RULES
OF THE
Society for the Promotion of Hellenic Studies.

1. THE objects of this Society shall be as follows:—

1. To advance the study of Greek language, literature, and art, and to illustrate the history of the Greek race in the ancient, Byzantine, and Neo-Hellenic periods, by the publication of memoirs and unedited documents or monuments in a Journal to be issued periodically.

II. To collect drawings, facsimiles, transcripts, plans, and photographs of Greek inscriptions, MSS., works of art, ancient sites and remains, and with this view to invite travellers to communicate to the Society notes or sketches of archaeological and topographical interest.

III. To organise means by which members of the Society may have increased facilities for visiting ancient sites and pursuing archaeological researches in countries which, at any time, have been the sites of Hellenic civilization.

2. The Society shall consist of a President, Vice-Presidents, a Council, a Treasurer, one or more Secretaries, and Ordinary Members. All officers of the Society shall be chosen from among its Members, and shall be ex officio members of the Council.

3. The President shall preside at all General, Ordinary, or Special Meetings of the Society, and of the Council or of any Committee at which he is present. In case of the absence of the President, one of the Vice-Presidents shall preside in his stead, and in the absence of the Vice-Presidents the Treasurer. In the absence of the Treasurer the Council or Committee shall appoint one of their Members to preside.
4. The funds and other property of the Society shall be administered and applied by the Council in such manner as they shall consider most conducive to the objects of the Society: in the Council shall also be vested the control of all publications issued by the Society, and the general management of all its affairs and concerns. The number of the Council shall not exceed fifty.

5. The Treasurer shall receive, on account of the Society, all subscriptions, donations, or other moneys accruing to the funds thereof, and shall make all payments ordered by the Council. All cheques shall be signed by the Treasurer and countersigned by the Secretary.

6. In the absence of the Treasurer the Council may direct that cheques may be signed by two members of Council and countersigned by the Secretary.

7. The Council shall meet as often as they may deem necessary for the despatch of business.

8. Due notice of every such Meeting shall be sent to each Member of the Council, by a summons signed by the Secretary.

9. Three Members of the Council, provided not more than one of the three present be a permanent officer of the Society, shall be a quorum.

10. All questions before the Council shall be determined by a majority of votes. The Chairman to have a casting vote.

12. The Secretary shall give notice in writing to each Member of the Council of the ordinary days of meeting of the Council, and shall have authority to summon a Special and Extraordinary Meeting of the Council on a requisition signed by at least four Members of the Council.

13. Two Auditors, not being Members of the Council, shall be elected by the Society in each year.

14. A General Meeting of the Society shall be held in London in June of each year, when the Reports of the Council and of the Auditors shall be read, the Council, Officers, and Auditors for the ensuing year elected, and any other business recommended by the Council discussed
and determined. Meetings of the Society for the reading of papers may be held at such times as the Council may fix, due notice being given to Members.

15. The President, Vice-Presidents, Treasurer, Secretaries, and Council shall be elected by the Members of the Society at the Annual Meeting.

16. The President and Vice-Presidents shall be appointed for one year, after which they shall be eligible for re-election at the Annual Meeting.

17. One-third of the Council shall retire every year, but the Members so retiring shall be eligible for re-election at the Annual Meeting.

18. The Treasurer and Secretaries shall hold their offices during the pleasure of the Council.

19. The elections of the Officers, Council, and Auditors, at the Annual Meeting, shall be by a majority of the votes of those present. The Chairman of the Meeting shall have a casting vote. The mode in which the vote shall be taken shall be determined by the President and Council.

20. Every Member of the Society shall be summoned to the Annual Meeting by notice issued at least one month before it is held.

21. All motions made at the Annual Meeting shall be in writing and shall be signed by the mover and seconder. No motion shall be submitted, unless notice of it has been given to the Secretary at least three weeks before the Annual Meeting.

22. Upon any vacancy in the Presidency, occurring between the Annual Elections, one of the Vice-Presidents shall be elected by the Council to officiate as President until the next Annual Meeting.

23. All vacancies among the other Officers of the Society occurring between the same dates shall in like manner be provisionally filled up by the Council until the next Annual Meeting.

24. The names of all candidates wishing to become Members of the Society shall be submitted to a Meeting of the Council, and at their next Meeting the Council shall proceed to the election of candidates so proposed: no such election to be valid unless the candidate receives the votes of the majority of those present.
25. The Annual Subscription of Members shall be one guinea, payable and due on the 1st of January each year; this annual subscription may be compounded for by a payment of £15, entitling compounders to be Members of the Society for life, without further payment. All Members elected on or after January 1, 1894, shall pay on election an entrance fee of one guinea.

26. The payment of the Annual Subscription, or of the Life Composition, entitles each Member to receive a copy of the ordinary publications of the Society.

27. When any Member of the Society shall be six months in arrear of his Annual Subscription, the Secretary or Treasurer shall remind him of the arrears due, and in case of non-payment thereof within six months after date of such notice, such defaulting Member shall cease to be a Member of the Society, unless the Council make an order to the contrary.

28. Members intending to leave the Society must send a formal notice of resignation to the Secretary on or before January 1; otherwise they will be held liable for the subscription for the current year.

29. If at any time there may appear cause for the expulsion of a Member of the Society, a Special Meeting of the Council shall be held to consider the case, and if at such Meeting at least two-thirds of the Members present shall concur in a resolution for the expulsion of such Member of the Society, the President shall submit the same for confirmation at a General Meeting of the Society specially summoned for this purpose, and if the decision of the Council be confirmed by a majority at the General Meeting, notice shall be given to that effect to the Member in question, who shall thereupon cease to be a Member of the Society.

30. The Council shall have power to nominate British or Foreign Honorary Members. The number of British Honorary Members shall not exceed ten.

31. Ladies shall be eligible as Ordinary Members of the Society, and when elected shall be entitled to the same privileges as other Ordinary Members.

32. No change shall be made in the Rules of the Society unless at least a fortnight before the Annual Meeting specific notice be given to every Member of the Society of the changes proposed.
RULES FOR THE USE OF THE LIBRARY
AT 22, ALBEMARLE STREET

I. That the Library be administered by the Library Committee, which shall be composed of not less than four members, two of whom shall form a quorum.

II. That the custody and arrangement of the Library be in the hands of the Librarian, subject to the control of the Committee, and in accordance with Regulations drawn up by the said Committee and approved by the Council.

III. That all books, periodicals, plans, photographs, &c., be received by the Librarian or Secretary and reported to the Council at their next meeting.

IV. That every book or periodical sent to the Society be at once stamped with the Society's name.

V. That all the Society's books be entered in a Catalogue to be kept by the Librarian, and that in this Catalogue such books, &c., as are not to be lent out be specified.

VI. That the Library be accessible to Members on all week days from eleven A.M. to six P.M. (Saturdays, 11 A.M. to 2 P.M.), when either the Librarian, or in his absence some responsible person, shall be in attendance.

VII. That the Society's books (with exceptions hereinafter to be specified) be lent to Members under the following conditions:—

1. That the number of volumes lent at any one time to each Member shall not exceed three.

2. That the time during which such book or books may be kept shall not exceed one month.

3. That no books be sent beyond the limits of the United Kingdom.

VIII. That the manner in which books are lent shall be as follows:—

1. That all requests for the loan of books be addressed to the Librarian.

2. That the Librarian shall record all such requests, and lend out the books in the order of application.

3. That in each case the name of the book and of the borrower be inscribed, with the date, in a special register to be kept by the Librarian.

4. Should a book not be returned within the period specified, the Librarian shall reclaim it.
(3) All expenses of carriage to and fro shall be borne by the borrower.

IX. That no book falling under the following categories be lent out under any circumstances:

1. Unbound books.
2. Detached plates, plans, photographs, and the like.
3. Books considered too valuable for transmission.
4. New books within three months of their coming into the Library.

X. That in the case of a book being kept beyond the stated time the borrower be liable to a fine of one shilling for each additional week, and if a book is lost the borrower be bound to replace it.

SESSION 1894-95.

The First General Meeting was held on November 19th, 1894, Mr. F. C. Penrose, V.P., in the chair.

Mr. A. J. Evans read a paper 'On Primitive Pictographs and a pre-Phoenician Script from Crete and the Peloponnese.' Following up a clue obtained in Greece during the preceding year, Mr. Evans had last spring explored the central and eastern parts of Crete, his researches resulting in the discovery of a whole series of objects, mostly seals of Mycenaean and earlier date, bearing witness to the existence in the island of an independent hieroglyphic system analogous to that of the Hittites, and also of linear forms which evidently represented a syllabic script closely approaching, and in many respects identical with, that of Cyprus. (Journal of Hellenic Studies, Vol. xiv., p. 270.)

In the discussion which followed, Mr. J. L. Myres, while holding that it was premature to judge yet of the discovery in all its bearings, expressed general agreement with Mr. Evans in his interpretation of the symbols the true significance of which had at first escaped himself when he had seen some of the objects in Crete. Mr. Myres referred to a correspondence in art character between these signs and the ornaments found on pottery and other manufactures in Crete. He reserved detailed criticism until the paper was published.

Sir H. Howorth expressed warm approval of the paper, and said that the symbols in question were certainly written characters, though probably ideographs rather than syllabic or alphabetic. The fact of such a rude system existing side by side with the fully developed system in Egypt pointed to complete isolation of Crete in early times. As to date, it seemed almost certain that the signs were earlier, and possibly much earlier, than the eighteenth dynasty in Egypt, when Egypt and Philistia were alike invaded by "men from the sea." The fact of similar symbols being found at Lachish confirmed the view that Philistia had been settled by people of Cretan origin. And the finding of such objects so near Greece seemed to give greater weight to the Greek traditions of an early empire of the sea, associated with the name of Minos. Crete was probably to be regarded as the home of Mycenaean art, and evidence from Egypt and elsewhere pointed to its introduction not later than the eleventh century B.C.
Sir J. Evans summed up the main points established by the paper, dwelling particularly on the evidence it afforded that the Hebrew names of letters were due to their pictographic origin, not to degeneration from a hieratic alphabet.

Mr. Cecil Smith expressed his sense of the great importance of the paper, but reserved detailed criticism. It was difficult, he thought, to reconcile the theory that linear symbols had been derived from pictographic with Mr. Petrie’s discovery in Egypt of linear symbols which he placed much earlier than the Mycenaean remains in Crete.

The Second General Meeting was held on January 23rd, 1895, Professor Jebb, President, in the chair.

The Chairman delivered an address on the life and work of the late Sir Charles Newton. After speaking of him as ‘one of the chief founders of the Society, whose presence and influence did more than anything else to carry it successfully through the earliest days of its existence,’ Professor Jebb proceeded to sketch the three periods of Newton’s life: (1) the preparatory stage, ending in 1853; (2) his work as traveller and discoverer in the Levant, closing with his appointment in 1861 as head of his department at the British Museum; (3) his work as ‘organiser and administrator; the recognised head of classical archaeology in this country; the active supporter of all enterprises, whether originating at home or abroad, which could extend the knowledge of antiquity.’ (Journal of Hellenic Studies, Vol. xiv, p. xlvi.)

In the absence of the author, the Hon. Secretary read a paper by Mr. A. G. Bather ‘On the Problem of the “Bacchus,”’ suggesting a new interpretation of the Pentheus myth mainly based on the well-known folk-custom of the ancient and modern world, in which a figure embodying the dead spirit of the old year is carried out of the town, and the new deity of the spring-time is brought in from the woods. (Journal of Hellenic Studies, Vol. xiv, p. 244.)

An animated discussion followed.

Mr. A. J. Evans thought that, however much difference of opinion there might be on questions of detail, the paper unquestionably followed a right instinct. The connexion of Dionysus with tree-worship had already been brought out by Frazer and others. As a parallel instance, Mr. Evans mentioned the old custom still observed in the Balkan peninsula of cutting down a tree at Christmas and carrying in the log to renew household life for the year to come. There was further the custom of decking the Christmas tree like a woman. The origin of the myth in question might not be wholly barbarous, but the cutting of the sacred tree might have actually suggested the cutting in pieces of the victim.

Dr. Verrall, while hesitating to express an opinion offhand, thought that a fair test of the proposed explanation of the Pentheus myth, so far as Euripides was concerned, was to see whether there was anything in the
story as told by him which, as being inconsistent with itself, might conceivably be due to a background of old myth misunderstood. The only point, in his opinion, of which this could be said was that of Pentheus being put up in the tree, which had always seemed to him unintelligible. Otherwise the story was quite consistent and could not be used to support Mr. Bather's theory of the origin of the myth. Mr. Bather had passed over the very important religious novelties in Dionysus worship, which were certainly importations, probably from Thrace. The notion of Dionysus as an invader could hardly be due merely to the suggested incoming of the new god, or bringing back of the old one. In many parts of the play the whole level of thought was different from that of earlier times in Greece, and it was more natural to suppose that the mysticism had been brought in by foreign missionaries.

Mr. Cecil Smith, looking at the theory from the artistic point of view, suggested a comparison with the Zagreus story, of which a striking representation occurred on a pyxis recently acquired by the British Museum.

Miss Harrison mentioned as further evidence of the Thracian origin of much of the Dionysus worship the mesmeric condition of the women who took part in it. At the same time, while not wholly accepting Mr. Bather's theory, she felt the value of looking at Greek literature with the folklorist's eye. It was interesting to see how Greek art took these myths and treated them in a poetical way. Dionysus was not the only tree-god. Athene also had that character, as shown in certain ceremonies of the Panathenaeic festival. And yet the idea of Athene being a foreign god had not therefore sprung up.

Professor Lewis Campbell thought that much caution must be used in applying folk-lore to the mature fruits of Greek art and literature. Thus this paper dealt with the story as told in Euripides only, without reference to the Orphic and other earlier literature. Certain features of folk-lore might survive in the finer literature, but it would be well to avoid the exaggerations of the solar mythologists of a generation ago.

Dr. Sandys expressed grave doubts as to the identification of Pentheus with Dionysus. As to the late introduction of the worship of Dionysus, in the early cult Dionysus would naturally be a deity of vegetation in general, and his special connexion with the vine would come later. The idea of a new god coming in might, therefore, mean merely the development from the old Dionysus of cultivation in general to the later Dionysus, the God of the Vine. The paper was, however, too elaborate to discuss in detail offhand.

The Third General Meeting was held on February 18th, 1895, Professor P. Gardner, V.P., in the chair.

Mr. Dyer laid on the table the official programme of the International Olympic games to be held in Athens in April, 1896.

Mr. J. L. Myres read a paper on researches in Caria undertaken by Mr.
W. R. Paton and himself in 1893 and 1894. The area under review is
bounded by the Gulf of Miletus on the north, and that of Cenamus on
the south, and extends from the peninsula of Myndus to the neighbourhood
of Moughla (Mobolla) and Giova (Idyma). (Journal of Hellenic Studies,
Vol. xiv., p. 373.)

The Chairman commended the skill with which the paper had presented
the processes of investigation in a district of very great interest.

In the subsequent discussion, Sir E. Ommannay, Mr. A. J. Evans, Mr.
G. F. Hill, Dr. Walker, and others took part, Mr. Hill contributing some
particularly interesting remarks about coins in the British Museum which
were attributed to the part of Asia Minor under discussion.

The Fourth General Meeting was held on May 27th, 1895, Rev. Dr.
Holden, V.P., in the chair.

Professor P. Gardner described and discussed the famous sarcophagi
found at Sidon some years ago, and now in the Imperial Museum at
Constantinople. The plates of the magnificent work now being issued
by Hamdy Bey and M. Theodore Reinach were exhibited by way of
illustration. After describing the circumstances of the discovery, and
dwelling upon the extreme beauty and interest of the sarcophagi, Professor
Gardner proceeded to describe in detail the four principal examples: (1)
The Lycian Sarcophagus, which the lecturer was inclined to attribute to
the latter part of the fifth century B.C. The subjects, in high relief, were
chiefly hunting scenes, and in the horsemen there was undoubted
resemblance to those on the Parthenon frieze. (2) The Tomb of the Satrap,
which probably belonged to the same period. The subjects included a
funeral banquet, a hunting scene, and the start of some warlike expedition.
These latter were probably episodes in the life of the person commemorated.
In style the tomb might be compared to the Nereid
monument of Xanthus. (3) The Tomb of the Mourning Women. In
this work, which probably belonged to the middle of the fourth century
B.C., and which was singularly beautiful and restrained in feeling and execution,eighteen women were represented, between pillars, in various attitudes
of grief. The whole was an artistic triumph, and had been well described as
'a dirige in eighteen stanzas.' From its similarity in style to the well-known
sepulchral reliefs at Athens it might almost certainly be attributed to an Attic artist. It was possibly the tomb of Strabo II.,
King of Sidon. (4) The so-called Great Sarcophagus, usually, though
erroneously, connected with the name of Alexander. It was more probably
the tomb of a king of Sidon, though scenes in the life of Alexander, and
his figure, undoubtedly occurred on the monument. It was difficult to
determine anything quite comparable to this magnificent work of art, though
perhaps the nearest analogy was presented by the Amazon Sarcophagus
at Vienna. The vigour and variety of the battle and hunting scenes, and
the richness of the colour, which was not, apparently, a mere coat of paint,
but actually worked into the texture of the marble, were unique. As to
the style, there was not sufficient evidence to connect it with the School of Scopas, of Lysippus, or any other known artist, and it was better to wait for further light before pronouncing a definite opinion. On historical grounds Professor Gardner was inclined to believe that it might be the tomb of a king of Sidon, Abdalonymus, who is known to have been a friend and prologue of Alexander.

Professor Waldstein drew attention to the resemblance between the sarcophagus last mentioned and hunting scenes by Lysippus and Leochares of which descriptions have come down to us. He also compared the Sarcophagus of the Mourning Women with the reliefs of Apollo and the muses found at Mantinea.

The Annual Meeting was held on June 17th, 1895, Professor L. Campbell, V.P., in the chair.

The Secretary read the following Report on behalf of the Council:

The Council may again congratulate the Society upon a Session of steady progress and good work. The fourteenth volume of the Journal is well up to the average of its predecessors. The General Meetings have been well attended and have in most cases led to interesting discussions.

In the course of the year the Society has had to regret the loss by death of several distinguished members. Among these the first mention is due to Sir Charles Newton, who took so active a part in the early organization of the Society, and contributed so largely to its success. An eloquent memorial address was delivered by the President of the Society, Professor Jebb, on January 23rd, 1895, and was printed in the last number of the Journal. Professor Heinrich von Brunn has also disappeared from the list of honorary members, to which have been added the names of Professor Furtwängler and Professor Petersen. More recently Professor Gustav Hirschfeld, of Königsberg, who was in charge of the excavations at Olympia when the Hermes of Praxiteles was discovered, and who has a special claim to the grateful recollection of English scholars as the joint editor of the *Greek Inscriptions in the British Museum*, has passed away in the prime of life, after more than a year’s heroic struggle with a painful disease. Sir Henry Layard, Sir James Lachaita, Professor Stuart Poole, Professor A. C. Merriam, of Columbia College, one of the most accomplished of American archaeologists, Professor H. C. Goodhart of Edinburgh, and Dr. Greenwood, formerly Principal of the Owens College, Manchester, must be added to the list of the year’s losses.

As in former years, the Council has been called upon to support various projects of excavation and exploration. The most important was a scheme for excavations in Alexandria, conducted under the direction of Mr. D. G. Hogarth, and in concert with the authorities of the Egypt Exploration Fund. After careful consideration the Council voted the sum of £100 towards the experimental excavations which, it was thought, would serve to show whether any substantial results were to be expected. After some months’ trial Mr. Hogarth came to the conclusion that for all practical purposes ancient Alexandria does not exist. As soon therefore as he had
proved the ruinous state of the scanty remains. Mr. Hogarth held his hand, and about a quarter of the grant will be returned. It is very disappointing that the result of this experiment on so interesting a site should be purely negative, but the expenditure seems to be justified if future explorers are thereby deterred from spending money to no purpose. Smaller grants of £25 each were voted to Mr. J. A. R. Munro for exploration in Asia Minor, and to Mr. J. L. Myres for exploration in the island of Amorgos, though in the event the latter was not applied for.

The usual grant of £100 has been made to the British School at Athens, two of the students of which institution, Mr. E. F. Benson and Mr. Bevan, worked under Mr. Hogarth at Alexandria. It may be of interest to members to know that a determined effort is now being made to place the School upon a sounder financial basis. The Council sincerely hope that the effort may be successful, feeling convinced that the maintenance of the School is of vital consequence to the promotion of Hellenic Studies in this country.

It will be noticed from the accompanying accounts that a considerable sum has again been spent upon the Library, partly in the acquisition of books, partly in binding. Among important books added to the Library during the past year may be mentioned Schreiber’s Hellenistische Relief-Bilder, Welcker’s Alte Denkmäler, the English edition of Furtwangler’s Masterpieces of Greek Sculpture, Volume vi. of Perrot and Chipiez’s Histoire de l’Art dans l’Antiquité, the English edition of Schreiber’s Atlas of Classical Archaeology; a set of the Numismatic Chronicle, of the Proceedings of the Rheinland Verein, and Winckelmann’s Monumenti presented by Sir A. W. Franks; the fourth volume of Freeman’s Sicily, and Jowett and Campbell’s edition of Plato’s Republic presented by the Delegates of the Clarendon Press; Michaelis’ Ancient Marbles in Great Britain presented by the Syndics of the Cambridge University Press. It has been thought advisable to add to the Library editions of the principal Greek and Latin authors and especially of those, such as Pliny, Pausanias and Strabo, that bear upon the study of archaeology. Some valuable works also were acquired at the sale of the library of the late Sir Edward Bunbury.

Within the last few months a scheme has been laid before the Council for publishing from time to time illustrated Catalogues of the numerous private collections of Greek antiquities which exist in this country, and arrangements have been made for carrying the scheme into effect as opportunity may offer. It is thought that such Catalogues will be of immense value to students and of general interest to many members of the Society. Probably a first instalment of these Catalogues, which will be uniform with the Journal, though independent of it, will appear in the course of the coming year.

The collection of lantern-slides, formed for loan to members, has rapidly grown. In the course of the year a new catalogue of them has been issued. They are in great demand, showing this part of the Society’s activity to meet a widely felt need.
On the interesting occasion of the unveiling in the Museum at Olympia of a bust of Professor Ernst Curtius, the prime mover of the excavations on that site, the Society was represented by one of its Vice-Presidents, Professor Percy Gardner, who presented a wreath on its behalf.

The Treasurer's Accounts show ordinary receipts during the year of £910, against £1,034 during the financial year 1893-94. The receipts from Subscriptions, including arrears, amount to £692, against £715. The receipts from Life Compositions amount to £50, against £79, a falling off of £29, and receipts from Libraries and for the purchase of back-volumes to £122, against £229, a decrease of £107. Receipts from other sources of ordinary income show no material alteration.

Since the entrance fee was imposed in January, 1894, about £50 have been received from this source, a very substantial addition to the Society's income.

In the matter of ordinary expenditure, amounting to £730, against £894 in the previous year, there is an increase of £7 in respect of rent, while the Stationery, Printing, and Postage remain, as last year, at £49. The expenditure on the Library has been £96, against £75 in the preceding year. The cost of the journal, Vol. XIV, Parts I, and II, has amounted to £44.

Besides the Annual Grant of £100 to the British School at Athens, £125 have been granted for other purposes, and a balance was carried forward at the end of the financial year of £169 7s. 6d., against £214 10s. 7d. at the close of the preceding year.

Forty-one new members have been elected during the year, while twenty-six have been lost by death or resignation. This shows a net increase of fifteen, and brings the total number of members up to 784.

Two new Libraries have joined the list of Subscribers, which now amount to 117.

In conclusion, the Council feel that the Society is in a thoroughly healthy condition. The number of new members, if not so great as in some years, is yet fairly satisfactory. The work done or in contemplation is such as fully to maintain the Society's reputation for enlightened zeal in the cause of Hellenic Studies. The only word of warning that seems called for is once more to remind members that, if the efficiency of the Society is to be maintained or increased, the inevitable gaps caused by death and resignation must be filled, and more than filled, by the introduction of new members. It should therefore be regarded as the duty of all to make the Society more widely known, and to insure a steady flow of new candidates for admission into its ranks. If this duty is realized and carried into effect the prosperity of the Society can never be a matter of doubt.

On the motion of the Chairman, seconded by Mr. Chancellor Christie, the Report was unanimously adopted.

Professor Pelham and Mr. J. H. Middleton were added to the list of
Vice-Presidents; and Mr. J. Adam, Mr. G. F. Hill, Mr. W. Loring, Mr. J. L. Myres, and Miss E. Penrose were elected Members of Council.

Mr. D. G. Hogarth, referring to his experimental excavations in Alexandria, said that it was not a grateful task to have to confess failure to discover, but that at the same time a good deal had been effected when a question so important and recurrent as that of the exploration of Alexandria had been settled even negatively. He stated that, owing to the great size and overbuilt nature of the site of the ancient city, it had been necessary to confine the inquiry to broad preliminary considerations as to depth of deposit, height of water level, and general condition of remains underground. To test these questions, shafts had been sunk in several localities in the east and centre of the site, and inquiries made diligently as to the result of previous excavations. Mr. Hogarth described his shafts and the galleries driven under the mound of Fort Kom el Dikk, and summed up the results. It appeared that everywhere the deposit was of great thickness and very unremunerative; the present water level up to or above the Roman strata, the whole coast very damp, and the condition of such remains as were found ruinous in the last degree. The speaker then alluded to the prospects of the greater monuments of ancient Alexandria being ever discovered in any good condition, and concluded by saying that although, under the circumstances, a foreign society could not be recommended to undertake excavations on such a site, he trusted that local archaeologists, whose point of view was so different and whose interest so much more particular, would not be discouraged from prosecuting the researches on which they were engaged at present.

We have examined this account, compared it with the vouchers and bankers' book, and find it correct.

[DOUGLAS W. FRESHFIELD, Auditors]

JOHN B. MARTIN, Hon. Treasurer.

ARTHUR JOHN BUTLER, 13th June, 1895.
A comparison with the receipts and expenditure of the last ten years is furnished by the following tables:

THE BEE IN GREEK MYTHOLOGY.

'Apis...ego divinas bestias pato.'

PETRONIUS 56.

The illustration which heads this paper shows a gold ornament in the form of a bee purchased in 1875 by the British Museum. It is a neat specimen of early granulated work; but, beyond the fact that it came from Crete, nothing is known as to the circumstances of its discovery. Similar finds have, however, been made elsewhere. Furtwängler in the Arch. Zeit., vol. 41, col. 274, notices among the acquisitions of the Berlin Museum for the year 1882 'sundry small plates of gold from the Crimea representing a head of Dionysus, Bees, and a Gorgoeeon.' Our own national collection possesses fourteen bodies of bees in gold of late Etruscan workmanship, and also a bee stamped in gold leaf of the same date. With these may be compared the three hundred golden bees found along with an ox-head of gold in the tomb of Childeric, king of the Franks. Doubtless other examples could be cited; and it seems worth while to attempt some investigation of their significance.

1 Perrot-Chipiez, Hist. de l'Art ill., 529, Fig. 592, erroneously say Camarina.
2 So described by Mr. H. B. Walters, who adds: 'Curiously enough the head is in each case missing.' It has been suggested to me that they may be intended to represent larvae or chrysalids. In favour of this is the fact that no sign of fracture is visible where the head would have been joined to the body.
4 Flinders Petrie, Tell el Atarah, Pl. XVII.
5 Figs. 336 and 337, shows two small models of bees or perhaps flies, but gives no clue to their meaning.
6 The present essay was substantially complete before W. Robert-Tressow's tractate de opima muliebre opus vetus significations et symbolica et mythologia (Berlin, 1889) came into my hands. That able and interesting author gives an exhaustive digest of passages from which I have borrowed sundry illustrations. He has not, however, led me to modify in any essential point the opinions which I had independently formed.
The provenience of the trinket above depicted may furnish us with a point of departure. Crete was, according to Nicander, the original home of bees, which appear repeatedly in its traditions. Antoninus Liberalis, on the authority of Boios, tells the following tale. In Crete there is said to be a cavern sacred to bees, where the story goes that Rhea gave birth to Zeus; and it is unlawful for any—be he god or man—to enter therein. Moreover, at a certain season year by year a flood of light streams forth from the cave; and tradition says that this takes place when the birth-blood of Zeus overflows. Antoninus proceeds to relate that four men attracted by the honey encased themselves in bronze and ventured into the cave. Here they saw the swaddling-bands of Zeus; upon which their bronze armour split, and the god was minded to slay them with his thunderbolt. The Moirai and Themis intervened on the ground that it was unlawful for any man to die in the cave. Zeus relenting transformed the intruders into birds. An illustration of the legend occurs on a black-figured amphora from Vulci, which represents four male figures stung by bees, all nude and bearded; they are Laios, Keleos, Kerberos, and Aigolios. The vase-painting gives the moment after the bronze has fallen from the men and before their metamorphosis. The whole story is to some extent based on fact. According to Λελιαν, Antenor in his Tales from Crete states that by divine instigation a swarm of those bees which are known as χαλκοειδής attacked the town of the Raukosoi and caused acute pain by their stings. The townsfolk unable to endure the plague quitted their native territory and migrating elsewhere founded through love of their mother-land (to adopt a Cretan phrase) a second town Raukos in Crete itself; for, though heaven drove them from their home, at least they could not brook being entirely robbed of their name. Further, Antenor relates that on Mount Ida in Crete are still to be found some few of these bees, enured with all the old ferocity of the race. This narrative, I think, affords a partial explanation of the legend recorded by Antoninus. If a whole village was actually dispossessed by bees, it may well be that a cavern tenanted by such fierce insects was regarded as an abaton throughout the country side. Again, if the local name for the redoubtable bees was χαλκοειδής, the myth-maker would be bound to arm his human marauders in bronze to match the mail of their opponents. But, conceding so much to rationalism, we have yet to account for (1) the associ-
ation of sacred bees with Rhea and the birth of Zeus, (2) the statement that the four Cretans were metamorphosed into birds.

On both points fresh evidence is obtainable. Lactantius 13 in answer to the question—Who was the first to worship the gods?—replies: 'Didymus in his Notes on Plutarch states that Melisseus, a king of Crete, was the first to sacrifice to the gods, and to introduce navel rites and religious processions. He had two daughters, Amalthaea and Melissa, who nourished the infant Jupiter with goats' milk and honey.' Hence arose the poets' tale 14 that bees flew up and filled the child's mouth with honey. Melissa was by her father made the first priestess to the Magna Mater; and from this fact the representatives of the goddess are still termed Melissae...The date of Melissae must have been exceedingly early as he had bringing up of Jupiter.' It will be seen that Antoninus is here confirmed by Lactantius. The former made Rhea give birth to Zeus in a Cretan cave and spoke of its iepai melitai as τροφοι του Δία. The latter says that the original priestess of the Magna Mater was the Cretan princess Melissa, who fed the infant Jupiter with honey, and that in memory of her office subsequent attendants of the goddess were also named Melisseae. Why bees should be selected as fitting nurses of the godhead, is not at once obvious. Possibly it was because 'in Graecia infantes primum melle alebantur, quod ex Paulo et Aetio monstrat La Vossius ad Barnabeae Epist. p. 311: cui rei ollulam enm spongia adhibuerunt.' 15 The custom still survives in the Greek Archipelago. Rennell Rodd 17 states that, in the island of Rhodes, the child eight days after birth is placed for the first time in a cradle where its lips are touched with honey by another child, who must according to prescribed usage be the eldest of a family, saying 'Be thou sweet as this honey.' The ceremony with which this rite is performed rather points to some underlying superstition connecting the bee with birth. But for the present it will suffice to remember that Zeus Kretagensis has intimate relations with the bee. Columella 18 mentions: 'mulier pubherrima specie Melissa, quam Jupiter in apem convertit.' Hesychius quotes Μελίσσαι as an epithet of Zeus. And the bee is his emblem on the coins of several Cretan cities. 19 There is, moreover, another tale told by Antoninus 20 which connects the bees as nurses with Zeus. It is an excerpt from Nicander's Ετερολογία: 'Zeus had by a nymph of Othrys a son afterwards named Meliteus. The mother through fear of Hera exposed the babe in the woodlands. But, in accordance with the will of Zeus, so far from perishing he thrrove upon nourishment supplied by bees. Now Phagros the son of Apollo and this same Othryan coincidence.

13 Lactant. Div. Inst. i. 22.
15 Verg. Georg. iv. 152. Colum. de re rust. l. 2.
16 Boeckh on Pindar, Olymp. vi. 96-47; op. W. Robert-Tornow, op. cit. pp. 119-122. The Nenia of the C.I.G. 308 is a mere
nymph, the mother of Meliteus the child in the wood, while feeding his flock chanced to fall in with the boy. Astonished at his healthy looks and still more so at the attendant bees, he picked him up and carrying him off home reared him with the greatest care. He gave the lad the name Meliteus because he had been fed by bees. Further, he called to mind the oracle in which God had told him once on a time to preserve as his brother the boy fed by bees. As soon as Meliteus grew to man’s estate he proved himself worthy of his noble birth, and became king over many neighbouring tribes; he also founded a town in Phthia and called it Meliteus.

To deal next with the transformation of Laois and his comrades. Roscher thinks it probable that the whole myth arose from the observation that certain species of birds prey upon bees. But, apart from the fact that the birds specified by Antoninus have no known antipathy to bees, this suggestion would not account for the alliance between bees and birds which we find elsewhere. It seems safer to recall the variant tradition that birds as well as bees fed the infant Zeus in his Cretan cavern. Moiro the Byzantine poetess wrote:

Zeus δ’ ἄρ’ ἐνι Κρήτη τρέφετο μέγας, αὖθι ἄρα τις νυν ἠλίθει μακάρων: δ’ ἑνεκτὸ πάσι μέλεσσα. τοῦ μὲν ἄρα τρήρων ὑπὸ ζαθὴρ τράφον ἅπροφρο, ἀμβροσίῃ φορέουσα ἄπ’ Ἱλεκανοῖς ῥοϊς νέκταρ δ’ ἐκ πετρης μέγας αἰετῶς αἰεὶν ὄφισσων γαμφήλης, φορένσε ποτὸν Δίῳ μυθιστο. τὸν καὶ μεγάλας πατέρα Κρανοῦ εὐρύταν Ζεὺς ἀθάνατον ποίησε καὶ οὐρανὸς ἀγκατάκεισεν. δ’ αὐτὸς τρήρωσι τελειῶσι ὄπασα τιμῆς, αἰ άδ’ τοι θέρεσι καὶ χείματος ἄγγελοι εἰσίν.

Possibly, then, the intruding Cretans were so to speak pressed into the service of Zeus under the form of birds. At any rate it is noteworthy that pelleiaës as well as melissae were their chosen attendants.

There were other localities besides Crete where the officiating priestess was termed a melissæa. Pindar’s lines are notorious:

δ’ μάκαρ υἱὸν Πολυμάσσαν, σε δ’ ἐν ταύτῃ λόγῳ χρησμὸς ὀρθασεν μελίσσας Δελφίδος αὐτομάτην κελάδο.

This we can hardly fail to connect with the singular statement of Pausanias: the Delphians affirm that their second temple was built by bees.
of the bees’ wax and of wings (ἀπὸ τοῦ κηροῦ τῶν μελισσῶν καὶ ἑκ ἀνερῶν); it was sent, they say, by Apollo to the Hyperboreans. Again, another legend has it that the temple was founded by a Delphian named Pteras—the builder’s name being transferred to the building; from this same Pteras, so the story goes, the Cretan town of Apteraioi derives its name by the addition of a single letter. In short we have a tolerably broad hint that the second temple at Delphi, a pre-historic structure, was dedicated to a joint worship of bees and birds. Prof. Middleton seems right in referring to this double cult the line quoted by Plutarch as the earliest example of heroic metre:

\[\text{Συμφέρετε πτερὰ οἰνωποι κηρόν τε μελισσαί.}\]

A trace of the bees persisted in the name μελισσαί still given to Apollo’s priestesses. Whether the birds had similar ministrants, corresponding to the πεταναι or πελειάδες at Dodona, we have no means of determining; but it is conceivable that a relic of the cult should be found in the famous omphalos, which on ancient works of art is repeatedly represented as a large egg standing on end and occasionally flanked by a couple of birds. Another point to be noticed is that, according to local tradition, the second temple at Delphi had been built by one Pteras who had affinities with the Cretan Apteraioi. This is not our only warrant for supposing that in primitive times the Cretans had helped to colonize Delphian territory. Dr. Verrall infers from the Homeric Hymn to Apollo (vv. 388—end) that the “possessors of the oracle from the earliest memory down to the beginning of the sixth century B.C. were in origin partly Cretan.” Consequently it is tempting to conjecture that the cult of μελισσαί and πελειάδες (?) at Delphi was derived from the sanctity attached to μελισσαί and πελειάδες in Crete.

If we now ask ourselves—How came these dissimilar creatures to be the objects of a united worship?—we recur to the legend which domiciled both bees and birds in the Cretan cave. Nothing could be more natural than that the animals which haunted this cave, the traditional birthplace of Zeus, should be regarded as his attendants. Entitled thus to a common reverence they would together cross the sea to Delphi. It is at least clear that in both localities they were essentially eithionia. On the one hand

---

27 The odd collection of wax and wings occurs again in the story of Iamas. Did the Sun-god destroy Iamas for presuming to employ substances peculiar to his own cult at Delphi? For the sun represented as a bee vide infra. 28 J.H.S. ix. 5. 29 Plut. τπακ. γιόν μὴ χρει ζαν. ητ. η. § 17. If πτερὰ in Paus. loc. cit. denoted the bee’s wings, it would have had the article. Philostrat. cit. Apoll. vi. 10 (quoted by W. Robert-Turnow, op. cit. p. 191) ἀγνὲς εὐθυλαστεῖς λέγονται μελισσαι μὲν πτερὰ, πτερὰ ἡ δρατέη. 30 The author of a work on Delphi (known to Tzetzes, chil. vi. 90, 938; and the Schol. on Hesiod, p. 29) was named Melissa;—again no more than a coincidence. 31 Herod. ii. 55, 57: Soph. Tith. 172, with Schol. ad loc. Pana. VII. xxi. 1, X. xii. 5. 32 J.H.S. ix. 14 ff. Sometimes the omphalos is covered by ‘strings of what look like small eggs’; but these are probably to be interpreted as woolly tufts.
THE BEE IN GREEK MYTHOLOGY.

the Cretan birds and bees occupied a sacred cave, 34 where they ministered to the child of Rhea. On the other hand the Delphian 35 egg-stone with its guardian birds marked the centre of the earth, while the oracular functions appropriate to chthonian powers were discharged by the Delphian 'bees.'

Further proof that the bee was a chthonian animal is afforded by its connexion with Dionysus. According to Apollonius Rhodius 36 this deity was in his infancy fed with honey by Makris, a daughter of Aristaeus:

\[\text{ἄντρο} \text{ἐν ἤραθρῳ, τόθι ὑπὸ τοῦ Μάκρου ἐναντίος},
\text{κοὐρὴ Αρισταίων μελιφρόνος, ὦ μα μελισσάων}
\text{ἐργά πολυκυμητῶν ἀνειρατο πιαρ ἐλάιν.}
\text{κεῖνη ἐπὶ πάμπροτα Δίου Νυσίην νῦν}
\text{Ἐὔβασις ἔντοσθεν Ἀβαντίδος φέω ἐν κολπῳ}
\text{δέξατο, καὶ μελίτη ξηρὸν περὶ χείλος ἐέκειεν.}

Ovid, 37 however, regards Bacchus as himself the discoverer of honey:—

Melle pater fruitor: libique infusa calenti
Ture repertori candida mella damus.

Dyer in *The Gods in Greece* (p. 149) remarks that Euripides, whose *Bacchae* 38 draw milk, wine, and honey from the soil, was probably familiar with the legend of Makris. Diodorus 39 tells at length a tale which makes Dionysus the son of Ammon and Amalthea. The father from fear of Rhea carried the child to a cave near Mount Nyssa in an island formed by the Cretan river Triton. Here he was entrusted to the care of Nyssa, another daughter of Aristaeus: *ἐκαστάτην δ' αὐτοῦ τάξιν τῶν Ἀρισταίων, ἄνδρα συνέσει καὶ σωφροσύνῃ καὶ πάνη παύει διαφέροντα.* 40 Daremberg and Saglio (*Dict. Ant.* I. i. p. 621 s.v. *Bacchus*) state: 'L'abeille appartenait naturellement à Dionysos Briaios, comme dieu du miel.' But to this we must return later on. Meantime his affinity with the insect is illustrated by an engraved gem, 41 which represents him crowned with vine leaves and wearing a beard composed of four bee-wings. Finally, 'Dionysus after having been torn to pieces in the form of a bull was born again, according to those who were initiated in the Dionysian mysteries, in the form of a bee.' 42 It is interesting to observe that the foregoing *παλεγμενεία* belongs to Dionysus in his character of Zagreus, 43 and that as Zagreus he was worshipped by both Cretans and Delphians. 'The conception of Zagreus,'

---

34 The details relating to this cavern—the glare emitted and the red stream that 'biled over'—perhaps point to volcanic phenomena.
35 In Crete too there was an *Ophélas,* about which a story was current connecting it with the birth of Zeus (*Diod. Bibl.* v. 70).
37 Ovid, *Fasti* iii. 235 ff.
39 *Diod. Bibl.* iii. 68 ff.
40 With this agree Oppian, *Gymn.* iv. 271 ff.
42 Dr. Guébriani, *op. cit.* ii. 217. I do not know on what authority the statement rests.
says Mr. A. S. Murray,41 or the winter Dionysus, appears to have originated in Crete, but it was accepted also at Delphi, where his grave was shown.5

In the Homeric Hymn to Hermes we get a seeming personification of mantic bees in the neighbourhood of Delphi. Apollo thus addresses the son of Maia:55—There be certain Fates, sisters born, virgins who delight them on swift wings, three in number; and, their heads sprinkled with white meal, they have their home beneath the fold of Parnassus, distant teachers of prophecy, which I too practised in childhood's days when tending kine, all unnoticed of my father. Starting hence they flit now hither now thither, feeding on honey-combs and bringing each several thing to pass. When they dart along full-fed with yellow honey, they declare the truth with a willing heart; but if they be robbed of the gods' sweet sustenance, then they lie as they hurry to and fro. Some details of this description call for comment. Hermann’s conjecture Ὄραι for the MSS. Ὄραι has been generally accepted, though Lobeck relying on a variant Σεμνάι suggests Πᾲ as an alternative.56 To me the manuscripts’ reading commends itself more than either of the proposed changes. Then again the phrase κατὰ δὲ κρατοῦσαν ἄλφατα λευνὰ perhaps describes the pollen-covered bees in terms which are meant to recall the ἀλφιταμάντες.57 In any case we have here bees endowed with prophetic powers, a trait which reappears elsewhere.58 Of the bee-Dionysus we have already spoken; it may be added that, according to the Scholiast on Pindar,49 he was the first to mount the Delphic tripod and foretell the future. Iamos, son of Apollo by Euadne, from whom the prophetic Iamids traced their descent, was fed by two snakes ὅμωφεῖ ὰδὲ μελισσᾶν.59 And the oracle of Trophonios was made known to the Boeotians by means of a swarm of bees.60 It is possible that the prophetic talent attributed to bees was based on the observation that ἐπηγαίνεσθαι καὶ χειμώνα καὶ ἠδῶρ αἰ μελιτταῖ στηρεῖον ὀλιγόκλων, ὅμωφεῖ οἱ μελιπονάγοι νησιώτατα ἔργα ἔχουσι. Its prophetic office was not confined to Greece, e.g. Josephus, Antiqu. V, vi. 376 the ἀφρία τῆς ἀφρίανθος, ἄλφατα καὶ ἀπεικόνισα τοῖς.61 Those who were possessed of supernatural shrewdness, in particular singers and sages, are said to have been fed by bees, commonly

41 Enc. Brit. ed. 9, vii. 240. 42 Hom. Hymn. in Mercur. 552-563. 43 Lobeck, op. cit. p. 818. 44 Íbid. p. 818, n. 6. To the list there given add Heraphus’ glosses ἀλφιταμάντες ἀλφιτά κακαιμεναίκαι and ἀλφιταμάντες ἀλφιταμάντες. 45 See W. Robert-Tornow, op. cit. pp. 35-39: ‘de apium examine vel imperatoriae vel regiae dignitatis, omino potestatis divitiaeque, omnis’; Íbid. pp. 43-60: ‘de apium examine dito multiforme portante.’ The author here refutes at length the opinion of Cruszer, that a swarm of bees was ‘omen funestissimum,’ admitting, however, that the bees which were seen over Rolle’s army in A. T. 800 possibly portended a happy issue to his expedition (why not an unhappy issue to his foe?). He continues: ‘si autem causam, cur aper symboolum terroris furvint, quasivimus, ex in annis vi patres videmur.’ A better cause may be found in the funeral associations of the bee; vide infra. Its prophetic office was not confined to Greece, e.g. Josephus, Antiqu. V, vi. 376 the ἀφρία τῆς ἀφρίανθος, ἄλφατα καὶ ἀπεικόνισα τοῖς. 46 Argum. Pyth. quoted by Prof. Moldston in the J.H.S. ix. 21. 47 Pindar, Olymp. vi. 45 fl. 48 Pasorius IX. xl. 1. 49 Aristotle, Ar. Hest. x. 40, 827b 10. Op. Aelian, de nat. vit. i. 11, v. 13. Aratus, proton. 296. Philos. de an. prop. 257 b.
during infancy. The story is told of Hesiod, Pindar, Sophocles, Plato, Vergil, Lucan, and Ambrose. Nonnos relates that Astraea fed the infant Beroe—

Ἀττιδοὶ ἱεράκων περισθέοσα μελισσώς δαίδαλοι ὡδεῖα πολυτρήτων λογεῖν, κηρία φωνήντα σοφή κεράσασα κυττάλλων

the purpose of this diet being to breed in the babe wisdom and eloquence: ἑσθημανυ γὰρ τὸ μὲλι τῆς ἐνθέου τῆς σοφίας, and as the poet observes—

τοῖς ἐφετερός Χαρίτων τόλαον ὀπτοτε κοῦρα
καρπότερη σιμβολοῦ μελισσών ὑπὲρ φωνῆς,

In like manner the Muses as patrons of divine song are akin to bees:—

Εὐτρήτω δοκάκεσσι πολυτρήτωσι λυγαίνει,

And the bee is regarded as especially devoted to their service. They sent bees to feed their favourite, the Sicilian Komatas, who sacrificed his master’s goats to them, and was by way of punishment confined for two months in a wooden chest. Sometimes they actually appeared in insect form. It was as a swarm of bees that they guided the Athenian colonists to Ionia, a country which they loved. And in the case of their devotees, who apot Matinane mev monogoue gather poetic honey, the similitude passes into a commonplace.

We have remarked that Dionysus was fed with honey by Makris, a daughter of Aristaeus. The legend of Aristaeus himself, as told by Vergil in his fourth Georgic, is instructive. This Thessalian shepherd, son of the
Thymbraean Apollo, finding his bees perish from disease appealed to his mother Cyrene, who dwelt with her sister nymphs at the bottom of the river Peneus. At her invitation he descended into the flood till he reached the fountain-head of all rivers, a subaqueous cavern of surpassing beauty. Here he was told that he must capture Proteus in Pallene and learn from him the cause of the disease. Helped by Cyrene he succeeded in surprising the god, who informed him that the trouble was due to the vengeance of Orpheus. Eurydice in her endeavours to escape from the shepherd's embrace had been bitten to death by a serpent; and thus Aristaeus' sin had led to Orpheus' fruitless quest and ultimate doom. It was the Napaean nymphs, the former playmates of Eurydice, who had destroyed his bees. To appease them he must sacrifice four choice bulls and four cows, leaving their bodies in a shady wood. After eight days had elapsed he should return and complete the expiation. He did so, and found to his surprise—

'liquefacta bonum per viscera toto
stridere apes utero et ruptis effervere castis,
immensaque trahit nubes, iamque arbore summa
confunde et lentis avam demittere ramis.'

This is the mythical prototype of the method actually recommended by Vergil for the procreation of bees. It is given more in detail by Florentinus, who professes to follow Democritus and Varro. A fat bullock, thirty months old, is confined in a narrow chamber measuring ten cubits every way and pierced by a door and four windows. He is then beaten till bones and flesh are alike crushed, though blood must not be drawn. Next, every aperture in his body is stuffed up with pitchfork rags, and he is laid on a heap of thyme. The door and windows are closed with mud so as to exclude light and air. After three weeks the chamber is thrown open, but care must be taken not to admit wind. When aired enough the body is fastened up as before and left for ten days longer. On the eleventh day clusters of bees will be found, while of the bullock nothing remains but horns, bones, and hair. The central idea of this singular superstition is that the life of the bull is perpetuated in the life of the bees, which are as Porphyry calls them Bourveis. Ovid emphasises the point:

"servant examina putri
De bove: mille animas una necata dedit."

The pluralization of the soul implied by this process was not likely to prove a stumbling-block to primitive imagination. The savage," says Mr. Frazer,  

---

172. Ovid, *Fasti* i. 270 f.

unshackled by dogma, is free to explain the facts of life by the assumption of as many souls as he thinks necessary. The directions given above are so many precautions to prevent the soul of the bull from escaping, and can in every case be paralleled from savage custom. He is confined in a narrow chamber, the door and windows of which are closed with mud; and entombment, to the early mind, serves the purpose of poisoning the spirit of the deceased. When he is beaten to death, no blood must be drawn; and primitive peoples frequently ‘abstain in the strictest manner from eating the blood of any animal, as it contains the life and spirit of the beast.’

Every aperture in his body is stuffed up with pitchet rags; and the soul is commonly supposed to escape by the natural openings of the body... The Hironas in South America seal up the eyes, nose, and mouth of a dying person, in case his ghost should get out and carry off other people. He is laid on a heap of thyme, probably to attract the new-born bees; just so the soul is sometimes ‘conceived as a bird ready to take flight...Amongst the Battas of Sumatra, when a man returns from a dangerous enterprise, grains of rice are placed on his head, and these grains are called *padirumal* *touni*, that is, “means to make the soul (touni) stay at home.”

When the chamber is aired, no wind must be allowed to enter; by it the soul might easily be carried off. Finally, the soul leaves the body in the form of bees; and similar transformations into lizard, raven, mouse, fly, or butterfly, have been widely believed.

It is very possible that this superstitious method of producing bees was attributed to Aristaeus merely because he was the pastoral deity who first taught men *τιν κατασκευή τῶν φυείων*. He was in his infancy fed by the Horai on nectar and ambrosia. He invented the mixture of honey with wine. He kept the flocks of the bee-loving Muses on the plain of Phthia; and possessed foreknowledge of the future. Tradition relates that he came to Ceos in obedience to Apollo’s orders and there stayed an oppressive drought by a sacrifice to Zeus Ikmaios. He has indeed been identified with Zeus in this island under the name of Zeus Aristaios: in favour of the identification K. Blondel adds Zeus Melissaios and Zeus Melichinos, Aristaeus is also said to have visited Boeotia, Euboea, Crete, Sardinia and Sicily. The bee occurs as his symbol on the coin-types of Carthaea, Coresia, and Lousis, in the island of Ceos; also on coins of the neighbouring islands Cynos, and Cythnos. The mating of Hybla and Camarin in Sicily.

has perhaps a similar import, if the bee is not a mere token of the prevailing industry. However, enough has been said to prove that Aristaeus was closely connected with bees, and with bees as emblematic of a fresh incarnation.

The same meaning must be assigned to the bees, which play a part in the legend of Glaucus, the son of Minos and Pasiphae. Hyginus\(^6\) gives the following version of the tale: "Glaucus, while playing at ball, fell into a jar full of honey. His parents sought for him and inquired of Apollo concerning the boy. Apollo made answer:—"A monstrosity has been born to you; whose can detect its meaning shall restore your son." On receiving this oracle Minos began to seek among his people for the monstrosity. They told him that a calf had been born, which thrice a day—once every four hours—changed its colour, being first white, then red, and lastly black. To get this potent interpreted Minos called together his augurs. They failed to find the solution, but Polyidus the son of Coernus explained the portent by comparing the calf to a mulberry tree, the fruit of which is at first white, afterwards red, and when fully ripe black. Then said Minos to him:—"According to the word of Apollo, 'tis thou who must restore my son." Hereupon Polyidus, while taking the auspices, saw an owl perched upon a wine-bin and frightened away some bees. He welcomed the omen, and took up the lifeless lad from the jar. Minos then said to him:—"Thou hast found the body—now restore the life." Polyidus protested that this was an impossibility; but Minos ordered him to be shut up in a tomb along with the boy, a sword being laid ready to his hand. When this had been done, suddenly a snake glided out towards the boy's body. Polyidus, thinking that it was intent on food, promptly struck it with a sword and killed it. A second snake in search of its consort saw the dead beast, crept out with a certain herb, and by means of its touch restored life to the snake. Polyidus followed its example. The boy helped him to shut inside the tomb, and a passer-by told Minos of what had happened. He bade the monument be opened up, recovered his child safe and sound, and sent Polyidus back home laden with gifts." In this curiously complex myth the bees, which were kept from entering the wine-bin by the owl, apparently symbolize the soul of the deceased endeavouring to regain the body within—an omen which was likely to direct Polyidus' attention to the jars in the bin.

Among the examples of primitive gold-work brought from Camiros in Rhodes by Messrs. Salzmann and Billioti were two oblong plaques embossed with the design here reproduced\(^7\)—a winged female, who from the waist downwards has the body of a bee. Similar pendants from the same place\(^8\) represent the so-called Persic Artemis, a winged female with a lion on either side of her.\(^9\) This affords some ground for taking our figure to be that of a bee-goddess, perhaps a bee-Artemis. I am not aware that other evidence is forthcoming for the existence of such a cult in Rhodes.\(^10\)

\(^10\) At the same time the Rhodian superstition mentioned above perhaps indicates that on this
THE BEE IN GREEK MYTHOLOGY.

But it is not a far cry from Rhodes to Ephesus, and it is known that something of the sort obtained among the Ephesians. Aeschylus in his tragedy of *The Priestesses*¹⁰ says:

εὔφαμεῖτε, μελισσονόμοι, ἂμοι Ἀρτέμιδος πέλας ὄλγαν.

'Hold your peace! The bee-keepers are at hand to open the house of Artemis.' On this Mr. Merry¹² observes: 'It is difficult to decide whether the word is connected with μελεθας, μελαις, or μελισσω, propitiare, or whether there is some mystical or symbolic allusion to bees.' That the latter is the case seems to me certain from the Ephesian use of the word ἐσσήν. Wood at the end of his *Discoveries at Ephesus* gives a selection of local inscriptions, one of which (No 16) is a decree relating to certain persons resident in Rhodes; they are to be accounted as benefactors, and admitted into a tribe and a thousand by the Essenes (τῶν Ἕσσήνας); the temple-wardens are to inscribe the decree on a pillar of stone and set it up in the temple of Artemis. This is cleared up by the author of the *Etymologiae Magnum* who has the following note:¹³ 'Εσσήν ὁ βασιλεύς κατὰ Ἐφεσίους ἀντὶ μεταφοράς τοῦ μελισσών βασιλέως. For a parallel usage he cites Callimachus' *Hymn to Zeus*, line 66,

ὦ ο ὑδέων ἐσσήνα πάλιν θάνατον,

where ἐσσήν is the equivalent of βασιλεύς. The Ephesian 'king' was of course the rex sacrificiæ, and it is perhaps owing to the religious associations of the word ἐσσήν that it was employed by Callimachus.¹⁴ Some further points of interest are told us by Pausanias. In speaking of the temple of Artemis Hymnia near Orchomenos he says:¹⁵ 'The priestess and the priest

¹⁰ *Ed. Prose*, p. 122.
¹³ *Callimachus*, frag. 588 Ἐσσήνων ἐσσήνων ἔρρηκεν against this. From evidence collected by W. Robert-Ternow, op. cit. pp. 24–35, it appears that in Egypt and other countries the bee was a royal symbol.
¹⁴ Pausanias VIII, xii, 1.
¹⁵ *Prose*, 84, quoted by *Aristoph., Prose* 1283.
must throughout their lifetime preserve purity not only with regard to sexual intercourse, but also in other respects; their ablutions and their mode of sustenance differ from those of the people at large, nor may they enter the home of a private citizen. I am aware that similar restrictions are practised for a year, not for a lifetime, by the Ephesians who feast in honour of Artemis and are called by the citizens "Εσσάρης." If a conjecture may be hazarded, the peculiar diet enjoined upon the devotees of Artemis at Orchomenos and at Ephesos comprised abstinence from animal food and the consumption of honey. However, that may be, there are bees carved on the sides of the Vatican statue which represents the many-breasted Artemis. Also the bee occurs as an emblem of that goddess on Ephesian coins from the sixth century onwards. And, unless coin-types were borrowed in a purely arbitrary fashion, the cult of the bee-Artemis must have prevailed elsewhere. For we meet with the same symbol on moneys of Smyrna, Erythrae, Arados and Parium; even Elaeus in the Thracian Cersonesian has coins with a head of Artemis on the obverse, and a bee on the reverse side. Apollonius Rhodius makes Medea command Jason to sacrifice honey to Hekate, that is, to the chthonian Artemis. Mελιττα in the C.I.G. 155 dedicates robes to Artemis; but this proves nothing, since the word used as a proper name is fairly common.

The worship of Artemis Ephesia brings into prominence a new feature of the bee symbolism. Hitherto that insect has come before us simply as a chthonian creature, typifying at most the παλέγγελε οία of the soul. At Ephesos our evidence points to ceremonial ablutions and continence as the main characteristics of the cult, though doubtless chthonian relations, which in the case of Artemis are never very far to seek, were not altogether absent. We are reminded of the beautiful words spoken by Hippolytus:

χαίρε μοι, καλλίστα,
kallista twn kata "Olimpiou
parthenon "Artemi"
soi touno plektov stepons de dekriatos
leimonos, de deipnona, kosmíasas fera,
ēn ote taimi αμoi pherein bota

88 Baumeister, Denk. i. 131, Fig. 138.
87 Winckelmann and others explained the bee on coins as an appropriate emblem of a colony—a much less probable view, at any rate in the case of Ephesos.
99 Ch. Morel in Dardenberg and Saglio, Ditt. Ant. i. 1, pp. 304-5. I suspect that the coin of Abdas, described by F. Gessner in the Arch. Zeit. vol. 19, col. 497 ff., is only another example of this type.

THE BEE IN GREEK MYTHOLOGY.

οὖ τ᾽ ἡθέ πτω σίδηρος, ἄλλ᾽ ἀκήρατον
μέλισσα λαιμόν, ἐρεύνον διέρχεται.
Ἄιδος δὲ ποταμίας κηπευει δρόσως.

But there were other members of the Greek pantheon with whom the bee was associated. Hesychius interprets μέλισσαι to mean αἱ τῆς Δήμητρος μύστικαι. He is apparently referring to a passage in Callimachus' Hymn to Apollo, lines 110—112:

Δηρίς δ᾽ οὐκ ἀπὸ παντὸς ὕδαρ φορέωσι Μελισσαί,
ἄλλ᾽ ἦτις καθαρή τε καὶ ἁψαλτωτὸς ἀνέφει
πίθακος εὖ ἀργή ὀλέγη λιβαί, ἀκρον ἀποτομ.

Here we find certain Μελισσαί performing a hydrophoria in honour of bee Dem. or Demeter, purity and sanctity being essential features of the rite. They reappear in a scholiu on Pindar, who informs us that μέλισσαι is a term used primarily of the priestesses of Demeter, and by a misuse of language applied to all priestesses, διὰ τοῦ ξύου καθαρών. A second scholiu on the same line has more to tell: 'Women initiated into the sacred rites go by the name of μελισσαί. Hence our author says elsewhere ταῖς ἐρέαῖς μελισσαῖς τίτπεται. The nymphs also that haunted holy places were called Μελισσαί—a fact explained by Minases of Patara, who says that they caused mankind to cease from eating flesh and persuaded them to make use of vegetable food; and in those days one of them, Melissa by name, found bees' honey-combs, and was the first to eat of them and mixing them with water to drink; she taught her fellows to do the same, and called the creatures μελισσαί after herself, treating them with the greatest care: he says, moreover, that all this happened in the Peloponnesse. Nor would the temple of Demeter be honoured were it not for the nymphs, who first brought crops to light and forbade cannibalism and devised woodland clothing.' This scholiu, then, combines two statements, (a) that the μύστικες of Demeter were called μελισσαί, (b) that the same title was given to certain non-carnivorous nymphs of the Peloponnesse. It will be advisable to collect any further evidence that may be cited concerning both classes of 'bees.'

(a) Servius in commenting on Vergil, Aeneid i. 480, recounts a legend which involves an intimate connexion between Demeter and the bee. 'There was once,' he says, 'at the Isthmus a certain old dame called Melissa. She was taught by Ceres the secrets of her ritual, and warned not to disclose to any one the mysteries which she had learnt. But when the womenfolk came and entreated her first by means of flattering words, then by prayers and promises, to reveal to them what Ceres had confided to her, and she persisted in holding her peace, then they became enraged and tore
her asunder. Ceres avenged her fate by sending a plague upon these women and upon the whole neighbourhood; moreover, she caused bees to be born from the body of Melissa.' Again, Persephone is called *Melitódes* in Theocritus xv. 94:

\[\text{μὴ φύσι, Μελιτώδες, ἵνα ἀμών καρπῆς εἴη.}\]

and *Méllíōsia* in a verse of Lasos of Hermione, quoted by Athenaeus; 106

\[\text{Δαματρὰ μέληπον Κόταν τὲ Κλυμένου ἄλοχον Μελίςσαι.}\]

One ancient commentator on Theocritus' line has the following note: 107 *Melitódes* like *Kóta* is a euphemistic name for Persephone due to the fact that the priestesses of Persephone and Demeter were known as *méllíōsia*. 108 Another subjoins an explanation of the euphemism: 'Because Persephone, being a subterranean goddess, brings bitterness rather than honey into the lives of men.' Disseis understands the fragment of Pindar quoted above as an allusion to Persephone. And it is possible that we should refer to the same deity the obscure statement of Porphyr. 111 ὅταν δὲ τῷ Πέρσῃ (τῇ Περσεφόνῃ Βαρνες) προσώφωσι μέλι ὡς φυλακε καρπῶν, τὸ φυλακτικόν ἐν συνβάλον τιθέναι.

(b) Passing now to *méllíōsia* in the sense of non-carnivorous nymphs, we must take account of several scattered hints. The daughters of the Cretan King Melisseus—Amalthea and Melissa—who fed the infant Zeus, are sometimes 112 regarded as Do-donean or Naiad nymphs; hence Diodorus 113 states that Zeus was nourished in the cave by *nymphs* on honey and milk. Homer ( Ὀιν. xiii. 104 ff.) describes a stalactitic grotto as—

\[\text{ιὸν νυμφίων, ἀλ Νημίδες καλοῦνται.}\]

\[\text{ἐν δὲ κρητῆρες τε καὶ ἀμφιφορῆς ἑαυτὶ οἰκῆσαι.}\]

\[\text{ἄλοιποι, ἐνθα'd ἔπειτα τεβαϊδώσουσι μελισσαί.}\]

Again, the title *Brissaios* or *Brissae* borne by Dionysus in Lesbos, as also *Brotó, Brótarmés*, Cretan names for Artemis, connects etymologically with *Bléttan* 'to remove the honey from the comb'; 114 and in fact with *méli*, *méllíōsia*: to the same circle undoubtedly belong the nymph *Brissa* mentioned by Cornutus 115 and the *Brissa* whom Hesychius takes to denote *Nýmphai*. Aristaeus, according to a fragment of Aristotle, 116 learnt the art of bee-keeping from the Nymphs: Heraclides Ponticus 117 and the *Etymologicum*...
**The Bee in Greek Mythology.**

**Magnum** further specify his instructors as the βρισκα. How the nymphs helped him to recover his bees has been already related. Oppian, makes him rear Dionysus in his cave σὺν Δρυασ...μελισσοκομοι εἰς Νύμφας. Lastly, a tale told by the scholiast on Theocritus iii. 13, seems to be apocope: "A certain Caeidian named Rhokos saw at Nineveh a fine tree leaning over and like to collapse altogether from old age. So he supported it on props and thereby lengthened its lease of life. Upon this the nymph acknowledged her gratitude to him: for "I am its coeval (ἡλικώτις τοῦ φρύτου)," she said, and bade him ask what he would of her. He requested her embraces. But she replied, "A bee will come and tell you the right season for wedlock." Mr. H. B. Walters sends me the description of a fifth century vase from the van Branteghem collection, now in the British Museum, which represents three ladies in a garden of whom one is inscribed ΜΕΛΙΣΣΑ. This may or may not illustrate the foregoing account of the bee-nymphs: personally I should not attach any religious meaning to the scene.

Both these classes of μελισσαι, the devotees of Demeter and the flesh-abstaining nymphs, found a place in the system of the latter-day mystics. A glance at Porphyry's tractate on The Nymphs' Cave in the Odyssey will prove the assertion. We may feel disposed to agree with Aug. Nauck's verdict on that work—'interpretationem loci Homericæ a Porphyrio propositam tanquam absurdam respuesmus'; but we must not close our eyes to the fact that it is representative of a distinct stage in the history of Greek mythology, and as such has a claim upon our attention. Porphyry's point of view will be best reached by the aid of a sequence of short extracts:

**De auct. Nymph. 7:** 'Demeter rears Kore in a cavern along with nymphs.'

**Ibid. 10:** 'By Naiad nymphs we mean the powers that have special charge of the waters, and the same term was used generally of all souls that came down to be born. For it was thought that the souls hovered over the inspired water.'

**Ibid. 12:** 'Hence also it is customary to call wedded wives νυφαί, since they are united to us for purposes of child-bearing, and to bathe them with lustral water taken from wells or streams or ever-flowing fountains.'

**Ibid. 18:** 'Wells and streams are akin to Hydrad nymphs; and still more so to nymphs in the sense of souls, which our forefathers called by

124 This is the Orphic doctrine of the μαινομενον ἄνισταν, or descent of the unborn soul through the heavenly spheres; see Lobeck, *Agatharcheum*, p. 192 ff.
125 So I translate κατά τας ψυχὰς, comparing the Schol. on Eur. HIPP. 77: ἔτοι σὺ λέγετα πειναία, κοίλοι εστι σε ἐλεόνυμον παντὸς τοιοῦτος τος ψυχής κατὰ τας τάς ζώον ἐς καλέον. Εἴπερ τὰς λυκιϊς καλοττιὰς καλοττον εἰς τοπολός. W. Robert-Turnow, 999, ed. p. 155, strangely paraphrases *Nympharium animae*. 
the special term μέλισσαι since they were producers of pleasure. So that Sophocles was not far wrong in saying of the souls—"The swarm of the dead hums and rises upwards."\(^\text{188}\) Moreover, the ancients gave the name μέλισσαι to the priestesses of Demeter who were initiates of the chthonian goddess, and the name μελιτώδης to Kore herself; the moon too whose province was to bring to the birth they called μέλισσα because, the moon being a bull and its ascension the bull, bees are begotten of bulls. And souls that pass to the birth are bull-begotten.

Ibid.: 'However, they did not apply the term μέλισσαι to all souls coming to the birth without further qualification, but only to such as should live a life of righteousness and return whence they came after doing the will of heaven. For the bee is fond of returning to its hive, and above all other creatures affects justice and sobriety...Wherefore honey-combs and bees fitly symbolize not only Hydriad nymphs but also souls that play the nymph for purposes of birth.'

In the haze of neo-Platonism it is hard to recognize familiar landmarks. But the gist of the matter seems to be this. The soul was conceived as a water-nymph, because before birth it had hovered over the divine ocean; hence the use of νύμφη to denote bride offered more or less shadowy support. The pure and undefiled soul was further represented as a bee, not only because it was productive of honey-sweet pleasure and a lover of order and sobriety, but also because it had come down from the horned moon as ordinary bees from the carcase of a bull. This Orphic doctrine is somewhat clumsily combined with the older mythology, which called Demeter's priestesses μέλισσαι, Kore μελιτώδης, and the moon\(^\text{188}\) (Artemis) μέλισσα.

Having now passed in review the main passages relating to the bee-symbalism among the Greeks, we are in a position to make some general reflections upon its character and development. The whole story becomes readily intelligible if we bear in mind the natural habits of the insect in question. Left to itself it chooses as its abode some crevice in cliff or stone. Wilkinson, writing of Egypt, says\(^\text{187}\)—'The wild bees live mostly under stones or in clefts of the rock, as in many other countries; and the expression of Moses and of the Psalmist, honey out of the rock,\(^\text{188}\) shows that in Palestine their habits were the same.' What applied to Egypt and the Levant held good for Greece,—witness the following lines from the Iliad:

\[\text{νύμφη θεναι εἰςι μελισσάων θείνων, πέτρης ἐς γαλαφρυὴς αἰεὶ νέων ἥρωμενων.} \]
\[\text{βοτρυνὶ δὲ πέτονται ἐπ' ἀνθείων εἰμαθοῦν.}\]

Or again—

\[\text{οἱ δ', ὅπε ὑπὲρ σφήκες μέσων αἰῶνοι ἦ μελισσαί, ὀλίκα παυσάντως ὄφω ἐπὶ παπαλοῖσσῃ.}\]

---

188 Soph., Frug. 693.
187 Pliny, N.H. xi. 157: 'mel plasmantie uberiis quattrin.'
189 Wilkinson, The Ancient Egyptians, i.

H.S.—Vol. XV.
Similarly Soranus relates that in the tomb of Hippocrates many hollow trees were used as receptacles for the bees. In the absence of a suitable rock, a hollow tree-trunk would serve their purpose. Thus Hesiod says of the oak-tree:

_άκρη μὲν τε φέρει θαλάνως, μέσον δὲ μελίσσας._

And F. A. Paley ad loc, quotes several parallels from the Latin poets. The Scholiast on Nicander remarks that before bees had been domesticated, they used to construct their combs in the hollows of oak-trees, and they do so still on occasion. Also the pseudo-Phocylides writes:

κάμνει ὡφροφεῖτος ἀριστοπάνος τε μέλισσα
ἡ ἑτέρης καλλῆς ἐντὸς χιμαῖρος ἐν οἷον ἀστρακέσσων
ἡ ὄρνις ἁγγέλεις κατὰ καλλίδος ἐκδόμη σημβλῶν
σμήνεις μεριστήτη κατὰ ἀνθέα καρπομαμάων.

If neither cave nor hollow tree were at hand, the carcass of any large beast would be utilized. In The Book of Judges we read: ‘Samson turned aside to see the carcass of the lion; and, behold, there was a swarm of bees and honey in the carcass of the lion.’ Herodotus narrates that the Amathusians cut off the head of Onesimus and hung it up over their gateway, κρεμαμένης δὲ τῆς κεφαλῆς καὶ ὕπνυσι ἡν καλλίς, ἐπὶ τοῦ μελισσών ἔκωσι ἐν αὐτῆς κηρών ἐνεπλευσε. This seems to me a more probable explanation of the βουργεὺς μελίσσας than M. de Pauw’s view that they are derived from the custom of raising young swarms in the warmth of a stable. It certainly tallies better with Nicander’s words:

_ποτὲ ὡ ἐργα διαμέμφαι μελίσσης
ἀμμιγα πατρίδοις Ἐμμεδίδοις αἰὲν ἀπὸ μοῦ χορον
σημάνον ἐξεγόντω τε χειμαῖρων ἐν γεμέσοις._

And again:

_εὐταῖς γὰρ σφήνας μελίσσης, ταῖροι δὲ μελίσσας,
σημάνοι πυθομένωι λυκοσπάνω ἐξεγόντωσι._

Starting from these simple facts of the natural kingdom we obtain at once a three-fold classification. Bees may be regarded as issuing from _caves_ or _trees_ or _cavities_. Under each of these heads they have given rise to a more or less complicated symbolism, the development of which it remains to sketch. I shall do so in the briefest manner possible.

The bees associated with Zeus Kretagenes were occupants of the cave.

---

129 Quoted by W. Robertson Smith, op. cit., p. 15.
130 Hem. ή, p. 293.
where he was born. Hence they were invested with chthonian characteristics, on the one hand ministering to chthonian divinities such as Demeter, Dionysus Zagreus, Persephone, Rhea, and the Ephesian Artemis; on the other hand practising the chthonian gift of prophecy as the Delphic priestesses or the Parnassian Moirai or the Muses who inspired a Pindar and a Plato.

Secondly, the bees that haunted hollow trunks originated the bee-nymphs. Pollux states that bees when their wings are grown are called νύμφαι. In the tale of the Cithern Rhoikos the nymph who sends the bee as her messenger is θεϊκώτες τοι αυτών. The ὄροςκεντάκες of Hesychius are identified with άλ Μήληταί. The βραχος of Heracleides teach the art of bee-keeping. In fact, the nymphs generally and Pan as their leader are recognized protectors of the hive.

Thirdly, from the discovery of bees swarming in a carcass came the belief that they represented the life of the defunct animal, and the consequent attempt to create bees with all its superstitions formulae. The prescribed method was fathered upon the pastoral deity Aristaeus, and did much to foster the conception that the soul might take the form of a bee.

Finally came the mystic school which in its rationalizing tolerance blended all three elements of the symbolism, and presented us with the bee as emblem of the nymph or unborn soul. The chthonian character of the rock-bee was admirably suited to their requirements. A little ingenuity sufficed to transform the tree-bee from a tree-nymph to a water-nymph. And the carcass-bee had relations with the bull which could easily be turned to good account.

The general impression produced on the mind of the average Greek must have been that the bee was a chthonian creature intimately connected with, if not actual embodying, the soul. From this standpoint it is not difficult to detect the significance of the άδεξεις which detailed in the opening paragraph of the present paper. The gold bees from Crete, the Crimea, and Etruria, were probably—as the gold bees of Childeric were certainly—tomb decorations, intended to symbolize the immortal soul. This is confirmed by a curious find made some forty years ago in a Sardinian grave; a bronze statue of a young man with braided hair and diadem came to light; on his breast were five bronze bees symmetrically arranged. This personage has been identified—too hastily, I think—with Aristaeus. When we remember Porphyry’s explanation of the βουργειτις μελισσαί, and Servius’ story of the bees springing from the body of the priestess Melissa, it is difficult to avoid

---

141 Pollux, Z. 117.

142 Pan as μελισσοδόρος was the guardian of bee-hives and ate of the honey (Apoll. Piper. 226, 6–7). Honey was offered to him (Theocrit. Ero. v. 59), as also to the nymphs (Ism. an. Apoll. iv. 9—quoted by W. Robert-Turnow, op. cit. p. 153).

the conclusion that we have here the bee as a symbol of immortality, if not of re-incarnation. Again, W. Robert-Tornow (op. cit. p. 134) quotes a gem "quae Amorem urna, cui apis insidet, navigantem demonstrat." It is aptly enough inscribed with the words ET ULTRA. A more doubtful case is a gold ornament thus described by Perrot and Chipiez in their chapter on Phoenician Jewelry: "un charmant bijou qui fait partie de la collection léguée par le duc de Luynes à la Bibliothèque nationale. Il a été, dit-on, découvert dans l'île de Milo; il est en or, et il a la forme d'un corymbé épanoui, d'une sorte de large fleur traitée d'une manière conventionnelle; les extrémités des pétales, que séparent de fines granulations, sont dépassées par les sépales du calice. Le milieu est formé par un saphir. Sur la surface de ce disque sont assemblées deux masques de femme, coiffées à l'égypitienne, et deux têtes de taureau. Plus près du centre, on voit deux abeilles, qui semblent être venues se poser sur la fleur." The discovery of such a jewel on one of the Cyclades reminds us of the gold plaques embossed with the bee-goddess that came from Camiros in Rhodes. The female heads, Egyptian in style, support the comparison. Bee, flower, and goddess were again associated in the cult of the Ephesian Artemis whose statue was adorned with rosettes as well as with bees. And the bucchane side by side with the bees on the open flower recall the words of Lactantius: 'quamquam apes, mellis colligendi causa circum flores voltantes, eorum ex dolilibs nati pulcherrima ac valde poetica est opinio, tamen minus vulgaris haec erat quam illa quas apes ex corpore bubulo putrefacto genitas esse putabatur.' But, in default of proof, it is safer to assume that the collocation of bee and bull was accidental, and that the trinket itself was devoid of religious meaning. The same may be said of a banded agate in the British Museum, belonging to the Townley collection; it represents a vase upon which are a butterfly and a bee. Both these insects are emblematic of the soul at times, but here perhaps they are merely natural objects forming an artistic scene. Greater importance may be attached to an amphora of Samian ware decorated with a row of bees, which was found by Messieurs Pottier and Reinaud in the necropolis at Myrina: it had in all probability contained offerings to the dead.

The sacrificial value of honey accords well with the cthonian nature of the bee. Porphyrty tells us: "πεποίηται ἡ ὄξυ τὸ μέλι καὶ τανάτος σύμβολον, διὸ καὶ μελίτων στορπάς τοῖς χρύσους ἔθους. These μελισσοφόδα are mentioned as well-pleasing to the gods by Plutarch, who elsewhere
THE BEE IN GREEK MYTHOLOGY.

observes: "Ελευθέρως τε ηρώαντα τα ἄϊ καὶ μελισσώδα θύσειν, ὡς ἀνίστησαν τό σωτήρα τοῦ μέλιτος πρὸς τὸν οἶκον ἐποίησαν. It must be admitted that the cause here assigned hardly carries conviction with it; Greek deities, especially those with chthonian relations, were not so averse to the vine. I suspect that this offering of honey instead of wine is rather to be considered as a survival from a primitive state of society in which wine was unknown. Plutarch loc. cit. had previously remarked that honey was σπονδά καὶ μέθυ πρὸς ἄμπελον φανερά. καὶ μέχρι μὲν τὸν τέλεος ἄρχοντοι οἱ μὲν πίνουντες οἶνον, μελισσώδεις πίνουσιν, κ. τ. ι. This is borne out by the Orphic myth in which Zeus circumvents Kronos by means of honey used as an intoxicant: πλησθεὶς γάρ, μελισσώδας μεθύει καὶ σκατούται ως ὑπὸ οἶνον καὶ ὑπὸν ὧς παρὰ Πλάτωνος ὁ Πόρος τοῦ νεκτάριαν πλησθεῖς, οὗτος γὰρ οἶνος ἦν. φησὶ, γὰρ παρ᾽ Ὀρφεί ἡ Νῦξ τῷ Δίῳ ὑποτεθεμένη τοῦ διὰ μελιτος δόλου—

ἐλθ᾽ ἄν οὖ ἔστη ὑπὸ τὸ δρύαν ιβυκόμοισιν ἐργοσθεὶν μεθύσαντα μελισσώδοις ἐριβομένους—

ὁμοιοι αὐτὸν. ὃ καὶ πάμφρα ὁ Κρόνος. Nommos describes the way in which honey was ousted by wine under the form of a contest between Aristasæus and Dionysus, the gods adjudging the victory to the latter. However in the ritual of certain divinities, as we have already seen, μελισσώδα continued to be offered. And the conservatism of religion is strikingly illustrated by the fact that wine as such was not allowed in the temple of the Bona Dea, the jar in which it was carried was called the honey-pot, and the wine itself was spoken of as milk! Honey and milk together with water occur as a chthonian oblation in the Orphic Argonautica 570 ff.:

αὐτάρ ἔγωγε
ψυχήν ἰαυσάμην στέφθαιναι μελισσώδα χύτλων,
ὑάστι τ᾽ ἡμῶν γαλακτεί, μελισσώδεις ὑμάς ναπημεῖν
λοίμας ἐκερχείον.

With this W. Robert-Tornow compares the offerings made at the tomb of Hesiod by the Nymphs:—

ο βετότας). Sophocles, C. I. 446 ff. describes the καθημέρα in honour of the Eumeneides which involved the use of honey—wine being prohibited: δείκτης, μελισσώδεις μέθυ τρισφάρμα μέθυ. Athenaeus, Deip. 693 F, states that in Greece of θυσία τα Ἴθρα, μελισσώδεις, οὖν εἰς φέροντας τα τοῖς βουσάι; and W. Robert-Tornow, op. cit. p. 170, cites an ancient ring on which 'spis inventavit, same captur aed ipse viarum tantum.' Suidas quotes Ptolemy to the effect that καθημέρα Βετότας were offered in Athens to Minos, Ec. Hellen. Selene, the Nymphs (op. Pass. V. v. 6, and Apollodotae Ormai (op. Empedocles op. Athan. Deip. 513 D). See further Robertson-Smith, Religion of the Scmites, p. 294.

120 Plutarch, Symp. iv. 6, 672 B.
122 Nommos, Dion. xiii. 258-259 and xiv. 225-230.
123 Macrobius, Sat. i. xii. 2. 68. Similarity Epphaus, ed. Mon. ii. 488 (quoted by Lou-beck, Aphrosis, p. 577), states that το έξω μελι τίτι εκεράμαι.
THE BEE IN GREEK MYTHOLOGY.

A mixture of honey and milk termed μελίκρατον is mentioned in the Odyssey, though there wine has already taken its place as an additional libation.—

In Aeschylus Prometheus 609 ff. Aetessa is represented—

παιδὸς πατρὶ πρεμμενίς χοίροι
φυροῦσι ἀπερ νεκροῖς μελεκτήρια.

Ζωὸς τ’ ὢφῃ σφηνὸς λευκὸν ἐντοτὸν γάλα.

τίς τ’ ἀνδρομαχός στῶμα, παμφαῖς μέλι,

λαβάσαν ὄρνταις παρθένον τιγῆς μέτα,

ἀκρατοὺς τε μητρὸς ἀγιᾶς ἀπο

πιπόν παλαιῶς ἀμπελῶν γάμος τὰς κ.τ.λ.

So in Euripides Orestes 114—115 Hermione is bidden to come forth—

κλαύσα σ’ ἀμφὶ τὸν Κλυταιμνήστρα τάφον
μελίκρατον ὑφὲς γαλάκτος, οἰνώπιον τ’ ἄχνη.

And in I.T. 162 ff. Iphigeneia offers—

πηγάς τ’ οἰρέλων ἐκ μάσχον.

Βάκχου τ’ οἰνήρας λαιβάς,

ζωλλάν τ’ πόλλα μελισσάν,

ἄ νεκροὶς θελεκτήρια κεῖται.

Again, the παλαρος, which was poured upon the tomb of the deceased was a semi-liquid substance compounded of honey, oil, and meal. Silius Italicus makes honey and wine an offering to Dis; honey, wine, and milk an offering to Proserpine. Apollonius Rhodius says of Jove;—

αἰῶνν ἀκρασίας μελισσάγας χέε λαμβάς

Γαῖα τ’ εὐφαέταις τε θεσεῖς φυγάεις τε καρποὺς

ὁρώνω γαύνωτά ὁ ἀπόγονως εἶναι ὀργαῖος.

In short, honey everywhere enters into the ritual of the dead. Hence those who were initiated into the Mithraic λεωντάκα, mysteries symbolizing

106 Ημετέροις, x. 518 ff.
107 Panamias V. 517, 6 regards the sects of honey as a survival (ἀργίδως τῶν τάφων) even where a libation of wine also was in vogue.
108 Cakes of wheat soaked in honey, called ἔστρα, were offered to Demeter (Schol. on Νικατος, Alc. 450), and honey-cakes (ἀπὸ τοῦ ἄργως τῶν τάφων) even where a libation of wine also was in vogue.
110 Apoll. Rhod. ii. 1272 ff.
metempsychosis, washed the hands in honey and cleansed the tongue with the same.\textsuperscript{163}

To the Greeks then, as to other branches of the Aryan stock,\textsuperscript{161} the bee was a sacred animal closely associated with the birth and death of the soul. This belief is not altogether extinct in modern Europe. In the Engadine it is still thought that the souls of men emigrate from the world and return to it in the form of bees,\textsuperscript{162} which are there considered messengers of death. When some one dies the bee is invoked almost as if it were the soul of the departed:

\begin{quote}
"Bienchen, unser Herr ist tod,
Verlass mich nicht in meiner Not!"\textsuperscript{163}
\end{quote}

In Germany people are unwilling to buy the bees of a dead man, it being believed that they will die or disappear immediately after him; moreover, the death of the master is announced to the bees in the hive.\textsuperscript{164} Similarly in some parts of France the bees must be consoled if a death occurs in the house; otherwise they would fly off never to return.\textsuperscript{165} An equally strange custom is observed in Poitou: "Il est d'usage, lorsque le maître de la maison meurt, de mettre les ruches en deuil, ce qui se fait en clouant à chaque ruche un petit morceau d'bofie noir. D'après les l'ires des vieux du pays, si on n'observait pas cette tradition, les abeilles mordraient le maître décedé, lorsqu'il reviendrait, la nuit, pour les visiter."\textsuperscript{166} Is it in such superstitions as these that we should seek the explanation of Moschus' lament?\textsuperscript{167}

\begin{quote}
μίλλων οὐκ ἔρρευο τὰ καλὰ γλάγορα, οὐ μέλες σιρμβλοι, κατάθομεν ὑπὸ νυστέρον νυστεροκοτος αὐτῷ τρυγαμάται.
\end{quote}

The \textit{Palatine Anthology} (vii. 717) contains at least one clear reference to the custom of announcing a death in the household to the bees:

\begin{quote}
Νηιαδὲς καὶ ψυχρὰ βοσάλια ταῦτα μελισσαίας ὁμοῦ ἐν εἰρήνῃ λέξατε ρησρείναις, ὡς ὁ γέρων λευκὶτος ἀπὸ ἀραστόδεσση λαγγοίς ἐφιάλτο χειμερῆ μυκτὶ λοιματάμην. σφημίδα ὑπὸ σκῆτι αἱ κορέες φίλοιν αἰ ἐς τὸν ἀφρίν 
γείτονα ποιμέναι πολλὰ παθοῦνι υπαίτι.
\end{quote}

\textsuperscript{163} Porphyri, de astr. Nymph. 15.
\textsuperscript{161} Gubernatus, \textit{Zoological Mythology} ii. 216 ff.
\textsuperscript{162} Possibly this conception in Greece inoculated the artistic representation of the soul. The minute winged forms that hover insect-like over the funeral bier depicted on Attic lekythoi are perhaps inspired by the idea that the soul appears as a bee. The same compromise between human and insect form would account for the \textit{vou} attributed to the dead. In support of this it might be urged that a well-known vase in the Munich collection shows four winged figures emptying pitchers into a large jar sunk in the earth: and winged ἄφροφοι at once recall Callimachus' line—Ἀφρός ἀν κατὰ γυνὴν ἀνατλήσαι.\textsuperscript{166} Gubernatus, op. cit. ii. 218 n. 2.
\textsuperscript{164} Itam, \textit{ibid.} ii. 219.
\textsuperscript{165} \textit{Revue des Traditions Populaires}, 1891, p. 154.
\textsuperscript{166} \textit{Ibid.} 1891, p. 764.
\textsuperscript{167} Mosch. iii. 30 ff.
In any case I submit that sufficient evidence has been adduced to disprove the assertion of Lobeck who, wishing to derive the Μάλισσαι of Delphi from the verb μαλίσσω, writes: *nemis vero et apum similitudo, nisi quis longissime repetere velit, nulla apparat in vatibus et sacerdotibus.*

Arthur Bernard Cook.

108 Lobeck, Ἀστευτάκη, 317 ff.
THE following paper, with the accompanying plates, embodies the results of several months' travelling and surveying in the Peloponnesse. I had set myself to study some of the ancient routes in that peninsula, with a view to identifying them with more precision than had yet been attained, and to clearing up some of the topographical difficulties connected with them. The labour was much greater, and much less fruitful, than I had anticipated; for the work of previous topographers has, on the whole, been extremely well done; and, if there are numerous problems which they have failed to solve, the explanation generally lies in the absence of the data necessary for their solution. Often, however, there have been conflicting views to choose between; and not infrequently I have ventured to differ from all my predecessors, to make (though tentatively) fresh identifications, and to correct views which, though generally received, appeared to me erroneous. In order to record these results I shall be obliged to give a consecutive account of the principal routes investigated; but I shall pass lightly over those parts of them about which no difference of opinion exists, dwelling fully only on those which are matter of controversy or in connexion with which I have some new theory to put forward. The region dealt with coincides roughly with the triangle Megalopolis—Tegea—Sparta; and I shall discuss in order the routes which connected these three towns; reserving for appendices a few notes on some outlying routes, and on the topography of the Mantinian plain.

Of the Maps, that on Plate II. is original; but Plate I. is a reproduction, with omissions and additions, of the corresponding part of the map made by the members of the French 'Expédition Scientifique de Moree,' which was published at Paris in 1832. This map, though not up to date, is still by far the best, and the only original map of the Morea. To bring it up to date, I have inserted the modern carriage roads and railway with such precision

I adopt the words 'routes' in preference to 'roads' lest I should convey a wrong impression. Traces of ancient made roads in the Peloponnesse are extremely rare; those which occur on the routes here investigated will be noted in their proper places. The large majority of ancient, as of modern, routes in the peninsula were mere mountain-tracks, identifiable only by the objects in their neighbourhood or by topographical considerations.
as I could compass, and entirely, or almost entirely, from personal observation; while the Nile and foot tracks marked in the French map are omitted, except where I suppose them to coincide with ancient routes, or for other special reasons. The ancient routes are marked wherever they can be determined with tolerable certainty; so that these Plates show fully, for the first time, their relation to those now commonly taken by the traveller or tourist.

A.—Megalopolis to Tegea.

Between the two principal Arkadian plains,—the Megalopolitan and the Mantineio-Tegean,—lies a small valley, bounded on the east by the ridge of Krávari, and on the west by that of Tsimbaron. In this valley the chief points of interest are: to the antiquarian, the acropolis of the ancient town of Asa; and to the traveller, the khans of Frankóvrysi (or, to adopt the more vernacular pronunciation, Frangóvryso), which are situated about half a mile from that acropolis, and form the first resting-place on the road from Tripolitsa into Messenia. To get from the Megalopolitan plain to the Mantineio-Tegean, one must cross successively Mt. Tsimbaron, the plain of Asa (Frangóvryso), and Mt. Krávari. And since the ancient route is known to have passed through, or close by, the town of Asa, the principal points on it which remain to be identified are the passes by which the two mountain-ranges were crossed.

I.—Megalopolis to Asa.

The following is Pausanius' account of the first half of the route, viz. from Megalopolis to Asa.

To complete our account of Arkadia, it only remains to describe the routes from Megalopolis to Pallantium and Tegea, which coincide so far as the so-called Choma ('Mound').

The suburb through which this route passes is called by the Megalopolitanos Ladokieia, from Ladokos son of Echenna.

Beyond this there was in ancient times a town, Haemonia, whose founder was Haemon son of Lykaion. The place has retained the name Haemonia to the present day.

Beyond Haemonia, and to the right of the road, may be mentioned remains of the town of Oresthasium, including some columns of a temple of Artemis. This Artemis has the title of Hierace ('Priestess').

Keeping along the direct road from Haemonia one comes to a place called Aphrodismium, and beyond it to another, the Athenaeum.

About twenty stades beyond the Athenaeum are the ruins of Asa; and the hill which once formed its acropolis still retains traces of a wall.

Any identifications which we may make of the site of Oresthasium and of the pass by which Tsimbaron was crossed must necessarily be interdependent; and our identifications of other points will be materially affected by the views we hold about these two. We must therefore consider them first.

The passes of Tsimbaron, leading from the Megalopolitan plain to the
SOME ANCIENT ROUTES IN THE PELOPONNES.

27

Ascan, are six in number; but of these the three southernmost 8 lie so far south of the direct line between Megalopolis and Ascan that they may, for our present purpose, be disregarded. There remain

1. The northernmost pass, near Siálesi; used by the inhabitants of Sunánon (the modern Megalopolis) and neighbourhood before the carriage road was made;

2. The pass ascended in zigzags by the carriage road; somewhat south of the one just named;

3. The pass which, starting from a point a little south of Rháposomáti, descends into the Ascan plain near Mármaría. This was the Turkish route from Kalamáta, and Messenia generally, to Tripoli, but has been almost entirely superseded by the carriage road just mentioned. A stream, which sometimes attains a considerable size, flows this way from the Ascan plain to the Megalopolitan; but, whereas the stream flows at the bottom of a deep and rocky gorge, the Turkish road necessarily climbs several hundred feet above it.

The respective heights of these three passes, taken in order, may be roughly estimated at 1,100 ft., 1,100 ft., and 1,000 ft., above the Megalopolitan plain—400 ft., 400 ft., and 300 ft. above the Ascan. 9 (2) is naturally steep and difficult; so that, even by travellers from Sunánon (which lies south of the ancient site), the more northerly route (1) was chosen by preference until the carriage road was engineered. (1) is far more direct than (3); and not much higher; but it may possibly have been less easily accessible in ancient times than it is at present, owing to the marsh (7ò ëos), 5 which lay just east of the city. (3) is considerably the longest route of the three; but it has the two advantages of being somewhat lower than the others and being easy of ascent. Further, since it is the obvious pass for travellers from Messenia, and was doubtless so used in ancient as well as in more recent times, there must have been a regular track across it long before Megalopolis was founded.

