantly found in Macedonia; and the indented square is decidedly Macedonian: hence either other races had adopted similar ceremonies, or they were struck by other Coreyraean colonies, of which we are uninformed.

DYRRACHIUM IN ILLYRIA, AND LEUCAS IN ACARNANIA.

Δ. Pegasus flying, to the right.
R.—Δ. Same type. AR. 1. 12½ grs. (British Museum, from my cabinet.)

Alliances between distant or neighbouring cities, either for political or religious objects, must have been frequent among the Greek races, from the nature of their institutions. Sometimes these alliances are recorded on their respective coins, when it was, no doubt, intended to confer on their treaties a greater degree of sanctity, so as to induce
each party to maintain them inviolate. It, however, rarely happens that the motives of these alliances can be explained through ancient historians; but when it is considered that, in all probability, the interests which occasioned them were merely local, and did not bear upon Grecian history in general, it is not at all surprising. The preceding coin would seem to mark some event which interested two Greek cities, Dyrrachium and Leucas; and the following extracts from Thucydides may throw some light upon the subject.

"The Dyrrachians having expelled the higher class of citizens, these last joined some barbarous Illyrians, and together carried on a predatory war against the city. Too weak to defend themselves, the Dyrrachians applied for aid to their parent city Corcyra; but, as the government of that place was at that time aristocratical, assistance was refused.

"Corcyra itself was originally founded by the Corinthians; and, agreeable to custom, when they sent a colony to found Dyrrachium, they applied for a leader from the metropolis; when Phalius of Corinth, a descendant from Hercules, was appointed to that honour; by which Corinth, through Phalius, became the nominal founder of Dyrrachium, whilst in point of fact it was a Corecyraean colony.

"On the return of the ambassadors, the Dyrrachians in their distress, and in accordance with the advice of the Delphian oracle, sent a deputation to Corinth, offering to renounce their former ties, and to submit to them as protectors. Their time was well chosen; the Corinthians, a long time on unfriendly terms with the Corecyraeans, on account of some informalities of usages and honours due from colonists to the mother country, willingly accepted the propositions of the Dyrrachian deputies; a number of
adventurers from Corinth, joined by some Ambraciot and Leucadian auxiliaries, were sent to their aid, and soon arrived at Dyrrachium, when commenced the famous war between the rival states, known by the name of the Corinthian war.

"At the onset of hostilities, the advantage was decidedly favourable to Corinth; but the Athenians, having been induced to side with Corecyra, and uniting their fleets, Corinth could no longer protect her allies; and Dyrrachium falling into the power of Corecyra, the exiles, the cause of the war, were restored."

The apparent age of my coin coincides with this interesting epoch; the type on the reverse is in a slight hollow, as on the coins of Perdiccas, king of Macedonia, who was contemporary with the above events, which occurred in the last year of the 86th Olympiad, when Pericles ruled at Athens. Thucydides omits to inform us how far the Leucadians engaged in the struggle; but as we see some of them joined to the Corinthian adventurers sent to protect Dyrrachium, it is not improbable that this succour was the consequence of a particular treaty: and in that case, in commemoration of the event the coin was possibly struck. The type appears to confirm this opinion; for the letters Δ and Λ, the initials of Dyrrachium and Leucas, are connected with the device of a Pegasus, the peculiar emblem of Corinth, which seems naturally to refer to a convention between the two former cities, under the superior and special power of the latter.

ALEXANDER II. EPIRI REX.

It is my opinion that there exist insufficient grounds for assigning certain Tetradrachms and their subdivisions to
Alexander of Epirus: I allude to those described in numismatic writers as follows:

Head with diadem and horn, covered with the elephant's skin.
R.—ΑΛΕΞΑΝΔΡΟΥ. Pallas walking, combating, a lance in one hand, and a shield in the other; in the field, a helmet and an eagle. AR. 8. 240 grs.

I consider they may safely be removed from Epirus, and restored to Ptolemy IX., surnamed Alexander, king of Egypt. My principal motive for proposing this change is, that they are constantly found in Egypt intermixed with other Egyptian coins. Twenty-five years' experience has sufficiently convinced me of this fact, during which time as many, perhaps, as fifty examples have come under my notice, but never a solitary instance has occurred of their being discovered in Greece. We have, moreover, the not uncommon coin in copper acknowledged to be of Ptolemy Alexander, but without the latter name, on which is the same head, ornamented with the elephant's skin.

My proposition, I freely admit, offers some difficulty, which I am unprepared to encounter. If a comparison is made between these coins with the name of Alexander, and those of the preceding kings of Egypt (say Ptolemy VII., for none is given to Ptolemy VIII. in silver), these last are lighter, of inferior metal, and much more rude fabric. There can be no doubt, however, that the classification of the whole series of the regal coins of Egypt requires correction and revision; it will, therefore, be pleasing to me if some competent numismatist should be stimulated by my observations, and should undertake the task. It is only where access can be obtained to large collections, that the work can be attended with success.

H. P. Borrell.

Smyrna, 19th November, 1841.
XIX.

INEDITED SAXON AND ENGLISH COINS.

My dear Sir,

I venture to lay before the Numismatic Society, in the form of a letter to yourself, a few remarks on three as yet unedited coins. One I apprehend to be a penny of Eadgar struck at St. Edmundsbury; another the long-looked-for half-penny of Edward VI.; and the third, a penny of Henry III., having the legend on the reverse, retrograde, HALLI ON RYLA.

My observations on the first may be given in a very few words. The difficulties in the way of its appropriation are that it is unquestionably a blundered coin, but I cannot think that in this instance the blunders are sufficiently startling to prevent the coin being rightly assigned. From the engraving which accompanies this paper, made from your own admirable drawings, it will appear that the legend of the obverse reads EADEAR. It will be seen that the D is unfinished, and that the E is substituted for L. Surely so slight a blunder as this was never allowed to prevent the appropriation of a coin all whose characteristics refer to the period of EADLAR.

The reverse presents us with the legend ZIC EADMONIDT, which I can see little difficulty in reading SCI EADMOND. The difference is vastly less than that to be found on the acknowledged pennies of St. Edmond, so many of which were found at Cuerdale.

If, however, it should seem that I am wrong in assigning the penny in question to the mint of St. Edmundsbury, I
am confirmed in my reading both of EADGAR and of EADMOND, by the circumstance that among the moneyers of Eadgar the name of Eadmond occurs. I think, however, that the ZIC is a blunder for ZCI; and, in that case, we have a new mint to add to those already known of the sovereign aforesaid. It would seem that the moneyers of Bury St. Edmunds were peculiarly liable to blunders.

We proceed next to the half-penny of Edward VI. "The coin," you say in your note, "is in so wretched a condition that it cannot be ascertained with certainty to be so." I venture to differ from this opinion; and in order to set forth the grounds of my own, I shall take the liberty to make a few observations on the principles of Numismatic Science.

In noticing a coin of which we have never seen a specimen before, our first care should be to ascertain the era in which, and the city or prince by which or whom, the medal was struck. To do this accurately, we must carefully note the standard of metal, the workmanship, the weight, the form, and compare these peculiarities with those exhibited by the coins of neighbouring cities, of succeeding or previous sovereigns. Not until all these circumstances have been carefully weighed, are we at liberty to decide on the age and the issuer of any coin, and then, and not till then, may we venture to make the coin serve as an historical document, and attempt to deduce from it any historical consequence.

Now with regard to the miserable piece of base metal before us, we first ascertain that the standard is of the very lowest and most debased character; the next thing which strikes the observer is, that the reverse bears the legend CIVITAS LONDON, that is to say there is sufficient remaining to show that such it has been; this legend encircles the old
device of the cross and pellets. On the obverse, we find a portrait in profile, looking to the right; the size and weight indicate a half-penny. Such are the indications with which this interesting but badly preserved relic presents us.

There was only one period, with the exception of the reign of Æthelred I., in which the English coinage was debased. This period commenced with the third coinage of Henry VIII.; continued (increasing the debasement as it proceeded) during the remainder of his reign, and during the first years of his son and successor; then, in the second coinage of that prince, the standard was suddenly restored; and the only subsequent instance of a debased coinage, for England, is to be found in the base pennies of Mary, and of Philip and Mary.

In Ireland indeed there was a base coinage earlier, and it continued later; and the same was the case in Scotland: but the limits of the English debasement are those which we have recited above. Having then a base coin which bears the legend CIVITAS LONDON, the period is limited first, by the inscription itself, from the reign of Edward I. to that of Elizabeth; and then, by its quality, to that which elapsed from the middle of the reign of Henry VIII. to the termination of that of Philip and Mary. Thus we have a choice of

Henry VIII. Mary.
Edward VI. Philip and Mary.

Now, of the base coinages of the first of these monarchs, we have no instance of any bearing a portrait in profile; and each one is described by the indentures made with the various mint-masters; besides this, there is the greater part remaining of an initial Roman E. It is, however, on the ground of a profile turned to the right on a base coin, that
we must reject any interpretation which would assign this coin to Henry VIII. On the coins of Mary again, and on those which, with the titles of her husband and herself joined, present her head alone, the portrait is a profile turned to the left; besides, here again we are met with the initial E followed by a D, no doubt a portion of the once complete legend E. D. G. ROSA SINE SPINA. Thus, then, whatever we say against attributing the coin to Edward VI. will militate far more against assigning it to either of the other two. But as the legend proves it to be an English coin, and the standard indicates a period of a very few years, during which only three sovereigns reigned, so we have negative proofs that it is a coin of Edward VI.

The positive proofs consist in its size, standard, weight, form, legend and device, all which have been already described. If now this be the half-penny of Edward VI. it differs much from what we have been led to expect; for here we have the cross and pellets, whereas all the descriptions which we possess of the base coinage of Edward VI. give us an idea that the half-penny would have the arms and the civitas lond on the reverse, and very probably the full blown rose with E. D. G. ROSA SINE SPINA on the obverse. I think that this will be found to add another link to the chain of coins in which the old device of the cross and pellets was preserved, extending now from the first to the last Edward.

The last coin is one which (with much deference to the authority of so eminent a numismatist as Mr. Hawkins, I shall still venture to call a penny of Henry III.) will call for not many remarks. I will, however, state my reasons for agreeing with Mr. Sainthill and our older numismatists, rather than with Mr. Hawkins, in the assignment of those pennies with the short cross to Henry III. rather than to
his grandfather. In the first place, I am guided by the names of towns and moneyers; and I think I discern more than a mere accidental agreement between those found on these two descriptions of pennies. In the next place we find Irish pennies of John, which give a triangle on the reverse, as well as on the obverse, whereas those of Henry III. have the double cross just like that on the pennies struck in England. Now as it is quite certain that Henry II. sought uniformity as the distinguished characteristic of his coinage, a uniformity which was never afterwards lost sight of, it would appear most probable, that if Henry II. had issued a very extensive coinage with the double cross on the reverse, and Henry III. did the same, with the only difference that in the one case the double cross was a short one, and in the latter a long one, the intermediate reign would not exhibit a totally different type. This conjecture receives support from the Irish coins of Edward I, II, III, which have a reverse precisely like those of the English ones. We have seen that those of Henry III. follow the same rule; and we might therefore expect that the same rule would obtain with regard to those of John and Henry II. From the settled character which, from the very first coinage of Henry II. (if there were two), marked the English mint, we should be led to expect that, if there were any English coins of John, they would resemble his Irish ones; and if there were any Irish coins of Henry II. they would resemble those struck in England. It is true that the style of letter observable on the Irish pennies of John resembles that which we notice on those of Henry III.; but why should there be so remarkable a departure in the rest of the coin, why in that should the cross on the reverse characterize the two Henries, grandfather and grandson, while the son exhibits a totally different type, and this too at a
time in which the necessity of monetal uniformity was just beginning to be felt?

Then we have some of the short cross pennies with the word "TERI," and some of the long cross pennies with the word "TERCI," and there appears no reason whatever to imagine such a name as TER. RI, or, as some have erroneously read it, TERIRI. Nor can it escape the notice of those who examine the workmanship of coins, that the same artist, or school of artists, must, with scarcely a doubt, have executed the two series of coins. Is it likely that the two reigns of Richard and John should have passed over without their being employed, and that they should afterwards have engraved all the dies of Henry III. during a long reign of fifty-six years? If it be replied, that one might have been copied from the other, then why was the intermediate coinage of John conducted on a different plan? Again, the coinage of Scotland presents us with some analogies. It seems pretty well agreed that the Scottish monarchs imitated the types adopted by their English contemporaries. Now the last portion of the long reign of William the Lion, corresponds with the last portion of that of John; its earlier part, with the closing years of Henry II. We find that the early coins of William present a single cross reaching to the inner circle of the coin, like those of Henry II., and a crown of the same character; the last give us the diadem of pearls, and the short double cross like those of Henry (as I venture to say) III. This circumstance may lead to important discoveries; Henry III. ascended the throne A.D. 1216. William the Lion was succeeded by his son Alexander II. 1213: there elapsed therefore three years between the death of William and the accession of Henry. It is then clear that the pennies of the Scotch king could not have been imitated from those of Henry
III. I think that they were imitated from a coinage of John, of which no specimen has reached our time. My reasons for thus thinking, I shall proceed to lay before you.

It is now pretty well agreed that we have no pennies of Alexander I.; that the earliest coins which bear the name of Alexander, are those of William's son; and that the coins of the Scottish Cœur de Lion commence the series of their pennies. The first in order of these bear a short single cross like those of Henry II., with a crescent, and what numismatists call a pellet in each quarter, but which pellet has a tail to it, and in one instance two tails, and looks wonderfully more like a comet than anything else. Now John's Irish penny has the crescent and a blazing star. It would seem scarcely to admit of a doubt that William's moneys copied the device adopted by those of John. The second description of William's coins has a short double cross, like those which Mr. Hawkins assigns to Henry II.; but instead of the crescent and comet, we find a mullet, perhaps only an imitation of John's blazing star: we have a crown of pearls also in imitation of the coin before referred to, of Henry II. or III; we have seen that it could not have been copied from the coins of Henry III., and it appears unlikely that, having taken John's moneys for a model, the Scotch artists should go back to those of Henry II.

I am inclined to think that we shall one day find proofs of two distinct coinages of John struck in England; one with a short cross, single, with a crescent and a blazing star in each quarter, and one with a short double cross, like those of his son; pellets in each corner, and probably the work of the same artist, not Aymary of Tours.

Once more I see no reason of sufficient force to disturb the arrangement which assigns all the pennies with the double cross to Henry III. The particular specimen which I
now describe has the reverse as usual, but the legend is retrograde, it reads halli on rula. The name Halli occurs among the moneyers of Henry III. mentioned by Ruding, and the mint of Rula. Rhuddlan has been suggested as the town implied, but the importance of the place in times past seems scarcely to warrant such an attribution. Ru
tland again has been named; but this is a county, and not a town. It is by no means easy to fix a spot likely to have been the Rula of the third Henry. It is just possible that as in a retrograde legend it is by no means unlikely that we should find inverted letters, the place may have been RVΓA; and then Rochester will be in all probability the place of coinage. I must apologize for the length to which I have extended these observations, and subscribe myself,

My dear Sir,
very faithfully yours,

C. R. Smith, Esq.

Henry Christmas.

XX.

ON THE TYPES OF TERINA.

The archaic coins of Terina have, on their reverse, the apteral victory, indicated by her name Νικα or Nικα, draped in a talaric tunic, and holding a pendent laurel branch. Those of the second epoch, a winged female holding a crown, recalling the Νίκα στεφανοῦσα of the Greek chori, the same, holding a branch of laurel, frequently the κηρυκεῖον or caduceus, occasionally caressing a bird, seated upon a hydria or water vase, or holding the same ob-

1 Millingen. Sylloge.
ject, and seated upon a cube or Ionic column. The most remarkable type is that of the same female, seated upon a cube on which is inscribed ΔΙΗ, and holding her hydria to a fountain, the water of which issues from a lion-headed mouth placed in a wall. Mr. Millingen, who has had these types twice under consideration, supposes it to represent Niké or Victory drawing water from a fountain, and the inscription ΔΙΗ possibly to be the name of the stream called by Lycophron Ἀρεώς which flowed near Terina. I had already suggested the possibility of this type representing Iris, from the appearance of the caduceus, and the fact of the Iris of the Iliad and of the cyclic poets being the Niké of the Græco-Italian vases. There is a winged figure, having in each hand a hydria, accompanied by the name Ἀδως, representing Aurora, or the morning breeze, pouring dew upon the earth, which could scarcely be the idea of the types of Terina. M. Gerhard, in his work on Mirrors, has already given the type of Terina in illustration of a mirror representing Iris drawing the water of the Styx, which is the interpretation to which I had independently arrived, and for which I can offer a confirmatory reason. The river alluded to by Lycophron, in the Alexandra, under the

7 Urlichs ingeniously makes the Niké Apterōs, Athene or Pallas—and the winged Victory, Iris.
9 Gerhard (Chev. Ed.), über die Flügelgestalten der Gottheiten. 4to. Berlin. 1840. Etruskische Spiegel. 4to, Berlin, 1840, pl. x. 1, 2, 4. No. 3. is an Etruscan scarabaeus of the same subject with a serpent at the feet.
name of Ares, is expressly stated by his scholiast Tzetzes\textsuperscript{10} to be the Eris, or Iris, "\textit{Eρις, καὶ Ἰρις, ὃς τινὲς γράφουσιν, ποταμὸς παρὰ Τέρεμναν.}" Eris, or Iris, as some authors write it, a river near Terina." The winged Iris accordingly personifies the river, in the same manner as the satyr Marsyas, playing on the διανλός, or double flute, and placed with the meander ornament beneath his feet, does the river of that name, a tributary of the Mæander.

