# CENSUS OF INDIA, 1901.

### COORG.

### IMPERIAL SERIES, VOLUME XIV.

### THE REPORT AND TABLES.

#### INTRODUCTORY.

- 1. The census of Coorg was taken on the same date as that of the rest of India, namely, the night of the 1st March 1901, and the Imperial Tables.

  The volume contains the report and this volume contains both the Imperial Tables which were compiled from the results thereof and the report upon them.
- 2. These Imperial Tables are 19 in number, and the figures in each of them

  The chapters in which the Imperial are considered in the chapter of this report which is set opposite to it below:—

	Number and descrip	tion of Im	perial Tr	able.			Chapter of the report in which it is discussed.

- 3. At the present census statistics of the population and religions of each town and village in the province were also compiled and these have been appended to the copies of this report which are intended for local use.
- 4. The census operations in the province were under the direction of the Enumeration and abstraction and Superintendent of the Census of Madras, and accordingly the enumeration was done on the same principles as in Madras.

  Superintendent of the Census of Madras, and accordingly the enumeration was done on the same principles as in that Presidency and the abstraction and tabulation of the figures were effected by the "slip system" there followed. The details of the machinery used in both these parts of the work are set out in full in the Administrative Volume (Part IV) of the Madras Report and it is not necessary to refer to them again here.

5. Appendix A below contains the report of the First Assistant Commissioner First Assistant Commissioner's on the operations, and Appendix B a statement of the expenditure incurred. The figures in the latter under Head A, Enumeration, I, District charges, were taken from the reports of the authorities in Coorg; those under II, Press charges, are the amounts which the Superintendent of the Madras Government Press estimates to be the share of the province in the various items of expenditure shown under it; while those under the remaining heads, namely, B, Abstraction and Compilation, and C, Superintendence, are calculated rateably on the population of Coorg on the basis of the accounts of the expenditure in the Madras Census offices upon the population dealt with in those offices. The figures do not, however, include the cost of printing this report, which cannot at present be ascertained.

I avail myself of this opportunity of expressing my acknowledgments to Mr. M. E. Couchman, I.C.S., who was the First Assistant Commissioner and District Magistrate while the work was proceeding, for the assistance he gave me in carrying it through.

#### CHAPTER 1.

### DISTRIBUTION OF THE POPULATION.

(TABLES I, III, IV AND V.)

6. The province of Coorg is the smallest in India, its area being only 1,582

Area and population of the province. square miles. Even of this, as much as 599 square miles, or over one-third, consist of Ghat or Reserved forests, which are practically uninhabited. Its population according to the census is only 180,607, or about that of an average taluk in the Madras Presidency.

7. The province has obtained a volume in the Census Series all to itself less in virtue of its importance than of its isolation. It lies at the top of the Western Ghats and is cut off by them from easy communication with the British districts of South Canara and Malabar, which form its western and southern boundaries, while on its other sides it is

surrounded by the Native State of Mysore.

Its general elevation is between 3,000 and 3,500 feet, but in places the hills in it run up to 6,000 feet. Like the rest of the west coast it has a very heavy annual rainfall, the average exceeding 120 inches in all parts of the province except the east side, which is lower. Were Coorg included in the Madras Presidency it would have been grouped with the districts of the "West Coast Division" referred to in Chapter I of the census report thereon. It is chiefly known as a coffee-growing country, and as the home of the race of Coorgs, or Kodagus, referred to later on.

8. Coorg is governed by a Chief Commissioner,—who is the British Resident in

Mysore,—subordinate to whom are a Commissioner,
who combines the functions of Civil and Sessions Judge
and head of the Revenue administration, and a First Assistant Commissioner. This
latter officer is also District Magistrate and head of the Police, but an Assistant
Superintendent of Police, who has relieved him of much of the executive control of
that department, has been recently appointed. There is also a Revenue Assistant
Commissioner who acts as personal assistant to the Commissioner. Civil Justice
is administered by a Subordinate Judge and two Munsifs.

The province is divided into the five taluks noted Aren in Taluk. square miles. 216:30 in the margin, each of which is administered by a native Moreura officer called a Subedar and is again sub-divided Pádinálknád 399-90 Yedenálknád 201:45 into Nads or Hoblis, the heads of which are called Kiggatnád 410-45 Nanjarájapatna 354.71 Parpattigars.

9. The gross receipts of the province in 1900-01, the year in which the census was taken, were Rs. 8,72,614 and the net receipts Rs. 6,36,315. The expenditure was Rs. 4,80,321 and the surplus thus amounted to nearly Rs. 1,56,000. The principal sources of income were land revenue, excise on spirits and drugs, stamps and income-tax, and the chief items of expenditure were public works, civil establishments and education.

The imports were valued at Rs. 28,14,000 against Rs. 17,20,170 in 1891. This includes Rs. 14,10,000 of treasure, grain worth Rs. 4,00,000, oils estimated at Rs. 1,40,000, sugar and saccharine produce valued at Rs. 1,35,000 and salt worth nearly the same amount. The exports were estimated to be worth Rs. 23,17,000 against Rs. 27,78,000 in 1891, of which coffee valued at Rs. 20 lakhs was by far the most important item. Grain and pulse (Rs. 1,25,000) came next, then timber and sandalwood (Rs. 1,19,000), and then cardamoms and spices (Rs. 38,000). The exports of coffee in 1891 were valued at Rs. 25,55,400 and the decline in this product is mainly responsible for the reversal of the balance of trade which has occurred during the decade, for, while in 1891 the exports exceeded the imports in value, the opposite is now the case.

10. The density of the population is 114 persons to the square mile, which is about the same as that of the Nilgiris district of Madras. If the 599 square miles of forest alluded to above are excluded, the number of persons per square mile rises to 184, which is

nearer the figure for Nellore than that for any other district of Madras, but is still greatly below the mean density of the Madras Presidency, which is 270 per square

The density has increased but slowly during mile. the last thirty years. In 1871 it was 106; in 1881, Talnk. Density. Mercara Pádinálknád 132 113; and in 1891, 109. These variations are discussed 72 215 more particularly in the next chapter. The density Yodenálknád Kiggatnad of the population of each of the five taluks is given in 120 Nanjarajapatna the margin.

11. There are five towns in the province as in 1891, but the number of inhabited villages is 479 against 492 in that year. The difference is due to the amalgamation of certain small

villages with others during the settlement.

As in Madras, the village is not a sociological unit, but merely an area the boundaries of which are determined by considerations of administrative convenience. Moreover, most of the people live in separate houses as they do in Malabar, and not in continuous streets. The villages run very small, their average population being only 345 against 623 in the Madras Presidency.

Of the rural population 41 per cent, live in villages containing less than 500 persons and another 55 per cent, in those containing between 500 and 2,000 inhabitants. Thus only 4 persons in every 100 live in villages which have a population

of over 2,000.

Town.

Mercara ...

Virarájéndrapet ...

Sómavárapet ...

Fraserpet ...

Kodlipet ...

Town.

Population.

6,732

4,283

and in the Madras Presidency they would probably not even be constituted "Unions" under the Local Boards Act. Eight per cent. of the population live in these

five places and the average number of inhabitants in each is 3,050.