On the whole, it would be hard to choose on purely de prori grounds between this route and (1); and it is fortunate that we have some historical evidence to fall back upon. This evidence is connected with the town Oresthasium.

'To the right of the road,' says Pausanias, 'may be mentioned remains of the town of Oresthasium.' Now this Oresthasium is identical with Oresticum; 6 and Oresticum, besides being near the route now under discussion, was on one of the routes used in military expeditions from Sparta to Tegyes and beyond. 7 Further, it was several miles west of Ascan, for

4 Of these (1) ascends left of Asmándouíri, and descends right of Mármaría; (2) ascends right of Asmándouíri, descends left of Pápári; (3) ascends by Skoriánoú, descends at Eutribóubhi or Pápári. The last of these, which passes far south of the summit, will be further described in connexion with one of the Spartan routes (pp. 48-9).

5 These heights are obtained by averaging the results of a number of observations made with an aneroid.

6 Paus. viii. 36. 6.

7 Paus. viii. 2. 2.

8 Herod. ix. 11; Plut. Arist. 19; Thuc. v. 64.
between it and Asea two places intervened,—the Aphrodisium and the Athenaeum,—and the nearer of these (the Athenaeum) was twenty stades (i.e. over two miles) from Asea. It follows that it was not only near the route from Megalopolis to Asea, but near the pass; and, if so, the pass must have been the southernmost of the three which I have enumerated,—viz. the pass by Marmariá. For, whether the Spartan route was the Megalopolitan plain, or went directly from the Lakonian to the Aesan,—(a point we shall have to consider almost immediately)—it cannot reasonably be maintained that it went farther north than Marmariá; nothing either in the passage of Mr. Tsiribou or in the crossing of the Aesan plain would have been gained by adopting such a route. The coincidence of the two routes,—from Sparta and Megalopolis respectively,—near Oresthasium, is to my mind conclusive proof that the southernmost of the three passes was the one used by travellers from Megalopolis.

Having thus, with the help of Oresthasium, identified the pass, let us see whether we can determine the position of Oresthasium itself more precisely.

Some topographers have placed it on the eastern side of Tsiribou,9 others on the western side,6 and one (Leake in his Travels in the Morea 10) on the summit of the mountain. The last-named theory may be discarded altogether. Leake afterwards (in Peloponnesiacs 11) himself abandoned it; not indeed for the almost conclusive reason that there is no trace whatever of any ancient settlement or fortification on the summit of Tsiribou,12 but because he preferred to assign that summit to a fortress not mentioned by Pausanias, to which we shall have to revert shortly,—the 'Athenaeum near Belbina' (τὸ πέρι τῆς Βέλβην Αθηναίου).13

There remains the question whether Oresthasium lay east or west of Tsiribou,—in the plain of Asea or in the plain of Megalopolis; but this question need not delay us long. It is impossible to suppose that the Spartan route to Asea was the Megalopolitan plain;—this would only be credible if the passes south of Tsiribou, leading directly from the Lakonian plain to the Aesan, were exceptionally high or difficult; and they are not.14 The Spartan route must have passed south and east of Tsiribou; Oresthasium therefore, since it was on the Spartan route, must have been east, not west, of that hill, and was therefore in the plain of Asea.

Leake's later view made the village of Marmariá the modern representative of the ancient site; partly, no doubt, for the reasons I have just enumerated, and partly on account of the name. This view is, in my opinion, very nearly correct. At Marmariá, indeed, repeated inquiries of the villagers have convinced me that there exist no traces of antiquity; but the natives

---

9 Leake, Peloponnesiacs, pp. 247, sq.
11 Loc. cit.
12 The only remains there are those of a extremely small building, or enclosure, of low stones.
14 See pp. 48-49.
of the neighbouring village of Papari showed me some time ago, at a point just to the right of the path which connects this village with Marmariá, a low hill which did distinctly bear such traces; and a small excavation which I subsequently made brought yet more of them to light. This little hill not improbably marks the site we are in search of.

![Map diagram](image)

**Fig. 1.**

The exact position of the hill—one of the last outlying skirts of Tsimaró—will be best seen from the special plan of the Asean plain (Pl. II.); and a sketch of the hill itself is given in Fig. 1. On its southern slope is a chapel, still standing, of Ag. Triáda (the Holy Trinity), and on its northern slope a ruined chapel of Ag. Giannákes (St. Johnny'). Built into the former are several hewn blocks of limestone, of Hellenic
workmanship; while built into the rude walls of the latter, but hidden by the débris, I found several pieces of worked marble, including among others a small fragment of a Doric column and a complete metope (unsculptured) and triglyph from a Doric frieze. The marble must have come from a considerable distance and therefore the temple to which they belonged was probably of some importance.

Besides these remains of a temple, there are abundant traces of human habitation—rude walls, partially or completely buried, and coarse pottery; but to none of these can an ancient date be confidently assigned.

Here then was certainly an ancient temple; probably, but not certainly, an ancient town or village. It is just where we have been led on other grounds to look for Oresthasium—viz., at the western border of the Aesan plain, and slightly to the right of the ancient pass from Megalopolis over Tsimbaron. The principal remains of Oresthasium, even in Pausanias' day, were the pillars of a temple,—that of Artemis Hiecha; indeed these are the only remains which he considered worthy of special mention. Further, the position of Oresthasium, if this be Oresthasium, bears a remarkable resemblance to that of Pallantium, its sister town. For Pallantium a small hill was selected, on the western border of the Tegean plain, one of the outlying skirts of Krávari; for Oresthasium a small hill, on the western border of the Aesan plain, one of the outlying skirts of Tsimbaron.

Oresthasium was reputed to be one of the oldest towns in Arkadia, contemporary with Pallantium and Phigalia; the three towns tracing their foundation to three sons of Lykaon,—Orestheus, Pallas, and Phigalius,—respectively, while Lykosura, founded by their father, was believed by the Arkadians to be the oldest town not in Greece only, but in the world. An act of the greatest heroism is attributed by Pausanias to the people of Oresthasium. In 659 B.C. (O.I. 30, 2), one of its sister towns, Phigalia, was taken, and its inhabitants evicted, by the Spartans. In response to an oracle, a hundred picked men of Oresthasium willingly devoted themselves to death in battle to secure the restoration of the Phigalians. The Oresthasians, says Pausanias, vied one with another for the honour of perishing in so good a cause. Apart from this we hear of Oresthasium (Oresteium or Orestheium) on two occasions only, each time as a stopping-place of Spartan troops on their way to Teges or (viz. Teges) to the Isthmus, viz., (1) just before the battle of Plataea in 479 B.C. (2) just before the battle of Mantinea in 418 B.C.

That this route, viz. the Aesan plain, was ever used by the Spartans in their military expeditions to, or beyond, Teges, is a very remarkable fact.

---

15 The breadth of the flutes in the fragment of column is approximately 2½ inches. The length of the metope and triglyph combined is 2 ft. 6 in., of the triglyph alone 10½ in. The height of the metope and triglyph is 1 ft. 5 in. The architectural forms are those of a rather late period.
17 Possibly from Dholian in the hills south of Teges, where there are both ancient and modern quarries.

22 Thuc. v. 64.
I need not, however, enlarge upon it here, as a separate section (C) will be devoted to this Spartan route.

The history of Oresthasium terminates in 370 B.C., when its inhabitants deserted it in favour of the newly founded capital of Arkadia, Megalopolis. 38

The site of Oresthasium being determined, it only remains for us to identify (1) between Megalopolis and Oresthasium,—Ladokeia and Haemoniae, (2) between Oresthasium and Asea,—the Aphrodisium and the Athenaeum.

(1) A mile and a half from Sinaion (the modern Megalopolis), in the direct line between it and the pass, lies the village of Rousvania. Coming from Sinaion, one passes, on the left of the road, just before entering the village, a chapel of Ag. Marfin, into which a number of ancient blocks of limestone have been built, and round which other others lie scattered; all, or most, of them being apparently architectural fragments of a Doric shrine. 39 And rather more than half a mile beyond the village, on the left of the path, is a small hill surmounted by traces of rude walls, probably belonging to an ancient fort, while the top and sides of the hill are sprinkled with pottery. It is natural to identify this region either with Ladokeia or Haemoniae. When we remember that the ancient Megalopolis lay entirely north of the modern Sinain, it seems probable that Ladokeia,—which is described as 'τα προ των αστειων,' i.e., a suburb,—lay nearer to the city than Rousvania, perhaps at Sinain itself, and that Rousvania represents Haemoniae.

Ladokeia was the scene of a battle between the Tegeans and Mantineaans in 433 B.C., 40 in which the victory was doubtful, and of another battle in 226 B.C. between Kleomenes of Sparta and the forces of the Achaean league,—a battle which ended in the complete defeat of the latter, and the death of the brave Megalopolitan Lydiadas. 41 This was one of that series of Achaean disasters which led to the alliance with Antigonus of Macedon, and the surrender to him of the Akrokoriuth.

---

38 Paus. viii. 27. 3.—Oresthasium has frequently been confused, or carelessly identified, with 'Orestes—an old name for the part of Megalopolis which lay south of the Hellison. That Orestas was half of Megalopolis is expressly stated by Steph. Byz. s.v. 'Orestes Βασιλικας.' That it was the southern half is clear (1) from Thuc. iv. 124, where the expression 'Ακολουθος τῆς Ορθωρίας' doubtless refers to the place afterwards known as Ladokeia, a southern suburb of Megalopolis (Paus. viii. 44. 1); (2) from Paus. viii. 34. 1—4, where a series of monuments commemorating the story of Orestes are mentioned on the road to Messene. That it was an old name for this region appears from the fact that the passage of Thucydides quoted above refers to a period long before the foundation of Megalopolis.

Orestias derived its name from Orestes (Steph. Byz. s.v. 'Orestes Βασιλικας') and may infer the same from Paus. loc. cit., Orestas from Orestia (Paus. viii. 3. 1); Steph. Byz. s.v. 'Oresthas' but both were occasionally called 'Orestes,'—the former in Enn. 397 (cf. ib. Electra 1217—5), the latter in Herod. ix. 11, Plut. Aarot. 16, Paus. viii. 3. 2 (cf. also Thuc. v. 44, 'Orestia'). The two places are merged in the article 'Orestias,' in Smith's Dict. of Gr. and Rom. Geography, and the same mistake (for I feel sure it is a mistake) led Babye (Eckardt, pp. 172, 173) Russian (ii. 227, and note 3), and apparently Curtius (Pellinaceni, i. 336), to place Orestas on the coast of Teboliarch, i.e., in the Megalopolitan plain.

35 Thuc. iv. 134.
36 Polyb. ii. 51, 55; Plut. Aarot. 36, 37.
Haimoniiæ is a place of no historical interest whatever. It is mentioned here only by Pausanias, and (so far as I know) by no other writer.

(2) I am not aware of the existence of any ancient remains between Oresthasium and Asea. Oresthasium, it will be remembered, lay a little off the road. Pausanias' expression indeed (ἐν δεξιᾷ τῆς ὁδοῦ) is ambiguous; but his next paragraph, which refers to the Aphrodisium and the Athenaeum, is introduced by the words τῆν ἐκ εἰδείαν ὄρνετ καὶ Νίμωνων, thus showing clearly that Oresthasium was not upon the eideia. The eideia therefore, probably coincided with the Turkish road, which strikes the modern carriage road near the Khan of Davranda and the chapel of Pandeleemon ('the All-Merciful'), (c. special map of the Aegae plain, Pl. II.). Since this chapel is approximately twenty stades from the acropolis of Asea, it has been conjectured with some probability that it may mark the site of the Athenaeum. For the position of the Aphrodisium, which one passed between Oresthasium and the Athenaeum, we have no evidence; nor is its identification a matter of any consequence, since it is mentioned in this one passage only, and Pausanias himself saw nothing there which he considered worth recording.

With Asea itself I am not particularly concerned, for its site has always been well known, and its history (such as it is) can be learned from the handbooks. I will therefore touch on one point only. The principal remains of Asea are the summae and the summit of its acropolis, and of at least two massive walls at right angles to this, running down from it to the bottom of the hill. These latter are always a puzzle to travellers. The explanation is, I believe, that there was originally a second (outer) wall running round the bottom of the acropolis, and that the two walls perpendicular to the hill extended from the inner to the outer so as to divide the intervening space into a number of sections, rather like the water-tight compartments in a ship. The effect of this was that, in case of a breach in the outer wall, the mischief would be concentrated, only one part of the circuit of the inner wall being exposed to attack; while the enemy would find himself cooped in between three walls—one in front of him and one on either side—all defended by the garrison. There are clear indications of a similar arrangement on the fortified hill near Ag. Andras in the plain of Astros, possibly representing the ancient Thyrea; and the same principle was exemplified certainly in mediaeval, and possibly also in ancient, times in the fortifications on Mount Kheinmos (See App. B. and Fig. 6) on the borders of Arkadia and Lakonia.

77 I have, however, never been able to see any traces of the ruined walls mentioned near this spot by Boblaye (Echerches, p. 173). On the other hand, Boblaye's remark that this site will not suit the Athenaeum rests on a confusion of this Athenaeum with τοὺς νεκροὺς Βλαστρανοὺς Αθηναύοις (Phist. Chron. 4), which must have been a totally different place (c. infra, p. 39).
II.—Asea to Tegon.

To return to Pausanias:—

Some five stades from Asea are the springs of the Alpheius and Eurotas, the former a short distance away from the road, the latter close to the roadside. By the spring of the Alpheius are a roofless shrine of the Mother of the gods, and two marble lions. Now the water of the Eurotas mixes with the Alpheius, and they proceed together in a common stream for some twenty stades; then, after descending into a chasm, they rise again, the former in the Lacchidian territory, the latter at Tegon (the Springs) in the territory of Megalopolis. From Asea one ascends to the hill called Boreum, on the top of which are traces of a temple. This temple was said to have been erected by Odysseus, on his return from Ilium, in honour of Athena Soteira and Poseidon.

The so-called Chona ("Mound") is the boundary of the Megalopolis territory against the Tegon and Pallantium. To get to the Pallantium plain you turn to your left at the Choma, while on the right of the so-called Chona is the Manthrian plain, which is included in the Tegon territory, and extends perhaps about fifty stades to Tegon. To the right of the road is a small hill called Krestum, upon which has been built a temple of [Ares] Aphasis. On the way to Tegon is a fountain called the "Leukonian."

By the spring of the Eurotas is obviously meant that group which gives its name (Frankovryssi or Frangovryso—"the spring of the Franks") to the two khana by the roadside. The "spring of the Alpheius" is probably to be identified with another group (v. Pl. II.) situated at the extreme point of the hill opposite Frangovryso, just beyond the new railway embankment. On the springs and streams in the valley of Asea, and the stories attaching to them, I shall have more to say in an Appendix.

The words ἐστὶν ἄνδρος ἢ Ἀσέας are susceptible of two different interpretations—either "From Asea one ascends" [i.e. on the route to Tegon], or "From Asea one may ascend" [i.e. as a special excursion]. The former interpretation is strongly confirmed by a comparison with viii. 39. 1, where there can be no doubt as to the meaning of the words ἐστὶν ἄνδρος. We are thus precluded from two very tempting identifications; viz. that of Mount Boreum with Ag. Elias of Kandrivs (v. Pl. II.), and that of the temple mentioned by Pausanias, ἐπὶ τῇ ἄκρᾳ τῶν δύρων, with a large one of the foundations; as well as some fragments of marble columns, are still visible within a very few feet of the summit of that conspicuous hill. Attractive as these identifications are, and in spite of a serious difficulty of interpretation involved in the alternative view, previous topographers are probably right in making Boreum the modern Krivari, and seeing the ἑσύος of Athen. Soteira and

---

82 VIII. 44. 3—8. 83 Appendix A.

The order was Doric. The flutes, in the extant fragments of columns, range from 3½ in. to 4½ in. in width. There are also fragments of triglyphs. Both 1 and 1 clamps were used.

So far as one can judge from the remains of its foundations, the temple was peripteral, its external measurements being approximately 90 ft. x 40 ft., and the external measurements of the cela about 74 ft. x 25½ ft. But these are very rough measurements, the best that can be obtained without a complete clearance of the site and the removal of the ruins of a chapel of Ag. Demos which has been superposed.

The temple on Ag. Elias has not, it believe, been hitherto noticed by archaeologists. In Landcker's Thesauri the summit of the hill has been marked erroneously as the site of Asea; and the remains described as existing upon it in the text of the same handbook (p. 219) are really those of the acropolis of Asea, to which I have already referred in the text.
Poseidon in a small shrine, of which some scanty marble fragments appear at the top, not indeed of the mountain, but of the pass.

Of four possible passes from the Ascan plain to the Tegian, the one with the temple is the only one which answers satisfactorily to Pausanias' description. For the pass followed by the carriage road goes north of Pallantium, the site of which may be regarded as finally determined, instead of going between it and Teges; while the pass by the village of Zelli, though by no means a bad route to Teges, would have been a very circuitous one for Pallantium. The remaining pass (a branch from the last, entering the plain by the 'causeway' marked in Pl. II) is only mentioned for the sake of completeness. No traveller from Asca to either of the two ancient towns would have made use of it.

The identification of the Choma is a less easy matter, and one in which I find myself at variance with all previous writers. According to the received theory it is represented by the causeway, referred to a few lines back, which crosses the narrow neck of plain between Mount Krâviri and the low hills opposite, striking the latter near the village of Birbâti. This causeway consists of two parallel rows of large unshaped stones, piled together, with a space between them. From whatever period it may date (a point which it is quite impossible to settle) its object was evidently to resist the encroachment of the swamp or lake—the so-called 'Taka'—which always covers a considerable part, and often the whole, of the plain south-east of it. This purpose it still serves, though to a very limited extent. It was first identified with the Choma by the members of the 'Expédition de Morée,' and their view of the matter has since then been universally accepted. But the objections to this view are (in my opinion) insuperable. (1) The pass which debouches at the causeway is not the one which I have shown to be the ancient route, but the last, and least admissible, of those which we have seen reason to reject. Leake, who is right about the pass, attempts no identification of the Choma. The 'Expédition de Morée,' who identified the Choma, say nothing about the pass. Curtius identifies both, and does not seem to be aware that the identifications are inconsistent. The route, as indicated in his map, is an impossible one: this is obvious both from that map itself, and still more clearly from mine (Pl. II), which is on a larger scale.

(2) The causeway runs approximately north-east and south-west across the Pallanto-Tegian plain, so that, while there would be nothing unintelligible in

---

33. These are principally fragments of Doric columns, the width of the bases ranging from rather more than 3 in. to rather less than 4 in. A grave objection to identifying this temple with that of Athena Soteira and Poseidon lies in the interpretation of the words ἀρχαῖα καὶ ἀρχαῖα ἡ σενοῦ, which should properly mean 'at the top of the mountain.' But on the whole this seems to me less objectionable than the forced interpretation of 'τοις; 55 σενοῦs which is the alternative to it.

32. 'Archaeologia,' pp. 148, 173; Ross, 'History of Peloponnesus,' p. 61 (Ross's apparent dissent from the French explorers here arises from a misunderstanding of their map; he and they really held precisely the same view); Curt, i. 992; Smir. ii. 237; etc.

31. It is practically certain that the real summit of Krâviri, which I have visited more than once, is not the site of a temple.
a theory which regarded it as dividing the Pallantian territory from the Tegean, it is quite impossible to suppose that it divided the Megalopolitan territory on the one hand from the Pallantian and Tegean territories on the other; yet this is what Pausanias says of the Choma.

Let us look for an alternative Choma. That it was at the bottom of the pass every one admits, since it marked the junction of the routes to Tegea and Pallantium, the Manthrian plain (Tegean) lying to right of it, the Pallantian to left.\(^{34}\) Now closing the mouth of the pass, at the very verge of the plain, is a little rocky hill, detached (or nearly so) from Kravari proper, and exactly satisfying these requirements. Arrived at this point, one must necessarily skirt the hill on one side or the other—on the left if one is making for the ancient site of Pallantium, on the right if one is making for Tegea. In my special map (Pl. II.) I have marked it (with a query) as the Choma. The only objection to this theory lies in the application of the term χώμα to a natural, instead of an artificial, hillock. But it is a noteworthy fact that, whereas Pausanias' expression for an artificial mound, whether tumulus or embankment, is almost invariably γῆς χώμα (and he uses the words a great number of times), here and (so far as I know) here only, the expression is τὸ καλούμενον, or τὸ ἐσφαλμένον χώμα. And the distinction is certainly no chance one; for he mentions the Choma thrice, and the name is always thus qualified. But if the difficulty of applying the word χώμα to a natural hillock be held insuperable, I can only say that, if the Choma was not this, it was in this place—if it was not the hillock, it must have been an artificial mound erected on, or by, the hillock.

The remainder of this route,—viz. from the Choma to Pallantium on the one hand and Tegea on the other,—may be dismissed in a very few words. The sites of Pallantium and Tegea are well-known; and the Manthrian plain is the low-lying land between Mount Kravari (Boreium) and the Tripolita-Sparta road. This plain is at the present day always either partially or entirely submerged; but, even if the Katavothra (v. Pl. II.) at the foot of Mount Kravari, which drains it, was more effectually kept open in ancient times than now, yet the shortest route to Tegea would rather skirt than traverse the plain, keeping along, or very close to, the edge of the low hills on which stand the villages of Bibiati, Monizaki, etc., and passing between them and the small hill surmounted by the village of Vouno. This last is the ἀρχ. αὐτοῦ καλούμενος Κρησιόν of Pausanias' description.\(^{35}\)

---

\(^{34}\) It is certainly strange that the boundary should have been down in the plain, so that both slopes of Kravari were included in the Megalopolitan territory. But the fact is quite clear from Pausanias' description, and is admitted on all hands. The boundary between the Tegean and Argive territories, near Hyssion, was very similarly situated. See Paus. viii. 34, 7, and p. 10 of the present paper.

\(^{35}\) I believe it is never entirely dry, even in the height of summer, but I do not mean to assert this too positively.

\(^{36}\) This identification was first, I believe, made by Ross, and his view has been generally accepted. The French explorers had previously supposed the big hill of Ag. Elias just east of Kaparlis, or the lower slopes of it, to represent Krestium (Epaph. Storia, et Moria, Atlas, Pl. IV.), and were followed by Leake, in his Peloponnesiacs (special map of the Mon-
It would be rash to attempt any identification of the ‘Leukonian’
fountain. Probably it was somewhere near Keratitsa. In any case it cannot
have been so far south as the point marked in the plan published by the
French ‘Expédition;’
for, if so, it would have been altogether off the
route to Tegena.

On the other hand, Manthura, or Manthyra, is there correctly mar ked.
At present the only traces of the ancient town (or village) are (1) a profusion
of scattered pottery, and (2) one or two architectural fragments lying close to
the chapel of the Panagia. Even these last are not certainly of ancient date.
It is not impossible, indeed, that the chapel of St. Elias, now ruined, which
formerly surmounted the hill immediately behind the site, occupied the
position of an ancient shrine or watch-tower. At any rate there are there
remains of two foundations, with slightly different orientations; and one
of these, which is built of larger stones than the other and without mortar,
may be Hellenic.

B.—SPARTA TO MEGALOPOLIS.

This route will be most conveniently discussed in two sections,—the
Lakonian and the Arkadian. For the former our principal authority is
Pausanias, Book iii.; for the latter Pausanias, Book viii.

I.—Lakonian Section; Sparta to Belmina.

On the route from Sparta towards Arkadia there stands a statue of Athena with
the title Pareia, in the open air; and beyond it is a temple of Achilles which is kept closed.
... Further on is what is called the Tomb of the Horse. A short distance only
from this tomb are seven pillars, hallowed (to my thinking) in the antique form[1],
and said to represent the seven planets. There are also upon the way
a sacred enclosure of Krammon with the title Sitermus, and a temple of Artemis
Myia. The statue of Aidos (‘Modesty’), perhaps thirty stades distant from the city, is said
to have been dedicated by Ikarios, and to have been erected for the following reason.[2]
Proceeding thence twenty stades, at a point where the stream of the Eurotas approaches very
close to the road, one comes to the tomb of Laba, who surpassed all his contemporaries in
fleedness of foot. Indeed he was crowned at Olympia for his victory in the long run; and
worn out, as I imagine, with his exertions he started home immediately after the victory,
and his death occurring at this spot he was buried above the public way. ... Proceeding

The principal objections to this view are: (1) the height of the hill—perhaps 300 ft.,
or 1,000 ft. above the plain—to which the words ὁ ἄγαλμα ἥφαιστος seem inappropriate; (2) its great
distance to the right of the direct route from the Chama to Tegena. Had this been Krammon,
Kramon would have been mentioned in connexion with the route from Tegena to Sparta rather
than in connexion with that from Megalopolis to Tegena.

The word ἡφαιστος applied to a very small, but conspicuous, elevation in a plain, cf. Paus. viii.
12.7, where it is applied to the hillock on which stood Old Manthura.

copied by Leake in his special plan at the end
of Peloponneseum, Curtius (vol. i. Pl. 111), and
Buran (vol. ii. Pl. VI.).

1, εἰς 47.1; Steph. Byz. s. v. Mavropop.

[4] This hill may be easily distinguished by a
group of three oak-trees which crowns it.

[5] Paus. iii. 29, 8—31.3.

[6] Where Tyndareus sacrificed a horse on
the occasion of the oath taken by Helen’s
suitors.

[7] Here follows a story of Penelope’s departure
from Sparta with her husband Odyssey.
in the direction of Pellana one comes to the so-called Charikse (*Stockade*), and afterwards to Pellana, which was in ancient times a city. Here, they say, Tyndarus took up his abode when he had to flee from Hippokoon and his son at Sparta. Here I saw, I know, two noteworthy objects—a temple of Asklepios and the *Pellain* spring. Into this spring they say that a maiden once fell while drawing water, and was drowned, but the veil which she wore on her head resurfaced in another spring called the *Lankelain.* From Pellana there are several stades to the place called Belmina.** This is the best-watered region in Lakonia; for not only is it traversed by the water of the Eurotas, but it also itself produces abundant springs.

Belmina was the frontier town. If the passage before as left any room for doubt on this point, the doubt would be removed by Paus. viii. 33. 3, where the account of the way from Megalopolis to Sparta terminates, as abruptly as the account of the way from Sparta to Megalopolis, at the *Ερμοσ το κατα Βελμίνα.* The use of Hermac as boundary marks, and the name Hermacum in the same connexion, are well illustrated by Paus. ii. 35. 7 and viii. 34. 6. Further we know from various passages, to which we shall have occasion to revert later, that the Belminatid region was a source of constant dispute between the Spartans and Megalopolitans. These facts, combined with the distances given by Pausanias (rather more than ninety stades from Megalopolis* and rather more than 150 stades from Sparta), and with his remark that the Belminatid was the best-watered region in Lakonia, leave no doubt whatever of its identity with the small valley formed by the junction of two of the most important of the streams which combine to form the Eurotas, and lying between the khas of Longanisko on the south and Mount Khelmôs on the north.

Mount Khelmôs (Fig. 2), which rises more than 1,000 feet above the valley, and completely dominates it, is surrounded by extensive remains of fortification walls, of which a considerable part is generally held to be of ancient date, while the remainder is undoubtedly mediaeval. Figs. 3 and 4 are from photographs of portions of the outer and inner walls respectively; a plan of the fortifications as a whole is given in Fig. 6 (p. 72), and some description of them will be found in Appendix B. Two questions, which are to a certain extent independent, at once suggest themselves; viz. (1) Where was the town of Belmina? (2) What was the ancient name of the fortress on Khelmôs? These questions have been answered in several different ways.

Leake* gives the name of Belmina to the remains on the summit, and supposes the lower town to have been situated near the chapel (now destroyed) of Agia Eirene, at the eastern foot of the hill, where trifling, but undoubted, remains of antiquity** have occasionally been found. Boblaye

---

* There are various forms of the name:
Belmina, Belman, Belma, Belman, Belmena (at least the region is Belmena). Strabo, p. 343), and probably (Paus. viii. 32. 4) Belmena. Except in translation, where the name must be given literally, I prefer the form *Belmina* to *Belmena,* chiefly for the sake of consistency, since one must occasionally speak of the *Belminatid* or *Belmenahid* territory (cf. Polyb. ii. 54 and Strabo p. 343), and *Belmenahid* is intolerable.

* Paus. viii. 35. 2.

* Travels in the Morea, iii. 29.

* Leake was told there were "Hellenic ruins" there. But the peasants, who are still unanimous in asserting the existence of remains, failed altogether to show us any trace of them. There is however sufficient evidence that minor antiquities, notably some small bronze figures, have occasionally been found near the spot.
places Belmina on the plateau which extends south (or rather south-east) from Pétrina, at a point some three kilometres west of Khelmós; and in this he is followed by Curtius and Bursian, the former of whom (like Leake) regards the ruins on Khelmós as those of the upper town, while Boblaye and Bursian give them no name, mentioning them merely as those of a frontier fort.

Now between the positions chosen by Leake and Boblaye respectively for the town (or lower town) of Belmina there is not very much to choose. In neither of these positions are the traces of antiquity sufficient to prove that a town existed. On the whole the evidence is perhaps in favour of the site selected by Leake. But with regard to Khelmós, a more decided view seems possible.

---

Boblaye, Recherches, pp. 75, sq.; Curtius, ii. 256, sq.; Bursian, ii. 113. Boblaye speaks of the "ruines très étendues vues par M. Vietty sur le plateau, au sud de Pétrina." This is, I suspect, the only evidence for the remains which rests on actual observation, and even this evidence is only reported at second-hand. I cannot help thinking that M. Vietty was taken, in either by the appearance, at a distance, of this region, which is studded with white rocks protruding from the soil, or by the traces of some house's stone walls—probably of cottages or shops—of which may be of any date. In rebuilding the chapel of Ag. Theodhore, which in this region, some walls of stones, tile, and mortar, were discovered; and also a very small marble thyron capital, of such bad workmanship that it must be of very late date, probably Byzantine, date. I suspect there was a small monastery there.
SOME ANCIENT ROUTES IN THE PELOPONNESE.

On the one hand it is undoubtedly true that, Belmina being the principal town of a very small valley completely dominated by Khelmós, the fortress which surmounted Khelmós must have been in some sense its acropolis. It was, that is to say, the natural place of refuge for the inhabitants in case of attack. Further, since Pausanias, who mentions Belmina both in describing the route from Megalopolis and in describing that from Teges, makes no reference whatever to the fortress unless he includes it in the term Belmina, there is a strong presumption, considering how important a place the fortress had once been, that he does so include it. On the other hand, there is no
doubt that the name Belmina was applied by Pausanias primarily to a valley, since he says it was traversed by the Eurión; and there is no reason why the fortress upon the hill-top should not have had a separate and more distinctive name. That name was, in my opinion, the ‘Athenaeum.’

The ‘Athenaeum’ of Polybius and Plutarch, with which I propose to identify the fortress on Khelmós, must, I feel sure, be distinguished from the ‘Athenaeum’ of Pausanias, which lay between Oresthasium and Asea, though some topographers have attempted to merge the two. It is described by Plutarch \(^{42}\) as τὸ περὶ τὴν Βελίμναν Ἀθηναῖον,

\(^{42}\) C. 4.
—as an ἐμβολή τῆς Λακονίκης, as Spartan (apparently), but a subject of dispute between the Spartans and Megalopolitans; and none of these expressions could be applied to a place within twenty stades of Asea. Polybius, the Megalopolitan, always speaks of it as τῶν Μεγαλοπολίτων ήν εν τῷ τῶν Μεγαλοπολίτων χώρα; but its whole history, as gathered from him and Plutarch, is a record of successive changes of hands. The same is true of Belmina and the Belminatid territory; whose history, in fact, blends in such a way with that of the Atheaeum that it seems impossible to dissociate them. So that there is every reason to believe that the Atheaeum was not merely near Belmina (περὶ τὴν Βέλμιναν), but formed part of the

Belminatid territory. And, if so, it can hardly have been situated anywhere but on Mount Khelmós; for Khelmós is, with a single exception, the only

(1) Paus. viii. 27. 4 (ὁ Βέλμινας = Belmina), cf. 6, 35. 4; (2) Plut. Cleom. 4 and Pol. ii. 48; (3) Pol. ii. 58; (4) Pol. iv. 37. 60, and 81; (5) Livy xxxviii. 34; (6) Paus. iii. 21, 3, viii. 35. 4.

The single exception is the prominent hill whose summit lies almost exactly on a line between the villages of Petrina and Grivou, from...
place in this region adapted for such a fortress, and, without any exception, the only place where traces of a fortress exist. These considerations, and the absence of any separate mention of the ‘Athenaeum’ in Pausanias, make it (to my mind) almost certain that Khelmos, the fortress *prop. excellens* of the Belminatid territory, and loosely included in the general word Belmina, is also the fortress more particularly known in ancient times as the Athenaeum.

This equation would doubtless have been made long ago, but for two reasons, viz.—(1) the coincidence that the Athenaeum is generally spoken of as properly Megalopolitan, Belmina (in Pausanias at least) as Spartan; a mere coincidence, since (as we have seen) both alike are rarely mentioned except for the purpose of recording a change of ownership; (2) the identity of name with that of the other place to which I have already referred.

The importance of the fortress on Khelmos, ‘the Athenaeum near Belmina,’ can hardly be over-rated. A mere glance at the map will show that it completely bars the way from Sparta to Megalopolis. But it does more than that—it is the key, as we shall see presently, to both of two routes between these two towns and also to one very important military route from Sparta to Tegea, viz. the route which traversed the Asean plain. It is also, both naturally and artificially, an exceeding strong position. That it was always a bone of contention is no matter for wonder; the only wonder is that a post so admirably adapted to defence should time after time have been taken and lost.

Between Sparta and Mount Khelmos there are numerous traces of antiquity. None of them can, however, be certainly identified with any site or object known to us from ancient authors, with the possible exception of some remains generally supposed to mark the site of Pollana. Though I have not much new matter to record in connexion with this part of the route, I propose, nevertheless, to sketch it rapidly, noting the principal remains upon it. This will enable me to correct some small inaccuracies of detail, and to add a few new observations.

The track follows the Eurotas valley all the way; for a great part of the way it keeps close to the river bed. For the first three miles the valley is a comparatively open one. To this section of the route belong all the places and objects mentioned by Pausanias between Sparta and the statue of which it is, however, separated by a deep stream-bed. This hill overhangs the eastern (or modern) track to Megalopolis, and commands a good view of the western track (the one commonly used in ancient times, and now used by travellers to Laconia). It also commands a magnificent view of the Megalopolitan plain as far north as Karystiana, and conceals this plain from Khelmos. Were there any traces of a fortress on the summit, one might naturally identify it with the ‘Athenaeum; but there are none, and a rocky summit like this could hardly have been fortified without retaining traces of the fact.

Unless, indeed, ‘Athenaeum’ was specially Megalopolitan name for the fortress of Belmina.

16 Burria (II. 113, note 3) expressly rejects the identification of Khelmos with the Athenaeum on the ground that the position of Khelmos will not suite the other Athenaeum, which he does not distinguish from this one.
of Aidos; but no one, so far as I am aware, has ventured to identify them, nor am I prepared to do so. About three miles from Sparta is a large unfinished building, one end of which is used as a khan, the 'khan of Zakharatous.' Near it the river makes a bend to the eastward, circumventing a low rocky hill; but the track to Megalopolis keeps straight on, passing left of the hill, and rejoining the river beyond it some 1 mile from the khan. Leaving the track at the khan, and keeping along the river bank, one sees almost immediately, on the opposite bank, the scanty remains of a Roman or mediaeval bridge,—probably the former,—and beside it the traces of a river wall of large blocks of stone. Just opposte this bridge, if one climbs the rocks which overhang the path, one finds a large rock-cutting, which was probably supplemented by building so as to form altogether a level area some 30 ft. x 20 ft. in extent. This cutting may possibly have been prepared for the statues of Aidos, its distance from Sparta according very well with such a theory; but it must be remembered that all identifications of this kind are little better than guess-work. Still keeping to the river, one reaches in a few minutes a fine Turkish bridge,—the 'bridge of Kopinosh,' which spans it by a single arch. It bears the inscription

1730

This bridge, though still in excellent repair, is now but little used; but prior to the construction of the carriage road it formed part of the ordinary route from Tripolis to Sparta and Mistra.

From the 'bridge of Kopinosh' to the point at which the river and the track to Megalopolis re-unite, the river flows in a narrow gorge between high rocks on the eastern, and the low hill already mentioned on the western, side. The former assume shapes so curious as to suggest artificial cutting; and on the slopes of the latter are traces (1) of an aqueduct or mill-stream, (2) lower down, of a half-buried wall, built in order to terrace up the soil, possibly for a road but more probably for purposes of cultivation. On the north end of the hill, where one rejoins the track to Megalopolis, are remains of polygonal walls, and the hill itself bears a fair sprinkling of pottery, while immediately between the hill and the river, on the narrow strip of land which separates them, are the lower courses of a long wall consisting partly of Hellenic and partly of later masonry, nearly parallel with the river. It is evident, in fact, that on and about this hill there was a group of buildings, the principal one being perhaps a small fort; and I draw special attention to this site because it has scarcely yet been mentioned, and never (so far as I know) correctly.37

37 Supposing, that is, that the ancient track kept close to the river at this point, coinciding perhaps (as far as the 'bridge of Kopinosh') with the track in Tegos. But it seems more probable that (like the modern one) it made a short cut by passing to the left of the low rocky hill described in the text.

38 Bandeker, who (p. 280) mentions polygonal remains 'on a hill on the opposite bank,' probably refers, though inaccurately, to this site.
It is disappointing that we cannot with much probability recognize in it any of the places or objects mentioned by Pausanias. The remains are too extensive to have belonged to a monument merely (the statue of Aidos), too near Sparta to represent the tomb of Ladas or the Charakoum, too near Sparta and too far from Belmina to be the remains of Pellana. A few days' excavation would probably throw some light upon this matter; and it is one to which I would call the attention of the American School of Classical Studies at Athens, who have at present a monopoly of excavation in Lakonia.

Within the next three miles, or less, from the hill last mentioned, traces of antiquity are visible in several places, either in the path or close beside it; but there is not one of them to which a name can be given with any approach to certainty. I will do little more than enumerate them.

(1) Five minutes' walk from the hill,—at a point where there is only just room for the path between the rocks on the left and the river on the right,—there is a bit of Hellenic wall, partly built over with later work, at the very edge of the river and flush with the path. Its position, and the presence of grooves,—apparently wheel-ruts,—upon its upper surface, mark it as a piece of retaining-wall intended to protect an ancient road from the encroachments of the river.

(2) Three minutes' walk farther on, the path still closely following the river, one passes a large cave, mainly (if not entirely) natural, in the side of the rocky hill on the left of the path. The entrance to this cave, which is called by the natives Φαύνα ("Oven"), is formed by an arch in the aqueduct which once brought water from the Βιβάρι ("Vivari," fish-pond") to Sparta, and which for a long way skirts the hills by the side of the path. Near this cave Leake saw a "semitropical sepulchral niche," which he identified with the tomb of Ladus, but for this its distance from Sparta is insufficient. Subsequent writers suppose the niche, or the cave, to have contained the statue of Aidos; but it does not appear that they saw the niche at all, and Leake (who, I suspect, is the sole original authority for its existence) distinctly calls it "sepulchral," an expression which hardly suggests a shape suitable for containing a statue. And the connexion between a cave, apparently natural, and the statue is not very obvious. I have already tentatively suggested (p. 42) that the statue of Aidos was a good deal nearer Sparta.

(3) After about twelve minutes' walk one reaches a comparatively open spot, formed by the junction of a stream, running from west to east, with the Eurotas. The valley of this stream was spanned a little higher up by the aqueduct already noted, and the remains of the piers which supported

---

68 If it represents any of the objects noted by Pausanias, it must be this. The words σπηρί the οπίσθιον suit it well; but, if so, the statue of Aidos must have been at some point a good deal less than thirty stades from Sparta. In the first plate to Rom's Reise in Peloponnes, 'Grab des Ladus' is marked near this spot, but without any apparent reference to extent remains.
69 Temple in the Moras, III. 33.
70 Ed. 15.
71 Burdan, ii. 115. See also Baedeker, p. 230, and the Travels in Greece, p. 251.
the aqueduct are still visible. In the low rocks on the left side of the path are some curious cuttings, known to the peasants as the "Mavrosedal" ('Kitchen'), which were probably made for the reception of some statues, altars, or the like, rather than for a rock-tomb.

(4) Twenty minutes more bring one to the remains of a massive Hellenic wall, forming an angle with the river, by the side of a small stream. It is by no means impossible, though the identification is a purely conjectural one, that this wall may have formed part of the Charikoma ('Stockade') of Pausanias.

(5) About four minutes' walk beyond this, to left of, and slightly above, the path, the rock has been cut back, almost certainly in order to make way for the ancient road. It certainly had nothing to do with the Turkish road, since the latter is proved by traces of the paving, still extant, to have been at a lower level.

After this, one passes no object of archaeological interest till one reaches what has been commonly, and I think correctly, taken for the site of Pellano. It is about half an hour's walk from the spot last mentioned, at a point where the valley widens out, and the path to Megalopolis begins to diverge from the river. On the left bank of the river (i.e. the side opposite to the path) are the twin peaks, both surmounted by chapels, which project westward from the village of Vourlia. Between the foot of these hills and the river is a narrow strip of land, protected from the encroachments of the latter by a wall of large and very roughly squared stones laid without mortar. A photograph of this wall is given on Pl. III. The total length of the wall, which appears to be Hellenic, may be roughly estimated at 200 yards; but it is not everywhere preserved. At the back of the strip of land which it protects, and just at the foot of the hills, is a fine spring, whose waters are artificially retained so as to form a kind of reservoir now supplying a mill-stream. This spring is the one which goes by the name of the "Vivari," and whose water was conveyed to Sparta by the aqueduct already several times mentioned. The aqueduct is probably of Roman date, with later reparations. A little beyond this wall and spring, the river is joined on the same (left) bank by a tributary, which has a bed of considerable size, though (like most

---

62 They are very convenient for lighting fires in. Hence the name. I have myself seen traces of fires there. From the same a story has arisen that they were the cooking-places of the workmen employed in making the aqueduct from the "Vivari," to Sparta.

67 It may be roughly estimated as varying, in different places, from 50 to 200 yards in width.
68 See above, p. 43.
69 The following story, with variations, told by the rustics in this connexion.—A certain Greek princess (İkshewla), having two suitors, set them each a labour to perform. One was to bring water from the 'Vivari' to Sparta, the other to build the fortress (sword) of Mistriz; and the one who first accomplished his task was to win her hand. Unfortunately the two tasks were completed simultaneously; and the princess, unable either to satisfy the claims of both her suitors or to choose between them, took poison and died.
Greek streams) it is not unfrequently dry. One may, if one likes, ascend this stream-bed to near the village of Koniditsa. At the village itself, and in the plain below it (at the point marked 'K.V.' [= 'Kephalóvrysis'] in my map), are two large springs, one of which is believed by the country people to derive its waters from the katavóthra of the 'Táka' (v. p. 68) in the plain of Tripolitsa. There are thus in the neighbourhood of Koniditsa no less than three 'headsprings' (κεφαλαζώνεις)—viz. one in the village itself, another in the plain immediately below it, and a third (the 'Vivari') close to the river, and just behind the ancient river-wall. It is the existence of these springs and of the ancient wall,—combined with the distances from Sparta and Belmina, tallying well with those given by Pausanias,—which has led topographers generally to identify this region with Pellana. Since Koniditsa itself stands almost too far back from the direct route to Megalopolis, the second and third of the springs just mentioned probably correspond to those which Pausanias denotes as 'Pelland' and 'Lankeian' respectively.

Pellana was one of the towns of the Lakonian 'Tripolis'; and, since the Tripolis is defined as being 'Laconici agri, qui proximus finem Megalopolitarum est', it must have extended as far as the frontier. There is therefore little doubt that Belmina was another of its component towns. The name of the third town is a matter of some doubt. Both Aegys and Karystus have been suggested; and the latter view is by far the more probable of the two. For, though the term 'Aegytid' appears to have been sometimes used in a wide sense and to have included Belmina, it is in other passages distinguished from the Belminatid; and Paus. viii. 34, 5 shows clearly that 'Aegytid' in its narrower sense was the designation of the valley lying west of the northern end of the Taýgetus range,—the valley whose northern portions are overlooked by the charming little town of Leondári. It may therefore be taken for certain that Aegys itself was in that valley, not in the Eurotas valley south of Belmina. But whatever may have been the name of the third town of the Tripolis, Karystus is the most plausible guess,—topographers are probably right in placing it at the 'Kalyvia of Georqhtai',—a village which one reaches, on one's northward journey, rather more than an hour after passing the supposed site of Pellana. At the Kalyvia there is another fine 'Kephalóvrysis' (head-spring).

The evidences of antiquity here are as follows:

---

96 This is probably the same Πελλάντας γεγομένος of Pll. Ap. 1, 8.
97 Possibly both; but at any rate the theory attaches to the one in the plain. It is probably erroneous, for the water (especially that of the lower spring) is too clear and too cold to have run so short a distance underground. The ancient theory was that the water of the 'Táka' rose again at Frangóvrysis, but the comparative levels of the two plains makes this impossible.

100 The former by Leake, Travels in the Morea, iii. 18, sq. and Burnet ii. 314; the latter by Leake, Peloponnesian (which represents his later views), p. 320, and Curtius ii. 358.
101 Supposing that Πελλάντας in Paus. viii. 27, 4 = Πελλάντας,
102 Ξηγ. Pol. ii. 54.
(1) There is an acropolis,—a low, rocky hill, steep of approach on all sides except the east,—surrounded at the top, and to some extent lower down also, by remains of walls, for the most part of late date, but among which there are some traces of probable Hellenic work.27

(2) The acropolis just described lies immediately left of the path to Megalopolis. A little farther on,—still just left of the path,—are two circular caves, cut in the soft rock, with roofs of the beehive shape. The diameter of one of them, which I measured, is approximately 18 ft., and the height some 10 ft.; and the other must be of about the same size. These caves, which I suppose to be tombs, were courteously shown me by Mr. Γεωργόπουλος, the demarch of Georghitsi. They might possibly repay excavation.

(3) In the village I bought a large number of coins,—most of them unfortunately of late date, Roman and Byzantine; none which could serve as a clue to the ancient name of the place.

There is but little pottery about. The place was therefore probably a small one,—perhaps little more than a fort.

Half an hour beyond the "Kalývia of Georghitsi" there is another "Kephálavrysis," gushing freely from beneath some rocks on the left of the path. The water of this spring is retained, so as to form a pool some 12 ft. × 17 ft. but of irregular shape, by the remains of an ancient wall of large hewn stones.

Hence to the "khan of Longaniko," in the "Belmainatid" territory, which I have already discussed, is a journey of about an hour and a half (for a fast walker an hour and a quarter). The path takes one first through a region commonly known as the "Agrapithókambos" (wild-pear region), and then through one called "Gonmarókambos"; the latter being a beautiful pass where the sides of the hills both to left and right are richly clothed with arbutus (γαιάροσ).

II.—Megalopolis to Belmina.28

27 An old wall, completely filled up, has also been recently discovered at the east end of the acropolis, just below the crown of the hill. It is about six feet in diameter, and is cut chiefly in soft rock. The proprietor has excavated it to a depth of some 30 feet in hopes of finding treasure.

28 Paus. viii. 32. 3, 4.
not the one commonly used at the present day, viz Skortsimol,—has been generally recognized. It is proved by the fact of its crossing the Alpheius below the junction of that river with its tributary the Theius, which entered it on the left. For the 'Alpheius' and the 'Theius' are, respectively, (1) the river which runs from the gorge of Tsimbaron between Rhapsomati and Marmaria; and (2) the Koutoupharina, the only tributary of the other which deserves the name of a ποταμός. And the ancient route to Sparta, Pausanias tells us, left the Theius on the left.

Phalaosine was placed by Leake a little east of Boira, where Gell reported 'vestiges of a city'; but the French explorers could see no remains there except those of ruined 'Kalývia,' and from my own observations I think they were right. Besides, the spot indicated is rather too far from the crossing of the Alpheius, and rather too near to the Hermæum, to correspond well with Pausanias' account. For the Hermæum was doubtless, as topographers are agreed, about the division of the water-sheds of the Alpheius and Eurotas,—i.e. below Spæcïka.

The eastern route from Megalopolis to Sparta,—now commonly used by travellers from Sinanou,—is indicated in my map as a modern track. Since it meets the western route immediately below Mt. Kehlōs, it is obvious that I have by no means exaggerated the importance of the 'Hermæum,' which crowned that hill, as the key to both routes from Sparta to Megalopolis as well as to the route which I am about to describe from Sparta to Tegos.

C.—SPARTA TO TEKKA AND MANTINEIA WITH THE SPARTA-MEGALOPOLIS ROUTE AND THE ASIAN PLAIN.

The evidence for the existence of this route is contained in the following passages:

(1) Hérod. ix. 11. In 479 B.C., shortly before the battle of Plataea, the Spartan ephors, daily reproached by the Athenian envoys with delay in sending their contingent against the common enemy, suddenly despatch a force of 5,000 Spartiates in the night, and next day announce to the astonished envoys that the troops have already started and are by this time at Oresticum. We know from Pausanias that Oresticum was identical with 'Oresthasium,' the place between Megalopolis and Asca whose position I have already discussed. These identifications are necessitated (1) by the distance from Megalopolis, as given in the present passage, (2) by Paus. viii. 44, 4, and 54, 3, where we are told that the sources of the Alpheus in the Megalopolitan territory derive their water from the plain of Asca (Frangóvryo)—a theory which could not have arisen had the Alpheus been any river other than the one I have described. On the relation between the waters of the Asian plain and the Alpheus, see Appendix A.

(2) Travelers' notes, p. 257.

(3) Hérod. viii. 2.

(4) P. 29 sqq.
(2) Plut. Arist. 10 (same story).

(3) Thuc. v. 64. In 418 B.C., when the Athenians, Argives, and other allies are threatening Tegea, the Spartans send an army to assist that town via Orestheum (Ὀρέσθευον τῆς Μαντιναίας). This is the expedition which ended in the first battle of Mantinea.

(4) Xen. Hell. vi. 5. 10 sqq. After the battle of Leuktra (371 B.C.), the Mantineians proceed to rebuild their walls. The Spartans send an expedition against them (370 B.C.) under the command of Agesilus. He marches via Eutrea. Eutrea was one of the Maenalian towns; and that it was not in the Tegean plain, but either in the Megalopolitan or in the Ascan, may be regarded as certain; for Agesilus, on his arrival there, found that all the inhabitants capable of bearing arms had left in order to join the rest of the Arkadian forces, who were assembling at Asca preparatory to marching to the defence of the Mantineians. Had Eutrea been in the Tegean plain, it would have been futile for its inhabitants to meet the other troops of Asca.

(5) Xen. Hell. vii. 5. 9. In 362 B.C. Epaminondas, at Tegea, hears that Agesilus, with the whole fighting force of Sparta, is marching for Mantinea, and has got as far as Pella (Pellana). This Pellana was, as we have seen, in the Eurotas valley, on the direct route between Sparta and Megalopolis—not on the direct route between Sparta, Tegea and Mantinea. Indeed this explains Epaminondas' attempt to surprise Sparta in the absence of Agesilus. Had the latter advanced by the direct route to Tegea, Epaminondas could have had no hope of getting from Tegea to Sparta without meeting him on the way.

The evidence for a military route from Sparta to the Mantinea-Tegean plain, and thence to the Isthmus via the Sparta-Megalopolis track and the plain of Asca, is thus amply sufficient. But the question immediately arises: At what point did the route to Tegea and Mantinea diverge from that to Megalopolis? Did it enter the Megalopolitan plain at all, or did it leave the Megalopolitan route somewhere near Belmio, and, keeping south of the summit of Tsimbaro, make straight for the Ascan plain? I have already stated that, in my opinion, common sense points to the latter alternative as the true one.

From the Beliminatid (i.e. the region about the khan of Longaniko) there are no less than three possible routes by which one may reach the plain of Asca (Frangóvylyo) without entering that of Megalopolis. One may:

(1) diverge from the Megalopolitan route at the khan of Longaniko, pass immediately right of the (now ruined) chapel of Ag. Kiréne, and ascend the river-bed of the Eurotas, not leaving it till it brings one out at a point immediately below Maniáti and Koutribodókhi.
in the Asean plain: or (2) one may follow a mule track which passes left of Ag. Eiréne and, skirting the eastern side of Mt. Khelmós, strikes the path from Skortsínou to Pápari and Koutribóukhi near the village of Agriakóna: or (3) one may keep to the modern (eastern) Sparta-Megalopolis route as far as Skortsínou, and thence take the path to Pápari and Koutribóukhi, skirting the southern slopes of Tsimbaróu, with Khelmós on one's right, passing left of Agriakóna, and descending into the Asean plain by either of the two villages just named. These routes may be clearly distinguished with the help of Plate 1.

Now (1) is perhaps the most obvious route; for, though it necessarily climbs some 800 ft. to get to the plain of Ase, it involves no pass in the ordinary sense of the word, but a gradual ascent along the river-bed. On the other hand (2) the river-bed is in parts very rocky, and thus would at any time be extremely inconvenient for troops; (3) it winds very much; (c) it would be impassable after heavy rain; (d) for a very considerable distance it passes through a deep-sided gorge, some hundreds of feet in depth, which would offer every opportunity for treachery.

(2) is a much safer and on the whole a more convenient route than (1); but the first part of it, as far as Agriakóna, is a trying one, ascending and descending constantly, and would, in my opinion, be far inferior as a military route, to

(3) the one by Skortsínou. This route is fairly direct, and is nowhere very rocky or very steep, although it ascends (as near as I can judge) to a height of 1200 ft. or 1300 ft. above the level of the Eurotas valley at the khan of Lunganiko, and 400 ft. or 500 ft. above the plain of Ase. It bears clear traces of Turkish pavement in some parts.

On the whole I have little doubt that this was the ancient route which led from Sparta to Tegea via the Asean plain.

The natural descent into the plain is by the village of Koutribóukhi; but the inhabitants of Papari, when they come this way, bear left before reaching the former village, and skirt the lowest slopes of Tsimbaróu; and travellers to Oresthiasium in ancient times would doubtless do the same.

At, or close by, Oresthiasium one struck the Megalopolis-Tegea road.

The central part of the plain of Ase was, no doubt, of a very swampy nature; perhaps even it was partially submerged, as it is at the present day. It was necessary therefore to pass either left or right of the centre in order to cross the plain. We have seen that the left hand route — via Oresthiasium — was at least on two occasions selected, in spite of being slightly longer than the other. It was evidently the stopping-place;

---

47 The extreme danger of this as a military route is well illustrated by a story which I heard from a very old Turk at Lunganiko, İsmahim Pasha (he says), marching from Sparta to Tripolitzi, was led by a treacherous guide into this gorge, whereas he ought to have gone by Skortsínou. He immediately found himself shot at from the overhanging hills on both sides, and, after losing many of his men, eventually succeeded in effecting his escape via Kaltezi.

50 The highest point is in that part of the route which coincides with (2).

52 Probably the name 'Ase is itself refers to this.
probably it was a larger town, and provided better accommodation, than Entae, which I take to have been the corresponding place on the right hand route.

Entae is mentioned by Pausanias as one of the "Maenalian" towns whose inhabitants contributed towards the foundation of Megalopolis; and by Xenophon as the place where Agesilaus stopped on his march from Sparta to Mantinea in 370 B.C., and also on his return journey. I have already shown that it must have been either in the Megalopolitan or in the Ascan plain; and since we have seen that the route did not enter the Megalopolitan plain at all, it must have been in the Ascan. Leake conjectured that it occupied the site of the little village of Barbhita; and my own view is only a slight modification of his. The traces of antiquity at Barbhita are very slender; but Liouan, a neighbouring village, certainly represents an ancient site. (1) In the village itself are various remains of antiquity, among which I may note especially a fragment of a marble Doric capital which must be either very early, or very late, in date; and some blocks of Hellenic masonry built into the chapel of Ag. Barbhita. More interesting are a number of stele, of uncertain date, but, from the absence of mortar or brick in the construction, not improbably ancient Greek. The villagers have already discovered quite a number of them. Several have been cleared out, and are now in daily use. They are circular, and are built entirely of small blocks of limestone, roughly hewn into shape. The diameter of one which I measured was only 2 ft. 6 in. (2) In the fields immediately surrounding the village have been found a considerable quantity of ancient coins. Of those which I have seen by far the greater number are Roman or Byzantine; but others are Hellenic, chiefly belonging to the Arkadian and Achaean leagues. (3) On, and a little below, the summit of the hill of Ag. Konstantinos, which overhangs the village, are some slight remains of two fortified walls of unhewn stones; walls to which it is impossible to assign a date, but which are very similar in construction to those of Sellasia (v. Appendix B) and to some (the least good) of those of the "Athenaeum" (Khelmós). The remains on the summit are for the most part flush with the ground, and it was not until I had made a small excavation there that I could satisfy myself of their existence, but the hill, from its

---

88 viii. 27. 3. 89 Hell. vi. 5. 12. 20. 21. 90 Travels in the Morea, ill. 31-38. 91 The "Palae-khora" mentioned by Leake (admittedly on hearsay evidence) is almost certainly the site of a deserted village, not (as he supposed) of an ancient town. It is probably identical with the "Vill. ex. " (= Village ruin) of the French map, where I have seen traces of rude walls, but nothing which suggests antiquity. On the other hand, by a small spring on the way from Barbhita to Exupivysta, about ten minutes' walk from the former, and just before one reaches the chapel of Ag. Giannas, there exists a piece of wall, of rather carefully fitted polygonal work, nearly fifty feet in length, preserved in parts to a height of over four feet. This wall, which I excavated (for scarcely a trace of it was visible above ground), appears to be almost isolated, and I was quite unable to discover to what sort of building it belonged. 92 It has the bulging schinus which generally characterizes an archaic order; but the profile is in other respects so peculiar as to suggest that it is a slovenly work of late date. It has been hollowed into a rude trough, and lies just outside the door of the priest's house.
Some ancient routes in the Peloponnese.

height and its position, is such a commanding one,—a key to the route from Lakonia into the Acan plain via the river-bed of the Eurotas,—that it would have been strange if it had not been fortified. It appears nevertheless, from the absence of pottery about it, to have been but little used, probably because the river-bed was generally avoided by Spartan troops for the reasons I have already mentioned; but its existence was an important, and even necessary, safeguard. A sketch plan of the remains in their present state is given below in Fig. 5.

The fortifications of Eutaea are mentioned by Xenophon in his account of Agesilus' expedition. That general, when he arrived at Eutaea, found them fallen into disrepair, and took the trouble of restoring them.

If I am right in my identification of Eutaea, the route thence to Tegea would be either via Barbitsa, the khan of Talagari, and the road from Megalopolis, or via Mámari and Zéli, by a path which crosses Mt. Krivari south of the summit. The latter is the more direct, but the former is rather
the easier route. For an army going (like that of Agesilus) to Mounticon, the Megalopolis road would be both easier and more direct than the other.

The existence of this route from Sparta to Tegea, via the Asean plain, or rather the fact that it appears to have been extensively used for military purposes in ancient times, may perhaps seem strange. And the fact that the new railway route, at present unfinished, from Tripolis to Sparta will not only pass Frangóvryso, but will go right through into the plain of Megalopolis, and there branch south for Sparta, will hardly allay this feeling; for the conditions of railway construction and the necessity of serving as many places as possible by a single route, are sufficient to account for the fact.

The true explanation consists no doubt partly in the fact that the most direct route,—the one which is now in common use,—though nowhere an abnormally steep one, involves a great number of ascents and descents, and would therefore, before the high road was made, have been very trying for troops on the march; but largely also in the want of good water upon it,—a want so marked that, as we shall see very shortly, even the alternative (and commoner) Spartan military route diverged considerably from the modern one in order to supply it by following a river-bed. On the route I have just described there are, it will be remembered, a number of magnificent springs; viz. (1) the "Vivari," and the spring between it and Koniditsa, (2) the "Kephálovrysis" at the Kalyvia of Georghiotsi (Karystus), (3) the "Kephálovrysis" in the path a little farther on, (4) the "springs of the Alpheius and Eurotas" at Frangóvryso (Asen); to say nothing of abundant river water (the Eurotas), the wells at Líanoú (Eutaca), and doubtless also wells at Orestasium.

D.—Tegea to Sparta, Direct Route.

We have no complete, or even nearly complete, account of this route in ancient authors. Pausanias mentions several objects which one passed on it (altars and temples), all within about two miles of Tegea, and none of them identifiable. Then he proceeds:

The boundary of the Lacedaemonian and Tegean territories is the river Alpheius. This river has its origin at Phylike; but not far from the source another stream flows down into it from a number of small springs, whence the place has come to be called Symbola ("the Junction"). Now the Alpheus appears to be distinguished from all other rivers by this peculiarity,—it has a way of disappearing frequently underground and then reappearing. For, starting from Phylike and the place called Symbola, it buries itself in the Tegean plain; and, after rising again at Asen and mixing its stream with the Eurotas, it descends a second time into the ground, to re-emerge at a place which the Arkadians call Pegos ("The Springs").

This passage certainly implies that the Alpheus either touched or crossed the route from Tegea to Sparta; but it does not necessarily imply
that Phylake, where the river had its origin, was on that route. We must not therefore identify it too positively, as some writers have done, with Kryavrysi,—the site of a khan (now in ruins) and a spring on the route from Tripolitsa which was till quite recently in common use. The spring at Kryavrysi contributes but little to the river; and it would be much more natural (I think) to describe the latter as having its origin in the hills beyond Vourvoura, whence the main stream flows, than at this point.

This however is a matter of no very great importance, since, as I have already observed, Pausanias nowhere says that Phylake was upon the ancient route; he only says that the river was upon the ancient route, and rose in Phylake. Now since the ancient route either touched or crossed the river, a glance at the map will show that it must have gone along the river gorge, not by Kaparelí and Alipokhóri like the modern carriage road; otherwise it would, like the carriage road, have missed the river altogether. This is precisely what we should expect, since the gorge offers by far the most direct route, whether one comes from Tripolitsa or from the site of Tegae. It was indeed in constant use till the new road was made, and is still frequently adopted by travellers on foot.

I have so far assumed that by the name Alpheius Pausanias denotes the modern Sarandapotamós, in spite of a very grave difficulty which arises from the fact that the Sarandapotamós, on entering the Tegean plain, bends eastward to join the river from Dhooliamá (the ancient river Garates), and flows with it to the Katavóthra of Vérzova, whereas the river referred to by Pausanias, and identified by him with the Alpheius, was certainly supposed by him to flow westward to the Katavóthra of the Taka. The necessity for this assumption has, however, been generally recognized; for the only alternative to it is the identification of the Alpheius with some tiny streams near Kaparelí, too insignificant to be noticed at such length by Pausanias, and in a position which the ancient road (unlike the modern carriage road) would be most unlikely to pass.

The difficulty attending its identification with the Sarandapotamós has been met by Leake and his successors by the hypothesis of an alteration, since Pausanias' day, in the course of that river after entering the plain. It is

104 When I was there (June, 1893), literally nothing; the small driblet which flowed from it being diverted so as to water a bed of onions or garlic close by. But there was at that time not so much as a drop of water either in the main stream-bed or in the one which here joins it from the direction of the khan of Lakoutros.

It is a pity that the spring of Kryavrysi, which used to be treasured by travellers as supplying the last drink of fresh water on the way from Tripolitsa to Sparta till one reached the khan of Vourliá, is now utterly neglected and its drinking-basin destroyed. The khan of Kryavrysi, too, is deserted. The disappearance of this (like that of many another old institution in Greece) is due to the construction of the carriage-road. The latter skirts the hills a great deal higher up, missing the old spring and khan.

105 With this difference, that the track from Tripolitsa passes west of Kamari and does not enter the gorge till it reaches a point just below Mavríki; while, starting from Pialí or any other of the villages on the site of Tegae, one naturally goes by the gorge all the way.

106 Peloponnesica, pp. 114, sq. and map. The theory does not appear in Travels in the Morea, which (unlike Peloponnesica) was based wholly on personal observation.
suggested that this alteration may have resulted from a temporary obstruction of the river's former course after heavy rain, or have been made artificially for the purpose of better drainage. I have discussed this theory in Appendix A, to which readers are referred. The conclusion arrived at is that neither the course traced in Leake's map nor that suggested by Bérard is compatible with the level of the ground in different parts of the plain; that the only alternative course remaining,—viz. through the town of Tegae itself,—is historically inadmissible; and that therefore I cannot bring myself to believe in the supposed change of course at all, and am rather inclined to attribute the whole difficulty to a blunder on the part of Pausanias.

One more question arises in connexion with this river. The Alpheius, says Pausanias, was the boundary between the territories of Lakonia and Tegae. Which part of the Alpheius served as boundary? Certainly not the part along which the route to Sparta lies; for this runs north and south, not east and west, and it is incredible that the whole of the territory either east or west of it was Lakonian. For my own part I agree with Leake in supposing the boundary to have been the eastern branch of the Sarandepotamos, which flows below Vourvoura,—in fact the principal stream of the river above Kryavrysi. But it does not seem to have occurred to Leake that this is an excellent reason for placing Phylake (where the Alpheius was said to rise) not at Kryavrysi but beyond Vourvoura.

If I am right in supposing the river of Vourvoura to represent that portion of the Alpheius which formed the boundary between the Lakonian and Tegean territories, the passage of Pausanias which we are now considering, accords admirably with another statement of the same author, to the effect that the 'Hermae' marking the junction of the Lakonian, Tegean and Argive territories were on the ridge of Parnon (ἐ’ αὐτοῦ) and in the pass from the Thyreatid plain, i.e., between Ag. Pétros and Arákhova.

Pausanias' account of the way from Tegae to Sparta ends at the frontier; nor is there any corresponding account of the other portion of it in his book on Lakonia. But in determining its direction we have only two routes to choose between, viz. (1) via the Klisofíra defile; the route adopted by the modern mule track and the new road, (2) via Arákhova and the bed of the river which takes its name from that village. Our choice between these two routes will depend largely on the position which we assign to Karyae.

Karyae, the site of a famous sanctuary of Artemis Karyatis, and the seat of an annual festival in her honour, was situated somewhere upon the...
way from Tegea to Sparta. It was at, or near, the frontier. Further, it was to the right of the way from Argos to Sparta, the turning which led to it being the third after one passed the Hermæ, or boundary marks, at the top of the pass of Parnon. Now we have already seen that the frontier in question was the part of the Sarandapotamos above Kryavrysi—the eastern branch, which I have called for greater precision the river of Vourvoira. And it is quite clear that the ancient route from Argos to Sparta was the track which crosses Mt. Parnon between Ag. Pétros and Aríkhova and enters the deep bed of the river of Aríkhova at or near the latter village. Hence the area within which our choice of a site for Karyae must necessarily be confined is by no means a large one. Karyae must in fact be looked for somewhere between Kryavrysi and Aríkhova and not far from the river of Vourvoira.

In the French map a ‘Palseo-kastro’ (‘P.K.’) is marked at a point.
about two miles due west of Arákhova; and this Palaeó-kastro has been confidently asserted by Ross,112 followed by Curtius113 and Bursian,114 to represent the ancient Karyae. But the two former admittedly never visited the supposed site; and the last-named does not profess to have visited it either. For my own part, repeated observation and inquiry have convinced me that no ancient remains exist, or have recently existed, anywhere near the point in question. The precise spot indicated is for various reasons difficult to find;115 but, if (as I think) I have succeeded in identifying it correctly, it is now occupied by a group of cottages (‘Kalývia ’), the disused threshing-floors of which, half buried in the ground, may easily have been mistaken by the French surveyors for traces of antiquity. I have accordingly substituted the abbreviation ‘Kal.’ (=‘Kalývia’) for the abbreviation ‘P.K.’ (‘=Palaeó-kastro’) in my revision of the French map. But further, even were this an ancient site, we could hardly be justified in identifying it with Karyae. It is too far from the frontier, i.e. from the river of Vourvoira. Had this been Karyae, it would have been impossible for Livy to describe an army, while it remained in Tegean territory, as being ‘at Karyae.’ A site much nearer the river must therefore be sought.

Now the only ancient site which I have been able to discover within the necessary limits is a site which answers well to all requirements. It is known to the villagers of Arákhova as the ‘Αράκηψις (‘Ascension’). It consists of a small rocky hill on the very edge of the river, about one mile south-eastward from Kryávrysi. It is the last projection westward of Mt. Tsoúka, being separated from it by a lower neck of hill on which stands, near a holly-oak (πωράς ), a ruined chapel which was doubtless dedicated to the Ascension.

Among other hewn blocks belonging to this chapel is one with the mark of a 1-clamp, obviously ancient, and on the southern slope of the hill are distinct ruins of Hellenic walls. These last have, the peasants tell me, been much more abundant, but the stones have been largely used for building wine-presses etc. in the surrounding fields. On the summit of the hill are remains of a large enclosure, which may be roughly estimated as sixty feet square—built of stones, mortar, and a little tile—to which it is impossible to assign even an approximate date; but some fragments of the pottery which covers both top and sides of the hill have the black glaze which is characteristic of Greek ware.

There is thus no doubt whatever that we have here an ancient site, and its position is precisely that in which we have been led on d'priori grounds to look for Karyae.116 But whether this identification be correct, or that of

---

112 Reisem in Peloponnes, p. 175.
113 ii. 281.
114 ii. 118.
115 Partly owing to the new road taking a different line from the old one. The ‘P.K.’ must not be confused with the ‘πύργος ’ (πύργο), a conspicuous mediaeval ruin much nearer Arákhova.
116 This site appears to be unknown to the topographical handbooks from Leake's time downwards; but it, if I mistake not, the same which Lieut. Gen. Jochums independently identified with Karyae (Journ. Roy. Geog. Soc. 1857, p. 49 and map). My attention was first called
Ross, which we have just rejected, or (lastly) that of Boblaye (Recherches, p. 72), who places Karyae at the chapel of the Panagia, just north of the village of Arákhova,—it is clear that the route to Sparta which passed by Karyae did not coincide with the modern road, but diverged from it to the left; and doing so, it cannot have gone vid. the Klisoúra defile at all, but must have taken the alternative route by Arákhova.

This view is fully borne out by certain passages of ancient authors. Polybius, 117 describing a march of Philopoemen into Lakonia, starting from Tegea, uses the following words:—

‘ό δὲ Φιλοποίμνιος...νυκτιπορήσας ἐνεργῶς περὶ τὴν ἐωθίνην ἐνεκάθεσα τὴν στρατιάν ἐν τοῖς περὶ τὸν Σκοτίταν προσαγορευόμενος τόποις, δὲ ἐστι μεταξὺ τῆς Τεγέας καὶ τῆς Λακεδαίμονος.’

This ‘Skotitas,’ which Polybius says was μεταξὺ τῆς Τεγέας καὶ τῆς Λακεδαίμονος, is described by Pausanias 118 as a large oak wood which one entered, on the road from Argos to Sparta, immediately after passing the Hermæ which marked the boundary between the Tegean, Argive, and Spartan territories. Since these Hermæ were situated on the ridge of Parnon, at the top of the pass, the ‘Skotitas’ wood must necessarily have occupied the western slopes of Parnon, between the top of the pass and Arákhova; it cannot have been anywhere near the modern Tripolitsa-Sparta road.

Again, in Xenophon’s account of the invasion of Lakonia by a combined force of Arkadians, Thebans, and others in 369 B.C., the allies, who had met at Karyae, are said to ‘descend’ (κατέβαινον) to Sellasia; 119 an expression which is far more appropriate if the route was by the river-bed than if, like the modern road, it involved such repeated ascents as to make it hard to say without accurate observation whether those or the descents on the whole predominated.

It may seem surprising that the route by Arákhova was so commonly used in ancient times in preference to the shorter route by the Klisoúra defile. But (1) I do not deny that the direct route was also in common use; I only say that we have abundant evidence for the use of the Arákhova route in connexion with military expeditions; and, so far as I know, we have no direct evidence for the use of the other; (2) the Klisoúra route would be in several ways a very trying one for troops. It is in many places narrow and rocky; it involves continual ascents and descents; and, worst of all, there is no good water (whether from spring, well, or stream) anywhere between Kryavrysi and the khan of Krevatás. The other route, though considerably longer, has the advantage of an almost imperceptible slope (that of the river-bed) all the way from Arákhova to the khan of Krevatás, with water all the way. The only discomfort one suffers on

117 Jachmann’s paper by Mr. J. G. Frazer. It is a valuable contribution to the topography of this region.
118 iv. 37.
119 iii. 10. 6.
119 Hell. vi. 5. 27.
this route is the continual crossing and recrossing of the stream, but this could be no very serious trial to the hardened feet of the Spartan hoplite.

At or near Arákhova the route from Tegea to Sparta joined that from Argos; and therefore from this point onward we may take Pausanias' account of the latter as applying equally to the former. He mentions but two places upon the way,—Sellasia (in ruins) and Thornax (with a statue of the Pythian Apollo); and, in his usual careless way, he gives no indication either of the distance or of the position of either. He does not even mention the river along which the route, at least as far as Sellasia, lay; and we might suspect the correctness of the identification of this route but for Poly. ii. 65, where it is distinctly stated to have lain 'παρὰ τοῦ Ὀλυμπηντος ποταμοῦ'.

There can be little doubt that the common identification of Sellasia with the hill of Ag. Konstantinos, which overhangs the khan of Vourliá, is the right one. For the position of this hill is too commanding, and the remains upon it are too extensive, to have been passed over in silence by Pausanias; and the remains cannot be those of Thornax, which we know from Xenophon to have been down in the plain.

The only alternative identification of the remains on Ag. Konstantinos worth mentioning is that of Leake, who supposed them to represent Mt. Barbosthenes, on the ground that Sellasia was not (in his opinion) on the direct road from Tegea to Sparta, while Barbosthenes was. But this notion of Leake's was based on the fact that Livy, in his account of Philopoemen's expedition against Nabis in 192 B.C., mentions Karyae and Barbosthenes but not Sellasia; and he overlooks the fact that, in describing T. Quinctius' march against Nabis three years earlier, he mentions Karyae and Sellasia but not Barbosthenes. We shall see shortly that, in all probability, Philopoemen was not on the direct route to Sparta when he passed Barbosthenes. Further, Barbosthenes was ten Roman miles from Sparta; and Ag. Konstantinos, which Leake proposes to identify with it, is not nearly so far.

The remains of Sellasia are those of a large fort or small fortified town. A plan of the walls, so far as they can now be traced, is given in Fig. 7 (p. 73). The immense importance of the position will be seen at a glance. The hill commands both the joint route to Tegea and Argos via Arákhova, and the route to Tegea via the Kliastrá pass, for these two separate at or near the now ruined khan of Krevatás (c. Pl. I.). The fort of Sellasia in fact plays in connexion with these routes a part very similar to that played by the 'Athenaenum' (Bolmina) in connexion with the two routes to Megapoli and the route to Tegea via the Asen plain.

123 [ii. 10. 6–11. 1. For proof that this route, like that from Tegea, went via Arákhova, see note 111.
124 Hell. vi. 5. 27.
125 The remains are of much too permanent a character to be those of one of the camps in which Kleomenes entrenched himself before the battle of Sellasia, as suggested by Robbys (p. 74); nor is it possible to adapt such a theory to Polybius' account of the battle.

SOME ANCIENT ROUTES IN THE PELOPONNESE. 59

On a small hill, or rather hilly, a little north of Ag. Konstantinos, on the Eastern side of the path, are some slight remains of a fortification wall which appears to be Hellenic. Probably it was an outpost of Sellasia. The hill and remains (marked on Pl. I.) go by the name of 'Palaeogoula.'

Since the time of the 'Expédition de Morée' the battle of Sellasia has been placed by almost all topographers at the junction of the Klissoura and Arákhova routes, where the river valley widens out a little,—i.e. near the remains of the once famous 'khan of Krevatás.' Probably it is impossible to improve upon this theory, though the absence of anything more than a small hill stream to correspond to the 'Γοργύλος ποταμός' of Polybius, and the unsuitableness, both in nature and position, of the hills which it is proposed to identify with his 'λόφοι' (Olympus and Eva), are very grave objections. If a junction of two rivers must be insisted on, then there is only one possible site for the battle,—viz. the meeting-point of the rivers of Arákhova and Vrístena,—and the latter must be identified with the Oenus, the former (along which Antigonus' route had so far led) with the Gorgylos. But this site is about twice as far from Sellasia as the other, and the difficulty about the 'λόφοι' remains. Of the two positions probably the one generally received must be preferred, since it lies in full view of Sellasia; but I am convinced that Polybius' description was not based on personal knowledge of the site.

It may be regarded as certain that the ancient track, like the modern, diverged from the river a little beyond the khan of Krevatás, passed

123 Polybi. ii. 65 sqq.; Plut. Cleom. 27, 28; ib. Phoc. 6; Paus. viii. 42, 5, 6.

124 The only exception, so far as I know, is Leake; who, though he modified his original views after the appearance of the French publication, never fell in with the French identification of the site (v. note 137). For what may be considered the orthodox explanation of the battle, based on the French identification, v. Ross, Notitia in Peloponnese, pp. 183 sqq., and May.

125 The so-called 'Eva' is a high hill, standing far away from the river-bed, which is supposed to have been the scene of the battle; and the so-called 'Olympus' is not an individual hill, but part of the skirts of the mountains, which overhangs the river from its junction with the river of Vrístena downwards.

126 Leake at different times proposed two different sites for the battle, both of which had the advantage of being at the junction of genuine rivers, but both of which topographers have rightly discarded. His first theory ('Travels in the Morea,' ii. 528 sqq.), which placed the battle a little above the monastery of Ag. Súranda (the Forty Saints), at the junction of the rivers of Vrístena and Agríaíos, was based on a mistaken view as to the route by which Antigonus had marched from Argoles—a mistake which has been sufficiently discussed above (note 111). His second theory ('Peloponnesiana,' 341–349) placed it a little below the monastery—where the river of Arákhova joins the combined streams from Agríaíos and Vrístena—and resulted from an attempt to reconcile his former view (that Sellasia itself was near the monastery) with the undisputed fact that the route of Antigonus was not (as he had formerly supposed) via Kastrióntha, but via Arákhova. But this revision of his theory was made many years after he had visited the spot, and is quite untrustworthy. For (1) the route to Sparta must certainly have passed, like the modern track as well as the carriage road, west of the hill of Ag. Konstantinos, and not through the difficult and dangerous gorge along which the river flows; (2) even were it otherwise, it would have been madness on the part of Klemens to have left Ag. Konstantinos undefended, and to have opposed Antigonus at the exit, instead of the entrance, of the gorge; (3) the proposed site, though not so completely shut in as the one which Leake had formerly selected, is too confined to admit of any battle in which a large number of troops, including cavalry, were employed.
west of the hill of Ag. Konstantinos, and close to the khan of Vourlia, and so descended into the plain. For the river-bed, after this point, gradually narrows till it becomes a deep and difficult ravine. The precise spot at which the ancient route descended into the plain, and the position of the Temenos of Apollo at Thornax, must remain doubtful for want of evidences. In the absence of information to the contrary, I have marked the route in my map as coinciding with the mule track, which was in common use until it was superseded quite recently by the easier, but more circuitous, carriage road.

**E.—TEGEA TO SPARTA: SPECIAL MILITARY EXPEDITIONS.**

Such I conceive to have been the usual military route from Tegae to Sparta. I have already mentioned a probable variation of it, via the Klisofra defile—a route coinciding most of the way with the modern track, and a great part of the way with the carriage road. I have also discussed an entirely different route by the Asean plain, Belmina, and the Eurotas valley. There are, however, one or two special expeditions which still require some words of comment.

I. The invasion of Lakonia by the Arkadians, Thebans (under Epaminondas), Argives, Eleians, and others in 369 B.C.

Accounts of this invasion are given by both Xenophon [128] and Diodorus [129]. From both these authors it appears that the allies met at or near Mantinea [130] whence they separated so as to enter Lakonian territory at different points. So far as the routes taken by the Thebans and Arkadians are concerned, the two historians are at one. The Arkadians, according to Xenophon, enter by Oeum (Oiōn) in the Skiritid territory, while the Thebans enter by Karyae. The Arkadians, after a desperate fight at Oeum, and the massacre of its defender Ischolus and his followers, join the Thebans at Karyae. From Karyae the combined forces descend (κατεβαίνουσα) together first to Sellasia, which they sack and burn, and thence to the temenos of Apollo in the Lakonian plain. Diodorus does not mention Oeum by name, but he tells us that the Thebans marched [straight] [131] to Sellasia, while the Arkadians made for the same place via the Skiritid territory, slaughtering Ischolus (= Ischolus) and his followers on the way.

---

[128] Hell. vi. 5: 22 sqq.
[129] xii. 63 sqq.
[130] Xenophon distinctly says Mantinea; while from Diodorus it appears that the meeting took place just after a defeat of the Spartans by the Arkadians at Orchomenus, about five hours’ journey north of that town.
[131] ἐκ τῆς τετράδου ἐπαναστάτικης ὧν τῆς Σκίριτος ἀνάπλωρως ἐκκύκλω (Diod. xii. 64). In the Tenhout edition of 1887 the word ἐκκύκλω is bracketed, and in that of 1893 omitted altogether, as being unintelligible—in opposition to all the MSS. Is it possible that it meant ‘straight,’ the commonest meaning of the word (as well as of the adverb ταρα), and in modern Greek? Even, however, if it be omitted, the fact that this route to Sellasia, alone of the four, is left wholly undescrilled, seems to imply that it was the ordinary one.
The Temenos of Apollo is doubtless that at Thornax, the only place noticed by Pausanias between Sellasia and Sparta; and the Theban route is the one which I have already described, by Karyae, and the modern Arákhova, and the river-bed. A comparison of the two accounts provides a confirmation of what I have, on other grounds, shown to be the case, viz. that the route by Karyae was the direct, or at any rate the obvious, route from Tegea to Sellasia.

But the Arkadian route requires more comment; for Oeum does not appear to me to have yet been correctly identified.

Topographers are no doubt right in giving the name Skiritis to the triangular block of mountains bounded (approximately) by the modern Tripolitsa-Sparta road on the east, and the Eurotas valley on the west—the apex of the triangle (as Leake puts it) being near Sparta, and the base towards the valleys of Asea and Tegea. The highest point in this region is the summit of the hill now surmounted by a chapel of Ag. Khristóphoros, about two miles north of the village of Kolínaes; a hill which reaches a height of more than 3,500 feet above the sea, and, with the clump of young oak trees which has been planted by the chapel, forms one of the most conspicuous landmarks in central Peloponnesse. This summit was regarded by Leake as the probable site of Oeum (lum). The fact that he mentions no traces of antiquity there, and that I myself was unable to discover any such traces, would not of itself serve to disprove the correctness of Leake’s view, provided that the site were in other respects an appropriate one. But this is very far from being the case. Kolínaes stands quite aloof from all routes connecting any of the Arkadian plains with Sparta; and for an invading force, wherever it started from, to attack Kolínaes would have been a most gratuitous undertaking. And the notion that the Arkadian force on this occasion went by Kolínaes will appear still more improbable if we remember that it was making not for Sparta directly, nor even for Sellasia directly, but for Karyae; a place which, if not actually (as I suppose) at the Ἀρκάλες, must have been somewhere between the Ἀρκάλες and Arákhova. The nearest glance at the map will show that, absurd as it would have been for any force advancing from Arkadia into Lakonia to go by Kolínaes, it would have been still more absurd for a force which had already reached that point to return northwards as far as the Ἀρκάλες. And the map does not show how steep and rugged are the ascents and descents which such a return would have involved.

Rejecting Kolínaes on these grounds, and taking all the topographical

126 III. 10. 3.
127 Travels in the Morea, III. 28.
129 I. 39. 29.
128 In the French map a ‘P. K.’ (Palseó-
  καστρον, παλαιόκαστρον) has been marked, not explicitly on Ag. Khristóphoros, but on another part of the same range of hills, at a point bearing approximately south-east from Ag.

Khrístóphoros and north-east from Kolínaes.

If I am right in identifying the hill thus indicated with that now called Ag. Elias, the evidences of antiquity there are (at present at any rate) quite inadequate. Nor is there any other hill in the neighbourhood which the villagers of Kolínaes can point to as bearing any traces of an ancient site.
data into consideration, I some time ago fixed on Kerasiú as a probable site for Oeum; and I was therefore more pleased than surprised when, on inquiry at Arvanito-Kerasiú, I was informed of some remains on the crown of a hill not three minutes' walk to the north of that village. These remains, slender as they are, are of undoubted antiquity; and I have marked them in my map (Pl. I.) conjecturally as Oeum. This makes the accounts of the expedition we are considering perfectly clear. The invaders, we are told, owing to their great numbers and the difficulty of the passes into Lakonia, determined to invade it from different points. The Thebans took the direct route (along the bed of the Sarandapotamos) and stopped at Karyae; the Arkadianus also made for Karyae, but via Oeum. If this latter occupied the site which I have indicated, the Arkadianus must have approached it either by a route coinciding very nearly with the modern carriage road, or (as I think more likely) via Mánari, a village situated in a little recess or inlet of the Ascán plain. The way from Mánari to Kerasiú is one which presents no difficulty; the Ascán plain, intervening as it does between the two principal plains of Arkadia (the Megalopolitan and the Mantineio-Tegean) was a natural meeting-place for the different Arkadian contingents; and Kerasiú (Oeum) lies almost in the direct line between Mánari and the 'Arákhýa (Karyae).

For the routes taken by the two remaining portions of the invading army—the Argive and Eleian contingents—we have the evidence of Diodorus alone, since Xenophon accounts for only two contingents, the Theban and the Arkadian. The Argives, according to Diodorus, entered Lakonia by the 'δρος τῆς Τεγεάτικας χώρας,' a phrase which I take, with previous writers, to denote the ordinary route from Argolis to Sparta by the Thyreatid plain. This route, as we have already seen, passed the 'Hermas' which marked the common boundary of the Argive, Tegean, and Lakonian territories, and struck the river-bed at Arákhýa. From Arákhýa onward the route of the Argives must have coincided with that of the Thebans and Arkadians advancing from Karyae.

A cursory reading of the text of Xenophon would indeed lead one to suppose that the starting-point of all the contingents was the Mantineian plain, though this is not expressly stated. But the topography of the country does not allow of four different routes into Lakonia all starting from Mantineia; nor is it surprising if most of the allies, though they first met and decided on the expedition at or near Mantineia, found it convenient to return first to their own homes for provisions and reinforcements; especially as this was a plan which fell in well with the policy they had decided upon, namely that of marching by different routes. We have already seen reason to suppose

---

146 'Arvanito-Kerasiú' and 'Vlákhko-Kerasiú' = 'Albania' and 'Wallachian Kerasia' respectively. Both villages now contain a mixed population.

147 They consist of (1) remains of a wall of lava masonry, slightly polygonal in character, forming part of a large, partially rock-cut, building; (2) other rock-cuttings; (3) a profusion of pottery, some of it with black gloss.

148 On the occasion of the expedition of Agisilas against Mantineia, only a year before, we hear of the various Arkadian contingents meeting at Ama (Xen. HELL. VI. 5. 11).
that the Arkadians approached not from the Mantineian plain but from the Asean—the central plain of Arkadia,—and now we see reason to suppose that the Argives approached not from Mantinea but by the direct route from Argolis. Applying the same principle to the Eleians, we shall agree with Leake \textsuperscript{143} that their route, only vaguely indicated by Diodorus as ‘κατ’ ἄλως τόπους πεπτυμένους,’ was probably the ordinary one from Elis by the Megalopolitan plain, Belmina, and the Eurotas valley. This is indeed the only way into Lakonia to which the epithet πεπτυμένος is at all appropriate. But the supposition that the Eleians adopted it is not without its difficulties. Leake says the route in question would present little difficulty when not defended at Belmina and Pellana.\textsuperscript{1} Belmina may possibly at this period have been in Arkadian hands;\textsuperscript{144} but Pellana was Spartan, and we have the direct evidence of Xenophon\textsuperscript{145} that there was a Spartan garrison at Leuktrum, a place which it is difficult to locate far from Leontari, near which passed the route from Megalopolis (and Elis) to Sparta. The march of the Eleians, then, in spite of the comparative openness of the route they adopted, is not likely to have been unopposed.

The Eleians, Diodorus tells us, made their way, like all the other contingents, to Sellasia. If we are right in supposing them to have entered Lakonia by the Megalopolis-Sparta track, they probably diverged from that track a little beyond the Kalavria of Georgitsi, and ascending the hills to the right of the village of Koniditsa, passed through or quite close to that of Vourlia. This is the route which I myself found the most convenient to adopt in passing from Skorision (near Belmina) to the khan of Vourlia (near Sellasia).

II. The ambush laid by Philopoemen in 200 B.C. (Polybius, xvi. 37).

This operation will readily be understood from what we already know of the topography. The chosen troops sent forward by Philopoemen take up their quarters near Sellasia, and threaten to ravage Lakonia. The Spartan mercenaries in Pellene (Pellana) attack them, ascending the hills in the manner just described; and are then led by a pretended flight past Sellasia, up the bed of the Oenius and into the ambush laid for them in the forest of Skotitas. This forest (it will be remembered)\textsuperscript{146} was situated on the road from the Thyreatid plain to Sparta, and extended at least from the top of the pass to Arakhova. How far southward it extended, cannot be determined; perhaps as far as, or even a good deal farther than, the river of Vrístena. Livy describes the region where the engagement of 192 B.C. was fought (\textsuperscript{v.} below) as being thickly wooded; and it is not impossible that these woods may have formed part of the forest of Skotitas.

\textsuperscript{144} Hell. vi. 5. 34.
\textsuperscript{145} Paus. ii. 38. 7.
\textsuperscript{146} The evidence on this point is not quite clear. See Paus. viii. 27. 4 and 35. 4.
III. The expedition of T. Quintius against Nabis in 195 B.C. (Livy, xxxiv. 26 sqq.).

The route adopted was the ordinary route, via Karyae and Sellasia. The only difficulty presented by Livy’s account lies in the words ‘inde (i.e. from Sellasia) cum audisset ascensum difficilis et artae vine esse’ (chap. 28). We have seen that Sellasia itself—or at least its acropolis,—was on the top of a high hill. Unless ‘ascensum’ is an error for ‘descensum,’ we must take the word ‘Sellasia’ immediately preceding as denoting the district, not the actual town; and this interpretation has some slight confirmation in the succeeding words, ‘quo in loco Antigonus...cum Cleomene...dimicasse dicebat,’ i.e. the river-bed, whence one climbs considerably before one begins to descend to the Eurotas valley.

IV. The march of Philopoemen against Nabis in 192 B.C. (Livy, xxxv. 27 sqq.).

It is impossible to omit all reference to this expedition; but the topographical data are scanty, and my own acquaintance with the route probably adopted is so imperfect that I must confine myself to a few words of comment on the original authorities and on the views of previous travellers.

The point of departure was Tegae, and the route was, as usual, by Karyae, where the first night was spent. After Karyae, however, Philopoemen appears to have diverged from the ordinary route; for the stopping-place at the end of the second day was not Sellasia (which is not mentioned at all) but Mt. Barbosthenes, a name entirely unknown from other sources. A divergence from the ordinary route seems also to be implied in the fact that Nabis (Livy tells us), when he heard of Philopoemen’s movements, had no doubt that he was making for Pyrrhi Castra, a place not elsewhere mentioned upon the Tegae-Sparta road. This place Nabis accordingly occupied, before advancing to meet the invader.

The engagement took place in a narrow and rocky defile,—‘anguatiae vini,’ ‘loca confragosa,’ ‘iter tale per quod vix tranquillum ab hostili metu agmen expediri posset.’ The way was so narrow that the column of Philopoemen, when he came unexpectedly upon the enemy, stretched to a length of nearly five miles. From the neighbourhood of a torrent, where the battle began, his auxiliaries succeeded in drawing their antagonists, by a feigned flight, into a valley in which an ambush had been laid; and a pursuit, attended by great slaughter, followed. Next day Nabis broke up his camp and returned to Sparta, and Philopoemen, who, with his heavier troops, had got to the Eurotas valley by a ‘via potentior,’ took possession of two roads leading from Sparta to Barbosthenes and Phare respectively, and slaughtered a very large proportion of the scattered troops of Nabis on their way back to the city.
Neither Barbothnes nor Phares nor Pyrrhi Castra, are known to us except from this passage. The last-named was certainly not right down in the Eurotas valley; for, had it been, the divergence of Philopoemen from the ordinary Tegesta-Sparta route in order to reach it would be unaccountable. Further, Philopoemen, when he descends to the Eurotas `via patentiore,' apparently avoids Pyrrhi Castra altogether. Lieut.-Gen. Jochmus, who discusses this expedition in some detail, places it at a place called `Vigilia-Castri' or `Petri-Kest,' upon the hills east of the Eurotas, where there are (he says) remains of two forts. The spot indicated is some two miles south of the monastery of Ag. Saranda and rather farther west of the village of Khryasapa. Unfortunately I have had no opportunity of seeing the remains he speaks of or of verifying the names; but the proposed location of Pyrrhi Castra appears to me to meet the necessities of the case, and accords well with an identification made first (I believe) by Bohlaye, and accepted by Curtius, Jochmus himself, and others, viz. the identification of Barbothnes with the Mountain of Vrestena, which extends from the village of Vrestena on the north to that of Basara on the south. This mountain is about the right distance (ten Roman miles) from Sparta, and lies just off the ordinary route from Tegesta. To ascend it Philopoemen would probably leave the Tegesta-Sparta route (here coinciding with the river-bed) at or a little beyond Arakhova, and would cross the hill which separates the river of that name from the river of Vrestena. This divergence, otherwise inexplicable, is fairly well accounted for if Pyrrhi Castra was where Jochmus places it, viz. somewhere on the plateau south of Ag. Saranda. Lastly, I know of no region in this neighbourhood which justifies so completely the expression of Livy—`angustie vine,'—`loca confrugosa' etc.—at any rate for so long a distance together—as the neighbourhood of the river of Agrinios, which separates by a deep ravine the country about Basara from the plateau on which are the monastery of Ag. Saranda and the conjectured site of Pyrrhi Castra.