Iris, considered as a personification of the rainbow and the messenger of Hera, was the daughter of Thaumas and Electra, and the sister of Arcé, and of the Harpies or Storm-winds. Although there is reason to suspect the passage of Homer in which she is called the "golden winged,"\textsuperscript{11} yet she is always so personified on works of the greatest antiquity.\textsuperscript{12} Her name is derived from εἰρω, to bind together, or εἰρω, to speak, in allusion to her physical import and her office, connecting her at the same time with the winds, to which she administered rain\textsuperscript{13} in her celestial capacity, and, in her infernal, as the liberator of souls with Hermes, the Κηρε, and the Eumenides.\textsuperscript{14} Niké or Victory, to which she bears such important relation, was the daughter of the giant Pallas and the Styx fountain, having a distinct connection with Pallas-Athené, and also with the infernal Eumenides or Σέμναι θεαι.\textsuperscript{15} The etymology of the two seems to be derived from "\textit{Eρις} and Νεῖκος, or Strife and Contention.\textsuperscript{16}

\textsuperscript{10} Ad l. 730.
\textsuperscript{11} ll. θ, 395. Suspected by P. Knight, in his Ed. Compare also the locus classicus, Aristophanes, Aves, 572.
\textsuperscript{12} Gerhard, über die Flügelgestalten, loc. cit. p.18.
\textsuperscript{13} Cf. Ovid’s Metam. i. 270, iv. 480.
\textsuperscript{14} Ἀνειδ iv. 694, et seq.
\textsuperscript{15} Called the Σέμναι. Euripid. Phœnis. l. 1777.
\textsuperscript{16} Cf. Gerhard, über die Flügelgestalten, &c. loc. cit. pl. iii. p. 18, where Niké and Iris bear off the body of a warrior.
One of the offices of Iris was to draw the water of the Styx ἐν χρυσῇ προχώφῳ, in a golden prochōus, to administer to perjured divinities.\textsuperscript{17} This fountain of Hades, κρήνη Ἀδοῦ, was placed in a splendid palace, supported by silver columns, and dripped from a height into a basin, ἀγγος, which overflowing, it swelled into one of the nine streams of Ocean.\textsuperscript{18} The Styx, whose terrestrial locality was supposed to be the Arcadian Nonacris,\textsuperscript{19} seems to have its legend, and probably name, transferred, along with those of the Acheron, the Acherusian lake, the Crathis, and other hills and streams, from the Peloponnesus to Magna Græcia; and some mythologists place the spot of the terrestrial fountain in Campania. It was not improbably the reputed source of the Eris or Iris of Terina. A swan, or bird of that species, is represented swimming in the basin or lake into which the stream of the fountain discharges itself.\textsuperscript{20} It is difficult to understand its allusion, unless the Arcadian Styx had any connection with the lake Stymphalus, on whose bosom swam the celebrated iron-winged birds chased by Hercules to the island of Aretesia. I know as yet of no solution of the word ΑΙΗ: Mr. Millingen merely suggests that it may be the Ares, and is a convenable name for a fountain. It is written perpendicularly in fugitive letters on a kind of stele or tablet, like the name of Eirene on the coins of the Locri. This word cannot easily be explained—it occurs in the sense of holy, a breaker, and the shore.

\textsuperscript{20} Supposed by Millingen, loc. cit. to represent one of the castella or reservoirs.
MISCELLANEA.

GREEK COINS FOUND IN ENGLAND.—We have lately seen some Greek coins, found at Aston Scott, in Shropshire, on the estate of Mrs. Stackhouse Acton, niece of the late R. P. Knight, Esq. They were:—a coin of Smyrna; head of Apollo laureated, to right. R. ΣΜΥΡΝΑΙΩΝ; two hands joined.—Youthful head. R. ΕΠΙ ΦΙΛΙΣΤΟΥ ΕΙΚΑΔΙΟΣ; Victory, holding a palm-branch, gradient to right.—Athens; ΑΘΕ; head of Dionysus Cissostephus. R. Head of Zeus, bound with a fillet.—Antiochus VIII. and Cleopatra; heads, radiated. R. ΒΑΣΙΔΙΑΣΑΣ ΚΑΙ ΟΙΠΑΤΡΑΣ ΚΑΙ ΒΑΣΙΛΕΩΣ ΑΝΤΙΟΧΟΥ; plumes, disc, and horns.—A coin of Paros, and an uncertain Italian or Sicilian coin; R. Protome of a human-headed bull.

Our belief is, from the difference of appearance and condition of the coins, that some trick has been played by parties interested to gain, or anxious to deceive; as, although possible, it is highly improbable such a collection in copper, and chiefly in indifferent condition, could have been rightly found there. We therefore put collectors on the guard, as we have lately seen a spurious medallion of Pescennius Niger dug up in Sussex by a ploughman. There seems an evidently deep-rooted spirit of deception in many instances.

THOMAS SIMON.—Mr. Peter Cunningham, whose extensive acquaintance with "Old Plays" is not the least of his acquirements, has directed my attention to Shadwell’s "Sullen Lovers, or, the Impertinents," wherein occurs an incidental notice of Thomas Simon, the medallist. The following is the passage:—

"Emilia. Let me go, I am going in haste to bespeak a seal.

"Sir Positive. A seal? Why dost thou know what thou dost now? to go about that without my advice: Well, I have given Symons and all of 'em such lessons, as I have made 'em stand in admiration of my judgment: Do you know, that I'll cut a seal with any man in England for a thousand pound?"

This slight notice affords contemporaneous evidence of the repute in which Simon was held at the time that this comedy was produced; the dedication is dated 1668, and it was brought upon the stage during the same year.

B. N.

N.B. The character of Sir Positive Atall (a great boaster) was, as Pepys tells us, a hit at Sir Robert Howard.

3. On the Bracteates found in the territory of Lausiz.
4. On a find of coins in Breisgau.

Monsieur Jules-Armand-Guillaume Boucher de Crévecœur, of Abbeville, Associate of the French Institute, well known as an able antiquary and numismatist, died on the 24th of November, in his 88th year. The very extensive collection of coins which the deceased gentleman had formed, is referred to by Professor Lelewel in his *Numismatique du Moyen-age*. The coins and general antiquities, many of a high local interest, are inherited by Monsieur Jacques Boucher de Crévecœur de Perthes, his son, President of the Royal Society of Emulation of Abbeville, and Associate of the Numismatic Society of London.

A quantity of Roman coins, amounting to upwards of 1,200, have recently been found in a field called Church-piece, near Lilly-horn, situated on the high road, from Oakridge common to Bisley, in the county of Gloucester. They are of small brass, and range from Tetricus to Allectus inclusive. Mr. Baker, on whose property the discovery was made, has sent an account of the coins and other objects to the British Archaeological Association, the former of which, if of sufficient importance, and requiring an extended illustration, will be transferred to the Numismatic Society.

**The Coin Forgers.**—The Paris forgers have lately been very active, and have so successfully imitated some of the middle age scarce coins of England and of France, as to impose even on the most experienced judges. One of the gang, of the name of Noffman, or Hoffman, has lately been making a tour in the west of France, and is now, it is said, on his way to England. He carries with him a quantity of genuine rare coins, both Greek and Roman, as well as Saxon, English, and Continental, which enables him to pass off the forgeries with greater ease, and less chance of immediate detection. It is supposed he and the rest are connected with the notorious *Rousseau* mint.
The Revue Numismatique for July and August has just reached us. Its contents are:

Sale of Ancient and Modern Coins and Medals at Vienna.—M. G. Wellenheim has forwarded to us a copy of Part I. of the catalogue of the second portion of the extensive collection of his father, L. de Wellenheim, Anlie Counsellor, announced for sale at Vienna, on the 10th of February next. The collection contains upwards of 45,000 pieces; namely, ancient coins, 16,500, and medieval and modern 29,000; of which there are Greek gold, 120; silver, 2,100; brass, about 5,800; and of the Roman series in gold, silver, and brass, about 8,400 pieces. The entire collection will be sold in the month of February by public auction, unless an offer is received previously.
G. B. is wrong. The remarks are not ours. Our own friends will know this from the occurrence of the odious un-English word "talented," which we never wrote or used in our lives.

Our Plymouth Correspondent will find his coin engraved in Plate VII. No. 8, of "Ancient Coins of Cities and Princes." There appears good reason for its appropriation to Bilbao. No. 2 is a coin of Zeugma, in Commagene, and bears the head of Antoninus Pius. It is very common.

An apology and thanks are due to our Cambridge Correspondent, who some time since kindly sent us sketches of some ancient British coins. These pieces offer no remarkable features, but we may recur to them at a future time.

M.M. Lindberg and Falbe, of Copenhagen, have announced a work on the "Coins of Ancient Africa," in which we may expect not only descriptions and explanations of many types and legends as yet unexplained, but also of numerous pieces hitherto unknown to the numismatist and antiquary. M. Lindberg is well known for his sagacious interpretation of the legend on the coins of Sexti.

Dr. Grote, editor of the "Blätter für Münzkunde," now holds the office of the Curator of the Coins and Medals of the king of Hanover.

S. The Legend on the well-known silver coins of Juba the Second is interpreted יבשויו רמ מודיק; i.e. Juba, Chief of the State. Whatever may be the opinion of the older numismatic writers, this appears to be the true reading; and it has the sanction of M. Lindberg, and also of M. de Sauley.

G. S. A. Our Correspondent will find a copy of the book, at a lower price, at the publisher’s, Mr. John Russell Smith. Half the books in the catalogue referred to are rubbish, and contain the obsolete reveries of dreamy "antiquists," which will embarrass rather than assist G. S. A. in his studies.

H. A.’s coin is of Gordianus Pius, struck at Edessa, in Mesopotamia. The type is common. The letters on the reverse are ΕΔΕΕΚ... KOΛΩ...
Dear Sir,

I do myself the honor, through your hands, of presenting to the Numismatic Society a drawing of the Beard Coin, or Token of Russia, from a specimen in my possession; and, by the assistance of a friend who is intimately acquainted with the country, its language, and its laws, I am enabled to offer some account of the origin and use of this very singular minting.

In most parts of Europe, the habit of wearing beards had fallen into disuse by the commencement of the eighteenth century. Peter the Great, desirous that his subjects should act in conformity with the prevailing fashion, issued his ukase (oukaz) in 1705, imposing a tax upon all those who wore either beards or moustaches, varying from thirty to one hundred roubles per annum, according to the rank of the individual: a modification, however, was made in favour of the peasant, who was only required to pay two dengops (denushkas), equal to one copeck, whenever he passed through the gate of a town. This ukase proved most offensive to the feelings of the people; and so much discontent was manifested on its
being enforced, that the greatest vigilance became, on many occasions, necessary to prevent popular outbreak.

Notwithstanding this, the law, in 1714, was extended to St. Petersburg, which previously had been exempt from its operation; and, in 1722, another decree was promulgated, ordering all who retained their beards to adopt a particular dress, and to pay fifty roubles every year; those who would not shave, and could not pay, were condemned to hard labour to work off the fine. This ukase was extended to the provinces also; but, in 1723, peasants bringing the produce into towns were wholly relieved from this tax.

In 1724, Peter directed that the copper token, or coin (which forms the subject of this communication), should be struck annually, and given as a receipt to those who had paid the tax for the current year; he also decreed, that the Raskolnicks (a religious section of the Greek church) should pay a double tax.

On the death of Peter, in 1725, all previous edicts relating to the beard were confirmed by Catherine I. in a ukase, dated the 4th of August, 1726.

In 1728, Peter II. issued a decree, permitting peasants engaged in agriculture to wear their beards; but insisting that the tax of fifty roubles, to be paid by all other persons, under penalty of hard labour, should be rigidly collected.

The Empress Anne, in 1731, promulgated her ukase, by which all persons, not employed in husbandry, and who yet retained their beards, were entered in the class of Raskolnicks, and were required to pay double the amount of all taxes, besides that of fifty roubles for the beard.

In 1743, the Empress Elizabeth confirmed the existing decrees in all their force.

On the accession of Peter III., in 1762, it was his in-
tention to have strengthened these laws of his predecessors with most stringent provisions; and he had prepared a ukase accordingly, which his sudden death prevented being carried into effect. His widow, Catherine II. (1762), immediately on her exercising sovereign power, removed every restriction relating to the beard. The Raskolnicks, who had fled the country to avoid the objectionable edicts, were invited by her to return, and had lands assigned for their settlement.

I have thus sketched the history of this beard-tax through a period of nearly sixty years, during thirty-eight of which this Token, or "Borodoráia" (the bearded), as it was called, was in use; the description of the token itself is as follows:—on one side is seen a nose, mouth, moustaches, and a large flowing beard, with the inscription "dioxis vsatia," which means, money received; on the reverse is borne the date of the year, in Russian characters (equivalent to "1705 year"), and the black eagle of the empire.

The national aversion to the origin of this token probably caused their destruction or dispersion, after they had served their purpose for the year, as they are now very rarely to be met with, even in Russia.

I remain, dear Sir,

Yours very respectfully,

WALTER HAWKINS.
XXII.

THE ADOPTION OF THE ATHENIAN STANDARD IN THE COINAGE OF SOME ITALIAN AND SICILIAN CITIES, ABOUT OLYMP. 75 (B.C. 480), CORROBORATED AND ACCOUNTED FOR BY HISTORICAL EVIDENCE.¹

The spirit of our present age, consisting chiefly in great universal and systematical combination, has at last been directed also to the study of ancient coins, and has opened here a new and most important source of intelligence. For though the great Eckhel and some other distinguished men of the last century very well understood what illustration history could receive from a well directed study of numismatics, yet they were all more or less embarrased by the imperfect arrangement of the subject; they could but with difficulty extend their views beyond the frontiers of that state whose coins they were treating of. The mere geographical arrangement of Eckhel, by which those cities that were most closely connected by commerce are severed, merely because some are situate on the coast of Asia, others on that of Europe, by which colonies of the same city, with the same type, and the same standard, are displaced and torn from their natural connexion, must disturb all historical order and character. But it has been the immortal merit of these indefatigable men, that by their pains a more organic arrangement is made practicable to us. And here it is M. August Boeckh,² who in our days

¹ Being a foreigner, I beg pardon of the benevolent readers of this Chronicle, if there is sometimes in my expression (though corrected and amended by the favour of Mr. Newton), somewhat strange or offensive to English feelings and ears, the thoughts of every nation being adapted only for their own language.

² In his Metrological Researches, Berlin, 1839.
has opened a new way and a new view, by shewing the connexion and mutual influence between whole nations, from the standard of the coins propagated by commerce and intercourse from one city to another, and changing conformably to the increase of the authority and influence of another power. Correspondence in standard, when joined with resemblance of type, will hereafter afford a more systematical arrangement of the Greek coins.

By this method, Boeckh has gained some new historical classes of evidence, one of which I will try here to corroborate by testimonies from ancient authors.

M. Boeckh, following the steps of his greatest pupil, Otfrid Müller,\(^3\) has proved that the Greek cities of Italy and Sicily have, as well as those of other countries, early received in their coins the standard of the Peloponnesian or Corinthian coinage, which fact corresponds so well with all historical notices, that it need in no way surprise us. For, when Phidon, that great man, who at so early a period contrived to unite the different Greek states not only by arbitrary aggregation, but by the bonds of civil institutions, had first provided with coins, or rather with a certain and well-ordered system of money,\(^4\) received from the Babylonians the two capital commercial towns of Greece, which he united for some time under his sway, Corinth\(^5\) and

---

\(^3\) Müller first touched upon this matter in his \(Æ\)ginetica, p. 89, and speaks of it afterwards in his Dörans, vol. ii. p. 213, of the German, and p. 227 of the English translation. Boeckh, in the book above mentioned, p. 82.

\(^4\) Boeckh, p. 77. compare p. 282.

\(^5\) That Phidon conquered Corinth, there can be now no doubt; and it is the fault of Müller, not to have assigned a certain period for Phidon’s possession of Corinth, which must have been for some years. That it was Phidon who first struck coins for the Corinthians is expressly said by Didymus, whom the scholiast of Pindar cites Ol. xiii. 27.
Ægina, the standard of this coin, as that used by two such great commercial towns, spread rapidly through the whole Peloponnesus,\(^6\) whence, partly by the colonies that proceeded from those countries, partly by commerce, particularly by that of Corinth, which was almost entirely directed to the coasts of the Adriatic and Sicilian sea,\(^7\) it was transported to Italy, and after having been combined with the Italian standard, was received by almost all the mercantile states of that region as the best manner of facilitating commerce and intercourse.

This, then, is a fact most probable and well proved; but M. Boeckh has also discovered,\(^8\) that several of the most important cities of Italy and Sicily, as Syracuse (the greatest colony of Corinth, and on which it relied the most for its supplies),\(^9\) Messana, and Rhegium,\(^10\) exhibit the

---

\(^6\) Hesychius, v. χηλωνη; Pollux, Onom. ix. 74; compare Eckhel, D. N. ii. p. 229; Müller, Æg. p. 55; compare p. 90; Dor. i. p. 157; Boeckh, p. 94.

\(^7\) The commerce of Ægina, though for the greatest part directed to the East; to Egypt, where the Æginetans possessed their own emporium round a temple of Jupiter (Herodot. ii. c. 178); and to the Black Sea, where they had a colony (Müller, Æg. p. 87), was not excluded from the West. On the contrary, Findar indicates very distant navigations of the Æginetans to the West (Nem. iii. 20; iv. 69; compare Müller, Æginetica, p. 81); and Strabo says expressly (viii. p. 376), that they had a colony in Umbria, which there is no reason to doubt.

\(^8\) Chap. viii. p. 318–324 of his Researches.

\(^9\) See my history of the Commerce of Corinth, p. 50.

\(^10\) Beside the cities above-mentioned, Boeckh enumerates the following cities that received this standard: Gela, Agrigentum; these, as well as Syracuse, with few exceptions; Segesta, Selinus, Panormus, with exceptions; Himera and Naxos, with exceptions; Camarina, Catana, Leontini, Entella, Motya. But in all these states it is not so easy to fix the period of the reception of this standard, which is here the capital point for us, as in the three states mentioned in the text. All the coins of Messana, with the hare and the chariot, have the Athenian standard; and this type,
standard of the Athenian money at a period, as nearly as
we can fix on by the style of the coins or the object of the
type, between the seventieth and eightieth Olympiad.
This statement appears, indeed, somewhat strange; and so
it has done to the author himself, who, as appears from
his own words, did not know himself how to account for
this fact, except on the supposition, that this great change
in the Italian and Sicilian coinage was merely an event
produced by the Corinthians, who had adopted the standard
of the Athenian coins, perhaps in consequence of the
abundance of the Athenian money coined from the silver
of the productive mines of Laurium. This cause, however,
stated by the author himself hypothetically, seems to me
to be not important enough to explain so great a fact; and
I take the liberty to differ in this point from my most
beloved and revered master and patron.

First, if we look at the relation that existed between the
Corinthians and the Athenians, it is most curious, and of
the greatest importance for the whole history of Greece,
clearly to consider the immense alteration that it had
undergone, just about the time when M. Boeckh is of
opinion that the Corinthians received the Athenian stan-
dard; for before this time these two states were united by
the most intimate and heartiest friendship, as it seemed,
but which, as the event proved, was merely political, at
least on the part of the Corinthians. Αἰγίνα, that little
rocky island, but whose inhabitants, of a bold and enter-
prising character, showed from a very early time the
greatest vigour in commerce and navigation, and became
thereby a very strong naval power—that island, an obstacle

as Aristotle tells us (in the text of Pollux, v. 75, καὶ μὴν Ἀνα-
ξίλας—τῷ νομίσματι τῶν Ἑγίνων ἐνετῶπωςαν ἄθηναν καὶ λαγών),
was given them by Anaxilas, the tyrant of Rhegium.
as it was to both states, Corinth as well as Athens whose eyesore (λημψη) it was called by Pericles,\(^\text{11}\) and preventing both from a free intercourse with the Ἀμυδανικός and Asia, was the cause that a common feeling of envy and hostility united those two cities. As long as Ἀθῆναι was a powerful and predominant state,\(^\text{12}\) the Corinthians had no greater interest, than to support and assist by all means such a small state as Athens at that period was, in order to overwhelm by it their most hated rivals, the Ἀγινιταντικής. So it was Corinth that opposed itself repeatedly to the other Peloponnesians, and was the only cause that the Ἐπιστροφή Πηγής Ἕλεως were not restored in the tyrannies of Athens,\(^\text{13}\) at the time when Hippias, irritated as he was, spoke out those fatal words: ἦ μὲν Κορινθίων μᾶλιστα πάντων ἔπιστα τὴν Ἐπιστροφήν Ἐπιστρατίδας, ὅταν σφι ἤκοισεν ἡμέραι αἰ κύριαι ἀνιάσθαι. “Assuredly the Corinthians would, with the utmost desire, long after the Ἐπιστροφής, to hold down the aspiring spirit of the Athenians, when the time came in which it was destined to them to suffer from it.” And two years before the battle at Marathon, the Corinthians supplied the Athenians, whose fleet was not strong enough to encounter that of the Ἀγινιταντικής, with twenty men of war; for they were then, as Herodotus says, the heartiest friends to them: ἔσεν γὰρ σφι τοῦ τοῦν τὸν χρόνον φίλον ἐς τὰ μᾶλιστα.\(^\text{14}\) Thus, when they demanded from the Athenians five

\(^{11}\) Plutarch vit. Pericles, c. viii.; comp. Rei Public. Ger. præcepta, c. vi. This situation of Ἀγινιταντικής, the ancient scholiast of Pindar, Ol. viii. 28. p. 192, b., describes very well by the words παρὰ τῷ πληκτῷ ἔσθαι.

