(1) The wedding ceremony. — What little worship of the gods is found in this group of rites is almost restricted to the rite of Agni, the domestic god, who was constituted a witness of the marriage, and who, in the form of the domestic producing social life, accompanied the young pair through life. On the other hand, the ceremony was surrounded by magical acts, of which the following were the principal. The bride's hand was grasped that she might be delivered into the power of her husband. She stepped over a stone to acquire firmness. She took steps with him in order to establish friendship. She ate the sacrificial food with him to create community of life. When she reached her husband's house, she sat down on a red-hot stone to ensure fertility. The son of a woman who had borne one male child was placed on her lap in order to fulfill the hope of healthy male progeny. Later, during pregnancy, a magical powder was placed in her nose to secure the birth of a son.

(2) Initiation. — Of the various religious ceremonies which were venerated during the gods, which display the same predominantly magical character, the chief was that of initiation (aparajitana). This, though not mentioned in the Rigveda, goes back to pre-historic times, as is shown by the parallel Avestic ceremony, and is the Vedic transformation of a rite by which, on the occasion of the puberty, a boy was made a member of the community of men. In India it was regarded as a second birth, as being the entry into a new life, when the boy was introduced to a religious teacher with a view to Vedistudy. The outward signs of the initiation are the girdle, which is wound three times round the body. The belt is then worn on the left shoulder and under the right arm, with which he is invested. The ceremony includes a number of magical observances. Various talismans are regarded as food, some of which will be mentioned below (see also Yajur Bhashana, 6.5, and of. Lemans [Hindu]).

(3) Public rites. — The public ceremonies of Vedic times were performed on behalf not of the clan or tribe as a part of an individual, who in these cases was the king. The most prominent of them, aiming at the attainment of certain definite purposes, are magical in their main elements. At the royal consecration (abhiparana) the king sits on a throne made of wood from the rudradya tree, which to the Indian was the

he invoked and sacrificed to the gods. In the later Vedic period of the Yajurveda, however, we find the price to a considerable extent reverting to the role of a magician, as he now appears, independently of the gods, driving away evil spirits or influencing the powers of nature by means of spells and other expedients of sorcery. In various lesser rites the priest acts quite in the style of prehistoric times. Thus he makes the bride step on a stone to ensure steadfastness; he causes fish to be eaten for the attainment of speed; this derived from the knowledge of the rain that it may actually rain—here he is not a servant of the gods, but a magician. Yet even in the earliest period, that of the Rigveda, the sacrificial priest was a magician as well, though not necessarily the only one, for both here and later references are made to sorcerers whose magic is directed against the sacrificial priest). It cannot be supposed that even the most advanced minds among the priests regarded prayer and sacrifice as the only means of securing welfare, while rejecting magic as ineffectual and reprehensible superstition. Magic was still to some extent used by those who had occasion occasionally, as is apparent from the character of some hymns of the Rigveda which, although late, form part of the canonical text. But not the employment of every form of magic was approved nor the practice of magic as a profession. Nevertheless, the attitude with evil spirits and the use of maleficent spells were liable to injure the community. This is sufficiently clear from the words of the author of a passage of the Rigveda: `May I die today if I am a sorcerer (garudhena), or if I have harassed any man's life; then may he lose his ten sons who falsely call me a sorcerer'; he who calls me, that am no sorcerer, a practiser of sorcery, or who, being a demon, says that he is pure, true; he who strikes him with his mighty weapon, may he sink down below every creature' (vii. civ. 15). It was because the Atharvaveda contained a body of maleficent spells that it did not attain to canonical recognition till after it had become associated with the sacrificial cult by the addition to its text of numerous hymns borrowed from the Rigveda. On the other hand, in the Atharvaveda itself (e.g., v. vii., vii. i.x.) magic is expressly approved when directed against the sacrifice offered by an enemy; and the ritual texts are full of directions for the sacrificer who wishes to destroy his enemy, in particular, when his efforts have not borne their magical turn for the purpose of inflicting injury. The post-Vedic Code of Manu even contains the express statement (xi. 33) that the magic spells of the Atharvaveda are the Brahman's weapon, which he may use without hesitation against his foes. In the Upanasas the magician-priest has become a philosopher who has passed from the path of ritual (barna) to that of knowledge (jñāna); but his magic, as it is, is by no means thereby deprived of its reality. The

ties (topas, lit. 'heat'), primarily exposure to heat, but including other forms of self-mortification, such as fasting, abstinence, and silence, were regarded as a means of attaining various supernatural powers resulting from the ecstatic condition induced by them. Thus the Rigveda says (x. cxxvi. 2) that those who are in such a frenzied condition that 'the gods have entered into them.' A poet of the same Veda tells (viii. lxxix. 6) how, in a vision directed by austerity (topas), he saw the old creations of ancient sages, the first sacrificers, in the remotest past of the human race. There are many other Vedic passages saying similar powers: dreams are born from the soul filled with austerity (Athravaveda, xiv. iv. 3); speech born of austerity penetrates to the gods (Taittirīya Aranya, v. vii. 7); he who has practised great austerity reaches the sun (Rigveda, x. xlix. 2); after practising austerity Indra won heaven (x. clvii. 1); the magical power of austerity peculiar to the Brāhmans will bring calmness on the man who injures him (x. cix. 4). Austerity confers the power to produce the mightiest creations: the goddess Asājā, perceiving austerity, produced the greatness of Indra (Athravaveda, xii. xii. 12); the seers were born of austerity (xi. x. 25; xviii. xii. 15, 18). In many passages the Brāhmans the creator Prajapati is described as gaining by austerity the power to wrest out of himself the worlds and all living creatures; and in one place (Sâtapatha Brâhmanas, x. iv. 4. 2) he appears as practising such asceticism that from all his pores came forth lights, which are the stars. The Brāhmans also tell how various mythical beings attained by austerity to a high degree of enlightenment that revealed to them some secret of sacrifice. It is for such magical effects that austerity is regarded as an essential element in the preparation for various particularly holy sacrificial rites. Thus the Soma sacrifice is preceded by a consecration (dikë) of the sacrificer in which he practises austerity lasting, according to some authorities (ib. xiii. i. 7. 2), till complete physical exhaustion ensues.

8. Magical conditions and agencies.—Magical effect is largely, if not altogether, based on contact (very often involuntary), which has to be brought about if the agency is beneficial to oneself, or to be prevented if the agency is injurious to oneself. The result desired is attained by the use of spells directed at various kinds. The place selected for the practice of magic is important, and when it is an element of the sacrificial ceremonial, is generally a lonely one. A cemetery, the seat of flesh-eating demons, is a specially suitable place for its operations. A cross-road is a favourite locality to divert oneself of evil influences. A secluded part of a house, a shed, and solitary spots in field or forest are also used. The time at which many operations of hostile magic take place is night; but that of others depends on their circumstances or the purpose. Direction is an important consideration. Thus the south is the home of demons, which hence perform operations of night; and north is the home of the deities. As is the sun, which is the creator and the nucleus of the universe, so are the deities. Thus the performers move from the south to the north.

(a) Spirits (pālpas).—Spirits are omnipresent and omnipotent, and as presiding over various agencies, to spread terror and destruction. They inhabit the field of Others (Athravaveda, x. xix. 1). The characteristics of spirits are damage and destruction, and the alteration of the course of human life.

generic name of râkṣas, yūtas, or pālpas, though many of them also have individual designations. Their appearance is for the most part human, though often with some kind of deformity; but they do not infrequently have an animal or bird shape, such as that of a dog, wolf, owl, or vulture. They also appear in assumed figures, human or animal; thus at funeral rites they are supposed to be in the form of the souls of the ancestors to whom the offering is made; and they approach women in various disguises. The sorcerer himself (as well as the spirit serving him) might assume animal form and thus injure his enemies. Belief in such transformation is already expressed in the Rigveda, where hostile magicians are spoken of as being able to shape themselves into fire, light, living creatures, and evenRCM. 0.25.16

Evil spirits are thought to be everywhere—in the air, in the earth, in the sea. They are not at all limited to the human dwelling, but are present in any place of human habitation (Brahmanas). They are divided into two classes: good or evil, and good or evil; the latter is the more dangerous. The most important occasions of domestic life—at births, weddings, and funerals. One of the main objects of their attack is the sacrifice; the Rigveda speaks (v. xiii. 2) of the Yajnas that seal the sacrificial food, and the Atharvaveda contains (vi. xix. 2) the wish that the idols may not be attacked by demoniac demons. These evil spirits, moreover, do harm to man's property, drinking the milk of his cows, eating the flesh of his horses, and damaging his dwellings. In short, every moment of life, every act, of every one of man's necessities is exposed to attack. The allies of human workers of calamity.

(b) Injurious substances.—Closely allied to these demoniac enemies are the numerous substances—which constitute the most general expression for which in the Vedic language is frāś, or 'body'—which, conceived as a vehicle of the spirit, has a spiritual, therefore sometimes is tinged with personality, and represents an advance of thought. Hence the boundary-line between personal demons and impersonal agencies is not fixed; thus the term pālpam, 'evil power,' as a masculine is used in the former, but not in the latter sense. Nor are even injurious creatures like bears, ants, and worms clearly distinguished.
that is torn up by its tusks; the force of lightning is latent in a splint of wood from a tree that has been struck; the virtue of one’s native land exists in a clog taken from it; a man is connected with the earth by his footprints; even an image or a picture conceiving of the essence of the beings or things which they represent or name. As all such powers are communicable by contact, the whole sacrificial ritual is full of rules as to the persons or things which the performer is to omit or avoid, with demons, and the power of the sacrifice is transferred to them. For instance, the skins of various animals communicate the characteristic quality attributed to them; one who seats himself on the hide of a bull acquires fertility; on that of a black antelope, sanctity; on that of a he-goat, plenty; on that of a tiger, invincible power.

9. Magical procedure.—The operations of magic are always accompanied with hostile agencies, either by preventing their contact with the operator or by bringing about their contact with an enemy. Auspicious rites, besides being much less numerous, and more easy to perform, are only proper to the initiated, and will, therefore, be treated under the various types of action, particularly auspicious and partly hostile, employed in magical ceremonies (§ 12).

10. Defensive magic.——This type of magic, though consisting in warding off injurious powers, is not always expressed in the form of hostility when demons are concerned; it may then be attended by a certain amount of propitiation. Thus in the Atharvaveda (i. xii. 2) deterrent homaige is paid to a demon of diseases, ‘may he be beneficent and will, therefore, be treated under the various types of action, partly auspicious and partly hostile, employed in magical ceremonies (§ 12).’

11. Fastin.——One of the chief precautionary measures against the attacks of hostile powers was abstention from food while entering the body. It is, therefore, a leading element in the preliminary consecration (dikṣa) for the Soma sacrifice. With reference to this, one of the Sūtras remarks (Aptasthana Śrutāntīra, x. xii. 19): ‘When an initiated man (dikṣita) has fasted seven days and has gathered the soma, he is purified for the sacrifice.’ A special form of fasting was the avoidance of particular kinds of food. Thus the performer of the new and full moon sacrifice had, on the eve of the ceremony, to refrain from eating either flesh or kind of food which he was going to offer on the following day. The teacher who has invested a pupil with the sacred cord may not eat flesh for a night and a day after the ceremony, to refrain from eating either flesh or kind of food which he was going to offer on the following day. The teacher who has invested a pupil with the sacred cord may not eat flesh for a night and a day after the ceremony, to refrain from eating either flesh or kind of food which he was going to offer on the following day. The teacher who has invested a pupil with the sacred cord may not eat flesh for a night and a day after the ceremony, to refrain from eating either flesh or kind of food which he was going to offer on the following day. The teacher who has invested a pupil with the sacred cord may not eat flesh for a night and a day after the ceremony, to refrain from eating either flesh or kind of food which he was going to offer on the following day. The teacher who has invested a pupil with the sacred cord may not eat flesh for a night and a day after the ceremony, to refrain from eating either flesh or kind of food which he was going to offer on the following day.

12. Absteminess.—Another safeguard is the practice of chastity. This is enjoined for three nights after the wedding ceremony in order to ward off the attacks of demons that destroy offspring. It is observed by the performer of the new and full moon sacrifice on the night before the rite takes place; for a day and a night by the teacher who initiates a pupil; for twelve nights by the offerer of the Sabhā sacrifice; during the course of the Dikṣa by him who undergoes that consecration; and by the Vedic student during the whole period of his apprenticeship.

13. Asceticism.—This expedient appears in various forms. One of them is exposure to heat; it is an element in the Dikṣa ceremony, it is specified for a rule being quoted for use when the initiated man breaks into perspiration. Sleeping on the ground is prescribed, during the same length of time as abstemiousness for the newly married couple, the Vedic student, and the person upon consecration, of the new and full moon ceremony, and of the Sabhā sacrifice. As a safeguard against demons dangerous to the sleeper, watching through the night is enjoined during the Dikṣa ceremony, and on the eve of setting up the sacrificial fires and of the new and full moon sacrifice. Silence is to be observed by the sacrificer undergoing the Dikṣa consecration, by the man about to set up the three
sacrificial fires, and by the Vedic student on various occasions. Holding the breath, which was regarded as an important form of asceticism, appears, for instance, in a rite during the funeral ceremony. It may here be added that austerities of various kinds had to be undergone by one person to cure epilepsy, before he was qualified to perform the magical ceremonies intended to effect the recovery of the patient.

(8) Concealment.—Another means of guarding against the attacks of hostile powers was concealment of one's person or of part of it, as seclusion in a shed and covering the head during the observances of the Dikṣa ceremony; or putting on garments to make oneself unrecognizable; or hiding the hair of the head and beard or nails cut off at sacramental rites, such as the initiation of the Vedic student (cf. § 8 (b)).

(6) Amulets.—Charms worn on the body were frequently employed both for the negative purpose of warding off evil influences from one's person (amulets) and for the positive purpose of attracting prosperity (talismans). Sometimes the same charm served both purposes; thus the pearl destroys diseases, and poverty, and at the same time bestows wealth and long life. Amulets were for the most part made of wood, but also of various other substances. Their efficacy is regarded as dependent on the particular power of reputation which the god has, and is not infrequently spoken of as imparted by the gods. They are called god-born, are said to have been given by gods to men, or to have had their power communicated to them by the gods, who co-operate with them; the gods themselves are described as having once been successful by the power residing in them; by ambits Indra overcame the demons (Atharvaveda, x. iii. 11). Their potency sometimes emanates from the name. An amulet derived from the varuṣa tree (Grooterae Roxburghii) destroys enemies because, according to the meaning attributed to the name (kṛt, x. iii. 5), it drives off (ekrapati). An amulet made of this wood is thus addressed in the Atharvaveda (x. iii. 11): "As the wind and the fire consume the trees, the lords of the forest, so do they consume my rivals; this varuṣa upon my breast, the brightly, dazzling tree, shall smite asunder my foes, as Indra the demons." One of the amulets most frequently mentioned in the Atharvaveda is that made from the jāngiṣa tree, which protects from enemies and demons. Again, a long hymn of the same Veda is devoted to this drama on the aggressive powers of an amulet fashioned from the wood of the śvetkṛṣṭa tree, which destroys foes, demons, and sorceries. Cf., further, art. CHAMAS AND AMULETS (Vedic). ii. Remedial Magic.—Magical operations are performed not only to ward off malevolent powers that are threatening, but also to expel them after they have taken possession of their victim in the form of diseases or ailments. The Atharvaveda is full of spells directed against these. Many such incantations make no mention of any concrete remedies with which their use was accompanied; but the evidence of the Sāstras shows that these incantations, at least very often, formed part of a magical rite in which concrete remedies were an element. Examples of simple spells for the cure of disease are the following: "As the rays of the sun swiftly fly to the vegetation, so to thee, O gourī, fly forth along the flood of the sea." (V. cv. 8); and "The disease that racks and wastes thy limbs, and the sickness in thy heart, has flown as an eagle to thee, overcome by my charm." (V. xxx. 9). Curative spices, however, more usually accompanied by the express employment of material objects, chiefly plants. The hymns of the Atharvaveda abound in references to such remedies. These represent the earliest beginnings of medical lore in India. The border-line between magical and primitive science here is not always definite, for in some cases the plant used with the spell may have been an actual cure for a particular disease, while in other cases its application was purely magical, as that of the herbs used to promote the growth of hair on bald heads (these were doubtless as ineffective as the hair-restorers of modern times). The following are two of the charms from the Atharvaveda intended for this particular cure: 'This is the stench which drops off, and that which is broken round, and all, upon it I sprinkle the all-healing herb.' (VI. xxxv. 2); 'Make firm their roots, draw out their ends, expand their middle, O herb! may thy hairs grow as reeds, may they cluster black about thy head!' (VI. xxxvii. 3). The Atharvaveda contains many spells in which the kṛṣṭha plant (probably Costus speciosus or arboresis) is invoked to drive out fever; two of its hymns (I. xxiii. 1 and 11) are meant to cure leprosy by the use of a dark plant; one (VI. xiii.) operates with a herb that destroys snake poison, and another (IX. viii.) with a plant against ophthalmia. Fractures of the head and limbs are treated with the plant arunāhati (V. xii.), and wounds by the use of the peppercorn (VI. cxx.). The use of ointment is associated with one hymn of the Atharvaveda (IV. ix.), of which this is one of the verses: 'From him over whose every limb and every joint they seated, O salve, thou dost, as a mighty interpreter, drive away disease.' Water not infrequently appears as a magical remedy, and its general curative powers are thus expressed by the following spell from the Atharvaveda (VI. xcv. 3): 'The waters verily are healing, the waters chase away disease, the waters cure ailments; may they prepare a remedy for thee.' It also cures individual ailments, as excessive bodily discharges: 'The spring water youder which runs down from the mountains, that do I render healing for thee, in order that thou mayest contain a potent remedy.' (II. iii. 1); or heart-disease: 'From the Himalaya mountains they flow forth, in the Indus is their gathering-place: may they, indeed, grant me that cure for heart-ache.' (VI. xxxiv. 1). Pranātasya gṛhyaśtrā (III. vii. 2) describes how water is used in a magical operation for the cure of headache: the performer sprinkled his hands and passed them over the eyebrows of the sufferer with the spell: 'From the eyes, from the ears, from the whiskers, from the chin, from the forehead I drive away the pain, the headache.' Another remedy is the horn of an antelope used against a hereditary disease named kṣetra: 'Upon the head of the nimble antelope a remedy grows! He has driven the kṣetra in all directions by means of the horn.' (Atharvaveda, III. vii. 1).

i. Offensive magic.—Aggressive operations against malevolent powers cannot always be distinguished, especially in regard to demons, from that form of defensive magic which is directed to warding off their attacks. Hence the expedients adopted are to some extent the same for both purposes.

1. Means employed.—(1) Fire.—Fire was one of the chief direct instruments of driving away demons and all hostile sorcery. Thus in the Rigveda Agni, the god of sacrifice, is frequently invoked (I. xii. 5, xxxvi. 20) with such phrases as: 'Bless, O Agni, against the sorcerers; always burn down the heads, allies of the demons.' This use of fire, probably the earliest in cult, though overlaid with its later and more monstrous sacrificial application, still survives in the Vedic rites. Thus a special fire called the 'lying-in fire' (sūtikārṇa) was sometimes introduced into the lying-in chamber (sūtikārṇa). Of this fire the author of one of the dedicate Sāstras remarks (Hriṅāyaka 15 Gṛhyasūtra, III. iii. 61):
Sacrifices, except in the case of the offering of water by the Soma, are not performed with it; he furnishes the child with small grains mixed with mustard seeds; he then adds a number of spells to drive away various demons that prowl through the village at night, that drink out of the water, and that enter the house. Agni, the child, is induced to have a dry appetite, to lack appetites, livers, and eyes. At the sacrificial ceremony of cutting the child's hair a fire is kindled while a number of auspicious verses are recited; as nothing is said of its application to sacrificial purposes, it is regarded as a fire that is reserved for religious purposes. Of similar significance were the fire employed at the investiture of the Brahman student, behind which both he and his teacher step, and that kindled when the pupil entered upon his course of Vedas. This was the sacrifice of the fire beside which the Soma sacrificer watched during the night in the Dīkṣā ceremony is certain, because it is expressly said (Taittirīya Samhitā, vi. i. 4. 6) that Agni is here appointed 'for the destruction of the demons.' It can hardly be doubted that in the great sacrificial ritual of the three fires, the southern fire was understood to have the magical power of dispelling demons, for the southern fire is the sign of the dead and the injurious spirits allied to them. In the funeral ritual a brand was taken at the southern fire and laid down pointing to the south, while the fire of the funeral sacrifice for the dead was kindled, and the demons were overcome in which Agni was invoked to drive away all demons that, assuming manifold forms, might venture near. At the conclusion of the funeral ceremony a fire was used by the survivors for the purpose of warding off the power that can cause death. Fire was also on various occasions carried round what was to be protected against the attacks of evil spirits. Thus a brand lighted at both ends was moved round the funeral offering; and a firebrand was also borne by the priest round the victim, the post, and other accessories of the animal sacrifice.

(2) Water.—Water is another efficacious means of repelling hostile agencies, as is indicated by the statement (Maitreya Samhitā, iv. viii. 5) that 'the demons do not cross the waters.' We have already noted some examples of the use of water in curing diseases and ailments. Water is further regarded as a chief means of removing possession by evil spirits. At the birth ceremony water is supposed to wash away all injurious powers from the new-born child. A purifying bath is prescribed before entering on various ceremonies, as the Dīkṣā, to remove superannuated power, and to prepare for future success. Thus the bride and bridegroom take a bath or perform ablutions before the wedding ceremony. In rites of expiation especially, bathing and washing play an important part. Various ceremonies also conclude with a bath in order to obviate the risk of taking back into ordinary life the magical influence inherent in the rite. Such is the case at the end of the Dīkṣā, when clothes and implements used during the ceremony are also laid aside. The significance of the bath taken by the Brahman student at the end of his apprenticeship is similar. There is, further, a rule that after the initiation, the initiate should wash himself, as the dead, demons, or Rudra, one should purify oneself with water from the contact with those beings which has thus been incurred. The urine of cows was specially esteemed as a means of purification, being regarded as impregnated by the power of the sun. It was regarded as communicating the abundant nutritive power inherent in the animal. As long as a magical condition is meant to continue, bathing or washing is avoided; hence dirt is the characteristic of one who, by means of asceticism (tapas), aims at acquiring special magical power.

(3) Plants.—We have already seen that plants were frequently used along with spells as a magical eure of disease. Cognate to this medicinal employment is the application of herbs to the purpose of securing the love of a man or a woman, and of promoting or destroying virility; of both these classes of charms the Atharvaveda contains many examples. But the use of plants, especially those which are employed against demons, is often mentioned in the Atharvaveda. Offences similar to those of the Atharvaveda are enumerated. Plants, together with frogs, as representing water, and snakes, as representing fire, are combined with spells against demons. Of plants similar significance are the yagya, the yugyug, and the guggul, the fragrant exudation of a tree, frequently occurs in the ritual as, by its odour, driving away demons of disease or frustrating a curse.

(4) Stones, etc.—In the wedding ceremony, as we have seen, the bride stepped on a stone to ensure steadfastness. A stone, as representing a dividing mountain, was regarded as a means of keeping off evil spirits, and with this intention it was employed in the funeral ritual to separate the living from the dead, where also a clot of earth taken from a boundary was similarly used. In the same ceremony a mat was laid against the formula: 'This is put between against calamity,' was pronounced (Kashās Samhitā, xxxix. 14). A stone was generally placed round the sacrificial fire, the purpose being to 'strike away the demons' (Taittirīya Samhitā, ii. vi. 6. 2).

(5) Local.—This metal was frequently employed in magical operations, as, e.g., in writing off dangerous substances. The Atharvaveda contains a hymn (i. xvi.) in which lead was used against demons and sorcerers, this being one of its spells: 'If thou layest upon our couch, or our domestic, we pierce thee with lead, so that thou shalt not slay our heroes.'

(6) Weapons and staffs.—These appear on various occasions as a protection against demons. Thus a man who wears a bride is accompanied by one armed with a bow and arrows. At the wedding ceremony little staves are shot into the air, with the formula: 'I pierce the eye of the demons that prowl around the bride who approaches the fire.' (Mānavgīrhyāsūtra, i. x.). At the royal inauguration the priest beats the king with a staff, saying, 'We beat evil away from thee!' (Kātāyana Gīrhyāsūtra, xvii. viii. 6). The staff is a part of the ritual equipment in the Dīkṣā ceremony. Its significance here is explained by the Satapatha Brāhmaṇa (iii. ii. 1. 92) thus: 'The staff is a thunder-bolt to drive away the demons.' The Vedic student, as peculiarly exposed to the attacks of evil spirits, is provided with a staff at the rise of investiture. This he must always carry, never allowing any one to pass between it and himself; he parts with it only at the end of his apprenticeship, when he casts it away into water, along with his girdle and other sacred objects. On entering the next stage of religious life the Brahman receives a new staff made of a different wood, the purpose of which is sufficiently expressed by the spells employed at the accompanying rite: 'Protect me from all powers of destruction on all sides,' and 'Destroy all hosts of enemies on every side' (Harivyāsūtra Gīrhyāsūtra, xxi. 9). A wooden implement shaped like a sword, technically called sphaṇḍ, and very variously applied in sacrificial rites, has evidently significance of a demon-repelling weapon. At the sacrifice to the dead the sphaṇḍ is passed over the altar with the words: 'Smiten away, do not approach, that it may stand on the altar' (Stāhāyasya Svaṛṣṭāsūtra, iv. iv. 2).

II. MAGICAL ACTION.—Certain types of action are regarded as producing a magical effect in various rites. The various types are the following:

(a) Hostile.—(1) To make a noise is believed to be an efficacious means of driving away demons. At the solstitial festival drums were beaten in order to scare evil spirits, which were deemed to
be especially powerful at the time of the shortest day. A gong was sounded at the ritual for exorcizing the demon of epilepsy. At the funeral cerermony, magi ground millet into a shattering pose.

(2) A frequent method of removing injurious influences is to "wipe them off." Thus lead or a black thread of wool was used as an aid in the process. In particular, the apāmārga (Aphrante) expounds (p. 223, note a, for "wiping out") was most variously employed in this sense. The Atharvaveda contains several hymns with which the plant is applied, the following being one of the spells in which this action is expressed (IV. xvii. 8): "Having wiped out every sorcerer, and all grudging demons, with thee, O Apāmārga, we wipe all that evil out." The Sātapatha Brāhmaṇa remarks (v. 4. 14) that by the aid of this plant the gods wiped away the demons. Among other magical applications of this action may be noted the requirement that one who has seen an evil dream should wipe his face.

(3) Another means of getting rid of demons or injurious influences is to "strip" them off. The black antelope skin used at a sacrifice is shaken out with the words, 'Shaken away is the demon; shaken away are the gods' (Pājiṣṇeygīsi Śanātī, 1. 1). The idea of shaking off the dead, the nemi- fant shakes the hem of his garment in order to remove the soul that may be clinging to it. At the conclusion of the funeral ceremony, the bundle of twigs, used to efface the footsteps of death, is thrown away for fear of the dangerous substances which it may have derived from those footprints. For similar reasons clothes worn on uncanny rites, such as funerals, are cast aside. Injurious substances are deemed to be stripped by passing through some aperture or some place to whom they adhere. This notion is found even in the Rigveda (v. Ixxx. 7), where Indra is said to have cured the girl Apālā, who suffered from skin disease, by drawing her through an opening in a car. It is doubtless a survival of this form of purification when, in the wedding ceremony, the aperture of the yoke of a car is placed on the head of the bride.

The removal of injurious substances is not always a mere redaction but is often also a transference to remote places or to other objects animate or inanimate. The Rigveda and the Atharvaveda contain several spells to relocate agencies to particular places or persons in the far distance. Thus hostile magic is expelled beyond the ninety streams (Atharvaveda, v. 71. 1); the disease which is sent away to far-off places, such as the Gandharves and the Marītas, and theシリーズ which is sent to certain souls and the demons which are carried to the divine being Trīpta Aptya in the remotest distances (Rigveda, xvii. 13-17). Injurious agencies are also transferred into inanimate objects, particularly unclean or infec- toria, especially cursed objects. A garment containing certain impurities is removed to a forest, suspended from a tree, or hung over a post, to which its dangerous influence is conveyed, and thus rendered innocuous (Atharvaveda, xiv. 4. 491). Stake-pollination is removed to a fleabane, which, being then thrown at a snake, returns the danger to its source (Kāliṭa Śūtra, xxi. 8). Fever is transferred to a frog as an antidote representing water (Atharvaveda, vii. civ. 2); while jaundice is conducted in a homoeopathic manner to a yellow bird (ib. vii. xii. 4).

(b) Auspicia.—(1) A very prominent part is played by eating in the communication of beneficial influences; contact with injurious substances which would, of course, be equally well effected by eating, is avoided by fasting (cf. § 101. (2)). The Vedas contain innumerable examples of the magical power conveyed by the eating of sacrificial food. The eating of the food is regarded as communicating the blessing embodied in it; and in the most various forms the view appears that the sacrifice transfers some convey some power implied in a particular sacrifice. Thus when the religious teacher initiates his pupil, he gives him the remnant of the offering with the formula, 'May Agni place his wisdom in thee.' On the occasion of the marriage festival a mixture of the milk of a cow that has a calf of the same colour and dung, belladonna, and salt is eaten. At the ceremony for the obtaining of male offspring the wife has to eat a barleymcorn and two vegetables, and the new-born child has been laid on each side of it (as symbolizing a male being). The act of two or more persons eating together establishes a community between them; at the wedding ceremony the bride and the bridegroom eat together, and at the royal inauguration the king and the priest.

Based on the idea that an animal, when eaten, communicates its special characteristics to the eater, the correspondence in essence and quality between the animal and the thing to which it is offered. To instru a bull or a (less often) a buffalo, for the purpose of conducting the sacrifice, is met with in the Atharvaveda. The goddess of the gods and the gods of the gods, the morning, a red-beat goat, for 'red of red colour, as if it were, are the Arvins' (Sātapatha Brāhmaṇa, v. v. 4. 1); to Agni with his columns of dark smoke, a he-goat with a black throat; to the Sun and to Yama (god of death), two he-goats, one white, the other black. A cognate magical correspondence appears in the offering of a black victim in a rite for the obtaining of rain: 'It is black, for this is the nature of rain; with that which is its nature he wins rain' (Taittiriya Śanātī, ii. 8. 5). When the descendant of all enemies is invoked, a blood-red victim is offered by priests dressed in red and wearing red turbans.

(2) There are several ceremonies in which anointing is applied for the attainment of auspicious ends. In the Dīkṣa rite the sacrifi cer is anointed with clarified butter, which, according to Baudhāyanas, gives him sight and sound sight. In the animal sacrifice the stake is anointed with clarified butter for the purpose of bringing blessings to the sacrificer. At the royal inauguration the king is anointed with a mixture of b estos and other substances which communicate to him the powers and abundance inherent in them. At the same ceremony the king anoints himself with the fluid contained in the hands of the chief priest who refrains for a year from cutting his hair, which has been flattened by it. At the Saunārman rite, an expiatory part of the Soma sacrifice, the priest consecrates the king by sprinkling him with the fat gravy of the sacrificial animals: 'With the essence of cattle, with the highest kind of food, he thus sprinkles him' (Sātapatha Brāhmaṇa, XII. vii. 3. 12).

(3) Churnas, made for the most part of wood, but sometimes of metal vessels, were frequently attached to parts of the body for magical purposes. A talisman made of wood from the butes tree (Butes frondosum) was worn in order to strengthen royal power (Atharvaveda, III. v.); a bridgework, a mirror in the Atharvaveda,为什么不根据自己的经验来判断这个说法？was fastened to his little finger, by means of a thread impregnated with lac, a talisman made of liqourice wood to secure the love of his bride (Kausiki Śūtra, xxxvi. 8 f.); at the full moon ceremony the sacrificer ties on his person talismans made of lac, together with all sorts of herbs, for the attainment of prosperity; while sowing seed, the husbandman put on a talisman of barley. The Vedic student who, at the conclusion of his apprenticeship, has taken the purifying bath ties a pellet of bodara (Zingibius ruber) wood to his left hand and fastens a pellet of gold to his neck; he then attaches two earrings to the skin of his garment, and finally inserts them in his ears. A talisman of gold secures long life: 'He who wears it dies of old age,' in the words of the Atharvaveda (XXXI. xxxi. 1). To ensure conception a woman puts a bracelet on the spell, 'An acquirer of offspring, and wealth this bracelet has become' (v. lxxxi. 1).

(c) Indifferent.—(1) Burying was a frequent secret method of conveying magical substances to others, generally with hostile intent. The Atharvaveda is full of spells to convey the power of magic buried in sacrificial straw, or fields, or wells, or cemeteries. Objects belonging to a woman who is to be injured—a garland, hair, a twig for cleaning the teeth—together with other things productive of misfortune are placed between three stones.
in a mortar (a symbol of crushing) and buried. The luck of a person thus attacked might be restored by digging up the objects, while an aspersions spell was uttered. The Sapatapatha Brâhmana states (iii. v. 4, 2.) a myth how the demons buried the queen in order to overcome the gods; but the latter, by digging them up, caused them to become inoperative. The Soma sacrifice even contains a ceremony the express purpose of which is to dig up objects buried by rivals or enemies. This idea of digging things sometimes has an auspicious intention, as when a mixture of milk, dung, beelium, and salt is buried in order to promote the welfare of cattle (Kaṇāka Śīrṣa, xix. 19).

(2) The action of looking at an object may be either beneficial or injurious. It has the former effect, e.g., when the sacrificer says (Viṣṇusyaṇi Śāntika, v. 34) to the priest, 'Look at me with the eye of Mitra; (the sun-god); or when a guest addresses the sweet food which is offered to him, saying, 'With Mitra's eye I regard thee.' (Avadhyavana Gṛhyaṣatra, i. xxiv. 14.) But the evil eye (q.v.), e.g. of the serpent, brings disaster on him towards the end of the wedding ceremony. The bridegroom secures himself from the evil eye of the bride by anointing her eyes and saying, 'Look not with an evil eye, bring not death to thy hand.' (Bṛhadāraṇyaka Gṛhyaṣatra, i. 4; Śaṅkhyāyana Gṛhyaṣatra, i. 16.)

In the Atharva-veda (xvi. 6) anointment is confused against the evil eye with the spell, 'Of the evil eye of the enemy protect us, O sacrifice, jōgula-tree is invoked against the evil eye of the hostile-minded.' (xvi. xxix. 3.) and a certain plant is employed with the spell, 'Of the enemy who bewitches with his eye we hew off the ribs.' (i. vii. 5; cf. xiv. xiv. 1.) On the other hand the evil eye produced by an insufficient object is shown as injurious by innumerable directions enjoining avoidance of such sights. Thus the Vedic student who, at the conclusion of his apprenticeship, has taken his purifying bath must not look at an enemy, a malefactor, a corpse-bearer, or ordure. For similar reasons, one returning to the sacrificial ground should not look round after performing an inauspicious ceremony, and offering to the goddess Nirṛti or a rite for the daughter of demons it is shown by innumerable directions enjoining avoidance of such sights. MAGIC (Vedic)

meant to deflect a river into another channel. The new course is first watered; it is then planted with reeds; and, finally, representatives of water, such as the aquatic plants called asoka, are deposited on it; the imitation is believed to produce the reality.

1. This type of magic is very frequently found in the Rigveda. The purpose of the ceremony is to call the god of rain-clouds (which frequently appear over the cowherds in the Rigveda). On the same occasion girls dance round a fire with jars full of water which they pour out, while they sing a song calling upon the cows to bathe. At the ceremony of piling the fire-altar of water is emplaced on the ground, on which rain is thus said to be shed, and grains is sown on the spot. When an otter is thrown into the water, rain falls in abundance; or, if any one desires rain, he casts herbs into the water, submerges them, and then lets them float away.

2. A modified form of sympathetic magic is divination, the aim of which is to find out what is hidden or future, largely from the occult correspondences between the representation and the real. The religious and sacrificial and funerary mean are the most significant representations: these can be interpreted by spiritual persons who possess inner illumination, strengthened by the power of asceticism and other magical means. From this direction, taken by a cove at a particular point in the ritual it may be inferred that the sacrificer will attain his purpose. If at a certain sacrifice the fire flames up brightly, the sacrificer will obtain what he wishes to have; if the fire rises, he will obtain what he wishes to have at least three. The fire kindled in a special way between two armies about to fight prognosticates the result of the battle by the direction of the smoke. The observer who, at a funeral, notes which of the three sacred fire-sheds a man enters first can tell whether the soul of the deceased is in heaven, in air, or on earth.

The following examples of divination are of a more general type; if one wishes to know whether an unborn child will be a male, the son of a Brahman must touch a member of the mother; supposing he has a masculine name, the child will be a boy. When it is desired to ascertain whether a boy, a good wife, she is bad etc., to choose between various clouds taken partly from auspicious sky (as that of a fair or a cowshed), partly from an unlucky sky (a cemetery or cross-roads); her choice betokens her character and her future. A special form of prophecy is the foretelling of weather by old Brahman from the smoke of dung.

Mixed with the know of the future obtainable from a symbolic process is that derived from birds or spirits, by interpreting the movement, the flight, or the cry of animals or birds specially connected with gods or spirits, such as the wolf and hyena, the owl, crow, pigeon, and vulture. Thus, in one of the two hymns of the Rigveda concerned with augury, the bird crying in the region of the Fathers (the south) is invoked to bring auspicious tidings (II. xiii. 3). Again, in one of the Sutras, the owl 'that flies to the abode of the gods' is addressed with a phrase well: 'Flying round the villages, from left to right, portend to us luck by thy cry. O owl!' (Hiṃlayakātin Gṛhyaśūtra, I. xiii. 3). The direction from which the woor will come is indicated by the flight of crows after the performance of the ritual. If the crow flies toward and for a girl. Such omens seem to be a later development, resulting from the simplification of the symbolic method of divination by isolating a single feature of a complex process.

13. Oral magic.—Magical formulæ are usually accompanied by some ritual act; but the spoken word in the form of a spell, a curse, or an oas also has a magical effect; it is said that ninety-nine spirits, O Night, shall help and protect us' (XIX. xlvii. 3-5). It is, indeed, characteristic of the hymns of the Atharvaveda to contain the names of numerous deities, while the panegyric of the Rigveda are addressed to one only; e.g., 'Heaven and Earth have anointed me; Mitra has anointed me here; may Bhṛpati anoint me; may Savitṛ anoint me' (VII.xxx. 1). The magic is very usually threats or undertakings in his own person, e.g., 'I plague the demons as the tiger the cattle-owners; as dogs that have seen a lion, they find not a refuge' (IV. xxvi. 6); 'As the fighting ever irresistibly smites the tree, so would a hundred-day beat the gams broken with toil' (IV. ii. 11); 'Swift as the wind be thou, O steed, when yoked to the car; at Indra's urging go, swift as the mind; the Marni shall harness thee; Tvaṣṭr shall place fleetness in thy feet' (VII. xix. 1). But the symbols of the sacrifice are also typical means, in order to effect his purpose, like the symbolic process in sympathetic magic; e.g., 'With the light with which the gods, having cooked porridge for the Brahman, ascended to heaven, to the pious ascending to the highest firmament' (XI. i. 57); 'As one pays off a sixteenth, an eighteenth, or an entire debt, thus we transfer every evil dream to our enemy' (VII. xvi. 5); 'As the rising sun robs the stars of their brilliance, so I rob of their strength all the men and women hostile to me' (VII. xiii. 1); 'The cows have lain down in their resting-place; the bird has flown to its nest; the monkeys have ascended to their trees; the elephants, brain, neck, back, arms I drive the disease' (III. xlii. 11). If, however the demon is known, this knowledge is emphasized as bestowing magical power over him; e.g., 'This is thy name; we know thy birth; this thy father, this thy mother.'

On the most varied occasions spells are uttered without any accompanying rite. The application of one that may be pronounced by a man on entering a court of justice is thus described (Pitṛsāvarśa Gṛhyaśūtra, III. xiii. 6): 'If he should think, this person will do evil to me,' he addresses him with the words, 'I take away the speech in thy mouth, I take away the speech in thy heart; wherever thy speech is, I take it away; what I say is true: fall down inferior to me.' Spells are also uttered, e.g., when a man mounts an elephant, a camel, a horse, a chariot, when he comes to cross-roads, when he swims across a river, and in many other situations. A formula sometimes consists of two or three words, or even of one word. If a man has spoken what is unworthy of the sacrifice, he has only to murder a man, or add an animal to the victim. The daily repetition of the first syllable Baha awries death from him who utters it; 'it has nothing to say to the man of evilknowing' (Gṛhyaśūtra, rav. vi. 1). Again, the mere mechanical repetition of a prayer meant for a totally different purpose may have a magical effect. Thus, the celebrated sacrifice, the Sāttvika sacrifice of the Rigveda (Ix. xxix. 49): 'We would attain that excellent glory of Savitṛ the god, that he may stimulate our prayers—if
The magical circle (belonging to the Atharvaveda) have been translated into German by W. Calander under the title of "Altindische Zauber-
rituale, Amsterdam, 1906."

MAGICAL CIRCLE.—For the "operation of conjuring" spirits the medieval sorcerer sat in the centre of a circle described on the ground. This formed a spiritual barrier, protecting him from hostile attacks, while enabling him to question his "familial" or other spirits from a colin of supernatural vantage.
"Circuit sunt munimenta quadam quae operantes a male spiritibus redunt tates." The concepts of circle, circular, and encircling lend themselves naturally to dramatic ceremonialism, and ideas of continuity, finality, and eternity have been appropriately expressed by circular symbolism.

In Scandanavian mythology a sorcerer enigmatis the earth. Populius Luanus, delivering an ultimatum from the Senate of Rome to King Antiochus, is reported to have drawn signs of strength on the ground, and put a circle round himself in which he awaited the reply. The circular form of certain shrines and religious structures may involve some symbolism, possibly astrological. According to the Talmud, a round house and a three-cornered house do not become unclean—e.g., from the contagion of leprosy—whereas a square house does. Possibly the sacred number 3 renders the three-cornered house immune; possibly, again, the three corners represent the cross of supernatural weapons. In the case of the round house the idea may be that nothing can cling to its smooth outline.

The circle as a supernatural protective barrier has several analogies in primitive custom, and variations of form involve corresponding variations of meaning. Throughout, from the earliest examples to the latest, importance is attached to the material or the instrument with which the circle is traced.

Among the Shuswap Indians the bed of a mother is surrounded by thorn-bushes, the object being to ward off the ghost of the dead person. The Bella Coola Indians, also of British Columbia, have a similar rite. Besides surrounding the bed with thorns, mortuaries cleanse their bodies while standing in a square formed by thorn-bushes, as a protection against the ghost. Here the mystic circle depends not on its shape but on its completeness in the geometrical sense.

Water and fire, excellent bulwarks both in human warfare and in spiritual conflict, and possibly for this reason, among others, regarded as supreme cleansers, are often used to avert evil influences.

The Lascians had a custom of keeping a fire burning in a circle around the bed of a mother for some weeks after childbirth. In Abyssinia the bed was surrounded by blazing herbs, while the mother herself was held by young fellows. It is a moving or dynamic form the fiery circle was used for the same purpose in Scotland. Morning and night fire was carried.

1 G. C. Horst, Zaubere-Blätter, Mainz, 1892, II. 70.
4 This seems to be contrary to the use of the pentagram or pentacle (see Thompson, loc. cit.).
7 Schwab, Das altindische Zauber, in JAI xx. (1898) 311.
round the mother till she was churched, and round the child till a bay-part of Scotland, a fire-candle was whirled three times round the bed where mother and child lay.

It has been suggested that in some such cases the idea was to prevent the soul in its critical state from leaving the body, but the greater proportion of cases certainly depend on the idea of protecting the person from evil, though the fire-treatment of childbirth may have originated simply in a primitive clinical intention of producing comfort or obviating complications.

In ancient India, walking round the coffin to 'give light to the spirits,' or to light on his way, 5 The Copts burned a fire round the grave. 6 A Chinese charm consists in laying a circle of ashes round the dead man; it is supposed to resuscitate him. 7 The Romans carried water or fire round mourners on their return from the funeral. 8

The curious custom of circumambulation as a mark of honour was practised by Hindustan, Greeks, and Celts.

In ancient India, walking round a person three times to the right (sunnise) was a ceremony of honour, 9 as it was among the Greeks and Celts. 10 The ancient Indians walked round the funeral pyre, as Achilles drove round the pyre of Patroclus (see art. DIAKOMELATHOS). The ancient Indians also practised the rite as a cure for a sick person. 11 Possibility the idea of protecting a person with a mobile, living image behind the honour.

In Assyria, a candidate for the priesthood consort with spirits in the mountains; when he returns home, he splits a young tree and thrusts it under the stones of the temple till any spirit which may still be clinging to him will be left sticking to the tree. 12 Highlanders of Scotland used to send their sheeps through the roof of their huts to drive out the witches. 13 Similar customs are found in N. Europe and England as ovals for sacred purposes.

The Lapps wore a brass ring on the right arm by way of protection against the ghost of the dead person. 14

Frazer infers superstitions about rings—arm or finger-rings—suggesting that the idea is to keep the soul in the body. For this purpose magic cords are tied round wrist, ankle, or body among various peoples. 15

"To keep the soul in or the demons out" is a question where convergence of practices is natural. In ancient India the medical magician encircled the bed of a woman at child-birth with black pebbles to ward off demons. 16 This is in line with primitive practices mentioned above, but a suggestion of V. Henry possibly connects it with Babylonian magic: he finds in old Indian magic traces of the double pentacle, or Solomon's Seal, the famous concentric circle or magical circle, consisting of two equal and equilateral triangles, cutting each other so that the resulting segments are equal. The underlying idea may be that the pole of the star pierce the invisible enemies. 17

The Indian data alone show a connexion of this astrological element, with the Semitic, and it is from the Semitic practice that the magical circle of medieval Europe, along with a considerable body of astronomical magic, was developed. This is a remarkable case of permutation from one source. Semitic magic and its conquest of Europe may be described, not altogether fancifully, as a lefthanded compliment to Semitic religion and the conquest of Europe by the Bible.

The Babylonian texts continually refer to the euwerti, which Thompson justly identifies as "the prototype of the magical circle, possessing the properties of a vantage point." 18

The Church-priest recited over the sick an insantiation: "The (name of) Es am i . . . , the messenger of Marduk an . . . ," the one to whom I pay my respects. 19

In more detail, the sick person was safeguarded by enclosing him in the nature of a charm, for the power of the charm, or of the priest, or of the material, or of the name, or of the force which conveyed the name, or of the power that lies in the name, etc. 20

The priest first performed a ceremony of invocation in which a kid was sacrificed. He fed the kid away, and then described the circle. 21 "Enclose the man with a magic circle, and of flour of rice, surround it in a great right and left. The ban is loosed. 22 A mixture of meads, 23 and to be intended: both substances possessed virtue. "The flour of Nergal, the sard-land god" was the "base" of another ceremony, before the god Nergal, the prince described with the sacred name of the river, was winged in its nest. 24 In yet another flour and water were used for drawing the circle. Here Thompson compares the medieval use of the Host as a protection against vampires and witches. The Babylonians described the mixture as the "set of the corn-god." 25 Similarly the Jews of Jerusalem employed the virtues of food against influences, sprinkling a mixture of flour round the bed of a person. 26 A Semitic parallel to the idea of "stripping off" passing through a ring, or arch, or other circumscribing circle is found in a cure for headaches, which consisted in a circle round a desert-plant with meal, placing it up at sunrise, and tying it on the head. When the plant was moved, the headache disappeared simultaneously. On the same principle, and, in some cases, for the same purpose, the employment of the magical circle for the conjuration of spirits is typical of the culture of these ages. The primitive Babylonian practice was now diverted from magical magic, and was applied to the evocation of elemental demons, whose aids were invoked for alchemical research or prophecy or evil magic against individuals, its main purpose was to protect the sorcerer from the dangerous servants, whom he called up. 27 At the same time the geometrical possibilities of the circle appeared to the mathematical instincts of the scholar, and geometry perhaps owes something to magical experiments upon the circle. Kaballistic lore was also called upon for the exploitation of names and numbers of power, to be inscribed in the circle. Here begins the positive virtue of the circle, which, in commerce, once as the concepts of the figure, made it something more than a protective barrier. It became rather a mystic focus of power, and had at least the merit of concentrating the alchemist's or astrologer's thoughts. Lastly, to the astronomers, the circle became, by means of astrology, a means of connexion, by means of astrology, to apply to it, and it thus became an intermediary between chemistry and astronomy, as the focus to which were attracted the infernal and supernatural powers alike.

The Arabic and Hebrew developments of magic in the early centuries of the Middle Ages are obscure. The account given by Psellus of a Hecateus circle, "i.e. a paiderbos, calls for notice, though its meaning is confused. He writes: "Hecate's circle is a golden sphere, enclosing a sphinx in the centre, turned to the east, the universe being set forth in the middle of it. They made contrivances by turning this; and they were wont to call such things teyrra, whether they have spherical or triangular or square or terrac, or round or oval, or having houses. According to this, they are the operations of the circle, or the sphere, as possessing secret power. And it is called 'Hecate's' being given another name to Hecate; and Hecate is a divinity among the Chaldeans." 28

The account may be simply confusing the Chaldean magical circle with the Greek magical circle (πετρυλία; τυρτόλια); but, for the same reasons, sometimes triangular in shape is an interesting hint in the direction of the pentagrams and other figures with which the magical circles were filled. Psellus notes that the object of the incantation was oracular, the incantations being to evoke spirits for the purpose of forcing them to predict future events. As for the Greek wheel on which the πετρυλία, wreath, was tied, there is considerable doubt as to its meaning.

The magical circle of mediaeval occultists had innumerable varieties, according to the purpose, the time, and the species of spirit to be invoked; and it also varied according to the predilections of the operator. The following may be considered as typical examples of the method of description and formula of blessing and of invocation. The magician, after purifying himself, collected his paraphernalia, including his magic swords, cross, crossbow, magical sword or knife, and so forth, and traced the circle, usually 9 ft. in diameter, with his wand or sword. He then blessed the circle, a typical blessing being:

The Good spirits seem to have been invoked but rarely; necromancy was also rare, though both forms of this were used, one in which the body and the other in which the shadow of the dead were the object of conjuration, and extraordinary precautions were taken in the process.

Now, it would seem that any evil spirit to the circle he could any how to control and exterminate. He knew his nature and how it was distributed to all things, its nature was such that it agrees with what it does and perhaps no spirit in the whole creation of the universe was more efficient in the circle and the quality of the spirits, and that the spirit lives only in or on. If there be any holy power of the sea, or rivers or fountains, but, in the place, it has been found that for the quality of the air and clear, and, for the spirits as to assume bodies. Let the circle be made as well as the defense of the invocant, and the confirmation of the spirit. And in the circle in the circle. And in the circle, perhaps, the names of the good spirits can be used in the way you do and be able to bind and constrain what we intend.

Characters and pentacles... frame an angular figure with the inscription of such convenient numbers as the characters suggest to themselves to our work. Furthermore, we are to be provided with lights, perfumes, ungents of our command, compounded according to the principles of the spirits by reason of their natural and celestial virtue. Holy and consecrated things to the defence of the invocant and his companions, but also serving for bonds to bind and constrain the spirits, such as holy papers, lambs, pictures, pentacles.

fixed in the ground or floor by nails. Five concentric circles, close together, formed a strong protective circumference. A triangle took the place of the pentagram, and three small circles were placed for the stations of the operator and assistants.\footnote{Waite, Occult Science, p. 60, Ceremonial Magic, p. 243f.}

The elaboration of geometrical design and astrological figures within the circle was connected with its positive efficacy for conjuration and control of the spirit. Thus Giordano Bruno wrote: '\textit{O quam multi vestri incensicoches circulorum et quam sensibis hominum occultas! Cum capti Draconis in Sagittario excitati, ignes agnoscimus et ignis sapienti in aqua, naturalis spiritus ad daemonias responsa venit.}'\footnote{Ibid.}

Consultation of the stars and seasons was essential. (see below in constituentia circulorum considerandique quae tempore annorum, quae horae circulorum faciatis, quae spiritus advocave velit, cui stellarum et regionis praeferentur, et quae functiones habebant.)\footnote{Ibid.}

For summoning chance spirits or seeing visions generally, a circle was made (probably at crossroads) and perfumed, and the operator had to walk round its circumference, east to west, till he was giddy.\footnote{Ibid.} For necromancy the churchyard was an appropriate site.\footnote{Ibid.} The operator wore elaborate vestments, and a ring was mounted with holy oil.

The circle was invariably obliterated on the conclusion of the operation.\footnote{Ibid.} A similar practice of destroying the traces of magical rites is regular throughout the history of magic, even in primitive cultures.

The talismans, pentacles, or seals, used freely by the magician, depended largely upon the magical circle which was described round them. Hence the practice of the large operating circle, the more concentric circles, the more potent the efficacy. Against the attacks of spirits they were very powerful, 'presiding with wonderful influence.'\footnote{Ibid.} They were exalted to the spirit on its appearance; by their means the operator bound the spirit, and was able to prevent it from departing 'without a licence.' The issue of the licence was an important detail; if it were omitted, the death of the operator might result.\footnote{Ibid.} The first virtue of a seal was from the star under whose influence it was, and, accordingly, it would be made of gold, if the planet were the sun, of iron, if the planet were Mars.\footnote{Ibid.} Seals 'of the names of God' were more powerful. Others had the names of angels, such as Raphael, Michael, Gabriel, inscribed between two concentric circles. Those which may be distinguished as pentacles proper had a Solomon's Seal, designed by a circle\footnote{Ibid.}.

The most usual form had enclosed within the circle the 'table' of a planet. These tables, it is interesting to note, were 'magical squares' in the mathematical sense (see below). Each planet, and each of the other forces, had its own magical squares.\footnote{Ibid.} The Seal had an obverse and a reverse, and was the size of a large medallion.\footnote{Ibid.} In connexion with the pentagram, this figure was a synonym for health. It was also developed into a continuous figure, by combining two, resulting in five, not six, points.\footnote{Ibid.}

The 'characters' of spirits were taken by the operator within his circle. These were in a book, which, when completed, was consecrated in a triangle described just outside the circle.\footnote{Ibid.} When a spirit appeared, it was asked to place its hands on its 'character' and swear.\footnote{Ibid.}

Medieval manuals for general use were frequently stamped with the magical circle in its numerous variations, as also were talismans of various make. The latter were effective, as a rule, only in cooperation with a ring engraved with 'characters.' This was worn on the finger, and the talisman on the arm or breast.\footnote{Ibid.} The magician's wand was sometimes planted and could be made into a circle, the ends being joined by a gold chain.\footnote{Ibid.} Described on parchment, the magical circle served as a basis for astrological calculations. This was used for prediction whenever Arabic culture penetrated. Thus in Malaysia at the present time the circle is employed for all kinds of divination. To select a lucky day for a journey or business, a circle enclosing a heptacle is used, and every alternate day is skipped. The bases of the continuous heptacle, running from a, g, p, Sunday to Tuesday, Thursday, Saturday, Monday, Wednesday, Friday, Sunday, and so on. This heptacle is an ingenious development of the double pentacle. Magic squares of three or five numbers enclosed in a circle are less frequently used. Another form of divinatory circle has only radii from the centre. Colours emphasize the various parts of these circles.\footnote{Ibid.}

With the mathematical curiosity, the so-called magical circle is a development from the magical square, known since the earliest Arabic science. The latter is a square divided into smaller squares in equal number with a number is written in each, so that the sum of the numbers in any row, horizontal, vertical, or diagonal, is always the same. The magical circle, or circle of circles, has numbers in concentric circles with radial divisions, possessing the same property as the rows in the magical square.\footnote{Ibid.}

\textbf{MAHABAN.—See HUNGARIANS.}

\textbf{MAGYARS.—See HUNGARIANS.}

\textbf{MAHĀBAN (Skṛt. mahā, 'great,' vana, Hindi, 'forest')}. A sacred town in the Mathur District of the United Provinces and Oudh, on the left bank of the river Jumna; lat. 27° 27' N., long. 70° 47' E. It is famous as the scene of the adventures of Krishna as a child.

Here and at Gokul (g.w.), as might have been anticipated, the places where the young god was attacked by the witch Pūṣānā, where he played hide-and-seek with the dairy women, where he destroyed the falling wooden mortar, and where he overcame the demons Trāṇavarta and Śaṅkata are now shown. Mahāban was, in reality, only the water-side suburb of that famous town, of which it has now appropriated much of its sanctity, possibly because Mahāban never recovered from its sack by Mahmud of Ghazni in A.D. 1017 (H. M. Elliot, \textit{Hist. of India}, London, 1897-77, ii, 438, 490). In the fort are found fragments of Buddhist sculptures, and it is believed that Mahāban was the site of some of the Buddhist monasteries which, in the time of the Chinese pilgrim Fa-Hian, stood on both banks of the river. The existing temple is supposed to mean. Only one is of any importance, that dedicated to Mathurānātha, Krishna as lord of Mathurā. The most interesting building, however, is that known as Asst Khambha, 'the eighty pillars,' which has the name Chhatā after birth, and given the child (pātā) of the infant god is exhibited. In its original form it seems to have been Buddhist, and afterwards used for Hindu ceremonial, and finally converted into a Muhammadan mosque.

MAHABHARATA

The style of the colonnades closely resembles that of the most famous building of the same class near the Ghat Mintar at Delhi (q.v.), and both buildings have been ascribed to the same age, the close of the 12th century. If a truth not yet proved, but one in which this building is that one half of the southern end consists of the shrine of a Hindu temple almost undisturbed, with the original roof still in position.

LITERATURE—The history, legend, and architecture of the MAHABHARATA have been the subject of a great number of studies, including the works of: A. A. Führer, Monument Historical Account of the Incarnations of the Hindu Deity Vishnu, in the Hindu Provinces and Caste, 1881, p. 121; 161 xvi. (1888) 427.

W. CROOKES—The MAHABHARATA is an epic poem of India in eighteen books, containing altogether about 400,000 verses of eight and eleven syllables each, although these verses are united into stanzas (called akshas and stotra) of four verses each, so that the Hindus call it a poem of a lakh (100,000) of stanzas. The books are of very unequal length, varying from a few hundred to several thousand stanzas, and there is also a supplementary book— the HarivaTaratva—of 16,000 verses, which has additional, illustrative and partly didactic. The epic proper contains about 30,000 stanzas embedded in and embellished by moral, political, religious, and metaphysical passages and characters, the son of Lord Bākṣa, and his relations and companions, the heroes, the gods, the demons, and the characters of the epic, to which it gives the title. It is probably older in its elder parts than the Rāmāyana, and yet it is entirely much later. It is the oldest extant history of the Western (Middle) India, while the Rāmāyana belongs to the east. It celebrates Kṛṣṇa as representative of Vīśṇu on earth, while the Rāmāyana celebrates Rāma. Finally, it has not the unity of the Rāmāyana, nor was it written by one poet, as was the Rāmāyana. According to a tradition still extant in the work itself, the MAHABHARATA at first contained only 8000 stanzas and was subsequently increased to 24,000, after which it was again enlarged by the additions of numerous episodes till it reached its present size. The chief individual characters in the poem are known in part in ancient literature, but not the popular characters, to which the most remarkable feature of the epic is its didactic and moral, and nearly every character is a real or fictitious person of the time of empire, when, however exaggerated, the conquest of all India was regarded as quite a possible fact. It shows a superficial knowledge of the extreme north and south and a very imperfect knowledge of Middle India. Castes are recognized as orders of society naturally, or, rather, divinely, established (e.g., xii. 72, 297). Heterodox beliefs are freely discussed; outlandish morals are gravely reproved (e.g., viii. 46). Satī is approved, but is not regarded as imperative; the ethical standard is high. Buddhist remains and Hindu temples are mentioned (e.g., iii. 190). Different epochs have amalgamated their beliefs in regard to the gods. In one episode the Vedic gods are paramount, in another the authority of Brahma is supreme; elsewhere Vīśṇu is the one great god, or Śiva alone is God and Vīśṇu is his representative. Only one late passage mentions the Brahman, Vīśṇu, and Śiva, as three forms of one god (iii. 372).

The MAHABHARATA begins with an Introduction, or Book of Beginnings, which tells how the childhood of the two brothers, Pāṇḍu and Bīśma, was spent, how they were banished by their uncle Bīśma. The former brother grows up and marries a western woman, Gāndhāri, who has a hundred sons, called Kṛṣṇa. Pāṇḍu has two wives, one of whom, Mādri, commits sati at his
death; the other, Pythā or Kuni, survives Pāndu and brings up his five children, called the Pāndus, who together are known as the five Kuni. Madri had invoked. These sons are Yudhishṭhīra (son of the god Dharmā, or Right), Bhīma (son of the wind-god), Arjuna (the chief hero of the epic, son of Indra), and the twins Nakula and Satrājanī (nephews of Yudhishṭhīra). After this introduction, which, like most childhood-recitals, is in general late, comes the 'Sātī', the title of the second āpāmvāsa (book), taken from the assembly in which the Sātī is killed. The epic draws its sub-title, Kṛṣṇa, a virgin wife, and destroy each other. The seventeenth book, 'Māniś- prasthānīka' ('Great Renunciation'), tells how the Pāndus give up their kingdom and climb to heaven by way of the northern mountains; this is supplemented by the last book of the epic proper, called 'Svāgārāloha' ('Ascent to Heaven'), describing the journey. To this is later added the Harivīrnāsī ("Genealogy of Viṣṇu"), a long account in three sections of the life and family of Kṛṣṇa as a form of Viṣṇu. It has, in part, the characteristics of a Parāšāra (q.v.), and is, without doubt, a subsequent addition, dating perhaps from the 2nd cent. B.C., though generally regarded as still older. The Pāndus are the possessor of an extensive store of philosophical and religious lore as well as a tale and as embodying important geographical and historical data. It undoubtedly reflects some real contest, which may have taken place about a mill. millennium before our era, between the Kṛṣṇa (the other epic, the Bhāgavata, extols the solar race), and derives the heroes from kings who descended from Soma, the moon-god, himself the son of the seer Atri. Buddha, who is said to have been a daughter of Ikṣvaku of the solar line. Their son was Purāvas, whose son, Ayu, was the father of Nala, the father of Āyasti, from whom came Duru and Yadu, the ancestors of all the lunar race, Yadu being the ancestor of Kṛṣṇa and Pāru being the ancestor of Bharata and Kuru, whose descendant, Śantanu, was the father of Bāla (above) by the goddess Gangā (the river Ganges). Śantanu's wife, Satrāvāra, was also the mother of Vyāsa and of Videhavirya, who died without children; but Vyāsa raised up children for him, and these were Dūrānāстра and Pāndu. If these legends be reconstructed historically with the help of the epics, the result is that a real historical background is reflected in the maze of myth. The polyandry of the Pāndus is a trait of certain hill-tribes, and is not unknown on the plains; it is undoubtedly a genuine trait of tradition. Parvati's instruction to Kṛṣṇa that a ruler race than the old and long-respected Kurus. An attempt to group the participants in the great war according to their place of origin has been made by F. E. Fargher (J.B.A., 1906, pp. 300-336, and 1910, pp. 1-56), who seeks in this examination to determine whether the theory of successive invasions leaving inner and outer rings of Aryans in India can be substantiated thereby; but the result seems to leave considerable doubt as to such invasions having left traces in the poem, though the theory of successive invasions may be substantiated on other grounds. The didactic teaching of the epic is not confined to any one part of the work, and from a general view of this teaching it is evident that a later pantheistic system has become amalgamated with the dualistic doctrines of the Śākhyā philosophers in its later stages. This mixed system is represented not only in the Bhāgavata-Purāṇa, but in the Angūrīya and in the philosophical chapters of the twelfth and thirteenth books. The outcome of the systematic exposition in the Purāṇa is to be seen in the attempt to reconcile the terminology and basic ideas of the
Sânkhya system throughout. The chief interest of the religious doctrine lies in the insistence upon the leading deities of the worshipper and the saving grace of the supreme god (see BHAKTIVÄDA). 

Krṣṇa as a form of Viṣṇu is not revered (as later) in his child-form, nor is anything made of his being the lover of milk-maids, though both these are recognized. He is worshiped strongly in the Hariyana and later Purāṇas, and it is perhaps not unjustifiable to conclude that they did not form part of the worship as originally adopted into Brahmanism. 

Directly opposed to Krṣṇa-Viṣṇunism is the Siva-cult also found in the epic, as already indicated. This cult appears to have been set against that of the Krṣṇa-worshippers by the more orthodox upholders of Brahmanism, although neither Siva nor Krṣṇa was a Vedic god. But Siva had long been recognized as a form of the Vedic Rudra, and, though probably at first a popular god, like Krṣṇa, he was already accepted by the Brahman priests. The parts of the poem exalting Siva as All-god or as the One God are not early; on the contrary, they bear the marks of later composition and the trait so familiar, that of phallic-worship, appears only in a few late passages. As this aspect cannot be the original one, the god must have acquired the seal of respectability only by degrees, being probably repugnant to the orthodox priests of Brahmanism. The special sectarian cults or forms of worship in the Purāṇas are unknown in the epic. The cult of Viṣṇu is that of the pantheistic All-god; the cult of Siva is that of the only One God. But, with the opposing claims of each sect, each god gradually assumes the distinctive attributes of the other. Viṣṇu, as the theistic god and Siva as the pantheistic All-god. Each in turn claims to be maker, preserver, and destroyer; and Brahman also, though originally creator-god, becomes destroyer as well, till all three, the sectarian Krṣṇa-Viṣṇu and Siva and the older Brahmā of Brahmanism, coalesce into the 'one god with three forms,' or, as the Hindu says, 'three gods and one form.' Beside these great gods it is noteworthy that a revival of sun-worship leads to strange ejaculations (see Sun-god) and much floating out (but only late passages), probably because of the identifications of Viṣṇu with the sun on the one hand and the later Persian sun-worship on the other; for, though the epic was probably rounded out to its present size about the century or so, there is no virtual completeness in all probability as an epic two or three centuries before (by 100 B.C.), yet numerous episodes and lacunary hymns have been added at all times, as may be seen by the manifold additions in the recently published southern text of the epic, which contains thousands of verses in great part of this character (in part, narrative). Of such sort also are the hymns to Durgā and probably also the exaltation of Skanda as the great array-leader of the gods, raised far above his earlier conception. All these later additions are of priestly sectarian origin. The original lay of the Bharata war may also have been of priestly rather than of popular origin, though the two-media story is not unknown in early literature. But it was part of the business of the king's chaplain to recite laddus in his honour, and it is not impossible that the chain of the epic kings may have expanded the theme for many years. "Dying living and dead kings and their glory formed the topic of lay and eulogies. The completed Mahābhārata was intended for recital, but this was in dramatic form. The lay was pre-eminently as well as recited by the purveyors of amusements at country fairs.

MAHĀBODHI.—See GAYA.

MAHĀR, MAHĀR, MEHRA.—One of the menial or depressed castes of W. India and the Deccan, numbering 3,843,080 at the Census of 1911. Their name is very doubtfully connected with G. F. Oppert's (Ort. Indic. & Mahārāṣṭra, London, 1882, 2 vols.) Mahārāṣṭri, which see. Pārvati on the banks of the Ganges. At that time beef had become a forbidden food; and when the divine cow, Tripādi Śrīkṛṣṇa, died, the gods determined to cook and eat her body, and Mahāmuni was set to watch the pot boiling. He was as insatiable as King Alfred, and a piece of flesh fell out of the pot. Not wishing to return the dirty piece to the pot, Mahāmuni ate it; but the gods discovered the delinquency and doomed him and his descendants to live on the flesh and sinews of women (R. V. Russell, Central Provinces Ethnographic Survey, pt. ix, Allahabad, 1911, p. 34; cf. E. J. Ritz, Census Report, Bihar, 1891, p. 134 s.).

Their religion is of the primitive animistic type, with a veneer of Brahminism. In the Khandesh District they keep the regular Hindu fasts and feasts, and worship the popular gods of their country—Viṣṇu, or Viṭṭhoba; Siva as Khandolā; Mahāsobh, an evil spirit who alides in an unshaped stone smeared with red lead; Bhrāra, or Siva in his terrible Bhairava form; and the Mother-goddess in the form of Ai Bhuvānī, whose image they keep in their houses. Besides these they worship snakes and the spirits of their dead ancestors (BG xii. [1880] 118 ff., xvii. [1884] 172 ff.). At a temple in Khāshīwār the Dheis worship what is really an image of Viṣṇu reposing on his serpent Sesā as Hānī, who is said to have been a deified woman of the caste. Women who are unable to nurse their babies and owners of cows which give a scanty supply of milk use the popular god of that milk if their milk be increased (BG xiii. [1884] 415).

In the Central Provinces the great body of the caste worship the ordinary gods Dev, Hanumān, and others, though, of course, they are not allowed to enter Hindu temples. They primarily observe the Hindu festivals of the year and the days of the new and full moon. On the festival of Nāgāpanchamī they make an image of a snake with flour and mix it with a sweet and eat it. At the sacred bathing place of Mahār they have a special bathing-gāh set apart for them, and they may enter the cleanness rule as far as the body goes, but may not go up to the temples: here they worship the god and think that he accepts their offerings. They are thus permitted to
travers the outer enclosures of the citadel, which are also sacred to the Mahádeva. In many cases the touch of the shrine of Mahádeva, but must stand before them with their hands joined. Then in Berar they worship a curious collection of deities, among whom are included the archangels Gabriel, Azrael, Michael, and Anâdîn, all of whom, they say, come from Pândharpur. In Berar the worship of these archangels was probably borrowed from the Mânavamsa; but in Gujarât it was apparently taken from Christianity.

It seems that the attraction which outside faiths exercise on the adherents of the old religions is due to the social degradation under which they labour, itself an outcome of the Hindu theory of caste. Hence they turn to Islam or to what is probably a degraded version of the Christian story because these religions do not recognize caste, and hold out a promise to the Mahârâjas equality with his co-religionists, and in the case of Christianity of a recompense in the world to come for the sufferings which he has to endure in this one. Similarly the Mahârâjas are the warmest adherents of the Muhammadan Saint Sheikl Farîd, and flock to the fairest held in his honour at Girîr in Wâhâba and Fratîghâr in Bâhûrâ, where he is supposed to have slain a couple of giants (Ruschen, p. 767).

LITERATURE.—Besides the authorities quoted in the art. see Census Report, Central Provinces, 1901, i, 182, Bombay, 1911, i, 577; Anjum, Ethnography, "Gujarat P. L. i, S. Bombay, 1912, p. 761.

W. CROOK.

MAHATMA.—See THEOSOPHY.

MAHÁVASTU.—The Mahávastu, one of the most noteworthy books of Buddhist antiquity, is a huge confused compilation of legends on the origin and development of Buddhism in the life of its founder (up to the gift of the ājataśatru) and his first disciples—in a word, on that ensemble which, with infinite varieties of detail, crossed and ramified, in every way, is the common property of all Buddhists. Beside the stories proper, there is a treasure, which is also traditional, an enormous mass of játakas (birth-stories) and tales, certain dogmatic speculations (see below, § 3), intermittently interspersed with digressions, mere padding—two, three, four accounts and more of the same episode, from different sources, sometimes contradictory, sometimes following one another, sometimes scattered through the book; doctealled into order, dismembered, incalculated.

The interest attaching to the Mahávastu is of many kinds: (1) it is a book of vinaya (discipline) of one of the ancient sects, and its history, so far as it can be traced, is instructive; (2) it is a vast repository of legend and folklore, which, when compared with Pali literature, was also inexhaustible, and the common property of the Maháyâna and the Maháyâna, and (4) its language, too, deserves attention.

1. History and contents.—The Mahávastu, or, according to the colophon (which is open to suspicion), Mahávastu-Kathà, claims to be a part of the Vinaya-pitaka, of the ‘recitation’ (i.e. the canon) of the Lokottaravadin Mahâsâghikas of the Madhyadesa.

(1) The Mahâsâghikas are one of the old sects or branches of the Order, the other branch being that of the Sthaviras or Theras (see sects (Buddhist)); from the beginning it probably had special rules of vinaya, or discipline. (2) The expression Lokottaravadin, ‘believer in the supernatural character of the bodhisattvas’ (see below, § 3, a), indicates a dogmatic school. It is possible that there were Mahâsâghikas who were not Lokottaravadin. It would not be difficult to prove from the Mahávastu the passage which have a Lokottaravadin tendency. (3) The Madhyadesa, or ‘middle country’, of the Buddhists comprises N. India, Magadha, Kosala, and Videha; but there were Mahâsâghikas outside of the Madhyadesa, notably the Pûrâsâlas and the Aparâsâlas, who were also Lokottaravadin.

In order to understand the word mahávastu and to see how the Mahávastu, in which discipline takes only a very small place, can belong to the section on ‘discipline’, it is necessary to go far back.

The disciplinary literature (Vinaya) was from the beginning composed of two parts: (1) the formula of confession (pratîtipada, pratîmokkha), a list and explanation of grave and venial transgressions to which an explanatory and historical commentary was soon added: on what occasion such and such a prohibition was made by the Master; in the Sarvastivadin school this commentary is called Piṭaka Vinaya; (2) the statutes of the Order, a collection of the texts (karmavâkyâ, karmavâcha) relating to ecclesiastical acts (ordination, sightly consecration, etc.) and of rules referring to ordination, consecration, the vajra-stick, the body during the rainy season, to parishes, medicines, beds, and scisms. These texts and rules were also embedded in a historical commentary. In the Pañcin they are divided into two sections (khandhâ-ka), in which chapters or books (partly the Great Yagga and the ‘Little Yagga’ (Mahâvagga and Chullavagga), the latter being devoted to subsidiary questions. There is the same division in the chronicles of the Sarvastivadins, under different titles; the Kṣatriyapakâga (consisting of ‘point of discipline or doctrine’, ‘story’, corresponding to the Chullavagga, and the Vinaya-vastu, which, although it does not bear the title ‘Great’, corresponds to the above.a Since a monastic exhibition of the Mahâvagga (and the Vinaya-vastu) is that, especially in its first part, it assumes the form of history. It contains a short epitome of the origin of the Order, which is perfectly imbued as an introduction to the vastu of ordination; it was in a book of discipline that the most ancient writers, for want of a better planned library, deemed it expedient to place some pages from the life of the Buddha—his illumination, his first sermon, etc. of the Vinaya-vastu (which is, as we have said, the Mahâvagga of the Sarvastivadins), who came long afterwards, took far more liberties: in the first ten chapters their work preserves the character of a historical composition of innumerable documents on the history of theusters of Buddhist tradition; (3) the Mahávastu, from the point of view of the individual of ordination, marks a period in the history of the Mahávagga and the Vinaya-vastu (which is, as we have said, the Mahâvagga of the Sarvastivadins), who came long afterwards, took far more liberties: in the first ten chapters their work preserves the character of a historical composition of innumerable documents on the history of the Maháyâna, and the Maháyâna, and (4) its language, too, deserves attention.

1 Barth, Journal des Savants, 1899, pp. 463, 422.

2 The Mahávastu is often cited as Mahávastu, and the Mahâsâghikas as Mahâsâghikas, without the article. Bodhisattva, indicates a dogmatic school. It is possible that there were Mahâsâghikas who were not Lokottaravadin. It would not be difficult to prove from the Mahávastu the passage which have a Lokottaravadin tendency. (3) The Madhyadesa, or ‘middle country’, of the Buddhists comprises N. India, Magadha, Kosala, and Videha; but there were Mahâsâghikas outside of the Madhyadesa, notably the Pûrâsâlas and the Aparâsâlas, who were also Lokottaravadin.

In order to understand the word mahávastu and to see how the Mahávastu, in which discipline takes only a very small place, can belong to the section on ‘discipline’, it is necessary to go far back.

The disciplinary literature (Vinaya) was from the beginning composed of two parts: (1) the formula of confession (pratîtipada, pratîmokkha), a list and explanation of grave and venial transgressions to which an explanatory and historical commentary was soon added: on what occasion such and such a prohibition was made by the Master; in the Sarvastivadin school this commentary is called Piṭaka Vinaya; (2) the statutes of the Order, a collection of the texts (karmavâkyâ, karmavâcha) relating to ecclesiastical acts (ordination, sightly consecration, etc.) and of rules referring to ordination, consecration, the vajra-stick, the body during the rainy season, to parishes, medicines, beds, and scisms. These texts and rules were also embedded in a historical commentary. In the Pañcin they are divided into two sections (khandhâ-ka), in which chapters or books (partly the Great Yagga and the ‘Little Yagga’ (Mahâvagga and Chullavagga), the latter being devoted to subsidiary questions. There is the same division in the chronicles of the Sarvastivadins, under different titles; the Kṣatriyapakâga (consisting of ‘point of discipline or doctrine’, ‘story’, corresponding to the Chullavagga, and the Vinaya-vastu, which, although it does not bear the title ‘Great’, corresponds to the above. Since a monastic exhibition of the Mahâvagga (and the Vinaya-vastu) is that, especially in its first part, it assumes the form of history. It contains a short epitome of the origin of the Order, which is perfectly imbued as an introduction to the vastu of ordination; it was in a book of discipline that the most ancient writers, for want of a better planned library, deemed it expedient to place some pages from the life of the Buddha—his illumination, his first sermon, etc. of the Vinaya-vastu (which is, as we have said, the Mahâvagga of the Sarvastivadins), who came long afterwards, took far more liberties: in the first ten chapters their work preserves the character of a historical composition of innumerable documents on the history of theusters of Buddhist tradition; (3) the Mahávastu, from the point of view of the individual of ordination, marks a period in the history of the Mahávagga and the Vinaya-vastu (which is, as we have said, the Mahâvagga of the Sarvastivadins), who came long afterwards, took far more liberties: in the first ten chapters their work preserves the character of a historical composition of innumerable documents on the history of the Maháyâna, and the Maháyâna, and (4) its language, too, deserves attention.

2 The Mahávastu is often cited as Mahávastu, and the Mahâsâghikas as Mahâsâghikas, without the article. Bodhisattva, indicates a dogmatic school. It is possible that there were Mahâsâghikas who were not Lokottaravadin. It would not be difficult to prove from the Mahávastu the passage which have a Lokottaravadin tendency. (3) The Madhyadesa, or ‘middle country’, of the Buddhists comprises N. India, Magadha, Kosala, and Videha; but there were Mahâsâghikas outside of the Madhyadesa, notably the Pûrâsâlas and the Aparâsâlas, who were also Lokottaravadin.
implies that the book was, like the Mahāvagga and the Vinayavagga, meant to be a history of discourses. As a matter of fact, of thirteen hundred pages about twenty treatise of discipline (especially at the beginning, two lines on ordination), and certain parallelsisms with the Mahāvagga cannot be mistaken; e.g., there is a series of stages of life in the Mahāvagga which is paralleled in the Tibetan Vinayavagga (Barth, loc. cit. p. 404). But, on the whole, the Mahāvastu is a collection of legends without any connexion with discipline.

One can easily understand how a primitive Mahāvastu, a historical treatment of discipline, would be fed (Barth says naurus) by a mass of heterogeneous materials, differing in date and character, which, by their inorganic or chaotic accumulation, would explain all that non-disciplinary literature which forms ninety-nine hundredths of the present Mahāvastu. This task of enlarging and rearranging would, if it had been wound up in the Mahāsūraṇa, we may suppose, that it had no shelves in which the jātakas, euttaras, and stanzas would be arranged. The only course was to gather together in the Mahāvastu all that seemed relevant.

The development of the Mahāvastu, therefore, if it had remained to any extent a history of discipline, and if some pieces of the framework of the Mahāvagga were perceptible, would seem quite simple. Must it be admitted that the last compilers of the Mahāvastu systematically cut away the elements of vinaya already sunk in the legendary mass? Or that, in the fearful disorder in which the literature of the Mahāsūraṇa was wobbling, these elements fell into the void? On this point, that the Mahāvastu was never in any respect, except its title, a replica of the Mahāvagga? The three hypotheses seem equally inadmissible.

Some light is perhaps afforded by the history of the Dīrapāṇada. E. Rüher (and after him S. Levi) has proved that this book is, above all, a collection of anecdotes and legends taken from the Vinaya of the Śrāvastī sect. The extracts have not always been very consistently, and some fragmentary non-disciplinary rules—see to be found the Dīrapāṇada. The history of the Mahāvastu is probably similar. The colophon gives it the name of Mahāvastu-amadita: it is to be thought that the narrative part of the Mahāvastu is derived from the Mahāvagga. In the Pali Vagga the various episodes are linked to the history of the second Sangha, the first or second generation; those, with some exception, are wanting in the Mahāvastu. So those same episodes which in the Mahāvagga and the Chatuvatthu are more or less prolix and discursive chapters of a treatise of discipline are here mere narratives, which end by making the Mahāvastu a book of stories.

However this may be, the materials which have entered into the composition of the Mahāvastu are of widely different ages; the source of the compilation is certainly ancient, since it forms part of the canon of one or more of the ancient schools. It must be admitted, therefore, that it took a long time to be formed, for it is certain that it was not completed until very late. The mention of astrologers under a Western name (kordopaṭika) and that of the writer of the Chinese account of the Hsun Ki Pellya (Felix I), Ujjivahanka (Uzbek I), indicate the 4th or 5th century. At that date, however, the persistence, in the prose, of the ecclesiastical jargon, which will be discussed below (§ 4), is an argument for an older date. Moreover, the late interpolations and carry the date of the compilation a little further back. In order to realize the character of this compilation, it must be

2. Comparison with Pali canon.—There are numerous parallel passages in the Mahāvastu and Pali literature. Minayeff, Oldenberg, above all Senart and Barth, and, lastly, Windisch, have called attention to the fact that Mahāvagga passages which seem to be marks of sect are rare. We are able to study the unsettled state of Buddhist tradition and the infinite diversity of arrangement and treatment of the same materials.

In these examples, the amount of similarity is at all events from simple community of subject and vague resemblance to complete identity. The latter, however, is rarely attained, and never for long. The similarity, especially in the verses, is to a large extent to an earlier one; it is shown in mode of expression, in general assurance, in words more than in matter, in sounds more than in words; the stana is the same, when the meaning is sometimes quite different, like an egg of which nothing remains but the shell. They all go back to one original. . . . The probabilities are not always in favour of the Pali edition. But for the example of the fragments as well as for the detail of their rendering, it is the Pali that is in the biggest, and that gives the best representation of the original version.

It is well known that all the comparisons set up between the Pali canon and the other canons arrive at the same conclusion. The Pali writings were fixed and codified first.

3. Relation to Mahāyāna and Hinayāna.—The Mahāvastu may be said to form the bridge between the Old Vehicle and the New. As is seen in art, Mahāyāna, the two vehicles are not incompatible, and the book may present certain characteristics peculiar to the Pali literature while remaining unaccompanied with the others.

1) The 'Buddhology' of the Mahāvastu marks a stage between the conception of Buddha as a simple mortal (Little Vehicle) and that of Buddha as a quasi-eternal god among infinite beings found down to this world (Great Vehicle). The Buddha of the Mahāvastu is a superman. He feels neither hunger nor thirst; he lives in ignorance of carnal desires; his wife remains a virgin. It is from consideration for humanity, in order to conform to the customs of the world (lokottarastana), that he behaves as a man, or that he gives to men the false impression that he is behaving as a man. In technical terms, he is lokaśāsa, superior to the world.

2) The infinite multiplication of Buddhas in the past and in the present is also a characteristic of Mahāyānist tendency. It must be noticed, however, that the Sarvastivādin, who are reputed to be free from Mahāyānism, allow that several Buddhas may co-exist, though in different universes, or 'fields of Buddha.'

3) Much more marked is the tendency of one of the chapters of the Mahāvastu, entitled Dao-tshul-mik, the book of the ten bhūmis—successive steps by which the future Buddhas have to mount up to the state of Buddha.

It is to the beings who aspire resolutely to the condition of Buddha that the Dao-tshul-mik ought to be set forth . . . for they will believe; the other will only cæli. (I. 195).

The Mahāvastu, therefore, has incorporated a book which is addressed, in so many words, to those who wish to become, not arhats, but Buddhas, i.e., to the men who enter the Vehicle of the future Buddhas, the Mahāyāna.

6 The text says that his body is mūrojñāna, 'mind-made.' This expression has been discussed by E. Schumann. According to the Abhidhammakośa, it means, not 'mental body,' body formed in the mind, but 'body created by the mind;' without intervention of seed and blood. Such is the body of the creatures called supapariṣtro, 'apparitional,' one of whose characteristics is that it leaves no trace.
7 Several other instances of Mahāyānist tendency are discussed by Senart and Barth (loc. cit. p. 585). Different interpretations may be suggested from that of these two scholars for
MAHĀYĀNA

On the other hand, Amitābha, Avalokita, Mañjuśrī, the dārāçā (spell), and the śāyāvatā (voidness)—and, we may add, karuṇā (compassion)—are unknown in the Mahāyāna, which remains 'a book of the Hinayāna in its mythological and legendary elements', as K. W. Schindler (pp. 259 ff.), and which is really Mañjuśrīnāsti only in the considerable interpolation of the Daśabhūmikā. 1

4. Language.—The ancient religious literatures of India—with the exception of the Brahmanic—were written in popular and archaic dialects. In course of time these dialects became 'fixed languages,' subject to rules. This happened with the Jains (avardhanyāgārhi), and with the church which was afterwards that of Ceylon (Pali). The Buddhist school of the Sarvāstivādins adopted Sanskrit, and Sanskritized both the ancient nomenclature and the traditional texts in prose and in verse. The language of the Mahāśāṅkha school remained 'in an unsettled state; it was neither Sanskrit nor Pāli, nor any of the known Prākritis, but an arbitrary and unstable mixture of all these.'

It is a literary language, says Smart, and it is certain that it was no longer (i.e. at the time of the compilation of the Mahāyāna) a spoken language, and not less certainly that, for several centuries and after that time, inscriptions and books were written in much the same way. But, in the Mahāyāna, there is a shibboleth. At bottom, there is undoubtedly the substance of a real idiom, akin to that of the most ancient inscriptions and to that which has come to us so admirably from the Buddhist texts of the Mahāyāna. At bottom, there is undoubtedly the substance of a real idiom, akin to that of the most ancient inscriptions and to that which has come to us so admirably from the Buddhist texts of the Mahāyāna.

Such is the language of the Mahāyāna in the present state of the text—more Prākrit in the poetry than in the prose, and extremely interesting for the linguistic history of India. This language is the language of the śīla, because it was first studied in the books of the Great Vehicle, the prose parts of which are in Sanskrit or quasi-Sanskrit, and the verses or stanzas (gāthās) in this peculiar jargon. This difference of treatment does not exist in the Mahāyāna, which, in the Sanskritisms seem to be unconscious.

5. The Mahāyāna asserts that salvation can be quickly gained; but it is a vehicle drawn by deer (arṇḍarātra). It prospers, when duly practised, in nirvāṇa in this existence (dṛṣṭānāma). One has to become an arhat, i.e. a sasana (q.e.), a man free from desire and lust. In fact, the arhat has already obtained nirvāṇa, the nirmāna called sādāhātra, the liberation from desire and lust, the machinery of life continuing automatically until it runs down.

It is mysticism, and a perfectly coherent mysticism. It involves no elements that are foreign to the end which it has in view, viz. the destruction of desire or thirst, the suppression of all activity (karma) liable to induce a new existence. It is consciousness in contemplation (dārāçā = 'right', 'truthful'), and meditation (bhāṣya) in the four truths: everything is painful, etc. These four truths may be summarized in a philosophical doctrine: what we call the 'sun,' or the 'ego,' is only a complex of innumerable, etc. (abādhya), which endures by means of desire (or thirst) alone; and an ethical doctrine: desire can be rooted out and the consequences of action can be suppressed by meditations which enunciate and deliver from existence.

(3) Although the Buddha is neither a god nor a supernatural being, he is nevertheless very different from the other saints. The saints, like the Buddha, have attained nirvāṇa in this life, because they have attained bodhi ('illuminized'); but it was the Buddha who discovered the truth of salvation which potentially contains bodhi, and who showed the 'path'; and he was able to do so because in the course of his innumerable existences, with a view to saving humanity, he accumulated good works and acquired infinite knowledge.

(4) The cult of the Buddha is not distinguished by what is properly called 'devotion' (bhakti)—
this sentiment implies a living god—though the Abhidharma-kosha employs the term. Veneration of relics, stupas, etc., is useful and recommendation, if it is good, is helpful; as penance (tapas) is, but it is not essential.

(5) Ancient Buddhism is not merely a vehicle of nirvāṇa; it also teaches how to be re-born in heaven or hell.

Three Vehicles are usually distinguished: (1) the Vehicle of the Srāvakas, (2) the Vehicle of the Pratyekabuddhas, (3) the Vehicle of the Bodhisattvas. The first two together constitute the Little Vehicle, the third the Great Vehicle (see E. Burnouf, Le Lotus de la bonne loi, Paris, 1872, pp. 32, 316, 390; H. Kern, Geschichte des Buddhismus, Munich, 1888, p. 41, Indian cosmology, meaning ‘human’, ed. F. Max Müller and H. Wendt, Oxford, 1888, p. 11, and excerpts on p. 52; E. J. Eitel, Handbook of Chinese Buddhism, London, 1888, a.j., Tipitaka; ed. C. Buddhaghosa, PTS, London, 1888, Commentary, p. xx, where the Srāvakas-Pratyekabuddhas are opposed to the Samskāramahāviśeṣas. There is no difference between the Vehicle of the Srāvakas and that of the Pratyekabuddhas; both arrive at the same bodhi, or illumination, and the same nirvāṇa; but, while the Srāvakas appear at a time when the Law of the Buddhahood is known, profit by the teaching of others, the Pratyekabuddhas attain bodhi themselves at a time when the Law of the Buddhas has disappeared; while the Srāvakas preach (preceptual) law, translated ‘teacher’, means rather ‘preacher’ (see SBE xi, Buddharmacaparājika, iv. 50), the Pratyekabuddhas do not convert, therefore, to enter the Vehicle of the Srāvakas. There are still other differences, e.g., they are of no importance to the Vehicle of salvation (see Abhidharma-kosha, iii, Pr. tr., London, 1883, p. 109, and notes; Chandakritika, Mahāyānāsastra (Pr. tr., Munson, new ser., vili. [1907] 2 ff., quoting literary authorities). It is marked that the Srāvakas and the Ven. Mahāyāna and the Pratyekabuddhas be in the Little Vehicle (Hinayāna g. 3)

Great Vehicle. The new Buddhism adopts the name of mahāyāna (‘great vehicle’). The word yāna (‘vehicle’) is used to express the same idea as that conveyed by the ‘supramundane path’ (lokottaravāna), the ‘path leading to nirvāṇa’. But whereas the latter is a sīlas of a brāhmaṇa, yāna, and this fact explains the diversity of definitions and the evident difficulty in which early writers—e.g., the Chinese pilgrims—found themselves when they tried to explain the difference between the Little and the Great Vehicle. The Great Vehicle consists of (1) the practice of the virtues (pāramitās) of a bodhisattva or future Buddha (i.e. pāramitāyāna [nayana] or bodhisattvayāna); by it one becomes a bodhisattva (bodhisattva); (2) the gain of knowledge of nirvāṇa (prajñāyāna or jīvānāṃjñā); (3) devotion; (4) it is the path of devotion (bhaktimārga).

(1) Career of the bodhisattva. The books which portray the Great Vehicle (Mahāyāna sūtras) tend to assert that nirvāṇa cannot be attained by the ancient method. To obtain deliverance from desire, ignorance, and existence it is necessary to practice all the virtues and acquire all the knowledge of the Buddha, to enter on the career of a future Buddha (bodhisattvarūpā) and pursue it for centuries. Instead of ‘Great Vehicle’, it may therefore be called ‘Vehicle of the future Buddha’ (bodhisattvayāna), or ‘Method of the perfect virtues, charity, patience, etc.’ (pāramitāyāna).

Now the Buddha Sākyamuni, during his former existences, has always lived in the world. It is possible, therefore, to enter the ‘Vehicle of the future Buddhas’ although married. Nothing, however, prevents monks from making the ‘vow to become Buddhas’; by this vow they mount the ‘Vehicle of the future Buddhas’, but by their union they bring themselves to the ‘course of the Buddhas’, and form part of one of the disciplinary schools of the Srāvakas. Young monks often take the vows of monks, and, after acquiring merit in this way for a time, renounce them in order to take the vows of a full career.

(2) Vacuity. The books that treat of philosophy explain that the ancient dogma, ‘The soul is nothing but a complex of transitory elements (skandha),’ is perfectly accurate, but unsatisfying; they would add that these elements themselves do not exist in themselves, but are ‘void’ (śūnya). For the two ways of understanding, and it is good, it is helpful; as penance (tapas) is, but it is not essential.

(5) Ancient Buddhism is not merely a vehicle of nirvāṇa; it also teaches how to be re-born in heaven or hell.

The doctrine of vacuity (śūnyātā) is the second characteristic of the Great Vehicle. A layman or a monk can perform the vow to become a Buddha without thinking out the doctrine of vacuity. The ‘theologians’ themselves declare that, as the beginning of the saintly career is entirely devoted to charity, it is not good to give too much thought to philosophy, i.e., to universal nothingness. On the other hand, an adept of the Little Vehicle who does not believe in the necessity of becoming a Buddha may adhere to the doctrine of vacuity and become imbued with it, in order to attain nirvāṇa as an arhat, i.e., in this present life. Some texts even explain that, if the doctrine of vacuity is really indispensable to the attainment of nirvāṇa, it is sufficient, without the career of the future Buddha.

(3) Devotion. The characteristic of the Great Vehicle is the worship of the Buddhas and ‘future Buddhas’ of high rank (see art. BODHISATTVA).

The Buddhas are great gods, almost eternal, who sit upon thrones in heavens surrounded by saints, and send ‘magic bodies’ down to earth in the paradise of this god, the blissful world (Sukhāvati), the western paradise, by the grace of the god and with the help of the holy sants Avalokitēṣvara, etc.

This Mahāyāna, purely devotional and with monistic tendencies, is not a ‘Vehicle of future Buddhas’. In the books discussing it (Sukhāvatisūtra, etc.) there is practically no reference to nirvāṇa. This Vehicle is a Buddhist form of the Hindu Mahāviṣṇu, or devotion. Bodhita must be accompanied by highly orthodox acts of worship, which are recommended in the Hinayāna: worship of stūpas, images in honor of the Buddha, abstinence from food before worshipping Buddha, etc. For the Mahāyāna Mahāvīṣṇu is held to be the lord of the heavens, it declares that rites efficac sin, and attributes salutary virtue to the reading of the srūpa and the repetition of the name of the Buddha—which is not quite orthodox.

It is to be noticed that the worship of Buddha, Tārā, etc., is compatible with the strict orthodoxy, as has been remarked in regard to Jāra, which is very idolatrous and yet attached to the Hinayāna.

3. Vedantic and Tautric Vehicle. The Mahāyāna, as analyzed above, is, from the philosophical point of view, a phenomenalist system, and, from the religious and mythological point of view, polytheism with monarchical and devotional tendencies.

From early times pantheism and polytheism led to conceptions of immortality and monism. In the days of Asanga (A.D. 4th cent.) men believed in an Ādībuddha (g. 5) who would play the part of Brahmā in his various aspects, divine, or Kṛṣṇa incarnate. These speculations upon immanence and emanation, which often mingle with the doctrines of the Mahāyāna proper,
are the basis of the 'Vehicle of formulae' (mantrarāja), the 'diamond method' (vajrayāna), also called the 'Tantric Vehicle' (tantrarāja). This Vehicle is Vedānta in Buddhist disguise as regards its doctrine, and Saivite and pagan as regards its mythological elements, names and its rites. Its goal is the condition of a Buddha, its doctrine that (1) every being is, in his innmost nature, a Buddha, and (2) every being can, by meditation, spells, Tantras, and therapeutic practices of all kinds (often erotic), 'realize' the Buddha nature at little expense (see TANTRISM).

4. Is the Mahayana the only Vehicle?—This is an interesting question and worthy of our attention. Do the Mahayana teachers regard the Mahayana as the only Vehicle of salvation? I-tsing's remarks may be accepted as giving the general opinion:

'These two systems (Mahāyāna and Hinayāna) are perfectly in accordance with the noble doctrine (of the Buddha) . . . Both equally conform to truth and lead alike to Nirvāna.'

But the scholastic literature and the Mahāyāna-sūtras of course differ and often narrow their views. Maitrey-a-Asanga says that 'the meditation of the Mahāyāna (of the Hinayāna) seems impracticable, leads to salvation'; 2 but for Śāntideva it is only a question of truth, and its followers are completely upon a path that has no issue; 3 Chandrakīrti sees no value in the Hinayāna except its teaching of 'vacuity' (see MAHĀYĀNA, p. 352), whereas there are old sūtras which proclaim vacuity (Sanyatapratisamayukta) in an extreme case orhatship and nirvāṇa may be attained by meditation on these sūtras. 4 In an extreme case, we say, because the Hinayāna has no part in the spiritual aids that are reserved for the future Buddha; he does not have the 'great means' (upaya) of salvation, compassion, great knowledge, great compassion (maitreyāraja), i.e. the desire and the vow to save all creatures: the possession of wisdom (prajñā) is unavailing, since he lacks the 'great means' of remission of sins and elimination of passion. In fact, there is only one Vehicle, as the Lotus of the True Law (p. 353) and several sūtras teach very clearly. The only way to salvation is to become a Buddha. But this demands a long career; so the Buddha has shown men a nearer goal, the nirmāṇa of the arhat, that they may not lose heart—like a caravan-leader who creates a magpie town in the midst of the forest, far from the end of the journey, that the travellers may think it nearer their destination, and take heart to advance. 5 The men who mount the Vehicle of the Śrāvakas and Śramanas is a mere preparation of the Vehicle of the Śrāvakas; embracing a false nirvāṇa, they are like a lover who embraces his mistress's corpse; they have, however, nearer to the true nirvāṇa. At death, they falsely think that they have attained deliverance and exemption from re-birth; they are not re-born, for they are not yet delivered, but they are re-born beyond the world (tridhatu), in the 'pure realm' (anantaravātāra), in lomasas which open their petals to the rays of Amitābha and other Buddhas. There they learn the true Vehicle, make the bodhi vowe, and enter, through numerous lives, upon the career to the true Buddhas. 6

The Chinese texts studied by J. J. M. de Groot (Codex du Mahāyāna en Chine, Amsterdam, 1886, p. 94) reduce the Hinayāna to the observation of monastic rules, taking no notice, either purposely or through ignorance, of all the Noble Path and meditation on the truth. They say that the Little Vehicle, thus understood, leads to re-birth in the very inferior paradises of the world of Rama (see CONVIVAS and DOWSON) and determines the birth of a Vehicle that leads to the gods (deva-śramaṇa, according to de Groot's translation), and not a Vehicle of salvation.

5. Speculatively the doctrines of the Mahāyāna.—These are examined in the arts of MAHĀYĀNA and VİJÑĀNA-VIVĀDA, which discuss the two chief philosophical schools of the Great Vehicle. The doctrines connected with the 'career of the future Buddha' (bodhisattvaraschna) and BODHISATTVA are shown in the texts, while BODHISATTVA is a very serious difficulty to be added to the technical of meditations; but the works on the subject (Abhisamayālaṃkāra, Bodhisattvavibhāga) have not been published, and present very serious difficulties.

6. Discipline (Vinaya) of the Mahāyāna.—The Indian schools of devotion (bhakta) are often not strict as regards morality and discipline. There existed, accordingly, i.e. Mahayana, inclining to Tantrism, which preached salvation and the remission of sins by the recitation of formulae, etc., independently of rules of conduct.

But there is also a rigid Mahāyānins monachism, sometimes adhering to the ancient Vinayas, sometimes introducing new ones. 6

(1) The Abhidharma-kosāstra says: 7

'The Bodhisattva (i.e. an adept of the Great Vehicle) begins to think: 'The Bodhisattva does not require to know the law which forms part of the Hinayana; he need not make it a rule for himself. What is the use of this rule? What is the use of this rule?'—if he thanks in this way, he is guilty of error, and renders himself very culpable.'

Śāntideva speaks in the same strain: 8

'The adept of the Great Vehicle will never give his hearers the vain hope of acquiring purity by simply reading the books of the Great Vehicle, and reciting formulae, while abandoning the rules of conduct.'

One fully realizes I-tsing's statement: 9

'Which of the eighteen schools [of the Hinayana] should be grouped with the Mahayana or with the Hinayana is not yet determined . . . Both (Mahayana and Hinayana) adopt one and the same discipline (Vinaya).'

Monks and convents practising the strict monastic observance of the ancient Vinayas adopted the dogmas and worship of the Mahayana; Yuan Chwang therefore mentions monks who were Mahayanaists of the Buddhavira-school and all perfect in Vinaya observance. 10 It has been supposed that the Vinaya of the ancient Maḥāyāna sect was the most popular in Mahayana convents, because it was a Mahayana convent that Fa Hian found the Maḥāsāṃghika Vinaya, 11 because the Mahayanaists have to have been the forerunners of the Mahayana. 12

(2) The Mahayana apparently introduced into the discipline some new rules concerning the use of milk and meat. The Sarvastivādins (Hinayana) allowed the use of meat under certain conditions; the Mahayanaists condemned it. I-tsing tells us a touching story of a young Mahayanaist, Chittavarn, who was refused ordination in a Mahayana convent until he renounced, in tears, his principles of diet. 13

Sooner or later, however, the Mahayana created a new Vinaya for itself—a Vinaya that was independent of the ancient Vinayas, that had a different purpose in view and that could be and was often

8. A Bodhisattvavibhāga-kahāna, p. 106 of Poussin's MS, on Abhidharma-khaṇḍa, xxxvij. 2, who allies the Lokottaravatāra, the Ratnagotra, Nāgarjuna, etc.

9. A Bodhisattvavibhāga-kahāna, p. 106 of Poussin's MS, on Abhidharma-khaṇḍa, xxxvij. 2, who allies the Lokottaravatāra, the Ratnagotra, Nāgarjuna, etc.
expected to be, used together with the ancient Vinaya. The ancient Vinaya were for the use of monks; the Mahāyāna Vinaya is the 'Vinaya of the future Buddha', or more exactly, 'of incipient future Buddhas' (ākārākrodhī bodhisattva).

(a) It was while making the Bodhisattva, Boddhisattva, prostrating himself at the feet of a Buddha, became a 'future Buddha'; this vow is valid, not only for present existence, but also for numerous future existences, like the voice of the wind which creates the divine line (śāntamātra), the obligation, and to a certain extent, the 'grace' (the moral power) to perform certain duties. We have no longer a Buddha in our midst to receive such a vow from us; we must content to take the 'disciple of a son of Buddha' (vijñāntimāsānāvara) before a qualified person (śrīvarika), or, in the absence of such, before all the Buddhas of the quarters.1 (b) The future Buddha must perfect the perfect virtues (parānityā); theologians have therefore to explain how he is to fulfil the virtues of giving, energy, and meditation. (c) He commits errors; he must know how to confess them, before whom (i.e. Buddha, or Bodhisattva, or the divine line that obtains parānityā). (d) The ancient devotional practices, worship of stūpas, etc., are not sufficient for devotees of Avalokita, Amṛtābha, and Tāra; fixed rules of worship are therefore established.

We have no exact information regarding the oldest forms of the Vinaya for bodhisattvas. But documents which give an accurate idea of the rules of life of the Mahāyānist monk will be found in the Brahma-kūṭa (tr. de Groot, Codex du Mahāyāna en Chine), and in the Daily Manual of the Shaṅgāna (S. Beal, A Catena of Buddhist Scriptures, London, 1871, p. 239). The ritual of the office in honour of Avalokita (Beal, Catena, p. 386) indicates the nature of the cult.

The Mahāyānist monks belonged to one of the Hinayāna schools, and fulfilled the obligations of future Buddhas in addition to those of their own school. Later, there were monks who adscribed solely to the monastic code of the Mahāyāna (the type given in de Groot, Codex du Mahāyāna en Chine), which became a complete code in itself, a conglomeration of different Vinayas. Finally, it is partly to the influence of the Hinayāna and return to the world; the Great Vehicle favoured this tendency inasmuch as it had a special code of the future Buddha for the use of married people. It is understood, however, that ordination for the bhikṣuhood can be granted only to persons who are at least Upāsakas, devotees, who have taken the three reñeges and are ritually bound by the five vows (not to kill, etc.).

The relative importance of duties for monks who are at the same time 'future Buddhas' is not always clear. I-tsing declares that he is not writing 'concerning those who claim to follow the practice of a Bodhisattva rather than the Vinaya rules. Sántideva cites an extreme case—the story of the monk who had practised continence for a long time (84,000 years) consenting to satisfy the desires of a woman so that he might fulfil the requirement of benevolence and kindness that is the essential law of future Buddhas.1 For them the sins of hatred are very serious, while the sins of desire are trivial. The very spirit of the Mahāyāna, therefore, may perhaps be responsible for the singular development of Kasmir monasticism, viz. married monks.2

II. HISTORY AND ORIGINS OF MAHĀYĀNA DOCTRINES.—As we have seen, the Mahāyāna differed from the ancient Vehicle in three points: (1) the substitution of the 'career' of a future Buddha 'for the 'quest of the quality of arhat'; in other words, the substitution of the bodhisattva, who might be a layman, for the bhikṣu, 'monk'; (2) the substitution of the doctrine of the void (śūnyatā) or of the 'non-existence in themselves of the constituent elements of things and of the human ego' (prakāramāraṇa-taya), superimposed upon the doctrine of the 'non-existence in itself of the human ego' (prakāramāraṇa-taya); and (3) the transformation of the Buddhas into great mythological gods, almost inhuman in their power of reaching out to and helping, providences; and, by a parallel development, the practice of devotion (bhakti) towards these 'great beings' (mahāsattva) instead of the respect and meditation practised by the ancients towards the Buddha; thus the language of the Buddha, what was formerly rendered in the Buddha, what men 'took refuge in' (stavayogana) when taking refuge in the Buddha, was the complex of the moral and intellectual qualities of which a Bodhisattva is capable. To admire and meditate on these qualities is an excellent means of gaining morality, tranquility, virāga. The Mahāyānist addresses himself to living, gracious, paternal gods. There are, therefore, three formative elements in the Mahāyāna; and its history means the history of the development and inter-relation of these three elements. This comprises three distinct histories; for, though the three elements are sometimes united, they are often separate; and, though their development has been parallel, or almost so, they have no connexion from the logical point of view. We may safely attempt to give the scheme of the evolutionary curve of these three elements, but it is very difficult to give chronological dates or precise details in the evolution.

1. Career of the bodhisattva.—Ancient Buddhism holds that Buddhas are very rare, but the Mahāyāna invites all who would be bodhisattvas to strive for the career of a future Buddha. This is a fundamental change from the dogmatic point of view, and involves a corresponding change in morality: in short, the monk believed that the quickest way to reach nirvāṇa was by meditation; he worked entirely for himself (avatāra); the activity of the future Buddha, on the contrary, is, above all, altruistic (śrāvaka). Our literary evidence on the stages of this transformation is unsatisfactory. On the other hand, it is easy to guess the motives behind it. The following factors are of great importance.

(1) The ideal of ancient Buddhism, the arhat, useless to others and an insensitive ego, the extent of insensibility, appeared mean when compared to the Buddha, the being of compassion and pity. Hence the 'saint for himself,' the 'delivered while
still alive,' so long the dream of India, was no longer held in honour. The creation of the type of the Buddha, the hero of charity, saving the world at the cost of so many lives consecrated to the work of the individual, is an essential element in ancient Buddhism; towards the doctrine of the 'career of the bodhisattva' open to all.\(^1\)

(2) The question arose, further, whether the bodhisattva actually obtains nirvāṇa. Formerly the arhat was considered as one, not only 'morality,' 'harmlessness,' but also 'feelings of benevolence' for the mass of human creatures, as it is only just, to mention, but his 'equipment of merit' 'appeared somewhat drab,' and we may suppose that men were even then tempted to ask whether his 'equipment of knowledge' was sufficient. Metaphysics and psychology had made progress. Many existences are necessary, they may have said, to obtain 'knowledge' sufficient for deliverance; just as, in order to achieve deliverance from desire, love of self, and love of existence, the first necessity is devotion to others.

(3) It is possible, also, that faith in nirvāṇa was shaken, that, not knowing exactly what nirvāṇa was, men were somewhat afraid of it, and devoted their attention rather to the acquisition of celestial powers and the bliss of the Bodhi (now transformed into very happy and long-lived personalities) (see below, \(2\)).

The Dāsabuddhaṁika, a very technical work on the 'career of the future Buddha,' was translated into Chinese between A.D. 295 and 316; the Mahāvastu (q.v.) of much earlier origin, gives a lengthy account of the stages or degrees (bhūmi) of this career. According to Chandrakirti (Mādhyamakavatāra), the Hinayāna knows nothing of the 'Vehicle of the Future Buddha,' which is the characteristic trait of the Mahāyāna.

2. Vacuity.—We have more extensive information on the philosophical doctrine. Here we are dealing with a philosophy rather than with a transformation: (1) the principles of analysis and speculative amplification applied by ancient Buddhism to the ego and the great unities (the body, the chariot) were now applied to the dharmas (elements of things); the minute elemental realities constituting the ego and the great unities; this is the Madhyamika system (see art. MADHYAMAKA); and (2) the ancient idealist tendencies developed which saw in thought the cause of all: 'All that we have thought is the result of what we have thought, the object of our thoughts, it is made up of our own reflections and thoughts.' (Dhammapada, i. [SBE x. (1898) 3]. Hence the conclusion that matter does not exist; thought alone exists.\(^2\)

The two philosophical schools of the Mahāyāna (Mādhyamikas and Viśṇuvādins) are both in line with the most ancient tradition. Nagārjuna, the great master of the former, is placed in the 2nd cent. A.D.; but there is a great deal of Mādhyamika philosophy in the Pali canon, and the sūtras of the Prajñāpāramitā, where this philosophy is predominant, are ancient.\(^3\) Chandrakirti establishes the fact that the true doctrine of the void was known to the Hinayāna, or, to be more exact, that the Buddha had already taught this doctrine in his first revelation, in the sūtras of the Hinayāna. But it will be asked, if this Vehicle, the Vehicle of the Śrāvakas, teaches the non-existence of themselves in the elements of the ego (dharmas), is it possible, where is the need of the Mahāyāna? The Mahāyāna, replies Chandrakirti, teaches not only the dharmas, but also the stages of the career of the future Buddha, the perfection of merit, the resolutions or vows to save all creatures, the application of merit to the acquisition of the quaternity of Buddha, the great compassion (Mādhyamakavatāra, tr. in Macleod, new ser., viii. 272), whereas the Mahāyāna was necessary.

3. Devotion.—As regards the deification of Buddhahs and worship of Buddhhas and bodhisattvas, we have a sure date in the Chinese translation (between A.D. 118 and 170) of the Sudhodana Sūtra, the book in which the monothist religious of Amitābha (see above, I. 2. (3)) is formulated.\(^4\) The Gandhāra monuments, the exact date of which is not known, but which is certainly later than the last cent. A.D., take us back even further than the earliest date of the Chinese translation. They show, or at least must be held to show, the worship of the bodhisattvas associated with that of the Buddhhas.\(^5\)

On the other hand, we know from the commentaries of the Hinayāna that the worship of the Buddha is of great antiquity. In the art of ADI BUDDHA the present writer has mentioned some of these documents, and although he no longer sees in certain passages the quasi-deification of the Buddha which he saw in 1908 he show that the Buddhists, or at least certain Buddhists, came to the conclusion that Sakyamuni did not descend in person to the earth, but was content to send his message (cf. DOCTRINE [Buddhist]). This is, in substance, the teaching of the Great Vehicle on Buddha—the Buddha almost eternal and saving beings by means of magical creations. Scholars who admit the authenticity of the Kālidāvatītha as a whole are compelled to locate this belief before the time of Asoka. Without believing in the authenticity of this very composite book, the present writer would willingly admit the real devotion of the Buddha and his 'almost' eternity belong to a period long before the formal documents.

It is almost certain, too, that this transformation of the Buddha may be explained by the natural evolution of the Buddhist dogma on this basis, Sakyamuni as a Buddha, Buddha as a real person, Buddha as a person who, through his own efforts, attained the highest perfection of knowledge, the highest true state of existence, the highest happiness. This is the origin of the devotion to the Buddha as a real 'puzzle' (Max Müller), and this idea is to be found in the influence of the 'barbarians,' notably the Manicheans—a influence which is exercised especially in Northern India, the Punjab, and Kashmir, where religious statues reached their highest point. The pre-historic mythology of the Great Vehicle is replete in obscurity, and the foundation of this hypothesis; but the comparisons to which attention has been called up to the present have little value and do not prove that Amithābha is an Alacrana Māra or a cosmic god. In any case it is useless to explain the worship of the Buddha by the influence of Greek sculpture which followed, the one of the first to make images of Buddhas. The whole 'Buddhhism' is a mystery.

\(^1\) See the tr. of Max Müller and Takakusu in SBE xic. (1894).

\(^2\) See A. Fouche, L'Art grécoc-buddhique, ii., who deals with the definition of Greek sculpture with precision, as well as with the definition of the great statue of Buddha and their date.

\(^4\) See Pouxon, Bouddhisme, Opinions sur la dogmatique, p. 368.
religion of Amîtâbha is Indian; the belief in the providence of Amîtâbha, in his saving grace, and in the idea of the Pure Land, is little in common with ancient Buddhism, but is excellent ReâÂ mism. The paradise of the Pure Land (Tûshítâvîrî, and Thammarâ) is the carriage of Amîtâbha, 'light of the Infinite light,' which probably are in reality 'sol's,' have not up to the present been sufficiently studied and understood. The idea of multiple universes, but only one created by a Buddha, is very authentic Buddhism (see, e.g., the Mahâyânâ).

III. HISTORY OF THE SCRIPTURES OF THE MAHÂYÂNA.—1. Controversy on the authenticity of the books and legends concerning them. We know that the books of the Hinayâna appeared surrounded with a very strong ecclesiastical halo; and that even the modern scholar may be the value to modern scholars of the tradition referring to the Councils (e.g., K. O. Franke, Dijâjâ-miyâvâ, âGöttingen, 1913, p. xii), the Buddhist of the Mahâyâna and of the Hinayâna admitted the authenticity, in the strict sense, of the ancient canon. But the adherents of the Hinayâna did not recognize the books of the Mahâyâna for the simple reason that these books were unknown in ecclesiastical history.

This is the word of the Buddha which is found in the Sûtras, which appear in the Vinaya, which is in harmony with the Vinaya (dharma-mâtvâ), this old text of the Dâipâ, is, according to them, the condemnation of the Mahâyâna, which not only is not authentic, but is even full of heretical novelties.

The most weighty argument of the Mahâyânist is the speculative argument. The Mahâyâna, they say, is in harmony with the dharma-mâtvâ; it is the only vehicle of nirvâÂ n. The Hinayâna is indeed authentic, but the Mahâyâna taught it only as provisory truth, taking into consideration the weakness of mind of his hearers. Besides, in the Hinayâna the Buddha taught it only as provisory truth, taking into consideration the weakness of mind of his hearers. Besides, in the Mahâyâna the Buddha taught the non-existence in themselves of the elements of the ego (see above, II. 2: Madhyamakâvâistrâ, p. 2). The doctrine of the multiple teaching of the accommodation to the ideas of the world (lokiâmukâvâstra), is taught in the Canon of the Pâthas, a sect of the Hinayâna (Madhyamakâvâistrâ, Fr. tr., Muston, new ser., xi. [1910] 124); which is also (3) said to have possessed the sîstras of the Prajñâpâramîta edited in Prakrit. This sect, however, is strict in the matter of doctrine, since it orders the expulsion of those who do not understand the 'reserved questions' (see art. AGNOSTISM [Buddhist], vol. i, p. 221); Madhyamakâvâstrâ, p. 251). (4) The Mahâyâna (a book of the Hinayâna) teaches the stages in the career of a bodhisattvâ and the perfect virtues.

4. MAHÂYÂNA, HISTORY OF THE SCRIPTURES OF THE MAHÂYÂNA.

If the whole of the Mahâyâna was not known to the ancients, it was the sublime and sublime was to be understood by the compilers of the Hinayâna. But it was the Buddha who taught them, and they were heard by the bodhisattvas Samantabhadra, Mâjñâkasa-mahâvâja, Gûhyâstra, Vajrayâna, and Maitreya. We cannot say that having obtained illumination, the Buddha preached to the gods (in the heaven of the Thirty-threet) and to the bodhisattvas (J. Edkins, Chinese Buddhism, London, 1886, p. 18; A. Foucher, Iconographie bouddhique, p. 86). The bodhisattvas, through the course of the ages, have revealed the Mahâyâna to men; Mâjñâkasa-mahâvâja took the form of a hûnâk, and it is said, made known the Prajñâpâramîta in 80,000 articles (Târânâtha, tr. A. Schefner, Petrograd, 1869, p. 58). It was Maitreya, the future Buddha, who explained the Prajñâpâramîta to Asanga, and who is the author of the treatises of the Vîjñânavâda school (Mâsterton, vi. [1905] 145, xv. [1914] 4). According to a Japanese tradition, interesting as an example although without historical value, Mâjñâkasa-mahâvâja and Maitreya had published the Mahâyâna in the year 116 of Nirvâna: 'If these books had not existed before, whom of us have we obtained!' — a very childish argument. This Mahâyâna is said to have been completed in 200 of Nirvâna, notably by the publication of the Avatamaka (= Gâo-dàmô-stûra). All these relations took place before Nâgârjuna (R. Fujishima, Le Bouddhisme japonais, Paris, 1888, p. 54).

Nevertheless, it is to Nâgârjuna that our most trustworthy documents give the honour of the revelation of the Mahâyâna. The Mahâyânist, and a Mahâyâna-sûtra, put into the mouth of the Buddha words like the following:

Four centuries after my nirvâna this Annada will be the blisâ called Nâga; he will teach the Great Vehicle. It is said that Nâgârjuna obtained the Prajñâpâramîta, or the Arita-sûtra from the Nâgas (Wassiliev, Buddhisme, p. 118 f.). We cannot give an account of all the legends referring to the revelation of the books of the Mahâyâna (see Târânâtha, p. 118 f.), what has already been sufficient idea of the beliefs that arose in the Buddhist world concerning the origin of these books. Apart from a few artistic partisans of the Hinayâna, all Buddhists readily believed all that appeared as the word of Buddha.

2. Criticism of the legends and conjectures. — The library of the Mahâyâna consists of two parts, which the Tibetans have carefully distinguished: first, the sîstras, divine works, uttered by Bhagavat himself, which are arranged in the Kâra (aka huyr, 'word of the Master'); and, secondly, the commentaries on the sîstras and the treatises (dibhas) properly so called, human works, the greater number of which were written by the monks to whom tradition ascribes them; all this literature forms part of the Tantrâ (bhatan huyr, 'instruction, scholasticism'). This distinction has not always a historical value. Many sîstras are frankly scholastic works, and it is probable that some of them are later than the signed treatises whose doctrine they contain and authorize.

We know that Asanga wrote five treatises which he gave as a revelation of Maitreya. Although revealed, these treatises are in fact the part of the Tantrâ, because in form they are not sîstras, but more treatises (kârikas, mnemonic verses, with a
MAHDI

Invent, preaching vacuity or the career of a bodhisattva, they make use of old models, reason in the manner of the Abhidharma-ahammas, and model the career of the bodhisattva on the path of the arhat, and the new meditations on the canonical meditations.

MAHDI.—The title Mahdi was first associated with 'Ali's son Muhammad b. al-Hassafiyah, and, apparently, given by him by the adventurer Mukhtar b. Ali 'Ubaid, who, after the death of Husayn at Kerbele, ostensibly championed the claims of this personage to the Khalifate. The word is ordinarily interpreted 'the divinely guided,' from a verb which frequently occurs in the Qur'an in the corresponding sense, though this particular root has not been definitely traced; yet this explanation did not give universal satisfaction, and several others were current (see Yaqut, Geographical Dictionary, ed. F. W. Winterfeld, Leipzig, 1850, v, 342).‘ It is clearly used as a title attached to the name of 'Ali, calling him 'the Mahdi, son of the Wali' (Tabari, Chronicle, ed. Leyden, 1879-1901, ii. 539), where the latter title means 'the legatee,' i.e. he to whom the Prophet bequeathed the sovereignty; it is, however, often interpreted as 'the trustee.' It is doubtful whether this Muhammad used it himself, as a letter purporting to be from him, in which it is prefixed to his name, was condemned as spurious by one of his correspondents on that account (Tabari, ii. 611, 66 A.H.). After the death of 'Ali's two sons by Fatimah, the Prophet's daughter, it would seem that some Muslims were ready to recognize the claim of this Muhammad, 'Ali's son by another wife, to the sovereignty, but he himself acted with extreme caution in the matter of asserting it; he was, however, impugned for a time by some of his companions of 'Abdallah b. Zubair, who endeavoured to wrest the throne from the Umayyads; but, when their supremacy was restored, he accepted a governorship, and appears to have ended peacefully. Some uncertainty existed with regard to both the time and place of his death, and a sect arose called the Kaisáníyyah, who declared that he remained alive in his supposed tomb in Mt. Raiwa, whence he would one day emerge; and the poet of this sect, the Sayyid 'Imám, fully expected this occurrence, though the Mahdi had disappeared for sixty years (Aghatri, Cairo, 1285, v, 32). The poet Kuthayir as-Suli, that his reappearance had been foretold by al-Kub al-Abhar (44 A.H.), whose name is often mentioned in connexion with matter drawn from the Jewish Scriptures. This prophecy may well owe its origin to that of the return of Elijah; but how the Mahdi came to be substituted for that prophet is not clear; if the reference to the Kab be genuine, we should gather that the word had been used before Mukhtar's time with a religious import. The poet further declared that this Mahdi's book was studied by the Kaisáníyyah, in which event his work must assuredly have been a forgery. With this personage the idea of an awaited deliverer is first connected in Islam, and this notion is expressed by the name Mahdi, which the participle 'expected' (mu'tattaq) is sometimes attached. The various pretenders from the house
of Ali received the title—e.g., Zaid (after whom the Zaidis are called)—he was defeated and killed in the year 122 A.H., and his body was afterwards crucified. An Umayyad satirist said that he had never before seen a Mahdi hanging on a tree (Mas‘ūdī, ed. and tr. C. Barbier de Meynard and Pavet de Courteille, Les Prairies d’or, Paris, 1881-77, v. 471). When the pretender Muhammad b. Abdallah first appeared (c. 122 A.H.), and was called the Mahdi, he was called out: ‘The Mahdi has come forth!’ (Tabari, iii. 159 [A.H. 144]). It was to be expected that prophecies of the appearance of such a personage should be attributed to the Prophet Muhammad, and such were current, though of questionable authenticity, the best, according to Mutahhar b. Tahir, who wrote about 325 A.H. (Le Livre de la création et de l’Histoire, ed. C. Huart, Paris, 1889-1903, i. 161), being

‘The world shall not pass away until my nation be governed by one of my house who name agrees with mine.

This tradition is also found in the collection of Tirmidhī († 279; ed. C. Roos, 1892-2, i. 20), where it is followed by another in which the Mahdi is mentioned.

‘We were afraid of some troubles occurring after the Prophet’s death, so we asked him, and he said: In my nation there is the Mahdi who shall come forth; he shall live five (or seven or nine) years, during which time he shall rule, and then he shall go away, “O Mahdi, give me!”; and the Mahdi shall pile into his lap as much as he can carry.

The author of this fiction appears to have interpreted the word as ‘the giver’, which should rather be Mahdi. Somewhat more information is to be found in the contemporary collection by Ibn Majah († 298; ed. C. Roos, 1892-2, i. 292); the tradition just given is repeated with some variations, indicating that under the Mahdi men would enjoy greater blessings than they had ever experienced; to it is prefixed one to the effect that certain persons with black standards (i.e. the ‘Abbasids) would come from the East, who shall ask for good and not be given it, and shall fight and be victorious and be offered what they asked and not accept it until they hand it (the sovereignty) to one of my house who shall fill it with justice as they filled it with injustice.

Another tradition states that the Mahdi is to be a descendant of Fatimah; another gives as the list of lords of paradise the following members of the family; the Prophet, his uncle Hazza, his cousins ‘Ali and Jaafar, and his grandsons Hasan and Husayn and the Mahdi. The last is:

‘Men shall come forth from the East, and shall prepare the way for the Mahdi.

It is certain that the authors of these fictions had somehow heard of an expected Mahdi, and made up traditions calculated either to encourage the munificence of princes or to win adherents for some political party. Mutahhar adds another, that the only Mahdi to be awaited was ‘Isa b. Maryam, i.e. the Christian Saviour; and, since orthodox Islam looks forward to His returning to judge the world—according to the law of Mahdi—It is not quite easy to find room for another Deliverer and in this respect the Mahdi is more plausible for the name, viz. the man of the mahdī, ‘cradle’, favours this view, the reference being to Qur’ān, xix. 30 ff., where Christ speaks ‘in the cradle’.

There is little reason for supposing that the Prophet Muhammad contemplated the appearance of a Mahdi, however interpreted; but the outbreak of the civil wars within a generation after his death, and the perturbed condition of Islam which followed, led to the adoption of the idea from Jews or Christians, who look forward respectively to the appearance and reappearance of the Messiah: why the title Mahdi should have been chosen by the pretenders whose office is, as has been seen, an unsolved puzzle. To the etymology suggested we should be inclined to add one more, viz. from hādū in the sense ‘to give,’ making the word mean ‘He to whom has been given,’ as in Mt 22:27 the Risen Saviour says, Ἰδοὺ μου ἀπαύγασεν κράτος καὶ τιτάνιον εἰς τῶν γυναικῶν ἐκ τῆς γῆς, and a similar interpretation was current for the Mahdi for that the Mahdi in Qur. 46:15 until Shiloah come, viz. shalūh, ‘whose is.’ Thus, the ‘Shi’ite author of the Fakhri (ed. W. Ahlwardt, Gottinga, 1860, p. 88), speaking of the Mahdi, says: behind the name of the Mahdi was, in the first place, to fill the world with justice in lieu of injustice, which often meant the abolition of unauthorized practices and the enforcement of orthodox doctrine and conduct; in the second, to achieve the conversion of the world to Islam, and often this was identified with the taking of Constantinople. Some, however, were satisfied with a partial execution of this programme; and among persons who had been deprived of his ‘right.’

The function of the expected Mahdi was, in the first place, to fill the world with justice in lieu of injustice, which often meant the abolition of unauthorized practices and the enforcement of orthodox doctrine and conduct; in the second, to achieve the conversion of the world to Islam, and often this was identified with the taking of Constantinople. Some, however, were satisfied with a partial execution of this programme; and among persons who had been deprived of his ‘right.’
before, and preselhets to whom the mysteries had been communicated were forbidden to divulge them until the Mahdi appeared. Probably with this community in theory, both the 219th, at Baha, and 219th, at Baha, who died of poison in Baha, and at Baha, and at Baha. Several others are mentioned with these by Ibn Hazm (Kitab al-Fihal, Cairo, 1321, iv. 179 f.). The sect called Qaf'iyah got their name from making sure of the death of the Mahdi, but having ascertained it (Mas'udi, Tuhd, ed. M. J. de Goeje, Leyden, 1894, p. 232). Believers in the continued existence of Muhammad b. Hasan al-Askari, whose father died 260 A.H. There was, however, great doubt as to the age of this Muhammad at the time of his father's death, some denying that he ever came into existence, and all agreeing that he could have been only a few years old at the time. Shahrazad locates him in Sama'a al-Dar (ed. W. Cureton, London, 1842-46, p. 129); but at some time in the 7th or 8th century he appears to have taken up his abode at Khissal. The traveller Ibn Ba'thah (*) 709 A.H. (ed. C. de Dangeau and R. E. Savigny, Paris, 1853-55, ii. 98) gives a weird account of the ceremonies which he found there, and which seem to be relics of some pagan cult.

"The poisoner prophesied all that would come forth. On the day of the departure, called the sanctuary of the Lord of the Age. Each afternoon a hundred of the inhabitants come out of their houses armed with drums and buzzers; going to the governor, they obtain from him a horse with saddle and bridle, or else a mule; beating drums and sounding buzzers, they then proceed, fifty before and fifty behind, in front of the charger and fifty behind. Others arrange themselves on either side. Coming to the mosque that has been named, they halt before its door, and say: 'Bismillah, O Lord of the Age, come forth. Mischief is rampant, and wrong abundant; this is the time for times to come forth, that God may distinguish thee between the true and the false.' This they continue till the prayer of sunset, playing their musical instruments the whole time."

Ibn Khalidun, a contemporary of Ibn Bat'tah, who has no high opinion of his versificity, tells the same story, with some variation. According to him, the people of Khissal hold that their Mahdi entered a cell in their habitation, and every night they appear with a mount before the entrance to this cell, and keep calling him to come out, from the public door, until he has killed all the animals (Protogonos, Beirut, 1900, p. 190). It is surprising that in the Yaruck-i-Guzaish (compiled 730 A.H. ed. E. G. Browne, London, 1910, p. 208) the connection of this Mahdi with Khissal appears to be unknown.

"In his ninth year he disappeared in Sama'a, and was never seen since; the people of the Khissal, however, believe that he is the Mahdi of the end of the world, is still alive, and will come forth when the time arrives."

Probably even the revised version of Ibn Ba'thah's story requires further redaction.

The majority of the Mahdis have thus played a larger role in the imagination than in reality; there have, however, been cases wherein the promises they have held has been considered and even permanent success. The first capital of the Fatimids in Africa was called Mahdiyyah after the Mahdi who founded the dynasty (297 A.H. = A.D. 909). The conquests which prepared the way for his sovereignty were all achieved by an agent, who had ultimately to produce the person to whom he had preached; and, according to the statements of his enemies, the person whom he pretends to be, so that called to play the part, the real Mahdi having perished on his way to Africa. According to an author of weight (Nizam al-Mulk, * 485 : see C. Schefer, Oriental Fiction, 1883-85, i. 163), the propaganda of this sect began at least a century
MAHDI

(tr. G. Ranking, Calcutta, 1898, p. 567 ff.). This person was named Shaikh 'Ala'i, and was born in Bahān in Hindustan. To the same place there came one Miyaq 'Abdallah, who had come under the influence of Muhammad of Jauzpur.

He adopted the manners of a Mahdi, which would seem to have been settled by Ibn Tūmār, for they consisted in extreme asceticism; making his dwelling in the corner of a grove far from the haunts of men, on the borders of a tank, he used to cast water on his head; and when the times of prayer came round, he would ride on the back of one of the labourers who had to pass that way, and compel them to form an assembly for prayer, with such a degree of asceticism that, if he met any man directly coming for the meeting, he would give him a few coins and encourage him.

Shaikh 'Ala'i was much impressed by this example. He too, transgressing under too self-esteem and conceit, devoted himself to the poor of his neighbourhood, and, entering the valley of self-renunciation and aseetism, he bestowed all his worldly possessions, even to his books, upon the poor. He became a disciple of Miyaq 'Abdallah; they two formed a community of ascetic socialists or communists, consisting of three hundred householders, who, abandoning all other source of gain and traffic, agriculture, and skilled labour, spent their time with them.

In spite of their asceticism, they were in the habit of keeping arms and implements of war always with them as a protection against their neighbours. They also in order to interfere with any proceeding in the city or the market of which they disapproved.

They would go and call the offenders to account by main force, admitting to be governed by the governor, and on most occasions they got the best of it.

After a time the place came to be too hot for Shaikh 'Ala'i, who, along with his followers, whose numbers had now reached six or seven hundred heads of families, migrated to Khaawāspur, near Jodhpur; but here, too, he interfered seriously with the government of the place, and he was recalled to Bahān, accompanied by his disciples. Islam Shah had by this time obtained possession of Agra, and he summoned Shaikh Alā'i to his court, whither the Mahdi proceeded with a party of select companions fully armed; according to the chronicler, the Shaikh nearly effected Islam Shah's conversion to his views, but he was presently expelled and sent to the Deccan. Meanwhile, his former teacher and associate had started a sect of his own, which, with some difficulty, he had got the authority of, and the Shaikh 'Ala'i himself was ere long summoned again to Agra, and requested to abandon his claims to the Mahdi ship; refusing to do this, he was deprived of life. His followers, however, were numerous, and increased, and were known as the Mahdawis; they were persecuted, but not exterminated, in the reign of Akbar.

Blochmann observes that these Indian Mahdis were men of considerable eloquence, who, by their preaching obtained great influence over the populace, and that they regularly came into conflict with the authorized exponents of the law with the Mahdiats in the courts. Badshahi takes evident pleasure in narrating how Shaikh Alā'i triumphed over the official theologians who were employed to argue with him. They endeavoured to bring the practice of their co-religionists into harmony with the strict principles enjoined by the Sunnite codes, and especially to bring the country was subject to violent oppression, and the broad basis of the Mahdi's appeal was the injustice and cruelty of every sort which sprung up the moment Gordon's wholesome discipline was withdrawn' (p. 12). Muhammad Ahmad, who took all this title, was born at Dongola in 1848 of a family of boat-builders; at the age of 22 he was already a Shaikh with a great reputation for his piety and knowledge. He became a powerful preacher; he denounced the iniquities of the Egyptians, and laid stress on the promised appearance of a Mahdi, with whom he generally identified himself, and, indeed, in the Shi'Ite sense; he claimed to be the true successor of 'Alī and the son of Hasan 'Askari. His claims were first recognized in 1881 at the island of Khartoum, when a band of men declared him their appointed leader, and he communicated to them the secret that he was the Mahdi. News of his 'issuing forth' having come to Khartoum, the governor sent to have him arrested; but he declined to obey, and, when troops were sent to enforce the order, he succeeded in annihilating them. He evidently possessed some skill both as an organiser and as a military leader, for he soon won an influence over the South Sudanese, and proceeded with victory to victory until, at his death in June 22, 1885, shortly after the historic fall of Khartoum, his empire extended from lat. 5 to 21 S., and from 23 S. to 23 E. of Greenwich. Wingate suggests as an epitome of Mahdist the sentence: 'Your money or your life'; in practice it was an enforced communism, maintained by compelling the people to divide their wealth arbitrarily by the Mahdi. Success also appears to have made of the Mahdi a coarse voluptuary. Like some of his predecessors, he seems to have aimed at producing what were supposed to be the conditions of early Islam, and to have insisted on a sort of asceticism; his followers were advised to go on foot, or at any rate to ride asses and not horses, except in war. Further, they were told to reduce expenditure on weddings. These ascetic tendencies were indicated by the name which his followers assumed, Darwish ('poor'), for which at a later period the Mahdi substituted the epithet Aniq ('helpers'), which had been given by the Prophet to the Prob. of the Mahdi's entertainers in Medina. The Mahdi himself clearly aimed at reproducing the career of the Prophet, since he had a hajjah, or 'migration', viz. from Agra to Bahān, where he first assumed the Mahdi title, to Sāfārī, to Māsāt in the Nuba mountains; and he assigned as title to persons representing the eminent associates of the Prophet who became the first successors. The title of Nāfi' Bakr, the first khalif, was filled by 'Abdallah al-Ta'i, who afterwards became famous as the Mahdi's successor, or Khalif, and is said to have suggested the title of Mahdi first to Zabair Pasha and then to Muhammad Ahmad (Muqaddas, xxiv. [1900] 5).

The asceticism of the Mahdi, like that of the Wahhabs, included the tabu of tobacco, the smoking of which it regarded as a greater offence than the drinking of wine; in his early days he showed leanings towards Sufism, and would gladly have obtained recognition from the head of the Sufis; this being refused, he abolished all orders except his own.

After the fall of Khartoum the South Sudan was gradually evacuated by the Anglo-Egyptian government, and the Khalif extended the Mahdi's empire by fire and sword till it reached the bounds of Egypt; in 1886 the reconquest of the country began, and this was achieved at the battle of Omdurman (Sept. 22, 1898). The Mahdi achieved nothing but devastation and destruction.

The success of the Sudanic Mahdi encouraged many others to play the part. It seems that the title 'al-Mahdi' in the Sudan, the Mahdi community was originally a proper name; its holder, however, gave it the familiar applica-
MAIMONIDES

After several years of obscure practice he became court physician to Saladin, pursuing his Rabbinical and philosophical studies undaunted while following out the exacting duties of his profession. The eminent position which he ever held in Jewish estimation is explicable in the popular Jewish saying, 'From Moses to Moses there was none like Moses.'

2. Works.—Maimonides' works can be classified under the following heads:

I. PHILOSOPHY AND REASON.

(a) Dala'il al-Haqiqah ("Guides of the Perplexed"). This was written in 1267 and was completed by 1270. It was printed in some ten editions, the best being that of Venice (1580), and has been translated into various languages. It contains a discussion of the nature of reality and the relationship between the created and the uncreated.

(b) Yad Ha-Ma'aseh ("Book of the Laws of the Universe"). This was written in 1263-64 and was completed by 1267. It contains a discussion of the nature of the universe and the relationships between its parts.

II. Commentaries.

(a) Commentary on the Mishnah ("On Yerushalmi").

(b) Commentary on the Mishnah ("On Tractate").

III. Miscellaneous.

(a) Commentary on the Talmud ("On Tractate").

(b) Commentary on the Talmud ("On Tractate").

LITERATURE.

The authorities have been cited throughout the article.

D. S. MAGUIRE

MAIMONIDES.—I. Life.—Maimonides (Moses ben Maimon), Talmudist, philosopher, and physician, was born at Cordova, 30th March 1135, died at Cairo, 13th Dec. 1204, is known in Jewish literature as 'Rambam' (the letters r, b, m being the initials of Rabbi Moses ben Maimon) and in Arabic literature as Abū l-Ṭairān Mīshā b b Mīmān ibn Aḥdālā. His native city falling into the hands of the Almohads, Maimonides, when yet a lad of thirteen, was compelled either to leave or to embrace Islam. He, together with his father, chose the former course, and settled at Fes. Here he led a life of study and research. The period from 1155 to 1175 was spent in the study of the Talmud, the Mishnah, and the Tosefta. Maimonides fixed upon Fes as a more congenial centre. A home was made in Fes, a suburb of Cairo. Soon after their arrival here, both the father and the brother of Maimonides died of a fever, and Maimonides was compelled by the necessity of earning a livelihood reduced in consequence, Maimonides took up the practice of medicine as a means of livelihood.
significant place both in Jewish and in general philosophy, his importance in these respects resting mainly on his three larger works—the 'Guide of the Perplexed,' the 'Sefer ha-Mitsvot,' and the 'Mishneh Torah.' The most essentially 'Jewish' of the three is the Mishneh Torah. It is an elaborate text-book of 'law' as understood by Jewish orthodox tradition, its sources being the Bible, the Talmud, and the various Rabbinic literature previous to Maimonides. What prompted the author to write it was the fact that the Talmud and the Rabbinic literature generally are large, unwieldy, unsystematized mass of opinions and rules, laws, counsels, preceptons, permissions, and prohibitions, with no vestige of any attempts at logical classification and arrangement; so that, unless a Jew possesses a complete mastery of these intricacies, he is puzzled to know what is, and what is not, Judaism as laid down by the Rabbis and sanctioned by orthodox tradition. Maimonides felt the necessity of aiding Jews in this cardinal respect. Judaism appears to him to be in danger of losing itself in masses of its own invention; he therefore planned a work in which both the letter and the spirit of the Talmud should reappear in a simple, orderly, and systematic guise. All the controversies, disputes, and doubts are in ordinarily set forth. The faithul Jew who wishes to know the settled Rabbinical view on any subject of ritual or belief need no longer waste for the information through oceans of unnecessary details. It is given in definite, clear-cut, and brief language. As can be understood, this good service rendered to Judaism was not without an admixture of evil. Talmudic law, once flexible, became rigid. Maimonides, by aiming at laying down a form of Judaism which was to be the norm of future religions practice and belief, felt that he was exercising a too arbitrary dogmatism. He made development impossible and chained Judaism to the letter, instead of leaving it free to the eternally unfolding life of the spirit. The numerous attacks—very often virulent and abusive—which were hurled against him both in life and after death on account of this dogmatism, and on kindred grounds, constitute a certain amount of material history. On the other hand, the book was well received in many Jewish communities, though the hope of the author that it would one day become the authoritative code for all Israel was never realized.

In the making of 'codes' or 'compendia' of Jewish law, Maimonides had both precessors and successors. But his work stands out from all these in two commanding respects: (a) a greater variety of subject, a badder interpretation of the laws of Judaism as a system both of 'law' and of 'theology'; (b) the metaphysical (Aristotelian) colouring pervading his treatme of religion and ethics, as well as the addition of dissertations on such subjects as the calendar, idolatry, and free will. He was no mere codifier in the sense that others were. His was the genius of the literary artist working out his own original conception of divine truth as perceived by the Jew. Hence whereas to-day resort is had to other codes only when enlightenment is sought on points of strict 'legalism' or 'strictly orthodox ritual'—what is called 'by letter'—the 'thirteen principles' of the Talmud—the code of Maimonides is a source of edification to the theological student generally, quite irrespective of its relation to the Jewish life. The first of the fourteen books comprises the 'Principles,' or 'Mishneh Torad' ('Knowledge'). Maimonides feels that, before a man can be ordered to worship God, he should first be informed of what God really is; so he sets out with proofs of the existence of God, of the impossibility of a plurality of gods, of the impossibility of a world without God, of the various grades of animate and inanimate existence—angels, 'spheres,' men, plants, minerals (introducing, of course, the four elements, viz. earth, air, fire, water). He shows how all these have their places in the cosmos, and how all reveal God in their several ways and degrees. In this part of his treatment he discusses the Rabbinic views of prayer, divine worship, Sabbath, feasts and fasts, repentance, and the whole host of ethical and civil preceptions which the Talmudic Rabbis had deduced from Scripture and had laid down for observance by the Jewish commonwealth. It is all done in a way which shows that, while Maimonides defended what he considered the eternal sanctity of 'ceremonial,' he was too spiritual, too mystical a thinker to omit giving due prominence to the ethical and spiritual aspects of Judaism—the aspects which justify and transfigure the rest.

The 'Guide,' or Commentary on the Mishnah, has not as yet had full justice done to it by scholars and students. It is has been in many senses overshadowed by the more popular commentary of Obadiah Berlino, an Italian Rabbi of the 16th century. But there is nothing to doubt that the growing modern recognition of the necessity of studying the Rabbinical literature on strictly scientific lines, the 'Guide' will yet come into its own.

The object of Maimonides was to enable the layman to understand the Mishnah—its technical phraseology as well as its general drift—without the necessity of working through the involved conclusions of the Talmud. The Mishnah is the 'excellence' the commentary on the Mishnah, but its elaborations and criticisms of the Mishnah, instead of throwing light on the latter, often render the darkness all the greater. Further, Maimonides was of opinion—and critical study shows that he was right—that the Talmudic masters did not always understand the Mishnah, because their extraneous knowledge was faulty. He therefore planned a work in which the student would be able to see the Mishnah as it essentially is and irrespective of the Talmudic glosses. Not that Maimonides ignores these glosses. He incorporates them—and largely too—in the commentary. But he sometimes adopts an independent opinion. This is just one of the facts that make his work serve as a really valuable introduction to the study of the Talmud. It is also very valuable for the many long dissertations which it contains on points in theology, philosophy, history, and exegesis. Thus, commenting on Mishnah xi. in the Treatise of the Synagogue, on the words 'All Israelites have a portion in the world to come,' he is led to write a treatise on the Jewish creed, in which he draws up the famous 'Thirteen Principles of Faith' (for which see ERE iv. 246), being the first 'Rabbantine' (i.e., as opposed to 'Karaita') Jew to ask the Synagogue to accept a set, formulated creed of Judaism. For this he was severely criticized by a famous 15th cent. Jewish philosopher, his cousin Crescas, in his Or Aschonai ('Light of the Lord'). But, as subsequent history proves, there was no necessity for attaching any really serious importance to these 'Thirteen Principles of Faith' held down for the Synagogue at no time did, and even at the present time does not, attach any canonical validity to them. In all probability Maimonides profligated them with no dogmatic intent. They are of the often-forgotten fact that Judaism emphasizes inward belief as well as outward conduct.

Another remarkable excursion is that known as
that He exists. God is indefinable. Even to assert, as Scripture repeatedly does, His unity, power, wisdom, eternity, will, is inadmissible. But how, then, can we justify Scripture! By assuming, he says, that, owing to the poverty of language, these terms must be understood as describing not a positive quality but a negative of its opposite. Hence to say that ‘God is one’ is merely tantamount to saying that God is not a plurality. Hence the deity cannot be described by negative attributes; and, since the number of these is infinite, the positive essence of the deity must for ever lie outside human comprehension. But, despite all this, the deity is unqualifiedly active in the universe; He is the creator of the cosmos, and the traces of divine design are everywhere obvious. How are these divine relations with the universe to be understood? Before grappling seriously with this subject, Maimonides enters into an acute criticism of the views of the Mutakallimun, or philosophers of the kalâm (q.v.). As against Aristotle, who maintained the eternity of the universe, these Arabic philosophers defended the createdness of the universe. Maimonides, as a Jew differing on this fundamental point from his teacher Aristotle, agreed with the Mutakallimun, but differed from the latter again on several other fundamental propositions of theirs.

Maimonides’ greatest contribution to metaphysics, however, is his ‘Guide of the Perplexed.’ It is designed, as he himself says, ‘for thinkers whose studies have brought them into collision with religious men, who have acquired sound knowledge, and who, while firm in religious matters, are perplexed and bewildered on account of the ambiguous and figurative expressions employed in the holy writings.’ Thus the book is not intended to convince the unbeliever, but, rather, to correct the believer. His introductory motto is, ‘Ye who have gone astray in the field of the holy Law, come hither and follow the path which I have prepared. The uncleanness of the soul shall not pass over it.

The object of the book is to provide a working harmony between reason and faith. But whose conception of reason does Maimonides take as the starting point for his study? Is it the philosophical, or the religious, or the legal? The book is written for the follower of the OT received a twofold divine message. Besides the message which is manifest to us in their written prophecies, they received oral revelations of a philosophical kind. The written prophecies are really instinct with the fundamental philosophies of the OT, as it were, imbedded in the text. In Maimonides he took as the starting point the rationality of the world as a whole.

Maimonides conceived it his duty to devote the major portion of the first book of the ‘Guide’ to an exhaustive examination of the anthropomorphic expressions occurring in the Scriptures in order that the reader should thereby learn the first and fundamental tenet of all metaphysics, viz. that God is incorporeal, and that all the Scriptural passages which talk of God as a body, etc., the foot’ of God, in which describe divine movements such as ‘passing,’ ‘dwelling,’ ‘coming,’ ‘standing,’ etc., must be understood allegorically, seeing that they express transcendental metaphysical truths about the deity. But a priori metaphysics is ultimately of little service. What about the Scriptural ‘attributes’ of God? Is not the misunderstanding of these liable to lead to an infringement of both the incorporeality and the unity of God? Maimonides saw real danger here. If the elucidation of the meanings and inter-relations of the different attributes of God, he proves the inapplicability of them all to God. All that can be predicated of God is...
of moral and intellectual perfection which prophecy necessitates, another factor is still required. This factor consists in a special vouchsafing of the divine will, i.e. divine inspiration. A man may have an intellectual insight morally perfect, but may be unable to prophecy, because prophecy arises, in the last resort, only at the call of a divine fiat; and the fiat is arbitrary.