It would (I think) be rash to attempt to fix more precisely the spot where the battle took place. But it is curious to note that a part of this very region, i.e. the part about the junction of the rivers from Taintsina and Agrianos, is the spot originally selected by Leake as the site of the battle of Sellasia. This region which, both from its position in relation to ancient routes and from the nature of the ground, is wholly at variance with what we know of the site of Sellasia,

---

Footnotes:
168 Pyrrhi Castra has sometimes been identified with the 'πηχηκεος γαρ' of Polyb. v. 19. But this must be a mistake; for to reach the latter Philip κυρτα από from Amyklas in the direction of the sea. The name appears to have been a common one. A 'Castra Pyrri' in Illyria is mentioned by Livy (xxxii. 19).
171 Livy xxxv. 27.
172 In Leake's sketch (Morea ii. 530) these rivers are marked as flowing from Vèria and Taintsina (= Taintsina) respectively; but a comparison of this sketch with the French map, or with Pl. I. will show that they are more correctly described as the rivers of Taintsina (and incidentally Vèria) and Agrinios.
acccords well in both respects with what Livy tells us of the engagement between Philopoemen and Nabis. 128

128 Pharsae (Livy xxxv. 30) has been placed by Leake and others, owing partly to the resemblance of names, at Veria, a very small village lying about half-an-hour's walk north-east of Basal (Leake, Pelop. p. 345; cf. p. 53 of Jocumsen's paper in the Journ. Roy. Geog. Soc. for 1857). The identification is little better than conjecture; but there are undoubtedly traces of wheel-ruts in the rocks between Basal and Veria; and this tends to show that at or near Veria there was an ancient town; for the road, of which they are evidence, must have been a local one, the route this way, via Kastaniotes, to the Thrystitil plain being altogether impassable to anything on wheels. If Pharsae = Veria, then the narrow track described by Livy, on which the battle took place, was probably on the road from Pharsae to Sparta, not on that from Barbothene to Sparta. Philopoemen, it will be remembered, was on his way from Barbothene to Pyrrhi Castra, not to Sparta directly. The direct Sparta-Barbothene road (Livy xxxv. 30) may have followed the lower course of the river of Arakkhe, between Mount Vresten and the series of hills on which stand the remains of Sallasia and the villages of Voutiani, Theologos, etc. But since the river here flows in a ravine so deep that the path, to get along at all, is obliged to skirt the hills at a considerable height above its left bank, I do not suppose, with Jochmus, that this was the *via patrentiae* by which Philopoemen de-

sounded to the Eurotas. It seems to me more likely that he retired his steps for a considerable distance, then descended to the valley of the river of Arakkhe, and struck the ordinary Teges-Sparta route at some point below the khan of Kouvatsi.

Leake (Pelop. p. 344 sqq. and map) identified Mount Barbothene with the hill of Ag. Konstantinou above the khan of Vourliki—the hill surrounded by the remains which are now-a-days generally supposed to be those of Sallasia. Sufficient reasons for the identification with Sallasia have been given already. But even leaving Sallasia out of account there are several considerations which forbid us to identify the hill with Mt. Barbothene. (1) It is on the direct route from Teges to Sparta, and Barbothene was not. (2) It is not by any means ten Roman miles from Sparta. (3) "The dell in which stands the khan of Vourliki, and through which the modern road [i.e. the track which crosses the Eurotas by the 'bridge of Kopanos'] from Tripolitza to Mistras descends to the Eurotas,"—in which Leake's views make it necessary to place the battle,—is not by any means such a dell as Livy describes. It is steep indeed in parts, but nowhere difficult, and its total length is very much less than the five miles which Livy gives as the length of Philopoemen's column alone. (4) There is no *via patrentiae* to the Eurotas.
APPENDICES.

APPENDIX A.

THE ALPHEIUS AND EUROtas.

The ancient theory of the origin of the Alpheius, and of its repeated disappearances underground, is briefly given in Paus. viii. 54. 1—3, a passage of which the parts which concern us here have been already quoted (p. 52). This passage is supplemented by Paus. viii. 44. 3, 4 (v. p. 33), and by Strabo, pp. 275 and 343. From all these passages alike it appears that the Eurotas as well as the Alpheius was supposed to rise near Asea; that their streams were believed to unite in the Asean plain, descend into a katathothra together, and re-appear in separate places as two distinct rivers. From two of the passages (Paus. loc. cit.) we learn in addition that the place where the Alpheius reappeared was called 'Pegae' and was in the Megalopolitan territory; from one (Strabo, p. 343) that the spring in which the Eurotas re-appeared was at the beginning (κατὰ τὴν ἄρμαν) of the Blemnitatis (= Belminotatis) territory; and from one (Paus. viii. 54. 1—3) that the spring of the Alpheius near Asea was itself supposed to have its origin in the water of the Sarandapotamós, which disappeared down a katathothra in the Tegean plain.

Eliminating what may be called the mythical element in this story, viz. the notion that two springs, whose waters mixed and flowed for a long way together before separating to form two rivers, could nevertheless be assigned each to its appropriate river, it is clear that there remain three questions requiring investigation; viz. (1) Is it true that either of the springs near Asea derives (or derived) its water from the Sarandapotamós? (2) Is it true that the Alpheius—and (3) is it true that the Eurotas—rises at the springs in the Asean plain? Let us take these questions in order.

104 Strabo, p. 275.—'τὸ δὲ τερ. Στράβωνος Παυσανίσου σταδίων ὀλὴν γῆν ἐκχίνων ἐν τῷ Ἀρχείῳ τήν Ἐρατοῦν ἐκδίδοντος ὑπάρχον, καὶ τᾶς τῆς χώρας Ἀρείου καὶ τῶν Ἐρατοῦν ἀπαλλαγόντων, δοταί καὶ τυπικτέσθαι μονεθήσεται, μηδέν περὶ τοῦ ἔσχεντος στραβοῦ ἐκτίμει καὶ μηδέν ἐν τῷ κολπῷ ἡταῖρὰ ἀναφέρεται κατὰ τὸν Ποντικόν ἐκστρέφει ἐν τῷ Ασθῆνει παλαιῷ.'

105 That the 'Alpheius' of Paus. viii. 54. 1 is the modern Sarandapotamós is generally admitted. See pp. 53-4.

112 This mythical element appears in both Pausanias and Strabo, but is most prominent in Strabo, p. 275, where the superstition about the chimaera is narrated.
(1) The Sarandapotamós.—This river, after entering the Tegean plain, joins the river of Dholianá (the ancient Garates), and with it flows north, then east, finally losing itself in the katavortha of Várzova, in the side of Mt. Rheinó (Parthenium). It is clear that the theory mentioned by Pausanias cannot possibly have arisen in connexion with such a river as this; it only becomes intelligible if we imagine a river losing itself in the katavortha of the Táka, in the side of Mt. Krávari (Boreium), the mountain which separates the Tegean plain from the Aegean. Accordingly it has been very generally assumed that the Sarandapotamós has changed its course since ancient times, and that in Pausanias' day it actually did flow to the katavortha of the Táka. Now had this been the case, it must have passed either (a) south of Tegea, or (b) through Tegea, or (c) north of Tegea. (a) —a course first (I believe) proposed by Leake, and now generally accepted—is excluded by the intervention of very distinctly rising ground, on the left of the path, all the way from the gorge of the Sarandapotamós to Píall (Tegea). (b) is out of the question; for had the town been cut in two by a river, as Megalopolis was by the Helisson and Mantinea by the Ophis, we certainly should have been made acquainted with the fact, either directly by Pausanias or some other topographer, or incidentally by the historians. (c), which has been suggested by Bérard, is to my mind equally incredible; first because, had the river thus lapped round the town, it is strange that the fact is never mentioned, and secondly because, though to the naked eye the course thus indicated may appear to be a level one, in reality there is a slight but steady rise from the part of the plain below Mertaoní westward,—a rise which is demonstrated by the fact that a small stream (correctly marked in Bérard's own map) runs for a long way in the opposite direction. Were Bérard's theory correct, this stream must originally have been a tributary of the Sarandapotamós and flowed with it to the Táka, westward. Then the very barrier, natural or artificial, which (on Bérard's hypothesis) diverted the Sarandapotamós into an easterly course, would have prevented the tributary from flowing in an easterly direction, since the tributary was on its western side.

On the whole, then, I am disposed to believe that the whole story is a blunder on Pausanias' part; the result, probably, either of a mistake in the name of the river, or of a confusion between it and some one of the small streams which drain the hills about Kaparí and, flowing into the Táka, eventually of course find their way to the katavortha in Mt. Krávari. This conclusion is confirmed by Strabo's evident ignorance of the story; for he twice relates the performances of the Alpheius in the Aegean plain, and once expressly as an illustration of the disappearances of rivers underground, yet he never so much as alludes to the previous disappearance of the Alpheius in the plain of Tegea.

But, even granting for the sake of argument that the Sarandapotamós

137 Shown both in Pl. 1. and in Pl. II.
524 and Pl. XIV.
did flow to the katavothra of the Táka, the question remains whether it could have re-appeared at Asea. The possibility has long seemed very doubtful, since the difference of level between the Táka plain and that of Frangóvryso (Asea) is very slight. But the theory has now been finally disproved by M. E. A. Martel, who has succeeded in descending the katavothra in question to a depth of no less than 42 metres below the level of Frangóvryso.\(^{100}\)

(2) The Alpheius.—My special map of the Asean plain (Pl. II.), intended primarily to illustrate some ancient routes and sites, shows also the main features of the water-system of that plain.

It will be observed that there are three principal groups of springs in the neighbourhood of Frangóvryso,—one quite close to the khans, another a little south of this group, just across the (unfinished) railway line, and a third at the east end of the plain, not far from the khan of Talagáni. Probably the first two of these correspond to what Pausanias calls the springs of the Eurotas and Alpheius respectively, since he mentions them both at the same distance (five stades) from Asea, only the former quite close to the wayside, the latter a little way off the road. However this may be, it will be seen from the map that the water from all these springs eventually merges, and flows in a body toward the gorge by Marmariás,—the gorge through which the new railway-line makes its way to the lower-lying Megalopolitan plain,—receiving also important contributions (\(a\)) from a series of surface streams which descend from the directions of Dóriza, Kandréva, Alíka, etc., and (\(b\)) from the lake, or swamp, which generally covers the centre of the plain in front of the village of Pápari. Thus all the water from the springs of Frangóvryso makes its way toward the gorge; but only a small proportion of the water which flows toward the gorge has its origin at Frangóvryso.

Just before the entrance to the gorge there is a series of katavothras (\(\psi\), map); but they are katavothras of the most degraded type. Instead of great rock chasms, like that of the Táka, or those near Vérzoa and Tsipíaná, we see\(^{101}\) nothing here but some holes in the soft ground; sometimes open and receiving a tolerable stream of water—at other times partially (perhaps sometimes even completely) choked.\(^{102}\) The combined stream which drains the Asean plain, when it reaches the katavothras, accordingly does one of two things. Either it finds them open, and engulfs itself in them; or, finding them closed, it pursues its course overground, and, reinforced just beyond the katavothras by two more surface-water streams

---

\(^{100}\) Revue de Géographie, 1892, pp. 332 sq.

\(^{101}\) There must of course be holes in the rock beneath, which we do not see.

\(^{102}\) Of the two principal holes I find the following details in my notebook:—

(1) 7 Nov. 1891; \(a\) almost completely choked, \(b\) open, the stream flowing down it in a sort of waterfall to a depth of (say) 10 ft., and filtering through rubbish at the bottom.

(2) 28 Nov. 1891; \(a\) open; no water getting so far as \(b\), but some filtering through the ground between the two.

(3) 14 June, 1892; water running down both \(a\) and \(b\); principally the latter.

(4) 10 Nov. 1892; water just trickling down \(a\), none reaching \(b\).

Any water which does not find its way down the katavothras runs beyond them to the gorge, as stated in the text.
on its right bank, it makes its way right through the gorge to the Megalopolitan plain, which it reaches (v. Pl. I.) a little way to the east of Rhapsoniáti.

Now at the far end of the gorge, where it debouches in the lower plain, is a 'kephalóvrysis' (κεφαλόβρυσις),—i.e. a head-spring, or group of springs,—by the river-side. These springs are undoubtedly the 'Pegae' (Πηγαί) of Pausanias viii. 44. 4, and 54. 3, where the water from the spring of the Alpheus, after descending into the katavothras, was believed to reappear. The question whether this belief was correct has not hitherto been definitely settled; but I have little doubt that the truth of the matter is as follows. The kephalóvrysis is a group of springs, some on the right bank, others on the left bank, of the ravine. Those on the right bank are perfectly clean, cool, and (I am assured) perennial; those on the left bank are comparatively turbid, and are not perennial. I once visited the kephalóvrysis the day after a thunderstorm, when all ordinary streams were thick with mud; and the clean springs were as clean as ever. Obviously, therefore, they can have nothing to do with the water which flows into the katavothras by Marmariá. But the turbid and intermittent springs have every appearance of coming thence; and if it be true (as one local informant told me) that the time when they cease to run coincides with the time when the stream in the plain of Asea is dry, there can be no doubt whatever that they do so. The upshot of the whole matter is therefore this:—The water of the springs near Asea, combined with a large quantity of surface-water from other parts of the plain, does make its way, overground or underground, to the place called by Pausanias 'Pegae,' and feeds the Alpheus. But the principal (perennial) springs at 'Pegae' have nothing whatever to do with those near Asea.

(3) The Euretas.—The story related by Pausanias and Strabo is to the effect that the Alpheus and Euretas disappear together; then reappear, the one at 'Pegae,' the other in the Belminatid territory; in other words, they separate in the body of Mt. Tsimbároú. The story is an unlikely one; for the water of the katavothras of Marmariá is amply accounted for by the springs at 'Pegae,' the Belminatid is a long way off, and the 'kephalóvrysis' there,—if the one intended be, as I suppose, the 'kephalóvrysis Logarias,' at the foot of Mt. Khelmós,—is too clear, too cool, and too constant to owe its origin to so variable a supply. One corner of the plain of Asea (the corner by Liánoú) is, as a matter of fact, drained directly, and without katavothras, by the

102 I once found one of them dry; but one at least (they told me) runs throughout the summer.
103 I have seen a considerable volume of water at the turbid springs when only a small quantity was trickling down the more obvious katavothras by Marmariá (10 Nov. 1892); but there was plenty of water in the streams in the Frangóvryras valley, and it gradually disap-
Eurotas (v. Pl. I.) ; but this drainage has nothing to do either with the springs near Frangóvryso, or with the katavórras down which their water disappears.

APPENDIX E.

THE FORTRESSES OF 'ATHENAEUM' AND 'SELLASIA.'

The importance of these two positions has been sufficiently pointed out in the text. The fortresses are analogous in several ways; not only in the parts which they play in relation to Spartan routes, but also both in plan and structure. (See Figs. 6 and 7; and for the Athenaeum, see also Figs. 3 and 4, pp. 39 and 40).

In each case the outer walls surround a hill-top, keeping so far as possible along the verge of the steepest slope, and as nearly level as the nature of the ground permitted; but this arrangement is rudely disturbed, in the case of the Athenaeum, on its eastern side, where the ground falls away very suddenly, and the wall necessarily descends with it quite 200 feet, in order to rejoin the crest of the hill (here much lower) near its north-east angle. On the western side the downward slope is much more gradual.

Each of the two forts consists of an upper and a lower enclosure, the upper forming the stronghold proper. In the case of the Athenaeum the upper enclosure may have been divided into two sections by a cross-wall (as it certainly was in mediaeval times), on the principle which I have attempted to explain on p. 32 in connexion with the acropolis of Asea; but this cannot be positively asserted.

In both alike we see the remains of massive walls, with towers, semi-circular or square, at intervals; and in both, though there must of course have been entrances of some kind, it has been impossible to find any certain traces of them, in spite of the fact that in the case of some of the walls,—e.g. the one which separates the upper and lower enclosures of the Athenaeum,—the foundations and lower courses are practically intact. Is it possible that some of the entrances, including those in the wall just mentioned, were at a higher level, and approached by temporary steps?

The structure of the walls of the two fortresses is also similar. The walls of both are built entirely of unhewn stones, merely piled together; the two faces of each wall being more carefully put together, and built of larger stones, than the interior. Fortification walls built in this style

---

In the lower wall of Sellasia it may be conjectured that there was an ancient entrance in the west wall, a hundred yards or more from its southernmost point. The nature of the ground makes this a very convenient place to enter the ancient circuit, and for a few paces there are here no traces of the wall.

naturally rank between such walls as those of Messene and Mantinea,—
double walls of large heun stone with earthen filling,—and such walls as
those of Megalopolis, which are of unheun stone with earthen filling.\textsuperscript{167}

The walls of Sellasia are uniform in style throughout; but in those of the

---

\textsuperscript{167} For an account of the walls of Megalopolis, and a comparison of them with other fortification walls, see Excevations at Megalopolis 1890—1891, pp. 108 seqq.
the upper enclosure from the lower (Fig. 4), (3) that of the remaining walls of the upper enclosure. The different kinds of wall are distinguished in the plan (Fig. 6). The difference between (1) and (2) lies in the size of the stones, those of the outer wall being very much larger than those of the inner. It will be seen, however, from the photographs (Figs. 3 and 4) that the lower courses of the inner wall are built of stones intermediate in size between those of the upper courses and those of the outer wall. These differences of size need not necessarily imply a distinction of date; but it is probable that they do so; especially as, in those places where the lower courses are built of larger stones than the upper, the change of style does not occur at any fixed height above the ground, but is variable, thus distinctly suggesting dilapidation and subsequent restoration. (3) appears at the first glance very similar to (2); but on a closer inspection it is seen that, in addition to the unhewn stones, mortar has been extensively, and tiles sparingly, employed.

The walls of style (3) are clearly mediaeval; but unfortunately the date of the remainder cannot be so positively determined. The outer wall (1) has hitherto been regarded as ancient by all authorities; and I have myself supposed it to be a roughly constructed wall of classical times; but Dr. Dörpfeld, judging from my photographs, expresses the opinion that, if they are ancient at all, the great size and loose structure of the unhewn stones proves them to be "Mycenaean" rather than Hellenic. That they are one or the other, and not mediaeval, appears to me fairly certain; first because it would be difficult to account for the total disappearance of the ancient fort, which, as I have tried to show in the text, must certainly have been upon this hill; secondly because, were walls (1) and (2) mediaeval, it would be very strange that not a trace of brick or tile has been found in any part of them; and thirdly because style (2), which cannot be earlier, and is probably later, than style (1), corresponds precisely with what we find at Sellasia, where the existence of a mediaeval fortress has never (so far as I am aware) been suggested, and no signs of mediaeval occupation have been found.

---

166 It should be stated that at one point in the outer wall, where it forms part of the upper enclosure,—at a point where it is preserved to a considerable height,—several courses of smaller stones appear above the larger. There is nothing to show whether this was the original arrangement or a restoration.

168 In the Athenaeum the thickness of the walls, both of the upper and lower enclosures, varies (approximately) from 8 ft. to 7 ft.; with the exception of a small part of the walls of style (3), where it is only about 5 ft.

At Sellasia the original thickness of the walls is, in their present condition, very difficult to determine. There is no doubt that that of the outer wall varied considerably in different places— in some it was only about 9 ft., while in one place I measured 12 ft.; the average thickness was perhaps about 10 ft. The average thickness of the wall which separated the inner enclosure from the outer was about 8 ft.

The plans given in Figs. 6 and 7 are necessarily incomplete; for, as I have already noted, I failed to find any certain traces of the entrances to either fort; and, in the case of the Athenaeum, it is quite possible, perhaps even probable, that some of the towers have wholly disappeared. In one or two places I have had to indicate the supposed position of the walls by dotted lines.

The contour-lines show with tolerable accuracy the relation of the walls to the natural contours of the ground, the level of each of the towers having been ascertained, previous to their insertion, by trigonometrical observation. Elsewhere the contours are only roughly sketched.
APPENDIX C.

Outlying Routes.

Plate I. covers a good deal of ground not immediately connected with any of the routes which I have hitherto discussed. I have however travelled over a great part of this ground, and have in consequence made some minor changes in, and additions to, the French map. A few short notes on questions connected with this outlying country seem therefore to be called for here. To be intelligible, they must be read as a commentary on the corresponding passages of Pausanias.

(1) Megalopolis to Methydrium (Paus. viii. 35. 5 sqq.).—Methydrium has been, by common consent, identified with an ancient site a few minutes' walk north of the small village of Nemnitsa. This being the ease, Karatoüla does not seem to me a satisfactory site for Trikoli; for it is not on the direct route to Nemnitsa. One cannot pass near Karatoüla on the way to Nemnitsa, unless one goes by way of the Langádhia river and the plain of Davía (plain of Maenalus)—and this clearly was not Pausanias' route. I suggest instead that Trikoli was at a spot just north of Zonáti, where there are remains of rough but massive masonry which appears to be of ancient date. From Zonáti one may continue one's journey northward till one reaches the foot of the hills, and then ascend these steeply a little to the left of the villages of Palamári and Psári. The path continues to climb till it reaches a height of some 1500 feet above the plain; then descends more gradually to the bed of a stream (dry when I was there) which drains the narrow valley behind Mount Rhafoni. Keeping along this valley one eventually strikes a track from Tripolítes to Dhimítisána and Langádhia near Arkoudhóchevma. The Helisson never comes in sight at all; but Libovísi, near Arkoudhóchevma,—(both of these places lie somewhat to our path and are not seen from it)—might perhaps be described as εἰς τὸν Ελυσσώτας (in the direction of the Helisson); and, if so, Leake may conceivably be right in placing Anemósa near it; but little

176 Leake, Peloponnesian, p. 238.
177 My authority for the modern name of this river is the French map. I do not think I have actually heard it used.
178 In the French map this river is marked as the Breittheats (Paus. vi. 7. 1; viii. 28. 7); but this is inconsistent with the generally received and almost inevitable theory which places Breithe near Karytiana. Besides, Pausanias (viii. 28. 7) distinctly says that the Breittheats, after a course of only five stades (rather more than half a mile), ran into the Alphaum. It is doubtless, therefore, the short but copious stream which rises just below Karytiana and turns the mill close by the Frankish bridge (cf. Beblayo, pp. 164, sq.).
179 These remains are marked in the French map, but (unless there are other remains which I have failed to see) they are marked on the wrong side of the stream. I have accordingly corrected this slight error.
178 In the French map a track is marked along this valley leading from Stemnitsa to Tripolítes. Leake, Peloponnesian, pp. 228, sq. The form Zibovísi, which Leake uses, is erroneous.
weight can be attached to such conjectures. Keeping due north, and soon
leaving the Dhimitza and Langidhaia path, one reaches, by narrow
fir-clad tracks, and one small level plain (possibly the 'plain of Polus'),
the village of Nemnitsa, a little beyond which is the site of the ancient Methy-
drion.

(2) Megalopolis to Maenalus (Paus. viii. 36. 5 sqq.).—I adhere to the
received identification of the plain of Maenalus with the valley which lies
west of Mount Apano-kresse, and in which are the villages of Zarakhova
and Davia,—in spite of the difficulty of reconciling this view with the distances
given by Pausanias in connexion with the route. To identify it with the
little valley of Valtetsi,—which seems to me the only plausible alternative,—
would not help matters much; its distance from Perneckis (or Paliskius)
would still be greater than that given by Pausanias, and the passage ἡ τοῦ ἄνω
χειμάρρου διαβότα, κ.τ.λ. would be unintelligible. Further, Valtetsi lies
too far from the principal range of Maenalus. In and about the plain which
I call for convenience that of Davia, and which is agreed to represent the
Mαυρακός πετίαν of Pausanias, the French map (followed by Leake in his
map at the end of Peloponnesea) rightly marks remains of various kinds.
Some of these are of comparatively recent date; but those in one place at
least, viz. on the hill of Ag. Elias, south-west of Sylimna,—are claimed as
Hellenic. The claim may possibly be well founded; and, if so, the site may
represent Soumetsia, as Leake and (apparently) Boblaye suppose; but I
am bound to say that, if there ever were Hellenic remains on this hill, they
have disappeared. By far the best remains of antiquity in this region are
those of the 'Palaeo-kastro of Davia,' on a small hill near the village of the
same name, but on the opposite (right) bank of the Hellison. Though
the greater part of the walls are of late date, they rest in part on Hellenic
masonry of the hewn polygonal type. The 'Palaeo-kastro' is, by some acci-
dent, omitted in the French map; but it is well known to writers on Greek
topography, and identified by some of them with the town of Maenalus,
by others with Dipaea. I myself am decidedly in favour of the identifica-
tion with Dipaea; for Pausanias seems to imply that Maenalus was actually
in some part of the mountain from which it took its name, while Dipaea,
since it was the scene of a pitched battle on a large scale, was probably in,

178 Leake, Peloj., map; Boblaye, p. 172. On
the other hand, Ross (Reisen im Pelop. p. 129),
followed by Curtius (l. 315) and Burrian (l. 229), places Soumetsia at Palaso-Sylimna, which
is a totally different place, lying considerably
west and somewhat north (instead of south-
west) of Sylimns. It is a very steep hill, over-
looking the plain of Davia, and containing on
its summit remains of fortification, church, and
other walls, but nothing necessarily dating from
ancient times. Quite close to the village of
Sylimna is yet a third hill, of much smaller
dimensions, surmounted by remains of fortifi-
cation-walls. This is the 'Palaeo-kastro of
Sylimna,' and contains nothing Hellenic.
176 The upper part of the Hellison goes by
the name of the 'River of Davia.'
177 Ross, p. 118, sq.; Curtius l. 315.
178 Leake, Travels in the Morea, ii. 52. Bur-
rian (ii. 228) does not attempt to decide between
the claims of Maenalus and Dipaea. For the
form 'Dipaea' s. Paus. viii. 27. 2.
179 Herod. l. 6. 30; Paus. iii. 31. 6; viii. 8.
5; viii. 45. 2.
or at the borders of a plain. Further, the territory of Dipae was traversed by the upper waters of the Helisson; and the plain of Davis is the only one which that river traverses before making its way through the mountains to that of Megalopolis.

The route by which the plain of Maenalus was reached from Megalopolis has next to be considered. That there is at least one error in the distances given in our text of Pausanias has been admitted; but it was a strange perversity which led Leake to multiply the error, all for the sake of making στός ξάρις the name of a place (Helos), translating πώλατο 'ravines' or 'passes' instead of the obvious meaning, 'gates,' and placing the temple of Demeter ἐν ξάρις on the top of a 'peaked height.'

The ξάρις was doubtless part of the plain immediately outside the town gates, between it and the hills, and there is no reason to doubt the correctness of Pausanias' statement that the temple of Demeter ἐν ξάρις was only five stades from the gates. If the Elaphus is the tributary which joins the Helisson from the direction of Arakamýtes and Valtétsi, as Leake (no doubt rightly) supposes, then Pausanias' distances work very well as far as Arakamýtes (Peraethes), and the number of errors is reduced to one. Arakamýtes lies just behind the big hill called Ag. Elias of Kandréva, to which I have previously referred in connexion with the plan of Asea (Frangóvryso); and, if it represents Peraethes, it is not impossible that the temple on Ag. Elias (v. p. 33 and Pl. II.) may be that of Pan; but it would be a mistake to lay much stress on the suggestion.

Pausanias has generally been supposed to imply that the route to Paliskiás followed the gorge of the Helisson all the way; but he does not actually say this, and to any one who has ascended this difficult gorge it must appear extremely doubtful. It is more likely that travellers to Paliskiás etc. crossed the Tsimbarou range, as travellers to Arakamýtes do at the present day, somewhere near Síalleí.

One question remains,—Where did Pausanias, in going to Maenalus, cross the Elaphus? at Paliskiás or at Peraethes? In other words, was Peraethes off, or on, the direct route from Megalopolis to Maenalus? I am inclined to adopt the former view; for, had the route followed the left bank of the Elaphus for twenty stades, it would never have crossed that stream at all, but would have gone by Valtétsi. At the same time, if my view of the matter be correct, the route of Pausanias, from Paliskiás onward, must have been along the main stream-bed of the Helisson; and I am not in a position to state positively that this is a convenient, or even a possible, route.

(3) Karmion, Gathatos, Króvi, Aegyo (Paus. viii. 34. 5 and 6).—The identification of the river Karmion with the 'Xerilo-potamo,' which appears
in the French map, has been generally accepted, even by Leake,\textsuperscript{189} who had formerly\textsuperscript{184} held a different view. There is no doubt that it is correct. The Gathetas must then be the stream which joins the other a little N. of Samará. I disagree with Leake's identification\textsuperscript{183} of Kromi with some remains near Samará, since Kromi was on the road to Messene, and Samará was not. The extant remains near Samará are those of rather massive walls of stones, mortar, and occasionally tiles, on the summit of a small hill surmounted by a wretched chapel of St. Demetrius. There are no Hellenic remains, nor have there been any within the memory of the peasants; but Leake\textsuperscript{189} distinctly mentions some, and they may have perished since his time. The hill is of a very suitable shape for a small acropolis.

The site of Aegys is doubtful. Some writers\textsuperscript{187} have placed it at the Kalývia of Georghiásai, in the Eurotas valley; but this theory has been discarded in a previous section,\textsuperscript{189} on the ground that, the 'Aegytid' territory (in the strictest sense of the word) being undoubtedly the valley of the Xerilo-potamo, west of the northernmost portions of the Taýgetus range, it is hardly likely that its chief town Aegys was in the Eurotas valley east of that range. In his Peloponnesicae\textsuperscript{189} Leake tentatively suggested Kamária. This village has now split up, or extended itself, into three, which are known collectively by the plural name 'Kamárae.' Above the uppermost of these villages is a sharp and conspicuous spur of hill, projecting from the side of Taýgetus. Its summit must be at least 1,000 feet above the village, and bears many traces of rude buildings; but most, if not all, of them are mediaeval or modern. I do not believe, either from its situation or from the nature of the remains, that it is a Hellenic site. I have accordingly marked it black in Pl. I.

(4) Teges to Argos (Paus. viii. 54. 5-7).—The route from Teges to Argos necessarily passes through the small valley of Akhλάδόκαmbo, which is separated from the plain of Tripolítsá by Mt. Rhoinó (Parthenium). There are at least four passes of Rhoinó; and every one of them is or has been in common use. They may be clearly seen from the map (Pl. I.).

The southernmost is the one adopted by the engineers of the new railway, as being the most circuitous and therefore enabling the line to descend to the lower valley\textsuperscript{189} by a comparatively moderate gradient. The railway, in fact, thanks to skilful engineering, makes the circuit of three sides of the mountain and nearly a complete circuit of the valley of Akhλálókambo, descending all the way. Obviously this was not the ancient route.

The three remaining routes coincide as far as the village of Hagioritisika, not far from which Bérard, of the French School, discovered some foundations

\textsuperscript{184} Pelop. p. 234.  
\textsuperscript{189} Morea ii. 297, and Pl. 2.  
\textsuperscript{187} Pelop. p. 235.  
\textsuperscript{183} Morea, loc. cit.  
\textsuperscript{185} P. 45.  
\textsuperscript{186} P. 235.  
\textsuperscript{189} The valley of Akhλάδόκαmbo lies some 1200 ft. lower than that of Tripolítsá.
which he believed to be those of the sanctuary of Dionysus Mystes and the shrine of Demeter. From Hagiorgitika one route (the so-called 'σκάλα τοῦ Μπέι'—Skála tou Bay') crosses the hill almost in a direct line for Akhładókambo. It is a Turkish road, paved in the usual way with large unhewn stones. Though in parts so steep that one would naturally regard it as impassable to anything on wheels, yet I have seen on it what I took for wheel-ruts; and, if they were wheel-ruts, the road must have been used by carts of some kind in Turkish times. One thing however is certain,—this is not the 'ὀχήματι ἐπιτηθεισάτη καὶ τὰ μάλιστα λεωφόρος' described by Pausanias.

The same objection applies, with perhaps still greater force, to what is sometimes called the 'κακὴ σκάλα,'—another Turkish paved road engineered, to a degree unusual in roads of this class, both by embankment on the lower side and by zigzags. The 'κακὴ σκάλα' goes through the gap separating Rhóinó (Parthenium) proper from Palaeo-moukhli, an isolated and conspicuous hill surmounted by the remains of a mediaeval settlement, and passes out into the plain beneath the largest of the new railway viaducts. Near the viaduct in question an inscription discovered by Bérard led him to place the 'sanctuary of Pan,' where that god was said to have appeared to the runner Philippides (or 'Phedippides') on his way to Sparta before the battle of Marathon; but it should be observed that, even if Philippides went this way (which is by no means certain), the sanctuary of Pan was (according to Pausanias) on the western, not on the eastern, side of Parthenium; since, after mentioning that sanctuary, he proceeds 'ὑπερβαλόντι δὲ τὴν κορυφὴν τοῦ ὄρους,' κ.τ.λ.

But whatever route Philippides adopted, it is quite clear that the one described by Pausanias as 'ὀχήματι ἐπιτηθεισάτη κ.τ.λ. is none of those which I have yet mentioned. It must have coincided more nearly with the modern carriage road, which passes north of Palaeo-moukhli, between that hill and the range of Ktenía. This is the only pass which could be made convenient for wheel traffic without very considerable feats of engineering, such as that which has resulted in the railway line. A Turkish road, of whose paving some traces still remain, coincided almost exactly with the carriage road, and probably represents the ancient route.

Hysiae, the frontier town, has been rightly located on a shoulder of hill close to the uppermost of the khias of Akhładókambo, and just above the new railway station. There is here an acropolis, with remains of good polygonal walls. Hysiae was Argive; and apparently the whole of the valley was Argive also, while both eastern and western sides of Mt. Parthenium were Tegean. This seems to be the inevitable conclusion from Pausanias,144 who places the boundary between the two territories 'ἐν τοῖς ἡπό γεωργομένοις.' Of this curious arrangement we have already seen an

---

146 viii. 54. 7.
example in connexion with the Megalopolis-Tegea route, where the 'Xóma' which served as boundary-mark has been clearly shown to have been situated at the foot, and not on the ridge, of Mt. Krávari.

APPENDIX D.

NOTES IN THE MANTINEIAN PLAIN.

In the top right-hand section of Pl. I. will be seen the great plain of Tripolissí, which contains the sites of Mantinea, Tegea and Pallantium.

The following brief notes deal with the Mantineian section of it only, the remainder having been discussed in the body of the paper. These notes fall under two heads, viz. I. Routes, II. Battles and Military Operations.

I. Routes.

i. and ii. Argos to Mantinea by the 'Klimax' and 'Prinus' routes (Paus. viii. 6. 4—8. 4). These two routes—with a third, coinciding with the 'Prinus' for a considerable distance, but keeping more closely to the valley of the Charadrus, passing south instead of north of the summit of Artemision, and rejoining the 'Prinus' route at Tsipianá—were first marked correctly as modern tracks in the French map, and were first (I believe) rightly identified with the ancient routes by Curtius. They may be distinguished as the Sángha, Karyá, and Tourníki routes respectively. My reasons for agreeing with the identifications of Curtius (which are adopted in the Guide Jeannin) in preference to others which have been proposed are as follows:

(1) Of the three possible routes, or passes, that by Sángha cannot be the 'Prinus' road, because it follows the course of a river (the ancient Inachus) from a point quite close to Argos right up into the hills, while the 'Prinus' road crossed one river (the Charadrus) near Argos and afterwards, up in the hills, struck another river (the Inachus). For a similar reason the Tourníki route cannot represent the 'Prinus', for it follows a single river (the Charadrus) from the plain to the summit of the pass. By the process of exhaustion, therefore, we arrive at the pass by Karyá as the representative of Pausanias' 'Prinus.' It crosses the Charadrus some two miles from the outskirts of Argos, just where that river debouches in the plain—follows its bed for about five miles, coinciding so far with the Tourníki route—then leaves the Charadrus, passes through the village of Karyá, and ascends very

130 P. 35.

134 Assuming, what is almost certain, that the route described in Paus. ii. 25. 1—3 as 'the' route from Argos to Mantinea is identical with the 'Prinus' route of Paus. viii. 6. 6

opp. But in any case it is distinctly stated in viii. 6. 6 that the Prinus road did not follow the Inachus except so far as that river formed the boundary between the Mantineian and Argive territories, &c. up in the hills.
steeply into the mountains, passing a chapel of Ag. Konstantinos (in which I once spent a miserable night), and at last coming in sight of the upper waters of the Inachus. It never actually follows the bed of the Inachus, for it skirts the hills at a much higher level; but it keeps that river-bed in sight for a long way, and crosses several of its tributary torrents before reaching the top of the pass. A little above Karyá is a conspicuous group of very old evergreen oaks (ποιμάρια or προμάρια), possibly the descendants of those which gave the name Πρίνος to this route, and another of these trees crowns a hillock which overhangs the summit of the pass at a height of nearly 4,000 ft. above the sea.

If this be the 'Prinus' road, Nestané is rightly supposed to be represented by the fortification walls on the hill by Taipianá; and the 'Αρχον πέδιον and Χορός Μακρός are the plain to north-west, and the small inlet south-west of it, respectively. I have placed the fountain 'Arno' in a slightly different position from that indicated in the Guide Joanne; since the spring there shown is on the side of the hill, and not (as Pausanias says) in the plain, while there is another, and more abundant, spring (or rather group of springs) down in the plain, corresponding much better with his account.¹⁸⁷ The modern path skirts the hill and does not reach the plain till quite close to the site of Mantinea, while the ancient one appears to have descended more steeply, reaching the plain at least twelve stades from Mantinea near the spring just mentioned.

(2) The 'Klimax' route must of course be one of the two remaining ones, viz. either that by Sanga or that by Tournski; and the latter is, in my opinion, excluded by the fact that the last part of it coincides with the Karyá route, which has already been identified with the 'Prinus,' while Pausanias' 'Klimax' and 'Prinus' clearly entered Mantinea from different directions. The name 'Klimax' was derived, says Pausanias, from some steps which had once been made in it to assist the descent, but which he apparently did not see. Steps are, however, visible, and in use, at the present day; they may be found near the top of the pass, on its eastern side; and they appear to be rather built up from small pieces of rock than cut in the rock itself. The ascent is a very steep one on both sides; and on the western side it consists of a series of zigzags so sharp that, as seen from near Sanga, they look very like a ladder, and would be amply sufficient to account for the name 'Klimax' even were there no actual steps in another part of the pass. Leake¹⁸⁸ and others have suggested that the fine springs near Pikerní, which one passes on this route, may be those which Pausanias mentions at Melangeia, whence (he says) Mantinea was supplied with drinking water. This may be so; but it should be observed that low ground

¹⁸⁷ Both identifications are of course conjectural. There is no trace of a σηρί (supposing σηρί to imply an artificial basin or fountain of spring-water), as distinguished from a σβησσα, at either place. Where I have marked the foun-
intervenes between these springs and the site of the town; so that, if this view be correct, there must have been a raised aqueduct to convey the water to Mantinea; and there is no trace of such an aqueduct.iii. *Mantinea* to *Tegea* (Paus. viii. 10. 1—11. 4).—One would naturally have supposed the way to Tegea to have coincided, as far as the hill now called Mýtika (Pl. I.), with that to Pallantium; but Paus. viii. 10—12 clearly distinguishes them. Both must have gone through the narrow part of the plain just east of Mýtika; but the Tegean route apparently kept to the eastward of the other, passing (Pansanias tells us) beneath Mt. Alesius, which is agreed to have been the hill which lies just east of the ancient site. There is no evidence for the precise direction which it followed; and I have marked it very nearly as Curtius has done.

Two white limestone thresholds, measuring roughly 10 ft. × 4 ft., noticed by the French excavators in the fields south of Mantinea, and marked 'R' in Pl. I. may not impossibly represent the temple of Poseidon Hippios, as they supposed; but this involves the adoption, in Paus. viii. 10, 2, of Schäfer's emendation, σταθεῖον for σταδίον.—An emendation suggested by Pol. xi. 11. 4—6, and 14. 1. The place called Phoezon, which was twenty-five stades from the temple of Poseidon, and apparently off the main road to Tegea, has been conjectured to have been situated somewhere in the little plain of Louká.

iv. *Mantinea* to *Pallantium* (Paus. viii. 11. 5—12, 1).—This route must necessarily have coincided more or less exactly with the present road to Tripolitsá and Megalopolis. The oak wood 'Pelagus,' in which a part at least of the battle of 362 B.C. was fought, was entered by it some thirty stades from Mantinea; the 'Pelagus' must therefore have occupied the gap between the spur of Mt. Macaulns called 'Mýtika' and the spur of Mt. Artemision which lies almost in the line between this and Louká. On these two points there is no difference of opinion.

The tomb of Epaminondas was on the site of the battle, i.e. down in the plain. Pansanias is quite clear on this point. He does not say, as he is commonly interpreted, that Epaminondas was buried at the place called Ξανθή, whence he witnessed the end of the engagement.

Skope (Σκοπή) itself is generally placed on the hill of Mýtika, which commands a splendid view of the plain in both directions; but Fongères, the principal excavator at Mantinea, writing in the *Guide Jeanne*, disputes...
the identification, on the valid ground that a wounded man, with a spear-
head in his body, could hardly be carried either so far or so high. But if it
can be shown (1) that the place called Skope was probably not the summit
of the hill (which is a clear 1,000 ft. above the plain), but a shoulder of it,
at least 600 ft. lower down; (2) that the name Skope really had a different
origin from that given in Pausanias, and that the story was invented to
account for the name,—then we shall no longer hesitate to identify Mytilike,
or a part of it, with the Skope of Pausanias. And this is the precise state
of the case. The summit of the hill, as Fougères truly says, is
surmounted only by a chapel; but on the shoulder is a much more inter-
esting object, which does not appear to have hitherto attracted the atten-
tion of archaeologists. This is the ruin of a small tower, about 14½ ft. square,
constructed of excellent hewn polygonal masonry with rough bossed surface
very similar to the masonry of which a great part of the walls of Mantinea
is composed, and probably dating, like them, from the 4th century B.C. A
photograph of this tower is given on Pl. III. The tower is known
to the peasants as the 'Ἀμαλωλος' (Windmill); and some of the
better-informed Tripolitioi regard it as the tomb of Epaminondas, basing
this view upon the idea, to which I have already alluded, that Epaminondas
was buried at the 'Skope.' I spent one day in excavating the little ruin,
clearing out the inside of it till I reached the rock, but without finding any
traces of human burial, and was thus confirmed in my view that it was
really a small watch-tower (σκόπη), immediately overlooking the boundary
between the Mantineian and Tegean territories, and commanding a fine view
of both. The tower had probably fallen into decay long before the time of
Pausanias, but the spot retained the name; and from the name, combined
with the exceptionally commanding position of the hill, arose the story which
he relates. That the wounded general really was carried over ground so
rough, and to a height so great, is (to my mind) incredible.

The account of the road to Pallantium stops, as so often in Pausanias,
at the frontier; but a reference to the map will show that the remainder of
it must have approximately coincided with the modern road to Megalopolis
which keeps near the border of the plain all the way.

v. Mantinea to Methydrium (Paus. viii. 12. 2—4).—There has never
been any doubt as to the general direction of this road, and it will be found
marked in my map almost exactly as in that of Curtius and elsewhere. The
Mt. Ostrakina of Pausanias is now generally identified with Mt. Ag. Elias,
one of the peaks of Maenalus, in accordance with the view taken by the
French surveyors. Leake was disputed the identification, on the ground
that Petrosäke, which formed the boundary between the Megalopolitan and
Mantineian territories, and was therefore probably at the top of the pass, was,
according to Pausanias, forty stades (i.e. 4½ miles) beyond the spring 'Kissa,'
the spring 'Kissa' being in some part of Mt. Ostrakina. But, even granting

---

*Peloponnesian*, pp. 230, sq.
that the boundary was at the top of the pass (which is by no means certain), yet the spring 'Kissa,' if it was on the south-east slopes of Ag. Elias, where the path first enters the stream-gorge, may well have been forty stades, or something very like it, from the boundary; for the hamlet of Kardar, which is situated at some distance up the gorge, is nearly an hour's walk from the top of the pass.

vi. and vii. Mantinea to Orchomenus: two routes (Paus. viii. 12. 5—13. 1).—The two most obvious passes from the Mantineian plain to the Orchomenian are those by the 'khan of Bilai' (as it is called by the French surveyors) and by Kakouri. There is a third pass via the plain of Kapsa to Levithi; but this route would never be adopted in going from the town of Mantinea to the town of Orchomenus.

Of the routes leading to the two passes, one is generally supposed to have passed west, the other east of Gourtsouli, a small isolated hill just north of Mantinea; and this is rendered probable by the distribution of the city gates, as shown in the Bulletin de Correspondance Hellénique, notwithstanding that the modern road to Kakouri goes west, and not east, of that hill.

Gourtsouli is almost universally supposed to represent the 'Πτολεία' of Pausanias,—the site of old Mantinea; and the route which passed east of it is supposed to be the first of the two mentioned by that writer, his Maera being near the modern Kakouri. But Leake held a different view. He supposed 'Ptolis,' to denote a lower, but equally isolated, hill, about a mile further north (v. Pl. I.). On the whole I incline to Leake's view; for it is quite impossible to describe Gourtsouli as being in a 'πεδίον ου μέγα,' distinct from the plain in which Mantinea itself is situated; and though the expression is not very accurate even when applied to the other hill, it is nevertheless intelligible; for that hill is actually hidden from Mantinea by the hill of Gourtsouli, so that it is (in a sense) cut off from the larger plain. If this view be correct, I should be disposed to regard Gourtsouli as the 'γῆς χάμα ἔνηλλον' which was 'said,' according to Pausanias, to be the tomb of Penelope, in spite of the fact that it is really of natural origin. And as it lies, ex hypothesi, between the two routes to Orchomenus, while the...
tomb of Penelope is stated to have been on the right of the first of the two which he describes, we must revert to Leake's view, as opposed to that of subsequent writers, that the first of the two routes in Pausanias is the western route, vid the 'khan of Bilâi';—that Maera was somewhere near this khan,—and that Mt. Anchisias, which was on the second route, was not (as commonly supposed) the hill overhanging the khan, but the great mountain now called 'Armeniâdhes,' a conspicuous landmark visible from all parts of the Mantineian plain. This arrangement possesses the incidental advantage of preserving the order in which Pausanias describes the Mantineian routes. Beginning with the 'Klimax' road from Argolis, he works round regularly in the direction east, south, west, north; and it would be strange if, in describing the two routes to Orchomenus, he suddenly inverted this order.

II.—Battles, etc.

It is not my intention to describe or discuss in full the various battles and military operations which took place in the neighbourhood of Mantinea. An admirable account of them will be found in Leake's Travels in the Morea.^{311} Some of the views there expressed have however been generally discarded, and some others are open to criticism; while Leake's map of the plain,^{312} being prior in date to the French Survey, is necessarily inadequate. The following notes may therefore be found a useful adjunct to his narrative.

(i.) Battle of Mantinea in 418 B.C.: Thuc. v. 64 sqq. (Leake, Morea, vol. iii. pp. 57—68).—There is no stream, which by any process of damming could be conducted, as Leake seems to have thought possible, indifferently either into the the plain of Loukâ (his 'Argon Pedion') or to the katavothra of Vérzova (Leake's 'Persova'). In fact his whole account (pp. 62, sq.) of the Spartan manoeuvre of diverting the waters is founded on a misconception of the water system of the plain. This will be seen by a comparison of his map with Pl. I. The stream diverted by Agis was doubtless the one which flows in a northerly direction from near Tegea, crosses the boundary of the Mantineiâ just beneath the hill of Mýtika, and loses itself in a katavothra in the south-west corner of the Mantineian plain. This katavothra is of the earthy kind, like those near Marmarâs (p. 69), and is consequently very liable to get silted up, with the effect of immediately flooding the surrounding country. The Mantineians no doubt were in the habit of damming it at or near the frontier, so as to make it flood the Tegean plain, while the Tegeans would be equally anxious to keep its channel open till it reached the Mantineiâ. Hence the constant friction to which Thucydides alludes.^{313}

It must be remembered, in reading Leake's account, that he places the ancient Nestane near Loukâ, so that when he speaks of 'the opening between

^{311} Vol. iii. pp. 57—69. ^{312} Morea, vol. iii. pl. 2. ^{313} Thuc. v. 65.
Scope and Nestane 'as forming 'the boundary of the Mantinice' (p. 63), his meaning, in spite of the apparent inaccuracy of the wording, is really quite correct. The route of Agis from Sparta to Tegea via Orestheium (or Orestasion), which immediately preceded this battle, has been sufficiently discussed in a previous section (pp. 47-52).

(ii.) Expedition of Agesipolis, 385 B.C.: Xen. Hell. v. 2. 1 sqq.; Paus. viii. 8. 7 sqq. (Leake, Morea, vol. iii, pp. 68-73).—The capture of Mantinea by Agesipolis in 385 B.C. was effected by damming the river Ophis, which flowed through the town, so that it sapped and destroyed the walls, which were of unbaked brick. Leake's identification of the Ophis in his Travels in the Morea has long been superseded; in fact he himself, in Peloponnesiaca, adopted Boblaye's suggestion, and identified the Ophis with the stream from Tegea described in the preceding paragraph. As this river never approaches nearer than two miles from Mantinea, Boblaye suggested that it might have gradually altered its course, and Leake, with more show of reason, that it had (before the expedition of Agesipolis) been artificially diverted so as to flow through the city. But there was really no need for these rather far-fetched theories, since the little river shown in the French map, and first (I believe) marked as the Ophis by Curtius, answers all requirements perfectly. It flows at the present day right up to the walls of Mantinea, laps round them, and reunites on the other side; then, after an extremely circuitous course which amply justifies its name of 'Oφις, it loses itself in a katavthon in the hillside somewhat north of Kapsa.

(iii.) The expedition of Agesilaus, 370 B.C.: Xen. Hell. vi. 5. 10 sqq. (Leake, Morea, vol. iii, pp. 73-75).—The march of Agesilaus from Sparta was via Eutnea, and I have already discussed it in connexion with Spartan routes (supra, pp. 50-52). His operations within the Mantineian plain cannot be followed with much precision; for, since he encamped on the first day under the mountains south-west of Mantinea, on the second day twenty stades from Mantinea, and on the third day in 'δύτισθεν κόλπος τῆς Μαντινηῆς,' it is evident that he was always within two or three hours' march (at most) of the town, and was not marching so much as shifting his camp, his days being no doubt spent in ravaging the country. Hence it is impossible to keep much count of his movements, or to identify the 'δύτισθεν κόλπος' with any certainty. The description of it, however, applies better to the valley which lies north of Tsipianá (marked in my map as the 'Argon Pedion') than to any other inlet of the Mantineian plain. This appears to have been also Leake's view. No plausible explanation of the mistake of Agesilaus in taking up this dangerous position has yet been offered.

244 Cp. 330, sq.
245 Becker, p. 140
246 The object of Leake and Boblaye was, apparently, to find a larger stream than the one which now flows past the walls of the ancient town.
247 South as well as west; for the Orchomenian contingent, in order to join him, had to pass Mantinea (Xen. Hell. vi. 3. 17).
248 Morea, vol. iii. p. 75.—It must be remembered that the 'Argon' there referred to is the plain of Louka, so that the 'smaller and more
Some ancient routes in the Peloponnesian

(iv.) Battle on 362 B.C.: Xen. Hell. vii. 5; Diod. xv. 84 sqq.; Paus. viii. 11. 5 sqq. (Leske, Morea, vol. iii. pp. 76-84).—There has been some difference of opinion with regard to the site of this great battle,—the battle in which Epaminondas fell. That a part of it was fought in the 'Pelagus,' the oak-wood which occupied the narrows immediately east of Mýtika and the 'Σκοπεία,'—i.e. at the very borders of the Mantineian and Tegean territories—have already seen. But it is not quite clear whether it was the right wing or the left wing of Epaminondas' army which was here engaged,—i.e. whether the rest of his army was drawn up in Mantineian territory or in Tegean. The former was Leske's view, and is (I believe) generally accepted, chiefly no doubt owing to the common designation of the battle as that 'of Mantinea.' But the argument from the name is far from being conclusive; for in any case the battle was fought as an attack on, and in defence of, Mantinea, and took place nearer to Mantinea than to Tegea. And there are good reasons for believing that the left wing, rather than the right wing, of Epaminondas' army was near Mýtika. For:

(1) Epaminondas was killed in the 'Pelagus';219 and his tomb appears to have been quite close to Mýtika, for it is mentioned by Pausanias220 immediately after the 'Σκοπεία,' which was on Mýtika. Now we know from Diodorus221 that the Theban column, led by Epaminondas himself, formed the left wing of his army, not the right wing.

(2) Xenophon's account of Epaminondas' march from Tegae222 is in no case easy of interpretation, is to my mind incompatible with the idea that he advanced beyond Mýtika, 'Τήν μὲν συνηρματίσατο,' he says,223 'πρὸς τοὺς πολεμιούς οὐκ ἤρε, πρὸς δὲ τὰ πρὸς ἐσπέραν ὅρη καὶ ἀντιπέραν τῆς Τεγέας 224 ὑμέτερον ὡστε δύξαν παρείχε τοὺς πολεμιούς μὴ ποιήσασθαι μάχην ἐκείπῃ τῇ ἡμέρᾳ.' The words 'τὰ πρὸς ἐσπέραν ὅρη' are most naturally interpreted as referring to the hills about Pallantium, in fact the Krávari range; but, as it is clear that the battle was not fought near Krávari, but in the direction of Mantinea, it is generally assumed that Epaminondas' march was in a north-westerly direction and that he reached the hills very near the modern Tripolités. Here he must have struck the road from Pallantium to Mantinea. 'Καὶ γὰρ ὅπως πρὸς τῷ ὄρει ἔγενεστο,' Xenophon goes on to say, 'ἐπει ἐξετάθη αὐτῷ ἣ φάλαγξ, ὡστε τοῖς ἤμηλοις ἐθετο τὰ ὄπλα, ὡστε εἰκάσθη στρατοπεδευομένῳ.' Then (we are told), when the enemy were sufficiently put off the scent by this manoeuvre, he suddenly formed the troops about him into

Northern branch of the Mantid plain between Mantinea and the Argos, probably means our 'Argos,' i.e. the plain of Taplada.

219 Paus. viii. 11. 10.

220 Diod. 11. 7. 9; 12. 1.

221 Ptol. 85, 86.

222 Leske (Morea, vol. iii. p. 81) apparently supposes Epaminondas to have been personally engaged in the cavalry engagement which preceded the battle, and never to have returned to Tegae. This view is countenanced by Diodorus' account of the battle, but opposed to that of Xenophon, whose authority, as a contemporary and a soldier, is rightly accepted as the more reliable.

223 Xen. Hell. vii. 5. 21.

224 Others read κατ' ἄντιτρας τίς Τεγέας, and Leske (Morea, vol. iii. p. 78, note) quotes the passage as τίς Τεγέας κατ' ἄντιτρας. The reading I adopt is from the Trencher edition of 1890 (ed. Keller).
a deep column, and advanced to the attack. There must be some little inaccuracy in Xenophon’s account here; for, if taken literally, it does not allow of any farther northward march of Epaminondas after striking the hills; yet we know, both from the common designation of the battle as that of ‘Mantineia’ and from the tradition about the ‘Pelagus,’ that some part of the battle was fought near the Mantineian frontier. Leake supposes Epaminondas to have skirted the hills (keeping, no doubt, along the Pallantium road) all the way from Tripolitsa to beyond Mýtika before drawing up his troops, and then to have drawn them up beneath the hills which extend northward from that point to the entrance of the plain of Kapsá (plain Alkimenedon), the whole battle being fought, according to him, on Mantineian ground. But, in the first place, so great a liberty as this in the interpretation of Xenophon seems unjustifiable; and, in the second place, Epaminondas could never have deceived the enemy (as Xenophon says he did) by taking an unwonted route if he had after all advanced along that route till he reached the narrows where it almost joined the ordinary route from Tegen to Mantineia.

A slight advance northward from near the modern Tripolitsá, perhaps as far as the hill in front of Merkóvání, and an extension of the line of troops from thence to a point near Mýtika, are the very most that can be got out of the words ‘ος πρὸς τῷ δρόμον ἔγενετο, ἐπελ ξέναθη αὐτῷ ἡ φάλαγγα’; and this view is the only one which explains the ruse by which Epaminondas put his antagonists off their guard. If this theory be correct, his extreme left wing, which bore the brunt of the battle, was engaged near Mýtika, i.e. just at the Mantineian and Tegean frontier; while the remainder of his army lay to the southward of it, in Tegean territory.

The ‘γῆλοφοι τινες’ (Xen. Hell. v. 5. 24), which commanded the enemy’s left flank, cannot be precisely identified in the almost level plain; but it is possible that they were part of the slightly rising ground northeastward of the village of Mandságara.

(v. and vi.) On the engagements of 296 B.C. (Plut. Dem. 35) and 243 B.C. (Paus. viii. 10. 5 sqq.) I have nothing to add to Leake, Morea, vol. iii. pp. 84-86.

(vii.) Battle of 207 B.C.: Polyb. xi. 11 sqq. (Leake, Morea, vol. iii. pp. 87-93).—Polybius’ account of this battle is clear and full, and is closely followed by Leake; but the battle is not one with which the permanent features of the ground had much to do. A certain ditch, by which the forces of Machanidas were thrown into confusion, played an important part in it; but it is not identifiable and probably no longer exists.

---

222 Morea, vol. iii. p. 81.

227 A ‘Graben’ is marked in Curtius’ map of the plain (vol. 1, pl. III.) and appears again as ‘Fosse’ in the Guide Jomme, being evidently marked with special reference to this battle. But though the whole plain is intersected with ditches, I can find no trace of this particular one.
SOME ANCIENT ROUTES IN THE PELOPONNESI.

The only topographical points whose position can be conjectured with any approach to certainty are the 'λόφος ὁ πρὸ τῆς πόλεως' of Polyb. xi. 11. 5 (evidently Mt. Alesius) and the temple of Poseidon. These have been already discussed (p. 82). For Ελισφασίων in Polyb. xi. 11. 6 Leake suggested Ελισφωνίων, but the suggestion is rightly abandoned in Peloponnesiacæ. Curtius, followed by some other topographers, identifies the territory of the Elisphasii with the 'plain Alkimedon,' that secluded valley being, like the Elisphanian territory, on the opposite side of the Mantineian plain to that on which stood the temple of Poseidon.

P. 579, sq.  Paus. viii, 12. 2.
FOUR FRAGMENTARY INSCRIPTIONS.

The first three of the inscriptions which follow were copied by me in 1893 at Brain-Effendi, one of the villages on the site of Tegea, whence, by an arrangement with the owners, I transferred them to the neighbouring museum at Palaea-Episkopis. The fourth, which is too fragmentary for restoration, was found by Mr. Νάκος, of Λιβαδιά in Bocotia, when preparing to lay the foundations of a house in that town in 1891, and I copied it at the time with his permission.

I. Brain-Effendi (Τεγεα). Found by Γεώργιος Βασιλίκος in his field. The inscription is on the face of a curved moulding (κεφαλή recta), about 10 in. in height, which must have formed part of a sepulchral monument of considerable size, perhaps in the form of a small heroon. The letters are from \( \frac{1}{2} \) in. to \( \frac{3}{4} \) in. in height, and are cut with some care.

\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\//\\/
II. Braim-Effendi (Tegea). Found near the preceding. On a fragment of white marble, about 1 ft. in thickness. The surface of the marble has been painted red, and considerable traces of the colour remain. The average height of the letters is about the same as in the preceding inscription, but less uniform, and the cutting is shallower. The inscription consists of a list of names, which readers may be left to restore according to their fancy. Late fourth or third century!

III. Braim-Effendi (Tegea). Formerly in the possession of Παναγιώτης Βασιλάκος at that village. On a fragment of a small herm, of which the head is lost. The ends of two locks of hair, however, appear just above the inscription. Letters from 1/4 in. to 1/8 in. in height, deeply but very carelessly cut.

ΜΕΓΙΣ
ΤΩΑΡ
ΤΕΜΙΟ
ΤΕΙΡΑΙΟ
ΝΟΚΙΑ

In spite of the variation in the forms of the letters ε and σ (Ε and Ε, Ε and Σ), the inscription is probably all of one date—possibly about Hadrian's time, when such variations within the limits of a single inscription appear to have been especially common (e.g., C.I.G. Nos. 193, 339, 2984, 2153). 'Αρτέμι is apparently a mistake for 'Αρτέμιδι, and [έ]νοκια for ένοκια. The inscription would then run thus:

Μεγιστω 'Αρτέμι(δ) Σωτεριφ [έ]νο(λ)κια.
and it may be suggested that the herm took the place of a nominal rent paid by the dedicatory party occupying a house erected within a sacred precinct or on sacred land; but I am not aware of any parallel case. The alternative is to read ενοχιος as a title of Artemis, but neither for this have we any authority.

IV. Livadiá (Lehadaia). Found by Mr. Nakos in 1891. On a block of greyish stone, 9 in. in height, and about 4 in. in width; broken at top, left side, and right-hand bottom corner. At the back of the stone the greater part of the surface is broken away, and portions of the four bottom lines only are legible. The letters, whose forms are inadequately represented in the type employed below, are about 1/4 in. high. The most probable date for the inscription is the second or first century B.C.

I give all that I was able to decipher on either side of the stone, doubtful letters being indicated by broken type. Lines 4 and 6 on the front suggest a deed of sale or a bond of some kind.

W. Loring.
The traveller riding westward from Mæri soon reaches the Gargy Chai, which is the only perennial stream running into the Telmessian Gulf, and is rightly identified by Kiporit with the overflowing Glaucus. It rises in a ridge connecting the uplands of Kyzyl Kaya with the Aigir Dagh, a partly detached lower buttress standing out to the north-west of the long mountain commonly called Eljik Dagh in the maps, of which the eastern peak is named Chal Dagh, and the less lofty western peak Shimshir Dagh.
Hence the stream runs to the S.S.E. down a deep glen, and after receiving the Nif Chai from the N.E., turns S.W. round the Kyzyl Dagh to the sea. Pliny, the only geographer who mentions the Glancus, says that it had a tributary, the Telmedius. If, as the inhabitants positively assured me, the Nif Chai is merely a tributary of the other, it must be the Telmedius. If so, the name of Telandrus, which was on the Glancus, must be given to the only ruins in the main valley, those at H-hissar, a site discovered by MM. Collignon and Duchesne, but not exactly described. It stands on the western bank of the river not far below its source, nearly due compass-west of Chai Dagh, on an isolated hill with a rapid fall to the stream, and consists of a mediaeval castle partly built of ancient blocks. In the cliffs on the south-eastern side are about half a dozen rock-tombs; originally there must have been about a dozen, but a landslip has almost covered several. On one, a temple-tomb, was a long inscription, illegible to me, in Greek letters of a good period and in a little ravine below are many ancient cut stones, including two bases of statues, one of which bore the inscription No. 4.

If the Nif Chai should be the real Glancus, Telandrus must be placed at Nif, where there are some small and apparently late remains. Telandrus is put by Pliny among the inland towns of Lycia, by Stephanus Byzantinus (who also quotes Alexander Polyhistor) in Caria. It is mentioned in the Attic tribute-lists. Ptolemy and the Byzantines do not name it. There was a Cape Telandria (St. Byz.) and an island of the same name in the gulf, 'in qua oppidum interrit,' which can hardly be the little rock of Arthoki.

Immediately to the west of the Glancus Pliny names Daedala, which is rightly identified by Hoskins with the fortress of Assar in the valley of Ineje. Fellowes, the first discoverer, calls the place 'Beenajah,' and the ruins Calynda (Lycia, p. 101). In the Doric temple-tomb mentioned by him is said to have been found the inscription No. 3, copied at Tersana. Assar seems to be marked twice over in Kiepert's map, once in nearly the true position without a name, once with the name of Daedala too far to the N.E. Hoskins' identification has been accepted with some doubt because the usually accurate Stadtmanns puts Daedala only 50 stades (about 5½ miles) from Telmessus. But its measurements westward from Daedala agree with those from Ineje (taken close to the land), if allowance be made for the usual slight exaggeration.

1 v. 27, annis Glancus defenrae Telmedium (ver. loc. Telmessum, evidently corrupt).
2 Quintus Smyrnaeius, 4. 6 (describing the burial of Glancus).
3 δικε θεόν κοιημενον φθοραν λυνεει σχεδον αει-
4 ομει δι κυρος κεκλεισει εις δυον Τελμεδουνα
5 χώραν ει λυενην, άγον η πελλίναι Αδανο κυριωταν Νομβρεις ει περιδιναν ιερον ένωρ
6 καθαμ πνιμας, τις ελευθ. φελλ ἐνθεωτερ.
Inje to Charopia (Cryn) c. 11 m.
Charopia to Kapu (Lydae) c. 4\textfrac{1}{2} m.
Kapu to the neighbouring Cape, c. 3 m.
Then to Cape Suvla, c. 7 m.

Daedala to Crya, c. 12\textfrac{1}{2} m.
Crya to Clydae, c. 5\textfrac{1}{2} m.
Clydae to Cape Pedalion, c. 3\textfrac{1}{2} m.
Cape Pedalion to the Aenon, c. 9\textfrac{1}{2} m.

Therefore 50 stades should be corrected to 100 or 115, and Daedala is rightly placed at Inje. It was always a very small place,\(^a\) though often mentioned because it happened to be the frontier town of Lycia and Caria. The boundary was ethnical, not merely political,\(^b\) for a few miles to the E. are found the Lydian inscriptions of Macri, and a few miles to the W. the Carian inscription of Charopia. Accordingly our earliest authority, the pseudo-Seylax\(^c\) (between B.C. 360 and 348), puts the frontier somewhere on the Gulf of Macri, and it is fixed more definitely between Telmessus and Daedala by the Stadiasmus\(^d\) (first century B.C.), and Strabo\(^e\) (A.D. 18): Livy\(^f\) and Mela\(^g\) (A.D. 43) imply the same boundary.\(^h\) In the year 43 began a series of administrative changes; the freedom of Lycia was taken away, restored, and taken away again. Rhodes had a similar fate. In 74 (probably) a definite arrangement was made: Lycia was joined as a province with Pamphylia,\(^i\) and Rhodes, deprived of its Peraea, lost its liberty in the same year. It must have been at this date that the frontier of Lycia was extended westward so as to include part of the old Rhodian Peraea,\(^j\) for an inscription of Lydae in honour of Sextus Marcus Priscus, procurator of Lycia-Pamphylia under Vespasian, shows that town to have been included in Lycia.\(^k\) The new boundary was probably the wide river Indus (Dolowan Chai), and so Ptolemy\(^l\) (c. 160) puts the frontier between Calinda and Caunus, and Quirinus Smyrneus (end of fourth century) calls the Lindus (road Indus) the end of Caria and beginning of Lycia.\(^m\) In Byzantine times a further extension included Caunus.\(^n\)

The mountain Daedala which Strabo places east of the town must be the Kyzyl Dagh (about 3,000 ft.; 984 metres in Kiepert).

---

\(^a\) Pliny indeed calls it oppidum, but cf. Ptolemy 5, 3, Ανίδαλα τόπος, Livy 37, 22, Daedala et quaedam alta parva castella: and Strabo p. 651.

\(^b\) Politically Daedala was the first town of the Rhodian Peraea, Strabo i, c.

\(^d\) I. 494.

\(^e\) P. 664 and p. 651.

\(^f\) Livy 37, 16, Telmessium annum, qui latus non Cariam, aliter Lyciam contingit.

\(^g\) L. 10.

\(^h\) There may have been temporary fluctuations, e.g. Alexander Ptolemy 1st century B.C. (St. Byz. a.s.) puts Daedala in Lycia, though Teldunutha was in Caria (supra), and Artemidorus (c. 100 B.C.) puts Crya in Lycia, according to St. Byz. a.s.: I suspect an error.

\(^i\) Treber, Geschichte der Lydier, p. 293 seqq.

\(^j\) Pliny (v. 27), writing in 77, still puts the frontier east of Daedala, but he often follows old authorities: cf. Dunbier, Ancient Geography ii. 491.

\(^k\) J.H.S. x. 73: No. 20 does not prove that Lydae was Lycian earlier, as the Lycians may have been on the mother’s side.

\(^l\) Pl. v. 3. Also the contemporary inscription of Ophiomos (Reiser iii. p. 113) includes Caunus.

\(^m\) Quin, Smyrn. 8, 81 ταύρα προσέχουσα πατρείς Αλέξανδρον υπερβολή, μεντηγερίας δυνα Αρκέων πηγάδα καὶ Δύνας γενεάς ἑαυτῷ τέθενται.

\(^n\) Hierocles and the Notitiae Episcopatus.
THE FRONTIER OF LYCIA AND CARIA.

The Callimache of the Stadiasmus corresponds to the harbour of Gitjek, where there are no ruins, but on the mountains behind the village there is a fort (see below), to which the name may possibly belong.

The next place named by our authorities is Crya, and since no ancient site is known between Gitjek and Kapu (Lydae) except Charopia, and the distance agrees very well with the Stadiasmus, that position, which is the accepted one, must be correct; the remains are surprisingly scanty, consisting of some traces of rock-cut steps by the landing-place, a small fragment of ancient wall (apparently not town-wall) and part of a mediaeval building. Some early importance is indicated by a number of pigeon-hole tombs, and five regular rock-tombs, on one of which is the well-known inscription in unmistakably Carian letters, usually called the inscription of 'Scopina.' This name should be erased from maps, as it is merely a corruption of Kapu (the door, Kapo in Greek), the modern name of Lydae, or perhaps rather of the isthmus below it; it can have no connection with the island of Scopel.

Crya is only mentioned by Stephanus (i.e. from Artemidorus), the Stadiasmus, Pliny, and Ptolemy; it may, however, be the same as Cryassus, a city of Caria, which was certainly in the Rhodian territory, and was supposed to be a Melian colony. I doubt the identity. Stephanus mentions two islands of the Caryans Kápuon (Καρπουν) and 'Aláda, which may be Tarsana and Ieromisi. Mr. Bent is mistaken in supposing that Tarsana contains no traces of any earlier occupation than in the days of the lower Empire; it has a small fortress of Hellenic masonry and a tomb of large squared blocks.

Lydae was discovered by Mr. Bent, whose description is very accurate. The southern point of the little peninsula, the modern Cape Suvla, which is mentioned in the Stadiasmus merely as 'the angle (ἀγκών) into the gulf,' must be the Cape Artemesium, bearing a temple, which Strabo puts immediately west of the Gulf of Giancus (p. 651).

About nine miles beyond Cape Suvla is the mouth of Garkyn Chai, a river which rises among the offsets of Gyökje-ovajik Dagh, north of Inje, and runs N.W. and W. to Kyzyl Kaya; here it turns S.W., and runs along the

---

23 The boatmen who know every inch of the shore say there are no ruins on the Ghilan or serpentine coast-hills, except Charopia.
24 Kiepert, who placed Crya here in the map in the Selecse, vol. i., afterwards changed the name to Lydae.
25 Pliny v. 31.
26 The Caryans are mentioned in the Attic tribute-lists. Cape 'Crya' in Mela is a doubtful cumbination for Cytrae; pseudo-Scelaz mentions Cape Kaphos (Millier, Geog. Gr. Min. 1, p. 73 note), converted into Kaphoos. Ptol. v. 3 writes Καφώος. It suffered from the earthquakes of A.D. 149, Selecse II. p. 118, xvii. C. Cf. p. 114, xiv. C. and p. 122. The ethnic is there Καφῶος as in St. Byza.
27 St. Byza, a.e. evidently quoting Plutarch or his authority. The two separate entries in St. Byza might easily refer to one town.
28 O.L.G. 2259; 2552: the ethnic is Kpóas or Kpóas, as in St. Byza.
29 A curious legend to this effect is preserved by Plutarch's de Virt. Mulier. p. 248. Cf. Polyaenus, Bk. viii. c. 54. Pliny's strange expression 'Crya fugitivorum' seems to refer to some legend, but hardly to this.
30 Pliny v. 31 says there were three, and puts them on another part of the coast, but this chapter is full of mistakes.
31 J.H.S. x. p. 52.
eastern side of the plain of Dolomon to the sea, receiving as tributaries the Thersakan Chai at Garkyn, the sulphurous Kookal Chai near Juma-belen, and finally the stream which drains the lake below the ancient Lissa.32

Near this river Mr. Davies discovered the ruins which he visited from Gijiek and describes as follows: "Two and a half hours from Gijiek brought us well over the ridge to a small hamlet called Thersakan. The road follows a stream which bears the same name, and in an hour more reaches the village of Garkyn-kii, almost on the borders of the Doloman plain. On the southern edge of this stream is a high round-topped hill known as Kuz, and an hour's climb from Garkyn brought us to an eminence on the N.W. slope of this hill, on which are the ruins of an ancient town. The acropolis, which is well preserved, is strongly built of good squared blocks, and has a perimeter of 357 paces; there are five gates, one of which is provided with an external stairway. From the N.E. corner a wall of rougher masonry runs radially down the hill: on the W. are traces of two outer walls parallel to that of the acropolis, and a fragment of another appears just below the S.E. corner. Remains of dwelling-houses are numerous both inside the acropolis and on the northern and north-western slopes; but a careful search failed to disclose any vestige of public buildings, built tombs or other monuments, and the only rock-tombs are of the pigeon-hole character."

There are strong reasons for believing this to be the long-sought Calynda. After Cape Artemisium (Suvla) Strabo mentions a grove sacred to Leto, and above it the town of Calymna (sic in MSS.), sixty stades (nearly seven miles) from the sea (p. 651). Pliny puts after Crya, flumen Axon, oppidum Calynda, Amnis Indus, etc.33 The river Axon, probably identical with the "Αγών,34 can only be the Garkyn Chai, and close to that stream between six and seven miles from the sea are these ruins, only on the east not the west side. Calynda derives its celebrity almost entirely from the fact that a Calyndian ship was run down by Artemisia at Salamis;35 a passing reference in Herodotus,36 and one in Polybius,37 are the only other historical notices;38 but it is said on good authority to have coined money, and, if so,

---

32 In answer to careful questioning, the inhabitants of Kyzyl Kaya, of Garkyn, and of Juma-belen independently gave exactly the same account of the course of this river, and this is confirmed by our own observations of the extensive views from Kyzyl Kaya, Kuz, and Juma-belen. No ruins nearer than Kuz are known to the people of this last village (which we reached by a road leading W.N.W. from the inlet just N. of Charkpa) except Lissa, and Allah-Dagh, where we found a single Ionic rock-tomb. For Lissa see J.H.S. i.e.
33 v. 37, 23. Probably he does not mean to put it on the coast; cf. Pharnar in the same chapter, etc. Ptolemy v. 3 does put it on the sea, but the authority of Strabo, and the silence of the Stadiasmus are conclusive against him.
35 Herod. viii. 37.
36 l. 172, talking of Cuma, he mentions the Calyndian frontier.
more imposing remains than those at Kuz might naturally be looked for Podalia, however, which also coined autonomous money, has neither theatre built tombs, nor inscriptions. Calynda was certainly in this neighbourhood, and any more important ruins can hardly have escaped notice, especially as the peasants of the district generally observe and eagerly point out the most insignificant building or tomb.

To the N. of the Thersakan stream lies another ruined fortress, confronting the one last described from the next spur of the hill-range, but smaller and less strongly situated. At one angle of the enclosure, and on the highest point of the eminence, are piled a quantity of very large, carefully hewn blocks, which have evidently been used for some purpose other than that for which they were designed, as one stone with a carved moulding has been built indiscriminately among others. The explanation may perhaps be found in the modern name of the spot—Monastir. House-remains are scattered about, but only in small numbers. G.D.41

At Kyzyl Kaya, some distance higher up the river, on a low hill are the ruins of a small town, surrounded with walls well preserved in places, and partly ancient, though chiefly 'Byzantine.' In the cliffs above are two very handsome and well-preserved temple-tombs, and a rock-tomb of the common Lycian type. Within the walls are some broken sarcophagi, and a defaced inscription.

On the summit of the steep cliffs to the N. of the valley is another small ancient town, known as Emir-tashi, on one long crest of a double-headed hill, consisting of the closely-packed walls of surprisingly small houses, of which the lower courses, built of great well-squared stones, are very perfect, though the upper part which was probably of wood has disappeared. Below the walls are many tombs, and on one Lycian sarcophagus there is a late Greek inscription.

Some miles eastward of Emir-tashi are some more ruins named, like all the places in this district, Kyzyl Kaya, but distinguished by the further name of Chukur-Hissar. This town, though still small, was a place of more pretensions than its neighbours. It covers the top and part of the sides of a long but very narrow and steep hill. Among a confused mass of house-ruins some good-sized buildings are traceable; in one place are remains of three prostrate columns, in another a white marble capital. There is also an ancient altar for sacrifice with steps, and a channel down the side. The highest point within the walls is occupied by a building which may have served for a keep. Without are a few sarcophagi, one of which, though the upper part is broken down and the great arched lid lies half buried beside it, still measures 8 feet in height and 16½ by 13 feet in area; another has a defaced inscription.

41 We were told of ruins at Kirm-kirra, apparently N.E. of Juna-heya, but they sound rather medieval than ancient.
42 'It may be noted that the people of Karkyn knew nothing of any town or village called Dolomen, though they named all the numerous villages in sight upon the plain. The title seems to be applied generally to the whole plain, and perhaps previous visitors have hastily assigned it to the residence of the kafrnaskah of Dolomen.' G. D.
Near the head of the Garkyn Chai, where a little side valley runs down it from Güjek Tash-bashi, is a much injured temple-tomb, once very handsome, and nearer the village are the walls of a castle or very small town with many sarcophagi, all broken but one, which has an illegible inscription. East of the village, which is 1½ hour above the port of Güjek, is a fort on the very summit of the mountains, small but well built of good squared blocks.

I could hear of no other ancient remains in this almost unexplored district, of which the accompanying map, based on Kiepert, will give a fair general idea; though it makes no claim to accuracy, being constructed from compass Bearings and time-measurements noted during two journeys in 1891 and 1894.

W. Arkwright.
GREEK INSCRIPTIONS FROM LYCIA.

1. At Lydae, on the western edge of the horizontal slabs of a tomb, on the side of which is Mr. Hicks' No. 12.¹

The lines were alternately coloured red and dark blue, the sixth and seventh being both blue. Most of the inscription was covered with a chalky deposit, which came off under the blows of a hammer. Unfortunately the pigment occasionally showed a tendency to come off with it, and the carving was very shallow. The operation was slow and I had to leave it unfinished. It seems odd that an honorary inscription should have been carved on an old tomb.

This inscription was discovered by the Austrian expedition of 1892. I have published it because my reading includes somewhat more than theirs.

6. At Telmessos, on a rock-tomb, on which occurs also the No. 107 of Fellows.

Letters 018m.

From Kaba-agach, a village on the most frequented road between Makri and the southern Xanthos valley, a track leads up a steep ravine in a W.N.W. direction to a plateau, where it reaches a tiny hamlet after about an hour's climb. Not far beyond this rises to an elevation of 2,000 feet a wooded hill, known locally as Assar-jik, on the summit of which is a considerable mediæval fortress. On its N.E. slope are several sarcophagi, the most part broken and overthrown, on one of which was the preceding inscription. Further search revealed traces of a ring-wall, double on the N.W. side, and apparently of dwelling-houses. In a depression between this and a higher hill on the west is a single Lycian rock-tomb without inscription, and beyond this fragments of an ancient sustaining wall running along the side of the second hill. We followed this wall and found on the ridge behind it further
to the S.E. the ruins of a building composed of large squared blocks: it seemed too small for a fort, and its purpose remains for the present uncertain. In descending northward to rejoin the road to Makri we noticed further traces of ancient inhabitation. We may conclude provisionally that the name of this little town was Alosa, though the name is not mentioned by any ancient writer, and the evidence of the inscription is of course inconclusive.

10. At Yakabagh, on a cylindrical stele said to have been brought from Pinara.

\[

Letters '032a. I cannot throw any light on the phrase ἐκ γένους, which however may perhaps be found elsewhere. I imagined τοῖς ἐκ γένους to mean 'his family.' But Mr. G. F. Hill suggests τοὺς παντάρχοντος ἐκ γένους ('the hereditary παντάρχον,' whatever he might be). He kindly informs me that παντάρχον occurs in one of the inscriptions copied by Birch from Daniell's MS. But thus ἐκ γένους will be equivalent to ἐκ προγ'νων; and this view, I think, is almost certainly right. Mr. Hill further observes that I may have misread the last line, which might contain a numeral (e.g. πεντακισ-χείλεια). I took no impression, but felt no doubt at the time.

12. At Xanthos, on the narrow side of a large stone, possibly a lintel, in large well-cut letters.

ΚΑΙΔΕΚΝΟΙΚΙΚΑΙΤΙΙΙΙ
Most of the letters are rather uncertain. We should probably be right in restoring the names of Σωτηρίως and Ιππόλοχος, and the local adjectives Πιναρίς and Παταρίς.

About half-way between Sidek-Yaila and Sidek-Sahili a sarcophagus above the road has been discovered by the Anatrians. On examination it proved to be surrounded by a ring-wall, which encloses the top of a small eminence, but no other ruins were to hand except the lid of a similar sarcophagus.

It is curious that Spratt and Forbes should have missed the village of Schnert-Sahili, which lies on the road from Sidek-Sahili to Andifilo, at two hours' journey from the former. Their track on the map appears to pass right over its position.

17. Near Belenkli-Skelesi, on a sarcophagus.

μεθερ έξος | κηδεύσαι η θεία θυσία Φελλείτων τό δήμω <Γ.

This sarcophagus lies with three others in a little valley, which faces from the western end of the bay of Assar across to Alimetaria. We reached it by a track which passes under the acropolis at the south end of the harbour of Sevedo (which Prof. Remundorf now identifies—correctly, I am convinced—with Phellos), and roughly follows the coast-line. About a mile eastward of these sarcophagi a hill rises from the shore of the bay, on which are the ruins of two square tower-like forts of ancient masonry, very carefully hewn and laid. Sarcophagi were frequently seen in the neighbourhood, but those which we could examine had no inscriptions. We heard afterwards that there were extensive ruins at Belenkli itself: the report may or may not be worth investigating.

18. Near Belenkli-Skelesi, on another sarcophagus.

* Rem. vol. i. p. 126.
* Anzeige der philosophisch-historischen Gesell. (Vienna), No. xviii. (July 20, 1899).
The names of the third son and the deity to whom the fine was consecrated are very uncertain. It is interesting to note that Phellos extended its sphere of influence so far.

ΤΟΝΤΑΦΟΝΚΑΤΕΣ ΚΕΥΑΣΑΤΟΟΣΕΤΗΣΚΑΡΟΑΔΙ
ΟΣΕΑΤΩΚΑΙΤΩΥ, ΩΛΩΔΕΜΗΔΕΝΙΕΣΕΣΤΩ
ΘΑΥΑΘΗΛΟΝΙΟΣ, ΤΕΙΔΕΜΗΘΗΘΕΙΩΤΩΤΥΙΝ

ΑΝΓΕΛΙΑΣΟΥΣΗ, ΑΝΤΙΩΒΟΥΛΟΜΕΝΩΝΕΠΙΤΩΜΗ ΣΕΙ, ΑΙΑΜΑΡΤ, ΛΟΣΕΣΤΟΘΕΟΙΣΟΙ...ΙΟΙΣ.

The name Osetes see above on No. 6; the name of his father is rather uncertain, and at first appeared to be Καρλάδιος. I cannot find elsewhere any instance of a fine made payable to a περιπτόλος, which, however, might conceivably be the title of a magisterial body. Mr. Rother suggests ναοπόλος, which would presumably mean the treasury of the temple service. ναοπόλος is quoted in the Theaurus from Alcaeus Strabonis, 9, p. 467, and ναοπόλος occurs in Hes. Theog. 991. Letters '027.

A track leads southward from Bajelah, on the road between Andīlo and Yaghūn, up the range of hills which forms the southern boundary of the Cyaneae plateau. After half-an-hour an eminence on the right shows the ruins of a tiny fort on its summit and other buildings consisting of small unsquared blocks. From this point a stile ascent of less than half-an-hour leads to a pass containing three or four sarcophagi and a single rough rock-tomb. A few house-ruins and another sarcophagus were found on a little hill to the left. A little further on stands another group of some half-dozen sarcophagi, one of which bears the inscription given above. The track here
110 GREEK INSCRIPTIONS FROM LYCIA.

bears to to the right, and in a quarter of a mile reaches a poor hamlet called Kyran-Dagh, at the foot of a hill on which are three sarcophagi and a fortress built of large squared masonry and measuring about 70 yards by 18; there are also ruins representing six or seven dwelling-houses. Opposite this fortress on the S.W. is a higher hill of conical form called Chardakly, on the summit of which stands a fort built of small rough masonry.

There is some difficulty in reconciling this with the account given by Dr. von Luschan of a citadel which he discovered near Chardakly. If his Chardakly is identical with ours it seems strange that he should have passed it without finding this monument, and perhaps stranger that the natives, whom we questioned closely, should have known nothing of the ruins which he visited. On the other hand his acropolis, as shown on the map, almost covers the position of Kyran-Dagh, and the identity of name has to be accounted for. As Chardakly only means 'camping-place,' the latter difficulty is perhaps not very considerable; and on the whole I am inclined to think that his position must have been somewhat east of ours.

As to Tindas, it must remain uncertain for the present whether it is identical with our acropolis or that of Dr. von Luschan or Tässa, or none of these. The literary authorities are quite silent.

20. At Cyaneae, on a stone built into the wall within the N.E. side of the city.

| (ε]δὲ τῆς θάψης φιλ[ή]σε τῶν | Λειμυρέων βῆμα [φ].

Letters Θ:42m. I do not find the spelling Λειμυρέων elsewhere. I did not cast the first four lines, thinking them too much weathered to be legible; but judging from the latter part I fancy the whole might be recovered.

This sarcophagus stands with half-a-dozen others on the second 'fortified eminence' mentioned by Spratt and Forbes. The remains are not extensive, but include numbers of large squared blocks and portions of a moulded step, which probably supported a large built tomb. It seems then that the stronghold, which commands the pass admirably, was connected with Limyra.

30. At Haji-Veligry (Korydalla), on a stone built into the wall of a hut.

VI Vol. I. p. 142, 'Before we commenced our descent,' &c.

H.S. VOL. XV.
This inscription had been partly covered with plaster and our endeavours to clean it were only partially successful. The execution is rather careless and the letters vary from 0.022 to 0.013m. I read the name Xandios in an inscription found between Andifilo and Balijah, where however the Austrians have ΝΕΑΝΑΡΟΥ for ΔΙΕΞΑΝΔΙΟΥ.

31. At Rhodiapolis, on a half-buried rock-tomb.

Ταύτας τὰς θήκας κατασκευώσατο Ἀρχέτιπλίς | Ἰμβριλου τὴν μὲν ἔσω ἐσώτερο τὴν δὲ ἔξω τοῖς ἑγγίνοις | μὴ ἔφησον δὲ εἰς τὴν ἔσω ἄλλον μηθένα παρεντεθήναι μηδὲ ἅδεκήσας | τὸν τάφον παρευρέσει μηδέμερα | εἰ δὲ μὴ ἀμαρτσωλὸς ἔστω θεοί πάντες καὶ τάσσαις.

The letters are very neatly cut. The tomb is divided by an inner front into two chambers, like many other house-built rock-tombs.

It may be useful to add a list of coins purchased in Lycia. Where the provenience is not stated, they were procured at Telmessos or Antiphellos, and may generally be assumed to have been found within a radius of, say, a dozen miles from those ports.

and a number of small Ξ; not exactly identified. Also, above a hundred Roman coins, none of which are earlier than the empire.

Gilbert Davies.
INSCRIPTIONS FROM LYCIA AND PISIDIA COPIED BY DANIELL AND FELLows.

The Library of the Department of Greek and Roman Antiquities in the British Museum possesses a manuscript volume containing a large collection of notes on the antiquities of Lycia made at different times by Samuel Birch. A considerable part of the volume appears to be a transcript from the papers of E. T. Daniell, the scholar who accompanied Spratt and Forbes on their travels in Lycia in 1842. Daniell copied a large number of inscriptions in Lycia, the Cibyratia, Pisidia and Pamphylia, some of which were published by his fellow-travellers in the second volume of their journal. It is particularly unfortunate that Daniell did not live to publish the results of his labours, as they have clearly suffered very seriously at the hands of others. What became of his original MS. is not known, only one page apparently in his hand remaining incorporated in Birch's volume. Birch's copies must be received with a considerable amount of caution, particularly as regards the forms of the letters. At the same time there is much that is worth publishing, and I have to thank the Keeper of the Department of Greek and Roman Antiquities for his permission to publish what follows.

The volume has of course been seen by various scholars, who have made use of it in various ways. Some extracts from it were made by Benndorf, and references will be found to it in the Notes to the second volume of the Reisen in Lycien, etc. The inscriptions here published are selected from the hitherto unpublished ones contained in the MS. I have been careful to avoid to the best of my power the repetition of anything that has already been published.

The references are to the present paging of the MS. volume, which apparently does not now correspond exactly to that given by Benndorf; to Fellows, Account of Discoveries in Lycia, being a Journal, etc. (1841); Spratt and Forbes, Travels in Lycia (1847); Le Bas-Wadlington, Voyage Archéologique en Grèce et Asie Mineure (1870); the Corpus Inscri. Gr.; Lanekeorontski, Vitæ de Pamphilie et Pisidie (1890-93); and the Reisen in Lycien, etc. (1884 and 1889).

A few pages included in Birch's volume include transcripts from copies made by Sir Charles Fellows in his third expedition, and there are two pages in Fellows' own handwriting. Some of the inscriptions found on these pages have been included in what follows on the same principle as those owing to Daniell.

There are a few fragmentary inscriptions in Lycian characters, copied by Fellows, which have not been reproduced here.

ἐπὶ τῶ(ι) τρῖτῳ(ι) μέρει ἐκτὸς | εἰ μὴ τιν ἐνηργαθος ἐπιτρέψω.

Σπάδιος. Cf. the genitive ᾿Απτάδιος (Reiss ii. No. 27, and note 5).

ἐαυτῷ(ι)—αὐτοῦ. I have throughout, in cases like this, placed
the smooth breathing over the shorter form of the word. The lapidary would
hardly have used ἐαυτῷ and αὐτοῦ in juxtaposition.

Inscriptions relating to a G. Licinius of Oenoanda and his family are given in Reise ii. p. 179, Nos. 226—228. See p. 181. He belongs to the same tribe, Sergia, but the names Φλαμβινός, Κρατιππος, and Ἰάσων are not mentioned. It is hence uncertain whether the two G. Licinius are more than relations.

A second transcript by Birch, apparently from another copy made by Fellows, on p. 375, presents no important variations.

τῷ(ι) Διὸ | Σολυμῶ(α) (δημαίρα) μν'.

The form Σολυμῶς for Σολυμᾶς is unusual; it occurs again on an
inscription on p. 493. This, for the same reason as the preceding, may be
conjecturally assigned to the neighbourhood of Termessus. The fine here
(10,050 denaria) is just half a sum recorded in another inscription from Termessus (p. 481, and Lanckoronski, Villas ii. p. 218, No. 83). We therefore have MBP which the editor explains as 12,100. But it may also be 20,100 (see Larette in Müller's Homer, i, p. 547), and the occurrence of half that sum here is in favour of this interpretation, although the sum of money is not devoted to the same purpose in both cases.

At Athens is an inscription (C.I.G. i. No. 904) reading Τροκώνδα(ς) ἡρωι
Μολιανός Τερμπσέες. A Κλαύδιος Ζηνοδοτιανός also appears at Hier-
apolis (C.I.G. iii. No. 3922). A priest Τ. Κ. Φλόρος is mentioned at
Termessus (C.I.G. iii. 4366 e. Lanckoronski ii. p. 224, No. 128).