\(^{12}\) See on the great power of this little island, Herodotus, V. c. lxxxi.; Plutarch vit. Themistoclis, c. 4; Conon in Euseb. Ol. lxviii. 3; and compare Müller, Ἐνν. p. 88.

\(^{13}\) Herodot. v. c. 75, and c. xcii. 14 Herodot. vi. c. lxxxix.
drachmæ for each vessel, which is indeed a trifle, they did so only to satisfy the words of a law, that forbade them to make a public present: δωτίνην γὰρ ἐν τῷ νόμῳ οὐκ ἐξήν δοῦναι; \(^{15}\) I wonder, therefore, that M. Wachsmuth, who is pre-occupied by M. Raoul-Rochette's prejudice against the Corinthians, should reproach them with the charge of greediness for money, and state that they let their ships to the Ἑginetans, with the imprudence of very short-sighted merchants. \(^{16}\) But all this friendly relation between the Corinthians and the Athenians was suddenly changed, when by the victory of Marathon, the latter displayed an immense vigour, and reaped alone the immortal glory of having defeated the Persian army, in consequence of which they gained a predominant authority amongst all the Greek race. And this ascendancy of the Athenians became yet greater and more formidable, when, at the battle of Salamis, their fleet almost equalled that of the other Grecians together. \(^{17}\) Indeed it is only by the fear with which the Corinthians must have then regarded their neighbours, that we can account for their odious behaviour to the Athenians at that juncture, so dangerous for the liberty and the whole existence of free Greece. \(^{18}\) And from this time onward, the

\(^{15}\) Herodot. vi. c. lxxxix. The whole sense of this law is indeed not very easy to comprehend.

\(^{16}\) Wachsmuth, Hellenische Alterthumskunde, i. p. 136.

\(^{17}\) Herodotus, viii. c. 48; compare c. 44. See also what is said by the Athenians, Thucydides i. c. 74; Demosthen. De Corona, c. lxx.; Socrates Paneg. c. xxxi.; Diodor. Sic. xi. c. 58.

\(^{18}\) See Herodotus viii. c. 79; as also c. 56. The Corinthians particularly are meant: compare the angry speech of the Corinthian general, Adimantus, against Themistocles, viii. c. lix.; though it is not quite to be overlooked, that, as Herodotus is the only author of importance for this period, and he himself is somewhat partial to the Athenians, which surely cannot be denied

VOL. VII.
envy between these two states grew every day more and more, till it burst out in the most furious hostility.

Such were the relations between the Athenians and the Corinthians at that time: let us see now what at the same period were those between the Athenians and those regions where that great change was introduced into the coinage, which we have such difficulty in accounting for. This difficulty, I hope, will disappear, if we accurately examine, and connect the few and scanty, and therefore quite neglected notices, which authors have left us of the early connexions which the Athenians had with Italy and Sicily.

Only for the sake of accuracy, I will not omit the tradition of Ephorus,\textsuperscript{19} whom Scymnus of Chios,\textsuperscript{20} who copies that author everywhere, and Stephanus of Byzantium\textsuperscript{21} have followed, that it was an Athenian, Theocles, the first of the Greeks who was by a strong wind carried down to Sicily; and who, not having been able to persuade his fellow-citizens themselves to send a colony there, applied

(see Plutarch de Herodoti malignitate, c. xxvi, and compare Müller, \textit{Egin.} p. 2), and also a friend of Pericles (see Adolf Schöll’s \textit{Life of Sophocles}, p. 119, 126, 130), we cannot wholly rely on what he tells us of the Corinthians: and more so, as he himself, by his great simplicity, confesses (viii. c. 94), that in his narration of the behaviour of the Corinthians in the battle of Salamis, he has followed the authority of the Athenians, but that all the other Greeks give a different account. Besides, Plutarch, in the Book just mentioned (c. i. and c. xxxix.), and Dio Chrysostom, on Corinth (xxxvii. t. ii. p. 103, ed. Reiske); and Marcellin, vit. Thucyd. § 27), relate a particular motive for the enmity of Herodotus to the Corinthians—the two latter, certainly, in the most malicious and odious manner.

\textsuperscript{19} Strabo, vi. p. 267; Fragm. Histor. ed. Didot. n. 52. The name, Thoucles, recurs at Athens also in the later age (Thucydidès, vii. c. 16).

\textsuperscript{21} Stephanus, v. \textit{Karáryn}. 
to the Chalcidians, whom he succeeded in persuading. But willingly as we would concede to the Athenians the glory of having discovered that island, yet there are many testimonies, as well direct as indirect, that prevent us from so doing; for Thucydides, when he says the Chalcidians, with Theocles, had, the first of the Greeks, built a town in Sicily, could not, with his accuracy, have omitted to add, that Theocles was an Athenian, if it was so; and thus also it appears that Hellanicus thought him to be a citizen of Chalcis, which, too, is the statement of Conon. Nor does it seem probable, that if this Theocles was the same who led the colonies of the Chalcidians to Chalcidice, he should have been an Athenian. And there is another argument which I account the most important, that the Athenians, if a fellow-citizen of them had discovered Sicily, certainly would have laid hold of this claim, when they afterwards coveted the possession of this island with so great cupidity; so that by all these reasons we are induced to believe, that either Ephorus was mistaken, or had his peculiar reason to transfer that glory to the Athenians; or that Theocles was of an Athenian family of Chalcis, as the Athenians are said to have founded Chalcis and Eretria. It is also by no means improbable, that, among the Ionians who then went over to Sicily, there were also some Athenians.

Another fact, approaching nearer in date to the time

27 Strabo, and Seimynus of Chios.
when the Athenians became mighty by sea, related by Hieronymus (Eusebius), under the third year of the fifty-fourth Olympiad; viz. that Pisistratus, the tyrant of the Athenians, went over to Italy, isolated as it is, is not so insignificant as it seems, if we suppose that Solon, the cotemporary of Pisistratus, who took the greatest pains in moving on his countrymen to industry and commerce, in which he himself gave them an example, had very distinct views with regard to the West, when he stirred the war against the Crissæans, whose immense riches were derived from the duties which they imposed on the Italian and Sicilian merchandise.

But whatever be the historical import of this fact, the consequences we might draw from it are too uncertain to be further dwelt upon, and we pass therefore to other notices, somewhat more complete and clear, and more capable of being combined. All these accounts are principally connected with Themistocles, the man who laid the foundation of the naval greatness of his countrymen, always reminding them, that all their safety was on the sea—who exhorted them to employ the silver of Laurium

32 Strabo, x. 3. p. 288; Casaub. p. 277, Tauchn.; εὐνυχήσαντες γὰρ οἱ Κρισσαῖοι διὰ τὰ ἐκ τῆς Σκελλίας καὶ τῆς Ἰταλίας τέλη.
33 τῆς γὰρ θαλασσῆς πρῶτος ἐστάλησαν εἰς τὴν Ἰταλίαν ἐστι—ταῖς γὰρ ναυαὶ μάλιστα προσέκεισα—ὑπὸ τε Περσῶν ὑφελιμωτέρον ἑνόμιζε τῆς ἀνω πύλεως, κ.π.λ. Thucydides, i. c. xiii.
in building a great fleet—and who, after having destroyed the Persian navy, not only surrounded the city of Athens with a strong wall, but also that fine port, Piræus, with its three small ports, which he himself had called their attention to—and who excited, by every means, the industry and the trade of the Athenians, so that Athens began to be an emporium open to all the world. This man, whose immense genius Thucydides has so admirably described, had his attention peculiarly fixed on Italy, as appears from certain statements.

Before the battle of Salamis, when the other Grecians, and particularly the Corinthians, intended to leave, with their fleet, the isle of Salamis, and go back to the Isthmus, Themistocles, irritated by the abuses of the Corinthian general, threatened, that, if Eurybiades, the general-in-chief, did not prevent the Grecians from doing so, the Athenians would put their families on board their ships and go to Siris, in Italy, which was their possession and destined to be colonised by them, as the oracles told—\( \text{(eì de taoùta µη ποιήσεις, ἥμεις µὲν ὡς ἔχομεν ἀναλαβόντες τὸν σωκράτας κομεύµεθ} \) δὲ Σίριν τὴν ἐν Ἰταλίᾳ, ἤπερ ἡμετέρη τὲ ἐστὶ ἐκ παλαιοῦ ἐτι καὶ τὰ λόγια λέγει ὑπ’ ἡµέων αὐτήν

36 Though, what Diodorus Siculus, xi. c. xiii. says, that The-mistocles made τὸνς µετοίκους καὶ τὸνς τεχνίτας ἀπελείς, seems not to be quite accurate. See Boeckh, Staatsb. i. pp. 355, 486; and Wachsmuth i. ii. p. 44.

37 See the inscription, which first mentions the emporium of Athens, in the journal called Zeitschrift für Alterthumswissenschaft, 1844, p. 30, where it is published by Ulrichs.

38 I. c. 138.
Siris was an ancient town of the Chones, most renowned in all antiquity on account of the fertility of its district; and not unknown are the sweet verses of the poet Archilochus:

\[ \text{oú γάρ τι καλὸς Χάρος οὖν ἐφύμερος} \\
\text{où ἔρατος, οἷος ἀμφὶ Σίρως ροῖς.} \]

There was in this town an ancient worship of Minerva; and, moreover, if we may trust to Stephanus of Byzantium, the same Minerva Polias to whom was dedicated the most sacred and ancient worship at Athens. The Colophonians, and other Ionian tribes, had once taken possession of this place; but of any connexion between it and the Athenians, such as the words of Themistocles, recorded by Herodotus, seem to prove, nothing else is recorded. However it may be, those menacing words of Themistocles are most important; and, moreover, if we look at the character of the oracles in that age, entirely connected with policy, that, if there were nothing else, hence alone we should infer, how intimately this great man was implicated with the interest of Italy.

---

39 Herodot. viii. c. lxii.
40 These verses are preserved by Athenæus, xii. p. 524.
41 Stephanus v. Σίρως.
42 See Athenæus, the place cited.
43 I will point out here a very curious and almost neglected circumstance, a colony of the Athenians in Sardinia, called Αγρύλη, or Ogryle. The notices hereof given (by Pausanius, vii. ii. 2, and Stephanus of Byzantium, s. v.) are too precise for us to think only the name had given rise to that presumption, particularly when we compare the words of Aristophanes, in his "Wasps," v. 670, ὃσις πόλεων ἀρχυν πλείστων ἀπὸ τοῦ Πόντου μέχρι Σαρδοῦς. And if there is any truth in this relation, we are almost obliged, by that which I shall say of the politics of Pericles, to suppose that this connexion preceded his age, if it does not refer to the mythic age, which is, indeed, not probable; or to the short interval that intervened between the death of Pericles and the representation of the "Wasps," which is also unlikely.
But of this there are further indications. To one of his daughters Themistocles gave the name of Italy, to another that of Sybaris, while to a third that of Asia. Another fact, of more importance, is, that Themistocles had a certain connexion with Coreyra, an island which was, and so has proved also in our days, the first stepping-stone on the invasion of Italy from the side of Greece; and just as "in Africam ex Sicilia gradus imperii factus est" by the Romans, so by the Athenians into Sicily and Italy from Coreyra. But of what kind this relation with Coreyra was, it is not possible for us to ascertain. For, though there are ancient writers who explain the matter more particularly, yet, as it has often been the case, that some writer of a later period amplifies an obscure notice of a more ancient one, just as he thinks proper, such seems to have been the case here. That which is certain, is, that Themistocles conferred some benefit on the Coreyanæans; for that Thucydides tells us, where he narrates his escape that he went from the Peloponnesus to Coreyra, after having been exiled by his countrymen and prosecuted by his enemies. (Ol. 76, 4; b.c. 472.) Now the scholiast makes a note on this passage of his author, and says this benefit was, that Themistocles had persuaded the Grecians not to persecute the Coreyanæans by war, on account of their having declined the participation in the war against the Persians.

---

44 Plutarch Vit. Them. in the last chapter.
45 These are the admirable words of Cicero, in Verrem, ii. i. 2.
46 I. c. cxxxvi. in the beginning—ἐν αὐτῶν (τῶν Κερκυραίων) ἐφεργέτης.
47 See Krüger, historisch-philologische Studien, p. 49.
48 ἔπειτι γὰρ οὖν συνεμίχθην—άλλη ἐσοφίσαντο—ἐμέλλον αὐτῶν ἄνελεῖν οἱ πολεμήσαντες. The behaviour of the Coreyanæans on that occasion, which the scholiast very well calls σοφίζεσθαι, is to all very well known.
authority he follows here, as usual, he does not say, although it is not quite impossible that he may be right, notwithstanding that, according to the strict sense of the oath taken by the Greeks on the Isthmus, when assembled on the information of the expedition of Xerxes, the Corcyreans, who had not stood on the side of the enemies, were not subjected to punishment. But very often those who have dedicated their labours to the illustration of the great historian of the Peloponnesian war, have observed, that the scholiast makes a statement, drawn from the words of the author himself, which seems to be quite a new one. Moreover, Plutarch is entirely ignorant of this cause of the obligation that the Corcyreans bore to Themistocles, and relates another, but uses such a phrase, that it seems most probable that he also had Thucydides specially before his eyes. Plutarch tells us, that Themistocles, when appointed arbiter between the Corcyreans and the Corinthians, about the possession of Leucas, composed their dissension in this manner,—he imposed a fine of twenty talents on the Corinthians, and let them both possess Leucas, each for an equal part. Also this cause is by no means improbable, or rather much more probable, than that stated by the scholiast; inasmuch as, by the share that the Corcyreans took in the foundation of almost all the other colonies of Corinth, whence they are ascribed by the authors, sometimes to the Corinthians, sometimes to the Corcyreans, there was much material for dissension between these two states; and, indeed, the first cause of the Peloponnesian war was of this kind. But we must

49 Herodotus, vii. c. cxxiii.; Lycurg. contra Leocratem; Diodor. xi. c. iii. and xxix.; compare Ulrichs; the Megarian ψίφισμα, p. 17, in the note.

50 Plutarch vita Themistocles, c. xxiv.

51 οὔσης αὐτῷ πρὸς τὴν πόλιν ἐνεργεσίας. Εὐνόμενος γὰρ, κ.τ.λ.
not forget, that there is no mention of such an arbitration as Plutarch mentions, in the conference that took place between the Corinthians and Corcyraeans at Athens, as recorded by Thucydides, although we can imagine how the Corcyraeans might have passed by in silence that preceding kindness of the Athenians, or rather of the afterwards banished Themistocles; and though this conference is not said by Thucydides to be verbally reported to us, it is most probable, that, as he was then not banished, and attended to all public affairs, he heard these speeches himself. Pseudo-Themistocles, whoever may be the author of those letters that bear the name of that great man, where he touches on the benefit bestowed on the Corcyraeans, does not specify of what kind it was, which is not unimportant in reference to the authority of the other traditions; but he adds a new notice, which I cannot omit, viz., that Themistocles prepared to go from Corcyra to Hieron of Syracuse, but, having heard of his death, changed his plan.

52 See what the author himself says, i. c. xxii.
53 In the eighteenth and nineteenth letter.
54 Cornelius Nepos, if it is but he, when he tells us (vita Themistocles, c. ii.) that the Athenians had made war upon the Corcyraeans under the conduct of Themistocles, has apparently confounded the Corcyraeans with the Æginetans, and had the war with the latter in view, which is particularly clear, as he says that this was the first step of Themistocles to his political career (primus reipublicæ capessendæ gradus). This fault of Nepos is already acknowledged by the penetrating Lambinus, wherefore I wonder indeed at Mr. Roscher, who, in his excellent book on the work and the life of Thucydides (p. 398, note 12), speaks without any doubt of this war between the Corcyraeans and the Athenians, and refers it to the time when Miltiades and Aristides were the chiefs of the Athenian republic. Cornelius himself does not agree with his own narration, when he says that Themistocles fled to Corcyra, and was sent by the first men of that state to Æpirus (c. viii.).
By all these scanty, but when connected, most important notices, we may clearly perceive, that, at the period we have been speaking of, the views of the Athenians, at least of their great leaders, were not so far from Italy and Sicily as is commonly supposed; but that there was an intimate connexion between these countries: and this is confirmed in a new way by another isolated and quite neglected fact, which, valued as it deserves, is of the highest importance; namely, that in the fifth year of the Peloponnesian war, when the cities of Italy and Sicily, divided as usual into two parties, made war upon each other, the cities of the Chalcidians, together with Camarina and Rhegium, which all stood on the side of the Leontians, then the principal leaders of this party against the Syracusans and the other Dorian states of Sicily, begged assistance from the Athenians, as well by virtue of an ancient confederacy, as while they were Ionians, κατά τε παλαιάν ξυμμαχίαν, και ὅτι Ἰώνες ἦσαν. As we must certainly refer this ancient confederacy, if not to a more remote period, at least to the time of the battle of Salamis—if we take into consideration, that it could not have been made by the Athenians in the time of Pericles, with whose politics it would have been as inconsistent as with those of Cimon, whose maxim was peace at home, and war against the Persians—we may learn by this how far, and to what extent, the authority and the influence of the Athenians had spread already at so early a date.

We have another testimony of a more peaceable intercourse between Athens and Syracuse in the time of Pericles, who, after a few years, succeeded to Themistocles as head of the Athenian republic, not less attentive than he was to the glory and power of his countryman, but far

55 Thucydides, iii. c. 86.
remote from every daring undertaking, and attached too firmly to more secure and nearer advantages than could be adopted by the views of his predecessor in laying hold of those distant countries, but who, on the contrary, we are distinctly told, restrained, as long as he lived, the ambitious longings of the Athenians after the possession of Italy and Sicily. He would therefore wish to animate, by all means, a friendly commercial intercourse; and, accordingly, Lysias tells us, that his father, Cephalus, came from Syracuse to settle at Athens, on the entreaties of Pericles, who was his friend and his host, about Ol. 76, just about the time of the exile of Themistocles.

