OLD SEALS FOUND AT HARAPPA.

BY M. LONGWORTH DAMES, B.C.S., &c.

In Vol. V. page 108, of the Archaeological Survey of India, General Cunningham describes a seal found at Harappa, in the Montgomery District, one of the enormous mounds which mark the sites of deserted towns in the plains of the Punjab.

The seal is described by General Cunningham as follows:—“The seal belonging to Major Clark is a smooth black stone without polish. On it is engraved very deeply a bull without hump, looking to the right, with two stars under the neck. Above the bull is an inscription in six characters which are unknown to me. They are certainly not Indian letters, and as the bull, which accompanies them, is without a hump, I conclude that the seal is foreign to India.”

In the Academy for May 2nd, 1885, M. Terrien de la Couperie, in an article on the meaning of the word Ten-Yul, refers to “the stone seal of Setchnen or Shih writing which was found a few years ago in the ruins of Harappa, near Lihor.” “This,” he adds, “is attributed by General Cunningham on archaeological evidence to the fourth century B.C., and is the oldest fragment of writing found in India.”

Another seal, apparently in the same writing, was obtained at Harappa on November 21st, 1884, by Mr. J. Harvey, Inspector of Schools.

M. Terrien de la Couperie is of opinion that these seals were brought to India in the course of trade through Baktria. Possibly they may have belonged to Buddhist pilgrims, who certainly must have visited Harappa. Seals in an unknown language are scarcely likely to have been articles of trade. It would be interesting to know the meaning of the inscriptions; and perhaps M. Terrien de la Couperie or some other scholar will publish a translation of them.

* He does not, however, say so at the place above cited nor in his Ancient Geography of India, p. 210.

* Plate XXXIII. Fig. 1, in Arch. Surv. Ind. Vol. V.
II.—The Two Thags and the Rāvāryā.

There were two *thags* who had spent a great part of their lives in robbing and cheating their simple neighbours, but at last there came a time when they found that there was no more scope for the exercise of their talents in their native village, so they resolved upon going out to seek fresh fields and pastures new. They set out at once, and after a long journey came to a city, on the outskirts of which they saw a poor Rāvāryā, sitting near a wretched hut weaving his *patti*.1

"Tell us, brother," said they, approaching him with a look of pity, "how it is that you do not live in the city, and prefer a wretched hovel in this solitary place to the fine houses there?"

"I am too poor," replied the man, "to afford to rent a house in the city, and there is no one there that is generous enough to accommodate me for nothing; so I sit here all day doing my work, and when night comes I go and sleep under the roof I have made myself." And, he added, "I make my living out of an *aadd* or two that I manage to earn by selling the two or three yards of *patti* I weave every day."

"We really pity your lot, my man," said the *thags*, "and henceforward shall be your best friends. Come now, get up and follow us to the river-side, where we shall give you a suit of clothes to put on in place of the wretched garments you now wear."

The Rāvāryā got up and followed them, rejoicing greatly at so much notice being taken of a poor man like himself by persons so much above him in life, as he thought the *thags* to be, for they were decently dressed and looked quite respectable. When they arrived at the river-side the *thags* bade the weaver get his head and his overgrown beard shaved and wash himself in the stream. After he had done all this they gave him a suit of clothes to wear, which he joyfully put on, while the two men said to him:—"Go now and attend to your work, but be always ready to render us whatever service we may require of you."

"Very well, Mā ḍāp,"—answered the poor man and returned towards his hut, while the two *thags* went on towards the city. Entering it they wandered about for some time, watching for an opportunity of practising their vile art upon some poor victim, when they heard that the king of the country, who had a beautiful daughter, was looking out for some great prince as a husband for her. This put an idea into the heads of the *thags*, and they instantly retraced their steps to the hut of the Rāvāryā, whom they found hard at work at his *patti*. They bade him get up and follow them immediately, and the poor weaver, true to his promise, obeyed them.

When they came to a secluded place the two men dressed the Rāvāryā in gold embroidered garments and jewels, and getting a litter from the city made him lie in it in the position of a sick man, biding him neither to stir out of it, nor to utter a single syllable without their permission. They then ordered the bearers to carry the litter towards the city, and they themselves walked one on each side of it waving *chauris*.2 They also hired every man and animal they could pick up on the road, till they had a respectable following of attendants, horses, and ponies.

They went on thus with a great show of pomp and parade till they reached one of the palaces of the king, when in a peremptory tone they ordered the gate-keeper to open the gate and give them ingress. The gate-keeper, however, refused to obey them, whereupon one of the *thags*, making a great show of authority, cried out:—"What! Is our Rājā Sājib to wait till this wretched gate-keeper makes up his mind to open the gate? Not for worlds! So, fall on my men, and break open the gates that we may get in." The men made towards the gate with what sticks and staves they had for arms, and the poor gate-keeper, thinking them to be in earnest, opened the gates wide in great fright. The *thags* and their followers entered the palace with a great deal of noise and bustle, while the poor gate-keeper ran full speed to apprise

---

2 See ante, Vol. IX. p. 296.
3 The tape woven by Rāvāryās.
the king, his master, of the advent of some great prince, with a formidable retinue, in the city, and to tell him how his men had taken forcible possession of the palace. The king forthwith sent his minister to inquire of the new comers who they were, and what had pleased the great prince to visit his territories.

The minister went accordingly, and begged admittance at the palace gates, but they refused to let him in. After making him wait outside for some time, one of the thags came out to meet him, whom the minister requested to usher him into the presence of the prince; but the thag, assuming an air of dignity, replied:—

"No, no, we are not going to trouble our great Rājā by taking you into his presence, for he is ill and requires quiet and rest. Go you, therefore, on your way."

The minister thereupon inquired of the thag whose son the prince was, and what was the object of his visit to the country.

"Oh! he is the son of that great monarch," he replied, "who levies tribute on your master, and is come here for a change of air, in order to recruit his health, and does not, therefore, care to be disturbed either by you or by your master."

The minister had therefore no alternative but to leave the palace, and he straightway returned to his master and acquainted him with the very cold reception he had met with at the hands of the strange prince's attendants. The king attributed this to his having omitted to send the prince presents worthy of him, and so he got ready five trays full of asharfis* and bade the minister go once more to the prince and present them to him with his compliments, after instituting inquiries after his health. The king also instructed his minister to learn from the prince whether he was unmarried, and if he would do him the honour to accept the hand of his daughter in marriage.

The minister obeyed his royal master, and repaired to the residence of the strange Rājā, accompanied by five men bearing the presents. This time, however, he obtained admittance into the palace without much trouble, so going up to the thags he asked them to present him to their prince that he might lay at His High-

ness's feet the presents his master had sent for him. The eyes of the thags glistened when the treasures were displayed to them, but thinking that if they held out a little longer they would get more out of the credulous king, they said to the minister, "Return home with your treasures, brother, the Rājā Sāhib is too ill to see you, besides, he wants none of your presents, and would never accept them. For what lacks he in his father's treasury?"

The minister, however, begged so hard to be presented to the prince,—promising that if it did not please His Highness to accept the presents he would withdraw with them,—that the thags yielded to his entreaties and told him to wait a while till they went and obtained their royal master's permission. Going to the Rāvariya they instructed him how to act when they brought the minister into the room. "Mind you do not answer a single question of his," said they, "but after he has put a great many to you, utter only a long ādā in response. And when he begs of you to accept the gifts he has brought do not make any reply to him. If, however, he still goes on imploring you to accept them, and will not withdraw from your presence, you can cry out as if tired of his importunities, 'Away with them!' and immediately make a pretence of going to sleep."

They then ushered the minister into the mock king's presence, who commenced inquiring after his health, but the sham Rājā Sāhib did not condescend to utter a single syllable in reply. He then begged the prince's acceptance of the presents his tributary had sent him, but even then the great man made no reply. At last, however, as if his patience had been completely exhausted, he cried out, "Away with them!" and in a moment the two thags turned the minister and the bearers of presents out of the room. The minister returned homewards, greatly disappointed at not having had an opportunity of mentioning to the foreign prince the proposal of marriage.

When the king found that his presents had not been accepted he began to fear that the great prince would slip through his fingers, and baulk him of his expectations of having him as his son-in-law, so he despatched the minister to him once more with still costlier presents. The

*A gold coin, value about 36 shillings.

* I.e. 'yes.'
eyes of the two thags sparkled with delight at sight of the treasure, but being consummate hypocrites they still made a pretence of not caring for them. At the minister's request, they went to the Rāvariya under pretext of asking his permission for the minister to enter his presence, and said to him, "When the minister speaks to you behave yourself as you did the other day, and when he has begged very hard of you to accept the presents simply say, 'Now keep them and have done with it.'"

Having thus tutored the mock king, they took the minister and his presents into the room where he lay in bed, and right well did he act his part, and when, at the conclusion of it, he said, "Now keep them and have done with it;" the thags ordered the bearers to put down their costly loads at His Highness's feet and withdraw. Taking leave of the prince with a low bow the minister went out of the room with one of the thags, while the other stood waving a chamri over the Rāvariya's person.

"Is His Highness unmarried?" inquired the minister of his companion when out of hearing of the Rāvariya.

"Yes," replied he.

"Can you then persuade him to honour my master by marrying his daughter? He will give her a large dowry and—"

"No, no," interrupted the thag, "do not entertain such an idea for a moment; he is too great a man to marry your master's daughter, and, besides, he is ill and not likely to think of matrimony at present."

"But there is no harm in asking his will," argued the minister, and he pressed the thag so hard that at last he got that worthy to promise to broach the subject to the prince at the first opportunity and to let him know His Highness's will as early as possible.

In a few days the king received intimation through the minister that the great prince had been pleased to accept the offer of the hand of his daughter, and would be glad if the nuptials were solemnized at an early date. At this there were great rejoicings in the city and preparations for the approaching wedding went on for some days. The king placed a large palace at the disposal of his son-in-law, and soon after celebrated the wedding of the Rāvariya and the princess with great pomp.

After the weaver was fairly installed in the palace with his royal wife, the two thags, fearing the chances of exposure, thought it high time that they should take their departure from the city. So they dismissed all their attendants, and under pretence of returning to the court of the bridegroom's father, they took their leave of the princess and her Rāvariya husband, and left the city, taking care, however, to carry away with them all the costly presents, &c., they had received for the mock king, from the bride's father. When parting they did not forget to impress upon the Rāvariya the necessity of his keeping himself well on his guard, so that there might be no exposure of the terrible swindle they had practised upon the king.

Some time after they had departed, it so happened that one evening, when the princess was sitting on an open balcony with her lord, she expressed her desire to play a game of chaupar* with him by the light of the moon that was shining brightly at the time, but the Rāvariya who had never played the game in his life, exclaimed, "What! play a game of chaupar, you foolish woman? I would rather weave a few yards of patti, sitting here under such a bright moon."

The poor woman was struck dumb at these words which revealed to her what her husband was, and could not utter a word in reply. She instantly withdrew into the palace, and from that moment ceased to have any intercourse with him. She remained thus estranged from him so long that life in the palace became insupportable to him, and one night he quietly slipped away, and, betaking himself to his hut in the jungle, resumed his old profession of weaving pattis.

After the lapse of a few years, the two thags began to be curious to know how the Rāvariya was enjoying his high estate, and whether he was living or dead. So they journeyed once more to the city in which they had left him. When they came to the place where they had first found him they were greatly surprised to see him sitting there working away at his patti as of old. On their inquiring of him the reason of his leaving the palace, he related in

---

* A game played by moving men on a kind of chess board according to the throws of a kind of dice. In all folklore this is a 'royal' game. The whole process is detailed in Legends of the Pāñjab, Vol. I. p. 240ff.
detail the conversation he had with his wife on that bright moonlight night; how it had led to his real position in life being known; how she had discarded him ever afterwards; and how, fearing for his head in case the king came to hear of it, he had run away from his wife, and had once more taken to his old profession of patzi weaving.

"Never mind what has happened, but come with us once more to where we take you," said the thags, "and we shall make it all right for you."

So saying they took him to the river-side and gave him a string of beads, bidding him to continue sitting there telling his beads till he was sent for by his wife. They then left him, and, purchasing some ghi and gul from the bazar, mixed them together. One of the thags covered his body with this composition, and the other got a litter and placed his besmeared companion in it. He then dressed himself in woman's clothes, and, adorning his person with rich jewels, transformed himself into a very good-looking young woman. Ordering the litter to be carried towards the city, he walked alongside of it, chamari in hand, warding off the flies that sought to reach the ghi and gul with which his companion was covered. On the way he hired three or four men as attendants, and thus they all walked on until they came in sight of the palace the Ràvariya had deserted. Ordering the litter to be set down on a spot well overlooked by one of the windows of the palace, he set some of the hirelings to cook their food and do such other work for them.

By-and-by, the princess, on coming to know that a woman, with an invalid in a litter, had put up near her palace, went up to the window to have a look at them. Seeing a beautiful woman well dressed, and decked with ornaments, attending to the wants of the occupant of the litter, she naturally inquired of the mock woman who she was, and what ailed the person she was nursing. The disguised thagy replied, as though he were a woman, that she was a traveller who had broken her journey there, and the person she nursed was suffering from leprosy. The lady further inquired what relation the leper was to her, to which she replied that he was her husband.

"That loathsome leper your husband?" sneered the princess, with her nose in the air, "and you are nursing him?"

"Oh! despise not my poor husband," cried the transformed thagy, pretending to be hurt by the words of the princess, "where does a woman seek for happiness but in her husband, her lord, her master? He has been suffering ever so long from this foul disease and I have been travelling about with him from country to country, vainly hoping that he would profit by change of climate; and at last, finding this place cool and pleasant, I have halted here and by your kind permission, shall stay here for a week or so. Is a woman to desert her husband because he is a leper? Oh no, not for worlds! I have always thought it my duty to serve and nurse my sick husband, however wearisome the task might be."

When the princess heard all this it brought thoughts of her own husband into her mind, and she began to reflect upon her conduct in deserting him merely because he happened to be a Ràvariya by trade, whilst that rich and beautiful woman, as she took the thagy to be, nursed and ministered to the wants of her husband although he was a filthy leper. The more the princess pondered over this incident the more she felt how heartless had been her conduct towards her husband, till at last she despatched her horsemen to find him out and to exhort him to return to her immediately. In the meantime she intimated to the thagy that she had no objection to their staying where they were as long as they pleased. The horsemen found the Ràvariya sitting by the river-side telling his beads, just as the thagy had left him, and succeeded in persuading him to return to his wife.

A day or two later the thagy who played the part of a woman requested the princess to lend him some ten thousand rupees, promising to return them when remittances arrived from his country. In her great joy at the restoration of her husband to her, and knowing that she was in some measure indebted to the leper's wife for the happy event, the princess hesitated not to give the loan asked for. That...
very night the thagens quietly decamped from the city, and washed off their assumed forms at the first river that came in their way.

The Rāvarīya and his wife henceforward lived in peace and happiness, and the thagens also turned over a new leaf and were reformed characters ever afterwards!

TWO COPPER-PLATE GRANTS OF JAYACHCHANDRA OF KANAUJ.

BY PROF. F. KIELHORN; GOTTINGEN.

At the request of the Editors I have prepared the following transcripts and translations of two copper-plate grants of Jayachchandra-dēva of Kanauj from photolithographs supplied to me. A short and very inaccurate abstract of the contents of one of these grants (marked by me A) will be found in Colebrooke’s Misc. Essays, Vol. II. p. 286; and the other grant (marked B) has been edited and translated in a most careless manner in the Jour. Beng. As. Soc. Vol. X. Part I. p. 98 ff.

After finishing my own transcripts, I have compared the following grants of Jayachchandra and his predecessors:—

1 A grant of Madanapāla, of Sañvat 1154, edited and translated by Dr. F. E. Hall in Jour. Beng. As. Soc. Vol. XXVII. p. 290;—

4 A grant of the same, of Sañvat 1177, partly edited by Dr. F. E. Hall, id. Vol. XXXI. p. 123;—

5 A grant of the same, of Sañvat 1182, edited and translated by Dr. F. E. Hall, id. Vol. XXVII. p. 242;—

6 And a grant of Jayachchandra (wrongly called Jaya Chandra) of Sañvat 1234, translated by Captain E. Fell in Asiatic Researches, Vol. XV. p. 447.8

Both inscriptions are composed in Sanskrit and written in Dēvaśāgarī characters. The historical information afforded by them is the same in both grants, with this difference, that when A was issued Jayachchandra was Yuvārāja, his father Vijayachchandra being then alive, whereas in B he is described as ruling sovereign. Of the six ancestors of Jayachchandra who are enumerated here as elsewhere (Yaśovigraha, Mahāchandra, Chandrādeva, Madanapāla, Govinda chandra, and Vijayachchandra), nothing specific is mentioned beyond this, that Chandrādeva acquired the sovereignty over Kanyakubja and that his kingdom included Benares, Ayōdhya and another Tūrīka, which probably was ancient Delhi; and that Vijayachchandra conquered one Hamamra, “the abode of wanton destruction to the earth.” Attention may also be drawn to the fact that the sovereignty over Kanyakubja is described as having been newly acquired, even when Govinda chandra, the grandson of Chandrādeva, was reigning.

The grant recorded in A was made on the full-moon day of the month Māgha in the (Vikrama) year 1225 by the Yuvārāja Jayachchandra, who was then somewhere on the banks of the Yamunā, and who by this grant made over the village of Nāgāli in the Dēvahalā Pattalā to the two brothers, the Rāuta Agatēsārman and the Rāuta Dādesārman, Brahmans of the Kāyapa gōtra. The grant was written by Jayapāla. The grant B is dated Sunday, the 7th lunar day of the bright half of Ashādha of the (Vikrama) year 1243, answering it appears to Sunday the 14th June A.D. 1187. The king Jayachchandra, when making the grant, was at Benares; the donee was the Dōda-Rūta Aṇauga of the Bhārādvāja gōtra; and the object granted was the village of Karmōli in the Āsurēsa Pattalā.

I am not able to identify the places mentioned in either grant.

other grants enumerated above.
2 Other grants are mentioned by Captain Fell in the article mentioned above.
3 See note 15 below.
4 See note 80 below.
only, measures about 1' 6" by 1' 1". It is quite smooth, the edges being neither fashioned thicker nor raised into rims. The inscription has suffered a good deal from corrosion; but the following inscription B renders it easy to supply most of the damaged letters. There is a ring-hole in the top of the plate; but the ring and seal are not forthcoming. The weight of the plate is 9 lbs. 8¼ oz.

TRANSLATION.

Om! May it be well! — (V. 1.) May the agitation of Lakshmi during the amorous dalliance, when her hands wander over the neck of Vaikuntha filled with eager longing, bring you happiness!

(V. 2.) —After the lines of the protectors of the earth born in the solar race had gone to heaven, there came a noble (personage) Yānśo-vigraha by name, (who) by his plentiful splendour (was) as it were the Sun incarnate.

(V. 3.) —His son was Mahīcandra who spread his boundless fame, resembling the moon’s splendour, (even) to the boundary of the ocean.

(V. 4.) —His son was the king, the illustrious Chandradēva, whose one delight was in statesmanship, who attacked the hostile hosts (and) scattered the haughty brave warriors as (the moon does the) darkness. By the valour of his arm he acquired the matchless sovereignty over the glorious Īadhīpurā, when an end was put to all distress of the people by his most noble prowess.

(V. 5.) —Protecting the holy bathing-places of Kāśī, Kuśika, Uttarakūśālā, and the city of Indra, after he had obtained them, (and) incessantly bestowing on the twice-born gold equal (in weight) to his body, he hundreds of times marked the earth with the scales (on which he had himself weighed).

(V. 6.) —Victorious is his son Madanapāla, the great jewel of the rulers of the earth, the moon of his family. By the sparkling waters from his coronation-jars the coating of impurity

[28] The spelling of this word appears to be तंकृ (not तंकृ) here and below.
[29] This sign is superfluous. Read “जम्मा मा.” I am doubtful about the last akshara of this line; it may be य य य य or क ए क ए.
of the Kaliyuga was washed off from the earth.44

(V. 7.)—As the moon, whose rays diffuse in abundance liquid nectar, from the ocean, so was born from him the ruler of men Gòvindačandra, who bestowed cows giving abundant milk. As one restrains an (untrained) elephant, so he secured by his creeper-like long arms the new (i.e. newly acquired) kingdom.45

(V. 8.)—When his war-elephants had in three quarters in no wise found elephants their equals for combat, they roamed about in the region of the wielder of the thunderbolt, like rivals of the mate of Abhrāma.46

(V. 9.)—From him was born the ruler of men, Vijayachandra by name, expert in destroying the hosts of (hostile) princes, as the lord of the gods (i.e. the gods in general) in clipping the wings of the mountains. He swept away the affliction of the globe by the streams (of water flowing as) from clouds from the eyes of the wives of Hammira, the abode of wanton destruction to the earth.47

(V. 10.)—When he goes out to conquer the earth girt by the ocean, the earth, distressed as it were by the heavy weight of his ruddy royal elephants, goes seeking protection up to the throne of Praniñati, in the guise of the dust rising from the multitude of his prancing horses.48

(L. 10.)—He it is who has homage rendered to his feet by the circle of all Rājas. And he, the most worshipful, the supreme king of Mahārajas, the supreme lord, the devout worshipper of Mahāśvāra, the lord over the three Rājas, (viz.) the lord of horses (Aśvapati), the lord of elephants (Gajapati) and the lord of men (Narapatī),49 (like) Brhaspati in investigating the various sciences, the illustrious Vijayachandra Rādēva,—who meditates on the feet of the most worshipful, the supreme king of Mahārājas, the supreme lord, the devout worshipper of Mahāśvāra, the lord over the three Rājas, (viz.) the lord of horses, the lord of elephants and the lord of men, (like) Brhaspati in investigating the various sciences, the illustrious Gòvindačandra Rādēva,—who meditated on the feet of the most worshipful, the supreme king of Mahārājas, the supreme lord, the devout worshipper of Mahāśvāra, the illustrious Madanapāladēva,—who meditated on the feet of the most worshipful, the supreme king of Mahārājas, the supreme lord, the devout worshipper of Mahāśvāra, the illustrious Chandradeva, whom his arm had acquired the sovereignty over Kanyakubja:

(L. 14.)—He, the victorious, commands, informs, and decrees to all the people assembled, resident at the village of Nāgaśānta (?), in the Dēvahalī Pātall, and also to the Rājas, Rājās, Yavārajas, counsellors, chaplains, warders of the gates, commanders of troops, treasurers, keepers of records, physicians, astrologers, superintendents of gynaeceums, messengers, and to the officers having authority as regards elephants, horses, towns, mines (?), Sthānas and Ghībulas,50— as follows:

(L. 15.)—Be it known to you that the son of the Mahāraja, the illustrious Jayachandra Rādēva, installed as Yavaraja, and as such by our consent empowered to act in all matters like the king himself,—after having bathed in the Yamunā at the Vaśishṭha (?),

41 Metre : Vasantatilakā.
44 Metre : Vasantatilakā. The compound जनयत काल... गान... has been translated by Captain Fell51 by the grasp of his mighty arm he was able to restrain an elephant of the kingdom of Narasattra; by P. E. Hall, "by whom, with his far-reaching creepers of arms, elephant-like surpassing governments were seized and coerced"; similarly by Dr. Rajendralal, "his long arms, extending elephant-like upward, seized and checked all elephant-like upward Kingdoms"; better in Jour. Beng. As. Soc. Vol. X. P. I. p. 102, "who by his arms, long and like the creeping plant, kept the newly acquired kingdom—stubborn as the elephant the original kingdom." The third pāda has been translated by P. E. Hall "and who was a fountain of eloquence copiously distilling the essence of rhetorics and nectar"; and by Rajendralal either "and he was the source of that fluid-nectar-sprinkling eloquence" or "the source (whence men obtained) kins which gave thick, sweet milk"; the double meaning suggested in the words of the original has not been noticed.
45 Metre : Duravitambita. Abhrāma is the female elephant of the East (the region of Indra), the mate of Airavata.
46 Metre : Mālinī.
47 Metre : Vasantatilakā.
48 The Gajapati is enumerated with other royal officers, such as the Mahārr, and the Satpati, e.g. Ind. Stud. Vol. XV. p. 389, note; compare also ante, Vol. III. p. 152. Hence it would appear that the Aśvapati and Narapatī also were high officers of state. The three terms have also been titles of dynasties and even proper names; see e.g. ante, Vol. VII. p. 79; Vol. VIII. p. 29; Vol. XII. p. 31; 32; Beal's Buddh. Rec. West. World, Vol. I. p. 13. Compare also Hall in Jour. Beng. As. Soc. Vol. XXIV. p. 247; Vol. XXX. p. 119, and Rajendralal, Vol. XXII. Part I. p. 327; also ante, Vol. XIV. p. 167, l. 29, hataya-airavatasya-asvapate. See note 15 above.
49 The exact meaning of the three last terms is not quite clear to me. On Manu VII. 62, itara is explained by swarnaruddhyapattitabhūna. Gīhula usually is a lord of kins or a cattle-station.
ght, after having duly satisfied the sacred
texts, divinities, saints, men, beings and
the group of ancestors, after having wor-
shipped the sun whose splendour is potent in
rendering the veil of darkness, after having
praised him whom his crest is a portion of
the moon, after having performed adoration of
the holy Vāśu, the protector of the three
worlds,—has, in order to increase the (spiritual)
merit and the fame of his parents and himself,
on the day of full-moon of Māgha in the twelve
hundred and twenty-fifth year, in figures too
1225, out of pure grace given the above-written
village with its water and dry land, with its
mines of iron and salt, with its ravines and
saline wastes, with its groves of mango and
madhūka trees, with its fisheries, with its grass
and pasture land, up to its boundaries (and)
defined as to its four abutts, to the two
Brāhmaṇas the Rāuta the illustrious Apaṭê-
(saran) and the Rāuta the illustrious
Dādāsarman, sons of the Rāuta Gotha, grand-
sons of the Thakkura Tihula (2) (and) grand-
sons of the Thakkura Allō (2), of the Kasyapa
gōtra, (and) whose three Āvarar are Kasyapa,
Avatsara and Naidhvara.—(confirming his
gift) with (the pouring out) from the palm of
his hand (of) water purified with kūta grass

and to be theirs) as long as
moon and sun (endure). Aware (of this), you,
being ready to obey (his) commands, will make
over (to them) every kind of income, fixed and
not fixed, the due share of the produce,

so forth.

(L. 23.)—And there are ancient verses which
teach the law on this (subject, as fóllower):—
[Here follow seven of the customary benedictive
and imprecatory verses, which it is unnecessary
to translate.]

(L. 23.)—This copper-plate grant has been
written by the illustrious Jayaśāla.

B.—FAIZABAD PLATE OF JAYACHANDRA.—
SAMVAT 1243.

This inscription is from a copper-plate
which was found near Faizabad in Oude,
and is now in the Library of the Royal Asiatic
Society in London.
The plate, which is inscribed on one side only,
measures about 1' 8½ by 1' 4". It is quite
smooth, the edges being neither fashioned thicker
nor raised into rims; but the inscription is in
perfect order throughout. The seal is circular,
about 2 ¼" in diameter; it has, in relief on a
countersunk surface,—across the centre, the
in the upper part, Gāruḍa, half man and half
bird, kneeling and facing to the proper right;
in the lower part, a śatka-shell. The seal slides by its socket-ring, which is about ½" thick and 1" in diameter, on a plain ring about
½" thick and 4" in diameter, which passes
through the ring-hole in the top of the plate;
this latter ring had been cut before the grant
came under Mr. Fleet's notice for preparing the
lithograph. The weight of the plate is
6 lbs. 5 oz.; and of the seal with its own ring
and the other, 2 lbs. 6½ oz.; total weight
8 lbs. 11½ oz.

V. p. 198, by a quotation from a Sūkta; but there that
shape is given to it only for the denotation of the accents.
I am unable to explain pravānāya and the remain-
ing terms up to the end of the line. Pravānāya takes
both here and elsewhere the place of the usual bīrāna
(compare e.g. Jour. Beng. As. Soc., Vol. XXVII. p. 222)
and would therefore appear to mean 'money-rent.'
F. E. Hall has translated it by 'quadrivial tolls,' and
Rajendra by 'tax on quadrivials.' But the place
where four roads meet is pravāna, not pravānāya; the
tologia would seem to include cattle-tax, and jātī tax 'on
things grown.' Truvikrāhaka, which together with other
unmistakable terms occurs also e.g. ante Vol. XIV. p. 12,
has by F. E. Hall been taken to mean 'Muhammadan
amendments' and by Rajendra 'royalty on aromatic
roads' (Jour. Beng. As. Soc., Vol. XXVII. p. 244, and
XIII. Part I. p. 331). Kshama-trapāddhāna (if this is the
right reading) I have not met with anywhere else.

TRANSLATION.

Om! May it be well!—(Verses 1 to 6 = verses 1 to 6 of the preceding.)

(V. 7.)—When he went forth to victory, the orb of the earth bent down beneath the excessive weight of the footsteps of his ruddy elephants marching along, tall, as towering mountains: then, as if suffering from cold, Sêsha, radiant with the clotted blood that trickled from his palate pierced by the crest-jewel, hid his face for a moment in his bosom.

(V. 8 to 10 = verses 7 to 9 of the preceding.)

(V. 11.)—His bright fame which met with no check in its playful course through the three worlds, (and) whose glory was sung by poets of known renown, made intense the fear of king Bali when it strode along like Trivikrama.

(Verse 12 = verse 10 of the preceding.)

(V. 13.)—After him (i.e. Vijayachandra) possessed of wonderful valour, (comes) the lord of princes named Jâya c h a n d r a; he is Nârdyana, having become incarnate for the salvation of the earth. Having put aside (all) dissension (and) censure (their own) liking for war, peacefully-disposed princes pay homage to him, seeking to rid themselves of the intense dread of the punishment (inflicted by him).

actual reading then is पेवसवरा। My reasons for proposing पेवसवरा are—Sêsha who carries the earth has his head actually hurt by the weight he has to bear, and hides it therefore in his bosom; but the writer of the verse, wishing to employ the rhetorical figure Upâspâya (which is indicated by न), assigns a different reason for Sêsha's action, viz. this, that Sêsha is suffering from cold. If we were to read पेवसवरा, न would have no sense. It should be observed that in the present inscription the two sibilants श and श at any rate are several times confounded; and that नाथ, नाथ is just what one would expect in a document of the writers of which delight in plays upon words. नाथ is given as a synonym of शदीर्घ by Hâmachaṇḍa.

Read वैध "स्त्रीयापि जाणासंहारितम्॥"
Read पुल। Read सैन्य। Read ताहाय। न। न। न।
Read नन्देन। Read नन्देन। Read नन्देन।
Read नन्देन। Read नन्देन। Read नन्देन।

Metres: Sâdulâvâikhita. For the words which I have translated by "as suffering from cold" the editor in Four. Bengal. As. Soc., Vol. X has स्त्रीयापि (which, I suppose, is meant for नन्देन) ; Captain Fell translates "forcing him from the trident," F. E. Hall and Rajendralal read नन्देन हेतु; the former translates "as it were, in consequence of being crushed," and the latter "crushed as it were," but Dr. Hall suggests the reading नन्देन हेतु which would mean "for fear as it were of being crushed." In the photolithograph before me the first consonant is certainly व (not श) and above it the two strokes for श seem to me clearly visible; the
records, physicians, astrologers, superintendents
of gynaecums, messengers, and to the officers
having authority as regards elephants, horses,
towns, mines (?), Bệdhas and Gōkulas:

(L. 22.)—Be it known to you, that, after
having bathed here to-day in the Ganges at
the glorious Vārāṇasī, after having duly
satisfied the sacred texts, divinities, saints,
men, beings and the group of ancestors, after
having worshipped the sun whose splendour
is potent in rending the veil of darkness, after
having praised him whose crest is a portion of
the moon, after having performed adoration of
the holy Vāsudeva the protector of the three
worlds, after having sacrificed to fire an oblation
with abundant milk, rice and sugar,—we have,
in order to increase the (spiritual) merit and
the fame of our parents and ourself, on Sunday,
the seventh lunar day in the bright half of the
month Āśāṁa in the twelve-hundred-and-
forty-third year,—in figures too, on Sunday
the 7th Śudi Āśāṁa 1243,—given the above-
written village with its water and dry land,
with its mines of iron and salt, with its
fisheries, with its ravines and saline wastes,
with the treasure in its hills and forests, with
and including its groves of madhūka and
mango trees, enclosed gardens, bushes, grass
and pasture land, with what is above and below,
defined as to its four abuttals, up to its proper
boundaries, to the Doḍa Rāuta the illustrious
Ānāgū, son of the Rāuta the illustrious
Dūṣāṅa, grandson of the Rāuta the illustrious
Ājhalā (?), of the Bhāravāja gōra (and
whose three Praūras are Bhāravāja Āṅgarasa
and Bārhapātaya, (confirming our gift) with
(the pouring out) from the palm of our hand
(of) water purified with khasa-grass. . . . . .103
(and) ordaining (that it shall be his) as long as
moon and sun (endure). Aware (of this), you,
being ready to obey (our) commands, will make
over (to him) every kind of income, fixed and
not fixed, the due share of the produce, the
pravasika, and so forth.

(L. 30.)—And on this (subject) there are
(the following) verses:—[Here follow ten of
the customary benedictive and imprecatory
verses, which it is unnecessary to translate.]
AN ENGLISH-GIPSY INDEX.

COMPiled BY MRS. GRIERSON; WITH AN INTRODUCTORY NOTE BY G. A. GRIERSON, B.C.S.

The only apology offered for this Index is the want of anything better. There is no English-Gipsy vocabulary in existence, except a short one in Paspati’s excellent Memoir on the Language of the Gypcians as now used in the Turkish Empire, published in 1869 in the Journal of the American Oriental Society.

For reasons which will be subsequently understood, the want of such a work was much felt by Dr. Hoernle and myself, when writing the comparative portion of our Dictionary of the Bihari Language. There was plenty of materials available in various languages, and accordingly the contents of the following works were indexed out:

It is believed that the Index following contains all the words in the above-mentioned works. The first of them contains a Gipsy-English Vocabulary. The second a very full French-Gipsy and Gipsy-French one. Part V. of the third consists of a Bukowina-Gipsy-German Glossary and Parts VII. and VIII. of a magnificent comparative glossary of selected Gipsy words. Out of them, the Index, which may be taken as a rough draft of an English-Gipsy Vocabulary, has been compiled.

Our knowledge of the Gipsy Language being only superficial, and only derived from the study of the above and similar books, we cannot hope that the Index is entirely free from blunders; but as we have found it extremely useful for the purposes of comparative philology, and as no other similar work is available, we think it right to place it at the service of our fellow-students. Perhaps some more thorough student, such as Mr. Leland, may be moved by its example to give us a really scientific English-Gipsy Dictionary.

We have thought it best to give the Gipsy words, generally, exactly as they have been spelt by the authors above named. This has been rendered necessary by the very unscientific spelling adopted by Borrow in the Lavo-Lil. Not being familiar with the pronunciation adopted by English Gipsies, we have been compelled to adhere to his spelling. Only in a few cases, in which there was no room for doubt, have we attempted to adopt a uniform system. Thus Borrow gives the root dik, and immediately afterwards dickimengro, ‘an overseer,’ and ‘dikkipen,’ ‘look,’ ‘aspect.’ In all these cases we have spelt the root uniformly dik. So also elsewhere, when Borrow has given a ck or a hard c, we have written k. Again, where Borrow has written co, we have written u. Thus Borrow’s poor, ‘earth’ appears as phu.

Paspati represents the hard palatal by tch, and the soft palatal by aj. We have followed the English method of writing ch and j respectively.

Miklosich complicates matters by using the Russian letter yer. For this we have substituted throughout ë, as its nearest English equivalent. His c, t, d, and l’ we have left unchanged. His ç, š, and ž we have written ch, sh, and zh respectively, and his ch (which equals the Persian č) we have written k. His dz, and his g’ we have written alike as j, his y as g, and his j as ş. In this way his spelling will nearly approximate the system used in transliterating Indian vernaculars.

With regard to the infinitive termination aeu, Paspati spells it with a long d, thus, ñed; but Borrow aeu. We have used ñed throughout to secure uniformity. Miklosich gives verbs in their root forms. To these we have added the infinitive sign ñed for a similar reason.

Part V. of Miklosich contains many Rumanian words, which have been borrowed by the local Gipsies, and which do not form a portion of the genuine vocabulary of the whole Gipsy tribe.
Pending the formation of a complete Gipsy-English Vocabulary, it has been thought best to include these words in the Index.

In every case we have given a reference to the book whence the word has been taken, so that no difficulty will be experienced in finding it.

Mr. Leland has made a happy suggestion that the original Gipsies may have been Dhoms of India. He points out that Romany is almost letter for letter the same as Drömni, the plural of Dróm. Drömni is the plural form in the Bhójpúr dialect of the Bhárí Language. It was originally a genitive plural; so that Romany-Rye, a gipsy gentleman, may be well compared with the Bhójpúr Drömni Drám (Skr. Drömni Drám), a king of the Dhoms. The Bhójpúr-speaking Dhoms are a famous race, and they have many points of resemblance with the Gipsies of Europe. Thus, they are darker in complexion than the surrounding Bihárs, are great thieves, live by hunting, dancing, and telling fortunes, their women have a reputation for making love-philtres and medicines to procure abortion, they keep fowls (which no orthodox Hindu will do), and are said to eat carrion. They are also great musicians and horsemen.

Mr. Fleet has drawn my attention to a South-Indian inscription given in the Ind. Ant. Vol. XI. p. 9ff., in line 50 of which a certain Dömma is mentioned. On p. 10 of the same volume, Mr. Fleet says with reference to him, "in connection with him (Rudra Deva), the first record in this inscription is that he subdued a certain Dömma, whose strength evidently lay in his cavalry. No clue is given as to who Dömma was; but as Doma, Dóbba, or Dama, is the name of a despised mixed caste, he may have been the leader of some aboriginal tribe, which had not then lost all its power." If this conjecture is true, it would show that the Dôm further extended over the greater part of India, and in some places possessed considerable power.

But the resemblance of the Bhójpúr and Gipsy dialects is not confined to a similarity of name. The Gipsy grammar is closely connected with Bhójpúr, or with its original Apabhrama Magadhi Prakrit, thus:

<table>
<thead>
<tr>
<th>Bhójpúr</th>
<th>Magadhi Prakrit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Đóm</td>
<td>(gen.) Đómś or Đómś</td>
</tr>
<tr>
<td>Đóm or</td>
<td>(gen.) Đómṇ</td>

<td>Gāl</td>
<td></td>
</tr>
<tr>
<td>Kārī, 'I will do.'</td>
<td></td>
</tr>
<tr>
<td>Kār, 'to do.'</td>
<td></td>
</tr>
</tbody>
</table>

These examples might be continued at great length; but the above is sufficient to show the close grammatical connection between the two languages. The vocabularies possess even more numerous points of resemblance, which will be evident to any one studying the accompanying Index. The following mongrel, half-Gipsy, half-English, rhyme, taken from Borrow, will shew the extraordinary similarity of the two vocabularies:

<table>

In the above it must be remembered that the verbal terminations of the Gipsy text are English, and not Gipsy.

I propose to deal with this subject at greater length on a future occasion.

In reading the Gipsy words, it should be noted that the mark 长 over a vowel refers to accent, and not necessarily to prosodical length.

The following abbreviations are used in the succeeding pages:—Eng. = Borrow’s Lavo Lili. Tch. = Paspati’s Études. M. = Miklošich, Theil V. M. 7 = Miklošich, Theil VII. M. 8 = Miklošich, Theil VIII. Gip. = Special Gipsy words given by Borrow; e.g. Span. Gip. = Spanish Gipsy. As. = Asiatic words given by Paspati; e.g. As. Tch. = Asiatic Gipsy. Psp. M. = Paspait’s Memoir, referred to above.
All.—Sore, soró, (Eng.); sarró, sarvildé, sávere, sróre, sarroré, sariné, sa', (Tch.); sú, sa', (As. Tch.); saoró, saúró, sáuro, soró, se, (M.); savóro, (M. 8)

Almighty.—Soro-rualó, (Eng.)

Alms.—Lachipó, (Tch.); pománş, (M.)

Alone.—Koko, kokoro, bikunjio, (Eng.); kókoro, kókoro, kókoro, kókoro, (M., M. 7)

Also.—Asé, asan, (Eng.); éské, (M.); vi, (M. 8)

Always.—Sar far, (Tch.) (Pepo'tis Memoir gives ghádeš,)

Among, he who is.—Maskarutnó, maskarimó, (Tch.)

Amonost.—Maskaré, (Tch.)

Ancient.—Püreno, (Eng.)

And.—Th, (Eng.); ta, te, u, (Tch.); a, hay, he, tha, thay, (M.); ta, u, (M. 8)

Angel.—Kött, (M.)

Angé.—Énjérn, éňeřos, (M.)

Anger.—Kholto, (Tch.); kholi, (M.); kholin, (M. 7)

Angry.—Roshto, (Eng.); kholináko, kholini-koro, (Tch.); khol'érniko, (M.)

Anoint, to be.—Kholito, kholasalotará, jugainová, (Tch.); khol'aró, rusháva, (M.)

Anoint, to become.—Khol'ardová, (M.)

Annihilation.—Arvani gérvani, (Tch.)

Annual.—Bershio, (Tch.)

Another.—Wafi, (Eng.); avér, (M.)

Answer, to.—Pučkára, (Eng.); pučಕára, (Span. Gip.); anglál dáva, (Tch.)

Ant.—(pl.) Kríor, (Eng.); kiri, (Tch.); tíre, tiré, (M.); kiri, (M. 7)

Anvil.—Amunf, (Tch.); loh, (As. Tch.); vaznél, (M.); amun, (M. 7)

Anxiety.—Tasáló, (Tch.)

Anxious.—Tasáló, (Tch.)

Anxiety, to be in.—Tasálóra, (Tch.)

Any one.—Kánkn, kánkn, kánkn jenó, (Tch.); kánkn, (M. 7)

Ape.—Mámá, mambóka, (Tch.); mímán, (As. Tch.); mímán, (M. 8)

Ape, those who carry in fair.—Mámunakoro, (Tch.)

Apothecary.—Drab-engro, drav-engro, (Eng.)

Apple.—Paúb, paúbi, paúvi, (Eng.); pauboy, (Ham. Gip.); pabá, khabá, paúb, (Tch.); phhabá, (M.); sev, sivi, (As. Tch.); phhabá, (M. 8)

Apple, of or belonging to.—Pabengó, (Tch.)

Apple, dried.—Hucú, (M. 8)

Apple-tree.—Paúblín, (Tch.); phabáin, (M.)

Apple, wild.—Péndúria, padúreč, pédúreč, (M.)

Apprehended.—Límnow, (Eng.)

Approach, to.—Pahsháová, (Tch.); pashová, (M.)

April.—Aprír, (M.)

Apron.—Joddakaye, (Eng.)

Arm.—(pl.) Murcoes, mursior, (Eng.); musió, (dim.); musoí, (Tch.); murecials, (Span. Gip.); musí, (M. 8)

Armed.—Angall, (Tch.); angall, (M. 7)

Armpite.—Kak, (Tch.)

Army.—Tse, časte, (M.)

Around.—Emprézhár, (M.); truval, (M. 8)

Arrest.—Arshté, (M.)

Arrive, to.—Resáva, (Tch.); arésáva, (M.)

Arrive, to cause to.—Resáváva, (Tch.)

Arch.—Okiá, (Tch.); sejúmt, (M.)

Arrow, to shoot with.—Sejóetásar, (M.)

As.—Sir, (Eng.); an, ani, in, eni, (Tch.); vórí, (As. Tch.), kánna, kána, sa, (M.); sa, (M. 8)

As yet.—Ojó, atghái, (Tch.)

Ashamed.—Alodge, (Eng.); lajanó, lajavó, (Tch.)

Aspaned.—To be.—Lajáva, (Tch.)

Ashes.—Práhos, (Tch.); chr, (As. Tch.); char, (M.); prakho, (M. 8)

Ask, to.—Pucháva, (Eng.); pucháwa, pucháva, mangáva, (Tch.); mangáwa, pucháwa, (M. 8)

Ass.—Mailla, (Eng.); kör, kör, fer, (dim.); kter, (pl.) khele, (Tch.); kar, (As. Tch.); magárí, (M.); kör, (M. 7)

Ass, female.—Kherné, (Tch.); mugarí, (M.)

Ass and foal.—Mailla and posh, (Eng.)

Ass, of or belonging to.—Kherunó, (fem.) kher- ni-koro, (Tch.)

Ass-driver.—Kheréskoro, (Tch.)

Assassin.—Manushfari, (Tch.)

Assassin, to.—Chináva, mór, (Tch.); le mar, (As. Tch.)

Assemble, to.—Ghédáva, murdaráva, (Tch.); le mar, (As. Tch.)

Assent, to.—Prinisáráva, énoiáva, (M.)

Assistance.—Namáah, namáh, (M.)

At.—Pashá, pasbá, (M.)

At all.—Asárás, (Eng.)

Attain, to.—Resáva, (Tch.); arésáva, (M.)

Attorney.—Méndéhari, (M.)

Audience.—Sháhab, (Eng.)

Auge.—Baldini, pipapi, pipaí, (Tch.)

Aunt.—Bibi, bibo, kaki, (Tch.); bibi, (As. Tch.); bibi, (M. 7)

Autumn.—Pahiz, (As. Tch.)

Awake, to.—Jängaráva, (Eng.); trisiaró, (Tch.); trízardó, (M. 8)

Awaken, to.—Jangáva, (Tch.); ushtaváva, (M.); jangáva, (M. 7)
Awaken, to cause to,—Jangavvā, (Teh.)
Awakened, to be,—Jangāniyavvā, (Teh.)
Axe,—China-mengro, (Eng.); tovēr, tovēl, (Teh.);

Bee,—Guallo-pishen, bata, (Eng.); burli, berūli,
(Teh.); biruli, (M.); burli, (M. 7)
Beech,—Fugu, (M.)
Beer,—Lovina, (M. 8)
Beet-root,—Dip, (As. Teh.)
Before,—Anglo, (Eng.); vegur, (As. Teh.); ang-
lā, (M.); angle, (M. 7)
EXTRACTS FROM CHINESE AUTHORS CONCERNING THE HISTORY OF THE KUSHANS.

BY EDWARD THOMAS, F.R.S.

In this Journal, Vol. XII. p. 6 ff. there appeared a paper of mine on "Indo-Scythian Coins with Hindi legends." During the course of the collateral investigations, I had occasion to refer to the obscure history of the Kushans, in regard to which I was able to glean but little information. Singular to say, in the latter part of the same year, an article was published in the Journal Asiatique containing very important contributions to our knowledge of the migratory movements of Central Asian tribes, the new materials for which were contributed by hitherto unexamined texts of the Chinese chronicles.

In the article in question, M. Éd. Specht, while carefully recognizing and regarding the labours of De Guignes and other learned Frenchmen, who led the way to the study of the Chinese authors, endeavours to base his new translations upon a general disregard of what he calls the "Compilateurs Chinois," and to have recourse to the more authentic documents of the Tching-seé—which was the original source from whence Ma-tawn-lin and others derived their information.

I have, therefore, copied out the subjoined extracts, concerning the history of the Kushans, for the pages of the Indian Antiquary—retaining them, however, intentionally, in their French garb, in order to preserve the integrity of the proper names.

M. Specht, in his introductory remarks, is careful to get rid of the confusion, existing in some quarters, as to the identity of the Kushans and the Ephthalites. He observes—

"M. Vivien de Saint-Martin avait cru trouver dans les articles de l'encyclopédie de Ma-tawn-lin concernant les Yu-teeh et les Yé-tha, la preuve positive que ces deux peuples ne différaient entre eux ni par le nom, ni par les mœurs et les habitudes; qu'en un mot, les Indo-Scythes et les Ephthalites ne faisaient qu'une seule et même nation. Cette opinion est pérépétuée répétée par l'inspection des documents que nous donnons. D'abord, le nom de Yé-tha n'existe

November, December.

1 Études sur l'Asie Centrale, d'après les historiens Chinois (M. Edouard Specht), p. 117, 1883 (October.

mêmes pas ; c'est une abréviation à l'usage des Chinois du nom complet Ye-ta-i-li-to, qui correspond à Ephthalites. Par la tombe l'identification du nom des Ye-tha avec celui des Yue-tchi d'une part, et de l'autre avec celui des Djata du nord-ouest de l'Inde; deux résultats qui avaient été admis par plusieurs indiastes éminents, Lassen en tête. Ensuite les Indo-Scythe, nommés par les Chinois Yue-tchi ou Kouen-chouang, étaient une peuple primitivement nomade, qui est devenu sédentaire, et s'est assimilé, au moins en partie, la civilisation indio-hellénique, comme le prouvent ses monuments, ses médailles, et ses inscriptions. Les Ephthalites, d'après le témoignage des récits contemporains, sont restés nomades, ils n'avaient pas de monnaie, et enfin eux seuls, et non leurs précédéateurs, les Yue-tchi, pratiquaient la ployandrie. Bref, ces deux peuples sont absolument distincts, non seulement par l'époque à laquelle ils ont apparu dans l'historie, mais par leurs moeurs et leur civilisation.

Ce résultat vient donc confirmer l'hypothèse, émise par M. Noldeke, que les Kouchans et les Ephthalites devaient être deux peuples différents qui ont habité successivement les mêmes contrées.”—(Tabari, Geschichte der Sasaniden, p. 115, No. 2.)

Extracts from Chinese Authors.

Yue-tchi ou Kouen-chans. L'histoire des premiers Han (206 ans avant Jésus-Christ à 24 ans après) contient, au chapitre xvi, une description de l'Asie centrale, dont nous extrayons le passage suivant:

Le royaume des Ta-Yue-tchi a pour capitale la ville de Kien-chi, à 11,600 li (de Techang-nesan ; il n'y dépend pas du gouverneur général (Touhou) ; on y compte 100,000 familles, 400,000 habitants, une armée de 100,000 hommes. À l'est, jusqu'à la résidence du gouverneur général, il y a 4,740 li ; à l'ouest, jusqu'aux A-si (les Arsaces), 49 jours de marche, et il est limitrophe au sud avec le Ki-pin (Cophène). [Le pays, le climat, les productions ainsi que les moeurs des habitants, les monnaies et les marchandises qu'on en tire, sont les mêmes que chez les A-si * * * ]

Originellement les Ta-Yue-tchi étaient nomades. Ils suivaient leurs troupeaux et changeaient de place avec eux, ressemblant sous ce rapport aux Hiong-nou. Ils compoisaient au moins 100,000 archers ; si bien que se fiançant à leurs forces, ils méprisèrent les Hiong-nou. Ils habitaient primitivement entre le pays de Thun-Hoang (Kouen-tcheen) et le mont Ki-lian (les monts célestes).

Après que le tenen-yu-Mao-thum eut attaqué les Yue-tchi et que le tenen-yu Lao-chang ayant tué leur roi, eut fait de son crâne un coupe à boire, les Yue-tchi s'en allèrent au loin, passèrent au delà de Ta-Ouan, battirent les Ta-Hia dans l'ouest, et les soumirent. Leur chef établit alors leur résidence au nord de la rivière Ouen (Oxus). Une petite partie de ceux qui n'avaient pu s'éloigner avec eux se mirent sous la protection des Khiang des montagnes du midi, et prirent le nom Petit Yue-tchi.

Primitivement les Ta-Hia n'avaient pas un souverain ou un magistrat principal ; chaque ville, chaque bourgade était gouvernée par son magistrat. La population était faible et craignait la guerre. Lorsque les Yue-tchi arrivèrent ils les soumirent.”

Il y a cinq principautés:
1. La principauté Hisou-mi, ayant pour capitale la ville de Ho-me, à 2,841 li de la résidence du gouverneur général et à 7,802 li de Yang-kouan.
2. La principauté Chouang-me, capitale la ville du même nom, à 3,741 li de la résidence du gouverneur général et à 7,782 li de Yang-kouan.
3. La principauté Kouen-chouang (Kouen-chans), capitale la ville Hout-tao à 5,940 li de la résidence du gouverneur général et à 7,982 li de Yang-kouan.
4. La principauté Hi-thum a pour capitale la ville Po-mao (Bamiyan) à 5,862 li de la résidence du gouverneur général et à 8,202 li du Yang-kouan.
5. La principauté Kao-fou (Kabul) a pour capitale la ville du même nom, à 6,041 li de la résidence du gouverneur général et à 9,283 li de Yang-kouan.

Ces cinq principautés dépendent de Ta-Yue-tchi.

Extract from Chapter 118 of the History of the second Han (A.D. 25 to 220).

Le royaume de Ta-Yue-tchi. Le roi demeurant dans la ville de Lan-chi • • • • •

Lorsque les Yue-tchi furent vaincus par les Hiong-nou, ils passèrent chez les Ta-hia, partant de l'Oxus : la capitale de ces derniers était Kien-chi ou Lan-chi, conquise plus tard par les Ta-Yue-tchi."

1 From the history of the Wei (220-265 A.D.)
2 Le royaume Kien-tun, qui est l'ancienne principauté Kouen-chouang (Kouen-chans), a pour capitale la ville de Hout-tao à l'ouest de Teche-wi-me-tsun. À 15,560 li de Tai.
3 Les habitants demeurent au milieu des montagnes et des vallées.

Le royaume Fou-yu-chi, qui est l'ancienne principauté Hi-thum, a pour capitale la ville de Po-mao (Bamiyan) à l'ouest de Kien-tun, à 15,660 li de Tai.
gèrent leur royaume en cinq principautés qui étaient Hieou-mi, Choung-mo, Konéi-chouang-Hi-thun, Tou-mi (Kao-fou ?).

Environ cent ans après, le prince de Koeni-chouang, Kieu-tsiao-khio, attaqueta et subjuga les quatre autres principautés, et se constitua roi d'un royaume qui fut appelé Koeni-chouang (Kouchans).

Ce prince envahit le pays des A-si; il s'empara du territoire de Kao-fou (Kabul), détruisit aussi Po-ta et le Ki-pin (Cophène) et devint complètement maître de ces contrées. Kieu-tsiao-khio meurt à quatre-vingts ans environ; son fils Yen-kao-tehia-tai monta sur le trône, il conquit le Thien-tchow (l'Inde) et y établit des généraux qui gouvernaient au nom des Yu-teh.

Depuis cette époque cette nation fut riche et puissante.

Tous les pays en parlant du souverain l'appellent roi des Koeni-chouang (Kouchans). Les Han (les Chinois), selon leur ancienne dénomination, les nomment toujours les Ta-Yü-teh.

The French translator enters into a critical examination of the exact date implied in the term "environ cent ans après"—and considers that it must be held to refer to the complete conquest of the Ta-hia, and not, as might be supposed from the words of Ma-twan-lin, to 100 years "after the journey of Tehang-kian, towards 126 B.C." This inference is further confirmed by the non-mention of this conquest in the work just cited, which dates from 25 A.D. The French commentator would therefore place this event in 24 A.D., up to which time the Second Han continued to reign. However, with so loose an expression as about 100 years, we need not seek to be very precise in our speculative results.

Indeed, M. E. Specht in his final summary contents himself with saying, "Le fils de Kieu-tsiao-khio conquit l'Inde, et cette empire dura depuis le milieu du premier siècle de notre ere jusqu'a la fin du cinquième siecle."

Subsequent extracts give us some information of the decadence of the Kushans, which may as well be reproduced here.

Le compendium des Veï composé par In-huan nous apprend qu'à l'époque des trois royaumes (220 à 280) "le royaume de Ki-pin (Cophène), ainsi que ceux de Ta-hia, de Kao-fou (Kabul) et de Thien-tchow (l'Inde), étaient sous la domination des Ta-Yü-teh." Qu'aquo l'histoire du Tsain (265 à 419) ne donne pas de notice sur les Kouchans, les Ta-Yü-teh sont cités comme étant au sud des Tsou-an.

Dans l'histoire des Veï (386 à 556) nous trouvons sur ce peuple les deux notices suivantes, qui nous parlent de la fin de leur empire dans la Bactriane.

Le royaume des Ta-Yü-teh a pour capitale la ville de Lou-kien-î à l'est de Po-ti-cha. Ils passèrent alors à l'occident et s'établirent dans la ville de Po-lo, à 2,100 li de Po-ti-cha. Leur roi, Ki-to-lo, prince brave et guerrier, leva une armée, passa au milieu des grands montagnes, fit un invasion dans l'Inde du nord, et les cinq royaumes au nord de Kan-tho-lo se soumirent à lui.

In conclusion, I have to advert to the casual mention of the change in the government of the country, brought about by the conquest of the Kushans—in the substitution of the military chiefs for local Râjas. What direct effect this may have had on the population at large we have no means of knowing, but it looks like the mere centralisation of a tribal empire, and the entrusting of subordinate power to responsible members of their own body, in supercession of the irregular and often conflicting interests of the old Hindu rulers.

And this is the exact state of things our coins bear testimony to—we have no Râjas or Mahârâjas—as noticed in my previous paper—the legends, written in a downward Chinese fashion, give us all told eleven names of generals with more or less Scythian designations, while their sectional tribal sept is always carefully added, as their quasi title to rule.

The multitude of these gold coins extant, and the range of the localities where they are found, testifies to the ample power and long sway of this exotic dynasty, and fully explains the frequent reference by the home "conquerors of the Scythians," which got to be a brag-word with the pretending 'Vikramâdityas' of India in these later times.

AFGHANISTAN IN AVESTIC GEOGRAPHY.

At the present time, when the mountain regions of the Paroamissus will, in all probability,

Nöthke, p. 7.
* Tiéven de Saint Martin, p. 42.
immediately following; but here we stumble on difficulties which have puzzled in no small degree interpreters of the Avesta. They are considerably aggravated by the unfortunate circumstances that Parsi scholarship has left us entirely destitute of any traditional help for this particular Yasht. The passage, in question, simple in its structure, contains a comparatively large number of what apparently are adjectives. Their etymology and their position in the context suggest their being appropriate epithets to something like a river. But just this noun so eagerly looked for cannot be found. It was the new editor of the Avesta, Professor Goldner (Drei Yasht, Stuttgart, 1884), to whom the happy thought first occurred of looking among these apparent adjectives for the indispensable complement implied by their presence—real river names. He advanced this explanation for the last four of those mentioned below; but the difficulty of identifying any of these four names on the map seems to have induced, subsequently, this distinguished Zand scholar to restrict his hypothesis to only two of them. I shall endeavour to produce in the following remarks such evidence as may justify the addition of eight new river names to the geographical index of the Avesta. Our version of the interesting passage which follows immediately on the one translated above, must, for the present, take for granted what has still to be proved.

"At its foot (the Mountain Ushidā) gushes and flows forth the Hrāstra and the Ḫāspa, the Fradatha and the beautiful Hārenahaiti, and Ustavati, the mighty, and Urvaddha, rich of pastures, and the Erzi and Zarenumaiti: at its foot gushes and flows forth the bountiful, glorious Helmand, swelling its white waves, rolling down its copious floods."

As we have no means for identifying these rivers besides their names, which, if they remained in use for a longer period, must have undergone considerable phonetic changes, it will be safest to turn first to those sources of geographical information which rank in respect to their age nearest to the Avesta—the reports of classic authors. Fortunately, as far as Ariana is concerned, they are based to a great extent on a very exact survey made under the Seleukidian rule.

Pliny, speaking of the districts to the south of Aria (Hirat), mentions the rivers Pharanacotis and Ophrundus (i.e. Ὀφρονδος of the Greek original), which Tomasek, in his exhaustive work, describing the course of the river are not clear in detail, but there is no doubt about their general purport.
treatise on the corresponding portion of the Tabula Peutingerana (Proceedings of the Viennese Academy, 1883), has recognised as the modern Harrat Rūd and Farah Rūd. They both flow from the western part of the Siāh Kūh into the lake of Sistan. The form Farahkūhī, which is supported by Tomasek as the original and native one for Farahkūhī, represents exactly our Zend Hvaranahāitī in Persian pronunciation. The substantiae hvaranahāitī "glory," as contained in Hvaranahāitī (hvaranah + suffix vātī), assumes in the Old Persian dialect the form of fara. Thus the Old Persian Vindafarāna, Vindarāna, is the exact equivalent of the Zend Vinda-hvaranah "winning glory." A striking parallel to the doublet Hvaranahāitī—Pharmacol is furnished by the different use of the names Zaraγγa and Zaraγγa, Zaraγγa and Zaraγγa, for the neighbouring district and its inhabitants, the change of initial Z into D being a well-known characteristic of Persian pronunciation, as compared with Zend.

For proving the identity of the Fradatha of our Zhand text with (O)rdradus, Farah Rūd, we can utilise the additional evidence of those names by which the old town Farah on the left bank of the Farah Rūd was known in the Macedonian epoch. In the itinerary of Ianoilos of Kharax this πόλις μαγανίς is called by the modern name Φοίνικη; but Stephano Byzantios, has preserved a more ancient form in the following excerpt: Φράδα πόλης ήν οἱ Δράγγας τοῦ Ἀλεξάνδρου Περσαίων μεταφώματος. Περσαία is, in fact, a literal rendering of Zand fradatha, which, in common use as neuter, means (literally "proficiency"), "progress," "increase."

The Farah Rūd is the next independent affluent of the Hamun or Zirra to the east of the Harrat Rūd; on the other hand, the Fradatha is placed in our list immediately before the Harranahāitī. We are, therefore, inclined to look towards the east for rivers, with which the preceding two—the Hvaspa and Hvāstra—may be identified. We find on the map of South Afghanistan two main rivers in a corresponding position, whose names must remind us of the Avestic forms—the Khapasp Rūd and the Khāsh Rūd. Coming from the southern slope of the Siāh Kūh they both reach the eastern basin of the lagune, where the lower course of the Helmand is lost. In Khapasp, a place on the upper course of the Khapasp Rūd, we may recognise the town Khōasp, mentioned by Ptolemy in Arakhosia. The name Hvaspa means "having good horses," and seems to have been a favourite designation for rivers in Iran. Besides the famous Khōaspās near Susa, whose water was supplied to the "Great King" wherever he moved (Herod. i. 188), we hear of another Khōaspās, a tributary of the Kābul river.

The station Cosatā, given by the Anonymous Hvaranahāitī, but missing in the Tabula Peutingerana, refers evidently to the town Khāsh, mentioned already by older Arab geographers, on the bank of the Khāsh Rūd, and supplies a welcome link between the Zand form Hvāstra and the modern name of the river. Whether the water of the Hvāstra = Khāsh is in reality what a probable etymology of the name (conf. Sanskrit svadākha "swadha") seems to imply,—"well tasting,"—may be decided by those who have traversed the arid plains, stretching on both sides of the lower river course.

There is, as yet, no indication to aid us in identifying the remaining river names. But fortunately we find at least one of them recognised in its true character by traditional authority. We read in the Bundahish (as translated by Mr. West, chap. xx. 34; Sacred Books of the East, Vol. V. p. 82) the following interesting passage:

"Regarding Frāsiyāw, they say that a thousand springs were conducted away by him into the sea Khāsh (the Khāsā of the Avesta). . . . and he conducted the spring Zarimand, which is the Hētmand river they say, into the same sea; and he conducted the seven navigable waters of the source of the Vachāni river into the same sea, and made men settle there."

The connexion with the Hētmand shows clearly that the Zarimand of the Bundahish is the Zarenumaia of our text. But no further light can be gained at present from this isolated statement. Whether the "seven navigable waters of the source Vachāni," mentioned besides the Zarimand, bear any relation to the seven rivers whose names appear in the Yasht passage discussed above, besides the Zarenumaia, must likewise remain uncertain.

The resemblance of the names and the identity of the epithet puruṣvītra—"rich in pastures," suggest some relation between the river Urvā, and the land (?) Urva, named as the eighth creation of Ahura Mazda in the first chapter of the Vendidad; but Urva itself still remains a most obscure point in Avestic Geography. In spite of the scantiness of historical evidence for the last four rivers, we need not yet renounce all hope of identifying them on some future map of Afghanistan, the present ones showing a conspicuous blank in quarters where a further exploration of the Paropamisus will, perhaps, reveal some distinct traces of our river names.
BOOK NOTICES.

Some time ago I received, through the kindness of the author, a copy of the above work. It was quite new to me at the time, and does not appear, even yet, to be known so well as it deserves; few or none of my Indian friends to whom I have mentioned it having seen it.

The readers of the Indian Antiquary will therefore, I hope, be glad to have their attention called to it.

When Mr. Egerton, M.P. for Cheshire, visited India about the year 1855, his attention was drawn to the great variety of arms and military weapons he there saw. The difficulty of obtaining accurate information regarding the names and origin of many of these led to the collection, by him, of the materials which form the basis of the present publication.

It was undertaken in the first instance, as one of a series of Handbooks descriptive of the different sections of the India Museum, but on the transfer of that collection, by the India Office, to the Kensington Museum, the design was interrupted, and the Illustrated Handbook of Indian Arms was the only one of the series which saw the light.

The subject has been treated by Mr. (now Lord) Egerton in a very full and exhaustive manner. Premising that he might have arranged the arms on an ethnological, historical or artistic basis, he decides, we think rightly, in favour of the first, on the ground that "identity of arms often denotes identity of race to a greater extent than language or religion, long after the more important characteristics of language and religion have disappeared," in illustration of which he refers to Mr. Cast's example of the Hindi dialect adopted by the Bhils instead of their original Kolharian tongue. A similar instance is afforded by the Nairs on the Malabar coast, the descendants, according to Mr. Hodgson, of the Himalayan Newars, whose normal speech has given place to the vernacular Malayalam.

The treatise opens with a rapid sketch of the Military History of India, commencing with the earliest arms in use after the pre-historic period to the invasion of the Mogul Emperor Babar (1494-1539 A.D.). Adverting first to the legendary and heroic epoch comprising the age of the great epics, and the earliest notices of the Greek writers, he passes to the first appearance of the Muhammadans in the time of the Caliphs (or Khilis) the inroads of Mahmud of Ghazni (1001-1030 A.D.) and the raids of 'Alau'd-din Khilji (1294-1312 A.D.).

The next period treats of changes consequent on the more frequent intercourse between India and Europe, following the discovery of the Cape of Good Hope, and extends from the reign of Babar to the death of the Emperor Aurangzeb. The third chapter deals with the transactions which occurred from the death of Aurangzeb to the fall of the Mughal Empire, which led to the introduction of a great variety of arms, and the more general use of artillery. During this period occurred the invasion of the Afghans and the rise of the Marathas, followed by the establishment of various European factories on the coast; the struggle between the French and the English, and their relations with the Native powers, particularly with the recently established Muhammadan kingdom of Mahr. The last part (Chapter IV.) relates to the period of comparative tranquillity under the supremacy of the English rule, during which the subordinate native princes were gradually brought under subjection to the paramount power, and, instead of contending with each other, amused themselves by drilling their followers on the model of the disciplined troops of their conquerors, for purposes of pageantry and show, while the military operations of the latter were directed against more distant localities on the North-East, and West, and the chapter closes with the end of the first Burmese war in 1826.

After these preliminaries the author passes to the more immediate subject of his treatise, and describes first the embellishments employed in the ornamentation of Indian Arms, which he treats under the three forms of Hindi, Persian, and Turanian art. These he illustrates at length, with appropriate examples and figures, into the details of which we need not follow him, neither need we enter into an examination of the processes employed in the manufacture of many of the weapons, an interesting description of which will be found in the second part of the chapter, but proceed at once to the more practical portion which treats of the weapons themselves. This is founded on the India Office Collection as it originally stood, with further illustrations from the Royal Collection at Windsor Castle, that of the Prince of Wales made during his Indian Tour, the Tower, the British Museum, &c., as well as on that formed by himself. The whole affords a very complete description of the warlike implements indigenous to India, and also of those introduced into it by the frequent conquests to which it has been
subjected, and by the numerous military adventurers who flocked thither for service, or were invited by prospects of advancement or more ambitious aspirations. The first groups of arms described are those of the Aboriginal and Non-Aryan Races, comprising the bows and arrows, clubs and axes, found amongst the earliest inhabitants of the Mainland and the Islands. Leaving the latter he takes a rapid glance at the pre-Aryan races of the Mainland, our information regarding which is too imperfect to admit of an accurate classification. We can point, however, to some of the most characteristic groups, such as the pastoral races represented by the Sanilis, Alhrs., and Kurumbars; the more warlike and predatory classes like the Bhils, Gajars, Kolis, Ranaosis, Belars and Marawars; and the people of the north-eastern tracts who have been described by Colonel Dalton, and to whom the general term of Kolarian has been given. These distinctions again are all more or less fused by the influence of language, as they are connected on the one hand with the Hindi, and on the other with the Dravilian tongues. The weapons in use among all these will be found to exhibit considerable uniformity arising out of the earliest requirements of civilized man. Its normal form is that of the staff or club which supports him in his walk, and acts as his lever for removing obstacles, or repels the assault of an opponent, whether man or beast. A flint inserted at the end becomes a battle-axe or hatchet, and the sharpened edge is the prototype of the sword. With a shorter piece in his left hand he wields off the blows of an assailant, and by increasing its breadth it becomes a shield, and protects him from a hostile arrow. When thick and heavy it serves as a missile; with a slender slip or more convenient reed propelled from a bow he strikes the more distant game beyond reach of the throwing stick.

Among the earliest of these primitive expedients is that represented in the author's illustrations by Nos. 1 and 4 of Group I. at p. 73. It appears to be the primitive weapon of the hill tribes of

India, Gonds, Kolis, &c.; as well as of the native inhabitants of Australia. It is made of heavy wood of extreme hardness, rarely of metal, from 18 inches to 2 feet long, and from 2 to 3 inches broad, more or less curved, generally flat: some are hooped with iron and with three or four spikes of the same metal at the extremity to make them more deadly. The best specimens exactly resemble the Australian Boomerang, and differ in no respect from the weapon used by the ancient Egyptian sportsmen as depicted in the tombs of the kings at Thebes, an example of which, found in a mummy pit, is preserved in the British Museum. The form differs somewhat in different parts of India, that of the southern predatory tribes, as the Marawars and Kralars, becomes narrower at one end, terminating in a knob or pommel to give a firmer grip in throwing. These are of different sizes, some in my possession being only 22 inches, but a specimen at Sandringham (see Plate, fig. 2) measures 23 1/4 inches round the curve. They are of a very heavy dark-coloured wood. The collection of the Prince of Wales contains one of fine steel (Plate, fig. 2a) 19 inches long, and 2 1/4 broad at the broadest part, not much thicker than a sword blade, with a foliage pattern of silver running along the centre, a very formidable weapon; and also one of ivory about the same size, probably intended more for show than use. Not improbably it may be an instance of the radana-kulina mentioned in the Ngama-gala copper plates, which Prof. Eggeling has translated "ivory weapons," and which Prof. Dowson suggests were kept as trophies of victory by great princes. The name given to this missile by the Kolis of Gujarast is katariga (see Plate, fig. 1) but in the Dravilian dialects it is called walai or wailai, tadli (= bent stick) by the Kralars and Marawars. Some specimens from Timmerly in the India Museum are labelled kahdri. In some parts of the country the wooden throw-stick has given place to a small sharp hatchet which is thrown with great precision. The Gonds are described by Capt. Forsyth as killing peacock, hares, and small deer, by throwing the little axe, which they under Prof. Haslcy's Physical Distribution noticed further on.

1. The pre-Aryan population has been variously classified by different writers. In the uncertainty that prevails to originate the simplest groups appear to be those of the pastoral, predatory, and agricultural. Underneath these a widely diffused servile class, probably the object of all, and represented by the Mirdas, Madas, Pariahs, Pakyars and various wild tribes, all of which still retain marked peculiarity of language. In Southern India, where the Dravilian tongue has effaced all earlier dialects, these remnants of the older races have failed to acquire some of its most remarkable phonetic sounds. Bhorana speaks the insalient group of the Tohas of the Nilgiris in the second place of his enumeration. Their numbers never exceeded a thousand, and they are now much fewer. They belong closely to the pastoral division, and speak a very rude Dravilian dialect, and will be seen to fall naturally under Prof. Haslcy's Physical Distribution noticed further on.

2. In the list at p. 73, Group I. No. 4, said to be from Gujarast, is of this form.

3. The wood most preferred is that called achal warman in Tamil (Harbavichina brata), but they are also made of a species of Diuapre or ebony tree.

*ante, Vol. III. p. 132.

4. Haslcy, p. 51, Groups II. III. I have never met this name, but it nearly resembles the term khatra, a word, however, not found in the Gujarast or Marathi Dictionaries, used for the boomerang in Gujarast, and is nearly identical with the name hali or hali given to the dagger with the Hebrew handle worn in the circles by the military classes throughout India, said to be derived from Sanskrit. See Shakespeare's Hind. Dict. e. v.
invariably carry, at them, in doing which they are very expert. Similar testimony is borne by another writer to the accuracy with which they use their little hatchets “knocking over a hare at full speed with astonishing celerity and certainty of aim.” “The Baidá Gonds in the Pachmarhi Hills use a hatchet which they throw with great skill at deer and even at tigers. They always carry it in their hand.” In the Southern Marāṭha Country, and also in the hill tracts of the Madras Presidency, several varieties of clubs and sticks are in use as missiles. Some of these are merely short clubs from 2 to 3 feet long, heavy at the extremity, and go by the name of kurnalājī (See Plate, fig. 3). Others are simply sticks of various lengths strengthened by iron bands to give them weight. Two specimens from the Dharwar district, from 2 feet 7 inches to 2 feet 10 inches long, heavy, and becoming gradually more curved and wider towards the extremity, and with a steel ring at either end (see Plate, fig. 4) are said to be favourite weapons of the Béjār caste. All these varieties of the throw-stick continue in use to the present day. In the wilder tracts, on the festival of the Ugāḍī, which occurs on the first day of the solstitial year, early in March, the whole village turns out armed with every available weapon, the great portion being throw-sticks, the Kamarese term for which is yëse-gōla, and beats across the whole area of the village lands, sparing neither bird nor beast, but not venturing across the line of their own boundary. The pursuit of a wounded hare beyond these limits has led to violent affrays with the people of the neighbouring tracts, similarly engaged, sometimes ending in bloodshed, which has brought them under the cognizance of the magistrate.

Prof. Huxley, in a paper on The Geographical Distribution of the Chief Modifications of Mankind, observes that “the indigenous population of Australia presents one of the best marked of all the types or principal forms of the human race,” a description of which he gives, founded on their physical characters alone, and goes on to state that this group, to which he gives the name of Australoid, is not confined to that continent only, but includes the “so-called hill-tribes who inhabit the interior of the Dakhan in Hindustán.” To these he adds the Ancient Egyptians and their modern descendants. “For although the Egyptian has been much modified by civilization and probably by mixture, he still retains the dark skin, the black silky wavy hair, the long skull, the fleshy lips, and broadish are of the nose which we know distinguished his remote ancestors, and which cause both him and them to approach the Australian and the Dāṣyā more nearly than they do any other form of mankind.”

Now it is very remarkable that it is to these three groups that the use of the bujaram is exclusively confined, thus adding a further confirmation to the principle of an ethnological classification adopted by the author for the arrangement of the multifarious arms he was about to describe. It is true that the use of the throw-stick had disappeared from the debased inhabitants of Egypt proper, under the grinding influence of centuries of oppression. It is still, however, the national weapon of the brave and unsubdued people of the Soudan, improperly called Arabs, with whom they have nothing in common except their religion, and with whom we have recently come into much to be lamented collision.

In all the recent conflicts, armed only with their throw-sticks and short spears, they rushed, regardless of the withering fire, upon the serried ranks of their opponents, hurling their wooden missiles and endeavouring to close in with their spears. Several of these sticks, picked up at random by an officer of the Black Watch after the action at El-Teb, are now before me. They are called kalāi by the Soudaneses, assāi in Arabic, and in Central Africa trumbashe. The best formed are from 30 to 36 inches long and curved at one end (see Plate, fig. 5) a peculiarity noticed by Wilkinson and also sharp flat projectile of wood, a kind of bowserang, which is used for killing birds or hares or any small game. When the weapon is made of iron it is called kalbāda.

11 “The use of the throw-stick was very general, every amateur chasseur procuring himself on the dexterity displayed with this missile, and being made of heavy wood, flat, and offering little surface to the air in the direction of its flight, the distance to which an expert arm could throw it was considerable; though they always endeavoured to approach the birds as near as possible under cover of the bushes or reeds. It was from one foot and a quarter to two feet in length, and about one inch and a half in breadth, slightly curved at the upper end. Its general form may be inferred from one found at Thebes by Mr. Budge, from those of the Berlin Museum, and from the sculptures.” Wilkinson’s Ancient Egyptians, Vol. III. pp. 38, 39, (1837) particularly fig. 837 on p. 42.
found in the Dakhan, while others resemble the kurmuta or short club. The affinity of these tribes to the ancient Egyptians is further deducible from their language which belongs to the Hamitic stock. This consists of several groups, one of which under the general name of Bishari (the Bishareen of late newspaper correspondents) is found occupying the extensive tract between Abyssinia and Suakin, and the Red Sea and the Nile. It is described as a language of great historical interest, and is supposed to be that used in the Hieroglyphic Inscriptions of Nubia. The different dialects of which it is composed are now spoken by the Hadendoa, Aabde, Boja, and other tribes, known collectively to the Romans as the Blemmyes, and in the Middle Ages as the Beja.

The bow is very much the same among all the tribes which retain its use. It is about 6 feet long, generally of bamboo, and strung by means of a slip of cane or bamboo bark. The arrows, which are from 2½ to 3 feet long, are variously pointed. One occasion I met with a peculiarity which as far as I am aware, has not been noticed before. When exploring the Godavari in 1848 we landed to communicate with some natives in a forest on the bank, and examining their arms Colonel (now Sir Arthur) Cotton, who was of the party, observed that the feathering of their arrows was adjusted spirally. On inquiring the reason they said they had inherited the practice from their forefathers, and that it gave the arrow a more accurate flight.

The above description applies to all the bows in use among the Non-Aryan tribes, but a more elaborate sort, like those numbered 80 and 457 (Handbook, pp. 81, 114) from Travancore and Gwalior, seem to have been intended rather for show than use. Others of a composite character are alluded to in a note at the same place, but are now seldom, if ever, seen. Examples of the konauta or curved Tatar bow, made of horn, are occasionally met with, and being of foreign origin

---

12 Specimens of this description were not wanting in the India Museum, as appears by the mention in Mr. Egerton’s note at pp. 75, 81, where he refers to “Cudgels or sticks used by watchmen, robbers, and others, plain and iron-bounded.” Some of them are 4 and 4½ feet long, with which may be associated the clubs called kambas or 4 or 5 feet long carried by the Todas (well-marked typical representatives of the Australoid group), which are entirely of wood, neatly shaped, and seem to be the only weapon in use among them.

14 Since this was written Colonel Clay, late of the Madras Survey, has told me that he brought home a number of arrows feathered in this way from Gummad, which are now in the possession of Sir Robert Sinclair, Acharnsdaile Lodge, Caithness.

15 Descriptions of these, the mode in which they are and belonging to a much later period do not call for more notice here.

From these rude weapons we pass to the arms with a cutting edge, which came into use at a more advanced stage of society, when the art of smelting metal became known. One of the earliest forms was that in use among the Khondas, Kols, and Sauras known by the name of biagti, a Hindi word of Sanskrit origin. It is a sort of axe with wooden handle from 2½ to 3 feet long and upwards. They are sheathed with brass, the blades being of various shapes, each distinctive of the different sections of the tribe. Several of these are figured at p. 79 of the Handbook, where they are entered under the name of tabar, a name I have never heard as being in use among the Khondas, and being a Persian word it is not likely it should be. Other specimens mentioned in the Handbook are said to come from the Malabar Coast.

After the bow and arrow the most characteristic Hindú weapon is a sort of bill or chopper which under various forms and names is found throughout the whole of India from the Himalayas to Cape Comorin. It is the kora (a) of Naipal, the kukri (b) of the Gurkhas, the ayyalna (c) katti of the Nairs and Moplas, and the korgatti of Coor, Miasr, &c. They are often carried slung to the back equally ready for attack or defence, or for clearing a path through the forest. Parasurama, the leader of the Turanian colony which invaded the western coast, is represented as carrying a paraik (Sanskrit bill or battle-axe), which, though generally figured and translated as a battle-axe, must have been the Nair war-knife or ayyalna katti still carried by his tribe. It is the prototype to the eastward of the dd or ddo which according to Captain Lewin is in general use among the wild tribes. It is a blade about 18 inches long, narrow at the haft, square at the top, pointed, and sharpened on one side only. Speaking of the Corens, Major Tickell says, “In the hand generally carried the dd (an awkward implement, half-knife, half-strung, and the agate ring sikhir from the Pers. sikh a bowstring and gahr taking or catching), or ayman (from the Arabic root = scraping) for protecting the thumb when discharging the arrow (p. 114) two of which we possess, will be found in the lists. See Nos. 360, 457-59, 592-93.

17 Group I, Nos. 30-32, 33, 37, 39, 40-42, 31, 56.

18 Groups II, III, p. 79, Nos. 89, 90.

19 (a) Group VII, p. 100, Nos. 323, 324.

(b) Group VIII, p. 100, Nos. 314, 315, 318, 319.

(c) ayyalna-katti, literally war-knife, is from the Sanskrit ayyala, a weapon, or arms of any kind, which is derived from the root yukha to fight. It is the ayyulna of the Handbook, Groups II, III, p. 79, figs. 111, 119, 126.

20 Group IV, p. 84, Nos. 129, 144, 195, 202, 208, 213.

21 Group V, p. 84-95, Nos. 241, 242, 230, 252.

22 Wild Races of Southern India.
chopper), which, like the Lepchas of Sikhim, the Newars of Nepal, and the Bhutias of Tibet, they apply to all imaginable uses. It is not intended to follow Mr. Egerton through the minute description he gives of the rude tribes to the eastward, and I merely remark in passing that the Burmese sword appears to be derived directly from the homerang, retaining its curved form, one-half serving as a handle to the metal blade of the other.

In early Dravidian poems, especially the war songs of the Maravars, a weapon is found under the name of etul, often translated, but erroneously, a sword. There is little doubt it refers to a form of the bill. The name still lingers in part, in the term applied to the broad sacrificial knife used in some of the temples of Kil, with which the heads of the sheep, goats, and other victims are struck off at a single blow, a feat sometimes accomplished even on a buffalo. The word is used by the Todas, and is found in the iravul or axe of the Badagas.

The remaining portion of the work is devoted to the notice of arms not characteristic of any particular race or country, which have been introduced by foreigners, and that chiefly since the earlier Muhammadan conquests. Among these I propose to touch only upon such as have a special Hindi character, and have been more particularly adopted by the natives in that part of India with which I am best acquainted.

The general Hindi term for a sharp-edged instrument is katti, a word which will be seen in combination with some of the names before quoted. This I at first thought might be a Prakrit form of the Sanskrit káśtha = wood, and so deriving it from the wooden throw-stick. But this etymology is not clear. Its Dravidian parentage rests on better grounds. Dr. Oakwell,

and it survives among some of the Negro tribes figured by Schweinfurth. In the Records of the Past king Aneshehbat of the XIIth dynasty, is represented as saying to his son Oesothun, "I brought men armed with the khopesh, being myself armed with the chopper." The late George Smith in the second of his three lectures on Assyrian History delivered at the Royal Institution, April 1875, exhibited an "antique bronze weapon of the exact type of the Egyptian khopesh, such as is in no other instance represented among the Assyrian monumental stones. It is the property of Mr. Robert Bannbury, the inscription and device on which were formerly explained by Mr. Smith. The beautifully engraved device an ankh or a pastoral staff, it seems, the standard of one of the divisions of the Assyrian army, and the inscription assigns it to the reign of Assurbanipal 1. 1498-1478 B.C., of the age of 35 centuries. It is probably the oldest sword in the world." - Times, 20th April 1875.

Chiefs of the predatory tribes of the Kallars and Marawars, who protect the villages of the plains from plunder by placing one of their followers in each village as watchman or sentinel, in return for the payment of blackmail.

24 Jour. Bengal. As. Soc.

25 These possess much ethnological interest, relate generally to plundering raids for driving off the cattle of neighbouring villages, and led to fierce encounters. Many of the virgula or monumental stones represent these cattle fights. Specimens of the poems are preserved in old Tamil grammars like the Nindividual, and are well deserving of being made more generally known in an English dress, with a critical examination of their contents.

26 The similarity of all the forms above enumerated to those found among other peoples of Turanian descent, seem to point to a common origin in Central Asia. Of this we have an example in the Persian khoy (kori) a specimen of which, obtained from Spain, is in the Collection of General Fitz-Rivers. It exactly resembles the etul. Leadell and Scott, Greek Lexicon, s. v., render it "a chopper, cleaver, kitchen knife," also "a broad curved knife like our bill used by the Thessalians, according to Herodotus (Xenoph., Cyropedia, 2, 1, 2, 6, 2, 10). Cf. Souver (nirupa), a weapon used by the Scythian tribes, also by the Persian, Khurasan, &c.; a single-edged axe or bill." The ancient Egyptians seem to have had a somewhat similar weapon represented in the paintings of the tombs, under the root kaji to cut, inserts katti, a knife, a sword, and refers to the Sanskrit krit to cut, and its many derivatives. Then again we have the Tamil kattai = trunk of a tree or block of wood. The most characteristic weapon of this description that I have seen is the pudie. In the Handbook it is called the gauntlet sword of the Marathah Cavalry, in which the arm to the elbow is protected by a steel gauntlet fixed to the blade of the weapon (Nos. 403, 404). I do not remember a single instance in which it formed part of the equipment of the Marathah trooper in the riasita of Irregular Cavalry in the Dakhan or Gujarä, indeed it appears to be a weapon unsuitable for use on horseback. I have only seen it carried by men on foot, especially athletes, who declare that with it a single warrior may defend himself against a host. The mode of doing so is shown by an exercise in which the swordsman, holding his weapon horizontally, whirls about with rapid gyrations making sweeping cuts and giving point on every side. A skilful feat performed in this exhibition is described on p. 149.

The khanjar is the national sword of Orissa, and especially of a class of military landholders in that province known as Khanjits, who, like the Munudwadigds of the South were bound to protect the inhabitants of the plains from the attacks of marauders. The khanjar is a straight two-edged sword about 3 or 34 feet long, becoming broader at the extremity which is rounded (Handbook, No. 521). The term soompar is applied in the Dakhan to a weapon of somewhat remarkable form, probably peculiar to that locality. It varies in length from 2 to 3 feet, becoming broader towards the end near which it curves outward, terminating in a sharp point. On the back, about 4 or 5 inches from the hilt is a round button-like knob, the use of which is not apparent.
INDIAN ARMS.

2. Valai tâdi of the Karnâjâk.
3. Steel ditto.
4. Valai tâdi, variety.
5. Throw-stick of the Soudan.
6. Imaginary sketch of a Sosanpâta Blade.
7. Monumental Stone at Guntâr.
8. Figure on the Kadambâswar Temple in the Fort at Reţtihalâli, Kōç Tâlukâ, Dhârâwâj, S.M.C.
This addition is also found on some of the broad sacrificial wāli blades. A weapon of the same name is mentioned in the Handbook (p. 104, No. 578 T); but neither the figure nor the description—
"A short, broad, heavy sword, slightly bent, point inclining upwards; worn by all ranks in Hindustān,"—agrees with the examples I have seen. The kind more particularly referred to is now very rare. The best that have come under my observation was in the collection of the Nawāb of the Karnatic at Chespāk, a figure of which is not available, but a rough outline is given from memory (see Plate, fig. 6). A specimen specially obtained from Haidarābād proved on receipt to be like No. 578 T. The blade is 2½ feet long, somewhat more curved, and wants the knob on the back. It is seen, therefore, to belong to the Haidarābād type, and that the sword known by the same name in the Dakhan is very different. The accompanying rough sketch of a virgal (see Plate, fig. 7) or monument about 3 feet high, near Guntur, exhibits the Dakhan sawantā or in a very rude and somewhat exaggerated form. A fourth kind of sword peculiar to the south has a long, straight, sharp-pointed two-edged blade, 3 feet 7 inches long, with a handle so small that it will only admit half the hand, and a broad hilt sloping outwards. In a statue of the founder of the Yādava dynasty of Dvārasamudra, which forms part of a remarkable group, more than once repeated in the Kōj Tālūkā of the Southern Marathā country, the hero is shown in the act of piercing a tiger, and holding a sword of this description with his two first fingers outside the hilt, and the rest of his hand within (see Plate, fig. 8). Believing the hilt was intended to protect the hand from the weapon of an opponent, it seemed doubtful whether the sculptor had not been careless in thus representing the grasp of the hand, but the following extract from the work of an old master-at-arms clears up the difficulty, and indicates the accuracy of the sculptor. "An Englishman cannot thrust straight with the sword because the hilt will not suffer him to put the forefinger over the crose, nor to put the thumb upon the blade, nor to hold the pummel in the hand; whereby we are necessitated to hold fast the handle in the hand; by reason whereof we are driven to thrust both compass and short (sic), whereas with the rapier they can thrust both straight and much farther than we can with the sword because of the hilt, and these by the reasons they make against the sword." This weapon is very uncommon. I have only once met with what I deemed to be an exemplar of it. The long, straight cut-and-thrust blade found among the local militia known as Shetsanawdā or Khāls, called farangī or farangī (No. 523 and p. 56 note 1) is of European manufacture, and was largely introduced by the Portuguese after the establishment of their trade in Malabar. They are often stamped with what appear to be single letters far apart, but not legible, as if impressed by workmen copying marks they did not understand. It is still commonly met with among all classes in the south, but chiefly among the village soldiery before mentioned. Bhavāt, the sword of Śiva, is a long straight weapon slightly curved and double-edged towards the point, resembling the kind known in Upper India as the sīrohi, and the regulation blade carried by the British Cavalry. At a Darbār held by the Hon'ble Mountstuart Elphinstone at Bīlmātpur about 1823, at which I was present, the Rājā of Sattār exhibited this weapon, and at the same time the bihār, or tiger-claw, with which his ancestor treacherously slew Āfzul Khān, the Muḥammadān general of Bījaḍār. The weapon so-called consists of four sharp curved claws resting at the base of each finger on a transverse steel band, terminating in a ring fitted to the fore and little finger, and looks externally simply like an ornament, while the weapon remains concealed in the palm. This last was subsequently presented, at another Darbār, to Sir John Malcolm, by whom it was probably given to the India Museum, and now appears in the Handbook as No. 476.

A variety of names are given to the long straight blades comprehended under the general name of sāif, sāmsher, &c. Tālīdār is a general term applied to shorter and more or less curved side arms, while those that are lighter and shorter still are often styled nīmchās. The 'abbās is an elegant curved Persian scimitar, so called from the name 'Abbās often stamped on the blade. The name sāmsher given to them in the lists is rather a generic term equivalent to saber. The blades are sometimes richly "ornamented (like No. 654, p. 132), on both sides with numerous figures of animals, incised and damascened in gold." In a similar example now before me the figures are in relief, and display on one side two elephants butting, a horseman pursuing a stag, two buffaloes fighting, a chīla killing a deer, two lions opposite each other, an elephant and a deer, a buffalo, a tiger killing a buffalo. On the other side a horseman pursuing a deer, a tiger suckling its young one, two lions face to face, a tiger on its back killing a deer, a tiger killing a deer, the latter on its back, tiger killing a calf and three other calves. The tāhā

87 The Paradoxes of Defence. By George Silver (a Master of Eton). 1899, 4to.

88 P. 115. See also p. 27.
a very broad, much curved blade, is a favourite weapon of the Pathans. On one occasion a sword ingeniously formed out of the snout of the saw-fish (Pristis), was seen in the hands of a soldier in a hill fort in Maisur not far from Chitaldurg. A great variety of daggers are carried in the sash or waist band. The most common in South India are the bāstār before mentioned, and the bāsk or bichāwet. The first is specially affected by the military classes. It is of various sizes, but always with the same handle, and more or less ornamented. I have one with two blades side by side, but not otherwise remarkable. The second is a small dagger, varying a good deal in form, but all more or less curved. Many others of foreign origin are met with, as the Persian peshkāba and khānjar, the Arab jambiya, the long Afghan knife and the Leeshī dagger with a long broad double edged blade, as also smaller knives with the general name of chaurī or kattī.

I will here refer to the light thrown on the origin of the numerous sword-blades known by the name of farhangīs by the description given in a former number of the Indian Antiquary of the Armoury at Tanjore. On the death of the last Rāja in 1855 the whole of the personal and landed property was made over to his widow, with the exception of the armoury. This was found to be in a most neglected condition. Arms of all descriptions were lying heaped together on the sunk floor of an out-building in the precincts of the palace, called the music-hall, but apparently used for athletic sports, and surrounded by a gallery for spectators.

Hundreds of swords of every kind lay caked together and covered with rust. Many of those that could be cleaned were found to be of choice manufacture and highly ornamented. The number of straight cut-and-thrust blades was very great, which Mr. Wallhouse, quoting a former writer (ante, Vol. II. p. 216), states to have derived their name of "phirangīs" from the Portuguese, by whom they were either introduced from Europe, or else made in imitation of such imported swords.

In addition to these were numerous bāstārs with ornamented handles fitted to blades formed of pieces of European swords. The design and execution of these handles is described as being of the highest artistic merit. "The fancy shown is endless and the execution minute and admirable." * * * * * "One has the grasp covered by a shield-shaped guard of pierced steel, bearing a griffin on each outer rim, from whose backs small blades project on each side at right angles to the central blade, which bears this inscription on both sides:—

∞ ∞ INI ∞ DOMINI ∞ X.

Another fantastic dagger has three long narrow blades parallel to one another, the middle one longest, and on it are the letters E D B. A bāstār with a handle throughout of beautiful workmanship, the open work sides an arrangement of griffins, phomixes, and clustered fishes, and the holddasts of the blade each four fancifully grouped parrots, bears on one side the blade, which is broad and three-channelled, the letters S M V N, and on the other C V M, with a human face in a crescent further up. A second bāstār has the handle covered with a guard representing a cobra with expanded hood between two rampant griffins; the long narrow blade exhibits a single deep groove "in which on one side are the letters I O H A N I S * V I L, and on the other four or five indistinct letters, and then A L I V N. A third with a handsome well-wrought steel hilt, after the thick layer of rust that coated it had been removed, disclosed to my surprise, in two deep channels on each side the blade the well-known name

ANDREA
FERARA."

The number of arrows and arrow-heads scattered about is stated to have been very large, "the former as usual, of reeds, with bone or ivory nocks and spike-heads of all possible shapes, short and lengthened, rounded, three or four-sided, channelled, or bulging in the centre; many were barbed, and many flat-tipped or ending in small globes,—perhaps for killing birds without breaking the skin; and there were some headed with hollow brass balls perforated with three or four holes, which were said to be filled with some inflammable composition, and shot burning on to roofs and into houses. Under the head each arrow was elaborately gilt and painted for six inches down the stem, and also for the same length above the nock, and each bore above the feathers an inscription of two lines in Marāṭhī characters in gold," &c. &c.

Several kinds of spears are included in the lists. The most common are the long lance or bāchī carried by the Marāṭhā Śilahārā, and the Irregular Musalmān troopers of the Dakhan. It has a bamboo shaft 10 to 12 feet long, and a small steel head with a long iron ferrule at the lower end for sticking it into the ground. The ballām or bādd is a strong pike 8 or 9 feet long, with a heavy sometimes curved, steel head, a formidable weapon, and the favourite arm among the Polygar foot
soldiers which has been used with much effect in defending their strongholds. A shorter javelin, sometimes seen, but not used in the South, where it is attributed to the Rajputs, is the sadh, a slender iron shaft grasped in the middle, with a thong attached. A specimen before me is 6 feet 9 inches long, 26 inches of which form the quadrangular point.

It remains only to notice a few miscellaneous weapons. The parring stick formerly mentioned has developed into a more artificial form called the saadā or mediā. The ringed shaft of one before me is 22 inches long, terminating in a turned knob at one end, and in a sharp spear point at the other, which is 5 inches more. The handle, about the middle of the shaft, is protected by an unarmored guard. Another form called the saingaṭ, made of two antelope horns, is 26 inches long, joined at their base by a handle from which projects a short blade, the extremities shod with pointed javelin heads, each about 4 inches long.

Here, too, I may mention the flail, a specimen of which from Southern India has a handle or shaft 15 inches long, from the end of which depend two chains 19 inches long, attached by a ring, each ending in a ball. A similar weapon appears to have been used by the ancient Britons of which I remember to have seen a figure in a pictorial History of England.

Blue clad Sikh mercenaries are sometimes met carrying on their conical turbans half a dozen steel chakras or more, which they discharge with considerable accuracy.

Of the two concluding chapters the first is devoted to a description of the martial exercises and games practised at the Dassara (Daśākṛa) and on other festive occasions at Native courts. These have now fallen somewhat into disuse in the South, but in many villages in the Marāthā country, and in most Native Regiments, gymnasia or tliim-khānas are kept up for the practice of athletic exercises by the young men of the place. The principal of these are the ādand, in which the hands are placed on the ground and then bending down until the chest almost touches the floor, the body is raised by straightening the arms; the saingaṭ, in which two heavy clubs are used in a series of motions somewhat like dumbbells; the leem or bow with a steel chain for a string, which is pulled by extending either arm alternately with great force. The proficient

multiplies the performance of each of these exercises as his strength allows until he can repeat them from fifty to a hundred times or even more, by means of which his muscular powers become fully developed and fit him to compete with advantage in their favourite game of wrestling. On festive occasions the athletes of a district meet to contend for the mastery, in which one or two of the most successful become recognised as the rural champions of the neighbourhood.

The last chapter treats of artillery and describes some of the most remarkable pieces of ordnance that have been cast in India.

The lists likewise contain the names of some varieties of the matchlock, as karol, a term new to me, the carbine of Haidar 'Ali's cavalry; jāzūṭ— a wall-piece, whence perhaps the Dakhanī jinadāl. A piece heavier than the common matchlock is found amongst the Marāwarās of Śivagāṅga and is called sarbojī, which may have some connection with the name of the neighbouring ruler of Tanjore (Serfoji vulgo Sarboji). A still larger kind belonging to the same part of the country is the sanjali.

The work is interspersed with much interesting information regarding the warlike habits and practices of different races, and I feel assured that it will be found very instructive, as well as useful, to the readers of the Indian Antiquary.

Want of sight will account for inaccuracies which may have crept into the foregoing descriptions and particularly in referring to the figures.

WALTER ELLIOT, K.C.S.I.

BERUNI'S INDICA.

Preliminary Notice.

Ever since Reimann's Etudes and Mémoire made fragments of Berunī's Indica accessible, the great importance of his work for the political and literary history of India has been generally recognized, and the desire to see the whole made publicius juris has been frequently expressed. It will be, therefore, welcome news to all who feel an interest in India, that Professor Sachau, to whom we owe an excellent edition and translation of Berunī's Chronology, has almost finished printing the text of the Indica, and that a large portion of his translation will shortly be ready for the press. An examination of Professor Sachau's MS., which he kindly placed at my disposal, has convinced

30 Of Sainull's Handbook, No. 557. In the Soudan a curved stick, with a hollow in the centre to protect the hand, called a queuey is used for the same purpose. Another called the saadā is shaped like a bow and receives the blow of the club on the string. Schweinfurth's Heart of Africa, Vol. I. p. 155.
me that Reinaud's extracts have by no means exhausted all the interesting information contained in Bérnū's book. On the contrary, there is not a branch of Indo-logy—with, perhaps, the single exception of Vedic studies—which will not gain very considerably by its publication. Bérnū was himself a Sanskrit scholar. He studied some Śāstras, especially astronomy and mathematics, deeply, possessed a superficial knowledge of others, and made careful inquiries among the best Pāṇḍits of his time, regarding the remainder and regarding the geography and the history of India. Though he complains of the want of communicativeness on the part of the Brāhmaṇs, which he ascribes partly to their arrogant contempt for all but their own caste-fellows, and partly to their hostility towards the Muhammadan invaders of their country, he has nevertheless collected more, and more correct, information than any foreigner who wrote before the great opening-up of Brāhmaṇical India under British rule. His wide culture, his high scientific attainments, and his full acquaintance with the literature of the Western nations, enabled him to estimate Hindī science and learning at their proper value, and permitted him to draw interesting parallels. Both the accounts left us by the Greeks and by the Chinese pilgrims read, by the side of Bérnū's work, like children's books, or the compilations of uneducated and superstitious men, who marvelled at the strange world into which they had fallen, but understood its true character very little. Bérnū's style is somewhat stiff and quaint, and he often devotes much space to very abstruse matters; yet his book will possess considerable interest even for the general reader, and many passages will be found to be highly amusing. In order to show how much the specialist may gain from a careful study of the Indica, I may give, as an instance, the remarks on the Śāhīda of Ugrabhūti, which explains the Kāntātra Grammar. It is the last on the list of Indian grammatical compositions, and Bérnū adds the following account of the manner in which it became famous:—Ugrabhūti, he says, was, according to common report, the spiritual guide and teacher of the reigning Shāh, Anandapāla, the son of Jayapāla. When he had composed his work, he sent it to Kāṣmīr for the approval of the learned. The latter, "being hitherto conservative," rejected it as useless; and refused to study it. Thereupon he removed his royal pupil to forward 20,000 dirhams and presents of equal value," to be distributed among those who would learn and teach it. The consequence was that the Kāṣmīrians, "showing the meanness of their avarice," immediately recanted their former opinion, and not only adopted the Śāhīda as their class-book, but wrote numerous commentaries on it. Now this story, which, at first sight, reads like a spiteful anecdote, can easily be shown to be quite true, and it enlightens us on various difficult points. As it is the custom in Northern India to pronounce sa instead of șa and kha instead of șha, it is evident that the Śāhīda is the Śāhīda commentary on the Kāntātra, copies of which I brought from Kāṣmīr in 1875. The first service which Bérnū does us is that he gives us its date, the beginning of the 11th century. But he teaches us still more. The Śāhīda is at present only found in Kāṣmīr, where several commentaries on it, written by Kāṣmīrians are extant, and where it is a favourite class-book. To any one acquainted with the literary history of Kāṣmīr, it must be clear that the Kāntātra was not the grammar originally studied in the valley, but that in earlier times the works of Pāṇini's school alone were studied and commented on. This struck me very much at the time of my visit, and I inquired in vain for the causes of the change. Bérnū's story now furnishes an easy explanation, and its truth is confirmed by the state of things in Kāṣmīr. The same story teaches us further that royal favour and liberality were employed in the interests of mere school-books, and that the needy Pāṇḍits easily succumbed to such influences. Ugrabhūti's case was probably not the only one of its kind, and it will be well for the historian of Sanskrit literature if he does not trust too exclusively to the theory of natural development, but is also in other cases on the look-out for similar external influences, which the anecdotes of the Pāṇḍits mention not rarely. Finally, the assertion, made in Jain and Brāhmaṇical Prabandhas, that, during the 10th, 11th and 12th centuries, the sūbhas of the Kāṣmīrian Pāṇḍits were considered literary courts of appeal, becomes now credible. The same story is told regarding the Naishadhaśaya, which its author is said to have taken to Kāṣmīr, and to have placed in the lap of the goddess Śrīdā. Hitherto, I must confess, I doubted that this narrative had any foundation in truth, but now it seems very probable.

G. Bühler.
THE SASBAHU TEMPLE INSCRIPTION OF MAHIPALA.

OF VIKRAMA-SAMVAT 1150.

BY PROFESSOR F. KIELHORN; GÖTTINGEN.

On a projecting point near the middle of the eastern wall of the fortress of Gwalior there are two temples, which the people call "the temple of the mother-in-law and her daughter-in-law." 1 By our own countrymen," so General Cunningham writes, (Archeol. Surv. Ind. Vol. II. p. 357), "they are generally called the 'great Jain temple,' and the 'small Jain temple'; but, as the sculptures, which can be recognised both inside and outside of the larger temple, are chiefly confined to the members of the Hindu triad and their consorts, I conclude that the temple must belong to the Brahmanical worship. Inside the portico there is a long inscription, No. VII., on two slabs, with the date of S. 1150, or A.D. 1093."

An edition of this inscription was attempted, from a facsimile supplied by General Cunningham, by Dr. Rajendralal in the Jour. Beng. As. Soc. Vol. XXXI. p. 411 ff.; but owing, I assume, to the imperfect state of the materials from which he was working, the text printed by Dr. Rajendralal is so full of errors and omissions that it may be considered almost valueless. Dr. Rajendralal has also given (loc. cit. p. 400 ff.) an abstract of the contents of the inscription, which, as in several particulars it cannot be made to agree with the Sanskrit text published by him, must have been based on the 'Thrift' Hindvi translation, prepared for the late Major Markham Kittoo,' which is mentioned by him on page 400. Misled probably by the popular belief or by the name Padmanath, which occurs in the opening blessing and in the body of the inscription, Dr. Rajendralal has pronounced the temple, in which the inscription is, to be a Jain temple, and he has told how, during the reign of the king Mahipala, a figure of Padmanath—a Jain divinity—came suddenly into existence, and how Mahipala dedicated it to the temple in the doorway of which the inscription under notice was recorded. This statement has already been discredited by General Cunningham on the evidence of the sculptures; and (like other statements which it is unnecessary to mention here) it is distinctly refuted by the inscription itself, in which it is recorded again and again, that the temple was built for the worship of Vishnu.

My own transcript of this very interesting and valuable inscription has been made from an estampepage, which at my request was prepared for me, on his recent visit to Gwalior, by Dr. Hultsch, on whom my best thanks are due for the great trouble which he has taken on my behalf. 2 I have finally revised my reading by the photo-lithograph, prepared from an ink-impression sent to Mr. Fleet by General Cunningham, and published herewith. The estampepage shows—what indeed could not have been inferred from Dr. Rajendralal's account—that the inscription has on the whole been well preserved; it no doubt contains many passages, sometimes extending over half a dozen letters, where the stone is worn away, and the deciphering of which has on that account been very troublesome; yet in the whole of the inscription there is not a single akshara of which some traces at least are not visible; and I venture to hope that the new transcript will be found to contain a complete and trustworthy copy of the original.

As has been stated above, the inscription, which is in Sanskrit, is engraved on two slabs. The writing on the first slab covers 5' 1½" in length and 1' 6½" in height; that on the second slab 5' 4" in length and 1' 6" in height. Each portion contains twenty-one lines; but the writing in the last line of the second part

1 I owe the words in brackets to Mr. Fleet. The current name of the temple has therefore nothing to do with sahara-brisham hundred-armed.

2 On p. 400 Dr. Rajendralal writes: "The composer of the deed was one Manikashta of the Bharadwaja gotra; on p. 418, lines 4 and 8, we read निश्चितत्वम्. He precedes—"and his writer Digambaraka. Its engraving needed the services of three artists, Padma, son of Deva-senifer, Sinhavaja and Mahula." Of these five names, only that of Padma occurs in the Sanskrit text on p. 418.
covers only about one-third of the length of the whole line. The inscription has been carefully and beautifully written in Devanāgarī characters by one Yaśodēvā-Digambharārka, 'the son of the Digambaras' (V. 106) who is described as a poet in all languages, and engraved by the three artists Padma, the son of Dāvavāmī, Sīhavāj, and Māhāla, whose names are given in the concluding lines. As regards the forms of the letters, I may state that the sign for _='is frequently not to be distinguished from that for _='and that I often have found it difficult to distinguish the sign for _='and _='and those for _='and _='_. Besides, I may draw attention to the sign for  _('which is used in śāntiśiva in L. 1, and in ānurādhaka in L. 11, and to that for _='which occurs in L. 3, 18, and 22 at the beginning of L. 3. Lastly, a peculiar sign for _='is used in the word Śānti in L. 9.

On the spelling of the words, and on the observation of the rules of Sanskrit, but few remarks are required. Concerning the rules of euphony, it may be observed that a final _='has not been changed to Anusvāra before a following initial _='in L. 3, Śūlānāra, L. 18 śūlānāra-nārakā, and L. 25 śūlānāra-pāra; and that _='wherever it occurs, has been changed to _=', even in L. 6, śāntiśiva, L. 9, śāntiśiva, and L. 22, śāntiśiva. As regards the spelling, we find _='for _='everywhere, except in L. 5 śāntiśiva; but we have once _='for _=' in L. 1. We have the danda for the palatal sibilant in āntiśiva in L. 8, āntiśiva in L. 30, āntiśiva in L. 40, and a similar use of śāntiśiva in L. 19, śāntiśiva in L. 40, śāntiśiva in L. 26, śāntiśiva in L. 34, śāntiśiva in L. 29, śāntiśiva in L. 19, śāntiśiva in L. 12 and 25, śāntiśiva in L. 13, śāntiśiva in L. 5, 14, 23, and 29, and śāntiśiva in L. 29; but we have also āntiśiva in L. 29, āntiśiva in L. 28, āntiśiva in L. 28, śāntiśiva in L. 39, śāntiśiva in L. 13, śāntiśiva in L. 35, and śāntiśiva in L. 23. On the other hand, we find the palatal sibilant used for the dental sibilant in śūlānāra in L. 10 for śūlānāra, and śūlānāra in L. 34 for śūlānāra (against śūlānāra in L. 10). Lastly, the Jihādāvīṣa has been employed instead of the lingual sibilant in śūlānāra, śūlānāra, and śūlānāra, for śūlānāra, śūlānāra, and śūlānāra, all in L. 36.

With the exception of the introductory ओके, Yaśodēvā, it is stated in the inscription, was a friend of Maṇiśākha, the composer of the inscription, and of one Pratīpa-Laṅkēśvarākā, who was a friend of both.

He is himself the composer of the Gwalior inscription No. VIII, which will be re-edited by Dr. Hultsch.
is exceedingly scanty, and may be summed up as follows:

Verse 5.—In the Kachchhəpəhəta (or, v. 57, Kachchhəpəhə) race there was a prince (1) Lakəhmana.

Verses 6-7.—He had a son (2) Vajrədəman, who defeated the ruler of Gədhinəlara (Kənyakubja), and conquered the fort of Gəpədəri (Gwalior).

Verse 8.—He was succeeded by (3) Maŋalaraļa.

Verses 9-11.—(4) Kiṭṭiraja, who succeeded him, defeated the prince of Məlava. He built a temple of Siva in the town of Siməhəpənəlyə.

Verses 12-13.—His son was (5) Mulađəva, also called Bhuvanəpələ, and Trailokyamalla.

Verses 14-15.—Mulađəva’s son, from his queen Dəvərətə, was (6) Dəvəpələ.

Verses 16-30.—(7) Padmapala, his son, carried on wars in all quarters; his armies are said to have marched even to the southernmost point of India. He died young.

Verses 31-67.—He was succeeded by (8) Mahipala, also called Bhuvanəkaṃalla, who being described as son of Suryapala (Suryapalasya śrīnah, or, v. 51, Suryajainita, and, v. 58, Suryanipambadana) and bhədəri of Padmapala, probably was a cousin of the latter. Nothing definite of any historical importance is said of Mahipala, unless there is in v. 50 an allusion to some war in which a prince of the Gandharvas was defeated by him. As the inscription is dated Vikrama-Samvat 1160, and as the temple at which it is put up was only completed immediately after his coronation, we may assume that the latter event took place not long before V.S. 1150. Mahipala’s minister was Gaunara (verses 109 and 110), the son, it appears, of Yəgəvərən (v. 77).

The temple, at which the inscription is put up, was built for and dedicated to Vishnu. This appears not only from the introductory verses (1-4), which invoke the blessings of Hari and of Aniruddha, an incarnation of Vishnu, but also from the distinct statements in verses 26 and 28, where the temple is described as bhavanam Harē and Hari-sadanam.

The edifice of Hari, or ‘seat of Hari,’ and from the references to Vishnu, his wife Lakshmi, and his incarnations, in the later portion of the inscription. That the name Padmanatha, in the Simnəhə Padmanəlala with which the inscription opens, must be taken to be a local name of Vishnu (suggested by such ordinary names of that deity as Padmanabha, Padmagarbeta, Padmanabha, Padmam) clearly appears from a comparison of the verses 30 and 69. In the former verse we read that Padmapala died when the god, who from what precedes can be no other than Vishnu, was only half completed; and in v. 69 we are told that Mahipala, so soon as he had been crowned, vowed to complete Padmanatha, and that he kept his vow (V. 70). It is easy to conjecture that this particular name was chosen to honour the memory of the prince Padmapala (see V. 1) who had begun the erection of the temple and buildings connected therewith, and had, it appears (see V. 30), designed the charitable institutions which were completed only by his successor.

What these charitable institutions were and how they were kept up, what portion of his revenues Mahipala devoted to the erection of the temple-buildings, what idols he gave to the temple, what ornaments he presented them with, what arrangements he made and what implements he furnished for their worship,—has been fully stated in verses 71-102 of the inscription, and need not be repeated here. I will only add, that I am unable to identify the village of Pahana-pali (v. 75), the income from which was divided into 50 shares, of which a few were allotted to the god, and by far the greater number to Brahma. The statement, in the original publication, that ‘assignments of land in the district of Brahmapura were made for the support of the temple’ rests on a misunderstanding.

The contents of the concluding portion of the inscription (verses 103-112) have already been given above.

In my transcript I have enclosed within brackets all aksharas which are indistinct in the estampe, from which I have transcribed the text; all those aksharas, about which I am at all doubtful, I have pointed out in the notes.

I trust I shall not be blamed for having omitted from my translation the verses 35-60. A literal translation of these verses, which frequently remind one of passages in the Kādambārī and Vaidyāvahā, would have been impossible or would have required more notes than the verses deserve. Besides, to the Sanskrit scholar these verses will offer no difficulty; and for the historian unacquainted with Sanskrit the short abstract of their contents which I have inserted between the translation of vv. 34 and 61, will, I believe, be sufficient.

---

(V. 4.)—What he wears here on his crest is not a piece of sapphire, nor is the holy one who glitters here made of pearl-stone. His body is rendered pale by the long separation from Ushá (and) he even now carries the blue lotus which had the good fortune of forming her ear-ornament.

(V. 5.)—There was a prince Lakshmana, an ornament of the Kachchhapagháta race, surpassing in manliness the son of Indra (and) an object of reverence for all princes. Wielding his bow (and) promoting the welfare of his subjects, he unabated, like Prithu, made the earth obedient to his will, after he had by force extinguished the mighty princes (as Prithu had uprooted the mountains.)

(V. 6.)—From him sprang the illustrious prince Vajradáman, resembling the wielder of the thunderbolt. When by honest means he had put down the rising valour of the ruler of Gádhinagara, his proclamation-drum, which fulfilled his vow of heroism, resounded in the fort of Gópadri, conquered in battle by his irresistible strong arm.

(V. 7.)—Knowing that he surely was not outmatched by any prince on the earth, he from curiosity had himself weighed of his own accord against donations of pure gold.

(V. 8.)—Then came the ruler of men named Mañjalárája, (who scattered) his enemies as the thousand-rayed (sun) does the darkness. As he for ever paid worship to the Lord (Iśvara), so he was worshipped by thousands of great lords.

(V. 9.)—Then came the lord of men, the illustrious Kirttirája. Whenever he marched forth, the sheets of dust rising from his armies took away, wonderful (to relate), the colour of the sun and at the same time that of the enemy.

(V. 10.)—Shall we tell the wondrous tale of this lord of men? By this ocean of bravery was the countless host of the prince of Málava

Akhikára, self-consciousness.—Goldstücker's Dictionary, s.v. अनिष्ट.

The exact meaning of गुणार्थ, which occurs again in v. 4., is unknown to me. The word is not given in our dictionaries.

See Vishnu-Purána I. 13, 82; and e.g. Kádañcabari, Calé Ed., I. p. 5 उपर इस वाक्ओश्चालितविनम्प्राप्तसाधिता।

Gádhinagara is Kánya-kubja.

The word for 'sun' also means 'friend.'
conquered in battle. When that (prince) had met with defeat, the villagers surrounded their houses with the multitudes of spears, which through fear had fallen from the hands (of his soldiers) in every direction.

(V. 11.)—In the town of Simhapāniya he caused to be built a wonderful temple of the lord of Pārvatī, which shines like a column of fame.

(V. 12.)—From him was born the lord of the earth, the high-minded Māla dēva, known as Bhuvanapāla, causing joy to the world. His body was decorated with the irreproachable marks of a universal sovereign; his fame was equal to Manu's.

(V. 13.)—When this powerful Tālākya-malla protected the whole earth whose other rulers had been destroyed, the world contained no rival of his.

(V. 14.)—His queen was Devavrata, as Lakshmi (is the wife) of Hari. From her was born to that lord of the earth, the illustrious Devapāla.

(V. 15.)—He surpassed Karpa by his generosity, the son of Prithā by his knowledge of the bow, and Dharmarāja by his truthfulness. He as a youth was the abode of modesty.

(V. 16.)—Through the religious merits of his subjects he had a son whose power of intellect was free from blemish, the illustrious lord Padmapāla; like Māndākini he was the ornament of universal sovereigns. Thinking as it were 'how can, even though I am master, another levy taxes?' he on his expeditions in the various quarters again and again obstructed the fierce-rayed (sun) with the thick (clouds of) dust (raised) by his armies.

(V. 17.)—After his troops of soldiers and horse had subdued the other quarters, they in due course marched to the southern region;

(and) when the night-walkers saw the masses of dust, resembling uplifted mountains, incessantly raised up by them (and) falling down on both sides of the ocean, they trembled, thinking that a lofty bridge was again being built.

(V. 18.)—Since the host of the gods had been deprived of its colour by his fame, beautiful like the splendour of the moon, surely all the wives of the immortals, of Indra and the rest, not going near their lovers from fear lest they should err and act improperly, envied now Śrī and Gaurī, who at once were united with the body of their husband.

(V. 19.)—Who has anywhere seen the trees radiant with every wished-for fruit? Who anywhere the cows yielding desires? Who anywhere the gems granting the object of one's wishes? (But) who has observed that any person's hopes were not fulfilled by that lord? A distinguished hero then is an excellent garden, which contains such things even as trees of paradise.

(V. 20.)—His doing it was, that the hands of robbers, even before they had heard of prince Pādma, with bodies unclad on account of their wretchedness, complained every moment in the forests that the earth was well protected since, alas, what used not to be, such nakedness had come upon them.

(V. 21.)—While he was ruling the earth, turning round existed (only) in potter's wheels, covetousness (only) in the acquisition of religious merit, hard were (only) the round breasts.

(V. 22.)—Knowing that to press the highly virtuous is not approved of, and also that it is wrong to be familiar with the merciless, he laid hold neither of the bow nor of the sword, nevertheless he defeated his enemies.

It might almost appear as if those expeditions to the south were mere poetical ornaments.

Śrī 'Majesty' and Gaurī 'the Earth' are represented as the wives of the king.

The same idea occurs in verse 21 (really v. 20) of the inscription published Jour. Beng. As. Soc. Vol. VII, P. 1. p. 167F, where the actual reading on the stone is as follows:

Puṣkaraṇīganātha dīkapāla (Gītadēva) Puṣkaraṇīganātha dīkapāla (Gītadēva)
(V. 23.)—His sword, covered with the drops of blood which at once began to flow, scattered on the battle-fields all around the seed as it were of the affection of the people and of his fame, with the crest-jewels of the hostile princes.

(V. 24.)—Because the wives of his enemies found out gold-lotuses in the forest, for this reason did the bees not find out the gold-lotus in his face.

(V. 25.)—Having reflected that fortune and life are unstable like the flood of a river, he set his mind on the performance of pious deeds, desirous of gathering the fruit of those two.

(V. 26.)—This supporter of his subjects, who was an ornament of the earth, who knew the law and was like unto the gods, caused that edifice of Hari to be built. How can I possibly with words tell its height? The lion who has ascended its top, means to devour, it seems, the deer in the moon.

(V. 27.)—From the top of the gold-ornamented staff on this temple, which rivals the mountain of the moon-carrying (Siva), there constantly (waves) this holy flag, white as the moon; hanging down at the setting of the wind it appears like the Ganges when, falling down from heaven, it enters the thickly-matted tawny-bright hair of the god of gods Sambhu, whose body is coated with ashes.

(V. 28.)—This is that mundane egg; the Lotus-born (Brahman) will be here, whom again we here shall carry on our vehicle through the air: surely those swans are ever present at the lofty seat of Hari, after they have admitted it to be the golden egg unopened.

(V. 29.)—Within the glittering structure stands the lord of Lakshmi, high like the golden mountain (Méru); (it is) a dwelling of the Sea-born (goddess Lakshmi) supporting the most excellent of the twice-born.

taining the man-lion; its maker was chosen by all the gods, who have found (here) a home, and so was this temple on the surface of the earth. Oh, may the whole turn out to be fit for Hari!

(V. 30.)—When the god was (only) half completed, (and) when eight of the most excellent twice-born had been installed, Padma Pála, still a youth, through the adversity of fortune obtained a seat on the lap of Sanākrandana.

(V. 31.)—Then his brother, the son of Sárya Pála, the illustrious Mahipála Déva, the abode of good deeds, became ruler at the glorious Gopári. When they had come to him of wide-spread fame, bravery and generosity, which in the absence of the son of Hari (Arjuna) and the son of the Sun (Karna) had been in distress, had at last (again) found a master.

(V. 32.)—Engaged in the creation of ministers, in the preservation of the Brahmanas, and in the destruction of his enemies, that prince partook of the nature of Brahman, Vishnu, and Siva.

(V. 33.)—When this king, a treasury of splendour, protected the broad earth, none else was endowed with splendour but the sun, none else was a king but the moon.

(V. 34.)—When his coronation-ceremony had been performed by well-conducted (persons, and) when he was seated on the throne, hard and singers thus praised him in lofty strains:

In the following verses Mahipála is compared (v. 35) to Brahman, (v. 36) to Mādhava (Krishna-Vishnu), (v. 37) to Halayudha (Balarāma), (v. 38) to the destroyer of Sanāra (Kamsa), (v. 39) to Śaśi, (v. 40) to Siva, (v. 41) to Indra, (v. 42) to Kuvera, (v. 43) to the sun, (v. 44) to the moon, (v. 45) to the son of Satyavati (Váśa), (v. 46) to Bhagratha, (v. 47) to the Rághava (Ráma), (v. 48) to Yudhisthira, (v. 49) to Vrikódara (Bhima), (v. 50) to the son of Indra (Arjuna), (v. 51) to the son of the Sun (Karna), (v. 52) to the sea.

121 Compare Vikramadityavachcharita IV. 112 अश्वति काव्यासाहित्यय वमतिनं गणनं भोज्याचित्य।

122 If I understand this verse rightly, it simply means that the prince had driven his enemies from their homes, and that his state was beautiful like the golden lotus; the bees showed no desire for this lotus, because they did not wish to have anything in common with the wives of the prince's enemies.

123 Compare Archaeol. Surv. Ind. Vol. II. p. 390, "As it stands at present, the great temple of Padmanabha is about seventy feet in height, but as the pyramidal top is very much broken, I estimate the original height of the building at not less than 100 feet."

124 i.e. the Himálaya.

125 We may assume that swans were carved on the walls of the temple; the poet (in order to employ the figure Upáraksha, which is indicated by the word तावसु) represents these carved swans as live birds, ever present at the temple, which they take to be the mundane golden egg, to serve as vehicles for Brahman who is born from the lotus that grows out of Vishnu's navel.

126 "Installed," viz. in the Brahmapihu mentioned below, verse 71, which was connected with the temple. For the use of the word गतिपातिति is compare below verse 79.

127 i.e. Indra; the sense is 'Padmapála died,' and as a warrior went to the heaven of Indra.
(v. 53) to a lion, (v. 54) to an elephant, (v. 55) to the day-lotus, (v. 56) to the night-lotus, (v. 57) to an ornament, (v. 58) to the sandal; (v. 59) he is praised as surpassing the deer and (v. 60) the moon.

Incidentally he is (v. 51) called Sūrya-janita 'begot by Sūrya,' (v. 53) Sūryanirāpa-nandana 'son of prince Sūrya,' (v. 57) Kachchha-pārīkṣa-bhūtāna 'an ornament of the Kachchhapāri family,' and (v. 49) entitled Bhuvanaikamalla. (V. 41) he is stated to have been familiar with the impervious tracts of the Sīkambuvāraṇagiri, and (v. 50) to have obtained fame by defeating in battle the king of the Gandharvas.

After verse 60, the bards continue praising Mahipāla as follows:—

(V. 61.)—"That the son of Pṛthā at the capture of Uttara's cows had alone put to flight the enemies,—that, it is true, we had learnt before, because Arjuna has been praised (for it) by Vyāsa;125 but now (only) can we form a clear conception of it, after we have seen how you, O illustrious Mahipāla, maided, are striking down the host of the enemies by thousands on the battle-field.

(V. 62.)—"Need we tell (even) more facts about you, O lord? You are the unsurpassed receptacle of the rules of policy. Hear, O master of the earth, how it faces with the four that are beloved to you: your fame spreads in (all) quarters; your praise is ever in the mouth of the virtuous; the whole earth reverences you; fortune delights to dwell in the house of (you) the friend of the twice-born.

(V. 63.)—"Is it strange, O Bhuvanaikamalla, that king Bhagatiptha should have led away this Mandikini from the world of the Lotus-born (Brahman) and brought it down to the earth below? But wonderful indeed is this, O lord, that from the orb of the earth here below you have made the stream of your fame to ascend upwards to the world of the Lotus-born.

(V. 64.)—"Nothing strange is there in this, O lord, that, such as you are, you with your quick arrows completely bereft of confidence your enemies hundreds of thousands strong in battle; but that in your anger, like the god of destruction, by the marvellous cruel strokes of your flashing sword you should have annihilated their very nature—that indeed does rouse our wonder.

(V. 65.)—"Your depth surpasses (that of) the ocean, your lustre (that of) the sun, your bravery (that of) the lion; with whom then can you be compared?

(V. 66.)—"The bracelet, O protector of the earth, shines on your massive arm as if it were the diadem of the goddess of victory dwelling within your arm.

(V. 67.)—"Because continually engaged in worship you have uttered the praises of the lord of the three worlds, therefore surely has he, pleased, firmly established you here. On your exalted lap, O ornament of the earth, we see a row of stars, spotless, like the bright rays of the sun and the moon, in the guise of a string of pearls."

(V. 68.)—When he had thus been praised by the bards, when he had revered the immortals, the preceptors and the twice-born, set free the inmates of the prisons, (and) granted assurance of safety to all beings.—

(V. 69.)—He, so soon as he was crowned, of his own accord made two vows, to complete Padmānātha, (and) to give his daughter to a good husband.

(V. 70.)—And both these things did he, endowed with discernment, accomplish. The king's daughter was given to a husband, charming as the god of love, (and) this lofty temple of the glorious Padmānātha was completed, an imperishable embodiment of fame.

(V. 71.)—And having appointed the remaining chief Brāhmās, he attached a Brahmāpuri (to the temple). Unwearied (and)

---

125 vis. in the Vīrāṇaśāstra of the Mahābhārata.
126 The king is like a mountain, on whose lofty slopes the stars appear to rest. Compare e.g. Kādambari, I. p. 9 (अजस्वीकृत वसुज यो महान यज्ञार्थ य कृष्णस्मृतिः).
127 The word vṛapālī appears to me to denote a row or set of rooms or buildings, attached to a temple for the accommodation of holy and learned Brāhmās; it occurs again in the same sense, e.g. Vol. VII. p. 305, l. 34 (समी मद्यवेदवः-व्रपापूर्णी). I assume that Madhapura had provided rooms for, and installed in them, eight Brāhmās (see above, verse 30), and that Mahipāla finished the building or buildings and selected the other occupants.
exceedingly devoted to the law, he established a charitable hall, where savoury food and drink were distributed.

(V. 72.)—Having done both, the master of the world, the universal sovereign of princes, of mature intelligence (and) the light of his family, made donations for the cooking of the naivēdyā of the glorious Pādmanāṭha and for lights.

(V. 73.)—The brahmāttāra¹³¹ rising from the small hall the lord himself divided into two portions; one half was assigned to the glorious Pādmanāṭha and the other half to the lord of the gods, Vaikunthā.

(V. 74.)—The prince arranged suitably for the complete maintenance of the tribe of attendants, women, musicians, singers and the rest, that there might be public performances before Pādmanāṭha.

(V. 75.)—Having properly divided Pāśhāna, he allotted five shares and a half to the god, and twenty-four shares and a half to the most excellent twice-born.

(V. 76.)—The lord of the earth gave all taxes...¹²⁸ connected therewith, and what was produced above and below the ground and a mine of salt to the god and to the twice-born.

(V. 77.)—With him there came to share the unseen (fruit of his pious deeds) the famous son of Yogēvara, endowed with the characteristics of a sage, in all matters a depository of the prince's confidence, a receptacle of modesty, a home of propriety, a seat of learning, a mine of sacred study, an unsurpassed dwelling of gratitude, a treasury of benevolence.

(V. 78.)—Confiding in him, the moon of princes, taking delight in the law, entrusted to him all acts of piety; (and) the sage entered into the thoughts of the king, because he was similarly disposed, was free from envy, and esteemed excellences (in others).

(V. 79.)—The following are the names of the sages who by Mahāpāla were given shares in that village; the particulars are stated in the grants:

(V. 80.)—First, the intelligent Dēvalabdhi, then Śrīdaradikṣita, (and lastly) the sage (Śāri) Kṛttiratha,—these three twice-born received each one share and a half.

(V. 81.)—Gaṅgādhara, Gautama, Malaka, Gayādha, Dēvanāga, Vasiṣṭha, Dēvasārmā, Yāsākara,—

(V. 82.)—Krīṣṇa, Varahasvāmin, Grahāsa, Prabhākara, Ichchhadhara, Madhu, Tilhēka, Purushottama,—

(V. 83.)—Ramēśvara, the excellent twice-born, and the twice-born Dāmodara;—these eighteen sages received one share each. The twice-born Shatīhabha

(V. 84.)—received three-quarter shares. Ratna and Tihupēka, the worshippers of the gods, received both half a share each. This completes the list of the sages.¹²⁵

(V. 85.)—And out of the shares of the god the prince gave half a share to the sage (Śāri) the Kāyasātha Lohabhaṭa (?) to be his for ever.

(V. 86.)—To the god the king gave a golden diadem covered with precious stones; in the midst of it a very large jewel is shining.

(V. 87.)—The ornament of princes gave a frontal ornament made of emeralds; the spotless lord of the earth also gave a golden ornament for the neck, blazing with precious stones.

(V. 88.)—He gave a pair of arm-rings set with many precious stones, and also four bracelets ornamented with jewels of great value.

(V. 89.)—This one set of ornaments, containing precious stones, is for the Lord; the second set, Aniruddha's, is solely of gold, and is as follows:

(V. 90.)—Achāyutach ā every day wears four bracelets, also a pair of tālapattas, (and) a kritīdāra with a golden handle (f).¹³⁴

(V. 91.)—A mahādīh (f) of silver was given accompanied by five caṅchālas; also four plates of brass for holding the naivēdyā;

(V. 92.)—three suvarṇāṇḍas (f), (as) decorations for the attendants of the god. And

¹²¹ The brahmāttāra would appear to be the sanctuary of the temple, usually called garbha-grīha, or below, v. 85 garbha-bhāman.
¹²² I cannot quote any authority for this translation of the word Pādmanāṭha.
¹²³ I am unable to give the exact meaning of Kārakapāla.
¹²⁴ For nisshirvāna one would have expected nisshapāna. See above v. 30. Nisshapāna is used in the same causal sense in v. 40 of the inscription mentioned above, note 116.
¹²⁵ (3×1)=18 (2×1)+1 (2×1)=3, whereas the sum distributed was 24. See ante, Vol. VII. p. 307, note 30.
¹²⁶ Nisshirvāna is probably the same as nisshapāna, an ornament; the other term I do not understand.
¹²⁷ Mahādīh (f) appears to be an upper garment, as is called 'a bolico' or 'waistcoat.' The first line of the following verse I do not understand. Suvarṇāṇḍa is used for kārtītāra in this. v. 22.
above was fixed a lotus of gold made into an
umbrella for the Lord.
(V. 93.)—And the silver image of Anīr-
dha will always be bathed, after it has
been placed on a copper plate, with (water from)a
vessel of the same material.128

(V. 94.)—There is one image of Vāmana,
a second small one of Ačhyuta, and another
made of vājēvarṣa-stone; the two are made of
bell-metal.
(V. 95.)—They all three are worshipped
assiduously in the sanctuary. There two
braziers of copper were given for lights.
(V. 96.)—The prince gave two copper basins
(and) two copper cups for bathing, and also
a pair of copper vessels for the argha-oblation.
(V. 97.)—Seven bells were given, together
with incense-burners, accompanied by vessels
for waving lights; besides seven conch-shells
also, (and) four copper pots.
(V. 98.)—The prince gave a vādahadhā of
brass (and) two kāhālaś,129 a cowrie and a
pair of staves made of bell-metal and crystal (?)
(V. 99.)—He gave two large kettles of copper
(and) two copper pitchers, also five copper pails
and a chāṭa130 of the same material.
(V. 100.)—This completes the list of im-
plements for the god.
(V. 101.)—For stone-cutters (?), carpenters
and so forth, for engineers, carmen and others,
and for excavating and building reservoirs,
wells, tanks, and so forth,—
(V. 102.)—the king gave the tenth part (of
the revenue) in his whole dominion. And he
likewise gave the twentieth part to Anīr-
dha; by that the hall for the charitable
distribution of food &c. is kept up.
(V. 103.)—May this temple of prince
Pādma, spotless like crystal, be imperishable
like the world of Viṣṇu (which he has) acquired
through (his) religious merits!

(Vs. 104 & 105.)—This faultless eulogy has
been composed by the chief of the twice-born
the descendant of Bharadviḍam, grandson of
the chief of poets Rāma, (and) son of the poet
Gōvinda, the poet Māṇikāṇṭha, whose
intellect is polished by (the study of) the
Māṇḍākikā and Nyāya (and) who delights in
eloquent sayings.
(V. 106.)—Yaṣaṭēva-Digambārakā
who enjoys the friendship of the sage (Śūri)
Māṇikāṇṭha in which Pratāpa-Lakšēvakīvāçā
shares, and who is a poet in all languages,
has written the letters.
(V. 107.)—When eleven hundred years had
passed, and when (besides) forty-nine years had
gone since Vikramā,—
(V. 108.)—in the fiftieth (year), in the month
Āśvina, in the dark half, this splendid eulogy
was composed by Māṇikāṇṭha by order of the
king; or, in figures, 1150, on the fifth of the
dark (half) of Āśvina.
(V. 109.)—Om! There is nothing wonderful
in this, that again and again in every battle
the various hosts of the hostile armies flew like
moths into the blazing fire of the prowess of
that lord of the earth, since he, (himself) equal
to Indra, had (for his minister) the wise Gaṇa,
who endowed with intelligence (and) almost
omniscient had surpassed the preceptor of the
ornaments of the solar race by his policy.
(V. 110.)—Is it strange that Maḥipāla
ruled the whole earth, when he had for his
councillor the wise Gaṇa, who resembles the
councillor of the gods?
(V. 111.)—This eulogy has been engraved
at the temple of the glorious Pādmanātha
in excellent letters by the artisan Pādma,
son of Devasvāmin,—
(V. 112.)—and also by Siṃhāvāja and
by the artisan Māhuṣa. May the letters (here)
engraved serve their purpose!

FOLKLORE IN WESTERN INDIA.
BY PUTLIBAI D. H. WADIA.

III.—The Black-Headed Man.
There was once a young lion who was very
strong and withal very valiant, and so defied
everybody.

128 The dictionaries give गुट, गुड़क and गुड़क, not गुड़.
129 A drum and two trumpets (?).
130 A spoon (?).

One day his mother said to him—"It is all
very fine for you to be proud of your great
strength, and to try your might on all you
meet, for you know that we are lords of the

131 For विनाकक the dictionaries give only the mean-
ing 'a stone-cutter's chisel.'
forest and every creature owns our sway, but you do not seem to be aware that there is one being in this world who is more than a match for us, and can bid us defiance. He walks on two legs, and is known as the 'Black-Headed Man.' Beware of his wiles and stratagems, if you value your life."

"Very well," musad the young lord of the forest, "I should like very much to see what he is like. He must be a mighty and powerful creature if he can hold his own against me. I shall go and seek him out."

Having thus determined, the young lion wandered about roaring for several days, till one morning he chanced to enter a part of the forest that was rarely frequented by his kind. Just then a carpenter, with his bag of tools on his shoulders, and a white turban on his head, happened to pass by. The young lion skipped with delight at sight of him and cried out—"Surely this must be the being my mother has told me to beware of: for does he not go on two legs? Now for it!"

Just then, however, he happened to look at the carpenter's head, and to his great disappointment found it was white and not black, as he had been led to believe. Nevertheless he thought he would go to him and ask him whether he knew where the 'Black-Headed Man' was to be found, and if so, whether he would direct him in his search for that being.

He accordingly called out to the carpenter in a loud voice—"Hey, friend! stop! I wish to speak to you!" The poor man had no alternative but to obey, and the lion, going up to him said, "Can you tell me where I can find the 'Black-Headed Man,' for I wish very much to form his acquaintance and to try my hand on him?"

The poor man's knees knocked together with fright as he heard this and he gave himself up for lost, when suddenly an idea entered his mind like a flash of lightning, and summoning up courage, he thus spoke to the valiant son of the lord of the forest:

"You wish to see the 'Black-Headed Man'? Well, your curiosity shall be gratified, for I happen to know where to find him; so come along with me and I shall show him to you."

The lion agreed to this, and the two walked on together for some time till they came to a large tree. Near this tree the carpenter stopped, and said to his companion:

"If your Highness would condescend to wait here for a while, I shall show you what the 'Black-Headed Man' is like."

He then set himself to work with his tools and began to cut a large hole through the trunk of the tree. When this was finished he fashioned a plank and fixed it at the top of the hole in such a way that it could slide up and down at pleasure, like the door of a mouse-trap. When all was ready, he requested the lion, who was eagerly watching his movements all the while, to come and put his head into the hole and look straight before him till he got a sight of the 'Black-Headed Man.'

The lion, rejoiced at the prospect of seeing the being he so much wished to meet; eagerly put his head through the hole, and in a trice the carpenter, who had already climbed the tree, let the trap-door slip down from above right on to the lion's neck, and pressed it so tight that he nearly squeezed the beast to death. He then got down and went to the other side of the tree, and uncovering his head, showed it to the dying lion, saying:

"Your servant, the 'Black-Headed Man,' whom you wished so much to see, stands before you; pray, what would you with him?"

The poor lion, however, was by this time past replying, and the carpenter shouldering his bag of tools, walked home at leisure, glad to have escaped, by this stratagem, from the jaws of a savage beast!

---

THE BRITISH NATIONAL ANTHEM TRANSLATED INTO SANSKRIT.

BY PROF. A. WEBER.

Text:

I.
God save our gracious Queen!
Long live our noble Queen!
God save the Queen!

Send her victorious,
Happy and glorious,
Long to reign over us!
God save the Queen!
II.
O Lord, our God, arise,
Scatter her enemies,
And make them fall!
Bless thou the brave that fight,
Sworn to defend her right,
Bending, we own thy might,
God save us all!

III.
Thy choicest gifts in store
Still on Victoria pour,
Health, Peace and Fame.
Young faces year by year
Rising her heart to cheer,
Glad voices far and near
Blessing her name.

IV.
Saved from each traitor's arm—
Thou, Lord, her shield from harm
Ever hast been.
Angels around her way
Watch, while by night and day
Millions with fervour pray,
God save the Queen!

5 राजा is pronounced rakhya.
6 क्रिया is pronounced kirpa.
TRANSLATION.

To the tune of the "Flower Garland."

O God of grace! protect Thou ever the gracious Empress,
Long may Victoria reign, O God of grace!

I.

May she ever reign happy; may her serenity be never disturbed.
Long may she reign and ever with victory and splendour.
May she blossom and bloom like a lotus-flower and ever prosper.
O God of grace! protect Thou ever the gracious Empress!

II.

O God of the helpless! defeat Thou ever her enemies,
Do Thou frustrate the evil politics of her enemies.
Our hopes are in Thee, O Lord, preserve Thou us.
O God of grace! protect Thou ever the gracious Empress!

III.

Bestow on her the best gift of Thy treasure.
May her glory be as the sun throughout the world.
Long may she reign: prolong her days.
O God of grace! protect Thou ever the gracious Empress!

IV.

May she ever do justice over us, and be protector of the law.
May everyone be happy under her excellent protection.
Let great and small with heart and soul upraise this song—
O God of grace! protect Thou ever the gracious Empress!

V.

Do Thou protect her ever from her royal enemies.
Should any terror arise upon her, O God of grace!
Then give her Thy hand and protect her with Thy grace.
O God of grace! protect thou ever the gracious Empress!

VI.

May the God of the Earth protect her always.
Seeing her boundless glory, may her secret enemies die of envy.
Day and night may millions bless (her) with joined hands.
O God of grace! protect Thou ever the gracious Empress!

In the Plate attached will be found the music of "Hári Phulla dát." It is given as a specimen of a Pañjábi tune, arranged, as closely as possible, according to the European method.

AN ENGLISH-GIPSY INDEX.

Compiled by Mrs. GRIERSON; with an Introductory Note by G. A. GRIERSON, B.C.S.

A NOTE ON THE KASMIRI PORTABLE BRAZIER.

In his paper on the Kasmiri portable brazier, the Rev. Mr. Knowles says that "it has been suggested that the Kasmiri learnt the use of the kūgar from the Italians in the retinue of the Mughal Emperors, who frequently visited the valley during the summer months A.D. 1587-1753." The subjoined stanza from Mañkha's Sīkṣākhaṭhakārita (iii. 29) seems to prove that braziers were in general use as early as the twelfth century:

हिन्दाने व शृङ्खल दृष्टिकोण
विवश्चन्द्रितकर नहैतका।
विनयित जलदृशः मनमे षुमने
पुरा तत्तित्वभायांत चुच्चायाम।

"There (viz. in Pravarapura or Srinagar) at the approach of winter, the brazier (kasantikā), which possesses many blazing holes, is flashing in the zendnas like a row of eyes of fire, which Love has adopted in order to conquer Śiva (who had burnt up Love by his only eye of fire)."

According to the St. Petersburg Dictionary, the word kasantikā occurs also in Kalhana's Rājatarangini (iii. 171), where the sleeping-room of Vikramaditya of Ujjayini is called lasad-dipta-hasanatika or "shining with the blazing brazier."

E. HULTZSCH.

PRATAP CHANDRA RAJ'S MAHABHARATA.

We are glad to observe that H. H. the Rāja of Faridkot has granted Rs. 500 towards Bābd Pratap Chandra Rāj's excellent and colossal undertaking, the translation of the Mahābhārata. We trust that this by no means isolated instance of H. H.'s munificence towards Indian literature will lead others of his rank to similarly aid this very important publication.

Sketches of an Indian District, already noticed in this Journal, Vol. XIV, p. 268, and inculcates the same lessons with the same freedom of speech. Many of the plates have already appeared in the of Jomard's commentary, which I bought in Kashmir, bears the date (Saptarshi)-Sauravat 24 and Śrī-Sākha 1570, i.e. A.D. 1648.
The book is another proof of the heartiness with which the author has entered into the very laudable object of improving architecturally the towns and districts he may be sent to administer, and (may we say it?) with which he also enters into official disputes. His success in the former is beyond doubt and has led, as we have previously observed, to really useful results in inducing the Governments of India to study something besides economy of construction in their public buildings. If Mr. Growse in the end succeeds in making the Indian official mind see that men, being human, love what they think to be beautiful, and that this love of the beautiful is worth consideration, as well as R.A.P., he will be well repaid for all his disappointments and those heartburnings, which he makes no attempt to conceal. We think we are safe in holding that there are abundant signs abroad of his eventual success in this object.

**THE BOOK OF THE THOUSAND NIGHTS AND A NIGHT,**

by Richard F. Burton, Vol. I. to W. Kamasherla Society, for private subscribers only.

In making his work follow so quickly upon Mr. John Payne's *Book of the Thousand Nights and One Night* (Vinton Society, for private subscribers only) Captain Burton has deliberately placed his labours before the public in the face of a powerful rival, but we do not think that he has for this reason anything to fear. It is no flattery to say that where the language, literature and social structure of the Arabs is concerned Captain Burton's attainments stand unrivalled; his opportunities, as he has used them, have been greater than those of any other living writer, and his command of English has been proved in other labours and on other subjects to be unusually extensive. He therefore undertakes the stupendous task—for it is nothing else—of a proper rendering of the *Arabian Nights* into English, with an equipment for the work that need fear no rivalry—not even that of Mr. Payne.

The former work was confessedly a book of pure literature, and the notes were consequently of the most meagre description, the author trusting to his dissertation published in the ninth and last volume to explain the history and nature of this wonderful work of imagination. Captain Burton aims at much more—he not only undertakes to render the text adequately, but to explain every allusion to history, literature, custom and belief. His notes are admirable, and come with a force and authority on the matters treated of that is, as we have above stated unrivalled, and—with all due deference to Mr. Payne's reasons for making his work a purely literary one—throw the older book completely into the background. Explanatory notes to a book of this kind are in fact so imperatively necessary that it is difficult to see why any considerations should be allowed to outweigh the arguments in their favour.

There are many difficulties in the way of a proper presentation of the *Arabian Nights* in an English garb. It must be a "plain and literal translation," and it must give the spirit, the manner and the matter of the original. These alone in the case of a master-piece of language like the *Kitab Alif Laila wa Layla* are matters of no small difficulty: and when again it is remembered that the translation is to be made from a book created by writers whose method of expression is utterly foreign to that of Englishmen, and filled with references of all sorts to matters unknown to English instincts, the difficulties become almost insuperable. To say, therefore, that a translation made under these circumstances is successful is in itself high praise. It seems to us that it cannot but be admitted that Mr. Payne's rendering is, viewed thus, a success; we think that Captain Burton's rendering is a still greater success, without reference to his invaluable notes. As "un-English" features of the original may be mentioned the rhymed prose so dear to the Oriental and so abominable to the English ear, and the rhyming of the verses—which last are especially difficult to deal with.

Another source of trouble is what Captain Burton calls the *turpiloquium* of the Arabs—that calling a spade a spade—which has obliged him in putting his "plain" rendering before the English public to clearly explain that it is not *virginitas puerisque*, and to assert in unmistakable terms that nothing could be more repugnant to his feelings than the idea of his pages being placed in any other hands than the class, viz. men and students, for whose special use they have been prepared. The plain speaking, indeed, of the *Arabian Nights* is to the modern English people simply insufferable, but it is so characteristic of all Oriental social life, that if the book is to be placed before its readers in any but a false light the grossness of expression must be literally given.

We here give a specimen—wonderfully characteristic of Arabic rhymed prose—which will give an idea of Captain Burton's method and also to some extent of his one defect viz., his love of rare and consequently little understood words and allusions—which has led a reviewer of another work to say that it had been not "Englished" but "Burtoned" by the translator.
"Thereupon sat a lady bright of blee, with brow beaming brilliancy, the dream of philosophy, whose eyes were fraught with Babel's gramarye, and her eyebrows arched as for archery; her breath breathed ambergris and perfumery, and her lips were sugar to taste and carnelian to see. Her stature was straight as the letter alif; and her face shamed the noon-sun's radiance and she was even as a galaxy or a dome with golden marquetry, or a bride displayed in choicest finery, or a noble maid of Arabby."

In the above, "blee" and "gramarye" may be held to be due to the exigencies of sā'ā, but we have "pimacothek of the brain," "a Pantagruelian of the Wilderness," "Mabingiogic archaism," and so on in the prose, or foreword as Captain Burton prefers to call it. We would here mention that the "Babel" the "letter alif," and the confusion of metaphor in the above quotation are all duly explained in footnotes.

We will now give a specimen of a versified rendering, taken at random from the second volume, p. 143, which will exhibit the author's success in reproducing the manner and rhythm of the Arabic, and also afford us an opportunity of making a comparison with Mr. Payne's efforts in the same direction. Mr. Payne's verses are to be found in Vol. II. p. 67 of his work.

CAPTAIN BURTON.

Time hath for his wont to upraise and debase.
Nor is lasting condition for human race.
In this world each thing hath appointed turn.
Nor may man transgress his determined place.

How long these perils and woes? Ah woes!
For a life all woeful in parlous case!
Allah bless not the days which have laid me low; I the world, with disgrace after so much grace!
My wish is baffled, my hope cast down.
And distance forbids me to greet his face.