Eleuthera is a form of Artemis comparable to those known at Ephesus
and Perga. She is represented on the coins of the Imperial period at Myra
The deity here mentioned is well known from inscriptions and reliefs (see A. H. Smith in J.H.S. viii. (1887), p. 238 and Lanckoronski ii. p. 9). He is represented mounted, riding rapidly, with chlamys flying behind his shoulders, and brandishing in one hand a javelin, a club, or a bipennis. The head is in some cases radiate. Full descriptions of these reliefs are given in Bull. Corr. Hellen. iv. p. 291 ff.

A congener of the θεὸς σάξων seems to be Kakasbos (see Lanckoronski, Lc., Drexler in Roscher’s Lexicon, and Petersen in Reisen ii. p. 3). Mr. W. Arkwright informs me that reliefs of the kind figured by Petersen are found in quantities at Makri. Under one at least of the horsemen seen by him was a heraldic arrangement of two snakes with an uncertain object between them. From this symbol, and from the fact that the reliefs come from the cemeteries, it is clear that Kakasbos is a chthonic deity.

The coins of two places in Lycia offer illustrations of a mounted deity evidently related to the θεὸς σάξων.

(1) Arycanda:

(a) Small bronze of the third or early second century B.C. 

Rev. Male head r., radiate. 

Rever. Apollo nude, leaning on column, and holding bow over lighted altar. AP in monogram.

(b) Imperial of Gordian III. 

Rev. Horseman wearing short chiton with sleeves, chlamys flying behind his shoulders, trousers, and radiate Phrygian cap. In his right hand he brandishes a club. (See Figure.)
Arycanda was celebrated for the worship of Helios. The Schol. ad Pind. 
Ol. vii. 33 says: év Άνωθεν δέ εστιν πόλις Ἀρύκαιδα καλουμένην, ἣν πλησίον 
ιερον τι χρησίν, ὃ πρώτερον μὲν Ἐμβολος ἐκαλεῖτο διὰ τὴν θέσιν τοῦ χωρίου-
έκ γὰρ πολλῶν καὶ πλατείων τῶν παρακείμενων πέτρων εἰς ὄξυν λήγει μέρος 
ἡ χώρα; νῦν δὲ προσομοιάσται Τρειρης ἀπὸ τῆς αὐτῆς αἰτίας, ἐπεὶ ὀδυσσέ 
πλοίῳ προσέκοψεν η ἥθεσιν τοῦ τόπον. ἐπεὶ οὖν μαλίστα ἐν τούτῳ τῷ τόπῷ 
θρησκευτήριῳ ἐστιν Ἡλίου κ.τ.λ. The radiate head of the type of the 
imperial coin symbolizes a solar character; and the same deity who is there 
figured must have suggested the types of the autonomous coins. Cf. the 
solar type of the θεός σώζων at Adalia (Bull. Corr. Hellen. iv. p. 293, No. 4), 
and the radiate head on the coins of Themistion in Phrygia.

(2) Choma:—

Imperial of Gordian III. Rev. Horseman wearing a short tunic, chlamys, 
and Phrygian cap; but not radiate, similarly brandishing a club.

The above evidence seems sufficient to establish a connection between the θεὸς σώζων in some of his aspects, and Helios ἔφυτος (see Lanckoronski, 
loc. cit.). It is possible that the club is here also a solar symbol of oriental 
origin, and that this deity bears it for the same reason as the sun-god 
Hercules.

With the Kakasbos-types may perhaps be connected the helmeted rider 
on the coins of Isinda and Panemoteichos in Pisidia. He is armed, on the 
coins of the former place, with a spear, and rides to the right, accompanied 
by a snake. In a few cases he appears to be attacked by the latter, but in 
the great majority it seems to be merely an adjunct to the type. A snake 
also occurs on the late Imperial coins of the same place as an adjunct to 
the type of a female figure seated on a throne nursing an infant (not Isis and 
Horus; s. Drexler in Num. Zeit. 1889, p. 201). These two types then would 
seem to be chthonic. At Panemoteichos the horseman is represented without 
attributes, and with both hands engaged with his horse, much as on some of 
the reliefs already referred to.

I append an alphabetical list of the more interesting names occurring in 
the inscriptions which are not included in this selection:—

'Αρτείμας. Acalissus, p. 329.
Λύρηλος 'Αλεξανδροῦ 'Απατιώνος τοῦ 'Αλεξανδροῦ. Xanthus, p. 434.
Λύρηλος Τεμεόθεος (= Δήμωες Ἡθομόνος of C.I.G. iii. 4366 f.).
Ternessus, p. 298.
'Αὐράς. P. 494.

G. F. Hill.
ON TWO TERRACOTTA FIGURINES.

[Plate IV.]

Among the recent additions to the collection of terracotta figurines in the British Museum are two which I am permitted to publish by the kindness of Mr. A. S. Murray.

The first (Fig. 1, Plate IV.) was found at Myrina in Asia Minor and represents a youthful winged male figure, leaning on a pillar and burning a butterfly over the flame of a small altar at its base. This statuette is of very good workmanship, every line has been carefully retouched, and drapery, wings and hair are so disposed as to form a background for the figure, which is entirely nude with the exception of a chlamys fastened on the right shoulder and thrown back over the left. The full soft face is framed by long curls; the wings, each feather carefully indicated, are as usual placed high on the shoulder and serve to throw the head into high relief, while the curvaceous pose of the body are further emphasized by folds of drapery added, for greater effect, behind the right side and thigh, after the figure was taken out of the mould, as is shown by a similar figure of very rough workmanship which has no drapery on that side and has not been retouched. The attitude is a familiar one,—the youth is leaning carelessly with crossed feet against the pillar on which his left arm rests, but,—and herein lies the interest of the figure,—with his left hand he is holding a butterfly over the flame of an altar in front of the pillar, while the right hand is held up to his face, apparently to shut out the sight of the victim’s sufferings, though to judge by the executioner's expression he was not affected, otherwise than pleasantly, by his occupation. The attributes of the male figure and his occupation force us to conclude that we have here some allusion to the relation of Eros with Psyche, but the Psyche myth, as we know it, had no literary existence until Apuleius gave the names of Cupid and Psyche to the hero and heroine of his charming

8 Height, 8½ inches; base, cast in one with the figure, square; feet, square; back, roughly modelled. Traces of pink colour on the chlamys, of green on the altar, and of brown on the hair. Flakes of white adhering to some parts of the figure. Terracotta Room, case 3.

9 Height, 8 inches, no traces of colour; base square, with signature ΑΡΤΕΜΩΝΙ on the back. Brit. Mus. Terracotta Room, case 26. The occurrence of the artist’s signature on the rougher of two similar statuettes is noted by MM. Potter and Reinach, Requêtes de Myrines 1, 186, 196, for which see also further examples of this artist’s work. Similar figure in Berlin (Antiquarium) inscribed on base ΑΡΤΕΜΩ-ΝΟΣ. Traces of pink on chlamys and rim of altar, and of blue on the pillar.
version of an old folk story (Met. iv., vi.—viii.), and this, though the basis of all later representations, had of course no influence on classical art. It is therefore only valuable as showing that in his day (second cent. A.D.) the two names were so indissolubly linked together that they could be fittingly given to the actors in a passion of true love, for there is little in common between the Psyche of Apuleius and the Psyche of classical art except their union with Eros. The former is a wingless mortal maiden persecuted by Aphrodite on account of her beauty, the other is the winged companion of Eros; she seems in fact to be a creation of art, not of literature, called forth by the artistic necessity for a female counterpart of Eros; hence she has wings, but these, as shown in the earliest representations, are bird wings. In this winged companion of Eros, literature, aided by the Platonic conception of a winged soul, may have seen the embodied soul (ψυχή) of man, but we cannot prove that she had any distinctive name until she appears with butterfly wings which were obviously given to her because of the double meaning of the word ψυχή. These afterwards became her distinctive attribute and the butterfly was even substituted for her—but all three forms appear on Pompeian wall-paintings, thus showing that the earlier conceptions were not superseded. In post-Christian times Psyche, both as maiden and as butterfly, became the emblem of the immortal soul, and had an independent existence in art, but such representations are of course valueless for the purposes of the present note. The three different forms under which Psyche is represented seem to be the natural outcome of the changed conception of Eros. In the fourth and succeeding centuries he is no longer the great god, 'Eros ἀνικατε μῦχας, of Sophocles; two subordinate traits in his character are brought forward, and insisted on, to the exclusion of all others—the mischievous boyish side and the passionately erotic one. His absorption into the Dionysiac circle helped to intensify this latter, and his winged companion became Psyche, the maiden with butterfly wings, whose existence was so merged in his that nothing but suffering inflicted by him, or joy shared with him, had power to move her. On the other hand the mischievous boyish Eros would naturally be represented with the butterfly, playing with it, teasing it, torturing it, for which latter purpose the torch he often carries is a useful and obvious weapon, and there are at least twenty authentic gems which show an Eros burning a ψυχή over a torch; in some of these in sport, but in others he is weeping bitterly over a task imposed on him by some outside force. This is the rendering adopted in the two most important monuments, a sarcophagus in the Museo Pio Clementino and a crater from the Palazzo Chigi. In the former two weeping Erotes hold a butterfly between them over two torches which rest against a small altar, and in the latter an Eros standing on a

7 Zoschi, Abb. Plate IV. 9.
8 Zoschi, f. v. 13, 14.
pedestal holds a butterfly over a torch with one hand and wipes away his tears with the other. Into these an idea of suffering and purification, possibly derived from the Dionysiac circle, has crept,—the suffering Love inflicts reacts on himself even though he is only an Amoretto.

The terracotta from Myrina differs from both these monuments and from many of the gems in several points; the Eros is not an 'Amoretto,' he is a youth, he is burning the butterfly deliberately over an altar not over a torch, and finally, if we may not lay too much stress on the face of so small a figure, the whole pose of the body proves that he was perfectly indifferent to the fate of his victim and barely interested in it. This indifference very much simplifies the interpretation of the figure; Eros is tired of his playmate and destroys her; hence there is no idea of purification by suffering unwillingly inflicted.

The rendering is not one that the coroplast would be likely to invent for himself—the butterfly, the altar, and the uplifted hand are all part of the mould—he may have misinterpreted his model, for the pose and the uplifted hand are at variance, but we may fairly infer that Meleager had something of the same kind in his mind when he wrote:

\[ \tau\nu \pi\nu\nu \nu\chi\nu\nu \nu\chi\nu \nu \nu \pi\lambda\lambda\nu \kappa\alpha\nu \nu, \fbox{\text{\nu\nu}} \text{\nu\nu} \text{\nu\nu} \nu E\nu\nu\nu \nu \kappa\alpha\nu \nu, \nu\nu\nu\nu, \nu\nu\nu, \nu\nu\nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \n
distinctly indicated under the thin tissue of the hood, while the shut eyes, muffling veil, and the boots carried, not worn, by the figure, all convey a suggestion of secrecy and silence. The costume is unusual, the full-sleeved tunic is generally worn by Asiatic divinities, such as Atys and Adonis, or by Amoretti masquerading as such. The figure is so clumsy that it could hardly have been imported and is more likely to be of local manufacture; though I have not so far found any local legend in connexion with Eros which would account for this unusual presentment of him, beyond that general impression of his noiseless power to which, as Mr. Murray reminds me, Meleager also gave expression when, appositely enough, he wrote:

υλλ' ιθι, δυσνίκητε, λαβών δ' ἐπι κούφα πέδηλα
ἐκπέτασον ταχυὰς εἰς ἐτέρον πτέρυγαν.

*Anthol. Pal.* v. 179.

C. A. HUTTON.
THE TEXT OF THE HOMERIC HYMNS: I.

This article is a sequel to the text of the Homeric Hymns published by the Clarendon Press in the year 1883. For that edition it was my duty to write a preface, which under the circumstances did no more than enumerate the manuscripts and summarize the views as to their relations held by the principal writers. Since that time I have studied the subject of the tradition of these Hymns at greater leisure, and I now present such conclusions as I have been able to attain.

The reviewers of Mr. Goodwin's edition, while indulgent to the book as a whole, took exception to our neglect of modern criticism, the few conjectures that had been inserted in the text, and the scanty record of others, usually accepted, in the notes. As this circumstance, so far as it depended on myself, was the fruit of conviction, and since I have followed out the principle upon which I then acted more at length in this article, I may be allowed to spend a few words in explanation of the position which in these matters I take.

The Greek classics have been read, studied, and edited for above four hundred years; the simple and easy corrections that the early editors, Greeks and Italians, made in their texts have been followed by the more learned but of necessity less and less certain attempts of Frenchmen, Dutchmen, Germans, English, who have provided every ancient writer with an accumulation of alternative readings which exceeds in bulk his own words. The past and present ages of scholarship have been generous in accepting these conjectures, partly from a natural desire to present a currently legible text to the reader, partly from an a priori theory as to the depravation of the ancient books that have come down to us. The growing familiarity of the new generation with the circumstances of mediaeval scribes, and the methods by which MSS. were produced, and, in especial, the discoveries of a considerable number of early fragments of papyrus in which ancient texts appear in materially the same form as that in which the first printers received them, have made it an open question whether the hospitality that has been extended to these conjectures of four centuries be not too wide.

It may be said at least that the scholar who proposes to produce a new text of any of these much-edited authors must justify his undertaking (after he has collected and arranged the existing documentary evidence) by passing through the narrowest of sieves the conjectures that have held the field and sold themselves as genuine ware for so many generations. I will state my
own opinion that, whoever be the author that is taken, the percentage of tolerable conjectures on him will be found to be very small indeed. Ignorance of language, ignorance of the usage of writing and of MSS. on the one hand, and the sheep-like acquiescence of editors on the other, have produced and perpetuated a crowd of *monstra* which overlie the words of all the ancients, and of the minor and less-read writers among them in particular.

To lay down the canons that determine a good emendation is not an easy task. I will content myself with stating one principle, not the only one, but that which is in most danger of being overlooked, namely, that no emendation is certain the passing of which into the actual documentary reading cannot be explained according to recognized graphical laws. If this condition be unfulfilled, not the most brilliant or witty substitute for the text can be accepted. The datum, the evidence given by the MSS., is that from which we start, and to which we come back; to depart therefrom is to compose, to rewrite the author, to write better than the author. We are tied by the document, and within the radius of graphical change about it lies the field for our invention.

How few conjectures are satisfactory, if this rule be strictly applied, is manifest, and it will be said that to admit the rule is to reduce the classics in many cases to a meaningless series of syllables. We may allow that much corruption has taken place which does not come under any definite case of permutation of letters. Such corruptions however, though their detection may be morally certain, do not admit of positive proof; they are suggestions not substitutes, and their proper place is in the commentary, not, unless we are to draw our facts of Greek from tainted wells, in the text.

In editing the portion of the Homeric Hymns for which I was responsible, I followed this principle, and thought myself deserving well of the author if I stripped him of his false skin of Batavian, Teutonic and British accretion and presented him, his wounds and sores clearly indicated, to the critical public. It has been said that even so a larger selection of conjectures should have been offered beneath the text. I admit that the amount of previous labour that should be retained and exhibited in an edition is a point upon which opinions may vary; but personally I am disposed to maintain that a bad conjecture is best soonest buried, both out of consideration for the author of it, and also that the reader's interest and critical sense may not be dulled and blunted. To take an instance—can anything be more disheartening and stultifying, and at the same time more intrinsically worthless, than the vast congeries of conjectures in the appendix to Weicklein's Aeschylus? If the classics are to continue to be studied with effect, the student's path must not be blocked with this dead matter of the past. A rigorous selection must present to the reader such suggestions as are probable, interesting, and helpful. The rest an editor will seek where they lie buried. In Mr. Goodwin's edition therefore the absence of a record of conjectures is to be taken to imply disapproval of them. My grounds for such an opinion are put out in the following pages.

This dissertation is so arranged that in the first part the manuscripts are
described, arranged in families and traced to archetypes. In the second the relations of these archetypes are investigated, the history of the text taken back to its furthest point, and incidentally many passages wherein tradition varies discussed. In the third part such conjectures as are at hand to the writer are offered on lines where the MS. testimony is unanimous. That these conjectures fulfil the canons I have indicated not even a critic will expect; they have at least this defence, that they are suggestions in a commentary, and do not in a printed text pose as the transmitted document.

I.

The Homeric Hymns are contained in twenty-six MSS. now extant. For a detailed description of them I may refer to Mr. Goodwin's edition. I here give a list of them according to the letters by which they are quoted. All except M (x. xiv.), Γ (x. xvi.) and G (x. xvi.) are of the fifteenth century.

A  Paris grec 2763.
A†  Athous. Vatopedi 587.
B  Paris grec 2765.
C  id. 2833.
Γ  Brussels. Bibliothèque Royale 11377—11380.
D  Milan. Ambrosiana B 98 sup.
G  Vatican. Regina 91.
H  British Museum. Harley 1752.
K  Florence. Laurenziana 31, 32.
L  id. 32, 45.
L₆  id. 70, 35.
L₁  id. 32, 4.
M  Leiden. (Mosequesias) 33 H.
Mon. Munich. Royal Library 333.
N  Leiden. 74 C.
P  Vatican. Palatino grec 179.
II  Paris grec suppl. 1095.
Q  Milan. Ambrosiana S 31 sup.
R₂  id. 52 K ii. 14.
S  Vatican. Vaticani greci 1880.
V  Venice. Marciana 456.

Γ was written by Aristobulus Apostolides, E by Giorgio Valla, L₆ and R₂ by Giovanni Scutariota, L₆ by Giovanni Rhoso, T by Constantine Lascaris in the year 1464. G is a copy of the editio princeps of 1488. L₆ and V present the Hymns in company with the Iliad and Odyssey, M (in its present
state) with the Iliad only; the remainder include them in a sort of corpus of hymnographers and cognate literature, such as Callimachus, Proclus, Orpheus, Musaeus, the Batrachomachia, and parts of Hesiod, Phocylides, Theocritus, Pindar.

Collations of all these MSS., with the exception of At, Mou, and T, were made by or for Mr. Goodwin. Since the appearance of the edition the readings of the Madrid MS. have been published by E. Bethe, Hermes, 1893, p. 522 sq. The collation is, by Bethe's own account, incomplete; but the information is very welcome and throws a great deal of light on the family. The acute guess of Hollander (Hermes, 1891, p. 170 sq.) that the Matritensis would turn out a close connexion of E is fully confirmed. The position of the MS. is discussed further on in this article. The remainder of Bethe's paper is a repetition of the notions of his predecessors.

The readings of the Athos MS. have been published by Professor Ingram Bywater in the Classical Review, October 1894, from a collation by Professor M. Constantinides. See infra, p. 140.

I have had an opportunity to re-examine the two Modena MSS. E and J, and below (pp. 160—1) I give a list of wrongly-reported readings. The blame for these errata falls upon myself, for my collations of these MSS. were used for the edition.

The critical question of the Hymns has been discussed in the following works:

E. Abel, preface to his edition, Lipsiae-Pragae, 1886.

More recent work upon these poems has not touched the subject of the manuscripts. In general, the views of Hollander may be said to be established: Mr. Goodwin agreed with them, and Professor Ludwich has given his assent (Index Lec. Regim. 1890, p. 4). In points of detail I differ often from Dr. Hollander, but my obligations are none the less great to his admirable and illuminating treatise.

M

This manuscript, known as M because it was found at Moscow (I will not repeat the familiar story), and now marked 33 H in the public library at Leiden, is a book of fifty pages, written according to general agreement in the fourteenth century. The pages measure 293 by 210 millimetres, there are two columns on each page, and about twenty-five lines to a column. The hand, as the facsimile in Mr. Goodwin's edition shows, is clear and

1 Which will be found in Matthiae's words in Goel's Catalogue of the Leiden Library, p. 9.
regular, the material is paper, which has now come to have a brownish colour; and is soft and fragile. Size and writing taken together, the book is above the average of fourteenth century MSS. The sheets are fastened in quinions, an arrangement not unusual at all periods of minuscule, but most frequent in MSS. written after the fall of Constantinople. The book has a well-marked character, and I do not remember to have seen another that exactly resembled it; at the same time its peculiarities are not sufficient to support a conjecture as to its place of origin.

The quinions are signed back and front in minuscule letters exactly in the middle of the bottom of the page. The present state of the book is as follows:

Quiones.
(1) f. 1 r. The numeral has gone. Inc. Iliad Θ 435.
   f. 10 v. There are the remains of some sign, but not an iota proper.

(2) f. 11 r. 1α.
   f. 20 v. 1α'.

(3) f. 21 r. 1Ω2.
   f. 30 v. 1Ω'. Expl. N 134.

(4) f. 31 r. No sign. Inc. καὶ οἱ ἀναστήσουσιν ἄγαλματα πόλλα ἐν νησί (h. Dion, i. 1), and on the same page h. Dem.
   f. 39 v. 1Ω'. This gather consists of only nine leaves; the last leaf, 39 v., is only half a sheet and is glued to the back of the quire. The first leaf therefore of the outside sheet has perished.

(5) f. 40 r. 5α: 5ε.
   f. 49 v. Sign wanting.

(6) f. 50 r. and v. Sign wanting. This single leaf is glued at the back.
   On the recto expl. h. Herm. xviii. 4; the verso is blank.

From this table it appears that the nine first quiores of the MS. are missing. It is natural to suppose that they would have contained the Iliad down to Θ 434, and as we have a statement, resting on information given by Matthai to Heyne (ed. Iliad I. xiii., xiv., III. xc), that an MS. containing exactly this amount of the Iliad exists or existed in the Imperial College at

* The former of these two signs is placed exactly in the centre of the lower margin of f. 40v, so that the number 5 which was written afterwards had to be put somewhat to the right. The sign 5 is an equivalent of the somewhat more frequent 5, and when applied to a quire denotes 5. There can be no doubt that it was marked on f. 40v with the purpose of signing the gather before it was filled. It might therefore be supposed that it was part of another system of signatures, and this of course would be of great importance in determining the original state of the MS. As however there is no trace of any other such figure, before or after, and the figures 5α, 5β, etc., in the gathers that precede occupy exactly the middle of the margin, I cannot think that 15 has anything to do with the composition of our MS. Possibly the gather had been numbered to form part of some other book, but from some accident was left over, and used up for the MS. of Homer. Such an explanation at least is suggested to me by the juxtaposition of the two numerals.
Moscow, it is an obvious conclusion that this MS. and M are parts of the same book. Next, the sixty pages that are at Leiden have lost the first page of quire a', and the whole of a'; this appears clearly from the signatures. Accordingly in M, as it was originally, there stood between N 134 and the first line of the fragment to Dionysius eleven leaves; eleven leaves, that is twenty-two pages of two columns of twenty-five lines each, give a total of 1,100 lines, less some few to be deducted for headings, ornaments, etc. What are we to suppose that these 1,100 verses consisted of? I am afraid that, beyond the general presumption that they were Homeric, we cannot say. An attempt has been made by R. Thiele (Philologus, 34. p. 193 sq.) to compute the extent of the original Hymn to Dionysus, by supposing that the scribe stopped writing the Iliad at one or another definite point, and giving the 1,100 lines, less this continuation, to the Hymn. Thus, if the scribe ended with the last line of N, there will be 397 lines over for the hymn; if, on the other hand, he included E also, there is a minus quantity. Really, I am afraid, it is impossible to set bounds in this gap of eleven leaves, and therefore to reconstruct the Dionysus-Hymn. Such an attempt rests on the supposition that the scribe deliberately composed an anthology of part of the Iliad and the Hymns, leaving off the Iliad somewhere between N and E, in order that he might take in a perfect hymn to Dionysus. This is too artificial a hypothesis to be entertained. Surely the idea of any scribe designedly presenting his readers with an abridgment of the Iliad is absurd. Fragmentary copies of the Iliad and of the Odyssey do exist, and in plenty; Laur. 32, 31 ends at E 5; Ven. 458 begins at E 410; Ven. 459 ends at M, Laur. 32, 25 at H, Laur. 32, 38 at A 523; Ven. 431 at E, Laur. 91 sup. 2 at E 422—but these are all real fragments. The MSS. contained more, but they have been mutilated, or the scribe has lighted on a mutilated archetype and copied what there was to copy. Designed excerpts from the Iliad we do not meet with until the Renaissance, when, and chiefly in the sixteenth century, A, or A and B as far as the catalogue, or ABT are often found separately. No parallel exists between these Italian schoolbooks and the case of M.

A somewhat similar omission of pages occurs in the Florence MS. of Aeschylus (Laur. 32, 9). Here a more extensive loss has taken place; i. 134 v. ends with Agamemnon 310, the next gather has gone completely and the whole of the following one except the first sheet, of which the first leaf contains part of the Agamemnon, the last part of the Choephoroi. There is of course independent evidence by which to control these data, but supposing there had been none, the amount of the Agamemnon lost in the first gather might have been highly estimated, but no guess could have been made as to where, in the second, the Agamemnon ended and the Choephoroi began.

I may notice in passing that the quire-signatures in M are all in the first hand. I find a suggestion in Mr. Goodwin's papers that this might not

* Thiele by some error makes the number (vol. 1869, p. 2).
be the case, and it is an idea that might occur to any one reading Thiele’s argument. Were they in a later hand, the whole argument would of course fall, but I think there is no doubt that they are in the hand that wrote the text. In the Iliad-part of the MS., the arguments, periochae and glosses are in the text-hand, though smaller than the text, and the signatures are in the same writing.

We cannot therefore reconstruct the contents of the lacuna in M, but we can on the other hand draw a conclusion as to the condition of its archetype. If the circumstance that eleven pages were allotted by the scribe of M to complete the Iliad from N 134 and commence the Hymns cannot be due to deliberate choice on his part, it must follow that the archetype, at the time when the scribe of M copied it, was defective at that point. The archetype obviously contained the Iliad and the Hymns, and there is no reason to suppose that originally they were anything but complete; but by the fourteenth century a great gap had been made near the beginning of the second half of the Iliad, and the scribe of M found a truncated Iliad running on without a pause to the Hymns. He copied his materials as they stood, without seeking to complete them from other sources; it is conceivable that he even made no division between the Iliad and the Dionysus-Hymn. In the archetype when perfect, the Odyssey may have stood between the Iliad and the Hymns, possibly Quintus also. It is obvious how far we are from fixing the length of the Hymn to Dionysus.

The archetype was not only defective in the middle, but mutilated at the end. The Mosquenais ends at xviii, 4, but the last two lines are written below the usual level upon the recto of f. 50; the verso is blank. That is to say, M is not itself mutilated here, but the archetype also stopped at xviii, 4, and the scribe seeing this economized his last page by finishing on the recto. Prof. Ludwig has already drawn this conclusion (Ined. Lctt. Regnum, 1891, p. 18).

The next question is that of the age of the archetype, or at least of its style of writing; was it uncial or minuscule? This sort of inquiry is often too confidently decided; it must be based upon the consideration of such blunders in a MS. as appear to be purely graphical, and may therefore arise from confusion between letters, ligatures and the like. It is necessary to exclude all emendations, ancient and modern, and phonetic variations in spelling. The small remainder, especially if cases can be found where the scribe has faithfully copied obvious corruptions, may allow a conclusion to be drawn. It must be remembered in addition that with a minuscule MS. there is always a presumption that its archetype was minuscule, and when the minuscule MS. is late, the presumption is almost a certainty. Moreover, while a single instance of minuscule corruption is sufficient to prove a minuscule archetype, any number of uncial corruptions may prove merely an uncial stage in the manuscript’s history, a circumstance which naturally does not require demonstration. Also, even clear uncial corruptions are not necessarily evidence for an uncial original, for, it is well known, several uncial forms, H, N, II, T, Π are frequent in minuscule also.
With these cautions we may consider the mistakes in M which appear to be graphical. The following seem due to an uncial confusion:—

DEM. 421 ὀκύρδη : ὀκυρά Hes. Theog. 354.
424 ταλαξαύρη : γαλαξαύρη ii. 353.
482 χρημοσυνήν : δρημοσύνην Pausanias ii. 14. 3.

AP. 156 θ'ού : δού cett.
306 τυφλόν τε : τυφάονα p (τυφλόν π).

APHR. 158 δῖνησι : χαλαίνησι cett.

On the other hand, we have these certain examples of minuscule corruptions:—

AP. 88 καμός : βαμός cett.
119 πρός : πρῶ cett. (πρ).
367 διασκεδέ : διασκεδέ cett.
457 ἐκ μὴ τοῦ δὲ : ἐκβητὶ οὖδὲ cett.

DIOSC. 17. δεσμά ἐθέλοντες : δεσμευθὲ ἐλάντες cett.

DIOSC. 17. 5 ἐπ' ἀμήταν : ἐπιβήταρες cett.

The minuscule character of the archetype of M therefore admits of no question. That M and no doubt also its predecessors were carelessly copied, and that errors once in existence were generally allowed to remain, will appear from these other mistakes, which I arrange under heads:—

(1) Mis-division.

AP. 272 προσώποι ἐνηίς παιῶν : προσώποις ἴπαινοι, cett.
430 ἱμένον δ' ἀμάθοις : ήμένοι δ' ἀμάθοις cett.

HERM. 38 ξύνους δὲ : ξύωνου δὲ cett.
82 νεοθηλέαν ἀγκαλορήν : νεοθηλέας ἀγκαλον ὕλης cett.
238 ἀλοσεπόδος : ὕλης σποδός cett.
308 ἐνεχόμεν δὲ : ἐνεχὲ ὅδε cett.
406 νεογοιαν : νεογοῖ ἐνου cett.
556 διδασκαλίαν : διδάσκαλον ἐτ.

This class of error is perhaps more natural in uncial MSS. In any case the nature of the corruption presupposes a long period of time. Νεοθηλέας ἀγκαλορήν probably contains an independent reading, as Hermann observed, praef. p. xxx. Ἐνεχόμεν δὲ turns on the sign — for ν, more frequent in uncial than in minuscule. (Ludwich's excellent emendation θεὰν σί πέρ for θεάν ὅπερ Dem. 64 rests on the same supposition.) Νεογοιαν probably is the result of ΝΕΟΓΝΕΩΝ; cf. K 336 ἀριστεύως vulg., ἀριστοὶ ἐστι. Aristarchus and a minority of the MSS.
(2) Omission of syllables or letters.

Dem. 228 ἑπιλαίησι: (ἐπιλυσθή Ruhnken).6
420 ῥέειa: ῥδειa Hes. Th. 351.
422. contra, ἀκατάςτη: ἀκάτη Hes. Th. 356.
Ap. 540 ἥτε ἑτήσιον: ἥτε στήσιον cett.6
220 τὸ τʹ οὐχάδε: τὸ τοι οὐχ ἄδε cett.
Herm. 28 σχίλα: σάφλα cett.7
572 μητʹ: μηπότ cett.
Aphr. 42 τέκε: τέκετο cett.
49 γελάσασα: γελαθήσασα cett.
66 κήπον: κύπρον cett.8

(3) Certain permutations of letters.

213 ἐλλήθα: ἐλλήθσα cett.
216 πετρήν: πιερήν cett.10
217 ἦν ἅρμηνας: ἦ μαρμηνας cett.10
234 σκίων11: κείω cett.
Herm. 55 ἱμνε12: ἵμνε cett.
79 σάδδαλα: σάδδαλα cett.
137 οὐλοκάρμα: οὐλοκάρμα cett.
138 ηδόσε: ἡδόσε cett.
373 ἁραγκής13: ἁραγκάιης cett.
543 μῆ14: μῆν cett.
Aphr. 159 εκ τῶν: ἐρκτῶν cett.10
Arex viii. 10 πρή15: πρήν cett.

(4) Mistakes that do not fall under any particular head.

Dem. 13 κόδικ τʹ οἶδα (unmetrical).
28 πολυλαπτω: idem Ap. 347, ubi πολυλαπτω cett.10
51 φαινόν (a. vox nihil).

5 This is made comparatively certain by the metre and the context.
6 Cf. Apoll. Rhod. iii. 651 τάσια. 'I' for τάσια.
7 Σχίλα arrives apparently through σαύλα
8 Similarly Ἕτε seems a correction of ἀτής
9 Intended for ἐνέλης?
10 These three examples seem unusual, πετρήν has been suggested to me = ΠΕΡΙΗΝ, = ΠΕΡΙΝ. Possibly from the omission of the insignificant symbol for πο, ἀπαγ.ιν. The ligature πο mistakes for the miniscule πο.
11 Κ. out of καιρ', the accent being mistaken for the abbreviation of και
12 The minuscule ligature πο resembles the minuscule letters πο. Possibly from the omission of the insignificant symbol for πο, ἀπαγ.ιν. The ligature πο mistakes for the miniscule πο.
13 Cf. χ 411, 461 τῆν 'Ρ' for γη. The ligature for πο was copied as πο, then accidentally γη became πο
14 Cf. χ 411 πολλακτω, where 'W' has πολλακτω. It is probably a semi-conscious correction to make metre after one λ had fallen out.
THE TEXT OF THE HOMERIC HYMNS: I. 145

Dem. 122 ὕδε (ummetrical).
267 συναυξήσασα (ummetrical).
302 ὥστε (voc nihil).
430 ἀρσομένη (ummetrical).

Ap. 76 ἄνδας: ἄνδας cett.
475 κεῖνοι: κεῖνοι cett.
343 ἡματα: ἡματα cett.

Herm. 108 τόνη: τόνη cett.
151 ὁμαχ: ὁ τάχ cett.
338 τέρπομον: τέρπομον cett.
400 ἄχου: ἄχο ὁ cett.
404 ἁμη κατ: πέρη ἐπ cett.
417 ἔθετ: ἔθετ cett.
493 ἓ ἐθος: ἐθος cett.
504 ὁμοπέτη: ὁμοπέτη cett.
565 ἀνδρ ἁδὴ: ἀνδρα δαείς cett.
376 ὁμιξον: ὁμιξ cett.

Aphr. 135 δούλω τα καταργήτω: σοῖς τα καταργήτωι cett.
157 ἀντύ: ἀντύ cett.

Suggestions as to the origin of several of these variants will be found at the places where they occur. I call attention to them here, since their number and the remarkably ummetrical and ungrammatical character of many of them will have an important bearing on the question how far M is an intentionally corrected manuscript. The purely phonetic variants I omit; they are common to all MSS. and their rarity or abundance does not warrant any conclusion as to the nature of the original. They are collected by Dittmar, Prolegomenon ad hymnum in Cererem homericum specimen, Halis Sax. 1882.

There are two omissions of some length in M, Apoll. 22—74 and Aphr. 68—122. These are relied upon by Thiele (loc.) to prove that M's archetype was uncial. After the evidence adduced above, it will probably seem more likely that the archetype of M was a book of much the same form as M itself, namely with about twenty-five lines on a page. As some of the minuscule corruptions (Ap. 119, 234, Diona. vii. 17, Herm. 375, 565 f.) appear to be due to abbreviations or ligatures, we may imagine m to have been a small book written in the common fluent hand of the tenth to twelfth centuries, the period to which we owe our most valuable copies of Greek writers. Did it resemble the MS. Laur. 32. 15 (D) of the Iliad, or Laur. 32. 24 of the Odyssey, or any of the various tenth to eleventh century MSS. of Hesiod, or perhaps Barocci 59, a book which contains the Phaethon, Hecuba, Musaeus and Phocylides? It was of course written in the East, and it was supposed by Matthai that M itself was brought to Moscow from Athos (Geel loc.).

In the course of time, like so many other books, m lost a number of
quires, which were not replaced, and when in the fourteenth century the scribe of M took it to copy, nearly half the Illiad, and an unknown amount of the Hymns, had disappeared. As far therefore as our positive evidence goes the canon of the Homeric Hymns is unclosed, and a papyrus from an Egyptian tomb may any day give us a hymn to Zeus or Athena.

After M we come to a group of MSS. DELIT, which have been held to belong to one family. The following list of absolute agreements justifies this statement:

The list need not be continued beyond Dion. vii. 34, where L breaks off. DELHIT are thus descendants of an archetype (α) which is not that of M or ρ. We shall see later that ELHIT are the most exact representatives of this archetype; before proceeding to establish their position and value, we may examine D and several other MSS. which appear to belong to the x family.

D.

It will be shown afterwards that x parts into two branches, ET (α) and LH (b). The following passages prove that D belongs to b rather than to α:

Aρ. 4 φαίδιμος ET
20 τοι ET
38 νήσος ET
ν. λαπαράτητη ET
44 πετρόπεσσα ETD
51 κε θέλεις ET κε έθέλεις D
60 πείασ ET
75 ἀδή oδ ET ἀδή o T
76 ἀκηδία άχη τε λάον ET
86 τε om. ETD
88 ο’ ἔξοχα ET
96 om. ET
128 ἀταλαίροντος ET
162 βαμβαλασίτων ET
171 ύφι μέσων ET
176 ἐπειδὴ ET
180 μήλιτων ET
197 οὔτε λάχεια E(? T)
217 ἡ μαγικάτας ET
260 τελείεσσας ET
261-89 om. ET

Out of 21 variants in 300 lines, D agrees 3 times with ET, 18 times with LH. A continuation of the comparison would establish the same proportions. Plainly D was constructed on a basis of LH. It differs from them in the following points; I omit places in which D coincides with ρ.

---

* I use ρ to denote the Paris family and its archetype (Hollander's ρ).
THE TEXT OF THE HOMERIC HYMNS: I

41 this verse in D stands after v. 36. The eye of the scribe passed from ὅρος ἀιτῶ in 35 to ὅρος ἀιτῶ in 40.
60 τειαρ D τειασ ET τειαρ LH τιαρ p.
72 αἰτήσασ αὐτοῦ x. The process of correcting D seems here displayed.17
74 κατὰ κράτος D κατὰ x. Cf. 71 where D (with NP) has τὸ πρῶτον for τὸ πρῶτον of x.
83 διώσει D διώσεν x. Evidently a correction to make metre.

114 ἠμαθ D ἠμαθ x (ἠμαθ’ p).
130 ἄθανάτοιοι D ἄθανάται x.
223 ἦκαν D ἦκε x.
402 ἐπεφράσασατ D ἐπεφράσασατ x.
514 ἀφατὼν D ...ἀτὼν x. This is the clearest case of conjecture in D.
540 τῆλειόν γ’ ἔπος D τῆλειον ἔπος x.

Herm. 38 δάνοις D δάνης x. M also has δάνοις, but it was not available in Italy in the fifteenth century.
47 λαβὼν D and x. D in marg. ἥρ ταμών. Cf. Ap. 72, another instance of the process of correction in D.
70 θεῶν D θεῶν x. Not an accidental difference, cf. Τ 53 θεῶν ὑπὶ καλλικλόρη, where θεῶν is Aristarchus’ reading, θεῶν Herodian’s and our MSS. are about equally divided. Cf. also Ζ 593, νέων and νεῶν. Dem. 490 θεῶν of M is necessarily wrong.
99 σκοτή D σκοτήν x.
100 μεγαμηδέναι D; μεγαμηδέθαι(φ)μα LH, μεγαμηδεῖον ET. Here D seems closer to the ET branch.
103 ήλανον D; ήλανον σεκ. The effect of ήλανον before and ἄροις after?
151 εἰλομένος D εἰλομένος x.
186 ὑγχιστών’ D ὑγχιστῶν’ x.
238 ἀμφικαλύπτει D ἀμφικαλύπτει x.
261 ἐξίπτε D ἐξίπτε x.
284 καθίσαι D καθίσσαι x.
289 πῦματον καὶ ὀστάτον D, πῦματον τε καὶ x.
425 δε λεγέων D δε λεγέων x.
540 βουληται D μύδεται x. Would seem an obvious conjecture, but cf. Ξ 300 βουλητ’ ‘ΧΔ’ for μύδετ’, Ξ 326 βουλὴν ‘PU’ for μῦδεν.

17 The same correction seems to be found in T. Bethe i.e. p. 524 says ἀμφικαλύπτει en ἀπόθεσις [L].
The Text of the Homeric Hymns: I.

Aphr. 3 κατὰ θυτών D κατὰ x.
13 σκότων D σκότων x. Conjecture.
22 ἵστη D ἵστη x. Cf. the contrary, Hes. xxix. 6, 11. ξ 159, ι 304 we have the same variant.
118 χρυσολακάτου D χρυσολακάτου x. Conjecture.
174 ἔρη D {βύρρη a. A conjecture and not a happy one.
203 καὶ D καὶ x.
205 τετιμένο D τετιμένος x.
214 ἀγήρως D ἀγήρως x.

Ge xxx. 3 ὑπέρχεται D ὑπέρχεται x.
Hes. xxxi. 4 ἀγακλατὴν D ἀγακλατήν x. A conjecture to help the metre, cf. e.g. I 165 κλητοῦς, κλειτοῦς, κλειτοῦς, E 491 al.

Dioc. xxxiii. 1 ἵστητε D ἵστητε x.

At.

In 1889, Prof. J. P. Mahaffy published in the *Athanaeum*, p. 631, an account of a MS. in the monastery of Vatopedi on Mt. Athos, which contained the Homeric Hymns. The MS. did not include the Demeter-hymn, but still considerable hopes were excited by the discovery. These have been dissipated by the publication, in the *Classical Review*, October 1894, by Prof. Ingram Bywater of a collation of the MS. made by Prof. M. Constantinides. The facsimiles made by Mr. Constantinides, which Prof. Bywater had the kindness to show me, prove clearly, both from the writing and the style of illumination, that the Athos MS. is a specimen of an ordinary fifteenth-century book; and this coincides with Mr. Constantinides’ description of the material, ἐπὶ χάρτου ἄργαλον παρεμφερόν μεμβραν. It is only in the fifteenth century that we find white glazed paper that looks like vellum.

This fifteenth century MS. closely resembles D, and (accordingly) its effect upon the text of the Hymns is limited to the immediate position of this MS. Its closeness to D may be judged from the following readings which the two have in common: Aphr. 10 ἐν λόγου, 41 the line takes the place of 36, ὀφεῖ (with E), 372—4 om., 403 ἀμανασάσθη (with NV), Hes. 54 κοκύβισε, 93 μηκέτι, 100 μεγαμέεια, 109 ἠλαυνοῦ, 156 δόσι, 224 ἄρτι ἐρώτα (with p), 420 γελάστη, 530 προορίζατ, 540 δούληται, 572 δ' om., Aphr. 13 σκότων, 22 ἵστη, 46 μεγημέναι, 174 ἔρη, 214 ἀγήρως, Asclep. xvi. 3 φέλγος (with KN). The points in which it differs from D are unimportant; they are according to the collation as follows: Aphr. 136—8, not added in marg., 147 ἱλόνων, 152 ἱλόνες, 211 om. (accidental, cf. p), 217 μαγνήσα, 339 πόσον, 347 πολυλαυστική, 359 χῶραν, 402 νῆσας, 468 ἕκταγαριν, 501 om., and in 500 ἐρωτόν for ἁίδιος, 509 δ' for τ', 522 τετιμένον (with MI), 544 δ' om., Hes. 5 ἠλαυνεῖ, 45 δυσμηθοῦ (with p), 446 φήλητα (with p), Aphr. 203 ἔρημα ὑν, 244 τόχα om., Mus. Aph. xxv. 1 Ζυρός for δόξ, Hes. xxix. 9, 10, after v. 11.
D and At therefore are copies of one archetype, and as commerce in Greek MSS, set Westwards and not Eastwards, we must suppose that this archetype was an Eastern Greek MS, and that D was copied from it in the Eastern world and exported to Italy. This archetype differed from the general ξ family, or more nearly from the branch b, in these points: (1) it omits the variants which we shall see belong to the family; (2) it exhibits certain readings which are not found in any other extant MS, and as it seems unlikely that the scribe had access to any different and now perished stock, are to be called conjectures. That is to say, the original of At D was a type of MS, intended to present a readable text of the author at the expense of tradition. In this respect it occupies an entirely different position from M, ELHT and nearly all the η family. It resembles S, and approximates to the ed. pr. The critical faculty of the scribe was not great, far less than that of S, T, or of Demetrios Chalcidyle; he lets pass the palpable ξ corruption τυφλόν Ap. 306, and but few of his corrections are acceptable.

HJK

D or some MS, very like it has itself descendents, and these may next be disposed of. They are H (Harley 1752), J (Estienne ii. B 14), K (Laur. 31, 32). That these belong to the general family ξ is proved by these passages where (H)JK agree with ξ against m η:

Art. ix. 3 μελήτης HJK ξ (and La) μελήτης η μελίτσος m.  
Mat. de. xiv. 3 τρόμος HJK ξ  
βρόμος m η.  
Apoll. 35 αὐτοκαρῆς HJK ξ  
αὐτοκαρῆς p (deest M).  
θη. 59 full line HJK ξ  
half line p (deest M).

and by these where (H)JK agree with m and η (with the latter of which they can have had no direct connexion) against η:

Ares viii. 9 εὐθαλεός HJK m  
εὐθαλεός p η.  
Mat. de. xiv. 3 τυπάνων HJK ξ m  
τυπάνων m η.  
Ap. 78 ἀκάθια χύτει λαόν JK (deest H) m η  
ἐκαστι τε φῦλα τεπούδουν p.  
152 οἵ τότ' ἐπ' JK (deest H) m η  
οἵ δη ποτ' ἐπ' p.  
162 κρεμβαλιαστήν JK (deest H) m η  
κρεμβαλιαστήν p.

The difference between ξ and JK is only of itacism.

Ap. 172 ἵμιεν JK (deest H) m η (ὑμίεν E)  
ἵμιον p.  
176 ἑπιδή JK (deest H) ἑπιδῆ m  
ἑπιδῆ p.

That HJK are more nearly descended from D appears from the following passages:

156 By η I designate the marginia of ξ.
THE TEXT OF THE HOMERIC HYMNS: I.

Ἀσκεφ. xvi. 3 φλεγόνος DNK; φλεγόνος HJ.
Ἀρ. 41, after v. 35 DHJK after v. 40, cet.
49 ἐβήσατο DNK; βήσατο HJ; ἐβήσατο cet. (ἐβήσατο I).
60 πείαρ DJK; πείαρ κ.; πιάρ ρ.
72 ἀτίμησον D; ἀτιμήσω κ. ἀτιμήσαις ρ.
ἀτιμήσῃ JK. (Κ in ras.)

Here J seems to have followed the correction of D, K to have followed the text of D and then to have been altered to the correction.

Ἀρ. 83 ἄμωσεν DNK; ἄμωσεν J; ἄμωσεν(σ')ευ ῥ.

Here contrariwise K follows D, J follows the vulgate reading but is corrected into the reading of D.

Ἀρ. 114 ἵμαθ' DJK; ἵμαθ' x (ἵμαθ' II) ἵμαθ' ρ.

The close connexion between Ἰ, J and K is shown by their fragmentariness, and by the curious order of the Hymn (viii.—xviii., Ἀρ. 1—186) that they contain; their archetype, which intervened between them and D, must have consisted of a few gatherings, survivors of some more complete MS., bound up in a wrong order. The half-verse Ἀρ. 186 ἄνθην κ. πρὸς Ὄλυμπον may have been the catch-word or guard of the quire with which the archetype ended. The copyists incorporated this morsel in their texts. How v. 185 came to be omitted, and v. 184 written after this catchword, does not appear.

The various members of the family differ amongst themselves, and if the variants in the original D are due to conjecture, much more so are those in its descendants. They are, in Ἰ,

Ἀρχ. viii. 4 δεμοστα H
Ἀρ. 40 οἱ Η (... χ. T)

δεμοστας cet.

ὦι cet.

in J

Ἀρ. 37 ἀγνησσον J
59 δὴ ραθεώ κε σ' ἐχουσι J
65 γενομεν ἃ cum ρ. S
70 αἰνος τε J
74 ἀλκινος J
82 ἐσται, γρ. J (cum w).
86 πέλεσαι, om. τε J.
Ἀρ. 139 γ' ἄνθης υπερος-ἀνθεσιν

· ἄλη J
151 ἀνδρας J

ἄγινον τιν S ed. pr. ἀγνησσον cet.,
δὴ ρα om. cet.
γ' ἐραίμην x cum K.

ἄλεις cet.
ἔστην cet.
πέλει cet. (om. τε DET ed. pr.).

τε ριου υπερος ἄνθεσιν ἄλης cet.
ἄνηρ Κ x αιει w. ρ.

Of these ἀγωνιστοῦ and ἐσταῖ are excellent original conjectures, γενοὶμην is an easy correction of the ρ of ε.

Two of the family possess common variants in

Dem. xiii. 1 ἀγωνιστὸς ΗΩ ημῇμηρ̣ ΚΕΤ (ἡμητηρ Π) ἤμητερ Ι ρ.

Ap. 31 κυνὴ add. ΗΩ om. Κ cet.

This variant I cannot explain, unless it is a relic of ναυζικλετή.

30 κουρίκον Η  κουρίκον Κ = καρίκον ρ.

51 κεθήλεις ΗΩ κεθήλεις ΚΔ κεθήλεις ET E ρ κεθήλεις LIII.

55 οίσεις ΗΩ οίσεις E ρ οίσεις LIHT (def. Μ).

158 ἀν ΗΩ ἀρ cet.

Traces of the conjectures of Η appear in Κ.

Ap. 65 γενοημῆν Ι ηνεν Κ. m. 2.

Ap. 151 ἄνδρας Ι, K. m. 2, and cf. 72.

Lastly all three MSS. differ from D in reading

ἐπὶ for ἐνι D Ap. 52.

ὑπ᾽ οἰνόποιο for ὑπ᾽ ἰνόποιο D Ap. 18.

S.

S (Vat. 1880) is a fragment of eight pages, the first gather of a fifteenth century MS. That it belongs in stock to η appears from the following passages:

Ap. 22 ἄδων Σ ρ ἄδων Μ ρ ἄδων Τ.

35 ἀντοκανῆς Σ ρ ἀντοκάνης Ρ (def. Μ).

46 σοι Σ ρ om. Ρ (def. Μ).

59 full line Σ ρ half-line Ρ (def. Μ).

211 ἐκεφεῖς Σ οἴκους Ρ 

272 προσόγχοικοι Σ ρ προσόγχοικοι Μ. ρ. 

274 δεξαί S Σ Μ ρ δεξαῖον Ρ.
Next there are several places in which $S$ agrees with $p$ against $\alpha$; although it seems more likely that they also are pure conjectures on the part of $S$, still it might be maintained that they were taken from a member of the $p$ class. I therefore give them apart:—

$$\text{Ap.} \quad 3 \, \text{ἐπισχέδου} \, S, \quad \text{ἐπι σχεδον} \, \alpha.$$  
$$65 \, \text{περὶ} \, \tauιμήσεσα \, S, \quad \text{περιτιμήσεσα} \, \alpha.$$  
$$96 \, \text{γενομεν} \, S, \quad \gamma' \, \text{ἐροιμεν} \, \alpha.$$  
$$83 \, \text{δόμασε} \, S, \quad \text{δόμασε} \, \alpha.$$  
$$114 \, \text{ἰσμαθ} \, S, \quad \text{ἰσμαθ} \, \alpha.$$  
$$151 \, \text{αι} \, S, \quad \text{αινη} \, \alpha.$$  
$$306 \, \text{τυφλω} \, S, \quad \text{τυφλον} \, \alpha.$$  

In some other places $S$ coincides with $HJK$ or a member of $p$, e.g.

$$\text{Ap.} \quad 30 \, \text{δόσους} \, S, \quad \text{Αδόσους} \, E, \quad \text{δόσους} \, \alpha.$$  
$$51 \, \kappa' \, \text{έθελον} \, S, \quad \text{κε θέλω} \, J, \quad \text{κεθελει} \, \text{κεθήλης} \, \alpha.$$  
$$53 \, \text{Αλλως} \, S, \quad \text{Δολου} \, \alpha.$$  
$$59 \, \text{δηρων} \, \text{ἀνακτο} \, e' \, \text{βοσκους} \, \text{θεοι} \, \text{κε} \, \sigma' \, \text{ἐχωσι} \, S. \quad \text{The nearest is} \quad \text{J's} \, \text{δηρων} \, \text{ἀνακτο} \, e' \, \text{βοσκους} \, \text{θεοι} \, \text{κε} \, \sigma' \, \text{ἐχωσι}, \quad \text{and this is the only other MS. that has the accusative} \, \text{ἀνακτο}.$$  
$$72 \, \text{ατιμησον} \, S, \quad \text{Ατιμηση} \, D, \quad \text{ατιμησω} \, \alpha.$$  
$$88 \, \text{τς} \, \text{ἐξοια} \, S, \quad \text{τς} \, \text{ἐξοιχα} \, E, \quad \text{T σε} \, \text{ἐξοια} \, S, \quad \text{correctus}, \, \alpha.$$  
$$129 \, \text{δεσματ} \, S, \quad \text{Κ(δεσματ)}. \quad \text{J δεσματ}. \quad \text{M κ δεσματ}' \, \alpha.$$  
$$139 \, \text{στε} \, \text{βιον} \, S, \quad \text{στε} \, \text{βιον} \, \text{D,} \quad \text{στε} \, \text{βιον} \, \text{or} \, \text{βιον} \, \alpha.$$  

The list however is more important of readings that are found in $S$ only:—

$$\text{Ap.} \quad 18. \, \text{υντι} \, \text{υανυσο} \, S; \quad \text{the nearest is} \, \text{M's} \, \text{υντι} \, \text{ναυσο}.$$  
$$44. \, \text{ρηναλα} \, S; \quad \text{the rest accent} \, \text{ρηναλα}.$$  
$$53. \, \text{λισα} \, S; \quad \text{Λισα} \, \alpha.$$  
$$54. \, \text{ευβδολο} \, \text{σε} \, \text{τσεσται} \, S; \quad \text{ευβδολο} \, \text{σε} \, \text{τσεσται} \, \alpha.$$  
$$57. \, \text{λιγυσουσι} \, S; \quad \text{λιγυσουσαΓ.} \quad \text{λιγυσουσιν} \, \alpha.$$  
$$128. \, \text{εσχον} \, S; \quad \text{Ισχου} \, \alpha.$$  
$$165. \, \text{αλλα} \, \text{αλγε} \, \text{αλγου} \, \text{S (cum Thuc.)}; \quad \text{αλλα} \, \gammaε \, \text{με} \, \text{M} \, \text{αλλαγε} \, \text{δη} \, \alpha.$$  
$$209. \, \text{οπποτι} \, \text{ωισιμενον} \, S; \quad \text{οπποταν} \, \text{iεμενο} \, \text{M} \, \text{οπποτ} \, \text{ωισιμενον} \, \alpha.$$  
$$216. \, \text{πιεριν} \, S; \quad \text{περιν} \, \text{ε} \, \text{περιδ} \, \alpha.$$  
$$234. \, \text{κειν} \, S; \quad \text{κειν} \, \alpha.$$  
$$297. \, \text{νιεσ} \, \text{ηρινου} \, S; \quad \text{νιεσ} \, \text{σερινου} \, \alpha.$$  

There being, as in the case of $D$, no other source existing from which different readings might be drawn, one must call these variants conjecture.
of the scribe of S; and it must be admitted that he was a scholar of unusual attainments and penetration. Of all the anonymous that have dealt with the Hymns the second hand of I alone is comparable to him. The mutilated form of the variants vv. 34 εὔβολος and 325 ἦ might suggest that they were not original to S but were copied from its archetype. At 165 we see the Thucydidean original reappear; naturally there can be no question of a survival of the genuine tradition; the scribe either took the reading from the text of Thucydidies or conjectured it independently. I do not know which is the more probable hypothesis. It is to be noticed that in the other case of corruption in the passage quoted by Thucydidies, 171, S does not revert to the Thucydidean ἀφήνοιε, but reads with Ἐρ ἀφ' ὑμέων.

S then belongs to the x stock, but omits the y variants and presents a corrected text. Like D it was a copy intended for current reading, and the rough places in the text were intentionally smoothed over. This character, of D and S, is the result of our comparison and inference; the two MSS. find an analogy in a contemporary recension where the aim of polishing the text is avowed, and the name of the reviser known—the first printed edition.

ED. PR.

This was published in Florence in the year 1488, in two volumes, the first of which contains the Iliad; the second the Odyssey and Hymns. For a description of the book see Le Grand, Bibliographie Hellenique i. p. 9 sq. The subscription, at the end of the Hymns, names Bernardo and Nero Nerli to whose munificence, and Demetrius of Milan the Cretan to whose labour and skill, the edition was due; the latter according to Le Grand, p. 10, was the printer. The name of the editor, to whom the scientific merit of the edition is owing, is given by Bernardo Nerli in the Latin dedication to Piero dei Medici 18 prefixed to the first volume: Nam ut omittam Nerri fratris liberalitatem et Ioannis Arcioli auxilium: Demetriqni Cretensis decretuletam: id iam nimirum mihi opportune fuit: maximeque opatum: quod ad honem Demetrii Chalcondylis Atheniensem nactus erat: Vrum profecto tempestate nostro doctrinam: praeclaremens: a quo huiusmodi opus accuratissime recognoscere possit. Perdifficile enim mihi videbatur sine eruditione vico id operis castigatisimum emendatisimumque fieri posse. Itaque ex illius consilio Heraeum ut ostenderetur priorum: ilia enim divino quodam ingenio nunquam potest: ac litterarum fontem elegit: qui quidem ob incurrunt ataque negligentiam librariorum ibi sei dissimilis videbatur: ut in nullo fere codice quamvis percreti integer agnosceatur. Quamobrem eruditionem sana vivi opera: qualis Demetrii nactus est: summoque iudicavit: qui et amore quo nos mediocri prorsus et communis utilitas gratia maxime adductas ipsa Heraei opera singulari diligenti summoque studio eum Eustathii commentariorum examinavit: atque examinavit: ... The life of Demetrius Chalcondyles may be read in Le Grand i. p. xcv. sq. He had been at this time some sixteen

18 The unfortunate son of Louvoz, killed in 1563 near the mouth of the Tarniglione, and whose tomb is at Monte Casinun. The Anthology also was dedicated to him (1494).
years public teacher of Greek at Florence, having succeeded Argypheus in 1471. Other books in which he appears as editor are the Isocrates of 1403, printed at Milan (Legrand: i. p. 16) and the Suidas of 1409 also printed at Milan (ib. p. 63). For a specimen of his work as a scribe, see Omont, Furstrei des Manuscripts Gres des XV e. et XVI e. siècles, plate 16. To Homer Demetrius prefixes an address to the reader, following the dedication of Nerli, in which the essential passages are the following: . . . kalon te kai teletiun panti te oun apeteliasin tis dynasthe kai par' hmnion diorhthesin tetvychos. sofobra gar hmn plenioron eneka dia spoudh Eis evwete, ef' doun avon te oun diorhthesin evsaia tis omorphon poiemata proschrhsamenein kai tois eustathion upomwhen, kai tais ton synagwghen per aytov poiein einai de te kai dievugy en hman en tosaute pragmatia, syngeimwthi ay wpto ton eugrammonos krinien ebdalautoin dikaios axiato kai maliyta ef' os h enigmai kai en komidh elogias, outhe iton legevnoin enou kai outhe h akolouthia elkleptai. Alloi eisper, en ay urotheia eiston, kai tis tou metrion apartishe eis ay itin eikones, to mou wpto ton tis aymmatata syngwthentos, de te kai upi' hman parothein dein mewnoi m' uphoun os en te tis baptraymumakhia kai tais hmnios exiachos dia tis ton otopiou ebdalatoi. ouste iton epon eirmos outhe m' eis te tis diaknoias ugiay apartisi, xetai paraplagiados kai kai ton blymono synagwghati, ou mou alia tis tis baptraymumakhia kai ton hmanon elokhrra en teugwthnta, ou pseudos mou eis deiphthamena de wpto ton tosyontou krhnon kai tis peris taita ton loghnon amelias, oui ay polh hemi ekaferon tois filologhthi, tis de upi' hman parothein kai o baptrayxen epoideumena en ton ton oiv kalipon evsidos. Than to say, Demetrius explains that he has made a recension, diorhthesin, of the poem, assisted (for the Iliad and Odyssey) by the commentaries of Eustathius and the works of other (Byzantine) writers. He apologizes for errors and oversights, where tradition has lost both the meaning of words and the construction of sentences, and for mistakes in spelling and metre, due partly to the printers, partly to himself; in particular, in the Hymns and the Brahmaumakshya the badness of the MSS. has caused here and there the loss of the connexion of the lines and the soundness of the sense. We expect therefore to find an eclectic text, with the tradition improved in many places, left as it stands in others for want of a remedy.

The class of MSS. that Chalcidyles took as the foundation for his text is clear from the following passages (M, being still in the East, naturally does not enter into the question):—

Ap. 39 κορόκου ed. pr. x
46 σόν hab. ed. pr. x

Chalcondyles thus showed his judgment by selecting the ε family, the excellence of which has only of late years been definitely recognized, for his basis; he did not however follow any of the nearest representatives of the original (ELIIIT). He required an authority that did not offer alternative readings, or flagrant impossibilities in the text; he therefore had recourse to a corrected member of the family, namely D, or a MS. very like it. This appears from the following places in which D and ed. pr. coincide:—

Ap. 51 κ’ ἑθελεὶς (κε θελεὶς ET, κε. θέλειν LII).
60 πεῖαρ (πείαρ LII, πείας ET).
72 ἀτιμῆσῃ, ἀτιμῆσον D (ἀτιμῆσῃ ELIIIT).
74 κατὰ (κατὰ x).
130 ἀθανάτου (ἀθανάτης x).
402 ἐπιφράσσατο (ἐπιφράσσατο x).
515 ἁγιατὸν (ἀ...ατὸν x).
540 γ’ ἔτος (ἔτος x).

Hom. 11 μεῖς (μεῖς x).
38 δάνης (θάνος x).
70 θέου (θέου x).
100 μεγαμηδείαον (μεγαμηδειόν ET, μεγαμηδεῖδον LII).
124 κατὰ (κατὰ x).
224 ἐστώ ὑμῖν (ἐστών II, ἐστην Ε).
238 ἀμφικαλύπτει (ἀμφικαλύπτον x).
261 ἔστε (ἔσταν x).
280 om. τέ (hab. x).

Aph. 118 χρυσαλάκατον (χρυσαλάκατον x).
174 ἡρε (ἡρε x).
203 ἡρπας τόν (ἐνῶν x).

Teseo xxx. 3 ὑπάρχεται (ὑπάρχεται x).
Sol xxxi. 4 ἀγακλητήν (ἀγακλητήν x).

Or perhaps it would be more correct to say that D is one among several manuscripts that Chalcondyles consulted, and whose readings he sometimes prefers to those of ELIIIT. At all events, the ed. pr. not unfrequently coincides with other extant MSS., as in the following passages. M, as already noticed, is put out of consideration.

Ap. Tite: ομηρον μναο γε απολλωνα. So exactly only Π.
18 ητε ἐνσπειρα. So exactly only S.

* 25 ὣς (ὡς A, rough breathing apparently erased).
It is possible that some of these apparent agreements with MSS. may be mere conjectures on the part of Chalcedonides, but according to strict method it would be improper to call them so. The following readings however, for which no other authority can be quoted (except M. in the East, and the second hand of Ε, the latter very possibly drawn from the printed book), may be fairly called Chalcedonides' own editorial contribution.

_Ap._ 63 μὲν
93 ἔλῃ
96 μεγάροις
220 ἄδε
223 ἀπ'

Herm. 65 ἄλτο  ὀρτον  ἐττ.
94 φῶς συνέσεω  ἤσαίν ἕσεν  ἐττ.
175 φιλητεύων  ἢ ἐφιλητεύων  ἐττ.
214 φιλητήν  ἕφιλητήν  κ.  ἕφιλητήν  ἐττ.
236 χυόμενος  χυόμενον  ἐττ.

Perhaps another printer’s error.

292 φιλητέων  ἕφιλητέων  κ.  ἕφιλητέων  ἐττ.
303 ὀλονοῦσε ἐδ.  ὀλονοῦσε ἐν ἐδ.  ὀλονοῦσε ἐν ἐδ.  ἐττ.
400 ἀτάλλητο  ἀτίτάλλητο  ἐττ.
474 αὐτάγρετον  ἀὑτὰ ἀγρετον  ἐττ.
482 ἢρ  ἢρ  ἐττ.
491 ἦρ  ἦρ  ἐττ.
535 ἐρείσης  ἐρείσης  ἐττ.

Ἀρν. 20 πόλεις  πόλις ἐδ.  πόλις  ἐττ.
39 καταβυθίσατο  κατά  ἐττ.  Cf. 50, 51, 52.
229 καὶ ἐγγενέος  ἐγγενέος  ἐττ.

Dion. vii. 13 λόγος  λογος  ἐττ.
Pen xix. 31 καλλονίου  καλλονίου  ἐττ.  Another printer’s error.
Poseid. xxii. 3 αἰγας  αἰγας  ἐττ.
Ge xxx. 15 παίζουσαν  παίζουσαι  ἐττ.

Of these conjectures of Demetrius several were found in M, on its discovery in 1780, viz. Ap. 223 ἂρ, 318 ἐρμέλον, 392 νῦν θείον (though only in a late hand), 502 ἢφαθ, Herm. 65 ἄλτο, and these all are correct, though ἄλτο on Herm. 65 has probably no stronger position than that of an independent variant.

These also are correct, though no MS. evidence has since been found to support them: Ap. 93 μείη, 96 μεγάρους, 220 ἄδε, 317 the marginal remark λειταριεῖν coincides with the judgment of most modern editors, 325 ἢρ ἢρ, 411 ἔρως, 419 παρέκ, 452 τίνος, Herm. 64 φῶς συνέσεω, 214 φιλητήν, 292 φιλητεύων, 400 ἀτάλλητο, 474 αὐτάγρετον, Ap. 20 πόλις, 39 καταβυθίσατο, and other forms of καταβυθίσατο. Dion. vii. 13 λογος, Poseid. xxii. 3 αἰγας, Ge xxy. 15 παίζουσαι.

The following appear to be incorrect: Ap. 63 μέν for κεφ which is demanded by grammar; 339 ἢ ὁσιον, where the real reading is quite uncertain; Demetria seems right in deserting the πόσον and παρόσον which his MSS. offered him. 407 οἱ τὰ πρῶτα; here M shows πρῶτα to be the original; Dem. sought to emend the unmetrical πρῶτα of his MSS. by inserting οἱ. 414 ἢδ; perhaps a printer’s mistake. 450 χαίρε, probably because he did not recognize a dative in the MS. χαίρε. Herm. 175 φιλη- τεύων, perhaps intended for φιλητέων as he corrects 214, 292; at least he is right in omitting the δ of the MSS.; 303 ὀλονοῦσε ἐδ., which at least is an improvement on the unmetrical ὀλονοῦσε ἐδ. 482 ἢρ for ἢρ, 491 ἢρ for ἢρ, 533 ἐρείσης. Ap. 229 καὶ ἐγγενέος; an attempt to correct the unmetrical MS. ἐγγενέος; M shows the real reading to be ἐγγενέος; the case is parallel to Ap. 407.
With a total of some 33 conjectures, of which 23 are certain, the first editor of the Hymns brought a very solid contribution towards the restitution of his author’s text; and when we consider that Stephanus’ corrections were clerical, and that most of Joshua Barnes’ suggestions that deserve consideration are taken up with introducing parallel phrases from the Iliad and Odyssey, it may be said without hesitation that Demetrius has, to find his equal as an editor, to wait for Ruhnken.

To recapitulate the results up to this point, we see that these MSS. which appeared generally to belong to the π family, viz. AtDHJKS and the MS. basis of the ed. pr., do not exhibit the influence of any other stock of tradition, unless in the ed. pr. we may recognize traces of the other family π. The variants between these MSS. and ELIIT, the principal representatives of π, are seen to be due to conjecture. When therefore we proceed to investigate the relations of ELIIT and to reconstitute their archetype, we may leave out of account AtDHJKS.

---

I need not continue the list beyond *Dion. vii. 34* where L breaks off. The number of literal variants that are common to E and T makes it abundantly clear that they are direct copies of the same archetype (*o*).

It is remarkable that those two MSS, E and T, so closely related, are among the few MSS. of the Hymns of which we know the scribes’ names. E was written by the personage who signs himself *γεωργιος οικαλλα* or *βαλλας πλακετινος*, Giorgio Valla or Valle of Piacenza. This scribe, collector, author and teacher, after passing a life in Lombardy, Liguria and Venetia, died as public teacher of Greek at Venice in 1409. His name has been obscured by the better known Lorenzo, perhaps his relative, and his biography remains to be written. His library, including many MSS. in his own hand, passed at his death to Alberto Pio, Count of Carpi near Modena, and now forms the nucleus of the Greek collection in the Estense. Constantine Lascaris, the scribe of T, is a better known man; see Legrand *i.e.* L. p. lxxi. nq. When he wrote our MS. he had been some four years at Milan, teaching Greek under the patronage of Francesco Sforza. In view of the usual belief that late MSS. were generally corrected by their writers, it is noticeable how few novelties are the result of the editing of these two considerable scholars. To Valla belong the corrections *οἰσεις Αρ. 54*, δου *Αρ. 156*, *μυστηριαν Αρ. 208*, *αντιβαλετο Ηερμ. 400*; to Lascaris *ἀνασκεισκε Αρ. 403*, *κρισσαλιν Αρ. 446*, *ὁρτο Ηερμ. 65*, *ἐφραυλοις Ηερμ. 286*. The value of Lascaris’ emendations it is evident exceeds that of Valla’s. The archetype *σ*, about whose date we can only say it was earlier than 1464, contained a number of gross graphical errors, which I need not

---

21 See however Tiraboschi, *Scria de’ Letterati Italiani*, 1825, p. 1561 sq., and Gabottis, *Giorgio Valla e il suo processo in Venezia nel 1489*, *Nuovi Archivi Veneti*, 1894, p. 231 sq. Valla unfortunately rarely dates his MSS.; and therefore we do not know to what period of his life they are to be assigned. The only exception appears to be Estense ii. P. 9, written in Venice in 1488.

22 For the authorities see *Notes on Greek MSS. in Italian Libraries*, 1839, p. 3.
repeat, and two or three noticeable variants, namely Ap. 479 the obvious conjecture καλλοίστα for ἀλλοίστι of ε, Herm. 296 μετὰ between τάλιμνα and γαστρός, Aphr. 174 πυρε which is ον's reading of the original λυρε.

I and II are not connected in the same degree of closeness. It is true that they have a certain number of graphical errors in common, e.g. Ap. 20 τε for τοι, 44 πετράδες(σο)ς, 51 κε[θέλες], 60 πείαρ, 84 ἀστω, 95 ἑρής, 155 ἂδος, 171 ἡμέων, 175 ἐπίθετον, 362 ἀπολογείων, 364 μηνύσαμαι, 412 πάσιγαν, Aphr. 174 ὑπερ, but each of them, and especially I, has a much greater number which are not common to the other. II's errors are not worth collecting; those of I testify to a certain cautiousness on the part of the scribe (e.g. in the lacunas Ap. 7 κ. ρεσιν, 8 ἄνεκρ παζε, 12 π τεια, Herm. 5 μ. ἁρ, Aphr. 6 ἐρ μέμην, 133 ἄπτιρπην) and also apparently to a misunderstanding of some abbreviations in the archetype (e.g. Ap. 17 προ for πρός, 42 μετράραμ for μερόπων, 64 δεξαῖο = δεξαίμην, μηπο = μηποῖη, Herm. 565 φρέντα a misunderstanding of φρεν). It is possible therefore that I and II are not direct copies of the same manuscript; whether they are or not, however, is of little practical importance; their ultimate archetype (b) is represented very closely by them, and had well-marked characteristics which distinguished it from e—viz. fidelity and absence of conjecture and, in particular, the retention of the marginalia of ε (=}γ) as marginalia and not as readings in the text. This will more clearly appear as we proceed to tabulate the readings of a and b and to reconstruct from them the general archetype of the family, e.

Ap. 55 οίσεῖς E
οίσεῖς T { a } οίσεῖς(τ)εῖς ε.
οίσεῖς L οίσεῖς b.
οίσεῖς II

The source of this error is evidently a confusion between σ and the ligature for στ. It might be questioned whether σ is a correction of E (as would certainly appear at first sight) or στ in T was accidental. On the whole following the majority it is safer to say that a had οίσεῖς, the more so as it is in the older sort of minuscule that there is a close resemblance between σ and στ.

ib. οίσεῖς πολλὰν E
πολλὰν
οίσεῖς ou' T οίσεῖς α.
πολλὰν
οίσεῖς, marg.
πολλὰν ο.
οίσεῖς, marg. πολλὰν II οίσεῖς, πολλὰν above or in marg. b.

All four MSS. here record the variant of e; II alone keeps it in the place which it apparently occupied in e, the margin: E puts it, corrupted, into the text.
This deep corruption has left a certain divergence between the members of either family; thus E in a and L in b alone preserve the important variant $\mu$ above δηρόν, which T and II omit. On the other hand E and T agree literally in the curious περιτας—a considerable test of relationship; and we may thence conclude that E’s marginal variant γρ. εἰ βοσκομεθε εἰ κε σ’ έχωσιν was not in a, but was either conjectured by Vallis or, more probably, taken from a MS. such as II or the archetype of II and L, b. In a the theta over περι is evidently a relic of the word which followed βοσκος or βοσκες. The letters περιτας are most ingeniously explained by Hollander, p. 13, who supposes them to mean περι πα τα δι, ‘about six,’ and to be a marginal note of a scribe defining the extent of the lacuna; this interpretation is very attractive, though I am not aware of any instance of a copyist giving such precise particulars about his original, and the expression as it stands is necessarily imperfect. Nothing less than λειτει (λ) γράμματα (γρ.) περι πα τα δι would be intelligible Greek. With this provision it is possible that the note stood in the margin of $x$, and that $a$ incorporated it (thinking it represented the actual reading) in his text, while $b$ omitted it altogether. This process may suggest that a stage or stages intervened between $a$ and $x$.

The relation between I and II seems simpler; L leaves a lacuna which II fills up: $b$ therefore had either a lacuna or a few unintelligible letters between βοσκος and σ’ έχωσιν. II either filled the lacuna with a conjecture or read these letters as θεοι κε. The survival of the letter θ in the other family $a$ suggests the latter view.

We may therefore reconstruct the reading of $x$ as—

δηρόν ἀναξ εἰ βοσκος θ σ’ έχωσιν.

marg. λ γρ. περι πα δι.

In the lacuna may have stood traces of ωικε. The corruption does not begin with $x$, but goes back to the common archetype of $x$ and $y$, i.e. to the full uncial period.
THE TEXT OF THE HOMERIC HYMNS : I.

ιβ. 114 ἵσμαθ’ ET, ἵσμαθ’ α’, ἵσμαθ’ ι’ ἵσμαθ’ ι’.

The same corruptions occur E 778 where ἵσμαθ’ is common, ἵσμαθ’ and ἵσμαθ’ rarer. II’s δ is evidently a correction of the scribe’s; it occurs in DJK.

ιβ. 136, 7, 8 in text, om. ET
in marg. praefixis σῃ ἐν ἑτέρῳ κείνται καὶ οὖσιν οἱ στίχοι ET
in text, om. L
in text, hab. II
in marg. praefixis ἐν ἑτέρῳ καὶ οὖσιν οἱ στίχοι κείνται LII

II evidently included these verses in the text by error; v omitted them in the text, but had them in the margin with the formula in the words of either α or δ. 23

ιβ. 151 ἀνήρ ET
aiči marg. ET ἀνήρ, marg. aiči α’
ἀνήρ aiči ι’ ἀνήρ, marg. aiči ι’
aiči II ἀνήρ, marg. aiči ι’
aiči marg. II

I. here has put the marginal reading into the text.

ιβ. 162 βαμβαλιαστὶν ET βαμβαλιαστὶν α’

κρεβαλιαστὶν, βαμβαλιαστὶν LII κρεβαλιαστὶν b

ιν. 171 Ὑμέων ET Ὑμέων α’

Ὑμέων LII Ὑμέων b

Since ν and η are equivalent phonetically to each other, it is a question what stood in ν; Ὑμέων is given by M, Ὑμών by P.

ιβ. 203 ἀμφι φαίνειν E ἀμφιφαίνειν α’
ἀμφιφαίνειν ι’ ἀμφιφαίνειν ι’
ἀμφιφαίνειν L id. a
id. ι’

23 The ’hooks’ which are written before these lines in II are not necessarily signs of omission, since E and T exhibit them in their margin, but imply that the vv. to which they are prefixed are to change their place from text to margin or vice versa, e.g. in the Had Ven. 454, ff. 168r, and 168v., omitted lines are added in the margin with prefixed.
The four MSS. here differ only minutely in their representation of the original; E has with painful accuracy preserved the iota adscript which was natural to an early minuscule MS, L has run the correction into the text and then marked it out again.

\[ \text{id. 211} \quad \text{η} \, \alpha\mu` \, \epsilon\rho\epsilon\nu\theta\epsilon\iota \, \text{E} \quad \text{id. a.} \]
\[ \text{η} \, \alpha\mu` \, \epsilon\rho\nu\theta\epsilon\iota \, \text{E} \quad \text{id. a.} \]
\[ \text{ή} \, \alpha\mu` \, \epsilon\rho\nu\theta\epsilon\iota \, \text{L} \]
\[ \text{ή} \, \alpha\mu` \, \epsilon\rho\nu\theta\epsilon\iota \, \text{II} \quad \text{marg. γρ. ἥ ἁμια φόρβαντι τριοπών ἢ ἀμαρύνθῳ LII} \]
\[ \text{ή} \, \alpha\mu` \, \epsilon\rho\nu\theta\epsilon\iota, \text{marg. γρ. ἥ ἁμια φόρβαντι τριοπών ἢ ἀμαρύνθῳ x.} \]

In a the marginal variant is ignored, in b it is recorded.

\[ \text{id. 217} \quad \text{ἡ} \, \muαγνινας \, \text{ET.} \quad \text{id. a.} \]
\[ \text{ἡ} \, \muαγνινας \, \text{LII} \quad \text{id. b.} \]
\[ \text{ἡ} \, \muαγνίδας, \text{marg. γρ. μαγνίδας} \]
\[ \text{ἡ} \, \muαγνινας \, \text{x.} \]

In a the variant has been taken into the text, to the exclusion of the original reading; b records both variant and text.

\[ \text{id. 276} \quad \text{def. ET} \quad \text{def. a.} \]
\[ \text{δελφούση} \, \text{L} \quad \text{δελφούση b} \]
\[ \text{δελφούση γ} \, \text{II} \]

L has been corrected.

\[ \text{id. 325} \quad \text{om. in text ET} \quad \text{id. a.} \]
\[ \text{om. in text LII} \quad \text{om. in text; marg. γρ.} \]
\[ \text{και οὕτως} \, \text{L} \quad \text{γρ. καὶ οὕτως b} \]
\[ \text{γρ. II} \]

Here all four MSS. have recorded the variant as a variant.

\[ \text{id. 344} \quad \text{om. E} \quad \text{hab. a.} \]
\[ \text{hab. T} \quad \text{hab. a.} \]
\[ \text{hab. L} \quad \text{hab. b.} \]
\[ \text{hab. II} \quad \text{hab. x.} \]

The omission in E is plainly accidental, and is due to the line beginning with the same word as 345. For the same reason, the p family omit it, independently.

\[ \text{id. 377} \quad \text{κεχολομένων} \, \text{E} \quad \text{id. x.} \]
\[ \text{κεχολομένων} \, \text{T} \quad \text{κεχολομένων a} \]
\[ \text{κεχολομένων} \, \text{L} \quad \text{κεχολομένων b} \]
\[ \text{κεχολομένων} \, \text{II} \quad \text{κεχολομένων} \]
The mistakes in E and L suggest a misapprehension of something in the respective archetypes. Possibly in a b the last syllable was represented by an omicron, and this, as sometimes happens, was mistaken for omega by E, while L copied it on the line and added an iota before. Cf. part II, Hes. 451 (χορως for χοροι).

\[ \text{Hes. 394} \quad \text{βρέχοισι} \ E \quad \text{βρέχουσι} \ L \quad \text{βρέξουσι} \ I \]

The evidence is undecided, for they are perpetually and arbitrarily exchanged in minuscule; cf. the same words and ἀλαπάζουν -ξειν, ἐναρξεῖν -ξειν, πτολέμιζω -ξω, ἐγγυαλίζει -ξεις, etc. in the Hiad and Od. MSS. The present ἀνήδηλλοι, somewhat supported E's βρέχουσι.

\[ \text{Hes. 479} \quad \text{καλλοίσι ET καλλοίσι} \ a \quad \text{καλλοίσι} \ L \quad \text{καλλοίσι} \ h \]

The three variants presented by the four MSS. establish that in \( x \) there was either a lacuna or some illegible letters. \( a \) either read these as κα or conjectured κα to fill the space, and ET reproduce this stopgap; \( b \) appears to have rendered the gap faithfully (or, to have omitted the illegible letters), and in doing so was followed by L; II conjectured (or read) πολλοίσι, which has the independent confirmation of M Par. This is one of the cases which suggest that II is a stage further than L off \( b \), or that the scribe of II found \( b \) in a better state than L did. Cf. 59, Hes. 42.

\[ \text{Hes. 513} \quad \text{ἐκων} \ \text{ατὸν} \ E \quad \text{ἐκων} \ \text{τὸν} \ T \quad \text{ἐκων} \ a \quad \text{ἐκων} \ \text{ατὸν} \ x \]

This passage may induce us to regard the scribes of ELLIT as faithful copiers rather than emenders. An original lacuna has been transmitted with remarkable fidelity through at least two generations.

\[ \text{Hes. 523} \quad \text{αὐτὸν} \ \text{ξάθειον} \ E \quad \text{αὐτὸν} \ \text{ξάθειον} \ a \quad \text{αὐτὸν} \ \text{ξάθειον} \ x \]

\( a \) has taken the original variant in place of the original text; \( b \) records both. Why Valla wrote ξάθειον over the line is inexplicable, fortunately T shows that it does not go any further back.

The Text of the Homeric HYMNS: I
Here unfortunately Bething has not given T's reading. The case is, however, parallel to Ap. 515: a lacuna in v has been transmitted through two stages; E in one family and L in the other give exactly the same-sized gap. II, as in Ap. 479, seems to have found b in a more perfect state, or to have filled the gap by conjecture. For his ἀρεσκόω cf. his μέγα μηδεῖο Hes., 100.

ἀναλύων: ET
ἀναρροι LII
marg. ἀναλυῶν L.

a, as before, has substituted the variant for the text; b preserves both.

ἐμψάστο E

τὸ L
ἐμψάτο a.

ἐμψάτο LII id. b.

Whether ἐμψάστο is a correction of Valla's, or the real reading of a, depends on T, the reading of which we do not know. We may however safely conclude that ἐμψάτο stood in a, perhaps with a marginal σα.

ὃτο E

ὃτο T
ἵνα ὃτο a
ὃτο b

ὃτο LII ὃτο b.

Lascaris reinserted ρ.

ἀνδάλα ἐρίφεν E

τὸ T
κ' ἐρίφεν L
ἀνδάλα αὐτή ἐρίφεν II
ἀνδάλα [αὐτή] κ' ἐρίφεν b
ἀνδάλα [ο' αὐτή] ἐρίφεν x.

Here unfortunately we have no reading from T. Again an original lacuna has propagated itself; and again II seems to have seen b in a better state than L did; again also, as at 42, there is one letter wanting in II's supplement.

αὐτοπρατήσας ὃς ET
αὐτοπρατήσας ὃς LII
marg. ἀντοπρατήσας L
marg. ἀντοπρατήσας II
αὐτοπρατήσας ὃς, marg. ἀντοπρατήσας x.

α here displays the same tactic as before; only that, in inserting the marginal text reading into the text, it has neglected to take out the whole of the original text reading, and thus produces the unmetrical result αὐτοπρατήσας ὃς.

μεγαμηδεῖον prior et ex pro correcto E
μεγαμηδεῖον T
μεγαμηδεῖον L
μεγαμηδεῖον II
μέγα μηδεῖον x.
It must remain a question whether \( x \) inserted a \( \delta \) between \( \epsilon \) and \( \omicron \) or not; the \( \mu \nu \sigma \epsilon \delta \epsilon \sigma \alpha \) of \( M \) is in favour of the \( \delta \). The omission is no doubt due to the scribe's feeling for \( \epsilon \nu \pi \alpha \lambda \lambda \gamma \lambda \alpha \), Lobeck, Paralip. p. 4.

\[ \text{id. } 168 \quad \delta \lambda \iota \sigma \tau \sigma \tau \iota \varepsilon \] 
\[ \text{id. } a \quad \lambda_{\text{I}} \] 
\[ \text{id. } b \quad \lambda_{\text{I}} \] 
\[ \text{\( a \) has accepted the variant instead of the text; \( b \) records both.} \]

\[ \text{id. } 212 \quad \phi \omicron \iota \beta \omicron \nu \iota \sigma \omicron \lambda \lambda \omega \nu, \] 
\[ \text{marg. \( \gamma \rho \cdot \mu \upsilon \theta \upsilon \nu \\omicron \nu \ \alpha \kappa \omega \omicron \upsilon \sigma \alpha \) \} \] 
\[ \text{id. LIII} \]

Here \( a \), contrary to its usual custom, has with \( b \) recorded both text and variant.

\[ \text{id. } 224 \quad \xi \lambda \rho \omicron \omicron \nu \iota \iota \epsilon \nu \iota \text{a} \] 
\[ \text{id. } a \quad \epsilon \sigma \tau \iota \nu \omicron \omicron \alpha \iota \] 
\[ \text{marg. \( \gamma \rho \cdot \epsilon \lambda \rho \omicron \omicron \nu \iota \text{a} \) \} \]

The reading of \( T \) is not given us, but in all probability it is the same as \( E \): \( a \), as usual, preferred the variant to the text; \( b \) recorded both.

\[ \text{id. } 241 \quad \delta \iota \rho \alpha \nu \nu \lambda \lambda \nu \alpha \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \nu \n
This case is more complicated, especially as we miss T’s reading; however following the usual procedure of the three MSS, we may suppose that E preferred the variant ἓν, and that accordingly ὅς was the text, in the original, and ἓν the variant, both of which are recorded by I. and II. more accurately by the former.

 indeb. 288 ἀντίθεσις ἀγέλησι βοῶν καὶ πόσει μήλων ET 
       marg. ἤν, ἀντίθεσις. βουκολίσι καὶ εἴρητάκες διέστω E 
       id. LII (sed ἀντίθεσις) 
       id. (ἀντίθεσις or -εισ) x.

Here, as 212, 241, both a and b record text and variant:

ideb. 322 ἰκοντο κάρμα E 
       id. a 
       ἱκοντο LII 
       marg. ἤρ. ἰκοντο κάρμα LII 
       id. b 

T’s reading is wanting; a prefers the variant, b records text as well as variant.

ideb. 326 μετὰ χρυσόθρονον ἢν ἔ 
       id. a 
       ποτί πτόχας 
       marg. ἤρ. μετὰ χρυσόθρονον ἢν ἔ 
       id. b 

The same.

ideb. 366 ἐρμῆς ὅς ἄλλου μῶθου ἐν ἀβαντοισιν ἐσπερ ἔ 
       id. a 
       ἐρμῆς ὅς ἄλλου ἐτέρωθεν ἀμετομοῖς ἐποτο ἡδά LII 
       marg. ἐρμῆς ὅς ἄλλοι (ἄλλοι L) μῶθου ἐν ἀβαντοισιν 
       id. b 

The same.

ideb. 400 ἀντιταλλετο E 
       ἀντιτάλλετο T 
       a 
       ἀντιτάλλετο LII 
       id. b 

This case is complicated, but it seems likely that α had ἀντιταλλετο, intended as a correction of the unusual ἀντιτάλλετο of ν; and that Valla further emended ἀντιτάλλετο into the comparatively familiar ἀντιβάλλετο. Or, of course, there may have been a υ superscribed in ν and α have incorporated this in the text, while b preserved the original ν, which is supported by M p.
THE TEXT OF THE HOMERIC HYMNS: I.

ib. 451 οἴρος ἔ
mg. ἀρ. καὶ δύνατε ἔ
id. α
id. 1 II
id. b
id. x.

Here a as well as b has recorded text and variant; so 241, 288, 563.

ib. 473 τῶν ἔ
id. a
καὶ II
marg. ἀρ. τῶν II
id. b
mg. ἀρ. τῶν x.

Here a has accepted the variant, b has recorded text and variant.

ib. 563 πειράσται Ὕ πειτα παρεξ ὤδων ἡμομουσεν ἔ
marg. ἀρ. πειτα δι' ἀληθινῳ δενιονται ἔ
id. α
id. T
id. L
def. II
id. b
id. x.

Both a and b here have recorded text and variant of x.

Apbr. 99 βήσεα ET id. a
βή
πειεα L
def. II
id. b

Even in the absence of II it is plain that a has preferred the original variant, while b has recorded variant as well as text.

ib. 174 βυρε ET βυρε α
ἤπερ L
id. b

These are typical misreadings of the minuscule kappa (b); a read this as beta, b as eta; since we find ἤπερ also in Par. it would seem that p had the same form.

ib. 205 τετιμένονος ET id. a τετιμένον
id. II id. b

the alternative τετιμένον is not a mere error, for we find it in M (see intro, Part II.).

ib. 214 ἰσα θείοι ET ἰσα θείοι LII id. a ἰσα πάντα,
marg. ἀρ. ἰσα θείοι LII id. b ἰσα πάντα,
marg. ἀρ. ἰσα θείοι x.

a prefers the variant, b reads text and variant.
The same has happened.

Here L fails us, but II as we have seen is amply representative of b, and we may conclude as before that a has accepted the original variant while b recorded the original text with the variant.

It is plain that II has conflated text and variant into one; in the absence of L however it might be doubted how to separate the two constituents of ἑὐβαρβίσεος. If we suppose a to have followed its usual habit and written the variant instead of the text, it is evident that ἑὐβαρβίσεος was the text-reading of x; we see also that D, which in general inclines to b, s ἑὐβαρβίσεος.

This case is more complicated; ἱλάσομαι of a seems to have grown out of ἱλάσομαι in the same way as αὐτοπροτήσεος δὲ out of αὐτοπροτήσεος δὲ Herm. 86. Then in x followed by b the variant seems to have been added, through mischance, twice over, once above the line and once in the margin; this double variant is literally preserved by II. D again confirms the text-reading of x.

To count up, it appears that out of forty-four passages examined in twenty-nine b has preserved the reading of y which was part of the common archetype x, while a has done so only nine times. The question therefore which has been raised as to the relative value of a and b answers itself. The four

58 The superiority of E over L was maintained by Gumm in his Hes. Blätter, and reasserted in his edition (1886).
MSS. ELHT are descended from an archetype with marginal or interlinear variants; these variants the scribe of a seems to have considered to be actual corrections, not alternatives, and to have put them into his text to the exclusion of the original; that a really was copied from x when x had these variants we see from the minority of cases where a has preserved the variant as well as the text, or has mixed it with the text. If we had a, that is ET alone, we should necessarily form an entirely false idea of the readings of a. As it is, these readings are preserved and with singular fidelity by b. There can be no doubt therefore of the greater value of this family, that is of LII. Between L and II the question is less important. It turns upon the passages (Ap. 59, 479, Herm. 42, 70) in which the reading of II is fuller than that of L. Are the additional details of II the work of conjecture, or are they due to some advantages that II enjoyed in copying b? In the absence of a third direct descendant of b the question cannot be answered positively. There is perhaps a prima facie probability in favour of L.

Next, with regard to α, the archetype of the whole family, can we arrive at any conclusion as to its character and age? The graphical corruptions common to ELHT are few. Ap. 65 γ' ἐρόηνα for γενοηήνα is due to the exchange of ν and ρ, only possible in minuscule; instances may be gathered from the Hymns themselves (Selene xxxii. 6 ἀκτίνας ἡ for ἀκτίνας p is perhaps an example) and I may refer to a collection from the scholia of the Vms. A of the Iliad in Ludwig's Aristarchos hom. Textkritik i. p. 267, n. 1, a characteristic dictum of Cobet's Var. Lect. p. 121, and the following instances from Laur. 32, 9, the excellent tenth to eleventh century MS. of the Argumentioi: ii. 440 and 556 ἄνοιγμα for ἄνοιγη, 320 ἐνήρευναι for ἐρήμερυν-

tαι, iv. 308 παρόξυστον, 517 ἄμυγνοι. Herm. 216 δραύλον for δ' ἄφραδλον can only be explained by the minuscule ligature αγ which was somewhat similar to the following ρ; ii. 303 οἰώνισιν εἴ for οἰώνισι σε seems on the other hand an uncial corruption. Apolh. 174 βούφ of α and πορρε of b necessarily go back to a minuscule λοφε. The archetype x was therefore minuscule, and fairly early minuscule, if we remember that some of the mistakes in L (p. 164) are such as might have been made in copying a MS. (b) of about the twelfth century. Of this archetype x it would be true to assert what Hollander says of the supposed general archetype of the Hymns, that it was in a damaged state; the lacunas Ap. 59, 479, 515, Her. 42, 70 are good evidence for that.