12. The population of Mercara was less in 1891 than it was in 1881, and is now again less than it was ten years ago. The number of people in Virarájéudrapet has similarly declined during the decade. The decreases since 1891 are in both cases due to the falling off in the coffee-growing industry which has already been noticed and the consequent decline in the prosperity of the province which has occurred. The fall in Mercara between 1881 and 1891 was due to the withdrawal of the regiment which used to be stationed there.

- 13. There are 30,560 occupied houses in Coorg, of which 3,077 are in towns.

  The occupied houses in the province.

  There are on an average 19 houses in every square mile, against 17 in 1891 and 14 in 1881.
- 14. The average population per house is higher in the villages than in the towns, being 6.02 in the former and 4.96 in the latter. This anomaly is due to the commonness of the custom under which several branches of an undivided family live under the same roof. The same thing occurs in the Náyar tárwád houses which are such a feature of Malabar. The modern tendency, as has been noticed in the Madras report, is for these large families to sub-divide and live separately, and that this tendency is operating also in Coorg is shown by the continuous decline in the average number of persons living in each house which has occurred during the last twenty years. In 1881, there were 7.98 persons in every house; in 1891, 6.46; and in 1901, 5.91. Probably in another ten years the number will have again declined slightly, but it is not likely to fall below five.
- 15. Of the rural population 90 per cent. are Hindus, 6 per cent. Musalmans and 2 per cent. Christians, but of the people in the five towns only 68 per cent. are Hindus, while 24 per cent. are followers of the Prophet and 7 per cent. are Christians. The adherents of the two latter religions thus affect a town life much more than the members of the first. The same thing occurs in Madras, though to a less degree. In Coorg the figures are largely affected by the numbers of Musalmans and Christians who immigrate into its towns for purposes of trade.

#### CHAPTER II.

#### MOVEMENT OF THE POPULATION.

(TABLES II AND XI.)

16. The expression "Movement of the population," taken as the title of this chapter, denotes in statistical usage the net result of the two factors which determine the strength of the population of any area at a given time, namely, the ratio of births to deaths and the ratio of emigration to immigration.

17. But in the case of Coorg it is of little use to attempt to draw any definite deductions as to the normal growth of the population from the registered statistics of births and deaths for the reason that the people of the province consist so largely of labourers on the coffee-plantations who have immigrated to it from the adjoining districts of Mysore State and of the Madras Presidency that every kind of calculation based upon such figures is vitiated.

The official vital statistics show a large excess of deaths over births, which would ordinarily mean that the population is rapidly declining, but the real explanation of the phenomenon consists in the fact that a large number of the people are male immigrant coffee estate coolies who are either unmarried or have not brought their womenkind with them, and so do nothing towards increasing the birth-rate. In Coorg there are 19,909 more males than females or, in other words, only 801 females to every 1,000 males. Vital statistics thus form an unreliable guide to the rate at which the population is growing.

No statistics of emigration or immigration available.

- 18. There are no statistics at all of the emigration from or immigration into Coorg, as neither the one nor the other is registered.
- Census statistics of variation of population.
- 19. In endeavouring to estimate the "movement of the population" we have thus only the census figures to go upon.

These show (Table II) that between 1871 and 1881 the population of the province (which was not affected by the great famine of 1876) increased by 5.9 per cent.; that in the next decade, which was a prosperous one, it declined by 2.9 per cent.; and that during the last ten years it has advanced by 7,552 persons or 4.4 per cent., the increase being about equal in the two sexes. In the adjoining British districts of South Canara and Malabar the rates of advance were respectively 7.4 and 5.6 per cent., while in Mysore the rate was 12.05 per cent.

These figures are at first sight curious, as in the decade 1881-1891 the population of every other province in India rose in numbers, but it will be seen from the report on the 1891 census of Coorg that the fall there was entirely due to the fact that while in 1881 the coffee crop was late, and the estate coolies who were picking it therefore remained in the province longer than usual and so were included in the census of that year, they had most of them returned to their native districts before the census of 1891 was taken. Mr. P. A. Booty, the present First Assistant Commissioner, informs me that in 1901 the crop was a heavy one and that therefore the coolies were most of them again on the estates at the time of the enumeration in that year. This statement is supported by the language statistics in Table X, for these show that the number of males who speak Malayalam and Tulu, the languages of the adjoining British districts, has increased much faster than the number of females who talk them. Thus the males whose vernacular is Malayalam are 2,194 more numerous than they were ten years ago while the females have increased by only 546. Similarly the males who speak Tulu have advanced in number by 838 and the females by only 66.

Thus even the census statistics of the variation of the population do not give any reliable indication of the essential rates of its growth when it is unaffected by migration.

20. Something, however, may be learnt from some others of these statistics. Table XI (Birth place) distinguishes the people who Birth places of the population. were born in Coorg itself from those who were born outside it. The percentage to the total population of those who were born in the province is only 69.5, which is lower than the figure for any other administration in the whole of India. In 1891 the percentage was about the same, being 69.4. Of the remaining 30.5 per cent, of the people as many as 28.2 per cent, were born in adjoining tracts, that is, in Mysore, Malabar or South Canara. These are the immigrant coffee estate coolies, as the proportion of the sexes among them shows, for while 36 per cent, of the males of the province are immigrants only 24 per cent. of the females come from outside it.

The rate of increase among these immigrants is 4.1 per cent, and the growth among the population which was born in the province was 4.5 per cent., which two figures are about equal. The advance in the population of the province as a whole has not therefore been greatly affected by the rate of increase in the immigrants.

Reasons for the slow rate of increase of the population.

21. The advance as a whole, as has already been seen, is only 4:4 per cent. It is thus clear that the last ten years, owing to the decline in coffee-growing, cannot have been a prosperous period in the history of the province. The birth place

statistics of Mysore State seem to show that the slow growth of the indigenous population was in part due to emigration thither. In 1891, 1,607 persons (699 males and 908 females) who were born in Coorg were found in Mysore. This year the numbers have increased to 2,553 (1,001 males and 1,552 females). The excess of females in these seems to show that many women from Coorg have married men in Mysore and gone to live there. There appears, however, to have been little movement westwards into British territory, the number of people found in the

Madras Presidency being 631 against 642 ten years ago. Outside Mysore and the Madras Presidency hardly any persons were found in other provinces who were born in Coorg.

The figures in the margin compare the variations in the population of the different taluks of the province.