O than who passeth that dear one's door.
Say for me, these tears shall flow evermore!

Mr. Payne.

The tides of fate 'twixt good and ill shift over to and fro. And no estate of life for men endureth evermore.

All things that to the world belong have each their destined end. And to all men a turn is set, which none may overgo.

How long must I oppression bear and peril and distress? Ah, how I loathe this life of mine that nought but these can show!

May God not prosper them, these days, wherein

I am oppressed. Of Fate, these cruel days that add abjection to my woes!

My purposes are brought to nought, my hopes are rent in twain. By exile's rigour, and my hopes are one and all laid low.

O ye, who pass the dwelling by, wherein my dear ones are, Bear them the news of me and say, my tears for ever flow.

The eternal subject of translatology has forced itself to the front, as usual, both in Capt. Burton's and Mr. Payne's prefaces. The latter has determined to avoid all accents or other tricks of typography in his pages as being repugnant to the taste of readers of works of imagination. This has led him—as it always does—into great messes, e.g. roe, khalif, eadi and other impossibilities in Arabic orthography and pronunciation. His proper names too are often positively atrocious, e.g. Agib-ben-Khashib, Nonrednin, Bedreddin, et hoc genus omnem. The former has avoided this pitfall by a judicious use of accents and apostrophes, and has produced, in consequence, a truer representation of the Arabic words and names. In the presence of so great a scholar as Captain Burton one must always speak even of his vagaries with respect, but we should like to know why when he writes kalandar, rukh, Jafar, jina, Nurmân, aspaghferaullah, and so on, he should also write Nâr al-dín, Badr al-dín, Shuykh, Laylah, Hosayn, Al-Zayni Ion al-Saddî, Al-Safî, and such like.

This collection of some 1,500 proverbs and sayings of the Kasimíra is admirable of its kind, and paves the way, let us hope, for many a really useful work in the future on that little known land and its people. Visitors to it are to be counted by the thousand, but accurate and practicable information regarding it is very difficult to procure, as anyone who has been in want of such is painfully aware.

The book has been constructed on the lines of Dr. Fallon's Dictionary of Hindustani Proverbs, now three parts published, and aims at giving the original a readable rendering, and where necessary a full explanation. Proverbs in Kasimír, as elsewhere, frequently allude to household folktales and these are given at length in every case, forming a most valuable feature of the work. The defect of the book, besides its too frequently shaky English, is that many of the allusions to legends and so on, which are in fact common to all India, are treated as if peculiar to Kasimír, no hint being given of their real origin, or presence, in Sanskrit or Prakrit literature; but this is not a very serious matter, and can be readily remedied.
in the second edition, which we hope to see some
day, for the work is well worthy of one.

The book throughout shows that care and
attention to details which is in itself a proof that
the general accuracy of the author may be taken
on trust. It is accompanied by a preface of a novel
and refreshingly naive description.

Bihar Peasant Life, by G. A. Grierson, B.C.S.

The best answer which the many honest and
laborious European servants, that the Government
of India may well be proud of possessing, can
give to the arguments of those who would repre-
sent them from interested or political motives as
being ignorant of the natives of India, lies in such
books as this. It is not a solitary example, but
merely one out of very many, the solidity, the
accuracy, the thoroughness of which is more than an
honour to the Indian Civil Service. As long
as the gentlemen that compose it can number
among them those capable of producing volumes
like Bihar Peasant Life, they need never fear
any quantity of misrepresentation and attacks
such as Messrs. Blount, Seymour Keay, Digby, and
others have lately thought proper to make in
England.

The work before us is a large octavo book
of 494 and clx viii. pp., the last part dealing with
the index only (3), and is full of the most
carefully compiled information of every kind
regarding the peasant life of Bihar; and yet
Mr. Grierson modestly puts it forward "as a Cata-
glogue of the names used by the Bihar peasant
for the things surrounding him in his daily life,”
and hopes "it may serve as a solid foundation for
more elaborate disquisition on the Bihar riyaqat
and his surroundings.” If any superstructure is
ever raised on such a foundation as this, we for
our part can only hope that it will be worthy of it.

In his preface Mr. Grierson explains the care taken
to render its pages accurate, but this is sufficiently
visible from a perusal of the work itself; every
page contains the vernacular name for everything
mentioned in Nāgari and Roman characters, while
the extended index is itself a practically complete
vocabulary of Bihar husbandry in all its aspects.

Care and thought is visible in the very arrange-
ment of the book. It is divided into Divisions,
Sub-divisions and Chapters. The Divisions are:

1. The Implements and Appliances used in Agricul-
ture and Rural Manufactures;
2. Domestic Appliances and Utensils;
3. Soils;
4. General Agricultural Operations;
5. Agricultural products and their Enemies;
6. Agricultural Times and Seasons;
7. Cattle and other Domestic Animals;
8. Labour, Advances, Wages and Perquisites;
9. Land tenures;
10. The Native House;
11. Food;
12. Ceremonies and Super-

stitions of Rural Life;
13. Trade, Money, Dealings
and Accounts;

The above list exhibits the comprehensiveness of
the volume and the following specimen of Sub-
divisions and Chapters will show its thoroughness,

Division I. Implements and Appliances used in
Agriculture and Rural Manufactures. Sub-divi-
sion VI. — Appliances used in the conveyance of
goods and passengers. Chapter (i) the country cart,
(ii) the large complete country cart, (iii) the little
country cart, (iv) the bullock carriage, (v) the pony

boat, (vi) the country boat, (vii) the litter. The actual

Treatment of each subject is, of course, very much
as Mr. Grierson himself says of it, that of a
“discursive catalogue.” For instance, the chapter
on litters consists of nine numbered paragraphs
describing and naming the ordinary kinds of
litters, the pole common to all, the parts of the
litter itself, its feet, its frame-work, its curtains,
special kinds of litters, and their special construc-
tive parts. The whole chapter gives a complete
groundwork on which to base a sound description
of the Indian litter in all its varieties, and we
could hardly direct a literary visitor to India, in
search of “local colour” for his inevitable book
of travels, to a better source for the true article.

The more serious purpose of the book before us
is, however, to supply the Indian Official and
Student with trustworthy information of a kind
so important to him, and this purpose it admirably
fulfils.

The illustrations are numerous and very wel-
come. In matters unfamiliar and special, an ounce
of seeing is worth a pound of description any day:

a fact long since recognized in the modern
dictionaries. The illustrations are lithographs or
woodcuts from photographs, and are the produc-
tion, as we now see them, of the Calcutta School of
Art. The author considers them excellent repro-
ductions of the photographs.—an opinion we cannot
endorse,—and lays what fault there is in them on the
originals, many of which were taken under
great difficulties. The fact is, however, that, as
lithographs and cuts, the illustrations are often
indistinct and blotchy, and their defects are all the
more to be deplored as nowadays the art of pho-
tolithography and photogravure have been
brought to such perfection in Europe and the
results from them are so accurate and pleasing.

On the whole we are enabled to heartily con-
gratulate Mr. Grierson on his work, and the
Bengal Government on finding an officer willing
to undertake so great a task and able to accom-
plish it with such success.
DISCURSIVE CONTRIBUTIONS TOWARDS THE COMPARATIVE STUDY OF ASIATIC SYMBOLISM.

BY H. G. M. MURRAY-AYNSLEY.

Introduction.

An almost new world of interest is opened out to us if we endeavour to enter into the lives of former races who have peopled the earth, and to study what is left to us in their monuments; and it is still more interesting and instructive to trace the origin of the symbols and customs which still survive in Europe, and try to guess from them (perhaps with tolerable certainty) whence came the Modern European civilization, to mark its gradual progress and development, and to note the changes which time and altered conditions have produced in religion, customs, arts, and architecture.

I have to some extent brought together in the following papers the results of laborious researches made by various students, but I hope also that some of the ideas and features of my work will be found to be new ones. The chief object of these papers is simply to make a collection of facts bearing upon the subject of customs and symbols. I propose also to give some drawings illustrative of the different symbols, with the idea of assisting others (who may not be able to wander so far as I have done) to prosecute further researches into the most interesting, but to a great extent unsolved, problem of the origin of certain peoples and races in Europe and elsewhere.

If we find the same customs, arts, and practices existing amongst peoples living on widely separated continents, we may reasonably conclude, either that such customs or practices had a common origin, or that (if they are such as would naturally suggest themselves to primitive races) they belong to distinct stocks of aboriginal peoples. The arts and customs of the so-called Stone Age in Scandinavia, of the natives of New Zealand, and of certain parts of Africa, would come under this latter category; for their development in arts and manufactures never enabled them to do more than supply the absolute needs of their existence: but, as regards the more civilized races of Central Asia and Europe, it seems very possible that their manners and customs have proceeded from a common source.

The date of the commencement of the Stone Age is of course conjectural, and has been put at from 3,000 to 5,000 years ago. The race which lived in it is, I think, now represented in Europe by the Finns, the Lapps, and the Eskimos, because implements have been in use almost down to our own times in the countries inhabited by the two latter peoples very similar in form to those which have been discovered in graves and bogs in Scandinavia, and classed as belonging to the Stone Age. The peoples who used stone implements and were ignorant of the use of metals in the North of Europe, were of what are styled the non-Aryan races; they were probably also stone-worshippers. But the so-called Siva-stones of India are held in reverence by non-Aryan peoples to this day, and when they find them to hand, they use the celts of their pre-historic forefathers for the same purpose. It seems to me, therefore, highly probable that aboriginal races existed contemporaneously both in Asia and in Europe, for it is hardly credible that, with such appliances as the peoples of the Stone Age possessed, they could have wandered from one continent to the other and (supposing them to have come from the same stock as the Siva worshippers of Asia) have made their way to Scandinavia through Siberia and Russia, cutting a path through the dense forests which are supposed to have then existed in those regions. Non-Aryan stone-worship is probably nearly as old as the Aryan worship of the Sun and the Planets and Fire.
To this day, both in Asia and in Europe, the non-Aryan races are those which have attained to, and seem capable of, only the lowest type of civilization; and they can never be confounded with the Aryan races, whose appearance and type of features differ essentially from theirs. They have kept themselves apart from the Aryans and appear to possess a much smaller share of self-respect and natural intelligence. Judging from the remains of pre-historic art in the Museums in Denmark, Norway and Sweden, it seems that two great waves of Aryan peoples, and conquerors of non-Aryans, made their way into Scandinavia from Central Asia at different and widely separated intervals:—the advent of the first of these, the workers in bronze, has been put at 1000 B.C. They are believed to have belonged to what we now style the Keltic race. I presume them to have come from the highlands of Central Asia by a northern route, passing through Siberia and Russia; for in the latter country ornaments have been found similar in character to those which have been discovered in graves in Scandinavia and there classed as belonging to the Bronze Age. Scandinavia, I imagine, they found on their arrival already occupied by the non-Aryans of the Stone Age, who retired or disappeared before them. In like manner the workers in bronze were, I think, displaced in Scandinavia by a second Aryan race who introduced weapons of iron, the country naturally remaining in the possession of the strongest,—in the hands of those who were provided with the best weapons, and had attained the highest degree of civilization.

The people of the Bronze Age were acquainted with gold; and some of their goldsmiths' work, both in design and in execution, far surpasses anything we now produce. Gold was largely used by them in the manufacture of articles for personal adornment, for cups for sacrificial or funeral purposes, and also for barter,—coils of gold about the thickness of an ordinary cedar pencil have been found in Scandinavia, and from their appearance it has been conjectured that they were carried on the person, and a small piece cut off as required. Silver does not appear

There till the Iron Age, when it was used for bracelets, brooches, chains, etc.

We must not fall into the error of imagining that these three periods of stone, bronze and iron, were contemporaneous in the various countries of Europe. Thus, Scandinavia did not receive Christianity till the eleventh century, and it may also have been far behindhand in emerging from its primitive customs. The Bronze and the Iron Ages, again, would appear to have overlapped each other in Scandinavia, for implements and weapons of both bronze and iron have been found together in those Northern lands. It is my impression from what I saw in the Museums, that bronze articles or fragments have never been found there in connection with stone cells; whereas in some of the dolmens, or tombs of the pre-historic people who inhabited Brittany, stone implements and pieces of bronze have been found side by side, and pieces of the same metal have also been discovered amongst the deposits of human ashes, which have not unfrequently been laid bare on excavating round the bases of the monhiers, or huge unknown slabs of stone, which the aboriginal inhabitants of that province placed upright in great numbers. In Brittany, too, the Iron Age was quite distinct from the Bronze Age. The people of the Iron Age in Sweden and Norway are best known to us under the name of the Goths. They are thought to have appeared in those countries about the year 100 A.D., and may have been a portion of a second wave of immigration from Eastern lands. They belong to the last stages of pre-historic times.

At this distance of time and from what I have above said, it would at first sight appear impossible that the non-Aryan peoples of Northern Europe should have any resemblance in type or features to non-Aryans in Asia. But I can quote from personal experience one instance at least, in which this is the case, viz. the Eskimos and the people of Spiti; and what renders it possible, in spite of the improbabilities of the case, that the resemblance is not an accidental one, is, that the Eskimos and the inhabitants of the Spiti Valley, which is in

---

1 It would be desirable to have this statement proved by illustrations—Ed.

2 A bronze bracelet was found some years ago in Guernsey on excavating the dolmen called Dolus. It is the opinion of some archaeologists that in this case, as also in Brittany, there had been a second and later interment in the same grave—the first during the Stone Age and the second in the Keltic, or Bronze Age.
the Himalayas, have both of them remained almost, if not absolutely, pure races, owing to their natural surroundings having isolated them from the rest of the world. The Spiti Valley is about 150 miles in length, connecting the extreme upper part of the Valley of the Sahalaj with the Lahaul Valley. At one end of it is the Hangrang Pass, over 14,900 feet above sea level, and at the other is the Bara Lach, which must be crossed in order to enter Lahaul, and is 16,000 feet in height; therefore during many months in the year, no one can enter or leave Spiti. As might be expected, its inhabitants are a rude hardy race of mountaineers; their language is a dialect of Tibetan and their religion is Buddhism. In the autumn of 1881, I and a companion spent about four weeks in this valley, during which I had ample opportunities of observing the people, for occasionally upwards of fifty natives of both sexes accompanied us on our marches as coolies, and our arrival in a village was a signal for the whole population to turn out—a European face being as rare a sight as a white crow. The women of Spiti are almost without exception very short in stature, but they are broad in proportion to their height and very muscular, as was evidenced by their carrying heavy loads up the mountains, and singing in chorus the whole time. Though they are not as dark in complexion as the natives of India, they have faces of a sallowish tint tending to olive, dark hair, remarkably high cheek bones, small and slightly oblique eyes. The general contour of the face is extremely irregular; the forehead broad, but flat. Their head-gear is a sort of pork-pie hat made of a dark cloth; their dress is a coat of dark blue or brown cloth, reaching down below the knees, and confined at the waist with a rope or sash. On their feet they wear high boots, or leggings, made of a woollen material, the feet being protected by leather or partially dressed skins. Now, when visiting the Ethnological Museum in Copenhagen in 1883, I was much struck by seeing in a glass-case a life-sized statue in wood or plaster, which professed to represent the first Eskimo woman ever brought to Denmark, about sixty years ago. From the position of their country and its climatic conditions the Eskimos are an equally isolated race as the people of the Spiti Valley, and strange to say, this statue bears a wonderful likeness in every respect to the type of the women from the remote and rarely visited Asiatic Valley which I have been describing. When I saw the figure I could not help exclaiming, “That is a woman from Spiti, but she is dressed in skins instead of having cloth garments.” Supposing, too, any of the natives of Spiti to have wandered thus far, Greenland would be a climate which would suit them; for I well remember how on leaving Spiti, when we got down to Darcha in the Lahaul Valley, our whole staff of coolies (whom we had hoped to take with us a couple of marches more) bolted away to their own country at 3 A.M., saying, though we were at an altitude of 12,500 feet, that it was so hot, that they could not bear to remain an hour longer.

Whilst we are on the subject of the great similarity in dress and appearance between peoples inhabiting different continents, it may not be out of place to remark that the above is not a solitary example as far as the dress is concerned. The whole attire of the women in the Kullu Valley, in the Himalayas consists of a long woollen scarf or shawl, a portion of which forms the petticoat, and is held in position by a girdle, whilst the remainder is so arranged as to cover the whole bust, leaving the arms free. This garment is fastened on each side of the chest by a brass brooch of the Runic form. It is a curious fact, but surely hardly an accidental circumstance, that in Africa, the women belonging to the nomad desert tribes of the Sahara clothe themselves precisely in the same fashion; except that the one garment of these latter is of calico, and the two brooches, equally of the Runic form, are made of a debased kind of silver. Again, a kind of cloth of the natural brown and white sheep’s wool, is occasionally made at the present day in Kasaut, which has a geometric pattern woven into it. On being asked for some specimens of it, the natives told me that only a small quantity of it was made, as it was very troublesome to weave. Curious to relate, fragments of woollen material with the same design woven in, have been found in ancient graves in Scandinavia, and are supposed to date from the Bronze Age. 3 An exactly similar material is still woven by the peasants

3 See Fig. 125 in the South Kensington Handbook for Scandinavian Arts, by Dr. Hans Hildebrand.
on the File Fjeld in Norway for their own use only; the design is the same, but the warp and the woof are red and white instead of being brown and white.

Regarding this difference in colour I would say that it will be found an almost invariable rule, that primitive peoples, as soon as they learn the use of colours, adopt what were till lately considered the three primitive colours, viz. red, blue, and yellow, in their dress and ornaments. The people of the Spiti Valley and of Ladak, known only of red cornelian, coral, turquoise, and amber, as ornamental gems, and the dress of the women in the former country reproduces the three colours of these only; though some of the richer women in Ladak introduce small squares of green cloth alternately with red ones on the square piece of sheep-skin with which they cover their shoulders both in summer and winter. Again, the same combination of red, blue, and yellow is seen on old Norwegian peasant embroidery, the colours and patterns of which recall that now executed by the peasant women in Albania. These last say that they use no set designs, producing their patterns, it would appear, out of their own inner consciousness. It is singular that the handiwork of these two races should be so much alike, for they can hardly have come into contact with each other for centuries, even supposing that they belonged originally to the same stock, and had the same (Asiatic?) progenitors.

I.

Sun and Cup (or Moon) Symbols.

Sun and Cup (or Moon) Markings and Fire Symbols are so intimately connected with each other, that it is difficult to separate them. I propose to devote the following two papers to Sun Symbols, and to customs connected with solar worship, in which we occasionally find the element of fire represented. The Scasika, which is more especially a Fire-emblem, will be treated separately.

* * * * *

Quite recently, certain scientific men have decided that this is erroneous, they maintain that red, green, and violet are the primary colours.

[The Gâyatrî or Sâvîtrî occurs in the Rig-Veda, iii. 62, 19. The words are - ā tva sarvair avachyaṁ bhagad devaya dâhamaḥ śriyāṁ gṛihyaṁ práchâyāṁ. There is a variety of rendering. Colebrooks gives (Asiatic Researches, Vol. V, p. 351) "Earth, sky, heaven. Let us meditate on these and on the most excellent light and power of the generous sporting and resplendent sun (presuming that it may guide our intellect)." Wilson (Rig-Veda, Vol. III. p. 110) varied this version in the text.

There are signs of Sun-worship having prevalence in all parts of the world at all times and among races of widely different origin. The verse called Gâyatrî was esteemed by the ancient Hindus to be the holiest verse in the Vedas. It is addressed to the Sun, and its translation in an abridged form, as given by Prof. H. H. Wilson, runs thus:—"Let us meditate on the sacred light of the Divine Sun, that it may illuminate our minds." In the first or Vedic era of the history of India, Sun-worship occupied an inconsiderable place in the religion of the Hindus, and an old Marathi Brähmana from Pûja once told me that the Sâivas worship the sun daily even now.

The All-covering Varuna (Ouranos or god of the Heavenly Regions of the Greeks) was originally among the Persians the god of the clouds, of the celestial sea, and of the heavens above it; and, when this branch of the Aryans reached Southern India, he there became the god of the earthly sea, which they then saw for the first time. The Sun, whilst it was still regarded as a wheel, a store of gold, an eagle, a falcon, a horse, &c. &c., was also styled the eye of Varuna. In the north of Asia, Mithra was associated with Varuna. Mithra was the god of daylight, and he and Varuna were fabled to sit together on a golden throne, and journey at evening in a brazen car; thus, from the Horse-Sun and the Wheel-Sun was naturally developed the Chariot and the Divine Charioteer.

Europids gives the Sun a winged car; and on coins from Eleusis, Démétêr is represented riding in such a car drawn by two serpents. The serpent, as we shall see later on, was an element in Sun-worship, and was used in connection with the Mithraic mysteries.

The ancient Mexicans were Sun-worshippers, and when they fought a battle they endeavoured to take all their captives alive to reserve them for solemn sacrifices to the Sun at certain festivals. These people would seem also to afterwards to, "We meditate on that desirable light of the divine Savîtri (i.e. the Sun) which influences our pious rites." Benfey more accurately renders, "May we receive the glorious brightness of this, the generation, of the god who shall prosper our works." Most Sanskritists have moreover tried their hands at it. It was more than probably originally meant as a mere invocation of the Sun.—Ed.]

To the Germans and Anglo-Saxons, the Sun was the eye of Woden.
have connected the Serpent with the Sun, for on such occasions the victim's neck was encircled by a collar of wood in the form of a snake. When he was slain, his heart was offered first to the Sun, and afterwards plucked out and cast down before an idol.

The two greatest and most ancient Rajput races in India were denominated Suryavamsa and Chandravamsa, or children of the Sun and Moon, in Hindustan this latter orb was a male deity. Sir William Jones, in the Asiatic Researches, alludes to the universal adoration of the solar orb, and says that the first dynasties of the Peruvian kings were dignified, exactly like those in India, by the name of the Sun and the Moon.

In the present day, at Hindut marriages in Kumārun in the Central Himalayas, it is customary for the Purūhas (family priest), "to worship the fire and read the marital vows, which are repeated by the bride and bridegroom separately, and by which each agrees to live with the other in harmony, making the Fire and the Sun their witnesses." 18

The Kols of Sambalpur in the Central Provinces are Sun-worshippers; so also are the Kurkus of the Mahādēo Hills, more than 400 miles to the north-west of that place. The Khonds, an aboriginal race, classed as Dravidians, combine faith in the Sun and Mother Earth.

From the earliest times, turning to the East in worship has been customary. In India, many temples have been built with the object of causing the rising sun to throw its first rays upon the entrance, and thus illumine the god or the stone which was in the innermost shrine, and at other times in almost total darkness.

In Muisur, and in the Salem district, are some remarkable kistvaens or tombs, supposed to be those of pre-historic race. They are, I believe, called round-headed slab-stone monuments. Attention was first drawn to them by Col. Welch in the early part of this century, but they were overlooked and almost forgotten till Lt.-Col. Bramwell of the Trigonometrical Survey, re-discovered them a few years ago. Each tomb is surrounded by round-headed slabs of gneiss, some of which are as much as 14 feet in height. What may be termed the tomb proper, consists of an ordinary kistvaen made of six slabs of gneiss. One forms the roof, another the flooring, and the other four the sides of the tomb. It invariably faces the East, and the slab on that side always has a hole in it. In most cases the aperture is about 15 inches in diameter, but in some instances it is not more than two inches across. The stones which compose the tomb are arranged thus:

It seems not impossible that this arrangement may have had some connection with the Svasalika. The Eastern position given to the door of the Hindut temple, and the Eastern aspect of the entrance to these tombs was possibly in the former case intended to signify that from the sun came light, warmth, and fertility, and in the latter to typify that as the sun rose (was newborn) each day, so the soul received a new birth. All savage and semi-civilized races seem to have an idea that when the body dies there is some kind of future existence for the spirit of man.

Lastly, the modern Christians perpetuate this custom of orientation in the position they give to their Churches, and in turning to the East in Church when they recite the Creed, or general assent to the articles of the Christian faith. In European Christian life also, when passing the wine, or dealing a pack of cards, it is constantly said, that this should be done "the way of the sun": and some persons deem it most unlucky if through inadvertence the bottle be sent round the other way (or from right to left).

Taking it all in all, it may be broadly laid down that Sun, Moon, and Fire Symbols are more numerous in Europe in northern lands than in southern ones. In the inclement regions of the north, light and warmth would be considered the greatest of blessings. Sun and Cup Symbols first appear in Scandinavia on objects which have been classed as belonging to the Later Stone Age. At this period (as far as is known hitherto) they were of two kinds only, viz. the ring cross for the Sun, and the cup-shaped hollow for the Moon: both generally recognized emblems of warmth and fertilizing power. The former

---

1 Pañjáb Notes and Queries, Vol. II. note 244.
have been found in extraordinary numbers in the so-called bog and grave finds both in Norway and in Denmark. (See Plate I., figs. 1 to 16).

The late Kamer Herr Worsae, head of the Archæological Department in Denmark, who gave much attention to this subject, came to the conclusion that the single ring cross was the Sun-god himself, and the Scutikia (the three-armed cross, the triqueta or triskele) another of the principal gods of the Northern triad; and finally, that the stars became emblems of the Sun itself, or of the large heavenly bodies.

Plate I., fig. 17 is a design taken from a vase of coarse pottery in the Museum at Copenhagen belonging to what has been called in Scandinavia the Later Bronze Age. In the centre is a wheel (the chariot-wheel of the Sun?) and below it is a quaint two-headed mythical animal, which may have been intended to represent the Sun-snake (or lightning ?), which from its zig-zag serpentine form might naturally be likened to a snake, and thus become associated with fire and solar worship. When I come to speak more particularly of the Scutikia I shall endeavour to show that one form of the Firo-Symbol is but a degenerate kind of serpent.

On ornaments belonging to the Later Bronze Age, we find the wheel-cross considered to be an emblem of the chariot which, according to most ancient beliefs throughout Asia and Europe, the Sun was supposed to drive through the sky. Now, both in Holland and Denmark it is no unusual circumstance to see a waggon-wheel on the roof of a stable or other building, placed there with the object of inducing a stork to build its nest upon it. No doubt the red legs of this bird caused it to be regarded as a fire-fowl; it comes with the spring and departs before the winter; it is the bringer of warmth and of fine weather. In Hesse also, the waggon-wheel is thus used; any building on which it is placed being deemed safe from fire, provided a stork builds its nest upon it. We have then here the wheel as an emblem of the Sun, and the stork as that of Fire.

In Asia, the wheel is associated with Buddha, and is an emblem which occurs frequently on Buddhist coins, and in Buddhist architecture. In Buddhist writings, Buddha is spoken of as turning the wheel of the law—or preaching. Plate I., fig. 33 is a representation of a Buddha wheel in my possession. I found it near a ruined mene in Lahaul. It is a stone disc about ten inches in diameter by one inch in thickness. Tibetan characters occupy the spaces between the spokes of the wheel; but, as the stone is rather worn, it is not easy to reproduce the letters very accurately. However, it is clear that the inscription is the well-known formula, "Oh mani padme hum."

Sun and Moon emblems, and the Scutikia in the various forms which it assumed, continued to be used abundantly in Denmark and Norway on ornaments and objects in common use, during the Later Bronze Age, and the Earlier and Middle Iron Ages. The same symbols occur also during the Later Iron Age or Viking Period. Curiously enough, in the new Runic Alphabet, which was there adopted at this time, "the letter S, which recalls one of the old Sun-Symbols, was called Sol or Sun."

Plate I., fig. 35 represents a small cruciform tube of terra cotta, which was found in the cemetery belonging to the ancient salt mines at Hallstadt in Austria. The Sun-Symbol engraved upon it appears to be a combination of the symbols in figs. 18 and 19 of the same Plate from Denmark. Fig. 34 is a copy of a silver brooch, clasped as belonging to the Later Iron Age, in the Historical Museum at Stockholm. It is remarkably interesting, for on it are marks which are generally recognized as Sun and Cup Symbols, and they encircle the Scutikia, or emblem of fire. Fig. 36 is a brooch belonging to the Later Bronze Age (as regards Scandinavia, be it observed, in all cases). Sun and Cup Symbols are also prominent in this example, and I have therefore selected it as a typical one. I have other similar brooches, one of which was found in an ancient grave near Bregens, on the Lake of Constance. The fact of this purely Norwegian type of brooch being found so far south, assists in confirming an idea which has long existed; that the three Swiss cantons of Uri, Schwyz, and Unterwalden were colonized by people from Scandinavia.

who wandered thither in consequence of a famine in their own country. The inhabitants of a valley near Brienz in Canton Berne, have to this day a tradition that their ancestors came from Scandinavia. Fig. 37 is a drawing of a crucifix bought at Bergen, in Norway, and a similar one which I saw in a museum, is classed as being of the 11th Century,—i.e. when Christianity was first introduced into those parts. It is of a peculiar type, and it will be observed that three nails only have been used in fastening the body of the Saviour to the cross, for the feet are crossed over each other, and one nail pierces both. Sun-Symbols are pendant from it, which seems to show that in those early times the people were permitted by their teachers to combine their former worship with their new faith (as in Russia).

I have above given a few examples of Sun-symbolism in Scandinavia, bringing it down to about 1000 A.D., but such Symbols exist there also in Museums on objects classed as belonging to the Middle Ages. In the Museum at Bergen are some apparently mythical small animals of that period which appear to have been children's toys, having Sun marks ☉ on their bodies; and on an old Norwegian bridal crown, stated to have come from the Sogne Fjord district and referred to the same time there are Sun and Moon Symbols ☉☉ alternately with pendant Suns, while Cup-marks finish off its upper edge.

Plate II. is a representation of a wizard's drum from Lapland, now in the Norwegian Museum in Stockholm. Though the Laplanders are professedly Lutheran Christians, they still retain great faith in augury and divination. They are very superstitious, and if on going abroad in the morning they meet an unlucky omen, they return home and do not stir again the whole day. They are said also to still pray to their ancient idols for the increase and safety of their herds. Their magicians make use of drums to form prognostications. Small brass rings are placed on different parts of its surface, which, when the drum is beaten with a small hammer, dance upon the signs represented on it, and according to the course taken by them the sorcerer, after going through certain manoeuvres, essays to foretell events. The Sun, Moon, and certain of the Planets are clearly definable upon the drum represented in the plate: the other Symbols are not so plain, but some little animals like rats appear to be worshipping the heavenly bodies.

Cup-marks exist on some of the megalithic monuments in Brittany. Plate III. fig. 3 is a menhir from that province, which is one of a line of monoliths (alignments as they are there called). The "lines" are sometimes composed of as many as ten parallel rows of such stones, and they may occasionally be traced for two or three miles. They usually, if not invariably, terminate in a dolmen (prehistoric tomb made of unhewn stones), or in a hill containing several dolmens. Antiquarians seem to be agreed in regarding them as the tombs of chiefs. The menhirs may have served as an avenue to indicate the road to the tomb, or have been looked upon as sentinels guarding the approach to it, for beneath many of them fragments of burnt and of imperfectly calcined human bones have been found. Plate III. fig. 1 is a cupmarked stone, now in the Museum at Vannes in the Morbihan (actual size), found at Keran, near Arradon, a place about two miles from Vannes. The nine Cup-marks upon it, which appear to be arranged upon a fixed plan may have had some special reference to the Nine Planets still worshipped at Benares under the name of the Naugra or Nava-Graha.

In the first part of Pre-historic Stone Monuments of the British Isles, by the Rev. W. C. Lukis,10 embracing those of Cornwall only, mention is made of a stone monument near St. Keverne, now locally called "The Three Brothers of Grugith." To use Mr. Lukis' own words,—"This monument is remarkable on account of its construction. A massive stone of irregular shape, 8 feet by 5 feet, is supported on two stones. One of these is 8 feet 6 inches long, and nearly 5 feet broad, and appears to be a rock in situ, and to have been selected on account of its suitableness; the other is a slab 7 feet 9 inches broad, and 18 inches thick, set up on edge, 2 feet 6 inches from, and parallel to, the former. The remains of a mound are still visible." This monument is given on Plate IV. fig. 1. As regards the present paper the

10 Published by the Society of Antiquaries—London, May, 1885.
chief interest attached to it is in the Cup-marks upon the stones, which are nine in number; 8 on the cap-stone and one on the rock. In this respect they coincide with the stone in the Vannes Museum above mentioned, but their arrangement is different. Plate IV. fig. 2 is a cup-marked stone by the roadside in the Forest Parish in Guernsey. Six Cup-marks only are above ground, but it is not unreasonable to suppose that more exist below, though it is not easy to ascertain this, as the monolith borders on a hard metalled road. Fig. 3 is a drawing of a Dolmen called La Garenne, on L’Ancrese Common, Guernsey. Here again, we have nine Cup-marks apparently intended for the Sun and Moon and the other seven Planets (according to the Hindū reckoning). As above said it is more than probable, from the regularity with which they are placed, that some meaning was attached to them.

The under surfaces of the Cap-stones of some of the dolmens in Brittany have in a few cases numerous Cup-marks incised upon them. Plate III. fig. 2 is a reduced drawing of the Cap-stone of a chamber, or small dolmen formed of unhewn stones at Baker Hill, Ross-shire, N. B. The incised marks upon it recall both Sun and Moon Symbols. As a rule such signs seem to be rare in the British Isles, but at New Grange, Drogheda, Ireland, is the following supposed Sun-Symbol ☉. Curiously enough in the Museum at Grenoble, Department Isère, in France, amongst the collection of Gallo-Roman antiquities found in that neighbourhood, is a highly finished ornament made of bronze. At one end is a lion’s head and fore-paws. The action of the animal is very spirited, and it appears to be springing forwards from right to left. Behind the lion, but facing the other way, is the bust of a woman partially veiled in the Greek style. Beyond this again, is a horse led by a man who is dressed in the short tunic worn by slaves, and on the horse’s flank is precisely the same Symbol as on the stone at New Grange. The horse is standing on a kind of pedestal, on which is the inscription STRATILLATES in Roman characters.

It is a curious fact, and one perhaps not generally known, that certain women in Albania tattoo their arms and foreheads with the Sun-Symbols common in the Later Bronze Age in Scandinavia. When in Corfu in 1883 I observed Plate I. fig. 4 in the centre of the forehead of more than one Albanian woman (one of the caste-marks in India is very similar in form to this), and also figs. 23, 25, and 26 tattooed on the arms and wrists of some of these people. They had been allowed to take up their abodes on the island about six years previously, after many of their villages had been burnt by the Turks, and many of the inhabitants massacred.

Fig. 1 of this plate has been found in Savoy and also in Wales. The cross with Cup-marks round it ☉ on a sepulchral urn in Wales; and the cross with supposed Sun-and-Moon Symbols ☉ on a fragment of pottery at Villanova in Italy.

Fig. 23 is at the bottom of a small silver drinking cup in my possession, which has the exact form of the Scottish quaich, and has been evidently a measure for a dram of spirits. It was purchased in Norway. I have a silver spoon also, bought in Bergen, which has on the handle these markings ☉. It is said to be of a type which belongs to that part of Norway styled the Nordland, a district north of Trondhjem (or Drontheim) and extending beyond the Lofoten Islands.11

Le Retour du Soleil.

I had intended the following account of the festival of Le Retour du Soleil, said to have been performed at Les Andrieux, to form part of the preceding notes on Sun-worship, but I have received a letter from a French friend in Dauphiné, throwing doubts on the authenticity of the festival herein described as a relic of antiquity. I translated the account in 1882 from a rather curious (and I believe now rare) History of the High Alps by Baron Ladoucette, a former Prefect of this Department, under the First Empire, who says that he himself witnessed the fête. His book was published about the latter part of the first quarter of the present century. The letter I received was in answer to one which I sent to Grenoble, with the object of endeavouring, if possible, to ascertain whether Le Retour du Soleil was still kept up at Les Andrieux.

My informant wrote—"An individual named Farnaud, who was a Councillor of the Prefecture..."
PIERRE BLANCHE AT KERUN ARRADOR, NEAR VANNES.

FROM A DOLMEN AT BAKER HILL, ROSSIRE. N.B.

MENHIR FROM BRITTANY.

MITHRA, WITH SIGNS OF THE ZODIAC, FROM THE MUSEUM AT ARLES.
under the Baron Ladoucette, left memoirs behind him, which have caused some persons to doubt the genuineness of Baron Ladoucette's account; and he added, “M. Farnaud possibly did this in order to gain for himself the reputation of a bel esprit.” In his memoirs the Councillor states that it was he who imagined and caused this festival to be performed, and did so in order to impose upon the credulity of Baron Ladoucette, who, he knew, was then compiling his work. This version of what was, if committed, a cruel practical joke, has been accepted by two antiquaries of Dauphiné, M.M. Chaper and J. Roman; the latter, however, qualifies his acceptance by adding that the oldest inhabitants of Les Andrieux are convinced that their ancestors always celebrated this fête, and that all those with whom he spoke were alive in the time of M. Farnaud, and would in consequence have been perfectly competent to state whether this ceremony only took its rise under his administration. Élisée Reclus, in his Universal Geography, speaks of this festival as a very ancient one.

Baron Ladoucette’s story is as follows:

“On the banks of the River Soveraise, in that portion of the High Alps which was formerly called the Godemar valley, is a little hamlet called Les Andrieux.

During the space of one hundred days in winter the inhabitants of this valley are deprived of the light of the sun. It is only on the 10th of February that this orb is seen by them again, therefore on this particular day, as soon as the dawn appears, four shepherds go round the village and announce that the festival is about to commence, by sounding pipes and trumpets. They then go to the house of the oldest inhabitant in the place, who under the title of Le Vénérable has to preside at the ceremony of saluting the return of the sun.

At 10 A.M. all the inhabitants, each provided with an omelette, assemble on the Place of the village. A deputation, preceded by the shepherds, then goes to fetch Le Vénérable, and accompany him to the place of meeting. On his arrival he is received with acclamations. Le Vénérable then places himself in their midst, and announces to them the object of this festival, and then, each holding his plate of omelette they form a chain and dance a ferandole round him.

As soon as the dance is at an end Le Vénérable gives the signal for departure, and preceded by the shepherds, all follow him to the stone bridge which is at the entrance to the village. On reaching this spot, each lays down his omelette on the parapet of the bridge, and then all go into a meadow close by, where ferandoles are again danced till the sun appears. As soon as this moment arrives each person goes up to his omelette and he takes up his omelette, or rather, as soon as the solar rays illuminate the whole of the pente, each one’s omelette is illuminated by the latter’s. They then walk back home, where they eat their omelette.

This festival is followed by a whole day, and sometimes extends into the night.”

THE NRISIMHATAPANIYA-UPANISHAD.

BY LIEUT.-COLONEL G. A. JACOB, BOMBAY STAFF CORPS.

It is impossible to collate the existing printed texts of the Upanishads with the manuscripts which of late years have come to light, without seeing how much yet remains to be done in this department of Sanskrit literature. In the footnotes to his translation of some of the Upanishads, Professor Max Müller has suggested many improved readings of the texts; but as the Nrishihatapaniya has not yet been taken in hand by him, I venture to lay before the public some of my own notes on the various readings of this Upanishad. In addition to the text and commentaries published by Professor Ramamaya Tarkaratna, in the Bibliotheca Indica series, in the year 1871, I have used the following MSS. belonging to the Deccan College:

A. One of the set No. 10 of 1882-83. It is a fairly good copy of the text, though not properly corrected. It was purchased in Gujarit.

B. No. 1 of 1882-83. It lacks the first 3 khandas of the first Upanishad, and has not been corrected. Still it is a valuable manuscript of the text, and has been of great use to me. This also is from Gujarit.

C. No. 145 of 1879-80. A beautifully written

12 An intelligent bookseller at Grenoble, when I asked him what sort of dance the ferandole was, said, that any joyous movement executed by peasants in the open air was styled a ferandole in that part of the country.

13 A correspondent from Grenoble tells me, that this bridge, now in ruins, still preserves the name of Pont de l’Omelette.
and very accurate copy of Śaṅkara's commentary on the Pārvatātpaṇi.

D. Nāriyāna's Dīpikā on the six Upanishads. A part of the set forming No. 233 of 1882-83. It was obtained in Gujarāṭ.

E. No. 146 of 1879-80. Śaṅkaraṇānda's valuable commentary on the Uttaratātpaṇi. It is in the same handwriting as C. and, for the most part, as accurate.

F. One of the set of 59 Upanishads called No. 133 of 1880-81. It was copied at Ahmadābād in A.D. 1700, and is generally accurate.

A short account of this Upanishad is given on page 167 of Weber's History of Indian Literature. That scholar says—"The first part treats of the Anuṣṭhābha-formula sacred to Nṛsiṃha, the mantrārāja-vārasishe ānustubha, with which the most wondrous tricks are played. . . . The contents of the second part are of a more speculative character; but in respect of mystic trifling they do not yield to the first part."

I fully endorse this statement as regards the contents of the Dīpikā, but consider the Uttara- or Pārvatātpaṇi, every way superior to it. Intāpaṇi to me in my mind deeply interesting as it is to me of the Mānḍākya a Vedic exposition of the contents, the school of which Śaṅkara is not directly taught in the Upanishads of the first three Vēdas, and is deduced from them by a forced interpretation. Here, on the other hand, we find that doctrine unmistakably enunciated, and even a distinction drawn between Māyā and Āvidyā—a notion which one associates with the later Vedantic treatises.

Professor Weber mentions Gauḍāpāda as a commentator on the Nṛsiṁhatātpaṇi; but though I have heard of his commentary in this country, I have not yet met with it.

The printed commentary attached to the Uttaratātpaṇi is not universally accepted as the work of Śaṅkara, and, in my opinion, there is strong internal evidence against his authorship. My belief is further strengthened by the following fact:—When studying the Māṇḍākya and Gauḍāpāda's Kārikās thereon, I referred several times to Nāriyāna's Dīpikā in the hope of obtaining further light; but found, to my astonishment, that his work consisted almost exclusively of extracts from Śaṅkara's Bhāṣya interwoven with portions of Ānanda-gūri's notes. With this phenomenon before me I compared his Dīpikā on the first half of the Kraṇa, and on the whole of the Māṇḍākya, with Śaṅkara's scholia on those tracts. In the former, and in the first Māṇḍākya, I met with numerous citations from Śaṅkara, intermingled with original matter—but, in the second and third Māṇḍākya there was scarcely a line that was Nāriyāna's own! A few weeks ago I read the Nṛsiṁhatātpaṇi, and made a copy of Nāriyāna's Dīpikā thereon for my own use. There again I found long excerpts from Śaṅkara's Bhāṣya on the Pārvatātpaṇi; whilst it differed entirely from the so-called Śaṅkara-bhāṣya on the Uttaratātpaṇi. I then carefully compared the Dīpikā on the Māṇḍākya, Kraṇa, Mṇḍākya, and Nṛsiṁhatātpaṇi Upanishads, where these plagiarisms occur. Nāriyāna styles himself Śaṅkara-dīty-ātpajñeṣa (which is perhaps his way of acknowledging his indebtedness); whereas, at the end of those on the Nṛsiṁhatātpaṇi, the Svetāsvatara, Mahānārāja, and the minor Aṭhāvaram Upanishads, he describes himself as śruti-mātri-ātpajñeṣa. The theory, then, which I have formed in view of the foregoing facts is that, whenever Nāriyāna wrote a commentary on an Upanishad on which a Bhāṣya by Śaṅkara already existed, he made free use of it; but that, when such did not exist, he wrote independently, as he was well able to do. The fact, therefore, that his Dīpikā on the Nṛsiṁhāttarātātpaṇi has nothing in common with that which some attribute to Śaṅkara, is, to my mind, strong presumptive evidence against the authorship of the latter. The same reasoning applies to the Svetāsvatara; and I cannot understand how it can be maintained that the Bhāṣya bearing Śaṅkara's name is really from his pen—so different is it in style from what we know to be really his.

The library of the Deccan College possesses Dīpikās by Nāriyāna on the Kātha and Kīna Upanishads also—but, as they are on loan in England, I cannot ascertain whether they support my view or not.
It appears from Śaṅkara's scholi on 3.5 that there are two distinct śākhās of this Upanishad, namely the Bṛigū and śāṅkara; but he does not say to which his text belongs. The missing information is, however, supplied by Nārāyaṇa, who says—

... The following list contains the most important of the readings which differ from those of the printed text, the pages of which are quoted to facilitate reference. There are many others which affect the sense, but they are withheld as being too numerous for this paper.

Purāṇatapana (5 Upanishads).

p. 8 (i.1). D. seems to read प्रहत्यु, and has प्रहत्यु as a variant (prahartya). G. reads प्रहत्यु. Instead of षट्प्रद्वंदति, A., G. have षट्प्रद्वंदति and they are supported by D. which says—पुष्पयविवजनति यथावकारमां नवनिष्ठिता। वचनम् तु न पढ़ित नान्ति। वचनम् प्रहत्युष्टिपुष्पयविवजनतिति।

p. 11 (i.2). A. G. insert वीरां after संव, D.'s explanation of प्रहत्युस्वराचारिक is noteworthy:—प्रहत्युस्वराचारिक...

p. 14 (i.3). A. G. omit प्रहत्युस्वराचारिक and so does D. which says संवस्त्रस्त्रूचारिक। श्रद्धास्वरूप। Instead of नान्ति... C. has नान्ति as on p. 69.

p. 16 (i.4). Instead of अन्त्यत्वस्य A.B. D. G. read अन्त्यत्वस्य. The syllable ह in त्वस्य should clearly be omitted, as in C. and printed commentary. It is accounted for further on.

p. 29 (i.5). For अस्तित्व D. C. read अस्तित्व, which is the reading also quoted by Śaṅkara on p. 27, 3 from bottom.

p. 35 (ii.1). Here, as well as on p. 146, I believe the reading सोऽयस्यंति is wrong, and that B. correctly reads in both places सोऽयस्यंति: In the expressions तत्वाः तत्वाः सत्त्वाः and सत्त्वाः here and on page 145, the स is equivalent to स as explained in the printed commentary on p. 146, and the same holds good here also. In the present instance D. explains it thus—अद्ययमेव्यक्तिः प्रतिनिधित्वमायित्वेन आद्ययमेव्यक्तिः सहस्रस्मांको मन्त्रामायित्वमायित्वं अनुस्मरितं। G. however, has सोऽयस्यंति: in both places.

p. 40 (ii.4). Instead of उपहरं (which is evidently a misprint for उपहरं) B. and D. read उपहरं as in Rigveda 2, 33, 11. C. has उपहरं. In this quotation, the word अन्त्यत्व has been substituted for श्रेयस्. All five MSS. read विशेषत्व instead of निशेषत्व.

p. 46 (ii.4). In the quotation from Mahānārāyaṇa-Upanishad (Taittirīya-Aranyaka 10, 10, 7) B. C. D. omit the words वश्यमयित्व् न पश्चात् किं निशेषत्वत: and they do not appear in the Aranyaka either.

p. 52 (ii.4). In the quotation from Rigveda 1, 154, 2, A. B. D. G. read विशेषत्व instead of निशेषत्व and together with C. they have अन्त्यत्व instead of निशेषत्व.

p. 57 (ii.4). B. inserts स्वात्तमतत् after वश्यमयित्व्. In the quotation from Rigveda 10, 121, 2, श्रेयस् न्यूनतः has been substituted for श्रेयस् मूर्ति: which is given by Nārāyaṇa as a variant.

p. 59 (ii.4). The अवग्रहा should be inserted before एवःविनि, that being the reading preferred by Śaṅkara and Nārāyaṇa, though they give the other as an alternative. A. D. and G. have अवग्रहाद् instead of उपहरं.

p. 72 (iv.1). Instead of अनात्ममयित्व: धान्यमयित्व: as in the Māṇḍūkya, A. and B. read अनात्ममयित्व: धान्यमयित्व: It is evident that the अवग्रहा is implied however, and Nārāyaṇa explains अनात्ममयित्व both here and in the same passage on p. 124. In the latter place, however, A. B. and E. follow the Māṇḍūkya. Nārāyaṇa says—अनात्ममयित्व: धान्यमयित्व: न किं बहुतायः विधिवत: संस्करितम् तत्तवः। नान्ति... लोकस्मिनित्वस्य पादम्ब्रमणम् सुलभस्वरूपाय:। G. has अत्यन्तायः.

The following remark of Śaṅkara's on the differences between the Māṇḍūkya and this Upanishad is worthy of notice—उपनिषद् सबवर्तमानपरास्तरमितिः काव्यभासस्य द्वितीयम्। तत्तवस्य पादम्ब्रमणम् एतं प्रतिनिधित्वम् नान्ति। सत्त्वाः तत्त्वाः तत्त्वाः तत्त्वाः। In our printed texts of the two Upanishads, however, there is no such difference as that here indicated; and I do not remember having anywhere met with the reading एप... एस्स: in a MS. of the Māṇḍūkya. This shows us, however, that as regards the settling of the text we have not yet attained to finality.

p. 82 (v.2). Nārāyaṇa's etymology of कलाकार्य: is curious. He says कलाकार्य कलाकार्य कतु नम गुणस्य यथा कालार्काः। A. B. D. G. read श्रव्य: instead of श्रभ, before कालार्काः.
p. 86 (iv. 3). B. D. insert as the 12th Mantra that given in the footnote,—and they both, in common with A., omit the 3rd Mantra on page 87. A. makes up its 32 by inserting that given in the footnote on page 87. G conforms to the printed text.

p. 88 (iv. 3). A. and B. read स्वतः for नानाः and स्वामन्य for स्वामन्. B. also adds स तीव्रे पदयित्र after the words स देवं पदयित्र.

p. 93 (v. 1). Instead of सूर्यनं B. D. read सूर्यन्. The latter says अर्घो हाति। अर्घो कुद्वन्ति व सूर्यन्ति।

p. 93 (v. 2). Instead of सूर्यन्ति, the reading of A. is सूर्यन्ति, and of B. सूर्यन्ति. Narayana’s explanation is सूर्यन्ति इत्यादि सङ्केते which seems to agree with A. G. is the same as the printed text. The stop after वर्णेण should come after the next word सः. Narayana says स वर्णेण प्रबलप्रभावितस्यः।

p. 102 (v. 4). In A. B. C. and D. सूर्यन्ति comes first in the list, and सूर्यन्ति second. B. omits all the rest except सूर्यन्ति. A. omits सूर्यन्ति तत्रतां, and it is not noticed by Saîkara or Narayana. G. is the same as the printed text.

p. 104 (v. 8). A. B. C. read उपायेत् instead of उपायेन, and before the last clause B. inserts साधनमेव बले।

p. 106 (v. 10). The word अन्तःकरण has no support from any of my MSS. It occurs three times. In the first instance A. B. C. and G. have अन्तःकरण; in the second, A. has अन्तःकरण (for अन्तःकरण?) G. अन्तःकरण and B. and C. again अन्तःकरण. The third instance is not referred to by C.—but A. and G. read अन्तःकरण and B. अन्तःकरण. This last seems to be Narayana’s reading, for he says अन्तःकरणमेवाशुः। Both A. and B. insert एकेन before सद्वस्ता वाक्यां, and, in common with G., omit मन्त्रयोगः after ब्रह्म न पुष्करः।

Uttarapatan (1 Upanishad).

The MSS. on this part are the same as on the former part, except that Sai-karananda’s Commentary (E.) takes the place of Sai-kara’s (C.).

The invocatory verses are omitted by B. and E.

p. 126 (1). After अन्तःकरण B. D. add अन्तःकरण and all the MSS. insert चतुर्द्विन्द्र after अन्तःकरण. D. and E. omit युता altogether, in the sentence स एव एव विशेषः, and B. agrees with them in the second instance. A. and G. include both.

p. 129 (2). The avagraha must be inserted in both cases before चायन्ते. The correct reading is अभागा।

p. 132 (2). The reading कालाभिः नानाः नानाः is impossible. I believe B. E. and G. to have the correct reading, namely, कालाभिः श्रावणी। which Sai-karananda thus explains:—कालाभिः: काल श्रावणीस्वाभाविकाः परमात्मनम् श्रावणीस्वाभाविकाः परमात्मनम् श्रावणीस्वाभाविकाः। असः कालाभिः श्रावणीस्वाभाविकाः परमात्मनम् श्रावणीस्वाभाविकाः।

It is well known that both eye and ear are fertile sources of mistakes, and I believe that the reading of A. and D. is an instance of the latter kind. In the body of A. the reading is कालाभिः: which has been altered in the margin to कालाभिः: but सूर्ये: must be a mistake for सूर्ये: D. thus explains—कालाभिः: श्रावणीस्वाभाविकाः परमात्मनम् श्रावणीस्वाभाविकाः। कालाभिः: श्रावणीस्वाभाविकाः परमात्मनम् श्रावणीस्वाभाविकाः।

The former reading is unquestionably the better and more probable one, but it is easy to see how the latter arose from it.

p. 136 (2). B. and E. omit एकेन, whilst A. and D. insert एकेन before चायन्ते. A. inserts हि श्रावणी, and B. श्रावणी, before श्रावणीस्वाभाविकाः।

p. 146 (3). In regard to साधनमेव: see notes on p. 35 (ii. 1.).

p. 147 (3). Instead of अनुरुपियं, Narayana reads and explains अनुरुपियं. He says, अनुरुपियं वा पञ्चमेण स्वरं पञ्चमेण भवन्तयुः। अनुरुपियं वा च चायन्ते। अनुरुपियं वा च चायन्ते।

The word महायुगम must unquestionably be eliminated. It occurs in G. only. The passage is explained by Sai-karananda thus:— गुणेनार्थानुरुपियं चतुर्द्विन्द्र सत्यं सत्यं सत्यं सत्यं तत्वं सत्यं सत्यं सत्यं सत्यं तत्वं सत्यं सत्यं सत्यं सत्यं।

p. 169 (3). The word महायुगम must unquestionably be eliminated. It occurs in G. only. The passage is explained by Sai-karananda thus:— गुणेनार्थानुरुपियं चतुर्द्विन्द्र सत्यं सत्यं सत्यं सत्यं तत्वं सत्यं सत्यं सत्यं सत्यं तत्वं सत्यं सत्यं सत्यं सत्यं।
A. has अथशक्तकस्व इम which looks as if the anusvāra was accidental. G. is the same as printed text.

p. 198 (6). D. gives समाधानमेव as an alternative reading to समाधानमेव, and, with A. and G. reads निषादमा for निषादमा.

p. 200 (6). All the MSS. read अकुशलपरे प्रशान्ति and not अकुशलपरे श्रवणि.

p. 201 (6). B. E. read पुक्तवेदीत्वते at the beginning of the verse, and the latter explains thus:—अखेव धन्याकाशीते संनारायणमिविवाहूष्ठ अस्त्यूष्ठ दृष्टिमिति कुरू राविबृहोः || G. has शृङ्खला अ पुक्त

p. 203 (7). Instead of उल्लथकः, श्च, वािलिकारकमा, A. D. G. read उल्लथिकारिकमा, and B. E. उम्बिकारिकमा, which I prefer. E. explains thus:—उल्लथिकारिकामा कामादीपनेनिप्रियमा। In the last line B. D. E. G. have उल्लथिकारिक इलेक्ट्रो मत्र अन्तरे instead of उल्लथिकारिक। The latter is certainly wrong.

p. 205 (7). The reading महाकारिकमा is not supported by any of my MSS.; and these again all differ from one another! A. has महाकारिकायांने नाममित्ति which is probably intended for महाकारिकायांने नाममित्ति; B. has महाकारिकायांमा नाममित्ति which may be a mistake for महाकारिकायांने नाममित्ति; D. has महाकारिकायांने नाममित्ति; E. महाकारिकायांने नाममित्ति; G. महाकारिकायांने नाममित्ति. I believe that E. is right. Compare the similar phrase महाकारिकमा परेण प्रशान्ति on p. 213 (7).

p. 207 (7). The reading पुक्तवेदीत्वते in the third line, instead of पुक्तवेदीत् ज्ञातम्, is quite wrong. A. B. E. G. read पुक्तवेदीत्वते विद्यामकाद्वयनम् which is no doubt correct.

p. 216 (8). A. D. G. have स्त्रांि, B. E. तेनांि.

p. 221 (8). A. B. G. read स्त्रांि for स्त्रांि: A. D. G. आत्मा and B. तेनांि instead of आत्मा; and A. B. E. G. धातुसा for धातुसा.

p. 226 (9). प्रातिः: the reading of the printed text, and of G., is supported by Nārāyaṇa, who explains it by प्रातिः; but A. and B. E. have प्रातिः in common with the printed commentary.

p. 227 (9). A. D. G. have न्युः in the place of त्वां.

p. 230 (9). B. E. G. read स्त्रांिम् instead of स्त्रांिम्.

p. 231 (9). A. D. read श्वेदिकायांने which the latter thus explains:—काविन्दौवेधिकायांने काविन्दौवेधिकायांने श्वेदिकायांने श्वेदिकायांने करति ||

p. 232 (9). All five MSS. read पुनः, not पुनः.
GULLALA SHAH.

A KASHMIRI TALE.

In a certain country there lived a fowler, who pursued his calling with far-famed success, and an incredible number of birds were reported to have been snared, or shot, by him every day. Some of these he set by for his own use and the rest he sold; however, being a spendthrift he did not become rich, but rather grew poorer and poorer. As fast as and as much as he earned, so fast and so much did he spend. Now this was all very well for a time, and for some years affairs proceeded comparatively happily; but by degrees it became manifest the birds were getting fewer and more wary, and there was consequently an abatement in his success; and so the fowler looked sad and anxious, and wondered what he should do for a living.

While he was in this state Râjâ Hâns summoned all the bird-world to a great assembly, and the few birds that remained in the fowler's country were also invited. The conference was an immense one, and all the arrangements were magnificent beyond description. Much business was done, and every bird expressed himself very pleased with all that he had seen and heard. At length the conference being concluded, the birds were dismissed to their several countries; but the little company which attended from the fowler's country, did not prepare to leave. Seeing this Râjâ Hâns inquired the reason.

"O Râjâ," replied the birds, "in our country there lives a fowler, whose aim is deadly and snare undiscoverable. Nearly all our brethren have been slain by him. In former days we were a great and mighty company, but now behold, O Râjâ, the smallness of our numbers and our strength. We pray you to have mercy on us, and deliver us out of the hand of this cruel man."

Râjâ Hâns was exceedingly grieved when he heard their sorrows, and immediately sought to relieve them. He had two chief ministers, an owl and a parrot, whom he loved very much, and to whose advice he always attended. Accordingly he now called them to him, and first addressing the owl, said,

"O Owl, I am ruler over all the birds and ye this account would prove a most useful bird if men could only easily understand its speech. The parrot is also quoted as a most accomplished sopher's companion, as well as a cheerful and faithful friend.
are my ministers. A portion of my subjects are terribly troubled by a certain fowler, whose tricks and snares they are powerless to resist, and yet they do not wish to leave their country. You will make arrangements for the preservation of these my subjects."

The owl was astonished when he received this difficult command; but remembering the parrot’s superior knowledge and wisdom, he replied, “O Rájá, this year order cannot be executed by me, owing to my blindness by day. The parrot, however, with Your Highness’s permission will fulfil it.”

Then Rájá Hains turned to the parrot and commanded him to perform the order which he had just given to the owl. The parrot at once agreed, made his obeisance, and departed. He went to the aggrieved birds, and bade them to be patient and to do nothing of their own counsel, but to be guided by him, and to believe that the Great God would interpose in their behalf. The birds with one accord consented.

When the fowler discovered that there was not a bird left in the country, he became more sorrowful than ever. His case appeared hopeless. How to provide for his wife and family he knew not, because he had never learnt any other trade and had never possessed a special friend. It was a sad sight to see his children gathering round him when he returned in the evening to ask him what sport he had had (for they were very hungry), and then to watch them one after the other going away again, on being told that nothing had come to his hand that day.

Thus affairs continued until the birds returned from the conference; when the fowler, having heard from one of his children that the birds had again appeared, went forth with net and bow to try and catch them. He spread his net in a most likely place, and looked so fierce and determined that the birds were more afraid than before, and went to the parrot, saying, "In such and such a place the fowler has spread his net. Tell us how we may escape, for we are certain that if this man fails to snare us in his net, he will shoot us with his bow.”

The parrot gave them permission to hide themselves in different places and promised that he would make provision for their permanent safety. So away they all flew, and were soon out of sight. Then the parrot went and walked straight into the fowler’s net and was snared, but no other bird was caught that day, and the fowler was almost frantic with despair. On reaching home his family rushed to him as usual, and inquired what luck he had had. "Nothing,” he replied, "because of your bad fortune, but this parrot came into my net to-day.”

Saying this he took the bird out of his cloth and made as though to kill it for food, but the parrot, guessing his intention, said, "Why are you going to slay me? Do you not know that my flesh is not fit for food? And even if you could eat me, what satisfaction for your hunger could you get out of such a morsel as I am? Would it not be a wiser plan to sell me to some dealer in the básár and provide yourself with provisions for many days from the price that you would obtain for me?”

The fowler acknowledged the wisdom of what the bird advised, and therefore put it into a safe place for the night, intending to rise early on the following morning and go to the básár with it.

As soon as the sun was up the next day, the fowler was up too, and off to the básár, proclaiming to the people that he had this parrot for sale. "Who'll buy? Who'll buy?” he cried; and many people stopped to look at the bird. They all seemed pleased with it, and many wished to have it, but on account of the small sums which they offered, the parrot refused to go with them. Of course this behaviour made the fowler very angry. He had been walking about in the heat all the day and was very tired and disappointed; and when he reached home, and saw again the hunger and distress of his family, he was exasperated beyond bounds. He swore that he would kill the parrot there and then. Poor bird! It thought that its doom was now most certainly sealed. However, it again begged the fowler to have patience with it. "You will perceive that I have not any personal interest in this delay,” it added. "In refusing to be sold for

---

3 A large number of stories might be quoted, in which the supposition that prosperity or adversity is sometimes dependent on the profit of another is mentioned.

4 Cf. Old Deccan Days, p. 197; also Folk Tales of Bengal, pp. 209, 210.
such small sums, as were offered for me to-day I have not been rude. Please do not think me ungrateful for the preservation of my life. If you will wait till to-morrow, and then place me in a nice cage and cover the cage with a pretty cloth, and take me here and there about the palace-grounds, some good and rich person will probably notice the cage, and ask what is inside. It may be that they will also feel sufficient interest in me to inquire my price. If so, then please leave the arrangement of this matter again to me, simply saying that I cost a great deal of money and will declare my own price."

The fowler again acknowledged the wisdom of the parrot's counsel and consented to follow it. And so on the following morning, a beautiful cage and cloth having been procured, the bird was put inside, and carried about by the fowler within the precincts of the palace grounds.

Now the king of that country had several wives, but they were all barren except one, by whom a little daughter had been born to him. This daughter grew up to be so good and beautiful that His Majesty loved her very much. He cared not to be absent from her, and there was not a request of hers, that he did not try to fulfill to the utmost of his power. One day she had expressed a wish to have a bird which could speak, and so the king had inquired diligently for such a bird. The fowler's visit therefore was most opportune.

While the fowler was perambulating before the palace the chief Wazir passed by. The fowler gave him a most profound salám. The parrot, also, gave him a salám, imagining that some great personage was near. When the Wazir heard the salám from the cage he was much surprised. "How strange!" he said; "Please remove the cloth that I may see the bird, which can do this wonderful thing."

The fowler did so; and the Wazir was more struck with the beauty of the parrot than with its cleverness, and offered to purchase it at any price. According to the previous arrangement the parrot at once named the price: "Eighteen thousand rupees!"

"What! Eighteen thousand rupees;" said the astonished Wazir.

"Yes; Eighteen thousand rupees;" the parrot again replied.

"Then I cannot buy you," said the Wazir; "but my lord the king wishes to have a speaking bird like you. So you will please be carried to him."

The parrot consented, and so on reaching the front entrance of the palace the Wazir took the cage, and went inside with it. After making his obeisance he placed the cage before the king, saying that at last he thought His Majesty had obtained his long-felt desire. As soon as the cage was set before the king, the bird most distinctly said, "Salám." This greatly astonished the king, who anxiously inquired whence the Wazir had obtained such a clever and magnificent bird. "It is the very bird that I have been wanting for a long time," he added. "You must sell it to me. Ask what you like, and I will give it you."

The Wazir replied, "It is not mine, O king. I met a poor fowler carrying it about the palace-grounds, and knowing that Your Majesty had need of such a bird, I first tried to buy it; but finding that its price was more than I could afford, I ordered the man to bring it hither. With Your Majesty's leave I will call in the man."

The king ordered the fowler to be brought in, and when he appeared, he asked him to sell the parrot. "Tell me its price and you shall have it," he said.

"My lord," tremulously answered the man, "I cannot tell the worth of the bird. I only know that it was bought for a large sum of money. Let the king's will be. The bird will state its own worth."

Then the king turned towards the parrot and inquired its price; whereupon the parrot answered as before, "Eighteen thousand rupees!"

"Eighteen thousand rupees!" said the king with a much astonished air. "Too much, too much. Surely you are joking with me."

He tried to bargain for a less sum, but the parrot was as resolute concerning its price as the king was resolute concerning its purchase. Accordingly eighteen thousand rupees were paid to the fowler, and the parrot was carried in its beautiful cage to the king's only and beloved daughter.

The fowler was now a rich man. What a wind-fall! Eighteen thousand rupees all in
one day! With what great joy he returned to his house, and how joyfully his family received him, when they heard the glad news. After dinner,—such a dinner as they had not eaten for a long time,—they began to discuss plans for the future.

"What shall be done with these eighteen thousand rupees?" asked the fowler. "Shall we leave the country, the scene of so much sorrow and distress to us, and go to a fairer and better land? Or shall we remain here and spend our money in trading? Increasing in wealth and in honour we should forget our past troubles. Say, O my wife and children; what shall we do?"

Thus were they engaged in conversation, when a great noise was suddenly heard in the yard; and loud above all sounded the voice of somebody shrieking out the fowler's name. A company of soldiers had arrived, who said that they had been sent by the king to summon the fowler to the palace. The poor man was terror-stricken. "My name, my name!" he cried. "The king sent for me! What does His Majesty require of me at this hour of the night? Perhaps he repeats of his purchase, and wishes to take the money back again. Or it may be that the parrot has maligned my character. Ah me! Ah me!"

But all his suspicions turned out to be wrong, for the king had summoned him in consequence of a conversation, which His Majesty had just had with the parrot, wherein he had been informed of the bird's mission. He wished to order him,—now that he had plenty of money,—to abandon the cruel calling of a fowler, and to apply himself to trade and merchandise. The fowler readily consented, saying, that this was his intention and that he would send his net and other things to the palace in testimony that he would not break his word. He then left, and as soon as he had gone, the king issued a proclamation to the effect that no person should catch or kill birds throughout the whole of that kingdom, and that whoever was discovered disobeying the Royal mandate should be severely punished. Henceforth there was peace and contentment in the bird community of that kingdom. They flourished exceedingly and their sweet songs filled the air all the day long.

Out of gratitude to the king the parrot decided to remain in the palace. He made himself so very agreeable, that every member of the Royal household fell in love with him, and especially the princess, whose whole time and thoughts the bird monopolised; so that she cared not to go to the king, her father, as aforetime, but was always talking and playing with the parrot, and saying, "O what should I do if my pretty parrot died or flew away from me? Polly, you do love me, don't you? and you will never go away, will you? O promise me truly that you will never leave me!"

Matters continuing thus the king naturally felt annoyed, for he loved his daughter exceedingly, and did not like her whole time to be spent with the parrot. One afternoon he consulted some of his friends as to the right course to pursue. He did not wish, or rather he was afraid, to have the bird slain,—but what was he to do? They advised him to order the bird to be brought to the Court, or to the garden, or wherever the king wished his daughter to come, for His Highness knew that wherever the parrot went, there the princess would go too. The king was pleased with this advice, and at once sent a servant to bring the parrot to the Court. Now the parrot, "as has been already mentioned," had the faculty of knowing all that was happening in the world, and used to tell his mistress any special news. Accordingly he now explained to her the king's plan for getting his daughter to visit him again. "You had better go," continued the parrot. "Go immediately, and leave me here."

The princess did so. Half-way to the Court, she met the king's messenger, and asked him what his errand was. He replied that he had been sent by the king to bring the parrot to the palace. "Never mind," she said, "you need not go. I will make it all right with the king. Return with me. I am now going to His Majesty." As soon as the princess had left to go to her father, the parrot remembered its native place and old friends, and determined to see them once more, thinking it could

* cf. Folk-Tales of Bengal, p 211.
return before the princess came back. So it pulled out its old and broken feathers that it might look the more beautiful, threw them on the floor, and then started. It reached home safely and was heartily welcomed by its relations and friends. They were all very glad to meet again, and had a lot to tell each other after so long an absence. They seemed hardly to have commenced conversation—so quickly did the hours pass by,—when the falling shades of evening reminded the parrot that it was time to depart; and so resisting all entreaties of its friends to stay,—if only for an hour or so longer,—it spread out its wings and flew away.

On its way back the parrot alighted in a garden, which was by the sea-shore, where grew many rare and beautiful flowers. It plucked two of the most beautiful and returned to the princess. The princess had, however, come back from the Court long before, and finding that the parrot was not there had become very anxious; and when after a little while she discovered some broken feathers lying on the ground, her grief knew no bounds. She thought that a cat had certainly entered the room and stolen her beautiful bird. After much weeping and lamentation she went to the king, told him her sad tale, and begged him to give orders that every cat found within the kingdom should be slain. Although the king cared nothing for the parrot, yet he was very desirous of pleasing his daughter, and therefore he at once ordered the immediate execution of all the cats that could be found in his country. Hundreds of cats were killed before nightfall.6

The poor princess, however, got very little comfort out of this revenge. She returned to her room, shut the door, and wept until she had no more power to weep and could not bear it any longer. "My pretty Poll, my pretty Poll," she kept on saying in an agony of grief. "Why did I leave you? O cruel, cruel, to have done this the very first time I was away from you!" Thus she mourned the loss of her pet companion. It was a long, long while before she closed her eyes that night; and when sleep did come, it came only for a short space. She soon awoke and then her thoughts naturally turning on her terrible bereavement; so she got off her bed, and determined to put an end to her grief by hanging herself. She contrived to fasten a piece of cord to one of the beams of the ceiling, and having made a noose, was about to put it over her head, when the parrot flew in through the window! Another moment's delay and the bird would have found his mistress a corpse. What tongue can tell, and whose pen can describe the astonishment of the one and the joy of the other, when they thus met? The princess clasped the bird to her breast, and weeping floods of tears explained how she had thought that it had been devoured by some cat, and on that account had prevailed on the king to sanction an order for the destruction of all the cats in the country; and then how she had felt so lonely and so miserable, that she had fully resolved to kill herself, because she could not live without its company. The parrot was so touched with the princess's story, that he almost forgot to ask her to hasten to the king and get him to revoke the cruel order concerning the innocent cats.

For some time after this they both remained perfectly silent,—lost in each other's joy. At length the parrot broke the silence. He told his mistress how he had felt constrained to leave her so abruptly and visit his home and people, also what he had heard from them and had seen on the way; and then he presented to her the two beautiful flowers which he had plucked from the garden by the sea. On seeing the beautiful flowers and inhaling their sweet perfume the princess fainted; she had never before seen flowers so lovely and of such delicious scent. When she came to her senses, she went and showed them to the king. His Majesty and all the courtiers were greatly surprised when they saw them. Such magnificent flowers had never been seen or conceived of by them. Such splendid perfume too; it filled the whole palace, so that the attendants and servants living in distant apartments perceived it and began to ask one another whence it was.

"How did you obtain these?" asked the king. "The parrot gave them to me," replied the princess. "He said that they were plucked from the flowering trees in the garden of the daughter of the king of the fairies, which is by

6 cf. Folk-Tales of Bengal, pp. 206-219, the "Story of the Hirama," which should be read in connection with this tale.
the sea-shore. There were twelve thousand of them in the garden, and each was worth twelve thousand rupees."

"True, true," remarked the king, "such flowers as these must be from heaven."

Then the princess asked her father to send and get some of these flowers for her. Now this was a very difficult request. Nevertheless the king promised that he would try, and at once despatched messengers in search of them. After many days these messengers returned, saying that they were quite sure of never being able to procure the flowers. However, His Majesty was not going to abandon the search so readily. He ordered notices to be sent to the different kingdoms of the world asking if these flowers were to be met with anywhere, and promising that he would give his beautiful daughter in marriage to the person, whoever he might be, who could procure them for him. This was done, and years passed without any news of them.

Now in former days there lived in the king's country a trader, who was exceedingly wealthy, and who, on account of his immense wealth, was much honoured by the common folk. Flattery and adulation had made this trader very proud; so proud that he would never listen to anyone, not even to the king. This proud man died, and owing to his not having any brothers or children his whole property reverted to the crown. It was a sad day for the trader's wife when her husband died. Poor woman; she was weak and sickly and expecting soon to have a little child. She knew not what to do. However, work she must, if she did not wish to die; and so she went and hired herself to a farmer of that country.

In due time her child was born. His lot was good, and he grew and waxed strong. When he was old enough to do some work the farmer sent him into the fields to tend the cattle. Day by day he found time, also, to go to school with the farmer's children, for he was a good boy and wished to be wise and great. As his mother, being under the supposition that her child had been born under an unlucky star, had not given him a name, his schoolmates called him Kharîâ, because his head was covered with scabs.¹ The school-

master, however, soon discovered the boy's talents, and perceiving also, that he was diligent in his studies and ambitious, he took special notice of him and taught him all he could. He gave him presents of books too, and Khâriâ soon became very clever and learned, and the envy of all the other boys.

One day it happened that as Khâriâ was going on an errand for his master the farmer, he met one of the messengers of the king, who wished to get some more of the rare and beautiful flowers. "Whence came you?" he asked. "What have you come for? What is your name?"

The messenger replied by putting the king's notice into his hand. Having perused it Khâriâ said, "Give me some money for the expenses of the way, and I will obtain these flowers. Go back immediately to your Royal master, and tell him to comfort his daughter with these words, until I appear. Be not afraid that I will deceive you."

The messenger was much pleased with the boy's frank and ready manner; and giving him the necessary expenses and a specially-sealed letter of the king, he hastened back to inform His Majesty of his success.

Khâriâ first went and told his mother what he was going to attempt. She begged him not to be so foolish, but he would not hear her. He then went to tell his master and his teacher, and taking leave of them, started on his journey. In two or three days he reached a jungle, where a very tall and grand-looking man met him. Catching hold of the tall man's hands, he said, "Salaâm!" The man returned the boy's salaâm and asked him who he was, whence he came, and whither he was going. The boy told him everything, as he had told his mother and master and teacher, and kept nothing back from him. Then the grand tall man blessed him, prayed for him, and bade him depart in quest of the flowers. But the boy would not let go his hand until he had told him in what direction to go. Seeing that the boy was in earnest, and was a worthy boy, the grand tall man disclosed to him who he was, and how by virtue of his great sanctity he could obtain for him whatever he required. "This is what I wanted from you," said Khâriâ, "for I could

¹ Kharîâ is the Kashmiri for the disease called scald-head (jaun).
see that you were a very holy person and had all power. I pray you tell me whether I can get these flowers, or not; what my future lot is; and what my name is."

The grand tall man answered, "My boy, you can get these flowers; your future is good; and your name is Gullâlâ Shâh."

Saying this he placed his left hand on the boy's head, and taking a hollow gourd filled with water, he threw its contents over him, when the scabs and all other failings in the boy's appearance disappeared, so that he was now very beautiful. As soon as he had done this the man finally told him to go. And as Khariâ was leaving he again blessed him.

After many days Khariâ arrived at a certain place, and took up his abode in the house of an old widow, who lived there. He was very kind to the old woman, and used to give her food and in other ways help her. Every day he went for walks in and around the city and constantly brought back with him some little present for the widow. One morning, as he was washing himself by the riverside, near the palace of the king of that country, the princess chanced to see him, and noticing that he was tall and handsome, she sent one of her attendants to call him, which was done. Khariâ said that he would go, and was conducted to a certain spot in the palace-garden, which the princess had pointed out. For many days they met together there, and the oftener they met the fonder they became of each other. At length the princess determined to marry Khariâ, and went to her parents to obtain their consent. Of course the king and queen first wished to see and to know something of the young man, and so a message was despatched to him, commanding him to appear at the Royal Court. In a little while the king, seeing that he was good and clever, and worthy of becoming his son-in-law, married his daughter to him. It was a very grand wedding, and there was no stint of money or trouble. Every arrangement was on the most lavish scale, and everything seemed to pass off most happily. Gullâlâ Shâh, for this was the name by which he was now known, visited the Darbâr every day, and his words were always listened to with the greatest attention and respect. Through his efforts, also, many good and just laws were introduced and many old-established errors corrected. Thus the kingdom became the terror and avenger of all evil men, but the refuge and defender of all who wished for right.

(To be continued.)

NOTES ON THE MAHABHASHYA.

BY PROF. F. KIELHORN; GÖTTINGEN.

1. Āchāryadēśiya.

The Mahâbhasyâ is composed in the form of a series of dialogues. The principal interlocutors in those dialogues are the Sîshya, the Āchâryadēśiya, and the Āchâryya. The Sîshya brings forward his doubts and asks questions; the Āchâryadēśiya is ready to solve those doubts and to reply to the questions raised, but panditammanya as he is, his answers are given hastily and without a full knowledge of all the difficulties of the matter under discussion; so that finally the Āchâryya must step in to overrule him, and to explain the true state of the case. Sometimes we find all the three disputants introduced in parts of the Mahâbhasyâ which contain only remarks of Patañjali; on other occasions, the views of the Āchâryadēśiya are contained in a Vârtika, and those of the Āchâryya in original remarks of Patañjali, or vice versa. Moreover, as the author of the Mahâbhasyâ has not himself told us which of the views stated in his work are those of the Āchâryadēśiya, and which those of the Āchâryya, it cannot be wondered at that commentators occasionally should differ, and that one should regard as the opinion of the Āchâryya, what the other takes to be the opinion of the Āchâryadēśiya.

All this is so plain and natural, and accords so perfectly with the Hindu method of scientific discussion, that it might seem unnecessary to state it here, were it not that Āchâryya and Āchâryadēśiya are by some scholars still taken to denote, the former only Kâtyâyana, and the latter only Patañjali, and that accordingly the word अचार्यदेशिय is still explained to be "a term used by Kâtyâya to denote Patañjali."

To show how the word Āchâryadēśiya is...
really used by Hindu commentators, I select the following from a large number of passages which I have collected from the commentaries of Bhartṛhari, Kāyaṭa, Haradatta, and Nāgōjībhaṭṭa.

The *Drandeya*-compound *स्मर्यायायायायायः* is employed by Bhartṛhari, when commenting on the *Mahābhāṣya*, l. 5, of Vol. I. p. 5 of my edition.

In the *Bhāṣya* on P. IV, 1, 13 (Vol. II. p. 204), where there is no *Vārttika* at all, the question is asked (l. 23, अथ तदनुभिन्न अविविधम्), what would be the correct form of a *Bhāuetih*-compound to express the sense of the words विनियम: गन्तवस्थान; the answer given (l. 24, वहुः लक्षणेतः) is, that the compound would be विनियम, and it is shown such a form is obtained; in the following words (l. 25, to p. 205, l. 5 कथा विनियम...तमालामण्डल वहुः इति अविविधम्) that first answer and the reasons adduced in favour of it are rejected; and it is shown that the compound would really be विनियम.

In this passage Kāyaṭa ascribes the answer विनियम: गन्तवस्थान to the *Āchāryadāśīya*, and the following words कथा विनियम to the *Āchārya*.

In the introductory portion of the *Bhāṣya* on P. V, 1, 19, (Vol. II. p. 343), where no *Vārttika* is yet referred to, Kāyaṭa ascribes the words (l. 9) यथा सिद्धोऽस्मि to the *Āchāryadāśīya*, the words (l. 12) वैधेतस्तत्तत्त्वाय to the *Śishya*, and the words (l. 17) न्यायाङ्कुलेन to the *Āchārya*.

In the introductory portion of the *Bhāṣya* on P. V, 3, 57 (Vol. II. p. 416), where likewise no *Vārttika* is yet referred to, Kāyaṭa ascribes the words (l. 18) वैधेतस्तत्त्वाय to the *Āchāryadāśīya*, the words (l. 20) न्याय ज्ञातिका to the *Āchārya*, the words (l. 24) न्यायाङ्कुलेन to the *Śishya*, and the words (l. 24) न्यायाङ्कुलेन to the *Āchārya*.

In the *Bhāṣya* on P. VI, 1, 91 (Vol. III. p. 70), Kāyaṭa introduces the statement (l. 22) अति मन्त्रम् with the words “*Āchāryadāśīyaḥ pānditammanyatēd ākaḥ*,” and he ascribes the words (p. 71, l. 4) अति मन्त्रम् to the *Āchārya*.

In the *Bhāṣya* on P. I, 4, 105-108, (Vol. I. pp. 352-354) Kāyaṭa introduces, in addition to the *Āchāryadāśīya* and *Āchārya*, the Chōḍaka or objector; and to these three disputants he assigns some of the statements made in the *Vārttikas* and Bhāṣya, as follows:

P. 352, l. 13 Chōḍaka: — स तारेष।

P. 353, l. 5 Āchārya: —चतुर्वयुः;

Or on p. 354, where there is no *Vārttika*:

1. Āchāryadāśīya: —तस्मातिक्षितः अविविधः

1. Chōḍaka: — शास्त्रातेष।

1. Āchārya: — शास्त्रातेष।

1. Chōḍaka: — वैधेतस्तत्त्वाय।

1. Āchārya: — वैधेतस्तत्त्वाय।

In the introductory portion of the *Bhāṣya* on P. VI, 4, 62 (Vol. III. p. 206), the words (l. 1), अथ के परम्परा may according to Kāyaṭa either be taken as the statement of one disputant, and the following words (l. 2) तु तु न्यायाङ्कुलेन as the words of the *Śrīdhāntavādin*; or अथ के परम्परा may be considered as questions and answers of the *Śishya* and *Āchāryadāśīya*, and तु तु न्यायाङ्कुलेन as the statement of the *Āchārya*.

The last passage naturally suggests the idea, that the term *Āchārya*, when used in opposition to such terms as *Śishya*, Chōḍaka, or *Āchāryadāśīya*, is equivalent to *Śrīdhāntavādin* or *Śrīdhāntin*, and, that such is really the case, might be proved by a large number of quotations. Here it may suffice to state, that *Āchāryadāśīya* is actually opposed to *Śrīdhānta* by Nāgōjībhaṭṭa on P. I, 27, to *Śrīdhāntin* by the same on P. II, 1, 69 and VI, 4, 42, and to *Śrīdhāntavādin* by Kāyaṭa on P. VII, 2, 106.

The natural consequence is that *Āchārya* in turn may be opposed to *Pāṇini* or *Pāṇinidīya*, as has been done, e.g., by Nāgōjībhaṭṭa on P. IV, 1, 10.

2. GONIKAPUTRA AND GONARDYA.

On p. 227 of Vol. XII. of this Journal, I stated that I hoped to prove, by the help of Bhartṛhari’s Commentary on the *Mahābhāṣya*, that later grammarians were wrong in identifying *Gonardya* with Patañjali. Since then, Dr. Rajendralal Mitra, who even in his preface to the *Yoga Aphorisms* (published in 1883) had adhered to the view which makes Patañjali a son of Gonikā and a native of Gōndara, has attempted to prove that *Gonikāputra* and *Gonardya* in the *Mahābhāṣya* do not denote Patañjali, but are the names of grammarians quoted by him (Jour. Beng. As. Soc. Vol. LIII. Part I., p. 261).

I shall now briefly indicate the reasons which years ago have made me arrive at the same conclusion; and I am perhaps the more justified
in once more discussing this matter, as the arguments in favour of the view advocated by Dr. Rajendralal appear even stronger than he has shown them to be.

The name Gōnikāputra occurs only once in the Mahābhāṣya, at the close of the discussion on P. I. 4, 51 (Vol. I. p. 336 of my edition). After having raised the question, whether one should say नेतृत्वक श्रुतम् or नेतृत्वम्, i.e., whether the word श्रुतम् should here be put in the acc. or gen. case, Patañjali simply answers उपयोग्य गोकृपापुरा “Gōnikāputra (says that) either (case is correct).” To this Nagājībhaṇṭa adds the somewhat vague remark गोकृपापुरा नाथकार इत्यादि, “they say that Gōnikāputra is the author of the Bhāṣyā.” It appears, however, that the statement here repeated by him had not met with general acceptance; for, on the margin of a MS. which was written in A.D. 1695, and which often furnishes valuable notes, we have the gloss गोकृपापुरा वायुव्यायामि उपयोग्य, परम नामिते दिव्याययां मन्त्रति, “in the opinion of the अच्छाय गोकृपापुरा, &c.,” a phrase which cannot be taken to refer to the Bhāṣyāvilāra. We are left then to choose whichever interpretation may seem the more reasonable one; and when we find that only on p. 332 Patañjali has answered a similar question by saying उपयोग्य नियमस्य, and has there moreover given his reasons for such answer, we shall, I think, decide in favour of the alternative that in the words उपयोग्य गोकृपापुरा he is quoting the opinion of another scholar.

Gōnardīya occurs four times in the Mahābhāṣya:

(a) On P. I. 1, 21 Kātyāyana shows that rule of Pāṇini’s to be necessary when we assume अदि to denote that which, while it is accompanied by something else (स्यर्याःनमिति) has nothing before it, and अदि that which, while it is accompanied by something else, has nothing after it; that on the other hand the rule may be dispensed with when ‘beginning’ and ‘end’ are simply taken to be what has nothing before it and what has nothing after it. After having explained Kātyāyana’s Vārtikas, Patañjali adds (Vol. I. p. 78):

गोर्न्द्रियस्य स्यर्याःनमिति स्यर्याःनमिति

“but Gōnardīya says, that (the definitions of अदि and अदि) ought to contain (the clause) स्यर्याःनमिति while it is accompanied by something else’ (and that therefore Pāṇini’s rule is necessary).”

(b) On P. I. 1, 29 Patañjali argues that that rule is necessary solely because it enables us to account for such forms as मक्कापितक and वाक्कापितक. Without it, we should render the sense of the phrase अस्मिन्निविश्वास्य मक्कापितक for मर्य would be Sareṇanāman even in the Bāhuvrīhi-compound and would therefore take अवक्षय by P. V. 3, 71, not अवक्षय by the general rule P. V. 3, 73. But Patañjali adds (Vol. I. p. 91):

गोर्न्द्रियस्य अवक्षयः

अस्मिन्निविश्वास्य प्रत्येकम् मक्कापि मक्कापि

“Gōnardīya says, that (the words termed Sareṇanāman) ought without any doubt to take अवक्षय and to receive the accent (due to them as Sareṇanāman, even in a Bāhuvrīhi-compound) because (both अवक्षय and that accent present themselves before the composition takes place and are therefore in regard to it) अवक्षय: that accordingly one ought (not) to say स्यर्याःनमिति, मक्कापि, but स्यर्याःनमिति, मक्कापि, (and that Pāṇini’s rule I. I, 29 is superfluous and may be dispensed with).”

(c) On P. III. 1, 92 Patañjali raises the question whether it is allowable to form a noun like कुक्षकार to express the sense of त्रिम्बकप्रीति in such a phrase as कुक्षकारप्रीति, “he turns clay into a jar,” and having, for reasons given, answered that question in the negative he proceeds (Vol. II. p. 76):

न पत्तितेवस्य प्रत्येकम्

इस्थायर्द्विकाराःकाराः

इस्तिलालकाराः

“Do we then not find the following, viz. ‘I maintain (that we ought to say) काराकाराः one who turns grass into a mat’? Gōnardīya certainly does maintain (that) this is correct.”

(d) Lastly, on P. VII. 2, 101 it is stated that, in the nom. sing. neut. आविष्कारस, the termination अव cannot be dropped, because this very termination has caused the substitution of अर्जिन, for अर्जि, and because there is a maxim, that that which owes its existence to something else cannot in turn cause the dis-

* The Kābīrī Mā has पत्तितेवस्या.
appearance of the latter. The objection to this is that such reasoning would render impossible the forms अति ज्ञानम् and अति ज्ञानस्, (because the terminations अन् and एः, as they owe their presence to the preceding ज्ञान, ought not to bring about the disappearance of that ज्ञान), and would lead one to form अति ज्ञानम् and अति ज्ञानस् instead. And the discussion is wound up in the words (Vol. III. p. 309):—

"Gōnārdhiya says, that such a result is exactly what is wanted; the forms should be अति ज्ञानम् and अति ज्ञानस्, since there is the maxim that that which owes its existence to something else cannot in turn cause the disappearance of the latter."

Now it is true that Kaiyāta, when commenting on (a), substitutes नान्दिकारास्य for गोनार्दिकारास्य, and that he understands Patañjali to propound in the passage (b) his own view as to the uselessness of the rule P. I. 1, 29. It is also certain that Nāgōjībhāṣa believes Kaiyāta in his note on (a) to say that Gōnārdhiya is the author of the Bhāṣya, and that Hēmāchandra (and Vardhamāna) consider the names Gōnārdhiya and Patañjali to denote one person. But Kaiyāta's words need not necessarily convey the meaning assigned to them by Nāgōjībhāṣa, and probably before him by Hēmāchandra, and a priori there is as little reason to identify Gōnārdhiya with Patañjali as there would be of identifying Patañjali with Kuṇaṇaravāḍa, who in the words कुन्नरावाढा विशिष्ट, is introduced, and whose views as opposed to those held by the Vārttikādāra, were probably adopted by Patañjali, on P. III. 2, 14 and VII. 3, 1 (Vol. II. p. 100 and Vol. III. p. 317). On the contrary, an examination of the statements ascribed to Gōnārdhiya would seem to show, that in two cases at least those remarks are quotations, quotations from a grammatical work which was in verse, and the terminological of which differed from that of the Mahābhāṣya, while it agreed with that of other grammarians. And moreover, the manner in which Gōnārdhiya is mentioned by Vāmana and referred to by Bhartrihihi, can, in my opinion, leave no doubt that those older grammarians never thought of identifying him with Patañjali.

The passages (a) and (d) may be considered to contain little of any decisive value, although I cannot altogether pass over the fact that on no less than eight occasions Patañjali has put forth his arguments in the same manner as on P. VII. 2, 101, and has employed the same phrase इत्यादित्वम् which occurs on P. VII. 2, 101, without an introductory "Gōnārdhiya says." (See Vol. I. p. 491, 495; Vol. II. p. 228, 238, 325; Vol. III. p. 159, 378, 403). More important is the passage (c). From the concluding words of it we learn, that it is Gōnārdhiya who maintains that one may form कष्टककार; and if then in the preceding line we read इत्यादित्वम् कष्टककारास्य, we may conclude that these are the very words in which Gōnārdhiya had expressed his opinion, or, to put it differently, that this sentence is quoted from a work of Gōnārdhiya, which cannot be the Mahābhāṣya. The words would appear to be part of a Ślokā, and that their diction accords with that of other grammatical Kārikās becomes evident when we compare, e.g.—

Vol. I. p. 144 स्त्रीलिङ्गस्य पारिश्वर्तवाहिः,
Vol. II. p. 87 अन्नवरसरस्वतो वनोपिनितपन्नपती- वनृविधुतम,
Vol. III. p. 183 शास्त्रिनिश्चितसूत्रस्यविविधे,
Vol. II. p. 65 श्वस्यविविधे शास्त्रांकुलक्रमः,

and other verses quoted in the Mahābhāṣya. That Gōnārdhiya was a writer of grammatical Kārikās is proved more clearly still by the passage (b); and that passage is of further importance, inasmuch as the half Ślokā actually furnished by it, and ascribed to Gōnārdhiya, contains two words which are never used by Patañjali, viz. the word गुलशिवाय which is peculiar to the Vārttikas, and the word प्रव्रुक्त (for अन्नवरस्रुक्त) which in this technical sense is found only in a Kārikā on P. VI. 4, 110, and in the Bhāṣya on P. VI. 3, 138, where Patañjali repeats a statement of other grammarians (Vol. III. p. 177, इत्यादि वानिज्यी प्रव्रुक्त अन्नवरस्रुक्ताः).

All this tends to prove that Gōnārdhiya cannot be Patañjali himself, but must be a

---

3. For a more accurate rendering of this maxim see Purāṇaprāṇahārvāsa, LXXV.

grammarian quoted by him; and such I believe is the opinion both of Vāmana, the author of a portion of the Kāśikā-Viśāli, and of Bhartṛihari, the commentator of part of the Mahabhadāsya. For the former, after having on P. VII. 2, 101 copied the statement that one ought to form अविद्यां and अविद्येन, adds इत्य गोनान्यानान्यानम् “such is the opinion of Gōnārya,” a remark which would be strange if Vāmana, who repeatedly quotes the Bhāṣya and the Bhāṣyakāra, had identified Gōnārya with the Bhāṣyakāra; and Bhartṛihari, when commenting on P. I.1, 29, and after having quoted the words गोनान्यानम्, raises the question निर्म्यानकारतज्ज्ञसारम् “what is the opinion of this Ācārya?” words which clearly imply that this Ācārya is not Patañjali.

AN ENGLISH-GIPSY INDEX.
COMPILED BY MRS. GRIERSON, WITH AN INTRODUCTORY NOTE BY G. A. GRIERSON, B.C.S.

BOOK NOTICES.

Highly as we value the works of the native grammarians, and convinced as we are that to them is mainly due that rapid progress which the study of Sanskrit has been making during the last century, we may yet, without fear of being misunderstood, venture to say that the time has arrived when their teaching should be subjected, by a comparison with the actual usage of the language, to a thorough and searching examination. No one who has given any serious thought to the subject, would suggest that those ancient scholars of India, whose labours have been preserved by Pāṇini, Kātyāyana, and Patanjali, would willingly have misled us, or would have invented rules which they did not believe to be warranted by the language as known to them. At the same time it is possible that, in their attempt to analyse and explain the facts of the language, they may have arrived at conclusions which cannot be upheld; that their desire to generalise may have led them to lay down rules which, true in individual cases, would, if generally observed, give rise to forms or expressions that have never been in actual use; and that the
commentators may have given a meaning to their dicta which was not intended by those who originated them. Moreover, it cannot be denied, that the ancient idiom of the Vedas has not received from the grammarians that careful attention and minute description which it deserves, and that their labours here at any rate must be supplemented by modern research.

But a comparison of the teachings of the grammarians with the usage of the language during its consecutive periods is likely to furnish valuable results in another direction. If it be true, that the grammarians were not like potters who fabricate their wares for those who demand them, if what they aimed at was by means of rules and exceptions to explain the existing words of the language, a careful examination and comparison of the extant literature should reveal what works must have been known to the grammarians, and assist us in fixing more accurately the place which they hold in Sanskrit literature.

It is from such considerations as these, that we welcome the appearance of the valuable work, the result of years of patient labour, by which Prof. Whitney has laid under deep obligations all who are interested in the study of Sanskrit grammar. The book is intended, to use the author's own words, especially as a Supplement to his Sanskrit Grammar, giving, with a fulness of detail that was not then practicable, nor admissible as part of the grammar itself, all the quotable roots of the language, with the tense and conjugation-systems made from them, and with the noun and adjective (ininitival and participial) formations that attach themselves most closely to the verb; and further, with the other derivative noun and adjective-stems usually classed as primary: since these also are needed, if one would have a comprehensive view of the value of a given root in the language. So far as the information at present available allows, everything given is dated,—whether found in the language throughout its whole history, or limited to a certain period, Veda, Brahmana, Sutra, Upanishads, epic poetry, or so-called classical Sanskrit. Of the forms taught by the grammarians, which have not yet been met with in actual use, a liberal presentation is made under the different roots: such material being always distinguished from the rest by being put in square brackets. In addition to this regular Dhatupatha, the author has given indexes of tense and conjugation-stems, from which it becomes at once apparent, whether a particular stem is found only in the earlier or only in the later language, or occurs in both; and an index of roots, arranged in reversed alphabetical order, under which we find the interesting note, that "of the more than 800 roots here recorded as making forms of conjugation, nearly 200 occur only in the earlier language, nearly 500 in both earlier and later, and less than 150 only in the later language."

For the later periods of the language Prof. Whitney has drawn his information mainly from the St. Petersburg Dictionary; but in the older language he has done much more independent work. He has, namely, himself "gone over all the texts of the earlier period accessible to him, including the as yet unpublished Kausitaki-Brahmana and Katha, and the immense Jaiminiya or Talavakara-Brahmana, which has as yet hardly been accessible to any one else; and from them he has excerpted all the noteworthy verbal forms and (less completely) the primary derivatives; thus verifying and occasionally correcting the material of the Lexicon, supplying chance omissions, and especially filling in not a few details which it had not lain in the design of that work to present in their entirety." The forms taught by the native grammarians have been given chiefly on the authority of Westergaard's Bodices, and for this reason a few wrong forms, which had found their way into that very accurate work, have here also been repeated.

Without entering into details, for which this is not the place, we venture to maintain that Prof. Whitney's book will prove of the greatest service not only to the student of Sanskrit generally, but also to those who more particularly have turned their attention upon the works of the native grammarians. To the latter the accurate and full collections contained in the work will probably suggest additional reasons for the belief that the so-called grammarians' dialect accords in a most curious manner with the language of what Prof. Whitney calls the language of the Brahmana period.

F. KIELHORN.

Notices of this very popular work have previously appeared in this Journal and its points have been variously discussed, but the chief feature of this particular edition—the illustrations—have been missed. They are all taken from bond and fide-native representations of Buddha and his life, without addition or alteration, and we have here before us facsimiles of pictures, however crudely executed in the original of Buddhist stories as they present themselves to the Buddhist imagination. A flood of light is thus necessarily thrown on those quaint sculptures and drawings so familiar and so
incomprehensible to the student of Indian Buddhist architecture and art, and a new interest given to them. As instances of this we would draw attention to the cuts on p. 7 entitled in the list "merchants bringing rich gifts": on p. 19, "Rishis passing the Jambu tree"; and on p. 86 where Buddha takes his horse to see the world. Viewed therefore as a teacher through its illustrations of the meaning of bas-reliefs and sculptures from Buddhist buildings the book is an invaluable one, and serves as a key by which the student may unlock the sealed door of ancient Indian design, and having thus once obtained an entrance into the vestibule use the clues now given him to penetrate unaided into the further recesses of the structure. Other books of course can do this for him, but they are not as a rule such as would from their nature attract any but the most earnest or from their costliness be available to any but the wealthy, whereas this one is both interesting and moderate in price. The value of the illustrations is augmented by its being placed with the text as it were:—cuts rather than full-page plates being used throughout the work.

As edition after edition of the Light of Asia has been brought out we cannot but wonder that the author has allowed his extraordinarily faulty transliteration to remain hitherto untouched. We quote the following passage from page 11 as a sample of what transliteration ought not to be. Either let it be scientifically regular or let it be "phonetic"; not a little of both, which is the worst system of all.

"After me repeat Your numeration till we reach the Lakh, One, two, three, four to ten, and then by tens To hundreds, thousands." After him the child Named digits, decades, centuries; nor paused, The round lakh reached, but softly murmured on,

"Then comes the kōtī, nāhut, nimnāhut, Khamba, vishkhamba, abab, aittata, To kumuda, gundhikas, and utpalas, By pundarikas unto padumas, Which last is how you count the utmost grains Of Hastagiri ground to finest dust; But beyond that a numeration is, The Kātha, used to note the stars of night; The Kōtī-Kātha, for the ocean drops; Inngga, the calculus of circulars; Sarvanikchepa, by which you deal With all the sands of Gunga, till we come To Antah-Kalpas, where the unit is The sands of ten crore Gungas."

On the previous page we have tatasavitārāreyam in the "Gāgaret," which the author gives, but, perhaps wisely, makes no attempt to translate. Now if you write kāṭha, &c. why write laik? And if you write crore why not write lacs? And again if you write laik why write Gunga? If you are going to be so very correct as to write a in a word where the cerebral nasal occurs, why be careless as to vowels in other words no more familiar to the general reader than tatasavitārāreyam on the very next page? We have again maaidān and nyua and then nullah (1), maharaj and maharaja, and so on ad infinitum throughout the book; to say nothing of such atrocities as abhidjna, Tchebible, chuddah and Arjuna! It is a great pity to allow the book to continue to be marred by signs of want of scholarship of such a nature as to throw doubts on its existence.

---

We take it that the object of this little work is to extract what of general religious morality is to be found in the Qu'ran—as we prefer to spell it—with the object of showing Christians and Muḥammadans how far they can agree. Seeing how beautiful and attractive on such points the language of the Qu'ran often is, the learned and distinguished author conceived the idea of using suitable extracts from it as a book for schools, useful alike to both religions. This idea well deserved success, but he was met with such a weight of prejudice—from Christians against 'teaching' from the Qu'ran, and from Muḥammadans against 'extracting' from so sacred a book—that he dropped it for many years. However in 1880 he had the courage to take it up again and to so far succeed as to reach a second edition in 1885. As a book the work is an admirable one, and let us hope that the victory over prejudice will be complete and final.

---

We are glad to observe that Mr. Wherry's very valuable work has reached its third volume, and that we shall not have much longer to wait for the fourth and last, which is to contain that "Complete Index" so much to be desired by all students of the Qu'ran.

This volume, which is, of course, conducted precisely on the lines of the former ones, takes us from the XIVth to the XLIth Sūra and fully keeps up the character of the work as a 'comprehensive' commentary. We are sorry, however, to note that the slips still occur in the transliterations of Oriental words and names which have disfigured the former volumes.
II.

Sun Worship.

Sun worship, probably the most ancient of all superstitions, still prevails in Hindustán, and formerly had a special existence in Phcenicia, Chaldea, Egypt, Mexico, and Peru. According to Allegre the explicit worship of the Sun, and more or less that of the other heavenly bodies, or at least a recognition of some supernatural power resident in or connected with them, was widely spread throughout Mexico, amongst both the uncivilized and the civilized tribes or peoples. In civilized Mexico, the Sun was definitely worshipped under the name Tomatink, or the Sun in his substance, and also under that of Naolin, or the Sun in his four motions. Sometimes he was represented by a human face surrounded with rays, sometimes by a full length human figure; whilst he seems to have been often confounded with the element fire, and with the god of fire. We find the same confusion in the Trinacria, or arms of Sicily, if, as has been supposed by many, it be a form of the Sæstika, or Fire-Symbol, which in process of time has lost one of its arms. In Scandinavia it has become what is there styled the Triskole. Obviously the Trinacria is a human face surrounded with rays in the centre of three legs.

When an eclipse of the Moon is expected, many of the natives of Hindustán hasten down to the nearest river or to a tank, and remain in the water the whole time of its duration, imagining that some dire misfortune would befall them were they to omit to do so. The Mexicans also have been described as being much troubled and distressed at an eclipse of the Sun or Moon, some of the wild tribes regarding the Sun and Moon as husband and wife. They believe that an eclipse of the Sun is caused by domestic quarrels, and to soothe the ruffled spirit of the Sun on such occasions, the rudest human victims that could be

found used to be sacrificed to him. For sacrifices to the Moon, under similar circumstances, abinos were chosen.

The Comanches, a subdivision of the Apaches, a tribe belonging to Northern Mexico, practise various religious ceremonies which are for the most part of a simple kind and directed to the Sun as the great source of life, and to the Earth, as the producer and receptacle of all that sustains life. According to the Abbé Demenouch, in his account of his missionary labours, every Comanche wears a little figure of the Sun round his neck, or has a picture of it painted on his shield: while from his ears hang two crescents which may possibly represent the Moon.

Halhed, in his Code of Gentoo Laws speaks of a spot in India, which in his day was much frequented by pilgrims, in the Sūbah of Oude, known as Sūrya-Kund. A festival was annually observed there, called the Sūrya-Pūjā, which took place on the 7th day of the bright half of January, when offerings of flowers were made to the Sun and afterwards cast into the Ganges. He also adds that the new-born babe of a Brähman was exposed to the Solar beams.

Fire-worship, as a special form of Sun-worship, early prevailed in Persia; its votaries, the Magi, being forbidden to spit in the fire or to pour water upon it, even if their dwellings or goods were in danger of being consumed.

According to Hyde, idolaters, as well as these Sun-worshippers, existed in ancient Persia, and the worship of Fire, and that of idols, were combined at one period. The Fire-worshipping Magi held the idolaters in abomination, but after the death of one of them named Smerdis, the sect which opposed idols became extinct in Persia. Quintus Curtius, when describing the march of the army of Darious, though writing long after the date, says that he was accompanied by an image of the Sun placed in

* Persian Religion, p. 38. Clement of Alexandria states that Artaxerxes, the son of Darious, caused idols to be made in human form for worship, and adds that this monarch was the first who created statues to the goddess Venus at Babylon, at Susa, and elsewhere.
a crystal, and the sacred fire carried on a silver altar; that the king's carriage was ornamented on all sides with images of gold and silver; and that there were also golden statues an ell in height on top of it, one of which represented Belus (the Sun). Tertullian also in his Apologia, Chap. 16, gives us to understand that the Persians adored a figure of the Sun, which they caused to be painted on canvas.

Zoroaster (Zardusht) gave Mithra, the Sun-god of the Persians, two principles; and made these exercise two distinct forces, each independent of the other, under the names of Ormuzd (good) and Ahriman (evil). This, in time, in the opinion of Mr. Fiske (the American upholder of the Darwinian theories), produced the Manichean heresy, in which the devil appears as an independently existing principle of evil, and thus was continued in part at least the old Asiatic worship of the Sun in comparatively modern Europe. This heresy, says Mr. Fiske, "was always ripe in Armenia. It was through Armenian missionaries that Bulgaria was converted from heathenism, and from thence Manichaeism penetrated into Servia and Bosnia, which latter was its headquarters from the 12th century onwards, and was a perpetual thorn in the side of the Papacy. From Bosnia, the great Albignensian heresy was propagated through Northern Italy and Southern Gaul." Mr. Fiske also adds, that "this connexion of Eastern and Western Protestantism was well understood at the time."

The worship of Mithra penetrated to many places in ancient Italy. At Milan there was his cavern or grotto and his sacrificing priests, as appears from an inscription discovered near the monastery of Saint Ambrose. Also, on the island of Capri, in the bay of Naples, in a grotto, are the remains of a temple of Mithra. The name of this grotto has been popularly corrupted into Matromania, but it should be styled Mithramonit. In Naples, too, there was a temple to Mithra, the columns of which may still be seen in the Church of Santa Maria à Cappella on the Chiatamone.

This worship of Mithra was introduced into Italy after the return of Pompey the Great from his victories in Asia, and bears all the marks of dating from the second half of the last century of paganism. In fact, the Mithraic feasts and the mysteries of the god Mithra, were established and recognised in Italy under the reign of Trajan, who was born 52 A.D. and ascended the throne 98 A.D. For nearly a century and a half the followers of Mithra were obliged, like the early Christians, to carry out their religious rites in caves and grottos, and the grotto of Mithramonit may be regarded as one of the spots where the votaries of this worship used to assemble in secret.

Mithraic worship was not of long duration in Italy. It was tolerated and permitted by the emperors in the first years of the second century of the Christian era, but Christianity was then already beginning to spread and gain ground, and was recognized by Constantine in the following century, as the true and only religion.

According to ancient writers, the ceremony of the initiation of a candidate into the Mithraic mysteries was very appalling. Tertullian says that the candidate encountered a drawn sword on the threshold of the cavern, from which, if he persevered in entering, he received more than one wound. He then had to pass repeatedly through the flames of a fierce fire, and undergo a rigid fast, which, some have stated, lasted 50 days, during which time he was to remain far from all human habitations; but this seems hardly possible, and some kind of coarse food must have been permitted him. He was then beaten with rods for two whole days, and during the last 20 days of his trial was buried up to the neck in snow. If he endured all these privations and sufferings, the candidate was admitted as a disciple of Mithra, and a golden serpent was placed in his bosom, given him as a sign of his regeneration, for, as the snake renews its vigour in the spring by casting its skin, so the vivifying heat of the Sun is annually renewed. Sokrates, the author of the Ecclesiastical History, who lived in the fifth century A.D., relates that in his time "the Christians of Alexandria, having discovered a cavern which had been consecrated to Mithra, but long closed up, resolved to explore it and see what remnants of that superstition it contained, when to their astonishment also were in their turn obliged to perform their religious rites in secret."

Illustrazioni Italiane, March 1883. It is not improbable that the Christians used this grotto, when they
the principal thing they found in it was a great quantity of human skulls, with other bones of men that had been sacrificed. They were brought out, and publicly exposed, and excited the utmost horror in the inhabitants of that great city."

It is not impossible that to the people of Italy, Mithra was the Sun himself. He was not so to the Persians; to them he was only a satellite of the Sun, a powerful god, though not the first or the supreme one, and more like a saint of our own days. The Persians adored him, but only for the favours which they believed he could obtain for them, by his intercession with the Sun.

Montfaucon, in his *Antiquities*, gives a description of a statue, supposed to be that of Mithra, which was discovered at Rome at the close of the 16th century, between the Viminal and the Quirinal Hills. His account of it is taken from that of an Italian sculptor named Vecoa, who examined the temple at the time it was excavated. The building was circular, as were all the temples of the Sun and Fire. In the centre was a statue of Mithra in white marble, rather less than four feet in height. It stood erect upon a globe, out of which a serpent issued, the emblem of life, twined in numerous folds round the body of the deity. The body of the statue was that of a man, and the head was that of a lion, one of the signs of the zodiac. The two hands grasped two keys pressed close to the breast, to indicate the god's power over the two hemispheres, and his solar origin. Around him was suspended a circle of lamps in regular order, apparently made of baked earth. What was remarkable in these lamps was, that they were so arranged as to turn the side which gave the light towards the statue; and this seems to show that these ancient people knew that the planets were opaque bodies, and derived their light from the Sun, the central orb, around which they revolved.

On a bas-relief of white marble in the Casino of the Villa Albani at Rome is represented a sacrifice to the god Mithra. In the centre of the group is a youth, or female figure, attired in the manner in which the Romans represented those whom they wished to delineate as foreign deities. This figure has a peaked or so-called Phrygian cap, flowing hair, a loose robe with sleeves reaching only to the knees and confined at the waist with a broad girdle, tight trousers down to the ankles, and pointed shoes. Both the tight trousers and the pointed shoes recall the dress of certain natives of India in the present day. It is standing over a prostrate bull, holding the head of the animal with the left hand, and thrusting a dagger into its flank with the right, just above the shoulder-blade. In the foreground is a small dog, while a serpent in an erect position seems watching the course of the dagger, and near the serpent are two scorpions. Behind and to the right of the principal figure is a half moon, while a human head and half bust with long flowing locks is within it. On the left of the central figure is a large bird, which, judging from its beak, is meant either for a hawk or an eagle. On the same side, but still further to the left of the spectator, is another human head which is more masculine in character than either of the others, and which may have been intended for Mithra himself.

The worship of Mithra in Europe was not confined to Italy and Greece, for the Greeks certainly introduced it in the south of France. In the museum at Arles is a *torse*, or technically speaking a *Hermès*, of white marble (Plate III. fig. 4; p. 68 above), a most striking bit of sculpture, and called a statue of Mithra. The head is wanting, the neck and shoulders are those of a man, the arms are kept close to the body by the folds of an enormous snake, between the coils of which, three in number, several of the signs of the zodiac are distinguishable.

The different sculptures above described are most interesting and instructive. In each case, the presence of zodiacal signs serves to show us that Mithra was a Sun-god, and we are able also by examining them to connect the Snake with Sun-worship, the serpent playing an important part in each instance. Sun, Fire, and Snake-worship and the emblems of each, are intimately bound up

---

6 The key is also the well-known emblem of Janus, or the Sun, with which he unlocks the gates of light.
7 According to Winckelmann.
8 From the engraving it is not easy to determine which.
9 The same costume was also given by them to Gallic or Dacian slaves.
10 Many of the inhabitants of Arles, which is known to have been a Greek colony, preserve a Grecian type of countenance to this day.
together, subtle links and fine gradations uniting them almost insensibly in some cases.

In India, the votaries of the goddess Kāli consider that it is acceptable to her that they should walk on the fire. If they are sick, they say, "Oh Kāli, Mother, only cure me and I will walk on fire in your holy presence." Some have supposed that the Hebrews of old caused their children to pass between two fires. Others again say that they waded them about in the flames, whilst the worshippers of Mōloch danced around or leapt through the fire. Amongst other heathen customs, St. Chrysostom blames that of lighting two great fires and passing between them.

In Norway, Brittany, and even in the British Isles, traditional usages are still observed which serve to connect fire with Sun-worship. On Midsummer Eve, on the hills near and round Thondhjem, bonfires are lighted at sunset, which at that season of the year is about 11-30 P.M. The whole population turns out to assist at the ceremony of kindling them. A barrel is fixed upon a pole driven into the ground, filled with shavings and other combustible materials, and its position most carefully adjusted, so that it may point exactly to that part of the horizon where the Sun will set on that day.

In England, the 21st of June, or the longest day, used to be a great day at Stonehenge. I hear it has now degenerated into a disorderly assemblage, but it was formerly the custom for a large number of persons to assemble annually at dawn at this spot, in order to watch for the rising of the sun, which on this particular day can be seen from the centre of the circle of Stonehenge, coming up exactly over the centre of a large stone at some distance from the rest, and called the "pointer" stone, and striking its first rays through the central entrance on to the so-called altar-stone. This custom has been quoted by one writer as an obvious proof of Sun-worship in the original constructors of the circles, and he adds the fact that at noon on the same day the "pointer" stone appears as though set at an inclination similar to that of the gnomon of a sun-dial.

In the county of Connaught, and in other parts of the south of Ireland, it is still the custom to kindle fires on St. John's Eve, which are kept up till sunrise. A friend, who, when quartered in Ireland, had frequently been an eye-witness of this scene, told me that mothers on such occasions are in the habit of giving their young children a kind of baptism of fire. He himself had had infants thrown to him through the flames, not once only, but many times. The people call this ceremony Baltinglass, or Bal-fire-blue. The title of Baltinglass (now extinct or in abeyance) is but a corruption of these words. The women, my friend added, prefer asking gentlemen to catch their children, thinking possibly that they will be more gentle with them than one of their own class in life. He also said that he had quite recently made inquiries as to whether this custom still survived, and was answered in the affirmative. At Youghal, County Waterford, every year on St. John's Eve, the inhabitants light numerous wood-fires in different parts of the town. Each person, or one member of each family, seizes a burning brand and runs with it to his house. If he arrives at his dwelling with his torch alight, it is an omen that the ensuing year will be a happy and prosperous one to him and his; but should it be extinguished, some dire calamity will, he thinks, fall upon his family. The new brand is then put in the place of honour above the hearth (the sacred spot in all ages and with all peoples) and the one of the previous year removed and burnt.

III.

The Seastika.11

Some have held the Seastika to be an emblem of the Sun, and others, again, say that the arms of the cross represent two pieces of wood and are typical of Fire, showing us the way in which fire was first produced by primitive peoples. Two crooked sticks were laid

[11] [The ceremony of Daus-Madaf, still very popular among the lower orders of Northern India consists of jumping into a fire and treading it out. It is done with a view to escape snake-bites, those who perform it being believed not to be liable to injury from the fire. Shīh Madaf died at Makampur in 1433 A.D. in the reign of Sultan Ibrāhīm Shāh Shārqi, of Jumāpur (1602-1440 A.D.). References as to this fire ceremony are Elliot, Races of

THE SVASTIKA.
one across the other, and a hole drilled through both, in which a pointed stick was inserted and rapidly twirled by the hands till all were ignited at the points of contact. In the present day, the sacred fire in certain Hindū temples is said to be kindled in this manner. It seems not improbable, however, that the Svastika may originally have been an emblem of the Sun (as a wheel) and of Fire also, both conveying light and warmth.

The Vēdas prescribe the āsavaṭha (पपल or βιον religious) and the āṃś (acacia suma) as the kinds of wood to be used in kindling the sacred fire.13 It is very common in Southern India especially, to see these two trees planted close together when young, so that when grown older their branches and foliage become entwined. The Hindūs style this "marrying" the trees.14 In this manner, Tree-worship became in a way connected with Fire worship.

Both the Greeks and Romans, down to a late period in their primitive history, used the above-described method of procuring fire. They found that the pyrkaia or lower part was best made of certain softer kinds of wood, such as ivy (vitis sylvestris); whilst the laurel, thorn, or other hard wood was to be preferred for the tryponon or drilling-stick.

Tyler in his Early History of Mankind mentions that the Eskimo kindle a new fire by a very similar process. They most probably see nothing sacred in the performance, whereas by the Hindūs it is regarded with feelings of great awe—feelings extended to the element itself by the ancient Persian Magi, who denoted Fire, which they considered the father and first principle of all things, as Zardusht (Zoraster) had taught them, by the word bār or bāp signifying 'father.'15 Their modern representatives, the Parsi priests of a famous fire temple in Gujurât, boast that they have cherished the sacred flame of the ancient Persians unextinguished for 800 or 900 years, i.e. ever since their expulsion from Persia by the Muhammadans. The Parsis, however, say that they do not worship Fire, and much object to be called Fire-worshippers, but they admit that they are taught from their youth up to face some luminous object whilst praying. Fire, they say, they look upon as upon other natural phenomena, i.e., as an emblem of divine power, but they never ask assistance or blessings from it. Pure Fire-worship also exists among the modern Hindūs. Thus it was formerly strictly prohibited to all Hindūs to go beyond the Indus, or rather, properly speaking, the Kālā Pān, or Black Water, as they call the Indian (or indeed any) Ocean, into which the Indus empties itself; but I was solemnly told by a Marātā Brāhmaṅ that this rule is now relaxed, and that Hindūs may do so if on their return to Hindustān they worship Agnīor Fire, saying certain prayers to it, and giving alms and a feast to the Brāhmaṅs. The man who told me this was in Government employ on £20 a month, and he added that if he ever went to Europe it would cost him about £100 to be re-admitted into his caste on his return, as the expenses of this are in proportion to a man's known income.

In India Hindūs belonging to certain sects are in the habit of tracing one or more figures of the Svastika on the outer walls of their houses, but I cannot recall ever having seen this symbol in the interior of any modern Hindū temple or shrine; nor yet have I observed its present use by the Buddhists of Western Tibet, Kanāwar, Spiti, or Ceylon. This was not the case in ancient Buddhist times: e.g., the Svastika exists as a so-called mason's mark on some of the stones of the famous Buddhist tope at Sārnāth near Benares, and it is twice repeated on stones in the interior of some cells surrounding the court-yard of the Iāl Darwāza or Red Gate Mosque at Jaunpur, which have evidently originally formed part of old Buddhist buildings.16

On the occasion of a marriage amongst the Hindūs, it is customary to send presents of sweetmeats, &c., to the friends and relations of the contracting parties. These are placed on trays and covered with an embroidered cloth. The tray and the cloth are returned to the donor after the gift has been removed by the person to whom it is sent, and after placing in the tray a small piece of money for the servant who brings it. A similar custom prevails in Spain, (or did so till very recently),

---

13 See Pāñjāb Notes and Queries, Vol. II. note 77.
14 See Pāñjāb Notes and Queries, Vol. II. note 261.
15 The same doctrine was afterwards inculcated by Anaxagoras the Greek philosopher.
16 [See also editorial note at the end of the paper.]
and on the occasion of a fête or "naming-
day" cakes and sweetmeats are sent arranged in
this very manner. I possess two or three of
the cloths used in Spain for covering the
trays. They are bordered with old lace and
and have conventional flower designs and
and various wonderful animals worked upon them in
coloured silks. Like the Indian embroideries
of the same nature the material which forms
the groundwork is white linen or cotton
cloth and the embroidery is exactly the same
on both sides. One of my cloths has the
Scastika many times repeated upon it. On
an ordinary cotton pocket handkerchief in
Grenada I also saw the same symbol, forming
its only ornamentation. I tried, but in vain, to
procure one such, and even failed to ascertain
where they were manufactured. This kind
of embroidery, too, was evidently known in
early Jewish times, for in the Song of Deborah,
(Judges v. 30) mention is made of needle-
work of divers colours; of divers colours of needlework on both sides, meet for the necks
of them that take the spoil."

The Scastika has been found in nearly
every country in Europe. In a letter from
Prof. Max Müller to Dr. Schliemann, quoted in
the latter's Ilium, or the Cities of Troy, at which
place this symbol and also Sun symbols have
been found in great numbers, the Professor
says:—"It is found in Bishop's Island near
Königswalde on the right bank of the Oder;
on a vase discovered at Reichersdorf, near
Guben; a whole row of this emblem surrounds
the pulpit of St. Ambrose at Milan; in the catacombs at Rome it occurs 1000 times; it is
seen also on wall paintings at Pompeii;
on a Celtic urn found at Shropsham in Norfolk
and now in the British Museum; also on
ancient Athenian and Corinthian vases; on
the coins of Leucas of Syracuse, and in the
large mosaic in the royal garden at Athens.
It is found in Hungary and in China, as well
as amongst the Ashantees and in Yucatan."

It will be observed that Professor Max
Müller here speaks of the Scastika as having
been only once found in England, but since
he wrote the above letter numerous examples
have been unearthed during the excavation of a
Roman villa at Beading in the Isle of Wight,
and the form of it known as the double
Sun-snake of Scandinavia, exists on an Agam
stone at Pen Arthur in South Wales. It was
also apparently in use in England in the cingus
cents, for when (in 1883) examining the articles
in the Treasury of the Cathedral of Valencia in
Spain, I saw two splendidly embroidered altar
frontals, which were said to have formerly
belonged to the Church of Old St. Paul's in
London, and to have been sold into Spain by
Henry VIII. On each is represented a portion
of the Church, and on one of them, which
depicts the crucifixion, a soldier of the Romans,
or of one of their allies, is holding a standard
on which are embroidered two snakes
tortuous, forming a scastika.

In Plate I. (p. 66 above) for obvious reasons, I
have placed the Sun and Fire Symbols of Scandi-
navia side by side, and I now propose to
give illustrations of the different forms and
modifications which the Scastika assumed in
other parts of Europe and in the East. Plate V.
fig. 1 represents the Buddhist and Jain form, both taken from drawings in Sir G.
Birdwood's Industrial Arts of India. Fig. 3
is on a fragment of a Persian carpet now in
the Museum at Gothenburg in Sweden. Fig.
4 is a mark on Japanese pottery, and fig. 5 on
porcelain made only for magistrates in China.
Figs. 6, 7, 10 and 11 are examples from Dr.
Schliemann's Ilium. Fig. 8 is on a slab of
marble now in the Museum at Naples, which
was found in the Christian catacombs beneath
that city, and fig. 9 is a representation of
the Trinacria, or Three-legged-man, of the
arms of Sicily. In the Marz-man the face
and the (Sun's) rays of the Trinacria have
disappeared, and only the three legs remain.
Doubtless both have a common origin and are
but an outcome of the Triskele, which was
itself a delayed form of the Scastika.

Fig. 12 is taken from a fragment of pottery
found in what is believed to be a pre-Etruscan
cemetery at Bologna in Italy. The row of
Scastikas, the warrior, and the mythical animal,
have in this example to all appearance been

17 Where it is used as a mark on pottery and especially
for the magistrates, and in Japan it is also a potter's
mark.

18 It has also been found on pottery in the Island of
Cyprus, a specimen of which is now in the Museum at
St. Germain in France.
stamped on the clay while it was yet soft. Plate VI, figs. 3 and 4 show an ornament in raised silver-work on a lance brought a few years ago from Japan by the Honble. James Sanderson and now in his Japanese villa in the Island of Guernsey. It is identical in form with a fragment of the Trikelse figured in cut 164, in Kamerie's Handbook of Danish Art. Plate V, fig. 14 is especially interesting, as the Scystika is here surrounded by half-moons in various positions. It is from a Mosaic pavement found at Gubbio in Italy in 1852. The Scystika has also been found on a Christian tomb with a Latin inscription, discovered in 1879 by Armelini in the new catacomb of Santa Agnese at Rome. Rossi, the great Christian archeologist, says that this inscription belongs to the second century of our era, and adds—"Perhaps this is the most ancient crus gaminata that has been found on Christian monuments."

On comparing the results of the grave and bog finds in Norway, Denmark, and Sweden, it would seem that the Scystika is most rare in the last-named, and most common in Norway, and that Sun and Fire symbols became diused in the two latter countries about the twelfth century.—that is to say, about the time of the introduction of Christianity; whereas in Norway they still continue in use down to our own times, though their significance is probably unknown to the present generation.

The "Mangling Stick" is still in common use in Norway. It is made of a single piece of hard and highly polished wood, about 18 inches long by 8 or 10 inches wide. At one end is sometimes carved a small wooden horse as a grip for the hand, or else the wood is so hollowed out as to leave a raised piece for the same purpose. When used, it gives collars and cuffs a much better appearance than the ordinary washerman's iron can produce. A Mangling Stick bearing the date 1809 in the Norwegian Museum in Stockholm is covered with Scystikas of the double Sun-snake type, an apparent proof that this was deemed a Fire-symbol in Scandinavia. On referring to Plate I. (p. 66 above) it will be seen from the examples there given that the Scystika gradually changed its form in those countries; and from the simple hak kors (crux gammata) or Scystika, became the double snake, and finally the Trikelse, after it had lost one of its arms.

A tolerably convincing proof that the ancients associated the Snake with Fire is furnished by Plate V. fig. 15. It is an exact copy of a brooch found a few years ago in excavating a Roman Camp on the Saalburg, near Franksfort-on-the-Maine. Each of the three arms of the Trikelse, or Sun-snake (as Professor Worsage calls it) is here represented with a serpent's head. Fig. 13 is a Scystika from the same collection, enclosed in a rim of metal. 19

Professor Newton, in a lecture delivered in December 1853 on the monuments of Lycian art, alludes to an interesting series of Lycian silver coins, which he refers to the period between the conquest of Lycia under Cyrus, and the overthrow of the Persian dynasty by Alexander. He says that these coins were struck by a number of autonomous cities, and are inscribed with their names in Lycian characters, and that they have on one side the curious symbol called the triquetra resembling the Manx Three-legs. He is of opinion that the coins belonged to a people whose original name was Tremile, a race belonging to the Aryan family, and who were afterwards called Lyceans. Another race called the Soleyi were a Semitic people, and inhabited Lycia contemporaneously with the Tremile, but were driven back into the mountains on the east and north frontiers, and in the end the Tremile became mixed with the Greek settlers along the coast.

In 1876 when I was at Leh (the capital of Ladak or Western Tibet) a caravan arrived with carpets from Yarkand. I eagerly seized this opportunity of purchasing some genuine Central Asian carpets and secured some on which the Scystika was introduced in the border. Plate VI, figs. 4 and 5, represent a portion of the border and the central medallion of one of my purchases. The border, I think, gives a hint as to the origin of the celebrated Greek key-pattern and the medallion is also very interesting as the only instance I have hitherto met with, in which the Scystika has assumed the form of the double Sun-snake of Scandinavia, 20

19 A design bearing a strong resemblance to the triquetra, is on the shield of Eryx, the legendary king of Sicily, as depicted on a vase in the Museum at Naples. Experts have put its date at before 100 B.C.

20 See Plate I. fig. 29; p. 66 above.
NOTE BY CAPT. TEMPLE.

A good deal has been made by the English mythological school of writers of the fact that the Christian Sayastikas point to the left or westwards, whereas the Indian, including Buddhist and Jain Sayastikas, point to the right or eastwards. Letting alone that the right in India is southwards and never eastwards, the following observations on undoubted Buddhist Sayastikas will probably go far to settle the theories built up on the pointing of the cross fylfot. In the *Inscriptions from the Cave Temples of Western India*, Bombay, 1881, are given a quantity of clearly Buddhist Square Pali Inscriptions from Kūḍa, Kārā, Saḷāḷāvāji, Junnar, &c. Many of these contain Sayastikas at the beginning and end. Kūḍa No. 27 has at the end Ꝗ; but at the end of 29 is Ꝗ which occurs again at the beginning and end of Kārā inscriptions, and beginning and end of Junnar 30, at the beginning of Junnar 5, 20, 28, 32 and 34, and at the end of Junnar 32; while Ꝗ occurs at the beginning of Kūḍa 30 and of Junnar 6 and 27, and at the end of 33. The form Ꝗ is found at the end of the Saḷāḷāvāji inscription, and Ꝗ at the end of Kārā 2. In this last example the thickening of the ends of the cross is probably due to the method of engraving. It will be seen, therefore, that the pointing of the Sayastika was not due in Pali inscriptions to its position, nor was it in any way constant.

GULLALA SHAH.

(Continued from p. 80.)

One day Gullālā Shāh begged the king to excuse him from the Darbār, as he wished to go shooting. The king readily assented, and ordered several soldiers and horses to attend him. About the middle of the day, when much excited by the chase, the horse on which Gullālā Shāh was mounted ran away. None of the other horses could keep pace with it, so fast did it gallop; and so Gullālā Shāh soon found himself alone and far out of reach of any help. At last the runaway horse suddenly stopped, for its legs had been fastened by an invisible chain. Perceiving that his horse was mysteriously bound, Gullālā Shāh dismounted, and taking his bow and arrow climbed the mountain hard by, to see whether he could find anything to shoot there. A little way up he discovered a small pond, upon the banks of which grew a tree, then one mass of blossom. Under the shadow of this tree he sat to rest, and while he sat a monkey approached. He determined to shoot it, and so made ready his bow; but the monkey, guessing his intention, made a great rush and dived into the pond, much to the disappointment of Gullālā Shāh. He remained looking at the place where the monkey had disappeared, expecting every moment that it would appear again.

But lo and behold! presently a beautiful girl, wearing a costly necklace of pearls, came forth, and walking up to Gullālā Shāh kissed him. Gullālā Shāh was exceedingly astonished at this, but being very good and holy he did not lose his presence of mind. He asked her who she was, and noticing that she hesitated to answer, he threatened to slay her if she did not tell him quickly. Being frightened she said:

"My name is Paṇj Phūl, and my father is king of this country, which is fairy-land. I have been good, and tried to do good, and everybody loves me. When I was very young my father intended to marry me to the son of his chief door-keeper. The hour was fixed and full preparations made, but a few days remained before the wedding-day, when the chief door-keeper's son went to play as usual with influence, insomuch as he has it in his power to give or deny access to his chief. Those who have read Cunningham's *History of the Sikhs*, will remember how Dhyān Singh, Ranjī Singh's door-keeper, used the immense influence which this position gave him, for advancing family interests. Dhyān Singh afterwards became a Rāja and received Pūṇč as his principality.
his companions. They played Wazir Pādshāh, i.e. one boy pretended to be the king, another pretended to be the Wazir, and others took the part of other great officers in the State. Each one was supposed to talk and act according to his part in the play. That day the door-keeper's son was voted king by his playmates, and sat in the royal place. While they were thus playing the real king's son passed by, and seeing the state of the game he chased the boy. 'He degraded from fairyland,' he said, 'and dwell among the common people.' On account of this curse the door-keeper's son soon died, and was afterwards born among the common people. A female companion told me of his death, on hearing of which I became very sad; for I loved the son of the door-keeper, and am determined to marry nobody but him. The king and queen and others have tried hard to get me to change my mind but I have remained steadfast. All my time has been spent in doing good, and in interviewing holy men. To-day I came hither to worship. One day it happened that a very holy man arrived here, whom I loved very much, and I thought to have met him here again to-day. He seemed very pleased with me, and used to give me whatever I asked of him. Once I asked him to tell me how I could again see the door-keeper's son, who had been born among the common people. He told me that he knew the lad, and that he was called Gullāla Shāh, and that I could see him if I was very careful to attend to his instructions. Of course I promised that I would be. 'Be careful,' he continued, 'and consider well, for the king will hinder you by strong charms and in other ways.' He then gave me a pearl necklace of such great virtue that no charms can affect the wearer, which I am to wear continually and guard patiently, if I would accomplish my purpose. After this I went back to my house. On the first opportunity I told my father of all that I had heard concerning Gullāla Shāh, and begged him to arrange for our wedding as soon as possible. The king looked very troubled when he heard this, and entreated me to think no more about the young man, especially as he was now one of the common people. Such a thing as our marriage could not possibly be, as it would bring the whole of fairy-land into contempt. But I was resolute, and so the king spoke sharply to me, and I answered sharply in return, and left the palace in a great rage. This is my history. O friend! If you can do anything to help me to discover anything about Gullāla Shāh, do so, I implore you, and I shall be obliged to you for ever.'

Here was a strange coincidence! Gullāla Shāh told her who he was, and kissed her. She recognised him and taking his hand said, 'I have found my long-lost beloved. With him let me ever dwell.'

Holding each other's hands they presently left the pond and came to the place where the horse was standing. Both mounted the horse, which was now quiet, and rode back to the

* This game is also called subhā and is very popular in Kaśmir. It is generally played by four younger. Four little sticks are provided, of which the bark on one side is peeled off. Any of the four children throw first. If one should throw these sticks so that they all fall on the bark side, then he is appointed pādshāh, i.e. king; but if not, then they all try and throw till some one finally succeeds. The next thing is to find out the wazir. He who throws the sticks so that one of them falls with the bark side up, but the other three with the peeled side up, is appointed to this office. Then a sāhib, i.e. a thief, has to be arranged. He who throws so that two of the sticks fall with the bark side upwards is proclaimed the thief. Lastly, a said, i.e. an honest man, has to be found. This part he has to play, who throws the sticks so that three of them fall with the bark sides upwards. If it should happen that all four of them fall with the bark sides up, then that thrower has to try again.

Pādshāh, wazir, sāhib, and said being known the real play begins. The sāhib, thief, is brought before the king by the wazir, who says—

"Pādshāh sāhib! Daud! Amad!"

"O king, peace and health to you! Here is a thief!"

The king replies, "Av asāl amad?" "Whence has he come?"

Then the wazir tells him the whole case and punishment has to be inflicted on the criminal. This is the most amusing piece of the whole fawādshāh."

"Fulshed angštli Bangeli top," says the king, "Give him Bangeli cannon."

The wazir kicks the prisoner's buttocks; or the king says: "Botantā angštli hān bado," "Bring a dog in his place from Ladāk."

The wazir takes the prisoner a short distance and then holding him by the ear pulls him back, while the prisoner barks like a dog; or the king says: "Fintartui kadya," "Take out the spindle."

The wazir draws a line with his thumb-nail on the inside of the arm from the elbow-joint to the wrist, and then hits the arm over the line as hard as he can with the first and second fingers of the right hand. This is rather a painful punishment. There are many other words of punishment too numerous to mention here.

I notice an allusion to this game in the story of 'Mahāsahādi and Viśākha," given in Tibetan Tales from Indian Sources, p. 194. Cf. also Arischi-Tovi chhich in Jülä's Mongol, Mārāmengmān: Innsbruck, 1888, pp. 197, et seq.

[The universal belief in metempsychosis peeps out here.-Ed.]
attendants and the other horses which the king had sent for an escort, and then returned to Gullâla Shah's house.

On arrival Gullâla Shah introduced Pañj Phul to his other wife. The two princesses seemed glad to see one another, and for some time lived together most happily, until one day the first wife asked Pañj Phul to give her the pearl necklace. Pañj Phul said that she could not do so; it was the protector of her life. She could never take it off from her neck. The first wife again and again urged her request, and promised as beautiful and as costly a pearl necklace in exchange; or if Pañj Phul did not care to give it, or exchange it, she might lend it to her for a while. But Pañj Phul was determined, and refused; nothing could persuade her to part with the pearl necklace for a moment. By reason of this the first wife got very angry, and went and told Gullâla Shah of their quarrel, and begged him to get the necklace, and he promised to try and do so. When Gullâla Shah asked Pañj Phul for the necklace, she refused as before, saying that it contained the secret of her life, and was a charm to her against all dangers, sickness and trials; deprived of it she might become sick and miserable, or be taken away from them and die. However, Gullâla Shah would not be denied, and so Pañj Phul for very love of him handed it to him, and he gave it to his other wife.

Soon after this Pañj Phul suddenly disappeared. On discovering this Gullâla Shah and his first wife, together with all the household, mourned and wept. "What have we done?" cried they all. "For a trifle we have lost our lovely Pañj Phul. How obedient she was to her husband! How unsatisfy in the house! How kind and loving to every one! Alas, alas! why did we do this thing? We have caused the death of our darling!"

As for Gullâla Shah he knew not what to do for grief, and wept day and night. At last, thoroughly worn out and ill, he determined to leave the place, and to go and seek the flowers, in search of which he commenced his wanderings. The king, seeing that he was getting weaker and thinner, consented, and gave him money for his journey.

Accordingly Gullâla Shah started, and on the second day reached the mountain in fairy-land where he had first met Pañj Phul. He climbed higher and higher, till he arrived at a certain path, along which he saw two men coming towards him. They happened to be two servants of the chief Washir of fairy-land. The Washir had no son to carry on his name, and so his wife had asked him to send men into the district with instructions to bring back with them such a youth as she could conveniently adopt as her son. These men had been wandering everywhere, far and wide, and had not as yet met with a likely person. They were now starving and in great despair, but they dared not to return to the Washir empty-handed. When they saw Gullâla Shah their first thought was to eat him, but afterwards, seeing that he was clever and handsome, they decided to take him to the Washir. So Gullâla Shah was seized and taken to the chief Washir's house in the fairy city. The two servants pretended that he was the son of a fairy, who was a sister of the Washir's wife, though she did not know it. The chief Washir, his wife, and everybody who saw Gullâla Shah, were pleased with him, and therefore henceforth he abode in that house and was everywhere recognised as the heir.

Every day the Washir attended the king's Darbâr, and in the evening, when he reached home, tired and weary from the day's business, he used to call his adopted son to him and pass the time in conversation. Hours and hours were thus occupied. Gullâla Shah used to ask him the news of the Darbâr and the chief Washir used to tell him everything. One evening, in the course of one of these long talks, the chief Washir told him that there had been great excitement in the Darbâr that day,

---

1. cf. "Story of Chandan Raja" in Old Deccan Days, the author of which remarks—"There are innumerable popular superstitions regarding the powers which can be conveyed in a charmed necklace; and it is a common belief that good and bad fortune, and life itself can be made to depend on its being removed from the wearer's neck." [See remarks on the Life-Index in Wide-awake Stories; pp. 404, 405.—Ed.]
as the king had been very angry with his daughter, Pañj Phul, who had formed an attachment for a person named Gullalla Shah, one of the common people, and refused to be married to any other person. She had run away, and for a long time there were no tidings of her,—no doubt she had been trying to find that common man,—but the king had caused her to return by virtue of a most potent charm, and now a terrible punishment awaited her. Her body was to be turned into wood and placed publicly in a certain garden as a warning to other fairy daughters not to do likewise!

Hearing this Gullalla Shah experienced great difficulty in keeping his countenance. "Here then is Pañj Phul!" he said within himself. "As soon as she gave up the pearl necklace she must have been brought back to her country, and now she is perhaps suffering the terrible consequences of my folly. Sorrow, a hundred sorrows!"

At length, however, he so far overcame his feelings as to ask the Wazir if there were no means of saving Pañj Phul from the dread sentence. The Wazir said there were. If Gullalla Shah could come, burn the wooden figure to ashes, throw the ashes into the pond in the midst of the garden where it was, then she would become her former self again.

Gullalla Shah was very pleased when he heard this, and presently, wishing the Wazir good night, retired to his room. No sleep, however, closed his eyes. His mind was far too excited. As soon as he was quite sure that all the inmates of the house were fast asleep, he went forth secretly to Pañj Phul's garden, burnt her wooden effigy to ashes, and threw the ashes into the pond. Directly he did this, lo and behold! Pañj Phul came forth looking as he had seen her when she appeared out of the other pond on the mountain side.

"My own dearest," said Gullalla Shah, "how could I have been so stupidly wicked as to have caused you all this trial? Forgive me, and say that you will never leave me again. Come and we will wander away into unknown regions, whether the hand of your tyrannical father cannot reach you."

Pañj Phul replied, "I forgive you, dear husband, but to go with you is not in my power, for my father has all power over me; without my charmed pearl necklace I cannot thwart him. Wherever I might wander, he would cause me to return from thence; and then my case would be worse than before. Now go, I beseech you, lest you also get harm; and pray that the king may have mercy on me, when he hears that I have been restored to life. Away quickly, my dearest, to a place safer for you than this."

Gullalla Shah then told her all that had happened to him—how he had wandered about in search of her, and was now the adopted son of the chief Wazir of that country, who confided everything to him. He would see her again, he said, on going away, and even if the king still wished to punish her, he would get to know a remedy, and come and restore her.

The following morning when the royal guard saw that Pañj Phul was alive again, they went and told the king. His Majesty was greatly surprised and sent for her. As soon as she appeared, he said, "How is it that you have come again to trouble us? Be you a serpent and find a home in yonder jungle," pointing in a certain direction where was a jungle, thick, intricate, and inhabited by wild beasts of various kinds. And it was so!

That evening when the chief Wazir returned to his house, Gullalla Shah heard all that had happened. "Strange," he said, "can anything now be done for the princess? or must she for ever remain a serpent?"

"Yes, there is a remedy," replied the Wazir. "If Gullalla Shah could get to that jungle, dig a cave, three yards deep and broad enough to admit two people, and make a covering with a hole in it for the mouth of the cave; and if after this he were to walk about the jungle calling "Pañj Phul, Gullalla Shah is here," and then go back and shut himself up in the cave: if he were to strictly attend to all these directions—then Pañj Phul, who is now a serpent, will find her way into the cave through the hole in the covering; and there is another thing, also, which he must remember to do, viz. to cut off as much of the snake as can enter in this way, chop it up into little pieces, carefully collect them, place them in a handkerchief, take them to the pond in the midst of Pañj Phul's garden, and there throw them into the water. If all these instructions
were carefully carried out, Pañj Phul would emerge thence in all her former beauty."

When he heard this, Gullâlâ Shâh was much comforted. After a little more conversation he wished the minister good-night. No sleep, however, came to him. He was far too elated at the prospect of being able to restore his beloved to her former self and of seeing her again, to wish for sleep. As soon as he knew for certain that the Wazir and the others were fast asleep he left the house and went to the jungle. That night he only fixed on a place for the cave, and then returned to his room. On the following night, armed with pickaxe, crowbar, spade, and other necessary implements he again visited the jungle, and dug a cave. He also made a covering for the cave and a hole in the covering. He then went outside and called for Pañj Phul. Pañj Phul heard her name being called and came in the form of a snake, as soon as Gullâlâ Shâh had re-entered and shut himself into the cave. She wound the greater part of her body in through the hole in the covering, and Gullâlâ Shâh cut off as much of it as got inside the cave, and then chopped it up into small pieces. These he carefully gathered and pushing back the covering, took them with him to the pond in Pañj Phul's garden, where he threw them into the water, and—just as the Wazir had said,—Pañj Phul appeared in all her former beauty. Gullâlâ Shâh drew her to him and kissed her. They talked long and lovingly until the faint streaks of dawn warned them to make arrangements to leave the place. Neither of them wished to be separated from the other, but what were they to do? It was time for Gullâlâ Shâh to return to his home, if he did not wish the Wazir to discover his absence; while Pañj Phul could not leave the place. She tried to do so, but without avail. She was bound by the king's charm over her to remain there. And so they parted.

Gullâlâ Shâh hastened back to the Wazir's house, and only just reached his room in time. Within an hour or so some of the poorer folk, going to their labours, passed by the place where Pañj Phul was sitting. They were very much astonished at seeing her, and went and informed the king of the matter. When His Majesty heard the news he sent for the chief Wazir to take counsel with him. "Do you not think," he said, "that Gullâlâ Shâh has been here and done this thing?"

"It is impossible," replied the Wazir, "for in the first place how could he get here? and then, how could he, a common man, obtain this power? He must be great to have done this, and in favour with the gods—a thought not to be entertained for a moment."

Pañj Phul was again summoned to the king, and this time was turned into a golden nail, which was immediately given to one of the attendants with instructions to hammer it into any boat, that chance to be just then in course of construction. The attendant took the nail and fixed it into the first boat he saw. On reaching home the Wazir bathed, and then called for Gullâlâ Shâh as usual and told him all the news of the day. When he heard that the princess had been restored and again metamorphosed Gullâlâ Shâh assumed an expression of great surprise. "It is strange," he remarked, "that the king should have chosen a golden nail as the form into which to change her. Surely she can never again be restored from such a metamorphosis as this?"

"O yes, she can," said the Wazir.

"How?" asked Gullâlâ Shâh.

"Well," replied the Wazir, "if Gullâlâ Shâh could by any means arrive here, and get into that boat, in one of the sides of which the golden nail is fixed, and could discover that nail, and then having extracted it, were to file it small as powder, and throw the filings into the pond which is in the midst of Pañj Phul's garden,—if he did all these things,—then Pañj Phul would return to her former shape and beauty;—and if she was this time restored, then henceforth the king's charm would be powerless to do her harm. It would have expended itself."

This was enough. So presently the hour being late the Wazir and Gullâlâ Shâh went to their sleeping rooms. When he heard of this radical cure Gullâlâ Shâh feigned no more than an ordinary interest, though in his heart he was inexpressibly glad. On reaching his room he said aloud, "Joy, joy, the time has come, *

* Meaning a Kâmârî river-boat.
I will go once more and restore my darling. Henceforth the charms of this hard, wicked father shall have no influence over her."

However, Gullála Sháh did not immediately start. He thought it better to wait a while, until all excitement and interest about the princess had passed away. For several months he patiently waited, and then one day he asked the Wápir's wife to allow him to go and visit certain places, that he wished very much to see, and to get also the Wápir's permission for the journey. He added that he was now of an age to take care of himself, and he did not like to hear only of the countries about which the Wápir, his father, had so fully informed him. The Wápir's wife was much pleased to notice this spirit in the youth, but she hesitated to give her sanction to the request, because the way to some of the places was exceedingly dangerous and the hardships unendurable; and especially so to one who had been brought up so gently as her adopted son. Gullála Sháh was respectfully indignant at this reply. Drawing himself up to his full height he said with intense earnestness, "What, my mother, shall the chief Wápir's son be deterred by difficulties and hardships? A sorry youth must I be, if such I show myself. Better far that I perish by them, than that I should venture hereafter to attain to the post of chief Wápir of this mighty and grand kingdom, as my father bids me do. Fear not, my mother, but let me go. However, if you have any talisman, I pray you give it me, for why should I unnecessarily suffer?"

Encouraged by her son's noble reply the Wápir's wife consented to his going, and gave him her signet-ring, saying, "Show this ring to the fire, wherever you may be in any difficulty, and two Jinns will appear and help you out of it. She gave him, also, abundant money for the expenses of the proposed journey. The Wápir too, was pleased, when he heard from his wife of his son's enterprise and inquiring disposition, and acceded to his wishes.

As will be supposed Gullála Sháh started as quickly as possible. After travelling for some time, one day he found himself being paddled along in a river boat, in which was the golden nail. His quick eye soon discovered it though it was much tamished and almost excluded from sight by a great beam, that ran along the side of the boat. Disguising his real character Gullála Sháh begged the owner of the boat to make him one of his hired servants. The man agreed, and soon Gullála Sháh was working the paddle as if he had been accustomed to that sort of thing all his life. Thus he continued for several weeks, until one day he told his master that he had had a dream during the night. In this dream two men appeared and pierced the bottom of the boat with spears, so that it was broken. "I know," he added, "the interpretation of dreams. Some enemy of yours has placed a charm here? and if that charm is allowed to remain it will sink the boat." The master of the boat was very frightened when he heard this, and entreated Gullála Sháh to try and discover the malignant charm. Gullála Sháh said that it was a very difficult task, nevertheless he would attempt it if the owner of the boat would promise not to inform any one of the matter. The owner promised. And then Gullála Sháh went to a lonely place, and kindled a fire, and when the flames arose, he showed them the signet-ring of the Wápir's wife. Immediately two Jinns appeared, ready to do whatever might be his bidding. Gullála Sháh bade them to bring the boat up on land. They obeyed, and then Gullála Sháh pulled out the golden nail, after which he ordered the two Jinns to put the boat back into the water. He now went and secretly showed the golden nail to his master. On seeing it the owner of the boat was greatly astonished, and thanked God for granting him such a useful and clever servant. Gullála Sháh kept the golden nail by him, and in a little while, having assured his master that all would go well with the boat, he asked for leave of absence, which was readily granted. He then returned by the help of the charmed signet-ring to the house of his adopted father, the chief Wápir. The Wápir's wife only was at home, because it was the time of the Dávár, and she welcomed him like a fond mother. Soon afterwards the Wápir came home, and then there were great rejoicings in the house.