The manuscripts that remain, namely ABCPL₂,NOQR,R₂V Monac, agree in the following readings:—

From this list it will be seen that the "Parisienses" are a very well defined family, rendering their archetype as with unusual fidelity. The way in which omissions (Ap. 11, 189, 211, 344, 416, Her. 10, 193, 532-4, Apfr. 194) and impossible forms (λευτρινώθεις Ap. 28, ἀδελφὴ ἢ ἃ. 75, κρεμβαλλασσόν ἢ. 162, ἀπόλλωνος ἢ. 215, ἐναλληγικῶν ἢ. 351, αἰσθητόν ἢ. 356, ἀδικήσατε ἢ. 366, διοικήσατε Πομ. 44, διά ἢ. 342, ἐποίησαν ἢ. 478, νῦν ἢ. 484, ἀποδοῦσαι ἢ. 560) are reproduced without correction in the text of thirteen manuscripts is very remarkable.

The variations within this family are neither many nor important. I give a list of those that appear in the collations at my disposal:

Hollander (p. 11), with a more detailed collation at his command, has concluded for a relationship between PL,RΓ,Γ. A reading of the variants above might incline one to group BFO together. At least it is plain that the Par. family are not immediate descendants from their common ancestor, but that several stages intervene. Certain corrections in B (Ap. 156, 210) and words left incomplete (Herm. 168, 410) are to the credit of its scribe. The striking feature however in this family is the second hand of Γ and its corrections.

Γ, a Brussels manuscript (Bibliothèque Royale 11377-11380, see Omont, Catalogue des manuscrits grecs de la Bibliothèque Royale de Bruxelles, 1885, no. 74), was written by Aristobulus Apostolidès, son of Michael, a Cretan who at the beginning of the sixteenth century wrote many Greek books and ended his life as bishop of Monemvasia. See Legrand, Bibl. Hellénique I, clxv, sq. and Omont, Facétudes des manuscrits grecs des quinzième et seizeièmes siècles, no. 5. The book is corrected by a second hand, of which I have no nearer information than M. Ouverbeaux' statement that it is later ('posteriors') than the

²⁵ Cf. the readings of D  οὔπρογενής and of ΕΚ  οὔπρογενής. In all the cases the same: the first letter of the Hymn was left by the scribe to be added in colour. ΕΥ have reproduced their archetype: B and ΕΚ have given the final word the first beginning that occurred to them.
original. Still we may safely assume that both the first and the second hand were not earlier than 1500, and therefore that the printed edition (1488) may have been consulted.

The text of the MS. is not very remarkable; the most noticeable variants are ἦδον Λρ. 22, νετόδον ἰδ. 78, ἁρσασσαις ἰδ. 516, ἡρίζεσκον Ηερμ. 58, and these may be put to Aristobulus' credit. The corrections of the second hand are far more striking and deserve enumeration.

Some of these, Ap. 32, 59, 215, 217, Herm. 119, 303, 397, Stat. de xiv. 3, are the readings of other extant MSS., and therefore although one or all of them may possibly be conjectures of the second scribe, we are not warranted in describing them as such. Next come coincidences with the editio princeps, e.g. Ap. 318, 325 (partly), 392, 450, 452, Aphr. 20, Ge xxx. 15. Here again these emendations may be the independent work of the second scribe; but, as I have said, the MS. was written at a time later than the ed. pr., and the probability is that the scribe availed himself of the labours of Demetrius Chalcondyles. There remain the variants to which no other source can be given; these are Ap. 181, 184, 192, 243, 244, 309, 318, 402, 423, Herm. 45, Aphr. 13, Pam xix. 45. Of these Ap. 192, 402, 423, Herm. 45 were confirmed upon the discovery of M in 1780. The list as a whole shows very great qualities of insight on the part of the corrector, and not one modern scholar only is anticipated in his emendation. It would be interesting if a further examination of the MS. threw any light upon the personality of the corrector.

I return to the Paris family as a whole. Upon the nature and age of the common ancestor (π), the following corruptions throw light—

Ap. 162 κρεμβαλιϊστον for κρεμβαλιαστον. Obviously the minuscule ligature στ is the cause of this error.

176 οπιδη for οπιδη. Perhaps δη written in minuscule was taken for δην also in minuscule; the presence of the ν would add only a single extra curve.

215 απολλονος (unmetrical) for απολλον; perhaps from απολλον, the α which was meant for the vocative being mistaken for the abbreviation of ας.

Herm. 481 φιλοκεδεα for φιλοκεδα. I think that this word, though an existing form, is a graphical corruption from φιλοκεδα, μ taking the place of the minuscule κ (κ), and ει that of ν by ordinary itacism.

I notice a similar interchange in Quintus i. 815, κείροντο and κυρόντο.

ib. 484 νοα for νον. This corruption seems possible only in minuscule.

ib. 560 εδαδυαι for εδηδυαι. This if a graphical corruption must have its origin in minuscule. An open omega and the minuscule η written together with η might be mistaken one for the other. Cf. επαρξατο επηρξατο in M Ap. 125, φιλαινη φιλαινη Herm. 214 in π.

Aphr. 174 ηφε for κυρε. The minuscule η has given eta.
These instances suffice to show that the archetype of the Parisienses was a minuscule manuscript, and as it is impossible that thirteen scribes should have made identical errors in copying one correct original, it follows, as in the case of ELIJIT, that \( p \) itself was copied from a minuscule MS.

We have now seen that the existing copies of the Homeric Hymns may be regarded as descendants of three independent minuscule manuscripts \( x \) and \( p \). The relation between these archetypes will be considered in the next part of this treatise. One theory with regard to two of them has first to be discussed. Otto Schneider (Callimachus i. p. viii.), Wilamowitz-Möllendorf (Callimachus p. 6), and Hollander i.e. p. 9 maintain that the archetype of all our MSS. whatever except M is a book which arrived in Italy in the year 1423, and has since disappeared.

In the letter which describes the celebrated cargo of 238 books of profane literature which Giovanni Aurispa brought from Constantinople to Venice in 1423 there occurs this passage (Ambrosii Traversarum Epistolae, ed. Laur. Mehus, Florentiae 1759, ii. col. 1027) 'Nam Gentilium Auctorum volumina Venetiis habeo ducenta triginta octo, ex quibus aliquæ tibi, quae rarissimo inveniri solent, nominatim dicam.....Argonautica Orphei, et eiusdem Auctoris tria opuscula, et Hymnos; Callimachum; quam plurimas Pindari Oden. Laudes Deorum Homeri non parem opus: Oppianum de Venatu, item de naturis Piscium, sed id rarum non est.....' Certainly the Homeric Hymns are intended by this description, and Schneider is entitled to every credit for his happy discovery, which seems to impart concreteness to a hypothetical genealogy.

That however this 'codex Aurispae' is the source of our existing copies with the exception of M cannot, if the preceding exposition is correct, be maintained. We have seen that some twenty-five MSS. extant fall into two principal families, \( x \) and \( p \); among the \( x \) family three fifteen century MSS. \( H \), \( J \) and \( K \) appear to be descendants of \( D \), another fifteen century MS. \( D \) and \( At \); yet another fifteen century book at present in Athos, seem to be sprung from a common archetype \( e \), which in its turn belongs to a group of MSS. now represented by LII; these two books themselves are descended more or less directly from an archetype \( h \); which together with a similar hypothetical archetype \( a \) actually represented by two fifteenth-century MSS. \( ET \), spring from the original ancestor of the whole family, \( x \). The other family \( p \) does not seem to have developed so many ramifications, but nevertheless the existing MSS. show signs of more than one generation between them and their parent \( p \), and \( p \) itself appears to be the descendant of at least one earlier \( p' \). Finally the two families \( x \) and \( p \) unite in a common ancestor \( x \). And this common ancestor we are asked to believe is a book brought to Italy in 1423, and which before 1500 gave birth to this complicated
progeny! To pass over the fact that many of the steps in the genealogy of \(x\) and \(p\) point clearly to early minuscule writing, and that the original \(z\) was certainly an uncial MS., has it never occurred to the originator and the continuers of this theory to ask if such \(ευπαιδία\) were even materially possible in the space of seventy years? The hunger of Greeks and the jealousy of Renaissance collectors may explain the production of copies as such; but the growth of error, the development of variant lections and the formation of families is a natural process, the work of centuries.

I shall only weaken this position if I add that, supposing Aurispa's MS. to be the parent of AA\(\text{BCDEGHJKLM}_2\text{NPQR}_2\text{STVWX},\) all these MSS. must necessarily be of Italian origin. Now I am not aware of any test to distinguish a Renaissance Greek MS. written in Italy from one written in Crete or on the Greek mainland; and we have now a case, At, of one MS. at least actually written in the East. Moreover, Schneider and Hollander assume that, this act of production accomplished, Aurispa's book disappeared from the world of manuscripts; it, 'als sie nach Italien kam, schon einige Jahrhunderte alt sein mochte, und durch ihr hohes Alter gelitten hatte' (p. 9). But the rest of Aurispa's cargo, the Venetian Homer, the Ravenna Aristophanes, the Laurentian Sophocles, survive, and are not even in tatters; why are we to assume the Hymns MS. was less robust? And where is the book? Even a ragged MS. need not vanish entirely; does it lurk in an unrecorded private collection, or have decamping Jesuits buried it?

As far as our evidence goes, there is no reason why Aurispa's book may not be D itself or another of the fifteenth century MSS. which we actually possess.

T. W. Allen.
A VASE IN FORM OF A BUST OF ATHENE.

(Plate V.)

In the latter part of 1893 the British Museum acquired the Attic vase which is represented in Plate V. (E 716 of the new Catalogue). The photographic reduction barely serves to convey a summary impression of this finely conceived work, but can give no idea of the subtler refinement of modelling and surface, nor of the delicate colouring which is still fairly preserved, and which would defy reproduction in any process. It belongs to the class of vases which in the latter part of the fifth century came greatly in vogue in Attic pottery, and in which the front part is usually pressed in a mould, in the technique of terracotta statuettes, the back part is varnished and coloured like a red-figure vase of the period: the whole form is usually based on that of the aryballos or acorn-alabaster.

The present instance is an aryballos in the form of a bust of Athene: it is nearly intact, the only part broken away being the calix-form lip of the vase. The height as it stands is 20 cm., and perhaps 2 more should be added for the missing lip. The bust, cut off immediately below the lower base of the breasts, rests on a plinth about 1 cm. high, which is varnished black in front, and at back is painted with a band of egg moulding. It is modelled entirely in the round, but the plain surface of the drapery falling from the crown of the head down the back, and the back of the helmet, are treated as the back of an ordinary red-figure vase, and are decorated with the patterns usual in this class of aryballos: the neck of the vase rises vertically out of the crown of the helmet, at the point where the support for the crest would naturally be attached, and the ribbed handle, springing from the upper part of it, broadly suggests the lines which the back part of such a crest would follow. The true crest has been treated in the conventional manner which is not infrequently found in fifth century art: adapted to helmets intended to be seen from the front; that is, it is bisected longitudinally, and the two sides are turned outwards to the front in such a way that they form a continuous crest extending from ear to ear; in this case they serve the double purpose of a screen to mark the neck and handle of the vase, and a division between the polychrome and varnished portions of this part of the vase. Around the base of the neck of the vase is a myrtle wreath; below the handle (on the back of the helmet), a palmette with
tendrils over a palmette rising from the ground: this ornament is repeated in larger size on the drapery forming the back of the body of the vase between drapery and helmet at the back is a band of egg pattern, which, though it is not in relief, suggests the rim of the helmet. All these patterns are left in red on a black glazed ground; the central dot of each palmette, and the berries of the myrtle have been gilt on a raised ground. This whole ornamentation therefore corresponds to that of the aryballi discussed by Milchhöfer in *Jahrbuch*, 1894, p. 1 f., and assigned by him to a period shortly before 420 B.C. ¹

The whole of the front part has been covered with a white engobe, on which the colours and gilding are laid. The flesh surface and the bulk of the helmet are left in this white; gilding (on a prepared yellow pigment) is used for necklace, aegis, locks of hair, and the details of the helmet, which is decorated with a thin line around the edge and eyeholes, between the cheek-pieces, and on the eyebrows; also with two confronted rams' heads, finely modelled in relief, one at the point of each cheek-piece; and a row of heads along the base of the crest and the junction of the cranium. The lips are painted in a thinned vermilion, and the same colour is used for the edge and interior of the drapery, the interior of the eyeholes of the helmet, and the upper edge of the crest; the remainder of the crest is a rich deep blue; the back of the mantle, where it is brought forward over the head, is in a delicate grass green. The eyes have apparently had the part which in nature is white tinted in a faint blue colour; on this the eyeball appears to have been represented, but it is no longer possible to decide how this was done. The eyebrows do not seem to have been indicated, but the edge of the hollow of the eye is here very cleanly and sharply modelled. The head is nearly in full face, with the slightest tendency downwards and forwards to the spectator's left, so that the broad level line of the eyes is not quite horizontal, but tends slightly downwards to the spectator's left. On the other hand, the right breast and shoulder are slightly higher than the left, as if the figure were standing with the weight resting chiefly on the left leg, and the right leg drawn back. The full and finely formed lips are slightly parted, the upper lip very short, the chin full and round, the nose broad and powerful with nostrils strongly marked, but the transition from it to the cheeks delicately modelled. Owing to the pose of the head, much more of the left side of the face and neck than of the right is exposed to view. The forms of the body are large and powerful, but the same careful modelling as is seen in the face is equally displayed here. Looked at in profile, the forehead, lips, and front of the chin are nearly in one line, which forms a right angle with that of the under side of the chin: this line is varied by the slight swelling of the frontal bone and orbital ridges over the nose and eyes, and still more by the outline of the nose, which springs somewhat forward at a decided angle from it. Without desiring to press the importance of measure-

¹ The identical ornament is found e.g. on the aryballi from Cyprus representing Oedipus (E 696 of the new Catalogue).
ments in so small an object, I think it is worth noting that the proportions of the head broadly correspond to those which Winter (Jahrbuch, 1887, p. 223, and Bonner Studien, p. 148) has laid down as characteristic of the Attic school of the period between the Olympian sculptures and Polykleitos. The fact that this bust could not possibly have been pressed from a mould gives it an importance over other vases of its class; this is proved not only by the freshness and crispness of the modelling, and by the undercutting of parts of the surface, but most of all by the highly plastic and original treatment of the hair. Starting from each side of a central parting, this falls around the face in a series of wavy twisting ringlets, each one of which is separately modelled and terminates in a projecting point worked almost entirely in the round; these locks entirely obscure the ears, and hang on each side of the neck down to the shoulders. The whole effect is that of a mass of twisting snakes, of which the flow and movement serve as a striking foil to the dignified and almost dreamy repose of the goddess' features. The general aspect, before the colours had faded, of this calm ivory face against the background of rebellious locks bordered by the shell-like vermilion edge of the hood, must have produced a charming combination of effect. The hood and the hair and necklace are all characteristic of this type of Athene, who, though she wears aegis and helmet, is not here in warlike mood; the helmet is tilted back, and all the rest is purely feminine.

I do not know any other example in Greek art of the helmet placed on the top of the peplos; probably in the present instance at any rate this is due to constructive necessity; the plain flat surface of the drapery offered to the artist a more suitable field for the palmette decoration, conventionally considered necessary for the back of a vase like this, than hair, or a combination of hair and drapery, would have done; it adapts itself readily to the contrast between the techniques of vase and terracotta, and it also enabled him to give more strength and capacity to his vase. The same tendency is generally traceable in the statuette-vases of the late fifth and fourth centuries; thus for instance in the groups representing the favourite type of Aphrodite Anadyomene, the bivalve shell performs the same function as the drapery on our vase.

The aegis is here of the same general form as is found for instance on the Villa Albani statue (Furtwängler, Masterpieces, fig. 29), with a thick stiff edge rolled back in the form of a piping and sweeping down in two curves to a V form between the breasts; of the same type too is the arrangement of the snakes upon it, each snake lying separately in a double spiral on the edge; in our vase the decorative instinct of the humbler copyist has been carried further, and the snakes are little more than opposing pairs of spirals.

The characteristic snaky treatment of the hair, which in male heads may be compared with the portrait bust of Perikles, is rarely found on female heads: the nearest analogy is perhaps the beautiful series of Syracusean coins,

especially the tetradrachms by Eukleides, where the head of Athene, as here, and in the case of the ‘Minerve au collier’ of the Louvre, has a necklace of beads or pendants. Furtwangler (Masterpieces, p. 107) has pointed out that these coins are of Attic-Pheidian origin, and in spite of the Corinthian helmet of our figure I think there can be little doubt that the vase before us is a free rendering, an impression as it were, but true enough as far as it goes, of one of the great Athenae of the Pheidian school, possibly of the Parthenos itself, made at Athens not later than 430 B.C. and offering in its colouring an interesting and beautiful illustration in miniature of the general effect produced by the chryselephantine method.

Cecil Smith.

[In the Arch. Anzeiger 1895, p. 42, No. 56, a lekythos in Berlin is described which seems to suggest comparison with ours; it is in the form of a woman’s head ‘of the later Phidian epoch,’ with a triple necklace, and locks of hair at each side, treated in a method resembling that of Pl. V.; it also has the eyes blue, the lips and eyelids red, and gilding on the hair and other details.—C.S.]
A MARBLE HEAD PERHAPS FROM SUNIUM.

[PLATE VI.]

The charming little head which is represented on Pl. VI. was bought six or more years ago at Lamia by the Rev. R. F. Acland-Hood from a Greek who professed to have dug it up himself in the neighbourhood of the temple of Athena at Sunium. Mr. Acland-Hood had intended to give it to the Museum at Zanzibar; but he kindly consented to make it over to the Ashmolean Museum at Oxford in exchange for other antiquities provided by Mr. Arthur Evans and myself.

The height of the head from the chin to the top is 4½ inches (cm. 11·5). At the back is a fracture which indicates that it was there joined on to the ground of a relief. I have tried to mount it in exactly the attitude and position in which, to judge from the fracture, it originally stood.

That the head belonged to a figure in high relief is clear from the fracture. But even apart from that, it would be certain. For the back of the head is very roughly worked, and is certainly not intended to be seen. The marble is according to Mr. J. L. Myres, a competent geologist, Parian. The preservation is excellent, only the tip of the nose being somewhat injured.

Style and school are not hard to determine. The way in which animation is rendered, rather by form and attitude than in the expression of the features, seems to indicate a time little later than B.C. 400. The form of the eyes belongs to the fourth century rather than the fifth. The three-quarter-face position, in which the head was intended to be seen, was a favourite one shortly before and after B.C. 400, as we know from the testimony of reliefs, and particularly of coins.3 The high forehead and the tapering chin seem to indicate an Attic school. Still more definite indications are furnished by the arrangement of the hair, which is distinctive. Over the forehead it lies in waves, but the long back hair is woven into long plaits which are brought round to the front of the head, and cross above the forehead. This crossing however is not quite above the middle of the forehead, but decidedly to the spectator’s right of the middle, an adaptation no doubt to sculptural perspective. The waves of hair, too, are thrown somewhat out of the straight in deference to perspective.

3 The three-quarter face on coins is specially common in the early part of the fourth century; cf. Types of Greek Coins, pl. v. 42, 43; pl. vi. 18, 22; pl. vii. 11, 24, 34, 35, etc.
A MARBLE HEAD PERHAPS FROM SUNIUM.

To this girlish outline of face and fashion of hair the closest parallel I have been able to find is in the Mantinean bas-reliefs of Praxiteles, in the head of a standing Muse (figured in Bull. Corr. Hell. 1888, Pl. III, middle figure), to which our head bears a very close resemblance. As to the plaits of hair we may best refer to Pausanias' description of Polyxena in the painting of Polygnotus at Delphi: Πολυξένη δὲ κατὰ τα εἰθισμένα παρθένου ἀνατεκταί τὰς ἐν τῷ κεφαλή τρίχας. I take the word ἀνατεκταί to signify not mere winding with a fillet but actual plaiting. And such plaiting is confined in the monuments, so far as I have observed, to young girls. We notice it in the case of a girl in an Athenian sepulchral relief (No. 729 of the Athens Catalogue). Also in the case of a head from Epidaurus which M. Kavvadias regards as belonging to an Amazon, but which appears to be on decidedly too large a scale for one of the Amazons of the pediment, and on the same scale as the figure of Victory of the same pediment. The same arrangement of hair is visible in the case of Artemis on the coins of Orthagoria in Macedon, of the period B.C. 400-350.

This coin strongly reminds us of the head from Sunium. And in fact if one tries to reconstruct the figure of which it was once a part, it is scarcely possible to do otherwise than supply a figure of Artemis hastening forward, either in the chase, or in conflict with some opponent. At first the possibility that the figure was an Amazon might suggest itself. But the slight and maidenly forms of the face, and the girlish fashion of the hair are far less suitable for an Amazon than for the girl-goddess Artemis. Nor does such hair occur, so far as I have seen, in any known Amazon. The vigorous and alert type quite excludes the notion of a sepulchral relief.

As Mr. Acland-Hood observes, the Greek who sold him the head had no motive for giving a false provenience, and we must at least provisionally attach some value to his statement that it came from Sunium. We thus reach a very interesting question. Can our head come from the frieze of the temple of Athena at Sunium? It is well known that in front of the promae of that temple was a frieze of which several slabs still exist, though in a deplorable state of preservation. They are figured in the Athenian Mittheilungen for 1884, Pl. 17-19. The subjects are (1) a Centauromachy, (2) a Gigantomachy, (3) Exploits of Theseus. Let us then compare in detail our head with the published fragments of the frieze, as well as their miserable state will allow us.

(1) Material.—The published fragments are of large-grained, according to Furtwängler Parian, marble. Our head is also, as I am assured, Parian.

(2) Relief.—Dr. Fabricius observes that the published fragments are in

---

5 The date of these is now, I think, undisputed. See Overbeck, Geschichte der Plastik, ed. 4, p. 61. I do not of course mean to assert that they are from Praxiteles' own hand.
6 Kavvadias, Denkschr. d' Epidavros 5, Pl. viii. 9, cf. Ir. 10.
7 Ibid. pl. viii. 5.
very high relief, and the limbs much undercut, to which circumstance he partly attributes their ruin. Our head is also in very high relief, attached by the back only to the background. The relief to which it belonged was about as high as that of the Phigaleian frieze.

(3) Scale.—The published slabs are 825 mètre (32½ inches) high. Our head is 115 mètre (4½ inches) in height. The Phigaleian frieze is about six heads and the Mausoleum frieze about eight heads in height; the Sunium frieze is about seven times the height of our head. Thus its scale seems to be exactly proportionate, as both in style and date it comes between the two friezes cited.

(4) Period and style.—It is not possible to gain from the engravings of the Sunium frieze a clear notion as to its date. But some archaeologists who have carefully examined the fragments on the site have expressed an opinion in the matter. Prof. Furtwängler considers that the sculpture, though not archaic, is severe, and apparently would assign it to a period not later than the middle of the fifth century. But Dr. Fabricius, after a careful examination, can find no reason why it should not be somewhat later than that of the Theseion. And Dr. Dörpfeld on architectural grounds maintains that the temple at Sunium was of later construction than the Theseion, which in turn was later than the Parthenon. This brings us near the end of the fifth century. And if the new head be assigned, as I think it should be, to the early part of the fourth century, there seems only a slight discrepancy in period. We must further remember that alike the architectural and the sculptural data for fixing the age of the Sunium temple are not by any means decisive.

(5) Subject.—The subject of part of the frieze at Sunium is a Gigantomachy. The figure of Athena in particular, with an overthrown foe at her feet, may be clearly made out, a group in composition similar to that on one of the later metopes of Selinus. Our head then, if it really belong to a running Artemis, will suit the frieze perfectly, so far as subject goes. It will be that of Artemis running forward with bow or torch to meet the enemies of the gods.

I think it must be allowed that the reasons for supposing our head to be part of the frieze at Sunium are at least worth consideration. The main difficulties in the way of such assignment are two. First there is, as we have seen, some difficulty as to date. And second, our head is admirably preserved, only the nose being slightly injured, whereas all the known remains of the Sunium frieze are in a deplorable condition. As regards this latter difficulty, however, it may be observed that some part of the frieze was in the time of Dodwell in good preservation; and all parts

* Athen. Mittheil. 1884, p. 345.
* In matters such as this approximate measures, if taken without bias, appear to me preferable to precise measurements, which are often merely misleading, especially in the case of small objects.
* Athen. Mittheil. 1882, p. 397.
* Athen. Mittheil. 1884, p. 336.
* Athen. Mittheil. 1884, pl. xviill. 7."
have greatly suffered in the last few years. If by some chance our head had been broken off and buried in the soil long ago, there seems no reason why, its preservation need surprise us.

That our fragment does belong to the frieze I do not venture positively to assert. But it is quite safe to say that, if it does not belong, the fortuitous coincidences between it and the Sunium sculptures, in material, relief, scale and subject, are of a surprising kind. And of course, if it really belongs to the frieze, it at once becomes the most important piece of evidence as to the date of the temple and the style of its sculpture. If, on the other hand, we are obliged to give up the connexion with the temple at Sunium, then the fact that our head was actually bought at Lamia, in Thessaly, will dispose us to look in that neighbourhood for some work of sculpture to which it may belong. In any case, it is so pleasing that in, and for itself it is well worthy of the attention of archaeologists.

Percy Gardner.
AN ATHENIAN LEKYTHOS.

[Plate VII.]

[Note.—The Plate which accompanies this paper is, we believe, the first published example of a direct photograph of the curved surface of a vase free from distortion. It is made by the Cyclograph, a machine devised by Mr. A. H. Smith. The vase to be photographed rotates while travelling along the circumference of a circle having its centre at the centre of the lens; and a narrow slit, which travels at the same time between the vase and the lens at right angles to the axis of the latter, ensures that so much only of the vase shall be exposed at any moment as is without sensible motion, at the point where the movements of rotation and translation counteract one another.

—End.]}

The Athenian lekythos here published has been recently acquired by the British Museum. It is interesting in two aspects. First, the design upon it illustrates the use to which such lekythi were put. We see a woman, apparently an ordinary mourner, carrying offerings for the dead. In her right hand is a funeral lekythos of just the same shape as the one on which the design itself occurs. In her left is a basket of fruits and a coloured sash to bind round the stelé on the tomb when she reaches it. Secondly, but more important, is the inscription beside her, Πατρακλ(ε) χαπε. On first thought one would suppose that the vase-painter must have intended to represent one
of the women who, according to the *Iliad* (xix. 301), mourned ostensibly for Patroclus but each having her own sorrows in her bosom,

\[ \text{ἐπὶ δὲ στενάχοντο γυναῖκες} \]
\[ \text{Πάτροκλον πρόφασιν, σφόν ὅ` αὐτῶν κῆδε ἐκάστῃ} \]

with which may be compared the parallel passage later on in the same book (338)

\[ \text{ἐπὶ δὲ στενάχοντο γέροντες} \]
\[ \text{μνησάμενοι τὰ ἐκαστὸς ἓνι μεγάρωσιν ἔλειπε.} \]

But the scene on the vase is of too ordinary a nature to justify an interpretation of that kind, and, what is more to the purpose, we know that the passage in the *Iliad* about the women mourners subsequently became the basis of a Greek proverb, known as Πάτροκλος πρόφασις, "to make a pretext of Patroclus," which is explained as applicable to those who cannot from fear weep for their own domestic losses but can bewail them in connexion with other misfortunes" (ἐπὶ τῶν μὴ δυνάμενων διὰ φόβου θραυμάς τὰς ικετὰς συμφόροις ἐξ ἔτερων δὲ θλίψεων αὐτὰς ἀποκλαιέιν, Perioeciogr. Gr. (Apost.) s.v.). It seems to me that our new vase is a direct illustration of that proverb and that the woman represented on it carries her own grief with her while she laments ostensibly for some Patroclus or other.

It will be observed that the inscription is not placed on a stelē, which besides would be in front of her if there were one. It seems to be painted on a tablet hanging behind her, round towards which she turns in what appears to me to be a very expressive action of appeal to it as if she were saying to herself, "that is the pretext, but the reality is something quite different." I doubt whether any instance exists of a true mourner turning away in this manner from the direction in which she stands or moves, while as regards the right hand stretched backwards that is entirely contrary to the rule on such occasions, which was to raise and stretch forward the hand (see the passages in Pottier, *Les lécythes blanches Attiques*, p. 57).

The drawing of the vase belongs to a late stage of what is called the severe period. The lines are extremely refined, the composition admirable, though not perhaps of the highest order, the folds of the chiton are rendered in fine lines of a pale red colour, the himation thrown over her left shoulder and wrapped closely round her figure has a thin border of pale red, which colour is also applied to the fruit in the basket and the sash.

A. S. Murray.
There is among the fourth century works in the Central Museum at Athens a head found at Laurium. It is made of Parian marble but it has been completely discoloured by slag or refuse from the lead mines, and is now quite black. In its present condition it is quite impossible to obtain a satis-
factory photograph of it, and the reproduction given of it in the figure is from a cast.

It has been published, as far as I am aware, only in M. Kavvadias' catalogue. There it is described as a head of the Lykeian Apollo. This identification rests solely on a passage of Lucian, who mentions a statue of the Lykeian Apollo in the gymnasium at Athens.

He says of it ('Ἀναξ. 7')—

τὸ ἀγαλμα ὅρας, τὸν ἐπὶ τῇ στήλῃ κεκλιμένον, τῇ ὑμιστερα μὲν τὸ τόξον ἔχοντα, ἢ δεξία δὲ ὑπὲρ τῆς κεφαλῆς ἄνακεκλασμένη, ὡσπερ ἐκ καμίτου μακροῦ ἀναπαυόμενον διέκυψι τὸν θεόν.

It will be seen from a glance at the photograph that the grounds for this identification are very slender. The left hand with the bow does not exist, and the only reason for supposing therefore that this is a head of the Lykeian Apollo consists in the fact that the right hand of the statue rests on the head. This in itself seems insufficient and, among other reasons, it is I think rendered impossible by the phrase ὡσπερ ἐκ καμίτου μακροῦ ἀνα-παυόμενον. For the hand is not idly resting, it is not a tired hand; the posture of the fingers is firm and energetic.

Before examining the head in detail it will be well to compare it with certain other heads, and to assign it, as we can with tolerable certainty, to its school. This is not difficult, for a detailed examination leads us to the same conclusion as the first impression, and suggests irresistibly that it is Scopas.

The two heads from Piali, found on the ancient site of the temple of Athene Alea at Tegae, are certain guides for the style of Scopas. He, as Pausanias tells us, was the architect of the temple, and executed the pedimental statues. These two heads are certainly from the pediments: they are too large for metope heads, they are completely in the round, and both have the top of the head sliced off, obviously to accommodate them to the sloping sides of the roof. In them we may then trace, if not the actual hand of Scopas, at any rate the style of the Scopas school as surely as we may learn from the Parthenon pedimental sculptures the manner of Phidias.

Their general characteristics are clear enough. In both cases the head is very deep and round, the measurement from the back of the head to the base of the nose far exceeding the length of the face. The face is short and full, the eyes very deep set, the mouth very short, and the curve of the forehead as it falls over the eyebrows very marked. In one word I should call them violent. But it is by examining why and how the mouth is short, and why and how the eyes are deep set, that we can best discover what it is that makes the Scopas manner so marked, and separates his school from other schools. For though the shortness of mouth is characteristic of Scopas, and equally characteristic of Lysippus, yet no two things can be less alike than the mouth in a Lysippian and the mouth in a Scopas statue.

Probably fewer mistakes have been made over Scopas works than those of any other school, for the Scopas manner is more distinct than any other.
The first impression of them is unique in the sense of life and force it conveys, and the sculptor has worked intelligibly; we can see in each feature the contribution it gives to the general effect. The eyes always seem to be gazing outwards and upwards, not dreamily but intensely, and the same tension is kept up in every feature.

The breath seems to be coming and going rapidly, the mouth is panting. In both the heads the muscles of the neck are strongly strained—in the helmeted head upwards, in the smaller head sideways. In the first the 'Adam's apple' is sharp and prominent, the skin being drawn tight over it, in the other the muscles to the right of the neck are full and almost exaggeratedly accentuated.

The treatment of the forehead is very marked. A deep line divides the upper forehead from the lower, and the lower forehead swells heavily over the line of brow. But there is no sharp line, as in Lysippian heads, over the bone of the brow; it is covered by a prominent muscle, and the swell of the forehead is carried over the bone to form one continuous curve with the line of the underside of the eyebrow. Thus the apparent depth of the eye is immensely increased. Instead of lying merely in the framework of bone as in Lysippian heads, it lurks, so to speak, beneath this very full and swelling curve coming right down over the forehead. This depth is further increased below the eye by the very prominent cheek-bone. The depth thus given to it adds to the impression of an eager outlook.

The upper eyelid is in both cases almost invisible. It is drawn up tight, following, as in nature, the upward look of the eye, till it almost disappears under the swelling eyebrow, and appears in the front view as the thinnest possible line, almost vanishing at the corner. The impression of the outward gaze is completed by a very subtly observed fact, which Mr. E. A. Gardner has pointed out to me and very kindly allowed me to mention. The lower eyelid drops rapidly from the outside corner of the eye, and rises quickly again to the inside corner. Now when a person focuses his eye on a near object, the lower eyelid is slightly raised in the centre, and the curve down from the outer corner and up again to the inner corner is slight, and approaches to a straight line. But if the glance is then transferred to a distant object, the lower eyelid at once sinks in the middle, for it is pressed down by the lens of the eye, which enlarges to focus itself on a distant object. Scopas observed and executed this most carefully and successfully; the long outward gaze so characteristic of his work is always indicated by this droop of the lower eyelid. It is interesting to see in other less successful artists of his school how, in their hands, the same thing attempted but misunderstood involves them in false drawing.

The nose is very broad at the base, but it never conveys a heavy impression. This is due to the fact that in both these heads and in others of the same school the nostrils are strongly inflated, thus necessitating a great breadth at the lower end of the nose. In this point again his less successful pupils go wrong. They copy the breadth of nose across the nostrils, but the nostrils they do not inflate. Instead therefore of receiving
an impression of eager vitality, we are merely struck by the heaviness of build.

This eager expression is also carried out in the mouth. The upper lip is drawn up in the centre, so that the distance from the top edge of the lip to the bottom of the nose is extremely short. This vigorous raising of the upper lip irresistibly suggests a quick-drawn breath, which is also, as we have seen, carried out in the inflated nostrils, and it entirely accounts for the remarkable shortness of the mouth, measured horizontally. As it is raised in the centre, the lines of the lip instead of being straight become triangular, and the top edge of the lip slopes downwards to the corners, which thus necessarily come closer together than they would if the lip was straight.

Again, this raising of the centre of the upper lip affects the shape of the opening of the mouth, for the mouth, open as in Praxitelean and Lysippian heads, is open in an entirely different manner. Instead of having a narrow slit running the length of the mouth between the parted lips, as in the Hermes, the marble Faun, the Venus dei Medici, the Apoxyomenos, to mention a few out of many examples, the raising of the upper lip in the centre necessitates a similar triangular opening. Shortness of the mouth is characteristic, it is true, of Lysippian works, just as it is of Scopaeic works, but there is all the difference in the world between them. The Lysippian mouth is structurally short; the Scopaeic, short because momentarily drawn up in the centre.

Now the general impression we receive from this head is that it is Scopaeic, and if we compare the technique of it with the few points I have mentioned as characteristic of certainly Scopaeic heads, we find that it has these in common with them. The full swelling curve of muscle passing from the forehead over the brow, giving the eye its characteristic depth, and making the distance from the front of the nose to the eyesocket very great, is equally obvious. The upper eyelid as in the Scopaeic heads is almost invisible, giving the eye its upward look, and the subtle drawing of the lower eyelid is attempted, but a little misunderstood. It falls rapidly and most characteristically, especially in the right eye, from the outer corner, presenting the most marked contrast to the treatment of this part in Praxitelean and Lysippian works; but, having done this, the sculptor seems to me to have misunderstood the object of what he was working at, and he brings it up to the inner corner in a hesitating and infirm line. In the left eye he seems to have made another attempt, but with slight mistrust of himself; the fall of the eyelid from the outer corner is less decided, and the rise to the inner corner consequently less rapid. Again the curve of muscle over the eye ends as in the Scopaeic heads in a somewhat deeply cut line outside the corner of the eye. In front all the characteristics of Scopaeic treatment are there, but the execution is not perfect.

The nose similarly is broad at the tip and, as far as one can see, for it is mutilated, the nostrils were cut deep and full. Much of the tip of the nose has gone, but the left nostril is still clear. The mouth is short, the upper lip drawn up in the centre, and falling rapidly away to the corners, and the
opening of the mouth wider in the centre than at the sides. The face is short and full, the depth of the head very great, and the muscles of the neck, swollen on the left side, tell us that it was not set straight on to the body, but inclined slightly over as I have had it photographed.

But though this work is thoroughly Scopasque, it is I think quite certain that it is not by Scopas. Though there are fine points about it, it is not of first-rate workmanship, if we compare it with the Tegae heads. As we have seen, the two eyes are not quite alike, and the right eye by itself is a little out of drawing; it is not set absolutely on the horizontal axis of the face as the left eye is, but inclined upwards towards the nose. In itself this is not conclusive, for as in nature so in art we find it on the finest heads, but in conjunction with other mistakes it is likely that it is a mistake too.

Again, the sculptor evidently found himself in difficulties over the hair. This passes over the forehead on each side in five broad, deep bands from behind the ears, and is carried up over the centre of the forehead to where the right hand rests on the top of the head. The back of the head is unfinished, and it is impossible to tell accurately exactly how and where these braids of hair start. But there is a distinct fault in the way in which the ear is put in.

The braids are thick and rise high off the head, so that they would either cover the ear, or would be pushed behind it. We are made to suppose that they are pushed behind it, for the whole ear appears, with the lower braids showing behind and in front of it. The ear then naturally would project beyond the braids which pass behind it, but this it does not do, for after making the braids the sculptor cut the ear out of them, so that though they pass behind it, it does not project beyond them, but is cut in them as it would appear in a sketch, not in a piece of sculpture in the round. The mistake is an unimportant one, but one which a great sculptor would not have been likely to make.

Again, there is, I think, a slight trace of archaism in the hair itself. It is impossible to speak for certain, as the surface of the stone is in such bad condition, but it seems to me that the braids are more formal and archaic than we should naturally expect in a work of this date, and more especially from the hand of Scopas, who perhaps more than all other Greek sculptors seems to have been modern in every sense of the word, analytical, impressionist, almost morbid.

But though this head shows the strongest possible contrast to Lysippian and Praxitelean work, and the strongest possible affinity to Scopasque works, there is a certain difference running through it all which separates it from the Tegae heads, and brings it near to the wonderful head probably of Hygieia found in the Asclepieion at Athens. There is greater softness and more repose about it, the violence of the Tegae heads is not entirely reproduced. This is accounted for, for this head I believe is not the head of a man but of a woman.

Apart from the general impression the head gives one, there are two tangible reasons for believing this.
In the first place I do not think that in the whole history of Greek art, from the fifth century downwards, there was ever a man's forehead of the shape and structure which this head shows. Always in men's heads there are shown the two foreheads, separated by a dividing horizontal line, more or less marked. The upper forehead coming from under the hair is bounded at its base by this line running across sometimes from temple to temple, sometimes not quite so far. Below this starts the lower forehead swelling above the brow in the 'bar of Michael Angelo.' Certainly this bar is one of the most characteristic features of Scopas' male heads. Mr. Murray, it is true, has suggested that the helmeted head from Piai is the head of a woman, but apart from the fact that there is nothing whatever to recommend this theory, it is rendered impossible by the very marked existence of the upper and lower foreheads, and the very strong bar which lies over the brow.

The reason for such universality of treatment is clear enough, for a man's head is structurally different from a woman's: all men have this bar and the separating line between the upper and lower foreheads, slightly sometimes but always perceptibly; women never.

The head of which I speak has no such bar, nor any rudiments of it. The forehead in one piece swells gently to the line of brow, and then falls heavily over it.

The other point is the hair. Ten bread plaits are brought from somewhere behind the ears, up to the centre of the forehead, and from there are carried upwards to where the hand is placed firmly on the top of the head. Here again it would be difficult to find anything parallel to this in any man's head.

But since the head has always been accepted as a man's head, it is only fair to examine shortly to what class of man it possibly belonged.

It is I think safe to assert that it is not the head of a middle-aged man nor of an old man, and this narrows us down to the choice between a boy, a youth, or a young god. Again, it is impossible it should be a boy's head: the features are far too mature and formed, and it is difficult to conceive that a boy, even when the hair was not cut at all, should have had enough hair to make five long braids on each side of his head. In addition to this the head is fully the size of an adult head.

If it is a male head at all it must then be the head of an ephebe or of a young god. Now many statues and bronzes have been found on which a young man appears with long braided hair. The so-called Choiseul-Gouffier Apollo in the British Museum, the replica Apollo and the Omphalos in the Central Museum, and the Ephebe head in the Acropolis Museum, are all well-known examples. Dr. Waldstein has shown in a very acute article on this subject (J.H.S. vol. i. p. 168, vol. ii. p. 332) that many early statues thought to be Apollos are in reality ephebe statues. But that this should be an ephebe statue is rendered most unlikely for one reason, and impossible for another.

In these long-haired heads of young men, the treatment of the long hair is always uniform. The hair directly above the brow is not braided at all, nor is it very long. It hangs down always in locks or in straight lines
over the forehead, coming down about half-way between the brow and the top of the forehead. The long hair grows behind the head, and is plaited in two braids which start in opposite directions from behind the ears, pass round the back of the head, and are pinned or knotted together rather in front of the top of the head. Here however the treatment is altogether different: all the hair, on the back and front of the head alike, is long, and the whole of it is plaited up into ten braids, five on each side of the head.

In ephesian statues, then, the long hair is the hair from the back of the head, the front hair being short and left free. In this statue all the hair is plaited up, and the front hair is long: for this reason it is unlikely that this head represents an ephesian.

But it is rendered impossible by another fact. At the time of the Persian Wars, the custom of young men wearing their hair long was altered. As soon as they became ephesians, it was cut short, boys only for the future wearing long hair, and dedicated at a feast called σώμετρημα. After this time ephesians appear with short hair, as we see on the Parthenon frieze, and all statues of long-haired ephesians date from the sixth century or the earlier part of the fifth. Myron, speaking roughly, marks the change, his statues, the Discobolus for instance, wearing short hair. But as this head dates from not earlier than the fourth century, we cannot account for the long hair in the case of an ephesian.

We come then to the last supposition, that it represents a young god; in other words, that it is, as has been always supposed, a head of Apollo. Apollo, it is true, both in archaic and later art, wears long hair, sometimes braided like an athlete; in which case, as Dr. Waldstein again has pointed out, he is always distinguished by a curl, sometimes with a big knot on the top of the head, made of the front hair; or sometimes, when represented as a boy, as in the Samothenos, with a boy's hair long behind and flowing, undult, in front. But it is quite impossible, owing to the firmness and maturity of the features, that this head should represent a boy, and in any case no head of Apollo has ever been found which shows a treatment of the hair in any way parallel to this. There are Apollos with the athlete's braid, distinguished always by a curl, there are Apollos with long boys' hair and boys' faces, and there are Apollos with luxuriant curls and knots of hair. The reason why there is no Apollo with hair like this does not seem far to seek, for men's hair does not grow in such a way; the front hair could never attain such a length that, passing round the back of the head, it could be brought up again over the forehead to the top of the head.

But to me more convincing than any argument is the impression of femininity the head gives. The head itself as it stands in the Museum is so discoloured that, having once been called an Apollo, it was not unnatural to continue to call it one. Certainly a photograph taken from the head itself conveys very little impression at all. But the cast and the photograph of the cast, where we get a white surface, shows much more of the character of it. There appears in it a softness and grace of contour which it is hard to associate with a man's head sculptured in the fourth century. It is true that in
later reproductions of fourth century works, such as the Apollo Saurocto-
nes, the effeminacy of the face suggests a female rather than a male, but I
very much question whether this is original. Certainly such softness does
not seem to exist in any genuine fourth-century work. Later sculptors, of
weaker powers, appear to have been unable to render smoothness and delicacy
of outline without giving effeminacy to contour; and it is their inability to
render both delicacy and virility, such as we see together in the Hermes by
Praxiteles, that results in the effeminacy of the Sauroctonos. It is impossible
to believe that the Praxiteles who in the Hermes rendered with such
triumphant success extreme delicacy of outline without losing virility of
character, could have in another statue attempted with less success delicacy
of outline and in the attempt altogether lost the manliness. Besides, in the
Sauroctonos we are dealing with the statue of a young boy, and this head
certainly does not belong to such a statue.

The ten long plaits of hair pass over the centre of the forehead up to the
hand on the top of the head. This is shown by the fact that the braids get
smaller as they pass from the ears to the centre of the forehead, and from
there up towards the hand. Clearly then the ends of the plaits, the thinnest
parts, lie under the hand. The hand placed firmly on the head is clearly
grasping something—it is natural to suppose the ends of the hair—and the
hand seems to suggest the solution of what the head represents.

We have, I think, before us the head of an Aphrodite of the Scopaic
type, doing up her hair after the bath. In a sixth-century vase published by
Gerhard (Etrusk. u. kamp. Vasen, pl. xxx,) there are represented women
standing under the cold douche, and these have their hair not free over the
head, but in long plaits hanging down, some over the shoulder, others down
the back. This head then—perhaps merely of a woman, but probably one
of the very common Aphrodite types, where she appears in some bath or toilet
scene—represents her as doing up the long plaits of hair after the douche.
The hand is quite distinctly grasping something; it does not idly rest on the
head, and the braids of hair pass up to it. The inference is fairly obvious.

It is unfortunate that we have no female head certainly by Scopas, for
nothing can yet be considered certain with regard to the Mausoleum
Sculptures; and though I do not think that this head is by the sculptor him-
self, it seems to represent with astonishing fitness the feminine type which
would correspond to the masculine type shown in the Tegea heads. There is
the same insight—for Scopas, we are told, aimed at representing the soul by
means of the body; the same eagerness and vitality, but all softened down,
and until a better is found we may take this head, together with the Hygieia
head, as the Scopaic female type, and of the two this one, I think, is more akin
to the Tegea heads than the other.

E. F. BENSON.
ARCHAEOLOGY IN GREECE, 1894-5.

The excavations between the Pnyx and the Areopagus, made by the German School under the direction of Professor Dörpfeld, have been continued once more during the present season. In consequence of the great interest of the topographical problems involved, it was decided last year that the site should be expropriated by the Greek government, and thus the excavators are no longer hampered by the necessity of piling up the earth near at hand, so that it could be put back again if required. The liberal subvention made by the German government to its School was supplemented this year by private subscriptions, for the purpose of these excavations, and consequently it was possible to continue them for a considerable time, and to clear a large area. Unfortunately it has hitherto proved impossible to divert the modern road, which runs right through the site, and conceals the place where Professor Dörpfeld supposes that the fountain Ennesacrums once stood. Until this also can be removed, we can hardly expect to arrive at certainty on the point.

Under these circumstances, the confirmation or refutation of Dr. Dörpfeld's theories of Athenian topography in this region has still to depend on the evidence offered by the surrounding buildings. Here too nothing decisive has yet been found, though many very interesting discoveries have been made, which are cited with great ingenuity by Professor Dörpfeld as tending to corroborate his theory. A provisional plan of the excavations, published in the last number of the Athenian Mittheilungen for 1894, makes it easy to realize the results which they have so far attained. It may be remembered that last year some traces were found of an early shrine of Dionysus, in the angle between the modern road and the south edge of the Areopagus. This has now been completely cleared; the precinct is triangular in shape, and is completely surrounded by roads. Near one corner are traces of a temple; in the middle are the remains of an altar, in the form of a table resting on four legs, and beside this, in the basis of the altar, is a sinking for a stela. At another corner is the most interesting feature of all; a wine press, originally of quite early period, and showing signs of repairs at different dates, and a floor at various levels. All these indications serve to show that there was an early precinct of Dionysus here, on the spot later adopted by the Iolaceni; whose inscription was found last year. Professor Dörpfeld identifies this earlier shrine as the Lemnion or the Dionysion in the Marshes (Limae). This is not the place or time to discuss the probability of the identification, which may be confirmed or disproved by further discoveries; but it is only fair to notice that it corresponds fairly well with the position assigned to this
early Dionysion by Maas in his dissertation *de Lenaio et Delphinio*, and is
certainly more probable than the position near the Dipylon gate formerly
assigned to the Lenaion by Professor Dörfeld. Of course there are argu-
ments on the other side, which need not be repeated here, since they are
familiar to all those who are interested in Athenian topography. The only
one that needs to be repeated in this new connexion is that the name Limnae
the marshes, certainly seems an unlikely one for this high district. The
ground between the Acropolis, the Areopagus, and the Pnyx forms a water-
shed, with a fairly rapid descent down the valley between the two latter
hills; nor does there appear to be any geological reason why the conformation
of the ground in early times should have been different enough to cause a
swamp to form here. The overflow from the springs and wells, or later from
the aqueduct, built in the sixth century, does not seem to supply an adequate
reason for the name. It was expected that some trace of the Odeum
described by Pausanias near the Eumaeacrumus would be found near the
precinct of Dionysus, but no certain remains of it have yet been discovered.
The lower parts of several buildings which face on to the surrounding roads
are fairly well preserved, and some of them are particularly interesting for
their pavements, which are almost like a simple mosaic, made of pebbles cut
flat on their upper side. Some of these probably go back at least to the fifth
century B.C., a much earlier date than has hitherto been attested for this kind
of work.

Another very interesting discovery has resulted from the complete
clearing of the small precinct previously found on the east of the ancient
road. The reliefs found in this precinct were sufficient to show that it was
dedicated to some god of healing, though the excavators rightly hesitated to
call it a sanctuary of Asclepius. An inscription has been found proving that
it was dedicated to Asclepius and Amynos; that is to say, no doubt, Amynos
was the earlier Attic hero to whom it really belonged, though, like all other
subordinate divinities of healing, he had later to share his honours with
Asclepius. The same inscription mentions also another associated hero,
Dexion, who had a separate precinct, of which the position is not known.
His name is of peculiar interest, because it is said that the poet Sophocles,
who in his lifetime was priest of the healing hero Aleon, was worshipped after
his death under the name of Dexion. New light is constantly being thrown
on these heroes or deities of healing, and the subject is daily becoming more
complicated and more interesting.

The ancient road has also been followed up to where it turns off sharply
to the left, to mount the ascent of the Acropolis. Unfortunately the hill at
this point has been so much denuded that hardly any ancient remains are
left, and hence it is impossible to test by excavation the correctness of
Professor Dörfeld's theory that the Eleusinion occupied this angle of the
road. This is again a disappointment. It is possible that a continuation of
the excavations, especially under the modern road, may lead to the discovery

---

of some inscriptions or other indisputable evidence as to the controverted points in the topography of this region. But it seems as if we must after all be content to draw our inference from the evidence that is now available, and under these circumstances it is hardly to be hoped that we shall as yet have any complete agreement among Athenian topographers, or that the era of controversy is likely to come to a speedy end. There is plenty of new material to discuss, but very little of such a nature as to close discussion.

During these excavations an attempt was also made to solve the question whether there was a subterranean passage beneath the orchestra of the theatre of Dionysus, as in so many other theatres recently excavated. A premature announcement of the discovery of this passage was made in the Greek newspapers, and this unfortunately, in spite of Professor Dorpfeld’s immediate contradiction, came to be repeated in some English periodicals. What was found was nothing but some irregular cuttings in the rock, of no particular shape, and evidently not intended for use; one well-like hole was very early, and contained fragments of Mycenaean pottery; others appear to be mere soundings, perhaps taken when the theatre was being made or altered, to ascertain the nature of the ground. It was also found that the rock was cut away in a straight ledge, just under the line of the stage of Phaedrus; this cutting, which is evidently an early one, may not be without importance in the reconstruction of the early theatre; it shows that the orchestra of levelled rock only extends over the part enclosed by the prolonged semicircle of the auditorium: outside this may have been either earth or wooden platform.

At Eleusis, the excavations of the Archaeological Society have been continued, under the direction of M. Skias; and the outlying portions of the site are being slowly cleared. Amongst the most recent discoveries is a plaque of late red-figured style, representing some ceremony connected with the mysteries; on the pediment above is a figure of Artemis.

The American School, wishing to follow up its successful identification of the domes of Icaria and Plotheia, at the back of Pentelicus, made excavations this spring at Kukumari, beyond Stamata. The project was due to Professor Merriam, and was carried out after his death under the direction of Professor Richardson. No topographical results were obtained, such as might test the correctness of Professor Milchhöfer’s identification of the site as Hecale. But an interesting inscription was found containing a sacrificial calendar: the days and offerings are prescribed for various divinities, and the price of the victims is in every case added. The local gods and heroes seem to belong mostly to the Marathonian tetrapolis; many of the names are new and interesting.

Other excavations in Attica have been concerned with the opening of tumuli. The most successful of these were conducted by the Swedish archaeologist, Dr. S. Wide, at Aphidnae; he found in a tumulus many graves of Mycenaean period, containing vessels, ornaments in gold and other metals, and also some skeletons, one of gigantic size. At Brauron other tumuli were opened by the Greek authorities, but without much result, as they had been previously rifled. And at Kára, at the foot of Hymettus, Mr. Myres, of the British School, investigated the nature of the stony mounds so common in this
region, marked on the German map as tumuli. After opening two or three of these, he came to the conclusion that they were merely heaps of stones gathered off the fields, of no funereal significance. But many of them go so deep beneath the present level of the soil, that they evidently are remains of very early cultivation.

The temple of Poseidon on Calauria (the modern Poros) has also been excavated by Dr. S. Wilde. It is famous for its view of Athens across the Saronic Gulf, which induced Demosthenes to choose it as the scene of his exile and his death; in early time it was also the centre of a religious amphictyony of considerable influence. Unfortunately almost everything above ground has been carried off for building purposes, and all that could be found was the plan of the foundations. These show the position of the temple and its enclosing precinct, and also of an agora beside it, flanked with porticoes. One of these, which is well preserved, is of quite early date, showing polygonal walls and capitals not much later than those of the Parthenon. A sacred road evidently led up through the agora to the temple. But little was found in the way of portable antiquities or inscriptions; some proto-Corinthian vase-fragments and a Mycenaean idol show the site to have been used from early times.

At Epidaurus, the shafts sunk in the stadium last summer by M. Cabitdias led to most interesting discoveries, and consequently the whole border of the seats, as well as both ends of the course, is now being completely cleared. In the stadium, as in the theatre, the seats of white limestone are preserved all round, at least in the front row, and to some extent behind it; the gutter in front of these is also preserved. But the greatest discovery of all is the line of the goal or starting-point—it is clear that what was the goal for the stadium must have been the starting-point for the diadromus. This is excellently preserved at the deeper end; it resembles that found in the stadium at Olympia, but with the difference that at Epidaurus we see preserved not only the sockets for the posts that separated the places assigned to the various competitors, but the marble posts actually standing. These were doubtless used for the same purpose as had already been suggested by Mr. Bosanquet in a paper read at the British School, for the sockets at Olympia—to carry the ends of the strings that separated the courses assigned to each competitor in a sprint race, according to the custom followed in athletic games at the present day. The seats on one side show dedicatory inscriptions; on the other, inscriptions recording the manumission of slaves in the simplest possible formula. Along each side of the course are placed five stones, dividing it into six spaces of one hundred feet each.

The excavation of the Heraeum near Argos has been brought to a conclusion this spring by Professor Waldstein. In addition to the two temples and their surrounding buildings, as previously cleared, a fine portico has now been quite uncovered. The most important finds of the present season are some more fragments of the metopes of the temple. Two of the heads are in fine condition, and one of them is among the best things that have been discovered upon the site; it is the helmeted head of a warrior, in excellent
style; and it certainly will form an important link in the argument about the school to which the sculptures are to be assigned. Its publication must of course be awaited before any more can be said upon this matter. Fragments of pottery were again discovered in great numbers, mostly of the same early styles as before, though a few pieces are of a peculiar character. There is now a great mass of material from these excavations in the museum at Athens, which will take a long time to work up; its publication will be awaited with considerable interest. Among the smaller finds may be noted an early inscription on bronze, which is a fine specimen of the Argive alphabet, and apparently contains a portion of a law or a decree.

At Mycenae, M. Tsountas has continued his excavations. Curiously enough, his chief find this season was a most unexpected one—a large hoard of silver coins of good Greek period. Perhaps its owner may have chosen Mycenae to hide his treasure, as being the last place where anybody would be likely to look for it.

M. Tsountas also opened, during the summer, several of the prehistoric graves on the island of Amorgos. He found many objects of the Mycenaean or earlier periods, including lance-heads, pottery, terra-cottas, and a statuette of very primitive style.

On Delos, the excavations of the French School were continued during the summer by M. Couve; they have been devoted mostly to the clearing of the prosperous town which grew up around the sacred precinct in late Greek times. Several houses, of Hellenistic or early Roman period, prove to be preserved to a considerable height, and the decoration of their walls, as well as the statues and other ornaments which they contained, have in many cases been recovered. Among the statues is an extremely fine copy of the Daidalomenos of Polyclitus, which must rank higher than any hitherto known; another very beautiful work is a draped female statue, which recalls the type of the finest Tanagra statuettes. It is to be hoped that these statues will soon be transported to the Museum at Athens; at present they remain at Delos, exposed to the weather and to the risk of even more violent damage. The fine statue of Ophiomus also deserves better care.

The French excavations at Delphi have also been resumed, with the help of a fresh subscription from the French Chamber, which has now voted about £30,000 for this work, apart from the regular grants made to the French School. There is not very much in the way of new discoveries to report since this time last year; the excavations were continued through the greater part of the summer; among other things found was a very fine statue of Antinous, almost perfect in preservation, and some good bronzes, including an archaic Apollo and a copy of the Doryphorus type. So much has been written already about the sculpture and other monuments discovered in the previous season that there is no need to add any general description here; no more buildings have been identified as yet, beside those mentioned in last year's report. But a further study of what had already been found has led to some interesting results, which have already been published by M. Hagnolle at an open meeting of the French School, and may be recorded here with due acknowledgment.
I have in the first place to correct one or two mistakes in my last year's report, such as it is difficult to avoid in writing very soon after a discovery. The horse's head, which is there quoted as probably being the only fragment found of the pedimental sculptures of the temple, has been fitted on to a body, and certainly does not belong to the temple sculptures at all. It is to be feared that there is no hope of finding these architectural sculptures; probably they must either have been taken away bodily by some later emperor to Rome or Constantinople, or else they must have been destroyed together with the marble front, which the Alcmaeonidae generously substituted for the stone one which they had contracted to supply. No remains of this marble front have been found, except one triglyph, which is buried deep in the foundations of the temple; nor does the form of the architectural members which have survived suggest a sixth century origin. It seems clear that the temple of which the remains are now visible must be due to a rebuilding of which there is no historical record; but Pausanias speaks of the pedimental sculptures by Praxias and Androsthenes as if they were still to be seen on the temple.

Several more metopes and fragments of metopes have been added to the treasury of the Athenians; nearly thirty can now be reconstructed in whole or in part, and this is the total number contained by the building. It appears probable, as M. Homolle suggests, that the two façades, of six metopes each, were accorded to the exploits of Heracles and of Theseus respectively, and that one side was occupied by the metopes representing the contest with Geryon, and his cattle, and the fight with the Amazons: the subject of the other side seems still uncertain. The series of caryatid figures, of which four have been recovered, apparently belonged to a separate building or small portico, not, as had at first seemed possible, to the treasury of the Siphnians.

The sculptural decoration of the Siphnian treasury has now been arranged and studied with care, and it forms a most valuable series. The pediment is apparently the earliest of all; it is like the rest of Parian marble, and represents the contest between Heracles and Apollo for the tripod; it has the remarkable peculiarity that the upper part of the background is cut away so as to leave the figures in the round, while the lower part is only in relief. The square-cut forms of the relief, and the rather squat proportions of the figures, are of a very archaic appearance. On the frieze a gradual development can be traced, from the very early style of some parts to a far freer and more advanced treatment in other groups. The subjects seem to be the Apotheosis of Heracles on the west side; the preparations for the race between Pelops and Oenomus on the south; the fight of Patroclus and the other heroes before Troy over the body of Sarpedon on the east, with the group of the seated gods looking on from either end, and

---

8 Bull. Corr. Hell. 1894, p. 188. I am indebted to this account throughout these remarks.

9 My statement about this pediment in last year's report is erroneous, but, by a singular chance, attributes it to Peloponnesian art.
the Gigantomachy on the north. These subjects are no longer a matter of conjecture; it has been discovered that every figure had its name painted either on the field of the relief or on its margin; and although the paint has in every case disappeared, the faint scratches made on the stone to guide the painter still remain, and can with care be deciphered. The variety and vigour of conception of these sculptures, and their care and delicacy of execution, must be seen to be realized. Casts of all the finest sculptures from Delphi have been made, and were exhibited last winter in the École des Beaux Arts at Paris; they are now in the Louvre, and a glance at them is better than any amount of description. The school to which the sculpture of the Siphnian treasury must be assigned has already caused some discussion. The names attached to the figures offer no indication; here, as in other works found at Delphi, they are added in the local alphabet. But on the shield of one of the warriors is incised an inscription in very curious decorated forms of letters, which was at first thought to have no meaning. This has now been deciphered with great ingenuity by M. Homolle as the artist's signature in the Argive alphabet; unfortunately his name is lost; but the Argive form of δ (Δ) is clear, and there are other indications of an Argive connexion. If so, we shall be able to quote the sculpture of the Siphnian treasury as an example of Argive art at the close of the sixth century; and with it, and the corresponding reliefs from the treasury of the Athenians, we shall have a wealth of material for comparison and contrast which cannot fail to throw much light on the history of Greek art at the most interesting period of its development.

In the case of so great an excavation as that of Delphi, it is impossible to do more than comment on a few of the most important discoveries. Provisional publications are promised, and will be awaited with the greatest interest. In particular, the great building inscription, dealing with the restoration of the temple in the fourth century, may be expected to help to solve the difficult problem of the date of the present remains of the temple.

At present the question of the preservation of the monuments of Greece, and their restoration if necessary, is even more prominent than that of their excavation. Public attention was drawn by the earthquakes of last spring to the dangerous state of the Parthenon. It is true that none of the fragments which then fell were of very great importance; but an examination of their fractures showed that many of the cracks, which it was hoped were only superficial, went deep into the substance of the marble, and made the preservation of many parts of the building extremely precarious. The same conclusion was reached by the French architect, M. Magne, as the result of a minute study of the Parthenon both before and after the earthquakes. A scaffolding has been erected, to facilitate a close study of the inner architrave of the western front, which is the part in most immediate danger of falling, and the German architect, Herr Dürck, has undertaken the task of supervising the necessary repairs. It is agreed on all hands that a new block of marble is necessary at this point: but all round the building, especially at the corners and along the west front, there are most ominous cracks, which require the
most serious attention. It is to be hoped that some means will be found by which the Parthenon may be put out of danger, without being disfigured either by new blocks or by unsightly bands and clamps. The remedy is not an easy one, and is worthy of the attention of all architects and of all who have any affection for the noblest monuments of Greek art.

Another monument of Athens, the Panathenian Stadium, is to undergo restoration on a very magnificent scale. In consequence of the project of the international athletic meeting, to be held in Athens in the spring of 1896, under the title of the Olympic games, it was resolved to put the stadium into a fit state for practical use; and one of the most munificent of modern Greeks, M. Aberof, has given a large sum of money to supply it with marble seats, like those once placed there by Herodes Atticus. Some portions of the decoration provided by Herodes are preserved, and these will serve as a model for the whole restoration.

In the National Museum, much progress has been made with the arrangement of the antiquities. All the vases, bronzes, and terra-cottas have now been transferred from the Polytechnic into this museum, which is now one of the most complete and varied in the world, as well as unrivalled in many branches. The vases are admirably arranged and exhibited, and many early classes can now be studied in Athens as they can nowhere else. A catalogue of the vases by M. Couve, of the French School, will soon appear, and M. de Bidder, of the same School, is also employed upon a catalogue of the bronzes, of which a part is already published. All the bronzes from the Acropolis, including those recovered and cleaned by Mr. Bather, are now exhibited in the National Museum. The work of sorting and cataloguing the vase fragments from the Acropolis, by Dr. Wolters, Dr. Graf, and Dr. Hartwig, is now completed, and arrangements are being made for publication. It is to be hoped that this magnificent series will soon be made accessible to study.

To turn next to Byzantine work, the restoration of the mosaics of the Church at Daphne is now all but completed. The process by which these mosaics were removed while the dome was rebuilt has been recorded in a previous report. Almost all of them have now been restored to their places in the church, from the canvas to which they had been temporarily transferred. No attempt has been made to complete them, or to restore the missing portions. The excavations of the Greek Archaeological Society within the walls of the monastery have led to some interesting results, and have revealed much of the plan of the early conventual buildings. A study of these has been made by M. Millet, who proposes to continue the excavations. Unfortunately another interesting convent, in Athens itself, that of St. Andrew near the Cathedral, has been ruthlessly destroyed to make room for the new offices of the Metropolitan Church. The refectory of this convent contained some very valuable frescoes, which have for some time been concealed by whitewash—among others a fine example of the Tree of Jesse, now hopelessly lost.

* Outside Greece, a good deal has been done during the past season to recover or to study the monuments of the art and civilization of Greece and
of other kindred peoples. The brilliant results of Mr. Arthur Evans's studies in Crete are already known to the readers of this Journal; Mr. Evans made another short journey in Crete this spring, accompanied by Mr. Myres, and attained some interesting results in the remains of Mycenaean civilization. Dr. Halbherr, though impeded in his excavations by political difficulties, succeeded in opening some tombs which were intact, and yielded a rich supply of Mycenaean vases and other antiquities. His excavations were subsidized by the Archaeological Institute of America. In Cyprus the British Museum again conducted excavations, this time at Curium, under the direction of Mr. Walters. As well as many later things, there were found here also some Mycenaean vases with human figures, of peculiar types.

In Egypt, an attempt has been made on a considerable scale to test the possibility of profitable excavations at Alexandria; these were made by Mr. Hogarth, on behalf of the Egypt Exploration Fund, and he was joined by Mr. Bonson and Mr. Bevan of the British School at Athens, and by the local archaeologist, M. Botti. Unfortunately the results were mainly negative. The great depth of the soil, and the bad condition of what is preserved beneath it, make excavation within the town of Alexandria almost impracticable. Nor do the tombs in the neighbourhood seem much more likely to repay the work spent on them. On the whole, it must be reluctantly acknowledged that Alexandria is not a site of which any great expectations can be entertained, and it certainly is among the most expensive and difficult to excavate.

It was announced last year that the walls of the Homeric Troy had at last been discovered—of the Troy, that is, which was contemporary with the Mycenaean civilization in Greece, and of which the traditionary greatness is recorded in the Iliad. The walls of this city have been almost entirely cleared during the past summer by Professor Dörpfeld, with a grant from the German Imperial purse. They are of very fine construction, and are regularly built; the most peculiar feature in their construction is that every few yards the line is a little set back, so as to form an advancing angle—a feature noticed also by Dr. Nauck in the walls of the fortress of Gha on Lake Copais. The greater part of the circuit of the walls is excellently preserved, though much obscured by the Roman foundations of the later Ilion; three towers, one of which contains a cistern, may still be seen.

The great loss sustained by English archaeology in the death of Sir Charles Newton received a full tribute from all the archaeological bodies in Greece. Another event which cast a gloom over the season was the sudden death, from pneumonia, of Professor Merriam, formerly Director of the American School, who had just returned to Greece to continue his work. Happily it is possible to conclude with a more pleasant recollection, in recording the tribute paid by all archaeologists here, Greeks and foreigners alike, to Professor Ernst Curtius at the dedication of his bust in the Museum at Olympia. That those splendidly conceived and ideally conducted excavations were due to his energy and perseverance would alone suffice for his renown; but it is even more encouraging to think how much of what has since been done is due to the not unworthy emulation of so excellent an example.

E. A. G.
A FLYING EROS FROM THE SCHOOL OF PRAXITELES.

[PLATE VIII.]

The terracotta reproduced on Plate VIII, with the kind permission of Mr. A. S. Murray was acquired by the British Museum in the course of this year from Eretria, where it was found in a tomb. It measures together with the wings 1 ft. 9½ in. in height, and is composed of a greyish, fine-grained, well-baked clay, which, as may be seen on the broken fingers of the left hand, shows a purplish tint when fractured.1

It is in perfect preservation, and the wings form an organic whole with the body. The delicacy of the modelling is especially conspicuous on the head and wings; at the same time it has suffered from a yellowish incrustation of some thickness. The whole statuette was covered in the first place with a lustrous white engobe; in addition the hair was painted red-brown, the wings green on the front side, the chlamys rose-colour, and the sandals purple; further, the tongue (lunula) of the sandals is yellow, or rather gilt. At the back the wings are neither worked nor painted; between them appears a small quadrilateral opening. This fact justifies the supposition that the Eretrian terracottas were destined for hanging against the wall, so as to have from a distance the appearance of objects in relief.

The fact is that of an ephobos of slender proportions, but the character of Eros is adequately indicated by the large wings.2 The action of the

---

1 It is interesting to put on record that the clay of our terracotta corresponds closely to the ashen-grey earth of Eretria described by Diodorides v. 20, 117 (ed. Spooner): "Την Ἑρετριδαν γῆν ἔχει ἐν στενῇ οἰκίᾳ ἑνα εὐημεροῦσα, ἢ λῆβαν φυλακῆς ἄργετα ἐν ἅμαρτίας, ἢ τίχος σπάνιον καὶ Ἄλλων ἄρτον πρὸς τε χαλκοῦστα κλημάτια γραμμαί ἀνά ἀποφράσματα. Also Pliny, Hist. Nat. xxv. 54: "Nonaque ut alba est et circa, quae praestat in medicina. Probatur mollitias: et quod si aequitas perdatur, violascentem reddit colorum." In view of this, it may be apposite to raise the question whether there was in Eretria in the fourth century a manufacture of terracottas dependent on those of Attica and Tanagra, yet distinct from them, such as has been already assumed for the fifth century lakythoi (cf. States in 'Εφημ. Αρχ. 1894, p. 56). In the National Museum at Athens are some fifty terracottas from Eretria, all without exception from the excavations of the last seven years. With the exception of a vase in the form of a negro's head (published by Hartwig in 'Εφημ. Αρχ. 1894, pl. 6, p. 121), not one of them has as yet been made known, although some may rank as masterpieces. None are over one foot high, and compared with them our terracotta ranks very high. See Aëtius, 1889, pp. 74, 115, 171; and compare also a terracotta published by Miss Burton in the current volume of this Journal, pl. 7, fig. 2, p. 184.

2 On Eros and his sepulchral signification see Furtwängler in Roscher's Mythol., Lexicon, art. Eros; Collignon in Dietstorm, des Ant., art.
A FLYING EROS FROM THE SCHOOL OF PRAXITELES.

left wrist implies that he has held some very light object, probably a wreath or a taenia. The whole composition suggests Praxiteles, and the stylistic details confirm this first impression. The head vividly recalls the Hermes at Olympia, and the Aberdeen head in the British Museum; but it is above all in the angle of the head, the form of the cranium and neck, and the shape of the nose and forehead that the similarity to the latter example is so conspicuous. At the back of the head are obvious signs of a wreath or fillet, which now no longer exists. The wonderful wings can only be compared with the genuine wings of the Palatine Eros, and the Borghese Eros in the Louvre; they are formed of several rows of short fan-like feathers and long sword-like pinious. The form of the hips, rather thick than broad, is another link with the Borghese statue. The manner in which the chlamys is drawn diagonally over the breast from the right shoulder, while at the same time allowing the body to be seen through, finds its closest analogy in the works of Praxiteles, e.g. the Bacchus of Versailles in the Louvre, which Furtwängler (Masterpieces, p. 337) has ascribed to the master himself. Only one other Eros statue of Praxitelean style wears so long a chlamys as that of our example; a copy of this is seen in a Pompeian wall-painting published by Zahl, Ornamente u. Gemälde aus Pompei, i. 99.*

In other aspects our terracotta presents certain differences which show that the artist was acquainted, not only with the works of Praxiteles, but perhaps also with the Belvedere Hermes, the supposed work of the sons of Praxiteles about 330 B.C. (see my article in Revue Archéol. June, 1895). The Etruscan Eros has all the rhythm of movement and harmony of the last-named. The face again is not sweetly smiling, but serious and reflective, as is that of the Hermes, which had been erected over a grave. In both cases the head turns to that side on which the hips bend outwards, while this bend is as strongly marked, and the right knee-cap as firmly rendered, as in the other works of the παδός Πραξιτέλους. Also with regard to the bodily proportions, our statuette, although representing a slightly younger ephesos,

* Cupido; Pottier and S. Reinsch, Nécropole de Myrina, Index a.v. Eros, and especially p. 329; Beulé, Bulle. numism. 1886, p. 70ff.
* Published by Miss E. Sellers in Furtwängler's Masterpieces, pl. 15.

The Eros in position and action of the arms corresponds minutely with the Dresden Artemis, which Furtwängler (Masterpieces, p. 324, fig. 139) regards as a product of the older period of Praxiteles. The head is gently inclined to balance the rigid left leg, and the bow is held in his left hand, while with the right he draws up his chlamys behind the shoulder just as the Diana of Gabii, which Studnicza (Feynont, en gr. Kunstgesch. p. 18ff.) has identified with the Artemis Brauronia of Praxiteles. The type of countenance connects it with the Eros of Centocelle, as also do the long curls of hair, the relatively short wings, and the similarity of the whole conception (for instance, he makes use of his weapon, but bends his head in reflection). Besides the three well-known examples we can point to a fourth Eros from the hand of Praxiteles, namely, that which Verres stole from the house of Mamertine Hicin at Messana, where it had been preserved for many generations. Cicero, in Verres, iv. 24, calls it similar to the Eros of Theophras: 'idem pries artiste (= Praxiteles) siuadem sibi Capidinam facti ilium qui sit in Theopis, propius quem Theopis visantur, num alias visendis nullas causa causas.' If then the Centocelle statue represents the Theophras Eros, the fourth and similar Eros-type may be preserved to us in the above-mentioned Pompeian statue. In this case it would be an older work of Praxiteles, and as it were introductory to his later Theophras masterpiece.
and on a smaller scale, approaches most nearly to the Belvedere Hermes. There is the same individual roundness and breadth of composition in the upper part of the body with its prominent breasri and relatively small head. There are as yet no signs of an immediate Lysippian influence, still less of the proportions of the flying Erotes from Megara and Myrina (Pottier and S. Reimach, Nécropole de M., pls. 11–14, p. 328), which on account of their sepulchral use afford the closest parallel with our terracotta.

The deviations of the Eretrian Eros from the Belvedere Hermes-type are explained by the fact that the former was intended to be hovering in the air. In order to express the backward and forward movement, the leg is much advanced, the toes drawn back under the foot. To avoid any appearance of excessive heaviness in the lower part of the body the arms are pressed close to the chest in Polyclitean fashion, and serve as a point of support for the mantle, the pendent folds of which present the appearance of a second pair of wings. This deviation from the Praxitelean pattern is not very happily executed; the two fore-arms are the only parts of the body of which the drawing and modelling leave anything to be desired.

We have seen then that the Eretrian terracotta is very closely connected with the Hermes of Olympia and the Belvedere Hermes. Like the latter, it may be regarded as the production of an artist working between B.C. 340 and B.C. 330, in full accordance with the artistic traditions of Praxiteles.

This influence—a natural result of the close political relations between Athens and Eretria 4—is further represented from the latter city by two works of art: the female head discussed by Furtwängler, Samml. Sabouroff, pls. 12–14, and the statue of a youth in the store-rooms of the National Museum at Athens, the head of which appears to have been inspired by the Hermes of Olympia. 6 The influence of Praxitelean art on ceramics generally, and especially on the Tanagra terracottas, has been frequently touched upon, the latest discussion being by M. Mayer, Athen. Mittheil., 1892, p. 261 ff., who collects all the older literature; but in this sphere there yet remains very much to be done. 7

Eros in the form of a winged Hermes is not hitherto known, although the development of art, and the close relation of Eros to Hermes, naturally tend in that direction. Apart from attributes and the slight distinction of age, the sculpture of the fourth century recognized a difference between the ephebos Eros and the ephebos Hermes, whether through the more or less girlish treatment of the hair or the rounded boyish face. Even on the two monuments 8 where the bodily proportions of Eros are stronger than

---

8 For the history of Eretria, see Richardson in American Journ. of Archaeol., 1891, p. 234 ff.
9 I know it only from S. Reimach's Chroniques d'Orleans, p. 380; in 1822 it was not exhibited, and it is not described in Evvardia's Ταυρικόν οίκον Μουσείον, vol. i.
6 On the influence of Lysippian art on the Smyrna terracottas, see Reimach, Histoire
7 Orn. p. 156 ff.; also Nécropole de Myrina, p. 159.
9 The sculptured column from Ephesos (J.H.S. xli, p. 230) and a terracotta of unknown provenance (Louchey, 3rd collection, pl. 13). The terracotta, if genuine, must be connected with the Ludovisi Area.
elsewhere, the smoothly divided hair in the first place and the rounded, roguish face in the second, serve to differentiate him from Hermes. Eros with close-shorn curly hair and severe Athletic face is in the fifth century a very rare,\(^9\) in the fourth a hitherto quite isolated phenomenon. The closest analogy to the Eretrian Eros is the athlete on a Campana relief (Campana. *Opere in plastica*, 94), preserved in many other reproductions; in his left hand is a palm, and with the right he places a wreath on his own head. Milchhöfer (*Archäol. Studien H. Bruun dargest.*, p. 62 ff.) has rightly traced it back to the picture by Eupompos (Pliny, *H. N.* xxxv. 75). The same figure, but somewhat more youthful, with the same motive, appears as an Eros with large wings on a later tetradrachm published by E. Beulé (*Les monnaies d’Athènes*, p. 222). The Eretrian terracotta in a mythological aspect may be regarded as the oldest certain example of that fusion of religious ideas which in the epoch of the Tanagra and Myrina terracottas gave rise on the one hand to bizarre creations, on the other to conceptions full of charm.

Nevertheless it must be acknowledged that the artist of our terracotta, if wanting in originality, has yet produced a perfectly complete and successful composition, the rhythm of which has an especial charm. As regards the seriousness of the conception we can only compare the Eros with a lyre on a lekythos of the ‘strong fine’ period published by Benndorf (*Gr. u. Sc. Vasenbilder*, pl. 48, fig. 2), or the Eros head of Pheidian period published by Furtwängler, *Meisterwerke*. Figs. 12-13. But while the movement of the latter still shows signs of awkwardness, in this case the problem is undoubtedly solved with entire success, thanks to the influence of painted sculpture, though almost without realism. Upward flight is expressed by the same means, and quite as harmoniously, on a contemporaneous work of art, the Ganymede of Leochares, whose prototype Furtwängler has recognized in an older pictorial composition (*Sammel. Sabinoff*, text to pl. 147, p. 5). On vases too, the lightly-hovering Erotes first appear rendered correctly in the fourth century; in the fifth they usually float diagonally down with stiff extended legs or bent-in knees and upward-curving bodies, unaffected by the treatment of the drapery.\(^{10}\) The question arises, to which painter of the

---

\(^9\) I can recall only the following: (1) two gems in the Brit. Mus. (Cadas, *Abhandl.* No. 673, 681); the style of both is that of the fifth century; (2) a gem of severe style in Gerhard, *Über den Gott Eros*, pl. 1, 8. In each case Eros is a perfectly mature youth, but how far the type approximates to Hermes, the small scale of the design forbids me to say.

\(^{10}\) I quote only examples from the British Museum: E 101, E 297, E 571, Eros with closed extended legs; E 15, E 187, E 229 (rev.), E 397, E 834, E 464, with bent knees; E 126, E 189, flying diagonally; E 229 (obv.), flying horizontally; E 129, F 57, upper part of body bent backwards. Flight correctly rendered, with or without aid of drapery; E 231 (obv.), E 241, and among Italian vases, F 138, 184, 306, 310, 314, 315, 399, 400, 458. Eros on the Pelas-glass F 424, which in many respects shows a remarkable advance on the latest fifth century vases, Eros still flies without inclining his head, or bending the hips outwards, or having drapery underneath him.

The flight of Niki had as a general rule the same development. We see her flying diagonally on E 327 and F 384; with bent-in knees, without aid of drapery, E 179, 287, 453, 458, 518. But on the vases of the fifth century she already appears in natural and easy flight, as on E 312 and F 406; cf. E 423, E 495. This is
fourth century the merit of this improvement must be ascribed, but it is impossible to give a definite answer. I should be most inclined to fix upon Pausias, the contemporary of Praxiteles. It was he who "primum lacunaria pingere instituit, nec camarae ante cum taliter adornant, morfuit" (Pliny, H. N. xxxv. 123). According to the unanimous opinion of architects the word camera (Gk. καμαρά) means, as opposed to lacunum and fornix, a kind of arched roof which in Greek times was made of wood. As none have been preserved, it is impossible to enter into the constructive details. So much however seems to be established by the evidence of antiquity, that between the longitudinal beams and the crosspieces were quadrangular spaces of varying size, which were closed in above with wooden tablets. Pausias then was the first to adopt the practice of painting these lacunaria (plural of lacunarium). His innovation did not however take the form of painting the same with ornamens or heads and busts, of both of which systems we have actual examples in the fifth century. His merit must rather consist in the fact that he first introduced the idea of painting in the lacunaria whole compositions of one or more figures. These wooden roof-panels which he painted are in my opinion absolutely identical in appearance with the still existing semicircular curved panels in the roof of the tepidarium of the smaller baths at Pompeii, in the Casa Farnesina at Rome, and elsewhere. Julius Lessing in his preface to the publication of the latter (Berlin, 1891, pls. 12-16) has very rightly remarked that this arrangement of rectangular partitions and clearly-marked-off panels must have been derived from wooden timber roofs.

The roof of the Pompeian tepidarium referred to (reproduced in Musci Borbonico, ii. 53) is our best possible authority for the manner in which flying, leaping, and swimming figures were lavished on the decoration of such lacunaria. In the six panels there illustrated we see five flying, and only one standing figure. Further the foreshortening necessitated by the vaulting (cf. Brunn, Künstlergesch. ii. p. 143) is rendered less objectionable by flying than by standing figures. I would suppose then that it was above

explained by the fact that her drapery was at an early period applied to this purpose of making her flight as easy as possible. The Nike of Ponce is another example; she cannot however be compared with those above-mentioned, as she has one foot resting on the ground, i.e. the base, and consequently does not fly clear.

11 Cf. above all the Dictionary of Architecture issued by the Architectural Publication Society, i.e. Camera and Lacunar (with reference to ancient authorities); also W. H. Hunt, Dict. of Terms used in Architecture, 4th edition, 1876; Dorn, Banknoten der Römerv, p. 283.

12 The former is proved from Helbig, Unternehm. über d. europe. Wandmalerei, p. 1929. 2. A classical example of the latter is a lacunarium in the Brit. Mus. from the Nereid monument, on which a head is painted in full face. Six (J. H. S. xiii. p. 133) has adduced this in support of his view that this monument belongs to the first half of the fourth century, but his arguments are not convincing; and I am still persuaded that the monument dates from the fifth century. Moreover Six's interpretation of the B. M. astragalus vase is not to my mind satisfactory. Rather than Aurne and Aeuffis we should regard the figures as nine personified astragali (αστραγαλοι), by means of which the figure on the left (much restored) declares oracles. Cf. a similar relief from Euganean in Landorowski's Sched. Pompيل. x. Pietraroja, figs. 109, 110, and for the astragalus oracle, Petersen 662.
all the painting of the lacunaria that suggested to Pausias the opportunity of entirely overcoming the old difficulty of the correct representation of flying male figures, as illustrated by the Eretrian terracotta, the Ganymede of Lecches, and other examples.

A merit of this kind would be naturally earned by one of the Sicilian school of painting, and especially by one of Pausias' talents, who parens pingebat tabellas maximaque pueros. The same artist painted an Eros in the Tholos at Epidaurus, which according to Pausanias (ii. 27, 3) βελη μὲν καὶ τύχων ἐστὶν ἄφελκος, λύραν δὲ ἄντι αὐτῶν ἀράμενος φέρει. I should conjecture that this Eros was represented flying downwards, in accordance with an old tradition, and in a similar attitude to the figure from Eretria which we have discussed.

P. Bienkowski.

*Keakow, Summer 1895.*

---

12 I see no ground for rendering parens 'children'; I take it as used in contradistinction to heredes.

14 On the vases of the fifth century a flying Eros frequently occurs, with the lyre held downwards in his left hand, a staff held up in his right, e.g. E. 191 in Brit. Mus. Another Eros playing the lyre and flying downwards is seen on the lekythos published by Benddorf (esp. 199), and on E. 126 in Brit. Mus.
THE HISTORY OF THE NAMES HELLAS, HELLENES.

It has sometimes occurred that a specious explanation of a fact, or a specious amendment of an error, has established itself so firmly in the court of history, that no one dreamed of disputing its claim to be unquestionably correct. At last, by accident, a doubt arises in some one's mind; and, after enjoying a long protracted success, the universally received solution, when its antecedents are investigated and its implications realized, turns out to be wholly 'impossible.' It may be easily shown, I think, that such is the case with the traditional explanation of the extension of the names Hellas and Hellen to the wide signification which they bore since the seventh century B.C. This explanation has had the inestimable advantage of resting on the authority of Thucydides; and it belongs to that class of explanations which merely require to be stated in order to recommend themselves, and which the human mind is accordingly inclined to accept unreflectingly. It has come to be regarded as a commonplace historical fact; yet it is noteworthy that in some recent histories of Greece it is simply stated that the Greeks adopted Hellenes as a common name, without any suggestion of an answer to the obvious question why that name was chosen rather than another. The authors apparently felt some difficulty in accepting the exposition of Thucydides. E. Meyer seems to have realized the difficulty more fully, and some remarks which he offers on the point will call for notice. In this paper I propose to exhibit the difficulties which render the received view untenable, and to put forward another explanation in its stead. The problem is: How came Ἑλλάς to be the common name by which the Greek peoples distinguished themselves as a race from those whom they called 'barbarians'? How came Hellas to be the name of the land, which we in western Europe call Greece? The solution involves the discussion of another problem,—a problem of exegesis which occurs in the Telemachia and has not received sufficient attention. With this subordinate question it will be convenient to begin.

The description of the leavetaking of Telemachus from his Spartan host, king Menelaus, at the beginning of the 15th Book of the Odyssey is familiar to every one who is likely to read these pages. But it will be well

briefly to recapitulate the circumstances. Telemachus visited Sparta for the purpose of learning tidings about his father. He sailed from Ithaca to Pylos, and he was driven from Pylos to Sparta, by way of Pherae, by Nestor's son Pisistratus. He stays a night at Sparta, is invited to stay longer, and might have accepted the invitation, if he had been left to himself; but he receives an urgent warning from Athena, before dawn, not to tarry longer, and accordingly he accosts Menelaus at break of day, asking permission to return home at once.

ηδη νυν μι' ἀπόσεμε φίληρ ἔς πατρίδα ηγαίων,
ηδη γάρ μι' θυμὸς ἀπέδεικα οἴκεται ικετεῖα.

By the emphatic position of ηδη, at the beginning of both verses, the speaker shows how great is his haste. 'Even now send me back to my country; for my soul yearneth to go home this very hour.' Menelaus assents, with courteous phrases, to his guest's wish. 'Telemachus,' he says, 'I will not detain you, since you desire to return. A host who keepeth a guest against his will is, to my thought, as bad as he that urgeth a guest forth who would fain abide. But at least wait till I bestow gifts upon you.'

So far, well; indeed, nothing could be better. But what follows?

ei δ' ἔθελες τραφθῆναι ἄν Ἑλλάδα καὶ μέσον Ἀργος
όφρα τοῦ αὐτοῦ ἐπώμαι, ὑποξεύεσθαι δὲ τοῖς ἱπποισιν
ἀστει δ' ἀνθρώπων ἡγίστρωμαι. οὐδὲ τις ἡμέας
ἀυτοὺς ἀμπέρυει δώσει δὲ τι ἐν ἑς φέρεσθαι
ἡ τίνα τριζωδον οὐχίδελεν ήτα λειβήτων
ητ' ἐν' ἠμίσουν ἡ στοιχεῖα ἁλείσον.'

But if you will wend through Hellas and mid Argos, I myself escorting you, well and good.—I will yoke the horses and conduct you from city to city. None will send us home empty, but all will give us something, a tripod, a cauldron, a gold cup, or a pair of mules.' 'Nay,' answered Tele-machus, 'I prefer to return forthwith, for I left none at home to guard my chattels.'

---

ταξινάν, ἄρρας ἐνὶ φόδως ἀνάμων μετὰ τάγμα.
6 180 sopp.
7 ἰτ of course marks the apodosis (so schol.
8 ν. ταξινάν). It is not scientific to regard an understood κατα τοῖς after ἵππωμα as a distinct way of construing (Hayman); for an understood κατὰ τοῖς is simply the explanation of apodotic δίσ, 'well—but, in that case.' Aristarchus gave another construction which is clearly wrong. He punctuated after ἐθέλει, and explained τραφθῆναι as imperative. Mr. Hayman ascribes this to a perception of a certain want of connexion in ὑπώμα, and remarks that the remedy is 'at some expense of propriety in the sense.' The ὑπώμα clause will demand some attention at a later stage of our discussion. In the paraphrase which I have given above, I have abstained from insisting on its precise meaning. In 9. 427 cf. 5. 16, 16. οὐρρ' εἰς εἰδώτη, ε.τ.α.—the apodosis is expressed by the action which immediately follows ἤρᾳ καὶ ἀκροτηρίαν ἐν τοῖς εὐπροφ., ε.τ.α. But here εἰ
θέλει is 'since you wish.'
It may seem astonishing to find Menelaus first readily acceding to the clearly expressed desire of his guest, and then, in the same breath, making a proposal, the acceptance of which, however we interpret its terms, would have implied for Telemachus a longer absence from Ithaca than another day or another two days spent at Sparta. Our astonishment however may be provisionally stilled by the reflection that the proposal of Menelaus offered inducements which might seem to him to justify a delay of several days, though a delay of even one day at Sparta, without such inducements, could not be fairly recommended to a man who professed to be in haste. The inducements were the opportunity of seeing something of the world—the cities of men—and the rich presents which were to be collected on the journey. The one condition that such a proposal could, under the circumstances, be entertained at all, was evidently that the delay which it involved should not be too long. And it was meant seriously. The king does not say: 'If you were not so pressed for time, I should have invited you to come with me on a tour through Hellas and mid Argos'; but, 'If you wish to go, I will come with you.' It was a polite offer; and Menelaus may have felt that it would be more probably declined than accepted; but it was clearly an offer whose acceptance was by no means out of the question. But what exactly was this proposal? What places did Menelaus propose to visit?

The received interpretation of άν' Ἑλλάδα καὶ μέσων Ἀργος is that Ἑλλάς means Northern Greece and that Ἀργος stands for the Peloponnesus, a part typifying all; so that the whole phrase means ‘Greece’—Hellas in the later sense of the name. μέσων is taken to designate Argos as in the middle or heart of the Peloponnesus. Before discussing the validity of this interpretation, I would make three preliminary observations, in respect to (1) the origin of the interpretation, (2) the meaning of Ἀργος, and (3) the force of μέσων.

(1). The received view has certainly the merit of antiquity, for it is as old as the final redaction of the Odyssey. The composer of the first Book of that epic was also, as Wilamowitz-Mollendorff has convincingly proved, the arranger of the whole poem in its present form. This poet (who did not live earlier than the middle of the seventh century) borrowed the phrase under consideration, Ἑλλάδα καὶ μέσων Ἀργος, but attributed to Hellas the wide significance with which he was himself familiar. He describes the fame of Odysseus as diffused far and wide, καὶ Ἑλλάδα καὶ μέσων Ἀργος—that is, throughout the whole of Greece; the phrase being of the same nature as Τροίς τε καὶ Ἐκτορ, ‘Greece and Argos in particular.’ It was an inevitable consequence that the obvious meaning of the expression in this later passage

---

8 Mr. Hayman assigns as the motive the opportunities which Telemachus would have, on such a tour, of prosecuting inquiries about his father. But the poet does not hint at this inducement.

9 It was clearly intended by Menelaus that Telemachus should return straight to Pylos with Nestor’s chariot. This is rightly noted by Hayman, ad loc.

10 Compare Merry, note ad loc. and ad α 314.

11 In his Homerische Untersuchungen.

12 a 314, ἄρης, τοις ἀλφαῖς εἰς καὶ Ἑλλάδα καὶ μέσων Ἀργος. The same line, (with a necessary variation ἄρης for ἄρης), has been interpolated twice in Ἐ (236 and 316).
should be transferred to the original, and far older, passage, which was incorporated in the fifteenth Book. Only, modern interpreters have introduced a refinement in the explanation of the phrase. They take Hellas to mean Northern Greece—though there is no reason to suppose that such a sense was attached to it by the author of Book i.; and they are consequently obliged to explain Ἀργος as typical, not literal, in order that the sum Ἑλλάς + Ἀργος may be equated to Greece.