Schelling's prominent discussions on the nature and origin of evil, on belief in divine providence and man's free will (in which he strikingly discusses the central problem in the book of Job), on the purpose of the Biblical precepts, on the meanings of the Biblical narratives, on the stages by which man comes to hold real communion with the divine—all these are treated with a fullness of knowledge which makes them a contribution to general as well as to Jewish theology. A vein of unvarying optimism permeates his teachings on sin and evil. Evil has no positive existence, but is merely the absence of good, just in the same sense as sickness denotes the absence of the possession of health, or poverty the absence of sufficiency, or folly the absence of normal wisdom. In support of the argument he quotes Gn 1st., 'And God saw everything that he had made, and, beheld, it was very good.' The Midrashic comment upon which is: 'Gewiss, gedacht, gedacht in Aharon,' (Pirkei de Rabbâ, xviii. 9). Divine providence extends to individual human beings, but not to animals, plants, or minerals. Here Maimonides differs from Aristotle, who held stringent laws in regard to count of particulars, because his knowledge was limited to universals. Scriptural passages are quoted in refutation of Aristotle's views. Can free will be reconciled with the fact of divine omniscience, and yet be a simply pre-determined destiny? Numerous passages from Scripture are quoted in illustration of the difficulty of the problem. Maimonides bases his answer on the words of Is 55, 'My thoughts are not your thoughts, neither are your ways my ways.' God's knowledge is unique; and the great mistake that men always make is that they persist in thinking and speaking of God's knowledge in the same senses as they think and speak of man's. It is identical with possession, and is the element of existence or of time—past, present, and future are all the same to God.

The object of the divine precepts is 'to give man truth and knowledge, to make men good' (Ex 19, 1), to acquaint men with God's knowledge, or to give a correct ordering of life or to remove oppression, or to give a training in good morals or to exhort against bad morals.' Man's final consummation of 'knowing' God can come about only after man has perfected himself, not only inwardly, but also in his relations to society, to the State, to the world. Maimonides discusses every precept of the Torah with the object of showing how their right understanding and practice lead to this end. By an ingenious adaptation of Scripture he shows that the reason why God 'told the people, by the way of the wilderness by the Red sea' (Ex 13, 2), instead of leading them straight to the land of Canaan, is that he gave them the necessary preliminary training in the endurance of hardship, in the cultivation of courage in face of danger, and in all the social and martial qualities which a self-governing nation needs. Even so, man knows not God. Before he can live and think on the high level of knowing God, he must live on the lower level of an obedience to all the divine precepts which are the training-ground for his more exalted 'Knowing' God and 'loving' God are identical.

Maimonides influenced all succeeding generations of Jewish thought by his introduction of what we nowadays call 'the scientific spirit' into the study of Judaism. Henceforward an anthropomorphic conception of God became impossible. God is spirit, and the worship of Him—based as this is on the carrying over from nature to the religious sphere of representations as interpreted by the Rabbis—is not a series of mechanical performances, but a movement of the human spirit towards its divine source. Man's intellect is his greatest asset. Hence Judaism, rightly understood, can never be a mere formalism, seeing that the application of the intellect to it cannot but result in a continuous chain of development in consonance with the changing phases of human thought as time goes on. Although much of the substance of the Rabbinc tradition is now obsolete, its encouragement to a freedom of spirit in the handling of religious problems will always, unlike the dogmatism of the Mishnaic Torah, make its appeal to the thinking and the freethinkers. Maimonides the liberal philosopher will live on long after Maimonides the dogmatic ritualist is forgotten.

The influence of Maimonides on general European thought has not yet been adequately appraised. The Latin translations of the 'Guide' in the 18th cen. affected the great Franscan, Alexander of Hales, as well as his contemporary, William of Auvergne. The great Christian scholars, Albert the Great and Duns Scotus, directly borrowed from its pages. Thomas Aquinas's whole theological system is permeated with the theological views and opinions of Maimonides. What debt, if any, Spinoza's philosophy owes to him is a moot point, but that the reading of the 'Guide' influenced Spinoza's mode of life is certain.

The last of these works, however, is not a complete edition of the letters, but a series of important correspondence between the chief Jewish scholar of his time and other prominent scholars of his day, and the emphasis is on the intellectual and philosophical aspects of his life. This edition was first published in Olomouc in 1883, and has been re-edited and re-published several times since then.

The letters of Maimonides are an important source of information about the intellectual and philosophical currents of his time, and about the relationships and interactions between different Jewish scholars and thinkers. They provide insight into the development of Jewish thought and the challenges faced by Jewish intellectuals in the late medieval period.
MAJHWĀR, MĀNHJI.—A non-Aryan tribe numbering, Majhwar 14,210, Manjhji 4933, according to the Census of 1911, and found in the United Provinces of Agra and Oudh, Bengal, Central Provinces and Berar, Assam. The name is usually derived from Skr. manjha, in the sense of 'hand', and ethnologically they are closely connected with the Goonds and Kharvars (q.v.).

In the United Provinces the Majhwar possess a well-marked system of totemistic exogamous divisions, some being named from trees, animals, or birds, each of which is held sacred and not injured or eaten by the members of the division who take their name from it. The tribal legend describes the rescue of their forefathers by a tortoise; they therefore worship the tortoise, and will not injure or kill it. Their death rites recognize the survival of the soul after death, and the taking place of a sacrifice to placate the power of the malignant spirits of the dead, particularly those who have died by accident or in some tragic way. But some of the ancestral spirits are supposed to be re-incarnated in their descendants, or in a calf which is taken care of and not used in ploughing. At marriages a fowl and spirituous liquor are offered to ancestors, and in their honour the potāri, or tribal priest, offers a fire sacrifice (homa). Among the special tribal deities of the Majhwar may be mentioned Dubbi Deo, the spirit of a bridegroom who in the olden days perished in a specially tragic way. As is the case with the cognate tribes, there is, in their beliefs, a close distinction between those who live more or less within the range of Hindu influence and those who are less exposed to it. The former worship, under the title of Mahādeva, 'the great god'—a name of Siva—a deity who seems to be identical with Bara Deo, 'the great god' of the Goonds, both of whom are believed to use the ox as a ‘vehicle’ (adghana). This cult has a basis of phallicism, which is more clearly seen in the worship of Lingko or Lingal (Skr. linga), the phallic stone; the potāri, at his periodic visits to his parishioners, worships Mahādeva by rattling a number of iron rings fixed on a staff. The collective village-gods are impersonated by a male deity (Hindu village, the sarvācāra, ‘house of the gods’), whose name is a mixture of modern origin, while his female counterpart is known as the Deolār (Hindu devārā, Skr. devapaksha, ‘house of the gods’), so named because she occupies the village-shrine, a mass of rude stones piled under a sacred tree, usually the sāli (Shorea robusta). More advanced members of the tribe identify her with the Hindu Devī. The shrine contains a water vessel, over which a red flag is hung, and the use of the deity is a little mound on which offerings are laid and a fire sacrifice is performed. The officiant at these rites is the bāgī (q.v.), the village medicine-man, who holds a goat or fowl facing the east and sacrifices it by cutting off the head and allowing a little blood to drop on the platform. The worshipper, his friends, and the priest and then cook and eat the flesh. No blood sacrifice is offered to ancestors, but flesh is eaten. The wife of the eldest son (a survival of mother-right) is offered in the family kitchen, where the honoured dead are supposed to live. When they eat they throw a little food on the ground for the earth-goddess, who is supposed to sit in the worship of the higher gods, but not at that of the village-deities. They also propitiate a number of demons or evil spirits, such as Turkin, the ghost of a Turk or Muhammadan woman, and her consort Barwar, who rule all the mountain-spirits of the neighbourhood. Other spirits inhabit streams and water-pools, and with these are joined the snake-gods—of the Nag and his consort, the snake. The tribal rite is the worship of the sacred karan tree (Nucifera parvifolia), which is ceremonially cut down and brought into the village, where the people dance round it to the beating of drums. The rite is probably, like similar rites in other parts of the world described by J. G. Frazer (GP, pt. i, The Magic Art, London, 1911, i, 247 ff.), a form of symbolical or imitative magic to promote the fall of rain and the fertility of the crops, and cattle (W. Crooke, PE ii, 94 ff.). Only the more Hinduized members of the tribe employ Brahmins, the real priests being the potāri and bāgī, who are usually drawn from the more primitive allied tribes, which are believed to preserve unimpaired the knowledge of the local cults. Petilism, so called, appears in the reverence for the sacred chain (gurūk) hung in the village shrine, with which hysterical girls are beaten in order to drive out the evil spirit supposed to cause such attacks. The belief in witchcraft, the evil eye, and omens is widespread.

LITERATURE.—W. Crooke, Tribes and Castes of the North-Western Provinces and Oudh, Calcutta, 1905, liii, 635 ff.; W. Crooke.

MĀL, MĀLĀ, MĀL PAHĀRIA.—A non-Aryan tribe, containing various groups, numbering, Māl 2,135,326, Māl Pahārī 94,669, according to the Census of 1911, and found in the greatest numbers in Madras, Haidarābād, and Bengal.

The inter-relations of the North and South groups have not been clearly ascertained, but they seem to be, to a large extent, pure Dravidians, and those in the Rājāmahl Hills in Bengal are closely allied to the Orāons (q.v.). The Māl, a cultivating caste in W., and Central Bengal, are mainly Hindus, and few vestiges of primitive beliefs can be traced among them. The snake-godess, Manasa, is their special guardian, and they also worship the local village-deities. The earliest account of their religion in the Rājāmahl Hills is that by Shaw, which has been supplemented by Riley and Dalton.

'S at the head of their system stands the Sun called Dharmer Gosin, and represented by a roughly-hewn post set up in front of each house. He is worshipped with offerings of tallow, goats, sinur [red lead], and oil at the commencement of the harvest season, and at other times when any calamity affects the family. When people are gathered together for this purpose, the village headman, who acts as priest, goes round the congregation with an egg in his hand, and recites names of demon spirits. He then throws away the egg, apparently as a prophylactic offering, and enjoins the spirits to hold aloof and abstain from troubling the sacrifice (Riley, TC, i, 67).

Shaw describes various gods inferior in rank to the sun-god.Whenever a tiger, small ox, or any other plague attacks the village, Ruksey or Rakai is supposed to desire that a shrine should be raised for him. Accordingly the women, or tribal priest, is directed to search for the god. He gets a branch of the sāli tree, and gum benjamin is burned, which he smears. He is thus enabled to point out a place where he directs the people to dig a pit in the shape of a sacred black stone, is discovered. The mānhji, or headman, then sets out in search of a large tree, under the shade of which he places the stone, and encloses it with a stone fence and hedge. A fowl or small bird is laid on the headman or some other worthy person does worship to the god and then retires (Anon. Res. iv, 461). This god at the present day is the tutelary deity of strong drink. The headman before he begins to distil liquor from the fresh crop of mānakus (Bagia latifolia) (Riley, ii, 57). Chal, or Chalan, presides over a group of villages, but he is not worshipped until some
plague attacks the people, when the demaño dreams that a shrine should be raised, and the god, when found in the shape of a stone, is placed under a malumuk tree near the village, the stone undergoing no change of form from the chisel (Astitvis. Res. t. 48 ft.). Goats and pigs are usually offered to him, but the triennial sacrifice of a cow, mentioned by Shaw, seems now to have fallen into disuse (Risley, ii. 58.).

The first worship performed by young men is offered to Páni Gosán, god of the road, but it is not undertaken till some accident has induced the worshipper to consult an exorcist, who decides whether a sacrifice will be acceptable.

On the day of thanksgiving at harvest he proceeds to a high road, and clears a space under the shade of a young bel tree (Ligul. nobilis), in the centre of which he plants a branch of the mahosor tree. Round it he makes marks with red paint and, laying some rice and an egg decorated with three streaks of vermilion near the second branch, he invokes the god of the highway to protect him on his journeys. A cock is sacrificed, some of the blood being dropped on the branch, and the offering is cooked and eaten by the worshipper and his friends. The rice concludes with the breaking of the egg, and is never repeated unless the person concerned should meet with an accident in travelling (Astitvis. Res. i. 51 ft.).

At present the offering prescribed for the god is a white goat, and the sacrifice is very expensive, owing to the rarity of the animal, which is not offered to the god, and then drunk by the assembled worshippers (Risley, i. 58.).

The tutelary deity of the village, spoken of by Lieutenant Shaw as Dwira Gomot (god of the doorway), is now called Bóra-Dwirí, because he is supposed to live in a temple near the village worship him in the month of March (Jan.–Feb.). Colonel Dalton suggests that this god may perhaps be the same as the Oronian Dáni. K. G. Headington, the head of the mountaineers," and Angas, the god of bonding, appear not to be known at the present day. Gunno Gomot, who represents in every household by the wooden post (gunna) which supports the main rafters of the roof. On this the blood of a slain goat is sprinkled to call down the blessings of ancestors. The fact that this god is common to the Malá and Mal Paháriá, and is worshipped by both in the same manner, points to a common origin of the two tribes. As in Lieutenant Shaw's time Chanda Gosán still ranks high among the tribe, and demands offerings on a larger scale than any other god (Risley, ii. 58.).

At the present day the priests of the tribe are said to be the demaño, who are originally divinities, but it is declared that generally the demaño does not officiate as priest, but merely directs the village headman, head of the household, or other influential person chosen for the occasion (60.).

The Mal Paháriá has of the same type. Their chief god is the sun, who is addressed as Gosán, 'Lord,' to whom an offering of rice is presented and then given to a goat, which is devoured by a blow from behind. The meat is soaked, and served up at a feast, of which the neighbours partake. The head alone, which is regarded as sacred food (prasada), is carefully reserved for the members of the family. Next in honour to the sun are Dáhi Jí, Maitá, Mother Earth; her servant or, as some say, her sister, Garáni; and Singhbáñi, 'she who rides on a tiger,' who rules tigers, anakes, scorpions, and all manner of noisome beasts. The tribe also performs the kumuthí dance round the sacred tree (see MAJJHÍRÁ). Chordaná, 'the thief demon,' is a malevolent spirit, who must be propitiated by sacrifice and the offering of the firstfruits of the crops, which are under tabu (J. G. Frazer, P.B., ii. 11. 48 ft.). To Mahádaná eggs are the appropriate offering. Gunnu Gosán, the house pillar, represents the lóre of the household, and every year the tutelary deity, which lives in a nil tree (Shorea robusta). This is periodically dabbé with red lead, and may on no account be cut down.

Malabar Jews.—See Jews in Cochin (MALABAR).

MALAY ARCHIPELAGO.—The religious beliefs and customs of the natives of the numerous islands of the Malay Archipelago, all of them belonging to the great Malay-Polynesian family, were certainly in their essence identical, but, owing to historical facts and foreign influences, by far the greater part of the population have forsaken their ancestral creed. The native population, with insignificant exceptions, of Java, Sumatra, Borneo, and Celebes, professes the Brahmán religion, the Brahmánism of the Tallow, Later, and Talait Islands, and has an increasing number of adherents among the Battak, Torajas, Sawunese, and Rottinese; Ruman Catholic natives are chiefly found in the Eastern part of Flores. Some small communities of converts to Christianity are also found in Java.

1. Animism.—The religion of the pagan tribes of the Archipelago is what is generally denoted as animism. In speaking of the beliefs prevailing in the Malay Peninsula Sketch rightly says: 'The root-idea seems to be an all-pervading Animism, involving a certain common vital principle (anesan) in Man and Nature, which, for want of a more suitable word, has been here called the Soul. The application of this general theory of the universe to the requirements of the individual man constitutes the Magic Art, which, says the author, the Malays, may be said to consist of the methods by which this Soul, whether in gods, men, animals, vegetables, minerals, or what not, may be influenced, captured, subdued, or in some way made subject to the will of the magician.1'

All this applies to the pagan Indonesians, and, in many respects, also to the natives who have adopted another religion and, in their own opinion, are sincerely attached to it.

SUMANGAT, with dialectic variations, is the general word with the Malays also in Indonesia for soul,' vital force,' penetrating every member of the body, but distinct from the latter, so that it can leave the body temporarily, e.g., in dreams, and finally at death. The Macassars and Buginese use the same word, sumango, sumango with the same meaning. The term tená, tondi for exactly the same idea; and the Dayaks have hamburuan, amuru, amari, blu, and other dialectic variations of the same word.

With the Torajas in Central Celebes the term is tanasa, properly homunculus; another expression is waygo, or limehati, i.e., 'shadow' (Jav. wayang, Malay. bayang). When the soul temporarily leaves the body, it assumes the form of a homunculus or an animal. A man whose soul thus goes forth in order to feed upon the souls of others appears in the shape of a deer, pig, crocodile, monkey, buffalo, or cat. Like many other Indonesians, the Torajas believe that there are witches who can separate their head and entrails from their body in order to suck the blood of sleeping persons. Such beings may be compared with the Mal. penemupatana, vampires.2

1 With the doubtful exception of the people of Ternate Tidore, Halmahera (Gililbo).
The word for ‘soul’ in Nias is *nosa*, which, like Skr. *prāṇa* and Gr. *pneuma*, is properly the ‘breath of life,’ and then ‘life,’ ‘vitality.’ The same may be said of *bangga* (Java), *malu* (Malay), etc. There are several other Indonesian words for ‘soul’—e.g., *Tontembua* *nimukur*, *nimukur*, *Sangir hinkudal*, *Bentenan hinkudal*, *Ponosakan nimukur*.

The common belief is that not only men, but also all creatures, vegetables, minerals have a soul. The Ngaju Dayaks make a distinction between *hamburuan* and *gana*, the former belonging to men, animals, rice, money, and the latter to angels, some trees, and things. The *gana*, like the *hamburuan*, can leave its abode and appear in the shape of a human being to men in dreams.

The soul leaves the body at death, and returns to its origin, the creator, or passes, directly or indirectly, to another life. The residuum of the individual, however, continues a shadowy existence as spirit. Such a spirit of the dead is called *lau* among the Ngaju Dayaks, and *angau*, *andaau*, among the Oceanese. It is believed that the *lau* goes forthwith to Lewu laiu, the spirit land, which it often leaves to roam in the woods or haunt its burial-place. During that time it is often harmful to the survivors, particularly by causing disease.

The common word for ‘soul’ in Battak is *boyu*, Nias *bohug*, which not only denotes the spirit of the departed, in which case we may translate it by ‘ghost,’ ‘spectre,’ but is applied also to supernatural beings, the *roto* or god. The Torajas use the term *angka* for the spirits of the dead, and, in particular, *aniku* for the spirits of chieftains and heroes. This word *aniku*, or *anskum*, so wide-spread throughout the whole area of the Malaya-Polynesian, in Formosa, the Philippines, and the islands of the Pacific, is the common term for the ghosts of ancestors in the Moluccas, Timor, and Rotti. The Rotineese use it also for demons, whereas the Hill Torajas apply it to their gods, who, in fact, are delineated ancestors. In general it is difficult to distinguish the ghosts of the departed from the spirits of higher beings or god, but among some Torajas who use the term *lauau*, we find that a distinction is made between higher and lower *lauau*.

According to R. H. Codrington (*The Melanesians*, Oxford, 1896), it must not be supposed that every ghost becomes an object of worship. A man in danger may call upon his father, his grandfather, or his uncle; his nearness of kin is important for it, and the ghost who is to be worshipped is the spirit of a man who in his lifetime had means to help him.

The same may be said with reference to the people in the Malay Archipelago, and not the heathen exclusively. The ghosts of different kinds are not to be found in powwow, The Karo Batang hold the ghosts of stillborn children in particular awe, making little houses for them, and honouring them with offerings. The inhabitants of the Luang Sermata Isles believe that the ghosts of those killed in war or by accident are called *ditik* in Galearase, *ditik* in Tobelorese. They are more powerful than other ghosts, protecting the living, especially in battle, and are worshipped in the village temple. The Torajas also honour the ghosts of those who have fallen in battle.

To another category of ghosts belongs the protecting genius of places, regarded as the founder of a village or the common ancestor of the population. In Java every village honours the ghost of its founder, the *gajah deus*, with frequent offerings. The tutelary deity of a place is called *danghyang*, i.e., ‘the god’; as the name implies, he is not a ghost, but a supernatural being. The worship of this reputed founder of a settlement is very common in the Moluccas. The Galearase call the genius of a village and the forefather of its people *wongé*.

The Indonesians in general live in constant dread of innumerable ghosts, who are mostly malignant, and therefore must be propitiated by offerings or warded off by other means. Most feared is the *pointa* or *pontaan*, a word which with slight variations recurs in the whole archipelago, the Malay Peninsula, and the Philippines. The *pointa* or *pontaan* is the reputed ghost of a woman who has died in childbirth and, out of jealousy, penetrates the bodies of pregnant women to kill the unborn children. Usually she is thought to have the shape of a bird, but to be invisible when she approaches her victim. In the archipelago the customary prophylactic against her insidious attempt is to suspend the thorny branches of a certain lemon-tree, the fruits of which are also employed as a means of repelling ghosts (for other means see Kruijt, *Het Animisme*, pp. 245–251).

All sorts of diseases are ascribed to the baleful influence both of ghosts and of other spirits. Especially in Nias we find several names of *behus* who are held responsible for the appearance of different diseases and evils. It is no wonder that the people employ every means in their power to cure sickness or to prevent threatening attacks. In apprehension of the danger which may accrue from the dead, the Malays take care that the dead body is so treated that the ghost may not return. With many tribes the symbolic gesture of doing this is to scatter ashes, as if to blind the ghost. The relatives of a deceased person have to undergo a longer or shorter period of mourning, during which they must wear the conventional mourning dress, observe certain restrictions in the use of food and drink, and refrain from amusements. At the end of this period it is customary for some tribes to offer human sacrifices, the ruling idea responsible for this custom apparently being that the ghost ought to be given a companion by way of propitiation.

It is commonly believed that the ghosts of the dead remain for some time in the neighbourhood of their former dwelling, whereas the spirits of the living are in the act of erecting a hut in which to place the necessary offerings. With some Indonesians it is usual to prepare a bed of state for the ghost during the first days after the death. Even the Christians of Ambon and the Sangir Isles believe that the dead man pays a visit to his former home on the third day.

The ghosts continue to wander and meet with all sorts of difficulties before finally reaching the realm of the dead, which is situated somewhere in the West. When they are supposed to have arrived there, a great commemorative feast is arranged, such as the *tataau* of the Ngaju Dayaks and the *tengka* and the *monopone* of the Western Bare’Torajas. For the ceremonies of the feast among the Dayaks of Sarawak see Ling Roth, *The Natives of Sarawak*, i. 288–310.

In the primitive belief of the less civilized Indonesians there is a bond of connection between a dead man and his body, chiefly his bones. It is usually the skull that is used as a medium for

---

3. Described in Adriani-Kruijt, *De Bare’s-sprekende Torajas*, p. 117.
communication. It is preserved with great piety, honoured with offerings, and worshipped. Not seldom a magic power is ascribed to parts of the body, which thus come to be in reality miracle-working relics. Another method of communication is in idols representing the deified ancestors; these are held to be inspired after due initiation. Such images are very numerous in Nias, where they are calledatsu, and occur also in Ceram and in some other islands. The Battak have no idols of particular ancestors, but keep two puppets in their houses, one male, the other female, called Silaan (‘the primeval ones’), or Debata Idap (‘deities of life’). They seem to represent the primordial couple from whom mankind is sprung. Among the Nagaj Dayakas' puppets called hampitong represent the ghost (gaana) of the slaves of the deceased at the tawuh, but the term has also the more general meaning of ‘puppet.’ The Torajas, on the other hand, except the To Lagoes and To Onda's, have no images, but wooden masks (pennia). Stones are also objects of worship, as well as certain earthen pots or urns, which are regarded as sacred and inspired.

3. Fetishism. - The belief that persons, during madness, epilepsy, and sometimes abnormal states of mind, are possessed by spirits has led to attempts to reproduce the same phenomenal condition under the pretence to get in contact with spirits, to learn from them what medicines to apply or how to act in matters of importance. The medium through whom the spirits manifest themselves is the shaman, who is brought into a state of mental abnormality, and the rites employed for this purpose being multifarious among the peoples of Indonesia, but, in general, similar to what we find elsewhere, e.g., among the Burmec (q.v.). The Battak distinguish the shaman (tiboso) from the priest (datsu). Though their functions are not seldom analogous, there is this difference between them: the former acts unconsciously, under inspiration, whereas the latter gives his decisions, basing his acts on his knowledge of the classics in full consciousness. With the Dayak tribes it is a priest or priestess who acts as medium. The dayong of the Kayans is a priestess who sends her own spirit in the form of a boy (tubao) of a shaman, or to conjure up the ghost of the dead. The manap, a word properly meaning ‘one who exercises power,’ is with the Sea Dayaks the man who is able to meet and converse with spirits. The same character belongs to the wakal, bii, kacor, and dayung of other Dayaks. Such persons are more properly medicine-men than priests or shamans. Yet it is true that in doing their work they occasionally show signs of ecstasy caused by their being inspired. A peculiar kind of shamanism, which, however, is of foreign origin, is found in Halmahera.1

4. Mythology. - In general it may be said that the pagan Indonesians recognize the existence of real gods, and that the supreme god is the creator, more or less directly, of the world and the preserver of it, and punishes the transgressors of his laws. In the Moluccas and the South-Eastern Isles the supreme deity is generally known under the name of Upa Loro (with dialectic variations). The word means ‘Lord Sun’—a sufficient proof of its origin. Upa Loro may be identified with Upa Langi, i.e., ‘Lord Heaven.’ The earth is a female deity, and represents the female principle, who, in the West monsoon, is impregnated and fructified by the male principle, Lord Sun-Heaven. Similarly, the Torajas recognize two gods: Ilai, ‘the Man,’ and Indara, ‘the Maiden;’ these formed men, but not animals or plants. In the Minahassa Muntumuntu is the sun and lawgiver. In the confused mythological lore of Nias we find Lowa Langi representing the creator of men, though himself is not primordial, but came forth from the bud of a tree. His counterpart is Lature, the chief of the evil spirits, who, curiously enough, is said to have his seat in common use, he is the master of all that is pitiable. The highest god of the Tobu Battak is Ompu mala jadu na bolan, ‘the Great Lord Origin of the Creation;’ and his subordinates are the three gods Deba na bolan: Battara guru, Sorinadu, and Mangala bujan. The use of the somewhat corrupt Sanskrit words is sufficient proof of foreign influence, but the name of the highest god is original, Bhatar Guru is a title of Siva among the Sakitas in ancient Java. Among the Kayans Battak, he is the highest god; and likewise among the Macassars and Buginese in former times. The Sanskrit word bhatera, in some more or less changed form, is found in many Indian languages in the sense of ‘god’ or ‘divine spirit,’ and is the name used by the Manyan Dayaks. With the Sea Dayaks it is batara or batar for higher beings. Thoroughly original is the word for the supreme being in Halmahera, viz., Galezarese Giki-moi, Tobolorese Giki-moi, the ‘First Being.’ The moon plays a considerable part in the myths, but not in the cult; but there are traces that formerly it was otherwise. In the belief of the people of Babar Narawalai, the war god, has his seat in the moon, with nine female ministers.

The host of minor deities or demi-gods is so great that only a few classes can be mentioned here. The saangu of the Ngaju Dayaks are benevolent demi-gods related to men. The most powerful of them is Tempon telon; his principal function is to conduct the ghosts to the after-life. The spirit of the djata (from Skr. dvata) are water-gods, whose ministers are the crocodiles. The water-spirits are called tagasangaraya in Nias. The hantus and hantuans of the Ngaju Dayaks are malign spirits, or demons, whereas the antu is considered by the Sarawak Dayaks to be a helpful spirit. The belief that demons make their appearance in the shape of snakes, dogs, pigs, crocodiles, tortoises, and men is very general. The Kayans have a great number of gods—e.g., a god of war, three gods of life, a god of storms and thunder, of fire,
of harvest, of the waters, and of insanity, and the gods who conduct ghosts to the subterranean world. Above all these gods or demons stands Laki, Tenang, and Deh Tenang, the patronesses of women. Laki Tenang is identical with Pas Silong of the Klementans, and Bali Pong-long of the Kenyahs.

Nature-worship. — Nature-worship in its widest sense finds its expression in the sacred character of mountains, volcanoes, seas, and rivers, all of them being inhabited and ruled by superhuman powers.

Literature. — The following is only a selection from the writings on the natural history of the Malay Peninsula.

MALAY PENINSULA

Trengganu on the east coast, all of which have recently been taken under British protection, and also the State of Patani, which is under Siamese suzerainty. To the south of the Federated Malay States lies the State of Johor, also now under British protection. It is common to speak of the north of the Peninsula as British Malaya, a term which formerly included our far greater possessions in Sumatra and the densely populated island of Java. Occasionally the term is more accurately extended to include the island of Labuan, Borneo, N. Borneo, a British possession, and the protectorates of Brunei and Sarawak also represent British interests in Malaya, though the conditions there differ materially from those in the peninsula and ought to be considered with the archipelago.

2. Ethnological affinities and history.—The ethnological affinities of the area of which the Malay Peninsula forms a part, as well as of the adjacent areas, are still obscure in many respects. In so far as they have yet been elucidated by ethnological investigations and an examination of historical records, they bear out conclusions deducible from the geographical data. The Malay Peninsula itself would appear from very early times to have received a wave of migration from the Asiatic continent, while the protected character of the waterway on the west side, and the richness of this part of the peninsula in minerals and other products, have favoured its economic development. This has made it the only attractive objective for higher civilizations, as the study of its entire history shows, but also a rendezvous of merchants and workers from many far-separated countries. At the present day not the least important element in the peninsula are the aboriginal races, Chinese from the southern provinces of China, Canton, Fu-kien, and the island of Hai-nan, Tamils from S. India and Ceylon, and, in a lesser degree, Sikhs, Panjabis, and Pathans from N. India, and Javanese and Malays from all parts of the Eastern archipelago. In the north of the peninsula isolated outposts of Siamese have pushed for a considerable distance over the Kraw Dividie, overstepping the natural ethnological boundary of the peninsula. Old forts can be traced in the Patani valley and for some way down the Perak valley, the defences of which were strengthened with a hedge of thorny bamboo, which is indigenous to this region. On the Upper Perak valley and in a few places further south there are distinct traces of Siamese influence in comparatively recent times.

(a) Malays.—The peculiar importance of the native religions of the region here discussed is due to the fact that they exhibit a clearly-defined series of superimposed ceremonial strata, native (i.e. aboriginal) of at least two different types, and Malayan Indian and Islamic. The most recent ethnological investigations confirm the view that the native population consists of the descendants of immigrants of a comparatively recent date, superimposed upon a more ancient stratum consisting, to a greater extent if not entirely, of aboriginal races. The Malays proper belong to the modified Southern Mongolid group of peoples found in Formosa, Sumatra, Java, and throughout a great part of the Malay Archipelago. When the Portuguese took the stratification of their immigration from Sumatra, about 900 to 1000 years ago, introducing a Hindustani civilization into the peninsula, it is probable that they found some Indio-Chinese race of superior culture already in possession. This is suggested, by certain features of the aboriginal dialects, and by other considerations.

It is of great importance to note that some of the Sumatran settlers, who followed, after some centuries, the earlier Perak and Koman colonists, are still in the matriarchal stage as distinct from other Sumatran settlers, by whom customs of a patriarchal type are followed. In the Malay peninsular people, the influence of the Negri Sembilan 'follow the adat perpatih', which may be described as such a type, whereas the other Malays of the peninsula follow the 'adat Temenggong' ('custom of the Temenggong'), these two contrasted bodies of custom being based on mother-right and father-right respectively.

These Sumatran settlers, together with Malay tourists, amalgamated with the aborigines, at any rate in some districts—e.g., in the State called Negri Sembilan—but the conversion of the Malays from tolerant Hinduism to Mohammadanism from the late 14th to the 16th cent. began to drive the aborigines into the jungles and hill fastnesses of the interior. Since that time Sumi Mohammadanism of the Shafiite school has remained (as in Java) the official religion of the peninsula, although among the less civilized of the Malays it is the nearest veneer covering a vast body of practices and beliefs which can be traced either to the influences of Hinduism or to primitive shamanistic beliefs, such as are still held by the aborigines. Malay Islamism is nevertheless still fervent.

It may be remarked that the Malay Peninsula belongs, geographically and ethnographically, to Indo-China, a name which well describes the fact that, with hardly any exception, the countries of racing inhabitants of the peninsula from time immemorial represent strata of races belonging to one or other of the two chief families of nations in various parts of Asia, viz., a Mongolid and a non-Mongolid, both terms being used broadly. Belonging to the latter family we have (1) Indo-negresses (defined by A. H. Keane1 as the pre-Malay 'Caucasian' element, of which the Veddas and the Kornhits, and one at least of the aboriginal races, are typical), often called 'Dravidian' (though, like 'Malayo-Polynesian', this term should strictly be confined to linguistic affinities); on the other hand, we find, as representatives of the same generic culture, a more fully developed or specialized type, possibly the tall, brown-skinned Polynesian. These two main Indo-Negress types are said to be represented in the peninsula, the pre-Malay 'Caucasian' element by the Vedda type, by the aboriginal Sakai, centred in S.E. Perak and N.W. Pahang (cf. one of the basic elements in the Malay language),2 while to the pre-Malay Oceanic 'Caucasians' (of the Polynesian or Maori type) belong the taller, more robust, 'Malays' of Kelantan and part of Patani. The latter may be described as very tall, somewhat fleshy, large-limbed men, with light brown or cinnamon-coloured skins, straight or wavy black, sometimes nearly curly, hair, and regular, sometimes almost European, features.

Again, the great Mongolian family of nations is represented both by the Siamese (or Thai) in the northern portion of the peninsula and by the Malays themselves in the southern part, the Malayan proper being perhaps best regarded as a highly specialized offshoot of the southern or 'Oceanic' Mongolid race, immediately immigrant from central and southern Sumatra. They have long, lank, brinshy, black hair, and are almost beardless, with skin of a dark yellow-brown or olive hue (or the 'colour of newly-fallen leaves'); they are round-headed (brachycephalic), and often have more or less wide

1 Kroeber and Permoltz, Cambridge, 1890, 221.
2 E. O. Winstedr, Malay Grammar, Oxford, 1912, p. 12. This connection was first definitely asserted by Fr. Conil de...
and flattened noses, and somewhat thick ears, and on the average are about 1'61 m. in height. The women are usually much shorter than the men. Both sexes have rather short, often almost stumpy, feet, with toes that are to some extent prehensile; they will walk up a thin sloping pole leading to a raised platform or house-floor by gripping it with the hands and at the same time treading on it, evidently in order to make their motion more certain. Their hands are remarkably fine and small; the dagger-like ends of a well-developed old-style belt chief, which was worn on his forefinger, was too small for an average-sized little finger of a European. A jungle Malay can commonly perform certain feats with his limbs that are impossible to a European unless he has been specially trained as an acrobat.

In Sumatra the race was moulded by Indian influences into a comparatively civilized condition before they crossed to the peninsula. When they arrived, they found the country occupied by the three pagan races (see below, (b)), whom they drove before them into the fastnesses of the mountains and beyond the interior. It is thought that they also found some branch of the Môn-Khmer or Môn races holding the coast-line and other points of vantage, and thus occupying almost the same relation towards the aboriginal races as the Malays do at the present day, and that they then partly absorbed the Môns, by thinning them of their women, and partly drove them into the jungle. This episode is, however, a lost chapter in the history of the peninsula, although some such theory becomes necessary in order to account for all the actually extinct conditions.

The Malay races are but partly civilized, a graft upon a savage stock, allied not only to the Central and Southern Sumatrans and Indonesians, but also perhaps ultimately to the Chams of Cambodia, Cham. 2 See CAMBODIA, CHAMS.

The hereditary savagery of the Malay nature, for many years after the introduction of the British Residental system (introduced to curb the tumultuous Malay Rajas, who were fostering piracy), continually broke out, the commonest form in which it showed itself being perhaps the "amok," the national Malay method of committing suicide, until the gradual strengthening of the right arm of the British law made it too risky to indulge in, when by degrees it became fashionable. Other striking evidence of the high-strung excitability of the Malay temperament is still to be seen in the form of the hysterical disease called "latax" (corresponding to what has been called "arctic hysteria"), which also has not yet been thoroughly investigated.

(b) Aborigines.—Various theories have been put forward as to the ethnological character of the several wild races which form the substratum of the population. It was held by the older ethnologists that they belonged to a homogeneous group — a Negrito race modified by admixture with the Malay population. This is what has been termed the "Pan-Negrito" theory of A. de Quatrefages, N. von Miklucho-Maclay, and others. This hypothesis, however, has proved untenable, and the result of later researches has established the fact that at least three types are to be found among these primitive tribes. Of these tribes two, at least (the Semang and Sakalai), can be found in a relatively pure state, though only in very limited areas, and the third (the Jakun) is probably nowhere really pure. Admixture between the three has taken place in varying degrees throughout the peninsula, and the only satisfactory procedure anthropologically is to compare each tribe with the pure, unmixed standard or standards to which it is most closely related. By no other method can any really useful conclusions be reached, or, indeed, the drawing of the most fallacious inferences avoided.

(1) Semang.—The Semang are a nomad Negrito race — comparable with the Negritos (Filmy) peoples of Central Africa, and probably most closely connected with the Andamanese, whose group of islands lies off the Burmese coast at its southward end — belonging to a primitive group of peoples found to a greater or less extent as a relic of the aboriginal population as far as New Guinea and the Philippines, although it is remarkable that no traces of such a race have yet been quite proved to have intermingled in Borneo midway between these two Negrito centres. The physical characteristics of these people are short stature (1'491 mm. male, 1'408 female), brachycephaly, skin varying from dark copper to shiny black, hair woolly, nose broad, lips curved, beard scanty. They extend from Patani to Kedah, and from Kedah to Mid-Perah and N. Palang.

In view of the fact that the Semang, or as they are called on the east coast of the peninsula, Pangan are so frequently described as being of Negro character — like African negroes seen through the reverse end of a field-glass — it cannot be too strongly stated that this is a mistake. At the utmost, it may be conjectured, with W. H. Flower, that they represent, with the true Pygmies, an original undeveloped stock from which the Papuans and like the Negroes, may have branched off. But even for this theory there are many difficulties, and it cannot be said to have been in any way established. Hence the Negrito and the Negro must be regarded as totally different races—the former having short or round heads and the latter being long-headed.

(2) Sakai.—The Sakai were at one time regarded as Semang admixed with Malay, but are now clearly differentiated as a separate and independent type* most nearly akin to the Dravidian group of peoples. They are taller than the Semang (average height 1'594 mm. male, 1'437 female), dolichocephalic, skin very variable, light to dark brown, hair wavy, nose fine and small, cheek-bones broad, mouth small, lower lip full and projecting, beard as a rule non-existent. The habitat of the purest Sakai is S.E. Perak and N.W. Palang.

(3) Jakun.—The Jakun are a mixed group inhabiting especially the south of the peninsula, probably everywhere blended, to a varying extent, with Semang and Sakai. This fact is the more remarkable since a relatively important element running throughout all the aboriginal dialects in

---

1 Pronounced "Mouv". The Môns, or Talings, are remants of an old pre-Malay race, one that once covered the whole of lower Burma. The Talang language is the oldest linguistic structure of Indo-China, and is fast dying out, though it is the original tongue upon which the Burmese alphabet and religion were modeled, and in which were composed the Môn-Khmer works, which go back to about the 11th cent. of our era.

2 The Cham dialect has in recent years been shown to contain Malay elements (E. C. J. Hobart, Dictionnaire anglo-français, Paris, 1906). One of the most peculiar customs (the custom of a man non-Malay) attributed to the Chams is that the women ask the men in marriage.

3 Wilkinson has recently suggested that five aboriginal race types should be recognized. When, therefore, the new elements such as would be required in order to form the two proposed new types, have been differentiated, and these elements are all shown not to be referable to either one or the other of the types already identified, the problem will have reached a further stage of development. Certainly, as at all times, there must remain some unexplained points, it is probable that some further racial element may eventually be isolated. [R.S. G. Gov. Papers on Malay Subjects : Aboriginal Tribes, 1910.]

4 Hugh Clifford, In Court and Kampung, London, 1907, p. 175. But this is a microscopical slip for one of many as many as any other ten men to familiarize the English public with the peoples of Malay.

5 This all-important differentiation was first clearly established by E. Hartin; see his magnum opus, Inhalt und Entwicklung der malayischen Halbinsel, Leipzig, 1905.
varying degrees consists of some Malayo-Polynesian tongue, the vocabulary of which shows affinities with the Malayan languages of the Far Eastern Archipelago, unlike modern (peninsular) or standard Malay. The reason for this is not apparent, unless we may conjecture that at some remote period a natural speech was in this Malayo-Polynesian type prevailed in the peninsula. The Jakun may be classified as consisting of at least three related groups, blended as above. In so far as they are of Malayan type, they should be considered as aboriginal Malayan. In physical character they are a little taller than the Sakai, the head is brachycephalic, the skin dark coppery, hair long, straight, and smooth, nose straight, flat, and short; the eyes show little tendency to obliquity, and the mouth is large and broad, with well-formed lips. The Jakun proper are divided by the Malays into Hill Tribes (Orang or Jakun Bukit) and Sea Jakun (Orang Laut).

The most recent in regard to these tribes is the hair-character; hence we may distinguish the three main racial groups as ulotrichi (‘woolly-haired’), cymotrichi (‘wavy-haired’), and liso- trichi (‘smooth-haired’). This has undoubtedly been a considerable admixture between all the wild tribes, but, owing in particular to their being still pagans, it is improbable that they have been materially affected by intermarrying with the Malays, since nothing could be rarer than that a Malay woman should demean herself by marrying a heathen husband. The case is rather the other way about, since a Malay marrying a woman of the wild tribes would see that his children were brought up as Musulmans; many live in many districts, especially in Kedah, the adoption of the Muhammadan religion by a large portion of the aboriginal Semang element has caused them to be reckoned as part of the recognized Malay population.

3. Culture. (a) Malays. Apart from such tendencies as have already been mentioned, the Malay character may be regarded as a softened and more civilised form of the Mongol, since under ordinary circumstances he may be more or less helpmeet to his wife, a peaceable, quiet, civil, and loyal subject, though he still retains much of his old proud sensiveness, and in inland districts he is still reserved in his ways of life, and suspects and suspects strangers. In countries where he is less tramelled by civilization, the Malay is frequently of a bold and even savage character and makes an excellent soldier; there should, therefore, be no doubt that with training he would soon develop first-rate soldierly qualities. His alleged laziness is due in part to his natural reserve, which allows more pushing races to outstrip him, and in part to the simplicity of his life, and to the absence of any spur to industry in a land where the climate supplies all the out of its own superabundance the greater part of his few simple wants—a land which to him is a veritable ‘island of fruits,’ of bowery hollows crowned with summer sea. It must be remembranced, too, that before the advent of the British the employment by his rulers of the krat or corete system, as well as the wide prevalence of debtslavery, made it difficult for the average Malay to rise above subsistence.

Among the institutions of the Malay race which share more or less with other races in the same region are the use of sea-canoes (prohuk), once associated with piracy, the building of houses on piles which have also developed on the border of tidal rivers, the practice of nesting on trees or even on the border of tidal rivers, by men-of-wars’ boats by slipping over the inundated river banks, the introduction of salt-water creeks. It was not till the second half of the 19th cent. that the prohuk was vanquished by the paddle-wheel.

These prohuk, being roomy boats paddled by large numbers of men, and of extremely shallow draught, could habitually单 pursuit by men-of-wars’ boats by slipping over the inundated river banks, the introduction of salt-water creeks. It was not till the second half of the 19th cent. that the prohuk was vanquished by the paddle-wheel.

perforated half coconut shell set aloft in a water-bucket, and timed to sink in a definite period. Pottery is made both with and without the wheel, and also by moulding in a split trunk, but in a few places only, and is often crude; on the west, in some cases a manganese incrustation is traceable, the types being both graceful and attractive. In some cases the hematite, which turns black on firing, is used as a varnish. The wide-spread use of bamboo and the palm-spathe bucket as a receptacle is, no doubt, responsible for the making of more extended development of fibric ware, in spite of the great abundance of clays suitable for porcelain. On the east coast generally, and less commonly on the west, mat-making is a fine art; at Malacca highly artistic baskets are made of twisted strips of pandanus. The woodwork of the Malays, as shown in the ornamentation of household utensils, as well as on the structural side of house and boat manufacture and furniture, is excellent, though as regards mere ornament it is decidedly scanty—the heartbreaking effect of the superficial Muhammadan veneer which has been imposed on the Malays from without. The further from such influences, the nearer the climate becomes, and the better its quality. The Malays are especially ingenious in adapting means to ends and in conforming to the conditions of their surroundings; their houses are well adapted to the conditions of life of a jungle-dwelling race, whilst the seaworthiness of the Malay prau, or sailing-boat, bears witness to the reputation of the Malay as a sailor.

(b) Aborigines.—The culture of the wild tribes presents generally many features of similarity. They are similar in some respects to some extent, existing largely by hunting, fishing, and the produce of their search for fruits and roots of the jungle. But most of them practise a primitive agriculture, sowing in a rude way small patches of rice or millet; their method of cultivating the wild half-wild orchard-trees, which grow as well in the jungle as elsewhere, is limited to throwing away in certain patches of the jungle the seeds or stones of the fruit they have eaten. The Sen Jakun are especially skilled in all devices for securing a livelihood along the foreshore, while the jungle tribes give evidence of a high degree of ingenuity in slaying and snaring their game by hunting and trapping.

The Semang are the most nomadic of the pagan tribes, though they are now taking to agriculture. Their typical clothing consists of a girdle of leaves or on festal occasions, a belt of shining black strings, made of the rhizome of the Hawaiia. Their typical habits are of a primitive character, consisting of mere lairs, or rock-shelters, or of simple round or rectangular leaf-shelters planted on the ground or in trees. Those of a more developed type are large enough to shelter a whole tribe, each individual having a separate fire and bamboo sleeping-place. Frequently the head is more or less shaved and the toes are likewise formed into a concave surface, possibly in accordance with a once usual Malayan custom. They do not circumcise or (as a rule) chew betel, nor do they tattoo or scarify the body. They have no bows, but the arrow-reaches. Their most distinctive weapon is the bow with poisoned arrows; in fact, among the pagan tribes, the bow is, in the present writer's opinion, good prima facie evidence of Semang admixture; the northern Sakai, who also possess it, are more likely borrowed it from the Semang. Almost all, however, now also employ the bamboo blowpipe, of a different type from that of the Sakai, the idea of which has been copied, in all probability, from their Sakai neighbours.

The Semang have no organized body of chiefs, but each tribe has a single head-man. The tribes are organized in villages, each under a chief, to whom disputes are referred. Quarrels between villages are settled by the chiefs. Complete equality exists as between individuals, and all property is held in common. Crime is rare, and punishable generally by fines.

The Sakai, a mountain race, are still largely nomadic. Their habitations consist of tree huts and temporary shelters; their clothing is a loin-cloth of tree-bark, though they also decorate themselves on occasion with a girdle of leaves. They bathe in the sea and practise circumcisions and body-painting, and sometimes wear a porcupine quill or a metal ring through the nasal septum. Their distinctive weapon is the bamboo blowpipe. Agriculture is of a very primitive type, the principal implement being a digging-stick. They use neither boats nor rafts. The ornamentation of their implements, more especially the blowpipe and quiver, is considerably more artistic than that of the other aboriginal races.

Their social order, like that of the Semang, is of a primitive type; the only functionary is the pêngbulu (Mal. 'head-man'), 1 who has every right over his tribe. Except when enforcing his position, however, he is only the leader of a small tribe. The office is hereditary, but, failing a direct heir, the pêngbulu may appoint his successor during his lifetime. In their laws the penalty of death is reserved for murder, the relatives of the victim being the executors of the death penalty. For theft, also, the punishment is exclusion from the tribe. For other crimes the delinquent makes compensation, or pays a fine. Individual property does not exist, its place being taken by family property. The family is the unit which cultivates the land, and the produce is shared among the members. The limits of the family property are designated by the pêngbulu, and abandoned land may not be taken up without his consent.

A more highly developed social order exists among the Jakun, or aboriginal Malays, as represented, e.g., by the Southern Sakai, who show strong Malay influence.

The Jakun are still to some extent a community of hunters, although among the Land Jakun agriculture is practised, more especially rice-planting. Their clothing resembles that of the Malays, but is scantier. They sometimes file their teeth to a point. Their typical weapon is a blowpipe of bamboo, or, as in Kuantan, uniquely made of two half cylinders of wood fitted together for the purpose—corresponding exactly to a form of blow-pipe used in Peru. They have no bows. They use spears and enticusses; in some cases they also carry sword and kris like the Malays. They live in huts built on piles and use 'dug-out' boats of hollowed tree-trunks, but on the river only, not on the sea. They still use face- and body-paint, but do not tattoo or scarify the face. Their marriage customs include, like those of the Malays, 'bride-purchase,' the ceremony of eating together, and, in addition, the bride-chaos, which takes place round a large bell-shaped mound, constructed for the occasion, or an ant-hill or tree, if the tribe is a land one, or in a dug-out canoe—the form which it took among the sea-gypsies (Orang Laut). Their social organization is a higher type than that of either Semang or Sakai. The chief of their tribe, the batin, is the head of a group of villages, and has certain subordinate officers.
who represent or act for him upon occasion. Thus, among the Besisi of Langat, the batin is the arbiter of all disputes referred to him by the sub-chiefs, besides being the priest at marriages, the magician in case of any misfortune or disaster, and the judge whose duty it is to punish wrong-doing. His substitute is the jinayang. Their subordinate, known as the penghulu balai,豪华 charge of the tribal feasts and councils, whilst the jukruk (probably = Mal. Juruk) is another officer. He is the summoner of the tribe; the penglima is the executive officer. Among the Benna each batin has authority within his own jurisdiction, but difficult or unusual cases are referred to a council composed of all the batin. In the absence of the headman, the batin is, indeed, almost an illegal crime against personal property is rare, and is expiated by payment of fines in the form of coarse Chinese plates or saucepans. One half of the fine goes to the batin and one half to the injured person.

The office of batin descends, as a rule, from father to son, except among the Jober Jakun, where the eldest son has to be accepted by the tribe, and, if his brothers as well as himself are rejected, a suitable boy, selected from among the sons of minor officials, would be appointed by the batin to succeed his father. The inheritance of property was generally from father to children, but varied from tribe to tribe in the proportion assigned to sons or to wives and other relatives. Property held by a man before marriage among the Mantra was assigned on his death to his parents, brothers, and sisters.

A "language" (of Malay).—The Malay language belongs to the Malay-Polynesian family, related forms of which occur sporadically over an astonishing vast insular area, extending from the north-east coast of South America to the west of Fiji. The languages spoken by native Malays in the Malay Peninsula, Celebes, and Sundas are more closely related to the Malay-Polynesian languages than to any other group of languages. Malay, with its dialects, is the chief language of the Archipelago, and is spoken by nearly the whole Malay Peninsula. Malay is the true Malay word in tabulating the various elements in these aboriginal dialects first made this identification possible.

The Malay tongue, by which the standard speech of the Peninsular and Singaporean states is meant, is of such a nature and is so much modified by contact with foreign languages that it is impossible to give a satisfactory dictionary of it. Malay is a language of the Sino-Tibetan family. The words are of two kinds: (1) native words and (2) borrowed words.

From a phonetic point of view, Malay shows a remarkably small, almost a minute, number of changes during the last four centuries. At an earlier period it had, however, become a very different language from that of the present day, and the great number of loan-words formed by the Malays during the last four centuries is an indication of the rapidity with which the language of a people is becoming modified by contact with foreign languages.

The oldest foreign loan-words in Malay are Sanskrit and Pali, and these words are still in use in the present day. Malay is a language of the Sino-Tibetan family. The words are of two kinds: (1) native words and (2) borrowed words.

more interesting element has been proved to show a very close affinity with the Kâmar or Mô dialects of western Indo-China. The identifications, though certain and numerous and even striking, are rather disappointing, if considered as evidence of the fact that the Semang as a whole are a sub-breed himself once remarked by the present writer: 'What is the use of our assuming (as certain scholars maintain) that all Jakun dialects are identifiable with Môn, when all that has been identified is about 20 per cent of the entire vocabulary? The question is, what is the remaining 80 per cent fit for?'

To reply, we must study attentively both the Semang and Sakal syntax structure and a considerable percentage of the vocabulary, as regards Sakal, the phonology of the modern Jakun dialects are of no importance. In general, there remains an unidentified element. Semang embryo, a number of words which are confined to the Negritos and which are completely sui generis. It is clear that the Semang and Sakal dialects belong to the Mon-Anam group. These words relate to matters of everyday life, and presumably they represent the old original dialects of the Negritos. Relation ship with Andamanese has been suggested, but remains completely hypothetical; for hardly a single word of Semang is recognizable in the Andaman dialects, and this fact is one of the many and great puzzles of the Semang problem. For the unidentified element in Sakal so supposed or of origin has been made, though it is possible that many of the uncertain words may yet be traced not to a Malayu but to a Môn-Anam origin. In the case of the Jakun it is pointed out that some of the words of unknown origin occur in Semang, but not in Sakal, and they are words which seek the support the view that Jakun dialects were originally allied to Semang; on the contrary, a large number of Jakun words are certainly allied to Sakal, and with Sakal certain southern Sakal dialects seeks to eliminate any linguistic Jakun, but leaves uncov ered both Kâmar and the common element in which Mâtri, Bedunman, and Bedun speak every other known language.

Religion: greater gods.—(a) Malay. The official Malay religion, as has already been stated, is Muhammadanism, but the popular beliefs and ritual afford abundant proof, which is supported by the historical evidence, that this religion has been superimposed upon some form of Hinduism, which itself, when introduced into the country, superseded an earlier and more primitive type of belief, of shamanistic character. Folklore, charm-books, and romances go to show that the greater gods of the Malay pantheon—so far as their names go—are borrowed Hindu divinities, while the lesser gods and spirits are native to the Malay religious system, incorporated in and modified by the higher religion, that is not entirely forgotten.

Taking first the Hindu deities, we find Vînu, the preserver, Brahma, the creator, Batârârû 1 (Siva), Kâla, 2 and Seri 3 simultaneously invoked by the magician. Of the greater divinities of Batara Gâ, the majority of the gods of the Malays, unquestionably the most important; in other words, the Malays were of the Saivite sect of Brahmansim. In the Hikuyat Sang Senamo, the Malay version of the Bhavamahâkyâ, Batâra Gâ appears as the supreme god, with Brahmû and Vînu as subordinate deities. He alone has the Water of Life which resurrects slaughtered heroes. The Malay magician will, on occasion, boldly declare that he was the all-powerful spirit who held the place of Allah before the advent of Muhammadanism, the spirit so powerful that he 'could restore the dead to life'; and that to him all prayers were addressed at that period. It may be noted that most of the theological terms in use among the Malays are of Sanskrit origin, and that the titles Sang-yang ('the deity') and Batâra are used mostly of the older Hindu divinities. The Malays, however, continue to invoke the Sanskrit title of Gâ, seems to have transferred it to a hunting-god, whom they identify in certain localities with the 'Spectres,' or 'Demon Huntsman,' though pure Hinduism would certainly not have recognized hunting (one of the duties of the deity) as a pursuit fit for one of their deities. Further, the Malays distinguish between a good and a bad side of Batâra Gârû's character, which may point back to the combination into one of what were originally two distinct personalities, Batâra Gâru and Kala. Thus the Malay Kala holds as his only definite sphere of influence the sphere of spirits intermediate between the land-sphere of Batâra Gâ and the realm of the dominion of a third deity called 'Grand-Sire Long-Claws' (Toh Panjang Kuku). This attempt to divide the spheres of land and sea must again be attributed solely to the Malay. Malayology knows nothing of the sea. It is clear, therefore, that in the greater deities of the Malayan pantheon we may, after all, recognize Malayan deities simply re-named after the gods of the Hindus. The Batâra Gâru of the sea is identified by some magicians with Si Raya, and occasionally with the god of mid-currents (Mambang Tal Filu). Sickness is sometimes ascribed to him, but it is not described as being brought by the malice of the Demon Huntsman, and fishermen and seafarers, on the other hand, obtain from him many benefits. The only other deities of importance are the White Divinity, who dwells in the sun, the Black Divinity, who dwells in the moon, and the Yellow Divinity, who dwells in the sunset; the last is considered most dangerous to children, and Malayan parents always endeavour to keep their children within doors at sunset and during the twilight in order to avoid any harm.

(6) Pagan race.—In view of the still inadequate evidence of the beliefs of the pagan tribes in relation to a supreme deity, it is necessary to exercise some caution in making any statement as to their ideas upon the subject. On the other hand, it is at least safe to remark that any one who, as the result of mere worrying by questions, commits himself to the statement that any of these pagan races have no such beliefs whatever, proves merely that his own methods of investigation are at fault in these matters.

It appears, moreover, clear that the Semang and Jakun, and possibly also the Sakal, are at present in the stage of development, common to most primitive peoples, in which the supreme deity belongs to the realm of mythology rather than of religion proper. Since he stands more or less aloof from the affairs of this world and the next, and possesses no cult, his claims to recognition are set aside in favour of spirits more closely in touch with mundane affairs, whose powers for good and evil are constantly capable of exercise and who at every turn must be propitiated. Among the Semang there is clear evidence for a belief in the existence of such a being, combined with a crude dualism based upon natural phenomena.

According to one account, Tû Pûn ('Grandfather Pûn') is a powerful but beneficent being described as the maker of the world. He was, in fact, described to the present writer by the Semang of Kékal as being 'like a Malayu Raja; there was nobody above him.' He is the moon's husband and lives with Ag-Ag, the crow who is the sun's husband, in the eastern heavens. Tû Pûn has four children, two male and two female. His mother Yûk is the old earth-mother, and lives underground in the middle of the earth. He has a great enemy, Kakhû, who lives in the west. He is dangerous and very black. It is said that why the east is bright and the west dark. The heavens are in three tiers; the highest of which is called Kakhû, and which are defended against unauthorized intrusion by a giant coco-nut monkey, who drives away any one found trying to enter the heavens.

The naturalistic dualism of this account is obvious; from his place of abode, and from his having the moon as his consort, we may perhaps conclude that Tû Pûn is a spirit of the right hand. In addition it has been maintained that the Semang recognize two other superior deities, Kari, a thunder-god, the supreme creator, ruler, and judge, and Ple, a related but subordinate divinity, who, under Kari, created earth and man. The evidence, however, is too slender for dogmatic statement, and the point still awaits the collection of further material.
The religion of the Sakai is more shamanistic in character than that of the Semang, and, if any corresponding belief exists among them, as has been maintained, it is overshadowed by the cults of demons, ghosts, and spirits. The Jakan afford more certain evidence of a belief in a supreme deity and deceptions at the best a vague and shadowy. The Mantri say that Tuhan Di-Bawah, lord of the under world, created the earth and dwells beneath it, supporting everything above him by his power. The Benua believe in one supreme deity who dwells in the sky and is invisible. He made the world and everything that is visible. The greater part of the Jakun of Johor know and acknowledge a supreme being whom they call by the Malay-Arabic name of Tuhan Allah; the grotesquely slight influence, however, that is really exercised by Muhammadan-

47. Lesser gods, spirits, and ghosts.—(a) Malay.

—Subordinate to the great gods are lesser gods or spirits whose place in Malay mythology is due to Mahayana Buddhism, although its influence may in part be due to the law that the gods of the auto- chthones are usually considered by an invader more powerful than his own deities. These lesser gods are the river-gods, the fakirs, or hantu. The Malayan, to a certain extent, show a tendency to identify them with the spirits of the older Hindu religion, but only the Black King of the Geni (Sang Gala' Raja) appears to rise on occasion to the level of the great divinities, when he is regarded as a manifest-

48. The soul.—(a) Malay. In Malay beliefs the sëmangat (‘human soul’) is a thin, unsubstantial mannikin, temporarily absent from the body in sleep, trance, or disease, and permanently departed after death. It is about the size of the thumb and invisible, but it is supposed to have a proportion, and complexion to its embodiment; it can fly quickly from place to place, and it is often, perhaps metaphorically, addressed as a bird. In mental attributes it is similar to a man, with a person,

1 But this name (Penduduk, ‘Word of God’) is clearly borrowed, like Allah, from Muslim sources.

2 literally Skr. akṣara, ‘beneficent,’ an epithet of Siva.

3 Or ‘hidden.’

faries and very easily cheated; blood-sucking demons of various kinds, mostly birth-spirits (these last being certainly among the ghostliest conceptions of humanity); and others such as the hantu kopek, which is the equivalent of our own night-

5. Pagan races.—Except in one or two cases, little has been recorded concerning the beliefs of the pagan tribes relating to the spirits or demons. Those which most afflict the Sakai of Sul- Bertam are the ‘tiger-spirit,’ the ‘jungle-spirit,’ the ‘river- or water-spirit.’ Against these charms and simples can prevail. Against the tree-spirit, however, who slays his victims before any one can help, there is no protection. The Sakai of Selangor had a ceremony at which they sat and blew bamboo pipes and sang to the demons. The spirits in which the Besisi believe include the wind-demon (jin angin), who lives on a white rock near Tanjung Tuan (Cape Rachado); the demonic legion (jin sa-rau), which dwells in the earth and, when possible, feed upon human beings; and the rotting demon (jin sa-ropat), who lives in the uplands. Certain trees are the embodiment of spirits, notably the gasta, eagle wood, and bambobor trees, and this is why, as a law of nature, objects—e.g., canoes, treasure-jars, and stone implements. Chipping a jar kills its spirit.

The Malayan, to a certain extent, show a tendency to identify them with the spirits of the older Hindu religion, but only the Black King of the Geni (Sang Gala’ Raja) appears to rise on occasion to the level of the great divinities, when he is regarded as a manifes-

3. The soul.—(a) Malay. In Malay beliefs the sëmangat (‘human soul’) is a thin, unsubstantial mannikin, temporarily absent from the body in sleep, trance, or disease, and permanently departed after death. It is about the size of the thumb and invisible, but it is supposed to have a proportion, and complexion to its embodiment; it can fly quickly from place to place, and it is often, perhaps metaphorically, addressed as a bird. In mental attributes it is similar to a man, with a person,

1 But this name (Penduduk, ‘Word of God’) is clearly borrowed, like Allah, from Muslim sources.

2 literally Skr. akṣara, ‘beneficent,’ an epithet of Siva.

3 Or ‘hidden.’
the semangat is distinctly referred to as being sevenfold, and, as a similar multiple division is found among savages (PCS I. 351 f.), this may be taken as original, although seven is a somewhat favourite number in Malay magic.

The belief in the existence of semangat does not confine them to human beings. Animal, vegetable, and mineral kingdoms are clearly recognized. While in the case of animals the semangat is a counterpart, on a reduced scale, of its embodiment, in the vegetable and mineral kingdoms the tree semangat or the ore semangat is usually an animal, whereas the rice semangat is treated as resembling a human infant. The semangat of the eagletree wood, e.g., takes the form of a bird, the tin-ore semangat that of a buffalo, the gold-ore semangat that of a deer, and so forth. A box or a treasurejar may also have a semangat until chipped or broken, when the semangat escapes from it. An interesting variation has been said to occur on the east coast of the peninsula, where the semangat of a particular kind of boat is called by a special name. mayor, as opposed to the usual soul-name, semangat. But there is no trace of this form on the west coast or apparently in other parts of the peninsula.

This belief is no empty belief inoperative in daily life. It forms the basis of the Malay's mental attitude and practice in all dealings with the animal, vegetable, and mineral kingdoms.

Although Malay animism is consistent and complex in extolling the belief in the semangat to all nature, animate and inanimate, side by side with the purely animistic belief there is abundant evidence of a special Circum-like theory attributing animism to trees, birds, and connected with the (accursed) human origin. The elephant, tiger, bear, deer, crocodile, solid-crested hornbill, and stick-insect are examples. Evidence of such anthropomorphisms is found not only in the folklore but in many magical ceremonies and charms of Malayans (on the semangat see, further, INDIANS).

(b) Pagan races.—Of the conception of the semangat held by the pagan tribes very little is known, but it is known that their beliefs must be inferred from their methods of burial and treatment of the dead and their views of the after life.

According to the eastern Semang (Pangun of Kayan), each man was a semangat shaped exactly like himself, but 'red like blood' and 'no bigger than a grain of maize.' It was passed on by the mother to her child. After death the semangats of the wise proceed to a paradise in the west in which grow fruit-trees. To reach it they cross a bridge consisting of the trunk of a colossal tree. At the end of the bridge sits a hideous demon, and such of the Semang as are scared by him fall into a vast boiling lake beneath, in which they swim for three years until the Lord of the Paradise of Fruit-Trees lets down his great toe for them to clutch, and in this contemptuous fashion pulls them out. The old and wise men for this reason would often throw stones into the lake, the time could fly over the demon's head. The western Semang believed that only the medicine-men went to the Land of Fruit; the lay members of the tribe crossed the sea in the land of the seafarers and thatch-palms, wherein was the hole into which the sun fell at night. If they had committed any bad action, they started by the same road, but turned north to a land which had two moons of day and one moon of night.

1 See also W. W. Skeat, Malay Magic, London, 1900, pp. 59, 91, etc. It is surprising to find among Malays this sevenfold division of the semangat.

3 It is generally said that semangat proceed to a Hades (Nirvāna) where they are washed clean by one 'Granny Long-Breasts,' and made to walk across a rolling cauldron on the sharp edge of a chopper. Bad semangats fall in, good ones escape to an 'Island of Fruit,' where they wait until a friend comes to show them the way to the 'Hueks of the Goddess.'

The Mantari semangat is peculiarly positive faith in the continued existence of the semangat after death. It leaves the body and is carried by Bayang Laos either to Ngangani or to Fruit Island (Palau Budak), far away in the region of the region, where all semangat dwell in harmony, marry, and have children. Those who die a violent death go to Red Land (Tamah Merah), a desert place and barren, repairing thees the Fruit Island to get their nourishment. The Benus, on the other hand, believe that after death the semangat dissolves into nothingness again, having been fashioned from air by Firman. Notwithstanding this, they hold that the semangat of medicine-men, while their animal bodies remain behind, are conveyed or carried to heaven in music.

3. Animism.—Although it would in any case be justifiable to regard the attitude of the Malays towards the kérans, or holy place, as a survival from an earlier stage of religious belief on the analogy of similar ideas among more primitive peoples, there is, in addition, abundant evidence to support the view that not only Muhammadanism, but also the popular ideas traceable to the influence of Hinduism, are superimposed upon a form of religion in which animism was the predominant factor. A belief in spirits pervades the whole of the everyday life of the bulk of the people. The position and importance of the animals of the Malays with (pawang and honmor), the language of the innumerable charms recited on any and every conceivable occasion, and the ceremonies which accompany any and every action or undertaking—even in some cases the most trivial—tell in themselves point to this particular conclusion, even if we lacked the evidence supplied by the statements of the Malays themselves with regard to their object and meaning. Important proof of this connexion is furnished by statements that in certain cases the Malays believe that animal powers, such as those of the monkey or the tiger, are the spirits of human beings, and that the spirits of the dead are wont to assume the form of supernatural beings.
to one tribe of Sumatrans, the Korinchian Malays, of whom there are a number living in the peninsula. In one case a dead tiger was identified by his possessing a gold tooth derived from his human origin (see Lycanthropy). Both ghost-elephants and ghost-tigers are strongly believed in. They are represented as thin men with elephant-like feet, harmless, and are the tutelary spirits of certain regions of sacred localities. The most famous ghost-tigers of the peninsula dwelt on Mount Ophir (4000 ft.), near Malacca; in Selangor they were the two stories were connected. The princess is said by local report to have established herself on Mount Ophir at the time of the Portuguese invasion, and still visits the hill in Selangor, accompanied by a handsome tiger, though herself invisible. When a tiger was killed, a public reception was accorded to him in the nearest village, at which he was treated as a powerful war-chief or champion, and was entertained by an exhibition of dancing and fencing. Both claws and whiskers of the tiger are greatly valued as charms; the latter are sometimes tied with a man's moustache, to strike terror into his enemies, and the former is imitated in the tiger's claw knives worn on their fingers by the men who pretend to be wer-tigers.

Equally significant are the stories and beliefs connected with the monkey. One animal occupies the place of Brer Rabbit in Malay folklore; it figures in numbers belief sayings and romances, and is honoured by the title of Mentari Belakar, 'the Viser of the (secondary) Moon'. In the rain-making ceremony it is said to ask for fire wherewith to ' singe its mother-in-law's feathers' (a bird).

Hunting dogs are continually addressed as if they were human beings. It is, however, believed that it is the duty to keep them in the jungle, unless the person meeting them barks after the manner of a wild dog before they have time to do so. Cass, in addition to possessing supernaturnal powers (e.g., in the rain-making ceremony), are lucky because they went for their owners. The other hand, cat-killers, when in purgatory, will be required to cut and carry coco-nut logs to the number of hairs on the cat's body, wherefore cats are not eaten, but only set adrift on rafts to perish of hunger. The flesh of swine is now regarded as unclean by the modern (Muhammadan) Malay, but there are indications that this was not always the case; thus a wild pig's paunch is required in a Malay recipe for turning brass into gold; the wild pig, moreover, is hunted and eaten with avidity by the wild jungle tribes, as it is still the case in N. Borneo and other parts of the Malayan region. It may also be noted that the flesh of the buffalo is preferred to that of the ox, and the former is used, and not the latter, for sacrificial feasts—a fact which suggests an obscure survival of Hindu belief. The earth itself is supported on the horn of a gigantic wild buffalo.

The attitude of the Malays towards wild animals and their belief in their magical powers are further indicated by the fact that in hunting and trapping monkey and cat, it is self-imposed by magic, by special charms supplied by the medicine-man, and by formula to be repeated in setting the traps and snares or when actually engaged in hunting operations, either to ensure success or to serve as an appeal to the tutelary spirits of the elephant-wizard, the Malay deer-wizard himself must first enter the toils before a hunt begins, in order to influence the deer magically to enter the deer-anees. If this was omitted, the result would be that none of the deer, nor would the deer enter. The marks on the legs of the sambar deer (russ) are due to ulcers on the legs of their natural origin.

Fish and other invertebrates, like land animals, are regarded as having human or superhuman qualities, and, when catching them, the Malays have to perform ceremonies to overcome their spiritual nature and magical powers. The crocodile, e.g., is accorded to have lain like one who fell from his mother's arms into the water. The various species of fish also have their special origin; one kind is said to be originally a cat, another a monkey, another a human being drowned in the river, and so forth. The Norse myth of the rivers sprang from the teats of the cow Anuahuma is recalled by a Perak story of a large specimen of the mudfish called arvan. Many magical or semimagical beliefs cling round the crocodile. In many of the rivers certain crocodiles are regarded as the sacred embodiment of dead chiefs, and are free from molestation. When hunting these reptiles, the Malays repeat charms and take precautions to secure capture by symbolic actions such as striking the water with the cane-paddle or holding a toy crocodile's tail; or, when eating curry, by gulping down three lumps of rice successively in the way in which it is hoped the reptile will take the bait; or (by avoidance) by not eating the tail of curries for fear that the wooden cross-piece buried in the bait will fail to hold the crocodile.

An elaborate ceremony precedes and accompanies a fishing expedition. It includes noication by three loud cries to the wind-spirits that offerings, consisting of raffles, beefsteak, goat sacrificed for the purpose, cigarettes, etc., hung up on a tree in a sacrificial tray, and their acceptance, and the slaying of two similar trays, one in shallow water and one, containing the goat's head, at the seaward end of the fishing stakes. Miscellaneous offerings from a basket are scattered while the boat is rowed out to the stakes, and, when they are reached, saffron-coloured and parched rice is scattered on the water, while the neutralizing rice-paste ceremony is performed on the stakes and the boat. A number of tabus, such as seven days' refrain from sexual indulgence, the avoidance of bathing without a bathing-cloth, or of taking an umbrella into the fishing-boats, or of climbing the fishing-stakes with boots on, are strictly enforced. The use of a taboo language by the fishermen is also de rigueur.

Among the wild tribes similar beliefs are entertained, but in particular they look upon animals as the embodiment of their illustrious forefathers. The elephant, the largest and most important of the animals, is the one into which the sinangats of Semang chiefs are supposed to migrate. In consequence, it has euphemistic and propitiatory names. The same applies to the tiger. Monkeys, snakes, and birds play an important part in Semang mythology, while among insects the stick-insect is the most important. The list of animals to which the sinangats of chiefs are supposed by the Besial to migrate is extended beyond beasts of prey, including deer and pigs as well as tigers and crocodiles. Among the Mantri the tigers are the slaves of the wizard, or pungang, and are supposed to be immortal, while the Jakun believe that, if a tiger meets them in their path, it is a man who has sold himself to the evil spirit in order that in such a form he may wreak vengeance on his enemy or give play to his malignity. The amount of unmagical history associated with the sinangats is quite remarkable for a race whose jungle knowledge is so complete as it is among real up-country Malays. The case of the large eel which is believed to metamorphose into a squirrel is typical. (b) Birds—are ideas of elephants, wise or amiable, or anthropomorphic in character, are very generally associated with birds by the Malays. As a rule, nocturnal birds are ill-omened. If one species of owl alights near a house and hoots, it is said that...
there will soon be a 'tearing of cloth' for a shroud. If the Bòborek, a nocturnal bird which flies in flocks (a goat-sucker or night-jar), is heard, the peasant beware; a wood pigeon beats it with a knifeful and calls out, 'Great-grandfather, bring us their hearts,' in the hope of deluding the spirits into the belief that he forms one of the train of the Spectre Huntsman (hantu pénbura) which these birds accompany, and must therefore not be attacked by them.

The argus pleasant (kwan) is said in Perak to have been metamorphosed from a woman; the female, moreover, is believed to reproduce its kind by swallowing the male bird alive. In Selangor it is believed that a hornbill was transformed from the murderer of an old man, another variety (rhinoplaez) to have been a man who slew his own mother-in-law. The tok kotamoi (a variety of horned owl) is believed to enter the fowl-house and there live on the intestines of fowls, which it extracts during life by means of a charm. The luck-bird—a small white bird about the size of a canary—if caught and placed in a rice-hue, ensures a good harvest to its owner; a ground-deve, kept in a house, is a prophylactic against fire. If any one is fortunate enough to secure the nest of a kind of heron, or rat-tailed pigeon in forests upon him the power of invisibility. But the list of birds to which it has been recorded that the Malays attach peculiar ideas and significance may be said to be limited only by the varieties indigenous to the peninsular.

In following, as in hunting, sympathetic magic plays a prominent part, while every operation has its appropriate charm for repetition. In catching wild pigeons, constant reference is made to their simanguat, and the aid of three charms is required to perform the 'neutralizing rice-paste' ceremony in the space in front of the conical smarier's hut, enclosed for the purpose, which is known as King Solomon's Court-yard, or to recite a charm over the long bamboo decoy-tube or pigeon-call. During the operation great care is taken that no part of the smarier's paraphernalia is called by its proper name (which might be understood by the pigeon); everything is called by some euphemisms beginning with 'the Mother Prince' (for the name of the hut) and 'Prince Distraction' (instead of the word 'pigeon-call').

(c) Vegetation.—The Malay beliefs in relation to trees and other forms of vegetation follow to a great degree, if not entirely, their customs in relation to animals. It is not clear that they hold that all trees have a simanguat, but it is certain that some trees, such as the durian, the coco-nut-palm, the trees producing eagle-wood, camphor, and guutta-percha, and others are supposed to possess simanguats. This belief extends even to dead and seasoned wood, as is shown by the invocation addressed to the timbers used in the ceremony of launching a boat—a ceremony which is frequently represented in Malay romances as taking place (as formerly in Fiji) over human rollers. In earlier days the men used to try to frighten the durian groves into addressing them verbally. The medicine-man struck the trunk of an unfruitful tree seven times with a hatchet and threatened to fell it if it did not bear. The toddy collected from the coco-nut-palm, 'Thus I bend your neck and roll up your hair; and here is my ivory toddy-knife to help the washing of your face.' The maleca cane is regarded from the same animistic point of view, and it is believed that the smarier will protect the owner from harm by snakes and animals, as well as bring him good luck in everything. In Selangor the stick-insect is supposed to be the embodiment of the maleca cane-spirit. In selling a tudang tree

(apparently not a specific tree, but a generic term for all trees containing a bees' nest)—a matter in which great reluctance is shown—it is necessary to obtain the service of a special spirit who is supposed to be the demon by charms and incantations. In the course of the incantation the heads of two white fowls are cut off and the blood is sprinkled upon the tree-trunks. The line is another tree of which the spirit is the object of a special cult, and looked upon as their chief patron by the theatrical players of Penang. In searching for the diseased and perfumed wood known as ghariu, or eagle-wood, the smarier of a petjung are required to burn incense and repeat the appropriate charms. According to one account, the petjung uses a shelter near the selected tree (which is indicated by a low whispering or singing in the tree), and then repeats a charm which induces the ghariu-spirit to appear to him, generally in a dream, and to inform him of the kind of sacrifice required. When the tree has been felled, any one passing between the trunk and the stump will die immediately. The polished uses and carries with him to a piece of eagle-wood, the ghariu wodupa (or shaped eagle-wood), which possesses a natural resemblance to some animal or bird. This is believed to contain the simanguat of the eagle-wood and confers upon him the power to produce. Similar beliefs are entertained, and similar ritual is followed, in the collection of camphor and guutta-percha. It is interesting to note that in the collection of camphor a special language must be used, pantung kapar, which, so far as known, is Malay in part only. A portion of any food eaten during the search for camphor must be thrown into the jungle for the bian, or camphor-spirit. Many rules followed in planting the groves are based upon sympathetic magic and amulets. In the first place, the propitious season for each operation must be indicated by the petjung. Sugar-cane must be planted at noon; this makes it sweeter by drying up the juice and leaving the saccharine matter. Maize should be planted with a full stomach, a thick stick, and thick dibble; this will swell the maize ear. Plantains should be planted after the evening meal, as they fill out better in the night air. Sweet potatoes, etc., are planted with 'eyes' when they begin to sprout; should be set about when the night is starry. Of all agricultural pursuits, however, the cultivation of rice exhibits most completely the animistic ideas which form such an important part of Malay culture and customs.

At every stage of the procedure the men are taught to avoid the well-being and prosperity of the rice-soul, upon which the success of the cultivation depends.

The time of the sowing is determined by the petjung; prayers are read over a portion of the seed used at the mosque (replacing an earlier ceremony at the holy place, or kertidin); in sowing, the mother-seed is placed in a specially-prepared bed in one corner of the nursery-plot before the rest of the seed is scattered. When the rice is ready, it is transplanted with proper propitiatory ceremonies, and occasionally, may occasionally, occasion, three or four times, one accompanied by a ceremony—a sort of mock combat (tisulak)—to chase off evil spirits. When the rice is ready for reaping, in order to begin the harvest, the first operation is to take the simanguat out of all the plots and before cutting the rice it was usual to sprinkle it with the neutralizing rice-paste. From the spot where the rice is cut there is a path and where there are seven joints to the stalk, seven stems are clipped ceremonially to be simanguats of the rice-crop. Another handful is tied by the petjung in the centre with a strip of a special variety of sugar-cane, to be the mother of the rice-crop of the year following. This mother-plant is cut last, preferably by the wife of the owner. The simanguat was made into the shape of a small bud dressed in swaddling clothes, placed in a basket with a painted face, the sun, and held on a new sleeping-mat, with pillows at its head, in the house of the owner. For three days the house must observe certain tabus; e.g., rice, salt, oil, money, etc., must not be kept in the house, perfect quiet must be observed, hair must not be cut, and so forth. These tabus are generally identical with those imposed in the case of the birth of children. For three days after the taking of the simanguat the
mother-sheaf was treated as a young mother; &c., young shoots of trees were pounded and scattered over it every evening, and on the evening of the third day coco-nut pulp and goat-dung, mixed with sugar were eaten and a little ejected from the mouth on to the sheaf—an analogue of the Salem administered before entering the clean house. The person must kiss the stalks, saying: 'Come, come, soul of my child,' as if embracing one of her own infants. Ultimately the rice is ground (representing the child) and from the sheaf (representing the mother) are mixed and placed in the forest where the rice is stored, together with a wreath of the straw of the first ceremonial pounding of the padi. While the ears first pounded being those cut immediately after the taking of the harvest and mixed with next year's seed, and some is used to make the tepung tawar.  

From all that has been said it will be clear that the gist of the Malayan harvest ceremony consists in the attempt to simulate, on behalf of the vegetative rice-crop, a lucky birth as of a human infant, in the hopes that this mock-ceremony may simulate the productive powers of the rice-plant for the following harvest.

(d) Mining.—In the western States of the peninsula tin-mining was, and is still, the most important industry. Although mining is now carried on chiefly by Chinese, the ceremonies in use at the mining of a mine are purely Malayan. Formerly a lucrative and highly important past was that of mining wizard; some of those magicians were believed to possess the power of bringing ore to land, and it did exist, and of turning it into grains of sand, or of sterilizing, such ore as existed. The ore itself was regarded as endowed not only with vitality, but also with the power of functional increase. Sometimes it was said to resemble a baboon, and in this shape could travel to and fro underground. The gold-spirit in one case (at Raub in Pahang) was believed to take the form of a golden roc-tree—an idea obviously based on the imaginary shape of some large nugget. Beyond tin, gold, and possibly a little silver and galena, no metals are worked in the peninsula.

The natives, however, have a great reverence for iron. The Lump of Iron in the royal regalia, when placed in water, is the most solemn and binding oath known to those who use it, and it is referred to in the most terrible denunciations of the Malay wizard; a long iron nail guards the new-born child, and that of steel is frequent (also of iron) or a dagger protect a corpse from evil contact, and a Malay in the jungle often plants his knife-blade edgewise to the source in a stream before he drinks, in order to drive away any charm that might have been thrown around him. Bezoar-stones and stone implements alike are said to be endowed with magical properties and powers; a unique east-coast belief regards the latter as arising out of the ground, and not, as almost everywhere else in the world, as being hurled down from the sky in the form of thunderbolts.

The objects of the charms employed by the mining wizards seem to be to clear the jungle of evil spirits, to banish evil spirits from the ground before starting excavations, to propitiate the local spirits and induce the tin-ore to show itself when the tin-bearing stratum is reached, and to persuade the spirit to partake of a banquet spread for it in a receptacle intended to represent a royal hall of audience. The spiritual 'audience chamber' is usually two or three feet square and furnished with offerings similar to those normally placed before a mother. A woman, when entering the stratum, and immediately after the city of Sumatra. Another version of the Creation, in part ostensibly due to Muslim influence, describes how God, the eldest magician, pre-existing by himself, created the pillar of light from the four corners of the earth, and the world-a snake, Sakatimuna, which was killed by Gabriel and broke asunder, the head and fore part shooting up to heaven, the tail part penetrating downwards beneath the earth and devoured by a certain serpent (whose name suggests an Indian origin).

1 Lit. 'cube' (the cube-shaped sanctuary of the Black Stone at Mecca). For the Ra'is see Mecca.
is remarkably anthropomorphic; in fact, it is a serpent in little more than name.

It was usually believed that the world was of oval shape and revolves on its axis four times in the year, and that the body of fire moves round the earth and producing the alternations of day and night. Some at least imagined the firmament to consist of a perforated stone or rock, the stars being caused by the light which streams through the perforations. The earth is declared to be carried by a colossal buffalo on the tip of its horns—an obvious Malay parallel to the world-elephant in the Ramayana and the boar- incarnation of Vishnu. When the buffalo gets tired, the buffalo tosses up the earth and catches it on the other horn, the concussion thus produced being the cause of earthquakes. This buffalo stands on an island in the nether ocean, or on a giant tortoise (according to some versions), or on the monstrous fish called Nun (Arab. 'fish'). The universe is girt round by a huge serpent which feeds upon its own tail. Particularly Malay, on the other hand, is the idea of the tides, which, it is said, are caused by the motion of two other serpents that twice a day leaves and re-enters its cave at the foot of the world-tree Pauh Jiangi (the sea-coco-nut-palm), which grows on a sunken rock or quicksand on the Great Whirlpool of the Ocean (pseudotase). The sun's name in Malay is Mata-hari, which means 'eye of day,' but on the east coast it is held to be a horse which is conducted in procession through the heavens by angels during the day, and led back again at night-time to the point whence it started.

Eclipses of the sun and moon are considered to be due to the devouring of these bodies by the gigantic dragon (Rahu), or, according to some, a giant clam. The Chinese also invented other races, and race notions, to save the sun and moon by making a vigorous noise to drive away the destroyer. The spots on the moon represent an inverted banyan tree, under which sits a old huntsman, plaits strings of tree-bark, or, as some say, spinning cotton. As soon as his task is finished, he will angle for everything on the earth's surface. The line has not yet been completely developed by a rabbit, which, if it is at all present, is always watching. It should be added that the Malay phrase, bulan bulan pindadok ('the moon is great with the mouse-deer'), is doubtless explainable by the fact that in Sanskrit mythology the mouse-deer are thought to be a hare or antelope, which, being hard pressed by a hunter, appealed to the moon for protection and was taken up by her into her arms; the phrase is often used when she is three-quarters full.

Landslips in the hills during the rains, being often accompanied by floods, are said to be due to dragons breaking forth from the hills, where they have been doing penance, on their way to the sea. Rocks and waterfalls of unusual appearance are believed to owe their origin to demons. A rainbow, if only a small portion of the end is visible, betokens the death of a Raja, if it appears in the west. The treasure which lies where the foot of the rainbow touches the earth has never yet been found, as 'no one can ever arrive at the place' where it touches. The rainbow itself is often taken to be a snake and is sometimes said to be seen on the backs of the water-beasts. On the east coast it is sometimes said to be the head and entrails of a horse or a bullock which comes down to earth to drink. There is a house on the east coast of the peninsula in which a water-jar (tampayan) hails itself dry by a rainbow.

Sunset is a time of danger, since then all evil spirits have power, while the name applied to the yellow glow of the last rays of the sun (ramam), 'the yellow deity,' is a term associated with terror. In Perak children are called in at sunset to save them from this danger, and women often chew and spit out at seven points, as they walk round the house. The root of a plant, Ampelos tithos, an evil-smelling root much disliked by evil demons. Pulau Tiongan, an island south-east of Palang, is believed to be actually the body of a dragon, or naga. The Malay who told this to the present writer said that, on one occasion, when he was on a Government vessel passing this island, when her crew, catching sight of the then existing three points of the dragon's crest on the summit of the island, fired, breaking them off, and that the vessel itself sank afterwards. There are now said to be a number of people living on it, none of whom is allowed to make the least use of vinegar; if any vinegar is spilled, an earthquake follows, because the island is in reality the monstrous body of an enormous dragon.

(b) Pagan races.—The Semang endow both sun and moon with human form, both being female. Like the Japanese, who have been credited by some authorities with Malayan ancestry, they start the new year with a crew (Ag-Ag), whom they assert to be the husband of that luminary, whereas the husband of the moon is Tt Pomm (see above, p. 354). When the sun sets, it falls into a cavern, where some Semang identify its spirit with that of the Great Serpent. Eclipses are caused by a huge dragon, or serpent, which tries to swallow the luminaries; in the case of the moon, the Semang assert that the serpent is the moon's mother-in-law, who has assumed this form and is trying to embrace it. The explanation is clearly regarded by the Semang with loathing and abhorrence. The rainbow is a huge python, or serpent, and the spots where it touches the earth are wherever and hard to live near. The Semang say that the great shower of thunder and lightning the Semang draw a few drops of blood in a bamboo internode and throw it skywards. As the ghosts of wicked tribesmen fly up to the heavens, this is intended to propitiate them and persuade them to return. Sometimes, however, it is believed that the spirits go downwards and become water-spirits. In this case part of the blood is thrown towards the sky and part downwards (Pangan).

Thunderbolts are supposed to be hurled as the result of undue familiarity towards a mother-in-law. An unusual explanation of thunder and lightning from Kadah is that the latter phenomenon is the flashing of the female doctors and medicine men. The thunder is the hum of the toads themselves when revolving.

The Kadah Semang hold that heaven consists of three tiers or layers: the highest is filled with the fruit-trees which bear luxuriantly all the year round, and is inhabited by the greater personages of Semang mythology; the second also contains fruit-trees, but is defended against unauthorized pillagers by a gigantic baboon who pells any such would-be assailants with 'false durian-fruit' (the produce of a wild fruit-tree); the third has nothing but the low brooding clouds which bring sickness to humanity.

Of Sakai belief little that is typical has been recorded, such information as is available testifying to a close resemblance to Semang beliefs. Râ-hù (obviously the Indo-Malay Râh), a being resembling a dragon, round the sun and moon, but is driven away by the beating of drums and clappers. Kelang Belok, a world-sage, at one time destroyed all human beings except a boy and a girl. With a magic knife the boy slew the
eagle, and from this pair all mankind are descended. The Sakai are said to indulge in ceremonial exorcism of the spirits of thunder, and it is believed that the forces of nature assist the souls of certain evil spirits or demons, though the forces themselves are not demons. The earth is a thin crust resting on the nether ocean, and the heavens possess several layers, or tiers; the inhabitants of the uppermost are said to include a race who has to wash the six-blackened souls in hot water.

The Blandas of Selangor say that the earth was originally the shape of a flat long betel-box (sodok-sodok), the nether ocean had the form of a globular tobacco-box (lipok-klik), and the heavens round and arched like an umbrella. The Blandas' account of paradise resembles that of the Bésai. The latter hold that the souls of the good (or wise) pass away to the Island of Fruit-Trees, which they identify apparently with the moon, an eclipse being the work of a spirit that wishes to annihilate their spirit ancestors, the moon's inhabitants. This island of Fruit-Trees is reached by a bridge which serves as a bridge, and from which the wicked fall into a lake or boiling cauldron. This happens only to those who allow themselves to be frightened by a big dog which sits at the parting of the ways by which they have to go. Those who do not have access to the spirit of the tribe are reputed to be able to visit paradise and bring back fruit with them. Gaffer Engkoh dwells in the moon, which he reached by a ladder now broken, and protects from wild animals dead souls who visit the Island of Fruit-Trees.

The Mantri have not, to any extent, acquired Malay traditions as regards the form, character, and motion of the sun, moon, stars, etc. The dark spots in the moon they believe, however, to be a tree beneath which sits the shadow-man Moyang Bertang, an enemy of mankind, who is constantly making noises with which to catch them—a task which he is prevented from accomplishing by mice, who continually gnaw through the strings. Elephants are not allotted to harm the dragon, but to a devouring evil spirit. The sky is a great [inverted] copper pot, suspended over the earth by a string, and around its edge the earth is constantly swirling about it, while the stars stick to it. Women's children are said to be as many children as the moon, but, having been tricked by the latter into eating them, now pursue the moon, and, when he succeeds in biting her, causes an eclipse to happen. This explains why the moon hides her children by day.

In the beliefs of the Bena Jakun the world is globular in shape and enclosed in the sky. Farthest north and south are the extremities of a great beam, the north being twenty days' journey from Boko, where there was a great hill from which the north winds issued. The sun and moon move round the earth, producing darkness and light alternately.

10. Origin of man.—(a) Malay. What is now the Malay, or South-East Asian, race is the son of man from the four elements of earth, air, fire, and water, appears to be a Malayized version of the Muhammadan story. Adam was formed from the four elements by the angel Azael, not without strenuous opposition and the consent of the earth itself. A common feature of Malayan romances and legends, which also appears in Japanese folklore, is probably also presented in the story of the discovery of human beings in the interior of some vegetable product, as, e.g., in the story of a giant bamboo, which contained a fresh shoot that was cut down, and in which King Darassà, according to the story in Sri Rama (the Malay version of the Râmâyana), found the princess, or, again, in the tradition of the discovery of the ring of the ring of the ring of the river of the rice paddy.

(b) Pagan races.—The Semang story of the origin of the human race is that the first woman, seeing that all other animals had children, was desirous of having offspring of her own, but did not know how to obtain them. So her husband took to carrying a brace of fire-logs under their arms in a way of make-believe. But one day the coconut monkey (Bôo), on noticing what they were doing, gave them advice, as a result of which they had two children, two boys and two girls. These married and had children of their own, but the ring-dove (ôkôkor) warned the children of the first generation that they had united within the forbidden degrees, and advised them to separate and "marry other people," in which case their children might intermarry without impropriety.

Among the Mantri the story of their origin forms an incident in a greater story of the creation: the first man, Mërtang, the first medicine-man, and his younger brother, Bîo, who came from a place called Rûsing land (Tanah Bangun) in the sky and returned there after a sojourn on earth. They were the children of two women, Vûlul and Vûlul of the two tribes Sa-Tidik and Handful of Earth (Tanah Sâ-Képàl), the latter being their mother. Mërtang took his youngest sister to wife, and from them the Mantri are descended. Bîo married the other sister, but had no offspring. When Mërtang died, Bîo, being an alarming extant, Òé Entah (or 'Lord-knows-who'), the first batin, a son of Mërtang, drew his father's attention to the circumstance. Mërtang wished things to remain as they were, but Bîo suggested that they men ought rather to die, after the fashion of the banana, which itself expires, although its young scions survive. Thus it was decided, and so the old now die, although they leave their children behind them. According to another version, the Mantri are descended from two white apes (ungka putih) who sent their young ones down into the plains, whereupon they developed so rapidly that they and their descendants became men. Yet another version says that men came down from heaven in a ship built by God, which floated upon the waters of the earth. The story of the princess found in the bamboo also occurs among the Mantri.

Benau tradition says that a man and woman were created by Firman when he formed the world. When the Lulum mountains, the oldest land, rose out of the water, a ship of pulai wood, completely enclosed, in which the man and woman were contained, was left floating on the surface of the water. After the ship ceased to move, they nibbled their way out, and from this pair are descended. As the male child was born from the right leg and the female from the left, children of the same womb cannot marry. The Jakun say that God created a man and woman in heaven who came down to earth in the State of Johor.

11. Personality: the body and personal possessions. —Malays, in common with all peoples of a primitive civilization, have implicit faith in the magical possibilities of personality and of intimate personal possessions. This belief in the beliefs relating to the spiritual or magical powers of the Rajas, the theory of the king as the divine man being strongly held and consistently adhered to. It is alleged that the Malay king originally had the right of raising beings in the interior of some vegetable product, as, e.g., in the story of a giant bamboo, which contained...
without being guilty of a crime and without any indemnity being asked him. Not only is his body sacred, but that sanctity extends to the royal regalia, which no one may touch, or even make models of, without incurring the risk of a grave illness, possibly even death itself. Any one who inadvertently pollutes the royal person, or wrongfully makes use of the royal insignia or privileges will be struck down by the divine (quasi-electric) discharge of the royal sanctity (daoulat). In the Malay Romance the kings are credited with all the attributes of inferior gods; they are usually invulnerable and gifted with miraculous powers, such as that of transforming themselves, returning to life, and resuscitating the lives of others. As a divine man the Malay king possesses a number of prerogatives which enter into almost every act of life and effectually set him apart from ordinary men. One of these is the sole use of white for the royal umbrella, and the use of yellow cloth (the white umbrella, once the royal emblem throughout Indo-China, has now been abandoned for yellow). Linguistic tabus are also employed with reference to the king, such words as santap, 'to eat'; beriu, 'to sleep'; gering, 'to be'; substitute for the usual Malay words when reference is made to the royal person. At the Malay king's death his name is dropped and he is called Marlum, the deceased, with the addition of a phrase descriptive of some prominent, and often uncomplimentary or grotesque, event of his lifetime. One of the most important and significant beliefs connected with the king is that which attributes to him a personal influence over the works of nature, such as the growth of the crops and the bearing of fruit-trees. This also, in a minor measure, applies to his delegates, and in modern times even has been extended to European officials employed in the government of the country.

The king is said to possess a magical property upon which the regal sanctity is based. It is a quality of the ordinary individual, though usually inversely in the sense that it is susceptible to evil influence, and, in the case of parts of the body, capable of coming to grief even to the owner. The head is still, to some extent, regarded as sacrosanct. In cases of assault greater penalty is exacted for an injury to the head than for that to any other part of the person. The hair is carefully supplied to be employed in cutting the hair; sometimes it is never shorn; more often it is not cut during a special period—e.g., after the birth of a child. Often a boy's head is shaved after birth with the exception of one lock in the centre of the head, which is allowed to grow until he begins to grow up, or even, in consequence of some parental vow, until he attains the period of puberty or marriage. These customs may be due to the sanctity of the head, or possibly to the idea that magic may be brought to bear upon the former owner of the hair by means of that which has been cut off. For this reason both hair-clipings and nail-parings are carefully disposed of, while they are invariably mentioned as part of the ingredients of the well-known wax mannikin still believed to be most effective in bringing about the illness or death of an enemy. To the same category belongs the practice of kneading up with the substance an image of a mannikin the eyebrows or other hairs of the intended victim, or soil taken from his footprint.

12. Holy places.—Notwithstanding the existence of the mosque as the centre of religious life, there is a strong element of belief in the efficacy of holy places (kérmat), at which vows are paid on special occasions. Such spots are invested with a high degree of sanctity. In theory they are the burial-places of holy men, the early apostles of the Muhammadan faith, or the first founders of the village, and persons of local celebrity; but, as a matter of fact, in many if not in most cases, they belong to an earlier state of belief than such an origin would imply. Many of these kérmat are not graves at all, but fall into the category of those holy places which the Malas themselves, when asked to interpret them, explain as being 'spirit places' (kérmat jin). For instance, the kérmat of Nakhooda ( 'shipmaster') Usain on Bukit Nyalas, near the Johol frontier, consists of rocks exhibiting no sign of any kind of burial. This (orthodox) jin presides over rain and streams and all kinds of water. Incense is burned here to prevent floods and to get sufficient water for irrigation. It is probable that the name is a later accretion and the rite a relic of the worship of the spirit of streams of water. In another place the kérmat is a tree with a protruberance on the trunk. This swelling is closely connected with the harvest; it increases in good years and in bad decreases.

In Klang there is a famous wishing-rock, called Bata Tre, to which the Mantri have resorted from time immemorial. A similar rock is situated on the top of Gunong Berembun ('Benign Mountain'), while other mountain summits also have similar wishing-places, each possessing its good spirit. The supplicant who visits these places carries with him a couple of white fowls and samples of various articles of food in a tray, which is left on a tree or placed on the highest peak of the summit. After his wishes have been silently addressed to the spirit of the mountain, the petitioner sets a meal prepared on the spot for the purpose.

13. Rites: prayer and sacrifice.—In the case of both prayer and sacrifice, the Malay standpoint is entirely materialistic. The prayer is invariably a request for material advantage; its efficacy is increased by repetition. Sacrifice, as is shown by the language of the charm, is, or was originally, regarded as a simple gift. There is evidence, however, of the progression from this point of view to that of homage, and, finally, to that of self-abnegation. The spirit or deity is invited to eat or drink of the offerings placed before him. An intermediate stage between the gift and the idea of homage is marked by the use of substitutes and a sacrifice of parts for the whole. For instance, in the instruction of the magician, 'if the deity demands a human sacrifice, a cock may be substituted'—a statement which points, moreover, to the former prevalence of human sacrifices. In one case a more explicit declaration was made to the present writer, who was told that for a man a buffalo could be substituted, for a buffalo a goat, for a goat a cock, for a cock an egg—a fact which explains the frequent use of an egg in Malay sacrifices. The idea of abnegation among the Malas appears to be confined to votal ceremonies or vows in which the votary's offering is not regulated by cash. All ceremonies ('His Glenn Farg'), understanding that he will sacrifice something of value to himself.

The chief rites performed on various occasions, to which reference is made below in connection with special beliefs, are: (a) prayer, performed at
shrines; (b) the rite of burning the incense; (c) the scattering of the sacrificial rice; and (d) the application of the neutralizing rice-paste.

The purification of the rice performed at shrines are the burning of incense, the offering of nasi kunyit (yellow-stained rice), and the killing of be-gods. The worshipers partake of the congee and, in some cases at least, of the yellow rice, while the white (‘soul’) cloth, five cubits in length, one for each of the river arms, or ‘arms’ of the mosque attendant (tutiak), though formerly it doubtless went to the puaqang.

(6) The burning of Incense is the commonest form of burnt sacrifices. An invocation is sometimes addressed to the spirit of the incense, urging it to pervade the skies and enter the nostrils of the god. Omens are drawn from the way in which the smoke rises.

(7) The scattering of the sacrificial rice is performed with four varieties of rice-grain (parched, washed, sulfonstained, and a special kind called ‘glorious rice’, or palaqang). The parched rice is generally used for scattering on the sacrificial tray after the basilisks have bitten on the ridge of the intended victim, the pagan cutting the rice with an iron knife. The rice is then thrown on the sky or over the huts of the village.

(8) Lustration is accomplished by fire or water. Of the former there is the ceremonial burning of the genitals of infants and the roasting of the mother after childbirth. One of the functions of lustration by water is an integral portion of a large class of ceremonies connected with bathing, fishing, agriculture, marriage, etc. It is called ompang sauvar, or ‘neutralizing rice wind’ (river). It consists in the application, by dabbing, painting, or sprinkling of a wash of water made of the rice used when burning offerings to the ancestors, the brush is made of boughs of five, seven, or nine leaves, and the rice is (a) planted on the floor, or (b) tied in strings of five, seven, or nine grains, or (c) burnt. The materials and combinations vary, of course, with the occasion and character of the ceremony, and in the last case as the embodiment, blessing the fishing-stakes, or for taking the rice-soul). Short rhythmic charms were often used to accompany the rites, but were not repeated audibly.

Developments of the idea of lustration by water are to be found in the curing of the mother and child after birth and the washing of the floor on similar occasions, the ablation of the sick, the bride and groom, and of corpses, and also annual bathing ceremonies which purify the bathers and protect them from evil. Fasting in the form of religious penalties is now seldom practiced, but in former days to be undertaken to secure a state of expiation, to induce visions, or to acquire supernatural powers. The fast always took place in a solitary place, and the fasting person was usually clothed in white, as the royal colour, and he might, like the king himself, enforce the ceremonial use and disuse of certain words and phrases. Probably both offices are held to be dangerous. Other powers and attributes of the medicine-man who may be mentioned are his ability to act as a spirit-medium and to give oracles in trances, and his practice of austerities and observation of chastity for the sake of his use of mesmerism is not yet recorded, but motor automatism is frequently observed. Although the office of the medicine-man is hereditary, the power may be acquired by certain recognized methods. One of these is to raise and meet face to face the ghost of a recently buried person, or the soul of an infant, by means of incantations and formigations performed at the grave-side.

The Malayas themselves make some distinctions between the puaqang and the bomor, the latter being the medicine-man who is concerned especially with the curing of diseases. The two terms are, however, sometimes used as if they were interchangeable. The basic principles of the medical man’s art are identical with those of the puaqang; they depend upon a belief in spirits, and the aim of his treatment is either to propitiate or to overcome their influence.

The bomor’s procedure in dealing with disease falls under two clearly distinguished headings. First comes the ceremonial incitation and instigation of the spirit when the character of the therapeutic treatment is determined by divination, by means of omens from the smoke of burning incense, by the position of coins thrown in a water-jar, or by the aspect of parched rice floating on the water’s surface.

The therapeutic rites are various in character:

1. Propitiatory ceremonies, the most popular of which is the use of the sacrificial tray called anahak, a small frame of bamboo or wood decorated with a fish, and the rice-leaves mentioned, on which offerings of food are laid for the spirits to eat when they has been hung in a suitable spot outside the house.
As an alternative method models of certain objects are placed upon the body of the sick person, or the spirits are invited to enter them, and then the tray is then got rid of by being hung up in the jungle or set adrift on the sea or nearest river.

The Balinese rite of counter-charms to neutralise the active principle of poisons, extended by the medicine man in most cases where any evil principle (even a familiar spirit) is believed to have entered a sick person's body. The ceremony of applying such charms usually consists in making use of certain powdered herbs or cal of water and drinking it after reciting the incantation.

Some of the charms intended to expel from the patient's body all kinds of evil influences or principles, such may have entered him on touching a dead animal or bird, or being improperly handled, etc. This is known as 'Wild Huntman.' The evil principle is known as bodi atarny to everything that has life, including inert objects such as trees, and even stones and minerals, which, in the Malay view, are animistic. Of these evil principles or 'mischiefs' there are one hundred and ninety, or, counting to seven, one hundred and ninety-three. To 'cast out the mischief,' the patient is smoked down with a brush (made of certain prescribed leaves and plant-sprays) which has been dipped in water in which woods have been grated or pieces of scrap-iron allowed to soak, or else he is rubbed with limes, appropriate charms being recited in either case. In another form of the ceremony the 'mischiefs' are driven from the body along a red thread, which the patient holds in his hand, until it reaches the neck of the patient. According to popular belief, they may also be expelled by a long and elaborate ceremony in which a protective spirit, such as the tiger, or elephant, comes to the assistance of the spirit, setting upon the medicine-man, who, while in a state of possession, simulates the movements of the animal spirit summoned, enabling him to mobilise the superior spiritual powers.

(a) **Recovery ceremonies**—cere monies to recall the sick person's soul. In these the dead is rolled into a human figure, which is laid upon five cubes of cloth. Rice is scattered, incense burned, and a charm recited to induce the deity to enter the body and be transferred thence to the soul-cloth, and thence to the patient. Similar ceremonies are also to prevent the sémangat of a swooning person from escaping.

(b) **Pagan rites.**—the bélam (shaman, or medicine-man) is the most important member of the tribe. The Beni Béru separated in the case of the chiefs or head-men are always bélams of more or less reputation. They obey certain prohibitions which do not affect ordinary members of the tribe; they may not eat the flesh of domestic animals, like pigs, fowls, or goats, and are of donkeys and fowls but rarely. They receive a special form of burial, traditionally regarded as specially honorable, consisting of a rude shelter built in a tree, in which are placed a medicum of food and water, a jumkayf, etc. It is believed that they are able to proceed to paradise in trances and to drive out devils. They alone know the love-charms that never fail, and can slay men by 'sendings' at a distance, and are the only ones who can give a person the power to change themselves into werewolves, and at their death their sémangat passes into the body of an elephant, tiger, or rhinoceros. When the latter dies, they proceed to paradise.

Not merely are diseases caused by demons, but they are exorcised as such. They are abstracted sympathetically from the body by pulling up sapling stumps at near the place where the disease is believed to have entered the patient. The affected part is rubbed with earth taken from the hole in which the root grew; chewed betel is ejected on the body (in imitation of the Malay medicine-man, and the hurling of dead saplings into the wood, so that the evil spirit may escape in the form of the tree's bark. 'Sendings' are performed by a minute dart or splinter of bamboo about two inches long, which is laid on the right palm and is ordered to go through the patient's heart, and then forth to the demon. This dart or splinter flies through the air and, reaching the victim, pierces his heart and kills him. Sometimes a taper formed of wax from a deserted bees' comb is burned at the same time. Such 'sendings' were said by the Semang to be effective at 'a distance of probably two miles.'

The Mantri believe that all diseases are caused either by the spells of bad men or by spirits.

Among the latter are the smallpox demon, which the Mantri avoid even mentioning by name; the droplenic demon (kántu kémbong), which haunts the abodes of men and afflicts them with pains in the stomach and head; the Demon Huntsman (the kántu si buru of Malayan origin), who dwells in lakes or pools, is black, and has three dogs which he will cause to chase a man in the forest; if they catch him, they will drink his blood and that of his substance; they will then stream, in the ground, in trees, and in caves, and crevices of rocks, dwell malignant demons who cause disease or mischief to men in various ways, as by sucking their blood and their causing their death. When a person is wounded, the kántu pari fastens on the lesion and causes the blood to flow by sucking. The Berembun tribes believe that diseases are inflicted by the spirits of the rivers (kántu sungen), which are evil and feed on the human sémangat.

The Mantri magician's most noted form of 'sending' is the fijyu, or pointing ceremony, which is achieved by the use of wax from an abandoned bees' nest.

When a wind blows in the direction of the victim, the magician takes a vessel of water and a lighted candle or two, and arranges an incision where the wind is supposed to be. Then when he discerns the image of his intended victim in the water, he throws the wax into the air and the wind will carry it to his victim. The latter feels as if struck by some unseen agent, and is immediately seized by sickness, which may result in death, should the strength of the spell be great enough.

This attack may be averted if the victim has surrounded himself by counter-spells or charms of a prophylactic character or has set up a way off the blow, but may even prevent the magician from seeing the image of the victim in the water. Amulets are much used as prophylactics against those diseases which are most frequently attributed to 'sendings,' but which may also be due to unsatisfied cravings (abhít pánum).

Among the Bena Jakun the magicians are an order combining the offices of priest, physician, and sorcerer. They and the Belel medicine-men are much dreaded by the Malays, who believe them (as autochthones) to be more powerful than their own magicians, especially, e.g., in matters in which the performance of the Beni bérpan ceremony is likely to be effective. Not only can the medicine-men cure, but they can inflict disease and death-sickness. This is usually effected by the 'pointing,' or fijyu, ceremony. Every tiger is subject to the pointed. They alone are allowed to perform the ceremony. Any magician of repute is believed to have one in constant attendance. In curing disease, incantations are accompanied by the music of the gélondong, a long bamboo stick by sticks, which are always made of wood of the mermuu tree. Conjurations are addressed to Jiwa-jiwa (=Mal. Skr. déva), who resides in heaven and alone can approach Firman. The incantations last all night for one, two, three, or four nights, until the medicine-man announces that he has received the medicine or that the deity is inexorable. The Berembun tribes, like the Malays, attribute the magician's powers to his command over spirits. Every shaman has disciples, who accompany him when at the point. These pupils alone enter the small hut of leaves erected near the house in which the medicine-man performs his incantations, these being continued until the wizard is possessed by the spirit. The latter then answers the medicine-man's questions respecting the mode of treating the diseased person."
A ceremony of exorcism known as sōi, or, more commonly, an sawi, is employed by the Béisil in case of illness or when an answer is required to a question concerning the welfare of an individual.

The ceremony takes place in a hut in complete darkness. After initiations accompanied by the rhythmic drumming of bamboo sticks, a man, who has been selected, usually descends upon one member of the company, who answers any questions put to him while he is in a state of possession. In the case of illness the magician erects a small leaf-chamber or cell (bali bandom) near the walls of the hut, in which he keeps a number of leaves. The Blandas employ spells and exorcisms to cast out disease and evil spirits. Spirits of tigers, elephants, and monkeys are summoned to enter the magician's body, and the sick man is then brushed with leaves seven times downwards from head to foot while a charm is repeated. In the blood-throwing charm water is used, and a charm against the Wild Huntsman is also recited.

15. Birth ceremonies and beliefs. — (a) Malay.

There are four spirits, or, rather, demons, which are specially feared by the Malays in relation to child-birth. The b小孩, a demon which appears in the form of a civet-cat, is evoked by incantation over the grave of a still-born child. It may, however, be inherited, and its possessors can send its emanations in the form of clouds or missiles to an enemy. It is especially inimical to children, who are sometimes made to wear a black silk string armlet as a protection against its attacks. The tancub, a demon who has died in child-birth, becomes a flying demon, or banneru, who, through a hole in the back of her neck, sucks the blood of children. It is believed that these demons have on occasion become wives and mothers, but, when allowed toرار at villages merrymaking, they will assume their original form and fly off again into the forest. The pontianak is the still-born daughter of a langur. As a precaution intended to prevent the dead mother or still-born child from originating these mischiefs, the langur and pontianak are buried with glass beads in the mouth (to prevent them from shrieking), an egg under each armpit (to prevent them from waving their arms in flight), and needles thrust into their nostrils (to prevent them from opening and shutting their hands in flying). The pontianak appears under the form of a species of night-owl. The pinanggalam, a colossal flying head with hair made of roots, and the amblang, who, it is believed, lives in the armpits of women, are vampires or banneru that sucks the blood of children, sits on the roof-tree, or endeavours to force its way through the floor, whenever a child is born, to attack the infant. In addition to these four spirits specifically connected with child-birth, there are the familiar two, called polong and pelais, which also give rise to anxiety at this time, though they do not confine their activities to new-born children. The polong originates from the blood of a murdered man which has been placed in a bottle and over which certain incantations have been recited. It is described as a diminutive female figure about as large as the top joint of the little finger, and is usually presented as the pelais, which in the form of a cricket, searches for a victim and enters his body, when found, tail foremost. The pelais is obtained by exhuming the body of a first-born child, a first-born mother's offensive garment, fish caught in a river, or the sould of a victim by an owner, and, as such, are sharply distinguished from the more primitive animistic ideas relating to disease, etc., which are held by the Béisil.

In regard to the observations at after child-birth, it is usual to engage the medium (bésil) to make the sick person take a bottle containing four or five areca-nuts, three or four packets of betel-leaf, tobacco, and so forth, all of which the bésil distributes and then sends to the owner of the bottle to use for the purpose of taking the cemers. The medium then recites some of the charms and assuages the child's horror, and so long as the number of leaves she chooses the luckiest place in the house for the child to be born, by dropping an adze-blade, point downwards, first in one place and then in another, until the floor, the stone, or the ground (under the usual Malay pile-dwelling). Beneath this spot, under the rafters, a small bunch of prickly screw-fruit leaves, the 'acid' egg-plant, or brinjul, and a black juniper (rattan stand for a cooking-pot) as a snare for and protection against any misfortune. The mother is believed, prick herself with the former and catch his head in the latter as soon as she is born). Demons must be kept away from the child by the fowls. A tray covered with husked uncooked rice and two mutes with several thicknesses of saree between are prepared for the child's reception. As soon as the new-born infant is laid upon this, it is formally adopted by the father, who (nowadays) breathes into its ear a Muhammadan formula. Mother and child are purified by bathing in warm water containing various kinds of leaves, with areca palm-blossoms. The child is then swaddled. Mother and child are next marked, especially the latter, as a precaution against convulsions and straining, and also, in the case of both, by way of protection against evil spirits. For this ceremony chips of wood from the thin end of the threshold, from the house-ladder, or from the house furniture, in combination with a coat of garlic, a coat of an onion, an aspic, a rattan pot-stand, and fibre taken from the monkey-face of an unfertilised cocoa-nut, are collected and burned, and the ashes are mixed with a little betel-water. When the betel-water has cooled, the charm is repeated, and, the forefinger having been dipped in the mixture, the centre of the child's forehead is scored by a boy, with an arrow-shaped mark; if a girl, with a cross, and also with dents on nose, cheeks, chin, and shoulders. The mother is marked with a line from breast to breast and on the end of the nose also. The evil one will then, it is thought, take woman and child to be his own (who are supposed to be similarly marked) and remain with them. Inasmuch as if the child is a girl, the eyebrows are shaved, and a curve is drawn in their place, extending from one side to the other on the ear. If the head is considered to be 'too long' (the Malay being on the whole a round-headed race), a yam-leaf cap is made to compress it.

Other ceremonies affecting the child are the administration of the 'mouth-openet,' the rite of giving the first drink from half a green coconut, followed by the laying of a gold and a silver and an amalagam ring on its lips, and by fumigating it before it is laid for the first time in the swing-cot, which takes the place of the Malayan cradle. The cot is protected by a funnel-shaped bunch of leaves of the brinjul and other materials, including the rendering of the charm and the use of the umbilical cord, a spice-block, and a trap against blood-sucking demons, made of a parang-blade, a coconot scraper, and a rattan pot-stand. This trap hangs under the bunch of leaves. The spice-block is explained as a substitute for the child itself; it is laid in the cot during the first part of the fumigation ceremony, and for the first seven days, whenever the child is taken from the cot, the block must replace it. The naming ceremony takes place usually within the first week, and the first head-shaving and nail-cutting a few days later. Of the naming ceremonies the most characteristic is represented by the east-coast practice of writing seven different names on as many separate banana-fruits, and then allowing the infant to choose between them.

The most characteristic Malay custom connected with child-birth is that which requires the mother to eat the roasting of the roasting the roasting (salak soltan) daily. A rough cough is prepared for her on a small platform, beneath which a large fire is lighted, and upon this bed she has to recline two or three times a day, and to remain there for an hour or two together less than forty days, and burying the child's tongue, with incantations, in a spot where three cross-roads meet. It has been noticed that these demons belong to the category of familiar spirits who are sent against the evil by the victim by the owner, and, as such, are sharply distinguished from the more primitive animistic ideas relating to disease, etc., which are held by the Bómer.
368 MALAY PENINSULA

and scratched over by the claws of a fowl held tightly in the grasp of the cleanser. At about the same period, of the forty-first day the child (in Perak) is presented to the river-spirits, being made to stand with one foot on a couple of coco-nuts and the other on a fowl (both of which have been deposited in the water). A boy then, if the infant is a boy, places the cocooned fish in the mouth of the clay idol and, if it is a girl, the cocooned fish in the mouth of a fish idol. The clay idol, if a girl, a girl acts as the fisher. In Upper Perak the baby himself, with a number of other young children, is caught in the net; he will then eat fish for the first time.1

During the forty-four days' period there are many food prohibitions—e.g., any foods which, from the Malay point of view, are lowering, such as certain vegetable foods, things which irritate the skin or cause faintness, sugar (except coco-nut sugar), coco-nuts themselves, and chillies are prohibited.

Both before and after child-birth many prohibitions are laid not only on the wife, but also on her husband. The latter may not shave his head or cut his hair until after the child's birth; he may not sit in or obstruct the doorway. Any un- towards act may cause deformity: a child was born with only a thumb, forefinger, and little finger on one hand, the thumb having been cut off, just previously to the child's birth, killed a crab with a cutlass. In fact, it was at one time prohibited for him to cut the throat of a buffalo or a fowl preparatory to cooking it, or even to take any life whatever during or for thirty days after the birth, by or distorted in growth by, a parasite, if used in building the house, would cause deformity, protract delivery, and endanger the life of both mother and infant.

(b) Pagan races.—Superstitions and practices connected with birth among the pagan tribes, or, rather, among these pagan tribes for whom Malayans origin and affinities are here claimed, strongly confirm the view that the popular beliefs of these more highly civilized natives of the peninsula are essentially primitive in character. The practice of roasting the mother, e.g., is found among the Semang, Bésaí, and Mantri, while among the Hlandas the practice of birth is as at least against the demons, the longuis (Malay langsurui), polong, and pontianaks—identical, at least in name, with those of the Malays. Another incantation is repeated at the moment of removing the caul as a charm against evil demons. The head-dress of the mother is bunched up in the back of the sufferer. The Sakai bury the umbilicus and placenta under human habitations so that the rain may not beat upon them and turn them into birth-demons. It must be stated, however, that our knowledge of the birth customs of the pagan tribes is by no means adequate, and the whole subject awaits further investigation. In one account of the Semang, for instance, it was alleged that their birth customs were based upon a belief in a bird-soul which was carried by the expectant mother in a bamboo receptacle; but, although the conception of the semangut, or birthing bird, is said to be familiar to the Malayan, this statement still awaits confirmation among the wild tribesmen. Both Sakai and Jakun make use of the services of a sage-femme, who, among the former, has a special hut used by the women of the tribe for purposes of confinement. The act of decorating the mother's mosquito-curtains with the leaf-hangings used on all important ceremonial occasions, while among the Mantri a cup of water is charmed during labour and administered to the mother. The act of certain leaved herbs to the child, and a charm is repeated. A name, which is retained until marriage, is given to the child at the moment when the umbilical cord is severed. The Benua Jakun fastened round the neck of the child at birth a string to which pieces of small буты, were attached. The Jakun also observed a number of food prohibitions: while the children were unable to walk, the parents abstained from certain fish and animal foods, the latter including fowls and eggs, deer of all kinds, etc.; and during this first month the children were not given fish to eat.2

16. Adolescence and maturity customs.—(a) Malay.—Of the purely Malay ceremonies at adolescence the most important are the filing of the teeth and the cutting of the first locks of hair—the latter, of course, only when, owing to some want of attention of the parents, the 'first head-shaving' operation has been postponed until marriage.

Tooth-filing is done by a professional tooth-wielder (gusan giri). Neutralizing the hair is done by the boy who, while an unskilled performer may cause much pain to the patient if he does not know thoroughly how to 'neutralize' the evil.

The rings of precious metal which are pressed against the patient's teeth as part of the rite of exteriority are used in the hair-cutting ceremony. The bride's hair is arranged in seven long tresses before either having done by the barber, which, on this occasion, shaves her head; to each of these is attached a ring of precious metal, and then each tress of hair, on being cut, is allowed to fall to the ground. The falling of hair is then symbolized by a coco-nut vessel (ornamented for the purpose with a charron edge), which is half full of fresh coco-nut milk. For this ceremony also the proceedings are opened by the aspersions of the bride with the neutralizing rice-water, some of it being also sprinkled on the palm of her left hand, by those who take part in the ceremony.

The ear-boring ceremony appears to have fallen into abeyance, though in some of the Malay States a special kind of large ear-rings, called krida or, ear-stud, is still the mark of virginity. Significantly, the ear-studs of a virgin bride are tied on to the ear-lobes of a widow who remarries, the latter being regarded, so to speak, as a sort of 'merry widow,' and being clan-fast, actually called jeeringly 'the widow adored' (janda bér-hiués). Ear-boring is now usually performed when the child is quite an infant.

Circumcision is practised, the instrument being traditionally a knife of bamboo, but in all the more necessary of the practices it seems to be entirely a non-Musulman rite. Especially in the Northern States it is accompanied by such a wealth of irrelevant ritual as to make it appear as if it had been grafted upon an ancient festival (probably the tonsure ceremony) belonging to an older faith than that of Islam.3

It is performed by the usual purificatory rites, and the ceremony is made the occasion for a banquet, at which the boy is dressed like a pilgrim and stained with henna like a bridegroom, after which the customary gifts are offered. In Perak he is then taken saile and robed in rich raiment, his mouth filled with the sacrificial saffron-stained rice, and his body sprinkled with the purifying rice-dust. After this, two coco-

3 Ib. p. 19.
which means literally 'admission into the body of the Malay people'—the most usual meaning of *jawat* being the vernacular, or 'Malay', language. Yet another term for the ceremony in these parts was 'purification' (*chukhi tābhok, literally 'cleansing of the person')—a phrase which is also applied in the same parts of the country to marriage.

(6) Togga rucek. Of the various operations with which it is usual among primitive peoples to mark the attainment of maturity, neither initiation nor circumcision is practised by the wild tribes except in the case of the former, among the Sektong and Jakun of the Batu Pahat in Johore and the Benua, and, in the case of the latter, as elsewhere, only where Muhammadan influence has penetrated. It may, in fact, be said that the rite is virtually synonymous with conversion to Islam, and that it may be taken as the broad dividing-line between Muhammadanism and mere pagandom. Nor, with the exception of a single record from the Perak Sakai, is there any hint in the strict sense of the expression. Siffication, however, is found among both Semang and Sakai, but not among the Jakun, and, judging both from distribution and from frequency, there is good reason to believe that the custom originated among the Semang, and was introduced, though only to a limited degree, among the Jakun. The siffication consists of divergent lines on the cheek from the nose towards the ear, produced by the scratches of a thorn or edge of a sugar-cane leaf, charcoal being rubbed along these scratches by way of payment. Body-painting is of wider distribution, and is to be seen among Semang, Sakai, and Jakun, but more especially among the Sakai. The colours used are black, white, red, and occasionally yellow. These are decorative and magical rather than tribal. Perforation of the nasal septum with the wearing of a nose-bar or porcupine's quill also appears to be more especially a Sakai practice. Boring the ears, however, is, as a ceremony, practically universal, and is probably of Indo-Malay origin. The frequent filing and blackening of the teeth may belong rather to the Malay or order of ideas. It occurs among the Semang of Kedah and Kelantan, but is doubtfully borrowed from the Malays of the neighbouring country.

The shaving of the head, with the exception of the top-knot, which is temporarily removed at puberty, is found among the Semang, but, though also found among those of the Malay, is more likely a native custom of the wild Negritos, as it is also found among their Andamanese kindred.

17. Betrothal and marriage. (a) Malay. Negotiations for marriage and the ceremony of betrothal are carried out by representatives of the families implicated. The betrothal is a simple affair, consisting chiefly of the offering of betel-leaf by the representatives of the prospective bridegroom and its acceptance by the bride's parents, the two parties meeting in a 'family circle', at which the offer used originally to be made, and the reply given, in rhythmic stanzas. The term of the engagement is then settled. The amount of the settlement at present custom at two *dharas* of dollars ($22, about £2. 6s.) in Selangor, or $31. 25 (about £3. 6s.) in Perak, etc. The sum is not usually mentioned unless a modification of the engagement is to be made. A breach on the part of the bride's parents involves forfeiture of double the marriage portion. The aflained pair avoid one another, but there is a regular system of exchange of presents, those given by the girl being deposited in the house of the betrothed, and returned by her companions, who also provide two *piles* and a barking dog. The present is in the case of the bride in the shape of birds or fishes. It should be added that the Malay name of the ceremony in the peninsula, *bē בי* a, is an interesting parallel to the splitting of the betel-nut (pinang), which is the symbolical act of betrothal to this day among the Dayaks of Borneo.

The actual marriage ceremonies cover a period of four days, beginning with the betrothal, and extending over two settings of the dais with two standard candelsticks, often 6 ft. high, before the door of the bride's chamber. The arrangement of the dais (pōlamann) is of extreme importance, since the number of copies of the marriage register (in the case of a Raja, yellow) pillows used indicates, according to a rigid code of etiquette, the rank of the contracting parties. The whole of the dais is covered with a mosquito-curtain, and the walls of the chamber are adorned with striped or 'rainbow' hangings (kain pēlăng), while the ceiling is decorated with an awning or 'heaven' (langit-langit).

The basic forms of the rice, which were those of a royal wedding, include the so-called 'bride-price', the food-sharing or toga *togetong*, and the apparent resemblance to royal ceremonial (as that may be noticed in so many Malay customs. The idea seems partly to disguise the subjects of the ceremony in order to evade the possible danger attaching to what is certainly regarded as a sacred occasion, and partly to promote a more perfect union between the pair by means of (1) a pledge passing between them (i.e. the 'bride-price') as well as by (2) the sharing of a meal together, and (3) the obliteration (so far as may be) of the distinctions of sex. The pretence of kingship by which the bridegroom is made to wear the bracelets, chain, neck-ornament (and, if we may go by the analogy of Malay funeral custom, even the kris) is simply, therefore, to secure a really effective disguise for the party in danger. The shaving of the bride's forehead may be similarly explained, since the bridegroom is also shaved. Although these are all likewise usages of royalty, it is wrong to regard them merely as a species of social self-advertisement; they are really the paraphernalia worn by all persons of the Malay race on certain critical occasions, in order to banish the spirits of evil and ward off mischief and danger. Till recent years the ceremonies over the greater part of the peninsula were almost entirely non-Muhammadan, and often took place in or in country districts without the intervention of any mosque official whatever. The customs followed, and on the east coast processions in monstrous or bird-shaped litters.

In certain details the wedding ceremonial has now become Muhammadised in character; among these is to be included, most probably, the wearing of the ring by the bride and bridegroom with henna. The henna-staining at first is done in isolation ('by stealth'), the initial public appearance of the married couple at their respective dwellings occurring on the second night, when ceremonial rice-water is sprinkled, offerings of rice made to each of the parties, and the 'henna dance' (kanti kisau) performed; on the fourth day the procession takes the bridegroom to the house of the bride's parents takes place. Here, on his arrival, his progress was in earlier days occasionally opposed by a mimic conflict (melaine), which terminated only on his payment of a small fine or ransom to these (for the nonce) self-appointed 'authorities'. This part of the ceremony, which used to be conducted even in the case of the so-called 'marriage by capture', is now taken to be merely an expression of the antagonism between the sexes. In some cases a rope or piece of red cloth has been thrown across the threshold, and wedding resistance was offered until the bridegroom had paid the fine demanded. Even then admission to the house had to be made against the resistance of women of the bride's party, as the simple marriage service—a mere bald statement of the fact and its acceptance by the groom—is not followed by the imam (Muhammadan priest) in the presence of the bridegroom only. It is said that, according to this form, the ceremony took place on the day before the procession. The groom
is then taken to the bride, and both are seated ceremonially side by side, in the presence of the bride's father and mother, feeding the other from a specially-prepared receptacle (nasi asilakai = bêlom, nasi asilakai = octagon). An octagonal erection of three superposed storys of small plates (nasi asilakai = 'octagon' and nasi asilakai = daw), coloured eggs (biter beren), and etc., stands before the bridegroom. The eggs, which have been cooked in the previous evening, and represent, and are given to the guests as wedding favours. On the third day of the instructions which follow the wedding, the bride and bridegroom were invited to a bathing-hosue in the evening. Later, at night, a houree was formerly lit outside the house and the groom 'stolen', i.e. carried off to his parent's house; and in the morning he returned to his own house next day, as parts of the bridal water-fight with syringes (called 'water-hows') took place (covered with a specified pavilion) between the tribes of the two parties. After this the bride and bridegroom each pulled one of the ends of a slip-knot made of a young coconut leaf, and the bridegroom broke through threads wound seven times round himself and the bride; in some cases (Patani) the threads were squared by burning. Seven days after the concluding feast-day the rites of the 'disco$tting of the ex-rings'—the emblems of the bride's maidenhood—take place. For two years the bridegroom may be expected to remain under the roof of his mother-in-law. It has been remarked that in the 'bridal rice' (nadi ker-asilakai), in the 'bridal thread' (bêlom, nasi asilakai), and in the bathing pavilion (bath gunok, belom) we have not only Indian influences, but Indian names. 3

In addition to this regular form of marriage with the consent of the girls' parents, the Malays recognize another form of marriage when the parents were notoriously unwilling, the essential feature being that the would-be bridegroom, fully armed, entered the house of the girl and secured the person of the bride, or prevent her from escaping. If the parents should then give their consent, the customary payments were doubled. This procedure was known as the poncat angkora. In a second and more peaceful form, the person adat (once frequently employed by Malayan Rajas), the groom did not break into the house himself, but sent his kris, accompanied by a messenger, to the girl's apartment, and in accordance with custom. If the kris was returned (e.g., on an unfavourable answer), the parents must send back with it a double dower. W. E. Maxwell gives an account of this form of marriage being recognized by Malayan custom. 4 Wilkinson, however, assenting to the second, regards the first as a mere custom. 5

The marriage ceremony is called in most parts of the peninsula by terms which are obviously of Arabic or Persian origin; on the east coast, however, where Muslim influence is less strong, it is often termed, significantly, by a Malay word denoting purification. Like their Polynesian colleagues (the Negris Semblis), the Melanese (e.g., the Negritos of Sarawak) forbid the marriage of two brothers' or sisters' son and daughter, but not that of a brother's son and a sister's daughter. 6

Pagans married.—Among the pagan tribes the essential feature in the marriage ceremony is a ritual purchase and a repast shared between bride and bridegroom. Among the Semang the price consisted of the blades of a chopper (parang), presented by the bridegroom to the girl's parents, and a coiled girdle of great length, said to be manufactured from the rootlets of the sugar-palm, given to the bride. This act of purchase, so long as it was performed before witnesses, was in itself binding. The Semang, as a rule, were monogamists, and conjugal infidelity was strongly disapproved, the immemorial penalty being death, which would now be commuted for a heavy fine. Among the Perak Sakai the nuptial present was conveyed by the bridegroom in a small box or yam-tube. According to one account, the bride and bridegroom attended at the house of the chief, who, after an inquiry as to their prospects, declared the matches and parades of rice, etc., and selected the couple, and stated that the relatives of both parties assembled at the bride's house, and that the two betrothed persons ate rice out of the same dish together. This being the case, the bride was placed into the house of the chief's sister, and was joined to the left finger of the left hand of the woman, and they were promised to name and clothe the children of the settlement.

The Sakai occasionally, but rarely, took more than one wife. Death or a fine was the penalty for infidelity.

The Jakun ceremony embodied several features of peculiar interest and importance. In addition to the nuptial presents for the bride and her parents—beds, white cloth, etc.—there was provided to give a hut, cooking-pots and pans, and other household requirements. Either party or both were questioned as to their ability to carry out the duties of their respective ages and the requirements in the case of the man being proficiency in the use of the bow-and-arrow, and in the case of the woman art in climbing fruit in the jungle, and even ability to smoke a native cigarette. The 'head-man' of the tribe, as a rule, was present and pronounced the parties husband and wife at the end of the ceremonies.

Among the Besi of Selangor the head-man then gave the bride and bridegroom a new name. And after this the marriage was the use made of a small in, or rather, bell-shaped mound of earth (sometimes an actual anti-heap decorated with natural and artificial flowers) which was placed in the path of the solar disk with rays, etc., and other ornaments; around this mound the bride was pursued by the bridegroom and the partners. In some cases three others, seven times; if he succeeded in catching her, they were declared to be married. Among the Besi of Klang (Selangor) the bridegroom would then tie the present writer seven times round this mound at a walking pace, and the bridegroom would then tie the reed on the case of the Besi of Pahang, a fire was substituted. Among the Besi of Klang (Selangor) the bridegroom would then tie the present writer seven times round this mound at a walking pace, and the bridegroom would then tie the reed on the case of the Besi of Pahang, a fire was substituted. Among the Besi of Klang (Selangor) the bridegroom would then tie the present writer seven times round this mound at a walking pace, and the bridegroom would then tie the reed on the case of the Besi of Pahang, a fire was substituted.

The counterpart of this ceremony among the Land-Tribes (Orang Dara) was, it is important to note, that both these, among the Orang Deras (Orang Laut) of Johor a ceremony in which the bride had to be pursued by the bridegroom for a given distance on the river, in cases.

Monogamy was generally, though not invariably, the rule. Although marriage was recognized as strictly binding by the Bési and other Jakun, yet at their drinking carnival (maun joo'ol), which took place at the end of the rainy season, all persons were allowed to exchange their wives promiscuously.

The Malay are not among those races which fear, but rather among those who pay respect to, the ghost of the departed.

After death the body is shrouded in sarongs and laid on the back, with hands crossed on the breast, on a mattress which, in turn, rests on a new mat of rushes or a pair of sarongs. In the preparation of betaef-leaf placed on the chest, the explanation being that, should a cut by any accident come in contact with, or brush against, the body, the touch of iron will prevent the corpse from returning to life, as once happened. Cuts are always expelled from the house while it contains a dead body, and the corpse is watched day and night in case evil should come near it. The preparation of the body includes ceremonial washings, which should be performed while it rests on the outstretched legs of four people (members of the family) sitting on the floor. Falling into the hands of the body, bananas-stems are used as rollers. A final washing of 'nine waters' is performed by the father-in-law, on the head, on the neck, on the body, on the arms and legs, and in the case of both sexes on the two feet. The body is then laid on a pile of straw, and the corpse is wrapped in a white cotton shroud, the selvage of which is torn off and used to bind the body. The feet are tied, and the sheet the kind of coffin used. If it is a single-plank bier (puluw u'lepa), the body is placed in a recess at the left side of the grave, and the bier is fixed in a sloping position with planks to form a kind of seat, at the top, so that the slab itself may not be covered by the earth to fall upon it. Another kind of receptacle

---

1 Wherever the old Palembang (Sumatra) tradition exists—in Pahang, Johor, Blau, Malacca, Selangor, and Perak—the ceremony of marriage is the same. But if we leave the Palembang area and cross into Patani, the ceremony is different, the regalia are different. We shall mention the ceremonies of the old and high civilizations which have been cleared out of existence by the civilized conditions of northern Courts and of the old and high civilizations, p. 70).

2 Wilkinson, p. 61.

burial customs exhibit considerable variation, but they are especially significant as revealing the attitude of the various groups towards death, and particularly towards the spirits of the departed.

The Semang appear to have no special fear of the dead, although they do exhort their deceased friends to think of the spirits of their departed ancestors and not to trouble the living. The Sakai, on the other hand, appear to have great terror of the spirits of the dead, and it is usual for them not merely to dress up in white when one has died, but to abandon the whole clearing, even if the crops are standing. The Jakun are distinguished from both the Semang and the Sakai by the tender care which they show for their dead relatives.

The Semang method of interment is simple. Among the Redah Semang the grave is usually surrounded by a low fence of palm-leaves, and the two bamboos upon which the body is carried to the grave are laid upon it. The corpse is placed on its side, with the head and knees to the right, on a mat or rough platform of twigs, and a screen of sticks, driven diagonally into the side of the grave and roofed with palm-leaves, prevents any earth from touching the corpse. When the grave is made up, and a frame of planks is placed round it to keep the earth of the grave-mound banked up properly. In the case of a chieftain, a small temple-like structure is then erected over the grave, and this has sometimes been seen furnished actually with a mosquito-netting.

No special sign of mourning is worn, but the sarongs in which the corpse is wrapped and the pall must be as costly as possible, consistently with the rank and wealth of the deceased person.

In the formerly Malayan district of Singora, several curious forms of exposure of the dead frequently took place until recently, when the Siamese Government prohibited the custom with great strictness. One of these consisted in suspending the corpse in a sign-shape receptacle or wrapped in a couple of trees in the jungle, at a height of about 8 ft. from the ground. Another consisted in depositing the body of the deceased person (placed at an angle) in a large receptacle in the form of a box, and the same means being employed on lofty posts — a method which is of exceptional interest, since it may be linked up with the custom of burial in a chest on high posts, still practised in Borneo.

The remarkable point about these forms of tree-burial, and post-burial exposure, is that they were both cases explained by the people who employed them as being reserved for any one who had died a 'bad' death, the idea being apparently that exposure would not suffice in such an instance to bring peace to the spirit. The Patani Malays also had once a similar custom — casting out to be eaten by dogs and vultures the bodies of those who had died a bad death. Yet from the statements of medieval Chinese writers (e.g., Ying Yai Sheng Lan, A.D. 1416), though quoted by Wilkinson, it is clear that such exposure, from the analogy of ancient Java, was in no way limited to bad deaths, but was an honorable and pleasing form of burial offered to the children of a family to their parents, so that it falls into line, in this regard, with the funeral customs of modern Tibet, where dead relatives are dismembered and given to the dogs and vultures. It would, on the other hand, perhaps readily come about that such methods should be barbarous and even 'wicked', when the country was settled by a people to whom such forms of burial were well known.

A third remarkable method was practised by the so-called 'white Práms' of the Malay-Siamese region, who had a small cemetery in Patalung, where their dead were deposited in a sitting position.

(b) Pagan races. — Among the pagan tribes the

VOL. VIII.—24
proviso that so-called 'direct' dreams come only on the eve of a Friday, whereas on other days the dream works backwards.

It may be added that the doctrine of luck play a most important part in what may be called Malay 'natural religion.' By certain signs and indications not only human beings but also birds and animals are either credited with the possession of luck or believed to be invested with the power of bringing it to those who kill or passage the Malay deer-wizard chants as follows:

'The seven hills and the seven valleys Come to me, O Hounds.
My Hounds are Hounds of Luck.
Not Luck that is adventitious, But Luck lives in their bodies.'

Even inert objects, such askrissors and other weapons, may be brinful of luck, or otherwise.

Omens.—Omens and divinations play a part of paramount importance in every department of life's activities in Malay. Equal significance is attached to signs deduced from the acts of men and those taken from the events of nature.

Among the acts of man in particular, the moon portends as approaching wedding. The entrance of an animal which does not usually frequent the house denotes fortune; to be hurled at by a wild jungle dog is a fatal portent; a wild bird entering the house should be caught carefully and smeared with oil, and then released in the open air, in a formula being recited which bids it fly away with all the ill-luck or misfortune of the household. Omens are taken from the flight, cries of certain birds, such as the night-owl, night-jar, or caprimulgus, the crow, and certain kinds of wild dove, as well as from a bird called the 'rook's husband.'

Such prognostics are drawn from entirely fortuitous events, but they may also be the natural reply to actions initiated by the inquirer. In such cases we have the rise of divination properly so-called (tallek=Skr. tikaka, 'mark').

One form of divination is effected by means of a lemon which, after offerings have been made to the gods, is cut open and the seeds formed, is suspended with incantations over a braziier by seven strands of coloured silk thread, the fruit itself being thrust through by a needle. The motions of the fruit are supposed to answer questions in the negative or affirmative, and will disclose a thief by indicating the number of fingers that close the lemon on paper that is of the guilty man. The mirrored surface of water held in the palm of the hand, or saliva, or a bowl filled with water and covered with a cloth upon which the names of suspected persons are successively placed is employed to discover those who may have been guilty of stealing. In the last-named case, two men each place a finger in the bowl, which begins to turn when the name of the culprit is placed upon the cloth above it. Another method is the use made of a rod - rod of a divining-rod composed of one, three, or more rattle-stems, inscribed with magical figures, and connected at the base or the top which vibrate when the thresher approaches; these rods may also be used for treasure or water finding, as by our own 'dowsers,' and even for establishing a necromancy.

It is noteworthy that the Malays attribute the arts of the diviner to animals as well as to men; thus the tiger is said to employ divination when it wishes to secure a human victim, just as tigers are believed to poisons themselves with the medicament applied to the newly circumcised when wounded.

An important and solemn ordeal was that by diving. This required the consent of the Sultan, and could be conducted only in the presence of the four great (west coast) chieftains.

In the case of a dispute, each of the adversaries in defence of his own case writes a solemn statement. After certain formal preliminaries, this document is handed over to one of the two bamboo receptacles given to each of the two

1 Skool, Malay Magic, p. 182.
adversaries, who are escorted to the river and placed up to their necks in the water. A bamboo pole is then made to rest upon their heads and, as a given signal, they are both pressed downwards. Each remains under the water as long as he can, but the contest is decided when one of them appears above the surface, his tube is matched from him. The winner is led back, his bamboo opened, and the result declared to the bystanders.

(4) Pagun races.—The savage Malayans of Malacca always paid particular attention to omens when a new clearing was to be made, and charms were used to expel the jangle spirits. The Mantri, in choosing a new locality for a clearing, paid strict attention to the attitude of the spirits toward his undertaking, as indicated by the dreams of the party. The dream of being chased by a dog or an enemy, entering water, or being flooded out was an evil omen; to dream of falling or climbing trees, of ascending trees, or of growing plants was of good import.

Divalnation among the Sakai, so far as records go, is practically non-existent. Among the Jakun it is employed as a part of their medical diagnosis, but, whether used as a part of a tribal or group ceremony or by the medicine-man alone, it falls more properly under the category of exorcism.

20. Charms, amulets, and talismans.—(a) Malay.—Not only does the Malay attempt to forestall the threat of evil, but he endeavours to ward it off by charms and talismans. Charms in the shape of invocations are extremely numerous, and are addressed to every conceivable form of spirit. But, in addition, free use is made of charms of a more material character. Examples of this class include a length of the steinambu (Malacca cane) with a joint equal to the height of the owner, which protects him from snakes and animals; so too, the "coco-nut pearl" (apparently a form of "tabasheer"), the "eyeless coco-nut" (which confers invulnerability by sympathy), the "dragon's blood" rattan or cane, the tiger's whiskers and claws, and many others are all, for various reasons, much sought after by warriors. Some of these are directly effective, other works only by influencing the volition of another mind, as in the case of contra-charms, charms for securing conjugal fidelity, and so forth. In most cases the charm consists of a short Arabic or Malay and Arabic prayer or a few magical letters or figures inscribed on paper or cloth and worn on the person. One important use for this is to enable the devotee of the magic to abduct the senggot of a person from his (or her) body, for the purpose either of benefiting the operator or of harming the intended victim.

There is a variety of methods of attaining these objects. In some the charm works without contact; in others contact is necessary. Although there is considerable variety, the principle in all cases is the same, and is based upon the Malay theory of the senggot. Thus, e.g., soil is taken from the intended victim's footprint and treated ceremonially by wrapping in red, black, and yellow cloth; and this, when suspended from the centre of the magician's mosquito-curtain, becomes the embodiment of his victim's senggot. As such it is switched with seven strokes three times a day for three days and then buried in the middle of a path where the victim is bound to pass; on doing so, he becomes distracted. Wood scraped from the floor where there has been dancing, parings of his nails, and clippings of his hair are utilized in various ways; sometimes they are kneaded into a wax figure, which is either transfixed with a thorn in the form of the senggot. The senggot desires to injure or burn to the victim's complete destruction.

Of the various methods of abducting the senggot without contact, the simplest is to go out when the sun clears, or when the newly-risen moon glows red, and, standing with the big toe of the right foot resting on the big toe of the left, make a trumpet of the right hand, and recite the appropriate charm thereon. At the end of each recital blow through the hollowed fist, using it as a given signal, they are both pressed downwards. Each remains under the water as long as he can, but the contest is decided when one of them appears above the surface, his tube is matched from him. The winner is led back, his bamboo opened, and the result declared to the bystanders.

With their customary logical thoroughness, the Malayas attribute the use of charms in some cases to wild animals, and even to reptiles. The wild boar, e.g., is believed to possess a talisman of extraordinary power called rantei babi, the wild boar's chain, which is hung up on a neighbouring bush by the animal whilst he is occupied in wallowing, and which can therefore sometimes be stolen by a lucky native. Another talisman carried by the boar for defensive purposes is the labum babi, the boar's stinking stone; the two together made a wild boar invulnerable. A similar "stinking stone" was sometimes worn by serpents.

Any magically potent object is called ber-tuah.

(b) Pagun races.—Amulets and talismans are common among the wild tribes. Coins are strung on necklaces to serve as "medicine," and rings of tufts of squirrels' tails, teeth of apes, wild pigs, and monkeys, and bones of birds and animals, as well as the bristles, teeth, and claws of tigers, were first worn, as among the Mantri, quite as much for magical purposes as for ornament. The Mantri strung pieces of turmeric on strings of artocarpus bark, and these were worn round the neck, wrists, or waist as prophylactics against serpents, bad winds, and, generally, all manner of evils. They also placed great reliance on the efficacy of spells to render them invulnerable. Semang women wear amulets of poluos (Licania peteata) leaf, and men wear similar ornaments of the rock-vein (curvat bates) fungus. It appears that among these tribes, as elsewhere, much of their personal decoration was intended to protect them against evil from the spirits by which they were on all sides surrounded. The elaborate patterns of the combs of the cattle-breeding Sakai-Semang women were similarly designed to ward off accidents and disease, and the copper bracelets, rings, and other objects worn by the Sakai were in effect talismans intended to ward off the wearer from ill-health and misfortune. The Semang, when wearing the Malay sarong, frequently still retain underneath it the primitive string girdle of "rock-vein" fungus, possibly from habit, but more probably for magical reasons.

The most important class of charms or talismans employed by the wild tribes is undoubtedly the ornamental geometrical patterns with which they adorn various objects of common use. These designs are intricate and have as yet been adequately studied and elucidated only to a small extent. So much, however, is clear: the pattern, as a rule, is symbolical of the use to which the object on which it appears is to be put, and its aim is to secure the successful attainment of that object. Exception to this rule may be made in the case of the women's combs and other articles, the patterns on which are intended to ward off disease, the attacks of reptiles, animals, and accidents. The difficulty of comprehending and interpreting these designs is increased by the fact that, in the usual fashion of primitive artists, the wild tribes make a part stand for the whole. The slabs of deer on a bamboo quilt, e.g., represent the whole animals, which, it is hoped, will be induced, by being represented as approaching towards certain wild jungle-fruits beloved of the deer, to visit a particular feeding-ground; they can be the more easily marked down and captured. The articles decorated in this manner...
MALIK IBN ANAS.—Malik ibn Anas, the founder of the Malikite school, was born in the month of Rabi’ al-Awwal in 85 (A.D. Nov. 793). He was of pure Arabic stock, being descended from Don Asbah al-Harith, who belonged to one of the tribes of Yaman. When still a youth, he had a deep knowledge of the Quran, the hadith (tradition), and other Muslim sciences, and soon he was held in reverence as a great authority in these matters.