When we now connect all these scanty statements into one argument, remembering how incidental they are, and what great and other important relations we must infer from them, it is clear, that just about the period of the battle of Salamis, the time of the greatest disinterested glory of the Athenians, when all the Greek states looked at them as the defendants of the common cause of free Greece, the influence of the Athenians in the affairs of the Western countries was very great, much greater than in the next period; so that we may, with the best reason, attribute to this influence, combined with a desire to oppose the Corinthian ascendancy, the introduction of the Athenian standard in the coinage of the cities of Italy and Sicily.

HENRY BARTH.

56 This is the ἀσφάλεια of Pericles, of which Plutarch speaks, vita Periclis, c. 17; compare c. 19, where he calls him ἄσφαλης καὶ δραστήριος. See, above all, the characteristic of this great statesman by Thucydides, i. c. 65.
57 Plutarch vita Per. c. 17; compare v. Alcibiadis, c. 20.
58 See Hoelscher vita Lysias, p. 9. Compare p. 16, though I must confess, that the words of Lysias, contra Eratosthenem, 54, make me somewhat hesitate.
XXIII.

COIN OF NERO, WITH WREATH.

Dear Sir,

I have the pleasure of forwarding an impression of the obverse of the brass coin of Nero, which I showed you this morning. The reverse bears the usual type of Genio Augusti, but without the S. C.

The point most worthy of notice is the peculiar shape of the crown, which is formed of alternate and distant leaves, with berries at intervals. The fineness of the work shows that the artist was capable of delineating the laurel in its usual form, had he intended to do so. If, then, the crown be not laurel, it is probably the wild olive, a plant with alternate leaves, as may be seen by referring to any botanical work, or to the plate given by Martyn, in his edition of the Georgics. “Græci Olympia victores oleastro coronant,” says Pliny; and I take the crown in question to be that which Nero wore at the Olympic games, and which, according to Suetonius, he wore when he entered Rome; “eo curru quo Augustus olim, .... coronamque capiti gerens Olympiacam.”

I remain, dear Sir,

Yours very truly,

Geo. Sparkes.

To C. Newton, Esq.

Bromley, in Kent,
17th Feb. 1845.

Müller (Archäologie der Kunst, p. 494-5) has already remarked, that, on the coins of Elis, the head of Jupiter
Olympius is found, with the wreath of wild olive (the cotinus); and that this wreath distinguishes the Olympian from the Dodonæan Jupiter, who is represented with a wreath of oak leaves. Krause, in his recent most learned work (Olympia, p. 332), considers that it was given to the victors in all the games at Olympia. From the very valuable list of Olympic victors in this work, we learn that Nero obtained Olympic victories with a quadriga of colts,—with the ten-horse chariot of colts,—in the contest of the heralds,—and in the musical contest instituted by him, and first performed Ol. 211; cf. Philost. vit. Apoll. t. iv. 8, 24; v. 2, 7; Sueton. Nero, c. 22, 24; Dio. Cass. lxiii. c. 14, 20; Zonares, Annal. xi. 47; Cors. d. Ag. Ol. p. 135; F. A. iv. p. 156, 157; Afric. apud Euseb. Ἐκλ ολα, p. 44; Scaliger, ἱστορ συν, p. 340; and that at his entrance into Rome he displayed his prize garlands, eighteen hundred in number (Dio. Cassius, lxiii. c. 21).

[We are much obliged to Mr. Sparkes for his very interesting communication; and we take this opportunity of renewing our invitation to English collectors generally to contribute from time to time to the Journal notices and illustrations of new and interesting coins in their cabinets.]

XXIV.

SYCEE SILVER.

[Read before the Numismatic Society, January 23, 1845.]

It is not my intention to enter here into a detailed account of the origin of Sycee silver, but merely to touch on its employment as a currency, which is of a period comparatively recent, in illustration of an examination which I made some time since, on the occasion of the transfer of part of the Chinese ransom to Her Majesty's Mint. On that occasion I had an opportunity, owing to the kindness
of the officers of that establishment, of inspecting several ingots of Sycee. The term is stated by Dr. Morrison, as well as the late Mr. Robert Morrison, to mean "fine floss silk," in allusion to the purity of the metal, which is apparently a native silver. It is run into circular, or shoe-shaped ingots, called in the Dutch East Indian establishments "schuyt," or "boats," and bears a legal stamp, or inscription, on its upper surface. Although not strictly numismatic, yet as interesting in respect to this subject, I must put in juxta position with the statement of the silver being so called from its quality, the notice on this metal in the San-tsae too-hwuy, Keuen 118, Chin-Paou, p. 5. "Gold is produced at Yih-chow, silver at Yung-chang. The commentary of Taou, the alchemist, states, that all places produce gold. The districts of Leang, Yih, and Ning produce much, which appears in particles of the sand in the water, called native gold. Silver is found at the same places, but is produced in stones. Soo-kung deems that silver does not come from the same places as gold which is found in the water. Chin-tsang-ke states, that native gold is the excrement of a venomous snake, and that he had constantly seen persons procure gold, by digging a cubit and more deep in the earth, until they arrived at a stratum of fine stones, which had all a dark burnt colour. Under the stones was gold. The larger pieces are like a finger, the smaller about the size of hemp-seed, or bean; its colour mulberry and yellow. If, when bitten, it is extremely soft, it is true gold. Corn-like gold comes out of river sand. It is washed and taken on a rug, or over a goose's or duck's belly. What the comment and Chin say are not at present correct, for gold now comes from Jaou, Sin, Nan, Keen, and Tang-chow. The gold which is collected is of different kinds, either in lumps like stones, or in grain like millet or beans.
SYCEE SILVER.

Should these not have been submitted to fire, they are called native gold. Silver is in mines mixed up with copper. The persons of the districts who collect it are obliged to take lead and repeatedly melt it, when it appears perfect: hence it cannot be native silver. There is no other native silver; and the writings which state that all the fissures in the district of Lo-ping, of the district of Jaou chow, have native silver, grossly err, for assuredly the true metal which is found in the fissures is in pieces, infused in stones. If it has the appearance of fine silk, or hair, the people of the district call it Laou-ung-seu, Old Man's Beard. Specimens of this sort are excessively difficult to procure; and when books use the term native silver, they must mean this.”

Similar allusions occur in other native works to the flossy and silky appearance of native silver; and according to the same authorities, the Corea and Annam, and the other bordering countries, supply their proportion to the Chinese market.

Mr. Robert Morrison, to whom we are indebted for the best published account of Sycee silver, states that it is formed into ingots, stamped with the mark of the office from which it issues, and with a date. I may also quote in support of this, a communication addressed to me by Mr. Reeves, many years resident at Canton, who states, in illustration of a particular ingot, that "the duties are all paid at Canton in pieces of this exact weight (ten taels); and the families of the payers, etc., are always held responsible for its purity. The marks are put on by the refiner (not the government), who is employed by the payer of the duties. They are paid into the treasury in the present

1 I have corrected in this passage, hea (Morrison, 3360), to pūh (ibid. 8781), which restoration the context demands. If hea should stand, read "quite different is native silver." For refinement of silver, cf. San-tsae. loc. cit. p.9.
state. Probably again re-issued in part for the payment of salaries.” He further observes, that “every piece must be made to the exact weight of ten taels; hence you will see on the under side of it, whence particles have been drilled out.” According to Mr. Morrison there are five sorts:

1. Kwan-leang, or the Hoppoo (custom-house) duties, forwarded to Pi-h-king, 97—99, to touch. An extra duty is levied to reach this fineness.
2. Fan hoo, land-tax. High standard but less than the Hoppoo. These two are government duties, and are probably issued by the local governments for salaries.
4. Yen leang (Canton dialect, Een heang), salt duties of a low standard of purity.
5. Muh tae, or Wuh tae, uncleansed, the grossest of all, only used for the purpose of plating, or washing grosser metals.

The Chinese Canton ransom contained a large proportion of pieces of the second kind, or land-tax, many of them of a period long past. The following list will, however, exhibit the actual state of the ransom.

Specimens selected for inspection.
Marked A. 1. Keén lung woo shih pă neen shih yi h yue, 11th moon of 58th year of Keén lung, A.D. 1793.

    4. Yuen paou, tseang pe yuen; refiner, Pe yuen.
Along with these were some smaller pieces.
ON THE COINS OF HIMERA.

It will be seen from this list, that the usual disposition is thus. On the upper part of the ingot, in a rectangle, is inscribed the name of the town, or city, where the duty was paid in for the land-tax; but this was replaced by the name of the firm, called in Chinese, Haou, when levied from a mercantile house. The inscription at the sides contains the date of the year and month when refined, and the name of the firm of the refiner; and it is here to be observed, that the firm-name is a felicitous name assumed by the mercantile house, and having no relation with the actual name and surname of the parties, but an appellative like those of our hotels and inns.² S. BIRCH.

XXV.

ON THE DATE OF SOME OF THE COINS OF HIMERA.

[Read before the Numismatic Society, Thursday, March 27, 1845.]

MY DEAR SIR,

I OBSERVE, that in your notes attached to the catalogue of Thomas's coins (p. 42), you call attention to the remarkable change in weight observable in the silver coins of Himera, and add, "These later coins (those with the crab on the reverse) being didrachmæ of the Attic talent, shew that some early and important political change had taken place, and occasioned an alteration in the public standard of the money of Himera." It appears to me, that it is not difficult to point out what the political revolution was that occasioned this change in the coinage. Indeed, this alteration in the standard of weight (the importance of which you have been, I believe, the first to point out), only brings a

² Mem. The dates of the regnal years are roughly calculated to the year of the Christian era, and not reduced.
fresh argument in support of a view which I have been long accustomed to regard as almost certain, and so obvious, that I am surprised to find, on inquiry, that it appears to be new to numismatists in general.

The union of the types of two different cities on the two sides of the same coin, is generally to be regarded as indicating an alliance between the two; and as such alliances were often of very brief duration, it is not to be wondered at that coins of this description are often of great rarity. This is not the case, however, with those in question, which are perhaps the commonest of all the coins of Himera, though they do not present any such differences in the style of work, as would seem to indicate their having continued to be struck during any very long period of time. Now, it is of course well known to all persons acquainted with the history of Sicily, that there was a period of at least ten years during which Himera and Agrigentum not only were in alliance, but virtually formed parts of the same state, being both of them subject to the government of Theron, and his son Thrasydæus. I am not aware that there exist any means of determining, with certainty, the precise date at which Theron commenced his rule over Himera; but we can at least arrive at a near approximation to it. Diodorus places his death in the archonship of Chares (b.c. 472–1),¹ and says that he had governed Agrigentum during sixteen years, which would give b.c. 488–7 for the commencement of his reign in that city; and he certainly did not make himself master of Himera until afterwards. We know also from Herodotus,² that he had expelled Terillus from Himera before the great Carthaginian expedition to Sicily (b.c. 480); and that author

¹ Diodor. lib. xi. c. 53. ² vii. 165.
even represents the expulsion of Terillus as the proximate cause of that invasion. Hence we may infer that Theron had made himself master of Himera at least one or two years before that event, which will allow nine or ten years for the period of his own rule over the two cities; and to this may be added perhaps a year for that of his son Thrasydæus, who, according to Diodorus, was expelled not long after his father’s death, but the exact period is nowhere indicated.

It is scarcely necessary to observe, that none of the so-called tyrants of the Greek cities struck coins in their own names so early as the fifth century B.C.; and that those published by the Prince of Torremuzza, and other early writers, with the name of Theron, are merely coins of Terina, the legend of which had been altered, or wrongly read. Nothing, on the contrary, would appear more probable, than that he should have introduced such a change in the coinage of Himera, as would indicate at the same time the close union of the two cities, and the dependence, or at least inferiority of the one to the other. Hence, while the coins of Himera adopted the type of Agrigentum on the reverse, those of the latter city remained unchanged; and it would be quite in accordance with the same purpose, that the citizens of Himera should be compelled to change their standard, so as to accord with that of their new allies, and enable the money of each city to be current in the other, without the inconveniences of exchange. Such a measure might, indeed, at this time be justified on the score of expediency alone, the Attic standard having then become universal in Sicily, with the single exception of Himera. It would be foreign to our present purpose to inquire into the causes of the singular fact—the fact itself is certain—that the Attic
standard was in use from the earliest times, not only in the Chalcidian cities of Sicily, Naxos, Leontini, Catana, etc., but in the Doric states of Syracuse, Camarina, Selinus, Gela, and its colony of Agrigentum. The heavier, or Æginetan standard, is found only, I believe, in the coins of Zancle, and in the earlier ones of Himera, which being itself a colony of Zancle (Thucyd. vi. 5.), had probably retained the standard of its parent city.

But we are not left wholly to conjectures as to the conduct of Theron towards Himera, or the degree in which he modified the institutions of that city; for Diodorus expressly tells us, that the people of Himera, finding themselves oppressed by the government of Thrasydaes, to whom the immediate rule of the city had been confided by his father, entered into secret negotiations with Hiero of Syracuse, who, however, instead of espousing their cause as they expected, betrayed their overtures to Theron, who thereupon proceeded to crush his enemies by a general execution of all those disaffected to his government. “After this massacre,” continues Diodorus, “seeing that the city of Himera was in want of inhabitants, he settled in it a colony, both of Dorians, and any others who chose to enrol their names as citizens. And these continued to dwell together in harmony and good government for the space of fifty-eight years, after which time the city was taken and utterly destroyed by the Carthaginians, and has remained uninhabited from thenceforth to the present time.” It is to this establishment of the paramount influence of the Doric element in Himera, that we may ascribe with little doubt that change of the coinage, which introduced, at the same time, the Agrigentine type by the

---

3 Lib. xi. c. 48, 49.
side of that of the ancient city, and the standard of
weight then in use at Agrigentum, as well as in all the
other Doric cities of Sicily. Such a change bears a remark-
able analogy to that which had been effected in the parent
city of Zancle not many years before by Anaxilaus, and
which is equally attested by the evidence of its coins.⁴

The establishment of this new order of things at Himera
is referred by Diodorus to the archonship of Phaedon, i.e.
B.C. 476–5, a date which does not accurately coincide
with the period of 58 years assigned by him to the
subsequent duration of the city; for it is certain that its
destruction by Hannibal, the son of Gisco, took place in
the summer of 409 B.C.⁵ Whether we are to suppose that
58 is only a mistake, or a false reading, for 68, which would
agree within a year with the true interval between the two
archonships, I will not stop to inquire; but it is certain,
that the year of Phaedon, if not actually correct, is nearly
so, as the revolution in question is necessarily fixed by the
circumstances attending it, between the accession of Hiero
in 478 B.C., and the death of Theron in 472. It may be
thought, indeed, that if we take this revolution, rather
than the accession of Theron, for the commencement of
the new coinage, there remains but a scanty interval
between that date and the expulsion of Thrasydæus, for
the production of the coins in question; but to this it may
be answered, first, that all the coins of Himera with the
crab, as already observed, have a marked general resem-
blance, which would lead us to assign them to about the
same period: secondly, that, as it appears from the words
of Diodorus that no violent change took place in the

⁴ See Millingen on the coins of Zancle or Messana, in the
Transactions of the Royal Society of Literature, vol. i., part ii.,
p. 93.

⁵ Diodor. xiii. 62.
republic on the expulsion of Thrasydæus, and the Dorian citizens (most of them probably of Agrigentine origin) continued to live on peaceably and quietly with the old inhabitants, it by no means follows that the new type, though first introduced by Theron, would be discontinued immediately after the expulsion of his family.

There is, indeed, another passage in Diodorus, from which it appears clear, that no political change likely to have permanently influenced the coinage took place, until some time after the expulsion of Thrasydæus. This passage, which is certainly not altogether consistent with the one already cited, may perhaps be thought to suggest a probable period for the discontinuance of this particular coinage; for after noticing the revolutions that took place in the cities of Sicily after the expulsion of Thrasybulus, the brother of Hiero, from Syracuse (B.C. 466), and that of the Ætnæan colonists, whom Hiero had settled at Catana, by Ducetius (B.C. 461), Diodorus tells us, that the latter revolution was followed by a similar return of the exiles, and expulsion of the opposite party throughout Sicily; and among the cities in which this revolution took place, he mentions particularly Gela, Agrigentum, and Himera. 6 Whether we are to consider this statement as altogether overruling that already cited relative to the uninterrupted tranquillity of Himera for fifty-eight years, or may reconcile the two, by merely supposing that the revolution was less complete at Himera than elsewhere, so that the Dorian colonists continued to live on there notwithstanding the return of the exiles, it is hardly necessary to inquire. As far as the coins are concerned, it is sufficient to remark, that either supposition would allow us a

---

6 Diodor. xi. 76.
period of fifteen years (from the archonship of Phaedon to that of Euippus, B.C. 476-461), during which this type may have been employed. Such a space of time would appear quite as long as the number of these coins seems to require. At the same time, I am far from attaching as much value to this suggestion concerning the termination of the coinage in question, as to the one already put forward in regard to its commencement.

These historical evidences appear to me as strong as the nature of the case can well admit; and I think it will be generally allowed, that there is nothing in the style of work of the coins themselves, or in the character of the inscription, to militate against the supposition now put forth concerning their date. The archaic character of the inscription, evinced by the use of the aspirate \( \overline{H} \) at the beginning, and the \textit{Roman} form of the \( R \), though it might be compatible with an earlier date, is certainly not conclusive against any period prior to the middle of the fifth century B.C. Before I conclude these remarks, I must briefly advert to the larger coins of Himera, bearing a figure sacrificing on the obverse, and a biga on the reverse, one of which occurs in the catalogue of Thomas's coins, No. 275.\(^7\) These coins, which are of the greatest rarity, are all tetradrachms of the Attic standard; but that they are posterior to the date at which I have supposed the change to take place, as well as to the didrachms with the crab, may, I think, be shown satisfactorily. For, in the first place, the inscription on these coins is \textit{IMEPAION},\(^8\)

---

\(^7\) Figures of them will be found in the work of Prince Torremuzza (pl. 35), and in the Hunterian Museum (pl. 30, fig. 18).

\(^8\) If we could trust Torremuzza's figures, already referred to, we should find an additional argument for the comparatively late date of these coins, in the occurrence of the \( \Omega \) (which certainly
having lost both the archaisms just alluded to; and, secondly, there is in the style of execution, as well as in the general conception of the design, a marked resemblance to the well known coins of Selinus, bearing the river gods, Selinus and Hypsas; and these latter may be referred, on independent grounds, to about the middle of the fifth century before Christ. The much greater rarity of the coins of Himera, of corresponding age, is one of those facts for which we are at a loss to account, but which cannot invalidate our conclusions with regard to the few that are known.

If the above remarks appear to you as conclusive as I am inclined to consider them, they are not altogether, I trust, without interest, as tending to fix, within very narrow limits, the date of the coins in question. Every such date that can be established in a satisfactory manner, is in fact a step gained in the history of Greek art, and may lead, by a careful comparison of the coins of different, but kindred or neighbouring cities, to still farther results. In the very case in question, it may be observed, that if the age of these coins of Himera be well established, we can have no hesitation in adopting the same date for some of those of Agrigentum, which are so identical with them in style of work, that it would be impossible to say, without examining the obverses, to which of the two cities they belonged. I remain, my dear Sir, yours truly,

E. H. BUNBURY.

THOMAS BURGON, Esq.

was not introduced into Sicily in early times) in the inscription on several of them (see figs. 4 and 6); but his figures are too often inaccurate in this respect, for any dependence to be placed upon such a fact.
MEROVINGIAN COINS AC. DISCOVERED NEAR CANTERBURY.
XXVI.