Variations in the number of the

22. The Coorgs themselves have increased by 3,480, or 10.7 per cent., since 1891 against an advance of 20.6 per cent, in the decade 1881-1891

#### CHAPTER III.

#### RELIGION.

#### (TABLES VI AND XVII.)

- 23. Subsidiary table 1 at the end of this chapter gives the main statistics of the religions of the people. It will be seen that out of the total population of 180,607, 159,817, or 88 per cent., are Hindus; 13,654, or 8 per cent., are Musalmans; 3,683, or 2 per ceut., Christians; and 3,305, or 2 per cent., Animists. There are also 107 Jains and 41 Parsis. In the Madras Presidency, of every 100 persons 89 are Hindus, 6 are Musalmans, 3 are Christians and 2 are Animists.
- 24. In 1891 there were no Animists in the Coorg returns. It has been explained in the report on the Madras census that Animists are those who are neither Musalmans nor Christians, and yet cannot be strictly considered to be Hindus as they worship none of the recognised gods of the Hindu pantheon, but reverence devils and spirits of various indefinite and indeterminate descriptions. In Coorg in 1891 all such persons were lumped together under Hindus.
- 25. Since that year Hindus and Animists together have increased by 4 per cent., Musalmans by 7.8 per cent., and Christians by 8.6 per cent. Jains are fewer by seven persons and Parsis more numerous by two.

There is considerable reason for supposing that Musalmans are naturally more prolific than Hindus, but probably in Coorg the rates of increase are affected less by this factor than by the immigration of followers of the Prophet for the sake of trade.

- 26. The advance in the number of Christians is nearly twice as rapid as in the population as a whole. Of the total Christian population, Europeans and allied races form 6 per cent., Eurasians 8 per cent., and Native Christians the remaining 86 per cent. A comparison of Table XVII with the corresponding figures of 1891 shows that far the greater part of the increase in the followers of this faith has occurred among Native Christians, as Europeans are 21 fewer than they were ten years ago, and Eurasians only 83 more numerous, while the numbers of the Native Christians have risen by 229. Some of the reasons which lead to a rapid increase among Native Christians have been discussed in the Madras report.
- Subsidiary table 2 at the end of this chapter shows the denominations to which the various Christians in Coorg adhere. Of the 228 Europeans as many as 163 belong to the Anglican communion. Of the 295 Eurasians, 175 are Roman Catholics and 90 are members of the Anglican Church. Of the 3,160 Native Christians, on the other hand, only six belong to this latter denomination, while 2,771, or 88 per cent., are Roman Catholics and 346, or another 11 per cent., are Lutherans. According to the figures, the adherents of the Anglican Church have declined in number from 458 to 259 in the last ten years, while the Lutherans have increased from 29 to 381. But the figure 458 includes 152 persons who in 1891 returned themselves as "Protestants" and it is not clear that some of these were not really Lutherans. If they were, the variations in the numbers belonging to these two denominations are not so striking as they appear at first sight. The fact that 148 fewer persons than in 1891 failed to return their sect also vitiates comparisons between the figures of the present year and those of 1891. As the statistics stand, they show that the Roman Catholics have increased during the decade by 371, or by 14 per cent., which is between three and four times the rate of increase of the population as a whole.

#### CHAPTER IV.

#### AGE, SEX AND CIVIL CONDITION.

(TABLES VII AND XIV.)

Age. The statistics are usually each inaccurate.

28. It will be convenient to discuss separately each of the three subjects with which this chapter deals.

#### AGE.

The various causes which operate to render the age returns at a census inaccurate have been referred to in the report on the Madras statistics, and they are at work in Coorg as much as elsewhere. Subsidiary tables 1 and 2 at the end of this chapter give, however, the distribution of 1,000 persons of each sex by the ages as they were returned, first for the last three enumerations and secondly for the three main religions, namely, Hindu (which includes Animistic), Musalman and Christian.

Ages of males in Coorg are peculiar. Some unusual points. In an ordinary progressive population the age of 5 ought to be larger than the number who are found at any of the other quinquennial periods and the number in each successive five-year period ought to decrease at a gradually increasing rate as death carries off its victims. But in Coorg among every 1,000 males there are more persons of the age 25—30 than in any other of the quinquennial periods and the same phenomenon has appeared at each of the last three enumerations. It is due to the fact, already referred to, that a large proportion of the male population consists of immigrant coolies in the prime of life.

Subsidiary table 2 shows that this peculiarity occurs among Hindus and Musalmans but not among Christians, and the inference is that the coolies belong

less to this last religion than to the other two.

30. Among 1,000 females, on the other hand, the largest number at each of the last three censuses and in all the three main religions are seen to be either under 5 or between the ages of 5 and 9. (There is considerable confusion, usually, between these two periods at a census, as parents return children of 3 or 4 as being of the round age of 5.) The inference is that fewer of the females are immigrant labourers. That a certain proportion belong to this class is, however, clear from the fact that the percentage of females who are aged between 15 and 29 is larger than is the case in provinces where conditions are more normal.

#### SEX.

31. There are 19,909 more males than females in the province, or, in other words, there are only 801 females to every 1,000 males.

This is again an effect of the presence of a number of male immigrant labourers within its limits. In the Madras Presidency the figure is 1,029. In 1891 the corresponding proportion in Coorg was 804 (probably because the immigrant population included in that census was smaller); in 1881, 775; and in 1871, 782. Subsidiary table 3 at the end of this chapter shows that women are proportionately fewest in the age periods between 25 and 50 among the followers of all religions except Christianity, which goes to confirm the conclusion already arrived at that few of the Christians are immigrant labourers. The table also shows that females are fewer in proportion to males among Musalmans than among the members of any other religion. The reason probably is that the Moslems are largely traders who have not brought their wives with them.

 The increase in the proportion of females to males which has occurred since 1881 may be due to two causes. It may either be owing Reasons for the increase in the proportion of females. to the fact that the coffee-estate coolies have begun to take their womenkind with them to Coorg in larger numbers than they did, or that the enumeration of women is more complete than it was. A certain amount of omission of women seems to occur at the enumeration in almost all provinces, and the Coorg statistics show that even in the castes which are indigenous to the province and contain no immigrants at all, there are fewer women than men.

33. Thus among the Coorgs or Kodagus there are only 979 females to every 1,000 males and among the Yeravas, who are the agri-Proportion of the sexes in castes cultural serf class of the province, there are only 942. These two castes are very rare outside Coorg, so that the number of the males among them cannot have been enhanced by immigrants

Numbe	r of f	emales	to 1,00	00 male	es amo	ng Coc	egs.	from other parts. It is noticeable (see the figures in the margin) that the pro-

nitted								it may be that members of the race have

omitted to return those of their daughters who were at this marriageable time of life.

34. The inference that women must have been omitted at the enumeration is also supported by the fact that of all the castes in the and in the other castes. province which number as many as 50 souls there are scarcely a dozen in which the females are more numerous than the males. All of these latter are Hindu or Animist castes, and only one of them is 600 strong. The only caste of any considerable strength in which the females are noticeably more numerous than the other sex is that of the Lingayats, who number 8,702 and among whom there are 1,038 females to every 1,000 males. The lowest proportions are found among the Tulu castes of Bant and Pále, the Malayálam castes Kammálan, Kólayán, Náyar, Paniyan and Tíyan, the Telugu Mangalas and Sáles, the Tamil Pallis, the Katikes, Kshatriyas, Lambádis and Sonagáras and the Musalman tribe of Navayats, in all of which there are more than twice as many men as women. The total strength of some of these castes in the province is, however, small.