During his long career Malik ibn Anas resided in Medina as a mufti and teacher of Muslim law. Like many men who have spent their lives in study, he has not left much for his biographers to record. His chief work was the Munazaahat (lit. ‘The Beaten Path’), the basis of the whole Malikite school of Muslim law. This book is not a mere collection of traditions. It deals not only with the sayings of the Prophet but also with the opinions of several famous faqih in Medina and with Malik’s personal views on various matters of canon law. It is often alleged that Malik rejected every kind of reasoning by means of argument and kept exclusively to the literal sense of the sacred texts. But the contents of the Munazaahat prove the contrary. According to his later biographers, Malik repudiated the idea of his old age. It is told that, when he sat down in his last illness and wept, he was asked: ‘What makes thee weep?’ He answered: ‘Who has more reason to weep than I? By Allah, I should wish I had been flogged and reflogged for every question of law on which I pronounced an opinion founded on my own fallible judgment!’

The text of the Munazaahat is handed on by Malik’s disciples in different versions. The best printed was that of Yabhaal al-Masabdi, which was printed with the commentary of Muhammad al-Zarqani in 4 vols. at Cairo (1883). Another version is that of Muhammad al-Shahbazi, the famous disciple of Abu Hanifa, who studied three years in Medina (printed at Lucknow, 1879).

It seems that the opinions of Malik ibn Anas were not always in agreement with the views of the Prophet and the Sahaba. As this point of view differed with that of some persons who accused him of declaring that he did not consider the oath of allegiance to the ‘Abbasid khiliffs as binding, he was even flogged and treated in a most scandalous manner. After this cruel punishment, however, he rose still higher in public estimation in Medina, where he died on the 10th of the month Raib al-Awwal, A.H. 179 (A.D. 3rd June 795).

Malik ibn Anas enjoys the reputation throughout the whole Muslim world of being one of the greatest faqih and traditionalists of Islam. At the present day his school is still dominant in the west of the Muslim territory, in the French and Italian possessions (Morocco, Algiers, Tunisia, Tripoli), and in many other parts of Africa.

TH. W. JUENBOLL.

MALTHUSIANISM.—Some economic and social investigations seem to be haunted by an evil fate. The subject with which they are concerned seizes popular attention for a time, and the results of the inquiry come to be represented in a form which is little more than a travesty of the original meaning and intentions. One of the most remarkable instances of this tendency is to be found in the reception accorded to the work of Thomas Robert Malthus, An Essay on the Principle of Population. Popular interest in his work grew much more rapidly than the time or the capacity for assimilating it, and he was criticized by many who had not read his books. He was accused in his own day of being an enemy of the poor, and of being guilty not merely of heterodoxy but also of atheism. It was said that ‘the inutility of the theory of Malthus levels at God, and the injuries it meditates inflicting on man, will be endured by every one’ (M. T. Sudder, Law of Population, i. 15). Further, the principles of population enunciated by Malthus have been expanded and developed in several directions by subsequent writers, and all and these views have been roughly by the vague and comprehensive term ‘Malthusianism,’ which means little more than the consideration of the relation between increase of population and the available food supply. Malthusianism, in fact, has no more definite meaning than ‘Smithianism’ in Germany.

It would be a mistake to consider that Malthus was the first economist who treated of population. The merchantists had explicitly advocated ‘population’ as an instrument of national wealth, and their views had influenced social legislation and poor-law administration in England during the 18th century. In 1776 Adam Smith had mentioned that ‘every species of animals naturally multiplies in proportion to the number of its subsistence, and no species can ever multiply beyond it’ (Wealth of Nations, bk. i. ch. viii. [ed. J. E. T. Rogers, Oxford, 1869, i. 84]), but it was not till almost the end of the century that Malthus selected the subject of population for separate treatment. It is true that more than a century earlier William Petty had published several essays relating to the numbers of the people, but his point of view was entirely statistical, whereas that of Malthus was directly related to the conditions of progress. In a sense the work of Malthus was begun to oppose the theories of William Godwin, who had published his book on Political Justice in 1793 and his Enquiry in 1797. Godwin had been influenced by Condorcet and other writers of the era of the French Revolution, and he advocated human perfectibility by means of a gradual equalization of wealth, under which condition there would be no incentive for the reasonable wants of all. In time the peaceful influence of truth would render force and even government unnecessary, so that a state of human perfection was possible. Godwin’s views formed a common topic of discussion among those who were interested in political science. Such
conversation was destined to have important results. It took place between Malthus and his father. The latter, Daniel Malthus—a friend of Voltaire and the literary executor of Rousseau—was favourably disposed towards Godwin’s views, while the son had doubts, which he afterwards placed in writing. The treatise which resulted was his Essay on Population, published anonymously in 1798.

Malthus believed that a fatal objection to the thesis of Godwin and other writers who maintained the same view was to be found in the relation of population to the means of subsistence. Population, when unchecked, doubles itself every twenty-five years; the means of subsistence, under circumstances the most favourable to human industry, could not possibly be made to increase faster than in an arithmetical ratio; i.e., the progression for population, if unchecked, would be 1, 2, 4, 8, 16, 32, 64, 128, 256, while that of subsistence could not exceed 1, 2, 3, 4, 5, 6, 7, 8, 9. Population had not increased in a geometrical ratio, owing to the checks imposed upon it by marriage and death; it was certain and direct, whereas the latter was probable. In fact, Malthus pointed to the grim spectre of famine, war, pestilence, and evil-living as the necessary limitations to the natural increase of mankind—either positively by reducing a redundant population, or negatively by the dread of these evils. The first edition of the Essay can be understood only by remembering the controversial purpose out of which it arose. In opposition to the optimism of Godwin and his sympathizers, Malthus emphasized the darkness of our situation. An attempt was made to correct this in the second edition (1803), which is practically a new book. The treatise of 1798 was in the main the critique of a Utopia from the point of view of the support of a growing population; that of 1803 was a scientific examination of the principle of population, as far as possible in isolation from other phenomena. There was, however, a greater change than that of external form; the two propositions, that the exposition of the checks to increase of numbers was worded differently, misery and vice become subordinate to what Malthus termed moral restraint. This new characteristic anticipates, and over-rides, our present means of subsistence. Hence moral restraint operates in the direction of postponing early marriages as well as irregular connexions. It means, in fact, as J. Bentham puts it, simply continence (Malthus and his Work, p. 33).

Much of the popularity of the principles of Malthus may have been due to his summing up the foundations of his theory in a formula which is as vital refreshment. The application of this formula to the world’s misery and misfortune, especially as the geometrical and arithmetical ratios seem to provide the certainty of a mathematical demonstration. But the formula suffers from a false simplicity; the first important objection against Malthus is that his argument is based upon two alleged necessities which he claims as co-ordinate, but it is clear that a supply of food is much the more urgent need. The celibate must be fed if he is to live. It follows that the tendency towards increase of population is a conditional one, and hence any ratio which is essential at a given time is susceptible of alteration, irrespective of changes in the quantity of food. Malthus often speaks as if population must increase up to the limits of the means of subsistence, but since his day there have been cases in which increased resources have been followed, not by an increase in population, but by an improvement in the general standard of living. The arithmetical ratio, as the maximum possible increase in the production of food, was later proved, and fully proved by Malthus; indeed, his sections on the state of population in America (Essay, 1798, p. 30) partially contradict his view of the ratio. Moreover, not only the production of food but its consumption must also be taken into account. Economies in consumption without loss of efficiency would enable a larger population to be maintained by the same supply. The whole statement of Malthus regarding agriculture in his earlier editions is embarrassingly by his ignorance of the Principle of Diminishing Returns; some of his expressions almost suggest it, but he makes no real use of this law. This theory, which was stated clearly by West (1815), was used in a totally different manner in which the population question was formulated. Torrens, James Mill, and McCulloch understood Diminishing Returns not so much as a theoretical tendency, but as a condition of the working of the extensive industries in practice. Accordingly, in spite of improved methods of production, they thought that the increase of population drove agriculturists to cultivate more and more inferior soils, so that a larger and larger proportion of the white population was required for providing the necessities of life. J. S. Mill stated this point of view concisely when he wrote: ‘It is in vain to say, that all mouths which the increase of mankind calls into existence, bring with them hands. There are as many hands as much food as the old ones, and the hands do not produce as much’ (Principles, bk. i. ch. xii. § 2). Mill, like the rest of the Classical School, regarded Diminishing Returns as a ‘law’ which could not be suspended only temporarily by the disturbing influence of improvements. The present disposition of economists is to consider Diminishing Returns as a tendency which is subject to frequent counteraction. The difference lies in the pressure of the gloom which settled on the population question during the ‘dismal’ era of economics in the first half of the 19th century. The real influence of Malthus survives in a much modified form, on the one side in the responsibilities of parents in being able to provide for their offspring, on the other in a ceaseless effort to effect improvements in the productive arts, particularly in those connected with the provision of the world’s food supply.

It is scarcely necessary to add that the doctrines and practices of ‘Neo-Malthusianism’, or the voluntary restriction of the birth-rate, form no part of Malthus’s own teachings and would undoubtedly have been indignantly repudiated by him.

MALUK DĀSIS.—The Maluk Dāsis form a small Vedic sect of northern India. It is an offshoot of the Rāmānandis (see F.R.E. ii. 546), and is named after its founder, Maluk Dās, a trader by occupation, who lived in the reign of the Emperor Aurangzeb (latter half of the 17th cent.). A. D. Wilson adds that there is a shrine in his honour and a monastery of his followers. The surrounding village of Sirithū is said to have been granted to him by the emperor.

The main point that differentiates Maluk Dāsis from other Rāmānandis is the fact that their teachers, like their founders, are laymen. Wilson adds that there is also a shorter streak of red in the facial hair of the priests. Like other Rāmānandis, they worship the Rāma incarnation of Viṣṇu. Wilson mentions six other monasteries of the sect in the Ganges valley, and also one of great repute at Jagannāth, in Orissa, where Maluk Dās is said to have died.

So far as the present writer is aware, none of Maluk Dās’s works have been published. He is said to have written a poem called the Dada Rāna, or parakṣā, in which he discovered a work of his ancestors, the Bhāgavata-purāṇa, dealing with the Kṛṣṇa legend of the devotees and the Kṛṣṇa incarnation of Viṣṇu, a dissertation on the soul and God, and he is also the reputed author of many well-known detached verses and commentaries. One of his verses is probably the stanza that is best known and most often quoted in the north of India, and offers a striking resemblance to the leading thought of Mt 6th. According to Hindu belief, the aṣṭādhyayana, or python, is unable to hunt for its food. It can only lie in its mouth open to wait for what will walk into it. The verse runs as follows:

Aṣṭaḍhyāyana na ṛṣiṃ | Patrīka nā ṛṣiṃ, šabda ni ṛṣiṃ. | The python doth no service, nor hath the fowl of the air a duty to perform in its living.

Quoth Maluk Dās, for all ṛṣiṃ ṛṣiṃ provide their daily bread.

MAMMON.—The word occurs three times in Lk 16 among the somewhat disconnected Logia that follow the parable of the Unjust Steward (19th in. 2), the last of which, ‘Ye cannot serve God and mammon,’ is found also in Mt 6th. It is a transliteration of the Gr. μαμών, a form which, with μαμωνάς, appears in TE, with Latin Vulgate, Septuagint, and a few Greek minuscules. The correct Greek, however, is μαμωνᾶς, which is found in RV, with all Greek mss., and modern mss., as well as in the Complutensian and the first two editions of Erasmus; but the influence of the Vulgate led to the appearance of μαμών in the later editions of Erasmus, and a further details as to spelling see E. NESTLE, in EB. The word is not Greek, nor is it found in the Hebrew Bible. It is a helenized form of the Aram. מָמוֹן, which means ‘money,’ ‘riches,’ ‘worldly goods.’ Wyclif and Purvey translated the word by ‘riches’ (‘richness’), but Tindal followed the Vulgate in transliterating the word, and so did all later English versions, except Geneva.

1. Derivation.—The Aramaic form: יָוֶּם (Yowem) follows a well recognized form of nominal inf. יָוֶּם, but scholars are divided as to what is the verbal root.

(1) J. Drusius (quoted in J. Buxtorf, Lexicon Chaldaicum, Basle, 1640, s.v.) and Dalman (in PREI xii. 163) derive the word from יָוֶּם, i.e. יָוֶּם, יָוֶּם, which would mean ‘that on which man trusts,’ or, as Dalman prefers, ‘that which brings man into safety.’ (2) Jastrow (Toluid Lexicon, p. 784) derives it from יָוֶּם, and says that which one accumulates. (3) Levy (Neuebrehisches und chaldäisches Wörterbuch, iii. 138) considers יָוֶּם יָוֶּם, ‘to distribute,’ to be the root, and thus our word means ‘that which is dispersed.’ (4) W. Gesenius (Thesaurus linguae Hebraeae et Chaldaicae, Leipzig, 1829, ii. 532), as if יָוֶּם יָוֶּם were the true form, derives it from יָוֶּם, ‘hide,’ whence יָוֶּם יָוֶּם, ‘that which one hides or treasures’ (Gen 40, Job 38, Is 40, Jer 4). It was therefore used in a sense intermediate between the two last, and fraction, but this use does not differ as to the derivation, it seems certain to the present writer that the Syriac versions all derived the word from יָוֶּם, and that they assumed a paronomasia to exist between our word יָוֶּם and יָוֶּם (pass. part. of יָוֶּם), which means ‘faithful’ or ‘trustworthy,’ thus: ‘He that is trustworthy in little is trustworthy also in much; and he that is not trustworthy in little is not trustworthy in much. If ye have not been trustworthy (ֵיָוֶּם) in the unrighteous mammon, whom will entrust (ֵיָוֶּם) to you the true?’ But, since the verb יָוֶּם is as common in Galilean Aramaic as in Syriac, may we not go further, and say that the paronomasia was probably intended by our Lord in the original Aramaic?

2. Usage.—The trade of the world, before the time of Alexander, had long been in the hands of Phoenicians and Arameans; and we have evidence that in both languages monēmon was the word for ‘money.’ As to the former, it occurs on Phoenician inscriptions on tombstones; and Augustine, in two passages (de Ser. in Monte. iv. xiv. 47, and Quest. Evang. ii. 34), states that the Punic word for lucrum (‘wealth’) is mammona. Its Aramaic usage is also abundantly attested. Jerome (Ep. exxi. 6) affirms:

Non Hebreorum sed Syrurum lingua, mammona dividit mancipulum.

Irenaeus (III. viii. 1) attests its use

'secondum Judaeum loquebant, quia ad Samaritanus utuntur.' The Aramaic Targums often contain the word: e.g., Pr 5, 'Honour the Lord with thy mammon;' Is 5, 'Ye that wish to learn, learn without price and without mammon'; Je 5, 'They accepted no mammon of silver;' in Ex 18 the ideal judges are those who hate the receiving of mammon.' In the Aramaic sections of the Palestine Talmud the same story is told twice (Mekhor. 1, Prokhet. 2), of 300 poor Nazirites who came for purification. R. Simeon asked King Jannes to give half the cost, but it turned out that the king paid all
the money (mamôn) and the Rabbi's half was his knowledge of Torah. Brabb. 619 says:

'Money (mamôn) is dearer to them than their own body.'

There is also a classification in lawsuits between those which concern money (דמויות 77) and those which concern a person (בתרות 77). This is found often in the Talmud and also in Jerus. Targ. to Deut. 11. The pre-Christian usage of our word even in Hebrew is shown from Sir 31:6, 'Blessed is he . . . that has not yet gone after mamôn.' The translators of the Sept. and the Vulgate, acquainted with the word, find in Ps 36:7 (Ev 37) they miread ἵππος as ἵππος, 'Thou shalt dwell in the land and be fed on its wealth'; and in Parg. Abodah (ii. 16) we have a 'saying' of R. Jose: 'Let the property (τους) of thy friend be as precious to thee as thy own.'

The very phrase 'mammon of unrighteousness' is quite common in Jewish literature; in the pre-Christian Book of Enoch the wicked say:

'Our soul is satiated with unrighteous mammon, but this does not prevent our descending into the flame of the pains of Sheol' (g106).

The phrase ἰτιόσαρισ ἵππος is a well recognized phrase in the octaves of money earned through deceit and fraud. The crime of Samuel's sons was that 'they turned after mammon of fraud' (1 Sam 8:18; cf. also Ps 125:1. Ezek 22:31. Hos 5:18).

3. Exegesis. (1) In Lk 16:1, 'Make to yourselves friends by means of the mammon of unrighteousness,' the difficulty is: to whom was Christ speaking? Lightfoot (Horae Hebraicae, iii. 159 ff.), A. B. Bruce (Expositor's Greek Testament, i. (1897) 586 ff.), and Merx (Die Evangelien Marcus und Lucas, p. 328 f.) hold that He was speaking to the Pharisees and publicans to whom ch. 15 was spoken (159), and who were still in the crowd (160). It was certainly more suitable for them than for the Twelve, who had not much 'mammon' of any kind; and, if so, the phrase has the same meaning here as in Jewish literature—money ill gotten, 'money gained by fraud.' Thus the advice which Jesus gives to the Pharisees is that they should make restitution to God by deeds of benevolence. Christ's advice is, says Merx (p. 328), 'Ye who have acquired money unrighteously and cannot refund it, use this wealth in making friends for yourselves, as Zacchæus, when converted, volunteered to give half his goods to the poor.'

'The counsel is to use wealth in doing kindness to the poor, . . . only care must be taken not to continue to get money by unrighteous means to have wherewith to do charitable deeds (Bruce, loc. cit.).

The alternative view, that the words are said to the Twelve, and that παρευρέσθαι is the evil stamp placed on all wealth, 'because great wealth is seldom gained or employed without injustice,' is forcefully presented by Moffatt, in DCG ii. 106 f.

(2) In Lk 16:11 we have a contrast between παρευρέσθαι and ἔλεγχος παρευρέσθαι, which seems to turn on a second meaning of ἰτιόσαρισ. In the original Aramaic, ἰτιόσαρισ means (a) 'deceit,' 'fraud,' and (b) 'nothingness,' 'illusion,' 'vanity.' We believe that ἰτιόσαρισ, here as elsewhere in NT, means real,' 'permanent,' 'belonging to the spiritual world,' in contrast with the present life of illusion and vanity, where the things that are seen are ephemeral (2 Co 4:4). We surmise, then, that ἰτιόσαρισ would, in the original Aramaic, appear in both v. 11 and v. 12, but in v. 11 ἰτιόσαρισ means 'deceit,' 'fraud,' while in v. 12, it means 'illusion,' 'vanity,' and thus presents a contrast to the 'true,' the 'real,' 'spiritual' riches. Our Greek translation, of course, obliterates or ignores the distinction between the two meanings of ἰτιόσαρισ.

(3) In Lk 16:2, 'Ye cannot serve God and mammon,' the emphasis is on 'serve' (δομέων). No man can and mammon are not compatible. The ordinance pursuit of wealth is not condemned. It is the undivided concentration of mind—the surrender of body and soul to money-getting—that is censured, as being incompatible with whole-hearted devotion to God and to His service. Mammon is personified as the object of undivided attention and service, and as in Ro 16:12 Paul speaks of those who 'serve' their own sensual nature (παρασκευάζοντες . . . τὸ εὐαγγέλιον καθὼς), and as in Col 3:5 he utters a warning against 'covetousness, inasmuch as it is idolatry,' i.e., wealth so easily erects itself into an idol, which woos men's affections from God. The central thought is 'living cheerfully what they acquire. Here and in Lk 16:12 there is, no doubt, a personification of wealth, as also in Tertullian (adv. Marc. iv. 35).

When Milton, therefore, speaks of Mammon as one of the fallen angels in hell, 'the least exalted Spirit that fell from heaven,' who even in heaven was admiring more the riches of Hea'n's pavement, truly gold,

To anger, divinely holy, else enjoyed

In vision beatific

(Pars. Lett. l. 675 f.; cf. also ii. 229).

We have, perhaps, not so much the flight of the poet's imagination as an indication of his familiarity with apocryphal lore. The phrase 'mammon-worship' has been made familiar by Carlyle (Frederick and Frosst, bk. ii. 2. bk. iv. 4. 8, etc.) and, is, no doubt, useful in emphasizing strenuously the warning of Jesus, 'Ye cannot serve God and mammon.'

MAN.—See ANTHROPOLOGY, ETHNOLOGY, EVOLUTION, PSYCHOLOGY, SOCIOLOGY, etc.

MAN, ISLE OF.—See CELTS.

MANA. MANA is a native term belonging to the Pacific region, but, for the purposes of the science of comparative religion, serves likewise as a category of world-wide application. The local sense will be found to stand in close relation to the scientific, despite the fact that the latter represents the more generalized concepts prevailing in different ethnic areas and presumably of more or less independent origin.

1. Local meaning of mana.—The word, says R. H. Codrington (The Melanesians, p. 119 n.), 'is common I believe to the whole Pacific, and people have tried very hard to describe what it is in different regions. I think I know what our people mean by it, and that meaning seems to me to cover all that I hear about it elsewhere.' For the two-fold reason that Codrington's account has not been impugned by later observations, and that it is the classical source from which the scientific use of the term mana is derived, it will mainly be followed here, though one must bear in mind that it deals primarily with the Melanesian, whereas there reason is to suppose that the actual word is an importation from Polynesia. It will be convenient to consider the mana of the Pacific region under two aspects: (1) the local, comprising the native view of what it is, how it is

1 W. Taylor Smith calls the attention of the present writer to a passage in the 'Pasco Sancti Bartholomaei Apostoli,' in Acta Apostolorum Apocrypha, ed. J. Bonnet, Leipzig, 1891-1903, p. ii. vol. i. p. 167: 'Vidiq (Satana) se exsudavit, et alterum sibi angelo apostolici, qui milam victoriam sacrificavit, secavit, es princeps immortalis, et socius argetum gennarum et omnium gloriam que esse in hoc mundo et in tuto hominum: et: Hac omnia tibi dabo si adoraveris me.'
manifested, where it resides, and whence it comes; and (b) practical, involving the methods by which it is sought to turn the supposed fact of its existence to human advantage.

(c) Theoretical aspect. — Mana is defined by Codrington thus:

"It is a power or influence, not physical, and in a way supernatural; but it shews itself in physical force, or in any kind of personal excellence which a man possesses. This mana is not fixed in anything, and can be conveyed in almost anything; but spirits, whether disembodied souls or supernatural beings, have it, and it essentially belongs to personal beings to originate it, though it may act through the medium of water, or a stone, or a bone. (p. 119 n.)" Or, again, he describes mana as "a force of a different kind from physical power, which acts in all kinds of ways for good and evil, and which it is not easy to define or control." (p. 119 n.)

In this account three points are specially to be noted: (1) that the power or excellence for which mana stands is 'in a way supernatural, namely, in so far as it is 'what works to effect everything which is wrought by the ordinary power of men, outside the common processes of nature' (p. 118); (2) that, even if it be in itself impersonal, resembling a contagion, or such a force as electricity, in that it can have a material object for its vehicle, "it essentially belongs to personal beings to originate it"; (3) that it 'acts in all kinds of ways for good and evil, or, in other words, may be used to benefit or to afflict friends and enemies' (p. 200), and is thus indiscriminately at the service of life and the black arts. So much for the nature attributed to mana—which, be it noted, is not moral, intellectual, or intellectual, or verbal, since it is equally a property, quality, or state. It may next be shown how such an attribution is a result of experience and something of consequence.

"If a man has been successful in fighting, it has not been his natural strength of arm, quickness of eye, or readiness of resource; for he has certainly got the mana, or spirit of some deceased warrior to empower him, conveyed in an amulet of a stone round his neck, or a tuft of leaves in his belt, in a loom hung upon a finger of his bow hand, or in the form of words with which he brings supernatural assistance to his side. If a man's pigs multiply, and his gardens are productive, it is not because he is industrious and looks after his property, but because of the stores full of mana for pigs and yams that he possesses. Of course a man naturally grows when planted, that is well known, but it will not be very large unless mana is in it: it will not be swift unless mana be brought to bear upon it, a net will not catch many fish, nor an arrow inflict a mortal wound." (p. 139)

Moreover, in this matter the native mind proceeds logically enough by the method of hypothesis and verification.

'If a man comes by chance upon a stone which takes his fancy; its shape is singular, it is like something, it is certainly not a common thing, there must be mana in it. So he argues with himself and he puts it to the proof; he lays it at the root of a tree to the fruit of which it has a certain resemblance, or he buries it in the ground when he plants his garden; an abundant crop on the tree or in the garden shows that he is right, the stone is mana, has that power in it.' (p. 139)

Hypothesis and verification even lurk behind the forms of prayer.

Thus at Florida, one of the Solomons Islands, a fisherman addresses Dunia, a fijian's ghost, connected with the frightful bird, in these words: 'If thou art powerful, mana, O Dunia, put a fish or two into this net and let them die there.' If he makes a good catch, he therefore exclaims, 'Powerful mana, is the fijdelo of the net.' (p. 140)

Again, the heir of a famous chief must live up to the reputation of his predecessor, or society decides that the mana has departed (p. 22).

For instance, a man claimed to have received from the ghost of a late chief, a very great man, a stone for producing pigs together with mana chant for working the stone; the people were ready enough to believe, but the stone proved unproductive of pigs, and the departed chief had no spiritual successor (p. 57).

To pass on to the question who or what may act as a host or vehicle of mana, it is plain from the foregoing examples that it may reside (though always conditionally and, as it were, by favour) either in a man or in a thing. For a man to have mana and to be great are convertible terms.

"To rise from step to step (in the steps, i.e. secret society or club) money is wanted, and food and pigs; no one can rise unless he has mana for it; therefore as mana gets a man on in the steps, so every one high in the steps is certainly a man with mana, and a man of authority, a great man, one who may be called a chief." (p. 103; cf. p. 115.) In the after-life, too, 'the ghost who is to be worshipped is the spirit of a man who in his lifetime had mana in him; the souls of common men are the common herd of ghosts, nobodies alike; but the souls of chiefs before and after death. The supernatural power abiding in the powerful living abides in his ghost after death, with increased vigour and more ease of movement' (p. 115).

As for the mana associated with inanimate things, the following example will show how it may come to be attributed.

'If a man came upon a large stone with a number of small ones beneath it, lying like a row among its litter, he was sure that to offer money upon it would bring pigs, and such a stone would be thought to have mana for it (p. 115). Moreover, the mana (herein, as has been said, resembling a contagion, or such a force as electricity) may be transmitted by one thing to another. Thus, to make sunshine, certain leaves are held over a fire, and a song is sung to give mana to the fire, which gives mana to the leaves, so that, when the latter are hung up upon a tree, the wind may blow abroad the mana derived from the fire, and sunshine may result (p. 201).

In other cases, the mana is seen to lend itself not only to transmission, but likewise to a sort of accumulation.

To make raies, leaves that are mana for this purpose are caused to ferment so that a steam charge rises up to make clouds, and at the same time a stone that is mana for rain is placed among them to assist the process (p. 201). It remains to notice the native theory of the ultimate source of mana. It was, as we have noted, that, according to Codrington, 'it essentially belongs to personal beings to originate it' (p. 119 n.)—namely, to a dead man's ghost, a spirit (which was incorporated from the first), or a living man (p. 151). The claim of the living man to originate mana is, however, somewhat doubtful, inasmuch as, if a man has mana, it resides in his 'spiritual part,' which after death becomes a ghost, while, for the rest, it is permissible only to say that a man has mana, not that he is mana, as can be said of a ghost or spirit (p. 191). In short, the native theorist would seem to have arrived at the view that mana, being something supernatural (to use Codrington's own term), may come from pre-eminently supernatural personalities such as ghosts or spirits. The existence of such a view, however, need not blind us to the fact that it is the man who does great things in his lifetime that is after death supposed to be a great spirit, and it is the fighting man's ghost, for instance, being known specifically as a keramo, or ghost of killing, and hence much prized as a spiritual ally who can give mana (p. 133). Similarly, it is because the stone with little stones round it is like a row among her litter that it is credited with mana; and the doctrine that it belongs to spirits (p. 183) is, clearly, but an explanatory after-thought. Thus neither animism (in Taylor's sense of the belief in spiritual beings) nor even animatism (the attribution of life and personality) would seem to be essentially involved in the naive experience of the wondering-working thing, whatever be the last word of native theory on the subject.

It must be allowed, however, that, if mana does not necessarily imply personality in the case of the thing with mana, it is none the less perfectly capable of co-existing with it, as in the case of the living man with mana; and, being as the living indwelling, comes to be intimately associated with the indwelling 'spiritual part.' In this way mana and its derivatives have come in various Polynesian dialects to supply all that is needed in the way of a psychological vocabulary, standing not merely for 'heart' and 'belly,' but for the 'interior man' and all therein comprised, namely, 'desire,' 'love,' 'wish,' and 'feelings' generally, as also 'thought' and 'belief,' and even in some sense 'conscience'
and 'soul' (see E. Tregear, Maori-Polynesian Comparative Dictionary, s.v., 'Mana'). Even if, however, mana thus in certain contexts almost automatically means the word 'personality', it must be remembered that, according to the native view, such personality is transmissible (just as we are liable to think of a man's—say, an artist's—personality as attaching to his work), so that the mana of the sacred person or thing, the medicine of the medicine man, the power of the sacred person or thing, or mediately because a ghost or spirit has put it into the person or thing in question. Meanwhile, the simplest way of ascertaining what modifications, if any, need to be imported into the local meaning of mana in order that the term may be employed generically, so as to cover analogous ideas hailing from a variety of other cultural areas, will be to review sundry examples of such kindred notions.

(1) Orenda.—This word is Iroquoian, belonging more especially to the Huron dialect, and apparently has the literal sense of 'chant' or 'song,' whence it comes to stand for the mystic power put forth by means of a magic song or in any other magico-religious way. Thus we are near the original meaning when we find one who exerts his orenda as the regular expression for a soothsayer, or hear of the orenda of the cicada, which is known as the 'sunshine or rain' are wont 'to turn it either way as it is made worth their while to turn it'. (Codrington, p. 290.) Healing medicine and poison are alike mana (ib. pp. 189, 308). As Tregear's citation of phrases shows, actual and supposed supernatural force generally involve the exercise of mana no less than does any and every form of blessing. In short, all trafficings with the unseen and occult, whether licit or illicit, are to a great extent guided and pressed into the service of malice, and of criminal intent, so mana lends itself to the manipulation of the expert, be his motive moral or the reverse. Further, whatever is mana is likewise, in a complementary aspect, not to be lightly approached, or, as we find it convenient for comparative purposes to say, 'tabu,' though, in Melanesia at all events, the word tabu (= tabu, tapu) has a rather different sense, implying human precedent which precludes all approach, and involves a supernatural sanction being rendered rather by rongo, or, where it is held to be especially severe, by buto (ib. p. 215; cf. pp. 190, 31). Whatever has magico-religious value in any degree is treated with more or less of awe, not to say fear, because in a corresponding degree it has supernatural power which is liable to exercise on the unwary with such effects as usually attend the careless handling of something extremely potent. In sheer self-protection, then, the profane, that is to say, ordinary folk in their ordinary manner of life, observe a number of tabus towards the person or thing that is mana. Meanwhile, conversely, such tabu may be looked upon as serving to keep the holy person or thing inviolate, or guarding the mana from desecrating influences that will somehow spoil its efficacy.

2. Scientific meaning of mana.—It remains to decide what meaning may appropriately be given when used as a class-name of world-wide application. Just as tabu has been turned into a general category standing for any prohibition resting on a moral or religious sanction, despite the fact that in Melanesia another shade of meaning apparently attaches to the term, so mana has of late obtained a wide currency as a general name for the power attributed to sacred persons and things, and is so much in vogue in the scientific literature. Suggestions which may have gathered round the word in this or that part of the Pacific region. Thus, even if it be true, as Codrington's somewhat guarded account leads one to suspect, that in Melanesia mana has been more or less successfully incorporated in an animistic system, so that its ultimate source is usually supposed to be a ghost or spirit, that is no reason why, for the general purposes of comparative science, mana should not be taken to cover all cases of magico-religious efficacy, whether the efficacy be conceived as automatic or derived, i.e., as proceeding from the power inherent in the sacred person or thing, or mediately because a ghost or spirit has put it into the person or thing in question. Meanwhile, the simplest way of ascertaining what modifications, if any, need to be imported into the local meaning of mana in order that the term may be employed generically, so as to cover analogous ideas hailing from a variety of other cultural areas, will be to review sundry examples of such kindred notions.

(2) Wakan.—This particular associations is strictly parallel to orenda, and stands for all 'power which makes or brings to pass.' It may come near to the idea of will-power, as in the Omaha act of
sea-chin-dhe-dhe, the 'sending of power' by singing to an absent friend engaged in war, or in the chase, and the current of the menstrual blood is sakan (whence the nuptial charm described by H. R. Schoolcraft, Indian Tribes, Philadelphia, 1833-57, v. 70 [see A. C. F. Meigs, 'Herbs and Their Uses,' American Assoc. for Adv. of Science, 1897, p. 326]). In short, the term may be applied indifferently to a shaman, to sun, moon, thunder, to animals and trees, to fetishes and ceremonial objects of all sorts, and, in fact, to anything that exercises overruling power (cf. W. J. McGee, 15 RBEW [1897] 182).

(3) Manus. —Here once more we have an Algonquian word that is generically identical in meaning with onneda or sakan. It is primarily an impersonal substantive; for in the Algonquian dialect a rigid distinction of gender is made between things with life and things without life; and, when manus stands for a virtue or property, the form expressive of inanimate gender is used, though, 'when the property becomes identified with objects in nature, the gender becomes obscure and confused' (W. Jones, AJFL xviii. [1905] 183 f). The following account by an Indian of the Fowl of the effects of the sweat-lodge brings out very clearly the non-personal nature of the force set in motion by a man for his personal betterment; he might almost as well be describing an electric bath.

"One smears oneself over the arms and legs... it is done to open up the pores for the sweating to enter into the body. The manitous comes from its place of abode in the steam. It becomes a sick man. On the head and the feet it proceeds out of the stone when the water is sprinkled upon it, and when the steam enters the body... and imparts some of its nature to the sick one so that he feels so well after having been in the sweat-lodge" (ib. p. 181 f.).

See, further, art. MANITU.

(4) Hasina. —This word is used in Madagascar to express the power or virtue which makes a thing unusually good and effective, such as the efficacy of a remedy, the power of a prophecy to come true, the virtue residing in an amulet or in a spell, the sanctity of holy persons and things, and so on. Hasina belongs in a high degree to the king, signifying that he is born in a family which has it, and is strengthened by the ceremonies of people having it, such as sorcerers and his own relatives. Hence his virtues being highly contagious, is apt to cause his subjects to fall ill and die if they but touch him. He dare not even speak to them, save through an intermediary. Meanwhile it is his duty to guard his hasina intact for the public good, so that A. van Gennep is probably right in regarding such a tabu as that which prohibits the subject from entering the court of the palace with his hat on his head as a 'fady (= tabu) de conservation' (Tabou et totémisme à Madagascar, p. 17). Indeed, the native theory of kingship turns entirely on this notion of hasina. Thus, at the king's enthronement, the monarch-elect stands on a sacred stone charged with hasina and cries aloud to the people: 'Have I, have I, have I the power?',' to which they reply, 'The power is thine' (ib. p. 82). Taxes paid to the king are called hasina, being derived from firstfruits and hence inherently sacred, in fact, a tithe. Even when the king is dead he transmits its hasina to the place of the grave, which is henceforward sacred, in fact, a tithe. Even when the king is dead he transmits its hasina to the place of the grave, which is henceforward sacred (ib. p. 104). It may even be, as van Gennep suggests, that the royal practice of strict endogamy, which was carried as far as sister-marriage, was due to the desire to preserve the hasina in the family (ib. p. 192).

Hasina is, however, by no means the exclusive property of the king. Nobles have it too, but in less degree. Even common men have some, and the very animals, trees, and stones have their share likewise. Hasina, in short, is relative. If I plant something in my field, I put into it some of my hasina.' Another man will therefore respect it, unless he feel his hasina to be greater than mine. In both cases he can receive no harm (ib. p. 18). Meanwhile I shall do well to fortify myself by protecting my property with amulets full of hasina, these often amounting to veritable boundary-stones (ib. p. 180). For the rest, whatever is sacred has hasina and for this reason is likewise fady, or tabu, so that, for instance, the stranger who has hasina, and is therefore fady, must be received with rites of admission the object of which is ditelower, 'to remove the tabu' (ib. pp. 40, 46).

(5) Baraka. —This is the term used in Morocco to describe the holiness attributed to 'saints,' male or female, as well as to places and natural objects, which are, however, thought of as deriving their holiness from the saint. The name ayid (i.e. asyyid), 'saint,' is meanwhile bestowed impartially on person or place, implying a certain 'confusion of categories' (E. Westernmarck, in Anthrop., Essays presented to Tyler, London, 1907, pp. 365).

To secure that the power shall be exercised in his favour, the Arab puts a conditional curse ('ar) upon the saint by throwing a stone on the cairn marking his tomb, or by tying a rag near by. The most efficient conductor of the power is, however, the blood shed in a sacrifice, for the blood contains baraka, supernatural energy, in itself, and hence lends potency on its own account to the curse with which it is loaded (ib. p. 365). Baraka is, however, by no means permanently possessed (it is when it provides the sting of a curse); for it stands equally for the blessing, l-baraka del id, 'the benign virtue of the feast,' which flows from the sacrificial meal, and is further evidence, of the worshippers by a man clothed in the victim's skin (Westernmarck, MF i, 445). Or, to take another example, the baraka inherent in the Moorish bride 'implies not only beneficial energy, but also a seed of evil or an element of danger,' so that people partake of her dried fruit to rid themselves of evil on account of her baraka, even while they regard a gift from her as bringing a blessing, and likewise suppose her blood to give efficacy to the ceremonies practised with a view to producing rain for the good of the crops (Westernmarck, Marriage Ceremonies in Morocco, London, 1914, p. 390 ff.).

(6) Manguur. —This word among the Kabi tribe of Queensland is not exactly equivalent with the word hasina, with which the doctor is full and whereby he effects his miracles. He is also known as muru muru, 'the man full of life' (muru barman, 'to live'). The force that pervades him is conceived, kyemorphically, as a number of those magic crystals which are so much in evidence when he engages in his acts of healing. As a native witness put it, 'always pebbles in his inside are. In the hand bones, calves, head, nails' (J. Mathew, Eaglehawk and Croo, London, 1899, p. 191). These pebbles enter the patient, so that he in turn becomes manguur bathin, 'full of vitality.' Or, conversely, the muru muru, the man full of life, sucks out the pebbles which some other ill-disposed person has put into the victim, so that when he recovers, the potency resident in the pebbles being thus equally capable of killing or curing according to the intention of the powerful man who has control of them (ib. p. 191). Or the medicine-man may relieve his patient by drawing out the evil by means of a rope, and such a rope he obtains from Bhakan, theriabow, who himself manguurur (superlative of manguur) superlatively potent (ib. p. 192).

These examples, which might be multiplied indefinitely, will suffice to show that there is a widespread tendency on the part of the peoples of the lower culture to isolate in thought and invest with
a more or less independent being of its own the power whereby a holy person or thing provest his or her holiness by means of action supremely oriented toward the good or evil. Modern anthropology lays great stress on this notion of the savage (whether it be conceived and expressed by him with full explicitness or not), because it appears to stand for something which lies at the very heart of his character, and does so in regard to the supernatural and unseen. Whether it is more or less central and fundamental than the notion of spirit is a question that need not be raised here. In any case it would be quite beside the mark to seek to assign exact relations of logical priority and posteriority to these two ideas, seeing that savage doctrine is tolerant of confusion, not to say downright contradiction, and uses the one or the other conception alternatively or in manifold conjunction as a particular situation may seem to suggest.

Here, then, it will be more profitable to indicate shortly what general purposes of theory are served by reference to the group of Ideas for which mana may by convention be allowed to stand when used in its scientific as distinguished from its purely local sense. In the first place, mana usually calls attention to the element which magic and religion have in common. At various ways mana religion corresponds roughly to whatever system of rites is resorted to by the community in general for self-preservation in the face of all the dangers, real or imaginary, that beset them. If you are a member of another tribe in your capacity as one of the men and I am not disinterested enough to attribute to you any religion whatever speaking of, even if your rites bear the closest family resemblance to mine; but rather it is the act of supposing you to wield a most malignant magic, in proportion as I feel respect for your power of getting the better of me. It is a case of me and my gods against you and your devils. Gods or devils, however, they have power alike, and to the stronger power, whichever it be, the victory goes. Similarly, within the tribe a particular individual may have recourse to mystic rites to help a public cause or to help himself in a way of which the public or community is not part of his private spies on his neighbour. In the former case he is behaving piously, in the latter he shows himself a wizard and deserves to die the death; but in either case indifference to the power of mana is set in motion. Mana, then, as representing what may be broadly described as the element of the miraculous, enables theory to treat the magico-religious as a unity in difference, the unity consisting in wonder-working power and the difference in the social or anti-social use to which it is put by the rival systems. In the second place, mana, taken together with tabu, provides a minimum definition of the magico-religious, such a delimitation coinciding accurately with the distinction which the savage both in theory and in practice draws between the world of the supernatural and the world of the workaday and ordinary. Whatever else it may be as well, and however it may be as a bundle of ideas, the magico-religious in all its manifestations is always hedged round with respect because of the potency inherent in it. Tabu and mana always imply each other, so that either can stand for the whole two-sided notion. Thus tapu ( =tabu) was a general name for the system of religion in Hawaii (Tregear, s.v. 'Tapa'). Conversely, when a word of the mana type, is translated into English, the notions of power, sacred, ancient, grandeur, animate, immortal all fall alike within the wide circle of its implications (15 REDE, p. 138). Mana, however, taken by itself offers the more adequate characterization of the nature of the magico-religious, since it reveals the positive ground of the negative attitude of fear and shrinking which tabu involves. It only remains to add that, having by means of such terms expressed the generic characters of the class of objects to which magic and religion relate, the anthropologist is merely on the threshold of his task, and must go on to the use of fresh terms of narrower connotation the specific types in which this class abounds. Thirdly, mana is well suited to express that aspect of the magico-religious or sacred in which it appears as a transmissible force or influence. Thus van Gennep shows the notion of hasina, which is of the mana type, to be closely bound up with that of tokina, contagion (Tabou et totemisme, p. 11). The idea of spirit, on the other hand, does not lend itself so readily to representation of such transmissibility or infectiousness on the part of what is sacred, except where some sort of dual personality is manifested, as in the case of what is known as 'inspiration.' Meanwhile the passing on of sacredness between one person and another, one thing and another, or a person and a thing in either direction, is a constant feature of primitive belief, corresponding as it does to that play of association to which the unorthics are most naturally given, especially when rendered suggestive by emotional excitement. Thus, in the Melanesian charm for sunshine, the operator's desire, as expressed in his song, starts a train of actions—the lighting of a fire, then the placing of leaves therewith, then the hanging of the leaves upon a tree to impart their warmth to the wind; and the whole process is interpreted in terms of the transmissibility of mana, this help sent to the fire by the leaves, the leaves to the wind, the wind to the sun, in strict accordance with the associational flow of the interest (cf. Codrington, Melanesians, p. 201). Lastly, mana is the term best suited to express the magico-religious value as realized in and through ritual; and ritual, as Robertson Smith has shown once for all, comes before belief in order of importance for the peoples of the lower culture. If mana is, regarded in itself, an impersonal and subjective, operating on its own account, even though personal beings may have set it in motion, this is largely because a more or less automatic efficacy is imparted to ritual as such, the results of conscious design that are immanent in the ritual are at most but dimly apprehended, the rite itself, on the other hand, stands out clearly as something that can be seen and enacted, and thus acquires independent value. Whatever it may exactly mean, at all events it works. Thus the ideas of mana and of ritualistic control go very closely together, the former being little else than a projection of the latter into the world of objects, which are thought of as so many loci in a system of partly co-operating and partly conflicting controls. And so it is also with the civilized man's notion of luck, which is a genuine, though degraded, member of the mana group of conceptions. Those who still hold with the belief for the superstitiously those who likewise believe in the possibility of controlling it.

LITERATURE.—For the local use of the word mana the locus classicus is H. H. Codrington, The Melanesians, Oxford, 1891. Cf. also E. Tregear, Macar-Polynesian Comparative Dictionary, Wellington, N.Z., 1893, s.v. 'Mana.' For the kindred words, ena, mana, maka, etc., see these A. Van Gennep, Tabou et totemisme a Madagascar, Paris, 1904, deals with hasina in strict relation to the local context, yet in a broad way that suggests interesting applications to classical theory. On the scientific use of the term see various essays, and the first of these going back to 1899, by H. P. Mear, in The Threshold of Religion, London, 1914. In 1904 Maret, in From Spell to Prayer, 18, and H. Hubert and M. Mauss,
MANDAEANS.—See SHAMANISM.

MANDAEANS.—I. Introduction.—The Mandaeans claim our interest not only as being a separate surviving branch of the Semitic stock, but also on account of their religion, their language, and their sacred literature. Besides the records of their religious teaching and their religious poetry, that literature includes fragmentary records and revisions of ancient Gnostic speculations and mythologies, and heretics of the Mandean faith, either as larger communities or as distinct family groups, were to be found some forty years ago and may perhaps still be found—in cities and strongholds, many of the lower Euphrates, the lower Tigris, and the rivers which water the eastern Iraq al-'arabī and the adjacent Persian province of Khūzistān (Arabistan). It is, indeed, necessary for them to live in the neighbourhood of rivers, since instinct in these flowing waters is an essential, and certainly the most characteristic, feature of their religious practice.

As far back as our records carry us, we find these Mandaeans in very humble conditions, earning their living—carpenters, smiths, locksmiths, goldsmiths—or shopkeepers. Upon their priests rested the duty of preparing and directing the public religious ceremonies, which were few and by no means sumptuous, as well as that of performing certain rites on behalf of individual members of the community. At these functions it was their regular task to recite a number of extracts from the sacred books. In the days of the ancients, such recitations took the place of the incantations that are no longer permitted, and in conjunction with the religious rites they serve to effect or to ensure the salvation of the soul.

From the time when the Mandaeans began the serious collection of their religious texts—their mythological and legendary documents may also be regarded as revelations—the transcribing of their sacred books, and even a monetary contribution to the expense of such labour, ranked among them as a work which could purge from sin, and hence not merely priests, but a considerable number of laymen, possessed copies. Some of these were obtained by Christian missionaries from their converts, and others were bought, with the result that since the middle of the 17th cent., not a few Mandaic MSS have found their way into European libraries. The books are composed in a distinct Semitic idiom, and written in a special script.

2. Mandean writings.—The most valuable, from the historical point of view, and at least in the main—the most ancient portions of Mandaean literature were composed in the voluminous Sīhād rabbed ("Great Book") or Genāz ("The Thesaurus"), which is divided into a right and a left part. This consists largely of theological, mythological, ethical, and historical treatises, which are interspersed with revelations, prayers, and hymns. All these components, so varied in the suet matter, may be called "tracates," though only by way of having a uniform term by which they may be enumerated and cited. From the introductory "blessings," which contain twenty-four times, and from postscripts, we may infer that the sixty-four pieces of which collections of hymns, were gradually incorporated in the "Thesaurus," now singly, now in groups. Originally each tractate was independent, though in the very first three or four separate writings have been brought together. The last tractate of the Right is the "King's book," which contains a survey of cosmic events as they appeared to a Mandaean who expected the end of the world to take place one hundred and fifty years after the foundation of the Arab sovereignty, and assigned to that sovereignty a duration of only seventy-one years; hence the tractate must have been composed in the early years of the 8th cent. A.D. The short tractate, xix, R. speaks of Mahamat the Arab (Muhammad) as one who had lived at least from two to three generations in the past. To the much more important i. and ii. R. however, notices referring to Muhammad have been attached only at the end, the mind of the translators evidently thinking that they must fill out the historical sketch; no other tractate exhibits any knowledge of Muhammad or any trace of his teaching. As regards the narrative tractates, we can distinguish between those of great and those of lesser importance, the latter having taken their materials or their themes from the former.

In some we find fragments interpolated from older works not now extant, while in not a few are a mere patchwork of remnants of works—often fragmentary—contained. When all has been said, it cannot be doubted that these documents of the Genāz which speak authoritatively of Mandaean thought and sentiment were, in fact, more or less rewritten, and that later redaction—often far more competent—as they have undergone was the work of Mandaean priests who were concerned to transmit to some form to future generations the greatest possible amount of their ancient traditions in a formal nucleus or focus of the entire collection is a manifesto of the Mandaean priesthood to the community (xxvii. R.; cf. MR. supplem. A).

Like the Genāz, the Sīhād rabbed ("The Book of John"), or Drēdē d'wāhīd ("Recitations of John"), more rarely designated Drēdē d'Yahēd ("Recitations of John"), is also a collection of tracates, many of which have come down in an incomplete, or at least in a corrupt, textual form. A considerable number of them relate to the experience and teachings of John the Baptist. The book also contains narratives (e.g., one about the "fisher of souls"), instructions in conversational form, etc. The dictio is still good, but the legend of the baptizer of the Jordan, who is mentioned only once in the Genāz, where he is described as a truly wise and devout prophet, is here brought down to the sphere of popular taste, and expounded with entertaining stories. The name, c. Yōhānā, is superseded by the Arabic "Yahēd" (cf. § 40), and from these facts we infer that the contents of this collection are of considerably later origin than those of the great "Thesaurus."

The Qolastā is a volume containing the liturgies for the annual baptismal festival and the service in liturgical form as Thesaurus sive liber magnum, Leipzig, 1887. We shall cite from this ed., using the letters B and L for the right and left parts respectively; the page and line figures will indicate the page and line. The right and left pages are for the living, the left-hand for the dead.
for the dead (massayah). Its poetic sections, which are intended to be recited as hymns or prayers, are worthy to stand beside the songs in the Gezah, though they are possibly not so ancient. The liturgical directions attached to them are certainly of much later origin, being the work of writers who were not familiar with the pure form of the Mandaeian language. The same statement holds of later section of the manuscript of the Magee Ritual, which has not yet been printed, though there are MSS of it in Oxford.

The liturgical rubrics of the two works just mentioned corresponds the Dēdān preserved in the Bibliothèque Nationale at Paris. A similar Dēdān is given by the Mandaeans to a work written on one long strip of paper. The Paris example is 136 x 6 cm., and gives the procedure for the expiation of ceremonial offenses (cf. T. Nöldeke, Mandaische Grammatik, p. xxiv). Another Dēdān, now in the Vatican Library, is 76 metres in length, and consists of a series of sketches representing the halting-places through which the soul of the wanderer passes before entering the Abāṭu. Its numerous figures have been drawn mainly with ruler and compass, and might be the work of a child's hand, while some parts of the text between them are of later date. The figures have been rendered illegible by stains and dilapidation of the paper. The Latin notes added by Ignatius a Jesu to explain the figures sometimes do not agree at all with the original text, and at certain points there is convincing evidence that the missionary could not read a word of the Mandaeian language. It would appear that he had the work explained to him by one of his converts, but that he frequently failed to understand his informant, and made fresh errors in writing his notes. 3

Another Mandaean work, one main division of which bears the title Aqṣar malwādd (Book of the Constellations), is found in the Royal Library of Berlin. According to Nöldeke (loc. cit.), "It is a compilation, containing all sorts of astrological material of very diverse date, and translated in part from Arabic and Persian; portions of it are of Jewish origin."

Mention should also be made of the recently discovered Sibah bowls with Mandaean inscriptions intended to avert a curse or an evil spirit. 2 They furnish melancholy evidence of the complete decay of Mandaean theology.

3. The Mandaeian language. — The idiom in which the Mandaeian writings are composed is recognized by Nöldeke as of importance for the study of the Semitic languages; it is the form of Aramaic which developed in lower Babylonia, and its nearest cognate is the special dialect of the Tannūṭu Babbī (i.e. the Aramaic of Upper Babylonia). The script (see below, § 20) has the advantage of expressing the vowel-sounds by letters, and does not require diacritical signs. A correct interpretation of the texts—so far as they are written accurately and in good preservation—has been made possible by the grammar which Nöldeke has drawn up from them (Mandaische Grammatik). 4

4. Translations. — Ignatius a Jesu, who, as a missionary in Baqra in the 17th cent., was in close contact with Mandaeans for nearly thirty years, simply says that he had some knowledge of their language, while his successor, Angelus a S. Josepho, thought himself also to know the language. The learned Maronite, Abrahæm Echelensis, from three Mandaeian books, and given to the public in a work printed in 1699 at Rome, that scholar had doubts expressed in reading with the assistance of Mandaeans behind him (cf. MI, p. 51). From the same period come three renderings of the supposed Mandaeian baptismal formula, but these show how utterly bewildered the translators were even with the first line of the Mandaeian writings. The material extracted by the learned Maronite, Abrahæm Echelensis, from three Mandaeian books, and given to the public in a work printed in 1699 at Rome, that scholar had doubts expressed in reading with the assistance of Mandaeans behind him (cf. MI, p. 51). From the same period come three renderings of the supposed Mandaeian baptismal formula, but these show how utterly bewildered the translators were even with the first line of the Mandaeian writings. For it is in reality their introductory formula. Later essays in translation, the most notable of which were the arbitrarily conjectural version by M. Norberg and the more careful and still very erroneous studies of G. W. Lorsch, are considered in some detail in MS, pp. xiv-xix. In the latter half of the 19th cent. it also transpired that there was no such traditional interpretation as scholars had expected to find. The Mandaeian priests (cf. MS, pp. 7-20). The specimens of translation offered by H. Petermann simply repeat the errors of Norberg (ib. pp. 99, 186, 214, 234).

Even with Nöldeke's Grammatik at our disposal, there are still serious obstacles to a correct translation of the Mandaeian writings. These contain a large number of expressions which we can interpret only conjecturally or else not at all; some appear to be Persian in origin, but there are also a number of genuine words whose origin in other dialects does not suit their Mandaeian context, while in other cases the context does not clearly show which modification of meaning has been developed from their etymological root. In some instances, again, it is obvious that words and phrases have acquired a theological or ritual sense which is not clearly determinable. All this, however, has to do with matters of detail; the course of thought and most of the constituent elements lie within the scope of literal reproduction. H. Pogson (op cit.) has taken the utmost care in establishing the renderings of the inscriptions, and has also, in connexion with them, translated numerous passages in the Gezah. 2

The myths relate to the origin and nature of the world of the gods and that of men, and also to the religious history of mankind. They are not derived from conceptions of nature, nor did they originate in the popular mind, but were constructed in accordance with theological views. The scientific gains which this vein of liturgy and myths seems to promise—and it is the prospect of such gains that draws us to the study of the Mandaeian texts—are in the main as follows: (a) enlightenment regarding the meaning of the Mandaeian rites; (b) a tenable view of the origin and early history of the Mandaeian religion; and (c) an advancement of our knowledge regarding the character of Oriental Gnosis and its religious bearings.

6. General contents of the Sidrā rabbā, or Gezah. — In seeking to solve the riddle presented by the Mandaeans and their writings, we must begin with a critical examination of the principal parts of their literature. We shall, therefore, first direct our attention to the matter found in the Gezah. There we find a teeming world fabricated by religious and theological fantasy. Gods and demons, or beings who are, with actions and utterances which, without any exception, relate to the creation of the world, the
founding of religions, and the destiny of the human soul. Not infrequently it seems as if one and the same being stood before us under different names, while in other texts the bearers of these names are fragmentary and are lost with one another; sometimes, again, a particular action is described to beings of altogether diverse character, or, as the action of one and the same being, it is described and characterized with much variation in different texts. It is still possible here to see two or three, all this, and we shall seek only to give a concise survey of the most important trains of thought and imagination to which the vast variety of the material here may be reduced.

7. Ancient Gnostic elements in the Genizah. The tractates that first claim our interest, as being probably the oldest, are those which exhibit polytheistic beliefs, or are at least ultimately based upon polytheistic views. Some of these open with speculations regarding the origin of all things, including the world of the gods, and to this group belong the sections in which emanational doctrines are set forth (cf. MS, p. 24 ff.). Here *the Great Finit*, from which uncountable other fruits have sprung, and — as a personal divinity being — "the Great Man of Glory," from whom, in like manner, other *Great Men* have arisen, are spoken of as primal entities. Beside the *Great Man* we frequently find *his counterpart* — the radiant ether (*aygar zevad*), or the *great ether of life* (*aygar robed d’aygar*), who appears sometimes as a primitive being, sometimes as one of the first emanations; and the same holds good of *the First Life*, also called *the Great Life*, and of *the Hidden First Kherqef* (i.e., *drop*), perhaps thought of as a sperm-drop. In all the sections of this type we read also of *the Great Jordan*, which is always represented as a roaring living water, as *the living water*, as *the gleaming and luminous water*. It encircles the realm of *aygar*, the world inhabited by the higher beings, and in its descent it is joined by innumerable other Jordains which water the *aygar*-realm, or, again, it traverses that realm as *the great artery of life*. So unorganized is the system, however, that as early as the middle period of the Genizah we find the personified figure of Wisdom making requests for revelations as to the gradation of the higher beings according to their period and dignity (MS, p. 222 f.). Nor do the texts in question present us merely with diverse elaborations of a single underlying view, or with various attempts to construct an imperfectly conceived system; on the contrary, they contain originally divergent conceptions of the origin of things — conceptions either fabricated or gathered from foreign sources by the Mendesean scholars themselves at a period before the transmitted texts were written. Of the authors of the Genizah it is only the polytheistic group that have made use of these conceptions.

Of the narratives describing the creation of the terrestrial world, some still bear a relation to the theogonies, the relation being peculiarly close in the long and important tractate v.i., which we may call the Mendesean Genesis. In this text *the Life* calls *the Second Life* into existence by a *request* to itself. Thus *the Second Life* creates for itself a second celestial world, and among the spirits of this higher realm of second rank (the *‘utras* of the Second Life) arises the idea of creating a third within it, viz., our earth, with inhabitants who should know but a worship only the Second Life, not the First. Then the Great Man of Glory, in order to frustrate this design, calls into existence the *Mandd d’ayyar*, who was to see that the First Life was worshipped also upon the earth.

In the Mandean dialect mandād is a by-form of mandēd or midēd, a noun from the root ma’d, and *Mandd d’ayyar* is equivalent to vērā ובו וָט (in the ordinary sense, and the term *aygar* (ultimately derived from Gr. ἄγαρ) as denoting the air of the celestial world and the north wind associated with it. The word *mānād* (usually — *= vessel*; *= instrument*) is still found in a group of hymns (L 68-74) in which the soul of the Mandean asserts its heritage in the higher world, declaring, "I am a *mānād* of the Great Life," while occasionally an exalted celestial being is distinguished by the epithet *pure mānād*. At first the deity referred to as *the Life* is still regarded as a plurality, being designated *the Fathers*, and is thus conceived as a council of gods — each one that is small and always unannounced. Very, however, *the Life* comes to be spoken of in the singular. In the polytheistic writers a number of other gods appear besides *the Life* — not, indeed, as its subordinates, but inferior to it in power and prestige. These are not called *god* — good of the Mandesians, in fact, that term was long restricted entirely to the false foreign deities (MR, supplement C) — but are referred to each by his proper name. The heavenly beings created for a special purpose are called *‘utras* (lit., *wealth*), as are also the countless angels who play a more ornamental part.

Far below the realm of *aygar* lies a world of darkness — the black water (mawāy ‘ayyar). We are nowhere told that the black water is merely a portion of the under world, or that it bounds or covers it, and yet the idea that the under world is in a liquid condition is quite irreconcilable with a large number of its features as presented in the narratives.

The creation of the earth which lies solid in the black water, and of the firmament expanded over it, is ascribed by the writers of the Psalms (Psalms 2, 72) to God alone (Psalms 104). The character of this demurgle shows a remarkable degree of variation. Psalms merely resembles the higher beings, and has arisen out of the black water; he acts only by permission, or, indeed, upon the authority, of *the Life*, and with the means vouchsafed to him by the latter, but he oversteps his orders; or he has accepted the preferred help of the evil spirits. Again, he is in fault solely because he has not boldly resisted such evil spirit, or, once more, he himself has committed no transgression, and it is only after he has duly performed his work that evil comes into the world. The creation of man is wrought in part either by Psalms or by the evil spirits, but is left incomplete, the soul and the finer organs, or at least the former, being still lacking. The soul — that which makes man live — is breathed into Adam by Mandd d’ayyar, or else brought down from the presence of *the Life* and placed in Adam’s body by one of the celestial beings. By this means, and also by the fact that the first man was at once enlightened regarding his origin and the true religion, the design of the subordinate spirits (those of the Second Life) to create a world whose inhabitants should belong to them and worship them alone was foiled.
Second Life nothing is said even in the 6th tractate—do not at once accept defeat. By magic they create all manner of noxious things—poison and corruption, predatory animals and serpents, devouring fire and earthquake, etc., as well as evil passions—and mingle them with the good creation. According to v. 1, the first to be deluded by the wicked ones was the woman of the Adam (Adam:56), dhabay, or his representatives (Hibil, Sittil, Enô). Must once more appear to fortify and maintain mankind in the true faith. These evil spirits are the Rûthi (Jad-Aram, 777) and the evil spirits of the seven planets and of the twelve zodiacal signs. Prior to the creation of the earth her abode was the region overlying the black water, and from her and her sons all evil things have come into the world—demons, founders of false religions, teachers of heresy, and men of violence. The Rûthi, who also bears the epithet of ‘world-mother’ or ‘mother of the world,’ bore these children to Ur, the Mandean devil, who was himself her son. He is a most villainous creature, and had to be laid under restraint before the earth and the firmament were created, the reason evidently being that the solidification of the land in the black water would otherwise have been impossible. According to v. 1, R. it was Mand, according to v. 2, R. it was his son Hibil šizwa, who cast ‘Ur to the ground, loaded him with chains, and set warders over him—either, on another view, immured him in ‘Ur’s own dunghill. Details as to how these measures were carried out—mainly by magic and trickery—are found in the tractates cited; and viii. R. (one of the later portions of the Geniza) relates further, with reminiscences of Bab. myths, how he was cast out from the earth and from the light (šûmas), which is said in the same passage to have been the first work of the creation. The Gnostic writer here adopts R. the Gnostic story according to which the light was born of the Rûthi (of God), as were also, subsequently, the lights of the heavens. The word γαί, ‘call,’ as used for ‘call into being,’ can be traced to the Biblical Genesis, as well as the names of Ādam and his wife Hāwâ, and, consequently, also that of their son Sittil (cf. רות, lengthened in Mand. to עות) and the names of the other two gôni Hibil and Enô. The exaltation of Abel (727), slain in his innocence, as Hibil šizwa seems to the present writer to be of later origin (cf. § 14). The Heb. narrative of the Fall, in which knowledge is described as a forbidden fruit, is one that the Gnostic author could not use at all, since he must have regarded it as directly in conflict with the fact that the knowledge of good and evil, of truth and error, was revealed to the first man immediately after he had received a soul from the higher worlds, and that that revelation marked the founding of the true religion.

In connexion with the account of the origin of the worlds and the true religion, the Mandean Genesis refers to the false religions. It states that all of them, as well as the peoples who profess them, were called into existence by the planetary spirits, and that, in particular, Judaism was created by Šamšu (‘the sun’), whom all people call ‘Adam.’ The writer does not mention Christianity by name, but in the place of Mercury he inserts the Messiah (Mîshîn), of whose followers he says that they ‘all accuse one another of lying,’ and of himself that he had distorted the teaching of the true religion. This reference to the mutually conflicting teachings of the Christian Church (R. 120, 7ff.) comes doubtless from the hand of the Mandean redactor.

10. Possible traces of a Gnosis entirely independent of Christian Gnosticism. On the connexion of the cosmogony (and theogony) there is nothing to remind us of Christianity except the fact that the rivers which contain the ‘living’ water are each called ‘Jordan.’ Among the Mandean the word yordam is used as an appellative; but, as it is not a native Mandean formation, this usage is, no doubt, to be explained by the peculiar accorded to the chief river of Palestine by the Gnostics, whose writings had been appropriated or used by the Mandans. There are certain facts which lend support to the opinion that the high honour paid to the river Jordan is of an older standing than the gospel narrative of John the Baptist and Jesus (cf. MS. p. 3, xvi. p. 154; Brandt, Ethiconai, p. 154); and upon this point the documents answer to the question whether the Mandean documents show vestiges of a Gnosis that was not affected by Christianity, and was perhaps pre-Christian.

11. Jesus Christ as Mandâ d’hayyê. Tractates bearing unmistakable signs of dependence upon a tradition of gospel history, and emanating, at the same time, from the polytheistic school, are two fairly well known out of the rest of the Geniza in that they alone speak of the Mandâ d’hayyê as having appeared in Jerusalem and Judah, or in company with Yôhannâ the Baptist at the Jordan, with a view to ‘selecting the believers amongst all peoples and families’ (R. 170, 10), while the proclamation of the true doctrine, which, according to the view otherwise universal among the Mandans, was revealed in the days of Ādam, is forgotten in these tractates under the name of the Geniza sect. They gave their sanction to the narratives without suspecting that they related to the Lord of Christian believers, and also without adjusting their own theological views to the new facts. The Mandans spoke of the Mandâ d’hayyê among the Jews, or among a human race long in existence, is never again mentioned—so far, at least, as the Geniza is concerned—by later Mandean writers.

12. The monotheistic school, or doctrine, of the king of light. With the polytheistic Gnosis described in the foregoing paragraphs Mandean writers of, we would surmise, the 4th or 5th cent. A.D. composed a stricto sensu monotheistic Gnosis, which, upon its leading themes, we shall call the doctrine of the king of light. 1. and xcv. R. furnish a complete and almost unvitiated account of it.

‘One is the lofty king of light in his kingdom’—lord of all heavenly beings, source of all good, creator of all forms of infinite greatness and goodness, highly exalted by the ‘kings’ or ‘angels’ who stand before him and inhabit his paradise. Of distinctively Mandean character are the features noted in 11. 17 (‘he sits in the lofty north’) and 6. 17 (‘victims are not sacrificed before him’), and the description given in 6. 8: ‘The Jordans of darkness in the worlds of light are white waters, full, white and intangible. And the dark waters and the white waters are the life of the serpent, and the wings of an eagle; he is hideous and of terrific proportions;’ ‘iron seethes in the ethiconai, and the stone is burned up by his breath; when he lifts his eyes the mountains tremble; the plagues quaker at the whisper of his lips.’ With all his demons he once projected an assault against the realm of light, but, coming to the border of his kingdom, he
found no gate, no way, no means of ascending to the celestial heights. Then the lofty king of light calmed the agitated world by proclaiming that 'All the projects of the Dayâr [demon] come to naught, and his works have no continuance' (ct. NR, p. 43 f.; NS, p. 231 f.).

According to the theology which finds expression here, the earth and the firmament, with all that they contain—stars, winds, fire, plants, animals, and human beings—were created by command of the king of light through the agency of an 'ätâ, named Gabriël, the Ambassador.

In the record of the mandate given to Gabriël the Mandean redactor has interpolated a passage referring to the subjugation of the world of darkness (6. 8-15), but nothing is said of this subjugation in the account of the actual creation. The creation of man is briefly recorded as follows (13. 9): 'And the man Adam and his wife Haorâ were fashioned, and the soul fell into the body.' Then (13. 11-13) 'the fire-angels came; they made submission to Adam; they came and worshipped before him, and changed not his word. One was the evil one, by whom wickedness was formed, who departed from the word of his Lord.'

make the human race abandon the true religion. These sections, however, retain only the scantiest elements of the original doctrine of the king of light. Such residual elements might have most likelihood be found in the figures of Hîbûl zîwâ, who (like Mandâ d'hayyê in the polytheistic Genesis) instructs the first man in all that is necessary for salvation, and 'Enô'ätâ, who in the course of the world's history comes forth to rehearse that instruction (R 29; cf. MS, p. 48).

15. Enô and the cloud; Masûn kûšâ.—The Mandean Enô (mûn, mû) rests upon an identification or fusion (due, possibly, to the author of the Judeo-Christian doctrine of the king of light) of the OT 'Enôsh (Gn 4:25) with the Son of Man (bar 'âdâsh) of Dn 7:13. Abel, Seth, and Enoch—or, in their Mandean form, Hîbûl, Sîtil, and 'Enô—figure in the Mandean texts as the spiritual forefathers of the human race.
that Râhâ is Yânu, and that Adônai, the god of the Jews, is Sâmés, the sun (on the Mandaean names of the planets cf. MS, p. 45). The observance of the appointed times is a Mandaean practice, though it later became obligatory (R 56. 12; cf. MB, p. 90, and below, § 32).

An account of the baptism of Jesus in the Jordan is given in the Sîdâr d’Yahyâ, which, however, narrates it in the following way: the Baptist is at first unwilling to perform the ceremony, and he only after he has received from heaven (Abâtûr) the written mandate, ‘Yahyâ, baptize the liar in the Jordan.’

The references in the Mandaean religion to Judaism.—Besides the OT characters already mentioned, several others are named in certain sections of the Genaza, but are of no importance in Mandaean theology. Virtually all of them are enumerated below.

It is curious to note that in one passage (L 18 f.) the promise is made to Adam that, ‘on the great Day of Resurrection he and all his race will rise again and be transported to his own hand, while in the last period of the world he will be presented to the King of Kings.’ Adam is said, quite in keeping with the Mandaean view, to have ascended to the ‘house of the Life.’ The idea of a resurrection from the dead is altogether foreign to Judaism; but it is clear that the passage about the promise must have been carelessly transferred from a Jewish or Christian-Gnostic source.

The Jewish materials in the Genaza were drawn, not directly from the OT, but from Aramaic sources, often in the shape of sayings. The Ark of Noah (Nû) ran ashore—as the Targums also tell us—on the mountains of Qârdî (Gordyæa, i.e., Kurdistan); Abraham and Moses were prophets of Râhâ; King Solomon, like King Jamshid in Iran, is said to have been born to a demon as in subject until he ceased to give thanks to his Lord, and let himself be adorned; the world-configuration which had once annihilated the human race before the Deluge was kindled by the angel Daniel, to whom was given power over fire; at the order of El-râhâ and Râhâ (MB, pp. 129 f., 123). 

The assumption that the Mandaean were originally a Jewish or Judeo-Christian sect (Milgrom, Weiss) seems to be in variance with the following facts. Their names and the prominent names associated with the teachings of Judaism was not obtained from oral tradition; on the contrary, they found the names in written documents, translated them, as foreign words, for they read them incorrectly. Thus they render the name of Moses as Môsa, Miriam as Mîryâ, Abraham as Abîrâm, Isaac as Uârîl, Jacob as Ya’qôb; Sâbat appears as Sâbat, mâlkhôh, ‘angels,’ as mâlkhî, ‘kings,’ and Benjâmeh as ben ‘Ammî, ‘the son of Amin.’ The inevitable inference is that the Mandaean had been throughout complete strangers to the religions tradition of Judaism. The same may be said of Jewish religious life. In the entire Mandaean literature there is no evidence to show that the Mandaean ever observed the Sabbath, or practised circumcision, or turned towards Jerusalem in their prayer. Like the Essenes (q.v.), they rejected animal sacrifices, and believed in a resurrection from the body at death; but marriage—in the form of monogamy, though with a succession of wives—and the procreation of children were enjoined upon them as a religious duty; they had nothing like the organized communal life of the Essenes. Their view of the planets is quite inconsistent with such a practice as that of according an adoring salutation to the rising sun. A further point of importance is that in their prayers the Mandaean turned towards the north, where the evil spirits and their chief Sâmârâl (from s’mâl, ‘the left,’ i.e. the northern one) have their abode in that very region of the heavens.

15. Conjectures on the Antiquity of the Mandaean religion.—The relation between the Mandaean teachings and Manichaeism (q.v.) cannot be fully discussed here. The parallels have been collected by the present writer in MS, pp. 223–235 (cf. Elchenau, p. 142 f.), and to that list should be added the correspondence between a passage in the Manichean narrative regarding the awakening of the first man to life (as quoted by Pognon, Incert. mand., p. 190 f., from Theodore bar-Khôn’s Book of Scholos), and one in L 40 f. In the veritable parallels the Mandaean versions seem to be secondary, and we must infer that both sides are indebted to the same group of sources. A large proportion of the material common to both is explained by the mutual influence of Christian (more especially Greek) and Manichaean groundwork of the doctrine of the king of light on the one hand, and in the theology of Mânî on the other. Doubtless, too, the Mandaean material was derived from the Manichaean tractate a number of fragments from Manichean documents to be found in the L 40 f. (cf. MB, p. 198 f.). The religious teachings of the two faiths, however, were essentially distinct in character; the fundamental dualism of the Manichean system—a doctrine that finds a satisfactory and logical design even in the creation of the world, and involves an ascetic mode of life—is far removed from the Mandaean view. It may also be noted that, according to a passage in the Kitât bi-Fihrist (ed. G. Flügel, Leipzig, 1871–75, p. 304), the father of Mânî, shortly before the latter’s birth, joined the Mughâna, a sect akin to the Mandaean; this point, however, need not be further discussed here (for fuller details cf. Brandt, Elchenau, p. 157).

On the other hand, we cannot place the slightest reliance upon bar-Khôn’s statement (in Pognon, pp. 154 f., 224–227) that the sect of the Mandaean was founded in the land of Mâsîân by a beggar named A’dô, of A’dibân, ‘Companions came to him, and there they played upon sys as beggars are accustomed to do.’ Some of the names of A’dô’s relatives, as given in the context, are also borne by well-known figures in the Mandaean religion, while most of them could be quite suitable for such. Nödlke is doubtless right in his conjecture that A’dô is simply a corruption of Adam—ΩΔ from ΑΩΔ. Here, in fact, we recognize a blunder on the part of the heresiologist, due to his habit of regarding alien religions as sects, and tracing each to a distinct founder.

The religious teaching of the Mandaean must, however, in the opinion of the present writer, be explained in other ways than those suggested by the theories discussed, and the view to which our critical examination of the Genaza leads us will be found to do justice to all the data, and has at the same time the merit of simplicity; moreover, it derives some degree of support from what can be ascertained regarding the age of the Mandaean script.

19. Age of the Mandaean script.—Comparing the Mandaean written characters with the various alphabets collected by Julius Cæsarius arsdrasianae (Strassburg, 1890; the work contains also the Pahlavi script), we find that, while they are somewhat like the characters employed in the Nabataean, they are, dating from the 2nd–5th centuries A.D., they
MANDAEANS

approximate more closely to those found in the inscriptions of El-Hajr, written in the 1st cent. A.D. (in these comparisons we must, of course, disregard the hair-strokes due to the cursive mode of writing). In particular, the circle by which the Mandaeans represent Ν is closely matched by the corresponding characters in col. 58 of Euting’s Tabula, and the Ν of an inscription at Baṣra, dated 17 B.C., is similar in form to the Greek minuscule ς. Thus, as the Mandaeans written characters are only a stage in the beginning of the Christian era, and as there is no ground for supposing that the Mandaeans had previously used a different alphabet, the rise of the Mandean literature cannot well be dated earlier than the 1st cent., A.D.

20. The baptismal nature-religion. — The idea that the rivers descended from the celestial world by way of the mountains in the distant north and that their waters impart fresh energies to the persons who bathe in them—a naturalistic element of belief retained by the Mandaeans amid all the thoughts and fantasies subsequently acquired—was probably inherited from their ancestors. In explanation of that belief, we may advance the conjecture that this Semitic people had not always lived among the lower courses of the rivers, but at an earlier period had dwelt in a locality far more northern, and nearer the sources—in a district from which they could see, upon their northern horizon, huge mountains towering to the sky (cf. MR, pp. 69-72; MS, pp. 213-217). We scarcely need to explain how these facts would provide a basis for the belief in question, and we can easily understand, too, how a people, if isolated from the native region and compelled to endure a miserable existence in their new abode, should seek, in conformity with the practice of their ancestors, i.e., by means of exorcisms, recurrently repeated, to absorb the virtues which the river brought from the higher world to the low-lying plains. We do not claim, of course, that this is more than a surmise, yet we would draw attention to the fact that there are linguistic phenomena which might be adduced in its support. Thus the Syriac idiom used in Kurdistan and on Lake Urmi is found to agree with the Mandaic dialect in the formation of the infinitive and in not a few features of the pronoun—which holds the same relative position in the Mandaeic language as the Hebrew mlw in Semitic languages—of great importance. If, however, we set aside the theory as hopeless, we must be content to suppose either that the very simple religious conceptions of abolition that prevailed from primitive times among the country people of Lower Babylonia or that by some means or another it had spread to that district from Syria (cf. Brandt, Elchabi, pp. 163, 164).

The Gnostic tracts. — The Mandaeans, then—though not yet bearing that name—practising their religious ablutions, and sharing the general Semitic belief in demons, were living in Southern Babylonia at a time when the intercourse of religions had proceeded so far in the districts in which the Aramaic and Persian languages were spoken that it had at length evolved those creations of theological fantasy common called Gnosticism, with which, however, we must here combine the Manichean teachings and, in great part, the substance of the Pahlavi books (Bundahish, etc.). The priests of this Gnostic tribe were not, intellectually, sufficiently advanced to interpret the religious symbols which had been passed on to them. They combined the objects of faith and the influences of religion as cosmic entities and occurrences; nor

had they much appreciation for explanations of the world-process by pre-suppositions which purported to guarantee future salvation to all who acted in accordance with them, although this salvation itself and its mythological elements, the ideas of the gods and all their imaginative embroidery, were quite as much a part of their faith as any other element of the religious observances. The Gnostics, therefore, to be read only with difficulty—documents coming from afar, dealing with things of a remote past, and unveiling the world of the gods—wrought upon them with the force of oracles, revelations from above, records of a superhuman wisdom. Accordingly, the priests adopted the tracts as their own, translating them, of course—at first orally, no doubt—into their own dialect. Conceivably, indeed, it was the desire of having these precious revelations in their own language that prompted them to draw up an alphabet of their own; and it is also possible that it was the translators themselves, and not their descendants in a later generation, who for the first time transcribed these documents were from the first meant for them and their people, that the texts had been revealed to their forefathers, and that the ‘Mandae’ addressed therein were none other than these ancestors and themselves.

22. The rise of Mandean theology. — It seems beyond question that the earlier generations of Mandaeans who had a knowledge of writing (covering, we should estimate, a period of at least two or three hundred years) traveled all the way in the translation—as far as the contents comport as in measure with their own religious sentiment—as records of revealed wisdom; in their backward intellectual condition, they could not fail to be impressed with matter so unfamiliar. In the work of translation, however, as well as later in transcribing and renewing dilapidated texts, they themselves learned the art of literary composition. Thus, if they found that these strange documents made no mention of, e.g., ‘the Jordan,’ the bath of immersion, or anything else that they could have wished to discover in them, they added what was required, while fragments of defective MSS they either interpolated in such order as they could devise. From translation they advanced to redaction, and from redaction to independent composition. Such, then, was the genesis of the Mandean literature; it consists essentially of borrowed matter. The circumstance that very diverse cycles of conception had a place in this material stimulated the Mandean scholars to attempt the task of combining one with another, and of mediating between the different views. This, again, explains the development of the Mandean theology, and it also accounts for the confusion that prevails in it.

The Mandaeans never had an orthodox system of theology. Their authors busied themselves with the motley materials that had accumulated in their minds only with a view to reproducing the narrative of the creation of the world and of the human race in a free and improved form, and the one central thought that guides all their efforts is the necessity of explaining the harsh lot of the devout Mandean in his earthly circumstances, and of giving him the strongest possible assurance that his soul will return to a state of pure and joyful eternal bliss which is its true home.

23. The religious beliefs of the Mandean writers. — Amid all the conceptions and the varied views which the Mandean writers became familiar, and notwithstanding all the reverence with which they received the new materials, they never
surrendered the traditional religious practice of their people, although their ideas of the benefits to be derived from the bath of immersion underwent a process of refinement in conformity with the development of their theology.

From the heterogeneous Gnostic trains of thought by which these theologians were influenced there arose, in course of time, a distinctively Mandaean religious belief, which can be traced without difficulty in most sections of the Genaza writings. The main features of that belief are as follows. Far above, beyond the heaven of the planets, there is a world full of light and splendour, where dwell the Life (as the supreme deity) and other divine beings, or where, according to another phase of doctrine, the 'exalted king of light,' surrounded by hosts of angels, sits enthroned. From that realm the soul of man derives its origin—the soul of Adam and the souls of his descendants in the Mandaean community. Far beneath, again, is the world of darkness with its black waters. Part of it has been 'thickened,' brought into a state; this is the earth inhabited by mankind. The earth has now the black water upon the south; upon the north it stretches over lofty mountains to the world of light; from that world the rivers descend by way of the mountains; and thus the Mandeans, by bathing in the 'living' water of the rivers, maintain their connexion with the higher realm. The souls of the devout dwell upon this earth as in a foreign land. Here, meanwhile, evil spirits reign, akin to the powers of darkness now immured—the deities of other peoples and other creeds—and it is they and their creatures or servants who make life a torment for the Mandeans. Hence the believer waits with most longing for his salvation, i.e., his deliverance from this existence. And in the hour of death a divine being descends from the world of light, and, as the 'liberator,' takes the soul from the body, and bears it upwards towards the celestial spheres to the world of light and of the Great Life.

25. Kustā. In the ethical and religious sections of the Mandaean literature much is said about kustā, 'straightness,' 'rectitude,' 'veracity.' In the ritual the ceremony of immersion included a gesture called 'putting forth kustā,' this being identical with what is described as a stretching out of the hand from the bath of immersion, or (after the performance of some other religious duty) 'before Mandā ḏhayā.' The water was made with the right hand, and it corresponded to the clasps of hands with which the soul would be welcomed by the Life and other great celestial beings when it reached the world of light. It was an outward manifestation of the upright mind and of royal devotion. Further particulars regarding the religious ceremony were constantly being increased and rendered more complex by the priests, who will be found in § 33 below, and more fully in MR, pp. 96–129, 221–226.

26. Ceremonial purity. In this period the idea of purity was recognized in the sense of a relation of the world of light so intimate that it carried with it exclusion from every object and condition antipathetic to it ('Hībī ḍawā, pure Mānā'; v. 116, 17, 'the Jordan of Life, from which I have taken purity'). The laws already mentioned regarding food came to the Mandeans through the medium of the ethical code in the doctrine of the 'washing of light,' as did also the injunction that husbands and wives should 'wash with water'; after cohabitation, and women after menstruation. It was only later that the commandment of abstinence was extended to many other occasions of life (Sioufi, cited in MR, p. 195f.).

27. Prayers. Among the Mandaean prayer was known as 'compassion,' or 'petition and praise.' According to the ethical code just mentioned, believers must rise to pray thrice in the day-time, and twice during the night, but in other texts, apparently of Judeo-Christian origin, the only prayers enjoined are one in the morning, one at the seventh hour of the day, and one before sunset, while in one passage (MR 800) the prayer in the night-time is actually asked to be invoked upon flesh-food before eating (MR 65: cf. MR, p. 94). The priests drew up short forms of prayer for these ordinances; but for protection against distress and danger they regarded prayer in the proper sense as less effective than a long series of recitations from the ancient books.

28. The massēqā. The ceremony termed mas-
30. The Mandaeans under Sasanian rule. — The Mandaeans never played a part in the field of politics. As long as they were allowed to go about their daily tasks without interference, their frame of mind was one of entire contentment. Their ideas, no sense a warlike people, and their whole history, as well as their literature, shows that they were able to offer only a weak resistance to persecution and attacks upon their religion.

Babylonia, in the period preceding its conquest by the Arabs, belonged to the empire of the Sasanians. We cannot say whether the Mandean hatred of the Jews was kindled by documents embodying an anti-Jewish Gnosis; it may perhaps date from the first half-century of our era, as part of rabbinical Jewish satraps, as related by Josephus (Ant. xix. 1. 14, § 310 ff., ed. Niese), provoked the whole population to an outbreak against themselves and their compatriots.

The Sasanians persecuted the Manichaeans and the Christians who adhered to Rome, but they spared the Nestorian Church, which was subject to the State, and the peaceable Mandaeans. The latter, however, were sometimes brought to give Christian monks who went to them as missionaries. In the Genaæus (xiv. R) we find an account of the Roman Catholic clergy and worship, and (i. and ii. R) we are told that the attempts to convert the Mandaeans were not always made with 'tender sweetness'— with discourses and promises—but were also supported by force. In that satrapy, doubtless, the Nestorian Church had at one time sufficient influence to have the soldiery employed on its behalf; and, accordingly, we read (R 8, 16): 'When [the Saviour Jesus] compels you, say, We are thine'; but in your hearts acknowledge Him not, and deny not the word of your Lord, the brightness of light; for hidden things are not manifest to the ignobly disposed.'

31. In the period of the Arabian invasion; migration. — Then (c. A.D. 650) came the rise of the Muslim Arabs, and the collapse of the Sasanian empire. Certain late portions of the Genaæus make reference to the gate and the demons of the planet Mars, 'Nirig' (Nergal) who is called the Arab 'Abdalah.'

'I the whole earth is made subject to his throne'; to his followers all things fall a prey; 'day after day they make war and shed blood, and are ever an oppression to this tribe of the souls, and to the great family of the Life'; and there are also many souls of the great family of the Life who go over to them, and deny the name of the Life . . . . In their distress the devout Mandaeans comeforth with themselves that the thought that the wicked 'Abdalah had fallen into one of the infernal princes, where his followers take him to task, asking why they now suffer terrors in the realm of darkness while the servants of the allies (i.e. Mandæi d'hayyā) against whom we drew the sword, mount up to the world of light' (MA, p. 155).

It must have been about this period, around the 7th or 8th cent. A.D., that most of the Mandaeans, having reached the limits of endurance, gave way before the Muslim Arabs, and migrated from Babylonia to the adjacent districts of Persia. It is possible that the minority, as what is dissolved at death, the Euphrates and the Tigris, had for a time ostensibly adopted Islam, or that they concealed themselves among the adjoining marshes.

32. Restoration of the cultus. — Tractate xxv. R may be interpreted as a summon to a meeting of the Mandean communities either on the banks of the rivers of Khuzistan or (after peace had been restored) in their old home; it is a manifesto in which 'we, the Tartufis,' turn with prayer and
adjuration to the Mandaeans of both sexes to urge them to fulfill their religious duties. The people are to come on Sundays to the temple (lit., ‘dwelling’; down to modern times it was nothing more than a small house with a tiled roof), where, in becoming order, they are to stand praying before the Tarnädis, to take part in the communion, etc. This tractate is unmistakably one of the very latest compositions in the Genaza, and is a documentary record of the religious and social organization of the Mandaeans. In earlier texts the term tarmädis (for תמרידה), like the corresponding word yapīra in the NT, means simply ‘believers’; but by this time it was the name which the priests applied to themselves. The institution of Sunday, as is shown by its designation as kalubba (כולבים | כולם בעב | כולם בעב; cf. Peshitta of Mt 28), was adopted by the Mandaeans from the Syro-Christian church, though, of course, through the medium of documents of whose origin they were ignorant. The manifesta urges the due observance of the day (MB, pp. 88, 90). The religious ceremonies enjoined are those of old; immersion is performed by the individual himself, usually applied by parents to children, the stretching forth of the right hand, and the partaking of communion-bread. Everything is as yet quite primitive, in harmony with the fact that the tarmädis, ‘priests,’ are still considerably distinguished from the məssātōd, ‘teachers,’ reverence for whom had been enjoined in the moral code (cf. § 13).

33. Introduction of new ceremonies by the priests.—In the period that immediately followed the downfall of the Persian Empire, and which we have to include in the development of the present order, the Mandaeans gradually passed from an organized religious community into a sacerdotal body and gradually assimilated the religious ceremonial rites requiring the co-operation of an official celebrant, or, at least, elaborated them from the traditional usages, and enjoined them with the necessary immersions and other formalities. Even towards the close of the period of the Genaza as attested in the latest sections of that work (cf. MB, p. 104), we find, besides the rites of marking the forehead with water from the river, a sign made with oil; a certain number of approaches was prescribed and was to be prepared and applied by the priests. The draught of ‘living’ water was duplicated, being taken once from the individual’s own hand and once from the sacred bowl (pəntād). The priesthood ventured even to institute, in addition to the ordinary communion-bread, a host of higher order, the ‘superior pəntād,’ which was reserved for themselves and the Salmāns (see below). They also (golād, see p. 89 ff.). Further, the first order, the məssātōd, the dead, one for the living. The latter was an eight days’ ceremony, and conferred upon the person concerned the title of kalumad tâb, ‘blessed perfect one,’ as well as priestly rank; it was thenceforward regarded as dead to the world, and had to abstain from sexual intercourse. The ordinary immersions performed by the individual Mandæan as time and opportunity permitted—every day, morning and evening (Le-Gonz, Voyage et observations, p. 201)—or only on Sundays and feast days, and the days preceding them (Sionni, La Religion des Soudâbes, p. 83)—could still be regularly performed without previous preparation. About this time, however, an annual festival was instituted at which all the members of a community assembled upon the bank of a river. This celebration, conducted by a priest, included, in its first part, all the ceremonies requiring to be performed in the water; but here the priest, using his right hand, submerged the layman three times; thrice, too, he made the sign upon the recipient’s forehead, and thrice, with his own hand, gave him water to drink. Further, the first immersion of children now assumed the form of a baptism administered by a priest with one or two assistants (for texts and references bearing upon these baptisms cf. MB, pp. 221-224).

34. Ceremonies wrongly interpreted by Europeans.—The assertion that the Mandaeans worship the cross rests upon references in the Syriac writings of Ignatius a Jesu (p. 38), and is due to misapprehension. What actually takes place is that at great festivals a priest of higher rank sticks a few cane rods into the ground, then joins those together and crosses, and that he renders homage to this sacred symbol. The structure is termed ‘beams of splendour,’ and may thus be regarded as symbolizing the world of light.

Reports dating from the 17th cent. agree in stating that it was the practice of the Mandaeans in Bagra to sacrifice a fowl once a year, and Jean Thévenot writes that he himself had witnessed ‘la sacrifice de la pomme’ on the 3rd of November 1665. Since, however, the Mandæan religion does not permit animal sacrifices, such statements refer in all likelihood to the fowl whose blood was used in preparing the special host mentioned above. According to Sionni, the ‘superior pəntād’ was made but once a year, and was in his wife, by whom seven wheaten cakes, each of which was sprinkled on both sides with four drops of sesame oil and four drops of the blood of a newly-killed pigeon. The fowl was afterwards buried in the temple, presumably with a view to ratifying its use as a sacred act. The act was thus in no sense a sacrifice, and it is so little in keeping with the fabric of the Mandæan cult that its institution can be characterized only as a gross blunder on the part of the priests.

35. The priestly hierarchy: an order of consecration in the Persian settlement.—The priestly system included the following grades: pupils, who were in training from their fifth or seventh year; assistants employed in the sacred ceremonies; priests, who had to pass an examination and be ordained; and high priests, chosen by the ordinary priests from their own number. The name applied to an assistant (pəntāp) was šəndād or šandād (cf. MS, p. 160), and to a priest, tarmād, while a high priest bore the Persian title of gamsābd, ‘treasurer.’ Each priest had his own dishes and table, and partook of food and drink apart from the others; but his wife might sit with him at meals. There are numerous data which seem to indicate that the clericalizing of the Mandæan cult was carried further in the Persian element. Besides the title of the high priest, the names of several articles of priestly attire (razd) are Persian words—tīdād, kvaṇaša, pandāmna. The priest’s seal-ring (Sionni, ‘le chaumiavar’) bears the device, ‘Name of Yawar zīvā’; had the inscription originated in Babylonia, it would have been ‘Name of Mandæan d’hayyé.’ Again, while the Narratio of Ignatius (p. 23) shows distinctly that the Mandæans of Bagra knew nothing of the practice of confessing to a priest, Sionni’s informant, who appears to have studied in Persia, tells of a form of confession according to which the sinner, upon making a penitent acknowledgment of his sins, three times receives absolution for the same sin, i.e., he is absolved of the results of his penance; but after the third confession he is absolved, and then a special consecration may be expected only by certain good works. The passage of the Genaza to which appeal is made in support of this ordinance and with regard to the process shall twice be ‘re-erect’ apostates or transgressors before casting them out of the community.

36. Final redaction of the Genaza writings.—Persian loan-words are found even in the oldest Mandæan texts, but names like Yawar (‘friend, helper’), Sām, and Bahram (Verethraghna) could...
hardly have come into vogue among the Mandaeans except on Persian soil. When, accordingly, in many treatates we find these names taking the place of the undoubtedly more ancient Manda d'Héron and Téhéran, and when we observe that in others, in passages where the bearer of that epithet is mentioned, it is added that he is also called Sáma, Yáwar, etc., it seems highly probable that most of the treatates in the Genizah underwent their final recension in the 12th century, i.e., attained their present form, in the Persian province.

37. Religious decadence: obsolence of the language.—By the time when the 'Abbáshá Khalifs had established peace and order throughout the empire, the Mandean religion had passed its zenith. The desire for knowledge and the spirit of enthusiasm were quenched; the theological activities that had been earnestly directed towards a solution of life's enigmas had spent themselves, and had given place—as in the writers of the Drévá d'malké and the Sdrá d'Yáby,—to placid dialectics and fable-making. The soul which knew that it had come forth from a better world and was destined to engage in such recitations, the recitations of the Mandaean, in fact, became familiarized with his faith, and was now anxious simply to bring his store of ancient hymns into order, to keep it intact, and to use it properly. It was during this period that the Mandaeans gathered their writings into collections, and composed the liturgical directions or regulations comprised in the Qolláth, the Marriage Necessities, and the Paris Dialogue. Moreover, living, as they now did, in isolated groups among peoples of other faiths, they gradually lost the use of their ancestral dialect, and Arabic, which had made its way into these districts, became their vernacular, though Mandaean still maintained its place in religious worship. In the process of organizing the ritual every ceremony came to be introduced and concluded with recitations from the sacred books; in the mezayá, indeed, the recitations constituted the main element, and, according to Sionifi, this ceremonial, designed to succour the departed, lasted for seven days. Since, however, the teachings of the Genizah required all believers to engage in such recitations, the priest endeavoured, by instructing the young, to confer upon the laity the ability to read and, as far as possible, to understand the texts, although their original meaning was doubtless almost wholly confined to a knowledge of the liturgical and traditional understanding of their own language.

38. The Sábians of the Qurán; Mughatsia and Mandaeans.—In the Qurán we find three passages (ii. 29, v. 72; cf. xxii. 17) in which the Jews, the Naṣzaraans (Christians), and the Sábians are assured of religious toleration. The famous Muslim scholar al-Macádi, writing in the 10th century, speaks of Chaldean or Babylonian Sábians 'whose remnant live to-day in villages among the swamps between Wáṣir and Básra;' states that in their prayers they turn to the pole-star and Capricorn, and describes them as 'those who wear girdles' (Nasara, N.), 'extraits, viii. 1 (1816) 122 ff.). The Mandaeans turned towards the north, and wore the girdle. Moreover, the Kitáb al-Fhiríst (p. 340, l. 36) states that the Sábians of the marshes are the Mughatsia, a word meaning 'those who wash themselves,' and adds the declaration that they wash all their food—a practice which, so far at least as flesh-food is concerned, is also enjoined in the Genizah. To these Mughatsia, however, the same writer ascribes a doctrine of dualism—a doctrine to which the Mandean documents; and he also states that many of them still worship the stars, while, on the other hand, the guarantee of toleration in the Qurán assures that the Sábians believe in One God (and in the Last Judgment). To account for these names to the Mughatsia there seem to be two alternative hypotheses at our disposal: we may suppose either that the Sábians of the Qurán were the descendants of that group of originally heathen baptists of Babylonian which did not share the religious development of the Mandaeans, or that some of the Mandaeans had taken refuge from the Arabs in the swamps (§ 37), and there, in deference to their custom of bathing and washing, had adopted new and alien doctrines. For further particulars regarding the Mughatsia cf. art. Elkesass, vol. v, p. 286.

The passages in the Qurán and the name 'Sábians' would apply most approximately to the Mandaeans. The Mandaeans, in speaking of their practice of immersion, always employ forms of the verbal root kas, as, e.g., in v. 286, l. 1: qasamás mayyám, 'who immerse their sons and their daughters'; by their Arab neighbours they were termed Šubába down even to recent times, and in European accounts dating from the 17th century, they were called 'Kabs,' 'Káb, 'Kab';—the termination being that of the Itál. or Lat. plural. The name may formerly have covered the Mughatsia as well, and the latter possibly also came under the references of the Qurán. As regards the Mandaeans, however, it is sufficient to say that, as an outcome of the doctrine of the king of light, they had become monothestic, and that they believed in a future retribution.

39. Ostensible Christianity of the Mandaeans.—The toleration extended to the Sábians was no means secured for the Mandaeans a condition of life satisfactory in every respect. In course of time—perhaps more than once—circumstances arose in which they thought it advisable to be regarded as Christians. As, however, besides the name of 'Mandaí,' they had also adopted that by which the Christians were known, viz. 'Nákóráyí';—in the Genizah the latter is actually used more frequently than the former—it would demand no great effort on their part to say that they were Christians. If, e.g., they no longer wished to be regarded as akin to the Sábians dwelling in the marshes, or if they thought it expedient to evade a tax imposed specifically on the Sábians, they would only assume the Christian name without misgiving. According to Ignatius a Jesu (Narratio, i., a chapter written by himself), the Mandaeans of Basra believed that Ignatius had granted them a document guaranteeing their security, but that his successors had not respected it. Ignatius also states that the Mandaeans were formerly united with the Chaldean Christians, but that, about one hundred and seventy years before his time, they had renounced the authority of the Babylonian patriarch and abandoned the name of 'Christians.' If we qualify this statement by saying that the Mandean communities had at one time joined hands with the Church—though only for a while—it will be quite correct.

The Arabic writer, Hama Isha'hí, (belonging, like the two Arabic writers already cited, to the 10th century), affirms that the true Sábians, i.e., those whom the Qurán has in view, were heretical Christians, 'living between the desert and the swamps.' This opinion may have arisen from the reports about the Mandaeans and the Mughatsia, and it might possibly be taken as indirect evidence that as early as the 10th century, the Mandaeans deserters, and on the other hand, a Muslim might quite well think of all the Sábians, by reason of their baptismal practices, as belonging to the Christian body.

40. The Mandaeans as 'Christians of St. John.'—The Portuguese monks through whose reports the existence of the Mandaeans was first made known in Europe asserted that they had descended from the disciples of John the Baptist (cf. a letter from Pietro della Valle, dated June 1622), and
from that time, in treatises and text-books of Church History, they have been referred to and regarded (on the ground of Ac 18:19-22) as Christian. S. Ioannis, Christians of St. John. It was not without some support from their own side that this designation gained currency. A number of Mandeans who had transferred their allegiance to the Roman Catholic Church visited Rome in the years 1528 and 1600, and Abraham Echellenis, who cultivated a most friendly intercourse with them in order to gain the fullest possible information regarding their characteristics and doctrine, was told by them that their people called themselves 'Nasara of Yahya'—though in Arabic only, the qualifying phrase perhaps meaning that they did not call themselves so in their own religious language, or among themselves, but that they adopted the name only in their intercourse with people of a different faith; at all events the phrase implies that they did not speak of themselves as krisitiyôn (R 55. 14, 282. 12).

John the Baptist is mentioned in a single tractate only (cf. § 11), which long lay almost unnoticed by the Mandeans, but at length, when the final additions and a number of titles to the writings of the Genâz were to be formulated (R 57. 23. 188. 20. 148. 20. 213. 10. 218. 29. 159) a sect opened in which the Mandeans turned to the figure of the Baptist with intense interest, and it is worthy of note that his eld name Yâhâna (which they pronounce Yâhâna) was now expanded to Yâhâya-Yôhâna, or was suppressed by Yâhâya-Yahya. Yahya-Yahya is the Arabic form of the name—form in which the Baptist is mentioned and highly exalted in the Qurân (iii. 34. vi. 85. xix. 13-15). May we not, therefore, venture to suppose that the reason why the sect of this period bring John into such prominence and make him a hero of their people was that they had already begun to refer to him, in the presence of the Muslim authorities, as the Prophet of their religion? Henceforth they could claim, whenever they were, however they thought fit, to rank as 'Nasårá d’Yahâya'—a name which, to all except themselves, could mean nothing else than 'Christians of John.' Finally, they actually introduced the name of Yahya-Yâhâna into their baptismal formula, and to have done so, in fact, by speaking of the rite itself as having been invented by God, by Mânda d’hâyâhây, and by John (cf. MR, p. 220, on the authority). This innovation would seem to be best explained as a result of the lesson constantly impressed upon the Mandeans by Roman Catholic missionaries during the 17th cent., viz., that their baptism was only the baptism of John mentioned in Ac 19:19, and as a counter-stroke to the attempts to bring them within the Roman Catholic fold.

41. In the period of the Portuguese ascendency in the Persian Gulf.—In the 16th cent. the Portuguese dominated the Indian Ocean, establishing themselves securely at Goa on the Indian and at Muscat on the Arabian coast, and in the harbours of Ceylon. They forced their way into the Persian Gulf, and on the coast of Persia made the island of Hormuz the base of their military forces; and with the pasha of the district of Basra they reached an agreement by which, in return for annual gifts, he permitted them to have a trading-station in Basra, and promised to protect it. The Portuguese soldiers and traders were everywhere followed by the Jesuits, who founded missions, and secured the government of such settlements as 'Christian territories' according to the regulations of the baptismal profession. Thus Portuguese monks came to Basra, where they obtained a house and made one of its rooms into a church, their hope being to win for the Roman faith more particularly the Nestorian (Nestorian and Armenian) Christians living in the district. Their attention, however, would soon be attracted by the Mandeans, for the number of the latter in Basra and its neighbourhoo was at the time of the 17th cent. was still estimated at 14,000-15,000, while in the city itself they are said to have formed the majority of the population (Le-Gouz). Decades may have elapsed before the monks learned that the 'Sabb' held John the Baptist in honour and baptized their children, and so came to believe that this Baptist people were already semi-Christians, and needed only a little instruction in order to become good Catholics. The Discourse which Ignatius issued as a supplement to the Narratio provides the arguments to be employed in persuading the Mandeans priests; but the latter were not to be won over by such simple means. The missionaries, lent upon gaining their end, induced the pasha to order the 'Sabb' to attend the Roman Catholic places of worship and observe Sunday according to the Christian practice of resting from servile work. In this way the work of conversion was set on foot, supported, however, by doles of food and clothing to the children of the poorer Mandeans.

42. In Basra in the time of Ignatius a Jesu.—The place of the Portuguese Jesuits was taken by an Italian mission of Disenclaved Carmelites under the leadership of Ignatius a Jesu. Within a few years Ignatius came to realize that great or lasting results would never be secured among the Mand- eans while they lived in Persia, and he devised the plan of persuading them to emigrate to Christian territories. From the Portuguese vicerey in the Indian Ocean he obtained a guarantee that the Mandeans who so desired would receive grants of land in the colonies under the viceroyal authority, on condition that they would give their allegiance to the Roman Catholic Church. The offer of settlements in Ceylon was accepted by the Mandeans who were eventually rejected because they insisted upon being allowed to take their priests with them and to remain loyal to their faith; but, notwithstanding this, a number of Mandeans were sent forth, such migrations having taken place, as has been ascertained by Assemani from documents of the Congregatio de propaganda fide, in the years 1629, 1633, 1646, and 1650. The whole affair, however, came to very little, and all that Ignatius himself says of it is that he had once sent to the
research can clear up the problem. Meanwhile the temptation has been sown in the direction of the Berlin system, which, according to Petrie, ‘defines all the history and the collateral facts which support it’ (‘Ancient Egypt, London, 1915, pt. i. p. 37’); and Manetho’s credit remains in suspense.

As a service to chronology, Manetho has contributed, though only at second-hand, two interesting traditions of Egyptian history. These are preserved by Josephus (c. Apion, i. 26 i.), and give a somewhat nebulous account of the Hyksos invasion, and the narrative of the expulsion of a race of lepers and uncanny persons, which may conceivably represent the Egyptian tradition of the Hebrew Exodus.

Manetho’s chronological scheme is too long to be given in detail, but will be found, in part or in whole, in most of the Egyptian Histories—e.g., completely in Budge, *Hist. of Egypt*, i. 130–140.

**MANICHÆISM.**—I. Sources.—Manichaeism, the religion of Mani or Manes, is one of those systems which are usually classed together under the name of Gnosticism. The Manichaean religion arose in Babylonia about the middle of the 3rd. cent. A.D., and during many generations exercised great influence both in the East and in the West. Of the literature of the Manichees very little has survived. The fragments of Manichean MSS which have lately been discovered in Central Asia present great difficulties of interpretation, so that, while they confirm much that was previously known, they do not enable us to form a connected idea of the subject. The attempts which have been made to interpret those fragments as well-known attempts in particular certain of the Apocryphal Gospels and Acts, are of Manichean origin must be pronounced wholly unsuccessful. Hence our information respecting this religion is derived almost entirely from non-Manichaean sources, of which the principal is the *Koran*, most of whom wrote with an avowedly hostile purpose. As our conclusions must depend largely on the relative importance which we attach to the various sources, it is necessary first to give some account of them. They fall into four main groups: (1) Oriental Christian sources, (2) Zoroastrian sources, (3) Western sources, (4) Muhammadan sources.

1. Oriental Christian sources. These have, in some respects, the greatest claim to consideration. The Aramaic-speaking Christians of Syria and Mesopotamia were in race, language, and in general culture nearly akin to the primitive Manichees, and had every opportunity of becoming well acquainted with their religion. Unfortunately very little of their testimony has come down to us. The earliest Syriac author whose works have been preserved in any considerable quantity, 1 briefly alludes to Manichaeism as an unimportant heresy.

The children of darkness, the doctrine of the wicked Man, who dwell in darkness like serpents, and practise Chaldæism (i.e., astrology), the doctrine of a being called the Spirit of Ahriman. More information may be gathered from the works of a younger contemporary of Ahrataes, the well-known Epiphanius of Nisibis, commonly called Epiphanius Syrus. References to Manichæism are found in several of his writings, especially in a series of five discourses, entitled *Lettres aux Hypaties*. The treatise against Manichæism composed by Gebriel, bishop of Hormizdah, in the 6th cent., seems now to be lost. 2 Later Syriac writers, such as Theodore bar Khûnî 3 and Barhebræus, 4 do not supply much that is of importance.

Among Oriental Christian authorities we must also reckon the Armenian writer Eznik of Kolb, who lived in the 5th cent., and Sa’id ibn al-Bitrî, generally called Eutychius, who was Patriarch of Alexandria from A.D. 933 to 938. 5

2. Zoroastrian.—The evidence contained in Zoroastrian literatures is far more abundant than that which may be collected from the works of Oriental Christians; moreover, it is much more difficult to interpret, owing partly to the unsatisfactory condition of the text and partly to our imperfect acquaintance with its language. Although the Zoroastrian condemnation of Manichæism which are found in Zoroastrian books bear witness at least to the dread with which the Persian priesthood regarded the rival faith. 6

3. Western.—Accounts by Greek and Latin authors exist in far greater quantity, but they are, from the nature of the case, much less trustworthy. Manichæism was so essentially Oriental (i.e., non-Hellenic) in its character that the Christians of the West would probably have had considerable difficulty in understanding it, even if they had been wholly impartial. That this was out of the question hardly needs to be stated. The strangeness of the system was doubtless increased by the nature of its Gnostic beliefs, but those who are attracted by mere novelties are usually uncritical, while the attitude of uncompromising. On Ahrataes see W. Wright, *Short History of Syriac Literature*, London, 1894, p. 32. The Histories of Ahrataes have been re-edited, with a Lat. tr., by L. Patrois (Paris, 1894).

From this, why the Manichees were accused of astrology will appear later on.

The first of these discourses and part of the second were published by J. J. Overbeck in his *S thiệtum Eypikov Syri anhalmag vaca selecta*, Oxford, 1865, p. 21 ff. This portion of the second discourse was reprinted by K. H. Knies (Nani, p. 595 ff.), with a very inaccurate Germ. tr. The remainder of the work, with the exception of some passages which are effaced in the MS, was first made known by C. W. Mitchell (*Ephraim’s From Refutations, i. London, 1912*). In Ephraim’s *Carmina Niesiana* (ed. O. Bickell, Leipzig, 1900), no. xiv., there is an interesting passage which undoubtedly refers to the Manichæans, though they are not expressly named: ‘Fools in their servants have lopped tails, how that the Darkness ventured to disturb the Light,’ etc.

4. The account of Mani has been published and translated by H. Pougou in his *Inscriptions manichéennes des dépare de Kermadec*, Paris, 1897, in part from Ephraim, and therefore cannot be regarded as independent of that source. Also P. Compte, *La Commenge manichéenne, d’après Theodore bar Ednab (*Bibliotheque sur la Perse, 1905*).

5. The testimony of Barhebræus is to be gathered partly from his *Syri. Ecclesiastical History*, partly from his Arab *Compendium of the Dynasties.*

Perhaps the most important passage on this subject is that which R. W. West has translated in his *Parhian Texts*, ii. 243 ff. (*SBR xxvi.* (1865)). A Germ. tr. is given by Sellmann, *Ein Bruchstück manichäischen Schriftstüms im arab. Museum.*
promising hostility, which was adopted by the great majority of Christian theologians, naturally proved even less favourable to accurate comprehension.

The foreign origin of Manicheism is duly emphasized by being the only Western writer who treats the subject from a purely philosophical point of view; though he speaks of Christianity with a certain respect, it is doubtful whether he ever became a Christian. Of more importance is the testimony of a somewhat later controversialist, Titus, bishop of Bostra in Syria, who died about A.D. 570. In a geographical sense, Titus must be reckoned among Oriental Christians, but his Treatise against the Manichaeans is probably the best modern, according to the Pergamum definition, of its authorship. His words, however, seem to imply that the book was not composed by the founder of Manicheism himself, for in quoting it he is stated to be the author who wrote down the doctrines of that heresy.

There are the very words used by him or else by one of his followers. He afterwards mentions a Manichean work entitled The Treasure, but whether this is identical with the book cited previously cannot be determined. In any case it is interesting to observe that, according to Titus, the Manicheans made every effort to conceal from outsiders the writings of their founder, apparently in order that their external orders might not lose their effectiveness. Another fact, of no less significance, is that Titus professes to have softened down the expressions which he found in his source: ‘these are not the words used by him, but this is what he meant to say, translated into more decent language.’ The inferences supplied by Titus this tendency must be constantly borne in mind.

A more popular but a much less respectable authority is the Acts Archelaus, a work which professes to be a diary of the conversations and travels of Archelaus, bishop of Carchar in Mesopotamia.

Here for the first time we meet with the remarkable theory that Manicheism originated, not with its reputed founder, but with a certain Scythian, from whom the system was passed on to Manes. These Acts are extant in a Latin translation, but they are from a Greek text of which we possess some large fragments. According to Jerome, the book was originally composed by Archelaus himself in Syriac (‘Syro sermones’) and afterwards translated into Greek. But it has been shown that Archelaus is not the author, and that the narrative is to a large extent, if not entirely, fictitious. Nevertheless, some modern writers have endeavoured to show that the book was mistaken in ascribing the Acts to Archelaus, he was right at least in believing them to have been composed in Syriac. The arguments which Kessler has advanced in support of this theory have been shown by T. Nöldeke to be worthless. The author of the Acts, whoever he was, evidently possessed no accurate information about the country in which he placed the scene of his story. For example, he represents the river Strangas as the Western boundary of the kingdom of Persia, which is derived from the Greek Romance of Alexander the Great (pseudo-Callisthenes), as Nöldeke points out. A writer who was capable of falling into such mistakes can scarcely be supposed to have had any definite knowledge of Manicheism. Nevertheless, it is not surprising that his statements were readily believed by Western Christians. With some variations, the story contained in the Acts Archelaus reappears in Epiphanius, Socrates, Theodoret, and several later writers.

By far the most celebrated of the Western authorities on Manicheism is Augustine. At first sight it might seem that his testimony ought to outweigh all those that have been mentioned, for during nine years (from A.D. 373 to 382) he was a professor of Manicheism. Among the works that he composed on the subject, after his conversion to Catholic Christianity, are the following: Contra Epistolam Manichaeorum quam vocavit Fuscantium, Contra Faustum, Contra Fortunatam, Contra Adiamicum, Contra Sacardinum, De Actis cum Felice Manichaeis, De Genesi contra Manichaeos, De Natura Boni, De Duobus Animi, De Utilitate Cordenli, De Moribus Ecclesiae Catholicae et de Moribus Manichaeorum. Many passages relating to Manicheism are to be found in his other writings, particularly in the Confessions. But, on the whole, the amount of positive knowledge which can be gathered from Augustine is much less than might have been expected. In the great majority of cases he confines himself to vague generalities, and, when he descends to particulars, his statements seem mostly to rest on hearsay. It may be doubted whether even his Manichean informants were at all accurately acquainted with the history and writings of their founder. Faustum, whom Augustine represents as one of the ablest and most influential among the Manicheans, was a native of N. Africa, and it is therefore unlikely that he could read the sacred books of his religion in the original Aramaic. Nor have we any reason to believe that the other Manicheans with whom Augustine came in contact were better informed. One of the latest, but not the least important, of the Western sources is the Greek Formula of Abjuration, which repentant heretics were required to pronounce before being admitted into the community.
mony of the Byzantine Church. It is present shape this document cannot be older than the 9th century. It consists of a series of anasmatas, directed partly against doctrines and partly against practices, on which without any definite plan. Some of the doctrines are undoubtedly Manichaean, but some emanate from other sects, and some appear to be gross misrepresentations. Yet, in spite of this mixture of Manichaeanism in which confusion, the Formula of Apojuration contains a certain number of interesting facts.

(4) Muhammadan.—Evidence from Muhammadan literature does not begin before the 9th cent. of our era. The chief source, the Muhammadan accounts, are, on the whole, the most instructive of all, much fuller than those by Oriental Christians and less misleading than those by Western writers. For this several causes may be assigned. In the first place, the Muhammadan scholars to whom we owe these descriptions wrote from a historical, rather than from a controversial, point of view. Moreover, some of them at least had access to very ancient and trustworthy sources of information. For Babylonia, the political centre of the Muhammadan Empire, was also the ecclesiastical centre of the Manichean community, and, accordingly, in that country the text and the traditional interpretation of the Manichean Scriptures were kept up in the form most likely to survive. It is true that after the Muhammadan conquest the Aramaic language gradually ceased to be spoken, but the knowledge of it never wholly died out, as we see in the case of the Christians and the Mandaeans, who have retained their sacred books, in their respective Aramaic dialects, down to the present day.

Almost all Manichean historians who treat of Muhammadan history on Manichaean times take some notice of Manichæism, but the authors from whom we learn most on this subject are the following: (a) Ibn Waddh, also called al-Yaqubi, who in A.D. 891 composed a History of the World; (b) Muhammad ibn Ishaq, who probably lived about the end of the 10th cent. of our era, and is known as the author of the Fihrist, i.e. Catalogue, an agreement storehouse of information respecting literary works of various kinds; (c) al-Biruni, who died A.D. 1048, one of the foremost men that the East ever produced, the author of a book on Chronology and other important treatises; (d) al-Shahristanî, who died A.D. 1153, the author of a work on philosophical and theological themes, these authors wrote in Arabic, although the last two were of Persian nationality.

The story of Main in the Shih-i Manfud of Firuzad, the well-known Persian epic poet, is almost entirely legendary, and the same may be said of nearly all the popular Muhammadan accounts, whether written in Persian or in Arabic.

2. The founder of Manicheism.—With regard to the history of the founder we are mainly dependent on Muhammadan writers, for the Western authorities either tell us nothing definite or else repeat, more or less faithfully, the legend contained in the Acta Archelai. The story there related is brief and folio.

In the time of the Apostles there lived a man named Sethyssianus, who is described as coming from Syria, and also as a Sabaean race, i.e. ex genere Saramonum.\footnote{1 Ed. M. T. Houtoua, Leyden, 1883.} He settled in Egypt, where he became acquainted with the wisdom of the Ephesians, and invented the religious system which was afterwards known as Manicheism. After emigrating to Palestine, and, when he died, his writings passed into the hands of his sole disciple, a certain woman. After a while he died, in consequence of a fall from the roof of a house, and the books which he had inherited from Sethyssianus became the property of the above-named woman. A young man named Corbicus, who had been her slave, Corbicus changed his name to Manes, studied the writings of Sethyssianus, and began to teach the doctrines which they contained, with many additions of his own. He gained three disciples—Adda, and Hermas. About this time the son of the Persian king fell ill, and Manes undertook to cure him; the prince, however, died, whereupon Manes was thrown into prison. He succeeded in escaping, but eventually fell into the hands of the king, by whose order he was strangled, and his corpse hung up at the city gate.

It is needless to say that this narrative, as it stands, has no claim to be considered historical. Some details, in particular the account of the execution of Manes, are confirmed by more trustworthy authorities, but as to the main point—the existence of Byzantine and Terebinthian Manichaism—the confirmation is forthcoming. The assertion that Terebinthius took the name of Buddha seems to be a confused reminiscence of the fact that Manes represented the Indian Buddha as one of a series of prophets who preceded the founder of Manicheism. But this, so far from tending to support the story as a whole, is rather an argument against it.

The accounts of the principal Muhammadan authorities may be briefly summarized thus: on the famine in the east of Asia in the 5th cent., when the population, according to their calculations, was reduced to about 200,000, and the name appears with a false aspirate, Munh (adj. munh, and this aspirate accounts for the form included, Manichæan, Manichæan, man), and the Greek and Latin writers often use, not only as an adj., but also as the equivalent of Manoa, Manes. The origin and meaning of the name Manichæus is uncertain, and to show that it is a real name, not an honorific title like Christ or Buddha.

3. This is the form given in the Fihrist. The forms are uncertain, but the consonants agree with those of Herenn, who is expressly mentioned as the father of Manes in the Gr. Formula of Apojuration. It is well known that the Arabs have no sign for F, and use P or B instead. According to the Fihrist, P is also borne the name of Bishak (Pors, Pákak), while al-Yaqubi calls him Munmuh. The last name, which is purely Arabic, must be due to some mistake.

4. According to al-Biruni, the birth-place of Manes was a village called Saradîn, on the upper part of the Kishn canal, i.e. a little to the south of Bishaf.

5. The statement of al-Biruni that Manes was born in the year 325 in the era of Alexander (i.e. the Seleucid era), and that his life was spent nearly with what we are told in the Fihrist as to the age of Manes when he came forward as a public teacher.

6. For the purpose of his book, the author of the Fihrist clearly implies that Manes did not derive his system from any human teacher. On the other hand, al-Biruni, who is the author of the Fihrist, gives the following account of Manes: "Manes' father 'founded' this sect,—an assertion for which there is no authority.

7. These details are given in the Fihrist, evidently from a Manichean source. What was the precise form of heathenism which Manes's father originally professed? These are the terms used in the Fihrist point to some local cult rather than to Zoroastrianism. The religion of the heart seems to have been a kind of Judaic Christianity mingled with some elements. It was not identical with that of the Mandaeans in later times, though it may have been their prototype.

8. The narrative in the Fihrist clearly implies that Manes did not derive his system from any human teacher. On the other hand, al-Biruni, who is the author of the Fihrist, gives the following account of Manes: "Manes' father 'founded' this sect,—an assertion for which there is no authority.

9. These details are given in the Fihrist, evidently from a Manichean source. What was the precise form of heathenism which Manes's father originally professed? These are the terms used in the Fihrist point to some local cult rather than to Zoroastrianism. The religion of the heart seems to have been a kind of Judaic Christianity mingled with some elements. It was not identical with that of the Mandaeans in later times, though it may have been theirs. That there is a difference between the two is well shown by the fact that the Mandaeans have their own distinctive term for the Manichean system, which is not recognized by Zoroastrianism, and that the name is there written somewhat differently (see Manú, Les Pères d'or, ed. C. Barbier de Meynard and Papu)
Before he was twenty-five years old he had privately gained a few disciples, but he began his public propaganda on the day when Shapir (Sapir), the son of Arshad, was crowned king, i.e., Mānī himself succeeded in securing the support of the king’s brother Pērōn, and through him obtained access to the king himself. In the course of time he is said to have visited India, Arabia, and China, but it does not appear that he ever penetrated into the Roman Empire. He corresponded with books and gnostics in Aramait, and probably wrote at least one book in Persian, probably the work known as the Šādpūrān, which, according to al-Birrūnī, was written from the year 264-265 to the year 267. It is said that Mānī illustrated his writings with colored pictures; his fans as a pupil of Sīrāj al-Dīn Afnān. But the facts given do not prove that Mānī was master of the universe. Mānī was put to death by King Bahārī (or, according to the other pronunciation, Wārān) himself, who reigned from about 272 to 275. Whether he was slain alive, as al-Yaṣāqī and some other authorities state, is doubtful. His corpse was, according to others, hung up by the order of the king, at the gate of Gundi-Shapir, an important city which by a little to the east of the ancient Susa. In later times that gate was always known as the ‘Mānī-gate.’ The execution of Mānī was evidently not so much the personal caprice of the king as to the enmity the Zoroastrian priesthood. At the same time the Persian government made a strenuous, but wholly fruitless, attempt to exterminate the sect. The Mānīs, however, made a refuge in the principles of philosophy, and the Mānīs, even in their most extreme form, were not finally extinguished.

3. The Manichean System. Manicheism, like other forms of Gnosticism, professes to be at the same time a religion and a philosophy, inasmuch as it not only professes to be an inspired dogma, but also undertakes to explain the constitution of the world. It is not, however, to be regarded as a philosophy in the ordinary European sense of the word. It attempts to arrive at philosophical truth by means of the premises of a religious system, and not by the aids of logic or by any kind of scientific induction; on the contrary, they claimed, no less than the primitive Christians, to be in possession of a direct revelation from God. Thus Mānī himself says, in a passage which al-Birrūnī quotes from the Shādpūrān (see above):

Wisdom and deeds have always from time to time been brought to mankind by the messengers of God. So in one age they come from the north, in another from the south, in another from India, in another from Persia, and in another from the Romans of the empire. The message of the messenger comes from the holy place in the House of the Holy Spirit, and the prophecy in this last age, through me, Mānī, the messenger of the God of truth to Babylonia.

So far, so good, forward by Mānī. We have now to consider the substance of his teaching.

The Manichean system is based upon the idea of the essential and eternal contrast between good and evil, between light and darkness. But it is not correct to say, as Western writers have frequently done, that Mānī identified good with spirit, and evil with matter (ήμ). Whether he ever attained to the conception of matter may be doubted; at all events, it is clear that Mānī conceived evil, or darkness, as something capable of thought and volition, and in other words, the dualism was of the imaginative, or poetical, not of the philosophical kind. The following is an abstract of the account given in the Firbat. Originally the light and darkness were bordered on one another, but were unmingled, the light being limitless above and the darkness limitless below. The light, which is called ‘the King of the Paradises of Light,’ but the realm of light includes also an atmosphere and an earth which are external with the totality of the other beings, the sky, the wind, the light, the water, and the fire. Satan, on the other hand, arrayed himself in the smoke, the consuming flame, and the fire, the darkness, the scorching blast, and the smoke. The struggle Satan prevailed over the Primal Man. The heavenly powers then interceded and rescued the Primal Man, but the demons, which formed his panegyry became mingled with the elements of darkness. Out of this confused mass the heavenly powers fashioned the actual world, that is, the material and vegetable organisms, but even objects which we regard as wholly inanimate, such as metals, contain elements of divine light. Hence the distinction between the inanimate and the animate, between the material and vegetal, is a distinction of light and darkness. This view of the universe is, in fact, a vast and complicated machine devised by God for the purpose of enabling the elements of light to effect their escape from darkness. When the light contained in the earth separates itself from the darkness, it ascends in the form of a pillar, called ‘the pillar of light’, first to the moon, then to the sun, and thence to the higher regions. This process continues until at length the final separation is brought about by a pillar of light. At length, about 1658 years. Thereafter the light will be secured for ever against the assaults of the darkness.

The most singular part of the Manichean system is that which relates to the origin and history of mankind. Unfortunately, the statements of the Firbat on this subject are fragmentary and full of obscurities, which the other sources do not enable us to explain in an altogether satisfactory manner. But it is clear, at least, that the first human beings, whom Mānī called Adam and Eve, were represented as the offspring of devils, the object of the devils in producing them being to ensnare them and to keep in their own possession, a portion of the elements of light. The heavenly powers, in order to frustrate the purpose of the devils, sent Jesus (who is here regarded as a celestial being) to instruct Adam on the subject of ‘the Paradises and the gods, the devil and the demons, and the heavenly, the sun and the moon,’ and in particular to warn him against the devils. As to the history of Adam and Eve many details are given, some of which have been borrowed from the Old Testament, and some perhaps from sources unknown to us, while some appear to be wholly fantastic.

1. Alexander of Lycopea (ed. Brinkmann, p. 4) observes that the Manichean system the term ‘eschatological’ is only found in the Platonist or the Aristotelian sense; accordingly Alexander defines the Manichean belief as ‘motion without order.’ (Oscar) 139 ff.

2. According to al-Shahristani, some Manicheans held that the mingling of the darkness with the light had taken place ‘blindly and by accident,’ not as a result of volition. But this theory is obviously a later philosophical speculation.

The nature of these gods is not specified; they are regarded as the offspring of the Supreme God.

It is instructive to compare these statements with the parallel passage in Titus of Rostam, 1:27. For the ‘Primal Devil’ Titus substitutes 3:24.

3. Thus, for instance, the rain is explained as due to the perceptions of devils (Titus of Rostam, 1:27).

The moon, as it waxes and wanes, is supposed to descend into a bucket which alternately fills and empties itself (ib.).

4. It is to be observed that Adam, ‘the first man’ (in Arabic al-‘ālam al-a’lam), is wholly distinct from the ‘Primal Man’ (al-‘ālam al-a’lam).
As we learn from the passage of the *Shāhārānā* quoted above, Mānī held that a series of divine revelations had been promulgated in the world by Buddha, Zoroaster, Jesus, and finally Mānī himself. Mānī adds that Mānī, in another of his books, claimed to be ‘the Paraclete (al-Parāqīţā) announced by Christ,’ and this we learn from other sources also, both Christian and Muhammadan. As the Muhammadan authorities use the Gospels, it may be assumed that it was used by the Manicheans themselves, but we are not to conclude that Mānī knew Greek, still less that he had read the NT in the original. The term Paraclete was in common use among Aramaic-speaking Christians, and Mānī doubtless borrowed it. Precisely what meaning he attached to the term is a question not easy to answer. From the statements in the *Fihrist* as to his parentage and birth we may infer with certainty that, though he laid claim to a divine commission, he was not regarded as more than a human being in the ordinary acceptance of the term. And it is to be observed that in the *Shāhārānā* the earlier prophets, including Jesus, are placed on a level with Mānī. This would seem to imply that they were also regarded as mere men. It is, therefore, not a little surprising to find that Christian authors, such as Titus of Bostra and Augustine, frequently represent Mānī as holding a Docetic theory with regard to Jesus, and that he held a doctrine concerning the earth, which he represented as being nothing except a lie. 

The difficulty of ascertaining what was really the Manichaean doctrine on this point is still further increased by the statement in the *Fihrist* that Mānī pronounced Jesus to be crucified. The *Fihrist* informs us also (p. 336, line 10 ff.) that one of Mānī’s works, *The Book of Secrets*, contained a chapter on the ‘son of the widow, that is to say, according to Mānī, the crucified Messiah, whom the Jews crucified.’ How the strange phrase ‘the son of the widow’ is to be explained, and how this passage is to be reconciled with that in which Jesus is said to have been crucified by the Jews, we have no means of determining. But, whatever the Manicheans may have believed as to the origin of the historical Jesus, the nature of his Body, etc., it would certainly appear that they denied the fact of his crucifixion. Hence, according to Augustine, they were in the habit of contrasting the unreal sufferings of Christ with the real sufferings of Mānī, which they solemnly commemorated by an annual ceremony known as the Procession. That the Muhammadan writers say very little on this Christological question may be due to the fact that here their own views happened to resemble those of the Manicheans.

The teaching of Mānī as to the duties and ultimate destiny of individuals was in accordance with his theory of the universe as a whole. Since the visible world has as its aim the separation of the light from the darkness, practical religion must consist mainly in the furthering of this process. The divine element in man must be freed from its fetters in order that it may return to its heavenly source. With regard to this part of the Manichaean system much misconception has prevailed in the West, from the time of Augustine to the present day. The divine element in man is not to be identified absolutely with the soul, though the Manicheans sometimes used language which admitted of such an interpretation. Yet, if we examine the evidence carefully, it becomes clear that, when they spoke of the soul as divine, they meant only that it contained something divine; and even this was not asserted with respect to the soul of every individual. Another misconception, due chiefly to Augustine’s treatise *De Dumbis Animabus*, is that man was represented as having two souls, one good and the other evil. In reality the passages which are cited as proofs of this theory affirm only the existence of two tendencies in man: this is not wholly good, the body is not wholly evil; so according to the *Fihrist* (p. 335, line 16 ff.), the Manicheans held that after the death of the righteous man, who contained in his body, namely, the water, the fire, and the breeze, to have been extracted by the sun, the moon, and the shining gods, and then ‘the rest of his body which is altogether darkness is cast into hell.’

But, although it was the duty of all Manicheans to take part in the liberation of the light from the darkness, their share in the great work naturally varied according to their several capacities. First of all, a broad distinction was made between the ordinary Manicheans, who were known as ‘the Hearsers’ or ‘the Combatants,’ and the inner circle of teachers or ascetics, whom Western writers call ‘the Elect’ (el *Ecktert, Electi*) and Muhammadans *al-Sudajāt*. The Elect again were subdivided

1. Christian, despite a visible quiescence like tempero, quos vos auditecum, quas causae essent, quod Pascha Domini plenorum nullis interdum a pandis tepidissimae celebrantur, nullis vigillis, null proletri osium induti audiicibus, nulli demum festivale apparat; cum vestrum Bema, id est, diem quo Manicheus occisas est, quod ad summum instructo tribunal et preterea libets arbitrato se in promptu posito et directe adorantissimam, magnus honoriosus praeposuit; hoc ergo cum sequare consilium, respondet, ut non dimitto passionem celebrandum esse, qui verum passus esse, Christum autem, qui natus non est, neque verum sed simulaturn carnem hominis occulto intendentem, non pertinetic, sed finissimae paupertate (Augustine, *Epistolae*Fundamenta, viii.)

2. It is well known that, according to the Qurān (iv. 156), Christ was never crucified; but, when the enemies sought to slay Him, He was removed from the earth and a likeness was sent up to them to be observed, does not imply any denial of the reality of Christ’s triumph. On the Muhammadan borrowed the conception from the Manicheans is very improbable, but at all events Immanuel’s term is adapted to his purpose.

3. The souls of those who are finally lost seem to have been regarded as wholly evil. Thus we read in the *Fihrist* (p. 331, line 24 f.) that Eve had two daughters, and that ‘the bodies possessed by all these souls are an abundant measure of divine light and wisdom, whereas the’

4. See the very instructive discussion by Bauer, p. 162 ff. This expression means in Arabic: ‘the veracious,’ but, as Keil has pointed out (Mitt. p. 234, note 4), it is here to be understood in the sense of its etymological equivalent in Syr.
MANICHÆISM

into several grades and formed an elaborate hierarchy, at the head of which stood the representative of Mani himself. But the position of the Elect differed essentially from that of the Christian clergy. In most cases, the Elect exercised ecclesiastical functions properly so called. Whether Mani instituted anything of the nature of a sacrament is doubtful; in any case, if there were Manichean sacraments, they cannot have occupied an important place in the system since the Oriental authorities make no mention of them, unless, indeed, we apply the term 'sacrament' to such practices as prayer and fasting.1 Hence the main characteristic of the Elect was not that they had the exclusive right, or power, to perform certain acts, but rather that they possessed a fuller knowledge of religion and abstained from certain things which were lawful to the rest of the community. This duty of abstention was called by the Manicheans the 'three seals,'2 which Augustine more definitely characterizes as signaculum oris, signaculum manuum, and signaculum sinuis.3 The first 'seal' imposed restrictions with respect to food and drink, the second with respect to outward actions, and the third with respect to thoughts and desires. Thus the Manichean asceticism implied no thought of expiation; the idea that self-inflicted suffering atones for sin—an idea which has exercised so disastrous an influence in some sections of the Christian Church—was quite foreign to the religion of Mani. The prohibitions which he issued are based upon the belief that certain acts, such as the destruction of life and the intercourse of the sexes, are essentially Satanic, and therefore repugnant to the light. In matters of detail the Manichean code naturally appears arbitrary to us; it is evident that in drawing the line between what is 'Satanic' and what is not Mani was guided much more by his fancy and by various natural associations than by any abstract logical principle. Thus, for instance, all Manicheans were forbidden to kill animals, but it would seem that the Hearers were permitted to eat flesh. The Elect abstained from both flesh and wine; they were forbidden to pluck fruit or vegetables, so that the food on which they subsisted had to be supplied by the Hearers. Similarly the Hearers were allowed to marry and to engage in worldly avocations, whereas the Elect might not acquire property, except for one day and clothing for one year.4 It is remarkable that among the things most strictly prohibited were idolatry and magic.5 As in nearly all Oriental religions, fasting played an important part. On Friday was observed as a fast-day by ordinary Manicheans; Monday by the Elect; viz. Zaddi, the 'righteous,' which we may assume to have been the form employed by the Manicheans themselves (see C. W. Mitchell, op. cit. p. 30). A Manichean who is called a Zaddi,6 p. 127 ff. These Idle women of the party of Mani, those whom they call Zaddiliphat7 Neither Kessler nor any previous writer seems to have noticed that from the same Syr. word is derived zadi, or zandiy, of zandias, a term which was applied especially to the disciples of Mani by the Persians of the Sassanian period, and afterwards by Muhammadans. Various other interpretations of this word have been proposed, but none that is at all plausible. The substitution of nd for dd is a phonetic change for which there are many analogies. That a term which was originally used as a title of honour should afterwards have acquired an opprobrious sense is likewise quite natural; cf. the Germ. Köter, from köd. The Egyptian terms for man and woman are gnedu and wnedu. According to Augustine (c. Fortunatianus, i.), the Elect were supposed to celebrate a kind of Eucharist in their secret meetings. But, as Augustine himself admits that he knew nothing definite on the true subject, we cannot attach much importance to his testimony. 2 Fikrist, p. 333, line 8; Fligiel, Mânî, note 317. 3 Fligiel, Mânî, note 317. 4 Al-Birûnî, Chronology, p. 202. 5 Matt. 5, line 15 ff.; John 15, line 15 ff. The 'three seals' are the first of the ten commandments which, according to the Fikrist (p. 333, line 10 ff.), all Manicheans were required to observe. 6 The prayers, which were recited several times in the day, the following specimens are given by the author of the Fikrist (p. 333, lines 9 ff.): (1) Blessed is our Guide, the Paraclete, the Ambassador of Light, blessed are his guardian angels and adored are his shining hosts. (2) Adored art thou, O shining one, Manî our Guide, source of brightness, branch of life, thou great tree which art wholly luminous. (3) I prostrate myself and adore, with a pure heart and a truth-speaking tongue, the great God the Father of Lights, the Essence of Lights, adored and blessed art Thou, all Thy majesty and Thy blessed worlds which Thou hast called;2 he adores Thee who adorist Thy hosts, Thy kingdom, and Thy majesty, and that which seemeth good to Thee, because Thou art the God who is all truth, life, and holiness. (4) I adore and prostrate myself before all the gods, all the shining angels, all the lights, and all the hosts, who proceed from the great God. (5) I prostrate myself and adore the great hosts and the shining gods who by their wisdom have pierced, expiated, and overcome the darkness. (6) I prostrate myself and adore the Father of majesty, the Great, the Luminous . . . 12 It will be noticed that these utterances contain not a single petition, no confession of sin, and no reference to the need of pardon. But we should not be justifiably in arguing that such conceptions were alien to the Manichean system, for great stress seems to have been laid upon the doctrine of the forgiveness of sin.4 Since, however, the Manicheans did not admit the idea of a propitiatory sacrifice, their theory as to the forgiveness of sin necessarily differed from that which was accepted by the great majority of Christians. Precisely what Mani himself taught on this subject we cannot hope to determine; but the view which appears to have been current among the Manicheans, at least as early as the 4th cent., was that repentance naturally leads to forgiveness, and that man is punished for sinning, but for failing to grieve over sin.5 With respect to Mani's doctrine of the future life we have somewhat fuller information. The division of mankind into three classes, the Elect, the Hearers, and the Wicked, is here specially emphasized. The Elect, immediately after death, ascended by means of 'the pillar of glory' to the moon, and thence were conveyed to paradise; the Hearers must pass through a long process of purification and of wandering to and fro, before they joined the Elect; while the souls of the wicked roam about the world, in a condition of hopeless misery, until the final conflagration, and are then consigned for ever to the realm of darkness.6 4. The relation of Manicheism to other religions.—When we consider the complex nature of Mani's teaching, it will not surprise us to find that very different opinions have been expressed as to its general character and its connexion with other religious systems. Until comparatively recent times it was the fashion to represent Manicheism, and Gnosticism generally, as a mere fantastic perversion of Christianity. When Zoroastrianism and Buddhism began to attract serious attention in Europe, the real or apparent resemblances between these religions and Manicheism naturally gave rise to the theory that Manicheism is a combination of Gnosticism, Buddhism, Zoroastrianism, and the like. For kestra, 'beatitude,' we should no doubt read kestr, 'life,' as Nöldeke has suggested. That this is, apparently, 'called into existence'—the Arab. verb dâha seems here to play a similar part to the use of which see H. Pognon, Inscriptions manédiennes, p. 185, note 1. Here follows a short clause which, according to the Fikrist (p. 333, line 15 ff.), all Manicheans were required to observe. 1 For kestr, 'beatitude,' we should no doubt read kestr, 'life,' as Nöldeke has suggested. That this is, apparently, 'called into existence'—the Arab. verb dâha seems here to play a similar part to the use of which see H. Pognon, Inscriptions manédiennes, p. 185, note 1. Here follows a short clause which, according to the Fikrist (p. 333, line 15 ff.), all Manicheans were required to observe.

Here follows a short clause which, according to the Fikrist (p. 333, line 15 ff.), all Manicheans were required to observe.
Buddhist elements, but whether Christianity, Zoroastrianism, or Buddhism formed the basis of the system was a disputed point. During the last twenty years the prevalent tendency to explain everything in the ancient world as due to Babylonian influence has led to the belief that Manicheism and all other forms of Gnosticism are simply modifications of the old Babylonian religion.

But to those who impartially examine the sources of these hypotheses will appear satisfactory. Whatever elements Mani may have borrowed from older Oriental religions, it is clear that the fundamental principles of his system are neither Zoroastrian, Buddhist, nor Babylonian. The relation in which Manicheism stood to Christianity was undoubtedly closer, but to call Manicheism a Christian heresy would be misleading. The characteristics which Manicheism and other Gnostic systems share with primitive Christianity are not necessarily derived from any Christian sources. They are, for the most part, products of a general movement which, as mankind outgrew the older religions, spread over the civilized world and assumed various forms, according to the special circumstances of each case. The general movement in question has been well described by H. Oldenberg as a shifting of the centre of gravity, in religious matters, from without to within.

The ancient conception of religion, as a sort of offensive and defensive alliance between man and God, a mutual agreement whereby the worshipper secured for himself prosperity, victory over his enemies, generally, tended away, or sometimes violently shattered, and in its place there arose a new kind of belief, which held out the hope, not of earthly enjoyment and dominion, but rather of rest, peace, and redemption (Buddhism, Berlin, 1887, p. 3).

In the time of Mani the old heathenism was no more in Babylonia, though Zoroastrianism had become the religion of the State. Moreover, large Jewish colonies had long been established in the country. The early history of the Christian Church in those regions next to nothing is known, but there can be no doubt that before the beginning of the 3rd cent. Christianity had taken root among the Aramaic-speaking population which occupied the Western provinces of the Parthian Empire. It is also tolerably certain that the Christians under the Parthians were divided into various parties, and that their beliefs sometimes diverged widely from the ordinary orthodox type. In particular the sect founded by the Syrian Christian Bar-daisan (Bardeesan), who died in A.D. 222, seems to have had a great influence. Ephram Syrus goes so far as to call Bar-daisan the teacher of Mani; this is not meant to imply that Mani was ever a Bardeesan, but merely that he adopted Bardeesan doctrines. In any case it is essential to realize that Manicheism arose in a country where several religions were competing with one another, and where, in consequence of this, various hybrid sects had been formed. Of such sects we have already had an example in the Magi, a sect of Gnosticism to which Mani's father attached himself. The hostility of Mani to popular paganism is sufficiently shown by his strict prohibition of idolatry. He that clearly distinguished between ordinary paganism and Zoroastrianism appears from his inclusion of Zoroaster among the messengers of God. He must, therefore, have regarded the Zoroastrianism of his own age as corrupt rather than as radically false; but how much he actually borrowed from it is a very difficult question. To suppose that Mani's dualism was due mainly to Zoroastrian influence would be an unwarranted assumption; for, though both systems are rightly described as dualistic, they nevertheless differ profoundly. The aim of the Zoroastrian is to banish evil from the world; the aim of the Manichean is to extract from the world that which is good. In this respect Manicheism has more in common with Buddhism than with Zoroastrianism; but from the fact that Mani represented Buddha as the communicator of a divine revelation we must infer that Mani's acquaintance with Buddhism was of a very vague kind. It is manifest, however, that in matters of detail he appropriated freely elements derived from very different quarters. Thus we can only attach importance to his adoption of certain ancient Babylonian doctrines, such as relate to the nature and movements of the heavenly bodies. In like manner he borrowed narratives, directly or indirectly, from the OT, although his general attitude to Judaism was one of decided opposition. That he refused to recognize Moses as a prophet is abundantly proved, hence in Christian writings directed against Manicheism the defence of the OT generally occupies a prominent place. It is probable that Mani's aversion to Judaism was largely due to his horror of a practice which Judaism notoriously has in common with popular paganism, namely, the sacrificing of animals.

Towards Christianity he was much more favourably disposed. Whence he derived his influence on the subject is indeed uncertain, for, though it seems probable that the greater part of the NT had been translated into Syriac some time before Mani was born, we cannot say how far he had access to it. Hence his peculiar teaching as to the person and history of Christ, to which allusion has been made above, may be due in some measure not to a perusal of the gospel narrative on his own part, but to the beliefs of his Christian informants. In any case it is clear that some of the most essential features of primitive Christianity, in particular the ascetic view of the present world, were thoroughly congenial to Mani. But he had one great advantage over the Christians; that he provided a much more secure dogmatic basis than any previous teacher. The Christian ascetics, in condemning natural feelings and appetites, were constantly hampered by their theory of God as the Creator of the universe in general and of man in particular; the distinction which they were obliged to make between human nature as such and human nature in its present corrupt state gave rise to endless difficulties. On the other hand, the Manichean teaching, that humanity is of Satanic origin, however shocking it may be to modern sentiment, greatly simplified the problem. In this, as in some other points, Mani displayed a boldness and originality of conception which entitle him to be regarded as a genius of the first order. To represent his system as a mere patchwork of older beliefs is therefore a total perversion of the facts.

4 History of the Manichean community.—At the time of their founder's death the Manicheans were already a numerous and highly organized

---

1 Astrological myths and speculations played a considerable part in some other Gnostic systems, notably in that of Bar-daisan.

2 See, for instance, the beginning of the account of Manicheism in al-Shahrazuri (I, 189). The statement in the Fabulae, (p. 335, line 5 ff.), that Mani rejected the prophets generally, is an exaggeration based mainly on the statement in the Parthian dynasty (about A.D. 224) rests on no trustworthy evidence.

3 A.D. 354, see Eastern Christianity, p. 80. This time was chiefly the Christianity of Edessa and its immediate neighbourhood; much of what he says probably applies also to Babylonia.

5 In this respect, of course, Mani did not differ from some of the early Christians. Thus the Epistle to Diognetus, which is specially regarded as a product of certain Jewish-Christian communities of animal sacrifices in terms of unqualified condemnation, and even in Rabbinical literature a tendency to disparage sacrifice occasionally shows itself.
sect, scattered over a great part of the Persian Empire and drawn from the ranks of various other religions. Some of them belonged to the Persian aristocracy; hence the bitterness with which the Zoroastrian priesthood opposed them. Under the Sassanian dynasty, the Manichaean was often the first name of the community, was a certain Sabian (Gr. Σαβιανός). For many centuries Babylonia continued to be the headquarters of the Manichaean organization, in spite of repeated persecutions on the part of the Persian government. Now and then there was a king sufficiently powerful and intelligent to restrain the intolerance of the priests, but as a rule the Manichaens were treated even worse than the Christians. For this reason, it is said, the persecution could be alleged, since the Manichaens were politically non-offensive, whereas the Christians not infrequently brought persecution upon themselves by their ostentatious display of their philo-Byzantine sentiments. The principal reason, however, why the Manichaean empire in Babylonia and Persia was that large numbers of Manichaens took refuge in Central Asia, where they carried on a successful propaganda among the Turkish tribes.

The first state at which Manichaeism began to spread in the Roman Empire was not certain, but it was undoubtedly well known there early in the 4th century. With respect to its prevalence in N. Africa, two or three generations later, Augustin furnishes evidence. The Christian emperors, as we might have expected, showed themselves no less intolerant towards Manichaeism than the kings of Persia. In the persecution of the Manichaens Pope Leo I. played a specially prominent part. As to the earliest history of Manichæism in Europe, very little can be discovered with certainty, on account of the vagueness with which the term Manichæism is used by Catholic writers. Thus the charge of Manichaeism was brought against the Bogomils in the Byzantine Empire and the Albigenses (g.v.) in Provence, but how little these accusations prove may be gathered from the fact that even at the present day the religion of the Russian Molokanye has been described as a modified form of Manichæism.

On the overthrow of the Persian Empire by the Muhammadan Arabs, about the middle of the 7th cent., the followers of Mani in the East enjoyed a period of comparative repose. Strictly speaking, they claim to toleration, for the Qur'an, which explicitly recognizes Jews, Christians, and Sabians as capable of deserving the favour of God (ii. 59, v. 73), does not mention Manichæism. Nevertheless, it would appear that in the early days of the Muhammadan Empire no penalties were inflicted upon the Manichaens. The extreme simplicity of their cult, and in particular their abhorrence of idolatry, may have satisfied the authorities in the matter of molestation under Muhammadan rule. At length it began to be rumoured that some Muhammadans in high positions had secretly adopted Manichaeism.