(2). As to the original meaning of Ἀργος there is of course no doubt. It meant the Argive plain, not the city. In all early parts of the epic, it meant one of two plains, either the northern horsefeeding Argos in the land which was afterwards called Thessaly,—Ἀργεῖον ἱππόβατον,—or the southern Argos of the Peloponnesus. Only in some later passages is it found designating the city which grew up beneath the castle of Larisa.

Can Argos be used as representative of the whole peninsula, of which it was unquestionably a politically important district? The commentators seem hardly to realize that the assumption of such a usage requires some vindication. They might with considerable plausibility adduce a verse of the Iliad, where it is suggested that Greeks and Trojans should conclude a peace, and that the Greeks should return home

Ἀργος ἐσ ἱππόβατον καὶ Ἀχαιών καλλιγύναια.

Here, it might be said, Argos represents the Peloponnesus, Achaeis represents North Greece, and the whole phrase is simply equivalent to Greece. But if we look a little deeper, we can see that this exegesis is not strictly true. The two most important chieftains on the Greek side in the legend of Troy were Agamemmon and Achilles. Agamemmon commanded the Argives and Achilles the Achaians, hence Argives and Achaians came to be used, representatively, and indifferently, for the Greek host. Thus when it is said "let them return to Argos and Achaea," the two most important contingents, the Argives and Achaianes, are singled out as representative of the army. The phrase implies the well-known representative usage of the national names, Argive and Achaian, in regard to the host before Troy; but it need not imply any representative force in the corresponding geographical names, Argos and Achaea.

There is another way by which it might be plausibly attempted to elicit the meaning 'Peloponnesus' from Argos. It may be rightly said that Argos, being the most important part of Agamemnon's realm, could naturally and fitly designate the whole of his realm, and that, as his realm covered a large part

---

13 τ. 75, compare Hengel's note "derändliche und nordischste Landstreif fremdländs für das gesamte Griechland." Such geographical abbreviations seem most unlikely.

It is worth while noting that this line may not be due to the author of τ., but may have been borrowed from him from a much older epic poem, a true Achilliad, in which—see note above—showed—it would have referred to the northern Argos which was contiguous to Achaea.

It has been suggested by a German commentator (Amel) that the northern Argos is meant in τ. 437, where Hermes, personifying a follower of Achilles, says to Pan, εἶ ὁ τρόποις ἀξίωτικος καὶ ἀληθῶς Ἀργοὶ λεγένοιμ. Our judgment on this point will depend on our view of the date of τ.

14 That Ἀργος is used in this sense will be shown hereafter.
of the peninsula, Argos was approximately equivalent to 'Peloponnesus.' It
seems to me that such a view might fairly be entertained so far as the name
'Αργος itself is concerned 13; but then, if 'Αργος means the realm of
Agamemnon, or practically the Peloponnesus, what is the force of the epithet
μέσον?

(3) And in any case, as applied to the literal Argos, what is its force?
It is obvious that 'Αρκαδία μέσον would be geographically correct, but that
'Αργος μέσον, if it mean, as it is explained to mean, 'in the centre of the
Peloponnessus,' is either false or pointless. It is false if μέσον be taken
strictly, for Argos is not Arcadia; it is pointless if μέσον be taken loosely, for
in this case the epithet would be equally applicable to Sparta or Elis. To
translate μέσον as central, with the suggestion that it was a centre of traffic, is
little more than to evade the difficulty by a rendering which, with a deceptive
appearance of being literal, lays more meaning on the Greek word than it is
capable of bearing. The only tenable 16 explanation is that of Mr. Hayman,
who takes μέσον as describing the position of Argolis between Lacedaemon
and Thessalian Hellas.

It has seemed well to call attention to these subordinate difficulties
before approaching the more decisive questions, which we must now consider.

(1) Is the received interpretation of ἀρ 'Ελλάδα καὶ μέσον' 'Αργος consistent
with the context? (2) What grounds have we for ascribing to 'Ελλάδα the
signification 'Northern Greece'?

I. Those who have studied the constitution of the 'Homer' state on the
evidence of the Homeric poems might feel inclined to hold the view that the
meaning of the proposal of Menelaus, made in such a very businesslike way,
was not to pay visits to foreign princes, but rather to make a progress through
dominions which were in some way dependent on himself, and in which he
would therefore have a right to exact presents from the lords of the land.
Those from whom he expected to receive tripods and mules would be
βαιληστει, standing to him in a like relation to that in which the βαιληστει of
Ithaca stood to Odysseus, or those of Scheria to Alcineus. And so this
passage 17 would illustrate the prerogatives of Homeric kings—the διοροφάρω
βαιληστει; and it would follow that Menelaus proposed a tour within the
dominions of the Atridae.

It must be remembered that the soveranties of the two brothers were
conceived as closely united 18; one is located in Argos, the other in Lacc-

---

13 There are however no passages where such
a meaning is necessary.
14 Tenable so far as the Greek is concerned,
and on the theory that Hellas is either
Thessalian Hellas or Northern Greece. It is
not, however, the true explanation—as might
indeed be suspected from the fact that it does
not take into account the same phrase ('Αργος
μέσον') in Z 224.
15 Menelaus exacting presents for Telemachus
from the subordinate βαιληστει would be exactly
like Alcineus exacting the other twelve βαιληστει
of Scheria to give presents to Odysseus # 356
app. ; cf. v 12. The kings replenished their

of the Ships' in Mr. Moore's edit. of the Iliad,
Books I—xii., where Lacedaemon (including
western Messenia) and Argos are marked as one.
daemon; but they appear as conjoint rulers, though the exact constitutional relation between them is not further defined than by the ascription of a sort of precedence and primacy to Agamemnon. On the death of Agamemnon, which had already taken place, 19 while Orestes succeeded his father in the Argive plain, the precedence and primacy in the realm of the Atridae would naturally pass to Menelaus. The extent of this realm is defined in the Catalogue; only, we must restore to the Atridae the kingdom which the author of the Catalogue has carved off for Diomedes, including Argos, Troy, Troezen, Epidaurus, &c., 20 and we must add part of the land to the west of Mt. Taygetus. 21 Using later geographical terms, the realm of the Atridae accordingly consisted of: eastern Messenia, Laconia, Argolis, with Corinth and Sicyon, Achaea. The parts of the Peloponnesus which it did not include were: Arcadia, western Messenia or Pylus, 22 Triphilia and Elis. The Atridae had no sovereignty in Northern Greece; and therefore, if the interpretation of 'Ελλάς as Northern Greece in the passage before us be correct, we cannot accept what otherwise we might consider likely to be the true view of the nature of the tour proposed by Menelaus.

These considerations, though in themselves quite indecisive, may at least prepare us to approach the passage from a new point of view. Let us now see how far the context may help us to decide.

dominion. But it excludes by a red line Corinthus, Sicyon, and the cities of the north coast (Pylos, Aigion, &c.), so that this may well correspond to an older state of things, which the writer of the Catalogue indicates by τὸν τοῦτον in l. 572: καὶ ἄγαντες δρομεῖν ἀρχιερέας ἔφτείναισε. The authority of Agamemnon in the south is marked by his proposal in l. 140 to give seven Messenian fortresses to Achilles. The common or joint rule of the Atridae is also implied very clearly in the Catalogue. The poet assumes that his heroes would expect to find Agamemnon and Menelaus commanding joint forces, and therefore deemed it necessary to state expressly that the Laconians and Argives were quartered separately: 1. 584 ἀπ’ τοῦτο τί πληροσκεύασαν. The association of Menelaus and Helen with Argos is indicated by the phrase ἀρχηγὸς Ἔλλης (which seems prior to the connexion with Sparta), and possibly the mention of ἀρχηγός in l. 562.

18 l. 534. The death of Agamemnon and accession of Orestes have been described in γ 304 sqq., and are implied in l. 516.

20 This innovation was rendered possible by the circumstance that in the older epic the town of Argos did not occur; it was therefore open for Diomedes to occupy. In γ 183 τῆς ἀργης Νάξου ἄρησκεν Ἀργοὺς ἰονικοῖς ἱππόπους, it is not necessary to take ἀργης of the town; but in any case Diomedes must be conceived as a ἰπποτεχεῖ φθάνοντα τετράλειος, within the dominion of the Atridae. In γ 200 (in a context which is certainly not an original part of the Tbalmarchy) our texts have—

áλλ' ἔχει τό γα κόπως τι καὶ ἄγαντες ἐπικαλεῖται σεβόμενον ὑπὸ τῆς ἑλλής Ἀργοὺς—

a description of what would have happened to Argos if Menelaus had been at home.

'Αργοῦς δὲ νομισματο π; (a) it cannot mean the land, for ἀρχηγοῖο both Menelaus and Agamemnon would have been in the land; (b) it cannot mean the town, for Messenia, not Argos, was in question. The right reading is surely ἄρχηγος, the variant; which means that Agamemnon would not have had burial in one of the royal tombs around the acropolis of Mycenae. The reading ἀρχηγοῦ is an emendation for ἐκατερος, one AC having fallen out under TEΩC being taken for ΓΕΩC. The passage was composed in Tonia at a time when I had fallen out of use.

21 l. 149.

22 Pylus in the stricter sense as Nestor's realm. The name had also the wider sense of all the land between Mt. Taygetus and the Corinthian; it answered, in fact, to the later Messenian. This use is found l. 153, where the strongholds Kardamyle, Theare, &c., are described as πιετήσας Πύλου ἀπεδέχετο. •
THE HISTORY OF THE NAMES HELLAS, HELLENES.

On the evening of his arrival, Telemachus was invited by Menelaus to stay ten or eleven days at Sparta. He deprecated the proposal:

'Απρείδη, μη δὴ με παλιν χρόνον ἐβαθέν ἔρικε.
καὶ γὰρ κ’ εἰς ἑναυτόν ἐγὼ παρὰ σοι γέ ἀνεχόμην
ἡμεῖς.... ἀλλ’ ἡδὲ μου ἀνάζοναι ἐταῖροι
ἐν Πύλορ ὡραθένη: σὺ δὲ μὲ χρόνον ἐνθαδ. ἐρύκες—

but no definite decision is made as to the length of his stay. Next morning, as we have seen, owing to the warning of Athena, Telemachus emphatically expresses his earnest desire to return to Ithaca as speedily as may be,—alleging now, not that his crew will be weary of waiting for him at Pylos, but that his property at home is in danger. Menelaus shows that he fully comprehends the haste of his guest, and kindly refrains from pressing him to prolong his stay at Sparta. Is it conceivable that he would then calmly go on to propose that he and Telemachus should start off on an expedition to Boeotia and Thessaly to visit the kings of the various states in those and the neighbouring countries? When 'Hellas' is explained as 'northern Greece,' it may be supposed that it means the countries north of the Megarid, including at least Thessaly, Malis, Phocis, Boeotia; and the route would have nearly corresponded to that which one would take now in driving from Corinth to Larissa, supposing Attica to be left out of the programme. Telemachus could not have been back in Pylos within three weeks,—and that would be but a small allowance of time for the enterprise,—if he had accepted the offer of his host. That his host should have made such an offer seems to me inconceivable; and a poet, who knew as much of geography as the poet of the Telemachy, could not have imputed such a proposal to Menelaus unless he wished to represent him in a grotesque light.

It will not be out of place to illustrate the incongruity by an imaginary modern example. Let us suppose that an inhabitant of Brindisi goes to visit a friend in Athens. A day or so after his arrival he receives an urgent telegram which necessitates an immediate return home. He tells his friend that he must catch the first train to Patras so that he may sail by a boat leaving that night for Brindisi. His host, recognizing the gravity of the situation, immediately says: 'My dear fellow, I will not detain you for a single moment. Nothing would be more gravely unfriendly than to urge you to stay in such a crisis. Go, by all means; I will give orders at once that a lunch basket be packed. But—by the way—I have a friend in Crete, who I know would be simply delighted to see you. He was an old friend of your father. A boat starts for Crete to-day. Don't you think it would be very nice, if we both sailed for Crete together—it would, I assure you, be a great pleasure to me—and paid him a short visit. You can't imagine how

22 Mr. Hayman interprets Hellas of Thessaly only. *Ad fin.*: 'Thessaly and Peloponnese' are intended. My argument is of equal force against this interpretation,—which is my opinion is more plausible than 'Northern Greece.'
hospitable he is, and what interesting things you will see in the island. Come, what do you say? We then return together here, and you go on straight to Patras.'

What should we think of the sanity or seriousness of a man who made such a speech?

II. We have now to consider what reasons exist, and whether they are valid and sufficient, which force us to attribute to Hellas a signification involving the incongruity we have just noticed in the passage under discussion.

The reason for adopting this interpretation of 'Hellas' is closely connected with the current explanation of the origin of the use of Hellas as the general name for all Greece. According to this current view, the name Hellas passed through three stages. In the first stage it designated a small district, of which the exact position cannot be identified with any certainty, but which lay in the neighbourhood of Malis and Achaia. Phthiotis. In the second stage the name had extended from this little corner to designate the whole of northern Greece as opposed to the Peloponnesus. In its third and final stage it came to include the Peloponnesus as well. The history of the name 'Hellenes' was parallel; but in the last stage it included all men of Greek race wherever their home was.

1. For the first stage the evidence is clear and remarkable. It is mainly contained in the ninth Book of the Iliad, in the long speech of Phoenix in the episode of the Presboia. This speech occupies a unique place in the poem; and, notwithstanding the mass of Homeric literature that already exists, a thorough investigation of this ninth Book is still much needed. Phoenix was son of Amyntor, king of Hellas. He relates how he quarrelled with his father, eluded the vigilance of his kinsfolk, and escaping from the palace of his sire left Hellas—'Ελλάδα καλλιγύνακα. Fleeing through the land—δι' 'Ελλάδος ευρυχόροιο—he came to Phthisia to the house of king Peleus:

Φθίνῃ ἐξ ξικώμην ἔμιθώλακα μιτέρα μήλων ἐκ Πηλῆς ἑκατοβ'.

Peleus, receiving him kindly, enriched him and sent him to the eastern borders of Phthisia to rule over the Dolopes.37

37 It is hard to find definite and complete statements. I have deduced what I may be permitted to call the current view from a number of statements and implications in the obvious books. As a rule, of course, the proposition is vague: the name 'gradually spread.' For example, in the Student's Primer, which in England, I suppose, is the most widely used educational handbook on Greek history, we read (p. 29): 'From this district [in Thessaly] the people, and along with them their name, gradually spread over the whole country south of the Cretanian mountains' (a statement which is otherwise most misleading. I quote from the ed. of 1831).
In the same Book of the Iliad, Achilles, rejecting the conciliatory presents offered by Agamemnon, says: 'There are many Achaean maidens to woo in Hellas and Phthia (όντος Ελλάδας τε Φθινη τε), daughters of the nobles who keep the fortresses.' Again, in the Nekyia we read of the realm of Peleus in Hellas and Phthia, 'What of Peleus? Has he still honour among the Myrmidons, or do they slight him, in Hellas and Phthia?' And in another passage we learn the name of one of the chiefs who kept the castles of Hellas. There Glauce slays Bathycles, son of Chalcion who, 'dwell in a house in Hellas, was eminent for wealth among the Myrmidons.'

These passages show that Hellas and Phthia were in close geographical proximity; that Hellas was conceived as part of the realm of Peleus, king of Phthia; and that the Achaean of Phthia, the Hellenes and the Myrmidons were intimately associated together. It seems to me probable that Hellas corresponded to the south-western part of the later Thessaly.

When we pass from the older parts of the epic to the literature of the seventh century, we are startled to find that the name of the little vassal state of the kings of Phthia has become the name of all Greece; that all Greek-speaking men from Sicily to Cyprus are Hellenes. The earliest instance of this use of the word in a writer whose date we can control is in a fragment of Archilochus:

ός Πανέλληνος ὄισσος ἐς Θάσον συνέδραμεν.

The form Πανέλληνες implies the common use of "Ελληνες in its wide sense. It also occurred in poems of the Hesiodic school; and the expression Πανέλληνες καὶ Ἀχαιοὶ interpolated in the Homeric Catalogue may belong to the same period. Not earlier, if as early, is the passage in the Works and Days concerning the poetical contest at Chalcis, where we meet the verse:

'Ελλάβος ἐξ ἄρης Τροίης ἐς καλλιγνάια.

---

28 f. 399.
29 A. 406.
30 Π. 586.
31 So Mr. Monro in his note on B. 483 says: 'The Ελλαδα of H. 9.471 f. appears to be farther to the north.' He adds 'outside the kingdom of Peleus.' This raises an interesting point. If we take the narrative of Phoenix by itself, we naturally suppose Hellas to be outside the kingdom of Peleus. But if we take it in connexion with the speech of Achilles, we infer that Amaryntus was a Πανέλλης dependent on Peleus. To discuss this would take us further into the borders of the Homeric question than is useful for the present purpose.
32 The verse is quoted by Strabo, 370 = viii. 6, 8. We may compare the use of Παναχαια in Homer for 'Αχαια in the sense of the whole host.
33 On the other hand, E. Meyer thinks that Πανέλληνες was older than Ελληνες in that sense. But Παραχαια, which seems a consequence of the wider use of 'Αχαια, would point the other way.
34 Strabo, 370, τοις τῶν Προτίγεων λέγωνα 'Ελλαδας, ὡς Πανελλήνες διηγομενοι λέγεται. — Works and Days 528, Βραδίως ὡς Πανελλήνες φαίνεται (one of the later strata of the poem).
35 B. 530. 'It has been supposed, with some reason, that the two lines 528, 530 are an interpolation.' (Monro).
36 Where Hellas cannot mean anything but Greece, I suspect that the verse may have been borrowed from an old epic, where it would have referred to the original Hellas and the followers of Achilles.
I have already pointed out that the new use of the name occurs in the *Odyssey* (see above, p. 219), being used by the bard who put the poem into its present shape, in the borrowed phrase *καθ Ἑλλάδα καὶ μέσον Ἀργος*. Others, quoted by Strabo, recognized this signification, and naturally (like the compiler of the *Odyssey* himself) interpreted the words as used by the poet of the Telemachy in the same way.

The following problem now faces us: How are we to pass from the original meaning which *Hellenes* bears in the older parts of the epic to the later meaning with which it emerges into view again in the seventh century? An answer to this has been suggested by Thucydides in the critical summary of early Greek history which forms the prelude to his work; and modern historians have reproduced—with or without additions and modifications—his answer. Before Hellen, son of Deucalion,” he wrote, “Hellas was not so called. But when Hellen and his sons became powerful in Phthiotis and acquired influence in other Greek states by rendering them help in war, other states one by one (καθ ἐκάστος), by their association with Hellen and his sons, came to be called Hellenes, but it was not until a long time had elapsed that all came to be called so.” He appeals to the evidence of Homer who confines the name Hellenes to the original Hellenes of Phthiotis.

This paragraph shows very clearly how Thucydides, with all his critical acumen and notwithstanding his sceptical temper, could not get beyond the lines of Greek historical method. Here, he is entirely within the toils of that schematizing of Greek history which was begun in the school of Hesiod. Hellen, the common ancestor of all the Greeks, had no existence, until all the Greeks were called by the name Hellenes. Hellenes does not presuppose Hellen, but Hellen presupposes Hellenes; of this Thucydides had no conception. And the plausibility of his statement that the Hellenes of Phthias obtained great power and influence among the surrounding states depends on the view that the sons of Hellen were the ancestors of the supposed divisions of the Greek race.

Now Thucydides does not commit himself to the assertion that the name Hellenes at any stage designated Northern Greece as opposed to the great Peninsula and the Islands. He only says that it spread gradually,—an obvious guess, which might occur to any man in the street and which also, of course, might be true. But if it spread gradually, the Isthmus of Corinth would mark a most natural stage in its progress; and it was this idea applied to the phrase in the *Odyssey*, ἲπ’ Ἑλλάδα καὶ μέσον Ἀργος, which generated the view that Hellen meant Northern Greece. Other evidence for this supposed second stage of the name there is, so far as I can

*Strabo, 670, Ἑλλάς ἐν ἱππεῖν θεόν ὅτι καὶ Ἀρμέσιος τιμᾶς ἔδωκεν τῷ Σιθυρίῳ χελιᾶν τῷ καθ’ Ἑλλάδα τοῖς πάνταις (᾽ὑπὸ Ἑλλάνες in a universal sense) ἰπ’ Ἑλλάδα τῷ παῖσιν τοῖς Ἑλληνικοῖς μήτε Ἑλληνικῷ ἐν τῷ Ἐργόν τῷ Χρόνῳ (γραφεῖσι) ἰπ’ Ἑλληνικῷ ἐν τῷ Χρόνῳ.*

*Thucydides, i. 5.*

*E. Meyer, Gesch. des Althelten, ii. 586,* has misapprehended this. He derives the Panhellenic force of Hellenes from the mythical position of Hellen as son of Deucalion, the primitive man. But the myth of Hellen was the consequence, not the cause. This must be assumed, unless it can be strictly proved that the genealogy was older than the Ionian school of the seventh century.
discover, absolutely none; and we have seen what difficulties are involved in this interpretation of the phrase in the Telemachy.

In accepting the view of a gradual extension of the Hellenic name over North Greece, historians have failed to realize the conditions which such an extension implies. There are two conceivable ways in which the name might have thus spread—conquest and federation. If the Hellenes had reduced under their sway a considerable number of the northern states, or had, as Thucydides suggests, obtained such a preponderating influence as to be practically overlords, we might have no difficulty in acquiescing in the received doctrine. But of such conquest or lordship there is no trace; and there seems to be no room for it chronologically. If this had been the political situation before the invasion of the Thessaloi, we should expect to find some record of it in the epic; but (apart from the disputed passage in the Odyssey) there is none. And the chief fact to which our records point after the Thessalian invasion is the southward pressure of the Thessalians towards Phocis, a situation which not only ignores, but hardly leaves a place for a large Hellenic realm or sphere of influence.

And a North Greek federation to which the Hellenes as prominent members might have given their name, would be an equally groundless supposition. The North Greek federation of which we know, which had its religious centre at the temple of Demeter at Anthela,—i.e. in the south of Homeric Phthia, the land with which the Homeric Hellenes were so closely linked—this league or amphictiony knows nothing of the Hellenic name. Yet if there were any truth in the common explanation of the history of that name, the Amphictionic league, whose heart was in the neighbourhood of old Hellenic soil, is the institution in which we might expect to find a trace of the supposed prominence of the Hellenes. In the seventh century, as we have seen, the name Panhellenes had come in, but there is not a sign that it had any connexion with the Amphictiony. The sanctuary at Anthela was not a Panhellenion. Thus the only tendency towards a unity of Northern Greece which we can discover in early history, namely the religious league which worshipped Demeter in common, was one with which the original Hellenes had nothing to do—and that although original Hellas was near the sacred centre at which the 'dwellers around' assembled.

It seems then that an historical inquirer must look round for some new explanation of the transition from the earliest to the later meaning of Hellas, and also that the student of Homer must seek some new solution of the line in the Telemachia of which we have said so much in the preceding pages. These two problems work into each other.

The chief fact that we can be said to know about the Hellenes of Phthiotis is that in historical times their name had entirely disappeared from the regions between the Spercheus and Peneus. The original Hellas had vanished and left not a track behind. Just the same lot had befallen the Myrmidons; who know what their ἄρτοι περικαλλῶν, mentioned in the
Telemmachy,\textsuperscript{40} was? That there had once been a Hellas, that there had once been Hellenes in those regions was well known, because Homer was well known; but where exactly Hellas was, none could do more than guess. It was supposed to have extended from old Pharsalus to Philothea. There was also an idea that there had been a town called Hellas—for which Homer certainly furnishes no support;\textsuperscript{41} and the antiquaries of two Thessalian cities set up rival theories as to its location. The Pharsalians said it had stood in the neighbourhood of their city, while Molites put forward another claim.\textsuperscript{42} These facts are of some importance in illustration of the circumstance that no trace of the Hellenic name survived in those regions.

For we surely cannot suppose with Leake that any such trace could remain in Ἐλλαῖα, which is stated to be a modern name for the river Spercheos.\textsuperscript{43} I may observe that in the lower part of the Malian plain this name is now quite unknown. I took pains to inquire at Lamia and in its neighbourhood, of a considerable number of persons of different classes, by what name the river was known. All, of course, replied at first: Σπρέγησος. When I pressed them for a 'Romane' name, they all said: Ἀλεμάνος. When I then asked them whether they had ever heard it called Ἐλλαῖα, the answer was always negative. Perhaps however this name may be in use higher up the river. In any case, it was used in Leake's day.\textsuperscript{44} But it cannot have been used in classical times, for it would certainly have been added to locate Homeric Hellas. We may conjecture that its origin had something to do with the medieval Thme of Hellas, which corresponded to Northern Greece.

The Hellenes then, who according to Thucydides gained such great power in the north, mysteriously disappeared. The question is: What became of them? To answer this question, I must invite attention to the Achaeans of Phthia, with whom they are so closely associated in our Homeric evidence.

Of that series of migrations which changed the geography of Northern

\textsuperscript{40} See note, p. 52.
\textsuperscript{41} It is marked in Mr. Mourot's map of Homeric Greece in his ed. of the Iliad. There is no trustworthy evidence for its existence, so far as I can see, nor yet for the town Phthia, which is sometimes assumed. The existence of a Σπρέγησος sixty stades from Pharsalus, of course, proves nothing. Leake considers the question (Travel in Northern Greece, vol. i., p. 532) and comes to the conclusion that Helles and Phthia were countries not cities.
\textsuperscript{42} Strabo 431-2: Εἰκ. 5, 5. Three questions are mentioned here as matters of controversy: (1) whether Phthia, Hellas and Achaea are the same or not; (2) whether Hellas and Phthia are countries or cities in Homer; (3) whether if Hellas was a city it is to be identified with a ruin sixty stades from Pharsalus, or with another ten stades from Molites.
\textsuperscript{43} See Leake's Travels in Northern Greece, vol. i., p. 532: 'The kingdom of Achilles, or rather of Peleus, comprehended at its southern extremity not only Thessalia but also a portion of what was afterwards Ionia. To this was added all the fertile valley of the Spercheus, which river still bears the name Ellada, or that applied by Homer to the country itself, together with the billy country northward of that river as far as the plains of Thessalia.' Thus Leake placed Hellas south of Phthia.
\textsuperscript{44} See foregoing note, and Leake, vol. i., x., x.
Greece and still more of the Peloponnesus, and which are generally described under the improper title of the Dorian Invasion, we have no historical record, and we can only infer what happened from the results. Some of these results appear vividly marked upon the map; for example, the splitting asunder of Locris into three separate lands. Another prominent geographical fact from which we are entitled to draw a conclusion is the appearance of Achaeus on the northern coast of the Peloponnesus. This coast-land is not called Achaea in the Homeric poems, but at the threshold of history we find Achaeans settled there. The origin of these Achaeans was obscured by the false practice of applying the name "Achaeus" to the pre-Dorian inhabitants of the Peloponnesus, and this practice was due to the Homeric use of the name as a general designation of the Greeks fighting before Troy. "Achaos" and "Agyrioi" were regarded as interchangeable, and confounded.

The view that the people of Agamemnon, that is, the inhabitants of the western Peloponnesus in the Mycenaean age, were "Achaeans," is however still so widely accepted that the evidence which might be adduced to uphold it must be more closely examined. (1) This view is always assumed in proving that the Cypriote Greeks were colonizers from the Peloponnesus. As it is, on other grounds, certain that Cyprus was colonized by the "pre-Dorian" inhabitants of the Peloponnesus, the same scraps of evidence might be applied, conversely, to demonstrate that those inhabitants were Achaeans. The scraps are: (a) the existence of a "beach of Achaeans," Achaos lektris, in Cyprus, where according to a legend Teucer landed, and (b) the existence of a priesthood in Cyprus known as "Achaomantes." Now in judging of these facts we must remember that we have no reason whatever for assuming that Cyprus, though certainly colonized mainly, was colonized only, from the Peloponnesus. There is no cause why we should not accept evidence proving that there were isolated settlements derived from other Greek lands. Therefore the double occurrence of the Achaean name in Cyprus, or its single occurrence in Rhodes, does not involve Peloponnesian Achaeans. The Greek colonization of Crete may be properly compared. In that island we find settlements from Thessaly as well as from the Peloponnesus.

It appears to me that the only scientific interpretation of these pieces of evidence bearing on the Achaean name, as well as another more striking and, it must be owned, more doubtful piece of evidence still to be mentioned, is in reference to a great Achaean realm in Thessaly, which is presumed by the epic (the realm of Peleus), and of which the historic Achaeans of Phthiotis were a survival. To it we must refer the Agamemnon who in the

46 It is worthy of attention that the Ozolian Locrians do not appear in Homer. We may infer that they were unknown to the earlier, and ignored by the later, poets. Yet Phocis appears in the Homeric map, and western Locris was a consequence of Phocis.

thirteenth century the land on the Cyrenaic coast and invaded the Delta, along with the Turscia, the Sardinians, and others. The sea-power of this Achaean kingdom was truthfully preserved in the legend which made the Argo sail from Iolcus.

(2). Another argument for Peloponnesian Achaecans may be found in the Homeric expression ‘Ἀχαίοις Ἄργος’, which is used in three passages of the southern Argos. But not one of these passages carries any weight, for they are all too late to prove, by themselves, that Achaecans inhabited Argos in the Mycenaean age. The phrase, possibly, was used in older poems, in a strict sense, of the northern Argos, and later poets, finding it ready to hand, applied it otherwise. In any case, the passages where we meet it represent a period considerably later than the Dorian invasion, when the Achaean name had come to be associated with southern Argos. They occur in the Iliad (in Agamemnon’s proposal of overtures to Achilles); in a digression (which is clearly a later insertion) in the thirteenth book of the Iliad; and in the Telemachy in the conversation between Telemachus and Nestor respecting the murder of Agamemnon.

To return from the false to the true Achaecans of the Peloponnesus, I submit that the natural inference from the geographical fact of the two Achaecans is that the Achaecans of Phthia were among the newcomers who invaded and took possession of the Peloponnesus. The connexion of Peloponnesian with Phthiotic Achaecia is a conclusion as legitimate and certain as the connexion of Asiatic Doris with the Doris of Mt. Oeta. The dialects of both countries be-

40 After the death of Raumes II. (1250 B.C.) in the 5th year of Memphite. The identification of Agamemnon with Ἀχιλλ is not probable; at least, there is nothing against it, since it has been established that the words of the Egyptian inscription imply not that they were circumcised but the reverse. See W. M. Flinders Petrie, ‘Asiatic and Egyptian,’ p. 357, 374.

41 Assuming Agamemnon to be a Mycenaean, we may not suppose that the Achaecans were the only Greeks among the invaders. There may have been McKemanii also. The Egyptians would naturally choose the name of one Greek people to designate all.

42 In the second and greater invasion, about three-quarters of a century later, the name Agamemnon does not occur, but Memnon appears. This is supposed to represent Ἀμαρσελ. The etymology is as probable, intrinsically, as the other; but we do not accept it so easily, because we know more about the Achaecans than about the Dorians. Amarsel is one of the most closely looked for early Greeks. It is associated only with Argolis and Egypt. If we remember that Ἀργος is not properly a national name, but merely the people who lived in Ἀργο, we may feel strongly inclined to believe that Amarsel really was the proper name of the Argive portion of Agamemnon’s subjects.

43 One of the clearest points about the history of epic poetry is that in the older Thessalian legend was the foundation, and that the prominence of Peloponnesian Argos was later. This order would correspond to the prominence of the Mycenaeans in the earlier, and that of Telemachus in the later, invasion of Lower Egypt.

44 T. 115. (The insertion runs from i. 90 to 136.)

45 γ. 251

46 σικ εἰς Ἀργος ἦν Ἀχιλλος, ἀλα ἐν ἄλλοις

It seems very doubtful whether this account of Agamemnon’s death is an original part of the Telemachy. The story is told again (in the mouth of Protesilaus) by Manures to Telemachus (X. 519 sqq.). In 251 the use of the genitive seems quite impossible. The words ought to mean ‘was he not of, did he not belong to, Achaean Argos’ and not it not his home’ and the parallel passages cited would only support this meaning. But the same required by the context is ‘was he not, at that time, in Achaean Argos?’
longed to the same group sometimes called the 'North-western'—the old name was 'Doric'—though the meagre remains of the Phthiotic speech do not allow us to compare the details. And we have a _nota causa_ to explain the migration, namely the appearance of the Thessalian invaders in the plain of the Peneus. The pressure of the Thessalians will account in the most natural way for the southward movement of a part of the Achaeans. The remnant who stayed behind in Phthia were soon to be reduced to dependence by the new lords who gave their name to 'Thessaly.'

Now, my hypothesis is that the migration of the Achaeans—which seems as certain as any other fact that can be reached by inference concerning the early wanderings of the peoples of Northern Greece—included also a migration of the Hellenes who were so closely associated with them. If the Hellenes abandoned their country to the Thessalians and went forth with their Achæan neighbours to seek a new home in the south, the disappearance of the Hellenic name from its original home is completely explained. If we had nothing more to go on, this conjecture might be reasonably entertained, but we have some confirmatory evidence.

This is furnished by the passage in the Telemachy which has engaged our attention and of which we now hold a satisfactory solution. The Hellenes have moved southward and settled in the north of the Peloponnese with their Achæan fellows. Here is the new Hellas, Aegion and Pellene, broad Helice, Hypersia and sleep Gonoessa, all the cities of that coast are Achæan or Hellenic towns. According to the Homeric conception this coast belonged to the realm of Agamemnon. So we must infer from the Catalogue where some of the towns are enumerated and the Ἀττικαὶ is mentioned. None of these cities however is mentioned elsewhere in the _Iliad_ or _Odyssey_, and therefore it may justly be argued that there is no clear proof that in the older epic the kingdom of Agamemnon had such a large extent. And the author of the Catalogue himself suggests in the case of Sicyon, that its connexion with Argos was later. May not the idea of a connexion of the Achæan cities with Argos have been later also? This is quite possible; but for my purpose it is of no consequence. The Catalogue shows that at a later period of the epic, to which the Telemachy also belongs, the north coast of the Peloponnese was deemed part of Agamemnon's realm. Now before the eighth century, this northern coast of Peloponnese had become a land of Hellenes, and the author of the Telemachy, composing his poem about that time, might therefore speak of it as Hellas. This is the Hellas meant in the expression ἀνὶ Ἑλλάδα καὶ μέσου Ἀργος.

---

54 The inscriptions (edited by Fick, in _Colloquium_, _Semiann. B._ p. 34—40) come from Lamba, Melitaia, Thasmakia, Pylos, Aes, Thelas, and date chiefly from 3rd and 2nd centuries B.C. It is important to remember that the Achæan dialect did not approximate to the group in which we include the Thessalian and the Aesopic. The Achæan heroes of the Aesopic epic did not speak Aesopic or anything like it, any more than the Peloponnesian. And yet the Achæans were adjacent to men who spoke that dialect which was adopted by the Thessalian invaders, and which has so many points of contact with Aesopic.

55 B 572—575.
Menelaus says to Telemachus: ‘Far be it from me to delay you. But I will at least suggest that there is another, though a longer, route, which you might take to Pylos. Instead of returning, as you came, by Phereus, you might go round the Peloponnesus, through “mid Argos and Hellas” (that is, in later phrase, by Argolis and Achaea). You would see something of the world, and I should be delighted to accompany you myself—Pisistratus, of course, returning as he came. It will indeed delay you some days, but then the cauldrons and tripods which we may count on collecting in our progress may be an inducement to you to change your mind.’

On any theory, the king’s proposal is made more for the sake of politeness than with much expectation that the guest will yield; but thus interpreted it is a natural and intelligible proposition. The suggestion to make an expedition into Northern Greece, which lay quite out of the way, was, as we saw, preposterous under the circumstances; whereas the suggestion to reach Pylos by a longer route, within the king’s dominion almost entirely, was if not very likely to be accepted at least plausible and free from absurdity.

Again this interpretation does justice—and this is not a matter of indifference—to the actual words in which Menelaus couched his proposal, to the words, namely,

\[ \text{ὄφρα τοι αὐτὸς ἐπομαί,} \]

which, as we saw, caused Aristarchus some difficulty. The point of the clause is now seen to be: ‘Returning to Pylos as you came, of course you go with Pisistratus. But if you would like me to accompany you (to Pylos), I shall be very glad to do so if you care to take a longer route, and drive round the Peloponnesus.’ Were the received explanation right, Menelaus would have said: ‘If you care to make an expedition to North Greece, τοι ἐπομαί, I will escort you there.’ But \[ \text{ὄφρα τοι αὐτὸς ἐπομαί} \] means something else: it means ‘the proposal I am making implies that I escort you to Pylos instead of Pisistratus.’

Hellas, then, meaning a land within the Atrid realm, the route of Menelaus and his guest, if the proposal had been adopted, would have lain—until they came to the frontier of Elis—in lands where Menelaus, like Alcibíades in Scheria, could call upon the princes to present tripods and golden cups to Telemachus.

In regard to the expression μέσον Ἀργός, it must be observed that Ἀργός had come, in the later epic at least, to designate not merely the plain in which the fortresses of Mycenae, Larisa, and Tiryns stood, but those lands in the east of the Peloponnesus over which Agamemnon’s sway extended. This may be proved from the following passages. (a) Ἀργός included Lacoonia, for it is said of Menelaus 38 that he is not destined

\[ Ἀργεῖ ἐν ἱπποβότῳ δανείῳ καὶ πότρου ἑπιστέιν. \]

38 5502.
and Menelaus says that he would be ready to transport Odysseus from Ithaca and give him a new home in Argos.

καὶ κε ἐς Ἀργεὶς νάσσα πόλιν καὶ δώματ᾿ ἐτέφελ.

(b) "_Argos included Corinth, which, like Mycenae, is said to be.

(Εφύρη) μοιχὸ "Ἀργεὸς ἱπποβότοιο.

(c) The epithet all in the well-known verse which sums up the kingdom of Agamemnon

πολλάξιον νίσσοις καὶ "Ἀργεῖ παντὶ ἰανάσσεω

implies such an extended use of the name. On the other hand we have no direct proof that the north coast of the Peloponnesus was included in this connotation of the name, and our passage would rather—though not necessarily—imply that it was not. It may also be observed that very late epic poets, such as the author of the last book of the Odyssey, used "_Argos in a wide indefinite sense, for 'Greece,' 'home'; for instance, the shade of Agamemnon addresses the shade of Achilles thus:

ὧλετε Πηλεός υἱε, θεοις ἐπιείκεις Ἀχιλλε, δὲ θάνες ἐν Τροίῃ ἐκάς "Ἀργεον:

where we may be quite sure that the northern or Pelasgic Argos is not meant.

Argos meaning the realm of Agamemnon, μέσον "Ἀργος would mean "the middle part of the realm," and would then be a most appropriate phrase to distinguish the Ἀργεῖοι πλῆθος, Argos in its original and narrower sense, from Argos in its wider sense. This explanation suits the other Homeric passage in which the expression occurs. In the Iliad, Diomedes describes himself as being Ἀργεῖ μέσον and his home was in the Argive plain.

The received interpretation has the merit of being received, and those

70 Ἐν 174.
80 Ξ 262. Some lines below (128) the phrase ἔδησα Ἀργεῖον occurs where 'Ἀργεῖος has the limited sense.
80 108—clearly inconsistent with the view suggested by the Catalogue that Diomede had a kingdom independent of Agamemnon.
80 It seems to me probable that the many islands included, not only the strictly Argolid—Calamis, Hydra, Sparta—, but Asina and Salamin. Aegina appears as part of Diomede's kingdom in the Catalogue (562), but the independent of Diomede is nowhere implied except in this passage, which is clearly 'tendencies.' Salamin was, possibly ruled by the lords of the Pelasgi (Megara), who were probably included, as well as Cnath, in the Mycenaean realm. It is hard to see any serious objection to the view that Salamin (which may have got its name from pro-Greek, Carian settlers; cp. Salamin-ca) did, as the legend says, take part in the colonization of Cyprus and give its name to a town there. This would not imply that the settlement consisted entirely, or even usually, of Salaminians.
80 The expression might, however, be otherwise explained as a subtle psychological touch. Agamemnon is thinking of his own case, and wishing that he had died far from his home, which was Argos. His thoughts are running on Argos and so he congratulates Achilles on having fallen far from Argos, where he should have said, from Achilles' point of view, Pithos. But I question whether this will be considered probable.
who still prefer it are entitled to say that, in the first place, it is quite conceivable that Menelaus meant to visit not merely princes who were in a relation of subjection to himself, but friendly and independent princes in northern Greece, who would liberally bestow gifts on the son of Odysseus, even as Menelaus himself bestowed them; and that, in the second place, the proposition, made for the sake of politeness, is, though it may sound preposterous, still conceivable, and that whether a delay of five days or five weeks is proposed is after all only a question of degree. With the first of these observations I quite agree; and I have not used the consideration as to the dependence or independence of those who were to present the gifts as an argument to base my case on; but at the same time I regard it as more probable that dependent entertainers are implied. In regard to the second observation, the question is—of course—one of degree; but this does not weaken the force of my objection to the received interpretation. Suppose A and B are staying together at Nice, and A, one day, tells B that he wishes to start for London immediately. It is quite conceivable that B, knowing A's business to be really important, might still say, 'Very well; but don't you think you could manage, instead of going direct by Lyons, to come with me to Milan and return by the St. Gothard?' but it is quite inconceivable that, under the circumstances, a reasonable person would propose an excursion to Algiers or Palermo.

But, notwithstanding the difficulty, we might be content to acquiesce in the accepted view, if there were any positive proof that Hellas ever did designate northern Greece. But there is, as we have seen, no such proof, and therefore the accepted view is simply unfair to the poet. The difference between the hypothesis advocated here, that Hellas meant Peloponnesian Achaea, and the current hypothesis, is that (1) the former suits the context in question and the latter does not, (2) the former rests on a certain historical probability, whereas the latter is gratuitous and improbable. As to the view that Hellas meant the original Hellas in Thessaly, this could not with any plausibility be maintained. For why should the poet single out the little principality of Amyntor as one of the chief objects of the tour?

This conjecture as to the history of the name Hellas I should not have presumed to promulgate, if it merely rested on this one passage in the Telemachy. It is however strangely confirmed by evidence from a totally different quarter. And this confirmation will also supply us with a solution of the main problem, How Hellas and Hellenes acquired their widest signification.

---

Footnotes:

---

It may be said that the author of the Telemachy ignored, or was ignorant of, geography. The journey of Telemachus from Pyle to Sparta, by clarions, and in two days, has been dwelt on, for example, by Professor Mahaffy (Greek Lit., vol. i. cap. 4). This was of course a poetic license. But such a liberty (or ignorance) in a smaller matter is very different from the ignoring of the general geography of Greece implied in the view which I have tried to advocate. Real geography (though sometimes erroneous in detail) is one of the features of the Telemachy, in contrast with the mythical geography of the other parts of the Odyssey.
The Greek colonization of Southern Italy and Sicily began in the latter half of the eighth century. In this movement the Achaeans of the Peloponnesus took an important and prominent part. They founded no cities in Sicily, but along the eastern shore of the promontory which at that time, and for a long time after, was called Italia—the original Italy, that is the later Bruttium, the modern Calabria—they founded a row of cities of which the most eminent were Sybaris and Croton, followed at a later date by Metapontum, near the north point of the gulf. These cities soon threw off shoots across the narrow mountainous promontory to the coast of the western sea. The Achaean colonies grew and multiplied. Now this group of colonies, flanked at one extremity by Spartan Taras, at the other by Locri, came to be distinguished by the special name of Μεγάλη Ελλάς, which the Romans rendered by Magna Graecia. It is perfectly clear that the name cannot have been given at a time when ‘Hellas’ had acquired its universal meaning. It is absurd to suppose that this group of settlements was called Great Greece, with the implication that the whole mother country was Little Greece. If indeed Sicily had been included under the appellation ‘Great Greece,’ such an explanation might be just conceivable. But it is quite out of the question to suppose that colonial arrogance would have led the towns of the south-western promontory of Italy to denominate themselves Great Greece in contrast with the whole of what we call Greece proper. Hence the name must have been given before Hellas had come to bear its Panhellenic meaning.

It need hardly be remarked that Μεγάλη Ελλάς could have had no reference to the old Hellas of Amyntor. For the two countries had nothing to do with each other; there is no trace of any historical connexion; and moreover, when the earliest colonies in south Italy were planted, the original Hellas, as we have already seen, cannot have been in existence; for, if it had been, some trace of their name and place in those regions must have been preserved, probably in connexion with the Amphictyonic league.

But if Hellas was, as I suppose, in the eighth century a name for the Peloponnesian Achaean, then Μεγάλη Ελλάς is perfectly explained. The cities planted, and the territory acquired, beyond the sea by the Hellanes was called Great Hellas, as opposed to their mother country—their second...
home—the strip of land along the north coast of the Peloponnesus. That
the name, originally belonging to the Hellenic or Achaean cities, should be
afterwards extended to the neighbouring Greek cities, which were not of
Achaean origin, on the same coast, for example to Locri and Taras, was
simply inevitable, once the name 'Hellas' had won its wider meaning and
the true origin of 'Great Hellas' was forgotten.

And it is just here, on the south Italian shores, that Hellenes began
to acquire the Panhellenic signification, which soon came to be universally
adopted. The natives of southern Italy, when the Achaean and Hellenic
colonies were first planted among them, came to use the name Hellenes
for all men of the same race and language as the Achaean Hellenes.
No cause (it may be remarked by the way) more powerfully promoted the
growth of a feeling of unity among the Greeks—the consciousness of their
common race and common language—than the institution of colonization
which brought them into contact with many various kinds of non-Greek
peoples. The names Greek and barbarian are conjugate terms, as Thucydides
pointed out; their meanings mutually depended on each other. And
therefore, a priori one expects, that the name 'Hellenes' should have obtained
its universal sense, just because Hellenes, in the special sense, had been
brought into contact with non-Greeks.

This is what happened in other cases. Among the Semites, the Greeks
were known as Iavones, because the oriental nations had special contact
with the Ιάβορες r Ionians on the coast of Asia Minor.66 But the name
'Greek' itself, by which the Romans designated, and we in the west still
designate, the Hellenes, is a more striking instance in point. One of the
earliest colonies in the west, though by no means as early as used to be
supposed,68 was founded by Euboean settlers and derived its name from the
Euboean town of Gyne. But along with the Euboeans were associated some
colonists from the opposite mainland, belonging to the little territory of

66 'Αρράς: the derivation of 'Ares from the full form άρράες has puzzled philologists.
It should certainly be explained as a 'Kose-
form.' There seems some tendency now, and
it seems to me judgible, to go back to the old
view which connected the original Iavones,
who gave their name to all the colonies between
certain limits on the Asiatic coast, with a
western district in the Peloponnesus. (The
compilation of this compilation by the further
connexion with Atlis seems extremely doubi-
ful.) If so, we might conjecture that in their
old home, where their name was completely
forgotten, there had prevailed another hy-
percoristic ablautment, in which the a, but not
the o, was lengthened: i.e., *Kevin, and that from
them the Ionians * κείνος, *κείνος, derived its
name. ιαβορείς, with the two hypercoristic
ος ιαβορείς and ος ιαβορείς, would be pretty. I take this
opportunity of observing that the monition of

Grain in the neighbourhood of Oropus. The destinies of names are indeed mysterious. The Graian name, always obscure in its original place on the borders of Attica and Boeotia, was fated, through its connexion with Italian Cyme, to become the European name of the whole race, of which the Graes were among the most insignificant members. The Oscans and other Italians, who had dealings with the new men who had settled among them, selected, perhaps by some incalculable instinct of the tongue, the name of the Graes in preference to the special names of their fellow-settlers from Euboea; and the name by which they distinguished the first Greeks they knew was naturally applied to the whole race. Thus in Campania and Latium, Graes, and then with the Italian adjectival termination Graet, was adopted as the general name for the Hellenes.

And so it was with the name Hellenes itself. 'Greek' was the name established in central Italy, because there Graes happened to have settled; 'Hellenes' was the name established in the extreme south of Italy—in the original Italy—because there Hellenes happened to have settled. The same instinct which in one case led to the choice of 'Graes' in preference to 'Chalcidians' or 'Cymeans,' led in the other case to the choice of 'Hellenes' in preference to 'Achaean.' But while the Greek name took root in the neighbourhood of a remote and isolated colony, which was probably at first little visited by other than Euboean Greeks, the Hellenic name was established within the limits of an active sphere of colonisation, where rival merchants from various parts of the Greek world sought a market. Milesians and Chalcidians, Locrians and Achaean, Megarians and Corinthians, finding themselves all called Hellenes by the Italian races, came to designate themselves as Hellenes in contrast with the barbarians. The barbarians brought home to them their own unity and also chose them a name for expressing that unity.

The name Hellas gained a corresponding extension; after a time. And when it became extended, it ceased to be used in its former limited sense, just as when the name Italia became extended over a large part of the peninsula it ceased to be used in the original and proper sense which confined it to the toe. In the east the other name, Achaean, asserted itself to the exclusion of Hellas; and while in the west the name Great Hellas survived, it was immediately forgotten why it had been so called, and was probably supposed to imply somewhat the same idea as our borrowed phrase 'Greater Britain.'

The history of the name Hellas may now be briefly summed up. It originally signified a small territory in the south of the land which in historical times was known as Thessaly, and adjoined, if it did not form part of, Phthia; and belonged to the Achaean realm which is known in the epics as the kingdom of Phais. The record of this stage is to be found mainly in part of a very old epic poem which has been worked into the ninth Book of our Iliad. In the next stage the name has passed to the north coast of the Peloponnesus; Hellenes and Achaean have migrated southward, owing to the Thessalian invasion. Here too Achaean and
Hellenes live together; and the land is associated with both names. The record of this stage is to be found in the Telemachia (8th century) in the passage which occupied our attention, and in the name Great Hellenes. In the seventh century we reach the third stage, and find that 'Hellenes' has ceased to designate a special people and has come to designate all the Greeks, and the compound Panhellenes has been formed. By the end of that century judges connected with the festival of Zeus at Olympia bear the title 'Ἑλλανοδίκαι.'

J. B. Bury.

79 Panaxias, v. 9, 4, states that in 380 two officers of this name were appointed, there having been one heretofore. This statement, if sound, gives a posterior limit for the Elean inscription in which one Ἑλλανοδίκας is mentioned (Collitz, Ἑλλανοδίκαι, l. c. no. 1132).
Büchsenschütz in his "Besitz und Ewerb" comes to the conclusion (on pp. 343 and 349) that the rate of pay in Athens for an artisan was from 5 obols to a drachma and for a labourer 3 obols. The facts and figures on which he bases his conclusions are taken from Boeckh ("Staatshaltung," Bk. I. c. 21), the conclusions are his own. Büchsenschütz is indeed somewhat puzzled by two facts, viz. that on 3 obols a man could scarcely support himself, much less a wife and family, and that in an inscription of the Periclean age (now published in C.I.A. 1. 325) a mere labourer got a drachma a day. However, Büchsenschütz neither attempts to explain these two facts nor does he allow them to modify his conclusions.

But since the publication of "Besitz und Ewerb" some inscriptions have been discovered (now in C.I.A. II. 2. 834 b and c) which throw more light on these points. These inscriptions are fragments of the building accounts of the epistatae of Eleusis and the treasurers of the two goddesses, 834 b in the archonship of Cephasophon (329/8), and 834 c some ten or twenty years later.

The following passages make it quite clear that at this time the daily wage of an unskilled labourer, finding his own food, was 9 obols: 8344, col. I. line 29, μισθωτός τοῖς . . . πλυσθέροντας καὶ πηλοδεστῶντας καὶ τὰ ξύλα ἀνακούσαν καὶ τῶν κέραμων, ἀνδράσιν ἔξ, τῷ ἀνδρὶ οἰκοσίτῳ . . ., line 46, μισθωτοί τοῖς τὰς πλυθοῦσα καὶ τῶν χαῦν ἀνταφείσας εἰς τὸ θεάτρον καὶ βωλοκοτήσας, ἀνδράσιν ΔΔΔΔ. τῆς ἡμέρας τεττάρων ἡμέρων τῷ ἀνδρὶ οἰκοσίτῳ . . ., line 111, κεφάλαιον ΗΓΔΗΔΔ, and line 60, μισθωτοί τοῖς τὴν τὴν βωλοκοτήσας . . . ἀνδράσιν Δ, τριῶν καὶ δέκα ἡμέρων, τῷ ἀνδρὶ ἩΓΔΓ οἰκοσίτῃ, κεφάλαιον ΗΓΔΗΔΓΔΓ. Hence line 33, which does not specify the nature of the work but mentions the same rate of pay, probably also refers to unskilled labour, μισθωτοί τοῖς ἐργασαμένως ἐν τῷ θεάτρῳ τῷ ἀνδρὶ οἰκοσίτῳ . . ., line 75, but, owing to mutilation of the inscription, it is not certain whether the pay is merely for unskilled labour or for that and something else, τῷ τῶν χαῦν θρησκευόμενην . . . τοῖς μισθοῖς ΜΓ (the μισθοί is for the prynty of 36 days, and amounts to 10 obols a day). Sawyers, like the carriers of earth, etc., earned 1 drachma 3 obols per diem, as appears from col. II. line 24, πρωτόν, καὶ τοῖς τὰ ξύλα διαπρόσασιν, τῆς ἡμέρας οἰκοσίτως ἩΓΔΓ, ἡμέρων ΔΔΔΓΔΓ, κεφάλαιον ΗΓΔΓ. A Sawyer seems to have made less than a carpenter of one kind, at any rate a door-maker gets for the prynty of 36 days 65 drachmas, i.e. 10½ obols.
per diem, line 67, τῷ πουήσαντι τὰς θέρας Διονυσίῳ Ἐλευσίνῃ οἰκονύτι μεσθοὶ ΠΔΓ. On the other hand the highest rate of pay mentioned is for brick-setting and carpentering and is 2 drachmas 3 obols per diem, I. 26, τέκτωνι τοῖς πλαθυβολήσασιν τὰ περί τιν τυλών καὶ τῶν πύργων καὶ τὰ εὐλίνα ἐργασμένα, ἀνδράσιν τρισιν, τῆς ἡμέρας ἑκάστρο οἰκοσίτῳ ἔστ. And the next highest wage is 2 drachmas for finishing the entom, II. 42, τοῖς ὀπολέσασιν τὰς παραστάσις... ἀνδράσιν τέταρσιν τῷ ἀνδρὶ οἰκοσίτῳ τῆς ἡμέρας ἔστ., δυοὶ ἡμέραι ΠΔΓ.

Thus far the wages seem to vary with the skill (and perhaps the strength) of the workman but not to fall below 9 obols. I. 31, however, presents something like an exception, ἐπικήπτει καὶ ὑπάγοντι τοῖς ἐργασμένοις ἐπὶ τῷ πυλών... τῆς ἡμέρας δύον οἰκοσίτων ἔστ., ἡμέραν ΠΔΓ., κεφάλαιον ΔΔΔΓ ἔστ. from which it is clear that either the scraper or the adjuster of the bricks, or both, received less than 9 obols a day. Perhaps the scraper was an apprentice and only got a drachm, whilst the adjuster was a master and got 9 obols.

Finally, the ἀρχιτέκτων was paid at the rate of two drachmas a day, as is shown unmistakably by 834c I. 12, and 834c 60, while the pay of the man elected to check the bills which was 1 obol a day in the earlier accounts (834b I. 12) was raised by a vote of the people to 2 obols in the later accounts (834c 61). Obviously, however, checking the bills could not have taken up all his time and he must have earned other money from other sources, for the sum allowed in these very accounts (v. I. 5) for the daily wages of one slave is 3 obols.

These inscriptions then, as far as they go, would show conclusively that the unskilled labourer got 9 obols, and a clever artisan as much as 15, and that Büchenschütt has fixed the rate too low. But the information given by these accounts has to be reconciled with Büchenschütt’s other evidence. That evidence is partly inscriptive, partly literary; and principally the analogy of the rate of pay given to the sailors and soldiers of Athens.

The inscriptive evidence is contained in C.I.A. I. 334. These again are building accounts (for the erection of the Erechtheum) belonging to Ol. 03 and probably to the year 405. In these accounts we have to distinguish between day-labourers who were taken on for an occasional job and men on piece-work. In the former class we have first sawyers, perhaps stone-sawyers, who received 1 drachma a day (πρίστας καθ’ ἡμέραν ἐργαζόμενοι... καλύμματα εἰς τὴν ὁροφήν, ἡπτὰ ἡμέραν δραχμὴν τῆς ἡμέρας ἑκάστρος); next, men who put up scaffolding and take it down, bring benches and fix them, and carry things (unknown, as the inscription is mutilated); these men receive sometimes 3 obols, sometimes 6, sometimes 0, but as the accounts explicitly say their pay was a drachma a day (ὑποργοὶ καθ’ ἡμέραν ἐργαζόμενοι... ἐπὶ ἀνδράσιν δραχμὴν τῆς ἡμέρας), it is plain that the payment of 3 obols represents half-a-day’s work, of 9 a day and a half’s. Another day-labourer, a τέκτων of some kind, is mentioned, but the inscription is so mutilated that it is only by conjecture that he has been represented as receiving 5 obols (τέκτων καθ’ ἡμέραν ἐργαζόμενοι ζωμένος μ[... ἐτερ[... τ[:μτ][σ]]]
The piece-work consists in fluting columns. Each column is assigned to a gang of 5 or 6 or 7 men. Each gang can do at least two sections of a column, perhaps two and a bit in a prytny. The pay for a prytny amounts to 38 drachmas for each man in a gang of 5, 32 drachmas for each in a gang of 6, and 27 drachmas for each in a gang of 7. Now as the pay for piece-work is and always must be calculated on the basis of the current rate of day-wages, and as the amounts just mentioned fluctuate about an average rate of a drachma a day, it is probable that day-wages were a drachma. The members of the gangs of 6 and 7 men appear to get less than the members of the five gang, and less than a drachma a day, but it is hardly likely that 5 men could do more in the same time than 8. It may be conjectured therefore that although the larger gangs only completely finished two sections in a prytny, they were well on with a third, for which they would get paid when it was completed.

We may note that the architect gets a drachma a day, and a πατεῖν an obol less.

The rate of pay for unskilled labour does not appear from the Erechtheum inscription, I. 324, but as in Η. ii. 834 it was, as we saw, the same as for sawyers, perhaps we may infer that here too it is the same, viz. a drachma. This inference is corroborated by the inscription referred to by Büchsenschütz, which was assigned by Boeckh to the Periclean age, but is of uncertain date and is placed in the C.I.A. (I. 325) next after the inscription of Ol. 93. In this inscription the daily wage of an unskilled labourer is mentioned not once but repeatedly as a drachma.

If therefore we were confined to the inscriptive evidence known before the publication of Buehler and Treu we should be forced to conclude that Büchsenschütz's figures are too low: he puts the labourer's day-wages at 3 obels, whereas the inscriptions show that they were sometimes twice as much. The inscriptions discovered since the publication of his book show that sometimes the labourer's pay was three times what Büchsenschütz puts it at, and the artizan's twice and twice and a half as much. And Kirchhoff (Abhandl. d. Berl. Akad. 1876, p. 56) and Fränkel (Anna. 203 to Boeckh) agree that the higher inscriptive rates were the normal rates, the lower merely exceptional.

What then is the evidence which is so strong as to outweigh in Büchsenschütz's opinion the plain testimony of the inscriptions? First, the literary evidence, next the analogy of soldiers' and sailors' pay. His literary evidence consists of four references (taken from Boeckh). The first reference is to Lucian (Timon 6, 12), which is not evidence for the fourth and fifth centuries B.C. The second is to Ar. Ecles. 310, where the chorins, by way of illustrating the difference between wages now and in the good old times, say μνημ καὶ τριάμβολον ἔξι τριάμβοισι λαβεῖν ὅταν πράττοσιν τι κοινῶν δαπάνης πτην πτηνοφοροῦσε.
WORK AND WAGES IN ATHENS.

But this does not necessarily prove that 3 obols was really the rate of pay in Aristophanes’ time. If we may suppose Aristophanes capable of a joke, it is conceivable that the point of the jest is the substitution of τριώβολαν for a larger sum παρα προσδοκίαν. It is as though—the average yearly wage of parlourmaids (Economic Journal, V. p. 147) being in London £20—an old lady were to say servant-girls ask such exorbitant wages now-a-days that she could never get one under £10. The third reference is to the Frosch 172, the passage in which the dead man stipulates for 12 obols for carrying Dionysus’ luggage, and when asked to take 9, wishes he may be revived if he does. On this all that needs be remarked is that Büchenschütz admits that it proves that ‘under favourable circumstances’ a labourer could earn more than 3 obols. The fourth and last reference is to a fragment of Aristophanes (in Poll. VII. 133), ὀβολῶν δευτερῶν ὁ δραχμῶν Μεινέκον τεττάρων καὶ τῆς φοράς, which proves two things: (1) that the charge for carriage was some (unknown) number of drachmas minus 4 obols, (2) that if the reference is to the day-wage of a porter, then the wage was at least 2 drachmas minus 4 obols, i.e. 1 drachma 2 obols. Thus of Büchenschütz’s four references, one is irrelevant and the other three prove, if they prove anything, that his figures are much too low. Again, then, what is there to make us fly in the face of the combined and harmonious evidence of inscriptions and literature, and six day-wages at three obols? There is only the analogy of the pay of mercenaries and Athenian soldiers and sailors.

Now, first, no analogy can be valid against such explicit and indubitable testimony as that of the inscriptions. Next, as for mercenaries, their pay is no more a guide to their total profits, than a railway porter’s weekly wage is to his total receipts—the plunder to take into account. As for the Athenian soldiers and sailors, service was a personal duty which the citizen-soldier was expected to render to his country for nothing: the 3 obols (granting that it was 3) which the sailor received, were given as σίτων, because the only citizens called on to serve as sailors were those who had no property, lived by their labour, and therefore when called off from their work by the state would have starved in its service had not the state allowed to them for rations what it allowed for the same purpose to its own slaves, viz. 3 obols.

If then Büchenschütz be wrong in considering the wages mentioned in I. 325 (viz. a drachma a day for unskilled labour) as unaccountably high, the question remains whether Kirchhoff and Fränkel are wrong in regarding them as exceptionally low. Both the latter scholars consider that the normal rate of wages is that given in the inscription of B.C. 329 (C.I.A. II. ii. 834) viz. 1 drachma 3 obols for labourers and 2 drachmas or 2 drachmas 3 obols for artisans, and that the wages mentioned in the Erechtheum inscription of B.C. 408 (C.I.A. I. 324) are below the standard. Both scholars have therefore to account for the low figures of the latter inscription. Kirchhoff argues that at a time when the state was so hard pressed by war as Athens was in B.C.

---

1 For this eclipse of Νανοψία cf. C.I.A. I. 321, lines 11 and 16.
408 the erection of the Erechtheum could only have been undertaken for the sake of affording relief to the unemployed, and therefore the wages paid were below standard rates. Frinkel agrees generally with this but throws out the suggestion that it is necessary to consider whether the labourers were oikosotai in B.C. 408 as they were in B.C. 329, or whether the state itself provided them with food at the earlier date instead of giving them the money for their rations. To begin with this suggestion: it does not quite account for all the facts. It might explain the difference of 3 obols between the earlier and the later rates for unskilled labour, for 3 obols is the sum allowed in the later inscription for a slave's daily rations; but it does not explain the difference in the artisan's wages which amounts to 1 drachma or 1 drachma 3 obols. In the next place, when the state provided labourers with food instead of giving them a money-allowance, the cost of their rations is duly entered in the accounts along with the wages-bill and is defrayed by the treasurers of the temple. Thus in II. 3846 col. I, the rations of the public slaves are charged in lines 5 and 42, and the rations of the engravers in line 6. τοις τά γράμματα ἐπικολάπασιν ἐπὶ τὸ ἀνάθημα ἐν τῷ Ἑλευσίνῳ σιτία. The wages of the men employed by the state to purchase the rations have also to be defrayed by the treasurers of the temple, ὁδ' 67, ἀνεμφαίησιν τοῖς δημοσίοις Ἀριστοκρῆτος Τροζηνος μεθος ΓΙΠΞ ΠΙΠΣΙ τῷ μηνός. If therefore the labourers in B.C. 408 were not oikosotai, if the state purchased their food for them, we ought to find the cost of it charged to the treasurers of the temple, but we do not. Of course the argument o siliceto has in the case of a fragmentary inscription such as I. 324 less weight even than it usually has, but on the one hand fresh portions of this inscription keep being discovered (see C.I.A. IV. i. 1, p. 38, ὁ. 2, p. 76, and 3, p. 148), which confirm the rate of wages but contain no items for food, and on the other hand we fortunately have the accounts for one prytany practically complete, and they duly charge for wages but not for board. The total expenditure in the eighth prytany (the accounts of which are contained in c, col. I. lines 25—87, ὁ. col. II. lines 2—10, and c col. II. lines 1—23) is twice stated to amount to 1,230 drachmas. Of this sum 1,041 drachmas are accounted for by the items charged on that

5 In C.I.A. IV. i. 2, lines 18 to 25 we have the pay-bill of the viateors for the prytany complete, giving both the separate items and the total, and the names of the workmen and the amounts paid to them. It is headed, νιατοι και νιατομα μετεχμuous. The last word (και κατημεχμους) probably means 'day-wages' (και κατημεχμους, cf. Baidas πεποιηκημους), and και νιατομα by itself probably means pay for piece-work, because some of the viateors are expressly said to be paid by the day (τὸν παρακελεντα διδοι και τὸν νιατομα και νιατομα), Γέροι ενέργοι [1], [1] and others are paid for work by the piece (e.g. lines 32—34). But if any one were to suggest that the word agrees with γεροφοι understood, then he would have to regard this passage as conclusively proving that the viateors were oikosotai in B.C. 408 as they were in B.C. 329, for the meaning of the words, on this view, must be that the account following includes the cost of the food as well as of the wages of the viateors. But there is no separate entry for food; therefore the cost of each man's food must be included in the amount paid to him and set opposite to his name. But that amount is, in the case of day-labourers, one drachma per diem, e.g. Προτος ενεργος [1] [1] Μεσαρος ενεργος III [1] [1] Κροης ενεργος [1] [1].
portion of the inscription which has survived; the remaining 198 drachmas were entered on the small fragment which is lost. Now, whatever those 198 drachmas were spent on (about 100 or 120 of them must, I think, have been paid to Theogenes' gang for fluting for his gang is usually entered in the pay-bill next to that of Onesimus, and the inscription breaks in the middle of the payments to Onesimus and his men); they certainly could not have paid for the labourers' rations, for this simple reason: during this prytany 35 labourers were employed, and the cost of the regulation rations would have come to 630 drachmas, whereas the sum not accounted for is only 198 drachmas.

It seems therefore as though Fränkel's suggestion would not account for the difference in the rates paid in B.C. 408 and B.C. 329, for the labourers appear to have been oikôsatoi at both dates. We must therefore fall back upon Kirchhoff's theory, according to which the rates were low because the work was relief-work. But there are objections to this view. The idea that relief-works were started for the benefit of the unemployed in ancient Athens is somewhat startling; and we should have expected a larger measure of relief—finding work for thirty-five men would not alleviate distress to any appreciable degree. At any rate we should have expected the relief to be confined to Athenian citizens (great jealousy was shown even of illegitimate Athenians when corn was being distributed gratis), but of the men employed in B.C. 408 on the Erechtheum the majority were metic; again, the fresh fragments of the Erechtheum inscription seem to indicate that the works went on for several years, and were not undertaken to tide over some time of particularly sharp distress. Finally, if C.I.A. I. 325 belongs, as Boeckh thought, to the time of Pericles, the matter is settled, for the uniform rate there is a drachma a day, and the relief-work theory does not apply to it.

As then there are objections, more or less serious, to the attempts made by Kirchhoff and Fränkel to show that the rates in the earlier inscriptions are misleading and abnormally low, I would suggest that perhaps the source of the difficulty is in the tacit assumption which both scholars make. They assume that in eighty years the rate of wages could not change. That 'real' wages did not change, i.e. that the labourer got no more of the necessaries of life when his wages were 1 drachma 3 obols than he did when they were 1 drachma, is likely enough. But this only proves that his money wages must have varied, if the purchasing value of money varied. And the purchasing value of money does so notoriously change in the history of a nation, that the difference between the earlier and the later inscriptions in the matter of wages is itself a presumption that the inscriptions are correct. And this presumption is confirmed by what few facts we have that bear on the subject. Boeckh has shown (St. d. Ath. 1. 118) that the standard price of wheat in the time of Socrates was 3 drachmas the medimnus, and in the time of Demosthenes 5 drachmas. Now if the price of other necessaries of life went up on the same scale, money wages also must have risen at the same rate, if 'real' wages were to remain the same. That is to say, we should expect money wages to rise from 6 obols to 10 obols, since prices rose 3 : 5; and the inscrip-
tions prove that wages actually rose from 6 obols to 9 obols for unskilled labour, and higher for artizans. That wheat was not the only article to rise in price, but that all commodities rose during this period, is probable because we know that throughout the history of Athens the quantity of the precious metals in circulation was continually increasing, and that consequently their purchasing value must have been proportionally decreasing. With the silver mines of Laurion at work, the silver drachma must have steadily depreciated, one would think. At any rate, for the whole period, from Solon to Demosthenes, Beecck calculated that prices went up five-fold. It is therefore not unreasonable to suppose that the price of other necessaries besides corn went up in the period B.C. 408—329 in the ratio of 3:5. Indeed it is easy to show that at the latter date 9 obols a day would only just purchase the necessaries of life. The rate of the average workman’s wages must be on the average such that an average family can be supported by it; and an average family consists of four persons, two parents and two children. Now in B.C. 329, as we have seen, the state allowed 3 obols a day for one slave’s food; if therefore we consider that two children eat as much as one adult, the labourer’s 9 obols would all go in food, and he would have nothing left for fuel, clothes, boots and rent. But as it is relatively cheaper to provide food for four persons living together than it is for one, and as a woman does not eat as much as a man, it is out of these economies that the labourer of B.C. 329 would have to pay for clothes, etc. That it was not impossible, though doubtless difficult, to do so is shown by Dem. 1045 § 22, where it is said that to live on the income from a capital of 45 minas of μηδεν εστιν. Now at the usual Attic rate of interest this capital would yield an income of 540 drachmas, which is (for a year of 360 days) 1 drachma 3 obols a day—exactly a labourer’s wage. Since then it was just possible for a labourer to live and bring up a family in B.C. 329 on a money wage of 9 obols, with wheat at 5 drachmas the medium, then in B.C. 408, with wheat at 3 drachmas and other necessaries cheaper in the same ratio, a money wage of 6 obols would be a living wage. Thus the ‘real’ wages were the same at both dates; there is no difference to be explained away by theories of board wages or of relief-work for the unemployed; and Büchenschütz’s wage of 3 obols must be relegated to some early age for which we have no definite figures—it does not apply to the fourth and fifth centuries B.C.

It is in accordance with these figures that 3 obols was the pay for dikasts, who, according to Aristophanes, were generally old men past work, and being old, probably had grown-up children earning money of their own. Possibly also they could try a case and put in half a day’s work after it. This latter consideration may help us to understand how it was that a drachma or 5 obols was sufficient compensation to a bouleutes for losing a day’s work. When he was not serving as a prytaneus, his duties as a bouleutes would leave a considerable amount of his time free. When he was in prytany, and therefore had to sit all day, he was fed in the prytaneum, and, if he got slave’s rations, the pay came up to about what a labourer earned. The pay for attendance at an ordinary meeting of the ecclesia, established at the beginning
of the fourth century, was continually being raised, not by democratic depravity, but by way of correspondence to the continual rise in prices, until it reached the sum of 6 obols. But this, its maximum, could not compensate even an unskilled labourer for the loss of his day's work; and that it did not entice him, is made evident by the fact that to secure a respectable attendance at a κυρία ἐκκλησία a full day's wages, 9 obols, had eventually to be offered.

Finally, perhaps I ought to mention some inscriptions which have been discovered at Delos (Bull. de Corr. Hellén, VI. p. 23), and which may at first sight seem to be irreconcilable with what I have said. The inscriptions themselves I have not seen; and for what the Bulletin says about them I am dependent on Frankel's notes to Boeckh and on Prof. Gardner's chapter on Temple-property in a forthcoming Manual of Greek Antiquities. I would premise therefore that Delos is not Athens, and the Delian inscriptions belong to the beginning of the second century. They are the accounts of the Hieropoet of the Delian temple of Apollo, and they give, amongst other things, the salaries of various officials: neocori are paid at the rate of 1, 2 or 3 obols a day, a κρημνοφύλαξ 1½ obol, a παλαιοστραφύλαξ 2 obols, a secretary 1½ obol, whilst the ἄρχων receives a relatively large salary at the rate of 2 drachmas a day. Now I do not know what were the duties or the social position of a neocorus, but if he at all corresponded to the verger of a modern cathedral, then he would have plenty of time to ply a trade of his own when he was off duty and to supplement thus his official salary. I am in the same state of ignorance as to the position of a κρημνοφύλαξ, but there seems to be the possibility of 'tips' in it: the ancient tourist, or rather pilgrim, to Delos had probably to pay for being shown what he wanted to see. About the 'secretary' I am in less doubt: he corresponds to the ἐποργαματεὺς of the Erechtheum inscription and to τῷ κεχειροτομημένῳ ἀντιγράφῳ τά ἄνα- λοιστήρων of C.I.A. II. ii. 824, who at first (β col. 1 line 12) received one obol a day, then (β col. ii. line 7) 1½ obol, and finally by vote of the people (c line 61) 2 obols. Now at Athens in B.C. 329 not even a secretary could live on 2 obols a day, and it is plain that he must have filled up his time and supplemented his earnings by doing other work. Obviously therefore he may have done the same in Delos; and if he, then why not the other officials whose salaries are at first sight so surprisingly small?

These considerations seem sufficient to show that the Delian salaries give us no clue to the rate of day wages in Delos. Another will perhaps be thought more conclusive: three temple officials are mentioned in these accounts who receive 120 drachmas a year (i.e. 2 obols a day) for food, σιτε- ρέσσων. This shows pretty clearly that in Delos at this time a single man's food was calculated to cost 2 obols a day; and if so, then the best paid neocorus, who got 3 obols, could not have maintained a wife and family on it; in other words, day wages must have been higher than 3 obols.

But there is another thing to consider: at Athens in B.C. 329, with wheat at 5 drachmas the medimnus, a slave's daily rations cost 3 obols. In Delos therefore, if I am right in arguing that money wages rose and fell with the
average price of wheat, we should expect that, with daily rations estimated at 2 obols, the price of wheat would be correspondingly lower, viz. 3 drachmas. And as a matter of fact, on the evidence of these same inscriptions (Bull, de Corr. Hell. VI p. 14, line 103), the price of wheat at this time was 3 drachmas.

We may now make with some probability a guess at the average day wage in Delos at the beginning of the second century. The price of wheat was the same then and there as it was in Athens in B.C. 498. Probably, therefore the rate of wages was the same, viz. a drachma a day. This is rather confirmed by the fact that the ἀρχηγός at Athens received the wages of an artizan, i.e. higher wages than the unskilled labourer; he received 2 drachmas a day, and in Delos also his salary is at the rate of 2 drachmas a day.

To sum up and conclude: in Athens and in Delos, at the end of the fifth, at the end of the fourth, and at the beginning of the second centuries B.C., the day wages of the unskilled labourer were equal in value to a Demetrian of wheat; or, to put it another way, if he worked six days out of seven, his week's work would purchase 2 medimni of wheat. Of course he did not consume or require so much wheat: one man's daily consumption of wheat only amounted to a choenix (a Demetrian of wheat).

F. B. Jevons.
ON SOME TRACES CONNECTED WITH THE ORIGINAL ENTRANCE OF THE ACROPOLIS OF ATHENS.

[Plates XI.—XIV.]

At the south-western angle of the Athenian Acropolis and immediately to the south of the temple of Nike Aphetos are some traces of foundations of walls and other indications which appear to throw some light on the original approach to the citadel before what is called the Beulé gate, which gave a direct west access to the Propylaea, was constructed.

The evidence seems to show that this approach coincided with that which was until very recently (i.e. previous to about 1860) the only regular approach, immediately under the S. W. angle of the Nike bastion; and where, a little within the old gateway (now destroyed), may be seen rough rock-cut grooves which had been made to assist the ascent. If from the site of that gateway a straight line be produced to the southward for about twenty feet, we find a portion of the rock of uneven surface but worn quite smooth. Indeed, when first uncovered on the removal of the Turkish or mediaeval buildings in 1889—1890, the surface was so extremely smooth that it appeared to have been worn by the feet of multitudes who had used it as a path to the Acropolis during a long series of years. See B on the Plan (Plate XII.), where this smoothed portion of the rock is shaded by double hatching. Lower down and following the dotted line on the plan from the point marked A there seem to be other indications of the path, namely along the track which is still used as the most direct footpath leading to and from the east and particularly where it runs between two masses of rock which here and there present the appearance of having been trimmed by tool strokes. The apparent interference with this path by the line of masonry, supposed to have belonged to the Choragic monument of Nicias, will not appear to militate against this theory when we consider the date of that monument and that the path in question would have ceased to be a main approach when the direct west access was made.

To the right hand of the point B—viz. the smoothed rock above mentioned—there is a considerable area over which the rock has been roughly levelled, extending eastwards as shown in the light hatching. This area is about thirty-eight feet below the datum level, which is that of the bottom of the lowest step of the temple of Nike Aphetos. The southern
boundary of this area is a definite edge of the rock and its northern a
t vertical cut face, nearly, but not quite, parallel to the flank of the temple
and the bastion wall. There is not much difference of level between the
surface of the area above mentioned and that of the portion extending about
forty-three feet farther towards the east, and including the site of the
modern guard-house, but it is not so evidently artificial. One portion,
marked C, of the first mentioned area has been smoothly levelled as if for a
foundation to be built upon.

In connexion with this last are two remarkable features which I shall
refer to more particularly. One of these, lettered D, is a rough artificial
cutting pierced into the solid rock in an oblique direction and sloping
upwards, and at the other point, viz. G, are several lines of stepping cut on
the upper surface of the rock, as if for the foundation of a wall running into
and joining the bastion at right angles.

Northwards of the features just described it is to be noticed that the
wall of the Nike bastion, which is continuous with the Cimonium and
presumably part of it, has been rebuilt from the rock upwards for the whole
extent between the points E and F; so there is no evidence remaining as to
the manner in which the structures, whatever they might be, which were
connected with the features I have described joined on to the main wall, and
we are quite at liberty to assume that a wall following the line pointed out
by the stepping did actually join on to the Nike bastion somewhere between
those points.

Assuming that we have rightly indicated from the grounds above stated
the direction of the path and the entrance, it is necessary to show how it
could have been defended consistently with ancient practice; and Pl. XIII. is
intended to show how an outwork might have been built taking the best
advantage of the existing rocks and providing along the line of ascent a
tower which would have commanded the unshielded side of an approaching
enemy. Returning to the points C, G and D, a most remarkable feature is
the excavation D already referred to. This shows a rather narrow entrance
on the face of the vertically cut rock and then a rough piercing for about
fifteen feet, with the floor sloping upwards and then terminating in an
unfinished manner. This may possibly record some siege of the Acropolis
with an attempt made by the enemy to carry the defences by a mine, which
from some cause, perhaps the unexpected hardness of the rock, was discon-
tinued; and that afterwards the axed foundation bed C, in front of the
opening, was intended to carry a mass of masonry for the purpose of sealing
up the mouth. But this aperture and cutting may also, instead of recording
an enemy's attempt, have been connected with an intended sally-port of
which there are instances elsewhere—notably on the south side of the
citadel at Tiryns—and the square foundation could have been prepared for
the defences which were to have secured the entrance.

However this may be, I think we ought to accept the evidence of the
stepped cuttings G as showing that here a cross-wall joined the main circuit
wall of the citadel, as already mentioned.
Returning to the point B, it will be seen by reference to Pl. XII. that the rocks to the westward of that point offer themselves very favourably for the support of the wall which is shown as founded upon them in Pl. XIII. It is true that I did not observe any rock-cuttings upon these rocks suitable for foundations of walls, other than those already referred to at the point marked G, but there would have been less need of any such preparations in those places; for the surface of the rocks in question is tolerably level, whilst the slope at G is very steep.

If the outer gate had been, as suggested in Pl. XIII., a little to the south of B, the walls which would have defended the approach, supposing them carried up, as they probably would have been, so as to range—or nearly so—with the Nike bastion, would have had a very commanding height; and there can be but little doubt that the defensive works at the western approach must have been very formidable, since the Persians apparently failed to make any impression upon them, even when defended by a very weak garrison, but scaled the citadel at another point. And it may be pointed out with respect to the original line of approach here suggested, that if it had been made where the Beulé gate was formed its effectual defence would have been much more difficult.

I have not followed the probable continuation of the walls farther than is suggested by the plan. A point however worth remarking in connexion with this subject is, that the ancient altar which has been discovered near the Beulé gate and is shown in Pl. XIII., and which seems to be in situ, is parallel, or nearly so, to the western wall as proposed, which has been derived from other indications.

In the elevation, Pl. XIV., the dotted line shows the position of the gateway, of mediaeval or Turkish construction, mentioned above, which has recently been taken down. The wall of the bastion is drawn so as to exhibit its present state with the middle and left-hand portion rebuilt with stones of various sizes. The regular courses show the parts which remain of the original structure. Further evidence of this is given by the photograph (Pl. XI.). It should however be observed that the stopped cuttings G, though just discernible, are scarcely distinguishable in the photograph from other rock-markings. They are however in reality very easily recognized when attention is called to them. The traces on the surface of the ground to which I have referred, are not shown on the photograph; the ground was too much concealed by broken fragments and vegetation.

F. C. PENROSE.
THE TEXT OF THE HOMERIC HYMNS!

PART II.

In the first part of this dissertation an account was given of the MSS. which contain the Homeric Hymns, their families ascertained and an approximation made towards the character and ages of their archetypes. Our next step is to compare these four archetypes, m x y and p, among themselves, with the view of discovering if, and how, they are related to each other, and what is the intrinsic value of their respective traditions. To do this I examine the readings of each archetype in detail, judging each variant in its turn and comparing it with such examples as I can produce that illustrate its particular case. I endeavour to assign each variant to the category of correct original, independent variation, pure corruption, half-intentional correction, and intentional interpolation. Upon the totals of these different classes given by each archetype depends its character and value. It will be seen that I am a disbeliever in the a priori method of dealing with MS. tradition, the method which selects, whether on good or bad grounds, one family as the source of pure tradition and rejects the rest as doctored and vicious, calls their good readings corrections, and their additions interpolations. I see rather in the divergence of families the working of accident, incalculable and not to be formalized. I start from the scribe in his function as a copyist, bent on the production of a marketable article and with no Mephistophelian predisposition to pervert tradition, and I call in the first place, to explain variants, on the natural conditions that attend such a function, unconscious errors of eye and hand, semi-unconscious tricks of memory and association, conscious correction within slight limits and approximative to the clerical; these causes I endeavour to support by analogy, and only in the last resort and in the light of clear proof bring in the kritische Thätigkeit of the patient copyist. I believe therefore that families differ only in degree, that Providence has scattered survivals of the original over all of them, in unequal proportions, and that in short, regard being naturally had to the general character of a family, every particular case must be judged on its merits.

1 As I send these sheets to press I receive, through the kindness of the writer, Dr. Hollander's tract Uber die neu bekannte gesammte Handschriften der homerischen Hymnen, Osnabruck 1885. I see on a first reading that the same view in essentials of the single MSS. and their relations is taken that I have expressed in Part I.
To illustrate the variations of these MSS. I have drawn largely on the MSS. of the Iliad and Odyssey, analogous documents whose history is on a larger scale that of the Hymns. For the Odyssey I quote from Ludwich; on the Iliad I use, besides La Roche's material, my own unpublished collations of the Italian MSS. I give below a list of the symbols by which I refer to them.\(^{11}\)

| 14 | | πέρεσανθέσιν | | | |
| Sel. xxxii. 6 | | ἀκτήρες | | | |
| Dīde. xxxiii. 14 | | ἀδέλλαι | | | |
Upon casting up this table it appears that \( x \) and \( p \) agree against \( m \) in 85 cases; \( m \) and \( x \) against \( p \) in 41, and \( m \) and \( p \) against \( x \) in 7. Without relying too strongly on these figures we may conclude that \( x \) and \( p \) agree in about twice as many cases as those in which they differ, and that therefore they are about twice as near each other as \( m \) is to the nearer of them (\( m \)). This result of counting agrees with what one would have expected from the palpable fact that \( x \) omits the Demeter Hymn while \( m \) has it.

\( y \), seeing that we have it quoted only where it differs from \( x \), agreed presumably in the main with \( x \). Otherwise of the 30 recorded divergences from \( x \), 15 are peculiar to \( y \), 5 are common to both \( m \) and \( p \), 5 to \( m \) only, and 5 to \( p \) only. As regards \( m \) and \( p \) therefore, \( y \) is half-way between them.

The general relationship of the archetypes is therefore settled. We proceed to investigate their intrinsic value. I begin with the family reputed least good, \( p \).

\textit{Ap. 19. πάντων \( p \), πάντως \( x \), πάντοσος \( M \).} Πάντως is fixed by 207, besides being a good Homeric word. The reason for the existence of πάντως is hard to find. Cf. however Solon iv. 20 Bergk πάντως, -ου, -ς, Theognis 26 πάντος, -ου, -ς, -ας. The coincidence with the disturbance in \( M \) is curious.

21. παντοτρόφων \( p \), πορττότρόφων \( m \). We cannot suppose that the scribe of \( p \) shared Gemoll's opinion as to the inappropriateness of πορττότρόφων. His reading is a graphical corruption, beginning with the vowel (so πόρδαλις, πάρδαλις N. 103, P 29, Φ 573, δ 4357), followed by the usual change of \( v \) for \( p \) (see p. 174). As to the reading to be adopted, there can be no doubt that Gemoll is over-nice. The fact that in an enumeration of the properties of Ithaca that island is called βοιβάτος is nothing against the propriety of πορττότρόφων as an epithelium onus of continent opposed to islands. Even in Odysseus' case all his oxen and part of his sheep and goats are \( ἐν ἑπταφόι \) (E 100), and the only beast the suitors get is carried over by πορττόμεθα with Philoctetes (v 186).

24. Λύνας τε θαλάσσως \( p \), λυμένες \( x \) (def. \( M \)). Λύνας is found in the sense of sea in Homer, see Lexx., but not with a genitive of θάλασσα. It may be a graphical corruption from λυμένες, \( ε \) and \( ε \) abbreviated. Hardly a pure conjecture.

32. ἄγχαλος Πεπάρμθος \( p \), ἄγχαλα γ \ (def. \( M \)). \( p \) is very probably right; B 640 χαλκίδα τ' ἄγχαλων, 697 ἄγχαλων τ' ἀντρών (ἀγχάλη Ζενωδ.). Theocr. xcv. 65 Ἀλκήνης καὶ ἄγχαλον, Αρ. Rhod. iv. 425 ἐν ἄμβρα. Λυκήν.

The laws as to the number of terminations of adjectives in verse are loose, cf. Lobecch Paradox. p. 474 sq., Kühner-Blasch S 647 esp. p. 538. As the MSS. in the Hymns vary considerably, I give in a table nine places where the question arises:

\textit{Ap. 32 ἀγχαλία Πεπάρμθος \( x \), ἄγχαλας \( p \) (def. \( M \)).} 
\( \theta \), 181 Δάηλου περικλύττον \( m \) περικλύττος \( x \). 
\( \theta \), 251 ἀμφιρύττους κατὰ νήσους \( m \) ἀμφιρύττες \( x \).
The MSS. give the masculine termination as against the feminine in this proportion; M in 2 cases (out of 8), χ in two (out of 9), χ in 6 (out of 9). Metre, to which Lobeck l.c. is willing to allow a large influence, does not, it will be noticed, enter into any of these instances. Itacism on the other hand probably does, at least into genders turning upon η and αι, and the inconstancy of κ at Hymn. 272, 412 is noticeable in this connection. The several lines will be best noticed as they occur.

42. πόλεις τοι, πόλεις α (def. M). Possibly mere itacism, possibly an expression of a view with regard to μερόσων. Η μερόσων is a simple adjective then both Cos and Miletus may stand in apposition to πόλεις, if Μερόσων is a proper name then only Cos. Cf. Peppmüller, Philol. 1884 p. 196.

54. εὔβους τοι, εὔβους α (def. M). The same variant H 238 Βοῦ Aristarchus, codd. plerique; Βοῦ Aristophanes, L Λευκ. B, M, Pa, Pe.

59. ἔρωτας ονειδία βόσκεις τοι, full line x, (def. M). The scribe of τοι, both careless and ignorant, simply omitted what he was unable to read. The Stoll-Cobet restoration βόσκησες θ' οί κε σ' ἔχωσι is supported by the parallel case of the Delphians (536, 7). Both oracles, naturally barren spots, are to be maintained χειρός ἀν' ἀλετρόν, by the forensicators.

65. γενομένη τοι, γ' ἐρμηνή α (def. M). Γενομένη is obviously right, and preserves the tradition; γ' ἐρμηνή, as we have seen (Part I. p. 174), is a common minuscule error.

71. ἔρη τοι, ἔρη α (def. M). 72 διειμήσας τοι, διειμήσα α (def. M). The fixed point in this passage is given by 71, where ἔρη must be right and ἔρη wrong. Ατιμήσα seems to have been altered to suit ἔρη, see p. 269; διειμήσα is a fifteenth century conjecture. In the absence of M therefore the original seems to be τοις διειμήσα, and this though ungraceful should be read. The second participle καταστρέφας goes closely with ὄψη and almost = κατα- στρέφεται καὶ ὄψη. M 113 sq. is somewhat parallel.

78. ἔξαστα τε τε βύλα νετουδὼν τοι, ἄρηδε τε χίτες λαῶν μέ. The accepted view is probably right, that τοι composed this hemistich to fill the place of ἄρηδε χίτες λαῶν; though it is difficult to understand what confusion or lacuna can have justified τοι in doing so. At ν. 59 τοι omitted a hemistich, apparently on similar grounds; here he fills the gap. Errors of ov for 9 in compounds of τοι are frequent (e.g. in ἀρτίσσος I 505, κτ 310, cf. ἡμλίκων and ἡμλίτως), but in this case ov is fixed by the metre and must have been...
original. Possibly πουλύποδες in 77 suggested the form. It would be
interesting if our knowledge of Byzantine phonetics permitted a guess
at the century when such a conjecture was possible.

129. δεσμά' τ, δεσμάτι' τις, δεσμάτι' τ, δεσμάτ' τ KS. The plural of
dεσμάς in the Hymns is δεσμά, as shown by Ἱεραμ. 157, 409, Διομ. ἑτ. 12, 13
where there are no variants. (On the other hand α 201 δεσμάτι' ἐξεσω.)
Δεσμά' τ therefore is probably right here, and should be read; the accent
which remains on δεσμάτ' in ἔως points to an incomplete correction; the later
MSS. KS carried the alteration a step farther.

132. οὖ δή ποτ' ἐπαυτία π, οὖ τότ' ἔως. The reading of π seems to be
due to the incorporation of a variant οὖ δή, of which ποτ' possibly represents
tότ', the reading of ἔως, corrupted. For the process cf. 215 ἀπόλλωνος for
ἀπολλων.

159. αὖδας π, αὖτις ἔως. A common variant, generally considered less
correct, so Λ 27, Γ 36, 440, E 697, A 567, etc.

171. See ἱσφυς p. 275.

176. ἐπίδημος π, δή ἔως. Δήμ and δή are variants α 160, where Zeno-
dotus and the second hand of 'U' (Mosaic. 519 B. s. xiv.) read δή. The
difference however may be purely graphical.

178. ὦμον π, ὦμών ἔως. Coalescence of resolved syllables is one of
the most usual signs of a careless scribe; cf. ἅφ. ὄμον 171, ἁφας 460,
χρυσοῦ Sel. xxxii. 6; in M cf. Ἅρμ. 263, Ἱεραμ. 542.

211. ἦ omiss the verse, from ἕομεν ἀρχαῖον. Its archetype naturally
had it.

215. ἀπόλλωνος π, ἀπόλλων ἔως. Ἀπόλλωνος of course is unmetrical,
and arises, I imagine, from an original error ἀπόλλων, corrected into the
vocative thus, ἀπόλλων; this o was then taken as a termination, = οὖ.

216. πειρής π, πειρής ἐκ, πειρήν M. On the accusative in this con-
struction see La Roche, Hom. Studien p. 118; it is recommended by the
corruption (graphical, see p. 144) in the earlier part of the word in M.
The dative and genitive are corrections with a grammatical object.