#### CIVIL CONDITION.

35. Imperial Table VII gives statistics of the civil condition of the people, that is, of the number of those who are unmarried, Civil condition. Where the figures married and widowed, while Table XIV gives particulars for the race of the Kodagus or Coorgs. race has also been selected for special notice in Table IX (Education by castes) and Table XVI (Occupation by castes) which are respectively discussed in the next chapter and in Chapter IX, Occupation. The reasons for this selection were as follows: It was decided to choose only those castes which were fairly common. In 1891 there were only five castes in the province which numbered over 10,000 persons, namely, Kodagu or Coorg, Gauda, Vakkaliga, Holeya and Yerava. Of these five only two,-Kodagu and Yerava,-are peculiar to Coorg, the remainder being castes which are found in much greater strength and in a more typical condition in the Madras Presidency, and which it would therefore be misleading to examine in so small an area as Coorg. It was thus only necessary to consider the case of the Kodagus and Yeravas. Neither the civil condition, the education nor the occupations of the latter promised to exhibit any striking points of difference from those of other castes of similar pursuits and social standing, but the Kodagus are a distinctive race with a marked national spirit of their own and it was accordingly considered desirable to collect particulars regarding their marriage customs, their literacy and their usual means of livelihood.

36. For the province as a whole the statistics of civil condition are not very instructive, as they are so greatly affected by the large The statistics are again affected by and varying proportion of adult immigrants in the population that few clear inferences of the marriage customs

of the people can be safely deduced from them.

37. Subsidiary table 4 gives the distribution of 1,000 persons of each sex by age and civil condition. The Madras Census Report but exhibit the same peculiarities contains some explanation of the looseness with which as those of other provinces the term "married" is apt to be used and an account

of the difficulty which the vagueness of the vernaculars occasions in getting an accurate return of widowers. Taking the statistics as they stand, however, this subsidiary table shows that civil condition in Coorg exhibits the same three characteristics as are usually found in all Indian provinces, namely, almost universal marriage, marriage at early ages (especially among girls) and a high proportion of widows to widowers. These characteristics, nevertheless, are not nearly so marked as in Madras, for whereas in that Presidency only 25 per cent. of the males and 5 per cent. of the females over 15 years of age are unmarried, in Coorg the corresponding figures are respectively 34 and 11; and though in Madras as many as 1 per cent. of the boys and 9 per cent. of the girls under 15 are married, in Coorg the figures are less than 1 per cent. and 2 per cent., respectively; further, in Madras there are 506 widows to every 100 widowers, while in Coorg there are only 285. This last figure is quite unusually low and must again be due to the fact that so many of the people are male immigrants who have not brought their womenkind with them.

Subsidiary table 4 shows, however, that few men over 30 years of age and fewer women over 20 remain unmarried, that many girls are married between the ages of 15 and 20 and many youths before they are 25, and that whereas 49 males in every 1,000 are widowers, there are on an average 176 widows in the same number of the other sex.

Subsidiary table 5 and the figures for all religions in subsidiary table 6 exhibit the same facts in other shapes. They show, for example, that only 10 in every 1,000 unmarried males and only 3 in the same number of unmarried females are over 40 years old; that 6 in every 1,000 married males and 25 in every 1,000 married females are under 15 years of age; that 12 in every 1,000 boys, and 69 in the same number of the other sex between 10 and 15 are married; that only 33 males in every 1,000 over 40 years old are bachelors and only 2 in every 1,000 females at the same period of life are old maids; and that while 164 males in every 1,000 who are over 40 are widowers the number of widows in the same number of females of that age is as many as 677, or more than four times as great.

38. This subsidiary table 6 shows, however, that the three main religions do not all contribute equally to bring about this condition Civil condition in the various reliof things. Of 1,000 Hindu males of all ages 392 are married and of 1,000 Hindu females 373, while among Christians the corresponding proportions are respectively 385 and 369. Among Musalmans the figures are 442 and 430, respectively, but these high percentages are doubtless partly due to the fact that so large a number of the followers of this faith are adult immigrants. That the Musalmans are addicted to marrying their girls early in life is, however, evident from other figures in this table, for while among Christians only 32 in every 1,000 girls between 10 and 15 are married, and among Hindus 65, the corresponding figure among Musalmans is as high as 130. They also marry off their boys at tender ages, 15 in every 1,000 of those between the ages of 10 and 15 having entered upon matrimony against 12 in the case of Hindus and 8 in that of Christians.

39. It has been mentioned in the Madras report that the universality of marriage and the early age at which it takes place are both of Declines in the universality of mar-riage, in the earliness of marriage, and in the proportion of widows to them largely due to the fact that the Brahmans consider that both practices are enjoined by their religion and that the people as a body follow the customs of the Bráhmans in such matters. The large proportion which widows bear to widowers

is also therein stated to be greatly due to the people having imitated the Bráhman custom of prohibiting the marriage of widows. It is satisfactory to note, therefore, that subsidiary table 6 shows that there are signs of a decline in the degree to which all three practices are now followed.

In all three religions the percentage of the population who are married has declined, the proportion of the girls under 15 who remain unmarried has risen, and, except among Hindus, the percentage of the women over 40 years old who

are widows has fallen.

40. Subsidiary table 7 gives the figures for Coorgs in Imperial Table XIV, already referred to, in proportional forms. It shows that in two of the three characteristics above mentioned the members of this race are superior to the community generally. Marriage is not so universal with them as with the people as a whole, only 314 in every 1,000 males and 325 in every 1,000 females naving entered upon matrimony against 396 and 378, respectively, in the total population. Of the males among them who are over 15, 37 per cent. are unmarried and of the females 19 per cent., while for the province as a whole the corresponding figures, as has already been seen, are only 34 and 11, respectively. In the third of the three characteristics,—the proportion of widows to widowers,—it has already been seen that owing to the unusual elements of which the population consists the figure for the province as a whole is unusually low. The Coorgs, however, can evidently claim credit for permitting widow-marriage to a considerable extent.

41. The last of the subsidiary tables shows the proportion borne by wives to husbands. It will be seen that in the province as a whole there are only 764 wives to every 1,000 husbands, and that among the Musalmans the proportion falls to as low as 593, or, in other words, that hardly half the Musalman husbands in Coorg have got their wives with them there.

#### CHAPTER V.

#### EDUCATION.

#### (TABLES VIII AND IX.)

Literacy of the total population. 42. In census phraseology "literate" includes

every person who can read and write.

Subsidiary table 1 at the end of this chapter shows that of the total population of Coorg 78 persons in every 1,000 possess this amount of learning. In Madras the corresponding figure is 63. In both male and female education Coorg is in advance of the Madras Presidency as a whole, for of 1,000 males in the former 128 are literate and of 1,000 females 16, while in the latter the figures are 119 and 9 respectively. If the districts of Madras are taken separately, however, there are several which are superior to Coorg in this matter.

43. Figures for the three main religions are given in subsidiary tables 2, 3 and 4, and these show that, as in the Madras Presidency, Christians are much more literate than Musalmans and Musalmans are in advance of Hindus. The figures are given in the margin for facility of reference. The superiority of the Christians in the education of women is particularly

Number in 1,000 who are literate.