In many cases these reports were entirely false; thus, for instance, the Khilafah of Walid II. (A.D. 743–744), whom Muhammadan historians depict as a monster of impiety, is accused of having said that Mani was the only prophet whom God ever sent into the world. 1 If al-Walid really uttered these words, they would prove not that he was a Manichaean, but that he knew next to nothing of Manichæism. It is, however, impossible to deny that secret conversi now and then took place among the literary classes. Apostasy from Islam is notoriously a capital offence according to Muhammadan law (see art. Apostasy [Muhammadan]). Hence we cannot wonder that in the latter half of the 9th cent., when under the Abbasid dynasty the spirit of religious intolerance became dominant in the Muhammadan world, a systematic attempt should have been made to extirpate Manichæism. The organizer of this persecution was the Khilafah al-Mahdi (A.D. 772–785), who instituted for the purpose a State Inquisitor, with the title of 'Inspector of the Zanadiqa.' The term zanadiqa (plural of zanidq) 2 was usually primitively to denote the Manichaens, though Muhammadan writers often employ the term 'herecites' or 'atheists.' 3 That al-Mahdi did not make a very clear distinction between Manichæism and some other heresies may be inferred from a passage in which he is represented as elaborately justifying his policy of persecution, when he here brought against the Manichaens include, e.g., the practice of marriage with near relatives (nabihat al-uhbati wa-l-banat), which was characteristic of the Zoroastrians (see art. Marriage [Iranian]), but seems to have been altogether foreign to Manichæism.

The religious policy of al-Mahdi was generally followed by his successors. The number of persons put to death on the charge of Manichæism certainly amounts to thousands. The Christians and Jews, though subject to various disabilities, were usually tolerated. But in spite of all, the religion of Manicha and long survived even in the heart of the Muhammadan Empire. Some two centuries after al-Mahdi, the author of the Fihrist tells us (p. 337, line 26 ff.) that he had been acquainted with about 300 Manichaens in Baghdad alone. But the region in which they were most numerous was Central Asia. In the territory of the Turkish tribe Taghcha, the majority of the population professes Manichæism; a Muhammadan traveller who visited that country describes it as flourishing and civilized. 4 When, in the reign of the Khalif al-Ma'mun, the (786–833), the Muhammadan emperor of Samarqand condemned to death a large number of Manichaens, they were saved, it is said, by the intervention of their co-religionist, the prince of the Taghcha. 5 This is the only known case in which Manichæism became the religion of a political community. We do not know how long this state of things continued, or when Manichæism finally died out; but we may conjecture that it was swept away, like many other beliefs and institutions, by the great Mongol invasion of the 13th century.

That the Manichaen community in the course

1 Kub-ul-Agbani, vi. 135, last line.
2 See the very interesting paper by I. Goldscheider, 'Babul Abd-al-Raschid und das Zanditiinstrument während der Regierungszeit Ibn al-Muhayd,' in Trans. of the Ninth Internat. Congress of Orientalists, London, 1885, ii. 104 ff. Goldscheider is of opinion that the Manichaean propaganda under the early Abbasids was somehow connected with the anti-Arabian movement of the Persian nationalists (the so-called Shu'ubiyya). Whether there is any truth in this view may be doubted, for Manichæism had nothing to do with political activity. At the same time, it is not surprising that Muhammadans should have often been accused of these wholly distinct tendencies. See p. 1054, note 5, in idem, 1869, p. 94. 3 The Sabians (a name which, of course, has no connection with the ancient Sabines), have been a sect or possibly a group of sects, who existed in Arabia at the time of Muhammad. The disciples of Muhammad were at first called Sabians, a word which later ages the title Sabians is falsely assumed by several religious communities, as a means of protection—e.g., by the pagan of Barmu, in Mescopotamia, and by the Manichaens of Samarqand, as we learn from al-Biruni.

VOL. VIII.—26
of its long history was not altogether free from internal dissensions which might have been safely assumed. But the positive information which we possess on this subject is scanty. We learn from the Fhirist (p. 334, line 4 ff.) that at a date which is not specified, but in any case some time before the end of the 7th cent., a party among the Manicheans severed their connexion with the central authority established in Babylonia and set up an independent organization; whether this schism was due to dogmatic differences or to other causes it is impossible to say. A second division took place about the beginning of the 8th c., and a sect of Manichæans became known as the Miqlaşya, after the name of their leader Miqlaş. The majority of the Manicheans, who remained faithful to the head of the community, a certain Mihr, were thenceforth called the Mihriya. The political and political between these two sects seems to have been matters of discipline rather than of religious belief.

LITERATURE.—In modern times, the first serious attempt to investigate the community of subject was made by Dr. P. de Beausobre in his colossal work, Histories des Manichéens, Amsterdam, 1734-37. He travelled with a wealth of knowledge on a scismatic, but his book is ill-arranged and contains many irrelevancies. An admirable summary and examination of the evidence, as far as it was then available, will be found in the treatise of F. C. Baur, Das manichäischen Religions- system. Cornelsen, Berlin, 1861, 1862, 1863, a work of much value, but should be used with extreme caution; the author’s speculations are often fantastic and his linguistic knowledge is very superficial. A. Harnack, Art. Manichäism, in EB 9 (rev'd by F. C. Conybeare in EB 11), is largely based upon Baur’s work, and supplies much valuable information, but should be used with extreme caution, as the author’s speculations are often fantastic and his linguistic knowledge is very superficial. The most recent and important work on the subject is that of H. R. Rocker, Enain Mani et sa doctrine, Geneva, 1897. Very important contributions to the study of the subject are contained in a series of articles by P. Cumont and A. Kugener, entitled Recherches sur le Manichéisme, Brussels, 1903-1912.

A. A. BRYAN.

MANIPURIS.—Officially the Manipuris are Vaishnavite Hindus. They cremate the dead, and receive the mantra from a recognized Hindu guru in many but not in all cases, they recognize Hindu festivals (but observe them a day late), they revere the cow, they are scrupulous in the matter of food, but, on the other hand, they do not practice child-marriage, they do not seclude their women, they permit divorce, they permit the remarriage of widows, they do not allow the supremacy of the Brahman, and none of the ordinary definitions of caste is applicable to them. Knowledge of the Vaiśnavite doctrines is spreading with the spread of education, but they are still the most backward of all Hindu groups in Assam. With them Hinduism, adopted as the State religion by royal edict (c. A.D. 1705), is of secondary importance, its value in that it separates them from the ruder tribes inhabiting the hills and from the subordinate peoples of the valley. It provides the rites and ceremonies of everyday life. It is, so far as externals are concerned, the religion of the Mani. It exists side by side with the earlier faith to which in the hour of trial and trouble, be they Raja or ryot, they turn unhesitatingly. The continued existence of this earlier faith in such vigour is a notable fact which enables the student of religion to trace the development in India to study at close quarters the process by which in Hinduism animism is tempered by metaphysics, and magic transformed by philosophy.

The historical records of Manipur, Nāthhaunrol, are valid documents for at least five centuries. It is a settled State far removed from savagery. At the present time the population consists of two main divisions—the Meitheis and the Lois. The Meitheis consist of seven clans, each divided into numerous families, the principal clan being that known as the Ningthouja, or Royal, clan. The name Meithei now borne by all the clans is thought to have been the name of the Ningthouja clan before its hegemony was completely established. The Lois, or the conquered people, are not admitted into the Meithei confederacy, but are of similar stock to the Meitheis, and the Meitheis worship the gods of these Loi villages as much as the Lois themselves. The Meithei confederacy is an endogamous group in theory, although in practice the issue of mixed marriages is admitted. The principal order of divine beings is the amang lois. There were originally, as recent research has shown, nine amang lois, or forms associated seven lairemas, or goddesses. There are now 364 such deities. The gods married with mortals, and their issue were promulgated to divine rank. The deities have different names in different places, and there are cases where, in an amang, a deity has been identified with the chief of the gods and with the snake ancestor of the royal family. Other gods are identified with the clan deities of clans still existing. Yet others are the sources of rain, the god of whose function is to guard certain areas and who are therefore known either as manikyingāpa, watchers over or guardians of direction, or lamli, gods of definite areas. Here there is obviously a combination of ideas dating back to the time when definite areas were occupied by local groups each possessing a group deity. Then among the amang lois is the rain-god, and last is the god of the household (Sema-meit), who is occasionally said to be the son of one of the seven goddesses of the manikyingāpa deities, was to keep sickness from entering the State. Each family has a special deity, male or female, who is obviously in origin a deified ancestor, but the worship of some at least of these group deities is not now confined to members of the group. The seven goddesses bear titles describing their functions. From each of them is sprung one of the clans composing the Meithei confederacy. The earth, iron, fish, gold and silver, salt, cotton, fire, and the winds are sprung from these goddesses, either directly or from their daughters. Each of these deities has a laipkham, or god’s place, specially sacred to him or her. Some of these, but for the convenience of their worshippers have abodes in more accessible spots. Such a laipkham is kept, notably on the ridges and passes, and are marked by heaps of stones and leaves. In the sacred groves near the villages of these special worshippers are houses for the deities, and these groves are sanctuaries for bird and beast. The gods play the national game of polo, and a stick and ball are kept for their use. In some cases they are represented by images or marten symbols. They also reside in the chief official of the group, village, or family which forms their special clientele. The principal ceremony in the worship of the amang lois is called the laikaham, literally ‘pleasing the god.’ In every case the god has to be enticed from running water. The ceremony rouses him from a state of quiescence into activity, as is shown by his entering into some selected worshipping. The god benefits directly the area, which gives him strength so that he becomes thereby more potent to aid his worshippers. The process of enticing the deity varies somewhat according to the deity, and is accompanied by numerous subsidiary rites, mainly in order to avert all evil influence. Special precautions have to be taken—e.g., clean fire, a special type manufactured by means of a bamboo and a cane in cross friction. Dancing is a necessary accompaniment of the rite, which often includes the use of fire—abuse—a feature which gives the god great
pleasure. While the ceremony is in progress, social and sexual tabus, immediately paralleled by the customs of the hill-tribes, are strictly enforced, thus indicating that the rite is in some cases to restore the solidarity of social life and to produce in the worshippers a sense of religious exaltation. The social divisions, resting on age and other lines of social cleavage, function separately on these interesting occasions. The deities and divinities of the rites are in some cases such as render the active participation of professing Hindus a matter of some difficulty, but the difficulty is surmounted by substituting a Loh, a member, i.e., of the non-Hindu section of the community in place of the rite, who believer for and by whom and on whose behalf the rite is performed. The Hindu may salve his conscience by merely sniffing the savour of the sacrifice, unmindful of the fate of the Pir Alis of Bengal, who fell from orthodoxy by mischance in that manner. In general, the tendency would seem to be to substitute offerings of fruit and flowers for animal flesh. Human sacrifice was unobservedly practised, probably at no very distant date.

The priests of the ancient order are designated maibas and maibs, and are recruited by the admission of those who become possessed by the deity at one of the high religious festivals. Inasmuch as sickness and disease are attributed to spiritual beings, the maiba is also the doctor of the community, but here there are specialists, and the practical knowledge of the maiba is far from despicable. The widespread belief in possession as a token and source of abnormal power and religious authority is beyond a doubt at the root of much that is important in Hindu doctrine. There is no evidence forthcoming as yet from Manipur to show that the priesthood is hereditary or that the members of the order, like bhakas and jogis, are regarded as jivanmukta (g.v.), or that their funeral rites differ from those of ordinary people. On its practical side the religion ministers to the simple needs of an agricultural community dependent on the weather, adequacy, and seasonability of the rainfall for their subsistence. There are rites to secure rain and rites to stop excessive rain. Not the least interesting of the numerous rites to secure good fortune for the State is the annual selection of cards by which is given its name for the year. Various means of divination are employed for the purpose of securing for this office a person who shall bring the good luck that is dependent on his personality.

Spirits, who accompany animals and fish, and are ever hurtful to mankind, in beautiful sinews who lure young men and make them insane, in vampires, in witchcraft, in the power of trees and of tree-spirits to cure as cause sickness, and in the malignant activity of the ghosts of those who die by violence or of women who die in childbirth are also notable features of their organized religious system. The rites which are performed for the purpose of protection and exorcism in these cases are full of interesting detail, but in general outline resemble the rites performed elsewhere on a similar level of culture for similar purposes.

T. C. Hodson.

MANITU.—Manitu, a word originally applied by the Eastern Algonquins to a god, is properly amat, 'spirits,' with the sign s, meaning any spirit or genius in the shamanistic devil-cult of the Indians, and also any genius loci without the implication of evil. In consequence of the teaching of the missionaries, the conception of one Great Spirit became current among the Indians, and this was expressed by the word hit or kehit prefixed to amat; thus Keht-amit, or Kitanit (Kitanit), to which was added the article expressing a mode of existence; hence Kitanitowit, 'the existence (known as) the Great Amito,' the paraphrase of God as taught by the missionaries. That the Indians themselves had evolved no such conception is abundantly testified by the absence in any American language of a word capable of expressing the idea of God, the words used in John Eliot's Bible (Cambridge, Mass., 1663) and employed by the Penobsicos Indians, Kiehtan and Keitanitom, being merely variants of this artificial compound. As such the conception was introduced in opposition to a spirit variously called Hobbomoco, the Evil Spirit, or Malsum, 'the Wolf.' Another form of the latter appears to have been evolved in antithesis to a contrasted form of Keitanitom, namely, Tan'tum, as opposed to Squantum, the Devil ('angry god'). Manitu is, then, a general word for any sort of a daemon, good or bad, and it has reached a higher significance by purely artificial means.

Nevertheless, the missionaries did not invent the idea of a good spirit, or of an evil spirit, or of a spirit-creator. What they did was to seize upon ideas already current in another form, fuse them, and present to the Indians the idea of a single unity as the embodiment of one unitary conception. The Indians believed that a spirit might be a fair or good-natured power, and that he might be an imimical power, and they also believed that a certain ancestral demon had always nobly disposed towards his children, but it was far from the thought of the Algonquins that there was an ever good and supreme Great Spirit, creator and benefactor, opposed to a Great Spirit of Evil. Wherever such ideas are found they are the thought inherited from forefathers who had been under Christian influence. Thus the Mandans painted upon one side of the tent a figure representing the Good Spirit and on the other side a figure representing the Evil Spirit, the latter being under the protection of both these powerful spirits; but this is merely the degradation of teaching originally strange to them. They recognized certain spirits who aided and certain spirits who opposed them, but not as such opposed to each other. They believed rather that the 'medicine-man' could control all spirits. Similarly, when the 'epic' of Kuliska describes this god of the Passamaquoddi the as son of a divine unknown mother and antithetical to a twin evil spirit, as the principle of good opposite of a sort of Ahri mar, it must be remembered that the Passamaquoddi have long been under higher religious guidance than that of their medicine-men. Even the 'vague faith in a Supreme Spirit' ascribed to them is derived from the same source. What is original is the conception of a superior being, who is father of the special tribe or race that revere him as leader and helper. In general it may be said that worship is not paid to an evil spirit as such, but also that worship is not paid to any good spirit as such.

The manitu is often confused with the wolves of western tribes. But the latter is often less a spirit than a power. His name (g.v.) may be translated as 'wolves,' which lies inherent in certain objects as well as in certain men. Its possession gives power, not, to the Indian's thought, a supernatural power, but a perfectly natural, although unusual, power. Between the two conceptions lies that of the ordinary oke, which at bottom is one with wehe, but is conceived as sometimes a spirit and sometimes a spiritual power. There is some corresponding word to be found in most of the languages of the American Indians, and every one of them com-
notes a power which may be called spiritual. Sometimes it is the purely shamanistic power contained in the medicine-bag, which is not really a medicine-bag at all, being the collection of objects with fetishistic nature, and sometimes it is a spirit, embodied or disembodied, such as the spirit of a waterfall, the spirit of thunder, the spirit of animals, etc. It is a mysterious force which may inhabit matter or make itself felt as an expression of spirit. The powers of nature have it, generally winds, storms, productive earth, and animals all have it, though some in larger amount than others. Finally, men have it in certain cases. But there is also another and quite distinct between this power and that found in spirits proper, where it becomes individualized. It is this very power that is the ‘medicine’ of the conjurer and nature-subduing priest. Whether it be called manitu, ohi ki (in Maya form), it is the same thing under a shifting terminology, except that among certain tribes it is more apt to be conceived as impersonal and among others as personal. Manitu is generally personal, ohi ki is generally impersonal, as we can see in the Powhatans, namely, that the corollary to something ‘above’, and Brinton interprets this as super in the sense of supernatural. But it is more probable that the word means super in the sense of superior. These Iroquois and Dakota forms are etymologically closely allied, and a possible connexion with Sioux ohippee may be admitted; but it would be unprofitable to attempt, with Brinton, to connect these terms with the above-mentioned ku of the Missisippi. The ‘Quaker’ of the Powhatans is another form of the same word, the notion of the sun, not the lesser. This word, like Tantam and Squamont above, is an adaptation from approximately corresponding Indian sounds (Quanlil is a name); and it contains the ohi of the Iroquois and Algonquins, but it is not probable that it is one with the southern huka, ku, etc. The Algonquin ohi means a spirit of any sort—e.g., the spirit of a body of water, or the spirit of a wilderness, and expresses a kind of divinity, the idea of a distinctly demoniac power ruling the winds, but not in a devilish manner; for, especially among the Hurons, the ohi gives good fortune and regulates the winds for the benefit of the good Indian.” It is a spirit and is represented as a host, and in this respect it differs from the conception of anitu (manitu), though in other respects it is difficult to perceive any distinction between the anitu (manitu) and the ohi; perhaps, as appears from the geographical distribution of the two words, the ohi soon spread to the East, while the anitu penetrated from the West to the Eastern tribes.

The manitu of greatest authority among the Algonquins was Michabo, and an analysis of this peculiar being shows that he was far from being an inanimate supreme spirit. Like many of the Indian spirits, he was a very superior animal, Mishabo meaning ‘great hare’ (originally manibocho). This manitu was revered from the Northern line of the States to the Mississippi, and far beyond the Mississippi. He was represented as the originator of all the system of conjuring and exorcising which makes the real science of the medicine-man; he ruled the winds and guarded his people, but was as often tricked and deceived as he turned trickster and deceived; he was for the most part a humorous buffoon, whose exploits amused the Indians, as those of Brer Rabbit amuse the Negroes. On the other hand, he is referred to as ‘the hare that made the moon,’ and he is even said to have created the earth. But as creator he is not dignified, nor even serious. It is more natural to him to hunt, and, when autumn comes, to smoke his last pipe before turning in to prepare for the winter. It is the smoke of his last pipe that makes the haze in the air of autumn. That he originally came from the East, and, according to the earlier accounts, sends (not creates) the sun and moon but of the East, has left to the legend a conjecture that Michabo has come from a confusion of wabos, ‘hare,’ with wabi, ‘light’ (Brinton, Myths of the New World, p. 165). There is the greatest confusion in the form of the name now known as Michabo, which appears to have given the name to the ‘superior’ manitu of the Algonquins as well as Namibozho and Manibozho, apparently because the name was sometimes rendered michi (‘great’) and sometimes manitu (‘spirit’), with wabo, ‘hare.’ That is, Michabo was thought of as the ‘spirit-hare’ or as the ‘great hare,’ and this ‘hare,’ according to Brinton, is a later Indian mistake for ‘light.’ Although the words are alike, and wabi means ‘white’ (wepa means the eastern light), yet nothing is more apt to lead one astray than reliance upon the alternate meanings. Brinton has done for American studies, he wrote under the dawn-myth influence of his day and probably said more stress upon etymology than upon etymology. The truth is that the interpretation best justified in accordance with Indian belief and tradition. Michabo was a demoniac animal of kindly disposition and endowed with a great magician’s knowledge and cunning, which, however, could not keep him out of incessant difficulties. He was not a god, still less a god of goodness, but, as has been said of similar Indian spirits, a spirit of good nature. He is the son of the wind, one of four brothers born at a birth, but he took command of them. As they were born North, South, East, and West, it seems as if he represented one of the four winds. Yet the early missionaries declared that he and the four winds were the chief Algonquin gods. As expressed in the account of the voyages of Baseler and expresses a kind of divinity, the idea of a distinctly demoniac power ruling the winds, but not in a devilish manner; for, especially among the Hurons, the ohi gives good fortune and regulates the winds for the benefit of the good Indian. It is a spirit and is represented as a host, and in this respect it differs from the conception of anitu (manitu), though in other respects it is difficult to perceive any distinction between the anitu (manitu) and the ohi; perhaps, as appears from the geographical distribution of the two words, the ohi soon spread to the East, while the anitu penetrated from the West to the Eastern tribes.

The manitu of greatest authority among the Algonquins was Michabo, and an analysis of this peculiar being shows that he was far from being an inanimate supreme spirit. Like many of the Indian spirits, he was a very superior animal, Mishabo meaning ‘great hare’ (originally manibocho). This manitu was revered from the Northern line of the States to the Mississippi, and far beyond the Mississippi. He was represented as the originator of all the system of conjuring and exorcising which makes the real science of the medicine-man; he ruled the winds and guarded his people, but was as often tricked and deceived as he turned trickster and deceived; he was for the most part a humorous buffoon, whose exploits amused the Indians, as those of Brer Rabbit amuse the Negroes. On the other hand, he is referred to as ‘the hare that made the moon,’ and he is even said to have created
the Iroquois. He destroyed the frog, which had made earth a desert by swallowing all the water, and he learned the wisdom of the tortoise which supplied him with the knowledge of how to make fire. Tosekha gave this knowledge to man. Yet here the brother is not represented as an animal; it is a simple conflict of white and dark, or light and darkness, a culture-myth which the Algonquins kept in animal form, while the Iroquois preserved or invented it without basing the myth upon any thing save the natural antithesis of light and darkness (cf. art. DUALISM [American]). It is this myth that caused the belief in American Indian dualism to receive wide acceptance, as it was thus originally interpreted by Brebeuf in 1629.

As the word manitu has been widely used by ethnologists, it has naturally lost somewhat its original signification and at the same time has gained a new connotation, so that it has come to mean special forces or entities without life, in his life retires into solitude, and after fasting and prayer is rewarded with the vision of a certain animal, which then becomes his totem. This is adopted by his clan, and when the clan becomes a part of a larger tribal body, it becomes the guardian of the clan, though with a marked tendency to become simply a totem-crest. The tutelary guardian-manitu thus becomes a more specific force, and the crests become merely the property of certain families. The myth of the totem-maniu received with it the powers or privileges still retained by the protector of the spirits, who continue to appear to bear his name, and the possession of these secrets forms the basis for the secret societies widely spread among the Indians of the Northwest. This is the 'individual totem' acquired by every youth at puberty, which, when the organizer of the Indian in a decayed state, is no longer identical with that of the ancestor and that inherited. The youth at this period wanders from his father's lodge in a secluded spot fests and cries to the spirits, inviting any one of them to become his personal patron (cf. art. COMMUNICATION WITH DEITY [American]). During his sojourn, he receives a totem, and on his return home, kills such an animal as he has seen in his dream, and preserves its skin in his mystery bag ('medicine-bag'). It is possible that the individual manitus, though in some cases a later development than the clan-toke, have other cases, notably among the Eastern tribes, of independent origin and as antique as the totem-maniu. Even among the Eastern Algonquins the acquisition of a special manitu by animal form by the youth who has just entered upon manhood.

On this expression see H. Kern, in SBE xxxi. [1884] 4; cf. Saddhabarina-prajnaparamita, ed. H. Kern and B. Nasjio, Petrogond, 1899, p. 69; 'A certain Bodhisattva, when he falls asleep, the first animal, bird, or reptile of which he dreams he considers to be the one designated by the Great Spirit of the tribe for his mystic protection during life. He then returns home, kills such an animal as he has seen in his dream, and preserves its skin in his mystery bag ('medicine-bag'). It is possible that the individual manitus, though in some cases a later development than the clan-toke, have other cases, notably among the Eastern tribes, of independent origin and as antique as the totem-maniu. Even among the Eastern Algonquins the acquisition of a special manitu by animal form by the youth who has just entered upon manhood.

MAHàJàJRí.—Like the majority of Buddhist 'gods,' Mahàjàjrí is represented under various aspects: (1) in the Great Vehicle, or Mahàyàna (q.v.), properly so called, he is a bodhisattva, an entirely Buddhist personage in definition if not in origin (his origin is obscure; cf. AVALOKITÉSVARA); (2) in the 'Tàntre Vehicle,' which is of very early date and is not always distinguished from the Great Vehicle proper, Mahàjàjrí becomes one of the names, and often the principal deity of the 'Tàntre Vehicle'; (3) the cult of Mahàjàjrí, originating in India, took a peculiar development in China: it probably spread from China into Nepal, where Mahàjàjrí is the mythical god of civilization.

1. As bodhisattva, Mahàjàjrí is sometimes described by his numerous names is perhaps Mahàju embodà, 'pleasant voice.' His usual epithet is kumàra, or kumàrabhàta, 'young man,' 'royal prince,' a title, whatever its origin, means technically a bodhisattva at the stage when, having received consecration (abhiséka) as a prince, he is associated with the power of a Buddha and becomes his right arm (see BODHISATTA, vol. ii. p. 749). He is named in the first rank of bodhisattvas, before Avalokiteshvara, at the beginning of the Third Layer (translated into Chinese A.D. 147–186), where he is represented (ch. xi.) as a great converter. The 'scholastic' sàtras and devotional works give him as a type of bodhisattva, relate his vow, attribute to him moral and supernatural powers, and present him as a guide and deliverer of all beings and believers of the Great Vehicle, and celebrate his power. Legend associates him with the revelation of the books of the Prajñàpàramità, the Revealer of the Prajñàpàramità, the god of the Word, is the patron of the Great Vehicle. To some extent, Mahàjàjrí becomes the god of wisdom, a personage of high importance. According to Fa-Hian (see J. Legge, Fa-Hien, A Record of Buddhist Kingdoms, Oxford, 1886, p. 49), the followers of the Mahàyàna worshiped the Prajñàpàramità, the god of the Word. We have many images of Mahàjàjrí; the most ancient, with two arms, are those which make his characteristic mark the Prajñàpàramità carried upon a lotus.

2. As Tàntre god.—It is in the Tàntre section of the Tibetan scriptures (Khos-kyi, 'Kanjur' as well as Tanjur) that Mahàjàjrí takes an extraordinary development. 1 Half a dozen Tantras (Kanjur) bear his name; among them is The List of the True Names of Mahàjàjrí Jhàna-sattva. 2 The last term, 'Essence-of-knowing, is no longer used. This becomes the god of wisdom, a personage of high importance.
by the Tanjur to Mañjuśrī: ‘spell (sādhu) of the’sus Buddha, the Essence-of-knowledge Mañjuśrī,’ which begins as follows:

· Homage to the Buddha of the beginning, the middle, and the end, free from every stain of sin, a body immaculate by nature, primordial Buddha.’

Sādhana (spells) are magical operations by means of which the worshipper brings a deity into his presence in order to identify himself with the deity—which is not difficult to accomplish, since every man is essentially nothing but deity, though paradigim and stained. These operations include ‘diagrams’ (manadalas), geometrical figures formed of squares and circles, more or less ornamental and sacred, and within each other, upon which is ranged an endless succession of deities represented by magic syllables. Mañjuśrī often occupies the centre of these manadalas.

Tāntā, gods have two aspects, a ‘right hand’ aspect and a ‘left hand’ (or erotic) aspect. Under the former Mañjuśrī is called ‘Lord of speech of the ontological Universe’ (Dharmadhātu-vyāgara); under the latter he is ‘Diamond-Love’, ‘Thunderbolt-Love’ (Vajrāngāra). His right-hand aspect is seen from the following:

· Quon s ‘identifica à Dharmadhātu-Vyāgara, qui a le corps tout blanc, quatre faces, huit bras: les cinq Bouddhas (qui représentent les cinq essences de Mañjuśrī dans la connaissance) ornent sa corne de joyaux... les deux mains (ou l’arme) sont les signes de l’enseignement: les trois autres, dorment le triangle, le fléau, la hache: les trois autres de gauche, le livre de la Prajñā.’

Then, Foucher goes on to say, the book, the four arms (the eight is simply a multiple), and especially the four faces, suggest representations of Brahmā. Grünwedel remarks that Mañjuśrī and Brahmā share the favours of a common loka (divine energy, feminine aspect, of a god), Sarasvatī. It is noteworthy also that the Narasasvatī (viii. 19) gives Brahmā among the names of Mañjuśrī. As soon as the Buddhah and bodhisattvas became gods, they inevitably became gods after Hindu fashion; Avalokīteshvara has more likeness to Śiva, and Mañjuśrī to Brahmā. Mañjuśrī always occupies an important, and often the chief, place in Buddhist polytheism.

3. As developed in China.—E. Huber was the first to observe that the canon of one of the Buddhist schools of the Little Vehicle, or Hinayāna (g.e.), contained traditions foreign to India — e.g., the legend of a town of Kathan — and he wondered, therefore, whether this canon had not been considered augmented and modified in Turkey itself. It is now certain that ‘Serindia’ and, later, China itself collaborated in the development of Buddhism. The story of Mañjuśrī, who, according to the Chinese pilgrim, now dwells in China, who is represented in the miniatures of the Nepāles MSS as a god worshipped in China, and who, according to the Nepalese tradition, came from China to Nepāl, is interesting from this point of view.

LITERATURE.—This is sufficiently cited in the footnotes.

MĀRA.—It seems that during the so-called late Vedic period, new gods, gods of a new style, were created. They wear, on the one hand, an aspect which is popular and mythological, and, on the other, one which is sacerdotal and esoteric; they are the expression of a pantheistic and pessimistic philosophy; but they are essential to devotion and worship. Brahmad-brahma is the most eminent among them. Kāla, ‘Time’, creator and destroyer, Kāma, ‘Desire’, a cosmic entity, and many others may be embodied in the figures of the popular pantheon. Our Buddhist connection on these gods is, as a rule, scanty, and, in many cases, we are largely indebted to Buddhist or epic sources.

This is the case with Māra, who is not unknown in the Atharvaveda, that aristocratic compendium of demonology; he is an important figure in Buddhism, and the Upanisads show the elaboration of the ideas which constitute his frame in Buddhism.

The Atharvaveda joins together Yama, the old Áryan king of the dead, Mrtyu, Death, Agha Māра, the evil slayer or hateful murder, Nirnāta, the destroyer, and Sarva, the prototype of Śiva (xi. xxiii. 1). Elsewhere (xi. viii. 19) it mentions the ‘deities called Misfortunes, or Evil (pāpamita, pāpamita dāna-vatā), and has derived (vi. xxvi. 1-2, xxiii. 27-28, i. 29) to Misfortune (pāpamita). Māra, or Mrtyu, is Death personified, the god who kills, and he has already acquired his Buddhist qualification, pāpamita, of ‘pāpānīman.’ This dark figure may be identified Yama or Sarva, also a mythological god.

That is what we know of Māra from the oldest literature. He quickly acquired a metaphysical and moral significance. For the Brahmans and of the Upanisads, who admit transmigration and are anxious to find the path to the other shore of transmigration, Māra, or Death, may be regarded as the sovereign of this subsolar universe; whoever obtains a passage beyond the sun reaches the realm of immortality. For the common people, the recurrence of birth and death is the rule; the sun is Death. The legend of Nachiketas in the Kathakā Upanisad is of importance for the history of Death: a young Brahman descends to Hades, and, unmoved by all promises of transient pleasures, wrings from Yama, the god of death, the secret of that which lies beyond death and the means of liberation from death, this only means losing the knowledge of Brahman which confers immortality. H. Oldenberg rightly compares this Nachiketas-Yama legend with the Buddha-Māra legend. Buddha also rejects the offers of Māra in order to obtain the supernumerous bhūmis; but, whereas Yama is benevolent and himself reveals the liberating truth to Nachiketas with only the habitual jealousy of a god, Māra is the evil one, the tempter.

1 Oldenberg, Buddha, tr. Hosi, p. 54.
Buddha is the deliverer from death and birth. Mara is the personal enemy of Buddha and Buddhism, the evil one, the tempter of Buddha and Buddha's disciples.

The position of Mara is clear in all our texts: Mara embodies desire, the universal fetterer, the sensual life both here and in the other world.

In scholasticism three Maras—panurputra māra, the devil Mara, māraṇāsāvara, Mara as death, and klesāsāvara, Mara as vices and passions—are distinguished. In ancient times these Maras were confused. Mara is not an allegory in the Pali stories of temptations; he is a demon; he is spoken of in the Pali-stories show a gradual development.

It follows that mythological features are not wanting, even in the oldest tales of the Pali canon. They are not, however, predominant. We are actually confronted with the temptation of Buddha by the multiplicity of Mara's daughters and Desire, Unrest, Pleasure (Tahāra, Arati, and Rati). It has been said that these stories—the intervention of Mara in order to make the future Buddha abandon his ambitions (a common topic in the Mahābhārata: gods grow jealous of the power acquired by their chosen, and dispatch fair damsels to trouble their meditation), or in order to make Buddha reach nirvāṇa prematurely—are only permutations of the doctrine of desire. Sākyamuni. This view is by far too rationalistic. Such stories, it may be, were looked upon in this light by some philosophers or 'modernists,' but it is safer to admit that the Buddhists believed in a divine enemy of the eternal welfare of men, and embodied this enemy in the traditional god of death. Mythical and folk-lore accretions, as well as scholastic concoctions, naturally follow from such a belief. Monks and nuns, especially when they refer to the 'heritages,' know that Mara could appear to them under any form, and ensure them into philosophical discussions.

The Sanskrit sources, late when compared with the Pali ones, but not insignificant even for the solution of the passages which have in common with Pali, indulge in much more dramatic and would-be poetical descriptions of Mara's attacks upon Sākyamuni. Some episodes are entirely unknown in the Tipitaka, viz. the battle for the bohlī, the possession of which, for all the compilers of the Lalitavistara, seems to be almost identified with the possession of the bohlī, the Enlightenment, itself.

It has been pointed out that even in the Pali canon, and perhaps even in the authorized literature, the inventions to be found in the more modern biographies of Sākyamuni, the Lalitavistara and the Buddhacarita, mark a further point in this development. There is truth in this statement: the multiplication of Mara's daughters and their counter-attacks, a large part of the mise en scène of the Lalitavistara, are not archaic—but the course of the development is not necessarily a chronological one. Less or more mythological versions may be productions of the same age in different circles.

It appears that the Mara folklore has been more luxurious than can be judged from the Pali canon. Some bits of popular folklore which have found their way into the authorized literature may be regarded as fragments of a larger cycle. It is only by a mere chance that we know that Mara roams everywhere, in the visible shape of murky smokiness, to catch the souls of the dying.

abode, no heaven of his own, in the official cosmology of the Sarvāstivādins (see art. COSMOGONY and COSMOLOGY (Buddhist)).

3 See art. Temptation (Buddhist) for the comparison between the Buddhist stories of temptation and the Gospel.

Original sources, Vedā, Pali, and Sanskrit, have been studied by Senart and Windisch.

L. DE LA VALLÉE POUSSIN.

MARCIONISM.—1. The Founder.—According to the earliest and most reliable accounts, Marcion was a shipmaster (navicular or naevrus) of Pontus, and may have been a native of Sinope. The story, which makes him the son of a Christian bishop in that region, and declares that he was excommunicated by his father for corrupting a virgin, is, on the whole, improbable, and may have been based on a misunderstanding of some phrase about his corrupting the doctrinal purity of the Church. It is possible that he was born and bred a pagan, and was converted to Christianity about the time of his journey to Rome. But the fact that his system of doctrine is based entirely on the Jewish and Christian Scriptures makes it, on the whole, more probable that he spent his youth in a Christian atmosphere.

Marcion arrived in Rome in or near A.D. 140—after the death of Hyginus, according to Hippolytus (see Ep. 34, ep. 13, ep. 36, ep. 15, ep. 19, ep. 19), a recent convert, he at first became a zealous member of the Roman Church, to which, according to Tertullian (de Praes. 30), he presented the sum of 200,000 sesterces. But before long trouble arose through his falling under the influence of the Syrian teacher Cerdo, who had a certain connexion with the Gnostics, and whose distinctive doctrine was that 'the God proclaimed by the law and the prophets was not the Father of our Lord Jesus Christ. For the Son is known, but the latter unknown; while the one also was righteous, but the other benevolently' (Tren. Hier. l. x. vii. 1).

It is easy to see how Cerdo's teaching would lead Marcion into uncomfortable relations with the orthodox Church; and it is not surprising to learn that his gift of money was returned to him, and that he was placed outside the pale. This took place about the year 144, and it is stated that Marcionite propaganda must have been active, since Justin Martyr tells us in his First Apology (c. 150) that Marcion, by the help of devils has caused many of every nation to speak blasphemies, and to deny that God is the maker of this universe, and to assert that some other being greater than He has done greater works' (xvi).

Tertullian, who was writing his adversus Marcionem in 207 or 208, places the activity of Marcion in the reign of Antoninus Pius ('sub Flo impius'). Eusebius (loc. cit.) says that Cerdo came to Rome in the episcopate of Hyginus (c. 137-141), and that his successor Marcion flourished under Anicetus (154-166). In view of the different statements, we may conclude that Marcion became active as a teacher some years before 150, and that his activity ended before or about the time of the death of Anicetus. For Marcion's own death no date can be definitely assigned.

2. The doctrine.—The teaching of Marcion may be reviewed under five heads: (a) the teaching, or the doctrine of God; (b) Christology; (c) criticism

1 This account, which was unknown to Tertullian, may be traced through Epiphanius to Hippolytus. The Armenian version is thus given by Eusebius (Historia Ecclesiastica). It states that Marcion is native of Pontus, the son of a bishop. And having corrupted a virgin, he went into exile on account of his father's having expelled him from the Church. And going to a heretical church in order to seek absolution (lit. penitence) and not obtaining it, he was irritated against the Church' (Against the Sects, bk. iv.).
and exegesis of the Scriptures, (d) the application of religion to practical life, and (e) the ritual of worship.

(a) Theology.—In theology Marcion’s main assertion was that the just God of the law and of the OT generally was other than and inferior to the God revealed in Jesus Christ, the chief attribute of the latter being goodness or loving-kindness. The idea of a dual godhead seems to have come from the Gnostics through Cerdo, and this fact may be connected with the (otherwise doubtful) statement by Clement of Alexandria (Strom., vii, xxv, 107) that Marcion’s god, contemporaneous with Basilides and Valentinus, ‘‘companied them as an elder with younger men.’’ At all events, Marcion’s theology differed from the Gnostic in excluding any doctrine of mons, and, indeed, any element which could not be derived from his interpretation of the Jewish and Christian Scriptures.1 His teaching was not in any sense pagan. His lost work named the Antithesae contained the proofs of his theology, which were attained by placing utterances by and concerning God in the OT side by side with opposed statements by Jesus and Paul about God in the NT.

He further differed from the Gnostics by abating of every attempt to construct a completed speculative system. The contrasts which he drew out were final, and he did not seek to harmonize them in a higher principle; for him the two ἄγεια were and remained completely separate, in spite of the moral superiority of the God of the NT. The logical weakness of the position is well shown by Tertullian. On the one hand, the introduction of number or plurality was inconsistent with the essence of true godhead; and, on the other, the interposition of the good God contemporary with a world which had been created by and belonged to another was an obvious stumbling-block.

(b) Christology.—The mode of self-revelation employed by the good God was, according to Marcion, that ‘‘in the 15th year of the reign of Tiberius He (i.e. Jesus Christ) came down to the Galilean city of Capernaum’’—to which Tertullian adds the explanation, ‘‘of course meaning from the heaven of the Creator, to which He had previously descended the Third Gospel (see below) which He believed to be genuine, and shared the belief of his time in other elements of the Christian creed; thus he laid great stress on our Lord’s descent into Hades and His preaching to the men of former generations who were there confined.

Again, as he believed in two Gods, he also recognized two Christs. According to him, the Messianic prophecies of the OT were true predictions, referring, however, not to Jesus Christ but to the Messiah of the Gnostics. He certainly did not attribute to the degree of activity which some of his followers did. In his view the Creator (i.e. the just God of the law) was the ruler of the whole material universe.

(c) Criticism and exegesis of the Scriptures.—In his criticism of the Scriptures Marcion combined a high estimate of the objective truth of the OT as a historical document with a startling and audacious subjective criticism of the NT. His mode of handling each was largely dictated by the necessities of his position. Convinced of the fundamental discrepancy between the theologies of the OT and of that which he regarded as the genuine kernel of the NT, he naturally laid stress on every narrative, discourse, or verse in the NT Scriptures which seemed to him to set forth the Jewish as opposed to the Christian view. His treatment of the OT has at least one great merit—he rejected allegorical explanations such as were current among the Gnostics; he took the history literally, and laid full stress on its distinctive characteristics. In the NT, on the other hand, while he similarly preferred the literal to the allegorical explanation, he proceeded ruthlessly in the way of cutting out such books or portions of books as did not fit in with his view of the facts, and in re-editing the text to any extent on subjective grounds. As the Third Gospel seemed to him to contradict the tenor of his theology, he adopted it, though in a mutilated and much altered state, as the only reliable portion of the historical writings contained in the NT. To him Paul was the only true apostle of the Master, and he believed that the Third Gospel was not written under Paul’s supervision and expressed Paul’s view of the life of Christ. The other Evangelists 1 he regarded as handing on a false Judaic tradition which had grown up among the Jews and he therefore rejected their works in toto. In the rest of the NT he accepted only ten Pauline Epistles, rejecting the Acts, the Pastoral Epistles of Paul, and the rest of the NT writings so far as known to him. And in the ten Epistles he used considerable freedom in rejecting or altering passages which conflicted with his views. An understanding of his detailed treatment of the NT can be best obtained by reading the fourth and fifth books of Tertullian’s adv. Marcion. 

(d) The application of religion to practical life.—It is easy to see that, however arbitrary and subjective was Marcion’s attitude in relation to the Christian tradition and its literature, his main interest in the matter of form is not speculative, but religious and practical. This is shown by the fact that he attempted no higher synthesis, but allowed what seemed to him the irreconcilable opposition between the Creator and the NT God to continue until the end of time. To him the means of salvation was faith in Jesus Christ and in His Father. This faith was to issue in an ascetic life which despised and rejected the works of the Creator, so far as the conditions of human life allowed. Thus the celibate alone were admitted to baptism. A further consequence of this attitude was that Marcion denied the resurrection of the body; the salvation through Christ was for the soul and spirit only. The moral earnestness of the Marcionite community was proved both by the zeal of its propaganda and by the large number of its martyrs.

(e) The ritual of worship.—The aim of Marcion was to found not a school, but a church. Accordingly, in points of rite he was to appear later as the messenger of the just God of the OT. But his exposition of the work of this Messiah does not seem to have proceeded beyond applying to him the language of OT prophecy.

1 Marcion appears to have held the independent, though perhaps unconscious, view that He was not God of the OT. He certainly did not attribute to the degree of activity which some of his followers did. In his view the Creator (i.e. the just God of the law) was the ruler of the whole material universe.

1 There is no definite evidence as to whether Marcion knew the Fourth Gospel.
of the peculiarities of usage in the Eastern branch of the Marcionite church may be gathered from the statements of Eznik (bk. iv.): 'He allows not one baptism only, but three after (successive) transgressions, and in places where no one has died he urges others to be baptised. And he has the boldness to direct women to administer baptism—which no one from the other sects would be bold to do. The second or a third baptism, nor (does he venture) to admit women to be priests,' etc.

Marcion's followers seem to have elevated him (at least virtually) to the rank of bishop, and the constitution of the sect was probably episcopal, though on this point we have not much information.

3. Later developments.—Among the followers of Marcion some, like Politius and Basilius, followed their master in recognizing two principles or divine beings; but some, like Apelles, held only one ultimate principle, the God of the NT, while others accepted three independent principles—the Good, the Just, and the Evil. Of these different teachers Apelles is the most interesting. Starting from the Marcionite opposition between the Creator and the NT God, he seems to have regarded the former as 'a foolish god' and the latter as 'a wise god.' The material world, in the view of Apelles as of Marcion, was created by this 'opposing spirit,' and so Apelles also taught an ascetic view of life. On the other hand, he rejected Marcion's doctrine of the divinity of Christ, and held that Christ really felt and suffered in His earthly experience, although He did not possess a truly human nature in the orthodox sense. But he maintained that in the Crucifixion lay the hope of man's salvation.

Then and there was the popular saying, 'Let us die for him, for he has died for us.' This was widely spread both in the West—Rome and Italy—and in the East—Arabia, Syria, Armenia, Cyprus, Egypt, and perhaps even Persia. After sharing in the persecutions inflicted on the Church, particularly under the procurator Seianus, the Marcionites seem to have enjoyed a short period of toleration early in the 4th cent., to judge from an inscription of A.D. 318-319. On a field south of Damascus, which records the existence of a village community of such worshipers was soon proscribed by Constantine. In the West they seem early to have succumbed to the more powerful propaganda of Manichaeism (q.v.), but in the East they may be judged to have exerted a stronger and more lasting influence. In 6th cent. the W. was given to them in the controversy works of Ehrmann, and from the careful account of their doctrines left us by Eznik, an Armenian writer of the 6th cent., that counted for much in Eastern Christendom. So late as the 11th cent. they are mentioned in Arabic by the Fihrist.

As the best illustration of the nature of Eastern Marcionism, we subjoin a literal translation of Eznik's Armenian account:

Marcion wrongly introduces a strange element (lit. strange- ness) in opposition to the God of the Law, putting with him also Hyle, by way of essence, and their worship was soon proscribed by Constantine. In the East they may be judged to have exerted a stronger and more lasting influence. In the 6th cent. the W. was given to them in the controversy works of Ehrmann, and from the careful account of their doctrines left us by Eznik, an Armenian writer of the 6th cent., that counted for much in Eastern Christendom. So late as the 11th cent. they are mentioned in Arabic by the Fihrist.

round of absorbing and ceremonious etiquettes which, under the régime of Hadrian, made up the official life of the capital. Through uncle Antonius, from whom Hadrian appointed Quattuor vir for the administration of Italy, he was brought from childhood into personal touch with the Emperor himself, and the playful ‘Verissimus’ accorded to him by Hadrian re-appears even in the formal address of the Christian apologist. Another influence, which he himself attributes to his mother’s fostering care, sank deep into the fibre of his being. In the antique life of Rome, religio, dependence upon God, pervaded every turn and corner of the simpler life of the home and farm the ancient pieties and rituals had never died away. Under Augustus the historic festivals and shrines, the ancient brotherhoods and colleges and guilds of Saalian priests, of Arval Brothers, of Vestal Virgins, and others were revived, and a profusion of new cults was introduced. Priests became the dress of leadership and rank, and patriotism found articulate expression in the worship of the Emperor and in countless forms of mystery worship. To this religious count Marcus was acclimatized from youth. At eight years old he was enrolled among the Saali, the most primitive of all the priestly colleges at Rome, and ‘got all the forms and liturgies’ by heart. At sixteen, as Profectus feriarum Lictorium, he solemnized the fête upon the Alban Mount; and besides the formal dignities of Pont Max., Xvir Socr. Fac., and VII vir Epul., he wore the cowl of Master among the Arval Brother- hood where the college is still extant. And which besought blessing for him and L. Verus in their conflict with the Marcianii. At the outset of his great campaigns he purified the people with the solemn ritual of the Lictisternium; at Athens he was himself initiated in the Eleusinian mysteries; on the Danube he approved the casting of lions into the stream at the bidding of the Eastern magi. His Stoic monotheism lent itself to sympathy with cults of every kind, as witnesses to the divine power.

2. Life.—His boyhood was given to wholesome and studious disciplines. At Rome he fenced, played ball, and eschewed the mischievous excitements of the circus and the amphitheatre; at Lucania he wandered, and shared the glee of rural industries and festivals. The correspondence with Fronto, his master in rhetoric, shows rare dexterity of type. Boyish experiments in philosophy ended in complete conversion under the peril of Ariston, the influence of Rusticus, and the charm of Epictetus.

His life falls into three sections: A.D. 121-138, boyhood, ending with his adoption in 138; 138-161, apprenticeship to rule, as Caesar and lieutenant to his adoptive father, Antoninus; 161-180, Imperial rule, shared nominally in 161-169 with L. Verus, and from 177 with his son, Commodus.

Till 167, when the Dacian campaigns begin, the years are filled with unremitting administrative activities. The Edictum perpetuum of Salvinus Julianus furnished the basis of the Pandects of Justinian; Gaius and Papinian immortalize the era, as master-builders among those who reared the great fabric of Roman law. Under the direction of sectorial organizations, the rigours of the patria potestas, the slave-owning systems, the slave-held staters were brought within control; protection was accorded to women, children, wards, minors, freedmen, slaves; educational and charitable endowments were multiplied; professorships were established at Universities; and the membership service was organized for communities. Commerce, industries, and communications were liberally fostered by pro-

in point of fact the penal provisions—deportation for those of higher rank, and death for humble offenders—would mitigate, not enhance, the penalty to which all avowed Christians stood liable. In their social organization the Christians remained as free as others did. In Rome itself Church-membership and jurisdiction, episcopal authority, and literary activity advanced apace. Apologists, such as Justin, Melito, Athenagoras, one after another addressed their pleas to the Emperor in person. Tityus and Hermas retort scorn and hot invective on their antagonists. Christians served in the Imperial households and, as the story of the Thundering Legion proves, were numerous among the legionaries.

None the less, illogical as was the situation, the profession of Christianity remained under the Imperial ban, and Christians as such were judicially liable to death. In two of the most famous instances when the penalty was enforced, responsibility devolves directly on the Emperor. The first concerns Justin, apologist and martyr, who with six associates was brought before the bar of Rusticus, prefect of the city, on the charge of ‘atheism and sacrilege’; each in succession adhered to death by decimation, and, on refusing to abjure or to offer sacrifice, was ordered to execution. Marcus was at the time resident in Rome, and, no doubt, endorsed the sentence passed by the Stoic prefect, his close friend and ex-preceptor. Stoic wisdom is the prosecution recorded in that masterpiece of Christian martyrlogies, the letter of the Christians of Lyons and Vienne to the sister churches in Asia and Phrygia.1 The outbreak, rooted in racial, even more than religious, antipathies, was fanned to fever heat by the frenzies of the amphitheatre, where the Christians were subjected by the mob to hideous and revolting tortures and indignities. When order was restored, and the martyrs, rescued from the fury of the mob, were remanded to prison, their sentence was referred to the Emperor himself, whose ruling was that, if they still persisted in recalcitrance, the law must take its course. The incident was fresh in his mind when he wrote despondently of barbarian streaming across the Alps, and knocking at the gates of Aquileia. From that date onwards the legions of the West were locked in a life-and-death struggle with Marcomanni, Quadi, Jazgyes, and other trans-Alpine hordes, sustained and carried to a triumphant conclusion only by the dogged and intrepid leadership of Marcus himself.

3. The ‘Thoughts.’—From these ordeals the Thoughts emerge. They are not the exposition of any system of life; reflections on a life; it is ‘To himself’ in the hours of loneliness and interstices of strain; a retrospect and record of experience; a manual of duty and endurance. In them a soul communes with itself, examines motives, corrects and affirms, or re-affirms, conclusions, emotes the sigh of weariness or the ejaculation of disgust, but perpetually renews resolve, unalterably clinging to the noblest hypothesis with which it was familiar. Beginning in almost random reminiscence, composition gave way to strain, real hammering upon the company, and a pleasure for its own sake; and for Marcus Stoic principles so interpenetrated the whole fabric of conduct and creed that these self-communings shed clearer light upon the actualities of Roman Stoicism than the homilies of Seneca or the Memorabilia of Epictetus.

(1) Logic.—In his theory of knowledge and sensation he adheres closely to the terms of Epictetus. The φαντασία are in part sense-impressions proper, derived from things, in part各单位, of aims, qualities, or attributes, moral or aesthetic, belonging to things, and conveyed to the reason. It is for reason to sit in judgment on them, determine their true content and value, and firmly maintain its own prerogative. In the one passage in which he formally discusses the doctrine of assent (σεβασμός, v. 10) he drops the Stoic claim to final certitude—τὰ πράγματα ἐκκαθάρτητα. But there remains a tenacity of moral assurance which suffices for conduct of life. Reason and the divine immanence attains a coherence, a consistency, and strength which give the indefeasible assurance of truth.

(2) Theory of Being.—In Stoic monism matter, form, and force are an inseparable life-power, self-determined from within, embodied in the various forms of phenomenal and spiritual being. The variety of being is explained physically by the doctrine of τὸ αἷον, that is, of tension within the life-producing force, preserved in ever-varying grades in all forms of existence, material or spiritual. In the successive grades of inorganic, vegetable, animal, and human life each variation represents a different degree or kind of tension in the informing πηγή, or life-power. Cohesion, life, and reason are resultant phases of the embodied spirit, varying in the same way as inorganic substances are seen to vary under processes of rarefaction or condensation. Εἶναι, ‘to hold,’ or ‘to cohesion,’ is the characteristic of Christian perveracity as of bravado. In Asia too, and in Africa, sporadic acts of persecution took place, and martyrdom was judicially inflicted, though for the most part Christians were screened under the Imperial dispensation from popular fanaticism or dislike. Of systematized persecution there was none, and to the Church historians and apologists of the next generation the era of the Antonines was an age of peace and toleration.

Marcus’s latter years were clouded with calamities, public and personal. In 166 Italy was devastated by plague, from which it never recovered; in its track came famine, earthquakes, and inundations of unusual severity; then the yet more terrible invasions of barbarians streaming across the Alps, and knocking at the gates of Aquileia. From that date onwards the legions of the West were locked in a life-and-death struggle with Marcomanni, Quadri, Jazgyes, and other trans-Alpine hordes, sustained and carried to a triumphant conclusion only by the dogged and intrepid leadership of Marcus himself.

1 Eus. HE v. 1. 2 xi. 3.
from which it originated. As, in the individual, soul actualizes itself in physical energies, such as life, growth, sensation, and all bodily functions and appetites, in moral, such as impulse (ἔνεσις), inclination (ἀθέτησις), aversion (ἀφεξις), will (προσεχεῖται), or in intellectual, such as perception (ἐκπαθεῖα), judgment (ἐπικεφαλία, καταλόγῳ, προφήτης), mind (μνήσθη), or reason (διάνοια), so, too, the world-soul operates in energies no less diverse in operation, now as the natural forces which actuate all inorganic or organic life, e.g., heat, moisture, breath, contraction, expansion, or the like, now as the moral forces which we know as fate, destiny, necessity, the 'laws' of nature or of God, and now, again, as those purposive or reasoning powers which, as design, providence, Zeus, God, direct the plastic movement of the whole.

For Marcus these conclusions are the key which unlocks all problems of life and thought. No Stoic thinker applies this key more resolutely and consistently to the whole field of ethics, personal and social. Every action, every relation, is referred to the cosmic test; by it he construes all the accepted formulas of the school, and resolves their ambiguousness.

(4) Cosmic unity.—Cosmic unity stands at the center of his thought, the pole to which his moral compass continually turns. In its contemporary phase of microcosmic self-expression the unity of the cosmos was realized and reflected in that world-Empire of Rome whose political activities centered in and radiated from Marcus himself. The Emperor was the indwelling god of the State, as earth was of the universe.

Unity is written large upon the face and in the heart of things. The idea that the world-order can result from chance, from the confused clash and welter of atoms, is impatiently dismissed. It would imply permanent confusion, moral and intellectual—a universe as unintelligible as intolerable. Beyond all possibility of mistake, materially and spiritually, the cosmos is a perfectly co-ordinated unity, 'one order made of all things, one God through all, one being, one law, one reason common to all things, intelligent and living' (vii. 9), as is shown by the rambifying bond of ubiquitous design (συναφεία γενεσίων, iv. 45) and that unifying rapport between the constituent parts (συνεποίησις τοῦ μειῶσ, v. 28, ix. 9) which results from perfect interpenetration (συμφύσης καὶ διάφυσης), and makes the whole inseparably one.

Design is everywhere apparent, in small and great—in all the processes of nature, in the adjustment of means to ends, in the social life of animals, in economy of materials, in the entire 'concentration of the web.' Nature is a vast laboratory, in which there is no destruction and no waste, but processes of cyclic transmutation and repair. Divination, oracles, dreams, add their corroborative testimony to the providential plan that runs through all.

Without reserve Marcus embraces the Stoic explanation of reason inherent within the world, accounting for its unity, its order, and its constitution. The most general term employed for this pervading and directive reason is the unifying Logos, which the Stoic school derived from Heracleitus, 'the reason and the ordinance of the city and commonwealth most high' (ii. 18), the all pervading, all-directing, all-perfecting principle and power which animates and operates in all that is. Less frequently it is called nature, or 'the nature of the whole' (νοησία, διάνοια), world-soul and moral sense (ψυχή, γνώμη), but also of world-impulse and world-sensation. The world, as a live whole and being (ἐνόσσος, iv. 40, x. 1), throbs to one master pulse as truly as all the energies of man respond to the direction of the unitary sovereign self.

(5) Unity of things.—The unifying power, a common gravitation revealing itself in man as truth, beauty, and love, combines, contrains, and co-ordinates all to a common end (xii. 30). It finds its type or organ in the central sun.

'I am the eyes with which the Universe Beholds itself and knows itself divine' (Shelley, Hymn of Apollo, vi. 12). But the splendid harmony invests common things and processes with an appeal and beauty of its own; they contribute to the advantage of the universe; they are notes, or discords, which swell the great accord. Not only the heavenly bodies in their orbits, sun and moon, fire and air, the living bees and nesting birds, the lustre of the emerald, and the bending of the corn, but even things unprepossessing in themselves—the cracks and crevices in bread-crust, the foam that flecks the wild boar's mouth—seem to him who is in union with nature, and touches hidden springs of answering admiration and desire.

'Earth is in love with rain, and holy ether loves—The world-order is in love with fashion, what is to be. To the world-order I profess Thy love is mine' (x. 21).

(6) World-soul.—The unity of the indwelling mind corresponding to personality in the individual man is incommensurate with the scale of the universe, beneficent and rational in aim. Degrees of goodness and of value are part of the great scheme, but everywhere 'things lower are for the sake of things higher' (v. 13, 30, vi. 55, xi. 10, 18, etc.), and all is for the best.

(7) Evil.—The oneness of the cosmos is utilized to explain the mystery of evil. Seeming evil is good misapprehended or disguised. The course of nature is all good. 'It contains no evil, does no evil, and inflicts no hurt on anything.' Analyze the facts, suppress the hasty, ill-formed inference, and the evil ceases to exist, or changes its complexion (vi. 36, vii. 20). It is the discord that prepares and shapes the harmony; the coarse jest (as Chrysippus said) that gives the comedy its point (vi. 2). 'Nothing is hurtful to the part which helps the whole' (x. 6).

(8) Providence.—The mind of the universe is social, 'civic' (συνοικικός) in all its aims. Fate, destiny, necessity (μοῖος, τὸ περιπουδίον, τὸ εὐπουδίον, θέσεις), overrule all things for the good of the community accorded with the movements of the universal Providence, the object of his reverence, trust, regard.

(9) The round of being.—Everywhere there is the recurrent transformation of elements, pursuing their continuous round. Change is nature's joy (ix. 35, iv. 36), the life of individuals, of nations, and of the universe at large. The 'passage up and down' repeats itself in history, upon the small scale and the great; always the same drama, the self-same scenes reproduced; the court of Hadrian, the court of Antoninus, the court of Philip, Alexander, Cesarus; the same stock roles, only with change of actors (c. 27; cf. vi. 45). This is the depressing side of the Emperor's philosophy, the resignation from which he would not desist to extricate himself by self-deception.

(10) Man a part of cosmos.—Man is by nature an inherent part, welling up from organic member—μοῖος, not μόος merely—of the whole. He draws from its organic life as vitally as the branch draws sap from the parent tree. His 'nature' is the nature of the universe; self-realization of that nature is an instinct and a call as primary as that of self-preservation, attained by deliberate co-operation with its designs and ends, by loyal following
of law and reason, by active citizenship in the world-commonwealth.

(11) Virtue.—Moral obligation is fulfilment of function, active acknowledgment of reciprocal relation to the whole. And this alone is able to minister interior contents, the forms—nothing is the same in the Holy Spirit and the godlike citizens of heaven.' The soul—a particle of Zeus (v. 27), the good genius or the God within (iii. 4, 6, 16), the lord and law-giver (iv. 1, 12), the pilot reason (vii. 64), the fellow-citizen, the priest and minister of God—towards which makes for righteousness. The indwelling presence becomes almost of that Holy Spirit in the Christian believer. Prayer is not merely communion with the inner self, but a true intercourse with God; the self-communings which the sage has left us are but part and sample of his habitual practice of the presence of God.

(12) Littleness of man.—Man is indeed part of the universe, but how immeasurably small a part—a morsel in the mighty sun, a morsel as between two infinites. Fame is as transient as it is brittle and precarious—a short-lived rattle of tongues, a bubble that bursts and vanishes (ii. 7, iii. 10, iv. 3, 19, viii. 20, etc.); gratitude is precarious and related; virtue is its own consequence, the mastery of the will, ability to uphold and satisfy the instincts of reason in fellowship with nature and God. If ever that is forbidden or barred, then indeed God sounds the signal for retreat. Unanimously and undisputed, we quit the rank. The exodus is quick and easy—a ‘bare bodkin' is enough. The play is ended (xii. 36); ring the curtain down. Death is the natural end of man's ephemeral endeavours. Whatever be its physical analysis, extinction, dispersion, or transformation, it is without exception or transformation, it is without exception or transformation, unless it is transformed, in which case, alternative which are dispassionately considered—the dissolution of the material elements end the present resultant; they take their place in other compounds, while the 'semital principles,' or life-seeds, will either integrate new forms and activities of being or themselves be resumed into the central reservoir of the world-life.

(13) Ethics.—In ethics the eye is fixed upon the inner self, upon the duties, disciplines, obligations, and exercises of one's own experiences. But the Imperial position assumed gives breadth and elevation of view, and the fixed sincerity of the writer attones for lack of form, or method, or variety. The commonplaces of the paraenetic Stoicism—the immortality of virtue, or the indestructibility of the wise—are not discussed at large. The more developed casuistry of later Stoicism, with its scheme of conditional duties (οἰκεία, κατακλυώντα, κατάθετα), its recognition of preferential moral choice (in προορίζει & διηγομένη), its admission of relative moral values (καί ἀξία), its belief in 'proficiency' (προσοχή), or progressive growth in philosophic grace, is everywhere assumed, though seldom in scholastic phraseology. The philosopher is on the threshold of the world, the statesman of the Emperor; theicken in window, sills and doors. The soul of the flesh, all vulgar vices of the tyrant or the profligate, even the licence and the luxuries of city life, are not in view. The whole attitude is one of straining, insistent obligation, wrought out in patience inexhaustible; men are the recipients, himself the dispenser, of benefits; in realization of the social tie, duties to equals and duties to inferiors monopolize the field. Against ingratitude nature has provided forbearance as an antidote. Of the four cardinal virtues, courage seldom solicits mention; truth is not protest or resolve, but that singleness of word and act, that quiet undeviating 'pursuit of the straight course,' which power and place make doubly difficult; just those virtues urging now the rights of the oppressed, but the obligations of the strong; as regards wisdom or self-control, it may be said that the whole book is an enlargement upon that theme. The moral perturbations which he dreads are those which beset power and place and privilege, such as impatience, discourtesy, distrust, officiousness, or such more delicate delinquencies as self-will in duties, the want of moral nerve or fixity of aim, or the indolence which, rushing hasty conclusions, admits unwarranted impressions or desires. And beside the solid virtues and charities incumbent on the ruler-power within which makes for righteousness.

'Blame none, 'Do not find fault,' 'To expect no one to do wrong is madness' (xii. 18), are maxims for the ruler rather than prescriptions for the teacher. 'God reward the honest and the less people. Certainly not. Then do not ask for the impossible' (ix. 42). The supremacy of the ἀγαθός—ln Marcus the favourite and characteristic term for man's highest governing self—secures to man self-assertion, not to an unstable world; within his own circle he becomes a 'sphere self-orbed, proof against all assaults of circumstance, all enticements and deceptions of sense, and all domination of impulse, appetite, or feeling. To that extent the social grasp which his will, with the sweep of the great cosmic current, and, at one with nature, reason, God, be wrapped in calm. To such an one all other things become 'indifferent,' for 'no man can rob us of our will' (xii. 30). Man is a citadel, a promontory against which the billows dash continually; but it stands fast, till at its base the boiling breakers are lulled to rest' (iv. 49). This attitude of sect endurance gradually moulds his moral as well as his physical lineaments, until he becomes a man which is engraven upon the stones of the Imperial arch, and abstinence rather than action, isolation rather than corporate fellowship, becomes the keynote of morality. Towards this the influences all compound—the master-spirit, the tone of sombre, almost wilful, resignation; the solitude and desolation of the close. Before his eyes Latin literature breathed its last. The great equestrian statue, the memorial column, the relics of his triumphal arch, the apotheosis of Scipio, are the last triumphs of aspiring art. Human fecundity was stricken with strange paralysis of reproductive power; the very Campagna was changing to a depopulated waste. Religions, politics, literatures, and Rome herself were dying. In unmistakable letters the handwriting was blazed upon the wall, and he himself was ἔφητος ὅποι ον. With his death decline and fall set in, not on the Danube only, but throughout the whole Empire of the West. His end was a slow and tedious struggle with the inevitable. No longer able to eat or drink, he lay upon his couch, still exercises the habits of duty and authority; spoke passionately of the vanity of life; and with the words, 'Hace incruentus bellum opera sunt,' turned to his rest.

2. Geographical distribution of the market.

The institution of the market is not unknown in many parts of the world. It is either altogether unknown or known only in its most rudimentary forms. It has been pointed out that certain geographical conditions are such that certain racial characteristics are more favourable than others to its establishment and development. Thus, the markets of insular regions, especially those which are situated on the coast, are, in general, of little importance, perhaps because the necessity for an exchange of articles of diet hardly arises among populations whose economic status is the same, and whose daily needs are supplied by the bounty of nature seconded by their own exertions. In such regions the occasion for a market arises only where different economic conditions come into tone—where, e.g., a tribe of fishermen have a tribe of agriculturists for neighbours.

According to J. G. F. Riesel, there are no market-places in Ceylon; and while we hear of the market in Java, Sumatra, and Borneo, we are reminded by a high authority that, in many of the islands inhabited by Malay peoples, the institution does not exist, or, if it has existed, it is to be regarded as imported rather than as indigenous. In New Guinea, markets are to be found in the German as well as in the British portion of the island; and we have a few notices of Polynesian and Melanesian markets in the First Two Centuries, Dublin, 1890; M. Königseck, De societatis religiosa... Acta et Commentarioria, vii, 1886; C. Martin, Les religions dans l'empire romain philosophes et poëtes, Paris, 1886; J. G. Rendell, Marcus Aurelius Antoninus to Himself, London, 1888; R. G. C. Oake, Die Philosophie der mittleren Schule in Berlin, 1885; L. Stein, Geschichte der Religion in Geschichte und Gegenwart, En- 

MARKET.—I. Definition.—The term 'market' may be defined as a periodic gathering of persons at an appointed place for the purpose of trading by way of exchange or purchase and sale, subject to the special regulations which law or custom may impose. The term 'fair' is frequently used in conjunction with the term 'market,' and has been defined as a periodical congregation of people recurring at more distant intervals. In either case the essential element is the same—recurrence, namely, at a fixed time and at a fixed place.

Provided that this element is present, any circumstances which bring men together can produce a market or a fair. The occasion may be a religious festival, a popular assembly, the formation of a camp, the temporary sojourn of a court at a royal residence, the use of a caravan at one of its customary halting-places, the concourse at a saint's tomb, the celebration of funeral games at the burial-places of a hero, or the temporary cessation of hostilities between Bactrians and Scythians.

3 See note 1 above.

See authorities in P. J. Hamilton-Grieve, The Silent Trade, Edinburgh, 1888, p. 117. See also § 4 below.
market spread from Masilia, from the north of the Italian Peninsula, and from the cities on the shores of the Adriatic to the countries of the neighboring barbarians. In Latium the fairs were of great importance, for they were associated with religious festivals; and the most important of the Italian fairs was that of Rome, which separated the Etruscan from the Sabine land at Soracte, near the city of Feronia. In Tuscany the religious festivals and popular gatherings of Romans, and the great importance of the trade fairs, and the tribal assemblies seem to have supplied occasions for the holding of markets.

So, too, in the past, the great markets of France, Germany, and England showed their close connection with the observances of the Church.

3. Origin of the market.—We have seen that, of the earliest, if not the earliest, of the forms of commerce is that which has been called the ‘silent trade.’ Those who engage in it are strangers to one another and are consequently enemies. But, so long as it lasts, they observe a truce, which is safeguarded by a supernatural sanction. This sanction derives its force primarily from the sacredness of the relation between the traders, which the trade creates, and—in very many cases—in a degree hardly less considerable, from the sanctity of the place where the trade is carried on. This spot lies often within a borderland—a locality which is very generally regarded by primitive peoples as holy ground—and such a situation is frequently chosen not only because it possesses this characteristic, but because it is regarded as the meeting place of the gods. Goods set out on the seashore, on a river bank, or at a meeting of ways are likely to catch the eye of the passing trader; and, if he is satisfied with his exchange, he will return again and again, to the known place at the known time. In this strange custom is to be seen, in our opinion at least, the germ of the market. Richard Lash, however, in his admirable essay on the ‘Primitive Market,’ urges two objections to this view. He contends that, in its beginnings, the market is, to a large extent, a provision market, mainly in the hands of women. He admits that, in certain cases, an exchange of articles of food may be transacted by the methods of the silent trade. A tribe of bushmen, e.g., which has a tribe of agriculturists for neighbours may employ these methods in bartering game for bananas. In such a case the traders are men, not women. But to infer from such evidence that the market is derived directly

9. The view indicated above as to the antiquity of the market is held by H. Schurz, Das afrikanische Black Erzgebirge, Leipzig, 1890, p. 129; and S. F. P. A. von Winterfeldt, Die Entstehung des Markthandels in Polen und dem Niederrhein, 1895, ii. 547; M. Kühnich, Der Handel der Vasallen und der Slaven, in Germania, 1895, i. 232. See G. Grimm, Die Sprache und die Sprachwissenschaft, x. (1878) 297; S. B. C. M. de la Roque, Reptile, 1025; O. Schwarz, Litterarische Geschichte der einfachen Völker, 1911, ii. 103; H. Reath, etc., ‘Handel,’ ‘Markt,’ 1033.

from the silent trade seems to Lasch to be wholly unwarranted. His second objection rests on the nature of the goods brought to market, which are, he says, for the most part perishable. They are produced constantly and they are in constant demand. Accordingly, market must follow market at the instances being fixed to suit the convenience of the traders. But the existence of such arrangements presupposes an exchange of views between these interested; and such an exchange involves a complete breach with the principles of the silent trade. The best way of dealing with arguments such as these is to turn to what evidence we have regarding the market in its historical phases. We shall find that it is attended by men only and that, in some instances, it exhibits features which recall to us those of the provision trade.

S. Passarge, e.g. describes a market on the Benue to which a man in each canoe holds it to readiness in case of a quarrel. Only those that were on hand, and who were able to present an armament of fish, hogs, and tobacco, could participate in the trade. From bank to bank the traders shouted at each other, and the value of their bargains. From thence the articles were taken down to the open space where a second round was played in the middle of the stream. Here they were examined by the parties met with in the presence of the king's collector, who stood on each side of the rock, and was a member of the event of any dispute arising during the bargaining; and they, of course, received a suitable remuneration from the particular parties.

Thus Lasch conducted without noise or confusion. If any disagreement takes place, the chief is there to settle it; he is so much a part of his own society that he is not likely to quarrel. If it is reported of the Eskimo of Point Barrow that in their intercourse with the Eskimos of Point Point they seem to be very wary, as if they constantly keep in mind that they are the weaker party in the company of strangers, they describe themselves as taking up a position of a man to a woman, or a man to a child. They say that great distance was formerly maintained by the women of the country, where women were swatched and concealed when a bargain was made, but that they have no such practice now; but in the past they have danced and amusements, and they never refrain from dancing enough to sleep.

A very curious instance, in which women were the traders, and a remarkable example of the silent trade mentioned by B. and L. Lander, is recorded by Tompkins in his account of the Mexican markets. He tells us that the Indian women made exchanges without any bargaining being spoken. One held out the article of which she wished to dispose, and the other took what was offered in her hand, and indicated, by a sign that it was worth, very little in comparison with the value of her own article, and that something must be given in addition before she could consent to the exchange. If the addition was made, the bargain was complete; if not, each retained her own property.

In these instances we have the mutual distrust, and, in the absence of the strange methods, which marked the silent trade. Further, the evidence shows that, so long as the market may at any moment become a battle-field, it is, of necessity, confined to the exchange of provisions, entirely in the hands of men. So, however, when women can visit it in safety, they assume the entire conduct of its traffic as guardians of its peace, or confine themselves to dealing in the objects of their special concerns, such as cattle and slaves.

Two further observations may be made in reference to Lasch's arguments. In the first place, there are many instances in which the articles, such as fresh fruit and fresh meat, are exchanged by the methods of the silent trade. In the second place, many cases can be cited in which the places where the silent trade is to be found and in operation are matters of common knowledge.

4. Situation of the market. The primitive market was held, just as the silent trade was practised, at spots so situated as to secure the safety of the trader.

Thus, a river separated those who resorted to the market on the Wouri, the articles to be bartered being laid upon a flat rock in mid-stream. In many instances the market is held within a borderland, as in the Batoua, the market of the Roman world, is a vast area of markets. In Indonesia the market is held on the borders of different districts; in the Congo the forest and those of Angola are generally equidistant from the nearest village. Among the Akaikuyu the site chosen for the market is an open space where two different districts can conveniently attend; while in the Congo country the market-places are of such distant countries, that there are two or three in open fields, and sometimes on the loo.

5. Another method employed by traders for this purpose was that of exchanging goods at a distance; in Peru and autres amis de Fournier, ed. C. M. J. Lange, Paris, 1816, p. 140; ed. C. Bru, et al. Discover the Sources of the Nile in the Years 1768-72, Edinburgh, 1831, p. 327; Ellis, Polyn. Res., ii, 231.
6. As to the connection of the market, the border-band, and the supernatural, see below.

21. See also Regnard, 'A journey through Finfarern, in the Traveler's of the Year,' do. 1879, p. 173; this church is called Laschand, and it is the place where the fair of the Lappishmen during winter is held.
of the markets. In the Shan States and in Korea the market is held on every fifth day in all the chief villages. This practice prevails throughout western Yunnan, and is found in Java and Aboekuta, at Igboeje and Onitsha, at Kong, and at Bobo, in the Meke district of British New Guinea, in ancient Mexico, and in many other places. At Khoradu, in the lower Ogum, the market between the townsfolk and the bushfolk takes place every eight days, and in the Banyeng country markets are generally held with an eight days' interval. In regard to the markets on the caravan routes between Malabo and Leopoldville, a distinction must be kept in view between those held daily by the neighboring villages for the caravans' supply and the weekly markets. The Foi market is one of four days; but frequently the market is held every eighth day. In order to mark the week when there is no market, it is called onaduo, 'little,' 'insignificant.' On the Lower Congo each market bears the name of one of the days of the Foi week, followed by the name of the village where it is held. The Khisias of Assam, the Battak of Sumatra, the tribes of the Lower Niger, and the Alkayna hold a market every fourth day. On the Luulubela the

VOL. VIII.—27

across a march, which nearly intersects the city. The markets at Hang-Chau and in the city of Mexico were held in great squares within the town. Tumimba may be cited as an instance of a town which had a great central market. In Java the markets are held under large trees on spots dedicated to the purposes of commerce. At the Bolong market-place are generally at the foot of the hills, and are marked by old fig-trees. In the Sherbro and its hinterland the markets are always held under large trees; and those on the upper Lualaba frequently take place on grassy mounds under the shade of large trees. In the chief town of Uganda, at Lango, at Fawea and Seba in the Meke country, among the Kabyes, and in the Meke district of British New Guinea, market-places are held under the shade of large trees; and a somewhat similar account is given of markets on the Congo.

5. Day of the market.—In the Shan States and in Korea the market is held on every fifth day in all the chief villages. This practice prevails throughout western Yunnan, and is found in Java and Aboekuta, at Igboeje and Onitsha, at Kong, and at Bobo, in the Meke district of British New Guinea, in ancient Mexico, and in many other places. At Khoradu, in the lower Ogum, the market between the townsfolk and the bushfolk takes place every eight days, and in the Banyeng country markets are generally held with an eight days' interval. In regard to the markets on the caravan routes between Malabo and Leopoldville, a distinction must be kept in view between those held daily by the neighboring villages for the caravans' supply and the weekly markets. The Foi market is one of four days; but frequently the market is held every eighth day. In order to mark the week when there is no market, it is called onaduo, 'little,' 'insignificant.' On the Lower Congo each market bears the name of one of the days of the Foi week, followed by the name of the village where it is held. The Khisias of Assam, the Battak of Sumatra, the tribes of the Lower Niger, and the Alkayna hold a market every fourth day. On the Luulubela the
MARKET

market is held every fourth day, other markets being frequented in the intervals. At Amba Bay the market takes place every third day. There are markets at Kanabur, and at Mogol. The Bini have now eight days in their week; but formerly they had four only. On each day there is a market in or near Benin city. Three markets are held at Kpabia; and two a week at Mrazek, at Koloa, and at Banjiribam. Weekly markets are held in Morocco, at Ppopah in the Sherbro, and in Lega-land, among the Ogonis, and among the Kabyles, and at Passuam in the southern part of Sumatra. In the Kuanzat district of Central Sumatra each market has its own special day of the week allotted to it. In Silodong there is a daily market, but the place at which it is held varies from day to day. In this last instance, and in many other cases, the market takes place here to-day, there to-morrow, and in a different locality on each of the days following, until the round is completed. The order is fixed, and so the inhabitants of each district know where the market is to be held each day.

6. Hour of the market. In Kukwa, Maselila, Kanab, Sokoto, and Timbuctoo, the market is held in the hottest hours of the day. According to Clapperton, the market at Kanab is crowded from sunrise to sunset. The Yo (Borno) market begins about 10 a.m. and ends about 3 p.m. In Borno and the Congo markets commence towards 10 or 11 a.m. and cease at 3 or 4 p.m. In some places in the neighbourhood of Hamar the markets begin about noon: at Gite in Angola they are in full activity by that hour. At Saris the busiest time of the market is from 2.30 p.m. to 5.30 p.m., and at Kuku in Borno about 3 p.m. In Thambaka the market is held in the late afternoon, and at Cossoo in Yoruba in the evening. It takes place at Aden two hours after sunset, and at Bida and Ibor in and some parts of Malacca in the night. On the upper Ubangi it is held from 8 to 10 in the morning. On the Livingstone it is deserted after noon.

In the Padaag district of Sumatra it is little frequented in the early morning, but by 10 o'clock it is full. Markets in the early morning are less frequent, for the obvious reason that they interrupt the day's work of those who resort to them more than do markets held towards the close of the day, and also because those at a distance cannot attend them.

7. Frequency of the market; market-women.

H. H. Johnston observes that both men and women make long journeys to sell their goods, the men always travelling furthest.

Among the Banded, if the market be near, the woman goes and her husband supplies the goods. If it be at a distance, the husband generally goes alone. At Whyndah on the Gold Coast, and among the Basut of Sumatra, the traffic in slaves was confined to the man. Among the Bubas, the men bring goats and palm-wine to market, and in the Mandingos they trade in cloth.

At Woodle the women sell milk and honey, fruits and herbs, while the men sell oxen, sheep, and slaves. At the Bamba the market is held at Kano is generally held on Saturday, and at Kuka in Borno the principal slave is generally sold the traders, while their masters look after the slaves. The Borno market people form a caste by themselves, they attend all the larger markets in person, and send their servants to handle the goods.

8. Religion and the market; the market peace.

The market peace is sacred, and this quality may be due to one cause or to a concurrence of circumstances: at the division of labour according to sex in primitive times, see K. Bühler, Der Geschlechtsaufbau der Volkerwirtschaften, Tübingen, 1890, p. 26; Schulte, p. 129; J. G. Frazer, Gf, p. v. the Spirits of the Corn and of the Wild, London, 1913, 1292.

several causes. It may be due to the nature of the relation between two things which the act of exchange creates, to the sacredness of the place where the trading takes place, to the consecration of the market at the time of its foundation, or to the occasion of which it is the scene, or to a religious festival.

Large fairs, held at different points on the Niger, are in the course of the year, and wherever there may be a market town or a village, some things of interest occur; and the names of some of the more important markets are known in the far-off countries of England and France. The Shillukas entered the Khartoum traders to their camp by a display of attractive mannerism, and then butchered them for their meat and oil. At a close of a Raka market the chief allowed his bodyguard to plunder the market-women.

and having the bay accepts of some of the great women by Arab traders. "But", he observes, "they have great tact and intelligence. An old established custom has great charm for them; and the market will again be attended, if no fresh outrage is committed.

Sometimes such violence kills the market. "To see how, a. In the market, there must be an assemblage of the local magnates; a pig or pigs must be furnished by the town to which the market is held. It is said that, at Stanley Pool, the establishment of a slave market is a sign for the sacrifice of a slave ("Contrary to the Laws of War").

In the Le Boatique de Stanley Pool, the words de la societe d’écoles field of the Gladstone the first edition of the London, 1890, 1, 168: GSP, p. 9, the editor, "of the object of this sacrifice was to convert the soul of the victim into a protecting demon (POW, London, 1890, 1, 168: GSP, p. 9)."

But, he observes, "they have great tact and intelligence. An old established custom has great charm for them; and the market will again be attended, if no fresh outrage is committed."

Sometimes such violence kills the market. "To see how, a. In the market, there must be an assemblage of the local magnates; a pig or pigs must be furnished by the town to which the market is held. It is said that, at Stanley Pool, the establishment of a slave market is a sign for the sacrifice of a slave ("Contrary to the Laws of War")."
stones, he came to be regarded as the god of both. In many cases the border-land consisted of tracts of neutral territory whither merchants repaired to exchange their wares; and thus the god of boundaries became the god of traders. Now we are told that the anacles not only traded at their public meetings, which were consecrated to the god of the public assembly. These poles were, in all probability, erected upon a stone; and it has been suggested that this is the meaning of the word erroneously used in later days for a stone column, the prototype of which is Irmansuln, Rolandspullen, perrons, and many of the market-crosses of Scotland are later forms. In view of the facts, it is tempting to conjecture that the stone which formed the base of the column, and which seems to have served as a seat of justice, was, in many cases at all events, a boundary-stone.

In the Middle Ages the market-cross was not always fixed, but was raised at the commencement of the fair. It became fixed only when the temporary market became a permanent market, when the temporary peace became a permanent peace. In China an official notified the beginning and end of the market peace by hoisting and lowering a flag; in British New Guinea, the head of a chief was put on a pole and cut off, thus closing the market; the trade between the people of the Riff and the Hejaz, in Arabia, was terminated when they were besieging ceased on the ringing of a bell.

Many instances might be cited of trading during a truce, followed by a resumption of hostilities as soon as the trading was over.

3 The name Chun Tholines, the German equivalent of Zeus Aragoral (see note below); see however, Magnin, Ges. Gesch. Opop. Tonkin, vol. vi. p. 504. According to Cassius (De Bell. Gall. vi. 17), the Gauls worshipped a deity whom he identified with Mercury.
4 D'Alvillia, p. 117.
5 "Quoque, eorum dem, quae regio Vossia, et urbs Wallonii, et urbs et Mercatus componuntur," carry the old name of Zeus Aragoral and of the autonomy of those assemblies. It is not improbable, that, for the purpose of ornament, a representation of: the god of the gods was attached to the column or carved upon them; and that, when the meaning of their symbols was forgotten, the popular imagination gave to them the face of the Faustian most popular at the time, and the Irmansuln became Rolandspullen. When the Mercatus was abolished and the barbarous people of the old continent continued in many places to ascribe the reality of the occurrence of things they bore the emblem of Christianity; sometimes they were altered or transformed so as to symbolize something new or additional; and sometimes they were replaced by the crosses planted by the Church in sign of possession.
6 The resemblance which many of the market-crosses of Scotland bear to the cornet has been pointed out by W. G. Black (Glasgow Cross, with a suggestion as to the origin of Scottish Market-Crosses, Glasgow and Edinburgh, 1905), and his suggestion as to their origin has been approved by D'Alvillia in the later of his two works cited above. At p. 82 of this work, D'Alville figures certain of the Scottish crosses, and it is curious to observe how close is the similarity of some of them with the sacrifice of Iermasuln figured by him on p. 149 of The Migration of Symbols.

of the common law which attracted not only the merchant but those who traded in the city, as judges of the district.

In the Kabyle markets, eg., an official—the chief of the market, who belongs to the leading family of the tribe which owns the land of the market, or the commercial estate, or estate of the peace, or those who fear attacks on the road, summarily expels the quarrelling, or these who create disturbance. He is concerned only with offences which affect the public, while civil and commercial disputes are referred to a marabout of the tribe. In the Berber market, he is the stranglers in the market that execute its law by stoning the delinquent. Again, in the Berbera market, there is no superior authority to whom the enforcement of the law is entrusted. Its execution is in the hands of the chief. An assembly of those belonging to the district is to judge in disputes; but the disputants need not abide by its decision. If they ignore it, they must leave the market.

But where the market lies within the territory of a king, he or his officer sees to the maintenance of order. Thus, at a fair on the Lulaha, within the country of the Kabyle, is a basket pumpe with a dozen guards, in order to no dispute might disturb it. Its basket is all the guards are without, they carried on their shoulders. Among the Nago, a chief appointed by the king performs similar duties; and these are discredited at the head of the king's collectors. Among the Gallas by the local headman. In the case of Boru—there is a market king who settles disputes between buyers and sellers; and the women choose a market queen for their protection, through which they conduct all their business.

This last instance shows that, while in some cases, the duties of the officers of the market are confined to the preservation of the peace, they are, in many others, of a much more varied character. Among the Bassambas the superintendent of the market collects the dues and attends to matters of policy. At Wadakor, the king's collectors are the general assessors of disputes and throughout the country of the Gallas, on the western Abyssinian plateau, the market is held under the superintendence of the local king who is appointed by the king, being set apart from the king's collectors. Among the Gallas the duties of direction of the market are exercised by an important official who is entrusted with the conduct of foreign trade and the supervision of the exchequer. In the Congo markets there is, in most cases, a chief of the market; perhaps a native chief, who regulates all disputes, and fines both native and alien, and does litigation so heavily that all are daunted by invoking his assistance. All these duties of the market are all day to try disputes arising in the course of trade; and in the Lougo market an official is charged with seeing that all the decrees are practiced in the trade between natives and Europeans.

The quality of articles brought to the market is, in general, a matter of consideration only when disputes arise.

The milk brought to the market of Jakoba, however, is daily subjected to examination; and in Morocco an officer is appointed to inspect the provisions offered for sale. He constantly attends the market and sees that purchasers are not overcharged; and, in view of the plenty or scarcity of the goods exposed, he must fix the prices. In Java, the market fixes the prices; and among the Bangala the price is fixed by the chins with reference to a standard. In Morocco and Jidja a public officer fixes a maximum price to all victualing traders. In some of the markets in Hawaii the chiefs regulated the prices; and in ancient Mexico they were fixed by the superintendents of the market. In China the officer placed over the market was charged not only with the maintenance of order, but with the supervision of weights and measures, and with the administration of justice in more important cases. The Chinese authorities appear to have exercised similar functions in regard to the preservation of the peace and the use of weights and measures. They also fixed the hours of the market, and regulated its conduct generally. The Roman authorities preserved order by means of his officers, and imposed fines upon the peace-breakers. He allotted their positions to the traders, and saw to the accuracy of weights and measures. To assure the same satisfaction within the markets was his special care, both by exposing frauds and by rejecting articles which were unfit for sale. In the market of Tenoxintal ten or twelve judges sat in a house on the market, and dealt with cases as they arose and to see to the punishment of delinquents. There were said to be two at the house when the judge saw what was bought and sold, and broke any false measures which they found in use. And it was the duty of these officers to fix the prices and to prevent frauds.

II. Market dues and their collection. In some markets—eg., at Silindeng—dues are not exacted. Among the Hausa, whose dues are levied, entrance into the town is free to the market people. At Ectenico men can enter the markets and trade without charge, but every woman must pay ten cowries to the government.

When trade took place in the temple of the sun, the priest-collected dues on behalf of the divinity. At a fair on the Lulaha, in Kishamna's country, each district whose representatives were present must make a gift to the prince. Kishamna, who performed a series of dances in the market, after each dance received their contributions from the market-women, who danced as they passed. In the Berbera markets the king grants his protection and collects the dues; and in the market of Feb.? and at the market of Rabat, an officer levies a small percentage on behalf of the government. At Adamana, in and at the market, the king's collectors are present in the market; and in those of Uganda, the constables (papels) take a double handful of the market-women's products.

2 Foyers, p. 134ff.
3 Between the natives themselves fraud is unknown. A mother sends her six-year-old child, knowing that it will not be cheated, because the collection of the taxes by native agents is the same as in quantity and quality (66, p. 160).
visions for the king, and levies a contribution for himself. I
Among the Hounda a chief appointed by the king collects a tax
upon every sale; and at Quenupi the people pay a tax on every sale, making up a revenue for the king. In the Lomako markets the chief of police sees to the payment of the dues; and at Kanó the chief of the market lets out the stalls at so much a month, forming a revenue of whatever his revenues obtained. In China there are special market-dues, which are collected by a special agent called the shagowu, who lays the special taxes, the collection of these dues, which were applied in the first instance to the needs of the market, and in the markets of Imperial Rome, and especially in the markets of Assyria, a special system of taxation was obtained. In the Mexican markets a fixed tribute was paid to the Emperor, in return for which he granted his protection against thieves.

In India the king was entitled to market-dues, which varied, according to circumstances, from a twentieth to a tenth of the value of the goods. The frequency of the Bakhsha market at Khana must pay three cowries to the chief, though the value of his goods may be; and in the Bongi market every person who brought articles for sale had to hand over one-twelfth of the value of the goods brought to market. At Nyangwe to a tenth or a sixth. Those who exposed goods in the Wwahuh market pay very heavy dues to the king of Dahomey, while in the Hawaiian markets two-thirds of the proceeds of whatever the natives sold was demanded by the chief.

In the markets of ancient Mexico each class of merchandise had its appointed place, the more cumbersome kinds being stored in the neighbouriing streets, or in floats on the canals: in those of the Middle Ages who sold outside of it was regarded as an illicit trader, and the who bought from him buying and selling, and is generally responsible for his conduct.

At Berbers each stranger must choose a protector (obban). He dare not trade without one, and he may act as the agents of their respective tribes in the business of barter; and many cases may be cited in which the man who takes a stranger under his protection not only acquires his friendship, but assists him in buying and selling, and is generally responsible for his conduct.

At Berbers, for example, each stranger must choose a protector (obban). He dare not trade without one, and he may act as the agents of their respective tribes in the business of barter; and many cases may be cited in which the man who takes a stranger under his protection not only acquires his friendship, but assists him in buying and selling, and is generally responsible for his conduct.

12. The arrangements of the market-place.

Among the Lega-Callas the markets are held only if the weather permits; for the climate is variable, and the market-places are wholly without shelter. In the markets of Madagascar there are neither stalls nor booths, but the goods are sold on the ground, or upon mats. The markets on the Lualala are held at uninhabited places, except at Nyangwe, where there are houses for traders and huts for slaves and porters.

When the caravans arrive at Berbers, the goods are unloaded, and are exposed in booths and huts erected for the purpose, and within a week, on what was previously a desert spot several hundred huts are ready for the strangers coming thither over sea. At Sommar they are exposed on the market-place, their business being conducted by temporary erections of boughs and mats, and at Guzulana the wares are exposed in tents and shelters of boughs, where stranger merchants are entertained and housed, while in some of the Sumatra markets huts are provided, where stranger merchants can display their merchandise, and pass the night for a mere trifle.

At Maidugui, the largest market in Bornel, lines of sheds and stalls over in extensive area: similar erections are found in the markets at Togolwa and Assema; and Passages says of the market in Adamawa that they contain numerous flat-roofed huts, which form a long street.

In the markets of Manchuria (Chia) the markets were held in great squares surrounded by shops, where all kinds of crude were carried on and goods sold — a description which recalls to us the famous markets of ancient Mexico.

In many markets the position assigned to the different traders depends on the nature of their wares, the result being that, where those wares are traded in by one only of the sexes, a specific portion of the market is allotted to each sex.

1. Lang, p. 250 ff. Similarly, at the markets of Bato Doloasia, a man carrying a girl-girl staff, accompanied by a drummer and a crowd of bystanders, took down his staff before each merchant ceremoniously, and, unopposed, helped himself, by means of a small calabash, holding a litre, from the merchant's calabash (Binger, L. 371).

19. Haggemacher, p. 39 ff. These emotions belong to the ordinary emotions, and in the market, they form a particular of the abon (protector).
27. Preuillet, p. 131.

In the markets of ancient Mexico each class of merchandise had its appointed place, the more cumbersome kinds being stored in the neighbouriing streets, or in floats on the canals: in those of the Middle Ages, who sold outside of it was regarded as an illicit trader, and the who bought from him buying and selling, and is generally responsible for his conduct.

The most curiosities of the primitive trader is that of transacting business by means of a third person. Dall tells us that the Alents have evolved trade with the monies, and we have suggested that some light is thrown upon the origin of this method by the instance of the exercise of the silent trade reported by Landor. It is said that, among the natives of Australia, children are made money without any one seeing them, but act as the agents of their respective tribes in the business of barter; and many cases may be cited in which the man who takes a stranger under his protection not only acquires his friendship, but assists him in buying and selling, and is generally responsible for his conduct.

At Berbers, for example, each stranger must choose a protector (obban). He dare not trade without one, and he may act as the agents of their respective tribes in the business of barter; and many cases may be cited in which the man who takes a stranger under his protection not only acquires his friendship, but assists him in buying and selling, and is generally responsible for his conduct.

MARRIAGE (Introductory and Primitive).—Marriage has two main functions: it is the means adopted by human society for regulating the relations between the sexes; and it furnishes the mechanism by means of which the relation of a child to the community is determined. Owing to the preponderant importance which has been attached to the family and the more stringent social functions of marriage have been largely overshadowed by its moral aspect, and it has not been sufficiently recognized that the function of marriage as the regulator of social relations may be one kind where the institution is of a very lax and indefinite order when regarded from the moral standpoint of civilized man.

The institution of marriage may be regarded as

the central feature of all forms of human society with which we are acquainted. It stands in an especially close relation to the family—using this term for the group consisting of parents and children. This social group rests absolutely on the institution of marriage. Where marriage is monogamous, the group formed by the family will consist of the consorts and their children; where marriage is polygynous, it will consist of a man, his wives, and their children; while in polyandry, the family will consist of a woman, her husbands, and her children by those husbands or assigned to those husbands by social convention.

The institution of marriage also underlies the extended family, this term meaning the social group consisting of all persons related to one another either by consanguinity or by those social conventions which so often take its place (see art. KIN, KINDSHIP). It is the marriages of the members of the extended family that immediately determine the limits and functions of this mode of social grouping.

The relation of the clan and other similar social groups to marriage is less simple. While marriage is the foundation of the family, it is possible that the clan-organization has grown out of a state of society in which individual marriage did not exist; but, whether this has been so or not, the clan-organization as it now exists is intimately related to marriage, this institution being the means by which descent, inheritance of property, succession to rank, and other social differentiations are regulated.

1. Regulation of marriage.—In all forms of

2. B. A. ABRAHAM, p. 469.

human society there are definite rules regulating whom the members of the community may or may not marry. These rules are of many different kinds, but they all fall under one or other of two main forms: regulation by kinship or genealogical relationship, and regulation by some form of social mechanism, consisting of clans or similar social groups. The rules may also be distinguished according as they prohibit or enjoin certain unions.

Among all these peoples who have the family as their main form of grouping, marriage is regulated solely by kinship, and the rules regulating marriage consist exclusively of prohibitions, forming the ‘table of prohibited kindred and affines.’ Peoples whose social system is founded mainly on the clan or other similar mode of grouping do not, however, regulate their marriages solely by this mechanism, but this kind of regulation, in all cases of which we have any exact knowledge, is combined with the regulation of marriage by kinship, the two modes of regulation co-existing, and supplementing one another.

Further, this double mode of regulation does not consist of simply alternating prohibitions, but, side by side with rules of prohibition, there are often definite rules which enjoin marriage with certain relatives. The regulation of marriage associated with non-kinship groupings assumes certain definite forms for which there are well-established terms such as exogamy, endogamy, and hypergamy.

2. Exogamy and endogamy.—Much confusion has been produced in the use of these terms through the mistaken idea of the process, which they denote, are opposed to one another, this being chiefly due to an error on the part of McLennan, who was the first to draw attention to the process of exogamy. According to this writer, exogamy is a custom in which a person has to marry outside his tribe. There are a few cases on record, though even about these we need far more exact information than we possess, in which it seems that people have to marry outside their tribe or other similar social group, but in the vast majority of the cases for which the term ‘exogamy’ is used the exogamous social group is not the tribe, but that subdivision of the tribe for which the term ‘clan’ is generally employed.

When we say that a community possesses the clan-organization, we mean that it is divided into a number of groups, the members of each of which must marry outside their own group. If they must marry into some other group of their own community, we have to do with the practice of endogamy, the community as a whole being endogamous. While the community is exogamous. From this it will follow that exogamy and endogamy are not antithetical processes, but, where both exist, supplement one another.

Endogamy in this sense is a relatively infrequent practice, being most fully developed in the caste system of India, in which the caste is the endogamous group and the gotra (q.v.) or other corresponding sub-group the exogamous unit (see art. Caste). The Toa or of the Tais is another pure case of the division of endogamous social groups into exogamous clans. In other parts of the world obligatory endogamy is rare. There are many peoples who are isolated from their neighbours, either by physical or, still more frequently, by social conditions, such as constant warfare, who habitually marry within their own community, but this custom differs fundamentally from that of the Hind or Tais.

There is no definite prohibition of marriage within the community, and, if the opportunity arises, such marriages meet with no opposition. Even in Europe there are cases in which marriage within the village or other social group is so habitual and departure from this custom meets with such social reprobation that we come very near to true endogamy.

It would seem that this tendency to endogamy is especially pronounced where the people of the place follow one occupation, and this association of endogamy with occupation is not only characteristic of the caste system, but may be found in one of the exceptional examples of obligatory endogamy, which occurs in Africa in the case of the smitas, who often form a social group kept separate, by having to marry within their own body, from the rest of the community to which they belong. It is noteworthy also that there is a definite tendency towards the association of endogamy and occupation in the cases of priesthood and royalty, and in some cases marriage within these classes is so strictly enjoined that it amounts to a form of endogamy.

The practice of exogamy occurs in many forms according to the nature of the social system of which it forms part. If the community is totemic, the exogamous social group will be the totemic clan. If the community is organized on a territorial basis, the exogamous unit will be the village, the hamlet, or the quarter of a town. If the grouping rests on a belief in common descent, the exogamous group may take its name from the ancestor, this mode of organization differing from the regulation by kinship in that the clan is remote, and in some cases mythical or fictitious. In one frequent form of exogamy the whole community consists of two moieties, the men of one moiety marrying women of the other. The rule that two people with the same family name may not marry, which is found in China, may be regarded as another variety of exogamy. In Australia this mode of organization is modified so as to produce a complicated system consisting of social groups known as matrimonial classes.

3. Australian matrimonial classes.—These form a special variety of exogamous system in which a person has not only to marry outside his own class, but has to marry into another specified group. In one form, known as the four-class system, each moiety is composed of two sections, the marriages of members of one section of one moiety being limited to one section of the other. This system is associated with a peculiar mode of descent in which a child does not belong to the class of either father or mother, but to the other section of the moiety of one or other of the parents. The system is known as the eight-class system, of each of the four classes is composed of two sections, in which descent follows the same kind of rules as in the four-class system, but, of a more complicated kind. This form of social organization has until recently been supposed to be unique, but A. R. Brown has shown that there is nothing more than a systematization of the regulation of marriage by kinship which is generally associated with exogamous systems. In Melanesia there are probably similar groupings, though of a less definite kind than in Australia.

4. Hypergamy.—This name has been given to a peculiar form of the regulation of marriage, only known to occur in India, in which a woman must marry a man of a caste or sub-caste higher than her own. Where this custom is found, men and women of the same caste are sometimes also allowed to marry, but there is the strictest prohibition of the marriage of a woman with a man of a caste lower than her own.

5. Regulation of marriage is related by kinship. Among peoples whose social system is based specially on the family and the nature of whose system of relationship shows that this mode of social organization has been of long duration, marriage is
MARRIAGE (Introductory and Primitive)

regulated exclusively by genealogical relationship. Marriages with certain classes of relatives are forbidden and those with other classes allowed, while others are permitted. This is the system, though generally not looked upon with more or less disfavour by the community, the chief example of this difference of attitude occurring in the case of first cousins. While in some societies such people among whom marriages with certain relatives are obligatory, or even so habitual as to stamp their presence on the nomenclature of relationship.

The regulation of marriage by relationships is a universal system. It is based on the family, but occurs also among many peoples who follow the classificatory system of relationship. It is found in many parts of Africa and America; it is characteristic of Polynesia, and occurs in some parts of Melanesia; while, as already mentioned, the matrimonial classes of Australia are only a specialized form of this mode of regulation. Among these peoples, however, the results of this form of regulation differ widely from those already considered in that the restrictions apply to the very wide circle of relatives involved in the use of the classificatory system. Among the Mendi, we have not to do with the prohibition of marriage merely between brother and sister or between first cousins, but also between those whom we should call second and third cousins, or even more remote relatives. Sometimes the rules forbid marriage with a person with whom any kind of genealogical connexion, apart from relation by marriage, can be traced. More frequently the prohibition does not take this extreme form, but there are rules limiting the prohibition to certain classes of genealogical relationships, a frequent form of such limitation being the exclusion from the prohibition of those cases in which cousins are descended from persons of different sexes. Thus, among many peoples the marriage of the children of two brothers or of two sisters is strictly prohibited, but not only is the marriage of cousins who are the children of a brother and sister allowed, but, as will appear shortly, those relatives may be the natural consorts of one another. The people who thus regulate marriage exclusively by relationship have lost the clan-organization which their use of the classificatory system shows them to have once possessed. Even those who still possess this form of social organization do not rely solely upon it for the regulation of marriage, but marriages with many relatives are allowed inside the same group. Sometimes this prohibition takes the form that a man must not only seek a wife out of his own clan, but must avoid the clans of both father and mother, and perhaps the clans of all the grandparents. More often, however, the prohibitions rest more directly upon kinship, and do not involve all the members of the clans with which the man is related.

Many gradations occur between people who regulate marriage solely by kinship and others among whom marriage is chiefly regulated by the clan-mechanism, but we know no people who have been found to be wholly devoid of the mode of regulation by kinship.

6. Marriage with relatives.—Among many peoples, and especially among those who use the classificatory system of relationship, the regulation of marriage by kinship is the rule of this type of prohibitions, but there are often definite regulations which make marriage with certain relatives the orthodox unions, and even in those cases in which such marriages occur, but are not especially frequent the influence which they have had upon the nomenclature of relationship shows that they must once have been habitual. The influence upon systems of relationship is so definite that it is possible to infer from their nature the existence of forms of marriage in the past which are no longer customary, though they may no longer be prohibited, and thus, for example, we may conclude from the fact that marriage between father and daughter is said to occur occasionally, though it is probable that in such cases the marriage is not that of a man with his own daughter, but with one whom he calls daughter in the classificatory sense. The marriage of a man with his brother's daughter would be a union of this kind, and such marriages certainly take place in some parts of Melanesia and in Australia.

(b) Brother and sister.—The case in which we have the most definite evidence for this form of marriage is that of royal families. Examples of the marriage of brother and sister are found in Egypt and Persia, and occurred also among the Incas of Peru. In recent times the marriage of brother and sister is common in Siam, Burma, Ceylon, Uaganda, and the Hawaiian Islands. In the last case the highest kind of chief was one whose father and mother were own brother and sister, who were themselves the offspring of a similar union. In this case certainly, and probably in the others, this form of marriage is definitely forbidden to those of other than royal or chiefly rank, and the practice is due to the belief in the virtue of royal blood and to the desire to keep this blood as pure as possible.

Marriage between brother and sister has occasionally been recorded as the general custom of a people. There are well-established cases where marriage is allowed between half-brother and half-sister, usually where they are the children of one father by different mothers, more rarely by one mother and different fathers. No other cases are well authenticated, and some records of the marriage of brother and sister, such as the case of the Veddas, are now known to be mistaken. In general, not only is this form of marriage prohibited, but its prohibition forms the central and most definite feature of the moral code; and this applies to the marriage not merely of own brother and sister, but of those relatives in the widest classificatory sense.

It has been supposed by Morgan and others that the idea of the marriage of brother and sister existed among mankind, and that it formed a stage in the history of the institution of marriage, but this opinion is chiefly based on misinterpretation of the evidence. Thus, avoidance between brother and sister (see Kir, Kromer, III. 3) has been held to show the former presence of sexual relations between these relatives. This is probably correct, but in Melanesia, from which region some of our best examples of this form of avoidance come, the custom is almost certainly a relatively recent practice due to external influence.1 In all cases where marriage or sexual relations are allowed between brother and sister, they are probably of late occurrence, due either to relaxation of the rules, or to the working of special ideas, such as that of the virtue inherent in royal blood.

(c) Cousins.—It is necessary to distinguish here between the married and prohibited cousins who are the marriage of those cousins, usually known as cross-cousins, who are descended from persons of different sex. The marriage of cousins in general is sometimes allowed and sometimes prohibited, this prohibition being a necessary consequence of the

classing of all or some cousins with brothers and sisters in different forms of the classificatory system.

The marriage of cousins is frequent among Melanesians, usually with the daughter of the father's brother, and here, as in other cases in which this form of marriage occurs sporadically, the motive is the desire to keep property within the family.

The most frequent form of marriage of cousins is that which takes place between cross-cousins, namely, cousins who are the children of brother and sister. In many places this marriage is not merely allowed, but is the orthodox union, and it is so habitual that it determines the form of the system of relationship and gives a special character to the whole social system. All the peoples who are known to practise this form of marriage use the classificatory system of relationship; but usually the marriage is not between cross-cousins in the wide classificatory sense, but between the children of brother and sister. In some communities these relatives are regarded as husband and wife, without the need of any ceremony or other social arrangement, and still more frequently they apply to one another the terms used between husband and wife, even when they are not actually married to one another.

In the most frequent form of this union a man marries the daughter either of his mother's brother or of his father's sister, but occasionally his choice is limited to one or other of these relatives, the case which occurs the most frequently being that he may marry the daughter of his mother's brother but not of his father's sister. This form of marriage occurs among a few peoples of Australia, in several parts of Melanesia, including Fiji, and in India, especially in the south of the peninsula, though it was probably once more widely distributed. It is also found among the Haida and a few other peoples of N. America, but has not yet been recorded from S. America. In Africa it has recently been found by Mrs. R. F. A. Hoernle among the Rottnestota.

This type of marriage has usually been regarded as a secondary consequence of the dual organization of society, and has probably arisen in most, if not in all, cases out of this form of social organization. In Melanesia it has probably had as its immediate antecedent marriage with the father's sister or with the wife of the mother's brother, but elsewhere it seems to be actuated by the desire to keep property within the family. In some parts of Australia the form is taken over by the matrilineal classes involves the marriage of second cousins, but we do not know how far such marriages occur between true second cousins or between more distant relatives. In some parts of the New Hebrides it is the custom to marry certain relatives whom we should class as first cousins once removed. Thus, a man may marry the daughter of his father's sister's daughter, the daughter of his mother's brother's daughter, or the daughter of his mother's mother's brother. One of these forms of marriage is especially frequent, viz. that with the daughter of the father's sister.

In general, marriage between these relatives is prohibited, but occasionally a man is allowed to marry his brother's daughter, and this marriage would seem to have sometimes been so habitual as to have influenced the system of relationship. This can be seen in northern Australia and in some parts of Melanesia. It has also been recorded elsewhere, and is allowed in some parts of Europe. Several peoples of S.

India permit a man to marry his sister's daughter. In some cases it is only the daughter of an elder sister who may be married.

Another marriage which may be included under this heading is that of the number in Melanesia, in which a man marries the wife of his sister's son, or in which he and his sister's son have their wives in common.

(c) Aunt and nephew. — Marriage with the father's sister occurs sporadically in certain parts of Melanesia, and is a regular practice among some of the Dene peoples of N. America, and marriage with the mother's sister is said to occur among the Osets of the Caucasus. Marriage with the wife or widow of the mother's brother is still practised in many parts of Melanesia, and is shown by the nomenclature of relationship to have once been a common practice. This form of marriage also occurs among some of the Bantu peoples of Africa, and many systems of relationship of N. America have features which would be its natural result.

(f) Grandparent and grandchild. — In Pentecost Island in the New Hebrides it is customary to marry the daughter's daughter of the brother; and this marriage with one who, through the classificatory system, has the status of a grand-daughter has, I think, lent itself so deeply on the nomenclature of relationship that it has become the usual practice of this people. This form of marriage has also been recorded among the Dieri of Central Australia.

A form of marriage similar to that just described, in that a man marries a woman two generations below his own, occurs in Ambrum, adjacent to Pentecost Island. In this island a man marries the daughter of his sister's son. Still more widely distributed is marriage with the wife or widow of the father's father. The occurrence of this form of marriage was first inferred from the nature of the terminology of relationship in Fiji and in Bougainville Island in the Solomons, but the present writer has since found it in vogue in several islands of the New Hebrides, not only with some wife of the father's father, but with the actual grandmother.

We do not at present know of marriage between grandparents and grandchildren outside of Aus- tralia, but there are features of some African systems of relationship which suggest its occurrence at present or in the past.

7. Polygamy. — The forms of marriage so far described are characterized by the social status of the partners to the union. The varieties now to be considered arise from the marriage of one person who enters into union. The term at the head of this section is most conveniently used as a generic term to include all such cases other than monogamy. Its different forms are polygyny, in which one man marries more than one woman; polyandry, in which one woman marries more than one man; and communal marriage, in which more than one man marries more than one woman.

8. Polygyny. — Though this form of marriage is not in most parts of the world, it is very rarely, if ever, practised by all members of the community, but is the special privilege of the powerful and wealthy. Polygyny can be universal only among a people which obtains women by capture or some other means from outside its own community. Sometimes the practice is limited to chiefs, sometimes, where large payments for a wife in vino, it is only the wealthy who can marry more than one wife. Sometimes polygyny is the privilege of those who have shown their superiority to the rest of their community in some way, as in Eddyhouse Island in the Solomons, where a second wife could be given to men who have taken ten heads in war.
Polynynous unions differ considerably in the degree of social differentiation accompanying the union. The different wives may live together in one house or in separate houses. Sometimes one wife is superior to the rest, and her children differ from those of other wives in social status—a condition which passes insensibly into the distinction between marriage and concubinage. Sometimes there are definite rules regulating the behaviour of the husband to the different wives.

The continent in which polygyny has reached its highest degree of development is Africa, in many parts of which the practice is so frequent and has so impressed itself upon the social organization that it has influenced the nomenclature of relationship, and special terms are used to distinguish from one another the children by the different wives of a polygynous marriage. Other regions where polygyny is well established are Australia and parts of Melanesia, where the polygyny is not a marriage, but an organized system of monopoly of the young women by the old men of the community.

It is sometimes the custom in polygyny that the wife of one man who marries a woman of marriageable age having the right to take her sisters also as they reach marriageable age.

9. Polyandry.—This custom is far less frequent than polygyny. At the present time its chief home is in India and its neighbourhood, and it also occurs in a definite form in the Marquesas Islands and among the Bahama and Batake, Banta peoples of Africa. In ancient times it has been recorded among the Zulus, Bobo, Patu, and Gaanches, but our information about these and many of the recently-recorded cases is not sufficient to show whether the condition was one of true polyandry or a variety of sexual communism. Even in India there is a distinct tendency for polyandry to be associated with polygyny, thus producing one form of communal marriage. Two varieties of polyandry are generally recognized, in one of which husbands are brothers, while in the other they are not necessarily related to one another. Following McLennan, these two forms are often called Tibetan and Nair (Nayar) respectively, but are better distinguished as fraternal and non-fraternal.

Both among the Todas and in Tibet and neighbouring regions, where polyandry exists in its purest form, it is of the fraternal variety. Usually the eldest son of a family marries, and as his brothers grow up, they share his wife with him. Even if one of the younger brothers takes a wife among the Todas, she becomes also the wife of the other brothers. It is doubtful whether the recorded cases of non-fraternal polyandry should be regarded as polyandry at all. Among the Nayars, who furnished McLennan with his pattern of this form of polyandry, a girl goes through a form of marriage with a man, but then or later consorts with a number of men who need not be related to one another. It is a question, however, whether these men should not be regarded as cibisbei rather than husbands of the boy-husband, and when the boy reaches adult age, he will consort with the wife either of one of these children or of some other boy. The motive of the custom is said to be that the boy shall have a son to take him out of Pust (hell). A similar practice has been recorded elsewhere, as among the Ostiaks and Ossossians. In Melanesia a man and his wife or wives might share a wife or wives in common, but this was almost certainly part of a system of communal marriage, and it is probable that this is also the true nature of some or all of the other cases of the triunity of polyandry. The polyandry of the Marquesas is peculiar in that the husbands are of different social status, one husband belonging to a more influential section of the community than the other.

We know very little of the social mechanism by means of which the status of the children is determined in cases of polyandry. In several cases it has been recorded that the children are assigned to different husbands in order of age, but it is certainly not true of the Todas, who were once credited with this practice. Among these people there is no need for any special ascription of the children to different husbands when these are brothers, owing to their common habitation and their common possession of property. It is only when the husbands are not brothers that the necessity arises, and then fatherhood is determined by a ceremonial act performed on the seventh month of pregnancy, the man who performs this ceremony becoming the father of the child for all social purposes.

We know little or nothing of the causes which have led to polyandry. Among the Todas and in the Marquesas Islands, and possibly elsewhere, polyandry is associated with female infanticide, and it has been supposed that the polyandry is a result of the scarcity of women so produced. It has also been supposed that polyandry has been the result of inequality in the proportion of the sexes, due to scarcity of the food-supply, this either producing a small proportion of female births owing to physiological causes or leading to the practice of infanticide.

It is noteworthy that the only definite example of polyandry recorded in Africa should occur among a pastoral people whose culture possesses several features closely resembling that of the Todas.

10. Communal or group-marriage.—The question whether this form of marriage exists has been the subject of a lively controversy between different schools of sociologists for many years. If we define this type of marriage as a union of more than one man with more than one woman, no one doubts that cases occur which conform to this definition. This form of union is found among the Todas, for instance, but there it seems to have arisen as a combination of polygyny with polyandry. It is when we pass from such cases to those in which large groups of men are held to be the husbands of large groups of women that doubt arises.

The solution of the problem turns largely on the sense in which we use the term 'marriage.' If this word be employed for relations between the sexes, there is no question that group-marriage does not merely exist, but is a widely distributed practice. If, on the other hand, marriage is regarded essentially as an institution by which the social status of children is determined, we are met by our imperfect knowledge of the exact nature of the recorded cases from this point of view; and another difficulty is that of drawing the line between wife and concubine, between husband and cibisbei.

The recorded case which seems most to deserve the name of group-marriage is that of the Ngara-bana (Urabannna) of Central Australia. It is stated that, among these people, no man has exclusive rights over any woman, and that we have
not to do with a confusion between wife and concubine appears from comparison with an adjoining people, the Dieri. The Dieri have a definite term for individual marriage, viz. tippa-malku; this exists side by side with the piruwa-unions, which is certainly one in which a group of men and women have the right to sexual relations with one another. The Ngarabana have consorts called pirauagaru, who evidently correspond with the piruwa of the Dieri, and the relations between the Ngarabana men and women who call one another appu-wu-du, therefore, seem to correspond with the tippa-malku union of the Dieri, except that they are group-relations, while the tippa-malku union occurs between individuals. The tippa-malku marriage, however, is associated with the custom of lending a wife, while men other than the husband have marital rights as part of the marriage ceremony. If the tippa-malku union is regarded as true marriage, it is difficult to withhold this name from the union between appu which seems to correspond with tippa among the Ngarabana. In order to reach a positive decision on the matter, however, we should like to be thoroughly informed about the exact social relations which exist between children and the male partners in the different kinds of union.

In some parts of Melanesia there is an association of definite individual marriage with the occurrence of sexual relations between the group of men formed by the husband’s brothers and the group of women formed by the wife’s sisters. Since these groups consist of brothers and sisters in the classificatory sense, they may be of considerable size. This case is, now at any rate, confined to relations between the sexes, and it seems, therefore, better not to regard this as a form of group-marriage, but to speak of sexual communism associated with individual marriage.

Those cases may be similarly regarded in which all the members of a conventional brotherhood possess marital rights over the wives of other fellows. The most definite case of this kind of which we know is that recorded by C. G. Seligman1 among the Massim of New Guinea, in which all the members of a brotherhood who were called another eriam have marital rights over the wives of the eriam.

11. Concubinage and Cicisbism.—Reference has already been made to the difficulty of distinguishing these conditions from marriage. The most convenient use of the word ‘concubine’ would be to denote a woman with whom sexual relations are permitted, although the union does not involve fatherhood. Similarly, the term cisisbe would be most conveniently used of the male partner in a similar union. If the terms were used in this sense, the pirauaga of the Dieri and Ngarabana would be concubines or cicisbians. The distinction would be especially applicable in such a case as that of the Todas, whose mokkothewoi would be distinguished as cicisbe from the husbands proper, there being the important difference between the two that the mokkothewoi partnership is not subject to the law of endogamy which regulates the polyandrous marriage. The mokkothewoi never obtains the status of father to his partner’s children except in those cases in which he is the same endogamous group as an expectant mother whose husband is dead or missing. He is called upon to perform the ceremony which sanctions the fatherhood.

The difficulty in using the term ‘concubine’ in the sense thus proposed is that in some of the cases, such as those of the OT, in which the use of the term is fixed, concubinage carries with it the social relation of father, sometimes even with full rights of inheritance and succession (cf. art. CONCUBINAGE [Introductory]).

12. Marriage and sexual relations.—In this article marriage has been considered chiefly as a social institution by means of which the relations between parents and children become part of an organized social system. People among whom marriage is a social institution of the most definite kind may vary greatly in their attitude towards the sexual relations of married persons. All gradations can be found between peoples who regard any sexual relations other than those between husband and wife as a heretical offence and those who allow very great freedom in this respect. Of all the cases of which we have any knowledge, however, the extra-marital relations of married persons are subject to definite restrictions, the due to the nature of these resting upon the conception of a wife as the personal property of her husband. Thus many peoples who will kill or make war upon the offender, if a wife is found to have been transgressed, will nevertheless allow others access to their consent is asked, or will offer no objection if relations with other men form part of the satiralia or other occasions when relaxation of the ordinary moral rules is allowed.

The chief modes of departure from marital chastity are exchange of wives, which is especially a feature of Australian society, and lending wives to guests, which occurs in many parts of the world. Allowing the use of a wife in return for money or other kind of compensation is more rare, and is often only a feature of the relaxation of morality which follows contact with external influence.

13. Sexual relations before marriage.—Peoples differ greatly in their attitude towards sexual relations before marriage. In general, pre-nuptial freedom is allowed to men, but great divergencies are found in the views held about female chastity before marriage. Among many peoples the pre-marital chastity of the wife is so highly valued that it may lead to such a practice as infanticide (cf. EJ 1911 ii. 689, 689a), and the testing of chastity may form an important part of the marriage ceremony, the failure of this test leading to annulment of the marriage or depriving the relatives of the woman of the bride-price or other benefits which they would otherwise receive if the marriage.

Among other peoples freedom of sexual relations before marriage is regarded as a normal occurrence, and there may even be an organized system of payments for such relations, or prostitution in some form may be regarded, as a regular preliminary to, and occasion for, marriage. In addition to the forms of marriage dependent upon the social status of husband and wife and the numbers of partners who enter into union, other varieties can be distinguished according to the place of residence of the married persons, and the age at which the union takes place.

14. Patrilocal and matrilocal marriage.—These are terms respectively for cases in which the wife goes to live with her husband, and the husband goes to live at the home of his wife, the usual consequence being that in the one case the children

MARRIAGE (Introductory and Primitive) 429

will belong to the locality of the father, and in the other to that of the mother. These two varieties of marriage have often been distinguished, especially by writers on Indian sociology, by means of the Sanskrit words devata and beema, but in the above terms, first proposed by N. W. Thomas, are now generally used. It is to be noticed that in the case of the patriarchal and matriloclal forms occur in which the man goes to live at his wife’s home for a time, the case being closely related to that mode of obtaining a wife in which a man has, for a period of a few years, to serve the parents of the woman he hopes to obtain as a wife (cf. §19). Sometimes, as in the island of Tikopia, the visit to the wife’s home is of so short a duration that it is probably only a survival in ceremony of a former condition of matriloclal marriage. Still another condition is that which occurs among the Arabs of the Anglo-Egyptian Sudan, in which the wife returns to the home of her parents in order to give birth to her children.

15. Infant marriage. — It is necessary to distinguish between infant marriage and infant betrothal, though the line between the two is often indistinct. Infant marriage is solemnized as husbands or wives when very young or even before they are born, but it is only when ceremonies are performed or transactions carried through which are of a legal nature as those accompanying the marriage of adults that we ought to speak of infant marriage.

Even in this limited sense, infant marriage is a very widely distributed practice. It is especially prominent in India, where its combination with the prohibition of re-marriage of widows makes it a very important feature of social life. Infant marriage occurs as an established practice in Australia and Melanesia, but here, as in other parts of the world, the process is often one of betrothal rather than of marriage. Sometimes a girl married in infancy goes at once to live with her husband’s people; in other cases she continues to live with her own parents until she is of age for the marriage to be consummated. Infant marriage has probably had two chief causes. It is a means of promoting the chastity of the young, adopted by many who regard the case as one of the conditions which seem to occupy the other end of the scale, in which the marriage of a person is pre-determined by the social rules of the community, as in those cases in which a man has to marry a certain relative or friend. However, in cases in which the choice is largely free, it is often the custom to make use of an intermediary, or the transactions connected with the marriage are arranged by the relatives or friends of the parties in the proposed union.

An important difference in the nature of the process of courtship turns upon whether the initiative comes from man or woman. Among many peoples proposals of marriage should come from the women.

The part played by other persons in the arrangement of marriage largely turns upon the extent to which relatives and friends take part in the pecuniary transactions which so often accompany marriage; but in intimate cases between the patriarcal and matriloclal forms occur in which the man goes to live at his wife’s home for a time, the case being closely related to that mode of obtaining a wife in which a man has, for a period of a few years, to serve the parents of the woman he hopes to obtain as a wife (cf. §19). Sometimes, as in the island of Tikopia, the visit to the wife’s home is of so short a duration that it is probably only a survival in ceremony of a former condition of matriloclal marriage. Still another condition is that which occurs among the Arabs of the Anglo-Egyptian Sudan, in which the wife returns to the home of her parents in order to give birth to her children.

17. Marriage by purchase. — In most parts of the world marriage is accompanied by pecuniary transactions. In some cases payment is made by the husband or his relatives to the relatives of the woman, this payment being usually known as the bride-price. In other cases payments are made by the relatiess that is Ghurta, while in others it is known as a dowry. In other cases again there are complicated transactions in which payments pass between the two parties, but often these are chiefly of a ceremonial nature, either existing alone or more frequently accompanying the transference of the bride-price or dowier.

Sometimes the payments made for a wife or husband may be so large as to form a definite impediment to marriage. They may tend to raise the age of marriage, or may even prevent some members of the community from marrying at all. In some cases, however, in which the payments seem to be very large the common ownership of property distributes the payments over a large circle, making them more practicable than would be the case if they had to be given by an individual person. Sometimes the payments are made in different stages which may correspond with betrothal and marriage, and sometimes they do not cease at marriage, but continue for some time afterwards, the birth of each child of the union being an occasion on which the marriage is renewed.

Among people who follow the custom of marrying certain relatives it sometimes happens that the payment for a wife is made only in those cases in which a man marries some other woman.

18. Marriage by exchange. — The most definite case of this mode of contracting marriage is that in which a man gives his sister to the brother of his bride, and, since this custom usually occurs among peoples who use the classificatory system of relationship, it may lead to the exchange of women between groups of considerable size. The motive usually assigned for this form of marriage by those who practise it is that it does away with the necessity of paying a bride-price; but there is no reason to suppose that in some cases the practice may have arisen out of, or be otherwise associated with, the cross-cousin marriage.

19. Marriage by service. — This kind of marriage, which has become common in some cases in the Bible, and which is known as marriage by service in the OT, is probably not very common, and, as already mentioned (§14), passes insensibly into the matriloclal form of marriage.

20. Marriage by elopement. — Among many peoples elopement is so frequent and is so little objected to by the community that it may be regarded as a regular mode of contracting marriage. In some cases it would appear to be the result of
restrictions upon marriage which have developed to such an extent as to have become irksome to the community. In the absence of any social mechanism for the abrogation of these restrictions it has become the custom to connive at their infraction by taking a lenient view of elopement. In Australia and some parts of Melanesia where elopement is frequent it may be the secondary consequence of the monopoly of women by the old men. In still other cases it may be a means of escape from the obstacles to marriage due to the bride-price.

21. Marriage by capture. — This form of marriage has aroused great interest in consequence of the idea of McLennan that, at one period of the history of human society, it was the normal mode of obtaining a wife. The capture of wives is known to occur, and the marriage ceremonial of many parts of the world includes either a definite conflict for the possession of the bride or features which may be interpreted as survivals of this process. It is very doubtful, however, whether any people can actually obtain wives from without their tribe, though the Khonds of India are said to do so, and it is probable that the conflicts of wedding ceremonial are derived from other social processes, such as the custom of marrying relatives, which gave certain parents a vested interest in the women of their own community. The custom of the cross-cousin marriage in southern India makes it probable that a conflict which takes place between the husband and his wife's cousin in some parts of Malabar is a survival of this form of marriage in which the cousin had a proscriptive right to the bride.

It is probable that many of the other customs which have been regarded as survivals of the capture of women from hostile tribes are rather the results of a social condition in which it was the custom that women should become the wives of certain members of their own community.

22. Trial marriage. — Unions to which this term has been applied have been recorded among many peoples, but many, if not most, of these cases should be regarded as trials before marriage rather than as examples of marriage in the sense in which the term is used in this article. Temporary unions are especially frequent where marriage is contracted with little or no ceremonial, and these cases are the inescapable result of trials before marriage on the one hand and into trials and frequent change of divorce on the other. A union should be called a trial marriage only if there is a definite ceremony entered upon with the condition that the union shall be annulled if it is not fruitful or if the parties to it wish to separate after a certain period.

23. Social functions of relatives by marriage. — Marriage brings the partners to it into definite social relations with large groups of persons in whom they had previously no special interest. Among some peoples, and especially among those who use the classificatory system of relationship, these social functions may take on very definite and well-established forms. Prominent among these is the custom of avoidance (see Kin, Kinship, III. 9) between a married person and his or her parents-in-law. The restrictions on contact are usually most pronounced in the case of a man and his wife's mother, and the avoidance in this case may be so strict that the two are not allowed to see one another or even to meet in the same house or even in the same village. A more frequent form of avoidance is that a man may not speak to his mother-in-law or may not speak to her familiarly, and still more frequent is the custom that he may not use her personal name, but must address her by the appropriate term of relationship. A similar mode of conduct often accompanies the relationship of a man to his wife's father. Usually the avoidance is less strict, and the avoidance between a woman and her husband's parents is also, in general, less rigid than that between her husband and her parents. In some places, certainly, and probably everywhere, these social and ceremonial functions are definitely associated with the idea of the likelihood of sexual relations between those who avoid one another, but the occurrence of similar customs of avoidance between persons of the same sex shows that this is not the only explanation.

Similar customs of avoidance also occur between brothers- and sisters-in-law, using these terms in the classificatory sense; but they are usually less strict, and often limited to prohibition of the use of the personal name or of familiar conversation. Often these customs are combined with certain duties on the part of these relatives towards one another — duties which may be summed up as those of mutual helpfulness. This is especially the case with the relationship of brother-in-law. Sometimes the duty of helping one another goes so far that a man may visit another's house, the property of his brother-in-law. Sometimes the men must defend one another in case of danger, while the presence of the relatives on different sides may put an end to a fight. Still another duty sometimes assigned to these relatives is that one must dig the grave or take the leading part in the funeral ceremonies of the other.

This combination of customs of avoidance with the obligation of mutual help may very possibly be explained as having grown out of the relations which arise when marriages habitually take place between hostile peoples, or they may be the result of the marriages which form part of the process of fusion of two peoples.

24. Marriage ceremonial. — The rites accompanying marriage vary greatly in duration and complexity among different peoples. Sometimes they are so fragmentary that they can hardly be said to exist, while in other cases the ceremonial may consist of rites of the most diverse and elaborate kind, prolonged over weeks or months. In the lower forms of culture the ceremonial of marriage is, in general, scanty, especially where it is the custom to marry relatives. Its greatest complexity, on the other hand, is reached in India, south-eastern Asia, and the Malay Archipelago, the elaboration in these regions certainly the result of Hindu influence. It is possible to distinguish certain main varieties of ceremonial. Putting on one side feasting and adornment as the expression of aesthetic motives natural to any important event in social life, we find a number of ceremonies which are connected with the economic side of marriage. Such is the transmission of objects from the friends of one partner to those of the other which form the bride-price or dowry. In some parts of the world, as in Melanesia, the transactions of this kind are numerous and complicated and form nearly the whole of the ceremonial. Sometimes, however, these transactions have aspects which suggest a religious character, especially in the customs of exchange which are so prominent in the ceremonies of Polynesia, Melanesia, and some N. American peoples.

Another group of ceremonies which may have a motive chiefly economic is the conflicts and other features which are probably indications of interference with vested interests affected by the marriage.

A large group of ceremonies consists of acts symbolic of features of marriage. Such are the joining of hands and the tying together of garments. Allied to these are the acts which seem
to show the superior status of one or other partner to the union. Thus the seniority of the bridegroom may be symbolized by presenting him with a white cloth round his neck or a gold ring round his ears, and possibly the 
\textit{tali} in India and the use of the wedding ring of our own culture may have had a similar meaning. Elsewhere, as in Morocco, the bride may be given gifts, such as riding a pack-saddle, which are designed to give her power over her husband.

Similar to these are the many forms of rite in which bride and bridegroom eat, drink, kneel, or march round a fire. Other rites, such as that of pouring rice or wheat on the head of the bride, probably have as their motive the desire to promote the fertility of the union, or to ensure an abundance of food for the household.

Another large group of rites seems to be connected with the idea that some danger is attendant upon entrance into the marriage state. It may be that the marriage in itself is a part of a general custom of performing ceremonies at any transition from one period of life to another—something like passage de l'\textit{rites de passage} of F. A. van Genep. Another motive may be the idea of danger accompanying marriage, to which reference may be made in the following passage from a work on which so great an effect has been ascribed by Crawley.\footnote{Rites de passage, Paris, 1909.}

Among features dependent on ideas of this kind may be mentioned the prolonged period which often has to elapse before consummation of the marriage is allowed, and the frequent customs according to which husband and wife are not allowed to see one another before a certain stage in the ceremonial. Many rites of purification, the assumption of new garments, and such disguises as dressing in the clothes of the opposite sex may also be of this order. It is probable that some rites of marriage are designed to impart to others the spiritual sanction which is supposed to attach to newly-married persons.

Many of the motives for ceremonial so far considered are of the kind usually supposed to underlie magic. Other features are definitely religious in that they involve specific appeal to some higher power. Such are definite rites of sacrifice and prayer, while the practice of divination to discover whether the higher powers are propitious also falls under this head, nevertheless.

Among most people of rude culture no part is taken by any person who can be regarded as a priest, but, as definite religious motives come to be recognized, the men who make up the body of the other classes (chiefly women) proceed to pass more and more into the hands of a class of persons especially set aside for the performance of this and other religious functions.

25. Marriage in animate objects.—In several parts of India it is the custom, under certain circumstances, that persons shall go through ceremonial marriages with such objects as a tree, a bunch of flowers, a dagger, a sword, or an arrow. One occasion for this form of marriage is the entrance of a dancing-girl upon her career, the motive being apparently that, though the future occupation of the girl will render a husband superfluous, she shall nevertheless be married.

Another motive for this form of marriage is the belief in the unlikeliness of certain numbers. Thus, to counteract the belief that a second marriage is unlucky, a widower may marry an innumerable host of women, each of whom is his second marriage. It is probable also, that marriage to a tree may, in some cases, especially where this forms a part of a larger marriage ceremony, depend upon a belief in the influence of the tree upon the offspring, possibly in the future reincarnation of an ancestor represented by, or whose representative is present in, the tree.

26. Marriage after death.—In some parts of India the body of a girl who dies unmarried is the subject of marriage rites, while the marriage of dead bachelors seems to have been a feature of ancient Aryan culture (ZBE ii. 22). The Aryan practice seems to have been the usual, or it is the custom of killing the wife on the death of her husband, and to have had as its motive the desire to provide the man with a wife in the afterlife. We do not know how the motive for the modern Indian practice.

27. Widowhood.—In some parts of the world the re-marriage of widows is absolutely prohibited, and in others widows normally become the wives of certain relatives, while intermediate cases occur in which their marriage is allowed, but is not subject to any special rules. Among many peoples, especially in the case of chiefs and more influential members of the community, widows are killed as part of the funeral ceremonies of their husbands, and there is reason to suppose that there is a connexion between this practice and the total prohibition of re-marriage, at least to which reference has been made in the last chapter. The latter practice is often found in the neighbourhood of places where the killing of widows on the death of the husband is or has been practised. Two cases where the association occurs are India and the Solomon Islands, and the connexion of the two practices is supported in the latter locality by the fact that widows undergo a period of seclusion after death, with features suggesting that the seclusion is intended to represent a ceremonial period of death. It would seem that the prohibition of re-marriage is adopted when the more extreme measure has been given up.

Several cases in which a widow normally marries certain relatives have already been mentioned. Sometimes, especially in Africa, a son takes his father's widow, excluding his own mother. Elsewhere a widow may be married by the sister's son, or the son's son, of the deceased husband, but the most widely distributed form of union of this kind is that known as the levirate, in which a wife is taken by the brother of the deceased husband.

28. The levirate.—The best known example of this practice is that recorded in the OT, in which the custom is limited to the case in which the dead husband has no children, the motive of the marriage being to raise up seed for the dead brother. The text refers only to cases in which a man marries his deceased brother's wife, and in most cases the Biblical limitation and motives are not present. The practice may be based on the idea that a wife is property to be taken by the brother with other goods, or it may form part of the duty of guardianship over the children of the brother and be designed to prevent the management of the children's property passing into the hands of a stranger whom the widow might otherwise marry.

In India, and in some parts of Melanesia, the practice of the levirate is subject to the limitation that the widow of a man may be married only by his younger brother, a man having no right over his younger brother's wife. It is not easy to see how this limitation can arise out of the motives for the practice already mentioned. It was supposed by McLennan that the institution of polyandry, and it is possible that in these Indian and Melanesian cases the practice is derived from either polyandry or communal marriage, the limitation being connected, depend upon a belief in the influence of the tree upon the offspring, possibly in the future reincarnation of an ancestor represented by, or whose representative is present in, the tree.
other forms among many peoples. In many parts of Africa a child born to a widow even many years after the death of her husband is held to be the child of that husband, and the Dinkas of the Anglo-Egyptian Soudan have a custom according to which a widow without male offspring who is beyond the age of child-birth will purchase a girl and marry her adult. Child-birth by this girl to her dead husband. Again, where there is a need for male offspring, especially to perform religious rites, a man without sons may call on his brother or his relative for a kinship bond by being taken as his wife's husband. 

39. Re-marriage of widowers.—We know of no people who prohibit the re-marriage of widowers, and the chief point of interest in this subject is the difference of attitude towards marrying with the deceased wife's sister. It has already been mentioned that in polygynous unions it is often the custom to marry sisters, and among people who follow this custom and many other beliefs concerning marriage and the use of the term is only metaphorical.

30. History of marriage.— Widely different views on this topic are at present current. On the one side are those who regard monogamy as the original state of which the other forms of marriage have developed; on the other are those who believe that monogamy has come into existence by a gradual process of evolution from an original condition of complete promiscuity through an intermediate stage of group-marriage. Lewis Morgan, who has been the chief advocate of an original state of promiscuity, based his opinion on evidence which we now know to be fallacious, and at present not only do we have no knowledge of any promiscuous people, but there is also no valid evidence that a condition of general promiscuity ever existed in the past. The theory of the group-marriage stands on a different footing. Whether the communist unions of different parts of the world be regarded as marriage or not, there is no question that such unions exist, and it is apparent that they have been more general in the past than they are at the present time. The nature of the classification system of relationship is most naturally explained by our original classification of societies. Even if this view be accepted, however, it does not commit us to the position that this condition was once universal among mankind. It is possible that only some of the main varieties of mankind have been universal or nearly universal, or even universal, it would remain possible, if not probable, that it is not a primitive condition, but only represents a stage in the evolution of human society. It may be that the reason to believe that mankind originally lived in small groups, perhaps consisting only of parents and children, the original state would have been monogamy, and, if so, the wide prevalence of communist forms of marriage is the result of the exclusion of factors which came into action as the social group increased in size. Even if the classificatory system be found in communist conditions, it has features, such as the clear recognition of generations, which are most naturally explained by its growth out of a still-earlier condition in which the unions between the sexes were monogamous, or to such small groups of persons as to approximate to that condition.

MARRIAGE (Celtic).— 1. Gaul. Polygamy does not seem to have been customary in Gaul. In the only passage that we have on the subject (Cesar, de Bell. Gall. vi. 19) the plural usores is certainly due to the plural eviri. At the time of Gaul's last struggle against the Romans every Gaul bound himself by a sacred oath neither to enter his house again after the death of his relatives, or wife (usorem, vii. 66) until he had ridden twice through the enemy's lines. We know that, as in other places, the wife (usor) brought a dowry, but the husband also added an equal amount taken from his own property.

On the death of either husband or wife, the survivor received both portions, along with the revenues accumulated after marriage vi. 19). Marriage was often employed as a means of securing political alliances; thus Orgetorix gave his daughter to Dumnorix; and the latter had his mother wedded to a noble of the Bituriges, and married his sister and other female relations to the other. (i. § 9, 18). The wife's position, then, was very much superior to that of a slave. Plutarch relates that, before the Gauls had crossed the Alps, the women reconciled the opposing parties by a terrible civil war, and ever after the Celts continued to admit their wives to their council when deliberating on peace and war, and to let the disputes with their allies be ruled by their wives' judgment. As agreement was made, later, between Hannibal and the Celts that, if the Celts had any grievances against the Carthaginians, the Carthaginian generals would judge, and, if the Carthaginians had any complaints against the Celts, the case would be judged by the wives of the Celts (de Mut. Virt. 6; cf. Polyeuctus, vii. 50). The numerous stories handed down to us by the ancients about the women of the Celts—Chilmarus (Polyb. xxii. 21), Caunna (Plut. de Phil. Virt. 30), Lenus (Tac. Hist. iv. 67), Gyptis (Athen. xiii. 35; Justin, xili. 3)—seem to prove that the Celtic wife was not the passive being that the wife has remained among most barbarous people to this day, who often gives her the title of mater familias, relates nevertheless that, when a powerhul of birth was about to die, his relations assembled, and, if there was any suspicion in connexion with his death, they cross-examined his wife to see how far the evidence was proved, they put her to death by fire and all kinds of torments. But there is really nothing more in this than the exercise of the power

As agreement was made, later, between Hannibal and the Celts that, if the Celts had any grievances against the Carthaginians, the Carthaginian generals would judge, and, if the Carthaginians had any complaints against the Celts, the case would be judged by the wives of the Celts (de Mut. Virt. 6; cf. Polyeuctus, vii. 50). The numerous stories handed down to us by the ancients about the women of the Celts—Chilmarus (Polyb. xxii. 21), Caunna (Plut. de Phil. Virt. 30), Lenus (Tac. Hist. iv. 67), Gyptis (Athen. xiii. 35; Justin, xili. 3)—seem to prove that the Celtic wife was not the passive being that the wife has remained among most barbarous people to this day, who often gives her the title of mater familias, relates nevertheless that, when a powerhul of birth was about to die, his relations assembled, and, if there was any suspicion in connexion with his death, they cross-examined his wife to see how far the evidence was proved, they put her to death by fire and all kinds of torments. But there is really nothing more in this than the exercise of the power

W. H. R. RIVERS
of life and death which the paterfamilias had over his wife as well as his children (vi. 19).

2. Ancient Britain and Ireland.— Among the ancient Britons the wife of a man belonged to the man who had married the woman first (Cesar, de Bell. Gall. v. 14). Women were common property also in Caledonia ( Dio Cass. Ixxvi. 12; cf. lxi. 6). In Ireland, it is stated, it was quite a natural thing for men to have intercourse with the wives of other men, with their mothers, or their sisters (Strabo, iv. v. 4; cf. Jerome, in Joann. ii. 7), but we find a much more advanced social state among the Irish and Britons described in the ancient epics and the collections of laws and customs.

3. Medieval Ireland.— In Ireland, although the wife might bring all her own personal belongings (fínol) with her, it was the husband first of all who proportioned her to her position and payable on the dowry, consisted of metals (gold, silver, copper, brass), clothing, or cattle; sometimes it consisted in some condition to be fulfilled by the future husband. In Ireland, marriage was generally a sort of sale, for the laws stipulate that the wife’s father has a right to the whole dowry for the first year, to two-thirds the second year, half the third year, and so on, his share decreasing until the twenty-first year, when the debt is cancelled; during all this time the wife has control of what remains of her dowry each year. As a rule, marriages were celebrated by preference on the first days of August, at the time of the Pair of Tailtinn, or in the month of November. Polygamy seems to have been practised, perhaps as an exception, a little before the Christian era. In any case, if it was very uncommon to have several wives of the free class, a king often had one or more concubines of a servile class in addition to his lawful wife (etmuiniter, ‘first wife’). Kinship ties were not always an obstacle to marriage: Lugaid, king of Ireland, married his mother; and a king of Leinster had his two sisters as wives.

The rights of the woman after marriage depended largely on her personal status in the community. In cases of separation for serious offence or by mutual consent, the wife received either the part of her dowry that was left her or what she brought on her marriage-day; in dividing the property, all that she had acquired by work and manufactured articles was taken into account, and the very smallest details were controlled by law.

4. Medieval Wales and Brittany.— The laws of Wales show in their archaic parts a similar social state. The woman brought with her a dowry (agueddy) equal to half of what her brother would have (gwsadd), and articles for her own use (argy-fren); she received from her husband a present proportion to her position and payable on the morning after the consummation of the marriage (conwyll). The conditions of separation depended on how long the union had lasted. If it had continued for periods of seven years all but two days, the belongings were divided equally between the couple; but, if the wife left her husband before this time, and without good reason, she had no right to anything beyond her conwyll. Polygamy was not forbidden. Postmarriage seems to have been less wide-spread than in Ireland.

The Britons who emigrated from Great Britain to Armorica in the 9th cent. called the dowry given by the husband to the wife consuedd, ‘face-price’. It was often property in land. Cf. also artt. CHIL/REN (Celtic), ETHICS AND MORALITY (Celtic), POSTMARITAL.

G. DOTTIN.

MARRIAGE (Christian).— 1. The Christian ideal.—The NT does not profess to set forth any new law or theory of marriage. Our Lord’s answer to the Pharisees who questioned Him on the subject of divorce (Mt 19, Mk 10) implies that the perfect ideal of marriage is sufficiently declared in the passages in Genesis which precedes to record the original institution of the holy estate of matrimony ( Gn 2:24.) The teaching and legislation of the Christian Church on this subject may, therefore, from one point of view, be regarded as a series of attempts to define more clearly and fully what is implied in the words of the original institution, and to enforce in practice the careful observance of the principles therein involved.

It is, accordingly, not strange that the subject of marriage occupies a comparatively small space in the teachings of the NT, and is for the most part confined to general rules as to the behaviour of married people such as might very well have found a place in the teaching of any heathen philosopher.

In the Gospels we have no direct reference to marriage, with the exception of our Lord’s dealings on the subject of divorce, which probably represent sayings uttered on different occasions, but which are, at any rate, all to the same purport: divorce is in itself sinful and inconsistent with the original divine institution of marriage.

In the Epistles we have a number of practical instructions in which the duties of married persons are clearly declared. The supremacy of the husband as the head of the wife is recognized, and the duty of wisely obedience declared. Mutual love and consideration are urged with considerable insight, while the perfect unity of husband and wife as ‘one flesh’ is duly emphasized.

The NT, in fact, deals with marriage as an established social institution as it deals with other established institutions, laying down broad general principles of conduct, and demanding faithfulness and uprightness in the discharge of all recognized duties.

It was not necessary for the first Christian teachers to condemn polygamy, for in both the Greco-Roman and the Jewish world in their time monogamy was the universal rule. Polygamy is not expressly forbidden in the OT, nor was it uncommon in ancient Israel; but the Jewish teachers of the post-Exilic period had come to recognize that it was not consistent with the spirit of the original institution, which plainly demands the union of one man and one woman in marriage.

Extra-marital connexions might not be seriously condemned in the Gentile world, but, for the begetting of legitimate children it was the rule that there should be only one wife to one husband. While it is safe to say, however, that monogamy is assumed throughout the NT, there is perhaps only one passage which a lover of proof texts would quote as distinctly forbidding polygamy, viz.

1 Co 7:1 “Let each man have his own wife, and let each woman have her own husband.”

Yet, although the NT does not profess to put forth any new laws on the subject, it does in the religion of the gospel have done inestimable service, not only in restoring and preserving preci-
MARRIAGE (Christian)

the natural characteristics of the sexes must involve a certain superiority and controlling power on the man's side in the marital duties and responsibilities. This result is the direct outcome of the teaching of the NT.

(3) The union of the sexes has been purified, and the happiness of the married life has been realized by the absolute prohibition of every kind of extramontial connexion. Such connexions were regarded with absolute indifference by the Greeks, and, in consequence, the temporary connexion with the tropis, was, commonly, considered more highly valued than the legitimate marriage, to the manifest injury of the home life and the status of the lawful wife. By the Romans, it may be said, such connexions, though not so highly regarded as among the Greeks, were, on the whole, regarded with contemptuous indifference. Although the case was different, so far as the Jewish law was concerned, we cannot doubt that the Jews would horrified at the prevailing tone of thought in the Gentile world and would imibes something of the very lax principles of morality current in their day. All such connexions are emphatically condemned, as also of

(4) The gospel emphatically condemned divorce as essentially sinful. In ancient Rome divorce was regarded as in some sense dishonourable, and therefore undesirable. For five hundred and twenty years it was boasted that divorce was unknown in Rome (Val. Max. i. 1), and the very bitterness with which the satirists denounced the laxity of their time in this matter shows that the old ideas has not yet been wholly lost. Nevertheless, it is only too evident that, in the time of luxury and advanced civilization in which the gospel was first preached, divorce was coming to be looked upon with the utmost indifference as a commonplace fact in ordinary social life.

The Jews had no doubt as to the lawfulness of divorce (cf. art. 'Divorce', in JE EV. [1903] 624-628), and it is probable that Mt 19:10 most truly represents the form of their question to our Lord. They desired to have His opinion, not on the lawfulness of divorce, but as to the causes for which divorce might be legitimately instituted. Our Lord's answer declares the essential sinfulness of divorce as inconsistent with the original institution of marriage.