MEROVINGIAN COINS, &c., DISCOVERED AT ST. MARTIN'S, NEAR CANTERBURY.

In the Session of 1844, I brought before the notice of the Society, at one of the ordinary meetings, three gold looped coins, which had been recently discovered in St. Martin’s church-yard, near Canterbury. I accompanied the exhibition with some brief remarks,¹ which subsequent discoveries may justify a repetition of on the present occasion.

Mr. Rolfe, to whose zeal and liberality the Society is much indebted, has procured from the same locality three more looped coins, a looped Roman intaglio set in gold, and a gold ornament; the whole of which objects have been engraved by order of the council, and are now exhibited together in the accompanying plate.

Fig. 1 is a coin of Justin. *Obv.* DN. IVSTINVS PF. AVG. bust of the emperor to the right. *R.* VICTORIA AVGVSTO- RVM. Victory, with wreath and globe, surmounted by a cross; the exergue, CONOB.

Fig. 2 is the remarkable coin of Eupardus. *Obv.* EVPAR- DVS EPS. retrograde; diademed head, and robed bust, to the right. *R.* NINV, on each side of a double ornamented cross; above, two inverted A's; in the exergue, VAV. Weight, 26 grains.

As before observed, Eupardus was a bishop of Autun in the sixth century, of whom scarcely any historical notice appears to have been given, nor is the precise period when he lived known. One ecclesiastical writer places him before

¹ Proceedings of the Numismatic Society, p. 28, in vol. vii. of the Numismatic Chronicle.
Nectarius, A.D. 540; another posterior to Syagrius, who was ordained about A.D. 560; and a third prior to Syagrius. The last of these, the authors of the Gallia Christiana seem to sanction as the most correct. We may therefore place him at about the middle of the sixth century. The coin is altogether unique, and of the highest interest. The workmanship of the bust is good, contrary to what is usually seen upon coins of this period. The costume is copied from the Roman model. Why this bishop should have placed his effigy upon the coins, whether as uniting the office of moneyer with that of chief of the sacred order, or simply from prelatical authority or power; whether this departure from the usual practice arose from individual caprice or vanity, or was sanctioned by regal favour, are at present questions not easily to be answered and reconciled with satisfaction. The letters on the reverse I have suggested may refer to Nivernum, a town in the diocese of Autun.

Fig. 3. A blundered copy of a Roman coin. The reverse may be recognised as an imitation of the extremely common type of the younger Constantine’s coins, two soldiers and a standard, with the legend GLORIA EXERCITVS, some of the letters of which are retained in the grotesque copy.

Fig. 4. Obv. +IVEGIOVICO. A full-faced bust; on the right a short, on the left a long cross. Rev. LEVDVLFO MONITAIIO. Leudulfus Monetarius. A nimbed figure on horseback to the right. Weight, 85 grains.

This piece is altogether extraordinary, both as regards the place at which it was minted, and the design upon the reverse, as well as its size and weight. The place of mint-age will probably be found to be either Juvignieu, or Juvisy, or Juges. The nimbed figure is not easily explained. The nimbus it is well known forms a conspicuous emblem in Pagan mythology, as well as in Christian works of art.

Fig. 5. *Obv.* ICONBENAS+....diademèd head to the right. *Rev.* +NONNI.......NITARVS. Nonnius, or Nonnitus Monetarius. A rude copy of the two Victories affixing an inscribed shield on a tree, upon coins of Decentius, and others.

This coin may be compared with one published in the *Revue Numismatique* by Monsieur B. Fillon, which was discovered twenty-five years since, with a large quantity of Merovingian coins at Beaugisière, near Fontenai-Vendée. Three thousand of these, it is said, were melted by a goldsmith at La Rochelle; and the invaluable deposit would have been entirely lost to science, had not the blow from the plough which broke the vase in which they were concealed scattered a considerable number, which were afterwards picked up. The specimen described and figured by M. Fillon differs in many points from ours, but the resemblance is sufficiently close to shew the identity of place and moneyer. It is thus described:

*Obv.* LONBENAS FIT. Diademèd head to the right. *Rev.* NONNITVS MON. A cross on a globe, in the lower quarters of which are the letters CG, below VII. Weight, 26 grains.

This coin M. Fillon assigns to *Lombez*, a locality in the department of Gers.

---

3 Année, 1845, No. 1, p.18.
Fig. 6. Obv. PASENO FETO. Head to the right. Rev.
+ LÉONARDO MONTARI. A rude figure of Victory, with
wreath and palm branch, marching to the right. Weight, 23 grains.

These Merovingian coins, it will be observed, are all
obvious copies from the Roman, although the imitation in
most is degraded and burlesque. They differ, in most
respects, from the specimens published by Conbrouse,
Rollin, and by M. Cartier in the Revue Numismatique.
To our associates and correspondents in France they will,
no doubt, be highly acceptable, as fresh and curious addi-
tions to the vast collections they have made of late years in
this hitherto obscure and neglected series of their national
currency.

Looped gold Merovingian coins, I believe, are not often
discovered in France. In M. Rollin's work there are only
two given, which were from the Kentish barrows. Many
others have been found in this country. They appear to
have formed necklaces or decorations for persons of dis-
tinction, a custom common with the Greeks and Romans,
and continued in the East down to the present day. Fig. 7.
a Roman intaglio in cornelian, was discovered in the same
place with the coins, and doubtless belonged to the same
necklace. Fig. 8. is in gold, set with coloured glass. It
seems a portion of some other ornament.

The site of St. Martin's church, near which these valuable
objects were exhumed, was once occupied by a Roman build-
ing, probably a temple, which was presented by Ethelbert,
king of Kent, to his queen Bertha, and her Frankish bishop,

---

4 They are of Verdun and Marsal, copied from the Nenia Brit-
tannica, and now in the museum of the Rev. Dr. Faussett, of
Heppington.
Luidhard; and subsequently it was given to St. Augustine. The antiquity of the locality as a place of sepulture is confirmed by the discovery of these ornaments and other objects, for it was a well-known practice with the Anglo-Saxons to inter with the dead personal jewelry and valuables; and as these looped coins could only have belonged to some person of distinction, it is by no means unlikely they may have adorned the person of one of the attendants of Queen Bertha. During the frequent intercourse in those days between Kent and France, these coins were probably brought over as presents, which would be the more prized on account of their novelty, for the Anglo-Saxons, as is well known, did not coin money in gold.

C. Roach Smith.
MISCELLANEA.

DISCOVERIES OF COINS.

BRITISH ARCHAEOLOGICAL JOURNAL.

March 1844.—P. 68.

At Helmingham, Suffolk, an aureus of Vespasian.
At Wootton, Northamptonshire, third brass coins of the following Roman emperors:—Gallienus, Salonina, Postumus, Victorinus, Marcus, Tetricus senior, Tetricus junior, Claudius Gothicus, Quintillus, Aurelianus, Tacitus, Probus, Numerianus. No new variety, and but few rare reverses.

June.—Pp. 162, 163.

In an excavation for sewerage at the west end of Newcastle-street, Farringdon-street, London, at the depth of fourteen feet, with numerous fragments of pottery and an iron stylus, two small brass coins of Constantine.

In an excavation for building at Broad-stairs, near Ramsgate, a small brass coin of Victorinus.

September.—P. 253.

At Springhead, near Southfleet, Kent, with a bronze Roman enamelled fibula of elegant shape, a British brass coin.

Obv.—(incuse) A horse; between the legs CAC.
R.—(convex) A wheat ear, dividing the legend CAM.

Several British, and many Roman coins found near the same spot, where are extensive remains of Roman buildings.

Near the church of St. Matthew, in Friday-street, London, with sculpture and pottery of the same reigns, coins of Henry III., and of the early Edwards.

January, 1845.—P. 385.

At Helmingham, with Roman bronze heads and figures, a coin of Valerian of silver, with two others.

ARCHAEOLOGIA, 1844.—P. 48.

In the barrows opened by the Archaeological Congress at Canterbury, a small brass coin of Victorinus.

Pp. 56, 136.

At Breach Downs, Kent, with remains of a purse, four silver sceattæ.

P. 131.

At Guyton, in Northamptonshire, in a Roman villa, brass coins of the following Roman emperors:—M. Aurelius, Albinus, Tetricus senior, Tetricus junior, Allectus, Constantinus I., Constantius II., Magnentius, Gratianus, and some uncertain late emperors.
At New Grange, in Ireland, with gold ornaments, a denarius of Geta, and two small brass coins defaced.

Gentleman's Magazine, 1844.—P.526.

March 22.—P. 637.

Near Closeburn, many thousand silver pennies and groats, English and Scotch.

Mr. Beale, of Oundle, Northampton, has very obligingly sent us advice of Roman coins which were found, with Roman pottery, and human and other skeletons, three brass pins, and part of a clasp and buckle, in excavating for a railway near that place. The coins were copper. Two Claudius, second brass; one Trajan, large brass; two Faustina senior, large brass; one Constans, third brass. One of the Claudius was found in a dark blue vessel, the only one preserved entire. This find took place at the close of last year.

Sir,—I have much pleasure in replying to your letter, and beg to send you the following list of the copper coins found on my estate.

1203

In September 14, 1844, while the labourers were digging for the railroad at the mouth of the Sapperton Tunnel, they found a human skeleton imbedded in the earth about fifteen inches, and by its side seventy Roman coins. Thirty-six of these coins were sent to me. They were of the coinages of Gallienus, Victorinus, Tetricus senior, Salonina, Quintillus, Carausius, and Allectus. The mouth of the Sapperton Tunnel is about a mile from a "place called the 'Lark's Bush,' in the hamlet of Frampton, where a large quantity of Roman coins was found."—Rudge's Gloucestershire, vol. i. p. 324. "The remains of a camp, near Frampton, in the parish of Sapperton, near which, in the year 1759, a very great quantity of Roman coins, of silver and small brass, were found, including almost a complete series, from Antoninus Pius to Gallienus, and many rare ones, denarii of Didia Clara, Macrinus, Diadumenianus, Orbiana, Gordianus senior, and Æmilianus, and small brass coins of Macrianus, and Ælianus, supposed to amount to near three thousand coins."—Rudder's Gloucestershire.

I am, Sir, your humble servant,  
Thomas Baker.

Watercombes House,  
10th March, 1845.  
C. Newton, Esq.

Italy.—In November 1844, in making excavations at the church of St. Paul, extra muros, at Rome, about four hundred silver pieces, of the tenth and eleventh centuries, consisting of Saxon, Italian, French, Danish, Hungarian, and German money. Among these were some new types of the Dukes of Normandy, which M. de Longpérier promises to edite in the Rev. Num. Some coins of Otho III., struck at Pavia and Lucca, 983 A.D.; of Henry II., struck at Pavia; of Canute, inscribed Ethric on Rumford; of Edward the Confessor, Godfrine on Lund, with other Saxon pieces, now in the possession of Mr. Curt, of Lisle Street, who has been kind enough to communicate this account.

Revue Archéologique, April 15, 1844.—P. 69.

In an excavation near Hédé, in Brittany, a large quantity of
Roman coins, third brass (the metal not specified), of Gallienus, Claudius II., Tetricus, Victorinus, etc.

P. 70.

At Sceaux, in the Département du Loire, in some Gallo-Roman tombs, with other antiquities; among the Roman coins was an unedited one of Valerian. Rev. Victoria Germanica.

P. 131.

Near the ancient castle of Roquefort (Ariège), some gold coins, and a large number of silver coins (blanc à l'écu), of the reign of Charles VI., valued at twenty thousand francs.

At Noyon, eighteen pieces of gold of Charles IX., and other kings of France and Spain.

Vol. V., p. 338.

Near Valenciennes, a silver Merovingian denier, inscribed Montiniaco.—Rev. A cross; between the limbs, eodvlfo mone; probably struck at Montigny, in Bassigny; unedited.

Revue Numismatique, March and April, 1844.

At Nogent sur Eure, Arrondissement de Chartres, 610 coins in silver, copper, and billon, of Roman emperors, from Maximus to Postumus.

July and August, 1844.

In a vineyard at Nazelles, Canton l’Amboise (Indre et Loire), in an earthen pot, about 170 large brass coins of the following emperors:

5 Nerva (A.D. 96—98), illegible.
16 Trajan (98—117), illegible.
24 Hadrian (117—138), rather better condition.
2 Sabina, bad condition.
20 Antoninus Pius (138—161), sixteen different types, moderate condition, two fairly preserved.
3 Faustina the Elder, two varieties, aeternitas—AVGVSTA, one only in fair condition.
35 Marcus Aurelius (161—180), eighteen varieties, three well preserved, the rest broken; a rare one with consecratio.
15 Faustina the Younger, nine varieties, four good.
3 L. Verus (161—169), three varieties, one tolerably preserved.
5 Lucilla, four varieties, moderate condition.
22 Commodus (180—192), fifteen varieties, one very fine, nobilitas avg. p. m. tr. p. xii. imp. viii. cos. v. pp.
3 Crispina, two varieties, one fair condition.
2 Albinus (193—196), two varieties, fair condition.
1 Sep. Severus (193—211), fine, Africa.
1 Julia Domna, good condition.
These were probably buried about a.d. 198.
At Nogent sur Eure, near Chartres, in an earthen pot, 90 pieces of gold, and 300 in silver, or billon.
The principal varieties were:

GOLD.
2. Aguil, inscribed philippe roi de france, probably Philip V.
3. Florin of Charles IV., or V., karolv. rex.
4. Lion of Philip de Valois (1328—1350).
5. Royal.
7. Pavillon.
8. Chaise.
14. The same, of Humbert II., Dauphin of Viennois (1333—1350).
15. The same, of Raimond III. or IV., princes of Orange, (1335—1393).
16. The same, of Jean de Luxemburg, king of Bohemia (1309—1346).
17. The same, of Wenceslaus, son of the preceding. (Cf. Lelewell, Numis. du Moyen âge, pt. tab. xxxviii).
18. The same, with the legend, gils aoir. ram, uncertain attribution.

SILVER, OR BILLON.
20. The same, of Charles II. or Charles V. karolv. rex.—Rev. francorvm.
21. The same, of Philip de Valois.
22. The same, of the same, with the crown.
23. Eagle displayed. marie de breTAGNE.—Rev. Cross, moneta nova d`elincovrt. Maria, daughter of John, Duke of Brittany, was married to Guy III. of Chatillon, Comte de Saint-Paul, and died in 1339.
24. Gros of Louis, Count of Flanders (Duby, pl. lxxx., No. 7).
25. Gros of Eudes IV., Duke of Burgundy, variety of one
(Rev. Num. 1841, pl. xix., No. 5).
At Robache, Département des Vosges, in June last, about 3000
Gaulish coins, all varieties of those published by M. de Saulcy
(Rev. Num. 1836, pl. iii.), except one reading retrograde con,
the name of the Consuanetes, a Gaulish race to the north of
the lake of Constance. This discovery is one of the most con-
siderable ever known of Gaulish coins.

Kosche's Zeitschrift für Münzkunde, March 1844.
In the summer of 1843, at a farm called Kopitkowo, near
Mewe, some miles from the banks of the Weichsel, in West
Prussia, an urn, with silver coins and ornaments, of fine work,
and apparently intended for the neck. Among the coins were two
Arabic dirhems of the Samanide princes, Ahmed ben Ismael, struck
(under the Khalifate of Moktahfi Billah), between 907 and 908
A.D., and Nasr ben Ahmed, struck between 913 and 942.
Three pennies of Ethelred II., king of England, 1016.
Seven varieties of Otho I. of Germany, and five of later Othos.
Two pennies of Henry, duke of Bavaria, afterwards the Emperor
Henry II. (1002—1024).
One penny of Bernhard, duke of Thuringia (972—1011).
One penny of Ekhard, margrave of Meissen (986—1002).
Three Bohemian pennies of Boleslaw (Prag), and two of Jaromir.
Three pennies of Ludolf, bishop of Augsburg.
One bracteate-like coin, with Runic characters. The ornaments,
and the best of the coins, were placed in the collection of antiqui-
ties in the royal archives at Königsberg. (See Numismatische
Zeitung, December, 1844; and for instances of similar discoveries,
Mr. Hawkins's valuable paper on that at Cuerdale, in the Numis-
matic Chronicle for 1841).

August.
At Luneville, in 1841, 148 gold coins of the time of the emper-
ors Sigismund, Frederic III., and Maximilian. About forty were
of the Margraves Frederic, and Sigismund of Brandenberg, and
there were single coins of Florence, of Baden, Frederic of Saxony,
Conrad of Jülich.
In the ruins of a fortress at Wolgast, guldens of Karl XI. of
Sweden, struck for Bremen and Verden.
At Dossow, near Wolgast, some coins, the earliest of which
were some groschens of Wladislaw II. of Bohemia, and the latest
were struck by Brunswick, Magdeburg, Hanover, Quedlinburg.

Numismatische Zeitung.—March 1844, p. 38.
At Elsterberg, at the close of 1843, a large number of brac-
teates, some of them struck probably late in the thirteenth century.
Near Altenberg, another large find of bracteates, struck probably as early as 1100.

_April._

At Lausanne, some old Roman and Carolingian coins (reported by M. Troyon to the Wissenschaftl. Kunstverein at Berlin, Feb. 16, 1844).

_May._

At Niederringelstein, on the Rhine, in an earthen pot, more than 3000 Roman coins.

In Medeah, a great number of Cufic coins, of Arabic dynasties, of the twelfth century.

Near Finsterwald, in Lausitz, in a pot, about 1000 entire bracteates, and the fragments of probably about 1000 more; the chief part of them, said to be struck before the introduction of Christianity into that district, the ancient _Wendenland_, the types being chiefly symbols of the ancient paganism of Odin, without inscription. Such coins are mentioned in early chronicles, but have never before been found.

_July._

At Ribe, in Denmark, silver coins of Waldomar IV., in an earthen vessel, in the ground.

_August._

At Eichstett, 22nd June 1844, a market town in Breisgau, a number of silver coins, struck by Karl III., at Strasbourg. (See Mader, iv. p.14).

In Colmar, August 1844, two unedited coins of Charlemagne, struck in his palace of Strasbourg, before his coronation, as emperor at Rome, A.D. 799.

**Saxon Coins found near Dorking in 1817.**

_Sir,—_When the large quantity of Saxon coins were found at Winterfolds, in the parish of Dorking, in the year 1817, I was a resident of that place; and many of these coins were shown me, before any of them had reached the British Museum. I had no chance of retaining any one of them; but feeling much interest in the discovery, I kept an accurate account of such as were submitted to me, as far as regarded variety. How many in point of number I saw I cannot now recollect; but there were one or more of the following monarchs and archbishops, viz.—

- Ce'lonulph. —R. Merc.
- Beldred. —R. Cant.
- Witglaeph. —R. Merc.
- Berthulph. —R. + ?
- Ceolulph. —R. Merc.
- Beornulph. —R. Merc.
- Ethelweald.—R. East Ang.