The whole city, also, seemed interested, and accounts of Gullála Sháh and his exploits, and the great trials and difficulties which he had overcome by virtue of the signet-ring, were upon the lips of every one.

In a day or two Gullála Sháh rubbed the golden nail into the thinnest of filings, which
he threw into the pond in the midst of Pañj Phūl's garden. No sooner was this done than Pañj Phūl became herself again and stepped out from the pond. They both kissed one another and cried,—so glad were they to meet again. They told each other all they had experienced since they last met, and Pañj Phūl declared that now she could go with him wherever he wished, and advised him to wait there till she had been to her room (which remained untonched since she last left it), and had taken such jewels and dresses, etc., as might prove of service to them on the way. Gullālā Shāh agreed, and Pañj Phūl went and quickly returned with jewels and dresses of great worth.

Then they both turned their backs on the fairy city, and started on their journey. They walked fast and long before resting, until they arrived by a pond of water, clear as crystal. Here they tarried awhile and ate some food. While talking together Gullālā Shāh told Pañj Phūl of his great desire to get some of the beautiful flowers which grew in a certain garden on the sea-shore. This garden, he explained, contained twelve thousand flowering trees; each tree had been planted by a fairy-princess, and was worth twelve thousand rupees. On hearing this Pañj Phūl said that she could obtain this desire for him, and any other desire that he might choose to prefer. But only she could get these flowers for him, for the princess of the fairy-country, where they grew, had never shown herself to man, and therefore would not see him.

In a few days their wanderings brought them to the sea-shore, close by this wonderful garden. Here they hired a certain vessel which was anchored near, and as they sat on board that night Pañj Phūl gave Gullālā Shāh a beautiful pearl necklace, and told him to go immediately and hang it before the light of a lamp in a secluded room in the side of the vessel. She also told him to remain in that room. The good of this was that several other beautiful pearl necklaces would be obtained by these means. Gullālā Shāh did as she had advised.

Meanwhile Pañj Phūl disguised herself in man's clothes, and pretended to be the servant of her husband. She then ordered the ship to be taken close to the garden of the fairy princess. On its arrival thither the princess's attendants came and ordered them to take the vessel away, because the princess wished the place to be kept strictly quiet and private, it being her wont to walk along just that part of the sea-shore. But the master of the vessel, Gullālā Shāh, and his sham servant, persisted in remaining, saying that they had many great and precious things on board; and so from fear of thieves had anchored the vessel in that place. They would not remove unless the king promised to refund them whatever losses they might suffer from thieves and such-like, who would surely come and beset them in any other place. When the king heard this he gave them permission to tarry there for the night.

The following morning Pañj Phūl took some of the pearl necklaces, which had been made as has just been explained, and displayed them to view near to the princess's garden. Presently the princess's female attendants came down to the water to bathe. As soon as they saw Pañj Phūl, they asked her who she was. She told them that she was the servant of a very wealthy trader, who was on board the ship. He was exceedingly good and had some very great treasures, especially some pearl necklaces, the most costly and beautiful in the whole world. When the attendants heard this they naturally desired to see these great treasures—and Pañj Phūl was only too ready to show them. At the sight of the beautiful pearls they were very much astonished, and entreated Pañj Phūl to allow them to be carried to their royal mistress. This also was readily granted. The princess admired them so much that she would not part with them; but told her attendants to inquire the price, and to get several more like them—as many as the merchant could spare. When these others arrived—a great pile altogether,—the princess determined to go and see the merchant; "for," thought she, "he must be a very great man to possess all these costly things." Accordingly closely veiled she went to the ship, and arriving there asked Pañj Phūl, the supposed servant, where his master's room was, as she herself wished to bargain with him for the pearls that she had selected. Pañj

* Of Grimm's Household Stories, p. 84; "Faithful John," the which story en passant compare with that of Phukir Chand," Folk-tales of Bengal, pp. 17-32.
Phul was hoping for this, but she did not wish to betray any special interest in the matter, and so said that the princess could not see the trader, as he had performed a certain worship, and therefore could not see or talk with any woman.

"But why cannot I see the trader?" urged the princess. "I am a good woman and have never seen a strange man. Surely he would not be defiled by my presence."

"He would not see you," answered Panj Phul. "If I took you to his room, he would only be angry. He would never show himself to you."

On hearing this the princess became more desirous than ever of seeing this strange man. She would go alone, she said, and thus no responsibility would rest on Panj Phul. Panj Phul said nothing as the princess went alone and knocked at the trader's door. He did not open it, but answered from within: "I care not to see any strange woman; and so cannot let you enter."

The princess, however, would not hear him. "What for?" she said. "I have never seen the face of a strange man. I am a good woman. Let me in. I am a good woman, and wish to be married to you. This only is my desire. Why should we not see one another?"

Being thus pressed the trader opened the door, and they saw each other, and love came with the sight. They talked together for a long time, and the trader showed her all his treasures. Then the princess left, full of affection for the strange trader, and full of amazement at his great and exceeding treasure. As soon as she reached the palace she told the king where she had been, and what she had seen, and how she had fallen in love with the man, and wished to be married to him. The king, being a very indulgent and good father, promised to see the man, and the next morning went for that purpose to the ship. When he saw the trader,—how pleasant he was, and of such good speech, and so wise withal,—he too accepted him in his heart; and on reaching home told his daughter so. The princess's joy was unbounded. How much she looked forward to the day! and what great excitement there was in the city at the thought of the approaching marriage! The wedding took place, and was celebrated with great grandeur, as befitted the rank and wealth of the king of fairy-land.

For some time Gullali Shah lived within the palace grounds and prospered exceedingly. However, he did not feel altogether satisfied; so one day he told the princess all about himself,—why he had come there, and how he wished to get the flowers and return to his native country. The princess repeated everything to the king, and asked his permission to take the twelve thousand flowering trees and accompany her husband; and to this the king consented. Preparations for starting were at once commenced. Twelve thousand carts were got ready for the twelve thousand flowering trees, and other arrangements were made for the transport of the treasures, that were given them by the king. An enormous company of troops and elephants, also were placed at the disposal of the illustrious couple. At length the hour of departure arrived. It was a most sorrowful occasion, for they were both very much beloved.

They first visited that country where Gullali Shah got his first wife. The king was intensely glad to see him, and gave him a splendid house to live in, and all else that he required. Gullali Shah stayed there for a little while, and then, laden with more presents, departed. They next went in the direction of Gullali Shah's own country. It was a long and difficult journey, but they all reached the city walls in safety, and pitched their camp outside the city, thinking that so sudden an advent of such an immense company (several thousands in all, besides elephants, horses, and other beasts), would much inconvenience the people. When tidings of their coming reached the palace the king was much frightened, and sent for his chief Wazir and other advisers, to ask what he should do to appease this great king who had now arrived; "for surely," he said, "so great and powerful a king has come here on no other account than for war."

The chief Wazir well considered the matter, and then replied, "Oh king, send, we pray you, your beautiful daughter, and let her arrange for peace. Who knows whether or not this great king will be captivated by her beauty, and so we be saved?"

"Alas, alas!" replied the king, "I have already given away my daughter to the man..."
who shall succeed in obtaining the flowering trees. Moreover, my daughter has refused several times to marry any man, no matter how great and wise he may be, except this person.

Thus were the king and his advisers occupied in conversation, when Gullâlâ Shâh, having arranged his camp for the night, took off his grand and princely clothes, and put on the ragged garments of a beggar, and thus arrayed went forth into the city with the twelve thousand flowering trees. He ordered the drivers to take the carts straight to the palace, while he himself went on ahead. On arriving there he sent a message by the watchman to the king, saying, "Bid your master, the king, to command me, for I am come with the beautiful flowering trees from the garden of the king of the fairies."

Strange that this message should have been delivered just at the time when the king and his lords were talking about these flowers, but so it was! When he heard the words the king did not believe the watchman, but thought that he was mad. The Wazir and other great officials present also thought that it was too strange to be true. However, His Majesty in a jesting manner bade the man to be brought in. Presently Gullâlâ Shâh appeared, clothed in rags, but bearing a sample of the beautiful flowers, which were so much admired by the princess and all the royal family. True enough there were the long-desired flowers, but the bearer of them was evidently of very mean origin—a dirty, ragged beggar! The king placed his chin in the palm of his right hand, and fixed his eyes upon the carpet. Thus he remained for several minutes, perfectly silent. "Is this the man?" he thought. "On whom must I bestow my beloved daughter? Surely, the man will not presume to ask for this thing? I will handsomely reward him, and then let him go."

"Friend, what seek you?" he asked, looking up again. "Will you be a great Wazir in the land? or do you wish for wealth? Say, and it shall be granted you."

"Let not the king be angry," replied the beggar, "I wish only for Your Majesty's daughter in marriage. In comparison with her, I esteem all honour and money as of little worth. I pray you, fulfil your promise to me."

The king answered, "Your request is your due; and far be it from me to break my promise by refusing it to you. Take my daughter; she is yours."

When all the lords and attendants, and even Gullâlâ Shâh himself, heard these words, they were astonished at the noble-mindedness of the king. For it would have been a small thing—nay, would have been accounted right and proper by nearly every one—if His Majesty had refused to gratify the beggar's desire.

Gullâlâ Shâh was bidden to go with the attendants to a certain grand house; and there reside for a few days, during which suitable garments would be provided for him and arrangements made for the nuptials. This done, the king and his Darbâr again conferred in council, as to what was the best thing to be done under the present difficulties concerning the foreign powerful monarch, whose camp lay close to the walls of the city. They talked together for a long time; but eventually, nothing definite having been agreed to, the king dismissed the Court, saying that he, attended only by his Wazîr, would visit this great king and inquire the reason of his coming. In the course of an hour the king and his Wazîr, with a few attendants might have been seen pursuing their way with anxious comenences—more like pilgrims than a royal party—towards the great camp without the city.

Meanwhile Gullâlâ Shâh had succeeded in eluding his attendants; and returning to his tent, had changed his clothes again. The king and the Wazîr did not recognise him when they were introduced. They were received with great ceremony; presents were offered, and the two visitors seated in state. Gullâlâ Shâh opened the conversation by inquiring all about the country and people. Then the king asked whence Gullâlâ Shâh had come, and why he had come. Gullâlâ Shâh then told him about himself, and how that he had come there in order to ask his, the king's daughter in marriage.

"Sorrow, a hundred sorrows!" replied the king. "I have already promised my daughter to a certain beggar in consequence of a vow. Were it not so, there is none other whom I could prefer to thyself. Have pity on me, I beseech you, for it is with a sad heart I say this."

noble, most righteous king," replied Sháh. "You have done well. Better should lose your life, your kingdom, than that you should deny your word. Know that all the rulers of the earth were better than you are! Then would the people be better, and righteousness and peace would reign in the world. God has prospered you, O king, He will yet prosper you. Only continuous care for your people and faithful to your word. Know now that the beggar, whom you have just mentioned, is none other than myself; and that I, also, am that same boy who was known to the people by the name of Kaaria, whose father died without an heir, and therefore his wealth and property were appropriated by the crown; and whose mother, in consequence of this, sought for employment from a certain farmer. God was with me and prospered me exceedingly; so that I met with one of your messengers, who told me all about your wishes. After much travel, through which I have become learned, great, and rich, I have at last returned to your kingdom, bringing with me the flowering trees. I chose to appear with them first in beggar’s clothes, that I might test your fidelity to your promise. You have been proved. Forgive me, I pray you, if I seemed to be wrong in this matter, and grant me your daughter in marriage.” Saying these words he caught hold of the king’s hands and seated him by his side in the place of honour.

When the king heard the good news, he was almost beside himself with gladness. “God be praised!” he said aloud and clasped Gullalá Sháh to him in affectionate embrace. “Of course, I will give you my daughter,—but who am I to promise this thing? Ask what you will, and you shall have it, to the full extent of my power.”

News of this meeting was at once conveyed to the princess, who would not believe it, until Gullalá Sháh himself appeared and declared it to her. In due time the wedding was celebrated with great eclat. Gullalá Sháh fixed his abode in that country, and lived most happily with his four princess wives, for Pañj Phul had long ago re-assumed her true character. He became increasingly popular and increasingly prosperous, and in a few years, on the death of the king, succeeded to the throne. Other countries were quickly conquered, and everything was managed with such skill and justice, that soon Gullalá Sháh became the greatest king of those days. All nations did him homage and all people respected him.

Some will perhaps think that Gullalá Sháh forgot his mother and relations in the time of his greatness; but it was not so. He found her out, and gave her a beautiful house to live in and a large number of servants to wait on her; he also inquired for those who had in any way helped her during her distress, and promoted them to offices of great honour. Thus did he live, universally just, loving, and good.

No wonder then that he become so popular! No wonder his kingdom waxed so great and strong! No wonder that when he died, at a ripe old age, there went up from all people, rich and poor, old and young, a great wail that seemed to rend the heavens!

SANSKRIT AND OLD-KANARESE INSCRIPTIONS.

By J. F. FLEET, B.C.S., M.B.A.S., C.I.E.

(Continued from Vol. XIV. p. 319.)

DIGHWA-DUBAULI PLATE OF THE MAHARAJA MAHENDRAPALA.

(HARSHA)-SAMVAT 155.

No. 160.

This inscription appears to have been discovered by Messrs. P. Peppe and James Conserrat, and was first brought to notice in 1864, in the Jour. Beng. As. Soc. Vol. XXXIII. p. 321ff., when, in his paper entitled “On a Land-Grant of Mahendrapala Deva of Kanauj,” Dr. Rajendralal Mitra published his reading of the text of the plate only, and a translation of it, accompanied by a rough and by no means accurate lithograph of the date. And, with the exception of subsequent discussions as to the reading of date, this rendering of the inscription has remained the standard published version of it up to the present time. I now re-edit it, with a little more of the original plate, which I obtained through the kindness of
The plate, which is engraved on one side only, measures about 1' 9" by 1' 4½". The edges of it were fashioned somewhat thicker than the inscribed surface, and with a slight depression all round just inside them, so as to serve as a rim to protect the writing; and, though the surface is in some places a good deal corroded by rust, the inscription is in a state of excellent preservation almost throughout; but some of the letters are so hopelessly filled in with hard rust, which it was impossible to remove, that they do not show quite perfectly in the lithograph.

On the proper right side of the plate there is soldered a thick and massive seal with a high raised rim all round it, measuring about 7½ by 11½, and rectangular, except that the top of it is raised into an arched peak with a slight depression on each side of it. In the arch thus formed, there is the standing figure, facing full-front, of a goddess, doubtless the Bhagavati who is mentioned in the inscription; and below this, across the surface of the seal, there are the twelve lines of writing, a to l, transcribed below.

Unlike the body of the grant, the letters of this legend on the seal are in relief; and, though they are in a state of excellent preservation almost throughout, the spaces between them are so filled in with hard rust, that it was impossible to obtain an impression of them, or to treat them satisfactorily by means of photography, include the seal also in the list.

The characters are North Indian N. The forms of the numerical symbols are of the for 5, 10, 50, and 100. The execution engraving is excellent throughout, except that the mark for 1 or 1 is sometimes a circular broadened and sometimes a decided stroke, at the bottom of the end of the continuation, to the left, the top stroke of the consonant, is occasionally imperfectly formed, and occasionally omitted altogether. Many of the letters show as usual, marks of the working of the engraver's tool. The plate is very massive and substantial; so that the letters, though fairly deep, do not show through on the back of it.

The language is Sanskrit; and the inscription is in prose throughout, except for the half-syllable, evidently intended as such, which is introduced in line 14, and records the name of the person who drew up the charter. In respect of orthography, all that calls for notice is—(1) the parambhaganavati in lines e, i, and k, and parambhagavati in lines 3, 6, and 7; (2) the use of τ as for τ, e.g. samkalpa, line 8, even though the distinct form for τ occurs in bhātikṣ, line 13; and (3) the doubling of t in conjunction with a following r, e.g. puttra, line 2, and sagāttra, line 11 (but not in pitrā, line 11).—I had no opportunity of taking the weight of this plate: but it is entered in Dr. Rajendralal Mitra's notice as 30 seers.

The charter recorded in this inscription is issued from the temple, complete with many cows, elephants, horses, chariots, and foot-soldiers, situated at Mahāḍāya (line 1). Then follows the parenthetical genealogy, repeated in the same words in the legend on the seal, to the effect that there was the illustrious Mahārājā Devaśaktideva (l. 2), a most devout worshipper of the god Vishnu. His son, begotten on Bhūyāradvā, was the illustrious Mahārājā Vasārājadēva (l. 3), a most devout worshipper of the god
AN ENGLISH-GIPSY INDEX.

Compiled by Mrs. Grierson; with an introductory note by G. A. Grierson, B.C.S.

Continued from p. 80.

GIPSY—Rom. romanăunis, yapări, japări, malkoch, (Tch.); găhără, păsha, (As. Tch.); loam, (Tch. Tokat.); rom, (Pap. M.); pasha, rom, sinkalo, (M. 8).

GIPSY-BLOOD—Kaulo ratti, (Eng.).

GIPSY-FASHION, after the—Romanescocnas, (Eng.); roman, romândire, (M.).

GIPSY-FELLOW—Romano chal, roman chal, (Eng.).

GIPSY-GENTLEMAN—Romano rye, roman rye, (Eng.).

GIPSY LANGUAGE—Romanes, romanyes, (Eng.).

GIPSY, of or belonging to—Romano, (Tch.).

GIPSY LASS—Romani chi, (Eng.).

GIPSY, one who is not a—see Stranger.

GIRDLLE—Kustik, (Pap. M.); kustik, (M.); kyuast yk, (M. 7).

GIRTH—Dingla, plûna, (Tch.).

GIVE, (imp.)—Dov, (Eng.).

GIVE AWAY, to—Yertshâvâ, yertsharâvâ, (M.).

GIVE, to—Deâva, (Eng.); dâva, (Tch., Pap. M., M. 7); bede, (imperat.) (As. Tch.).

GIVE, to cause to—Dimirhâvâ, (Tch.).

GLANDERED—Limâl, limençoro, (Tch.).

GLANDERED HORSE—s.,—Nok-angaro, (Eng.).

GLANDERS—Lim, (Tch.).

GLASS, drinking—Jam, (Tch.); stëkla, takhtây, (M.); stegla, valin, (M. 8).

GLITTER, to—Nêzövâvâ, zevîasrdavâ, (M.).

GLOW, to—Lipjâvâ, (M.); to glow on, lipisard'ôvâvâ, (M.).

GLUE, to—Lipjumâ, (M.).

GO AWAY, to—Chambahâva, (M.).

GO, to—Jalâvâ, (Eng.); jávâ, (Tch., Pap. M., M. 7); jami, (1 pres.) (As. Tch.); phevâva, tardâvâ, zhâva, (M.).

GO BY, to—Nikâvâ, (M. S).

GO OUT, to—Niklava, (Tch., Pap. M., M. 8); niglava, (Pap. M.); enkîlava, (M.); nashâva, (M. 8).

GONE OUT, to have—Niklîvâva, (Tch.).

GOO OUT, to cause to—Niklîrava, nikûl dava, (Tch.).

GO ROUND, to—Eknûzhîravâ, (M.); plurâvâ, (M. 8).

GO THROUGH, to—Skîpîsard'ôvâvâ, (M.).

GOAD—Ghaalî, momell, (Tch.).

GOAT—Buznî, (fem.) buzî, (Tch.); buznî, (As. Tch.); kâpî, kâpî, takî, (M.).

GOBLIN—Korî, (dim.) korî, (Tch.).

GOBLIN, of or belonging to—Korakhoro, (Tch.).

GOOD—Devel, dibble, dorvel, duvel, dubble, (Eng.); devêl, del, (dim.) devêlor, (Tch.); huva, (As. Tch.); devêl, (Pap. M. M.); devel, del, dîl, (M.).

GOOD, of or belonging to—Devîcano, delvelkoro, (Tch.).

GOOD-FATHER—Kirî, kirî, kirî, (Tch.); nanah, nanah, t'irî, (M.); kirîvo, (M. 7).

GOODMOTHER—Kirî, (Tch.); tîrî, (M.).

GOODS—Zhamatû, (M.).

GOLD—Sonakey, sonneko, (Eng.); sonmakå, sommakå, (Tch., M. 8); zîrldhî, (As. Tch.); sommakå, gilpe, (Pap. M.); sommakå, (M.).

read the numerical symbols for the year as 396, treating them apparently as decimal figures, and the symbol for the day as 7—1 am a little uncertain about the third symbol for the year: but, contrasting it with the unnumbered 8 in the date of the following inscription, and comparing it with the 5 of the Nepal Bandha MSS. in cols. 7 and 8 of Bhagwanlal Indraji's Table, ante, Vol. VI. p. 44,—it seems to be a form of the symbol for 1.
HAMMER, blacksmith’s.—Várias, chokános, chakános, (Tch.); varás, (M. 8)
HAND.—Vast, vast, (Eng.); vast, (Tch.); hast, (As. Tch.); vást, (Pep. M.); vast, (M. 8)

THE RETIREMENT OF GENERAL CUNNINGHAM.

We cannot issue this Number without a few words of farewell to Major-General Alexander Cunningham, R.E., C.S.I., C.I.E., late Director-General of Archaeological Surveys, who, having resigned his appointment, has just left this country, after a connection with it, and with the study of Indian Archaeology in all its branches, that has lasted through more than half a century.

Entering the service of the Government of India as a Lieutenant of the Royal (late Bengal) Engineers in June 1831, General Cunningham landed in this country no long while afterwards, and applied himself almost at once to the researches that have made his name so well known.

His first publication was, in 1834, the "Correction of a mistake regarding some of the Roman Coins found in the Tope at Manikya, opened by M. Court" (Jour. Beng. As. Soc., Vol. III. p. 635ff.) And from that time, till now, he has been a constant contributor to that Journal, to the Numismatic Chronicle, and to others devoted to oriental topics.

Of separate publications he has given as The Bhilsa Tope, 1854; The Ancient Geography of India, Vol. I. The Buddhist Period, 1871, devoted chiefly to the illustration of the campaigns of Alexander, and the travels of the Chinese pilgrim Hsien-Tsang; The Stupa of Bharhut, 1879, with a magnificent series of fifty-seven plates; and the Book of Indian Eras, 1884, containing an extremely useful set of Tables for calculating Indian Dates, which does not seem to have as yet become as well known as it should be.

But his name is, of course, best known in connection with his official post as Director-General of the Archaeological Surveys of India, for which he was specially selected in 1870 and was persuaded to return to India again after his original retirement from active service. In connection with this office, General Cunningham has given us, in 1877, Volume I. of the Corpus Inscriptionum Indicarum, containing the Asoka Inscriptions, and, from 1871 to 1895, twenty-one volumes of Reports of the Archaeological Survey of India, which—whatever criticism may be applied to them in detail—contain an extraordinary amount of information that only requires careful and systematic indexing for its practical value to be recognised.

It is a relief to know that General Cunningham's invaluable collection of gold and silver coins did not share the fate of his books and manuscripts, unfortunately lost at sea, but have reached England in safety. We hope that he has many years before him yet, in which to make the contents of this collection accessible to the public, and to reconstruct many of his other unpublished writings which would seem at present to be so hopelessly lost.

7th March 1886.

No. IV.
Sacred Stones.

In the Bible the Prophet Isaiah condemns the stone-worship of his day in the following words:—"Slaying the children in the valleys under the cliffs of the rocks? Among the smooth stones of the stream is thy portion; they, they, are thy lot: even to them hast thou poured a drink offering, thou hast offered a meat offering. Should I receive comfort in these?"

In India, at the present day, both the Saiva and Vaishnava sects of Hindus have their sacred stones. The liñas of the Śaivas exist in all their temples, while the Vaishnavas have their īdāgraṇā.

The Vaishnavas as well as the modern Jains reverence the impression on stone of the soles of two feet, a Vaishnava temple at Gayā being called Bishn-Pad, or 'Vishnu's Foot.' This symbol is also many times repeated on the natural rock of a hill at Śrāvaṇa-Belgola in Mārsur, on which is a Jain temple. Plate IX. fig. 1 is a representation of this emblem from the Rājā of Nāgpur's palace at Benares. Fig. 2 is a mosaic pavement in the centre of the floor of the cghatri or cenotaph at Góvardhan, erected to the memory of the grandfathers of the present Mahārājā of Bharatpur. It is not unknown in Europe, forming a portion of the ornamentation on one of the large stones within a dolmets, at Arzón, in the Morbihan, South Brittany; see Plate IX. fig. 3. In the Island of Guernsey, on the Roqueaine Road and not far from L'Érée, is a field in which is a rocky mound. A stone, called La Pierre aux Dames, at one time stood on its summit, but a former proprietor removed it in a vain search after supposed treasure, and it now lies at the foot of the mound. On the surface of the stone, which is of granite, there are two depressed traces of footmarks in opposite directions. The depressions appear to be due to disintegration of the granite block, but so closely do they resemble the impressions of two human feet, that one is forced to believe that their present form was at some remote period greatly assisted by some rude sculptor's chisel.

An incident, which once happened to the present writer in Benares, seems to throw some light upon the significations of this symbol in Modern India. One day, when wandering in the outskirts of that city the attention of our party was attracted to a temple, which, though handsome, on a closer examination, proved to be an insignificant one. But near it were two tombs:—on the larger one was a liṅga and trident, between which was the impression of the soles of two feet; the smaller had only the two feet upon it. Whilst we were wondering what could be the meaning of these symbols in such a position, a middle-aged native woman came up to us and on being asked about the tombs said: "The largest is my father's tomb; the other is the tomb of my mother; they were both Gauñs and so am I." On being questioned still further she added, "We use the signs of the feet to express worshipping at our parents' feet, i.e. being their disciples." It would appear from this (though I will not vouch for its being invariably the case*) that the Gauñs bury their dead, contrary to the usual Hindu practice of cremation.

The worship of rude stones must have prevailed in Kāśmir at one period. At a place called Pandrattan, about three miles from Sīrīnagar, there are three or four so-called Saiva stones of very large size. In 1876 one was still upright in its original position, the others were prostrate on the ground. Baron von Hügel, in his Travels in Kāśmir and the Panjāb, relates, too, that he found many such stones near the sacred spring at Islamābad. Similar stones have also been found in places where Buddhism is known to have existed, and it seems not improbable that such emblems are the relics of a still older form of religion than that of Buddha, which fell into disuse when it was introduced. They have been found also amongst the ruins of

---

1 Chap. lxvii, 5 & 6.
2 Of this symbol the late Kamer Herr Worstman says, "is frequently occurs on rock cuttings in Bohuslän, in the South of Sweden (the ancient Scania) and it has been considered a sacred sign over the whole earth, being in India an emblem of Buddha and of Vishnu." [See

* Burial among such ascetics, we believe, is the invariable rule, and not cremation.—Ed.]
the old town of Valabhi in Kathiawar, but I have never seen any either in Ladik (Western Tibet), in the Himalayan Valleys of Lahaul and Spiti, in the upper part of the Satlaj Valley, or in Ceylon, in all of which Buddhism now prevails. It should be noted here that, at the present day, in the Panjab, in the Central and North-West Provinces, and in the Southern Peninsula of India, the worshipers of Siva far outnumber any other purely Hindu sect.

Madden, in his account of the Tarai and Kumaon, says, "a little below the point of junction of the Gauḍ and the Bajiya, at a holy spot called Maipùr or Mayapūr, is the Chitr Siita or Mottled Stone, a large rounded boulder of quartz conglomerate, reposing in a deep cleft in the sandstone which forms the right bank of the Gauḍ. It is sacred to Devi and Mahadeo (i.e. Siva), and is greatly venerated."

In the Central Provinces, the Gonds, generally held to be an aboriginal race, and who there rank very low in the social scale, are still in the habit of choosing a rough stone of an oblong form, which they daub over with a red pigment, set up under a piping tree (ficus religiosa), and perform pujā (worship) to it. This consists in pouring oblations of milk over it and making offerings of flowers, &c. As an instance of the transfer of this custom to orthodox Vaishnavism I myself saw a pilgrim at Gayā place a small box of incense matches on a tray, together with other offerings, and deposit them in the innermost shrine, on the impression of the foot of Vishnu. The custom of offering libations in this manner is not yet extinct in Europe. At the Point de Jerbourg, the most south-easterly promontory of the Island of Guernsey, is a tall rock, which, when viewed from a particular point, is said to bear some resemblance to a cowled monk. This rock is called by the country people "Le petit bon homme Andrelot," and the fishermen when passing it take off their hats and make a libation to it of any liquor which they may happen to have on board, and throw some old clothes to it.

There is a passage in the Apocrypha in the Book of The Wisdom of Solomon, ch. xiii. 10, and part of verses 13, 14, 17, and 18, which shews that a similar form of worship to that just noticed was practised in the days of Solomon. It runs thus:—"Miserable are they, and in dead things is their hope, who called them gods, which are the works of men's hands, gold and silver to shew art in, and resemblances of beasts, or a stone good for nothing, the work of an ancient hand—and fashioned it to the image of a man; or made it like some vile beast, laying it over with vermilion and with paint colouring it red, and covering every spot therein; then maketh he prayer for his goods, for his wife and children, and is not ashamed to speak to that which hath no life. For health he calleth upon that which is weak for life prayer of that which is dead: for humbly beseecheth that which hath the means to help: and for a good journey he asketh of that which cannot set a foot forward."

The ancient Arabs, prior to the reformation of their faith by Muhammad, paid particular reverence to a stone called Allât. It had a conical form, and was probably the same as the linga worshipped in India as the emblem of Siva. In Rome, as well as in Greece, and in Etruria it was only after the lapse of several centuries that art ventured to represent the gods under a human form. On this account, the earlier inhabitants were accustomed to offer sacrifices to the trunks of trees, or to dark-coloured stones, a habit which, according to some passages in their poets, survived for a long time amongst the lower classes. Indeed, from what we learn from Varro, for more than 170 years the Romans rendered worship to their gods without having any representation of them whatsoever, and Plutarch relates the story that when Numa regulated the ceremonies to be observed by the Romans he forbade any objects of a definite form being exposed to public veneration. It is the opinion of certain learned men that such must have been introduced in the reign of the elder Tarquinius, who was an Etruscan; which leads us to conjecture that he may have brought...

SCULPTURED STONES AND MONOLITHS IN THE ISLAND OF GUERNSEY.
the custom of image-worship with him from his own country.

It would appear that stone-worship was not unknown in Europe, and in England, even as late as the Xth Century. In his work on the *Stone Monuments, Tumuli and Ornaments of Remote Ages*, Mr. J. B. Waring says that Col. Forbes Leslie observes that, in Thorpe's *Ancient Laws of England*, Theodore, Archbishop of Canterbury in the VIIth Century, the Saxon King Edgar in the Xth, and Canute the Dane in the XIth, all forbade the worship of stones. At a Council held at Tours in the VIIth Century, it was resolved that the church doors should be closed against those who worshipped certain upright stones,9 and Mr. Waring adds, that he remembers to have seen an Anglo-Saxon law to the effect that whoever wished to preserve such stones might do so on payment of a fine to the Church. A stone of this sort is possibly indicated in the *Edda*, the most ancient book of Scandinavia, where mention is made of an oath taken near the Sacred White Stone. M. Holmhoe in his little work, *Buddhism en Norvege*, published in 1857, after speaking of sacred stones as known in Kashmir and India, goes on to say: "It is most singular to find traces of the same customs in Norway. The museum at Bergen possesses three stones of a greyish white marble. One was brought from a large kauri (or tumulus) on a farm called Glein in the island of Donnae off the coast of Heligoland. This stone, like those from Balabhipura in Soreth" (Valahhi in Kuthiwalid) "three feet high, and nineteen inches in diameter. Both tumulus and stone were formerly held sacred. The two others were not found in tumuli, but another was probably their original position."10 Another Norwegian antiquarian, M. Liligren, relates that in the year 1817, in a field in the parish of Sparhoe in the diocese of Throndhjem, a stone of precisely the same form was discovered, and another in Vestmanland in Sweden; and he gives it as his opinion that they had been worshipped as gods. Mr. Christie also speaks of a similar stone, "which tradition says existed formerly near the town of Tromsöe in Finmark, and was worshipped by the Laplanders, and that the Bishop in consequence had it removed, and thrown into the river." The same person says also that he himself had seen "on the farm called Opsanger in the parish of Quintherd in the diocese of Bergen, on the summit of a large tumulus, a stone of the same kind." Stones of this form, when found in Norway, are supposed to belong to the Iron Age. In another place M. Holmhoe says, "according to the ancient laws of Scandinavia, put forth in the first century after the introduction of Christianity there, it is especially forbidden to worship stones."

M. Holmhoe also says: "We will now pass on to stones of another form, which also appear to have been considered sacred. These are stones of a spheroidal or ovoid form, which have been found in certain tumuli. One such stone, nine inches in length and seven in circumference, was found within the cell of a tumulus not far from the town of Flekkefjord in Norway." He then goes on to say, "The Museum at Bergen possesses two stones which in size and colour exactly resemble hen's eggs, they are made of some white stone, probably marble, and were found in a tumulus in the district of the Sandfjord in the diocese of Bergen. The proprietor of the land told me that he found them in the cell in the centre of the tumulus." He next proceeds to enumerate several places where spherical or oval stones of the same description have been found in Norway, and also in Denmark, in Livonia, and in the North of Germany. Now in one part of the bazur at Benares hundreds of spherical or oval stones are exhibited for sale. They are for the most part of the size and form of a common hen's egg.11 Possibly they are used in private worship, for it is well known to all who have ever been in India that no Hindú except an outcaste will eat an egg or even keep fowls: there seems, therefore, little doubt that some religious meaning must be connected with them. Similar spherical stones, again according to M. Masson, have been found in toposes and tumuli in Afghanistan and other places also.12 They have invariably been found in the centre of such monuments, which position, M. Masson

---

9 The Śaiva stones of India, and the menhirs of a certain type in Brittany.
10 Since this was written, at least ten more such stones have been discovered in Norway.
11 The Śaivas are said to regard the egg as the symbol of creation. [But is the doctrine of the brähmāvēda or the World's Egg exclusively Śaiva? — Ed.]
12 *Travels in Afghanistan*, Bilākisfāa, &c.
thinks, was given to them with some special object.

These stones take another form in Scandinavia, of which three or four specimens exist in the Museum of Antiquities at Stockholm; but it seems an open question whether they can be considered to be Śaiva stones. They perfectly correspond with a description given by M. Liligren of certain stones in a passage he quotes from a manuscript by M. Schöning, Bishop of Throndhjem, relating to a custom which existed in Norway at the end of the XVIIIth Century. M. Schöning says, “at the farm of Qualest in the Telemarken district, two stones were still preserved at the end of the last century of the form of loaves of common rye-bread, that is to say, round and convex on their upper side. These stones were so much esteemed, that they were placed upon seats of honour and bathed regularly with milk, and butter, and at Christmas watered with fresh beer.”

There are yet other kinds of sacred stones some of which are still in use in India, and of which examples still exist in Europe, viz. stone circles, monoliths, and stone implements. In one of Mr. H. Rivett-Carnac’s papers on the rock sculptures and monoliths of Kumān, which he has permitted me to use, he mentions a stone circle on the summit of Panḍakoll, (a mountain rising to the height of nearly 8,000 feet above the sea) within which four monoliths are standing. This monument consists of an outer and an inner circle of stones. The outer circle, 16 feet in diameter, is composed of rough stones piled one upon the other, with larger stones at the entrance. The inner circle, 8 feet in diameter, is made partly of large stones about 3½ feet in height, and partly of smaller ones. The entrance is to the south. In England the stone circles of Stonehenge and of Avebury in Wiltshire are well known, and similar monuments exist in the Channel Islands, viz. in Guernsey, and on the island of Herm.

Mr. Rivett-Carnac, when describing the four monoliths on Panḍakoll, Plate VII., figs. 1, 2, 3, 4, says, “No priest lives on the hill, which is too cold, jungly and inaccessible for a lengthened sojourn, but a fair is, I learn, held there in the spring, when many pilgrims visit it, chiefly childless women.” He goes on to say: “Fig. 1 has a mark upon it which was perhaps intended for the Moon, on Fig. 3 is what looks like a Sun. Fig. 2 is a monolith of the same nature from the summit of Panḍakoll. Fig. 4 is another stone from Chandeswar in the same district.” Fig. 5 is a stone from Tartary given in front and side face, and Fig. 6 is from the island of Naxos in Greece. The two last bear a strange resemblance to each other; but it is a still more singular circumstance to find the same type of stones existing in Europe, and still used as a place of pilgrimage by women. A specimen is given in Plate X, taken from a sketch made for me by a friend some years ago. This statue is known as the Venus de Quinipil, and is situated near Band Morbihan in Brittany. Black, in his Guide to Brittany, describes it thus:—“It is a nude radially-formed stone statue, about eight feet high, standing against a slab. The thighs are disproportionately thick, and the arms disproportionately thin. Round her waist is a narrow girdle, the ends of which fall down in front. The hands are crossed over the body. The statue stands on a pedestal nine feet high rising from the front of a terrace over a dilapidated fountain. From the flatness of the features some have supposed it to have an Egyptian origin, but the probability is that it does not date later than the 16th Century, when it was an object of impure rites among the Bretons.”

In Brittany, certain upright blocks of stone called menhirs have in some districts been placed in rows of ten or even more lines, forming thus an avenue leading to a dolmen, or tomb of some ancient chief and his family. Other stones again have been placed singly in elevated positions and are somewhat conical in form. They much resemble the Śaiva stones of India.

Near St. Renan, and about 12 miles from Brest, is a monolith called the Menhir of Kerlos, said to be the finest in Brittany. It is a quadrangular stone of brownish granite, 19 feet in circumference and 39 feet in height above ground, tapering slightly towards the top. It is about 2 feet thick at the ends, and 4 feet at the centre. On its east and west sides, at a height of from 2 to 3 feet from the ground, is a circular protuberance or boss. On and

13 At any rate this is the case with the Menhir of Kerlos in France.

around these two places it has an almost polished appearance, whereas the rest of the stone is covered with a fine short species of lichen, caused by the action of the winds from the Atlantic. Female pilgrims are said to visit it at the present day, and very probably a habit of rubbing the lower part of the monolith has produced its peculiar appearance. It is worthy of remark that the eastern boss seems to be the favoured one. The Rev. W. C. Lukis, in his Guide to the Chambered Barrows of South Brittany, when speaking of an enormous menhir near Locmariquer, now broken into three fragments, but which would, if entire, be 67 ft. 6 in. long, 13 ft. 6 in. in its widest part, and 7 ft. 6 in. thick, says: “About 658 A.D. the Council of Nantes decreed that all venerated stones or objects of superstitious devotion amongst the people should be demolished. Some have thought that this menhir was rudely thrown down and broken in pieces in obedience to the order of this Council;—others again, that it either fell or was injured by lightning.”

The following description of a cromlech on the Island of Anglesea, by Captain Lukis, brother of the author just quoted, is a most interesting one in the present connection. Captain Lukis, who is of the opinion that such monolithic monuments of Great Britain were connected with the religious worship of the prehistoric stone builders, wrote in 1880: “I have had another day at Brin-celle Din, as it is styled in the Ordnance Map, or Yr Ogof (The Cave), as it is called on the Island of Anglesea. I found a rude pavement of rough slabs and immediately beneath it a thick bed of small beach pebbles.” I also measured an extraordinary stone pillar, which is on the right side of the chamber in a slanting direction towards the South, and found it to be exactly 9 feet in length, with a circumference in its thickest part,—for it tapers upwards,—of 14 feet 10 inches. This leaning pillar bore evidence of having been disturbed at the base on the southern side, but I do not conceive that when in its proper upright position it could have touched the upper surface of the covering stones. On reasoning on the singularity of this pillar within the principal chamber, so very unlike the props of construction around the place, it cannot be considered to be for the purpose assigned to stone pillars or supports, which are sometimes found in cromlechs. In the monument of Dehus (or De Tas) in the Island of Guernsey, the rude pillar beneath the second cap-stone was evidently placed therein to support a flaw or crack which was found to endanger the covering stone—in other instances also this has been the case—but in all of them the reason of the cromlech builders is clear and evident. At Yr Ogof, we find a pillar with a regular abraded surface, almost polished in some parts, and gradually reduced upwards. Its character is so different from those on record, that we are forced to assign some other reason for its introduction into the main chamber. Another abraded pillar stands at the eastern end of the avenue-covered way. It is more rude and irregular than that of the chamber, and stands near a small side cist which appears to be an addition to the chief cromlech. . . . . . I can only say that the pillars at Yr Ogof assimilate greatly with the styles of the Hindus, although there may be some deeper meaning in placing them within the chamber of the dead.”

Plate XI. is a sketch of a menhir discovered some years ago near Pont l’Abbé in Brittany. It was found buried in a field near the village of Lescoml, and is now in the grounds of the Chateau de Kerzun, belonging to M. de Chatellain. The height of this monolith is about 10 feet, it is about 4 feet 2 inches in diameter at the base, and 18 inches in diameter at the top. Its base is encircled by sculptured figures, each about 4 feet 3 inches in height, and arranged in four compartments. In one is the figure of Mercury, in another of Hercules, in a third of Mars, and in a fourth, which is much defaced, are the figures of Venus and Adonis (?). In Plate VIII. figs. 1 and 3, are representations of two rude sculptured stones in the Island of Guernsey. Fig. 1, the Lady of St. Martin’s, now stands at the entrance to St. Martin’s churchyard, and fig. 3 is beneath a tree in the churchyard of Câtel parish. This last was found a few years ago under the flooring of the chancel of Câtel Church, when it was being relaid. It is similar in character to the Lady of St. Martin’s, but is much more defaced. One cannot fail to be struck with the great resemblance in type.

15 Similar ones form the flooring of some of the domens in Brittany.
which these two figures bear to those from Tartary and Greece shown in Plate VII. Plate VIII. fig. 2 is a monolith in the parish of St. Peter’s in the Wood, Guernsey. Fig. 4 is a stone with a boss, upon which an incised cross, now let into a low garden-wall belonging to a house in St. Martin’s parish. Fig. 5 is another incised stone built into an old archway at St. Clare on the same Island.

In the South of Russia similar rude stone statues abound, and Plate IX. fig. 4 is a reproduction of a drawing sent to me from the neighbourhood of Ekaterinoslav. Stone images of this character have also been found in great numbers on mounds in the Steppes. Most of them are still upright, and as far as I have been able to learn, are all female figures; but my informant, a Russian lady, imagines that they were not all intended to represent the same goddess. Her reason is that these statues, for such they are apparently, are of different dimensions and are not much alike, in so far as their obliterated features allow a likeness to be traced. The hair behind, too, is not always arranged in the same manner;—some have one plaits, others two plaits, not unfrequently tied together at the ends. My informant further tells me that “These idols were certainly worshipped in our country (Russia) at a very remote period, and it is even thought that human beings were sacrificed to them, because in many places quantities of bones have been found heaped up near them.” The statues are from seven to eight feet in height, but I have been unable to ascertain of what kind of stone they are made. The only information I have been able to procure on this head is, that the material is of a dark-brown colour, and has a yellowish tint in places; also that the stone appears to be of a slightly porous nature; but neither this nor any other kind of stone exists on the Steppes in question. There is a great deal of granite in the bed of the Dnepyr, but in the district now under discussion for hundreds of miles there is no material even for making roads, yet an immense number of these statues on mounds exist there and are the only landmarks which the traveller meets with.

Within the last few years, the attention of Europeans in India has been drawn to the celts, and other stone implements of various kinds and forms to be found there. Captain Inaki, who was in India at the time of the Mutiny, and had been accustomed from his earliest childhood to such objects, told me that during his residence there he recognized some celts in a grave near Allahabad placed on a rectangular altar. This altar was built up of square stones surmounted by a thin slab, and from its centre rose a short stylus against which the five celts were leaning;—three firmly fixed and two detached. Mr. H. Rivett-Carnac, Head of the Opium Department in the North-West Provinces, and a keen observer during his annual camping tours over various parts of those Provinces, has kindly permitted me to make use of a paper he wrote on this subject, and which was published in the Journal of the Asiatic Society of Bengal for 1882. The celts, figured in Plate XIII., were, I believe, all found by him in the Bândâ district, and their preservation is very possibly owing to their having been used as Śiva stones.

As far as his investigations have as yet been carried, no such stone implements have been found in use in the present day, even amongst the most backward of the aboriginal tribes in India. None of the natives seem to understand or to be able to explain their use, they rather regard them as wonderful, mysterious, and even holy—in fact, with the same feeling as they regard anything old and rare—just as of certain beads which they occasionally find in Oudh after the rains, the people say, “We did not make them, God made them.” When turned up deep out of the earth by the plough, the celt is supposed by them to be a thunderbolt fallen from heaven. The finder usually places it under the village pipal tree (ficus religiosa), sometimes sanctifying it with a daub of red paint, and thus converting it into one of the emblems of Śiva. Curious to relate, the older people in the Island of Guernsey when they find a celt look upon it as a thunderbolt. Within living memory they used to build such a stone into the wall of a new house or barn, in the belief that thus the building would be protected from lightning. It is said that the younger generation are becoming more enlightened, and that this superstition is dying out by degrees. In Plate XIV. are celts found in Guernsey for comparison with those of India.

A friend, now residing in Guernsey, obtained, a few years ago, a small celt from a farmer in the island of Sark, which this latter firmly

SCALE 4:10
believed was a thunderbolt. Not long previously, during a heavy thunderstorm, one of the farmer's cows, which was grazing in a field, was struck on the shoulder by lightning and killed instantly. The animal was afterwards found sunk on its knees, stiff and rigid. Its owner's immediate impulse was to dig into the earth round about this spot to find the thunderbolt which had caused the cow's death. Strange to say, the celt, a small green one, which my friend now possesses, was found near the head of the cow, and the farmer and his wife were both fully persuaded that it had fallen from heaven and destroyed the animal, nor did my friend's reasonings to the contrary have any effect in disabusing them of this idea.

In one of the carvings from the Sâcâhi Stâpa, as reproduced by Mr. Fergusson in his Tree and Serpent Worship, is a figure holding an axe which is fixed on to the handle by cross bands, in the same manner in which it is believed the stone celts were hafted. Mr. Cockburn, Mr. Rivett-Carnac's coadjutor in his labours, found a carving at Kâlañjâr, which is evidently very ancient. It represents a human figure holding in the right hand an implement which closely resembles a stone celt fixed into a wooden handle. But Mr. Rivett-Carnac seems puzzled to conceive how a very large celt in his collection, which weighs upwards of 8 lbs., could have been hafted and used as a stone implement. May not this object, however, have been intended not for use, but for ornament, and planted before the hut of a chief on a bamboo pole as a symbol of authority, as is customary with the people of the South Sea Islands? Similar large celts have been found in Scandinavia, and the Director of the Ethnological Museum in Copenhagen conjectured that such was their use. I have recently had the pleasure of finding that this idea is probably correct, from viewing in a private collection some colossal celts brought from the South Sea Islands by one who had seen them thus employed.

Plate XIII. fig. 9 is a polished celt, which from its form is one of the most interesting in this collection. It has two notches about half way from the cutting edge which were evidently made for the purpose of binding it to a handle, and the opposite directions of the planes of the notches indicate that the binding was carried round it.

Both in India, in Scandinavia, in Brittany, and in the Channel Islands, the stones of which celts have been made are of various kinds, and consequently of various degrees of hardness. Some are of sandstone, others of flint, or of diorite, others again of hard black basalt, or of a kind of stone which does not exist at all in the neighbourhood in which the celts have been found: e.g., a celt found in Guernsey is made of a material known to exist in no nearer country than Hungary, which would seem to indicate that certain implements of this nature were much prized and carried about on the person. The manufacture of celts gradually increased in perfection. The earliest specimens had no polish, but to some of the later ones, in spite of the hardness of the material, a very high degree of polish has been given. In Captain Lukis' collection is a most beautiful and typical celt of this kind; it is made of a very hard kind of stone, deeply grooved on either side, and highly polished. The Comte de Limur, a well-known French antiquarian, has said of some of the Indian celts that they so closely resemble in this respect those dug out of the tumuli of Carnac and other parts of Brittany, that had they not been marked out for him, he would not have been able to distinguish the one from the other.

Mr. Rivett-Carnac says that one or two partly polished basalt celts have been found in the South Mirzâpûr district. They are about the length of the fore-finger, and resemble in shape and size a jade knife from the Lake-dwellings of Constance, which Dr. Fischer sent him, and which is now in the Indian Museum for comparison with the Indian types.

Plate XIII. fig. 12, is a celt of polished diorite from Robert's Ganj in the Mirzâpûr District which considerably resembles in form a village Mahâdeo, and this may account for its being found in a shrine so far to the East of India, as the habit of preserving celts under trees is not general in the Mirzâpûr district.

Sometimes a number of ordinary celts are found in India heaped up beneath or near a pipal tree in the manner above described, which the owners will (so Mr. Rivett-Carnac says) readily part with, but they will not give up any which they have decorated with colour. Mr. Cockburn once found as many as 25 celts during a search of one hour, and altogether,
since their attention has been drawn to this subject, he and Mr. Rivett-Carnac have found some hundreds of all types and sizes, and similar in form to many which have been discovered in Europe and America. Mr. Rivett-Carnac's later finds appear to differ slightly in form from the flint implements and arrow-heads which he found in Central India in 1864, but I would venture to assert that all have their counterparts in objects of a like nature, which have been found in most countries and may be seen in almost every museum in Europe, and which were used as weapons by primitive peoples before they became acquainted with metals.

One of the smaller celt found by Mr. Rivett-Carnac has been fixed into a handle of stag's-horn, like those found in the Swiss lake-dwellings. He had it sharpened, and says that it now chops wood as efficiently as a small iron axe.

It is well known that the Buddhists of Western Tibet and of the Lhama Valley make walls of stones at the entrances to their villages styled manis, which are occasionally a quarter of a mile in length, but are never more than four feet in height and the same in width. On the top of these walls numerous inscribed stones are loosely laid, placed there as memorials of the dead, or when starting on a journey, registering a vow, or entering upon any important undertaking. The person who requires one for any of the above purposes, chooses a smooth stone, and takes it to one of the local monasteries, where a priest usually engraves upon it the sacred sentence “Oka mani padme huin” which has been translated to mean “All hail to the jewel in the flower of the lotus.” This sentence appears to be an unmeaning one at first sight, but the key to its meaning is, I believe, to be found in Ceylon, where a supposed tooth of Buddha, kept in a temple at Kandy, in seven or more cases of gold or silver gilt, in the form of a stupa or tumulus, is an object highly venerated. This tooth, which some Europeans have imagined from its shape and size to be that of an alligator, rests within a golden lotus flower and may well be likened to a jewel in the flower of the lotus. From its peculiar mode of shedding its seeds the natives of India have always regarded the lotus as a symbol of creative power. It has from all time been held sacred by them and might consequently be considered by the Buddhists a suitably receptacle in which to deposit such a precious relic. Again, a curious old brass object in my possession, bought in the bazaar at Benares, seems to afford an almost certain proof that this explanation is a correct one. At the base of it is a ball, an emblem of Siva, from whose back rises a lotus bud, which, on a couple of turns being given to it, opens its petals and discloses a small agate egg. Behind the bull is a cobra with its body elevated as if in the act of strike. A ring which it holds in its mouth, serves to support a small pointed vase which is perforated at its lower end. If this vessel be filled with water, the liquid slowly drops upon the egg in the centre of the flower, and thus a libation is poured on the jewel in the flower of the lotus.

About the word mani as signifying a sacred stone or lines of stones: it seems to me to survive in Europe in place names. If we study a local map of Brittany, we cannot fail to be struck with the frequent recurrence of Mané: as the prefix to various sites on which are dolmens or megalithic monuments.

M. Henri Martin, in his Etudes Archéologiques Celtiques, explains Mané to be the augmentation of men or maen, stone: —e.g., menhir, great-stone. And he adds that it designates equally an artificial mound, or the summit of a mountain.

No. V.

Some Ideas about the Future Life.

Wherever the doctrine of annihilation has not prevailed, mankind has had in all ages, and still retains, the belief that the soul and the body are distinct, and that the soul has to go through a process of purification, or a season of probation after the decease of the body, in order to atone for evil deeds committed by the latter when on earth. These ideas are most widely spread. We find them amongst Musalmans and Hindos, amongst the ancient Greeks, in Sweden, in Germany, in Northern America, in the Island of Formosa, in the Fiji Islands, and in many other portions of the world.

The process of atonement in a future world implies a journey thither, and the nature of that

Buddhism prevails in the Himalayas.—always pass those piles of stones so as to have them on your right hand.
STONE CELTS FROM THE BANDĀ AND MIRZĀPUR DISTRICTS.
STONE CELTS FROM GUERNSEY.
journey has naturally been a source of speculation and thence of belief. This belief has in its turn given rise to ceremonies mainly aimed at giving relief to the traveller along the dreaded and unknown road. I will here only refer to that form of the ghostly journey which makes the body pass over water. Thus Greeks had their Styx, Akhérōn and Kēkytos, over which souls were ferried by Charon, and it was their custom to plant asphodel around the tombs of the deceased, as its seeds were believed to be capable of affording nourishment to the dead.

The northern nations of Europe formerly believed that their dead had to cross over water to the future home in boats or ships. In Scandinavia bodies were for this reason sometimes buried in ships, and a large boat containing the bones and weapons of a deceased chief was found a few years ago near the Sondre Fjord in Norway. Sweden has popular legends to the same effect. Thus Odin is said to have conveyed the slain from Brálhall to Valhalla in a golden ship. Popular opinion of old, again, in Germany, assigned Great Britain, as being across the water, as the Land of Souls. To this day also it is said to be the custom in the parish of Ploungon on the River Treguere in Brittany, for corpses to be conveyed to the churchyard by boat over a narrow arm of the sea, called Passage de l'Enfer, instead of taking them by the shorter land route. It is still a common notion in the East that the souls of the dead must pass over water, or over a bridge before they can arrive at their final resting-place. In the native State of Chambā, in the Pañjāb Himalayas, there is such a bridge, over which all corpses must be carried on their way to the burning ghât near the river where the bodies are cremated, and though there is another perfectly easy and safe path, the bearers of the dead always traverse this perilous causeway, which is hardly more than eighteen inches wide and not protected at the sides in any way. The people of Chambā are Hindūs. The Muhammadans have also their As-Sīrāt, a sharp bridge, which they believe to be the middle of hell, and which must be crossed by all at the close of the solemn judgment, whether they are destined for paradise, or for the place of torment. A profession of faith in this is as follows: "We most heartily believe and hold it for certain that all mankind must go over the sharp bridge, which is as long as the earth, and no broader than the thread of a spider's web, and of a height proportioned to its length. The just shall pass it like lightning, but the wicked, for want of good works, will be an age in performing it. They will fall and precipitate themselves into hell fire with blasphemers and infidels, with men of little faith and bad conscience, with those who have not had virtue enough to give alms. Yet some just persons will go over it quicker than others, who will now and then be tried upon the commands which they have not duly observed in this life. How dreadful will this bridge appear to us! What virtue, what inward grace of the Most High will be required to get over it! How earnestly shall we look for that favour! What deserts, what venomous creatures shall we not find on our road! What hunger, drought, and weariness shall we endure! What anxiety, grief and pain shall attend those who do not think of this dangerous passage!

Let us beg of God to grant us, with bodily health, the grace not to go out of this life loaded with debts, for the Arabian often says, and with good reason, that no obstacle is so hidden, as that which we cannot overcome by any expedient or artificial contrivance whatever."

The Egyptian Land of the Dead was in the West, and they placed their tombs, whenever it was possible, on the West bank of the Nile. As the funeral procession of the mourners moved forward, their constant cry was, "To the West, to the West." "When the tombs were, as in most cases, on the West bank of the Nile, the Nile was crossed, when they were on the Eastern shore, the procession passed over a sacred lake." The soul of the dead man was supposed to journey to the under world by a water progress.

This notion of a journey over water after death is common also to savage races of the present day. The inhabitants of the Island of Formosa imagine that the souls of wicked men are sent day.—Ed.]

[This custom must evidently arise from the old Hindū belief in Vañcarata, the swift river of hell, composed of filth, blood, and ordure, which must be crossed by holding on to a cow's tail as it swims over; a belief which has given rise to many death-customs in use at the present day.—Ed.]

[The notion of As-Sīrāt is to be found also in the Zoroastrian and Jewish systems; whence no doubt Muhammad borrowed it.—Ed.]

R. S. Poole—Contemporary Review for Aug. 1881.
tormented after death, and cast headlong into a bottomless pit full of mire and dirt, and that the souls of the virtuous pass with pleasure and safety over it upon a narrow bamboo bridge which leads directly to a gay paradise, where they revel in all kinds of sensual enjoyment, but that when the souls of the wicked attempt to pass along this bridge, they fall over on one side of it. Some of the American Indians have a tradition that they must go southwards to seek the Land of Souls. According to the Ewoks, an untutored tribe in Northern California, the bright rivers, sunny slopes, and great forests of their paradise are separated from the earth by a deep chasm, which good and wicked alike must cross on a thin slippery pole. The former soon reach the goal, aided doubtless by the Good Spirit as well as by the fire lighted on the grave by mourning friends; but the latter have to falter unaided along the shivering bridge, and many are the nights that pass before their friends venture to dispense with the beacon, lest the soul miss the path, and fall into the dark abyss. Nor do they hold that retribution ends with the peril and anxiety of the passage, for they think that many are liable to return to the earth as birds, beasts, and insects. After 40 years’ residence as a missionary in Samoa, one of the Pacific Islands, Dr. George Turner, in a work recently published, says “that the inhabitants of this island held that the souls of dead Samoans started for Pulst— the spirit world, through two circular holes near the beach, the larger hole being for the souls of chiefs, and the lesser one for those of commoners. They went under the sea till they came to a land where all things were very much as they had been on earth. Chiefs looked forward with pride to the use of their bodies as pillars in the house of the Samoan Pluto.”

Connected with this journey of the dead is an attendant dog, whose existence is believed in East and West in widely separated lands. It is a popular belief throughout all that part of France which formed the ancient Armorica, that the dead betake themselves at the moment of their departure to the parish priest of Braspar, whose dog escorts them to Great Britain. In the ancient Scandinavian mythology, a fabulous dog called Garfr was believed to guard the entrance to the infernal regions. In Asia also the dog is associated with the death or funeral ceremonies. The Parsis place a dog in the chamber of a dying person to serve as the soul’s escort to heaven. According to their belief, the soul arrives at the bridge Chinavat, where the gods and the unclean spirits fight for the possession of it. If the soul be that of a righteous person it is defended by the other pure souls, and by the dogs that guard the bridge. In Buddhist countries, too, a somewhat similar idea prevails. A very large and savage breed of dogs is kept in certain of the Lama-santies or monasteries in order that they may eat the bodies of the dead, which is deemed the most honourable form of burial in Ladik or Western Tibet. In 1876 when passing through Llama Yunn, a few marches only from Leh, I went over the Llama Monastery there. Some of these fierce dogs tried to spring out upon our party, and it seemed to us that even their owners did not trust them, and had much difficulty in restraining their ferocious instincts.

A very curious instance of the idea that some form of absolution is necessary after death for sins done in the body occurred in India in the 14th century; the actors were Muhammadans. Tughlaq-Bad, near the modern city of Dehli, was founded by Ghiyasuddin Tughlaq Shâh, who reigned 1321–1325 A.D., and was succeeded by his son Muhammad Shah Tughlaq, an accomplished prince, but a man most unscrupulous in his actions. He is credited with having, among other crimes, compassed the death of his father. When he came to the throne he was the most inhuman and tyrannical of all the Pathan Sovereigns of India, and many of his cruelties were witnessed by his cousin Firoz Shâh Tughlaq (called also Bârbak) who ascended the throne on his death in 1351 A.D., and sought by a most singular method to cancel some of his predecessor’s sins. The words of Firoz himself, as related by Farishta, who took them from an inscription on a large Mosque at Firozibad, are as follows:—

“I have taken pains to discover the surviving relations of all persons who suffered from the wrath of my late Lord and Master, Muhammad Tughlaq, and having pensioned and provided

A small place about 30 miles South-East of Brest, and distant about ten miles from the sea as the crow flies.

Only the friends of the richer people can afford this.
for them, have caused them to grant their full pardon and forgiveness to that prince in the presence of the holy and learned men of this age, whose signatures and seals as witnesses are affixed to the documents, the whole of which, as far as lies in my power, have been procured and put into a box and deposited in the vault in which Muhammad Tughlaq is entombed." These papers were intended to serve as vouchers of free pardon from all whom the dead man had deprived of a nose, of a limb, or of sight, and were placed near him in order that he might pick them up at the last day; for according to Muhammadan belief every offence has a double aspect—in its relation first to God, and then to man. In the latter case, pardon given by the injured one is believed to reduce some portion of its future punishment.

I have read that a somewhat similar custom is in use among the Christians of the Greek Church, and that they are in the habit of putting into the hands of a deceased person at his interment a written form of absolution, which is understood to be a discharge in full from all the sins which he has committed during life.

The notion of certifying to the Deity the virtues of the deceased is widely spread. It is said to be customary amongst the Laplanders for six of the most intimate friends of the deceased to place a dead body in a coffin, after wrapping it in linen, with the face and hands left uncovered. In one hand they put a purse with some money to pay the fee of the porter at the gate of Paradise; in the other, a certificate signed by the priest, directed to St. Peter, to witness that the deceased was a good Christian. A superstition of the same nature is held by the people of the Fiji Islands. They worship a god they call Ndengei under the form of a large-serpent, and believe that immediately after death the spirit of the deceased person goes to him for purification or to receive sentence, but that it is, however, not permitted to all-spirits to reach the judgment-seat of Ndengei. They say that an enormous giant, armed with an axe, is constantly upon the watch on the road thither, ready to attack and wound all who attempt to pass him, and that no wounded person can go forward to Ndengei, but is doomed to wander about in the mountains. To escape unscathed from the giant's axe is ascribed solely to good luck. Another development of the idea is to be found in India, where a portion of the pūjā or worship given through occasionally by Hindūs is called tarpān. It is a form of absolution for the souls of deceased ancestors and friends, but it can be performed by the male sex only.

The Brāhmaṇas have long ago made use of the notion of the necessity of providing for the needs of a future life to further their own present comforts, and Maurice rightly remarks, "Great rewards are promised to those that are charitable (towards the Brāhmaṇas), inasmuch as they believe that if a man performs the first kind of dān (pūjā or worship which consists in giving away his own weight in gold or silver) he is ordained to remain in Paradise for one hundred million kalpas or periods of Brahmana, and that when he re-adopts a human form, he will become a mighty monarch." This particular phase of "good-works" has in modern times taken a most eccentric and objectionable form.

There is a class of Hindū ascetics in the Panthā, who call themselves Sutpheshahs, from their founder, a faqīr named Suthra, who lived in the time of Aurangzeb (1658 to 1707 A.D.). Their legend is, that hearing that he could perform wonders, the Emperor summoned the faqīr to his presence and told him that any favour he might ask should be granted, on which he requested that he and his followers might be permitted to go about begging unmolested and freely, and that every shopkeeper should be made to pay them not less than one paise. His followers still continue their profitable trade, and are noted for their indolence, intemperance and excesses. They carry two short sticks and walk through the byad, beating these together until money is given them, nor will they pass on till they get it, sitting dharrūn, as it is called, for hours and even days till their demands are satisfied. On receiving alms, they say to the shopkeeper, "May Bibī Nānak Shāh (the founder of the Sikh religion) take your boat safely over the river of life."  

[These documents, were it possible to obtain them, would doubtless be most interesting.  
22 Banaras is the most favourable spot for this.  
23 About a half-penny.

CHINGHIZ KHAN AND HIS ANCESTORS.

BY HENRY H. HOWORTH, F.S.A.

(Continued from Vol. XIV, p. 274.)

XXXII.

The Yuan-ch'ao-pi-shi tells us that Chinghiz Khan on his return from his western campaign encamped again on the Irtish, and in the autumn of the year of the Hen, i.e. 1225, he returned once more to his head-quarters in the black forest on the river Tula. He was on his way home when news reached him of the death of his eldest son, Juchi. We have seen how after the capture of Khwârizm Juchi had retired to the steppes of Kipchak in an irritated mood. There he spent his time in hunting instead of subduing the neighbouring tribes inhabiting Ibrî Sibîr, Bulgaria, Kipchak, Bashguardia, Russia, and Circassia, as his father had ordered him. Irritated at him for not obeying his commands in this respect, Chinghiz had sent several summons to him to go to his presence. He had excused himself on the ground of his ill-health, and he was, in fact, unwell. One day when he was changing his camp he reached a place where there was plenty of game, and being himself ill he ordered his beks to go hunting. A Mangut, who had recently been in his country and seen this hunt, in which he supposed Juchi was taking part, reported that he was not really ill. Chinghiz, who was naturally enraged, prepared to compel his obedience by force, and Shagatai and Ogotai had already set out with some troops, and he was preparing to follow when news arrived that he was dead. This was in 1224, and Juchi was then 48 years old. He was buried near Seraili. We are told Chinghiz was greatly distressed at his son’s death, and wanted to punish the Mangut who had brought false intelligence, but he could not be found. The Shajrat-ul-Atrak says, “Chinghiz would never hear anything to the disparagement of Juchi, and when the news of his death arrived none of the amirs had the hardihood to inform him of his loss, for he had threatened that anyone who mentioned his death should himself be put to death. They at length all assembled, and it was determined that Alugh Jirji or Georgi (?), who was one of Chinghiz’s companions, should tell him while he was performing the duties of bejir (?); and therefore on that occasion he said to him, ‘O king! the sea is defiled or troubled, and who can purify or compose it? O my king! a great commander has fallen from his throne, and who has power to raise him up and restore him?’ Chinghiz replied, ‘If the sea is troubled my son Juchi is the only person who can still it, and if a great commander has fallen from his throne Juchi alone can raise him up and re-establish him.’ Alugh Jirji having repeated what he had said with tears in his eyes, Chinghiz asked him why he wept, and what was the occasion of his sorrow, which made him also sorrowful. Jirji replied, ‘I have no power to disclose the cause of my grief. Thou hast said it; thy orders be with thyself, O king; thy penetration has disclosed my secret.’ Thereupon it is reported that Chinghiz Khan said, ‘Like the wild ass pursued by hunters and separated from its young, so am I, and like a fool who seeks friendship among his enemies, and abandons his friends, so am I, separated from my brave and worthy children.’ The amirs thereupon each took his station, and performed the mourning ceremonies for the death of Juchi Khan.”

Chinghiz now prepared for his last campaign, in which he revenged himself upon the king of Hisa or Tangut for various grievances, of which we have the following accounts:—In the Yuan-ch’ao-pi-shi we read that before he set out on his western campaign he sent a messenger to Burkhan, the ruler of Tangut, saying, “You have promised to be to me as my right hand. Now that the people of Khoikhoi (the Muhammadans), have killed my envoys, and I go to require satisfaction from them, be my right hand.” One of the grandees of Tangut, named Ashaganbu, then sneeringly said, “If you are not strong enough, then do not be a king.” Aid was accordingly refused, and Chinghiz, when he heard of this, had declared that although it

6. i.e. send a contingent.
was difficult for him to revenge himself then, he would not fail to do so on his return from the west. But according to the *Yuan-shi-lieh-pien* the king of Tangut had given refuge to two great enemies of the Mongols, one called *Sunko-enki*, and the other *Chelah*. Chinghiz complained bitterly of this, but the king of Hiamade no amends, and even employed these two runaways. The *Yuan-shi* says that Chinghiz accused him of sheltering his enemy *Shilguksankhona*, and of refusing to give his son as a hostage. According to the *Sisia Shu-shi* or special history of Tangut, during the absence of Chinghiz Khan in the west there had been a conspiracy against him among the Tatars with black carts, who tried to secure the aid of the people of Tangut in their revolt. The account adds that the ruler of Hia had secretly plotted against Chinghiz, and sought aid outside, and in consequence Bolu, son of Mu-khu-li, had been ordered to wage war against him. The *Altan Topchi* and *Seunang Setzen* report a curious saga to the effect that the king of Tangut had a brown-coloured dog with a black muzzle which was a *khubilham*, and had the power of foreseeing things. When it barked with a loud voice it meant that no danger was impending, while when it whined it signified that some foe was threatening. During Chinghiz Khan's absence in the west, this dog had continually whined. The king, who fancied all danger was past, urged that the dog was getting old and had lost its cunning, and lived accordingly in a false security.

Li-tsu n-hui, king of Hia, had died in 1223, and been succeeded by his son Li-t'e, called *Terwang* by Douglas, who says his father abdicated in his favour. Erdmann says that in the tongue of the Tangutans he was called *I ran*. Rashidu'd-din agrees with the *Altan Topchi* and *Seunang Setzen* in calling him Shidurgho. This name also occurs, as we shall see, in the *Yuan-ch'oo-pi-shi*. Palladius says the word means an owl or a fierce bird. Schmidt says it is a Mongol word meaning straightforward, open, and answering to the Tibetan *rong*.

Tangut with Tibet have long been lands of romantic interest to the surrounding nomads from their quasi-sacred and mystical character as the homes of the most flourishing forms of Northern Buddhism, and this is reflected in the sagas that have been reported about it by the later writers, such as the author of the *Altan Topchi* and *Seunang Setzen*. They both connect Chinghiz Khan's last campaign there with a romantic story about a beautiful wife of the Tangutan ruler. They tell us that when the latter heard how Chinghiz had conquered China he sent Tortong, son of Bayan Sartagh, with proposals to pay tribute, and to become his right-hand man. Chinghiz accepted this, and sent the messenger back with presents. On his return the Envoy passed the night at the house of Yabughia, of the tribe Taijiju, as they sat together in the evening he spoke to his host and said, "Your Khakan seems indeed to be a son of the Tengri," but his wives are not so fair to look upon. The wife of our ruler Shilghun Kurbeljin Goa, the daughter of the Chinese *jaujua* Setzen Umadi, is so fair that with her light there is no need of a lamp." Chinghiz Khan, we are told, had had an intrigue with Mongulun Goa, Yabughia's wife, and she informed him of what she had heard about the beauty of the queen of Tangut, and added that she must become his wife. Chinghiz now sent Shidurgho a message to say he was going on a campaign against Sartagh, and asking him to march with him. Whereupon Shidurgho replied, "Such a Khakan as this, who has subdued all peoples, is not surely in need of help. The lion, the king of beasts, is the strongest of all, and thou, valiant Bogda and king of men, why dost thou need help?"

Chinghiz, enraged at this answer, replied: "If I am spared I will give thee a fitting answer. The Tengri, my father, be my witness." Thereupon, says *Seunang Setzen*, Wajar Setzen of the Khongkirad said, "My Lord, so long as boys are born and men come into being; so long as an iron
stirrup holds togetherspeak not thus. Why do
you speak of dying? May your life be prolonged!
May your enemies be conquered! May the
number of your subjects increase! May the
fame of your name spread everywhere!

The *Allan Topchi* has at this point a curious
saga in reference to a supposed rivalry between
Chinghiz and his brothers. It says that after
his campaign in the west the Khorumzda
Tengri sent him a jade vessel full of wine, an
arshin in size. As he began to drink his younger
brothers remarked, "The proverb says, 'To
the oldest ten, to the youngest four.' Having
appropriated the greater part of the contents
of the vessel will not the commander leave as the
dregs." Thereupon Chinghiz replied, "At my
birth by order of Buddha there appeared in my
hand a jade seal from the Empire of Dragons.
Now I have received a great jade vessel full of
wine. It appears to me I am its owner, but
if you wish to drink take it. His brothers
thereupon took the vessel and began to drink,
but they could not swallow it. They there-
upon returned it saying, "We unjustly de-
manded our portion when it was not ordained
above that we should have it. Drink it your-
self, and appoint us divisional commanders."
He accordingly emptied the vessel, which made
him somewhat drunk, and continued, "At my
birth the jade seal of the ruler of the Dragons
appeared in my hand. Now the powerful
Khormazda has sent me down a jade vessel
full of wine, an arshin in size. I am the ruler
appointed by God: we will go to war against
the Tanguts."

The kingdom of Hia was then both powerful
and populous, and Chinghiz Khan made
corresponding preparations, and, as we are told,
collected an army of 180,000 men; of these
40,000 Mongols were commanded by Chagatai;
30,000 others by Subotai and Chepe; 20,000
Khwârizmians under Ilmku, 20,000 Indians
under Bula Nayan, 30,000 Jats and Kipchaks,
under Badru'd-din, whose grandfather had
been put to death by Muhammad Khwârizm
Shâh, 30,000 other Khwârizmians under
Dânishmand, and a body of irregulars under
the chief of the Uighurs.

The *Yuan-ch'ao-pish* says that Chinghiz set
out in the autumn of the year of the Dog (i.e.
1220), taking with him his wife, Yesui. During
the winter he occupied himself with hunting in
the district of Arbukha. The brick-coloured
horse on which he rode, taking fright at a wild
horse, threw him, and he fell and hurt him-
sel. The army at once halted in the district
Sorkhat. On the next day his wife Yesui
said to the princes and grandees, "During the
night your sovereign was in a high fever; you
had better hold a consultation." Thenceupon
they assembled, and one of them, Tolun, said,"The
Tanguts are a settled people living in towns:
they cannot move away: let us therefore return,
and when our ruler has recovered we will
come back again." The nobles all approved of
this, and informed Chinghiz. The latter said,
"If we retire the Tangut people will inevitably
think I am afraid of them. I will rest here
and recruit. Let us send a messenger to them
and hear what they say." A man was accord-
ingly sent to the Tangutan ruler, who is here
called Burkhâr by our author, with the mes-
sage, "You formerly promised to be to us as our
right hand, but when I went against the Khoi-
khoi,** you did not go with me; more than
that, you reviled me. Now having conquered
the Khoi-khoi, I demand satisfaction for your
insults." Burkhâr replied: "I never spoke
defamatory words of you. Ashagamba it was
who made it appear I had done so. If you wish
to fight with me then come to Kholshak,***
but if you wish for gold, silver, and stuffs, for
tribute in fact, come to Siliang for them.**
When the messenger returned and reported
these words to Chinghiz he said, "Is it possible
for us to retire after hearing such haughty
words? If I die he shall pay for them. This
I vow before the eternal heaven."**

Sanang Setzen does not refer to these negotia-
tions, but he has a saga referring to the hunting
that took place at this time. He calls the place
Khangkhai Khan, by which the range
which forms the watershed between the Orkhon
on the north, and the Onghin, and says that
while hunting there Chinghiz remarked, "In
this place there is a blue wolf and a white doe.

---

* The phrase is not in the *Allan Topchi*.
* i.e. the God Khormazda.
* Sanang Setzen, p. 55.

* i.e. the Muhammadans.
* i.e. the mountain range west of the Yellow River,
  near which was the capital of Hia or Tungut.

---

** More to the west, says Palladius.
+ The Tazik on the south is doubtless meant.
+ In the original Burzshino and Goa, meaning the
two ancestors of the Mongol royal house.
You must capture them alive, and not kill them. You will also meet a black man on a blue-grey horse. Take him also alive, and bring him to me." The three were duly captured and brought before him. Chinghiz asked the man who he was, and why he was there. "I am a trusted friend of Shidurghu," he said, "and he has sent me to reconnoitre. My name is Khaturakchi Khaar Budang," and in all Tangut there is none superior to me. I was captured unawares, while I laid my black head down to rest, and while my grey horse Gun Bobol, a racer, which no creature that has feet can catch, was tethered to the ground by his fore-feet." Then said Chinghiz, "You seem to be a brave man," and spared his life, adding: "They say your Khakan is a kubilgham, into what form can he change himself?" The man answered, "In the morning he is a black-striped snake, then you cannot catch him; at noon a tawny-striped tiger, and then also he is safe: but at night he converts himself into a beautiful youth and plays with his wife, then you can secure him."  

The Yuan-ch'ao-pi-shi tells us that Chinghiz first attacked Ashaganbu, who fled into a mountain fortress. His warriors were killed and his wealth appropriated, while his people were divided among the army. The same authority continues with a paragraph which is an anachronism, since Mu-kha-li was at this time dead. It says that while Chinghiz was passing the summer in the snowy mountains he sent the army in pursuit of Ashaganbu, which captured him and his people, who had retired more into the mountains. Chinghiz, we are told, presented Burchi and Mu-khu-li with some of the treasures, allowing them to take what they would, and he further said to them, "I have not yet distributed the prisoners taken from the Kin. You two divide equally the relatives of the Kin sovereign, let the fair youths be your falcons, and the pretty girls the servants of your wives. The former Kin rulers trusted them, and had them near their persons. They used to harm our ancestors. You are both akin to me, let them therefore serve you."  

The snowy mountains of this notice answer apparently to the Morna Khān mountain of the Altan Topchi, and Saamang Setzen, who report a characteristic saga in connection with it. They tell us that Chinghiz remarked of the place, "This would be a good rallying place for a broken people, and a good camping-ground for a peaceable people. It is a capital haunt for roe-buck and bears." Noticing an ill-omened owl sitting on a tree Chinghiz told his brother, Juchi Khazar, who was a splendid shot, to shoot it. He fired, but the owl escaped and instead a magpie, which had dropped into the line of fire, was transfixed through the wing. This was deemed an ill-omen, and Chinghiz was very angry and had his brother arrested. Then came the Orluk princess to him, and said, "Master, the stains of the vile ought not to foul the purity of the good. The most worthy and distinguished often meet the fate of the worthless. The fate of the ill-omened owl has fallen upon the magpie. Letthy brother go." But Chinghiz had had his jealousy aroused by another incident, and would not consent. We are told that during the campaign one of his servants, named Bogol Mechin, said to him, "Thy brother, Khazar, being drunk, held thy wife, Kulun, by the hand." Thereupon Chinghiz sent his informer to Khazar to demand some eagles' feathers which he won. Khazar replied: "Although he is supreme I can get heron's feathers more easily than he" and gave him the feathers, but the messenger would not take them on the ground that they were dirty. Presently Chinghiz sent again to demand some heron's feathers. Seeing a hawk flying by he asked the messenger where he should shoot it. "In the black and yellow spot on his head," said the messenger. Khazar shot off the bird's head. Again the servant refused, saying that what they really wished for were eagle's feathers, which were more suited to a sovereign than those of the heron, besides, these were stained with blood. Chinghiz now upbraided Khazar with having insulted his wife, with having killed the magpie, and with not sending him such feathers as he wished. He had him bound numbered 36,000.  

20 Called Kara Botou in the Altan Topchi.  
21 Called Kuebalat in the Altan Topchi.  
22 Altan Topchi, pp. 97-98. Saamang Setzen or Schmidt seems to have misunderstood the concluding clause, and thus made nonsense.  
24 i.e. the In-ju or so-called natural relations, who  
25 This is the version of the Altan Topchi. Saamang Setzen converts the haunt for bears into a charming resting place for an old man.  
26 Saamang Setzen calls the first feathers those of a heron, and the second of a hawk.
by five people and led to a fence and fed on the flesh of the wild Tibetan Yak.44

The details of the campaign are so variously told that it is not easy to follow them. The Yuan-chao-pi-shi says that Chinghiz on leaving the snowy mountains passed through the town of Urakhai.

In February 1226 according to the Yuan-shi-lei-pien he captured Etzina, described by Marco Polo as situated a 12 days' ride from Kan-chau, towards the north on the verge of the desert. De Guignes and Pauthier say Etzina is found in a map of His, of the Mongol period, and the latter adds that the text of the map names it as one of the seven lus or circuits of Kan-suh.45 Klaproth says the river Thao-leu-kho, after joining the Khe-shui, which comes from the south-east from Kan-chau, takes the name Etzina and falls into the lakes Sabo and Sogo, the latter of which was in the Ming period still called I-dai-nay-khai.46 He, with great probability, puts the town of Etzina on this river.47 The Yuan-shi seems to refer to this town under the name Khe-shui-chin,48 and Colonel Yule independently has suggested that a town called Hoa-tsiang, placed on the river Etzina in D'Anville's map, is to be identified with Etzina. It is possibly the town called Tumnegai in the Altan Topchi and Seanang Setzen. During its siege they relate that an old woman who was descended from a monster, and who was called Kharar Khang, used to mount the walls of which there was a triple circle about the place, and pronounce horrible curses and exorcisms over the besiegers, by which disease was scattered among them, and many men and cattle perished. Thenceupon Subutai Baghatur implored Chinghiz that he should release his brother Khazar, who had been put in confinement as I have described, lend him his dun-coloured horse, Jigurtu Khula, and order him to go and shoot the old witch, Khazar soon after shot her in the knee-cap. She fell on her side, and as she was dying pronounced a curse upon Khazar's descendents, declaring that the males would be affected with sores, while the females would be deserted by their husbands.49 The Yuan-shi-lei-pien further says Chinghiz captured all the fortresses, which were very numerous, between Etzina, Ning-hia,50 Kiayukoan,51 and Kan-chau.52

Chinghiz now seems to have gone to pass the summer heats in the mountains of Khon-chau and then captured the towns of Su-chau and Kan-chau, situated respectively on the two rivers named above, which combine together to form the Etzina. The siege of Kan-chau was, according to the Kaung-mu, marked by a curious incident. We are told it was governed by Ka-yekiel, the father of the boy Chakhun,53 who had been adopted by Chinghiz Khan as I described in an earlier chapter. Chakhun was ordered to communicate with his relatives. He accordingly wrote a note to his younger brother, saying he wanted to speak to him, which he fastened to an arrow and fired into the town. The boy was only 12 years. He appeared on the ramparts, but they would not let him leave the place. Chakhun then sent a confidential person to communicate with his father. The latter it seems was agreeable to surrender the place, when Achu, who was second in command, fell upon him at the head of 36 men, and killed him with his son, and also the envoy. He then prepared for a vigorous defence, but all in vain. The place was taken by assault and a general butchery was only avoided by the pleading of Chakhun. The only people executed were Achu and his 36 accomplices.54 Chinghiz now captured Si-liang-fu Cholo and Kholo in Kan-suh. The first of these towns, says Gaubil, was at that time a very big place. It is now a fortress and known as Yong-chang-wei, in lat. 38° 10' long. 14° 10' W. of Peking.55 It is possibly the Ergunil of Marco Polo. Advancing again across the Shato or Stony Desert he arrived at Ki-ya-tu, or the Nine Fords over the Yellow River, and captured the town of Ing-li-sien, called Yingle by Douglas.56 The Yuan-shi says he traversed the Shato, went by way of Tsi-du and the river, and

54 DeMailla, Vol. IX. p. 117; Douglas, p. 100.
captured Yar and other towns of the second rank. The Yar of this notice is apparently the Ing-li-sien of De Mailla's authority. Hence we are told Chinghiz despatched Silisienpu and Khuta Timur to summon Sha-chun, situated on the river Sirgalziz in the west of Kan-suh, and nearly directly south of Khamil. Its people pretended to submit to the Mongols, and prepared meat, wine, spirits, and other refreshments for their army, but meanwhile they planted their best troops in ambush with the intention of surprising them. Khuta Timur, supposing that their submission was sincere, marched to take possession of the place. He fell into the ambush, and was nearly captured, as his horse stumbled and threw him, but Silisienpu allowed him to mount his own charger, and showed altogether such a bold front that he defeated the enemy, and withdrew without material loss.

In July, 1226, Li-te, the king of Hia, died of grief at seeing his country the prey of the Mongols, and was succeeded by his son, called Li-hien by De Mailla and Le-seen by Douglas. In November of the same year, says the Kang-mu, Chinghiz Khan captured nearly all their towns from the people of Hia. In vain the inhabitants sought shelter in the caves of the earth, hardly two people in a hundred escaped, and the ground was covered with bones. At this time Chinghiz attacked Ling-chun, situated on the Eastern bank of the Yellow river, a little south of Ning-hia, the capital of Hia. An army was sent to its rescue under Ve-imin, but Chinghiz having crossed the Yellow River put it to flight. The Ve-imin of this notice is apparently the Seouming-ling-kong of DeMailla, who tells us that the king of Hia having determined to make a supreme effort sent him against the Mongols, but Chinghiz crossed the Yellow River and defeated him. This is apparently the struggle referred to by Rashidu'd-din, who says that the Mongols having captured many towns laid siege to Dersekai (perhaps the native name of Ling-chun), when they heard that Shidurgho, whose Chinese name was Li-wang, had left his capital, Irkai, and advanced at the head of 50 tumans, i.e. 500,000 men; Chinghiz Khan went to meet them, and encountered the enemy in a plain dotted with lakes formed by the overflow of the Kara Muran, i.e. the Upper Hoang-ho, which was then frozen over. The battle was so bloody that 300,000 (?) Tangutars perished. Three of the corpses were standing on their heads, for, says Rashidu, it is established among the Mongols that among ten tumans of corpses there is sure to be one standing on its head. This D'Ohsson explains by a reference to the Speculum Historiale of Vincent of Beauvais, to which we owe so much interesting information about the Mongols, Book xxix. ch. 83, and Book xxx. ch. 95, where we read that the Tatars when they put a hostile population to the sword, and wished to have a census of the dead were in the habit of standing a corpse on its head for every ten thousand victims on elevated ground. Thus after the sack of Tiflis in 1221 seven bodies were placed on their heads in various places to show that 7,000 people had perished. The town of Ling-chun was speedily captured and sacked. We are told that while the troops thought only of securing women and children, gold and silver, and other booty the famous statesman Yelin-chutsi, whose origin we have previously considered, took charge of the government archives and of two mule-loads of medicinal rhubarb which was of great service to the army in an epidemic which ensued. He cured all those who were attacked by means of this specific alone.

We elsewhere read that during the siege of Ling-chun the five planets having appeared in conjunction in the south-west it was deemed a bad omen, and Chinghiz determined to retire for a while to the valley of Yen-chau, where he encamped. According to the Yuan-shi-lei-pien he encamped 30 or 40 leagues north of Ning-hia the capital of Tangut.

During the year 1226, Ogotai, his third son, with the general Chakhan, marched into Ho-man and attacked Kai-fung-fu, the Nanking, or would be nearer the mark than the above large figures.

DeMailla, Vol. IX. p. 121-122.

Gaubil, p. 40.
southern capital of the Kin Tartars, and sent Tang-king to summon it to surrender, but they had to raise the siege.\textsuperscript{60}

Chinghiz soon reopened his campaign against his, and having left a division to besiege Ning-hia he crossed the Yellow River in February, 1227, and captured Tsu-shi-chau or He-chi-chau,\textsuperscript{61} and seized Lin-tao-fu.\textsuperscript{62} Then going to the north-west he ruined Chasho,\textsuperscript{63} called Towcho by Douglas, who says it was in the modern Taou-chau-ting. He then captured Si-ning.\textsuperscript{64} DeMailla says these successes were secured by Hience, the prince of Lian-tung, who was sent across the river with an army by Chinghiz.\textsuperscript{65} Gaubil says one division at this time secured the country of Kuku-nor, Kun-chau, and Sha-chau.\textsuperscript{66} Meanwhile another army under Chinghiz Khan’s brother Oghizin, occupied Sin-tu-fu in the province of Chih-li.\textsuperscript{67} After capturing Si-ning Chinghiz advanced upon Lung-tu,\textsuperscript{68} situated to the west of Piao-liang-fu in Kan-suh, and captured Te-shan-chau,\textsuperscript{69} and other towns.\textsuperscript{70} He now sent an envoy named Shang-ts’in to the Sung court at Nanking, and prepared to pass the summer-heats in the mountains of Liu-pan.

A kind of presentiment, we are told, seized him that he was about to die, and summoning his officers he said to them, “My time has come. Last winter, when the five planets appeared together in one quarter was it not to warn me that an end should be made of slaughter? And I neglected to take notice of the admonition. Now let it be proclaimed abroad where our banners wave, that it is my earnest desire that henceforth the lives of our enemies shall not be unnecessarily sacrificed.”\textsuperscript{71} This is referred to at greater length by the Muhammadan writers, such as the author of the Jahan Kasht, by Rashidu’d-din, etc. We are told that while he was encamped at Ongu-talan-kuduk,\textsuperscript{72} a dream foretold to Chinghiz his coming end. He summoned, according
to D’Ohsson, his two sons, Ogotai and Tulni, who were encamped 5 or 6 miles away,\textsuperscript{73} together with his generals and grandees. Abulfaraj says that he summoned Chagatai Baith, Ogotai, Tulni, Kukkan, Shargatai, and Arushar.\textsuperscript{74} Turning to the last of these, he said that he wished to speak privately and confidentially with his sons and grandsons, and begged the rest to withdraw. He then addressed them, saying, “Beloved children, the strength of my youth has given place to the feebleness of old age, and the firm step of the boy has been followed by the tottering of the old man. The last journey, whose command is so exacting, the summons of death, is at my door. By the power of God and the aid of heaven I have conquered this vast and far-reaching realm, which is a year’s journey from its centre to its circumference, for you, my dear children, and have also duly ordered it. My last unconditioned will is that in fighting with your enemies and in exalting your friends you will be of one mind and one purpose, thus securing for yourselves a long and happy life, and also enjoyment and profit from the kingdom. If you hang together you will be able to administer the government thoroughly, and will be in a position to fight your foes, to overwhelm your antagonists, and to live in peace. If, on the other hand, you become stubborn and disagree, you will tear the mantle of the state asunder and it will perish.” When he had thus expressed his will he went on to say, “Which of you must I name my successor?” His sons thereupon went down on their knees unanimously before him and said: “Our illustrious father is master and we are his servants, we are entirely in his hands.”\textsuperscript{75} According to the older Muhammadan authorities, followed by D’Ohsson, he then nominated Ogotai as his successor, and expressed a hope that Chagatai, who was not according to them present, would not raise any questions about this.\textsuperscript{76} Mirkhavand

and the other writers who had to be deferential to Timur and his family, bring in the ancestors of that hero on this occasion. They have a story which is quite unknown to the older authorities that Khabul Khanan made a compact with Kajuli Baghatur (the ancestor of Timur), conferring on the latter and his descendants exceptional dignities. At this time the head of this house was Khabjar Noyan, and we are assured that Chinghiz had the old compact produced, confirmed Khabjar in his honours and ordered his sons to do so, and to attach their tammahs to the official document containing these his last wishes.

Chinghiz then went on, according to the Western writers, to point the moral of his advice by the familiar anecdotesthis of the strength of a bundle of sticks when contrasted with a single one, and then used a more probable simile in quoting the story of the snake with one tail and many heads, which, when the frost came, began to dispute as to which hole was the safest shelter; meanwhile it was killed by the cold, while the snake with one head and many tails, which having only one person to please, dragged itself in time into a safe retreat.

Chinghiz having nominated his brother Ochigin to prosecute the war in China, and also appointed his other sons their due positions, set out on his last campaign. At this point the authorities differ. The Yuan-ch’ao-pi-shi says that the ruler of Tangut appeared before him and presented him with golden idols, golden and silver vessels, boys, girls, horses and camels, altogether to the number of nineteen times nine. Chinghiz allowed him to do homage, but he himself sat behind the screen. While this was going on he became sick. On the third day he changed the name of Burkhan into Shidurgho, and commanded Tolun to kill him. He said to Tolun, "When at the beginning of the Tangutan war I fell from my horse during a hunting expedition, you being troubled about my health suggested that I should return, but in consequence of the insolent remarks of my enemy I waged war on him, and by the aid of heaven I have subdued him. Take for yourself the movable property of Burkhan, together with the vessels." The Yuan-shi says that Li-hien, king of Hia, surrendered and was taken prisoner to Mongolia. The Yuan-shi-lei-pien says that Li-hien found himself driven to the last pass in Ning-hia, and surrendered at discretion in June, and set out for Liu-pan to humiliate himself before Chinghiz. He had hardly left the town when he was massacred, and his palace and the city were sacked. DeMailia says it was in May when the Tangut ruler surrendered, and that Chinghiz wishing to pass the summer heats in the north put chains upon the unfortunate prince and took him with him, and thus the kingdom of Hia came to an end.

The author of the Kang-mu thus apostrophizes this event: "From the beginning of the world no barbarous nation has been so powerful as the Mongols. They tear up nations as if they were plants, to such a degree have their power grown. Why does heaven permit it?" The Muhammadan writers, who wrote under the patronage of the Mongols, tell us that after his great defeat Shidurgho withdrew to his capital Artakhin, whence he sent envoys to Chinghiz, begging that a respite of a month might be allowed him, when he would surrender if his life was spared, and he were counted among the chief’s sons. Chinghiz consented to this, and promised to treat him as his son. This month, it seems, had not expired when Chinghiz died, and he left orders to his generals to keep his death a secret, and when the king came out of the city as agreed upon, to kill him and put the people of Ning-hia to the sword. This was faithfully carried out after his death.

Minhaj-i-Saraj has a curious account of this last campaign of Chinghiz. He tells us the ruler of Tangut had a large army and war materials without end, and on account of the number of his troops, the power of his servants, the width of his dominions, and the vastness of his wealth and treasures, he had adopted the name of Tengri Khan. The Mongols had several times invaded his borders, but had not subdued him, while he had more than once defeated Chinghiz Khan in battle. When the

86 i.e. the Divine Khan.
latter returned home from his western campaign, he took counsel with his grandees and suggested that as he had come back with greatly increased strength, and was contemplating an attack upon Tamghaj, that he should make peace with him and offer him an alliance. Peace was accordingly made. Presently Chinghiz Khan having advanced across the Kara Maran, in a campaign against "Chin and Khita," Tengri Khan joined him. Some Mongol noyans objected to the alliance, saying that if they were defeated the Tengri Khan would be sure to turn upon them, as he was their enemy, and as his territory would be in the rear of the Mongol army it would be a great source of danger; and they counselled that Chinghiz should have his ally put to death. He accordingly had him seized. The Tengri Khan, conscious of his approaching doom, said, "Tell Chinghiz Khan I have not shown any perfidy towards you. I came to you under a treaty. You are acting treacherously towards me, contrary to our covenant, now listen to me. If when you slay me blood of the colour of milk flows from me know that in three days your death will follow mine." When this was reported to Chinghiz Khan he laughed and said, "This man is mad, blood like milk never comes from the wound of a slain person, nor has any one ever seen white blood. It is most necessary to put him to death quickly." When the executioner struck the Tengri Khan white blood like milk in fact came from the wound. When Chinghiz heard of this he went to verify it, and thenceforward strength forsook him, and on the third day in the graphic words of Minhaji-Saraj, "his heart broke and he went to hell." The same author adds that Chinghiz, before dying, left as a last legacy the duty of exterminating the subjects of the Tengri Khan, irrespective of age or sex, and after he died Ogotai carried out this duty and duly put to the sword the unfortunate inhabitants of the land. The Yuan-ch'iao-pi-shih tells us that Chinghiz having overcome the people of Tangut and killed their ruler Burkhan, and having exterminated his parents, children, and grand-

children, commanded that at every meal he should be reminded of this with the words, "The Tanguts are extinguished." Having thus fought with the Tanguts for the non-fulfilment of their promises he returned.

To turn to the other authorities. The mountain of Liu-pan above mentioned, where Chinghiz spent the summer of 1227, is, according to Hyacinthe, in the district of Ping-liang-shu and Dr. Bretschneider says it still bears the same name, and is marked on modern maps in the department of Ping-liang in Kan-sah, south of the city of Ku-yuan-ch'ao. The Yuan-shih does not name the mountain, but says the Mongol army was encamped at Tsing-shui-hien, a place on the banks of the river Si-kiang about twelve leagues east of the town of Ts'in-shan. Rashidud'd-din says Liu-pan was situated on the borders of Church 6. Nang'eas and Tangut. While Chinghiz was there two envoys from the Sin emperor named Wanian-kha-chao and Otang Agueh arrived with presents of peace. Among the presents which they took was a salver filled with beautiful pearls. Chinghiz had them distributed among those of his officers who wore earrings. The rest had their ears pierced in order to be able to share in the distribution. What remained over after this distribution were scattered among the crowd and scrambled for. It was while at Liu-pan that Chinghiz also received the homage of the princess of Lian-tung to which I have previously referred. While encamped here the great chief was taken dangerously ill. Tului was the only one of his sons who was by him. On his death-bed he drew out for his officers plans for securing the Nanking or Southern capital of the Sin empire. "The picked troops of the Kin," he said, "are guarding the defile of Tong-kuan, a most powerful fortress, guarded on the south by a precipitous mountain, while the Yellow River bathes its walls on the north, and acts as a great natural ditch. In order to turn this position you must ask permission from the Sung to traverse a portion of their territory, permission which will be readily granted, as

24 *i.e. the Kin empire.
25 *i.e. the Sung empire.
the Sung have for a long time been the mortal enemies of the Kim. You will then advance by Tang-chau and Teng-chau, whence you will march straight upon Ta-liang. To relieve his capital the Emperor will have to withdraw the garrison of Teng-kuan. They will arrive worn out with the fatigue of a long march, and it will be easy to vanquish them.

The Yuan-shih says that Chinghiz died near Sali-kol in his camp of Karatsuki. These two names, says D’Ohason, are Mongol names, given by the invaders to Chinese localities. This, according to the Chinese authorities, took place on the 18th of August 1127, when Chinghiz was 66 years old, and when he had reigned 22 years. Rashidul-dhi makes his age at the time of his death to be 72 years, and says that he had reigned 41 years. In another place he says that Chinghiz was born in a Swine year and lived in a Swine year, and that he died on the 15th of Khnai of the year of the Swine, answering, he adds, to the 4th of Ramazan 624, Hij. i.e. 18th August 1227, which is no doubt the correct date. He says that he died in the mountains called Liang-Shan, by which no doubt he meant the range so called in Shen-st.

The Allan Topchi and Ssanang Sezen make out that Chinghiz Khan was the victim of the beautiful wife of the Tangutan ruler, and embellish their story with the romantic surroundings available to the professors of Tantra Buddhism. We read in their pages that when Shidurgho changed himself into a serpent Chinghiz became the famous bird Garuda. When Shidurgho became a tiger, Chinghiz became a lion, and when he became a boy Chinghiz became an old man, or according to Ssanang Sezen became Khormuzda, the king of the tengri or spirits, and thus the former easily fell into the latter’s grasp. He said to the Mongol conqueror, “Do not kill me, for I represent the morning star, and will destroy all your enemies. I will put meat before you and you will not have either hunger or thirst. If you kill me it will be worse for you, while, if you let me live it will be worse for your descendants.” Chinghiz then shot at Shidurgho and tried to cleave him down with his sword, but he could not wound him, thereupon, according to the Allan Topchi, the Tangutan ruler said, “You have shot at me and struck at me, but have done me no harm. In the sole of my boot you will find a grey thrice-twisted cord, take it and strangle me with it, and your descendants will be similarly strangled. As to my wife, Kurbeljin Gea, take care you examine her to her black nails.” Whereupon he died. According to Ssanang Sezen, Shidurgho said to Chinghiz, “With a common weapon you cannot injure me, but between the soles of my boot is a triple dagger made of magnetic steel, with which I may be killed.” With these words he offered him the weapon, saying, “Now you may kill me; if milk flows from the wound it will be an evil token for you, if blood flows from your posterity.” He also says that he had Chinghiz probe his wife’s previous life diligently. Chinghiz having pierced Shidurgho in the neck killed him and appropriated his wife and people. Everyone was surprised with her beauty, but she said, “Formerly I was much fairer, I am now grimy with dust from your troops. If I could bathe I should renew my good looks.” Chinghiz thereupon ordered her to bathe. The Allan Topchi says she had meanwhile caught a swallow, tied a note to its tail, and sent it to her father. In this letter she told him she meant to drown herself, and he must look up the stream and not down for her body. Following out her directions they accordingly sought up the stream, and having found the body each brought a bag of earth with which they covered it. The hilllock so formed was called Holkho Kuzgan, and the river Khutan Gol. Ssanang Sezen has a different version, apparently pointing here, as elsewhere, to a somewhat different tradition. He tells us the river where the princess bathed was the Kara Muran, that she refused to do so till the Mongols had withdrawn, that then a bird from her father’s house hovered over her and she caught it and tied a letter to its neck, saying in it what she meant to do. When she came out of her bath

103 A Mongol idiom, meaning examine her thoroughly.
104 Compare the saga told by Mihajl-i-Saraj above quoted.
she was much more beautiful. The following night while Chinghiz lay asleep, she bewitched him, and he became feeble and weak. She then went down to the Kara Muran and drowned herself, whence, says Suanang Setzen, the Kara Muran is called Khatun Eke to this day. When the bird returned to her father, who was called Shang-dsa-wang-ya, and was of the family U, from the Chinese town of Irghai, he went to look for his daughter’s body, but found only one of her pearl-embroidered socks. On this he raised a mound of earth still called Timur Olkho.107

Suanang Setzen says that as the great Chief’s life ebbed away he apostrophised those about him thus: “My fortune-bearing and excellent wife Burte Jujin, my three beloved ones Khulan, Jissu and Jissucken, my inchoate loyal companion Kulu Boghori Noyan, you nine Oroloks, my incomparable mates, my four brave brothers, my four indefatigable sons, my unyielding flint-like officers and generals, my great people, my noble kingdom, all you children of my wives, my beloved subjects, my dear fatherland.” As he was thus giving way to human weakness, Kilken Baghatur of the Sunids, said to him, “Thy beloved wife Burte Jujin may die; thy administration, admirable as the precious jade stone, may fall into disorder; thy united people may be scattered asunder; Burte Jujin the wife whom thou didst wed in thy young days may die; thy laws, held in such high esteem may be degraded. Thy two sons Ogatai and Tului may become orphans. Thy subjects, the inheritance of thy children, may be lessened. Thy excellent wife Burte Jujin may die. Thy two brothers Ochijin and Khajikin may fall to the ground. Thy great people ruling so widely may be scattered. Its very spirits, thy friends, Boghori and Mun-khin-li will collapse with grief, and when we reach the further side of the Kang-ghai Khan, thy wives and children will meet us, weeping and weeping with the words, ‘Where is the Khakan, our Lord?’ Therefore, O my master, do be a man and look hither.” As Kilken Baghatur thus addressed him Chinghiz raised himself on his bed and replied, “Be you a faithful friend to my widowed Burte Jujin and to my two orphan sons, Ogatai and Tului, and be ever true to them without fear. The precious jade stone has no crust, and polished steel has no rust upon it. The body that is born is not immortal. It goes away without a house or a place to return to. This keep in everlasting remembrance. The glory of an action is to complete what you have begun. Firm and unbending is the heart of a man who keeps his pledged word. Be not guided by the wishes of others, so will you have the confidence of many. This is clear to me, that I must be severed from you and go hence. The words of the boy Khubilai are very weighty. Do you all weigh his words. He will some day occupy my throne, and he will, as I have done, bring you prosperity.” When he had spoken these words, continues our author, “the master raised himself to God his father, in the town of Turmegei in the sixty-ninth year of his age in the Tong (sine’s) year (1227) the 12th of the seventh month.108 Plano Carpini states that Chinghiz was killed by a thunderbolt,109 while Marco Polo, no doubt confusing his death with that of his grandson Mangu, says he was killed by an arrow which hit him in the knee at Caju.110

SANSKRIT AND OLD-KANARESE INSCRIPTIONS.

BENGAL ASIATIC SOCIETY’S PLATE OF THE MAHARAJA VINATAKAPALA.

(HARSHA)-SAMVAT 188.

No. 161.

This inscription appears to have been discovered by General J. C. Stacy, and was first brought to notice in 1848, in the Journ. Beng.

---

107 Alan Topchi, p. 164; Suanang Setzen, p. 163. Schmidt remarks in a note that the upper Kara Muran or Yellow river, is still undoubtedly called Khatun Muran, i.e. the Queen’s river, by the Mongols, and that he has found the same in Mongol writings.

108 Suanang Setzen, pp. 103-105.

As. Soc. Vol. XVII. Part I. p. 707f., when, under the heading of “Inscription from the Bijaya Mandir, Udayapur, &c.,” the Secretary of the Society published Dr. Rajendralal
Mitra’s reading of the text of the plate only, and his translation of it. In 1863, in the same Journal, Vol. XXXI. p. 1ff., as an accompaniment to his paper entitled “Vestiges of Three Royal Lines of Kanyakubja,” Dr. FitzEdward Hall published his own reading of the text (id. p. 14f.), which in some respects an improvement on the previously published version. And, with the exception of subsequent discussions as to the reading of the date,—in the course of which, in 1864, a rough and by no means accurate lithograph of it was published with Dr. Rajendralal Mitra’s notice of Mahəndrapalā’s grant in the same Journal, Vol. XXXIII. p. 321ff.—this latter rendering of the inscription has remained the standard published version of it up to the present time. I now re-edit it, with a lithograph, from the original plate, which, having been presented by General Stacy, is in the Library of the Bengal Asiatic Society, and was there examined by me. I have not succeeded in obtaining any information as to where it was found; and from the entry in the Index, published in 1856, to the Journal of the Bengal Asiatic Society, p. 208, it appears that the locality never was known. It has usually been spoken of as the “Benares Plate;” but this seems to be due only to the mention of the Vārāṇasi (Benares) visākya in line 10, where the locality of the village granted is specified.

The plate, which is engraved on one side only, measures about 1’ 9 1/2” long by 1’ 5 1/2” broad. The edges of it were fashioned somewhat thicker than the inscribed surface, and with a slight depression all round just inside them, so as to serve as a rim to protect the writing; and both the surface of the plate, and the inscription on it are in a state of excellent preservation throughout; but some of the letters are so hopelessly filled in with hard rust, which it was impossible to remove, that they do not show quite perfectly in the lithograph. As in the case of Mahəndrapalā’s grant (No. 160, p. 105ff. above), onto the proper right side of the plate there is soldered a thick and massive seal, with a raised rim all round it, measuring about 8 1/2” broad by 1’ 1 1/2” high, and shaped like the seal of Mahəndrapalā’s grant. In the arch at the top of the rim is a similar standing figure, facing of the inscription; and below this, across the surface of the seal, there are the sixteen lines of writing, a to p, transcribed below. Here, again, unlike the body of the grant, the letters of this legend on the seal are in relief; and, though they are fairly well preserved almost throughout, it was impossible, for the same reasons as in the case of Mahəndrapalā’s grant, to include the seal also in the lithograph.—The characters are of precisely the same type as those of Mahəndrapalā’s grant; viz. North Indian Nāgarī of about the eighth century A.D. They include forms of the numerical symbols of the period for 8, 9, 86, and 100. The execution of the engraving is excellent throughout; and the mark for 5 in conjunction with consonants, both as 5, and as one of the components of ai, a, and ana, is formed with more care than in Mahəndrapalā’s grant. Many of the letters show, as usual, marks of the working of the engraver’s tool. The plate is very massive and substantial; so that the letters, though fairly deep, do not show through on the back of it.—The language is Sanskrit, and the inscription is in prose throughout, except for the half skra, evidently intended as such, which is introduced in line 16, and records the name of the person who drew up the record. In respect of orthography, all that calls for notice is the use of the upadhmāṇa in tayōh=jañāṇuhydābh, line 8 (and line 9 of the seal);—the paramvaiṣākya of line 1 of the seal; and, as in Mahəndrapalā’s grant, the parambhagavatī of lines 3, 5, and 6, (and lines e, i, and k of the seal); the use of va for ba, e.g. samavadha and pratīvadha, line 10, though the distinct form for ba occurs in bbhīved, line 15; and the doubling throughout of 5 in conjunction with a following r, e.g. pūtra, line 2, and pitrāh, line 13.—I had no opportunity of taking the weight of this plate; but it is probably rather heavier than Mahəndrapalā’s plate.

As in the case of Mahəndrapalā’s grant, the charter recorded in this inscription is issued from the camp, complete with many cows, elephants, horses, chariots, and foot-soldiers, situated at the place named in line 13. Then follows the parenthetical words
(l. 7). His son, begotten on Dēhanāgādēvī, was the illustrious Mahārāja Bhōjadēvā (l. 8), a most devout worshipper of the god Vishnu. And Bhōjadēvā's brother,—by which method of mention it is intended to denote also his successor,—another son of Mahēndrapāladeva, begotten on Mahēndiśevī, was the illustrious Mahārāja Vīṇāyakapāladeva (l. 9), a most devout worshipper of the Sun, who meditated on the feet of his father and brother. The inscription then proceeds to record that the village of Tikkarikārāma, in the Pratiṣṭhāna bhakti (l. 9), and attached to the Kāśipāra pathaka which belonged to the Vārānasi viṣaya, was given by Vīṇāyakapāladeva, in order to increase the religious merit of his parents, after bathing on the sixth lunar day in the river Ganges (l. 14), to the Bhāṣṭā Bhūlākā, of the Darbhi gōtra, a student of the Atharvaveda. Line 16 contains the record that the charter was drawn up by the illustrious Harshā. And the inscription concludes in line 17 with the record of the date, in numerical symbols, on which it was assigned, viz. the year 888, the ninth day of the dark fortnight of the month Phālguna (February-March). The era is not specified in the record; but, applying the date to the era of Harśavardhana of Kanauj, the result is A.D. 794-95.

A PASSAGE IN THE JAIN HARIVAMSA RELATING TO THE GUPTAS.

By K. B. Pathak, B.A. Miraj.

In the Jain Harivamsa, a work which is not to be confounded with the Brahmanical Purāṇas of the same name, I have lately come across an interesting passage purporting to bear on the Gupta era. I do not wish, however, to make this passage the basis of any speculations; I place it before the reader, simply for what it may be worth. To do justice to the Jain writer, I must say that this work has a decided advantage over other Indian Purāṇas, in the fact that it gives the precise date of its composition; thus, in the colophon the author says,

THE INDIAN ANTIQUARY. [MAY, 1886.

(Verse 51) "In Śāka seven hundred and five;—when Indrāyudha was ruling over the North;—when Śrivallabha, the son of king Krishna, was governing the South;—when king Vatsara, the glorious ruler of Avanti, was ruling over the East;—and while the victorious and brave Varaha was governing the West, the kingdom of the Sauryas;—(52) In the town of Vardhamanapura, whose great prosperity was increasing on account of auspicious things,—in the bast, erected by king Nana, which was the abode of the glorious Pāravānattha,—this (history of the) lineage of the Haris was formerly finished; and it was afterwards well-composed in the quiet temple of Sānti (nātha), when Jīna was offered ample worship on a large scale by the people of Ōṣāṭikā(?);—(53) This sacred history of the lineage of the Haris was composed again, for the attainment of supreme wisdom, by the glorious and learned poet Jīnasena, who obtained eminence in the line of the great Punnās-āṅgās which has abandoned all other sāṅghas. May this work, by the grace of Pārava, pervade the regions in all directions, and endure steadily for a long time on the earth!"

The passage relating to the Guptas is in chap. ix. and runs thus,—

Vāraṇaśī Vārāṇasīyāṁ Bhaṭṭarṇaṁ Śrīvakṣe ṇāṁ jīvaṁ Su- niṣṭhānaṁ. || 83
Pūrṇaṁ rājyaṁ tattvyānti vāparātmānti. || 84

* Read वैराणसि. * Perhaps the Bāhrākūta king Góvinda II., the son of Krishna. — J. F. F. * lit. "who had (the name of) ṛjīva with vāsa at the beginning."

This king Nana is alluded to in ll. 9-10 of a Bāhrākūta inscription published by Dr. Bhagwanlal Indraji (Jour. Rs. Br. Rs. As. Soc. for 1883)—

नमः पुर्ववर्ष सुनिष्ठा प्रकाशित—
नामस्यनिष्ठानं वायम् स्वप्नादिकम्।

*See note 1 above. * sc. Mahāvira.

Vishaya-bhābhujā may perhaps mean "native rulers," as distinguished from foreign conquerors.

The following table gives the gist of the above passage:

| Palaka    | 60 years. |
| Vishaya-bhābhujā | 150      |
| Muruṇḍas | 40        |
| Pushpamitrās | 30       |

* Vatsara, the lover of Vasavadatta, was a Muruṇḍa—

Pāravānādā, vāparātmaṁ. * The original, being in Nāgarī characters, does not show for certain whether we should read Pushpamitrā or Pushpamitrā.

Bhaṭṭaṇaḥ, though used in the singular, must be the name of a dynasty, not of an individual sovereign.

12 Ajitājīna was the son of Kalkīrāja—

13 Indrapura can very easily be identified with the modern town of Indir or Indor in Central India.
Vasumitra and Agnimitra ruled 60 years.

The "Ass-kings" 100
Naraśāhana 40
Bhaṭṭabṛāja 240
Guptas 231
Kākārāja 42

Then Ajitānājaya began to rule.

According to this account, the Guptas began to rule after the lapse of seven hundred and twenty years from the nirvāṇa of Mahāvīra. The date of this latter event has not as yet been satisfactorily and finally settled; but the majority of Orientalists accept B.C. 527-26. If we reckon from this date we arrive at A.D. 193-94 as the initial date of the Gupta rule, which then, according to this Purāṇa, extended over a period of two hundred and thirty-one years.

Note by Mr. Fleet.

In order to apply the above passage properly for chronological purposes, we ought to know what date Jinasēna assigns to Ajitānājaya, the last of the kings mentioned by him, and then calculate backwards from that date, instead of forwards from the time of the nirvāṇa of Mahāvīra. Mr. Pathak, however, tells me that Jinasēna does not make Ajitānājaya contemporaneous with himself (Saka-Saṅvat 705; A.D. 783-84), and gives no hint whatever as to the interval that had elapsed between Ajitānājaya and himself. And I have not been able to obtain any other mention of this king Ajitānājaya, or of his father and predecessor Kākārāja, whose name, occurring elsewhere only as that of the tenth and future avatāra of the god Vīsṇu, is peculiarly suggestive of this part of the passage, at any rate, being purely imaginative.

Jinasēna has hit off pretty accurately the duration of the Gupta power; for the latest inscription dated in the Gupta era, which specifically associates the era with the continuation of the Gupta rule, is that recorded in the Khōk plates of the Parīvrājakā Mahāvīra Saṅkshēpā of the year two hundred and nine (A.D. 528-29). But the information given by him in the preceding lines, even if right in respect of the succession of dynasties, must be wrong as regards the duration of each of them. For, calculating backwards from A.D. 319-20, the known commencement of the Gupta era, the result, according to Jinasēna, for the nirvāṇa of Mahāvīra, is B.C. 401-400, later by a century and a quarter than the generally accepted date referred to by Mr. Pathak above.

AN ENGLISH-GIPSY INDEX.

COMPILED BY MRS. GRIESEON, WITH AN INTRODUCTORY NOTE BY G. A. GRIESEON, B.C.S.

(Continued from p. 115.)

HOPES.—Niḍēzhdi, (M.)
HORN.—Shing, (Tch.); shingh, (Pep. M.); shōng, (M.); shing, (M. 8)
HORSED.—Shingalō, (Tch.)
HORNY.—Shinghāsoro, (Tch.)
HORSE.—Grastur, griṣṭur, gry, (Eng.); gras, grastō, (Span. Gip.); davārī, grast, gras, gra (dim.), grastorō, grai, (Tch.); greta, (Pep. M.); agōrī, agōra, (As. Tch.); grast, (M.); gara, gra, (M. 7)
HORSE, draught.—Telegāre, (M.)
HORSE, of or belonging to.—Grastanō, grastēs-koro, (Tch.)

HORSE-DEALER.—Gry-engro, (Eng.)
HORSE, a KICKING.—Del-engro, (Eng.)
HORSE-KEEPER.—Herdeleshhu, (M.)
HORSE-RACING.—Gry-nashing, (Eng.)
HORSE, a GRAY.—Parnō, (M.)
HORSE-SHOE.—Petal, (Eng.); nélkōh, petalo, (Tch.); nail agōrī, (As. Tch.); sāstō, sāstrī, sāstrī (M.); petalo, (M. 8)
HORSE-SHOE, maker of.—Petaul-mengro, (Eng.)
HORSE-STEALING.—Gry-choring, (Eng.)
HOSE.—Kholov, (M. 7)
HOST.—Gāzhō, gazhū, (M.)
HOSTESS.—Gazhī, (M.)

Saṅvat, up to A.D. 1384 (ante, Vol. XI. p. 241). And one of the Kāśṭhāwālā inscriptions, viz. the Mārāt plate of A.D. 894, actually associates the name of the Guptas with the era, if in line 17 (ante, Vol. II. p. 288), where there is obviously an error of some kind or another, gopīśa is a mistake for gopāl—But the instance given above is the latest one in which the duration of the Gupta sovereignty is connected with the era.

HOT—Tattoo, (Eng.); tabló, tattó, (Tch.); tattéti, (As. Tch.)

HOUR—Ora, yora, (Eng.); őr, (Tch.); chás, (M.)

HOUSE—Ken, keir, ker, (Eng.); kher, kéir, her, ker, (dim.) kheróó, (loc.) keré, (Tch.); guri, (As. Tch.); ker, (Pep. M.); khér, (dim.) khérróó, (M.); kher, (M. 7)

*HOUSE OF A JUSTICE OF THE PEACE*—Pokiniskoó, ker, (Eng.)

*HOUSE-BREAKING*—Keir poggriing, (Eng.)

*HOUSEMAID—Keir-rakli, (Eng.); pokoyoó, poko-yóó, (M.)

HOW—Sar, sau, (Eng.); sar, (Tch.); sar, (M.); ani, (M. 7)

HOW MANY? Kebóó, (Pep. M.); sódéen, sódén, sódóó, (Span. Gip.)

HOW LONG? / sódé, sódó, súdóó, (M.)

HOW MUCH? Sau kisi, kisi, (Eng.); quichi, (Span. Gip.); abóó, keboó, keeti, (Tch.); keti, (Pep. M.); sódéen, sódén, súdé, sódóó, súdóó, (M.); kazon, keiti, (M. 7)

HULK FOR CONVICTIONS—Berro, béro, (Eng.); bero, (Span. Gip.)

HUMAN—Lachighioskoró, (Tch.)

HUMANITY—Manushípa, (Tch.)

HUMBLE—Kharná, sikno, (Tch.); kharno, (M. 7), sikno, (M. 8)

HUMBLE ONESSELF, to—Khármiová, (Tch.)

HUMBLE ONESSELF, to cause to—Khármiovárá, (Tch.)

HUMILITY—Khármipé, (Tch.)

HUMP—Khóóhika, (Tch.)

HUNDRED—Shel, shil, shevál, (Tch.); shil, shel, (Pep. M.); shil, (M.); shel, (M. 8)

HUNDREDWEIGHT—Cégnáí, (M.)

HUNIO—Nashido, nasinho, nasho, (Eng.)

HUNIOR—Bokh, (M. 8)

HUNKEY—Bokkáló, bokú, (Eng.); buko tan, (Hun Gip.); bonkáló, (M.)

HUNKEY, to be—Bokkálová, (Pep. M.); bokkálová, (Ová,)

HUNT—Polúváne, vénát, (M.)

HUNT, to—Polúváne, (Tch.)

HURLER—Wusto-mengro, (Eng.)

HUNT, to—Dúkáva, dukéva, (Eng.); musaráva, (M. 8)

HUSBAND—Rom, rommando, (Eng.); rom, (M.)

HUT—Kólya, (Tch.); kóliha, (M.)

HUT, little—Kólidéé, (M.)

HUT, of or belonging to—Kólbyéngoro, (Tch.)

I—Mi, man, (Eng.); me, (Tch.); me, mi, (M.); me, (M. 8)

I ALONE—Mi kokoro, (Eng.)

I AND—Móya, (Tch.)

I MYSELF—Mi kokoro, (Eng.)

ICE—Buzlí, (Tch.)

IDIOITIC—Levadvó, (Tch.)

IF—Is, (Eng.); te, (Tch., M. 8)

IF IT WAS—Sas, (Eng.)

IGNORANT—Yosmás, (Tch.)

IMAGE—Dikkipen, (Eng.)

IMMEDIATELY—Éndátoó, ndáta, (M.)

IMMERSE, to—Boláva, (Tch., M. 7)

IMMORTAL—Vimuló, (M.)

IMPLEMENT OF IRON—Chinkerdó, (Tch.)

IMPOSSIBLE—Náia, (Eng.)

IMPRECATION—Armán, armání, (Tch.)

IMPRISONED—Pandlo, staró, (Eng.)

THE VIJAYANAGARA GENEALOGY.

In the course of certain correspondence with a literary opponent, Dr. G. Oppert has referred to my two papers on the Karnāṭaka dynasty; and, though condescendingly admitting that my reprint of the two grants is "on the whole pretty correct," adds that "Dr. Hultsch, being led astray by foregone conclusions, perhaps also misled by the repeated re-occurrence of a similar succession of names, committed himself to a series of blunders."

The accusation directed against me by Dr. Oppert recoils on himself. The names printed in italics in his genealogical table, are mere repetitions of persons previously named. A grant of Ranga III,5 and five grants of Venkata II, impressions of which I owe to the kindness of Dr. Bargoss, are identical with the two published grants down to Tirumala III, the father of the two donors.6 As the dates of these six grants range between Śaka 1497 and 1535, Pedavenkata, whose grant is dated in Śaka 1558, cannot have belonged to the fourth generation after Ranga III.

and Venkata II, which he did according to Dr. Oppert's table. The key to the difficulty is supplied by stanza 28 of the Kondiyāta grant (= stanza 25 of the Kaliakurisi grant), which runs thus:—

"Formerly from the famous king Rāmaraja, who resembled divine Rāmahadira in appearance, and who possessed prosperity and majesty, there sprang five sons, who were able to protect the world, who followed the path of policy, and who longed to grant the desires of the crowd of wise men, just as the (five) trees of paradise (which had sprung) from the milk ocean."

The word pāurea, 'formerly,' suggests that the genealogist refers to another Rāma than Rāma VI., viz. to Rāma II.; and the correctness of this supposition is proved by two facts:—

1. Venkatādri (styled Venkata I. by Dr. Oppert) is called the younger brother of

5 In order to avoid confusion, I adopt Dr. Oppert's numbers.
6 For particulars on these grants see l. c. p. 155.
Pedavenkata's grandfather, in stanza 31 of the Kalakurmi grant:

2. Dr. Oppert's table furnishes an additional proof, as it gives the names of the four brothers of Ranga II., to whom each of the two grants published by myself alludes.

In this manner the miraculous double string of similar names disappears. Dr. Oppert's Ranga VII. and his two sons Pedavenkata and Chinnavenkata are identical with Ranga II. and his two sons

BOOK NOTICES.

Two full years elapsed between the issue of No. XLIII., the first half of this volume, and the issue, at the end of February of this year, of the present Number which completes it. It is much to be wished that the Secretary would follow the example of the Royal and the Bengal Asiatic Societies, and issue smaller parts at frequent intervals, thus providing for the more speedy publication of the papers submitted to the Society, instead of keeping them locked up from the public for so long a time.—It is also desirable that the papers published in the Journal should invariably be headed by the dates on which they are read before, or submitted to, the Society. In previous volumes, it has been the custom usually, though not quite always, to give this information; in the present Number, it has been uniformly omitted. The Index is meagre, and gives a very inadequate idea of the various contents of the Volume. It has been prepared; however, in accordance with the custom for previous volumes. The practical value of these volumes would be much enhanced by full and detailed indices. The Editor himself can hardly be expected to do this work alone. But much might be done in this direction by securing the cooperation of the scholars whose papers are printed in the Journal; each of them would probably gladly assist by indexing his own contributions.

As to the contents of this Number,—in the first paper, Art. XII. "On the Asvchatyadakshara of Kahehmendra" (p. 167 ff.), Dr. Peterson draws special attention to a verse, cited in the Mahabharata, and now found to be quoted by Kali-mandira (A.D. 1050) and assigned by him to "Kumara Jaya, an author whose date is not known, but who, from the specimens of his "style available in the later anthologies, cannot," Dr. Peterson contends, "be placed so far back as B.C. 150, the date now commonly accepted for "Patañjali."—To this paper Dr. Peterson has appended a "Note on the date of Patañjali" (p. 181 ff.), with the object of showing that the grammarian in question lived in the time of a king Pushyamitra or Pushyamitra, who was conquered by the Early Gupta king Skandagupta; i.e., in accordance with Dr. Peterson's view of the epoch of the Gupta era (published by him in a subsequent paper and noticed below), about the middle of the fifth century A.D. The question depends in the first place upon a grammatical example, given in his Mahabhadra by Patañjali,—"ika Pushyanitram ydjayabah,—which indicates that Patañjali lived in the time, and perhaps at the court, of Pushyamitra. But, whatever may be shown hereafter to be the real truth as to Patañjali's date, the rest of Dr. Peterson's argument, as to the identity of this Pushyamitra, loses its validity, in consequence of the fact that the passage in the Bhaitari inscription, on which he relies, is not samudita-bala-kosäti-Pushyamitrana cha jited, as he gives it on Dr. Bhagwanlal Inrjia's authority—but samudita-bala-kosäti-Pushyamitrana=cha jited. Skandagupta conquered, not a particular king named Pushyamitra, but the tribe, confederacy, or dynasty, of the Pushyamitrans.

Art. XIII. a "Note on Bädarâyana" (p. 194 ff.), by the Hon'ble K. T. Telang, is directed against Professor Weber's inclination to identify this writer, the author of the Brahma-Sättras, with Śūka, one of whose pupils was Gaññāpāda, the teacher of Gōrindranātha, who again was the preceptor of Śaṅkarācārya; on which identification Prof. Weber would refer Bādarāyana conjecturally to between 400 and 500 A.D. Mr. Telang's opinion is that "the Brahma-Sättras "date back to a far remoter age than that which "Professor Weber assigns to them" as above; but he does not appear to be prepared at present to suggest an absolute date for them and their author.

Art. XIV. "The date of Patañjali; A Reply to Professor Peterson" (p. 199 ff.), is a paper by...
Dr. R. G. Bhandarkar, who, in respect of the more special point relied on by Dr. Peterson, applies himself to showing that the Pushpamitra (or Pushyamitra) in whose reign Patañjali lived, must have been Pushpamitra the Śunga, of the second century B.C. In a footnote on p. 217, he points out that, on my reading of the passage in the Bhārati inscription, it refers to the Pushyamitra as a tribe, not to an individual king named Pushyamitra. He also quotes some other interesting historical allusions in the Mahābhāṣya, tending to support his (and the late Dr. Goldstücker's) selection of the middle of the second century B.C. as the proper date of Patañjali.

Art XV. “Five Copper-Plate grants of the Western Chalukya Dynasty from the Karmāl District” (p. 233ff.), is a paper by myself on four grants sent to me for examination by Mr. R. Sewell, M. C. S., and a fifth obtained otherwise. The paper is accompanied by lithographs of the plates, executed very successfully in the Survey of India Office, Calcutta. No. 1 is the revised text of the inscription dated in the first year of Adityavarman, a son of Pulikēśin II., which was originally published by me in the Ind. Ant. Vol. XI. p. 63ff., and which brought Adityavarman’s name to notice for the first time. Nos. 2 and 3 are inscriptions of Vikramāditya I., another son of Pulikēśin II., now published for the first time, and dated in respectively the third and the tenth years of his reign. The chief interest of these two inscriptions is, that they are undoubtedly genuine inscriptions of Vikramāditya I. and show that he reigned for at least ten years; and that, in connection with Adityavarman’s grant, they show that, in spite of the reverses which the Western Chalukyas appear to have suffered after the death of Pulikēśin II., the continuity of their rule was maintained over at any rate such portions of their dominions as lay in the Karmāl direction. No. 4 purports to be another inscription, also now published for the first time, of Vikramāditya I., without date; it is possibly spurious. No. 5, from Togarchāṇ, is the revised text of an inscription, previously published by me from somewhat imperfect materials in the Ind. Ant. Vol. VI. p. 85ff., of Vinayāditya, the son of Vikramāditya I., dated when Śaka-Saṅvat 611 had expired, and therefore when Śaka-Saṅvat 612 (A.D. 680-91) was current, on the full-moon day of the month Kārttika in the tenth year of his reign.

Art XVI. “Wilson Lectureship: Development of Language and of Sanskrit” (p. 245ff.); Art. XVII. “Pāli and other Dialects of the Period” (p. 273ff.); and Art. XVIII “Relations between Sanskrit, Pāli, the Pākṛitas, and the Modern Vernaculars” (p. 314ff.) by Dr. R. G. Bhandarkar, are Nos. I. II. and VII. of the Lectures delivered by him as the First Series of the University of Bombay Wilson Philological Lectures. A foot-note on page 245 tells us that they have, on Dr. Bhandarkar’s offer, been printed in this volume in connection with the controversy as to the date of Patañjali. The conclusions at which Dr. Bhandarkar arrives, on linguistic development and similar grounds, are—that Pāṇini must be referred to about the eighth century B.C.; that Yāska must have flourished about the seventh or sixth century B.C.; that, as regards Kāṭyāyana, we may accept the popular tradition which refers him to the period of the Nandas, i.e. to about the first quarter of the fourth century B.C.; and that Patañjali lived in the middle of the second century B.C. As regards the languages, his conclusions are—that the Middle Sanskrit, or the Sanskrit of Yāska and Pāṇini, continued without any important corruption down to Yāska’s time. “After his time, however, i.e. about the seventh or sixth century, the elaboration of the Pāli, or ‘Low Sanskrit as it might be called, began in a decided manner; and the language continued to be spoken up to the time of Patañjali.”

“The Pākṛitas must have begun to be formed about that time; but they did not then attain any distinctive character; and the vernacular speech probably did not finally leave the Pāli stage till a very long time afterwards.”

“The growth of the specific Pākṛitas ... must be referred to the early centuries of the Christian era.” ... “About the sixth or seventh century, the Apabhraṃśa was developed in the country where the Brajbhāṣā prevails in modern times.” ... And finally—“The modern vernaculars seem to have begun to assume a distinctive character about the tenth century. In the copper-plate inscription containing the name of Bhāskarāchārya, dated 1128 Śaka or 1206 A.C., which I once mentioned before, Marāṭhi appears in its specific character; and so also does Hindī in the work of Chand, who flourished about the same time.”—Coupled with their own intrinsic value, the bearing of these Lectures (indirect though it is) on the Patañjali controversy, which is the subject of two of the preceding papers in this volume, may be accepted as sufficient reason for the printing of them in the Society’s Journal on this occasion, as a special case. But it is to be hoped that this is not to become a precedent for the future publication of all the Wilson Lectures in this way. The present three Lectures, with the short Note attached to them (pp. 343ff.) occupy one
hundred and one pages out of the two hundred and twenty-three of which this Number consists. The funds of the Society, as far as they are expended on its Journal, are intended for the publication of papers read before the Society itself, and for the cost of plates to accompany them; not for the publication of outside papers and lectures, which ought to be otherwise provided for.—Dr. Bhandarkar’s first Lecture is headed by the invocation Namah Parasavaunand, “Reverence to the Supreme Spirit!” This is quite out of place in an English Society’s Journal; as also is the analogous Om! Gauḍāyya namah! “Om! Salutation to Ganesa!” at the commencement of Count A. De Gubernatis’ Sanskrit address, published at p. xxviii ff. of this Number. In both instances, these exclamations should have been cancelled by the Secretary in editing the volume.

In Art. XIX. “A Copper-plate Grant of the Trailokyata king Dahrasena” (p. 340ff.), Dr. Bhagwanal Indraji gives an account, with text and translation, of a new and interesting inscription, now published for the first time, from some plates forwarded to the Society by Mr. J. G. White, Bo. C.S. Dr. Bhagwanal Indraji considers that the king’s name as given here, Dahrasena, is a corruption, or popular pronunciation, of ‘Dhaharasaṇa.’ The inscription is dated in the year 207 of some unspecified era, which he considers to belong to an era established by the Trailokya-kaśas, and commencing A.D. 249. He refers, in this connection, to Dr. Bird’s Kanheri plate, as being dated specifically in the year 245 of the era of the Trailokya-kaśas. He also notices, in order to reject it on grounds which in themselves are scarcely sufficient, Dr. Bhandarkar’s inclination to take this as the era of the Rāṣṭrakūṭas (Early History of the Deccan, p. 33ff.). But, in order to prevent the possibility of any suggestion as to a Rāṣṭrakūṭa era being thrown out again on the same grounds, he should have explained more fully why Dr. Bhandarkar is mistaken in this respect, and how the mistake arose.

The original Kanheri plate has been lost sight of; and all that is available for deciphering it, is the imperfect lithograph published by Dr. Bird. In re-editing this inscription in No. 10 of the separate publications of the Archaeological Survey of Western India, p. 57ff., Dr. Bhagwanal Indraji read Trailokyakāštā, with the remark “the tri in Bird’s copy looks like stra; but the upper part must be for the circle denoting tris,” “badly formed.” Dr. Bhandarkar then accepted the reading of Trailokyakāstā, and took ‘Strākūṭa’ as either an abbreviation of, or a miselction for, Rāṣṭrakūṭa; and hence arose his theory as to the Rāṣṭrakūṭa era. It is perfectly plain, however, that Dr. Bird has only given a somewhat imperfect representation of śrī in which the t, followed by r, is doubled (in accordance with an early custom of orthography), and that the correct reading of his plate was Trailokyakāstä. Dr. Bhagwanal Indraji’s notice of a new inscription of so much interest should have been accompanied by a lithograph, for which the original plates afford very good materials.—In his text, he has twice (in lines 2 and 3 of the second plate) written the upadhyāya, instead of the jihvedadhyāya, before ka; the mistake, of course, is a self-evident one, but it is one that should not have occurred. In the translation, the words Buddhagupta-dakṣakaravāṇa certainly do not mean “to my Dakṣa, Buddhagupta, these commands.”

The text of this inscription is printed according to a peculiar arrangement which sacrifices nearly a quarter of the space available for each line, in favour of the remark “Line 1 ends” and the entries below it, and yet leaves it a troublesome matter to find out where the lines do end! The only practical method of editing inscriptions for the necessary purposes of reference to the lines, and of finding without trouble in a lithograph any doubtful passage that requires comparison, is to place the numbers at the commencement of the lines, and to begin each line of the original with a fresh line in the printed version. In the Number under notice, this same objectless arrangement is followed also in Art. XX. by Dr. Bhagwanal Indraji and in Art. XXIII. by Dr. Peterson, though not in Art. XXI., another inscription by Dr. Bhagwanal Indraji, in which the proper method of arranging the lines is followed. In respect of prose passages, there is nothing whatever to be said in favour of this arrangement. In respect of passages in verse, there is perhaps no particular objection to an editor arranging them according to the lines of the verses, if he thinks it looks nicer; but nothing is achieved thereby, except waste of space and inconvenience of reference; and, when that arrangement is adopted, a better method of marking the commencement of each line of the original must be devised than that used in this Number.

In Art. XX. “Transcript and Translation of the Bhūtāti Lāt Inscription” (p. 349ff.), Dr. Bhagwanal Indraji gives his own reading of this inscription, with a translation of it, from his personal examination of the stone.—This paper is accompanied by a lithograph, the cost of which might well have been saved. It gives a reduction of an “eye-copy” made by Dr. Bhagwanal.
Indraji in 1869; i.e., it represents, not the original as it exists, but the original as Dr. Bhagwanal Indraji saw it and succeeded in tracing it, which is a totally different thing. Lithographs of this description are now quite out of date. This version may be a slight improvement on the last published; Dr. Bhaudaji’s (Jour. Br. B. R. As. Soc. Vol. X. p. 598) But the general editing of the paper is careless to a degree, and destroys whatever value it might otherwise have possessed. Setting aside minor points, such as the omission to correct what may be assumed to be printer’s errors; the use of Licchhavii in line 3 of the text, but, in the translation, Licchhavi, without any comment on the variation; &c., the verses are treated in the most erratic manner. In the text, they are numbered down to verse 4; but the remaining eight are left unmarked. In the translation, they purport to be numbered down to verse 7; but 1 includes the whole of verse 1 and half of verse 2; 2 includes the verse 2 and the whole of verse 3; 3 represents in reality verse 4; 4 represents verse 5; 5 represents verse 6; 6 represents verse 7; 7 represents verses 8, 9, and 10; and verses 11 and 12 are left unmarked. On p. 333 we have the curious remark:—“We learn from this inscription that his” (Samudragupta’s) “son and successor Chandragupta the second was named Licchhavividhuvihti.” This involves a slight improbability, since Licchhavi-daughters means “the daughter of Licchhavi,” an epithet hardly applicable to Chandragupta II., or any other of the male sex; and also a double mistake, inasmuch as what is really intended,—Licchhavi-daughter, “the daughter’s son of Licchhavii,” an epithet, not of Chandragupta II., but of his father Samudragupta. In connection with the Patajali controversy, Dr. Bhagwanal Indraji enters into a variety of remarks, and, among them, quotes me, at secondhand, as having furnished Dr. Bhandarkar with the reading Pushya in line 11. He proceeds to say the whole line, “Bhagwanal adds, is, in Mr. Fleet’s judgment, capable of being read न. What this mysterious sentence means, is not explained. But, as to his preceding remark, I have never adopted the reading of gribhāt that he attributes to me, for the simple reason that, the vowel before vri and being unmistakably short, the word must be jīted. Nor do I find it altogether certain that even Dr. Bhandarkar has attributed the alleged reading to me. What that gentleman says (p. 217, note 8) is “He reads पुष्यातिन्वित “but instead of पुष्यातिन्वित there “is in his copy ग्रीवातिन्वित distinctly. But he says “the whole line is quite capable of being read “सुधितानां नागचन्द्रायुष्मानसंघीया. The second sentence certainly seems to attribute gribhāt to me; but not so the first, the plain grammatical meaning of which is that Dr. Bhandarkar himself saw gribhāt in the impression that I showed him; not that I read gribhāt to him. And this meaning is in accordance with his remark in the text of his paper, that he himself could read gribhāt in Dr. Bhaudaji’s lithograph. This, however, is a matter that is not worth further discussion. The point that we were concerned with was the reading of the twelve aksaras before cha jīted. Dr. Bhandarkar wished to test, in order to corroborate or disprove it, Dr. Bhaudaji’s published reading of samudita-bala-kosam-Pushya in gribhāt, and Dr. Bhagwanal Indraji’s proposed reading of samudita-bala-kosam-Pushya in gribhāt, &c. I told him that the passage certainly did introduce the base Pushya; and that, though I was not prepared to give him then an absolutely final reading, I was inclined to prefer the accusative plural, Pushya, with a preceding accusative plural in apposition with it, to the accusative singular, Pushya, with a preceding accusative singular, or with an ablative before it; and this is the point that he brings out in the second sentence quoted by me above from his footnote. This was in March or April 1885. Afterwards, in England, when working again on this inscription, I made up my mind finally that the reading was two accusatives plural in apposition, samudita-bala-kosam-Pushya, which is the only possible doubt whether we should read Pushya or Pushya; and I notified this to Dr. Bhandarkar some months ago, soon after seeing his “Reply to Professor Petersen.” I have entered into the point at some length here, because the passage really is one of some importance. I have to add that, before discussing the readings of others, Dr. Bhagwanal Indraji should make sure that his own readings are correct. In his translation, he gives “having . . . conquered Pushya;” but, in his text, he gives the nominative case, Pushya, which, whatever it means, certainly has not the meaning of the translation. We might take this as a printer’s error, overlooked by the author, for Pushya; but Dr. Bhagwanal Indraji repeats the same reading on p. 354, with a footnote, and leaves no doubt about it by the emphatic remarks “the next sign is cha,” and “the . . . is quite distinct.”—At the end of his paper, Dr. Bhagwanal Indraji throws in his adherence to the theory of A.D. 319 as the commencement of the Gupta era. In connection with this, he quotes the years 98 and 239 as the
earliest and latest dates for Kumāragupta. But we have the well-known Bilsaj inscription of Kumāragupta, which is dated, in words, in the year 96 (Archaeol. Surv. Ind. Vol. XI. p. 19, and Plate viii.); and General Cunningham quotes a coin of his which gives the date of 130 odd (id. Vol. IX. p. 24, and Plate V. No. 7.)

Art. XXI. "An Inscription of Aśokavalla" (p. 357 ff.), by Dr. Bhagwanlal Indrajit, gives his text and translation, with remarks, from an impression sent by General Cunningham. This is a Buddhist inscription of the twelfth century A.D., and is of interest as tending to support Dr. Bhagwanlal Indrajit's previous suggestion (Ind. Ant. Vol. X. p. 347) that the date of Buddha's nirvāṇa, relied on in the Gaṇaś inscription of the year 1513 from that event, is the Pagan date, B. C. 638.—Dr. Bhagwanlal Indrajit originally read the name of the king as Aśokachalla. He now corrects this into Aśokavalla, and is probably right in doing so. But what is his authority for saying that the second part of the name, valla, is a contraction of vallabha?—His treatment of the details of the date, in line 12, is wrong. He reads Bhadra di 8 ṛṣ 29, and translates "the 8th day of the dark half of Bhadrapada, the 59th solar day." But there is nothing in the text, even as he gives it, to represent the "dark half"; nor is it explained by him how ṛṣ comes to mean "the solar day." The real reading of the original is Bhadra-dinda 29.

Art. XXII. "Böthlingk's Indische Sprichwörter," (p. 361 ff.), by Pandit Durga Prasad, gives, in a tabular form, the results of a careful examination, based on independent sources, of Professor Böthlingk's collection of Sanskrit proverbs and lyrical pieces. The paper consists of emendations and brief notes which, judging from the two specimens to which particular attention is drawn on p. xxii., will be of considerable use to students of the original collection.

The concluding paper, Art. XXIII. "An inscription from Kotah" (p. 378 ff.), by Professor Peterson, gives his revised version of an inscription edited by Professor Kielhorn in the Ind. Ant. Vol. XIII. p. 162 ff. This paper is accompanied by a lithograph, which might as well have been omitted: apart from its peculiar colour, the details of it show, either that the preparation of it was not properly supervised, or, more probably, that it reproduces a very indifferent impression.—I am not at present in a position to say how far Dr. Peterson's rendering of the text is an improvement on Prof. Kielhorn's; but I notice that in the first line he follows a slip of Prof. Kielhorn in writing the upadhiṣṭānta, instead of the jihāvāṃśīya, before k; even his own lithograph suffices to show that the original has the jihāvāṃśīya, as of course might be expected, śrīdātadvādārśa-adhivāja-kīrti, &c.—"This inscription is dated in the 79th year of the "Lords of Mālava," which corresponds, as Dr. Peterson tells us further on, to A.D. 740, since "it can be shown that this era of the Lords of Mālava is no other than that now known as the "Vikramādiya era."" The proof is furnished by an inscription at Mandasor, discovered under my direction, and incidentally mentioned first by Dr. Bhundarkar in p. 219, note 10, which gives for Kumāragupta the date of the year 494 of this era; or, according to the original, "when four hundred and ninety-three years had elapsed by (the reckoning from) the tribal constitution of the Mālavas." Dr. Peterson's proposed translation of this date (p. 381), is slightly different,—"when four hundred and ninety-three years from the establishment [in the country?] of the tribes of the Mālavas had passed away." He admits, however, that gaṇa-sthitī, which I render by "tribal constitution," may have another meaning than that which he has suggested for it. And, in passing, in connection with the understanding of these Mālava dates, I would deprecate the translation of Millāvā-ādīnaṃ by the specific expression "of the Lords of Mālava" (Prof. Kielhorn, Ind. Ant. Vol. XIII. p. 163; and Dr. Peterson, in the paper under notice, p. 380), or by "of the kings of Mālava" (Dr. Peterson, in his translation, p. 339). It is safer at present to use the less binding expression of "the Mālava lords," especially as an inscription at 'Gaṅgaspur' or 'Gaṅgaspur,' dated when the year 333 of the era had expired (Archaeol. Surv. Ind. Vol. X. p. 331, and Plate xi.), uses the simple expression "Mālava-Kāla," in commenting on which General Cunningham in 1830 recorded his opinion that this Mālava era must be the same as the era of Vikramādiya of Ujjain. Following Dr. Bhagwanlal Indrajit's erroneous quoting Gupta-Sahisvat 98 and 129 as the earliest and latest known dates of Kumāragupta, Dr. Peterson proceeds—"What is the era in the "494th year of which Kumāragupta was ruling the wide earth? This is a question to which I take it there can be but one answer. It is the era now known as that of Vikramādiya. This can perhaps be most effectively demonstrated by beginning at the end, and assuming for the sake of argument what I desire to prove. Kumāragupta, then, let us take it, was reigning in the year 494 of the Mālava era, that is, of the Vikramādiya era, that is, in the year A.D. 498. "Kumāragupta's earliest and latest known dates, in the era of his House, are 88 and 129, that is, the years A.D. 497 and 448. On our hypothesis
BOOK NOTICES.

7th March 1886.

This valuable little volume contains a great deal more than might be assumed from its unpretending secondary title, a "Catalogue." The authors give us in the first place an introduction, dealing very fully with the Historical Outlines of the period to which these coins relate. This is followed by some brief remarks on the Inscriptions, Monograms, Types, and Weights of the Coins, supplemented by a list of the Normal Weights of Coins a table of the Aryam Pali alphabet as found in the coins, and a sketch of some of the principal Prakrit legends, with their Greek equivalents and English renderings. Then follows a very detailed and careful account of the coins themselves, supplemented by twenty-nine very fine autotype plates, and three photolithographic. The book will be invaluable to numismatists, and to all others.

then the Mandosar inscription falls easily with-
the time at which Kumāragupta is known
to have been reigning: and there is no other
era known to us which will give us the same
result. The Mālāva era and the Vikramāditya
era are therefore one and the same. It is taken
for granted in the above that the initial year of
the Gupta era is A.D. 319. But with Oldenberg
and Bhandarkar I hold that no apology is
required for such an assumption. Those who
still hesitate may rather fairly be challenged to
show how any other theory of the Gupta era
"can be made to fit in with the Mandosar inscrip-
tion." I fully agree with Dr. Peterson in his results. In spite of my previous inclination to accept General Cunningham's view of A.D. 165 as the epoch of the Gupta era, and consequently to accept, of Alblum's rather ambiguous statement, that part as correct which says that it was the downfall of the Guptas that took place in
A.D. 319-20, these results forced themselves upon
me directly I obtained a complete and fully
intelligible impression of this new Mandosar
inscription. And they must, I think, be apparent
to any one who has the epigraphical data before
him, and gives them due consideration. But I
would avoid Dr. Peterson's method of taking for
granted the points that have to be proved, and of
ignoring several other points of importance that
require to be disposed of. The case may be put
briefly thus:—The Gupta inscriptions and coins
give us, for Kumāragupta, the extreme limits of
Gupta-Samvat 90 and 199 odd. We may take 118
as the mean of these. The result, for this mean,
is:—(1) according to the late Mr. Thom's view
A.D. 191; (2) according to General Cunningham's
theory, A.D. 279; (3) according to Sir E. Clive
Bayley's, A.D. 303; and (4) according to one
interpretation of Alblum's statement, A.D.
432-33. Then applying the Mālava era to these
results, we must look for its epoch close to respect-
vatively (1) B.C. 302; (2) B.C. 214; (3) B.C. 190;
and (4) B.C. 61-60. But the first three results
each entail the supposition of a brand-new era,
hitherto unheard of, and utterly unexpected. We
must not overlook the fact of the existence of coins,
first brought to notice by Mr. Carleye (see
Archaeol. Surv. Ind. Vol. VI. p. 165ff., and
Vol. XIV. p. 149ff. and Plate xxxi. Nos. 19 to 25),
which have on them the legend Mālavrata
jāyata, "the victory of the Mālavas," in charac-
ters ranging, in General Cunningham's opinion,"from perhaps B.C. 250 to A.D. 250." These
coins show that the Mālavas existed, as a recog-
nised power, long before the time when, as I
consider, their "tribal constiution" took place.
And, if we have to invent a new era, these coins...
who are interested in any way in the history of the period with which it deals.

The series commences with the coins of Andragoras, king of Parthia (?), circa B.C. 390, and ends with those of Kanerkes (Kanishka), Hoerkes (Huvishka), and the "mysterious" Bazodeo (Vasudeva).

Some of the historical problems involved are as yet hardly ripe for discussion. I notice, however, specially, that the authors follow Mr. Ferguson in holding that the "Saka era," the epoch of which is A.D. 78, "starts from the date, not of the destruction of the Sakas, but of the establishment of their empire in India under Kanerkes," or, as a footnote adds, "perhaps Kadphises II., as it is "Kadphises who begins the issue of Indo-Sythic "gold coins; and Kanerkes' earliest date is the "year 9."

In passing, I would notice a point suggested to me some little while ago by Dr. Hoerlale, viz. that, instead of speaking of Kadphises I. and Kadphises II., it would be advisable to refer to them always by their full names of respectively Kosola- or Kujula-Kadphises and Oceano- or Hima-Kadphises. No explanation of the syllables kadphises has ever yet been established; and, in speaking of these two kings as Kadphises I. and II., we may be, and very likely are, committing some such solecism as if we were to speak of, for instance, Dioctotus and Apollodotus as respectively Dotus I. and Dotus II.