(5) The teaching of St. Paul about marriage as the symbol or analogue of the mystical union of Christ with His Church (Eph 5:22-24) has had a profound effect on Christian thought, elevating and purifying the conception of marriage. Marriage for the Christian is something more than the ordinary social institution; it is, above everything else, 'a holy estate.' Man and wife are no longer a twain, but one flesh. This idea has already been pointed out, implies more than a merely physical union. How much more? It may be said that it implies a perfect union of love and affection, and entire community of life, goods, and rights of ownership. This may be very desirable, and possibly even necessary; but it is not a necessary outcome of the gospel just as truly as the abolition of slavery—another social institution which is nowhere directly condemned in the NT. It may be argued on rational grounds that some such idea was in the
mind of the Apostle. The idea may not seem altogether absurd to a modern metaphysician; but the undertaking was not bound to defend the infallibility of St. Paul's metaphysics, and may be quite satisfied with the simple, positive, and practical view of the union.

It is, however, necessary to bear in mind that this idea of a mystic or psycho-physical bond formed in matrimony is, essentially, that sacramental view of marriage which was authoritatively defined in the Church of the Middle Ages; and it is still the accepted doctrine of the Roman and Eastern churches, and which has had important practical consequences for Christian thought and Christian life.

2. Marriage rites and ceremonies.—The history of the rites and ceremonies accompanying marriage belongs properly to the sphere of the Christian antiquarian; but, inasmuch as those rites and ceremonies have been the subject of mystical interpretation on the part of Christian theologians, and have thus acquired a certain religious significance, a brief notice of them may well find a place in the present article.

Marriage-celebrations in all times and in all countries have been either essentially religious functions or, at all events, accompanied by religious rites and ceremonies. The solemnization of marriage was regarded by the ancients as something peculiar to the Christian Church. In fact, there is not a single feature in the marriage-services of the Christian communities that cannot be traced back to the apostles, to the nuptial ceremonies of the Roman Empire or, in the other hand, the form of our Christian services, the ministerial benediction, and the clear expression of Christian doctrine in prayers and exhortations have helped to preserve a living sense of the peculiar sanctity of marriage as taught in the NT.

Marriage is, in the first place, an affair of the family. In the earliest period the Christian congregation regarded itself as a spiritual family, and the life and concerns of every member of the congregation were of intimate interest to the whole body. No member of the congregation ought to enter upon so important a contract as marriage without the advice and approval of the whole congregation. This is implied in the words of Ignatius:

"Sea μαρτυρον ο εκκλησία παγκόσμιον και το το γινόμενον, μετά μηναλό το εκκλησίαν το τον Χριστόν συνεχιζε, η τα γινόμενα τα εκκλησίαν και μου προσφερέσθαι (Ep. ad Polycarpus, v).

It is inexcusable, therefore, that the celebration of marriage should not have been accompanied from the very first with suitable acts of Christian worship, or that the accustomed marriage-rites should not have been celebrated as solemn religious functions. With the expansion of the Church and the consequent weakening of the close bond of social union between members of the same congregation, the necessity for ecclesiastical sanction for marriage would be less strongly felt, and marriages might be contracted without any formal benediction.

The testimony of the Fathers, from the middle of the 3rd century onwards, shows that what we should now describe as civil marriages were not unknown, perhaps were not uncommon, but at the same time were strongly disconcerted by the Church. It is evident that the general feeling in the Church was very much the same as it is to-day. While a religious ceremony was not required as a condition of Christian communion, it was felt that the right and proper course was for all Christian people marrying honourably to seek the benediction of the Church upon their union.

From the 5th cent. onwards, we may observe that there can be little doubt that the celebration of marriage with ecclesiastical benediction was the almost universal custom. The inference which has sometimes been drawn from the fact that about A.D. 902 Charlemagne prohibited marriage without benediction (Gal. vii. 383) and that so late as A.D. 900 Leo the Philosopher issued a similar edict (Novel. 89), that purely civil marriages were very common up to the end of the 9th c. is still that which is borne out by anything that we know of those ages.

Nevertheless, marriage without benediction, though thus condemned by the civil law, was, if otherwise unobjectionable, regarded as valid in the Church up to the time of the Council of Trent. That Council (A.D. 1563, sess. xxiv.) decreed that henceforth no marriage should be considered valid unless celebrated by a priest in the presence of at least two other witnesses. The decree, indeed, clearly expresses the principle that the ceremony is not of the essence of the sacrament, the matter of which remains, as before, the consent of the parties; but it claims the right on the part of the Church to regulate the conditions under which a valid marriage can be celebrated. The decree holds good only in those countries in which the decrees of the Council have been published.

In the Eastern Church the Confession of Peter Mogias of Kieff (A.D. 1640), in which the priestly benediction, the accustomed formularies, and the invocation of the Holy Spirit are declared to be essentials of marriage, is regarded as authoritative. The marriage-celebrations in the Christian world for hundreds of years past contain elements derived from two sources, viz. the eponymia, the ancient ceremony of betrothal, and the uspiere, or marriage-ceremony proper. The solemn troth-plight, the joining of hands, and the giving and receiving of a ring or rings with certain gifts of money—the arrea, pledge of the dowry—were the principal features of the betrothal ceremony. The crowning of the bride and bridegroom, the formal handing over of the bride by her parent or guardian to the care of the bridegroom, the solemn declaration of the completion of the contract, and the bringing home of the bride in triumphal procession to her future home were the accustomed nuptial ceremonies. The priestly benediction may perhaps be considered as the distinctively Christian addition to the ancient ceremonies, yet even this may have been solemnly sanctified by a special benediction. The ancient custom of the ancient church in the celebration of an absolutely indisputable marriage. The reference to the demand for ten witnesses in St. Ambrose 2 would naturally suggest the confarreation. Old customs are often preserved in an imperfect fashion even when they have become obsolete (see MARriage [Roman]).

1 The following passages may be referred to as bearing out the view here presented: Clem. Alex. Ped. III. 11, Strom. iv. 20; Tert. ad Ombr. II. 9; de Pudicitia (this passage is worth quoting in full: "Ideo pecus non, consulis opus est non prudens, ecclesiasticum profanum, in usquechatrinum inducere pecuniam. Nunc consecratus est, nunquam non consecratus matrimonii crimine sündum."); Ambrose, Ep. xiv. 7, condemning mixed marriages with unbelievers, which the Church censured, but could not wholly prevent in the earlier church. If the bishop of Poitiers, Ep. x. v; Basil, Ep. xvii.; cassii 60, etc.

2 Sam 21:14. This passage may, of course, simply refer to the old Roman custom by way of example.
There is no express evidence that the veiling of the bride formed part of the Roman ceremonies of betrothal; it seems rather to have been confined to the Eastern Church. Tertullian's time, however, it was a betrothal ceremony among Christians, the bride continuing to wear the betrothal veil from the time of the betrothal to the wedding-day. Probably, therefore, it was abolished as a ceremony in the Eastern Church. 

A passage in Tertullian would seem to imply that the giving of a ring, though it was a harmless custom, was not practised by Christians in his day (de Idolol. xvi.). This may have been the case, but the whole of the 4th and 5th centuries were said to have been Christian, and the marriage customs of the early Christians, but the universal custom of the Church from the 4th cent. onwards would seem to show that the giving of the ring had always been generally practised.

The crowning of the bride and bridegroom was condemned by Tertullian as implying acknowledgment of heathen deities. Yet it continued to be commonly practised in the Western Church long after his time. In the Eastern Church it prevailed to the present day, and is regarded as the most important part of the marriage-ceremony, marriage in the East being often described as 'the crowning. The sacraments and signs of marriage were simply regarded as distinct ceremonies, between which an interval of time might elapse, up to the middle of the 9th cent., is evident from the letter of Pope Nicholas I. to the Bulgarians (A.D. 865 [PL cxix. 960]), in which he treats of the marriage customs of the Western Church. It is, however, most probable that from much earlier times the two ceremonies had been generally combined in practice. Formal speculations were not required by Roman law, and were frequently omitted. In such cases it would be natural that the giving of the ring, the troth-plight, and other espousal ceremonies would take place at the actual marriage. The Anglican custom of celebrating the first part of the marriage-service in the body of the Church, while the concluding prayers and benediction are said at the altar, is a vestige of the ancient distinction between espousals and marriages.

3. Asceticism and marriage.—The idea that there is something necessarily impure and degrading in the union of the sexes in marriage, or that, at all events, marriage must be regarded as a somewhat grudging concession to human weakness, finds no place in the teaching of the NT. Notwithstanding the strict inculcation of the general principle of self-denial, there is nothing to suggest that the apostolic Church held marriage below the level of clerical life, or that the apostles were to be preferred, in the sight of God, to the pain and the discipline of the married life. Nor does the NT give any support to the doctrine of the 3rd cent. that the ascetic view should have a firm hold on the Christian Church and should have speedily become the predominant and, in fact, universally accepted view. The rise of the monasticism and the admiration aroused by the devotion of the monks and also, from the middle of the 4th cent., the intensified worldliness of the new fashionable Church would naturally free the spirit of the ascetic ideal. The command, 'Love not the world' (1 John 2:15), had to find some new interpretation when the world was no longer a professedly heathen world, but a community of nominal Christians. The doctrine of the earlier Gnostics, Basilidians, Saturninians, Encratites, and of the Manicheans, of the essential sinfulness of conjugal union was, of course, formally condemned, but in the extravagant landings of virginity in the writings of St. Jerome, and even the more moderate utterances of St. Augustine, the disparagement of the married state sometimes approaches very closely to the views of those heretics. In the Middle Ages the doctrine of the superiority of the virgin state firmly held its ground, and led to many extravagances. But the teaching of the NT and the constant witness of the Church served at all events as a safeguard against the worst results of the disparagement of marriage.

It was not until the Reformation of the 16th cent. that any serious attempt was made to vindicate the claims of healthy home life and happy marriage to a position of equality with the virgin state. In Luther's eyes all monastic vows were essentially sinful (de Votis monasticis, 1521), and, in general, the Reformers maintained a similar position. The question of the superiority of virginity became an essential point of controversy between the Roman Catholics and their opponents, and the Council of Trent (esss. 24, can. x.) condemned with anathema the doctrine of the equality of the married state with, or its superiority over, the state of celibacy. The objection to second marriages, which were discouraged by the Church and absolutely forbidden by the Montanists, was one result of the ascetic spirit. This we should now regard as a mere harmless eccentricity of no serious importance in the history of Christian thought; but it is far otherwise with another result of the ascetic movement—the enforcement of the celibacy of the clergy. It is significant that it was in the course of the 3rd cent. that the question of the propriety of clerical marriage seems first to have become prominent. Hitherto the Church had held that clerics, like other Christian men, might be married or not, according to their discretion. Those who held the essential superiority of the celibate life would naturally consider that the clergy, as especially belonging to the class of holy persons, should be unmarried. At all events, in the 3rd cent. it came to be recognized that, as each man should 'abide in that state wherein he was called' (1 Cor. 7:29), the clergy should not contract marriage after their ordination. Decisions to this effect are found in the canons of some local synods, though the Council of Ancyra (A.D. 314) made an exception in the case of deacons, who, because of their ordination, should inform the bishop if they intended to marry. From this position it was a natural step to the view that after ordination clerics should cease to maintain consensual relations with wives previously known, relations which could scarcely have been put forth except by a council of celibates. The Council of Elvira (Illibri; A.D. 305) laid down this rule under penalty of deprivation. The ecumenical Council 1

1 In some of his letters, e.g. Letter to Pope Liberius, 360, J. H. M.'s view of the question of love was quite different. J. H. M. thought that it was possible to love another man, and that this was not opposed to the practice of the Church.
of Nicea (A.D. 325) was restrained from passing a similar ordinance only by the emphatic protest of the Martyr Confessor Paphnutius, who pleaded earnestly for the former order in married life. From the close of the 4th cent. the principle that the clergy ought to be celibates was universally adopted in theory in the Western Church. The first letter of Pope Hilary of Poitiers (c. xiii. 1132 ff.), described by H. H. Milman as the first authentic Decretal, the first letter of the Bishop of Rome, which became a law to the Western Church, absolutely interdicted the marriage of the clergy. Nevertheless, all through the Middle Ages, despite the zealous efforts of men like Boniface I., St. Gregory the Great, St. Anselm, and St. Dunstan, despite papal edicts and decrees of councils, the marriage of the clergy continued to exist in every part of Europe. It was regarded in general with indifference, sometimes with approval, by the laity, and was zealously contended for as a right by the secular clergy. Even after the 11th-century crusade of Hildegard (1009-88), the 'scandal,' as it was considered, of 'clerical concubinage' maintained its existence here and there, though it was probably never after Hildegard's time regarded with the same indifference as before.

In the Eastern Church the rule of celibacy has never been imposed on the inferior clergy. By the 6th Council of Constantinople (in Trullo; A.D. 692) the marriage of clerics after ordination was forbidden, but for those married before ordination, with the exception of the bishops, the continuance of conjugal relations was permitted; the wife of a bishop was compelled either to become a deaconess or to retire into a convent. For all practical purposes this remains the rule of the Eastern Churches to the present day, except that marriage is not merely permissible but compulsory for the parish priest, who must, however, be married before ordination. The bishops are chosen from the ranks of the monastics, so that no parish priest can look forward to promotion to the highest position in his Church.

4. Ecclesiastical law and Church discipline.—The Christian Church from the very beginning was constituted as an organized society or, at all events, as a closely connected congeries of societies claiming a right and duty to exercise moral superintendence and discipline over individual members. Church law and ecclesiastical jurisdiction are, then, no late outgrowth or corruption of primitive Christianity. They are, in the very nature of things, a part of the very essence of the Church. It was inevitable that in the Apostolic Age such questions connected with marriage should arise as would be considered matters for the judgment of the community. In 1 Co 7 we have an interesting example of such questions and of the apostolic method of dealing with them. The saying of Ignatius as to the necessity of submitting a proposed marriage contract to the approval of the bishop has already been quoted.

Now it is at all surprising that matters connected with marriage should have, from the Apostolic Age until now, occupied an important place in ecclesiastical legislation. From the civil side, marriage is regarded as a legal contract which must be regulated for practical purposes by the State. From the Christian point of view, marriage in the Church may claim an additional, if not a paramount, place, in the highest interests of religion and morality. Experience shows that there must ever be a possibility of conflict between the two jurisdictions. The Church has its own laws, and the State has its own, and it is sometimes difficult to reconcile both. The Church may claim to regulate the marriage of its members; the State must regulate the marriage of all in its country. Experience shows that there must be a conflict between the two jurisdictions, and that, consequently, difficulties in practice may often result.

The question whether a law or supposed law of the Church must really be received as a divine ordinance. So long as the Church was a small and odious body in the state, its opinion did not much matter whether it regulated the discipline of its members, but as the church grew in power and influence, so the regulations for the discipline of its members came into conflict with the general laws. It was in this way that some of the ecclesiastical authorities, though even then we have reason to believe that Church censures were sometimes delayed or evaded when the Church was in conflict with the state, that the state was in conflict with the Church; but in many cases the Church had to submit to the rule of the community. The case of mixed marriages with Jews or Pagans, which often took place despite the ecclesiastical prohibitions, is an example in point.

In the Middle Ages the matter was settled by allowing marriage, for Christians at all events, to become entirely an affair of the Church. Much laxity of observance might prevail, and the laws of the Church were more often than not flouted by the laity; the wholesome restraints of the law; the princes of the Frankish, Teutonic, and other new nations might decline to abandon their ancient right to have a plurality of wives; but, none the less, it was fully recognized that the Church's jurisdiction in such matters ought to be respected as supreme. It is in the modern period, since the Reformation, that the question of the two jurisdictions and the proper relations of the one to the other has come into prominence and has given occasion to many practical difficulties arising from the conflict of two different ideals. The Reformers vindicated the claims of the State and of the civil magistracy as against the extravagant claims of the medieval Church, holding that the laws of the Christian State must be regarded as Christian laws and must be obeyed and that no law-abiding citizen should be subjected to Church censure or other social inconvenience for neglecting some ecclesiastical ordinance, so long as he did nothing illegal or dishonourable. It was, of course, understood that no law contrary to the teaching of the gospel should be obeyed, and that a man, such as the Apostle Paul, should be obeyed as to the one thing, and, for instance, as to the other thing. In general admitting the duty of obedience to the law of the State, held that it was the province of the Church to define what things were moral or not, and to consider the matter of marriage. Both parties would agree that the object of all marriage laws should be to safeguard purity and morality, and would probably admit that the Church had no right to impose anything in opposition to the law of the State, unless it were in some sort necessary for that object; but the Reformers would by no means concede to their opponents that it was for the Church to impose any regulations which it pleased, without any control by the laws of the State or not. The two questions which in modern times have given occasion to most difficulty have been the question of divorce and the question of the conditions of valid marriage.

(a) Divorce.—Divorce, in the strict and proper acceptance of the term, means the complete severance of the marriage-bond, the persons divorced being left free to marry again. Canonists and theologians, however, frequently apply the term to what is more properly called 'separation' or 'legal separation,' when sanctioned by legal process, 'judicial separa-
MARRIAGE (Christian)

denied that, if the bond is broken, it is broken alike for both partners, but, as the guilty partner is, or has been, living in notorious sin, and can give no evidence of repentance and reformation to the more complete divortium a vinculo nutritum. It has been universally admitted that adultery and, perhaps, some other grave offences justify the separation of man and wife. Such separation is, indeed, contrary to the Christian ideal of a monogamous marriage; but under the new dispensation, as under the old, it is necessary for the hardness of men's hearts in this imperfect world to make provision for occasions when both partners are professing Christians and those in which one is an unbeliever or a heretic. These and similar questions have from century to century occupied the attention of Christian teachers and legislators.

The teaching of our Lord on this subject, as it has come down to us, is found in four passages in the Synoptic Gospels, viz. Mt 19:1-9, Mr 10:1-12, and Lk 16:18. In Mark and Luke the prohibition of divorce and re-marriage is absolute and unqualified; in Matthew the qualifications "saving for the cause of fornication," except for fornication, are added. Roman Catholic divines and those Anglicans who adopt the stricter view maintain that, as each Gospel must be taken in and by itself as authoritative, the passages in Mark must be accepted as the decisive rule for Christians, while the qualified statement in Matthew must be understood as merely giving sanction to separation: a mena et thorh in case of adultery.

On the other hand, it is contended that the ordinary rules of exegesis require us to interpret the unqualified statements in Mark and Luke by the fuller and more balanced statement in Matthew, so that we must not take each Gospel as an independent entity, but must compare one with another. According to what Christ really taught. Moreover, it is contended that, when He spoke about divorce, our Lord must have had in mind the complete severance of the marriage-bond, since that was the only meaning His hearers could possibly attach to the word. It is pointed out that the sayings in Mark and Luke are simply ordinary examples of the method of the great Prophet, who was accustomed to set forth broad principles in an absolute extreme form, leaving it to His people to apply His teachings with all the necessary qualifications in the manner of legislation to their individual cases and needs. That this principle has always been recognised in the interpretation of the Sermon on the Mount without in the least detracting from the supreme importance of that great utterance cannot well be denied. Our Lord was, in fact, a prophet rather than a legislator. Hence it is maintained that the passage in Matthew may be taken as a fuller expression of the Lord's mind than the briefer passages in the other Gospels, that we have His exhortations, from which He has since accepted without qualification. The purpose of marriage, as of all Christian institutions, is the service of God, and to this end, the Christian may undertake the duties of the marriage relation more closely than any other offence, yet it may fairly be said that there are other things which may make marriage life so intolerable, and the ground upon which it is unnecessary to insist that, if divorce or separation be allowed at all, the grounds for such separation ought not in reason to be confined to the one offence of adultery. This difficulty was met by many of the Fathers by showing, on good Scriptural authority, that idolatry, covetousness, unnatural offences, etc., might rightly be classed under the heading of spiritual adultery. There is probably no more a formal difference between this and the argument which appeals most forcibly to modern minds—that there are offences which make married life so intolerable that there can be no restoration of affection, that, where the spirit of affection has been absolutely destroyed, the real viculum has been ruptured, and that, therefore, such offences may rightly be put in the same category as conjugal infidelity in the strict sense of the word.

The passages in the Synoptic Gospels have been treated as they stand in the NT without any reference to the results of modern criticism; it will be generally admitted that such treatment is justified in dealing with ethical or doctrinal questions. It must, however, be acknowledged that the recent higher criticism of the Synoptic Gospels has thrown a new light upon the matter, and to a certain extent, strengthened the case of those who condemn divorce absolutely. The writings of many competent critics are of opinion that the qualification, except for the cause of fornication, formed part of our Lord's teaching (e.g., A. B. Bruce, H. Weiss, H. H. Wende, P. W. Schmidt, B. W. Bacon, C. G. Monetière), and that He forbade divorce simply and absolutely. The four passages are reduced to two. The passage Lk 16:18, probably derived from the source Q, may be regarded as the original and genuine form which has been altered by the first editor. It is quite evident that Mt 19:9 and Mk 10:12 are but slightly different versions of the same conversation, while everything goes to show that the form in Mark is the original (see W. C. Allen, ICC, St. Matthew, 2 Edinburgh, 1912, ad loc.).

If the modern critical view is granted, it, will, no doubt, be admitted that the case of those who absolutely condemn divorce will be somewhat strengthened, but it is not likely that the existing state of opinion on the whole will be very much affected. The acceptance of this view will simply bring into greater prominence the fact that questions of this kind have never really been decided on grounds either of exegesis or of authority pure and simple, but that our interpretation of our Lord's teaching has always been guided by moral and theological considerations. The saving clauses, саpеко тогон ирον ирoен и мω τι εις ирοειν (19), may be admitted to be early notes of interpretation added by the Church—a reminiscence, perhaps, of instruction actually received from the Lord—but those  

Augustine frequently expressed the idea of the wider interpretation of "fornication." Саpеко тогон ирον ирoен и мω τι εις ирοειν, сε ειδους иρον сε εις ирοειν, сε εις иροειν τον εμον may be admitted to be early notes of interpretation added by the Church—a reminiscence, perhaps, of instruction actually received from the Lord—but those  

1 See Pope, L. 372 (19); μω τι εις ирοειν (19).

2 W. C. Allen, though holding the critical view, yet protests, in letters to The Guardian (lxv. [1910] 20, 295, 286, 1782), against making use of any directly to the Lord's teaching, and justifies the use of the NT as received by the Church. J. Keene, in his pamphlet, "An Argument for not Proceeding immediately to repeal the law which prohibits adultery," (1837), attempted to support the stricter view on the ground that the NT had no hesitation in making special provisions only for the Jews of Christ's own time, and were not to apply to Christians, for whom the absolute prohibitions were intended. This view does not seem to have met with much approval, and is not now advanced.
MARRIAGE (Christian)

who plead for the right of divorce will still maintain that the interpretation was fully justified and quite on a level with many of our other interpretations of the Sermon on the Mount.

The only other passage in the NT where the subject of divorce is directly treated is 1 Co 7 where St. Paul appeals to our Lord's authority, repeating the general prohibition of divorce. There is nothing, however, to indicate that, when he speaks of a separation between wife and husband, he had this particular case in mind. Many by nature, in the spirit and mind of his mind. The presumption is rather the other way, and it would seem as if he were merely thinking of the case of separation for what we should describe as incompatibility of temper. The chief interest of this chapter centres in the rules and regulations laid down by the Apostle with reference to matters about which he could not appeal to any direct utterances of the Lord Jesus.

In the first place, he recognizes the possibility of separation 'a mensa et thoro' (v. 11); if husband and wife are separated for any reason, they are to remain single or become reconciled to each other. Even those cases may be subject to the case of separation for conjugal insolvency, we may feel sure that, if he had done so, the Apostle would have approved of the counsel given in the Shepherd of Hermas.

If a husband who divorced his wife was forbidden by the law to take her back; but it is characteristic of the gospel to give prominence to the possibility of repentance; and so the law says that 'he who has put away his unbelieving wife to remain unmarried (ℓανθανόντως) so that the sinner might have an opportunity for repentance with consequent restoration (Mold. iv. 1).

In the second place, St. Paul deals with the case of a marriage between a Christian and an unbeliever—Jew or heathen. If it is desired that the union should continue, the wife may consent to the marriage, a brother or sister is not under bondage in such a case, and, if the unbeliever dissolves the connexion, the Christian is free. This must be taken to mean free to marry again (cf. Ro 7:3 for the use of the terms 'freedom' and 'bondage').

This passage was expressly cited in later times as the authority for the canon law of the Roman Church, which permits divorce by mutual consent in cases of mixed marriages between Christians and unbelievers (see Innocent III., Decretalès Gregorii, iv. 19, de Divortiis,' ch. 7.

The canons of the Roman Catholic Church unqualifiedly forbade marriage, if both parties at the time of marriage had been baptized Christians. In the Eastern Churches, on the contrary, divorce is permitted, not only for adultery, but also for other serious causes, as, e.g., habitual breach, deserts, any party on the life of the other, insanity, leprosy, etc.; but no one is permitted to obtain a divorce more than once. In East and West alike, in the earlier period, and most especially after the ascetic movement became popular—i.e., after the middle of the 3rd cent. the Fathers were strong in their denunciations of re-marriage, even in the case of an innocent partner. In some cases such unions were made from the time of marriage, and at least temporary cohabitation. Yet, while the civil laws permitted re-marriage, it is evident that all the eloquence of the Fathers could not entirely prevent it. In a general way, it is probable that the average lay opinion did not generally approve of the excessive rigidity of what we may call the ecclesiastical view. The Eastern Church, however, has, from the time of the removal of the seat of empire to Constantinople, been much more dependent on the civil power, and, as a natural consequence, more subject to the influence of lay opinion, than the Church of the West, where the power of the ecclesiastical authorities was much unfeigned.

In the matter in hand this difference is very well illustrated in the 5th cent., by the moderation of the views of St. Basil, who refused to condemn re-marriage absolutely, though he could not approve of it, and of Lactantius, as compared with the Western teaching. St. Jerome, and yet, even up to the 12th cent., when the present canon law of the Roman Church was finally formulated, it is evident, from a careful study of the various decrees of synods and councils, that it was not possible in practical life to carry out the principle of the absolute indissolubility of marriage.

Re-marriage in certain cases is permitted implicitly or explicitly by the following Councils: Elvira (IIIibera, c. 305), Vannes (445), Agde (506), Orleans (533), Compiègne (750), and Bourges (1031); to these we may add the testimony of the Penitential of Theodore of Canterbury, drawn up for the guidance of the churches under his control, which in some respects perhaps goes to an extreme in making allowances for the weakness of human nature, but in which very considerable liberty is allowed in the matter of re-marriage.

Civil legislation regarding the matter of the marriage of Constantine to Justian bears witness, indeed, to the growth of Christian influence in the attempts made to limit the grounds for divorce and, in general, to make divorce more difficult. Nevertheless, the law permitting divorce by mutual consent was still in force until the time of Justian, while the grounds on which it might be obtained were numerous enough. Under the legislation of Theodosius the Great and Valentinian a wife might divorce her husband for (1) treason, (2) adultery, (3) homicide, (4) poisoning, (5) violating sepulchres, (6) forgery, (7) stealing from a church, (8) robbery, (9) cattle-stealing, (10) attempts on her life, (11) introducing immorality; and (12) common assault. A husband might divorce his wife for any of the above cases, and also for (13) dining with men not relatives without her husband's permission, (14) going from home at night without permission or reasonable cause, and (15) frequenting circus or theatre without permission; to which Justian added (16) procuring abortion, and (17) mixed bathing.

It was very natural that the Reformers in the 16th cent. should call in question the rigid medieval views on the subject of divorce, regarding them as an outcome of the claims of the ecclesiastical position upon the conscience of the individual by the spirit of asceticism. The Protestant and Reforming divines held that divorce with the permission of re-marriage was justified in the case of adultery and, generally speaking, of cruelty or prolonged desertion. In the 16th and 17th centuries the same view was generally expressed by Anglican teachers, even by those who, like J. Cosin and H. Hammond, are generally considered as belonging to the high school in theology.

The Reformers rejected the sacramental theory of marriage, and held that the words 'the twain shall become one flesh' signified no more than a very comprehensible union based on mutual affections. The doctrine that marriage could be dissolved only by death, since husband and wife could no more cease to be husband and wife than brother and sister to be brother and sister, seemed to them to be the natural outcome of the sacramental doctrine. This is not, indeed, wholly true; for it is quite possible to hold the sacramental view, or something very like the sacramental view, and yet to believe that the marriage bond may rupture the nuptial bond as really and completely as death itself. Still it is evident that rejection of the sacramental theory makes it easier to reject the strict doctrine of indissolubility.

In the next place, the Reformers maintained...
that, since separation 'a mensa et thoro' was permitted, it was more conducive to morality and more in accordance with the teaching of 1 Co 7 th that an innocent partner should be allowed the right of re-marriage than that temptations to a life of sin be multiplied. Further, they pointed out that the strict enforcement of the canon law forbidding divorce had not succeeded in putting an end to the evil; that in the later period the multiplication of grounds on which marriage might be declared null and void a\textsuperscript{b} initio, implying the consequent dissolution of perfectly honourable unions, had really made divorce easier and more common than before, and had become a grave scandal and the source of much immorality. Finally, with their profound reverence for the Scriptures of the OT, it was natural that the Reformers should urge that divorce could not in every case be morally wrong, since, if it were, it could never have been allowed by God under any circumstances. This last argument was put forward by John Milton with much power and eloquence in his Doctrines and Discipline of Divorce (1658). The Christian writer has ever gone so far as Milton in advocating the utmost liberty for Christian men—he does not concede the liberty to women—in this matter. He is, indeed, well entitled to say that God has joined together mense et thoro, but he will by no means allow that a mere marriage contract or ceremony, though entered upon freely by mutual consent and duly consummated, must necessarily constitute such a joining together. Marriage is indissoluble only when there is complete and perfect unity of heart and soul between the partners. It may be safely said that the absurdities to which Milton subjected the doctrine that marriage could be dissolved if pushed to their logical conclusions are a sufficient refutation, nor does this work of his seem to have had much effect on English thought in his own or any succeeding age.

In most Roman Catholic countries civil legislation has conformed to the ecclesiastical ruling of the Council of Trent, and divorce has been forbidden. In Austria, however, it is permitted to those who are not members of the Roman Catholic Church. France is an exception. The Code Napoléon (1804-10) restricted the unlimited licence which had been permitted in the earlier years of the Revolution, and imposed a period of three years on various grounds, including 'mutual consent.' With the restoration of the monarchy (1816), the older law was again adopted and divorce was forbidden. It was not till 1864 that the Civil Code of the Code Napoléon were revived, with certain modifications, serious injuries or cruelty being admitted as sufficient cause, but divorce by mutual consent being forbidden.

In America the laws vary from one State to another. In S. Carolina and Maryland, originally Roman Catholic States, divorce is not permitted; in New York it is granted only on the ground of adultery; while in Maine and Dakota it may be granted on almost any pretext.

If the Report of the Commission appointed by Edward VI. (Reformatio legum ecclesiasticarum) had resulted in legislation, it is probable that the old law of the Common Law, according to which a divorce would have become part of the law both of the English Church and of the English State. With the king's death, however, the prospect of any alteration in the old law died. The Commission appointed to report on the case of the Marquis of Northampton, who, having obtained a separation under the ecclesiastical courts, desired to marry again, allowed the second marriage; but, as the marriage had already taken place while the Commission was sitting, its decision cannot be considered as absolutely unbiased. The Marquis, however, was advised to have his second marriage legalized by special Act of Parliament, and an Act to that effect was passed in 1548, but was repealed when Queen Mary came to the throne. This case is important, as it may be said to have ruled English practice until the passing of the Divorce Act of 1857. The canons of 1604 (can. 167) confirmed the authority of the ecclesiastical court to grant judicial separation, but only under condition that a definite pledge was given by the parties not to contract a second marriage. Divorce proper with privilege of re-marriage could be obtained only by special Act of Parliament. Between the time of the Reformation and the passing of the Divorce Act 317 cases had been dealt with by Act of Parliament in England and 146 in Scotland.

The Act of 1857 abolished the jurisdiction of the ecclesiastical courts in matrimonial cases, and established a civil court for the purpose. In England and Scotland divorce can now be obtained through the court without special legislation, but the law does not apply to Ireland, where an Act of Parliament is still necessary. In Scotland a wife may obtain a divorce on the ground of adultery alone, but in England cruelty or other serious offence on the husband's part must be proved in addition, and where adultery is proved no divorce may be obtained on the ground of adultery alone.

In 1909 a Royal Commission was appointed to consider the whole question of the laws relating to divorce and separation. The Commission, after very careful investigations, extending over two years, published their report in Nov. 1912. No attempt has as yet been made, however—up to the middle of 1915—to give effect to their report by way of legislation. On two points the commissioners were unanimous: if divorce is to be allowed, the method of procedure should be changed by the institution of special courts, so that the divorce should be made, not easy for any class, but as easy for the poor as for the rich; secondly, men and women should be placed on an equal footing, a wife being allowed to divorce her husband on the ground of adultery alone. The majority of the commissioners were in favour of extending the grounds on which divorce might be granted so as to cover cases of wilful desertion for at least three years, cruelty, inordinate insolence after five years' confinement, and imprisonment for a term of ten years. No attempt was made to limit death sentence; but a strong minority protested against this proposal, and claimed that divorce should be granted only in case of adultery.

The resolutions of the Lambeth Conference of 1888, in which this difficult practical question was fully discussed, may fairly be taken as representing the authoritative ruling of the Anglican Church as a whole at the present time.

'(1) Inasmuch as Our Lord's words expressly forbid divorce except in cases of fornication or adultery, the Christian Church cannot recognize divorce in any other than the excepted cases, or give any sanction to the marriage of any person who has been divorced contrary to this law during the life of the other party.

(2) That in no case, during the lifetime of the innocent party, in the case of a divorce for fornication or adultery, should the guilty party be regarded as a fit recipient of the blessing of the Church on marriage.

(3) That, recognizing the fact that there has always been a difference of opinion in the Church on the question whether Our Lord meant to beet his Marry, the case of a divorce for adultery, the Conference recommends that the clergy should not be instructed to refuse the sacraments and other privileges of the Church to those who have been divorced on this ground, and that such persons may be married. These resolutions were reaffirmed by the Conference of 1908, with the addition of a clause that the clergy should not refuse the sacraments to any person who has by means of a court of law divorced a spouse for adultery, and desire to enter into another contract of marriage, it is undesirable that such a contract should receive the blessing of the Church.'

The increase of wealth and luxury, and the growth of a spirit of self-indulgence so characteristic of the present age, together with the widely spread
MARRIAGE (Christian)

intellectual unrest, tend to encourage the demands for a wider extension of the facilities for divorce. Impatience with the formalities and a certaindistaste for old-established bonds are the natural characteristics of an age like ours. The deepened sense of the supreme importance of the spiritual union and companionship in marriage which Christian societies have come to recognize, and which the frequency of divorce must have a degrading effect upon individual character as well as upon society in general, naturally regard with some anxiety the tendency in the present day to make divorce easier and more common. It is undoubtedly necessary for the Christian Church to make resolute protest against this tendency. It is, however, certain that the effects of nineteen centuries of Christian influence have not been wholly shaken off.

We shall never again be able to regard divorce with the same easy indifference with which it was commonly regarded in the 1st cent. of our era. Christian influence will make us feel on behalf of the Christian view of marriage, not in the modern world in the way of conciliating decrees and authoritative edicts, but by the weight of Christian public opinion guided by the principles of the NT.

(1) Equality of rank or condition between the contracting parties, though required by Roman law, has never been regarded as essential in the Christian Church, however desirable it may be.

In Imperial times connexions were sometimes formed between slaves and free women, such connexions, though officially described as concubinage, being regarded as perfectly honourable and moral. It is not improbable that in the Christian Church, with the close relations of brotherhood prevailing between all classes and the excess of the number of free-born women over that of free-born men, such connexions would be by no means uncommon—the fact that they were socially recognized as creditable would, of course, have considerable weight. Some references which have come down to us seem to show that this was the case, and that such connexions were regarded by the Church as essentially marriages.

'Si quis habeat ex ore ex omnium fidum comum in habet, non concubinatium quod est in eam ex ore ex omnium comum, in habet, communis non repulsit tamen tamquam sibi umbra nullius servit ut non componatur, ut nisi prius commovatur, sine placuit, sine concubinatio consensu.' (1st Consilium of Toledo [c. 400, can. 17].)

'Christianos non dicam plurimas sed duas simul habere libertatem sin, nisi unan tamquam aut oxum aut caro loco utique et consortes obiectus legum.' (Iudicis, ep. Gratian, Dis. 4, quoted by B. G. Alexander, Hist. Eccl., Lyons, 1784, l. 90.)

(2) The question of mixed marriages between Christians and non-Christians was, as might have been expected, one of the earliest practical problems with which the Church was called upon to deal. It formed the subject of one of the queries proposed to St. Paul by his Corinthian converts. The Apostle's reply is clear enough so far as marriages contracted before conversion are concerned. A Christian called to continue such a marriage was holy, i.e. right in the sight of God, if his unbelieving partner decided to dissolve the union. If the unbeliever decided to divorce the reason given, namely, 'the brother or the sister is not under bondage in such cases'—which must mean that the Christian would be at liberty to contract another marriage (see, for St. Paul's use of terms 'bondage' and 'liberty,' ch. 7).

In the question of mixed marriages where the marriage was entered into before conversion the Church took a different view. In the case of a couple where both parties were Christians, and both were free-born, the Church regarded such a marriage as valid, for both parties were free, and in the absence of a priest in a Roman Catholic place of worship, the man being further obliged to guarantee that children born of the marriage shall be brought up in the Roman Catholic faith. Marriage otherwise is declared to be null and void. The publication of these decrees, for all practical purposes, in these countries by Pope Pius X. in the well known 'Ne tenere' decree (1907) has given rise to much controversy. Roman Catholic divorce defies the decrees on the ground that the Church has a right to make any regulations she pleases as to the conditions on which she shall recognize marriages, and that it is desirable to prevent mixed marriages as far as possible, and is, further, the duty of the Church to take care that the children of marriages blessed by her shall be brought up in the faith. Their opponents urge that it is inevitable that mixed marriages will continue to be entered into in a large mixed community; that, when this is so, and a marriage is lawfully performed, the Church has no right to cast a slur on respectable persons who have, admittedly, been guilty of no irregular conduct; that to insist on a religious ceremony to which one party may object is to put undue pressure upon conscience, while to demand a pledge for the education in a particular way of children to be born is to override the law of the land and the
natural rights of parents, and that such interference is unjustifiable. 1

(Christian) 

Lord Anson. — It was a common complaint with the Reformation and those who sympathized with them that the multiplication of grounds of prohibition of marriage, the custom of nullification in doubtful cases or cases of illegality, and the facility with which decree of nullity of marriage could be obtained had created much uncertainty in the matter of marriage-relations and had been the source of grave scandals. The same objection was expressed in the statute of Henry VIII. for the regulation of marriages (1533–34):

'Many persons, after long continuance together in matrimony without any allegation of either of the parties or any other at their marriage why the same marriage should not be good, had been divorced contrary to God's law on the pretext of precontract or by reason of other prohibition than God's law permitted. Marriages have been brought into such uncertainty whereby no marriage could be so surely knit or bounden but it should be in either of the parties power to prove a precontract, a kindred and alliance, or a carnal knowledge to defeat the same.'

In the Roman Catholic Church three kinds of relationship are laid down as impediments to valid marriage, viz. blood-relationship or consanguinity, affinity or connexion by marriage, and spiritual affinity. The first, the kindred and alliance between godparents and godchild, or between two persons who are godparents to the same child. In the Eastern Church the system is even more elaborate, and the grounds of prohibition more numerous than in the Western, while at the same time the custom of dispensation commonly practised in the West since the 5th century is unknown in the Eastern Church. In the East two brothers are not allowed to marry two sisters, and a sister, marriage being forbidden—since the Lateran Council (1215)—within the fourth degree. This is in practice almost the same as the Eastern rule. The Lateran Council, however, abolished all prohibitions on the score of affinity within the second degree according to the Western reckoning. No trace of these second degree prohibitions is to be found before the 5th century. In the earlier centuries Christians would be familiar both with the Levitical Law of Holiness (= Lv 18) and with the ordinary Roman law, which went to all intents and purposes, to the same effect—marriage being forbidden within the second degree according to the Western reckoning. It goes without saying that their marriages would be regulated according to the provisions of those codes. The only question in connexion with this subject of prohibited degrees which excites interest or gives occasion to serious controversy at the present time is the much vexed question of marriage with a deceased wife's sister. Such marriages have long been legal and customary in America, in the British colonies, and in several European countries. In England they were not unknown prior to 1835, though condemned by the canon law of 1215 and 1351, and nullified by the civil courts to be perfectly valid and unimpeachable in law, unless voided by special legal process undertaken during the lifetime of the parties; but Lord Lyndhurst's Act in 1855 declared all such marriages within the prohibited degrees absolutely illegal. After many futile attempts, and in face of very strong opposition, an Act legalizing marriage with a deceased wife's sister in the United Kingdom was passed. It is the general clause permits clergymen who have a conscientious objection to refuse to celebrate such marriages, but in the case of Bannister v. Thompson, in which proceedings were taken against a clergyman for refusing the Holy Communion to persons so married, it was decided that the clergy may not refuse the sacraments to persons legally married within the prohibited degrees. Meanwhile the table of affinities in the Anglican Prayer-Book remains the law of the Church, and, in strictness, it would seem that the clergy are prohibited from celebrating a marriage between a widower and his deceased wife's sister, even if they do not feel themselves bound by the famous canons of 1604 to hold that such marriages are ' incestuous and unlawful and altogether null and void' (can. 96). The logical course might seem to be to revise the table of kindred and affinity, but to retain the same or a similar influential body in the Anglican Church is strongly opposed. Those who object to these marriages do not now, as a general rule, claim that they are expressly prohibited in Lv 18, though attempts more or less ingenious have been made to prove that they are. It is held, however, that the general principle that near affinity is a bar to marriage is laid down in the Law of Holiness, that a greater number of cases of affinity are cited in Lv 18, and that the case of the deceased wife's sister is so exactly parallel to that of marriage with a husband's brother that the same principle may be held to stand good. Further, it is said that the reference to the sin of the Canaanites (Lv 18') shows that the prohibitions are regarded as matters of universal moral obligation and not national enactments applicable only to the Israelites. Again, it is maintained that the healthy moral sentiment which makes us regard with loathing and repulsion such unions as those between brother and sister and uncle and niece should also prevail between those who are brought into such close relations of affection as brothers and sisters by marriage. The same sentiment ought to prevail, and anything which may tend to destroy it must be regarded as morally injurious and degrading. The emotional view of a mystic spiritual bond formed in marriage urge that this bond creates as close a relationship between a man and the members of his wife's family as exists between blood-relations. Finally, it is pointed out that marriage with a deceased wife's sister has been expressly forbidden by the Church, at all events since the 4th century. It is most inadvisable, therefore, it is said, to tamper with so long established a custom or, indeed, with any well-established custom in connexion with so delicate a subject as the marriage relationship. Such are the main arguments by which marriage with a deceased wife's sister may be opposed. It is now worth while to consider arguments which have been brought forward on the other side.

It is very doubtful, it is urged, whether the Levitical law relating to a different status and specially intended for the people of Israel can be regarded as a moral law binding on Christians; but, even if it be accepted as such, not only is there no express prohibition of marriage with a deceased wife's sister in the Bible, it is implied that such marriage is perfectly lawful (r.18). The Jews have never regarded such
unions as forbidden, nor were they forbidden by the ancient Roman law. The very fact that an apostolic canon (date probably late in the 3rd cent.) excludes marriage from the clergy, shows that they were not generally regarded at that time as unlawful per se.

No injury has resulted, it is held, either to marriage or to the sanctification of social morality from the permission of such marriages in America and in the British colonies. It is evident from experience that such marriages are in very many cases desired, and in large centres of population among the poorer classes it is absolutely necessary as a safeguard to morality that they should be permitted. It is denied that any feeling of repulsion similar to that inspired by incestuous connexions exists, or ought to exist, in the case of one's wife's near relations. Affinity ought, in certain cases, to be a bar to marriage, but the true ground of prohibition in this case is what is known as respectus parentaite. The marriage of a man with his step-sister or with his nephew's widow is shocking to the moral sense because of the more or less paternal relationship involved in the connexion. According to old Eastern law, a marriage between a woman and her deceased husband's brother, now become the head of the house. That marriage with a deceased husband's brother was not forbidden until moral repulsion, in itself, is shown by the fact that it was declared null in the case of a man dying without children. There is no reason, therefore, for thinking that any other principle than that of the respectus parentaite governs the prohibitions of marriage within certain degrees of affinity in Leviticus, while, in the evident total absence of any sense of repulsion against such unions among the majority of modern civilized people, no reason can be given why they should be forbidden. It is further urged that, even if the sacramental theory of marriage be accepted, since the mystic bond is dissolved by death, it may be fairly held that the connexions formed are no longer binding. That a great distinction is made between marriage with a deceased wife's sister and marriage with those closely connected by blood is evident from the fact that the Roman Church freely and frequently grants dispensations for the former, notwithstanding her high sacramental belief.

Some Anglicans, while not prepared to condemn marriage with a deceased wife's sister as absolutely wrong doctrinally, yet consider it so undesirable that at least it should not receive the blessing of the Church by a marriage ceremony. Such an attitude has in most periods been taken up with regard to objections, but not absolutely forbidden, marriages. As pointed out above, it is the position taken by the Lambeth Conference with reference to the re-marriage of the innocent partner in a divorce case. It has, however, been said that such an attitude is not logical and that the same time unjust to Christian people. The majority of Christians have come to regard the nuptial benediction as almost, if not altogether, an essential of the Church, and, hence, members of the Church are committing no moral offence, they may reasonably claim the blessing of the Church upon their union; if they are entitled to receive the sacraments, it is held that it is unjust to cast such a slur upon them as is implied in a refusal to hallow their union.

5. Conclusion.—Poets and story-tellers have made the love and courtship which lead up to marriage a matter of such all-absorbing interest that married life itself may well seem, by comparison, to be utterly dull, prosaic, and uninteresting. At the same time, divines and canonists have generally directed attention to the sterner aspect of the matter, dwelling exclusively on restraints and prohibitions, and sweeping with a watchful suspicion every form of marriage that they suspected of remoteness from religious observance. Nevertheless, the Scriptural ideal of marriage has maintained its hold in the Christian world and has been a mighty influence for the sanctification of family life and the development of character.

From one point of view, marriage is a restraint—a healthy restriction imposed on unbridled licence and excessive indulgence; it brings with it duties and responsibilities which prevent the unbridled indulgence of character and the use of the talents of the world and call for the continued exercise of patience and self-denial. It is well that, in a matter of so much importance, so intimately connected with our social and moral welfare, the restraints and responsibilities should be clearly defined and earnestly enforced. But there is another point of view which is, after all, the higher and truer. In this, perhaps more clearly than in any other field of human life, we are taught by the gospel that restraints are imposed and self-denial demanded, not for their own sakes, but as a means to truer and more abiding blessedness. Holy marriage is a gift of the Church, a gift of Christ for man's good, and to be a source of blessing. In happy married life man is to find his trust and most lasting happiness, and to reach the fullest perfection of which his nature is capable.
MARRIAGE (Greek).—I. General.—The Greeks, as a rule, seem to have entered upon marriage from religious or practical motives rather than on sentimental grounds. The generation of children was, in fact, the recognized main end of marriage, with which went also the desire to obtain a capable housekeeper. Hesiod in the Works and Days speaks of marriage as being "a bond for the sake of children." Compulsory marriage, then, is a mode of marriage, which, as reckoned by the ancient philosophers, was the most reasonable and the most likely to produce a successful home. In the Greek world, marriage was a social institution, and not merely a matter of personal preference. It was a necessary part of the social order, and was regarded as such by the ancient Greeks.

II. Marriages of the Pharaohs.—The marriage of the Pharaohs was a matter of state, and was celebrated with great ceremony. The marriage of Thutmose III and his wife Ahmose was celebrated with much splendor, and was regarded as an event of national importance. The marriage of Akhenaten and his wife Nefertiti was also celebrated with great ceremony, and was regarded as a turning point in the history of Egypt. The marriage of Ramses II and his wife Tanis was also celebrated with much splendor, and was regarded as an event of national importance. In all these marriages, the bride and groom were given a magnificent wedding present, and were attended by a large number of guests.

III. Monogamy.—The Greeks were, in general, monogamous in their marriages. Polygamy was, however, not unknown, and was allowed in certain cases. The most common form of polygamy among the Greeks was the marriage of two or more sisters, or of two or more brothers, or of two or more cousins. This form of polygamy was allowed by the laws of the state, and was regarded as a matter of convenience.

IV. Divorce.—Divorce was allowed in the Greek world, and was regarded as a matter of necessity. The law of divorce was determined by the state, and was subject to the decision of the courts. The grounds for divorce were generally the failure of the marriage, or the misconduct of one of the parties. The procedure for divorce was generally simple, and was subject to the decision of the courts.

V. The Greek Family.—The Greek family was a matter of importance to the Greeks, and was regarded as a matter of religion. The family was regarded as the foundation of the state, and was the basis of all social and political organization. The family was composed of the parents and their children, and was regarded as a matter of necessity. The state was regarded as a matter of convenience, and was subject to the decision of the courts.

VI. The Greek Woman.—The position of the Greek woman was a matter of importance to the Greeks, and was regarded as a matter of necessity. The Greek woman was generally regarded as a matter of convenience, and was subject to the decision of the courts. The Greek woman was generally regarded as a matter of necessity, and was subject to the decision of the courts.
MARRIAGE (Greek)

That concubinage existed at Athens is to a considerable extent cannot be doubted, owing to the influx of free women and their menfolk from the rest of Greece. 

Lysias mentions a law which a husband is to abide with his wife and his adulterous wife caught γυναικείῳ διότι, whether it be with his wife or with another woman, or if her children be illegitimate (Lys. 1. 21). 

Also in a law of Drakon quoted by Dem. 23. 4, there is a law in the Ecclesaiastic code: τὸν νυνίαν ἀνέκνηθον ἀνήλικον ἀνέκνηθον ἀνήλικον τοῖς γυναικείοις. These passages must cover free foreign women, from which class, as well as from that of slaves and foreigners, the majority of νυνίασας at Athens doubtless came. It is clear, however, from 11. 35, that this law did not extend to δακρυματίωσις νυνιῶν (the naturalization of the female children of Athenian fathers, and from other passages that native Athenian women were not equal in such matters to νυνίασας. 

No special laws touching the case of these and giving them privileges over foreign women living in the polis are known. Hence the hypothesis 4 of the existence at Athens of a status of 'legitimate concubinage,' in which an Athenian citizen, already lawfully married, contracted another union with another Athenian woman, who was, like the wife, formally betrothed (γυναικειόν), her children being therefore legitimate, but who nevertheless was not a wife, fails to the geicon, as being simply the assertion of legalized bigamy.

Here also should be mentioned Muler's theory—that after the fall of the usian expedition, probably in 411 B.C., certain changes went into the Athenian law with a view to increasing the number of citizens. His theory is that an Athenian citizen might marry outside the limits of the regular marriage. Marriage in the proper sense could be contracted only with an Athenian woman, but the new legislation permitted a man to take, in addition to his Athenian wife, a partner who was neither γυναικείον nor νυνίασα—"a secondary wife, who was not a wife in the common sense of the term." This Athenian wife, or "co-wife," or secondary wife, might be either a Greek Athenian or foreign woman; her children were entitled to all rights of citizenship, provided that the father had legally adopted them. If the father had left no children by his real wife, these γυναικεία had all rights of inheritance, but had a claim only to half the real estate of the father. It is, in fact, probable that after this law an Athenian man, should he leave no legitimate male children, might have adopted, after his death, his Athenian wife (if she remained his wife), and so leave a legitimate heir. 

The marriage of consuls was common (cf. Dem. xliii. 74); union of uncle and niece was possible (cf. Lys. xxxii. 4, Is. xxxiii. 74), and even of aunt and nephew (case of Demosthenes facing Apollodorus). The custom of betrothing a man, thus living in his death-bed his prospective widow to his nephew (Dem. xxvii. 5). A man might marry his half-sister by the same father, but seemingly not by the same mother. 

Recht hat die Polychyden gewiß nicht ausdrücklich verbieten, aber wahrscheinlich such nicht geradesam erlassen. Das Gesetz enthält keine Bestimmung, und damit war der Wilkelehe. 

The law of Draccon of Thuri, inflicting loss of political rights on a man who gave his concubine to another, is 16, clearly implies universal monogamy (cf. Hrusa, p. 56). 

1 See Buermann, Der Sohn, etc. ("=Jahrbücher für chl. Phil., 1877-78, Supplementband ix. p. 328, 1881; C. Zimmermann, De necorum Atheniensis conditio, Berlin, 1860. 

3 For ἡν τῆς γυναικείας ἂν ἐν ἐχωμεν ἀνεὼς ἀνεὼς γαμητής, 

4 The form γυναικείον was used by Isocrates only in iii. 83: τὸν αὐτῶν τήν αὐτῶν γυναικείον τήν γυναικείον. 

5 The form γυναικείον was used by Isocrates only in iii. 83: τὴν αὐτῶν τῆς γυναικείας τῆς γυναικείας. 

6 Philodemus, El. 18; cf. Dem. xvi. 18; Is. 77, 14; Hyper. iii. (v. 13). 

7 But modern writers have in general agreed that the form γυναικείον in reference to betrothal must be restricted to the form γυναικείον in signum 'pledge' or 'security,' which is, in fact, its ordinary signification. The form γυναικείον (see also R. de Béauvoir, Politik, p. 91 f. and 157) means 'the daughter of the father, and γυναικείον (pass.) the daughter of the mother of the woman; but the last use is not common, and does not appear to be taken by permission from the noun γυναικείον or the adj. γυναικείον (Wyse, on Isocrates, iii. 4).
MARRIAGE (Greek)

It was essentially a family ceremony (although regulated by law) at which, besides the principals, relatives and other witnesses were present, in numbers corresponding to the social distinction of the parties (cf. 15, 18). The ceremony included a verbal formula of the woman, which certainly was not legally necessary, any more than her consent to the match; in point of law she was simply the object of a purely business arrangement or bargain between her father and the suitor. Of the formalities necessary or usual we know nothing. Herodotus, in his account of the wedding of Agariste of Sicyon, seems to preserve in part verbal formulas of the Athenian marriage-contract in the 8th cent. n. C. It is strange in this case that there is no allusion to any written record of the contract, at any rate at Athens, where, indeed, there was much laxity in this regard; but it is hard to believe that the procedure was purely oral—more especially as it was at the ἐγγύησις, where the dowry agreed upon was actually paid, or agreements entered into as to its future payment.

It is clear from the above that the use of the term ἐγγύησις by the Greeks was quite different from that in later times: it is merely a question of a marriage ceremony, or a betrothal, and not of an actual assurance of commitment, in the sense of a legal pledge, on the part of the woman, to be faithful to her husband, as is denoted by the use of the term in the New Testament, where the marriage ceremonies are considered as the perfect bond between the husband and wife. It was the custom in Greece to have a wedding ceremony, even if the couple did not intend to be married, in order to confirm the engagement and to give the couple a sense of public recognition of their relationship.

The question, therefore, which has been debated, as to whether ἐγγύησις was an act of betrothal or an alluding preceding marriage, or was not rather the beginning of the married state itself—the first and most important of the ceremonies of the wedding-day, and actually constitutive of marriage per se—seems to receive its solution through purely historical considerations. Primarily and originally, the ceremony of ἐγγύησις was a literal putting of the woman by her κύριος into the hands of the suitor for price paid, the interval being the striking of the bargain and exercise of conjugal right (γάμος) being filled by the leading home of the newly-purchased bride. This home-leading, being that part of the entire transaction which was of a striking and necessarily public character, was accompanied by the processions over increasing social significance, while at the same time it was the moment at which religious intervention to invest the ceremonies with their own special solemnities, whether of a prophylactic or of a prognostic sort. The whole mass of historical evidence, of infinite variety, and of very various degrees of consciously realized import, which constitutes the actual procedure of marriage, in its social and non-juristic sense, interesting and important as it is for the student of anthropology, can be given here only in barest outline.

5. Wedding Ceremonies. The Greek γάμος was essentially a religious ceremony (τάγης), covering both the deportation of the bride from her parents' house into that of her husband. The month Νοέμβριος (Jan.–Feb.) was generally selected, and Greek custom seems to have prescribed in general that a winter season was proper for marriage; and the speculations of the philosophers were in accord (cf. Aristotle, Pol. iv. 13, 1555a; τοις δὲ τριτοῖς τὴν γυμνήν νυφίν τούτον οὐκ ἔτη διελέγοντο τούτοις ταῖς ἐν τούτοις τιμιόταται τάξεσι). The bride was dedicated to various deities (θεοὶ νυφῶν) her girl's toys and other gifts, and more especially her personal treasures, now shorn, were given to the bridegroom, as is that before marriage girls offered their hair to Hera, and the Fates; cf. Hesych. σ.ν. γάμους (θ), 2. The most important pre-nuptial ceremony was that of the ἀνακάθαρσις, in which the bride was purified by purification rites. Athens the water must be fetched from the Kallimarmaro (Thuc. ii. 37, 2), tall water-jars of peculiar shape (ἀνακάθαρτα) being used for the purpose—which it was also the custom to set up on the tomb of those dying before marriage.

The order of the details of the nuptial ceremonies is not certain, and doubtless varied according to the locality. A feast was given in the house of the father of the bride, there being security of the event, for the guests were really witnesses (Dem. xxx. 21; Is. viii. 18). Associated with this was the unveling of the bride (ἐκάθαρσις), cf. Pollux, ii. 29, 1, τὰς γυναῖκας ἐμπνεύοντος τιμήν καὶ τίμημα ἐπεμενεῖ τὸν τάλαινα καὶ τὸν ἀνακάθαρτος. The bride's garments were laid out (cf. hiphopteleia, ἀνακάθαρσις, ἀναπληρωματική ἐπεμενεῖ τιμήν καὶ τίμημα ἐπεμενεῖ τὸν τάλαινα), and on the day of the wedding called ἐκάθαρσις, and the first night was the νυφήματα. Cf. J. B. Harrison, The Meaning of the Word ἐκάθαρσις, in CIH xxvii. (1914) 256.

1 Cf. Pollux, iii. 39, 1, τὰς γυναῖκας ἐμπνεύοντος τιμήν καὶ τίμημα ἐπεμενεῖ τὸν τάλαινα καὶ τὸν ἀνακάθαρτος. The bride was dedicated to various deities (θεοὶ νυφῶν) her girl's toys and other gifts, and more especially her personal treasures, now shorn, were given to the bridegroom, as is that before marriage girls offered their hair to Hera, and the Fates; cf. Hesych. σ.ν. γάμους (θ), 2. The most important pre-nuptial ceremony was that of the ἀνακάθαρσις, in which the bride was purified by purification rites. Athens the water must be fetched from the Kallimarmaro (Thuc. ii. 37, 2), tall water-jars of peculiar shape (ἀνακάθαρτα) being used for the purpose—which it was also the custom to set up on the tomb of those dying before marriage.

The order of the details of the nuptial ceremonies is not certain, and doubtless varied according to the locality. A feast was given in the house of the father of the bride, there being security of the event, for the guests were really witnesses (Dem. xxx. 21; Is. viii. 18). Associated with this was the unveling of the bride (ἐκάθαρσις), cf. Pollux, ii. 29, 1, τὰς γυναῖκας ἐμπνεύοντος τιμήν καὶ τίμημα ἐπεμενεῖ τὸν τάλαινα καὶ τὸν ἀνακάθαρτος. Cf. J. B. Harrison, The Meaning of the Word ἐκάθαρσις, in CIH xxvii. (1914) 256.
The procession accompanying the bride ἐπὶ ἀδέσποτην to her new home took place in the evening, by torchlight, the Hymenaios song being meanwhile sung by the bridegroom and his attendants to provide a chorus on the scene of the Shield of Achilles in ll. xviii. 491 f. The bride was introduced to the hearth amid showers of dates, figs, and other sweetmeats (κατασκήνωσις).

6. Bride-price.—In primitive times, remarks Aristotle, men bought their wives (Fol. ii. 8 = 1292 b; cf. Plato, Laws, 804 a). The Epic contains frequent mention of the bride-price (δώρον), normally calculated in oxen, paid by the suitor to the bride's father. It must sometimes have happened, even in very early times, and under a great strain of custom of marriage by purchase, that a father must give something to boot with his daughter in order to secure the desired son-in-law. The economic factor, the relation between population and resources, has obviously, and has contributed largely to the establishment of a custom of dowry in place of the bride-price. In historical times, at any rate, the bride-price has been wholly replaced by the dowry given by the wife to the girl by her parents.

The Epic contains evidence of the transition stages. Of Andromache it is said that Hector took her from her father's house and paid the bride-price unstinted (Ili. xxii. 712 f.). Of Aeneas, slain Iphidamas it is said that he fell *far from his bride, of whom he had paid no price, and much had he given for her (II. xi. 524 f.; he saw no return for his expenditure of 100 horses). In order to appease Agamemnon offers to let him have a dowry and then he does as he pleases, now, said, he will give a present with her (τῷ ἐμί δ' ἐμῆς σημεῖος ἔχω τελέον μας, ἄλλο δ' αὐτῷ νῦν), said, he will give a present with her (πᾶσι τοῖς ἐμῖς σημείοις ἔχω τελέον με, ἄλλο δ' αὐτῷ νῦν), etc. (cf. Od. v. 214, xiv. 342).

Ultimately the δώρον becomes to be a dowry given by her parents to the bride—perhaps through a transition stage in which the bride-price received from the suitor was used wholly or in part to equip the bride and to furnish the feast. In the Odyssey the two systems are both found (241, ix. 53, Teiresias, regarding the Chalkida, the money given for the bride-price (cf. Od. xvi. 77, 281 f.; xiv. 269) but in Od. l. 277 f. — Od. XII. 101 f., οὔτ' ἐμι τὸ παντζάριον ἄκοπον ἐμὶ τῇ γυναικί, οὔτ' ἐρευνώντω, a dowry given by the parents is meant, just as at Phaedr. Euthyphro ἐκός occurs used equivalent to—'

7. The dowry.—In historical times, in Athens, the marriage settlement or dowry (παλαιότερον, ἀνάγκη) was in the form of the property of the husband, i.e. the inheritance, or, in general, the property of the woman, distinguished from connubium; for the freedom of divorce allowed by Athenian law to the husband made the position of a portfolio wife very precarious. (Dem. III. 26; X. 470 a: ἡ γυνὴ διαφωνεῖται ἐξ ἀρχῆς ἐξέγερε τίς τῇ γυναικί, οὐκ ἐπ' ἑαυτῆς γένος μοι ἀνάκλασθον, ἀπὶ θερμοῦ.)

The marriage was followed by some ceremony or act for which the technical and fixed phrase was γυναῖκα τῇ γυναικί (cf. Is. 17. 35; Herod. 43). This has been variously interpreted by both ancients and moderns as an introduction or constitution of the wife among the members of her husband's family, or as a banquet, sacrifice, or donation (see Wis. Lexis, p. 365).

2 Od. xvi. 114, 190; Od. xvi. 252. It is clear from Od. xvi. 307 that the δῶρα were given to the parents, not to the bride. Hence is explained the term used in ll. xvii. 356, κερδοποιηθέν, 'realising a high price is given' (see G. Murray, Rise of the Greek Epic, Oxford, 1901, p. 192 f.). In ll. xvi. 314 f., there is talk of getting the price of a 'bad bargain' refunded. In ll. xvi. 301-315, the meaning of the marriage settlement is given, where the δῶρα are described in the technical term, with such additional gifts (cf. ll. xix. 51). The example quoted from Od. vi. 159 as an illustration of this intermediate stage ('Yielding these goods, to be paid by the husband, as was set up in the past technical term, with the δῶρα of the bride, with such additional gifts') (ll. xix. 51). The example quoted from Od. vi. 159 as an illustration of this intermediate stage ('Yielding these goods, to be paid by the husband, as was set up in the past technical term, with the δῶρα of the bride, with such additional gifts') as the definition of γυναῖκα τῇ γυναικί, 'the giving away of goods, slow oxen to women'. A mortgage-stone (ἀψηφόα) of such type is set up on the property of the woman, as in the following type: ἡ γυνὴ διαφωνεῖται ἐκὸνας ἀνάκλασθον, 'the giving away of the woman' (cf. l. 493). In ll. 493 f., S. Roberts and E. A. Gardner, Intro. to Greek Epigraphy, pl. 11, The Inscrip. of Atticus, Cambridge, 1896, p. 477; Dittenberger, Syll., 817). The widow of the rich banker Pasias is known from an inscription to be a member of her husband's family (Dion. Hal. ii. 25). The dowry was used as security for the whole, in the event that the woman's spouse had not enough money or because her husband could not give adequate security for the whole sum, interest upon which was secured by a mortgage, according to agreement (Dem. xii. 6; Inscr. jurid. graecæ, i. 133 f.). All these arrangements were made before witnesses (cf. Dem. xxx. 9, 21), but were therefore not in the form of an official and publicised, as at Myconos and Tenos; at Athens the permanent stone record of the mortgage was deemed sufficient safeguard of the rights of the parties. Naturally all this implied the necessity of keeping strictly distinct the property of the woman from that of her husband and wife (cf. Dem. xiv. 57, ill. 28); neither Athens nor, so far as we know, goes the rest of Greece know community of property between husband and wife: and, if ever enforced, was certainly obsolete in the 4th cen. k. and was, in fact, virtually abolished by the law fixing the minimum amount to be settled on a poor mortgagee by his next-of-kin—a law which equally passed as Solonian (Dem. xviii. 54). Hippocrates, the richest Athenian of his time, gave his daughter, as is remarked in the recommendations of philosophers, all the property of his wife's family, both in dowry and in husband's family, as his daughter, as is remarked in the recommendations of philosophers. It is clear that the Athenian dowry system, which was probably that of Greece in general, tended to maintain the connexion of the wife with her father's family; the wife did not, as in early Rome, become an assigned member of her husband's family (Dion. Hal. ii. 25).

(a) Amount of dowry.—According to Plutarch, a law of Solon limited the size of dowries at Athens; but, if this, if ever enforced, was certainly obsolete in the 4th cen. C. and was, in fact, virtually abolished by the law fixing the minimum amount to be settled on a poor mortgagee by his next-of-kin—a law which equally passed as Solonian (Dem. xviii. 54). Hippocrates, the richest Athenian of his time, gave his daughter, as is remarked in the recommendations of philosophers, all the property of his wife's family, both in dowry and in husband's family, as his daughter, as is remarked in the recommendations of philosophers. It is clear that the Athenian dowry system, which was probably that of Greece in general, tended to maintain the connexion of the wife with her father's family; the wife did not, as in early Rome, become an assigned member of her husband's family (Dion. Hal. ii. 25).

1 A father might settle a dowry on his daughter by will (Lys. xii. 9), but was not obliged to make this provision; failing which, a daughter had no legal claim on his estate. The Code of Gortyn is more liberal, giving daughters a legal claim in one-half of a brother's share, in lieu of a dowry—an already portioned daughter having no further claim. That is to say, at Gortyn there was legal obligation to dowry. Ephores, so quoted by Strabo, p. 452, ἀνήρ ἡ δώρον ἐκέρδησε, ἐκ διδάκτου δωρίνη, ἐκ διδάκτου δωρίνη, attributes the Gortynian rule to Crete generally, and may be correct in so doing.

2 The nearest male relative of a poor ἀδεσποτὴς or ἀδήσποτος was under legal obligation either to marry herself or to portion her on a scale fixed by law (Is. 138; law in Dem. xiii. 54). Contempt of the law was possibly construed as κακοποιείν, involving κακοποιείν, involving partial σιγά

3 Hence Euphrates makes his complain that women have to buy a husband (Med. 250 f.).

4 For τόπος, see the explanation given by G. Glotz, La Solidarité de la femme dans le droit criminel en Grèce, Paris, 1904, p. 2981. Plato, in Laws, 727 c, lays down the principle that a man may not marry a slave (that is, an ἄρρητος) unless the ἄρρητος is living inŞefek, ἐπὶ τῆς ἀρρητοῦ ἐπὶ τῆς ἀρρητοῦ ἑαυτῆς (cf. 774 f. D). The ἀρρητὸς τῆς ἀρρητοῦ (Dem. xii. 19) has not been preserved. 
MARRIAGE (Greek)

6. Dissolution of marriage.—Disolution of marriage in Athens was partly based on the principle that the husband's power of repudiation was unfettered by any legal conditions or formalities. He simply sent the woman, with her dowry, back to her father's house. A prudent man would, as usual, summon witnesses, but need not do so (cf. Lys. iv. 28). When the wife sought a separation, she must lodge with the Archon τῆς δίκης ἀναθέσεως (Plut. Alc. 8; Andoc. iv. 14: ἀναθέσεως ἀναθέσεως), but nothing is known of the procedure. Against a wife proved guilty of adultery the husband was compelled by law to use his right of repudiation, condonation of the grounds of the divorce, being visited with ἀνίκη (Dem. lix. 11). On the other hand, it is certain that adultery of the husband gave the woman no legal right of divorce, and it is probable that it was not generally regarded as sufficient ground of separation. It is evident that the possession of a dowry must have been a strong protection to the wife against a husband's caprice, and in many households must have made her virtually mistress of the situation.

Two special features call for remark in this connection. It was competent for husband and wife to agree to a mutual dissolution of marriage in order that another more congenial match might be made. Thus Pericles so parted from his wife; he obtained her consent, to take Aspasia (Plut. Per. 24). Again, the operation of the laws respecting heirless dowries (παρθένια), often, according to Inheritance (Greek), vol. vii. p. 304). The latter occasion of dissolution of marriage differs from the first-mentioned in that the court does not seem to have tried the case more than an application or formal notice to him in camera. It is doubtful whether the δίκη διωσκεφάστας and the δίκαια διωσκεφάστας, which are said to have been available for a newly betrothed husband and wife respectively, as if a sort of suit for restitution of conjugal rights, are not mere figments.

1 For comparison of the Gortyan regulations with the later regulations in the East; cf. Eberhard, Diachronie des Rechts, 240, etc. Meineke, Die asiatische Rechtsordnung, 1928. The Athenian law of the dowry was essentially the same as the Gortyan law, and indeed the Gortyan law was probably based on the Attic law. The differences are mainly formal, and do not affect the substance of the law. In particular, the Gortyan law does not provide for the husband's power of repudiation, which is a feature of the Athenian law. The Gortyan law also provides for the wife's right to a share of the dowry, which is not a feature of the Athenian law.

2 Cf. Dittenberger, Spol. i. 236: Ηγεμόνος τὴν ἐκλείμενην δομημένην προς τὸ γάμῳ (not in Syræus).

3 Wi. I. 37: ἴδε τοίς ἐπάνω τῆς ὁμογένειας τῆς ἱεράς, ἰδίᾳ καὶ ἱερά τῆς ἱεράς, Ἰώνου τῆς ἱεράς. 4 Summary: the dowry could not be curtailed by the husband, but could be curtailed by the wife. The husband was not entitled to repudiate his wife, but could do so. The Gortyan law was based on the Athenian law, and was probably derived from it. It is clear from the Gortyan law that the dowry was not regarded as a gift from the husband to the wife, but as a joint property of the husband and wife. The husband was entitled to a share of the dowry, and could not repudiate his wife without her consent. The wife was entitled to a share of the dowry, and could repudiate her husband without his consent. The Gortyan law also provided for the husband's right of repudiation, which is a feature of the Athenian law. The Gortyan law also provided for the wife's right to a share of the dowry, which is not a feature of the Athenian law.

4 Cf. Lys. iii. 28. 5: ἴδε τοῖς ἐπάνω τῆς ἱεράς, ἰδίᾳ καὶ ἱερά τῆς ἱεράς. 6 Cf. Plut. Alc. 8; Andoc. iv. 14: ἀναθέσεως ἀναθέσεως, ἀναθέσεως ἀναθέσεως, but nothing is known of the procedure. Against a wife proved guilty of adultery the husband was compelled by law to use his right of repudiation, condonation of the grounds of the divorce, being visited with ἀνίκη (Dem. lix. 11). On the other hand, it is certain that adultery of the husband gave the woman no legal right of divorce, and it is probable that it was not generally regarded as sufficient ground of separation. It is evident that the possession of a dowry must have been a strong protection to the wife against a husband's caprice, and in many households must have made her virtually mistress of the situation.

5 Two special features call for remark in this connection. It was competent for husband and wife to agree to a mutual dissolution of marriage in order that another more congenial match might be made. Thus Pericles so parted from his wife; he obtained her consent, to take Aspasia (Plut. Per. 24). Again, the operation of the laws respecting heirless dowries (παρθένια), often, according to Inheritance (Greek), vol. vii. p. 304). The latter occasion of dissolution of marriage differs from the first-mentioned in that the court does not seem to have tried the case more than an application or formal notice to him in camera. It is doubtful whether the δίκη διωσκεφάστας and the δίκαια διωσκεφάστας, which are said to have been available for a newly betrothed husband and wife respectively, as if a sort of suit for restitution of conjugal rights, are not mere figments.
9. Widows. - The Athenian regulations concerning widows were as follows. If there were no children, born or adopted, the widow must return with her dowry to her father's house; she must, as a rule, if of suitable age, marry again in accordance with the wishes of her dead husband or those of her kópws (Is. vii. 8). If there were children, she might remain in her husband's house, where she passed under the authority of her children's grandfathers, and be brought up as a minor, and under that of her eldest son when he came of age—her dowry becoming the property of her children, subject to her right to support (Dem. xii. 27, xlv. 20). She might, however, return with her dowry to her father's house, and be given again in marriage (Dem. xl. 6 f.). The same option was open to her if, on her husband's death, she declared herself pregnant (Dem. xiii. 75), in which case it was the Archon's duty to protect her interest (Arist. Ath. Pol. 56. 7). It is clear that here again the existence of the dowry secured on mortgage put the final decision completely into the hands of the widow and her kópws.

MARRIAGE (Hindu) — 1. General characteristics. — The earlier Vedic texts, which may be said to cover the period down to the end of the 6th cent. B.C., present us with a uniformity of the same account of the condition of marriage among the Hindu tribes whose life they depict. Among these tribes marriage was a union of man and woman, for all practical purposes indissoluble save by death, and naturally therefore involving the highest strata of the population. Marriages were contracted between persons of full age, and often by mutual consent; while there are clear traces of the payment of a bride-price for a wife, there is also proof of the giving of dowries by fathers or brothers in order to secure the marriage of daughters or sisters. Traces of marriage by capture are scanty and confined to the warrior class.

The position of the wife in these conditions of society was one of security and dignity. She was, indeed, under the complete control of her husband, though we do not know how far the actual restraint his power extended. But she was the mistress (pottin) of the household, as her husband was the master (pottin). In the marriage-hymn of the Rigveda (x. 19. 1), she is told to exercise authority over her father-in-law, and her husband's brothers and unmarried sisters. The case contemplated seems to be one in which the eldest son of a family marries at a time when his father, through decrepitude, has ceased to exercise full control over the family, and when, therefore, the wife of the eldest son becomes the mistress of the joint family. This is not inconsistent with the respect elsewhere mentioned as due from a daughter-in-law to her father-in-law, which doubtless applies to the case in which the father is still able to control his son and to exercise the rightful authority of the head of the house. The wife was also a participant in the interests secured by the husband; but in this regard a certain deterioration of her position can be traced in the Vedic period, doubtless as the result of the growing importance of the priestly class and the corresponding loss of power of the Brahmans would not be priests. This regulation seems to have been due to the view that women were impure as compared with men, and the same idea may have been at the root of the practice of the Satapatha Brāhmaṇa, for example, first in the Satapatha Brāhmaṇa (i. 8. 2), requiring a woman to eat after her husband, just as such, and the husband was liable only for refund of that stated amount—the principle being, as at Athens, that the wife's dowry should neither increase nor diminish (cf. the Code of Gortyn); from which it follows that the maintenance of the husband and of children had been in the hands of the husband, as was the case at Athens.

MARRIAGE (Hindu) — 1. General characteristics. — The earlier Vedic texts, which may be said to cover the period down to the end of the 6th cent. B.C., present us with a uniformity of the same account of the condition of marriage among the Hindu tribes whose life they depict. Among these tribes marriage was a union of man and woman, for all practical purposes indissoluble save by death, and naturally therefore involving the highest strata of the population. Marriages were contracted between persons of full age, and often by mutual consent; while there are clear traces of the payment of a bride-price for a wife, there is also proof of the giving of dowries by fathers or brothers in order to secure the marriage of daughters or sisters. Traces of marriage by capture are scanty and confined to the warrior class.

The position of the wife in these conditions of society was one of security and dignity. She was, indeed, under the complete control of her husband, though we do not know how far the actual restraint his power extended. But she was the mistress (potin) of the household, as her husband was the master (potin). In the marriage-hymn of the Rígveda (x. 19. 1) she is told to exercise authority over her father-in-law, and her husband's brothers and unmarried sisters. The case contemplated seems to be one in which the eldest son of a family marries at a time when his father, through decrepitude, has ceased to exercise full control over the family, and when, therefore, the wife of the eldest son becomes the mistress of the joint family. This is not inconsistent with the respect elsewhere mentioned as due from a daughter-in-law to her father-in-law, which doubtless applies to the case in which the father is still able to control his son and to exercise the rightful authority of the head of the house. The wife was also a participant in the interests secured by the husband; but in this regard a certain deterioration of her position can be traced in the Vedic period, doubtless as the result of the growing importance of the priestly class and the corresponding loss of power of the Brahmans would not be priests. This regulation seems to have been due to the view that women were impure as compared with men, and the same idea may have been at the root of the practice of the Satapatha Brāhmaṇa, for example, first in the Satapatha Brāhmaṇa (i. 8. 2), requiring a woman to eat after her husband, just as such, and the husband was liable only for refund of that stated amount—the principle being, as at Athens, that the wife's dowry should neither increase nor diminish (cf. the Code of Gortyn); from which it follows that the maintenance of the husband and of children had been in the hands of the husband, as was the case at Athens.
as in Bengal at the present day a wife normally feeds on the remnants of her husband's meal.

Naturally enough, there were different views as to the character of women. A wife completes a husband and is half of his self, we are told (Bṛhadāraṇyakopānīyāgī, i. iv. 7; Satapatha Brāhmaṇa, ii. 1. 1. 10), and her good qualities are frequently mentioned. On the other hand, the Maitrāyani Saṃhitā (t. x. 11, iii. v. 3) describes woman as untruth and as connected with misfortune, and classifies her with rice and drink as the chief evils. In several places (Taittirīya Saṃhitā, vi. v. 8. 2) a good woman is ranked below even a bad man, and the Kātaka Saṃhitā (xxxvi. 1) alludes sarcastically to her ability to obtain things from her husband by coquetry.

The most important function of a wife was doubtless that of bringing into the world a son in order to perform the necessary funeral rites to his father and to continue the race. Adoption, indeed, was known as early as the Rigveda, but it was not popular (cf. art. ADOPTION [Hindu]), and lack of a son (saṃsrad) was regarded as the greatest of evils. On the other hand, the birth of a daughter was regarded as a misfortune; the Aṣṭārga Brāhmaṇa (vii. 15) contrasts a daughter as misery (śarpa) with a son as a light in the highest heaven. But the view once widely held, that the Vedic Indians practiced satyavatiism in the case of girls, has been disproved by O. von Böhtlingk.1

In political life women took no part; men alone went to the assembly. But, while the position of the wife in the sacrificial ritual was narrowed by the priests, there is evidence that women took part in the speculative activity which manifested itself in the 6th cent. B.C. in the Upaniṣads. We learn that a group of several women teachers, who may or may not have been married, but also of the two wives of the great sage Yājñavalkya, who shared her husband's intellectual activities.

In the Ābrahmāṇīyakān and Bhāpatīyastrās, which mark the end of the Vedic period proper, and which may be held to represent the views of the period from the 4th cent. B.C. onwards, in the epics (i.e. the n. a. x. 209), in the Arthasastra, and in the Kāmaśāstra we find in full force the tendencies which reveal themselves in the later classical literature, and can be observed in their development at the present day. Different types of marriage are now recognized and classified, being assigned to the different classes of the population. Marriages between people of full age are still allowed; thus the warrior class is permitted to marry by capture or to form love matches, while the Kāmaśāstra permits love matches generally. Against these special cases must be set the general rule, which first appears as a counsel of perfection in the Māṇḍūkya (vii. 8) and Gobhila Gṛhyasūtras (iii. iv. 6), but which by the time of the later Śrīmātī—i.e., not later probably than the beginning of the Christian era—has won full acceptance, viz. that it was sinful on the part of a father2 to allow his daughter to attain puberty without being married, and the girl herself fell to the condition of a Śūdra (śūdrā), marriage with whom involved degradation on the part of a husband. The date of marriage is placed earlier and earlier as the authority is later in date. Thus the Śrīmātī of Mārga (ix. 94) fixes the ages of husband and wife at 30 and 12 or 24 and 8 respectively; the later work of the Ābrahmāṇīya (ZZMG xiv. ii. 416) and the didactic portion of the Mahābhārata (XIII. xiv. 132) give the wife's age in these cases as 10 and 7 respectively, while yet later texts give 4 to 6 as the lower and 8 as the upper limit. There is abundant evidence that these dates were not merely theoretical; the old marriage-ceremonial, which included the essential part the taking of the bride to her new home, whence the name marriage (viṣaṇā) was derived, was divided into two parts; the actual ceremony took place shortly after the betrothal (vaidyāna), but the taking of the bride (viṣaṇā) only after puberty. The unmarried daughter (kumārī) living at home was distinguished from the married daughter (suvardini or svaśvāri), whose connexion with her past was recognized to the extent that, contrary to the rule that no mourning was observed for a married daughter, a brief period of mourning was prescribed in the event of her death before her departure from her old home. The early prevalence of the custom is also vouched for by the Greek authorities,3 and was noted by al-Biruni in the 11th cent. A.D.4 At the present time, despite the efforts of reformers, it is still the prevailing practice among all Hindus who stand under the influence of the Brāhmans to marry their daughters before puberty, and the practice has spread even among Muhammadans.

The practice of sending a girl put before us in the Hārīta Śrītī (iii. 3). The wife is to devote her whole thought to his house and her husband, to prepare his food, eat what is left over by her husband and sons, wash the utensils, stow cow-dung on the floor, make the domestic offerings, embrace her husband's feet before going to rest, in the hot season fan him, support his head when he is weary, and so forth. On the other hand, to her falls the whole of honour in the household, and she is an undisputed mistress of her daughters and any other women living under her husband's roof. The description in the Śrītī is confirmed by the literature and practice of the other hand, it must be noted that the intellectual achievements of women in India since the rule of early marriage became effective have not been in accord with the normal development which might have been expected from the state of society depicted in the Upaniṣads, and the heroines of the epic and the classical poetry are chosen, as a rule, from those women who, for some reason or other, have not fallen under the operation of the ordinary practice. There is also much evidence in the proverbial literature of the derisite which were attributed to women in general and wives in particular.

2. Forms of marriage.—In the Vedic period the normal form of marriage appears to have been one in which much was left to the choice of the two persons concerned. It is, at any rate, not proved that the father could control the marriage of either son or daughter of mature age, though doubtless parents often arranged marriages for their children. Of the practice of giving a bride-price there is clear evidence from the later Śrīmātī, but there is also clear evidence of the practice of a father and, in his absence, a brother giving a dowry to enable a daughter or sister to obtain a husband; or a daughter might be given to a priest in return for his assistance at some rite. There is also a trace of marriage by capture in the Rigveda, where we hear (i. cxix. 19, cxvii. 20, X. xxxix. 7, lxv. 12) of the carrying off by Yidama of the daughter of Purumitra, apparently with the good will of the maiden but against her father's desire. The normal marriage was duly celebrated at the house of the father of the bride, an essential, which is fully described in the Gṛhyasūtras. It may be noted that many forms which have been found in the marriage-rutine of other Indo-European and non-Indo-European peoples. Of these practices the most

1 ZDMG xiii. [1899] 494-496.
2 See also S. B. S. 120, 121. 
of the marriage-ritual given in the Grhyaśutras have been interpreted in this sense, but the interpretation is neither necessary nor probable. The gāndhāraṇa rite, recognition of the bridegroom, and the brāhmaṇa, and much of the ritual is still observed at the present day. 1

In the Śrautī literature eight forms of marriage are recognized and described, but with many differences in detail. In the case of Brāhmanas and Manu (iii. 24) recognizes as approved four forms: the brāhmaṇa, dāiva, āraṇa, and prājāyatya. The characteristics of these forms are that in the first the father spontaneously offers his daughter to a suitable husband, in the second he gives her to a priest engaged in performing a rite for him, in the third the suitor gives a pair of oxen, and in the fourth the initiative in proposing the marriage comes from the bridegroom. Of these forms, therefore, practically represent marriages by mutual consent and parental arrangement, while the second and third have traces of marriage by purchase, though the texts are careful to explain that the pair of oxen was not intended as a price (būkṣa), but was to be given to the daughter by her father as a mark of honour. It is perfectly clear, however, that the original sense of the custom was a marriage, and the device of offering oxen by reference in the older Grhyaśutras of Pārākara (i. viii. 18) and Sānkhāyana (i. xiv. 10) to the practice of giving the father-in-law a hundred oxen with a waggon, and by the recognition in the Grhyaśutras of the Kāṭha and the Mānsa schools (i. vii. 11) of a usage by which the bride-price was paid in money to the father.

Marriage by purchase was recognized among the warrior class; in the Mahabharata (i. xil. 9 ff.), we are told that Pāṇḍu paid the Madra king in gold, jewels, horses, elephants, ornaments, etc., for the hand of his sister, and that the purchase of women was the family practice of the king. Still more was the custom prevalent among the lower classes of the people. Manu admits (iii. 24) that some allowed the Vaiśya and the Sūdras the āsura marriage. It was an open, out-and-out sale, though he condemns the practice in toto. But facts have prevailed over the objections of the Brāhmanas to the sale of children, and even at the present day marriage by purchase is common enough in Bombay, Madras, and the Panjāb, and is the normal form in Assam. In Bengal it is restricted to the lower classes of the population, but there the practice of the purchase of bridgrooms prevails instead, the practice of child-marriage having placed a high price on eligible husbands.

In addition to the āsura form, the warrior class was allowed the rākṣas, the gāndhāraṇa, and the padderaka forms, though the last is condemned by Manu along with the āsura. Together improved. The former type of marriage was marriage by capture in its simplest form, and its performance is described in many of the epics of the epic, though the rage of the warrior will sometimes be considered as a capital offence. But, outside the epic, we hear little of this remarkable privilege of the warrior class, and this practice has left no surviving proof of its existence. This accords with the evidence of the Grhyaśutras and Dharmaśutras, which recognize with a good deal of agreement the right of each class to marry among the daughters of men of the same order, Brāhman, Kṣatriya, and Vaiśya, and which differ seriously only on the validity of marriages with the Sūdra women. Arrian, probably on the authority of Megasthenes, records (Indica, xii. 8)

1 See W. Wintermets, Das altindische Hochzeitsrecht, Vienna, 1897; A. Weber and E. Haen, Indische Studien, v. 177-411.
that marriages were not allowed between गोत्र—probably a reference to the castes which were certain to be exogamous. The Buddhist texts yield the same result, but they recognize that the king might marry where he would and make his son by any wife his heir-apparent. Mann still recognizes mixed marriages subject to the rule of inversion, but the later Rigveda tends to make them out as objectionable. The modern rule is strict against mixed marriages, confining the possibility of marriage to the modern castes; but the date when this principle of the Svetasvatara Upanishad expressly refers to (I. viii. 3. 6) to marriage as permitted in the third or fourth generation, the former being the rule, according to the commentators. Two marriages, the latter among the Saṅgrātras, while the Dākiṇātayas, or people of the south, permitted marriage with the son of the father's sister or daughter of the mother's brother, but not, apparently, with the son of the father's brother or the daughter of the mother's sister. The Gṛhyasūtras and the Dharmaśastras in effect agree in prescribing that marriage should not take place between a man and a woman of the same gotra (gātric) as his father, or a sāpindha of his mother, and these terms extended at least to all relatives within five degrees on the mother's and seven on the father's side. Later texts add to the restrictions by extending the prohibitions in the case of the mother, and by forbidding unions with the daughter of a spiritual teacher or pupil. At the same time, concessions are made to local customs and the practice of marriage of cousins in S. India is recognized by Bandhāyana (I. ii. 3). But the practice of marrying outside the gotra, a term of wide extension and indefinite sense, but covering all those of the same family as defined in the Brāhmaṇas, and in the general rule at the present day throughout India—at any rate, among all the higher castes. The chief exceptions are found in S. India, where some tribes practise the opposite rule of endogamy.

In Rājputana, among the Rājputs who claim to be descendants of the old warrior class, exogamy is closely connected in their history with the practice of marriage by capture. Of much less importance are the restrictions arising from the feeling that the eldest son and the eldest daughter should be married before the younger sons and daughters, a breach of this rule being merely a ground for a renunciation, and not a fatal bar to the validity of the marriage. The rule is, however, very old, being found in the Pāya-deva (Māndya-purāṇa Sāndhikha, IV. i. 9), and recognized also in the later literature. In the southern members of Brāhmaṇa castes the practice of a mock marriage of the elder brother with a branch of a tree in order to avoid the evil result of a breach of this rule by a younger brother.

4. Polygamy.—The practice of polygamy among the Vedic Indians is abundantly attested by references in the Rigveda and other texts, though in the main monogamy is recognized as normal. In the case of the king four wives are expressly mentioned—the mahā-kā, the first wedded, the parivarī and the tātikā (the one who bore no son), the śānī, or favourite, and the pādāvī, who is explained as the daughter of one of the court officials. The mahākā seems to have been the wife proper, though the others were evidently not mere concubines. In the Arthasastra, the Sūrya, and the epic the rule is laid down that a man may have wives from his own caste and each of those below his, either excluding or excluding the Śūdra, and in such cases the wife of the same caste was the wife par excellence (dharmaṇapāsī), with whom the husband performed his religious duties. The heroes of the epics are frequently represented as having several wives, but one of them always ranks first, and, similarly, later in inscriptions one wife only is often mentioned with her husband. The rule of precedence among wives according to age or seniority to date of marriage might, however, be overridden by the husband, who could degrade a wife from her position as chief wife; in that case he was required to make her a present of gifts or property to a new wife whom he was marrying. The modern rule permits the husband to contract as many marriages as he wishes without any need for justification or consent on the part of his existing wives.

In addition to wives proper, the Smṛtis recognize the existence of concubines (dāti, bhujyāyī), which are described as wives by not being married in due form, and who could not in any case become their husband's heirs. They were, however, entitled to maintenance by his brothers as his heirs on his death, and intercourse with one of his brothers' wives was explicity permissible. In the present day the keeping of concubines by wealthy Hindu is a recognized usage. The Smṛtis show some preference throughout for concubines (dāti, bhujyāyī), which in the case of a wife dying or being divorced is expressly disapproved of. This appears to be the re-marriage of a man who has a wife living, and other authorities restrict the right to become the heir of a husband to the chief wife, who is the surviving half of her husband. In all religious observances the husband is to act with his chief wife only, and marriage is treated by Manu (ix. 101) as a pledge of mutual fidelity between husband and wife.

5. Polyandry.—While polygamy is recognized in the Vedica period, though chiefly among kings and important Brahmans, there is no clear trace of polyandry, all the passages adduced from the Kāraṇa Smṛti (xvii. 2) (XIV. i. 44, 52, 61, ii. 14, 17) admitting of more probable explanations. On the other hand, the heroes of the epic, the five Pañcavas, are represented as marrying Draupadi and having her as wife in common—a fact which is elaborately explained and defended in the epics. This form of polyandry is recognized by Bṛhaspati (xxvii. 20) as practised in the south, and by Agastambha (ii. xxvii. 29) as an ancestral custom. The present day polyandry is still found among Brahmans, Rājugūpas, and Sūdras alike in Kumaon, where children are shared by the brothers as by the Parivas, and among hill tribes in the Panjāb, where the children are divided among the brothers. The reasons given for the practice are poverty and the desire to avoid division of property. Among the Jats of the Panjāb the wife of the eldest brother has to serve often as the wife of the younger brothers also, and the practice is common in the case of the Himalayan tribes. The custom also prevails in the south among the Nairs of the Kamarā council and the Todas of the Nilgiris. The modern evidence comes mainly from Tibetans and Dravidian tribes, and there is no indication that the practice was ever widely spread among tribes of Aryan culture.

The characteristic quality of a Hindu marriage was that it was a union for life; in striking contrast to the Dravidian and Tibeto-Berman usages, marriages among Hindus were seldom broken by divorce. In the Smṛti literature, however, cases are recognized in which divorce in the form of the contracting of a new marriage by the wife during her husband's lifetime is allowed, and the occasions for divorce (śudda), i.e. abandoning a wife and leaving her without maintenance on the part of the husband, are set out. The abandonment of a faithful wife counts as a serious crime, which must be expiated by a severe penance, and which may involve expulsion from caste. Adultery affords a ground for divorce, and might in certain cases be punished with death, but according to other authorities it is only punishable by a light penalty. Any serious offence against a husband by his wife, such as Yajñavalkya (i. 72), is a ground of divorce, and Nārada (xii. 95, 99) gives as offences justifying such treatment attempts to murder, wasting property, or being a procuress of abortion. In modern Hindu law, divorce depends on local custom, and, where allowed, is permitted only for adultery, but divorces are very common among all Dravidian tribes, which also allow freely re-marriage of wives in the case of the disappearance, long-continued absence, impotence, or loss of caste of their husbands. In order to be united with his brother, apparently as a bride. The passage clearly shows that the wife was not to be burned with the dead, but it unmistakably suggests, what is not expressly stated, that the latter is to be the case, and the Atharvaveda (xviii. 3. 1) refers to this as an old practice. 1 It was evidently not approved by the Brahman of the Vedic age, for it is not mentioned in the sūtrās, and appears first in the later Vaiṣṇava ORGYANTRA (vii. 2) and in interpolated passages of the VIGHNA SRIPTI (xxv. 14, xx. 39). The later Smṛtis approve it, but not without occasional dissent. In the epic it plays little part; though the natural interpretation insisted on being burned with his husband (Mahābhārata, i. cxvii. 31); but in the later romances and historical works it is often mentioned, and as early as A.D. 500 an inscription is found to celebrate a sūtra. Forbidden in India in 1829, it was observed in 1839 in the Panjāb at the death of Ranji Singh, and in 1877 at that of the Maharāja of Nepal. The primitive character of the rite is shown by the fact that often other attendants perished with the queen or queens when the dead man was a prince. Normally the wife was burned with the dead man; if he died away from the present day the women might be burned alone (asamārana), but the burning of a pregnant widow or one with a young child was forbidden, and the practice was normally more or less voluntary, except in the case of royal families, where reasons of policy doubtless reinforced considerations of religion in favour of burning.

In many cases death was doubtless regarded as preferable to the fate of a widow, whom the Smṛtis and modern usage, despite the efforts of reformers, condemn to a life of fasting, devotion to her dead husband, pilgrimage, and asceticism from any form of luxury, such as the use of a bed, ornaments, etc. If she had grown-up sons, she fell under their control; if not, under that of her husband's kin, who were bound to maintain her so long as she remained faithful to her late husband. The later texts also recognize her right to be heir to her husband, but only on condition of never marrying; even then she was not allowed to remarry, a disability which is not altered by Act XV. of 1856. The harshness of the rule is better realized when it is remembered that the practice of child-marriages enormously increases the number of widows.

In the Rigveda it seems to have been the practice for the wife of the dead man to be taken in marriage by his brother, whether or not the latter had a wife already, but it was not done in the case of marriage by the brother of the dead, or if there was no brother; the father or eldest son became the husband of the widow in order to continue the race of the dead man. Such a son, when of age, would inherit his father's property, which, until then, would be managed by his mother or by his real father, to

---

1. Hillebrandt, ZDMG. xl. [1886] 719, explains these passages quite differently; but his view is not as unarz戰.
3. Cf. Bṛhaspati, xxvii. 29; ii. 31; Arāṇavāt, xiv. 59.
whose estate also he might in certain cases succeed. By an ingenious misreading the principle the texts allow an impotent or ill man to appoint another during his life to beget a son for him, and in the epic the right to act in these cases is frequently recognized as specially appropriate for Brahmans. But the general tendency of the later texts is more and more against the practice, which was subjected to increasing restrictions or absolutely forbidden, and in modern times the practice of appointment (niyoga) is more primitive or more primitive form of actual marriage with a brother's widow.¹

8. Marriage and morality.—Though fidelity on the part of both parties to a marriage was double-ided in ideas, there is abundant evidence throughout the literature that infidelity on the part of the husband was neither rare nor considered worthy of moral censure. In the case of the wife there is no doubt that in the Smriti literature and in modern usage adultery is regarded as a serious offence which may in certain cases be punished by death. Some of the Vedic passages (Taittiriya Samhita, v. vi. 8; 3; Majitrivajyani Samhita, iv. 7) cited as showing tolerance of adultery are susceptible of other interpretations, but there remain the facts that a special ritual at the Varanapraphaska is clearly intended to remove the effect of adultery (Majitrivajyani Samhita, v. 11; Satapatha Brahmana, ii. v. 20), that the Brhadaranyak Upanishad (vi. iv. 11) contains a spell to expiate adultery with the wife of a Brahman, and that the Brhadaranyak Yajurveda (ii. 28) advises a husband how to receive the case of going on a journey if he desires his wife to have lovers in his absence. The romances and fable literature frequently allude to cases of infidelity, and the Amukhdharana refers (xxii. 4 ff.) to a time when wives were used in common, a practice terminated by Srekapeta. The lack of chastity of the women of the East is recorded by Brhaspati (ii. 30). Too much stress must not, however, be laid on these notices; the reference to the Eastern women may be an allusion to the loose marital relations in Tibet, and the references to the lax morality of previous times are made for the purpose of proving that the recognition of illegitimate sons then accorded was antiquated at the time of the texts.

9. Marriage and property.—The widow of the dead man, according to the Nirukta (iii. 4) and Bandhaya (iii. ii. 41-46), was denied the power of becoming an heir. Gautama (xxvii. 21 f.) mentions her in the list of heirs, but points out the alternative of the adoption of the practice of niyoga for providing the son in whose absence alone could the mother be heir. In Vijn (xvii. 4) and Yajnavalkya (i. 136) is first found the express mention of the widow as the next heir in the absence of male issue. But it is a fact that the right thus obtained is expressly limited by the texts: the widow could not give away, or mortgage, property to other property thus inherited; she held it for her enjoyment only, and she was not entitled alone to succeed as heir, but on her death the duty of maintaining the other wives—a rule which is not recognized in modern Hindu law where all the wives have an equal right of succession.

Distinct from the property obtained by marriage was the Stridhana of the wife, which is mentioned in the Smriti literature, and this, like the rest of the marriage gifts, the bride-price given by her father to her, and the fine paid by her husband in the bower where she was degraded from her position as chief wife in favour of another. This property fell on her death to her daughters, if she had any; if not, apparently to her husband. The later texts make some authorities, shared it with their sisters in any event; and, in the case of failure of all issue, to her husband only if she had been married according to one of the four superior forms of marriage; otherwise it went to her father. In some cases the unmarried daughter was preferred to the married in heanship to her mother. In the later Katkayana Smriti (xx. 30) there are found elaborate rules as to the power of a woman over her Stridhana. She was at liberty to dispose in any way of presents from living relatives, even if consisting of immovables; her husband could not use them without her consent. She was allowed to receive from her sons any property promised by their father and not paid to her, while gifts to wives were encouraged, if not exceeding 2000 pana or consisting of moveables. She could dispose of her property as she chose, so far as it consisted of gifts from relatives, to relatives; the rest went to any unmarried daughter, or, failing such, to her son's daughter, or, failing such, if she left no children, her property passed to her parents if she were married in one of the lower forms of marriage, and any landed property went to her brothers. The later texts make some commentators develop in much detail the doctrine of Stridhana, and the Mitakshara (a commentary on Yajnavalkya) argues that all property which would receive in any way falls under that head, and must not be governed by the special laws laid down with reference to the Stridhana proper. This is contrary to the earlier evidence, which expressly differentiates between Stridhana in the narrow sense and property inherited from a husband, which may pass to his own exors, or given by strangers, over which she can exercise power of disposal only with her husband's consent.

¹ Mayne, Hindu Law and Usage, 60. ² Katakayana, xxiv. 55 f.; Brhaspati, xxv. 60 ff.
MARRIAGE (Iranian)—1. Zoroastrian.—According to the sacred texts of Zoroastrianism, marriage is regarded as an essential part of the " vidhva" (Persian), FAMILY (Persian). The second happiest place in the world is that in which a righteous man sets up his household (Vend. iii. 17: 1). Zoroastrians believe that the pair who are urged to strive to live a life of righteousness and to help one another in good deeds (Ys. iii. 8).

Since marriage is regarded as almost a religious duty, Zoroastrians hold it a meritorious act to help their co-religionists to enter the sacred state, and such assistance may even serve to atone for sin (Vend. iv. 44, xiv. 15). It is by no means usual therefore, for Persians to enjoin by will or by a trust that a certain amount of their wealth be expended in aiding poor brides to marry, and certain institutions, as the Parsi Pañchayat of Bombay, provide special funds for this purpose.

The Parsi community in India has passed through so many vicissitudes that it is difficult to determine which of the various marriage customs of the Parsis were originally Zoroastrian, although it appears to be practically certain that the strictly religious ceremony, at the very beginning of the Aštrūd, or blessing known as the Pañchavānd-nāmā, which is recited at the wedding ceremony, the officiating priest declares that the contracting pair is "according to the law and custom of the Mazlayasian religion."

According to the Avesta, both manhood and womanhood were attained at the age of 15 (Ys. ix. 5; Ys. viii. 15, xiv. 17; Vend. xiv. 15; Bundahīsh, iii. 19). Since in the Avesta we find maids praying for suitable husbands (Ys. ix. 23; Ys. v. 87), it would appear that child-marriage was not practiced. The ritual recited at the marriage ceremony, bidding the pair to express their consent after 'truthful consideration,' points in the same direction. The present Parsi Marriage Act enjoins the age of 21 for males and 18 for females; if the contracting pair are below that age, the marriage certificate must be signed by their parents.

The marriage ceremony is preceded by several other rites. When the match is arranged, an auspicious day is fixed for the betrothal, such as the day of new moon, or the first (Hornauz) or twentieth (Bāhram) day of the Parsi month. At times, especially in Mofussil (provincial) towns, the services of Hindu astrologers, who may name one or more auspicious days for the betrothal, marriage, etc. The match is usually arranged by the parents, with the consent of their children; but often, at the present time, the contracting parties make their own choice with the approval of their parents. Mutual friends of the two families generally carry messages and bring about the match—a course recommended by the Pand-nāmā-i Āruvi-i Mārpanpandān (xii.) and attested in the Sāh-nāmā (tr. A. G. and E. Warner, London, 1905 ff., i. 177 ff., ii. 125, 86-88) by the marriages of the three sons of Farīdūn with the daughters of the king of Yemen, of Rastam with Tahminā, and of Kāsū with Sudhābhā. Until recently professional match-makers were not unknown, and they still exercise a certain amount of activity.

On the day of betrothal (from Pers. nāmāz thudan), since after the betrothal the bride receives in religious recitals of prayers for her the name of the groom, even though, by some reckoning, the marriage does not take place. An unbetrothed girl was said to be 'unnamed' (nā kardah nāmān). Betrothal is regarded as a solemn part of the marriage ceremony, the mīrā sīr-māzā, or 'pledge of the magnitude of a man' (Vend. iv. 2, 4, 6, 15). The couple are formally asked the parents that the bride and groom respectively be given in marriage to each other. The priests took part in the nāmāz (betrothal) at Surat in the middle of the 18th cent. (Anquetil du Perron, Zend-Avesta, Paris, 1771, ii. 557 f.), when the two families met, and the groom's family priest, after prayer, placed the hand of one of the contracting parties in that of the other.

The betrothal is followed by the Divō, when a lamp (divī) is lit early in the morning, and the women of the two families interchange visits and gifts. This Day is regarded as more important than the betrothal proper, because on it the bridegroom and wedding rings are usually presented. The Divō is followed by the Ādāri, when the dowry given by the bride's father is presented to the groom's family. Presents are exchanged, chiefly from the bride's family, on several other days between betrothal and marriage.

An auspicious day, such as the day of new or full moon, is fixed for the marriage as for the betrothal. Tuesday and Wednesday are unsuitable.

In some families the astrologer's services are engaged before the marriage also. When matches are being arranged by mutual friends, the horoscopes of the intending bride and groom are submitted to him, to find whether the stars predict harmony between the pair. If this is not to be the case, the projected match is broken off.

In the morning or afternoon of the marriage day the bride and groom take a sacred bath—custom which is mentioned in the Sāh-nāmā (ed. T. Macan, Calcutta, 1829, p. 1579), where Bahram Gur takes his Indian wife to the fire temple for that purpose. The religious portion of the wedding is usually performed shortly after the marriage, perhaps to symbolize that, just as day and night unite and blend, so the wedded pair should be united in weal and woe.

The marriage is generally celebrated with much pomp, as was the case in ancient Iran, as recorded in the Dinkart (ed. P. B. Sanjana, Bombay, 1874 ff., ii. 97). The groom, wearing a white ceremonial robe and holding a shawl in his hand, sits among friends and relatives of his own sex in the compound. Around his neck he has a garland of flowers, and on his forehead is a vertical line of red pigment (hirun). In colour this is held by some to represent in India an earlier custom of the sacrifice of animal life, and in shape to symbolize the brilliant, fruitifying sun, whereas the round hirun of the bride is supposed to be a symbol of the moon, which absorbs the rays of the sun.

A short time before the marriage, a procession, headed by the officiating priests, and often by a band of music, goes to the house of the bride, where the ceremony generally takes place. The men seat themselves in the compound, and the women in the house. At the door, the side posts of which—like those of the groom's house—are in early times it was usual to name that house by the names of the bride given to present gifts. The sum of 2000 silver dirhams and 2 gold dikes, mentioned in the manuscripts to have been the average sum which a groom of moderate means was expected to provide for his bride. On the Āruvi, with the bride's family, and with the groom's family, such gifts as are usual in India are exchanged. On the Divō, with the groom's family, and with the bride's family, and on the Ādāri, with the bride's family, and with the groom's family, presents are exchanged, chiefly from the bride's family, on several other days between betrothal and marriage. A considerable time might elapse between betrothal and marriage (Vend. xv. 9; cf. Geiger, p. 245).
MARRIAGE (Iranian)

marked with turmeric (whose yellow colour is held to symbolize the sun, and hence abundance and fertility), the groom is welcomed by his future mother-in-law, a fresh mark of kunkun is made on his forehead, and rice is made to adhere to it, and it also thrown over his head.

During the marriage ceremony the officiating priest again sprinkles rice over the bride and groom, and before the recital of the 7th and 8th verses of the pair three handfuls of rice each other, some mothers making the couple eat a few grains of rice then.

An egg, a coco-nut, and a little tray of water are now passed three times round the groom’s head and cast away, and in the course of the evening the women of the bride’s family make the groom dip his hand in a water-jar, in which he leaves for them a silver coin. Formerly it was also the custom for the feet of the bride and groom to be washed after the marriage ceremony, but the adoption of English foot-gear has caused this to survive only in washing the tip of the boots.

After the groom has been thus welcomed at the door, he is made to cross the threshold without touching it, and with his right foot first, these precautions being observed also by the bride when she first enters her husband’s house. Having entered the house, the groom awaits the bride, while the bride’s chair is left unoccupied in the centre of the apartment. On stands beside the chairs are trays of rice to be thrown over the pair, and lighted candles, while beside the bride is a small vessel of ghī and molasses (typifying gentleness and sweetness) which stands before the pair, holding a burning censer in one hand and a little frankincense in the other. Beside each of the contracting parties stands a witness, usually the merchant, and generally married persons.

The following requisites are necessary for a regular marriage: (1) the marriage must be celebrated before an assembly of at least five persons who have been summoned for this special occasion; (2) the contracting parties are asked by the officiating priest whether they consent to be united in wedlock; (3) the hands of bride and groom are joined (khatkhati, "hand-fasting") and a symbolic knot also plays a prominent part in the ceremony; (4) the actual marriage ceremony is followed by a benediction accompanied by waught and rice, etc.

Before being seated side by side, the bride and groom are made to sit opposite each other, separated by a piece of cloth as a curtain. The senior officiating priest now joins the right hands of the pair, and the recital of the Yathk ahi sarvah, a piece of cloth is passed round the chairs of both so as to form a circle, the ends of the cloth being tied together. With a repetition of the Yathk ahi sarvah the khatkhati is then performed by fastening the right hands with twists of raw yam, which is passed round the hands seven times, then seven times round the bridal pair, and, finally, an equal number of times round the knot in the encircling cloth. The fee for this ceremony is the perquisites of the family priests, even though the rite may be performed by other priests. The attendant next puts frankincense on the fire, and the curtain between the pair is dropped, while the bride and groom throw over each other a few grains of rice which they have held in their left hands. The one who first throws the rice is said to win. Following the recital of the benedictions the priests also throw rice over the pair. They are now seated side by side.

The more strictly religious portion of the ceremony is now over. Two priests stand before the pair, the elder of whom blesses them, praying that Ahura Mazda may grant them 'progeny of sons and grandchildren, abundant means, strong friendship, bodily strength, long life, and an existence of 150 years.' He then asks the witness who stands beside the groom whether, on behalf of the bridegroom’s family, he consents to the marriage 'in accordance with the rites and rules of the Mazdaansians, promising to pay her the bride price of 2000 dinars of pure white silver and 2 dinars of pure gold of Nishapour, so that the similar question is asked of the witness for the bride’s family, and then of the contracting parties, the questions being repeated three times. Next follows the recital, by both the officiating priests (Yun, or 'thrice') of the Parindasnamah or Asiroid (fr. F. Spiegel, Avata úberzet, Leipzig, 1852-63, i. 232-234, and, in great part, by the present writer, in Dorsbai Franji Karaka, Hist. of the Persis, i. 182 ff.). The adoptions in the Asiroid are followed by a series of benedictions, in which Ahura Mazda is besought to grant to the wedded pair the moral and social virtues characterizing the yeznotas (angels) who give their names to the thirty days of the month. Prayer is also made for other blessings, and that the bride and groom may be granted the virtues and qualities of the great heroes of ancient Iran, that they may live long, and have many children, etc. A portion of this address is repeated in Sanskrit—probably a reminiscence of the times of the earliest Parsi emigration to India, when it was desired to make the address intelligible to their Indian hosts.

The Asiroid is followed by another group of benedictions in Pzand, this group being called the Tan durn (ed. E. X. Anstz, Pzand Texts, Bombay, 1899, p. 164, t. Spiegel, op. cit. iii.).

The marriage ritual is repeated at midnight. From Anquetil du Perron (i. p. 319, ii. 558, n. 5) this appears to be a reminiscence of the earlier Persian custom when, in Kirmuk the marriage ceremony was performed at midnight. This custom is not, however, universal.

A number of minor usages, not regarded in any way as part of the solemn ritual, are also observed, especially by women, in the Mofassil towns. The first of these, which, like the others of this class, is now observed more as a joke, is chhekti chedi, in which the nearest friend of the bridegroom is required to tie the skirt of the jand, or flowing dress, of the groom to that of the sari of the bride; thus united, the pair go to the bridegroom’s house. This is followed by foot-washing (cf. above), after which comes the daht baraz, or making the newly-weds’ chair partake of food consisting of dapsi (curd) and rice from the same dish, each giving the other to eat. Another custom, now almost obsolete, is making the bride and groom play ekhi bokhi or even. Each takes several rupees in the right hand and asks the other whether the number is odd (ekhi) or even (bokhi); if the opposite party guesses the number rightly, he or she is said to win. The underlying principle is probably similar to that of the rivalry of bride and groom to be the first to cast rice on the other, as already noted.

Marriage songs are sung frequently through the nuptial ceremony, and the whole concludes with a toast, at which courses of fish (a symbol of good omen) and sweets are essential, but meat is forbidden, either out of deference to Hindu scruples or from motives of economy.

JIVANJI JAMBHERJI MODI

2. Next-of-kin marriage.—A problem of peculiar delicacy in connexion with Iranian marriage is the question of the nashündah (Vahavi vešted, kka), usually translated 'next-of-kin marriage' of the modern Parsis maintain that this is a marriage.

1 The etymology of the word is apparently noto, 'belonging to (or the community or clergy)'—compare with Lat nates, and croista, 'marriage' (C. Bartholomew, W. A. Strasbourg, 1904, col. 1890). For a less plausible etymology, based on native tradition (Bhaktat, iii. 22, 161, West, SEP xiii. 401), see Darmesteter, Zend-Avesta, t. 125 b.
MARRIAGE (Iranian) 457

between first cousins, and such is certainly its present connotation. The Greek and Latin writers, on the other hand, regarded *vzwštådèthlja* as referring to marriages between children and not of uterine brothers and sisters; and in this view they are followed by the great majority of non-Parsi scholars of the present day.

In this connection, it is worth noting for the solution of the problem, and mentions *vzwštådèthlja* only in five passages—all late.

The Mazdayan religion commands *vzwštådèthlja* (Yt. xxvii. 19). This ceremony, named *vzwštådèthlja* by a young man is to be chosen who has contracted it (Vesp. iii. 3; cf. Gka iv. 3); corpsebearers may be purified, not only with the urine of cattle, but also with the urine of a man and woman who have performed *vzwštådèthlja* (Vend. viii. 18; no other human beings can produce this vehicle of purification); and Vištasp is the protector, among others, of the youth who fulfills the requirement of *vzwštådèthlja* (Yt. xxv. 17). Barthold's claim (vol. 1870) that Vištasp's wife Huisoza was also his sister, on the basis of Yt. xv. 34; was scarcely be deemed cogent (see Huisoza, Early Zoroastrianism, p. 221 f.), in spite of the assertion of the late Pahlavi Vázkat-*Zarúna* (iv. The Pahlavi commentator on Yt. xlv. 4 clearly sees an allusion to *vzwštådèthlja* between father and daughter, but the text does not sustain his conjecture.1

The evidence of the Greek and Latin writers is unanimous as regards the nature of *vzwštådèthlja*. That the royal house should practice the marriage of parents, children, or of brothers and sisters, is not inexplicable. It probably rested, at least at a number of times, upon a desire to keep the royal blood absolutely pure, and finds a conspicuous illustration in the history of Egyptian dynasties.2 Thus Cambyses married his sister, and, though he had eaten the flesh of his father Darius (Herodotus, vii. 16), that before this ruler's time, the Persians were not wont to exclude with their sisters, we are told that the notorious Parysatis urged her son Artaxerxes Longimanus to wed his sister Atossa (Plut. Artax. 23; cf. Euseb. Prep. Ero. vi. 19.) For a less certain instance see Ctesias, Pers. 2), to whom her own sister Darius later offered marriage (Plut. Artax. 26). The Baotrian satrap Syapnithres married his mother (Quintus Curtius, VIII. ii. 19), and Terindelmes his sister (Ctesias, Pers. 54.) The only case alleged in the Sassanian period was the marriage of Kavast with his daughter Sambyle (Agath. ii. 23). This custom is reported, however, not only of the royal family, but also of the Persians generally. Additional marital relations with mother, daughter, or sister are alluded to by Diogenes Laertius (Proem. 7, xi. 83), Strabo (p. 735), Plutarch (de Fort. Alex. i. 88), the Athenaeus, v. 625 f., Jerome (in Jovin. ii. 7), Clemens Alexandrinius (Pans. i. 7), and Minucius Felix (Octo. 31). Philo states (de Spec. Leg. p. 778 B) that children from union of mother and son were deemed particularly well-born, and Catullus says (lixiiii. 31), that 'magus ex mater et gnato signatum optaret.' This last quotation is of considerable significance in determining the real origin of a custom which excited horror among the classical authors. Xenophon Lydus, as cited by Clemens Alexandrinius (Strom. i. 2, ad fin.), had centuries before, recorded such marriages as peculiarly Magian, and Strabo (p. 1068) declared them to be an ancient usage (cf. also Sotion, cited by Diog. Laert. Proem. 7). In the Sassanian period the Christian martyr Mihrangumasp had, before his conversion, married his sister (G. Hoffmann, Anzeige aus gr. Abten pers. Martyrer, xvi, 1889, p. 93; and, as for another possible but uncertain reference to the *vzwštådèthlja* of Akhura Manzeli. Immortal, 1912, p. 139). The text is not unmixed allusion to it in Dinkart in. xlvii. Dornemesh, Zend-Avesta, l. 341, 12, misunderstands the Pahlavi construction of the Zend-Avesta text (Dinkart, xlvi. 1, xlvii. 1). There is no certain reference to the *vzwštådèthlja*; for the correct rendering see Mills, p. 370f.

Two centuries later, the reformer of Manjistân, Bahzár, forbade his followers to marry their mothers, sisters, daughters, or nieces (al-Birânî, Chronology of Anc. Persia, p. 334), and further, especially with uterine brothers and sisters; and in this view they are followed by the great majority of non-Parsi scholars of the present day.

Mills has now been reported by Massad (Pravirice d'or, ed. and tr. Barbier de Meynard and Pavet de Courteille, Paris, 1861-77, ii. 145), that Farouk (the Thraëtaona of the Avesta) begot a daughter by his grand-grandson, another by his great-grandson, and so to the seventh generation (cf. also Justi, Iran. Namenbuch, Marburg, 1895, p. 192).

In the Pahlavi text allusions to *vzwštådèthlja* are common. Observance of it is one of the surest signs of piety in the coming days of evil, i.e. the Arab conquest (Bahman Yt. ii. 57, 61); it expiates mortal sin and forms the one insuperable barrier to the attacks of Aeshma, the incarnation of Fury (Sa'înast â-jâbâh, xii. 18, xvii. 51); it is especially obnoxious to demons, whose power it impairs (Dinkart, ii. 82); it is the second of the seven good works of religion, and its neglect the fourth of the thirty heinous sins, and is included in the thirty-three ways of gaining heaven (Dinâ-i Mângîn-î-Xrâtå, iv. 4, xxxvi. 7, xxxvi. 12). It is even said that it has been prescared by Zarathushtra as the eighth of his ten admonitions to mankind (Dinkart, iii. 195; cf. Selections of Zoroastrian Texts, xii. 13), and to arrange it is a work of merit (Dâštîn-i-Dînk, lxxviii. 19). In a word, from it to arise 'complete progress in the world... even unto the time of the renovation of the universe' (ib. lxxvii. 61).

These Pahlavi texts, however, cast no light on the precise connotation of the term. Yet there are references in this literature which are the reverse of ambiguous. The Pahlavi synopsis of the 8th favart of the lost Avesta Varâha-nâsâr Naek clearly refers to the *vzwštådèthlja* of brother and sister (Dinkart, ix. xlii. 27), and that of the 24th favart of the lost Bāhâ Naek to the wedlock of father and daughter (ib. lxxvii. 7, 9.) The most explicit statement is found in the account of a controversy between a Zoroastrian theologian and a Jewish objector, recorded in Dinkart, iii. 82 (tr. West, pp. 392-410):

'The consummation of the mutual assistance of men is *vzwštådèthlja*. That which is... that with near kinsfolk, and, among near kinsfolk, that with those next of blood and the mutual connection of the three kinds of nearest kinsfolk—father and daughter, son and mother, and brother and sister—is the most complete that I have considered.

These three forms are illustrated, respectively, by the union between Ahura Mazda and his daughter Spenta Armaiti (cf. on Yt. xlv. 4 above); and on its probable origin as a cosmogonic myth of the *tâpâr* of Heaven and Earth, cf. L. H. Gray, AEW vii. (1904) 267, from which sprang the primeval being Gâymârâ, by the return of some of the souls of the dying Gâymârâ to Spenta Armaiti (cf. also Bundâhîn, xv. 1; Dâštîn-i-Dînk, lxxvi. 6; al-Birânî, p. 107), resulting in the birth of the first human pair, Majêrê and Masîyôrû, and by their procreation (cf. also Dinkart, iv. x. 10, Dâštîn-i-Dînk, xxxvi. 82, lxxvii. 7; lxxvi. 7.)

In the 5th chapter of a Pahlavi Rivayat, probably

1 The statement that Aris-i-Vârš had seven sisters, and all these seven sisters were as wives of Yt. vii. 3 (ii. 1-3, 7-10; scarcely earlier than the 6th cent. a.d.) may be compared, but is not absolutely certain in meaning (West, p. 397).

2 So West, p. 397; and later (SBE xxvii. (1905) 268) he retranslated the passage so that *vzwštådèthlja* is not unmixed allusion to it in Dinkart, in. xlvii. Dornemesh, Zend-Avesta, l. 341, 12, misunderstands the Pahlavi construction of the Zend-Avesta text (Dinkart, xlvi. 1, xlvii. 1). There is no certain reference to the *vzwštådèthlja*; for the correct rendering see Mills, p. 370f.

2 Another stock argument for brother-and-sister marriage was found in the legend of the union of the primeval twins Yima and his sister (Pahlavi Yima and Yima; see Bund. xxi. 1, and West, SBE xxvii. 46). This legend was introduced in the extant Avesta, though it evidently dates from the Indo-Iranian period, since it forms the theme of Rigveda x. 10.
written between the Arab conquest of Persia and the 16th cent., found preceding the Dastītan-Dīnāk in many MSS, there is a lengthy polemic in favour of zvēktākas, there written zvēktādāt (ed. Bamanji Nasarianji Dhabar, Pahlavi Rīvdag y n a c- cōrapmty, Bombay, 1915, pp. 9–21, tr. in extracts West, SBV xviii. 415–495). Defending it by the old examples of Abūrā Mazda and Spenna Armaite and of Masāy and Masāyān, it says, that when a man (unmarried with mother, daughter, or sister, zvēktādās is superior in religious merit even to the ceremonial worship of Abūrā Mazda, the replenishing of the sacred fire, or showing becoming reverence to a priest, and that it saves the most heinous sinners from hell.

When the millennium is about to dawn, 'all mankind will perform zvēktādāt, and every head will perform through the miracle and power of Khvēštādāt'. The first time that a man practises it, 'a thousand demons will die, and two thousand wiles and witches . . . and when he goes near to it four times, it is known that the man and woman become perfect. . .

...When some one year in a marriage of Khvēštādāt becomes the domain of all the world . . . has been given by him . . . unto a righteous man . . . And when he keeps four years in his marriage, and his final (funeral) ritual is performed, it is known that his soul thereby goes to the ordinary heaven (khvēštādāt); and when the ritual is not performed, it goes to the domain of the evil (Khvēštādāt). This is the custom of those who observe zvēktākas is a hundred times more to the good deeds done by other pious men; and the penalty for divulging is from this is hell.

From certain passages in the same chapter it is very evident that zvēktākas are the narrow sense here advocated was by no means pleasing to the Parsi community.

Thus, when Abūrā Mazda and Zarathustra held council, Zarathustra said: 'This duty and good work shall I fulfil first?' Ashurman spoke thus: 'Khvēštādāt.' . . . Zarathustra spoke unto Ashurman thus: 'In my eyes it is an evil (vadāt) which is done.' Ashurman spoke: 'In my eyes, also, it is just as in thine; but I have been told that there is no evil mixed with it.' 'It should not seem so' (West, p. 425).

As early as the date of composition of Dinkart, iii. 82, there are indications that zvēktākas had come to bear its present meaning of marriage of first cousins, and this is the teaching of more modern Parsi Rīvdag (West, pp. 404, 425 f.) and the practice of Zoroastrians at the present day.

The Parsi theory of the origin of zvēktādāta is fairly clear. The Dinkart (iii. 82) that its basis was a desire to preserve purity of race, to increase the compatibility of husband and wife, and to raise the writer does for children, which would be felt in redoubled measure for offspring so wholly of the same family. Another reason—doubtless well founded, especially after the Arab conquest—was that marriage outside the family might tend to religious laxity and even to perversion to another faith (Rīvdag viii., tr. West, p. 416 f.). As a matter of fact, however, these arguments are inadequate to explain the real origin, and the suggestion of Just (Gll. iii. 435) that the source is to be found in Egypt (cf. Egyptian section, above) is equally improbable.

There is no evidence that incestuous zvēktādāta was known in the Avesta, and it is not usual in Pahlavi writings of the 8th–9th centuries that it is unmistakably advocated (West, p. 427 f.). At the same time, the testimony of the Greek and Latin witnesses cannot be ignored; and, while we may grant, for the sake of the argument, that in the later Zoroastrian period there was vital religious reason for incestuous zvēktādāta, as set forth by the Dinkart and the Rīvdag, no such reason can be adduced for the custom standing prior to the 8th century. It is clear, moreover, that incestuous zvēktādāta was then not restricted to noble and royal families.

It is true that the Pahlavi summaries of lost Avesta texts afford the only authentic reading of zvēktādāta (iii. 82, above, p. 457 f.), but the baseless reading of zvēktādāta into Zv. iv. xiv. 27. 741. and the writer's [above, p. 457] hints that we cannot rejoin implicit confidence in the accuracy of these summaries.

but that it was also practised widely among the common people. On the other hand, the present writer knows at present of no cases in the historic (as distinguished from the legendary) period of Zoroastrianism, except the Sasanian royal instance alluded to above, and the marriage of Mihram-gushnasap.

We must also note that incest was abundant to the Indian branch of the Indo-Iranian family (for see J. Joly, Recht und Sitte [614 p. 8], Strassburg, 1896, and especially M. 801 f., 110–114, 117, 152–158). Among the other Indo-European peoples the Greeks permitted marriage between uncles and nieces, nephews and aunts, and half-brothers and half-sisters on the paternal side (see 'Greek' section, above, § 2); the ancient Prussians and Lithuanians have been allowed marriage with any kinsman except one's own mother (O. Schrader, Reallex. der indogerman. Altertumskunde, Strassburg, 1901, p. 809 f.); and equal licence is ascribed to the ancient Irish (cf. 'Celtic' section, above).

There remains, then, two hypotheses on the origin of incestuous zvēktādāta. (a) It may be derived from a non-Indo-European people. This theory is maintained by Moulton (pp. 234–238), who holds that the custom was Magian, and so neither Indo-European nor Semitic (cf. ib. chs. vi.–vii., and art. MA01), nor Iranian at all, although or even criticizing Moulton's very plausible, even probable, theory, it may be suggested that the practice was genuinely Persian. In view of the extremely primitive character of the Indo-Slavonic peoples, who have, not without reason, been claimed as those who have retained most truly the original type of Indo-European civilization (S. Feist, Cultur . . ., Berlin, 1913, p. 478; O. Schrader, Sprachvergleichende Umgang und Umgang, Jena, 1907, ii. 129 f.; and art. Aryan Religion, passim), the occurrence among them—as among the almost equally primitive ancient Irish—of what is practically identical with incestuous zvēktādāta is certainly significant. On this hypothesis, Zarathustra's reformation did away with zvēktādāta, as with so much else of the older Iranian which his litter was rejected; but, when the more ancient folk-religion returned, it restored zvēktādāta, together with many other things that had been discarded. In the present state of our knowledge it is not possible to decide between these hypotheses; he merely presumes his own for what it may be worth.

Whatever the origin of incestuous zvēktādāta—which is perhaps nothing but endogamy carried to its extreme—so much is clear: pure Zoroastrianism never knew it; it was practised by none-Zoroastrian Persians; it was advocated at least during the Sasanian and early Arab periods by a Magianized priesthood; it appears to have then been a theoretical ideal, prompted by the religious and political situation of the period, rather than an actual practice; it was constantly resisted (even as an ideal) by a large—and, doubtless, ever increasing—body of the faithful; it has disappeared. It had a certain justification during the days of Arab persecution, and Parsi should recognize this. It has been one of the chief taunts of the type flung against every religion by the ignorant—body of the present. 1

1 The instance of Yama and Yami, already mentioned, does not militate against this, for a case attested 10 (on which see especially J. von Schrader, Mysteries and Mithras (in Festschrift, Leipzig, 1908, p. 275 f.) Yama manifests extreme reluctance to the union. The problem is thus raised from the human race from a primordial pair of twins. The same remarks apply to the myth of the godhead {a cognate myth comparable with the Vedic couple (see Riz. xii. 18 f.), and especially Muir, Origin and Development Text, 1[1879] 107–114, lv. (1872) 40–46).
merely a temporary experience, never a real tenet; and it was repudiated, so no, as intensely by Zarathustra as by his disciples, a few centuries later.

3. Old Persian.—Concerning the specifically Old Persian marriage rites we possess only meagre information. Strabo tells us (p. 733) that marriages were performed at the beginning of the vernal equinox, and that before the ceremony the bridegroom sat in the nuptial couch he ate an apple or camel marrow, but nothing else during the whole day. We also learn from Arrian (Anab. VII. iv. 7) that a seat of honor was placed before the groom, and that his prospective bride came "after the caps had gone round" (μερικὰ τὰ σαρώ', being welcomed by her husband with the giving of the right hand and a kiss. Naturally a banquet formed part of the wedding (Est 2:8; Jos. Ant. xi. vi. 2).

To the Scyths (g.v.), at least some of whom were Iranians, the Greeks ascribed the practice of each man having free access to the wives of his fellow tribesmen, although Herodotus (I. 218, iv. 104) restricts this to the Massagetae and Agathyrsi. The latter were possibly Iranian (E. H. G. Mynms, Scythians and Greeks, Cambridge, 1913, p. 102; cf. W. F. Lotze, Persica, I. 754 L.). The former are considered Iranian—they are certainly so—by J. Marquart (Untersuchungen zur Gesch. von Iran, Göttingen and Leipzig, 1896–1905. vii, 711, 340. Evian, Berlin, 1901, p. 150), though this is doubted by Mynms (p. 111), who, probably rightly, regards them as a "mixed collection of tribes without an ethnic unity." In any event, as he says (p. 98), this form of marriage (for all Indo-European instances of which see H. Hirt, Indogermanen, Strassburg, 1906–07, p. 703; Schrader, Realllex. p. 634) is probably non-Aryan.

See, further, art. Family (Persian).

LOUIS H. GRAY.

MARRIAGE (Japanese and Korean).—I. JAPAN.—From ancient times marriage and marriage regulations have been considered important by the Japanese people. Both ideas and legal regulations concerning marriage, however, seem to have passed through three distinct stages: (1) that of the age of the Taiho-ryo (A.D. 701–1185), much influenced by Chinese morals and laws; (2) that of feudalism (from the end of the 12th to the 15th centuries), moulded by bushi, Japanese knighthood, much influenced by the authority of the head (patria potestas) which has varied from a great age to the present age, but in general may be said to have been strong in ancient times and to have weakened in recent years. The family in the time of the Taiho-ryo was often very large, including over one hundred persons, but the numbers gradually decreased until at present it consists of only five or six individuals. Marriage under such a system not only brings changes in the status of the contracting parties, but also means the removal of a member of one group to another. In other words, marriage brought a man and a woman and also between two families. Therefore, when a marriage is to take place, not only the free contract of the parties is required, but also the consent of the heads of the two families. From the time of the Taiho-ryo to that of the Meiji era, a marriage engagement was first made between the parents of the parties, and often the consent of the parties was not required, for filial obedience was considered one of the highest and noblest virtues. Lately, with the development of the idea of freedom, the point of view has somewhat changed; according to the regulations of the present civil code, it is required. In the present age the consent of the parties in addition to the consent of the parents. Moreover, when a man reaches the age of thirty and a woman that of twenty-five, the law no longer requires the consent of the parents for the sanction of marriage.

2. Caste.—While caste in the strict sense of the term never existed in Japan, the Taiho-ryo was a humble class, which was not allowed to intermarry with others, who were recognized, and the child of such a marriage belonged to the humble class. During the feudal age the people were divided into lords, knights, and commoners including farmers, artisans, and merchants. Marriage was required special permission. A marriage between members of the lordly class required sanction from the central government until 1871. According to the Taiho-ryo, Buddhist priests were not allowed to marry; and one who transgressed was sent to a far island or put to death; but this ban was abolished in 1872.

3. Age of consent.—At the time of the Taiho-ryo a male was allowed to marry at the age of 15 and a female at 13; but the present civil code requires the age of 17 for the male and 15 for the female. There has been no prohibition of marriage on account of old age.

4. Monogamy.—Old laws and customs in Japan forbade multiple marriages, but not concubinage. According to the Taiho-ryo, concubines occupied the position of relatives in the second degree, and no limitation was made on the number of concubines of a child by a concubine held an inheritance right. The custom of concubinage was prevalent among the noble and rich, and society did not condemn it. Moreover, in the opinion of some, concubinage was considered necessary, with the existing family system, in order to preserve the family line from possible extinction. In the Meiji era, however, through the influence of Christianity, the idea of monogamy became strong; and in 1889 concubinage ceased to be recognized by law, though the long-established custom still lingers to some extent.

5. Second marriage.—When a marriage contract has been dissolved by divorce or the death of one of the parties, a second marriage is permitted. In ancient times, however, the proverb 'A chaste woman never sees two men.' had great force; and for a woman to refrain from re-marriage was regarded as a beautiful virtue. The reason was that a few women who cut off their hair, or became priestesses, or committed suicide, on hearing of the death of their husbands in battle. Such forms of devotion gradually rose in the authority of the head (patria potestas) which has varied from a great age to the present age, but in general may be said to have been strong in ancient times and to have weakened in recent years. The family in the time of the Taiho-ryo was often very large, including over one hundred persons, but the numbers gradually decreased until at present it consists of only five or six individuals. Marriage under such a system not only brings changes in the status of the contracting parties, but also means the removal of a member of one group to another. In other words, marriage brought a man and a woman and also between two families. Therefore, when a marriage is to take place, not only the free contract of the parties is required, but also the consent of the heads of the two families. From the time of the Taiho-ryo to that of the Meiji era, a marriage engagement was first made between the parents of the parties, and often the consent of the parties was not required, for filial obedience was considered one of the highest and noblest virtues. Lately, with the development of the idea of freedom, the point of view has somewhat changed; according to the regulations of the present civil code, it is required. In the present age the consent of the parties in addition to the consent of the parents. Moreover, when a man reaches the age of thirty and a woman that of twenty-five, the law no longer requires the consent of the parents for the sanction of marriage.
6. Marriage of adulterers.—A man and woman, either of whom has been divorced or sentenced to be divorced on account of adultery with the other, may not marry, by the prohibition which has existed since the time of the Taiho-ryo. Social disapproval of such union is very severe; and, even when the woman or wife forgives and consents, the prohibition is binding and cannot be evaded, so that those found thus married are separated by law.

7. Marriage of relatives.—Marriage between near relatives in direct and collateral lines is forbidden for the sake of health and protection from degeneracy. The Tairyo marriage of cousins, or a widow or widower with a brother or sister of the deceased, is not prohibited; and such marriages are not rare.

8. Relation of husband and wife.—In olden times the rights of a husband were very far-reaching, and a wife who obeyed her husband absolutely was considered virtuous. Men were held in high regard, while women were not. Lately the position of woman has improved, but even yet, when a wife makes a contract, she has to get her husband’s consent in many cases, and the husband’s property is always under the supervision of his wife while they are married.

9. Engagement and ceremony of marriage.—The customs as well as the laws of marriage in Japan have passed through a series of changes. In ancient times marriage by sale and marriage by capture were common; but from the time of the Taiho-ryo customs gradually became more refined. There is in Japan, however, no custom of direct personal engagement or of previous personal acquaintance. Such things would be regarded as disgraceful by all Japanese above the middle class, for a formal marriage is always arranged by a match-maker who renders service to both parties and their parents. When consent is given and the engagement made, gifts are exchanged, and a marriage-contract is considered to have taken place. Then, upon an auspicious day, the wedding ceremony is performed, usually at the home of the bridegroom at night. The marriage intermediary, escorting the bride in her best attire, takes her seat at an appointed place, and the bride and bridegroom drink wine, exchanging cups nine times. This constitutes the entire ceremony, after which the bride and bridegroom are introduced to relatives and friends at a wedding dinner. No religious or legal form is required, except that, by the present civil code, notification must be made to a registrar in order that the marriage may be officially sanctioned. With the coming of Christianity marriages are increasingly performed in churches; and recently the custom has arisen of holding services at Shinto shrines. The law, however, requires no religious sanction, as it is only a civil marriage that is officially recognized.

10. Divorce.—Before the promulgation of the present code (1896-98), divorce, or, rather, repudiation, was very easily secured at the husband’s will. No legal procedure was necessary beyond the husband’s writ with his signature, but it was fixed seven causes, one of which must exist in order to make the repudiation effective. Thus the power of the husband was somewhat curtailed; but only the husband could repudiate. The present code recognizes two forms of divorce: by mutual consent, and by judicial decree. The former requires only the mutual consent of the parties, while the latter requires an act of the court upon the contested request of one of the parties. This form of legal divorce must be for some one of certain causes recognized by law, and becomes operative only after judicial judgment has been given. Statistics for 1908 show the total number of marriages to have been 8,583,168 and of divorces 656,768, i.e., about 7 divorces out of 100 marriages. Only judicial divorces, however, are given in statistics, and by far the greater number are by mutual consent.

11. Judicial separation.—This system does not exist in Japan.

II. KOREA.—In Korea marriage is according to the old custom. Early marriage prevails, and government control has had but little effect, though upon several occasions laws have been issued, even setting the age for marriage at 29 for men and 16 for women. It is usual for a girl of 12 or 13 years to marry a boy of 10 or less. Wives are usually a few years older than their husbands. Second marriage is not prohibited, but is considered a disgrace by most; and those who consider the middle class never re-marry. Arrangements for marriage are made by fathers, grandfathers, or elder brothers and relatives in authority; and the wishes of those who are to be married are not taken into account. The ceremony is performed at the home of the bride, and it is not necessary to notify a civil officer. Only the husband can divorce, and the wife has no way of refusal. There is no system of divorce by consent, but by the new law, since annexation, a way has been opened for a wife to seek divorce. The number of marriages made in 1912 was 121,993, and that of divorces only 908.

T. Nakajima.

MARRIAGE (Jewish).—Every man is bound to marry a wife in order to beget children, and he who fails of this duty is as one who sheds blood, diminishes the Image [of God], and causes the Divine Presence (Shekhinah) to depart from Israel.'—thus runs the rule in the Code of Gaba (Shudent, Arubh, 13). It is based on ancient Rabbinic (Tannaitic) prescription (Yebamoth, 63b, 64b), itself inferred from well-known Biblical texts (esp. Gen. vi.) with following verses), and it is emphasized by the somewhat later apophthegms: 'Whoever has no wife rests without blessing'; 'such a one is not called a man' (ib. 62b). Marriage was the means by which the human race was imprinted on the generation the divine image; it was, with the consequent domestic felicity, the expression of true manhood. It was the basis of the social order, and thus its regulation was, in Rabbinic opinion, one of the chief differences between Jewish and primitive systems (cf. Maimonides, Ishith, 1. 22). The social obligation was strengthened by Messianic hope—"the son of David—i.e., the Messiah—will not come until all souls stored for earthly life have been born" (Yeb. 62b). Though the purpose of marriage was the begetting of children, other aspects of marital life were fully appreciated (see article FAMILY. Jewish Law, and all of the quotations in M. Mielser, The Jewish Law of Marriage and Divorce, New York, 1901, p. 181; I. Abrahams, Jewish Laws in the Middle Ages, 1901, p. 181;
MARRIAGE (Jewish)

London, 1896, p. 114). Very profound is the Rabbinic view that man's yérer is in this instance the cause of good; but for his passions man would not build a house, nor beg children (Gen. Rabb. ch. ix.). Man, in Rabbinic theology, is impelled by two yéréras ("impulses, inclinations"); one good and one evil, both of which are termed desires by the temper of the soul (Sif. on Deut. 6 Maimonides, Bikk. iv. 5). The bodily passions are not in themselves evil (cf. F. C. Porter, 'Yēzer Hara,' in Yale Bicentenary vol. of Biblical and Semitic Studies, New York, 1906), and the control of his spirit and its direction into holy ends were effected (cf. Maimonides, Guide of the Perplexed, iii. 35). The Rabbinic theory of marital intercourse is summed up ideally and, in a sense, mystically in the saying: 'Three are associated in every human being: God, father, and mother' (Qadushin, 106).

With regard to the authority of parents in arranging marriages of their children while minors see Ere v. 742. When the parties were adult, the consent of parents was not necessary to make valid marriages (Maimonides, Ishq. viii.), but, as MiELZNER adds, 'in consequence of the high respect and veneration, however, in which father and mother have ever been held among Jews, the case of contracting marriages without the parents' consent fortunately belong to the rarest exceptions' (p. 69).

Early marriages, arranged by the parents, were long considered a valuable aid to morals. The legal age for valid marriage was the age of puberty, but the usual age of the bridegroom in Talmudic times was 18 to 20 (S. Krauss, Talmudische Arch/ologie, Leipzig, 1910-11, ii. 28). A Jewish court would often put pressure on a man over 20 to compel him to take a wife (Eben hā-zer, i. 3), but such pressure was not applied in the case of students, while (as the gloss ad loc. points out) in modern times all attempts at compulsory marriages have become obsolete. Curiously enough, no rule is stated with regard to the age of the bride. Girls were treated as marriagable from the beginning of their thirteenth year, and at various times very youthful marriages have been reported (see Abrahams, ch. vii.). In recent times, while, on the whole, Jews probably marry at a somewhat earlier age than the general population, assimilation in social customs is modifying differences (statistics in JE vii. 338). There is no fixed law that Jews must marry more frequently than others marry their cousins. Marriage between Jews and Christians has increased (statistics in JE vi. 612). No section of Jewish opinion favours marriages between parties who are not of the same religion, the difficulties of the education of the children and the disturbance of the home harmony being felt to offer strong objections. There is no bar, however, to the religious solemnization of a marriage with full Jewish rites in the case of proselytes to the synagogue.

The Biblical 'degrees' were maintained in later Jewish law, with certain extensions (Yalk. 21; Maimonides, Ishq. i. 6; MiELZNER, p. 37), the latter being partly theoretical prolongations of legal ascendants and descendants; but in one case a new degree, homogeneous to the Biblical was added; for, while the Mosaic Law (Lev. 18) expressly forbids only the father's brother's wife, the Talmudic Law adds also the mother's brother's wife, and besides, the father's uttermost brother's wife (MiELZNER, 29). These marriages (see Eben hā-zer, 683) imposed still further rigour on the marriage law.

The general question of the relation between Jewish marriages and the civil law of England is historically and legally considered in the monograph of H. S. Q. Henriquez, Jewish Marriages and English Law, London, 1906. It may in general be said that while the law maintains some disabilities not upheld by the law of the land, no Jews permit marriages which, though allowed by Jewish law, are forbidden by the civil law. Thus, though the husband and wife's sister is valid in Jewish law, such a marriage was never solemnized in England while English law disallowed it. So, too, though by Jewish law a man may marry his niece (though a woman may not marry her nephew), no such marriage would be performed by Jewish rites, since English law forbids such a union. But, where the Jewish law is more severe than the English, the severity is in most cases maintained, though the tendency in Jewish liberal organizations is toward equalizing Jewish custom with civil conditions. The orthodox Jews do not permit a kihān-i.e. one tracing descent from the first aposterel ewed divoced woman: nor would the re-marriage of a divorced person be solemnized by the orthodox synagogue unless a divorce had also been obtained from a Beth Din (Jewish ecclesiastical court). On the other hand, the levirate marriage was no longer in general use (though a few instances are recorded) at the beginning of the Christian era (the Sadducean question in Mt 22 was probably theoretical), has now lost all vogue (Eben hā-zer, clix., and commentaries: JE vii. 171). In the case of a childless widow the brother-in-law goes through the ceremony of hārāt (Deut 25), which frees her to marry a stranger (MiELZNER, p. 54 f.; JE vi. 170 f., where the rite is illustrated). On the levirate marriage see further, I. MATTECK, in Studies in Jewish Literature, Berlin, 1913, p. 210; on marriages between uncle and niece, S. KRASS, ib. 105.

Except for rare cases in countries where Muhammadan law prevails, monogamy is enforced by both law and custom among Jews, although neither Bible nor Talmud formally forbids polygamy (for the Talmudic evidence see KRASS, ii. 27). Only in the case of the levirate marriage did the Pentateuch actually ordain a second marriage, and, as has been mentioned above, the levirate marriage fell into disuse. That monogamy was the Biblical ideal is shown by Gn 2, i.e. 21-27, and the whole tendency of the Song of Songs (cf. A. Harper, Song of Solomon, Cambridge, 1902, p. xxxiv); and the same conclusion is drawn from the mythological imagery in which marriage typifies the relation between the one God and the unique people Israel. Polygamy survived among the Jews into the Christian era (see references in JE viii. 658), but monogamy was then and thereafter the general rule. The difficulty was that, as the end of marriage was the begetting of children, childless marriages were no fulfilment of that end, and in case of the wife's sterility the older authorities were divided in view as to the relative advisability of insisting on divorce or of permitting a second simultaneous marriage (on this and several other questions of Jewish marriage and divorces, see the writer's evidence before the Divorce Commission); but by the beginning of the 11th cent. monogamy was made the binding and absolute rule for all western Jews (Abrahams, i. 188).

The ancient and medieval preliminaries to marriage have, in modern times, lost much of their old significance. Betrothal (kisvin or qiddushin) in Rabbinic law was not a mere agreement or contract for a future marriage, but an act involving the actual privileges or responsibilities of the married state, betrothal was so far the initiation of marriage that it could be terminated only by death or divorce.
Since the 16th cent. the two ceremonies of betrothal and marriage have been performed on the same day, though in Talmudic times a year might intervene between them (Mishnah, Kollelash, v. 2). The legal betrothal was always preceded by an "engagement," and this 'engagement' gradually replaced the older betrothal. Often a professional match-maker (shahidahim) was employed in the Middle Ages, and the custom is still in some vogue (Abrahams, p. 170 f.). The ceremonies of marriage now include the older betrothal and marriage rites. The essence of the marriage ceremony is the presentation by the bridegroom to the bride, in the presence of two witnesses, of an object of value and the recital of the formula:

'Be thou consecrated unto me by this [ring] according to the law of Moses and Israel.' The marriage rite was and is invalid without the bride's consent—her consent is formally stated in the Ketubbah (see below); but, until recent times, she took a passive part in the ceremony, the formula being spoken by the man only. In some orthodox and in many Sephardic, the bride's part is now more active. For the validity of a marriage the presence of a Rabbi is not essential, but such presence is usual, and so are other ceremonies: the use of a ring, an espoused (shagah), the breaking of a glass, the recital of the Ketubbah, and the repetition of the Seven Benedictions.

The ring, now so usual in Jewish weddings, is not a Talmudic, but was introduced in the Geonic age (A. Harkavy, Tahwibhahim hap. Geonim, Berlin, 1887, § 65), perhaps in the 7th cent. The ring replaced the older gift of money or some article of value; it must not contain gems (Abrahams, p. 183), and need not be of gold. Possibly the use of the ring was derived from Rome, just as the objection to marriages between Passover and Pentecost corresponds to the Roman prohibition of marriages in May (J. Landesberger, in Jud. Zeitschrift für Wissenschaft, and Leben, vii. [1869] 81). In the Middle Ages Friday was a favorite day for Jewish marriages, though the Talmud objects to such marriages. Wednesday was also a common day for virgins, and Thursday for widows. In modern times there are no restrictions to days of the week, except that marriages are not celebrated on Sabbath or fast days. In the orthodox synagogues marriages are still not performed (except on specified dates) between Passover and Pentecost, nor on certain anniversaries of a mournful nature. During the marriage ceremony the ring is put on the forefinger of the bride's right hand; she afterwards removes it and places it on the customary finger of the left hand. Marriages are now frequently celebrated in the synagogue, though there is no loss of validity if the ceremony occurs elsewhere, as is widely the custom in America. The whole problem as to the place where Jewish marriages may be celebrated is treated in L. Levine, in Generaler Scheve, where many other Jewish marriage questions, historical, social, and legal, are also discussed (iii., Szegedin, 1893, pp. 13-53).