} of the Heptarchy.
Egbert. — R.
Ethelwulph. — R.
Athelstan. — R.
Ethelbut. — R.

I also saw one or more of Alfred's.
Pippinus. R. Franc.
Wilfrid. R. Archiepisc.
Cennoth. R. Ditto.

I presume Berthulph to have been of, whom it is said in Camden, that anno 888, he "reigned in Mercia, but as feudatory to the West Saxons. Being much molested by the invasions of the Danes, he quitted his kingdom, and retired to a private life."

I trust that this statement, although adding nothing to the collection in the Museum, will not be unacceptable. I am, Sir, &c.

JAMES PUTTOCK.

To the Editor of the Numismatic Chronicle.

SIR,—In your very interesting work on the coins of the Romans relating to Britain, you mention only two coins known to exist of Maximianus (Hercules), with LON in the exergue. Last week, on looking over a small collection belonging to my friend, the Rev. C. H. Bennet, rector of Ouseden, in Suffolk, I found among them an excellent second brass of this emperor, Rev. GENIO POPVLI ROMANI; in the exergue, LON. I am happy to be able to add another emperor to the list of those who minted in London; for in the collection belonging to the Ipswich Library, I saw a few months back a second brass of GAL. VAL. MAXIMIANVS, with the same reverse and exergual letters. This last coin has something singular in its style of execution, the head not being flattened out over the field of the coin to the degree usual in the coinage of this period, but smaller, more elongated, and of somewhat higher relief. I do not know where either was picked up; but it is a curious coincidence, that both should now be preserved in Suffolk, where the one mentioned in your note to p. 107, was discovered.

I have also met with an unpublished reverse of Carausius, discovered at Caerleon, in Monmouthshire (a place where his coins frequently are turned up), and now in the hands of Mr. W. Jenkins, of that place. It is of copper, washed with silver, well preserved, but of rude work. The reverse is perfectly distinct; VENVS VIC. Venus leaning against a column, and holding a globe and palm branch, exactly the same figure as that represented in the impression below, from an onyx intaglio found at the same place, and in the possession of the same Mr. Jenkins. I have the honor to be, Sir, your obedient servant, C. W. KING.

To the Editor of the Numismatic Chronicle.

Trinity College, Cambridge,
Jan. 30, 1845.
In p. 16 of the Proceedings of the Numismatic Society, published in Vol. V. of the Numismatic Chronicle, it will be seen that Mr. C. R. Smith refers to a coin of Maximian, with LON, which was found, with many others, on the banks of the Stour. The coin of Galerius Maximianus, as Mr. King remarks, appears to be the only specimen noticed with these exergual letters. It would be desirable to obtain impressions of it in sealing wax. The coin of Carausius is also new. Mr. Jenkins has kindly forwarded impressions, from which the correctness of Mr. King's reading is confirmed. The coin, however, is, unfortunately, badly preserved.

EDITOR.

TESTIMONIAL TO MR. CHARLES ROACH SMITH.—Several members of the Numismatic Society having felt desirous, on the retirement of Mr. Charles Roach Smith from the office of Honorary Secretary, to present him with some testimonial of their esteem and respect, as well as of their approbation of his services, resolved to enter into a subscription for that purpose. The proposal was cordially responded to by a large number of members, and a sufficient amount having been readily contributed, a meeting of the subscribers was held at the rooms of the Society on the 23d of January, at which Dr. Lee, in their name, and at their request, presented to Mr. Smith a silver tea and coffee service, accompanied with their best wishes for his health and prosperity. The different articles were inscribed as follows:—

TO

CHARLES ROACH SMITH, F.S.A.
LATE
THEIR HONORARY SECRETARY,
FROM
FIFTY-ONE MEMBERS OF
THE NUMISMATIC SOCIETY
OF LONDON.
JAN. 1845.

We cordially congratulate our esteemed friend and colleague on this occasion, feeling assured that no one better deserves such a testimonial, not only for his indefatigable attention to the duties of the particular office in connection with which the present was given, but also for the services he has rendered to the study of British Archaeology in general.

INITIA MONETÆ SUECANÆ sub examen revocata a JOHANNE HENR. SCHRÖDER, ex actis Reg. Societ. Scient. Upsal. T. xii. p. 381—391, with a plate, 4to. Upsal, 1844, contains a memoir, by Dr. Schröder, on the early coins of Sweden; of the king Olaf, who reigned A.D. 994—1024; and Amindus, his son, who was

VOL. VII.
king from A.D. 1024—1051. These coins are of the greatest interest, from their resemblance to our Saxon series, and being evidently directly derived from England. The moneyer, Godwine, of the first king, is evidently an Anglo-Saxon; and the letters CRUX, the cross disposed in the spaces between the cross and circle, bear marks of a derivation even as late as the Norman conquest.

**Penny of Harthacnute, of the Dover Mint.**—A penny of this monarch, reading O. HARTÆCNVT REX, R. ETSIGE ONN DFRA (Etsige on Dover), has been lately procured at a silversmith's in the town of Dover, having been found in the vicinity of that place. This, with two new Offas; one, with the head, found at Basle, in Switzerland; the other from Rome, are in the possession of a well known member of the Numismatic Society.

Leitfaden zur Nordischen Alterthumskunde, herausgegeben von der Foniglichen Gesellschaft für Nordische Alterthumskunde. 8vo. Copenhagen, 1837.

Fifty Bracteate Coins found at Dælia. See Professor Holmboe’s Treatise, De Prisca Re Numaria Norwegiæ, &c.

Five Coins found in Norway, viz. Otto, first emperor of Germany; Udalricus, Duke of Bohemia, A.D. 1002 to 1037; Hitopha, bishop of Cologne; a coin of Westphalia of the 12th century; Frederic 1st of Germany; and an impression in tin-foil of a supposed Anglo-Saxon coin.

Medal struck to commemorate the Grand Convention of the Friends of Universal Peace, held in London, June 22, 1843.

Two Burmese Coins.

A specimen, from Sierra Leone, of the Gold Rings worn by the Africans, and serving as money.

A small Ring of the same kind.

Lieutenant-Colonel Lewis Robert Stacey, C.B., commanding 43rd regiment N. I. of the Bengal establishment; and Thomas Lott, Esq., F.S.A., were balloted for, and elected into the Society.

Robert Anstice, Esq., F.G.S., and F. W. Prideaux, Esq., forwarded for exhibition, through Mr. C. R. Smith, one hundred and fifty-two Gaulish coins, in silver, found a few years since near Dol, in Brittany. These coins, upon examination, prove to be as follows:
1. *Obv.*—TOGIRIX. Head to the left  
*Rev.*—TOGIRIX. Horse galloping to the left  
Numbers: 116

2. *Obv.*—Q.IVLI. Head to the left  
*Rev.*—Portions of the word TOGIRIX, as on No. 1.  
13

3. *Obv.*—ARIVOS. Helmeted female head to the left. (Pallas?)  
*Rev.*—SANTONO. A horse galloping to the right; beneath, a pearled circle, with a point in the middle  
13

4. *Obv.*—SOLIMA. Head to the left  
*Rev.*—A horse; beneath, a fish  
2

5. *Obv.*—Head imperfect  
*Rev.*—Portion of a horse; above, COA. (Lelewel, Type Gaulois, Pl. iv. fig. 37.)  
1

6. *Obv.*—Diademed head to the left.  
*Rev.*—A horse; above...EDV. (Caledu); below, a twisted serpent  
1

7. *Obv.*—Q.DOC. Helmeted head to the left.  
*Rev.*—A horse; .DOCl; beneath, SANT  
1

8. *Obv.*—Head to the left  
*Rev.*—Horse galloping to the left; below, DVBN0  
1

9. *Obv.*—Head to the right; letters, apparently DVBN0 COV  
*Rev.*—DVBNORIX. A figure in the Gaulish trowser, holding a standard, on which is a hog, to the left  
1

10. Unappropriated  
3

152

1. The coins of Togirix, a Gaulish chief, are extremely common. They are found frequently in Sologne, and the Chartrain territory, and, indeed, particularly in the central provinces of France. 2. This type, with the Q prefixed to the IVLI, is unpublished. Some of these coins, without the Q, were found, a few years since, at Bazoches, in Dunois (Eure-et-Loire), with coins as Nos. 1 and 5. Q. Julius, it is probable, may have been a Roman governor in Gaul, contemporary with Togirix. The association of their names upon coins is to be regarded as a manifestation of friendship and political alliance. The word IVLIOS occurs on the *Rev.* of a coin, reading on the *Obv.* DVRAT, presumed to be of Duratus, a chief of the Pictones, who, it is supposed, was sanctioned by Julius Cæsar, in thus shewing his friendly connexion with the Romans. 3. ARIVOS is considered to
be the name of a chief of the Santones. 4. These coins are attributed to Solimariaca, now Soulesse, near Toul. The head is supposed to be the effigy of Solima, the tutelar goddess of the city. 5. Given by M. De Lagoy to the Senones. 6. Coins of this type are attributed to the Santones; and the Q. DOCI. Quintus Docius, may be the name of some Roman in authority over them. 7 and 8. These coins are assigned to Turnacum, a city of the Nervii, now Tournay. M. Lelewel thinks, that the coins reading DVBNORIX, were struck by Dubno previous to his subjection by the Romans; and those without the adjunct RIX, or REX, subsequent to the Roman ascendancy. For examples of these and analogous coins, as well as for the latest and best essays upon them, reference should be made to M. Lelewel's "Type Gaulois," and especially to the articles by M. de la Saussaye in the various volumes of the Revue Numismatique.

Mr. C. Roach Smith also brought before the notice of the Society a new variety of the British or Gaulish coins found in Sussex and Hampshire, and exhibited at previous meetings (see Proceedings of the Numismatic Society, 1841, p. 38, and 1843, p. 102). It is in gold, and weighs 82 grains. Two of the others most resembling it weigh 82 and 83 grains (see plate iv.). On the obverse, or convex side, are the letters TINC, in a label. On the reverse, a horseman, with right arm raised, as if in the act of throwing a javelin; the horse curveting to the right; beneath, the letters C.F. It was found on Titchfield Hill, and is now in the possession of J. N. Hughes, Esq. of Winchester. (Pl. iv. fig. 6.)

The workmanship of this coin, which is of a good style, and the form of the letters, warrant our believing it to be either the work of a Roman artist, or fabricated by a British workman, who had well studied and copied a Roman model, a conjecture supported by the close resemblance of the reverse to that of the coins of the Cossutia family, with Bellerophon mounted on the horse Pegasus; and beneath, the legend I. COSSVTI C.F. In this case, the letters C.F., the two last of the Roman inscription, would indicate nothing beyond the whim of the moneyer. The letters on the obverse, on the contrary, are not so easily explained by reference to the practice
of imitating. The horseman hurling a javelin, on the reverse of coins of the Crepusia family, bears a still closer resemblance to the mounted warrior on the British coin. As in so short a time, five, varieties of these hitherto unpublished coins have been collected, further discoveries may be anticipated, which, by comparison and attention to locality, may assist their explanation and appropriation.

Mr. Smith also exhibited from the collection of Mr. Hughes, a large brass coin of Antoninus Pius, in a fine state of preservation, with the reverse of Britannia (see plate iv.). It resembles No. 13, in plate 11, of Akerman's Coins of the Romans relating to Britain, but is from a different die, and varies in some of the details. The shield wants the spike in the centre, and is radiated; the spear is slightly barbed at the lower end, and also in the shaft at the top; and the male figure is dressed in a kind of ornamented boots. The coin was found, some years since, with others, of Pius, the Faustinae, &c., in a vase, in the county of Northampton.

Miss Pulteney forwarded, for the inspection of the Society, sixteen denarii found at Amberwood, on the borders of the New Forest, by a labourer, who was grubbing a bank. The coins are of Valentinianus, Valens, Gratianus, Magnus Maximus, and Arcadius; reverses common; mintages, Lyons and Treves. Seven coins, in small brass, of Gallienus, Victorinus, and Claudius Gothicus, found at Pond Head, in the New Forest, accompanied the above.

Mr. Joseph Clarke exhibited a penny of Offa, found at Chesterford, and a penny of Ciolvulf, found at Dudhenhoe End, a hamlet near Saffron Walden. The latter reads,

*Obv.*—+LEOLVVLF REX O. Portrait to the right.
*Rev.*—+SIGESTEF CONET. In the centre, X.

This is an unpublished variety of the rare coins of Ciolvulf, king of Mercia. The name of the moneyer, Sigestef, occurs on the coins of his predecessor, Coenvulf, and in conjunction with the place of mintage, Dorobernia, Canterbury, on a specimen, without the portrait, in the Duke of Devonshire's collection.

The penny of Offa, as shown in the wood-cut (page 6), reads,* Obv.*—OFFA REX. *Rev.*—TIDVALD (?) inclosed in a wreath,
formed of two serpents. This is also an unpublished type. One similar is mentioned in the sale catalogue of the coins of the late Sir John Twisden; but a doubt was raised as to its genuineness, which is weakened by the authenticity of the example exhibited to the Society.

Read, 1. A letter from Professor Holmboe, of Christiania.

"Christiania, May 8, 1843.

"Being informed, through the Proceedings of the Numismatic Society forwarded to me, together with a letter from the Society’s secretary, that the Society is in possession of a numismatic collection, I hope that the coins inclosed in the little box, namely, fifty pieces of bracteates out of those found near Dælia, 1840 (vide my Treatise "De Priscâ Re Nummaricæ Norwégicæ," &c.), together with five coins of the middle ages, found in Norway, will not be void of interest to the honoured Society. I have the honour to send them in the name of the Norwegian University, begging, at the same time, leave to include a copy of an Anglo-Saxon coin (not found in Ruding’s work), on the obverse of which is to be read, ELA MI NORT (?) round a head; and on the reverse round one greater, and two smaller crosses, LDRED ON VSILT. Could this possibly be ascribed to Ella, or Ælla, king of Northumberland (A.D. 862); and is there any town, or place, existing in Northumberland, which has borne the name of Usilt (perhaps St. Oswald)? It seems to offer a very convenient intermedial between the stycas of Asbercht, and the pennies of Regnald. It would be very interesting to me to see the question discussed.¹ I have the honour to be, your most obedient servant,

"Ch. Holmboe.

¹ Professor Holmboe has been requested to forward a wax impression of the coin, the tin-foil cast which he supplied being damaged. Matrices of coins, made in sealing-wax, are by far the best medium for transmitting facsimiles. From these, casts in plaister of Paris can be taken.

3. A letter from Mr. Dickinson, accompanying one from Mr. Nightingale, respecting the Tin Money of the trading ports of the Burman empire. Specimens were presented, at the same time, by Mr. Dickinson to the Society. Printed in the "Journal" for 1844, p. 29.

4. A paper, by Mr. J. Y. Akerman, Secretary, on some Merovingian, and other gold coins, discovered in the parish of Crondall, in Hampshire, in the year 1828. Printed in the "Journal" for 1844, p. 171.

December 28, 1843.

Professor H. H. Wilson, Vice-President, in the Chair.

Presents.

A Set of Proof Specimens of the Coins of her present Majesty.

Medal, in silver, by Borrell, recording her Majesty's visit to the King of the French at the Château d'Eu.

Medal, in bronze, of the Very Rev. Henry Richard Dawson, Dean of St. Patrick's, Dublin, by Woodhouse, 1840.

Medal (No. 2.) of the Peace Society. Rev.—Personifications of the four quarters of the globe burning their weapons of war.

Presented by

The Right Hon.

H. D. Haggard, Esq.

Edward Hoare, Esq., Cork.

John Lee, Esq. LL.D.

The Author.

The Author.

Lithograph of an Ancient Amulet in the form of the Conâc, or Murrain Caterpillar, dug up at Timolegue, county of Cork, and now in the collection of John Lindsay, Esq.

" "

Lithograph of another Amulet, of the same description, dug up near Doneraile, county of Cork, now in the Piltown Museum, county of Kilkenny.

" "

Lithograph of a unique variety of the Gold-Ring-Money of Ireland, found in a turf-bog, near Macroom, in the collection of E. Hoare, Esq.

The "York Courant," of October 12, 1843, containing an account of an alleged Jewish Medal found at York.

John Warrington, Esq., was balloted for, and elected into the Society.

Henry Rhodes, Esq., exhibited a steel-die for the reverse of the shilling of James I., found, a few years since, in excavating for a sewer at London Wall, near Finsbury Circus.

The Secretary observed, that several more steel-dies were discovered at the same time, which were eventually deposited in the library of the Guildhall. Application had been made to the Library Committee for permission to exhibit these dies to the Society; but, notwithstanding no account of them had been published, and they remained unexamined, as it is believed, by any person competent to give an opinion upon them, the request on behalf of the Society had not yet been granted.
The Reverend Edward Gibbs Walford exhibited some Roman Coins recently ploughed up in the Black Grounds in Caldwell’s, at Chipping Warden.

They are of Domitianus, 1.—Pius, 2.—Faustina the younger, 1.—Philippus, 1.—Victorinus, 4.—Tetricus, 1.—Gallienus, 2.—Urbs Roma, 4.—Constantinus jun. 5.—Constans, 4.—Constantinus II. 4.—Valentinianus, 1.—Valens, 3.—Gratianus, 2.—Total, 35. From the vallum on the east side of Chipping Warden, named Arbury Banks, a small brass Carausius; and from the Black Lands, King’s Sutton, Northamptonshire, six small brass coins of Constantinus, Crispus, Constans, and Magnentius.

The Reverend Henry Christmas laid before the Society a list of Roman Silver Medallions and Coins, found in 1830, in a field at Holwel, near Taunton, on the estate of Downing Blake, Esq. They were deposited in an urn of red Samian pottery, which was shattered to pieces by the plough.

"1, Park Cottage, Haverstock Hill, 28th December, 1843.

"Dear Sir,—I have the honour of submitting for the inspection of the Society to night, from Mrs. Kidd, one of the Chinese honorary medals bestowed by them during the late war, on such of their troops as had personally slain a barbarian (Englishman) in battle. I have seen several of them, of different shapes, but all with similar devices and inscriptions. They appear to have been struck by wood-blocks, and more resemble badges than medals, with which latter objects, however, they must be classed, as on some to which I refer, the value in money was expressed, as Yīh\(^1\) tseen,\(^2\) one mace, or tenth of a dollar, &c. Above is a scroll ornament, and a bat flying, with its head downwards. This animal, called the fūh yīh, is of very common occurrence in Chinese works of art; but I must confess that I have not as yet been able to discover the particular notion attached to it. Beneath is a horizontal line of Chinese reading,

\[\text{Min chê tsung tūh poo tang,}\]

'from his lordship the governor-general of the Fūh-keen and Chē-keang provinces;' and underneath, in larger characters,

\[\text{Shang, 'a reward.'}\]

\(^1\) Morrison's Chinese Dictionary, Part ii. vol. i. No. 12175.