To return to the date of Kanishka and Huvishka,—the general set of opinion of experts now certainly is that Kanishka did establish the Saka era, or at least began to reign very shortly after the establishment of it by some member of his family. The chief obstacle to the general acceptance of this view is the theory that the Early Gupta coinage comes numismatically immediately after that of Kanishka, Huvishka and Vasudeva; and, as it is now known that the Gupta era did begin A.D. 319, the interval of one hundred and forty years between this date and (on the Saka era theory) A.D. 176, the latest date of Vasudeva does not fit in with the theory. On this point I would remark, and it cannot be urged too strongly,—that numismatic (and paleographical) theories must be subordinated and adapted to such facts and dates as are established by definite epigraphical records. To adopt the reverse process, and interpret epigraphical records so as to suit numismatic (and paleographical) theories, is utterly unreasonable, and can only end, as it so often has, in hopeless confusion. In the present case, we have ample materials for filling up the interval between Vasudeva and the Early Gupta kings, in the later Indo-Sythic coins of the Punjab, of which Mr. Thomas has given us some specimens in this Journal, Vol. XII. p. 69., and which are sufficiently numerous to overlap Chandragupta I. and Samudragupta (as is required), as well as to fill up the interval.

As regards the "mysterious" Bazodeo or Vasudeva, the authors refer to one inscription of his, which, "if rightly read, would shew that he sometimes dates from year 5 of the era, which "will give to his reign the impossible length of 94 "years." This led Professor Dowson to suggest that Vasudeva was a general name given to the kings of the Kanishka dynasty by their Indian subjects. Apart from this suggestion, the point is of considerable importance as bearing upon a theory which I can find no possible grounds for accepting as probable in respect of the early kings of India itself,—that Kanishka, Huvishka, and Vasudeva recorded their dates on the same principle as the Kasmirians in their Lakakali; i.e. with the omission of the hundreds. I think that neither this theory, nor Professor Dowson's suggestion, need be had recourse to, in order to explain Vasudeva's supposed date of the year 5. A reference to the published lithograph (Archaeol. Surv. Ind., Vol. III. Plate xii. No. 2); a comparison of Dr. Bhaghwanal Indrajit's Table of the ancient Nargar Numerals (Ind. Ant. Vol. VI. p. 441); and an unbiased consideration of the requirements of the case, should satisfy anyone that what we have is, not the symbol for 5, but either an imperfectly preserved, or an imperfectly represented, form of the symbol for 70, which of course fits in perfectly well with Vasudeva's other dates, ranging from 44 (but 574) to 98.

13th March 1886.

J. F. Fleet.

This volume and the preceding, giving together a list of 18,797 manuscripts, would seem at first sight to offer a very promising field of research to Sanskrit Scholars, and thus to make a very ample return for the expense that they have cost the Government in publication, and for the time and trouble that the compilation of them has cost Dr. Oppert himself and—a more serious matter still—the various District Officers through whom he has obtained so many of the materials.

A closer examination, however, leads to very different results.

The full form of the Catalogue used by Dr. Oppert contains eleven columns. Cols. 6 to 11, however,—intended for respectively the Substance and Character; Pages; Lines; In whose Possession; Age of the MS.; and Remarks,—are actually
printed only in the case of 4,996 manuscripts, viz. 3,398 out of 8,376 in Vol. I., and 1,628 out of 10,421 in Vol. II. The necessity for Col. 9, "In whose Possession," is hardly apparent, as it only repeats the entry prefixed as a heading to each separate list. Take, for instance, Vol. II. Nos. 7,469 to 7,556. These are preceded by the heading "His Highness the Maharaja of Pudukkotá," and yet each of the 337 entries has opposite it, in Col. 9, either "His Highness the Maharaja," or "Ditto," as the case may be; this, surely, is rather an unnecessary waste of space. Col. 10, "Age of the Manuscript," is filled in, pretty constantly, from the statement of the owners of the manuscripts, and may probably be taken as fairly correct in respect of such entries as Vol. II. No. 2106, fifteen years; No. 2110, twenty years; and even No. 2118, eighty years. But it nowhere contains any details of the dates, in support of the entries that are made; though we should like particularly to know on what authority Vol. II. No. 692 is entered as two thousand years old; No. 438, as twelve hundred years; Nos. 657 and 664 each as one thousand years; or even, to come down to comparatively modern times, Nos. 1,962, 1,963, and 1,964 each as six hundred, and No. 1,967, as five hundred years old. The first of these entries, Vol. II. No. 692, is one that specially attracts attention. For, if it can be substantiated,—as, from Dr. Oppert giving no special remark discrediting it, we might suppose it to be,—it will give an interesting corroboration of Dr. Rajendralal Mitra's theory, that the Hindus must have known the art of making paper at least two thousand years ago! But perhaps it is one of the "evidently incorrect" entries alluded to in general terms by Dr. Oppert in his Preface to Vol. I.? In Col. 11, "Remarks," the entries are so few and far between as to be practically none at all, and are confined almost throughout to such statements as "Two Copies," "Three Copies." In Vol. I. there indeed are a few entries of a more ambitious kind; such as No. 2, "Such works are also written by Ráma|múnti|carya and Mádhava|carya;" No. 4, "Vyása is the reputed Author of most of the Púr|ñas, No. 740, "With a commentary; Parásara|bháțta is also called Bhaṭṭára|y or Bhaṭṭar;" No. 812, "Vidya|ra|ya is another name for Sáya|nacarya." But neither of the two volumes contains in this column any entries of a practical and useful kind, as tending to give any hint as to the value and importance of the particular manuscript remarked on.

For the remaining 13,801 manuscripts, we have only the first five columns of,—(1) No.; (2) Name of the MS. in Dvánagári; (3) Name of the MS. in Roman; (4) Subject-matter; and (5) Author's Name. Of these, Columns 4 and 5 are avowedly filled in on speculation; as Dr. Oppert tells us in his Preface to Vol. I.—"The columns containing the subject-matter and the author's name having rarely been filled up by the Pandits, I have supplied this deficiency to the best of my ability; the contents of the columns are therefore enclosed in brackets." We may, of course, credit Dr. Oppert with having filled in many of the entries correctly; e.g. Vol. II. No. 1334, Málatimádhava, "(Nátsaka) (Bhavabhiśki)," No. 1697, Rághuvamáśa, "(Kárya) (Káli|dásá);" No. 3082, Siddhánta|ka|numulé, "(Vyákarana) (Bhaṭṭójagidikshita);" and No. 4445, Ati|ar|vā|vā|da, "(Veda)." But his knowledge of subject-matters and author's names can hardly be universal, and his memory infallible. And it is quite impossible that the entries in these columns can be correct throughout.

The two columns in fact, simply resolve themselves into Cols. (1) No. (2) Name of the MS. in Dvánagári; and (3) Name of the MS. in Roman; or, in other words, into merely a long string of 18,717 titles, of the kind which is not of the slightest use for any practical purposes, and the insufficiency of which was commented on in very pointed terms by Mr. Whitley Stokes, in his note written on the 6th August 1888, when the question of Sanskrit Manuscripts was first taken up by the Government of India (see the Papers relating to the Collection and Preservation of the Records of Ancient Sanskrit Literature in India, Calcutta, 1878.).

There is nothing to be gained by going any further with the present series of volumes, which with the silence of their Prefaces as to anything of importance in the Lists, only give in a printed form the preliminary memoranda which Dr. Oppert should have kept to himself as the basis for detailed personal inquiries, and thus, eventually for the publication of useful lists. What we require for Southern India is a series of Reports like those given us by Dr. Bühler and Dr. Peterson for Western India and Rajputáná, by the late Dr. Burnell for the Tanjore Library, and by Dr. Rajendralal Mitra for Northern India and Bengal; bringing discoveries of importance to prominent notice, and giving, not simply mere strings of names, but full details of the authorship, contents, condition, and dates of the date of each manuscript,—extract to sufficient to show the reclassification to which it belongs,—and, in individual cases, such other information as will naturally suggest itself in the course of research. The work, of course, is one that entails a great deal of labour and patience, and can only progress slowly. But it deserves, and requires, to be done systematically and thoroughly, if it is done at all.
The present system, as exhibited in the volume now under notice and its predecessor, simply serves no practical purpose whatever; and it is a pity that Dr. Oppert's time and energy should be expended so fruitlessly.

J. F. Fleet.

23rd March 1886.

Of the private publishing-firms of Bombay, none seems more anxious than is the Nirnaya-Sagara Press, to furnish the student of Sanskrit with clearly printed, well got up, and moderately priced editions of the classical works of Sanskrit literature. The list of books already brought out by that press, includes amongst others several works of Kālidāsa, the Ratnadeeti, the Daśakund-racharia, and the Kiritārjunya. Other works are in the press; and more are to follow, if sufficient assistance and encouragement be given by the public. The principal editors appear to be Mr. K. T. Paraba, and Mr. N. B. Godabole, B.A., and, if I remember rightly, formerly a Jagannath Shankershet scholar of the Bombay University. In Europe it is unfortunately some what difficult to get hold of books published in India. But having succeeded in procuring a copy of the Kiritārjunya brought out by the Nirnaya-Sagara Press, I consider it right both to the public and to the enterprising publishers, to state plainly what opinion I have arrived at by an examination of a portion of this 'Edition.'

In a few words, it is this, that Messrs. Godabole and Paraba have given us in this 'edition' little more than a reprint of a Calcutta print; that, as regards the commentary, they have taken no great trouble to understand what they have handed to their printers; and that, for the part which I have had the patience to study, they do not appear to have consulted a single one of the many MSS. which must have been within reach.

A few examples out of many may prove this:

On II. 19, in which verse the word मुक्ति occurs, we read the note "मुक्ति कर्तव्योऽन्निता: हि कर्तव्योऽन्निता:। नेरविन्नम्: फूलयतानीताः समानः।" Here are three mistakes.

On II. 7 Mallinātha is made to say "असीर्यिन्निता: प्रायणार्थे अतुयान्त्योऽसत्यसिद्धि हि नायात्यात्:। अवैभवति: नात्यपापायार्थः।"

Praymuktha, praymukthi: and nivartati, nivartati. The same mistakes occur in the Calcutta Ed. of 1875; but the Bombay Editors have corrected a fourth mistake of that edition.

On II. 17 we have the note उद्भावस्थानं कर्तव्यार्थे। केवलं प्रायमुक्तेन विवाहितम् कर्तव्यार्थे। अन्यायं न कर्तव्यार्थे।।

The Editors have copied from the Calcutta Ed., but, trying perhaps to give some sense to the passage, they have added a mistake in compounding the two words विवाहितम् of that edition. It should of course have been उद्भवस्थानं कर्तव्यार्थे। केवलं प्रायमुक्तेन विवाहितम्। अन्यायं न कर्तव्यार्थे।।

The Commentary on II. 27, as printed in the Bombay Edition, is a regular mine of mistakes. In the first place, a well-known definition has been, with two mistakes, thus copied from the Calcutta Ed. — अवैभवतिकारणकान्तिनिष्ठा वैभवमयान्त्याः। Secondly the interpunctuation of the whole passage, in which Mallinātha discusses the compound अवैभवतिकारणकान्तिनिष्ठा, shows that the passage has not been understood; and the words उद्भावस्थानं and वैभवमयान्त्याः, prove that the Editors have again been copying. And, lastly, the final remark अन्यायं न कर्तव्यार्थे: — अन्यायं न कर्तव्यार्थे। उद्भावस्थानं कर्तव्यार्थे। अन्यायं न कर्तव्यार्थे। shows, not merely they have been copying, but also that they have taken no trouble to understand what they were putting before the public. Had they made any attempt to do so, they would probably have discovered that the words अवैभवतिकारणकान्तिनिष्ठा of the Calcutta Ed. stand for प्रायमुक्तेन विवाहितम्, and वैभवमयान्त्याः for अन्यायं न कर्तव्यार्थे।

Proof of copying may also be afforded by आकार्यतिकारणकान्तिनिष्ठाः for आकार्यतिकारणकान्तिनिष्ठाः on II. 29; by the sign of interpunctuation before कर्तव्यार्थे: on II. 35; by नवम्येत्: for नवम्येत्: on II. 39; and by other mistakes which have been reprinted.

To give the Editors their due, I must add that they have appended to their edition an alphabetical index of the verses of the Kiritārjunya.

On the whole, the first edition of the Kiritārjunya, published at Calcutta in 1814, may be said to be still the best. Many of its mistakes have been repeated, while others have been added, in the later editions. May we hope that the Superintendents of the Bombay Sanskrit Series will arrange to put us in possession of a trustworthy and correct text of Mallinātha's excellent commentary on a poem which, for many reasons, is one of the most important and attractive works of the classical literature of India?

Göttingen.

F. Kielhorn.
In times long past there lived a certain king, who was so occupied with, and so proud of, his own thoughts and words and actions, that his name became a proverb in the land. "As selfish as our king," "As proud as our king," the people used to say. As will be supposed, the courtiers and Wazirs of this king were thoroughly tired of bearing him and of having to add fuel to the fire by assent and flattery. "Ah! where is there such another country as this,—such soil, so well irrigated, and so fertile?" he would ask.

"Nowhere, O king," the Wazirs and courtiers would reply. "Where are there such just and clever laws, and such a prosperous people?"

"Nowhere else, O king!"

"Where is there such a splendid palace as mine?"

"Nowhere anything to be compared with it, O king!"

"Ah! yes," and then His Majesty would stroke his beard and draw a long breath, as though overburdened with a sense of his own greatness.

Nearly every audience of the king was disturbed by such performances as these. It was becoming very wearisome; and the more so as the king was a man of moderate attainments, and his country and people, also, were of an ordinary character. At length some of the Wazirs determined to answer him truthfully the next time he put such questions to them. They had not long to wait for an opportunity.

"Think you," said his Majesty, "that there is another king greater than I, or another kingdom more powerful and glorious than mine."

"Yes, O king, there are," they replied.

On hearing this unusual answer, his Majesty got very angry. "Where is this king? Tell me quickly," he said, "that I may take my army and go to fight with him."

"Be not hasty, O king," they replied. "Consider, we pray you, before you act, lest you be defeated and your country ruined."

But the king became more angry than before. He ordered his whole army to be assembled, and as soon as they were ready, he rode forth at their head, and sent messengers in every direction to challenge the people to fight.

For a considerable time he would seem to have inspired all countries and all peoples with awe, because nobody accepted the challenge, there being no pretext for such slaughter as there would be in a big battle, unless it was to satisfy this selfish and proud king. But at last another king appeared with his army and defeated the selfish and proud king; and took away all his kingdom and all his glory and all his power.

Here was an end to his pride. Crushed in spirit he disguised himself and escaped with his queen and two sons to some place by the side of the sea, where he found a ship ready to sail. He asked the captain to take him and his little family on board, and land them at the place whither he was sailing. The captain agreed; but when he got a glimpse of the beautiful queen he changed his mind, and determined to fulfil only a part of the agreement—and to take the woman only. "What a beautiful mistress she would make!" he thought, "and what a lot of money I could get if I wished to sell her!" So when the moment for starting arrived the queen first embarked; and then, just as the king and his two sons were about to follow, some strong, rough men, who had been suborned by the captain, prevented them and held them tight, till the ship was well out to sea.

Loudly wept the queen when she saw that her husband and two boys were being left behind. She smote her forehead, tore her clothes, and threw herself upon the deck in great distress; and finally swooned away. It was a long swoon, and although the captain used several kinds of restoratives yet for more than an hour she remained as one dead. At last she revived. The captain was very attentive. He arranged a nice bed for her, brought her the best of food, and spoke very kindly; but it was all to no purpose, for the queen refused to look at him or speak to him. This continued for several days, till the captain despaired of ever getting her love and therefore determined to sell her.

Now there was in the same ship a great merchant, who seeing the queen's exceeding beauty,

---

2 [Why are the Kâshîrs so fond of 'ship' stories? It is a point worth investigating.—Ed.]
and hearing her refuse the captain's suit day after day, thought that perhaps he might buy her, and win over her affection. Accordingly he offered the captain a large sum of money for the woman, and she was handed over to him. Most earnestly and perseveringly the merchant tried to please her and make her love him, and eventually he so far succeeded, that when he told her that he had bought her for a large sum of money, and, therefore, she ought to consent to marry him, she said, "Although the bargain between you and the captain is void, because the captain had no right to dispose of me, I not being his, yet I like you and will marry you, if you will agree to wait for two years, and if during this period I do not meet my husband and sons again." The merchant complied, and looked forward in best anticipation to the completion of the period of probation.

As soon as the vessel was out of sight, the hired men released the king and his two boys. It was useless to seek revenge even if his Majesty had any desire for it; and so he turned his back on the sea, and walked fast and far with the two boys, who wept and lamented as they ran along by his side, till he reached a river, somewhat shallow, but swiftly-flowing.

The king wished to cross this river, but there was not any boat or bridge, and so he was obliged to wade it. Finding his way very carefully he got across safely with one of his sons, and was returning to fetch the other, when the force of the current overcame him and he was drawn down beneath the waters and drowned.3

When the two boys noticed that their father had perished, they wept bitterly. Their separation, too, was a further cause for grief. There they stood, the one on this side of the river and the other on that side of it, with no means of reaching one another. They shouted to each other, and ran about hither and thither in their grief, till they had almost wearied themselves to sleep when a fisherman came by in his boat. Seeing the great distress of the boys he took them both into it, and asked whom they were, and who were their parents. And they told him all that happened.

When he had heard their story, he said, "You have not a father or mother, and I have not a child. Evidently God has sent you to me. Will you be my own children and learn to fish, and live in my house?" Of course, the poor boys were only too glad to find a friend and shelter. "Come," said the fisherman kindly, leading them out of the boat to a house close by, "I will look after you." The boys followed most happily and went into the fisherman's house; and when they saw his wife, they were still better pleased, for she was very kind to them, and treated them like her own real sons.

The two boys got on splendidly in their new home. They went to school, and in a very short time learnt all that the master could teach them. They then began to help their adopted father, and in a little while became most diligent and expert young fishermen.

Thus time was passing with them, when it happened that a great fish threw itself on to the bank of the river and could not get back into the water. Everybody in the village went to see the immense fish and nearly everybody cut off a slice of it and took it home. Some few people also went from the neighbouring villages and amongst them was a maker of earthenware. His wife had heard of the great fish and urged him to go and get some of the flesh. Accordingly he went, although the hour was late. On arrival he found nobody there, as all the people had satisfied themselves and returned. The potter took an axe with him, thinking that the bones would be so thick as to require its aid before they could be broken. When he struck the first blow a voice came out of the fish, as of some one in pain. The potter was very much surprised. "Perhaps," thought he, "the fish is possessed by a ḍhāt." I'll try again; whereupon he again struck. Again a voice came forth from the fish, saying, "Woe is me! Woe is me!" On hearing this the potter, thought, "Well, this is not a ḍhāt evidently, but the voice of an ordinary man. I'll cut the flesh carefully. May be that I shall find some poor distressed person." He began to cut away the flesh carefully, and presently he descried a man's foot—then the legs appeared—then the body and head, all entire.6 "Praise, praise be to God," he cried aloud, "the soul is in

---

5 ḍhāt, a malignant spirit haunting cemeteries, lurks in trees, animating carcasses and deluding or devouring human beings.

6 Cf. *Indian Fairy Tales*, pp. 75, 76, also *Wide-awake Stories*, p. 411, where instances of "Living in animals' bellies" are enumerated.
him yet." He carried the man to his house as fast as he could; and on arrival did everything in his power to recover him. A great fire was soon got ready, and tea and soup given. The joy of the potter and his wife was very great when they saw that the stranger was reviving.

For some months the stranger lived with these good people and learnt how to make pots and pans and other articles; and thus helped them much. Now it happened just then that the king of that country died (for kings die as well as other people), and it was the custom of the people in that country to take for their sovereign whosoever the late king's elephant and hawk might select. On the death of the king the elephant was driven all over the country and the hawk was made to fly here, there, and everywhere, in search of a successor, and it came to pass that before whosoever the elephant bowed and on whosoever's hand the hawk alighted he was supposed to be the divinely-chosen one. So the elephant and hawk went everywhere, and in the course of their wanderings came by the house of the potter and his wife, who had so kindly sheltered the poor stranger that was found in the stomach of the fish. It chanced that as they passed the place the stranger was standing by the door,—and behold, no sooner did the elephant and hawk see him, than the one bowed down before him and the other perched on his hand. "Let him be king, let him be king," shouted those people who were in attendance on the elephant, as they prostrated themselves before the stranger and begged him to go before them to the palace.

The ministers were glad when they heard the news, and most respectfully welcomed their new king. As soon as the rites and ceremonies necessary for the installation of a king had been fulfilled, his Majesty entered on his duties. The first thing he did was to send for the potter and his wife and grant them some land and money. In this and other ways, such as just judgments, proper rules, and kindly notices of any and all who were clever and good, he won for himself the best opinions of every subject and prospered exceedingly.

After a few months, however, his health gave way. Such strict attention to public affairs was too much for him; and, therefore, the court physicians advised him to seek relaxation in out-door exercise. So sometimes his Majesty went a-riding, sometimes a-shooting, and sometimes a-fishing. He got especially fond of the latter amusement. Knowing this, a fisherman came to him one day and said, "Be pleased, your Majesty, to accept this fish which came into my hand this day." The king was delighted to see such a large fish and inquired when and how it had been caught. The fisherman explained everything to the king, and manifested such knowledge of, and interest in, his calling, that his Majesty got to like the man, and ordered him to be ready at any time to go with him on fishing expeditions, that he (the king) might learn everything about the art, and be able to land big fish like the one just presented to him.

"Your Majesty is very good and gracious, and whatsoever your Majesty commands is accepted of all men as right and proper and just; but be pleased to listen for a moment to your servant. In my house are two sons, who are stronger and cleverer than I am. If your Majesty will order it, I will take care that they are always ready to attend on you."

The king agreed. Whenever he went a-fishing, he always took these two boys with him. A familiarity sprung up between his Majesty and the boys in consequence. His Majesty got exceedingly attached to them,—they were so sharp and clever and handsome and good, that he finally arranged that they should generally be with him, no matter what his occupation.

Just about this time the merchant who bought the wife of the poor king who had been supposed to be drowned, visited that country for the purpose of trading. He succeeded in obtaining an interview with the king, and opened out all his precious stones and stuffs before him. The king was very much pleased to see these wonderful treasures, and asked many questions about them and about the countries whence they had been brought. The merchant told him everything, and begged permission to trade vacant throne by kneeling down and saluting the favoured individual as he passes by. Cf. also Folk-Tales of Bengal, p. 100, wherein this custom is mentioned, "Early in the morning the elephant went about, sometimes to distant places, and whosoever was brought on its back was acknowledged king by the people." Cf. also Wide-awake Stories, p. 327.
in that country, and sought protection from his Majesty. The king readily granted the merchant's request, and ordered that some soldiers were to be at once told off for this special duty, and so arranged that one of them should be on guard always in the courtyard of the merchant. He also sent the fisherman's two sons to sleep on the merchant's premises.

One night these two boys, not being able to sleep for some reason or other, the younger asked his brother to tell him a tale to enliven the occasion, as it was miserable lying down there with only the glimmering light of a little oil lamp. The elder brother said: "All right, I'll tell you one out of our own experience," and began:—

"Once upon a time there lived a very great, learned, and wealthy king, but he was very proud. This pride led the poor king to the direst ruin and grief. One day, when going about with his army, challenging other kings to come and fight with him, one great and powerful king appeared and conquered him. The defeated king escaped with his wife and two sons to the sea, hoping to find some vessel wherein he and his family might embark, and get away to some foreign land, and there forget all their troubles. After walking several miles they reached the seashore, and found a vessel about to sail; but alas! the captain of that vessel proved to be a very wicked man. He took the beautiful queen, and then, when the king and his two sons were going to embark, some men, hired by the captain, kept them back till the vessel had sailed out of sight. Oh! what a terrible time that was for the poor king! With what a sorrow-sick heart he turned away with his two sons! He walked many miles, not knowing whither he went, till he came to a swiftly-flowing river. As there was no bridge or boat near, he was obliged to wade across. He took one of his boys and got over safely, and then was returning for the other, when he stumbled over a stone, lost his footing, and was carried away by the fierce waters; and has not been heard of since.

"You can imagine the state of the two boys. It was night and they had neither food nor bedding, nor did they know where to go, nor how to get to one another. At length a fisherman came along in his boat and seeing these two boys crying he took them into his boat, and afterwards to his house, and got very fond of them, and so did his wife, so that they both became like father and mother to them. A year or two ago, all this happened, and the two boys are supposed by every one to be the fisherman's two real sons, O brother, we are these two boys! And there you have my story."

The story was so interesting and its finish so wonderful, that the younger brother was more awake than before. Its narration had also attracted the attention of another. The merchant's promised wife, who happened to be lying awake at the time, and whose room was separated from the shop by the thinnest of partitions only, overheard all that had been said. She thought within herself, "Surely these two boys must be my own sons."

Presently she was sitting beside them and began asking them all sorts of questions. Two years or more had made a great difference in both of the boys, but there were certain signs that a hundred years would never efface from a mother's memory. These together with the answers which she had elicited from them assured her that she had found her own sons again. The tears streamed down her face as she embraced them, and revealed to them that she was the queen their mother, about whom they had just been speaking.

She told them all that happened to her since she had been parted from them; how the captain of the vessel, finding that he should never be able to get her to live with him, had sold her to the rich merchant; how this rich merchant had been very kind to her, and really loved her, and was a thoroughly good man, besides being clever and wealthy; and how she, thinking that she should never meet with her husband, their father again, had promised to marry this merchant at the end of two years, only three days of which remained now. She explained that she did not like the merchant enough to become his wife, and so she wished to contrive some plan for getting rid of him.

"The plan is," she said, "for me to pretend to the merchant that you attempted to violate me. I will pretend to be very angry, and not give him any peace, till he goes to the king and asks his Majesty to punish you. Then the king will send for you in great wrath, and will inquire about this matter. In reply you must say that it is all a mistake, for you quite regard me as your own mother, and in proof of this you will beg his Majesty to send and fetch me, that I may corroborate what you say."
Then will I declare you to be my own dear sons, and beseech the king to allow me to go free of this merchant and live with you where I may choose for the rest of my days."

The sons consented to her proposal, and the next night, when the merchant, also, was sleeping on the premises, the woman raised a great shout, so that everybody was awakened by the noise. The merchant asked what was the matter.

"The two boys, who look after your shop, have tried to violate me; so I shouted, in order that they might desist."

Hearing this the merchant was much enraged. He immediately bound the two boys, and as soon as there was any chance of seeing the king, he had them taken before his Majesty and explained the reason of their thus appearing before him.

"What have you to say in defence of yourselves?" inquired the king. "Because, if this is true we will at once order the execution of both of you. Is this the gratitude you manifest for all my kindness and condescension towards you? Say quickly what you may have to say."

"O king, our benefactor, we are not affrighted by your words and looks; for we are true servants. We have not betrayed your Majesty's trust in us; but have always tried to fulfil your Majesty's wish to the utmost of our power. The charges brought against us by the merchant are not correct. We have not attempted to violate his wife; we have rather always regarded her as our own mother. May it please your Majesty to send for the woman and inquire further into this matter."

The king assented, and the woman was brought. "Is this true," he said, "which the merchant, your affianced husband, witnesses against the two boys."

"O king," she replied, "the boys, whom you gave to help the merchant have most carefully tried to carry out your wishes. But the night before last I overheard their conversation. The elder was telling the younger brother a tale,—made up out of his own experience, so he said. It was a tale of a conciliated king who had been conquered by another mightier than he, and obliged to fly with his wife and two children to the sea. There, through the vile trickery of the captain of a vessel, the wife was stolen and taken away to far distant regions, where she became engaged to a wealthy trader; while the exiled king and his two sons wandered in another direction, till they came to a river, where the king was drowned. The two boys were found by a fisherman and brought up by him as his own sons."

"These two boys, O king, are before you, and I am their mother, who was taken away and sold as a wife to the trader, and who after two days must altogether live with him. For I promised that if within a certain space of time I should not meet with my dear husband and two sons again, then I would be his wife. But I beseech your Majesty to relieve me of this man. I do not wish to marry again, now that I have my two sons. For the reason that I might get an audience of your Majesty, this trick was arranged with the two boys."

By the time the woman had finished her story, the king's face was suffused with tears, and he was trembling visibly. Presently, when he had slightly recovered, he left the throne, and walking towards the woman and the two boys embraced them long and fervently.

"You are my own dear wife and children," he cried. "God has sent you back to me. I, the king, your husband, your father, was not drowned, as you supposed; but was swallowed by a big fish and nourished by it for some days, and then the monster threw itself upon the shore and I was extricated. A potter and his wife had pity on me and taught me their trade, and I was just beginning to earn my living by making earthen vessels, when the late king of this country died and I was chosen king by the elephant and the falcon,—I, who am now standing here."

Then his Majesty ordered the queen and her two sons to be taken to the palace, and he explained his conduct to the people assembled. The merchant was politely dismissed from the country. As soon as the two princes were old enough to govern the country, the king committed to them the charge of all affairs, while he retired with his wife to some quiet place and spent the rest of his days in peace."

1106 A.D., and borrowed professedly from the Arabian fabulists.

Another variant of this story is to be found in Tiberian Tales, the story of "Krishna Guntu," pp. 232, 233. A third variant is the story of "Swet-Basanta" in Folktales of Bengal, pp. 93-107. Another is that of "Sarwar and Nir" in the Legends of the Punjab, Vol. III. p. 97 ff.
THE LAST YEARS OF SHAH SHUJA'A, WITH AN APPENDIX ON THE AFFAIRS OF HIRAT.

Translated from the Tārikh Sultān of Sultan Muhammad Khān Bārakzāi.

BY E. REHATSEK.

In his preface the author of the Tārikh Sultān, who is probably still living, mentions the sources used by him when compiling his work—some already well-known to us—which are as follows:—For geographical and statistical information the Grammar of Goldsmith (sic), the Mīrdw'ī'cezah and the Jām-i-Jam; for the rise of Islam and the Lūdī and Sūr dynasties, the Tārikh-i-Farīshthah, Sir John Malcolm (sic) and the Māhkān Afgānīah; for the history of the Ghiljāi and Durrānī tribes the Jahān-kushā-i-Nādirī and the Majmu' Abdīlī; for the Sadozāi dynasty the Memoirs of Shāh Shuja'a written by himself; and for the affairs of the Muhammadzādā dynasty the information given by the Sardār Shēr-‘Ali Khān son of the deceased Sardār Muhīrīl Khān Muhammadzādā, by Qāzī ‘Abdur-Rahmān Khān, and by the author's own father; as well as by several other Bārakzāi and Durrānī chiefs, all of whom were still alive when the book was written, and whose statements the author trusted the more as they had themselves taken an active part in the events described in it.

The Tārikh Sultān, which consists of 291 pages 8vo, was completed in 1865, but was lithographed only in 1881 after the author's return from a pilgrimage to Makkah. The author is a Bārakzāi, and describes events from an Afghān standpoint. He gives a promise of impartiality in his preface, and not only has he kept this, but, as will appear from the footnotes illustrating the translation, he is also remarkably correct in his facts and dates; the difference in the latter from those in Kaye's War in Afgānistān amounting generally to a few days only, and as to the former, we possess no means of impugning them. He had not at his disposal the farrago of despatches, reports and correspondence upon which European historians base their accounts, but he naturally possessed a better insight into the affairs of his own country than any foreigner could possibly have.

Thus, very soon discovered the insignificant position of Shāh Shuja'a, as a mere puppet in the hands of the English officers, and often alludes to it as though it were a matter of course. The outbreak of the 2nd November 1841 at Kābul he ascribes to the fact that Nīzāmūddīnah, the newly appointed wāżīr, who was a Bārakzāi, had procured an order from Sir W. Macnaghten for the deportation of five Durrānī Khāns to Peshāwar. This made them determine to rise the very next day in arms to expel the foreign invaders, and thus was brought on the evacuation of Kābul by the British forces. There was no long plotting, conspiracy or preparation, and the outbreak would not have taken place, but for the obnoxious order issued so rashly and peremptorily. Before this, too, the exile of Šāmād Khān Pāpalzā, which the same Nīzāmūddīnah induced Sir W. Macnaghten to decree, according to our author foreboded evil, and became a cause of ruin to Shāh Shuja'a, and of despair to the population as well as to the army. This opinion, however, must be an exaggerated one, unless Šāmād Khān was a man of very great local influence; but for all we know, such may actually have been the case. General Elphinstone, although he was commander of the British forces, is not even once mentioned, and this must be attributed to the fact, that being an invalid, scarcely able to mount a horse, he never appeared in public and remained totally unknown to the Afghāns; whilst the political officer, Sir W. Macnaghten, who transacted all business, was by them considered supreme, and is accordingly called the pleni-potentiary wāżīr and even Lord, by our author. With this preamble we may now proceed to the translation itself:—

On the seventh of the sacred month Žu'lu'qādah 1250 A.H. [7th March 1835 A.D.] Shāh Shuja'a departed by way of Sind to the town of Lodiānì, where he lived for a while quietly, but allowed aspirations to royal power to occupy his mind, as will be narrated. He had spent all his life in campaigning and fighting, but unprofitably, as he himself states in his Memoirs:—"It is evident to the minds of intelligent persons that great Sultāns have encountered many adversities of this kind, and that most of them have suffered hardships in times which favoured mean upstarts. I and my adherents have never been, and are not now, much dismayed by the flight of our
troops, the inconstancy of fortune, and the fatigues of marching; but we are aggrieved at the consequences, and our hearts are lacerated, because we have been disappointed, in spite of most strenuous efforts, in the realization of our hopes. We underwent immense trouble in collecting troops and stores for the contest, but all in vain. Nevertheless the portals of divine beneficence are open, and my hands are stretched forth to the Lord of Might. As long as the soul bestrides the charger of thy body, O Shuja'a Shah [i.e. Valiant King], never let the reins of hope escape from thy hands! If treacherous fortune break thy heart a hundred times, comfort it again and again, trusting in the aid of God; for it is not unlikely that the Lord of kings and angels will grant the prayer of an humble suppliant."

After Shāh Shuja'a had spent fully four years in the town of Lodīnā, the Queen of England, having conceived the design of conquering Afghanistan,1 ordered Lord Auckland, the Governor-General of the Company of Hindustān, to cultivate the friendship of Shāh Shuja'a. Accordingly Lord Auckland appointed Mr. [sic] William Macnaghten, the envoy [at Lāhor] to be commander of the army which was to aid Shāh Shuja'a, and this envoy concluded between the three powers, namely, the English, Ranjit Singh [of Lāhor] and Afghanistan, a treaty, the contents of which were as follows:—Firstly, that an English army shall accompany Shāh Shuja'a to Kābul, and restore to him the country of his ancestors. Secondly, that no one shall claim the countries subject to Ranjit Singh on this side of the river [Indus] or on the other side in Sind, the Šūbah of Kašmīr and Peshāwar with its dependencies, and the Šūbah of Multān with its surrounding districts; and that the said Shāh shall, after the capture of Kābul and of Quāndāhar, send annually to Ranjit Singh by way of gift, young horses, exquisite and abundant provisions, including delicious fruits, which Ranjit Singh shall in his turn reciprocate by not failing annually to forward to the court of Shāh Shuja'a Indian goods of high value, such as Kašmīr shawls, golden ūnghās [turbans], kimkhās [brocades], &c., according to his requirements. Thirdly, that whatever sums may enter the treasury of the Shāh by way of good fortune from some Durrānī Khān-zādahs or from others, shall be equally divided between him and Ranjit Singh. Fourthly, that Ranjit Singh shall send annually to the Shāh a subsidy of two lākhs of gulāds rupees [i.e. of the Nānakshāhī or Guldār currency] and five thousand Musalmān naubārs from the town of Peshāwar; and that a portion of the Sind country shall, from generation to generation, belong to the Shāh. Fifthly, that if during the reign of the Shāh in Afghanistan any calamity threaten him from the western side he shall avert it, but in case of his inability to do so singly, he shall ask aid from the English and from Ranjit Singh, in conjunction with whom the said trouble shall be removed.2

The above treaty having been agreed to, and duly signed, Shāh Shuja'a started on the 23rd of the great month Shābān in the year 1255 [1st November 1839]3 with the English army, resembling the waves of the sea and led by Mr. [sic] William Macnaghten, from the town of Shikarpūr [in Sind]. After viewing the presents of Ranjit Singh and the gifts of the Nawāb Bahāwāl Khān 'Abbāsī [of Bahāwālpūr], which consisted of Arab horses, camels, two big cannons, a sum of money, cloths of gold and silk, with many other exquisite goods, properly exposed in order, according to ancient usage, the Šūhībs of exalted dignity [i.e. the English Commanders] desired the English troops which had joined the standard of Shāh Shuja'a, to salute him; and they, having adorned themselves according to their custom, paid their respects to him, whereat he was as pleased as if the seven climates had fallen under his sway, and presented the officers with pashmīnas (woollen cloths) whilst he gave cash to the soldiers. Then the Amirs of Sind were asked for tribute, but as they were filled with evil intentions, they first prepared to fight; however, after seeing English troops arriving by water and by land in countless numbers,

---

1 The declaration of the Governor-General, dated Simla, the 1st October 1839, however, runs thus:—"The Governor-General confidently hopes that the Shāh will be speedily replaced on his throne by his subjects and adherents; and when once he shall be secured in power, and the independence and integrity of Afghanistan established, the British army will be withdrawn."

2 This is the so-called tripartite treaty, the whole of which may be perused in a far more correct form, in Vol. I, pp. 319-321 of Kaye's History of the War in Afghanistan. The treaty was concluded and signed at Lāhor on the 26th June 1839.

3 The date given above is too late, and probably the copyist's mistake, not the author's. "The Shāh and his contingent moved from Shikārpūr on the 7th March." Kaye's History of the War in Afghanistan, Vol. I, p. 412, footnote.
like the waves of the boisterous sea, they yielded and paid the sum of twenty-eight lâhâs of rupees according to the previous custom, of which amount the Sâhihs [the English] gave fifteen lâhâs to Ranjit Singh, and thirteen to the Shâh, as had been agreed upon.

After that the two allied powers marched in the direction of Qandahâr till they reached Kudâ, which is thirty karâhs distant from the town of Ahmadshâh. The Sardârs of Qandahâr, desirous for an encounter, hastened with their infantry and cavalry to the fort of Fatu'llah Khân, which was near, and garrisoned it. About this time Kadd Khân Mohmand, a celebrated trooper, in the service of the Qandahâr Sardârs, stole an elephant belonging to Mr. William Macnaghten whilst grazing, and took it away. At this period also Hâji Khân Kâkâri dissolved his connection with the Sardârs, and presenting himself with his followers to the Shâh during the night, informed him that certain of them, who had the day before given out that they would make a night attack [on the English], had mounted their horses under that pretext and had returned to the town, whence they had taken their families and had fled towards Persia.

The next day the united armies marched together and halted near the canal of Fatu'llah Khân, where the Sardârs had been stationed. On the 12th of the glorious month Safar, on a Sunday, in the year 1255 [27th April 1839] the troops pitched their tents on the outskirts of Qandahâr, and on the next day Shâh Shuja'a went with Mr. Macnaghten and his companions to the castle of the city, where they took up their abode. Shâh Shuja'a undertook no business without their consent, and commenced to administer the civil and military affairs of the country under a constant anxiety to please them. He summoned from the Garmîr [in Southern Afgânîstân] an Ishâqzâi, Hâji Dost Muhammad Khân by name, who was a son of Sardâr Madâd Khân, and showed him abundant favours. Of all the Sardârs he honoured the two Hâjis most, namely the one just named, and Hâji Tâj Muhammad Khân Kâkâri, better known as Hâji Khân [and mentioned above].

In Qandahâr the English commanders again concluded a new treaty with Shâh Shuja'a,

the contents of which were as follows:—Firstly, that on the part of the English Government an envoy shall always remain with Shâh Shuja'a, who on his part shall likewise keep one with the English for the transaction of business. Secondly, that Shâh Shuja'a shall admit no European into his service or into his country, without first informing the Sâhihs of exalted dignity [i.e., the English administrators] and obtaining their consent. Thirdly, that the regular troops of the English shall be under the command of their own officers for the performance of duties approved of by both powers, but that the number of officers and of English administrators shall not exceed fifty persons; and that the wages of the said troops shall be paid by Shâh Shuja’a from the treasury of his own government. Fourthly, that in commercial matters the English administrators shall be permitted to take any measures, which in their opinion will promote the welfare of traders. This treaty between the two governments was concluded on the 7th May 1839 A.D., i.e., the 22nd of the glorious month Safar 1255 A.H.6

Meanwhile a strange event took place, which became an occasion of dismay to all Musalmâns, and especially to the Afghâns. One day a maiden was walking from the city towards the villages, when one of the white soldiers (yakî âr stipâshân gorâh) under the influence of drink, forcibly took hold of her, carried her into a dry water-course, and dis honoured her. The cries of the girl attracted the attention of some persons by the roadside, and when what had taken place became known, her father collected a great crowd and went to the royal darbâr to seek justice. Shâh Shuja’a had really no authority, and the Sâhihs of exalted dignity made abundant excuses; but the circumstance appeared so abominable to all the Musalmâns, especially to the Afghâns, an unusually hot-tempered and jealous race, that although they remained outwardly quiet from fear, the blood of the Durrânî Khân boiled with rage, and they said to each other:—

"What will become of our honour, when the arrival of the Shâh has been inaugurated by such an untoward event? It has now become evident that the authority of the Pâdshâh is

---

1 The name of the town is not given by the author, but it was probably Qandahâr.

2 Kaye, op. cit. Vol. I. p. 422, has the 25th April, which is a trifling difference only.
merely nominal." Although all the Durrain Khâns, especially Háji Döst Muḥammad Khân Ishâqzâi and Háji Khân Kâkâri, gave evident proofs of their grief, they managed to retain their equanimity externally; and their displeasure became known to the Shâh only during the march for the subjugation of Kabul, when they began to manifest their discontent, the first cause of which was the above-mentioned misadventure of the maiden, and the second was the disappointment of Háji Khân in the hope he had cherished of obtaining the high post of Wazir of Afghanistan.

After having on the 11th of Rabī‘u‘s-ṣâni‘ 1235 A.H. [24th June 1839] appointed the Shâhzâdah Fath Jang to be Hákim [Governor] of Qandahár, and the Sardâr Muḥammad ‘Atâ Khân, son of the Sardâr Sayyid Dost Khân Bâmiżâi to be his Lâtent, the Pâdshâh marched with the English commanders and their war-like troops in the direction of Kabul; whilst Háji Döst Muḥammad Ishâqzâi, Háji Khân Kâkâri, Muḥammad Taqî Khân Vakili, Nârû’d-dîn Khân, son of Yahya Khân Bâmiżâi, with most of the Durrain Khâns, excepting Sikândar Khân Bâmiżâi, obtained leave for a few days on the pretence of not having prepared baggage for their march, and remained in Qandahár. The English army reached Ghazân on the 17th of Rabî‘u‘s-ṣâni‘ [30th June 1839], and after the Sâhibs of exalted dignity had reconnoitred all sides of the Hisâr (Castle) of Ghazân, they expressed to each other an opinion that Major Leech and Major Todd had drawn up a defective plan of it and had described it in a manner different from the reality, and said that if such had not been the case, they would not have left their siege-guns at Qandahár. After that they came down [from the heights] in the vicinity of Mazâr ‘Alî Lâlî in the rear of the minarets, and selected a position. Next day, when the Sâhibs of exalted dignity were considering how to conquer the fort, news arrived that a Ghiljâ, Muḥtar Mâshâ by name, who dwelt in the town of Zârmû, was about to arrive by way of the mountains, with twelve thousand men, for the purpose of fighting, and that Muḥammad Aṣaf Khân, the son of the Amîr Döst Muḥammad Khân, was likewise ready for a contest, and was stationed at a distance of two karâhs with two thousand sawâdârs. Shâh Shujâ‘a instantly despatched the infantry, which was at hand with two cannons, to meet them, and the ghâdżâ [crescent riders] having been shamefully defeated after a brief contest, fled into the mountains. During the second night at two o'clock in the morning Mr. William Macnaghten came to the Pâdshâh [Shâh Shujâ‘a] and informed him that in two hours a mine would be sprung, and the Hisâr of Ghazân conquered; and asked the Pâdshâh if he would like to witness the spectacle by ascending to the top of Bahlût Sâhib’s siârât [shrine]. Accordingly the Pâdshâh immediately betook himself with a few couriers to the said locality, and as soon as he arrived on the one side the English canons were fired, whilst on the other the mine was sprung; whereon the gate of Bahlût was blown up by the force of the gun-powder and razed to the ground:—as the Kasâmî poet Hamîd says:—

Suddenly the fire rose high from the fort:
Its smoke sent a lasso to the celestial sphere.
From the earth a conflagration burst,
Like the fire of hell up to the sky:
When it overturned that fort-wall from the roots,
The fire and smoke became such,
That the planets Mars was of the companions of the pit."

The Shâh blazed up like fire from joy:
He ordered the troops to attack.
All the English forces having entered the city indulged in plunder and rapine, so that those died whose cup of life had become brimful with the wine of fate; and the rest, men and women, having been captured, were thrown into prison. The Sardâr Ghalâm Haidâr Khân, son of the Amîr Döst Muḥammad Khân, who had been the Hákim [Governor] of Ghazân, being desirous of avoiding the consequences of such a calamity [as imprisonment], intended to let himself down from the ramparts of Malik Muḥammad Khân by means of a lasso, but hesitated to throw himself down; and having prepared to submit to the decree of God, fell likewise, after a while, with his family into the grasp of fate and was confined:—as Hamîd the Kasâmî poet says:—

When that ripe man was bound with raw hides,
The sphere said:—'A royal falcon came into the net.'

* According to Kaye, Vol. I. p. 496, the army halted at Qandahár from the 20th of April to the 27th of June.

* See Qâdir, Ch. ixxv. v. 4.
He was taken to Shâh Shuja‘a-ul-Mulk who, after threatening and reproving him, spared his life at the intercession of the English, to whose camp he was then conveyed. Yaqût Khán, the eunuch, with others, was ordered to take charge of him and of his family.

This event caused so much uneasiness to Afsâl Khán that he went to his father, who was encamped with his army at Arghandâl, and gave him a true account of it, wherein the Amir Dost Muhammad Khán despatched his brother Navâb Jabâr Khán to Shâh Shuja‘a and to the English, under the pretext of making arrangements for his family, but in reality to ascertain the state of affairs. The Navâb elicited, after many interviews, the answer from the English, that if the Amir Dost Muhammad Khán with his family would consent to go to Hindustân, the English Government would certainly give him one lakh of rupees per annum; and he returned and conveyed this information to the Amir Dost Muhammad Khán.

The Amir, meanwhile, experienced much faithlessness and ingratitude from his own troops, who, under the Khán Shàh Khán Qizilbash, broke out into open revolt against him, robbing him publicly, and committing depredations of provisions and goods even in his own camp. This so distressed the Amir that he blew up his powder magazine and fleeing with his family in the direction of Turkistan, took refuge with the Pâdshâh of Bokhârâ, as will be narrated if it pleaseth Allah the Most High.

The Durrâní Khán who had, as mentioned above, remained in Qandahâr to make preparations for their troops, did not leave it until they heard of the conquest of Ghazni, when they hastened as quickly as they could to Kábul, Shâh Shuja‘a, in concert with the English, then despatched a number of troops in command of Captain Outram and of Hâjî Khán Kâkârî, in pursuit of the Amir Dost Muhammad Khán, but as the Hâjî was negligent, he returned some time afterwards without effecting his purpose; and when Captain Outram arrived he reported the matter.

When Shâh Shuja‘a entered Kábul with the English commanders and the English army on the Ist of Jumâdú‘s-sânî [12th August 1839] he occupied himself constantly with the administration of military and civil affairs, acting so closely in conformity with the wishes of the English, that not a hair’s breadth of difference arose between them. He appointed Mirzâ Ḥâsidar ‘Ali Khán, the army-writer, with the approbation of Colonel Claude Martin Wade, to be always with the Shâh, in order to maintain and to augment the two powers, as to maintain and to augment mutual harmony.

When Shâh Shuja‘a had become convinced of the tardiness of the Qandahâr Khán in arriving, and of the negligence of Hâjî Khán Kâkârî in pursuing the Amir Dost Muhammad Khán, he cast into prison the said Hâjî Khán, and the Hâjî Dost Muhammad Khán Išâqzâi, and also Nâib Amir Bârukzâi, Mullâ Rashid Bârukzâi and Áqâ ‘Auâsid Fârîz-sabrân, the last three of whom had been confidential advisers of the Amir Dost Muhammad Khán. He had also several other men, who were Khâns in Kâbul, taken and put into prison. Hâjî Dost Muhammad Khán Išâqzâi died in captivity from a disease he had, and thus liberated himself from the prison of this deplorable world. After this Hâjî Khán Kâkârî was set at liberty.

When the Shâhâzâdah Timúr, the eldest son of Shâh Shuja‘a arrived 14 in company with Colonel Claude Martia Wade from the Pâñjâb and Peshawar through the Khâibar Pass, ʿAbd al-Dhâlîshukûr Khán Išâqzâi, who had during thirty years been plebiscitary agent of the Pâdshâh at Lódianâ, likewise arrived at Kâbul in the retinue of the Shâhâzâdah. The Pâdshâh, after bestowing upon him a robe of honour, with the approval of the English, made him Wazîr and Tâhir of his government. Some time afterwards Sârdâr Muhammad Zamán Khán, son of Navâb Asad Khán, with his own and brothers, Sârdâr Amir Muhammad ‘Usâmîn, son of Navâb Shâmad Khán, and the sons of the Sârdâr Amir Muhammad Khán, who were all cousins of the Amir Dost Muhammad Khán, arrived. They kept up their position and dignity, and the English showed them many civilities; and although the honours enjoyed by the Bârukzâ tribe were extremely distasteful to the Pâdshâh, he said nothing for the sake of the English.

14 It was on the 3rd September that Cotton, Burnes, and other British Officers, with a guard of honour, went out to receive the prince. Kaye, Vol. I. p. 407.
After an uninterrupted sojourn of nearly four lunar months, when the trees had lost their foliage, and the snow was falling, the Shāh determined to spend the winter at Jallālābād, and departed from Kābul on the 24th Shabān [2nd November 1839] after having appointed the Shāhzādah Timūr to be governor of Kābul with 'Abdu'llah-shakūr Khān for his lieutenant, and Alexander Barnes, who remained behind as his agent. It happened also that whilst the Pādshāh and the English were dwelling at Nimla, the Shāhzādah Muḥammad Akbar, who was the most intelligent son of the Shāh, and cousin to Dost Muḥammad Khān, died of a grave malady, so that a further stay at Bīgh-Nimla was unbearable to the Shāh. He, therefore, sent the corpse to Lamghān, where it was buried in the vicinity of the blessed masā'īr of [the saint] Muītarlāk, and himself departed to Jallālābād.

On arriving there, Sayyid Hāshim, the Ḥikīm of the town of Kuner, and a partisan of the Amir Dōst Muḥammad Khān, failed through fear to come in to pay homage, and so was [held to be] refractory. Accordingly a detachment of English troops with several cannons and one hundred savārs of 'Abdu'llah Khān Chakāzī were despatched under the command of Mr. (sic) Macgregor to remove Sayyid Hāshim, and to instal in his place Bahā'ūddīn Khān. Sayyid Hāshim took refuge in his fort and stood the siege bravely several days, whereon the English determined to undermine and blow up the gate, as they had done at Ghāznī. But after they had done so, they found, when making the assault, that an extremely thick wall had been erected in rear of the gate, and they could effect nothing. The rain being very violent, and the assault fruitless, the English were compelled to return to their tents. Meanwhile Sayyid Hāshim, who was very frightened, considered this opportunity to be the best for escaping. Accordingly he mounted a charger and fled into the mountains, whereon the above-mentioned officers installed Bahā'ūddīn Khān in his place and returned to Jallālābād. On the other hand 'Abdu'll-ʿAzīz Khān Jabbār Ghiljāī, who was a confidential friend of the Amir Dōst Muḥammad Khān, and whose foster-sister the Amir had married, having previously found grace with the Pādshāh and the English, came to pay his respects; but being overcome by groundless fear went instead to the mīṣ'ār of Saʿīd Khān. His apprehensions arose from his perceiving that the Pādshāh bore nothing but the title, and that in reality the English Government enjoyed all the power. Fanaticism was an additional motive for his retirement, from which no friendliness could draw him. Accordingly the Government determined to raze all his fortlets to the ground; but he possessed in Jākān on the outskirts of the Saʿīd Khān, a strong fort rising into the blue sky, and eluding all the efforts of the 'adūl of the Ghiljāīs to destroy it. Some troops were therefore despatched, who effected that purpose. An English force was also sent in command of Mr. (sic) Conolly, because the Khōks, who live to the south of Jallālābād, had revolted and refused to pay their dues, but before the troops arrived they agreed to pay up on condition that a reduction should be made. A reduction of twelve hundred rupees was granted. Moreover, the road through the Khaibar Pass and from Jallālābād to Kābul being infested by robbers, an agreement of the happiest kind was concluded with the Ghiljāī Khāns and chiefs of those parts, so that henceforth no traveller was molested.

After this Shāh Shujaʿa undertook a pilgrimage to the blessed tomb of Miḥtarlāk (to whom be salutation!), which is situated in Lamghān, where Mīrzā Ibrāhīm Khān, the munshībāshī of the Government, who was the Ḥikīm of the Tājīks in Lamghān, entertained the troops and the Pādshāh with handsome banquets. The Pādshāh then returned again to Jallālābād, and remained there till he went in company with the English officers to Kābul, where he arrived on the last of the victorious month of Ṣafar in 1256 [2nd May 1840].

While the English officers were on their way from Qandahār they had approved of the mīṣ'ār of Dīlān Rabāt, which is situated on the western side of Chashmah Maqr, and conceived the idea of building a fort there. Accordingly the Shāhzādah Timūr was sent in that direction with English troops, and returned, after an absence of some months.

Meanwhile some well-meaning persons brought to the notice of Shāh Shujaʿa that the trade of the courtiers was getting very brisk, and that any man [i.e. British soldier] could satisfy his
lust for a small sum of money, because handsome females splendidly attired and bewitchingly adorned were boldly frequenting the houses of profligates as often as they chose; but that this increase in wickedness would inflame the religious sentiments of the population; [saying]:—

"If no one stems this torrent
It will produce much devastation."

Shāh Šuňja'a being frightened by these words, alluded to them covertly and enigmatically in a conversation with Mr. William Macnaghten, who replied:—"Whenever soldiers are prohibited from doing such things, they become subject to unaccustomed maladies." As the Shāh desired to please the English he said nothing more on the subject.

As long as Mulla 'Abdu'sh-shukur Ishagzai enjoyed full power, by his good management of affairs the Padshah's total want of authority did not become publicly known, till a man became obstreperous, on the strength of his friendship with Alexander Burnes, about criers being sent through the city (of Kabul) to fix the price of grain, or on account of some other trouble. 'Abdu'sh-shukur Khán reproved him for form's sake, and some persons in the crowd taking the part of the man said:—"If the Padshah has no authority, why should 'Abdu'sh-shukur be exalted?" A messenger of Burnes soon after arrived, and Mulla 'Abdu'sh-shukur [instead of resenting this impertinence] made excuses to him, saying:—

"I did not know that the man was your dependent." However, while he was vazir he kept [the real state of] matters secret, and managed affairs so smoothly, that the population trusted the Shāh:—

Appoint a God-fearing man over the subjects,
Because a virtuous man is the architect of the kingdom.

But Mr. Macnaghten and Alexander Burnes disregarded all consequences, and being displeased with 'Abdu'sh-shukur on account of the abovementioned fracas, removed him from his post, and appointed in his place Muhammed Usman Khán, the son of the Waizd Wafidár Khán, because he always acted according to the wishes of the English.

About this time Shih Shuňja'a received information that the Amir Dost Muhammad Khán, having escaped from Bokhára, had arrived at Ḥālm, and had made from thence, with the aid of the Azbaks an attack upon Bāmián, but had been defeated and had then gone to Kohistán. Mr. Masjadi Khán, who was a Sayyid of authentic descent, had thereupon made preparations for a ghazá [crescendade] to accelerate the arrival of the Amir Dost Muhammad Khán. When Shih Shuňja'a became aware of this movement, he despatched his son, the Shihzádah Timúr with some Durrání sádars, accompanied by Mr. Alexander Burnes and General Shiel and their forces, to Kohistán. A conflict took place when the troops reached the mūz'a of Khwâjah Khizar situated near Charikar and belonging to Mr. Masjadi Khán Bahdúr, who was bold enough to offer resistance with only fifty warriors; but the artillery soon made a breach in the fort-wall and the order to storm it was given. The Mir now perceived that his position was hopeless, but as life is of use only with a fair name and a brave one, according to the saying, "If thou abide even one moment only in the world, be a man," it became necessary to sacrifice it. Accordingly, in order to attain martyrdom, the defenders of the fort ranged themselves with drawn swords on both sides of the breach, shouting: "We belong to Allah, and unto him shall we surely return," and fought so valiantly that they struck down their assailants as they arrived, in such numbers that their corpses, heaped upon the other, might almost have served as a ladder for mounting up to the fort. Mr. Conolly also having quaffed the bitter draught of death in this severe struggle, the day-book of his life was folded up. When the General (Shiel) perceived that on account of the bravery of Mr Masjadi Khán it would be impossible to take the fort, he gave up the attempt and withdrew his troops from the breach. Mr. Masjadi Khán, whose bravery was worthy of all praise, likewise abandoned the fort during the same night, and after joining the Amir Dost Muhammad Khán was again attacked. First the Indian troops advanced, but the Sardár Muhammad Afsal Khán meeting them like a furious lion cut many of them to pieces, and those, who survived, been killed by a dawsion hand at a petty fortress in Kohistán." Kaye, Vol. I. p. 557.
fled; whereon the English forces advanced and he was under the necessity of turning from that side to the other.

The English officers had promised to pay a reward of two lakh of gold rupees to any one who would slay the Amīr Dost Mohammed Khān, and bring them his head. He accordingly, finding no refuge in any other direction, was under the necessity of hastening with two nawars in the evening to Macnaghten, who received him honourably, and treated him kindly, although he first said:—"The Shāh must make his salām." But innate pride prevented the Amīr from complying, whereon Macnaghten excused him, acted according to his wishes, and, having afterwards sent for his family to Ghaznī, forwarded him together with them to India. The family remained in Lodiānā where it was lodged in royal houses, but the Amīr was sent to Calcutta, where a yearly stipend of two lakh of gold rupees was assigned to him. On the other hand, in Kābul Shāh Shuja'a was in the sight of intelligent persons held as of no account. Indeed his dignity had departed from him, as if he had fallen from heaven down to the earth.

About this time the Shāhzādah Fat'h Jang, who was Ḥākim of Qandahār, felt aggrieved at some words that Major Leece had said to him, and having, at the request of Shāh Shuja'a, come to Kābul, his own brother Ṣafdar Jang was appointed to his post.

The winter having again become severe, Shāh Shuja'a appointed for the second time the Shāhzādah Timūr Governor of Kābul, and departed with the English Officers to Jalālābād, where the following events took place during his sojourn:

The Sanko Khel tribe, which lives among the various sections of the Shinwārīs, had robbed them of several flocks of sheep, on account of some long standing domestic feud. Accordingly some English troops and a company of the Sawārā Jāmbāz Shāhī [Mounted Royal Bodyguard] were despatched to punish the Sanko Khels, who, however, took refuge in the mountains pass near them; so that the troops could only destroy and burn their fortlets, and then return.

Another strange event which happened was, that one day Mr. Macgregor produced three pieces of paper with the Shāh's seal and handwriting on them, addressed to the chiefs of Kōhīstān, inciting them to revolt, and to wage a jihād [crescentade] against the English. The Shāh knew that these writings were altogether forgeries, but was amazed on identifying his own seal and chirograph. He accordingly summoned Mirzā Ibrāhīm, the Munshībāshī, into his presence, and asked him for an explanation. After a little reflection the Mirzā declared that some disloyal person must have obtained possession of the three papers and skillfully changed the contents by erasing [or washing out] some words, and substituting for them some others of a treacherous import. When the manner in which this forgery had been committed became known to the Shāh he sent for Mr. Macgregor, and pointed out to him the vestiges and marks of the first writing, which could yet be discerned on the papers when attentively examined, whereas his suspicions likewise disappeared. The Shāh then said to the English officers that the benefit they had at times bestowed upon the Bārukzāi tribes would all certainly be required by treachery, and that they would produce other papers of the same kind.

He also said:—"All this is the consequence of appointing Nizām-ud-daulah to be seātī, especially at a time when he has made common cause with Jabbār Khān, Muḥammad 'Uṣmān Khān, Muḥammad Zamān Khān, and has made Mirzā Imām, Barī Khān, Mastāfī 'Abdu'r-Razzāq Khān, Mirzā Aḥad Khān and Naib Amīr Bārukzāi his agents. If I had possessed any authority I would not have left alive one of the Bārukzāis, especially the sons of the Sardār Fāiq Khān. If you deal with the Bārukzāis according to the

13 The native troops fled like sheep. Emboldened by the craven conduct of the British cavalry, the Afghan horsemen rode forward, driving their enemy before them, and charging right upon the position of the British, until almost within reach of our guns. The Afghan sabres told with cruel effect upon our mounted men. Lieutenant Broadfoot and Criqui were cut to pieces and Dr. Lord was killed by a shot from a neighbouring fort which tore out his bowels." Calcutta Review, Vol. VII., for January—June 1847, p. 55; also Kaya, Vol. I.,

14 An Oriental salutation inferring inferiority.
maxim that a foe is to be reconciled by benefits, you are mistaken. The reverse policy of striking off your enemy's head with the sword is the proper one. But you can take your choice." As they were, however, expecting to conciliate that valiant tribe, they did not care to answer the Shâh.

After that the Shâh became anxious to make a pilgrimage to the blessed musâr of Mihtar-lâk (to whom be salutation) and to pay a visit to his beloved mother, and fulfilled both intentions. After his return Nižâmuddâlah, who was desirous that no one besides himself should enjoy the confidence of the Pâdshâh's Government and of the English officers, considered it proper for his interest to bring about the ruin of Ibrâhîm Munshi, whom the Shâh greatly trusted. Accordingly he said that Laghân, which the Tâjiks had rented to him, was his own freehold, and no solicitations of the Munshi could extort the money due from him [to the Government for it], nor could the Pâdshâh himself effect anything, because he was unwilling to act against the wishes of the English officers (for which reason all the Khâns and servants of the State despaired of his position, and knew that his reign had come to an end).

Not long after his arrival from Laghân, Shâh Shu'â'î returned in company of the Shâhís of exalted dignity to Kâbul, and appointed with their approbation the Shahzâdâh Timûr to be Governor of Qandahâr; also his hâram, which he had called from Lodîânâ arrived in Kâbul in the month Rab'î'î's-sâhî, in the year 1257 [between 23rd May and 21st June 1841].

When Nižâmuddâlah Muḥammad 'Uṣmân Khân, son of Waḍîr Waqfâdâr Khân, had attained full authority, and knew that his power as wâzîr was paramount, he became so puffed up and haughty that he treated persons of both low and high degree with equal scorn. He kept most of the salaries of the Durrânî Khâns and of others in arrears, so that a few of them, whom he believed to be not only devoted to his interests, but reckoned as his servants, often brought it to the notice of the Pâdshâh that the Ghulâmâns had not received their pay; but in vain, until one day Şâmâd Kâhan Popalzâ'i made the same request as on former occasions. As this took place in a general Darbâr, the Pâdshâh was necessarily obliged to turn to Nižâmuddâlah and to ask him what he thought of the complaint, and on the latter replying that it was contrary to the truth, Şâmâd Kâhan exclaimed:—"You are certainly a liar; you cultivate the friendship of the Pâdshâh's enemies, while you cause the hearts of all his loyal subjects and well-wishers to bleed." Then mutual and hot recriminations followed, to avoid hearing which the Pâdshâh rose and left the Darbâr hall, whereon Nižâmuddâlah, who had lost all self-possession, waited upon Mr. Macnaghten with his complaint and said:—"To-day I have been insulted in public Darbâr, and if no reparation is to be made, what answer shall I give to-morrow to others? and where shall I seek a refuge from their bad acts and impudent words?" Thereon Mr. Macnaghten indited the following letter to Shâh Shu'â'î:—

"Şâmâd Kâhan is a silly impudent fellow and by no means worthy to be present at a royal Darbâr. If he be expelled from the country he will be excused from being present." The Pâdshâh, who considered the words of the English officers as commands from heaven, prohibited him nolens volens from making his appearance [in Darbâr].

The event just narrated became a cause of ruin to the Pâdshâh and of despair to the population, as well as to the army. Indeed the wickedness of Nižâmuddâlah reached at last to such a height, that the Pâdshâh could not bestow a single copper from the revenues upon anybody. He was moreover, from want of authority, unable to continue the allowances granted to the blessed musârs of 'âshiqs and 'ârifâs, which no one had stopped from ancient days to the present times; and whenever anyone appealed to him he only uttered the words "orders will be issued," knowing full well that nothing would be done, but being desirous of keeping up appearances.

(To be continued.)
No. IV.—Vēmāi and the Thieves.

One night as a party of thieves were prowling about in search of booty, they happened to fall in with the goddess Vēmāi, going along at full speed with a tray on her head. Taking her to be a human being, they eagerly went up to her, and found that the tray she carried was of solid gold, and contained, besides rice, kaskū, and other objects of good omen and a pair of dice set with diamonds and pearls. Glad to find such valuable booty within their reach they attempted to lay hands on the treasures, when Vēmāi cried out, in an authoritative voice in which was mingled a tone of entreaty, — *Keep away, my friends, and touch me not, for I am the goddess Vēmāi, and am hurrying to the palace of the king, unto whom a son has been born, in order to write his destiny. Pray, therefore, do not detain me.*

"We would willingly allow you to go," said the thieves, "if you, by way of corroborating your statement, tell us what is to be the destiny of the king's son."

"I regret," said the goddess, "that I am unable to gratify your curiosity, for I myself have no idea at present of what I shall write down; I have only to throw these dice and await the result, and then write down the secret of the child's destiny just as it is revealed to me."

"Very well then," said the thieves, "we allow you to go on your errand, on the condition that, on your return from the palace, you tell us the destiny of the boy, as it is revealed to you."

The goddess agreed to this and departed, while the thieves remained where they were, awaiting her return.

After finishing her business at the king's palace Vēmāi, true to her promise, hastened to the spot where she had left the thieves. As she approached them they noticed that she was downcast and wore a sad look. Nevertheless they pressed around her and eagerly listened as she thus related to them the destiny of the king's son:

"This poor boy, I am sorry to say, has a very bad future before him, although he is born a king's son. He will lose his parents at the age of twelve and will then be deprived of his legitimate possessions by an usurper, who will condemn him to pass his life as a prisoner within the walls of a castle. He will, however, manage to break his bonds after some time, and escaping from the castle, will betake himself to a jungle, where he will pass the rest of his life in eking out a precarious sustenance by hunting small game."

Thus saying the goddess departed. The thieves, outlaws though they were, loved the king, who was good and pious, and were, therefore, very much distressed on learning of the misfortunes that were to befall the prince.

Nearly twelve years after this all that Vēmāi had foretold came to pass, for the good Rājā died and his Rāṇi followed him soon after, leaving the poor boy an orphan under the care of an uncle, who soon usurped the throne for himself, and closely confined his nephew in a castle. The thieves, whose sympathies the prince had enlisted almost from his birth, and who were following his fortunes all the while, befriended him at this juncture, found means to get him outside the prison walls, and bid him in a jungle. Knowing, however, that the boy was foredoomed to live on small game they were determined to baffle his destiny at least in that particular; so they provided him with a bow and arrows and set him to hunt in the jungle. The rabbits, deer, and so on, as if aware that he was to get his living out of them, marched past him and almost threw themselves in his way, but the thieves would, by no means, permit him to shoot them; as soon, however, as an elephant or such other big game came in sight, they bade him discharge his arrows at them. As the forest was full of elephants, rhinoceroses, and the like

---

1 Vēmāi is supposed to be the goddess who determines the destiny of man. She is popularly believed to visit unseen the bedside of the new-born infant on the sixth night after its birth and to write out its destiny. Under this belief superstitious people place on that night, a tray containing a blank sheet of paper, a pen, ink, a coconut, and the red powder used for marking the forehead on auspicious occasions near the baby's cradle. They however, do not expect to see any writing on the paper, but are content to believe that the child's destiny has been determined during the night.

2 A red powder used for marking the forehead on auspicious occasions such as Birthdays, Weddings, &c.
the young prince managed to bag one of these huge creatures almost every day, and the sale of their hides and tusks realised large sums of money.

In this way the thieves succeeded in baffling the destiny of the boy in one respect, because by putting him in the way of killing large game they started him fairly in life as a merchant in ivory and skins, and thus saved him from the privations he would otherwise have suffered by being doomed to live on small game only.

MUDYANUR PLATES OF SAKA 261
OF THE BANA KING MALLADEVA-NANDIVARMAN.

BY LEWIS RICE, C.I.E., M.B.A.S.

This grant consists of five copper-plates, 5½ inches by 2½, strung on a metal ring, uncut, which is secured by a metal seal, 1½ inches in diameter, bearing in relief the image of the bull recumbent, Nandi, with the sun and moon above. The outer side of the first plate and both sides of the last plate are blank; but there are traces of an inscription on the former, which has been effaced. From so much as appears, it is evidently the beginning of a Gaṅga inscription, containing the usual phrases, as in the Hoslur and Náganañgalá plates, down to Harivarman. The plates belong to a resident of Mundyanur (the Mundiyánur of line 23) in the Mulbagal Taluká of the Kollá District in Mäisär, and were found a few years ago in the court-yard of his house by some boys who were digging about in play.

It proves to be the charter of a gift of the village of Mundyanur or in its Sanskrit form Chūḷāgrāma, to twenty-five Brahmans, made by the Bāna king Vadhuvallabhā-Malladeva-Nandivarman, in the Saka year 261 (A.D. 339-40), the twenty-third of his own reign, while he was staying at Avani. The language is Sanskrit throughout, very full of mistakes: the characters are Párvada-Hale-Kannada. There is a constant insertion, unnecessarily, of visarja before the initial p of a following word, a practice which seems pretty general in old inscriptions in this character.

The opening lines are in praise of Siva. Then follow praises of Vishnu, with the view of introducing him in his connection with Bāli in the Vāmanam or dwarf incarnation; but some of the inscriptions are such as belong only to Śiva. From Mahābali or the great Bāli, the lord of the Dānavas, was descended a promoter of his race, the king Nandivarman. His son Vījaya-Dēva, next succeeded to the kingdom, and in turn was followed by his own son, a glory to the Bāna race, Sṛi-Vadhuvallabhā-Malladeva-Nandivarman, the donor of the grant. He is described as the ruler over a seven and a half lakh country containing twelve thousand villages, situated in the Andhra mangala or Telugu country. One of the inscriptions in his praise, being a complimentary reference to Buddha, strikes me as most unusual in a Brahmā grant. It says of the king (line 1) that “in compassion for all living things in the three worlds he was like Boddhisattva,” going on to compare him in other qualities with Vīrabhadra, Mahādeva, and Kārttikéyā.

At the end, the carpenter (ṭvashtri) Nandivarmachārīya states, in the first person, that he inscribes the grant by order of Vadhuvallabha-Malla. The king, calling himself Vadhuvallabhā-bhūpati, also in the first person, confirms the grant as long as the sun and moon endure. The Sarvapallāha, or general minister, the Daṇḍakāpi Vainavasata, then records that he has carried out the order. The inscription closes with the two words vijñahanam alleleu, the meaning of which is not apparent, though the latter seems to refer to the writing.

Of the professed date of this inscription, I express no opinion. It is left to the judgment of those who feel able to pronounce upon it. But as regards the other contents of the grant, we are not without information to guide us. From the inscriptions formerly published present plates, I consider that this grant is certainly spurious, at any rate so far as the date is concerned. The characters are, roughly, of much the same type as those of the Merkara and Náganañgalá plates.—J. E. F.]
by me† which first brought the Bāṇa kings to light, it was found that they claimed to be of the Mahábalî or Mahávalî race, and we obtained the names of Bāṇa-Vidhāhara or Vikramāditya, and Prabhu-Mēru. The grants published by Mr. Foulkes‡ added considerably to our knowledge by giving us the following genealogy, with certain historical references:—

Bali.

| Bāṇa.

Bāṇa Adhirājā, followed by many kings. Then Jaya-Nandivarman, ruling territory to the west of the Andhra country.

Vijayāditya.

| Srī-Malladēva, Jagadēkamalla.

| Bāṇa-Vidyādharā.

| Prabhu-Mēru-Dēva.

| Vikramāditya.

| Vijayāditya, Pukkaḷa-vippuva-gaṇḍa.

| Vikramāditya, Vijayābāhū.

Then the Chōḷa king Virā-Nārāyaṇa suddenly uprooted the Bāṇas; but they were restored eventually by the Gaṅga king Kēsari or Prithivipati, in the person of Hasti-Malla.

The present grant, so far as it goes, confirms this pedigree, and is made by the king here called Srī-Malladēva, Jagadēkamalla, the father of Bāṇa-Vidyādharā. If, as seems probable, the Gaṅga king who restored the Bāṇas, was the predecessor of Srī-Purusha who began to reign Śaka 649 (A.D. 727-28), or that king himself, this would give us a date to which the overthrow of the original line must have been some time anterior. And to arrive at the reign in which our grant was issued, we have to reckon back six generations beyond that event. We also know that the Pallavas were in possession of Kāṇchi and Mahābālpura early in the 7th century A.D., and that both they and the Mahāmallas or Mahābālis suffered defeat at the hand of the Chalukyas in the second half of that century.

That the Bāṇa kings continued to flourish in the east of Māsūr subsequent to their restoration, there is abundant evidence in inscriptions. From one at Manigaila-Gollahalli, we find a Bāṇarasa ruling in Śaka 821 (A.D. 899-900); and from a fine stone at Kendali-Madhivāḷa, we learn that he was contemporary with the Gaṅga king Nītimārga and with Nelmēbdhiraj. The latter, from inscriptions at Bēmaṅgala, was ruling in Śaka 826 (A.D. 904-5). Of Nītimārga I have obtained many inscriptions. He was ruling in Śaka 831 (A.D. 909-10), and bore the titles Koṅgaḷi-Varma, Dharma-mahābdhiraj, Satyavāky, Rāchamalla and Peramadigal.

The Bāṇas are met with down to a late period. For, my conjecture† that the inscriptions at Srīvilliputṭūr in Tinnivelly of A.D. 1483 and 1476 belonged to them, proved to be correct, as ascertained by Mr. Sewell at the time. Two kings of this family, styling themselves Mahāvali-Vāṇa (for Bāṇa) Adhiraj, thus seem to have got possession of the Pīṅḍya throne in the latter half of the 15th century.

To return to our grant. The reference to the Nandi hill and the Pāḷār, at the commencement, is interesting. The Pāḷār throughout its course, as formerly pointed out by me,§ would seem to be identified with the Mahāvali or Bāṇa line, from its source in Nandidurga to its mouth near the celebrated Mahābālpura. Among the titles of the restored dynasty were “lord of Nandi” and “having the crest of a bull,” and here we have Nandi on the seal of the original line. Also, if I am not mistaken, the small coins sometimes picked up at Mahābālpura, have a Nandi on them.

The village of Āvanī, from which the grant was issued, is a celebrated place. It is said to be Apañīkakṣētra, one of the ten places of greatest sanctity in India. Here Vālaṅkī, it is stated, had a hermitage: here Rāma encamped on his return from the expedition against Lāṅkā: hither Sīh repaired

---

‡ ante, Vol. X. p. 38.

when put away by him, and here gave birth to her twin sons Kūśa and Lava, who were brought up by Vālmiki. It is now the seat of a Guru of the Smārta sect, and contains an interesting group of large temples dedicated respectively to Rāma, Lakṣhmī, Bhārata, Śatrughna, and Vālī-Sugrīva. From inscriptions it would appear that they were originally erected about 580 A.D. (298-29.)

Hodali, which gives its name to the district in which Mādyanār was situated at the time of the grant, is still so called. The boundary villages mentioned are easily identified. Uttarama is Uttarār; Kuladipa is the village now called Koladēvi; Kottamaṅgala and Koṭatūr still bear the same names. Kanakadāvāparvata is the only place that is doubtful; the name is probably a translation of some vernacular name like Sonabāgīlū.

It remains to say a word with reference to the Brāhmaṇs to whom the grant was made. Of the four named, it will be seen that three, after their gotras have been given, are described as sāṁanya-charaṇa. Of this I have been unable to obtain any explanation, though we have a sect of Drāvīḍa Brāhmaṇs called Brīhadcharaṇa. The story is that Agastya had been engaged for the performance of a great sacrifice by a Pāṇḍya king, who sent invitations to Brāhmaṇs in distant places to attend. Those who received the notice early, came away at once, but those who got it later and had farther to come, did not arrive till the ceremonies had begun. From this circumstance the former got the name of brīhat-charaṇa, the ‘big strikers’ or ‘fast walkers’; Similarly the others may have been distinguished as sāṁanya-charaṇa or ‘ordinary walkers’!

Translation.
Om! Obesance to Śiva! He, the ocean to which flows the waters of the Mandakini whose throne (or source) is on the lofty peak of the mountain called Naundi, lord of the

earth, his lotus-feet worthy of worship from Devendra and the gods, triumphs, the adored! (L. 2)—Be it well! His breast embraced by the daughter of the bearer up of the mountains of the earth, bearer on his head of the

nectar-producing moon, source of mercy, his glory illuminating all worlds, reposing on his couch the serpent in an ocean whose waters are flowing in shining waves, was Kamalānābha (Viṣṇu);—on whose starting to take the three strides, manifesting desire with the signs of hands and feet, was established the fame, as the only giver of gifts in the world, of the great Bālī, lord of the Dānavas;—the cause of the increase of whose race, freed from the enemy of sin through the sound of the blessings chanted by great Brāhmaṇs possessed of all merit acquired in the constant exercise of holy rites, having a force composed of mighty elephants, his terrible army led by commanders the prancing of whose restive chargers stopped the motion of the earth, worthy of reverence from all the kings in the world, his breast the abode of valour and government, the rod of his arm as long as the world-bearer (Ādiśeṣa), his dreadful sword unconquered by the most powerful kings, his body glittering with the radiance of garlands and epanelates, having obtained the crown and the throne, was Nāndīvarman, the upholder of royal virtues.

(L. 10.)—After him, his excellent son, whose face was like a lotus opening to the light of the rays of the morning sun, his footstool illumined with the radiance caused by the crowns and garlands of prostrate kings, by name Vijayaḍītya-Dēva, possessed of many kinds of wealth won from his enemies by the strength of his own arm, filling all quarters with the shouts from his deep throat resembling thunder from the storm-clouds, having a serpent-like sword, his body glorious with groups of wounds from the stroke of warlike weapons in the moving fight, having governed the kingdom:—

(L. 14.)—There was, in like manner—a sun in awakening the lotus-lake of the Bāṇa race—his son, who in compassion for all living things in the three worlds was like Boddhisattva, in valour the equal of Vṛabhadra beloved of Hara, in protecting the kingdom like Mahēndra, in possession of pearls the equal of the ocean, in having a (mount) Mēru of unique immovable wealth resembling Kārttikeya, daily the cause of manifest joy to Uma; as elephants tremble at the might of a raging lion so were his enemies overcome in battle by the wind of the strokes of the sword uplifted in his hand; the bright lotus-eyes of women, fascinating in their gait from the weight of their loins, being attracted to him could not be taken off again.

(L. 20.)—By him, being such a one, his long arms an ornament to the circle of the earth, daily adding to the three kinds of power, ruler of a seven and a half lakh country containing twelve thousand villages, in the Āndhra maṇḍala, cause of continued prosperity to the four castes,—(viz.) by Śrī-Vadhūvallabhā-Malla dēva-Nāndīvarman, being in the town of Ávani, in the Saka year two hundred increased by sixty-one, the twenty-third of his own reign being current, in the Vījāmbī sūvatvāra, on the thirteenth (day) of the dark fortnight of Kārttika, on Monday, under the constellation Gemini, to Śrī-Rudra-bhāṭa-śarman of the Bharadvāja gśtra and sāmānya-charaṇa, to Trilochanabhāṭa-śarman of the Kauṣika gśtra, to Trivikrama-bhāṭa-śarman of the Kauṣika gśtra and sāmānya-charaṇa, to Nārāyaṇa-bhāṭa-śarman of the Kṣaya gśtra and sāmānya-charaṇa, and including them twenty-five Brāhmaṇs of various gśtras, having washed their feet, the village named Mūḍiyanūr in the Hōdāli viśaya, is, with pouring of water, by me given.

(L. 28.)—The boundaries of that village are (here) stated:—(here follow the boundaries in great detail, and then various imprecatory verses).

(L. 50.)—By order of Vadhūvallabhā-Malla, I, the carpenter Nandīvarmāchārya, inscribe the charter of this grant. As long as moon and sun endure, for so long in perpetuity, I king Vadhūvallabhā, make a gift of Chūḍāgrāmā. Thus was it done by the Sava-pradhāna, the Duṇḍāśīpa Vaivasvata. The grant is written (?)
AN ENGLISH-GIPSY INDEX.

INDRAGÓMIN AND OTHER GRAMMARIANS.

BY PROF. F. KIELHORN; GÖTTINGEN.

Professor Bühler's notice of Professor Peterson's Second Report on the Search for Sanskrit MSS. (ante, Vol. XIV. p. 354) has again drawn my attention to Professor Peterson's discovery (Report, p. 65), that "the Indra grammar" commenced with the words निहितसुलां फूँके. "To light upon a passage"—so Professor Peterson says,—"which actually quotes the first words of Indra's grammar, while as yet scholars are disputing as to whether such a work ever existed. is indeed a reward for much fruitless toil." And Professor Bühler adds:—"This discovery settles, indeed, the question, if an Ainḍra grammar really existed."

It would seem that, in the opinion of both scholars we have now at last got actually a quotation from that Ainḍra grammar which, according to the late Dr. Burnell, preceded the grammar of Pāṇini, and that, according to their views, such an Ainḍra grammar has really existed, or may, as Professor Bühler suggests, still be in existence. Much as I rejoice at Professor Peterson's discovery, I cannot but think that the conclusion drawn from it—supposing it to be as stated—"is a somewhat hasty one."

I have indeed been long aware of the fact that a grammar composed by Indra must have existed, because I knew that that grammar had been used by Hēmachandra. But as the fuller name of the author of that work is Indrágómin, just as Chandra's fuller name is Chandragómin, I feel no inclination to make it older than Pāṇini. And my opinion as to its comparatively recent origin is confirmed by an examination of the statements that are ascribed to it,—a writer who copies from the Vārtikas on P. I. 4, 3 and VIII. 3, 1, cannot be older than Pāṇini,—as well as by the fact that Indra or Indrágómin is mentioned in company with grammarians or grammars like Chandragómin or the Kālīpaka, about whose relation to Pāṇini there can be no doubt.

Hēmachandra mentions the views of other grammarians most frequently; but, un-

fortunately, instead of quoting those scholars by name, he introduces their statements by such vague expressions as Kaśīki, Kāśīki, Ākāśi, Aparé, etc. What grammarians were meant to be denoted by these terms, I first learnt from the marginal notes in a MS. of a small portion of Hēmachandra's grammar which is in my possession, and I subsequently discovered that the names there given have been taken from a commentary, called Nyāsa, on Hēmachandra's Bhāṣāvṛtti. Of this Nyāsa I have now been able to read through a MS. of the Deccan College (No. 252 of 1873-74), which, I regret to say, does not go beyond the first Pāda of Adhyāya II. of Hēmachandra's grammar; and from it I give the following names of grammarians or works on grammar, which Hēmachandra is supposed to refer to:—

Indragómin. Fol. 11b Indragómi-Kālīpaka-prabhritayāḥ [Hēmachandra: केलिपक प्रभृतियम् सदिष्टानि सर्वसाधि यथा कर्मार्थं च चैत्यं कुण्डल्ल। Fol. 12a Indragómi-Chandra-prabhritayāḥ; Fol. 15a Chandragómini-prabhritayāḥ [Hēmachandra: अन्यत्र ई उपस्य सामालये नैष्कल्ल्णि। तस्मात्व विभूते विवेकने युन्यासेऽवृत्ति नैकल्ल्णि।] [Besides, my own MS. has Indra-Chāndran Fol. 53a].

Utpala. Fol. 13b उपत्तां कर्मार्थमुग्ढानां प्रचात्तानां; Fol. 18b;—Fol. 14b. Utpalādayāḥ; Fol. 16a twice.

Kālīpaka; Fol. 25b, [and Kālīpaka in my own MS. Fol. 53a]; Fol. 3b Kālīpakādyāḥ; Fol. 11b Indragómi-Kālīpaka-prabhritayāḥ.

Kāśikākāra. Fol. 11b Kāśikākārādayāḥ.

Kāśirasvāmin. Fol. 13b गोपीविभ्रतिः सत्त्वांगमी भद्रद्वासवज्ञवनन्तिः। Fol. 15a forms only अथियक्षेपे, विवेकेने उपथाः; Fol. 20a Chandra-Bhājā-Kāśirasvāmi-prabhritayāḥ.

Chandra-gómin. Fol. 12a Indragómi-Chandra-prabhritayāḥ; Fol. 13a Chandra-prabhritayāḥ; Fol. 15a Chandragómini-prabhritayāḥ; Fol. 18b Chandrádayāḥ; Fol. 20a Chandra-Bhājā-Kāśirasvāmi-prabhritayāḥ; Fol. 23a Chandragómini-Dēvanandy-adāyaḥ; Fol. 24a

The Kālīpaka, or Kālīpakādā, or Kānandra-vyāk-

1 So far as I know, there is only one Indra grammar about which there has been any dispute, viz. that Indra grammar which according to Dr. Burnell is older than Pāṇini.

2 The Kālīpaka, or Kālīpakādā, or Kānandra-vyāk-
The Indian Antiquary

Vāmana. Fol. 16a Vāmana-ādayaya [Hemachandra says: कैप्तन hymnasāraṇāya scill. जसानामपरम, they form therefore कर, but not वृतत].

Viśrāvantīvidhyādharī. Fol. 11b [Hemachandra says: कैबिक व्रस्तायोविद्यायामपरम कारयोगाविद्यारसायसतीतिमयित्र नोन्यस्वतिः. भाषात् वह इतर अहं का चालायोविद्यायमे भैरवू। तथाैरे तो सायत्वः तथा तो वहात् तत्सायत्वः ऐर्<style>h6</style>त; and the Nyāsa adds कहिसित्वै। विज्ञानविशिष्टै।] Fol. 95 Viśrāvantīvidhyādharī-ādayaya [कैबिक व्रस्तायोविद्यायामपरम स्त्राय सायत्वायस नोन्यस्वतिः सन्त सन्तविद्यारसम्। सक के शिष्य =कहू त, तिथै 1]; Fol. 18a; [besides, my own MS. Fol. 44b].

Sakatayana. Fol. 13b and my own MS. Fol. 53a Sakata; Fol. 16a, Fol. 21a Sakata; [my own MS. Fol. 50b Sakata-yana]; Fol. 12a, Fol. 13a, Fol. 15a, Fol. 18a Sākatayan-ādayaya.

Srūtapālī. [My own MS. Fol. 53a]; Fol. 15a Durgasiṃha-Srutapālalīlī [Hemachandra says: सर्वत्र द्वार, पत्राविवर्तिता करित, and the Nyāsa adds कहिसित्वै। हृदितिविद्यायामपरम,].

In addition to the above my own MS. Fol. 50b makes Hemachandra quote the opinion of Ratnamati, called Ratnamati bandhūka, in the words: राजास्यविवर्तिताविद्यायामपरम। नायार रायित। नायार रायित। नायार रायित। नायार रायित। नायार रायित। नायार रायित। And the Nyāsa cites, on its own account, the following: Upādhyāya (तस्त सुवालुः अनु दृश्वतायमपरमाविद्यायान्तिः); Kākala (दृश्व कर्कस्य वाद्ययं); Jayākīrtya; the Dēttāpaśyāraṇikāḥ opposed to the Vaijaya-karaṇāḥ; the Nyāsa and a Nyāsākaraṇā; the Bhāṣayō, Bhāṣayakāraṇā, Bhāṣayakāraṇā-Vaṁśikārāṇā, and Śrīśeṣhāraṇā (i.e. Paṭāṇjaliḥ); Vatsa-Rishabhā (पतं श्रवतात्त्वान नतिः कपल वृता व्याहरान सिद्धिः); the Viśrāvantī (विश्रावन्ती); the Vaijayaṅkīrta; and a marginal note explains the word अन्ये by Jinendrā-Bhōja-Pāṇinī-prabhītayya.

Now from the above list it will appear, that Hemachandra in the compilation of his own grammar has used exactly those grammatical works which we might have expected him to use, viz., besides the Pāṇinīya and its commentaries, the grammars of Chandra, Śākatayana (who, of course, has nothing to do with the old Śākatayana), Bhōja, and Vāmana; the Jaimāndra, the Kalpaśaka, the writings of Kharāsvāmi, and similar works. Certain it seems, that he has known nothing older than Pāṇinī, and we shall probably not be far wrong, when we assume that the grammar of Indra or Indragomin bore a somewhat close relation to either the grammar of Chandragomōni or the Kāldā.

* In the Garutamamahādāddhi p. 2, Vāmana is described as the author of the Viśrāvantīvidhyādharī; the same work mentions, p. 167, a Nyāsa on the Viśrāvantī, and p. 191 a Viśrāvantīvādī. A Bhāṣayāraṇikā of Vāmana is quoted, id. p. 532; and Vāmana also composed a Śākatayana in 24 Āryas, which seems still to exist. In the Nyāsa, from which I have quoted in the above, Viśrāvantīvidhyādharī is certainly intended to be the name of the or the epithet of a man, not of a grammar; the name of the grammar appears to be Viśrāvantī. Compare Kādanta as the name of Sārvarman’s grammar, and Mūṣhī as that of Malayagiri’s (Mūṣhīkārī).

1 Ratnamati is often quoted. The man here intended I suspect to be the same as Ratna-śrīphēkha, who appears to have composed a commentary on the Chāndāya-dṛṣṭānta, and who is cited (with Vimalamati) in Anandadatta’s Paddhati,
THE CHANDRA-VYAKARANA AND THE KASIKA-VRITTI.

BY PROFESSOR F. KIELHORN; GÖTTINGEN.

Tradition tells us that the Chandra-Vyakarana is older than the Kasika-Vritti. The kindness of Professor Oldenberg, who has placed at my disposal his copy of the fragments of Chandra's grammar which are at Cambridge, enables me to prove that the compilers of the Kasika have diligently used that grammar, although they never actually mention it.

On Pāṇini IV. 1, 54 the Kasika has the note अभू-गात्रजन्य-इति व्यस्तम्, which is not found in the Mahābhāṣya. The three words are taken from Chandra's rule, which corresponds to Pāṇini IV. 1, 55, नासिकार्यणाति-भास्त्रकक्ष-ग्रस्तकृ-गात्रजन्य-कालयानिकायः.

On Pāṇini IV. 1, 63 the Kasika has the note शुरूर्वोकारा-कलोपन्धम व्यस्तम्। शुक्ल: जि which is not in the Mahābhāṣya. Chandra has the rule पुजूः पुजः.

On Pāṇini IV. 1, 85 the Kasika has the note यमोंवति व्यस्तम्, which is not in the Mahābhāṣya. Chandra has यम, in his rule विराज्ञ-विविद्य-वियोजनः.

On Pāṇini IV. 1, 156 the Kasika has the note ज्ञातवर्णस्य विकल्पम्: Chandra has the rules त्रिवृत्त: त्व त्रिवृत्तिः।

On Pāṇini IV. 2, 42 the Kasika has the note

6 The Padajits of Tibet are certainly right when they say that the Chandra-vyakarana agrees with Pāṇini, and they may be therefore supposed to be right in maintaining that the Kathāpavadānī agrees with the Indrāvyakarana, (see Schiefner, Tārānātha, p. 56), i.e., as I take it, the grammar of Indrāvyakarana. Indrāvyakarana would, in my opinion, be the same as Indrāvyakarana (ed. p. 69), and Tārānātha is quite right, when he says that in Aryadeva the Indrāvyakarana did not appear before the

son and Bhandarkar, who already have done so much for the preservation of Sanskrit MSS., to purchase as many commentaries on Hēmacandra's work as they can lay hold of, because I believe that such commentaries will furnish many valuable notes on the history of Sanskrit grammar. If the information at my command be correct, there must still be in existence a Brihadāranyaka, called Sahadāmādhava, a Nyāsa by Dharmaṇḍaka, one by Rāmacandra, a Laghuṇāya by Kanakaprabha, and similar works. They will probably not be pleasant reading, but if Professors Bhandarkar and Peterson will give me the chance, I will try to make the best of them.
who did so; for his rule is भवति (without न्युक्ते)

The second explanation, which is given in the कादिक of पाणिनि V. 1, 94, was the one adopted by Chandra; for his wording of the rule is तत्तत्र चादनि:

On पाणिनि V. 1, 126 the कादिक has the note काश्यकालिन यो संहितायनम्. Chandra has the rule संहितायनम् यो:

When on पाणिनि V. 1, 131 the compiler of the कादिक asks कपयु कालावधिमति, he shows that he knew Chandra's rule जै मर्यादा उपाय: And by his remark उत्तरसुरसंहिताय|ङ्गमुक्ति| on पाणिनि V. 2, 81, he indicates that he was acquainted with the wording which Chandra had given to the rules 81 and 82, काश्यकालिन यो and काश्यकालिनम्.

On पाणिनि V. 2, 138 the कादिक has the note अभ्यक्तः। Chandra's wording of the rule is अभ्यक्तः अभ्यक्तः। On पाणिनि V. 3, 12 the कादिक has the note द्विनां द्विनां। Chandra has the rule के भवति:

On पाणिनि VII. 2, 48 the कादिक has the note के भवति। Chandra does read द्विनां परिप्रेक्ष्यति.

On पाणिनि VII. 2, 49 the कादिक has the note के भवति। Chandra does read नु भवति। On पाणिनि VII. 3, 17 (see also on V. 1, 55) the कादिक has the note अभ्यक्तः। Chandra has कुलिकम, in his rule संहितायम्।

These instances, to which I might add many others from the incompleted copy of Chandra's grammar which is accessible to us in Europe, will sufficiently prove, that the authors of the कादिक-व्रतिं knew that grammar and used it in the compilation of their own work. They will also show that Chandra has not, like some of the later grammarians, merely copied from the शब्दाल्पकाय, the वर्तिका, and the अद्वितीयः; but that he also has either tried to improve on these works himself, or has in addition to them used other works, which do not seem to exist any longer.

Strange it appears that the compilers of the कादिक should never have mentioned Chandra and his grammar; that they should not have done so even in connection with rules such as पाणिनि II. 4, 21; IV. 3, 115; and VI. 2, 14, where by quoting the चन्द्र-वद्यकरण्यa they would, one might say, have much more vividly illustrated पाणिनि's meaning, than by the examples which they have actually given.

It is one of the characteristic features of Chandra's grammar, that,—while it retains the most artificial terms of पाणिनि's grammar, such as सदा, वद्य, दुःख and others, some of which have not met with general acceptance even in पाणिनि's own school,—it discards a large number of other terms, many of which have been found so appropriate or useful, that they have been adopted even by European grammarians. From गुण and व्रतिक, Chandra goes back to आदिन and दाली; from साक्ष्यपद्य to यागदेह or व्रतिक; व्रतिक of course had to become दाली; for उपरागा Chandra always employs प्राग; for सर्वनाम, सर्वेदि; for तद्धिता, आदिन; to तात्त्विक, सर्वाभिनन्त्विक; and the reverse, आदिन, for परस्पर

Deva is expressed by चार्दिन; बहुतरहि, by anyदिन; and देयहि, by महृदिन; उपाधिण्य is सप्त; उपाधिण्या, apra-
MISCELLANEA.

GENERAL CUNNINGHAM’S ARCHEOLOGICAL REPORTS.

I observe that, in the last number of the Indian Antiquary, it is pointed out that General Cunningham’s Archeological Reports only require careful and systematic indexing for their practical value to be recognized. I am engaged in preparing a full analytical index, which will be published by the Government of India as a separate volume uniform with the Reports. I have made indices to twelve volumes, and hope to publish the combined Index by the end of the year; but my leisure is scanty, and I cannot promise any definite date.

Any suggestions offered by readers of the Indian Antiquary will be welcome.

V. A. SMITH.

Basti, N. W. P., 6th April 1886.

A NOTE ON THE COINS OF THE HINDU KINGS OF KABUL.

In connection with the general subject of the Gupta era, on which I shall have occasion shortly to submit some special remarks, I take this opportunity of putting together a few notes that I made about three years ago, when I first read Sir E. Clive Bayley’s Paper, with its Postscript.

“On certain Dates occurring on the Coins of the Hindu Kings of Kabul,” published in the Numismatic Chronicle, Third series, Vol. II. p. 128ff. The question now opened has no bearing on the settlement of the epoch of the era, otherwise than as being one of the numerous side-issues that have to be disposed of before any settlement of the main subject will be accepted as final by general readers. But, as such, it appears to me to require to be discussed.

Sir E. Clive Bayley’s theory was that the epoch of the Gupta era fell A.D. 190. Like General Cunningham’s theory of A.D. 167, it was supported, or was apparently supported, by astronomical calculations of the details of the date in Buddha-gupta’s Āraṇ pillar inscription, and of the sarvatāravas of Jupiter’s twelve-year cycle mentioned in the dates of the inscriptions of the Parivṛjaka Mahārāja Hastin and Sankshobha. But the real key-note to it is to be found in his belief, and Mr. Thomas’, that certain coins of ‘Syrālapati’ of Kābul have on them dates accompanied by the syllables ga, gu, gupti, or guptani, which were supposed to stand for “Guptaṇga kāla,” and to denote “the Gupta era,” and in his argument that the dates of these coins, in order to fit in with the period of A.D. 887 to 916 assigned by him to ‘Syrālapati,’ can only be reckoned from A.D. 189 or 190.

But, irrespective even of the extreme improbability of such an expression as Guptaṇga kāla, “the era of Gupta,” being used to denote an era which, though used by the Guptas, was certainly not founded by, at any rate, the Mahārāja Gupta, the first of the family mentioned in the inscriptions,—this theory of A.D. 190 has, so far as pp. 135, 137 read and translated Guptani kāla (for guptani kāla) vikrama vikrama, “counting from the era of Gupta.” But the real reading is Guptaṇga puranā puraṇa vikrama, “making the calculation in the reckoning of the Gupta.” This is a very different thing. And the real significance of the expression is its very clear indication that this date was being recorded in an era which was not the customary one for that part of the country.
the above-mentioned grounds are concerned, absolutely no support whatever.

Of the coins in question, those that have the clearest dates on them are Pt. vii. Nos. 24 to 27, belonging to some unnamed king. They are not attributed to ‘Syalapati’; but are considered to be rather more recent. It is admitted, however, that they belong to the same series; and I take them first because they are so very clear. If we examine them with the help of Sir E. Clive Bayley’s Table of Numerals in Pt. vii., it is evident at once that No. 24 reads, not “902 Gu,” but simply “904,” with nothing after it; and that Nos. 25, 26, and 27 read, not “812 Gu,” but simply “814,” again with nothing after it. The figures being in fact absolutely identical with those which Sir E. Clive Bayley himself read as simply “814” on Nos. 19 to 31, 29 to 31, and 34. In these instances, the supposed Gu is nothing but the sign that makes the difference in these numerals between 2 and 4. And Sir E. Clive Bayley’s reading further involves the peculiar anomaly that the figures have to be read in one direction, from the rim of the coin, and the supposed Gu in the opposite direction, from the inside of the coin which results in the curious arrangement of “902 ng” and “812 ng.”

We have here to note that Sir E. Clive Bayley reported that Mr. Thomas would read the whole date in one direction, from the inside of the coins, and would interpret it as “Gu 617,” denoting the initial date of Simanta’s dynasty according to the Gupta era; and, accepting 319 A.D., according to Albirin’s statement, as the actual date of the Gupta era, would thus place Simanta’s accession in 936 A.D.” Allowing for the possibility of the first sign being capable of meaning Gu, this way of interpreting the figures seems to be equally well borne out by Sir E. Clive Bayley’s Table. But the first sign cannot mean Ga, and does not mean Gu. And a reference to the Table will show immediately that the figures have to be read, as Sir E. Clive Bayley read them, from the rims of the coins; and that the dates are in reality nothing but 904 and 814, as I have pointed out above.

The coins of ‘Syalapati’ himself are Pl. i. Nos. 3 to 5, and 7 to 10. Of these, No. 7 is read as “707,” and Nos. 8, 9, and 10 as “727,” without any supposed reference at all to the Gupta era; and these readings are in accordance with the Table of Numerals, if the dates are read from the rim of the coin like the dates of Nos. 19 to 27, 29 to 31, and 34, referred to above. On the other hand, if we might read the figures on these seven coins from the inside, there appears no particular objection to interpreting them as respectively “308” and “808.”

There remain Nos. 3, 4, and 5, which are read respectively as “Gupta” with two doubtful figures, “90 Gu,” and “90 Gu,” meaning (6)98 and (6)99. And these are unfortunately too easy to deal with, since—though the signs that are supposed to mean Gupta must be in reality numerals of some kind or another, there is nothing in Sir E. Clive Bayley’s Table, and I can obtain nothing elsewhere, to explain their value as numerals. But, in attempting to find a proper reading of them, we must in the first place notice that the sign which, on Nos. 4 and 5, Sir E. Clive Bayley interprets as the figure 9, and enters as such in his Table, occupies exactly the position which is filled in Princep’s coin, noted below, by a symbol resembling a crescent moon on the top of a short staff with a cross-handle; and this suggests that the sign in question is not a figure at all.

In the hope that some of the readers of this Journal may possess a clue to their real meaning, I now give a reproduction of the signs that were supposed to mean Gupta. The lithograph was issued by Sir E. Clive Bayley as capable of being “accepted as a fair rendering of the usual form of the word.” But it will be admitted, at once and generally I should think, that it answers in no way whatever to the usual form of the word, and cannot be so interpreted in accordance with any known alphabet, even though we should follow Mr. Thomas in looking upon it as a degraded and contracted form of the word.

In trying to find out what these signs do mean, it must be noted that coin No. 3 in Pl. i. gives some indications to the effect that the first sign as given above, is imperfect on the left side, and that in its complete form the left side was exactly similar to the right; the whole sign, in fact, being something like two crescent moons, back to back, connected with a bar.

Also, any information bearing on ‘Syalapati’ real date would of course help much to clear up the point. And in connection with this, I would draw special attention to his coin figured in Princep’s Essays, Vol. I. p. 364, Pl. xxv. No. 2, which, as now explained by Sir E. Clive Bayley’s Table, gives the unmistakable date of 814, traces of which are also discernible in No. 1 on the same plate. This No. 2 has behind the horseman the same monogram, u u, (not ṭṭ) as Sir E. Clive Bayley’s Nos. 25, 38, and 27 have; also, as explained by No. 1, it has in the upper corner in front of the horseman, the same symbol (interpreted by Sir E. Clive Bayley on his No. 29 as a rude imitation of adal) that appears in the same position on others of these coins, and resembles a crescent moon on the top of a short staff with a cross-handle. These points of similarity suggest
that possibly Sir E. Clive Bayley's Nos. 25, 23, and 27 (and others) belong really to 'Syalapati,' though his name is not on the obverse. And the unmistakable date of 514 on any rate Prinsep's Essays, Pl. xxv. No. 2, further suggests that the figures on Sir E. Clive Bayley's Nos. 7, 8, 9, and 10, should not be read as 707 and 727. Sir E. Clive Bayley places 'Syalapati' in A.D. 857 to 916; which would agree very satisfactorily with the date of 514 on Prinsep's coin, if we might refer it to the Saka era, with the result of A.D. 892-93.

On the other hand, General Cunningham, in the Arch. Surv. Ind. Vol. XIV. p. 45, places him rather earlier, about A.D. 800, but quotes no authority for this. I have not been able to find any other information as to the probable date of 'Syalapati.'

J. F. Fleet.

22nd April 1886.

A NEW GRANT OF DHARASENA II. OF VALABH.

I have received from Mr. Wajeshchakar Gauri-shankar of Bhawmarg, through Colonel J. W. Watson, Political Agent, Kāśīhāwaḍ, impressions, with text and translation, of a new copper-plate inscription of the Mahārāja Dhārasena II. of Valabha, dated (Gupta) 542 (A.D. 571-72), from the village of Jhar in the Amrēli Pargana in Kāśīhāwaḍ. The plates were found by Mr. Wajeshchakar, and are in his possession. It is not necessary to publish the grant in full; but a description of it will not be out of place.

The inscription is on two plates, measuring roughly about 11½ by 8½, and appears to be in a state of excellent preservation. The first plate contains 16 lines of writing; and the second, 18. The characters are in the ordinary type of the Kāśīhāwaḍ alphabet, of the period to which it belongs. The language is Sanskrit throughout.

The text follows the draft of the three grants of the same Mahārāja, published in this Journal, Vol. VII. p. 682, Vol. VIII. p. 301ff., and Vol. XII. p. 100ff., and all dated in the same year, 542, but on the fifteenth day of the dark fortnight of the month Vaiśākhā. I note below a few passages in which the present grant tends to elucidate the correct text of the draft.

The contents are, in brief, as follows.—There was the illustrious Śūdrāpati Bhaṭārkā (line 3), a devout worshipper of the god Mahēśvara, who was possessed of glory acquired in a hundred battles fought with (i.e. against) the large armies, possessed of unequalled strength, of the Maitra-kas, who by force compelled their enemies to bow down before them. His son was the illustrious Śūdrāpati Dhārasena (l. 4), a most devout worshipper of the god Mahēśvara. His younger brother was the Mahārāja Drūnasinha (l. 7), a most devout worshipper of the god Mahēśvara, who was anointed in the kingship by the paramount master in person, the sole master of the circumsphere of the territory of the whole world. His younger brother was the Mahārāja, the illustrious Dhruvasena (l. 9), a most devout worshipper of the Holy One. His younger brother was the illustrious Mahārāja, Dhārapatākha (l. 10), a most devout worshipper of the Sun. His son was the Mahārāja, the illustrious Guhasena (l. 11), a most devout worshipper of the god Mahēśvara. His son is the Śamaanta and Mahārāja, the illustrious Dharmaśena (l. 16), a most devout worshipper of the god Mahēśvara.

From the city of Valabha (l. 11), he, Dhārasena, being in good health, issues his commands to all his Ayuktakas, Vinignakas, Dronigikas, Mahattaras, Chātas, Bhaṭas, Dravyaksha-ganikas, Śaikikas, Prātisdrakas, Drāṇapakas, Chakalhārunikas, &c., that he gives as a brahma-dāya, for the purpose of maintaining the rises of the five great sacrifices of the bali, charu, vaisvādāha, ayukhāra, and atithi (l. 27), to the Brahman Chhachchhāvara (l. 22), an inhabitant of the town of Brahmapura, a member of the Bhāṛara gōtra, and a student of the Maitreyanaka-Mañavaka (āśāhā)—(1) the village of Vaiṣṇava (l. 22), in the Dipanakara pithā and the Bīlakaẖāhā sthāli,—(2) one hundred padāvartas (of land) (l. 23) within the area of Bīlakaẖāhā, in which the words are not those of the present text, they denote that there is no express intimation as to the contrary.

1 See Dr. Kiernan's explanation of this passage, ante, Vol. XIV. p. 388. I find that Dr. Bhāuj Dāji, in 1884, had an idea as to the correct interpretation of this passage. He wrote (Jour. Bo. Br. R. Rs. Soc. Vol. VIII. p. 848.):—"A sentence in the copper-plate, which has hitherto not been translated correctly, shows that they (the rulers of Valabha) 'triumphed over a sun-worshipping people (Maitra-kas)."

2 The epithet ādi is not used here. In line 5, the reading of this grant is prakāśakara-vamāna-muni-mahārāja-Mahārāja-Kali-kalabha; and in line 10, prathidha is omitted before mahārāja.

3 In line 9, the reading is klihaka-prabhākara-śakta-kali-kalav[?]; and in line 14, mahārāja is omitted before guhasena.

4 In line 12, the reading is satya-pādā; in line 13, nityāyakas-śāriyakṣa-bhīṣaka-prabhatas &c.; and in line 15, mahārāja is omitted before guhasena.

5 In line 16, the reading is satyapādā; in line 17, satyapādā; in line 18, satyapādā; and in line 19, parakshetra-sahajā-vāma-mahārāja-vāma-Dharmakshetra-kālīviṣa.

6 Or perhaps Śrīvatsakas. The text looks like nīcāṃvatā-saṅkalikāya uttābāya &c.; but it may perhaps be nīcāṃvatā-sādhīyatāya &c.;
the northern boundary, to the north of the division called Bhaṭṭākabhdha, to the east of an ant-hill, and to the west of the road or river called Amrīkayavha;— (3) in the same eighth region of the compass, 10 an irrigation-well (1.23), with twenty-five pāḍḍavartas of land lying round it;—

(4) in the eastern boundary of the village of Vyā padra (1.24) in the Jāhari sthali, one hundred and sixty pāḍḍavartas (of land) on the south of the high-road, on the east of the field of Jarajaka, on the west of the junction of the boundaries of Baddhikype, and on the north of the field of Kānakaka or (? Vinaka), a resident of the village of Bārāmakalyagrama;—

and (5) twenty-five pāḍḍavartas (of land) (1.26) in the southern boundary of the same village.

Lines 28 to 32 contain the usual mandate against interfering with the full enjoyment of the grant; and two of the customary benedictive and impregnative verses.

These are followed by the statement, in line 33, that the Dānaka was Chiribira, and that the charter was written by the Śravānasvarādhipati Skanda bhāata. Then comes the date, in numerical symbols, of the year 252, the fifth day of the dark fortnight of Chaitra. And the inscription ends with the endorsement—"(This is) the sign-manual of me, the Mahārāja, the illustrious Dharasena."

23rd March 1866.

J. F. Fleet.

TWO PASSAGES FROM THE ACHAŚATIKĀ.

At page 141 f. above, Mr. K. B. Pathak has published an interesting passage from the Jain Harivināsaka, which mentions the Early Gupta kings, and, in giving a regular succession of dynasties, including them, from the nirvāṇa of Mahāvīra, purports to have a bearing, though a wrong one, on the question of their epoch.

I now give, as another literary curiosity of a somewhat similar kind, two passages from the commentary named Ačhārāṭikā by Śīlāchārya on the Jain work called Ačhārāṇasātra,—from a manuscript, supposed to be about three hundred years old, shown to me in the early part of 1883 by Dr. Bhagavantlal Indraj.¹

The first passage, on pp. 2078 and 2089, is in metre, and runs—

¹ Dvārāpāṭty-adhikāśhuh iśatāśhaṃ gatāśhaṃ Gukiptāpi [18]

Gupta-Vināsakaśaṃ gusā cāh

Bhadrapadē śākāṭkāśhaṃ gataṃ cāh

Śīlāchāryaṃ kṛiṭaḥ

Ganubhāīyāṃ sthitīṃ śīkṣaśaḥ

somag-paryaṣṭyaṃ śāhīyāṃ

mātārya-vināśkaśaṃ śākāṭkāśhaṃ kṛīṭaḥ

This passage gives Gupta-Saṅvat 772 (expired), the fifth day of the bright fortnight of the month Bhadrapada, as the date on which this portion of the Commentary was completed by Śīlāchārya, at Ganubhāī (Camby). The second passage, on p. 2565, at the end of the whole book, is in prose, and runs—

Saka-nirgrahāṇa-saṃvatsaraśatāśhaṃ jagatāśhuh Vaiśākha-saṃvatsarāṇaṃ Ačhārāṇaṃ kṛiṭaṃ // ba /// Saṅvat (page 2565 ends here; and the next page, containing the repetition of the date in figures, and the last final words of the author, is lost).

This passage gives Saka-Saṅvat 798 (expired), the fifth day of the bright fortnight of the month Vaiśākha, as the date of the completion of the whole Commentary.

The two passages, indicating, as they stand, that Śīlāchārya treated the Gupta and Saka eras as identical, obviously contain a mistake of some kind or another, which must be attributed to a pedantic desire on his part to introduce a mention of an era,—whether the Gupta or the Saka, as the case may be,—with which he was only imperfectly acquainted. And the mistake cannot be cleared away, unless we can obtain some independent record of the real date of Śīlāchārya,² sufficient to shew whether the Ačhārāṇa was written during Gupta-Saṅvat 772 to 798 (A.D. 1091 to 1117), or during Saka-Saṅvat 772 to 798 (A.D. 850 to 870).

The passages, however, are of some interest, in showing that, in Śīlāchārya's time, there was still a recollection of the fact that the era,—which must have been known best from its use by the rulers of Valabhi, and which came eventually, in Kāṭhiāwār, to be called the Valabhi-Saṅvat,—was connected originally and specially with the Gupta kings, by whom it was introduced into Kāṭhiāwār and the neighbouring parts.

31st March 1886.

the author from other sources,"

² Read jātāśhaṃ.

³ The Saka era was used so rarely, if at all, in Gujarat and Kāṭhiāwār, that probably the Gupta era gives the real date for Śīlāchārya. And I would throw out a suggestion that possibly a mistake of the same kind may account for the dates, Saka-Saṅvat 400 and 417, of the apparently spurious Umētā and 116 grants of Dadda II (ante, Vol. VII. p. 615; and Vol. XIII. p. 115f).
THE EPOCH OF THE GUPTA ERA.

BY J. F. FLEET, B.C.S., M.R.A.S., C.I.E.

UNTIL the discovery of the Mandasor inscription of Kumāragupta and Bhādhavamman, which I publish at page 194ff. below, the only direct information available as to the Epoch of the Gupta Era was the statement of Abu Rihān Albirānī, who, writing in the first half of the eleventh century A.D., left on record the following notes, as taken from M. Reinaud’s French translation of the original in his Fragments Arabes et Persans, page 138ff.:—

People employed ordinarily the eras of Śrī-Harsa, of Vikramaditya, of Śaka, of ‘Ballabha,’ and of the Gutasas. * * * * * ‘Ballabha,’ who also has given his name to an era, was the prince of the town of ‘Ballabha’ (Valabha), in the middle of Anhilwad, at a distance of about thirty yojanas. The era of ‘Ballabha’ is subsequent to that of Śaka by two hundred and forty-one years. In order to make use of it, we take the era of Śaka and deduct at the same time the cube of six (216) and the square of five (25). The remainder is the era of ‘Ballabha.’ This era will be discussed in its place. As to the Gupta-Kāla (the era of the Gutasas), we understand by the word gupta certain people who, it is said, were wicked and powerful; and the era which bears their name, is the epoch of their extermination. Apparently ‘Ballabha’ followed the Gutasas immediately; for the era of the Gutasas also commences (with) the year two hundred and forty-one of the era of Śaka. The era of the astronomers commences (with) the year five hundred and eighty-seven of the era of Śaka. It is to this era that the Khaṅ-khaṅ-khaṅ Tables of Brahmagupta are referred. This work has among us the title of ‘Araṅad.’

According to it, placing ourselves in the year 400 of the era of ‘Yeṣhindjed,’ we find ourselves in the year 1088 of the era of Śrī-Harsa, the year 1088 of the era of Vikramādiya, the year 953 of the era of Śaka, the year 712 of the era of ‘Ballabha’ and of that of the Gutasas.”

According to the above extracts, Albirānī seems to state in the first instance that the Gupta-Valabhī era began when Śaka-Saṅvat 216 + 25 = 241 (A.D. 319-20) had expired; and this is borne out by his making the year 712 of this era correspond with Śaka-Saṅvat 953, the difference being exactly 241 years. In his next mention, however, he apparently speaks of it as commencing with Śaka-Saṅvat 241, i.e. when 240 years had expired. While in a third passage, a little farther on in the book, in explaining how the Hindus arrived at the date (January, A.D. 1026) of the taking of Sūmāthapāja by Muhammad of Ghazni, he tells us that they first wrote down 242, then 606, and then 99, with the result of Śaka-Saṅvat 947 (A.D. 1025-26); and here, though he does not expressly mention the Gupta-Valabhī era, there can be no doubt that the figures refer to it; and they seem to indicate that, in this calculation, the epoch of the era fell when Śaka-Saṅvat 242 had expired.

We have thus three years to choose between for the epoch of the era,—Śaka-Saṅvat 240, 241, or 242, expired; i.e. Śaka-Saṅvat 241, 242, or 243 current,—involving a question that can only be settled by accurate calculations of the data available from the inscriptions, published in detail, so that general readers may see that the processes are satisfactory. And I would here point out that, before any of the existing Tables can be utilised for these calculations, at least the following preliminary points must be settled,—(1) whether the years of the Gupta era had a distinct arrangement of their own; or whether they followed the scheme of the years of the Kaliyuga, Vikramas, or Śaka eras; (2) if they were identical with

As is shewn by Albirānī’s statement further on, this is not the era of Harshavarmanas of Kanauj, commencing A.D. 660 or 667, but an earlier era, commencing B.C. 497, of which we have no epigraphical record, and, in fact, no information beyond Albirānī’s statement that it existed, coupled with a remark that, in a Kashmir almanac, he had found the epoch of it put forward to Vikramas-Saṅvat 661 (A.D. 667), whence “he felt some doubts that he had not found the means of resolving.”

This is quite an imaginary name, which must be

attributed to Albirānī fancying some connection between the name of the city of Valabha and the Sanskrit word sulebha, which was very often used as a proper name, but not in the case of any of the rulers of Valabha. But, setting aside this mistake about the name, which is rather like that of his treating Śaka as the name of an individual, instead of a dynasty, Albirānī is of course speaking of the era that was used by the well-known rulers of Valabha.

* Fragments Arabes et Persans, p. 146.
the years of the Vikrama era, whether they followed the northern reckoning, with the year beginning with the new-moon of Chaitra, or the Gujarât and southern reckoning, with the year beginning with the new-moon of Kartika, seven months later; and (3), after deciding the previous points, whether, in the arrangement of the months, the bright fortnight came first, according to the custom of Gujarât, the Dekkan, and Southern India, or the dark fortnight, according to the custom of Ujjain and Benares.

But, whatever may be the final settlement of these points, the fact remains that Alberini had information given to him of the existence of an era, coupled with the name of the Guptas and of the city of Valabhi, which began A.D. 318-20, or within a year on either side of that date, and which it is convenient to us to speak of as the Gupta era. And, that this era was actually used in connection with the name of Valabhi, at any rate, is proved by the Verawal inscription of Arjunaditya of Aplaghad, in which the leading records of the year are Vikrama-Saivat 1320 and Valabhi-Saivat 945.

So much was certain. But it was felt to be highly improbable that the era of the Guptas should date from the epoch of their extermination. And students of the subject divided themselves almost at once into two schools.

The first, represented most publicly and with undeviating tenacity up to the last by the late Mr. Ferguson, accepted Alberini's statement as to the epoch of the era, but,—on the analogy of the statement which he also seems to make, that the Šaka era, too, dated from the overthrow of the Śakas; a statement which, if made, was certainly wrong,—rejected the addition that it dated from the downfall of the Guptas; and took A.D. 318-19 for the date of rise of the dynasty, as well as the establishment of the era,—selecting this particular year on the theory that the era did not date from the accession of a king, or from any particular event, but, for convenience of comparison, was regulated from the completion of four of Jupiter's sixty-year cycles from the commencement of the Šaka era.2

The other school accepted A.D. 318-19 for the downfall of the Guptas, and took the Valabhi era of Arjunaditya's inscription, which indisputably began then, as being separate altogether from the Gupta era, and as having been established in commemoration of that event; and began then to look about for an earlier date for the establishment of the Gupta dynasty and their era as used in their own inscriptions. The chief exponents of this school have been the late Mr. Thomas,3 who held that the era was identical with that of the Śakas, commencing A.D. 78;—General Cunningham,4 who finally fixed on A.D. 167;—and Sir E. Clive Bayley,5 who selected A.D. 190.

There was, of course, much to be said from either point of view. And, in default of definite evidence settling the question one way or the other, perhaps the strongest argument against the views held by Mr. Thomas, General Cunningham, and Sir E. Clive Bayley, was to be found in the following anomalous position, which had occasionally been noticed more or less directly, but had never been disposed of. It was held by all that the Rulers of Valabhi came immediately after the Guptas. It was also held that in A.D. 318-19 they founded the city of Valabhi, and established the Valabhi era dating from then, in commemoration partly of that event, and partly of the Gupta rule having then ceased and the power having passed into their own hands. And yet,—as is shown by, amongst other things, the fact that Bhajārka, the founder of their family, came only one generation before the year 206, the earliest date that we have in the era used in their own charters,—they did not allow this era of their own, established under such memorable circumstances, to supersede the Gupta era;

---

3 In accordance with these views, Dr. Bieber fixed on about A.D. 300 (ante, Vol. VII. p. 305). But I have not quoted him as a public exponent of the theory, because the full discussion of the matter that he promised (ante, Vol. X. p. 293) has not been issued; and it is impossible to say how far his views might have changed in writing it, even before the discovery of my Mandasor inscription.
6 In the Postscript to his "Remarks on certain dates occurring on the coins of the Hindu Kings of Khān," published in the Numismatic Chronicle, Third Series, Vol. II. p. 125ff.; see page 152ff. above.
but, as shewn by the Ailná plates\(^{11}\) of Śilādirya VII., dated (Gupta)-Sānīvat 447, they continued the use of the Gupta era for, in accordance with the three starting-points given above, respectively 286, 294, and 318 years at least, after the establishment of their own era! This surely involves an improbability far greater than any other, of whatever kind, that can be imagined in connection with the whole subject. And to this I will only add here that, during the first six generations, inclusive of Bhājārka, when they were mere feudatory Śeṇāpatis and Mahārājas, the Rulers of Vahalī had, as a matter of fact, neither the authority, nor the power and opportunity, to establish an era of their own at all; and that, if an era had been established by the first paramount sovereign of the family, Dhārasena IV., he would, like Haričavardhana of Kanauj, have dated it from his own accession, and not from the original rise of his family.

In order to arrive at any prospect of a final settlement of the question, what was wanted was a date for one of the Early Gupta kings, recorded in some era other than that which was specially used by them in their own inscriptions. This has now at length been found in my new Mandaśör inscription, which, composed and engraved in the year 539 (expired) from the tribal constitution of the Mālavas, gives us, through his feudatory Bandhuvarman, the date of the year 493 (expired) of the same era for Kumāragupta.

This was not the first instance that had been obtained of the use of this era, which may for convenience be called the Māla-sānīvat. For it is obviously identical with the era which is alluded to in the Kapaśwā inscription\(^{12}\) dated in the 796th year (expired) of the Mālava lords, and is also mentioned, under the specific name of the Māla-Kāla, in a fragmentary inscription, dated in the 336th year (expired), at ‘Gārāspār’ or ‘Gaṅgārāspār’ in Central India.\(^{13}\) But though, in commenting on this latter inscription, General Cunningham expressed the opinion that this Mālava era must be the same as the era of Vikramāditya of Ujjain, this point has not hitherto been capable of proof; for the reason that neither of these two dates gave sufficient details for actual computation. Nor does the inscription now brought to notice. But, in its mention of Kumāragupta, it answers the purpose equally well.

Turning to the Gupta inscriptions and coins, the earliest and latest dates that we have for Kumāragupta are, respectively, Gupta-Sānīvat 96 and 130 odd. The first is established by his well-known Bilsāj pillar inscription;\(^{14}\) and the latter, by one of General Cunningham's coins.\(^{15}\) Last, however, the coin date should be looked upon as at all doubtful, we must note also his Mankūrā inscription,\(^{16}\) dated Gupta-Sānīvat 129. And, of these extreme dates we may take Gupta-Sānīvat 113 as the mean.

Applying this to the various theories regarding the Epoch of the Gupta era, it represents—(1) according to Mr. Thomas' view, A.D. 191-92; (2) according to General Cunningham, A.D. 279-80; (3) according to Sir E. Clive Bayley, A.D. 303-4; and (4) according to Mr. Fergusson, A.D. 431-32.

Next, applying to these figures the date of Mālava-Sānīvat 435 (expired), recorded for Kumāragupta in the inscription under notice, we find that the initial point of the Mālava era must lie within a few years either way of (1) B.C. 302; (2) B.C. 214; (3) B.C. 190; and (4) B.C. 63-61.

The first three results, however, each entail the supposition of a brand-new era, hitherto unheard of, and entirely unexpected. At the same time, as regards the second possible result of about B.C. 214, we must not overlook the existence of certain coins, found in large numbers at Nāgar in the north of Mālava, about forty-five miles north of Kāši, and originally brought to notice by Mr. Carleyle,\(^{17}\) which have on them the legend Mālavādāna jayaḥ "the victory of the Mālavas," in characters ranging, in General Cunningham's opinion, "from perhaps B.C. 250 to A.D. 250." These coins show that the Mālavas existed, as a recognised and important clan, long before the time when, as I consider, their "tribal constitution," which led to the establishment of their era, took place; and so also, in the other direction, does the mention of them in the Allahābād pillar inscription, among the tribes.

conquered by Samudragupta, show that down to his time at least they maintained their tribal constitution and importance. And, if we were compelled to have recourse to a new era, these coins might justifiably induce us to select as its epoch B.C. 223, the date fixed by General Cunningham for the death of Asoka; which would make the present date of Mālava-Saṅvat 433 correspond with A.D. 270, or well on into the first decade of Kumāragupta’s reign according to General Cunningham’s theory. But this entails, as I have said, the supposition of the existence of an era, of which not the slightest indication has ever yet been afforded by the very numerous inscriptions that have now been examined from all parts of the country; and this is an expedient that must by all possible means be avoided. And, further, it forces the Kītā inscription of Mālava-Saṅvat 793, and the ‘Gyāraspur’ inscription of Mālava-Saṅvat 336, back to respectively A.D. 572 and 713; periods to which, from their alphabets, they cannot possibly belong. And thus,—since, within certain limits, paleographical evidence must be accepted,—it creates a paleographical difficulty that is insuperable. So also does the third result, to practically the same extent; and the first, to a still more marked degree.

The fourth result, on the contrary, satisfies all the paleographical requirements of the case. And it brings us so very close to B.C. 57, the epoch of the well-known Vikrama era,—an era, moreover, which by the tradition of later times is closely connected with the country of the Mālavas, through the name of its supposed founder, king Vikramaditya, whose capital, Ujjain, was the principal city in Mālava,—that we are compelled to find in it the solution of the question, and to adjust the equation of the dates thus,—Gupta-Saṅvat 113 (the mean date for Kumāragupta) + A.D. 319-20 = A.D. 432-33; and Mālava-Saṅvat 493—B.C. 57-56 = A.D. 436-37, which of course falls well within the seventeen years of Kumāragupta’s reign remaining after his mean date.

My new Mandosā inscription, therefore, proves:—(1) that Alinhūṁ’s statement, that the Gupta era began within a year or two on either side of A.D. 319-20, is certainly correct;—(2) that the rest of his statement, that this was the epoch of the extermination of the Guptas, and not of their rise to power, is as certainly wrong;—and (3) that, under another name, connecting it with the Mālava clan, the Vikrama era did undoubtedly exist anterior to A.D. 544, which was held by Mr. Ferguson to be the year in which it was invented.

This inscription is, I maintain, in itself sufficient to prove these points. But, if any hesitation should still be felt about accepting them, and if any further confirmation of them is required, we have only to turn to the Gōlmaṇḍhīpū inscription of the Mahānāma Śivādeva I. of Mānagiri in Nēpāl, discovered by Mr. C. Bendall, and published by him in this Journal, Vol. XIV. p. 97ff.

It is dated in the year 318, without any specification of the era. But the clue to the construction of its date is given by its mention of the Mahānāma Amśuvārman, as the contemporary of Śivādeva I.

Amśuvārman’s approximate date, viz., about A.D. 637, was very well known from Hiuen Tsang’s mention of him. And, as the Nēpāl series included three inscriptions of Amśuvārman himself, Nos. 6, 7, and 8, dated respectively in the years 34, 39, and 45 (?), of an unspecified era, and another, No. 9, of Jishyagupta, dated in the year 48, and mentioning Amśuvārman,—Dr. Bhagwandal Indrajit very properly referred these dates to the era established by Harshavardhana of Kannuj, and commencing with his accession in A.D. 600 or 609, with the results of A. D. 640-41, 645-46, 651-52 (?), and 654-55.

This much being quite certain, it follows that the date of 318 for Śivādeva I., the contemporary of Amśuvārman, must of necessity be referred to an era commencing just about three hundred years before that of Harshavardhana. And the era which exactly meets the requirements of the case is the one commencing A.D. 319-20; for then 318 + A.D. 319-20 = A.D. 637-38, which is in quite sufficient agreement with the rest of these results. The date of Śivādeva I. is thus broken away and lost.

16 See Beal’s Buddhist Records of the Western World, Vol. II. p. 81; also ante, Vol. XIII. p. 432, and Vol. XIV. p. 345. 17 The second symbol is doubtful, but it is either 4 or 5.
accordance with A.D. 640-41, the first date that we have for Ashóvarman.

We have now to consider how this era of A.D. 319-20 came to be introduced into Nepal. This can only have been effected through a conquest of the country, by either the Early Guptas or the Rulers of Valabhi. As to the Rulers of Valabhi,—I have already had occasion to remark that, for the first six generations, inclusive of Bhatárka, they were mere feudatory Sénapatis and Mahárajas; and these members of the family, at any rate,—even if we admit for the moment that they established this era,—cannot possibly have conquered Nepal, and cannot have had anything to do with the introduction of the era there. The first of the family who claimed to be a paramount sovereign is Dharasena IV., with the dates of 326 and 330, and with the titles of Paramabhatáraka, Mahárdjáthirajá, and Paramásvara, in common with all his successors, and also with that of Chakravartin, which, not being assumed by any of his successors, may perhaps indicate that his power was more extensive than theirs ever was. Now, in passing, if we refer his first date of 326 to A.D. 319-20, the result, A.D. 643-45, brings us to a very suitable period indeed for him to assume the position and titles of a paramount sovereign, viz. to the commencement of the anarchy which, as Matwan-lin tells us, attended the death of Harshavardhana, “the warlike lord of all the region of the north.” It ended in the complete disruption, for the time, of the kingdom of Kanauj. Ashóvarman became paramount in Nepal, and Adityasena in Magadhá; and the opportunity was of course taken advantage of by Dharasena IV., to assert his independence in the west of India. But, to say nothing of the improbability of the thing on other grounds, the fact that Ashóvarman became king of Nepal is in itself enough to prevent our admitting the possibility of a conquest of that country by Dharasena IV. Referring the same date of 326 to the earlier three proposed epochs, we have respectively A.D. 408, 497, and 520. For these periods there is, perhaps, no particular objection to our assuming, for the sake of argument, that Dharasena IV. may have extended his power over a considerable portion of Northern India. But the Valabhi charters, in which a conquest so extensive as that of the whole of Northern India and Nepal would most certainly have been recorded, give not the slightest hint of any such event; in fact, with the exception of the allusion to the overthrow of the Maitrakas by Bhatárka, from beginning to end they give absolutely no detailed information at all in connection with any of the successes claimed by the members of this family. And, even if Dharasena IV. did conquer Nepal, and did introduce there the era commencing A.D. 319-20, the question still remains, and cannot be answered,—Why should he act with such extreme inconsistency as to introduce there this supposedly unused era, instead of the Gupta era which he himself, and his successors, continued to employ for all the official purposes of their own kingdom?

Turning now to the Early Guptas, the case is very different. There can be no doubt that their era, whatever may have been its epoch, was well known in Nepal at an early date. Kumaradévi, the wife of Chandragupta I., was the daughter of Lichchhavi, or of a Lichchhavi prince; i.e. she belonged to the very family from which, according to Dr. Bhagwanlal Indraji’s inscription No. 15, the earliest historical rulers of Nepal sprang, and to which, as shown by his title of Lichchhavikutakata or ‘the banner of the Lichchhavi family,’ Śivadéva I. himself belonged. Further, in the Allahábád pillar inscription Nepal is expressly mentioned among the countries conquered by Samudragupta. And, finally, the Kahánu pillar inscription shows that Skandagupta’s empire extended at any rate up to the confines of the country. Now, in my paper on “The chronology of the early Rulers of Nepal,” I have shown that the Nepal Vañasvali has possibly preserved for us, unconsciously, a reminiscence, not only of the introduction of the Gupta era into that country, but even of the actual year of its introduction; viz. Gupta-Saṅsvat 88, when Chandragupta II. was on the throne. This special point is one for further investigation. But it is impossible to doubt that the Gupta era must have been perfectly well known in Nepal, and must have been used there. It is also precisely the era that would be adopted and hereditarily clung to by the Lichchhavis, connected as they were by
marrriage with the Early Guptas. And their special attachment to the era in which the date of Śivadeva's inscription is recorded, is shown by its being continued by his Licchhavi successors down to at least the year 435, as shown by Dr. Bhagwanlal Indraji's inscription No. 3, in spite of the systematic adoption meanwhile of the Harsha era by their neighbours, the Suryavarnas or Thakuri rulers of Kailasakottabahavasa. And, as I have shown above, the era in which Śivadeva's date is recorded, must have begun A.D. 319-20.

I submit, therefore, that, though it may not in itself prove the case in the same way that my Mandsor inscription does, Mr. Bendall's Gomādhijī inscription furnishes the most valuable corroboration that we could look for of the results derived from the Mandsor record; and,—though I shall be very glad to see the matter argued in this Journal, as well as it can be, from any other point of view,—that the two inscriptions together give absolutely conclusive proof of the correctness of those results.

SANSKRIT AND OLD-KANARESE INScriptions.

(Continued from p. 141.)

No. 162.—Mandsor Inscription of Kumaragupta and Bandhuvarman.

The Malaya years 493 and 529.

This inscription, which is now published for the first time, is from Dasar, or according to the official and more general form of the name, Mandasor, the chief town of the Mandsor District of Seindia's Dominions in the Western Malwa Division of Central India. It came to my notice through information given by Mr. Arthur Sullivan, who, in 1879, sent to General Cunningham, from Mandsor, a hand-copy of a fragmentary pillar inscription of a powerful king named Yasodharman. I saw this copy in 1883, and, recognizing in it the name of Mihirakula, sent my copyists, in March 1884, to take impressions of this fragment and of any other inscriptions that they might find. In the search made by them, they discovered the present inscription, and also an entire duplicate copy of the pillar inscription of Yasodharman, which had escaped the notice of Mr. Sullivan. I myself visited Mandsor in February 1885.

As recorded in the present inscription, and in another which is on a white stone built into the wall on the left hand inside the inner gate of the eastern entrance of the Fort, and is dated (Vikrama)-Samvat 1321 (A.D. 1264-65),

Guru (vāra) or Thursday, the fifth day of the bright fortnight of the month Bhadrapada,—the ancient Sanskrit name of the place was Daśapura, by which it is mentioned also in line 2 of an earlier Nāsik inscription of Ushavādā. This, in its modern form of Dasar, is the name by which, in preference to Mandsor, the town is still habitually spoken of by the villagers and agriculturists of the locality and neighbourhood, and even as far as Indor. And in some bilingual sanads or warrants, of about a century and a half ago, I found this form, Daśāpura, used in the vernacular passages, while the Persian passages of the same documents gave the form Mandsor. So, also, Paṇḍits still habitually use the form Daśapura in their correspondences. The local explanation of the name is that the place was originally a city of the Purānic king Daśaratha. But, on this view, the modern name should be Daśarathā. The true explanation evidently is that,—just as now the township includes from twelve to fifteen outlying hamlets or divisions; Khilchpur, Jankūpur, Kāmpurīya, Chandrapurī, Balāgūjrī, &c.,—so, when it was originally constituted,

1 We may compare the use, by Paṇḍits, of Ahiṣapura and Nakhapura for respectively Sampaṇgan and Ugāraṇ in the Belgaum District; except that it is doubtful whether these are original Sanskrit names, or only pedantic Sanskrit translations of original vernacular names.
it included exactly ten (daśa) such hamlets (purā). As regards the fuller form of Mandāsor, by which alone the town is known officially and is entered in maps, I cannot at present explain the origin of it. But Dr. Bhawvanlal Indrājī suggested to me that it may perhaps represent Manda-Dasāpura, “the distressed or afflicted Dasāpura,” in commemoration of the overthrow of the town, and the destruction of the Hindu temples in it, by the Muslims. And, as tending to support this suggestion, I would mention that one of the Pāṇḍits whom I questioned on the spot, gave me Man na daś or as another form of the name. The true explanation, whatever it may be, would probably be found in the Dasāpura-Mahātmya, which is extant, but which I did not succeed in obtaining for examination.

Exclusive of the outlying hamlets, Mandāsor consists of a fairly large town, close on the north or left bank of the river Siwan, with a Fort of considerable size between the town and the river. The Fort, which is of Musalmān construction, is said to have been built with stones brought from ruined temples at Madj, otherwise called Afzalpur, about eleven miles south-east of Mandāsor; and the foundations and walls of it are full of stones, both sculptured and plain, which evidently come from demolished Hindu temples. But, in addition to the magnificent columns which I shall describe in connection with the duplicate pillar inscription of Yāsōdharmar,—there are still sufficient remains, lying all about Mandāsor, to show that Mandāsor itself was full of ancient Hindu temples and other buildings, abounding with specimens of the very best style of architecture and sculpture. A full examination of the architectural remains, in the course of which further inscriptions would probably be discovered, was out of my power. But I noticed specially a very fine well just inside the eastern entrance of the Fort;—a colossal bas-relief image lying near this well; and a remarkably fine sandstone monolith in the hamlet of Khilichpur, on the south, across the river. This monolith is now partially buried, in an upright position. The part projecting above the ground is about 10' 0" high and 3' 9" square, covered with sculptures in the very best old style. A socket at the top shews that it supported a beam; and, as it is sculptured on all four sides, it cannot be the jamb of a doorway, but must be either an upright of an arch or a pillar of a temple. Exclusive of floral patterns towards the top, each face shews two panels of figure-sculptures, one above the other; and the villagers say that the monolith has been gradually sinking each rainy season, and that they can remember having seen six more similar panels of sculptures on each face; this would make the height of the monolith not less than at least thirty feet. From the sample furnished by the part that is still above the ground, this monolith well deserves to be entirely raised out of the ground, and the sculptures on it examined and reported on by the Archaeological Survey Department.

The present inscription is on a stone slab, apparently rather good and dark sand-stone, built into the wall on the right hand half-way down a small flight of steps leading to the river in front of a mediaeval temple of the god Mahādeva (Siva) at the Mahādeva-Ghāt, which is on the south bank of the river, just opposite the Fort, and I think, in the limits of the hamlet of Chandrapuri. There are no sculptures on the stone. The writing covers, except for a margin of about half an inch, the whole front of the stone, about 2' 7½" long by 1' 4½" high. It has been a good deal worn away about the centre of the stone, and also the stone is chipped at several places round the edges; but only a few letters here and there are really illegible, and these can in each case be easily supplied.—The characters give a good specimen of what may be called the Western Mālwa alphabet of the fifth century A.D. They belong, in general features, to the South India class of alphabets; but they include two letters borrowed from the Northern alphabets, viz. the distinct form of the lingual g, e.g. in taḍḍl, line being shewn to me, this turned out to be only a small four-sided obelisk, roughly four or five feet high and a foot or so square, of quite modern construction, with rude Nāgari writing on it which may perhaps be a hundred years old, but certainly not much more. My visit to this obelisk, which I had hoped might turn out to be of importance, led to my noticing on the way the monolith that I have described above.
6, and chāḍā, line 17, and also the rare lingual dh, e.g. in drīḍha, lines 9 and 11. The average size of the letters is 4°. — The language is Sanskrit; and with the exception of the opening Siddham and the concluding words in line 24, the entire inscription is in verse. — In respect of orthography, we have to notice (1) the occasional use of the jīkmāniya and upadhāgniya; e.g. jagataḥ-kahaya, line 1; ganaḥ-kham, line 8; pravisatiṣṭa-puṣqāṭi, line 2; and abhitāmrah-pāyāt, line 3; but not, for instance, in acaghūnālm kavac, line 5; pariḥ-śriyapā, line 14; rajaḥ-piṣṭurita, line 3; and pratimnātā pramudita, line 9; (2) the occasional doubling of t, dh, and th, in conjunction with a following r; e.g. chitṛēṇa, line 12; rddhra, line 18; and abbdha, line 6; (3) the same of th and dh, with a following y; e.g. patthyām, line 9; and svavdhāya, line 8; and (4) the same of dh, with a following r; e.g. addhādi, line 3.

The inscription, which belongs throughout to the solar form of worship, narrates in the first place how a number of silk-weavers immigrated from the Lāṭā vishaya or district into the city of Daśapura; and how some of the band took up other occupations, while those who adhered to their original pursuit constituted themselves into a separate and flourishing guild. It then refers itself to the reign of a king named Kumāragupta, who, from the description of him in line 13 as sovereign of the whole earth, can be no other than the well-known Kumāragupta of the Early Gupta dynasty. Under him, the governor at Daśapura was Bandhuvarman, the son of Viśavavarmman. It then proceeds to record that, while Bandhuvarman was governing at Daśapura, the guild of silk-weavers built at that city a temple of the Sun, which was completed when four hundred and ninety-three years had elapsed, “by (the reckoning from) the tribal constitution of the Malavas,” and therefore when the four hundred and ninety-fourth year (A.D. 437-38) was current, on the thirteenth day of the bright fortnight of the month Sahasya (December-January). Afterwards, under other kings, part of this temple fell into disrepair. And then it was restored by the same guild, when five hundred and twenty-nine years had elapsed, and therefore when the five hundred and thirtieth year (A.D. 473-74) was current, on the second day of the bright fortnight of the month Tapasya (February-March). This second date is, of course, the year in which the inscription was actually composed and engraved; since we are told at the end that it was all composed by Vatsabhaṭṭi, and the engraving throughout is obviously the work of one and the same hand.

Translation.
Perfection has been attained! May that Sun protect you,—who is worshipped by the hosts of the gods for the sake of existence, and by the Siddhas who wish for supernatural powers, (and) by ascetics, entirely given over to abstract meditation (and) having worldly attractions well under control, who wish for the final liberation of the soul, and, with devotion, by saints, practising strict penances, (who wish to become) able to counteract curses;

and who is the cause of the destruction and the commencing (again) of the universe! Reverence to that Sun,—whom (even) the Bhāhmanical sages, though they knew the knowledge of the truth (and) exerted themselves, failed to comprehend; and who nourishes the whole of the three worlds with (his) rays diffused in all directions; who, when he is risen, is praised by Gandharvas, gods, Siddhas, Kinnaras, and Naras; and who grants (their) desires to those who worship (him)!

whereas the neuter, spriṣant, in apposition with āghēṣhū, is what is required. This, however, would not suit the metre. The only emendation that suits the metre, is to alter the construction and read nabhōḥ spriṣantaṁ.

And victory; " Metro, Vasantatilaka.

Read virāya. | 41 Metro, Vasantatilaka.

42 Metro, Aśvīya; and in the next verse.

43 Metro, Mālīni. 44 Metro, Śūkṣa (Amsbūhhab).
that Sun, decorated with glorious beams, protect you,—who shines day after day with the mass of (his) rays flowing down over the wide and lofty summit of the lordly mountain of dawn, (and) who is of a dark-red colour like the cheeks of intoxicated women!

(L. 3.)—From the district of Liśa, which is pleasing with choice trees that are bowed down by the weight of (their) flowers, and with temples and assembly-halls of the gods, and with vikaraś, (and) the mountains of which are covered over with vegetation, to (this) city of Daśapura there came, full of respect,—first, in thought; and afterwards (in person) in a band, together with (their) children and kinsmen,—men who were renowned in the world for (skill in their) craft (of silk-weaving), and who, being manifestly attracted by the virtues of the kings of the country, gave no thought to the continuous discomforts produced by the journey. And in course (of time) this (city) became the forebear-decoration of the earth, which is adorned with a thousand mountains whose rocks are besprinkled with the drops of rut that trickle down from the sides of the temples of rattling elephants, (and) which has for (its) decorative ear-ornaments the trees weighed down with flowers. Here** the lakes, crowded with kāraṇḍavas-ducks, are beautiful,—having the waters close to (their) shores made variegated with the many flowers that fall down from the trees growing on the banks, (and) being adorned with full-blown water-lilies. The lakes are beautiful (in some places) with the swans that are engaged in the pollen that falls from the water-lilies shaken by the tremulous waves; and in other places with the water-lilies bent down by the great burden of their filaments. Here the woods are adorned with lordly trees, that are bowed down by the weight of their flowers and are full of the sounds of the flights of bees that hum loudly through intoxication (caused by the juices of the flowers that they suck), and with the women from the city who are perpetually singing. Here the houses have waving flags. (and) are full of tender women, (and) are very white (and) extremely lofty, resembling the peaks of white clouds lit up with forked lightning. And other long buildings on the roofs of the houses, with arbours in them, are beautiful,—being like the lofty summits of (the mountain) Kailāśa; being vocal with songs (like those) of the heavenly choristers; having pictured representations arranged (in them); (and) being adorned with groves of waving plantain-trees. Here, cleaving asunder the earth, there rise up houses which are decorated with successions of storeys; which are like rows of aerial chariots; (and) which are as pure as the rays of the full-moon. This (city) is beautiful (through) being embraced by two charming rivers,** with tremulous waves, as if it were the body of (the god) Smara (embraced) in secrecy by (his wives) Priti and Rati, possessed of (heaving) breasts. Like the sky with the brilliant multitudes of planets, it shines with Brāhmaṇas endowed with truth, patience, self-control, tranquillity, religious vows, purity, fortitude, private study, good conduct, refinement, and steadfastness, (and) abounding in learning and penances, and free from the excitement of surprise.

(L. 8.)—So assembling together, (and) day by day received into greater friendship by (their) constant associates, (and) honourably treated like sons by the kings, in joy and happiness they settled in (this) city. Some of them (became) excessively well acquainted with the science of archery, (in which the tilting of the bow is) pleasing to the ear; others, devoting themselves to hundreds of excellent achievements, (became) acquainted with wonderful tales; and others, unassuming in (their) modesty (and) devoted to discourses of the true religion, (became) able to say much that was free from harshness (and yet was) salutary. Some excelled in their own business (of silk-weaving); and by others, possessed of high aims, the science of astrology was mastered; and even to-day others of them, valorons in battle, effect by force the destruction of (their) enemies. So also others, wise, possessed of charming wives, (and) belonging to a famous and mighty lineage, are decorated with achievements that befet (their) birth; and others, true to (their) promises (and) firm in friendship

** The original has, as far as line 8, the relative construction, which I have changed, for convenience of translation, into the absolute.

** Of these rivers, one of course is the Śivanā, on the north bank of which the town stands. The other must be the Śunī, which now flows into the Śivanā about three miles to the north-east of the town.
with the accompaniment of confidence, are
skilled in conferring favours upon (their) intimates. (And so) the goddess shines gloriouslyall around, through those who are of this sort, and through others who,—overcoming
the attachment for worldly objects; being
characterised by piety; (and) possessing most
abundant goodness,—(are) very gods in an
earthly habitation.

(L. 11.)—(Just as) a woman, though endowed
with youth and beauty (and) adorned with
the arrangement of golden necklaces and betel
leaves and flowers, goes not to meet (her) lover
in a secret place, until she has put on a pair
of coloured silken cloths,—(so) the whole of
this region of the earth, is (almost superfluously)
adorned through them, (as if) with a silken
garment, agreeable to the touch, variegated
with the arrangement of different colours, (and)
pleasing to the eye.