Christians in the education of women is particularly noticeable. Among the members of that religion there are 384 literate females to every 1,000 literate males, while among the population as a whole there are only 98. The education of the males of this religion does not, however, appear to be

- 98. The education of the males of this religion does not, however, appear to be in a progressive condition, as the proportion of those who are between the ages of 15 and 20 who can read and write is less than the corresponding percentage among those who are aged 20 and over. Among females the opposite is the case.
- A4. For Imperial Table IX, which shows the literacy of selected castes and races, only one race, the Kodagus or Coorgs, was picked out, the reasons for choosing it being those already referred to in the last chapter in connection with Table XIV (Civil condition by selected castes).

Subsidiary table 5 gives the proportional figures for this race and shows that in every 1,000 persons belonging to it there are 162 who can read and write,—in every 1,000 males 284 and in every 1,000 females 37. In other words, the Kodagus are considerably more literate than the main body of either the Hindus or the Musalmans in the province (see the figures in the margin above), but do not approach the Christians in this respect.

45. For the first time in the history of the censuses of Coorg, particulars were collected in 1901 of the vernaculars which the literate literate population could read and write. Only certain selected vernaculars are shown in the tables, those chosen being Tamil, Telugu, Malayálam, Canarese and (in the case of Table IX) Kodagu or Coorgí, the language which the Coorgs speak.

The figures for the total population and for the three main religions are given in subsidiary tables 1 to 4. These show that among the population generally far more people can read and write Canarese than any other vernacular, the number in every 1,000 males who know that language being 96 against 11 who know Malayálam, 6 who know Tamil and 9 who know other languages. Only one man in the whole province can read and write Telugu.

In every 1,000 Hindu males, 104 can read and write Canarese, 8 Malayálam, 4 Tamil and one other languages.

In every 1,000 Musalman males, however, 96 know "other languages," which includes Hindóstání, and 38 Malayálam (these latter are no doubt Máppillas), while the number who know Canarese falls to 19.

Christians are most literate in Canarese, then in Tamil and then in Mala-

yálam.

The Coorgs who are literate are practically all of them literate in Canarese (see subsidiary table 5), only 2 males returning themselves as being best able to read and write Malayalam and only one as knowing Kodagu. A considerable number of them have entered themselves as knowing how to read and write English better than any other language.

46. Literacy in English for the total population, the three main religions and for the Coorgs is shown in these same five subsidiary tables. Of the people of the province generally, only 9 in every 1,000 can read and write the language,—of every 1,000 males 14, and of every 1,000 females no more than 2. The corresponding figures in the Madras Presidency are 5, 9 and 1, so that Coorg is in advance of that Presidency as a whole in knowledge of English just as it is in literacy generally.

The number of males and females in every 1,000 of each of the main religions

Number in 1,000 literate in English,

Males. Females.

Hindus ... 12

Musalmans ... 3

Christians ... 178 39

who can read and write this language are given in the margin. Hindus are superior to Musalmans in this respect though they were behind them in education generally. The Christians are far in advance of the other two religions, but this is partly because the

Europeans and Eurasians included under this head are of course more literate in English than in any other language.

Of those of the Coorgs who can read and write, 11 per cent. (12 males per cent. and 4 females per cent.) have returned themselves as knowing English.

Progress made in Education. Number of literates in 100

Nales, Females, 1881 ... 88 0-5 1891 ... 11·2 0-9 1901 ... 12·8 1·6 47. The figures in the margin show the progress which has been made in education in the province in the last twenty years.

Literacy among males is very little commoner than it was in 1881, but among females it has made a considerable advance, the percentage of the sex who

can read and write being nearly twice what it was ten years ago.

Number knowing English in 100

Males. Females.

1891 ... 0.7 0.1
1901 ... 1.4 0.2

Knowledge of English has also advanced rapidly, the percentage of each sex who can read and write it, as the figures in the margin show, having doubled during the decade.

#### CHAPTER VI.

#### LANGUAGE.

(TABLE X.)

48. The chapter on language in the Madras report discusses the various languages which are current in that Presidency, and as the vernaculars of Coorg are, with two exceptions, the same as those spoken in Madras, it is unnecessary to go over the ground again. The two exceptions are Kodagu or Coorgí, the language of the Coorgs, and Yerava, the dialect of the caste of that name. This latter caste does not apparently occur outside the province. The former of these two languages is described by Dr. Caldwell as standing about midway between old Canarese and Tulu and the latter is usually treated as a dialect of Malayalam.

49. The subsidiary table below arranges the various languages which were returned in the schedules according to the families and groups usually recognised by philologists and also shows

the number in every 1,000 of the population who speak each of them.

It will be seen that the language of the province is Cangrese, 424 in every 1,000 of the people speaking it. Next in popularity comes Kodagu, which is the vernacular of 217 in every 1,000 of the population, or of nearly one quarter of it. It is spoken by others besides the race of Coorgs themselves, as though only 36,091 people returned themselves as Coorgs by race, 39,148 persons have put down Kodagu as their parent tongue. One of the castes which use it is the Ayiri caste of artisans. The number of persons who speak the language has increased 10 per cent. during the decade, which is almost the same as the rate of growth of the Coorg race.

After Kodagu, come Malayálam, Yerava and Tulu, which are each of them spoken by between 7 and 8 per cent. of the population. Tulu and Malayálam are tongues which belong to Malabar and South Canara and the people who speak them must be immigrants from those districts.

Yerava is returned as spoken by 13,175 persons against 2,587 in 1891, but this is probably due to more careful enumeration than to any real increase in the people who use the language. It is explained in the Madras report that precautions were taken this year to endeavour to prevent the enumerators from returning persons as using the language of the tract in which they were found instead of enquiring what vernacular they actually employed in their own households. There are 14,586 persons in Table XIII who have returned Yerava as their caste, while the number of persons who speak the language is 13,175, so that apparently a considerable proportion of the caste use other vernaculars.

Hindóstání is the vernacular of some 4 per cent. of the people. No other language is entered by more than 3 per cent. of the population. English is spoken by 454 persons, or 3 in every 1,000, and as the Europeans and Eurasians number 523, some of them must speak other tongues in their households. One of these is Portuguese, as it is returned by 111 people and these must be Goanese Eurasians or Native Christians from Malabar, as no one has returned himself as Portuguese by race in Table XIII.

### Subsidiary Table,—Classification of the Languages returned.

ONE II

#### CHAPTER VII.

#### INFIRMITIES.

#### (TABLES XII AND XII-A.)

50. Four kinds of mental and bodily infirmities were recorded at the census, namely, insarity, deaf-mutism from birth, blindness and corrosive leprosy. Like those for every other province, the Coorg figures are probably rendered inaccurate by the difficulty the enumerators experienced in correctly diagnosing these diseases and by the reluctance felt by parents in admitting that their young children were afflicted by them, but as these sources of inaccuracy apply at all censuses alike they constitute no reason why the figures of one enumeration should not be compared with those of another.