\(^2\) Ibid. No. 10716.
"Above is a hole, as if to attach it to the dress. All that I have seen came, like the preceding, from the western provinces of China, in which our troops were engaged. Believe me to remain,

"Yours very sincerely,

"Samuel Birch."

2. A paper, by the Rev. E. G. Walford, on a Coin of Juba II., some time since brought before the notice of the Society. (See Abstract of Proceedings, p. 11.)

The chief interest excited by the coin, arises from an inscription, in Phœnician characters on the reverse, beneath a horse, unbridled, and running at full speed. Mr. Walford, by the aid of Hebrew, which he quotes St. Augustine and other writers to prove came from the same source as the Phœnician, explains this inscription to signify, *By decree of King Juba.* (See Num. Chron. Vol. VI. p. 183.)

Reference to Plate IV.

Fig. 12.—Large brass, of Antoninus Pius. *Rev. Britannia.* In the possession of J. N. Hughes, Esq.
JANUARY 25, 1844.

PROFESSOR H. H. WILSON, V.P., IN THE CHAIR.

Presents to the Society.

Medal in Silver, by Borrel, recording the visit of Her Majesty Victoria to the king of the French, at the Chateau d'Eu. [PRESENTED BY W. D. HAGGARD, ESQ.

Oriental Cylinders, by A. Cullimore, Nos. III. and IV. [PRESENTED BY ISAAC CULLIMORE, ESQ.

Robert Weddell, Esq., and John Wilkinson, Esq., were balloted for and elected into the Society; and Professor Joseph Arneth, Director of the Imperial Cabinet of Coins and Medals at Vienna, was elected an associate.

Mr. C. Roach Smith, Hon. Secretary, announced the result of an examination of 615 small brass Roman coins, found about a year ago at Wootton, near Northampton. They were deposited in a bank, in a narrow-mouthed earthen vessel, the neck of which, protruding from the side of the bank, had been noticed for years by labourers in going to and from their daily work. Mr. Joseph Clark, of Saffron Walden, while on a visit to London, heard of the discovery; and under the hope of saving the coins for examination, immediately proceeded to the spot, and succeeded in obtaining the coins on loan, for the inspection of the Society. By thus rendering them available to numismatic inquiry in so disinterested and liberal a manner, Mr. Clark has entitled himself to the best thanks of the Society.

The following list exhibits the relative proportion of the various coins one to another, which accords with their accepted degrees of rarity, as well as with the usual ratio in which they have been found to occur in similar deposits. Some of the reverses are rare, but no novel variety has been observed.

VOL. II. D
Mr. John Barton, of Barton Village, Newport, Isle of Wight, forwarded an impression from an aureus of Libius Severus, recently found near Carisbrook castle. Obv. D.N.LIBIVS SEVERVS P.F. AVG. Diademed head of the emperor. Rev. VICTORIA AVG GG.; in the field R.A.; in the exergue CONOB. The emperor seated to the front; his right foot tramples on a dragon; his right hand grasps a long cross, and in the left he holds a globe surmounted by a victory.

Mr. C. R. Smith remarked that the Isle of Wight has hitherto afforded to the antiquary scarcely any Roman remains. It was not to be supposed that some evidences of Roman habitancy had not been from time to time discovered; but none had been recorded. Sepulchral urns from barrows, and other localities, have been found; but no evidence has been adduced to shew that they were of Roman fabric: a small fragment of the bright red glazed kind, unquestionably Roman, was preserved a few years since in the collection of the Newport Institution; but that, as well as other objects asserted to have been found in the island, was unaccompanied by any description or reference to details explanatory of the circumstances attending its discovery: antiquities which are thus undescribed, cannot be made fully available to the views of the archaeologist.

Last year an aureus of Valentinianus Junior, now in the possession of the Rev. E. M’All, was found at Brixton; and, about fifteen years since, 600 of the small brass coins of Valentinianus and Theodosius, with six denarii of Gratianus, Arcadius and Honorius, enclosed
in an earthen vessel, were ploughed up at Cliff, near Shanklin. It is believed that these constitute nearly all the authenticated discoveries of Roman coins made in the Isle of Wight.

Mr. C. R. Smith then laid before the Society a list of Anglo-Saxon coins discovered at Milton-street, in the parish of Arlington, in Sussex, compiled from impressions in sealing wax forwarded by Mr. Charles Ade, of Milton-court Farm, near Alfriston. A few of these coins were first found by a labourer, while digging in his garden. Mr. Ade then ordered a systematic investigation of the soil to be made, which led to the discovery of many more. They are of Canute, Harold, Harthacnut, and Edward the Confessor; and, as will be perceived by the following catalogue, present us with several new moneyers’ names, and new readings of the names of some towns.

On the coins of Edward the Confessor, the moneyers' Enstan, Elard, Bridd, and Elfgar, are new. The spelling of the words Dover, Exeter and Hastings are new, as is that of Sandwich, SADP. Mr. Cuff has a coin of the same moneyer, "on SAN." On the coin of Harthacnut the town of Hastings is now, for the first time, added to the places of mintage in England, of this prince; and Bridd, whom we first find on the coins of the Confessor struck at Dover, to the list of his moneyers.

Mr. William Wire forwarded for examination a large quantity of Roman coins, in first, second, and third brass, and in silver, discovered within the last few years in and about the town of Colchester. They extend from Antonia, B.C. 39 to A.C. 38, to Arcadius, A.D. 395 to A.D. 408.

Mr. C.R. Smith remarked, that he had only found two of these coins, which, from rarity of type, called for observation. The chief interest of the collection lay in the authentication of discovery at Colchester, a town occupying the site of Camulodunum, one of the principal towns of Britain under the Roman supremacy; and, notwithstanding the neglect with which they have been treated, still possessing ancient remains of the highest interest. Vast quantities of coins have been from time to time discovered within the precincts of
Colchester, which might have formed an interesting public collection for illustrating the history of the town, but, unfortunately, the inhabitants possess no museum, and the various antiquities are dispersed as soon as found, without any attempt being made on the part of the corporation to preserve and record them. The two specimens in Mr. Wire’s collection which possess a general interest are, a small brass coin of Carausius, of the Victoria type, as No. 209 of “Akerman’s Coins of the Romans relating to Britain,” with the addition of the letters RSR in the exergue; and a second brass coin of Nerva, *Obv. IMP.NERVA CAES. AVG. P. M. TRP. X....* laureated head to the right. *Rev. NEPTVNO CIRCEN....TIT*; in the field S.C. Neptune standing to the right; his left hand resting on a trident, in his right either a whip or an *aplustrum* of a galley; behind, a recumbent figure and an anchor, most probably a personification of the Tiber. This coin is remarkable for the place of discovery, as well as for the inscription; one precisely similar, and the first of the kind recorded, having been found at Colchester. It was engraved and published by the Rev. Mr. Ashby, in 1772, in the *Archæologia*, and was then deemed unique. About twenty years after, Eckhel published another, differing in a portion of the legend; a third was found in the Thames a few years ago;¹ a fourth, bought at a public sale, is in the collection of Mr. Hobler. Ashby’s coin reads thus:—

*Obv. IMP. NERVA CAES. AVG. P. M. TRP. COS. III. PP. Rev. NEPTVNO CIRCENS CONSTITVTORI. To Neptune, the founder of the Circensian games.* Eckhel’s:—

*Obv. IMP. NERVA CAES. AVG. P. M. TRP. COS. III. Rev. NEPTVNO CIRCENSES RESTITIT. To Neptune. The Circensian games restored.* Ashby quotes Dion Cassius to shew that Nerva abolished the Circensian games, and explains the apparent inconsistency between the statement of this historian and the numismatic evidence, by considering that the emperor struck this coin in honour of Neptune, to shew that the abolition of these games was resolved upon, not from any disregard to

¹ Num. Chron. vol. iv. p. 150.
their sanctity, but to ease the people of taxes for their support, which had become intolerable; and, therefore, while he reduces the costly sacrifices and expensive races of the circus, in the coins he pays respect to their divine founder. Eckhel observes, "There will be no shrewd antiquary to whom it will not seem astonishing, not that these coins bear evidence to facts unknown to historians (for many of the coins of Nerva record events unnoticed by them), but that two coins should be found, both unique, relating to the same fact, and yet dissimilar, one being constitutos, the other restitutos." Mr. Smith remarked, that he considered the two coins perfectly reconcileable with each other, as well as with the testimony of historians. The restoration of the Circensian games would mean a restoration to their primitive state, before they were encumbered by Domitian, the predecessor of Nerva, with the many onerous innovations which, Suetonius states, he introduced; to the reduction of these, and not to the abolition of the entire games, the passage in Dion Cassius\(^2\) refers. The other coins, it would seem, should all be read, Neptuno Circensium constitutori, a legend which, like the other, implies homage rendered to the god upon occasion of the restoration of games of which he was the founder, as well as of religious ceremonies connected with them, to their original simplicity and purity.

Mr. W. S. Fitch, of Ipswich, exhibited an aureus of Vespasian: Rev. the emperor crowned by Victory; recently found at Helmingham, in the county of Suffolk.

Read—1. The following letter from the Rev. Henry Christmas:

"My dear Sir,

"At the Meeting of the Society, held Nov. 23, 1843, a letter was read from Mr. Binley Dickinson, of Leamington, accompanying one from Mr. Nightingale. Mr. Dickinson presented to the Society two of the large tin coins used in the ports of the Burmese empire,

\(^2\) Lib. lxviii. B.
and there so common that they are measured by baskets-full. These coins bear numerous inscriptions, and for the most part display an animal with branching horns on the obverse, and a wheel on the reverse. Mr. Dickinson himself, in the observations which accompanied the coins, came to the conclusion that the animal was designed most probably to represent the sol-lunar character of Matrādeva. Mr. Birch replied, that the latitudes where these coins were current were at too great a distance from any part where Brahminism was prevalent, that it could hardly be expected that the coins should bear allusion to Brahminical legends,—that the religion of the country was Budhuisms, and the chief object of worship was Budhu, or Bodh, under the form of Gaudma. It may, perhaps, be agreeable to the Society to inspect the accompanying MS., in the illuminated parts of which the history of Gaudma is depicted, and in each stage of which that deity is accompanied by a hind, an animal which makes a considerable figure in Burmese tradition.

"The MS. itself is the property of the Rev. John Bathurst Deane, M.A., F.S.A., who has kindly forwarded it to me for the purpose of being laid before the Society.

"I remain, &c.

"Henry Christmas."

"To C. R. Smith, Esq."

2. A paper by John Field, Esq., on the ancient dies, or coining irons, for the hammered money, as used in England from the earliest period. Specimens were exhibited to the Society, together with coins struck from dies of Edward III. Published in Num. Chron., and Journal of the Society, vol. vii. p. 18.
FEBRUARY 22, 1844.

THE PRESIDENT IN THE CHAIR.

PRESENTS.

A Medal in Bronze, by Hart, struck to commemorate her Majesty’s late visit to Antwerp. 

Mr. Goddard Johnson, of Norwich, exhibited a steel punch, found at Stoke Ferry. The punch resembles some of those exhibited at the previous meeting by Mr. Field, and was used as the reverse of a die for a groat, but of what precise period, the bad preservation of the punch does not furnish the means of ascertaining. Impressions taken from it resemble the early Scotch groats.

The coins illustrated in this paper were chiefly bought by the British Museum at a sale of Mr. Steuart’s collection. They are of Laus Lucaniae, Pergamus and Sardis, Eumenia Phrygiae, Hierapolis, Aezanes Phrygiae, Dionysopolis Phrygiae, Tiberiopolis Phrygiae, Bagæ Lydææ, Blaundus Lydææ, Mæonia Lydææ, Aphrodisias Cariæ, Tabæ Cariæ, and Bubastites Nomos.—Published in Numismatic Chronicle, and Journal of the Society, vol. vii. p. 5.

MARCH 28, 1844.

EDWARD HAWKINS, ESQ., IN THE CHAIR.

PRESENTS.

VOL. II.

Mr. C. R. Smith exhibited, by permission of the Library Committee of the Guildhall, some steel dies for shillings of James I. discovered a few years since, during excavations for sewers in London Wall, near Finsbury Circus, and now deposited in the Guildhall.

Mr. Akerman continued the reading of Mr. Borrell's papers on Unedited Autonomus and Imperial Greek Coins. This portion comprised some unpublished silver coins of Aegae, Cyme, Myrina, Neontichos, and Temnus, in Aeolia; Eresus, Methymna, Mitylene, Nasi vel Napi, and Pyrrha, in Lesbos Insula; Arsinoe, Clazomene, Ephesus, Erythrae, Lebedus, Leuce, Magnesia, Miletus, Neapolis, Phygela, Priene, Smyrna, Teos, and Lebedus, in Ionia; Samos, Insula. Published in Num. Chron. and Journal of the Society, vol. vii. p. 45.

April 25, 1844.

Dr. Lee in the chair.

Lithographs of a unique ancient bronze engraved Celt, found in the county of Tipperary in 1843; of a bronze fibula found in the county of Roscommon, in 1842, now in the Piltdown Museum; and of a Lunette of gold, weight 1 oz. 4 drs., found at Hangiston, in the county of Kerry, in 1842, now the property of R. B. Pooker, Esq., of Cork.
A piece of Abyssinian Salt money called \textit{Amholmah}, of the value of \textit{2}\textsuperscript{$\frac{1}{2}$}d.

Presented by

\textbf{Dr. Lee.}

Denier and Half Denier of William of Aquitaine.

Presented by

\textbf{Monsieur E. Cartier, of Amboise, through Mr. Akerman.}

Samuel Sandilands Rogers, Esq., of Athol Street, Douglas, Isle of Man, and Peter Hardy, Esq., F.R.S., of Addiscombe, Croydon, were balloted for and elected into the Society.

Mr. C. Roach Smith brought before the notice of the Society several rare and unedited coins, the most remarkable of which were as follows:—1. A brass coin of Cunobelin. \textit{Obv. CV}... a winged victory to the left, holding a wreath in her right hand. \textit{R.} An eagle. In the collection of Thomas Bateman, Jun., Esq., of Bakewell, Derbyshire. Only one similar is known, which was found in the parish of Boughton Montchelsea, Kent;* but it is in so corroded a state as only to be identified by comparison with Mr. Bateman's well preserved specimen. 2. A silver coin found with some sceattas in the Isle of Thanet. \textit{Obv.} Male unbearded head to the left. \textit{R.} A winged figure to the left; in the field \textit{EP}. This piece, like most British and Gaulish coins, is slightly concave and convex, and would without any doubt be classified with those reading \textit{EPPICOM.F.}; but the correctness of this appropiation is rendered questionable by the fact of the coin having been discovered with sceattas, with which it accords exactly in weight. 3. A gold looped coin. \textit{Obv. EVPARDVSEPS} retrograde; diademed head, and robed bust to the right. \textit{R.} A double ornamented cross; above, two \textit{A}'s inverted; on either side \textit{NINV}, in the exergue, \textit{VAV}. This coin appears to be of a class hitherto unknown. It is assigned by Mr. Smith to Eupardus, a bishop of Autun in the sixth century, of whom no historical notice beyond that of his name is given, nor is the precise period when he held the office of bishop agreed upon by ecclesiastical writers, one placing him before Nectarius, a.d. 540; another, after Syagrius, ordained about a.d. 560; the latter of which the compilers of the \textit{Gallia Christiana} seem inclined to think the more correct.† The letters on

* Collectanea Antiqua, Pl. V., Fig. I.
† Gallia Christiana, tom. iv. p. 343.
the reverse of the coin cannot be so satisfactorily interpreted: it is possible they may be intended to refer to the town of Nivernum, in the diocese of Autun. The coin was found in the precincts of St. Martin’s church, Canterbury, with two others, also mounted with loops for wearing as ornaments; one of them is of Justin; the other has a helmed head on the obverse, with letters, which if intended to constitute words, cannot be interpreted; and on the reverse, an evident copy from the well-known design of the two soldiers and standards, on small brass coins of Constantine the younger, the letters which surround it being a jumble of those which constitute the words GLORIA EXERCITVS in the Roman model. These coins are in the collection of William Henry Rolfe, Esq., of Sandwich.

Mr. Smith also exhibited a leaden fibula, the property of Mr. Nightingale, and purchased by him at a public sale. It is remarkable as bearing a helmed head and bust, with letters surrounded by a wreath, and an external pearled circle, thus presenting on one side the appearance of a medallion.

Mr. Smith stated he was disposed to think that the letters on this medallic fibula might have been intended for †VITALianus CONSul, who, in the time of Anastasius, was elected emperor at Constantinople for a brief period, and subsequently made consul by Justin. On one of the coins of Justin, as given by Ducange, are two seated figures; and beneath, the letters VITA, evidently meant for Vitalianus. The costume is of the period, and the spikes on the head bear a resemblance to those of the crest of the helmet on the coins
of Justinian the successor of Justin. This suggested reading of the inscription was advanced with doubt as to its correctness. The ornament appears to be of the sixth or seventh century, and may be the work of the people of the north of Europe. As Mr. Haigh observes, there is a certain analogy between it and some ornaments found in Denmark, figured in the Nordisk Tidsskrift for Oldkyndighed,\(^*\) b. ii. tab. 1, which exhibit rude medallic portraits in some cases, together with portions of lettering copied from Roman coins.

John Newington Hughes, Esq., of Winchester, forwarded for examination some small brass Roman coins, discovered in excavating the foundations of an ancient building on the estate of Sir Thomas Baring, at Micheldever. These coins are chiefly of Arcadius and Theodosius, possessing no particular interest in themselves, but useful as serving to direct and assist antiquarian researches in the locality where they were found.

The Rev. Henry Jenkins of Stanway, exhibited a gold British coin found at Mark's Tey in Essex. It resembles Fig. 40, in Pl. xi. of Ruding.

Read—1. A note from the Rev. T. F. Dymock.

"The above representation of a coin of Harthacnut may perhaps be acceptable to the Saxon numismatist. I see no reason to doubt its being an English type. The letters on the obverse are not very distinct; they are, I believe, HARNDECNV, with the two final letters combined. The legend of the reverse is clearly LEOWINE ON LUND. Leofwine was a moneyer of Canute, Harold I., and Edward the Confessor; and Lund is a more unsuspected abbreviation of London than Lud. The weight of the coin is 16 grains.

T. D."

\(^*\) Kisbenhavn. Svo. 1833.
2. A paper by Samuel Birch, Esq., F.S.A., on the coins of Cunobel-in, reading TASC, or TASCIA, or TASCIOVANI.F.

This series of British coins, which has been the most discussed and the least satisfactorily explained, is considerably advanced in interest by the importance which must be attached to Mr. Birch’s interpretation of the inscription.

Mr. Birch proposes to read those coins with CVNO or CVNOBELIN Obv., and TASC.F. or TASCIOVANI.F. Rev., as, “Cunobelinus Tasciovani filius,” “Cunobelin, son of Tasciovan;” and those reading simply TASC, or TASCIO, or TASCIA, as, “Tasciovanus,” “Tasciovan,” the presumed father of Cunobelin; the latter often associated with VER, “Verulamium,” the former frequently with CAMVL. “Camulodunum.” Mr. Birch enumerates these various coins, and assigns reasons for restricting the mintage of those of Cunobelin to Camulodunum, and that of Tasciovan to Verulamium. There are some few possible exceptions to these two towns being the sole places of mintage of these princes, which are referred to in the paper.—*Printed in Numismatic Chronicle and Journal of the Society*, vol. vii. p. 78.