(L. 12.)—Having reflected that the world is
very unsteady, being blown about by the wind
like the charming ear-ornaments, (made of)
spings, of the women of the Vidyākharas; (and
similarly) the estate of man; and also accumula
tions of wealth, large (though they may be),—
they became possessed of a virtuous (and)
stable understanding; and then; —

(L. 13.)—While Kumāragupta was reigning
over the (whole) earth, whose prudential
marriage-string is the verge of the four oceans;
whose large breasts are (the mountains) Sumeru
and Kailasa; (and) whose laughter is the
full-blown flowers showed forth from the
borders of the woods; —

(L. 13.)—There was a ruler, king Viśva
varman, 48 who was equal in intellect to Śakra
and Bṛhaspati; who became the most eminent
of princes on the earth; (and) whose deeds in
war were equal to (those of) Pārtha;—who
was very compassionate to the unhappy; who
fulfilled his promises to the miserable and the
distressed; who was excessively full of tendern
ess; (and) who was a very tree of plenty to
(his) friends, and the giver of security to the
frightened, and the friend of (his) country; —

(L. 14.)—His son (was) king Bandhuvār
man, possessed of firmness and statesmanship;
beloved by (his) kinsmen; the relative, as it
were, of (his) subjects; the remover of the afflic
tions of (his) connections; pre-eminently skilful
in destroying the ranks of (his) proud
enemies. Handsome, youthful, dexterous in
war, and endowed with humility, king though he
was, yet was he never carried away by passion,
astonishment, and other (evil sentiments);
being the very incarnation of erotic passion,
he resembled in beauty, even though he was not
adorned with ornaments, a second (Kāmadēva)
armed with the bow that is made of flowers.
Even to-day, when the long-eyed lovely women
of (his) enemies, pained with the fierce pangs
of widowhood, think of him, they stagger
about through fear, in such a way as to fatigue
(there) firm and compact breasts.

(L. 15.)—While he, the noble Bandhuvār
man, the best of kings, the strong-shouldered
one, 49 was governing this city of Daśā
pura, which had been brought to a state of
great prosperity,—a noble (and) unequalled
temple of the bright-rayed (Sun), was caused
to be built by the silk-cloth weavers, as a guild,
with the stores of wealth acquired by (the
exercises of their) craft;—(a temple) which,
having broad and lofty spires, (and) resembling
a mountain, (and) white as the mass of the rays
of the risen moon, shines, charming to the eye,
having the similarity of (being) the lovely
crest-jewel, fixed (in its proper place), of (this)
city of the west.

(L. 17.)—In that season 50 which unites
beautiful women with (their) lords; which is
agreeable with the warmth of the fire of the
rays of the sun (shining) in the gless; in
which the flames lie low down in the water;
which (on account of the cold) is destinate of
the enjoyment of the beams of the moon, and
(sitting in the open air) on the flat roofs of houses,
and sandal-wood perfumes, and palmleaf-fans,
and necklaces;—in which the water-lilies are
bitten by the frost; which is charming with
the humming of the bees that are made happy
by the juice of the full-blown flowers of the
śāhāra and priyākuśu-trees and the jasmine-

48. This again, is a second parenthesis, the real context
of the preceding verse being the description of Bandhu-
varman in line 14.

49. "high-shouldered."

50. The winter.
creepers; in which the *lavali*-trees and the solitary branches of the *nagand*-bushes are made to dance with the force of the wind that is harsh and cold with particles of frost; *(and)* in which *(the cold induced by)* the falling of frost and snow is derived by the close embraces of the large and beautiful and plump and bulky breasts and thighs of young men and *(their)* mistresses, completely under the influence of love; *(when)*, by *(the reckoning from)* the tribal constitution of the Mālavas, four centuries of years, increased by ninety-three, had elapsed; in *that* season when the low thunder of the muttering of clouds is to be welcomed *(as indicating the approach of warmth again)* — on the excellent thirteenth lunar day of the bright fortnight of the month Tāpasya; *(in the season when)* Kāmadeva, whose body was destroyed by Hara, develops *(his number of five)* arrows by attaining unity with the fresh bursting forth of the flowers of the *ubhaka* and *kētaba* and *sinduwāra*-trees, the pendulous *atimukta*-creepers, and the wild-jasmine; *(when)* the solitary large branches of the *nagand*-bushes are full of the songs of the bees that are delighted by drinking the nectar; *(and)* when the beautiful and luxuriant *vādha*-trees swing to and fro with the fresh bursting forth of *(their)* flowers, the whole of this noble city was decorated with *(this)* best of temples; just as the pure sky is decorated with the moon, and the breast of *(the god)* Śārṅī with the *kanētu*bha-jewel.** As long as *(the god)* Iśa wears a mass of tawny matted locks, undulating with the spotless rays of the moon *(on his forehead)*; and *(as long as)* *(the god)* Śārṅī *(carries)* a garland of lovely waterlilies on his shoulder; *(so long may this noble temple endure for ever!)*

*(L. 23.)* — By the command of the guild, and from devotion, *(this)* temple of the Sun was caused to be built; and this *(eulogy)* that precedes was, with particular care, composed by Vatsabhaṭṭi. Hail to the composer and the writer, and those who read or listen *(to it)*! Let there be success!

A GWALIOR INSCRIPTION OF VIKRAMA-SAMVAT 1161.

BY E. HULTZSCH, Ph.D.; VIENNA.

Besides the large Sāsahā temple inscription of Mahipāla, which has now been properly re-edited by Prof. Kielhorn *(ante, p. 33 ff.)*, Dr. Rajendralal Mitra has transcribed and *translated* also the following mutilated inscription,1 discovered by General Cunningham in the fortress of Gwalior2 and now preserved in the Museum at Lucknow, where I copied it. As the letters of this inscription, so far as they have been preserved, are large and distinct, Dr. R. Mitra has misread only about a dozen syllables. But he has not attempted to decipher that portion of the first line which is still readable, and which contains no less than three names of royal personages.

And he has failed to observe that the genealogy of the kings closes with stanza 9, although — if not the context — the sign of interputation after that stanza might have attracted his attention. Manoratha and Madhvasūdana were no kings of Gwalior,3 but the former was the secretary of Bhavanapāla, and the latter a grandson of Manoratha. The date of the inscription falls within the reign of Mahipāla's successor, whose name has been lost in stanzas 7 to 9.

The contents of the inscription are, in brief, as follows: — Stanza 1 gives the name of Bhavanapāla, who is the No. 5, Mālavā, also called Bhavanapāla and Trailōkamalla, of

---

Prof. Kielhorn's paper, ante, p. 35.—His son (st. 2) was Aparájita, Prof. Kielhorn's No. 6, Dévapála. —The son of Dévapála (st. 3), and the son's son of Bhuvanapála, was Padmapála, Prof. Kielhorn's No. 7 of the same name.

Of stanza 4 enough does not remain to show its purport.—Stanzas 5 and 6 give the name of Mahipáladeva, Prof. Kielhorn's No. 8 of the same name, the king of Göpali kára. —Stanzas 7 to 9 seem to refer to the death of Mahipáladeva, and must have recorded the name of his successor; this name, however, is not now extant. At the end of stanza 9, a peculiar sign of punctuation marks the close of the vaikkalali; thus—

The incomplete stanza 10 seems to have contained an invocation of the god Bhava (Siva) and of his wife Aparájita (Umba), by which the genealogy of the builder of the temple was introduced.—Stanzas 11 to 13 give the name of Mânóratha of Mathurá, the secretary of Bhuvanapála, who was married to Bháva (Siva). —His son (st. 14 to 16) was Mánichiandra, who caused to be built a temple (kirtana) containing statues of Svaráti (Siva) and other gods, and who married Rásagati (?). —Their son (st. 17 to 20) was Mahusudana. —His younger brother (st. 21 and 22) was Áśchandra, who caused a temple (Siva) to be built.

Stanza 23 records that the inscription was composed by the Nirgonda Páthaka Yaśodāvāna. —

Stanza 24 contains an invocation of the god Bhava (Siva).

The concluding prose passage records that the linga of the temple mentioned in stanza 22 was set up on the sixth day of the bright fortnight of the month Mágha, when eleven hundred and sixty-one years had elapsed from the time of king Vikramáka. 

The yanuka proves that Aparájita has to be taken as a proper name and a bherudá of Dévapála, whose name occurs in stanza 3.

This seems to be the original form and the immediate source of the modern name 'Gwalior,' or correctly Gópáli kára. In Prof. Kielhorn's verses 8 and 31, the name that is used is Gópáli kára, 'the mountain of Gópa;' and in other inscriptions Gópáli kára and other synonyms.

Stanza 12.—Brièreaspati (even) is unable (Garvar káhá) to praise (sufficiently) the knowledge of the essence of arithmetic of all manner of writing (lips), the virtues, and the deeds of this man, who used to write down the expenditure, the income, the commands, and the compositions of King Bhuvanapála.

This may be the small Sáhabhá temple; Archqol, Surv. Ind. Vol. II. p. 362. On kirtana, 'a temple,' see ante, Vol. XII. p. 229, 239.

* For the probable site of this temple see Archaeol. Surv. of Ind. Vol. II. p. 361 and Plate xxxvii.

* Probably the word pristimani has to be supplied with gopikás áthah, Yásódeva modestly calls himself 'the home of the arts, whose banner is poetry displayed in the six Bhisáhá.' What these six Bhisáhá are, we learn from a stanza quoted by Jñánsaka on stanza 34 of the 25th canto of Manahí's Srikrishnacharita:

...Bhikshu, that is Parshvara, the Lord...

Compare also Kalhí's Rájatarangini, VII. 611, where prince Harsha is called navas-bháhákas sat-kárti. Yásódeva was a friend of the poet Manikájás, who composed the Sábábá inscription, and he it was who wrote that inscription. There he is called Dipamárácaka, and described as adha-bháháka kárti (ante, p. 46).

* Read mukul (मुकुल).
3.—On some doubtful Vārttikas.

While trying to reconstruct the Vārttikas of Kātyāyana from the Mahābhāṣya, I have never ventured to hope that my attempt would from the beginning be successful in every particular. I indeed feel convinced that the general principles which I have followed are correct, and I believe that my edition is likely to present a fairly true picture of what Kātyāyana’s work was like, before it was embodied by Patañjali in his own work. But I have always been ready to admit, that, in individual cases, the comparison of older or better MSS. than those are which I had at my disposal, the superior knowledge of other scholars, or my own researches, may prove that I have been wrong; and there certainly are Vārttikas in my edition, about whose right to be there I myself feel doubtful, just as in that portion of the text which I have assigned to Patañjali, there occur some statements which may have to be regarded as Vārttikas. With the permission of the Editors, I intend in this Journal to discuss some of those doubtful Vārttikas, and I hope that scholars who are versed in the subject, and to whom ancient MSS. are more readily accessible than they are to myself, will take an interest in the matter and assist in the final settlement of a question which is of some moment for the history of Sanskrit grammar.

Not counting the 14 Pratyāhāra or Śiva-sūtras, the total number of rules of Pāṇini’s Aṣṭādhyāyī in the published text is 3983. According to my edition of the Mahābhāṣya, Kātyāyana has appended notes to 1245 rules only, and Patañjali has, independently of Kātyāyana, attached remarks of his own to 468 other rules. The remaining 2270 of Pāṇini’s Sūtras are not directly treated of in the Mahābhāṣya, but I may state incidentally that by far the greater number of them have either been actually quoted by Patañjali, or can

---

13 Cancel the anāśavastra.
be shown to be necessary for the formation of words which have been made use of by that scholar in the course of his arguments.

As Kātyāyana in his Vārttikas has treated of somewhat less than a third of Pāṇinī's rules, and as he has not told us in figures to which particular rule he intended to append a remark or a set of notes, it might be expected that he would have endeavoured to remove our doubts in this respect by some other device, that in some way or other he would have pointed out the Sūtra, to which a Vārttika or a string of Vārttikas must be understood to belong. And I believe that he really has done this, and that the device which he adopted furnishes a means of occasionally testing the accuracy of the MSS., and tends to enable us in a number of doubtful cases to distinguish between his own remarks and those of his successor and commentator Patañjali.

When in the MSS. we examine what in accordance with the general method of the Mahābhāṣya ought to be regarded as Vārttikas, we find that in the case of about 1200 Sūtras the first of a set of Vārttikas, or the one Vārttika that may have been appended to a rule, contains some distinct reference to that rule; that it is worded in a manner which at once renders it apparent to which rule of Pāṇinī's the Vārttika or the string of Vārttikas belongs. No less than 131 times Kātyāyana has repeated a whole rule of Pāṇinī's, absolutely unaltered, at the commencement of the first Vārttika which he was attaching to that rule. In numerous cases a first Vārttika contains the whole rule to which it belongs, altered only so far as to allow of its being construed with the other words of the Vārttika. In a very large number of instances a first Vārttika commences with the first word or words of a rule, or repeats that portion of it to which the remark contained in the Vārttika is meant specially to refer. Thus, in the case of 24 rules of Pāṇinī's which teach the meaning of technical terms, it is the technical term taught in a rule, compounded with the word रिक्तस्य, that is placed at the beginning of a first Vārttika. Similarly, in the case of about 50 rules which teach the addition of suffixes, the particular suffix taught in a rule, compounded with the word निर्देश, is made to head the Vārttika or Vārttikas attached to a rule. For

those who wish still further to pursue this subject, I may add that there are between 25 and 30 instances, where the reference contained in a first Vārttika is not to the rule under which it is actually placed in the Mahābhāṣya, but to a preceding rule, or where a Vārttika, which according to the Mahābhāṣya heads the Vārttikas of one rule, really belongs to the Vārttikas of the preceding rule, and that a few times we are referred by a Vārttika not to Pāṇinī's rule itself, but to the Gaṇap appended to it. Thus much is rendered certain even by a study of the MSS., that in the vast majority of cases Kātyāyana has clearly indicated the rules to which his notes refer, and the presumption therefore is that he has intended to do so everywhere. If his Vārttikas were taken out from the Mahābhāṣya and printed as a separate work, we should have no difficulty in pointing out the Sūtra to which any given Vārttika or number of Vārttikas belong.

The case is different with many of the notes, which Patañjali has appended to Pāṇinī's rules. When Patañjali tells us रिक्तस्य रिक्तस्य रिक्तस्य (Ed. II. p. 279, 19), we suspect indeed that we are directed to add a certain suffix, which has been taught by Pāṇinī, to रिक्तस्य रिक्तस्य रिक्तस्य, and that that suffix is रिक्तस्य, we know only when Patañjali's note has actually been appended to or placed under P. IV. 2, 43. What Patañjali has taught in this particular instance, Kātyāyana would have expressed in a sentence like रिक्तस्य किँकॉर्य रिक्तस्य किँकॉर्य रिक्तस्य, a sentence from the wording of which it would have been clear at once that the suffix to be added is रिक्तस्य, while from the position assigned to it in the order of the Vārttikas, we should have inferred with certainty that the suffix रिक्तस्य alluded to is the रिक्तस्य taught by Pāṇinī after the suffix रिक्तस्य; in other words, the रिक्तस्य of P. IV. 2, 43. Similar rules of Patañjali's occur under P. III. 1, 16 निर्देश, P. III. 1, 145 निर्देश, P. III. 3, 17 निर्देश, P. V. 2, 129 निर्देश, P. VII. 2, 68 निर्देश, and elsewhere, and make it clear that Patañjali did not consider it necessary to indicate, by the wording of his notes, to which of Pāṇinī's rules a particular note refers. His notes of this kind receive a meaning only when they are actually put under

in this case the primitive words have no gender at all, and they are singular, daal, or plural, whereas the words formed by कुप्त have a gender, viz. are neuter, and are all singular. This must be accounted for, and is accounted for, by the final portion of the Vārttika which teaches that सुवार्तिका is the termination of a derivative formed by the addition of कुप्त to a primitive word which is a verbal form. Unwilling as I am to alter the text, I would suggest that we ought to read प्रतिवृत्ति कुप्ति वातावरणानि.

P. V. 4, 66, समासानन्: — Vārt. विषुवं वृजानं सीताभिसमानानि. Here we expect to be told in the Vārttika, of what समासानन्संस्तता are the ज्ञानम्: The word प्रतिवृत्ति appears altogether 41 times at the commencement of a Vārttika, but in all these cases that, whose purport is stated in such a Vārttika, has been given to us in a previous Vārttika (Vol. I. p. 87, l. 17; 97, 13; 154, 9; 159, 9, etc.). Seventeen times प्रतिवृत्ति stands in the middle of a Vārttika, and it is then preceded by a word in the Locative or Genitive, which contains that of which the purport is to be explained by the Vārttika (Compare e.g. Vol. II. p. 47, l. 1 कुप्तिवृत्तिः स्थ्यं ज्ञानं हिंसानि, p. 402, l. 3 विपरीते स्थ्यं ज्ञानं विश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वासयोऽविश्वास�ोऽविश्वासयोऽवि
instead of लते, धूर, and गृहु; the two statements
given above can nevertheless not be regarded as 
Vārttikas, so long as the first of them contains
no reference to Pāṇini’s rule. This objection
would be removed, if we were allowed to read
अन्तग्रह चलाणां नेत्रीते.

P. III. 1, 17, शाक्यकलङ्कालं शाक्यनि करारे;—
Vārt. 1 शुभितृद्विताप्रश्नम्; Vārt. 2 नीलाशथा. The
MSS. kK. omit the two Vārttikas and read 
शुभितृद्विताप्रश्नम् च च; this reading is exactly the same
we find in the Kāśikā-Vṛttī.

P. IV. 1, 85, पिनदिन्यानिक्स्यः साक्षात् प्रसा रणानु:-
Vārt. 1 शुभितृद्विताप्रश्नम् च च; Vārt. 2 नीलाशथा. Several
MSS. omit this and some of the following Vārttikas
up to Vārt. 8. In none of the eight MSS.
which I have compared does the first Vārttika
contain any indication of the Sūtra to which it
belongs. We may conjecture the correct reading
of the Vārttika to be शुभितृद्विताप्रश्नम् च च, and this reading we actually
find in the Benares edition of the Mahābhāṣya.

P. IV. 3, 131, श्रीतिसार:।—Vārt. 1.
कौरिं श्रीनाशिलायाम्; Vārt. 2 आयोध्यार्जुः कर्मनि निषलोच्ययेत्।
These two Vārttikas (which have been received
into the text of Pāṇini’s grammar) have nothing
to do with the particular rule P. IV.
3, 131, but they may be regarded as additions
to the whole chapter, which begins with the
rule 129 and ends with 131. Similarly the
Vārttika अन उपपादालोबिन उच्चोऽपि शुभितृद्विताप्रश्नम्
has been placed under P. IV. 1, 75, which is
the last rule in the chapter treating of the
formation of feminine bases; आशुतोम्यान्त्रप्रेरि
वाहिकासिनां इन्कुलान्ततासम्बन्धानि, under P. VI.
2, 91 etc.

P. VI. 3, 109, श्रीविकािवस्तिरायाम्याः।—Vārt. 1
श्रीविकािवस्तिरायाम्याः। Several MSS.
omit this and some of the following Vārttikas.
We must, it seems, assume that श्रीविकािवस्तिरायाम्
and other words explained in the Vārttikas had
been put down in the Gaṇapīṭha, and that
the reference therefore is to the Gaṇa. Similar
references to Gaṇas we have on P. IV.
1, 4; IV. 1, 151; IV. 2, 49; and V. 2, 116.

P. VI. 3, 122, श्रीतिसार:। तस्मान्य श्रीतिसार:।—
Vārt. 1 साक्षात् कौरिं; Vārt. 2 प्राणिवाक्षेपीं शरीरस्य। Both Vārttikas are omitted by some of
the MSS. The reference to Pāṇini’s rule may
consist in this, that तस्मान्य and श्रीतिसार:
are bases formed with the suffix यम्, which is mentioned
in the rule. A similar case we find in अन्तग्रह
पलितान्त्रम्; on P. IV. 1, 39, which undoubtedly is a Vārttika, and where अन्तग्रह and पलितान्त्रम्
are at once recognised to be such words as are
spoken of by Pāṇini in his rule.

P. VIII. 2, 17, राजसी।—Vārt. 1 इत्यत्वः; Vārt.
2 गृहिञ्जासुध्र। The wording of these two Vārttikas may perhaps be accounted for in a similar
way. The Vārttikas preceding them belong
undoubtedly to P. VIII. 2, 16; and when then
immediately afterwards Kātyāyana teaches
something regarding two bases that end in यि, we
must understand him to refer to that यि which
is spoken of by Pāṇini in the rule following
upon VIII. 2, 16.

I will finally mention a few cases, in which
it may be doubtful whether a certain statement,
which in my edition has been ascribed to
Patañjali, might not, for the reasons which I
explained in the above, perhaps be better
regarded as a Vārttika.

On P. I. 1, 75, उपपादालोबिन उच्चोऽपि श्रीविकािवस्तिरायाम्। I have printed
as a remark of Patañjali’s उपपादालोबिन उच्चोऽपि श्रीविकािवस्तिरायाम्। I was at the time surprised,
that Patañjali should have repeated the words
of Pāṇini’s rule, but the MSS. then at my
disposal did contain those words, and they
did not in any way suggest the idea, that a Vārttika
might have disappeared. I now find that the
MS. A. does omit उपपादालोबिन उच्चोऽपि श्रीविकािवस्तिरायाम्,
and further consideration has convinced me, that either the MS. A. is right or that a
Vārttika has disappeared; on the latter alternative we should have to read उपपादालोबिन उच्चोऽपि श्रीविकािवस्तिरायाम्।

On P. II. 1, 23, श्रीतयः। I have assigned to
Patañjali the statement श्रीतयः प्रयोगस्य समानान्तः
प्रयोगस्य, but I now feel almost certain that
this is really a Vārttika. When however
we compare such Vārttikas as अन्तग्रहम् वाहिकासिनां
प्रयोगस्य समानान्तः; on P. I. 1, 41,
श्रीतिसार:। प्रयोगस्य हिंदौणे; on P. III.
1, 39, or श्रीतिसार:। प्रयोगस्य हिंदौणे; on P. V.
1, 1, we should expect to read श्रीतिसार:। प्रयोगस्य समानान्तः।

On P. IV. 1, 15, वार्तोः। I may have been
wrong in rejecting the reading of the MSS.
Eg:B., which before आपेक्षयाः have the Vārttika
आपेक्षयाः दोषण्याः। प्रतिपाद्यम्। But if,
what seems very probable, this is really a
Vārttika, I should expect Patañjali’s explanation
to be आपेक्षयाः कथीयम्। कस्य प्रयोगः।
प्रतिपाद्यम्। हि मयं भुव। इत्यत्वः। Compare e.g.
Vārt. 1 on P. III. 4, 2, Vārt. 1 on P. VI. 1,
6: Vārt. 1 and 2 on P. VI. 1, 58; Vārt. 1 on P. VI. 1, 108; Vārt. 1 on P. VI. 1, 171.

On P. V. 4, 103, अनसन्नाविश्वासकारण, I have given as a remark of Patañjali's the statement अनसन्नाविश्वासकारणै: वाच तत्त्वम: the MS. a. omits here अनसन्नाविश्वासकारणै: and g; a very indifferent MS., has the same words twice. The repetition of Pāṇini's rule at the beginning of this statement must again make us suspect that a Vārttika has disappeared in the MSS., and that we ought to read अनसन्नाविश्वासकारणै: बौक्तिक पक्षम्. It is true that Kātyāyana, when he wishes to make a rule of Pāṇini's optional, generally employs the word वाच तत्त्वम् (compare e.g. Vārt. 1 on P. III. 1, 27, Vārt. 1 on P. V. 1, 10, Vārt. 1 on P. VIII. 2, 103), yet on P. III. 3, 156 हृद्याविश्वासकारण, we have the Vārttika हृद्याविश्वासकारण, to which अनसन्नाविश्वासकारणै: बौक्तिक पक्षम् would be similar in every respect.

The doubts and conjectures, which I have expressed in the above, are in the first instance suggested by the principle that the first Vārttika on a rule must contain some distinct reference to that rule. There are other matters, on which I should wish to elicit the opinions of Indian scholars.

We frequently find in the Mahābhāṣya statements, which end with the word उत्तम, 'something has been said,' 'a remark has been made.' They are invariably followed by विस्तुक्तत: 'what has been said?' When we examine the answers to this question, we are struck by the fact, that almost every one of them consists in one or more Vārttikas met with in different parts of the Mahābhāṣya. We are thus led to the conclusion that the statements ending with उत्तम, are themselves Vārttikas, and that in them Kātyāyana is referring us to other Vārttikas, which generally precede, sometimes follow, the Vārttikas ending with उत्तम. And our belief in the soundness of this conclusion is strengthened, when we examine those statements a little more closely.

When we try to ascertain what Vārttikas Kātyāyana may have appended e.g. to P. I. 1, 60, अतिदृष्ट न, the first Vārttika to present itself will be अनवार्तितार्थेनापरापरापरापनम्. It is explained by Patañjali as other Vārttikas are, with this difference only that the comment on the words preceding उत्तम has taken the form of an introductory remark. It does contain

the necessary reference to Pāṇini's rule, for like other Vārttikas on सुन्दर-rules it does begin with the technical term defined by Pāṇini, compounded with संबन्धम्. It must be considered a Vārttika, because the wording of the sentence which in my edition is given as Vārt. 2, and which undoubtedly is a Vārttika, shows that there must be a Vārttika preceding it, and because in the preceding we find nothing that could possibly be regarded as one, excepting our हृद्याविश्वासकारणपक्षम्. "The remarks that have been made," and to which we are referred by उत्तम, are हितकारोपथिनिर्देश, and निदुर्दृष्टिनिर्देश, the former being the Vārt. 3 on P. I. 1, 44, and the latter the Vārt. 9 on P. I. 1, 1.

Now, what I have proved in this one instance may be shown to be true elsewhere, and it becomes evident, that by the Vārttikas described Kātyāyana has furnished a means of testing to some extent the value of any attempt at reconstructing his work. For whenever we find a statement of his ending with उत्तम, our Vārttika-पाठ, if it be right, must contain the Vārttika or Vārttikas, to which he refers us. And when, to give a somewhat striking instance, in the Vārt. 10 on P. I. 2, 45 he tells us "that he has said something regarding the question as to whether letters have a meaning or not," and when, in order to show what Kātyāyana has said, Patañjali quotes the seven Vārttikas on pp. 30 and 31 of Vol. I. of my edition, exactly as they have been printed there, it will appear probable that the principles followed in the reconstruction of the Vārttikas were correct. On the other hand, if in the Mahābhāṣya it should have been answered differently, it must be possible to substitute a Vārttika or Vārttikas for the answer actually given by Patañjali. If in any particular case it should be found impossible to point out the Vārttika to which Kātyāyana could have referred us, such a case should either make us doubt our having fully understood the drift of his remarks, or suspect some fault in our method, or in the readings of the MSS. used for the reconstruction of his work.

In my edition the number of Vārttikas ending with उत्तम is 45; not one of them has been given in the Calcutta edition of Pāṇini. 38
times we are referred by उक्तम् to something which precedes the Vārttika containing the word उक्तम्: 7 times to what follows. 36 times Patañjali has answered the question किस्मम् by quoting one, two, three, five, or even seven Vārtikas exactly as they are given in the edition; thrice he has considered it sufficient to quote only part of a Vārttika; and four times he has quoted a Vārttika, but completed it by words of his own. Once (in Vol. I. p. 229), instead of quoting the actual text of the Vārttika, he has given his own explanation of it. Once only has Patañjali referred us to a remark, which is purely and exclusively his own, and it is this particular case that has induced me to discuss this matter under the head of the (as yet) doubtful Vārtikas.

To the rule P. VI. 4, 66, Kātyāyana append the exception (Vārt. 1), that हेण is not substituted for the final यह, यात्, etc., before a suffix commencing with the letter यह, and as an instance in point he quotes the word युस्मात्, which occurs e.g. in Vāj. S. VI. 19. Patañjali then raises the question, how with such an exception one is to account for the words द्वीरी and पांकरी, in which हेण apparently has been substituted before a suffix commencing with यह. This question is answered in the sentence (Vārt. 2) द्वीरी पांकरी कौनसी “as to द्वीरी and पांकरी you are referred to what has been stated”; and Patañjali by way of explanation tells us that the statement alluded to is नामशब्दम् | किन हेण | तत्त्वप्राप्तिप्रसंस्करणम् (“here we have no substitution of हेण for the अर्थ of यह and यात्, but that of Saṃprasaṇa for the यह of यह and यात्, (together of course with the operations attendant on or caused by the substitution of Saṃprasaṇa).”

Now the statement quoted by Patañjali is certainly not a Vārttika, but is a remark made by Patañjali himself in Vol. III. p. 197, l. 22, and the alternative we have to face is this: either Patañjali is wrong in citing his own words instead of quoting a Vārttika, or the MSS. are wrong in reading द्वीरी पांकरी कौनसी किस्मात्. We must either point out the Vārttika, which Patañjali should have quoted, or substitute for द्वीरी पांकरी कौनसी किस्मात् words such as उक्तम्. I confess that, without having examined other MSS., I do not venture to express any decided opinion; should such an examination, however, prove favourable to the retention of the second Vārttika, I might probably suggest that Patañjali ought to have referred us to the Vārttika वाक्योत्तेको संसरणां च on P. III. 2, 178.

Of more frequent occurrence even than the Vārtikas described, taking them all together, is another Vārttika, to which the same general remarks are applicable,—I mean the Vārttika उक्तम् यात्. It has been shown elsewhere, that Kātyāyana has not merely stated his doubts and objections in regard to some of Pāṇini’s rules, but that often he also has shown how those doubts may be solved and the objections removed, and it is mainly for the latter purpose that the Vārttika उक्तम् यात् has been employed by him. For, when making use of this phrase, he thereby intimates that an objection raised is met, or an additional rule rendered unnecessary, by some Vārttika or Vārtikas in another part of his work, Vārtikas to which we are referred by the very words उक्तम् यात्, and which after the usual question किस्मात् are generally pointed out by Patañjali. On P. III. 1, 30, after having stated (Vārt. 1 and 2) that the Ambändha यात् of the suffix विक्रमित्र यात् by P. I. 1, 5 prevent the substitution of Vṛiddhi in कामयते, Kātyāyana adds (Vārt. 3) उक्तम् यात् “or it is as stated”; in other words, he refers us to the Vārt. 4 on P. I. 1, 5, in which he himself has explained why that rule of Pāṇini’s can have nothing to do with कामयते. In Vol. III. p. 2 and also p. 440 he similarly refers us to the four Vārtikas 2-5 on P. I. 1, 21, in Vol. II. p. 242 to the six Vārtikas 4-9 on P. IV. 1, 183, and so elsewhere. Here too we must in every case be able to point out the Vārtikas to which Kātyāyana can have referred us, and the probability here also is, that there is something wrong in our work or in the MSS. which we have followed, when we are unable to do so.

In my edition the phrase उक्तम् यात् occurs as a Vārttika 55 times; among the Vārtikas appended to Pāṇini’s rules in the Calcutta edition I have not found it once. In 33 out of these 55 cases Patañjali has cited the Vārtikas, to which we are referred by उक्तम् यात्, exactly as they are found in the edition. In 10 other cases he has either quoted only part of a Vārttika, or quoting a whole Vārttika he has rendered its meaning more easily intelligible by adding words of his own, or he has given in
his own words the sense of a Vārttika, not the actual text of it. Twice (Vol. I. p. 194 and Vol. II. p. 183) Patañjali refers us first to a Vārttika, and afterwards, objecting to Kātyāyana's reasoning, to remarks of his own; and three times (Vol. I. p. 225, p. 433; and Vol. III. p. 223) he refers us to Vārttikas and at the same time to other statements, which it is unnecessary to discuss here. Five times (Vol. I. p. 141; Vol. II. p. 427 and 433; and Vol. III. p. 333 and 416) he has referred us only to remarks of his own, but in these cases it is easy to point out the Vārttikas which he should have quoted. Thus by the Vārttika उक्त त्यो on P. V. 3, 83 and P. V. 4, 27, Kātyāyana can have referred us only to his Vārttikas 6 and 7 on P. IV. 1, 92, where Patañjali himself has given the very examples कुन्तु कुंदवत्स; etc., the gender of which has occasioned Kātyāyana's remarks on P. V. 3, 83.

From this general survey it will appear then, that in 53 cases out of 55 we have either been actually referred to the Vārttikas, to which allusion is made by the phrase उक्त त्यो, or that we, at any rate, can point out the Vārttikas, which should have been cited by Patañjali. It is different with the two remaining cases, on which that very account demand a more detailed discussion.

On P. II. 3, 8, Kātyāyana proposes to add the rule (Vārt. 1), that प्रति etc., when conveying the meanings spoken of in P. I. 4, 90, etc., govern the Accusative, such a rule being considered necessary to prevent the employment of the Locative and Ablative cases taught in P. II. 3, 43, and P. II. 3, 10; and Patañjali adds that Kātyāyana's rule would prove advantageous also in enabling us to dispense with the word अन्तर्गत in P. II. 3, 43. The Vārt. 2 उक्त त्यो would lead us to expect that in the sequel Kātyāyana's additional rule should have been rejected by means of some other Vārttika of Kātyāyana's. In reality Kātyāyana's suggestion has been met, as regards the Locative, by the remark that Pāṇini in his rule II. 3, 43, has said अन्तर्गतेन, and, as regards the Ablative, by showing that for reasons given the परि in P. II. 3, 10 can only be the परि spoken of in P. I. 4, 88, not the परि of P. I. 4, 90; nor do I see how it could have been met in any other way. Such being the case, I consider that the words उक्त त्यो कुन्तु कुंदवत्स; at the top of Vol. I. p. 447 of my edition are wrong and must be struck out, notwithstanding the fact that they are given by all the MSS. hitherto examined by me.

Similarly, I, for the present, believe that the MSS. are wrong in giving as a Vārttika what is now Vārt. 3 on P. VIII. 1, 15, for there too the statement लिङ्कूरिकवाचणेतं लोकाभ्यावाचित्स्त्व, to which we appear to be referred, is not a Vārttika. That statement occurs as part of Patañjali's commentary, e.g. in Vol. I. p. 390, 1, 18, where we certainly might have expected Kātyāyana to allude to it, had it been possible for him to do so. It occurs too in Vol. II. p. 418, 1, 24, where the Kāśmir MS. appears to us right in omitting before it the words उक्त त्यो कुन्तु कुंदवत्स, which have found their way into all the Dēvaṇāgarī MSS., just as the phrase उक्त त्यो has found its way into some of the MSS. in Vol. II. p. 173, 1, 23. On the other hand, I will not conceal that, in Vol. II. p. 198, 1, 15, Patañjali has introduced the statement लिङ्कूरिकवाचणेतं लोकाभ्यावाचित्स्त्व by the words असाध्यातेन, and that at any rate Nāgājībhaṇṭa understands the Āchārya there referred to be the Vārttikakrit.2

Besides the Vārttikas which I have treated of in the above, there are some others, which I should call 'doubtful Vārttikas,' but to which I have nevertheless assigned a place in my edition, because in a first attempt I wished to be guided rather by the MSS., than by my own views as to what ought to be a Vārttika and what not. One or two examples may show, that at least I have not been quite unconscious of the objections that might be brought against the text given by me. By the Vārt. 10 ब्रह्मचारिणं पत्नी on P. I. 1, 23, my edition makes Kātyāyana, who in the preceding Vārttikas has tried to amend Pāṇini's rule, reject that rule altogether,—reject it, without giving any reasons, and without intimating that the rejection of the rule would be an alternative proceeding. Now this is altogether contrary to what we see Kātyāyana do else-

2 I may add that Kātyāyana has referred us to other Vārttikas of his also in the Vārt. उक्त त्यो कुन्तु कुंदवत्स; in Vol. I. p. 55; in the Vārt. उक्त त्यो कुन्तु कुंदवत्स; in Vol. I. p. 463, and p. 464.
where. Kātyāyana always proves his propositions; he always shows what is the good of his proposals; when he suggests an alternative course, he tells us that he does so. When he rejects the rule P. III. 3, 119, he does so by saying गोवितकानीयमव्ययेन प्रवेदायमव्ययवायो निवन्धति; when, after having discussed the rule P. I. 1, 44, he desires to show that that rule may be dispensed with, he says (Vārt. 19) अद्वितिया यदि विविधायाम्. I am convinced then, that on P. I. 1, 23, Kātyāyana could not have simply said वहननमहत्तम, and that the MSS. are wrong. What appears to be a Vārttika is really a translation into the language of Kātyāyana, of Patañjali's statement बताते न देवमन्त्रयं वहननमहत्तम।—Chance repetition of Patañjali's words has caused the reception into the text of false Vārttikas elsewhere. In his Vārt. 5 on P. I. 4, 52, Kātyāyana states that that rule does not apply to अत्र, खान्, मी, and वह; in the following Vārt. 6, which is given by all the Dēvanāgarī MSS., he is made to say that Pāṇini's rule does not apply in the case of वह, provided that verb be not used in connection with beasts of burden. Here it is clear that Kātyāyana would not have included वह in the list of verbs given in Vārt. 5, if he had intended to make a special rule for it in a separate Vārttika. The special rule concerning वह is really, if I may say so, a Vārttika of Patañjali's on Kātyāyana's Vārt. 5, and has taken the form of a true Vārttika, because Patañjali's words वर्गीयितः यत्र कर्मन्यथे were wrongly put twice in the MSS. Such has, I believe, been the case with what is now Vārt. 20 on P. II. 2, 24 (omitted in the Kaśmir MSS.), with the Vārt. 4 on P. III. 2, 110 (omitted in the MS. K.) and in one or two other instances, and this is one of the reasons why I appeal particularly to those scholars, who have old MSS. within reach, to assist me in the task of improving my work.
mentioned in one of the Reports as having been formerly extant in Benares, but it would have been more satisfactory if the author had given some information concerning the document, before quoting it as an authority.  

Table XVI, which gives the initial days A.D. of each Hijra year, is one of the most useful in the book, and has the merit of being intelligible at a glance. Some of the explanations of other tables would be better if made a little fuller.

I have noticed the following misprints in addition to those enumerated in the list of Errata:—

Preface, page v. line 16, for 1789,1889-9067 read 1788,757-9067

sib. .. line 29, for 67 or 7 days over real leaves 67 or 7 days over

Page 24 line 23 for 627 read 1027

86 31 Table III. Table II.

85 35 Table III. Table I.

87 8 Table IV. Table III.

85 10 Table II. Table I.

227 8 1043 1013

The book under review contains much matter which invites comment; but I have already occupied my share of space, and must content myself with remarking that it is difficult to resist the conclusion that the dates of the Indo-Scythian kings are expressed in terms of the Seleucidan era.

25th April 1886.

V. A. SMITH.

DIE KÁŚMIR-RECENSION DER PÁNCÁPAKÁ, VON DR. W. SOLT. KIEL: C. F. HÄSLER, 1886.

It is a well-known fact that many of the most celebrated literary productions of India have come down to us in different recensions, greatly varying from each other in essential points, and frequently leaving an editor in doubt as to which to adopt as the best and most original form of the text. Thus, for instance, the Rámdáya exists in three, and Kálídás's Sbátatála in five recensions; and it certainly speaks more for the popularity than for the artistic value of the comparatively small poem now under consideration, that the three principal versions, in which we find it spread over India, coincide only in seven stanzas, and that these, moreover, exhibit a considerable variety of reading.

The Páncáda was first published in 1833 by Professor von Bóhlem, together with Bhartrihari's Áphorísms, under the title Carmen quod Chaurí nomina festus eroticum, from a Dévanápáram manuscript of the Indian Museum, No. 33 of Colebrooke's collection. According to the commentary thereon, the poet, under sentence of death on account of his intrigue with a king's daughter, is represented as picturing to himself, in the presence of death, the charms of his beloved and the joys of bygone days, in fifty stanzas, each beginning with adýdpí, "even today," the supposed pathos and tender beauty of which won for him the forgiveness of the incease father and his consent to the union of the enamoured couple. In general conformity with Bóhlem's text, the poem appeared again in Habélin's Sanskrit Anthology, Calcutta, 1847, and in three more editions by native scholars, in all of which, however, Sundara is given as the name of the author. The reading on which these five editions are based, forms what Dr. Solf calls the Middle-Indian or Bengali Recension, and to it belongs also Manuscript No. 146 of the India Office, containing the text with a commentary by one Rámákarnágála.

Almost simultaneously with Hábélin's edition, a French scholar, M. A. Ariel, published in the Journal Asiatique for 1848, a new version of the poem, founded on two South-Indian manuscripts, both written in the Grantha character, and differing but slightly from each other. The name of the author is A. Chóra, but the hero of the tale is called Páncíti Bilíha, and his love-story forms the larger part of the work, whose 118 stanzas only 46 begin with adýdpí. With this version tallies in most essentials a manuscript of the Bodleian Library in Oxford (Auffrecht, Catalogus, p. 133b.), which the author of the present pamphlet designates the "South-Indian Recension."

The abovementioned Bilíha, a poet of the second half of the eleventh century A.D., is known as the author of the Vikramákítónveda, which was published in 1875 by Dr. G. Bühler, and in his introduction the learned editor first throws out the suggestion that the Páncáda might also be a work of his. Two years later, Dr. Bühler published his Detailed Report of a Tour in Search of Sanskrit MSS., made in Kásmíra, Bódiputára and Central India, and here he was able to substantiate his previous surmise, by obtaining a manuscript of the Páncáda, "which settles all doubts about its authorship, and explains the origin of the anecdote connected with it." It is this third Kásmíra or "North-Indian Recension" which Dr. Solf has now edited, translated into German, and annotated. His little work will be received as an interest-
ing and valuable contribution to Indian textual criticism, although we doubt whether his new explanation of the origin and purport of the poem will meet with an equally ready acceptance.

This Journal has been started with the object of collecting information from more specially the Dravidian districts of India and Ceylon. There is a large field of work open to it; and we heartily welcome its appearance, in the hope that it may do for the south of India what the Indian Antiqury is doing for the more northern parts. Judging by the fact that nearly all the articles up to date are from the Editor's own pen, the Taphrobanian seems to have hardly become as yet as well known as it deserves to be; this, however, is a point in which time doubtless will effect a change. It is desirable that in a period like this, when so much sound information is available, such mistaken identifications as that of the ancient Sūrāpānka with the modern Sūrat (p. 51) should be avoided; as also such untenable suggestions as that the Kalukyas “are named after the Keluk, who are called the Zendic Arians, taking their name from ‘Keluk’ a wolf” (p. 51); or that the Hândas were the subjects of the monkey-chief Hanuman (p. 111). But, setting aside points like these, the four numbers of the Taphrobanian that have already appeared, contain a good many interesting and valuable notes and hints on the topics to which it is devoted; and we hope to see the Journal continue and prosper.

It would be quite impossible in the space allotted to us to do justice to the arguments adduced in this remarkable book in support of Professor Robertson Smith's theory—i.e., an opinion based on the results of a fair discussion of all the available evidence can be so called—that the male kinship of the Arabs has been generated from a system of kinship through women only by steps common to a similar change in all rude societies, where such has taken place; and all we can do is to direct the attention of our readers to these arguments and to promise all students of the structure of society in the East much food for reflection and much guidance of a safe kind in the study of one of its most important and yet most difficult and complicated features.

It should be remembered that the study of the social structure of the early Arabs, which involves, of course, that of the Semitic races generally, is not an abstract study, but includes matters, without the proper comprehension of which, many things observable in the habits and manners of modern Orientals—never matters of indifference to Englishmen in the present day—are meaningless freaks of custom, and much of what is in the sacred books and traditions of three most important religions—Christianity, Judaism and Muhammadanism—is a mere tissue of incomprehensible texts. Any work, therefore, which helps to clear up the dense mists in which the subjects of kinship and marriage in the East are still enveloped is not only welcome; it is of practical importance.

Professor Robertson Smith goes steadily through his subject from point to point commencing with the theory of the Genealogists as to the origin of Arabic Tribal Groups and showing with much cogency the errors it contains, the causes that led to them, and the literary forgeries with which they were supported. He then passes on to the discussion of the kindred group and its dependents or allies, and the homogeneity of the kindred group in relation to the law of marriage and descent. The very titles of these divisions of his subject will arrest the attention of the student in India of social systems, which are in no way connected with that of the Arabs by descent or development; e.g., that of the Rajputs. The opening sentences of the two chapters devoted to these points are strangely applicable, too, to much observable in India among purely Hindu Societies. The two principles underlying the genealogical system of the Arabs are that every tribe is a homogeneous group, i.e., a collection of people of the same blood and that the son is of the blood of the father.
system and his chapter concerning it, though
professedly only a commencement of the investiga-
tion, is most suggestive throughout and
thoroughly worth careful study. It has often
struck us that evidence is procurable in India of
a general prevalence of a like system now or at
some earlier period, and as an instance of the
existence of a custom at the present day pointing
in this direction we would quote the following.
Many of the Musalmans of Kasur in the Punjab,
who are mostly descendants of old Pathan settlers,
belong to the "Snake" Caste or Tribe (ed. 4.1)
and have special ceremonies, performed in honour
of snakes, which partake of the nature of ancestor
worship. Thus they hold that the snakes of the
present day are the descendants of a great king, as
they themselves are. When they find a dead
snake they clothe and carefully bury it and
think themselves free from the results of poisonous snake-bite.1 Prof. Robertson Smith
thinks that local observation would do much to
wards gathering more and conclusive evidence
as to the former prevalence of pure Totemism in
Arabia, and we would suggest that the existence
of such a custom as that just described is an
encouragement of investigations being proceeded
with seriously in India with a like object
in view.

HISTORY OF NEPAL, Translated from the Parbatia by
MUNSHI SINGH SHANKER SINGH and PANDIT SRI
GUNAMAND. Edited by DANIEL WRIGHT, M.D.,
Cambridge University Press.
This is a translation by the Mr. Munshi of the
British Residency at Khatmandu of a MS. Van-
skata or Genealogical History of Nepal aided by
Paqitit Sri Gumaund of Patan, a representative
of the family of the professional genealogists of
the country. The original MS. is in Parbatia,
mixed with Sanskrit and Newari. Dr. Wright, the
editor, formerly Residency Surgeon at Khaim-
du, has edited it, so far as an editor in Orient
of professional scholarship can do so, from
personal observations extended over several years
of residence in Nepal. In this work he has
received the aid of Professors Cowell, Eggeling
and Wright. The work is illustrated with chromo-
lithographs based on native drawings.

Such a work therefore gives the native view of
the local history and must be taken for what it
is worth, but in view of the revived interest in
ancient Nepali History, consequent on the recent
discoveries of inscriptions in that country more
than once alluded to in the last volume of this
Journal, the work is undoubtedly one that
students should keep by them.

The appendices are very interesting and useful
being a list of the musical instruments used in
Nepal, of the agricultural instruments, of
the coinage, weights and measures, and measures of
time, a Parbatia and Newari Vocabulary, several
Newari songs in original with rendering, a bardic
list of the kings of Nepal, and a long catalogue of
Sanskrit MSS. collected by Dr. Wright and
now in the Cambridge Library.

A DICTIONARY OF ISLAM, by T. P. HUGHES, B.D.,
This great work follows the same lines in cyclo-
opedic form as the author's short and, we must say,
 wonderfully accurate Notes on Muhammadanism
published in 1877. To the former work we have
often had occasion to refer and have always done
so with the certainty of finding correct information
on the point looked for. That the volume before us has the same high claim on our confidence
there can be no doubt — so abundant are the signs of the care bestowed on it throughout
its 750 closely printed pages.
The author has wisely, in a first edition at any
rate, limited himself to an exposition of the
Sunnī variety of the Muhammadan faith, treating the
Shī'ās and Wahhabis as dissenters and noting
the differences in their doctrines from those
of the Sunnis. Keeping in view the numerical
strength of the great sects of Muhammadanism
this is undoubtedly the correct method of dealing
with Islam as a whole. comparatively small as
the number of the Wahhabis is, Mr. Hughes is
quite right in paying such special attention to
their tenets as his articles prove him to have
given them, since, as the Puritans of Islam, they
have better preserved the original teachings of
that faith than its other followers have done. As
a proof — if proof were wanting — of the great care
taken to include everything that bears upon
or can elucidate the faith of Islam Mr. Hughes has
treated Sikhism as one of its sects, because Guru
Namak really intended his doctrines to be a com-
promise between the two great faiths of the Punjab
in his day — Muhammadanism and Hinduism;
and we would recommend the reader to study
the article Sikhism contributed by Mr. Pincock as
one of the best expositions of that ill-understood
belief that has as yet been published.
The presence of such a title as Sikhism among
the articles in this Dictionary leads us to notice
a pleasant and important feature of the book.
Articles of general import are not headed neces-
sarily under the Arabic terms for the subjects dis-
cussed but under their English equivalents: — e.g.,

1 The whole detail of this worship is to be found in Vol. II, Punjab Notes and Queries, note 554.
we find: magic, marriage, paradise, philosophy, sacrifice, Hell, guardianship and so on as article headings, though we find essentially Muhammadan doctrines such as Qur’a (Retribution), Shirk (Idolatry), Masjid, Khutbah (Sermon), Hajj (Pilgrimage to Makkah) and so on under their appropriate Arabic titles.

As specimens of the thoroughness with which the more important subjects have been discussed we would point to the articles Qur’a, 24 columns; Muhammad, 68 columns; Marriage, 23 columns; and many others of like length. A Bibliography of all such subjects is added to each article, that under Muhammadanism being especially noteworthy. Cross references, too, abound, and the work has been rendered all the more valuable by an index to the Arabic technical terms scattered throughout the articles.

The Illustrations are very numerous and an admirable help to the elucidation of the descriptions in the purely descriptive articles. We especially note those under Prayer, Shoes, Muharram, Masjid, Marriage and Writing. This last article which is, by the way, from the pen of Dr. Steingass, is a capital résumé of the subject and the illustrations of the various scripts, though somewhat incomplete, are excellent of their kind.

Mr. Hughes is to be congratulated on the success which has attended his efforts to present a trustworthy and unbiased account of one of the great religions of the world to those who care to study it, and the much-maligned Missionary body in India on this fresh proof that its members—at any rate the leaders amongst them—do thoroughly understand the belief of those whom they have undertaken to convert to the doctrines of Christianity. Quite lately we had the pleasure to note the splendid mastery of his subject exhibited by the Rev. T. D. Bate in his Claims of Islam. —though this was a book of another class to that under review and the work of a Missionary belonging to another sect.

With the Dictionary of Islam on his shelf no writer can be excused from mis-statements regarding the commonplace of Muhammadanism; no Government Official, no Christian Missionary, and no Oriental traveller from ignorance on matters that require his attention.

The object of this short treatise is to put together all the information regarding the ancient condition of the Island of Rhodes which has been collected by the research of the last fifty years. The author has further pressed into his service all the literature of the subject that has come to his knowledge both in England and on the Continent. The result of his labour is a monograph both complete and useful.

The book discourses on the Geography, History, Polity, Religion, Art, Learning and Folklore of the ancient Rhodians so far as modern research has thrown light on these subjects, and it will thus be seen that by extending his observations upon so wide a field the author has given himself an opportunity of presenting a fairly complete picture of this society of days long gone by.

There is always something wonderfully fascinating in reading about the social economy of any of the ancient Greek populations, when well portrayed as in the present instance, and the ways of the people of ancient Rhodes are no exception to the rule. Much as we may admire—and much as some of us do idolatically worship—the relics of their art and literature in an abstract way, yet it is the genuine humanity, so to speak, of the Greeks, so conspicuous in their doings, which wins our sympathy. For instance, what can be more deliciously human than the following:—It was a habit of the Rhodians to set up statues to their worthies as a “good example” to their successors, much as the modern Chinese Government deifies those whose example it wishes the public at large to respect and follow. However, this praiseworthy custom in time degenerated, as all such are apt to do, and by the time the Romans became the dominant people in those parts the setting up of statues came to be much abused. Every Roman who touched at Rhodes got a statue, till the possession of one there was a valueless honour. But this naturally created a demand for statues beyond the capabilities of the local supply and so “the Strategos would take off the old inscriptions and put up others till some figures had done duty for Greeks, Romans, Macedonians and Persians! Sometimes the Strategos was careless and assigned an old man’s statue to a young man, or an athlete’s to an invalid, or that of a general on horseback marshalling his troops to some man too lazy to leave his litter!” The Caesars were always allowed a new statue!

However, the bulk of Mr. Torr’s book is occupied with much more serious matters than this, and we would instance his remarks on the guilds which covered the Islands, the system of self-government, the administration of justice, and the methods of trade, as well worth perusal. The notices of the coinage and the chapters on Art and Folklore will interest specialists. On the whole the work is worth study for itself irrespective of the fact that it is so far the only complete
resume of recent research into the subject. Every statement is vouched for, chapter and verse, in footnotes, and there is a useful index.

Burma, As it Was, As it Is, and As it Will Be, by T. G. Scott (Shwé Yoe) London : Redway.

This little book is the outcome of a lecture delivered before the Society of Arts, and is in reality a rapid popular sketch of the History, Country and People of Burma, written with literary skill and in the lively style that distinguishes its author.

There is, of course, little that is new in it; but the chapters on the Country and the People are written as only be can write who has a close practical acquaintance with both, and we may therefore with a force that the mere student of books can never hope to rival. The historical chapter is a rapid—and withal an accurate—survey of the known facts about the history of the Birmese, which belong to the useful sort. They remind us very much of those sections marked 'History' in an Indian Gazetteer or Settlement Report, where the ancient history is dismissed in a very few words and we are brought at once to events which will directly elucidate modern facts. The book is, however, readable throughout; much of it contains, as we have above observed, information at first hand, and all its pages bear the stamp of a careful consultation of the best authorities procurable. Can we say anything better of a purely popular work?

The Mahabharata of Krishna-Dwaipayana; Vyasa; Translated into English Prose. Published by Protop Chandar Roy; Bharata Press, Calcutta.

The last instalment that has been issued of this extremely useful work is Part XXII, carrying us down to the commencement of Section 295 of the Vana-Parsa. The translation has now attracted much favourable notice by the Press, both in this country and in Europe; and it is almost impossible to say too much in support of an undertaking which, in addition to making the contents of this interesting Epic available to students unacquainted with Sanskrit, is of the greatest practical use to Sanskrit scholars also, who, unable to find time to search the original text for passages that they require to look up, have now a quickly progressing means of ready reference being provided for them. The undertaking is one that involves a very heavy expenditure on the supporters of it, the Dātavya-Ādārā-Ālaya, or Society for the Presentation of the Bādra; since, like all its other works, this Translation is distributed almost entirely gratis, and it is therefore a pleasure to note, from the cover of Part XXI, that such munificent pecuniary support has recently been given by His Highness the Nizam, H. H. the Maharājā Gaikwar of Baroda, H. H. the Maharājā Holkar, and Their Highnesses the Maharājās of Faridkote, Jeypore, Dhar, and Rewah. With such examples as these before them, we may confidently hope that the work is in no chance of languishing from want of recognition by the leading Native representatives of the country whose ancient legendary history is thus being made so practically available for the researches of general readers all over the world. And we are glad to take this opportunity of recommending the general work of the Society to the support of patrons of literature in Europe and other countries.

This reprint represents the first results of a very commendable desire on the part of the publishers to reproduce in a handy, compact, and cheap form the valuable series of volumes known as the Asiatic Researches, which comprise many of the writings, belonging to the latter part of the last and the early part of the present century, of Sir William Jones, Sir Charles Wilkins, and other well-known Oriental Scholars, who gave the first start to the study of Indian Archaeology, and carried it on so successfully until the Bengal Asiatic Society was established. The original volumes have long been out of print, and can be obtained only at an almost prohibitive price; and the present enterprise of reprinting them will, therefore, supply a real public want, and has every chance of success, if subsequent volumes are only turned out as carefully and as well as the one under notice. The plates of the present volume do not altogether stand the test of comparison with the originals from which they have been reduced; and succeeding volumes will be capable of some improvement in this respect. But the more important part, of course, is the letter-press; and this appears to be reproduced throughout with scrupulous fidelity and care. On the whole, the publishers are decidedly to be congratulated on the general appearance of their first volume; and we may hope, from this specimen, that the others will be equally up to the mark. It is much to be wished, though, that the publishers would bring the work out in larger, or at least more frequent, parts. At the present rate it will take twenty years to complete, which, for the majority of students of such books, is rather too long a time to have to wait.
Discursive Contributions Towards the Comparative Study of Asiatic Symbolism.

By H. G. M. Murray-Aynsley.

No. VI.

Sacred Trees.

In Revelation xxi. 2, is mentioned "the tree of life which bore twelve manner of fruits, and yielded her fruit every month, and the leaves of the tree were for the healing of the nations." Now it is most interesting to find the symbol of the tree with its twelve leaves, or occasionally the same number of flowers or fruits, on Persian carpets this day. I have seen it also on Yarkand carpets, on which latter the tree is represented in a more conventional form. To quote Sir George Birdwood's Industrial Arts of India: "...In Yarkand carpets the tree is seen filling the whole centre of the carpet, stark and stiff as if cut out in metal, in Persian art, and in Indian art derived from the Persian, it becomes a beautiful flowering plant, or a simple sprig of flowers; in purely Hindu art it remains in its pure architectural form, as seen in temple lamps, and the models in brass and copper of the sacred fig, as the Tree of Life."

In India two figs—the banian (Ficus Indica) and the pipal (Ficus religiosa) are held to be especially holy. The pipal, indeed, is so sacred that castes are taken under the shade of it and merchants will sometimes object to have one near their stalls or shops, as they say that in such case they could not ask more than a proper price for their goods! It was beneath a tree of this species that Buddha attained nirvana, and a descendant of the sacred tree (quite a young one), under which it is believed to have taken place, is still worshipped at Bódh-Gayá. According to Buddhist tradition, it was once desired to send a branch of the original tree to Ceylon, but no knife could be permitted to touch it. In the dilemma thus caused the tree came to the rescue, for a branch dropped off of itself into the golden vessel which had been prepared for it.

The following is a curious account of a sacred fig in the East. I was fortunate enough, when in Naples in 1883, to pick up at a street bookstall a copy of the works of Pietro della Valle, a Sicilian who visited India in 1623. In one place he speaks of a tree outside the town of Cambay, of the same kind as those which he saw on the coast of Persia, near Hormuz and where it was called lál. He adds, that it is unknown in Europe and that the Hindu style it bar (i.e. banian). The tree near Cambay was held in great veneration. "On account of its great size and antiquity the people visit it frequently, and honour it with the superstitious ceremonies belonging to their religion. It is dedicated to one of their goddesses whom they call Parbatt, and say was the wife of Maháibilities, one of the greatest of their gods. At the trunk of this tree, not far from the ground, is a rudely sculptured circle which does not in the least resemble the human countenance, but according to their ideas is the face of their idol. They paint this circle of a bright red colour. The Romans did the same, for Pliny relates that they coloured the face of Jove with vermilion. Moreover, this sacred tree has always round it a circle of certain heart-shaped leaves, those belong to a plant which is here called pán, but in other parts of India botel."

Another interesting instance of a peculiarly sacred fig is to be found in the Fort at Allahábád, where there is a Hindu temple, which, owing to an accumulation of the soil, is some 20 feet below the present level of the ground, and can only be approached by descending a flight of steps. This temple is a great resort of pilgrims, and inside it the priests show the stump of a tree of the fig species, which they say miraculously throws out leaves at a certain season of the year. When I saw it the stump was perfectly bare of leaves, and had three or four branches, each about four inches in diameter and about three feet in length; they were clean cut at their upper extremities.

---

1. On a fragment of a terra-cotta vase in the Museum of Antiquities at Copenhagen, supposed to belong to the Later Bronze Age, a tree is figured which the late Kamr Zerche calls the Tree of Life. It is present in connection with Sun-symbols; and a similar Tree-symbol has been found in Ireland at New Grange, Drogheda.

2. The number seems to be invariable.

---

3. One of the notions of the primitive Aryan cosmogony was that of a prodigious tree, which overshadowed the whole world.

4. A state of complete holiness and rest according to some authorities—of annihilation or absorption into the Deity according to others.

and neither the wood nor the bark looked like that of a dead tree. Every year, at the annual fair which takes place at Allahabad, it is said that this tree certainly has leaves, but the apparent miracle is accounted for by the generally accepted belief (by Europeans) that the sergeant of the guard (it is a British fort) receives a bribe from the Brahmas to open the gates the night previous to the fair, and permit them to introduce a new tree.

A similar idea also existed formerly in Scandinavia. Near old Upsala in Sweden, tradition says, there was a sacred tree which was always green, and the same thing is related of another tree in the Island of Gothland.

In Scandinavia, too, the trees most reverenced were the birch, which from its heart-shaped leaves, its pendulous branches, and its yellowish white bark more nearly resembles the pīpal than any other European tree, the beech, the common ash, and the rowan or mountain ash.

When speaking of the tree-worship there M. Holmboe says:—"In Norway one still meets with trees which are reputed sacred. A magnificent birch tree on a farm in the parish of Sognsdal, in the diocese of Bergen deserves mention. The inhabitants of this place relate that no sharp instrument has ever touched this tree, and that anciently it was the custom once a year, at Christmas, to water it with fresh beer." We have here a combination of Buddhist ideas and the Hindu custom of offering libations.

In the Himalayas, where the pīpal does not flourish, the deodar, which is a pine, is the sacred tree, as its name, "the tree of the gods," implies. Groves of it are planted near the principal temples, both in the Satlaj and Kulu valleys. In Mexico and Central America the cypress and palms used in former days to grow near the temples, generally in groups of three. They were tended with great care, and often received offerings of incense and other gifts, but they do not seem to have been dedicated to any particular god, as amongst the Romans, where Pluto had the cypress, and Victory the palm. Mention has been made by some authors on America of a cypress at Santa Maria di Tule which was one of the most sacred of South American trees, and whose trunk measured ninety feet in circumference at a height of six feet from the ground.

In Europe 'sacred trees' have been put to a more practical use, and instances innumerable could be given in which in ancient times European courts of justice and other public assemblies were illegal, unless held in the open air, beneath the shade of some tree, most frequently the oak. The same idea prevails in Africa amongst the people of the Congo, where the village chief and the members of his family form the legislative and judicial council, which meets under a tree. It is stated that the ficus religiosa is the tree selected for this purpose.

Many of the English "Gospel Oaks," too, were planted to mark the parish boundaries, and it was beneath their shade that the clergyman read the Gospel on Ascension Day (or Holy Thursday), when he with the parish officials and others assisted at the beating of the bounds. In fact, nearly all the celebrated oak-trees in England were boundary trees, e.g. the Shire-oak in Sherwood Forest. The beating of the bounds is practised in some of the Metropolitan parishes to this day. The procession consists of various charity and parish schools dressed in quaint uniforms, and provided with long willow canes. They are headed by the parish clerk, beadle, and other functionaries. In some cases the procession passes through houses and workshops, and, on the different spots being pointed out to them, which divide their respective parishes, the lads strike the ground rigorously with their canes. They are then generally regaled with buns and milk, given a small coin, and granted a half holiday.

---

* Buddhisme en Norwegen.
* The oak was the sacred tree of Great Britain, its name in Gaelic is de-darach, a very close approximation, in form at any rate, to the name given to the sacred tree of the Hindis.
* Bancroft, Races of the Pacific States of South America.
* The oak was sacred to Thoq, because of the red colour of its fresh-cut bark. In the Southern Peninsula of India it is worth noting that Para-tirana, is failed to have acquired Traversaries by throwing his battle axe from one point to another; and in certain parts of the north of Europe the hammer (the emblem of Thor) was used to take possession of unoccupied or newly purchased land, as the owner drove over it in a cart. In Scandinavia this was done by lighting a fire upon the ground.
* Ascension Day is said to be always observed as a day of rest by the quarrymen who are employed on Lord Penrith's slate quarries in Carnarvonshire; not, however, from any religious regard for the day, but on account of a superstition which has long been current in that district, that working on that day is invariably attended with some fatality. A few years ago with some difficulty the managers persuaded the men to work on that day; but each year there was a serious accident, and now very few of them will venture even to go in sight of the quarries on Ascension Day.
Mention has been made above of the custom of making offerings to trees. Offerings are, of course, all the world over, made to all objects of worship, and among the Buddhists of Ladak or Western Tibet, and the Lahaul valley, they are of a propitiatory nature. The people of these parts are in the habit of depositing stones or walls of loose stones, before they undertake a journey, and also, I believe, when they register a vow. Similarly the Hindus at Ahmadabad in Gujarat hang up tiny horses made of white calico and stuffed with bran (which, however, more nearly resemble giraffes than horses) on the railings surrounding the tomb of a former Muhannadan ruler of that province before they commence any important work. They imagine that they thus insure its success. Tavernier, who visited India, in the time of Akbar, also mentions that in his time it was the custom for pilgrims going to a temple for the cure of any disease to bring with them figures or models of the limbs affected, made either of gold, silver, or copper, according to rank or ability, as offerings to the god. At Patialpur-Sikri, near Agra, again, propitiatory offerings are made at the shrine of Salim Chisht, the friend of the Emperor Akbar. Certain Hindus are in the habit of jumping off a high wall into a tank below, a distance of about 60 feet, in order to amuse (or rather distress) European visitors. These men are said always to give a third or a fourth part of whatever they receive for performing this feat to the shrine of the saint. His tomb is in the courtyard, and they believe that were they to omit their offerings, they would perish at their next attempt to make this jump.

Offerings to shrines soon become extended to the trees in the neighbourhood, and such votive offerings, as an expression of thankfulness for blessings received, may be seen in every Roman Catholic country. At Lourdes in the Pyrenees they number hundreds of thousands of various kinds, in shrines by the wayside, and as pictures hung up in trees. At Nagkhand (the Shoulder of the Snake) about 40 miles from Simla, several small trees and shrubs on the highest point of a low mountain pass are decorated with votive rags. The streamers thus formed are of various colours, and are, it is believed, thank-offerings placed there by native travellers on attaining the summit of the hill, which is at times encumbered with snow. When approaching Nagkhand from Simla, the grassy knoll on which these bushes grow much resembles a coiled snake, whence no doubt the name of the locality. In his Folklore of the Northern Counties of England, Mr. Henderson cites a similar custom in use at St. Helen's Well, near Thorp Arch in Yorkshire, where "the offering was a scrap of cloth fastened to an adjoining thorn, which presented a strange appearance under its bundle of rags." I have been told, too, that in certain parts of the South of Ireland the people are in the habit of hanging up shreds of cloth on the bushes or trees, but whether these are intended as propitiatory or as thank-offerings I have been unable to learn. Sir W. Ouseley, in one of his works on the East, speaks of a monolith about 10 feet high, at a place called Tang-i-Karna in Persia, which is surrounded by a dwarf wall to denote its sacredness. The top of the stone is hollowed out, he thinks for fire, and it is locally known as the stone of the fire-temple. On a tree near it are remnants of garments left there as votive offerings by superstitious persons.

Holed stones and trees form a curious subject for speculation and the key to the secret seems to have been hit upon by Maurice in his Indian Antiquities, where he says, "The Indians are in the habit of purifying themselves by passing through a natural or artificial cavern, where the spiritual pilgrims enter at the South Gate, and make their exit at the Northern one, as was anciently the custom in the Mithraic mysteries." In pursuance of this notion in India certain stones which have natural holes in them, are regarded as sacred. Those persons or children who pass through such holes are held to receive thereby a "New Birth of the Soul." Under the same idea, the rulers of Travancore, who are Nairs by caste, are made into Brahmas when they ascend the throne, by passing through a golden cow or lotus flower, which then becomes the property of the Brahman priests.

Two important instances of such holed stones and trees are at Harput in Armenia and at Dhamu, Ault near Bukhara. A similar custom obtains near the tomb of Nizamuddin Auli near Delhi. [A similar custom obtains near the tomb of Nizamuddin Auli near Delhi.—Ed.]
stones are described in the first part of a work which has very recently appeared embracing the monuments of Cornwall only. One of these, called the Tolwen, situated near St. Buryan, has been used superstitiously within living memory for curing infirm children of their diseases by passing them through it; the other near Madron is called the Men-an-tol. Both are figured in Plate XII. (see p. 133 above) by the kind permission of Mr. Lukis. The Tolwen, a slab of large dimensions, has a hole 16½ inches in diameter bored through its centre, which was made by picking away the opposite sides equally. This stone has been shifted from its original site by the tenant of the house behind which it stands, in order to make room for a pathway to his back door. The Men-an-tol is on the moors, a short distance to the right of Ianyon Farm House, in the direction of Kara Galva. The hole in this latter stone is not a perfect circle, being 21 inches in diameter in one direction, and 18 in the other. It stands exactly midway between two high stones which are in the same line with it in the direction N. E. and S. W. The hole has been made in the same manner as that in the Tolwen, with this difference:—the countersinking is not equal. "This, it is obvious, was intentional—the deeper sinking is on the eastern side of the stone."

One of the most interesting features of these monuments is the names by which they are known. *Men* or *maen* is the word for stone both in Brittany and in Wales to this day, and in the word *Tolwen* we find both the Welsh and the Norwegian word for a hole.

Many curious superstitions still exist on the island of Tiru in Scotland, the property of the Duke of Argyll, and on the west side of it is a rock with a hole in it, through which children are passed when suffering from whooping-cough and other complaints. Ripon Minster has beneath its central tower a crypt which goes by the name of St. Wilfred's Needle, entered from the nave by a narrow passage 45 feet in length. It consists of a vaulted cell 9½ feet high, 7 feet 9 inches wide, and 11 feet long. An opening in the north side of the cell 13 inches by 18 is called "the Needle." The original use for which this crypt and the singular opening were intended cannot now be ascertained with certainty, but there is a popular tradition that the Needle was in former times used "a test." "They pricked their credulous who could not thread the Needle," is the quaint remark of old Fuller in reference to the supposed use of the opening. The idea of the necessity for a spiritual or bodily new birth controls probably the modern customs as to certain pillars in the courtyard of the Mosque of 'Umar at Cairo, two of which are much closer together than any of the rest. The natives say of these that only an honest or a good man (one new born?) can pass between them.

In Europe the purposely distorted branch of a tree, as well as the naturally or artificially perforated stone, seems to have been used for the purpose of curing diseases and thereby producing as it were a "New Birth of the Body."

In 1883, when staying at the country-house of some Danish friends, whose estate is situated about 10 or 12 miles from Roskilde, I one day, during a drive, passed through some large woods, and at one point an old beech tree was pointed out of which one branch, at a height of about a foot from the ground, formed a perfect bow, and was higher up again united to the trunk. This tree had most probably been operated upon when young, by a portion of the trunk being split, and held open by wedges. My hosts informed me, that to their certain knowledge up to within eight years previously, parents who had sick children, were in the habit of coming there from considerable distances in order to pass their little ones through this hole, believing that thereby their maladies would be cured. The ceremony was not complete, however, till they had torn a strip of cloth from the child's dress and tied it to the idea of its length. Possibly it was clambering rather than walking, for my informant remarked that the hole is gradually increasing in size owing to stones and rocks falling from the upper part.

Other explanations regarding this vault, make it a confessional, or a place of penance, or a sepulchre for the host on Good Friday.

It is said they are so still in some parts of England and in Scandinavia.
it to this branch of the tree, in the belief that when this decayed, or was borne away by the wind, the little sufferer would be healed, showing thereby one use of the rag-bush. My friends added that occasionally many such streamers might have been seen hanging on this tree at one time. Gilbert White of Selborne says that in his time there stood at that place “a row of pollard ashes, which, by the long seams and cicatrizes down their sides manifestly show that in former times they had been cleft asunder. These trees when young were severed and held open by wedges, whilst sick children stripped naked were passed through the apertures under the persuasion that by such a process the poor babies would be cured. As soon as the operation was over, the tree, in the suffering part was plastered over with loam and carefully swathed up. If the part coalesced and soldered together, as usually fell out when the feat was performed with any adroitness at all, the infant was cured; but where it still continued to gape it was supposed that the method used would prove ineffectual.” “We have,” he goes on to say, “several persons now living in the village, who, in their childhood, were believed to have been healed by this superstitious ceremony, derived perhaps, from our Saxon ancestors, who practised it before their conversion to Christianity.” It is said that a similar custom is still in vogue as regards the ash tree in some of the Southern counties of England, and that there also, children suffering from whooping-cough are made to pass through the loop formed by a bramble which has taken root at both ends.\footnote{Since writing the above a lady friend has told me that when she lived in Wiltshire she well remembers this being practised.}

FOLKLORE IN WESTERN INDIA.

BY PUTLIBAI D. H. WADIA.

No. V.—The Unfortunate Merchant.

Once upon a time there lived in a certain country a merchant, who was at one time very prosperous, but having suffered great losses in trade, he came to be in such poor circumstances that starvation stared him in the face. As the king of the country knew him well, his wife advised him to go to court, feeling sure that the king would do something for him.

The merchant, however, felt reluctant to go to the king as a suitor, but when, after suffering great privations for a long time, he saw that there was nothing left for his family but starvation, he made up his mind to follow his wife’s advice, and one morning presented himself at the court, which he found crowded with many persons, who had come there on the same errand as himself. This sight rather unnerved him, and he devoutly hoped the king would not recognize him. When his turn came, however, to be ushered into the royal presence, the king recognized him at once, and asked what he could do for him. The merchant with great hesitation related his case, and the king, being a very thoughtful man, feared that he would hurt the dignity of one so respectable as the merchant, if he gave him pecuniary assistance before so many people. So he requested him to wait till all had left the court, and then going into his private apartments he ordered a water-melon to be brought to him, in which he made a hole, and, pouring out its contents, refilled it with gold coins. Then summoning the merchant before him, he gave him the melon and said, “Take this to your family, it is a refreshing fruit, and you will all enjoy it this hot day.”

The merchant thanked the king, and returned homewards very much grieved at receiving only a water-melon, when he expected something more substantial. As he was walking along on his way home, he met two travelers, who were very thirsty and looked wistfully at the melon he was carrying, and being of a very generous disposition and thinking that they needed the melon more than he did, he gave it to them and walked quickly home empty-handed.

After passing many more months of privation and misery, he was persuaded by his wife to go to the king a second time, in the hope of better luck. The king was, however, much surprised at the merchant’s paying him a second visit so soon after the first, but when he
heard that he was as poor as before, he thought he had invested the money he had given him in trade and had lost it. He, therefore, filled a water-melon once more with gold coins, and presented it to him.

The merchant was again greatly disappointed at being sent away with such a trifle, but he nevertheless made his obeisance to the king and returned homewards. This time, however, he resolved not to part with the fruit, knowing that it would be welcome to his starving children. He had not proceeded very far, however, when he met a beggar who asked alms of him, saying that he was very hungry. The merchant could not resist this appeal, and, having no money, gave the melon to the beggar.

When he reached home, his wife was sorely vexed at his bad luck, and wondered very much why the king, who was reputed to be very charitable, should treat her husband so shabbily, as to send him away with a melon every time he went into his presence. Being, however, of a persevering nature, she once more persuaded him to go to court and ask the king for help. He accordingly went there and stood before the king as before. This time, however, before giving him anything the king asked him to explain what use he had made of the two water-melons he had given him.

The merchant related to his sovereign how he had given the first to two travellers, who were very thirsty, and the second to a hungry beggar, who asked him for alms.

The king laughed at the merchant for what he considered his folly, and told him what the two melons were filled with. His Majesty then filled another water-melon with precious jewels in the merchant's presence, and gave it to him, admonishing him to be very careful of it.

The merchant went away rejoicing, full of hopes that the contents of the fruit would enable him to start in life anew. Now it happened that as his house was situated on the other side of the river which passed through the town, he had to cross it, and in doing so, his foot slipped, and the fruit fell into the water and was carried away by the flood. The poor merchant wept over this misfortune, and returned home cursing his evil star.

He was now fully persuaded that it was the will of Ishwar that he should remain poor, and thinking it useless, therefore, to struggle against destiny he resolved never to ask anybody for help again, but to live as best he could till it should please Ishwar that he should see better days.

SANSKRIT AND OLD-KANARESE INSCRIPTIONS.

By J. F. Fleet, B.o.C.s., M.R.A.S., C.I.E.

(Continued from p. 201.)

NO. 163.—MANDASOR INSCRIPTION OF YASODHARMAN AND VISHNUVARDHANA.

The Malava year 589.

This inscription, which has not been previously brought to notice, is from a stone-tablet which, when shewn to me in 1885, was in the possession of Sir Michael Filose, K.C.S.I., at Ujjain, but which had come originally from an old well, somewhere in the lands of Dasr or Masr, the chief town of the Mandsor District of Scindia's Dominions in the Western Malwa Division of Central India, where it was found, in the course of repairs, built up with the inscribed surface inside. I could obtain no accurate information on the point; but possibly this is the large and ancient well, just inside the eastern entrance of the Fort, which I have mentioned at page 195 above.

The stone is a smooth and beautifully engraved tablet, apparently of slate-stone, measuring about 1'11'' broad by 1'6½'' high and 2½'' thick. There are no sculptures on it connected with the inscription. But, on the back, which is divided into two compartments by what seems to be either a spear with a curved handle, or a shepherd's crook, there are

* See p. 194 above, and note 1.
engraved in outline, very roughly,—at the upper corners, the sun on the proper right, and the moon on the proper left; and, lower down, on each side, a man on horseback, facing towards the central dividing sculpture; the horseman on the proper right side carries either a chauri or a skōsha-shell in his left hand; the other horseman carries something in his right hand, but I could not distinguish the object. These sculptures were engraved, of course, when the tablet was fixed in the position in which it was discovered, with the inscribed surface inwards; and it is owing to this position that the inscription has remained in so perfect a state of preservation. The writing covers the entire surface of the stone, with a margin of from 1 1/2 to 1 1/2 cm; and is in a state of excellent preservation almost throughout, though there are just a few letters from which it was impossible to clear out the hard incrustation of lime with which the writing was blocked up from beginning to end, sufficiently for them to come out quite perfectly in the ink-impression and so in the lithograph. At the ends of lines 1, 2, and 3, a few letters have been lost by the edges of the stone being chipped here; and at some other places a few letters have been damaged in the same way. But the only place where the missing letters cannot be supplied, is at the commencement of line 16. The average size of the letters is 1 cm. Differing from the Mundaśēr inscription of Kumārūgupta and Bandhuvarman, No. 162 above, page 194 ff., the characters here belong to the northern class of alphabets. They include the very rare initial an, in auliēra, line 5; and the rather rare db, in udōdham and gūdha, line 7; rādha, line 11; and adhān, line 13; also the separate sign for d, as distinguished from d, in dinbam, line 17. The language is Sāṃskṛti; and, except for the opening word siddham, and the two words at the end recording the name of the engraver, the entire inscription is in verse.—In respect of orthography, we have to notice (1) the use of the guttural nasal, instead of the anusvāra, in vakṣa, lines 6 and 9; ahiṣa, line 9; aśam, line 11; and abhrani, line 12; (2) the use of the dental nasal in bhaṇāvitr, line 2, and yanāvitr, line 4, though we have the more usual anusvāra.

in mandāsī, line 22; (3) the doubling of t in conjunction with a following r, e.g. kātra, line 4; kalatrā, line 11; and pārīttrāsya, line 16; and (4), the doubling of dh in conjunction with a following y and e, in aukādyāsita, line 16–17, and aukādīvā, line 18, though not in other places.

As I shall shew in a following paper, this inscription is of extreme importance, in supplying, by its date, the key to the whole history of the period. It refers itself to the time of a tribal ruler named Yaśōdharman, and of a king named Vishṇuvardhana, who, though he had the titles of Śrējādhira and Paramōṣvara, would appear to have acknowledged a certain amount of supremacy on the part of Yaśōdharman. Vishṇuvardhana's family is mentioned as the lineage that had the aulīkara-crest; but I have not been able to obtain any explanation of the word aulīkara. The inscription is dated, in words, when the year five hundred and eighty-nine had expired from the tribal constitution of the Mālavas, and, therefore, when the year five hundred and ninety (A.D. 533–34) was current; but no further details of the date are given. The object of it is to record the construction of a large well by a person named Daksha, the younger brother of Dharmadēva who was a minister of Vishṇuvardhana, in memory of their uncle Abhayadatta, who had formerly held the same office.

The genealogy of this family of ministers is given; and it includes a somewhat noticeable name in that of Bhaṇugupta, the wife of Daksha’s grandfather, Ravikṛiti. Her date would be just about one generation before that of the king Bhaṇugupta for whom we have the date of Guptā-Saṅvat 191 (A.D. 510–11); and the coincidence of name and time is such, that it is almost impossible not to imagine some family connection between him and her. Bhaṇugupta, of course, must have been a Kshatriya; and Bhaṇugupta’s husband, Ravikṛiti, was evidently a Brāhma. But the ancient Hindu law authorised the marrying of Kshatriya wives by Brāhmaṇs. And we have an epigraphical instance of this practice in the Gaṇotikāca cave inscription of Hastibhīja, a minister of the Vaiśākha Māhārāja.

Dēvasēna; it tells us that Hastibbhōja's ancestor, the Brāhmaṇ Sōma, "in accordance with the precepts of revelation and of tradition" married a Kshatriya wife, through whom Hastibbhōja was descended, in addition to some other wives of the Brāhmaṇ caste, whose sons, and their descendants, applied themselves to the study of the Vēdas.¹

TRANSLATION.

Perfection has been attained! Victorious is he, (the god) Śaṁbhū, the lord of (all) the worlds,—in whose songs, hummed with smiles, the splendour of (his) teeth, like the lustre of lightning sparkling in the night, envelopes and brings into full view all this universe!

May he, (the god) Śaṁbhū, confer many auspicious gifts upon you,—employed by whom in the rites of (affecting the) continuance and the destruction and the production of (all) things that exist, (the god) Svayaṁbhū, is obedient to (his) commands, for the sake of the maintenance of (all) the worlds;
and by whom, leading him to dignity in the world, he has been brought to the condition of being the father (of the universe)! May the serpent of the creator of existence\(^{30}\) accomplish the alayment of your distress,—(that serpent) the multitude of whose foreheads, bowed down afar by the pressure of the heavy weight of the jewels in (their) hoods, obscures the radiance of the moon (on his master's forehead); (and) who (with the folds of his body) binds securely on (his master's) head the chaplet of bones which is full of holes (for stringing them)! May the creator of waters,\(^{31}\) which was dug out by the sixty thousand sons of Sagara, (and) which possesses a lustre equal to (that of) the sky, preserve for a long time the glory of this best of wells!

(L. 4.)—Now, victorious is that tribal ruler,\(^{32}\) having the name of the glorious Yāsōḍhārman, who, having plunged into the army of (his) enemies, as if into a grove of thornapple-trees, (and) having bent down the reputations of heroes like the tender creepers of trees, effects the adornment of (his) body with the fragments of young sprouts which are the wounds (inflicted on him).

(L. 5.)—And, again, victorious over the earth is this same\(^{33}\) king of men,\(^{34}\) the glorious Vishnuvardhana, the conqueror in war; by whose own famous lineage, which has the asikara-crest,\(^{35}\) has been brought to a state of dignity that is ever higher and higher. By

---

30 bhava-sṛiṇ. Originally, Brahman was the creator; Vishnu, the preserver; and Siva, the destroyer. But of course the Vaishnavas and the Saivas inverted their own special gods with all three attributes. And, that bhava-sṛiṇ here denotes Siva, is shown by the general purport of the preceding two verses, and especially by the mention of the chaplet of bones in this verse. He is always represented with a necklace of skulls, a serpent hanging round his neck, and the crescent moon on his forehead.

31 The ocean. The allusion in this verse is to the legend that the bed of the ocean was excavated by the sons of Sagara in their search for their father's vāstu-māthaka-horse, which was stolen from their custody by the sage Kapila, and was only found by them when they had dug down through the earth into the lower regions. Kapila, in his anger, reduced them to ashes; but subsequently restored the horse on the intersection of Anūṣum, the grandson of Sagara. The obsequies, however, of the sons of Sagara remained unperformed, and their transfer to heaven was barred, until Bhagiratha, the grandson of Anūṣum, brought the river Ganges down from heaven, and led it over the earth to the chariot made by the sons of Sagara. Flowing down through this, it washed their bones and ashes, by which they were raised to heaven. And, as such of its waters as remained in the chasm constituted the ocean, the latter was called vāṣpa in commemoration of Sagara and his descendants.

32 yānubra; see page 223 above, note 2.

33 This expression looks at first sight as if Yāsōḍhāra-

30 having brought into subjection, with peaceful overtures and by war, the very mighty kings of the east and many (kings) of the north, this second name of "supreme king of kings" and supreme lord;\(^{32}\) pleasing in the world (but) difficult of attainment, is carried on high. Through him, having conquered the earth with (his own) arm, many countries,—in which the sun is obscured by the smoke, resembling dense dark-blue clouds, of the oblations of the sacrifices; (and) which abound with thick and thriving crops through (the god) Mahatvan pouring cloudfuls of rain upon (their) boundaries; (and) in which the ends of the fresh sprouts of the mango-trees in the parks are eagerly plucked in joy by the hands of wanton women,—enjoy the happiness of being possessed of a good king. Through the dust, grey like the hide of an ass,—stirred up by his armies, which have (their) banners lifted on high; (and) which have the bāhun-trees tossed about in all directions by the tusk of (their) infuriated elephants; (and) which have the crevices of the Vindhyas mountains made resonant with the noise of (their) journeying through the forests,—the orb of the sun appears dark (and) dull-rayed, as if it were an eye in a peacock's tail reversed.\(^{34}\)

(L. 9.)—The servant of the kings who founded the family of that lord was Shasthidatta,—the fame of whose religious merit was known far and wide through the protection of (their) man and Vishnuvardhana were one and the same person. But the general structure of this verse, as well as the use of the two distinct titles jayendra and mahisasura, and of the expression ṅma-rādhā, shows that this is not the case. "This same," simply means "this reigning king," in whose time the inscription is written.

34 mārādhipati; see page 223 above, note 3.

35 I have not been able to obtain any explanation of the word asikara; but it seems to denote either 'the hot-rayed (sun), or 'the cool-rayed (moon)." As regards bhūcha, a mark, sign, token, spot, which I render by 'crest,' it is the technical term for the principal emblem impressed by kings on the copper-seals attached to their charters, and is quite distinct from the emblem on their dhwajas or banners. Thus the Rajas of Sambatti and Belgaum had the svayamgaruka-dhwaja or 'banner of a golden Garuda,' but the sikhara-bhūcha or 'elephant-crest' (e.g. line 43 of the Tērōś inscription of Saka-Saṅgha 1645 A.C.; ante, Vol. XIV, p. 13, and p. 24, note 24). The Chalukyas, in their branches, had the marāhālībhūcha or 'boar-crest,' which appears on the seals of all their charters, and the special connection of the bhūcha, with the crest of a bull, or 'charter,' is shown by a passage in lines 73 ff. of the Kornallī plates of Bālarāja 11,—"on whose charter the mighty form, that of the first bull of (the god) Vishnu, which lifted up the entire circle of the tip of (its right-hand) task, became in a pleasing way the crest." (ante, Vol. XIV, p. 85.)

36 rjīyādhīrōja.

37 paramādhīrōja.

38 i.e. "looked at from the wrong side of the feathers."
feet; who by his resoluteness conquered the six enemies (of religion);  

(L. 15.)—And after him there came that (well-known) A bh a ya d a t t a, maintaining a high position on the earth, (and) collecting (in order to dispel it) the fear of (his) subjects (?);—by whose eye of intellect, which served him like the eyes of a spy, no trifle, however remote, remained undetected, (even) at night;—(Abhayadatta, of fruitful actions, who like (Vṛhspatī) the preceptor of the gods, to the advantage of those who belonged to the (four recognised) castes, with the functions of a Rājasthānīya  29 protected the region stretching from the pale mass of the waters of (the river) Rēvā which flows down from the slopes of the summits of the Vindhya, and from the mountain of Pariyātra, on which the trees are bent down in (their) frolicsome leaps by the long-tailed monkeys, up to the (western) ocean, and containing many countries presided over by his own upright councilors.

(L. 17.)—Now he, D h a r m a d h a s a, the son of D o s h a k u m b h a,—by whom this kingdom has been made, as if (it were still) in the Kṛta-age, free from any intermixture of all the castes, (and peaceful through) having hostilities allayed, (and) undisturbed by care,—in accordance with justice proudly supports the burden (of government) that had (previously) been borne by him; 30—(Dharmaidhāsa), who,—not being too eager about his own comfort, (and) bearing, for the sake of his lord, in the difficult path (of administration), the burden (of government), very heavily weighted and not shared by another,—wears royal apparel only as mark of distinction (and not for his own pleasure), just as a bull 31 carries a wrinkled pendulous dew-lap.

(L. 19.)—His younger brother, D a k s h a n,—invested with the decoration of the protection of friends, as if he were (his) broad-shouldered (right) arm (decorated) with choice jewels,—caused to be excavated this great well, that bears the name of "the faultless" which causes great joy to the hearts of those that hear it. This great (and) skilful work was achieved here by him, who is of great intellect, for the sake of his paternal uncle, the beloved Dharmadēsa, must be the younger brother of Abhayadatta, and the third and youngest of the sons of Ravi-
skrit and Old-Kanarese Inscriptions.

---

29 viz. love, anger, greed, joy, pride, and passion.
30 Interpreters of Vedic quotations and words.
31 An epic hero, the younger brother of Dhritarāṣṭra and Pāṇḍu, described as the wisest of the princes and sagacious people.
33 sc. Abhayadatta.—Dēśakumāra, the father of
Abhayadatta, who was cut off (before his time) by the mighty (god) Kṛṣṭánta, just as if he were a tree, the shade of which is pleasant to resort to (and) which yields fruits that are salutary and sweet through ripeness, (vanish only) destroyed by a lonely elephant.

(L. 21.)—Five hundred autumns, together with ninety less by one, having elapsed from (the establishment of) the supremacy of the tribal constitution of the Mālavas, (and) being written down in order to determine the (present) time;—in the season in which the songs, resembling the arrows of (the god) Smāra, of the cuckoos, whose utterances are low and tender, cleave open, as it were, the minds of those who are far away from home; and in which the humming of the flogs of bees, sounding low on account of the burden (that they carry), is heard through the woods, like the resounding bow of (the god Kāmadēva) who has the banner of flowers, when its string is caused to vibrate;—in the season in which there is the month of the coming on of flowers, when the wind, soothing the affectionate (but)

perverted thoughts of disdainful women who are angry with their lovers, as if they were charming sprouts arrayed in colours, devotes itself to breaking down (their) pride,—in that season this (well) was caused to be constructed.

(L. 24.)—As long as the ocean, embracing with (its) lofty waves, as if with long arms, the orb of the moon, which has its full assemblage of rays (and is more) lovely (than ever) from contact (with the waters), maintains friendship (with it);—so long let this excellent well endure, possessing a surrounding enclosure of lines at the edge of the masonry-work, as if it were a garland worn round a shaven head, (and) discharging pure waters the flavour of which is equal to nectar!

(L. 25.)—May this faultless Dākaḥśa for a long time protect this act of piety. (he who is) intelligent, skilful, true to (his) promises, modest, brave, attentive to old people, grateful, full of energy, (and) uncarried in the business-matters of (his) lord! (This eulogy has been) engraved by Gōvinda.

NOTES ON THE MAHABHĀSHYA.
BY PROFESSOR F. KIELHORN, GÖTTINGEN.

(Continued from p. 211.)

4.—Some suggestions regarding the verses (Karikas) in the Mahābhāṣya.

Besides the Vārṭikas of Kātyāyana, which are in prose, and to explain which is the main object of Patañjali, there occur, scattered through the Mahābhāṣya, a number of verses treating of grammatical matters. Some of these verses have been fully commented upon by Patañjali; of others he has merely given the general import, or he has appended to them an occasional remark only. Again, there are verses which appear to repeat in a summary way what has been already stated before in prose; and still others, which are neither commented upon, nor partake of the nature of summary verses. Sometimes the discussion on a rule of Pāṇini's is carried on solely by means of verses that are explained by Patañjali; on other occasions verses, commented upon or without comment, precede the prose Vārṭikas on a rule, or follow them, or occur in the midst of them. In a large number of cases the verses occur singly, but sometimes two, three, four, five, or even six verses are grouped together; and we also meet with a considerable number of half-verses, and even quarter-verses.

The total number of these verses is about 260. The metres in which they have been composed are the following:—

The ordinary Ārya: about 40 verses.

Gītī: one verse and a half; Vol. III. p. 216.

The ordinary Ślokā: about 165 verses.

Three quarters of a verse: Vol. II. p. 29.

Half-verses: 16.

Quarter-verses: 12.

45 nāsty: but it is very difficult to find a really satisfactory meaning for this word in this passage.

46 sc. the spring.
When the term Ślokavārttikakāra is opposed to the term Vārttikakāra (or Vādyakāra), as has been done by Kaiyāta on Vol. III. p. 189, or by Bhaṭṭi on Vol. I. p. 36, both of course denote different persons; and in such a case it was hardly necessary for Nāgājībhaṭṭa to tell us that the Vārttikakāra (or Vādyakāra) is Kātyāyan, and the Ślokavārttikakāra another. 8 But from this it by no means follows that the Ślokavārttikakāra has been regarded by the commentators to be different from the ordinary Vārttikakāra in every case. On the contrary, we have abundant proof for it, that both Kaiyāta and Nāgājībhaṭṭa (as well as Haradatta and other commentators whose works have been examined by me) have considered Kātyāyan as the author, not only of prose Vārttikas, but also of Vārttikas in verse. When Kaiyāta on P. i. 1, 21 opposes the Vārttikakāra to the Ślokavārttikakāra, the former must be understood to be Kātyāyan, just as the Ślokavārttikakāra can be no other than Pāṇini; and, as the particular statement ascribed here to the Vārttikakāra is a verse on P. vi. 4, 74, Kaiyāta must have taken Kātyāyan to be the author of that verse. 9 Similar instances might be quoted from Nāgājībhaṭṭa's work. So far then, what we learn from the commentators amounts to no more than this, that in their opinion some of the verses in the Mahābhāṣya are by Kātyāyan, and others by another author of Vārttikas.

But the commentators assign some verses also to the author of the Bhāṣya. Thus Pūrṇarāja ascribes to the Bhāṣyakāra the verse in Vol. I. p. 356; Nāgājībhaṭṭa calls the verse 2 in Vol. III. p. 267 a Bhāṣyakāra Śloka; and he states that the verses in Vol. II. p. 229—verses fully commented upon—belong to the wrong: in some of those cases a slight alteration of the text would have sufficed to set the metre right.

8 Bhaṭṭi on Vol. I. p. 36: —देहीचे बांधकालिक | कात्यायनस्य देवसुक्तं तत्वं शास्त्रार्थकालिकसायाः | Nāgājībhaṭṭa on Vol. III. p. 189: —नागाजीब्धार्तिकारे प्रसा कार्तिकात्मकसायाः | Kaiyāta on Vol. III. p. 189: —रचयितो नागाजीब्धार्तिकारे प्रसाकार्तिकात्मकसायाः | and Nāgājībhaṭṭa: —शास्त्रार्थकारसायाः. 10

Bhäšyakṛtt, not to the Vārttikakṛtt. All this (whether right or wrong) is mere conjecture; and so is another statement of Nāgōjībhaṭṭa's, according to which the half-verse in Vol. II, p. 292 belongs either to the author of the Bhāshya or to another Vārttikakāra. Nāgōjībhaṭṭa evidently had no traditional knowledge as to the authorship of the verses, and even when he tells us that the verse श्रीकावम्भू in Vol. II, p. 393, also found at Vol. II, p. 15, is taken from some Sāstra or other, which probably is true, he must be considered to state only his own opinion.

The case is different, when Kaiyāṭa volunteers the remark that the verse ज्ञेनविशेष in Vol. I, p. 484, which might be called a summary verse, has been composed by Vyāghrabhūṭ. A distinct statement like this cannot have been invented by Kaiyāṭa. It must have been copied from the works of other commentators, who may be supposed to have had good reasons for what they were reporting. It is the only important statement that we owe to the commentators, regarding the authorship of at least one verse in the Mahābhāṣya.

A priori there is no reason why Kātyāyana should not have written some of his Vārtikas in verse. Among the few Vārtikas of the Bhāradvājya, handed down to us in the Mahābhāṣya, there is one, in Vol. III, p. 199, l. 19, which is in verse—a sufficient proof, that a combination of prose Vārtikas and of Vārtikas in verse could not in itself be regarded as objectionable. But what we must demand of a work written partly in prose and partly in verse (supposing that work to have been composed by a scholar like Kātyāyana), is, that the several portions of it should form an harmonious whole; that there should be some connection between its verses and its prose statements, and that the former should not contradict the latter; that a question, which has been fully discussed and disposed of in the prose, should not be raised and discussed again in the verses; that the terminology employed should be the same in both, and that at any rate its prose and metrical portions should contain evidence of having proceeded from one and the same school of grammar. We also might fairly expect that the prose portion should not entirely ignore that part of the work which is in verse.

If from such points of view we examine the verses which have been commented upon by Patañjali, and it is only these verses that could possibly be regarded as Vārtikas—we shall indeed discover many reasons why such verses should not be assigned to the writer of the prose Vārtikas, while it might be difficult to bring forward a single argument in favour of their having been composed by Kātyāyana. In a previous article, I have shown that about a hundred times Kātyāyana has referred us by the word वर्त्तिका or the phrase वर्त्तिका या to statements or arguments which occur in other parts of his work; in all these cases the reference is to prose Vārtikas; and there is not a single instance in which Kātyāyana has thus alluded to a statement in verse. I have similarly already drawn attention to the circumstance, that Kātyāyana purposely has so worded the first Vārtika on a rule, as to indicate the rule to which such Vārtika must be understood to belong. Now it is a fact, that 27 times in the Mahābhāṣya a first prose Vārtika is preceded by verses, many of which do contain some distinct reference to the rule of Pāṇini's to which they have been appended, and that nevertheless, in every one of these cases, the reference to Pāṇini's rules is repeated in the following prose Vārtikas. Those who

\[\text{See p. 299 f. above.}\]

\[\text{In Vol. III, p. 229, l. 15, Patañjali does also refer us to the verse on P. VI. 4, 127; but Kātyāyana's reference is solely to the Vārtika 13 (and 15) on P. VII. 1, 1.}\]

\[\text{See p. 294 above.}\]

\[\text{If the verse परिभाषा. कर्तव्ये in P. III. 2, 118 were Kātyāyana's, he would not have repeated रोक तिल in his Vārtika on that rule. If the verse on P. VI. 3, 46 were his, he would have omitted the नजी in from his first Vārtika. If the verse, with which the discussion on P. VII. 1, 75 opens, were Kātyāyana's, he would not have noticed his first prose Vārtika, as he has done. In this last case, the very way in which Patañjali introduces the first Vārtika, shows that now only Kātyāyana is about to speak.} \]
would assign the verses to Kātyāyana, must certainly admit that here again he himself would have completely and intentionally ignored those verses in his prose statements.

To adduce more direct proof, I would certainly deny that verses like those in Vol. I. p. 33, अनुमति विनायक, and p. 145, even though they have been fully explained by Patañjali, can by any possibility be ascribed to Kātyāyana. Those and similar verses stand in no connection whatever with preceding or following Vārtikas, and by themselves they are unintelligible. They receive a meaning only when taken as part of the discussions that have been started by Patañjali, and their presence cannot be accounted for unless we assume that they have been borrowed by Patañjali from elsewhere. Nor can we assign to Kātyāyana verses like those on P. I. 1, 19 or P. VI. 4, 74; for what we learn from the former is really nothing but what Kātyāyana has already told us in his Vārt. 20 on P. I. 4, 1; or that the same scholar, who in a prose Vārtika in Vol. II. p. 354 has taught us to form पर्वतन्त, would in a verse in Vol. II. p. 378 have derived the same word by means of the suffix तर्व; that in Vol. II. p. 301 he would have formed ममन्तीन् with the suffix छ, and on p. 310 with नीत, वैय and वाक्य on p. 286 with व, and on p. 311 with अय। Besides, I consider it altogether unlikely that Kātyāyana would, for no apparent reason, have used the term देव in the verses in Vol. II. pp. 284, 373, and 425, or that he would have employed for उल्लम्ब the term दु for the term दु in the verses in Vol. III. pp. 229, 247, and 318, when he has never employed those terms in his prose Vārtikas. It is also certain that a verse like that on P. V. 2, 39, which speaks of a suffix उत्तर, cannot have proceeded from a scholar who elsewhere accepts Pāṇini's views of the formation of the words बार, नावन etc.; the more so, when the concluding portion of that verse is distinctly directed against the prose Vārtika of that scholar on P. V. 2, 37. I might go on quoting other verses which are directed against the prose Vārtikas, others that try to improve on them, and again others intended to explain them; but will conclude these arguments by stating that in three instances (in Vol. I. p. 444, and Vol. II. pp. 88 and 117) Patañjali has distinctly intimated that the verses on which he happens to comment, are not by the author of the prose Vārtikas, and that Kātyāyana himself and his Vārtika are mentioned in the verses explained in Vol. II. pp. 121 and 176.

13 The verses on P. VI. 4, 74, try to show that Pāṇini's rule VI. 4, 72 may be dispensed with, which is not the opinion of Kātyāyana; they moreover suggest a new rule of which they maintain that it will render Kātyāyana's Vārtikas on P. VI. 1, 55 superfluous. In note 3 I have shown that Patañjali does not regard these verses as his own; the verses themselves prove, that they are not Kātyāyana's.

14 It is really difficult to say whether this term should be read दु or दु. The authority of the MSS. is decidedly in favour of reading it दु, and I have read it दु mainly because this gives a correct verse in Vol. III. 315, 1. 5. Perhaps I have attached too much importance to the metre, which, after all, is violated in many verses in the Mahabhāsha. In the MSS. of the Jaimāndra grammar, too, the term is read दु and दु.

15 Kātyāya on P. V. 2, 39: यत्तत्वदेशाय | पवित्रामपित्राय विनायक | यथा तत्तत्वदेशाय | कामपित्राय | यथा कामपित्राय | ।

17 In the three instances given above Patañjali introduces verses, which are explained by him, by the words अति भ्र, after prose Vārtikas. By the same phrase he introduces, after prose Vārtikas, a verse on which he does not comment, in Vol. II. p. 38. By अति भ्र he introduces verses, after other verses or after remarks of his own, in Vol. I. pp. 13, 63, 253, 335; Vol. II. pp. 37, 917, 228; and Vol. III. p. 410. After a verse he introduces another verse by पर एव एव। अति भ्र in Vol. I. p. 33; and by पर एव एव: alone in Vol. I. p. 484 and Vol. III. p. 410. On Vol. I. p. 484 नागरिणी is in doubt as to whether the verse so introduced is by Patañjali or by another. We should have expected to find the words एव एव before the second verse in Vol. I. p. 500.

18 Besides, the Bhagavat Kātyāya is mentioned in a so-called summary verse in Vol. II. p. 97.
My opinion then of the verses which have been explained in the Mahābhāṣya, is, that they do not belong to Kātyāyana at all, but have been borrowed or quoted by Patañjali from other works. There is every reason to believe that those works were composed after the Vārttikas. Though they were written in verse, their aim, so far as we can judge, was the same which Patañjali himself has had in view in writing his own work, to elucidate, or to correct and improve on, the Vārttikas, and to discuss matters connected with individual rules of Pāṇini's or with the system of Pāṇini's grammar, that had not been touched upon by Kātyāyana. Moreover, we shall probably be doing no injustice to Patañjali, when we maintain that he frequently has taken the substance of his discussions and many of his arguments from those older works, even where he has not actually and distinctly quoted from them. For, not to mention that such an opinion accords with what tradition tells us were the circumstances under which the Mahābhāṣya was composed, it is only by a supposition of this nature, that we can account for a curious fact which is sure to arrest the attention of the student of the Mahābhāṣya.

It sometimes happens that in the midst of Patañjali's prose discussions we meet with quarter-verses or smaller fragments of verses, which taken by themselves are unintelligible, but which fit exactly into the discussions of which they form part. They are not and cannot have been intended as quotations; nor can they be of Patañjali's own authorship, because there is no conceivable reason why Patañjali should suddenly have given utterance to part of a verse, and because he repeats their meaning in prose. In fact, they might have been omitted without the slightest loss. Now those portions of verses must have been taken from somewhere; where there were quarter-verses, there must have been whole verses; and when those quarter-verses fit into Patañjali's prose discussions, they must have fitted into discussions that were carried on in whole verses. I believe, then, that in the cases alluded to Patañjali is merely reproducing, if prose, what was before him in verse, and that only by chance, and not intentionally, he has repeated in his own discussions fragmentary portions of his metrical originals. As typical instances of such portions of verses, that must have been taken from older works, I may quote the words in Vol. I. p. 14, l. 3. letūr ḍa Ṛṣyānātra, the meaning of which in Patañjali's own language is letūr ḍa Ṛṣyānātra; the words śatāvāḥ-śaiva in Vol. I. p. 48, l. 12; pāñjānānaṃ viśe śasti śasti in Vol. II. p. 127, l. 11; śatāvāḥ-śaivaśantānāḥ in Vol. II. p. 384, l. 5; aśvān kāriṇaḥ in Vol. III. p. 229, l. 10; and kānāsaneśa pratiśeṣa in Vol. III. p. 280, l. 12; all of which might and should have been omitted from the Mahābhāṣya, and the accidental presence of which merely shows that Patañjali is indebted to his predecessors for the arguments which he happens to be propounding. The same conclusion may be drawn from the occurrence in the Mahābhāṣya of certain half-verses and of some complete verses, which resemble the smaller portions of verses spoken of in so far as they too, by themselves, are meaningless, and which must therefore likewise be considered to have been part originally of works that were discussing in verse the same questions which Patañjali happens to treat of in prose. Half-verses of this nature we find, e.g., in Vol. I. p. 16, l. 10; pāñjānānaṃ viśe śasti śasti in Vol. II. p. 284, l. 6; śatāvāḥ-śaivaśantānāḥ in Vol. I. p. 33, l. 16; and elsewhere.

That Patañjali sometimes has merely reproduced the information which he had obtained from works composed in verse, might be shown also in another way. When we examine, e.g., his remarks on P. VII. 3, 107, the quarter-verse ahaṃ śathaṃ sūtrāḥ of course shows us that, in this particular point, he is not giving us his own argument. But, more than by this, we shall be struck by the extraordinary construction nātāṃ varamahāṃśe,21 in the
last statement adduced by Patañjali. That neither he himself nor Kātyāyana would have written thus, is certain, and it is a relief to discover that the whole statement नानाविद्यालयानात्म है is really the end of a verse, and that the word Sanskrit finds some excuse in the exigencies of the metre. It is not difficult to conjecture that the original verse belongs to the same writer to whom we owe the half-verse on P. VI. 1, 14. Similar proof is afforded, to mention only one other instance, by Patañjali's remarks on P. IV. 2, 60. The statement सस्वन्देखतान्यास्य व in the fifth line of these remarks is again the end of a verse, and the first line on p. 254 forms a correct half-verse, when we omit from it the word विना, which is unnecessary, because a special rule is given for it in the sequel. Besides, the term रक्तक and the word स्वस्त: in the line prove that we have to do with verses, not with the prose of either Kātyāyana or Patañjali.

Excepting, perhaps, the so-called Sanātaka-बक, or summary verses, there is really no valid reason why any of the verses in the Mahābhāṣya should have been composed by either Kātyāyana or Patañjali. On the contrary, we have shown that many of the verses, which have been fully commented upon by Patañjali, can certainly not be ascribed to Kātyāyana. And having proved that Patañjali has undoubtedly borrowed from older works which were in verse, we shall regard those works as the source of those verses also to which he has appended an occasional remark only—verses like those in Vol. I. p. 96, 1. 1-5, Vol. II. p. 137, 1. 4-7,—or the meaning of which has been merely indicated in a general way—like those in Vol. I. p. 147, 1. 12-18, p. 356, 1. 9-10,—as well as of those verses which have been left without any comment and which clearly are meant to be regarded as quotations—verses such as those

60 रक्तक stands for रक्त as e.g. does रक्तक for रक्त in the verses on Vol. II. pp. 284 and 398; विना for विना; विना for विना in Vol. II. pp. 284; and रक्त for रक्त in the verses in Vol. II. p. 310. स्वस्त stands at the end of verses, e.g. in Vol. II. pp. 284, 292; Vol. III. pp. 67, 140, and 463.

61 A clear instance of how Patañjali is quoting from other works is furnished by the verse in Vol. II. p. 182. The question raised in the last words उपस्वस्त of that verse has nothing to do with the matter under discussion, but refers to P. III. 4, 93. It must have been answered in a verse following upon the verse that is cited by Patañjali (Kātyāya says: श्रेष्ठवर्णानावलिकम्).—Similarly in Vol. I. p. 71, p. 75, p. 181, etc. But it may appear doubtful, if even the so-called summary verses should be assigned to Patañjali. To me it seems at least possible, that the commentators may have misunderstood the nature of these verses. Their opinion is that Patañjali, probably to assist the memory of the student, has given in those verses a résumé of the arguments which he has stated before in prose. But if Patañjali had really been so kindly disposed, we might well ask, why in the whole of the Mahābhāṣya he should have given proof of such disposition at the utmost on twenty occasions only, and why he should not have appended summary verses to discussions far more lengthy and complicated than those are to which such verses have been attached. Nor can it escape the attention of the student, that occasionally the so-called summary verses contain arguments or statements, of which there are no traces in the prose by which the verses are preceded. The verse in Vol. II. p. 55 speaks of irregularities of accent, that have not been mentioned before. The first verse in Vol. I. p. 100 compares the case in hand with an analogous case, while the discussion in prose has omitted to do so. Besides, we have seen already that one summary verse—the Dódhaka verse in Vol. I. p. 484—is reported to have been composed, not by Patañjali, but by Vyaghra-bhūti. Why should the same Vyaghrahbhūti not be the author of the Dódhaka verse in Vol. II. p. 65, which contains distinct traces of not being a mere summary verse, and of the Dódhaka verses in Vol. III. p. 423? I confess I can discover no reason why the verses spoken of should likewise not be regarded rather as the source of those arguments which Patañjali is propounding in his prose, than as summaries, repeating, for the benefit of an inattentive student, those arguments in verse,
A FURTHER NOTICE OF THE ANCIENT BUDDHIST STRUCTURE AT NEGAPOATAM.

COMMUNICATED BY SIR WALTER ELLIOT.

Some time after I communicated the former Article on the remarkable and unique edifice at Negepatam, an old friend, an officer in the Madras Army, but now an inmate of the College of St. Joseph at Negepatam, sent me, through his brother, some further information which it may be interesting to place on record. He writes as follows:— "In a pamphlet entitled *Interprétations d'Antiques Idoles Bouddhiques*, by M. Textor de Ravisi, Ancien Commandant de Karikal (Indes Orientales), being *Extrait de Travaux de 1865 et 1866 de la Société Académique de Saint Quentin*, published at Saint Quentin at the Imprimerie Jules Menard, 7, Place de l'Hôtel-de-Ville, in 1866, I have found an account of the statuettes that Sir Walter asks after. I have not time to copy in full, but I have given above the title, author, and publisher, so that Sir Walter, who probably may have known the author in India, may get the little pamphlet if it be still in print. Textor de Ravisi says of the tower, that, when the Portuguese discovered India, they spoke in their account of Negepatam of this tower as *la tour ruinée*, and that the Dutch used it at one time as a Lighthouse. The tower, he says, was an irregular square. The materials are enormous bricks beautifully manufactured and very superior to the country manufacture of to-day. The cement is a *terre glaise* (which I take to be polished shell *chunam*), but it is stated that the cement was extremely hard and like stone.

"From those who were present at the demolition of the tower, I have learned that exteriorly there were apparently three storeys, but interiorly there were no traces of landing places or storeys, and that there were only three smooth walls, the fourth side being open all the way up. The bricks are said to have been very large; the cement as M. Textor de Ravisi describes it. The foundations were about eight feet deep, and there had apparently been an underground cellar or storey, for the middle was filled with sand, and the inner walls were covered with very hard shell *chunam* polished. No statuettes or anything else were found in the tower itself, with the exception of four little square pieces of gold, let roughly into the four corners of what appears to be the foundation stone. This foundation stone was at the very bottom of the foundation.

"No statuettes were discovered in digging the foundations for building the dormitories that now form one side of the college quadrangle. It seems they had to cut down, and then to dig and remove, the roots of a venerable banyan tree, and among these roots several curiosities were found. Amongst others five small statuettes, some sitting, some standing, but all Buddhist, and indeed from the drawings in M. Textor de Ravisi's book, identical in shape, but miniatures of the Gaudamus so common in British Burmah. I would also draw Sir Walter's notice to a fact he may have forgotten, that shell *chunam* is very common in many of the Buddhist temples of Burmah, and this is the more remarkable as in that country it is only their temples that are built of masonry. M. Textor de Ravisi incidentally mentions in another part of his pamphlet, "Ces idoles trouvées dans de tels conditions jointes à l'existence de la tour dont la structure indique une construction bouddhiste sembleraient démontrer que ces statues remontent à l'époque où le culte de Bouddha fut définitivement expulsé du sud de l'Hindoustan par le triomphe de Brâhmanisme." And certainly everything that was discovered seems to speak of Buddhism, for among other things a bell was discovered in the neighbourhood of the statuettes. This bell was recast and is now the college bell. The dormitory, which now stands on the place where the statuettes were found is about 60 yards from the position occupied by the ruined tower. I subjoin or enclose some rough copies of some sketches of articles found with the statuettes. I should not forget to mention among other things a human skull that was found in a kind of small arched tomb."

*"With regard to the tower, one of the native Fathers now in the college, tells me that he*

---

2 This looks like Chinese Buddhism.
remembers as a boy that the tower was nearly twice the height it was at the date of its final destruction, and that even then it bore the appearance of having been still higher formerly.

"I wrote the above when I was absent from the college. On my return I have consulted the Records, and send sketches marked A. and B., showing respectively the ground plan of the tower, and some of the ornaments dug out of the foundations of what is now one of the dormitories, and which I have already referred to above."

"Les briques sont énormes, sous l'âge d'elles au coin de l'ouest à l'intérieur on trouve quatre lames fines, étroites et courtes d'or. Voici le plan des fondemens avec le coin où l'on a trouvé ces lames, les fondemens avaient à peu près 12 ou 13 pieds de profondeur."

A.

1. or
2. decombres anciens
3. mur isolément bâti à la face intérieure
4. 5. idem
5. sable marin
6. grandes briques."

B.

"En creusant les fondemens on trouve dans la tranche du sud-est (1) un piedestal, (2) une plaque sculptée et percée au milieu, (3) une cloche, et (4) une espèce de couronne; tout excepté la cloche en cuivre doré; dans la tranche N. E. on trouve un crâne."

"To my idea the figure No. 4 corresponds to the head pieces of the Burmese Gamallas, and so also No. 3 to the Burmese pagoda bells. But No. 2 certainly is more like Chinese than Burmese."

In conclusion, he adds the following extract from the Records of the College, having reference only to the final demolition of the edifice:

"À une des extrémités du Collège de S. Joseph à Negapatam l'élevait, il y a six ans, une vieille tour carrée mesurant de vingt-cinq à trente pieds de côté. La hauteur de cette tour qui primitivement était de soixante-dix à soixante-quinze pieds, avait été, pour prévenir les accidents, réduite de moitié. Une ouverte unique, partant de la base au sommet, donnait entrée et jour du côté du midi. L'édifice était un mur massif de briques et de terre sans aucun caractère architectural. Aux quatre côtés de la base, de profondes excavations s'étaient formées sous l'action séculaire des sels marins. Ces excavations avaient jusqu'à huit pieds de profondeur. Au sommet et sur les côtés l'on voyait une vigoureuse végétation d'arbustes.

Récemment, quantité d'objets, depuis longtemps enfouis, appartenant au culte bouddhique, ayant été découverts dans les environs du vieux monument, ou en concluant qu'il avait été un temple, consacré à Bouddha. Une opinion moins accréduent en faisait un simple point de repère (sic) pour les navires qui approchaient de la côte, et lui attribuait une origine Hollandaise, mais la croyance populaire, sans rien déterminée de son origine et de son usage, lui attribuait un caractère sacré et superstieux."

The above particulars do not add much to our previous scanty knowledge of the old building. The most interesting fact is that the discovery made in the foundations of Negapatam.

"Extract from "Des Missions Catholiques" of 17th July 1874.

* Extract from Records of St. Joseph's College,
four pieces of gold under a large brick in the west corner, which appears analogous to the deposits of gold, coral, pearl, &c., found in the Buddhist Topes, leading to the inference of a common Buddhist origin. The discovery of the skull also tends to the same conclusion. The only other remark I have to make is in regard to the statement that "interiorly there were no traces of landing places or storeys." With reference to that I repeat what I said in my former paper that "at the top of the lowest storey were marks in the wall showing where the floor of the second had been fixed." It may also be added that the statement of the native Fether above mentioned, that "he remembered the tower twice as high as it was at the date of its final destruction," is easily explained by a reference to the plate at p. 226, fig. 2, Vol. VII, as it stood in 1846, and Mr. Middleton Rayne's sketch in 1866, fig. 1.

RED CLOAK. — Lolli plaikta, (Eng.).

RED HERRING. — Lolli matcho, (Eng.).

SEPATHA, THE ANCIENT SANSKRIT NAME OF BTANA.

I have published (ante, Vol. XIV. p. 88) two epigraphical instances in which the ancient Sanskrit name of Byana, the chief town of the Byana Tahsil or Sub-Division of the Bharatpur State in Rajputana, is given as Sripa-tha.

A third instance is now available in another Byana inscription, of which General Cunningham has given a lithograph in Archzol. Surv. Ind. Vol. XX. Pl. xvii. No. 2 (see also id. p. 65), and which commences—

Om·11 Siddhi·11 Sanvat 1503 varahia Ashadha va di 9 Pana dinch art-Sripathayata, &c.

I notice that, at page 61 of the same volume, General Cunningham gives the ancient name of the town as Pathayampuri, and adds—"This "I believe to have been the original name of the "place, and also of the present name of Bayana. "For, by the simple elision of the th, Payampuri, "or Bayampur, might easily be shortened to Bayana." It seems sufficient to add here that no such name as Pathayampuri ever existed; it is simply a mistake originating in a total misunderstanding of the locative case art-Sripathayata, puri, "at the glorious city of Sripa-tha," in line 6 of the Byana inscription edited by me (ante, Vol. XIV. p. 10).

J. F. FLEET.

23rd March 1886.

MISCELLANEA.

DR. PETERSON'S EDITION OF THE SUBHASHITAVALI OF VALLABHADEV.

I came across this book a short time ago at a friend's house; and looking into it, because, though not myself a Sanskrit scholar, I take sufficient interest in the subject to be able to read with pleasure, and, I trust, with profit, prefaces of and introductions to such works as this.

In the present instance the Preface consists of pp. i. to ix. Pages i. and ii. on which the learned Professor describes how he has compiled and collated the present work, and how he acquired his coadjutor, are interesting. But from this point onward there is much in respect of which he has laid himself open to serious misapprehension, not to say blame.

On p. iii. he joins issue with Fitz-Edward Hall as to the proper estimate to be formed of Subandhu and his fellow Asiatics, and concludes with the following appeal:—"It is enough to ask the reader if he finds it difficult to recognize, in the verses that follow, the 'touch of nature.'" Here follow a considerable number of passages selected from the extracts forming this volume, which are ingeniously compared with passages taken from works in other languages.

Now, whatever may be the advantage, and I personally can see none, of seeking identical phrases in works of authors separated in time by many years and in distance by many thousands of miles,
it must, I think, be admitted that mere identity of form does not predicate identity of essence. If, however, Professor Peterson, or any one else, derives either profit or pleasure from wandering through such a literary puzzle, he is fully entitled to enjoy his fancy, so long as he does so in private, or, in public, confines himself to profane authors.

But, in the name of Christianity and of good taste, I feel bound to protest most strongly against the use, for such purposes, of passages taken from the Bible.

My friend gave me literal translations of several of the passages referred to on pp. vi. to ix. of the Preface; and it is certainly only by a considerable stretch of the imagination that Dr. Peterson's euhemerized adaptations can be found in the Sanskrit originals.

To two passages I would particularly invite attention. In No. 3187, on p. vi., in the bald words "Worship to Siva," Dr. Peterson finds a prototype for the opening petition of our Lord's Prayer. I would merely ask him, Does he consider such a comparison to be in accordance with propriety and good taste? Can he find any real point of similarity between the purely heathen Siva of Hindu mythology, and the Almighty Father of our Christian Religion? No. 3560, on p. viii. is another glaring instance of bad taste. It is a complete puzzle to me how any one can possibly identify the mythical nectar of the Hindus with the Water of Life, promised by Our Saviour, and so can find, in the rest of the verse, any analogy to the sublime scene between the dying Christ and the penitent thief.

Possibly such comparisons might be necessary, and even interesting, in a work in which the dogmas of Hinduism are compared with the theology of Christianity. But, in a book which is destined to be a mere text-book for immature schoolboys and irreverent undergraduates, it would have been in better taste had Professor Peterson sought for his analogous passages elsewhere than in the sacred writings of the Christian religion.

It is often charged against us foreigners in India, that we do too little to impress the Natives with any idea that we really believe in the Christian religion. This negative charge is too often well sustained. But I would ask, Is it necessary to add to our sin of omission that of commission?

This work is brought out under the auspices and at the expense of Government. Does our Government, which is nominally a Christian one, exercise any censorship over its educational publications? Does it do anything to prevent our English Bible from being debased into a common school primer, and thereby becoming "a byword among the heathen, a shaking of the head among the people?" When works, with Prefaces of this nature, are issued under official sanction, it is surely time that Government should intervene.

Dr. Peterson will, I trust, not be altogether displeased that he has "drawn a critic's fire" on this part of his work. But, as one who entertains a great admiration for his high abilities, I would ask him in the name of good taste, if on no higher grounds, to cancel pp. vi. to ix. and illustration No. 1039 of his Preface in all future editions, of which I hope there may be many.

29th May 1886.

G. M. C.

BOOK NOTICES.

The thirtieth number of the Bombay Sanskrit Series brings, in the edition of Vallabhadra's Subhasitavali and its accompaniments, most important contributions to the history of classical Sanskrit poetry. When I first found this work in Kashmir, which through a mistaken confidence in some interpolated passages I attributed to Śrīvara, it struck me at once that a book had come to light which if explored by a competent hand, would yield results as interesting for the student of classical Sanskrit as those gained by Professor Aufrrecht from Sārgadāra's extensive Paddhati. Want of leisure prevented me, however, from doing more than expressing this view.

Later on, the MSS. which I had acquired were sent to Professor Aufrrecht, who in an article on the work, published in Professor Weber's Indische Studien, corrected my mistake concerning its author, and gave some extracts from it. In the course of his search for Sanskrit MSS. Dr. Peterson found two more and, it would seem, better copies. He has now given us, in conjunction with Pandit Durgaprasada of Jaipur, an edition which certainly will be most useful, may indispensable, to every Sanskritist, both for the critical restoration of many classical texts and for the study of the history of classical poetry.

The text of Vallabhadra's Anthology is made up of 3327 quotations, culled from the compositions of between three and four hundred different poets. The Editors have not only duly numbered each verse, but have added an alphabetical list
of the Pratīkṣas or opening words of the extracts, and valuable critical and explanatory notes. The names of the authors have been arranged alphabetically in the Introduction; and under each name the Pratīkṣas of the verses, marked with it, have been shown once more. A good deal of interesting information has been added from other sources, especially from various articles by Professor Aufrecht, published in the Journal of the German Oriental Society.

This list of poets shows that Vallabhādeva, who was a Kasûtrian, has chiefly drawn on the literature of his native country and of the northern half of India. Some famous southern poets, such as Dandin, are neglected, probably because their works were as little known to Vallabhādeva as to his countrymen of the present day. More curious is the omission of the great Paramāra Bhūjā of Dhārâ, whose less famous descendant, Aryanadēva (Instr. p. 5), has received consideration. The list also shows, as the Editors point out (Instr. p. 111), that the author of the Sūhkāśikāvali cannot be placed earlier than in the first half of the fifteenth century A.D. For he quotes Jñânakâra, the author of the Rājâvali, and contemporary of Zaimâkâhidân of Kasûtr. Want of space makes it impossible for me to notice all the numerous interesting and important points contained in the Introduction. But I cannot refrain from calling attention to some among them as well as to some passages where I differ from the Editors. Under Kâldâsâ-Mâgha (p. 23) the Editors express the opinion that this signature, which is appended to verse 3330, goes to show that a Kâldâsâ and Mâgha wrote at least one joint poem. Without wishing to dispute the possibility of this interpretation, I cannot but point out that the signature may have a very different meaning. It may indicate nothing more than that the same verse occurred in other independent compositions of a Kâldâsâ and of Mâgha. Plagiarism is not unknown in India. In legal literature phrases analogous to the above signature, such as atâpya Mânu-Dâvatâ or atha Mânu-Vasishtha, refer to identical verses in the separate Smritis of Mânu, Dâvala and Vasishtha, while atha Sûkâs-Lâkhitâ indicates the reputed joint composition of the two sages named.

Under Kumârâdâsa (p. 25), we have besides the verse from the Aucâstîcâdârâvâdâchârtid, which contains the pâda quoted in the Mahâbâhâshya, the very interesting information, attributed to a Râjasâkhâra, that Kumârâdâsa wrote a poem entitled Jânakâharana, after the composition of (Kâldâsâ's) Râghuvârâs. This new information is, I think, extremely important. It probably will greatly help to solve the difficulties, which the agreement of the end of Kâmâraâdâsa's verse with the quotation in the Mahâbâhshya has raised. This solution, I think, will not confirm the suspicions, expressed by Dr. Peterson and others, against the antiquity of the Mahâbâhshya. Eventually, I believe, we shall find that Kâmâraâdâsa is not quoted by Pântâjâli, but that he has taken the fourth pâda of his verse from the Bâhâshya and has treated it like a samasây.

The list of Kâshâmârâ's works (p. 27-28) requires some additions; see S. Lévy, Journal Asiatique, Nov.-Dec. 1885, p. 309.

Under Pâṇini, the editors give a résumé of all that is known as yet regarding the poet Pâṇini, and a recapitulation of the arguments tending to prove his identity with the grammarian. There can be no doubt that the later Hindus have believed in this identity. I cannot say that I am prepared to assert that they must be wrong. I see nothing unreasonable in Dr. Peterson's supposition that Pâṇini may have used, in obedience to the usage of the poets of his day, grammatical forms which his grammar sanctions "ekhandaśi." Nor can I believe that, if the grammarian Pâṇini did write a Kâvyâ, he must, for that reason, be supposed to have lived in the fourth or fifth Century A.D. The Kâvyâ literature, and the rules of the Alâmkârâsastra, are, in my opinion, much older than is commonly asserted. One of the points, hitherto left out of consideration, is the character of some old inscriptions. The description of king Sâtabhâjâ in the great Nâsik inscription (Archaeol. Surv. West. Ind. Vol. IV. p. 108, No. 13) reads very much like a passage from Bâṣa. It evidently has been composed by a man acquainted with the rules of the Alâmkârâsastra, and with a literature based on it. Yet this document belongs, according to those who place it latest, to the first half of the second century A.D.; in my opinion, to the beginning of the first. Considering all things, I am inclined to say regarding the âpâni question, with Dr. Peterson,—"Let us then wait."

Râjasâkhâra, the dramatist (pp. 100-103), is now pushed back to the middle of the eighth century A.D. One of the arguments put forward by the Editors I would no longer use. I think that it is hazardous to maintain the identity of Kâshâsâvâminâ, the Commentator of the Aâmarâbdâsa, with Kâshâ, the teacher of Jâyâpâla (not Jayasimha, as the Editors say). If the second argument, the statement that king Mahâkâmpâlaka, who was reigning in 761, was Râjasâkhâra's pupil, is based on the date of the Dîgâvâ-Dubauli Plate published by Mr. Fleet.
I think that it requires further corroboration. A Mahêndrapâla may have reigned at Khnait in 761 A.D.; but it has not been shown that this king was Râjaékhara's Nîrbhaya-Mahêndrapâla, the father of Mahipâla. According to the inscription the sons of Mahêndrapâla were Bhûja II. and Vînâyakapâla.

With respect to Rudraçya and Ruyyaka Prof. Pichet's new publication "Rudraçya's Śringâvatâra and Ruyyaka's Sahâjayâlita" must be compared. Dr. Peterson gains one victory over me. Ruyyaka was certainly also called Ruchaka, a point which I doubted in my view of his Second Report.

In conclusion, I must add that the volume has been most appropriately dedicated to Professor Anrechte, who has first shown the great importance of the Sanskrit Anthologies. I must also express the wish that future numbers of the Bombay Sanskrit Series may bring equally handy editions of some of the other unprinted Anthologies.

G. Bührer.

I had myself drafted a notice of the above-mentioned book, but have very gladly substituted the one received from Dr. Bührer. In doing so, however, there is one feature in the book, not touched upon by him, as to which I feel myself bound to make some remarks.

I refer to the nature of the Preface. It is unnecessary for me to say much, as I have given an insertion above to a letter which shows how the matter strikes an independent observer. But I will add, that I agree emphatically with what the writer of that letter has said, and consider it a matter for, to say the least, extreme regret, that the Scriptural comparisons referred to should have been introduced. If the similarities that are presented could be shown to exist in reality,—I mean apart from the glamour that is thrown over the Sanskrit texts by Dr. Peterson's poetical imagination and skill in free translation—they might form an interesting topic for treatment in a separate special paper or pamphlet. But, in a book like this, which is not concerned in the most remote degree with the subject of Comparative Religion, and is only an ordinary educational text-book that will be used principally in Hindû Schools and Colleges, they are entirely out of place, and should not have been introduced. It is to be hoped that in future editions they will be expunged, both from the Preface and from the Notes (see, for instance, the Notes to Extracts 17, 22, and 225.)

J. F. Fleet.

12th June 1886.

One of the most interesting works on things Indian is about to be produced by W. H. Allen & Co., the well-known firm of oriental publishers, from the pen of Dr. Pope, already so favourably known for his studies in the Tamil language. The Kurral is not only the first work in its own language, but, as "one of the highest and purest expressions of human thought," has also an interest far beyond the ten millions of speakers of Tamil. It is therefore an event of some importance when a scholar entitled to speak with such authority as Dr. Pope undertakes to bring it once more before the European public.

The form in which it is to be given is that of a carefully revised text, accompanied with a metrical version in English, a grammatical excursus, and a complete Lexicon and Concordance. In order also to make the work as valuable as possible, the Latin version of Becker and the renderings of Ellis are to be added. On the whole, the form of the book is somewhat didactic, and it is indeed an introduction to the poetical dialect of Tamil. But the versified renderings of the original couplets will make it a book that the student of Indian thought will do well to study on that account alone. I would suggest the separate publication of the translation as a work of pure literature and one of no small interest without. In its present form the book is one rather for the scholar than the general reader.

A work like this has, of course, been a long while on the stocks, and specimens of its style were published in this Journal as long ago as 1878-81 (Vols. VII. to X.); but it must be understood that it will now be published in a far better form than in those early specimens.

It is characteristic of an Indian book that it should be without date and anonymous, and the Kurral of Tiruvalluvar is no exception to the rule. It is in fact nameless as well as anonymous, for Kurral really means nothing but 'couplet,' and Tiruvalluvar is a mere title of the priestly teachers of the lowly Pàrayas (Pariahs) of Madras. Of the author nothing is really known except that he was a weaver and lived at Mayilipur, that suburb of Madras Town renowned throughout the Christian world as St. Thomé, one of the earliest sites of Christianity in India. From this ancient Christian village came one of the grandest productions of man's brain, much of which bears so strong a resemblance in thought to the Sermon on the Mount. It has accordingly been argued that this, with much show of probability, that the teaching of the Gospel influenced the nameless weaver of Mayilipur. I would, however, deprecate too
much stress being laid on this fact, and I perhaps sufficiently indicate my reasons by drawing attention to the Buddhist Khaddaka-Pāliha, which so clearly reflects the same doctrines.

The Kurvat is divided into three books, Virtue, Wealth, and Love; and these again, leaving out the introduction, into 8 sections and 129 sub-divisions, embracing really in a series of short stanzas the whole ethics of the daily life, not of any particular race or people, but of mankind generally; though in a truly Indian fashion the last book does not treat of ‘love’ in a spiritual sense, but as kama, i.e., sensual love. In its own land the Kurvat owes its popularity as much to the beauty of its versification as to its morality, but it is its breadth of view and its speaking to the heart of man that must make it a favourite with the world at large; and it is undoubtedly these qualities which have made all sects of Hindus in Madras claim the author as their own, just as Hindu and Muhammadan in Northern India alike claimed that other great eclectic, the medieval reformer, Kabir, feeling that he spoke not to any sect, not to any form of religion even, but to the whole of mankind. As regards the Kurvat it has so sunk into the hearts of the Tamil people, and so captivated their fancy, that, though composed so long ago (say between 500 and 1600 A.D.), they have preserved it almost intact, repeating it with an infinite variety of commentary indeed, but with a nearly identical textual reading. In this respect it affords a great contrast to the great popular ethical poem of the North, for the Kabir-Sīgar vary as the editions.

Ellipsis rules over Tamil poetry, and to such an extent is this the case that the poetical diction is a thing apart in the language. To this dialect as exhibited in the pure undiluted diction of the Kurvat, a complete introduction is to be given in the grammatical remarks, vocabulary and concordance which Dr. Pope will attach to his version. In better hands this part of the subject could not be left.

B. C. TEMPLE.

A Compendium of the Castes and Tribes found in India, By E. J. Kitts, B.C.S. Bombay: Education Society’s Press.

This work covers the whole of India, for it includes the important item of the Native States, and the information contained in it is of the latest, being based on the Census of 1881.

In his introduction to this very useful and clear compilation, the author rightly says that “the subject as a whole has indeed been a mighty maze without a plan,” and in the six sets of tables, which comprise his Compendium, he has endeavoured to supply a bird’s-eye view of the entire system of the Castes and Tribes of India, so far as strength and distribution are concerned.

Difficulties, however, soon met him as he proceeded with his task, for the completeness of the various Census Reports in this respect differ enormously. For instance, in Madras minuteness was overdone, while in the North-West Provinces whole castes were omitted from the category. Identification, too, has been a no slight task, what with variations in the matter of transliteration and indeed of actual vernacular spelling and pronunciation of caste names, and the ignorance of compiling clerks and census enumerators, which ‘made havoc’ with many names. Then again, castes which have wandered have found separate appellations in many places, leading to a host of synonymy by no means easy of detection. The sub-division of castes, too, is a hard nut to crack, and far from being free from controversy, however conscientiously it is tackled.

An enumeration of Mr. Kitts’ “Lists” will best show how he has endeavoured to bring out the main facts of the Indian castes as evidenced by numbers and collocation. List I. contains the important castes—i.e. those that number 1,000 and upwards or which are found in more than one Province or Native State. List II. contains the small castes, and includes those best to be described as the converse of those entered in List I. List III. shows the synchronies and sub-divisions of the large castes, and List IV. gives them in the order of numerical strength. List V. gives the occupations of the great castes. And List VI. is very important as showing all those that number over 100,000 and their strength whenever they exceed 25,000 in any district, and also as showing the percentage of each caste in any district where it forms more than 10 per cent. of the total population.

It will be seen that these lists are valuable, not only to the ethnological investigator, but also to the politician, if such a term can be applied to those who, in India, have the government of the country in their hands.

Three indices are supplied, (i) to Lists I., II and III.; (ii) to Lists IV. and V.; and (iii) to List VI. and the Lists themselves are so printed as to bring out the facts they refer to as clearly as possible. On the whole, we have no hesitation in saying that Mr. Kitts is to be heartily congratulated in having produced a work which will be of material benefit to all persons interested in the Ethnography of India, and which has materially advanced that study.

The Andaman Islanders are to be congratulated on having so indefatigable and capable an officer as Mr. Man placed over them. In this work he has indeed insured them a place in the list of nationalities, a kind of office they are badly in want of, for these poor naked savages are, as is the fate of all such, fast disappearing from off the face of the earth before the march of European civilization.

There is a special interest attaching to the Andamanese. They are a race of coal black pigmities, with woolly hair, consisting of nine tribes closely allied ethnologically and speaking nine languages, differing altogether from each other as such, but of an obviously common origin philologically speaking. Ethnologically they have, like all true races, peculiarities of physical structure proper to themselves, and philologically their language is a special one, showing relationship to no other. They thus stand apart in the world, as it were, and form to the anthropologist a subject of extraordinary interest.

Mr. Man's work is an exhaustive study of these tribes conducted with scientific accuracy of inquiry and systematic care. It ranges over the whole subject of ethnological research, and consists of a series of notes on nearly every conceivable point that can be studied with a view to a proper understanding of a savage race. It is divided into three parts, which may be roughly said to deal with the development of the Andamanese physically, mentally and socially. The work for easy cross reference is divided off into paragraphs, but the index refers to the pages, and it is accompanied by many plates, mostly permanent reproductions of Mr. Man's own photographs. It is further enriched by a Report of Researches into the Language of the South Andaman Islands, taken as a model of the whole group, by Mr. A.J. Ellis, F.R.S., late President of the Philological Society, in which its peculiarities are well exhibited. These are that the opposite principles of suffixed and prefixed grammatical affixes are both in full use,—a phenomenon apparently confined to this group,—and the expression of pronominal adjectives by prefixes,—a principle nowhere else so fully developed. Otherwise the language is agglutinative, following the principles common to that class.

The above is but an imperfect sketch of this remarkable work, which is not only a model of anthropological research, but also of unusual interest.

In the German Universities where Sanskrit is mainly studied for general philological purposes, more attention is paid to the Vedic language than to that of the later classical and post-classical literature; and several exclusively Vedic chrestomathies have of late appeared, to be used as text-books at the professional lectures. Delbrück led the way in 1874; the texts selected by him (from the Rigveda only) are accompanied by footnotes and a glossary. Professor Windisch brought out, in 1883, twelve Rigveda hymns with Śāyaṇa's commentary and a glossary to it, with a view to familiarizing the student with the Hindu system of interpreting the Veda. Anyone who has grappled with the peculiar difficulties which the method and diction of the commentators present to the learner, will be able to appreciate the services rendered by the Professor as a guide on that rugged path. The most recent manual is the Vedachrestomathie by Professor A. Hillebrandt, of Breslau, which gives not only 39 hymns, or portions of hymns, of the Rigveda, but also twelve taken from the Atharvaveda, passages from the Sūtrapatha and Aitārīya-Bṛihmaṇa, and a chapter from the Chāndogya-Upanishad, with the necessary complement of a full glossary. The editor, who has for many years almost exclusively been engaged on Vedic research, and is now bringing out, in the Bibliotheca Indica, an edition of the Śūkaprāṇa-Sṛutastava, has already made his mark by several valuable monographs on Vedic mythology and ritual (on the goddess Aditi, 1876; on Varuṇa and Mitra, 1877; on the new and full moon sacrifices of the ancient Hindus, 1880). We hope to meet him again in a field of Indian scholarship which he has been cultivating with such zeal and signal success.

The first four of these Grammars were reviewed at length in our last volume by Mr. Beames, and it is sufficient now to welcome the issue of the fifth. The South Maithili Dialect comprises the speech about South Darbhanga, North Mungér and the Mādhopur Sub-Division of Bhagalpur. The grammar before us is compiled with the same minuteness and the same care that has so distinguished its predecessors. The language differs from that of Northern Maithili by its more flexible form and more convenient phonetic development.
ONE of the most important dates in early Indian history, is that of king Mihi-
arakula, the son of the well-known Törāmāṇa of the inscription on the Boar at Īrān in the Central Provinces. The importance of it is two-fold.

In the first place, as it is a generally accepted fact that he was a persecutor of the Buddhists at the time when the patriarch Simha was killed, his date should give us as a very satisfactory means of testing the accuracy of the Chinese accounts of that period. And in the second place, as, after his Indian career, he became king of Kāśmir, it should give us also a very safe starting-point for the adjustment, backwards and forwards, of the chronology of the early kings of that country, as recorded in

Rājatarāṃgīṃ.

Until a recent discovery was made, his name, so far as epigraphical records go, was preserved for us only in the Gwalior inscription, discovered by General Cunningham, which, after the mention of Törāmāṇa in line 2 ff., proceeds—

Tasyābẖita-kulakīrtīṁ
putrētulā-vikramaḥ patiḥ prīthvīyāḥ
Mihiṇarakulāti-khyātāṁ
bhāṅgō yaḥ Paśupatim

"Of him, the fame of whose family has risen high, the son (i.e.) he, of unequaled prowess, the lord of the earth, who is renowned under the name of Mhiṇarakula, (and) who, (himself) unbroken, [broke the power of] Paśupati." Dr. Rajendralal Mitra, who originally edited this inscription, had read the verse somewhat differently, and translated—

"Unto him, of the renowned race, was born a son of unrivalled prowess, named Paśupati, the lord of the earth, and the most distinguished of the solar race." This, which has remained the standard reading and translation up to the present time, led to the inscription being always quoted as one of Paśupati, the son of Törāmāṇa. And,—though when, in January 1884, I first saw the original stone, I recognised at once that it contained the name of Mihiṇarakula, and not simply a reference to the solar race,—I took it to be a secondary title of Paśupati, a king whose existence is proved by his copper coins, which are found in the country round Gaya and Benares, and even up to 'Narwar' and Gwalior,* which bear his name in characters of just the same type as those of the Gwalior inscription. Relying on a great extent upon the apparently safe deduction from the Chinese records,ª that the patriarch Simha was killed A.D. 472, in the time of Mihiṇarakula,—my theory was, that Mihiṇarakula overthrew the Early Gupta kings; that Törāmāṇa came in his train, and subsequently, on the overthrow of Mihiṇarakula, established his own power; and that his son was Paśupati, who was also named Mihiṇarakula in memory of his father's former sovereign. And it was only in the course of writing the present paper that I came to see that the Chinese record cannot be interpreted as giving the date of A.D. 472 for the death of Simha, or is incorrect, if it gives that date, and if his death really did occur in the time of Mihiṇarakula; and that Törāmāṇa, so far from being a mere follower, was the father and predecessor of the great Mihiṇarakula himself. This will explain the double-struck coins, published by Dr. Hoernle in the Jour. Beng. As. Soc. Vol. LIV. Part I. Proceedings, p. 4 ff. The Törāmāṇa of these coins must be the father of Mihiṇarakula, not, as was thought at the discussion of them, the later Törāmāṇa of Kāśmir; and I feel sure that a re-examination of these coins will shew that in every case the name and emblems of Mihiṇarakula lie over those of Törāmāṇa.

Setting aside this unrecognised epigraphical record, and another of quite recent discovery that I shall notice below, Mihiṇarakula's

ª Corpus Inscriptionum Indicarum, Vol. III. No. 36, Plate xxiv B.

ª I am unable to supply the damaged akharas after paśupati; but it is plain that they contain an antithesis to (a)khaṅgāt, * without breaking; unbroken.

name was known to us only in its transliterated form of Mo-hi-lo-kiu-lo, and in its translation, Ta-tso, in the writings of the Chinese pilgrim Huen Tsiang; and, apparently, as Mi-lo-kieu, a mutilation of the full transliterated form, in the notes of Hwui Wu-tai-Se on Wong Pu’s Memorials of Sâkya-Buddha Tathâgata.

The connection of Mihirakula with the death of Sinha, Sinhala-putra, or Aryasinha,—who was according to some accounts the twenty-third Patriarch, and according to others the twenty-fourth, in succession after (and exclusive of) Sâkya-Buddha,—rests upon Hwui Wuh Tai-Se’s notes or commentary on the 179th paragraph of the Memorials of Sâkya-Buddha Tathâgata, the text of which was written by Wong Pu about the middle of the seventh century A.D. Mr. Beal tells me that Sinha’s name in Chinese is Sz-tsê; and that this is not a phonetic representation of some such name as “Sitis,” as he originally understood it, but a literal translation of the Sanskrit Simha, ‘a lion.’ Substituting Sz-tsê and Sinha for the original Sse-ten and Sis of Mr. Beal’s translation, we read—179. The end almost was the appearance of the flowing blood (milk) Not. In the order of transmitting the law in India, the twenty-fourth patriarch was the venerable Sz-tsê (Sinha). He was dwelling in Kí-pán-kwo (Kipan, according to Rémusat es Kandahar [Gândhâra, or Gandhâra]. “Knowing the calamities which impended, and from which he could not escape, he delivered the garment and the gátâ to his disciple Po-sz-to Ayushmat (Bashisata), and said, I know there are calamities impending. You must, therefore, go to another country to practise renunciation (or, to undergo transmutation; i.e. to die.) After this, the heretics increasing in power by flattering the king Mi-lo-kieu (? for Mo-hi-lo-kiu-lo, i.e. Mihirakula), the kings lost the true faith, overturned the law, destroyed the temples, and murdered Sz-tsê (Sinha). The waves of the ‘Peh-ii’ (the Sveti, or Subhabastin) rose several feet, owing to the massacres of people. This was the end of the transmission of the law in that country.”

Huen Tsiang’s account of Mihirakula is given in connection with his notice of the ancient town of Sâkula (She-kie-le), fourteen or fifteen it to the south-west of the capital of the kingdom of Ta-kâ (Teek-kia), which bordered, to the east, on the river Vipâsi (Pi-po-chê), the modern Biyas, and, to the west, on the river Sindhu (Siu-tu), the modern Indus. It is, in brief, as follows:—

Some centuries before the period (A.D. 629-45) when Huen Tsiang was on his Indian travels, there was a king named Mihirakula (Mo-hi-lo-kiu-lo), who established his authority in the town of Sâkula, and ruled over India. He desired, in his leisure moments, to study the law of Buddha. But, becoming enraged with the Buddhist priests, because they appointed, instead of one of themselves, a mere household servant to enlighten him, he issued an edict to destroy all the priests throughout the five Indies; to overthrow the law of Buddha; and to leave nothing connected with it remaining. At this time there was a king of Magadha (Mo-hi-lo-ku-lo) named Bali’ditya (Po-lo-lo-t’io-lo, explained by Yeo-jih13), who profusely honoured the law of Buddha. Hear-

* This, however, is a mis-translation (see Beal in Buddhist Records of the Western World, Vol. 1, p. 167, note 6); since the Chinese editor explains it by ‘great tribe or family,’ which represents a Sanskrit mahâkula; whereas the first component of the name, mihira, means ‘the sun.’ Huen Tsiang must in some way or other have confused mihira (mihira) with mîr, ‘emperor, prince, lord, governor, chief leader, head of a family.’

2 “If the expression used refers to the whiteness of the river Sveti or Subhabastin (the white river), then the text would be ‘the appearance of the river’—referring to its rising a foot, owing to the massacres. See the commentary, and Jull. II. 197.” Subhabastu is not, as far as I can find, a dictionary or Purânic word. But it is accepted as the name that is intended by Huen Tsiang’s transliteration Sz-p’o-fa-tu; and it is identified with the Védô Sâveti and the modern Sâvat river (e.g. Budd. Rec. West. World, Vol. 1, pp. 129, and note 4, 122 and note 12, and 126, note 24.)—J. F. F.

13 lit., ‘the young son,’ or ‘the rising sun.’—The transliterated form of his name occurs only here; throughout the rest of the narrative the translation, Ta-tso, is used. But as nowhere else in his translation, Ta-tso, is used.
ing of the cruel persecution and atrocities of Mihirakula, he strictly guarded the frontiers of his kingdom, and refused to pay tribute. Mihirakula raised an army to punish his rebellion. And then Bālādityya, knowing his renown, and thinking that he himself could not withstand him, wandered with large numbers of his followers through the mountains and deserts, and hid himself in some islands. Mihirakula committed his army to his younger brother, and himself embarked to go to attack Bālādityya. But he and his troops were caught and surrounded in the narrow passes; and Mihirakula was captured alive, taken into the presence of Bālādityya, and condemned to death for his crimes. Bālādityya’s mother, who was of wide celebrity on account of her vigorous intellect and her skill in casting horoscopes, expressed a wish to see Mihirakula once before his death, as she had heard that he was of remarkable beauty and vast wisdom. Mihirakula was brought into her presence, and, after some persuasion, was induced to uncover his face, which, during his interview with Bālādityya, he had stealthily kept hidden under his robe. On beholding his face, the king’s mother said—

“My son is well-favoured; he will die after his years are accomplished. . . . I gather from his air that he will be the king of a small country; let him rule over some small kingdom in the north.” Eventually Bālādityya, moved by his mother’s words, and her representation that it was right to forgive crime and to love to give life, and that, if he slew Mihirakula, for twelve years he would have the sight of his pale face before him,—pardoned Mihirakula, gave him in marriage to a young maiden, and treated him with extreme courtesy. Then Mihirakula assembled the troops he had left, increased his escort, and departed from the islands. Meanwhile, Mihirakula’s younger brother, who had been left in command of the army when Mihirakula set out to attack Bālādityya, had gone back and established himself in the kingdom. Mihirakula, having thus lost his royal estate, concealed himself in the isles and deserts, and finally went northwards to Kaśmir (Kia-ši-mi-lo), and sought an asylum there. The king of Kaśmir received him with honour, and, in pity, gave him a small territory and a town to govern. But, after some years, Mihirakula stirred up the people to rebellion, and placed himself on the throne. After this, Mihirakula made an expedition to the west, against the kingdom of Gandhāra (Kien-t’u-lo). He took the king in ambush and killed him; exterminated the royal family and the chief minister; overthrew the stūpas and destroyed the saṅghārāmas; and slew large numbers of the people by the side of the river Siadhū (Siu-tu). Then he took the wealth of the country that he had destroyed, assembled his troops, and returned. But before the year was out he died; and, at the time of his death, there was thunder and hail and a thick darkness, and the earth shook, and a mighty tempest raged. And the holy saints said, in pity,—“For having killed countless victims and overthrown the law of Buddha, he has now fallen into the lowest hell, where he shall pass endless ages of revolution.”