The bride and bridegroom usually stand under a huppah or canopy, during the marriage ceremony; the rite has been abrogated in some of the modern Jewish congregations. Originally the huppah was the marriage chamber, into which the bride and groom were conducted after a procession, but it is now merely symbolic, and consists of four upright posts covered by a canopy of silk or tapestry (for details see Abrahams, p. 183; for illustrations, JE vi. 504 ff.). A regular preliminary of the ceremony is the signing by the bridegroom of the ketubbah (lit., 'writing'), or marriage contract (for the ordinary wording see Mielziner, p. 87), which sets forth the amount payable to the wife in case of the husband's death or the wife's divorce, and in olden times also the wife's dowry, in respect of which, as of the husband's settlement, the ketubbah was, in all cases of claim on husband's property (see Mielziner, p. 104 f.), and the ketubbah protected these rights, and also formed a potent restraint against rash divorces. An instance of a ketubbah, however, the reader may refer to L. Ginsberg, Gemara, New York, 1906, ii. 729. In Oriental lands the ketubbah often included a solemn undertaking by the bridegroom to observe strictly the law of monogamy (see Abrahams, p. 189), and the document published by him in Jews' College Jubilee Volume, London, 1906, p. 101). Of the many marriage customs which have prevailed in Jewish marriage ceremonies, one deserves special mention. The bridegroom breaks a glass, but the meaning of the rite is uncertain. Some have seen in it a symbolic allusion to the close of the anti-nuptial condition (some say that the theory is that the custom arose from... a desire to keep men's joys tempered by more serious thoughts, and on the other hand from the never-forgetten memory of the mourning for Zion (see Annotated Edition of the Authorised Daily Prayer Book, London, 1914, p. cxxvii). The same phenomenon is seen in the 'Seven Benedictions' cited below, where Jer 33:16 is effectively used. As regards the momentous nature of the Jewish prenuptial ceremony is recorded in the Talmud (Brakhot, 30b):

'When the son of Rabbah was married, the father saw that the Rabbin present were in an unpious mood; so he took a costly vase of white crystal worth 400 minims and broke it before them to curb their spirits.'

On the other hand, joyousness is the predominant note of Jewish weddings—a joyousness hallowed by the principle that the participation in such functions is a religious duty. The differing of poor brides was an act of sanctified loving-kindness (Habbath, 12b); and the assistance at wedding festivities was an element in pious life (Proph. 34). Lyric praises of the bride were so regular a habit that we find quaint discussions as to the terms to be used in the eulogies (Habbath, 17a). On the subject of other wedding customs, both Oriental and Western, see Abrahams, ch. x. and x.; JE viii. 340 ff.; Krause, ii. 57; W. Rosenkrantz, Ceremonial Institutions and Customs, Baltimore, 1902, ch. xi.

Most characteristic of the Jewish marriage ceremony are the Seven Benedictions, which are already quoted in the Talmud (Habbath, 8). First comes the benediction over wine (on the use of wine in Jewish ceremonial see Annotated Prayer Book, p. cxxxii); then follows 'blessed art thou... (sof the creator as the author of all things to His glory; after this
MARRIAGE (Roman).—It is a comparatively easy task to describe the Roman idea and practice of marriage, if we confine our description to historical times; for there the evidence is fairly complete, and the state of society familiar to us. But the subject is complicated by its antiquities; and these cannot be wholly omitted, for they are the foundation of marriage systems, and they reflect the earlier conditions of Roman society from which the later practice descended. We shall begin, then, with these antiquities, and so clear away the main difficulties, which, however, cannot be fully explained in the present state of our knowledge.

1. Pre-historic.—There is some evidence, in the form of survivals in later procedure, that marriage by capture existed among the ancestors of the Latin race; but at what stage, whether among the people of the terrae maxima in N. Italy or still further back, we cannot tell. The simulated rape of pasta (see below), the parting of her hair with a spear, possibly the lifting her over the threshold of her husband’s house, taken together with the legend of the rape of the Sabine women, suggests a custom. True, each scrap of evidence may, if taken separately, be explained otherwise, but it must be allowed that the cumulative evidence is strong. On the other hand, capture implies exogamy, of which we have no evidence in the Roman marriage. Marriage was originally within the limits of the gens (Marquardt, Privatunterthumer, p. 29, notes 1 and 2); if, therefore, marriage by capture is to be assumed as an original practice of the race, it must have been before the development of the gens as a social institution. But, if this early form of marriage is not provable for the Roman people, it is highly probable that the later form of marriage by purchase existed among them at one time, leaving its traces in the later composito, which, as we shall see, was merely a simulacrum of the marriage by purchase from the potestas of her father to the manus of her husband (for the possible connexion of the compositio with marriage by purchase see Westermarck, MT ii. 364 ff.).

2. Early forms of marriage: confarreatio, compositio, and usus.—In early Roman society we find three distinct forms or rules by which marriage could be effected. As to the historical interpretation of these there is endless dispute, but the object and conception of marriage as an institution are clear enough. The object of a summa matrimonium, such as was the result of all these methods, was beyond doubt to produce children capable of keeping up the religion (sacra) of the family, and also of serving the State in war and peace. Children of compositio, i.e. cohabitation without marriage, were not to be Roman citizens, and could not represent either family or State in any capacity. The word which covered all legitimate forms of union was connubium; as Ulpian says, in the clearest exposition that we have of the law, 'Summa matrimonium est si inter eos qui nuptias contrahunt connubium sit.' Connubium, or uti connubii, is the right of contracting true or legal marriage, and belonged, at least, to Caesar (i. 58), to Roman citizens only, to Latins and foreigners only when it had been granted by the State. And, as marriage in this true sense meant the transference of the bride from one definite legal and religious position to another, from the sacra of one family to those of another (see Family [Roman]), and from the potestas of one paterfamilias to the manus of another, it is obvious that the process was one of the utmost gravity both for the families concerned and for the State. The sense of this grave importance is best seen in what, rightly or wrongly, is generally believed to have been the oldest form of patrician marriage, which was applicable only to patrician families throughout Roman history—confarreatio or farreus, so named from the sacred cakes of far (the old Italian wheat) used sacramentally in the rite. Confarreatio stood also next in age to the presence of the Pontefex Maximus and the Flamen Dies, the former, no doubt, representing in the Republican age the Rex of an earlier time (see Fowler, Religious Experience of the Roman People, London, 1891, p. 271), and the Flamen representing Jupiter, the deity of good faith in all alliances. When the preliminaries had been adjusted (spomandia, auspicio, etc., see below), which were common to all insta matrimonio, a cake of far was offered to Jupiter Farreus, and sacramentally shared by bride and bridegroom, in the presence of the Pontifex Maximus, the Flamen Dies, and ten other witnesses. This number ten has given rise to much discussion, but it is so common throughout Roman procedure that there need be no special significance in it (in Livy, xxxvii. 3, it appears to have religious meaning, and so perhaps in confarreatio). A victim also was offered (to what deity is uncertain), the skin of which was stretched over two seats, on which the bride and bridegroom had to sit (for these and other details see Gaius, i. 112, Serv. ad Aen. iii. 347, Georg. i. 81 ; Dei Aug. on Book ii. 11). The ceremony itself must be noted, do not perform the service, but witness it, giving this rite a peculiar solemnity which our authorities do not explain, probably because they did not understand it. Modern scholars and students of Roman law have usually thought of it as the real original form of marriage.
in the Roman State, which must be imagined as an accumulation of both of patrician families; it survived into historical times only as a means of supplying persons duly qualified to fill the old priesthoods descended from that patrician State, viz. the Rex Sacrorum and the three Flamines maiores, Dialis, Martialis, and Quintus Flaminus (Gaius, i. 118). Later, however, it has been suggested (by Cuq, Institutions juridiques, p. 215 ff., followed by Lamprach, State and Family in Early Rome, p. 110 ff.) that it came into existence only when the custom of marrying within the gens was broken through, when the religious difficulty of transferring a bride from one gens to another called for special religious interference by the State. There is something to be said for this; but to the present writer it seems hardly sufficient to account for the sacramental character of the rite and the use of the skin of the victim. No ancient author says that this was the only form of patrician marriage; if it had been so, the Rex and the Flamen must have been constantly in requisition for weddings, more often than would be consistent with their other duties. It is possible that the confarreatio may have been a very special religious form, originating in the marriage of the Rex only, or in families forming an inner circle of aristocracy, from which the Rex must have been chosen, and which would be likely or willing to supply children qualified to become camilli patrini et matrimini in the service of the State (Serv. ad Georg. i. 31). It must be remembered that the patrician State itself had a history, and did not come into existence full-blown; the confarreatio probably represents an early form of it, but not exactly that which we have been accustomed to imagine.

There are two other ancient methods of transferring a bride from one family to another, from the potestas of her father to the manus of her husband; but it is to be noticed that neither of these was, strictly speaking, a marriage ceremony, and it is to be assumed that, when they were used, the real marriage rite was that described below under marriages which did not produce confarreatio in manus.

In other words, the true marriage rite was, except in confarreatio, distinct from the act which transferred the bride from the potestas of her father to the manus of her husband, or to that of his father, if he were a filius familias in the potestas of his father. Thus marriage, the form by which, in the presence of five witnesses and a libratores (a form which could be used for other purposes besides marriage), the bride was made over to the manus of her husband by a symbolic purchase (Gaius, i. 115), looks as if it were a legal addition devised for some particular purpose, perhaps to enable the ordinary patrician family, which did not seek to produce children capable of filling the highest religious offices, to obtain by a single act the same legal results as in confarreatio. This is, indeed, a mere guess, and one among many, into which it is not necessary to go in this article.

The other method which produced confarreatio in manus took a whole year to complete the process; if a duly qualified pair lived together for an entire year without a break, manus followed of necessity by prescription; but by the XII Tables it was possible for the bride to escape this result by absenting herself yearly for three nights from her husband's house, by which means, in legal language, the manus would be barred (Gaius, i. 111). It is not easy to see that this was the reason why the husband could acquire manus, and the one most commonly in use. Confarreatio and confutex both presuppose the existence of the law and the state of the full development, but manus may go much further back. Manus and confutex are, however, alike in this, that they have a private and not a public character, and do not need the presence of priest or magistrate; it was easy, therefore, to pass them on to plebeians or Latins, when these attained consulship; but this could not be so with confarreatio, if, as we have assumed, the main object of the latter was at all times to be the exclusive holding of the exclusely patrician religious offices.

In these three methods of marriage the union was accompanied by manus, though in the case of manus not till a year had elapsed. Usus, indeed, shows us plainly that the Romans of early times did not think of marriage and manus as inseparable: for the bride must have been properly married under usus, if her children were to be Roman citizens, though for a year at least she was not under manus. We must also remember that, if the husband were not sui iuris, but a filius familias under the potestas of his father, as must constantly have happened, the wife passed under the manus, not of her husband, but of his father. Quite early marriage and manus became separable both in thought and in fact; and under the XII Tables, as we have seen, the wife was given the option of escaping a change of manus altogether, and this may be taken as proving that a tendency in this direction had shown itself much earlier. After that time, mainly, no doubt, from reasons of convenience connected with the ease of a marriage without manus came to be almost universal. Usus died out altogether (Gaius, i. 111); confarreatio survived as a legal expedient in certain cases (e.g., CIL vi. 1627; CIL vii. 24163 Turc, lines 14); and confarreatio became so commonplace that its bonds had to be relaxed by Augustus in order to get a supply of candidates for the old patrician priesthoods (Gaius, ii. 138; Tac. Ann. iii. 71, iv. 16; Sustin. Aug. 31). Yet marriage law continued to be as complete and binding a union as before, and we now have to see what made it so, by briefly examining the process as we know it in historical times.

3. The historic period.—(a) Conditions of marriage.—The necessary conditions of marriage were:

1. The families of both parties must possess the usus comunitatis (as explained above); 2. The parties must not be within the prohibited degrees of relationship (cognato).

Originally no cognato could marry who were within the seventh degree of relationship; i.e., second cousins could not marry; this was, no doubt, a survival from a period in which families of three generations are under the same roof, and were therefore, by a well-known psychological law, unsuitable for intermarriage (see E. Westermarck, History of Human Marriage; London, 1904, p. 320 ff.). Traces of such large households are not wanting in Roman history (Val. Max. iv. 8; Plut. Crassus, i. and Cato the Elder, xxiv.). But these strict rules were gradually relaxed, and from the time of the Punic Wars it seems to have been possible for first cousins to marry (see Marquardt, Privatlehrbucher, p. 30, note). When the Emperor Claudius married his brother's daughter, he had to obtain a decree of the Senate for the purpose, and this licence, which was afterwards repealed, was not generally approved (Tac. Ann. xi. 6; Gaius, i. 629). (3) The consent of the parties was absolutely necessary, but not that of the parties themselves, who were often betrothed by their parents at a very early age; e.g., Cicero betrothed his daughter when she was only ten years old (Fowler, Social Life, p. 140 f.). This was a survival of the old custom in many parts of the world, where the maintenance of the family is a matter of supreme importance, and no time is to be lost in securing that children shall not remain unmarried.

The betrothal (sponsatio), however, at Rome was not a promise of marriage but a legal contract, and might be broken by
MARRIAGE (Roman)

485

consequent if there was a strong dislike on the part of either boy or girl (see, however, Serv. Sulpicius, in Aul. Gell. iv. 4). The early betrothal serves to show us that the idea at the root of marriage was that of service to family and State, i.e. the procreation of children, or, once the marriage was consummated, the two persons were considered to be one. The age of puberty and the toga praetexta of childhood; this might happen at different ages, according to natural development, but the minimum age was 12 for a girl and 14 for a boy.

(8) Ritual.—If all these conditions were fulfilled, a day was fixed for the marriage which must be one of good omen; as with May, was an unlucky month for this purpose, and so was the early part of the year, while certain days, such as reiugiones were to be avoided (Fowler, Rel. Exper., p. 38 ff.). At earliest dawn, according to ancient usage both public and private, the auspices were taken by the right of birds; but by Cicero's time this seems to have dropped and the election of the exact hour that the victim took its place, as a preliminary to the first step in the procedure, which was the declaration of consent by the parties, usually but not necessarily recorded on tabulae nuptiales. Then the bride assumed the wedding dress, viz., the flammeum, or hood of red or yellow, and the tunica recta with a woolen girdle fastened with the nodus herculaeus, this knot, we learn from Piny (HN xxvii. 63), was used for binding up wounds and we may therefore suppose that it was a charm against various kinds of evil (c.f., however, ERE vii. 749). Her hair was parted into four separate locks with a spear-head (hasta collisibalis), which may have been a survival from pre-historic marriage by capture; and under the flammeum she carried a bunch of herbs picked by her own hand (Festus, e.n. 'Cornu' [p. 56, Lindsay]). She was then ready for the actual marriage rites, which, as will now be seen, was a matter not only of secular contract, but of religious usage; it is occasionally called a sacrum, as in Luan, Phar. ii. 350 (of the marriage of Cato): 'a vestimentary textum in hoc sacramentum' (Festus, p. 249 [p. 292, ed. Lindsay]). This act, and the sacrifice which seems to have followed, are represented on many monuments, of which accounts will be found in A. Rossbach, Römische Hochzeit- und Ehedekämmer, Leipzig, 1871, passim; these are, however, all of very late date, and not easy to interpret. The destrarum arcus, a symbolic act of union, in which, under the guidance of a promus, who must be a matron only once married, the bride placed her right hand in the right hand of the bridegroom (Festus, p. 242 [p. 292, ed. Lindsay]). This act, and the sacrifice which seems to have followed, are represented on many monuments, of which accounts will be found in A. Rossbach, Römische Hochzeit- und Ehedekämmer, Leipzig, 1871, passim; these are, however, all of very late date, and not easy to interpret. The destrarum arcus took place, so far as we can see, in all cases, and the important fact is that it was not always accompanied by the solemn declaration of consent. Possibly the Veiius was the usual method in early times (Fowler, Rel. Exper., pp. 121, 138), and it is sometimes, at least since the two in E. iv. 106. When the sacrifices had been offered by the pair, the persons present swore on a palus 'by way of good omen, and the wedding ceremony, exquisitely described by Catullus in his first poem. She was taken to the boy's house, from the arms of her mother, and led in procession to the house of her husband by three boys, sons of living parents (patrini et matrini), pure and old, and of good ones, one of whom carried a torch of white-wood, while the other two held her by the hands; flute-players and torch-bearers went before, the mysterious and unexplained cry 'Talasse' was raised, and nuts were thrown to the youthful lookers-on. When the bride reached the house, she smeared the doorposts with oil and fat (of wolf or pig), and tied a thread of wool around them; probably these old customs were originally charms to averi evil (for the see J. Play. De Lanza in antiquorum ritibus usus, in RSVV ex. ii. [Gassen, 1911] 82). She was then lifted over the threshold, perhaps as a last sign of simulated reluctance to be thus transplanted, and was received in her new home.

(3) This reception, the third act in the procedure, is obvious in its details, but the general meaning is plain. It was called 'reception into community of' fire and water' ('reception in ignem acceptus', i.e. into partnership with these necessities of human existence (E. Samter, Familienfeste der Griechen und Römer, Berlin, 1901, p. 28 ff.). We are also told that she brought with her three coins (aunae), one of which she gave to her husband, one she laid on the hearth, and the third she threw down at the nearest compitum ('crossways') (Normus, p. 802, Lindsay). Here she seems to be making an offering to the genius of her house, to the spirit of the hearth-fire, and to the Lar of the family's land allotment, who dwelt in a sanctuari at the compitum (see Fowler, Rel. Exper., p. 77). She was now in the atrium proper which, opposite the door, the lectus gentilis had been made ready. The morrow would find her a mater-familias sitting among her maids in that atrium or in the more private apartments behind it.

To help maintain the establishment which the marriage was to set up, she brought with her a dos, or dowry, which in strict law became the property of the husband (for modifications of this rule see art. 'Dos,' in Smith's Dictionary of Greek and Roman Antiquities). As Cuv. well puts it (p. 291), her position of dignity in the house, and her title of domina as mistress of its slaves, would have been impaired if she entered it with empty hands and lived at the expense of her husband. The dos was also the means of securing to the children born of the marriage succession to their mother's property as well as to the patronymic of the father.

The ritual which we have been examining plainly indicates that the Roman bride was to hold a much nobler position in the household than the Greek wife (see Marriage [Greek]). She shared with her husband all the duties of the family, religious and secular; she lived in the atrium, and was never shut away in a woman's chamber. She took her meals with her husband; in all practical matters she was consulted, and only on questions of politics or intellectual she was expected to be silent.

'When she went out arrayed in the graceful vesta matronalis, she was treated with respect, and the boy looked after her; but it is characteristic of her position that she did not as a rule leave the house without the knowledge of her husband, or without an escort' (Fowler, Social Life, p. 144).

The character induced and expressed by such a position is exemplified in the legendary story of Corto, the son of the mother of the Greek, in Caesar's mother Julia, and, among many others, in the perfect lady whose courage, good sense, and domestic virtues live for ever on the marble of the Capitol. The Reins (CIL vi. 1227; Fowler, Social Life, p. 109 f.)

4. Divorce.—No doubts towards the end of the
MARRIAGE (Semitic)

Republic the type of womanly virtue just described was growing rare, owing to the gradual break-up of the tribal family life—the result of a moral degeneracy which even Augustus was unable effectually to check. This downward tendency is best seen in the history of divorce. Marriage by custom had been practically indissoluble; we hear of *differentia*, but it is said (Plut. *Quint. Rom.* 50) to have been so awful a rite that we assume that it was used only for penal purposes. But the other forms of marriage, not being of the sacred or canonical character, did not present the same difficulty, and the legal formula of divorce is as old as the XII Tables, and therefore probably earlier than the fifth century B.C. ('claves adimere or exigere' (Cic. *Phil.* ii. 28; cf. above, p. 1299). By the 2nd cent. marriage was becoming unpopular in high social circles, and divorce was becoming common (Fowler, *Social Life*, p. 117 ff.). In the Ciceronian age it was extraordinarily frequent; almost all the well-known ladies of that period were divorced at least once. Pompey, though a man of excellent character, was married five times, Cæsar four times, Cicero three times. Under the Empire the virtuous Pliny the Younger also three times. There was no difficulty in the operation of divorce; it was purely a private matter, and either party could send in the petition of divorce without any given reason or any complaint of misconduct. No remedy was found for a disorder so universal; and to the looseness of the marriage-tie, and the corresponding disregard of what had once been the chief object of marriage to be wedded in part at least the degeneracy of Rome and Italy in the first three centuries of the Empire (L. Friedländer, *Sitzungsberichte Rom*, Leipzig, 1901, Eng. tr., London, 1908-13, i. 242 f.).

MARRIAGE (Semitic).—Students of social evolution seem justified in holding that the family of primitive man was an intermediate development between the sex of the closest animals and the lowest living man. In the lowest known human societies the form of marriage is usually a temporary monogamy. This temporary monogamy has been accompanied among most early men by a greater or less degree of sexual irregularity, and has varied according to economic circumstances and the bent of the people. So far as can be ascertained from the existing evidence, it underwent some interesting variations among the primitive Semites.

1. Primitive Semitic. — Among many savage or semi-savage peoples it is customary to allow unmarried girls complete sexual liberty. In some communities it might in time easily come to be thought that a woman who had exercised such liberty was more likely to bear children than one who had not. There is reason to believe that something like this prevailed among the primitive Semites, and that superstitious value attached to this exercise of liberty, for in many widely-scattered portions of the Semitic world it became a sacred duty to bear children and sacrifices their virtue by one or more acts of free love. It was thus, apparently, that the temporary *hierodoulai* originated (see *Hierodoulai* [Semitic and Egyptian], vol. vi. p. 672 ff.). Besides the existence of *hierodoulai* among the Semites, both temporary and permanent, there is also evidence of much sexual irregularity among them. It is the working hypothesis of most Semitic scholars to-day that the area was the cradle-land of the Semitic people. Naturally, the peculiar desert and oasis environment of the Arabian peninsula left its impress on the Semitic family life. In the oases dates and fruit, and to a certain extent, apparel and maintenance for the flocks was produced, but it was necessary to lead the flocks into the desert in search of pastureage. Whether, however, men lived in an oasis or wandered from place to place, women would always be needed to perform the duties of the household and the camp, that the men might be free to fight, either in defence or for plunder. There are two reasons for believing that the women were for the most part the sisters and mothers of the men, whether the clan was resident in one fertile spot or was nomadic: (1) Semitic marriage was notoriously temporary, and (2) kinship was reckoned through the mother.

That marriage was, on the whole, temporary seems probable from the frequency of divorce in Semitic lands, especially among the Arabs and Abyssinians (see below). The researches of W. Robertson Smith established as well as the evidence will permit that among the early Semites kinship was reckoned through the mother: the researches for this view are as follows: (1) The well-known Biblical phrase for relationship is 'bed in parity' (Gen. 46:26). (2) The custom called *aspis*, by which a child is consecrated to the god of his father's tribe, cannot have been primitive, but must have sprung up in a state of transition to ensure the counting of the offspring to the father's side of the house. (4) Cases occur in the historical period in which a boy when grown attaches himself to his mother's tribe. The priest Zabai, son of the prophet Daniel, and the Arabic antiquarians appear to have known that such cases were not uncommon. (3) The fear that sons would choose their mother's clans led men who were wealthy to marry within their own kin. (6) Kinship between a man and his maternal uncle is still considered closer than that between a man and his paternal uncle. (7) Joseph's sons born of his Egyptian wife were not regarded as members of Israel's clan until formally adopted by him (Gen. 46:29). (8) Tamar might legally have been the wife of her half-brother Amnon, the relation being on the father's side (2 Sam. 13:15). Such unions were known in Judah as late as the time of Ezekiel (Ezk. 16:28). (9) Tabitha, king of Sidon, married his father's daughter, and such marriages were known in Mecca. Since the marriage of those really regarded as brothers and sisters was obnoxious to the Semites, kinship must in these cases have been counted through the mother. (9) In the Arabic genealogical tables metronymic groups are still found. (10) In Arabic inscriptions found at Hejra metronymic clans appear. To this evidence a few items gathered by other scholars. Nöldeke noted that among the Mandæans a man is described

---

1 *Kinship and Marriage in Early Arabia*, p. 170 ff.; cf. also *Barton, Semitic Origins*, p. 516.
2 *Ch. 21, l. 198, 299.*
as the son of his mother, which indicates that kinship was reckoned through the mother. F. E. Peters points out that among the Babylonians a man could, if he chose, join the kindred of his wife, which is a relic of the same custom. Wellhausen has observed that in the Pentateuch J counts descent through the mother, while P reckons through the father. Among some primitive peoples kinship is counted through the mother because they are ignorant of the part of the father in reproduction, among others, as e.g., the Nairs of the Malabar coast of India, it is reckoned through the mother because a system of polyandry prevails. The wife has several husbands, no one of whom lives with her, but all of whom visit her occasionally, and it is not known which one of them may be the father of a child. Which of these came to the Semitic system of female kinship? We have no evidence to show that the Semites were so ignorant of the processes of reproduction that paternity was unknown to them. On the other hand, there is considerable evidence indicating that at one time a type of polyandry somewhat similar to that of the Nairs prevailed among the early Semites.

In the Ugarit texts there are specific statements that the women whom the poets visited only occasionally were members of other clans, and that they often visited them at personal risk, which indicates that there were relations between the clans. The marriages of Samson (Jg 14, 16) were of this nature. Such marriages were often terminated by the migration of the tribes in different directions. Ammianus Marcellinus was no doubt speaking of this type of marriage when he said that among the Arabs the bridegroom lived with his wife and her husband, and that, if she chose, she withdrew after a certain time. In this type of marriage, the propriety necessarily be reckoned through the mother, and the fact that such alliances prevailed would be sufficient to account for the early Semitic custom of female kinship.

Such marriage conditions, while compelling the women to live with their brothers and sons rather than with their husbands, left them comparatively free from the masculine domination to which they were subjected after the rise of polygamy. Something of this freedom still survives in Arabia. In the desert parts of the peninsula like Oman and Hasa, which are not so dominated by Islam as the rest of it. The type of marriage which seems to have prevailed in past, as well as in the present, is polyandry and polygamy. Just as a woman might receive successive husbands, so the husbands also might have several wives in different clans. On the whole, however, the more numerous partners would seem to have been enjoyed by the women, for the practice of putting girls to death prevailed down to the time of Muhammad (see Qur'an, xvi. 61, lxxvi. 8), so that women must have been fewer than men. Marriages of this early Semitic form were not always as common as the mixed marriage offered in his Mu'allajat that he followed one day the whole tribe of the tribe who spent a day in their camp, and that of the tribe who afterwards rode and whose fruit he found he repeatedly tasted was the daughter of his uncle. In like manner Lailah, the woman celebrated in the poem of Amr b. Kutham, was Amr'skinswoman. Whether the marriages which occurred within the tribe were more permanent than the alliances which were made in other clans cannot be determined, but one would naturally suppose that they were. Out of these general conditions there developed a type of temporary marriage for a specified time—three nights or more—called mutḥal marriage, which continued till the time of Muhammad.

Another type of polyandry, that called Tibetan, because first studied in Tibet, was the form of marriage in vogue at one time in the northern part of Arabia. In this form of marriage a whole family of brothers possess one wife in common. The most important witness to this type of marriage is Strabo, who says, in describing Arabia Felix:

'All the kindred have property in common, the eldest being lord; all have one wife, and it is first come first served, the man who enters her house first has the bark of the palm. It is customary for every one to carry it; but the night she spends with the eldest. Hence all are brothers of all; they all have conjugal intercourse with mothers; an adulterer is punished with death; an adulterer is a man of another stock.'

The reference to conjugal intercourse with mothers is probably not to be taken literally, but it is to be explained by Qur'an, iv. 26, where it appears that men had married wives of their fathers. In other respects the passage describes all the features of Tibetan polyandry. Its existence in that part of Arabia is also attested by epigraphic evidence.

W. Robertson Smith collected considerable evidence to show that this type of polyandry was also known in N. Arabia.

(1) Bakhshali relates that two men made a covenant of brotherhood, which resulted in their sharing goods and wives—a fact which seems to betray a survival of the type of polyandry. (2) In Arabic kanāmah means the wife of a son or foster son, but is used also to denote one's own wife; in Hebrew kālihā means both betrothed and daughter-in-law, while in Syriac kūthā means both bride and daughter-in-law. These facts can be most easily explained as remains of the type of polyandry. (3) The Arabic law that a man has the right to the hand of his cousin, and the fact which the fourth saqib and his attendant traditions attest, that, if a man died and left only female children, the father's male relatives inherited the property and married his daughter, are regarded as the results of a previously existing condition of polyandry. (4) The Qur'an (iv. 22 ff.) forbids men to labor against their will, and forbids them to take their deceased mothers in marriage except what is just.
earlier time and the patriarchal form of marriage, which generally was prevailing at the time of Muhammad. W. E. Smith so regarded it. But, be this as it may, by the time of Muhammad, the custom of polygamy had come into vogue in Arabia; a type of marriage in which the husband was practically the owner of the wife, and which is, consequently, known as *bd al* marriage. In this type of marriage children belonged, of course, to the father’s clan. Smith attributed the origin of the *bd al* marriage to wars and to the consequent custom of marriage by capture. Marriages of this type might be either monogamous or polygamous, according to the caprice of the wife or the wealth of the husband. In much earlier times they had become the custom among the other Semites, who had migrated to lands more fertile than Arabia.

What form of marriage ceremony the early Semites had is largely a matter of conjecture. The type of marriages of which the early poets boast was probably without ceremony. A simple solemnity or agreement between the parties sufficed. 1 This must often have been the case also with the later *mut*ah marriages. After a marriage of this kind was recognized by the clan of the bride, a period was celebrated for a week, during which there was much jollity of a type suited to the rough character of the civilization (see Jg 14:21). As marriage became more permanent, somewhat similar festivities became the rule and have persisted in all parts of the Semitic world.

2. BABYLONIAN AND ASSYRIAN. — There is little direct evidence of marriage and the position of women in Babylonia earlier than the time of Hammurabi (c. 2000 B.C.), though it is certain that the regulations embodied in his Code of laws are for the most part the expression of customs that had then been of long duration.

The most conspicuous instance of the position of a married woman of the earlier time is that of Barnatarru, wife of Lagash about 2825 B.C. From an archive of tables discovered at Tellah, which contained the pay-rolls of the attendants of her palace, memoranda of her gifts to temples and festivals, 2 and even a record of her acrobatic 3 abilities, 4 it appears that she held a position in Lagash analogous to that of a queen in a modern European country. One cannot say that her husband had no other consorts, but it is certain that her position and importance were shared by no other. Frequent references in the eyes of the public have parallels in Babylonian history, and are in striking contrast to the insignificance of the women in the *harim* of Assurbanipal (668-626 B.C.), into which many princesses went, never to be heard of again. 5 Sennurunatu, the wife of Adad-nirari IV. (910-752 B.C.), was prominent enough to be described as “lady of the palace and its mistress.” 6 She is the nearest Mesopotamian parallel to Barnatarru. In the light of later Babylonian laws, however, it is probable that Barnatarru was the only wife of Lagash, and that he was, at least in theory, a monogamist. If this is the true of the rule, it would be true for most of the men of his kingdom.

For the period of the first dynasty of Babylon (2123-1924 B.C.), the Code of Hammurabi affords an authoritative source of information on marriage. The Code contains this regulation: 7 ‘If a man takes a wife and does not execute contracts for her, that woman is no wife’ (§ 18). This is proof that in Babylonia marriage had passed from Semitic life, and had, in consequence of long legal development, become a matter of record. The marriage ceremony was incomplete without the signing of contracts. The law did not recognize the marriage of a woman without a ‘common law’ marriage. One reason for this was that the bride usually brought a dowry from her father’s house, which the law safeguarded for her and her children. The husband also had to pay a bride-price to his father-in-law, which, upon certain conditions, reverted to him (§§ 138 f., 162-164). As Babylonian law dealt much in the evidence of written contracts, these were regarded as necessary to a legal marriage. The terms of the marriage, according to the Code, bore somewhat more heavily upon the woman than upon the man.

MARRIAGE (Semitic) 469

divorce, provides that, if the husband divorces the
wife, he shall be driven out to the oxen of the
yoke; and all women of Semitic polyandry shall be driven
out of the marriage-house of the palace. 2 Another contract
provides for a divorce on the part of the man by
payment of the usual alimony; on the part of the
wife, on pain of having her hair cut off and being
sold for money. 3 This latter was a less severe penal-
ty than being thrown into the river. In general,
however, the penalties for initiating divorce im-
posed upon the wife in the marriage contracts are as
mild as those of the Code, though not necessarily
identical. In one case the wife is to be thrown
from a tower; 3 in another, impaled. 4 Never-
theless, the penalty most often imposed is that
mentioned in the Code. 1 One marriage, concern-
ing which two documents bear witness, 2 records the
wedding of two sisters by one man, but provides
that the elder shall be the chief wife, and that
the other shall perform for her certain specified
duties.

From the Neo-Babylonian and Persian periods
several marriage contracts have come down to us. 1
The stipulations in them as to bride-price and dowry
varied; but there were several legal relations those of
the time of the 1st dynasty, but the conditions on which
the parties may separate are generally omitted from
the contracts of that period, although divorce did the
contracts the man acts for himself and arranges with the
parents of the bride, though, if the husband is a minor,
the parents make the arrangement for him.

The bridegroom enjoyed in this respect more liberty
of action than the bride. In Babylonia, as in the
ceremony of the English Church, she had to be
"given away."

We have no knowledge of ancient Babylonian
marriage ceremonies farther than that before marriage every woman had to act once as a tem-
porary hierodoulas (see Hierodoulou [Semitic and Egyptian], vol. vi. p. 674).

3. Hebrew. — In the story of Samson there are,
as noted above, some faint traces of that early
Semitic type of marriage in which the wife be-
longed to a hostile clan, lived with her people,
and was visited by her husband for longer or shorter
periods. The stories of the Patriarchs give a
true view of various phases of matrimonial development.
The marriage of Jacob to the daughters of Laban in-
dicates a type of marriage in which the husband
resided with the bride's family, and the children
were counted to his family, for Laban says: 'The
daughters are my daughters, and the sons are my
sons' (Ge 31:27). Then Jacob broke away, and the
children were counted to his stock. This
marked a transition from one system of kinship
to the other. A number of survivals of the two
matriarchal types of marriage just mentioned are
found in the narratives of the OT; Sischem, e.g.,
consented to circumsision to render himself accept-
able to the clan of his proposed wife (Ge 24:37).
A number of instances also occur in which a son in-
erherits his father's cconces; Labosheth regarded
Saul's concubine as his own, and rescued Abner's
taking her (2 S 3:6); Solomon for the same reason
regarded Adonijah's desire to marry Abigail as
treason (1 K 2:13; cf. v. 2); Reuben was denounced for endeavouling to anticipate the inheritance of

his father's concubine during his parent's lifetime
(Ge 35:25). As noted above (§ 4), these are survivals
of Semitic polyandry, and the marriage con-
vival was the levirate—a custom which required a
brother to take the widow of a deceased brother and
claim the first fruit of the union as the child of the
decayed (Dt 25:5; Ge 28:5-8). The influence of
these early forms of marriage is evident in the
great liberty enjoyed by women of the early period
(see 1 S 25:14, 2 K 4:21). In the stories of Abraham
and Jacob the type of marriage is also reflected in
the arrangements which Abraham concluded with a
husband, for the sake of obtaining an offspring
which the wife is unable to bear (see Code of Ham-
murabi, §§ 144, 146). The general type of marriage
of which we have evidence in the Hebrew writings
was, however, batal marriage, the regular Hebrew
word for husband being *b*al, and that for a
married woman *b*a'lah, which means 'owned,' 'possessed.' Another evidence of this conception
of marriage may be seen in Ex 20:13, where the wife
is counted among a man's possessions. Among
the poor, marriages were probably often monogamous,
but there was no sentiment against polygamy, and
in the law of the patriarchs, in which the large harems of David and Solomon abundantly
show, Dt 21:20, presupposes that a man will also
often have two wives. The law of Ex 21:11-14
takes it for granted that a man who divorces his wife
concerns either of her owner or of his sons.

1 See 1S 25:14, 2K 4:21. The list of the degrees of kinship in which marriage was prohibited in 1R 18, 20, and Dt 27 belongs to the period of Judaism which began
with the Babylonian Exile. At no period were
young people allowed to arrange matrimonial
affairs for themselves; such arrangements were
made by the parents (cf. Ge 21:24, 29:34; 1R 14).
About to about 650 B.C. a man could
divorce his wife without any formalities whatever
(see Hos 5:1 and 2 S 8). This liberty was some-
what modified by the Deuteronomistic Code, which
provides (24:1) that, if a man wishes to divorce a
wife, he must give her a written statement to that
effect. It permits him to issue the divorce for any
cause; she need only 'have found no favor in his eyes.' Apparently the custom
made divorce less easy than in earlier times, when
no written statement was necessary; for, in an age
when writing was not a usual accomplishment, it
was quite an undertaking to compose a divorce
compos. In Judaism, however, this provision
was held to justify frequent divorces.

The law of Deuteronomy permitted only the
man to initiate divorce; it granted to the woman
no corresponding power. It represents, no doubt,
the usual custom among the Hebrews. One in-
stance, however, is known in which a Hebrew
bride secured by her marriage contract a similar
liberty. Among the Jewish rabbis discovered at
Elephantine in Egypt a marriage contract was
found, which contains this passage:

1'st to-morrow or any later day Mibphahah shall stand up in the
congregation and say, 'I divorce As-hor, my husband,' the
price of divorce shall be on her head. .. If to-morrow or
any later time As-hor shall stand up in the congregation
and say, 'I divorce my wife, Mibphahah,' her marriage
shall be forfeited, etc."

Whether other Jewish women at Elephantine were
accustomed to gain this liberty by contract, or
whether there were special reasons why it was
secured, Mibphahah, we do not know; but in any
event it is a significant modification of the OT
status of women in such matters.

The Deuteronomist's law defined two cases in
which a man was for ever powerless to divorce a
wife: if he had falsely charged his bride with not

covered at Assuan, London, 1606, Papyrus 6, p. 291. Papyrus
Q confirms the statement.
MARRIAGE (Semitic)

being a virgin, and if he had been forced to marry a woman whom he had violated (Dt 22:22). The penalties for adultery bore more heavily on the woman than on the man, the only cases where the woman could be stoned being when the crime was committed with the wife or betrothed of another; then both the man and the woman were to be stoned (Dt 22:22-23). The point of view was that adultery was an offense against the husband's property (cf. art. ADULTERY [Semitic]). The wife was accordingly compelled to be faithful, but no similar fidelity was exacted of him. So long as he did not love the woman, and marry her, the consent of those who were really or prospectively the wives of others, he was not punished, except that, if he violated a maid, he might be compelled to take her as an additional wife. The penalty imposed on a wife or a betrothed maiden for adultery seems in the earlier time to have been burning (Gn 39:30), but was later changed to stoning (Dt 22:24). If a woman was simply suspected of adultery, she was tried by ordeal (Nu 5:11-31). As the ordeal consisted, however, in drinking water into which holy dust from the sanctuary floor had been thrown, it must generally have resulted in the release of the accused woman. The frequent recurrence of adultery on the part of the prophets would indicate that the penalties were not well enforced and that it was of frequent occurrence (2 Kr 31 and Hos 3:2) afforded specious instances in which the penalty was not enforced.

4. Arabian. — The early Arabian marriage customs have been sufficiently treated above (§ 1); it remains to note how these customs were affected by Islam. By the time of the Prophet the marriage had apparently become the normal type, and polygamy prevailed among the rich. The husband had full power over the wife and could even divest her of her authority by beating her (Qur'ān, iv. 30). Some survivals of customs which belonged to the earlier time were, as noted above, condemned by the Prophet (iv. 26). Before the time of Muhammad no limit had been set to the number of wives a man might possess. In the interest of moderation, Muhammad ordained that legal wives should be no more than four, but that a man might also enjoy as concubines as many slaves as he was able to possess (iv. 8, 29). The Prophet himself was allowed as many as he wished (xxixii. 49). Marriage with one's mother, daughters, sisters, paternal and maternal aunts, nieces, mother-in-law, daughter-in-law, granddaughters-in-law was prohibited (iv. 27). Marriages with foreign women were permitted, if the women were believers (lx. 10). Adultery was a crime for a woman, but apparently not for a man. Before the time of the Prophet an adulteress had been literally burned, but Muhammad changed this to imprisonment in the house of the wronged husband (iv. 19). A slave girl was to receive half the penalty of the married woman (iv. 36). Divorce of a wife, as among the Hebrews, was possible to the husband at will. Before the time of Muhammad, the formula of divorce consisted of this sentence, which the husband pronounced to the wife: "I renounce thee as my mother's hand!" After this had been pronounced over her, it was considered as unnatural to approach her as it was to approach a real mother, and so it was considered wrong to remarried a divorced wife. Muhammad called this "backing away" from wives (liviii. 2). He declared, however, that the utterance of this formula did not constitute a real relationship, and so permitted a man to marry a wife whom he had divorced (xxixii. 4). A man might not divorcing a wife who was pregnant, or who was nursing a child (lxv, 6), but apart from this condition a man and wife who did not agree might separate at any time (iv. 129), though liberal alimony was enjoined (iv. 24). It is assumed (xxxii. 48) that men will frequently change their wives for mere whims after marriage, even before consensual relations have been established. Liberty of divorce has been freely exercised by the faithful both in ancient and in modern times. A dower (the so-called gift of marriage) was required, including all that he married and divorced, more than two hundred women. Sometimes he included as many as four wives in one contract, and he would divorce four at one time and add new ones and those who were already in his household. A certain Mughairah b. Shabah is said to have married eighty women in the course of his life, and Muhammad al-Tayib, a dyer of Baghdad († 623 A.H.), is said to have married in all more than nine hundred women.6 Palgrave relates that the Sultan of Qatar in E. Arabia married a new wife every month or fortnight, who was then divorced and placed on a pension. C. M. Doughty tells how Zain, his host, a petty sheikh, not only permitted his wife to be courted by another Arab, but offered to divorce her so that Doughty could marry her.7 Naturally a woman could not marry so many men, because she had not the right of divorce, and because she could have only one husband at a time; some of them, nevertheless, managed to have a surprising number. A certain Mughairah of Yemen is said to have had upwards of forty husbands, and her son Kharijiah did not know which one was his father.8

In parts of Arabia certain old marriage customs still survive in the practice of Islam. Thus in Sudan and among the 'Asir in S. Arabia marriage for a definite term still exists, and a man who has a permanent wife may also take a temporary one. In Sudan the agreement is witnessed before the qādī, and so has the sanction of Islam. At the expiration of the contract, the couple may separate without the formality of a divorce; if they continue to live together, a new contract is necessary. Such marriages are still practised in Mecca at the time of the pilgrimage.9 Marriage ceremonies among the Arabs vary greatly according to circumstances. Sometimes they consist of a feast, sometimes of a civil contract before the qādī, and sometimes there is no ceremony at all. The marriage of a woman is announced above, is said to have reduced the contract to very simple terms. A man may marry more than one.10 Betrothed women spoke, and she replied, "Married!" and was from that moment his lawful wife.11

5. Abyssinian. — Abyssinian is Christian, though its form of Christianity is the result of an arranged marriage. The Abyssinian is a priest, and the contracting parties partake of the Holy Communion. A candidate for holy orders is compelled to marry once, as in the Greek Church, but he cannot divorce his wife, and, if she dies, he may not marry again: one matrimonial partner is alone permitted to him.12 Among the people religious marriages are not popular. All travellers agree that the Assyrians prefer to be married by civil contract, as these

MARRIAGE (Slavic)

MARRIAGE (Slavic).—As early as the pagan period the family life of the Slavs was regulated by legal marriages, which were concluded in a solemn manner. Like other nations, the ancient Slavs had two forms of marriage: marriage by capture of a girl belonging to another family or tribe, and marriage by purchase. In the Christian period only the latter was sanctioned by the Church and approved by the law. In the Slavonic countries, marriage by capture was prohibited and gradually disappeared. Nevertheless, a series of traditions and observances which visibly reflect traces of the old form of marriage by capture is preserved in the wedding ceremony. To these customs belongs, e.g., that of stopping the bridegroom on his way to the house of his bride and then of shutting the door before he can hide the bride; and here may also be mentioned the habit of presenting a false bride to the bridegroom. In Russia the wedding-guests engage in symbolical fights, which may rightly be deemed as survivals of the old and family. It frequently happens that those who have been divorced and have each married others divorce their second spouses and are again reunited. If the separating couple have children, the children are divided. The eldest son falls to the mother, the eldest daughter to the father; if there is only one son, he goes with the mother; and, similarly, one daughter goes with the father; if the remaining children are unequal in number, they are divided by lot.

In addition to these irregularities, there is also much concubinage in Abyssinia, as in other Semitic countries. The levirate exists there, and its compulsion operates not only when a brother dies, but when, as so often happens in African wars, he is emasculated, so as to be incapable of begetting children.

These peculiarities of Abyssinian matrimonial life are clearly a survival from early Semitic conditions, and Christianity has never been able to eradicate them. The Abyssinian is so anxious to marry a girl, he applies directly to her parents or nearest relatives; when their consent is obtained, and the dowery arranged, the affair is considered settled, the girl being given no voice in the matter. Civil marriages are celebrated by feasts much as in other Semitic lands, the bridegroom and his friends feasting by themselves, and the bride and her friends by themselves. After a day of festivity, the bride is carried to the house of her husband, and the marriage is accomplished. This formality is observed in no matter how many times the bride may have been married before.

GEORGE A. BAYLON.
to show her submission (sometimes she even re-
sixed the symbolic blows), and, after being clothed
in new garments by the women and the 'best man,'
she went to bed with her husband in the presence
of the witnesses. After the nuptial night purifica-
tion was performed in a clear stream or at a well.
Later on, this procedure was reduced to a mere
sprinkling with water.
Besides these chief and almost fundamental
ceremonies, the various Slav peoples have other
customs connected with the popular wedding, the
details of which cannot be described at full length
in this article. It is interesting, however, to note
that for a long time the people attached far
greater importance to these domestic wedding cer-
emonies than to the rites prescribed by the Church.
Historical documents testify that, even in the 16th
and 17th centuries, not only the common people
but also the more cultured classes regarded the
ecclesiastical ceremony as a purely religious act
without any legal significance. A marriage became
legal only after the precise performance of all pre-
scribed observances inherited from the ancient
and consecrated by the family tradition; and this
conviction is still to be found among some of the
Slav nations.

M. MAICHAL.

MARTINEAU.—James Martineau (1805-1899) was born in Norwich,
April 21, 1805, the fourth son and seventh child of Thomas Martineau,
a manufacturer of baromines. Of Huguenot an-
cestry, he was also descended through his father's
mother from John Meadows, one of the ecclesias-
tic ministers of 1662. After four years at the Norwich
Grammar School he was placed under the care of
Dr. Lant Carpenter at Bristol (1818-21), to whom he was
then ''spiritually reborn." His teacher was a
pioneer in education, and combined instruction in
the elements of science as well as psychology and
moral philosophy with classical and mathematical
training. Thus equipped, he was placed in machine-
working factories. Later, by an appreciation
ship after a year (partly under the shock of a
tereavement which 'turned him from an engineer
into an evangelist' (speech at Nottingham, 1876; Car-
penter, James Martineau, p. 241), and in 1828 he
entered Manchester College, York, as a student
for the ministry. He had been brought up in the
Unitarian theology of Priestley, and embraced his
necessitarian pantheism with ardour, though at
Bristol he had read Wilberforce and Hanah
More, and was not without occasional misgivings
concerning the freedom of the will. On the com-
pletion of his College course he took charge of Dr.
Carpenter's school for a year (1827-28), and, after
a short period of ministerial service in Dublin
(1828-29), terminated through his refusal of the
endowment known as the Regent Denum, he began
his longest pastorate in Liverpool (1832-57). In
1840 he undertook the additional duty of Pro-
fessor of Philosophy and Political Economy in
Manchester New College, on its return from York
to its old home in the industrial city. During the erection
of the Hope Street Church by his congregation
(1848-49) he spent fifteen months with his family
in Germany, returning to resume his ministry.
The conversion of the College of the City of London led
his settlement there in 1857, and from 1859 had also
ministered in Little Portland St. Chapel till 1872,
in which threatened failure of health led to his
retirement. In the meantime he had succeeded to
the Principalship of the College in 1899, which he
held till June 1886.
For more than fifty years he had been actively
engaged in literary work of many kinds. To the
religious denomination of his birth and education
he gave unstinted time. At a very early age he was
the chief influence in transforming its fundamental theological
conceptions, while in the wider field of philo-
sophy he was the powerful antagonist of the empiricism and
monism of the age. His writings and lectures are
characterized by an unceasing battle against the
philosophy of Spinoza, aesthetic materialism, and the
agnostic philosophy of Spencer.
The Unitarians of Martineau's youth followed the
tradition of Locke. Accepting the NT as the
final authority in Christian doctrine, they recog-
nized Jesus Christ as the Messiah, whose teachings
were authenticated by miracles. To this interpre-
tation Martineau remained faithful till after 1832.
But further study of the Gospels confronted him
with the predictions which implied the return of
Jesus in the lifetime of His disciples to judge the
world, and this begot an investigation into the
significance of revelation which led him to declare
in his first work, The Rationale of Religious Inquiry
(1836), that 'no seeming inspiration can establish
anything contrary to reason, that the last appeal
in all researches into religious truth must be the
judgments of the human mind.' By 1845 he had
abandoned the apostolic authorship of the Fourth
Gospel, and in the third edition of the Rationale
(1845) he ceased to demand belief in the gospel
anomalies as essential for an Christian name. In
the Prospective Review (1845-64) and its successor,
the National Review (1855-64), he secured an organ
for his theological and philosophical essays, while
others not less brilliant appeared in the West-
minster. Indefatigable in study, a constant teacher
of the young, he devoted long courses of lectures to
the exposition of the NT and the history of Chris-
tian doctrines, and in his last large treatise, The
Scot of Authority in Religion (1860), he returned
again to his earliest theme. He re-examined the claims
of the Roman Catholic Church, the infallibility of
the Bible, and the historical significance of Christ-
ianity, and presented Jesus no longer as the Jewish
Messiah, but as the 'prince of Saints," revealing
the highest possibilities of the soul. Looking back
at ninety (1889), he wrote to William Knight:
"The substitution of Religion at first-hand, straight out
of the immediate interaction between the soul and God, for
religion at second-hand, fetched, by copying, out of anonymous
traditions of the Eastern and Western centuries ago,
had been the reality directing, though hardly conscious aim of
my responsible years of life" (Carpenter, p. 560).
Martineau thus remained to the last a Unitarian
in his interpretation of the Deity, and a Christian
in his allegiance to Jesus Christ. But his position
was often misunderstood, partly because of his
sympathy with modern social and political devo-
tion, and partly because of his steadfast refusal to
belong to a Unitarian Church. This was due to
the discovery of the real nature of the foundation
on which the majority of chapels occupied by
Unitarians were held. Some of these had been
founded in the 17th cent., others in the 18th, by
the English Presbyterians, who, under the leader-
ship of Baxter, had stood for 'catholicism against
all parties,' and repudiated creeds and confes-
sions. In dedicating their chapels 'for the
worship of God by Protestant Dissenters' (some-
times specified as Presbyterians, sometimes as
Independents, sometimes as both together), they deliberately rejected all limiting doctrinal names. By slow processes of Scripture study many ministers and congregations gradually became Unitarian in theology. At first this was the case, and a suit was instituted against the trustees of a charity in York founded by Lady Hewley, whose husband, Sir John Hewley (M.P. for York in the reign of Charles II.), had been a wholesale dealer in these doctrines. The decision (December 1833), which displaced the Unitarian trustees, was at once seen to imperil the tenure of all the chapels of similar foundation; and after long litigation the existing worshippers were secured in possession only by the Dissenters' Chapels Act (1844). The controversy had a lifelong effect on Martineau's views of the true basis of Church union. To the association of individuals for the promotion of Unitarian teaching he remained constant all his life. But he could not accept a theological name as a condition for religious fellowship. It was inevitably exclusive instead of catholic; it seemed to involve treachery to his spiritual ancestors; it barred the way to those very possibilities of change which had been the secret of the Unitarian advance. Deeply conscious of indebtedness to the Manichean world, Martineau endeavoured (1856) to form a Free Christian Union, which was joined by representatives of every British Church, but was disbanded two years later. Subsequently he worked out a scheme for the National Church as a Federal Union (CL II. [1887] 408 ff.), which proposed to abolish the Act of Uniformity, to release the Church of England from State control, and associate with it the other British English Christian Churches. The plan aroused considerable academic interest, but the Bill in which it was embodied was never actually laid before Parliament.

From the time of his settlement in Liverpool, Martineau had been continuously engaged in teaching and writing, and his intercourse with the young was a prominent cause of the changed view of the moral consciousness which led to the reconstruction of his philosophy. Trained in the pantheistic necessitarianism of Priestley, he had lived under a habitual tension of obligation without realizing its force. Martineau now contributed here to give it new meaning. Wordsworth had long been his favourite poet; Plato called forth his admiration for 'the fair and good'; Coleridge and Carlyle revealed unsuspected deeps of thought and passion in human nature; and through all the other makers and thinkers of his time, his freedom and dignity. In reviewing Bentham's "Deontology" (Monthly Repository, 1834), while still placing the 'criterion of right' in the 'tendency of an action to promote the happiness of an agent,' he laid stress against Bentham, on the reality and worth of the disinterested affections, and prepared the way for a wholly new set of moral values. The questions of his pupils, his persistent NT studies, and the hymns of the Wesleys opened new aspects of the inner life; and in the lecture on 'Moral Evil' in the Liverpool Controversy (1859) he formally abandoned the determinism of his youth. The change involved many modifications. He ceased to regard revelation as 'communicated truth'; it was effected through character; its organ was the conscience and not the intellect; the definite historic type was seen in Christ as the image of the Father.

Reinforced by his reading of Kant, and in opposition on the one hand to the 'association' philosophy of James Mill, and on the other to the moralisms of Spenzera and Hegel, Martineau began to work out his new analysis of man's moral nature. The sphere of judgment was transferred from consequences without to springs of action within. In this inner world lay a multitude of appetites and energies, which were not all of equal rank. When they were examined side by side, some revealed themselves as more powerful, while others fell into a lower place; and this distinction of rank was irresolvable into any other element such as order, truth, beauty, sympathy, or reason. All moral estimates, therefore, were relative; preference was always an alternative before the mind, and the power to recognize these diverse values lay with conscience, which pronounced this better and that worse. This view was first expounded in the 'Elements of Morality,' and led to the definition: 'Every action is right which, in the presence of a lower principle, follows a higher; every action is wrong which, in the presence of a higher principle, follows a lower' (Essays, iii. 335). The year before, during a visit to Liverpool, Mrs. Carlyle had described Martineau as the 'victim of conscience.' He was to become the 'conservative' moralist since Butler. Here was the witness of Deity within; here the access of the soul to divine things; here the true ground for the conception which he was afterwards to define as 'the personal indwelling of religious ideas in the mind and the soul.' alongside this man's ethical constitution ran an exposition of our knowledge of the external world (in a review of J. D. Morris's 'Historical and Critical View of the Speculative Philosophy of Europe in the Nineteenth Century, London, 1846, in Prospects, 1846): 'The act of perception gives us simultaneous knowledge of subject and object' (p. 360). Again and again in subsequent essays Martineau insisted on this 'natural dualism' against idealism on the one hand and pantheism on the other, and vigorously defended the veracity of our faculties. But perception involved more than passive consciousness; it was evoked by resistance and the effort needed to overcome it; besides the space-relation of the I and the not-I, a cause-relation was revealed in the same antithesis. In the strenuous conviction of personality which he derived from his ethical experience, Martineau found the true meaning of cause; its seat was in the personal power of the will, and this he boldly applied to the interpretation of the surrounding scene. The 'not-I' now contributed him to give it new meaning. Wordsworth had long been his favourite poet; Plato called forth his admiration for 'the fair and good'; Coleridge and Carlyle revealed unsuspected deeps of thought and passion in human nature; and through all the other makers and thinkers of his time, his freedom and dignity. In reviewing Bentham's "Deontology" (Monthly Repository, 1834), while still placing the 'criterion of right' in the 'tendency of an action to promote the happiness of an agent,' he laid stress against Bentham, on the reality and worth of the disinterested affections, and prepared the way for a wholly new set of moral values. The questions of his pupils, his persistent NT studies, and the hymns of the Wesleys opened new aspects of the inner life; and in the lecture on 'Moral Evil' in the Liverpool Controversy (1859) he formally abandoned the determinism of his youth. The change involved many modifications. He ceased to regard revelation as 'communicated truth'; it was effected through character; its organ was the conscience and not the intellect; the definite historic type was seen in Christ as the image of the Father.

Reinforced by his reading of Kant, and in opposition on the one hand to the 'association' philosophy of James Mill, and on the other to the moralisms of Spenzera and Hegel, Martineau began to work out his new analysis of man's moral nature. The sphere of judgment was transferred from consequences without to springs of action within. In this inner world lay a multitude of appetites and energies, which were not all of equal rank. When they were examined side by side, some revealed themselves as more powerful, while others fell into a lower place; and this distinction of rank was irresolvable into any other element such as order, truth, beauty, sympathy, or reason. All moral estimates, therefore, were relative; preference was always an alternative before the mind, and the power to recognize these diverse values lay with conscience, which pronounced this better and that worse. This view was first expounded in the 'Elements of Morality,' and led to the definition: 'Every action is right which, in the presence of a lower principle, follows a higher; every action is wrong which, in the presence of a higher principle, follows a lower' (Essays, iii. 335). The year before, during a visit to Liverpool, Mrs. Carlyle had described Martineau as the 'victim of conscience.' He was to become the 'conservative' moralist since Butler. Here was the witness of Deity within; here the access of the soul to divine things; here the true ground for the conception which he was afterwards to define as 'the personal indwelling of religious ideas in the mind and the soul.' alongside this man's ethical constitution ran an exposition of our knowledge of the external world (in a review of J. D. Morris's 'Historical and Critical View of the Speculative Philosophy of Europe in the Nineteenth Century, London, 1846, in Prospects, 1846): 'The act of perception gives us simultaneous knowledge of subject and object' (p. 360). Again and again in subsequent essays Martineau insisted on this 'natural dualism' against idealism on the one hand and pantheism on the other, and vigorously defended the veracity of our faculties. But perception involved more than passive consciousness; it was evoked by resistance and the effort needed to overcome it; besides the space-relation of the I and the not-I, a cause-relation was revealed in the same antithesis. In the strenuous conviction of personality which he derived from his ethical experience, Martineau found the true meaning of cause; its seat was in the personal power of the will, and this he boldly applied to the interpretation of the surrounding scene. The 'not-I' now contributed him to give it new meaning. Wordsworth had long been his favourite poet; Plato called forth his admiration for 'the fair and good'; Coleridge and Carlyle revealed unsuspected deeps of thought and passion in human nature; and through all the other makers and thinkers of his time, his freedom and dignity. In reviewing Bentham's "Deontology" (Monthly Repository, 1834), while still placing the 'criterion of right' in the 'tendency of an action to promote the happiness of an agent,' he laid stress against Bentham, on the reality and worth of the disinterested affections, and prepared the way for a wholly new set of moral values. The questions of his pupils, his persistent NT studies, and the hymns of the Wesleys opened new aspects of the inner life; and in the lecture on 'Moral Evil' in the Liverpool Controversy (1859) he formally abandoned the determinism of his youth. The change involved many modifications. He ceased to regard revelation as 'communicated truth'; it was effected through character; its organ was the conscience and not the intellect; the definite historic type was seen in Christ as the image of the Father.
branche, Spinoza), and physical (Comte), he expended (vol. ii.) his own interpretation of the nature of moral authority. This involved a classification of the propensions, passions, affections, and sentiments, and an arrangement of them in a scale of value. The scheme he thus wrought out of human experience was then contrasted with the hedonist ethics of the older utilitarians, and the modifications introduced by the idea of evolution. In employing 'Bitches in the Evolutionary Deduction' he denied that laws of matter and motion could explain the genesis of consciousness, while the feeling of moral right and freedom involved another point of fresh departure. The section on 'Conscience developed into Social Censor and Religion' further supplied hints which modified the stress of individualism in some of his earlier writings.

The stream of Esayns had ceased for some years after the suspension of the National Review (1864); but an important address on Religion as affected by Modern Materialism (1874), suggested by John Holden's discourse to the British Association, Belfast, and its sequel, Modern Materialism: Its Attitude towards Theology (1876), brought Martineau again prominently into the field of philosophical discussion. Two other addresses, Ideal Substitutes for God (1879) and The Relation between Ethics and Religion (1881), belonged to the period in which he was slowly completing the treatise modestly entitled A Study of Religion (2 vols., 1884). It opened with an investigation of the limits of human intelligence, a fresh defence of 'natural realism', a plea for the objective reality of space and time, a reply to the empirical doctrine that we know nothing but phenomena, and a refutation of the agnosticism of Spencer. God had been presented at the outset as a 'divine Mind and Will ruling the Universe and holding Moral relations with mankind' (vol. I. p. 1); and the bases of theology in the doctrine of His sole causation in the natural order and His perfection in the moral order were re-established and supported with fresh illustration. The teleological conceptions which had been discarded in earlier revolts against Paley were now revived on a far wider scale, and the presence of rational ends was displayed with varied scientific knowledge in the vast processes of evolution. Martineau's last word on the grounds of belief and their illustration in the NT was uttered in The Seat of Authority in Religion already cited, in which the origin of Christianity were expounded with remarkable force and daring (1899). The work was less technical than its predecessors, and appeal to the wide circle of those who had found indelible help in the author's earlier writings. In the Endevours after the Christian Life (2 vols., 1843-47) he had unfolded secrets of personal religion and moral experience in language often of lyric beauty; and his Hours of Thought on Sacred Things (1878, 1888) narrated on the themes of his thought and many of the varied incidents of the human lot. A small book of Home Prayers was issued (1891) in response to the urgency of many friends, and in four volumes of Essays, Reviews, and Addresses (1890-91) he gathered up those of his detached writings which he wished to preserve. Even their wide range, over history, science, and philosophy, does not exhaust the whole scope of his productivity, which included periods of research and study. In the theological timidity and the ecclesiastical strife of the early Victorian era he stood forth (often alone) as the fearless advocate of the principle of religious freedom. Later years brought unsought appreciation. Gladstone designated him as 'the greatest of living thinkers'; and a younger philosopher (A. Seth Pringle-Pattison, HJ i. [1905] 444) aptly fixed the character of his service to his age by describing him as 'an ideal champion of the spiritual view of the world in a time of transition and intellectual insecurity.'

LITERATURE.—Besides the works already named, some of Martineau's earlier writings were collected by American friends in Woodsmen, Cambridge, Mass., 1882; Studies of Christianity, London, 1888, and Essays Philosophical and Theological, 2 vols., 1891. He was a contributor to Theft, Murder, and Robbery and a Study, 1907; J. Drummond and C. B. Upton, The Life and Letters of James Martineau, 1890; H. Carpenter, James Martineau, Theologian and Teacher, 1908.

MARTYRS.—See SAINTS AND MARTYRS.

MARY.—The following article, dealing with the cult of the Virgin Mary, issues from the Scriptural and orthodox positions (1) that our Lord Jesus Christ, being the eternal Son of God, became man, being conceived by the Holy Ghost and born of the Virgin Mary; and (2) that, insomuch as He is thus God and man in two distinct and one person for ever, so is she, His mother, truly and properly described as Theotokos and Virgo Deipara—the Mother or Bringer-forth of Our Lord and God, who was God when He issued from her virgin womb, wearing the manhood of Christ, as that substance had been prepared for Him, which He had taken to Himself, which He carried with Him to the Cross, which He raised in spiritual glory from the tomb, which He wears for ever at the right hand of the Majesty on high. These things are part of the faith of the whole Catholic Church; they are treated here as historical facts.

Another matter which has more or less been silent upon it, unquestionably exercised a powerful influence on the development of the cult of the Virgin Mary, is assumed in this article in accordance with the view of overwhelming the larger part of Christendom, viz. her perpetual virginity: 'virgo concept, virgo puerper, virgo permaneat.' With the general question of the Invocation of Saints, and the merits or demerits of that practice, this article is not concerned.

The only questions, therefore, to be here discussed concern the implications of these facts. We shall examine historically: (1) what was inferred from them in the Apostolic and early ages of the Church as to the duty of Christians towards the Virgin Mother of the Lord; (2) when and how the wide-spread developments of her cult arose; and (3) the grounds on which these developments have been justified, or are rejected, by those who accept the facts.

1. In Holy Scripture.—Over and above the witness borne by the four Gospels, the apocryphal collections of hymns (e.g. 1st and 2nd century), having a human mother (Mk 30, Jn 25-26) whose name was Mary (Mk 6), and the direct statements of two of them (Mt 1.18, Lk 1.26-35) that she was a virgin when by the power of the Holy Ghost she conceived and bore our Saviour, we have in the third Evangelist several notices expressive of the high reverence and honor due to her. St.
Luke records the angelic salutation, "Hail, thou that art highly favoured, the Lord is with thee (19)" and the angelic blessing "Blessed art thou among women" (18). He makes it plain that she was the moral, and not simply the physical, instrument of the Incarnation; he brings out her wonderful faith, believing in God's power, seeking no explanations. At Cana, when she does interpose, she is hidden behind His time; and her advice to those whom she is sure that He will help is, "Who soever He saith unto you, do it" (Jn 2:5). When, on another occasion, he sent two of His disciples, calling him, "Jesus evidently did not go, but answered, "Whosoever shall do the will of God, the same is my mother."" (Mk 3:31-32, Lk 10:41) When a woman exclaimed, "Blessed is the womb that bare thee;" He replied, "Yea rather, blessed are they that hear the word of God, and keep it." (Lk 11:27-28). He does not imply, of course, that Mary had not these graces—they were conspicuously in her, but He certainly puts the moral virtues higher than even her unique privilege. And when, from the Cross, He commands her to St. John saying, "Behold thy mother," and to him, "Behold thy son," He was giving him a precious legacy to the theologian apostle, yet the obvious meaning of our Saviour's words was rather that St. John should take care of her than that she should be his proponentess of the Christ. The Words in the Acts of the Apostles, "Jesus, the Son of the living God," and in the Holy Communion in the NT are (1) the mention of her by St. Luke (Acts 1:14) in the place of honour as the first; and only one named among the Christian women, and as still, after the Ascension, "the mother of Jesus." (2) the reference to her by St. Paul (Gal 4 4) as "a woman."—an obvious allusion to the Protesvangelium (GN 39); and (3) St. John's taking from her experience certain features for his prophetic portrait of the Church as the sun-clothed woman (Rev 12). 2. In the first three centuries. —The Christian literature of this period keeps in regard to Mary strictly to the lines of the NT. References to her are sparse, and these, though distinct as to her being the Virgin Mother of the Lord and therefore to be honoured, give no suggestion of aught that could be called a cult. Herol's short Epistle does not contain her name; but in his Life by Pionius there is this: "He, according to the prophecy, . . . being born of an undivided and apostolic virgin." (Eph.). In the Apology of Ariamidas she is simply "a Hebrew virgin." Ignatius, in the short recension of his seven Epistles (here regarded as genuine), is fuller. He tells (ad Philad., v. x.) how the virginity of Mary deceived the Decoll; that 'hidden from the public eye, this world was the virginity of Mary and her chastity.' He intimates that "mysteries wrought in the silence of God, now to be cried aloud:" he adores our Saviour, "Son of Mary and Son of God:" and he insists (ad Trall. i. 1) that His birth of her demonstrates that she deceived the Decoll; that she was a slave of ignominy, and that the correspondence between Ignatius and the Virgin is a Latin forgery, which never existed in the Greek, and is based on the saint's use of the word "virgin."

Justin Martyr (Dial. cum Tryph. c.) and Irenaeus speak of her as does the Puritan Milton, as 'the second Eve.' (The knot of Eve's disobedience was loosed by the obedience of Mary; for what the Virgin Eve had bound fast through unbelief that did the Virgin Mary set free through her obedience. (Tertullian, ad. Marc. v. xi. xxiv.) And again he dwells on the moral side of her part in the incarnation; "Mary, having a man before her and being nevertheless a virgin, by yielding obedience became the cause of salvation to herself and to the whole human race." (c. He.)"

If, however, we find Irenaeus, in the barbarous Latin version of his works, calling Mary the "advocate" of Eve, we shall do well to remember that his Greek, apparently, evryphage, which implies not advocacy in our sense, but reliance. Origen supplies one of the only two places in the Fathers where the words of our Lord from the Cross to her and to St. John have the least appearance of supplying us with the secret of his permanent veneration for his mother, "mocking fate" according to those who think soundly of her; Mary had no other son save Jesus; and that Jesus said to her, "Behold, thy son." Therefore those, in whom Christ lives are sons of Mary (C. Probal. i. 69)."

But does this go further than Christ's own, "Behold, my mother and your mothers" (Mk 9:30)? Both Origen and Tertullian, like Ignatius before them, draw from her motherhood of Christ arguments against Gnostic or Docetic heresy. Yet even of the Gnostics—so strait already was the Church's faith in the Virgin-Birth of the Redeemer—several were constrained to admit the fact, while others, allowing that He issued from her womb, protested that He drew nothing from her substance.

If any cult of the Virgin existed in these early centuries, it is in the records of the Church's worship at the time that we should expect to find it, rather than in the treatises of St. John or the apologies of the defenders of the faith. But such accounts of the Church service of the period as have come down to us exhibit precisely the same features as do the writings of the ante-Nicene Fathers. No mention of Mary's name, no reference to her, occurs in the notices of Holy Communion in the NT; nor in the liturgical thanksgiving in the 1st Epistle of St. Clement of Rome; nor in the Didache; nor in the Martyrion of St. Mary or Tertullian's account of the Eucharistic service. The only place where an invocation of St. Mary could come in is at the Commemoration of Martyrs and the Commemoration of the Departed; and on this all that St. Cyriacus has to say is:
MARY

In like manner, Gregory of Nyssa, "Have any of ourselves dared to say..." Mother of God, that most holy Virgin the Mother of God?" (Ep. xvi. 7; and Ambrose, "Talis decret partus Deum" (Hymn iv. de Adventu Domini (PL xvii. 1474). Cyril of Jerusalem, with equal force, uses Christ's birth of Mary as demonstrating the companion truth of His real manhood.

"Believe that this only-Begotten Son of God..." was begotten of the holy Virgin. The Virgin was made Man, not in seeming and mere show, but in truth; nor by reading through a charmed book, but truly of her own flesh... If the Incarnation was a phantom, salvation is a phantom too. (Cat. Lect. iv. 9).

The whole church, we may say, of this period were, in one form or another, devoted and the Incarnation; they all fixed men's thoughts on the question pronounced by our Lord Himself, "What think ye of the Christ? whose son is he?" (Mt. 22). It was impossible for the Church to refuse any of them, as of God His Father, so of the Virgin Mary His Mother—"to reply to Macedonians, with its denial of the Godhead of the Holy Ghost who overshadowed her (Lk 10); to Apollinarism, which, refusing to Christ a human soul, cut off from His sacred heart its thousandfold return of her love; and then to Nestorianism, which, dissolving the unity of Christ's Person, by one and the same stroke reduced the Great Mother from being Himself the Word incarnate to a mere bond in close association with the Word, and made Mary the mother only of a human infant. All these efforts helped to burn in upon the mind of the Christians of that age the truth which E. B. Pusey tells us so

"startled him in his young days when first it flashed upon him that it must be true, that one of our natural senses is the last and lowest of God's rational creation was raised to a nearness to Almighty God above all the choirs of angels... Yet it was self-evident, as soon as stated, that she of whom Christ was deemed to take the human flesh was brought to a nearness to Himself above all created beings; that she stood in all creation or all possible creations, is that in whom He who in His Godhead is consubstantial with the Father, deigned, as to His Human Body, to become consubstantial with her" (Hibern. i. 24).

It is no creature-worship; it is the sense of this tremendous fact brought home to a heart invested with the love of the Incarnate Son that explains at once the profound solemnity of Cyril's Letter to Nestorius and the splendid eloquence of Proclus's oration on the Virgin Mother. It was not that she is the mediator (there is no hint of such a notion), but that it is He is God whom she bare, whom "she alone inexplicably housed." Nor need we fancy with the writer on 'Mary' in E.B.1) that it was the Nicene solution of the Arians, that her dignity as for the utterance of the full truth concerning Christ that the orthodox theologians of this period are accustomed to refer to her. This holds of them all—of Cyril of Alexandria as well as of Athanasius, Basil, and the Gregory, of Ambrose and Augustine as well as of Leo. It was in this connection that Athanasius had spoken of her as theoreas long before Nestorian preacher shocked the congregation of St. Sophia by refusing her the title.

Athanasius gave it her because "from the flesh of holy Mary the Son of God by essence and nature did proceed... How can they wish to belittle Christians who assert that the Word descended on a holy man as upon one of the prophets, and deny that He Himself from the Virgin Mary, and that being the body from Mary?" (Ep. ix. 2d Epist. 2); and, again, because, "where the flesh of the Virgin differs nothing from the flesh of sin;... but her body transmit it not to the body of Christ, which she did not conceive through concupiscence" (Augustine, c. Jul. Pelag. v. 19).
And Pope Leo I. (in a passage still remaining in the Roman Breviary as one of the Lessons for Christmas Day) says that: "to (Christ's) birth alone the modes of human passion had not contributed."

In entire consistency with this teaching of the great Fathers, we find that the worship of the Church in the conciliar period shows hardly a trace of the cult of the Virgin. There are indications that she was prayed for.

Thus, in the Armenian Liturgy, "We beseech thee that in this holy and holy Mysteries let the name of the holy virgin Mary, and of John the Baptist, of the proto-martyr Stephen, and of all the saints" (F. E. Brightman, Liturgics, Macmillan and Co., p. 449).

But she is not often mentioned. In the liturgy in the Apostolic Constitutions she is not even named; if she is referred to there at all, it is as included with others—apostles, martyrs, virgins... whose names Thon knowest." In other liturgical works of the period—e.g., the Statutes of the Apostles (Ethiop., c. 350)—there is no mention of any commemorations of the departed, nor even there in the Arabic and Suidic versions of this book.

The liturgical service in the Testamentum Domini gives thanks that the "Word... was born of the Holy Ghost and God Virgin;" but its commemoration of the dead. Remember those who have fallen asleep among the faithful, and grant us an inheritance with Thy saints, names neither the Virgin nor any other saint. The Pilgrimages of Silene also is silent concerning her, while the Catechetical Lectures (Lect. xxii. on the Eucharistic service) of Cyril of Jerusalem, where we might have expected to find something, has only this:

"Then we commemorate also those who have fallen asleep before us, first the Apostles, Prophets, Apostles, Martyrs, that at their intercessions God would receive our petition"—still no mention of Mary.

In the liturgy of the civil 'diocese' of Africa in the time of Augustine (A.D. 400) the only place where an invocation of the Virgin could have come in is in its commemoration of the saints and martyrs, but there is again no direct evidence that her name appeared (Ordo Rom. Primi, App. iv.). Of Basil his latest editor says:

"Even Letter CXXII, which bears obvious marks of sporadic revision from a later age, does not go beyond a recognition of the Blessed Virgin as Guardian, in which the Catholic Church is agreed, and a general invocation of apostles, bishops, and martyrs, the Virgin not being set apart from these" (Bloomfield Jackson, Prolegomena to St. Basil, Allen and Unwin, 1899, p. 127).

The passage runs: "I invoke you to supplication to God, that through them, that is through their mediation, the merciful thing may be procured for me."

That the departed saints, now 'with Christ' (Ph 1:23), do pray for us is an obvious conclusion from their perfected love; it has some sanction in the NT (Rev 5:13); it is argued for on this ground by Origen (de Orat. 31), Eusebius (de Martyr. Patent. v.), and Jerome (Ep. ix.); and it was an easy transition to ask God that their intercessions might be heard for us; but Omnipotence alone can hear the cry of every human heart, and Omnipotence alone can deliver everywhere, and it was quite another thing to ereit any saint, however highly exalted, with powers or prerogatives of the kind. Not so did the Fathers of the Church and the holy martyrs pray. Cardinal Newman admitted that no prayer to the blessed Virgin is to be found in the voluminous works of St. John Damascene (in the 4th cent.), we do find cases of direct invocation of this or that individual saint, it is in private prayer, and in regard to some more restricted matter in which the Virgin has not been interested when on earth, and might be presumed to be interested still. Of this limited sort was the prayer of Justinian, mentioned with incidental approval by Gregory Nazianzen (Orat. xxiv. 11), "imploiting Mary to come to the aid of a virgin in danger." St. Mary had already been thought of as the 'virgin of virgins'—the leader of those virgin bands to whom, next to the martyrs, the Church felt that she owed a special debt. The martyrs were her witnesses to Christian truth; her virgins were the exponent of Christian purity. She was, it must be remembered, not only 'sacrosanct,' but she was actually accorded the title of Virgin, and St. Paul (1 Cor 7:9) under the pagans pertinaciously and, when, on Constantine's conversion, pagan sensuality proved a menace no less formidable to morals than heresy to doctrine, virginity, organized into monasticism, became more and more like the expression and the shield of this side of Christian virtue.

Athanasius found the monks and virgins of Egypt the greatest use to him in his contest with Ariasimus. He introduced monasticism at Rome; Ambrose and Martin carried it respectively to Gaul and to Transalpine Gaul; through the latter, the trainer of missionaries, it spread over the Celtic West. Jerome carried it to Palestine; Basil was its protagonist through Asia Minor. Virginity and monasticism, no less than orthodox, turned the thoughts of the faithful very much towards St. Mary. If orthodoxy found, as we have seen, that Christ's birth of her was a witness at once of His Godhead and His human, and His monasticism boast her as the crown of virgins. If orthodoxy called forth the panegyrics on Mary by Proclus and Cyril of Alexandria, the thought of her virginity led even more directly to her being regarded as a patroness.

It is while considering the veneration of the virgin life that Augustine reminds us how "the glory of the Virgin is the glory of all holy virgins: they, too, are mothers of Christ if they do the will of His Father" (de Sanct. Virg. v.).

Thus, too, Jerome:

"Therefore the virgin and the Christian Virgin may have dedicated in themselves the firstfruits of the virginity of both sexes (Ep. civili, ad Pam. 51); and Gregory of Nyssa:

"What happened in the stainless Mary when the fulness of the Godhead which was in Christ abused out through her, that happens in every soul that leads by rule the virgin life. No longer does she, indeed, do the Master come with bodily presence, but spiritually, He dwells in us and becomes His Father with us (De Virg. ii.)".

4. During the medieval period.—For the purposes of this article, this period is divided from the extinction of the Western Empire by Odowace (A.D. 476) to the close of the Council of Trent (1563). Throughout this period Christianity runs in an Eastern and a Western stream; but in spite of their divergence, there took place in both a remarkable development in the cult of the Virgin. It came to a head more early in the East. There, where the chief heresies concerning the Trinity and Incarnation had arisen, and where theological speculation was more congenial to the public taste, new forms of error on these subjects were constantly springing up, and to these the orthodox found a complete answer in the Scripture records of our Saviour's birth of a Virgin Mother. His Virgin-birth witnessed alike the reality of both His natures and the unity of His Person; it hallowed monasticism; it rebuked the impurities first of the Iconoclasts and then of the Mahommedans, while the calamities which afflicted and cut short, if they did not, till A.D. 1453, destroy, the empire in the East, were at least sufficient to impress all Christians who remained when it ended, with awe-struck thoughts of Christ as the Judge of men. They remembered how, in the days of His flesh, the good centurions had, unrelished, deemed himself not worthy to come under the feet of the Christ, but had besought Him through the elders of the people.

W. M. Ramsay argues that so early as the 5th cent. the honour paid to the Virgin Mary at Ephesus was the reversion in a baptized form of the old pagan worship of the Virgin's Mother (Pauline and other Studies, p. 130).
It must be admitted that such prayers are but inferences, not unnatural, from the deliberate teachings of the latest Roman Catholic dogma, the most influential in the East, of the Greek Fathers, of John of Damascus, that Mary is the sovereign Lady to whom the whole creation is made subject by her Son—implying, of course, that, over and above her office in the Incarnation, she is herself, through His gift, a direct giver of help to such as may seek it at her hands. It should be added that the Feast of her (not of Christ's) Presentation in the Temple (the story of which was mentioned above), originated in the East in the 5th cent., and was not introduced into the church of the West until the 15th. See art. IMMUNE

The Western Church, too, was soon to find through many ages the practical value of monasticism, and to carry the doctrine of celibacy to further lengths than its Eastern sister. It, too, was to have experience of errors (such as the 8th cent. Adoptionism) which, disparaging the Saviour, disparaged her also. In Spain, Hungary, and the two Sicilies, as well as through the Crusades and Algerian piracy, it was to come into painful contact with Islam. In the 12th cent., on the other hand, the reaction from those errors contributed its impetus to every movement in the Virgin's honour, while manifold oppressions of the poor turned them naturally to the thought of her as the Mother of Pity, and the chivalry of the knights made her the Lady of his orisons. But the development of her cult was slow in the West. In Adamnan and Bede it is hardly perceptible; in the Life of St. Columba she is not mentioned. In Bede's H.P., St. Wilfred has a vision of St. Michael telling him, 'the Lord has granted you life, through the prayers of your disciples, and also the prayers of His holy Virgin, the ever-virgin, ever-mother, ever-mother of perpetual virginity' (v. 10), and the Hymn concerning St. Etheldreda urges how 'ever Virgin Mother a shining virgin band rejoices; and how her honour has made many virgin blossoms to spring forth' (v. 20).

At Rome in the pope's (8th cent.) mass on Easter-day at the Basilica of St. Mary Major, the only mentions of her are those (1) in the Great Intercession:

"Venerating the memory first of the glorious ever-Virgin Mary, Mother of the same Our God, and Lord Jesus Christ; and also of Thy blessed apostles and martyrs ... and all Thy saints, and of her whose marbles and whose doors the wise shipwrights' hedges, the holy mother of God and all the saints' their memorial and intercession with the Father" (p. 115).

(2) and in the Post-Communion:

"Deliver us, O Lord ... and at the intercession for us of the blessed and glorious and ever-Virgin Mary, the Theotokos, and of Thy blessed apostles ... and of all Thy saints, that in all things we may be defended by the help of Thy protection; through the same Christ, Our Lord".

The two liturgies remaining in use among the orthodox Greeks are those of Chrysostom and Theodoret, and are more moderate. The former mentions her in the Euchologian: Thanksgiving for Christ 'born of the holy Mother of God, ever-Virgin'; and prays that God 'would unite all of us who are united under thee, O Virgin'; also (p. 24) that 'we may be found with all Thy saints ... especially all holy, immaculate, supremely blessed glorious Lady, the Mother of God, and ever-Virgin Mary' (pp. 397, 414).

It is not impossible, in view of Basil's own writings, that even the last is an interpolation. The liturgy called Chriseomos is fuller on St. Mary:

The Prayer to the Virgin is more through the intercessions of the Holy Mother of God and all the Saints"; but, again, it prays for her: 'We offer to Thee this reasonable service on behalf of those who have departed in the faith ... Apostles ... Virgins ... the most holy, undivided, excellently laudable, green Lady, the Mother of God, and Ever-Virgin Mary' (pp. 814, 820).

Moreover, we are now to the last augments and more popular of the authorized devotions of the Greek Church, we find her invoked in the most direct manner:

"O God, who didst lead Thy Word to flesh from the womb of the Blessed Virgin Mary, grant that we who believe her to be in truth the Mother of God may by her intercessions be helped before Thee." But neither is this, nor the Secreta de S. Maria, nor the Post-Communio de S. Maria a prayer to her; the last was indeed adopted in the English Book of Common Prayer as the collect for the Assumption. The confession of sins in the Mass made to Almighty God, to the Blessed Virgin, ever-Virgin ... and to all saints, is held to be but a recognition of the fact taught by St. Paul, that the whole body of the Church (from which those who do not separate the saints [Ro 6:1] suffers with the suffering of every member (1 Co 12:12); and, inasmuch as we are united in a common body, the honour of Christ the Head is the honour of all His members. If it be not wrong, it is thought, to ask, as is done in the prayer 'Sancti sancta Trinitas,' that our memorial of Christ's Passion, Resurrection, and Ascension may redound to the honour of Mary and all saints, as well as to the salvation of all for
whom they pray. These are regarded as fair inferences from the truth which we all confess, in the Apostles' Creed, of the Communion of Saints. The moderation of the Roman Missal did not suffice, however, for the popular devotions, which were more and more assumed to assume the forms, first of invoking her directly to intercede for us ("ora pro nobis"), and, next, of asking her personal help for both soul and body. Two festivals really of our Lord—His Presence in the Temple (Feb. 2), and His Conception (March 25)—became rather those of her Purification and of the Annunciation to her, while the Feasts of her Conception (Dec. 8), her Nativity (Sept. 8), and her Assumption (Aug. 15), already observed in the Eastern Churches, were introduced into the West, at first in other lands rather than in Italy or at Rome, and not always either with the same meaning or without protest.

Thus, the observance of the Assumption was appointed by the synod of Salzburg in A.D. 800, but is marked as doubtful in the capitularies of Charlemagne; literally its title imports no more than her death—the taking up a sort of her dormition, or 'sleep.' The doctrine of her bodily assumption into heaven, derived from the apocryphal story condemned by Pope Gelasius, though widely believed, and implied in the teaching of the First Council from John of Damascus, is not even now de fide in the Roman Catholic Church, but only a 'pious opinion.' The Feast of the Visitation of the Virgin (July 2), also apocryphal in origin, was introduced from the East in the last century, withdrawn from the Calendar by Pius V. (1565–72), and reintroduced by Sixtus V. (1585–90).

The Nativity of Mary (Sept. 8) would be older if the sermon of Augustine, cited in his Office, be generally admitted commonly said that this fact is first mentioned by Andrew of Crete (c. 750); its observance was appointed by the synod of Salzburg in 800; two centuries later it had not become general in Italy, while (c. 1140) St. Bernard blames the canons of Lyons for the innovation of keeping the feast of her conception because it was not holy like her Nativity, St. Mary being, he held, not conceived without sin, but sanctified in the womb. Thomas Aquinas said (Summa Theol. III. xxi., that the Church of Rome tolerated it but did not keep it (a not uncommon way with some in those days of treating popular devotions); and, when it did, commonly in the churches of St. Mary Major, it was still, so late as 1340, the festival only of the 'Sancification of the B. V. Mary.' Underlying these different names for this festival lay the long controversy as to the sinlessness of Mary. All agreed (as all orthodox Christians must agree) that she was sanctified so as to yield a perfectly sinless manhood to the Son of God (Lk 15, 7); but there arose in the 15th cent. a question when the process of her sanctification began, and, while divines of the date and authority of Aquinas denied her immaculate Conception, the arguments on which Scotus based his support of it were derived wholly from abstract and not historical considerations. The discussion, nevertheless, tended to her exaltation above all saints, on the ground not alone of her office, but of the grace bestowed on her. It must be confessed that some medieval writers transgressed all bounds in the language which they employed. Peter Damian, e.g., speaking of her as 'defiicata' (Serm. de Nativ. Mar. [PL. cxlv], 740), while the very natural tone of Thomas Aquinas' Scotus Catechism of 1552 calls the 'bonny image of the Baby Jesus and His Blessed Mother' to remind us of His gracious coming as an infant to sanctify childhood and maternity was dealt with in a manner not far from idolatry when—as sometimes happened—one image of the Virgin (generally a black or an ugly one) was regarded and resorted to as more powerful for the help of suppliants than another.

5. From the Reformation to the present day.—The fundamental position of the Protestant Reformers, that the justification and salvation of the sinner are through faith in Christ alone, involved, on the one hand, the fullest recognition alike of His Godhead and His manhood; and, on the other hand, a reformation, accordingly, were at one in confessing the Catholic faith as set forth in the ancient creeds and by the great councils, which meant, of course, their acceptance of His birth of a pure virgin, and her honour as His mother. It involved, on the other hand, an insistence that the soul should come to Christ direct, and a repudiation of the idea of any creature coming between it and Him. The latter principle, it is true, could be pushed to the extreme of disregarding the help which He has graciously provided in His Body the Church (Eph. 4), for bringing men to Himself, and in the ordinances whereby 'Christ and the benefits of the covenant of grace are applied to believers' (Shorter Catechism, 92). It brought almost everywhere the practical elimination from Protestant teaching of all thought of the departed saints having any function whatever (save that of remembered example) in this world. The 'Communion of Saints,' while admitted in words, was interpreted as existing simply between believers in this present world; and, contrariwise, the prayers of the living were limited to the 'Church militant here on earth.' The prominence of St. Mary in Roman Catholic devotions reacted among the Reformers in an opposite direction, till Puritanism (in certain sections) 'scorned' even the singing of her inspired Magnificat, gave up the public use of the Apostles' Creed because her name occurred in it, and even so late as the publication of the Church Hymnary (1858) was able to secure the rejection of Bishop Richard Man's version of the Stabat Mater and the deletion of the words 'Son of Mary' from H. H. Milman's hymn. It may be doubted whether such courtesies have helped either to a livelier faith in Jesus Christ or to a deeper love towards Him; and how far they have furthered Christian ideals of purity, chivalry, and sanctity. Puritanism, however, has not conquered either the Scottish or the Anglican Church. The former in the 18th cent. dared to speak of the Virgin in the public service in one of its 'Paraphrases' (Par. 38), and restored the use of the Magnificat (in metre) in another (Par. 36), and of late years 'authorizes' the printing of it in prose, as well as the recital of the Apostles' and Nicene Creeds (Church Hymnary, Church of Scotland Anthem Book, and Mission Hymnal). These have always kept their place in the Anglican Books of Common Prayer; and the Church of England has further secured a commemoration of St. Mary by retaining among the 'Feasts to be observed' both 'The Purification of the Blessed Virgin' (Feb. 2) and 'The Annunciation of the Blessed Virgin' (March 25). In both countries divines universally respected (e.g., the Scottish Dr. W. Hanna and the English Bishops Joseph Hall and John Pearson) have spoken of her in terms of singular reverence and beauty, while W. M. Ramsay, holding, as he does, some pagan ancestry for her cultus as it exists in Asia Minor, speaks of it nevertheless as 'a purifying and elevating principle' (Psalms and Other Psalms and Odes, 196).

In the Roman Catholic Church there was some hope at the beginning of the Counter-Reformation that much might be accomplished in the exuberant cult of St. Mary would be averted or at least modified, but this thing certainly was done; and the Council of Trent in its Decrees, and even in its Catechism, is fairly moderate, distinguishing, as did the older councils, between the 

...
some Negro race (which in bodily characteristics verges on the Hamitic negroid) were used for land, cattle, sheep, goats, and the domesticated ass of Ethiopia played a great part in their lives and mental considerations. All sections of the Masai, agricultural as well as pastoral, speak a language which differs but little in its two or three terms of the Urban vus.

The relationships of this speech lie nearly and clearly with the Luluka language of the Mountain Nile, with the Bari of the southern Egyptian Sudan, with the Elgoni of Mount Elgon, and with the Turkana of Lake Rudolf; perhaps also with other languages of the Rudolf basin. In a more remote degree Masai is related to the other members of the great Nilotic speech-group—the Nandi languages of British E. Africa, and those of the Dinks, Shilluk, etc., of the Egyptian Sudan. The customs and, to some extent, the beliefs of the Masai similarly connect them with the tall Negresses of the Upper Nile basin. Clearly, the progenitors of the Masai emigrated originally from those regions which now constitute the northern provinces of the Uganda Protectorate; but at what period this is little evident to show, except that it was far enough back in the history of E. Equatorial Africa for the migration to have passed out of tribal recollection. In all their myths and legends they think of themselves as a people indigenous to E. Africa, most of all to the regions round about Mount Kenya. This snow-crowned lofty volcano of more than 17,000 feet of altitude plays a considerable part in their traditions, and is supposed by them to be the habitation of a demigod or goddess Naitenkap, who was at the same time E. Eve or Adam, the parent, at any rate, of the higher types of humanity. The Masai speech, like some other Nilotic languages, especially those of the south-eastern portion of the regions inhabited by Nilotic Negroes, bears evident traces of an ancient Hamitic impress, though it must be emphasized that neither it nor any other member of the Nilotic family can be described as Hamitic, or as other than a ‘Negro’ speech. But many centuries ago, perhaps as far back as the last periods of dynastic Egypt, the Kushitic section of the wide-spread Hamitic race (Caucasians tinged with Negro and perhaps Dravidian blood) profoundly impressed itself on the racial type, the speech, the culture, the beliefs, and those of the Nilotic Negroes. Similar action on the part of these Hamites appears to have led to the final shaping of the Bantu languages and the impulse of the Bantu conquest of the southern third of Africa. It is curious that, however, the Hamits—the Masai, Nandi, and other south-eastern Nilotes may be in physical and mental characteristics, their cattle, on which such a large proportion of their thoughts and beliefs are centred, are of the E. African, humped, originally Indian ‘zebu’ type. They do not belong to the long-horned, usually straight-backed, Galla breed, a bovine variety which seems to have originated from a wild species in W. Asia in remote Neolithic times, and to have been the earliest form of domestic cattle in ancient Egypt. These Galla oxen are nowadays found in the greater part of Abyssinia, in Darfur, Wadai, and Bornu. The mysterious Be-hima—the Galla—

1 In the traditions of the Masai their home-land—Kapsokob or Kopeskob—lay to the north of their present habitat. They called the south ‘the land of strife,’ showing that their southern advance was attended by constant struggle with the rival tribes not of Masai race.

2 Na-irra-kop is a word beginning with the feminine prefix na-, a prefix originally conveying the sense of ‘mother,’ or often diverging into an equivalent for ‘source of,’ ‘place of,’ productive of.

3 There are, however, traditions among the south-western Masai that they once possessed or knew of this long-horned breed.
like aristocracy of E. Equatorial Africa — implanted this long-horned type of ancient Egyptian ox, cattle in the Victoria Nyanza, Tanganyika, and the frontier of the Congo forest. But the long-horned Galla ox has never yet made its appearance to the east of the Victoria Nyanza or among the Masai tribes, whose cattle are Indian in type.

2. Gods.—Though in physical characteristics the Negro element predominates in the Masai over any other, this people is superior in mentality to the Egyptian and the Negro; and one is struck with a certain imaginativeness and a natural poetry in their thoughts, stories, and religious beliefs rarely found among Negro peoples, and probably due to some ancient or modern infusion of the Caucasian. The Masai believe in a far-reaching divine power emanating from the sky high above the earth, and even above the lower regions of the atmosphere. This divinity, to which they can pray at times with real earnestness, is known usually by a female name, Eti-ai (Et- is the feminine article, ai, or gi, is the root). Eti-ai is occasionally referred to as 'the Black God,' though in some stories or in some manifestations of the divinity to be a true consisting of (1) Eti-ai, the greatest and remotest of all gods, the god of the elements; (2) the benign Black God of rain, who takes a real, though far-off, interest in humanity; and (3) the angry or malicious Red God, who is, on the whole, spitefully disposed towards mankind and dwells in the lower part of the atmosphere. Eti-ai and the Black God (or both fused in one personality) would like to keep the rains from falling to the parched land, and to bring perpetual drought and desiccation. In perpetual abundance, so that there might always be fat pastures to feed the Masai cattle, or perpetual cultivation for the Masai agriculturists; but the Eti-ai, as the Black God, intervenes and interrupts the moisture so necessary to life under an equatorial sun. Distant thunder is believed to be the remonstrance of Eti-ai at this churlishness of his subordinate deity, whom, however, he seldom besets himself to circumvent. Eti-ai is known to some of the non-Masai tribes as 'Kai' or 'Gal' without the article, and by the Masai themselves is called by other names, such a Paassai.

3. Demons.—In addition to these two gods or three gods (according as the Black and Good God is or is not identified with the Ruler of the Heavens, Eti-ai), the Masai believe in superhuman beings who resemble the jinns (genii) of the Arabs — devils, it is convenient to call them. Similar beliefs reappear in the Sudan and in many parts of the northern range of the Bantu languages, such as the Cameroons. These jinns, or devils, trench in some of their characteristics on the werewolf conception, being in some aspects like a lion and in others like a man, or having originally taken the form of lions and then put on an appearance half human and half like an insomniac stone; or they are believed to go about looking like a lion on one side, and on the other like a monstrous human being. Their favourite home is the forest. They are mainly, if not entirely, anthropophagous in their food preferences, and do not touch wild beasts.

In one of the Masai stories recorded by Hollis it is narrated that the devil's custom is to call to human beings who pass the place of his settlement in the forest. 'Come, my brother, help lift this load of firewood.' If they are foolish enough to present themselves to him, he challenges a polotted stake which he carries. When any particular district was believed to be haunted by a devil and the Masai wished to pass through it in their customary migration, they provided for himself and his followers who would arrange to march past the cannibal's haunt in a large body as possible, the warriors going both in front and behind. 'Should a voice be heard issuing from the bush, calling some one, everybody remains silent, for they know that it is this devil that is calling. The man who is called being a phagophagous jinn, seizes all the human beings in one district except a woman, who succeeded in hiding herself with her child in a pit. As the boy grew up he made a bow and arrow, and, when he was fifteen years old, called the boy information as to how he might proceed to recognize his tribe, and, most if not all, of the people whom he had eaten, out of gratitude these resuscitated Masai elected the boy as their chief.

It is quite possible that this and similar stories, widespread over Negro Africa, refer to the lurking cannibals of some big and brutish race which lingered in the forests of Africa long after the more open country had been populated by the modern types of man. Such grim ogres may have worn over their backs the pelts of wild beasts that they had killed, and thus have一类 one with beast, and on the other a ghoulish type of man.

4. Cosmology. —The Masai believe that, when Nairnerkop,2 the demi-god of Mount Kenia, decided to start out on the earth-preserving trip, the Masai — be found things in E. Africa, via an already existing Dorobo (the word properly spelled Torobo and means a wandering people of pre-Adamic life, an elephant, and a serpent, all of whom lived together. In course of time the red serpent and the elephant mother, who, however, before her death had given birth to a calf, which escaped from the Dorobo, and to its journeying about the world met a Masai to whom it confided its troubles. At this juncture God himself (Eti-ai) intervened, and summoned both the Dorobo and the Masai to his presence. The Masai came, but the Dorobo seems to have delayed. The consequence was that the Masai received good gifts and honours, because they had been the master of E. Africa. Other variants of this story make Nairnerkop (the divine man of Mount Kenia) machine throughout, and do not involve the intervention of the great sky-god, Eti-ai.

Exegetical.—With regard to a life after death, in some of the Masai traditions it is related that, when the man-god Nairnerkop gave to their primal ancestor, Le-eyo, instructions as to how to arise when a child died, the latter out of selfishness because the child next to die was not his own—over the prayer which was to adjure the child's spirit to retire, Le-eyo frequently prayed that the moon, though it died, might rise again, but that the dead child might remain dead. Some time afterwards Le-eyo was likely to lose his own, and therefore said the prayer rightly. But it was too late; only the first invocation had produced its effect when he died, never comes back, but the moon always returns.

Yet this great agony of the mind of man—this refusal to regard death as the end of a creature—these personalities of those whom we have loved or respected—prevails with the Masai, as the repeated assertions in their folklore that 'All is over with man as with the cattle, and the soul does not come to life again.' With this people there has been a gradually growing belief (it is so also among many Bantu tribes) that a medicine-man, a great doctor, a great chief, or a very wealthy

1 Hollis, p. 212th.
2 J. L. Kraef, the great missionary pioneer of Equatorial E. Africa, writing in 1830 in his preface to the Vocabulary of the Engilish El Dobu (the Western Masai), thus describes the religious beliefs of the Masai: 'At the remotest antiquity there was one man residing on Oldonyo elibor. . . . This man was superior to any human being, and whom Esgai (heaven, supreme being, god) placed on the mountain. This strange personage whose beginning and end is unknown and whose whole appearance impresses the Watusi mind with the idea of a demi-god is called... Neterokub. The intelligence of this strange person residing on Oldonyo elibor reached a man named Enjema Enamer, who with his wife Sambu lived on Mount Sambu which is situated to the east of Oldonyo elibor and is a high mountain but does not attain to the height of Oldonyo elibor. The White mountain of Tanga and with his wife who by the intercession of Neterokub became fruitful and gave birth to a number of children. Neterokub also taught Enjema Enamer the taming of the elibor and all its uses. In the forest—... It is to Oldonyo elibor ('Kenia,' as the Watusi call it) that I offer to the Watusi the obligation of the intercession of Neterokub for getting rain, cattle, and health from the Esgai.

The Dorobo are the game hunters of E. Africa, shorter in stature than the Masai, but not very dissimilar from them in appearance, and containing many mixed strains of blood—Hamite, Negro, and possibly Bushman.
considered unlawful. When they finish their meal, they stand up and sing a song, which may be rendered approximately thus (paraphrased from Hollis):

'God to whom I pray,
God who thunders and it rains,
Give me offspring.
To thee only every day do I pray,
Thus morning star;
To thee only every day do I pray,
Thus who art of sweet morning and all sage plants.
To thee only every day do I pray,
Who art prayed to and who hearest;
To thee only every day do I pray.

Women and children also pray for rain. The old men's prayer in time of drought (shanted round a bonfire of sweet-smelling wood into which is thrown a charm from the medicine-man) is:

'Black god, hail!
God water us;
O them of the uttermost parts of the earth,
Black god, hail!
God water us.'

Young men pray that their battle raids may be successful and that they may bring back herds of cattle. All these prayers seem to be indiscriminately addressed both to God and to the morning and the evening star. God is not confined to the sky over the moon, but is something behind, above, beyond, and more powerful than these heavenly bodies, which are beings of either sex that alternately marry and quarrel, other celestial planets Venus and Jupiter they take little heed, with the exception of the Pleiades (the appearance of which in the heavens is indicative of seasonal changes), the Sword of Orion, and Orion's Belt. Counts are perturbing as indicative of approaching disasters.

8. Source of Masai religion. — M. Merker, a German officer, who lived much among the Masai of German East Africa, published a work (first issued in 1904) in which, after discussing various Masai beliefs and customs, he attributes these and, in part, the origin of the Masai, to a strong wave of Semitic influence from the north, even reviving that old story, the dispersal of the Ten Tribes. It is difficult to understand how he can see anything in Masai belief and ritual that especially suggests Jewish blood or influence and at the same time overlook the presence of similar beliefs and rites in the intervening Hamites or the Semiticized Somali. For unnumbered centuries waves of Caucasian influence and even trickles of Caucasian blood have been passing from Western Arabia, Syria, and Egypt through Ethiopia into Nilenland, the Central and Western Sudan, and the steppes and forests and lake regions of East Africa. The Masai have brought their share of these beliefs, superstitions, and customs from their northernmost centre of development—somewhere, possibly, in the basin of Lake Rudolf, a region that, no doubt, was influenced from Abyssinia a score of centuries ago, as it is at the present day. At the same time, attention should be given to Merker's records of Masai traditions and beliefs, especially as set forth in the later edition of his work (Die Masai, Berlin, 1910). A. C. Hollis, whose own work on the Masai is one of importance, and Albert Steggall, a missionary long resident in the eastern part of Masailand, both argue that Merker got his information regarding Masai beliefs chiefly from Masai who had long been connected with the Roman Catholic mission, and, consequently, that these informants were merely giving him versions of the Hebrew traditions in the OT. The receptivity of the Masai mind is no doubt great; but no mission had been established in those regions a sufficient length of time for much teaching to have been imparted to Masai, nor, from what the present writer knows of missionary work in those regions, is it likely that either Roman Catholic or Protestant missions

person cannot entirely cease to exist in personality even after the body is dead, buried, and decayed. It is thought by the Masai, as by Zulus and numerous tribes of W. African Bantu, that the soul of a deceased person of importance enters one of the serpents or python-like snakes which frequent the vicinity of human habitations in pursuit of rats and other vermin. These (usually black) snakes are, therefore, sacred in the eyes of the Masai, who are careful not to kill them. If a woman sees one at night, but, she pours milk on the ground for it to lick up. A variety of species of snakes are regarded as totem animals by one of the Masai clans, who protect them against ill-treatment by the members of any other clan, and will even call on them for help if they get worsted in a fight, exclaiming, 'Avengers of my mother's house, come out!' The Masai believed that the female snakes thus invoked would bite those who had not adopted them as a totem.

It has even been thought by some Masai, probably not earlier than the latter years of the 19th cent., that the souls of very great chiefs are not sufficiently provided for by transmigration to a snake, but in some way go up to heaven, to the abode of Esai. It is not impossible that this growing belief may have resulted from their talks with the missionary in E. Africa. They certainly believe that there is where one could call God; and soul, some impalpable living essence, and that this subsists a man's body when he falls asleep. Therefore a sleeper must be too suddenly awakened lest the soul be left outside the body and the man die. In one mood the Masai will assert that no such things as 'ghosts' exist, because they cannot be seen; in another they appear to believe that ghosts do exist and can be killed by cattle, though not by men. When a herd of cattle hauls and staves fixedly at something, it is not a lion or a leopard, it is a ghost.

6. Divination. — They also believe in omens, and, like all the Negro peoples of E. Africa, pay great attention to the cries and the actions of birds which are propitious or unpromising. Their medicine-men practice divination of future events (1) by shaking a handful of stones out of a horn, (2) by examining the entrails of a slaughtered goat, (3) by getting drunk on mead, and then prophesying at random, and (4) by the interpretation of dreams.

7. Prayers. — The Masai have a very real belief in God, and, if they are vague about his personality and uncertain whether they are praying to the Great God of the Firmament or to the Black God of the Upper Clouds, to one or other they occasionally make sacrifices of sheep—a rite usually conducted by the women, who, as a matter of course, pray twice a day, while men and children only occasionally utter prayers. In these prayers men and women associate the evening and morning stars, and even the snow peaks of the great mountains, Kenya and Kilimanjaro, with the Deity. They pray for children and for the health of the children, for rain, for success in time of war, and plenty of cattle. The present writer, however, when residing many years ago at Taveita near the eastern border of Kilimanjaro, noted that the men of the Wa-Taveita (mainly Masai in race and religion, though now speaking a Bantu language) could pray most earnestly and touchingly to Esai, the Power of the] which their children were sick.

When one of their number gives birth to a child, the Masai women gather together and take milk to the mother; they then slaughter a sheep, which is called a 'purifier of a hut,' or simply a 'purifier.' The woman bathes the animal by herself and eat all the meat, and no man may approach the spot where the animal is slaughtered, for it is
at that stage in their development spent much time in translating and teaching the book of Genesis to the Massai, it is probable that the ancestors of the Massai in their northern home were in contact with the Christian Gallas or Abyssinians, and from them imbibed those ideas of Adam and Eve and the other traditions regarding the great Patriarchs and the Melchisedek legends enshrined in the first chapter of Genesis; or the ideas may even have percolated through N.E. Africa in pre-Christian days, when the Jews and Idumeans were conscious of a good deal of W. Arabia and of Ethiopia.

The stories transcribed by Merker are not only reminiscent of the Jewish myths of Adam and Eve, Cain and Abel, Esau, Jacob, Joseph, and Abraham, but even extend to a personality like Moses, actually bearing the name of Musanna (or Marummi). There are even traces of a belief in a fiery serpent, of the Ten Commandments of Sinai, and of a paradise garden like Eden.

A good deal of this account of the Massai religion must be taken in the past tense. Year by year old beliefs and traditions are fading away, and the young are shifting from the one absolute materialisation (with the white man as their wondrous-working divinity) or adherents of the various Christian missions, to which they are proving useful and influential converts.

LETTRENA.—In addition to the works of Hollis and Merker quoted throughout, see J. L. Krapf, Vocabulary of the Gagundu Tupah, or Language of the Wa-Ungu. Taylor Thompson, Through Masai Land, London, 1886; H. H. Johnston, The Kilimanjaro Expedition, d. 1896, The Upanda Protectorate, Finschhinde, The East of the Mount, d. 1901.

H. H. JOHNSTON.

MASBOTHANS.—According to Eus. H.E. vi. xxii. 5 f., Hegesippus had written of the Hemerobaptists and the Masbottaens (Masbobotana) as two distinct sects in the circumcision among the children of Israel. The brief characterization of the Masbottaens given by the ancient heresiologists are based simply upon their etymologies of the name, which they connect either with the word 'sabbath' or with μαξα, 'will,' 'purpose.' Among modern scholars A. Hilgenfeld has advanced the conjecture that the Masbottaens were the followers of the early heretic Thebathias, also mentioned by Hegesippus, but in all likelihood the name is a pagan eponym 'baptists.' In glossaries of the Palestinian Aramæans the only word given for 'baptism' is masbò-thá, and, as we know that among the Mandaeans on the Euphrates the regular term for ceremonial immersion in running water was κολασα (see art. MANDÆANS, p. 357), we can hardly doubt that Masbobotana signifies people in whose religious practice such immersion formed an outstanding element. Thus the Gr. term 'Hemerobaptists' might quite well have been applied to the same group, and the idea that the two names denoted different sects may simply have been a mistake on the part of Hegesippus. It is no doubt the case that in the time of Hegesippus there were among the Jews various parties which advocated the practice of immersion, each, however, after its own particular form: there were, e.g., the Bnei-Ezra, the bathers every morning and evening, and the 'bathers of the early morning' who thought it necessary to perform an immersion before morning prayer. The term 'Hemerobaptists' would, of course, be quite appropriate for both parties that can be reconciled.

The designation 'Masbottaens,' however, would also suit the Elkesaites, and, in fact, pointedly suggests that sect, as the Elkesaitic tradition contains the name Zebaid, formed from the same verbal root as κολασα (cf. art. ELKESAITES, vol. v. p. 265). By the time of Hegesippus the Elkesaites had become so numerous in Palestine—though only, it is true, in the territory east of the Jordan— that he can hardly have remained ignorant of their existence. On these grounds, accordingly, it would seem very probable that those who had become known to him as the sect of the Masbottaens were none other than the Elkesaites. LITERATURE.—A. W. BRANDT.

MASK.—A mask may be defined as a molded or carved surface, representing the anterior half of a head and face, and usually worn over the face of a person. Further significations are the cast taken from the face of a dead person and the parallel form in sculpture—the front half of a human head and face preserved—and the head of a fox. A division is made by W. H. Dall into 'mask proper,' 'masket,' resembling mask but worn not upon the face but above or below the face, and 'mascot,' the latter not intended to be worn. This division is primarily anthropological.

The use of masks in one form or other and for various purposes has been practically universal in all stages of culture above that which the natives of Australia may be assumed to represent. The greater proportion of the Polynesian peoples are an exception. It will be most convenient to arrange the subject according to the purposes for which the mask is employed, incidentally noting details of form and manufacture and variations of general type. It may be noted at once that both in form and in use there is the usual similarity between the most widely separated races. The mask is in most cases ethnologically independent in origin.

1. Views as to the original meaning of masks.

The usual purpose of a mask is disguise by a more or less defined impersonation, impersonation alone, or, more rarely, protection, physical or moral. The figures impersonated may be real persons, imaginary persons, especially spirits and demons, or various animals and natural objects. Robertson Smith regarded the use of animal masks in religious ceremonial as a survival of an earlier practice according to which the worshipper put on the skin of a victim, in order to 'envelop himself in its sanctity.' In the form of a 'masket' many peoples have used the heads of animals, even as a war head-dress. The ritual mask is frequently credited with the power of imparting to the wearer the qualities of what it represents. The Eskimo believe that the wearer is 'mysteriously and unconsciously imbued with the spirit' represented by the mask, and, when wearing the mask of a tiger, he becomes that tiger. In the drama of the Pueblo Indians the actor is supposed to be transformed into the deity represented. The wearer of a mask in the dances of primitive peoples is 'assimilated to the real nature of the being represented'-possessed by him. But neither this belief nor the desire to be enveloped with sanctity can be regarded as the original intention of the mask. Dall considers the original mask of the North American Indian.

to have been a shield held in the hand to protect the face from missiles, and later worn on the face, affecting the human visage in a terrifying aspect, with the object of frightening the foe. On another line of development it became the helmet; but this view also fails to give any original psychological explanation. The Australian does not have the mask, but in their ceremonies they disguise the face by painting, or with down and blood. Previous to the invention of the Attic dramatic mask, the Dionysian mummers painted their faces with wine, possibly to simulate the effects of intemperance. As in the case of the ancient Roman kings and generals, whose faces were painted with vermillion on state occasions to resemble Jupiter. But this idea is clearly secondary. Again, it cannot be argued that the mask is a development from the custom of painting the face. The two are parallel reactions to the irreducible dramatic instinct in its elemental phase of the assumption of another personality. The elaborate facial make-up of modern dramatic art is, when contrasted with the Attic masks, a fair analogy to the blackened face of the modern peasant mummer, as contrasted with the wooden masks of the N. American savages. We may conclude that the ideas of assimilation, whether magical or religious, of terror, of protection, and even of disguise are secondary, and that the primary purpose of the mask is dramatic; the mask is a concrete result of the imitative instinct.

The various purposes, therefore, to which the mask is applied have no necessary development from one another, but are natural implications to particular purposes of the original mimetic instinct.

2. War masks. These are not of frequent use. In Central and West Africa warriors used hideous 'masks' of zebra-hide. The natives of Yoruba were masked representing lions, tigers, and so forth, to terrify the enemy. In medieval Europe and Japan soldiers were helms painted with frightful masks. The frontal skull on the helmet of the German 'Death's Head Hussars' is of similar origin.

3. The mask of terror. For other purposes than those of battle, the terroristic idea has been applied. The Chinese placed horrible paper masks on the faces of their children in order to frighten away the demon of smallpox. In Africa there has been the office of 'sham devil.' In China, in order to neutralize the activity of an evil spirit, a man was masked to represent an evil spirit itself. The Greek myth of the Gorgon's head was inspired by similar ideas, with which a primitive custom may be compared: in Timon of Athens, in order to deceive evil spirits and prevent them from injuring the remains of a dead man, a coco-nut mask was placed near the body. The further idea is here involved of protection by means of a mask, which, so to say, draws the enemy's fire. A similar use of the mask is seen in the expulsion of evil spirits. The people of China and Celebes, when 'driving out devils,' blacken their faces or wear masks. Possibly the masked Perchens of Central Europe had originally a similar function.

There may have been a mimic struggle between the Beasts and Man, the Ugly masks, symbolizing a struggle for the crop; masked mummers at sam- sawing festivals represent evil spirits.

4. The mask of justice. Officers of justice or terrorism assume the personality of a supernatural

inspectors, the Venoms of mediaeval Europe being a historical case. Executioners wore a mask, and possibly the black cap of the judge is an adaptation.

5. The mask in secret societies. These institutions are practically universal in the middle culture. In some cases they include among their functions the assumption of a terrifying aspect, or the imposing of the name of a god. This, like all their proceedings, is carried out with mummery, and the mask is employed along with other disguise or impersonation.

The Simulungu and the Bokwe wear masks, the collectors wear masks. The Kukui, Egbu, and Egunyan are other instances of these W. African societies; their masks are based on various ideas connected with the tutelary spirits of the society. The Igbo society of the Yoruba-speaking peoples is closely connected with the priesthood, and the king is obliged to submit to its decrees. The mask of Egunyan represents a hideous human face; he is supposed to be a man risen from the dead, in order to spy out what is going on in the land of the living and carry off those who misbehave. The Nambo of the Banks' Islands is a secret society whose name means 'ghost.' The members possess much power, and periodically hold meetings and processions, wearing their masks.

The famous Duk-duk societies of New Britain, New Ireland, and the Duke of York Islands comprise practically the whole of the adult male population. In one aspect of its functions the Duk-duk is a personification of justice—judge, policeman, and executioner in one. The remarkable head-dresses worn by the operators are technically mask-like structures, representing some spiritual force in the semblance of a cassowary.

The operators are two Duk-duk representing the male and Tubuan the female cassowary. The mask worn by each is a 'huge hat-like exrinisher' of grass or palm-fibre, 6 ft. high. As far as the body-dress is concerned, it may be said to represent the cassowary, but the head is 'like nothing but the head of a Duk-duk.' A long stick is at the apex, and the 'tresses' are coloured red. The female is said to be plain, the male more flashy. The extraordinary belief is held that the Tubuan mask gives birth to the novices when initiated into the society; and two female masks are kept from year to year for the purpose of annually bestowing its spirit; the heads acting seem to be lost or merged in the mask. No one is supposed to know who the actors are. The male masks appear to be burned after the ceremony. The committees of adults who supervise the making of young men are frequently dressed in disguise and wear masks. In Torres Straits on these occasions a man represents the deity Agrad; he is painted all over and wears a leaf petticoat and a turtle-shell mask. Several masked mygwar (devils) frighten the novices, who are well beaten, and are told the dreadful names of the masks.

A wolf society among the Nutka holds initiation meetings; men wearing wolf-masks carry off the novices.

1 See Webster, op. cit.
2 A. Bastian, Die deutsche Expedition an der Lempa-kuiste, Jena, 1874, t. 128.
The divine mask. — The shaman of N.W. America, e.g., among the Makahs, has one mask for every performance. In a spirit séance, he puts on a mask and summons the spirit with his rattle. The Eskimo shamans, in making their masks, give expression to their ideas of the spirits represented. Their masks are a creative, and not a mimic, art. The shaman is said to be able to see through the animal-mask to the manlike face behind. In the ritual of ancient Mexico the priest wore a mask representing the god. On the other hand, priestesses in Nigeria may not wear or touch a mask.

From a similar point of view the protected of a guardian spirit wears a mask, when dancing, to represent that spirit and identify himself with it. The Monomono of New Guinea wear masks representing guardian spirits, when they appeal to them for help, fair weather, and the like, among the masks being those of kangaroos, dogs, and cassowaries. The masks, when made, are fumigated in order to put life into them. They are treated with respect and addressed as if they were living persons. A man wears a mask resembling his totem animal, and the belief is that the wearer becomes the totem-animal.

The image of a god may wear a mask; the Mexicans having the face of certain idols masks of a human face cut off from the skull and preserved. They also used elaborate masks with pyrites for the eyes, and obsidian and turquoise mosaic in back of the face. The god 'Our Mother' wore a two-faced mask, and her priest donned a replica of this.

The death mask. — In connection with the dead the mask has been exploited along interesting lines, assisting among other things the art of portrait sculpture. Besides the practice of embalming or otherwise preserving the heads of dead friends or enemies, several peoples have made masks of these. Such a mask has once been mentioned as placed upon the face of a Mexican idol, and there is a fine example in the Christy collection in the British Museum. In New Britain and elsewhere in Melanesia and New Guinea, such masks (skull masks) were worn in sacred dances. The Mexicans also placed painted masks or masks of gold or turquoise mosaic on the faces of their dead. The Alteata of the Western Highlands covered the faces of the dead with masks. The meaning of the last practice is obscure, but the Alteata think that it is intended to protect the dead against the glances of evil spirits. Their practice of wearing masks in certain religions dances, so as not to behold the idol round which they revolve and whose glance means death, may be compared. Similarly, among the Guaymis of Panama, during the initiation of young men, the women who attend upon them wear masks. Bantu girls at puberty wear straw masks, and Lillooet girls (British Columbia) wear goat-skin masks at the same time. In Mexico, when the king was ill, the images of the gods were masked, possibly to prevent them from drawing away the soul. Some idea of disguising a person dangerous or in danger may be connected with this, and hence the mask is merely a veil. In Siam and Cambodia masks of gold were placed on the faces of dead kings. The Shans have the same custom, using masks of silver or gold. These are the next seem to have been used upon a portrait. The Egyptian mummy had an artificial face forming part of the portrait superstructure over the corpse. Death-masks proper, of gold, silver, bronze, and terra-cotta, have been found in Medinet Habu, Thebes, Ephesus, the Crimea, Italy, France, the Danube valley, and Britain.

The most conspicuous and complete examples are supplied by Mycenae and Rome. In the famous shaft-graves opened at Mycenae golden masks, clearly portraits, were found, corresponding to men and children. Those at least of the latter, being of thin gold leaf, must have been moulded with the hand upon the face of the dead. The masks of the man were of thicker plate, and had no eye-holes. The hands and feet of the children were also wrought in gold leaf. This suggests that the informing idea was similar to that of swelling the dead, painting the face, and otherwise decorating, while protecting, the corpse. The Roman nobles kept wax portrait-masks of their ancestors in the atrium. The dead nobles lay in state for seven days, during which the emblamer (pellinctor) took a mould of the face, which he then cast in wax, and painted with the natural colours. The mask was placed on the dead man's face, or, in case of putrefaction, on an effigy. After the burial the mask was hung in the temple, possibly fixed on a bust, and under it was a titulus giving the name and exploits of the man represented. These imagines were connected by lines giving the genealogical succession, and termed stemmata. The tax imaginum gave a man the right of having his imagos carried in the funeral train of a descendant. The remarkable custom was that a man was followed to his tomb by all his ancestors, their masks being worn by persons as similar as possible in stature and form, riding in chariots. Marcellus was attended by six hundred of his forefathers and kin. The imagines were crowned with laurel on feast days. By Pugin's time the wax masks were giving way to clipiato imaginum, i.e. medallions of metal.

Since Roman times the method of securing a portrait by taking a death mask has been continued in the case of great personages. This is the 'death-mask' of sculpture.

The dramatic mask. — The secret societies of N.W. America are, in contrast with those of Melanesia and Africa, chiefly concerned with dramatic representations. Their 'masque' privileges are important, but they exercise little authority; in fact, these societies might be described as amateur dramatic clubs, with a religious setting like that of the mediaval gilds. Frazer describes the institution as 'a religious drama' like that of ancient Greece. Various purposes other than that of entertainment are fulfilled by the performances; various, too, are the characters represented, according to the constitution of the society, whether totemic or consecrated to guardian spirits or otherwise. But the presence of their masks is a common feature.
function is pantomime, and the mask is the means of impersonation. The masks are made of various woods; they are mostly of large and prominent of feature, painted red, black, and white. In some of the grotesque sort the eyes and jaws are movable, and worked by a string. Some masks were masks of both sexes; the Swiss masks are two-faced, enabling the actor suddenly to change his character. The masks are surrounded, as usual, with considerable mystery, and are burned or thrown away at the end of the season. Sometimes their use is declared, and there are elaborate rules. No uninitiated person may see them being made. Little masks are worn on the fingers. The masks represent human persons—mythical, sometimes hideous—or animals. Ancestors, spirits, suffix (tutelary spirits), natural objects (e.g., the sun-mask of the Kwakiutl, the round with seal’s whiskers, and feathers, which gradually expand like a fan), animals, and birds form the subjects of a remarkably varied collection. The Tsimshians have a mask representing the thunder-bird, and at the performance mock lightning is produced and water is poured from the roof. The masks resemble the ancestors of the clans, viz. the wolf, owl, frog, and coyote. But, since the wearing of a mask is regarded as being unlucky, well-to-do men hire professional men to wear them, and are compared with civilized prejudices against the actor’s profession. The dances are pantomimic representations of the myths stored by the society, and may thus be compared with the magical pantomimics of the Australians, intended to encourage the natural processes which they represent, and, on the other hand, with the medieval ‘morality,’ which was an object-lesson in good and evil. The dances have a sort of mysterious glamour over the performance and at the same time allows the actor to remain unknown. Apart from entertainment, the pantomimes are performed in honour of dead personages, or to bring blessings on a particular man or the community. In N.W. Brazil a very pretty pantomime is performed in honour of the dead, at which the masked actors represent the gorgeously-coloured birds and insects of the forest. The dramas of the Pueblo Indians is remarkable; it has features resembling those of the morality and the Greek drama. Divine beings are the characters representing the old-inhabitants in the village square, and have (at least as a secondary object) the intention of preventing rain, good crops, or prosperity in general.

The Lamas of Tibet practised a regular religious drama, exactly parallel to the European morality and mystery; there were good and evil spirits, a protecting deity, men, and animals, and for all there were the appropriate masks. The Burmese drama employed masks for character types such as king and minister. Siamese actors wore paper masks, coloured green, red, black, or gold. A peculiarity was that the wearer did not speak; the parts were spoken by prompters. In Japan the dramatic masks of paper or lacquered wood were very elaborately artistic, gods, demons, men, and animals being represented in masks by good artists.

The drama of ancient Athens, both tragic and comic, employed the mask, which had been used in the old Bacchic; they were masks of both sexes; the actors of the comic use them unabbreviated. The dramatic use of masks was first established by Thespis, who previously had painted his face with white lead or purplum. Linen masks unpainted were then adopted; Chaucer improved them; Phrynieus added paint and generally fixed their form.

The Greek mask was made of linen, or sometimes, of cork or wood. It was large (in tragedy) to correspond to the superhuman proportions of the actors. The obeks (eyecap), a cone-shaped prolongation of the upper part of the forehead, added size and dignity to the head. The white of the eye was painted strongly, but an aperture was made for the actor to see. The mouth was permanently opened wide, and the tradition remains, unexplained, that resonance was given to the voice by means of the shape of the mask. All the facial mask aimed at was to be well emphasized of types; every feature was exaggerated, and in the huge theatres of the Greeks this fact was essential. No change of facial expression being possible and the finer shades of emotion may have been avoided. The mask prevented any considerable evolution of the psychological drama. ‘It would be difficult to imagine the part of Hamlet played in a mask.’ Pollux enumerates twenty-four styles of tragic masks. The tyrant’s mask had thick black hair and beard and wore a crown. The lover’s face was pale. The comic mask was, in the Old Comedy, the portrait of a real person; when Aristophanes presented The Clouds, Socrates stood up in the auditorium to enable the audience to identify the mask of his impersonation; but when Cleon was to be staged, the makers refused to supply a mask, such was the fear inspired by the demagogue. In the New Comedy of manners types were represented. The hot-tempered old father wore a mask with one eyebrow drawn up and the other normal; he expressed his changes of temper by turning this or that side. The Roman drama dispensed with masks until the time of Roscius, who is said to have introduced them on his own account, being ugly and affected with a squint; but they had always been worn in masques and masquerades, which were often suppressed. A side-development of this drama, and a new application of the word ‘mask,’ were made in the ‘masque’ popular in Elizabethan times.

The theory of Frazer as to the magical and religious origin of the drama may be tested by the special case of the mask. He writes:

5. Ibid. pp. 282, 284.
8. Ibid. p. 294. Skiod connects the terms ‘mumming,’ ‘mummer,’ with the Low German, Namme (made of sound, sounds, used by nurses to frighten or amuse children, while pretending to cover the face.
9. Ibid. p. 408.
Academy sought to draw down blessings on the community by mimicking certain powerful superhuman beings and in their assumed character working those benedictions which were in the capacity of mere men; they would have confused themselves powerless to effect. 1

The mimetic magical ceremonies of the Central American Indians were another piece of evidence in favour of this view; but it seems more probable that the native mimetic instinct expressed itself first with no particular purpose, being later applied to various magical or religious aims. It is impossible to prove that the earliest masks or even face-paints represented anything but fanciful characters of merely dramatic import. 2 The instinctive delight in personal disguise is a universal element in all the applications of the mask, and as an adjunct to a temple of Baal (2 K 3:24), in the custom of civilized peoples of wearing a mask on the upper part of the face at fancy-dress balls, which reproduces the barbaric entertainments of lower cultures. The burlgar's mask is another modern reproduction of the idea of disguise, but employed for utilitarian purposes.

The swinging mask. — Cases have been cited of the mask being separated from its wearer and becoming a sort of idol. The ancient Italian oscilles are an interesting parallel. These were miniature masks in wax, marble, or terracotta, and apparently wool, which were hung up on the houses and temples during festivals, and allowed to swing in the wind. 3 The intention may have been magical, to make the crops or vines grow, by disseminating magical force, by swinging high, or by the virtue of movement.

Masks in metaphor and history. — Many obvious metaphors have been inspired by the mask, which need not be recapitulated. In history the Faux Visages, a section of the Gibelline faction in the 13th cent., otherwise the Massariati, are curiously repeated in name by the False Faces, secret society of the Iroquois. 4 'The man in the iron-mask' is a historic mystery illustrating the permanent fascination of this element of applied psychology.

Literature. — This is fully given in the article.

A. E. CRAWLEY

MASS. — See Eucharist.

MASSÈBHÂH. — In the OT massêbhâh (מַשֶׁבָּח) denotes a standing-stone, stèle, obelisk, or pillar, sometimes conceived as being an abode of spirit or deity. The name is derived from 77 (P.H. 1880). A stone pillar or monument. Aram. 272; Syr. prop. name Nosib; Palmyrene (אכש) 22. The massêbhâh is referred to as a heathen symbol of the Canaanites (Ex 23:24; Deut. 7:19). Massêbhath and debeth are so frequent that it could be said that they might be found upon every high hill, and under every green tree (2 K 17:20). The word massêbhâh is used to describe sacred stones in connection with an altar (Ex 23:24; Ev. of Moses, Hos 3:12; Is 30:21; without condemnation mentioned, the articles being considered usual in Hebrew worship). The strong pillars of Tyre doomed to destruction are called massêbhath by Ezekiel (29:1), and massêbhath (בֹּשֶׁבָה) uses the same term for the Egyptian obelisks at Heliopolis. The use of the massêbhâh is strictly forbidden to Israelites by the

Deuteronomy code and in the Law of Holiness (Lev 26:1), and the editor of the books of Kings estimates their character in the light of this prohibition. The earlier writers, especially E and Hosen, see no harm in these stones; but the teaching of the other prophets, with the massêbhâh, representing them as making altars (cf. LXX Ex 24, substituting פָּרֹת, 'stones,' for מַשֶׁבָּח). Hebrew monotheism, when fully developed, disdained sun and moon of their ancient divinity (Gn 1:18): 'The heaven is my throne, and the earth is my footstool: what manner of house will ye build unto me?' (Is 57:11). At such a period in Hebrew thought there was no longer any superstition for stones, caimns, cromlechs, or menhirs.

Stones are used with no occult associations. Samuel commemorates a victory by setting a stone, which he called Eben-ezer (1 Sam 7:10); the Temple has two pillars, Jachin and Boaz, set up in the porch (1 K 7:18); inscriptions are recorded on stone (Is 28:25; Ex 32:14); the bound stone is marked by a stone (2 Sam 23:17). Absalom in his lifetime set a pillar, called a 'shilshol,' to perpetuate the memory of his intimacy with the massêbhâh, representing them as making altars (2 Sam 19:22). In temple building (1 K 7:18) an agreement between Jacob and Laban (Gen 31:48) as to the boundary of the land by a stone and pillar (Génôf, 'consecrated stones,' of which the Latin words came to mean 'graves') is not without meaning (see stone). When men sought an enduring memorial, when they wished to make the deity the protector of a covenant, they often chose some form of stone as an emblem of the divine protection. Nothing more is indicated in this few instances.

Jacob set up a stone for a massêbhath, poured oil upon the top of it, and called it Beth-el (Gen 33:19). This stone is found associated with altars and debeth figures in religious centres. Jacob's ceremony implies more than it states. Jehovah sets up a stone saying, 'This stone shall be a witness against thee,' (Deut. 27:13) and the New Testament uses the word in a metaphorical sense (Acts 7:45). The use of unknown stones for an altar (Ex 20:24; 27:2, Jos 24:26) befriends the feeling that the chisel would offend the masses.

Semitic and other parallels show that such instances are surviving specimens of an elaborate system of stone-worship. The massêbhâh is found in the cognate languages, and denotes 'consecrated,' 'holy,' 'divine dedication' (Lampridios). Among the primitive Arabs the massêkh serves as an altar, the victim's blood is smeared over it; hence the name ghârîyy. It is, however, more than an altar, 'a sacred head' (J. Wellhausen, Resta arâa. Hadentoums, Berlin, 1887, p. 99). Herodotus iii. 3 describes the Arabs making a covenant.

An umpire draws blood upon a sharp stone from the head of each of the two persons making the contract, and with part of their garments he smears the blood on seven stones placed between them, invoking God and Allah. Herodotus might have added that the parties tasted each other's blood (W. R. Smith, Kingfish and Marriage, London, 1867, p. 365). The Canaanite high-place discovered at Gezer reveals the conspicuous place assigned to standing-stones in the cult of Palestine before the Hebrew occupation (R. A. S. Macalister, Excavations of Gezer, London, 1912). Phoenician colonists spread the practice, and Ptolemaic temples confirm the sanctity of the stone column, and the Greek name Baños, appears to be derived from Beth-el. Thopaoutai, in the 4th century B.C., describes the superstitious Greek passing the anointed stones in the streets, taking up his phial and pouring the anointing oil over them falling on his knees to adore, and going his way (Polyb. ii. 16).

Traces of like practices are recorded down to the present day. A full description of a shrine of the pre-Islamic stone-worship in a Turkish village of Macedon is given by A. J. Evans in his Mycenaean Tree and Pillar Cult (JHS xl. 1901 29 ff.). It is due to prophetic intolerance of the irrational and immoral that so slight traces of lithoboly remain in the OT.
'What mean ye by these stones?' asked the Hebrews; ratio in obscuro, answered Tacitus. To seek one principle consistently applied is as hopeless in custom as in a language. Feeling, variable and incertant as it is, can be sanctified and consecrated. Mounds have inspired awe and affection—e.g., Olympus, Fujiyama, Hermon, Horeb, Sinai—and it has been suggested that the sacred pillar is little a model of the Holy Hill. Myths have been borrowed and treasured; and if the host of heaven received adoration, any fragment coming on a path of light, like a falling star, or supposed to be sent amid thunder and lightning would command devotion (cf. Diana of the Ephesians and the image which fell down from Jupiter [Ac 19:4]; Sarithone in Damascus, quoted by Photius [A.D. 869], Biblioth. 345b, 28; 348a, 28; the Ka-ba at Mecca, as E. Burton thinks [Pilgrimage to El-Medinah and Meccah, London, 1892, ii. 300 f.], retaining its sanctity in spite of lapse). Moreover, the shadow of a pillar is a clue to the moon and the sun and the regulation of the calendar. The structures at Stonehenge 'had for the most part an astronomical use in connexion with religious ceremonial' (N. Lockyer, Nature, lxviii. [1905-06] 153; see also series of Notes on Stonehenge, in S. W., ii. 47, 54, 101, 124). The same conclusion is maintained with regard to the standing-stones of Stoneh ors in Orkney by M. Spence (Scottish Review, xxxi. [1880] 40-417). The late Hebrew term נמחיב, rendered uniformly 'sun-images' in RV (Ezek 6:14, Lv 26:9, Is 14:27, 2 Ch 14:1 [cf. 14:9] 34-7), probably represents the קסבב with solar associations. Palestine had a human past before the Hebrews entered it. The stone-tables (holly-pine) occurring in hundreds suggested imitation; the menhirs to the east of the Jordan served as prototypes of the קסבב. Of the more obvious influences specified by the Biblical writers the contemplation of the dead has always been the strongest inspiration.

Cup-markings on the קסבב or on adjoining altars are not infrequent (cf. art. CUP- AND RING-MAKINGS). On an altar they are suggested to receive the blood of the victim; on a tombstone they would serve for food and drink offered to the dead, although a plain Turk explained the hollows on tombstones as meant to gather water for the birds. On other stones they are on the sides, not on the upper surface of the stone; and they may be arranged in the shape of a horse-shoe. Cup-markings are held to be inconsistent with the purpose of the Nesher; all qualification of the cupping showed that the cup and pillar had not originated at the same period (PEFS, xxxv. [1904] 112 f.). The cupped stone is cited to explain Zec 3:9: 'Behold the stone that I have set before Joshua; upon one stone are seven eyes; behold, I will engrave the engraving thereof, saith the Lord of hosts, and I will remove the iniquity of that land in one day.'

An article by B. D. Eerdmaans (in JBL, xxx. [1911] 109-113), entitled 'The Sepulchral Monument "Kasbbeh"', has revived discussion on the meaning of the pillars. "The kasbbeh is easily explained as a house for the soul. Therefore the name of the deceased person is inscribed upon it; and the monument itself was called אמאבכ, the male form was chosen for the graves of men, the female form for the graves of women (p. 110).

This result has, with some reservations, been approved by E. Sellin, who adds corroboration and, in consequence, suggests striking interpretations of Is 62:9 and 51:4 (OLZ, xi. [1912] 119 ff., 371 ff., 568 f.). The views of Eerdmaans and Sellin are strongly opposed by M. R. Young, who argues that the kasbbeh is an urban type of Goddess (JBL, xxx. [1911] 486 f.). This indication of sex is a welcome improvement on the sugestio contaminata which prevailed for some time. In spite of Herodotus, ii. 16, and similar testimony in Lucian, and the phallic columns at Gezer and Petra, it appears that this was a subsidiary and occasional interpretation of the standing-stones. The feeling that the pillar or pillar image was so placed for the soul is supported by the Jewish custom in Oriental cemeteries (כֶּסֶבּ, as they are called) of giving every individual a stone. The inscription name indicates the sex, apparent from a special shape of the stone. The tombstone of a Rabbi or of a person who died of cholera has a distinctive shape.

MASTER AND SERVANT. — See EMPLOYERS, EMPLOYMENT.

MATERIALISM. — Materialism is one of several types of metaphysical theory concerning the nature and number of the ultimate realities to be assumed in order to explain the universe. Dualism (q.v.) asserts that two independent principles must be presupposed, viz., mind and matter. Monism (q.v.)—in the qualitative sense—regards these two principles as aspects of one ultimate. Monism—in the quantitative sense—is opposed to dualism in regarding one principle as sufficient. There are two kinds of such monistic theory: spiritualism, which affirms mind or spirit to be the only ultimate reality, and materialism, which makes the same assertion of matter. Thus, according to the doctrine of materialism, extended, insensible, eternally self-existent matter is the one fundamental constituent of the universe; mind or consciousness is but a mode or a property of such matter, and psychical processes are reducible to physical. More precisely, there are three kinds of metaphysical materialism, thus described by Külpe (Intro. to Philosophy, Eng. tr., p. 117): 'attributive materialism, which makes mind an attribute of matter; causal . . . which makes it an effect of matter; and equative . . . which looks upon mental processes as really material in character.'

I. History. — The atomism of Leucippus and Democritus is the earliest example of materialistic theory. According to these philosophers the physical world is composed of invisible material particles, and mind is made up of similar atoms, smaller, rounder, smoother, and more mobile. The theory was abhorred by all philosophers of the Hellenistic period, and the two or three leading systems were of an illogical and quantitative (of size, form, arrangement), banished final cause or intelligent purpose from the world, denied the immortality of the soul, and interpreted the universe only in terms of mechanism and fixed law. The last element in early Greek atomism does not necessarily presuppose or involve materialistic theory, though Lange, the historian of materialism, seems to see it in the chief virtue of early materialistic speculation. The theory of Leucippus and Democritus was developed by Epicurus and Lucretius, with certain modifications.

At the beginning of the modern period the early Greek materialism was revived by P. Guesdon; it, however, deprived it of metaphysical significance by reconciling it with belief in God as Creator of the universe. T. Hobbes, at the same time, taught a similar view, so that, though the tone of his philosophical system is materialistic, he cannot be called a thoroughgoing materialist. He strongly insisted that all that exists is body or matter, and that motion is the only kind of change in the universe. Gradually, 248 ff., 460 ff., 1900-1901.

D. M. KAY.
MATERIALISM

Mental development depend on the body. P. B. D. Holbach's *Systeme de la nature* (London, 1770), which rejects every form of spiritualism and supernaturalism, marks the culmination of this movement of thought.

Near to our own time materialism appeared as a reaction from post-Kantian idealism, with renewed energy in Germany, K. C. Vogt, J. Moleschott, and J. Blumenhau his leading exponents at the beginning of the 19th century. Their writings, though erasing—for the first time, perhaps, in the history of materialism—some sense of the need of an epistemological foundation for a metaphysic which resolves mental process into material, reveal great crudity of thought and knowledge in this connexion, and in spite of their popularity are of no philosophical worth to an age which is careful and critical as to epistemological presuppositions, especially such as are involved in the physical sciences. Description of physical and even mental processes, in the language of materialism, is easier to science; and this fact, together with the jubilant prophecy with which science is flushed with many successes, over-hastily exaggerated its own scope and functions a generation ago, accounts for the materialistic colouring which many generalizations are given knowledge have received—a colouring which has often been taken by students of the physical sciences, unpractised in philosophical reflection and criticism, for an essential implication or consequence of scientific truth rightly so called. J. Huxley, who on an occasion could teach materialism of the most dogmatic kind, and in another mood would capitalize to spiritualism, sought permanent refuge in agnosticism; and, since his earlier and more militant essays, materialism has found no literary champion among British scientists. In dogmatic form it is to be found to-day, perhaps, only in the literature of secularist 'free' thought. Even the monism of E. Hoeckel, which is materialism in all but its name, awakens no enthusiasm among scientific students in Britain; it is rightly regarded as involving an obsolete standpoint; which science, more silent and cautious—if not more critical—than formerly, has left behind.

2. The attractiveness and plausibility of materialism. The chief outbursts of materialistic metaphysic have coincided with epochs of remarkable progress of physical science. The emergence of this tendency to regard the world as fundamentally material, at successive epochs in the history of thought, is evidence that materialism strongly compensates itself to many minds, especially to those whose studies chiefly lie in the sphere of the physical sciences.

There are many reasons for the attractiveness of materialism as a metaphysical theory or view-of-the-world to such minds, and the view possesses great plausibility when it is contemplated from the epistemological standpoint which the natural sciences, as well as the philosophy of common sense or ordinary social intercourse, take for granted. These reasons may now be specified, and the assumed theory of knowledge whence they derive their plausibility examined.

The reason why, as H. Holmgren says (*Problems of Philosophy*, New York, 1905, p. 140), 'ever and again essays are made in the materialistic direction, although—since the advent of the critical philosophy—not with such dogmatic assurance as formerly', is that our knowledge of matter, its changes and its properties, is so much greater, and so much more easy to obtain, than our knowledge of mind. Psychology is a comparatively young science, so far as it embraces psychic phenomena and is pursued in its relation to physiology, even psychology deals with matter rather than with mind. And in so far as it is pursued by the analytic method—the only truly psychological one—it is a study beset with enormous difficulties. Moreover, such psychological knowledge as is forthcoming and established is rarely open to the investigator of physical phenomena, so that he proceeds in abstraction from essential elements involved in every 'objective fact' that he examines and classifies. Psychology, again, more immediately involves metaphysics, which for the most part is as yet disputed ground. Lastly, the physical sciences owe much of their prestige to the fact that they are based on measurement, and, being thus quantitative, are capable of mathematical treatment, whereas in psychology (of the pure or analytic kind) measurement is out of the question.

The physical sciences, again, impress us with their connectedness. The connectedness of the external world exercises an overwhelming power on our minds, and especially upon the imagination. Mind, on the other hand, is discontinuous; it is known only in the form of individual minds and these minds are not known, as yet, with anything like certainty, to communicate with each other through any other medium than that of matter. Further, we know minds only in connexion with bodies or material substrata, and, so far as observation goes, we have no knowledge of mind existing independently of body, though, again, so far as observation goes—it seems that most material 'things' exist without mind. Science teaches us also of the past history of a material world which existed for ages before organic beings, which alone experience enables us certainly to endow with minds, could exist upon it. Yet more impressive is the array of facts demonstrated and explained by physiology, comparative anatomy and psychology, and pathology as to the concomitance of psychic processes with physical, their dependence on material phenomena such as the functioning of the brain, the correlation of mental development throughout the animal kingdom with organization and complexity of brain-structure, the effects upon mind of injury or disease in brain tissue, and so forth. Thus a very strong, clear, and convincing case for the priority of matter to mind, and for the dependence of the mental on the material, is presented by science; and there is much to suggest that consciousness is a property, and not merely a product of matter or material process. The progress of science would seem, as Huxley put it, to have meant the extension of mechanical law and the realm of materialism, and the conception of spirit and spontaneity from the universe, and to afford as good ground for asserting mental phenomena to be effects of material as for asserting heat to be due to physical causes.

Moreover, it may be added, it is impossible to invalidate this coherent and cumulative argument for materialism from the standpoint of the physical sciences. No counterexample can be made, for instance, out of the fact, if it be a fact, that some mental events no correlated material changes within the brain have been discovered; for future research may possibly discover them, and it is precarious to stake our metaphysical theory on gaps in scientific knowledge. Nor can materialism be refuted by saying that thought, or consciousness in general, is unlike other activities or properties of matter. Heat, light, sound, and electricity are qualitative phenomena, and the changes that are properties of matter or of other possessing some of the characteristics of matter. It is a baseless dogma that the effect must resemble the cause, so long as we refer to physical phenomena and effects. Science, in its more abstract developments, does indeed reduce all diversity to quantitative difference, all causality to identity, so that
heat, light, electricity, etc., are resolved into nothing of the sort—i.e., of extended and inert substance; but at this level of analysis consciousness, looked upon as one kind of phenomenon among others, and regarded from the purely or abstractly objective point of view adopted by science, might still be maintained as belonging to a class of resolution into physical antecedents. Perhaps the most that can be urged, from this epistemological standpoint, is opposition to materialism, is that the adoption of it as the usual theoretical technique of science is abso-

The argument should suffice to dispose of the dogmatic certainty of materialism, though not necessarily of the possibility of its (indemonstrable) truth. That material change, while ever pursuing the same path as materialism, should have other than a physical epi-phenomena, the connexion of which is that of logical sequence, is a possibility with which the materialist must be credited, and to which, perhaps, his opponent will allow him to be 

The scientist, leaving himself out of the question, can discover himself at the end; he is thus led to think that his own mind, which has largely shaped his phenomena and made them what they are for him, is but an illusion, an effect, an epi-

3. Refutation of materialism.—But there are more telling arguments against a materialistic metaphysics, and these are to be mentioned when we emerge only when the question of the episte-

When science boasts of the objectivity of its knowledge, it does not merely imply possession of knowledge concerning facts such as is universal, or capable of being common to all subjects—which is a perfectly legitimate contention; but it further calls out of sight altogether, as convenient or essential to its own practical procedure, all refer-

The materialism which science studies are not inde-

they are the sum of objective elements common to many individual experiences. Consciousness of an object which is not owned, a thing which is nobody's, a pheno-

Knowledge, moreover, as distinguished from pure positivistic action, such a thing in reality, reveals the work of sub-

Materialism also involves the old and obsolete assumption that the so-called secondary characters of matter (colour, tone, odour, etc.) are fundament-

Materialism, as the phenomena per se, however convenient and harmless it may be for purposes of ordinary discourse and practical investigation and description, is epistemologically false, or, rather, nonsensical. Yet it is precisely by the ejection of this colloquial fiction into an epistemological principle that materialism and all kinds of thought obtain a fixed founda-

Experience—the only ultimate datum, the one thing which cannot be doubted or explained away without involving the assertion of its reality—is always essentially a duality in unity, subject-

Science can ignore—so long as it confines itself to its own business—the one element in experience, the subjective, though of course its whole procedure involves subjective activity; and it ignores it so completely that its students sometimes come to look upon what they have agreed to leave out of sight (it being none of their business), as if they come to be talked of as if they were really subject-

Their independence, their priority, their exclusive reality become to be affirmed. The scientist, leaving himself out of the question, can discover himself at the end; he is thus led to think that his own mind, which has largely shaped his phenomena and made them what they are for him, is but an illusion, an effect, an epi-

Materialism, as the phenomena per se, he can proceed to lay before us an array of imposing facts and arguments which, from the standpoint of science, are as irrefutable as they are im-

But, once the epistemological opposition that objects, as known to us, can exist to be known independently of all experiencing subjects is shown to be impossible, the tables are turned. Not only do the arguments in question lose all their apparent force, but consciousness, which materialism would resolve into an epi-phenomenal effect or property of self-existent matter, is seen to be the primary reality, and knowledge as we know it is shown to be a conceptual construction of mind.