224. τελμήσαν π, τελμήσαν ἐκ, τέλμισον m. The form τελμήσαν
is established by Strabo 409, Steph. Byz. s. a. and the passage there quoted
from Antimachus, who derives the name from τελμήσαντο. m and π are
attempts to help the metre after ν had fallen out, m perhaps with a reminiscence
of τέμενα κα 184.

227. πώ τότε π, πώτοτε ἔως. πώτε is a common error, cf. 152.

233. οἱ ὃ δὴ π, οὖδε ἔως. οὖδε is a corruption, possibly intended in ἔως to
go with its reading κεραυνός (cf. p. 277). The same variation Ἀρχαὶ 139 is
confined to AQ.

272. προάγον τιν, ἄρκα, προάγοντες π. A corruption from misreading
πρ', that arose independently in ἄρκα and ὠς. Not a correction.

* I may perhaps be permitted to coin this word, the natural correlative of ὑμετερεύοντας,
THE TEXT OF THE HOMERIC HYMNS: II.

293. θημων p, ηηων m. I am unable to account for this singular corruption; 4 162 where θημων is the original Ludwig quotes ναφ from Plut. de sollert. anim. 283 E, η 100 for θημων we find the variants πυργων and θουνων.

306. τυφίωνα p, τυφλών m (τε add. m). Corruption in m from which p happens to be free; cf. 352 where the readings are τυφίωνα xp, τυφίωνα m. One sees how accidental variants are, and also that when x and p diverge it is upon a point of ucial confusion.

322. έτι μήσεα p, μησεα x, μχσεα m. έτι no doubt is a correction based upon λ 474 and does credit to the scribe of p. The common archetype of xp had μήσεαι, a simple ucial corruption from ΜΗΣΙΕΔΙΑ, Ti coalescing to give Η. Cf. p. 279.

339. ἥ παρόσον p, ἥ πόσιον x, ἐστιν, δοσω, M. On this passage see p. 279. The original reading of xp seems to have been ΗΟΙΟΝ, which produced πόσων to avoid the hiatus, and afterwards παρόσον and πόσιον alike to save the metre.

356. αἴσιον p, αἴσιον m. A simple confusion with the more common word αἴσιος. Cf. Herm. 516, p. 294.

403. παντοῦ p, παντοῦ m. Παντός[e] seems better than παντοῦ[ε] of which there is no clear example in Homer. V. Lexx.

515. χρυσῆ p, ορατῶν m, ...ατών x, χαρίεν Atheneaeus 22 C. I am unable to see that χρυσῆ is necessarily a correction: m and x (originally) indeed both read ορατῶν, but χαρίεν which goes back to the second century A.D. is enough to show that other readings were then in existence, and χρυσῆ may be a survivor of one of these. The lacuna in x is an accident confined to that family. An example of a real correction of ...ατῶν is at once to hand in ἀγατῶν the conjecture of Ατ D, accepted by Demetrius Chalcoundyles.

Herm. 45. ἀς ἐτε p, ἀς ἐτε x, ἀς ἐτε m. The original of this passage is as hard to recover as that of Ap. 339, see below p. 279. The readings of p and x are certainly both corruptions, and that of p is the deeper. What can ἄκ have meant to the scribe? hardly an accusative; did he intend it for ἄξ?

59. ὠνομακλητὴν ὀνομάξου p, ὁνομακλητῶν ὀνομάξου x, ὁνομακλητὸν ἐξονομάξου m. An attempt of p to make ὁνομακλητῶν, the v in which was to him long, metrical. Cf. E 55, 491, 578 al.

67. φιληται. I collect the MS. variants on this word as it appears in the Hymn to Hermes.

67. φιληται xp φιληται m.

175. φιλητέον m, φιλητευον xp.

214. φιλητην p φιλητην m (φιλητήν E).

292. φιλητευον p φιλητευον m.

446. φιλητα p φιλητα m.
It will be seen that $p$ has at least its full share of the correct φη- spellings. It would be easy to ascribe the variants to itacism, but that the φιλ- spelling prevailed in antiquity; so Herodian and Trypho ap. Chiosobosc. Ap. 62, ii. p. 2712 derive it from υφελέτης, κατά φαφρασι του υ και του ε και εκτίμει τον ε εις η. Hes. Opp. 375 the MSS. are divided as here. Aesch. Choeph. 999 the Lurm. has φιλήτης and Eur. Rhesus 217 the Venetus and the other MSS., but in Photius the words φηλώνυ ἀπατῶν, φιλόματα [śv] ἐξαπάτας follow in the series φη. Archilochus (fr. 46) is quoted by Eustathius (Od. 1889, 1 sq.) as using the word (spelled by Eust, naturally φιλήτας), Seneca (Ep. v. 13) makes the curious statement about its origin. *Intraeum more quos φιλήτας *Δεισιτίτι κενστ.* Brunck's φιλήτης ὑ ἔρως, καλῶς ἀν ἐντὸς Anth. Pal. v. 308 is very probable for ϕιλήτης of the MSS. On the derivation see Vanček, p. 1192.

119. δι' αἰώνος τε τορῆσας $p$, δι' αἰώνας $wx$. Gemoll's objection to te is well founded: the original was probably δι' αἰῶν' ἀντιτορήσας, i.e. διαωάτιστορησας, which divided wrongly gave διαώονα τίτορῆσας and the successive corrections δι' αἰώνας and δι' αἰώνος τε τορῆσας. $p$ again is furthest off. For ἀντιτορῆσιν cf. 178, 283, E 337, K 267; for the misdivision cf. ἀντιτορέστασις ὄφτων. 120. p. 291.

127. χαρία φέρον προφρον $wx$. Again $p$ is a step further off the original, which no doubt is Barnes' χαριφρον.

152. παρ' ἵνας $p$, περιγνύσι $w$, περ' ἵνας $x$. Παρ' is probably an alteration of παρ' $wx$, cf. Ge xxx. 17, 14. 1336 παραίον, περ' ἱνα 'G Mor,' L 19; Vat, 124 Ι8, 12, 18 exp. 40. 198. περ' ἵναιον, παρ' ἱναιῶν 'L' Vat. ἵπτο $x$, M $p$. The phrase περ' ἵνας, which has been attacked, is well defended by Theoc. xxv. 242 περ' ἵναιον ἑλίξες, $p$. Where similar variants occur (see Ziegler).

200. εὐκραίρωσιν $p$, εὐκραίρισσα $wx$. For εὐκραίρωσις with two terminations cf. Aesch. Suppl. 304 εὐκραίρω σαμ. The reading of $p$ therefore is not necessarily itacistic or a correction. See ante, p. 261.

241. νῆδομον $p$, ηδωμον $wx$. id. 449. In neither place is νῆδωμον possible, and we must admit it to be a correction. The two words are occasionally interchanged; no variants on νῆδωμος are reported in the Iliad, nor on Ap. 171, Paus xix. 16; in the Odyssey however ηδωμον is read δ 793 by 'P', μ 311 by 'PG', the form being in both cases metrically possible.

312. δὲξαν παρα $p$, δὲξον παρά $wx$. A mistake on the part of $p$, but how far conscious it is hard to say. Variations between -α and -ο in verbs are frequent, cf. Ap. 146 under α, p. 275.

313. ἐπεέσων $p$, ἐπεέσσω ἡμε. The plural is obviously right, and there is no reason why we should call it a correction. The singular of ἡμε is an easy error, arising from the 'neuter subject.'

342. δέα $p$, δεια $wx$. Which of these two forms is an itacistic corruption from the other will depend on the view taken of the passage in general. I do not admit the necessity of Barnes' τοια; and in this case δέα will seem more original than δεια which, though Ilgen printed it, is plainly impossible. Read therefore δέα, πελώρα.
THE TEXT OF THE HOMERIC HYMNS: II

356. κατερέξε ρ., κατερέξε μν. The reading of ρ. is right, and similar confusions between the tenses of ἔχομαι, ἔδειχν ὦ occur E 650, 1 535.

361. ἀλεγῆνος ρ., ἀλεγῆνων κ., ἀλεγῆνων μ. 557, ἀλεγῆνων ρ., ἀλεγήνων μ. Ἀλεγῆνος is probably established by ἀγάλατος ἀλεγήνυε 476 where there is no variant. The two variants of ρ. are cases of itacism, with in one of them (ἀλεγήνους) a slight conjecture to make a possible word.

371. νέον γ. ἐπίτελλομένου ρ., νέον μμ. The addition of γ. is a metrical conjecture, which occurred independently to the scribes of D. See in general p. 275, A 157.

386. κρατετό ρ., κρατετό μμ. Gloss, or perhaps corruption (ρ. dropping out); the reverse process A 119, and μ. on 265.

402. ἦλαυνε ρ., ἦλαυνε μμ. Accidental omission, cf. 59 ἄνομάξου ρ., ἄνομάξου μμ. 492 where there is no variant, and 272 where only μ. has -νττ. Apollonius iv. 1341 ἀγαθανωι without variant; more exx. in the Lexx. See in general note, p. 291.

478. ἐταίρων ρ., ἐταίρης μμ. Due probably to assimilation with ἐνούφαινον.

481. φιλομείδεα χόρον ρ., φιλοκυδεά κόμον μμ. The adjectives are about on a level. Φιλομείδης is not found without a double μ. earlier than Paul. Silentiarius Anth. Pat. vii. 66, 10 ἐναθα Καλλιμένης φιλομείδιν ἄνθητα Μούσαις cf. ix. 524. 22, though it would be rash to tie the writer of this hymn down to such a rule. Φιλοκυδής appears to occur elsewhere only in 375, φιλοκυδεάς ήβης, and is a less good epithet of κόμον. Either word may have been derived from the other, by itacistic change of ες and υς, then graphical change of χ and μ. I cannot account for χόρον.

530. ἀκήρατος ρ., ἀκήριον μμ (ἀκήρατον Λ.). No variants are quoted on ἀκήρατος in the Odyssey, but the reading of L shows that ἀκήρατος was a natural error, perhaps caused by reminiscences of ἀκήρατος, ἀκηραίος.

560. θύσατο ρ., θύσατος κ., θύσα τμ. The commonest of phonetic errors, cf. merely γιόνοι for γιόνοι 20, Apollonius iii. 685 θέαν Λ. Guell; contre v. 35 θύεθε 'Μ' for θύε, cf. χ. 509, A 180.

ἀπό ηδονίας ρ., ηδονία μμ. Apparently a graphical confusion of ο for η; cf. φηλοτὴν, φηλοτήν 214, K 252 παροχουκένε, παροχοχεκένε.

Ἀριδ. 16. χρυσηλάκατον ἁρ., χρυσηλατόν κ. χρυσηλάκατον μ. Art. xxvii. 1 χρυσηλάκατον omnes. Here we have two passages where ρ. goes wrong against one where it is right. Probably therefore χρυσηλάκατος in this line is not a correction but the original reading, and in χρυσηλατόν χρυσηλατόν a syllable has accidentally fallen out. No variants are recorded in the Iliad and Odyssey.

20. τόνος ρ., τόνοις κ., τόλεις μ. Πόλεις, as Gemoll observes, is surprising in the sing., and feeling the difficulty m made τόλεις. Πόλεις is a graphical
corruption; Η 726 in the phrase ἄμοι πόνοι ἀνδρῶν, πόλεων is read by L 16.

39. κατὰ θυτήσεις p, κατὰ θυτήσεις με, id. 50. The feminine καταθυτήσει does not occur in Homer; the masc. form is therefore probably a correction conscious or unconscious of π. On his tendency to this formation see p. 261.

71. παρόδιλες p, παρόδιλες (def. M). A usual and ancient variation in the spelling of this word. Aristarchus preferred παρέδεα; N 103, P 20 the MSS. are about equally divided, παρέδε in the text of the Ven. A.

82. τε καὶ p, καλ (def. M). A correction to save the quantity of καλ before εἶδον; Ruhnken accepted it, and Art. xxvii. 22 ἵμεον καὶ ἄλλης, Wolf's τε is usually inserted. For the reverse cf. A 528 ἵμπου τε καὶ ἄρμα, where τε is omitted by 'L' Val. 30, M 10.

84. θαμβαίνειν p, θαμβαίνειν με (def. M). θαμβαίνειν does not occur, and is probably a phonetic corruption.

136. 136a, οδ' σφιν ἄεικελή γυνὴ ἔσσομαι ἕ καὶ οὐκί p, οδ' σφιν ἄεικελή νῦν ἔσσομαι ἄλλη εἰκὼν | εἰ τοι ἄεικελή γυνὴ ἔσσομαι ἕ καὶ οὐκί με. A typical instance of mechanical contamination; both lines stood in the archetype of p, the scribe's eye wandered from one ἄεικελή to the other. This the commentators have recognized.

140. ἄγοραῖες p, ἄγοραῖεις με. A sheer misguided correction in p, ἄγοραῖειν does not occur in Homer. Cf. ἀλεγίζον in m Herm. 361 for ἀλεγίζων.

174. ἄμετρα p (βερά a, κύρε m). This typical uncorrected graphical corruption in p and z shows how little deliberate purpose works among MSS.

203. ἢρπαστέ ἔων p, ἢρπαστε ἔων x, αἰνῶν m. The mere omission of ν ἐφελκυστικόν has produced this variant in p. It is curious that in the other families the same letter has been incorporated with the next word, and in M an itacism has superceded to give an additional disguise. Hermann no doubt was right in establishing δν.

218. χρυσόδραμον p, χρυσόδραμον με. Semi-conscious correction in p, influenced by the neighbourhood of Τθάνον and ἐπιελκυστικόν.

245. τ' p, γ' με. Homeric usage shows τ' to be right; γ' is naturally a common graphical mistake.

270. γηθήσοται p, γηθήσεται με, 280 ἄξιοι p, ἄξιοι με. Possibly simple itacism, otherwise a correction of optative for future is of extremely common occurrence, e.g. H 129, I 231.

Aphr. vi. 9. ἐλθεμ' p, ἐλθεμ' με. *Ἀλθεμον is established by the adjective ἀλθεμείς and Pindar's ἀλθεμα χρυσοῦ besides by later use; ἐλθεμ' must be an alteration based upon ignorance of the rare word.

18. ἐνστεφάνου Κυθερίνης p, ἐνστεφάνου με, Aphr. 175 ἐνστεφάνου ξα, ἐνστεφάνου m. Aphr. 6 ἐνστεφάνου, 288 ἐνστεφάνοι without variant. It may well be, and has been by all commentators, doubted whether ἐνστεφάνος or ἐνστεφάνοι be the more fitting epithet of Aphrodite; I incline to side with Hollander (p. 13 n.) and Gemoll in favour of ἐνεστρ., but without joining with Baum, in condemning the 'levitas' of m, which is at least consistent in
reading ἴσττ.; rather does ἴ show light conduct in wavering between the two words. Ἀνατράφων is the Homeric epithet, ἴσττάφανος we have as early as Solon fr. 19, 4, Theognis 250, 1304, 1332, 1383; in Simonides fr. 52, the two words again are variants (ἱσττάφανον 'B,' δισττάφανον 'PQ,' ἱσττάφανον 'VL').

_Dion._ vii. 8. ἔγε ὢ, ἔγευε μᾶ. In mα a syllable has been doubled.

_Mater deor._ xiv. 3. κρατάλη ὢ, κρατάλῳ μᾶ. Κρατάλου has been assimilated to ἱαχ in ὲ; the scribe no doubt considered κρατάλη a nominative.

女足 τυτάνον ὢ, τυμπάνον μᾶ. Τυτάνον is right and not a correction; in mα a confusion occurred with the more familiar word, as Apollonius ii. 1139 both 'L' and 'Guelf' have τυμπάνων where it is unmetrical, and in Anth. Pal. vi. 165, 5 (a passage modelled on this) βαρν τυτάνον βρομον. Suidas quotes τυμπάνων.

_Aeschy._ xvi. 3. δοτίνῳ ὢ, δοτίῳ μᾶ. Semi-conscious alteration in ὲ, with reminiscence of δωτίνῃ. Δωτίῳ is fixed by Hesiod op. Strabo 442, 647, and Simonides fr. 30.

_Poe xix. 26. θαλάων ὢ, θαλάων ὢ (def. M). The theta has dropped out in ὲ from the greater familiarity of θαλάων; the same process may be seen at Ἐ 91. Apollonius ii. 843 ('Guelf').

_Ath._ xxviii. 10. ὃβριμες ὢ, ὃβριμες ὢ (def. M). Here for once ὲ has the more correct spelling. The variation is perpetual in the Iliad and Odyssey.

_Hes._ xxix. 3. ἑλάχις ὢ, ἑλάχις ὢ (def. M). The second person is surely right, and the third a correction; ἐβριμεις xxx. 2 is not parallel, for there Γᾶτω is addressed in the third person while here we have Ἐστὶ in the vocative and σοῦ v. 4. Cf. the invocations 'Ἀρτέμις ἡ θάλαμους τῶν ὑδάτων ἑλάχις Anth. Pal. vi. 240, 2, ἡ ἰέ ΣΆμον μεθέουσα καὶ ἡ λάχις Ἰμβράσαν Ἡρη ιδ. 243, 1.

_Ge xxx. 8. πάρεστι ὢ, πέρ ἐστιν ὢ (def. M). Πάρεστι though no doubt coinciding with the original seems a real correction; otherwise it is hard to explain πέρ ἐστιν. Cf. v. 14, Herm. 152, aut._

_Th._ 14. παρ' εὐρενθέν ὢ, πέρευρεθέν ὢ (def. M). This also is a case of correction in ὲ; cf. below p. 271.

_Selene_ xxxii. 6. ὅπτες ὢ, ὅπτης ὢ (def. M). ὅ's error seems inexplicable, but there is no reason to suppose it was originally common to ὲ.

_Dios._ xxxiii. 14. ἄδελλαι ὢ, ἄδελλας ὢ (def. M). Apparently the scribe of ὲ took κατέπουσαν as intran. = κατεπούσατο (as παύσειν Dem. 351), and altered ἄδελλας to suit his view.

On counting up these passages it will be found that among some seventy variants peculiar to ὲ, eleven are conjectures (Ap. 59, 78, 522, 339, Herm. 127, 241, _Aphec._ 146, _Aphec._ vi. 9, Ge xxx. 8, 14, Dios. xxxiii. 14), seventeen are half-conscious conjectures (Ap. 19, 152, 216, 224, 374, Herm. 48, 15, 119, 312, 361, 386, 492, 530, _Aphec._ 39, 38, _Mut. de._ xiv. 3, _Aeschy._ xvi. 3), one is an independent reading (Ap. 513), twenty-one are original (Ap. 32, 65, 71,
I proceed to examine x.

Ap. 71. ἵθης x (def. M), ἵθη p. ‘Ἱθης 2 pers. is obviously wrong; the two forms ἵθη, ἵθης are exchanged, but in circumstances where either of them is possible, A 203, Π 163, Δ 205; we must suppose that the scribe of x, under the influence of some similar association, wrote ἵθη for ἵθης, and then altered ἀτιμήσας into ἀτιμήσω (72, which he meant for aer. med.) to suit it. I think this more likely than that, with Hollander p. 10, ἀτιμήσω is a survival of ἀτιμήσαν.

151. ἀνήρ x, αἰεὶ ἄνερ. ‘Ἀνήρ does not stand in any graphical relation to αἰεὶ, and we must suppose it to be a correction of x, introduced, after δε in 152 had become ὅτι, to provide a subject for φαίη.

174. ἡμέτερον x, ἡμέτερον ὑπ. Gemoll is plainly wrong in preferring ἡμέτερον; the maidens are to establish the poet’s fame, by talking of him to tourists, in return he will carry Θείης fame wherever he goes [as he actually does in the Hymn]. There is the same notion of a bargain, but reversed, at Θ 496, 7. ‘Ἡμέτερον is far from being the ‘bessere Ueberlieferung’; it is an itacismus purus putus.

211. ἅμε ἐρευθέει x, ἅμε ἐρευθεῖ ὑ, ἅμαρνόθω ὑ (def. p). The original, and the relative value of these three readings is quite uncertain. See p. 276, n. 12.

216. πιερίνι x, πιερίν ὑ, πιερί p. A correction in x, as in p; cf. p. 263.

224. τεμυρησόν x, τέμυρησον ὑ, τέμυρησόν ὑ; x alone is right, the other II. are corrections; cf. p. 263.

284. ὑποκρέμαται x, ὑπεκρέμαται ὑπ. Ὀποκρέμαται is not found, and its origin in x is hard to explain, unless it was suggested by ὑπερθεῖν and ὑποδέχομαι. I may observe in passing that little use can be made in criticism of confusions between abbreviations; those for ἐπί and ὑπό are absolutely unlike.

322. μῆσαι x, μητίσαι ὑ, ἔτε μῆσαι p. x presents its original unaltered, while p has emended it, cf. p. 264, and v. 515.

339. ἦ πόσσαν x, ἦστιν ὅποιον ὑ, ἦ πάροισον ὑ. Apparently a correction in x, but nearer to the common original than p’s reading. Cf. p. 264.

515. ἀτον x, ἀτόμον ὑ, χρωσὴν ὑ, χαριεῖν Athen. 22 C. Whatever view is taken of the readings of p and Athenaeus, it is plain with what fidelity x has transmitted its original.

Herms. 45. αἱ ὅτε x, αἱ ὅτε ὑ, αἱ ὅτε p. Αἱ ὅτε though wrong seems less far than the reading of p from the original, cf. p. 264.

65. ὅτο x, ἄλογο ὑ, ὅποι ὑ. A clerical error in x from which p is free. For the falling out of ὑ p cf. N 125 ὅσεν ‘Mor.’ for ὅσεν, Ξ 522 ὅσεν, ὅσεν,
THE TEXT OF THE HOMERIC HYMNS: II.

L 17. 18 Vat. 27 O 694 δος Aristarchus, δορον the majority of our MSS. It is noticeable how x here also refrains from correcting its original.

Herms. 86. αὐτοπρεπὴς ὃς x, αὐτοπρεπὴς ὃς. These words as they stand give no sense. Whatever the original may have been they are a long way from it. Mr. Tyrrell's conjecture of αὐτοπρεπὴς will be admitted to be the best yet made, and seems to satisfy the sense admirably. I should however prefer αὐτοπόρος ὃς (without which it is difficult to explain the reading of x), or may we assume an original pair of readings, αὐτοπρεπῆς and αὐτοπόρος ὃς?

Making this supposition, the actual variants must be explained as the result of repeated emendation and conflation: thus αὐτοπόρος ὃς = αὐτο-
περπορως; then by an inversion αὐτοπρεπῆς ὃς, and by correction, to give the semblance of a known word, αὐτοπρεπης. On the other side αὐτοπρεπῆς,
we may imagine, by the same process became αὐτοπρεπης and αὐτοπρεπης.
The ground for the emendation of αὐτοπόρος ὃς will naturally have
been the (apparent) metrical difficulty.

232. τανυτύδον x, τανυπόθον ὃς. The form τανυτύδον exists, e.g. Ἀπελ. 837, but the metre here settles the question in favour of τανυτύδον.
x is free from the corruption, which is phonetic, and occurs in 464 and in the lemma of Apollonius' lexicon εὐ. Cf. πιθάνειν = πιθανόσκειν, p. 206.

254. κλήν x, λέκνο cett. Κλήν is usually taken as a gloss on λέκνο, but glosses do not seem to have largely invaded x, and it may well be a correction from a corruption, λέκνο κλίνο κλίνη.

303. οἰωνόσιν εὖ x, οἰωνόςιν ὃς. An uncial corruption, εὐ for ΣΥ, as noticed p. 174. Here we may observe the fidelity with which x transmits it. τυφλὸν Ἀρ. 306 is another case.

361. ἀλεγής x, ἀλεγῆς ὃς. See p. 266; x has escaped the itacism of ρ.

397. ἀπειδεῖτο x, ἀπειδεῖτο ὃς. A correction in x, due apparently to the distance of ἰκω, which may have been taken for an adjective. The same failure to understand a construction led to ἀτυμής for ἀτυμήσας. Ἀρ. 72. Here the corrector of ἰγ was seized with the same idea.

Ἀρ. 16. χρυσηλάτων x, χρυσηλάτων ὃς; 118 χρυσηλάτων ὃς χρυσηλάτων ὃς. See p. 266; the syllable ακ seems to have fallen out accidentally before ἰγ.

99. πείσα x, βήσα ὃς. Πείσα (or rather πίσα, as Ruhnken corrected) of course is right; the variation is itacistic with a reminiscence of βήσα. Ἡν 124 xix 2 the word is spelled πίση. T 9 we have πίσα as a variant, 124 πίσα πείσα πίση. Ἀρ. Ῥί. iii. 12(12)8 πείσα. Cf. Ruhnken's note.

144. ἔρος x, ἔρος ὃς. A natural error in ὃς; 294 where the metre does not decide, Eust. and Vat. w have ἔρος, 315 where the metre makes ἔρος necessary, the MSS. are about equally divided; Herms. 434, Ἀρ. 91 there is no variant.

244. κατὰ x, τάχα ὃς. Κατὰ seems impossible with ἀμφικαλύψει; one must suppose it a corruption from τάχα through χατα.
THE TEXT OF THE HOMERIC HYMS: II. 271

Mot. deor. xiv. 3. τρόμος x, βρόμος y. βρόμος αφλόν occurs Herm. 452.
Dion. xxi. 10 τυφάτων βρόμον Auth. Pet. vi. 165; 5; id. vi. 217. 5 κυβέλυχ
τερον βρόμον; τρόμος is evidently the worse reading and, as there is no
graphical relation between β and τ, must be either a gloss or a conjecture.

Pen. xix. 7. κάρνα x, κέλευθα y (def. M). Here M is wanting
κέλευθα of yp gives the better sense as against x’s κάρνα, which is identical
with κορυφας and may very probably have come from v. 4. (Ludwich, Rh.
Mus. 1887, p. 548 prefers κάρνα.)

26. θαλέων x, θαλέσων y (def. M). See p. 268. x has fallen into a
clerical error.

Hest. xxix. 3. ελαχε x, ελαχει p (def. M). *Elaχe seems the inferior
construction, and the scribe was probably tempted to it by the distance from
Ε Cf. Ruhnken’s note on Dem. 269, and ante p. 268.

Ge xxx. 3. περ ἐστι x, πάρεστι p (def. M). Per ἐστι is unexplained,
and on that account, besides its persistence in DEII and some members of p
(BL2, NP), is to be considered original. x therefore again has accurately trans-
mitted its original. p would seem to have corrected it.

14. περεσαπεδύσι x, παρ’ εἰσαπεδύσι y (def. M). The original of x
again seems to have persisted, while p has endeavoured to correct it. With
π(περεσαπεδύσι) (p. 299) before us, and comparing περεσαπεδύσι x, Dem. 454,
452, 475, περεσαπεδύσι Herm. Sel. 13 we may perhaps accept Ernesti’s
περεσαπεδύσι. M, it must be remembered, is wanting.

Selen. xxxii. 6. ἀκτης x, ἀκτινε p (def. M). The word ἀκτὴρ does
not exist, and how x inserted it can only be guessed.

When these passages are counted, it appears that among some twenty-
eight variants peculiar to x, there are two downright conjectures (Ap. 151,
Mot. de. xiv. 3), nine semi-conscious conjectures (Ap. 71, 216, 284, 359,
Herm. 86, 307, Ael. 244, Pen. xix. 7, Hest. xxix. 3), no independent readings,
four survivals of the original (Ap. 224, Herm. 232, 361, Ael. 144) and some
thirteen graphical or phonetic errors, plus those given Pt. I. p. 161 sq.

I pass to a more difficult and more important subject, the valuation
of the tradition of M. Our experiences with x and p have prepared us for a
large proportion of novelties in M; we shall see to what conclusion as to
their origin a detailed examination of them takes us. I may notice
how important it is in such an examination to deal with archetypes of families
and not with single MSS. As against AtDELIT or ABC......V, the single
M might seem to have little authority; when we deal with w σ and p, =
at the lowest reckoning has the weight of one to two.

Ap. 14. μικάρα λητοί M, μικάρ’ ὅ λητοι cat. When ὅ fell out,
μικάρ’ was expanded to give another syllable. So 17. κύνιον for κύνιον.
θ has fallen out.

19. παντίδος x, πάντος y, πάντων p. Πάντων is fixed by v. 207
(See p. 261). Of παντίδος with the second syllable lengthened there is no
example; either therefore παντίδος became πάντος and the y was doubled
to make metre, or σ is a graphical confusion for the minuscule omega (ω).
82. ἔσται: m, ἐστὶν cet. ἔσται evidently is right, and occurred as a conjecture to J. The vulgate ἐστὶν is a corruption; cf. Θ 286 (ἔσται) ἔστι 
94. τά με, καὶ cet. A mechanical slip, due to the three τέ's before. 
96. om. Ma, hab. ὅπ. The coincidence between M and α is accidental, and arises of course from homoeoarchon with 98. The line stood in α and ς. 
Baumeister and Gemoll therefore are signally mistaken in seeing an 'interpolation' in it. 
To show what a part mechanical circumstances play in these omissions. 
I give a table of omitted lines in the Hymns. 

Ap. 33 σκύρος καὶ φώκα αἰαὶ καὶ αὐτοκαίης ὅρος αἰτῶ 
40 καὶ κλάρος αἰγλήσασα καὶ αἰασηγῆς ὅρος αἰτῶ. 
41 follows 35 in ΑτΔΗΙΚ. Homoeotelenon. 

144 πάσας δὲ σκοπιάν τὸ φιλαί καὶ πρόσωπες ἀκροι 
145 ὑψηλῶν ὀρέων ποταμοὶ δὲ ἀλαδε προενέργεις, 
πάσας δὲ σκοπιάς τὸ φιλαί καὶ προενέργεις Ι. Homoeotelenon. 
189 om. ρ without apparent cause. 
211 ἡ ἄμα φάρβαντι τριῳπο γένος ἡ ἀμαρόνθω 
212 ἡ ἄμα λευκίττω τοι λευκίττων διάμαρτι. 
231 ἐνθα νεφιμής πόλος ἀναπτύει χθόμενος περ 
232 ἐκκον ἄριστα καλά χαμαὶ δὲ ἐλατηρ ἄταθὸς περ. 
232 om. MBO. Homoeotelenon. 
260 ἐνθάδ’ ἀγνισοῦσα τελήσασα ἐκατομβασ. 
289 the same words. 
261—280 om. ET. 
283—320 om. B apparently without cause. 
325 α omit all but γ apparently without cause. 
344 οὕτε ποτ’ εἰς εὐνήρ διὸς ἡλιφε μιτησίμος 
345 οὕτε ποτ’ εἰς βόκον πολυταῖδαλον ὡς τὸ πάρος περ.

216 ἐς Πόλυον ἠγαθένε διξίμενος εἰλλύπας βοῦς.
215 om. L. perhaps from Homoeoteleuton.
218 Ίχνα τ’ εἰσενέγας ἐκεῖδος εἰτε τ’ μύθουν.
219 ὁ πότιο τ’ ἡ μέγα θανίμα ταῦ ἐθηαλμοὶς ὦρόμαι.
220 Ίχνα μὲν τάδε γ’ ἑστὶ βοῶν ὠρθοκραιράον.
218, 219 om. M. Homoeoteleuton.
422 om. xp without apparent cause.
456 νῦν δ’ ἑπὶ ωὖν ἀλλος περ ἑων κλαπά μῆδα οἶδας
457 Ἰξε πέπων καὶ θυμών ἐπαίνει προσβελτόρωσιν
458 νῦν γὰρ τοὺς κλέος ἔσται ἐν ἀθανάτοισι θεοῖσι,
457, 458 om. xp. Homoeoteleuton.
498 βουκαλλας τ’ ἑπέτελλεν ἐξεκτὸ δὲ Ματίδος νίος
499 γηθίςας κιθαρίν δὲ λαβὼν ἐπ’ ὀριστέρα χειρός.
499 om. M. apparently from Homoeoteleuton.
500 σηματ’ ἑτει κιθαρίν μὲν ἐκβόλῳ ἐγγιάλιζαν
510 ἰμερὴν δεδαιον’ δ’ ἐπεδελεῖον κιθάριζεν.
510 om. M. apparently from Homoeoteleuton (ξεν and ξεν).
532 τῶν ἄγαθον ὅσα φημι δαιμέναι ἐκ διὸς ὁμφής
533 μαντεύην ἐνεφίστει διοτρεφόμεν ἂν ἐφευπεῖν
534 φέτε σε δεσφατόν ἐσται δαιμέναι ὑπὲ τι’ ἄλλον.
532 om. E without apparent cause.

Aphr. 10 ἄλλ’ ἀρα οἱ πόλεμοι τε ἄδων καὶ ἔργων ἀρρης
11 ὑμίναλ’ τε μάχαι τε καὶ ἁγιάλα ἔργ’ ἀλεγύνειν.
11 ἄλλ’ ἀρα οἱ πόλεμοι τε καὶ ἁγιάλα ἔργ’ ἀλεγύνειν. E, from the influence of ἔργων in 10 and ἔργ’ in 11.
96 πάσιν ἐταίριζουσι καὶ ἀθάνατοι καλέονται
97 ἢ τις πυρφαύων αὐτ’ ἀλσεα καλὰ νέμονται.
97 om. E. Homoeoteleuton.
136 οὐ σφυν ἄεικλην νῦσς ἔσσομαι ἄλλ’ εἰκεία
THE TEXT OF THE HOMERIC HYMNS: II.

Ἀρν. 136 οἱ τοι ὁμήλια γυνὴ ἐσσομαι ἥ καὶ οὐκι.
οὐ σὺμν ὁμήλια γυνὴ ἐσσομαι ἥ καὶ οὐκι μην, from the influence of ὁμήλια—ἐσσομαι in both lines.

Out of twenty-seven cases therefore in which omissions are testified to by our MSS, (and no others can enter into the question), twenty-one are the result of similarities of words at the beginning or at the end of a line, acting on the eye of the scribe. The remainder are probably due to mechanical circumstances of a similar sort, but which escape our observation. The conclusion therefore with regard to the value of a particular omission is overwhelmingly in favour of its being accidental. Moreover (and this is a consequence which finds its application in part III.), it follows that if we seek to improve the text by insertions of our own, these must, by their wording, explain their omission.

90. φιλαομοσύνης Μ (-μος ἦ), φιλαομοσύνης cet. Μ is right (cf. Hom., 172. τιμής without variant). Similar errors arising out of the 'Ionic dative' are B 227 (καλοπάς) καλοπάς(γ) Laur. Ο R, Ven. Α Cant. Val. Μ 456 (κορυφής) κορυφής(γ) L 457 Ven. 456, and no doubt the variant έκ κορυφής Ven. Σ 456, Val. 456 Μ 456 Α Cant. 'is due to the same cause,' E 75 (κορινής) κορινής(γ) codd. 'plerique, I 627 (άπρειδης) άπρειδη(ς) Ή Η Λaur. Α (cf. cl. H 373 άπρειδης without variant). The simple confusion άλλος άλλος occurs frequent. In the opposite sense of Z 456 (άλλος γενέ) άλλος, -ας, -αις codd. άλλος Val. 456 Κ 542 (δεξίον) 'S Cant. Cant. Β Α. Mose. 457 Β 457 Β R, Β Ven. 457 etc.

110. ἄπο μεγάρω ἦ, άπεκ cet. The fact that άπεκ does not occur in Homer is nothing against it here, seeing that άπο 428 we have άπεκ νεφέων without variant, but a comparison of similar variants makes it probable that άπεκ here is a scribe's contrivance to make metre and άπο original. Cf. H 131, άπο μελέων, άπεκ L 456, Ven. 456, άπο μελέων Ven. 456, άπεκ. ψ 43 άπο μεγάρω, άπεκ 'έκ 'J,' ψ 434 άπο μεγάρω without variant. Ι 248 άπο τρόπων, άπο 'έκ 'Vat. 456, 225, 225 etc. Β Α. Mose. 456 Β 456 Α Cant. 456 Α Cant. 456, 456, 456 Α Cant.

114. τομαθ' ων, τομαθ' ων, τομαθ' Σ, τομαθ' DΤΚ. An error of spelling partly occasioned by the influence of ιδημος; ω alone preserves the correct form. The identical errors occur E 778 and in addition the forms τομαθ' L 456, τομαθ' Ven. 456, τομαθ' M 456.

116. μενήνθεν ων, μενήνθεν cet. Itacism, and μεν 142 μεθάκης, 143 τοι (prob.), 146 σοι, 162 κρεμβαλαστην, 218 περρέβον, νολκον, 223 αλας, 224 μυθαλασθον, 117 φοινικεί υοι φοινικέ, 120 ὑε for ηε must be called accidental.

125. ἐπορέσσατο ἦ, ἐπορέσσατο cet. 'Επορεσσατο is possibly a conjecture, intended in the sense of ἐπορέσσατο (as Igen thought), or we may simply have come out of η by ordinary permutation (cf. p. 266). 'Επορεσσατο is used unhomERICALLY, but Gemoll's discussion upon its meaning is somewhat beside the mark; to the writer of this hymn no doubt it was simply an old word for 'to serve, pour.'
125. κρατέρου μ, καρτέρων cet., sim. 358. A constant change, due to absence of feeling for quantitative metre, present in the Iliad MSS. 127. ἀβροτον μ, ἀβροτον cet. (cf. 411 τερψιμβροτον μ, τερψιμβροτον cet.). Herm. 71 ἀβροτον, 339 ορσιμβροτον without variation supports the μβρα here, but the forms, especially in ἀβριμος, etc., vary indefinitely in the MSS. Cf. La Roche, Hom. Untersuch. i. p. 6, 7. 129. απείρατα μ, πείρατα cet. Σπείρατα is perhaps a phonetic variation, as σβήσαν for βήσαν B 532. 'O Eton. L 190 Ven., Πατ., Πτ. 38 Με, helped by the reminiscence of σπείραν. 145. ψηφιδων τ ὅρεων ποταμοι ἄλαδε μ, ψηφιδων ὅρεων ποταμοι θ' cet. An accidental transposition; at 24 there is no variant. 146. επιτέρπεται μ, επιτέρπεται cet. The present is right, Thucydides' επιτρήπητη being governed by ἀλλ' ὅτε in his version. ο's variant is no doubt accidental, cf. 428 πέφανται for τέφαντο, A 424 τέφαντο codd., τέφανται Aristarchh., B 448 τέφανται, τέφαντο Ζοναď, MSS., about equally divided, Δ 184 δειδάσαν, δειδάσαν Με, 264 εδέχεται, εδέχος MSS., divided, ad. 151. θὰνων ὁμ, θὰνατον cet. Quite accidental, for the nom. can hardly be given sense. Cf. E 901 καταθυμηθος, κατα θυμος, 'Vrat. a.' Ρε, Ω 499 αιτος, αιτος 'L Lips. 'Vat., p. 27. 157. δηλαιδες μ, δηλαιδες δ' ιδ'. μ is obviously right, δ' is added to make metre. I have no instances of δ' itself used for this purpose, but the following are examples of the insertion of other quantity-making letters or words. Θ 21 'ν ερωσαν, 'ν μ 'ν ερωσαν 'S. Mosc. 3' and many MSS. Α 457 εξω τε χροσ, τε εκ χροσ 'B.C.' L 12 (cf. ἀπο ἀπεκ, v. 110, p. 274); Α 459 δε μεγαθυμα, δ' αι 'L Hart, 'Vrat. b. Mosc. 3.' L 32, 410. Ven. 3. 'Α.' Vat. 16 15 25 25. M. 1 12; Ap. 491 επικαιωτες γ' επι μ ΓΟ, επικαιωτες επι cet., Π 430 πρερ γ' ευχε, γ' ομ. 'CD' Vat. 10 22. ιδ'. 442 δδε γ' ερως Ven. A. and L 3, γ' ομ. cet., E 821 τυμ γ' ουτίμεν, γ' ομ. 'L.' L 3, 410. M. 1, 12. 'Ε 181 ιντε δεν, ιντε γ' 'S Cant.' L 10. R. M 11 δεντερ M 19, h. Herm. 371 νεον επιτελελουειν, νεον γ' 'P (αυτ. AQ). 162. κρεμβαλαστην M, κρεμβαλαστην του ιδ'. Itasciim; μ no doubt had κρεμβαλαστην. Cf. the similar variations τουλων, τουλην, πολλων, πολλην Θ 50, K 27. 171. ἐποκρινεθθ' μ, ἐποκρινηθθ' cet. A very common exchange. It may suffice to quote from the Hymns alone 'Αp. 321, 430, 543, Herm. 343, 408, 'Εκα. viii. 12. Here the norist seems fixed by μνησαθθ 167 where there is no variant. 181. γαρ μ, δ' αδ cet. Δ' αδ is here the better reading. Such particles are constantly interchanged; I give for instances H 328 πολλων γαρ τεθηκα, μεν many codd., δε Ven., N. ven., Vat., δε N. Ρε, Θ 238 δε ποτε φημι, γαρ 'H.' Ven. 13. οθ. Δηλοιο περικλυστων μ, περικλυστης ιδ'. Ον περικλυστων see Lobeck, Paralip. p. 474; the word varies in one play of Aeschylus, Pers. 599 περικλυστη ναιιν, 882 ναιιν — περικλυστη, so that περικλυστη here need
not be called a "conjecture." A real conjecture is to hand in the second reading of Γ, περικλώστρια, which would involve the omission of μέγ. Cf. p. 261.

192. ἀφράδες m., ἀμφαδές cct. One of the most signal instances of the excellence of M. The corruption ἀμφαδές arose from ρ dropping out of ἀφράδες, leaving αφαδες, to strengthen which μ was added more or less on the analogy of δεμιος, διμιος. Γ's corrector saw the truth.

198. εἴδος ἀγανή m., ἀγητή cct. No defence of ἀγανή can be offered; it is a conjecture, possibly motivated by some corruption in ἀγητή.

200. ἐν δ' m., ἐνβ' cct. 'Εν δ' is naturally right; τῆσιν needs a proposition. Α' and θ' are exchanged almost posseis as particles, it is rarer to find them confused as parts of words; cf. however ἕξ 78 ἐν δ', ἐπαθ' 'FO,' Α 93 oδθ', oδθ', MSS. divided.

204. μέγα m., μέγα cct. Μέγα is very likely an accident, due to the abbreviation μέγα. Μέγας and μέγα (adverb) are exchanged in the Ηiad, B 111, I 18, but not before a vowel.

209. ὀπτότοις ἐλεμονοὶ m., ὀπτόςοι' ἀνοφόμενοι cct. (ἀπτότος' S). ἀνοφόμενοι appears really to conceal Martin's brilliant conjecture μνοφόμενοι; the consonants μ occurring together seem to have had a tendency to part, ε. g. Α 113 κλαταιμήστρης, κλαταιμήστρης Βεν. Α, Α 439 κλαταιμήστρα schol. Soph. O.C. 71 (cod. Larr. 32, 9). Ω 347 αἰσχυνητήρι, αἰσχυνητήρι 'Pap. 2 man., νομιμάτι, νομιμᾶτι; in these instances ν has fallen out while μ remains, but Θ 304 αἰσθητήν καλδ., αἰσθητὴν Aristarch., αἰσθητήν (ut vid.) Aristophanes and Zenodotus. Μνοφόμενοι then became νοφόμενοι, and ὀπτόςοι ὀπτότοι somewhat as in M at Ap. 19; a was then added to give a sort of word. 'Τέμενος in M wears a strong look of a conjecture, while conversely from εμεμονος one could hardly suppose νομνονος conjectured.

I may notice further that the principal verb, εἴκες, is not necessarily sound, cf. ο 157 κυρίων 'GUZ,' κυρίω 'EPXHDDLY W East.'

220. τοῦ τ' ὁχυάδε m., τοῦ τ' ὁχυάδε cct. Τοῦ first disappeared, under the influence of hiatus, then το was lengthened to make metre.

223. απ' m., απ' cct. The context makes απ' right; the interchange of these prepositions need not be illustrated. Demetrius conjectured απ'.
Another correction to make metre, see ante, p. 263.

231. ἄναπτευς m, ἄναπτευς x, ἀναπτεύσω π. Right; contra, Herm, 413 m is wrong with ἐρμέω against ἐρμέω of cet.

232. om. MBO; lab. cet. Homoootelenoton, acting (naturally) independently on M and these two members of p. See ante, p. 272.

233. ἐκ ὧν διήφω τοῦ, ἐκ διήφω. Accidental reduplication.

234. κρατέως τοῦ κρατέως κατὰ. A mistake in spelling; or can the scribe of m have intended κρατέως to go with νοῦς of m (and x)? It is needless to say that κρατέως is established by O 433.

247. τελφοῦς', τελφοῦς' cet, and 256, 276. At 244 m has with the rest τελφοῦς; at 377, 378, 386, 387 all have the correct τελφ. At 244 Γ, at 276 L, have been corrected to τελφ. A striking case of the arbitrariness of both corruptions and corrections.

249. πολλοὶ m, ἐνθαδ' cet. Πολλοὶ has a fair claim to be called an independent reading; at least it is hard to see how ἐνθαδ' here if it were original should have lost its place. In 249 it is justified as an antecedent to δῶρο in 250, 251, which are not repeated in the corresponding passage below: there (260) it may either therefore not have stood at all, or may have been ejected by the influence of ἐνθαδ' in 258.

251. ἀμφιρύτως κατὰ νίσσον α', ἀμφιρύτας cet. See ante, p. 261. V, 291 in the same phrase ἀμφιρύτως αναίνει. The -νος of m is therefore original, and -αν of αρ probably a grammatical correction. In this hymn v, 27 we have Δῆλον ἐν ἀμφιρύτῃ without variant, and the fem. termination is the rule in the Odyssey (but a 50 νήσον ἐν ἀμφιρύτῃ 'Ma'), cf. also Apollonius i. 1305 Τήνον ἐν ἀμφιρύτῃ. Later the word has two terminations, e.g. Hes. Theog. 983. The usage then is about equally balanced, and the conclusion must be to follow the majority of MSS. in each particular case.

263. πηγάν m, πηγάνιν cet. A mere corruption, cf. p. 263.

269, 270, πηγασίον m, πηγασίοντος, πηγάσιοντος cet. Vv, 282, 396, 521, Herm, 555 πηγασίον without variation. The prose form is a variation in several places in τ, φ, and x, and therefore we need not call πηγασίον here a corruption, ἔτος τοῦ, κρίσιν cet, and so 282, 431, 438, 445. The single x is right, see Ebeling Lex. Hom. s. κρίσια. Whether m preserved the right spelling and αρ corrupted it, or m corrected a common error, is an open question.

272. ἄλλα τοι δὲ m, ἄλλα καὶ δὲ αρ. Τοι might possibly be supposed repeated from τοι 270, but the sense of the passage seems to give it the preference over καί. ἄλλα καί would represent the absence of chariots and horses as a disadvantage in spite of which the oracle might still prosper. Telphusa's argument is 'there will be no chariots indeed, but so, you see' (τοι), i.e. therefore, the place will do for an oracle. Τοι is persuasive and argumentative. Baumsteiner felt the objection to δὲ, though his conjecture is nonsense: τοι is not, as Gemell says, Ruhnken's conjecture. For the permutation cf. r 224 αὐτάρ τοι 'GPHJULW,' ἄλλα καί δὲ 'XD ἐρ. U1',
THE TEXT OF THE HOMERIC HYMNS: II.

284. πατρός m; πατρής κυρ. Πατρός appears to mean always a small stone; perhaps here it is a correction motived by hiatus, cf. 341. The same variant is noted by Eustathins on Π 411 but without MS. support hitherto.

292. ἀρ m, ἄρ κυρ. "Ar" evidently gives much the livelier sense, and ἄρ might have crept in grammatically, apart from its graphical closeness; cf. Herm. 246 ἀνά, ἄρα, E 686 ἄρ', ἄρ, L 104 άρ, Vep. άρ, έ 130 ἄρα Aristarchus. Ό, ἄρα some critics and ' P' ἄρα Rhinanus and Callistatus, 257 ἄρα 'Ο, ἄρα 'Ρ, ἀνά 'Ο, 'Ρα 'FMZ', Ap. Rhod. iii. 198 ἄνα 'Laur. Guelf. Laur. 16' ἄρα codd. ditt. In the parallel passage v. 252 the MS. reading is ταῦτα δὲ τ' ἐγώ, and Igen's κ for τ' is by no means necessary.

293. θεμετέοιμα m, θεμετέοιμα κυρ. The parallel v. 253, where the variant only extends to ΜΠ of the Parisienses, makes the present certain. The insertion of ο between vowels in verb-forms is a common error in MSS, So έκελεν -ευς B 28, 50, 65, Γ 119, L 660, Α 641, etc., Βουλευτός' -ύσως, B 347, τίσως τίσως τις 258, etc. Cf. also v. 403, Herm. 560, Aphr. 125.

295. καλά, δινείκες m; μακρά, διμετέρης κυρ. V. 255 all MSS, have μακρά, διμετέρης, from which it may be supposed that here where the line is repeated m failed in memory over one word, and κυρ over the other. καλά might be a reduplication of μικελί for the exchange cf. μ 436 where Αρπ. Lec. reads καλοί for μακροί. Δινείκες as an adv. does not appear elsewhere.

308. ἤμεκ' ἄρα Μ (ήμεκ' m)?, εῦτρ' ἄρα δὴ κυρ. The dots affixed in Μ call attention to the error of spelling in ἤμεκ', which is not for οὐκει' or οὖκει', as Ruhnken and Hollander suggest, but a mere blunder for η μεκ' which occurs without variant χ 198, Theognis 1275. It is an independent reading, and, of the two, preferable to εὐτρ' ἄρα δὴ of κυρ.

318. ἐμβαλεν m, ἐμβαλεν κυρ. The 3 pers. of κυρ is evidently due to a misunderstanding of the person referred to in ἐλούσα. The right correction occurred to Demetrius Chalcodyles and the reviser of Γ. The connexion of 317, 318 is still unsettled, and the alterations of τέκνω, from Ruhnken's to Gemoll's, are futile. Chalcodyles άεια hits the mark; the words άρ τέκνω αυτή are emphatic and cannot be dispensed with. Hephaestus is 'her son whom she bore herself' in contrast to the unnatural methods of Zeus, who must needs assume the part of mother: 324 οὐκ άρ έγώ τέκνοιμ; On the other hand a construction is required between 317 and 318; to read δὲ for άνά, with Abel and the second hand of Γ, is equivalent to giving up the situation. A lacuna, containing such a line as αἰσχος έμοι καί άνεκος έν οὐρανῷ άν τε καί αυτή or the like must be supposed. The similar ending caused the omission; if the assurance offsets, cf. 230, 231, and 537, 538,126

321. χαρίζωσθαί Μ, χαρίζωσθαι κυρ. The aorist, as Hollander p. 22 says, is more suitable to the context which deals with a past event; see the

126 This passage is discussed by Poppmaillor.
passages collected in Ebeling, Lec. Hom. We should therefore read χαρισασθαι, though I have not found another example of the doubling of σ in this word. Gemell’s ‘vielleicht richtige Konjektur’ begs the question; why, if M’s reading is right, should it be a conjecture? The single σ of χαρισασθαι is so far in favour of its genuineness, cf. 430, Herm. 343, 408.

322. σχέτλια μ, σχέτλει άπ. An accident, assimilation to σχετικά.

ο. μπήκεα, μήπεα, ετ, μήπεα ἢ. See p. 264. Μπήκεα is ample guaranteed in Homer, cf. merely 325, Dem. 345, P 416. The passage Λ 474 σχέτλει τιτ’ έτι μείζον έτι φρειρ μήπεα έγρον (where έτι goes closely with μείζον) is not enough to turn the balance in favour of D; rather it supplied the correction έτι, after the original μηπεα had, as explained above, contracted into ΜΗ(ΤΙ)ΙΣΕΔΙ.

326. και νῦν μέντοι μ, και νῦν μὲν τοι γάρ ε, και νῦν τοι γάρ μ, m’s combination is perhaps the best. It may be doubted whether the other reading was και νῦν τοι γάρ or και νῦν μὲν γάρ; x at any rate presents a confusion of both.

339. έστιν, δοσον μ, η πόσον ε, η παρόσον ἢ. I have suggested above, p. 264, that the π in the reading of ζορ was due to the scribe’s desire to avoid the hiatus NOCON; Demetrius Chalcondyles less sensitive restored η πόσον. The point in M’s reading may be an indication of the same feeling, and έστιν a correction for the same purpose. The η of ζορ would suit with an original ζην (Hermann’s conjecture), the first syllable of which was treated as a dittograph of the second and consequently omitted; cf. Λ 306 where for ζην Vat. x read η. M’s έστιν on the other hand suggests έστιν έστιν (which I would put in the text), and έστιν δοσον, η παρόσον may have been a pair of independent readings. Parts of the verb ‘to be’ are often interchanged, ε. K 41 έστι, έστι, έστι, 239 έστιν, έστι, Λ 306 έστι, έστι, έστι, and even έστιον: Αρ. 82 έστιν, έστι. Anth. Pal. vi. 243, 4 έστιν, δοσιν: P. ισομεν: ισοι: Πλ. is a curious resemblance.

341. η δι ιδοῦσα μ, η δι έστιν ιδοῦσα ζορ. The reading of ζορ is palpably a metrical expedient; in v. 255 it has invaded m also. This desire, semi-conscious, of scribes and readers, both medieval and ancient, to avoid what they considered hiatus, leads to different combinations: cf.

ρ 9, με ιδοται, μ ιδοτας ‘FGXDUZ’; so perhaps τη ιδογ is rightly restored Hes. ὑπ. 610 for ιδίον of codd.

Z 365. δε οὐκελεύομαι, δε οὐκελεύομαι, MSS. equally divided; ρ 52 δε οὐκελεύομαι Aristarchus and most MSS, δε οὐκελεύομαι Aristophanes, δε οὐκελεύομαι Ε.

for ἀσπίδας ἐν. Sim. P 45. The commonest reading is a mixture, ἀσπίδιν ἐν.

Δ 542. ἐλώω' ἀτάρ, ἐλώος' ἀυτάρ vulg. for the proper ἐλώος ἀυτάρ which seems found unambiguously only in L 142 Vat. 129 Btv.

Cf. also Θ 376 δῷρ'] ἄν ἱδωμαι for δόρα ἱδωμα, H 198 οὐδὲ τ' ἁδρευσ施行 for οὐδὲ τ' ἁδρευσ施行. H 452 ὰ' ἔγω, τάν' ἔγω for τά τ' ἔγω. I 504 κλαίει δέ μν γι' κλαιεί δὲ μν. L 417 ἁμφι δέ τ' ἁίσοσται, ἁμφι δ' ἀρ' ἁίσοσται and even ἁμφι δέ καὶ' ἁίσοσται, δέ τ' ἁίσοσται, E 4 δαίε δέ οί, δαίε δ' οί for δαίε οί.

342. ὅστο M, δίετο χρ. Ignorant misspelling.

349. μῆνες m, νῆκτες χρ. Mēnes, the reading without variant of the parallel places, λ 294, χ 293, is undoubtedly the real tradition; νῆκτες is inappropriate in the context and owes its position to the automatic suggestion of ἡμέρας. Gemoll's 'Besserung,' applied to μῆνες, begs the question; if m is right and χρ are wrong, why must m be a 'Besserung' of χρ? 350. ἐπιτελεπλεύνου m, περιτελεπλεύνου set. Περιτελεπλεύνου is read in the two Odyssey places just quoted, but in both cases with the variant ἐπιτελεπλεύνου which follows (so χ 204, ἐπιτελεπλεύνου itself is suprascr. παρ' in 'X'). It is improper therefore to talk of m's 'conjectandi libido' with Baumeister. The ἐπιτελεπλεύνου probably came from ἐπιτελεπλεύνου which follows (so χ 204, ἐπιτελεπλεύνου itself is suprascr. παρ' in 'X'). Helped by a reminiscence of the word ἐπιτελεπλεύνου itself.

352. τυφών m, τυφάων set. Natural variation of spelling, like ἄγηρον, ἄγηρον τ', ἄγηραν B 447, ἄγησαν εἰςαυ I 645 etc.

60. πῆμα θεοίς m, πῆμα βροτοίς set. Ruhnken accepted θεοίς, and after him Ilgen. Βροτοίς, however, seems fixed by 306 and μ 125; the homoeoteleuton of 351, 352 may have produced the opposite of its usual effect, and have made the scribe of m imagine that the second βροτοίς had driven out the original word. We have the same change B 216, Βροτῶν 'Ομήρων: PY; contrariwise Hos. Theog. 329 τῆμεν 'ἀνδράσων.

356. τῷγ m, τῷγ' set. I do not know if τῷγ is a real correction, based on a misunderstanding (i.e. = τῷγ'), or a graphical confusion, to be added to the instances p. 266.

367, τυφωνεύς m, τυφωεύς set. Ruhnken is inclined to defend τυφωνεύς, comparing the article in Hesychius, τυφωεύς' ἐν τῶν μεγάλων. The form in Hesych is generally emended into τυφωεύς, but even so it is evidently the same corruption as in our passage; it is a half-conscious rewriting, due to a mental mixture of τυφών and τυφωεύς. In MSS. at large also there is a tendency to insert a between adjacent vowels.

374. πέλαγ m, πέλαρ set. A corruption that I cannot explain. There is no similarity between the symbol for ας and ωρ; still we have the same change exactly i 428. 'Αν προ τέρας' says Ruhnken.

375. βούβας m, φούβας set. Phonetic.

379. ἐξαπαθούσα m, ἐπαπαθούσα set. Right accentuation preserved in m.

394. ἀγγέλλουσι m, ἀγγέλλουσι x, ἀγγέλλουσι p. m preserves the present; in ἐγένος however it wavers with the rest. I agree with Gemoll that the
THE TEXT OF THE HOMERIC HYMNS: II.

present is to be retained in both cases, and that οἵ ἰα—Παρνησσίον is parenthetical. 193 The arrangement is harsh, but excusable as an amplification of Κρήτης ὑπὸ Κρήτην Μινώου. The whole hymn gives the history of existing institutions, and this parenthesis calls attention to the point now to be explained: 'he saw a ship in which were men, Cretans, the Cretans who etc.' Müller, Dorian i. p. 233, says 'it is known from many traditions and historical traces that the connexion established by the Cretans continued for a long time.' Cf. 518 οἷοι τοις Κρήτην παίηνες, Ἡρα. 125, 6. Peppmüller l.c. p. 268 sq. defends the transpositions.

402. οὗτος μ., δότις εἰπ. ἐπεφράσατο μ., ἐπεφράσατο ἑ., ἐπεφράσατο ἔπ. Nothing seems certain here except that νοῆσαι is corrupt and that the commonly adopted θ' ἐνόησεν (after θ' 94) is an inert supplement. Query νωμάτα ἐ σ α ἰ τ on the meaning of the word see under Dem. 373, in part III.; cf. E 777 νομενθαι, νοέθαι, Theognis 705 νοίοι ΑΟ, νοήμα cet. Νομοθαι would have the advantage of preserving ἐπεφράσατο, which seems genuine, while ἐπεφράσατο and -αιτο are evidently metrical corrections. Translate 'not one had the wit to lay hands on him,' on the supposed dolphin. Οὗτος therefore seems the better reading, δότις may have been a conjecture to avoid the apparent asyndeton of 403. (Peppmüller l.c. accepts οὗς ἐνόησε.)

403. ἀναστίαςκε μ. (and T), ἀναστίασκε cet. The imperfect is more in accordance with τίναςκε. See v. 293 for the tendency of σ to insert itself.

ib. νομια δούρος μ., δοῦρα cet. An ignorant correction.

407. τὰ πρῶτιστα μ., πρῶτα cet. Τὰ πρῶτιστα' occurs v. 237, πρῶτιστα Ἡρα. 25, 111 and confirm the form. Πρῶτα is presumably a gloss. Similar variants are Δ 297 ἐπηγάς μὲν πρῶτα (πρῶτιστα 'Vrat. b.c.' R. Vat. 60 = A. Mc., πρῶτον Vren. Β. Vat. 9 = Μc.); Ξ 295 οἶον δ' οὐ πρῶτοι περ Aristarchus 'ACL.' Vren. 9, Vat. 9, Ps. Pe (πρῶτιστον alli and most MSS. πρῶτον om. per L, 9 = Vat. 13 Mc). These variations are unintentional, a specimen of a real conjecture is that of Demetrius, οἵ τὰ πρῶτα.

420. η' μ., ἤν αἰ, ἤν ρ. It is generally recognized that μ. has kept the right form. 'Her arises first from contraction (as η' Μ 371), then ρ. is added to avoid the hiatus. Similar variants occur σ 150; A. 609 Η. 307 η' preserves itself intact.

423. ἐκτίτον αἰτῶ μ., ἐκτιτ(ο)μενον αἰτῶ εἰπ. The same unmétrical corruption appears B 592, where ἐκτιταντον, εκτιτιμενον and the impossible εκτιμεν' are common variants; Quintus, xiii. 91 the MSS. have ἐκτιμων ἑλαλαπάξειν for the necessary ἐκτίτον.

431. ἐπὶ μ., ἐπὶ ἐπι. Ἐπὶ Κρίσις 'over against Crissa'; Crissa, being the principal place to which the gulf at that time led, is used as a general direction, equivalent to a point of the compass. 'When it had gone past all the Peloponnesus, and over against Crissa began to show the great gulf that

193 Another parenthesis which interrupts the logical order, but in past time, is Theor. xiii. 22-24.
severs off the fertile Peloponnesus, i.e. to the East. For the sense cf. Herod. vii. 115 κόπτων τῶν ἔτη Ποσειδίου, and other exx. in the Læxx. Ἐπιεὶ of χρ is intolerable after ὅτα: Schneidewin's very bad alteration τάχις ἐφαίνετο, though accepted by Gemoll, is sufficiently refuted by Ap. Rhod. iv. 1231 Πέλοπος δὲ νέον κατεφαίνετο γαίᾳ, Theoc. vii. 10 κόπτω τῶν μεσάτων ὀδών ἄνως, οὐδὲ τὸ σάμα. ἵνα οὐκ ἔστω κατεφαίνετο. 130
447. μεγαγάρ δέος ἐμβαλ' ἐκάστῳ ὑπ., εἶλεν ἐκάστῳ ἔρ. It is hard to see in what way the reading of ὑπ. is inferior to that of ἔρ. The turn is Homeric, Λ ΙI μέγα σθένου ἐμβαλ' ἐκάστῳ. Ἐγροτὶ both readings may be independent. Somewhat similar changes of subject are δ 508 τὸ ἐξ ὀρχήματος ἔμπεσε πούντον, ἐμβάλας. G, ἔκτεσε, ἐκβάλε. GXD.'
459. ἐτὶ ὑπ., σωτι ἔρ. These prepositions are constantly interchanged; cf. H 83, K 336, 347, M 115, etc. There is a natural presumption that ἐτὶ is a gloss, and here the metre confirms it.
496. δελφίνοις ὑπ., δελφίνοις ἔρ. (δελφιός ΟΑΟΟQ). A word containing the elements δελφ- seems necessary after δελφιος 494, δελφιῳ 495, but δελφίνος is obviously out of the question. May the right form be found in δελφίνης; Ap. Rhod. ii. 700 the name of the python is given in the line δελφίνης τὸ όρασι πελώρων ἐξεύρηκεν, where the scholiast of L doubts as to the gender; τὸ ἅναμα τοῦ δράκοντος οἱ μὲν ἄρρητοι οἱ δὲ θηλυκοὶ κυνώ, ὁ καὶ βελτίων. However this be in the verse of Apollonius, the existence of the masc. form δελφίνης seems assured by the next sentence of the scholiast, who continues ἄλλος, ὅτε δελφίνης ἐκαλέατο τὸ διοικήσεων τῶ ἐνδελφίνων ἅρματιοι καὶ Ἀλλάμαχος κυνώ. If then the temple-keeper was called δελφίνης, the same word may have been an epithet of the altar; the spelling, on which in any case no weight can be laid (the MS. Guelph, in Apollonius has δελφίνης), may have varied according to the derivation imagined; here naturally one must read δελφίνης. The somewhat unusual masc. termination and the familiar title (Rhiimus, Auth. Pal. vi. 278, 3 Φώιβα τοῦ θ' θεοῦ δελφίνης) amply accounts for M's -ος, and δελφίνος easily passed into δελφίνος. Cf. the variants for ἑλατινάδος v. 210.
501. εἰν ὅτε ὑπ., εἰσάκε ἔρ. The use of εἰσάκε in Homer is mostly confined to places where it is followed by κε, e.g. β 99 εἰν ὅτε κεν. τ 144, ω 134; later, e.g. Athena xxviii, 14 Ap. Rhod. iv. 800, 1212, the word is found alone. In the Odyssey places there are several variants, β 99 εἰν ὅτε τε 'Η', ω 134 εἰσάκε 'Ζ', and to a similar corruption I suppose that εἰν ὅτε is due here.
502. ἐβαίνω ὑπ., ἐβαίνω ἔρ. The inferior family neglect the aspirate.
505. βάπτων ὑπ., βαίνων ἔρ. Baívow is fixed by A 437, and the I aor.
seems only transitive. ἐξαυτή may be a late gloss. The same variant however occurs O 384 Σ 68.

507. ἔρματα m. ἔρματα ερ. The spelling of m is wrong, as at A 486 in 'H 2 man,' Ven. 15. The y is more frequent in ἔπεμψας; Η 89 all codd. σ 295 'JH 2,' Apoll. 104.

510. ἑρμοῦτες m Τ, ἑρμοῦτες αρ. Only Baumeister has been found to suggest that m conjectured ἑρμοῦτες—a feat that moderns as well as Byzantines might have been proud of. ἑρμοῦτες is a curious example of double corruption, itacinus (ῥίσοντες, so ῥύσοντες Vat. 35 Σ 571), and correction into an actual word (ῥίσοντες). Σ 571, the other passage where ῥύσοντες appears in Homer, 'Harl. Vat.' L 120 Ven. 139 Vat. 35 Σ 32 30 turn it merely into ῥύσοντες. Cf. Αν. Εψ. 4 εἰσηγηθηκαν codd., εἰσεθηκέν ν. l. in schol.

537. αἰὲν m, ὅσα ερ. Aἰēn perhaps, as Hollander p. 19 says, comes from αἰεῖ in 536.

543. ἐρματα m, ἐματα ερ. Apparently a sheer, uncorrected error.

Herm. 11.16 μὴς m, μεῖς cec. T 117 the Chian read μὴς, but no MS. evidence is known for it. Is μὴς here merely itacistic? Hes. Ὄπ. 557 μεῖς without variant.

12. ἀγαμ' ἀρόσμα m, ἀγαγέν cec. In m first ν was omitted, then the θ, to avoid hiatus, suppressed.

15. πολιδοκοῦ πολιδοκοῦ cec. Itacinus, cf. 50 πῆχες, 151. ἠλυμένος, 250 πῆματος.

42. Marg. γρ. ὅς δοκεῖ μοι ἀγαμ' ἐξετά m; cf. 88 γρ. ν., γρ.; Ap. 391 ἵσωμ

λειτοῦ στίχους εἰς. Hermel. xiv. 5 πῆμακτε, these acknowledged corrections show the sort of intentional conjecture that the scribes of m effected. It is needless to say that none of them are the work of the actual writer of M; he copied them from his archetype with the rest of the book. I imagine them to be due to the tenth century propagator of m; at that period we find conjecture active on the margins of MSS. If ἀγαμ' on this line be thought too poor a suggestion to be true, then the original note can be put back into the uncial period, and time given for διόνω to corrupt into ἀγαμ' but it seems to me a true scribe's conjecture, aiming merely at the nearest intelligible word, like a printer's correction of an author's MSS. The identical correction, reversed, occurs in Laur. 32, 9 Agamemnon 1146; where for ἀγαμ' of the text the reviser writes in the margin γρ. ἄνω.

43. ὅ ὅτε m, αἳ ὅτε ν., ἄζ ὅτε p. This passage has been misinterpreted by every commentator, so far as I am aware, but Baumeister. Accepting his αἳ ἐς τε the translation goes: 'as when a swift thought passes through the heart of him whom thick cares disturb, and they, the sparks, dart from...'

16 I refer generally to Ludwich's edition (1891), in which are summed up his articles in the New Jahrbücher für Philologie 1886-1889.

24 Ludwich's αἷς is an attempt at the right sense.
his eyes, so at one time, word and deed, did brave Hermes devise. That is to say Hermes’ ἔργον followed upon his ἔποιη with the rapidity with which, when a man is puzzled, as soon as ever an idea comes to him, his eyes light up. All four members (ῥόμα — ἀμαρναί, ἔποιη — ἔργον) are necessary to the comparison; and therefore, if for no other reason, the theory of Hermann (praef. p. xlviii.) and others, that we have two alternatives run together in the text, falls to the ground; so does any interpretation based on ἦ ὅτε of m. Gemoll’s inability to understand what cares and glances have to do with each other is a wonderful admission, even for a commentator. The psychology is minutely accurate; as long as the man is tossed by constant anxieties (ὑποστροφῶσας μέμαμας) which seem to admit no solution, so long his eyes are dull; but no sooner does the happy thought cross his breast (ὅπως στέρνου περίσσος) than his eyes light up and glances dart from them (ὑπηθῆσωσι) like light from a pool. He is in fact ‘stung with the splendour of a sudden thought,’ his case is

as when a great thought strikes along the brain
and flushes all the cheek. 13

The Homeric δέ τε to introduce an additional touch in the simile needs no illustration.

The palaeographical account on the other hand of the origin of the actual MS. readings is by no means satisfactory. From διάδετε one may perhaps get διότε of x and ἀς ὅτε, as suggested p. 264, may be a further correction, but ἦ ὅτε of m is very far away and may point to an independent though inferior reading ἦντε cl. v. 55. Somewhat similarly in Ap. Rhod. iv. 1453 Stephans emended ἦ ὅτε for ἦντε.

59. οὐνομακτήν ἐξανομίζων m, ὀνομάξας s, ὀνομακτήν ὀνομάξας p. m only preserves the original; in x the ἐξ has fallen out, as of ἐξηλαύνει in v. 402, though there in p only. x leaves the line imperfect, p makes the impossible emendation ὀνομακτήν; cf. p. 264. For ἐξανομίζων cf. οῦ 278.

63. ἄλτο m, ἀλτό s, ἄλτο p. Independent variants; T 62 ἄλτας ἰ ἐκ θρόνων ἄλτον, marg. Ven. A ἐν ἄλλοι ἐκ θρόνων ἄλτον οὕτω καὶ ἦ μασσαλεττεῖν; no MSS. seem to have the variant.

74. ἄγέλας m, ἄγελας s. A matter of spelling; cf. 154 ἔλαθε, 356 ὄψει. Ἄρης, ἀλετή, Ἱερμ. xii. ἤρω.

78. πρῶτον m πρῶτοθεν s. Perhaps a gloss; cf. Δ 129 πρῶθε, πρῶτον L 35 M 40 πρῶοθεν, πρῶτον L 25 ὤ 12 ὤ 15 Ven. 2, C, A, Mo, Vat. 29 29 29 M v.

82. ἕρθηλαν ἄγκαλαρῆν M, ἑρθηλέος ἄγκαλαρ νῆς s. The passage is somewhat uncertain, from the non-occurrence elsewhere of ἄγκαλαρ. The word presented by M. is particularly mysterious. Hermann (praef. p. lvi.) conjectured ὥρης for the last word, and with this assumption

13 Prof. Tyrrell has anticipated this Tennysonian reminiscence. Another is suggested by Ἀρης, 219 sqq.; who does not think of ‘And the returning on thy silver wheels’.
THE TEXT OF THE HOMERIC HYMNS: II.

νεοθηλεαναγκαλώρην can be derived without much difficulty from νεοθηλε-αγκαλώρησι, if one compares the similar processes νεογνωρίας 406 = νεογνήσιον, ὀλοσπόδος 238 = ὀλοσπόδος. The cadence resembles Hist. Theog. 576 νεοθηλεάς ἀνάθει τούς, Athen. 682 F στεφάνων εὐώδες ἄνθεα γαίης. Cf. also Minnemnus fr. 2, 1 πολυανθεός δή υπόρ. 87. δύσον αἰθουσαν ὁ, δύσον αἰθουσαν ἔρι. A striking instance of the deprivation of ἔρι. Δέμεν in Homer is not used except of actual building, τεχνιη, τέμπος, etc., but it is no great stretch to apply it to building up, terracing, tending, a vineyard, in the sense of the expressions ἔυκτιμήν ἐν ἀλκή, ἔυκτιμήν κατ' ἀλκή. What the old man was actually doing is defined by n. 90 ὁ γέρων τοῦτο φιλάττησε, and his own words v. 207 ἐκάπτων περὶ γονίου ἀλκής οἰνοπόδοο; in v. 188 he had moved on to another job. When therefore Hermes found him he was 'building up' his vineyard by digging about and tending the roots of his vines, i.e., digging out the furrows and loosening the earth about the roots, a usual springtime occupation in Mediterranean countries where corn and fodder are raised between the vines before the grape ripens (ἀυθίσια). Gemoll's note lacks actuality. Δύσον αἰθουσαν seems partly corruption, partly conjecture.

88. οὐχιστον λεχεπθον Μ. originally; οὐχιστον λεχεπθον ἔρι. The plural is inexplicable, unless it is another case of ω = η, cf. p. 266.

90. ἕπικάμπυλα έξιλα ὁ, ἕπικάμπυλος ὁμός ἔρι. It is hard to believe that so satisfactory and stable a reading as ἕπικάμπυλος ὁμός can ever have been corrupted into ἕπικάμπυλα έξιλα. έξιλα may well mean the lower woody stalk of the vines about which the gardener is actually digging; this dry wood (τὸ έξιλα τῆς ἀμπέλου, Eur. Cyl. 572 κάρκας καὶ ἀσπαλάθους έξιλα Theocr. xxiv. 89) is eminently 'twisted,' ἕπικαμπυλος, in contrast to the straight shoot which springs new each year. For the adjective cf. Hist. op. 427 ἕπικάμπυλα κάλα; and generally Apollonius i. 1117 στύποις ἄμπελου ἔντροφον έλη.

91. οἰνὸς τε, οἰνοίς τε, οἰνόσει τε, οἰνόσεις τε. οἰνόσεις of course is right. The words ὅτι ταῖς πάνται δήομεις illustrate ἀνθούσαν (the vine still in flower).

98. ἐγένετο τε, ἐγένετο ἔρι. A corruption, through ἐγένετο.

108. πυρὸς ὑπεμεῖότερο τῶν τε, τέχνην ἔρι. Τών is a considerable corruption from τέχνην, but ὕμως v. 110 is analogous; Ruhnken conjectured ἀντιψημ. The sense of the v. is difficult; ἐπιμεῖσθαι with an accusative elsewhere means 'to touch,' as 441 ὅλων ὑπεμεῖότερο νότα, and this does not suit τέχνην. Ilgen, and after him Hermann, wished to give ἔπεμεῖοτε the sense of 'desire' and make it govern πυρὸς directly, as indeed is more natural, cf. K 401 δύσον ἔπεμεῖοτε ὕμως. Still the writer may have used the word as equivalent to ἐκμάσσατο, 511.

109. ἐνίμμελε σιδῆρος τε, ἐπέλευφε σιδῆρος ἔρι. On primitive fire-making see the passages and authorities quoted in Baumeister's and Gemoll's notes.
There seems sound, of pruning and pointing the stick to make it a proper borer; so in exactly the same sense Α 236 περί γαρ μη ἐχαλκοῦ ἔλεφς | φυλλα τε καὶ φλοίων, of the sceptre, and Φ 433 ἀπολεγόμενων ὑπάτω χαλκῷ, with variants ἀποκόψεων, ἀποκοψεὶς. Ἐπιάλλης has hitherto been inexplicable; according to ιαλλε and πρόιαλλη it can only mean "thrust on," which, as Gemoll has seen, would make σιδήρῳ = στορεία, naturally an impossible combination. Dr. Postgate suggests that ἐπιάλλη may be a coartation of λείαιων "smoothed" (Quintus xii. 136 οί δ' ἔρπ' ἕπει δόξους | λείαιων). In any case the actual process of friction is omitted (as the act of lighting is v. 113), for σιδήρῳ can mean nothing but "knife." If Hermes had a γρίφανος with which he scooped out the tortoise and apparently killed two cows, there is nothing to prevent another tool appearing on the scene.

110. ἀπονυτο εἰς, ἀνά ε' ἀπονυτο αὖρ. m is right, seeing that δύρ(μ)νυτα has the v long in Homer. Similar variations depending on misapprehended metre are B 528 οί δ' ἀφόρτειτα, οί δ' ἐρ' ἀφόρτειτα "H," L 16 Vech. 12, Vat. 11 19 22 23 M 34, Pa, Po, Bo, E 365 τῇ δ' ἐρ' Ἀργος, τῇ δ' ἂργος, MSS. equally divided. H 186 ἄλα ὡτε δὴ τῶν ἔκακεν vulg., δὴ ρ' ἔκακεν Ven. A, Ven.

Vat. 16 δὴ ῥ' ἐκοντο Aristarch., no cod., L 528 ἐρ' ἔκακεν, ἔρματ ἐκακεν MSS. equally divided, M 218 ἐρ' ἔκακεν ἔλθε Aristarch., but no MSS., ἐρ' ἔκακεν ἔλθε MSS.

ἡθ. θυμός αὐτή ῆ έρμος αὐτή αὖρ. Ἀραπτέεεν seems always used of mental or bodily processes in Homer; still the phrase θυμός αὐτή ᾧς is so strongly supported (see the comm.) that θυμός must be supposed a correction of θεμός, ἔρ, having fallen out.

119. ἐκρίναις, ἐγκλίνον ἔρ. The place is admittedly difficult. Ἐγκλίνον can hardly be distinguished in meaning from ἐκαλλείον. Ἐκρίναια does not occur in Homer, but may mean "taking them apart," i.e. first one then the other. I am unable to judge between the readings. I may observe however that ἐκαλλείον, which neither Baum, nor Gemoll can understand, is necessary to the story, Hermes had thrown two cows down; they fell upon their backs (ἐπί νότα); he then, in order to get at their backbone (ἀὶδώνες), roled them over and pierced their spines with his γρίφανος.

One understands that when cattle are poleaxed at the present day the essential part of the process consists in the penetration of the brain by a spike, by which death is immediately produced. Hermes' action in 'boring' through the cows αἰδώνες is virtually the same. The throat-cutting was a second stage, passed over by the writer here; in v. 405 Apollo mentions the second act only, ἐσπερατομωσία. The two parts of the operation are clearly given in the account γ 442 sq., Ap. Rhod. i. 425 sq., and where Enneas kills a pig ξ 425. Quintus i. 264 gives only the former part; the second only is mentioned A 457 sq., B 420 sq., Ι 292, H 313. The instruments are given in a line of Anth. P. vi. 306, "σιν πελέεε καὶ τάν λαμπιτόμον σφαγίδα."
Gemoll's difficulties are therefore unnecessary. On ἀντιτορήσας, which I would read, see p. 265.

132. ἐπειθετεῖς m, οἱ ἐπειθετοῦ xφ. The dative ἰμείρων 133 makes it necessary, 'Επειθετέο (v. 395) no doubt was invented by one of the scribes of m after οἱ had fallen out, to make metre. Somewhat similar is Η 195 where for γε τύθωνται we find τυθωνται in F Vrat. c, Mosc. 3, N M O P Vat. U Vγ, while γε is omitted without substitute in M N P η. M 162 ὑπελήγετο, ἐπελήγετο 'L, Vat. a b c d L η. 229 ὑπεθοῖοτο, ὑπεθοῖοτο 'Ambros., O 162 ὑπέσσα ὑπεθεῖσαται, ὑπέσασι ὑπεθεῖσαται L 19 O v T h. 2 M n A Mo, ὑπεθεῖσαται V t e V γ. 228. ἐπειθεῖ m, ἐπειθεῖ xφ, ἐπειθεῖ τοι Λ ed. pr. Here on the contrary m has preserved the necessary δѣ, the place of which after it had fallen out in xφ was supplied by the conjecture τοι in Λ and ed. pr. Cf. η. 25 ἐπειθεῖ διὸς νιῶν, δѣ om. U, 205 αὐτὰρ ἐπειθῇ, δѣ om. DWY. So Hollander, p. 22. These two instances, following one open the other, may show the arbitrariness of correction.

141. πανούχιον m, πανούχιος xφ. Πανούχιον might stand as an adverb cf. ἀφωθοῦ Λ 436, p. 282. ὑ. κατέλαμπε m, κατέλαμπτε xφ. Ἐπεθαμψε occurs P 650, and the parts of ἀπολάμπτω frequently, καταλάμπτω though found in later Greek is not Homeric. Does this however affect its position here?

148. ἰθυσία m, ἰθυσία xφ. ἰθυσία is the right form and is generally accepted, cf. ἰπιθυβεῖ 475. For a similar confusion between like forms cf. Η 195 where for δῶν Aristarchus reads δῶνo and the form is preserved in the Vat. η. ὑ. ἄντυρω m, ἄντυρω xφ. The accusative seems a conjecture resting on a misapprehension. Ἀντυρω (of the construction of which Baum. doubts) is of course directly dependent on ἰθυσία; cf. O 693 ἰθυσία νέον, η. 119 βῆ δὲ ἰθὺς προδύωνο, γά 17 ἰθὺς κεῖ Νέατορος: 'straight for.'

150. φέρωντα m, λαβόντα xφ. Here, as in other passages where the sense is lost, the merits of the MSS. cannot be estimated from their readings. Primo facie φέρωντα and λαβόντα are on a level, and as they do not improve the sense there is no reason to call one a correction of the other. The sense appears to me to require a lacuna which might be filled thus:

159 ὅς σε λαβὼν μίψει κατὰ τάρταρον ἠρῴεται (cf. 256)
159α ὅ σε λαβόντα μεταξὺ κατ᾽ ἄγκεα φηλητεύσειν.

'either Apollo will bind you and throw you down to Tartarus, or if you escape (λαβόντα) you will be an outlaw in the maschia.' This utilizes the reading of xφ; the resemblance of σε λαβὼν to σε λαβόντα accounts for the omission of 159α and the contamination λαβόντα.

· 164. ὅς μᾶλθα πολλὰ μετὰ φρεσίν ἄμψε τὸ ὀδοῖ m, παιρα—ἀισόλα xφ
Aἰσυλα sees too cynical a term to suit Hermes' supposed character (μήτιον, ταρμαλέων κ.τ.λ.), and with this feeling Ruhnken conjectured αἰσιμα. The passage Τ 261 quoted by editors since Pierson is not in point; there Aeneas retorts to Achilles that he also understands ἤμεν κερπομία: ἥτο αἰσυλα μνεόσασθα, i.e. to utter scoff and evil speech. Could a precocious infant make the same reply to his mother? Hermes' answer is rather that he is not an ordinary child, senseless and without counsel, timorous and afraid; for (166) his action is deliberate and intended for their common benefit. This difficulty is by no means removed by the reading of M, πολλα—ἀρμεν. On the other hand I cannot imagine that this is a correction or corruption from that of ἔρι; the difficulties in παῦρα—ἀἰσυλα were not likely to occur to a Byzantine scribe or reader. *Ἀρμενα in Homer always and Hesiod mostly is used of concrete objects: Scnt. 34 however οδή μεν ἐνοπτύουν και ἀρμενα πάντα παρείχουν, 116 μαλα γάρ νο οἱ ἀρμεναι ἐππεν are metaphorical instances, and cf Thogmis 275, 695, Theocr. xxix. 9, Plato Anth. vii. 35, 1. On the whole, to make the best of what the MSS. give us, I suggest that the actual readings are the result of the dislocation of two original ones, πολλα—αἰσυλα, i.e. 'a very naughty boy (justly) afraid and dreading his mother's rebuke, and παῦρα—ἀρμενα 'a boy with few sensible, fitting ideas,' etc. For the dislocation cf. Ap. 295, p. 278.

169. αὐδήμοθ', ἀνεύχομεθ' ἔρι. A graphical mistake, cf. B 560 ἀοίνη, ἠσθην. E. Mag. Vat. (post n. a.), 656 ἀρχοινετα, ἀρχοινετα 'S, L, R, Α. 188. ποντα μητηρί μαία ἔρι. I confess myself unable to decide if (with all the editors) μητηρί is half gloss half reminiscence, or (with Hollander, p. 29) μαία is a gloss upon μητηρ. 200. κελευθα μα, κελευθαν ἔρι. For the plural cf. v. 348, Dem. 381, Ap. 452, 472, Pen. xix. 7; it is a variant Ψ 501 ('Vrat. a'), but unfortunately I have not marked this line for collation. Under these circumstances the plural has at least as much claim to consideration as the singular.

202. οὐκ μα, οὐκτο ἔρι. Hard as the omission of τιν with οὐκτο is, it seems impossible to resist the analogy of Ν 287 οὐδὲ κεν ἐνθα τεύν γε μένος καὶ χείρας ὄντος. Hes. Theog. 740 οὐδὲ ἔν τινα πελοντός ἐν ἐναυτον ἀδίκον, εἰ πρώτα πελοντός ἐντούθε, κεν ἔπαινος ἐντούθε γένοιτο: Op. 12 τιν μέν κεν ἐπαινόεσθαι νοοσάς is softened by the participle. Cf. Jelf-Kühner § 373, 6. It does not however follow that μα's οὐκτο is a correction; Ruhnken and Ilgen preferred it. In any case Ernest's οὐκτο (a parallel might indeed be found Π 681) is surely very bad, though Gemoll and Ludwig print it. Cf. A 216 om. τινα.

208. νοοσά μα, νοοσαν ἔρι. Νοοσάς is put out of court by the fact that δοκεω according to the Lexx. is followed by an infinitive in Homer; whether it is a conjecture or a corruption I leave unsettled. On the general construction I follow Franke quoted by Baumeister (whose parallels are not all relevant). V. 277 μητε τιν οἰκου δστα βοῶν κλότων ἔμετραν | αἰτίες ai δοξα μεν, and Dem. 57. φωνὴ σισικον ἐκαθαρίσει | δοξα στα εὖ, οὐδε οἰκου ὁθαλμησετοιν ὀστῖς ἔρι, ib. 119 establish the sense here as 'I thought I saw, but I know not for sure, I thought I saw a boy—whoever the boy was that went with the oxen.'
For examples in later Greek see Blaydes on Nub. 883 τὸν κρατόν’ ἔστι καὶ τὸν ἡττονα. In both the passages of this hymn the supplement is malicious; here the speaker contrives in the parenthesis to give the information which he denies he possesses.

230. κρονίωνα m, κρονίωνος xp. Accidental assimilation to παιδα, cf. p. 279.

238. ὀλοσπόδος m, ὅλης σποδός. Ὄλοσπόδος must be a corruption, perhaps through ὑλοσπόδος; cf. ἀγκαλορής, etc., p. 143. The verse is sound as it stands and requires no alteration. The charred logs (πρέμυσις ἄνθρακες) are kept alive by a covering of wood-ash (σποδός ὅλης), in the same way as the βαλός in ε 487 and Metaneira’s boy Dem. 239 and cf. Theoc. xi. 51, xxiv. 88; while v. 140 Hermes puts out his own fire with ordinary dust (μέλανα κύων).

241. προκαλούμενος m, προκαλεύμενος xp. A common variation in spelling; B 684 καλέσετο, καλάσετο Λ, M 13 'Eust. G'; on the other hand M 283 Aristarchus read λασούντα while all the MSS. have -έντα.

248. παττήρας δ’ ἀνά πάντα μυχίμ m, ἀρα xp. For confusions between ἀνά and ἀρα see p. 275, Ap. 292. Here the decision turns on the construction of παττήρας, for which see Ebeling Lex. Hom. 'Ἀνά occurs Ap. Rhod. iii. 1284 παττήρας δ’ ἀνά μενο ἢ δε' κόγα, M 333 with the addition of the clause εἰ τῶν' διότο; the direct acc. Δ 220; in other passages the verb is absolute or with other prepositions. The balance of sense seems in favour of ἀνά; at least it is gratuitous, with Baumeister, to call it a conjecture.

248. ἐμπλείους m, ἐκπλείους xp. ἐκπλείους is not Homeric, and κ is an easy corruption from β.

255. δάπτων ἐπέλ αὐτ. m. Accidental, cf. Ἀφρ. 156.

259. μὲτ’ m, ἐν xp. There is no ex. of ἔγειρεν in Homer with a preposition except v. 461, which obviously is not comparable. Μετ’ and ἐν therefore stand on about a level; elsewhere they are interchanged, cf. Ἀφρ. 247 where μετ’ is impossible. Λ 470 ἐν, μετά codd. equally divided, τρ. μετά Ven. Λ, both readings Eust.

265. κρατεῖν m, κραταιῶ xp. Gloss or emendation from κρατεῖν = κρατάνω. The reverse, κραταιῶ for κρατεῖν, stands in μ v. 386. Λ 119 for κραταιῶ, which the metre necessitates, we have κρατεῖν, καρτεῖν, κρατεῖν (L 1). Cf. also Ap. 126, 358.

287. μῆλον m, κεῖνυ xp. Μῆλον is either a gloss or the result of μηλοβοτόμας 286.

292. ἀρχός m, ἄρχος xp. The corruption in m is phonetic; p fall out, and a was strengthened in accordance with a common tendency; cf. Ap. 540 p. 266, τιφασκεῖν, B 867 νύστης, ναύστης Eust., Λ 578 παντείδων, φασιμιδών 'G Barocc. Townl', Ven v. Vat, 11 m. 2, M 15. Π 338 καλλόν, καλόν 'Λ(B)CDHl Cant.' and most MSS. Mr. Goodwin's correction πανιμένη for πανιμένη Dem. 398 rests on the same law.

294. κρατῶs m, κρατοῦs L, κρατῶs xp. The mistake in m seems accidental, especially as the accent is preserved. L's κρατοῦs looks like a correction of the same error conflated with the text.
303. αὐτοῖς ἐμ., τοῖτοις ὦρ. A correction in ὦμ. from ταῦτοις, which is actually the reading of E. The exchange of ὄν and ἄν hardly needs illustration, cf. however P. 253, Z 55, H 285.

306. ἐκλεμένος ὦμ., ἐλεημένος ὦρ. Cf. 151 σπάραξεν ὄμφ. ὄμως ἐλεημένος, Aen. 450 χαῖτροι ἐλεημένοι εὑρίσκαν ὄμως, and Hom. 245 δολήρων ἐλεημένον ἐτροπήσας; for other exx. in Homer see Gebhing's Index. The survival of the nominative both in ὦμ. and in ὦρ., when the acc. would have been so much easier a construction, is a considerable proof of its genuineness. Translate: he pushed his wrap down past his ears, with his shoulders covered in it, i.e. although his shoulders were covered in it; he uncovered his head but no more; ὄμφ. ὄμως κ.τ.λ. is parenthetical. As to the divergence between ὦμ. and ὦρ., I incline (with Windisch) to regard both forms as corruptions from an original ἐλεημένος: the ὦ fell out, and ἐλεημένος was corrected conjecturally by ὦ to ἐκλεμένος, by ὦρ. to ἐλεημένος. Commentators have universally taken παρὰ to mean 'up,' but Hermes was till this moment a bundle of σπάραξα (240); now, beginning to walk seriously (σπουδῇ ἵνα), he undoes his head to talk with more dignity to Apollo.

339. γαῖαν ὦμ., γαῖη ὦρ. Γαῖαι has been neglected by all editors, even Ruhnken, but I see no reason why it may not be the better reading. Of the parallels given by Ebeling, loc. Hom. p. 448b, the following are in point:

δ 417. πάντα δὲ γεινόμενος πειρᾶσται ὄσα ἐπὶ γαῖαι ἐρπέτα γίνονται καὶ δέωρ καὶ ψυκτικὰ πιστ. 

η 332. τῶν μὲν κεῖν ἐπὶ ξείδωρον ἄριστον ἀσβεστον κλέος ἱν. ἑγὼ δὲ το πατρίδι ἰκοίμην. 

ρ 386. οὕτω γὰρ κλητοὶ γε βροτῶν ἐπὶ ἀπειρόνα γαῖαι-πτεροχν ὦ σὺκ ἀν τις καλέοι. 

ψ 371. ἤδη μὲν φάος ἦν ἐπὶ χθόνα.

I have omitted cases in which there is a verb other than the verb 'to be.' In the remaining instances the 'pregnant accusative' is doubtless to be explained by some notion of motion or extension inherent in the subject; and it will hardly be disputed that ἀνδρῶν, ὑπόσιν λυσιμβροτοι εἴσ' ἐπὶ γαῖαι fulfils this condition as well as any of the exx. from the Odyssey. The corruption from γαῖαι to γαῖη is easy, the reverse seems impossible.

342. εὐθώνυλον ὦμ., εὐθυταρόν ὦρ. The reading of ὦμ. is of course right, and is supported by 342, 355; πόρον may be an emendation for πόλον, helped by the occurrence of the word in 398, at any rate it is unnecessary with Gemoll to call πόλον a 'Besserung.'

349. βάλιν ὦμ., βάλινοι ὦρ. I cannot explain βαλίνω, which is impossible in this construction.

352. πόλιν στίβου ὦμ., μέγαν ὦρ. I have no instances of an exchange between πόλις and μέγας. It is impossible to say ἡ πρίον Ἐτολίκη that one reading is more original than the other.