3. A paper by Charles Johnson, Esq., addressed to Dr. Lee, on the Salt Money of Abyssinia, called in the Amharic language, “Ahmulah.”

These Ahmulahs vary in size, but few are less than eight inches long; they are narrower at the two extremities than in the middle. As money, new salt pieces are received in Shoa, during the dry months, at the rate of twenty for the favourite Austrian dollar of the coinage of 1782. It is requisite that the diadem, shoulder knot, and the letters S.F. under all, should be distinctly visible; any other dollar will bring only eighteen or sixteen ahmulahs, according as it approaches in appearance the required standard. The “man dollars,” as the Abyssinians term those minted by the emperors, are taken with considerable hesitation, and then only at a rate 30 per cent. below the value of those of Maria Theresa, possessing the requisites above mentioned. In the wet months, the “man dollars” will not be received at all, and even the most approved kind will then only com-
mand an exchange of eighteen ahmulahs each. The rates here
given are those current in the market place of Aliu-amba, the chief
resort of the money-changers of Shoa.

The author gives a detailed account of the salt money, the extent
and character of its traffic, and many curious customs connected with
its purchase and exchange. There is also, it appears, a less generally
known currency in Shoa, of small pieces of amber cut in the same
form as ahmulahs, but of considerably less dimensions. The pieces
of amber are pierced to admit of their being strung, and worn as
beads; and Mr. Johnson remarked that amber beads from an ancient
British barrow, closely resembled in size and shape the Abyssinian
specimens.

4. A paper by Thomas Burgon, Esq., on three denominations of
Greek money, and their application to the discovery of the Tyrian
and Ægyptian (or Ptolemaic) Drachmæ and Talents.

May 23, 1844.

Dr. Lee in the Chair.

Hugh Welch Diamond, Esq.

Plates Nos. IV. and V. of Unedited Greek Coins in the possession of the Chevalier Prokesch d'Osten.

Silver Coin of Sicyon.

Histoire Monétaire de la Province d'Artois et des Seigneuries qui en dépendaient, Béthune, Fauquembergues, Boulogne, Saint-Pol, et Calais. Par Alexandre Hermand. 8vo. Saint-Omer, 1843.

The Rev. Lowrie Guthrie, Rector of Cranley, Guildford, was balloted for and elected into the Society.

Mr. Pfister exhibited an unedited and unique soldo d'oro of Benevent, struck in 787, on which the name of Charlemagne is in the Lombard or Teutonic idiom, CVAR for Carus, similar to the names of Conrad and Cuno on German coins, CVONZAD, CVONO, &c. It was found two years ago at Liano, a village not far from Salerno, on the mountain pass towards Benevent.

Mr. Pfister also exhibited a coin of Isabella de Vilhardouin, Princess of Achaia 1297—1301. Obv. YSABELLA.P.ACH. Rev. DE.CLARENCIA; and one of Mahaut de Hainaut, Princess of Achaia, and Duchess of Athens, 1311—1313; Obv. MAHAVT. P.AG. Rev. DE.CLARENCIA. Both of these coins are very rare.

Mr. Alfred Stubbs, of Boulogne, exhibited a drawing of a coin in billion of the Anglo-Gallic series, which he believes to be an unedited addition to the many varieties already known of the money of Edward III.

Mr. Stubbs thus describes the piece. "The obverse has a lion's head crowned, as that described in Ainslie, p. 76, pl. iv. No. 32, but the legend is different, as I see remains of the word DVX. The reverse however varies much; there is on mine a cross patée extending to the outer circle; in three of the quarters an open crown; beneath one of them, an annulet, and in the remaining quarter, three
pellets. The legend is so much worn that only very few letters are distinguishable; I think it has been +BVR.DE.GAL.E.CI."

Mr. Carruthers of Glencregagh, Belfast, exhibited an impression in sealing-wax of a Wolsey groat of Henry VIII. with a new Mint mark, which Mr. Carruthers thinks may be a triple crown. This impression was closely examined by some members of the Society, who stated that although the mark certainly bore a resemblance to the object suggested by Mr. Carruthers, it was impossible to decide that it really was so, without an inspection of the actual coin.

Read—1. A communication by Mr. J. H. Burn, of some unpublished notes in the possession of Mr. Burn, of the late Mr. G. H. Pettingal, on the word TASCIA and its varieties upon British coins. Mr. Pettingal’s paper was written at Shrewsbury in July 1832. The interpretations of the various inscriptions are founded upon the observations of Ruding, in vol. i. pp. 267, 268, of Annals of the British coinage. As Mr. Pettingal’s readings are not adopted or sanctioned, it is believed, by experienced numismatists, and are founded on the same unsound basis as those advanced by his ancestor the author of a Dissertation on the Tascia, or legend on the British coins of Cunobelin, it appears to be unnecessary to quote more than one instance of his mode of explaining the disputed legend. TASCIA he reads thus:—

Tiberius Augustus Senatus Consultu; Imprimere Adjudicaverunt; a laboured and unsatisfactory interpretation, unsupported by analogous abbreviations upon Roman coins, which are certainly the models of the Romano-British.

2. A further portion of Mr. Borrell’s papers on Unedited Autonomous and Imperial Greek Coins. These valuable communications are in progress of printing in the Journal of the Society.

According to custom, the Meeting then proceeded to appoint auditors of the accounts for the year 1843—4, and elected the following gentlemen to that office:—Thomas Lott, Esq.; William Devonshire Saull, Esq.; Henry Laycocke Tovey, Esq.; and John Wilkinson, Esq.
The Lord Albert Conyngham, President, in the Chair.

The President, by the sanction, and at the suggestion, of the Council, took the sense of the Meeting upon the question of proceeding to ballot for the election of two candidates whose certificates had hung in the Meeting-room during the last two Ordinary Meetings, but whose election, by the strict letter of the Institutes, would not take place before the next Ordinary Meeting, in November. The Meeting, to avoid so long a delay, unanimously resolved to proceed to the ballot at once, the result of which decision was, that Colonel Charles Richard Fox, M.P. was elected a Member, and Professor C. A. Holmboe, Professor of Oriental Languages in the University of Christiania, was elected an Associate of the Society.

The Report of the Council was then read as follows:—

The arrival of the Seventh Anniversary of the Numismatic Society, calls for the usual Report from the Council, as to its state and proceedings during the past Session.

For the first time since the formation of the Society, the Council are spared the pain of commencing their Report with the announcement of losses of Members by death. During the year that has elapsed, no casualty of this kind has, as far as the Council are aware, occurred either among the Members at home, or among the foreign Associates.

The diminution in the number of Members caused by retirements within the year, amounts to nine, namely four original, and five elected, Members.—While on the one hand the retirements, few as they are, include some names which the Society will regret no longer to see upon its list; on the other, two or three are of a class which has been repeatedly alluded to in former Reports, as those from whom the Society derived no advantage whatever. In fact, at the outset of every Society, many persons who take no decided interest in the particular branch of scientific pursuit for the promotion of which it is instituted, are induced either by the importunity of friends, or by the better motive of general good wishes for its success, to enrol their
names among the members; and others, in the anxiety of the founders to make up a numerous list of Members to start with, are apt to be included without a sufficient knowledge of their intentions. The experience of all Societies shews that in the course of a few years a large defection of Members of this description invariably takes place; while those who subsequently propose themselves for admission, being in general actuated by personal devotion to the studies which the Society is designed to advance and facilitate, form additions of a more permanent and desirable character.

On these grounds, the nine secessions above-mentioned, are more than compensated for, by the election of nine new Members, whose names are as follows:—

Thomas Lott, Esq., F.S.A.  Samuel Sandilands Rogers, Esq.
Lieut. Col. Lewis Robert Stacey, C.B.  Peter Hardy, Esq., F.R.S.
William Warrington, Esq.  The Rev. Lowry Guthrie.
John Wilkinson, Esq.  Col Chas. Richard Fox, M.P.
Robert Weddell, Esq.

The Society has also elected the two following foreign Associates:—

Professor Joseph Arneth, Conservator of the Imperial Cabinet at Vienna, from whom, as was stated in the last Report, the Society received the compliment of the dedication of his Synopsis of the Roman Coins in the collection under his charge; and Professor Ch. Holmboe of Christiania.

The numerical state of the Society, differing but little from that of 1843, is as follows:—

1844

- By Balance from last year | 55 4 6
- By Annual Contributions | 143 17 0
- By Admission fees | 7 7 0
- By Payments for the Numismatic Chronicle | 30 11 6
- By one year's dividend on 185l. 19s. 1d. 3 per cent consols, to January 5th 1844 | 4 1 6
This statement may justly be considered as favourable. The income, which has been estimated at about 170l. on an average, has this year amounted to 185l. 17s.; while the expenditure having been but 154l. 9s. 9d., the balance in the hands of the Treasurer, after discharging every demand upon the Society up to Midsummer now ensuing, has increased from 55l. 4s. 6d. in June last, to 86l. 11s. 9d. at the present audit.

This augmentation is certainly to be in some measure attributed to a perseverance in the recovery of old outstanding subscriptions; but it is also partly due to the permanent improvement of a more prompt and punctual collection, than heretofore, of the contributions for the current year. Both these measures are indispensable to the well-being of the Society; and it is therefore confidently hoped and expected, that every Member will feel it to be his duty individually to assist the Officers of the Society in enforcing them, and thus prevent the loss and discredit which result from an accumulation of arrears.

The Council announce with great regret the retirement of their valued colleague Mr. Charles Roach Smith, from the office of Secretary. His name is of course so well known to all the Members of the Society, as one of the most diligent and successful students of archaeology in this country, that nothing need be said by way of enhancing the value of his services; still however, the Council feel bound to record their grateful sense of the zeal, ability, and indefatigable industry displayed by him on behalf of the Society, amidst a pressure of occupations from his professional and scientific pursuits, greater perhaps than falls to the lot of any other Member.

Mr. Smith is willing still to continue a Member of the Council; and the Council having been favoured with a promise of the services of the Rev. Henry Christmas, as the successor of Mr. Smith in the Secretaryship, beg to propose him to the Society for election.

The following papers have been read at the meetings of the Society since the last Anniversary. Most of them either have been or will be printed in the Numismatic Chronicle, and all of them have their value:—some, as for instance Mr. Borrell's and Mr. Birch's papers on Unedited Autonomous and Imperial Greek Coins, as materials for any
future work on that most interesting and prolific branch of numismatic research, for which the discoveries since the publication of Mionnet's well known volumes furnishes ample room; others, as recording the time, place, and circumstances of discoveries of coins, which but for such a channel of communication, would in all probability be entirely lost, and the utility of which can be estimated by those only who have been embarrassed, as almost every writer on numismatic subjects has been, by the want of them.

5. On Unedited Autonomous and Imperial Greek Coins, by H. P. Borrell, Esq. Printed.
6. A descriptive list of Roman and silver Medallions and coins, found in 1830, at Howell, near Taunton, by the Rev. H. Christmas. Printed.
8. Observations upon the ancient Dies or Coining Irons for the hammered money, by John Field, Esq. Printed.
12. Notes by the late Mr. G. H. Pettingal, on the legend of the coins of Cunobelin, by J. H. Burn, Esq.

In addition to these papers, there has been received a variety of minor communications, many of considerable interest and utility,
which, being duly recorded in the abstract proceedings of the Society, constitute a source of profitable reference for students in various branches of numismatic research.

The list of donors to the Library and collections of the Society is as follows:—among them the Council would more particularly notice the Right Honourable William Ewart Gladstone, the master of the Mint, who has presented a complete set of proof coins of her Majesty, from the Five Pound piece to the farthing.

The Royal Academy of Sciences and Belles Lettres of Brussels.

The Royal Society of Antiquaries of the North.
The Royal Asiatic Society.
The Society of Antiquaries of Newcastle-upon-Tyne.
The Norwegian University.
Monsieur F. Verachter, Antwerp, Associate.
Albert Way, Esq., Dir. S. A.

It cannot but be gratifying to the Society to continue to receive the flattering tributes paid to its exertions by distinguished foreign numismatists, and to witness the use made of its transactions in their researches. For instance, in the recently published "Histoire monétaire de la Province d'Artois," by Mons. Alexandre Hermand, an Associate
of the Society, some of the coins found at Cuerdale, which were so ably illustrated by Mr. Hawkins, and published at the expense of the Society, are referred to, and serve to make more complete the catalogue of the learned author.

While touching upon the works of foreign numismatists, the Council conceive that they will do good service to the cause of numismatic science, by drawing attention to the Revue Numismatique, published at Paris under the editorial superintendence of Mons. Etienne Cartier and Mons. L. de la Saussaye, Associates of the Society. It is a valuable periodical, which ought to be in the library of every numismatist, but which, judging from the list of subscribers, appears to be scarcely known in this country.

Works of a similar description exist in Germany. Their titles are the "Numismatische Zeitschrift" of Weisssensee, edited by M. Leitzman; and the "Zeitschrift für Münz- und Wappenkunde," edited by Dr. Köhne, of Berlin. A numismatic periodical has been also established in Belgium.

Another subject to which allusion may with great propriety be made in this Report, is the recent establishment of the Archæological Association for the encouragement and prosecution of researches into the arts and monuments of the early and middle ages. The Council could not allow the institution of an Association for such an object, to pass by without expressing their cordial wishes for its success, and recommending it to the support of all persons interested in numismatic pursuits, not merely on the specific ground that those pursuits must necessarily benefit by its investigations, but also on the wider principle, that the object of the Association is one which ought to be dear to every lover of the history and institutions of his country.

With this Association the Council have hastened to place the Society in relation, by the presentation of their Journal; as they have done, and will continue to do, with regard to kindred Societies, whether at home or abroad.

In the course of the last few months, two of the most extensive private Cabinets of coins in this country have been passing under the hammer of the auctioneer. The collections alluded to are, the one sold
by Messrs. Christie & Manson, in March last, which, although the name of the owner was not stated from authority, is well known to have belonged to the Duke of Devonshire. The other, the collection of the late Mr. Thomas, believed to be the most copious and valuable ever formed by a private individual, which is still in progress of dispersion by Messrs. Sotheby & Co. The catalogue of the classical portion of the latter has been prepared with such unusual learning and care, that it will be permanently valuable as a work of reference to numismatists; and the Council cannot but wish that time and opportunity had been given for the compilation of an equally able catalogue of the Devonshire collection, the value and interest of which well deserved a less hasty and transitory record than it received.

The chief object of the Council in thus alluding to the dispersion of these two remarkable Cabinets, is to suggest with the greater weight the service that might be rendered to numismatic science by private collectors, by the publication of descriptive catalogues of their Cabinets. Nothing short of this can render a fine private collection properly known and appreciated. Such collections are necessarily less accessible than public ones; and it is but rarely that they are adequately estimated, until upon the very eve of dispersion. A signal example of the kind of work which the Council are desirous of drawing forth, already exists in Captain Smyth's descriptive catalogue of a Cabinet of Roman Large Brass Medals; a book which, under the unpretending title of a Catalogue, is perhaps the most popular, interesting, and scholar-like work in the English language on the subject to which it relates. It is to be hoped that the time will never arrive when the collector will sink into the mere hoarder, and when the gratification of personal taste (although unquestionably the greatest and a most legitimate motive for the formation of private collections) will be permitted to override the use to be made of these imperishable monuments of antiquity, as materials for the illustration of history and the arts.

It is much to be regretted that the Trustees of the British Museum have so long delayed the publication of a Catalogue of the coins in the

VOL. II.
National Collection. Such a work, if published (unlike most of the other works issued under the authority of the Trustees) in a form and at a price to become tolerably accessible to the student as a book of reference, instead of a mere book of luxury to the rich man, would find its place in the Library of every numismatist and scholar, and from the magnitude and value of the collections in every department, would prove an invaluable addition to all existing sources of information.

The collection at the British Museum is the only public Cabinet in this country that is as accessible as a good collection ought to be; and even there, perhaps, the facilities for inspection are capable of, and may hereafter receive, extension by the public exhibition of a selected series. But at the Bank of England, at the Bodleian at Oxford, and at the Hunterian Museum at Glasgow, there are Cabinets of the greatest interest and value, to which access, though not in so many terms altogether denied, is so jealously guarded and restricted by statutes, conditions, and regulations, more vexatious even to the curator than to the visitor, that practically their contents are almost as unknown and useless to students, as if they had never been brought to light from the earth in which they were hidden. Such a state of things ought not to continue; for if no plan could be devised by the Trustees of these treasures to render them more easily accessible, their dispersion, rather than their conservation, would be a public benefit.

It only remains for the Council to submit to the Society a list of Officers for the ensuing year, to be balloted for according to the Institutes.

The Report was received and ordered to be printed.

The Meeting then proceeded to ballot for the election of Council and Officers for the ensuing year.

The following resolution was voted unanimously—

Resolved:—

That the thanks of the Society be given to Charles Roach Smith, Esq., F.S.A., for the untiring zeal and ability with which, during a period of four years, he has discharged the office of Secretary, and has by his exertions greatly contributed to the advancement of numismatic science in general, and to the welfare of this Society in particular.
John Gough Nichols, Esq., and James Cove Joues, Esq., the Scrutineers appointed by the Meeting, announced the result of the ballot, and the following gentlemen were declared duly elected as Officers and Council.

President.

THE LORD ALBERT DENISON CONYNGHAM, F.S.A.

Vice Presidents.

CHARLES FREDERICK BARNWELL, Esq., F.R.S., F.S.A.
HORACE HAYMAN WILSON, Esq., F.R.S., M.R.A.S., Boden Professor of Sanscrit, Oxford.

Treasurer.

JOHN BRODRIE BERGHE, Esq., F.S.A.

Secretaries.

JOHN YONGE AKERMAN, Esq., F.S.A.
The Rev. HENRY CHRISTMAS, M.A., F.R.S., F.S.A.

Foreign Secretary.

JOHN YONGE AKERMAN, Esq., F.S.A.

Librarian.

HUGH WELCH DIAMOND, Esq., F.S.A.

Members of the Council.

SAMUEL BIRCH, Esq., F.S.A.
JOHN BRUMELL, Esq.
JAMES DODSLEY CUFF, Esq., F.S.A.
JOHN FIELD, Esq.
WILLIAM DEBONAIRE HAGGARD, Esq., F.S.A., F.R.A.S.
WILLIAM HARDY, Esq.
EDWARD HAWKINS, Esq., F.R.S., F.S.A., F.L.S.
JOHN LEE, Esq., LL.D., F.R.S., F.S.A., V.P.R.A.S.
JOHN GOUGH NICHOLS, Esq., F.S.A.
WILLIAM DEVONSHIRE SAUL, Esq., F.S.A., F.G.S.
CHARLES ROACH SMITH, Esq., F.S.A.
HENRY LAYCOCKE TOVEY, Esq.