51. Such a comparison shows (see the particulars in the margin) that during the last twenty years a decrease has occurred (not-withstanding the increase in the population) in the number of persons afflicted with each of the four infirmities, and that the only one of them which is more frequent than it

			Total num	ber of		men ton which is

and the second of the	Carrier and the	and the second	warman Managa	There was	at the contract of	1 (1 ( 11)

was ten years ago is blindness. This decline occurs in the case of all three main religions and of both sexes with two exceptions, namely, that insanity is

more common among Musalmans than it was and that blindness occurs more often among females.

52. These four infirmities are usually found to be more common among males than females and this characteristic is observable in the case of leprosy and deaf-mutism. The insane persons of each sex are, however, exactly equal in number and blindness is commoner among females than males owing to the inclusion in the returns of an exceptional number of women over 60 years of age who are afflicted with that disease.

53. Coorg shows a smaller proportion of persons suffering from each of the four infirmities than the Madras Presidency as a whole, as the figures in the margin show, and the difference is especially marked in the case of leprosy. The pro-

Number in 100,000 afflicted with

Insanity, Deaf-mutism, Blindness, Leprosy,
Coorg ... 18 58 53 5
Madras ... 19 64 89 35

portion in Coorg is also smaller than that in the adjoining British districts of South Canara and Malabar in the case of all four of the diseases except deafmutism.

54. The subsidiary tables at the end of this chapter give the main facts of the subject in condensed and proportional forms but it is very necessary that in considering these it should be constantly remembered that where the actual figures are so small percentages are apt to be very misleading. For similar reasons the figures in these tables which are exhibited by ages are very irregular. Taking them at what they are worth, they show that insanity among males chiefly occurs in those who are between 20 and 30 years of age and among females in those aged between 25 and 30 and between 35 and 40. In Madras, mental infirmity among females was commonest at the ages between 10 and 19, when child-bearing usually begins, than at any other period.

55. Only congenital deaf-mutism ought to have been shown in the schedules, and if this distinction was accurately observed the number of the afflicted in the earliest age-period, 0-5, ought obviously to be higher than that in any other and the number of the infirm in each succeeding age-period ought to get gradually and regularly less as death carries off its victims. Subsidiary table 2 shows, however, that the proportion of

deaf-mutes in the age-period 0-4 is only about one-seventh of that in the next period 5-9. The reason for this is partly the tendency of parents, already referred to, to conceal the existence of infirmities in their young children and partly the fact that children of three or four years of age are often returned as being five years old. At the ages above 5-9 the decline

					Males.	Females

do and ov	or	***	1000	1211	17	45
					1,000	1,000

old. At the ages above 5-9 the decline in the number of the afflicted in both sexes is very irregular. This is owing to the inaccuracy of the age-returns. When the numbers are larger these inaccuracies tend to counteract one another, but here the actual figures are very small. If, however, we take decennial, instead of quinquennial age-periods the irregularity is much less marked, as the figures in the margin show.

56. Blindness is commonest in men among those who are between 50 and 60 and in women among those who are aged 60 and over. More than a quarter of the blind females are of this advanced age, and this is perhaps due to the fact that women live longer than men and are thus more liable to the infirmities of old age, of which blindness is one.

Leprosy. 57. Lepers are so few (only nine in number) that no deductions can be made from their ages.

58. Imperial Table XII-A gives statistics of the castes and races in which the infirmities by eastes. Infirmities by eastes. Infirmities by eastes. The castes which occur in Madras it was found necessary to group connected castes before dealing with the statistics for them, and in the case of Coorg it may be stated that no clear inferences can be drawn from the figures.

#### CHAPTER VIII.

#### CASTE, TRIBE OR RACE.

(TABLES XIII AND XVIII.)

Most of the Coorg castes are Kutuma, Maléya, Méda, Yerava, Pále, Tuluva and Kappála, occur frequently in the Madras Presidency and notes regarding them will be found in the caste glossary attached to Chapter VIII of the report on the census of that province. These twelve exceptions make up 32 per cent. of the total population of Coorg. Only two of them, however, the Kodagus (36,091) and the Yeravas (14,586) are at all numerous, and notes of the measurements of these two and a discussion of the place among other castes which may be assigned to them will be found in a paper entitled The Coorgs and Yeravas, an ethnological contrast, by Mr. T. H. Holland, F.G.S., in the Journal of the Asiatic Society of Bengal, Volume LXX, Part III, No. 2, 1901. All the twelve castes are referred to in the Ethnographical Compendium of the Castes and Tribes found in the Province of Coorg written by the Rev. G. Richter, late Inspector of Schools in Coorg, and I have had no time to visit the country to make further enquiries about them. Regarding two of them, however, the Ayiris and the Yeravas, I have been furnished by officers of the province with certain fresh particulars which are not mentioned by Mr. Richter and I accordingly give these below.

60. Ayiri .- The Ayiris are the artisan caste of Coorg and correspond to the Kammálas of Malabar and the Tamil districts. Like other artisan castes, they are divided into groups according to the particular occupation which they follow. Thus, there are the Tattas (goldsmiths), the Kollas (blacksmiths) and the Tacchayiris (carpenters). Their tradition is that they came to Coorg from Malabar during the reign of Dodda Vírappa Wodiyar, but they now speak the Coorg language in their homes and follow many of the Coorg customs. The caste has no recognised headman but the usual pancháyats decide caste matters. These are generally assisted in their deliberations by some of the Coorgs. They can fine up to 100 hanas (a hana is 3 annas 4 pies) and can also excommunicate. Marriage is usually adult. Difference of employment is no bar to intermarriage, a carpenter's son, for example, being allowed to marry a blacksmith's or a goldsmith's daughter, but there is one section of the caste called the Kambala Ayiris, who are said to be sprung from out-casted members of the community, with which the others will not marry. A man may claim his sister's daughter or son as a match for his son or daughter. The marriage ceremony resembles that of the Coorgs, the binding portion of it consisting in the man taking the girl by the hand and leading her a few steps. Widows may remarry if they wait for six months after their husband's death. They generally marry their late husband's brother and, as usual, the ceremonies at the marriage of a widow are fewer and simpler than those at that of a maid. Divorce is allowed on strong grounds, such as the leprosy, insanity or adultery of the wife, and is effected by the husband repudiating her in the presence of relations and neighbours and returning to her the things she brought with her on her marriage. Divorcées may remarry. The Ayiris follow the ordinary Hindu rules of succession, and not the Marumakkattayam law. The caste does not employ Brahmans as priests, its people performing their own ceremonies, and does not wear the sacred thread. The dead are either burnt or buried and ceremonies are performed on the twelfth day after death, but annual sraddhas are not observed. Ayiris eat mutton, game and pork, but not beef, and they drink alcohol.

61. Yerava.—The Yeravas are one of the lowest castes in the province and are coolies and landless day labourers by occupation. They have two endogamous sub-divisions, the Paniyas and the Panjiris, and the former is said to have eight and the latter twelve exogamous

sections, most of which are territorial in origin. Both sub-divisions have a headman who seems to act also as its priest. That of the former is known as the Muppa and that of the latter as the Kanaladi. The former can impose a fine of six brass bangles and the latter a penalty of 8 hanas. Panjiri Yeravas admit outsiders of higher status to their ranks on payment of a small fee to the headman. The marriage ceremony is the usual simple affair common among the lower castes, but the tali is tied round the girl's neck by the headman of the sub-division. A Paniya Yerava may not marry two sisters but a Panjiri Yerava may. Widows and divorced women may marry again. The favourite deity of the caste is Karingále which means "the black-legged one." The Yeravas eat pigs, rats and vermin but not beef.