361. ἀλεξίζου ὦμ., ἀλεξιταρόν τ., ἀλεξίτωρ π. Apparently a real conjecture
in m, arising from a corruption of ἀλεγόνων similar to p's ἀλέγεων 557. Cf. ante, p. 266.

385. ὄγρευσον ἔτοι παράκλησιον ἐφι. These synonyms are perpetually exchanged, e.g. K 384 καταλέξω vulg., ὄγρευσον 'ηρ. L, Vat. 18. 20

388. ἐπιδειόσωμα ἔτοι ἐπιδειόσωμα παράκλησιον ἐφι (ἐπιδειόσωμα Π). The common original seems ἐπιδειόσωμα, out of which m has made ἐπιδειόσωμα, ἐπιδειόσωμα in order to lengthen the syllable. Both inventions are of course very iuviili. 'Quidam' in Stephanus suggest ἐπιμούσοραι, Barnes' ἐπιμούσοραι however at present holds the field. This has all the marks of a bad conjecture; the sense it gives is but mediocre (X 234 δειροθεος ἐπιμούσορα is not really parallel), and it is inconceivable that a familiar and, so to speak, stable form like ἐπιδειόσωμα should have crumbled into ἐπιδειόσωμα. To heal a corruption, one must first discover the circumstance that started it. Among the more common accidents that may set corruption in motion is the case where a word is omitted in its proper place, and added at the end of the line. I collect here some instances of this process and its results:

Here therefore I suppose that the original formula μέγας το γ' ἐπὶ δροκον ὄμοιας and that ὅρκον was omitted and added at the end, producing the line δ' ἐπὶ όμοιας ὅρκον, and that in course of centuries copying the unmetrical collection of syllables ἐπιμούσοραι was weakened down to ἐπιδειόσωμα or ἐπιδειόσωμα.

385. ὁφορόν ἔτοι τὸ χρήματα τιτάλλητο ἐτ' ἐπὶ τὸτο χρήματα. The most signal proof of the excellence of m; the rarity of the word, and the easy permutation of ρ and ν (see Part I. p. 174) amply explain the corruption in ἐπι and give the lie to Baumeister's designation of ὁφορός as 'conjectura.'

400. ὅχου δὲ τὸ χρήματα τιτάλλητο ἐτ' ἐπὶ τὸ χρήματα.
THE TEXT OF THE HOMERIC HYMNS: II.

ἀτιτάλλετο ἃπ. Does M’s δχιου imply a former δχιου, or is it entirely unintelligent, like δχιουπνοδι v. 238? Ἀτιτάλλετο, though an existing form, is metrically impossible, and Demetrius’ ἀτιτάλλετο seems certain; ἀτιτάλλετο arose from misdivision, χρηματατάλλετο χρημα | ταταλλετο, τιταλλετο, finally χρηματατιτάλλετο, which Valla made ἀτιτιτάλλετο and Lascazis ἀτιτάλλετο (cf. Λ 250 κοιμείν ἀτιτιτάλλεμαι τε, ἀτιτελέσαι, τε: 'on the ground' of the cave, where the cows were, in contradistinction to the roast meat which (135) μετήρα δ' ἀλφ' ἀνάλειμε. 401. ἐκ τοῦ, παρὰ ἃπ. ‘Ἐκ is perhaps a gloss on παρὰ, in which there is certainly more force; so Franke ἃπ. Baumeister.

403. ἀπαίνεθεν τοῦ, ἀπάτερθεν ἃπ. These two words are exchanged E 445, where ἀπαίνεθεν is read by 'S Cant., R,., Val., Μ 11, 12, and the mixture ἀπάτερθεν in L 11. ‘Ἀπαίνεθε is far the more frequent word in Homer, an ex. of it in a somewhat similar sense to this is Π 198 τὸν δ' ὅσ 0ν ἀπαίνεθεν ἰδειν.

404. γαίη κατ’ Μ, πέτρη ἐπ' ἃπ. I can offer no suggestion as to the origin of γαίη κατ'.

411. ἀμβολάδη πρ. emm punctis, ἐμβολάδη ἃπ. ἐμβολάδη is an ἀπαξ εἰρημένον, but the meaning which must be 'closely, clinging,' is amply guaranteed by the forms ἐμβάλλει, ἐμβλημα, ἐμβολαί, ἐμβολεύς, ἐμβόλος, 'graft.' ἐμβολάδη exists but in the senses of either (1) boiling, throwing up, or (2) precluding, as 426. The change of ο and ε before consonants is so frequent (ἀγέρερν, ἀγέρεν, ἀν', ἐν', ἀμβαίναντες, ἀμβαίναντες, ἀμπυντο, ἀνήκας, ἀνήκας, ἀγκλίνως, ἀγκλίνως) that we need not call ἀμβολάδη a 'conjecture.'

418. λόρνη τοῦ, χείρος ἃπ. The quantity of the ὅ naturally puts λόρνη out of the question. I explain it as a scribe’s conjecture to avoid the homoeoteleuton of 418, 419. Cf. Αρ. 352 πήμα θεοῦν, p. 250.

422. vers. lab. m, om. ἃπ. Ἐκχεισίος ille codex Moscov. hunc locum pulcrrimo versu auget, Rulken. The two theses account for its loss in ἃπ. Gemoll, whose suspicious are too easily roused, objects to this v. and to 457, 8, which also κατ' alone preserves; why not to the Hymn to Demeter itself?

429. ἀοίδον εἰς, ἀοίδον enim. ἀοίδον seems the result of assimilation to ὑπόν v. 430. Cf. Α 171 ἀφενος καὶ πλατυτον, 'Baroec. Mor. Mosc. I ex corr.' for ἀφενος καὶ πλατυτος.

431. ἐπαντες ἃπ. ἐκαστος ἃπ. Igen after Wolf accepted ἐπαντες, under the idea that ἐκαστος came from v. 428; it seems more probably a gloss. 'Ἐκαστος with a plural is well established in Homer; variants of ἐκαστος ἐκαστος occur in several passages, and τ 463 'Vind. 5' reads ἐπαντα for ἐκαστα.

440. γενεύς ἃπ. γενεύς ἃπ. is obviously right, but why call it with Gemoll a 'Besserung' ? 6 the MSS. read γενεύῃ, γενεύῃ, 'diōs Didymus,' and contra Z 142 γενεύῃ, γενεύῃ. 'Plut. Cons. ad Apoll. 6.' In the other places there seem to be no variants.
451. χορός M, χορεί ἕρ. Did the scribe of M mistake χορ for χορεί?

453. ἄλλα μέλησεν ἑ, ὁδε μέλήσεν ἕρ. The double ὁδε in ἕρ is singular. Possibly ὁδε and ἄλλα were originally inverted in the arch. of ἕρ and ὁδε written over ἄλλα as a correction; the next scribe then gave ὁδε in the first place, but without correcting ὁδε in the second. *Mosc. ex coniectura puto* says Baum, but who by the light of nature would have thought of ἄλλα?

456. οἶσθα ἑ, οἶδας ἕρ. οἶδας occurs v. 467 without variant, and a 337 where Zenodotus read ἐξείς; in other places in Homer the form is οἶσθα without variant (e.g. v. 382), except Α 85, where Zenodotus read οἶσθας. Here therefore we may call οἶσθα a grammatical gloss.

457. 458. hab. ἑ, om. ἕρ. 'Sind nur in M überliefert und jedenfalls Interpolation,' Gemoll. Possibly, but their omission in ἕρ is no evidence, for there was never a clearer case of homoeoteleuton. This even Baum, admits. Cf. ante, p. 272.

468. θαίσσειν ἑ, θάϊσσες ἕρ. θάϊσσες is not, as might be supposed, a mere error in spelling. The ancients considered the word θαίσσειν to have the meaning of θαίσσεια; schol. Aesch. Suppl. 603 gives καθήμενος as an equivalent of θαίσσει. Soph. Α.Π. 2 gives θάϊσσεται and θαίσσει προκειμένῳ as explanations of θαίσσεται: Hezych. κτ. θαίσσει among other interpretations has καθήμεν θαίσσεται. There is no variant to θαίσσεμεν 172, nor in the places where the word occurs in the Iliad and Odyssey; Apollonius ii. 1026 we have θαίσσαν in 'Guelf.' On the whole therefore we may call θαίσσεις a half-conscious variant.

471. δὲ ἑ, γε ἕρ. These particles are exchanged passim in the Homeric MSS.; the sense gives the preference to δὲ.

482. δότις ἄν καὶ αὐτήν ἑ, δότις ἄν αὐτήν ἕρ. The extra syllable in ἄν may be the result of contamination, e.g. of ὄσ τίς ἄν or ὄσ κε μεν, cl. 486.

486. φεύγουσα ἑ, φήγουσα ἕρ. Φήγουσα coincides with Martin's conjecture, and is generally accepted; it must be supposed that in the case of ἕρ the ν first fell out of φεύγουσα, then φήγουσα was written φήγουσα to make metre, and φήγουσα to look like a real word. Cf. μ 351 στρευόμεθα, στρέγγομαι 'NK,' Dionysius Chalcus (Bergk vol. ii. p. 262, fr. 2, 1), πεννόμενοι 'L,' πευσόμενοι 'BPV.'

487. ἐών ἑ, ἐπὶ ἕρ. ἐπὶ is made necessary by ἐν, but the words are hardly distinguishable graphically, so great is the resemblance of form, and often of meaning; e.g. Α 277 ἐωτί Aristarch vulg., ἐωτί Zenod. 'MS' L 16, Ven. μ. p. Vat. p. 16, 12, 11, 25, 426, ἐων codd., ἐων Aristarchus, Vat. 4, Α 230, ἄδων, ἐων Aristarchus δικός; ἐων vulg. ἐων L 9, 16, 19, Ven. 14, 19 Vat. 14, M 10, M 264, ἐωτάς vulg. ἐωτάς L 9, 17, Ρ 1, Α, Vat. 14, 26, M 11.

487. ἐρευνής ἑ, ἐρευνῶ ἕρ. The error of ἕρ is accidental, and was avoided v. 483.

490. om ἑ, hab. ἕρ. The omission, no doubt accidental, may be due either to homoeoteleuton, or to the recurrence of ὁδε in 500.
501. ὑπὸ νέβθεν ὑπὸ καλὸν ἔρ.  
502. ὑπὸ καλὸν ἔμ. ὑπὸ μέλος ἔρ.

The reading of ὑπὸ in both places is consistent and intelligible, that of ἔρ is in neither case possible, and admits of explanation on graphical grounds. So in 501 καλὸν is impossible with ἵπεριεν (or σεμερθαλέον) following in 502; it crept in from ὑπὸ καλὸν underneath. In 502 μέλος is impossible metrically; it may be accounted for either by supposing that μέλος in 501 (after itself supplanting μέρος, which v. 53 makes certain) was copied mechanically into 502, or, more elaborately, one may suppose that when ὑπὸ καλὸν had taken the place of ὑπὸ νέβθεν in 501, the scribe was offended by the second καλὸν, and substituted a new word for it. For this process cf. 352, 416. The reading of ὑπὸ therefore seems original in both places; translate, 'the lyre rang beneath (his touch) and the god sang sweetly to it' (ὑπὸ, cf. φ. 411). I have written ὑπενεβθε as more Homeric, cf. Αρ. 118.

502. σεμερθαλέον ὑπὸ ἱπερίεν ἔρ. It is hard to understand the objection to σεμερθαλέον; it occurs in the same sense 54, 420 without variant, and these passages are thought sufficient to replace χειρον 501, where no MS. reads it, while here where ὑπὸ reads σεμερθαλέον it is called a 'reminiscence.' Suspicion should more naturally fall upon ἱπερίεν, as a palpably easier word, helped also by the analogy of Σ 570. Ilgen's correction of δέσσεν to δέσσεν in obedience to the earlier passages is superfluous; the scribe had no inducement to make such an alteration, cf. φ. 411 for the form.

503. καὶ ρὰ ὑπὸ ἕνθα ἔρ. ἕνθα makes more of a paragraph, καὶ ῥὰ carries the action on with less break. Which sense is the more appropriate may be a matter of opinion. I see no reason why the two readings may not be independent.

5th. ὑπὸ ὑπὸ ἔρ. Since Clarke conjectured it, has prevailed; ὑπὸ was an obvious error.
6th. κατὰ κατὰ ὑπὸ. κατὰ may be a gloss; προὶ and προὶ are constantly glossed in the Iliad MSS., cf. ε. ο. Κ 336. Similarly Αρ. 459 ἐπὶ.

507. τὰ μὲν τὸ μὲν ἔρ. Either reading may stand; the plural of the article seems commoner in later Greek, the singular in Homer, e.g. ή 46. The conjectures δὲ δὲ μὲν, ὅ μὲν are singularly misplaced; the apodosis to μὲν is δὲ in 511, and the opposition is not between persons, which ὅ would imply, but between the different occupations of Hermes. τὰ μὲν in one respect, i.e. as regarded Apollo, αὐτὸς δὲ ἀφ' for himself on the other hand.

510. ὑπὸ ὑπὸ, but, singularly, Baum, and Gemell are asleep to the 'interpolation' in ἔρ.

515. ἄμα κλέφης ἄμα καθέθης ἔρ. 'Ἀκαλλέπτειν does not exist, and the sense of ἄμα is admitted to be good. The change of ἄμα and ἄνδε and generally of μ and ν is sufficiently motivated by graphical laws, cf. ἄνδε, p. 278. Baum's 'correctio' is therefore unnecessary.

516. ἐτ' ἀμοιβήματα Μ., ἐπαμοιβία ἔρ. Neither [ἐπ'] ἀμοιβίοτοσ nor [ἐτ'] ἀμοιβίοτοσ (for which ἐτ' ἀμοιβήματα must be meant) occur; Wolf and Ladhew are no doubt right in reading the latter form, the comparative
rarity of the termination (Kühner-Blass § 33-2, 5, 335, 15, Lobeck Ithol. p. 171, who gives a list of adjectives of both formations) accounting for the omission of ρη. Cf. Δ 381 παραίσια, παραίσιμα. Ν', Ζ 62 αἰσίμα, αίσια, Bekker Ap., S31, 16.

518. κ' μέγη Μ', μέγαν χρ'. The reading of Μ points to a variant κατά. Κατώντωμι is unhomerice; cf. Eur. Her. 383 δάλλον ἀγένος σὺν κατώντωμι.

524. ἀρβηβώ εἰ, ἄρβηβο χρ'. The same phonetic variant occurs H 302 ἄρβηβσαντε, ἄρβηβσαντε L 224, 226, 228, Rv. Ntv. Α, Πa, Vat. Β 224, 226, 228, Μ 224, 226, 228, 229, 247 Αρβηβών, άρβηβων 'DHULWZ.'

533. διαμπερές εἰ, διατερέφες χρ'. A second epithet of Hermes, after φέρων, seems unnecessary; on the other hand the inversion διαμπερές ὑπὲρείσεις is strange, and διαμπερές itself is not very significant, since in the text as we have it there is no mention of this request.

534. ἄλλων εἰ, ἄλλων χρ'. This might be thought a casual variant, but in the similar phrases μητέ χρ', ἄλλων ἀδικώτατον E 827 ἄλλων is read by several MSS, some of a distinct family, e.g. Cant. Vat. a, L 224, 226, 228 19 Ven. 39, Ρa, Ρb, Ρv, Βατ. Β 224, 226, 228, Μ 224, 226, 228, 229, 247, 249, 251 337. Ξυμποτος εἰ, Ξυμποτος χρ'. A phonetic variant, occurring ξυμποτος in the Iliad (Δ 209, 301, 341, Δ 343, E 214, Z 382, Θ 149 al.); cf. Dem. 72, Αρ., 166, 314, 542, 543, 544, 545.

542. περιτραπών, εἰ, περιτραπέων χρ'. Correction in εἰ, supervening on a corruption (περιτραπών, περιτραπών). For the contraction cf. p. 263. 543. οὐδ άπαντώς εἰ, στις αὖ ἄδη χρ'. εἰ obviously has taken the ending of 545, induced by the recurrence of έμης ὕμης ἀπονήσιας.

543. φωνή τ' ἢδε πότηρες Μ', φωνή καὶ περιφέρεις χρ'. The strength of the view which regards εἰ's reading as independent is the solidity of the reading of χρ'. The citations brought by the commentators to justify περιφέρεσι only make it the more inconceivable that so regular an expression should have been glossed by a rare word like ποτήρα. There is a complete absence of motus, failing which we are bound to admit the independence of ποτήρι, a word imitated, as by Aratus Phaen. 278, from ζ 337 αὐτή ῥ' ἐκείνη ποτήρα (Αυλ.-Ηρ). Ποτήρ (Hesych. ποτήρι ἰδέαν: οὐ δέ ποτήρι. Ε.M. ποτήρ' ἀ τήριας: Φίλος ὡς ὁχό χαῖ, οὗ δεύτηρον) is a concrete noun meaning 'course, flight,' and of several birds seen at once and taking different directions may well be used in the plural (Quintus xxi. 5 ποτήρια: οἰνονων). For the form cf. Herod. xv. 5 ποτήρια ὑπδ' Εὐρώπηνος, Ο 633 βοῦς ἄμβι φοῖνικα, E 887 χαλκείο τοπήρια, etc. Since Ruiken and Ilgen every editor has preferred the χρ' reading, but their rejection of ποτήρι rests on mistaken ideas of ancient and mediaeval text-alteration. A rare word is not used to gloss a familiar one, and Byzantine scribes had neither wish nor capacity to invent a 'gesuchte Wendung' of this sort. The two readings are independent.

550. νιός εἰ, νιέ ντη. Τίνες is perhaps an accident, the result of the neighbourhood of ἐρικυδίως; cf. 429.

552. σεμναῖ εἰ, σοιραῖ ντη. Of the two words σοιραῖ is the more
likely to have been a gloss. Hermann’s Ὑρίας, however brilliant, is not conclusive; Mr. A. B. Cook, J.H.S. xv. p. 7 prefers μαίρας, Ludwig σεμνάι. 556. διασκαλίαν ἐτι ὲ, διδάσκαλου ἵπτε ἄρ. See Part I. p. 143; διδασκαλίαν ἐτι is an example of real Byzantine correction. 560. θυσίασιν ὲ, θυσίασιν ἤ, θυσίασι π. The reading of ὲ is accepted by every one since Ruhnken; σ inserted between vowels, to form futures and aorists, is a very common error (see p. 278). The correct spelling ζ is shared by ὲ with ζ (cf. p. 266). 565. ἀνθρ' ἀδη ὲ, ἀνθρα δαῖης ἄρ. Cf. p. 145; this unconcealed corruption in ὲ may come from ἀνθραδαὶς, abbreviated or not, the super-scribed syllable being understood as a correction of ζ. So reverse aπόλλονος for ἀπόλλων p. 263, in p. 567. νομίζουν ὲ, ὀμίλετ ἄρ. Νομίζουν similarly seems to be a correction from an ancient corruption arising from a mis-division: ἀθανασία | νομιλεῖ.  Ἀπρ. 8. γλαυκόπτιν ὲ, γλαυκόπτι ἄρ. a 156, Hes. Theo. 13, 888, Ἀρ. 316 γλαυκόπτιν Ἀϑηνᾶ, Atl. xxviii. 2 γλαυκόπτιν before a consonant without variant; on the other hand Ἀρ. 323 γλαυκόπτι Ἐθήμη, Θ 373 γλαυκόπτια ἐπη also without variant. Here accordingly the authority is about equal. 10. ἀδεν ὲ, ἀδεν ἄρ. ‘Ἀδεν no doubt is from εὐαδεν v. 9. In the same word Ἀρ. 22 all the MSS. have the plural. 18. ποιλόχρυσα δὲ ὲ, καὶ γὰρ τῇ ὄδε ἄρ. ‘Mira lectio in M partim errore nata partim haridatione’ Baum. I cannot regard ποιλόχρυσα δὲ otherwise than as original; there would be a complete absence of inducement to misunderstand or to improve upon καὶ γὰρ τῇ ὄδε. The passage must have run at first 18 καὶ γὰρ τῇ ὄδε [παρθενὴ μὲν τῇ ἀγαμῆ τῇ] 17a ποιλόχρυσα δὲ τόξα καὶ υἱῶτα θῆρας ἐναιρεῖν 19 φόρμωτις τε χοροῖ τε κ.τ.λ. The letters ὄδε repeated in exactly the same position in consecutive lines produced the double omission; so in 10 and 11 ἔργων and ἔργω had a like effect in E. Artemis’ bow is called παγχρήσα Διὶ. xvii. 5. 25. στερῶσ ὲ, στερῶσ ἄρ. Correction in ὲ, to make metre of στερῶσ after the second ὲ had fallen out. 38. ἑδέλ ὲ, θέλοι ἄρ. Hes. in sm. ὡς πόλεις 20, ἕπων 66, νῦν 138, ἐμαίλο 148, νῦν 250. 66. τρόις ὲ, τρόιν ἄρ. For the gen. after ἐπὶ in the sense of motion, see Ebeling Lex. Hom. p. 451a. Here the meaning ‘towards Troy’ (the place of arrival being more closely indicated by ἑθην Ἑ. leave 68) seems not inappropriate. 67. νέφωσι βιμφά ὲ, νεφέσι τῆς ὄρος ἄρ. I do not see why ὲ’s reading is necessarily the less genuine. Gemell attributes βιμφά to the ‘Belesenheit’ of the author of the ‘recension’; sooner than make such a demand upon the
learning of any scribe or reader of \( m \) I would consider \( \theta \omega \sigma \alpha \) a gloss upon the rarer \( \rho \iota \mu \varphi \alpha \) (and thereby settle Baumeister’s doubts). For \( \rho \iota \mu \varphi \alpha \) in Homer see the Lexx.

114. τροφής \( m \), τροφί \( \varepsilon \). The rarity of the fem. τροφή as an adjective explains the corruption τροφής; several critics conjectured \( m \)’s reading, which no doubt is original.

118. χρυσοκρατίου \( m \), χρυσοκρατί \( \varepsilon \). At v. 16 this corruption was confined to \( \varepsilon \); here it has invaded \( \sigma \) also. See p. 266.

125. ψαλέα \( \iota \), ψαλέ \( \iota \varepsilon \). On the insertion and omission of \( \sigma \) cf. p. 278. Here the tense decides the interpretation. All commentators but Rahnuken and Matthiae prefer the present, which must mean ‘I thought my feet did not even touch the ground,’ of some one who moves so fast he thinks he swims in air. But are we to suppose Aphrodite representing this maiden as \( \kappa \omega \kappa \alpha \iota \kappa \tau \kappa \iota \alpha \) from Phrygia to Troy, ‘across fields of men, and much unparted and untilled land where hungry beasts roam’? Surely Hermes carried her; Baumm’s citation \( \Sigma 228 \) \( \omega \delta \iota \varepsilon \chi \rho \omega \alpha \mu \alpha \rho \pi \tau \varepsilon \rho \alpha \sigma \omega \iota \) of Hera is against him; Hera flew, as is explicitly said of Hermes (\( \varepsilon 49 \pi \tau \tau \varepsilon \tau \tau \), and therefore literally ‘did not touch the earth’; and similarly Persephone and Hermes \( \Delta \varepsilon \rho \varepsilon \) \( \beta \alpha \tau \sigma \nu \varepsilon \rho \varepsilon \mu \alpha \varepsilon \nu \xi \omega \varepsilon \tau \). We must therefore read the future and translate ‘I thought I should never touch the ground again,’ i.e. the journey was so long she thought it would never end. The antithesis with 126 is good: ‘I thought we were going on for ever, but he assured me I was being taken to you,’ i.e. that the journey had a definite end.

132. \( \mu \varepsilon \sigma \tau \varepsilon \) om. \( \varepsilon \). ‘Coniectura additum’ the relentless Baumm does not fail to say.

135. \( \delta \omega \omicron \varepsilon \tau e \). \( \sigma \alpha \iota \delta \tau e \). \( \kappa \alpha \iota \gamma \eta \iota \) \( \tau \varepsilon \). \( m \)’s reading may be recommended to the consideration of those who believe in the ‘Belesenheit des Urhebers der Recension.’ It is a corruption superficially corrected, possibly arising from \( \sigma \alpha \iota \delta \tau e \) \( \kappa \alpha \iota \gamma \eta \iota \) \( \tau \varepsilon \). \( \kappa \alpha \iota \gamma \eta \iota \) \( \tau \varepsilon \) being made into \( \delta \omega \omicron \varepsilon \tau \) to give the semblance of a word.

139. \( \kappa \varepsilon \tau e \) \( m \), \( \tau e \). These confusions are the result of the number of particles in the line. One (supplied by Matthiae as \( \tau \varepsilon \)) has disappeared entirely. In the second place \( m \)’s \( \tau e \) is obviously right, in the first \( \kappa \varepsilon \) is not impossible. See the Lexx. on \( \kappa \varepsilon \) with the future.

147. \( \alpha \delta \alpha \alpha \alpha \delta \). \( \kappa \alpha \iota \gamma \eta \iota \). \( \alpha \delta \alpha \alpha \delta \). \( \kappa \alpha \iota \gamma \eta \iota \). ‘\( \kappa \alpha \iota \gamma \eta \iota \) is an error of spelling in which \( \delta \) is accompanied by \( N \), cf. p. 284, but \( \alpha \delta \alpha \alpha \delta \). \( \kappa \alpha \iota \gamma \eta \iota \) is a possible reading, cf. \( \varepsilon 319 \) \( \epsilon \rho \tau \alpha \iota \alpha \) \( \kappa \alpha \iota \gamma \eta \iota \), \( \pi \varepsilon 86 \) \( \alpha \delta \alpha \alpha \alpha \delta \) \( \gamma \epsilon \kappa \tau \iota \), \( \varepsilon 42 \) \( \sigma \iota \varepsilon \tau e \). \( \kappa \alpha \iota \gamma \eta \iota \) and was printed by Hermann, followed by Abel.

157. \( \lambda \chi \iota \iota \omicron \). \( \lambda \chi \iota \iota \omicron \). The ending in \( m \) may be due to assonance with \( \epsilon \sigma \rho \tau \rho \rho \sigma \nu \rho \nu \sigma \nu \). Scribes are sometimes thought to have mistaken the abbreviation ‘(\( \varepsilon - \sigma \)) for \( \sigma \), see Vitelli \( M u c u l o \) \( i t a l i a n i \) l. pp. 13, 170.

174. \( \kappa \omega \rho \iota \omicron \) \( \nu \), \( \beta \rho \nu \epsilon \rho \). \( \kappa \omega \rho \iota \omicron \) is right, cf. \( \Delta \varepsilon \rho \varepsilon \) \( 189 \) and see ante, p. 267. Does not the correct \( \kappa \omega \rho \iota \omicron \) by the side of monsters such as \( \delta \omega \omicron \varepsilon \tau e \). \( \kappa \alpha \iota \gamma \eta \iota \) \( \kappa \alpha \iota \gamma \eta \iota \) suggest that all are equally accidental survivors?

175. Cf. ante, p. 267.
THE TEXT OF THE HOMERIC HYMNS: II.

189. βιοθάλμιμος  

204. ἐπιοικοσκεῖν—

Ruhnken wished to insert the "w" reading throughout, but besides the harshness of the change from optative to infinitive, a copula (e.g. χρισίμων τ'), as Baumeister observes, is necessary. On the other hand, once the "w" reading in existence, it is hard to see any reason for altering it, while three infinitives might conceivably have been corrected into optatives by a scribe who wished to assimilate them to μετηπ. The "w" reading now receives this amount of independent support that τετιμένων of one point, as I said above, p. 172, to τετιμένοι, i.e. an original acc. with a nom. as variant or correction. The passage Τ 234 does not support one reading more than the other.

229. ἐγγεγένως 

241. τοῖος "w" τοῖοντος "w". Τοῖος may have come from 230, but more probably is due to the falling away of ουτ, so Ἡ 242 τοῖοντος οὐτα we have τοῖον in Λ 47 οὐτα, Ἡ 242 οὐτα we have τοῖον in "w" Ἡ 242, Vat. 242 οὐτα and τοῖον τοῖον, evidently by a correction, in "w".

247. ἄνειδος ἐν "w" μετ' "w". "Ev is necessary here, as Demetrius saw. For the exchange of the prepositions cf. Ερμ. 259 p. 289.

255. ζώνη "w" ζώνης "w". There is no variant v. 282; the acc. is perhaps due to the influence of εδέμην.

280. μῦ "w" μῦν "w". Itacism in "w", but is Hermann's correction μῦ really necessary? In 267 we have an at least equal portent, e as a plural, and there fortunately it is beyond the reach of emendation. Νῦ 3rd pers. sing. is used as early as Theognis 364 and Theognis writes virtually the same conventional epic dialect as that of this hymn.

Ἀπολ. vi. 4. ἰμύκε "w", ἰμύκε "w". Itacism, and so 12 κοσμηθηκαί, Dion. vii. 13 ἄριστοι, Ἀθ. xi. 3 αὐτοῖ.

15. ἱδόθαι "w", ἱδότες "w". ἱδόθαι is certainly unintentional; perhaps ἱδόθαι 17 produced it.

Dion. vii. 29 ὰι καστέρως "w", ἵ ἐκαστέρω "w". The mysterious ὰι seems to represent an original ἵ in "w"; for such a variant cf. Κ 506 where for ἵ ἐν in the third member 'C' has ἵ (repeated from 504), for the omission of ἵ cf. Ψ 332 where the Aristarchean reading according to school. V was ἵ, according to Eust. (Neumann, p. 328) ἵ τόγε. For the sense, apart from the difficulty of taking ἐκαστέρω as exegetic of ἤπερδορέας (which ἵ would necessitate), there seems no instance of a repetition of ἵ in alternatives; see Ebeling, Lex. Ερμ., p. 248a. The ordinary reading here corresponds exactly to Β 326 ἰ—ἵ ἱγε—ἵ, Ἀρ. Ρρ. i. 308 ἰ—ἵ ἵγε—ἵ, Ἰ ῤι, 1241 ἰ—ἵ
THE TEXT OF THE HOMERIC HYMNS: II.

5. εἰρείη, ἗δρ. Ἡ ρήμα therefore in ὡς was a mechanical repetition of ὡς in 28; the fact that it remains in the unintelligible form ὡς uncorrected, in Μ, is a proof how little the MS. underwent a thoroughgoing editing.

Ἀρτιω, ix. 3. μελήτης ὡς, μελήτης ϖ, μελήτης π. The proper name is preserved, as usual, in the best MS.

Ἀρρ. x. 3. θέει μ, φέρει ἔρ. So far as sense goes θέει seems to me the better reading (στ. αὐτῷ). That there are difficulties in the way of φέρει Ἀνθός may be seen by Gemoll's note, where the rash conjecture ἵστος is hazarded. With θέει the translation of ἓνθος will be 'bloom, beauty.' (as Dem. 108 al.), not 'flower' literally. 'Επιθέω itself does not seem to be used in this sense, but ἔπιθέω is and abundantly, v. Lexx. The change of subject should not be a hindrance.

To φέρει I have no objection as an independent reading, but it is easy to account for it: θ and φ are close, cf. p. 301, and the change of subject would be sufficient motive for a scribe to alter θέει by inserting ρ. The actual variant occurs: O 88 Θέουσα, φέρουσα 'Lips, Hurl. frgm. Mosc.' Ven. 3, Vat. 317

4. μάκαιρα κυθήρης μ, θέει σαλαμίνος ἔρ. The objections raised against κυθήρης on the score of sense are sufficiently met by Hollander's observation (p. 32) that κυθήρης corresponds to κυθέρεαι of ν. 1. It has not been noticed that χαῖρε μάκαιρα κυθήρης εὐκτιμῶσα λέδεωνα gives a line with a diaeresis after the third foot—a grave objection against a Homeric verse, but perhaps less weighty in a composition of the uncertain date of this hymn.

5. εἰναλίης τε κύπρου μ, καὶ πάσης Κύπρου ἔρ. (M. de Vries has had the kindness to assure me, Jan. 23, 1894, that this is the reading of M. I regret that it was overlooked in the edition.) Κύπρος, κύπρος in Homer have the long by position; Κύπρος is found as early as Ibycus, fr. v. 2 καλλικότερον μελάθημα σι μὲν Κύπροι, and often later. Both quantities meet Theocr. xviii. 51. Hermann regarded the variants of vv. 4, 5 as two different versions of the same passage. Cf. Ἀρρ. vi. 2, 8.

Demetr. xiii. 1. τέλω μ, τέλον ἔρ. The unmetrical τέλω may be a gloss.

2. περσεφώνειαν, φερσεφώνειαν ἔρ. The variant is common, the π-variant appears to be right; cf. I 457 περσεφώνεια Ven. A, 569 περσεφώνεια Ven. A, φερσ. Vat. 11, M 19, κ 404 φερσ. 'Matro fr. vi. 6,' 509 φερσ. 'H,' 534 φερσ. 'Δ,' κ 217 φερσ. 'GD,' 226 'GHD,' 635 φερσ. 'GD ῥp. UI,' μ 70 φασιμέλουσα, a reading handed down for πασιμέλουσα but without MS. authority.

Herod. xvi. 4. δε Ῡ Ἡμέρᾳ μ, δε πρὶν μὲν ἔρ.

5. τυμαίεστε ἀεθλείων κραταίως μ, πομπῆσιν ἐπί εὐρυσθῆσθαι ἀνακτὸς.

6. ἐξορά ἔργα μ, πολλὰ δ' ἄνεθε αὐτῷ.

There may be some doubt as to the restitution of μ's reading (Igen inserted δε between ἀεθλείων and κραταίως, I would suggest κραταίως, on the analogy of the perpetual interchange of κράτος, κάρτος, κρατερός, καρπερός, and make a stop at v. 5), but no one will, I imagine, with
Baumeister and Gemoll consider a Byzantine scribe to be the author of the whole. At least one may with equal right ask why the reading of \textit{xp} is not an invention. Hermann again saw two versions of the same passage. The unmetrical state of \textit{M} as it stands, and the correction \textit{πημάλειτη}, might have suggested that the line was not of quite recent origin. Cf. Hollander, p. 33.

This condition of vv. 4, 5 in \textit{M} and the corruption \textit{Dion}, xvii. 5 make it likely that \textit{m} or the archetype of \textit{m}, which we know to have been mutilated and which ended abruptly at xviii. 4 (Part I. p. 142), had suffered some damage on its last page or two.

The peculiar readings of \textit{y} have next to be considered.

\textit{Ap}. 55. \textit{πολλὺν} \textit{γ}, \textit{οἰσε} \textit{xp} (def. \textit{M}). The readings are as nearly on a level in point of sense as any pair can be; they seem to me independent. Gemoll puts \textit{πολλῷν} in the text; Hollander, p. 30, is more guarded. We miss the evidence of \textit{M}.

136-8. \textit{βεβρίθη} καθορῆσαι Διὸς Λητοῦ τε γενέθλην γηθοσύνη δὶ μιν θεός ἕλετο οἰκία βέθαιαν

\νί\όνον ἤσπερον τε φίλοντε δὲ κηρύδε μάλλον ἱππ. \textit{y}, om. \textit{mex}.

Whether \textit{y} had 139 also we cannot definitely conclude. The verses 136-8 and 139 are incompatible with each other; on the other hand either alone gives a fully adequate sense. To emend or transpose the whole passage therefore so as to include all four lines seems mistaken; we have evidently two versions of the same passage, one preserved by \textit{mex} the other by \textit{y}, independent one of the other. This is the view of Hermann, praef. pp. xx. xxi. As illustrations of similar alternatives I give H 234, 234a, Θ 415, 415a, \textit{Apfr}. 136, 136a, \textit{Dion}. i. 4-6, 7.

162. \textit{βαμβαλιαστῶ} \textit{y}, \textit{κρεμβαλιαστῶ} \textit{mex}. The vulgate is well established, see comm. Still \textit{βαμβαλιαστῶ} is not necessarily a graphical corruption, as Hollander, p. 30, assumes; it is a verbal noun from \textit{βαμβαλιωδέω}. 
a form which may well exist by the side of βαμβαλιων K 375 βαμβαλια Anth. Pal. v. 272, 4, βαμβαλιζου schoh. Ven. 16, βαμβαλιζειw Lex. Sequ. ap. Bekker An. i. p. 30 (copied by Eust. 812, 45), βαμβαλιζων Hipponax fr. 17, 2, βαμβαλιζουσιν οι δεμονα δειδοκες Ar. Prob. 27, 11 (949a. 13). In these passages it means 'chatter' or 'rattle' (ασαφη φωνη πραιομενου υπο του φοβου schoh. Ven. loc.) of the teeth, and from teeth it is but a step to bones. I take βαμβαλιατων therefore to be an independent reading.

211. ἀμαρίνθιω y, αμ' ἐρεβέθι m, αμ' ἐρεβεθε ν. On this place I have expressed a general opinion above, p. 276 n. 12. 'Ἀμαρίνθιον is known to us as a town Strabo 448 ταυτης [της 'Ερετριας] δ’ έστι καιεν η 'Ἀμαρίνθιον ἄφ’ ἐπτα σταθην του τειχους, and the evidence for the word as the name of a person is very slight (Steph. Byz. 'Ἀμαρίνθου νήσος της Εὐθολας, απο τινος κυνηγου της 'Αρτέμιδος, a mere eponym; Probus Verg. Ecd. ii. 48 Narcissus flos ut Arcesilas refer a Narcissus Amaranthi qui fuit Eretehis ex insula Euboea. C. Mülle, Φ. Π. G. i. p. 102, corrected 'Eretheis 'into Eretricis'; it would be as simple to change 'amaranthi' into 'amaranthinio'). In any case it is a long step to call Amaranthus an 'amathium' of Apollo, and I wonder at the facility with which editors have followed Schmedewin in printing 'Ἀμαρίνθιον.'

325a. hab. y. om. map. The similarity between νυν μη τοι and νυν μεντος caused map to omit it. Editors, kinder to y than to m, have not called it an interpolation.

525. άσωτος ἐκενου y, αιτοῦ δίσεθον map. I do not share in the certainty of editors in regard to the reading of y; the grammatical likeness between α(τον)κακθων and αυτονδατε(ξ)ον is of course considerable, but it may be doubted which way it tells.

Πετμ. 45. ἀμαλκάναι y, ἀμαργαλ map. I cannot suggest any explanation of ἀμαλκάναι.

241. θη ρα νενον λοχανω y, δη ρα νεόλλοντος map. Νενον λοχανω still resists all attempts at explanation; and the conjectures based upon it do not deserve mention. The alternative νεόλλοντος may fairly mean 'new-born,' of an infant who has received the attentions that the goddesses give Apollo, Ap. 120; the periphrase suits the semi-serious style of this Hymn; cf. Aristoph. Acol. 17 ἀλλ’ αὐτετπόντ’ ἐξ οτου τοι μπότομαι where the scholiast says τοτέσται ξω, μεταφορικόν. τ’ ἀρ ζωντ’ ἐπεται το μπότεσθα. A sense has got by the passage by patching νεόλλοντος with Hermann's conjecture φιλο for δη. This is strikingly confirmed by y's θη, since φ and θ are exchanged not uninfrequently, more on phonetic than on grammatical grounds; so A 268 for φηραίν θηραίν is read in 'L. Lips. Vrat. b, L. v. v. 14. Ven. R, A Vat. φηραί ν θηραί ν, and as a correction in several other MSS., M 392 for αὐτοφ, αὐτόθι is in L. v. Vat. v. 14. Ven. v. 21. M v. v. Mo. The particle φη was read by Zenod. at B 144, but is found in no MS., at Ε 499 it is given as ε δι φη or ε εφη (and in the latter sense Aristarchus interpreted it). Cf. also Hipponax fr. 14. 2. We are next to suppose that θη became in the majority of MSS. δη, for which change cf. L 394 θη, δη 'E S Cant.' L. v. R, M v. 11. cl. Θ 448, K 104.
THE TEXT OF THE HOMERIC HYMNS: II

288. ἀντὶν βουκελοῦσα καὶ ἱροτόκως δίσοιν γ, ἀντίσις (μι) ἀνέ-
λησθ’ βιδαν καὶ τάσει μήκον μαρ. Hollander’s examination (p. 27) of these
lines is unexceptionable. The two readings are independent. 17

326. μετὰ χρυσόθρονων ἦδ γ, ποτὶ πτέχαις ὁλύμποιοι μαρ. Again I
refer to Hollander’s.

366. ἀλλον μέθον εἰς ἀθανάτωσιν εἰσεν γ, δ’ αὐθ’ ἐτέρωθεν ἀμείβο-
μενος ἔπος ἕδει μαρ. Hollander, p. 26. This case falls under the head of
‘formula of speaking,’ of variations in which there are countless instances in
the Iliad and Odyssey; e.g. Λ 73 ὁ σφιν ἐπαράκτωσιν ἀγοράζατο καὶ μετέτειν,

Ven., R, P, Pa, M 13, E 764 τὴν δ’ ἀπαμείβομενος προσέβη νεφελη-
γερέτα Ζένων υψ., τὴν δ’ ἤμειβετ ἐπειτα πατρίν ἀνδρόν τ’ θέσι τοίο
ἀρχαῖα (ἔνων Schol. Ven., Δ) ‘LS Cant., Vat. b Mosc. 1, L 14, R, Vat.,
φ. εἰς Γ, M 13, 12, etc. For single words exchanged cf. Hsm, 368
ἀγρευμένως, καταλέξω, p. 291. Similar variations occur in phrases denoting
‘going away.’

473. τῶν γ, καὶ μαρ. In the uncertainty as to what word is hidden
by παῖς ἀφρείον it is impossible to decide absolutely between these two
variants. Prof. Ludwig and Tyrell have broken the monopoly of Hermann’s
πανομοσφόνιον, which however brilliant does not satisfy the graphical con-
ditions; Tyrell’s πεδ ἀφρείον is more than ingenious, but are we really to
introduce πεδα = μετὰ into Homer? Another mysterious phrase, bearing
some likeness to this, is φυσι δ’ ἄνερ φρείον ἀφρείον Hes. Op. 455. The older
conjectures are collected in Igen.

563. φεῦδονται δ’ ἥπειτα δ’ ἄλλαξαν δενίουσας γ, πειρόνται δ’
ἡπείτα παρὰ δοῦν ἠμερωνεῖν μαρ. Δονέωνται Baum, but this conjecture
has for the first time been clearly explained by Mr. A, B, Cook, J.H.S. xv.
p. 7. As long as ἄλλωνται referred to women, no clear picture or intelligible
motive was given; but the applicability of the term to bees or bee-women
is at once evident. Δονέος is divided in meaning between motion and sound;
in the latter sense we have ἰσομέτατα Ap. 270 of chariots, and in the neuter
Theocr. xx. 29 ἕμι αὐθ’ δοσίω. I take δονέωνται therefore of the angry buzz
of bees that will not settle, ‘buzzing about among each other.’ Similarly,
metaphorically, Anth. P. v. 121 μ’ σύνε—ἀμφεδροισιν τὸν καλὸν. I see how-
ever no reason to suppose that δευνός is anything but a graphical
corruption, to which marginalia are peculiarly liable, not necessarily going
back many years; and the other reading, which it must be remembered
belongs to us also, was certainly not invented (as Gemoll supposes, Einleitung,
p. 10) to supersede it. Schneidewin’s, Hollander’s (p. 28) and Ludwig’s
attempts to read both vv. at once are not happy. We find everywhere in
the Hymns that real variants are original alternatives, not a sequence inter-
rupted. I take the two lines therefore to be independent, as 288, 326, 366.

17 ‘Ἀντὶν is not certain; Hollander rendre il ἄρτης, Gemoll after Schneidewin ἀργη.’
THE TEXT OF THE HOMERIC HYMNS: II.

We may next look at such variants as have two families to support them. It may be expected prima facie that a reading found in two such distant families as \( m \) and \( y \) will have a strong claim to acceptance.

\[ \text{Ap. 217} \quad \text{άργινής} \quad \text{μαγρινής} \]

The readings of \( m \) evidently go back to a common source, which may be Mattheus's \( \text{Eυνής} \); \( m \) of the two is nearer the original, and has not made the step of taking on \( μ- \). A bridge may be made from \( \text{ένηρας} \) to \( \text{άργινής} \) if we imagine the former written etymologically \( \text{αινήρας} \), and I confused with \( \Gamma \). The corruption must be very old, and we are therefore correct in positing an uncial exchange. (So Holland, p. 24.) The \( \text{ερ} \) reading is a further correction of \( \text{μαγρινής} \).

\[ \text{Herm. 168.} \quad \text{άπαστοι} \quad \text{μαγρινής} \]

\( \text{άπαστοι} \) is uncertain for it is very possible that the superscription in \( y \) may be drawn from a \( y \) source. In point of sense however \( \text{άπαστοι} \) does not seem appropriate; Hermes and his mother would hardly starve even if they were not recognized by the other Olympians. \( \text{άπαστοι} \) also may be explained as a correction of \( \text{ΑΛΙΣΤΟΙ} \) from \( \text{ΑΛΙΣΤΟΙ} \); the corruption again is uncial.

212. \( \text{μύσον} \text{άκοσας} \text{μυ}, \text{φολίος} \text{στόλλον \( \text{ερ} \)} \]

The variants are equally balanced in authority and sense, and seem independent.

224. \( \text{θρομαί εῖναι} \text{\( \text{μυ}\), \text{έστιν} \text{όμοια}.} \)

Either reading gives a good construction, and no such expediency as reading \( \text{κένταυρον λασιάοχενα (Schneidewin)} \) or omitting 225 (Holland) are wanted. Construe in the one case \( \text{συτε κενταύρου βήματα} \text{θρομαί εῖναι} \text{τά βήματα ἐκείνου} \text{δοτίς} \text{κ.τ.λ.,} \)

in the other \( \text{συτε κενταύρου βήματων ἐστίν} \text{όμοια} \text{τά} \text{βήματα} \text{ἐκείνου} \text{δοτίς} \text{κ.τ.λ.} \)

Of the two variants \( \text{θρομαί εῖναι} \) is the livelier, but if it were original I cannot see a reason for altering it to \( \text{έστιν} \text{όμοια}, \) for the difficulty such as it is is on the side of the latter.
THE TEXT OF THE HOMERIC HYMNS: II.

320. ὡς ἔν, τῶν ἑ, ὡς τῶν ὑ. ὡς is probably an interpretation which the difficulty of the construction has forced into the text.

322. δὲ τέρπρου ΤΕΟΝ ἦν, Δ' ἦν κάτω κάρρυν ἦν. On τέρπρον see the Lexx. In Attic (e.g. Aristophanes) the word denotes part of a ship, and the nautical connotation is predominant in it. However it is used of other material things (στέγη οἰκίας Ησυχ., ἱλασμεν ἐπὶ τέρπρου θυρίσσιον Αἴαλος Βεργκ, Π.Π.Π. iii. p. 378) and there seems nothing in the etymology to give it a more definite meaning than 'point, peak.' Accordingly with Ruhnken and Ludwig I keep it here; the more technical the meaning of τέρπρον, the harder it is to imagine a learned reader wishing to insert it at the price of disturbing an inoffensive reading like ΤΕΟΝ κάρρυν. It has also the joint authority of ὑ and ὑ.

451. ἐκηονο μη, οἴμος ὑ. I confess myself unable to fix the relation between these words. The eagerness of editors to accept, in this case, where it might obviously be a gloss, the reading of μη is singular. θ 429 οὐδὲς ἐκηονο is undecisive and cuts both ways. On the whole I should prefer οἴμος, as the less common word. Ludwig, Homericus i, p. 6 note, holds the interesting view that the corruption of ἐκηονο to οἴμος is phonetic.

Ἀρθ. 214. ἵστα τεύθεσι μη, ἱμᾶτα πάντα ὑ. Here again, as Herm. 224, the sense given by one reading, ἰστα τεύθεσι, is the livelier, but there is no positive reason to reject the other. The arguments brought by editors in favour of ἰστα τεύθεσι may all be turned against them.

DM. vii. 37. φαῖος μη, τάφος ὑ. Here again, as Herm. 451, the reading of μη wears the look of a gloss.

Ἀρσ. viii. 9. εὐθαρσίας με, εὐθαλός ὑ. Εὐθαρσίας is naturally appropriate to ἤμος, and the a, which is used by Pind., Eur., Aristoph. (Birds 1062), need be no stumbling-block in a document of the very uncertain age of this hymn. It is equally unlikely to have suggested a correction to a scribe, and I am not inclined, with Holland (p. 29) and Gemoll, to consider εὐθαρσίας unoriginal.

Of the nine readings then which are shared equally between the four families there appear to be five cases of independent variants and four where the one variant has proceeded from the other, viz. Ap. 217 and Herm. 168 as the result of corruption, Herm. 451 and DM. vii. 37 as part of a process of interpretation. The way in which the families are distributed—now on the right side, now on the wrong—is a proof of the arbitrariness of tradition and the merely relative difference between MSS.

We have thus discussed the variants offered by the four families in detail; our next step is to collect our results:

Of conscious conjectures, there are in μ 6, in τ 2, in p 11;

of semi-conscious conjectures, in μ 34, in τ 9, in p 17;

of independent readings, in μ 33, in τ 9, in p 1;

of exclusively right readings, in μ 46, in τ 4, in p 21;

of graphical and phonetic blunders, in μ about 90, in τ about 20, in p about 50.
These figures, which are necessarily only loosely approximate, give a fairly
correct idea of the value of the various archetypes after an unprejudiced
survey of their variants.

\(m\) is in every way the most strongly characterized branch. It has a very
large number of graphical and phonetic blunders, of which some 34 are
roughly and only half-intentionally corrected while the greater number
remain untouched. It has also nearly 89 peculiar readings which have
always belonged to it; 33 of these have an equal claim to acceptance with
the alternatives in the other families, 46 are sole survivors of the original.
\(m\) therefore appears in the excellent character of an uncorrected codex,
whose errors are due to natural causes, and which represents a distinct line of
tradition.

\(x, p, y\) form in comparison a uniform vulgate, valuable as preserving
the alternatives to \(m\)'s independent readings, and the correct originals of \(m\)'s
immeasurable blunders. Among themselves they differ as follows. \(x\) is
principally valuable for the fidelity of its copying and the almost entire
absence of conjecture, to which its singular corruptions offered much occasion.
\(p\) has the general defect of having passed through the hands of particularly
ignorant scribes, whose errors and whose half-intentional corrections of them
detract from its value; a larger proportion however of genuine survivals
remains in \(p\) than in \(x, y\). \(y\) offers a small number of variants, whose chief
value is that they consist for the most part of entire lines.

No one family therefore represents the original fully, and no family can
be dispensed with; all in part, none entirely, possess the inheritance. They
possess it in different degrees, and this proportion is their value. Paradosis
is a fickle goddess, and dispenses her favour with a deplorable lack of system.
When all our weighing and balancing is done, it remains for the editor of
these Hymns to take his good where he finds it.

I next endeavour, with the knowledge that we have gathered up to this
point, to reconstruct the history of the text. The fifteenth century copies fall
into two classes. The former contains the MSS. ELITTDaHJKS; of these
HJK seem to be descended from DAT, DAT from an ancestor which had a
close connection with LII; S also seems derived from LII. LII, the parents
of DATHJKS, go back to a common ancestor \(b\). \(ET\) similarly spring from
one parent \(a\), and the origens of \(a\) and \(b\) lead to a common family-archetype \(x\).
The other fifteen and sixteenth century copies, ABCGILMNOPQR, R, V, GM, point through several but less well defined stages to a common
origin \(p\).

Both of these archetypes were minuscule, and in all probability passed,
as single MSS., through several minuscule stages. While they were apart,
readings were added to the margin of \(x\) from another stock, \(y\), about which
from the circumstances in which it is given us we can say little but that its
readings stand equidistant between \(m\) and \(p\), and therefore the natural
presumption may be correct, that it belonged in the main to \(x\).

Next, \(x\) and \(p\), and therefore \(y\), all issued from one common stock \(x\), a
MS. written well in the uncial period and probably pretty far back in that. When α and ρ differ, it is accordingly generally on points of uncial variation. ς contained the hymnus minus that to Demeter and the fragment to Dionysus, combined in one collection with various other quasi-epic writings.

Parallel to ς and its progeny, there had descended another family, represented by the single fourteenth century MS. M. This had for at least two generations minuscule ancestors, and may be traced back without admixture to an uncial progenitor μ. This copy, as well as all its offspring save M, possessed at least two more Hymns than the ς family, and presented them in company with the Iliad and possibly other Homeric poems.

This μ coincided in the main with ς, though in a very considerable number of lines it offered different readings. Whether μ and ς ever had a common ancestor, that is, a universal archetype of the Hymnus, must be a doubtful question. It is perhaps too generally assumed that the tradition of any author necessitates a single archetype. Where the writer is an historical person, as Persius or Martial, such an expression may have meaning; but when we deal with a corpus of writings of uncertain authorship and different ages, the expression original archetype becomes as theoretical as original family of languages. In the absence of any documentary evidence bearing on the Homeric Hymns earlier than the fourteenth century, no conclusion of the sort can be drawn; nor, considering the endless possible relations between manuscripts and scribes in the whole course of antiquity, can any explanation be offered of the connexions and combinations that may have existed between α at any of its stages and the different members of ς.

The stemma therefore which I subjoin does not end in a single point, but in two open threads.

Whether however or no there was ever a common archetype of the Hymns, there are a certain number of errors common to all the MSS, alike. These I will next enumerate. To arrive at errors common to an entire tradition is from the circumstances of the case difficult; there is ex hypothesi no other MS. authority with which to compare them. On the other hand objective certainty is equally imperative, and to include readings which have been displaced by brilliant conjectures is but a begging the question. A modified objectivity may be had in cases (1) where the passage is quoted by some other writer, (2) where the traditional reading is unmetrical or palpably corrupt, (3) where analogy of sources or other similar literature is very strong. With these criteria we may collect the following series (the interpretation of the passages will be considered in Part III.):

Lp. 165. ὀλλα τις λεγει; ἄλογον Thuc., 171 ἢφι ἡμῶν, ἦφιον Thuc., 184 ἐπενδευε ἡ vox nihil, 255 ἤ ἐπενδευε γε ἐπενδευε; 246 ἐπενδευε ν. 341 seems proof that this is wrong (see p. 279), 371 ἣμερον μένος; ἣμερον is a vox nihil, and the Homeric analogy seems to necessitate ἐξερευν, which Barnes first restored; 392 ἐμαθον, the Homeric analogy seems to necessitate ἐκτός, which in T corrected εμαθον, an uncial error; Ἱημ. 153 περιν, 325 εὔμας(υ)λη 346 ἐκτός, all three at least unexplained, if not corrupt; 419 and 501 κατὰ μέλος, where κατὰ μέλος
seems established by ν. 53: 473 παίδε ἄφρείον, unmetrical: Aehri. 252 στοιμαχήσεται a vox nihil, 254 σχέτιον oik ὀφνότατον, unmetrical (no doubt originally ὀφνότατον) and the Homeric ὀφνότατον seems imperiously necessary.

These very restricted instances throw a clear light upon the character of the tradition of the Hymns, at the furthest point to which the MSS. take it. That such forms as ἵμεροι, ἱμαθήνη, κρισυάρχω, εὐμική, παίδε ἄφρείον, ὀφνότατον should have come into existence, and having come into existence, have persisted uncorrected till the fifteenth century in a language and style so familiar as the Homeric, is surely a very remarkable phenomenon. It points, in my judgment, to the great neglect of these poems; they will have been copied from time to time, but seldom read; and as it is the reader and not the scribe who notices errors and to whom corrections in MSS. are due, these corruptions once in being continued undisturbed down to the Renaissance. The overwhelming number of corruptions in M (see Part L. p. 143 sq.) suggests that this family met with even fewer readers than the others; an opinion confirmed by the survival of the Demeter hymn alone in M. If free commerce had existed between the various families and exchanges of variants had been frequent, surely the two first hymns could not have failed to be added to the truncated corpus.

The next question which presents itself is this: Given a number of variants that, so far back as our MSS. reach, are not deducible from each other, what is their origin? Are they due to early interpolation, to a recension made in classical times, or how?

To answer this question I will compare the phenomena of a text which bears an obvious resemblance to this, namely the Iliad. I invite consideration of the following variants:—

(1) Γ 126 πορφορέων, μαμαρέων.
(2) στ. 211 ἔζωμεν, ἔζωμενον.
(3) Δ 260 κρητήρι, κρητήριον.
(4) στ. 450 πόνος, φόβος.
(5) στ. 527 ἀπεσούμενον, ἀπεσούμενον.
(6) Ε 511 τείχεοιπλήτα, τείχεοιπλήττσα.
(7) στ. 60 πάντα, πολλά.
(8) στ. 203 ἐξελύθη, ἐξεσύθη.
(9) στ. 394 αἰὲν, κεν.
(10) στ. 549 ὀρσίλοχον, ὀρτίλοχον.
(11) στ. 744 πολλὰς, πόλεις.
(12) στ. 791 δὶ ἐκάστη, δὶ ἐκαθαῦν.
(13) στ. 797 τεῖρετο, τρεῖβετο.
(14) Ζ 226 ἐρχεται, ἐρχεται.
(15) στ. 288 ἒ δὲ εἰς οἶκον ὦνδα παρίστατο φοριαμοίσι, αὐτῆ δὲ ἐς ἄλλην οἰκίαν κατεβιβάζεται εἰρήνη.
(16) Η 12 λύω, λειώ.
(17) στ. 103 δύνα, δύο.

H.S.—VOL. XV.
THE TEXT OF THE HOMERIC HYMNS: II.

I draw short the list, which is not meant to be exhaustive, with the former half of the Iliad. All these are MS. variants. Now suppose that our knowledge of the Iliad text depended entirely upon fourteenth and fifteenth century MSS., and that scholia and other external sources were not existent; what account would be given of these readings? I imagine that criticism would make short work of them, and assign them on one ground or another to the 'kritische Thätigkeit' of unrestful Byzantines. Nos. 1, 4, 13, 28, 30 are excellent examples of the gloss supplanting the original; 15, 23, 25, 26 point to the common phenomenon of 'unconscious cerebration,' i.e. recollection, on the part of the scribe; 2, 3, 5, 9, 10, 11, 12, etc., might be thought due to intentional correction of supposed grammatical and orthographical errors—and so with the remainder. Yet what do we find? Of the 'glosses' πορβυρίων (1) is ascribed to Zenoctus, Aristophanes and Aristarchus, μαρμαρίες was the contemporary vulgate which the majority of the MSS. have preserved; πονας (4) was Aristarchus' reading, which he preferred to the already existent φοβος; τέρετο (13) was Aristarchus' preference, τριβετο was read by ἄλλοι; the most striking instance (28) shows that δόρπων is not an effort of misplaced antiquarianism, nor δείπτων an explanatory gloss: δόρπων has Zenodotus for godfather; αὐτή (30), be it better than φωνή, is due to no Tszetzes, but to Aristarchus. Analysis of the other cases shows that these variants, which in appearance seem so explicable by the ordinary accidents of tradition, are without exception of the respectable antiquity of 2,000 years, and were reviewed, approved or rejected by the librarians of Ptolemaic Alexandria.

These variants, thus seen to be ancient, are of the same sort as the variants which we have been discussing throughout the Hymns; some of them are literally identical. Our history of the transmission of the Hymns begins with the fourteenth century. What reason have we to suppose that, if it were continued farther back, these variants would not be found in existence at any given period? That all of them are ancient does not necessarily follow, for in the Iliad there are hundreds of variants beside those
which I have quoted on whose history we have no light. But considering the Hymn-variants as a mass, it appears reasonable to conclude, after they have been subjected to detailed examination, and in default of external evidence to the contrary, that they have always subsisted in the Hymn-corpus, and that they go back to times approximating to the original collection.

The test of this theory can only be a papyrus of the Homeric Hymns from a tomb in Egypt or the cabbalah of an Arab; but, in tanto, we may content ourselves with the one piece of substantive evidence that does exist—the quotation made by the fifth-century Athenian Thucydides. Thuc. iii. 104, in a familiar context, quotes the Hymn to Apollo 146–150, 165–171, and exhibits the following variations from our tradition:

**MSS.**

146 ἄλλα σὺ
147 μᾶλλον ἐπιστήμων ἢ τὸν
148 αὐτοῖς σὺν παίδεσαί καὶ αἰδήρης
149 οἱ ὅς σε
deficient
150 στὴρα ἤτοι
153 ἀλλὰ ὁ ἔξωτος ἑλέος
154 ἥνως
155 ἀντιστάσις
156 ἀθάνατον ἐν ἁγίῳ σε
157 ἰδῆναι
158 ἀφ' ἡμῶν, ἡμῶν, ἡμῶν

**Thuc.**

146 ἄλλα οὖν.
147 μᾶλλον 
148 σὺν 
149 οἱ ὅς σε
150 θυμὸν εἶρε
to
154 σε
155 ἐκεῖσθαι
156 
157 ἀδικημένος
158 
159 
160 
161 
162 
163 
164 
165 
166 
167 
168 
169 
170 
171 

Very different views have been held at different times upon the relation of these two versions. Many of the opinions are collected by Gemoll ad loc. The most natural perhaps was to give the preference to apparent age, and suppose the Thucydidean the original; then to assume both corrupted, and to arrange a composition from elements of either of them. The only sound view however is that most justly expressed by Gemoll, 'im ganzen und grossen stehn beide Texte fest, und der Herausgeber hat sich für den einen oder den andern zu entscheiden.' If a positive analogy is wanted, I need only point to the pre-Alexandrian variants upon the Iliad and Odyssey, for instance in Plato; these no one that I am aware of would seek to introduce into the text of Homer at the expense of the vulgate.

---

18 It may be noticed that the ἄλλα οὖν of Thucydides is far from 'sinister,' as Gemoll misleadingly asserts. The sense is perspicuous: 'You, Apollo, at one time walked about on rocky Delos, at another you wandered through the islands and mankind, for you have many temples and groves, and all heights and peaks and streams are dear to you; but when you take your pleasure in Delos in especial, then (apart from the Ionian gather.) The MS. tradition is more emphatic in favour of Delos.'

19 It is in Delos that you take your pleasure there (relative) the Ionians gather.' Incidentally it may be worth suggesting that a proposition such as 'Thucydides quotes from memory' is intrinsically absurd. What do we know of the circumstances under which a Greek of the fifth century wrote a book? All we are entitled to say, as judges of evidence, is 'Thucydides quotes.'

16 ἀντιστασις καὶ ἱκανός is supported by the identical phrase in Theog. 791.
There are however two places in which a doubt may be felt as to the genuineness of one or both traditions. The former is

\[ \dot\alpha\lambda\lambda\epsilon\gamma\epsilon \lambda\gamma\tau\omega\ \mu\varepsilon\ \kappa\alpha\ \dot\alpha\pi\delta\lambda\lambda\omega\nu \] 

\[ \dot\alpha\lambda\lambda\epsilon\gamma\epsilon\ \lambda\lambda\kappa\alpha\ \mu\varepsilon\ \dot\alpha\pi\delta\lambda\lambda\omega\nu \] 

\[ \dot\alpha\lambda\lambda\epsilon\gamma\epsilon\ \dot\alpha\eta \lambda\gamma\tau\omega\ \mu\varepsilon\ \dot\alpha\pi\delta\lambda\lambda\omega\nu \] 

\[ \dot\alpha\lambda\lambda\epsilon\gamma\epsilon\ \dot\alpha\eta \lambda\gamma\tau\omega\ \mu\varepsilon\ \dot\alpha\pi\delta\lambda\lambda\omega\nu \]

Editors until Ernesti allowed the MS. reading to stand in the text, although Norman (1887), in an edition of a speech of Aristides, had advised the substitution of the Thucydidean. The arguments against the vulgar are (1) that there is no example of \( \dot\alpha\gamma\epsilon \) being given so much substantive force as to balance \( \chi\alpha\rho\rho\tau\epsilon \) \( \dot\alpha\gamma\epsilon \ \mu\varepsilon\ \chi\alpha\rho\rho\tau\epsilon \ \dot\delta \), (2) the \( \mu\varepsilon\ ) after \( \lambda\gamma\tau\omega \) calls imperatively for a verb before it. \( \dot\delta\eta \lambda\gamma\tau\omega \) is therefore corrupt, and M’s reading is an attempt at a correction, to unite \( \lambda\gamma\tau\omega \) and \( \dot\alpha\pi\delta\lambda\lambda\omega \); and as an original is wanted, no doubt it is \( \dot\lambda\epsilon\kappa\alpha\ \mu\varepsilon\ ). The transition will be facilitated if we suppose the vocative \( \lambda\gamma\tau\omega \) (vv. 14, 62) the intervening stage; \( \dot\delta\eta \) is then a corruption of \( \dot\theta \) taken for \( \dot\theta \eta \) (\( \dot\theta \eta \)).

This account is remarkably confirmed when we find that in the late MSS. of Thucydides the same phenomenon has taken place. Bekker’s apparatus, which, to the shame of the learned world, is still the only one available for the third book, shows that while the elder MSS. have \( \dot\lambda\epsilon\kappa\alpha \), one of the later (b) has the reading of the Hymns \( \lambda\gamma\tau\omega \), while another (c) has the intermediate stage \( \dot\lambda\epsilon\kappa\alpha \). It is not necessary to suppose that these late Byzantine scribes were aware of a rare book like the Hymns; the corruption in both places alike was graphical. Gemell therefore is so far right when he says that the two traditions are identical. The other case is

\[ \dot\alpha\dot\beta\ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ ]

\[ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \]

\[ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \]

\[ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \]

\[ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \]

\[ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \ \dot\alpha\dot\beta \]

In the first place \( \dot\alpha\dot\beta \ ) of \( p \) is doubtless an itacism, cl. Ap. 174, p. 10; similarly \( \dot\alpha\dot\beta \dot\alpha\dot\beta \ 0 \) of the later MSS. of Thucydides must be a metrical correction from \( \dot\alpha\dot\beta \dot\alpha\dot\beta \ 0 \), since \( \dot\alpha \) and \( \dot\varepsilon \ ) can only exchange through minuscule forms, and the testimony of \( \dot\alpha \ ) takes \( \dot\alpha \ ) back to the uncial period (this naturally disposes of the attempt of Ruhnken and his followers to put \( \dot\alpha\dot\beta \dot\alpha\dot\beta \ 0 \) in the text). Taking then the reading of the best MSS. of both traditions, \( \dot\alpha\dot\beta \dot\alpha\dot\beta \ 0 \) on the whole offers more of sense than \( \dot\alpha \dot\alpha \ 0 \), and may accordingly be considered a correction from it. The difficulties seem concentrated in \( \dot\alpha\dot\beta \dot\alpha\dot\beta \ 0 \), and this we may therefore suppose the original of the passage. From this form emendation must start. A singular coincidence of corruption occurs in Ap. Rh. iv. 1373 \( \dot\eta \dot\gamma \ ) \dot\eta \dot\gamma \ ) \dot\eta \dot\gamma \ ) \dot\eta \dot\gamma \ ) \dot\eta \dot\gamma \ ) \dot\eta \dot\gamma \ ) \dot\eta \dot\gamma \ ) \dot\eta \dot\gamma \ ) \dot\eta \dot\gamma \ )

Twice therefore where the Thucydidean and the manuscript versions differ, corruption has had its way; in the former it is confined to the MS. tradition, in the latter it has invaded both sources. The other passages appear to be genuine variants, and confirm the view that we have taken of the differences within the manuscripts themselves, namely, that they are from their origin independent.10

10 Compare also the variants given by Pausanias in Deis. 483, and by Antig. Cypript. in Herm. 51.
The question immediately follows. If these variants are taken back as existing parallel to such an early age, what view is implied of their ultimate origin? and here it is inevitable that the well-deserving word 'Rhapsode' should make itself heard. The view that the variations in Homer generally are the work of Rhapsodes has filled a great space in the literature of the Question, and with respect to the Hymns is maintained with most persistence by Hermann (in his Preface) and Hollander. But the Lower or Textual criticism can have nothing to do with Rhapsodes or other figures of early literature; it has no tests by which to detect or define their work, it must content itself with tracing the variants on the Hymns as far back as its method will take them, and declaring that at this point they are independent. A further step belongs to a different province, and is outside an inquiry which clings to MSS. and the inferences that may be drawn from them.

I conclude therefore this section with a list of these independent variants, the authorities on which each depends being affixed:

THOMAS W. ALLEN,

W 274, 5 and 276, 7 are probably alternatives.
AEGOSTHENA.

[Plates IX., X.]

AEGOSTHENA, now more generally known as Porto Germano, lies on one of the easternmost bays of the Corinthian gulf, and on the northern frontier of the Megarid. Its remoteness from ordinary routes—for between it and Velia, itself an ultima Thule, rise 2,000 feet of pine-clad mountains—accounts for the fact that it is to this day practically unknown, and also perhaps for the very scanty mention of it in ancient literature. There was a shrine of Melampus there, the Spartans passed it in their retreat from Leontria, and that is all. But the same remoteness has preserved for us a Greek fortified town in better condition and greater completeness than any other, not even excepting Messene.

The town was divided into two parts, the Acropolis defended on all sides by a line of walls and towers, and the lower town fortified on the north, from the Acropolis down to the sea, by a similar line, still remaining in good condition. We are, I think, both by the exigencies of its position and also by certain scanty remains bound to assume the existence of a corresponding south wall, of which mention will be made later. The style of building both in the Acropolis and the long wall is the same. The towers in either case are of quadrangular square-cut stones, averaging a metre in length, and half a metre in height and breadth. In the lower courses of the walls that join these towers, we come across that style of building usually known as 'fourth century polygonal.' Other scattered pieces of polygonal work occur here and there. The materials are a hard limestone of the district, and a less durable conglomerate rock.

The Acropolis (cf. Plan I).

The Acropolis is oblong in shape, defended by a wall running all round it, and joining its eight towers. The east side is the most complete and most impressive, for there the wall stands in situ for nearly all its length, surmounting a steep rocky slope which descends to the valley. The towers stand at intervals of about 50 metres, four in number. On this side the only means of egress is the small postern defended by the tower B. The corner towers D and E are built solid for the space of some 10 feet from the rock, the interiors being filled up with stone rubble, and A is solid for
PLAN I.—THE ACROPOLIS.

Scale: 1 yard.

0 10 20 30 40 50 60 70 80 YARDS.
nearly twice that distance. Of the fourth corner tower G, only the scantiest traces remain. A and D however are in excellent preservation, and from them we can get a very complete notion of the original arrangement.

The tower A is probably the finest existing specimen of Greek fortification work. It rises 11½ metres above the top of the adjoining wall, and from that point is built solid above for the space of about 10 feet, and below to the base of the wall itself. The stones are built in very regular lines, each course being half a metre in height. The entrance to the tower itself is thus 10 feet above the wall level, and is made through a narrow door, easily defensible. The height of the door above the wall suggests that it was reached by a ladder which could be drawn up if necessary. Thus, even if the Acropolis was taken, a few defenders might still hold this tower.

The chamber inside is rather less than 8 metres square, and is lighted by two very narrow oblong windows. Unfortunately it has been used, probably by monks or hermits, in later times, and the interior of the walls has been daubed over. Judging however from the corresponding tower D, we should assume that it contained two chambers, one above the other. It is complete on the south side from top to bottom, and is finished in a low flat gable. The east and west sides are also complete, but on the north the gable has gone.

The east wall here rises from the ground inside the Acropolis to the height of 8 feet, and is faced with large masonry on both sides and filled up solid with rubble. Outside it continues nearly perfect till the next tower B, but inside throughout the greater part of this section both the inside facing and the rubble filling have gone. The two intermediate towers B
and C have been built hollow to ground level, and there are traces in both
of holes to receive wood flooring. The lowest chamber in each would thus
be reached from the wall by a descending ladder, the upper story being on
a level with the top of the solid filling of the wall.

The same solid filling of the wall extends to the corresponding corner
tower B, the lowest story of which, as in the case of A, is built solid. Unlike
A however, this tower is reached direct from the wall, part of one side of the
door remaining. The upper part has fallen, but eight courses up is a
complete row of holes for roof beams, and on the adjacent sides larger holes
for the main rafters. The tower now rises only a few courses above these, but
it is quite clear that there were two stories in it, and we may with fair pro-
bability assume the same for A. Similar holes for rafters appear high up on
the wall itself between C and D, which here rises some feet above the solid
filling, showing us that a covered passage passed between the towers.

Of the remaining towers, the corner tower E, like A and D, is built solid
for the first story, up to the level of the solid filling of the wall, but beyond
that nothing remains. G has vanished altogether with the exception of a few
courses enough to show that a tower once stood there, and a little rubble
filling, which leads us to suppose that it, like the other corner tower, was built
solid for one story. Similarly H, of which only a few courses remain, like the
other intermediate towers E and G, was built hollow down to rock level.

North, east, and south of the Acropolis wall the ground slopes rapidly
down, in many places almost precipitously, to the valley, and it is only on the
west that it is of any use to look for the main gate. Here for the most part
the wall has been rebuilt, in some cases with the original stones, in others
with rough walls, chiefly to keep the soil from slipping. But there is suffi-
cient evidence to enable us to place the main gate directly to the north of F.
This tower, as will be seen, contains a double chamber, which suggests addi-
tional defence, the northern wall of the smaller chamber is built smooth and
square, and no wall stories are bonded into it, as is the case with all the other
towers. It is thus evident that the wall did not run up to it, and the only
inference is that the gate communicating with the lower town lay here.

The lower courses of the walls, as I have stated, are largely built in the
fourth century polygonal' style, while the towers themselves are purely
rectangular. It is possible then that the walls were built first, and the
towers as they stand a slightly later addition, and this is borne out by some
slight evidence on the spot. Thus just inside D is a line of polygonal
masonry M, which suggests that a tower, built in the same style as the wall,
once stood, or was once begun there. Another piece of polygonal work occurs
on the conjectural south wall of the lower city at V, and as this runs north
and south it could not have been part of the wall itself, and it is hard to say
what it is, unless we conjecture it to be one side of a tower built in the
same style as the walls. It is moreover 620 metres long, or the exact
length of several of the other towers.

Of the other Acropolis walls, the north wall is complete in all its
length, and rises to the height of 7 metres in some places, and at its least
complete parts is upwards of 4. The west wall however is almost entirely rebuilt, probably in late times, to keep up the level of the soil. That it lies on the original site is however certain from its position with regard to the three towers in it. An original piece still adjoins the tower $E$, and again, south of the gate tower $P$, the original wall is still standing for the space of about 10 metres. Of the south wall only a few fragments remain, which are however enough to make its general line certain. For a few yards starting from $A$ it is still complete to the top, and is strongly bonded into the tower.

In connection with the Acropolis we may also take a piece of early polygonal wall at $K$, and two caves faced with large roughly-cut masonry at $L$ and $P$.

The wall $K$ is built polygonally with large stones, and it seems impossible to assign to it a date later than the early sixth century. It runs along the edge of a steep rock for 9 metres, which descends to the river-bed, and from its position we must conclude, even without other evidence, which will be dealt with later, that it is defensive work of a very early date.

Close to this is the cave $L$, faced with large masonry on the south end, as was found by excavation, for several metres across its mouth to the west. On the south is a narrow slit cut in the masonry, with marks of a door or shutter to close it. There is a similar cave at $P$, on the east side of the Acropolis just outside the tower $A$. There are two theories about this cave, both of which appear tenable, but neither convincing:—

(i.) That it was part of the system of fortifications.

(ii.) That it had sacred associations.

(i.) A story is told by the peasants that cave $L$ is the entrance to a passage leading up inside the Acropolis to the tower $A$. We spent some days in digging here, and found that the earth which came out of it had many fragments of Greek black-ware embedded in it, but as nothing of importance turned up, and it was obviously out of the question to dig up to tower $A$, we abandoned it. The excavations however showed that the cave went on for some considerable distance, and showed no signs of coming to an end. It sloped slightly upwards, and it seems possible that, as in so many cases, the modern Greek peasant has preserved an older belief often founded on fact. The rock which covers it in has broken away towards the mouth, but the discovery of foundations crossing the mouth of the cave makes it not impossible that it was once entirely closed in, and reached only from some point inside the Acropolis. Again, the great similarity of this cave to the cave at $P$ makes it probable that they served similar purposes, and the juxtaposition of $P$ to the tower $A$ lends a certain weight to the tradition of the peasants. It has occurred to me that there may have been at $L$, which is close down to the river, some sort of water-gate, unapproachable because of the stream, which has now gone the way of most Greek streams, but from which secret sallies might once have been made. The one objection to this theory is that the small shutter closing the window opens not inwards but outwards. It is
however much too small to allow a man to pass through it, being only about 2 feet high and 9 inches across, and though we should have expected it to open inwards, the objection perhaps is not a very serious one.

(ii.) Again, it is impossible to prove that sacred associations are connected with the cave. It must however be remembered that Argosthena was the cradle of the Melampus worship, and his worship, akin in many ways to that of Asclepius, Amphiarans and Trophonios, centres, there is reason to think, in caves. Pausanias mentions a shrine and statue to him here, though he does not describe their situation. Again there are adjoining the cave the remains of a Byzantine church, pointing not east and west, but north and south, which may perhaps be explained by the supposition that it was built, as often happens, on the lines of an old Greek shrine. The objection however to the whole theory, lies in the similarity of this cave to the cave at P, and it is hard not to suppose that they served the same purpose.

The long wall of the lower city starts from the north-west angle of the Acropolis, and extends down to the sea. Square towers, similar in building to those in the Acropolis, are placed at intervals of about 60 metres throughout its length. For the most part they do not present any special features, and only three are complete up to or above the first story. Of these J is solid in its lowest story, T hollow to its base. O, however, of which a detailed plan is given (Plan III.), presents some features of special interest.

This tower guards a gate, and has been specially constructed with a view to its defence. It consists of three chambers, of which the outer chamber, or tower proper, projecting like the other towers beyond the main wall, is built solid in its lower story. The inner wall of the tower however has never been bonded either into its adjacent wall, or into the city wall which runs to meet it; and, as there must have been some means of access to the second story of the tower, I have ventured to restore a staircase at this point, necessary in itself, and accounting for the fact that the inner wall of the tower does not extend across to the adjacent wall. Additional evidence for this may be found in the fact that the solid filling of this tower does not extend right across to the inner face, but only to the point where I should restore the staircase.

The space between the tower and the rounded angle inside the gate consists of two chambers, separated by a wall at A, of which only a few stones, bonded into the adjacent wall, remain. Both these chambers were built on ground level, and the entrance seems certainly to have been at the rounded angle, where the wall, here three courses in height, presents a finished corner. No trace remains of any wall meeting this, but from its shape it seems probable that a similar carved angle completed this chamber. On the opposite side of the gate was another chamber, of which one wall and the start of its adjacent wall alone remain.

There was on this wall certainly one more gate and perhaps two. At A there are foundations showing two chambers, one on each side of a well-worn chariot track, traces of which appear inside the town, passing parallel to the

1 Paus. ii. 44. 5.
Aegosthena

Acropolis wall across to the river-bed. It also seems probable that there was a gate just below the north-west angle of the Acropolis, though its vicinity to the gate just mentioned rather tends against it. But an examination of the piece of wall left at this point on the Acropolis shows that the wall of the lower tower was never bonded into it, which on the evidence of all the other meeting points of walls and towers can only be accounted for by the existence of a gate. There are also signs on the slope outside that the ground has been artificially levelled, and the steepness of the slope from the road below up to the gate in the west wall of the Acropolis makes it almost necessary to suppose that another road approached it. Such a road, coming as I suggest, would lie nearly on a level, its gate would be admirably defended by the tower at the north-west angle of the Acropolis, and its whole course by the west wall.

It seems unlikely that there was ever a sea-wall along the coast. There are, it is true, many hewn blocks lying about, but it is more natural to suppose that these belong rather to piers or jetties for ships, for the whole object of the long walls must have been to secure communication with the sea. The sea, it appears, from certain rock-cuttings below its present level, has encroached along the coast, and certain of these rock-cuttings, pointed out to me by Mr. E. H. Egerton, resemble very much the dry-docks round the Munychia harbour. They lie in parallel lines seawards, and though it is impossible to examine them closely, they seem beyond doubt to be slips for beached boats. If then the blocks lying about on the shore are remains of a sea-wall, the docks would be entirely cut off from the town, and be rendered perfectly futile in time of siege.

The evidence for the existence of a long south wall is fragmentary. Inwood marks a piece of it still standing, but his plan, hastily made, is full of grave inaccuracies, and as the piece he has marked has disappeared without leaving any trace, his evidence is not conclusive.

Crossing the river-bed below the cave at L, we find on the opposite bank a long shrub-covered line of stones running down without break to the piece of polygonal wall mentioned above at V. V itself lies at right angles to this, and, as I have said, is just the length of other tower walls. Throughout the length of this mound of stones are many blocks which are lying identical with the ordinary wall stones, and the whole rampart exactly resembles those long lines of fallen walls which mark ruined Norman or mediaeval castles in England.

Again, continuing the same line below V towards the sea, we come across many wall stones lying half-buried in the earth, some of them looking as if still in situ.

Thirdly, just below L and on the north of the river-bed, there lies a long spur of rock, stretching east and west, with rough steps cut along it. It ends in a sharp edge towards the river, also, I think, artificially cut. This again seems to mark the line of wall which perhaps stood against this spur of rock.

---

1 Inwood, The Erechtheum, pl. 39.
the steps in the rock leading up inside the wall from the level of the river. At this point, as the long rampart of stones is on the other side of the river, I imagine the wall crossed the stream which for the rest of its course lay inside the town, thus supplying it with water. The river, it may be noticed, descended from the hills in a steep incline shut in by high rocks, and could not be diverted.

Finally, it must be remembered that the very strong and massive north wall becomes unintelligible without a corresponding line of defence on the south. Gates, towers, and walls alike become quite useless unless they can be defended, and no defence is possible if the invading army has merely got to march round the citadel to occupy this wall on both sides. The use of
the north wall no doubt, as in the case of the long walls at Athens, was to
insure communication with the sea, but it is hard to imagine anything more
futile than a single long wall. It is no doubt strange that one wall should
have remained while the other has disappeared, but against that we have the
fact that in some places on the north the wall has disappeared with as
absolute a completeness as on the south, leaving not even the rampart of
stones we find there.

Roman occupation has left little trace in the town, though certain
remains of it came to light during excavation. A few uninteresting
imperial inscriptions, and the base of a bust of Hadrian, on which he is
called the oikistes of the city, were found among walls and foundations of
Roman houses near the shore; Hadrian, as we know, made an extensive
tour of Greece, and this bust very probably commemorates his visit to
Aegosthen. Higher up in the town further excavations were made, but the
slope of the rock is so steep that hardly any soil has accumulated on
it, and nothing of value or interest was discovered.

Outside the town several tentative holes were dug in the four
cemeteries which lie two to the north of the town and two to the south. In
some respects the finds were interesting.

We here came upon a whole series of small seated terracotta figures,
which give the development of the ordinary seated goddess figure which has
been found in such numbers throughout Greece.

In the earliest of these the figure is a mere mask, very thin, and pre-
senting no attempt at all in the way of modelling or even showing the limbs.
The skirt falls in one uniform line from the knees, terminating in a straight
line of drapery above the feet. The body in the same way is only a flat
sketch of the front of the figure, and is exactly as thick as the skirt. The
features are just indicated. The head-dress is the poodle or the simple
stephanon. From the point where the hips would be in a solid figure, project
two chair-legs set at an angle to the skirt, so that the whole thing rests
on these and the skirt as on a tripod base. In this earliest type the figure
has no arms or legs, but two rectangular projections by the side of the knees
indicate the arms of the chair, which thus consists of two arms and two
hind-legs.

The next type shows the figure solid, and there are attempts at modelling
the arms and hands. The hind-legs of the chair, though still separate from
the figure, are much thicker. The third and latest type shows the ordinary
seated figure made in one piece, of which such numbers were found in the
excavation of the Acropolis at Athens.

Earlier than any of these were a number of small idols from one to two
inches high, of which we found about ten. They are merely little sticks of
clay, pinched in to indicate the nose and hands, which are meant to be
hanging by the sides. In each the top of the head was concave, as if
perhaps they were copied from some rude early idol, on to the head of which
libations were poured. They compare interestingly with the stone idols from
Amorgos, with which the shops in Athens were flooded in 1893. These latter
were more fashioned to the human shape, but like the early seated figures mentioned above were mere masks of stone.

Mixed up with these were many fragments of pottery of all styles, from early Dipylon down to red-figure. Man-headed birds, rosettes, and stars, formed the chief ornaments on the earliest of these. The red-figured fragments were remarkable in technique, for the red, instead of being the natural colour of the clay, was produced by a thin and delicate slip laid on to it, over which were drawn the details of the figure. Several other pieces resembling Fikellura ware were also found, and bits of Boeotian geometric. The ground colour is yellow glaze laid on to pale clay, and the design painted in a curious lustreless red and brown. Finally we came upon a fourth century statuette of Kore carrying torches, about eighteen inches high. The head and feet were missing, but the rest was of respectable workmanship.

These finds were all loose in the earth, mixed up together, and at no great depth, in the middle of the south-west cemetery. They all lay just by the side of a late Roman wall, which I think accounts for the strange admixture of dates. The wall certainly belonged to a Roman villa superimposed over a Greek cemetery, and in digging for the foundations it is pretty clear that the builders cleared out the graves and their contents, and that we found them lying in the rubbish-heap where they had been thrown.

These early pieces of figures and vases are of interest in connexion with the early polygonal piece of wall and the rough cave masonry, as showing that there had been a settlement on the spot of great antiquity. This one had been already led to expect by the information given by Pausanias that Aegosthena was the cradle of the Melampus worship, a hero of whom the little we know takes us back to very primitive times. History however is altogether silent about the place until the beginning of the fourth century, when, to judge by the massive and imposing fortifications erected there, it was expected to take rank as a military station of the first importance. Luckily and unluckily, to the modern traveller it is the end of a cul-de-sac; and thus while few have heard of it, and fewer visit it, it may remain undisturbed for many years—a place, for those who have seen it, to marvel at and return to.

E. F. BENSON.

1 Xen. Hell. 5. 4 : 6. 4.
TWO SEPULCHRAL LEKYTHI.

(Plate XV.)

Mr. Arthur Evans kindly allows me to publish two interesting white lekythi recently acquired for the Ashmolean Museum. The first was said by the vendors to come from the excavations at Eretria, the second from excavations at Athens itself. The particular source of them, however, is not a matter of great importance, since as yet no satisfactory proof has been adduced that the white lekythi found at Eretria were made in Euboea or elsewhere than at Athens. Both of our vases appear to belong to the regular Attic series. The plate and the cut which pertain to this article were both produced from photographs taken with the help of Mr. A. H. Smith's ingenious invention, the cyclograph (see above, p. 192). The plate was made direct from a photograph, the cut drawn by Mr. F. Anderson on the basis of a photograph.

Vase No. 1.—Height 15 inches (ctm. 38). (Pl. XV.)
On shoulder, three palmettes, leaves alternately red and black.
Over design, simple Mæander.
Design in red: stele, bound with fillets and surmounted by a kind of capital which supports an elaborate double acanthus and palmette; two rosettes on face; at foot a box. On the right a youth clad in a red himation, extending his right arm. On the left, a winged Nike advancing towards the stele, clad in chiton with diplois, holding in both hands a flat tray containing wreaths.

The eyes of the figures are in profile, the eyelashes clearly marked; the style is of the latter part of the fifth century. On the surface of the vase is a hard yellow glaze.

The curious feature of the design is the presence of a winged figure, no doubt Victory, in place of the usual mourning woman. So far as I know, this is the only vase published with this peculiarity. It is true that in the Catalogue by M. Froehner of the vases and terracottas exhibited at the Burlington Club in 1888 it is stated that on the lekythus No. 124 a winged female figure appears on one side of a sepulchral stele. But those who turn to the photographic representation of that vase in the plates will easily convince themselves that this description is not altogether correct. There is on the shoulder of the girl by the tomb what appears at first sight to be
a butterfly wing, but on examination it is seen to be only the end of a small over-garment fluttering in the wind, like the flying chlamys so commonly represented in vase-paintings and sculptural reliefs. Mr. Bosanquet is good enough to inform me that among the vases from Eretria in the Museum at Athens is a small and conventionally drawn lekythos (No. 2018) on which a winged figure appears in the place of a female mourner. I know of no other instance.

We must briefly consider what meaning was probably attached to the design by the artist who painted it. I think we may decisively reject the notion which might suggest itself that the winged lady is the soul of the deceased. When souls are represented on these lekythi they are of very minute size. Moreover the winged figure is clearly bringing offerings, and can scarcely be the deceased person to whom offerings are brought. It is by no means impossible that the other attendant at the grave, the young man, may represent the occupant of the tomb. Several instances may be found in which the deceased is not seated on the steps of the stele, but standing beside it. But the winged figure is certainly not the soul of the dead.

It is in fact quite clear that she is, as I have described her, a Victory. Her attitude is charming, and her form well-drawn, in spite of a little clumsiness in the legs and feet. The position is not quite that of any of the Victories in the balustrade of the temple of Athena Nike; and in fact the vase is probably of somewhat earlier date than that balustrade. But the vase-painting and the relief belong to kindred schools of design, and alike indicate a tendency of Athenian art at the time. This is the tendency to bring in, wherever it may suitably be done, figures of Victory engaged in a number of the offices really carried out by mortals. In the balustrade, Victories lead a bull to sacrifice and erect a trophy in honour of some Athenian victory. The instances in which Nike in vase-paintings and reliefs brings the wreath to an athletic victor are too numerous to mention. It need not therefore in any way surprise us to find Victory bringing wreaths also to the grave of some distinguished person, very probably a winner in the games.

We may illustrate the substitution of Nike for an ordinary female figure by the comparison of another set of vases. On two vases of Berlin, one red-figured and one white,¹ we have the same design, a woman at a fountain, stooping to lift a hydria. On a lekythos at Athens² a similar figure appears in the same attitude, but with wings.

Before quitting this vase I must remove the fears of those who may suspect that some part of the design may be due to the ever increasing skill of the modern Athenian dealer in antiquities. At my request Mr. Evans has had the vase washed with water, and even in some parts touched with diluted acid, in order to make sure of the antiquity of the drawing; and the vase has sustained this treatment without suffering any injury, or losing a line of the design.

TWO SEPULCHRAL LEKYTHI.

Vase No. 2.—Height 11½ inches (cmt. 28·4).
On shoulder; three palmettes with leaves alternately red and black.
Over design, simple maeander.
Stele, drawn: aslant, surrounded by acanthus. On the right, a youth
clad in himation, drawn only in outline; his right hand rests on some object,
apparently a distaff which rests on the step of the stele. On the left, a
female figure clad in dark chiton bound with white girdle; she holds a small
bier which contains the body of a dead child, the head disproportionately
large, the eyes apparently closed. A fragment of the coverlet falls from the
bier. A lyre hangs above in the background.

In several details of ornament this vase resembles the first, but the
drawing is more careless. The date cannot be much later.

In this case also the interest of the vase arises from an unusual
peculiarity of the design, the corpse of the child. The drawing of it is very
unsuccessful, the head is too large, and the body unnaturally flattened. This
latter peculiarity however may be seen in the drawing of many prothesis
vases, though in not so extreme a degree. In our vase the bier is but little
larger or deeper than the flat tray in which wreaths and lekythi are commonly
brought to the tomb; yet the artist has made his purpose quite clear. It is
no tray turned into a bier by slight modifications, but a bier which the hand
of the draughtsman, evidently a very unskilful and careless workman, has
made nearly in the likeness of the usual tray.

The meaning of this picture also must be briefly considered, although in
this case it is not easy to reach a definite opinion. Is the grave, like so many
at Athens, that of a young mother who died in childbirth? In that case no doubt it would not be unnatural that the infant for which she gave her life should appear by the stele. It may be supposed that the child which did not long survive its mother is brought to the grave by the nurse, while the young husband brings the distaff of his lost wife. Both infant and distaff may well have found a place in the grave, the place of which is marked by the stele; very appropriately therefore they may figure with the lyre as dedications or offerings at the tomb. I can suggest no better interpretation than this; to which the main objection seems to be that it supposes in the painter of the lekythus a special reference to the circumstances of the particular death, a thing somewhat unusual at Athens even in the case of grave-reliefs, and still more unusual in the case of sepulchral vases. Such reference is out of the lines of the higher Attic art. But the painter of our vase is evidently an ill-trained or inexperienced man, as the defects in his drawing clearly show; and such a man would be more likely to violate the ordinary rules of Athenian convention than an artist of more experience.

It is in fact the narrow limits of received conventions which make the large series of Athenian lekythi with white ground somewhat uninteresting in spite of the beauty of the drawing and the charm of the designs. It is pleasant to find, as in the two vases before us, that even at Athens the strict rules of artistic precedent were occasionally violated, and interesting variations introduced. These variations are in our two vases in diametrically opposite directions. The artist of the second vase varies in the direction of the admission in his design of circumstances peculiar to an individual case; the very much more highly educated artist of the first vase varies in the direction of unusual generalization and ideality, a human mourner being replaced by a figure which embodies rather the general principle of mourning, and of offerings to the dead.