The Rājātarāṅgaṇi (i.; Calcutta edition, lines 291 to 329; French edition, verses 289 to 326) takes up his history from the time when he became king of Kaśmir, and gives an emphatic account of his cruelty and evil deeds. Except, however, for the hint unconsciously given in the mention of the invasion by the Mlecchhās, it treats him as a native hereditary king of the country. Thus, after Hiranyākṣaḥa (line 289), there came his son Hiranyākṣa, who reigned for sixty years (l. 290); and after him, his son Mucūla, who reigned for the same period. And then, when the country was overrun by a Mlecchha tribe, there came his son Mihirakula, who was of cruel deeds and resembled Kāla or Death (in destructiveness) (l. 291); in whom butaries of it; especially as, just before, Bālādityya had announced his intention of concealing himself “among the bushes of the morasses” (“an millon des marais”).

18 Or “engaged himself,” see the preceding note.

19 In the Rājātarāṅgaṇi, he is called simply Hiranyā (Hiranyākṣaḥaḥ).

20 In the Rājātarāṅgaṇi, he is called Vasu-kulū.”

21 Mlecchha-gaṇa-dhārma mandala.”
the northern region possessed another Antaka or Death, thus rivalling the southern region, the regent of which is Antaka (I. 292); whose approach was always heralded by the flights of vultures, crows, &c., that flew before him, eager to devour those who were being slain by his troops (I. 293); who was a very ghoul of a king, surrounded day and night by thousands of slaughtered beings (I. 294); and who had no pity or respect for children or women or aged men (I. 295).—One day he noticed that the breasts of his queen, who wore a muslin bodice from Siṃhala or Ceylon, were marked with golden footprints. Burning with wrath, he questioned the chamberlain, and was told that, in the Siṃhala country, it was customary to impress the material with the stamp of the king's foot. This explanation failed to appease him; and he set out on a campaign as far as the southern ocean, and slew the king of Siṃhala (II. 297-300).—Instead of him, he set up another king of cruel disposition; and he brought away a woven cloth called yanushālāvā, stamped with an image of the sun (II. 296-301).

—On his way back, he overthrew the Chōla, Karpāṇa, Nāṭa, and other kings, whose ruined cities announced their defeat to those who flocked into them on his departure (II. 302, 303).

—As he came to the "gate" of Kaśmir, he heard the terrified cries of an elephant that had fallen into a chasm; and the sounds gave him such exquisite pleasure, that he caused a hundred other elephants to be wantonly destroyed in the same way (II. 304, 305).—"As the touch of the sinful defiles the body, so does a description of them defile the speech; accordingly, all his other evil deeds are not detailed: lest they should pollute (the narrator)" (I. 306).

—"But who can fully comprehend the behaviour of men whose minds are unenlightened, and who do unexpected deeds? for even he made an assumption of religion, for the sake of acquiring merit" (I. 307). Thus, evil-minded as he was, he installed the god Ādityaśara in the city of Mihirapura (I. 308); and he gave the āgrahāyas to Brāhmaṇas of the Gāndhāra country, of Miṭṭha birth, Dāradas, full of sin, the lowest of the twice-born, resembling himself in character, who shamelessly cohabited with their own sisters and daughters-in-law; who sold their wives for lures; and whose women, through being enjoyed by others than their lawful husbands, had become as shameless as themselves (I. 309-313).—At length when he, a very Bhairava, became ascetic, and had resigned for seventy years, he became afflicted with much disease, and immolated himself in the flames; and a voice from the sky was heard to proclaim that, though he had slain three creeds of people, yet he had attained final emancipation, in consequence of the disregard that he had shewn for his own sufferings also (II. 314, 315).

—There are some people who consider that he made amends for his cruelty, by his gifts of āgrahāyas, and similar deeds. And, even when the country was overrun by the Dāradī priests, Miṭṭha by birth, of impure rites, and all (the national) religion was destroyed, yet he insured the maintenance of pious observances.

—And he firmly established the countries of the Āryas, and then performed a terrible penance, ordaining, as expiation for his sins, the burning of himself; in accordance with which he bestowed a thousand āgrahāyas at Viśākha-vari born in the Gāndhāra country, and then gave his body to the flames, on a pyre which was a flat plank studded with razors, swords, and bows, and thus stoned for all his cruelty (I. 316, 321).—Others, however, say that he acted as he did in order to destroy the Khāsas, who had become powerful when the city was burned by the Nāga (I. 322).—As a final instance of his cruelty, one day, when he was descending into the river Chandrakulyā, his way was blocked by a large rock that could not be propted and removed. Having performed penance, he was told by the gods in a dream that a powerful Yaksha dwelt in the rock, performing the austerities of a Brāhmaṇ, and that the obstacle could be removed only by the touch of a chaste woman. Next day he declared his dream, and

E. V. 

—Evidently a form of Śiva or Śiva, combined with the Sun.

—One of the most terrible and cruel forms of the god Śiva.

—The reference is to Rājavāraśa, I. 247-263, relating how Nara L., who built a city on the banks of the Vīṣṇu, became enamoured of Chandrakūla, the wife of a Brāhmaṇ named Viśākha, and the daughter of the Nāga Sūravā—how, falling in his attempts to seduce her, he sought, also in vain, to compel her by force to yield to his desires—and how the Nāga Śūravā took vengeance for the insult, by burning down the city and destroying the king in the conflagration.
had it put to the test; but no woman was found who could prevail against the rock, until a potter's wife, named Chandravati, touched it and displaced it. Whereupon, filled with anger, he caused three crores of women to be slain, with their husbands and brothers and sons (l. 323-328).—In short, he behaved altogether in such a way, that it was only the power of the gods, who caused him to do such things, that prevented his subjects from rising of one accord and slaying him (l. 329).—

When at length he was destroyed, a certain son of his, named Vaka (l. 334), of good behaviour, was anointed king by the people. He, though born from one who had grievously afflicted them, gave them happiness; and then religion returned, as if from the other world, and security came back, as if from exile in the depths of the forests (ll. 330-333).

In addition to the introduction of Gandhara Brahmanas into Kasmir, which is amply supported by Hiuen Tsiang's account of the invasion of the Gandhara country by Mihirakula, we have, in the above narrative of the Râyataranâyana, the reminiscence of two distinct historical occurrences.—The first is contained in the statement that Mihirakula's accession to the throne of Kasmir was at a time when the country was overrun by a Māheśhha or foreign tribe. Mihirakula's name itself is sufficient to show that he was a foreigner, not a Hindu. I lay no stress upon the fact that the first component of it, mihira, 'the sun,' is a word imported into the Sanskrit from a Persian source. But the second component, kula, if taken as a Sanskrit word in its meaning of 'a family,' makes up altogether a name, which, though it might be accepted as a perfectly good Sanskrit appellation for a tribe, family, or dynasty, as meaning 'the family of the Sun, or of the Mihiras,'—is an impossible proper name of an individual. This is a point which, I think, must be clear to any one. But, if any doubt should be felt, Mihirakula's coins, which come in large numbers, in copper, from the neighbourhood of Râwalpindi and from Kasmir, suffice to remove it. I have had the advantage of examining those in General Cunningham's collection, and I found them to give two varieties of his name, Mihirakula, and Mihiragula; out of twenty-two of the best specimens, ten gave the termination as guâ. What the termination kul or gui may mean, I must leave Persian scholars to decide. But there can be no doubt that his name, as preserved by Hiuen Tsiang, and in the Râyataranâyana, and the inscriptions, is simply the Sanskritised form of a foreign word mîhîrâkula, which, in the sense of a certain kind of cotton cloth, actually does occur in the Ain-i-Akbari. Further, on his coins, his name as Mihirakula is coupled with the Hindu title Śri; whereas the other form, Mihiragula, is coupled with the purely foreign name or title of Shâhî. And this not only stampa him decisively as a foreigner, but also enables us to determine precisely the tribe to which he belonged. In the first place, this title directly connects him with Vâsudéva, who also used it in earlier times; e.g. in his inscription of the year 87. And Vâsudéva, again, is directly connected with Kanishka and Huviskha by, amongst other things, his use, in his inscription of the year 44 (?), of the title of Dêvaputra or Daivaputra, which is also used by Huviskha in his inscriptions of the years 39 and 47. Mihirakula, and his father Törâñâga, therefore, belonged to this same race, which,—whether best and most properly known as Indo-Scythians, Śâkas, Hūsas, Turushkas, Shâhâs, or Daivaputras,—had established themselves in the Pâñjâb at an early date, and continued in power down to at least the time of Samudragupta, as is evidenced by the record, in the Allahâbâd pillar inscription, that in the north he overthrew, amongst others, the Daivaputras, Shâhâs, and Shâhângshâhâs. And this explains why we find Sâkala, in the Pâñjâb, given by Hiuen Tsiang as Mihirakula's capital. The statement, therefore, of the Râyataranâyana, that Mihirakula's coin of Hiraya, has to be applied to No. 8 of the coins published by Dr. Hoerdt in the Jour. Beng. As. Soc. Vol. LIV. Part I. p. 47.

23 Only the second syllable, kula, actually falls within the edges of the specimens examined by me. But other coins of the Kasmir series give the complete word shâhî, and leave no doubt that this was the title on the Mihiragula dies.—The same explanation, and not that it is a
accession to the throne of Kāsmīr took place at a time when the country was overrun by a Mlecchta tribe, is historically correct; though it embodies only half the truth, in omitting to add that Mihirakula himself was one of these Mlecchhas. And the invasion took place, of course, from the south, from India itself, when, on his dismissal by Bālavipa, Mihirakula sought to re-occupy his own throne, but found himself ousted by his unnamed younger brother.

The other historical reminiscence of the Rājavataramiyini is contained in the account of Mihirakula’s invasion of Sinhaala or Ceylon. As applied to Ceylon the story is not only improbable to a degree, but impossible. In the Majnatut-Tawdrāk, however, exactly the same story is told in connection with Mihirakula and king ‘Hal’ of Sinhdhi, who allowed none of the fine fabrics made in his country to be exported, unless they bore the mark of the imprint of his foot. When Mihirakula found his queen wearing some of this stuff, he sent for the merchant from whom she had purchased it, and, on ascertaining the particulars from him, took an oath to invade Sindh and to cut off the foot of king ‘Hal.’ In vain his minister represented that Sindh was the country of the Brahmanas, and that it would be impossible to triumph over it. Mihirakula would listen to no expostulations, and set out with his army. King ‘Hal,’ finding himself unable to resist, consulted his Brahmanas, who advised him to have an elephant made of clay or mud, and to place it at the head of his forces. The elephant was fashioned so that fire came out from it, and consumed many of the soldiers in the vanguard of Mihirakula’s army. At length Mihirakula was obliged to consent to terms of peace. But he fulfilled his oath, by fashioning a waxen image of king ‘Hal,’ and cutting off one of its feet. He then set out, at first embarking on the river Indus, and then, as the waters rose, marching along its banks, to return leisurely to his own country, building temples, towns, and cities, as he went. But, hearing that Kāsmīr had been attacked by his enemies, he hastened his return, and drove them out. After him, concludes this narrative, his authority passed to his children, whom all the people of India obeyed.—All this account is reasonable enough. And the reference of these incidents by the Rājavataramiyini to an invasion and conquest of Ceylon, is probably due to a real historical invasion and attempted conquest of Sind, confusedly mixed up, as Mr. Beal has suggested to me, with the name of the patriarch Sīnha or Simhapputra, who was slain in the religious persecutions of the same period.

A final point, worthy of note, in the narrative of the Rājavataramiyini, is the statement that, even when (the national) religion was destroyed, Mihirakula insured the maintenance of pious observances, i.e. evidently of those habitual to the country. This is confirmed and illustrated by other characteristics of his coins, which show clearly his religious or sectarian tendencies, both foreign and Hindu. Nine of the coins examined by me, with the Sanskrit legend Sri-Mihirakula on the obverse, have, as the principal symbol on the reverse, a bull, the emblem of Śiva and the Śaiva worship; coupled in seven cases with the legend Jaya[,]vriṣha. Another leading symbol of his coins is an eight-rayed sun or planet, usually with a periphery or circle round it; this appears on the obverse of three of the same set of coins, and in two instances on the reverse, below the fore-feet of the bull. And a third leading symbol is the crescent moon, which occurs in eight instances on the same set on the reverse, over the back of the bull. Also, two coins of the same set, and one of the set that has the Sanskritised foreign legend Shāhī-Mihirakula, have on the obverse a standard, the top of which is either the eight-rayed sun, or a crescent moon, or perhaps a tribhūra, another emblem of the Śaiva faith. Probably throughout his career Mihirakula adhered in person to his own national and hereditary solar worship; and indications of this are given in the Rājavataramiyini, in the god established by him at Vijayesvara, and the city built by him in Hōla, both having names be-
ginnung with mihira, 'the Sun'; and in his bringing back, from Ceylon according to the narrative, the yanushadēra-cloth, stamped with an image of the Sun. At the same time, that he did encourage the national Hindu religion, is indicated very plainly by the Śaiva emblem of the bull, with its legend, on some of his coins, as noted above.

Before entering on the question of Mihirakula's date, it will be necessary to notice here some additional information that Huen Tsiang gives us about his antagonist, Bālādītya of Magadha; since part of it, at any rate, has been used in an attempt to fix the date of Bālādītya, and, through him, of Mihirakula. In his account of the kingdom of Magadh (Mo-rīe-to),19 the Chinese pilgrim tells us that, not long after the nirvāṇa of Buddha,20 a former king of this country,21 named Śakrādītya (Šī-kiā-lo-'
'o-tīe-to), a Buddhist, built a suṇghārāma at Nālanda.22 His son and successor was king Buddhagupta (Po-t'o-kio-to),23 who built another suṇghārāma on the south of the above. After this, king Tathāgatagupta (Ta-thā-
'kiā-to-kio-to) vigorously practised the former rules of his ancestors, and, east from this, built another suṇghārāma. King Bālādītya (P'o-lo-'
'o-tīe-to) came to the throne in succession, and built a suṇghārāma on the north-east side; and also, in the same neighbourhood, a great vihāra, three hundred feet high.24 And his son Vajra (Fa-shē-to) came to the throne in succession, and built a suṇghārāma on the west side of the convent.

A somewhat different account is given in the Life of Huen Tsiang,25 which makes, of these five kings, a direct lineal succession of father and son. According to this, if Śakrādītya is really to be placed not long after the

nirvāṇa of Buddha, Bālādītya must be placed not more than a hundred years or so after that same event; i.e., at the very latest, somewhere about B.C. 375. This, however, even in respect of the earliest date that has been proposed for Mihirakula,—that of A.D. 180, by Mr. Ferguson,—is at least nearly five hundred years too early; since there can be no doubt that Bālādītya, the fourth of these kings, is the person who successfully resisted the attack of Mihirakula.

Either, therefore, we must look upon the regular genealogical succession, given in the Life, as an amplification, and an erroneous one, of Huen Tsiang's original account, which asserts no connection (except that they were rulers of the same kingdom) between, in the first place, Buddhagupta and Tathāgatagupta, and, in the second place, Tathāgatagupta and Bālādītya. Or, as in the case of the "some centuries ago" to which Huen Tsiang appears to refer Mihirakula, we must look upon him, or his editors, as wrong in allotting to Śakrādītya so early a period as "not long after the nirvāṇa of Buddha."26 In the former case, we may, without objection, accept Śakrādītya and his son Buddhagupta as belonging really to a very early period, and remain, at the same time, free to increase the intervals between Buddhagupta and Tathāgatagupta, and the latter and Bālādītya, to any extent that may be necessary; looking upon the whole account as simply commemorating the names of five more or less disconnected kings of the country, who had specially signalised themselves by the erection of certain famous buildings. But, whether all these five kings succeeded each other as father and son, or not, the second supposition seems the more probable to totally different persons. In respect of the king mentioned by Huen Tsiang, we are not dependent on the correctness of the restoration in the French (or English) translation. Huen Tsiang gives, as the first component of this name, the well-known Fo-t'o, which he uses so habitually for Buddha, the teacher, the holy Śākya-Tathāgata, and in respect of which he could not possibly be mistaken. Whereas, in respect of the king mentioned in the Eran inscription, the metre, as well as the perfect clearness of the reading, shews as conclusively that the first component of that name is Buddha, the planet Mercury. Sanskrit scholars will recognise at once the thorough difference between the two names.

20 So also Julien—"Peu de temps après le nirvâna du Buddha." 
21 But, according to Julien, the first king of the country, premier roi de ce royaume, is also mentioned Hui Lun, as reported by I-tsing (ante, Vol. X. pp. 111, 120).
22 In a note on the date of Bālādītya (Buddh. Rec. West. World, Vol. I. p. 182, note 9), Mr. Beal has confused this Buddhagupta with the Buddhagupta of the Erân inscription, so also did Mr. Ferguson, who, in treating of these two names, wrote—"I do not think the difference of spelling here indicated of any importance. Hui Lun's name was translated first from Sanskrit into Chinese, and from Chinese into French, and might possibly have been more changed in the process" (Jour. R. As. Soc., N. S., Vol. IV., p. 118, note 4.)—The two names, however, are utterly distinct, and

24 In the Life, Śakrādītya is called an "ancient king" of the country, and is simply placed vaguely "after the nirvāṇa of Buddha," without any hint as to whether he came shortly, or a long while, after that event.
ferable of the two; for, as General Cunningham has pointed out, the total silence of Fa-hian regarding any of the magnificent buildings at Nalanda, leads us to infer that they must all have been built after A.D. 410. This, however, is a matter that we must look to Mr. Beal to clear up, in his forthcoming translation of the *Liao* of Huen Tsiang; and I have noticed it in passing only because of the use which, in his attempt to fix the date of Mihirakula and Bālāditya, Mr. Beal has made, as noted below, of the name of Buddhagupta, the second of these kings.

The dates that have been proposed for Mihirakula and Bālāditya are (1) by the late Mr. Fergusson, A.D. 180 to 200; (2) by General Cunningham, during the century from A.D. 450 to 550; and (3) by Mr. Beal, A.D. 420. Mr. Fergusson based his date on the opinion, which he then held but afterwards abandoned, that the reign of Kanishka ended A.D. 21; coupled with the statement of the *Rajatarangini*, that twelve reigns intervened between Kanishka and Mihirakula. General Cunningham’s date was based partly on Fa-hian’s silence regarding Bālāditya’s *saṅghārāma* and the other buildings at Nalanda; and partly on the similarity of the architectural style of Bālāditya’s temple with that of a temple near the Bōdhi-tree at Bōdhi-Gaya, which, he had already shown, must have been built about A.D. 500. And Mr. Beal based his date upon his erroneous identification of the Buddhagupta of Huen Tsiang’s account with the Buddhagupta of the *Ārā†a* inscription; which, coupled with his adoption of the theory that the Gupta era commenced A.D. 190, gave for Buddhagupta the date of A.D. 349 to 388, and for his “grandson” Bālāditya a period fifty years later; (b) on the fact that, in Fa-hian’s time (A.D. 399-414), Buddhism was still flourishing, and there were five hundred *saṅghārāmas* in the neighbourhood of the Swatī river; whereas in Huen Tsiang’s time all the convents were ruined and desolate; which shewed that Mihirakula’s persecution, during which Sīrha was killed, must have taken place at any rate after that period; (c) on the concurrent testimony of the Chinese accounts, which state that a life of Yasubandhu, the twenty-first patriarch, was written by Kumārajīva in A.D. 408, and that a history of the patriarchs, including Sīrha, was translated in China in A.D. 472; and (d) on the fact that the twenty-eighth patriarch, Bōdhidharma, was certainly alive in A.D. 520, as he arrived in China, from South India, in that year; which, allowing one hundred years for the four patriarchs between him and Sīrha, brought us again to A.D. 420, the period already arrived at on grounds (a) and (b).

The real date, however, of Mihirakula and Bālāditya,—with, of course, the margin of a few years either way,—is now fixed with certainty by the duplicate pillar inscription of Yāsōdharman, from Mandaśūr, which I publish at page 253f., below.

This inscription records that this powerful king Yāsōdharman had worship done to his feet by king Mihirakula, “whose forehead was pained through being bent low down by the strength of his arm, in the act of compelling obeisance;” i.e. that he subjugated Mihirakula. And, as another Mandaśūr inscription, published by me at page 222 ff., above, has already given us the date of Mālava-Saṅvat 589 (A.D. 532-33) expired, for Yāsōdharman, we now know very closely the time of the overthrow of Mihirakula’s power in at any rate Western and Central India.

As regards the beginning of his reign, we have only to notice that Mihirakula’s Gwalior inscription is dated in his fifteenth year. Considering all that he did subsequently in Kāśmīr and Gāndhāra, it will be admitted that this date must be very near the end of his Indian career. His fifteenth year, therefore, must fall somewhere about A.D. 532-33, the recorded date of Yāsōdharman; and in all probability a year or two before it. And we shall probably be very near the mark indeed, if we select A.D. 515 for the commencement of his career.

---

*See p. 251 above, note 33.*
*See page 254 above, note 5. What we require to know is whether this account includes the death of Sīrha; and, if so, how A.D. 472 is arrived at for its translation.*
SANSKRIT AND OLD-KANARESE INSCRIPTIONS.

By J. F. Fleet, R.C.S., M.B.A.S., C.I.E.

(Continued from p. 222.)

No. 154.—MANDASAOR PILLAR INSCRIPTION OF YASODHARMAN.

This is another inscription from Dasor or Mandasor, the chief town of the Mandasor District of Scinda's Dominions in the Western Malwa Division of Central India. With the inscription of Kumargupta and Bandhunvarman, No. 102 above, page 194, it was discovered in 1834, in consequence of information given by Mr. Arthur Sullivan; and it is now published for the first time. Like the following inscription, No. 155, it is on one of a pair of magnificent monolith columns, apparently of very close-grained and good sandstone, lying in a field immediately on the south side of a small collection of huts, known by the name of Sadapi or Sundapi, but not shown in the maps as a separate village, between two and three miles to the south-east of Mandasor.

The column with the present inscription lies partially buried, north and south, with the top to the north. The base of it is rectangular, about 3' 4' square by 4' 5' high; and, as there is no socket at the bottom to indicate that it was fitted into any masonry foundation, this part must have been buried when the column stood upright. From this base there rises a sixteen-sided shaft, each face of which is about 2' 7' broad where it starts from the base; part of the shaft, about 17' 0' in length, is still connected with the base, making the length of this fragment about 21' 5'; and the present inscription, occupying five of the sixteen faces, is on this fragment, the bottom line being about 2' 2' above the top of the base. Immediately in continuation of this, there lies the remainder of the shaft, about 17' 10' long; at the upper end of this, the faces are each about 7' broad, showing that the column tapers slightly from bottom to top. The upper end of this fragment is flat, with a round socket projecting from it; which shows that these two fragments make up the entire shaft, the total length of which was thus about 39' 3', or 34' 10' above the base. This column appears to have broken naturally in falling, and not to have been deliberately divided, as the other column was, in the manner described below. The next part of this column, the lower part of the capital, lies about forty yards away to the north, close up to the hedge of the hamlet, and is a fluted bell, about 2' 6' high and 3' 2' in diameter, almost identical in design with the corresponding part of a small pillar from an old Gupta temple at Sāchi, drawn by General Cunningham in the Archæol. Surv. Ind. Vol. X. Plate xxii. No. 1. In the bottom of it there is a socket-hole, about 11' in diameter, answering in size to the socket on the top of the shaft; and on the top there is a projecting socket. About twenty-five yards south of this, and fifteen yards north of the column, I found a flat stone buried in the ground, just level with the surface; and, on excavating it, it proved to be the next portion, the square upper part of the capital. It measures about 2' 8' high by 3' 10' square, with the vertical corner edges trimmed off. I could not get at the bottom of it; but there must be there a socket-hole, answering to the projecting socket on the top of the bell-shaped part that came below it. I only exposed one side of it; but this was sufficient to show that it is a lion-capital, exactly like the capital of the other column, noticed more fully below. On the top surface of it, there is in the centre a circular socket-hole about 11' in diameter and 4' deep, with eight other rectangular socket-holes round it, one in the centre of each side, and one opposite each corner. The total length of this column, up to the top of the lion-capital, is about 44' 5'; or forty feet above the ground, if it stood with the entire base buried. The square lion-capital must have been surmounted by a statue or statues, of the same kind as that which stands on the summit of the pillar at Īrān which has Bulihagupta's inscription on it; but I cannot feel sure of having found it. I found, indeed, in the same field, towards the west

1 See page 194 above, and note 1.

side, in three pieces, a very well executed sandstone bas-relief slab, 9' 0'' high, with a rectangular pedestal 3' 2'' breadth by 1' 8'' deep and 8' high, of a male figure, standing, somewhat larger than life-size, wearing a kirita or high head-dress, with necklace and armlets, and draped from the waist downwards, with a small figure standing by the right leg. And close by this there were, in two pieces, the kirita and the head and shoulders of another figure of the same size, evidently a duplicate of the above. Unless, however, there were some intervening parts that have been altogether lost, these slabs cannot belong to the columns, since their pedestals have no sockets to fit into the socket-holes on the tops of the lion-capitals.3

The other column, with the fragmentary duplicate copy of this inscription, No. 105 below, page 257f., stood, as is shown by the present position of its base, about twenty yards north of the column that I have just described. When overthrown, it fell east and west, with the top towards the west. The base is rectangular, about 3' 3' square by 3' 11'' high. Differing from the first column, the base here is followed by a concave circular part, about 1' 0'' high. From this there rises a sixteen-sided shaft, each face of which is about 3' broad where it starts from the base. But the portion of the shaft that remains attached to the base is only about 1' 1'' long; and a row of chisel-marks all round the column here shows that it was deliberately broken by the insertion of wedges. The next piece of the column,—or rather a remnant of it, as it is broken vertically, and part of it has been lost,—lies about three yards to the north of the base, and parallel with it, but in an inverted position, with the upper end to the east. This piece is about 9' 0'' long; and the remnant of the duplicate inscription is here, on two of the faces; the bottom line of it being about 2' 9½'' above the square base. The next piece of the shaft is missing altogether, and is supposed to be entirely buried somewhere in this field. The remainder of the shaft, about 6' 9'' in length, lies, almost entirely buried, a few yards to the west of the

portion including the base and the commencement of the shaft. Each face here is about 7'' broad at the top; shewing that this column also tapers slightly from bottom to top. The top of this fragment is flat, with a round socket projecting from it; which shews that we have here the end of the shaft. Immediately west of this fragment, there lies the fluted bell part of the capital, about 3' 0'' high and 3' 3'' in diameter, similar in design to the same part of the capital of the other pillar. In the bottom of it there is a socket-hole, about 11'' in diameter, answering in size to the socket on the top of the shaft; and on the top there is a projecting socket. Immediately to the west of this there lies, upside down and partially buried, the next portion of the capital, the square upper part, measuring about 3' 0'' high and 3' 10'' square, with the vertical corner edges trimmed off. The bottom, and one entire side and parts of two others, are exposed; and enough is visible to show that each side consists of a bas-relief sculpture of two lions, each sitting on its haunches and facing to the corner, where it merges into the corresponding corner lion on the next side,4 with the head of a conventional stāha or mythological lion in the centre, over the backs of the lions. In the bottom of this stone there is a socket-hole, about 10½'' in diameter, answering to the projecting socket on the top of the bell-shaped part that came just below it. And I dug under one of the corners of the top enough to find there a rectangular socket-hole, which justifies us in assuming that the top has one circular and eight rectangular socket holes, just as in the top of the lion-capital of the first column. As in the case of the first column, I cannot feel sure of having found the statue or statues which must have stood on the top of it.

About fifty yards away to the west of these two inscribed columns, in the next field, I turned up the lower part of another sandstone column. The base is rectangular, about 3' 6'' high by 3' 4'' square. The shaft, of which only a length of about 2' 0'' remains attached to the base, is circular, about 3' 4'' in diameter; and, instead of being plain like the two inscribed columns, it is carved all to the columns.

3 There are some similar bas-relief slabs set up in a group under some palm-trees in another field, about fifty yards away to the east from where the inscribed columns lie; but these, again, do not appear to belong

4 Compare the lions on the upper part of the square portion of the capital of the Erav pillar.
over with cross-lines into diamond-shaped knobs. I had the field excavated all round this column, but could find no traces of the rest of the shaft, or of the other parts of it. From its different pattern it can have no connection with the other two columns.

The two inscribed columns were evidently intended as a pair, though the full measure of the second cannot be taken. From the distance between them; from the difference in the detailed measures; and from the analogous instance of the Ėran pillar, as showing the way in which they must have been finished off at the top.—they can hardly have been connected by a beam, after the fashion of a thraṇa or arched gateway; and there are no traces of any temple with which they can have been connected. They are evidently an actual instance of two rāmagamātas or "columns of victory in war," such as the Miraj plates of Jayasimha III. of Śaka-Saṅvat 946 speak of, as having been set up by the Rājtrakūṭa king Karkara or Kākka III., and as having then been cut asunder in battle by the Western Chālukya king Taila II.

To return to the inscription on the first column—the writing, which covers a space of about 3 3/4" broad by 1 3/4" high, has suffered a good deal from the weather, and, owing to the difficulty of obtaining lights and shadows, partly in consequence of the letters being rather shallow, and partly because of the natural light colour of the stone, it is rather difficult to read on the original column; but, in the ink-pression and the lithograph it can easily be read with certainty throughout. The size of the letters varies from 1/8" to 3/8". As in the case of the Mandaśor inscription of Yaśōdharman and Visnuvardhana, No. 163 above, page 222 ff., the characters belong to the North India class of alphabets. The rather rare lingual dh occurs in uṣṇidhān, line 4; and the separate form of the lingual d, as distinct from the dental d, in sānḍāṭi, line 3, and chhāḍā, lines 5 and 6. In eva, line 4, and skhaṁtair-varṣya, line 5, we have the optional method, according to the northern alphabets, of writing r in conjunction with a following y in this period.—The language is Sanskrit; and, except for the two words at the end, recording the engraver's name, the inscription is in verse throughout.—In respect of orthography, we have to notice (1) the use of the vāpyaṁtīya in adhivāpaṁtī, line 5; (2) the use of the guttural nasal, instead of the anusvāra, before ā, in aḥā, line 5, and vaṅka, line 8; and before i, in ājī, line 1, and pāṅka, line 3; (3) the doubling of k and t, in conjunction with a following r, in dhikaṇḍi, line 4; chakkaṇḍi, line 7; nūtraṇ and yattura, line 3; anyavāra, line 6; and uṛjīvāra, line 7; but not in kriyantā, line 8, and śātru, line 1; and (4) the doubling of dh, in conjunction with a following y, in adhyāyā, line 4.

The inscription refers itself to the reign of a powerful king named Yaśōdharman, who is evidently identical with the Yaśōdharman of the Mandaśor inscription of Mālava-Saṅvat 589, No. 163 above, page 222 ff., and whose dominions are here described as including the whole of the northern part of India, from the river Lōmbaṭya, or the Brahmaputra, to the Western Ocean, and from the Himalayas to the mountain Mahāṇḍra. We have an important allusion in the statement that he possessed countries which not even the Guptas and the Hūnas could subdue; and a still more important record, in connection with the general history of the period, to the effect that homage was done to him by even the famous king Mihirakula. It is not dated. But Yaśōdharman's date is now known from the Mandaśor inscription of Mālava-Saṅvat 589 (A.D. 532-33) expired, No. 163 above, which also occurs in ordinary composition; e.g. in Mānandī-prasāto-vāpa-viśdēha-dharmam, in line 5 of the Mālaviy plates of Bhārata II. of the year 222 (ante, Vol. XIII. p. 311); and in dāvāpyā-tēsita-saṁmāṇa-dharmam, in line 19 of a Kṣemēśwar grant of Vikramāditya V. of Śaka-Saṅvat 900 (unpublished).

1 It is doubtful whether this denotes the famous Mahāṇḍrakula or Mahāṇḍrakula is the Kālēśvar District, among the Eastern Ghaṇtas; or another mountain of the same name, not so well known, which appears to be mentioned also in line 2 of an earlier Nāṣik inscription of the twentieth century of Sūr-Pulīpti (arched. Surv. West. Ind., Vol. IV. No. 14, pp. 188, 189), and must be located somewhere in the Western Ghats.
mentions him and Vishnuvardhans; and the present inscription, having been engraved by the same person, Goveida, must fall within a few years on either side of that date. The object of it is to record the erection of the column for the purpose of reciting the glory and power of Yasodharman; and,—since the present tense is used almost throughout, and also verses 7 and 8 speak of the column as being set up by Yasodharman himself,—the inscription must be one of his own time, not posthumous.

**Translation.**

May that very long banner of (the god) Śūlapāṭha destroy the glory of your enemies;—

(that banner) which bears (a representation of) the bull,12 marked by the five fingers (dipped in some dye and then) placed on him by (Pārvati) the daughter of the mountain

(Himālaya), who causes the distant regions, in which the demons are driven wild with fear by (his) terrible bellowings, to shake; (and) who makes the glens of (the mountain) Samārāṅ to have their rocks split open by the blows of his horns!

(L. 2)—He, to whose arm, as if to (the

11 Metro, Śūka (Amsakha).  
12 Nasdi or Nandin, the vehicle of Śiva.
arm) of (the god) Śaṅgapāṇi,—the fore-arm of which is marked with callous parts caused by the hard string of (his) bow, (and) which is steadfast in the successful carrying out of vows for the benefit of mankind,—the earth betook itself (for succour), when it was afflicted by kings of the present age, who manifested pride; who were cruel through want of proper training; who, from delusion, transgressed the path of good conduct; (and) who were destitute of virtuous delights:—

(L. 3.)—He who, in this age which is the ravisher of good behaviour, through the action simply of (his good) intentions shone gloriously, not associating with other kings who adopted a reprehensible course of conduct,—just as an offering of flowers (is beautiful when it is not laid down) in the dust;—he in whom, possessed of a wealth of virtue (and so) falling but little short of Mānu and Bharata and Alarka and Māndháni, the title of "universal sovereign" shines more (than in any other), like a resplendent jewel (set) in good gold:—

(L. 4.)—He who, spurning (the confinement of) the boundaries of his own house, enjoys those countries,—thickly covered over with deserts and mountains and trees and thickets and rivers and strong-armed heroes, (and) having (their) kings assaulted by (his) prowess, —which were not enjoyed (even) by the lords of the Gúpta, whose prowess was displayed by invading the whole earth, (and) which the command of the chiefs of the Hāṣṇa, that established itself on the tiaras of (many) kings, failed to penetrate:—

(L. 5.)—He before whose feet chieftains, having (their) arrogance removed by the strength of (his) arm, bow down, from the neighbourhood of the (river) Lauhitya up to (the mountain) Māhendrā,19 the lands at the foot of which are impenetrable through the groves of palm tree, (and) from (Himālaya) the mountain of snow, the table-lands of which are embraced by the (river) Gaṅgā, up to the Western Ocean,—by which act (all) the divisions of the earth are made of various hues through the intermingling of the rays of the jewels in the hair on the tops of (their) heads:—

(L. 6.)—He by whom (his) head has never been brought into the humility of obeisance to any other save (the god) Sthānū ;—he, through the embraces of whose arms, (Himālaya) the mountain of snow carries no longer14 the pride of the title of being a place that is difficult of access;—he to whose two feet respect was paid, with complimentary presents of the flowers from the hair on the top of (his) head, by even that (famous) king Mihirakula, whose forehead was pained through being bent low down by the strength of (his) arm in (the act of compelling) obeisance:—

(L. 7.)—By him, the king, the glorious Yasódharmān, the firm beams of whose arms are as charming as pillars, this column, which shall endure to the time of the destruction of the world, has been erected here,—as if to measure out the earth; as if to enumerate on high the multitude of the heavenly lights; (and) as if to point out the path to the skies above of his own fame, acquired by (his) good actions;—(this column) which shines resplendent, as if it were a lofty arm of the earth, raised up in joy to write upon the surface of the moon the excellence of the virtues of Yasódharmān, to the effect that—“His birth (is) in a lineage that is worthy to be eulogised; there is seen in him a charming behaviour that is destructive of sin; he is the abode of religion; (and) the (good) customs of mankind continue current, unimpeaded (in any way) by him.”

(L. 9.)—From a desire thus to praise this king, of meritorious actions, (these) verses have been composed by Vāsula, the son of Kakka. (This eulogy has been) engraved by Gōvinda.

No. 105.—Mandāsor Duplicate Pillar Inscription of Yasōdharman.

This is the remnant, mentioned above, of the original duplicate copy of the inscription of Yasōdharman on the second inscribed column at Mandāsor, described at page 254 above.

The writing, which covers a space of about 1' 1" broad by 1' 2" high, is in some respects in a state of rather better preservation than the entire copy; but nearly three-quarters of the full inscription is lost here, through the column having cracked vertically and part of it being now not forthcoming.—The size of the letters varies from ¹⁄₄ to ⁵⁄₄. This

18 See page 255 above, note 7.
14 To complete the sense, we must apparently supply,
inscription appears to have been in all essential details an exact reproduction of the copy that has been preserved entire, No. 164 above. In respect of paleography and orthography, we have to notice, as far as the record goes, just the same points as in that inscription; and also the doubling of t, in conjunction with a following r, in kattu, line 1, where it is not doubled in the preceding inscription.

DISCERVACO CONTRIBUTIONS TOWARDS THE COMPARATIVE STUDY OF ASIATIC SYMBOLISM.

VII.

Snake Worship.

Snake-worship is still to be found in India throughout the length and breadth of the land, from Nāgakovil (Temple of the Snake) in the extreme south to the frontiers of Central Asia;—in fact, almost wherever there is a Hindu population, either its actual presence, or its former existence may be seen or traced.

Commencing at the extreme north we find that the earliest form of religion in Kāsā is supposed to have been Nāga- or Snake-worship, since when Buddhism, Hinduism, and then

The names of Miḥira-kula and Yaśōdharmā are very legible in lines 6 and 7; but the passage mentioning the Guptas and the Hūnas has been lost in this copy; and also that which gives the boundaries of Yaśōdharmā’s dominions. A translation of the fragment is not given, as the contents of it are fully explained by the translation of the entire copy above.

again Nāga-worship are said to have prevailed in the Valley. At the time of its conquest by Akbar in 1558 A.D., Ablī-fuzāl relates that there were no less than 700 different places there, where images of snakes were worshipped by the inhabitants, against 134 temples dedicated to Śiva, 64 to Viśnu, 22 to Durgā, and 3 to Brahma; a statement which is borne out by the character of the architecture of the valley as we now see it; for, with very few exceptions, all the most ancient temples have been devoted to Serpent-worship.3

It seems highly probable that the parāk or head-dress worn by the women in Ladāk (who

3 Some of them stand in courts capable of being flooded, and were entered by means of stone causeways, but the drains have become choked up; they cannot now be approached except by wading. The temple at Pandrathan near Śrīnagar is a case in point. Mr. Ferguson is of opinion that the temple at Mārtan also belonged to the sect of the Nāgas or Snake-worshippers, though others have thought that it was dedicated to the Sun.
are Buddhists) should be by rights held to be a remnant of Serpent-worship in the Himalayas. This ornament has precisely the form of a cobra, the extremity of the tail being fastened to the hair on the forehead and the broad flat head of the snake descending behind to the waist of the wearer. It is usually made of leather, covered with rough pierced turquoise and brooches of gold or silver, according to the wealth or social position of the wearer; but every woman, however poor, possesses a parâk of some kind.

Passing on southward we find that a special feast is held for one day in the year at Benares in honour of the Serpent-god near the Bakariyâ Kupâ in a suburb of that city, and some of the forms in which the Serpent is there sculptured are given in Plate XVI. figs. 1, 2, 3, 4 and 5. Fig. 6 is placed beside them for the sake of comparison; the type is the same, but it was found on a stone in the interior of a dolmen within a tumulus near Gavrinis, an island off the South Coast of Brittany.

In Southern India proper we find that in Coorg, the cobra is still regarded with much fear, and the spots (oratās) on which a cobra is believed to have died, are carefully walled round, under the impression that were any one unwittingly to tread on such a spot he would be a doomed man.

As regards the neighbouring State of Mânsûr, Nâgâ or Snake-worship appears to be now on the increase. It is believed to have existed there in very ancient times, and to have then died out to arise again of late years, as in Kâsî. This theory is supported by the facts that no traces of it are to be found amongst the rich sculptures, which adorn the old temples at Bélûr and Halâhâd in that State, and that all the Nâgâ sculptures appear to be comparatively modern work. The only signs of Snake-worship in the temple at Bélûr, which belongs to the Vaishnavas, and has no snake emblems upon it, are two Serpents of very inferior modern work, carved upon a stone in the courtyard. At Halâhâd the Snake is only found in subordinate positions on the twin-temples, which belonged to the Śâiva sect, viz., on the stylobate of a porch where the gods are represented churning the sea with a huge snake as the rope in order to obtain ambîta, and on one of the bands of carving on the exterior where Śîva is seen holding a Nâga Mûdamma on his left arm.

In Bangalore and other places in the Mânsûr State, this Nâga Mûdamma seems to be regarded as a sort of tutelary saint, and at the entrances to villages there may commonly be seen by the road-side a kind of pedestal, on which are fixed three large upright slabs of gneiss (see Plate XV. figs. 3, 4, and 5). On the centre one is Nâga Mûdamma, and on one of the slabs on either side is a representation of the Fire-headed or the Seven-headed Nâga: on the other are two serpents entwined as in the well-known caduceus of (Hermès) Mercury. General Cunningham, Bâhâss Tophes, Preface, identifies this last with the oldest form of Buddhism, and says it is but a symbol of dharma, or nature deified. Again, some of the sculptures from the Buddhist remains at Amârâvati now in the British Museum consist of tophes in miniature carved upon small slabs. They are covered with bas-reliefs and the principal object on many of them is the Five-headed Serpent. The centre head is the hooded cobra in full face, and on either side are two snakes' heads and necks in profile, which seem to be regarding (or adoring?) the cobra. The whole five heads terminate in one body knotted into graceful folds. However, from the style of the carving, it has been thought that none of the statues of Nâga Mûdamma are more than a century old, and it is well-known that it is only within this period that the people of the Mânsûr State have openly returned to their old forms of the Tree and Serpent-worship suppressed for many centuries by Brahmanical influence.

As specimens of forms similar to Nâga Mûdamma from other parts of Asia I have added Plate XV. fig. 1, which is the representation of a Tâtûr goddess holding a conical object on the palm of her right hand; and fig. 2, which is a Nâga goddess from Kanauj in Oudh (Awadh).

To show that such symbolism of the Snake-woman is by no means confined to Asia, on Plate XVI. fig. 7 I have figured a talisman.

---

3 Revealed for a consideration to the owner of the ground by a certain class of men who are wizards by profession.

4 [This of course, is a reference to the well-known classical Hindu tale.—Ed.]

5 A figure with a woman's bust and the lower extremities of a serpent.
called "La Sirena," in use amongst the lower classes in Naples at the present day. I submit that a strong and decided family resemblance exists between the Tâtar goddess, the Nâga lady from Oudh, the Nâga Mûdammâ of Mainâr, and the Sirena of Naples, and that beyond a doubt they all had a common origin in the remote past. Again, there formerly existed in the ancient church at Lamos, in the Vallée D'Ossau, in the Pyrenees, a holy-water vessel of white marble, which has since been removed into a modern edifice, as the old church is now a ruin. Within this vessel is sculptured in alto-relievo a siren which in form and character resembles the Nâga Mûdammâ, holding a fish in her right hand and her own tail in her left; there is also a centaur and two fishes. On the exterior is carved the "sacred monogram" in Gothic letters, with an interlaced ornamentation on either side of it; all evidently XVth Century work. It is very probable that the vessel originally came from Biele, a place in the same valley, where there is said to be a superb mosaic and the remains of a Roman Villa; and tradition says that it was appropriated and put to a religious use during the middle ages, when most likely the Christian symbol on the exterior was added.

In Scandinavia remains of a Serpent-worship of a somewhat different signification are numerous, and besides the Sun-symbols which have been described (p. 66 above) as belonging to the Earlier Bronze Age there are certain other forms which the late Kamer Herr Worsaae says represent the Sun-snake. Such are the simple S, the double S or $\mathcal{S}$, and the two-headed snake beneath a wheel (the wheel of the Sun?) figured in Plate I. fig 11 (p. 66 above). With reference to the origin of these symbols in his Danish Art, Prof. Worsaae says, "The snake, as is well-known, played an important part in the Asiatic and in the ancient Egyptian symbolism, partly because they thought the sun's path through the heavens formed a curve like a snake, and partly because lightning, or the fertilizing fire, flashed upon the earth in a snake-like zig-zag."—and this he concludes that the triskele $\mathcal{S}$, also (see Plate I. fig. 12, p. 66 above) was but an outcome or variety of the veśātika. A reference to fig. 15 Plate V. which, as explained above, p. 92, is a sketch of a bronze fibula found a few years ago on excavating the Roman Camp on the Saalburg, not far from Frankfort-am-Main, would appear to show that Prof. Worsaae's surmise as to the connection between the triskele and the Serpent is correct, for the former is here present, and each limb of it has a Serpent's head.

On the whole, traces of Snake-worship are not numerous in Europe, and the cult does not appear to have taken much hold upon the minds of the people there; the reason probably being that Snake-worship, essentially a worship of fear, would naturally die out where the alarming kinds of venomous snakes did not exist. But as instances of it may be noticed a singular festival still held once a year in Italy, in a little mountain village in the Abruzzi, where on a certain day the peasants walk in procession, carrying round their arms, waists, and necks, all the snakes they can find. They observe this custom in the belief that they will thus be secured from poison and from sudden death, and further that it will bring them good fortune, especially in love. Also a good many of the legends of the Basque Provinces in the South of France turn upon a Seven-headed Serpent. Thus the "Heren Suje" is always described as being seven-headed, and in the myth of the "Serpent D'Isabôt," the oldest version of the numerous tales of this nature, this serpent lies with its head resting on the summit of the Pic du Midi de Bigorre, its neck stretched down towards Barèges, whilst its body fills the valley of Luz and its tail lies coiled in a hollow below the Cirque de Gavarnie. And lastly, at Carnac in Brittany, is a small hostelry which bears the sign of "Le Serpent Vert."
THE LAST YEARS OF SHAH SHUJA'A, WITH AN APPENDIX ON THE AFFAIRS OF HIRAT.

Translated from the Türkî  Sultanî of Sultan Muhammad Khan Bârûkzâi.

BY E. REHATSEK.

(Continued from p. 170.)

At the time Shâházâdah Timûr was appointed to the Governorship of Qandahâr, Niżâmû'ddaulâh sent his own son 'Abbâs Khan with him, and obtained, without the permission of the Pâdshâh, a letter from Mr. Maenaghten to the address of Major Lawrence, entrusting to his son ['Abbâs Khan] the entire administration of Qandahâr, so that the Shâházâdah had no other business there than to draw his monthly salary of three thousand rupees. Accordingly when Shâh Shuja'a had learnt the state of the case, he wrote a letter to Mr. Maenaghten to the effect that as the Shâházâdah had no influence whatever in the Government of Qandahâr, his sojourn there was useless. Mr. Maenaghten, who wished to keep on good terms with Niżâmû'ddaulâh, gave some valueless explanations, and when the latter perceived that Mr. Maenaghten wished to please him, he said to him one day:—"The Khâns of this country are receiving thousands of rupees for nothing, and it would be advantageous for the public welfare to curtail their allowances."—Maenaghten, who was not well acquainted with the circumstances of the country, lent a willing ear to the suggestions of Niżâmû'ddaulâh, and knew not that:—

"He wishes you ill, and is a bloodsucker of the people,
Who seeks your profit by oppressing the people."

Accordingly, first of all, Niżâmû'ddaulâh claimed the sum of forty thousand rupees from the Ghiljâis, which they annually retained out of their own agricultural produce, in return for keeping up thânahs [police-stations] and performing other duties. They replied that the said allowances had been granted to them by former Pâdshâhs for guarding the roads, and for making good the losses merchants sustained by thefts, but Niżâmû'ddaulâh would not listen to any arguments, and insisted upon the confiscation. This transaction became an occasion of injury to both the allied Govern-

ments, because as soon as the Ghiljâis obtained a true notion of the intentions of Niżâmû'ddaulâh they left Kâbul by night, and prepared for rebellion in their own territories; so that when the English forces under the command of George Macgregor, which were marching to Jallâlâbâd, reached the station of Khûrd Kâbul, nine karahs distant from the city, the Ghiljâi tribe blocked the road and a severe fight ensued. It was, however, at last compelled to leave the English forces, and to allow them to pass, and they marched on to Jallâlâbâd.

The irregular regulator of the kingdom [Niżâmû'ddaulâh] moreover, having removed the Hâkim of the Ghiljâis from his post, appointed to it his own son, who was a boy not more than seven years old, a step that augmented their discontent.

About this time Niżâmû'ddaulâh brought of his own accord a paper to the Shâh, in company with Maenaghten, the contents of which were as follows:—"Five of the Durrâni Khâns, who are the origin of the increase of turbulence, viz. Ghulâm Ahmad Khan, son of Sher Muhammad Khan Bâmizâi, surnamed Mahtâra'ddaulâh, and 'Abdu'llah Khan Akhâzâi and Muhammad 'Atâ Khan, son of Sardâr Samandar Khan Bâmizâi, and Sardâr Sikandâr Khan, his uncle, and Sardâr 'Abdu's-salâm Khan, son of Muhammad Ikrâm Khan Anâ'ul-mulk, must leave the city of Kâbul, to go wherever they please." As the Pâdshâh only knew of these Khâns from their readiness to serve him, and from their approved loyalty, he was confounded; but as he had the goodwill of the English officers much at heart, he was obliged to agree to their exile. The Khâns were exceedingly distressed, and represented to the Pâdshâh that each of them had extensive connections, property, and a family in Kâbul, and knew not where to go after abandoning them: but he, being desirous to please the English, paid no attention to their objections and made no reply.

1 Among the measures of economy which were now resorted to, was that of curtailing the stipends of the Ghiljâi chiefs. Col. Rev. Vol. II. No. iii. 1844, p. 249.
Then a fresh firman of Lord [sic] Macnaghten was promulgated, ordering that the departure of the Khans from the city must not be delayed beyond three days, and saying that they would be called to account if it was; they were moreover to go to Peshawar and to no other place. On this the Khans naturally supposed that they were to be transported to India as prisoners, and entirely despairing of the protection of Shah Shuja'a, who had no authority whatever, and fearing to lose their lives, women, and children, they were induced to hold a secret consultation for devising means of escape from the impending calamity. It happened also that during the same night a man went about the city, and threw a paper into the house of each of the Khans. In the morning when they saw the papers, they found the following words written on each of them:—"Pay attention to your case, because to-morrow you will be made prisoners with great suffering and distress, and will be sent to India." As papers of the same kind had been thrown also into the houses of Mir Haji, and of Hafiz Jai, the sons of Mir Wazir, and into that of Aminullah Khan Lahurudari, they endeavoured after perusing the contents to discover the bearer, but the more they sought, the less they found him. It seemed as if a jinn had done the business: but no—I am mistaken, rather an angel of the Almighty had brought this affair to light from the secrecy of non-existence. In the course of the day the Khans, whom their distress had made impatient, held a consultation, and determined to rise in arms next day against their foes, in order to see what would come forth from the curtain of futurity. They bound each other by a strong covenant, and said:

"If successful, we shall place our feet on the top of the celestial sphere,
Else we shall have sacrificed our lives like men for the end we had in view."

On the morning of the seventeenth of the blessed month Ramazan, in the year 1258 [22nd October 1841] they rose in arms, attacked, captured, and slew every one they met. Verily they committed abundant excesses. Shah Shuja'a, whom this catastrophe had made uneasy, despatched naspaghis and jarchas with orders to quench the flames of the insurrection, which however spread so extensively that his efforts proved futile. Then he summoned to his presence the Khans who had revolted, but they refused to obey: whilst some sent a reply that they could no longer bear the haughtiness and independence of Nizam ud-Daulah and that the time for negotiation was now passed. The Padshah, therefore, sent some Tilangah (Native Indian) troops, together with his mounted bodyguard under the command of the Shahzadah Fateh Jung, and several pieces of artillery for the purpose of dispersing the company of the ghadis, and delivering Mr. Alexander Burns: to whom he also sent a message that he should, in any case, leave the city and betake himself to the Bilah Hisar, or to his own Chautu [Cantonment]. But as his death, decreed by fate, was imminent, he paid no attention to it. The Tilangah and Hindustani troops, who had marched out under the command of the Shahzadah, were attacked by the ghadis, who killed and wounded nearly seven hundred of them, and put the rest to flight, so that they hastened with the Shahzadah into the Bilah Hisar. Shah Shuja'a also despatched Mirza Ibrahim Khan Manshi, to the Chautu of Mr. Macnaghten with the information that as this was but the first eruption of a rebellion, and as it had not yet developed itself, he ought to order all his troops to enter the city on all sides to disperse the crowd of insurgents. Mr. Macnaghten, who was intoxicated with the sleep of carelessness despatched one [Tilangah] regiment with eight pieces of artillery to the Bilah Hisar for the security of the Padshah; but the latter sent word that he was perfectly safe, and anxious only to see the confusion in the city put down, according to the saying:

"The fountain head should be stopped with a spade,
Because, when full, it cannot be crossed on an elephant."

Macnaghten then sent a reply that affairs would yet turn out well.
Meanwhile, however, the ghāzīs had girded up the loins of courage and shouting the blessed verse, "Verily Allah loveth those who fight for his religion in battle array, as if they were a well compacted building," hastily assailed the house of Alexander Burns, which was in the city, looted his property, and capturing him whilst he was in the act of fleeing, cut him to pieces with their merciless swords. After plundering his house they set it on fire, and likewise robbed, in the twinkling of an eye, the Government-treasury, which was near it, and in charge of the Fanangi [European] Johnson; which acquisition caused the poor and the destitute to lift up the banner of mendicancy.

On the other hand, it occurred to some of the upright and united Khāms, viz. 'Abdu'llah Khān Aḥsainzādī, Amin-ullah Lahukurūl, Sardār 'Abdu'llah-salām Khān Bāmīzālī, Sikander Khān Bāmīzālī, &c., that after having embarked in so dangerous an undertaking, they could not impart safety to a Government without a Pādshāh. Therefore they unanimously elected Mahammaad Zamān Khān to be Pādshāh, and resorted to more violence in order to realize their hopes. Accordingly after slaying Alexander Burns and plundering the treasury under Johnson, they attacked the fort of Nishān Khān, situated between Deh-i-Afgān and Bāgh-i-Shāh [Garden of the Shah]. As the European officers had purchased the ghādān of the fort, and adorned it for habitation, they showed fight. When, however, the ghāzīs impenetrably rashed upon them they could no longer resist, and most of them were slain. Those who escaped the sword, fled by the aid of some friends the Chandāl Mājallah to the first Ghāvān, whereon all the corn and stores, laid up in the fort for the winter, fell into the possession of the ghāzīs.

When Mr. Trevor, who had on the first day taken up a position in the tower of Fatḥ Khān, knew that Burns had been killed, and the treasury plundered, he made the Jāmbās Shāhī Shāwās, whom he commanded, his own body-guard, and asked Mr. Macnaghten to send him a regiment for protection. But this did not arrive, and the ghāzīs came in numbers and almost captured him. Meanwhile the inhabitants of the Andarānī Maljallah reduced him to great straits for want of water.

On Thursday the twenty-first of the said month [25th October 1841] the valiant ghāzīs, who were under the command of the Nāib Aminu'llah Khān Lahukurūl and 'Abdu'llah Aḥsainzādī, considered that, as the English had no stores (ghādān) in the Cantonment, but had transferred all [their stores] to the forts of Jā'fīr Khān and Sharīf Khān, they must, if the stores be destroyed, perish partly by hunger, and partly by bullets. The conclusion was accordingly arrived at that these two forts must be taken, and the stores,—that is to say, the provisions,—plundered. Accordingly, therefore, they so ravaged them that in a moment it was as if they had never existed. They also set fire to the fort [of Jā'fīr Khān] and attacked the fort of Sharīf Khān, which was near the Cantonment. The English Ensign Warren, who was with one hundred fifty men of the Fifth Regiment in charge of the fort [of Jā'fīr Khān], felt himself unable to resist the ghāzīs, and was ready to agree to leave it, and thus save his life. Meanwhile Captain Swayne, who had with two hundred men of the Forty-fourth Regiment been marching from the Cantonment to relieve him, became on reaching the Bāgh-i-Shāh a target for the bullets of the ghāzīs, and lost an eye; and most of the other officers having been killed, as many of the rest of the force as escaped the sword, trod the way of flight. About the time of mid-day prayers, Ensign Kārn [sic], intending to aid Ensign Warren, marched from the Cantonment with one regiment of the [East India] Company, and one division of the Nīgānī Cavalry [regulars]; but before he had yet approached near, the ghāzīs discharged a shower of bullets upon his advancing force, of which they killed eight and wounded fifteen, causing it to retreat to the Cantonment. They then continued their operations around the fort, pushing a mine to the base of it like mice.
Boyd then went to the commander of the army, namely Mr. Macnaghten, shunting that the surrender of the fort to the enemy would entail the loss of one lakh of rupees, and what was worse, the sanjar in it combined not more than twelve days' provisions, nor was there any force at hand strong enough to collect provisions elsewhere, and convey them to the fort. Macnaghten also was now perplexed, and sent word to hold the fort till night-fall, when succour would arrive. Ensign Warren replied that the ghâsâs were undermining one of the towers, and also that his men had become so cowed, that from fear for their lives most of them were leaping down from the rampart and taking refuge in the sanjar, and that therefore if no succour arrived in the evening, all would be lost. After six o'clock in the evening, Macnaghten held a council of war with his officers, and a decision was arrived at not to send a reinforcement to the fort of Sharif Khan till the next morning to prevent the loss of the ghâdân, because the Afghâns were not in the habit of sacrificing their night's rest, and would not be watching the fort, nor harassing the besieged. As a measure of precaution, however, Captain Johnson was sent as a spy to bring information about the Afghâns, and he returned after a while with the report that they were assembling, and preparing for an assault. Nevertheless, the English officers delayed sending reinforcements till the morning dawned, by which time the impetuous ghâsâs had taken the fort by storm, and set the gate on fire, so that Ensign Warren had to escape with the troops by a way he had prepared for flight. As the conquerors had taken possession of abundant provisions, and the want of them in the winter season would cause great hardship to the English troops, the English officers, when they saw the Afghâns engaged in carrying off the corn, impelled partly by apprehensions of impending distress, and partly by feelings of honour, purposed to adopt Lieutenant Eyre's suggestion to attack the fort of Muhammad Sharif forthwith. His senior officers, however, would not agree to let him command, and unanimously selected Major Swayne to take charge of an assault with the Sixth Regiment of Indian Infantry, in the hope of obtaining possession of the remnants of the corn; but this officer, instead of preceding his men, according to the usual custom, preferred to walk in the shelter of an adjoining wall. When the commander of the troops saw this, he knew that such a coward would effect nothing, and ordered them to retrace their steps.

Next day Ensign Bird was sent with one hundred men of the Forty-fourth Regiment of the Shahî [Royal] Infantry, Mr. Delin with as many of the Fifth Indian Infantry and Mr. Sturt with the same number of the Thirty-seventh Indian Infantry to assault the fort, [Major] Griffiths being appointed commander over these officers. They directed their artillery against the fort of Muhammad Sharif, levelled its walls and then took it by storm. Then they advanced until they got possession of nearly one half of the Bâgh-i-Shâh. On the other hand the Afghân sawârs, led by 'Abdu'llah Khân Achakzâi, invaded the Bâgh-i-Shâh and expelled Captain Thackeray with the juâdâkichs therefrom, killing great numbers. The Qâlîbâshes of the muhâllâh, who had up to this time remained neutral, succoured the Afghâns when they saw them pressed, and renewing the attack, retook the Bâgh-i-Shâh with the fort of Sharif, and having driven the English into the sanjar besieged them.

On Tuesday the twenty-seventh of the month Ramazân in the same year, when the provisions of the English troops had been altogether consumed, the plenipotentiary wâsit Macnaghten sent an officer to Brigadier Shelton who was in the Bilâ Hîşâr, to ask for

---

10 This word does not occur in any Persian Dictionary, but is in Sanskrit sanskrîta, "collection," hence "a place where a collection of stores is kept." It has passed into Marâshî unchanged and also into other Indian languages, and is on the way of becoming an English word like bhâta, hansâlîch, chiffâ, &c., and is already being used in print. A correspondent of The Bombay Gazette, writing from Sûnkîh, meant by it a small circular fort, and in our text it appears to designate a magazine or store-house like ghâdân above.

11 "Early on the morning of the 5th the commissariat fort was abandoned by its garrison, the enemy having attempted to fire the gate and escalade. The garrison came out by a hole made from the interior—tools having been sent over night, with a view to the introduction of reinforcements and the withdrawal of supplies from the store."—Report of General Elphinstone.

12 Lieutenant.

13 A party under Major Griffiths of the 37th Native Infantry was sent out against Muhammad Sharif's fort. A practicable breach was effected, and the storming party entered with an irresistible impetuosity worthy of British troops. Kaye, Vol. II. p. 97. This took place on the 6th November 1841.

14 This gives the 1st November, which is about a week too early.
some grain, if he had any, whereon the General, having obtained some flour and corn, brought it with an artillery waggon, a battalion of the Forty-fourth Royal English Regiment and the whole of the Sixth Regiment of Shah Shuja'a-ul-Mulk to the sangar. When he arrived at the Cantonment the soldiers became frightened, because he said that the English troops would be unable to encounter and to fight the furious Afghans; more especially now, as the winter was setting in and the scarcity of food would become such that not one man of the English army would be able to return alive, wherefore the opportunity of leaving Kâbul, and marching to Jâllâbâd, ought to be at once embraced. But Macnaghten and the officers of the army replied that, in the opinion of intelligent men, such a proposal smacked of madness itself; because they had taken infinite trouble in the construction of the sangar for their own safety. To abandon it therefore and to lift up the banner of retreat in another direction full of enemies, would be tantamount to feeding a fire with more wood, or to throwing one's goods into a rushing torrent; and for this reason the best thing to do was to remain in their stronghold till the commencement of the spring. When the soldiers heard the depressing words and contradictory proposals of their officers, they became sore afraid in their hearts, preferring death to life; and the more so, as they knew that the provisions in the Cantonment would not last longer than two days more.

Now the Afghans stormed and took the fort of Rikâ Bâshli, situated at the distance of an arrow shot from the Cantonment, on which they fired a rain of bullets. The pleiopotentary [Sir W. Macnaghten] having ordered the fort of Rikâ Bâshli to be bestormed, Colonel Mackrell went with the 44th Regiment, in company of Lieutenant Bird with the 6th Regiment, and a number of other Europeans as well as Indian soldiers, and made their attack from one side, whilst Captain Bellew started with still more numerous troops and the same intention from another; whereas the victory-craving Afghans, perceiving the impending danger, rushed between the two forces, and surrounding those of Captain Bellew, cut most of them to pieces. When Brigadier Shelton became aware of what was taking place, the fire of his zeal blazed, and he fell with his men upon the Afghans, who repelled them twice, and at the same time continued to fire upon the troops of Lieutenant Bird, which they had surrounded. In the third attack the Afghans incited each other and, becoming more furious, reached the enemy, committing such slaughter that all of them were killed, except Lieutenant Bird and one of his valiant soldiers. It is moreover said that these two men fought so bravely, that they caused thirty Afghans to attain the dignity of martyrdom. Of the English two hundred men were killed, but in this give-and-take, the forts of Rikâ Bâshli and Zulfiqar and another, fell into the possession of the English, together with some grain they contained. One-half of this they succeeded in transferring to the sangar by the evening; but when the shâhanshâh with the golden diadem, namely the sun, had thrown the veil of obscurity over his face, ("By night when it covereth all things with darkness,"[18]) the brave Afghans blew up the walls of the two forts by mines, and thus wreaked their vengeance, which greatly augmented the dismay of the English.

Another contest took place at the Pâtâh-Bimûrû, originally called Pâtâh-i-Bibi-mûrû.[19] On the twenty-fourth of the blessed month Ramaûsân in the same year [8th November][20] the English cavalry rode about the vicinity of the Cantonment, whereas the Afghans sawdâra rushed upon them and occupied the top of the hill which dominated their Cantonment, whence a râisâlah of regulars was immediately sent to dislodge them, and the Afghans, unable to cope with them, retreated. Afterwards some of the Kûhâshânî Infantry preparing for another fight, constructed a sangar on the top of the Bimûrû hill, and when next day a crowd of ghânâs ascended it, with the intention of fighting, the English troops likewise marched out from the Cantonment and stood ready for battle, whilst a râisâlah been shot down by the gallant three."—Kaye, Vol. ii. p. 53.

[14] But it was only on the urgent representation of the Envoy, that an expedition against the Rikâ Bâshli fort was undertaken at last.—Kaye, Vol. ii. p. 58.

[15] Lieutenant Bird, with two escays of the 37th N. L. sought refuge in a stable, which they barricaded and defended with a resolution that deserved and secured a crown of success. When the fort was carried by the British troops, they were found with exhausted ammunition, but alive and uninjured. Thirty of the enemy had

[24] On the 15th November the enemy occupied in great strength the Bimûrû hills. They had planted two guns in a commanding position, and were cannonading the British Cantonment."—Kaye, Vol. ii. p. 56.
of regulars with two pieces of artillery on wheels, under the command of Lieutenant Walker, was sent up the hill, the top of which they reached with extreme difficulty. When the fighting began, the Köhistání foot-men succeeded in gradually withdrawing from the range of the cannons, so that the balls could not strike them, whilst their own bullets laid low all the artilleryists. 14 On this occasion, 'Abdu'llah Khan Aclakzái, who was a lion in the field of valour, and who had in his morning prayers asked God to grant him martyrdom, rushed forth in the company of a number of brave with the war cry — "Assistance from Allah, and a speedy victory." 15 and overturning the cannons made an attack upon the savârs of the English riádál. But alas, whilst doing so, the valiant 'Abdullah Khan, having tasted the sherbet of martyrdom, was received into the Almighty’s proximity of mercy and repose. All the Musalmáns, especially the Afgáns, tore the collar of grief for his loss, and it was confidently thought, that had not the Khan been overtaken by the decree of fate, the Cantonment of the English would on that day have fallen into the possession of the gházi. 16

After that the English, having evidently no more power and strength to fight outside, were besieged in their Cantonments, and began to negotiate for peace with the Afgáns. On the sixteenth of the month Shawál [1st December 1841] Wazír Muhammed Aqbar Khan, son of the Amár Dost Muhammed Khan, who had escaped from Bókhára and had been living in Tashkurgání, and had come to Kábul when he heard of the rebellion, as will be narrated in the Memoirs of the adherents of the Amár Dost Muhammed Khan, if it pleaseth Allah the Most High, — was with Sháh Shuja’a in the Bâla Híshár, when the English in the Cantonments had begun negotiations with the Afgáns, and messengers were going forwards and backwards between them. When Macnaughten had obtained a substitute and desired to return to Hindustán, he wrote to Sháh Shuja’a that the further stay of the latter in Kábul would be unsuitable for him, and that if he were to go with him to India, the [East India] Company would grant him a pension of four lâkhs of rupees per annum. The Pádsháh replied, that if his hands had not been tied by a feeling of honour and by his family he would have done so, but could not, according to the saying:—

"O ye that are encumbered by a family
Must no longer hope for tranquillity."

He also advised Macnaughten that it would be better to be on his guard, and likewise to take refuge in the Bâla Híshár, and when he heard that Macnaughten had been killed, he was very sorry. 22 Then the English army marched in command of Mr. Pottinger—whom they had made Lord [Commander] after the murder of Macnaughten, on account of the scarcity of provisions, in the direction of Jallálabdáh, 23 but all perished during their march from the extreme cold and in consequence of the attacks of the gházi, 24 — as will be narrated in the

but commanded by General Elphinstone and not by Pottinger, as stated above in our text.

22 The arrival of the army from Kábul was anxiously expected in Jallálabdáh:—"At last on the 10th of January, when the garrison were busy on the works, holding with axe and shovel, with their arms piled and accoutrements laid out close at hand, a sentry, on the ramparts, looking out towards the Kábul road, saw a solitary white-faced horseman struggling on towards the fort. . . . . A shuddor ran through the garrison. That solitary horseman looked like the messenger of death. Few doubted that he was the bearer of intelligence, that would fill their souls with horror and dismay. Their worst forebodings seemed confirmed. There was the one man who was to tell the story of the massacre of a great army. A party of cavalry were sent out to succour him. They brought him in wounded, exhausted, half-dead. The messenger was Dr. Brydon, and he now reported his belief that he was the sole survivor of an army of sixteen thousand men."—Kaye, Vol. II. p. 217.—The detailed account of this disastrous march, terminating with the extermination of the whole army, occurs ibid. Book VI. Ch. II. from p. 218 to p. 256. Readers, however, who expect a chronological sequence of the facts narrated, will be little surprised that it is not always observed in this work; and that the tragic arrival of Dr. Brydon at Jallálabdáh has been narrated before, and not after the account of the extermination of army is given.
The population of Kābul crowded against the Bālā Hīsār, until they got it into their possession like the Cantornents of the English; whereon Shāh Shuja'a, perceiving that the tyrannical English Government was destroyed, was under the necessity of acting according to the maxim, "if the times do not suit you, suit them," and of courting the friendship of Amin-ullah Khan Lahukurdi, to whose house he sent his own son the Shāhzadah Shāhpūr for the purpose of allaying the excitement of the insurgents, most of whom considered him [the Pādshāh] to be altogether English in his sentiments. Amin-ullah, being pleased with the promises made to him, of gold, of robes of honour, of position and of high dignity, brought over a number of Durrāns and Fārsis to the side of the Pādshāh: who also pledged himself, while the negotiations proceeded, to bestow a gift of two lākhs of pūkhūr rupees upon [the Shāhzadah] Muhāmmad Zamān Khān. But the latter at first refused, saying, "I am a Khaīwān, and not a receiver of bribes," to which Amin-ullah Khān replied, "As now a Pādshāh of Islām has been found, the Khalifate is abolished and the Wazirate is also a high position and most valuable dignity, which I am able to procure for you," and then Mūhammad Zamān Khān necessarily consented. On the 7th Zu-l-hijjah A.H. 1257 [27th January 1842] the Shāhzadah Shāhpūr proceeded with Nām Amin-ullah Khān and Nawāb Mūhammad Zamān Khān, and all the Ghiljāi, Kōhsīzāni, and Qidāsh Khāns to the Bālā Hīsār for the purpose of saluting the Shāh, and having been presented with beautiful robes of honour they paid him their respects every day."}

Wazir Mūhammad Akbar Khān, who was on this occasion at Jallālabād, felt much aggrieved on being informed that the Khāns had made peace with Shāh Shuja'a, and wrote secretly to the chiefs of Kābul, that if the Shāh was sincere in his desire to strengthen Islām and to destroy the infidels, they must incite him to extirpate the remainder of the English who were still in Jallālabād. With this object people were daily sent round bearing the noble Qurān [Hāsrat Fārsuḍ] on their heads shouting the Tahbār [the words Allāh-akbar] and proclaiming that the Pādshāh of Islām ought certainly to go to Jallālabād to remove the remaining Englishmen from Afghānistān. As gratitude to the English impeded the Pādshāh from consenting to ruin their government, he adopted the policy of procrastination, and declared that in case Mūhammad Akbar Khān should be unable to conquer Jallālabād, he would himself induce the English to depart from Afghānistān by diplomacy, and in case of their failing to comply, he would force them to do so by war. As the Musulmān were displeased with the return of Mūhammad Akbar Khān, they were of opinion that it would be better to send a letter to the English officers. Accordingly, to please them, Shāh Shuja'a despatched one by Sardār 'Inayatullah Khān Bāmsī, and another by Dīn Mūhammad Khān, his private chamberlain. These were to act apparently as his agents, but in reality to favour the English, whom they openly told to depart from Jallālabād, but secretly put on their guard against the treachery of the Bārsāzī tribes, and more particularly against that of Mūhammad Akbar Khān, lest they should be deceived by his duplicity, and perish like Macnaughten, from trusting him.29 It is alleged that the Shāh's object in this correspondence, which was protracted during two lunar months, was no other than to gain time for the arrival of another army from Hindustān. This conjecture is supported by the writings of Mr. Macgregor, the Hākim of Jallālabād.

(To be continued.)

28 "The Bālā Hīsār was evacuated by the British troops on the 13th December."—Kayo, Vol. II. p. 311.
29 "Ever since the departure of the British army, Shāh Shuja'a had reigned at Kābul. He had reigned at Kābul, but he had not ruled. His power was merely nominal. The tribes wanted a puppet; and in the unhappy Shāh they found the only one who was ever likely to stand between them and the vengeance of the British nation. Day after day they made their salam to him in the Bālā Hīsār, but so imperfect was their outward recognition of his regal dignity, that money was still coined in the name of the Nawāb Zamān Khān."—Kayo, Vol. II. pp. 333-4.
30 The Shāh himself talked openly in the Darbar about standing forth as the defender of the faith and declaring a religious war against the Khāres, but he privately assured Conolly that he was heart and soul with the British, and he wrote long letters to the Governor-General, Clerk, Macgregor, and others, declaring his inviolable fidelity, and eagerly clamouring for money."—Kayo, Vol. II. p. 255.
ANCIENT TENURES OF LAND IN THE MARATHA COUNTRY.

BY SIR WALTER ELLIOT, K.C.S.I., F.R.S.

The Marāṭhās constitute a well-defined section of the Hindu population. They occupy a considerable portion of the table-land of the Dakhan; and, to define its limits more exactly, the western boundary may be described as following the line of coast from Dāmnā to Goa, the northern being marked by the Sātpūrā range as far as Nāgpūr, whence the eastern border follows the course of the Waingaṅgā, and other tributaries of the Gōdāvarī, as far as Bīdar, thence an irregular line passing through Kāgal, Kuraṅdā, Hukārī, Belgaum and Dāṅwā to Sadaśīvagadh, divides them from the Karmāṭaka and Kanaresc-speaking people.

Of the origins of the people who have inhabited this tract from the earliest times we have no certain knowledge. We first become acquainted with them on the decay of the Andhra empire. At that time two powerful indigenous races occupied the southern portion of the Andhra dominions in the Dakhan, the Pallavas to the east, and the Raṭhās to the west. The aspirations of both of which were kept in check by the growing power of the Chālukya dynasty. The language of the Raṭhās has a Tanūrian foundation, but it has great similarity to the grammar and structure of Hindi. It is expressed in characters of two forms, one identical with Dēvānāgarī, the other cursive, the running hand used on all ordinary occasions called Mēd or Mōdī. With a not inconsiderable literature of its own, it has received large additions from Sanskrit, principally by translation. Hence also the national designation it effects for its people and country of Rāṣṭhrāṇī and Mahārāṇī, by which it has sought to overshadow the indigenous names of Raṭha and Mahāraṭa.

The Marāṭhās have always been distinguished for their courage and love of independence, which they maintained despite the superior power of the Chālukya. Advancing from their seat on the Bīlmā they even overthrew for a while that kingdom between the 8th and 10th centuries, and afterwards, amid the growing power of the Muhammadans, they still maintained their independence, until, in the days of Aurangzeb, in the 17th and 18th centuries, they emerged from their mountain fastnesses under Sīvājī, and swept away the wide-spread Mughal empire, penetrating even to its threshold in the city of Dēlī itself.

The great body of the Raṭhās is composed of the agricultural classes or kumbh, distinguished for their skill and industry as cultivators, and for their readiness and aptitude for war, being equally prepared at all times to exchange the plough for the saddle and the spear. Below them are the servile classes, mahārs or māhrs, who have been suggested by some as the ancestors of the Marāṭha nation, but they belong without doubt to that numerous body of serfs, hereditary bondmen, adscripti glebae, the koliyōra of the Kanaresc, the mālas of the Telugus, and the parīkas of the Tamils. The mahārs imbibed the martial instincts of their masters, and served with credit as tāryās in the pāghās, or stable horse of local chiefs, when they were called hūtānandā. But the most important class is that of the Brāhmaṇs. Astute and able as the twice-born caste is throughout India, the Marāṭha Brāhmaṇ is pre-eminent distinguished among all his confraternity for ability and force of character. The particular term, by which they are known from the Niyōgis or Telugu Brāhmaṇs on the one hand, and the Sēyik of the west coast on the other, is that of Dēśastha or "national," which marks them as first par excellence, and the highest rank is always conceded to them. They took an active share in all the public transactions of the Dakhan, both civil and military, from the period of Muhammadan rule down to recent times. Ferishta states that Būlān Nizām Shāh made a Brāhmaṇ his dīvān or minister, with the title of Pēshwā about A.D. 1592, a practice which became general as applied to the Brāhmaṇ ministers of the different chiefs, and was even adopted by Sīvājī himself in favour

of his own minister Śim Rāj Pant, whose successors ultimately displaced the descendants of his royal master.

The preference shown by the Muhammadan princes to the Dēṣasthas and the skill and ability displayed by the latter in the revenue administration, gradually led to the substitution of Marāṭhi for Persian as the language of account under Brāhmaṇ scribes, which greatly added to their influence. This influence they have never lost. Every ruler, of whatever race or creed, finds the assistance of a Brāhmaṇ diwān or dōredār indispensable to the success of his administration, and hence the Marāṭhi system of accounts, though much modified, has not become obsolete even to the present day.

Before noticing the system of assessment introduced by the Marāṭhas it will be useful to give a short sketch of the governments that preceded them. The earliest that exercised any influence now perceptible on the assessment was that of Anāgundil or Bijnapur, which prevailed over their extensive dominions from the beginning of the 15th to the middle of the 16th century. This gave place to the 'Ādil Shāh dynasty of Bijapur in 1553 A.D., which was succeeded in 1686 A.D. by that of the Dehlī or Mughalāī Sarkār on the conquest of the Dakhan by Aurangzeb. When the Marāṭhi rule was restored under the Poona Government the revenues were ably administered for some time under various Brāhmaṇ sarāṇīkha (provincial governors) on the chōlī system inherited from Bijapur. But by degrees abuses crept in under the weak and improvident rule of the Peshwā Bījī Rāo. The collection of the revenue was farmed to the highest bidder, and new offers were accepted at Poona for districts already rented, the new-comer sometimes having to expel his predecessor by force. Then, aware of the precarious nature of his tenure he was obliged to exact to the utmost. The abuses arising out of such a system were augmented by internal disorders, insurrectionary movements, and plundering raids, so that when the Southern Marāṭha country came into the possession of the British Government in 1817 a general state of disorder was found to prevail.

Out of this chaos the first step of the new Government was to ascertain as far as possible the principles, if any, on which the original assessment rested. It was found by a careful examination of the oldest accounts procurable that the system of assessment in force under the Bijāpur and early Marāṭha Governments was derived from the times of the Anagrundil or Bijnagar kings. According to tradition, Krīṣhṇa Rāya, the greatest prince of that line, made a regular survey of the whole area on which assessment was due. This was the rāya-rēkhā or hulndār measurement, still referred to as the oldest authority extant. It was on it that the Bijapur settlement was based, which stands at the head of all the old assessments under the title of rākambīrīz. The dry lands only appear to have been subjected to the rāya-rēkhā survey, for in the pargāns bordering on the Malnad or western districts, which are principally under wet cultivation, the village measures bear other names, and vary considerably from each other. The scale of the rāya-rēkhā mār is cut on a post in the gateway of the Gadag fort, and measures exactly 7 ft. 9½ inches. Of these 20 make a bighā and 36 bighās a rāya-rēkhā mār. Another in the Basavana temple at Nāwalgund gives 7 ft. 6½ inches. A subsequent governor under Anagrundil introduced the viṭṭṭī-pantī mār, so called from his own name, into many villages of the black soil. It is marked in the temples of Anigiri and Amhībhāvī, and on a stone at Hobej, still extant, measuring 10ft. 6½ inches, 10ft. 1½ inches, and 10ft. 6 inches respectively. It never came into general use, and is supposed to have been much larger than the standard above recorded would sanction. Instances of other measures, probably of very early date, are also found, such as pattās, guḷās, chiyygars, &c. All these, with the mār, constitute measures of the superficial area. The gardens are estimated by the space, called shalēs or thalēs, occupied by a certain number of trees. But there is another measurement of the dry lands called the kōṭkēṣ, or ḍīn-kōṭkēṣ, which seems to have originated in some very early assessment, and to have reference to division of land of uncertain origin and of very variable extent. See Marshall's Statistical Report, p. 26, Bombay 1822.

---

5 These are found in different parts of the country and vary greatly in extent. The chiyygar is a large
the quantity of land that yielded one hān or pagoda (=Rs. 4 of cash).

The dry land was thus assessed either on a measurement of its actual extent by the rāya-rēkkā standard, or exceptionally by some local measure, or it was estimated by the quantity of land to which the payment of a certain sum was attached, stated in hāns and their fractions.

A different mode was adopted in the Malnad or wet lands, which is known under the name of bijāwāri. The land was estimated by the quantity of seed required to sow it, measured by khandis and kudus. This, too, is attributed to the time of the Anegundi sovereigns, and is said to have been determined in the following manner:

The revenue was taken for a given number of years in kind. The fees of village officers, and all other expenses were deducted from the grain on the threshing-floor, the residue was divided into two equal portions and the rāṣāṭ allowed to take his choice. The average proceeds of the other half, or Sarād share, was then recorded as the assessment of the land which had produced the whole.

The bijāwāri was not confined to estimating the value of wet land, but was occasionally resorted to in dry cultivation also, where the result was recorded in kurgis. The kurgī is the name of the seed plough, and the quantity of seed which the husbandman can sow in one day with a pair of bullocks becomes the measure of the land liable to assessment. The kurgī is of unequal extent, varying from 5 to 10 bighās.

Whether, however, the Bijāpur State adopted these measures from the former government or not, it is certain from accounts now remaining, that they were in use under that state. In all cases, not otherwise specified, the staple measure of the Bijāpur State was the chāwār, said to contain 129 square bighās. In all these modes of assessment, whether by the chāwār, the mīr, the local measures, the kattrī, or the bijāwāri estimate, a similar plan came to be observed of making the quantity of land in the measure vary in extent with reference to the qualities of the soil, while the sum assessed on it was always the same, a practice which led to the uncertainty in the superficial extent of each denomination, new found to be so general. But the bijāwāri lands were sometimes further divided into classes paying different rates, a usage not altogether unknown even in dry lands.

The preceding observations refer to the payment of the revenue in money, which was further modified by the chālī system before referred to, which will be more fully explained hereafter. But the revenue was also sometimes levied in kind (particularly when jāgīrs and ināms were placed under sequestration), under the bijāwāri system already adverted to, according to which a kudus (= 30 bighās) of seed land was considered equal to a pur or the fourth part of a chāwār. Accounts are yet extant showing this process in great detail from the takht-i-rēzi or seed account to the gallūd or account or share at the harvest.

The land tax, as has always happened under a Muhammadan government, becoming very high, was remodelled, under the later princes of the 'Ādil Shāhī family, and the result, known as the tankhid, is referred to as the apal of 1080 A.H. (1669 A.D.) in all subsequent accounts of the Mughal or Dehlī rule, as a standard or foundation. The tankhid is considerably less in its sum total than the previous rākal, though the rates were higher. It seems to have formed the limit of the collections of the Bijāpur State when it was adopted as the basis of the Mughal assessment. To this every subsequent increase of revenue attained under the imperial government was added with the name of ināfa-taunfīr (= additional increase), after which it remained a fixed and permanent item, even though the source from which it was derived had ceased to exist. The taunfīr and the tankhid together constitute the kamāl-bāris, or full demand of the Mughal Government, but this kamāl was never realized in any instance that has been met with, on the contrary a certain portion was deducted every year, as loss (ājāt), and the remainder only (tattīmā) was considered to be the jamā or demand. Thus the kamāl is of no value as a standard of comparison, because it was never in actual operation.

We have said before that the administration of the land revenue, under all the various tenures already enumerated, was regulated by what has been called the chālī system. Originating under the Bijāpur government, it was perfected and brought to its high state of
efficiency by the Marathiya. The principle on which it was founded was that of the municipal character of the Indian village, according to which the principal inhabitants conduct all the affairs of the community, and manage their transactions with the officers of government. All the assessable lands in the village are entered in the accounts as liable to the ānâdī or standard tax, and are divided into four classes. 1st, the châlî, consisting of the best and most fertile fields, and those nearest the village; 2nd, the katyuta, paying a slight addition to the ānâdī; 3rd, makhâ or khand makhâ, which never pays more; and 4th, korsut or kaaul, which only pays the ānâdī when brought into cultivation under favourable circumstances, to which may be added payâbâr or lands held by foreign cultivators, not members of the village community. The lands of the first class are occupied exclusively by the principal inhabitants, who are therefore called châlîkârâ. When, at the annual settlement of the revenue the officers of government in fixing the assessment made an estimate formed from past collections and other sources, of what a suitable demand ought to be, the difference between the original ānâdī and the sum so fixed, was, with the consent and concurrence of the châlî râ’iyyats, imposed on their lands exclusively. This, under the name of patti, was sub-divided by them among themselves, but no addition was made to the demand on the other lands. This done, the châlîkârâ became liable for the realization of the whole village assessment, and had to make good any balance that remained outstanding. They were, therefore, careful to provide against the occurrence of such a contingency. They kept up the cultivation by preventing râ’iyyats from absconding, and by procuring new settlers; they assisted the poor with seed, bullocks, and labour at the sowing season; gave them temporary remissions to bring their fields into full tillage, and took care that they performed their engagements accordingly. When by these means the condition of any of the inferior holders was sufficiently improved to admit of his sharing in the burdens and privileges of a châlî râ’iyyat, he was brought into that body. But when, on the other hand, a châlîkâr was unable from losses or misfortune to contribute his share, he was only assessed at katyuta or makhâ rates to allow him to recover his reduced circumstances.

The onerous conditions of the châlî tenure were counterbalanced by advantages which not only enabled the holder to discharge its conditions with ease, but made it an object of ambition with every râ’iyyat to become one. In the first place, the châlî râ’iyyat held the best lands in the township, and occupied the best houses in the village. These were attached to particular fields, and could only be possessed by the person cultivating such fields. Secondly, kaauls for breaking up waste (nângar or great plough kaauls) were only given to those paying châlî, and never to any other râ’iyyat, but the latter could hold hariyali and itâdãv kaauls. Thirdly, the right of cultivating for ka’amâlâr, who always let their lands for much less than the sarkâr or government rates, was restricted to the châlîkârâ, who also could alone employ payâbâr or alien sub-tenants from other villages. These, with some other special benefits, varying in different places, and the influence they enjoyed over the village community and its concourses, and a degree of consideration with which they were treated by government and its officers, form some of the principal privileges attached to the châlî tenure.

The term châlî is, therefore, applicable rather to persons than to lands, but as the best lands were always held by the former, the expression châlî fields is not uncommon.

A portion only of the lands of a châlî râ’iyyat were subjected to the imposition of the patti, or to the châlî tenure, the rest was katyuta, makhâ, and kaaul. It was sometimes, therefore, impossible to point out the particular field considered as châlî, though at other times this was specified in the accounts.

---

1 nângar kaaul was that given for breaking up old waste, over-run in the black soil by nach or nafis grass, the matted, deep-seated roots of which could only be broken up by the great plough drawn by five or six yoke of bullocks, and entitled the holder to exemption from all demand for eight or ten years. See Dr. Wight's description of the nach grass, *Ichaeum murheus*, Wight.

1 Itâdãv and hariyali kaauls open to the other râ’iyyats were only temporary exemptions to clear superficial weeds. The itâdãv on an exemption annually increasing to the full amount for a short period, and hariyali in like manner to extirpate the surface herbage of *Agrilus lineatus*. 

---

The patti, or extra assessment, is nominally, and was originally variable, but came in time to be considered as a fixed and customary rate, under the name of mānūli or fair patti, in contradistinction to the juddi patti, or excessive addition of later times. It was nevertheless always omitted in the cultivation accounts. I have scarcely seen a single lāvāli-patraik or chitā, or schedule of land under cultivation, antecedent to the Maśār conquest that contains more than the īndāt. It was usual for the Marāhā kamāqīrā to make remissions for bad years, misfortunes, &c., by deducting a part of the patti, a half, quarter, two āndā, or any definite proportion, and to impose an equal additional proportion in the following year, which was never objected to by the rāyāts, and, I believe, is practised in some of the jāgīr villages to this day.

The chālī prevailing in the districts between the Krīshṇā and the Bhāmā differs considerably from that above described. There the patti and his bābānand (collateral relatives) are almost the only chālīdārā. They pay no juddi or official quitrent, but hold a certain quantity of sarv-indām or mirāśi land free of all rent, the proportion of which is regulated by the quantity of chālī they may have undertaken. If by any accident a chālīdār is forced to give up all, or a portion of his chālī holding, he must at the same time relinquish his sarv-indām or free land, or an equivalent portion of it.

These two kinds of chālī recall to mind the descriptions of village economy still subsisting in other parts of India.

The first, or Southern, bears a strong resemblance to those communities in the Karnātak where the concerns of the village are regulated by the body of the inhabitants or mirāśi-dārā, collectively, while the chālīdārā of Indī and Muddebihāl (districts of the Bhāmā or valley of the Bhāmā) have a slight connection with the bhāgīdār or co-partnership patti of Gujarāt. Indeed, I recollect two or three villages in Muddebihāl where the patti had divided the village into shares, each managed exclusively by one of their body, for the revenue of which he was responsible. A tenure still more closely resembling the chālī formerly prevailed in Bhārā and Kadāpa (Cuddapah), under the name of appanam, and probably still subsists in the Telāgu portion of the Nizām's dominions, for I found it lingering as far north as Gaḍjam under the same name.

These are probably remains of a state of society that at one period seems to have been general throughout India, in which the concerns of the village were administered by the chief inhabitants in a body.

---

**THE MEANING OF BAPPA AND BAVA.**

**BY J. F. FLEET, Bo.C.S., M.R.A.S., C.I.E.**

In order to facilitate the discussion of some points of importance in connection with the Rulers of Vaiabhū, I publish herewith a complete genealogy of the family as I interpret it from the inscriptions, with the official titles of the members of it, and their dates as far as I have been able to verify them.

The point to which I would draw attention in the present note, is the meaning of the two words bāppa and bāva, which occur in the compounds bāpplā-dānūthī, "meditating on the feet of bāpplā," and bāvā-dānūthī, "meditating on the feet of bāvā," and of which...

*Superficial observers, however, not aware of this, were liable to suppose that the best, or chālī lands, were expensively rack-rented. It is related that an inexperienced kamāqīrā (revenue officer) under the Peshāwā's Government, proceeded to remodel the assessment under his charge on what he considered to be more equitable terms. Naīn Pahālā, the able minister of the Peshāwā Nākāsāy Rāo, and his successors, no sooner heard of it than he repaired to the district in person, replaced the assessment on its former footing, and removed his over-zealous dependant. This celebrated division was not a pure Dēnāsī, but belonged to the subdivision of that body known as Koṅkanaśāhā or Chittpāwa, of which the Pahāl Peshāwā were also members.*

Śilāditya VII,
or Dhrūbhaga (Dhruvabhaga).

Paramaḥkṣattra, Mahāprajādhirāja,
and Paramēśvara.

(G. S. 447.)
The first expression, which was of very general use, occurs, among the Valabhi grants, with the paramount titles qualifying boppa, in paramabhâttaraka-mahârâjadhiraja-parâmadâraca-sri-boppa-pûd-ânudhyâda, an epithet that is applied—(2), in lines 53, 54-55, 57-58, and 63 of the grant of Śilāditya VII. of the year 447, and in other grants as far as they go, to Śilāditya IV. V. VI. and VII., each of whom came in direct succession after his father, and each of whom had the paramount titles of Paramabhâttaraka, Mahârâjadhiraja, and Paramâsava, and was also a most devout worshipper of the god Mahâsvara.

Among the inscriptions of other families, the same expression, boppa-pûd-ânudhyâda, without any qualifying titles of boppa, is used as an epithet—(3) of the Bhâttaraka and Mahârâja Śivâdèva I. of Nâpûla, in line 1-2 of his inscription of Gupta-Saiva 318;—(4) of the Mahâduttamanta Ahaśivarman of Nâpûla, who was also favoured by the feet of the god Pâsupati (Îsîva), in line 2 of his inscription of Harsha-Saiva 34, and in line 4-5 of his inscription of Harsha-Saiva 38;—(5) of Jîśiniputra of Nâpûla, who again was also favoured by the feet of the god Pâsupati, in line 4 of his inscription of Harsha-Saiva 48, and in line 6-7 of another of his inscriptions;—(6) of the Paramabhâttaraka and Mahârâjadhiraja Śivâdèva II. of Nâpûla, who again was also favoured by the feet of the god Pâsupati, and was a most devout worshipper of the god Mahâsvara, in line 2 of each of his inscriptions of Harsha-Saiva 119 and 143 (?)

The same expression, boppa-pûd-ânudhyâda, with the feudal titles of Mahârâja and Bhâttaraka qualifying boppa, occurs in paramadhâraca-boppa-bhâttaraka-mahârâja-sri-pûd-ânudhyâda, an epithet—(7) of the Bhâttaraka and Mahârâja Vâsanâsena of Nâpûla, in line 1-2 of his inscription of Gupta-Saiva 433.

And finally, a compound of almost identical import, viz. boppa-pûdâ-bhâkta, “devoted to the feet of boppa,” occurs, with the title Bhâttaraka qualifying boppa, in the epithet boppa-bhâttaraka-pûdâ-bhâkta, which is applied—(8) to the Pallava Mahârâja Siûshavarman II., who was a most devout worshipper of the Holy One (Bhâgavat), in line 8 of his grant;—(9) to the Vângi Mahârâja Vîjayanandavarman, also a most devout worshipper of the Holy One (Bhâgavat), in line 1 of his grant;—(10) to the Pallava Mahârâja Nandivarman, again a most devout worshipper of the Holy One (Bhâgavat), in line 14-15 of his grant, possibly spurious;—and, with the further qualifying title of Mahârâja, in the epithet boppa-bhâttaraka-mahârâja-pûdâ-bhâkta, which is applied—(11) to the Pallava Vângi Mahârâja Vîjayanandavarman, again a most devout worshipper of the Holy One (Bhâgavat), in line 14 of his grant.

In publishing the two grants of Śilâditya V. of the year 403, Mr. V. N. Mandlik treated the words boppa and boppa, quite unnecessarily, as identical, and considered that they denoted “some great teacher of the Śiva faith, or some remarkable great king of that name; but more probably the former, from the adjectives used;” or, again, “some sage, venerated equally in all parts of Hindustân.” So, also, Dr. Bhâgwanâl Indrajî has recorded his opinion that boppa is “a general title used by chief priests.” And I myself have suggested that the name is that of “some king or pontiff of very early times, whose authority was recognised universally in his own day, and was afterwards preserved in the tradition of several distinct regal families.”

These suggested explanations, however, cannot be upheld.

In the first place, the epithet in which boppa occurs belongs undoubtedly to persons of the Śiva faith in instances Nos. 1 to 6 above. But Nos. 8 to 11 show that it was applicable just as much to followers of the Vaishnava faith.

In the second place, as pointed out by Dr. Bühler, the feudal title Mahârâja which qualifies boppa in Nos. 7 and 11 above, and

still more, the paramount sovereign titles of Paramabhatrākṣa, Mahārājadhikārā, and Pravirājya, which qualify it in the instances grouped under No. 2, show that the word must refer to some one of noble or regal birth, and cannot denote a priest, no matter how high his rank in the hierarchy might be.

As regards the question of bappā being a proper name, the word does occur in this way — as the name of an official, the Buddhikārā and Bāhyā Bappā, in line 59 of the grant19 of Śilāśītya IV. of the year 372; — as the name of some one after whom was named the Bappā-

pādiya-vihāra, or "Buddhist monastery of the feet of Bappā," at Valabhi, mentioned in line 19 of the grant20 of the Mahārājā Dharasēna II. of the year 299; — in Bappavāmī, one of the grantees in line 11 of the Khōś grant21 of the Parivārajaka Mahārājā Hastin, of the year 163; — in Bappārya, one of the grantees in line 53 of the Chammak grant22 of the Vakāṭaka Mahārājya Pravarasēna II.; — and in Bappā-

bhūtā, a Jain teacher,23 allotted to Vikrama-

Saṅvat 890 to 895. The same word is also probably a component of Bappūra, the name of the family to which, as recorded in an unpublished inscription of Mahālāsaka, Dur-

labhādāvī, the wife of the early Chalakya king Pulikōchā I., belonged.24 A similar word bāppa, probably derived from it, occurs in Bāppadeva, the name of a Śenāpati in line 35 of the Siwāni grant of Pravarasēna II.25 And, finally, Bappā, or Bappā Rāvula, has been preserved by tradition in Mēwād, as the more familiar appellation of an early Gāhila chief, who is said to have established the power of that tribe on the overthrow of the Bhūlas or Bhūlas.26

But the idea that, in the technical expression under discussion, bappā denotes some particular priest, whether of the Śaiva or Vaishānava faith, whose memory had been preserved in different parts of India from very early times, has been disposed of above. And, this being so, it remains difficult, on the supposition that the word is a proper name, to imagine how it should have cropped up again from time to time, under precisely similar circumstances, in such different parts of the country and such varying periods as are indicated by instances Nos. 2 to 11 above.

The true explanation of the word, in this technical expression, first occurred to me from noticing the way in which the titles that qualify bappā vary in accordance with the titles of the persons to whom the epithet bappā-pād-

ānudhyāta is applied; and it is fully borne out by the epithet śrī-ajakā-pād-ānudhyāta, which is applied only to Dharasēna IV. in line 38 of his complete grant27 of the year 326, and in his grant of the same year of which only the translation of the second plate has been published.28 This expression, which, if it had not been so completely overlooked, would probably have made the matter clear long ere now, dropped out in all the subsequent Valabhi grants, even in those of Dharasēna IV. himself of the year 330; probably

Gupta-Saṅvat 265, Saurāshtra was invaded by barba-
rians from the north, and the town of Valabhi was sacked. Now, the accompanying genealogical table shows that the Śenāpati Bhasākara, the founder of the Valabhi family, must have been alive in or shortly before Gupta-Saṅvat 191, though his birth must be placed some twenty-five years earlier. And there can be little doubt that the Mēwād tradition is based on a confused remembrance of the rise of the Valabhi family. The Jain date of Gupta-Saṅvat 235 probably refers to a historical event; that event, however, would be, not the sacking of Valabhi by barbarians from the north, but the reverse of this, the pillaging of Valabhi after the overthrow of these invaders, the Malhāra Bhasākara. Tod (id. p. 546) gives an abstract of an inscription, dated Vikrama-Saṅvat 1064, from "Aitipur," which mentions "Syeula," in the 6th generation, but not Bappā. There is a later inscription of the same family, dated Vikrama-

Saṅvat 1158, at a "Mathe near the temple of Achalāvara at the Achaśi Hill Fort on Mount Abū, which takes the genealogy back a step further, and mentions Bappā, or Bappā Rāvula (under the name of Bāpā, if the translation is correct) as the first of the family; see Kvarāj Sarnā Tuṣyamal Das' translation in the Jour. Beng. As. Soc. Vol. IV. Part I. pp. 369. 576., and p. 19.

on account of something in the official relations between Śilāditya I. and Kharagraha I. which remains to be cleared up. But it occurs in these two instances; and, in accordance with Dr. R. G. Bhandarkar’s rendering, it undoubtedly means "meditating on the feet of (his) illustrious grandfather." Ajja in Kannarese, and ajā and ājā in Marāṭhī, are the ordinary words for 'a grandfather' in the present day. And it is evident that ajjaka is the older Prākrit word, from which these have been derived.

On this analogy, boppa suggests itself at once as the old Prākrit form of the modern bāpī, 'a father.' And now it becomes clear why the word is qualified by the paramount titles in its connection with the paramount sovereign Śilāditya IV. and his successors, the reason being that the father of each of them was himself a paramount sovereign; and, on the other hand, why, in its connection with feudatories, it has either no qualificatory title at all, or only the feudatory titles Mahārāja and Bhāttāraka, as in the case of Vasantasena, Sīthāvarman, Vijayananidvarman, Nandivarman, and Vīshnugopavarmen. The rule thus disclosed also shows why, in the case of Śivadēva II., himself a paramount sovereign, boppa has no qualifying term; for, the way in which he is introduced in lines 11-12 of the Nēpāl inscription, No. 15, shows that he brought in a new branch of the Thākuri family, and that his father Narēndradēva, even if he held the rank of Mahārāja, was at least not a paramount sovereign. And the same rule explains why, in connection with the paramount sovereign Dharasena IV., ajjaka is qualified by nothing more than the ordinary title ērī; for, he himself was the first paramount sovereign in the family; and his grandfather, Kharagraha I., was at the best only a Mahārāja.

The analogy of ajjaka and boppa now suffices fully to clear up the meaning of the word bācā. It suggests at once that it is nothing but the older Prākrit word from which have been derived, with somewhat differing significations, in Marāṭhī, bāhaba, 'a term of respectful mention for a father or an elderly person; bāhā, a term of respectful mention for a Gōvāli, Guru, father, or elderly person,' and bhaba, 'a husband's brother, especially an elder brother,' and in Kannarese, bācā, 'the son of a mother's brother, or father's sister, a man or woman's brother-in-law (in every case, if older than one's self),' and bācā, a husband or wife's elder brother, a maternal uncle's son (similarly, in every case, if older than one's self). Looking for its application in connection with Śilāditya III., we note, in the first place, that the grants shew very clearly that his father Śilāditya II. did not reign at all, which explains why the epithet boppa-pad-dvahyāda is not used in respect of him; and, in the second place, that the only paramount sovereign before him was his father's distant cousin Dharasena IV., who, so far as paramount sovereignty is concerned, was his immediate predecessor. This shews us that bācā was used, here at least, to denote 'a male relative, of the same generation with a father,' or roughly 'an uncle'; and explains why bācā is qualified here with the paramount titles. And the fact that, after the first adoption of this technical expression, the Vālabhi succession was in each instance direct from father to son, explains why the expression bācā-pad-dvahyāda does not occur again.

In Kannarese, boppa appears in the form of boppa, in boppa-sīniga, 'the lion of (his) father,' an epithet applied to the Raṭṭa chieftain Lakshmīmeda II., the son and successor of Kārtaviryā IV., in line 63-64 of his inscription of Śaka-Saṅvat 1151. In confirmation of this I may quote—ayana-sīniga, 'the lion of (his) father,' a title of the Śilāhāra chieftain Gaṇḍarāditya of Kōḷapur, in line 21 of his grant of Śaka-Saṅvat 1382, and also of his son Vijayāditya;—mātana-sīniga, 'the lion of (his) father-in-law,' applied to the Daṇḍanāyaka Kēśavādityādēva, in lines 17-18 of the Kāḷorōjli inscription of Śaka-Saṅvat 997;—ayana-ganāvārāna, 'the choice elephant of (his) elder brother,' applied to the Daṇḍanāyaka Sāmāvabhāṭa in lines 11-12 of the same inscription;—ayana-anāhārya 'the warrior

or champion of (his) elder brother,' applied to the Sinda chieftain Áchugí II. in line 9 of his inscription of Śaka-Saṅvat 1042; and—bhūvān-aṅkakāra, 'the warrior or champion of (his) uncle or other relation of the same generation with his father,' applied to a Śilāhāra chieftain named Gōñkidēva in line 46 of the Tērāḍāl inscription of Śaka-Saṅvat 1042, etc. Other similar titles, which help to explain the preceding, through the introduction of proper names instead of words of relationship, are—Senana-sīṅga, 'the lion of Śena,' applied to the Raṭa chieftain Kārtavirya II., the son and successor of Śena I., in line 7 of his Saundatti inscription;—

*Tailana-sīṅga, 'the lion of Taila,' applied to the Kāḍamba chieftain Kṛttivarman II. of Banawāśi, the son and successor of Taila I.,—

*Tailaman-aṅkakāra, 'the warrior or champion of Tailama,' applied to Kāmadēva of the same family, the son and successor of Tailama;—

*Goṅkān-aṅkakāra, 'the warrior or champion of Goṅka,' and Gūhēyana-sīṅga, 'the lion of Gūhēya,' applied to the Śilāhāra chieftain Mārasīṁha, the son and successor of Goṅka, and the nephew of Gāhala or Gāvala I., in line 28 of his grant of Śaka-Saṅvat 980.

A NOTE ON THE ORIGIN OF THE GUPTA ERA.

In my paper on "The Epoch of the Gupta Era." at page 189ff. above, I did not include any remarks on the origin of the era, for the reason that this is a question which is still the subject of speculation only, and as to which but little that is certain can as yet be said. I will, however, here put together a few notes on this point.

I have remarked, on two or three previous occasions, that, though it is convenient to continue the custom of speaking of the era as the Gupta era, still there is nothing in the inscriptions to show that it was invented by the Early Guptas themselves. And the contrary supposition is the more probable one. The first two members of the family, Gupt and his son Ghaṣṭ́kachā, held only the feudalatory rank of Mahāraja, and had not the authority to establish an era. The first paramount sovereign was Ghaṣṭ́kachā's son, Chandragupta I, who was succeeded by his son Samudragupta, and grandson Chandragupta II. The inscriptions give no dates for Chandragupta I and Samudragupta; but they show that Chandragupta II was reigning up to at any rate the year 93 of the era. Now, the era, if established by a Gupta king at all, can hardly have been established later than in the reign of Chandragupta I; and if he was the founder of it, he would have dated it from the commencement of his own reign, just as Harshavarman of Kanauj, in founding the new Harsha era, dated it from his own installation, neglecting even the reigns of his elder brother Rājyavardhana II and father Prabhākara-varman, both of them paramount sovereigns, and much more, as a matter of course, two preceding generations of Māhāraja, beginning with Rājyavardhana I. The result is an average of at least thirty-one years for the three reigns of Chandragupta I, Samudragupta, and Chandragupta II. This, in itself, is not impossible, though it is improbable. But, when we regard the fact that Kumāragupta, the son of Chandragupta II, reigned for at least thirty-four years, from the year 96 to the year 129, the result, an average of thirty-two years for four successive reigns of fathers and sons, is, I submit, sufficient to show that the era dates from before the commencement of the reign of Chandragupta I, and probably, by a mere coincidence, from just about the time to which the Māhāraja Gupta, the founder of the family, must be referred; and that, consequently, it was not established by a Gupta king at all.

1 I omitted to quote there an alternative rendering of the crucial passage in Albrecht's statement, suggested by Mr. Thomas in his edition of Prinsep's Antiquities, Vol. I. p. 271, note; viz. "'Again, the Kōbaṭ Kāl (Gupta era), that was, as it said, a wicked and powerful family; when it ceased, it was dated from, and as it were (it would seem that) Balab was the last of them, for the first of their era also is 241 years after the Saka Kāl." — Albrecht's expression and meaning will, it is hoped, be made fully clear in Prof. E. Stasch's approaching edition and translation of his work.
By whom it was founded is the point that still remains to be determined; and, if the era was devised in India itself, this point can only be settled by ascertaining who were the paramount sovereigns to whom the Mahârâjas Gupta and Ghatotkacha were feudatory. Mr. Fergusson's opinion on this point, was in the direction of the era having been established by the Andhra king Gautampitana-Satakarni, with whom he placed between A.D. 312 and 333. Dr. R. G. Bhandarkar, however, places this king between A.D. 133 and 154; and, according to his view of the history of the period, we should have to refer the establishment of the Gupta era to some event connected with either the downfall of the Satraps of Saurashtra, or the history of the Râdhrakshás of the Dekkan.

Our knowledge of the early history is not yet such as to enable us to work out this point fully; and I refer to it chiefly in order to shew the direction in which researches might be made.

But I would add here that, though I have treated the era as having been invented in India itself, and as having been introduced into Nepal by the Early Guptas, still it is equally possible that the era was obtained by them from Nepal, and is in reality the Lichchhavi era, founded by the Lichchhavi kings, at a time, perhaps, when their republican or tribal constitution was abolished in favour of a monarchy. The writings of Fa-hian and Huien Tsang prove the great antiquity of the Lichchhavi clan in the direction of Nepal. And, as regards their epigraphic records, I have shewn that the first historical king, Jayadeva I., must, by the ordinary allowance of time for each generation, be referred to A.D. 330-355, and it needs but little adjustment to carry him back to A.D. 318, 319, or 320. This supposition would explain, perhaps better than any other, why, even after the introduction of the Harsha era into Nepal not later than A.D. 640-41 and its adoption by the Thakuri family of Kailasakutabhabavana, the Lichchhavi rulers of Mânagriha clung to the earlier era, and continued the use of it down to at least the year 435 or A.D. 754-56, and in all probability for a century longer. And all the other facts will fit in just as well with this supposition, as with the other theory. The friendly relations between the Early Guptas and the Lichchhavis, and the pride in them felt by the former, are shewn by the intermarriage in the time of Chandragupta I.

by the careful record of the name of Kumârâdvi herself and of her family on some of his coins; and by the epithet of Lichchhavi-dauniktra, "the daughter's son of Lichchhavi, or of a Lichchhavi," that is always applied to Samudragupta in the genealogical inscriptions. And I have perhaps been wrong in speaking, on previous occasions, of a conquest of Nepal by Samudragupta; the exact reference, in the Allahabad inscription, is to Nepal-pratyagata-aripati, which may mean either "the frontier-king of Nepal," or "the kings of the countries on the frontiers of Nepal." It is quite possible that the Early Guptas did not extend their dominions actually into Nepal; and that, in that direction, they and the Lichchhavis reigned in amity side by side on equal terms.

J. F. Fleet.

3rd August 1886.

THE UPANISHADS AND THEIR LATEST TRANSLATION.

Under this heading, a valuable article is contributed to the First Part of Vol. VII. of the American Journal of Philology, by Professor W. D. Whitney, of Yale College, an American Sanskritist and philologist of deservedly high repute. It consists, for the most part, of a critique on the first and fifteenth volumes of the Sacred Books of the East, its handling of which may be regarded as a sample of the "wholesome severity" which the writer advocates in interpreting the Upanishads!

Many of the criticisms of individual passages are characterized by considerable acumen and accurate scholarship, and cannot fail to be of value to students of these philosophical tracts; but the general effect is not a little marred by the sweeping condemnation of the volumes as a whole, in which the critic indulges.

Considering that the work under review is from the pen of one whom all know to be a scholar of no mean order, such comments as the following are almost unseemly:—"The whole body of them [i. e. of the notes] is to be condemned, as furnishing a minimum of valuable and helpful context, even when they are not altogether misleading. There is not, it is believed, a single instance where a really difficult passage is seriously and competently discussed." Again:—"If there were in any part of these two volumes a passage of a different character from those we have been reviewing—a passage showing signs of a sound

1 Page 194 above, and ante, Vol. XIV. p. 346, Inscriptions N. and P.
2 On the "king and queen" type of Mr. V. A. Smith's arrangement; Jour. Bong. At. Soc., Vol. LIII. Part 1, p. 171, and Plate II. No. 2.
plan, careful and conscientious execution, penetrating insight into the difficulties of the text and successful effort to set them forth and explain them—it would be our duty and pleasure to pay it our attention. But no such passage is to be found; the work is all of one stamp; there is hardly a paragraph, much less a page, in it that does not furnish matter for serious animadversion."

Professors Whitney and Max Müller have long been before the public as writers, in a popular form, on the science of language; and it is well known that in advocating their respective theories they have come into violent antagonism.

It is deeply to be regretted that the atmosphere of linguistic study should be so fatal to calmness as it seems to be, and so generally provocative of spirit of "envy, hatred, malice and all uncharitableness"—evidence of which, in the case of these two scholars has, unadvisedly, been preserved for posterity in one of the volumes of *Chips from a German Workshop*, and is again conspicuous in the article under notice.

The opening pages contain some sound remarks on the merits of the Upanishads generally, together with others of less value, on the demerits of the native commentaries. We do not share with the writer his extreme contempt for the interpretations of such a scholar, for example, as Śāṅkara, śāṅkaraḥ; as we cannot but feel that a man like him, of extensive reading, of acute intellect, and living at least a thousand years nearer to the time of the composition of the Upanishads than we do, was possessed of very material advantages as an interpreter of them; and no modern scholar can afford to set him aside or deny him the most serious attention. For much that is unintelligible in the texts of our printed editions of the Upanishads, and misleading in the commentaries thereon, the editors are responsible; a glaring instance of which is to be found in the volume of minor Āharvāna Upanishads, which forms one of the *Bibliothee Indica series*. It is no exaggeration to say that neither text nor comment of that volume has the slightest critical value.

The Professor's remarks on the various possible methods of interpreting the Upanishads, are full of interest; and we reproduce one of them for the benefit of our readers:—"A third way, leading in quite another direction, would be this: to approach the text only as a philologist, bent upon making a version of it exactly as it stands, representing just what the words and phrases appear to say, without intrusion of anything that is not there in recognizable form; thus reproducing the scripture itself in Western guise, as nearly as the nature of the case admits, as a basis wherein could afterward be built such fabric of philosophic interpretation as should be called for; and also as a touchstone to which could be brought for due testing anything that claimed to be an interpretation. The maker of such a version would not need to be versed in the subtleties of the later Hindu philosophical systems; he should even carefully avoid working in the spirit of any of them. Nor need he pretend to penetrate to the hidden sense of the dark sayings that pass under his pen, to comprehend it and set it forth; for then there would inevitably mingle itself with his version much that was subjective and doubtful, and that every successor would have to do over again. Working conscientiously, as a Sanskrit scholar only, he might hope to bring out something of permanent and authoritative character, which should serve both as help and as check to those that come after him. He would carefully observe all identities and parallels of phraseology, since in texts like these the word is to no small extent more than the thing, the expression dominating the thought: the more the quantities are unknown, the less will it answer to change their symbols in working out an equation. Of all leading and much-used terms, in case the rendering could not be made uniform, he would maintain the identity by a liberal quotation of the word itself in parenthesis after its translation, so that the sphere of use of each could be made out in the version somewhat as in the original, by the comparison of parallel passages; and so that the student should not run the risk of having a difference of statement which might turn out important, covered from his eyes by an apparent identity of phrase—or the contrary. Nothing, as a matter of course, would be omitted, save particles whose effect on the shading of a sentence is too faint to show in the coarseness of translation into a strange tongue; nor would anything be put in without exact indication of the intrusion. The notes would be prevalingly linguistic, references to parallel passages, with exposition of correspondences and differences. Sentences grammatically difficult or apparently corrupt would be pointed out, and their knotty points discussed, perhaps with suggestions of text-amendment. But it is needless to go into further detail; every one knows the methods by which a careful scholar, liberal of his time and labour toward the due accomplishment of a task deemed by him important, will conduct such a work." There are few Sanskrit Scholars of the present day as competent to prepare a version of this description as is Professor Whitney himself; and it is to be hoped that he will ere long furnish us with an instalment of work on these lines.
Before concluding, we must correct an error occurring in the opening sentence of the article under notice. It stands thus:—“The Upanishads are to the modern Hindu that part of his sacred literature for which he cares most, if not the only one for which he cares at all.” If the writer were to sojourn for a few years in this country he would find cause for modifying this view. As a matter of fact, “the modern Hindu” knows no more of the Upanishads than he does of the Mantras of the Veda. The Paurânik literature, and the popular vernacular poems based thereon, are the only writings “for which he cares at all.”

G. A. JACOB.

15th June 1886.

SAMANYACHARANA AND BRIHACHARANA.

In the June number of this Journal, p. 174 above, Mr. Rice has given a derivation and explanation of the name of Brikaharana; and I take this opportunity, as I am a Dravidia Brahman of that caste, to write to you of what I have heard and read about its origin.

In the Stâlapûrâya of Lâlguji, a small town in the district of Trichinopoly, a story occurs explaining how a certain set of Brahmanas came from the north and received the name of Brihacharana.

There was a great dearth in the Chôla country; all the lakes and rivers had dried up; famine and pestilence prevailed. Brahmanas, as long as they are orthodox especially, cannot live for a moment without that most necessary element of human or animal kind,—water. But, so great was the scarcity of water in the Chôla dominions, that even the Brahmanas there had to leave off a great part of their rites.

Just at this time the king3 of the Chôla country found a great multitude of Brahmanas coming into his dominions from the north. Wherever they halted, they found sufficient water for their bath and ablutions. They were all Akhadas, or religious men who maintained their sacred fire, with their wives. When the Chôla king saw them, he was struck with their deeksha or pious behaviour and observances, and said—guyam bhikad-decharana, “you are all persons of mighty (wonderful) observances.” From that time these new Brahmanas were called Brihaddecharana, which in course of time was corrupted into Brihacharana.

The Samanyacharana of Mr. Rice’s inscription may mean, I think, the other Brahmanas, who must have been the previous settlers, and who must have had only ordinary observances, samanya-decharana. These may be the modern priests of temples, Gurukkals and Pujaris, who are always considered low in the scale of Brahmanism, and who, especially in Southern India, are not considered fit for company at meals, and do not join in domestic and religious gatherings. In the several Chôla inscriptions that I have examined these Gurukkals only sign as Brahmanas, and I have found no other Brahmanas. The mention of the Samanyacharana, which is a name opposed to that of the Brihacharana, may also go much against the genuineness of the date of the grant, Sraka 261.

As far as I can conclude, I am of opinion that the first Brahman migration to the South began in the seventh century A.D., and that the original immigrants must be the present degenerated Gurukkals, who seem to have once exercised great influence. The Brihacharana, Vadamas, and others, must have arrived in later times.

CURiosITIES OF INDIAN LITERATURE.

THE FOUR QUESTIONS.

When king Yudhishtira was in exile, he came to a tank inhabited by a ferocious Grâha or water demon. It was the habit of this beast to put the following questions to all who came to drink at the tank:

कौ में किमान्त्रिक वद्यं कारणोऽवधं च परस्त्रः सर्वस: ।
हर्षते येज् तदार् प्रवें पविख्यते जनसमेत ॥

‘Who is happy? What is wonderful? What is the news? What is the path? First answer me these four questions, and then drink.’ As no one was ever able to answer these questions, he used to kill and devour them. Yudhishtira, however, was equal to the occasion, and, when challenged, replied as follows:

विवेकास्यानां नागरीवासां प्रजास्य तीर्थनिः कौ गुहे ।
अनुभृणी चावासी यं सर्वार्थं चावासी यं नागरीवासी ॥
अहं सर्वाँख्यं भुतानि परमाणुं भक्ति भवानि ॥
अस्मित्वान्निश्चित्तं किमान्त्रिकं वद्यं परमाणुं ॥

अधिनामानांवरस्तं भवानि युधिष्ठिरसी राजानं विभवानि ॥
मात्रेषु वि परमाणुं भवानि युधिष्ठिरसी राजानं विभवानि ॥

पनस्तहं किं न प्रजास्य नागरिक सागर न विभवानि ॥
पूर्वस्यतरं तिन्ते कं तु गुह सागरस्य नागरीवासी न विभवानि ॥

Coloured red.—The Dravidian name of the place is Tiruvizran, or the sacred spot, from which the seven sages attained, after long penance, eternal felicity.

3 The king’s name is not on good authority. He is, I think, called Karikâla; but whatever may be the name in the Stâlapûrâya, we cannot take it as an historical certainty.

3 Through the great righteous power they had in them.
He who cooks his mess of vegetables at the eighth watch of the day, and he who is not in debt, and is not a sojourner,—he, O Water-Goblin, is happy. That, while every day created things are hastening to the hall of death, others should say, "I wish to remain,"—what is more wonderful than this? In this cauldron (of the world) full of illusion, time cooks created things, with the sun for fire, night and day for fuel, and months and seasons for the stirring ladle,—this is the news. The Scriptures are at variance and Holy Writ is at variance; many are the holy men, but their advice is at variance; the essence of virtue is placed in the inner recesses (of the heart), and that, along which the great and good have gone before,—that is the path.

On hearing these replies the Graha was mightily pleased, and, giving him all the riches he had carried off from his former victims, let him go on his journey. 

G. A. GRIERSON.

BOOK NOTICES.

It was known some years ago that the late Dr. Burnell held peculiar views as to the date of the book which we have been accustomed to call the laws of Manu. The matter cannot be regarded as finally settled yet; but Burnell certainly had the courage of his opinion; and the evidence on which he founded it, if not conclusive, is well deserving of consideration.

No one, of course, now believes as Sir William Jones did when he brought out his translation nearly a hundred years ago, that the code, if it may be so called, is as old as 1200 B.C. The theory generally accepted in late years is, that the book contains the customs and rules of the Mānavas, a sect of Brāhmaṇas who followed the Black Yajurveda; that it is mainly a versification of the Gṛhya and Śāmaryadhitika Śūtras of that sect; and that it was compiled about 500 B.C.

The grounds for fixing Manu so far back are briefly stated as follows:—The gods mentioned in Manu are chiefly the Vedic deities; the account given of the four castes and their origin is similar to that given in the Purāṇa-Sūkkha; there is no allusion to the practice of Satī, or to the worship of Vishnu and Śiva; nor is there any mention of the Rāmāyana or the Mahābhārata.

Burnell, on the other hand, would put Manu quite a thousand years later. He holds it to be conclusively proved that the book was not compiled earlier than 500 A.D.; and he thinks he has good grounds for believing that the compilation was made by a Brāhmaṇa from Northern India, at the court of king Pulakashīn I., who reigned about 500 A.D., and who was the founder of the Western Chalukya dynasty. This particular dynasty is fixed upon, because it is known from inscriptions to have had the name Mānavya as well as Chālukya, the former name being supposed to imply that the Purūhitas of the kings of the Chalukya dynasty were priests of the Mānavya śūtra.

Burnell's reasons for this opinion take up the greater part of the Introduction to this edition. That part of the book, as the Second Edition tells us, is somewhat fragmentary, having been left incomplete by Burnell at his death. Dr. Hopkins has refrained from making any additions or alterations, though signs are not wanting, in the footnotes and elsewhere, that he does not share all Burnell's views, or give the same weight as Burnell does to all the arguments by which they are supported. But, although we cannot quite easily follow all the steps of the argument as stated in the Introduction, the general drift of it is plain enough. In fact, Burnell's views on the date of Manu had been published and exposed to criticism some years before he died.

Burnell starts with the statement, which no one will be disposed to contradict, that the dharma-śūtras are developed from the gṛhya-sūtras, śāmaryadhitika-sūtras, and dharma-śūtras. Different schools followed different recensions of the Veda; those schools had different śūtras also. Now the śūtra period is the latest period of early Sanskrit literature, and cannot, in fact, be earlier than 600-200 B.C. The earliest mention of dharma-śūtras specially is in the Mahābhārata. Consequently Manu cannot be earlier than 200-100 B.C.

Burnell's next argument is from the style of Māna. The form of the Śloka in Māna is that which we find in the epic poems; the language in general is simple and modern, and the compounds are according to the forms used in modern Sanskrit; in fact, the text of Māna closely resembles the style of the other versified śūtras; and Burnell says he was himself able to prove "by Tibetan documents" that the versification of the Abhavvyāna-Gṛhya-Sūtra was done in 700 A.D.

The next argument is from the matter of the book. The first, seventh and twelfth chapters all contain matter quite foreign to the original śūtras. The dialogue in the first chapter is quite in the style of the Purāṇas. The philosophical system followed in the account of the creation, etc., in the first chapter, is that modifi-
cation of the Sāṅkhyā which we find in the Purāṇas. As neither Pāṇini nor Patañjali mention the Sāṅkhyā system, we may be sure that it did not exist in their time; consequently the chapters of Manu which infer a knowledge of that system must be at least as late as the first century A.D.

Further, the work is evidently intended for kings and such persons, and not, primarily, for Brāhmaṇas. The seventh book seems to prove conclusively that it is so. Now, such a work, Burnell thinks, could only have been composed under a powerful prince, and in a peaceful time. In the first century A.D. all India was in confusion. So the date of Manu must be still farther limited to between 100 A.D. and 600 A.D. So much, according to Burnell, is certain. The fact that the name Mānava belongs to the Chalukya dynasty seems to his mind to give strong probability to the conjecture (for, after all, it is nothing more) that the Mānava-Dharma-Sūtra belongs to the reign of Pulakēśin I., who reigned about 500 A.D.

Up to the eighth chapter the translation is entirely Burnell's; Dr. Hopkins has made additions to the notes. From the eighth chapter to the end both translation and notes are Dr. Hopkins', who has carefully conformed all through to Burnell's method of working. The plan of the work, so far as the text and notes are concerned, seems to us to be an admirable one. It really puts the commentaries in their proper place. These commentaries are of no literary value whatever. Their value is in the fact that they preserve various readings and traditional explanations, and that they supply parallel passages. We hear that there is at present being prepared in Bombay an edition of Mānava in which several commentaries are to be printed along with the text. We doubt very much the wisdom of such an undertaking. We question even whether many years of Max Müller's valuable life have not been almost wasted over his colossal edition of Sāyaṇa's commentary on the Rig-Veda. What an inculcating boon it would be, even now, to students of Sanskrit to have an edition of the Rig-Veda on the model of Burnell's translation of Manu!

In this volume General Cunningham deals with the results of tours made in 1883-84 and 1884-85 in Bundelkhand, Bīrā, and Central India. A few pages are occupied with brief notes concerning some places in the Pañjab.

This volume compares very favourably with several of its predecessors, and contains much matter of interest and value. It is impossible within the limits of a review to notice all the interesting discoveries recorded, or to discuss at length the topics on which difference of opinion may exist; but I shall endeavour to place before the readers of this Journal some of the most interesting results attained during two unusually fruitful tours.

General Cunningham has obtained much additional information about the Chandellas of Bundelkhand, and the Kalachuris of Chāḍ or Dāhal. The inscriptions of Prithū Rāj Chauhān at Madampur in the Lalitpur District, had already been published, but with a mistake in the name of the conquered province. The name is now correctly read as Jējākabhukti, which is thus shown to have been the original name of the region now known as Bundelkhand, the Jējākabhukti of Abū Rihān. The Jējākabhukti Brahmans are therefore the Brāhmaṇas of Jējāhō, or Jējākabhukti, just as the Sakṣena Brāhmaṇas are the Brāhmaṇas of Sankisa.

A brief account is given of the antiquities at Bāsin in the Bānda District to which I first drew attention in 1881. The poet Chānd ascribes the foundation of this town, the full name of which is Rājavāsini, to Rāhilavarmā, the fourth king of the Chandella dynasty.

The capture of the fortress of Kālaśār by Kuth-ud-din Aibak, which has hitherto been referred by General Cunningham and others, including myself, to the year 1209 A.D., is now shown to have occurred on the 27th April 1208 A.D.

A useful list of the Kālaśār inscriptions is given with two plates containing lithographic facsimiles from impressions. All the important inscriptions in this volume are reduced from mechanical impressions, and the plates are thus far more valuable than those in some of the earlier volumes. But the scale of some of the reductions is inconveniently small, and it is impossible to read the text without the help of a magnifying glass; with that help, however, the text is clear. Accurate translations of a great many of the inscriptions now published are still wanting, and any palaeographer with time to spare will find ample occupation in translating them.

I cannot admit that General Cunningham's revised list of the kings of the Chandella dynasty is an improvement on that made out by me years ago on the basis of his original list.1 In his new

list General Cunningham inserts Dēvarvamālēva as a reigning king distinct from Krittvārman I., with whom I had identified him, but gives no reason for the assertion that he was the brother of Krittvārman (p. 84). The inscriptions plainly imply that the two titles belong to the same person. The Mau-Chatharpur and the Deogarā inscriptions agree in giving Krittvārman as the name of the successor of Vijayapāla; whereas the Numaura copper-plate states that Vijayapāla was succeeded by his son Dēvarvamālēva. The other alias of Bhūmipāla for this king, which seems to be supplied by one of the imperfect inscriptions at Kalañāj, may be due to a misunderstanding.

General Cunningham ignores the demonstrated fact that Jayavarman, the grandson of Krittvārman I., was also named Krittvārman, and repeats his old mistake of inserting a Halakshana (Sallakshana) II. between Jayavarman (alias Krittvārman II.) and Prittvivārman. The evidence of the inscriptions is unmistakable, being as follows:—

Angulī copper-plate Mau-Chatharpur inscription (S. 1190.) (not dated).

Krittvārman (II.) Jayavarman.
Prittvivārman. Prittvivārman.
Madanavarman. Madanavarman.

As I showed before, the language of the Mau-Chatharpur inscription, which mentions the second Sallakshana, plainly means that he was not a ruling king, and there is no room for his insertion in the list of sovereigns.

The catalogue of Chandella inscriptions now given is more complete than that which I was able to compile; but is marred by some misprints. The date of No. 28, the Angulī copper-plate, is S. 1190 = A.D. 1133, and not S. 1188 = A.D. 1131; and the date of No. 38 is S. 1215, not S. 1213.

The recent researches of General Cunningham recorded in this volume add considerably to the scanty information we previously possessed concerning the Chandella chiefs who ruled in a portion of their old territories after the Muhammadan conquest; but their history is of little intrinsic interest.

The question as to the identity of the hill chieftain, named Dalaki-wa-Malaki by the Muhammadan historian, who was defeated and slain in 1248 A.D. by Ulugh Khān, has given rise to much discussion. General Cunningham now found in the chronicles of Riwa a Rāja Dalakēśwar followed by Rāja Malakeśwar; and this discovery leads him to identify Dalaki-wa-Malaki with these Bāghēl chiefs, and his fort with Bāndhōgārī in Riwa. But Meināj-ust-Siraj explicitly tells us that Dalaki-wa-Malaki’s fortress was “in the vicinity of the Jammā between Kālañāj and Karrā.”

Now Bāndhōgārī is over a hundred miles south of the Jammā, and is not between Kālañāj and Karrā. The description given by Meināj-ust-Siraj can apply only to a place either in the Bānda or the Allahābād District, and I would suggest the great fort of Marpha in the Bānda District as being very probably the stronghold of Dalaki and Malaki. Marpha is 12 miles N.E. of Kālañāj, and “as large and lofty as either Kālañāj or Ajaygarh” (p. 18). It is absolutely the only fortress which lies between Karrā and Kālañāj. And its claim to be the stronghold of Dalaki-wa-Malaki is strengthened by the fact (p. 103) that it was the first place in which the Bāghēs settled. It is improbable that there should have been both Dalakēśwar and Malakeśwar, as well as Dalaki and Malaki, at about the same time. On full consideration, therefore, I am disposed to think that General Cunningham is right in his identification of the personal names, through wrong as to the situation of the place. The Riwa genealogy is only use as showing that the names Dalakēśwar and Malakeśwar occur; and that the form Dalaki-wa-Malaki, given by the Muhammadan historian, is not far wrong.

I adhere to my opinion that Dalakēśwar and Malakeśwar were Bhar chiefs.2 I observe that, according to Riwa tradition (p. 114), Rāja Karanālēva, the Kalachuri, was a Bhar; and it is quite possible that the Bāghēs may have Bhar blood in their veins. Mr. Carnegy thought that the Bais Rājputa in Oudh were of Bhar descent. And I have elsewhere shown it to be probable that the Chandellas are descended from Khangāra, who are probably a branch of the Gōps.

A painted inscription of a Mahārāja Bhūmāsa, dated in Indo-Scythian style on the twelfth day of the fourth fortnight of the hot season of the year 52, was found at a hill named Ginja in Riwa.

At Besāni between Kālañāj and Ajaygarh, one of the rare inscriptions dated in an intercalary month was found. General Cunningham points out that, according to his tables, the month Ashāḍha in the year 958 of the Chelhi era (1207 A. D.) ought to be intercalary, as it is stated to be in this inscription, and observes that “the mention of the intercalary month in this year is particularly valuable, as it proves that the tables of Hindu years with their intercalary months, which I have prepared for publication, are absolutely correct for the long period of nearly 700 years. But my tables of intercalation are certainly correct for even a longer period, as I find that the month of Śrāvaṇa is recorded in an inscription as having been intercalary in the Śaka year 1081 or A.D. 1169.”3 These coincidences will serve to inspire

---

2 See, p. 37.
scholars with confidence when using the Book of Indian Eras.

The following observation deserves the attentive consideration of students of prehistoric archaeology:—"A few miles to the north of Baraon at Nayakhera [near the sources of the Ken River] I found a slab 5 feet long and 21 feet broad, covered with round 'cup-marks' from 1 inch to 3½ inches in diameter, to which the boys of the village were still adding fresh ones. I counted 196 marks. The whole of these cup-marks were said to have been made by the boys. In fact I saw a boy making one during the day, and several of them looked very fresh." (p. 166). I wonder how many of the 'cup-marks' which have excited the curiosity of the learned may be ascribed to the same cause.

10th June, 1886.

V. A. SMITH.

I may add to the concluding remarks above, that I have been told that Scotch sailors are still in the habit of making 'cup-marks' on certain rocks in the islands to the West of Scotland whenever they visit them, and that the number of 'cup-marks' at these places is thus constantly increasing. I cannot give chapter and verse; but the information is worth recording here, in corroboration, and in the hope that this point may be further investigated by those in a position to do so.

23rd July, 1886.

R. C. TEMPLE.

This volume is very inferior in interest and value to volume XXI. The first thirty-five pages merely repeat, with some unimportant additional details, what has already been published in Volume XVIII. Mr. Carlege's restorations at Kasia (Kusinagara), the scene of Buddha's death, in the Gorakhpur District, were not very judicious; but it is only fair to acknowledge the zeal which led him to spend twelve hundred rupees of his own on the work.

Some of the great earthen tumuli at Lauriyanavandaph in the Champaran District were excavated, with the result that, though signs of human burial were noticed, no distinct interment could be made out, and nothing was found. General Cunningham identifies these tumuli with the chaitya of the Vrijas mentioned in the Ceylonese Buddhist legends. The barrows seem to be extremely ancient, but it is impossible to assign to them any definite date.

The discovery of a new edict pillar of Ashoka at Rampurwa in the Terai, north of Betiya, has been already published in Volume XVIII. Mr. Carlege notes that the edicts on this pillar are inscribed in the dialect which rejected the use of the letter v. The remarks on the position of Ashoka's inscriptions along the main lines of ancient roads are not novel, but are worth noting. Mr. Carlege would expect to find another edict pillar within the Nepalese hills. Pages 55-52, like pages 1-35, are almost a reprint of a portion of Volume XVIII. An interesting list of 101 ancient coins found at Bairat in the Benares District, is given at page 114; and a similar list of the coins obtained at Masaon-Dih, near Saidpur-Bhitar in the Ghasipur District, is given on page 108. Most of the coins found at both these places belong to the earliest Hindu and Buddhist types. Both these ancient sites also yielded a considerable number of flint and agate implements. Unfortunately no drawings of these objects are given. Mr. Carlege observes that he has found stone implements at Indar in the Bulandshahr District, at Bhutura in the Basti District, near Buddha, and throughout Bundi, in the Nagaur state, in the hills of Rewa and Mirzapur, and in Rajputana.

These few remarks indicate almost everything worthy of notice in this volume.

In the Preface, General Cunningham observes that he has "long held the opinion that the Hindus knew and practised the art of stone-cutting at least two centuries before the time of Ashoka. Indeed, the very name of Taxila, or Takshasila Nagar, the city of cut-stone buildings, proves that the art was known and used before the time of Alexander."

He also argues that the beautifully finished letters of Ashoka's inscriptions must have been preceded by a ruder alphabet, which has been lost owing to the almost, though not quite, universal use of wood in early times, and hopes that coins may yet be found bearing characters of this lost alphabet.

10th June, 1886.

V. A. SMITH.

This 17th volume of Dr. Albrecht Weber's Indian Studies is, as usual, full of the most interesting matter. In it the learned editor himself completes his Analysis of the Sacred (Prakrit) Writings of the Jainas, by a succinct and at the same time exhaustive survey of the Nandisutra, the Amrtyogadadharastra, and the four Mulasamhara-stri. This is followed by an attractive article
by Dr. E. Leumann, on the Seven (really Eight) Schisms of the Jainas, whose curious dialectical subtleties frequently remind us of the specious reasonings of Plato's Parmenides. The following characteristic story is told of the origin and decay of the second of these heresies, that of Tiasgutta. His teacher Vasu had expounded the question—"Is it allowable to say that a soul-atom is a soul?" To which the answer had been, "No; as little as it is allowable to say the same of three, or more soul-atoms, which would lead in the end to the proposition that a soul diminished by one soul-atom is a soul; for the soul is a complete totality of atoms comparable to those of the Ether." This led Tiasgutta into an erroneous idea that if the atoms of a soul, by the loss of one of them, cease to constitute a soul, that one must itself be the soul, since the latter's designation as a soul depends on its existence.

A pious layman, named Mittasiri, thereupon undertook to convert him and his followers by a counter-argument very much ad hominem. Inviting him to a rich feast, he offered him a morsel of every dish and nothing more, until the guest exclaimed—"Why am I thus insulted?" —"How have you been insulted?" inquired the host in reply: "Is it not your theory, that a whole is made up by its odd part? I have entertained you in accordance with your own teaching; not venturing to entertain you according to that of our lord Vaddhamuna!"

The information regarding Jaina literature, contained in the above mentioned articles, is supplemented by an Essay by Prof. Jacob, in which he proves that the Vachyakas or descriptive passages of the sacred writings of the Jainas, which hitherto were considered to be written prose, are in reality composed in a metrical form, similar to the Greek so-called hymns, and another paper by the same author explains the theory of the šlokas, or heroic verse of the Indians, both in its usual and in that more irregular form, which the native Prosodists call vipula.

The remainder of the volume is devoted to Sanskrit literature proper, and, excepting some Miscellaneous from the pen of Dr. T. Amfretz, is entirely supplied by the indefatigable Editor himself. In it the translation and explanation of the third book of the Aitareyana, forms a welcome sequel to that of the first two books, given in Vol. IV. (1885) and XII. (1873) of Indian Studies. This is followed by a critical and annotated edition of the text of the two Aitareyana of the Nāgārjuna School of the Śāmasaṅgha. Two smaller Upanishads, the Gārūḍapāṇiḥ and the Nīlāmfalāpaniḥ, text and translation with explanatory remarks, are valuable additions to this branch of theosophic literature. The latter treatise in particular, which in a series of questions and answers, contains an abstract of the Viśuṣṭa Doctrine of the Absolute (nirdeśa = 'without a prop or support, independent, absolute'), and in which Prof. Weber recognizes indications of a certain antiquity, is remarkable by a decidedly ethico-practical tendency, which in some places seems to imply a direct protest against the system of caste. "Who is a Brāhmaṇ?" asks the last question; and the answer is: "Brahmaśrava sava brāhmaṇa iṣṭa; every one (sava) who knows Brahmā (the Absolute), and he only (iṣṭa), is a Brāhmaṇ." This clearly leads up to the conclusion that mere birth-right gives no claim to the title.

F. S.

On perusal of the first two numbers, forming the first half-yearly volume of this new Quarterly, we must congratulate the Editor, Mr. Bouger, on the great success that has attended him at starting. Seldom indeed have there been more powerful issues of a periodical been laid before the public, for every contributor up to date has been previously known to fame. It is needless, therefore, to say that though the scope of the Journal is exceedingly wide, the various subjects are handled with that skill which ensures success.

The article that will prove perhaps the most interesting of all is that by Lady Dufferin on female medical aid for the women of India; and that, not merely on account of the position of its author, but for the business-like, though withal womanly, manner in which she has dealt with her subject. In perusing her pages the reader begins to perceive that it is her capacity for business which has enabled her to give so grand a start to the noble scheme of aid to the suffering and helpless of her sex that her sympathies have compelled her to initiate. Col. Yule's Hobson-Jobsonians is an amusing and instructive introduction to his Glossary of Anglo-Indian Words now published in full, of which he first printed specimens in this Journal some years ago, when his collaborator, Mr. A. C. Burnell, was still alive. Our present relations with Burma have called forth articles from the Editor and Prof. Douglas on the relations between that country and China; while Sir Lepel Griffin, to whom rumour ascribes the existence of the new Review, supplies characteristic articles on those other current topics the restitution of Gwalior Fort and the Native States. A subject, too, especially interesting at the present time is the political Geography of Asia, entrusted to the highly qualified pen of Sir Frederick Goldmid.
Among miscellaneous matter is a readable article on the pilgrimage to Mecca, by Mr. Wollaston; but we should like to know why such an authority on things Oriental writes on page 393 "a famous doctor by name Hallage,"—under which appellation, in a paper quite correct as a rule in orthography, one hardly recognises the famous Mansur Hallaj. The whole record of his life and death—real and apocryphal,—is, moreover, so well known that one cannot help being surprised at being informed that—"it is also recorded that a famous doctor, by name Hallage, was put to death for having taught certain ceremonies and prayers to supply the neglect of performing the hajj."

The Asiatic Quarterly Review is clearly intended to lead among Oriental Journals of the popular sort, and if it goes on as it has begun, there is no doubt that it will do so in the future, as it evidently does in the present.

We heartily welcome this second edition of Dr. Wright's now celebrated work. It was in 1872 that he first drew attention to the existence of Hittite monuments, and for a long while his was a voice crying in the wilderness, especially as, since the Hittites had no place in classical history, it was the fashion in the critical world to throw doubts on the accuracy of the Biblical references to them. However, by dint of patience and sticking to his point, Dr. Wright has succeeded in convincing the learned Oriental world that his Hittite inscriptions do refer to the people so often spoken of in the Bible, thus restoring, as he says, the Empire of the Hittites to its rightful position in secular history.

So far from being alone in his efforts to elucidate the exceedingly difficult epigraphical remains of this long-lost people in this second edition of his work, Dr. Wright has the powerful aid of Prof. Sayce, Sir Charles Wilson, Captain Conder, and Mr. Rylands, not to mention Dr. Isaac Taylor and Mr. Finch. With such an army of authoritative collaborators, it is needless to say that the book is as good a one as the present knowledge of the subject can make it.

It is evident that we have to thank that energetic Orientalist of the Far East, Mr. W. E. Maxwell, for these valuable and useful volumes.

The first contains 34 descriptive papers of all kinds regarding the little-known States of the Malay Peninsula; and the second, six papers on the Natural History, Geology and Botany of those parts, three of which are by the celebrated Dr. Theodore Cantor.

The sources of this collection are Dalrymple's Oriental Repository, the Asiatic Researches, and the Journal of the Asiatic Society of Bengal; so that it will be seen that some of the papers date many years back; indeed the first on Quedah was written as long ago as 1806, and many refer to matters long before that date.

The work of editing has been entrusted to the very capable hands of Dr. Rost, who has indeed printed the various articles much as he found them, but has added footnotes and references where practicable, and has done what was possible towards rectifying inconsistencies in the orthography of names in the valuable indices he has added to the volumes, viz. a general and a vernacular index.

Vol. I. contains 6 plates of inscriptions which would be all the better for being reproduced by a mechanical process from the original, if possible, as hand-drawn copies of inscriptions, however carefully prepared, are more than liable to serious errors. This is a work that the now energetic Society of Orientalists at Singapore might with advantage take up.

The last two works here edited for the first time by Professor Pischel belong to the rhetoric department of Sanskrit literature. In the first-named work occupies a rather prominent place. It is a literary poem, the several verses of which, either singly or in groups, are composed so as to serve as illustrations of the rules of rhetoric. The author of this work is Rudrata, or as the colophon calls him, Rudrabañjya. His age, Professor Pischel, in the Introduction, determines to be not later than the middle of the ninth century. Some of his examples are quoted by Pratihārāṇḍarája, who was a pupil of Mircula, who was a son of Kallata, who lived about 850 A.D. Accordingly Pratihārāṇḍarája must have lived about 950 A.D.; and, since he quotes Rudrata as a standard author, the latter must be placed about one century said "Rudrabañjya, having pledged a letter of his name as security for a loan of a thousand (pieces of) gold, received from people the appellation of "Rudrata," only, as a substitute for his full name, until the day when he redeemed the pledge."—J. F. F.
earlier. This argument presupposes that Rudraṭa was the composer of his own examples. A large portion of the Introduction is devoted to proving that premise: and there seems no reason to doubt that it is correct.

Contributions towards our knowledge of the Sanskrit rhetoric literature, especially when they come from the hands of such a competent editor as Professor Pischel is, are particularly valuable. Their importance in assisting historic and lexigraphic research can hardly be exaggerated. Two striking illustrations of this fact occur in the Introduction, in which Professor Pischel incidentally proves, from data supplied by Sanskrit rhetorical works, that the well-known rhetorician Daṇḍin was the real author of the Mṛchkaṅkāti, and that "the Paśchataśri, in its Northern recension, must be later than the middle of the ninth century A.D." The former of these two discoveries will, no doubt, require further verification before it is generally acquiesced in.

R. H.

A Journey in Nepal and Northern India, by Cecil Bendall, M.A. The University Press, Cambridge. 1886. 8vo, pp. xii. 100; fifteen illustrations; and two genealogical tables.

This handy and carefully got-up little volume is the outcome of a cold-weather tour in 1884-85.

Mr. Bendall's primary object was the acquisition of Sanskrit MSS. for the Cambridge University. Pp. 39 to 67 are devoted entirely to this subject, and shew, in outline, very satisfactory results, which remain to be treated in detail on a future occasion. Among the more important acquisitions are several new fragments of the Cādvāraṇyakāraṇa (p. 54), a copy of the Hitopadēśa written in the fourteenth century A.D. (p. 55), part of a new recension of the Nāradaṃśri (p. 56) written A.D. 1407, and two new commentaries on the Mīghadāta (p. 59). The first of these has a special paleographical interest, in presenting a new type of character, in which the vertical strokes of the letters have triangular tops, similar to the nail-headed characters of Central India, of which one or two specimens have already come to notice, but with the difference that the apex of the triangle is here uppermost, whereas in the Central India specimens the reverse is the case. Mr. Bendall found a short inscription, in the same characters, on the pedestal of a statue of Buddha in the Imperial Museum at Calcutta. Students will look forward to the separate study of this character, which he promises.

A good deal of attention was also paid to the subject of inscriptions, with the result of at least two important discoveries. One is the inscription, presumably of Anuśvarman, dated (Harsha)-Sañvat 34 or A.D. 640-41 (p. 74ff., and Plate ix.), which is valuable because the details of the date include an intercalation of the month Pauṣa. It had been supposed that the months Mārgaṣīrṣa, Pauṣa, and Māga, were, as now, at any time intercalated by the Hindus. The present inscription disproves this view in respect of Pauṣa. And, since this discovery, a new copper-plate grant of the Mahārāja Dharaśena IV. of Valabhi, dated (Gupta)-Sañvat 330, has come to notice, containing an intercalation of the month Mārgaṣīrṣa, which, apart from its own interest, is also of value as giving confirmative evidence in support of the correctness of Alābhratī's statement regarding the epoch of the Gupta-Valabhi era. Dr. Bühler has already published this inscription in German; and his English version of the paper will shortly be issued in this Journal.