62. Statistics of the Europeans and Eurasians in Coorg are given in Table XVIII. There are 228 Europeans, of whom 212 are British subjects and the other 16 are mainly French and German missionaries. Of these Europeans, 137 are males and 91 females and, as is usual in India, most of them are either under 12 years old or between the ages of 30 and 50. There are 295 Eurasians and of these, as has already been mentioned, a considerable proportion seem, from the parent-tongue figures, to be Goanese from Malabar.

#### CHAPTER IX.

#### OCCUPATION.

#### (TABLES XV AND XVI).

The scheme of classification of occupations in Table XV is, in its main essentials, the same as that followed in 1891, but on the present occasion an attempt has been made to differentiate those who actually work at each means of livelihood from those who are dependent upon others working at it. For this reason and also because several of the groups in the scheme have been transferred from one sub-order, Order, or Class to another, few comparisons can be usefully instituted between the figures of the present census and those of the enumeration of 1891.

- 64. The many difficulties which surround the preparation of an accurate account of the occupations of the people, both at the enumeration and in the abstraction and tabulation, have been referred to in the Madras report and need not be again set out. The vagueness of the entries in the schedules relating to owners of, and labourers on, coffee estates which are there referred to occurred again in the case of Coorg and it is not possible to be sure that some of those who returned their means of livelihood as "cooly" or "cultivation" were not really labourers on coffee estates, or to tell how many of those who entered themselves as "coffee cultivators" were owners or managers of estates and how many were merely labourers employed upon them.
- Bural simplicity of the occupations of the population.

  Bural simplicity of the occupations of the population.
- 66. No less than 81.8 per cent. of the inhabitants of the province subsist by agriculture (Order V in the scheme) in some form or Agricultural occupations. another. As many as 46 per cent., or nearly one-half of them, are landholders and tenants, another 19 per cent, are agricultural labourers, and 16.5 per cent. are included in sub-order 12, Growers of special products, which consists almost entirely of those who are engaged in the cultivation of coffee, whether as owners or managers of estates or as labourers employed upon them. Probably, moreover, the greater part of those who are comprised in sub-order 75, General Labour, are really mainly agricultural labourers, so that perhaps the real number of those who subsist by the land is some 83 per cent. of the population. Of the persons in sub-order 10, landholders and tenants, 88.1 per cent. are cultivating landowners, and another 9.6 are cultivating tenants, leaving only 2:3 as non-cultivating landowners. Arranged in other ways, these figures show that 90.4 of the people in this sub-order are landowners and the remaining 9.6 are tenants, while 97.7 of them are actual cultivators and only 2.3 non-cultivators.
- other prominent occupations. the people are Order VII, Food, drink and stimulants, a large proportion of the people included in which are grain dealers, petty bazaar keepers and toddy sellers, and Order VI, Personal, household and sanitary services, those comprised in which are mainly cooks, washermen, indoor servants and barbers. Outside these three Orders, and excluding the general labourers already referred to, there are, indeed, only three occupations which support more than 1,000 of the people of the province. These are cart owning and driving (groups 417 and 419), working in precious metals and stones (groups 316-318) and making and selling baskets, mats, brooms, etc., (group 347).

Subsidiary table 2 sets out these principal occupations of the population in the order of their magnitude and it will be seen that as few as fourteen means of subsistence support as many as 90.5 per cent. of the inhabitants of the province. 68. The industrial part of the people, properly so termed, is almost negligable, for though Class D, the industrial class in the scheme, supports 9.5 per cent. of the inhabitants, the great majority of those are the traders in Order VII, and the goldsmiths and basket makers already referred to.

69. Learned and artistic professions (Order XX) support 1 per cent. of the people but more than a third of these are native doctors, astrologers and diviners, and people employed about the temples, none of whose duties are usually either learned or artistic in the strict sense of the words.

70. Subsidiary table 3 gives particulars of the number of actual workers in each order and class who are partially agriculturist, that is, live mainly by some non-agricultural occupation but have, in addition, an interest of some kind in land. It will be seen that these persons number 807. As many as 240 of them are people whose principal means of subsistence is employment under Government, and the majority of these are found in the upper ranks of the various services. Another 133 live mainly by the learned and artistic professions of Order XX and of these 41 are schoolmasters. Next in number come those whose principal occupation is connected with "transport and storage." They number 103, and 66 of them are cart owners or drivers. A fair proportion of the cooks and washermen also have an interest in land.

71. The last two columns of subsidiary table 1 give the percentage of the persons supported by each class, order, and sub-order who are (a) actual workers at the occupations included in them and (b) dependents upon such actual workers. The instructions to the enumerators directed that every person who earned any income at all by following a means of livelihood should be returned as an actual worker, whether that income was sufficient to support him or her entirely or not. Consequently only those persons are shown as dependents who did no work of any kind.

The percentage of those supported by the various occupations in the scheme who are actual workers is thus high, being 70.1 per cent., and the dependents form

the remaining 29.9 per cent. of the population.

This high figure is not, however, maintained in all the orders and sub-orders. In those in which women and children cannot take the part of actual workers the percentage is considerably lower. Thus in Order XX, Learned and artistic professions, only 47.3 of those who are supported by the order are actual workers at the occupations included in it. On the other hand in the orders in which women and children can take the part of actual workers such as Order IV, which consists mainly of herdboys; Order V, Agriculture; Order VI, Personal and household services; Order IX, which comprises all the coolies engaged in building; Order XIX, which mainly consists of bandy drivers; and Order XXII, Earthwork and general labour, the percentage of actual workers is higher than in the province as a whole.

- 72. Subsidiary table 4 shows the number of the actual workers in each order who belong to each of the two sexes, and this brings out much the same point again. There are 66 female actual workers to every 100 males, and of the more numerously represented orders the percentage of actual workers belonging to the gentler sex is highest in Orders V, Agriculture, and VI, Personal and household services, while among those in which it is lowest are Orders XX, Learned and artistic professions and I, Administration.
- 73. Imperial Table XVI gives statistics of the occupations by which the Coorgs or Kodagus live. The reasons for the selection of this race for exhibition in the table have already been given above in Chapter IV. Subsidiary table 5 at the end of this chapter gives the figures in proportional forms and in more detail. It will be seen that of the 23,650 actual workers which the race comprises, no less than 22,889, or 96.8 per cent., are either landlords or tenants who themselves cultivate the lands they hold. In addition to this 98 more are owners or tenants of land which they do

not cultivate themselves, 71 are agricultural labourers and 72 subsist by owning or cultivating coffee estates. In other words, 97.8 per cent. of the Coorgs depend directly upon the land for their living. Of the remaining 2.2 per cent., 212 are employed in the public service proper and 147 more as forest rangers and guards, teachers in schools, village officers, in the Survey and Public Works departments and on railways outside the province, and 75 as personal or domestic servants.