Materialism, we conclude, misunderstands human experience, in which subjective and objective form one whole, while they are gradually differentiated only through increasingly complicated processes of conceptual distinction. The objective, however, is not to be identified with the material, as if these were convertible terms. Matter is a conceptual abstraction from experience, and so cannot be taken for the ground or basis upon which observations are made. Atoms, again, are only figurative ideas; and that they have to be endowed with the very attributes which, in gross matter, were invented to explain, if not indeed to explain, the phenomena of observation, is a sufficient warning against adoption of the naive realistic view that they are corporeal or material particles.
ently different from the so-called primary (extension, impenetrability, etc.). It was one of G. Berkeley's great contributions to philosophy to show that this distinction is untenable. The secondary qualities of matter may be due to our mode of perceiving them to be 'in our mind' and not 'in matter'. But on closer examination it is to be seen that the primary qualities are in precisely the same case. Our idea of extension, for instance, is gained only through the perceived 'size' of a body, and this depends on our distance from it. That a material object is of the same size, though at one time it may appear larger and at another smaller to a perceiver, is an inference, and involves the revision of the evidence of our senses by reasoning. The extension which we attribute to a physical object, then, is inferred, and not perceived, extension; and, if we abstract from our idea of extension the sensation-elements supplied by touch or sight, nothing remains. Therefore matter possesses extension no more than it possesses colour, except as perceived by our minds. If, then, there be anything at all which Berkeley (or any other) denies outside our minds and the direct action of God upon them which causes the sensations whence our idea of extension (or any other quality of matter) is derived, we are content to regard something as not matter as it is perceived. There may be what J. S. Mill called a 'permanent possibility of sensation' independent of us, whose case is not perceived; but, if there be, it is an entity wholly different from the 'matter' of physical science and common sense, and, for all we know, may just as aptly be described as mind or spirit. We can, therefore, without self-contradiction ascribe our sensations to the God who made us and created the physical universe (pluralism); but we cannot ascribe them to matter as perceived. Either of the views just mentioned would explain our experience; and, unless we ascribe our sensations to the influence of other spiritual existences endowed with 'being for self,' we cannot but assume, with Berkeley, that the nonmoral matter, the substratum of sensations, the substance which constitutes the permanent possibility of sensation, is but a medium or means existing solely for our sakes, and one which, from a theist's point of view, must seem superfluous. The concept of matter, then, is built on the basis of a view of a preexistent and manifestly conceptual construction to explain the origin of sense-impressions. It thus seeks to derive the underived from the derived.

There are several other inconsistencies involved in the dualistic doctrine, one or two of which may briefly be mentioned. Materialism implies that everything which happens and is accompanied by consciousness of its happening would happen equally well without consciousness; or, in other words, that consciousness makes no difference to the course of the world. But, if so, it is difficult, on the theory of evolution by survival of the fittest, which is the current scientific explanation of the origin of every organ and every function, as well as of every individual organism and every species, to account for the emergence, and still more for the development, of mind. Materialism, once conceived as a thoroughgoing type, regards consciousness as the product or effect of matter, while cherishing the principle of ex nihilo nihil fit in its application to what physicists call 'energy.' This is often held—though doubtless quite erroneously—to assert that not only is there quantitative equivalence between the energy which, in any physical change, disappears in one form and that which is equivalent to it, but also that the sum-total of energy in the universe is constant. The latter, and illegitimate, part of the generalization has been a tenet of materialists; and it is difficult to reconcile with their assertion that mental phenomena are caused by matter. For in every such production of consciousness there is a disappearance of physical energy, unless energy is also attributable to consciousness. The last view is so objectionable on many grounds to materialists, partly because it opens the possibility that mind can predominate over matter, if they have avoided working it out. Lastly, it is generally admitted that materialism cannot explain even the simplest type of conscious process. The difficulty of conceiving how a sensation or a feeling could be the necessary consequence or effect of motion in matter or mass-points, and of imagining how mathematical physics would cope with such a possibility, is overwhelming; and, of course, it has never been faced.

4. Recent substitutes for materialism: hylomorphism. It is not surprising, under the pressure of all these difficulties and in the light of the self-criticism to which the doctrine has of late been subjected, that materialism should at the present time be a practically abandoned philosophical theory. Useful as a method, it is wanting as a metaphysic; and representatives of natural science with something in common, as mathematical physics asserts for its necessary postulate—living. Thus J. Tyndall was willing to endow primordial matter with 'the promise and potency of life'; and W. K. Clifford, in his mind-burst hypothesis, and Haeckel, in his imaginative theory of atoms indwelt by rudimentary souls, go yet further, and couple hylomorphism with pan-soulism.

Hylomorphism is as ancient as the Ionian school of Greek philosophy, and was taught in a crude form by Thales. The Stoic doctrine of a world-soul is another form of it, revived and developed by several thinkers in the period of the Renaissance (Parsius, Leibniz, Br. Bernhard, London, 1897, p. 304).
While Kant thus saw that hylozoism meant ruin to science in so far as it involves the calculability (by an intelligence higher than ours, though strictly finite like that imagined by Laplace) of all past and future states of the world from a sufficient knowledge of the position and motion of each of its mass-points at any given moment, modern upholders of the mind-stuff hypothesis, and the Cusanian idealistic physics, have not been so clear-sighted. They would retain materialism, for all intents and purposes, while changing its name. Qualitative monism is, indeed, in all its forms a position of unstable equilibriums; or, to change a metaphor, it is a half-way house (for temporary lodging) between materialism and spiritualism. And, as retreat upon materialism becomes more and more impossible, as hylozoism is seen to possess greater capacity to explain actuality than the doctrine of dead and absolutely inert matter, and as, finally, life means the power to act or change according to an internal principle, while only one such principle is known to us—thought, together with feeling, desire, and will—which depend upon it—it will doubtless come to be more and more plainly seen that the implications of natural science are not materialistic but spiritualistic.

F. R. TENNANT.

MATERIALISM (Chinese).—Chinese religion and philosophy have been declared by many writers to be materialistic, and hence the tendency to regard materialism as a special creed taking rank with Confucianism, Taoism, and Buddhism. This view implies a misconception of materialism: a philosopher who does not believe in a material world, or who assigns to a Supreme Being a substantial body, is not a materialist. Materialism assumes matter to be the only basis of reality. This is a cosmological materialism, to be distinguished from 1st ethical materialism, which sees the aim of life in egotism, pleasure, and sensuality. Both are to be found in China, but it is not at the root of her great religious systems, although materialistic tendencies may be found occasionally. Nor does a materialist think of imputing materialism to the Buddhist faith, which teaches that the visible world is nothing but a semblance, a vision without any reality. Taoism takes a similar view: there exists no life except Tao, the Absolute, a supernatural, incomprehensible entity. But how about Confucianism, which has often been described as materialistic? Confucius himself owned to a "benevolent agnosticism," declining all metaphysical speculations, but was not averse to popular beliefs and customs. To a disciple asking him about death he replied, "While you do not know life, how can you know about death?" and on another occasion he made the following remark to the spirit, "keep aloof from them." He believed in a superior being which he called Heaven, but never used the personal name God—a fact by which he laid himself open to the charge of polytheism. Probably he had no clear notion of heaven, but certainly he did not conceive it as an anthropomorphic god. Still more than Confucius himself his followers, especially the philosophers of the Sung period (12th cent. A.D.), hold that there is no materialism, but unjustly. The system of Chu Hsi, the head of this school, is a pure dualism. He recognizes two principles, matter and reason, and to the latter even concedes priority. Out of their combination the world was evolved. Matter splits into the five elements (metal, wood, water, fire, and earth); reason is the life-spirit, which also contains the virtues (benevolence, righteousness, propriety, and knowledge).

Another kind of dualism, savouring much of materialism, was in vogue in ancient China, and seems to have been known as the Huang Hsi's philosophy. At the earlier stages of civilization, religion, philosophy, and sciences are usually not yet separated. So it was in China, where we meet with the dualistic theory of yin and yang in Confucianism as well as in Taoist works. It was the first germ of a natural philosophy universally accepted by the Chinese irrespective of their religious convictions or philosophical ideas. In the commentary to the Yi King ascribed to T'ao-se, the grandson of Confucius (5th cent. B.C.), we read that the origin of existence is due to the cosmic dual forces yin and yang, which are the bright, male, generative principle; yang the dark, female, receptive principle; yin the heaven, yang the earth. Most Chinese critics look upon these principles as material substances—an interpretation open to doubt. But we have another telling the Taoist writer Lieh-tse of the same time, saying that he at least considered the yin and the yang to be substances. The evolution theory, though not quite scientific, reminds us of that of modern naturalists.

The sage of old held that the Yang and the Yin govern heaven and earth. Now, form being born out of the formless, heaven and earth take the same course: there was a great evolution, a great inception, a great beginning, and a great homogeneity. During the great evolution, Vapours were still imperceptible, in the great inception Vapours originate, in the great beginning Forms appear, and during the great homogeneity Substances are perceived. Light and light matter becomes the heaven above, the turbid and heavy matter forms the earth below. (Lieh-tse, L. 37.)

No divine being intervenes in the creation of the world, and yet we are not justified in calling Lieh-tse a materialist, for, notwithstanding this materialistic theory, the highest principle remains Tao, a spiritual being which alone is endowed with reality; the world with all its changes is imaginary.

At an early age the Chinese had further developed this dualistic theory of yin and yang by enlarging on the working of the five elements which were conceived as physical and as metaphysical essences as well. They were believed to predetermine and vanquish one another in regular turns, thus bringing about the four seasons: in spring the element wood reigns supreme, in summer fire is the master, in autumn metal and in winter water; to earth there is no corresponding season. The elements have their seat in different directions: wood in the east, fire in the south, earth in the centre, metal in the west, and water in the north. They are ruled by five deities, the genie of the seasons and the four quarters.

Whereas this attempt at natural philosophy is nothing but a medley of heathen and less fanciful, though the old dualistic theory was transformed into a consistent materialistic system by the sceptic Wang Chung (1st cent. A.D.). From various attendances it would appear that he thought of yang as a fiery and aggressive element. The former produced the sun, the moon, and the other stars of heaven, while from water and its sediments earth, the oceans, and the atmosphere were developed. Both fluids are in constant movement and are unfettered in the pursuit of any intelligence or subservient to the purpose of any spiritus rector; it is spontaneous and regulated solely by its own inherent natural laws; heaven and earth do not act on purpose, but are endowed with consciousness. Wang Chung rejects all anthropomorphisms which have clustered
round the idea of heaven or God. The human body is formed of the two fluids, the yin producing the body, and the yang the vital spirit and the mind. At death they again disperse, the yang or heavenly fluid, returning to its original state of unconsciousness. Consequently there can be no immortality, which Chu Hsi likewise disclaims.

Wang Ch'ung's materialism has not had any serious influence on the Chinese people, not because they had a horror of materialism, as many Westerners have, but owing to Wang Ch'ung's bold criticisms on the national sages, Confucius and Mencius, and they have never concurred. So far as we know, Wang Ch'ung is the only Chinese thinker who set forth a scientific system of cosmological materialism.

Already in the 4th century B.C., the materialistic doctrine formulated by Yang Chu, the philosopher of egoism and pessimism. He maintains that in human life happiness is far exceeded by misfortune, and that this is the result of the baddness of the human soul itself. The practice of virtue is of no avail, because in this world the wicked thrive, and the virtuous are visited with disasters. Therefore men ought not to harass themselves in the service of comestible or useless aims such as wealth, honour, or fame, or sacrifice themselves for others, but should enjoy their short span and be satisfied with the good that they have, for with death everything ends. In consequence of the vehement impositions of Mencius this doctrine has never got a hold on the Chinese mind.

Both Yang Chu and Wang Ch'ung have been long buried in oblivion, until they were redeemed from it by the congenial interest of foreign admirers.

MATERIALISM (Indian).—1. We possess several comparatively modern works which set forth the various philosophic systems of India, e.g., Samvat Chaturth, (1) and Exposition of the Six Systems. (2) The systems are arranged in the order of their increasing orthodoxy, from the author's point of view: the first, for which, as we shall see, materialism is a suitable name, is the worst of all, and the only one which is expressly in contradiction with the general conception of Indian philosophy and mysticism.

In more ancient sources—in the Mahabharata, on the one side, and in the Buddhist scriptures, canonical or scholastic, on the other—we find data concerning this materialistic system which are scanty but generally in agreement. (3)

As regards the sources that would give us direct

1. For the Mahabharata see E. W. Hopkins, The Great Epic of India, New York, 1901, and the works on materialism in general, as The Natyacaryamati, (Mahabharata), 1. 6 (Fr. L. D. Barret, Temple Classics Series, London, 1905, p. 185).

2. For the Mahabharata see E. W. Hopkins, The Great Epic of India, New York, 1901, and the works on materialism in general, as The Natyacaryamati, (Mahabharata), 1. 6 (Fr. L. D. Barret, Temple Classics Series, London, 1905, p. 185).

information about the materialist school only, a few citations can be brought forward, and their authenticity is not certain.

We are not convinced that a materialistic school, a systematic, in the exact sense of the word, existed. There have been 'materialists' who have entertained some very well-defined theories, 'spiritualists,' whether Brahman, Buddhists, or Jains, give different names, and whose opinions are, perhaps artificially, grouped in the works of which we have spoken. The most characteristic name is Nāstikas, literally 'deniers,' 'misbelievers,' those who say na asti, (x). The most famous are (a) Chārāvakas (difficult to interpret; Chārāvaka is said to be the founder of the sect; he is undoubtedly the author of the Brāhmaṇḍa). (b) Lokāyata, 'worldly,' spread throughout the world. (c) The term, which, according to T. W. Rhys Davids, denotes primarily the knowledge of nature, and whose adherents are said to be the materialists of the Nāstikas, as the first two: (d) the Bābhāsaptas, disciples of Bṛhaspati (the head of the Vedic gods and the lord of wisdom).

2. In the Buddhist system, the doctrine of materialism is attributed to 'Ajita of the garment of hair,' one of the scholars and famous ascetics of the time of Buddha. He said:

'There is no such thing as sins or sacrifice or offering. There is neither fruit nor result of good and evil deeds. There is no such thing as this world or the next. There is neither father nor mother, nor beings springing from life with its own being. People are in the world no recluses or Brahmans... who, having understood and realized, by themselves and their friends, the next, make their wisdom known to others. A human being is built up of the four elements. When he dies, the matter in him returns and relates to the earth, the soil to the water, the bone to the fire, the windy to the air, and his existence, the next, becomes the drink of the ocean or the ocean of the sea.'

The four bearers, on the lion as a fifth, take his dead body away; till they reach the burning-ground man atter forth edics, but there his bones are bleached, and his offerings end in ashes. It is a doctrine of fools, this talk of gift. It is an empty lie, mere idle talk, without profit to the hearer or the dissolution of the body, are cut off, annihilated, and after death they are not. (4)

It will be seen (1) that these formulæ show a really authentic character. They are quite independent of Buddhism, for the Buddhists do not believe much more than Ajita in the use of sacrifice and offering. Perhaps they come from the Agnikus or Jattus (ascetics who give up all things, who have braided hair), who entered in large numbers

1. Citations in the summaries mentioned in note 1 and 2 on the previous column; and also in the Buddhist sonnets (see p. 394, n. 4). See also art. LOKATAYA.

3. See also the art. LOKATAYA.

4. Dīgha Nāgārjuna, 1. 55; Samvat Chaturth, 3. 207; Mahāyāna Nirvāna, 1. 51, and also in the Sankrati sources. This passage is often translated. The version reproduced above is that of Rhys Davids, Dialogues of the Buddha, 1. 75. The book should be drawn to those of F. Burnouf (La Litté de la bonne loi, Paris, 1880), P. Grimaldi (Sept Sutras gédas, do. 1876), and O. Franke (Dīghakāya in Ausdruck und Bedeutung, 1. 1913). The sacred writings of the Jains contain the same evidence, and confirm the Buddhist tradition (see H. Jacob, Jaina Sutras, ii. pp. 333, 341; 280 Mr. (1890))

A more complete study would describe the philosophy of Pārāsara Kasṣapa, another materialist content, (4) who denies responsibility, and teaches what is called the 'theory of non-action': 'If with a discus an edge sharp as a razor he should make all living beings with one cut, one piece of flesh, there would be no guilt to blame for, not by increase of guilt would essence be destroyed. The discussion is conducted by Makkhali, who denies liberty: There is no such thing as power or energy, or human strength or human nature, or the connection; and they, by their nature, come and goes very near the well-known point of view of the materialists, namely, the question of the weakening of human activity (aṇupata). It was Buddha who said that fate (dāna) is only the sum of our former actions.
MATHURA

into the primitive community, and for whom the time of novitiate was shortened because they believed in the retribution of actions.

(5) Ajita does not believe in life after death or rebirth; he believes only in the four elements—earth, water, heat, wind, conceived in a materialistic sense; he therefore denies the fifth element, consciousness or cognition (vijñāna), which, under different names and in different manners, constitutes the orthodox or spiritualistic systems, the essential of what the West calls the soul. The doctrine attributed to the materialists by later sources, viz. that 'thought develops in the human body from a special mixture of the elements like the intoxicating power of the fermentation of the grain or the juice of the sugar-cane,' arises quite naturally from this ancient theory of Ajita.

(6) Ajita denies the fruit of good and bad actions, and, consequently, morality. He is a Nāstika, a 'denier.' He certainly denies sacrifice, supernatural births, etc., but, of all these denials, the denial of the renunciation of good and bad actions is the most monstrous. The Buddhist works teach that false opinion (mithyādṛṣṭi) consists essentially in this denial, which destroys the roots of merit and causes a man to commit all kinds of sin.

Ajita's doctrine of 'unbelievers,' 'deniers,' are usually 'libertines,' if we believe our sources, which attribute to them sayings like the following:

'As long as we live we ought to live happily, enjoying the pleasures of the senses. How can the body reappear after it has been reduced to ashes?'

What leads us to believe that there was, properly speaking, a materialist school, is the double philosophical theory that our texts attribute to the deniers.

(1) The only means of knowledge (pramāṇa) is the immediate evidence of the senses. All orthodox Indian schools are wrong in appealing to induction (anumāṇa) or to authority (the word of a competent person, of an omniscient being, guru, or of the Veda).

A sentence belonging to the literature of the materialists says: 'There is nothing in man except what is visible to the senses. Look, dear friend, at what these so-called scholars call the traces of the Buddha.' A man who wanted to convert—let us say 'pervert'—a woman to his materialist opinions, went out of the town with her, and on the dust of the road he drew with the thumbs, index fingers, and sides of the fingers of his two hands, marks resembling the footprints of a wolf. In the morning the scholars said: 'Assuredly a wolf came last night from the forest; for otherwise it would be impossible that there could be a wolf's footprints on the road.' And the man said to the woman: 'See, dear friend, what clever thinkers these men are who maintain that induction proves the existence of supra-sensible objects, and who are regarded as scholars by the crowd.'

(8) Denying induction, these philosophers without philosophy are forced to deny causality. The name Svabhāvikas is given to the scholars who

Among the questions which the Buddha refused to examine (see A. B. Bierbrodt, pp. 214, 273), there is one: 'Is the vital principle (jīva) the same thing as the body (kāraṇa)?' The Buddha condemns the two opposite opinions and constructs a middle way.

In order to exhaust the Pāli material on the question of materialism, we must read also the Pāñjika-Buddhārtha (see the tr. in Rhys Davids, op. cit. II. 347, in which there is a discussion materialistic and non-materialistic, another world, gods, etc., but also on the existence of the soul.

believe that things, the colour of the lotus and the sharpness of thorns, are not produced by causes; they are because they are.

(1924) 104; L. Skuel, 'Materiaux pour servir à l'histoire du materialisme indien', Museum, ii. (1903) 277. Besides these special works see J. B. Coleridge, Essays on the Religion and Philosophy of the Hindus, London, 1858; A. Barth, Die Religion der Hindus, do. 1905, Index; F. Max Müller, The Wes System of Indian Philosophy, do. 1866, pp. 94-104.

MATHURA (Muttra).—The name Mathura, or Muttra, is borne by both a district and a town in the United Provinces of Agra and Oudh. The District (1445 sq. m.) lies to the north of the Agra District, and includes many places sacred to the worship of Kṛṣṇa, the most notable being the small towns of Brindāban, Gobardhan, Gokul, and Mathura (q.v.). Mathura town or city stands on the right bank of the Jumna, on the main road from Agra to Delhi, in 27° 39' N., 77° 41' E. (pop. in 1901, 60,042). The city, which is of immemorial antiquity, was first by early Hindu writers in the country of the Shā大夫 (f.), and was visited by Ptolemy (c. A.D. 140) to be one of the three cities of the Kasaipairi. He calls it Madura (Μαδύνα), 'the city of the gods' (VII. 1. 30). Arrian writes the name as Mathus (A. H. I., 5. 5), and Pliny (HN. VI. 19) uses the same spelling.

An alternative Hindu literary name was Madhūprā, now represented by the village Maholi, which is so close to the city as almost to form one of its suburbs (Gawae,ā, B. A. E., 407). In Kāśī, which destroyed the temples, changed the name to Islāmābad or Islāmāpur (10. pp. 35), but the new name never became current (see N. C., 4th ser., ii. (1902) 236). The city was plundered by Mahāmān of Ghazni in A.D. 1018-19 and again by Abū Saīd Sūrānī in 1275. The greater part of the District came under British rule in 1803.

Mathūrā, one of the seven sacred cities of the Hindus, is second only to Benares in sanctity. The city and the western half of the District, known as the Brāj-mandar, are now associated almost exclusively with the legend and cult of the cow-herd demi-god Kṛṣṇa, but the locality as a whole was sacred to Jains and Buddhists as it was to Brāhmanical Hindus. The literature concerning the religious history and antiquities of Mathurā is extensive, and new objects of interest are constantly coming to light. It is impossible here to do more than indicate the importance of the locality in the history of Indian religions and the exceptional interest of the broken remains which have escaped from repeated Muslim violence.

Mathurā, being situated between the Muḥāmadan capitals of Agra and Delhi, was specially exposed for centuries to iconoclastic attacks. Hardly any ancient Hindu importance is now standing, and the valuable sculptures which make the district famous among archaeologists are mostly discovered by excavation. The sculptures and remains of buildings in an extremely fragmentary state are found in the city and for many miles around.

The objects connected with the Jain cult have been discovered for the most part in the Kankali or Jain Tīlā (mound) to the S.W. of the city, which was the site of two Jain temples, one Digambara and the other Svetāmbara, as well as of a remarkable stūpa, the only Jain monument of the kind about which details are known. In its earliest form it dated from remote antiquity, possibly as early as the 4th century B.C. The Jain faith was vigorous in the Kushan period early in the Christian era, and the images found came down to the 11th century. At the present day Jainism is unpopular in the Matrucheta District, their principal settlement being at Kosi, where there are three temples.

The numerous Buddhist remains, which are of great interest, disclose the former existence of an important monastery founded by Huvška Kushan, probably early in the 2nd cent. after Christ. In Fa-Hian's time (A.D. 405) there were twenty Buddhist monasteries with some 6000 monks in the neighborhood of Mathurā. Fa-Hian travelled, more than two centuries later, the number of monks had diminished. The Muhammadan attacks from A.D. 1018 onwards wiped out the Buddhist asceticism in the region. From inscriptions indicating that the popular Buddhism of Mathurā included a sensual erotic element, which probably has contributed to the subsequent development of the Radha and Kṛṣṇa worship now specially associated with the Mathurā region. Nāga worship was much practised during the Kushan period.

Brāhmaṇical Hinduism appears to be the most ancient of the Mathurā religions. The Greek writers call the chief local god by the name of Heracles, and the sculpture representing the fight of Herakles with the Nemean lion is one of the most famous of Mathurā antiquities.

The temple of Kesava Deva at the Kotra on the western side of the city, rebuilt early in the 17th. cent., was described by J. B. Tavernier (c. A.D. 1650; Travels in India, tr. V. Ball, London, 1889, ii. 240) as 'one of the most magnificent buildings in all India.' Amrakub destroyed it in 1669, and built a mosque on the site. All the old Hindu temples in the city were destroyed by the Muhammadans at one time or another.

Archaeological evidence shows that the cultus of Kṛṣṇa was well established as early as the 4th and 5th cent. after Christ (Buitrari inscr. of Skandagupta, c. A.D. 456; sculptures at Mandor in Mathurā, c. A.D. 450-65, p. 140). In 1445 the Vaśāsna cultus of Mathurā in its present form was not developed until the close of the 18th. cent. under the influence of the Bengali Gosains of Brindānā. The history and character of the cultus are well described by Guvrā, to whose book the reader is referred. The great temple of Vīgān under the name of Rāng Jī, built between 1845 and 1851 by local merchant princes, is remarkable for its special features. It is 4½ miles across.

The Notorious erotic sect of Vaśāsna founded by Vallabhachārya (g.n.) (born A.D. 1479) has its headquarters in the town of Gokul, one of the Christian missions (Baptist, Church Missionary, and Methodist Episcopal) is established in the city.

had said: 'The bird, transported with joy at sight of me, unconsciously utters its melodious notes. On account of this good deed, after my Departure (Nirvāṇa) this bird shall be born in human form, and named Mātrūṣa; and he shall praise me with transport in the estimation of the wise.' (Record, tr. Takakusu, p. 156 f.). We recognize here one of the prophecies (āyākaṇga, nivakṣṇa) narrated in connexion with many Buddhist divinities and others, in the Jatakas. We also have another interpretation of the name of Prakṛt form, Mātrūṣa = mām atichitta, 'transported with joy (at sight of me).'
However this may be, we have in Mātrūṣa's own work (Varṇaṇārasayana, vv. 1-3 and 80 f.) arguments both to the previous heretical poems and to the supposed prophecy of Buddha.

The remainder of Mātrūṣa's career may be recorded in the words of Tānānta (tr. Schiefer, P.):

'At the time when Mātrūṣa was converted to the Buddha-dogma, the number of heretics and Brāhmaṇas in the Viharas of the four quarters, who had entered the order, was very great. It was thought that, if the greatest ornament of the Brāhmaṇas, Dharma, had shaken of his own system like the dust of his shoes and turned to the Buddha-dogma, that Buddhist dogma must be in truth a great marvel. Consequently there were at least more than a thousand Brāhmaṇa monasteries and an equal number from the heretics. The Āchārya, being full of great service to religion, collected on his daily penamala his daily alms food for the sustenance of the two orders of Brāhmaṇas. He also entered a ten-day fast and lent all the two orders of monks and the two orders of priests the totality of food, whereafter he entered a fast of two hundred and fifty days in contemplation and two hundred and fifty days in studying, leaving them to their uninterrupted occupation.

The hymns composed by him are also spread abroad in all lands: and finally the scholars and scribes of India have discovered and faith in Buddhism grew mightily among all the people in the land, greater service was, through the hymns, rendered to the spread of the dogma. Towards the end of his life he received a letter from the king of a certain country, and did not answer it. But after composing thirty-four he died. According to some biographies, it is related that, having reflected that the Bodhisattva had given his body to a tigress and so forth, he had thought he could do the same, as it was no uncommon act. Seeing, accordingly, a hungry tigress attended by her young, he essayed to surrender his body, but at first could hardly accomplish it. But, when a still stronger faith in Buddha was kindled in him and he had with his own blood written down the prayer in seventy verses, he first gave the tigress his blood to drink, and then went into a weakened frame a little strength, and then surrendered his own body. Others assert that the personification which was an Āchārya Parabuddhabhavaktu, who came after Mātrūṣa. The latter composed the abstract of the Prakṛt form and many other Śravakas, and brought many observations to the Brāhmaṇas of both the Great and the Little Vehicle; as he (Mātrūṣa) did not confine himself to the Mahāyāna, and the Brāhmaṇas were very devoted to him, he is greatly renowned as a general hero of the orthodox.

The testimony of I-taing, earlier by some 900 years, is not less emphatic (p. 167 f.):

'He composed first a hymn consisting of four hundred dokas, and afterwards another of one hundred and fifty. These charming compositions are equal in beauty to the heavenly flowers, and the high principles which they convey rival in dignity the lofty peaks of a mountain. Consequently in India all who compose hymns imitate his style, considering him the father of literature. Even men like the Bodhisattas Advata and Vatsambhada admired him greatly.

Throughout India every one who becomes a monk is taught Mātrūṣa's two hymns as soon as he can recite the five and ten paragraphs (śīla).

This composition is adopted by both the Mahāyāna and Hīnayāna schools. There are many who have written commentaries on them, nor are the imitations of them few. Bodhisattva Gāñga (Dignaga) himself composed an imitation. He added one verse to each of the one hundred and fifty verses, as if they became thirteen verses each, and called them "Mixed" hymns. A celebrated priest of the Deer Park, Śravastī, composed one verse to each of Gāñga's verses, and consequently they amounted to four hundred and fifty verses (dōkas), called the "Doubly Mixed" hymns.

Mātrūṣa's poetry includes Nāgaraṇī and Asvaghosa among those who imitated Mātrūṣa. The renown and influence echoed in these statements are further substantiated by the fact that the two hymns particularized were translated, as well as others, into Tibetan, and one of them, the 'Hymn in One Hundred and Fifty Verses' also (by I-taing himself) into Chinese; moreover, the originals have been found in various fragments among the MS trouvailles from Chinese Turkestan, so that in due time it will be possible to form a first-hand appreciation of the three forms. In either case, it is useless to base our estimate upon what has already been made public and upon the very literal Tibetan versions and the English rendering of a portion of the Yāstikā of the Vātsya of Asvaghosa, and of the whole Epistle to King Kaniska.

The former, the 'Delineation of the Worthy to be Delineated,' is represented with obvious correctness as the earliest of the author's Buddhist compositions. Abjuring his previous heretical poems, he celebrates with great verve and abundance of poetic imagery the peerless excellences of Buddha and his doctrine. The hymn consists of four hundred verses, divided into twelve chapters with separate titles.

The 'Hymn in One Hundred and Fifty Verses' is quite similar in style and matter, as may be seen from the fragments already published, extending to about half of the poem. The so-called version (saunagata) with one hundred and fifty additional verses by Dignaga, constituting the 'mixed' (mudraka) hymn, quite corresponds to the description of I-taing quoted above. The origin of Sakyadeva is not known. Concerning the minor hymns nothing need be said.

There are also two short tracts in verse, entitled respectively Chaturuparaya-yāktha and Kāliyugapurāṇakaṇṭha, the former treating of the miseries and deceptions of life, and the latter of the evils of the present Iron Age.

Undoubtedly the most interesting of Mātrūṣa's writings is the 'Epistle to King Kaniska' (Mahāyānakarikā). Beginning with excuses for not accepting the great king's invitation and for boldness in offering advice, he proceeds to counsel the young sovereign as to his moral policy, concluding twenty out of eighty-five verses containing a pathetic appeal on behalf of dumb animals and depressing the chase. The latter topic was familiar on Buddhist lips, as we may see from the Edita of Asoka. The whole epistle is full of mildness, gracious courtesy, and moral worth; that it is an old man's writing appears on the surface, and no doubt it is the latest of Mātrūṣa's compositions.

The statement that Mātrūṣa set the type for all later hymnologists is certainly so far true that all subsequent stotras are in the same form. This may fairly represent his quality as a poet: he displays great art in the use of language, much rhetorical skill, flow, and copiousness of matter. But the abstract nature of his conceptions, which are largely concerned with the dogmatic characteristics of the person and teaching of Buddha, and in consequence their often conventional character, place him upon a different level from his junior contemporary, the author of the Buddhachārīتا. Concerning the other writers who have been identified with him, Arya-Sūtra, Tiratnandana, and Dhamika-Suṣūnā, reference may be made to the literature given below.'
In metaphysics, matter is one of the ultimate principles or 'substances' of which phenomena are appearances or manifestations (dualism), or the sole substance in terms of which the universe is ultimately to be explained (materialistic monism, or materialism [q.v.]). In this sense matter is the reality, unknowable in itself, which underlies the properties of all particular things, and which properties inhore, or by which, as impressions made on our senses, they are catted. It is the support, or substratum, of such qualities, supposed to be necessary in order to explain, in any given case, their constant coexistence as a group. The British empiricists, Locke, Berkeley, and Hume, minimized the importance of the conception of substance. Locke found the concept obscure and of little use; Berkeley dismissed matter as an abstraction and a superfluity; and Hume similarly banished spirituality. Kant retained the conception in the sense of the permanent in all change. Modern phenomenology, in so far as it preserves at all the concept of substance, and consequently of matter, regards it as denoting an unknown extant upon which physical properties somehow depend.

In the physical sciences, matter is the substance —not in the sense of a metaphysical first principle, but rather in that of the 'stuff' —of which the sensible universe is composed. Its supposed action upon our sense-organs and nervous system gives rise to the totality of changing physical phenomena. Physical science dispenses with metaphysical 'matter', as perhaps an anthropomorphism, and employs 'matter' to denote simply what is common to all material or sensible bodies, after subtraction of all their particular and diverse characteristics. In the time of Descartes, Boyle, and Locke, a distinction was drawn between the primary and the secondary qualities of matter. The properties regarded as primary were extension, figure, and solidity, or impermeability; and these were supposed to inhore in matter, and to be in no way conditioned by our mind. The secondary qualities, such as colour, sound, and taste, on the other hand, were held not to subsist in matter itself; the idea that we have of them were not supposed to be copies of anything existing independently of the mind. It is doubtful whether in this respect there is any difference between the primary and the secondary qualities; and modern science retains the distinction only in so far as it tends to resolve the secondary qualities into quantitative relations, and to describe them in terms of analogies with the primary.

Absolute impenetrability, as a universal and essential property of matter, is not suggested by actual observation. Indeed, it was in all probability the observed penetrability of gross matter, especially in the gaseous form, that next to the inert and immovable the properties of matter in terms of its atomic constitution. The happy guess of Democritus, scarcely based upon experiment or observation, was revived as a genuine scientific theory at the beginning of the 19th cent. by Dalton. The observed fact, which seems to have thrown up the idea of atomic hypothesis, was that chemical elements combine with one another in definite and invariable proportions by weight. This would naturally ensure if combination were the union of one or more atoms of another, the atoms of each element being precisely alike in weight and in other respects, but different from those of other elements. The atomic theory has ever since Dalton's time been the foundation of the science of chemistry; and without such hypothesis its facts and laws would be unintelligible.

But the notion of simple, impenetrable, hard elements, such as Democritus postulated, is not free from difficulties. These atoms must be endowed with elasticity if they are to serve to explain certain physical phenomena; and this is incompatible with their simplicity. Difficulties of this kind led to the suggestion of Boscovich, that the atoms composing matter are not extended, hard bodies, but points, and centres of attractive and repulsive forces —forces whose magnitude varies with the distance between the points, but in such a way that no force, however great, can bring the points into coincidence. Thus extension and impenetrability were eliminated from the properties of the atom; but Boscovich's theory was not generally accepted because of the scientific prejudice against 'action at a distance', or, in other words, because of the ingrained tendency to regard interaction between atoms to be conceivable only in terms of the kind of action with which we are familiar, viz. contact action, collision or pushing.

Another hypothesis as to the nature of the atom, and, therefore, as to the constitution of matter, is that devised by Lord Kelvin, according to which an atom is a vortex-ring of 'ether,' in an ethereal plenum capable of transmitting vibrations or waves. This hypothesis escapes at the same time the difficulties attending the notion of the impenetrable, solid, elastic atom, and those besetting the idea of action at a distance, or between isolated points. The ether had been postulated to explain the phenomena of light, and, later, those of electricity and magnetism. It was supposed to explain the constitution and properties of matter. It has not furnished an explanation of gravitation, and it seems to require modification if it is to supply a mechanical representation of what physicists call an electric charge. Inasmuch as the ether is non-material, it is indeed unreasonable to expect it to admit of mechanical description; for mechanical conceptions are derivable only from acquaintance with matter. On the other hand, the success which has attended such mechanical, or semi-mechanical, descriptions suggests that, if ether be not matter, it is at any rate very like it.

Lord Kelvin's kinetic theory of matter, which resolves matter into non-matter in motion, differs from that of Boscovich in that it offers a plenum instead of isolating and empty space; this plenum provides for action and reaction without the aid of the notion, distasteful to physicists, of action at a distance. It differs again from Newton's in dispensing with hard atoms, while furnishing atoms which are not only extended, but also in virtue of their rotational movements, elastic. It has been claimed on behalf of this kinetic theory of matter that it enables the physicist to deduce material phenomena from the play of inertia involved in the motion of a structureless primordial fluid, and so achieves the ideal of ultimate simplification which scientific description or explanation seeks. This is so, though it must be borne in mind that the explanation attained is an explanation of the world only as it has been first artificially.
simplified by science. The further claim that physics is thus capable of reduction to a branch of pure mathematics is, however, not allowable; in going too far it refutes itself. For physics professes to deal with the real or sensible material world and the ideal things of mathematics becomes more and more abstract, into 'pure' physics; but then it is no longer a science of the real, but only of the ideal or conceptual. Conceptual or pure science applies to the real world, indeed, but only partially or approximately. It is not only its subject describes the world in one aspect only, and leaves others out of account. Thus pure or abstract science of the material is valid, within limits, for economical description; it is not adequate to full explanation. That this is true in particular of the kinetic theory of matter can be seen at once when we grasp the fact that the primordial fluid — the nons-matter to which matter is reduced, or which science substitutes for matter — is not a real thing, but an abstraction. A perfect fluid, in the first place, is a fiction, not anything known to observation. In the second place, Lord Kelvin's medium, in so far as a mechanical philosophy, has but essentially terms incapable of division, pressible, frictionless, inextensible, and structureless, in no respect from empty space. The one property in virtue of which it has been argued that no other differs from it is the property of mass. But, as Ward has maintained (Naturalism and Agnosticism, vol. 1. lect. v.), inertia, in the qualitative sense, does not suffice to supply determinate limits to the primordial fluid; inertia is a property of matter, but not of modes of motion, and it is precisely the property of mass in molar bodies that, as both Clerk Maxwell and Lord Kelvin recognized, the kinetic theory of matter fails to explain. This theory is the subject of investigation, and, therefore, belongs to the realm of symbolic description, not to that of explanation or interpretation. Science, indeed, in its higher or more abstract reaches, falls so far short of furnishing, as it was once jubilantly asserted to furnish, a complete philosophy of the world in terms of Newtonian mechanics that it professes to do no more than describe natural phenomena in so far as these are to be regarded as changes in the motion of masses. It abstracts from the qualitative properties and changes of matter, because these are not amenable to scientific method, and replaces them by hypothetically representative movements of ideal 'molecules'. But, as a philosophy for perceptual experience, is not only one in kind for abstract science; as the goal and limit of abstraction is reached, or as physics passes into pure mathematics, matter becomes indistinguishable from space. It may similarly be shown that causality is eliminated by abstract science, and replaced, for descriptive purposes, by identity change being explained and further explained until at last it is literally explained away. The development of scientific generalization in the direction of the ideal of unification and simplicity has thus not established a materialistic metaphysics or a mechanical philosophy, but has only provided a provisional symbolical description of certain aspects of the material world, valid so long as other aspects may be neglected. Such is the philosophical outcome of the scientific mode of dealing with matter.

Until recently matter was regarded as divisible only so far as to the chemical atom. There were held to be some four score fundamentally different, simply irresolvable, kinds of matter. Matter was the primary concept of the physicist, and electricity was described more or less in terms of it. Matter was held to be strictly unchangeable in its elementary forms, the atom being supposed to be indestructible. Quite lately, however, all these beliefs have been reversed. It has been found, by a series of researches mainly conducted at, or in connexion with, the Cavendish Laboratory, Cambridge, that the atoms are not simple, but that portions of them can be split off and exist separately, and that they do, as is called by J. J. Thomson 'corpuscles', are identical, from whatever different kinds of atoms they may have been broken off, and possess the same mass or inertia. Thus it has become necessary to regard the atoms as containing quantitatively the two terms of their differences, as built up of parts or corpuscles which are identical. Further, the corpuscle has been found to bear, or to be, a constant electrical charge (electron). Corpuscle and electron would seem to be identical, because the whole mass of the corpuscle appears to be due to its electric charge and its motion. Thus 'mass,' the most fundamental and characteristic property of matter, becomes resolvable into an electrical phenomenon; the electron is the fundamental unit alike of electricity and of matter, and matter is explained in terms of electricity. An atom, in fact, is composed of a large number of units of negative electricity (electrons or corpuscles) associated with an equal number of positive units of electricity.

The full importance of the discovery and isolation of electrons has not yet been realized; it is that of introducing a new mode of dealing with matter, because they serve to explain the cause of the excitation of the ether-waves which produce light, and also render comprehensible other phenomena not belonging to the theory of matter. But it may be noted that the atomic (or, rather, the ultra-atomic) structure of matter, hitherto a supposition or indirect inference, has at length been experimentally demonstrated. The recent discovery of a new kind of radiation and other radio-active substances have led not only to the proof that the chemical elements are transmutable — helium, e.g., is produced by the breaking up of radium — but also to the revelation of single atoms.

'Single atoms of Helium, shot off by Radium as rays, have been revealed in two ways. Each atomic projectile produces a long train of electric ions as it passes through a gas before its energy is exhausted, perhaps by knocking loose corpuscles cut of the molecules it encounters. Rutherford has shown that the corpuscles are particles of the helium atom struck by the slow throw of the needle of the instrument. Secondly, the ion acts as a nucleus for the attraction of other rays of the same kind, and, in this way, C. T. R. Wilson has made visible as a line of cloud the track of each particle' (W. G. D. and G. A. Whetham, Science and the Human Mind, London, 1914, p. 253). Recent progress in science has thus furnished new light upon the question of the constitution of matter. But the ultimate question as to what matter is remains, as before, unsolved, and perhaps, as P. G. Tait (Properties of Matter, Edinburgh, 1885, p. 14) seemed to think, insoluble. To have learned that matter is electricity is not to have diminished the mysteriousness of its nature. To physical science indeed, matter, like a 'thing' or a 'fact,' is a datum. The data of science, however, are for philosophy or the theory of knowledge constructs. Hence it is to philosophy that we must betake ourselves if we are to hold up further elucidation of the problem contained in the question what matter is. As we have already seen, the more abstract departments of science cannot help us, because they proceed from an artificial definition of matter derived simply to make abstract science a possibility.

'The bodies we deal with in abstract dynamics are just as completely known to us as the properties of matter to which we explicitly assign to them' (J. Clerk Maxwell, in Nature, xx. (1878) 214).

The fundamental property thus conventionally assigned to matter with a 'let it be granted' is mass or inertia; and the science of matter is then
valid of matter if it be wholly inert, or in so far as it is characterized by inerina. Whether any matter is wholly inert is a question; that everything is inert must be denied. The concept of matter is no less for a materialistic metaphysic.

For other philosophical questions connected with matter see art. Materialism.

F. R. T. N. T. N.

MAURICE.—The position of Frederick Denison Maurice (1805-72) in the history of English 19th century theology is difficult to define. He regarded himself as a simple old-fashioned Christian; but to the religious world of his time he was a most obscure and dangerous heretic. Julius Hare spoke of him as the greatest thinker since Plato, and Mill described him as one of the most powerful of the age; but to most of his contemporaries Maurice seemed an obscure mystic, with a strange love for the Athanasian Creed and the Thirty-nine Articles, which much of his teaching appeared to vitiate. Described as a leader of the Broad Church Party, he indignantly repudiated the epithet 'broad,' and still more the suggestion that he belonged to any 'party.' He spent much of his energy in controversy, sometimes bitter and occasionally hardly fair. Yet he was constantly on the look-out for points of agreement with his opponents, and those who knew him best were deeply impressed by his spirituality and goodness.

The paradoxes of his position may be partly accounted for by his family circumstances, and by the character of the age in which he lived. He was the son of a Unitarian minister, whose wife and daughters were converted to various forms of Evangelicalism, chiefly dissenting and Calvinistic. They were pious, clever people, much addicted to argument; and Frederick learned much from each, though he was repelled by all their theological systems. He combined his father's enthusiasm for the Fatherhood of God with his mother's conviction of the Divine Will as the root of all. His intense reverence for family relationships, together with the discordant doctrines of his loved ones, drove him to seek for some ground of unity more fundamental than doctrinal agreement. This he ultimately found in the conception of the Church as the divine family, an institution that was to him God (whom he feels about us is far more important than what we feel about God). His view of Christ as absolutely at one with the Father separated him from his Evangelical mother as well as from his Unitarian father. It precluded all idea of the Atonement as a change in the Father's Will, as a bargain, or as a legal fiction. Similarly the popular beliefs about the Bible, the future life, and all the common notions of the so-called 'New Theism' of the age, seemed to Maurice tinged with materialism. He was especially repelled by all sects, because he found in himself tendencies to fall into what he believed to be their errors. His controversial bitterness was often directed in reality against the power which he knew to be lodged in his own nature. Everywhere he discovered good, but also evil; and his position was generally a puzzle to his contemporaries.

The contradictions between politics showed the same characteristic. Growing up in the Tory reaction that followed the French Revolution and the Napoleonic wars, he was naturally disinherited by the briliances and bigoted reaction. Rome was almost equally opposed to a Liberalism which consisted mainly of destruction of abuses. The forces which carried Wordsworth and Coleridge into Conservatism and High Churchmanship operated strongly upon Maurice, with his reverence for the past and his attraction towards sacramentality. For a time he hesitated. At Cambridge, where he was a distinguished career, he refused to take a degree, because this would have involved a profession of Churchmanship. He wrote a novel, the Athenaeum, and engaged in various literary enterprises. Then he decided to offer himself for ordination, and, as a preparation for this, to go through another undergraduate course, this time at Oxford. Then he published a defence of the tests by which acceptance of the Thirty-nine Articles was required from all who would obtain an Oxford degree. His arguments were, of course, fundamentally different from those used by ordinary Tories, and perhaps equally unreasonable. He afterwards admitted that his main position was untenable.

Maurice's first really important book was The Kingdom of Christ (1842). The book was primarily intended for Quakers. Their doctrine of the Inner Light as a protest against the social and spiritual was enthusiastically accepted by Maurice; but he set himself to proclaim the sanctity of the visible. Forms are witnesses to the invisible, and channels through which divine power works. The Church is a spiritual kingdom, asserting human brotherhood, and protesting against human self-assertion and individualism, which would, if uncontrolled, destroy society. The author sometimes seems intensely Evangelical, sometimes a pronounced Catholic, sometimes a rationalist and a sort of socialist. He passes from an obscure mysticism to teaching so simple that it seems commonplace; he glances through the whole history of philosophy and theology; everywhere he discovers two tendencies, 'one belonging to the earth, one claiming fellowship with [the] Divine'; and the upward tendency is the search for that kingdom which God has provided in the Catholic Church. All this seemed orthodox enough. Its implications were not generally recognized, and in 1846 Maurice was elected to the professorship of Divinity at King's College, London.

It was characteristic that his next book dealt chiefly with the value of the non-Christian religions, the pagan philosophies, and the medieval theologies. The Beliefs of the World appeared in 1847, and one form of the Moral and Metaphysical Philosophy in 1848. The latter had originally been published in 1836, but it was expanded in a series of later editions. It illustrates the wide learning of Maurice and his great ambition of discovering his points of agreement with diverse and mutually contradictory thinkers. As a history it is open to the criticism that, instead of giving a well-balanced account of systems, it presents only those aspects of them which the writer was attracted.

At this period Maurice was keenly interested in social movements. He invented the phrase 'Christian Socialism' as a protest against un-Christian Christians and un-Christian socialists. He recognized the good in the aims of Chartists and Revolutionists. He sympathized intensely with their protests against the condition of the poor and the competitive basis of society. He set himself sternly against appeals to force, and was utterly distrustful of democratic ideals; but he started little newspapers, like Politics for the People and The Christian Socialist, with more revolutionary friends. Naturally Maurice was made responsible for the views of his less eminent associates, whom he warmly defended against the abuse of the propertied classes and their representatives. Moreover, the co-operative schemes at which he worked were regarded as an attack on capitalism, on the leading political economists, and on what was con-

MAURICE

sidered as the due subordination of the working classes. The 'respectable' press, secular, religious, influenced against Maurice, and at length the Council of King's College appointed a committee to inves- tigate the matter. But there was nothing in the Christian Socialism of Maurice inconsistent with his duties or his position as a Divinity professor.

The attack was then shifted from charges of socialism to charges of theological heresy. In 1853 Maurice published the volume called Theological Essays. On most points the new book was only reiterating and expanding views previously expressed; but it made clearer the author's divergence from conventional and orthodox theology, especially on the subject of eternal death. He maintained, in effect, that 'eternal' means spiritual. Knowledge of God, love, truth, and the like are eternal. Eternal death is not a matter of time or place, but of spiritual separation from the divine. The locality and duration of future punishment were matters outside Maurice's message, and he seemed to have believed that it was also outside the message of the Bible and of the Anglican formularies. The religious world felt that much of the book was fatal to what passed as Christianity, but it succeeded in using the orthodox language that it was difficult to see how Maurice could be convicted of heresy. He must, therefore, be ejected from his professorship without the formulation of any specific charges. The Council of King's College refused to adopt Gladstone's suggestion that Maurice's writings should be submitted to theological experts; and they compelled him to resign. The responsibility for their decision cannot be laid on Maurice; the majority seems to have been actuated by a sense of the High, the Low, and the Moderate. Some High Churchmen had been at first attracted by the fervid sacramentalism of Maurice; but they soon came to suspect that his meaning was something very different from theirs. At length Pusey declared that Maurice and he were not worshipping the same God. Low Churchmen were even more disgusted with books full of intensely Evangelical sentences, which were yet fundamentally opposed to their whole scheme of salvation, their doctrine of the Fall and of the Atonement, and of the doom awaiting those who did not accept the Evangelical views. The Broad Churchmen alone protested against the expulsions, and even they were puzzled as to how one who was so much in agreement with their hostility to the prevalent doctrines of the religious world could yet enthusiastically accept much that seemed to them superstitions and out of date. Nevertheless, the Broad Churchmen stood by Maurice, though he vigorously repudiated Broad Churchman- ship. The Evangelicalism of Wilberforce and Simeon and the Anglo-Catholicism of Keble and Newman were the dominant forces in the religious world. Maurice had learned much from both. But at bottom he was opposed to both peaceful parties, and few were disposed to forgive his errors, in consideration of his enthusiastic support of some at least of their cherished principles.

Time has revolutionized the situation. At present many of the best High and Low Churchmen agree in grateful remembrance of Maurice, and appear to ignore the great gulf which separates his views from their own. The fervent sincerity and piety of the Theological Essays are unmistakable, through the mechanical hand to the truth, tantalizing and obscure. More popular are The Prophets and Kings of the Old Testament (1853) and The Patriarchs and Lawgivers of the Old Testament (1856). The latter is a development of a literal interpretation of truth, and especially of God's character, by a direct intercourse of the divine with the human. God literally spoke to the hearts of the old heroes, and He speaks no less directly to men's hearts in all ages. This conviction attracted Maurice especially to the Johannine books, on all five of which he wrote valuable commentaries, in which, however, he left the doctrine of the Incarnation uninvolved. His last book, The Criticism of Criticism, was published soon after the death of J. F. W. Herbart, with whom he had been in friendly relations. Maurice's attitude towards the Bible was in some respects vague. Without claiming for it infallibility, he was 'inclined by any criticism of its contents, and disposed to re-interpret it rather than reject it; and he would not follow the party against Cowl and Essays and Reviews; but he disliked the critical spirit, and had little sympathy with plain speaking which hurt pious souls, except when it was in defence of some spiritual truth. Nevertheless, he was always ready to scandalize the religious world in cases where the traditional views seemed to him profoundly irreligious. Thus his Manuel's Hampton Lectures (1859) practically declared that man could have no knowledge of God, except what was given him by the Bible. Such orthodox agnosticism was horrible to one who believed in a Light that lightens every man. Manuel taught, in effect, that Spirit was not at all prepared to assume that words like 'fatherhood,' 'righteousness,' and 'justice' meant, when applied to God, all and more than what they imply in human relationships. To Maurice this was atheism; and in his book What is Revolution? (1859) he poured out the vials of his wrath upon the Hampton lecturer. There followed a very bitter controversy, in which Maurice for a time received little support. Gradually, however, the more spiritu- ally-minded men of all classes rallied to his side. Maurice's later years were spent in comparative quiet. The number of his actual disciples remained small, but his influence increased. The breadth of his personality exercised a wide influence. It was also noticed that this mystic had proved singularly right in many of his ideas of practical reform. His Working Men's College and College for Women were imitated by more or less modifications in numbers of institutions all over the country. His co-operative schemes, though unsuccessful, helped to pave the way for a great movement, conducted on less idealistic principles. Christian Socialism, under that or other names, became a great force; and meanwhile the more obvious features of the popular theology passed into the background, when they were not driven out of the conventional religion. Accordingly, though Maurice in books and sermons continually reiterated his old teaching, he aroused little fresh opposition. He continued to protest against popular doctrines, orthodox or liberal, but he gave little to add to his old arguments. In 1866 he was appointed to the professorship of casiology, moral theology, and moral philosophy at Cambridge, and threw himself heartily into the duties of that position. Experts are divided as to the value of his contributions to metaphysics and to philosophy. For all departments of thought and life he claimed a theological basis, in a Father revealed in a Son through the operation of a Spirit, and witnessed by a Catholic Church, with Bible and sacraments.

Those to whom these things were either incredible or so far disconnected with philosophy and reason as to regard them as a somewhat overburdened mystic, however much they might reverence his character, learning, and ability.

J. E. SYMES.
MAY, MIDSUMMER.—Agricultural peoples throughout the world have established a ritual, more or less elaborate, about the critical periods of their common industry. This ritual, in effect, is the farmer's religion, and it may be considered the culmination of all pre-Christian animism, and its most important development prior to the great organized faiths. In the form of holiday customs its semblance survives abundantly throughout Europe, and is a little of its belief is latent beneath Christianity to-day.

We shall discuss its meaning below. This is perhaps less complex than has been supposed; but it is clear that the agricultural meaning is associated with the popular attitude towards the changes of the seasons, lunar and solar movements, and the growth and decay of vegetation in general. The calendar of this cult is that of the countryside, and this is even suggested by the three categories to which the terms May, midsomer, and harvest belong.

1. May.—The typical European celebration of May Day is well known. Trees, green branches, or garlands, are carried round, and a King and Queen of May are appointed from among the young people. According to Mannhardt and Frazer, these objects and persons represent the tree-spirit or spirit of vegetation.

The intention of these customs is to bring the home to the village, and to each house, the blessings which the tree-spirit has in its power to bestow.

They had 'originally a serious and, so to speak, monumental significance; people really believed that the god of growth was present unseen in the bough. The idea of the spirit of vegetation is blended with a personification of the season at which his time of flowering is strikingly manifest.'

The custom of setting up a May Tree or May Pole has been widely spread in Europe. A typical case is that of Swabia; on the first day of May the first tree brought to the village, decorated with ribbons, and set up, and the people then danced round it. It remained on the village-green till the next May Day, when a new tree took its place.

At a later stage, at least in England, the May Pole was permanent, while in Bavaria it was renewed at arbitrary periods of three, four, or five years.

When the meaning of the custom had been forgotten, and the May tree was regarded simply as a centre for holiday making, people saw no reason for setting a fresh tree every year and preferred to let the same one be permanent, only decking it with fresh flowers on May Day.

Instead of a tree or a branch, a branch decked with flowers, or simply green branches, are frequently employed. English children use two hoops of osier or hazel, crossing at right angles, and twine flowers round them; or a pole is carried with a bunch of flowers fixed on the top. In modern English custom the essence of the May Pole is the long ribbons attached to the top; each of these is held by a child, and as they dance round the pole the ribbons twine round it, to be untwined when the dancers return by the three categories to which the terms May, midsomer, and harvest belong.

The tree-spirit is often embodied in human form or in a living person. English children carry a doll in the garland, sometimes styled 'The Lady of the May.' In Alsace a little girl is selected to be 'the May Queen'; in May the child may hang a May Tree. The Russian Lithuanians crown the prettiest girl and address her 'O May! O May!' In Brie a boy is wrapped in leaves; he is styled 'Father May.' In China and Japan the 'May Pole' is a Manju, in Carinthia (Carniola) a Rumania a boy covered with green branches; at the end of the procession an effigy of him is flung into the river.

Here is what Frazer terms the double or bilingual representation of the tree-spirit by a tree and doll or a living person. Instances of the single representation by a living person are numerous, such as the Little Leaf Man of Thuringia, the English Jack-in-the-Green, usually a chimney-sweep, who wore a framework covered with green leaves and flowers. But the innumerable May Kings and May Queens. These still, in many cases, remain to announce the coming of spring, as well as to wish the people good luck.

Often the symbol of this is that of a wedded pair, king and queen, lord and lady, bridegroom and bride. Trees, Frazer notes, are sometimes married to each other. In some cases one party is a 'forsaken sleeper,' who is awakened by a kiss or the like. In a few cases there is an indirect representation of a marriage between the May couple. The folk-drama of the marriage of Zeus and Hera in ancient Greece may be similar to the above, and certainly that of the Queen of Dionysus was identical. According to Frazer, the principle is that marriage promotes fertility.

One aspect of these customs is that the symbolic figure is supposed to ensure fertility to women and cattle as well as to vegetation and the crops. This is brought out in German and English folk-custom. The European customs are certainly to be correlated with those of other peoples whose chief object is to promote the growth of the young crops or of the seed. In N. Morocco, for instance, during May or at any time in spring, the women engaged to weed fields make a doll. A visitor or a stray horse runs away with it. A popular pursuit follows, and, if a man from another village succeeds in carrying it home, the village where it was made must buy it back, usually with a feast. The doll is termed Mota, and is dressed up as a girl.

Another element besides that of the spirit of vegetation is detected here by Westermarck.

The doll Mota is obviously a personification of the wheat, vital energy; she is regarded as the bride of the field, and the ceremony itself I have heard called "the wedding of the wheat." Considering how commonly violent movements, contests, and racing are found as rites of purification, I venture to believe that the ceremony of Mota is originally meant to serve a similar purpose, that it is essentially a magical means of cleaning the corn, which is added to the more realistic method employed by the women on the field. At the same time, however, there may be also an idea of distributing barley over the fields by racing about with the doll. Sometimes a large wooden spoon is used for the frame of the doll.

The two polar ideas of Moroccan magical belief are I-lus, evil magic, and bara per, holiness or good magic, each being a force, no two forces being equally employed. English children use two hoops of osier or hazel, crossing at right angles, and twine flowers round them; or a pole is carried with a bunch of flowers fixed on the top. In modern English custom the essence of the May Pole is the long ribbons attached to the top; each of these is held by a child, and as they dance round the pole the ribbons twine round it, to be untwined when the dancers return.

The negative aspect of agricultural ritual, viz. the imposition of tabus, has traces in European custom, especially in the prohibition of unlicked acts or times. Tabus is best exemplified, however, in lower cultures. The Dayaks of Borneo, for instance, consider the whole period of farming and all its operations to be subject to supernatural influences, while planting and especially critical times. The most elaborate tabus are imposed, and omens are constantly taken. Merriam and Fanshaw follow the period of tabus.

The idea underlying the various restrictions is that men must not give time and attention to anything but the care of the crops.

5 A. Westermarck, Ceremonies and Beliefs, 1913, p. 20.
6 9B, p. 22.
If the Christian Lent was developed out of a period of agricultural taboo, there is complete continuity between the old and new faiths. The question of date may here be noticed. European folk-custom has a large body of similar restricted periods, observed before and during Lent. Such as the Death of the Carnival, the Burial of Shrove Tuesday, Carrying out Death, Sawing the Old Woman, followed by a dramatic advent of Spring, Summer, or Life. The former generally takes place on Shrove Tuesday at Mid-Lent, the latter sometimes follow immediately, or at a later date—the fourth Sunday in Lent, for instance—while in Russia similar ritual in both forms is celebrated in spring and at midsummer, and also on St. Peter's Day. These dates suggest that the old agricultural calendar was altered to suit the ecclesiastical.

In the majority of these Lenten customs the tree or branch or doll or person is termed Summer or Summer-tree.

The "customs" of bringing in the May and bringing in the Summer are essentially the same. The Summer-tree now is likely an embodiment of the tree-spirit or spirit of vegetation.

With regard to the representation of Death, more prominent in the 'Summer' (Lenten) ritual than in that of May Day, Frazer's view is that it is an embodiment of the tree-spirit or spirit of vegetation, the Summer-tree being often a "revivification of the effigy of Death." The idea is the death and revival of the spirit of vegetation in spring.

There is, as already noted, a natural identification of season or date with the spirit. The death is represented frequently by killing, and, as may be connected with the idea of slaying the incarnate embodied spirit while still vigorous, in order that its successor's vigour may be guaranteed.

Another feature of May ritual is the kindling of bonfires, though this is most conspicuous at Midsummer-tide.

The Beltane fires of Scotland were kindled on May Days as late as the 19th century. The traces of human sacrifices at them were particularly clear and unequivocal. The most significant example is that of the north-east of Scotland. Here the Beltane fires were lit not on the first but on the 2nd of May. O.S. They were called somerfires. The belief was that on or about the 2nd the witches were abroad in all their force, casting ill on cattle and stealing cows' milk. To counteract their evil power people placed the rowan-tree and woodbine, chiefly of rowan, were placed across the byres doors, and fires were kindled by every farmer and cottar. Old thistle, or straw, or turf was piled up and set on fire on a little hill, or hill of five. Some of those present kept constantly tossing up the blazing mass, and others seized portions of it on pitch-forks or thistle-stalks and, holding them as high as they could, they would throw them on the fire. "Fire burn the witches." In some districts a large round cake of oat or barley meal was rolled through the ashes. When the material was burned up, the ashes were scattered far and wide, and all continued till quite dark to run through them still crying, "Fire burn the witches." In Ireland, Scotland, and Bohemia bonfires were lighted on the first day of May; and in the last-named country the 'burning of the witches' is prominent.

Bathing, washing the face with dew, and drenching effigies and mummers are common customs on May Day. The European May customs are also among some peoples, celebrated at Whitehart. This date is especially marked in Russia, but also occurs in the Altmark, Bavaria, and other parts of Germany, Denmark, and Austria-Hungary. They are celebrated elsewhere at Whit-holiday, and on St. John's Eve or St. John's Day. One or two other dates are elsewhere found, cases apparently of arbitrary selection of a spring or summer critical day. The Swedes celebrate a minor form of the ritual on May Day, but are remarkable among European peoples for concentrating these customs upon Midsummer. Upon Midsummer Poles, garlands, arbour, and jumping over bonfires are in great evidence. It is curious that parts of Bohemia have the same date, while in Russia both Whitma and Midsummer are celebrated similarly. The same ideas and practices are applicable to May Day and Midsummer Day, but a Pyrenean custom suggests a special causal connection. Here a tall tree is cut down on May Day and kept until Midsummer Eve, when it is ceremonially burned.

Similarly there is a continuous connexion between the ritual and beliefs belonging to the whole trio of the critical periods, May, midsummer, and harvest. In Morocco the first day of summer (17th May) is the death of the earth, the first day of a new season, and the first day of harvest. It is quite natural that green trees and green branches should be most conspicuous on Midsummer day, and corn sheaves and the like at harvest; the preponderance of bonfires at midsummer, however, is a curiously difficult problem, whether on the theory of the tree-spirit with its corollary of sun-charms or on that of purification and baraka.

2. Midsummer. Turning now to the midsummer celebrations, we find that in Sweden May Poles are set up and decorated, and the people dance round them, and bonfires are lighted which are danced round and jumped over. In Bohemia the May Pole itself is burned.

In Russia on St. John's Eve a figure of the mythical personage, Kupalo, is made of straw, and dressed in woman's clothes, with a necklace and a floral crown. Then a tree is tipped, and, after being decked with ribbons, is set up on some chosen spot. Near this tree, to which they give the name of Marena (Winter or Dead), the straw figure is placed, together with a table, on which stand spirits and viands. Afterwards a bonfire is lit, and the young men and maidens jump over it in couples, carrying the figure with them. On the next day they strip the tree and the figure of their ornaments, and throw them both into a stream.

In some parts of Russia the ceremony is accompanied by weeping and wailing for the destroyed effigy, or by a mock combat between those who attack and those who defend it. In Sardinia there is a ritual which seems to be a survival of the ancient Greek, with 'Garden': the village swain proposes to a village girl early in spring. Then in May she sows in a pot a handful of corn, which is well grown by Midsummer Eve, when it is called Erna or Fennari. On Midsummer Day the young couple go in a procession and break the pot against the church door. Feasting follows, and in some districts a bonfire is lighted, round which the people dance. A young couple who wish to be 'Sweethearts of St. John' clasp hands across the fire. The two 'gossips,' suggests Frazer, may correspond to the Lord and Lady of the May, and, ultimately represent in flesh and blood the reproductive spirit of vegetation.

In Morocco smouldering fires are made on Midsummer Day or the evening before.

In the Moroccan custom the smoke is more 1 GB, pt. viii., Bolder the Beautiful, i. 172.

7 Westermarck, p. 79.
important than the blaze; the practical point is
fumigation of man, cattle, trees, and various
belongings.

It is also noteworthy that in Morocco at midsummer magic formulas are active in certain species of vegetation. Fumigation by burning certain kinds of plants and the mere application of leaves and branches promote fertility, act as charms against the evil eye, and ensure general well-being. There is also a custom of eating, in a quasi-sacramental manner, special foods, in which there is borax. 2

And it is probably no corner of Europe in which it has not been the custom to kindle bonfires at Midsummer-tide. Besides the leapsing through the fire, there are customs of throwing blazing ditches through the air and of rolling burning wheels downhill. 3 A certain sanctity, as in the need-fire ceremonies, attaches to the kindling of the fire in some instances. A frequent custom is that of making gigantic figures of wicker-work, which are paraded and then burned, these midsummer giants being apparently analogous to the May Kings in their leafy garb. There are also traces of burning animals alive. 4

Frazer derives these customs of modern Europe, especially those of N. France, from the sacrificial rites of the Celts of ancient Gaul, as typified in the druidical sacrifices, and mythically in the death of Balder. 5 The main interpretations of these fires-rituals have been put forward. Mannhardt, originally followed by Frazer, explained them as sun-chambers. 6

At the 'great turning-point in the sun's career,' the summer solstice, primitive man 'fancied that he could help the sun in its declining course—could prop its falling steps and reinstate the sinking fire.' 7 The wheel and disk are suggestive shapes. Frazer also noted the purificatory aspect of these customs. 8 Fire is a cleanser, and is frequently used for the purpose of the need-fire. Westermarck emphasized this aspect.

Their primary object in many or most cases is to serve as a protection against evil forces that are active at Midsummer. 9

In the Moroccan customs cleansing by fumigation is the chief idea, although there is also the ascription of positive virtue to the smoke. Westermarck finds no evidence for the sun-charm theory. 10 Later Frazer regarded the two views as being mutually exclusive, but admitted the purificatory theory as being the more probable. 11

Traces exist of what has been interpreted as human sacrifice by drowning on this date. Various similar customs have been interpreted as rain-chambers. 12 In Morocco, however, midsummer ceremonial bathing is connected with the idea of securing health by cleansing, and the same idea is attached to the European custom of rolling in dew. 13 Various kinds of divination, as is natural on special dates introductory of a new season (as Midsummer is often regarded), are practised. Mock fights, tugs-of-war, games, and abuse of the ceremonial figure are common incidents. These have been interpreted as dramatic survivals of a ceremonial and magical representation of a struggle between good and evil influences, or designed to produce by homeopathic magic movement in the weather, or in the growth, of the crops. 14 Magic plants are gathered at midsummer

(see art. DEW); such are fern-bloom, fern-seed, mistletoe, and St. John's work. 15

For the special harvest-rites see art. HARVEST.

3. Basis of agricultural rituals.—The general theory of agricultural ritual propounded by Frazer can be connected with such primitive magical rites as the Australian nachkings for developing the growth of food-plants and animals. But in many European cases it seems that the main object is to purify the sphere in which the corn grows, and many rites are connected with a spirit of vegetation but with vaguely-imagined evils, often in the form of witches. 2 The burning or destruction of the tree-spirit is often a doubtful proposition. It is impossible to dogmatize on the origin and first intention of these agricultural rites, but it is necessary to bear in mind the possibility that beliefs in corn-spirits and the like, and even the magical practices themselves, may be late accretions upon some simple psychological and even utilitarian facts. There is also the sense of crisis, very strong in the primitive mind. Thus, psychic reactions in sympathy with the objects concerned might lead to damns (q.v.) or unconscious imitations—e.g., jumping to make the corn grow; in the same way imitative explanations might be made of such necessary processes as weed-burning. When established, these ex post facto explanations, magical, psychological, or theological, obviously tend to usurp precedence.

LITERATURE.—This is very extensive, but the main critical works are cited in the text.

A. E. CHAWLEY.

MÁYÁ.—Máyá, illusion, appearance, is a term in the philosophy of the Vedanta applied to the illusion of the multiplicity of the empirical universe, produced by ignorance. In reality there is only One, the brahman-ätman. It is not till a somewhat late period that the word assumes the technical meaning of the cosmic illusion, although this development of its sense is not an unnatural one. The word máyá is not uncommon even in the Rigveda, where it has the meanings 'supernatural power,' 'cunning,' 'mysterious will-power.' Siva usually explains it by grāhā, 'mental power,' or pujā, 'cunning,' 'guile,' 'deception.' Indra, e.g., is said to assume many forms māyābhīt, 'by magic wiles, or mysterious powers;' as the possessor of this power, he is called māyān.

The term of the use of the Rigveda has been thoroughly analysed by A. Bergaigne (Religion édifiante, Paris, 1878-83, ill. 59-68; cf. A. Hillebrandt, MA YÁ, WZKM, iii. 1891, p. 371). Other terms, or such derivatives as māyān, māyāpān, are applied to the wiles of the demons conquered by Agni (v. ii. 9, etc.) and Sāman (vi. i. 6, and especially by Indra, whether alone (t. xxii. 4, etc.) or accompanied by Viśvā (vii. iii. 4). By overcoming the māyā of the demons Indra won the Śoma (vii. viii. 8). Men of evil craftsmanship are māyān (t. xxxix. 2 or dūrmāyān (t. xxx. 10); the sorcerers uses māyā (vii. iv. 24); but the māyān cannot overcome 'the primal firm ordnances of the gods' (n. vi. 1). The Aivina conquers the māyā of the evil Dāsya (t. xxii. 9).

On the other hand, the terms are applied to good deities. Through māyān Mitra and Varuna send rain and guard their law breakers (t. ii. 5, 7); through māyā the thunderbolts are thrown at the demon Ajar. The Manu employs it (v. ixxi. 6), and are māyān (v. ixxvi. 7), or somā (t. ixxviii. 1), etc. Māyā is known to Indra by Trāṣṭrap (v. iii. 9), the Aivāyas (v. xxxii. 10), and Varuna and Mitra (t. i. 9, etc.); and it is a characteristic of Varuna (v. viii. 14, etc.); while it is the Sibhas attained divine dignity (iv. i. 1). It was also employed by Agni (t. vii. 7) and Soma (t. xxxvii. 17), and in the different times the gods are united (t. xxxv. 5). It was a mark of the Aivānas (t. ixxviii. 6, etc.), and even earthly sacrificers are māyān (t. xxxi. 9).

Through māyā the Indra triumphs over the demons, by the māyā of the Śiva (v. xxv. 7, 16), by the māyā of the Āva (v. xxx. 7, 17), and by the māya of the Sāman (v. xxxv. 7). Sun and moon succeed each other in virtue of māyā.

With the knowledge of self phenomena become known as phases of it; they are potentially real to a certain extent, but ignorance of the ātmā regards them as independent of the ātmā. We have not quite reached the stage of the later Vedānta, which regards phenomena as unreal, like a mirage. Ignorance, in the Upanisads, is an absence of true knowledge; in the later Vedānta it is rather an active force which conjures up the illusion of phenomena for the delusion of the self. In the Upanisads along with pantheistic compromise which grants that the world does exist, but holds that the sole reality of the ātmā is not in the least degree affected, for all is the ātmā. This view pervades the Chhandogya Upaniṣad, e.g.:

‘The ātmā is above and below, behind and in front. The ātmā is all the world’ (vii. xxv. 2).

As time went on, māyā gained an ever-increasing independence as the substance prakṛti (nature), which was at first subordinate to the ātmā. In post-Upanisadic literature the term appears frequently in a non-philosophical sense; a man who ‘wastes his life’ is called ‘the illusionist’ (it may be a misprint or garbling of a term which means a man who craftsily seeks to gain money through māyā; and the ātmā, lit. without māyā, means honestly). In those cases (for further references see Bühnling-Böcher, loc. cit.) the original meaning of māyā persists.

In the philosophical sections of the Maññadhāra the term is used in its philosophical sense. Thus Vaiśṇava, speaking as the supreme god, says: ‘Entering into my own nature (prakṛti), I arise through māyā’ (vi. xxviii. 61); this explains the famous avatāra of the deity, ‘Māyārṇava’ is one of the thousand names of Viṣṇu (xii. xvii. 121). (On the question of māyā see Evans, J. E., The Great Epic of India, New York, 1901, pp. 138-142.)

The doctrine of māyā in the Vedānta forms the cardinal distinction from its great rival system, the Saṅkhya (g.v.) philosophy. Vedānta is the system of ādīśvāt (non-duality); the phenomenal world does not exist; it is only māyā, arising from avidyā, that makes us erroneously think it to be real; māyā is overcome when he who ignorantly believed himself to be an individual realizes that in actuality he is one with the ātmā; then only is salvation (mokṣa, lit. ‘liberation’) finally won. In the Saṅkhya, on the contrary, the phenomenal world is real; the Vedāntic ātmā is ignored (Saṅkhya is atheistic); the soul (cit, lit. ‘thought’) is involved in the woe of life because of avidyā (failure to distinguish between matter and soul), due to avidyā, etc.; salvation is gained by the complete isolation (kaivalya) of the soul from matter; and the soul then exists as an eternal, but unconscious, individuality. (On the distinctions between Vedānta and Saṅkhya see especially Max Müller, Six Systems, p. 279 ff.)

One of the most important of the early works on Vedānta is the Kāraṇa of Gadapāda (8th cent. A.D.), one of whose pupils was a teacher of Śaṅkara. He is an uncompromising expounder of the doctrine of māyā, and strongly denies the existence of the universe. The waking world is no more real than the world of dreams. The ātmā is both the knower and the known; his experiences exist within him through the power of māyā. As a rope in a dim light is mistaken for a snake, so the ātmā is mistaken for the variety of experience (jīva). When the rope is recognised, the illusion of the snake at once vanishes. The true knowledge of the ātmā is attained, the illusion which makes us think of it as a multiplicity of experiences vanishes. The world has no more real existence than the snake, and, as one cannot remove or cast off what does not exist, it
is wrong to speak of obtaining freedom from it. The "atman" cannot be said to create or cause the universe, for while the universe creates the "atman", the "atman" would be either from the existent or from the non-existent; but the former is impossible, for it would be producing what already existent, and the latter is impossible, for the non-existent—e.g., the son of a barren woman—cannot be the cause of anything; it cannot even be realized by the mind.

Gaudapada's monism assumed its final form in the "Six Principles of Reality" (b. probably A.D. 788). Saivkara is well aware of the difficulties in the way of reconciling the various views of the Upanisads, and is further perplexed by the fact that as "drift" ("revolution") they all ought to have equal weight; the latter difficulty he overcomes by his classification of knowledge as of two kinds: a higher, the knowledge of "brahman", and a lower, including all that is not this metaphysical knowledge. Saivkara, in writing "as a person of no existence at all, as a person of no existence at all, and as a person of the self. It is through "nitya" that plurality is perceived where there is only the "atman." Multiplicity is only a matter of name and form, which are the creations of ignorance, being no different from it, through the power of illusion ("nityabhakti"). The highest One manifests himself in various ways by "svayam" as a magician assumes various forms by his will. Saivkara further defines two kinds of existence, empirical and metaphysical, for the first time emphasizing clearly a distinction which seems, however, to be known even in the Upanisads. The phenomenal universe is a fact of consciousness, and therefore has a sort of existence; all experience is true so long as the knowledge of the "atman" is not attained, just as the experiences in a dream are real to the sleeper, until he awakes.

"Therefore before the consciousness of identity with "brahman" is aroused, all worldly actions are justified." (On Vedanta-sutras, i. 12.)

In spite of the discussion that has raged round it, as Saivkara's time, the doctrine of "nitya" as enunciated by him still holds the field in India to-day, and, as one of the fundamental doctrines of his Adwaitist school, pervades the philosophy of the great mass of thinkers in India.

J. ALLAN.

MAYANS.—The territory of what is now the Republic of Guatemala, adjoining parts of the Republic of Honduras and of the Mexican States of Chiapas and Tabasco, and the peninsula of Yucatan, was inhabited in ancient times, as it is to the present day, by a number of different tribes, speaking allied idioms and forming a linguistic family usually designated as "Mixe-Chichimec." From the name of its most conspicuous member, the people of Yucatan. This population is to be regarded as the second of the great culture-nations of Mexico and Central America. The Mayas in material and intellectual civilization and in some ways surpassing them, but, unfortunately, much less known than the Mexicans, as regards the special traits of their civilization, their history, and the elements of art, which is found in the ancient monuments in Central America—Palenque in Chiapas, Menche Timamit on the Usumacinta river, Quirigua in Guatemala, Copan in Honduras, Uxmal and Chich'en Itzak in Yucatan—are the work of members of that family. They were the great astronomers and mathematicians who calculated the duration of the revolution of Venus and, perhaps, of other planets as well, and were wont to write down and handle numbers exceeding a million. They had elaborated a system of hieroglyphic writing far superior to that of the Mexicans, but only partially deciphered as yet. They were unexcelled in the apprehension and reproduction of living forms of animals and men, and, in a whole, their civilization and their religion were closely allied to those of the Mexicans.

In their religious practices they were not so summary as the Mexicans, human sacrifices being much less numerous and in many cases being replaced by the killing of dogs. They resembled the Mexicans in their methods of prayer and sacrifices, fasting, and torture, and in piercing their ears and tongues and drawing streams through the holes. They also sacrificed living animals by fire to the god of fire, and in some places tortured themselves by running with naked feet over burning coal.

Like the Mexicans, the Mayans divided the year into eighteen periods of twenty days each, and they also commenced their ceremonies early in the year, in our month of January, by renewing all kinds of ceremonial utensils—incense-burners, clay-ids, and the like. This feast was called Oca, and was devoted to the chac, the gods of labour, i.e., the rain-gods. When they had to make a new wooden image or, as they said, to create a god, the work began in the preceding months, and with great precautions (fasting, etc.), the artisans being confined to the house as long as the work went on. In March they had a great fire-ceremony, performed by the old men and directed to the chac and to the old god Itzamna, who may be considered the god of life and the god of fire. This ceremony was called tupp-kok, 'extinguishing the fire.' They brought together every species of animal that was at hand; and, after having kindled a great fire, they killed them by cutting the breasts and tearing out the hearts, which were cast into the flame. The larger animals, such as jaguars, pumas, calves, were not so easily captured, so they made imitations of their hearts from copal, which was their incense, and threw these into the fire. The hearts having been consumed, the priests extinguished the fire, and threw water from their jugs upon it. This ceremony was intended to secure sufficient rain for the crops of the new year. Another ceremony was connected with this performance. They made a kind of terraced pyramid near the religious buildings, which have been regarded as an image of the clouds. The priests anointed the lowest step with mud and the upper ones with blue colour, invoking the chac and Itzamna. This was, no doubt, another ceremony for bringing rain.

In April the cacao planters, who were also the great merchants, cacao being the staple merchan-
disc of ancient Central America, celebrated a great feast to the black god Ekchua, the god of the caravans and the merchants, to the chac, and to Hobail, the god of the bee-hives. They killed a dog of the spotted colour of the cacau-pod and offered plus a dog of the wild fowl, and kindled incense. In the month of May there was another great feast, called Pacumuch, celebrated to Cit chac coh, the god of war. It began with a five night's sacrifice in the temple of the god of war, and during this time the war-chief, called nacon, and elected for four years by the members of the tribe, was seated on a throne in the temple of the god of war and venerated as a deity with incense-burning. The people performed a dance called hollok-ooh, 'warrior-dance.' At the end of the five days they performed the fire-ceremony described above, after which the war-chief was taken in a solemn procession all round the temple; a dog was sacrificed, and the heart offered to the god. The heart was put into a bowl and covered by another bowl, after which the assistant priests dashed to pieces some great jars full of water—undoubtedly another cause of incense—intended to produce rain for the crops. A great banquet of meat and general drunkenness followed. The same banquets and drinking-bouts were repeated in the course of the festival. The three towns vied with all the smaller villages. These feasts were called Zabacil thun, and it is expressly stated that they were made in order that the new year might be a fertile one and bring rich crops.

The month of July was reckoned as the beginning of the new year by the Yucatecas at the time of the conquest. The twentieth (mitul) in question was called Pop, 'straw-mat,' meaning 'dominion,' 'ruler.' This new fire was put into the brazier before the idol, and all the priests and principal men burned incense with it to the idol. In the following months all the professional instructors of the different branches of the people's life, the books of the priests, the implements for casting lots and the fetishes of the doctors, the weapons of the hunters, and the fishing-nets of the fishermen were burned, by anointing them with blue colour. This feast was called Popcuc. In the month of September the bee-keepers had a special feast at which they brought offerings of incense and honey to their god Hobail. In the month of October, called Xul by the Yucatecas, there was a great ceremony in the village of Mani, dedicated to the god Kukulkán, the 'feathered snake,' the Yucatec translation of the Mexican god Quetzalcoatl, who was venerated as a culture-hero in Yucatán. The discovery of the pyramid on the Yucatan peninsula, Mayapan, and Chichén Itzá, having been founded by Mexican emigrants. The last feast in the year, celebrated at the time of our months November and December, corresponded in a way to the Mexican Incolli, ceremonies being performed to promote the growth of the youth and to strengthen them. Contrary to the custom of the Mexican Aztecs, the ceremonies were performed in secret, but it is not certain that this was not also the case in the days of the old native mythology. The amusing part of these ceremonies is that all the people spent the whole night wearing only a loincloth. They dance and sing throughout the year, and this is not considered as a sin. The dance is a later form of "Mózáruban," within a mountain named "Hueitla" (so also Corem, Perú, l. 844). The name "Mózáruban" is incorrect; but it more properly means "Land of the Many Gates" (T. Noldeke, GTRF II. 1900, 178, n. 1). The Aztecs, the Arab, and the Tartar, the Arab, the Tartar, and the Tartar (on odone) or Tabasaran (Bont. x. 17, xiii. 15, xx. 27), is the land of the Tartars of Philemy (O. 842). The name "Tabasaran" is the same as Diodorus (n. i. 8.2) and Athenaeus (464 l.; Maria, Berinba, p. 190). F. Windischmann's identification of Mazendarán with Media (Scorstz, Stud. Berlin, 1928, p. 239) was wrong.
view when he says that ‘these demons were, no doubt, merely holsters,’ while M. N. Dhalia (Zoroastrians, pp. 169-170, 1814, pp. 8, 24, 190) sees in them the nomads of Mazandaran and Gilan, ‘who poured down in great numbers and pillaged the possessions of the Iranians. A number of the Avesta texts are called daevos, giving no information as to their nature or habitat (Y. vii. 17, 32; Vend. ix. 13, x. 16, xviii. 9f.). We have, however, more precise indications as to their location in the account of the threefold sacrifice by the hero Spentzas on Mount Harz to gain the victory over ‘two-thirds of the Mazaiiany demons’ (Y. vii. 22, ix. 4, xv. 8, xix. 26), for Haratsa (or, as it is also called in the Avesta, Haras Berczai, ‘lofty Haras’) is generally—and probably correctly—identified with Alburz, though construed in a mythological, rather than a geographical, sense (e.g., Spiegel, Erân. Altnerthm., i. 201, 465, 522; Darmesteter, i. 101, n. 28; K. Geldner, Gãr., p. 45; in the Greek, Ostr. deza, Kultur, pp. 42-45), and the ‘peak’ (šéka, Y. xv. 7; cf. xii. 23; Bund. v. 4; Ys. xii. 3) of Haras is probably Mt. Damâvand (Geiger, loc. cit.). The identification of the deza (from which Mazaiiana is derived) with Mazandaran is also made by Neric-sangh (c. a.d. 1290), who, in his Skr. paraphrase of the Ysana, renders ‘Mazaiiana’ by ‘Mâjandârâsîya’ or ‘Mâjandârâsîsha’ (Y. vii. 11, xxi. 1, xlvii. 32).

Closely associated with the Mazaiiana daevos are the Varenyan daevos and dagezants, or adherents of the Ido demon (Y. xxvii. 1; Y. vi. 22, xiii. 137, xv. 8, xix. 30; Y. x. 97, xii. 71, and Vend. x. 14 are unimportant in this connexion). The land of Varena was the fourteenth best created by Ahura Mazda, but Angra Mainyu cursed it with ‘continual earthquakes and non-Aryan over-lords’ (Vend. i. 17). It was ‘four-eared’ (sôthru-gosha, i.e., four-square or quadrangular); cf. Darmesteter, i. 14, n. 33, and was the birthplace of the hero Tharaetsar or Faridân, who overcame Ahi Dahaka (Vend. i. 17; Y. vi. 33)—a tale which was discussed at length in the lost Sáthar Natsh of the Avesta (Dinkart, ix. xxi. 17-24; cf. also viii. 9, ix. xxii. 4). 2

The location of Varena is a matter of dispute. It was certainly near Tabaristan (Spiegel, i. 545), but is hardly to be identified with the modern village of Verok, south of Sarî, as argued by Spiegel (i. 72, n. 2, 645) and F. Justi (Handb. der Zend.-sprachl. Forsch., 1864, p. 270 [with earlier literature], Gãr. ii. 404). Uncertainly equal is the view of C. de Herlee (Avesta trad., Liège, 1875-77, i. 87, n. 2) that it was the modern Kirman. A. V. W. Jackson (Gãr. ii. 663) and Dhalla (loc. cit.) identify it with Gilan, and Darmesteter (i. 14, n. 38) with Tabaristan or Dailam. Tabaristan was formerly preferred by Geiger (Jâstirn. Kultur, pp. 127 L, 184); his later view (Gãr. ii. 391), identical with the Capellan Gates, seems scarcely an improvement. Neric-sangh was ignorant of the meaning of the term, for he renders Varenya by sihrâmakara, ‘confusing,’ and kama, ‘love’ (on Y. vi. 19); cf. Geiger, Gãr. ii. 391), confounding the epithet of the later Pahlavi Varenda, the demon of lust (Jackson, i. 660, 665; Darmesteter, i. 373, n. 33; L. C. Casartelli, Philosophy of the Mazaiyan Religion under the Sassanids, Bombay, 1859, pp. 91, 106). On the whole, Gilan appears to be the most probable identification.

It would seem that the term of Haohyamanga refers to an early invasion of Mazandaran and Gilian by Iranians, and their conquest of it, at least in part. This is borne out by the local tradition of the early 12th cent., for Ibn Isfandiyâr, who, in his Kitâb, i. 121, two pious men who came from Mazandaran to receive the faith from Frashâhshah, the father-in-law of Zaráhushdâr (Dinkart, i. xxi. 17-24).

In the Pahlavi texts the most interesting passage in the present connexion is found in the Shâhân-gândanig Vîêtar (xvi. 28-36), which records a belief closely similar to the frequent Gnostic concept of the entanglement of man, combined with a touch of the Iranian heresy of Zarvanism.

‘The rain was the seed of the Mazârdanis for the reason that when the Mazârdanis are born, whose light is swallowed by them, and, in order to pass it from them through a new regulation, discrimination, and retention of the light of Time, the twelve goddesses give their daughters to Time’ (to the house-attending males Mazârdanis, so that while the last of these Mazârdanis, from seeing them, is well suited to them, and seed is discharged from them, the light which is within the seed is poured out to the earth. Trees, shrubs, and grains have grown thereof, and the light which is within the Mazârdanis is discharged in the seed’.

In the Shâhân-nâmeh Mazârdan is described with little geographical accuracy (Nûdeke, i. 178), and the Kârgassârs (‘Vulture-heads’), who are frequently mentioned as inhabiting the country, like the Sagars (‘Dog-heads’), Bazgûsh (‘Goat-ears’), and Narmpâl (‘Strap-foot’), 1 the influence of pseudo-Caliththèmes upon Firdausî (Nûdeke, i. 146, n. 3). In his proper shape the king of Mazârdan had a bear’s head (Warner, i. 75). The land itself was

1 The home of warlock-drills and under spells Which none hath power to loose;
To go or en’ of thing of going thither Is hold unloose, which doth;

Nevertheless, it was invaded unsuccessfully by Kâ Khâd and successfully by Rusym (ib. 30-41, 42-44, 51-78), one of the greatest events of the latter being the slaying of the ‘White Virgin,’ whom Warner (ii. 27 f.) holds to be a personification of the Mazârdanis, rendered pale by the unhealthy climate of this. This ‘White Div’ was

‘mountain-tall,
With shoulders, breast, and neck ten cords across’ (ib. 69).

The magic exercised by the ‘White Div’ against Kâ Khâd reads like a description of a severe hailstorm (ib. 40); the only other point worth noting is that his blood cured falling sickness (ib. 69).

Even in the Arab period Mazârdan remained imperfectly Islamizd. As late as the 10th cent., many of the inhabitants of Dailam and Gilian were ‘plunged in ignorance’ (i.e., heathenism), and some were Magians, this being particularly the case with those in the mountains, valleys, fortresses, and other inaccessible places (Mas’dî, Frairies d’or, ed. and tr. C. Barbier de Meynard and Pavet de Courteille, Paris, 1851-77, i. 5). It was a

1 The rodical signs, appointed as celestial leaders by Ahura Mazda (Dinkart, i. 101), were called ‘Ages, along the Chai, Hâmî (Strak, pp. 607 f., 214; cf. W. Tomaszek, in Fäsiy-Wissowa, i. 137, 142), 192.

2 In a Turfán fragment Ahi Dahaka, who was imprisoned in Damâvand, is called ‘Mâmûn’ (ibid., 116). The text has been found in a number of copies, but in both cases the accompanying names are illegible (C. Salemann, Manichaic Studies, i. 52). From it we learn: 1 From it we learn: 1
centre of the Hurramite and Zaidite sects of Muhammadanism (4; 188, 187, 117; cf. also Ibn Isafandiyar, pp. 155, 188-193).

The Zaidites call for no special remark, but the Hurramites may be briefly described, as being one of the many attempts at religious sectarianism in W. Asia.

The exact meaning of the name is not absolutely certain. It is generally translated as from Pers. 'szur, 'cheerful' (i.e., Euphratean'; so T. Haarbrücker, in German translation). To his tr. and *Bhārakhsīnī* (Religionspartiheiten und Philosophenschulen, Halle, 1881, p. 351, not noted, but it has also been derived from the town of Hurram near Ardabil, and even from a name of one of the Hurramite leaders of the 17th c. of Mas'udī, as 'the teaching hurram (ed. cf. C. Scheffer, Christliche Perser, Paris, 1888-84, i. 170-171, where the remaining passages of Naṣīr-al-Ḍulî's Nīṣābūrī's *Isfarsī* cf. also S. H. Ribāt, *Gīrī fī h. 922*), *All Ibn Sam, Ibn al-Dīn, Ibn al-Fatāṭā Fīzmā, and a volume of miscellaneous extractes*). Muhammad Ibn-al-Hazān Ibn Isafandiyar, *His story Fīzmā* (ed. cf. R. G. Glügel, *Bābāt, sein Abstammung und erste Anfänge*, 1341, 1432-34, E. G. Browne, *Islamic History of Persia from the Earliest Times till Ferdowsī*, London, 1902, pp. 325-336. Much earlier literature on the history of the country has been lost, e.g., *All Ibn Muhammad al-Malādīn* H. Ribāt, *Gīrī fī h. 921* (1901) 146 f. (with copious references to earlier literature).

LOUIS H. GRAY.

MAZDAK.—See OMAZAD.

MAZDAK.—I. History.—Mazādak, son of Bāmdār, a Persian (probably a native of Susiana), was the leader of a communistic sect which towards the end of the 5th c. A.D. became a formidable power in the Sassanian empire. According to some accounts, the original founder of this sect was a certain Zarābnd, son of Khurrawagān, on whose behalf Mazādak is said to have carried on propaganda among the populace, but in any case it was under Mazādak that the sect first began to exercise influence. His temporary success was largely due to the state of anarchy then prevailing in Persia. The emperor Kavad, who ascended the throne in A.D. 488, finding himself opposed by the nobility and the influential Zoroastrian priesthood, entered into a close alliance with the arch-heretic and emasculated his revolutionaries. The governing classes were strong enough to depose Kavad in favour of his brother Jāmāb; but after his restoration, which took place a few years later, the power of the Mazādakites continued to increase, though Kavad does not seem to have supported them very actively. In the concluding years of his reign a bitter struggle was waged between the courtiers, which the Mazādakites endeavoured to secure for one of Kavad's sons who was devoted to their cause, while the Zoroastrian priests, in agreement with the emperor himself, regarded

The nalatan tongue,' and Bābāk's own tongue 'was cramped by outlandish speech' (see, further, Browne, *loc. cit.*).

To this information al-Isfarsī adds that the Māzyārīyān 'appealed to the religion of the Muḥāmmārid, and he says:

'Since the Kitāb yāvūz in these mountains (of Tābaristān) agree upon every kind of depravity with women and flute-playing, etc., and therein (i.e. at night) the men and the women agree together. Then the lamp and fire are extinguished, and every one of them rises up to one of the women who chances to sit within the tent. Then, no one of them ever knew that in the ignorance they had a king named Shahrīsab, whom they despised more than the prophets; and when they mourn for the dead, in his name they pay tears and lamentations, (even) their grief for him.'

It is clear that the Bābākīyān were only a later phase of the sect founded by Mazādak, but in a degenerate form, marred by the cruelty which characterized the career of Bābāk, who is said to have slain at least 255,600 persons during his years of power.

LITERATUR.—F. prince Khusrav as the presumptive heir to the throne. The course of the events which culminated in the massacre of Mazdak together with many thousands of his followers is uncertain. According to the narrative of a Persian official who was converted to Christianity and became the name of Timotheus (Ioannes Malalas, in PG xvii. 654; Theophanes, ib. viii. 395), Kawdistan pretended to yield to the Mazdakites, and, having appointed a day for his abdication, caused his soldiers to cut down the Mazdakites and assembled with their wives and children in the neighbourhood of Ctesiphon to witness the ceremony; he then gave orders that the surviving members of the sect should be seized and burned, and that their property should be confiscated. Most Muham- madan writers place this massacre in the reign of Khusrav, but the truth appears to be that, although it was carried out under Khusrav’s direction and probably at his instigation, it preceded his accession (A.D. 631) by two or three years. Noldeke assigns it to the end of 632 or the beginning of 633 (Gesch. der Perser und Araber zur Zeit des Khusrav, p. 355). The ruthless energy displayed by Khusrav in this occasion earned for him, it is said, the title of Anushakurban (Anushahrwan, Nushairwan), i.e. he of immortal spirit, and the further measures which took place to exterminate the Mazdakites and the whole of their movement, so that henceforward the Mazdakites vanish from history. That they were entirely exterminated is scarcely credible. There is some ground for the suggestion that Mazdak’s ideas maintained themselves in secret and found expression in various Anioman sects which arose in Persia during the Muhammadan period (for an account of one of these see art. MAZANDARAN).

2. Doctrine.—It must be remembered that the whole of the information about Mazdak is derived from hostile sources. The epiphany written by an intolerant sacerdotal caste over heretics who had brought it to the verge of destruction may fairly be summed up in the words ‘de mortuis nil nisi malum’; and, unfortunately, we have nothing from the Mazdakite side to set against the biased narrative of our Zoroastrian and Christian authorities. On the other hand, we cannot suppose that the Persians, altogether obscure the essential character of Mazdakism, however they may have misunderstood or misrepresented it in detail. Its socialistic basis is well described in the following passages from a letter of the Emperor Constantine the Great (Leyden ed., 1879-1901, i. 893. 11 f., translated by Noldeke, op. cit. p. 154):

‘Among the commands which he (Mazdak) laid upon the people and earnestly enjoined was this, that they should possess their property and families in common; it was, he said, an act of piety that was agreeable to God and would bring the most excellent reward hereafter; even if he had had no religious commandments upon them, yet the good works with which God was well pleased consisted in such cooperation.’

In another passage (Tabari, i. 893. 19 f., Noldeke, op. cit. p. 141) we read:

‘They [the Mazdakites] asserted that God placed the means of subsistence (ardiz) in the world in order that His servants might share them in common, but men had wronged one another in that respect. The Mazdakites said that they would take from the rich and give to the poor, and give back to those who had little their due portion at the expense of those who had much; and they declared that he who possessed more than his share of wealth, women, and property had no better right to it than any one else. The nobler seized this opportunity, and in large numbers because so powerful that they used to enter a man’s house and forcibly deprive him of his dwelling, his livestock, and his property, since it was impossible for him to resist such violence. It came to such a pass that the father did not know his son nor the son his father.

While the principle that every man is entitled to possess an equal amount of property involves logically the removal of class distinctions, and the abolition of marriage, it may be asked from what point of view the principle itself was regarded by Mazdak, whether these results of its application formed part of his programme, and how far they were achieved by his followers. To take the last question first, Khusrav, in his speech to the priests and nobles after his coronation (Tabari, i. 896. 15 f., Noldeke, op. cit. p. 160 f.), dwells upon the ruin of their religion and the heavy losses which they had incurred. The systematic regulations which he made for the purpose of compensating the sufferers, establishing the position of children of doubtful origin, etc., show that the social revolution must have caused many, and probably a large number of the upper classes bore the brunt of it. Our authorities give great prominence to this aspect of Mazdakism; they are, however, still not in doing so. Mazdak was not a philosopher, like Plato, content to work out on paper a theory of the ideal communistic State. He was a militant social reformer, but he was something more. Noldeke has remarked that what distinguishes Mazdakism from the organized social movements of our modern times is its religious character, a peculiarity in which it resembles all Oriental movements of the same kind (op. cit. p. 459; cf. his art. ‘Orientalischer Socialismus,’ in Deutsche Bundeskunde, Feb. 1879, p. 284 f.). This character is preserved in the hostile Zoroastrian tradition. Mazdak’s asceticism—he is said to have forbidden the slaughter of cattle for food—gave a religious scope to the social destruction under which the ‘ungodly fasting Ashenaqma’ (Pahlavi commentary on Vendidad, iv. 49; SBE iv. 2 [1890] 48). The passages from Tabari translated above, and still more the epic narrative of Fir dazu (Shah-nameh, ed. Farnier Macan, Calcutta, 1829, p. 1611 f.), which reflects the sentiments of the priesthood, bring out quite clearly the fact that Mazdak identified his doctrines of equality and fraternity with the religion of Zoroaster in its original uncorrupted form.

‘I will establish this (communism) in order that the pure religion
May be made manifest and raised from obscurity.
Whoever follows any religion except this,
May the curse of God overtake him (den)

(Shah-nameh, p. 1613, line 11 f.).’

‘Five things turn a man from righteousness:
The sage cannot add to these five:
Jealousy, anger, vengeance, need,
And the fifth one that masters him is covetousness.
If thou prevail against these five demons,
The way of the Almighty will be made manifest to thee.
Because of these five, we possess wealth,
Which have destroyed the good religion in the world.
Women and wealth must be in common.
If thou desirest that the good religion should not be harmed,
These two (women and wealth) produce jealousy and covetousness and need.
Which secretly unite with anger and vengeance.
The Demon (den) is always turning the wise.
Therefore these two things must be made common property
(Shah-nameh, p. 1614, line 7 f.).’

Without claiming that Mazdak was animated by no other motives than those which his enemies attribute to him here, we may well believe that he regarded his communistic scheme as the only sure means of enabling mankind to attain the object which Zoroaster had set before them, namely, the defeat of the powers of darkness and the triumph of the spirit of light. The astonishing success of his propaganda is explained by the force of his appeal to Persian idealism. He would not have gained extensive support for his social programme unless it had been, ostensibly if not in fact, the instrument by which he hoped to accomplish a great religious reformation. In the main he appears to have held fast to Zoroastrianism, and no reliance can be placed on the statements of Shahrazd and later writers who credit him with cosmopolitan speculations closely akin to those of Mani.

LITERATURE.—The principal references to Mazdak which occur in Greek are by Paphlagon, Ambrose, and Augus-.

The text is collected by T. Noldeke, Gesch. der Perser und Araber zur Zeit der Sassaniden, Leyden, 1879, at the beginning of the fourth exordium. ‘Tober Mazdak and the Mazdakites, p. 455 f., which

REYNOLD A. NICHOLSON.

MEAN.—The historic varieties of significance associated with this term are all evolved from the general idea of that which comes between something, or in the ‘middle’. Hence the term has an implication of double relationship to two other terms, the primus medius (primus in meaning, medius in space) and the things which are in between two other things in reference to space or time.

As subst. and as adj. ‘mean’ entered Mid. Eng. from late Lat. mediae aequalis, mediae proportione, Med. Fr. moyen. The orig. mediae aequales (like Eng. ‘middle’ through its A.S. original) is connected with one of the most widely spread roots in human language. Both as subst. and as adj., ‘mean’, in the sense of ‘lowest’ or ‘least’, is to be distinguished from subst. ‘mean’ of A.S. origin (A.Eng. mean, O.E.Eng. mene, Mod. Ger. gemein, akin to commune), which, originally signifying ‘general’ or ‘concerning all’, is the indirect aorist subjunctive of that meaning. ‘Midden’ or ‘moderate’ and then of ‘low’ in rank or quality, ethically inferior or ignoble, esp. ‘avaricious’ or ‘pampered’.

That the mean has given an ethical application by Aristotle (Eth. Nic., iii. 7, 1115b-1115b) in which a doctrine of virtue it holds the central place. Virtue consists in reasonable moderation, involving the avoidance, on the one side, of excess, and, on the other side, of defect; in this sense virtue holds an intermediate position and may be said to be a mean. Here the mean is not quantitative, and the notion of ‘equal distance’ from the extreme is not applicable. Even the idea or action may err by excess or by defect; between these opposed extremes (e.g., ἐρωτηματικός and ἡλικία) stands that degree of activity which characterizes virtuous conduct (in this instance, moderation). Aristotle, Eth. Nic., iii. 7, 1115b-1115b.

Its ‘distance’ from the extremes will depend on the nature of the agent in relation to that of the moral case before him, and is therefore to be determined, not by any abstract considerations, but by the rational judgment of the man of insight (φύσις) [Eth. Nic., ii. 6, 1107b].

This conception involves that of an adaptation or harmony of opposites. This idea, similar to the harmony of parts displayed in a work of art; in fact, it expresses the moral aspect of virtue. Aristotle is aware that, in the strictly ethical sense, there is no such thing as a mean. ‘In every case there is an extreme’ (I. 6. 11, 1106a 22; 17, 1107b 6; Stewart, Notes on the Nicomachean Ethics of Aristotle, ii. 206). But, in laying stress on the aesthetic aspect, Aristotle is true to the Greek genius. The traditional direct view of life made it natural that ‘moderation’, ‘measures’, and kindred conceptions should be appropriated to express excellence in life and action.

The term ‘mean’ is used (more inadequately rendered ‘temperance’), closely related to the traditional maxim μετέξωσις ὑπάρ. Its opposite is ὑπάρχησις. In Homer the object of moral condemnation is of the nature of excess, ‘going too far’; above all, ‘wickedness’ is ὑπάρχησις. In the case of the strong it is the insensibility of brutality, especially in reference to the weak and the helpless: in the low and the weak it is the reverse, a want of sense in the presence of something stronger.2 When a man thinks of doing such things, he tells such men that they are not reasonable and unwise witnesses feel ἐπαινέσει, righteous indignation.

There is an application of the Aristotelian principle of the mean in the general theory of knowledge, not, indeed, expressed there by Aristotle, but implicit in much of his thinking, as in that of Plato; it was made by Hegel into the first principle of thought and being in the applications of dialectics. The ‘mean’ of thought as a dialectically progressive movement through its opposites—to the history of human thought and endeavour; it is this that gives to his reflections of history all their strength and value, notwithstanding the exceedingly rigid formalism with which the principle is applied by him in certain cases. We can only, in reality, find the nature of these and antitheses (in pairs) from the opposition of the higher truth springs; we can only find conflicting υπαρχειν, streams of tendency, movements of thought.

A movement involving truth mingled with error is found in conflict with another movement, involving different truths mingled with different errors. What is required is a point of view above both the conflicting principles, from which we can criticize them. This is the true ‘middle way’, found, not by taking what the two extreme views have in common, and disregarding all their differences, but by finding a principle which contains more truth than either of the courses pursued by truth. The value of the conflicts and oppositions of history is to suggest the need for these higher—or, to vary the metaphor, deeper—truths, and sometimes also to suggest that the conflict is the means of attaining them.

MEAN (Chinese).—Outside of Greece, the theory of the mean received formal attention only in China, where produced the classic chuâng yung, commonly known as ‘The Doctrine of the Mean’, though more exactly rendered ‘Equilibrium and Harmony’ (see above, p. 90), the authorship of which is attributed to the grandson of Confucius, Tzu-sâ, who flourished in the 6th cent. B.C.

Heaven has conferred a spiritual nature upon man, and an accordance with this nature is called the path [of duty], which must never be abandoned (I. 1-2). The terms chuâng (‘equilibrium’) and yung (‘harmony’) are respectively absent of stirrings of pleasure, anger, sorrow, or joy, and the state in which those feelings have been stilled, and they set in their due degree (I. 4).

Therefore, let the states of filial piety and harmony exist in perfection, and all things will prevail throughout heaven and earth, and all things will be nourished and flourish (I. 5). According to Confucius himself, the superior man embodies this ideal state, and ‘perfect is the virtue which is according to the Mean’ [ii. f.]; yet some error by exceeding it, and some by falling short of it (iv. 1) —only the sage is in perfect harmony with it (xi. 5).

Yet the ‘path is not far from man’ (xiii. 1); but, even if ‘common men and women, however much below the ordinary standard of character, can carry it into practice; yet in its utmost reaches, there is that which even the sage is not able to carry into practice’ (xii. 2). One is not far from the path when he ‘cultivates to the utmost the principles of his nature, and exercises them on
the principle of reciprocity (xiii. 3); and yet were
the superior man to speak of his way in all its
greatness, nothing in the world would be found
able to embrace it; and were he to speak of it in
minuteness, nothing in the world would be found
able to split it (xiii. 2). 'The superior man manly
what is proper to the station in which he is; he
does not desire to go beyond this . . . The superior
man can find himself in no situation in which he is
not right, if he has done anything, he blames only
himself (xiv. 1 f., 5). He advances in regular
order from stage to stage (xiv. 1), and constantly
strives to advance and develop his virtuous nature
that he may pursue the path of the mean (xxvii. 6).
'When occupying a high station, he is not proud,
and in a low situation, he is not insubordinate'
(xxvii. 7); and it is characteristic of the superior
man, though appearing insipid, yet never to pro-
duce satiety; while showing a simple negligence,yet
to have his accomplishments recognized; while
seemingly plain, yet to be discriminating' (xxviii. 11).
Among the many virtues of Confucius, special men-
ion is made of the fact that he never swerved from
the mean (xxxi. 1).
The remainder of the Chung Yung is devoted to
filiation of filial piety, and to the duties of the
age, the obligation of absolute sincerity, the
path of the mean, the character of the ideal
ruler—all of which depend on the cultivation of
Chung Yung.
The mean is mentioned a number of times in the
other Chinese Classics; e.g., the Y i King says
(xxii. 3) that the ruler should 'be sincere and pur-
sue the path of the Mean'; but these texts add
nothing to the main discussion in the Chung Yung.

LITERATURE.—The Chung Yung is most conveniently ed. and
tr. by Ch. T. Chao, Hongkong and London, 1891-5, i. 242-336 (cf. also his Predecessors to this vol., pp.
59-60), and again tr. by him in S.B.I. (1888) 296-326.

LOUIS H. GRAY.

MECCA.—Mecca (Arabic Makkah) is a city in
Central Arabia, famous as the birthplace of Islam,
and, except for a short period at the commence-
ment of the system, at all times its chief sanctuary.
A variety of the name, Bakkah, occurs once in the
Coran (iii. 90), and this is probably the earlier
form, though the etymology is uncertain.
The classical geographers, who devote considerable
attention to Arabia, are apparently not acquainted
with this settlement, and the name of Pre-Islamic
Mecca (vi. 72) is derived from a different root.
The 'Chronicles of Mecca,' of which the earliest extant
is by Azaqi († 240 A.H.), so far as they treat of
the pre-Islamic period, are collections of fables, in
the main based on the Qur'an, but to some extent
influenced by the later history also. It would
appear that, when Islam arose, there were no
chronicles in existence dealing with the affairs
of Central Arabia, and for some centuries the days
of paganism were regarded with a sort of horror,
which prevented the preservation of precise in-
formation concerning them.
The references to the city in the Qur'an throw little light on its early history. A sara incorpo-
rated near the end of the collection (xiv) reminds
the Prophet of the Owners of the Elephant, who
were tempted by birds (adidin), which flung at them stones of siyil. The tradition interprets
this as an expedition by Abyssinians against the
Meccan sanctuary, miraculously frustrated, but it is
possible that this story is an invention of exe-
gesists, who coupled the sara ev. with ev. which
decidedly deals with Meccah, and is itself a frag-
ment, scarcely to be construed in its present form.
In it the Qurash (the tribe in possession of the
Makkan sanctuary) are advised to attack the Lord
of this House, who has given them food after
hunger and safety after fear. These two pheno-
mena, plenty and safety, are mentioned elsewhere
in connexion with the Meccan sanctuary, the
former as a result, it would seem, of visits from
pilgrims, whereas the latter probably means safety
for refugees; but the texts are not very clear.
The sanctuary itself is called 'the House,' or the 'Sanctuary,' or the Ka'bah (a word said to mean no more than
'house,' or perhaps the Ethiopic word for 'double,'
as in two-storied), or 'the place of prostration, the
Sanctuary.' In lii. 90 it is called 'the first house
established for mankind, blessed and a guidance to
the worlds, containing manifest signs, the station
of Abraham, and whoever enters it is secure.'
This would by itself imply that the Ka'bah was
the first house ever built, as a model for all others,
and that Abraham took refuge there and made it
his abode. Elsewhere (xiv. 40) Abraham states
that he had settled his family by it (or in it) in
spite of the sterility of the valley, in order that
they might pray there regularly; and he prays
that the town (and not the house only) might be
secure. In xxii. 27 he is represented as doing in
his time much as was afterward done by Muham-
mad: he was told to purify the house for
those that perform the four ceremonies called
maqaf, standing, inclination, and prostration.
In li. 118f. Ishmael is represented as having
with Abraham; they laid the foundations of the house, and were told to:
and purify it as before, the ceremony called 'siraf' being
substituted for 'standing.' What may be inferred
from these texts is perhaps that prior to Muham-
mad's time the Ka'bah was a sanctuary which
enjoyed some popularity in part of Arabia, and that
the right of sanctuary had to some extent been
associated with the settlement of Mecca and with its
inhabitants. The biography of the Prophet
certainly implies that the Meccans were
the strongest opposition to bloodshed, and possessed
little aptitude for warfare. The association of
Mecca with Abraham is unlikely to have been
earlier than the Prophet, except so far as the
N. Arabian tribes were known by monotheists on
the authority of Genesis, to be descended from the
patriarch. It seems clear, however, that the
Ka'bah was only one of many sanctuaries which
were visited, and, if the word sara, which is used
for 'pilgrimage,' be explicable from the Hebrew
sara, 'draw round,' the Arabian month which is
called after it is likely to mean 'month of going-
round,' i.e. the round of the sanctuaries, as opposed
to the preceding 'month of squatting' at home.
The word technically used of going round the
Ka'bah, sara, seems also to be properly used of
going a round, as, e.g., is done by a sentinel, and
this ceremony may be due to a conflict of thought.
The pilgrimage which became stereotyped in Islam
involves visits to places which are likely to have
been seats of distinct sanctuaries, some at a consid-
erable distance from Mecca.
The difficult sara ev. speaks of 'winter and summer
journeying,' which is traditionally interpreted
of Meccan caravans, and in the biography of the Prophet these play an important part
by Muslim archaeologists suppose that the Qurash,
owing to their character as 'Allah's people,'
joyed immunity from attack, and so had special
facilities for the carrying trade. It is not easy to
reconcile this with the primitive condition of the
raids very clearly prevailed in Mecca at the rise of Islam,
and the complete ignorance which the Qur'an
assumes for its inhabitants. If there be any truth
in this carrying trade, it is likely to have been on
a small scale.
In the Qur'an Mecca is sometimes called 'the
Mother of the villages,' i.e. the chief village; else-
where the number of the villages is given as two,
which the commentators suppose to mean Mecca.
MECCA

and Ta'if; it is more probable that only Mecca is meant. Of walls we first hear in the reign of Mu'ātdhir (A.D. 908-332), and these did not surround the settlement, which was naturally protected by mountains, but merely blocked the passes. Sooneck Hurgonje 1 is probably right in thinking that the community first gathered round the well Zamzam, which furnishes a constant supply of water. The Arabic tradition gives in the names of the tribes which formed the community, but scarcely hints at any sort of municipal organization or government. Still more surprising is the absence of all mention of priests, such as we should have expected to be associated with a sanctuary. The wealth of the tribes is likely to have consisted mainly in camels, but other forms of wealth were probably known; visitors to the shrine have at all times paid more or less heavily for the privilege, and this source of wealth is, as we have seen, indicated in the Qur'an. We possess only casual notices of the amounts demanded in later times, but the central idea that money was often afforded a considerable revenue. The 'Abbasid caliphs expected the governor of Mecca to make the pilgrimage-tax his chief source of revenue; besides this visitors' fee, they had to pay for admission to the sanctuary and pilgrims' food and lodging to pay import duty. Attempts were made by pious sovereigns to abolish these dues, but they had a tendency to revive, and their analogues doubtless existed in the period before the rise of Islam.

Prior to the rise of Islam it would appear that some notions of Christianity had penetrated to Mecca, and the biographies of the Prophet profess to give us the names of persons who had either adopted that system or showed some leaning towards it. There appears to be no recollection of the existence of any Christian place of worship at any time in this city. The tradition represents the pagan inhabitants as tolerant towards religious innovators and dissentients, so long as the local beliefs and practices were not assaulted; but the life of such a community was so intimately bound up with the local religion that it is difficult to suppose that dissent could remain quite immune from persecution.

There is reason for thinking that the Prophet's original attitude towards the Meccan religion was uncompromising and that his success would have involved the abolition of the ceremonies of which the Ka'bah formed the centre. His rejection by the Jews of Medina (q.v.) caused him to contemplate the return to the religion in which he had been brought up, and some time before the taking of Mecca he obtained a truce enabling him to perform the pilgrimage with some ostentation. Doubtless this performance paved the way for the subjection of the place. But when Mecca had become a rival, its position was modified in two important ways. On the one hand, it became the only sanctuary in Arabia; on the other hand, the presence of non-Muslims increased the influence of the island tribes, who were the chief Muslims. Since the pilgrimage was now made compulsory, Mecca lost nothing by this innovation.

It is uncertain whether the Prophet contemplated retaining Medina permanently as his capital or at least as the centre of his state and government. There is no doubt that there were jealousies between the two places before the Prophet's death. None of his successors (except perhaps 'Abd al-Malik) had any right to inherit the occupation of the caliphate (which lasted some ten years) seems to have regarded Mecca as a suitable metropolis for political purposes, but its position as the central sanctuary has rarely been endangered. Certain fanatical sects, such as the Carmatians and Wahhabis (q.v.), have at times done damage to its monuments, and

the substitution of Baghdad or Jerusalem form it is said to have been considered by 'Umayyad and 'Abbasid caliphs, although they recognized in time that such experiments would have been fatal to Islam or to their thrones.

For the history of Mecca since its adoption of Islam we possess a series of Chronicles, of which those published by F. Wustenfeld 2 cover the first three centuries from the Hijra to the death of 'Umar. H. St. J. Hurgonje 2 has added the substance of certain unpublished records which carry the history up to our time. Regular government was then introduced, perhaps for the first time, a prefect appointed by the sovereign responsible for the maintenance of order. This personage was leader of the ceremonies at the time of the pilgrimage, unless the sovereign either came himself or sent a special representative. The governments of the three towns, Mecca, Ta'if, and Medina were at times united in the same person, at times distinct; the first was much the most important of the three. In 'Abbasid times it is of pilgrimage often afforded a considerable revenue. The 'Abbasid caliphs expected the governor of Mecca to make the pilgrimage-tax his chief source of revenue; besides this visitors' fee, they had to pay for admission to the sanctuary and pilgrims' food and lodging to pay import duty. Attempts were made by pious sovereigns to abolish these dues, but they had a tendency to revive, and their analogues doubtless existed in the period before the rise of Islam.

Prior to the rise of Islam it would appear that some notions of Christianity had penetrated to Mecca, and the biographies of the Prophet profess to give us the names of persons who had either adopted that system or showed some leaning towards it. There appears to be no recollection of the existence of any Christian place of worship at any time in this city. The tradition represents the pagan inhabitants as tolerant towards religious innovators and dissentients, so long as the local beliefs and practices were not assaulted; but the life of such a community was so intimately bound up with the local religion that it is difficult to suppose that dissent could remain quite immune from persecution.

There is reason for thinking that the Prophet's original attitude towards the Meccan religion was uncompromising and that his success would have involved the abolition of the ceremonies of which the Ka'bah formed the centre. His rejection by the Jews of Medina (q.v.) caused him to contemplate the return to the religion in which he had been brought up, and some time before the taking of Mecca he obtained a truce enabling him to perform the pilgrimage with some ostentation. Doubtless this performance paved the way for the subjection of the place. But when Mecca had become a rival, its position was modified in two important ways. On the one hand, it became the only sanctuary in Arabia; on the other hand, the presence of non-Muslims increased the influence of the island tribes, who were the chief Muslims. Since the pilgrimage was now made compulsory, Mecca lost nothing by this innovation.

It is uncertain whether the Prophet contemplated retaining Medina permanently as his capital or at least as the centre of his state and government. There is no doubt that there were jealousies between the two places before the Prophet's death. None of his successors (except perhaps 'Abd al-Malik) had any right to inherit the occupation of the caliphate (which lasted some ten years) seems to have regarded Mecca as a suitable metropolis for political purposes, but its position as the central sanctuary has rarely been endangered. Certain fanatical sects, such as the Carmatians and Wahhabis (q.v.), have at times done damage to its monuments, and

1 Mekd, The Hague, 1889, i. 5.
in the neighbourhood by the Egyptian Sultan Jaqmac (1483-58). On the Ottoman conquest of Egypt in 1516 the allegiance of the Sharifs was transferred to the Sultan of Constantinople. The new rulers interfered with the authority of the Sharifs to a greater extent than their predecessors, and the presence of a Turkish governor at Jeddah has constituted a permanent restriction upon the independency of the Sharifs' suzerainty also led to the adoption by the Sharifs of an intolerant attitude towards the Shiites of Persia, who could only with difficulty and at some risk obtain permission to proceed to the pilgrimage. In the 17th cent., owing to the decline of the Ottoman power, the Sharifs, who were almost always involved in family quarrels, became somewhat less dependent upon Constantinople, and could even at times defy the representative of the metropolitans at Jeddah. Both the sacred cities were threatened by the rise of the Wahhabite movement towards the end of the 18th cent., and indeed in 1793 and 1798 appeals for help against this new power were addressed to the Ottoman Sultan. This was not forthcoming, owing to the European complications in which the Porte was involved, and in 1803 Mecca was evacuated by the Sharifs, and presently occupied by the Wahhabites. The mosque was then abandoned, and remained unoccupied according to their ideas. The Sharifs, however, after a short time re-installed on his professing to adopt the Wahhabite tenets; and for some years Turkish subjects were excluded from the pilgrimage. In 1813 an expedition sent by Mikhamid ibn 'Ali, founder of the khaedivial family in Egypt, succeeded in recovering the sacred cities, and a Turkish Pasha was installed in Mecca, where, however, the rule of the Sharifs was nominal. After a time the Ottoman power was again represented by the governor of Jeddah.

The meaning and the limits of the sanctuary (karaa) were extended by Islam. The sense of this Arabic word is 'to forbid,' and a sanctuary is a place where certain acts are forbidden, of which the most important is bloodshed; it is unlikely that this prohibition before Islamic times extended beyond the Ka'bah itself. Az representing a place where murder is forbidden, it is right in asserting that at this time the dwellings of the citizens surrounded the Ka'bah, leaving only a small area (finada) the growth of the Muslim community required the destruction of these dwellings; and, operations of this kind were undertaken by the second and third Khalifs. The area was further enlarged by the pretender 'Abdallah b. Zubair, but the actual mosque surrounding the Ka'bah was first built by the Umayyad al-Walid ibn 'Abd al-Malik ibn Marwan, (A.D. 705-715), who erected a colonnade with marble pillars and other luxurious decorations. Further additions to the area were made by the 'Abbásid Manṣūr (755), who also built a minaret, and who, in the inscription placed on his work, claims to have doubled the area. Further large additions were made by his successor, Mahdi, who at great cost had a torrent diverted with a view to bringing the site of the Ka'bah into the centre of the mosque. Yet further extensions were effected by Mutawakkil (866), who also introduced luxurious ornamentation. The frequent repairs required by the mosque were due in part to the floods by which Mecca was repeatedly visited, and to some extent to damage done during civil disorders. Under the Khalif Mu'tamid considerable extensions and restorations were again carried out in the years 894-904, and the like was recorded for the year 918 under Mu'tadid. Under this Khalif serious mischief was wrought by the Camaftsl, who massacred the pilgrims, and for a series of years practically put a stop to the institution; their atrocities culminated with the siege in 917 of the Bani Hanafites, which they were conveyed to their headquarters in Hajar, whence

(continued on next page)
houses in Mecca; according to modern travellers, this question is purely academic, since the inhabi-
tants are entirely gain their living by letting their houses to pilgrims.

The place of Mecca in the Muslim religion is otherwise not free from anomalies. On the one hand, it is clear that the standard of morality and piety practised by the devout Muslims has at no time been particularly high, and various travellers have been shocked by their experiences; on the other hand, there is no doubt about the sanctity of the place in the spiritual budgets that accrue to those who go thither. These are not indeed free from danger; for, just as the value of good actions is higher in Mecca than elsewhere, so the debt incurred by evil deeds is there increased; and, according to the Sufis, evil thoughts and intentions are punished in Mecca, but not elsewhere. If Abū Ṭalib al-Makkī († 386 A.H.) is right, pious men in early times who went thither on pilgrimage used to transact business with and another outside the sacred area, devoting the former exclusively to religious exercises. The resulting danger was one of the reasons why continuous residence in the city was prohibited. Two others urged by Ghazālī († 505 A.H.) were the fear lest familiarity should breed contempt and the fact that absence makes the heart grow fonder. It could also be urged, according to the Qurān, the house is a place of returning, i.e., one to be visited, not made a place of residence (II. 119).

The various sovereigns who have been protectors or 'servants' of the sanctuaries have ordinarily been lavish in marks of their favour and somewhat jealous of munificence exercised by rival potentates; among the public works executed by these benefactors the greatest amount of space appears to be devoted to the Chroniques of the aqueducts, one of which conveys water from Mt. Arafat to Mecca, utilizing a channel originally constructed by order of Zubayda, wife of Harūn al-Rashid, occupied fourteen years (965–979 A.H.) and cost enormous sums, owing to the difficulty of piercing the rock and the primitive character of the methods in use. Numerous colleges, hospitals, and almshouses have been erected by Islamic sovereigns and their ministers, many of them furnished with endowments. The fate of all pious foundations in Mecca, according to Snouck Hargroene, is the same: most of the houses that have any value have been at some time or other purchased in order to serve as endowment, but gradually passed from hand to hand in such a way that they retain the name engy (on which see ERE vii. 577 ff.), without serving any pious purpose. The name, however, prevents their being legally sold, yet sale is often necessary, and this is effected in fact, though news names are employed to serve instead of 'sale' and 'purchase.' An attempt was made by a Turkish resident in the middle of the 19th. cent. to declare all such transactions invalid, but his novov was procured before this could be carried out.

The erection of the places of learning has not had the effect of rendering Mecca at any time a university centre, and its printing-press has contributed very little to Arabic literature; nevertheless as a gathering-place for the pious it has regularly served for the dissemination of ideas, which are worked out elsewhere. A. Le Chaîelle, indeed, attributes the introduction of the religion into Mecca in recent times to the influence of the Sa’dis.

1 La conférence nouvelle rend à la Meccan le rôle de foyer du musulman, que lui avait fait perdre le caser sacerdotale (Les Congrès musulmans du Hadjey, Paris, 1807, p. 19).
2 Ibn al-‘āmil al-Makkī, Cairo, 1905, I. 119.
3 Ibn al-‘āmil al-Makkī, Cairo, 1906, I. 100.

The author of a dialogue on Islamic revival be-

tween Muslims of various nationalities recently placed the scene in Mecca. Yet the cosmopolitan character of the pilgrimage among the followers of the early Islamic conquests has to render this sanctuary the place where it was easiest to address the Muslim world as a whole. Decades of settlement of succession to the Khalifate were issued and deposited here by Harūn al-Rashid. If a man wished to procure a copy of a rare work, he would have a crier advertise the want among the pilgrims.

In spite of the rule which forbids access to Mecca on the part of non-Muslims, many Europeans have undertaken the pilgrimage, some indeed having adopted Islam for the purpose of carrying out this project. In Christians at Mecca (London, 1890) Augustus Lalli gives accounts of sixteen such visitors, beginning with Ludovico Varthema, a gentleman of the city of Rome, who reached the forbidden city in 1503. Since the publication of Lalli’s collection, several other pilgrimages have been added to the list: Hadji Khan and W. Sparrow, With the Pilgrims to Mecca, 1902, London, 1903; and A. J. F. Wavell, A Modern Pilgrim in Mecca, do. 1912. Among the reports of these pilgrimages that by R. F. Burton (Pilgrimage to El-Medina and Mecca, London, 1855–56) is classical; it adds, however, very little topographi-

cal information to that which had been given to the world by J. C. Burckhardt (Travels in Arabia, London, 1829). Of the others the account of the city by Snouck Hargroene (op. cit., 1885) is the most important. In several cases the travelers were so fully occupied with the task of preserving their lives that they had no leisure to make observations of value; and in not a few instances the veracity of the narrators has been questioned, not without cause. Besides these accounts by Europeans there are many in existence by Muslims, some of whom have employed the French language. It is asserted that the number of the former who have succeeded in witnessing the pilgrimage and returning to tell the tale is small compared with that of those who have sacrificed their lives in the attempt; and those who have accomplished the task safely have in most cases done so by the exercise of great cunning and ingenuity. The plan of H. Maltzan (Wallfahrt nach Mecca, Leipzig, 1885), who, in order to pass for a Muslim, borrowed the personality of an Algerian, the latter undertaking to remain in hiding for the necessary period, may be commended, both for boldness and for astuteness; it was not, however, free from danger.

MEDIAN RELIGION.—The religion of the ancient Medes is one of the most difficult and disputable questions of ancient Iranian history. The statements of the earlier classical authorities are not easy to reconcile with the Iranian Avesta, and fresh elements of difficulty have been introduced by the decipherment of the cuneiform inscriptions.

The actual facts are these. As far back as the 14th cent. B.C. the cuneiform documents of Bogaz-Keui show that there was an Aryan, but not as yet Iranian, religion, and that the gods Mithra, Varuna, and the like were worshipped there (Divine History ed. E. Meyer, SBAW, 1906, pp. 14–19). By the 9th cent. B.C. this Aryan population had become Iranian.
and was settled east of the Zagros mountains, where it was known to the Assyrians as Mada, or Meda, by the name of Amadã, like Amardi for Mardi. From this time forward the name of the kings and chiefs of Media and the neighboring districts mentioned on the Assyrian monuments are Medes, and in a list of Medes princes conquered by Sargon in 714-713 B.C. we find the name of Mazdau, proving that Zoroaster's god Mazda, 'the Wise,' was already worshipped (cf. also F. Hommel, FSBA, 1899, p. 132). The name of Magi mentioned, is also found in the tablets from Assur-bani-pal's library at Nineveh. On the other hand, Istnavek, or Astyages, the last king of Ecbatana, is termed in the inscriptions, not 'King of Media, but 'King of the Unnamed Mada' or 'Horda,' an archaic title given by the Babylonians in early times to the northern barbarians, but applied in the Assyrian age to the Cimmerians and Scyths (qq.v.). The similarity of the name of MEDIA, and the question whether the Medes of the classical writers who were conquered by Cyrus were not really Scythians whose religious beliefs and practices have been transferred to their Median subjects or neighbours.

Like the Medes, the Persians also were Iranians. But here again the inscriptions make it doubtful whether Cyrus and Cambyses, the founders of the Median empire, were of pure Iranian stock, and whether the religion of Cyrus, at all events, was not the polytheism of Susa (cf. art. Armenia, vol. i, p. 70). Both he and his son conformed to the ancient worship of Babylonia. Gaumátas, or the Medes, was expressly stated by Darius (525 B.C. [Pers. text] l. 83 ff.) to have destroyed the ayadana, or 'prayer-chapels,' of Persia, a word which is translated 'temples of the gods' in the Babylonian version of the Behistun inscription. These Darius claims to have restored, along with other possessions of the Persian and Median peoples, through the help of the great god ARA MAZDA, the creator of the earth and heavens, who in the Persian version of the Behistun inscription (iii. 77, 79) is specially called 'the god of the Aryans.' In the eyes of Darius he occupied much the same place as that occupied by Jahweh in the OT. He was the national god of the Persians and Medes and supreme over all other gods. The existence of the latter, however, was admitted: at Behistun Darius says that he was assisted not only by Aarma-mada, but also by the other gods, all of which were opposed. The right to the rights of law of Aarma-mada was 'the Lie' (drauga), the Achaemenian equivalent of the Zoroastrian Angra Mainyu (Ahirman, q.v.). But there is no reference to the Zoroastrianism of the Avesta in the inscriptions of either Darius or his successors; their priests, moreover, were not Magians, whose overthrow and massacre were, on the contrary, commemorated in the festival of the Magophonia, and the bodies of the Persian kings seem to have been buried in the ordinary way instead of being thrown to dogs or birds of prey. This, Herodotus says (v. 140), was a Magian custom.

The date of Zoroaster (Zaratustra) is uncertain, but modern scholarship is inclined to assign it to the 6th cent. B.C.; and Jackson (at least) seems to be right in concluding that he arose in Media rather than in Persia, the tradition which makes him a Persian being late.

Zoroaster is unknown to both Herodotus and Ctesias, with the earliest mention of him occurring in a fragment, questionably ascribed to Xenophon of Lydia and in Plato (Alcibiades I), who says Zoroaster makes the Magi a Median tribe (i. 101), but he also implies that they were a class of priests (i. 140), and he describes certain of them as interpreters of dreams (i. 107). He further ascribes to them the Zoroastrian practices of reverence for the dog and destroying noxious animals (i. 140). No sacrifice could be offered without the presence of a Magus, who accompanied it with a hymn (the Avestan Gāthā) and there was neither altar, fire, nor legislation (i. 132). The Greek historian adds (i. 131) that 'the Persians' (whose priests were the Median Magi) had 'no images of the gods and no temples or altars, considering the use of them a sign of folly.' They sacrificed to Zeus (Ahriman-Mazda) on the summits of mountains, as well as 'to the sun and moon, to the earth, to fire, to water, and to the winds.' The worship of the goddess Anahita, and presumably also of Mithra, is referred to in two inscriptions of Artaxerxes Menander (Sisica a, 41, Hasm. 51) was borrowed at a later date from 'the Arabians and Assyrians' (Herod. i. 131).

On the other hand, the burning of the Hellena by Xerxes (Herod. vii. 35) is inconsistent with the belief that water was divine, and in Herodotus's account of Magian religion Avestan Mazdaism is continuous by its absence. So, too, is any reference to the doctrine of the dualism. The simplest way of explaining these anomalies is to suppose that the religious system described by Herodotus was that of the Medes, among whom the Magi were a sort of hereditary priests, like the Levites in Israel; and that the religious system of Darius represented the religion of the Persian aristocracy, but that the origin and fundamental principles of the two were the same. The conquest of Media by Persia, who had reduced the Median forms of theology among the Persian people, their influence would have been momentarily checked by the overthrow of Darius and his party, who perhaps would have stood in much the same relation to the Median aristocracy as the Pharisées did to the Sadducees. Meanwhile the reformer Zarathushtra had appeared in Media, where he built upon existing religious beliefs and practices, and attracted the Magi to his side. The result in the course of centuries was the Mazdeism of the Avesta.

MEDIATION.—Mediation is a word of extreme vagueness, but is here considered only in its technical or quasi-technical applications in religion. In a sense all we are and have is mediated in some vague way. Our very being comes to us through our parents. The society into which we are born and in which we are trained mediates to us most of what

3 This is the general view, but J. H. Moulton (Early Zoroastrianism, London, 1913, pp. 225-230) doubts whether it is correct. He holds that the Medes were the aboriginal inhabitants, and that the Magi (q.v.) were their priests. If this be granted, the Medes were neither Iranians nor Semites. He directly states that the Medes 'belonged to neither of the two great races which divided Xerxes Asia, between them was a wide and in more detail, a similar view.

4 For a somewhat definitive exposition of the Magophonia, see art. Festivals and Fasts (Iranian), vol. v, p. 874.

6 See, however, Moulton, p. 212.
what we think of as intellectual, moral, and religious convictions. The greatest part of what comes under these headings is not original achievement of our own, but inheritance or education; it comes to us in somewhat similar terms. It may be possible to make our own what is thus mediated to us, and to become possessors, as it were, in our own right of what we have inherited or been taught; but, to begin with, every creation born in Christ is the mediation of something out of the whole capital with which he adventures upon independent life.

1. The NT use of the term Mediator.—The technical use of the word is most easily grasped if we start from that application of it which is most definite and concrete, viz., its application to the work of Christ. There are four NT passages where this is found: Tit 2:9, Heb 9:12, 12 ff. In all these passages Christ is represented as mediating between God and man. God and man have been estranged. The relation which normally subsists between them has been destroyed, and the work of the mediator is to re-establish it. In 1 Timothy 2:5 the work is explicitly connected with the redemption of death of Christ; there is one mediator between God and man, Himself man, Christ Jesus, who gave Himself a ransom for all. The same idea is expressed in the three passages in Hebrews: there Jesus is spoken of as the mediator of a new or a better covenant. The covenant is the religious constitution under which God and man form one society, or live a common life. The old and inferior constitution, under which the ideal of religion was not realized, was the Levitical one. This was anointed because of its ineffective character, and in place of it, through the incarnation of Jesus, by means of, and at the cost of, His incarnation and sacrifice—comes the Christian relation of man to God. In this the ends of religion are really attained. There is real forgiveness of sins, real purification of conscience, real and abiding access to God, and all due to the mediation of Christ. This use of the term ‘mediation,’ which may be called specifically Christian, is that which has been mainly developed in later theology.

Christ’s work as mediator is that in which He interposes between the holy God and sinful man who are estranged from each other, and makes peace. This specifically Christian use of the term, however, is only the mediation of its use in ordinary relations. In ancient as in modern times a state or a person could offer to mediate between two other States or persons at war. The substantive mediator is used with such terms as διαλλάγης, διατηρής, and is defined by Suidas as μαρτυροῦς, ‘peacemaker.’ The verb μαρτυρέω, which occurs once in the NT without an object (He 6:7), though some here would supply τηρεώ, ‘His promise’ is else usually transitive: μαρτυρέω τού διαλλάσσων εὐφράξως (Polby. XI. XXIV. 3) = ‘to achieve the settlement by friendly mediation.’ A state of hostility or estrangement, in which the making of peace is the work of a third party, and that with the identification there went, as a matter of course, the ascription of this attribute or function to Christ. This is supposed to explain why Paul, when he introduces the idea of creation through Christ, does it simpliciter, without any justification or explanation; he is only doing what every one would concede who agreed with him in identifying Jesus with the Christ. But to this there are many objections. As far as we can know, there was no trace whatever in the Phariseism in which Paul was reared of any such idea as that the Messiah was participant in the creation of the world. Paul, through this may be discredited as a subjective impression, Paul writes in Colossians with passionate earnestness on this subject, and not like a man manipulating borrowed ideas which have no vital relation to his experience. And, if it be said that it is not so much a theological Messiah with whom Jesus is identified by Paul, but a supernatural being of another sort—the Logos of popular Greek philosophy, of whom many things were predicated as Paul predicates of Christ in connection with which the further question is raised, how did Paul come to...
make this identification? He never mentions the Logos by name. There is no indication in his writings that he knew anything about philosophy or that he had any interest in its problems. The Logos of the current philosophy, which did mediate somewhere between God and the universe, was the philosophic solution of a difficulty which he had never felt; namely, how the transcendent God was to come into any relation to a material world. Paul was not troubled by any more than the OT prophets or Jesus Himself, nor does he ever bring his experience of creation through Christ into any relation to it. The motive and the meaning of that doctrine must be sought elsewhere.

A real clue to his thought, as opposed to this formal one, may perhaps be found in another way. In Paul's experience as a Christian, Christ was everything. He had reconciled him to God and made him a new creature. He had put him in possession of the final truth and reality in the spiritual world. He now believed that there was a correspondence between the reality of the new world and the believer's interest in it. It must be subservient. He could say, 'All things are yours' (I Co 3:23); 'All things work together for good to those who love God, to them that are called according to his purpose' (Ro 8:28). And 'all things here' must be taken without restriction. It means not only all that happens, but all that is. Creation must in the last resort be in alliance with the God and Father of our Lord Jesus Christ, and in league with his purposes. As J. Orr put it (The Christian View of God and the World, p. 388), if it is to be built on redemption lines. That is the same as to say, it must be built on Christian lines; the world in which Christians live must be essentially a Christian world. It is not a world in which anything can defeat God's purpose in Christ; it is not a world in which the final sovereignty of Christ can be frustrated; it is a world which is essentially related to Christ, to his work of reconciliation, and to his supreme place at last as heir of all things. Now, is it not legitimate to say that a world which was created for Christ was created in Him and through Him? The difficulty of comprehending what is meant by the creation of the world through Christ is only one aspect of the difficulty of apprehending Christ's pre-existence, and that again is only one aspect of the omnipotence and insuperable difficulty of defining the relations of eternity and time. If pre-existence is a legitimate way of expressing the absolute significance of Jesus—the fact that what we see in Him is the eternal truth of what God is, and that therefore He belongs to the very being of God, 'before the foundation of the world'—then the mediation of creation through Christ is a legitimate way of putting the conviction that in the last resort, and in spite of appearances, the world in which we live is a Christian world, our ally, not our adversary, or, if our adversary, one who is necessary, that in conflict with and victory over him we may prove that we have found the way of salvation. Paul does not start with the speculative idea that creation could not be immediate, and that all material and spiritual existences—things on earth and in heaven, things visible and invisible—must owe their being to the mediation of some supernatural agency which is identified in his mind we cannot tell why, with Jesus. He does not start thus, and then give this vague speculative idea a particular application when he comes to explain the redemption. On the contrary, he starts with Christ and with the experience of redemption which, as a matter of fact, is mediated through Him. But the redemption thus mediated is something of absolute significance. It involves contact with ultimate realities, with the eternal truth and love of God in Christ; it kindles a light in the soul which must fall of knowledge in the world if we are to see it as it is; it involves no smaller a conviction than that the world is essentially a Christian world, and it is this conviction, which is still involved in Christian faith, that forms the vital content of Paul's doctrine that all things were created through Christ.

That the world has this character may, of course, be doubted. It may even be argued that no moral life, no life involving moral perception, is possible except with a background of nature which is morally indifferent; it is only in a world which is indifferent to the distinction of good and evil that man can prove his devotion to good for its own sake. But there is really no such world, though the lightning does not shun the good man's path. What the doctrine of creation mediated by Christ implies is that in the very constitution of nature it is possible to discover the same principles as are revealed in the life and work of Christ. If we are not so, no one with roots in nature would understand Christ when he appeared. The ultimate task of Christian philosophy is to discover spiritual law in the natural world. That is what every idealistic philosophy teaches; it is the inspiration of the highest poetry; Wordsworth found in nature not an adversary or a neutral, but 'the soul of all my moral being.'

4. Mediation in the Fourth Gospel. Without using words like προσφέρει and προσφέρεται the Fourth Gospel makes perhaps a more conscious and continuous use of the idea of mediation than any other book of the NT. Leaving the Prologue out of account, it is mediation in the specifically Christian sense, just as in Paul and Hebrews. The whole book might be summed up in the phrase of 14, 'No one cometh unto the Father, but by me.' It is to Jesus that men owe all the blessings which constitute salvation. They are variously described, most frequently as 'life' and 'eternal life,' but they come to men through Him and Him alone. Yet a counter or complementary truth is presented in the same Gospel. No man comes to the Father but by Jesus, yet no man comes to Jesus but him who is drawn by the Father (6). It is as though there were two powers in the world antecedent to the historical Jesus which had Him in view, which prepared men to understand Him, and to welcome His mediation when He came. In the constitution of nature, in the impression which it makes as a whole on the spirit of man, in human life itself with its various experiences of success and failure, of wronging others and being wronged, of forgiving others and being forgiven by them, there is a sum or complex of forces which bears witness to Christ and constitutes a providential drawing of men by the Father to the Son. But it is only when we receive the Son and believe in Him that we truly come to the Father. The earlier stases of religion are mediated to us through all the experiences of life; these provide for it a broad and indisputable basis here and now, and make it independent of any particular historical mediation. It is, of any mediation through persons or facts which have their place in the past. But this immediate experience of religion, as a religion, is some kind of it, of pure inwardness and spirituality, which has its certainty in itself, and is not at the mercy of a historical criticism for which no fact is beyond question—does not, according to the Evangelist, enable men to dispense with what is mediated through Jesus; it only enables and prompts them to appreciate it. It is constituted through Him. Instead, he who has seen Jesus has seen the Father. And, para-
doxical as it may seem, this historical mediation does not shake the certainty of religion; the perfect religion does not become doubtful because the mediator of it lived in time. We are in Him that is true, and he that believeth hath the witness in him (Jn 20:31).

In the prologue the idea of mediation is even more explicit than in the body of the Gospel, and it is wider in its range. The first three verses are now exercised by the Son in Paul, and it is difficult to think otherwise than that the author has identified Jesus with the Logos of the current philosophy, and that he is speaking of Him in terms whose antecedents are philosophical rather than evangelical. The very ambiguity of the term Logos (ratio, oratio) may have commended it to Him. It suited him equally well to have Jews feel that in Christ they had God's last word to man, and to have Greeks feel that in Christ they were in contact with the reason of the world, the rational principle or truth in which all things lived, and moved, and had their being. The one knew no logic other than, he would have held, were meditated to men through Jesus. It is by no means clear, however, that the prologue makes the Logos, as distinct from the historical Jesus, the mediator either of a universal revelation of God, or of a particular revelation of God to Israel. The interest of the Evangelist in such speculative ideas is perhaps less than has been assumed. The traditional and somewhat gnarled interpretation of the prologue, according to which the Incarnation does not appear until v.4—an interpretation which has so commended the passage to those who delight in the idea of a general revelation in nature and history culminating in a final and adequate revelation in Christ—is almost certainly wrong. The movement of thought in the prologue is spiral. The Incarnation appears already in v.1, and the history of Christianity up to the time of the writer is summarized in v.4. Revelation in its full and specifically Christian sense, the mediation to men of that knowledge of God which is eternal life, is accomplished only through Jesus, the Word made flesh. The difference from Paul may be said to lie in this: in Paul Jesus mediates revelation through redemption (we know God as Father because He saves us by His Son), whereas in John He mediates redemption through revelation (we are saved from sin and death because through Jesus we have the knowledge of the Father). But the distinction is true only when it is not pressed. In both writers it is the specifically Christian sense of mediation that is vital: Jesus is the mediator between God and men. The wider sense of mediation, according to which Jesus mediates creation as well as redemption, while it is found in both, has not the same emphasis. The apologist seems to feel that their religion ultimately implies this, but it is not this that directly inspires or sustains it.

5. Mediation and Jesus’ consciousness of Himself. The most important question to the Christian religion is whether this specific, self-conscious mediation, which is not only recognized by but pervades all the apostolic writings, is confirmed when we turn to the mind of Christ Himself. He never King of the creation of the world, but was He conscious of being in any sense a mediator between God and men? Did He stand between them to any extent? Did He to any extent owe to Him either the knowledge of God or reconciliation to God, or were those supreme spiritual blessings immediately open to them, in independence of Him? The questions have been answered in both ways. Harnack’s famous dictum (Das Wesen des Christentums, Berlin, 1900, p. 91), that in the gospel as preached by Jesus the Son has no place, but only the Father, is so qualified by other statements that its author can hardly be cited for the negative. Much more uncompromising representatives of this side are J. Weiss and W. Heitmüller. The former, in his dissertation (Göttingen, 1914, p. 364), in discussing the relations of faith in Christ and faith in God (in Paul), explicitly renounces the idea of a necessary mediator of salvation. Christ was there, as a matter of fact, and therefore Paul cannot place Him in a position in his religion somehow; but Weiss, with a sense of his own daring, declares that there was no necessity for His mission and work in the nature of God, and that God’s eternal love, though Paul knew it only through Christ, must have had its way even if Christ had failed the redeeming work of the Father, or if God in the fullness of His love had been able to dispense with the sacrifice of Christ. There is not, indeed, any appeal here to the mind of Christ, with regard to mediation, but there is the expression of a conviction which forecloses any such appeal. In Heitmüller’s Jesus (Tübingen, 1913) the denial is even vehemence:

* It is quite beyond doubt that according to the preaching of Jesus we have to do in religion only with an immediate relation of man to God: between God and man nothing stands between them, not even Jesus. Religious significance in the proper sense Jesus in any case does not claim (p. 75).