The other discovery, of still more value, is the inscription of Śivādēva I. and Anuśvarman, dated (Gupta)-Sañvat 319 or 318, A.D. 633 to 637 (p. 72ff., and Plate viii.), which was originally published by Mr. Bendall in this Journal, Vol. XIV. p. 97ff. The extreme importance of this inscription is in its furnishing for the first time the correct date to the interpretation of the early Nāpāl dates (see my paper on "The Chronology of the Early Rulers of Nāpāl," ante, Vol. XIV. p. 342ff.), showing that they have to be referred to the Gupta, not to the Viśravamāra era; and in the confirmative evidence that it gives of the Gupta era having really commenced A.D. 319-20, or thereabouts, as stated by Alābhratī (see my paper on "The Epoch of the Gupta era," p. 192ff., above).

Should Mr. Bendall visit India again, it is to be hoped that he will prevail on his friend, Dr. Bhagwanlal Indrajit, to allow him to assist in editing the epigraphical records and coins in that gentleman's possession, referred to on page 1. This would be a real public benefit; for, without some such cooperation, it seems that these important antiquities will see the light never at all.

Pages 1 to 33, the Archaeological and General Report, contain much that will interest general readers, and include eight good representations, from photographs by Mr. Bendall, of architecture and Nāpāl scenery. It is to be hoped that the rebuke administered in the note on page 36, will come to the notice of, and may have some effect on, Mr. W. Scawen Blunt.

4th August 1886.

J. F. Fleet.
THE LAST YEARS OF SHAH SHUJA'A, WITH AN APPENDIX ON THE AFFAIRS OF HIRAT.

Translated from the Tārīkh Sulṭān of Sulṭān Muḥammad Khān Darūkhānī.

BY F. REHATSEK.

(Concluded from p. 257.)

WHEN the population of Kābul found that the Pādshāh was pursuing a policy of delay, they asserted that no faith was to be placed in his promise to go to Jallālābād, as he was himself in reality a Farangī, and they ridiculed the legend on his coins, which was as follows:—

Coins of silver and gold, brighter than the sun and moon,

Were struck by the favourite of the age, the King Shuja'au'l-Mulk Shāh.

By changing it into the following distich:—

Coins of silver and gold were struck by Shuja'ā the Armenian,

The favourite of Lord Burnes, the dust of the feet of the (East Indian) Company.

There is, however, a proverb that the gate of a town may be closed, but not the mouths of enemies; and after all, the assertions of the wicked are not deserving of credence.

The populace of Kābul, having appointed Mir Ḥājī, a son of the late Wazīr Mīr Wā'īz to be their leader, followed him in crowds, waving banners and parading Qurāns taken from the holy shrines of pilgrimage. Multitudes of faqīrs and sūfīs, shouting the name of Allah, likewise departed with them in the direction of Jallālābād. When Shāh Shuja'ā witnessed this tumult, he concluded that if he failed to join the populace, the insurrection might become general and his own existence imperilled. He, therefore, determined to accompany the crowd to Jallālābād to prosecute a ghazā (crescentade) against the infidels, and despatched the Shāhzhādah Fāṭḥ Jang with the vanguard, in conformity with a decision arrived at, as far as Dēh Khudādād, where it halted. On Tuesday the second of the victorious month Ṣafar in the year 12571 the Pādshāh at last marched out of the Bālā Ḥiṣār with royal pomp and a great deal of baggage, and selected the mā'ṣa Sāh Sang as his halting-place. He really intended not to reach Jallālābād in less than a month, being under the impression that during that period an English army of succour would arrive from Hindūstān, as is recorded in his Memoirs. He had also taken this opportunity to remove his jewels, for it is said that he picked out all the best gems and most valuable rings, the price of which amounted to fifty lākhs of rupees, from the treasury, and carried them off; but Allah knows best! He held a general Darbār at Sāh Sang, where he summoned the Shāhzhādah Shāhpūr to his presence and appointed him Ḥākim [Governor of Kābul] with Naṣru'llah Khān for his Lieutenant, and gave them both leave to return to the city; whilst he himself took a pālanquin about the time of evening prayer, and went on some private business to the Bālā Ḥiṣār. On entering he ordered the guardians of the road to be present and watchful, because the Shāhzhādah Shāhpūr would depart from the camp towards morning. The inmates of the karan and other confidential persons about the Shāh have revealed that he was very uneasy during the whole of that night (in the Bālā Hiṣār), moving about, and often asking the eunuch for the time. When the morning dawned he performed the two matinal prayer flexions of the sunnah, but delayed the two prayer flexions of the faraḍ till his arrival in camp, to be performed in his tent. Then he entered the pālanquin as before, and urged the bearers to make haste.

On his arrival [on the preceding day] in the Bālā Hiṣār, some ill-starred schemer had given information to Shuja'au'ddaulah Khān, the son of Nawāb Muḥammad Zamān Khān, that the Pādshāh was secretly spending the night in the Bālā Hiṣār, and would return to the camp in the morning. Shuja'au'ddaulah, thereupon, with a number of followers, determined to kill him, and lay all night in ambush of 1257, we get the 29th March 1842, which is more in concurrence also with Kaye's statement, Vol. II. p. 378, that on the 29th March 1842 the Shāh sent round orders to proclaim that he was about to march southward on the 31st.

1 The above date is, according to our reckoning, the 5th April 1842, which being earlier than that of the event preceding it, must be a mistake, the date given for it having been the 20th January 1842; but if we retain the date of the month and take the year 1257 instead of 1257, we get the 26th March 1842, which is more in concurrence also with Kaye's statement, Vol. II. p. 378, that on the 29th March 1842 the Shāh sent round orders to proclaim that he was about to march southward on the 31st.
outside the Bâlâ Hîsâr, waiting for the opportunity:—according to the proverb:—

When fate uplifts its head above the sphere
All wise men are but blind and deaf.

In the morning when the palanquin of the Shâh reached the ambush, which was half-way between the Bâlâ Hîsâr and the (British) station, Shuja`u'an`d-daulah and his adherents suddenly fired a volley of bullets at it [from a distance]. The illustrious Shâh, perceiving this to be an attempt on his life, became frightened, and leaving the palanquin with great precipitancy, began to run, and the bearers also took to their heels. Shuja`u'an`d-daulah himself, staggered by what he had done, felt unequal to the completion of the deed, and intended to return without having effected his purpose; but one of his followers, a Murâd-khânî, Ja`fîr Khân by name, taking hold of the bridle of his horse said:—"There is no other game breathing in this desert except the wounded one; what do you mean to do? Return and finish him, and do not abandon your first intention. As the wise have said:—

When you get hold of your foe and conquer him,
Wisdom ordains to spare not his life."

Encouraged by these words, Shuja`u'an`d-daulah Khân hastened to the palanquin, and not finding the Shâh in it, he looked about till he perceived him by the side of a brook, prostrated on the ground from the shots he had received. The murderers now sent him with a few sword cuts to the mansion of eternity, took some jewels from his diadem as well as from other parts of his dress, and departed. A chamberlain, Shâh-nawâz Khân by name, whom the firing had scared away, and who had concealed himself, came forth from his hiding place when he perceived that the field was clear, and observing that the Shâh's two pockets were full of jewels and pearls, cut them both off and started in the direction of the Bâlâ Hîsâr; but his over-reaching crouteness made him conceal his booty under a wall, so that instead of benefiting him, it became the prey of others. This dreadful event took place on Wednesday the twenty-third of the above month, and a chronogram of it was embodied in some verses by a durvech

of the name of Ghulâm Muhammed Shâhjî Nawâshâh Bâqîr Shâh Faqîr. The Ûsâh Shâh Shuja`u'an`d-Mulk was of a very mild but persevering character. He spent all his life in waging war, and undertook during his reign not less than thirty campaigns against his foes. Although he was, by the decree of fate, worsted in most of them, his firmness of purpose, as has been narrated, never allowed him to abandon the hope of ultimately subduing his enemies. He was possessed of good poetical talent, so that his Dâvân is replete with brilliant verses and figures of speech composed in easy language, and read to this day in Hindîstân, Írán, and Afgânîsân. Most beginners improve their phraseology by a study of it. He was more than sixty-five years old at his death, and when the news of it was, on the same day, brought to the Shâhzzâdah Shâhjûr, the shining daylight became as dark as night to him; but he was nevertheless compelled to look to the defence of the (Bâlâ Hîsâr) fortress! When the Shâhzzâdah Fath Jang, who was encamped at the wâs`a Deh Khudâddâd, received the distressing news he took refuge in the fort (of Majmu`d Khân) by the advice of Ghulâm Haidar Khân, the son of Majmu`d Khân Bayît; but the wicked nature of the latter suggested to him to deliver the Shâhzzâdah in bonds to Muhammed Zamân Khân. Meanwhile, Shâh Zamân and the Shâhzzâdah Haidar intended to place the Shâhzzâdah Shâhjûr upon the throne, and to read the khatîbîn in his name. He, however, refused his consent, and replied:—"At present we stand in need of union and not of hypocrisy, and the liberation of a brother is preferable to a high position." Accordingly through the Nâb Amlu`llah Khân, and at the instance of Khwâjah Khânjî, a number of cavalry and infantry was despatched to the fort of Majmu`d Khân, whence they delivered the Shâhzzâdah Fath Jang from the grasp of his foes, and conveyed him to the Bâlâ Hîsâr.

Next day Amlu`llah Khân came with Mir Hîjî and a number of Qizîbhâh and Durrâîkhâns to the Bâlâ Hîsâr, where they took into consideration the age of Fath Jang, and immediately placing him on the throne offered him

2 The above date gives the 8th April 1842, after applying the rectification indicated in the preceding footnote: but Kayes (Vol. II. p. 379) states that Shâh Shuja`a` was slain on the 5th of April.

2 The verses, consisting of a lament, are worthless in every respect, and are here omitted.
their congratulations. A few days afterwards, he desired all the Khans to pay him homage and to swear allegiance to him, which most of them did, except some partisans of Muhammad Zamân Khan, who refused. He also gladdened the hearts of all who had entered into a covenant of loyalty to him, by presenting them with plenty of money, and exquisite robes of honour, thus exalting them above their peers.

Some time afterwards, Amin’lallah Khan prepared, at the instigation of the Shâhzâdah (Fat’h Jang) and with the consent of all the Khans, to ruin Muhammad Zamân Khan, and the more so as their forces amounted in appearance to double the number at his disposal. On the day appointed for attack Amin’lallah Khan discovered that Mir Hâji Shâh was a well-wisher of the Nawâb [Muhammad Zamân Khan], and kept him under close surveillance. As, however, he was intending to begin hostilities, the Kâbul and Kohistâni men learnt that Mir Hâji was under surveillance, and abandoned their intention of attacking Muhammad Zamân Khan. They hastened instead to the house of the Nâib, which they pilled and demolished in a moment. Amin’lallah Khan having thus, in the twinkling of an eye, become the vanquished instead of vanquisher, considered himself fortunate to have escaped with his life, and took refuge in the Bâlâ Hisâr.

After this event, the Nâib Amin’lallah Khan and the Shâhzâdah (Fat’h Jang) determined to garrison the fortress, and sent the Shâhzâdah Shâhpûr with some troops and the Khans who happened to be present, to guard the surrounding localities, and to bring in the revenue, as well as corn and all other necessaries. Accordingly the Shâhzâdah, who was in the first instance to occupy and to repair the fort Bîn Hisâr, and to send corn from it when hostilities broke out, took possession of and kept the gate locked. When Muhammad Zamân Khan heard of what had taken place he secretly marched from the city on the second day afterwards with some savârs, partly of his own tribe and partly Ghilzâis, and betook himself by way of Chahârdeh, in the rear of the mountain, to the fort Bîn Hisâr, the vicinity whereof he reached in the darkness of the night. In the morning a fierce battle raged between the parties, but as Sardar Abdur-Râs’ul Khan, son of Ikram Khan Bâmîrâi, joined the forces of Muhammad Zamân Khan during the fight, the adherents of the Shâhzâdah were defeated, and the thread of their connection became severed. So they retreated again to the Bâlâ Hisâr and kept off the assailants, but ventured out from it no more, and waited for the arrival of an English army to succour the Shâhzâdah (Fat’h Jang).

Meanwhile he continued with the help of Amin’lallah Khan to harass his opponents, until Muhammad Akbar Khan, leaving his followers, came to Kâbul, where he was informed of the antagonism between Amin’lallah Khan and Nawâb Zamân Khan. He thereupon induced the former, with the aid of Muhammad Shah Ghiljâi, to get himself lowered by means of a rope and pulley from the Bâlâ Hisâr to meet him. The Shâhzâdah Fat’h Jang was greatly dismayed at the departure of the Nâib, but Mirza Ibrahim Khan, the Chief Munshi, and Mirza Haidar ‘All Khan the army-writer, who had been trusted, confidential and honoured servants of Shâh Shuja’a, comforted the Shâhzâdah and told him by no means to give way to discouragement, as much as all the dwellers in the Bâlâ Hisâr, the Durrânî Khans, and the Hindostani troops were loyal and steadfast and would be ready to sacrifice their lives for him; whilst they themselves stood sureties for the promotion of his cause. They called Durvish Muhammad Khan, the son of Hâji Hâshim Khan ‘Arab, with all the Abyssinian officers, to bear testimony to the truth of their assertions. The Shâhzâdah, whom these promises had inspired with new courage, resisted the assaults upon the Bâlâ Hisâr for forty days, supported by the Durrânî Khans, viz. Sardar ‘Inayat’lallah Khan, ‘Azim Gul Khan ‘Urshâgî, Sikandar Khan Bâmîrâi, Samad Khan Bâdûzâi, and Muhammad ‘Umar Khan Bâmîrâi, and also by the Kâbul Khans, viz. Khwâjah Khânjî, known as Shekh Mazâr, and Mîr ‘Âftâb. There was much fighting on the tower of the two eagles, which bears likewise the name of the upper tower, and which was assaulted by the adherents of Muhammad Zamân Khan and of Muhammad Akbar Khan. In reality all the duties of the garrison, and negotiations with its opponents, were performed according to the directions of the above-named Mirzâs (and supporters of Fat’h Jang), and nothing was undertaken without their approbation. They
often also sent letters to General Pollock in Jalalābād, inviting him to come to Kābul, and he replied that he would soon do so.

As the English did not move from Jalalābād, and the siege was dragging out its length, the enemies became more daring in the prosecution of it. The store of gunpowder in the Bālā Hīsār had likewise all been consumed, and when this became known to the besiegers, they issued orders, that nobody should send in a single misgāl of it; and they were obeyed, except by one man, a Hindū Munshi, who being acquainted with Khwājah Khānjī conveyed some gunpowder to him. When, however, the people of the city became aware of the transgression, they placed him under the merciless sword, and he only saved his life by making a profession of Islām. After that, gunpowder became so scarce in the Bālā Hīsār, that one misgāl could not be purchased for a hundred rupees. Nevertheless Mirzā Ibrāhīm Khān Munshi and Mirzā Hādīr Khān by various stratagems succeeded in smuggling some gunpowder from the city to the fortress, through the rannapts. But at last the besiegers, by persevering vigilance, totally cut off the supply of gunpowder, and then Nawāb Sānja'a Khān, son of Nawāb Najību'-ddaulah, who had, from being one of the Indian servants of the Shāhzhādah, risen to the position of Diwān, undertook to manufacture gunpowder in the Bālā Hīsār itself and began the business by mixing sulphur with charcoal, intending to continue it afterwards in a more complete form. Meanwhile, Sardār Muhammad Akbar Khān with the aid of Hījī 'Alī Khān the (military) miner, dug a mine beneath the principal western tower of the Bālā Hīsār, which was known by the name of the Bājanhū tower, and blew it up, so that it became level with the ground: whereas the Shāhzhādah Fath Jang hastened with a number of Arabs and Abyssinians to the spot, and in a short time raised a wall of stone and earth (in its place). The Shāhzhādah then commenced, through Nāb Aminullāh Khān Lāhurkūndī and Muḥammad Shāh Khān Ghiljī, negotiations for peace with Sardār Muhammad Akbar Khān, whom he made his vazīr, and thereby put an end to all hostilities. He also opened the roads to the fortress and surrendered them.

A few days after Muhammad Akbar Khān had become vazīr and had made the troops subservient to himself, a letter fell into his hands, which the youthful inexperience of the Shāhzhādah had indisposed, craving for the aid of General Pollock, and which he had despatched to Jalalābād. Muhammad Akbar Khān kept the letter and threw the Shāhzhādah into prison for it:

He who does this will be requited with that.
The property of the Shāhzhādah was looted, and all the jewellery taken that could be found; but as soon as he got an opportunity he escaped from prison with the connivance of certain persons in the Bālā Hīsār, and taking refuge in the Chāndiul Mahjālah, remained there in concealment. Some time afterwards Sāfīrāz Khān, the brother of Nāib Aminullāh Khān Lāhurkūndī and Khwājah Khānjī, surnamed Shēkh Mazār, procured through the mediation of Mirzā Hādīr 'Alī Khān, and of Mirzā Ibrāhīm Khān, all the travelling appliances necessary for the Shāhzhādah, and conveyed him by way of Karakchah, or some other unknown route, to Jalalābād to General Pollock, and to Maegregor, who was the English Ḥākīm of that place.

When the Bombay army was appointed to give assistance, it marched by way of Qandahār to Kābul, and troops from Hindūstān despatched for the same purpose marched by way of Jalalābād; from which place also General Pollock brought the Shāhzhādah will be a sufferer." Kaye, Vol. II. p. 541. "On the 7th June the Bālā Hīsār fell into the hands of the Bārkāzīs." Ibid. p. 542.

"According to Kaye, the Shāhzhādah Fath Jang waited for the arrival of the British army in Kābul, and accompanied it to India when it left, as will be seen in the last foot-note to this piece.

"General Nott marched from Qandahār, on the 7th August (Kaye, Vol. II. p. 594); from Ghaznī he brought away on the 8th September the famous gates of the temple of Somnuth at the express command of Lord Ellenborough (p. 967), and on the 17th he encamped at a distance of four or five miles from Kābul (p. 600).
Fath Jang to Kabul with him. All arrived in Kabul on the 18th Shabānā of the Hijri year 1255 [24th September 1842] and General Pollock with George Macgregor forthwith issued a proclamation through Mirza Haider ‘Ali Khan the army-writer, expressing a wish that a wazir should be elected by the Durrānī Khāns from among themselves for the proper administration of military and political affairs. Accordingly by the consent and with the approbation of Khān Shīrin Khān, son of Amīr Aṣlān Khān Jawān Shār, and the Qızbāsh Khāns—who had deserted the Amīr Dost Muḥammad Khān and had come to make their salutations—the Khāns dressed Ghulām Muḥammad Khān, son of Muḥtārān ‘ddul Khal Sher Muḥammad Khān Bāmīzāi, an intelligent man, in an exquisite robe of honour and elected him wazir.

When it had become known that the Kohistānī people had, under the leadership of Nābir Amīn’lākh Khān Lahurkūrī, become turbulent at Chārkār, the English despatched several battalions and a detachment of seunder in command of the Shāhzādah Shāhpūr the son of Shuja’ā’l-Mulk to subdue him. When these forces arrived they dispersed the ghāzis, and having set fire to Astalīf, a place in Kohāman, they wished to make the Shāhzādah Shāhpūr Ḥakīm of Kohistān. But in the meantime news arrived that the Shāhzādah Fath Jang, having become aware of the intention of the English to return to Hindūstān, had abdicated the throne and government of Kabul, and was about to depart to India, the Shāhzādah Shāhpūr therefore returned from Kohistān to Kabul. He there learnt that the Shāhzādah Fath Jang had indeed determined to go to India, rejecting the offer of his ancestral throne and dādem, made to him by the English officers, unless they gave him the sum of five lakhs of guldār rupees and four battalions of regular troops, saying:—“What can I accomplish with an empty treasury and a hungry stomach? or how shall I commence a business which cannot be terminated? It is a thousand times better not to act, than to act in such a case.” The English officers did not accept the proposal, and began their march to Hindūstān, accom-panied by the Shāhzādahs and by their hāramān. However, at the last, the Shāhzādah Shāhpūr went by the advice of some Amīrs to George Macgregor and General Pollock, and represented that his honoured father had from youth to old age waged war for the purpose of subjugating Afghānīstān, and had abandoned it only with his life, and so he thought the present an unsuitable time to give up his hereditary kingdom. The English approved of his resolution, and ordered John Shakespear to install him on the throne in the Bālā Hīsār, with Ghulām Ahmad Khān for Wazir, and Khān Shīrin Khān for Amīr, which he did and then joined the camp. The Shāhzādah remained for some time in Kabul, and then he heard that Wazīr Muḥammad Akbar Khān, the son of the Amīr Dost Muḥammad Khān, who had gone to Tajpūrghān when the English arrived, was on their departure again bent on returning to Kabul. So he despatched the Shāhzādah Ban Shahrānī with considerable forces to the Ḥakīm of Bāmīān, to stop the progress of Wazīr Muḥammad Akbar Khān. But the Wazīr Ghulām Ahmad Khān having meanwhile perceived that the prestige of the Sadizā’ī government was on the decline and that of the Bārnikāi monarchy in the ascendant, he interviewed several Qızbāsh Khāns of Kabul, viz. Muḥammad Rūs Khān, the son of Bāqar Khān ‘Ali, and Qurbān ‘Ali Khān Bāgh ‘Ali, and Mirzā Imām, and Burūl Khān Munshī, and Mirzā ‘Abdu’l-Razzāq Khān Mustafī, and secretly conspiring with them, despatched with their consent a letter to Wazīr Muḥammad Akbar Khān, informing him that they were all his partisans, and that he ought to make haste and come to Kabul. Thus encouraged, the Wazīr went at once to Bāmīān, where he met the troops of the Shāhzādah, all of which joined him; on which the latter had no choice but to take horse and whip, and hasten to Kabul. When he arrived, most of his well-wishers represented to him that as many of his sincere friends and sympathizers had scratched their faces with the nails of discontent, and had shaved off their moustaches with the razors of ingratitude, it would be best for the rest, while they are

9 On the 20th August General Pollock began to move from Jalālābād (Kaye, Vol. II. p. 567) and on the 15th September he encamped on the Kabul racecourse (1944)
yet able, to depart with their families to Lodínán, and gladly to accept their former pensions from the English Government. Accordingly, aided by the power of Sarfaraz Khán, brother of the Nâib, and of ‘Âzim Gul Khán Bânmîzi ‘Urâfî and of ‘Abdu’l-Majíd Khán, Mâmâi Pópâlzaí, they departed by way of Karakchah to Jalâlábâd with their wives and children; but, during the journey they were robbed of their baggage by a band of the Jahâr Khel tribe, who dwelt at Asirak, and even made the Shâhâdah prisoners. They and their harams were liberated only at the instance of ‘Âzim Gul Khán, who had some friends among the Ghiljáis, and persuaded them to convey the party to Jalâlábâd to Muhammad ‘Usmân Khán Nizâmuddaulah, who was still the Hakim of that place; whence they departed with his consent and that of ‘Abdul-Rahmân to Pesháwar, to which town ‘Âziz Khán of the Jahâr Khel tribe conveyed also the ladies and children in litter with all honour. There they joined the Shâhâdáhs and all hastened together to Lodínán, where the English Government assigned to them sufficient allowances, and there they lived in contentment, renouncing their aspirations to power, being convinced that their realization was impossible.10

**Appendix on the Affairs of Hirât.**

The remaining adventures of Shâhá Mahmúd and of the Shâhâdâh Kâmrân, who had gone to Hirât and those parts, after being defeated by the Amir Dost Muhammad Khán, and govern there, not having been recorded by the pen which traces musk characters, they will be narrated in detail in this place. Our trust is in Allah:—

In the year11 1235, Fatâ ‘Ali Shâh Qájár despatched Shujâ’au’s-Sultanat Hasan ‘Ali Mirzá with a powerful army to invade Khurášân, who committed great depredations around Hirât. Shâhá Mahmúd therefore sent the Afghán ‘Abdún-Samád Khán with many presents and the promise of allegiance, as ambassador to Fatâ ‘Ali Shâh, who was satisfied, and recalled Shujâ’au’s-Sultanat, so that Shâhá Mahmúd and his son again lived five or six years in tranquillity. But in the Hijri year12 1241 dissensions arose between Shâhá Mahmúd and his son Kâmrân, the latter usurped all the power, no longer obeyed his father, and requested Shujâ’au’s-Sultanat who was at Khurášân, to come to his assistance. This request was granted, and the father was removed from the throne. Shujâ’au’s-Sultanat then left his son Arghún Mirzá in Hirât and returned (to Khurášân), after which Shâhá Mahmúd sat in the corner of retirement till he died a natural death in the Hijri year13 1244, and his son Kâmrân carried on the government of Hirât.

Muhammad ‘Atâ Kâhn Alâkâzâí, brother of Sardâr ‘Abdul-láh Kâhn the Hakim of Kâshmîr, perished in the general epidemic which raged throughout the whole of Afghânistán in 1244, A.H., or 1828 A.D., and the Shâhâdâh Kâmrân appointed Yâr Muhammad Khán, the son of Sardâr ‘Abdul-láh Kâhn, late Hakim of Kâshmîr, who was his own cousin, to be his Amír-’l-umrâ. Yâr Muhammad Khán was a valiant and open-handed man, and was on this account afterwards raised to an even higher station, and made vezir.

In the Hijri year14 1248 Shâh Shujâ’a arrived (in Afghânistán) and was defeated at Qandahâr by the Amir Dost Muhammad Khán. He took refuge in the forts of Lâsh and Jawâin, and the Shâhâdâh Kâmrân sent the eunuch Hâji Firúz Khán his favourite, with presents, and a message, that although Hirât was even as his own house, it would be better for him to remain for some time in comfort and pleasure in the muqā’ Farrah. This fact is recorded in the Memoirs of Shâh Shujâ’a.

Next year,15 A.H. 1249, Fatâ ‘Ali Shâh determined to send the Nawâb, ‘Abbas Mirzá, his heir apparent, to conquer Khurâshân, who in his turn despatched Muhammad Shâh, at that time known by the name of Muhammad Mirzá, with a large army to conquer Hirât, which the latter thereon beleaguered. The Shâhâdâh Kâmrân, not being camp to India, and to seek an asylum in the Company’s dominions, &c. Kayo, Vol. II. p. 640.
10 It was now time that the British army should depart. Nothing remained to be done. Any longer continuance at Kábul would only have aggravated the sufferings of the people and increased our own difficulties. So on the 11th of October orders were issued for the commencing of the march on the following day. The unhappy Prince, Fatâ Jâng, had claimed and sought permission to accompany Pollock’s
preparing to stand a siege, sent his Wazir Yâr Muhammed Khan to ‘Abbâs Mirzâ, who was in Mashhad, to sue for peace. The latter, however, had the envoy put in chains as soon as he arrived, and demanded the surrender of Hirât. All the pleadings of this Wazir having proved thus fruitless, Kâmrân was forced into the defence of his fortress, which he carried on with the utmost energy till ‘Abbâs Mirzâ was overtaken by a dangerous malady, and was compelled to return to his capital Tâbrîz, and even to recall his son Muhammed Mirzâ from the siege of Hirât. He accordingly abandoned it, in obedience to his father’s behest, and sending Wazir Yâr Muhammed Khan very sick, he bestowed a robe of honour upon him, and gave him leave to depart to Hirât. Kâmrân, much pleased with the arrival of his Wazir, spent three or four years in peace, till A.H. 1242, when they both marched with an army to Sîstân, invading Sîh Kohah, Khâkpuir, and other districts, and bringing back numberless prisoners and untold booty to Tâbrîz.

Next year Shâh Kâmrân undertook a campaign with the intention of subjugating Qandahâr, and passing through Farah, he took up a position at Kowârâ, to which place the Sardârs of Qandahâr advanced to meet him and pitched their camp on the banks of the River Hirmand [sic]. Bahâr Khan Peshkhudmat sallied forth with a band of valiant combatants, but Kâmrân, after obtaining due information, sent Nâib Dasta’l-kûzî Yâsqûb with a few thousand sevâtâs to defeat him. The Nâib marched quickly and surprising Bahâr at midday, attacked him and put him to flight, compelling him to take refuge with the Sardârs. It not having been at any time the intention of the Wazir Yâr Muhammed Khan to subjugate Qandahâr, he induced Kâmrân Mirzâ to be satisfied with the results already obtained, and they proceeded instead to attack Lish and Jowâîn; but after they had besieged Sâlû Khan in the first named fort during a period of four months, news arrived that Muhammed Shâh, who had after the demise of his grandfather Fatîh ‘Ali become Pâdshâh of the extensive dominions of Iran, was marching with a vast army to conquer Hirât. So Kâmrân and his Wazir abandoned the siege of Lish and hastened back to Hirât. The Persian army laid siege for fourteen lunar months to Hirât, but being foiled by the valour of the Afghan troops, retracted its steps towards Tâbrîz without attaining its object, beginning its retreat on the nineteenth of Jumâdî’s-âsâl, in the Hijri year 1254 [9th September 1838].

After the departure of the Persian army Hirât remained a total ruin and Pottinger, the English Paranghi there, did not repair it. Moreover one day he made light in anger of Sher Muhammed Khan, the brother of the Wazir, and insulted him. So the Wazir addressed, in concert with Kâmrân, a letter complaining of his tyranny, to the English Shâhâba in Qandahâr, and asking for a substitute in his place. The said Shâhâba recalled Pottinger from Hirât and sent Todd instead of him, who began the rebuilding and repairing of Hirât. As soon as the Wazir obtained a favourable opportunity after the arrival of Todd, he told him that when advances of money were required for Hirât he ought to make them, taking a deed that the full amount was to be repaid in the following year. Todd was an inexperienced man, gave to everybody what he asked for, and paid the money after getting the deed, and in this manner the English government lost from five to six lâkhs of rupees.

Kâmrân gradually surrendered the whole administration into the hands of his Wazir Yâr Muhammed Khan, being sovereign in name only, and spending all his time in carousals and prodigacy. The Wazir then feared that the presence of the English in Hirât might induce Kâmrân to attempt to recover his power and to excite tumults; accordingly he managed with many apologies to remove Kâmrân from the city, who, however, soon got tired of his exile, and proceeding in the Hijri year 1256 with his sons and the ghulâm khânah to the fort of Ikhâmâr-‘eddin, during the Wazir’s

18 Began on the 18th April 1836.
19 This date agrees perfectly with that given in the proclamation of Mirza issued when the Persian army retired from Hirât. See Kaye, Vol. I. p. 228.
20 "I think Sir A. Burnes is disinclined to go to Hirât and Sir J. Keane is averse to his going there. It is probable I may send Todd instead." Mr. Macnaghten to Lord Auckland, Qandahâr, April 25th, 1839, Unpublished Correspondence. Footnote in Kaye, Vol. I. p. 435.
21 Up to this time eight lâkhs of rupees had been advanced to the Hirât government. When the next year dawned upon Hirât twelve lâkhs had been so advanced. The utmost benefits had been conferred upon the Shâh. The measures of our British officers had received "king, chief, and people from starvation" Kaye, Vol. I. p. 516-7.
22 Begun 5th March 1840.
23 *ante, p. 170, note.
absence from the city in the Kartah garden, removed the planking of the bridge, and prepared for hostilities. On this the Wazir Yār Muhammad Khān entered the city with numerous troops, and first sent Najū Khān Bārūkzāi to negotiate with Kūrān, but he remained obstinate, and was therefore beleaguered in the fort of Ikhtīārī Muṣlmānī, the eastern tower of which was undermined and blown into the air, after a siege of fifty days. This event greatly disheartened Kūrān, whose sons the Wazir had also by this time got into his possession as hostages, so that he surrendered and was sent to Kūsān under the pretence of being presented with the place in jādīr. At the instigation of the Wazir, he was followed there by Sardār Tāj Muhammad Dastaʿīkūz, who despatched him in the same year to the regions of non-existence. His body is interred in the Rauza Bāgh.

His reign lasted twelve years. He is said to have been of short stature with a pock-marked face, of cruel temper and tyrannical humour. Many instances of his injustices are on record, but we shall content ourselves with the mention of only two or three of them. One is that, whilst Hākim of Qandahār, he got up in the middle of the night, mounted his horse, and taking up a position in the Shikarpūr bāzār, turned the people who were conveying a bride to her husband's house, to his own mansion; and then, after dishonouring her, sent her on. Wherefore all the people cried to heaven for vengeance against him, and the locality bears to this day the name of Kāshī Darūr. Kūrān spent most of his time in hunting antelopes, but chased also any other game when he roamed about the deserts. One day his runners had pursued a fox to a cave, but instead of entering it, the fox preferred to surrender and be captured. Kūrān, in order to ascertain the cause of this, had the mouth of the cave enlarged by his people, who succeeded after digging for an hour, in pulling out a man, who stated that he had taken refuge in the cave from fear of the sāwaž of Kūrān. The Pādshāh then kept the man in close confinement, and it was discovered that he was a wealthy merchant, who had concealed himself in the lair of a wild beast to escape from the extortions of Kūrān, and had remained there, till by the decree of fate, his presence was revealed by means of a fox. He had to pay a fine of fifty thousand rupees!

The cow escaped the butcher's grasp!
To deserts fled, unseen by human eyes;
A lion broke her with a blow.
Thus fate crowns each escape from death!

By such wicked acts as these he estranged from himself his subjects and his troops; nay, his prodigality was the cause of the extinction of the Sadozāi dynasty, which had lasted ninety-six years, for “Verily Allah will not change His grace which is in men, until they change the disposition in their souls.”

After him Yār Muhammad continued to govern Hīrāt for eleven years, and his son Sādīq Muḥammad Khān was Hākim of Hīrāt for four years more, until by the machinations of ʿĪsā Khān Bardarānī and other Amirīs, the Shāhzādāh Muḥammad Yūsuf was raised to the governorship of Hīrāt. He slew Sādīq Muhammad Khān in the Hīrāt year 1271.

The detailed narrative of the events last mentioned is as follows:—When the Wazir conducted the government of Hīrāt after the murder of the Shāhzādāh Kūrān, he invited most of the Alakzāi Amīrs from Qandahār, and conferred high appointments upon them to such a degree, that shepherds and farmers were made Baglārḥūs and Qəlahqas. In the following year he marched with a strong army to punish the inhabitants of Ghūr, and having devastated the districts as far as Qurtazi, which is on the frontiers of Zamindāwar, he returned to Hīrāt. The year afterwards he reduced Karimād Khān Hazārāh, who had desired to be independent; but again appointed him Hākim, after he had paid the revenues which were due. As soon as the winter was over he marched with a powerful army to subjugate Maimanah, but had to return to Hīrāt on account of some dissensions. But in the next year he sent Ḥāshimi Khān Alakzāi Baglārḥūs with a strong force to subjugate Maimanah, and to uproot the power of Ḥikmat Khān, who was captured, but nevertheless reappointed

22 In the character and person of Shāh Kūrān there was little that was estimable or attractive; there was still less in the person of his Wazir. Kaye, Vol. I. p. 208.
23 Qudān, ch. xii. v. 12.
24 This name is afterwards spelled Seyyid, but I retain the first spelling throughout.
25 Began 24th September 1654.
Hikim, after he had disgorged the revenues due. The son of Hikmat Khan was taken as a hostage to Hirat, where the Wazir treated him well.

Salar-i-Qajar, who was governor of Mashhad Maqaddas on behalf of the Persian Government, was dispensed when it also appointed the Shahzadeh Hamzeh Mirza, brother of Muhammad Shah, to be governor of Mashhad Tus, and therefore went to Marv, where he made common cause with the Turkmans, and finding an opportunity during the winter, marched with Turkman savars to subjugate Mashhad. After taking the town, he besieged the Shahzadeh in the citadel, who called in the assistance of the Wazir Yar Muhammad Khan, when he was pressed beyond endurance. Accordingly the Wazir started with numerous troops in the direction of Mashhad under the pretext of reinforcing Salar; but when he had arrived at a distance of two karahs from the town, he deflected from the proper route and proceeded to aid the Shahzadeh, whom Salar attacked as soon as he heard of this intention. The Wazir now perceived that the affairs of the Shahzadeh were in a desperate condition, and so he induced him to march with his troops and artillery to Hirat, where he provided all the necessary stores, and maintained them in great comfort in the localities of Kusun and Ghurian, where he had them housed, till the winter was over. When the spring set in, reinforcements arrived from Tahran, with which the Shahzadeh marched to reconquer Mashhad. He requisitioned the services which the Wazir had rendered by presenting him with four pieces of siege artillery, and the title of Zahiruddaulah [Support of the Monarchy] when he took leave of him.

All this confirmed the friendship between the Qajar dynasty and the Wazir, and he governed Hirat during the next two or three years in peace till Ahmad Khan, the brother of Sulu Khan Ishagzai revolted, and making common cause with the Sardars of Qandahar, solicited them to occupy Lash and Jawain, both of which were dependencies of Hirat, and even brought Sher Ali Khan, son of Sardar Mohrdil Khan to Lash, and established him there. The Sardars likewise marched with their troops to attack the Wazir and arrived in Girishk, whilst the Sardar Muhammad Sadig Khan, son of Sardar Kuhandil Khan came with a powerful army and took the fort of Khakpur which is a dependency of Sistan. The Wazir on his part also started with his ever-victorious army, but wrote during the march to the Sardars of Qandahar, that enmity between him and them is out of place, as both parties were enemies of the Saddozais, and that as all this trouble had been fomented by Ahmad Khan Lash-Lash, his punishment was necessary, and the taking of the fort of Lash from him a most important matter. He himself made his own arrangements for attacking the fort, and succeeded in one day in depriving Ahmad Khan of it; and then gave Sher Ali Khan leave to depart to Qandahar. On the march to Lash, the Wazir had felt unwell from eating cucumbers and curds, but the distemper now became more serious. So he left the camp in charge of his son Said Muhammad Khan, and made all possible haste to reach Hirat. He expired, however, on the road to it, in the mura'a known by the name of Rabut Mirzah. This event took place at the end of the month Shaban in the Hijri year 1267 [29th June 1851]. His corpse was conveyed to Hirat and was interred by the side of the Mazir-i-Jami.

He independently governed Hirat for eleven years and was a man of firm character and unbounded liberality. He was so anxious for the good opinion of his people, that once when one of his sardar [common soldiers] died, he went in person to the heirs, and after reading the Fitrāh, presented them with robes of honour, Kazmir shawls, &c., and went away. It is also on record that once when a servant boy brought a robe of honour as a present from him, the recipient expressed his doubts as to whether a mistake had not been committed, and asked for what services the gift had been bestowed, as he had received a very valuable one but the day before!

After him his son Said Muhammad Khan assumed the reigns of government under the regency of his mother, but he surpassed even his father in liberality, and bestowed enormous sums upon poor wretches who scarcely deserved to receive a present of two rupees. He was subject to fits of insanity, in one of which he fell out with his mother who dwelt in the fort of Ikhtiaruddin; whereon he brought cannon to bear upon it, and ordered the artillery to fire them, making wanton breaches in the wall. He, however, rejoiced and abased his mother!
May God preserve us from such aberrations of mind! It is said, too, that one day when sitting in public darbār, he perceived a cat walking along the coping of a wall, which caused him to break out in a fit of horse-laughter and to exclaim:—“What would become of the wall, if this cat were changed into a cow?”

The Durrānī Khān at last lost all the reins of his sanity, and invited the Sardār of Qandahār twice or thrice to overthrow his government. They came, but effected nothing till Naib ‘Īsá Khān Durrānī secretly invited the Shāhzādāh Muḥammadal Yūsuf, son of the Shāhzādāh Malik Qāsim, son of Ḥājjī Firdūsī-dīn, who was at Mashhad. He arrived during the night of Tuesday the third of the sacred month Muharram in the Jihār year 1272 (15th September 1855), entered the city of Hirāt with one hundred swords and caused the kettle-drums to be struck in his own name. The Alkūzī Khārs and Amirās, most of whom happened to be dead-drunk with aromatic wine, were frightened when they heard the sound of the kettle-drums, and not being able to distinguish their hands from their feet, hid themselves in every corner. Although they had swallowed bābās of rupees during the government of the Wazīr, not one of them dared to offer opposition, except Ḥājjī Khairullāh Khān, who came forward to fight and received a mortal wound, in consequence of which he departed from this perishable world. Sā’īd Muḥammadal Khān was taken and slain, whilst all the Alkūzī Amirās were made prisoners and mulcted in silver by the rīfī and the mānī.

When the Persian government was informed of what had taken place, Naṣru’dīn Shāh, desirous to protect the old administration, despatched his own uncle Ḥusānum-Sūltānat Murād Mirzā, who was the Ḥakīm of Khorassān, as commander-in-chief with a powerful army and artillery to conquer Hirāt, which he invested, and besieged therein Muḥammadal Yūsuf and Naib ‘Īsá Khān for a long time. After the siege had been thus protracted, Naib ‘Īsá Khān Bardurānī sent envoys to Qandahār to wait upon the unequalled Amir, and asked him to send reinforcements, but the Amir Shāhīb paid no attention to the request. At last Naib ‘Īsá Khān, being much distressed by the bad behaviour of the Shāhzādāh Muḥammadal Yūsuf, sent him prisoner to Ḥusānum-Sūltānat, who slew him in revenge for the blood of Sā’īd Muḥammadal Khān. After the siege had lasted for a very long time, there was a scarcity of grain in the city, but still no aid arrived from any quarter. So Naib ‘Īsá Khān was under the necessity of suing for peace, and surrendering the city to the Qajār [Persian] government. On which the Persian army marched into the city and acted as it listed.

One day, when Naib ‘Īsá Khān Bardurānī, at the invitation of the Shāhzādāh (Murūd Mires), made his appearance in the camp for the purpose of paying his respects, a man approached him on the pretext of wishing to speak to him, and shot him dead. This happened at the time when the adherents of the Amir Dost Muḥammadal Khān arrived at Qandahār from Kābul, after the demise of Sardār Kuhandīl Khān, subjegated that city and expelled from it Sultān Ḥamadh Khān, son of Sardār Muḥammadal ‘Aṣim Khān, together with Muḥammadal ‘Imam Khān, son of Sardār Raḥmān Khān, on account of some disputes they had with them. These two exiles, despairing of assistance from other quarters, sought it from the Qajār Government, and went to Tahrān to implore Naṣru’dīn Shāh Qajār for it. Sardār Sultān ‘Ali Khān also went there with the same intention.

As the English Government was not willing that any Afgān possession, and especially Hirāt, the abode of victory, which is one of the finest of localities and possesses a strong citadel, should be at the disposal of the Qajār Government, it had, as has been narrated above, during the time of Kāmrān and of the Wazīr Yār Muḥammadal Khān, spent a great deal of wealth and property, through the Englishman Todd, in improving the district. It now forwarded through its plenipotentiary, at Tahrān, representations to Naṣru’dīn Shāh, that as the European powers had made an agreement that no other power than itself should interfere with the possessions of Afgānistān, the Persian Government, which had occupied Hirāt, ought, according to the said agreement, to restore it to the Afgāns, and to cease to interfere in its affairs. But as the forefathers and ancestors of Naṣru’dīn Shāh had husted always for the subjugation of that strong fortress, and had hoped in their hearts for the conquest of that God-created citadel, he paid no attention to the representations of the English plenipoten-
and expelled them from the city; whereon they went to Qandahār, where they received suitable appointments.

Sardār Sulṭān Aḥmad Khān obtained from the Qījār Government the title of Sarkār, his son Shāh Nawāz Khān being distinguished and exalted by the title of Amir Punjī. He governed Hīrāt six years with perfect dignity and independence. He then marched to Faṛrāh, which Sardār Muḥammad Sharīf Khān, who had revolted, had taken from Saifullāh, the rākīl of the son of the Amir Dost Muḥammad Khān. He conquered that strong fort as soon as he arrived, chiefly by the aid of his son, Sikandār Khān, which caused him to utter the sentence:—"The edifice of Pardūn was taken by Sikandār." Being satisfied with what he had accomplished, he returned to Hīrāt, and bestowed the governorship of Faṛrāh upon Amir Afzal Khān, the son of Sardār Pārdīl Khān, who being aggrieved at some words the Amir Dost Muḥammad Khān had said to him, had come to Hīrāt with Sardār Gholām Maḥjūdīn Khān, son of Sardār Kuhandīl Khān. For this the Amir Dost Muḥammad Khān, whose abode is now in paradise, intending to punish him, marched with a powerful army in the year 1279, took Hīrāt, and conquered the whole of Afgānīstān, as shall be narrated if it pleaseth Allah the Most High!

THE FOUR PRINCES.

A Kasmīri Tale.

In days long since gone by there lived a king most clever, most holy, and most wise, who was indeed a pattern king. His mind was always occupied with plans for the improvement of his country and people; his darbār was open to all; his ear was ever ready to listen to the petition of the humblest subject; he afforded every facility for trade; he established hospitals for the sick, inas (sarīfāt) for travellers, and large schools for those who wished to learn. These and many other such-like things he did. Nothing was left undone that ought to have been done; and nothing was done that ought not to have been done. Under such a wise, just and beneficent ruler the people, of course, lived very happily. Few poor, or unenlightened, or wicked persons were to be found in the country.

But the great and good king had not a son. This was an intense sorrow to him; the one dark cloud that now and again overshadowed his otherwise happy and glorious life. Every day he prayed earnestly to Śiva to grant him an heir to sit upon the throne after him. Long and patiently he had waited for an answer, when one day Śiva visited him in the garb of a āyāk,1 and was so fascinated with his good and respectful manner, that he said:

character is depicted with ash-covered body, matted locks, and in a most emaciated condition. He sometimes appears to his devotees in the disguise of an ordinary yāḍī or yāḍīn. Cf. Old Deccan Days, p. 254.

---

1 Śiva is the great representative yāḍī or āyāk; the ideal of what can be attained by the keeping of the body in subjection and by exclusive contemplation of divine things; hence he is the saha yāḍī, and in this...
the tender mercies of four nurses, and they grew up strong, healthy, clever, and beautiful boys. The king was exceedingly fond of them. He appointed the best masters for their instruction, and lavished the most rare and expensive gifts on them. Nothing was too good, nothing was too costly; the greatest trouble and attention were not too much for the king's four beautiful and clever boys.

Meanwhile His Majesty married again, and had other sons by his second wife. But it was a sad day when the king took to him this second wife; because she naturally became very jealous when she saw the first queen's sons growing up so beautiful and wise, for she thought within her heart that they would have the king's favour, and so interfere with her own sons' succession to the throne. Accordingly she determined to ruin their character in the estimation of her husband, or failing that, to somehow or other compass their death.

It has been said that the king was thoroughly engrossed in the desire to improve his country and people. To do this work properly, he constantly felt his extraordinary position as a king a great hindrance. Though he very much depended on his ministers and subordinate officials, knowing that for the most part they were honest and just, yet he was convinced that he himself must go in and out among the people, see things with his own eyes, and hear what the people were saying with his own ears, if he would rightly understand their state; and, therefore, he frequently visited towns and villages in different disguises and under cover of the night. In this way he thoroughly ascertained the needs of his subjects, so that they wondered at his sagacity and skill.

This continued for some time, until early one morning, while returning from an excursion to a neighbouring village, it commenced to rain very hard. Not having expected this quick and heavy shower, His Majesty was quite unprepared for it; and so what with the long ride and the mud he arrived at the palace.
looking more like a porter than a king. The soldiers at the gate, even, almost allowed him to pass in without the customary royal salute.

The queen at once heard of the king's plight and when, having changed his wet and maddy garments, he went to her room she met him with a frown. "Wherefore this frown, my wife?" he said.

"I like not," she replied, "that you, my lord and king, should do these things. They do not become either your position or your age. Why don't you command your sons to do this work? They are grown-up, and are good and wise enough to perform it. Command them to do this work, I pray you. Thus shall I be saved much anxiety concerning you, while the affairs of the kingdom will not suffer in the least."

"You have spoken wisely," answered the king. "It is better that I should resign these duties to younger hands,—and who are more wise and diligent than my own sons? They, too, will be kings and rulers some day, and ought to learn experimentally now, while I am alive to direct and help them, what will be expected from them hereafter. I will immediately call them and explain my wishes."

Accordingly the four princes were at once summoned before the king; and when they appeared, His Majesty told them of his conversation with the queen, and how that he had determined to hand over this itinerating work to them. "You are younger and stronger than I am," he added. "I trust you will endeavour to fulfil your duties to my satisfaction and to the people's profit."

The four princes expressed their pleasure at this manifestation of their father's confidence in them, and assured him that he should never find that confidence had been misplaced. Directly that day changed into night they commenced their work of secret supervision. They each had a special round, and whatever was worth notice they reported to the king. Under such a strict and regular supervision it was no wonder that the kingdom continued increasingly happy and prosperous (!)

But seeds of mischief were being sown at the palace against these princes. The queen was getting more and more jealous of them, as she saw her own sons growing into manhood. She plotted in every imaginable way against them. At first the king heeded not her lying insinuations and unkind wishes, but afterwards overcome by her skill and charms (for the queen was both very clever and very beautiful), he began to speak harshly to the four princes, and now and again he looked with suspicion on them. The princes noticed that the face of their father was being changed towards them, and that there was a marked lack of the trust and affection that had hitherto encouraged them to prosecute unflaggingly their arduous labours.

This state of affairs went on for several months. At last, worn out by unpleasantries by day and watchings by night, the four princes met together to solemnly consider what they should do. They appointed their meeting at midnight and in a most unfrequented part of the jungle. Each prince told his tale of sorrow, and each one except the eldest, on the conclusion thereof added, "And now my counsel is, dear brethren, that we fly this part of the country and go whithersoever Parameswar may lead us. What will be, will be."

"Not so," said the eldest prince. "Stay, my brethren. What foolishness is this that you entertain in your hearts? Not so, not so, I counsel you. You know not what you are proposing. Deprived of sleep you have become deprived of your wits also. In a same state of mind you would not speak thus. What I would the sons of the greatest and holiest king that ever sat on the mansad* disobey their father, and run away like mean, spiritless, curs before his commands? No, never;—this is not your meaning. Listen, O my brethren, I warn you not to think any more about leaving your country. Get to your beds and rest. I will watch for this night. To-morrow night another of us will watch; and the next night another; and the night after that another. Thus shall we get more and abundant rest; and the work of supervision will be regularly carried on."

Saying this, the eldest prince wished them all good-night, and started to fulfil his watch. The other princes also left, and being thoroughly impressed by their eldest brother's advice went home and soon forgot their

* A large cushion of velvet, silk, and precious stones doing duty for a throne.
sorrows in sleep. The next night the second prince went, while the first prince rested, and on the third night the third prince watched, and on the fourth night the youngest prince, while all the others took rest in sleep. This arrangement lasted for many months and answered well. The princes bore their father's unkindness bravely, and in every way behaved as they should do. Their piety, goodness, and attention to public affairs won praises from everybody, except the king and the queen who deluded him.

How true is the saying, "Real virtue never continues unrewarded by the gods." One night while the eldest prince was going his rounds of inspection he reached a small hut wherein a certain Brahman resided with his wife. The prince noticed them through the open window, and as he looked the Brahman arose, opened the door, and came out. As usual the good man looked up at the heavens; and no sooner had he done so, than he turned, and rushed indoors again, exclaiming "Tráh, Tráh!"

"What is it?" his wife inquired somewhat timidly. "Oh," said the Brahman, "I saw the star of our king obliterated by another star."

"What is the interpretation of this sign?" asked the wife.

"It means," the Brahman replied, "that our king will die in seven days from this time."

"Die!" said the Brahman almost in tears.

"How will His Majesty die? By sickness, or by the hand of an enemy?"

The Brahman replied, "On the seventh day hence, just after the first watch of the night a deadly black snake will descend from the sky, and will enter the king's bedroom by the door thereof, that opens on into the courtyard, which is on the east side of the palace. This snake will bite His Majesty's toe, so that he will die."

"But surely this must not be," said the Brahman. The king can be delivered from this cruel death. Tell me how his deliverance may be accomplished. Of a truth it cannot be that a king so just and holy and clever as our king is should perish in this way."

"The gods prevent such a disaster!" said the Brahman. "Get me some ghee and a few pieces of wood, that I may make an offering to them. For it is written in the Sástras that if a man, when he knows of any misfortune about to happen to the king, will offer at that time something in the fire to the gods, then the king will be saved from the misfortune; otherwise the king will not be saved. Who knows but that our king may be spared to us?"

So saying he took the sticks, kindled a fire, and cast the ghee into the fire; and then after many prayers and invocations rose and turning to his wife said, "His Majesty will be delivered if one of his relations will attend to these instructions. The man in whose heart is the wish to do this thing must dig pits in the courtyard that is on the east side of the palace; and some of the pits he must fill with water and others he must fill with milk. He must also throw flowers in these pools, and on the intervening spaces right up to the door of the king's bedroom. This done he must be present at the doorstep at the appointed time with a sword in his hand. The snake will surely come and will swim across the water and the milk, and, after passing through these elements and over the flowers, will be rendered comparatively harmless. On the arrival of the snake at the doorstep, the man who has taken upon him to perform this work must strike at it with the sword and slay it. After killing the snake he must take some of its warm blood and going into the king's room smear it over His Majesty's toes. In this way the king will be preserved from evil;—but alas! who is there to perform these things?"

The prince, whom curiosity had drawn very near to the window of the Brahman's hut, heard everything that was said, and he, of course was very much surprised. In the morning he communicated the matter to his three brothers. Not a hint, however, reached the ears of the king. For six nights the four princes continued going their rounds as usual, but on the seventh night the eldest prince begged to be allowed to go out of his turn, because it was in his heart to save the king.

1 Tráh, Tráh (also Sanskrit), an exclamation denoting "mercy! pardon!"
2 Hóm, a kind of offering by fire, which can be made by Brámans only. It is an offering for special occasions. The method of making it is as follows:—During the utterance of prayers and invocations, according to the object of the sacrifice, five kinds of wood, together with dárśa grass, rice, and ghee, are kindled and burnt. The fire is kept burning only as long as the occasion for it lasts. The Hóm is a most efficacious offering, compelling the obedience of the gods and changing in the fate.
Accordingly he went and dug some pits in the court on the east side of the palace, filled some of these pits with milk and some with water, and threw flowers on every side and right up to the door of the king's bedroom. Then, when everything was ready, he took a naked sword in his hand and standing on the doorstep awaited the coming of the serpent. All this had been done after the king and queen had retired to rest.

The first watch of the night had scarcely passed, when the prince, thus standing on the alert, heard a sound as though something had fallen. Presently he noticed the faint movement of some animal through the pools of milk and water; then there was a rustling through the flowers which he had scattered about the palace; and then he descried what looked like the body of a serpent wriggling towards him. Now was the time! The prince tightened his hold on the sword, and as soon as the snake reached the doorstep, he cut it in two. He quickly took some of the warm blood of the reptile, and having blindfolded himself, quietly opened the door of the bedroom and entered. He had covered his eyes because he did not like to look on his father in his private room. Carefully he felt for the toes of Their Majesties, and when he had hold, as he thought, of the toes of the king, he smeared some of them with the blood. But he could not see what he was doing, and stained some of the toes of the queen instead. This woke Her Majesty, who was a very light sleeper; and when she noticed a man leaving the room, she shrieked aloud and aroused the king. Presently she noticed some blood on her toes, and imagining that a rākṣaśa had visited them she became almost frantic with fright. The king also woke just in time to see the figure of his eldest son pass out of the bedroom.

"Yes, yes," exclaimed His Majesty, "it is all true, even as you said. Now I am quite assured of the wickedness and deceit of my sons. To-morrow I will order the execution of all four of them. Such wretches must not be allowed to live."

Of course the queen improved the occasion. When she had sufficiently recovered from the shock, she reiterated to the king all that she had seen and heard, with sundry additions. She also showed the king her blood-stained toes. These things, together with what His Majesty himself had witnessed, made him resolve on the speedy execution of his sons.

"Undoubtedly," he said, "when my sons found that by themselves they could not harm me during your lifetime, they compacted a league with rākṣaśas. May the gods deliver us!"

The queen's joy was now almost complete. At last she thought she had gained the end of her desires! Bright pictures of the future passed before her mental vision. She saw her own sons, great, clever, and wise, ruling in the land, all people praising them and all countries doing them honour. Impatiently she waited for the day when the only obstacles to the accomplishment of this wish would be cleared away.

Very early next morning the king went to the council-chamber, summoned his friends and advisers, and ordered his four sons, now prisoners, to be brought before him. Deprived of their princely robes, their faces and hands soiled from contact with the damp dirty walls of the dark vault wherein they had been imprisoned for the greater part of the night, they looked very wretched. Still they did not despair. Hope was written on each one of their foreheads.

Not a sound was heard when the four princes entered and walked up to the place appointed for them to wait and hear their sentence. After a few minutes' pause, the king, trembling with anger, charged them with having done what was worthy of death, an act which the gods, and therefore he, could not pardon. He accordingly ordered their immediate execution.

On the conclusion of the sentence the executioners ran forward and laid hands on the prisoners. Then some of the ministers and others present took upon themselves to ask what the crime of the four princes might be. But the king would not listen. "Remove these men," he said. "I will explain their crime afterwards."

(To be continued.)
THE BHAGALPUR PLATE OF NARAYANAPALA.

BY E. HULTZSCH, PER. D. VIENNA.

I re-edit this grant, originally obtained at Bhagalpur, from an inscription prepared by myself from the original plate, which is in the Library of the Asiatic Society, Calcutta.

The inscription consists of seventeen verses and mentions the names of the following princes of the so-called Pāla dynasty of Bengal:

1. Gopāladeva.

4. Vigrahapaladeva.

5. Nārayanapaladeva.

Gopāla was married to Maitri. Dharmapāla conquered a certain Indravarja and other enemies, and transferred their kingdom to a certain Chandravikasa. Vākapa and Jayapāla were the generals of their respective elder brothers. On his expeditions, the latter is said to have come in contact with the kings of the Utkalas and of the Pragjyotishas. Vigrha-pāla married Lajjā of the Hailhayavasāna.

According to the prose portion of the inscription, the donor, Nārayanapāla, resided at Mulagāvī (Mulagāvī). Although a Budhists (Sangata), he boasts of having built a thousand temples for the lord Śiva. The present grant he made to the temple of Śiva at Kalasapota, which he himself had founded, and to the attached congregation of Pāsupata teachers. The village granted was called Māravikā, and was situated in the Kaśiṇa vishaya, a district of Trakhaṭi (Tirhuti). One of the chief points of interest which the present record affords, is the unusually long list of royal officials. Among these are mentioned soldiers from Gauḍa, Mālaya, Khaśa, Hūla, Kulika, Kapita, and Ṛśita. The date of the grant was the 9th day of Vaiśākha of the 17th year (of Nārayanapāla's reign).

The inscription closes with two verses which contain the name of the Dūtakṣa and of the engraver. The former was the Bhātṛ, the Goraḍa, the Puṇyakrīt. The latter was Mahāyāna, a native of Saṃdāśā or Eastern Bengal.

The present grant has been previously edited and translated by Dr. Rajendralal Mitra. Those who will take the trouble to compare the subjoined translation with his, will concede that the grant needed to be translated afresh. In order to justify the republication of the text itself, I annex a list of 'various readings,' from which more orthographical inaccuracies are omitted:

Translation.

Om! Hail! —

(Verse 1.) — Victorious is that illustrious lord of the world, Dāśabala (Buddha), and that other (lord of the world), Gōpāladeva, whose heart was resplendent with the jewel of compassion; whose mistress was Mañjuśrī, whose wisdom, (arising from) perfect knowledge, washed off ignorance, as the pure water of a river does the mud; and who, having overcome the power of those who were acting according to their own desires, attained everlasting peace! 18

(V. 2.) — From him sprang the brave prince Śrī-Dharmapāla, who possessed royal dignity by birth; who imposed just taxes (sama-karaḥ); who was able to bear the burden (of the rule) of the earth; who was the only refuge of those kings (bhūkṛitiḥ), who approached him, fearing the destruction of their party (paksha-cheriḥ); who was always eager to keep within the (maryādā) and whose majesty possessed (i.e. the brilliant white) — which (milky/ocean) Lakṣmī, which contained (makāraḥ); which

mountains (bhūkṛitiḥ), which approached it fearing the cutting of their wings (paksha-cheriḥ); and which was always eager to keep within its coasts (maryādā).

(V. 3.) — This mighty one (bali) again gave the sovereignty, which he had acquired by defeating Indrāja and other enemies, to the begging Chakrāyudha, who resembled a dwarf in bowing — just as formerly Bali had given the sovereignty (of the three worlds), which he had acquired by defeating Indra and his other enemies (the gods), to the begging Chakrāyudha (Vishṇu), who had descended to earth as a dwarf. 19

(V. 4.) — To him, who resembled Rāma by his strict adherence to truth, there arose a younger brother called Vāk-pāla, who equalled him by his virtues, and whose majesty was like that of Saumitri (Lakṣmanā). Combining policy and valour in his person, and conforming to the command of his brother, this illustrious one cleared the quarters of hostile armies and subjected them to one (royal) parasol.

(V. 5.) — From him sprang a victorious king Upāndra, who purified the earth which Umā, daughter of Upāndra,
as, destroying in battle the enemies of sacrifice, Upendrâ (Vishnu) had procured the enjoyments of universal sovereignty for his elder brother Dévapâla (Indra).

(V. 6.)—When, by order of his brother, he started with an army in order to subdue all quarters, the lord of the Utkalas left his capital, driven to despair from afar by the mere name (of Jayapâla); and the king of the Prâjyôtishas enjoyed peace at last, surrounded by friends, bearing on his lofty head (i.e. being much obliged for) the command of that (prince), which bade (his foes) cease to plan battles.24

(V. 7.)—His son, the illustrious ViGRAHA PÅLÂ, became like Aãjâtastra, as the edge (dhâra) of his spotless sword, just as a stream (dhûra) of pure water, removed the paint of his enemies' wives.25

(V. 8.)—He made his foes the abode of heavy misfortune and his friends (the abode) of lifelong fortune.

(V. 9.)—Lajjä, the ornament of the Haihaya race, became his wife, as the daughter of Jahnâ (the river Gaṅgâ) that of the ocean. As her acts were pure (while she belonged) to her father's family, thus her sanctifying power was extremely great (when she belonged to that) of her husband.

(V. 10.)—From her he begat the virtuous ŚRI-NâRâyaṇapâladâva, who possessed the majesty of the regents of the quarters, which they had imparted to his body for the protection of the earth.26 He adorned with his deeds the inherited throne, whose foot-stool of stone was covered by (prostrate) princes with the lustre of their diadems.27

(V. 11.)—The deeds of this king,28 which deserve to be recorded in the Purâñyas and which are full of the chaturvarga, captivate the heart.

(V. 12.)—By fine sentences, which won the hearts of good men, he confirmed (the tradition of) Sättivâhana (sic); and by his liberality he made the story of the Ániga king (Karha) credible.

(V. 13.)—When his sword, blue like a lotus, was flashing in the van of battle, it appeared to his enemies, through fear, yellow and red (pita-lôhita)—since it was drinking blood.

(V. 14.)—Taming men constantly by wisdom and valour, he steadily subjected them to his rule. When beggars approached him, they became satisfied to such an extent that they never thought of begging again.

(V. 15.)—It is wonderful that he was the lord of fortune (the husband of Śri), but did not commit black deeds (did not act like Krishna); that he was the chief of the learned (the king of the Vidyâharas), but rich in enjoyments (a big snake); and that he resembled fire (anala) in brilliancy, but Nala in conduct.

(V. 16.)—While his fame, white as the autumnal moon, was pervading the three worlds, Radra's (teeth beaming with) wild laughter will, methinks, have lost their splendour, and the wreaths of kôtaki-petals, worn in the hair by the Siddha women, must have had to be inferred for a long time only from the humming of the bees.

(V. 17.)—"Let penance be mine, and the kingdom thine!" Thus two men have spoken to two others:—ViGRAHA PÅLÂ to him and Sâgara to Bhagiratha.

(L. 24.)—From the illustrious camp of victory pitched at Śri-MUḌGA-GIRI, where the bridge which is produced by the wall of boats of various

24 According to the Pâlî Dict., dhâra also means 'sacrifice'; the 'enemies of sacrifice' compare subhakrama in the Mahabharata; the 'command' compare subhakrama in the Mahabharata; the 'command' compare subhakrama in the Mahabharata; the 'command' compare subhakrama in the Mahabharata.

25 The sense of this word is similar to that of 'giver.'

26 Compare M.
kinds proceeding on the path of the Bhāgirathi, surpasses the beauty of a chain of mountain-tops;—where the rainy season seems to prevail continually, as extremely dense troops of rutting elephants (of thick clouds) are obscuring daylight;—where the dust, that is raised by the hard hoofs of innumerable squadrons of horse presented by many northern kings, gives a grey tint to the horizon;—where the earth aches with the burden of the endless infantry of all the kings of Jambudvīpa, who have come to worship the Paramēśvara;—he, the devout follower of Sugata, the successor of the Mahārāja Uṣṇikha Śrī Vīgrahapālādeva, the illustrious Paramēśvara Paramabhaṭṭaraṇa Mahārāja Nārāyanapālādeva, being in good health, reports, announces, and issues commands respectively (to the following persons)—(1) to all royal officers coming into the village of Makutikā together with its ground,—which belongs to his (the king’s) domains situated in the district of Kaksah in Tirabhukti,—viz. to every rājārerājana, rājāputra, rājamātā, mahāśākharīghrakha, mahābhakṣapālīka, mahāsāmanata, mahādēṣāpati, mahāpratihāra, mahākāṣṭādikarī, mahāadhyādīśaṭdadhanaśa, mahādaṇḍādikā, mahākaṇḍādikā, rājaśāhī, upari, dāśāparadikha, chauṇḍāharana, dāṇḍika, dāṇḍapālika, jaukika, gaukika, kehārapa, prānta-pāla, kōṭṭa-pāla, khandaraṇa, and to those appointed or commissioned by the former ones, to those occupied with elephants, horses, and camels, in the navy and army, to surveyors of foals, mares, cows, she-buffaloes, goats, and sheep, to every dālāpuṇṭaṣaṇīka, gamaṇīṣaṇīka, and abhiṣekāmanīṣaṇīka, to heads of districts and heads of villages, to ferry-men, to irregular and regular troops from Gauḍa, Mālava, Khāsa, Hūna, Kukka, Karnāta, and Lāta, to servants, etc.—and (2) to the other unnamed subjects of His Majesty residing in Makutikā, Brāhmaṇs, etc., from the Mahātantra and Uttama down to the Meda, the blind, and the Chaṇḍāla:—

(L 38.)—‘‘Be it known to you, that—(1) for the suitable (performance of) pājá, bāti, chauṇḍa, and saṭṭa, for new buildings, and for other requirements of the divine Śiva-bhūtārakā at Kalaśāpota, for whom he (Nārāyanapālā) himself has built a thousand temples, and whom he has put up there (at Kalaśāpota);—(2) in order to (provide) couches and seats, medicines for the sick, requisites, etc. to the congregation of Pāṇḍapa teachers (at Kalaśāpota);—(3) in order to (enable the Pāṇḍapa to bestow) blameless (i.e., unhindered?) enjoyments, consisting of a share fixed by them, on other persons desired by them,—the Mahārājā Uṣṇikha Śrī Nārāyanapālādeva has given the above-named village of Makutikā, up to its boundaries, grass, and pasture land, with its ground, with its places, with its mango- and mahākūla-trees, with its water and dry land, with its pits and saline spots, with the upari, dāśāparadikha, and chauṇḍāharana, with exemption from all oppression, not to be entered by irregular or regular troops, not to be meddled with by any body, accompanied by all revenues, such as shares enjoyed, taxes, gold, etc., according to the maxim of bhūmichīhāra, to last as long a time

p. 334. I avail myself of this opportunity to correct a mistake committed in my rendering of the Śrava inscription of the Bhūrutū Śrīpa, ante, Vol. XIV. p. 158f. There sūkaṃṣamanīta does not mean ‘the end of the stone-work;’ but simply ‘the stone-work;’ see Childers, n. v. kṣamaṇa.

30 Both pratyayā and parikhāra are Buddhist terms. According to Childers, the four pratyayā or necessities of a Buddhist priest are dāśāparadikha, sādhuśāla, dhammaśāla, and bhāṣyaśāla. In the present grant, sādhuśāla and bhāṣyaśāla correspond to the two last words. With gāṇaparikha compare gāṇaparikha, etc. On the eight parikhāra or requisites see the article parikhāra.

31 Both pratyayā and parikhāra are Buddhist terms. According to Childers, the four pratyayā or necessities of a Buddhist priest are dāśāparadikha, sādhuśāla, dhammaśāla, and bhāṣyaśāla. In the present grant, sādhuśāla and bhāṣyaśāla correspond to the two last words. With gāṇaparikha compare gāṇaparikha, etc. On the eight parikhāra or requisites see the article parikhāra.

34 The Amāśāhārī grant (see note 19 above) reads rājānīkāra for rājānīkānti-prāṇīkāra.

35 The Amāśāhārī grant reads sangarākha.

36 Such specimens seem to have the same technical significance as its Pāli equivalent nanakamma; see Rāja Dāsika and Oldenberg's Sinnaya Texts, Vol. III. p. 101, note 2. Hence the word, who had to superintend a new building, was called nanakamāni; see id. Vol. II. p. 333, note 2, and the Bharutu and Aṃkarātī inscription, where we find nanakamāni and nanakamma (Jour. Germ. Or. Soc. Vol. XLI.). A similar term is kammikatika in the Banawasī inscription, ante, Vol. XIV.
as the moon, the sun, and the earth shall endure, in order to increase the spiritual merit and glory of his parents and of himself, to the divine Śiva-bhaṭṭāraka by the (present) edict.

(L. 44.)—"Therefore, you all shall approve of this gift; and future kings shall assent to it and preserve it, out of regard for the (heavenly) rewards of a gift of land, and out of fear of sinking into the great hell, in case of (its) confiscation! And the cultivators residing (in Makutikā) shall be obedient to (this) order on hearing it, and shall deliver (to the donors), at the proper time, all suitable revenues, such as shares enjoyed, taxes, gold, etc."

(L. 47.)—Śāntv 17, on the 9th day of Vaiśākhā. And the verses which praise the merit (gained by gifts), (pull) thus:—[Here follow five of the customary imprecatory verses, which it is unnecessary to translate.]

(V. 18.)—The messenger for this (grant was) the illustrious Bhūtā, the Gūḍaṇa Puṇyākṛttī. He knew the meaning of the idea of Brahmān, which it is very difficult to understand even with the help of the Vēḍānta (books); he was extremely well read in all īrū्तi together with the āyās; and he performed sacrifices, in which great presents were made.

(V. 19.)—The illustrious Manuḥhadāsa, a native of the excellent Samatā, the son of Īmbhādāsa, has engraved this edict.

(The seal) of Śrī-Nārāyaṇapālādēva.

THE RELIGION OF THE ARABS.\(^1\)

It is commonly supposed that the people of Arabia are adherents of the Muslim faith, and that their hostility towards Christians is properly attributable to this circumstance. The fact is, however,—as was pointed out by Burckhardt in the early part of the present century, and as has been noted by other travellers since then,—their hostility is directed not towards Christians alone, but towards all foreigners whatsoever,—especially English foreigners, whom they regard as interlopers visiting them with ulterior views.\(^2\) That not Christians, quod Christians, are alone the objects of their aversion, is proved by the fact that, in our own times, a Jew was, on detection in Makkâ, instantly seized and put to death.\(^3\) The senti-
ment is not unexampled;—a similar dislike of all interlopers marks the Afghan and the Nepalis to this day, and markel, in times not very remote, the kingdom of Burma and the empire of China. But in Arabia the aversion to inter-
lopers has undoubtedly the added element inherited by the tribes there from the days of Isma‘ill Ismael; for that aversion was abundantly evinced long before the birth of Muhammad. It knows no difference of tribe, nationality, or creed; even the faithful themselves, unless they are in a position to hold their own, are not exempted from the misanthropy of these weird Children of the Desert. Their self-aggregation is totally different in its genesis from the mere religious antipathy which characterizes the Muhammadan; and it is difficult to account for it, excepting on the principle that the Arabs are the sons of their father, of whom it was said, ‘His hand will be against every man, and every man’s hand against him.’

This aversion cannot be of the nature of religious exclusiveness, for it is not a fact that the Arabs are adherents of the Muslim faith. This might be shewn in a variety of ways, of which, for our present purpose, we will select only one,—the attitude of these men towards the institutes of Muhammad. Of these, one of the most distinctive was the ordinance by which the Prophet enjoined upon his followers for ever the observance of the lunar calendar. He did not, as is often erroneously supposed, give the months new names; what he did was to forbid the practice of inter-
calation, by which those who observed the solar method were wont to balance one year with another, in such a way that the same month always occurred at the same season of the year. This practice the Prophet found to appertain among the Jews and Christians of Syria, and he denounced it as an act of ‘infidelity,’ and a departure from God’s original intention ‘in the day when He created heaven and earth.’\(^4\) And it is to this arrangement of his that the curious phenomenon is traceable, which all English people, who have resided in the East, have noticed,—that the months of the Muhammadans retrograde through all the seasons of the year, and in the course of a little more than three and thirty years, each month comes back to its original place; having in the meantime retrograded through all the seasons.\(^5\) When Muhammad authorised this change in the calendar, it was the month of Dicember: in other words, it was the cool season, and the days were at their shortest; and it was not so difficult to keep the Fast of Ramazân. But he was ‘an unlettered man,’ as he tells us in the Qur’an,\(^6\) and little foresaw what the effect would be that would overtake his followers. But fifteen years after the establishment of this institute (when he had long been dead and gone) the month of the Fast fell in the hottest season of the year; so that then, and ever since then, the observance of this ‘holy month’ has led to the death of numbers of his followers (especially among the young) from the combined operation of heat and thirst in the hottest months of the year.

But the genuine Arabs—the descendants of Isma‘ill and of his remote ancestor Qahhân—never fell in with this new arrangement; and to this day they observe the customs of their progenitors of the times before Muhammad—even refusing to relinquish the very names by which their ancestors designated the months several centuries before Muhammad was born.\(^7\)

We have made allusion to the current opinion, that the names applied in the present day to the months by the Faithful were originated and applied by Muhammad. This opinion would seem to have arisen out of a misunderstanding of a statement long since made by the learned Dr. Prideaux, the celebrated Dean of Norwich,—that

under the influence of Muhammad the old names of the months became 'totally abolished.' Now, Prideaux (apart altogether from his personal characteristics as a controversialist) was, and is to this day, a very high authority in Arabian learning; yet, this statement of his is a pure lapsus memoriae, and is an additional proof that even Homer sometimes nods: for the learned Doctor himself gives us on the same page of his imperishable work, an historical account of the Arabian calendar directly subversive of his own assertion. The truth is, that the names at present in vogue for the Muhammadan months were first applied to them by Khâbân-Murra, a scion of the great tribe of the Quraih. This man was father of the celebrated Qasai, and fifth in descent from Fihr Quraish, and was (according to the calculations of M. Canan de Persival) born (in A.D. 358) just two centuries and twelve years before the birth of Muhammad. He was the great-grandfather ofbash, himself the great-grandfather of Muhammad, and was thus the Prophet's sixth ancestor. There is reason to believe that this man, Khâbân, borrowed the solar or intercalary method which he established in the Hijaz, from the Jews; and it is understood by the generality of Arabists that he did so with the view of fixing the time of the annual pilgrimage to Makkâ (a religious observance of the Arabs from unknown ages before the time of Muhammad) to a convenient season of the year. This is evident from the meanings of the names which he applied to the months. For prior to the time of this ancient Arab Chief, the months of the Arabs had other names than those they now bear, and the new ones, having been adopted by the tribe of the Quraih (whose influence in commercial and ecclesiastical affairs at Makkâ was predominant) eventually superseded the others. Now, it is a curious historical phenomenon that down to the time of Muhammad, Arabia had long produced a great man once in about two centuries, the influence of whom had centred in Makkâ, and had extended more or less extensively over the entire continent. The Anœætes, the Khuzâ'ites had each in succession obtained ascendency there at distances of time approximating to that figure; Fihr, Khâbân, Qasai, Hâshim, had severally had their day; and at length, in apparent obedience to this singular law (first pointed out by a great Oriental savant of our own times, Dr. Aloys Sprenger) Muhammad's turn arrived. These men and dynasties left each of them their mark upon the national history of the Arabs, in one way or another; and the part reserved for Khâbân was the reform of the calendar and the giving of new names to the months. The principle which influenced him in the change he authorized, was that he might apply to the months names expressive of customs and phenomena with which the Arabs in general were familiar; and while doing so, to mark, at the same time, the Sacred Months and the season of the national pilgrimage. This he did, by giving to the 'four sacred months,' so-called (the first, the seventh, the eleventh, and the twelfth) names appropriate to the sentiments which the Arabs had come to cherish towards them, and by stamping upon the name of each of them (the twelfth) the designation of the yearly pilgrimage.

Now, apart from the fact that the statement of Dr. Prideaux might very reasonably lend support to the inference that down to the time of Muhammad, the months of the Arabs bore different names to those they now bear—an inference the unsoundness of which has been shown in the facts just stated—this learned writer further tells us that the names given by Khâbân were adopted all over Arabia 'when Mahomet had brought all the rest of the tribes, besides the Khashtites, (Quraih) under his power.' But it has been repeatedly proved by different writers, that the whole of the Arabs never were converted to Islam; that of those who in Muhammad's life-time professed conversion to it, the greater number apostatized as soon as the news of his decease reached them, and became forthwith the enemies of those who continued in the Faith; and that to this day the Badawîs, who more than any others may be said to be the children of the soil, are the chief

19 Prideaux, Life of Mahomet, p. 2 {Edn. 7th, Lond. 1718.}
20 We use this language advisedly, for a work that went through three editions in one year in times when books were costly and readers of such weighty works as his were comparatively few; a work from which friends and foes have never ceased to borrow, and over which, after the lapse of a couple of centuries, controversialists of all shades of opinion still think it worth their while to quarrel,—such a work as that must be possessed of quite unusual vitality.
21 Lane, Arabic Lexicon, p. 135, col. 2.
foes of those who engage in the pilgrimage to Makka. 23

The power of these men in the Arabian continent is paramount over every other power,—even that of the Sultan himself, who is regularly supposed to be the supreme ruler of the land: and the power they wield without mercy is unique in its kind. With the single exception of the kingdom of Najd, the home of Wahhabism in the Highlands of Arabia, these wild descendants of Isma'il are, for all practical purposes, masters of the whole continent through the length of it and the breadth of it. They hold such complete supremacy there, that they even exact from the representatives of the Sublime Porte itself an annual tax for the liberty of traversing the territory which their tribes severally hold in the Desert. The supremacy even of the Sultan himself, the political and ecclesiastical head of the Faith, is but nominal there, for even he has to pay a tax for travelling through a continent supposed to be part of his own dominions. Since the time of the succession of the Fatimi emperors at Cairo by the Usmanis of Constantinople, no Sultan has ever made the pilgrimage to Makka. The Mahdi, however, has for centuries past been the recognized symbol of royalty in the Syrian and Egyptian caravans, and this curious memorial is always surrounded, along the whole route, by certain high officers of state, who serve as the living representatives of the civil and ecclesiastical authority of the reigning Sultan. In other words, even though the Sultan himself were present in the caravan, that would make no difference to the Badawis. He still would have to submit to the impost. On one occasion, the Syrian caravan, which included (as it always and necessarily does) the representatives of his authority, declined to pay the tax. When the season of pilgrimage came round in the following year, a vast horde of Badawis (numbering forty thousand) lay in ambush among the hills of the Hijaz, and rushed without parley upon the pilgrim host, and slew the main portion of them; nor would they permit the caravan to pass until the annual tax for that and the preceding year had been fully paid. 24

Now the men who thus, for all practical purposes, are the masters of Arabia, are the hereditary and time-worn enemies of the Faithful, and no dignitary of Islam, from the Sultan downwards, can undertake the stupendous task of traversing the continent unless he makes his account with them. Their demands, however exorbitant, have to be weekly conceded by all,—without dispute, and with as little delay as possible; and their very subsistence, from century to century, is mainly derived from levies remorselessly exacted from those whose only business in their quarters is the fulfillment of the precepts of the Prophet. The pilgrims, rich or poor, have no greater enemies than these natives of Arabia,—whom they describe with a cynical sneer, as Jarram, 'highway robbers.' 25

The very name of these Arabicians is a signal of terror to pilgrims. It is on record, that when the leaders of the ceremonies of Arafat are anxious to hurry the worshipping multitude away with all possible haste to the next station, Muzdalifa, no 'cry' more effectually clears the ground than the cry of the near approach of a swarm of Badawis. 26 It is a curious comment upon the often-rummed supremacy of the Islamic religion throughout the continent of Arabia, that a Christian or a Jew quietly visiting the Shrine of the Faith, should, on detection, be instantly slain by the constituted authorities at Makka without the form of trial, while these hereditary foes of the Faithful should be at liberty to traverse even the Sacred Territory, everywhere and at all times, without fear of the reigning power or any of its representatives at the 'Holy Places of the Faith;' 27 and that any such thing as an appeal to the Sultan against the brutalities of these men in his own dominions—even in Makka itself—could elicit from him nothing but a confession of utter helplessness. We submit that such an anomaly as this

23 Palgrave, Central and Eastern Arabia, i. 229 of (Edn. 2nd, Lond. 1866).
24 Burckhardt, Bedouins and Wahabys. i. 5—8, 23, 118, 194, and ii. 3, 7, 23—4, 26, 31, 33—4, 239, 273; Niebuhr, Travels in Arabia, ii. 28—9 (Edn. Heron, Edinb. 1762); Crichton, History of Arabia, i. 123 (Edn. Edinb. 1854); Burckhardt, Arabia, i. 413; Burton, Pilgrimage, ii. 255.
25 This name 'Jarram' is an honourable title among the Badawis, especially among those of them who haunt the territory that lies between Makka and Madina. A man slain in a fara, Burton tells us (Pilgrimage, ii. 101), is said to die jarram, 'a brave'—to die 'game,' in fact,—while the man among whom he dies in his bed is called 'carrion' (faithi). The mother of such a one will exclaim,—'Oh that my son had perished of a cut throat!' And her attendants will suggest, with deference, that such untoward event came of the will of Allah. 26 Burton, Pilgrimage, ii. 334—5.
27 The term is the recognized translation of the word 'Haras'—the designation technically applied to the portion of the country, stretching away from Makka as a centre to various distances ranging severally from forty to about a hundred and forty-five miles in the different directions from the city. The designation was first applied to the locality by the confederation known as the Haras League,—an alliance of the local tribes which was founded there long before the time of the Mahommedan ascendancy.
28 We allude, of course, to Makka and Madina, at both of which places there are certain established officials appointed by the Turkish Government. Strictly speaking, however, the term is applied only to certain localities within the limits of the territory defined in the preceding footnote.
it would be impossible to match in the history of human government. If Christians are
Infidels," what are the Badáws? These men are not regarded by the pilgrims as converts to Islám; and so far from its being a fact, as stated
by Dr. Prideaux, that the ancient names of the months were 'totally abolished' under the influence of Muhammed's ascendency, the names
given them by Kiláb, have not, even down to this late period, been accepted by all the Arabs.
This statement is fully borne out by so high an authority as Burckhardt, who gives a list of
the names which these indomitable sons of the soil still give to the months.39
Almost the only trace of the ascendency of the Prophet among them is to be found in the fact that his name is occasionally found among them as a proper name of male persons: but for the most part, even the names they give to their children are distinctly names embodying allusion to the
gods and goddessess of the pre-Islamic times.40
The names given by Kiláb to the months, having been (as they were) left unaltered by Muhammed, came into use, of course, wherever his
pretensions were fully admitted and his institutes adopted. But it is difficult to break up and revolutionise the inamorial customs of a host of segregated and hostile races devoted to wild and wandering habits; and such difficulty must
ever be enhanced by the gross ignorance of the Arabs. It is, therefore, not to be wondered at
that Muhammed has failed, even down to the present moment, to revolutionise such a thing as
the nomenclature of the calendar in the living of these wild and untutored desert men. So
foible, indeed, is the hold which his religion and his authority have among the tribes, that a faith-
ful eye-witness records that one of the tribes deliberately disregard the obligatory nature of the
four sacred months,—though the observance of this pre-Islamic usage was con-

firmed by Muhammed.32

Notwithstanding the fact that the Prophet reaffirmed the 'sacred-
ness' of these months,—during which, before his time, peace became a religious duty recognized by all Arabs,—the people of this tribe have allowed the observance to fall into disuse; if indeed they ever recognized it at all. This
same authority asserts that the members of this tribe attack their enemies even in the 'holy
month' of Ramazán,33—a month whose immunity is distinctly owing to the teachings of the author
of the Qurán.34 To call such persons Muhammedans—to assert that they are converts to the
Faith of the Prophet—is but to ensure contradiction, and awaken sentiments of disgust in the
mind of any intelligent Muhammadan. There is evidence in overwhelming abundance in the
pages of dispassionate travellers, to show that the chief perils of pilgrims to the Shrine of the
Faith during those months which the Prophet held to be 'sacred' arise from the denizens of the
country themselves alone; and the evidence shows that the Arab tribes, disregarding entirely
the religion of the pilgrims, and the self-denying and most costly errand on which they travel,
consider the pilgrimage season their great opportunity for plunder.35 One of these travellers
says,—Muhammad and his followers conquered only the more civilized Badáws; and
there is even to this day little or no religion amongst the wild people, except those on the
coast or in the vicinity of cities. The Faith of the Badáws comes from Islám, whose hold is
weak; but his customs and institutions, the growth of his climate, his nature and his wants
are still those of his ancestors, cherished ere Makka had sent forth a Prophet, and likely to
survive the day when every vestige of the Ka'aba shall have disappeared. Of this nature are the Hikzikas' pagan oaths,36 their heathenish
names,37 their ordeal of licking red-hot iron, their sallah (or scarification,—proof of manliness),
their blood revenge, their eating carrion (i.e. the body of an animal killed without the usual
formula),38 and their lending their wives to

Evidence of Prophecy, 517; Burton, Pilgrimage, iii. 328
(Ed. 1st, Lond. 1864); Burckhardt, Bedouins and
Wahabys, I, 71, 77, 118, 127, and II, 9, 25, 39; Miller,
History of Muhammadanism, 452 (Ed. 2nd, Lond., 1818).

These pieces contain but a few samples of the evidence to which we allude.

39 That is to say, malodictions and invocations in which are embodied the names of the deities supposed to have been demolished by Islám.

30 Such as 'Abdu-l-Shams (servant of the Sun), 'Abdu-l-
Mandt, 'Abdu'll-Uzza, and many others common still among the Arabs, though they embody (as do these two) the names of the fetishes.

31 On slaying an animal for food, the butcher recites the formula:—Bismillah, Aláhu akbar, ' In the Name of Allah,—Allah is Supreme!' To partake unwittingly of meat slain without the recital of this formula, is considered tantamount to apostasy from the Faith.
strangers. All these I hold to be remnants of some old creed; nor should I despair of finding among the Badawis bordering upon the great desert some lingering system of idolatry. This is plain language,—considering that it is from the pen of a traveller who never was suspected of a bigoted aversion to the religion of the Prophet. And this dispassionate eye-witness elsewhere records that there are even among the Badawis of the Hijaz itself, young men who, as an introduction to life, risk everything in order to plunder a pilgrim. They care but little for the value of the things stolen: the glory of the exploit consists in the act of robbing a pilgrim.

It surely will not be pretended by any sensible man, that such persons are to be counted among the trophies of the Prophet? He was wont to say,—A fast of but one day in a sacred month is better than a fast of thirty days in another month; and a fast of but one day in Ramazán is more meritorious than a fast of thirty days in a sacred month. All these months, Ramazán included, are (as has been shown) disregarded by the Arabs. Yet the great importance of the whole matter of these months, in the judgment of the founder of the Faith, would, we submit, scarcely have been more forcibly taught, and placed in juxtaposition with the unceasing contempt shown towards them and towards the religious observances, the performance of which they were intended to secure, by the innumerable tribes who form the permanent population of the land, the tradition brings to a point the view we have sought to establish,—that the genuine sons of the soil, the men who for all intents and purposes are the real masters or Arabia and even of the Sacred Territory itself, are not Muhammadans at all.

SOME HINTS ON LOOKING FOR MEGALITHIC MONUMENTS AND STONE IMPLEMENTS IN INDIA.

Before entering on their career in Asia, few Indian officials have had time or opportunity to study the stone circles, monoliths, and stone implements in England, Brittany, and the Channel Islands, and therefore, should they meet with such monuments or stones in India, they are apt to not recognize them; or, if they do so, to fail to understand the interest and importance which antiquarians in Europe would attach to any observations they might make regarding them, provided they take note of certain points to which my attention was drawn by Captain Lukis, who assisted his late father, the well-known archaeologist, in making excavations in the Channel Islands and Brittany some years ago, and in studying the inscribed and cup-marked stones of the sepulchral and ceremonial structures of Brittany and Guernsey.

Stone structures may be of six kinds:
I. Sepulchral receptacles, i.e. chambers and cists.
II. Monoliths, or stone pillars.
III. Avenues of monoliths, composed of two or more rows of pillars.
IV. Monoliths in a single row.
V. Circles of monoliths.
VI. Small circular enclosures of stone and earth having a small low entrance or doorway, i.e. hut circles, or dwellings.

It is with regard to the sepulchral monuments that hints are specially necessary.

In the first place the observer should learn to distinguish between a chamber and a cist. A chamber has three sides enclosed by slabs set on end, or by a walling of dry masonry, or by a mingling of both, the fourth being open for use (when required). Sometimes a passage or covered way is attached. A cist has all its four sides closed, and is not intended to be opened again for other interments. The former may therefore be regarded as a family vault; the latter as a grave for one individual. The covering of either consists of flat slabs laid across, or forming a rude arched roof.

The orientation of both chambers and cists should be noted by a pocket compass.

It should also be stated, in any account which may be given of megalithic monuments, whether a mound of small stones or earth covered the chambers or cists, or whether any vestige of such mound be observable.

33 The reader will find some account of this strange custom in Burchardt, Arabia, i. 378; and Pischel, Races of Men, 299. (See also Robertson Smith, Kinship and marriage in Early Arabia, passim. — En.)
34 Burton, Pilgrimage, ii. 100.
35 Ibid. 353.
36 It is told of the Lahoba, a sect of the Auf tribe near Bahîyâ, that a girl will refuse even her cousin, unless (in the absence of other opportunities) he has plundered some article from the pilgrim caravan in the very front of the Daba's links. Dated fifty years ago, the delinquent would have been impaled; now he escapes with a mere rib-roasting. Fear of the blood-feud, and the certainty of a shut road to future travelers, prevent the Turks from attempting to exact reprisals; and they conceal their weakness by pretending that the Sultan has hesitated to wage a war of extermination with the brigands who occupy the 'Holy-land of the Faith!' The utility of such a pretence is manifest enough, when we remember that no army, however well equipped,—not even the armies of the Greeks and Romans in their best days,—was ever able to conquer the Badawis in their own Deserts. — Burton, Pilgrimage, ii. 101.
Careful search should be made for cup-markings or other sculptures on the stones of the various monuments, as well as upon rocks or exposed upright stones in their neighbourhood.

Inquiry should be made whether human remains, manufactured stone, bone, or other instruments and ornaments, or clay vessels, or bronze or iron fragments, have been found in the chambers or cists.

If cup-markings are present, it is very desirable to know on which face of the stone they exist, i.e. on the outer, or the inner surface. It is also most important in all cases of cup-markings that the arrangement should be carefully noted.

If possible, plans, elevations, and sections of the monuments drawn to scale, or approximate measures, should be given.

With regard to stone implements, it is of great interest and importance to the ethnological student to be informed whether any specimens discovered in India present any special peculiarities of form; whether they are grooved or plain, rough or polished, and whether they bear any signs of having been worked up with a metal tool or of having been simply chipped to the required shape and ground down to a smooth surface by friction; and last, but not least, of what kind of stone they consist. Should they consist of a kind of stone not found in the part of the country where they are discovered, then the nearest known locality of such stone should be stated. A slight knowledge of mineralogy would enable the observer to supply this information. This point, if insisted upon, might assist in determining the course of the former migrations of various races; for instance, stone implements have been found in Brittany and in the Channel Islands made of fibrolite, a stone known not to exist nearer to these places than Hungary. Others again have been discovered of jadeite, a stone coming from the east. Such implements were evidently much prized objects. They are rare in comparison with those made of more ordinary kinds of stone, show signs of more careful workmanship, and possess a considerable degree of polish. Time was, perhaps, when they were their owners' most cherished possessions. If we knew their former history what would it not reveal to us?

H. G. M. MURRAY-AYNSLEY.

NOTES ON THE EARLY HISTORY OF PEGU:
BY THE LATE SIR ARTHUR PHAYRE.

In looking over some old letters I have found two or three from Sir Arthur Phayre, whose loss we have all deplored.

The following, which I now transcribe, contains some inquiries to which I was unable to reply so fully as I could have wished at the time. They are still, however, not devoid of interest, particularly the name Su-bein-ga or Su-bein-na, which I cannot identify. I had an opportunity of noticing the general tenor of his note, and of some similar remarks subsequently received, in my contribution to the International Numismata Orientalia, pp. 109-10, 134-35.

I take this opportunity of recording my sincere regard for my departed friend, and my appreciation of the excellent service he has rendered to Oriental Archæology.

WALTER ELLIOT.

MY DEAR ELLIOT,

In comparing your Numismatic Gleanings with statements in the early history of Pegu, I find many points which illustrate the received accounts of settlements from Telingana on the coast of Pegu in the early Hindu times and afterwards when the Buddhists sent Missionaries. At the same time the Pegu historians sometimes evidently "make up" stories. For instance, they say Pegu city was founded by the sons of the king of Vijayanagar. Now, as Vijayanagar was not founded until the 14th century, and Pegu city was founded A.D. 573, it is evident this is a "make up." But do you think there was an ancient Vijayanagar? If so, at what period? The Pegu histories speak of people coming to Pegu from the country of Ka-ra-na-ka, and the city of Su-bein-ga, or Su-bein-na in that country. Is there such a word now in use for the North Carnatic, or what was the ancient name?

The people of Pegu call the Telinga people now in the country "Ka-lay." What can this be from? The word Chulya is frequently applied to the native seamen from Coringa, but this is more by the Mahommedans than by the Burmese or Talingas. Is this word still used about Coringa and Rajamahendri?

In Burma the system of weights has originally come from Telingana, though no doubt much altered now. The eise in use is 3½ pounds Avoirdupois. Does this correspond in name and weight with that still in use in any district? The ticki, so called by Europeans, the Burmese call kydi. It is about 250 grams weight. Has this word a Telugu origin? I feel I am giving you a deal of trouble. There is one more word I will ask about. European broadcloth is called the same substance as that of which the implements found in the Channel Islands and at Carnac in Brittany were made.
CURIOSITIES OF INDIAN LITERATURE.

LAKHIMA THAKURANI.

Lakhima Thakurani was a famous poetess of Mithila. I have not been able to obtain any particulars as to when she lived. Numerous stories are told of her learning. The following are samples:—When her daughter was of age to be sent to her husband, she wrote the following letter to the young Pandit to whom the girl was married. The text in this is written as it was given me, but is probably corrupt:—

اهنها نسبت نستدل وادمحميد نسبت نامه
سیا قصد کرده نسبت نامه نسبت نامه
تیهکدیا کنار نسبت نامه نسبت نامه

To understand the above, it is necessary to know that the numbers refer to the signs of the zodiac, which are as follows:—

1. नेव 7. तुतु
2. रूप 8. इच्छक
3. चित्र 9. धनु
4. कर 10. मकर
5. बिल 11. कप"र
6. कर 12. मून

The translation is,—'Attacked with the severe onslaught of the God of Love is she. Distraught like a crab or a fish in a dry place is she. O thou bull-minded one!—the damsel, round-formed as a water jar, with arched eyebrows, (the destined wife) of thou who art like a lion amongst kings, and who is not (gods) like a shopkeeper's wife who plies the scales. She feels pain like that of a scorpion bite. Quickly let the result of married life relieve her.'

In accordance with Lakhima Thakurani's letter, the young Brahman came, and after the usual ceremonies, went with his wife into the bridal chamber. As, however, she was very young and tender he abstained from exercising his marital rights. The bride told her mother, who remonstrated with her son-in-law as follows:—

तर्क वाक्य उत्तमवादमानिव उत्तमवादमानिव
काव्यशिल्प उत्तमवादमानिव उत्तमवादमानिव
लक्ष्मी देवी उत्तमवादमानिव उत्तमवादमानिव

'Be not afraid that the damsel is too slender. Has a flower-stalk ever been seen to be broken by the weight of a bee? Therefore in private must she be passionately given pangs. A piece of sugarcane (when pressed) gives us gently much sweetness.'

The son-in-law followed her advice, and next morning the following conversation took place between mother and daughter:—

Daughter.—माता किसे न यायम सब्ेरे
Lakhima.—कामायत हुसन पर
Daughter.—माता तप निनेणी नन्दकुले बड़ो है नी मौन पैगान (से दस्त्री)
Lakhima.—अज्ञातवादी किरति न योज्याते भोज्याते
कर्तना रत्नाकार समाता शान्तिविभूषिता

'O Mother, I will not retire again to the bridal chamber.'

'Why not, my moon-faced one?'

'Your son-in-law passionately gives me pangs, even when bound in my arms. He burns me as if it were with live coals, and I am torn to pieces with his nails and teeth; of what love-demon am I the sport, and why does he play with me like a tiger?'

In the two last sets of verses मदलिवान and शर्सुन-विभूषिता are puns on the names of the metres.

A Pandit once came to try Lakhima Thakurani's learning. She heard this, and disguising herself as a water-girl, went to meet him. The Pandit addressed her as follows:—

उन ने मह विद्याते विद्याते विद्याते निति विद्याते
अन्य विद्याते विद्याते विद्याते निति विद्याते
विद्याते निति विद्याते निति विद्याते

'Why are you gazing at me, pitcher on hips, with languid eyes? Gaze on some other man suited for you. I touch not a fair one whose hip is marked with the pitcher.'

To this piece of impertinence she replied:—

सरस्वती नाथाय विद्वानाय दासीयाते
हाम श्रद्धाया महान परिवर्त्ततामाते
सरस्वती देवी विनिनिधान अयुक्ताते
सरस्वती नाथाय विद्वानाय दासीयाते

'Tfaith, I tell thee, who art smitten by the arrow of love, that I am not so minded towards thee. I could not find my slave. You are like him, and I was merely trying to find out if you were he or not?'

Then the Pandit saw that she was Lakhima, and admitted himself conquered.
LAKHIMA THAKURANI AND THE BIKAUN.

In Mithilā, the men of a certain high sept of Brāhmaṇas are in the habit of selling their daughters and sisters in marriage to Brāhmaṇas of lower caste, and of marrying girls of lower caste on receipt of a consideration. This sept is called from its practices the sept of the ṛṣayāna or mercenary Brāhmaṇas. The practice is much reproved by Brāhmaṇas of other septs. Lakhimā Thakurāṇi once noted a marriage celebrated with great pomp. It was one of these Bikauḍas, who had sold his sister in marriage to a man of low caste. She thereupon composed the following verse on the subject which has since been famous in Mithilā.—

चंतरक ् तुरंग परिणस्ततः
पिंपी पारमानन्यायस: ।
मरित के गुरुभासविषयी
अवैमानानन्यविवरणम् ॥

Freely translated.—'You may make your spirited horses prance, and with them trample on the town-folk. But we all know that your wealth is not got by your own exertions but by the sale of your sister's person.'

G. A. GRISWOLD.

THE 'IYAR-I-DANISH.

Sir,—With reference to the remark in Vol. XIV. p. 264 ante, that the 'Iyār-i-Dănish of Abu’l-Fazl has never been edited, I would draw attention to the fact that lithographed copies of this book in Persian may be easily obtained in Bombay, Calcutta, Delhi, Lucknow, &c., as it is a very popular work, and is often preferred to its prototype the Awdr-i-Suhaili, which, although more elegant, is more difficult.

E. R.

PROTAP CHANDRA ROY’S MAHABHARATA.

We are glad to observe that H. H. the Rajā of Faridkot has granted Rs. 500 towards Bābā Protap Chandra Roy’s excellent and colossal undertaking the translation of the Mahābhārata. We trust that this by no means isolated instance of H. H.’s munificence towards Indian literature will lead others of his rank to give similar aid.

An appeal, however, issued with Part 24, shows that the publisher is still hampered by an insufficiency of funds, and is obliged to ask for further pecuniary assistance in carrying on his patriotic and laudable undertaking. We confidently hope that his appeal will not be made in vain.

Having finished the lengthy Vana-Pārva, the publisher has now issued Parts 25, 26, and 27, carrying us through the Vīrata-Pārva, and as far as Section 7 of the Udyoga-Pārva. These Parts show an improvement in both the style of printing and the quality of the paper, and thus indicate that the publisher is neglecting nothing that may tend to attract support to his work.

BOOK NOTICES.

The object of this series of little books, well printed, prettily bound in red cloth, and sold at a very cheap rate, is to make not only the more popular books of the “higher literature,” but the less-known works of English prose, accessible to every purse. “It is clear,” says the Editor of the series, “that there are many books of surpassing interest which are hidden away from the everyday reader, but which, by being brought again to light by sympathetic hands, having the right word spoken to them in touch with the time, can hardly fail to gain new popular vogue.” A happy choice has fallen upon the well-known and most important romance of King Arthur as a commencement.

In reproducing Sir Thomas Malory’s celebrated work, the Editor has closely followed Caxton’s original text, so far as it is consistent with the avowedly modernized form in which it is now put before the reader. Still this has entailed a certain amount of cutting about, which the student will always have to keep in mind if he uses this edition.

In accordance with the general idea of the series, an introduction is provided explanatory of the original, and though this gives us little that is new it may generally be regarded as ‘safe’ and useful. It is a far cry from King Arthur to the lucrations which Thoreau, named after the scene of his self-chosen solitude for two years and two months, “on the shore of Walden Pond, in Concord, Massachusetts.” As a work of pure literature, no doubt, the work interests those who make that the pursuit of their lives, and the introduction is as sympathetic as a reader could wish, especially if he delight in the kind of panūm which Thoreau so liberally furnishes.

On the whole, Editor and Publisher are both to be congratulated on the first two volumes of their venture.

This is a translation of that very celebrated antiquarian novel, Flaubert’s Salammbo. Though
in fact a pure novel, the work has long been noted for containing a mine of archaeological lore regarding Carthage and the Carthaginians, as the result of the most laborious and painstaking researches extended over several years. The correctness of Flaubert’s knowledge of details was several times assailed by French critics, but he always turned round upon them and showed that he was prepared with authority for every statement, and that he well knew what the real facts were whenever he took a liberty with history for literary effect. The story of Salammbo, daughter of Hamilcar Barca and sister of Hamilcar, arises out of the struggle between the Carthaginians and the mercenaries they so ill-treated during the period separating the Second from the First Punic War. Though hardly coming within the scope of this Journal, the book is worth study as an accurate picture of life closely connected with matters Oriental. The translator may be fairly congratulated on successfully accomplishing the difficult task of rendering a work into English which has hitherto been held to be untranslatable.

The full title-page of this now popular book—
"Myths and Myth-makers, Old tales and Superstitions interpreted by Comparative Mythology"—has an ominous sound about it, especially since the whole method of the philological school of comparative mythologists has become so much discredited of late. Nor is confidence restored by the statement in the preface: "I have not attempted to review otherwise than incidentally the works of Grämm, Müller, Kühn, Bréal, Dastert and Taylor; nor can I pretend to have added anything of consequence, save now and then some bit of explanatory comment to the results obtained by the labour of these scholars, but it has rather been my aim to present these results in such a way as to awaken general interest in them." Now it is the writings of Professors Max Müller and Kühn, as the chief exponents of what is known as the philological theory of comparative mythology, that are so very unsafe, and the ideas that the general reader will imbibe, under their guidance, regarding the genesis and life of folklore, are not likely become any safer by undergoing the process of being made popular.

The ‘Origia of Folklore’ is the title of the first subject which the author discusses, and a glance over this will sufficiently inform us as to the line of argument he has pursued and the manner in which he proposes to trace Folklore to its source. With him ‘Folklore’ and ‘Folk-tale’ are apparently synonymous, and folktales are the débris of native myths. Everything is traceable to a myth about the sun or the moon or the elements. Mr. Fiske is in fact, a follower of Prof. Max Müller, and believes that the names of the actors and heroes in legends, myths and folktales, enclose the secret of their origin. To our mind this is an exceedingly unsafe criterion, and dependent at the best on etymologies, which are, to say the least, doubtful and far from being conclusive. To limit, in the first place, folklore to folktales forces us to treat such matters as proverbs, customs, and beliefs, as the débris of folktales, just as Mr. Fiske would treat folktales as the débris of myths, and myths as the outcome of “an unlimited capacity for believing and fancying.” Now, to our thinking, folktales are only a portion of folklore, and to seek therefore a special origin for folktales apart from the rest of folklore is to treat the subject piecemeal—always a most unsafe proceeding. The rest of the theory, besides being capable of proof only by a process that is indecisive, is based on a notion that has not yet been proved to be correct, viz., that the power of imagination of the ancients was unlimited. Why should the untrained man of antiquity be held to be endowed with a finer fancy than his modern cultivated descendant? The fact is, that the cultured imagination of the modern student, fascinated by the beauty that he puts into an ancient myth, has led him to lend his savage forefathers a mental capacity they never could have possessed. The “Max-Müllerian” theory contains indeed three fatal errors: it treats a part of the subject as the whole of it; it rests upon an uncertain and highly disputable basis; and it invests the savage with mental capacities of civilized and indeed cultivated man.

If the cravings for ascertained truth, now so strong in the scientific student, are to be satisfied, some other plan for explaining folklore must be adopted, and Comparative Mythology, after a fair trial, may be looked upon as played out. Mr. Fiske says that the once fashionable theory of Euhemeros is dead beyond recovery, and he must forgive us for saying that the days of its successor are already numbered, and that before long the Philological Theory of Comparative Mythology will itself be counted as among the slain.

Having so far expressed ourselves as to the general tenor of Mr. Fiske’s work, and our ideas as to the value of the theory to which he is devoted, we have nothing but admiration for the manner in which he has put it before the reader. Whether his conclusions are warrantable or not, his ideas are clearly expressed, and each portion of his book put together with a skill that has won its reward in the popularity of his series of short essays.
DISCOURSIVE CONTRIBUTIONS TOWARDS THE COMPARATIVE STUDY
OF ASIATIC SYMBOLISM.

VIII.

The Evil Eye and Allied Nations.

One of the old Hindu legends connected with 
Ganesha, the elephant-headed god, the son 
of Siva and his wife Parvati, is that as soon as he 
was born, his parents invited all the other gods 
and goddesses to come and see him, but by an 
unlucky accident they omitted or forgot to 
invite Sani, who appeared on the scene in a 
terrible rage, and with one glance of his eye 
caused the child’s head to drop off. The other 
gods rushed out in horror and in their despair 
cut off the head of an elephant, which they 
found sleeping close by with its head towards 
the north. This they clapped on to the 
infant’s body before its mother had time to see 
and prevent the transformation. This faith 
in the efficacy of the Evil Eye is fully believed 
in India to the present day.

It is also strong in most parts of the world, 
and still lingers amongst the peasantry in some 
counties in England, where there is a belief in 
‘Lucky Stones,’ i.e. self-born ones. A 
correspondent of the English Notes and Queries 
relates how, on entering a house in a Yorkshire 
village, he observed a ponderous necklace of 
them hanging against the wall. On inquiring 
about them, he found the good woman of 
the house indisposed to give him any explanation 
regarding them, but he presently elicited 
from her that such stones had the credit 
of preserving the house and its inhabitants 
from the Evil Eye.

“Why,” said he, “surely you don’t believe in 
witches now-a-days?”

“No,” she replied, “I don’t say ‘at I do, 
but certainly in former times there was wizards 
and hizzards, and them sort o’ things.”

“Well,” the gentleman rejoined, “but surely 
you don’t think there are any now?”

“No,” I don’t say ’at there are, but I do 
believe in a Y evil Eye.”

Again, a peculiar race of people exists on 
the Island of Guernsey, who are accounted witches 
and are thought to have the power of casing 
the Evil Eye. As far as I have been hitherto

\[1 I am doubtful whether this is the name of the clan, 
or of certain families only. It was a point on which I \]

could not obtain satisfactory information.
the meat had become frozen; but no doubt the servants of both families preferred to adhere to the theory that the provisions had been bewitched.

So far we have been dealing with the Evil Eye properly so called, but the modern Hindustānī word nazar for a mischief-glance is not quite equivalent to the English expression The Evil Eye, as it is much more comprehensive and implies the ill effects which may result from the gaze of any one, even of the most benevolent and affectionately disposed, if that gaze has induced in the mind of the gazer complete satisfaction at the object observed, whether animate or inanimate.® Evil intention is here left out of the question, and it is for this reason that Hindu mothers do not like any one (Europeans in particular) to admire their little ones even openly, nor to look at them when they are eating, lest they should cast the Evil Eye on them. This view of the Evil Eye is not confined to India, for in certain parts of Greece if a child is admired, it causes its mother the greatest consternation, and there mothers frequently decorate their infants’ caps with coins or other bright ornaments to distract attention from the child to these objects; an idea of which more anon. An expression of approval or admiration is met with the treaty “Don’t give it the Evil Eye,” and the mother immediately points with two fingers at the person or object in question, accompanying the gesture with the word for garlic, as garlic is deemed a sovereign antidote against this malign power: the origin of which notion is probably to be found in an idea prevalent both in parts of India and in Spain to a very great extent, that garlic and onions are preservatives against fever.®

Another development of the notion that the Evil Eye is inherent in certain people is to be found in Smyrna, where the lower classes believe it very unlucky to be looked at by a person with grey eyes.

In India the black or dark blue colours are frequently considered as protective against nazar. Thus in Upper Kunāwar, in the Satlaj Valley, it is quite a common occurrence—I may say almost the usual thing,—for a mother each morning to make a black mark on her infant’s forehead and nose with a bit of burnt stick, in order to preserve it from evil influences during the day. On the principle above explained, if a man be blind of one eye, or has any other optical defect, he is believed to be likely to cast nazar should he meet any one with a particularly fine pair of eyes, and for this reason many of the natives of India are said to put kājal (lampblack) on their eyelids, or a piece of white thread hanging downwards, anything in short, to distract the attention of others, and avoid rousing feelings of covetousness in their minds. They also hold that if a person’s eyes are encircled with kājal they are themselves also incapable of casting nazar, and deem it a pretty thing for a woman thus to adorn herself, for in this case she can neither receive the ill effects of nazar nor impart them to others.®

The custom of using colours to distract attention from the thing to be protected is naturally not confined to black, and in other parts of India the natives sometimes paint all kinds of strange subjects in gaudy colours on the exterior of their houses, so that should any unlucky glance be turned towards their dwelling, it may be attracted by these representations and rest upon them, rather than on the house itself or its inmates. Similarly, we find Madame Carla Serena in her interesting work Seule dans les Steppes which appeared in 1883, saying that the Khirghiz have a great fear of the Evil Eye, and ornament the heads of their beasts with bright-coloured ribbons to frighten it away. She speaks of having seen in her wanderings whole troops of camels thus decorated.

A mixture of all the above notion in one person once attracted my attention. In Corfu in 1883, I met a Christian woman from Alexandria, whose nationality was doubtful, but she spoke Italian fairly well, and I fancy she had a mixture of European and Egyptian blood in her veins. She was carrying an infant of about eight months old in her arms, whose waist was encircled with strings of coral to which were attached a silver whistle and bells, a boar’s task, coral charms like those used at Naples against the Evil Eye, a piece of mother-of-pearl order, immediately call out “pepper!” thinking by this means to avert any evil consequences from themselves.

® [See Pañjab Notes and Queries, Vol. I. passim.—Ed.]

VARIOUS FORMS OF A TALISMAN STILL IN USE AT NAPLES.
A BROOCH OF THE BRONZE AGE FROM NORWAY.

A BROOCH OF THE NORWEGIAN TYPE FROM A GRAVE NEAR BREGENZ, IN SWITZERLAND.
set in silver on which was engraved the image of some saint, and a small silk bag. I inquired the contents of this, and was told that within it was salt, a piece of charcoal, a nail, and a piece of garlic. And lastly in the centre of the child's forehead was an object resembling a dark blue wafer, which the mother said was to protect it from the Evil Eye. As we have already seen in this heterogeneous collection of articles, the black and the blue colour and the nail are connected with Asiatic superstitions, and in Greece, garlic is regarded as a preservative against evil influences.

Among other methods of counteracting nanar I may mention that in Calcutta the natives hold that a portion of all the food they buy in the market should be thrown into the fire to avert the Evil Eye. Muhammadians, too, are said to be, if possible, more fearful about nanar than Hindûs, and often furnish the latter with texts from the Qurûn to be used as amulets in order to keep it off.

In this connection I could draw attention here to a peculiar set of amulets used in Naples, which appear to have arisen from the notion of the Evil Eye, and to serve in some degree to connect the East and the West. There seems little doubt that many of the customs and superstitions still existing in Naples were brought to that part of Italy by the Greek colonists, who settled at Cumæ and elsewhere, and whose ancestors again, in remote times, were probably some of the earliest wanderers from Central Asia to Europe. At the present day the Neapolitans, in customs, at any rate, as I will now show, approach Eastern types; and they would seem to do so in character as well; for the higher classes are clever and acute, but they are deficient in perseverance, develop early, and lack accuracy and method in business matters, and also in small things; while the lower classes are deeply imbued with superstition of an Oriental kind.

These singular amulets which bear decided traces of Asiatic Symbolism are still in use in Naples, and it is highly probable that the original signification of their various parts is unknown to those who now adopt them. They are figured in Plate XVII. Fig. 5 differs from the others in that it has the lotus-flower,—a favourite Hindu emblem on the left; while on the extreme right is a fire-altar with smoke issuing from it. Figs. 3 and 4 are very old and worn specimens, and fig. 1 is a Janara or Moon. Fig. 2 was sent to the Abbate Bastiani (no mean authority on points of Archaeology) for opinion, and I give here the result of his inquiries and researches, which I have translated from the original Italian MS. He begins by saying that he showed "this little silver article to a great many people in Naples; some said immediately that it was a charm against the jettatura (fascination), and others again that it was the sign of some sect. The first named, who were for the most part people of the lowest classes, declared that superstitions mothers were in the habit of hanging such amulets on their children to save them from ill fortune, but the latter, people of some intelligence, held that such symbols belonged to the freemasons." He himself seems to think that there may be some accidental masonic figure in this mysterious amulet, but nothing more, and he believes it "to be an object which illustrates the customs of the Neapolitan people; especially those of the women of the lowest class." He considers it to consist of several parts, which we will now proceed to examine in detail, following the Abbate's own words:

"(1) We have a serpent on one side and a tree on the other; the trunk of the tree and the tail of the serpent are united, though they remain distinct at the lower part. (2) Beneath the head of the serpent rests the handle or top of a key. (3) Between the tree and the serpent rises an arm; the hand, which is closed, holds a horn, within which is a half-moon overshadowing the whole amulet; perhaps, too, the little circle at its base for hanging it on to the person is not without its symbolical meaning. We have thus enumerated all the parts of this amulet, which are seven in number; viz. a serpent, a tree, a key, a hand, a horn, a half disc, and a circle; but possibly we may add two more to these; i.e. the two spaces in the form of a heart, which strike us when we carefully consider the whole.

"Let us now discuss the signification of these nine signs or symbols, and try to discover the precise meaning of them. The man who cut

---

8 Salt and iron still have their significance with the English.
and fashioned this amulet did not know it perhaps, neither do those who hang it round their children, nor the person who wears it; but all three have thought by its means to drive away something from themselves,—to make this charm a sort of lightning rod against certain evil influences—and all three followed a vague and superstitious tradition: they may often in their own minds have given a poetical meaning to this object. The archaeologist with his spectacles on nose, and his big books of yellow parchment before him, may hit upon and theorize about mysterious doctrines, but will that suffice the curious searcher after truth? Will the archaeologist succeed in bringing to light the meaning of the strange fancies, and will he be quite certain of his facts? On the whole, he will only be able to give us such knowledge as lies in following out the order of the ideas which we find in this amulet. Thus, the serpent and the tree recall the history of the human race, and explain the origin of evil, which we ought to avoid and against which we ought to exercise our free will, abiding in virtue by the force of reason and determination; for even animals are maintained by their instincts in the order assigned to them. According to heathen ideas, this fixed principle was not sufficient; some presiding power was necessary; a kind of mysterious grace, which is indicated by the arm, and the hand holding a horn, whence it is easy and natural to affirm that Bonus Eventus is here signified. He was the youthful god, pleasing to look at, folded in his mantle, and not in a cunningly made and complicated coat of mail, and depicted in the act of holding a horn in his right hand. He goes on to say “with regard to the serpent, what good fortune is connected with it! It is a symbol of prudence, and also of victory. It follows from these two attributes that we have here the history of the transformation of our moral world, in which the serpent was a god, and man was its victim.”

11 Guile nauph the name of prudence;

11 [To a Christian only. If the amulet is of Eastern origin the significance would be very different. — Ed.]
12 Still following the Abbate Bastiani’s argument it should be remembered.
13 The Abbate imagines that it is on this account “the Neapolitans wear a little ornament in form of a horn on their watch-chains to drive away, as they think, the jetasura or the Evil Eye, and that “they are in the habit of stretching out a forefinger.”
14 [Is not all this argument based on Jewish and Christian notions? — Ed.]
15 [This is not borne out by the study of primitive religions.—Ed.]
16 When a Neapolitan woman belonging to the lower classes is angry with another, she will call her a janara (a witch).
pitate the gods, were called novendiales because they lasted nine days. Is it not in this sense that we (Roman) Catholics have our novenas in which we glorify God, the all powerful and trine during nine days? And is not nine the number of the orders of spiritual angels who incessantly sing in Heaven before the Trinity?"

I have faithfully transcribed the Abbate’s quaint conceits regarding this amulet, though on the whole they do not seem to throw much light on the subject. During a 25 years’ residence in Naples he had never before chanced to see this little charm; even now, he does not enlighten us as to its name, but styles it a fascino, or charm. It was only after some searching and many inquiries in the quarter of Naples called Old Naples, that I was able to hunt up the various forms given on Plate XVII. The people, at first, seemed ashamed of owning that they held such a superstition, but after several visits and much questioning, I elicited from them what I believe to be the true name for these little silver ornaments; viz., cinerula, top or head of rue. The charm is bound over the heart of a newly born child, thence, most probably, its name.

Whatever be the value of the Abbate’s opinions as to the meaning of the amulet, he has struck a key note in alluding to the custom of strewing rue round the couch of a woman and her newly born infant and the hanging of this charm on the child. We have here a distinct connection between the customs of the East and the West. In India rue is in various ways a charm against evil, and when describing a native wedding in that country, Colebrooke says, "The bridegroom goes in procession to the house where the bride’s father resides, and is there welcomed as a guest. The bride is given to him by her father in the form usual at every solemn donation, and their hands are bound together with grass. He clothes the bride with an upper and better garment; the skirts of her mantle and of his are tied together. The

13 The wintry Ddónté, one of the farther summits of the Pindos range in Albania.
14 This is a very dangerous derivation. Although the word "Aryan" is really Aria, the derivation of ariolus, &c. is exceedingly doubtful. Ariosus, &c. should be harius, the root of which more than probably, like that of the kindred words harpios, harpe, karpo, &c., lies in hiru, the intestine. — En.
15 A boss of gold worn upon the neck by the children of free-born Romans to distinguish them from those of freedmen, who wore leather ones.
16 It is always unsafe to theorize upon the meaning of charms fashioned and originated by the humble and ignorant as if they were the work of highly educated and intelligent minds. It is a much safer course to seek for natural and very mundane origins for such things. These incantations appear to be mere theory and to attribute to Christian ideas the origin of objects supposed to have a pre-Christian descent. These must he taken for what they may be worth. — Ed.
17 Specimens of these charms are in the possession of Dr. E. B. Tylor, F.R.S., at Oxford, who has had them several years. They also came direct from Naples. — Ed.
bridegroom makes an oblation to fire, and the bride drops rue upon it as an oblation. Compare this with the use of rue in England. According to Miller, rue was anciently named in English "Herb Grace," or "Herb of Grace," and Warburton says it had the latter name from its having been used in exorcisms, but that "when Ophelia in Hamlet says to the Queen 'There's rue for you and here's some for me, we may call it herb o' grace o' Sundays,' she does not refer to this plant being used for exorcisms as performed in Churches on Sundays, but means only, that the Queen may, with peculiar propriety, on Sundays, when she solicits pardon for that crime which she has so much occasion to rue and repent of, call her rue, 'herb of grace.' In Burke's Romance of the Forum, it is said that during the trial of Mrs. Manning "the bench of the dock was, according to custom, strewed with rue." This practice has now been discontinued at the Old Bailey, and in place of the herbs a small bouquet of flowers is placed on the judge's desk from April to October. In the English Notes and Queries, when referring to the use of rue at the Old Bailey we read that in Laurence's Life of Fielding it is stated that this custom arose after a contagious disease which had been engendered by the foul atmosphere there upwards of a hundred years ago, and in Bland's Popular Antiquities, it is mentioned "that rue was hung about the neck as an amulet against witchcraft in Aristotle's time." Another reason given for this custom is that an assize in the eighteenth century gaol fever carried off judge, jury, and prisoners, and that since then it had been used as a disinfectant.

We will now endeavour to find out the meaning of the jettatura, (fascination or charm), and we shall perhaps be led to see that the ideas connected with it once more serve to show the close alliance that exists between the East and the West. In Naples, the favourite jettatura is the cornaisole, a tiny bull's horn of gold, silver, or coral, which is universally worn attached to the watch chain. It may possibly, at one time, have been invested with a threefold meaning: (1) As the horn of plenty, bringing good fortune; (2) As a protection against evil coming from without, from ill-disposed or unlucky persons, who have the power of casting the Evil Eye; and (3) May it not also originally have had some association with the idea of the scape-goat? The following anecdote, which was related to me by an Italian lady who knew one of the persons concerned, would seem to indicate that this last idea is not a far-fetched one. A family had settled themselves in an apartment in a certain house at Naples, when shortly afterwards another floor in the same house was hired by a lady whom the first comers believed to be possessed of the Mal' Occhio or Evil Eye. They were in despair at this circumstance, and in order to avert any bad consequences which might result to themselves, they caused a ball to be brought to the house, and had it driven through the entrance archway and round and round the court-yard for some hours, evidently as a 'scape-goat.' This custom is in close connection with a well-known one in India, where to the present day, Hindus are universally in the habit of turning loose bulls, to wander about, after some person's sins have been transferred to the animal by the performance of certain ceremonies. As an instance of the further development of this idea in the East Dr. Schuyler speaks of a custom existing in Turkestan, in a passage so curious that I cannot forbear quoting it. "Life in Aeh Kurgan was rather dull; amusement there was none, all games being strictly forbidden. Such things as jugglery, dancing, and comic performances are, I am told, prohibited in the Khanate:—the licentious Khan having seen the error of his ways, and having put on, for his people at least—the resemblance of virtue. Of praying there was very little; occasionally in the afternoon or at sunset some few pious individuals would have offered their prayers to the stars, and would then place some money and a token in a house where there was no star visible. The wise Khan having seen the error of his ways, and having put on, for his people at least—the resemblance of virtue. Of praying there was very little; occasionally in the afternoon or at sunset some few pious individuals would have offered their prayers to the stars, and would then place some money and a token in a house where there was no star visible. The wise Khan having seen the error of his ways, and having put on, for his people at least—the resemblance of virtue. Of praying there was very little; occasionally in the afternoon or at sunset some few pious individuals would have offered their prayers to the stars, and would then place some money and a token in a house where there was no star visible. The wise Khan having seen the error of his ways, and having put on, for his people at least—the resemblance of virtue. Of praying there was very little; occasionally in the afternoon or at sunset some few pious individuals would have offered their prayers to the stars, and would then place some money and a token in a house where there was no star visible. The wise Khan having seen the error of his ways, and having put on, for his people at least—the resemblance of virtue.
spread out a rag and make their supplications to Allah. One poor old man, I noticed, who seemed constantly engaged in prayer. On calling attention to him I was told that he was an isāchā, a person who gets his living by taking upon himself the sins of the dead, and thenceforward devoting his life to prayer for their souls. He corresponds to the Sin-eater of the Welsh border.

The Abbate Bastiani's notice of augurs and soothsayers reminds me that there is one divining custom existing both in the East and the West, which should mentioned in this connection. In India, in order to discover a thief it is a common practice to send for a diviner who comes with two attendants, and is provided with a pair of scissors, some rice, and a basket, or sieve, used for winnowing grain. Both the sieve and the scissors have in this case a very significant meaning, because the sieve is considered emblematical of the rain clouds, and iron is deemed in many lands an effectual charm against evil spirits. When the charm is about to be tried a fire is lighted in an earthen pot and the diviner takes the winnowing basket; an article which in India has its edges bent up on three sides with the fourth side flat. After having stuck a pair of scissors into the upper and deepest edge of it and repeated certain prayers or incantations, he causes his two assistants each to put a finger beneath the holes in the scissors and in this manner to hold the tray suspended over the fire. All in the house must then in turn take a small quantity of uncooked rice in their hands and drop it into the flames between the fork formed by the scissors, the diviner all the time repeating certain formulae. All goes very smoothly till the guilty person attempts to scatter his rice, when the grain sifter commences turning round rapidly, and the true culprit is thus exposed. A friend, who saw this plan tried in her own house at Bangalore, told me it was perfectly successful in that case and the guilty person—a woman—seeing she was discovered, confessed having committed a theft from her fellow servant. A parallel to this is to be found in England.

Brockett, Glossary of English North Country Words, says: "The vulgar in many parts have an abominable practice of using a riddle and a pair of scissors in divination. If they have had anything stolen from them, the riddle and the shears are sure to be resorted to." A similar mode of discovering thieves or detecting the guilt of a person accused of any crime, prevailed amongst the Greeks.

A singular development of the idea of iron in the shape of nails as a protection against spirits generally, however rather than the evil eye came under my notice, when travelling in the Mysore State. I chanced to meet a European Government official making a tour of inspection through his district. As is usual in such cases, a number of natives came to him every day; some with wrongs to be redressed and others simply to make their salutations. In the latter category was an old native who had served in the late Maharaja's body-guard. His former uniform, which was abundantly ornamented with gold lace, had been carefully preserved, and was worn on this important occasion.

In his right hand he held a stick of powerful proportions—the upper part as thick as a man's arm—the lower end about the size of a man's wrist on which were numerous silver rings and knobs. It was made out of a branch of the Bombax Malabaricum (Sambul), a tree common in jungles thereabouts, producing pods containing a silky cotton fibre; both the trunk and the branches are thickly studded with protuberances which resemble blunt nails.

When asked why he carried about such a formidable looking stick the old man replied: "When provided with such a stick as this anyone can walk safely at night through the jungles without fear of demons." He evidently did not carry it to protect him from man, but from the spirits of evil.

As another instance of a custom which in closely allied form exists in India and in Europe I would here notice the following. Many wandering native traders, such as those who sell shawls, stuffs, cloths, tiles, &c., frequently come into the verandahs of European houses in India to dispose of their wares. Should any

31 Dr. Schweyler gives his portrait.
32 A Welsh friend, however, who is fond of folk-lore and is a native observer, tells me that he has never heard of "the Sin-eater of the Welsh border."
33 According to Kelly, Indo-European Folklore.
34 Another development of the idea is to be found in Northumberland, where girls are said to turn a riddle in order to raise their lovers.
article be purchased of such a trader and happen to be the first thing he has sold that day, he will, on receiving his money, take the rupees one by one, and with them touch first his forehead, then his mouth, and lastly his yard-measure. I was recently a witness of a somewhat similar proceeding in Guernsey. Chancing to go into an old curiosity shop just as a cart-load of goods arrived, which had been bought at a sale the day before, I invested in some articles, paying for them in five-franc pieces. The shopkeeper, a woman, spat upon one or more of the coins, apologising for so doing by saying it was for luck, as those I had bought were the first things which she had sold out of that consignment.

I think I should also draw attention to a singular custom which still exists in Guernsey, called Le Clameur du Haro, which is probably known to few persons out of the Island, and which is clearly performed on the principal of the well-known Indian custom of ḍālāṁ. It has great influence over the minds of the people, and though it is only resorted to in extreme cases it is invariably respected. The following account of it was related to me by a lady whose husband, a few years ago, employed it to obtain redress for an injury. He owned a stone quarry, which he had leased out, but for some years he had not been able to get any rent from the lessee, who also defied a notice to quit which had been sent him. He consequently decided to make use of the ancient but still effective custom of Le Clameur du Haro. He went to the quarry accompanied by two or three friends and a couple of policemen as witnesses. Arrived at the spot he went down on one knee, crying “Haro! Haro! On me fait tort; à mon aide, mon Prince!” This is an appeal to Rollo, the dreadnought Norman chieftain. After the ceremony had been gone through not a workman would dare to touch a stone. The matter then of necessity came before the Law Courts, and the case was decided in favour of the owner of the property.

Here again is another superstition which curiously survives in India and in Europe. In the Panjōb Notes and Queries, Vol I., Note 219, a custom is cited, according to which if a couple have lost several male children, and a boy is again born to them they call it Nathā i.e. one having a nath or nose-ring. They pierce its nose and introduce a ring (an ornament worn by girls and women only) in the desire that the child should be mistaken for a girl, and so passed over by the evil spirits. This idea is not unknown in Europe. Some years ago when I was spending the summer in the Engadine I saw a good deal of an Italian lady, who, as far as I remember, was a Milanese. She had a sweet little child with her, apparently about five or six years old. For some days the little one went about attired in a sort of knickerbocker suit, and I certainly thought that this child was a boy, but one day, to my amazement, I saw it dressed as a girl in a pretty white muslin frock. On my expressing much astonishment at the transformation, the mother told me that out of a large family only one grown up son and this little girl had survived; she had lost several between, all girls, and she seemed to think that by disguising the sex of this one, she would in some way avert evil from it.

Lastly in India, when a man wishes to put anyone out of the way, a not uncommon method of disposing of an enemy is to mix small bits of chopped hair with his food: a most deadly proceeding I believe, unless emetics be speedily given. Neapolitans, when they have a spite against any person, get rid of his cat or his dog in this manner. Here again we have the East and the West mixed up in a way that is at least remarkable.

THE FOUR PRINCES.

A KASMIRI TALE.

(Concluded from p. 303).

At this moment one of the four princes signed with his hand and prostrated himself before the throne, as if he wished to say something.

"Let him speak," said the king. "May be he

30 [Compare also the custom of handling prevalent alike in the East and the West.—Ed.]

31 [The custom of spitting on coins for luck also obtains among London crossing-sweepers and street-beggars. Ed.]

32 Also if his elder brother has died a boy is clothed very shabbily, no doubt because it is hoped he will thus escape the notice of the godlings, the agents of divine mischief in India.
wishes to relieve his heart of some foul secret. Let him speak. Let him speak."

The prince said:—"O great and merciful King and father, hear me; I beseech you, before I die:—In past times there lived a merchant, whose only son grew up to be exceedingly clever and wise in all manner of works, and was also very good. One day the merchant, wishing his son to have a large experience, bade him to make arrangements for going abroad, as it was his intention to send him to some foreign country with merchandise. Within a week the young merchant got ready and started. Many strange people he met with and many wonderful things he saw; and I could occupy the attention of Your Majesty and of this assembly for several days in the narration of some of these, but one incident only I ask permission to mention.

In the course of his journeys the young merchant met with four men, who were wildly disputing with one another over the possession of a poor dog, that they were dragging about most unmercifully.

"Why quarrel ye thus one with another?" he asked.

"We are brethren," said one of the disputants, "and our father has recently died. We have just been trying to arrange our several shares of the property, and all proceeded most amicably, till we had to decide about this dog. We each have a cow apiece, an equal share of the rice and other grain, an equal number of sheep and goats; but this dog we cannot divide, so that each one of us may have an equal portion; and therefore the eldest brother says, 'It is mine,' and attempts to seize it; and I wish to have it and so lay hands on it; and my other two brothers also think they have a right to it and try to get it. You wonder, perhaps, that we care to wrangle over such a trifling matter; but this is not an ordinary dog. Each of us would gladly relinquish his right to it, had we not learnt that this is no common animal. Our dear father, when on the point of death, bade us to sell it for Rs. 20,000; but nobody will give us so much money for it. We took it to the bāzār, and the people laughed at us for asking such a price. Some thought that we were mad, others thought that we were joking, and a few struck at us for our apparent folly.'

Strange story," said the young merchant, "very strange. Cannot you possibly sell the dog for a smaller sum?"

"No," replied the four brethren most decidedly. "We could not disown our deceased father, who charged us so strictly concerning this matter."

The young merchant believed them and thinking that the dog must in some way or other be worth the money, he said, 'I will buy it.' Besides this, his father had warned him not to miss the first purchase or sale, even though it might be to his loss. So he at once took the dog and paid the money. The rest of the way he was very much prospered, and in a few years he returned to his father and country a most wealthy and experienced man.

He had not been back from his travels very long before his father died. Owing to some mismanagement concerning the property the young merchant found himself suddenly without anything except the clothes in which he stood upright, and the dog that cost him so great a sum of money. In the hour of his distress he visited another merchant, who was a great friend of the family, and begged him to advance Rs. 15,000 on the dog. This merchant readily complied. Taking the money the young merchant went and traded, and gained for himself another little fortune.

Meanwhile the other merchant became very fond of the dog. He used to take it about with him by day and kept it fastened up to a peg in the middle of the court-yard at night. The dog, too, was very fond of his new master, and seemed never so happy as when he was with him.

One night the animal's sagacity and faithfulness were put to the test. When everybody was asleep and every place was covered with a thick darkness, some robbers arrived at the merchant's house. They came along very stealthily. However, the dog's quick ear detected their approach. It barked loudly to wake the household, but no one was aroused. It barked again and again and, yet more loudly, when it saw the robbers enter refusing hander, or the first bargain or sale of the day. They will often lose rather than give up the first chance of trade.
the house; and ran about most wildly to the full tether of his chain, longing to get free. At last, just as the robbers were departing with their ill-gotten treasure, the chain broke. The dog dashed forward and would have jumped on them, but seeing that they had arms in their hands, he refrained. He reflected that he might be killed in the affray, and to what purpose? Better, he thought, to follow quietly on behind, to see whither the robbers conveyed his master's things.

The robbers walked far and fast till they reached an out-of-the-way place in a little jungle, where they stopped, dug a large pit, and therein deposited their treasure, intending to come again and arrange for its distribution as soon as the excitement about the robbery had subsided. When they were quite out of the way the dog went up to the place and scratched the earth round about, so that he might recognise the spot; and then returned to his master's house.

On the following morning the merchant rose and found the front door of his house ajar, and all his cupboards and boxes open, and their contents rifled. 'Robbers must have been here,' he cried, and rushed hither and thither tearing his beard and smiting his breast. The neighbours, attracted by the noise, came round and wept also.

'Alas, alas!' said one, 'would that we had taken more notice of the dog's barking.'

'Surely it must have awakened you?' said another.

'No, no,' replied the poor merchant.

At mention of the dog the merchant took the animal and placed him before him, and like a madman fondled him and talked to him, saying, 'Oh that you could speak and tell me who has taken my goods:' whereupon the dog seized the merchant's right sleeve between his teeth and began to pull towards the door.

'Perhaps,' remarked one of the neighbours, 'the dog knows where the treasure is concealed. I would advise you to follow his lead.'

On, on, the dog trotted for many a mile, till he came to the place in the jungle where the robbers had buried the goods. There he scratched away and threw up the ground most vigorously. The merchant also, and the few friends who had accompanied him, began to dig at the place. Presently they came on some of the stolen property; and then all of the things appeared! The merchant was overjoyed at the sight.

As soon as he had got his goods back again in his house and had arranged them in more secure places, he wrote to the young merchant the following letter:

'To the abode of wisdom and bravery and goodness, beloved of all men, salām? After an expression of my intense desire to see you, be it known to you that I am your obliged servant for ever. You let me have a dog some time ago. That dog has just saved me from ruin. I send a request that you will kindly sell it to me. You let me take it as a security for Rs. 30,000 of which amount Rs. 15,000 were at once paid you; so I enclose a cheque for the same amount again, making altogether Rs. 30,000. If you will please grant this my request I shall always pray that blessings may wait on you from every side.'

Having sealed the letter he placed it within the dog's mouth, and told him to go to his old master.

When the young merchant saw the dog running towards him, he thought that he had escaped, and that therefore his present master would soon follow and demand repayment of the money, which would not be at all convenient just then. So he determined to kill the dog; and then if the merchant came and asked for his money he would be able to say: 'Give me back my dog, and I will return to you the money.' But grief, a thousand grieves! No sooner had he slain the dog, and taken him up to bury him in some secret place, than the letter dropped out of the animal's mouth. The young merchant picked up the letter, and on reading it, dropped down insensible.

---

ites, in which the machinations of the wicked wife or mistress are counteracted by the stories of the King's advisers. See the Sandbild Cycle, parr. 89, ed.}

Folk-tales in Bengal, 150 ff. and hero is recognized by his relating his story, Indian Fairy Tales, 1912. The idea frequently occurs. Old Deccan Days, 90, 99, 143ff; Indian Antiquary, IX. 8; IV. 80; 833.}
The prince told this sad story with much feeling, so that the king and all the assembly were much moved by its narration. Not the slightest sound was heard in the darbâr when the prince, after pausing a few minutes, said, even more solemnly than before, “O King, you have commanded our speedy execution; but we are as innocent as that poor dog. May it not be that you will regret this hasty work, and like the young merchant, of whom I have spoken, repent when it is too late.”

“The order is irrevocable,” whispered the king. “I cannot hear the man.”

Then another of the princes prostrated himself before the throne and begged that he, too, might be permitted to say something before he died.

“Say on,” said the king, slightly waving his right hand.

The prince began:—“O great and gracious King, there was in times long past a celebrated shikârî, who entirely supported himself by the several beasts and birds which he killed in the jungle. One day it happened that nothing came to his hand. He was in great distress about this, as there was no food in the house for the morrow. So he went on some three days wandering further and further into the jungle in the hope of getting something, till at last he came to a hut outside which some shikâris were sitting. They asked him who he was and whence he came; and when they heard that he was in search of food and had not partaken of any for three days, they set some meat and bread before him, and promised to take him in a short while to a spot where shikârîs would certainly be found.

After a good meal and a refreshing sleep he and one of the other shikâris went in a certain direction in the jungle and killed a bârah-singâ, some smaller animals, and a bird or two. These the other shikâris would not think of touching.

“No, no,” they said, “these are yours. Take them home quickly to your wife and children, who must be starving by this time. We would like to keep you with us longer, if it were not for the thought that you must be anxious to return home at once. However, we hope to see you again.”

Thank you much for your goodness to me,” replied the shikârî. “I shall undoubtedly come and see you often, and shall always be ready to help such friends as you have proved to be. Had it not been for your timely aid, I and my house would have perished. Of course you will see me again.”

On arriving at his house he found his wife and family almost dead from starvation. They had waited and waited for his return, until they had become quite ill from want of something to eat. So he quickly got a fire ready, cooked some venison, and made some broth.

The next day they were well and happy again, and related to each other all their wretched experiences; and blessed the shikârîs in the jungle, who had been so kind to them.

In a few days the shikârî told his wife that he must visit his friends in the jungle, as he had promised that he would go and see them again soon. So he prepared some presents and went. The other shikâris were very glad to see him, and treated him right hospitably. He stayed with them many days, during which he did much hunting, and arranged that the beautiful daughter of the chief of the party should be married to his son; for thus the two families would be bound together by other than ties of friendship.

In due time the wedding took place and the bridegroom was invited to come and sleep in his father-in-law’s house. He went and in the middle of the night the happy pair were disturbed in their slumbers by a great howling of jackals. Now it happened that the bride understood the speech of every bird and animal. Accordingly as she lay awake listening, she heard the jackals saying to one another,

‘A dead body is floating down this river and round one of the arms of the corpse there is a bracelet of five precious stones. Where is that person who will go and drag the body to shore and take off the bracelet of precious stones, and thus do three good works, viz., avan, cleanse the river of this pollution, save the five precious stones from being lost altogether in the bed of the river, and provide us poor hungry beasts with a good meal?”

The Wessel.” In the story of “Gelert by Spenoc ground work is the same. Perhaps other similar tales in Europe.”

12 Shikârî, a hunter.
13 Bârah-singâ, a twelve-timer (Cervus elaphus).
When she heard this, the bride rose from her bed, and walked out towards the river. Her husband, also, moved by curiosity went after her unawares. On reaching the brink of the water the woman leapt in and swam towards the floating corpse, which was just discoverable in the faint moonlight. She seized the body, and having pulled it to the bank, she took off the beautiful bracelet, that was tied round one of the arms, and then returned to the house.

Her husband arrived first, as he had not waited while she untied the bracelet. 'What can she have gone to the river for and bathed at this time of the night?' he thought. No sleep came to him because of this, but his wife slept soundly till the morning light.

According to custom, the husband on rising immediately went to the river for a bath. What was his horror and disgust to find in the very place where his wife had jumped in during the night, a half-eaten body of a human being! He said within himself, 'My wife must be a rākshāsī.' She has devoured half of this body, and will certainly come and devour the remainder on the next night.' Thinking this he feared to return to her, and so went by an unfrequented path back to his father and his father’s house.

'Father,' he said on arrival, 'why did you marry me to a rākshāsī. I am sure that this woman is a rākshāsī, because last night she feasted on a human body. In proof of this you can go and see the remains of the corpse lying on the river-side. What an unfortunate man I am!'

When the shikārī heard these words he thought that either his son was not speaking the truth, or else he had gone mad. So he hastened to ascertain the real state of affairs. When he was yet some distance from their house, the father of the bride and several other members of the family came forward to greet him, and to inquire the reason of his strange and sudden departure.

Thinking it wise to dissemble matters till he ascertained the truth concerning the woman who was fully known, the shikārī bade them not to be anxious.

In this he returned quickly in obedience to his son, and having heard the truth concerning talking animals and understanding non-language, cf. Wide-awake Stories, pp. 412, 413.

The boy was not grown up, he added, and therefore he had been ordered to return home quickly. He hoped they would forgive any apparent rudeness, and allow the bride to accompany him.

The other shikārīs were quite satisfied with these explanations and agreed to let the bride go. After eating a little, the shikārī (the father of the bridegroom) went back to his house with his daughter-in-law.

He soon managed to walk behind her, for he was afraid to keep up with her, lest she should really be a rākshāsī and eat him. They had proceeded some way in this fashion, when the girl, feeling tired and weary, sat down by a little pool of water under the shade of a large and beautiful tree. The shikārī, also, encouraging himself in the thought that his son had, probably, only had a nightmare, sat down beside her, and taking out some provisions, with which the girl’s father had supplied him, gave her some to eat.

While they thus sat, enjoying the rest and the food, and each other’s conversation, a few crows gathered round and commenced cawing and making a great noise, as they hopped and flew about from branch to branch and stone to stone with eyes fixed on the scraps of the meat; ready to pounce down on the first opportunity and carry them off. One of them, an old crow, wished to be especially friendly, ‘Who is that person,’ he cawed, ‘that can hear and understand my speech?’

Near the roots of this beautiful tree, there lies a potful of precious stones, and under this pot are thousands and thousands of ants, that are destroying the very life of the tree. Oh where is the person that will dig up this pot, and thus save the tree, and us who have built our nest in its branches and besides this enrich himself beyond thought and speech?’

The girl heard these words and laughed and wept alternately.

On seeing this her father-in-law got very frightened. He thought that she laughed and wept because she was a rākshāsī, and was then meditating making a meal of him. With a tremulous voice he asked her, ‘Of what nature are you? If you are a rākshāsī I beg of you to spare me.’

17 Cf. p. 316 above, note 8.
The girl, exceedingly surprised at these strange words, answered, 'I am not of a bad or sanguinary nature. What have you observed in me, or heard about me, to prompt such a question?'

'How came that half-devoured corpse on the river-side the other morning?' he said.

'Why did you laugh and weep just now, and almost in the same breath?'

'What! shall I tell you?' she said. 'Are you really supposing me to be a rākshasī for these reasons? Is this the cause of my husband, your son's, sudden disappearance? Is it on this account that you have walked behind me almost all the way here? What folly! What wrong is this! Listen to the truth of the case. On the night of the day that your son visited my father's house, the jackals prowled about the place and made such a noise, that we both awoke. Their conversation was loud and long that night, and no wonder, for they had seen a corpse floating slowly down the river, and on one of the arms of the corpse, they said, a beautiful bracelet was fastened. Understanding their speech I thought that I would go down and drag this corpse to land and get the bracelet. Look, here it is; and she showed it to her father-in-law wrapped up in a dirty piece of cloth. The dead body, I left on the river bank. Perhaps the jackals came afterwards and devoured it. I did not, you may be sure. It was a half-eaten corpse, that your son probably saw in the early morning, and as he had very likely noticed my going to the river in the middle of the night, he thought that I must be a rākshasī and therefore have devoured the body. And so he fled.'

Saying this, she laughed heartily. The shikārī, also, could not help laughing.

'And then again,' she continued, 'just now a crow perched on yonder branch, and by cawing said that much treasure was concealed near the roots of this tree. Understanding the speech of birds also, I laughed and cried from joy at the thought that I should get further treasure, and thus be able to bring ease and pleasure to my husband and family. Wasn't that quite rational? O please do not think me to be a rākshasī, or anything of that nature. I wish to be a faithful wife to your son, and to do good to all people.'

The shikārī was very glad to hear this. He thoroughly believed his daughter-in-law's words.

Presently they both dug together round the roots of the tree and found the treasure—some most valuable stones and riches. In the excitement of the moment the shikārī embraced the girl, and begged her to forgive both him and his son for their misapprehensions concerning her.

Most happily they recommenced their journey. It was a beautiful road. The trees made one long avenue, through which they walked in a most grateful shade the whole way; flowers of every form and beauty strewn the ground, and streams meandered in all directions carrying with them life and strength and gladness.

From one of these streams the shikārī, feeling thirsty, asked his daughter-in-law to bring him some water. She at once obeyed, and as she stooped down to take the water a frog croaked and said, 'In the name of mercy will nobody listen? Within this stream a treasure lies concealed; and therefore the stream is filled with insects. Who will hear me and take out the treasure? Thus would the waters be healed and travellers, who drink of it, be benefited; the frogs would be able to enjoy themselves without hindrance from unpleasant pains in the stomach, which they are constantly experiencing from life in this water; while the finder of the treasure would be enriched beyond all want.'

On hearing this the girl went at once and told her father-in-law, who immediately came to the stream and found the treasure. Having securely fastened it round their waists they proceeded on their journey. When they arrived near the house the shikārī asked his daughter-in-law to go on ahead. She did so, and while she approached the entrance of the house her husband saw her; and observing that she was alone, he at once thought that she had killed his father and now she was coming to slay and eat him. And therefore he armed himself with a sword, and when she came up expecting to be welcomed by

13 Kāsūrīs have various devices for carrying their money or other little valuables. Sometimes they conceal it in their turbans; sometimes in their kanūrbandās; sometimes in their sleeve cuffs; sometimes in their kalāms; and sometimes tie it up in the end of their Asūdar, or wrap.
husband and looking forward to showing him their great wealth, he struck off her head.

In the course of an hour his father reached the house. 'O father,' said the son. 'God be praised that you have been preserved from the hands of this blood-stained woman! Be glad now. Henceforth we shall dwell in peace and safety. I have slain her. Behold her life-blood stains the door-way.'

When he saw the marks of blood about the place the shikārī fell down insensible. It was a long time before he again came to his senses. Great was his grief, but greater the grief of the hasty husband, when he heard the truth of the case.18

There was perfect silence during the narration of this story. With great power the moral seemed to be brought home to the heart of the king. "O king, our father," the prince said in conclusion, "be not hasty, we beseech you, concerning this matter of our execution, lest you also come into similar grief."

His Majesty, however, hardened his heart and would not hear the thing.

Then another of the princes prostrated himself before the throne and begged to be permitted to speak. He said:—"Many years ago there lived a king, whose favourite sport was falconry. One day this king visited a certain jungle for shikār, and reached a spot where he had never been before. He was so charmed with the place that he ordered his tents to be pitched there. While this was being done His Majesty got very thirsty and asked for some water. According to custom a sword was in the right hand of the king, a hawk perched on the left, and the royal flag in front, and so it happened, that when the king was about to drink, the hawk flapped its wings and upset the cup. A servant went and brought some more water, but again the hawk caused it to be spilled. This time the king was angry and spoke harshly to the bird. Again a servant went and got some water, but the third time, when His Majesty took hold of the cup and lifted it to his mouth, the hawk fluttered about tremulously, upsetting the water and discomposing the king exceedingly.