### APPENDIX A.

Extract from the report of P. A. BOOTY, Esq., I.C.S., First Assistant Commissioner of Coorg, to the Superintendent of Census Operations, Madras, No. 53, dated 27th April 1901.

In reference to your letter No. 630, \* dated 11th December 1900, I have the honour to report upon the way in which the arrangements for the census worked in Coorg.

2. (a) The preparation beforehand of a list of persons available in every village to act as enumerators or supervisors is very necessary, as otherwise it would be quite impossible to make appointments at the time of dividing off the blocks. The lists were prepared by the village accountants, checked by the Nad Parpatigars, and then compiled and checked by the Taluk Subedars before being submitted to this office.

The plan of dividing the taluks into thickly and thinly populated areas was not

adopted in this district as there appeared to be no necessity for it.

The plan of sending printed copies of circulars issued by you would have saved considerable trouble in this office had a sufficient number been supplied for communication to all the eight charge superintendents. It would therefore be better in future to send as many copies as there are l'aluks and Municipalities, together with some spare copies for communication, if necessary, to Nad Parpatigars.

The circulars were communicated to charge superintendents by sending copies or extracts in some cases and translations in others. The charge superintendents

communicated them in the vernacular to their subordinates.

(b) The House List.—Some difficulty was experienced in numbering houses so that blocks might be compact.

There are no wild tracts where it was not possible to prepare the list within

reasonable time.

The definitions of "house," "building," and "common way" were not easily understood by village officers. Buildings not ordinarily used as residences were given numbers in column 3 of the house list instead of in column 4. A question was raised by one of the Subedars as to whether cooly lines under one roof should be numbered as one house or whether each compartment occupied by a separate family should be given a distinct number, and he was informed that the latter method was correct.

The house lists were checked by Nad Parpatigars, Subedars and my predecessor; in the Municipalities, they were checked by municipal overseers and

Vice-Presidents.

Correct lists of villages were obtained from the Coorg Land Record Office.

(c) Numbering.—Common tar, purchased from local shops, was used for this purpose and was found satisfactory. Its cost was Rs. 14-2-10.

Numbering was commenced on 4th July 1900 and finished on 18th September

1900.

(d) Marking of Circles and Blocks.—There were no difficulties in following instructions. Some of the charge superintendents made mistakes, but these were corrected in this office.

Maps were used in the preparation of circle lists, and were found very useful

in making each circle compact,

Circle lists were completed in manuscript on 20th October 1900 and the printing was finished on 3rd December 1900. The census divisions were (i) 10 charges, (ii) 168 circles, including 4 forest circles, (iii) 1,531 blocks, including 8 forest blocks. There were on an average 23 buildings and 22 residences in each block.

<sup>\*</sup> This and the other letters from the Superintendent referred to herein will be found in Appendix B of the Administrative volume of the report on the Census of Madras.

- (e) Small Blocks.—No difficulty. The supply of extra block lists and covers was sufficient.
- (f) Agency.—There was no difficulty in obtaining enough men, except for the enumeration of travellers by road, houseless poor and cart-stands. The numbers of census officers were (i) 8 charge superintendents, (ii) 164 supervisors, (iii) 4 special supervisors, (iv) 1,450 enumerators, (v) 101 special enumerators. All the charge superintendents and special supervisors were officials. Of the enumerators 1,221 were unpaid non-officials and 229 were officials; of the special enumerators 6 were non-officials and 95 officials; and of the supervisors 9 were non-officials and 155 officials. There were no paid non-officials, though some of them are now claiming travelling allowance.
- (g) Schedules.—1,135 books and 5,900 loose schedules were issued. They were all used. The supply to taluks not being sufficient, loose schedules were issued from the district reserve. The supply of enumeration tickets was sufficient. The rigid restrictions on the issue of household schedules worked satisfactorily.
- (h) Instruction of Census officers.—In accordance with your letter No. 488, dated 6th November 1900, circular orders were issued impressing upon the charge superintendents the great importance of the oral instruction of supervisors and enumerators in the rules for filling up the schedules. They were also directed that they should make a point of personally instructing every one of their supervisors and as many of their enumerators as possible, and that supervisors in their turn should teach every one of their enumerators. They were further ordered that at every class of instruction, as a minimum, a Hindu, a Musalman, a Christian, a literate person and a child should be enumerated.

A circular order was also issued to all the Subedars on the subject of giving practical instruction in the field to their subordinates, and ordering weekly progress

reports to be submitted by them.

Special instructions about agricultural occupations and workers in factories were issued. The Manual and the printed instructions to enumerators answered the purpose for which they were intended. Special instructions were also issued in this district for the separate enumeration of Jamma Coorgs (in view to ascertain how many persons are exempt from the operation of the Arms Act) in accordance with the Chief Commissioner's orders.

The one-schedule books distributed to supervisors enabled them not only to acquaint themselves beforehand with the rules for filling up the schedules and with the form of the enumeration book, but also to instruct their enumerators.

(i) Writing out of block lists.—The instructions on this point were not explicit. The headings of columns 4 and 5 were not found to be clear enough. It was not known whether the serial number to each family should be consecutive right through the block or whether each house should have a separate series of numbers for the families living in the one house.

The block lists were written by the enumerators.

(j) Preliminary Enumeration.—It was begun on the 10th of January in rural areas and on the 14th of February in Municipalities and completed by 15th and 20th February respectively. The dates fixed in the instructions were suitable.

The preliminary census was at first made on plain paper, and after being checked by supervisors, and as far as possible by charge superintendents, was copied into the printed enumeration books. It is believed that it is accurate.

(k) Final Census.—It lasted from about 7 in the evening till about midnight in some places, the time required varying according as the distance to be travelled was greater or less.

The supervisors accompanied the least intelligent of their enumerators and checked the entries, carrying out, as far as possible, the instructions contained in paragraphs 50, 51 and 52 of the Manual. It was reported that one estate and a few individuals were not enumerated at the final census, and enquiries into this matter are still proceeding.\* With this exception, the final enumeration is believed to be accurate.

<sup>\*</sup> The schedules relating to these were subsequently received and are included in the statistics of the province.

APPENDIX A. 35

Travellers by road were enumerated at selected stations by the police and tollgate keepers. The houseless poor were enumerated by beat constables, and the enumeration in cart-stands outside Municipalities was also done by beat constables. The instructions contained in your No. 381, dated 15th October 1900, were also carried out.

Only one census of jungle tribes was taken in reserved forests on the day of 1st March, as this was considered advisable.

In no part of this district did the census last for more than one day.

- (l) Provisional Abstracts.—These were prepared according to the instructions contained in your letter No. 629. A gazetted officer, namely, the Revenue Assistant Commissioner, was placed in special charge of the district abstract in accordance with paragraph 10 of above letter, and district totals were wired on March 6th. There were no difficulties in following the instructions.
- (m) Demeanour of the people.—Two prosecutions were ordered for refusing to do enumerator's duties. No scares were apparent. The people were not opposed to the census. A notice was published on the lines indicated in your letter No. 509.
- (a) Expenditure.—A statement of census expenditure up to 31st March 1901 is sent herewith.