His Majesty was very angry, and raising his sword killed the bird.20

On this one of the wasps came up and suggested that there was some special reason for the hawk's persistent and apparent rudeness. Perhaps some evil was in the cup.

The king then ordered that the stream whence the servant had brought the water should be thoroughly examined. For some distance nothing was discovered till they came to another little stream running into it, whose waters were of a greenish hue. This tributary stream they also followed, and in a short while came on a large python,21 out of whose mouth green slime (rank poison) trickled. Frightened at the sight of this terrible monster the servants ran back to the camp as fast as they could.

When His Majesty heard their account, he beat his breast and tore his beard, saying, "Oh why was I so hasty! I have slain my preserver! My handsome, faithful falcon is no more! Oh that I had waited to inquire the reason of the bird's behaviour!"

"O King, our father," added the prince after a few moment's pause; "we beseech you to inquire thoroughly before you deliver us over to death."

Then the king began to relent. He doubted the truth of the queen's story, though he did not know how else to account for the marks of blood on Her Majesty's toes and the presence of the eldest prince in their private room at that time. "Tell me," he said, turning to his eldest son and heir, who as yet had kept perfectly silent, "everything concerning last night; and if you can answer satisfactorily then you and your brethren shall go free."

The eldest prince having prostrated himself before the throne, replied:—

"O King, our father, your goodness and kindness are well known to all men. We do not hesitate to answer you about this matter; for our consciences are clean, and we are assured that Your Majesty will receive us again to your confidence, when you have listened to our petition."

"While going my rounds one night, I reached

which is said to be known in the Valley, though I very much doubt it. A native gentleman told me that it had been seen on the Jammāh side of the Pir-Panjāb.

21 Cf. variant of this story, Folktales of Bengal, p. 154.
a hut, where lived a Brähmaṇ and his wife. Attracted by the man’s strange behaviour,—for he came out of the hut, looked up at the heavens and then went in again exclaiming trāh trāh,—I drew nearer to the place, and heard that Your Majesty’s star had been destroyed by another star, and that this meant that Your Majesty would die on a certain night. From further conversation between the Brähmaṇ and his wife, I learnt that a serpent would descend from the sky to kill Your Majesty, and would enter the palace by the door that opens into the court to the east. There was no hope of safety, said the Brähmaṇ, unless one of Your Majesty’s relations would dig pits in the palace-court, whence the snake would enter, and fill them with milk and water, and cover the pools thus made with flowers, so that the snake by passing through them might lose its poison; and further, the man who would do this thing, must also slay the snake before it entered the palace, and smear some of its warm blood over Your Majesty’s toes.

“Therefore, O King, our father, I took upon myself to do this. I was present at the door on the east of the palace at the appointed time. The pits were dug and everything arranged as the Brähmaṇ had ordered. The serpent came and I duly slew it. And then, fearing to enter Your Majesty’s private room with my eyes open, I blindfolded myself. Hence the mistake I made of putting the blood on the queen’s toes instead of on Your Majesty’s. No rākṣasa entered Your Majesty’s room.

“O King, our father, why do you suspect us? We are true sons. You have listened to the words of the queen, who wishes her own sons to have the throne and the great places in the kingdom, and so has maligned us. We have never deceived you, O king, or wished you harm.”

The king hung down his head in sorrow and shame. In a few minutes he arose and dismissed the assembly, saying: “Ye have heard. I will go myself and ascertain the truth of these things.”

Accompanied by his four eldest sons, the king went and saw the pits that had been dug and the blood-stained place where the dead body of the snake had been thrown. He then visited the Brähmaṇ’s hut and closely interrogated him concerning the eventful night. All was found to be perfectly correct.

There was great rejoicing in the city that night, when the news was blazed abroad how near the four princes had been to death, and how they had been saved. It was soon arranged for these princes to govern the land. The eldest son became king, and the other sons were appointed ṛvāris. They lived together most amicably and prospered much. The poor Brähmaṇ and his wife were well-provided for during the remainder of their lives. The plotting, malicious queen was divorced and exiled. The old king retired to a jungle, that he might entirely devote himself to meditation and prayer. In this jungle he obtained a very great reputation for sanctity, and at length died at a very great old age.\textsuperscript{32}

\section*{Valabhi Inscriptions, No. XVIII.}

\textit{By G. Buhler, Ph.D., LL.D., C.I.E.; Vienna.}

\textit{(Continued from Vol. XI. p. 309.)}

A NEW GRANT OF DHARAŚENA IV.

The subjoined transcript of a new grant of Dhrāśena IV. of Valabhi, has been made according to a reversed photzincograph which I owe to the kindness of Dr. J. Burgess.

The original plates, which, as I learn from Dr. Burgess, were found last year in the Kheidā (Kaira) Collectorate, seem to be in good preservation, as only a few letters of the second page of the photzincograph are illegible.

Their measurements appear to be about 1 inches by 10\frac{1}{4}. The first plate contains 28 lines and the second 29, the two last being so shortened in order to make room for royal signature. \textit{स्वत्वते नमः.} The chart agrees most closely with those of the inscriptions of Dharaśena IV., published in this Journal I. p. 14, and Vol. VII. p. 73. The true execution of the inscription is good. There are few clerical mistakes, and few misspelling.

\textsuperscript{32} Cf. variant of this story, Folktales of Bengal, “Strike but hear.” pp. 147-158.—[There can be little doubt that the Sindhā cycle of oriental folktales is responsible for the form that this story is made to take.—E.]

\textsuperscript{1} The two horizontal strokes which the facsimile after नमः do not represent the नाम्, but in end of a Mahādeva just like the more common strokes.
The Vānśāvālī contains nothing new. But the document offers a good many other points of interest.

First, we learn from line 1. that, like the grant discussed ante, Vol. VII. p. 78, and Vol. X. p. 278, it was issued “from the camp of victory located at Bharukaccha.” Whether we take this phrase to indicate that Dharasena IV. was at the time engaged in a warlike expedition, or was making a royal progress through his dominions, the inevitable conclusion is that the Broach district, as far as the Narmadā, belonged for a time at least to the kingdom of Valabhi.

Secondly, the statements regarding the recipient of the royal bounty allow us to trace the ancient name of one of the ṭhēdas of the Brāhmaṇs still existing in Gujarāt. According to lines 41-42 the donee was the Brāhmaṇ Aditiśārman, son of the Brāhmaṇ Bhavaciga, a student of Vaiśasaniyisakhā and a member of the race of Parāśar. It is further alleged that he was an emigrant from Udumbaragahvāra, resided in Khēṭaka or Khēḍā, and belonged to the community of the Udumbaragahvāra-Chaturvēdis. These phrases show that Udumbaragahvāra was the ancient name of a country or of a town, and that a Brāhmaṇical community, consisting of emigrants from Udumbaragahvāra, was settled in Khēḍā, and kept itself separate from the other Brāhmaṇs of that town. I have never found Udumbaragahvāra used elsewhere as a geographical name. As names of towns and villages, formed with root u, one of the modern representatives of the Sanskrit udumbara, are common on the map of India, I conclude that Udumbaragahvāra was the name of a town; it means literally “a thicket of udumbara-trees.”

As regards the Udumbaragahvāra-Chaturvēdis, they are, I think, the forefathers of the present Brāhmaṇs or Udumbaras who are found in considerable numbers in the Khēḍā Ahmadabād Collectorates, in the Pańchās, and in the Baroda territory. They still regard themselves as immigrants; and their claim is justified by the fact that a great number of Udumbaras are found in the provinces east and south-east of Gujarāt. The antiquity of the Udumbaras is attested by the statement which Bhavabhūtī makes regarding himself, that he was an Udumbara and a native of Vidarbha or Berāra. The representation of Udumbaragahvāra by Udumbara, is justified by the rule according to which, for proper names and other sanūjñas, expressed by a compound, the first or the second part alone may be used, as Bhima for Bhīmaśeṇa and Bhīma for Satyabhāmā.

Thirdly, the description of the objects granted furnishes an interesting contribution to the ancient geography of Gujarāt. According to lines 43-50, Aditiśārman received two fields and a bhṛinjī. One of the fields which required to be sown with two śīphakas (?) of rice according to the measure of Khēṭaka, was situated in the udhāra or zili of Khēṭaka, in Kōlamba, in the south-eastern portion of the sīm of the village Vādāsāmālikā. Its boundaries were, to the east the sīm of the village of Sīhamuḥijja; to the south the sīm of the village of Viṣaṇpalli; to the west a field (called) Śāmikā, i.e. the field where Śamī grows, belonging to Drūṇa; to the north a field (called) Kāccaśākā, i.e. the small field where Kāccāśā grows, belonging to Mahēśvārī. Looking at the Trigonometrical Survey Map, it is very probable that Vādāsāmālikā is the modern Vānśāvālī, east of Mahμudabād. To the east of the south-eastern sīm of Vānśāvālī lies the large village of Sīhamuḥijja, which is clearly the Sīhamuḥijja of the grant. Exactly to the south of the south-eastern boundary of Vānśāvālī, we have the village of Vānśol, the name of which closely corresponds to Viṣaṇpalli; in Gujarātī palli becomes regularly ol; and vānas for viśa is not very extraordinary in a language where Śīvī pi śavāna gatah. If these identifications are accepted, Kōlamba must be the name of a territorial subdivision of, and must correspond to a portion of, the Mahμudabād Talukā. The second field required to be sown with two śīphakas (?) of rice according to the measure of Khēṭaka, was called kōlata, a name which I do not understand, and was situ-

* The disappearance of the s is explained by its change to h in the dialect of Khēḍā. An intermediate form probably was Vānśavālī. The spelling Vānśāvālī still occurs.
tated in the śīna of the village of Duhūduhu, which belonged to the Nagaraka pathaṅka, i.e. the pathi or Tālukā immediately surrounding the town, i.e. probably Khērā itself. Its boundaries were, to the east a field belonging to the Mahattara Gōllaka, called Aṭāramaṇa-kērā, i.e. the playground of the Tūrdaśa Gingēns, and a Khandakērā (?) belonging to Sābbṭhāka; to the south the śīna of the village of Jāṅga-pālī; to the west the śīna of the village of Gōḍa-pālī; to the north the Aṭāramaṇa, the Sāmmekērā, and two antiths. The want of a portion of the Trig. Surv. Map makes exact identifications of the villages named impossible. But I remember perfectly well to have visited a village Jāṅaol in the Khērā District. The bhrīṣṭī lay in the padakrēṣṭī, the pātim or grazing-place, of Duhūduhu, on the eastern śīna. Its boundaries were, to the east a kapithāhāṇi (i.e. an undani near a kapitha-tree); to the south a small field (kēdā-rīkā) called Viśīṭa (Viśīṭa?); to the west a kapithāhāṇi; to the north two undanīs beyond the brahmāṇa-yā field, belonging to the Brahmāṇa Vairabhāṣa. The word bhrīṣṭī, which occurs here for the first time in a Valabhi grant, probably means, like its modern Hindi representative bhāṣā or bhāṭi, 'raised ground near a tank for planting Piper betel upon.' The hitherto unknown term undani, which is associated with it, seems to be etymologically derived from the Sanskrit 'urdha' (to raise). The expression pūrveprat-tadāvahūmāṇa-yāvahūmāṇavatātirahātum, i.e. "with the exclusion of grants to gods and Brahmans, and of the twentieth (to be paid) to Brahmans," deserves attention, because the other inscriptions do not mention the twentieth payable to Brahmans. The payment of this tax is occasionally recommended to Vaiṣyas and Śūdras in works on Dharma.

Fourthly, the name of the Dūtaka, or representative of the king for the conveyance of the grant, is very interesting. Just as in the Añana grants, published ante, Vol. VII. pp. 73ff. and 76ff., a royal lady, the princess Bhūvā, is entrusted with this office. Dhrausena's grant, which belongs to the Añana collection, names the vīruḍhāṭi-Bhūpā. Probably the same person is meant here. Bhūpā may be only a misspelling for Bhūvā.

Finally, the date of our inscription, सं 300 + 10 श्री मार्गशीर्ष स्थ 2, is of the utmost importance, and settles, I think, the question regarding the beginning of the era, used in the Valabhi grants. As soon as I saw it, I thought that, taking into consideration the double date of the grant of Śādyatiya-Dhruvaṇa, it must be taken to stand for सं 330 + 10 मार्गशीर्ष, wrecked. It must indicate the occurrence of an intercalation of the month of Mārgaśīrṣa in the year 330 or 331 of the era of the Valabhi grants, and that with this interpretation the date would be useful for testing the various theories put forward with respect to the initial year of the era. Some friends, to whom I communicated the fact and my explanation, raised a weighty objection by pointing out to me that, according to the method of intercalation actually used in India, the months Mārgaśīrṣa, Paśuṇa, and Māgha, cannot be intercalated at all. It was possible to meet this by answering that, considering the numerous changes introduced by the Hindus at various times into their astronomical calculations, the present Indian method might be late invention, and not applicable to the earlier inscriptions. Still, the possibility of a mistake on the part of the writer of the grant cannot be denied. It, therefore, remained hazardous to use a date, which might be reasonable.
suspected, for the final settlement of an important chronological question. The doubts regarding the correctness of our date have, however, been dispelled of late by Mr. C. Bendall’s discovery of a Nepál inscription which plainly mentions an intercalation of the month Pausha. It is given as No. II., Pl. ix., in Mr. Bendall’s Journey in Nepal, pp. 74-76. Its date runs—

Sañvat 34 prathama Pausha śuklaadaśīṭya-gam, “the year 34, first (month of) Pausha, on the second (lunar day) of the bright half.”

Prathama-pausha gives no sense at all, if it is not taken to indicate that in that particular year the month of Pausha occurred twice, or was intercalary. Further, if Pausha was intercalary, the rule of intercalation, used in the old almanacs of Nepál, must have differed from that adopted by the Jūshis of later times.

As Mr. Bendall’s inscription belongs to Amāśva-rman, and hence the year mentioned refers to the Śrīharsa era, it could be ascertained by astronomical calculation, whether according to any possible method the month of Pausha could be intercalated in the years 640-41 A.D. Two eminent astronomers, Professor Adams of Cambridge and Dr. Schram of Vienna, before whom the facts were placed, have both arrived at the result that with the use of the elements of the Brahma-Siddhānta, a mean intercalation of Pausha is obtained for the year 640 A.D., which corresponds to Śrīharsa-Sañvat 34 (running). It is, therefore, evident that the ancient almanacs of Nepál took into account the mean intercalation alone, and that it ignored the modern method, which admits of an intercalation only in case two new moons occur in one solar month which has been exactly calculated according to the entrance of the sun into the particular sign of the zodiac. Dr. Schram is of opinion that an incorrect assumption of an equal length of the lunar months forms the basis of the doctrines of the Śrīyā-Siddhānta, enunciated in verses 4-5 of the first chapter, and that thus some of the older Indian astronomers were ignorant of or disregarded the fact that the solar months of winter are shorter than the others.

Encouraged by the wording of the Nepál date and its interpretation by the astronomers, I placed before Dr. Schram the question whether an intercalation of Mārgaśīrṣa was possible in the years 496-498 A.D. (166167 + 330-331), or in the years 519-521 A.D. (159-190 + 330-331) or, finally, in the years 648-650 (318-319 + 330-331). I chose these three different periods in order to test the well-known three theories regarding the beginning of the Gupta era, which has been placed by General Cunningham in 167 A.D., by Sir E.C. Bayley in 190 A.D., and by Bārūni in 319 A.D. Dr. Schram, whose elaborate calculations have been printed at length in my German paper on this inscription, answered:—(1) That, among the years mentioned, 497, 518, and 648 A.D. were intercalary;—(2) That according to the method of calculating intercalations which is used at present, the intercalary months would be respectively Janaśtha, Bhādrapada, and Kārtiika;—(3) But that according to the rule for mean intercalations Mārgaśīrṣa would be intercalary in 648 A.D. This result, it seems to me, leaves no doubt possible with respect to the chronology of the Valabhi kings, whose dates, lying between Sañvat 207 and Sañvat 447, are thus known to range from 525-6 to 765-6 A.D. This discovery destroys one of the most important arguments for placing the initial date of the Gupta era earlier than 318-19 A.D., as it is now evident that Śrīlakṣaya VI., sur- named Dhurūbhaṭa, cannot be the Tu-lo-ho-pu-t’su whom Hsien Tsang visited about the year 634 A.D. Considering the important discoveries made of late, (1) by Mr. Bendall of the use of an era which began in 318-19, by Śivadeva I. of Nepál, and (2) by Mr. Fleet, of the Mandāsār inscription, according to which Kumāragupta was lord of the whole earth in the year 494 of the Mālavas or Mālavās (i.e. of the Vikrama era), I now feel compelled to withdraw my opposition to the acceptance of
Bérindí’s statement that the Gupta era began in Saka-Saṅvat 241. Strict proof that the Mālava era really is the Vikrama-Saṅvat, and that the Kumāragupta of the Mandasor inscription is the Kumāragupta of the Gupta line, has still to be furnished. But the probability that these assumptions are correct, is very strong.

MISCELLANEA.

PROGRESS OF EUROPEAN SCHOLARSHIP.

Zeitschrift der Deutschen Morgenländischen Gesellschaft, Vol. XL. Part I.; Leipzig, 1886.—Number is in great part devoted to articles and with the Aryan side of Oriental studies, the Editor apologizes, promising a counterbalance in the next number. The first paper Dr. Hultsch describes part results of a tour in India undertaken by the winter of 1884-55, and the spring of the latter year. His journeys extended over the Bombay and Central Provinces, thence to Calcutta, and finally, through Banâras, Gwâliyâr, Mathurâ, and the Pañjâb to Kâshgîr. Thence he returned to Bombay, via Jaipur, leaving India in May 1885 for Europe. After describing his tour Dr. Hultsch gives a list of 483 MSS. collected by him in India. It is little more than a nominal list, the Doctor stating that hitherto time for further description has failed him. It includes...
the names of about 115 Jaina works which appear to be of special value. Dr. Hultzsch next discusses a number of inscriptions collected by him on his journey. The first two are taken from the Temple of Vaiśālīśrāṣṭāsāmin in the fort of Gwalior. The second of these two had been previously attacked by Bābhā Raśendra Lāla Mitrā (J. B. A. S. XXXI. 407). Dr. Hultzsch gives a transcription and translation of both. He also transcribes and translates an inscription found on a large black stone at Dholpur, which deals with a king Chandu or Chanḍāmahāśēna, the son of Mahīśahara, the son of Śauka. The next inscription transcribed and translated is on five copper-plates received from Tēzpur in Assam, and deals with a king Vaiśālīśrīrā, the son of Nīlāsākasiṁhā. After this he transcribes and translates, so far as is possible, a fragmentary stone inscription of the Chandella Dynasty in the Allahbad Museum. He connects it with the two following observations in former works:—

(a) "One of the Mahābā inscriptions gives the genealogy from Bhanga to Kirtivarman, but its date is lost" (Arch. Surv. Ind. II. 447).—(b) "An inscription, now apparently lost, which General Cunningham found at Mahābā, gave the Chandēla Genealogy from Bhanga to Kirtivarman." (V. A. Smith, J. B. A. S. L. 10.)

If this identification is correct, it is an important find. At any rate, the inscription is of great interest, for, though very fragmentary, it tallies with the above descriptions of the contents of the missing stone. This is followed by a more perfect stone inscription found in the same place, also dealing with the Chandēla Dynasty, and giving the genealogy of Paramārī (i.e. the Hindi Par'māl) and of his ministers and other courtiers. Lastly, he transcribes two fragmentary inscriptions in Banāras College. The second belongs to the time of Mahābā Shāh, and mentions certain merchants of the Agrātākanvāsin (Agrār'wāxa) Caste. Dr. Hultzsch concludes a very interesting and important paper with a minute study of the Bharātā Inscriptions, which is well deserving of attention.

The second paper (with plate) by Dr. J. G. Stickel deals with Omayyad coins of the ancient Philistine town Askalon. It is a continuation of a former paper by the same author which appeared in pp. 499ff. of the preceding volume of the Zeitschrift. In a concluding note Dr. Stickel draws attention to the forthcoming Fasti Arabicus, or the History of the Muhammadan Empire as established by coins, by Mr. Stanley Lane-Poole.

A short paper by Prof. J. Gildemeister draws attention to alleged plagiaries by Moses of Khōren from Pseudo-Kallisthenes.

Two interesting papers by Prof. Hermann Jacobi follow:—The first is supplementary to his treatise on the origin of the Śvetāmbara and Digambara Sects of the Jaina. The author’s conclusion is that the origin of the Bojja or Bōjika sect is much later than that of the Digambaras, and that the separation of the latter from the Śvetāmbaras was not a sudden schism, but a gradual divergence commencing in the time of Bhadrabāhu, and continued through the next generation. The Professor incidentally refers to the commentaries of Haribhadra to the Avāsyaka-Sūtra, and of Devendra to the Uttarāthiyavavaya-Sūtra. The former died, according to tradition, in the year 529 A.D. but Prof. Jacobi prefers to fix him in the 9th century, and to consider that the legends narrated by him and Devendrā are derived from a common source. He also incidentally refers to the connexion between the name Sahasranalla, and the Persian title Hazānumārd. The second paper is a collection of three short notes, entitled Miscellen. The first draws attention to the fact that the 7th Učekhveda of the Dasaślokārcharita is niroh-tyavavaha, that is to say, that the labial letters u, ū, o, p, ph, bh, m, n do not occur in it. Though this fact is apparently new to European scholars, it is, at least on the Bengal side, well known to Nāvikē Scholarians in India and to their European pupils. The second note deals with the verses quoted by Halāyudha in his commentary to Pingala as samples of the metre. The author makes out a plausible case, that Halāyudha borrowed them from the Chandōvichita of Dauḍin, a work not now known to be extant. The third gives an example of the poetic artifice entitled Yamaka, or commencing each line with the last words of the preceding line, taken from the Sātrakaśićāyana.

The next article, which is by Prof. Eugen Wilhelm, deals with the conception of Royalty and Priesthood in Ancient Iran. The writer commences with noticing the sharp distinction which must be drawn in this matter between the Iran of the Avestā and the India of the Vedic hymns, the latter each god is alternately pre-eminent, there is no distinct system of priority, while in former we find the greatest regularity and order. There never is the slightest doubt but that Mazda is the highest god, who stands far above all other gods, who are his obedient creations. He is well illustrated by the political status of the two countries, for, while Iran was a homogenous state, the European was a confederation of petty independent tribes. Professor then discusses the cuneiform inscription of Ahīmenides, and comes to the conclusion that under them the king was King Supreme of Grace of God. He derived his authority from Ahura Mazda, between whom an
stood no third person or priest. The relation between him and his god seems to have been a directly personal one. At this period, the professor concludes, there was no Anro Mainyush known, no opposing Demon to the sovereign will of the Supreme God. At the time of the Avestá however there must have been a narrower notion of the king’s office. The king was not the first man in the state, but the second. Over him stood the High Priest. The beau ideal of the Avestá is a Hierarchy in which Zarathustra (Zoroaster) or his representative, forms the head. The most perfect state, according to this idea, is one like Ragha, in which Zarathustra or his representative is High Priest and High Ruler in one; but if these two dignities are separated it is not the High Ruler or king who is the first, but the High Priest. Space fails us to give full details of the manner in which this most interesting subject is worked out; suffice it to say that Prof. Wilhelms concludes[1], that the conception of Anro Mainyush is not an original Aryan one, but arose on Iranian earth, and (2), that it does not appear that Ahura Mazda and Anro Mainyush were opposing forces, the true rivals being Spēlīt Mainyush and Anro Mainyush.

Under the title of Vedāca Dr. Pischel gives three notes on Vedēc subjects. The first has reference to Rig-Veda 8, 47, 15, which the author translates “It a person (in a dream) prepare a necklace or a wreath, we attribute the bad dream to Trita Aptya.” He then explains how the preparation of a wreath can be considered unlucky, owing to the custom of crowning sacrificial animals and persons condemned to death. He next discusses the difference between sroj and salla, the latter not occurring in the oldest forms of the language. He finally discusses the effect of dreaming of the various colours, connecting the ill-luck associated with red, not with blood (which is a sign of luck), but with the terrible god Rudra, the Red God.—The second note deals with Rig-Veda 7, 5, 9, 12, for which the Professor proposes a new reading and explanation. The last note is concerned with the meaning of the word Bāj which occurs five times in the Vedas. The Professor suggests that Bāj may be both and may mean ‘by,’ ‘among,’ or ‘to the’ and justifies his suggestion at some length. The next article, by Prof. G. Bühler, is an independent translation of the second half of the 14th Edict of the Asoka Columns. This important paper deserves close study as well interested in the subject, and a brief summary of its contents would be impossible.

Professor Theodor Aufrecht gives a short contribution on the poet Umāpatīdharma, described by Jayadēva in the introduction to the Gītāgīvinda as prolix (vākeśa pâlavaṇya). The professor gives references to other verses of this poet, and suggests his date as the first half of the eleventh century, founding his theory on an inscription published in J. B. A. S. XXXIV. p. 142. It may be mentioned, however, that there is a Maithili tradition that Umāpatī was a contemporary of Vidyāpati-Thakur, who flourished 1400 A.D. There was certainly a Maithili poet of the first rank of that name, and some poems by him in Maithili were published in J. B. A. S. LIII. Special Number, p. 76.

Then there follows a rejoinder by Prof. O. Böthlingk, on Prof. Bühler’s notes on Böthningk’s criticism on Führer’s edition and Bühler’s translation of the Vanishtadharmadharma (Z. D. M. G. XXXIX. p. 794). The essence of the controversy appears to consist in the last paragraph of the present article, in which Professor Böthlink, replying to Prof. Bühler’s argument that in dealing with such a text it is necessary to be very conservative, answers, “Yes, to be conservative is a very fine virtue, but it has its limits.”

The number, which is very interesting to Indian scholars, concludes with a review by Prof. Nöldeke of Robertson Smith’s Kinship and Marriage in Early Arabia.

(2) Nachrichten von der Königlichen Gesellschaft der Wissenschaften, No. 7; 28th April, 1886.

—This is an interesting paper by Dr. Hultzsch, on the Drama Tāpasavatasesāra, a MS. of which he picked up during his recent journey in India (No. 26 in his list of MSS.). The author was Mātrakāja, alias Anangalakshma, the son of Narēndravardhana. The date of the author is conjecturally fixed as before the second half of the ninth century, owing to his being quoted by Anandavardhana and his commentator Abhinavagupta, and again as being after the commencement of the seventh century, as many of his situations and even at times his language are borrowed from the Ratnāvalī of Bāya. The drama deals with the second half of the story of Udayana, king of Kausāmbi in Vatsa, which we find in the second and third labhak of the Kathāsaritagār of Śāntadīva (dated 1063-51 A.D.). The first half is the story of Vāsavadatta, the second of Pāmdvatā. On p. 236 (3 of the reprint) Dr. Hultzsch gives a most interesting account of former Buddhistic versions of the same story, and shows that in many particulars the story of the particulars seem to have been borrowed from the play above treated of: e.g., the asceticism of the king its
author of the Tipasaenaasarnajja is indebted to Buddhist sources for his plot. The paper concludes with a number of extracts from the work, and with an index of the commencement of all the verses occurring in it. None of them occur in Bohtlingk's Adische Spruche, nor in Aufrecht's Index to the Sarigadhapuddhati.

(3.) L'Epigraphie et l'Histoire Linguistique de l'Inde; Reprinted from the Proceedings of the Academie des Inscriptions et Belles-Lettres, Paris, 1886.—In this paper M. Senart considers the Linguistic History of India almost exclusively from the point of view of epigraphy. He admits that there are other valuable sources of information, but his aim, on the present occasion, has been to draw attention to a line of demonstration in his opinion too much neglected.

At the end of a most interesting essay M. Senart comes to the following conclusions:—

(a) Regarding the Vedic and religious languages the inscriptions of Piyadas bear witness indirectly that, at about the commencement of the 3rd century before Christ, it was the object of a certain amount of culture. (b) As regards classical Sanskrit, its preparation and elaboration in the 4th century, was based mainly on the Vedic language, and stimulated by the first applications of writing to the vulgar dialects, should be placed between the 3rd century B.C. and the 1st century A.D. Its literary or official use extended at the end of the first century or commencement of the second; and it is hence, à priori, certain that no work of the classic literature can be anterior to this date.

(c) As regards the mixed Sanskrit, called the dialect of the gathas, it is only a method of writing Prakrit, aiming at, as far as possible, the orthography and the etymological forms of the religious language. Its use, born spontaneously and developed gradually, stimulated the codification of a language inspired by the same idea, but more refined and more consistent, the non-religious Sanskrit, while to us it is an approximate measure of the latter's progress. Its use extended before that of literary Sanskrit, and becoming more general under the sway of one of the great Buddhist sovereigns, Kanishka, insured its survival as a literary dialect in several schools of Buddhism. (d) As regards the Prakrits, the earlier establishment of Sanskrit determines their grammatical form, which was fixed in the 3rd or 4th century. None of the Grammars which teach Prakrit grammatical rules, and none of the works couched in any of these dialects (including Pali) can be considered as existing, in their present form, at an earlier period than that date.

Such are the views, almost startling in their novelty, advanced and argued with considerable force, by one of the foremost European scholars in this branch of philology. They deserve at least a respectful attention from those who adhere to older and more accepted theories.

(4.) Revue Critique d'Histoire et de Literature: Paris, 24th May 1886.—This number contains nothing of interest to Indian scholars, except a short notice of that most useful work the Deutscher Literatur-Kalender for the year 1886, and a reference to a paper read by M. Leon Heuzey, at the Academie des Inscriptions et Belles-Lettres, entitled 'Le Roi Dongagni a Tello.' 'Le Roi Dongagni' was hitherto considered king of 'Ur of the Chaldees,' was successor of Gondas, patre of Siparia (Tello), M. Heuzey considers that this generally received opinion is more than doubtful.

G. A. GRIEBISON.

A NOTE ON THE HISTORY AND DATE OF MIHRAKULA.

I have not my books about me here, and therefore cannot answer your letter, and the remarks in your essay, as I could wish. But, as I brought the Chinese copy of the Si-yu-ki with me, I can add a few words on your criticisms.

(1) The date 472 A.D. for 'the history of the Patriarcha'—B. Nanjio's No. 1340—is fixed by the Colophon, stating that the translator, or compiler, lived at this time in China.

(2) I have a suspicion (see further on) that Taso, the equivalent for Mo-hi-lo-ki-in-lo, is a Mongolian name, meaning the 'great horse,' and not a personal title, but a tribal one. There may be a Mongolian (or Turkish) compound Mihraka, which would be the personal name of the ruler.

(3) There can be no doubt that the original Chinese text gives "several centuries" before the period of Hien Tsiang (sho-pi-khien-tain).

(4) With respect to "the islands of the sea," this is the exact translation of the original Chinese hai, 'sea,' may, however, be equivalent to the "mouth of the Ganges," for the month of the Ganges, as also of any other river; see Monier William's Sanskrit Dictionary, s.v. Also we have by Indian writers.

Gangasagara, for 'the mouth of the Ganges,' it enters the ocean, it still exists as the mouth of the Ganges, in Lower Bengal; or "Saugo," an island at the mouth of the branch of the river. The text perhaps Biskiya took refuge in the Spokahauna islands between the mouths of the Ganges, and suitable place for a king of Magadha.
Stan. Julien always translates the word 'sien,' 'previous' or 'former,' by 'first,'—which is a mistake. Śakāḍīṭyā could not have lived shortly after the Śriṃśa, because the theory of the "One Vehicle" is the last and latest form of the Buddhist development, and must come after the "Great Vehicle."

With respect to Buddhagupta, and Budhagupta, I was misled. I quite accept your correction.

And now, having alluded to your "rubrics," let me add that I can only account for the introduction of Sinha's death (for an account of his death, or martyrdom, by Mi-lo-kiu is found only in the notes on Woung-puh, but also in the Fan-fa-tsong-qin-in-chuen; B. Nanjio's No. 1340 (Kien, vi. p. 11 b)) into a book dating 472 A.D., by the supposition that it was an addendum, after the former part was written, with a view to complete the succession down to Bödhidhamma, who certainly left India for China 526 A.D. It is certainly singular that, according to a well-authenticated tradition (vide Edkins, Chinese Buddhists, Trübner's Oriental Series, pp. 81, 85), the Buddhist succession ended with Sinha; (and therefore that Basiasita, Patnomita, and Prajñātara, are fictitious names). If so then your date for Sinha and Mihirakula, viz. circ. 520, would be fully confirmed.

The term Mi-lo-kiu, is not necessarily a corruption of Mihirakula,—but a phonetic equivalent for Młčečha,—hence it is likely that this king Mirqul (or whatever his real name was) belonged to the Młčečha invaders.

That these were Mongol or Huns, appears very likely, first, from the fact of their excessive cruelty, and then, second, from the narrative of Sung Yun, who speaks of this king of the barbarians (Młčečha) having invaded Gandhāra and set up another king of cruel disposition exactly as you quote from the Rājatarāṣṭrapāla), a third, from the fact of Cosmas calling this Golasa (a Greek form of Gula). (vide my adduction to Records of the Western World.

all hands your date seems to be confirmed, yet not quite at the origin of the Chinese for Vasubandhu; but I think it highly possible that Mihirakula was a Mongol or Młčečha, who had invaded India and extended his power over Gandhāra down to Sung-Yun, and Huen Tsiang's

I shall allude to this subject in my preface to the Life of Huen Tsiang.

S. Beal.

5th August 1886.

A NOTE ON THE DATE OF MIHIRAKULA.

I have no time to enter fully at present into intricate archaeological discussions. But I venture to offer some brief criticisms on Mr. Fleet's valuable paper, "On the History and Date of Mihirakula," in order to show that there is something to be said in favour of views other than those adopted by him.

The discovery that Mihirakula was the son of a Toramāna, and the conqueror of Pasupati, as well as the opponent of a king Bāllāditya, will undoubtedly in time settle his date. But I am not yet fully convinced that the problem is solved.

To enforce conviction that Mr. Fleet's view is correct, it will be necessary to harmonize his theory with the history of Kasmir; and that harmony remains to be demonstrated. Dr. Hoernle's notes on the Kasmir coins, seem to me opposed strongly to Mr. Fleet's new theory of the attribution of these coins.

I can see no warrant for the conjecture that either Huen Tsiang or his translators must have made a mistake in asserting that Mihirakula, the conqueror of Bāllāditya, flourished "some centuries" before Huen Tsiang's pilgrimage (A.D. 629-645). It seems to me very rash to tamper with the text, and boldly say that we ought to read "more than a century before."

The statement on p. 292 above, that Gen. Cunningham adopts the date of 500 A.D. for the erection of Bāllāditya's temple at Nalanda, and of the bōdhi-tree temple at Bōh-Gayā, is erroneous. The General did at one time adopt that date, being misled by a forged inscription; but he soon recanted his error. His final view as to the date of Bāllāditya, the builder of the great temple at Nalanda, will be found in Archaeol. Sere. Ind. Vol. III. p. 83. Gen. Cunningham there accepts "the pilgrim's statement, that the Nalanda monastery was built seven hundred years before his time, as a plain fact, which must have obtained from the annals of the monastery itself. Bāllāditya must, therefore, be placed towards the end of the first century before Christ, or early in the first century after Christ." In the footnote, the latter alteration is indicated as the more probable.

would add that it does not alter my opinion regarding the date of Mihirakula; though I am quite ready to give up the idea that it was his antagonist who built the temple in question at Nalanda.—J.F.F.]
There really appears to be no reason whatever to reject Huen Tsang's evidence. The Bahlalita who built the Nalanda temple, was distinct from, and much earlier than, the Bahlalita who defeated Mihirakula.

Gen. Cunningham's published notice of the history of Mihirakula (Archaeol. Sut. India, Vol. II, p. 197) is very slight. But, just at the time when Mr. Fleet's article appeared, I was fortunate enough to receive a letter, dated 13th ult., from the veteran archaeologist, which briefly discusses the question of Mihirakula's date in connection with the problem of the Gupta era and contains observations of interest. Gen. Cunningham, at the time of writing his letter, adhered to the belief that the era used by the Guptas began about 166 A.D.

As to the Gupta era he writes—"My opinion regarding the passage in Al Biruni is, that his statement is quite correct, and does not involve a contradiction. The Guptas never term their Sanvat by their name, but simply `Sanvat.' The Gupta Cal was an era established, as Al Biruni says, when their power ceased. Two eras are therefore quite distinct. The inscription of Mahavanman of Lankadipa is in undoubted Gupta characters, and is dated in Sanvat 279. I infer that the Sanvat must be that used by the Guptas themselves, as the characters are Gupta letters. Now Mahavanman's date is known to lie between A.D. 343 and 450. Deduct 279. Remaider A.D. 155 and 180. The beginning of the Sanvat used in his inscription, therefore, lies between A.D. 155 and 180. Now what Sanvat was this?"

"Next Mihirakula of Kasmir, who was conquered by Bahlalita. Bahlalita is almost certainly the Naragupta-Bahlalita of the gold coins; and, if so, he must be later than 174 and 174, the known Sanvat dates of Budhagupta. But Mihirakula certainly preceded the establishment of the Little Yuchi in Ghandhara, as I have three coins of Kidara Kushana Shohi, and some thirty or forty of Mihirakula. This Kidara I take to be Ki-to-la of the Chinese. Mihirakula therefore reigned about A.D. 350-400. But Bahlalita's date, being later than 174 Sanvat (used by Guptas), would, if referred to A.D. 318, be later than 318 + 174 = 492 A.D., or say 500, at which time Moghavahana, or his son, must have been reigning in Kasmir. Accepting my date of A.D. 166,

Bahlalita will be later than 166 + 174 = 340 A.D. Q.E.D."

As I said at the beginning, I have not time now to develop or discuss the arguments thus briefly indicated. I have published them in a crude form in order to stimulate discussion. Mr. Fleet's arguments in favour of his theory of the Gupta chronology are strong; but all the assumptions which underlie them have not yet been made good; nor have the counter-arguments been demolished, not at least to my satisfaction. Gen. Cunningham's letter shows that I have good company in my scepticism; and, pending the result of full discussion, I propose to keep my judgment in abeyance respecting the era of the Malavas, that used by the Guptas, and that called by their name, as well as respecting the date of Mihirakula.

V. A. Smith.

Note by Mr. Fleet.

As regards the Both-Gaya inscription of Mahavanman, referred to above, I was, of course, aware of it when I wrote my paper; it is included in my Gupta volume, No. 71. As it is of interest, I will publish it in the next number, or shortly afterwards.

It is dated Sanvat 299, as I read the second symbol; not 279. It mentions two Buddhist teachers of the name of Mahavanman, natives of Ceylon, and records that the second of them built a mansion of Buddha at the Boddhimaṇḍa, i.e. within the precincts of the "diamond-throne" at Both-Gaya. The value of it lies in the probability that the second Mahavanman mentioned in it, is the Mahavanman who composed the more ancient part of the Pali Mahāvamsa or history of Ceylon.

There is no doubt that the date of the inscription has to be referred to the Gupta era, with the result, according to my view, of A.D. 588-89.

On the other hand, from the Ceylonese record Mr. Turnour (see his Mahavamsa, pp. ii., li., 254ff.; and Jour. Beng. As. Soc. Vol. p. 922) arrived at A.D. 459 to 477 as the period of the reign of Mahavanman's nephew Dhūtu and it was during his reign that Mahavanman compiled the history.

I cannot see why the Ceylonese should be permitted to see the most convincing proof, to be held to have contradicted the general Oriental custom of relying on very accurate and reliable records. To me the palaeographical, numismatic, architectural, historical deductions from a new inscription prove, and which, because of Mihirakula's inscription, cannot be correct, unless we alter the state of Rājarṣiśvarī so much as to place Mihirakula before it, instead of sixteen years before Mihirakula, instead of sixteen years before.
records must be adapted to definite dates; the reverse course of this is quite irrational and mistaken, and has led to nearly all the doubts that exist regarding the Early Guptas.

If the second Mahānāman of this inscription is Diātusōna's maternal uncle, then the real point established by the record is, not that the Gupta era began A. D. 166, but rather that the details of the Ceylonese chronology are not as reliable as they have been supposed to be, or else that a wrong starting-point has been selected in working them out, and that now require considerable rectification.

24th September 1886.
J. F. Fleet.

CURiosITIES OF INDIAN LITERATURE.

THE PANGS OF PARTING.

The following lines are well known in Mithilā. They are very true, and are worth preserving. The metre is not very correct:—

बदि यासिनार नाय गिनिते
यामि यामि चचनि हि मा बढः
अति: पवनं न देवनं
पतन्त्राग्रामीं हु सहाम्

‘If thou must go, my Lord, say not, “I go, I go.” The falling of a thunderbolt on one causeth not the pang; it is the knowledge that it is falling which is unbearable.’

With these may be compared Lakhīmī Thākurā’s verses on the pangs of anticipated separation, which are very popular in Mithilā. They are as follows:—

रूपसु रूपसु न रूपसु कृतिविपत्तनं कृतिमन्तोक्तवायः
थाकारथुपादि नित्यं न पवनं न देवं
हनवाहं रहस्यमात्रकवायं
कान्तानिलक्षणोविन्दति रजसं मद्यी चक्रावकः

‘He breaks the crisp lotus tendrils to eat them but does not do so, for he mistakes them for the rays of the moon; though athirst he does not drink the drops of water in the lotus leaves for he thinks them stars; in the shade of the lotus-Flowers dark with the swarms of bees he sees night when there is no night; always dreading separation from his beloved, the chakrawāk imagines even the day to be night.’

G. A. Grierson.

BOOK NOTICE.

ANCIENT PROVERBS and MAXIMS from Burmese Sources, or the Nāki Literature of Burma, by James Gray. London: Trübner and Co.

This is a rendering of the four popular aṭtis of Burma, or nākis as the Burmese prefer to spell it. These are Lokaṭiti, Dhammaṭiti, Rajjita and the Suttacālaṭiti, i.e. in the Pāli form of the words. The immense popularity of these imported works, for they are strictly such, Burma, especially of the first mentioned, makes some importance to have English translations of them, and we therefore welcome this little volume. Mr. Gray’s introduction, however, has not to say as to the date of the importation of Pali literature into Burma, nor of its present history there; and to say the truth, it would be as to this is known at present, or is likely to be known for a long while to come.

We are glad to observe that the author has the advantages of which he now gives only the translation of the preparation. The texts that circulate in Burma, always or nearly always in manuscript, with a gloss in the vernacular, are, from being correct, and a well-collated prepared text would be of valuable information, for the knowledge of Pali.

Mr. Gray has been at some pains to collect all the parallel passages in the various aṭtis, and also in his notes to give passages from the Indian classics which indicate the sources whence many of the aṭti aphorisms were drawn. The Burmese glosses of course show the manner in which the people of Burma have assimilated Indian ideas, while borrowing their religion, better than do the Pali texts; for, even if it be granted that these last are taught along with the glosses, it is from the glosses that the Burmese get their ideas of the meaning of the texts. Useful, therefore, no doubt, as it is to give a rendering of the Pali for the benefit of English students, it would enable them to more clearly apprehend the workings of the Burmese mind if the text were accompanied by a rendering of the explanation of it as understood by the Burmese, as well as by parallel passages culled from the earlier Indian literature. At any rate this might be attempted with reference to the Lokaṭiti; and in this connection we would note that a translation of the most popular of the vernacular renderings of the Lokaṭiti was given by Captain Temple in the Journal Beng. As. Soc., Vol. XLVII. Part I. p. 289ff, which has been overlooked by Mr. Gray.
A SELECTION OF KANARESE BALLADS.

By J. F. FLEET, B.C.S., M.B.A.S., C.I.E.

(Continued from Vol. XIV. p. 303.)

No. 2.—The Income Tax.

This ballad refers not to the present Income Tax, but to the original Duties on Profits arising from Property, Professions, Trades, and Offices, which were imposed, with effect from the 31st July 1860, by Act No. XXXII. of 1860, and were, I understand, actually levied for only two years, as stated in the song, though the Act was not repealed until 1868, by Act No. VIII. of that year.

The song contains nothing disloyal. But it gives very plain expression throughout to the unpopularity and suspicion with which the Income and License Taxes have always been regarded; especially among the cultivators, whom, as paying Land Assessment, direct taxation of this kind is not intended to touch, save under exceptional circumstances, but upon whom such taxes always do fall more or less, despite all the efforts of the English District Officers to prevent such a result.

As regards the leading points of the song, the Act in question provided for a Duty of three per cent. for general purposes, and of one per cent. for "roads, canals, and other reproductive works." Hence the pretext, "of putting the roads and paths in good repair," that is put into the mouth of the assessing officer, when he announces his "scheme for extracting the money of the Rāyats." But there were the provisos, that no income under two hundred rupees per annum (nominally twenty pounds sterling) should be taxed at all; that no income derived from purely agricultural occupations should be taxed, unless it amounted to at least six hundred rupees; and that, on incomes of less than five hundred rupees, two per cent. only should be levied, and not the one per cent. for public works at all. Hence, when the popular champion Hittālī-Vrabhadrā appears on the scene, in answer to the inquiries made by the officer with appellate powers, he promptly writes down five hundred rupees as the limit of the incomes of the people in his village, thus trimming matters so as to please both the assessing officer and the villagers.

Two English officials are mentioned by name. The first, Gāddia-Sāheb, is the late Mr. Stewart St. John Gordon, Bombay Civil Service, who held the post of First Assistant Collector and Magistrate in the Dhārwād District, and, in October 1860, was deputed to be the special Income Tax Officer for the District. He died in 1867 or 1868, when holding the post of Additional Member on the Council of the Governor-General. A new portion of the town of Hubbalī was named after him "the Gordon Pāth," and the Dispensary, the bridge connecting Old and New Hubbalī; and the Gurusiddhāpā Hoḍl or reservoir, which furnishes the principal water-supply of the town, were built under his direction. The second official, Yalapālī-Sāheb, is Mr. John Elphinston, B.C.S., quite recently retired. He was in the Dhārwād District, as Second and First Assistant Collector and subsequently Collector and Magistrate, from August 1861 to June 1863, and on other later occasions, and was extremely popular among the people of the District.

In the accompanying plate I give the air of the chorus. The same air runs more or less through the whole song. It will be seen that the rhyming characteristic of this class of composition is preserved much more regularly in this ballad, than in the one previously published; and that the execution is more artistic throughout, as might be expected from the professor's son by whom it was composed.

Translation.

Chorus.—How shall I describe the distress of (our) lives? The oppression of the English has become very great! Poor people are weeping, so that the tears stream down (their) cheeks, and are in great anxiety!

First Verse.—Listen to the matter from the

1 Rāyat, or properly Rā'īyat, also written Raīta and Rayūta in Kanarese, Rayat in Marāthī, and 'Ryot' in English, is "a peasant cultivator."—I do not explain, on this occasion, technical terms that have been already explained with the ballad previously published.

2 I owe these details to the kindness of Mr. J. R. Middleton, B.C.S., now at Dhārwād.
beginning! There came the noble gentleman, Mr. Gordon, who sat down and contrived a scheme,—a device for extracting money. Mr. Gordon put forward the pretence of saying—"I am going to put the roads and paths in good repair; what is your opinion about it? for the matter is your business."

All the members of the village-jury consented; they knew not that it would turn out thus; in the pride of (their) wealth, they opened (their) teeth (and laughed); (thinking that) it was no matter of urgency. (With a change of metre),—Listen! Then they imposed (on us this) grievous tax; it became difficult for poor people to fill (their) bellies; they had to sell (their) spinning-wheels. The Government was greedy after money; there were searching inquiries day after day; straightway they put up to auction (even) the cow-dung (that is used for fuel), and sold the firewood by weight. If the Pêndhris and Lamâpis wish (now) to support their children (as they used to) by selling wood, (they cannot); they have fallen into a state of beggary; thus did the matter turn out.

Second Verse.—A clever scheme occurred to the Government; with all haste they imposed the Income Tax, a contrivance for extracting the money of the Râyats; thus did they act. The Government behaved with severity and strictness, (giving an order)—"Issue (compulsory) notices," and fix the period (for payment); treat them with sternness, without any fear of the consequences, if they fail to pay."

Then the Collector came, and put up at the (travellers') bungalow; and all the people went and besieged him, as if (the god) Śiva had come down (upon the earth).

(The order was given)—"If they exceed the period (for payment), pile on the interest, and take (their) houses for sale by auction;" then many people paid (the tax), with lamentations, full of fear in (their) minds. (With a change of metre),—All the chief men of the different castes assembled, and, taking counsel together, presented a petition,—"O Sir, sit down and make inquiries; we have not the means with which to pay the tax."

The gentleman did not accept it favourably; (saying)—"This matter rests not with me." (Their) hands and feet became weak, by going constantly (to him); they all sat by, refusing (their) hardly-earned and pitiful food and water.

The rich men (said)—"Laying aside (our) ornaments and other things, and putting on tattered waistcloths and jackets, let us go to the bungalow just like poor people, without any feeling of shame.

Third Verse.—The rich men braced up (their) courage, saying—"The tax will leave us;" O my brother! going constantly to the bungalow, great were the intriguing efforts that they made. The rich men, O brother! sat all together (on the ground), just like labourers and village-watchmen; each of them heaved deep sighs, turning (their) faces downwards.

(But the officials) levied the tax on the whole village; they came and sat down in the Kamari Bazaar; by force they compelled (the people) to produce (their) goods, and took them under attachment.

The weavers and sellers of silk spoke to the Subhêdâr, saying—"You are like the father that begat us; with a little tenderness in (your) reins, take pity and let (us) go. Thon, O lord! art (our) mother and father; do thou remit the tax on us; . . . has been cut and brought, weeping every day." (With a change of metre).—The wooden planks, the web-beams of

---

9 pâchâra, lit. the five people; i.e., the members of the Pâchâha or Pâchâhat, the village-jury, which traditionally consists of exactly five members.

10 châta, Mârâhî, is equivalent to the Kamarese Bâdâ; haste, speed, method, manner (of reading, reciting, and singing). It marks a change in the metre or rhythm.

11 The regular and urgent necessity of Hindu life, rich or poor, and usually collected, gratis, along the highways.

12 The restriction of forest-rights, especially of the free collection of firewood, has always been a matter of grievance among the lower castes.

13 The Pêndhris or Pendhâris are a low-caste tribe, whose occupation is chiefly to collect wood and grass for sale, and prepare manure. They have always had strong marauding tendencies, and have figured constantly in Marâhâ history. The usual English representation of the name is Pintlay.

14 chhatra chip is unintelligible.
the looms, the skeins of silk, the earthen pots, the dishes for eating from; all these they sold by auction, putting (reserve) prices on them. (With a change of metre).—The Government became very bad, O my brother! poor people had their eyes full of tears, saying,—“What a time of trouble thou hast brought, O Iśvara (our god); no man has any care of us. Say now, is it a lot of weeping women that are sitting here?; whatever we may do, the tax will not cease.” Then (by paying the tax) they redeemed the dishes for eating from; say now, did not they display fortitude?

Fourth Verse.—Rāyappa of Harpanhalli wrote out a statement,—“Sir, they have (each) as good an income as may be wished for;” he brought trouble on the poor; no justice remained.

Very brave were the Musalmans of the Ka-mari Bazaar;—“Be off,” said they, “we will not pay the tax; take it, if you like, (by force) and fine (us); this is (our) order to you.”

The Subhēḍār fired up in wrath; house after house, he searched them all; hear! how even small pieces of copper, and the braziers’ awls, and the stone-splitters’ tools, were carried away (for sale).

(With a change of metre)—All the Musalmans sat down together, making a conspiracy, inside the mosque;—“Where is the stick? search and bring it here (that we may beat those who come to levy the tax); will you now hesitate and back out of the business?” Thus they conspired,—“Undoubtedly we will beat anyone who comes (to make us pay the tax); perhaps they may put us in fetters; but, if so, what more could they do?” (But others said),—“Ye madmen! is not this a serious matter? it is not right to display any insubordination towards the Government; keep to the habit of falling down at the feet of (them, your) parents; there is (surely) some little regard (for you).”

Fifth Verse.—There came the noble gentleman, Mr. Elphinston; very full of affection for poor people was he; he sat himself down and made inquiries; listen how it befell!

All the Musalmans then assembled together, and, acting in unison, presented a petition; listen! they all came in company to the bungalow. “It is proper that thou, O lord, shouldest listen to this (our) petition; it is right that thou shouldest remit the tax on us.” Standing there, he gazed upon the poor men, with compassion in (his) reins. The gentleman looked well into the matter, and quickly caused a reply to be written, saying that they should present the petitions (of regular appeal); there was trouble in his reins, as if a fire was kindled there. He gazed upon the tattered garments worn by the women, and all their wealth; while they were weeping, (saying)—“(Our) hands can find no millet in (our) houses.”

Then the noble gentleman made inquiries; the principal rich men, O brother!, sat down; and the poor people did obeisance (to him). With great attention the gentleman listened, (saying)—“Declare how much income they have.” Hittāli-Virabhadra wrote it down, putting the estimate at five hundred rupees; and laid it on the ears of the representatives of the village, not to abandon (their) duty (to the villagers) by saying (that it was any higher).

Sixth Verse.—All the people in concert were making up (their) accounts, weighing the matter out one with the other; how shall I describe the sorrow of the people? so the work went on. First the merchant Mākapapetti, a very virtuous man, himself sat down and made up the reckoning; thus the minds of all were satisfied. Listen now again! The poor people stood by in restless anxiety, and made supplication to the gentleman; and then the virtuous gentleman caused to be given back to them the tax that they had paid.

The Musalmans said,—“O Allah! it is a year since we have eaten wheat and rice; (the god) Śiva (alone) knows our straits; what can we give?”

It was in the Pramōḍāta samāvatāra, my brother; that the Government imposed the tax; poor people were full of anxiety to the very cores of (their) hearts, (crying)—“O Lord! O holy one!” Up to (the end of) the Prajāptatti samāvatāra, the people were in straitened circumstances, and kept saying,—“Poverty has stricken the Government; let us go to some

---

13 This, of course, is ironical.
15 The staple grain of the country.
17 The Pramōḍāta and Prajāptatti samāvatāras are the fourth and fifth in Jupiter’s cycle of sixty-four years.
other kingdom;" heartily they cursed the
disposition of the village-juries, the merchants,
and the Subhēdār.

This song was composed in Hubballī, to the
sound of a drum decorated with an elephant-
goad and a nosegay of flowers; with the favour

of (the god) Gurusiddharā, the poet Gurusid-
dha, the charitable one, the son of Han-
mantrāō the teacher of singing, made and sang
the words; sit and listen, O my brother! to
the topic, the predicament that brought such
ridicule!

this, words put into the mouths of the Musalmāns.
THE AGE AND WRITINGS OF NAGARJUNA-BODHISATTVA.

By the Rev. S. BEAL.

From an examination of Chinese documents relating to Nāgārjuna, it seems evident that he is not the same person as Nāgasena.

It has been hitherto commonly held that these two names denote one person. But the Chinese version of the Melinda-Pramaṇa (Nanjo’s Catalogue, No. 1588) describes Nāgasena as a native of North India, and simply terms him a Bhikshu; whilst the Life of Nāgārjuna by Kumārajīva (ed. No. 1461) places him in South India, and speaks of him as an eminent Bodhisattva.

Again, the time when these two writers flourished is not the same. Nāgasena was contemporary with Menander, who flourished ed about B.C. 140; whilst Nāgārjuna was certainly subsequent to the date of Kanishka, and, according to the latest conclusions, lived towards the end of the second century A.D.

Again, the characters of the two seem to be wholly different. Nāgasena was a skilful disputant, but a loyal follower of the primitive doctrine of the great Teacher; but Nāgārjuna was the founder of a new school, an ambitious innovator, and an adept in conjuration and magic.

On all grounds, then, we must distinguish these two writers, and be content to let Nāgasena alone, judging him only by his one work, The Questionings of Melinda.

* This is the customary, though irregular, euphonic conjunction of kēlari (kēliśi) and anta.
I will, however, make one or two remarks about the Chinese versions of this book. I call the versions, but they are only abridgments of the original work, if that work is fairly represented by the Pāli translation. The first was made by an unknown hand during the Eastern Tsin dynasty, i.e. between A.D. 317 and 400; it is called Na-sien-pi-khu-king or "the Sūtra of the Bhikshu Nāgasena." After some introductory matter relating to previous births, we are told that there were two Brāhmanas, who had practised together their rules of austerity in the same mountain. One of these had expressed a wish that he might be born as a king; the other desired that he might be re-born in a condition to arrive at nirvāṇa. Accordingly, the first became the son of a king whose kingdom was by the sea-shore; and when the time came to name him, he was called Mī-maṅga. The other was born in the country of E-ta-la (aphone) and he was called Ta-la; but, because a royal elephant belonging to the family was born on the same day as the child, he was also called Na-sin, "for (the narrative adds) the Indian word for 'elephant' is Na" (? Nāga). Having become a Bhikshu, he attained celibacy, and after a while came to the country of She-kia in India, and took up his residence in the Shit-ti-kia temple. We must restore She-kia to Śākāla, and Shit-ti-kia to Jāti-kā. So that the plot of the discussion which follows, is laid in the same place as in the Southern or Pāli account. Meanwhile, the Prince Mī-lan had succeeded to his father's maritime kingdom; and, being an adept in religious and philosophical questions, he requested his ministers to inquire for one worthy to enter the lists with him in disputation. The reply was that in the Northern region, in the country Ta-tei, in the kingdom of She-kia, and in the palace of an old king of that country, there was dwelling a Shaman well able to dispute with the royal scholar. Then follows a description of the city of Śākāla, the noble character of the people, the richly ornamented gates, the sculptured palaces, the apartments of the court ladies, the streets and suburbs, the elephants, horses and chariots, the artikans and scholars, and the tribute paid to this city by all the small countries round about. The clothing of the people is described as being of the five colours, glistening and bright—the women, of white complexion, and wearing jewels and costly ornaments—the soil, rich and productive, &c., &c. This was the capital of the country of Mī-lan. The King, therefore, proceeds thither, and the disputation is narrated in two long chapters of twenty and fourteen double pages respectively.

From a superficial examination, the description appears to be, in its general character, identical with that found in the Melinda-paša; but, as I do not possess the English translation of this work, published, I understand, by Mr. Trenckner, I have not been able to make any exact comparison.

The only remark on the foregoing that need be made, is that the kingdom of Menaänder may properly be described as a maritime one, as the conquest of Patanale is ascribed to him; and, as he reigned over an extensive tract from the foot of the Paropamisus to the sea, we may accept the Chinese account that, whilst his kingdom bordered on the sea, its chief city was Śākāla. This country the Chinese writer identifies with Ta-tei, which is generally referred to the Roman Empire, but may, I think, be also equivalent to the countries ruled by the Baktrian satraps. On all sides, at least, this Chinese book supports the identification of Melinda (Mī-lan) with the Menaänder of the Greeks.

There is another short work, in the Chinese collection of books, relating to this subject. It comprises the 101st tale, or story, in the Taeh-pa-te-lang-king (the Samjuktaranapitakasātra). The tale is called Na-sien-Nan-lo-wang-king, i.e. "the Sūtra of Nāgasena and Nandaraja." The contents are similar to the former work noticed. The king's name is given as Nanda, instead of Mī-lan. But I see no difficulty in supposing Nanda to be a contraction of Menaänder, or of the Pāli Minanda.

On the whole we may conclude that Nāgasena, the Bhikshu, was contemporary with Menaänder, and that his discussion with the

1 [The modern Sağhalı, in the Paği:] see page 266 above, note 9—J. F. F.]
2 Ta-tei in this place must denote the Greco-Baktrian Empire.
3 Śākāla, therefore, at this time was the seat of Greek influence and civilization in North India.
4 Wilson : Arvon Antiq, page 266.
5 Nalju's Catalogue, No. 1229.
Greek ruler may have given rise to the story of Plutarch about the distribution of his (Menaître's) relics and the monuments placed over them.

We now come to Nāgārjuna, respecting whom there is abundance of information, of a mixed character, to be found scattered throughout the Buddhist literature of China. The chief difficulty is how to connect these scattered notices into anything like a reliable narrative.

Taking Hsüan Tsang's notices first, we find that, according to him, Nāgārjuna lived during the time of a king called So-lo-p'o-ho, in Southern Kūsala. He practised the art of converting inferior substances into gold, and also gained a knowledge of the elixir of life. By means of the latter, he had extended his own and the king's years over several centuries.

The king built for him, or excavated from the rock, a mainghārāna; the rock or mountain was called Po-lo-mo-lo-ki-li and it was 300 li south of the country. We cannot fix the site of the capital city, visited by Hsüan Tsang; and so the Po-lo-mo-lo hill is not known for certain. One thing, however, we know that it must be restored to Bhramara, or “the black bee,“ and was called after Durgā or Pārvati; and that it is the same as the Śrī-parvata-Paramalāgiri named by Scheifner in his Translation of Tārānātha, p. 304. On this hill Nāgārjuna is said to have passed one hundred and twenty-nine years of his life (Scheifner, Tārānātha, p. 73). We must then, it appears, give up the old story of Fa-hian about the pigeon (pārāvata) monastery, and substitute for it the Śrīparvata dedicated to Durgā. I have been told by Dr. Burgess that he has good reason for identifying this rock with the celebrated Śrīśālā, on the river Krishnā.

But now the question arises who was this king So-lo-p'o-ho, and what was his probable date?

The Chinese explanation of the king's name is, "he who draws, or pulls well." This, however, gives us but little help, beyond suggesting, as the original Sanskrit word, Sadvāha,-a name which we do not know of from Sanskrit sources, and which does not seem a very probable one. But we are told by I-tsing that this monarch was also called Shi-yen-te-kia, which might be restored to Sindhu-kā; moreover, the same writer says that Nāgārjuna wrote to him as the king of a country called Sīng-lū (Sind?) All this is obscure; if it is true the Vāya-Purāṇa gives us the name Sīndhu-kā as the first of the Andhras; but his date is much too early for Nāgārjuna. Under these circumstances, I can find no clue to the settlement of the date from this part of my enquiry, and must rest satisfied with the suggestion that the Chinese translation of the Sanskrit name is wrong,—that the original name Sātavāhana, which is equally deducible from the transliteration, and the sound of which might easily be confused by the Chinese with the sound of Sadvah, and that the king is to be identified with one of the Sātavāhana or Andhrā kings, and possibly with the Yajñāśri-Satākarni, who seems to have flourished about A.D. 178 to 297.

If we come now to consider the succession of Buddhist Patriarchs as they are named in the Northern Books, we find that Nāgārjuna is the thirteenth in the order, and Pārāvā the ninth. If this Pārāvā was the one who presided over the council summoned by Kanishka, then we may reasonably place him about 300 years after Ashoka, or A.D. 70 or 75; for this seems to be the meaning of the 400 years after the nirvāṇa, alluded to by Hsüan Tsang. His successors were Punyayaśas, Aṣṭaghoṣa, Kapimala, and then Nāgārjuna. Respecting these, there is no reliable observation found in Chinese Books, except that Aṣṭaghoṣa was contemporary with Kanishka. As there has been some

---

**This** is a phonetic representation, and is explained as meaning "he who draws the good," which of course suggests Sadvah or Sadvahana as the original Sanskrit word.

**This** expression probably means that it was 300 li from the capital of the kingdom.

**It** seems worth noting that a Buddhist Budana named Nāgārjunashāstrā is mentioned in one of the inscriptions at the Jaggayaspadā Śīlā, thirty miles north-west of the well-known Amaravati in the Kistna (Krishnā) district (Archaeol. Surv. South. Ind. Vol. III. p. 57). This inscription, however, is in Sanskrit; and, partly for that reason, partly on palaeographical grounds, has to be allotted to the beginning of the seventh century A.D.; and it thus gives about A.D. 650 as the date of this Nāgārjunashāstrā. — J. F. F.

**Kin** chin yin; lit. "right-drawing." At one time I thought this was equivalent to the Greek Svaipa.

**Ii** Nan-pi-chi-kou-ten, K. iv. p. 5 b. I-tsing tells us that the king's title (ho) was Sha-lo-p'ohun-ka, his private or personal name (ming) being Shi-yen-te-kia.
doubt expressed about this, I will refer to stories 33 and 94 in the abovementioned work called Samyuktaratnapitaka. In these stories we have mention made of the king called Chandan-Kaniha, which I can only restore to Kanishka of Gandhara. He was a great conqueror, and was converted to Buddhism. In story 94 he is said to have had three friends.—Aṣvaghōsha, his spiritual adviser;—Mo-cha-lo (Madra), his great minister;—and Chay-lo-kia (Jurka?), his chief physician. We are then told how Kanishka, after a great slaughter of his enemies, relented and desired to pursue a more peaceful life; on which his chief minister intimated that such a desire could scarcely be carried out by such a man as he had been. The king then orders a caldron full of water to be heated to the boiling point, and when this is done, he flung into the water his ring 111 and his minister immediately to take it out with his hand. The officer begs to be excused, but in vain; at last, on condition he would take it out, the king permits him to adopt his own method. Of course he takes from under the caldron the fire, and allows the water to cool. Then he removes the ring. “And so,” replied the monarch, “even I may gain the treasure of the Law, by extinguishing within me the three fires of lust, hatred, and doubt.”

I only refer to this story to show that Aṣvaghōsha was contemporary with Kanishka. But he was probably a young man, and may have succeeded Punyayāsas in his old age. At any rate, we cannot accommodate this succession to any date for Nāgarjuna earlier than the latter end of the second century A.D.

According to Tibetan accounts, Nāgarjuna lived some 600 years after Buddha; for this is the only reasonable way of explaining the statement that according to some his life was 71 years short of 600, and according to others 29 years short of that period. This is supposed to be a mistake for 71 or 29 years short of 600 years after Buddha; and if we assume the date of Buddha (according to Tibetan accounts) to be 100 years before Aṣvāka, this again would give us a date for Nāgarjuna from about A.D. 166 to A.D. 200.

I think we may safely regard this as the nearest approximate date to be got from Chinese or Tibetan sources. I will merely add that the change introduced by Nāgarjuna into the code of Buddhist doctrine was so great that it is said he claimed himself to be the “all-knowing one” (the Omniscient), and that, after his death, Stūpas were raised to him, and he was worshipped as Buddha.

SANSKRIT AND OLD-KANARESE INSCRIPTIONS.

By J. F. Fleet, B.C.S., M.R.A.S., C.I.E.

(Continued from p. 258.)

No. 166.—Bodh-Gaya Inscription of Mahanman.—The year 269.

towards the proper right side of the stone, there are engraved in outline a cow and a calf, standing towards, and nibbling at, a small tree or bush; the tips of the ears of the cow are discernible in the lithograph, below the commencement of line 14.—The writing, which is in the upper part of the stone, and covers a space of about 1' 7½" broad by 1' 0" high, including a margin of about an inch all round, is in a state of perfect preservation almost throughout.—The average size of the letters is about ½". The characters belong to the northern class of alphabets. They include, in the last line, forms of the numerical symbols

1 The ‘Bodh-Gaya’ of the Indian Atlas, Sheet No. 194, Lat. 24° 42' N.; Long. 85° 3' E.
for 8, 9, 60, and 200. In the conjunct letter ry, in vaityayatish, line 7, we have to note that the r is formed on the line, with a single y below it. The language is Sanskrit; and, except for the opening symbol representing ॐ, and for the date at the end, the inscription is in verse throughout. In respect of orthography, the only points calling for notice are (1) the occasional doubling of k and t, in conjunction with a following r, e.g. in chakkrain, line 13; tantram, line 2; and chaitra, line 14; and (2) the use of v for b throughout, e.g. in vanatka, lines 2 and 8; vabhvin, line 6; and vëdhi, lines 10 and 12.

The inscription does not refer itself to the reign of any king. It is dated, in numerical symbols, in the year two hundred and sixty-nine (A.D. 588-89), on the eighth day of the bright fortnight of the month Chaitra (March-April). It is a Buddhist inscription. And the object of it is to record the erection, by a certain Mahanam, the second of that name mentioned in this inscription, of a vihara of Buddha, i.e. a Buddhist temple or monastery, at the Bodhimagda, or, rather, within the precincts of it; i.e. at the modern Bodh-Gaya.

With regard to the places mentioned in this inscription, Lankà is, of course, one of the most-well-known names of Ceylon. And Gen. Cunningham tells me that Amaradipa, the 'mango-island,' is another of its names, derived from its resemblance in shape to a mango. Bodhimagda is the name of the miraculous throne under the bodhi-tree at Bodh-Gaya, also called the vastrana or 'diamond-throne,' on which Buddha and his predecessors sat, when attaining bodhi or perfect wisdom. And Professor Childers, in his Pali Dictionary, added that he inferred that the term was also applied to the raised terrace built under the bodhi-tree within the precincts of any Buddhist temple, in imitation, presumably, of Buddha's throne. This, rather than the throne itself, seems to be its meaning in the present inscription.

The chief interest of this inscription lies in the probability that the second Mahanam mentioned in it, is the person of that name who composed the more ancient part of the Pali Mahasannas, or history of Ceylon. If this identification is accepted, it opens a new point of importance in the question of date. On the one hand, there can be no doubt at the date of the present inscription must be referred to the Gupta era, with the result of A.D. 588-89. On the other hand, from the Ceylonese records Mr. Turton arrived at A.D. 495 to 477 as the period of the reign of Mahanam's nephew (sister's son) Dhatunena, and it was during his reign that Mahanam compiled the history. The recorded date of the present inscription, therefore, shews, if the identification suggested above is accepted, either that the text of the Ceylonese chronology is not as reliable as they have been supposed to be; or else that a wrong starting-point has been selected in working them out, and that they now require considerable rectification.

Translation.

Victorious for a very long time is that doctrine, replete with fame, of the Teacher, the first kinsman of the Śakyas, by which, illustrious as the full moon, the insubstantial primary substance of existence has been pervaded in all directions by which the warriors, who are heretics, obstructive of the path of beatitude, have been broken to pieces, being assailed with the weapon of logic; and by which the whole treasure of religion, that had been stolen by the enemy which is original nature, has been recovered for the welfare of mankind!

(L. 2.)—May he, Mahā-Kāśyapa, protect you, who, for the purposes of praise, observed the precepts of Buddha, the chief of saints; who practised that auspicious habit of abstract meditation which is of the nature of a trance; who overcame the anguish of successive states of existence; whose wonderful subjugation of the passions in final emancipation (is to be) displayed in the hand of Maitreyas; and by whom the two pure feet of Buddha the saint were beheld at the time of attaining nirvāṇa.

(L. 4.)—His disciples, endowed with a connected tradition of doctrine, purified as to their emotions, and active in compassion for existing beings, roamed at one time over the unruvilled country at the feet of the mountains of Lākṣaṇa, and in succession from them there were born, in hundreds, disciples and disciples' disciples, possessed of the virtue of (good) character, who, without the glory of (actual) sovereignty, were the ornaments of a lofty race of kings.

(L. 6.)—Then there was the Śramaṇa Bhaiva, whose welfare was effected by the development of abstract meditation; who discriminated between good and evil; who destroyed error; and who possessed an unequalled wealth of true religion.

(L. 7.)—And his disciple (was) he who had the name of Rāhula, after whom (there came) the ascetic Upasena (L.); then in succession (there was) Mahānāma (I.); and after him another Upasena (II.), whose special characteristic of affection, of the kind that is felt towards offspring,—for any distressed man who came to him for protection, and for any afflicted person whose fortune had been destroyed by the continuous flight of the arrows of adversity,—extended, in conformity with the disposition of a kinsman, (even) to any cruel man who might seek to do (him) harm; and by whose fame, arising from good actions, the whole world was thus completely filled.

the injunction which Buddha, when on the point of attaining nirvāṇa, gave to Mahā-Kāśyapa, to deliver over his kāśita or yellow robe (and with it the transmission of the Buddhist doctrine) to Maitreyas, when he should attain the condition of Buddha (see Beal's Buddha. Rec. West. World, Vol. II. p. 1427).

Mahā-Kāśyapa was seated in meditation, when suddenly a bright light burst forth, and he perceived the earth shaking. And then, exulting his divine sight in order to ascertain what wonderful event was indicated by this portent, he saw Buddha in the act of entering on nirvāṇa (see id. Vol. II. p. 161).
His disciple, greater (even than himself), is he who has the appropriate name of Mahānāman (II.); an inhabitant of Āmrāvipā; a very ocean of a mighty family; born in the island of Lāukā; delighting in the welfare of others;—by him this beautiful mansion of the Teacher of mankind, who overcame the power of (the god) Śnāna, dazzling white as the rays of the moon, with an open pavilion on all sides,—has been caused to be made at the exalted Bodi māṇḍapa.

By means of this appropriate action let mankind,—frequented from attachment to worldly things; having the condition of (mental) darkness dispelled; (and), like (the flame of) a torch, having no adhesion (to material objects),—enjoy the supreme happiness of perfect wisdom!

As long as the sun, the dispeller of darkness, shines in all directions with diffused rays; as long as the ocean (is) full on all sides with its circles of waves that are curved like the hoods of hooded snakes; and as long as (the mountain) Sumāru, the abode of (the god) Indra, has its summits made beautiful by various jewelled sabbs, in such a way as to be full of lustre,—so long let this temple of the great saint attain the condition of being everlasting!

The year 200 (and) 60 (and) 9; (the month) Chaitra; the bright fortnight; the day 8.

No. 167.—Bodh-Gaya Image Inscription of Mahānāman.

This inscription, which also is now published for the first time, is from the pedestal of a Buddhist image that was discovered in the excavations made by Mr. Beggar District in the

Cunningham and,... in the Gaya... The writing is of about the size of the letters is about the northern... Sanskrit remark. The inscription is traditionally prefixed to the name of the reign of a king who is known as Indra. There is a Bodi Māṇḍapa, which is the seat of the sthāna, the second preceding inscription.

As pointed out by Mr. Beggar, this inscription must have been at least several hundred years old when he visited Bodi-Gaya; he could not receive the gold-ordination, he could not receive the gold-ordination, at least ten years after that, he would have been invested with twelve years, before he reached the Thera. A further point to be noted is, that it occurred before the to Bodi-Gaya probably became king of Ceylon, time when Dāthu rāma, the uncle and nephew —during the flight of the usurper Pāṇḍu; to avoid the persecutions of our deductions, this according to Mr. Turn-again and 439. It was between A.D. 434—

Description of the Mehara Chief Thepaka.

By D. C. Das, BHAWNAGAR.

The inscription of the Mehara Chief Thepaka, found at Gohiwād, is situated on the north bank of the river Kāthil in the corner of the town. The inscription was cut into a stone that had been lost five pieces; it contains twenty-three lines, of which the first twelve are in the Brahmi script. The writing covers a space of about 1' 6" broad by 1' 0" high. The average size of the letters is about 1/2". The characters are Devanagari, of the period to which the inscription refers itself. In khāra, line 2, vākala, line 5, and akhāna, line 16, the kha is represented by the sign for a. The avagraha occurs in several places. The verses are numbered in the original.

Translation.

The lunar dynasty is the name of a famous dynasty, and their kings were venerated by the people. The name of one of their kings is Khaṅga, the son of Viraksetra. (L. 2.) The lunar dynasty has achieved a world-wide fame; in the family of the meritorious kings named Khaṅga, the sons of his predecessors who were endowed with the virtue of forbearance.

(L. 3.) In his family was born a man who bore the excellent name of Jāsādhavala, who was the treasure of all virtues, and whose fame became all the more renowned on account of his beauty; and whom a lady named Priyamāla, born in the solar dynasty with the sons of Vījaya and Subhāṣa, married on account of his beauty.

(L. 4.) Like a creeper of the kalpa-tree, she bore to Yaśodhavala three excellent sons—Mallā, Māṇḍala, and Mēliga.

(L. 5.) At this point—their names flourished in the family of Vākhārāja, a hero named

1 Read śrī-ākṣara-kātyāñ. 2 Read khangā. 3 In this word, the kha is represented in vākala, line 5, and akhāna, line 16. 4 Read nṛṣapati-buddhika. 5 Read putrā. 6 See note 3 above. 7 Read kartun. 8 Read kṣatrya. 9 See note 3 above. 10 See note 3 above. 11 See note 3 above.
Nāgārjuna, who was the companion of the illustrious Maṇḍalika, and who had subdued the circle of his enemies with the prowess of his arms which were always itching to strike.

(L. 6.)—His son was Māhinānda, at whose birth on the earth the joy of his elders knew no bounds.

(L. 7.)—The daughter of Māṅgalārāja, named Rūpā, who was possessed of a charming beauty, gave birth (by this Mahānanda) to a son named Thēpaka, who was brave . . . and dear to his master. Even Vāchṣapati is powerless to describe his virtues; so how shall we?; it is impossible to make an enumeration of his charities.

(L. 9.)—Then (this) Mēhāra, who won the hearts of his subjects by his nobility, valour, sense of justice, and glory, had the royal dignity conferred upon him by king Mahiśa at Tālaḍhavāja,13 a place dear to Brāhmaṇas.

(L. 10.)—While that high-minded Thēvaka was reigning, with his four sons, a benevolent idea occurred to him, of building a large tank, capable of quenching the thirst of all beings in a country where water was scarce and very deep; then he spoke to Kuṇta-rāja:—

(L. 12.)—"O king, born in the family of Vaiśāditya, and descended from Śūrya-Vikakala, listen to my . . . virtuous and beneficial advice. Just as my paternal uncle, who lived at Jirnaḍurga, built a tank called (after him) the Saṅgavāraṇa, so also do thou get a tank built, (called) the Thēvavāraṇa (after me)."

(L. 15.)—That virtuous earthly hero, having been thus instructed by the Mēhāra, immediately had a tank built, full of charming water.

(L. 16.)—May the Mēhāra, the beloved of Brāhmaṇas, with his sons, grandsons, and followers, live a very long life!

(L. 17.)—The year 1338; the Bāva saṁvatavāra being complete; in (the month) Ashīṣha; in the eighty-sixth (year); on the seventh lunar day; on Monday; this tank was finished.

(L. 18.)—(This inscription was) engraved by Saṅgāka, the son of Sūtra-Vāchā, an inhabitant of the famous Prabhānipattha.

Note by Mr. Fleet.

The chief interest of this inscription lies in its being a historical record of the Mēr or Mēhār tribe, the modern representatives, as was suggested to me some three years ago by Dr. Bhagwan Lal Indrajit, of the Maitrakas, who are mentioned in the Valabhi grants in connection with the Śrīyāpati Bhaṭārka.

His suggestion was that Maitraka is the Sanskritised form of the original name of the tribe. In endorsing it, I have to point out that the original name was Mihira; which again is the Sanskritised form of the Persian mihr, 'the sun,' and is no doubt to be attributed, as a tribal name, to a special predilection for sun-worship. The Sanskritised form Maitraka also preserves this connection in a very happy way; since it is a regular derivative from mitra, which again, as denoting the sun or the god of day, is an adaptation of the Persian Mithra. The Mihiras were a branch of the Hūnas, who, under the leadership of Tārāmāṇa and Mihirakula, overthrew the power of the Early Guptas and established themselves in Kāthiawād and other parts of Northern India, and were then, in their turn, conquered in Kāthiawād by the Śrānapati Bhaṭārka.

Other epigraphical references to them have been obtained. Thus, a Mihira king, or a king named Mihira, is mentioned as being defeated by the Rāṣṭrakula chieftain Dhruvra III. of Gujarāt, in line 45 of the Bagumra grant dated Śaka-Saṁvat 789 (A.D. 867-68). And the Tīrtha grant14 of the Chaulaka king Bhibhānāla, II, dated Vikrama-Saṁvat 1264 (A.D. 1207-8), mentions, in lines 6, 7, 8, 25, and 26, two Mēhāra Rūjas named Jaga-malla and Āna.

The present inscription gives us a third reference, in being a record of a Mēhāra chief named Thēpaka or Thēvaka, with the date of Vikrama-Saṁvat 1386 (A.D. 1329-30).

And a fourth reference is furnished by a short inscription15 on the pedestal of a Jain image, stored with several others in a place called Goraṅmahdi on the island of Śīlā-Ṭīḍ, off the south-eastern coast of Kāthiawād. It records that, in (Vikrama)-Saṁvat 1272

13 The modern Talōja in Kāthiawād.

15 Edited by Dr. Hulscher; ante, Vol. XI. p. 357 ff.
16 Mentioned in the Bombay Gazetteer, Vol. VIII. Kāthiawād, p. 652. —In the absence of an ink-impression, I describe it from a transcript sent to me by Mr. Vajeshankar Gaṁshankar. The images are said to have been transported to the island from the mainland, to save them from violation, when the Musalims invaded the peninsula.
(A. D. 1215-16), on Ravi(vāra) or Sunday, the fifth day of the dark fortnight of the month Pausha (December-January), the image, one of Mahāvira, was made by the order of the whole Saṅgha, and was installed by the Śūri Hariprabha, of the Chandra-gachchha, a disciple of the Śūri Śāntiprabha, at Timbāṅka (Tīmāṇa), the estate (pratipatti) of the Mēhara Rēṣa, the illustrious Kaṇāsiṁha. The corresponding English date is, with a difference of one day, Monday, the 11th January, A. D. 1216.

The Mēr or Mēhars are to the present day a tribe of considerable importance in Kāthiāvārī. According to the Bombay Gazetteer, they are nearly 24,000 strong, and are a race which has attached itself from time immemorial to the Jēhōwā Rājputs. Colonel J. W. Watson tells me that the Jēhōwās are said to be only the rājakulī of the Mēhars, i.e. the branch of the tribe in which the ruling power is vested; and that there are grounds for thinking that this is probably correct. He also informs me, in addition to the miscellaneous information given in the Gazetteer, that the Mēhars follow the custom of a younger brother marrying his elder brother's widow.

Another settlement of the Mēhars was in Mērāwād, in Rājputāna; in connection with which a good deal of interesting information about the tribe may be found in Tod's Annals of Rājasthān, Chapter xxvi.

Traces of them seem also to be found in Mēharauli or Mēsharauli, a corruption of Mīhira-puri, the village, close to Dehli, in which there is the iron pillar inscription of the emperor Chandra.

Mēhar on the Indus, in Sindh, is probably another early settlement of the tribe. And, if indexes were only forthcoming of the Trigonometrical Survey Maps, we might doubtless find many other interesting records of the extent to which they spread, and the chief localities in which they settled.

The full details of the date of this inscription are Vikrama-Saṅvat 1386, the Bhāva saṅvatara; Sōmavār or Monday, the seventh lunar day, without any specification of the fortnight, of the month Āśādhā (June-July). By the Tables, however, Vikrama-Saṅvat 1386 was the Sukla saṅvatara; and the Bhāva saṅvatara was the year 1391. Whether we treat the year as current or expired, this date, by General Cunningham's Tables and by Cowasjee Patell's, does not work out correctly. For Vikrama-Saṅvat 1386 current, the result for the first seventh day in Āśādhā (in this instance Pūrva-Āśādhā) is Saturday, the 23rd June, A.D. 1330; for 1387, (or 1386 expired), Thursday, the 13th June, A.D. 1331; for 1391 current, Wednesday, the 28th June, A.D. 1335; and for 1392 (or 1391 expired), Sunday, the 16th June, A.D. 1336. These calculations are according to the Gujarāt reckoning, with the year commencing on the first day of the bright fortnight of the month Āśādhā, and with the dark fortnight coming after the bright, I suspect, especially as the Bhāva saṅvatara is described as being pūra, 'full or completed,' that the last result is the proper one; and that in this, as probably in other instances, the discrepancy may be due to the ittihi, or lunar day, not coinciding exactly with the vāra or divasa, the week-day or solar day. The seventh ittihi of Āśādhā possibly began after sunrise on Sunday, and ran over into Monday. The only other way to adjust the date with the result, would be to look upon Sōmavār, Monday, as a mistake of the composer for Saṃnyavāra, Wednesday; in which case the third result might be taken as correct. The ink-impression, however, distinctly reads Sōmavārā.

The number of the year is expressed in such a way as possibly to be quoted as an instance of the use of the Loḥakādia, or method according to which the centuries are omitted. This question of the Loḥakādia, as used in comparatively modern times, requires to be worked out. But I should think that, in the present case, the omission of the centuries is due only to the inability of the composer to introduce them into his verse. To supplement the verse, he has given the full date in figures just before it.
THE BRITISH NATIONAL ANTHEM TRANSLATED INTO SANSKRIT.

BY PRAMADA-DASA MITRA; BENARES.

On the occasion of the Queen's Birthday, 24th May 1886.

Text.

I
God save our Gracious Queen!
Long live our Noble Queen!
God save the Queen!
Send her victorious,
Happy and glorious,
Long to reign over us!
God save the Queen!

II
O Lord, our God! arise;
Scatter her enemies,
And make them fall!
Bless Thou the brave that fight,
Sworn to defend her right;
Bowing, we own Thy might;
God save us all!

III
Thy choicest gifts in store
Still on Victoria pour—
Health, peace, and fame!
Young faces, year by year,
Rising her heart to cheer,
Glad voices, far and near,
Blessing her name.

IV
Saved from each traitor's arm—
Thou, Lord, her shield from harm
Ever hast been.
Angels around her way
Watch, while by night and day
Millions with fervour pray—
"God save the Queen!"

One special point in the present translations is to be found in the rhyming ends of the lines throughout.—Ed.
SOME FANTASTIC CHARACTERS.

BY J. F. FLEET, B.O.C.S., M.R.A.S., C.I.E.

Most archaeologists are familiar with the so-called ‘shell-characters,’ which exist on several of the ancient monuments of India, and the clue to the interpretation of which has not yet been obtained. Published instances of them will be found in the Jour. Beng. As. Soc. Vol. VI. p. 968, Plate lvi. No. 16, from the Aśoka column at Allābād; in the Padālī, Vol. IV. (1869) p. 43, Plate, from the Pahād pur column at Benares; in the Archæol. Surv. Ind. Vol. I. p. 37, Plate xvii, from Skandagupta’s pillar at Būhār; and in the Archæol. Surv. Ind. Vol. III. p. 154, Plate xiv. No. 32, from a pillar at ‘Rajāonā’ or ‘Rajjāhānā.’

Another class of curious characters is very well illustrated by the highly floriate letters on a pillar in the temple of Rājāvalēhāna at Rājīm in the Central Provinces, reproduced by General Cunningham in the Archæol. Surv. Ind. Vol. XVII. p. 19, Plate x. No. 3, which contain the name of Śrī-Purṣāṇḍityā;—rather difficult to make out, perhaps, by itself; but easily recognisable when compared with the name as written in ordinary characters at another place in the same temple, No. 2 in the same plate.

On one of my visits to Calcutta, I noticed in the Imperial Museum an inscribed stone from Kurgōd or Kurgōdā, in the Ballari District of the Madras Presidency, which gives some fantastic characters of a new kind. There are Old-Kanarese inscriptions on both the front and back faces of the stone. On one side, the inscription is of the time of the Western Chālukya king Śomēśvara IV. It commences—

Sri-Svayambhunāthaya namah,—“Reverence to the holy (god) Svayambhunāthha!” The word śrī, which in Old-Kanarese inscriptions is often given in various elaborate and ornate forms, is here represented by an initial in which, on the right side, can be made out the front half of an elephant; the rest of the design seems to contain nothing in particular. These words are followed by the verse—Namas-tunga-śīra-śīra-chanda-chandara-chāmara-chālara-trājālōka-nagar-ārāmābhā-mānā-stambhaya Śambhavā,—“Reverence to (the god) Śambhū, who is decorated with a chauri that is the moon that lightly rests on (his) lofty head; and who is the foundation-pillar for the erection of the city of the three worlds!” This verse introduces two ingeniously devised ‘bird-characters.

The first is the dra of chandra; in the centre there is the ordinary character da, and the bird is formed by an elaboration of the r, which is often turned completely round the letter, as here.

The second is the bha of Śambhavē, in which the head of a bird is introduced by an elaboration of the first part of the letter.

I owe this last reference to Mr. V. A. Smith. His forthcoming Index to Gen. Cunningham’s Reports will be an invaluable acquisition for references.

Since the preparation of the present lithographs, I have found that the first five lines of the Kurgōd inscription, including these three characters, have been represented,—but not at all perfectly,—in the Jour. Beng. As. Soc. Vol. VI. p. 683ff. Pl. xxxvii.
VI.—Sunábáí Jáí.

There was once a great merchant named Dántá Sêth, who had seven sons, but no daughter. So he and his wife prayed to Jáíswáram incessantly to bless them with one, till at last he heard their prayers and a daughter was born to them. They were so overjoyed at this that they made the occasion one of great rejoicing, gave away large sums of money in alms to Brákmapus, and regularly afterwards, every morning, the mother waved a string of pearls over the little girl's head and gave it away to the poor.

They had also a golden swing made for her, on which her seven sisters-in-law were made to swing her all day long. Thus Sunábáí Jáí, as she was called, grew up in great happiness and comfort, and was petted by all the friends and relations of her parents. But alas! this state of things did not last long. Before she was seven or eight years old, her parents died, leaving her under the care of her seven brothers, and their wives. The demeanour of the latter instantly changed towards her, and they who during the life-time of her parents had vied with one another in showing their love for her, now not only refused point blank to swing her, or to do any other service for her, but often told her to get out of the swing, and perform the household duties with them.

Not long after the old people had gone to their rest, the young men, their sons, betook themselves of going to distant parts for the purpose of commerce; and getting ready a ship they sailed away in it, leaving Sunábáí Jáí to the tender mercies of their wives. Before taking their departure, however, they bade them take great care of the little girl, and told them not to let her want for anything during the time they were away. But as soon as their backs were turned and the sisters-in-law found the child fully within their power, they disregarded the parting injunctions of their husbands, and set her to do all the household work they had been made to do when their mother-in-law was alive. Not content even with this, they often beat and scolded her, and, in short, tried to make her life as miserable as possible.

One day, one of them ordered her to go and bring dry wood for fuel from the jungle, and when the girl looked about for a rope with which to tie the bundle, they all scolded her and would not let her take any.

"Don't tie the dried sticks into a bundle," they said, "and yet, mind you bring as many as we used to do, when you were swinging at your ease in your golden swing."

The poor girl went out without a rope, and after she had collected a large number of sticks, she found that she could not carry more than three or four sticks on her head at a time without tying them together, so she sat down in a corner and began to cry. At this a large serpent crept out of its hole and said to her:

"Well, Sunábáí Jáí, what is the cause of your tears?"

Then the little girl replied:

"Dántá Sêth had seven sons and after them came Sunábáí Jáí,
Over whose head a string of pearls was waved every morning;
But now, all the seven brothers have gone away in a ship, leaving her alone,
And all the seven sisters-in-law ill-treat Sunábáí Jáí."*

"And they have bade me," she continued, fetch firewood, but have given me no rope with which to tie the sticks together, and I find that I cannot carry more than two or three sticks on my head, while they have ordered me to bring home a large bundle."

The serpent felt pity for her and said—
"Fear not, good Sunábáí Jáí, I shall instantly remove the cause of your grief. See here: I will stretch myself at full length upon the

---

1 Note that the birth of a daughter would not, in India, be ordinarily an occasion for rejoicings.
2 On auspicious occasions rice, coconuts, sugar, betelnut, dates (dried), are waved over a person's head and then thrown or given away, for they are believed to carry away all the misfortunes that might be in store for the person in question. Sometimes rich people wave such precious things as pearls over their children's heads with the same object.
3 i.e. the infant brides of their seven infant sons.
ground, and you must place your sticks in the middle of my body; and then, when you have piled up as many as you can carry, I will wind myself round them like a rope, and you will thus be able to carry the bundle easily."

Sunābāl Jāī thanked the serpent, who soon wound himself round the sticks she placed upon his body, and the little girl walked homewards with the bundle on her head. As she threw down the bundle in the yard all the seven sisters-in-law came running out of the house to scold her for bringing only a few sticks from the jungle, as they thought. But what was their astonishment to see as a large bundle on the ground as one could fairly carry. They were struck dumb with surprise, and could not for the life of them comprehend how the little child could have carried so many sticks on her head without tying them together; for the serpent, it must be mentioned, had glided gently away, before they could observe it.

They were, however, very much provoked, and resolved to subject her to severer ordeals. So one day one of the worthy ladies covered a large heavy quilt with ghit and oil, and bade Sunābāl Jāī go to the sea-shore and wash it clean, firmly believing that this time she would either be drowned in the attempt or return home to get a good caning. Poor Sunābāl Jāī dragged the quilt to the sea-side, and sitting down upon a stone began to cry at the utter impossibility of washing such a dirty, oily, heavy thing single-handed, and without the aid of soap or anything. However, she went to work after a time, but though she used all her strength till she was quite exhausted, the quilt remained as dirty as ever. So she again sat down in disappointment and cried more bitterly than ever.

There was nothing near her but a few cranes, who had all along been watching the poor girl. When they heard her cry they all flew towards her, and one of them asked her why she was crying. Sunābāl Jāī replied:

"Dantā Sēṭh had seven sons and after them came Sunābāl Jāī,
Over whose head a string of pearls was waved every morning;
But now all the seven brothers have gone away in a ship leaving her alone,
And all the seven sisters-in-law ill-treat Sunābāl Jāī."

She then related to them how she had been sent to wash the dirty quilt by her sisters-in-law.

"Is that all?" said the crane, who acted as spokesman: "then dry your tears, and we shall wash it for you in a trice."

Sunābāl Jāī agreed, and immediately the cranes set to work, flapping their wings backwards and forwards upon it, and dipping it now and then into the water, till they had made it in a short time as white as their own plumage. Sunābāl Jāī was very grateful to them for this, and carried the quilt home to her sisters-in-law in triumph.

They were very much chagrined, not only to see Sunābāl Jāī return home safe and sound, but to find that she had brought back the quilt, clean and white beyond their expectations. So they said nothing at the time, but inwardly swore to subject her to still greater hardships, to see how she came successfully through them all. So after a few days they mixed a phārd of rice and a phārd of dāl (pulse) together and ordered her to go into the yard and separate them.

"Be careful," said they, "not to lose a single grain out of these two phārds, for we have counted every one!"

The poor girl carried the mixture into the yard as desired, and sat down to her work, but she had no idea how she was ever to separate so many small things as the grains of rice from the dāl. So she cried and cried till even the sparrows on the large trees in the yard were moved by her tears, and they came down to her to inquire into the cause of her grief. Whereupon Sunābāl Jāī repeated to them how

"Dantā Sēṭh had seven sons and after them came Sunābāl Jāī,
Over whose head a string of pearls was waved every morning;
But now all the seven brothers have gone away in a ship leaving her alone,
And all the seven sisters-in-law ill-treat Sunābāl Jāī."

And she informed them of what her sisters-in-law had set her to do, when forthwith a large flock of sparrows set to work, and separated the rice from the dāl with their beaks, making two large separate heaps in no
time. Sunābāl Jāl joyfully took the separated grains into the house. Her sisters-in-law could not believe their eyes, so astonished were they to see the job done so quickly. One of them, however, making a pretence of counting the grains, said:—

"Stop, stop! Sunābāl Jāl, is that the way you do your work? I find the rice short just by one grain; pray how do you account for that? Go and fetch it this instant, or we shall beat you within an inch of your life."

The poor child went back into the yard, and began to look for the missing grain of rice, with eyes full of tears; when she beheld a sparrow flying into the house. She followed it, and to the surprise of all the bird dropped a grain of rice into the heap, and flew away.

At this the women grew very jealous of the poor child, and bethought themselves of some sure method of getting rid of her. They therefore ordered her one day to go into the jungle and get for them some tigress’s milk, firmly believing that she would meet with her death in the attempt. Little Sunābāl Jāl had no conception of the dangerous nature of the errand she was sent upon, and so she fearlessly wandered here and there into the jungle in search of a tigress, but fortunately for her she did not find one. So, fatigued and utterly prostrated, she sank down on the ground in a thick part of it, and cried for help; when lo! a tigress sprang out of a bush hard by, and seeing Sunābāl Jāl, said:—

"Well, Sunābāl, what are you doing here, and why are you crying?"

Then Sunābāl Jāl told her tale in the following words:—

"Dantā Sēth had seven sons and after them came Sunābāl Jāl,
Over whose head a string of pearls was waved every morning;
But now all the seven brothers have gone away
in a ship leaving her alone,
And all the seven sisters-in-law ill-treat Sunābāl Jāl!"

"My sisters-in-law have sent me," she continued, "to fetch the milk of a tigress, and of a surety I don’t know where to find it."

At this the tigress took pity on her and gave her some of her own milk, which she carried home in the pail she had brought for the purpose.

Great was the surprise and disappointment of the seven women on seeing Sunābāl Jāl come home alive and unhurt once more, and when she placed before them the pail with the tigress’s milk in it, their astonishment knew no bounds. They now clearly saw that she was under the special protection of Fate, and that, therefore, every attempt of theirs to get rid of her would come to nothing. Still, however, they persevered, and one day told her to take a large piece of cloth, go to the sea-side, and bring in it the foam of the ocean. Not suspecting the uselessness of making such an attempt, the little girl went to the sea-side, and passed nearly the whole day up to her knees in the water, trying to catch some at least of the foam that floated by her, but to her great dismay she found how utterly impracticable such a thing was. Her tears fell fast when she saw that it was getting dark, and thought how far she had to go, and how, if she went home empty handed, her sisters-in-law would visit her with the severest punishment they could inflict, when her attention was attracted by a solitary sail. She felt great interest in watching the movements of the ship which was fast making for the shore; when it neared her she recognised it to be that of her brothers, and her delight was unbounded.

Being seized with a desire to give her brothers a surprise, little Sunābāl Jāl hid herself behind a rock till they landed. The vessel anchored in due time, and the seven young men put off in a boat for the shore. As soon as they stepped on dry land, the little girl, unable to restrain herself any longer, ran up to them and was clasped in their arms. When the excitement of this most unexpected meeting was over, the brothers inquired of her what she was doing on the sea-shore so far away from home. She related to them all that had befallen her since their departure, and told them how that day she had been sent to fetch foam from the sea. The brothers were greatly enraged on learning of the inhuman conduct of their wives, and resolved to punish them as they deserved. So they took Sunābāl Jāl on board their ship, and kept her there till the following morning; when one of them, cutting open his thigh with his knife, put his little sister into it and sewed up the rent! They then went ashore and walked
leisurely home. When they arrived there, their wives were greatly surprised to see them, for they had not expected them to return so soon. Pretending to know nothing of Sunábá Jáí, they demanded of them where she was, when the wicked women replied that she had behaved very badly after their departure, and had taken to wandering about at pleasure, regardless of their admonitions, and that that morning, too, she had gone no one knew where, without their permission; but would come back, sure enough, in the evening, as was her wont.

"Very well," said the men, let us have something for our breakfast now, and mind, if Sunábá Jáí does not return by dusk we shall hold you answerable for her life."

The seven women, who had not seen the poor girl all the previous day and night, began to tremble at these words, and devoutly prayed that she would return home in safety. When they were at their meals, however, they noticed that one of the men every now and then placed a morsel of food upon his thigh, and that it soon disappeared therefrom, to be replaced by another; but, seeing their husbands were in an angry mood they dared not ask them any questions. At last, when night came and there were no signs of Sunábá Jáí, the brothers were furious and bade their wives on pain of death to tell them what they had done with her. Seeing further prevaporation useless, they all confessed their guilt, and expressed their fear that Sunábá Jáí was drowned in the sea; when, to their great dismay, one of the brothers opened the rent in his thigh, and pulled out 'Sunábá Jáí, as large as life and as well as ever. Upon this, the wicked women fell on their knees, and begged loudly to be forgiven, but their husbands were inexorable; they shaved their heads and cut off their noses and mounting them upon donkeys, sent them away to their parents' houses, to live there in disgrace for the rest of their lives!

FOLKLORE IN SOUTHERN INDIA.

BY S. M. NATESA SASIJI.

No. XIII.—THE FOUR GOOD SISTERS.

In the town of Tañají there reigned a king named Harihí, who was a very good and charitable sovereign. In his reign the tiger and bear drank out of the same pool, the serpent and peacock amused themselves under the same tree, and thus even birds and beasts of a quarrelsome and inimical character lived together like sheep of the same flock. While the brute creation of the great God was thus living in friendship and happiness, need it be said that this king's subjects led a life of peace and prosperity unknown in any other country under the canopy of heaven?

But, for all the peace which his subjects enjoyed, Harihí himself had no joy. His face was always drooping, his lips never moved in laughter, and he was as sad as sad could be, because he had no son. After trying in vain the various distributions of charitable gifts, which his elders and priests recommended, he resolved within himself to retire into the wilderness, there to propitiate Mahésvara, the great god of gods, hoping thus to have his desires fulfilled.

No sooner had this thought entered into his mind than he called his ministers to his side, and, informing them of his intention, made over to them the kingdom of Tañají. He gave strict orders to them to look after the interests of his subjects, warning them that, if they failed in this, they would have to pay forfeit with their heads. Thus appointing his ministers in his place, to order his realm during his absence, Harihí retired to the nearest jungle as a hermit.

The monarch of Tañají, who had been attended with innumerable servants, now became his own servant and master. He removed all his royal garments and clothed himself with the bark of trees. To him, whose bed had been till then the softest of cushions made of the finest and most delicate cotton, the dried leaves now furnished a mattress. Roots and fruits were now his only food, in the place of a thousand different dishes, which had at one time been daily spread before him. Every morning he rose from his bed of leaves, bathed in the coldest water, and sat meditating on Mahésvara till about the twentieth ghatikā.1

* 2 p.m.; a ghatikā is twenty-four minutes, 30 ghatikās make one day, and 30 one night. Thus 60 ghatikās make a day and night.
Then he would rise up and taste something of the roots or fruits he happened to see near him. In the evening again he would bathe and sit meditating till midnight. Then thrice sipping water only would he retire to rest (if rest it deserves to be called) for ten ghatikās. Such was his daily routine, and in this most severe penance he wasted away by degrees for nearly two years. All his ribs began to project from his sides, his skin dried up, and one could count his nerves and veins. For all that, he never wavered in his penance.

On the first day of the third year after Harij commenced his penance, the great god Mahēśvara came to recognize the monarch in his devotee. Mounting his bull, with Pārvatī, his goddess, on his left, he appeared before the royal hermit who literally danced with joy at the sight of his long-looked-for god!

"Thy prayers and praises, my good son, have been rising before our throne in Kailāśa, for the past two years, like a pillar of virtue, and have brought me down to thee to grant thy boon. Ask and thou shalt have." Thus spake Mahēśvara with a smile on his face and his right arm raised to bless.

"My great God," replied the king, "language has no words to express the great joy and pleasure I have had to-day in that thou in thy holiness hast condescended to visit thy poor dog. This slave of thy most divine righteousness has had no child conferred upon him, though his beard has whitened with age. To gain this boon, and thus sweeten the few more years he has to drag out in this world, he has been propitiating thy divine holiness."

"All men must undergo the miseries of a former life," replied the god. "However, for thy long penance we have been pleased with thee, and grant thee this request. Choose then:—A son who shall always be with thee till death, but who shall be the greatest fool in the whole world; or four daughters who shall live with thee for a short time, then leave thee and return before thy death, but who shall be the incarnation of learning. To thee is left to choose between the two." Thus spake Mahēśvara; and Harij the hermit chose the daughters. The god gave him a mango-fruit to be presented to his queen, and disappeared.

The fruit of his long penance Harij thus held in his hand. He cared nothing for the prospect of having only daughters. Daughters or sons, he wanted to have children, and so his desire had been crowned with success. A thousand times happy he felt himself in the prospect before him, as he returned to his country. Great was the joy of his subjects and ministers, to see among them again their beloved sovereign.

The king called for his priests, and, fixing an auspicious hour for the presentation of the fruit, gave it to his queen. She became pregnant, and in due course gave birth to four daughters as beautiful as Rāti.* And thus Harij obtained four daughters by the grace of God in his old age. Their names were Gaṅgābā, Yamunābā, Kāmalābā, and Nikābā.

He left no stone unturned to give them a liberal education. Professors for every branch of learning were appointed, and the girls, before they were in their tenth year, had been taught the four Vedas, the six Sāstras, the sixty-four kinds of learning, and all the rest of it. They became great Pandits, and were like four great jewels among the woman-kind of those days.

One day the old king was seated in the first storey of his palace to be rubbed over with oil. The oil-rubber began to apply the oil to his head so irregularly and in such a stupid way, that his daughters, who were looking on at a distance, were highly vexed, and calling to their mother asked her to interfere, and send the man away. Then they themselves applied the oil to their father's head, in so delicate a way that the old king did not in the least feel that anything was being rubbed over it. He was exceedingly pleased with them, and after sending them away finished his bath.

He now bethought him of Mahēśvara's condition when granting his desire for children,—that his intelligent daughters should leave him before they had been long with him. "How will they leave me? If I give them away in marriage, then, of course, they will leave me: but if I prevent this, and make some other arrangement for them I shall avert the

unhappy prophecy of the god!” So thought Hariji, and so has many another fool thought, only to bring down swift retribution on his head.

After finishing his ablutions the king did not go into the dining hall, but retired to his couch and lay down sulkily. According to the ancient customs of Hindu monarchs this was a sign of great uneasiness of mind, and the news that the king had not taken even a grain of rice after his oil-bath spread throughout the palace. The queen came flying to know the reason of her lord’s displeasure. “Call my minister at once,” was his order, and the queen sent word to that officer.

As soon as the minister arrived the king ordered him to summon a great council within a ghatīka, as he had an important question which could be solved only by that learned body.

The assembly was hastily called, and the members collected, anxiously waiting for the matter to be set before them. The king came and took his seat, and after looking gravely round him rose up and said—“My learned councillors that have met here to-day, I have a great question to put before you for your opinion. Many of you are traders, and occasionally, for various reasons, travel to different countries. When you procure a rare object, or a very precious jewel, or a valuable ornament, do you keep it for your own use, or do you give it away to somebody else? Kindly think over the matter well before you give me your answer.”

Thus spoke Hariji, and all present explained that, if the object were very rare they would prefer keeping it to themselves.

“Exactly! well said!” vouchsafed the king. “Even so do I wish to act! After great hardship and severe penance I obtained through the grace of Mahēśvara four daughters. They are my gems, my jewels, and my ornaments. Why should I give them away in marriage to another? Why should I not myself marry them and retain them under me? If you would keep the rare things you acquire to yourselves, why should not I also do the same?”

All his councillors hung their heads for very shame. They were disgusted at the turn which their generalization had been made to take and saying, “As it pleases Your Majesty,” took leave of their sovereign, all thinking that their king had gone mad.

It was not from any insane tendency that the old king spoke in that shameless manner before so learned and respectable an assembly. He had firmly resolved within himself to marry all his four daughters himself; and as soon as his councillors had left him, he called his minister to his side, and asked him to go and consult his daughters about it. By this means the king foolishly thought that he would reverse Mahēśvara’s prediction that his daughters should leave him early, and see him no more till just before his death.

The minister was in a delicate position. If he objected to take the news to his daughters, the old king might be enraged and punish him; and if he boldy stood before the girls and spoke to them shamelessly about their father’s intention to marry them himself, they might become enraged and murder him! Of the two alternatives he chose death at the innocent hands of the princesses, rather than at the guilty hands of a king, who had become so mad as to be in love with his own daughters. So he went to them.

The princesses had at great a regard for their father’s minister as they had for their father; and when they saw him approaching their mansion they welcomed him, and making him sit in their midst, wished to hear whether he had any special reason for his visit that day. When he heard the innocent talk of these children, who had not even commenced their teens, his eyes began to swim with tears at the thought of the unwelcome news he had to communicate to them. The girls, who were naturally intelligent, at once guessed from his tearful countenance, that it must be some very bad news that he had to tell, and so the eldest broke silence by sweet and well chosen words:—

“Our kind father, for so we regard you, what is the matter with you, that you have put on such a dismal face? Disclose to us the burden of your heart, that we also may share in your woes.”

The minister could no longer contain his sorrow. He sobbed aloud and told them all the proceedings that had taken place during the day, and how very sorry he was that they should have that morning showed their skill to their father in the oil-bath affair. The girls were greatly affected at what they
heard, and the eldest, Gaṅgābāi, spoke as follows:

"From this minute our father is no more our father, since he has become so depraved as you represent him to be. We all now regard you as our father, and request you to oblige us in this delicate business. It is of no use to you to say 'no' to the king's question. I shall give my consent to the marriage, and tell him at the same time that I have vowed to undergo a penance for six months, after which the marriage may be duly performed. For the present I request you to oblige us with a seven-storied mansion made of lacquered wood. In each storey I request you to store up provisions sufficient for all of us for six years. The seventh storey must contain water: the sixth, vegetables; the fifth, rice; and so on: while we must occupy the first two stories and proceed to carry on our penance. You must come here with the king on the first day of the seventh month, and then you shall see a wonderful thing! For the present, please go and inform the king of our consent to the marriage and of the penance we have resolved on for six months, during which period we must be allowed to live unobserved."

The minister was delighted to see that the princesses, though they were young in years, had a very sound knowledge of the world. He promised to oblige them most willingly, and gave orders, with the permission of Hariji the king, for the building of the lacquered mansion and for the storage of provisions. As for the king, when he heard that his daughters had given their consent, he was overjoyed, and eagerly waited for the seventh month to come. He even took special care to see the mansion was built without delay. The minister, too, left no stone unturned to supply the provisions requisite for half a dozen years. The mansion was built, and the princesses took up their abode in it for their penance. As soon as they entered they bolted the door inside, and began to meditate upon the boon-conferring goddess, Vāralakṣmī. For six months they meditated, and on the last day of the last month secured her favour. She appeared before them in a dream, robed in pure white silk, and applied kañkāma (red powder) to their foreheads in token that she had favoured them, and that from that day they might depend upon her for assistance.

Now outside this mansion, which had been built in the city of Taṅjai, Hariji was counting the days, and, to occupy his time meanwhile, had decorated the city for the coming wedding of himself with his daughters, and sent invitations to all the corners of the world. Several kings, out of simple curiosity to see the mad performance—for the old Sovereign had proclaimed to the world that he was going to marry his own daughters!—came to Taṅjai, and were waiting for the wedding day.

At last, the long expected first morning of the seventh month arrived, and Hariji sent his minister again to his daughters to ascertain their wishes. Again the daughters returned word that they gave their full consent to the marriage. Hariji was overjoyed at the second intimation of compliance, and decorated himself with all his choicest ornaments. With music before him he marched towards the lacquered mansion, the kings and the other guests following him to see how matters would terminate. When the processional music fell upon the ears of the princesses, they contemplated Vāralakṣmī and prayed:

"O benign Goddess, if thou wouldst have us become the wives of a suitable husband,—a noble prince,—let this mansion rise from its present position and fall again in the midst of a jungle untrdden by human feet! Let the gates of this mansion be shut to all that may desire to open them, except to him only whom thou hast appointed to be our husband!"

The eldest led the prayer, and had scarcely finished, when the procession stopped before the mansion. And lo! a crack was heard and the lacquered mansion, as if it had wings, began to soar into the sky! In a moment it vanished out of the sight of the sinful father; and all around him with one voice cried out that he was well repaid for his wicked thoughts. At last Hariji saw the guilt of his intentions, the just punishment with which the god visited him, the fulfilment of his prophecy, and his personal share in the early fulfilment of it. He was buried in the ocean of shame and sorrow, till those around him consoled him with that part of the prophecy, which promised that his daughters should come back to him before his death.

Within the mansion the four sisters continued to live as if it were their home. They had
everything they could desire, and, excepting the time they were obliged to spend in cooking and eating, spent their days in study and music. Their evenings they invariably spent most happily in playing the *sîdhr*, and thus forgetting their sorrows. In this way they lived a life of innocent enjoyment, in the expectation that the goddess Vâralakshmi would soon relieve them of their troubles by sending them a suitable husband.

At a distance of a hundred *kâs* from where the princesses' mansion had been located by the will of Vâralakshmi, was a kingdom named Sûvaprû. In it reigned a most just king named Isâabhâjî. He had an only son named Tânuji, who was twenty years old,—an age which fitted him for taking the reins of the kingdom into his own hands. His royal father wished, therefore, to have his marriage celebrated. The bride chosen was the daughter of Isâabhâjî's own sister, and therefore Tânuji's first cousin. All liked the proposed marriage, except the prince; for though the bride was as beautiful as the moon, she was blind of one eye!

"A one-eyed wife I will *never* marry!" was his reply to the several representations his relatives made to him.

Isâabhâjî was already very old, and his sole object in life was to see his son married, and to dandle a grand-child before his death. He had tried his, best previously, on several occasions, to choose a young lady of noble family as a bride for his son, but Tânuji would have none of them. However, the king's sister, having great influence with him, compelled her brother to fix on an auspicious day for the marriage of his son to her one-eyed daughter Kurudi. Finding it hopeless to convince his father of his disinclination to marry a lady who was defective by nature, Tânuji outwardly consented, and the preparations for the celebration of the marriage were commenced on an enormous scale.

Two days before the time appointed for the marriage the prince desired to go out hunting, in a neighbouring forest. His object was not really to hunt, but to disappear in the thick wilderness, and to run away in order to evade the marriage. The hunting expedition started in the early morning and reached the forest by about the sixth *ghaftâd*. The hunting proceeded as usual till about the fourteenth *ghaftâd*, when the prince was seen to run to a corner of the hunting ground, to disappear for a time, and then to emerge again from his place of concealment. The hunters, thinking that it was his pleasure, left him to himself, and engaged themselves in a different portion of the forest. Tânuji now found it a good opportunity to escape, and changing his horse for a fresh one, galloped towards the East and vanished from the sight of his vast army of hunters. Just about this time the hunt was brought to a close. "Where is the prince? Have you seen His Highness?" were the questions which the hunters put to each other. But the prince was nowhere to be found! They searched for him in the wood till darkness overcame them, and at last returned to Sûvaprû, late at night, without him!

The old king was waiting the return of the prince with a sumptuous dinner; and when the hunters informed him of his disappearance he fell down in a swoon, as it were a tree cut at the roots! His sister and other relatives flew to his side to console him, and he was slowly brought back to his senses. It now became more than plain to him that he was himself the cause of the prince's flight, by having tried to force him to marry Kurudi against his will. He cursed Kurudi and her mother, he cursed himself, and he cursed every one involved in the proposed marriage! He at once sent for the palace soothsayer to consult him as to the safety of his son, and as to the probable date of his return. The soothsayer made his appearance and took his seat before the king with a palm-leaf book on his left and a square dice of sandal-wood on his right. When His Majesty explained to him the disappearance of the prince, and wished to know all about him, the soothsayer contemplated Gardôsa, cast the sandal-wood dice thrice, and turned up a leaf of his palm-book, guided to the particular page by the number thrown by the dice. He then proclaimed:

"Sûkra' now reigns supreme; and Sûkra's course is a happy course! A marriage will be gained in the East! Be cheerful, my son, for

8 [This is a notable incident, as giving a rational explanation of the common disappearance of a prince on a hunting expedition in Oriental folktales. It usually takes place in a miraculous manner.—Ed.]

9 The planet Venus, which is male in India.
the lost thing will surely be found within the space of two years. Meanwhile give sumptuous dinners and fees to several Brāhmaṇs every day, and Paramēśvara will help you!"

The faces of the king and of every one present glowed with joy as the soothsayer proceeded in his reading of the secret lore.

"A pair of shawls for the good soothsayer!" cried out Isabhājī; and the present was accordingly given. The king fully believed that his son was to return to him in two years, and in this belief he forgot all his sorrow at his disappearance.

Let us now see what happened to the prince after his escape from the hunters. He left them about noon and galloped towards the East. By about twilight fortune conducted him towards the mansion of lacquer. The appearance of the splendid building made of strange materials, and not of brick or stone or chusa,8 awakened his curiosity, and made him approach it. In addition to this, he was already dying of hunger, and wished for at least a mouthful of water. Being sure that he had left his hunters far behind, he approached the mansion and sat down in the marbled lacquer pavement of the outer verandah. The god of day was sinking down in the West, and the golden rays of his evening beauty seemed a thousand times more beautiful than he had ever seen them as they glittered on the lacquered covering of the grand palace, which by its loveliness struck awe into his mind. Before the mansion ran a rivulet from which our hero drank a handful or two of water, and overcome by fatigue stretched himself on the cool surface of the palace verandah, leaving his horse to get his water and grass himself.

It has been already said that the princesses inside the mansion used to spend their evenings in playing upon sweet musical instruments and in singing. Now as soon as Thānuji had stretched himself on the verandah to sleep, sounds of sweet music fell upon his ear. They were the most exquisite notes he had ever heard in his life. Like evening zephyrs in the spring they came gently to soothe his weariness. He sat up and listened for a while to the sweet flow of music above.

"Is there a heaven in this life?" said he to himself; "have some nymphs from the divine world made this mansion their abode? or do wicked devils dwell here to feast upon night-stricken passengers?"10 However, whether they be good or bad, I must see the inhabitants of this palace, and leave to fate what it may bring upon me!"

The music now suddenly ceased, for it so happened that the sitār had to be adjusted for a different tune. Meanwhile the prince rose, and went round the mansion to see whether there where any gates to it. On the North side of it he discovered a large gate-way, and inside it a gate. This he approached and gently touched, to see if it was shut or not. Now, since Varamakshmi had fixed upon prince Thānuji as the husband of the four princesses, the gate of the mansion flew open,—as the gates of a river dam unlock to the rapid rush of released waters,—and discovered to him four beautiful maidens made a thousand times more beautiful by the strange and unexpected meeting, by their evening attire, and by the lovely sitārs in their hands.

When the princesses saw the door open and their handsome visitor standing outside it, fearing to enter in, they breathed a thanksgiving to their goddess for the fair gift, and laying down their sitārs, approached Thānuji with due respect. All four humbly prostrated themselves before him and then rose up. The eldest began to speak, while the other three sisters eagerly watched the movements of the visitor's face.

"Lord and husband of us all," said she, "glorious is this day to us as it has brought here our partner in life. Strange and sad is our history, but nevertheless we are all mortals, warmed by the same human blood that circulates through your Lordship's veins and equally affected by the same joys and sorrows. We will reserve our story, however, till your Lordship has dined, as we see plainly by your face that you are greatly tired. Accept us as your Lordship's wives, and we for our part have

earned the richest treasure the world can give us by having met you."

His vague fears about the mansion and its inmates suddenly melted away like snow before a powerful sun, when Thānuji saw the princesses and stood listening to the speech of the eldest. He also considered that day the most glorious of his life, and took leave of them for a few seconds to secure his horse, which for all the delight that had come to him he did not forget. He then bathed hastily in the hot water the ladies prepared for him, and after praying to the great God, who had been so bountiful to him that day, sat down with three of the ladies to take his dinner. The fourth attended to the leaf-plates, and supplied fresh courses as each dish was consumed. They then related their previous stories to each other, and copiously did the prince shed tears, when he heard how it was that the princesses came to perform penance to secure the favour of Varalakshmi;—and the ladies, too, when they heard how king Isabhaji had worried their husband to marry his one-eyed cousin, and how he had run away from the hunting party to avoid the marriage which so disgusted him. All were glad at the fortunate turn their lives had taken, and from that evening the prince and the princesses began to live most happily together as husband and wives, entirely forgetting their former homes.

Thus, hidden in an ocean of joy, Thānuji lived for two full years in the lacquered palace, in the company of the four princesses to whom fortune had conducted him; while they were one and all grateful to their goddess Varalakshmi for having sent them so noble and beautiful a prince as their partner in life. After two full years had been thus passed, the prince one day thought of his old father, and the usual cheerfulness left his face. His wives noticed the change and desired to be informed of the thoughts which were passing through his mind. He, noble in mind as in body, told them outright that he was thinking of his father, and that the idea of not having seen him for two years made him sad. The eldest princess as usual was the first to speak:—

"My dearest lord, it has been our misfortune to have lost a father, and we do not wish to see him again if we can help it. But we do not see any reason, therefore, why you should lose yours, who is also a father to us. Nor do we see why we should continue to live for ever in this wilderness, while you have a kingdom to govern. My advice is, that you go now to Sivapuri, see your old father, and interest him in our behalf, so that you may be able to take us where we shall have a home, a father-in-law to worship, and such society as becomes our position. You will thus be able to arrange for our living in the world like other people, without wasting our youth in this desert."

The prince thanked his queens for their sound advice, who began to make preparations for sending their husband back to his parents. They supplied him with fine sweetmeats for the way, and, with the good wishes of his wives, Thānuji started for Sivapuri.

He reached the town on the second evening after he left the lacquered palace, but the inhabitants were not able to recognize him, as it was already twilight. He arrived at the palace at about the third ghātikā of the night, and prostrated himself before his father. The old king had been counting the days and the hours for his son’s return, and as the second year rolled away and the prince did not make his appearance, he had been greatly enraged against the sooth-sayer whose prophecy had thus nearly proved untrue. The cunning sooth-sayer had been daily predicting one week more when, fortunately for him,—or the old king’s wrath would have known no bounds,—and fortunately for the old king himself, considering his advanced age,—the prince suddenly turned up. Isabhaji wept for mingled joy and sorrow; joy at having recovered his son, and sorrow at that son’s neglect of his old father for so long. But all is well that ends well, so the old king praised his household gods for having given him back his son, and merely inquired into his history for the past two years.

When Isabhaji found out that by good fortune his son had won the love of the four princesses of Thānuji, he wished his son every prosperity in the world, and gave him permission to make very arrangements to bring them to the palace at Sivapuri, and to marry them regularly. But Thānuji wished to wait a while, and his father allowed him his way.

Now the news that Thānuji had won the love of the four fair princesses of Thānuji reached his aunt, the sister of Isabhaji, and his cousin, the
one-eyed Kurudi. His aunt's dearest ambition had always been to unite her daughter to the prince, but she now thought that she must banish all hopes of its fulfilment, as long as the four fair princesses lived. Her daughter, however, was a scheming sort of girl, and determined somehow to get one of the four princesses of Thaŋuji into her own quarters, and there to murder her.

"Then the other three ladies will spurn the prince," thought Kurudi, "and he will have no other course open to him but to marry me."

For this task she engaged a doubled-up old woman, instructed her as to the position of the lacquered palace, and told her that she was to try her best to get into the good graces of the princesses. She was to serve them for a time as a faithful servant, and wait her opportunity to bring one of them away. Should she succeed in this, Kurudi promised her ample rewards.

The doubled-up old witch started with provisions for a month, and erected for herself a temporary hut in the forest at the gate of the lacquered mansion. Her nights she spent on a platform on a tree for fear of beasts of prey, and her days in her hut. After cooking and eating a little rice in the morning she would take her stand near the gate of the mansion and howl out:

"My children! Have you all forgotten me, your poor old foster-mother? Oh, how tenderly I brought you all up in your earliest days! And remembering you, I have deserted all my relations, children and friends at Taŋjai, and have traced you to this wood. If you would take me into your service, I shall still continue to render you the help I can, in washing your clothes, in preparing your meals, in combing your hair, and other domestic duties, which it was once my delight to perform while I had the charge of you all till your seventh year. What a foolish old king he was to think of marrying you to himself, and thus to have lost you!"

These and a thousand mournful tales of the past, which she had carefully learnt from the one-eyed Kurudi and her mother, she would howl out. But the ladies would never do anything without the consent of their husband, and their doors, too, would never open to any one except their lord.

After living with his father for a month, Thaŋuji returned to the lacquered mansion. He noticed the hut in front of the palace gates, but did not care to enquire who lived in it, and went on and touched the gate, which opened to him. He entered in and gave his wives all their father-in-law's presents, for the old king had sent them through his son several costly ornaments and cloths. The ladies put him a thousand questions as to how he spent the month, and were eager to see Śivapuri, and to live there as Thaŋuji's queens, under the kind protection of their good father-in-law. But the prince told them to wait for a few more months till his aunt could dispose of Kurudi in marriage to some one, for he hated the idea of taking them to the palace while his cousin and enemy dwelt in it,—that cousin whose hand he had repeatedly refused, and whom he could never hereafter marry as long as he lived.

The prince's wives then told him about the old woman, and Thaŋuji had great doubts as to the wisdom of admitting her into the mansion. Having studied tricks at courts and elsewhere, he suspected that the old woman came from his one-eyed enemy; but she left nothing unaccomplished on her part. Her repeated cries, with which the serene palace of the wilderness began to echo, at last aroused some pity for her in the heart of the prince.

"Never mind," said he at last, "let us admit her and watch her character. If it is suspicious, we will punish her; if on the contrary it is good, we shall be glad of having secured her services."

Thus with his permission the old hag was entertained, and from that moment, it was as if a serpent had been entertained to sting its own master, who fed it with milk and fruits. Deep, tricky, and a trained witch, the old hag pretended to do all sorts of kindness to the Taŋjai princesses and their affectionate husband.

There was nothing which she would not do with her own hands. Early she rose, bathed and cooked, and attended to the wants of the ladies, who after pleasant nights of singing and dancing slept very late in the mornings. The princesses found her invaluable, and this necessity for her services, in addition to the assumed kindness of the hag, increased their liking for her. The ladies loved her, and their lord Thaŋuji saw no reason, for the five months he remained for the second time in the
forest, to observe anything bad in the character of the old woman. Again, he remembered his old father, and so, recommending his queens to the kind care of the old dame, he again went to Śivapuri for a month, taking with him his wives' gifts to his father.

The old woman was only waiting for the return of the prince Thāṇujī to Śivapuri. The second day after he had left the palace, she induced the princesses to take an oil-bath, and in the oil she mixed a herb which was able to produce insensibility lasting for three days in the strongest constitution. While the oil was being applied to the heads of the princesses, they felt giddy, and before the bath was over one and all of them were in a dead sough. The wicked old woman now took the eldest on her back, and leaving the others to themselves to live or perish, flew away to Śivapuri with the nimbleness of a vixen.

She placed her burden before Kurudī, who amply rewarded her and sent her away. This one-eyed devil in woman's form now proceeded to take full vengeance on whom she regarded as the chief of her enemies. She sent for a barber and had the hair of Gaṅgābāī's head cut off, the insensibility that still overcame the poor girl making her unconscious of the loss of woman's most precious jewel. Kurudī, next proceeding to torture her enemy, sent for needles and thrust one into each pore of her skin. The pain caused by the needles made Gaṅgābāī open her eyes, and being very intelligent, she at once guessed the calamity that had come upon her. Not caring for herself, she asked her enemy, the one-eyed Kurudī, whether her sisters were all safe.

"Yes they are, and you shall pay for all the mischief they have done and for your own to boot!" roared Kurudī gnashing her teeth.

Gaṅgābāī then closed her eyes, never to open them again her enemy thought; for the effects of the drug, and pain caused by the needles, made her almost a corpse. Kurudī next tore out her eyes, and told two of her maid-servants to throw the now mutilated body into a ruined well at a short distance from the palace. They did so accordingly, and then went about their duties.

The whole of one day and one night Gaṅgābāī floated on the water in that ruined well, without recovering from her sough, and not until the morning of the fourth day after the oil had been applied to her head, did she fully come to her senses. At first she felt herself to be floating on the surface of the water, but as soon as she began to recover her faculties her body began to sink. She caught hold of a step in the well, guided to it by instinct, for her eyes were gone, and she remained immersed in the water with only her face above the surface. The needle operation, her questions to a one-eyed lady about the safety of her own sisters, and that lady's affirmative reply—all came back to her recollection as if it were a dream. She now came to understand her misfortune.

"Ah! that I should have had confidence in that old woman," she cried, "she must have given me some drug, made me insensible, and given me over to my enemy of the one-eye, of whom Thāṇujī used so often to speak. Alas! Thāṇujī, you are passing your days merrily with your father, not knowing the fate that has come over your wives, fully believing that the old woman, whom you recommended to them, is properly discharging her duties! I do not know what has become of my sisters! I do not know where I am! My eyes are gone!"

The needles imbedded in her body gave her the most excruciating pain, and she was unable even to weep. At last she began to pant as if suffocated.

The well in which she was struggling for life belonged to a neatherd, and round it he kept a garden, in which there were half a dozen beds containing tender cabbages. He came to water his vegetables, and on approaching the well with his pitcher he heard a voice as if in great pain, slowly issuing from it, but the water was too deep for him to see what was in the well. Now neatherds have queer notions as to devils and witchcraft, and he imagined that the sounds in the well emanated from a devil that must have taken up a temporary abode therein. So, he shouted out, looking down the mouth of the well,—

"O you devil! If you do not tell me who you are, and why you have thus invaded my possessions, I will throw rubbish into this already half-ruinéd well, and cover you up!"

Gaṅgābāī, who was only waiting to hear some person's voice, spoke slowly, in pain
though she was, as she was afraid that silence would mean burial in the well,—

"Kind and noble gentleman! I am too weak to tell you the whole story. I am a lady born of noble parents and have come to this wretched condition through my sins in a former life. If you will kindly take me up, regard me as one of your daughters, and restore me to health, I shall reward you amply."

The neatherd, whose name was Gōvinda, was a man of very kind disposition, and his heart melted at the idea of calamity befallen one of the fair sex born of noble parents. So he got down into the well, took Gaṅgābālī up, and shed tears to see so noble a form cruelly deprived of eyes and hair, and suffering from cruel tortures from needles.

"Cover my body with your cloth," said the princess, "and take me to your home at once. I greatly fear my enemy may watch me and try to kill me again."

So the neatherd, trembling at her words, took her home in haste. As soon as the princess felt herself safe in the house of the kind neatherd, she spoke to him thus:

"My respected protector, my father,—for so do I regard you for taking me out of the well,—I am a princess and a virtuous lady. This is enough for you to know for the present. More shall relate to you after I recover from my pain. If you begin to pull out the needles as I am, I should die, I think, before half a dozen were removed. You will do better by cooking rice in a large vessel, emptying it on the ground, and holding me over the steam while you pull them out. Keep on doing this till the last needle is removed, and I shall get well."

The princess then closed her lips, and her body was like that of one in deep slumber. The neatherd, who already respected the princess for the majesty of her form, now began the treatment according as she had said. That so noble a creature should have come to such calamity, aroused in his heart greater and greater pity. The treatment went on for a week, during which, now and then, Gaṅgābālī would relate to the old neatherd, who never left her bedside, parts of her story. Thus by degrees Gōvinda came to know the whole of it. The princess, too, recovered, except that her eyes were gone, and her head still shaven. These defects had to be remedied before her health could be said to be really restored. For this she propitiated the boon-conferring goddess Varalakshmi, and then she sneezed, when lo! there dropped from her nostrils seven precious gems! She called to Gōvinda and addressed him thus:

"My respected Gōvinda, my kind protector, I have to trouble you still more. These seven gems has Varalakshmi just given me. Take six for yourself, convert the seventh one into money, and buy some cows. Milk all the cows morning and evening, boil down the whole of the milk into only two measures, and give them to me."

The neatherd took the gems, locked six of them in his box and went with the seventh to the bōzār. When he showed it to the gem-assayers they estimated its value at seven lakhs of māhars, for which enormous sum he disposed of it to a rich merchant. He could have purchased all the cows in Śivapuri for that amount, but instead of doing so, he bought only a hundred fine milk cows, and brought home the other portion of the money. Gōvinda truthfully told what he had done to Gaṅgābālī, and she was delighted at his uprightness. The neatherd, for his part, now began to regard her as a goddess. The milk of the one hundred cows he boiled down into two measures as directed, and placed them before her morning and evening. She used this milk in her food and daily improved in health.

We must here leave Gaṅgābālī under the kind protection of our neatherd, and turn to inquire about her other sisters. It has been already said that all the four sisters fell into a swoon, when the old woman applied the oil to their heads, Gaṅgābālī only was removed to Kuruṭi's palace, while the other three continued insensible for three days, coming to their senses on the fourth morning. What was their astonishment when they missed their eldest sister and the old woman! They began to suspect their husband.

"Has our lord played this trick upon us to take our eldest sister to his palace at Śivapuri and to leave us all here, in everlasting banishment? Shan't we be angry with him when he comes? For our sister will never forget us, and will soon bring him back."

Thus resolved they in their minds, and, being very innocent and timid, passed their days
patiently waiting till their husband and their sister should return. They would soon return together they thought, but they were doomed to be disappointed.

After staying with his father for a month, the prince returned to the forest with great eagerness to meet his dear wives, for he knew nothing of the calamity that had befallen them. When he entered he found no joy in the palace, but the three sisters lying down each by herself with no mirth or welcome in their countenances. He was greatly vexed, and missed his eldest queen, whom he loved best, and as to whom the other queens suspected him.

"Where is my Gaṅgābālī, my dears? And why have you all got such dismal faces?" asked Thānūjī.

Till then they had thought that their sister was safe with their husband at Śivapurd, but when the prince enquired after her, they fell off their couches, and, weeping and wailing, inquired what had happened to their sister! It was now plain that some trick had been played upon them all by the old woman. The prince asked them to relate what had taken place in the palace since he had left it, and they told him everything. It then became as clear as the day to Thānūjī, that the old woman, who pretended such affection for them, was a rogue, and that she had taken his love Gaṅgābālī to Kuruḍi for some foul purpose. He consolled his three other wives, cursed the day on which he took in the old woman, and started at once in search of his lost love. Her sisters were equally anxious about her, and promised to be careful during his absence.

"The door shall open to none except to yourself, my Lord, and that, too, only when you bring us back our sister," said the youngest of the sisters. And our hero, buried in the ocean of sorrow, and not knowing how to find his lost love, returned to Śivapurd.

He informed his old father Isabhājī of what had happened, and they both sent courtiers to different parts of the kingdom to make a careful search for Gaṅgābālī. The prince also secretly made all the requisite enquiries in the palace where Kuruḍi and her mother were living. For six months the search went on, and yet no trace was found of the lost princess. Meanwhile Isabhājī was drawing day by day nearer to his grave, and again began to trouble his son about marrying the one-eyed Kuruḍi. But the prince would never agree to it.

While a whole army of courtiers were thus searching for Gaṅgābālī in the various parts of the kingdom, she was living comfortably in Gōvinda's house, and her diet consisted daily of the two measures of milk, morning and evening. Now Gōvinda had a daughter named Gopī, and she and Gaṅgābālī became very good friends. Gaṅgābālī related to her her whole history one morning, and was anxious to do something in revenge to Kuruḍi before joining her sisters in their palace. With a scheme for this in her head she addressed Gopī thus:—

"My dear Gopī, my story is as you have heard, and my heart burns within me when I think of my treatment at the hands of that one-eyed witch. I ask you now to help me to repeat Kuruḍi's acts on herself. Convert the milk which your father brings to me at night into curds. Take the curds with you and cry out in the streets—'Good curds to sell! Never have neatherds sold such curds! Fine curds, one hundred māhās per measure! Good curds!' Good curds!' Every one will call you a fool for putting such a price on your curds; but go to the palace and Kuruḍi will send for you and ask you the price of your curds. Demand as before one hundred māhās. She will give the money and buy your curds, and finding them very sweet will offer to buy some from you every day. Go on giving her the curds, but do not take money for them. Only cultivate her friendship. And then I shall let you know what we must do."

Gopī obeyed Gaṅgābālī exactly and in this way secured the friendship of Kuruḍi. Then said Gaṅgābālī to her:—

"My dear Gopī, when you go to-morrow to the palace put on a sad countenance, and, when Kuruḍi comes and asks you the reason for it, tell her that you have a sister who has had lately small-pox and lost her eyes. Ask her to give you a pair of human eyes. She has with her my two eyes which she will give you. Bring them to me."

Gopī did as she was told, and when the eyes came into Gaṅgābālī's hands she put them into the empty socket and meditated on the boon-confering goddess Varalakshmi, when her sight was completely restored. She now for
the first time beheld Göpī and her father the
neatherd. She thanked them again and again
a thousand times and asked Göpī to beg her
hair from Kurudī under the same pretence of
having a sister who had lost hers. Göpī, who
who had now fully secured the affections of
Kurudī, brought back Gaṅgābālī's hair, and the
princess put it on her head, and meditated on
Varalakshmi; when lo! every hair returned to
its proper place! Thus, through the neatherd
and his daughter, and by the divine help of
Varalakshmi, Gaṅgābālī crossed the ocean of
misery, and came back to her former self.

The news that Isabhājī was trying to compel
his son Thānaji to marry Kurudī, was com-
municated by the one-eyed lady to her friend Göpī.
She also informed the neatherd's daughter
that, though the prince was not agreeable
to the match, he would be soon compelled
to give his consent to it, to oblige his father
and his aunt. These bits of information
were duly passed on to Gaṅgābālī, who, now
thought this a good opportunity to wreak her
vengeance on Kurudī. So she asked Göpī to
go to the palace next morning with curds,
and to sit down rubbing her hair on the
ground.

"My dear Göpī," said she, "if you will
keep on rubbing your beautiful hair on the
ground, Kurudī will call you mad, for thus ins-
ulting an ornament that nature has granted
you. You must then tell her that a doctor has
given you a prescription for making the hair
grow quickly, that ever since you have applied
it your hair has been growing at the rate of a
cubit a day and that as you are not able to take
care of so great a quantity, you are, rubbing it
on the ground to check its growth. She will
then ask you for some of the prescription,
and you must agree to give it, and come to
me."

Göpī agreed to all that Gaṅgābālī asked her
to do, and went to the palace. She pretended
to rub her hair on the ground until Kurudī
came and asked her the reason, when she replied
as she had been instructed. Kurudī was
naturally somewhat bald-headed,1 and as Isa-
bhājī had just made his son consent to marry her,
his wedding day, for which she had been
so long waiting, was at last approaching. To
make herself, therefore, as beautiful as possible
by adding flowing hair to her charms, was
an important point; so she said to Göpī:

"My dear Göpī, I thank the day which first
made us friends! My hair is a weak point
with me, and if you can make your hair grow at
the rate of a cubit a day, I should much like to
see your doctor, and show him my head also.
Will you kindly bring him to me?"

Göpī, as instructed, said—"Undoubtedly he
shall be here with me to-morrow, my noble
lady;" and returned home.

Gaṅgābālī was anxiously expecting to hear
what had taken place in the palace between
her friend Göpī and her bitter enemy Kurudī,
and, when the latter came home, she related
how she had promised to bring the imaginary
doctor next day to the palace. Gaṅgābālī
could have leaped for joy.

"My end is attained," said she in great joy,
eagerly waiting for the next day to come.

As already said, the old king had made his
son Thānaji consent to marry Kurudī, and the
wedding day had been fixed for the tenth day
of the bright half of that very month. It was
just ten days before the happy event was to
take place that Kurudī was expecting to see
the doctor with the wonderful power of breed-
ing hair. That morning Gaṅgābālī changed
her female attire for the first time in her life
for a man's and wore a doctor's robes, and so
well did she carry out the disguise that her
friend Göpī was hardly able to distinguish in
the young doctor her friend Gaṅgābālī. Thus
metamorphosed and followed by Göpī, Gaṅg-
ābālī reached Kurudī's house, where she was
welcomed, and given a seat near its mistress.

"Can you indeed make hair grow very
quickly?" asked Kurudī.

"Madam," replied the sham doctor, "I have,
ever since I began practising the art, been
most successful in it. On no occasion has the
hair I have manipulated grown less than a cubit
a day. I shall try the best of my medicines
on your head. Only the old hair must be
entirely removed, and the surface of the head

1 Long and flowing hair is considered one of the best personal adornments of the softer sex among the Hindus.
[It may be noted here that the name of the one-eyed Kurudī is a Kanarōa word, meaning 'a blind woman.'—Ed.]
must be turned over with a sharp knife for a day, before the medicine can be applied. In the case of tender constitutions there may be slight pain for a day, but on the second day the pain will go away, and shoots begin to appear. After that every day your hair will increase by a cubit, and a time will soon come when you will have to cut off a portion daily.'

Kuruḍi listened to the doctor's plan, and thought to herself, that, out of the ten days that remained to her before the marriage,—making allowance for the time required for the shooting of the hair,—she might have eight cubits' length on her head on her wedding day. So she at once sat down for a clean shave.

Gāgābāl now wreaked full vengeance upon her enemy. Kuruḍi's head was shaved clean! The skin was then cut in all directions, and powdered pepper rubbed in—a soothing balm to a scored pate! Said the doctor:

"Madam, the medicine has now been applied: You may feel a little burning sensation, but it will be all right in a day. To-morrow, or the day after, in the morning, the shoots will begin to sprout."

Kuruḍi, in expectation of the fulfilment of her wishes, patiently bore the pain. A full day and night elapsed, but still the burning did not cease. Fearing that if the balm were removed the medicine would lose its effect, she patiently bore the pain for a second day, and on the third day as soon as the morning dawned she put her hand to her head to see if there were any signs of the sprouts. "The shoots have begun really to sprout," thought she, for her fingers felt the worms which had already begun to breed in the matter formed on her head! Several of her servants, who had been ordered not to see her till then, were now called in to examine her head. Her mother, too, made her appearance. What they found was this:—Kuruḍi with her head shaved, ploughed up and pasted over with powdered pepper! They washed her head with warm water and began to treat the wounds. But they were past all treatment; for two days' exposure to such treatment had caused corruption to set in! Still the fond heart of Kuruḍi's mother left no stone unturned to restore her daughter. She sent servants to Gāpī to look for the doctor, but neither doctor nor Gāpī were to be found; for the sagacious Gāgābāl had removed her protector Gōvinda and her friend Gāpī to a village outside the town on the night she tried her treatment on her one-eyed enemy.

Neither the old king Isabhājī nor his son Thānujī, of course, knew anything of what had passed in the palace where Kuruḍi was living; and, in honour of his marriage, the prince wished to have his rooms adorned with paintings, the better to receive his visitors during the ensuing wedding. He therefore proclaimed that he would greatly reward any good painter that would come forward. Gāgābāl, who was now living outside Sīvāpuri, came to know of Thānujī's proclamation, and dressed herself up as a painter, and appeared before the prince. He was charmed with the fair face of the painter; and Gāgābāl's disguise was so complete that he failed to discover his lost love in the painter. He tested the sham artist's skill, but as Gāgābāl had learnt the five arts in her younger days she easily stood the test. Then the artist put the following condition on his undertaking the task,—that no one, not even the prince, should see him while at work, and that the prince must be the first to examine the pictures when finished. Thānujī, who was much taken by the painter, agreed to everything and left him to his work.

Gāgābāl now bolted the door, and mixing her colours proceeded to represent her whole story on the walls, from the time that Thānujī went the second time to Sīvāpuri, to the point of her appearing before her lord as a painter. She drew the old woman flying with her to Kuruḍi; the torture she underwent at Kuruḍi's cruel hands; the scene at the ruined well; the portraits of Gōvinda and Gāpī, her protectors in her calamity; her revenge on Kuruḍi, in the disguise of a doctor; and lastly her appearance in the attire of a painter. She not only painted the scenes, but also added explanatory notes. On the third day she came out of the room, and sent the messengers on watch outside to inform the prince that the painter had finished his work, and wanted to take his

leave. When the prince came to examine the painter's work, he said:

"My Lord, I shall come for my reward on Your Highness's wedding day. You had better examine the pictures in my absence at the fifteenth ghatakā this afternoon, for that, the soothsayers told me, is the auspicious ghatakā (hour). Kindly, therefore, do not examine them before that time, or I fear evil stars will make you judge ill of my powers of execution."

Gaṅgābālī said this to gain time in order to reach her home before her lord should come to recognize her in the painter. The prince accepted these new conditions, for the painter's face exercised a wonderful influence over him. His misfortune in not recovering his lost love, his approaching wedding with one whom he hated from the very bottom of his heart, his unfaithfulness to his former wives in agreeing to marry Kurudi—all these were passing and repassing through his mind every moment, as he waited impatiently for the time when he could examine this work.

At last the hour arrived. Thānuji entered his apartment to look over the paintings, and exclaimed:

"My dear wives are painted here! Did the painter ever see them? Ah! my dearest Gaṅgābālī is dying here! Most horrible! Oh wicked enchantress Kurudi! Oh kindly nether Gōvinda! I shall well repay for your assistance."

Then like a mad man Thānuji wept and laughed, and laughed and wept, till he came to the end.

"After all my love is living!" exclaimed he, as he staggered about the floor, and fell heavily.

His servants, who had been listening to all his ravings, at last dared to approach their lord, and flew to his assistance. They took him up and brought him round. "My carriage," was all he said to them; and they at once got it ready. He then drove outside the town to where the painter had told him he was living; and there Gaṅgābālī, who had rightly expected her husband to come to her directly he saw the pictures, was waiting to receive him. They flew into each other's arms.

"I have at last found my lost gem, and never again while I live shall I lose it in the forest!" said the prince; "God has given me back my lost gem!"

The princess only replied by her tears, for she could not open her lips. Presently, after the first excitement was over, they questioned each other as to their history during this calamitous period, and again wept over their misfortunes.

With Gaṅgābālī by his side, Thānuji now drove to the lacquered mansion, sending word to his old father that he had discovered his lost love, and was going to the forest to bring all his dear wives to Śivapuri, and that, on the day originally fixed for the wedding, he would be married to them and never to Kurudi!

Alas for Kurudi! No medicines had any effect on her. She died on the day before that appointed for her wedding, unable to bear up against her pains, external and internal. For remorse, at the torture she had inflicted on her enemy, overcame her mind before she breathed her last!

To return to the lacquered mansion. The prince met his other wives and gave them their lost sister, and returned to Śivapuri, relating stories all the way home, some of the calamities that had befallen him and Gaṅgābālī, owing to their having entertained the old woman in their palace. When they reached Śivapuri, all excepting Kurudi's mother, were happy on the marriage day, on which Thānuji, with the consent of his father, properly married all his four wives.

After the princesses had thus lived for a short period with their husband, they heard that their father was dangerously ill. So, accompanied by Thānuji, they went and visited him before his death. The father had only time to beg their pardon before he breathed his last, leaving his large kingdom to his daughters. The princesses, remembering the minister's kindness to them, gave him their kingdom, and returning home to their husband's country, lived with him for many years in peace and prosperity, during which they did not forget the kindnesses that Gōvinda and Gopi had done to Gaṅgābālī.
THE VERSES OF LAKHIMA THAKURANII.

At p. 318 above, there is given a verse based on the signs of the Zodiac; and, as Mr. Grierson suspects, the text is certainly corrupt. The same verse is repeated in the South of India also; though no one knows here that Lakhima Thakurani is the author of it. The correct form of the verse, as current in Southern India, is—

संतोष वस्मांविश्व सांदिना संपुष्किता निजपेते

कृप्यादायतवहृतीयमतिनमुत्कावशारसताम।

वा वही काठिपचन्मी च नवमुसू: सरसीवांवता

प्राप्तिस्वर्गस्वावतः श्रवण्या चुर्ण हरीरय नव॥

The latter portion of the last line, team-adhunā
tāruṁ triṣṭyā bhava, gives a very good ending to the verse;—"You had better quickly give her the result of married life." In this correct form of the verse, the heroine is called katipāchamī, which means sinha-katī, as the 5th (pañcamī) sign of the Zodiac is sinha. In the verse as given by Mr. Grierson, this portion is nīpā-paṇchamāsya; which does not give a good meaning, though Mr. Grierson has done the best with it. On the other hand, kati-pañcamī (or sinha-katī) is very commonly applied to beautiful damsels in Sanskrit literature; e.g.—

उद्वृत्तमुय्यी मृगास्मीही

गुणद्विवाहविकितमंगताि॥

विनंता यदि सा हृदये वृजि

के जपः के तपः के सन्नाथिष्ठि॥

"If a lady, whose face resembles the moon, whose loins resemble the lion's, and whose slow gait is illustrated by that of a kindly elephant,—if such a lady lives in one's heart why should a man perform prayers and penances, and why the still more painful task of rigid contemplations?"

On the same page there is given another verse commencing तन्नी बाळा. The South-Indian version of this is—

तन्नी बाळा तूनुसुनिति स्वस्वसनाब बूंका

लोके भार्तवस्ववत्तनामगहनी किन्द्रा भगता।

तस्मादिशरसि नवत स्वामीवर्षिनीवा

मन्याताना विसुज्जित रात्रि नेत्रयज्ञिः समां॥

The meaning of the last line is—"If crushed gently, the sugarcane does not yield the whole of its juice." Evidently the same meaning can be made out of मन्याताना( मैने?) बहुतरसं ने दासाः—

"If Mr. Grierson had given to 'ने' the meaning of 'not' instead of 'us.' In Sanskrit, ने as well as न means 'not'; and a sugarcane when pressed gently, gives not much sweetness."