But Harnack’s position becomes an embarrassment when he deals explicitly with some words of Jesus. He admits that they disclose not merely a prophetic but a superprophetic consciousness—e.g., the well-known passage Mt 11:7. To be the bearer of a unique revelation, the Son simpliciter must terrifies us to think of it. It is not a divine self-consciousness, but it is almost more than human. It might impel us to ask whether it was compatible with soundness of mind to ascribe to Jesus the point at which the form of Jesus becomes mysterious to us, almost uncanny (p. 71). Further on, he speaks of the riddle as insoluble (p. 89), but apparently he thinks that he has reduced it to less disgusting proportions when he writes (p. 126) that Jesus seems to have claimed for Himself only that He is the way to the Father. It is difficult to see how He could have claimed more. The opposite view, that the place which the NT generally assigns to Jesus, as the indispensable mediator between God and man, is in harmony with Jesus’ consciousness of Himself, is argued in the present writer’s Jesus and the Gospel (London, 1908, p. 156ff.) on the self-revelation of Jesus. The present covers both the Johannine idea of the mediation of the knowledge of God (as in Mt 11:7) and the Pauline idea of the mediation of redemption (as in Mk 10:45). What it does not expressly extend to is the speculative idea that creation as well as revelation and redemption is mediated through Christ.

6. Other mediators than Jesus.—Emphasis is laid in the NT on the exclusive character of Christ’s mediation; there is one God, and one mediator between God and men. This is the idea of such passages as Ac 4:12 (’none other name’), Col 1:20 (’in him dwelleth all the fulness of the Godhead bodily, and in him ye are made full’), and He 7:25 (the priesthood which does not pass to, or cannot be trenched upon by, another), as well as of Jn 14:6. What is in view in these passages is the idea that Christ in His work of mediation may have rivals or competitors, powers which in independence of Him prepare for His work, or supplement it, or enable men to dispense with it. This is unambiguously and exhaustively denied. The idea of mediation in the Christian sense is inseparable from and declared by Him. Spiritual beings, whatever their name or degree—principalities, powers, dominions—owe their own being to Him, and have their functions,

1 "Wir müssen es aus sprechen..." echterweise muss man sagen." (ibid.)
whatever they are, in a world which He has reconcile
to God.

The effectiveness of His mediation with regard to
t nature (being) as well as redemption is strongly
asserted both in Col 1st and in 1st. Probably in
both these passages, as well as in 1 Th 2t, there is
reference to the idea of the world which it is diffi-
cult for us to define. For ancient thought gen-
gally, and therefore for ancient religion, the world
was full of invisible powers of a personal or quasi-
personal sort, and these easily asserted a place for
themselves in the scheme of things. They came be-
tween God and the soul in ways that we cannot
appreciate, and the interest of the apostles is to
expel from the relations of God and the soul every
power but that of Jesus. Their argument is that of
experience against uncontrolled imagination.
The controversy of later theologians, Catholic
and Protestant, on the mediation (intercession)
of saints are like this, but not identical. Those who
admit that we can pray for one another have no
ground for denying that the saints can pray for us.
All that is to be said is that do not know any-
thing about it; but whatever the saints may do for
us, it is not found on Jesus, as it was on the
mediators who might bring us to God apart from
Him.

For statements on opposite sides of this ques-
tion see Calvin's Institutio, III. x. 20-27; West-
minster Confession, ch. xxi. 2; Thomas Aquinas,
Summa theol. II, II. 3; J. H. M. Rath, Outlines of
Polemik, Leipzig, 1900, p. 294.

9. Meditation in the OT.—If we look back from
the NT to the OT, we find much everywhere
what can be described in terms of mediation, though
muσηντες occurs only once in LXX (Job 9), where
according to T. K. Cheyne (EB, col. 3098), it
answers to v72, and means a person who could
interpose with authority between Job and his
imperfect or arbitrary God—an arbitrator who would
see justice done. This is akin to the διαργυστηριον,
defined by Aristotle as διο δαιον, and often found
in Greek as a synonym of μεσοντης; but it is hardly
the equivalent of the NT μεσοντης, whether we regard
revelation or reconciliation as that which comes
to men through Him. If we confine our attention to
the relations of God and man, in which the term
mediation is properly applied, both aspects of it
prevade the OT. Revelation, or the knowledge of
God, is mediated to men through the prophet. It
is through the prophet to whom it is mediated in
the prophet himself; for the purposes of religion
he obtains it immediately. He stands in God's
counsel and hears His voice; it is the voice of God
Himself, or such an echo of it as the prophet's
voice can utter, that is heard when He speaks.
There is no external criterion for distinguishing the
true voice of God from a voice which speaks lies in
His name. The secret of the Lord is with them
that fear Him (Ps 24); they have, without knowing
it, what the NT calls (1 Co 12) the gift of
'discernment of spirits.' As revelation is mediated
through the prophet, so in the largest sense is re-
cognition through the priest. The Levitical system
may have been very imperfect as it was destined, in-
deed, to perish by its inadequacy; but the idea of
it was to enable men to approach God, to give them
peace with Him, to put it in their power, in spite of
all they had done, to have communion with God, living as members of a society of which He was
the head. The Levitical system does not, of course,
exclude what the OT exhibits of the mediation of
mediators. Much importance is attached to
prayer: the house of the宝贵的 ruin. We come—the
final break between God and His people—when
Jeremiah hears that, though intercessors like Moses
and Samuel stood before Jehovah, they could not
turn His heart toward Israel (Jer 15). The minis-
try of intercession mediates for man to God, as
well as the ministry of sacrifice, to which the latter
is added; and in both, though of course it is diffi-
cult for us to define. For ancient thought gen-
gally, and therefore for ancient religion, the world
was full of invisible powers of a personal or quasi-
personal sort, and these easily asserted a place for
themselves in the scheme of things. They came be-
tween God and the soul in ways that we cannot
appreciate, and the interest of the apostles is to
expel from the relations of God and the soul every
power but that of Jesus. Their argument is that of
experience against uncontrolled imagination.
The controversy of later theologians, Catholic
and Protestant, on the mediation (intercession)
of saints are like this, but not identical. Those who
admit that we can pray for one another have no
ground for denying that the saints can pray for us.
All that is to be said is that do not know any-
thing about it; but whatever the saints may do for
us, it is not found on Jesus, as it was on the
mediators who might bring us to God apart from
Him.

tion see Calvin's Institutio, III. x. 20-27; West-
minster Confession, ch. xxi. 2; Thomas Aquinas,
Summa theol. II, II. 3; J. H. M. Rath, Outlines of
Polemik, Leipzig, 1900, p. 294.

9. Meditation in the OT.—If we look back from
the NT to the OT, we find much everywhere
what can be described in terms of mediation, though
muσηντες occurs only once in LXX (Job 9), where
according to T. K. Cheyne (EB, col. 3098), it
answers to v72, and means a person who could
interpose with authority between Job and his
imperfect or arbitrary God—an arbitrator who would
see justice done. This is akin to the διαργυστηριον,
defined by Aristotle as διο δαιον, and often found
in Greek as a synonym of μεσοντης; but it is hardly
the equivalent of the NT μεσοντης, whether we regard
revelation or reconciliation as that which comes
to men through Him. If we confine our attention to
the relations of God and man, in which the term
mediation is properly applied, both aspects of it
prevade the OT. Revelation, or the knowledge of
God, is mediated to men through the prophet. It
is through the prophet to whom it is mediated in
the prophet himself; for the purposes of religion
he obtains it immediately. He stands in God's
counsel and hears His voice; it is the voice of God
Himself, or such an echo of it as the prophet's
voice can utter, that is heard when He speaks.
There is no external criterion for distinguishing the
true voice of God from a voice which speaks lies in
His name. The secret of the Lord is with them
that fear Him (Ps 24); they have, without knowing
it, what the NT calls (1 Co 12) the gift of
'discernment of spirits.' As revelation is mediated
through the prophet, so in the largest sense is re-
cognition through the priest. The Levitical system
may have been very imperfect as it was destined, in-
deed, to perish by its inadequacy; but the idea of
it was to enable men to approach God, to give them
peace with Him, to put it in their power, in spite of
all they had done, to have communion with God, living as members of a society of which He was
the head. The Levitical system does not, of course,
exclude what the OT exhibits of the mediation of
mediators. Much importance is attached to
prayer: the house of the宝贵的 ruin. We come—the
final break between God and His people—when
Jeremiah hears that, though intercessors like Moses
and Samuel stood before Jehovah, they could not
turn His heart toward Israel (Jer 15). The minis-
try of intercession mediates for man to God, as
well as the ministry of sacrifice, to which the latter
is added; and in both, though of course it is diffi-
cult for us to define. For ancient thought gen-
gally, and therefore for ancient religion, the world
was full of invisible powers of a personal or quasi-
personal sort, and these easily asserted a place for
themselves in the scheme of things. They came be-
tween God and the soul in ways that we cannot
appreciate, and the interest of the apostles is to
expel from the relations of God and the soul every
power but that of Jesus. Their argument is that of
experience against uncontrolled imagination.
The controversy of later theologians, Catholic
and Protestant, on the mediation (intercession)
of saints are like this, but not identical. Those who
admit that we can pray for one another have no
ground for denying that the saints can pray for us.
All that is to be said is that do not know any-
thing about it; but whatever the saints may do for
us, it is not found on Jesus, as it was on the
mediators who might bring us to God apart from
Him.

For statements on opposite sides of this ques-
tion see Calvin's Institutio, III. x. 20-27; West-
minster Confession, ch. xxi. 2; Thomas Aquinas,
Summa theol. II, II. 3; J. H. M. Rath, Outlines of
Polemik, Leipzig, 1900, p. 294.
of all human life; He is the Word made flesh; Paul can even say (2 Co 3:17) that in His exaltation He is the Spirit. All meditation between God and sinful men is summed up and exhausted in Him. He is Himself our Peace. But all meditation, if the spirit is to rise properly, the religious sensation of the absolute significance of Jesus as the mediator of reconciliation: it is one way of expressing the conviction that He is the Beginning and the End, the First and the Last.

3. Subordinate sense of meditation (the means of grace).—Meditation in a subordinate sense is the subject of the whole doctrine of the means (media) of grace; that is, of the divinely appointed ordinances through which the salvation of Christ is brought home to man. Grace is mediated through these ordinances, especially, according to Protestant theology, through the Word, sacraments, and prayer. The conditions under which the use of the ordinance becomes effectual for salvation—i.e., the terms on which grace really is mediated through them—are stated in all the confessions in more or less experimental and argumentative forms.

Comparative religion offers examples of meditations which are less analogous to those here considered. Wherever there are religious institutions and customs, they are mediatorial. It is through them that the spirit of a religion is conveyed to those who are brought up within its pale. Sometimes there are what is called 'developmental coincidences' between other religions and Christianity where there is no real interdependence. Thus Mithra was called Mithras in the first instance, dwelling in the nether world, midway between heaven and hell. But the local meaning deepened into a moral one. Mithra became mediator between the inaccessible and unknowable God who reigns in the ethereal spheres and the human race which lives its restless life here below. He is addressed as great Mithra, messenger of the gods, mediator of the religion of the elect (P. Cumont, Les Mystères de Mithra, Brussels, 1913, pp. 129, 130, 146). Similar phenomena are abundant in the religions of India. But we nowhere find a religion of which we can say, as has been said of Christianity, that it is what it is because of the presence in it of the mediator.

In the case of meditation involves that of the nature of Christianity, and especially raises the question whether Christ has a necessary place in the Christian religion, and, if so, what place in it. It is, and what it implies as to Christ Himself (Christology), the literature is really co-extensive with the subject. The conclusions of main aspects of the subject are to be found in J. Butler, Analogy of Religion, ed. J. H. Bernard, London, 1900, pp. 117, 118, 172. Besides the works mentioned in the article, all modern writings on NT theology are more or less relevant, but the formal treatment of it, even in the Jesus-Paul literature, is not frequent.

MEDICINE.—See DISEASE AND MEDICINE.

MEDICINE-MEN.—See SHAMANISM.

MEDINA.—Medina, in Arabic with the article, means 'the Town,' as opposed to the desert (Q. 2, 103). The name usually given to the city whither Muhammad fled from Mecca, sometimes interpreted as 'the Prophet's City.' Its proper name was Yathrib (18, xxxvii, 13). It is also called the 'City of Stephanus Byzantinus (c.e.) and the Agora of Potenly (vi. vii, 31), apparently identical in origin with the Egyptian Agorak (indeed a form of Athrib is mentioned). Another name which is sometimes cited is to be compared with the Hebrew Tob (Jg 11, etc.), and perhaps with the Greek θεραία, meaning 'fragrant' or 'good.' Many more names are collected by Samhadi (893 A.H.) in his monograph on Medina (Khalīgat al-wujūf, Cairo, 1350), but these are mostly honorific epithets; one, however, which he quotes from the OT is Salqah, which should rather be Salkah (Jos 19, etc.); but this identification is certainly erroneous.

Since Stephanus Byzantinus gives the relative adjective of Yathrib as 'Agorak, it must have been the home of several persons who bore the names of its pre-Islamic history are mainly fabulous, though they must contain a little fact as well.

The settlement, which is often called 'between the two lakes,' i.e., the Harlem formations, was at the commencement of Islam a joint home of the early Jews. The former were grouped in two tribes, the Ans and the Khazraj, whereas the latter three tribal names are handed down—Qaimqa, Qaraita, and Nadir. The native Jewish tradition appears to know nothing of these colonies, whose names surprise us; for the last two are clearly Arabic, and the first apparently so. They are supposed to have had a dialect (or jargon) of their own, some fragments of which are preserved in the Qur'an (iv. 48), but are exceedingly puzzling. This fact would seem to militate against the supposition that they were Arabs who had adopted Judaism. If we are justified in attributing to them some of the Jewish matter that is found in the Qur'an, they must have been acquainted with portions of the Oral Tradition, to which there are occasional references; and it is practically certain that the early Islamic lawyers were indebted to, and to the extent from these communities for certain technicalities and even whole maxims. The personal names which are preserved are partly Hebrew, partly Arabic.

The Muslim tradition represents the Jews as further advanced in civilization than the Arabs of Medina, and engaged both in trade, including lending money on security, and in cultivation of the soil; the state was the most important product. Further, they are said to have had schools, and to have written Arabic in Hebrew script, as was done at a later time and is done even now. They were under the protection of their Arab neighbours, and were occasionally compelled to fight in the tribal wars, much against their inclination.

Between the Ans and the Khazraj there was a long-standing feud, which led to the parties summoning the Prophet in the same manner recorded in his biography. Hellenic antiquity, which furnishes many analogies to that of the Arabs, provides illustrations of this expedient for putting an end to civil strife. He called his new companions Anṣār, 'Helpers,' a name which, according to the Qur'an (ii. 45, lxi. 14), originally belonged to the Medeness, and doubtless is a popular etymology of Nazarene.

Like many other statesmen, the Prophet found in external warfare the best remedy for civil strife: and, since at least for some years all new adherents were required to migrate to Medina, the
towm grew vastly in magnitude and importance during his despotism. Neither be nor his immediate successors had power to make any other form of art, and, though building must have gone on for the housing of the increasing population, it was, like the Prophet's mosque and domes, a purely decorative kind. There are traditions, probably deserving credit, that the building was completed during this period; but reconstruction on a considerable scale appears to have taken place first in the time of the Umayyads, the dynasty of the Khawālijīs. In the year 884, the Caliph Amr b. Abi-l-Aswad, who had given orders for the reconstruction of the building and the houses of the Prophet's wives, and the inclusion of the whole area in a new mosque covering 200 × 200 cubits. According to Tabari (Chronicles, Leyden, 1879–1901, i. 1184), the Caliph demanded and obtained assistance from the Byzantine emperor, both in materials and in workmen. The new mosque was elaborately decorated, and rewards were offered to the artists, who, however, according to Samhādī's authorities, were at times guilty of profanity. The whole was under the direction of Omar b. Abi-l-Aswad, who introduced the mihrab and four minarets. In 160 A.H. further additions were made by order of the Khayr al-Mahdi, and his successors continued to repair and decorate it. The whole building burnt down in the year 654 A.H. and restored chiefly by the Egyptian Sultan, whose successors continued to adorn and enlarge it. It was again burned down in 896 A.H., and rebuilt by order of Qalībān with great magnificence. This was in the time of the local historian Samhādī, who was absent at the time of the fire, but lost much of his property owing to it. Qalībān's is the existing mosque. Architectural details connected with the various buildings are given by R. F. Burton (Pilgrimage to El-Medina and Mecca, London, 1855–55, vol. i. ch. xvii.), who also adds some details for the period since Samhādī. Apparently a certain amount of destruction was effected by the Wahhabis, who also plundered the treasures; but, when they had been forced to evacuate the place in 1815, the damage was made good.

Visitation of Medina is not incumbent on Muslims, but it is regarded as a devout act. The Prophet having said: 'Whoever performs the pilgrimage and visits me, God will not let him be mutilated by me' (quoted by Hariri, Maqāna 301). The visit is, of course, to the Prophet's grave, which is the object of interest in the sanctuary; for the Sunnis those of his first two successors and his daughter, who lie beside him, are also of importance. For a description of the tomb itself, which is screened off, but can be viewed from the road, see Burton (Travels, ii. p. 430).

MEDITATION.—See DEVOTION AND DEVOTIONAL LITERATURE.

MEDITATION (Buddhist).—See BOHESATTVA, vol. ii. p. 762 ff., DHYANA.

MEEKNESS. 1. OT conception. The Hebrew word for meekness (nag) is closely connected with the ideas of humility, poverty, and affliction. A great feature of OT literature is the attempt which it constantly reveals to reconcile the facts of experience with the principle that righteousness brings prosperity, while wickedness is inevitably followed by disaster. In view of the apparent contradiction of this principle by the facts of life, some OT writers (Ps 37, Job) attempt to vindicate the ways of God to man, and to establish the ultimate reality of this principle by insisting that the suffering of the righteous and the success of the wicked are only temporary. In the end divine justice and the works of God (who are thus identified with the righteous), while the transient prosperity of evil-doers will end in calamity and downfall. Numerous exegetes, Christian teachers derive the conception of meekness from the OT, but enlarge and spiritualize its meaning and application. The deep significance attached to this con-
cept in the NT lies in its identification of the loftiest ideal with the profoundest reality. The meek man is thus defined as one who not only "resists evil" (Mt 5), but as one who "resists not evil" (Mt 5).

He is the one who surrenders the immediate interests of life, but in so doing he is not emptying his life but rather filling it with larger interests. He believes that the rights of others make the rights of all others his own. Accordingly, Jesus calls upon His disciples to surrender even the most obvious rights of property (Mt 5). But the ground of such surrender is not the denial of individual rights on the part of Christ. On the contrary, He assigns the highest importance to individual work, and He confers upon the meek a title not only to the Kingdom of Heaven, but also to the inheritance of the earth (Mt 5).

Such possession, however, is to be realized only through spiritual development; that is, to say, such possession is not to be won by self-assertion or by means of the later forms of opposition, but only as the individual identifies the common welfare of men with his own. Hence Christ's refusal to take part in a selfish struggle for private gain is the basis of a group of all oppositions by depriving others of the very power of setting up interests in opposition to His own.

3. Philosophical conception. — (1) Its place in the history of ethics. — While other ethical systems have in many cases been characterized by lofty ideals of conduct, the profound conception of meekness indicated in the preceding paragraph is distinctive of Christian ethics. The ethical Ideal has generally been conceived as pleasure in some form or other. Hedonism (q.v.) conceives it as the pleasure of the moment, but the objection to this view is that such transient pleasure cannot satisfy a consciousness that is not momentary. Eudemonism (q.v.) seeks to repair this defect by setting up the happiness of the life as a whole as the summum bonum, but a fatal limitation of this view is that the happiness of life as a whole is incalculable. The balance of pleasures and of pains cannot be adjusted, and the values of competing pleasures cannot be quantitatively determined though they may be qualitatively distinguished. The same criticism applies to Utilitarianism (q.v.), for the greatest happiness of the greatest number is still less calculable than the happiness of the individual life as a whole. A further criticism applies to all three forms of Hedonistic ethics — the criticism that, if happiness alone is found, this radical defect can be met only by a radical change of ethical ideal. What the nature of the new standard is to be will depend upon the point of view taken. If this be the standpoint of Christian ethics, then the ultimate moral standard cannot be lower than the attainment of perfection; and an essential factor in the rule of conduct by which this ideal is to be realized is the quality of the manner in which the tasks are accomplished. True humbleness, reverence, consideration for others, self-respect without vanity, reverence, and perfect humility — for all these qualities are characteristic of the true meekman beside faith as the alone lead, according to Christian ethics, to the realization of moral perfection, and at the same time to the attainment of real temporal prosperity. In NT phraseology the meek are most truly happy (Mt 5) and blessed (Mt 5). The meek are, therefore, not only non-resistors (Mt 5), but also the inheritors of the earth.

But how is such a quality of character, which has its distinguishing features in an undertone of self-assertion, actually to achieve the conquests and acquire the possessions which are thus ascribed to it? The NT answer is twofold. On the one hand, it is to be achieved by the medium of the meekness of Christ; on the other, it is to be achieved by the meekness of the meek themselves.

(2) Its relation to the doctrine of evolution. — According to the principle of natural selection, it has been argued that in the evolutionary process the unwarlike or "meek" man will become predominant to make way for the survival of the fittest. There are some, therefore, who maintain that by supporting such institutions as hospitals, almshouses, and sanatoria we are retarding the process of evolution. It is evident that such a view degenerates and criminals, consumptives and lunatics, and, worst of all, taxing the sane, healthy, and law-abiding citizens for their support.

But this view fails to recognize that the doctrine of evolution implies. It confuses this principle with that of letting the weakest go to the wall. It is hardly necessary to point out that by adopting such a principle we should blunt our finer feelings and should therefore sink in the moral scale. And the cost in money, and efficiency for other pursuits that is entailed in our care for the aged and diseased is negligible when compared with the moral gain of the meekness indicated in the NT.

MEGARICS (Megarenses). — Platonists of the Megarian school of Megara are generally regarded as the founders of the Megarian school, though it would be more correct to keep the name for his successors a generation or two later. Platonists himself was an Eleatic and also an "associate" (tropos) of Socrates. The account of his philosophy given by E. Zeller (Philosophie der Griechen, n. 1, Leipzig, 1889, p. 244 f.) is vitiated by his adoption of Schleiermacher's identification of the Megarics with the "friends of the forms" (phlogos) of Plato's Sophist. It is quite impossible to reconcile the few facts we know about the teaching of the Megarics with the theory of plurality of forms, and Proclus, in his commentary on Plato's Parmenides (p. 149 ed. V. Cousin, Paris, 1839-37), states quite distinctly that the "friends of the forms" were those who believe in the intrinsic nature of reality, the Pythagoreans on such a point Proclus's testimony is conclusive, for he had access to and was familiar with the works of Plato's immediate successors.

The most trustworthy account that we have of the Megarian doctrine is that of Aristotle, the teacher of Alexander of Aphrodisias (2nd cent. A.D.), and some extracts from whose History of Philosophy are preserved in the Paraphrase of Eusebius (xiv. 17). Its Eleatic origin is at once apparent from these, and Aristotle expressly says that it was the first doctrine of Xenophanes, Parmenides, Zeno, and Melinus, and later of Stilpo and the Megarics. In the first place, they made it their business to "throw" (exoáthelw, a metaphor from wrestling) all sensation and appearance, and to trust in reasoning alone. The method which they thus adopted was elaborated by Zeno, a method which was known as "dialectic" by its adherents and as "eristic" by its critics. It consisted in showing that all contradictory but equally cogent conclusions must be rejected with regard to everything without exception, and that there was no true at all in any of the appearances presented to our senses. That is
what Plato calls ἀριστολογία, and we still possess a curious fragment of speech generally known as the Dialektes (the name is without authority), which applies the method to certain ethical antinomies. It is most natural to regard this work as a predilection of Megara, and we know it was so held by Epicurus, who along with special tenacity to their native dialect.

The effect of this criticism is to leave us without anything but the One or the Whole (τὸ έν, τὸ ολό), and to deprive the Many and the Parts of all claim to participate in the whole.

That was the doctrine of Parmenides, but there is evidence that Euclides understood it in a rather different sense than the founder of his school, and it is here that we can trace the influence of Socrates. The One of the Eleatics had been a continuous, corporeal plenusa, whether finite (Parmenides) or infinite (Melissus), but Euclides took the step of identifying it with the Good, which was 'called by many names, such as God, and Mind (nous),' in a way that 'the Absolute made its first appearance in the history of philosophy, and its claim to be the sole reality was based on the incompatibility of the criticism of the One and the Absolute.'

The philosophy of Euclides had a very great influence on Plato, who had taken refuge with him at Megara after the death of Socrates, and it is to this influence that we may more probably ascribe the unique position assigned to the Good in the Republic. It was impossible, however, for Plato to acquiesce permanently in an Aristotelian doctrine of any kind; for that excluded from reality what was most interesting in the Soul, and especially the chief Soul of all, namely God. The Parmenides and the Sophist are chiefly occupied with this problem, and it is plain that Plato believed himself to have disposed finally of the Absolute. That led, of course, to a breach between the Academy and their fellow-Socrates of Megara, and from this time forward we may discern the beginnings of a distinct Megaric school. As was natural, the negative dialectic was more zealously cultivated than the central doctrine of Euclides. When an abstract Absolute has been set up, there is no more to be said about it, but the dialectical method is always available for the criticism of rival philosophies. Aristotle was naturally the chief object of the Megaric attack, which was led by Eubulides. Aristotle's own logical theory was to a large extent abstracted from his own work, and the line was never given to his course on fallacies, the Sophists Enchechi, bears witness to it; for, since the time of Plato's Sophist, the old term had been revived as a name for thinkers of the class known later as Megarics. The fallacies exposed by Aristotle are, in fact, for the most part, Meagric arguments, and that is the explanation of the sense in which the words 'sofism' and 'sofist' have been used from that time to the present day. Many of these sofismes are well known, such as the Liar (μάχαιρα), the Veiled Man (μάκενος), or the Heap (σαρκόνιον). As an extreme specimen, we may take the argument of the Horns. 'What you have not lost, you have not.' Some of the arguments are more serious, however, and raise the problem of continuity.

The conclusion of Zeno is that of the school of the Eleatics, the rvntis acei (αριστολογία, referred to by Horace (Epist. II. i. 45). The most important of all is the problem of view, however, was the so-called of the Horns. What you have not lost, you have not. Therefore you have horns.' Some of the arguments are more serious, however, and raise the problem of possibility altogether. The argument may be stated thus: 'Nothing impossible can proceed from anything possible. But it is impossible that anything in the past should be other than it is. If it had been possible before it was the past, then it must have proceeded from a possibility. Therefore it was not possible that it should be other than it is. Therefore it is impossible that anything should happen.' Chrysippus confessed that he could not solve this, and Epicurus still based himself with it.

The ultimate foundation of the Megaric school as a philosophical sect was the work of Stilpo of Megara, who for some time after the death of Aristotle (322 B.C.) was the most important philosophical personality in Greece. When Poseidon took Megara in 397 B.C. he tried to induce Stilpo to return with him to Alexandria, but the invitation was declined. From the few facts that are told of him it is plain that he revived the positive side of the doctrine of Euclides and insisted on the necessity of reality for appearances. He makes the idea of man is to speak of nobody; for it is not to speak of A any more than of B. In the same way, he refused to admit that a cabbage shown to him was a cabbage. There was a certain sense ten thousand years ago. As he further denied the real existence of forms or species (εἴδη), whether in the Aristotelian or in the Platonic sense, it followed that everything was mere appearance. But when distinguished from all his predecessors, so far as we know, and what made Megaricism a reality for the first time, was the ethical principle which he deduced from this apparently barren Absolutism. It was the only ethical principle that such a doctrine can yield, that of quietism and insensitivity. Plato's nephew Socrates had already maintained that pleasure and pain were the same as the real world of things, and that good men at impartiality (ἀσκολεία), and the word 'apathy' (ἀπαθία) occurs in the Platonic Definitions (413 A), which belong to the early Academy. In his Ethics (1194, 24) Aristotle alludes to those who define the various forms of goodness as ἴδια and ἴδια. But it was Stilpo who made the doctrine live. Thales, who was his fellow-citizen and a little later in date, holds him up as the great example of indifference to the vicissitudes of fortune. It was significant of the influence of Aristotle in his influence in this direction by the Cynics; for the doctrine follows quite naturally from his denial of reality to the world of sense, which he certainly derived from a very different source. As Zeno of Citium was a disciple of Stilpo, we may certainly regard him as a spiritual ancestor of Stoicism.

The same tendency was represented by the school of Eretria, whose chief representative was Menedemos (c. 350-278 B.C.), and which regarded itself as an offshoot of the school of Eleus, which looked upon Pheno as its founder. We know little about it, but its existence bears witness to the growth of the quietist ideal and its intimate connexion with a metaphysical theory which rejects the appearances of the world and holds fast to the one conceived as absolute.

LITRAER—There is little literature dealing with the Megarics outside the general literature of ancient philosophy, and it is difficult to determine whether they may be regarded as anticipated. It will be sufficient to mention the work of C. Mallet, Histoire de l'étude de l'antiquité d'Eire, 1840, and E. Meir. RABBI MEIR. —Rabbi Meir, a Jewish sage who flourished in Palestine in the 2nd cent., belonged to the fourth generation of the Tannaim (Rabbis of the age of the Mishnah); he was one of the foremost disciples of Rabbi Aqiba, and helped, with
them, to give a new impulse to the study of the Law (i.e., the consolidation and development of Jewish religious thought and practice) after the troubles attending the persecution under Hadrian. Some great was the estimation in which he was held that, by one another of those days, the nafs of Rabbinical authorities continued to teach, Meir stood by this (TIt. 57, 68, 78, 80). His associates were both great to the Law, and his human and practical place is also uncertain or unknown. Contrary to the Talmudic practice, he is cited without a patronymic, and his doubtful descent gave rise to the legend which made him a son of Nino, a fabled convert to Judaism (Gittin, 56a, 46v). Even his real name, Meahah (Moses), was half-forgotten. When Agiba, flouting the edict of the Roman authorities, continued to teach, Meir stood by him (TIt. 57, 68, 78, 80). His other masters were Rabbi Ishmael, to whom he went because he seemed to him intellectually unequal to the task of following Agiba's discourses, and—a still more interesting fact—Eliezer ben Abuyah, who was later to become an apostate and a declared friend of the Romans. From the latter, recreant though he was, Meir did not altogether dissociate himself in after years. He listened to his doctrine, and made discreet use of it.

"Like one who eats dates, he devoured the fruit, but threw away the stones" (Miqra, 180). His motive was not to win the love of learning; there united with it grateful regard for one who had once been a cherished teacher, and likewise the hope of winning back the renegade; but his relations with Eliezer, alas! he died with sunshine and were partly the reason why his reputation with his contemporaries fell short of his posthumous fame.

Returning to Agiba later on, Meir was ordained by that master, and began to teach in the Rabbinical schools. In his discourses he availed himself largely of the Haggadah (the homiletical method of Scriptural interpretation) and also of fables and parables. Thus it was said of him in later times that "when Rabbi Meir died the parable-makers died with him" (Sifra, 49a). He is credited with being the author of three hundred tales, of which only a few have been preserved in the Talmudic writings (Sanhedrin, 33b). His knowledge of Latin and Greek also helped him in his Biblical lectures. His acquaintance with the sacred text was so extensive and precise that, whenever he had to expound a verse, he exhibited a smugness in his eyes. For such a one he was, as the saying goes, a synagogus on the eve of the Feast of Purim and found that there was no copy of Esther forth-coming for public recital, he wrote out the entire book from memory (TIt. 57, 68, 78, 80). For this intimate knowledge of the sacred text he was doubtless largely indebted to his profession as a scribe. Compared with the exegetical methods of his immediate teachers, his own mode of interpretation may be said to have been rationalism, keen and bold dialectic played a large part in his expositions, so that it was said of him (Sanh. 29a) that, in his lectures, he was like one who uprooted mountains and ground them together. He amassed and perplexed his colleagues by his daring decisions. He would declare the unlearned permitted and the forbidden as well.

It was usual to regard consecutive passages in the Bible as necessarily having a common subject-matter; Meir, however, held a different opinion. There are many such passages, he declared (Sipri to Nu 25:4) that, in his view, "the two passages are connected by their common subject-matter and the different order in which they are cited is due to the different point of view from which the same subject is treated."

This originality of his was viewed differently by different minds. Some admired his rationalism and courage; "Meir's very staff," they cried, "teaches knowledge" (Jerus. Testim. 14, 9). Others disapproved. "Enough, Meir," protested his colleagues when once he was more than usually daring (Mird. Rab. to Ca. 186). Nevertheless, as Hamburger remarks (ii. 707; as to the protest see H. Weiss, Geruch. ii. 15), in virtue of his qualities of mind and heart, he breathed into Judaism the breath of a new life, and the "Reshalah" (the body of decisions on ritual practice), his orderly and logical arrangement of the material contributed greatly to make the compilation of the Mishnah possible. He was a stringent upholder of the ritual Law; but he was even more strict with himself than with others.

"Never have I presumed to set aside, in my own personal practice, the decisions of my colleagues whom those decisions have been more stringent than mine" (Shebith. 136a).

His strength of character is further illustrated by his opposition to Simon ben Gamaliel and his presiding over the Sanhedria in Usha. To Meir had been assigned the office of Ḥakhdim of that body (as to the duties of that functionary see J. E., art. "Bakam"). Holding Simeon's knowledge of the Law inadequate, and resenting the President's excessive regard for his own dignity, he conspired with Rabbi Nathanael, one of his associates, to secure the Patriarch's deposition. Simeon, however, defeated the plot, and it was the leader who was ejected. Later on Nathanael was re-admitted, but Meir sturdily refused to make the necessary submission, and he narrowly escaped expatriation in consequence.

His domestic life was at once happier and sadder. His wife Beruria (Valeria) is one of the great women of the Talmud. The daughter of the martyr Rabbi Hananah ben Teradion, who suffered under Hadrian, she was well-educated in learning and moral worth. The touching story which records her wonderv ful fortitude in the hour of crushing calamity has been told again and again.

During Meir's absence at the academy one Sabbath eve, their two sons suddenly died. Beruria with the sad tidings from her husband until the day of peace without a tear of pity, but tallied the hours, and when she was told of it in a parable. "A friend," she said, "left me some jewels to keep for him years ago—so long ago that I had come to look upon them as my own. Now, of a sudden, he has claimed them; but I find it hard to part with them. Must I really give them up?" "Why ask such a question?" answered Meir, "you should have restored them already." "I have done so," she replied, as she led him to the death-chamber (Mird. Hidd. to A. 171). This is not the only instance in which the Talmud is just enough to admit that one of its greatest sages was taught by a woman; Beruria instructs her husband in the higher knowledge on another notable occasion. Annoyed by the pin-pricks of uncomely neighbours, Meir angrily called down imprecations upon them. His wife rebukes him. "Rather," she protests, "let us pray that they may live to repent, for the Psalmist's supplication is not "Let sinners be consumed out of the earth," but "Let sin be consumed" (the allusion is to Ps. 106:40, where the Hebrew is susceptible of Beruria's interpretation: for the story see Br. 16). The Rabbi, despite a certain severity and intolerance, was worthy of his wife. His defects were the defects of his qualities. Sometimes he set his face like a flint towards other men's weaknesses, he was strong and brave when life's sorrows touched himself. He, too, could preach and practise the great duty of human kindness. Echoing Ec 5:4, he says, "Let thy words before God be few; school thyself to say, 'Whatever God doeth He doeth well' (Job 36:5). And, again, 'As we should treat God, so should we praise Him for good and evil' (Job 13:14). Good itself suffers with His sorrowing children (Mish. Sanh. 107)." Exponenting in novel fashion the verse, 'A good name is better than precious ointment; and the day of death than the day of one's birth' (Ec 7:1), he said that death comes to good for those who pass hence with a good name (Br. 17a). Again, he said that what, according to On 19, God saw and proclaimed 'very good' at the Creation was death (Mird. Rab. to Be. 19). The section of the Mishnah known as Akedah.
Melancholy.

_MELANCHOLY._—In Greek philosophy the bodily constitution of an individual, his appearance, his liability to disease, and also his mental character were explained by the proportions in which the four humours were distributed in his framework. These were blood, yellow bile, black bile, and phlegm, the predominance or excess of which gave respectively the sanguine, the choleric, the melancholic, and the phlegmatic temperaments. The names seemed, in fact, to correspond to certain broad differences, bodily and mental, among men, and writers on insanity are still careful, in their descriptions of cases, of taking into account the "temperament" of each patient. The differences are now made to depend either upon the blood or upon the nervous system, or both. If the blood is decisive, the difference may be sought either in its substance—the number of red cor-
pussles, etc.—or in its circulation; if the nervous
system, is in the strength or the rate of reaction, or
both. Henle made use of the conception of nerve-
tone, which has since been retained and developed
(Anthropologische Vortrage). No part of the
nervous system, he showed, is ever wholly at rest
during life; every stimulus, even of a certain degree of
excitement already present in the nerve-endings and
nerve-fibres on which it acts; what we call
rest is, therefore, a moderate degree of activity,
which is the steady state; for fall, and which is maintained
by internal stimuli, acting through the blood. This
is the 'tone' of the nerves, their preparedness for
action; the higher the tones, the stronger the
reaction. On the nerve-tone will, therefore, depend
the sensibility of the individual, his prevailing
emotional attitude, and his quickness and firmness of
response. A low tone shows itself in the dull,
slow expression of face (in the phlegmatic, e.g.),
the relaxed muscles, the deliberate movements,
the tendency to 'run to fat'; a high tone in the
vivid complexion, alert expression, and quick
movements of the sanguine or choleric. The
nervous system according to Henle, has also a high
nerve-tone, but reacts through the emotional or
affective system, rather than the voluntary;
whereas the choleric relieves feeling by prompt and
strenuous action, the melancholic is denied this
and is therefore slow. The melancholy is the brooding
up and nursing of emotions, a habit from which gains,
or, it may be, merely hypochondria and hysteria,
spur. Wendt's simple formula has been widely
accepted; that temperament is primarily a question of
emotions, that emotion undergoes two Forms of
change, one in intensity, or strength, the other in
rate; hence the fourfold division: strong and quick;
slow and strong; melancholic; weak and quick;
and languid. Strong emotions under modern conditions make
a predominance of pain; slowness of change means
that the mind takes time to follow out its own
thoughts, is not wholly absorbed by the present
but looks to the evil ahead. These tendencies
characterize the melancholic (Grundzuge der
physiol. Psychologie, Ill. 637). The scheme is too
simple to fit the complexities and subtleties of human
character, however, and there is no general
agreement even as to the number of distinct
temperaments, as many as nine having been suggested,
1. Melancholy and pain.—Melancholy differs
from other dispositions in being well-recognized
temporary emotion or mood, one that will
not be changed to a prolonged
or permanent trait, and also in being in an extreme
form the most prominent symptom of a definite
form of insanity—melancholia or mental depression.
It has formed the theme of one of the most wonderful
books in our language—The Anatomy of Melancholy,
by Robert Burton, first published in 1621.
The melancholy with which he deals, and of which the 'causes,
symptoms, prognostics, and cures' are set forth with such fertility
of illustration, is 'an habit,—a chronic or continuous
perilous', but it is built up, as he recognizes,
out of 'melancholy in disposition', which is 'that transitory
Melancholy which comes and goes upon the smallest occasion
of cares, fear, grief, passion, or perturbation of the mind, any manner of care, discontent, or thought,
with a mixture of anguish, dulness, heaviness and vizitation
of spirits, any ways opposed to pleasure, joy, delight, causing
inwardness in us, or a dislike. In which equivocal and
tempting sense, we call him melancholy that is dull, and empty,
limp, ill-disposed, solitary, any way moved, or displeased.'
Melancholy in this sense is the character of Mortality
(L. 164 [ed. London, 1656]).
It might be said that this temporary melancholy
is merely mental pain, however caused, and that the
manifestation or disposition or habit is a state of
mind in which many of the characteristics of the
dominant tone.
The expression of melancholy is that of pain, the
pale face, the drawn look, lips and eyebrows turned
slightly downwards at the corners; the respiration
slow and sighing; the pulse slow, the tempem-
ture lowered, the nutrition-processes, including the
appetite, impaired, so that the body seems in-
sufficiently fed. One of the immediate consequences
is a loss of sensibility to outer impressions;
they lose in clearness and distinctness; the
judgment follows suit, and the whole mental character
is, even though only for the moment, changed for
the worse. In particular, egoism develops—
'The patient thinks only of himself and his sufferings; altrui-
istic passions, family affection yield to an egoism of the most
exacting and extreme type' (H. Héritier, Les Sensations
internes, Paris, 1859, p. 188).}

Mental pain may be less acute, but it is more
persistent than physical pain, and it has the same
reverberation throughout the organism. The dis-
tinction between the two is probably artificial; mental
pain accompanies all physical pain, while in its turn physical pain—discomfort, loss of nervous
tone—is a constant accompaniment of mental pain.
The most common cause of the former, physical
pain, is the over-excitation or exhaustion of some
sense or motor nerve; so the most common cause
of the latter, mental pain, is that of over-
exhaustion of the brain centres and tracts concerned
in ideation, emotion, memory, and will. Love and
over-study were two of Burton's causes of melan-
choly. So melancholy may be the result of fatigue, or
of irritability, due to excessive functioning on the
emotional or intellectual side, especially when the
strain has not been rewarded with success.

The extraordinary persistence of melancholy,
owing to its difficulty in discriminating the mind from it, is, due, as Beaunis urges, not
merely to the fact that it causes—the desires, the memories—
are persistent, but also to 'the accuracy of the irritant, which
is at the root of all mental pains, the idea that all
is lost and without hope. The mother who knows that she
never see again the child that has died in her arms, the artist
who sees that he will never be able to realise the ideal of
his dreams, the inventor who has discovered a lead up to
richness, the poet whose verse, that he believes to be inspired,
are laughed at, the thinker who seeks the key of knowledge
and cannot find it, the Christian who sees the fountaining of his
belief and of his faith, all have this sentiment of the irreparable, of the lost beyond
return, which leaves behind only nothingness and despair' (ib. p. 23).

2. Melancholy and the sense of values.—Melan-
choly is the mood of an imaginative mind; it is
true that an animal is sometimes described as
'melancholy'; a dog that has lost his master,
a wild animal in captivity in a narrow space, a bird
deprived of its mate; death, even self-inflicted
death, is known to have followed such misfortunes.
So a child may be 'melancholy' after the loss of
a mother or a playmate. But in the strict sense
melancholy is an adult and a human infirmity.
Probably the time of greatest frequency is the
period of adolescence; in middle and old age it
tends to disappear, to be replaced in senility, occa-
ionally, by a state outwardly similar, but
inwardly different. Byron's lameness and Heine's
and Leopardi's delusions have suggested
that physical disease may be the predisposing
cause to melancholy; but, as Metchnikoff
points out, Schopenhauer preserved his melancholy
and pessimism to a vigorous old age, while there
are innumerable cases of patients suffering from
serious and even deadly diseases, yet retaining
their native lightness of heart. If anything, melan-
choly is more common among the young, healthy,
and vigorous. It did not exist among
the health at all, but upon the sense or 'sentiment'
of life. The typical case is Goethe, who in his
own youth passed through the torrent which he
describes in The Sorrow of Werther, and had
thoughts of suicide, but in his old age is described
as casting off the sickly and morbid side of his
character, replacing it by a serene and even joyous
love of life (E. Metchnikoff, Essays optimistes, pt.
viii.). The intensity of feeling for the young
than in the old, both for pleasure and for
pain; hence they are more impressionable; but
this is not due to the greater vitality or sensitive.
ness of their nervous system, but rather to the fact that the elder man is better able, through his experience, to interpret the impressions, to see them in their true perspective, and in relation to life as a whole, whereas for the young each impression is taken in isolation, is weighed only in its relation to the immediate needs or desires of the self. Hence, in the better part of his life, the older man experiences more happiness, and the deeper pain. In the same way melancholy is more frequent in men than in women, in the northern races than in the southern races of Europe. A northern race, perhaps because its civilization is more recent growth, is more conscious of itself, and less conscious of the wider group in which the loss of one individual is compensated by the gain of another. It was mainly from Russia, Germany, and Scandinavia that the melancholy school of writers of last century—the Fin de Siècle—came. Suicides are said to increase in number northwards, and one of the most common causes of suicide is melancholy (see Burton’s disquisition on suicide [1, 497]; and Mechnikov and 106). At the back of all melancholy is fear—fear of pain in the first instance, then fear of loss, of failure, of death, of society’s judgment upon oneself. The more intense, the more acute, the greater the appreciation of a good, the greater the pain at its loss, and the greater the pain at the prospect of its loss. Hence melancholy is, paradoxically, more common in the idealist than in the materialist. Paul Klee, painting of Baudelaire, finds the key to the profound melancholy of this rather repulsive figure in the mysticism and idealism of his early faith. When such a faith, the faith in the eternal, has been strongly held, its object deeply adored, the loss of faith and its power to affect the individual is impossible. The individual may no longer have the intellectual belief, but he still has the need to feel as when he believed. The desires remain, strengthened by habit, and in the sensitive soul their influence is irresistible; yet their satisfaction is impossible. Melancholy then is the effect of failure of adaptation to the environment, in matters of faith and belief. The stronger the resistance of facts to the realization of the thinker’s dream, the deeper his melancholy. To the mystic faith is not the mere acceptance of a formula or of a dogma; God is not for it a word, a symbol, an abstraction, but a reality in the whole company the soul walks as a child in its father’s, who loves it, knows it, understands it.

Once an illusion so strong and so sweet has gone, says Bouguereau, a child of less intensity will suffice; after the intoxication of opium, that of wine seems mean and paltry. Driven away at the touch of the world, faith leaves in such souls a gap through which all pleasure slips away. The more the sufferer tries to escape, the more securely is he held, until at last there remains as his only satisfaction the reasonable but convincing figure of that which lives, and moves, and works, and endures in all alveolus, and delivers from all doubts. —Death (Paul Bourget, Rêvées de psychologie contemporaine, Paris, 1892, p. 11).

Still deeper is the melancholy of unsatisfied desire, when the failure of satisfaction lies, not in the resistance of external circumstance, but in the inability of the subject to enjoy, an inability which is itself a mark of exhaustion; it is the soul that has lived most, felt most strongly, indulged its passions to the full, till its power to feel is almost destroyed, that finds life most unbearable. 1

1 Le mensonge du désir qui nous fait assister entre la brutalité mortuaires des circonstances et les impuissances plus irrépétibles seuls (p. 125).

It is the melancholy of nature after the storm of evening, of the gray light that comes after the sunset, of the brown tints of autumn trees—exhaustion or decay after stress and life.

It is the melancholy that is associated with pensiveness, deliberation, thought, as in Milton's II Penseroso—the melancholy of the poet and of the philosopher. Beausiris connects this also with pain, however. When man reflects, he is forced to recognize, according to Beausiris, that he is born to pain, and that pleasure is only an accessory in his life.

There is no physical pleasure which can compensate for an hour of unions pestilence, so much less a moral. The death of those we love, no intellectual pleasure which is not annihilated when we think of how much is unknown in our fate. Futility, the inescapable pessimism, is at the root of every reasoning, of every meditation (p. 322).

Happily, he adds, most men do not reflect or meditate upon the fate either of themselves or of others; their interest faces outwards, not inwards; they have no time to worry over problems that great minds have found disturbing. When worry over them, they are able to set their worries at rest by the acceptance of a solution ready-made, on the authority of the Church or the pastor. 3

Melancholy and exhaustion.—The essential nature of melancholy has been probed more deeply from the point of view of pathology, and in various ways the idea of exhaussted or decreased energy has been brought into connexion with the known laws of mental activity. To Bevan Lewis melancholy means nervous enfeeblement; the subject is no longer able to do easily and smoothly even the most familiar and habitual acts; it is only with effort that he can think, or attend to what he hears, or fear. It appears to us that the true explanation is due to mental operations being reduced in level so far as to establish conscious effort in lieu of the usual unconscious operations, or haphazard states of consciousness which accompany all intellectual processes. The restless movements of the intellectuality, (in the artist, poet, etc.), as well as those of the state of mental excitement, bespeak in the former case the excited muscular element of thought, and in the latter case the same feeling, but in the melancholy these muscles of relational life are usually at rest, the eye is fixed, dull, heavy, sluggish in its movements and painful in effort, the eyelids are drooped, the limbs motionless. The only muscles in a state of tension are those which subserve emotional life, vital, small muscles of expression ("Textbook on Mental Disease, p. 121.

The use seems less clearly, the mind interprets less accurately; the will acts less vigorously, and less effectively; it may be that the motor ideas, which are the cues, if not the excitants, of action, cannot be formed or recalled accurately in the mind; hence sluggishness and inertia. The environment, the non-ego, appears as antagonistic or foreign to the self; it is no longer the world in which we moved freely and easily, therefore pleasant, but one which is strange and strange, which resists our efforts and centers our desires. The result is a rise in the subject-consciousness; the mind is thrown back upon itself. The man broods upon his sufferings, which become his wrongs, and, in interpreting or explaining them, suspicion of others is the simplest and therefore the most frequent way out.

According to Pierre Janet’s interpretation, melancholy represents a stage on the way to neurasthenia psychique, or psychic misery, with its accompanying disaggregation of the personality, and subjugation of the consciousness by the subconscious or unconscious self. There are innumerable degrees of attachment and detachment of acts and ideas to the self. In thought-reading and in table-turning we have seen simple instances of how acts are carried out which correspond to ideas or thoughts in the mind of the subject, yet the acts are neither voluntary nor conceived on his part; he is aware of the result, not of his own tyranny or spiritualism—the possession of the medium by the supposed spirit of the dead, who gives through the medium information which the latter, in his normal state, is wholly unaware of. Here we have a more systematized form of the same thing.
Finally, in hypnotism, in hysteria, morbid impulses, fixed ideas, and obsessions, there are vivid examples of how thoughts, or, rather, systems of thought, though formed by the individual, may yet lead to actions for which he cannot recognize his responsibility, which he may indeed forget immediately afterwards and, therefore, wholly fail to connect with his real self. He is unaware even that he was the physical agent; any proof of this that can be brought forward must have a shattering effect upon the self-consciousness; the patient feels that he no longer has a grip of himself, that he may do some incredible act of violence, cruelty, immodesty, or crime. He becomes estranged from himself—and this doublelessness is itself an added source of destruction; it is the same in effect whether the two personalities are at each other's ear, when alternating personalities, or exist simultaneously, although acting separately; the disaggregation means an impairment of the self, often revealed by an actual loss of power, weakened concentration of attention and will. The subject becomes more confused about his own feelings, his strength of will, his health, his prospects in life, etc. This subjectivity is the essence of the melancholy disposition. It remains to ask what is the cause of the disaggregation of consciousness, the psychological misery, of which melancholy is so prominent a symptom. According to Janet, the cause may be either physical or mental; as the exhaustion of a prolonged illness, or of a sudden shock, or continued over-exertion, in heavy physical strain; or mental, as in the shock of terror, excessive grief, prolonged mental worry, strong emotional excitement (e.g., religious). The great vital crises, at puberty, adolescence, and the change of life, with the feeling of strangeness which the loss of old and the gain of new sensations and impulses bring, are common causes of at least a temporary disaggregation and depression. The theory is not widely different in effect from that of Bevan Lewis; in both it is the co-ordinating power that fails, through nervous exhaustion; the elementary forces fall apart, and the subject seems out of touch with his environment, is unable to face the tasks of his social or occupational life. According to the degree of disaggregation or rise of subject-consciousness, there may be simple melancholy, hysteria, or actual insanity (F. Janet, L'Automatisme psychologique, p. ii. ch. iii. and iv.).

4. Melancholy and personality. The sense of mystery, of strangeness, of possession, that occurs in melancholy deserves to be considered in detail. In melancholy, as has been shown above (§ 3), the sensations and the emotions are clear, the threshold is higher, the perceptions based upon them are blurred, partly from the relaxation of the muscles of attention, partly from the absorption of the mind by the new, more imaginary. The individual neither sees nor hears so clearly as before; the commonest objects may look strange, the most familiar voice sound different; but these things are interpreted not as a change in the experiencing subject, but as a change in the object experienced. One's friends, one's country, one's world have changed, and the subject is unable to face the great activity required to adapt himself to the new sphere. Still greater is the loss of clearness in the memories. The most vivid experiences can no longer be clearly and definitely recalled, tend to lose the warmth and intimacy which memories of 'my own experiences' should possess, as compared with those of others of which I have merely heard or read. Thus in mental exhaustion and depression the memories of my own life lose their emotional tone; they seem to belong to another self. It is true that this state lends itself to analysis, and that the habit of analysis, once formed, may continue when normal life has returned.

Janet is said to have well expressed the desire to know when it is turned upon itself, is punished like the curiosity of Psychology by the flight of the beloved object; the outward-facing look makes for health; too prolonged a look leads to nothingness. By analysis I am annihilated.' And again, 'All personal happenings, all the experiences are for me pretext to meditation. Such is the life of the thinker. He desexualizes himself every day; he consents to experiment and to act, it is the better to understand; if he wills, it is to know what will. Although it is sweet to him to be loved, and he knows nothing sweeter, there again he seems to himself the occasion of the phenomenon rather than its author. He contemplates the spectator of love, and love remains for him but a spectacle. He is nothing but a thinking subject, he retains nothing but the form of things' (see L. Duques de P. Moutier, La Dépersonnalisation, Paris, 1931, p. 138 f.).

This is an exact description of the frame of mind in the milder forms of melancholy, that of the poet or artist, like Byron, Edgar Allan Poe, Heine, the young Goethe, etc. Shakespeare's Hamlet is a classical instance; he is not real experimenters, real agents, or lovers, but as far as emotion is concerned. Probably, however, their descriptions are the more accurate in that they are not blinded by passion, as is the cheerful ordinary mental.

A somewhat different way of putting the case of melancholy might be drawn from the writings of S. Freud and others of his or allied schools—viz., that depression springs from the influence of a morbid complex on the will. The subject may be any strong emotional experience, shock, terror, social disaster, etc. Wishes, desires, more or less closely connected with the shock-complex, are repressed, at first conscious, but then, as the suggestive ideas and associations, which arise from the same root, are expelled from the mind when they enter it. But a train of thought, when expelled, and a wish, when repressed, do not on that account cease to exist. They continue to live in the subconscious or in the unconscious, and may, so long as they are incomplete or unrealized, influence the conscious life indirectly. They may do this in two ways: (a) the complex, when repressed, for its repression, a considerable degree of the available psychic energy; the individual is mentally weakened. As we have seen above, the greater effort required for the simplest, most habitual acts is felt as strain, as exhaustion, as pain; the self, with its distresses and difficulties, becomes more and more the centre of attention. (b) But, further, the complex, though itself driven below the level of consciousness, and shut off from direct connexion by the 'censor' of consciousness, is still enabled during moments of relaxation, half-sleep, reverie, distracted attention, etc., to send disguised messengers through. These take the form of dreams, phobias or fears, obsessions, sudden impulses, etc. For the most part these dreams and impulsive acts are protective; they are a means of realizing, in however imperfect a way, the wish inspired by the complex; but the subject himself may be wholly unaware of this origin and of their meaning; they seem like an invasion of his personality by a foreign one. Painful experiences and memories have a far greater tenacity of life than pleasant; they have a high degree of 'perseveration,' as it is called, i.e. the tendency to force their way into consciousness, of their own accord, and without any apparent stimulus or associative link. And, again, even the slightest of associations is enough to drag up the painful complex or its substitutes. On the
other hand, such memories are not 'sociable'; they do not bring other thoughts in their train; especially they lack 'determination'-value, the tendency to direct the mind systematically from one thought to a train of others; they tend to elog thought. The subject becomes more and more conscious of inefficiency in his profession or in his social life; and the consciousness of failure has the unconscious sense of making the actual failure all the greater.

5. Melancholy and pessimism. Melancholy and pessimism are two sides of the same state of mind, the one the subjective attitude of the individual, the other the theoretical interpretation. Happiness becomes a dream which is never realized, and which it seems hopeless to pursue. Subjectively, indifference, apathy, want of feeling; objectively, death, seem the only desirable things. The ideas, imaginations, and suggestions that arise in the mind of the melancholic, according to a well-recognized law (see Stirringer, Mental Pathology, p. 292 ff.), tend to be of the same emotional tone as that of the disposition in which they are called up, i.e., painful, depressing; the melancholy sees only the sad, the tragic, the bitter side of things, the pain that is suffered, the sins and crimes and follies that follow, the not the pleasures, the kindness, the goodness, that are in things. Hence melancholy, whatever its source, has played a powerful part in religious movements. It is not only that religion and its history furnish the melancholy mind with a cohort of images of the most terrifying type, but also that the consciousness of the suffering self sends it to religion, to the idea of sin and its punishment, as the most obvious and natural counterpart; and, finally, that religion offers the only adequate relief and hope of escape. Religious melancholy is the subject of one of Burton's most curious dissertations (pt. III, sect. IV, membra i.), and James's "Varieties of Religious Experience," lects. vi. and vii. on "The sick Soul," gives a modern presentation. It is there shown how, as in Tolstoy's case, melancholy may be accompanied by a total change in the estimate of the values of things; things that seemed of the utmost value before now seem worthless; they excite no emotion or interest whatever; and a consequence of this is that the world, and people, look different; and the life of different persons, strange and real. It is also shown that in a rational being the strangeness and change of feeling incite to a search for a reason, for an explanation, either directly in oneself or in the action of other beings upon oneself. Either of these ways may lead to religious conversion and relief.

6. Moroseness. The pathologist Pinel, in his treatise on "Mental Alienation," depicted melancholy as two distinct types—the one filled with enthusiasm for art, for literature, for all that is great and noble, or, among ordinary people, merely pleasant, lively, and affectionate, yet apt to torment himself and his neighbours by bursts of anger and choleric suspicions; the other is the type to which the Emperor Tiberius and Louis XI. of France belonged—men who are gloomy and taciturn, deeply suspicious of others, fond of solitude. Similar to the former is the dominant mark, with cunning and duplicity of the most dishonourable and cruel kind, which, if power is added, become fiercer and more restricted as age increases (P. Pinel, "L'Aliénation mentale," Paris, 1809, p. 161). This coincides with some accuracy the morose type of melancholy. Moroseness springs from the disposition to regard others as having secret designs upon one's property or life or place, and to avoid them in consequence. It involves extreme self-centring and misanthropy.

Melanesians are a mixture of the imaginative, moroseness of the unimaginitive mind—the man who does not aspire beyond that which he has already attained, the man of narrow range of ideas, unable to appreciate the values that others place upon them, especially the ideal values. Probably the pivot of the morose character is, like that of melancholy, fear or anxiety.

As de Pursac has said of the miser, 'It is undoubtedly true that from insecurity springs anxiety, and that anxiety becomes torture and a source of trouble for the individual; it affects the diminution of activity, the development of defensive tendencies to the detriment of the expansive tendencies, the cult of absolute security, and the horror of risk. It is intimately bound up with insecurity' ("L'Avarie," p. 35).

This is true also of the man who lives in a state of inferiority of position, in narrow and selfish characters; there is no sense of the solidarity of the race, even of the family; the morose man sees only the bad side, the weaknesses of his neighbours; he has no sympathy with any kind of feeling for others; he is vindictive, and, if opportunity allows, savage, brutal, cruel.

J. L. McIntyre.

MELANESIANS.—1. Extent and limits of the subject. The region of the South Pacific, which is called Melanesia, is well defined, except on the western side. The boundary on the east lies between Fiji, which is Melanesian, and Samos, which is Polynesian. To the south the Melanesian island of New Caledonia is separated by a considerable space of ocean from New Zealand, which is Polynesian, as are the small islands of Micronesia on the north from the Melanesian Solomon group, but to the west the islands of Melanesia overlap New Guinea. Some of the inhabitants of that vast island are Melanesian, as any that are familiar with their language; but, though Melanesians have been called Papuans, there can be no doubt that Papua, or New Guinea, cannot be placed as a whole in Melanesia. Five distinct groups of islands are without question Melanesian: (1) the Solomon Islands, with the groups which connect them with New Guinea; (2) the Santa Cruz group; (3) the Banks' Islands and New Hebrides; (4) New Caledonia, with the Loyalty Islands; and (5) Fiji.

The first discovery in Melanesia was that of the Solomon Islands by Spaniards, under Mendana, in 1567. In 1568 the same voyager discovered Santa Cruz and in 1606 Quiros and Torres discovered the New Hebrides and Banks' Islands. The Dutch discovered Fiji in 1643. French voyagers in the latter part of the 18th cent., and finally Captain Cook in his second great voyage, completed the general survey of all the groups. In the records of these passing visits it is vain to seek for information concerning the religion of the natives. The discoverers saw what they believed to be temples, idols, worship and invocations of devils; they interpreted what they saw, as we have done, according to their own conceptions of savage beliefs. It was not till missionaries, about the middle of the 19th cent., began to live in closer intercourse with the native people, and to learn their languages that any certain knowledge...
of Melanesian religion could be gained. The following account represents in the main the knowledge which has been imparted by the Melanesian Mission of the Church of England. The religion of the Fijians is considered in another article (see FJ). The account given here has been drawn from the Solomon Islands, the Santa Cruz group, the Banks' Islands, and that of the Northern New Hebrides. It has been gathered from natives of those groups in native language, and much of it has been gained from what educated natives have written in a very slight, however, has come from the Western Solomon Islands or the Southern New Hebrides; but there is every reason to believe that religious beliefs and practices in these islands do not differ considerably from those of the central parts of Melanesia.

2. Basis of Melanesian religion.—From whatever sources they may have derived it, the Melanesians generally have held the belief that their life and actions were carried on in the presence and under the influence of a power superior to that of living man. This power, they thought, was all about them, attached to outward objects, such as stones, plants, trees, houses, etc., and passed from person to person, either by men, alive or dead, or by spirits and animals. This 'sense of the Infinite,' as Max Muller (Lectures on the Origin and Growth of Religion [HL], London, 1878, lect. 1) calls it, was the foundation of the religious beliefs of the Melanesians; the general object of their religious practices was to obtain the advantage of this power for themselves. This power is impersonal, and not confined to itself, although it is always put in motion by a person; and all remarkable effects in nature were thought to be produced by it. It is not fixed in anything, but can abide and be continued in almost anything. All spirits, beings superior to men, have it; ghosts of dead men generally have it, and so do some living men. The most common name for it is mana (q.v.).

The methods by which living men use and direct this power may well be called magical; the controlling force lies generally in words contained in chanted or muttered charms. If worship is addressed to beings who are not living men, and if the power of their power is sought from them to do good or to do harm, it is because such beings have this mana; the forms of words have efficacy because they derive it from the beings which have mana; a common object, such as a stone, becomes efficacious for certain purposes because such being has mana power. In this way the influence of the unseen power pervades all life. All success and all advantage proceed from the favourable exercise of this mana over all other beings. Whatever evil happens has been caused by the direction of this power to harmful ends, whether by spirits, or ghosts, or men. In no case, however, does this power operate, except under the direction and control of a person—a living man, a ghost, or a spirit.

3. Objects of worship.—The objects of religious worship, therefore, were always persons to whom prayer or sacrifice was offered, or in whose names charms were recited, with the view of gaining supernatural power, or turning it, either directly or indirectly, to the advantage of the worshipper. These personal objects of worship are either spirits or ghosts. By spirits are meant personal beings in whom the spiritual power already mentioned naturally abides, and who were men; by ghosts are meant the disembodied spirits or souls of men. To keep in mind that it is essential to the understanding of Melanesian religion, Natives themselves are found to confine them at times, while Europeans are usually content to call all alike deities, gods, or devils.

(1) Spirits.—A native of the Banks' Islands, where spirits are called evi, wrote the following definition:

'What is a spirit? It lives, thinks, has more intelligence than a man; knows things which are out of sight without seeing; is powerful with mana; has no form to be seen; and has no soul, because it is itself a soul' (see Cottingham, Melanesians, p. 123).

The evi of the Northern New Hebrides is of the same nature as the evi of the New Hebrides, being a shadowy, unsubstantial form; and there are many spirits called by the same name to whom the definition does not accurately apply, while the stories concerning them treat them as if they were men with superhuman and supernatural powers. Still the natives steadily maintain that these are not, and never were, men. In the Solomon Islands beings were believed to exist who were personal, yet who had never been men, and who lacked the bodily nature of men, but they were very few and enjoyed little religious consideration. The term which is applied to such beings is also applied to some who had undoubtedly existed at some time as men. The question arises whether these beings, concerning whom stories were told and believed in the Banks' Islands and New Hebrides which showed them to be like men of more human power and intelligence, and therefore to be called gods. Such were Qat in the Banks' Islands, Tagaro, Supe (in various forms of the names) in the New Hebrides, and Lata in Santa Cruz. To such as these it would certainly not be improper to apply the word 'god.' But the native word by which they are known, such as evi, is applicable also to other beings for whom 'god' is too great a name, this category including elves, fairies, nameless beings of limited influence whose nature is still spiritual, so to speak, not corporeal. To describe all these, to distinguish them from dead men, the best general term seems 'spirit'; and it is to these beings that the religion of the New Hebrides and Banks' Islands looks, as possessing and wielding mana, the power which must be called spiritual, which men have not in themselves, and which they seek to obtain for their advantage by sacrifices, prayers, and charms.

(2) Ghosts.—It makes the matter clear if this term be used when the beings spoken of are simply men who are dead in the body while that part of them that is not bodily retains activity and intelligence. In the Banks' Islands and New Hebrides the word used is merely 'dead man,' such as tamate or nainate. In the Solomon Islands a very common word in various forms is tindalo. The question again occurs whether these beings are not rather called gods. There are certainly some to whom prayers and sacrifices are offered, whose place and time in human life are forgotten or unknown, and whose existence as persons possessed of powers far superior to those of living men is alone present to the belief of the existing generation. Such may not unreasonably be called gods. But, whereas in the Eastern groups such beings are plainly called 'dead men,' it seems better for clearness, to use an English word which shows them once to have been living men, and separates them from any such beings as are believed never to have belonged to the living kind. The word 'god' cannot be a translation of 'dead man.' Where, as in the Solomon Islands, a distinct name, such as tindalo, is in use, this objection to the use of the word 'god' does not so plainly apply. Yet the natives emphatically declare that every tindalo was once a man, that the tindalo is the spirit (terumpa) which once was the flesh and source of life, and power in a man who was then in the body. The living men who worship the tindalo regard themselves as possessed of that non-corporeal nature which alone remains in the dead, and is the seat of the dead
man's superhuman power. They believe that some of them have a measure of that power, derived from the dead. They believe that, when they become gods, they will also, when they are called upon as a child. Such appeals are not prayers according to the meaning of the various native words which would be translated 'prayer' in English. Prayers in the native sense are forms of words and, in another sense, are formulas which are known only to the person and which may be uttered in a certain way. They are, however, not the same as the word 'prayer' in the English language. A man in danger by the sea may call on his father, grand-

father, or some ancestor to still the storm, lighten the canoe, and bring it to the shore; when fishing he may beg for success, and when successful may thank his helper. But in such cases a formula, if one were known, would always be preferred, and that would be a prayer in the native sense of the word. Charms, muttered or sung under the breath for magical purposes and in the treatment of sickness, are easily distinguished; but it must be noted that in Florida, an important centre of Christian teaching in the Solomon Islands, the word used for Christian prayer is taken from these charms.

It is remarkable that the Banks Islands and the Northern New Hebrides, where spirits have a more important place in native religion than ghosts, all prayer must be addressed to the god of a dead person. Indeed, every prayer begins with the word tataro, which is, no doubt, a word meaning 'ghost.' It is true that in danger at sea a man will call on dead friends to help him, but this is not a true prayer (tataro) because no formula is employed. It is also true that men in danger call on spirits, either with or without a formula; but neither is a true tataro, since it is not addressed to ghosts. Many forms of words, moreover, which are true tataro prayers, are formulas for cursing as well as for petition. Such are used when a man throws a bit of his food aside before eating, and pours a libation before drinking kava, or when he pours water into an oven, since in these he seeks benefits to himself and mischief to his enemies. A tataro prayer is a spell; it is a call for help in danger is a cry.

5. Sacrifices.—There can be little doubt that sacrifices properly so called have a place in Melanesian religion. One simple form of sacrifice is universal. A fragment of food ready to be eaten, a bit of betel-nut, and a few drops of kava poured as a libation are offered at a common meal as the share of departed friends, who are often called by name, or as a memorial of them with which they will be gratified. This is accompanied with a prayer. With the same feeling of regard for the dead, food is laid on a grave or before a memorial image, and is then left to decay, or, as in the West Indies, is taken away and eaten by those who have made the offering. In a certain sense, no doubt, the dead are thought to eat the food. Yet the natives do not always eat the offerings which they receive in the strict sense. In the Western Islands the offerings in sacrifices are made to ghosts and consumed by fire as well as eaten; in the Eastern groups they are made to spirits, and there is no sacrifice of food. In the former nothing is offered but food; in the latter money has a conspicuous place.

(1) In the Solomon Islands.—A sacrifice in San Cristoval, one of the Solomon Islands, has been thus described in writing by a native who was present at the place:

"In my country they think ghosts are many, very many indeed, some very powerful, some not. There is one who is a principal in war; this one is truly mighty. The only thing we need is to understand that our people wish to fight with any other place, the chief men of the village and the sacrificers, and the old men, and the men elders and young, assemble in the place next to this ghost;"
and his name is Harumae. When they are thus assembled to sacrifice, the chief sacrifices goes and takes a pig. ... The pig is killed (strangled), not by the chief sacrificer, but by those whom he chooses to assist him, near the sacred place. Then they throw him to the ground; and, as the priest tells it should, he falls upon the ground; they bring a bowl and set the pig in it, and they cut the blood out of the pig; then the blood runs down into this. When the cutting up is finished, the chief sacrificer takes a bit of flesh from the pig, and he takes a coco-nut shell and dips up some of the blood. Then he takes a long stick and the bit of flesh and enters into the shrine, and calls that ghost and says, "Harumae! Chief! I give you this pig to you with this pig, that you may help us to smite that place; and whatsoever we shall carry away shall be yours, and we also will be yours." Then he burns the bit of flesh and the coco-nut shell, and comes down the fire is upon the fire. Then the fire blazes up freely to the roof, and the house is filled with the smell of the pig, a sign that the ghost has heard. But when the sacrificer went in he did not go boldly, but with fear, and this is the sign of it: as he goes into the holy house he puts away his bag, and washes his hands thoroughly, to show that the ghost shall not reject him with disgust." (Coddington, p. 396.)

The pig thus sacrificed was eaten by the worshippers. When this account was written, the older people well remembered Harumae as a living chief. In the sacred island of Malaita a native also gives the names of seven kinds of sacrifice: (1) A man returning from a voyage puts food before the case which contains the relics of his father. (2) In sickness, or where failure of a crop shows that sacrifice for the favourable season has not been offered, a substitute for the man whom the offended ghost is plaguing, and is strangled and burned whole on the stones of a sacred place, together with mixed food. (3) The dead man calls aloud upon the offended ghost and upon many others, and sets a bit of the food which he has left unburned before the relic case of the dead man to whose ghost the pig was offered. (4) To 'clear the soul,' a pig or dog is killed and cooked; the sacrificer calls upon the ghost by name to clear away the mischief, and throws the sacrifice into the sea or sets it in the place sacred to the ghost invoked. (5) (6) (7) are sacrifices of first-fruits—yams, flying-fish, and caranuru nuts—which are presented as food to the ghost concerned, with the invocatory names and in a sacred place. In Florida and Ysabel, both belonging to the Solomon group, sacrifice is of the same character. There are those who know, having been taught by the chief, or by the headman, how to approach the powerful ghosts of the dead, some of whom were the objects of a more public and some of a more particular worship. Such a ghost of worship, called a tinu, had his shrine in which his relics were preserved. The officiating sacrificer is said to 'throw the sacrifice.' A certain tinu, whose worship and influence are not local, is called Manoga. A native writes:

"He throws the sacrifice when he invokes this tinu, he hears the offering round about, and calls him, first to the East, where rises the sun, saying, 'If thou dwellst in the East, where riseth the sun, Manoga! come hither and eat thy mash food.' Then turning his face towards where sets the sun, and says, 'If thou dwellst in the West, where sets the sun, Manoga! come hither and eat thy mash food.' There is not a quarter towards which he does not invert the direction. And when he has finished calling it he says, 'If thou dwellst in heaven above, Manoga! come hither and eat thy mash food. If thou dwellst in the Pleiades or in Orion's belt; if below is Turritwain; if the distant sea is as high in the sun or in the moon; if thou dwellst inland or by the sea, Manoga! come hither and eat thy mash food.'" (Coddington, p. 396.)

Whether, as in this case, the offering be vegetable food or whether it be a pig, a piece is consecrated to the spirits that dwell in the place, and the people without partake of the sacrificial food. In these islands, moreover, the sacrifice of the firstfruits must precede the general use of the products of each season.

Human sacrifices were occasionally made, and such were thought most effectual for the propitiation of an offended ghost. In this case the victim was not eaten; the meat was burned. If the piece of flesh which was offered; but a piece of flesh was burned for the ghost's portion, and bits were eaten by young men to get fighting power, and by the sacrificer who had made the sacrifice. In the island of Santa Cruz the flesh of pigs or vegetable food is placed before the stock of wood that represents a person recently deceased for him to eat; feathers are also put by him, and victims of flesh are offered for ghosts, and food is thrown to them at sea. These are distinctly offered for the ghost to eat or use, but are soon taken up and disposed of by the offerings as common things. Such offerings resemble those of food laid on graves or at the foot of an image in the Solomon Islands, which would not there have the name of sacrifices; but the full sacrifices of the Solomon Islands, as has been shown, have the nature and associations of the thing itself, or

(2) In Banks' Islands and New Hebrides.—To offerings here, no doubt, the name of sacrifice is far less properly applicable than the word presentation, which it is necessary to employ. The offerings are made in almost all cases to spirits, but in some cases to the ghosts of dead men. The offering is generally native money; nothing is killed or burned; nothing eaten; and the offering is laid upon a stone, cast into water, or scattered upon a snake or some other creature, the stone, the creature, or the sacred spot being chosen because of its connexion with the spirit who is to be conciliated or from which benefits are sought. Access to the spirit is to be obtained through the sacred object; but the common worshipper or supplicant cannot obtain this access by himself, and is consequently obliged to use the services of a go-between who knows the stone or whatever it may be and through it is able to know and to approach the spirit. The worshipper generally gives native money to the 'owner,' as he is called, of the sacred object, who then gives a little money to the spirit, and perhaps pours the juice of a young coco-nut on the stone, while he makes his request on behalf of his client. There is thus an intercession, a presentation, an offering of what the supplicant values and the spirit has pleasure in receiving. So far it is a religious action of a sacrificial character, and is distinct from prayer. In that, besides similar sacrifices to spirits, offerings are made to the ghosts of powerful men lately deceased, either at their graves or in the places which they haunt. Men who know these and have access to them take mud, food, and pigs living or cooked, dedicated to the sacred place, and leave, or profess to leave, them there. Nowhere in these islands is there an order of men who can be called priests. The knowledge of the spirits and of the objects through which access to them can be obtained is open to all, and is possessed by many. Most of those who possess it have received it secretly from their fathers or elder relatives; but many have found it by happy accident for themselves, and have preserved their connexion with the spirit by the success of their ministrations.

(6) Sacred places and objects.—The sanctity which belongs to such stones as have been mentioned in connexion with sacrifice has, of course, a religious character. Native life in Melanesia is, for the most part, in continual contact with the spirits and the divinities which belong to this religious feeling. The sacred character of the object, whatever it may be, is derived from one of two causes: it may lie in the nature and associations of the thing itself, or
it may be conferred by men who have the mana, the technical name for power or property. It may be said generally speaking, that among these sacred objects there are no idols, in the strict sense of the term. It is true that images are made more or less in all quarters to represent the dead, being set up as totems at funerals, in burial-places, in canoe houses, and in places of general assembly. They are treated with respect; offerings of food are made, and other valuable things are occasionally lately to them, but the images are memorials of men deceased, likenesses to some extent, and representations; they are not worshipped, and are sacred only because of what they represent.

1. Stones.—Sacred places almost always have stones in them. The presence of certain stones gives sanctity to the place in which they naturally lie; and, when a place has for other reasons become sacred, stones which have that character are brought and placed there. Here again recurs the importance of the relations between spirits and ghosts. The stones of the burial-place of a powerful man receive mana from him; and if a man had mana buried near sacred stones, this connecting the ghost to the soul of a living man; but the native believed that the human spirit connected between the sacred stones and spirits. Many sacred stones are sepulchral, and this is usually the case in the Solomon Islands. The sacrifices already described are offered upon stones. A stone is also frequently sacred to a god, and in Eastern Islands, because a certain spirit (a kind of human ghost) belongs to it. In this group stones may be divided into those that naturally lie where they are reverenced and those which have mana derived for various reasons from a spirit, and which are carried about and used for various purposes, and as amulets. The natives emphatically deny that the connexion between stones and spirits is like that which exists between the soul and body of man. Certain stones are kept in houses to protect them from thieves; and, if the shadow of a man falls on one of these, the ghost belonging to it is said to draw out his life and eat it. It has been supposed that the ghost which consumes the man's life must correspond in the stone, but by it or, as they say, at it; they regard the stone as the instrument used by the spirit, which retains the stone or lay hold on the man by the medium of his shadow.

2. Trees, streams, and living creatures.—Trees are sacred because they grow in a sacred place, or because they have a sacred snake, e.g., that haunts them. Some have a certain inherent awe attaching to their kind. The natives deny that they ever regarded a tree as having anything like a spirit of its own corresponding to the soul or mana of man. Streams or rather pools, are sacred as the haunts of ghosts in the Western, and of spirits in the Eastern groups. The reflexion of a man's face upon such water gives the ghost or spirit the hold upon the man's soul by which it can be drawn out and its life destroyed. Among living creatures which are sacred, sharks have a conspicuous place. If one of remarkable size or color haunts a shore or rock in the Solomon Islands, it is taken to be a person's ghost, and the name of the deceased is given to it. Before his death a man will give out that he will enter into a shark. In both cases it is well understood that the shark to which the ghost has betaken himself may be used as a weapon or charm; and the Banks' Island crocodile may be a tindalo, since the ghost of a recent ancestor may possibly have entered it, or may be known as a spirit. Among the Melanesians any living creature that haunts a house, garden, or village may well be regarded as conveying a ghost. Among birds the frigate-bird is conspicuous for its sacredness in the Solomon Islands; the ghosts of deceased men of importance find their abode in them, and indeed ancient and widely venerated tindalos dwell in them. In all the groups there is something sacred about kingfishers. Snakes receive a certain veneration wherever they are found in a sacred place. The original female spirit, that never was a human being, believed in San Cristoval to have had the form of a snake, has given a sacred character to all snakes as her representatives. In the Banks' Islands, and still more in the New Hebrides, snakes which are believed to be such spirits to themselves, and which therefore have much mana, are worshipped and have special names and are venerated in sacred places. One amphibious snake is firmly believed to appear in human form to tempt a young man or woman.

As, then, the religion of the Melanesians altogether an animistic religion? Nowhere does there appear to be a belief in a spirit which animates any natural object, tree, waterfall, storm, stone, bird, or fish, so as to be to it what the soul of a man is to his body, or, in other words, so as to be the spirit of the object. The natives certainly deny that they hold any such belief; but they believe that the spirit of a man deceased, or a spirit never a man at all, still appears near and with the object, which by this association receives supernatural power, and becomes the vehicle of such power for the purposes of those who know how to obtain it.

7. Magic and charms.—The belief in magic and the use of magic and charms do not perhaps properly belong to religion; but among Melanesians it is hardly possible to omit this subject. The foundation of religion is the belief in the surrounding presence, as we may say, of a power greater than that of man; and in great part the practice of religion comes to be the method by which this power can be turned by men to their own purposes. The natives recognize, on the whole, spirits of nature in the greater movements of things which affect their lives, but at every point they come in touch with what they take to be the exercise by men of the power which they derive from either ghosts or spirits. By means of this power, men who know the proper formula and rite can make rain or sunshine, wind or calm, cause sickness or remove it, know what is beyond the reach of common knowledge, bring good luck and prosperity, or blast and curse. No man has this power of himself, but derives it from a personal being, the ghost of a man deceased, or a spirit of a nature which is not human. By charms (certain forms of words muttered or chanted, which contain the names of the beings from whom the power is derived) this power becomes associated with the things through which the power is to pass. These things are personal associations, remains of food, herbs and leaves, bones of dead men, and stones of unusual shape. Through these objects wizards, doctors, weather-nongers, prophets, diviners, and dreamers do their work. There is no distinct, a ceremony of the craft is handed down from father to son, from
uncle to sister's son, or, it may be, is bought and sold. Many men may be said to take a profession of theft or to get property and influence thereby. A man cannot, it may be said, be a chief without a belief that he possesses this super-natural power. There is no doubt that those who exercise it are mischievous to their neighbors, and perhaps reside in them, though, indeed, they are conscious of a good deal of deceit.

A great part of this is sympathetic magic, and seems to the people to be real in itself. The failure of some charm or of some magician does not discredit charms or magic, since the failure is due to the counteraction of another and stronger charm; and one doctor who has failed has been, secretly or openly, opposed by another who has on his side a more powerful ghost or spirit. Thus the people were at every turn in contact with the unseen world and its powers, and in this religion was certainly at work. It is not necessary to go into this subject in any detail. With regard to sickness, it is often said that savages do not believe that any one is naturally sick. That is not the case in Melanesia, in the one case of all disease is seen as caused by spirits, and no serious illness is believed to be caused by ghosts or spirits; and the more important the patient is the more reasonable it seems to ascribe his sickness to his own act or to the witchcraft of someone. It is not common to ascribe sickness to a spirit in these groups where spirits have so great a place in the religious regard of the people. There it is the ghosts of the dead who inflict sickness, and can be induced to remove it; for there is a certain malignity belonging to the dead, who dislike to see men well and living; a man who was powerful and malevolent when alive is more dangerous than ever when dead, because all human powers which are not merely bodily are believed to be enhanced by death. So, whether to cause sickness or to remove it, the doctor by his charms brings in the power of the dead. A wizard is paid by a man's enemy to bring the malignant influence of the dead upon him; he or his friends pay another to bring the power of other dead men to counteract the first and to save the endangered life; the wizard who is the more powerful—who has on his side the more or the stronger ghosts—will prevail, and the sick man will live or die accordingly. The San Cristoval fight the battle out with ghostly spear. All success and prosperity in life, as well as health and strength, are held to depend on the spiritual power obtained by charms or resident in objects which are used with charms; the Melanesian in all his employments and enterprises depends upon unseen assistance, and a religious character is thus given to all his life.

8. Tabu. This word, commonly tapu or tambu in the islands of Melanesia now under consideration, and established as an English term, was taken from the islands of Polynesia. In Melanesia the belief prevails, clearly marked by the use of distinct words in some islands, that a man is awful and, so to speak, religious character can be imposed on places, things, and actions by men who have the momo to do it. A place, e.g., in which spiritual control is affected, is called by the name of a spirit that has been seen, which a spirit haunts, is holy and awful of itself, never to be lightly invaded or used for common purposes. But a man who has the proper power can tapu a place as he chooses, and forthwith appropriates it and has the common use of it. Behind the man who exercises this power is the ghost of the dead or the spirit whose power the man has. Tabu implies a curse. A chief will forbid something under a penalty. To all appearance it is a chief that he forbids, and as a chief that he prohibits is respected; but in fact the sanctions comes from the ghost or spirit behind him. If a man has the power to tabu, he as may and sometimes does, he runs a serious risk; but if, on the other hand, he forbids the gathering of that a power that resides in them, though, indeed, they are conscious of a good deal of deceit.

A great part of this is sympathetic magic, and seems to the people to be real in itself. The failure of some charm or of some magician does not discredit charms or magic, since the failure is due to the counteraction of another and stronger charm; and one doctor who has failed has been, secretly or openly, opposed by another who has on his side a more powerful ghost or spirit. Thus the people were at every turn in contact with the unseen world and its powers, and in this religion was certainly at work. It is not necessary to go into this subject in any detail. With regard to sickness, it is often said that savages do not believe that any one is naturally sick. That is not the case in Melanesia, in the one case of all disease is seen as caused by spirits, and no serious illness is believed to be caused by ghosts or spirits; and the more important the patient is the more reasonable it seems to ascribe his sickness to his own act or to the witchcraft of someone. It is not common to ascribe sickness to a spirit in these groups where spirits have so great a place in the religious regard of the people. There it is the ghosts of the dead who inflict sickness, and can be induced to remove it; for there is a certain malignity belonging to the dead, who dislike to see men well and living; a man who was powerful and malevolent when alive is more dangerous than ever when dead, because all human powers which are not merely bodily are believed to be enhanced by death. So, whether to cause sickness or to remove it, the doctor by his charms brings in the power of the dead. A wizard is paid by a man's enemy to bring the malignant influence of the dead upon him; he or his friends pay another to bring the power of other dead men to counteract the first and to save the endangered life; the wizard who is the more powerful—who has on his side the more or the stronger ghosts—will prevail, and the sick man will live or die accordingly. The San Cristoval fight the battle out with ghostly spear. All success and prosperity in life, as well as health and strength, are held to depend on the spiritual power obtained by charms or resident in objects which are used with charms; the Melanesian in all his employments and enterprises depends upon unseen assistance, and a religious character is thus given to all his life.

9. Totemism. If totems, properly so called, exist among Melanesians, they must be considered in treating their religion. A totem is defined by J. G. Frazer (Totemism and Exogamy, London, 1910, i. 326, 8) as being 'a class of material objects to which a savage regards with superstitions respect, believing that there exists between him and every member of the class an intimate and altogether special relation.' The relation between a man and his totem has partly a religious and partly a social character. It is held that 'the members of a totem clan themselves by the name of their totem, and commonly believe that they are actually descended from it.' Each one, moreover, 'believing himself to be descended from, and therefore akin to, his totem, the savage naturally treats it with respect. If it is an animal he will not, as a rule, kill or eat it.'

(1) Florida, in the Solomon Islands, where the native system as it is understood by themselves has been carefully explained by natives of some education, affords probably the best field for consideration of the subject. The people are divided into six exogamous kindreds, called kuna, each with its distinguishing name, descent following the mother. Two of these kindreds are named from living creatures, a sea-eagle and a crab. Each of the six has some object which its members must avoid, and which they must abstain from eating, touching, approaching, or beholding. This is the mba or of the kuna. In one case, and one case only, islands, that is the Kiwai, is eaten without taboo, and would say that the pigeon was his ancestor. Here, then, the pigeon appears as the totem of the Eagle kin; they cannot eat it; it is their ancestor. But was a pigeon their ancestor
in the sense that they are descended from it? Decidedly not. It was a human ancestor who associated himself with the pigeon; the pigeon represents the dead man, the pigeon is a tindalo, a dead man of power called "tindalo," and a thing abnormally valuable, the "miedlo," to those to whom the tindalo (once a living man) becomes.something. That is, to say, the pigeon represents the human ancestor; the man begat the generations of his kindred before he died and entered into a pigeon. The pigeon is not truly an ancestor, nor is it truly a totem, it is not even a symbol. It is an example of another kindred which avoids the giant clan, the traditional ancestor of which haunted a certain beach. That ghostly ancestor is represented by the clan on that beach, and a native will say that the clan is his ancestor, but without meaning more than he means when he says that an ancient weapon in a shrine is a dead chief, a tindalo, that is, belongs to him.

(2) In another of the Solomon Islands, Uluwai, not long ago the people would not eat the fruit of the banana, and had ceased to plant the tree. The elder natives would give to the fruit the name of a powerful man whom they remembered living, and his spirit would not eat it, thus accounting for their avoidance of the banana as food. The explanation was that this man, before his death, announced that after death he would be in banana fruit, and that they were not to eat it. Soon he would have been an ancestor, the banana would be an ancestor, while clearly there was no descent from a banana in the belief of the people. This, then, is not a totem, though it may illustrate the "individual totem".

(3) In the New Hebrides, in Aurora Island, there is a family named after the octopus. They do not call the octopus their ancestor, and they freely eat it; but their connexion with it is so intimate that a member of the family would go to the reef with a fisherman, call out his own name, and say that he wanted octopus, and then plenty would be taken. This, again, seems to approach totemism.

(4) In the Banks' Islands and New Hebrides, however, there is what comes very near to the "individual totem." Some men, not all, in Melanesia, conceived that they had a peculiar connexion with a living creature, or it might be that the creature had a close connexion with its creator, either after death or unexpectedly, in some singular manner. If this was a living thing, the life of the man was bound up with its life; if an inanimate object, the man's health depended on its being unbroken and secure. A man would say that he had his origin in something that had presented itself to him. In Aurora Island in the New Hebrides, a woman dreamed of a spirit, which she thought was something—e.g., a coco-nut— which has a particular relation to her unborn child, and this child, hereafter must never eat.

10. Societies, mysteries, and dances. (1) Societies. A very conspicuous feature of native life in the Melanesian Islands, and New Hebrides is the universal presence in those groups of a society, called by some form of the name superc, an institution which is entirely social, and has no religious character. To gain advance and distinction in it requires, no doubt, the spiritual power of mana, as does every other form of success, and so sacrifices, prayers, and charms are used; and doubtless the superc is under the sanction of tabu. It is also true that a man's position after death is believed to depend in some measure on his rank and his liberality in this life; but the account of it cannot come under the head of religion.

(2) Mysteries. A religious character attaches much more truly to the mysteries, the mysterious secret societies which hold an important place in native life in the Solomon Islands and in the Eastern groups. The lodges of these societies appear to visitors to be temples and seats of religious worship; the images within them seem to be idols. The mysteries are closely fenced by a strict initiation, and a rigid tabu guards them; to those outside the secret and unapproachable retreats the mysterious sounds and the appearance of the members in strange disguise convey a truly religious awe. In fact, the mysteries are deifically or profanely connected with the dead, the ghosts which are everywhere, more or less, objects of religious worship. In the Banks' Islands, the word "mysteries" was simply "the Ghosts." Yet, although within the mysterious precincts the ordinary forms of sacrifices and prayers were carried on to gain the assistance of the dead and communion with them, there was no esoteric article of belief made known and no secret form of worship practised. There were no forms of worship peculiar to the society, no objects of worship of a kind unknown to those without. There was no "making of young men," no initiation without which a man did not take his place among his people. The women and the children, perhaps, really believed that what they saw and heard was ghostly, but many an accident betrayed the neighbourhood in disguise; and the neophyte, when initiated into the sacred place, found himself in the company of his fellows of daily life. Still, since the presence of the dead was professed and believed, and since so much of the religion of the Melanesian, particularly in the Solomon Islands, was concerned with the ghosts of the dead, it is true that these secret societies and mysteries belong to the religion of the people.

(3) Dances. All the Melanesians have their dances, which are part of the mysteries, and which it is the first task of the neophyte to learn. But there are dances everywhere in the public life of the people which, however difficult, all boys and young men desire to learn, and have to learn in secret before they can perform them at the feasts. The ghosts in Hades, in their shadowy life, dance as living men do. Visitors are too apt to speak of "devil dances" and "devil grounds"; but it may be said to be certain that dances, as such, have no religious or supernatural character in Melanesia.

11. Creation, cosmogony. The consciousness of the relation of the creator is accepted as a chief ground of natural religion. Consequently, when natives are asked (perhaps very imperfectly) who made them and the things around them, and they give the name of the maker to whom the original is ascribed, they are thought to name their creator; and it is assumed that this creator is the chief object of their worship. Thus Qat, under the name of Fik, was thought at first to be the father of all, and the name of the supposed creator has elsewhere been taken as the name of God. But creation, the making of men and things, is by no means a proof of very great power, or a ground for great reverence, among Melanesian people, it
may almost be said that relation to a creator has no religious influence at all, though reference to Qat as the maker of men is made in correcting children in the Banks’ Island. The existence of the Banks’ Islanders was a recent discovery; the course of all the great movements of nature, are quite independent of that creative power which was ascribed to certain spirits. The makers were spirits, or deities, or birds, or animals. The Kishikis were characterized by a female spirit in the shape of a snake; she made men, pigs, cacao-nuts, fruit-trees, and food in San Cristoval; death had not yet appeared. There was a woman who had a child. The snake strangled the child; the mother chopped the snake in pieces; thenceforward all good things changed to worse, and death began. Respect is shown to snakes as the progeny or representatives of this female spirit, but she cannot be said to be worshipped.

In the Banks’ Islands and the New Hebrides, as has been stated before, spirits are the principal objects of worship, and they are also believed to have a rank, even though they in the central figure of the world of man. Yet it must be borne in mind that they are by no means held to be originators; they came into the world existing under circumstances which make them the gods of men now live, where there were houses and canoes, weapons and ornaments, fruits and gardens. In the Banks’ Islands Qat held the highest place. He was born in the eleventh of twelve brothers, who dwelt in a village in Vava Vava. There Qat began to make men, pigs, trees, rocks, as the fancy took him, in a land which already existed. His chief assistant in this work was another spirit (eun) named Marawa (spider); his brothers envied and perverted him. When he made a wife for himself, they tried to kill him; he instructed them and played tricks on them. There were other spirits in the world when he was born, some enemies whom he had to overcome. From one of these spirits, dwelling in another group, named Night, he bought the night to relieve the tidium of perpetual daylight. Finally, when the world was settled and furnished, he made a canoe in the middle of the island of Santa Maria, where now is the great lake, collected his wife and brothers and living creatures into it, and in a flood caused by a deluge of rain water was washed out of the sea and disappeared. The people believed that they were taken away by Qat, and looked for his return. Though no longer visible, he still controlled to a great extent the forces of nature, and he heard and influenced the affairs of the people. The natives looked upon him as an ancestor as well as their creator, but they were emphatic in their assertion that he was never a man himself; he was a spirit, a spirit, a power, a nature different from that of man; and, because a spirit, he was master of all magic power, and full of that mana which was at work in all around. It is, however, scarcely possible to take him very seriously or allow him divine rank, even though he is the central figure in the origin of things and his influence is present and effective. In the New Hebrides nearest to the Banks’ Islands Tagaro takes the place of Qat. He was the grandson of Tane, the first of Polynesia. He made things as Qat did; he had his brothers, ten of them, and there was another, Supwe, who thwarted Tagaro and made things wrong. Tagaro also went back among the other islands Supwe was the chief of this band of spirits. In Santa Cruz, Lata corresponds, but not very closely, to Qat and Tagaro, since he also made men and animals.

These Upper spirits are named and known as individual persons. Besides these, in all the islands are spirits immemorial and unnamed. These are they whose representative form is very often a stone, who haunt the places which their presence makes sacred, who associate themselves with snakes, sharks, birds, and the various things through which they are drawn to life; and draw from them the spiritual power from which comes all manner of success in life, and which can be turned to injury as well as succour. It may safely be said that these spirits are not malignant beings, though they were spiteful at times and were willing to do mischief to the enemies of their worshippers. The multitude of beings who in the Solomon Islands have power in storms, rain, droughts, calmness, and especially in the growth of food—the vigena, hóona, and others— seem to belong rather to the order of spirits than to that of the ghosts of the dead, and such they are acknowledged to be, though the natives speak of them as ghosts.

Thus the world of the Melanesians was populous with living beings, visible and invisible, with men, with the ghosts of the dead, with spirits great and small; and pervading of the world of man a power which belonged to all spirits, to the dead as much as to the living; all these could direct it and employ it, and it was everywhere at hand. The world so peculiarly adapted to the Melanesians by the circle of the sea which surrounded the islands which were known to them, a circle which varied in place and size according to the position of the centre. The old world of the Banks’ Islanders did not include the Solomon Islands; that of the Solomon Islanders was a much wider world. Wherever the circumference of the circle fell the sky was supposed to shut down fast upon it. Under the watchful eye of the spirits, the sun and moon made their journeys; and the stars hung in it. The heavenly bodies were not thought to be living beings, but rather rocks or islands. In the sun and moon were inhabitants with wives and families, in whom the sun and moon were personified and about whom many stories were told; but these have no religious character.

12. Death and after death. Without some belief in a life after death, as well as in a power superior to that of living man, it is plain that the Melanesian religion could not be such as has been described. This implies a belief in a soul of man, though what that is they find it difficult to explain. They believe that everything uses different languages, and these words convey various metaphors, when they are properly understood, the idea of which probably involves a certain degree of inconsistency. It is in a way the natives looked upon him as an ancestor as well as their creator, but they were emphatic in their assertion that he was never a man himself; he was a spirit, a spirit, a power; a nature different from that of man; and, because a spirit, he was master of all magic power, and full of that mana which was at work in all around. It is, however, scarcely possible to take him very seriously or allow him divine rank, even though he is the central figure in the origin of things and his influence is present and effective. In the New Hebrides nearest to the Banks’ Islands Tagaro takes the place of Qat. He was the grandson of Tane, the first of Polynesia. He made things as Qat did; he had his brothers, ten of them, and there was another, Supwe, who thwarted Tagaro and made things wrong. Tagaro also went back among the other islands Supwe was the chief of this band of spirits. In Santa Cruz, Lata corresponds, but not very closely, to Qat and Tagaro, since he also made men and animals.

These Upper spirits are named and known as individual persons. Besides these, in all the islands are spirits immemorial and unnamed. These are
of men that they should die. In stories the first men are represented as changing their skins, as snakes cast their slough, and returning to youth and strength, until by some accident or folly life could no longer be so renewed, and death came in. When the way to the abode of the dead was opened and men departed to their own place, Hades. The funeral rites do not require description. The disembodied spirit is not thought generally to pass away, but the body which has left the place in which it has lived; but, the body being buried, or otherwise disposed of, the ghost proceeds to its appointed place.

(2) Hades.—There is a great difference between the conception of the Solomon Islanders and that of the Banks' Islanders and New Hebrides people with regard to the place where the dead take up their abode. In the Eastern Islands Hades is in the underworld; in the Solomon Islands the dead, though there is an underworld, depart to islands and parts of islands belonging to their own group, and from Florida they were conveyed in a ghostly canoe, a ‘ship of the dead.’ In all parts of Melanesia the condition of the dead in this abode is an empty continuation of the worldly life; in all parts the ghostly life is not believed to be eternal, except in so far as the native imagination has failed to follow any accurate measure of time. But, though the dead congregate in Hades, they still haunt and frequent the homes of their lifetime, are active among the living, and, as has been shown, in the Solomon Islands the religion of living is mainly concerned with the worship of the dead. In these islands the weapons, ornaments, and money of a man of consequence are buried with him or placed on his grave. Whether these decorate the dead or not is uncertain. It is certain that when a dead man’s fruit-trees are cut down, as they say, as a mark of respect; he ate of them, it is said, while he was alive, he will never eat again, and no one else shall have them.

The notion is general that the ghost does not at first realize its position, or move with strength in its new abode; and this condition depends in some extent on the period of the decay of the body; when that is gone the ghost is active. It is an expedite this activity in some parts the corpse is burned.

While in a general way the ghosts of the dead pass to their habitation which have their principal abode in the sea. Before his death a man may declare his purpose of taking up his abode in a sea-bird or a shark, or the dead body may be sunk into the sea and not buried. These sea-ghosts have a great hold on the imagination of the natives of San Cristoval and the adjacent islands, and were frequently represented in their carvings and paintings. The appear as if made up of fishes, and fish are the spears and arrows with which they shoot disease into the living.

In Santa Cruz the dead, though they haunt the villages, go into the great volcano Tamami and pass below. In the Banks Islands the common Hades has many entrances; in this they have villages in which they dwell as on earth, but in an empty life. The ghosts range about their graves for a time, and it is not desired that they should rest. Sometimes the deodests they have a portion thrown for them. The great man goes down to Panoi with his ornaments, that is, with an unsubstantial appearance of them. In the Northern New Hebrides, at the ends of the islands, the northern or southern points, by which ghosts go down, and also return. In Lepers’ Island the descent is by a lake which fills an ancient crater. Living persons in all these islands have gone down to see their dead friends; they have seen the houses, the trees with red leaves, and the flowers, have heard the songs and dances, and have been warned not to eat the food of the ghosts.

(3) Rewards and punishments.—There remains the important question whether the condition of the dead is affected by the character of the living man; whether the dead are happier or less happy, in better or in worse circumstances, to which end they have been, in native estimation, good men or bad on earth.

(a) Solomon Islands.—It cannot be said that in these islands the moral quality of the men affects their condition after death. When the canoe of the dead took the ghosts of Florida across to the adjoining island of Guadalcanar, they found a ghost of worship, a tindalo, with a rod which thrust into the cartilage of their noses to prove whether they were duly pierced. Those who passed this test had a good path which they could follow to the abodes of the dead; those who failed had to make their way as best they could with pain and difficulty. In Yasbel they present themselves to the master of their Hades at a pool, across which lies the narrow trunk of a tree. They show their hands; those who have the mark of the frigate-bird existence will live, whereas these, who have not the mark are thrown from the trunk into the gulf beneath and perish.

(b) Banks’ Islands and New Hebrides.—In these islands there is something which approaches to a judgment of a moral kind. It is true that, as a man’s rank in the world has depended very much upon the number of the pigs he has slain for feasts, so the ghost fares badly who has not done his duty by society. So in Peniel the ghosts leap into the sea to go below, there is a shark waiting which will bite off the nose of a man who has not killed pigs; and in Aurora a fierce pig is ready to devour the ghost of a man who has not planted the tree that supplies material for the mats which are so highly valued. But there is a kind of judgment, a discrimination between good and bad, which has a moral character, and is, perhaps, well worthy of reflection. Thus in the Banks’ Islands it was believed that there was a good Hades and a bad. If one man had killed another by treachery or witchcraft, he would find himself opposed at the place of descent by the ghost of the man whom he had wounded; he would tread the path which led to the bad place, and wandered on the earth. If a man had been slain in fair battle, his ghost would not withstand the ghost of the man who slew him. The bad, they said, were not admitted to the true Panoi, the Hades where there were flowers, though but shadows, and the empty semblance of social life. But who was the evil man? It was answered, “One who killed another without cause or by charmers, a thief, a liar, an adulterer.” Such in their Hades quarrel and are miserable; they haunt the living and do them what harm they can. The others, who lived as they ought to live, abide at least in harmony in Panoi after death.

It is very likely that these notions of something like retribution in the under world have not entered very deeply into the native mind, and are not generally entertained. But that such beliefs should have been received at all is enough to show that their sense of right and wrong has been carried by Melanesians into their prospect of a future state, a view which can hardly have failed to have something of a religious influence even if it cannot be said to prove in itself the existence of a religion which these islanders undoubtedly possess.

LITERATURE.—J. Lubbock, The Origin of Civilization, London, 1875; E. B. Tyler, P.C., op. cit. 1895; A. W. Murray,
MELETIANISM.

There were two Meletian schisms, each having considerable influence in the fortresses of the Arian controversy. The earlier took its name from the Meletius who was bishop of Lyopolis in Egypt; the later from the Meletius who was consecrated bishop of Antioch in A.D. 390.

1. The Meletian schism in Egypt.—Μηλητρισ (Epiphanius) or Μηλητις (Athanasius) was bishop of Lyopolis in Egypt, and his dispute with Peter, bishop of Alexandria, led to a schism which received attention at the Council of Nicaea. According to Athanasius (Apol. c. Arianos, 59), Meletius was condemned about A.D. 303 or 306, so that the quarrel lasted for a long standing when the Council assembled. The origin of it is extremely obscure. As Hefele points out (Counsels, Eng. tr., i. 343 ff.), there are three separate accounts: (1) in diplomatic correspondence preserved in the works of M. J. Routh, Religions Sacra, Oxford, 1814-18, iv., 22; (2) in the writings of Athanasius; (3) in Epiphanius. All these differ in their details as to the origin of the schism. Copies of the three documents preserved in Routh is in a letter of certain Christians in prison who were afterwards martyred by Diocletian (Eus. HE vi. 8). It is supposed that the actual writer of the letter was Philoes, bishop of Hierapolis, addressed as a fellow-minister (communiter, the document being preserved in Latin), so that the schism has evidently not yet begun, and he is blamed for ordaining clergy in strange dioceses, without the consent of his fellow-bishops or even of Peter of Alexandria. The second document is a note, added by an anonymous hand, to say that after the martyrdom of the bishop Meletius had gone to Alexandria and found two discontented men, Arius and Iulodes, and proceeded to excommunicate the visitor (pecundus) appointed by Peter, who thereupon wrote the letter which makes the third of our documents, to the people of Alexandria, bidding them to avoid all communion with Meletius. From this very early and contemporary evidence we learn that Meletius' offense was that of trespassing on the rights of Peter and the other bishops by ordaining orders out of his own diocese. It is to be noticed that these irregularities took place before the deposition of Meletius. Athanasius says nothing about the irregular ordinations. In his Apology against the Arians (ch. 50) he gives as the cause of the deposition of Meletius that he had been guilty of many offenses, particularly of having sacrificed to idols and of having calumniated the bishops of Alexandria, Peter, Acellias, and Alexander (ch. 11). In his Letter to the Bishops of Egypt and Libya he asserts (ch. 22) that the Meletians were declared schismatics fifty-six years before, and that the Arians thirty-six years ago were convicted of heresy. Socrates (HE i. 6) gives practically the same account as Athanasius, and may, perhaps, have copied from him. The third version of the origin of the schism, however, differs materially from those which we have hitherto considered. It is given by Epiphanius (Liber Heraclei 19) and printed in Routh (p. 195). Meletias, says this writer, was a perfectly orthodox bishop. Indeed, he credits him with having accused Arius to Alexander, with whom Meletius, through a schismatical bishop, was on good terms. The real cause of the dispute was, according to Epiphanius, the question of the treatment of the lauded. But Epiphanius' account, as Hefele shows, is full of inaccuracies, and contradicts the earliest evidence, as when, e.g., he makes Meletius a fellow-prisoner with Peter. But he may have been correct in the underlyings of the schism, Meletias being, like Novatian at Rome and the Domestics in Africa, the representatives of the severe disciplinarians. Epiphanius had, moreover, special reasons for not allowing Meletians from their schism having spread to his native place, Lyopolis. Perhaps because of his doctrinal orthodoxy, Meletius and his party were treated very leniently by the Council of Nicaea. It may be that this was a signal for the authority of the bishop of Alexandria, was directed against them; but in the synodal letter (Soc. HE i. 9) Meletius was not permitted to ordain or appoint clerics any more, and those to whom he had ordained were to be admitted to the Church (αὐτοκράτεια quam non est) and to rank below the clergy ordained by Peter and his successors. Athanasius was much troubled by these schismatics who joined his opponents; and from their ranks came his bitter enemies, the priest Isiacynus Arsenius, and many others. Athanasius bitterly regretted the decision of Nicaea in this matter (Apol. c. Arianos, 71). He compiled a list of the followers of Meletius (given). The schism lasted, according to the middle of the 5th century (Soc. HE i. 8).

2. The Meletian schism at Antioch.—The importance of the Meletian schism at Antioch is due to the fact that it hindered the good understanding between the Roman and Alexandrian Churches and those Asiatic Christians who, though at heart zealous, were less uncompromisingly Nicene than many of the Athanasian party. The dispute, which lasted for more than fifty years, ranged the great saints and Fathers of the latter years of the 4th century. In opposite camps. Against St. Basil, St. Gregory of Nazianzus, St. Flavian of Antioch, and St. John Chrysostom were opposed St. Damaus of Rome, St. Ambrose of Milan, St. Peter of Alexandria, and, much against his will, St. Athanasius himself. The merits of the controversy are perhaps as evenly distributed as the names on either side. To understand it aright it is necessary to trace the divisions of the church at Antioch from the days of the Nicene Council, Eustathius, the bishop, who had been one of the foremost champions of the accepted creed, was the first to suffer in its cause, being deprived of his see in A.D. 330, though not without a serious tumult in the city, owing to the machinations of Eusebius of Caesarea and the 'conservative' faction. The see of Antioch was now filled by prelates who were hostile to the Nicene formula—Eulalias, Eupaphron, Flacillus, Stephen, and Leonitius, the last of whom, by prudently concealing his real opinions on vexed questions, preserved peace till his death in 357. He was succeeded by Eudocius, 'the last of the all the Arians,' who was installed as bishop of Constantinople in A.D. 390. It now became necessary to provide a successor at Antioch, and Meletius was chosen, being supposed to be in accord with the party in power (P. Castr., Le Schisme d'Antioche, p. 72, note). In his sermon, however, on the 8th he declared himself on the side of the Nicene (Hier. lxxii.,) and was at once deposed and exiled, several of his partisans put in his place. Thus Meletius, once the Arian nominee, had become a Catholic confessor. Since the deposition of Eustathius, the faithful Nicene remnant had remained apart under the care of the
priest Paulinus, and did not enjoy the prospect of communicating with the followers of Meletius, who, unlike them, had not borne the burden of the contest. The party of Paulinus, however, was not numerous, and it was more perhaps its insignificance induced Eusebius, who is said to have had a regard for its leader, to allow it the use of a small church. Meletius's party, on the other hand, was numerous and increasing owing to the popularity of the bishop, and it was extremely probable that under him the Catholics would ultimately be united. In 362 Athanasius held the small but important Council of Alexandria (see ARIANISMO, vol. I, p. 780). A synodal letter, the *Toumos of Antiochenos*, was sent to Antioch by the hands of the bishop Eusebius of Vercell, who had attended the Council; but on his arrival he found that his companion in exile, Lucifer, bishop of Caliarius in Sardinia, had taken upon himself to consecrate Paulinus bishop of the old Nicene party at Antioch. As far as Antioch was concerned, the schism was unimportant. Meletius was universally beloved, and his moderation in regard to the points at issue in the controversy was more in consonance with Asiatic and Syrian Christianity than the uncompromising attitude of Alexandria and the West. Nor was Athanasius available for settlement, which left bygones be bygones, and allowed the good work done by Hilary of Poitiers in reconciling the bishops of Asia Minor to the Nicene Creed to bear fruit. But, not wishing to disavow Lucifer, the bishop of Alexandria, Meletius recognized Paulinus, as did also the Roman see. The dispute had now reached a stage at which principles were involved not unlike those which made the unhappy Donatist schism so incurable. There—the difference being that the Donatists (q.v.) rejected bishops who had been unfaithful in regard to heathenism, and the Eusathathians of Antioch those who had once been infected with heresy. The Roman see under Damascus declared unassailably for Paulinus; but throughout the East Meletius was regarded as the champion of orthodoxy; and he was a sufferer under Valens for his adherence to the Nicene Creed. The Cappadocian fathers, Basil and the two Gregorys, were devoted to Meletius, and John Chrysostom belonged to his church and was first ordained reader and afterwards deacon by him. The writer of the "Life of St. Basil," who in vain appealed to Athanasius to recognize Meletius, and was seriously troubled by the uncompromising support which Damasus gave to Paulinus. Things were complicated by Apollinaris, the famous bishop of Laodicea, who, though condemned for his erroneous opinions, is recognized not only as a defender of Nicene theology, but also as one of the profoundest thinkers of his time (see APOLLINARISMO). Among his friends was the presbyter Vitalius, who had been made priest by Meletius, but was ultimately consecrated by Apollinaris as rival bishop to Paulinus (c. 573). Thus, including the Arians, the Church of Antioch was now divided into four parties, the three Nicene bishops being Meletius, Paulinus, and Vitalius. Strange enough, not a shadow of suspicion rested on any one of these three rivals in regard to church discipline. Meletius and Paulinus were both recognized as saints, while, despite the suspicious orthodoxy of his consecrator, Vitalius was highly respected by the most honoured churchmen of the day. The distinction of Meletius was given when the six leading presbyters of the Church agreed to recognize either Meletius or Paulinus, if one survived the other. In 381 Meletius was at Constantinople, taking an active part in the General Council. This Council was destined to affirm the creed of Nicea and reunite the Church, though it proved unable to bring peace to the distracted community at Antioch. Meletius died during the Council; and, for some unexplained reason, Flavian, one of the six presbyters who had agreed to consecrate Paulinus if he survived, consented to be consecrated successor to Meletius. His action appears on the face of it indefensible; but, as he proved a remarkably saintly bishop, there may be some extenuating circumstances for his conduct of which we are not aware. The appointment of Flavian was one of the reasons for the Roman see's regarding the Council of Constantinople with disfavor.

Paulinus was supported by the bishops of Egypt, Cyprus, and Arabia, whilst Palestine, Syria, and Phcenicia adhered to Flavian. Theodosius recognized Flavian, and, when the serious affair of the statues was causing anxiety in the city, it was he as his bishop who pleaded the cause of the people at Constantinople (A.D. 387). Paulinus died in 388; and before his death he consecrated Evagrius in his place—a most uncanonical proceeding. The Westerners seem to have supported the claims of Evagrius, and Ambrose urged Theodosius to compel Flavian to come to Italy and submit his claims to the decision of the Church there; Theophylus of Alexandria was naturally opposed to this, as were Epiphanius and Jerome. When, however, Evagrius died, no rival bishop was consecrated. On Chrysostom's appointment to Constantinople (398) he managed to heal the breach, for both Alexandria and Rome were concerned; and Flavian placed the names of his two rivals—Paulinus and Evagrius—on the diplomas of the Church. The Eustathians continued to hold separate meetings till the time of Alexander (414-415), who healed the schism by an act of Christian courtesy, visiting the Eustathian church on Easter day and being accorded a hearty welcome by the congregation. The schism was finally ended when Kallistus, patriarch of Antioch (481-485), brought back the relics of Eustathius. The schism of Antioch would be no more than a somewhat dull chapter in ecclesiastical history were it not for the underlying causes, indispensable for the right understanding of the intricate questions which make the religious divisions of the East so complicated. As has been indicated, there was a singular absence of bad feeling and, we may add, of bad motives. We hear nothing of the disorder and even crimes which mark the course of the Donatist schism. But throughout we can see how incompatible were the ideals of the great patriarchates of Rome and Egypt with those of the East. Meletius, Flavian, John Chrysostom, and Nestorius, the great Antioch, all felt the encroachments of the bishop of Alexandria supported—except in the case of Chrysostom—by Rome. What has been called the Meletian schism was a foreshadowing of troubles to come which rent the Church asunder, and it is a phase in the long struggle between the rival theologies of Alexandria and Antioch, which dates from the days of Origen.

**MEMORY.**—i. Use of the term. (a) The term "memory" can be used in a wide logical sense to signify retention of the effects of stimulation. In this sense it is regarded by some writers as a fundamental attribute of living matter—a view
portrays the relation of body to soul; each may enter into the service of the other.

The bodily memory, made up of the sum of the sensori-motor systems of which the habit is a quasi-instantaneous memory to which the true memory of the past seems to be attached . . . the memory of the past offers to the sensori-motor mechanisms all the recollections capable of playing a part in their task and of giving to the motor reaction the direction suggested by the lessons of experience . . . But, on the other hand, the sensori-motor apparatus of which memory is a function, the unconscious, memories, the means of taking on a body, of materializing the idea of the self, is, it is supposed, that a recollection should reappear in consciousness, it is necessary that it should descend from the heights of pure memory down to the precious store of the past, by some action taking place.

James Ward would subscribe to the biological doctrine of memory, but finds it meaningless save as interpreted in terms of the psychological.

'Nay, the bare term 'retention' itself, and all cognate terms, such as 'trace' or 'residue,' are meaningless unless some present circumstance can be related to the past; thus they presuppose memory.' The analogy of inscribed records is a favourite resort of those who strive to elucidate the nature of memory by physical imagery; we find it again and again in Locke, for instance. Such an analogy is about on a par with that between the eye and a telescope - the one is a natural, the other an artificial, organ or instrument of vision; but neither will explain seeing as a psychological fact.' 

'Recorded memories alone are not memory, for they presuppose it. They may consist of physical traces; but that is not memory. The word called 'unconscious,' suggests mind; . . . the unemotive theory, then, is to be worth anything, seems too clearly to require not merely physical records or 'engravings,' but some experience of learning.'

(c) 'Memory' may be used to denote the retention of past experience without reference to the specific, explicit reproduction of such experience. The essential difference of this use of the term from the biological use lies in the word 'experience' with its implication of mental processes. Writers on psychiatry, such as Morton Prince, S. Freud, and C. G. Jung, use the term 'memory' for the influence of past on present experience, whether the subject is conscious of such influence or not.

When we consider of memory as a process we have in mind the whole mechanism thought to be working of which this past experience is registered, conserved and reproduced, whether such reproduction be in consciousness or below the surface of consciousness.

In this sense all perception and all behaviour involve memory. Not only so, but these writers would include in their reference past experience of which the individual took no conscious note. Sensations received, a day similar with no consciousness of their occurrence, are said to be remembered and to be of great importance in determining future experience.

(2) As usually considered, memory belongs to cognition, but, inasmuch as all experience cannot be reduced to processes of cognition, so, it may be argued, neither can the retention and reproduction of experience. Such a theory requires that the emotional aspect of experience, feeling-tone, and conation be reproduced in memory as emotion, as feeling-tone, and as conation. Just as these aspects of consciousness are never experienced alone 'in abstracto' but always in a concrete whole of experience, so they will never be reproduced 'in abstracto,' but in a concrete whole with an idea or with an object of sense-perception in this or that action. In this article memory will be treated with the retention of past experience and the explicit reproduction of such experience in the form of ideas.

2. Reproduction of ideas. - It is a disputed point whether ideas of past experience ever arise spontaneously in consciousness or are always suggested by the datum of present consciousness. Evidence in favour of the former has been derived from the experimental work of G. E. Müller and F. Schumann, A. Binet, and other experimental psychologists.

Hering states the doctrine of the heredity of acquired characteristics with great simplicity.

'Ve have ample evidence of the fact that characteristics of an organism may descend to offspring which the organism did not possess in life, and that it acquired owing to the special circumstances under which it lived . . . What is the descent of special peculiarities but a reproduction on the part of organized matter of processes in which it took part as a germ in the germ-containing organs of its parent, and of which it seems safe to say that re-creation that reappears when time and occasion serve.'

For Hering the marvels of instinct are but the marvels of habit handed on from generation to generation.

'He who marvels at the skill with which the spider weaves his web or the bird builds its nest is in many ways wiser than he who does not learn her art all on a sudden, but that innumerable generations of spiders acquired it hitherto and by step by step.'

Samuel Butler, in Life and Habit (1877), set forth the same doctrine, although he was at that time ignorant of Hering's paper. Into a later book, entitled Unconscious Memory, he incorporated a translation of the German lecture.

At different periods and actions of memory is presented by such biologists as Francis Darwin, R. Semon, and H. S. Jennings. It should be noted that in such a biological doctrine of memory there is a difficulty involved.

The structural development and behaviour of plants and animals may testify to memory in this wide sense without thereby giving evidence of consciousness.

(6) In a psychological use of the term such a reference is essential. As generally understood in psychology, memory denotes the retention of experience and its subsequent reproduction with the consciousness that it belongs to the past. To remember is to refer back. The distinction between memory as a conscious experience and memory as a non-conscious fact has been emphasized by H. Bergson in his distinction between the memory which imagines and the memory which repeats. All our bodily habits are memory in the latter sense, but not necessarily in the former. Acquired skill implies practically with the retention of past progress, but in the exercise of skill there need not be any conscious reference to those past exercises whereby this skill was acquired. Both forms of memory may be found in a person who acquired skill is guided on any occasion by a conscious reference back to past efforts, successes, and failures. For Bergson the relation of the two forms of memory
The latter view certainly represents the commoner form of memory. The attempt to classify the later view of the suggested idea stood to the present consciousness gave rise to the 'laws of association.' The types of relationship, contiguity in time and place, similarity and contrast, were erected into principles. The present assumption was said to suggest the past experience y because previously x and y had been contiguous in time or place, or because they were similar, or, again, because they contrasted - consolation (see art. Association). Modern writers seek to find an explanation for this association of past and present in the direct and indirect connexions of experience brought about through our purposeful activities. Association is but a special form of the bonds existing between different moments of experience in virtue of the organization of experience into systems. Direct or indirect participation in some common system or whole constitutes the bond of union which enables a present datum to suggest past experience. The laws for the organization of experience, for the formation of spatial wholes, temporal wholes, and the like, are the ultimate principles of association. The conditions which determine the actual line of association followed on any given occasion are of two sorts: one to the whole line of which the present datum and a particular past experience participate, and those which relate to the special circumstances of the present moment of suggestion.

A whole which is closely organized will form a stronger basis for association than one which is loosely organized or which lacks a definite principle. A whole which has occurred repeatedly or recently is more influential than one which is of rare or long past occurrence. Experimental investigations have served to demonstrate the efficacy of close organization, intrinsic interest, repetition, and recency in determining suggestion. As illustrative of the influence of close organization one may cite H. Ebbinghaus's work with nonsense syllables. The only principle for organization was the spatial arrangement and time sequence of a string of syllables - e.g., duck, ill, lap, pop, etc. - memorized by reading aloud. Any interference with the spatial and temporal organization of the series rendered re-memorizing of the same syllables difficult, and the degree of difficulty in re-memorizing the syllables was in proportion to the degree to which the original spatial and temporal organization was disturbed. As compared with a whole which has meaning - e.g., a passage of prose or verse - these strings of nonsense syllables are more difficult to memorize, a fact which illustrates the influence of an intrinsic interest as a basis of organization. The work of L. Steffens and P. Eppeholt has emphasized the importance of attention with respect to the basis of organization. It has proved more economical to memorize material by repeating it as a whole than to memorize it piecemeal, provided the material is such as can be attended to without undue difficulty. Continuity of interest is preserved by this so-called 'global' method, whereas it is destroyed by the artificial sections of the 'partial' or piecemeal learning. The value of rhythm in organizing a sequence of experiences has been shown by Müller and Schumann, and is a commonplace of school practice. The influence of repetition in rendering suggestion certain and swift is illustrated by Müller's researches. Experimental work by Müller and A. Pfleffer demonstrated the effect of recency in determining which of two possible lines of association suggestion should follow.

Of the conditions relating to the moment of suggestion, two seem to be predominant - the emotional attitude of the individual, and the trend of his ideas. The influence of the first on the line of association is demonstrated by the emotional congruity between the attitude of the present and that of the experience recalled; in a bad mood we forget failures and recall only ambitions and achievements. The importance of the trend of present consciousness has been shown in much recent work. An investigation by H. J. Watt brought out the central role of association exercised by the Ausnahme, or task, before the mind at the moment. On the relevance or irrelevance of the reproduced idea depends very largely the serviceability of our memory in any given difficulty. Appositeness for the purpose of the present moment, for what W. James termed 'the topic' of the stream of thought, will give one line of association the advantage over another.

A question which has become important for psychology is dissociation. Some writers hold that, just as experience becomes organized into wholes and these wholes are interrelated one with another in still larger organization, so, also, that the opposite process, viz. dissociation. Through dissociation certain episodes of past experience or certain aspects of that experience drop out of a given organization; such episodes can be reproduced; no suggestion of normal consciousness can connect itself with the dissociated contents of past experience. The theory is of great importance to psychopathology in its bearing on the amnesia of hypnosis and hysteria and on multiple personality. The process whereby the insularization of non-suggestible memories is brought about is described differently by different writers. Dissociation is the line of dissociation followed by Morton Prince, repression (without the implication of dissociation) in virtue of some pain value is the line of dissociation described by the Freudian school.

3. Obliviscence and reminiscence. - The failure of reproduction, whatever may be the view taken as to disintegration, is by no means the same psychical fact as failure of retention; inability to recall does not in itself prove obliviscence or the decay of past experience. Whether there can be total obliviscence, whether any experience can cease to be influential in mental life, may be open to dispute. Certainly it would seem that many experiences cease to be influential in mental life. In the absence of any interest to organize items of experience obliviscence would be the natural fading out of processes which had fulfilled their function. Ebbinghaus's experiments with nonsense syllables, already referred to, furnished a typical curve of the rate of forgetting such items. The principle of organization was mere spatial and temporal contiguity; no interest gave value to the series of syllables or rendered one syllable of greater worth than another. Ebbinghaus's curve shows that after an interval of twenty minutes 41.8 per cent of any series learnt was forgotten, after an interval of an hour 56.9 per cent was forgotten, after twenty-four hours 66.3 per cent, after six days 74.6 per cent, after thirty-one days 78.9 per cent. The fading away of the processes is rapid at first and very gradual afterwards. Experimental work, however, would also seem to indicate that experience does not necessarily begin to fade from the moment it ceases to be 'present' experience. On the contrary, there is a certain amount of evidence that processes ripen or mature in the recollection of past experience being clearer or fuller after some short lapse of time than immediately after the original occurrence. Some of the experimental work of H. J. Watt suggests this, and researches with school-children has brought out the same feature. Thus, if the amount of ballad poetry
which children aged 12 can reproduce correctly im-
mediately after learning by being represented by 100, the
amount which they can reproduce forty-eight hours
later without any further learning will be 110. A
similar increase in content reproduction is found in
other kinds of school material.
In the case of none-
sense syllables, although forty-eight hours later
some syllables can be reproduced which have not
been remembered immediately after learning, the
total amount reproduced is not high. This tendency
for 'reminiscence,' as it has been termed, is more
marked in children than in adults. The greater
organization of adult consciousness would enable
any experience to attain its full value and associa-
tion speedily, and, when reproduced, it is already
developed, and henceforward decay rather than
growth will be its life-history. In the case of the
less organized experience of the child it may well
be otherwise. The meaning and association of an
experience would develop more slowly, and might
be incomplete when the demand for reproduction
followed at once upon its first reception.
4. Function of imagery.—Past experience repro-
duced as ideas depends very largely upon imagery.
Imagery is of the same character as sense experi-
ences—visual, auditory, tactile, motor, etc. Fran-
cis Galton proposed to divide individuals into
classes according to the kind of imagery used in
reproduction—e.g., an auditory, one who reproduced
past experience in terms of auditory imagery, heard
words distinctly although not actually recalled. (Ps 20:5)
Most people were said to belong to a mixed type, i.e.,
not to use all varieties of imagery. It would seem,
however, that the kind of imagery used, even by a
recognized mixed type, depends very largely upon
the ideas reproduced and the purpose for which
it is reproduced. The fragmentary character of
images, their instability and lack of localization
as compared with that of speech, has always
been recognized. The schematic and symbolic
character of imagery with respect to the idea for
which it stands has received more attention in
recent research. The function of imagery would
seem to be to provide a focus for attention, of
which imagery provides a focal point, so as to
give clearness and definiteness to ideas.
It has been noticed that, when the process of re-
production takes place with difficulty or where a
train of ideas develops slowly, there the presence
of imagery is marked, and the imagery seems
indispensable to the realization of the ideas in
question.
Where, on the other hand, ideas are repro-
duced rapidly or a train of ideas develops
rapidly or is familiar in its character, the imagery
is sketchy and in some cases scarcely recognizable.
This has been said to be what is called 'imagery'
that is either not raised whether reproduction
possible without imagery, without even the
symbolic imagery of words standing for the ideas
reproduced. Here, as in so many other psychol-
ogical problems, no dogmatic answer is possible
in the present state of knowledge. There is
much patient research in connexion with the question,
and from it there should arise a clearer conception
of the problem and of its solution.
On the development of memory and memory
training see art. DEVELOPMENT (Mental).
MEMRA.—The tendency of Hebrew imagery to
persuade abstractions, such as sin, shol, which is
evident also in the manner in which the
divine word or speech is represented in poetry and
highly developed language. God's first by which creation
came into being and continues to exist is spoken of
as emanating from Him to execute His will by the
word of Jehovah 'were the heavens made' (Ps 33:6). 'He sendeth his word, and they are
fulfilled' (Ps 147:17).
In Is 55 the word proceeding from God's mouth
assures form and success. His will will be
accomplished as His plenipotentiary. In the Apocalypse
we meet with a few instances where the word
stands for God.
It was the word that descended on the officers of the fallen
angels to pierce them with the sword (Jud 5:21); it entered
Abram’s heart; (Gen 15:1); it slew the first-born in Egypt;
this all-powerful word leaped from heaven out of the royal
throne (Wis 13:3).
But, while these instances are of rare occurrence in
the Targums—though nowhere else in Jewish
post-Biblical literature—the word is already hypo-
tatized under the form of Memra. The Aram.
Memra, emphatic, or more, from emar, 'to speak,' signifies,
like Yeōm, from Yēōm, 'a word,' without the
additional meaning of 'reason' connoted by λέγεω.
It occurs about 180 times in the Onkelos Targum,
100 times in the so-called Jerusalem Targum,
and 320 times in the pseudo-Jonathan (in the
last two also we być) for God.
It stands either in the constant state—that is, Gn 15:16
'the word of Jehovah (Gen 24:3). In Ex 3:4
Moses brought forth before the people of Jehovah
(is in Jonathan 'before the shvikhim, 'Gen 24:46)
The Memra of Jehovah their God is their support, and
their king among them.'—or with suffixes: 'It is a sign
between me and you' (Ex 3:19). 'The Memra is a
consuming fire' (De 4:24). 'I will shilth thee with my
Memra' (Ex 29:14). It has been passed by (Ex 40:34).
It was employed by the Targumists
in the place of God wherever anthropomorphic
expression is not suitable, or any act inconsistent with the nature of a
transcendent God, are mentioned. Thus
Yēōm, with the Memra, may be explained as
she had founded, the earth, and by my strength I have
hung the heavens' (Is 44:24). 'The Memra becomes
the Memra of Jehovah' (Is 44:19). The
Israelites said: 'Behold, Jehovah brought us out of Egypt
(Is 63:11). God spoke by his Memra (Nu 14:18);' for
'my Memra' is rendered 'the voice of the Memra' (Ex 25:11).
The Memra gave the Law (Ex 60). These are the
Memra which Jehovah brought between his Memra and the children
of Israel' (Lev 26:64). Jehovah the God, his Memra, is
the helper who brought the children of Israel out of Egypt
(Nu 21:15). Isaiah says 'the glory of the Memra was on the
king of the world, on Jehovah Memra' (Is 9),
and hence 'the voice of the Memra' (De 4).
The above are only a few typical passages of the use of
the Memra (for an exhaustive list see F. Weber,
Judith, Thesaurus, Leipzig, 1897, p. 190;
A. Ederusheim, Life and Times of Jesus,
London, 1887, ii. 679 ff; he was followed by W. Fair-
weather in HDB, v. 344). What, then, did the
Targumists understand by the Memra? A
cursory glance at the Aramaic version will make
the question before we answer this question.
The demand for a version in the Aramaic vernacular by the retur-
ned exiles must have been supplied very early; it is
difficult to say how far back we are to place
the institution of the office of the Memra ("Dragramen,
"Intepreter," who rendered into the vernacular each verse of the Law and each three
verses of the Prophets, as they were read publicly in
the synagogue (cf. the office of the Evangelists
in the early Christian communities). The frequent
repetition must have produced a stereotyped ver-
sion.
The explanation of Christ on the Cross in the
Aramaic of Ps 25, indicates that the word
Memra, Doctor, was familiar to Him in that language; and St. Paul's
quotation of Ps 85:9 in Eph 4:24 is more in accord-
ance with the Targum than with our Mas. Text or the
LXX. A written Targum of Ps 85:9 in the
time of Gamaliel (Shab. 115a). Although neither
Origen nor Jerome mentions the existence of
a Targum, that of Onkelos had already at that time
become a kind of authorized ver-
sion.

"E. Jehudah says, 'whosoever transpales a verse (of the
Scripture) as it stands misrepresents the text, and whoever adds
it to a Mashephemah. Let him rend it in accordance with our
Targum" (Bab. 49a)."
Jewish scholars agree that this refers to Onkelos (see Maimonides, in Yad, Ishih 8:4; see also I. Zunz, Gottsdienstliche Vorträge, Frankfort, 1892, ch. v.). The aim of the version was to give a correct rendering of the text. Where he differs from his predecessors in favour of the Halakhah and popular usages:

Ex 40:10, De 15:10 are rendered: 'Ye shall not eat flesh with milk, upon the hottest day of the year' (Lev 18:6) is already called 'cattle'. The Passover shall be eaten in one assembly' (Heb. "one house") (Ex 13:9) is in accordance with Pesah 49a.

In order to understand that Jew and the pagan Gentile was intended to embody Palestinian theology for popular use, and deviation from the original in the case of the names and acts of God was to guard against misconception of the nature and irreverent use of the name of God. We find, accordingly, the divine unity insisted on:

Elohim with a plural predicate is rendered in the singular (Gen 2:24); De 49:1 is translated 'to know that Jehovah is God, there is none beside him'; 'Who is like unto thee among the gods?' (Ex 15:11), 'Jehovah is God, great, and there is no other God.' Jehovah may not even be contrasted with other gods. Not even may the term 'god' be applied to other divinities on the earth.

They are either 'enemies,' 'abominations' (Gen 30:5), 'or terrify' (Gen 19:12), 'be brought up to the highest place of his terror' (Heb. 'Bara') (Num 24:10).

To avoid contrasting God with man or ascribing the same action to both, Onkelos would introduce a paraphrase: 'They believed in the Mâemâ of Jehovah and in the prophecy of Moses' (Ex 14:9), 'the people murmured against the Mâemâ of Jehovah and strove with Moses' (Num 20:27); or the construction would be changed into the passive. 'Let it not be spoken to us from before Jehovah' (Ex 20:5).

The same construction is employed when human actions and passions are ascribed to God:

'The voice of the lad was heard before God' (Gen 21:15), 'it is revealed before me' (Heb. 'I know') (Ex 36:9); a Mâemâ from before Jehovah's name (Gen 3:25); 'they met with a Mâemâ from before Jehovah' (Num 22:6). This construction explains Onkelos's rendering of De 33:27, which incidentally resembles Js 1:16 by his word the world was created.' In the place of פֶּן "the everlasting arms' he reads, like the Psalms version 18:57, 'he (the Mâemâ) bowed (warred) the world, which in the passive assumed the shore rendering.

It is evident that a version made under the influence of rigid uncompromising monotheism and acceding to the Rabbinic theology would avoid the assumption of an intermediate being distinct from God. To compare the Mâemâ with Philo's Logos would credit the Targumists with more knowledge than they otherwise claim, and would be also unaccountable why only this term and nothing more of Philonic exegesis and mysticism should have found its way into the Targums. Its use in all the Targums rather warrants the assumption that its adoption is older than the Alexandrian Logos. We are inclined to think that it was introduced by the M²thurg mantm when the name YHVH ceased to be pronounced and Abadeh was substituted, some time during the Palestinian period. The Mâemâ, therefore, is the deity revealed in its activity, just as the Shkhkhah and Ḫārâ represent the divine majesty and glory. The term is based on Gn 1:26, emphasizing the fact that the world came into being by divine command. Onkelos uses Mâemâ when speaking of human authority:

'Ve, the mouth of Pharaoh' (Heb. 'the mouth of Pharaoh') (Gen 41:13), 'he does not receive our Mâemâ' (Heb. 'will not obey your voice') (Dt 21:9).

Onkelos takes up and expounds the words referred to in the art. see JF. M. Mura; S. D. Luzzatto, Philotheos, Vienna, 1830; W. Boussæ, Die Religion des Judentums im neustamentl. Zeit., 3:242, Berlin, 1876, p. 899.

MEN, THE.—In the Greek-speaking portion of the ancient world, the term 'men' is used to designate a wide range of individuals from various walks of life. This includes not only common people, but also religious leaders, philosophers, and military leaders. The term 'men' is often used to refer to a group of individuals sharing a common interest or profession. In the context of the New Testament, the term 'men' is used to refer to the leaders of the religious community, including the Pharisees and Sadducees. In the New Testament, the term 'men' is used to emphasize the importance of spiritual and evangelical thought. They were called 'the men' because they were laymen, and not ministers. The circumstances in which they arose varied in different districts; the causes to which they owed their origin admit of little doubt.

In the reign of James v., Robert Bruce, the eminent Edinburgh preacher, was banished to Inverness. In a letter, written in Feb. 1612, to Sir James Scampie, the laird of Balvay, the exiled minister says:

"If his Heiness will command me to the scaffold, I have a good conscience to obey him, and it would be more welcome to me nor this lingering death that I am in' (D. Calderwood, Hist. of the Xvii.f of Scotland, Edinburgh, 1842-49, iv. 135).

The 'lingering death' which Bruce deplored resulted in the establishment in Inverness of meetings for prayer and fellowship, and in the gathering together of bands of godly men whose influence continued to mould the religious life of the Highlands for many generations. After the establishment of the Presbyterian Church in Scotland in 1635, nearly 300 ministers relinquished their living, and their places were filled in the greater number of parishes by ministers who did not possess the qualifications of the profession, and who were often at variance with the parishioners. The people in the more populous districts of the South, the unity of the people, and their devotion to Presbyteranism, enabled them to maintain their religious zeal by means of public meetings for worship held in defiance of the law. In the North a number of the ministers readily turned Episcopal, and retained their livings. The people were less devoted to Presbyterianism, but, even so, the more devout among them were roused to opposition by the manner in which the vacant livings were filled. The parishes were large, the population was sparse, and combined action for the holding of religious meetings was almost impossible. Religious instruction was for a time neglected. The 'curates,' as the new incumbents were called, exercised little or no influence. When ministers were no longer regarded as leaders of the people in sacred things, they rose to take their place men of devout lives, of integrity of character, familiar with the Scriptures, and recognized as possessing spiritual gifts, who, going from parish to parish to hold meetings, were accepted as religious guides.

At a later period, the arbitrary manner in which patronage was exercised in the Presbyterian Church, and accusations brought against its bishops and courts, revived the influence and importance of an institution which had already obtained a foothold in many districts. Bands of earnest Christians boldly denounced legal arrangements which ignored religious needs and aspirations, and the people denounced them for so doing. Interest in a common object drew them together. They deplored the low state of religion in the land, they yearned for spirituality of worship and a greater knowledge of Holy Scripture among their countrymen. They held monthly or quarterly meetings for prayer and fellowship. These were occasions of high spiritual enjoyment. Sometimes the companies sat up during the whole night, and passed the time in prayer and praise and spiritual conversation.

In order to prevent any misconception of their aims they provided themselves in some cases with carefully drafted constitutions. A document, dated 17th September 1788, setting forth the objects and rules of the society of the Men in Ross-shire shows that, while they decried the low state of religion throughout the land, they were not in a spirit of self-righteousness; they were at the same time faithful in dealing with one another. Among various evils they deplored, thrusting in God's presence, oppression by the force of the law of patronage — pastors who have nothing in view but the fleeces.' The same docu-
ment gives us one of the rules of the society: 'This day, as the Word of God requireth, that we should consider one another, to provoke unto love and good works; therefore, if one or more of us see or hear anything unbecoming in the walk, conduct, or expressions of another, that we be free with one another to reprove him; and this we are sure we shall do for the glory of God, and the benefit of our souls.'This rule is illustrated in the following passage (Mt 18:19): 'Thou shalt not hate thy brother in thine heart; but shalt in any wise rebuke thy neighbor, that sin may not grow upon him.' It adds: 'We are aware that this our meeting together, out of different parishes, will be misconstrued; but, so far as we know ourselves, we have no divisive views in it; nor do we make a faction, and we desire to give none offence.'

Soundness of judgment characterized their utterances and their conduct. Their activity was far removed from that fanatical enthusiasm into which religious zeal frequently degenerates. One exception, still referred to with bated breath, when referred to at all, indicates their abhorrence of fanatical excess. They organized meetings for prayer and instruction, in which they expected to make a running translation from the English version into the language of the people. They did not choose to expound the Word, and not a few were eloquent and powerful preachers, though lacking the training of a divinity school. The deep respect of the people for an ordained ministry was reflected in the fact that these spiritual guides, even when their influence was most powerful, did not ordain ministers or preachers, but the 'Men' (as Done.).

By the 'Men' the evangelistic spirit was kept alive in large districts, and the comforts of religion were administered in many a stricken home and in many a remote hamlet. They generally set apart one night of each week for prayer, and another for fellowship or conference. On the latter a portion of Scripture was selected to be the subject of discussion. This passage was referred to as the Bona Ceist, or the 'Question.' The Men, each in turn, gave an exposition, generally bearing on experimental religions and their gifts of speech, and of scriptural interpretation were developed. Fitness to expound Scripture in public assemblies, combined with blamelessness of life, secured recognition as one of the Men. This exercise became so popular that, whenever the Sacrament of the Lord's Supper was administered, a day was set apart for the Men. Generally it was the Friday between the Fast-day and the day of Preparation. It was known as ta na Ceist ('the day of the Question'). Great gatherings were expected when popular Men came to the 'Communion.' Worshippers often travelled long distances, and from far and near; multitudes, who never became church members, attended faithfully on the Men's day.

The presiding minister opened the service with prayer, and the reading of Scripture, and afterwards, if no public question was to become the 'Question.' One of the more highly honored of the Men announced a passage, indicating its bearing on Christian experience, and required two or three to deal with some such topic as 'marks' by which God's children are distinguished from the world,' 'marks of true conversion,' 'marks of saving faith,' etc. Then the presiding minister called upon the most aged and experienced of the Men to give the 'marks' to their fellow-Christians. This service was generally held in the open air. Its popularity was such that the largest church could seldom contain the congregation gathered that day. 'To rise to the question,' on a Communion Friday stamped the speaker with the hallmark of public recognition. Henceforward his position was assured. He was one of 'the Men.' The popularity of the Men was a menace to the Church wherever the services were not sufficiently sanctified by evangelical faithfulness. Many of them would not partake of the Sacraments at the hands of ministers of whom they did not approve, and were approved ministers of none. The Church feared the practical discipline from receiving those who held aloof from the worship of their own parishes. Resolutions against the Men were passed in Presbyteries and Synods, but all efforts to crush them only increased their popularity. The people believed in them, honouring them for the strictness of their lives, and frequently asserting that they were possessed of the gift of prophecy.

In earlier times, wherever the doctrines of grace were faithfully proclaimed, the Men were faithful to the Church, and they undoubtedly created a taste for the more spiritual and evangelical preaching which began early in the 18th century. With the revival of evangelicalism the special circumstances in which they proved a religious force passed away. But power and influence once acquired are not easily lost. In many districts the Men heartily welcomed and warmly supported an evangelical ministry; in others they persistently and fiercely opposed all ecclesiastical influence. The estrangement continued too long in parts of Scotland. In the north of Scotland they continued to stand aloof, and in the more northern districts they formed bodies known as 'Separatists.' They came to be regarded as the more they developed contempt for all learning except a literal knowledge of the Authorized Version of Scripture. They came to be regarded as the more learning they had, the more they developed contempt for all learning except a literal knowledge of the Authorized Version of Scripture. They became narrow and intolerant. Utterly disregarding all outward culture, they attempted to form in the people a religion of loveless gloom. From one extreme it was easy to pass to others. Antinomianism was openly professed in some districts, and exorcism was practised in others. These futile throws were the spurious imitations of a life that had gone. In later times opposition to instrumental music and church choirs, a severe observance of the Sabbath, a blind devotion to the recognized translation of Scripture, a general contempt for learning, and a zeal for the doctrine of election which merged into fatalism characterized generally the scattered fragments of a body whose sway was at one time both powerful and beneficent.

But the old spirit has not altogether disappeared. A different type is occasionally met with. Men, tender-hearted and spiritually-minded, still preserve the best traditions of a past age. In the absence of the minister one of these may be found here and there to conduct the Sunday service in church or meeting-house. Standing at the preacher's desk, ready to give an extemporaneous address or to read a portion of some 18th century divine, he follows devoutly the usual order of service, except that he does not pronounce the benediction. These Men live saintly lives, they are honoured by the people, and they help to preserve the simplicity and spirituality of religion.

G. R. MACPHER.
not flagellants but dancers, flagellation being a mere
accompaniment of the dance, and not even a real
practice. The name is probably a corrup-
tion from 'Christ,' the name by which they designate themselves as those who
have Christ in their midst, in their leaders.

Although the Men of God have many 'Christ's,
their practice is strictly in the proper
sense of the word, for their Christology is only one
side of their doctrine of spiritual ecstasy; that is
to say, they are a secret sect who practise asceti-
cism, and in a manner transcendent.

Their principal mode for drawing down the Spirit is dancing (radaenie),
other devices are the singing of songs, of which
they have a great number, couched in highly
poetical language, and fasts. A member of this
sect who succeeds in receiving the Spirit in full
measure becomes a Christ or even a God Zebaoth
(a Christ of the highest rank) or a Mother of God;
those who receive the Spirit in a less degree are
identified with the apostles, the ecclesiastical saints, and honoured as prophet,
and prophetesses. In their belief, even Jesus of
Nazareth first became a Christ only through recei-
ving the Spirit at His baptism. While these prophecies have not been fulfilled, a permanen-
t possession, ordinary members of the community
may obtain Him temporarily through the same
means.

Beverside severe and often protracted fasts, complete
sexual abstinence is a feature of their asceti-
cism. Those who enter the sect as married people
must henceforth live as brothers and sisters.

Others are, as a rule, not permitted to marry at
all, but may take a young woman into their house
as a 'spiritual sister' in 'spiritual marriage,' ex-
clusive of sexual intercourse. The latter consti-
tuted the trestipes of Adam and Eve, and is con-

demned as the sin 'er' Bradley; in accordance with
this view, childbirth is regarded as extremely
sinful, while children are despised as 'little sins.'

Generally speaking, the Men of God aim at a
monastic style of living, their houses being
arranged as convents and the women wearing a
kind of nun's dress. Like all Russian sectaries,
they enforce complete abstinence from intoxicat-
ing liquors; even coffee, and in many communities
tea also, is forbidden. On the whole the Kilias-
t system of morals lays so much stress on the
mortification of the flesh (the resurrection of which
they deny) that it has not been able to set up a
pure life. Altruism appears among them essentially as sympathy, which has to display
itself in the bestowal of alms. Besides practising
asceticism, they lay great stress on the voluntary
endurance of persecution from the State and from
the Church, and the sect is persecuted even to
the present day as 'extremely pernicious.' In earlier
centuries the persecution was excessively brutal;

attempts were made to crush them by the rod
and the scabbard, but in vain, and they furnished
many martyrs. Since the beginning of the 19th
cent., those methods have been replaced by
imprisonment and transportation to the Caucasus
and Siberia.

The Men of God, however, seek to show the
bravery of their opinions not by open confusion of
their faith, but by concealment of it, and it is pre-
cisely their obscurity in this matter that has often
brought upon the sect the severity of punish-
ment. This concealment of their belief is due to
their view of the Holy Spirit, whom they regard
as a power which shuns observation, revealing itself in a way that is not averse from publicity. If a
man talks about the Spirit, he loses Him.

Consequently not only are their ecstatic religious
services secret, but they generally conceal the fact
of their adherence to the sect. They outwardly
conform to the State Church, and attend Confes-
sion and Holy Communion, although they spit out
the wine afterwards. They themselves celebrate
communion with bread and sour drink from rye meal
and malt) or with water.

Any one who desires admission into the sect
must, at an initiatory rite, conducted with an
extremely elaborate ceremony, swear a solemn
oath that under no circumstances whatever, not
even under the severest persecution, will he dis-
close his belief either to his nearest relatives or to
the ecclesiastical confessor. In reality this sect
together despises the State Church as 'the world,'
the kingdom of Satan, and regard the 'papas'
(clergy) as Jewish priests and Pharisees. In opposi-
tion to the Orthodox Church, they are sure that
they are the only true Church, the Kingdom of
God on earth, because they alone possess the Spirit
of God. The services of the Orthodox Church are
useless, since they dispense with dancing, the
proper means for bringing down the Spirit from
heaven.

The Men of God have also services in which
there is no dancing; these are the 'usual con-
ferences,' and consist in singing, and the reading and
exposition of Holy Scripture, but they also have
assemblies for attracting adherents, and they hint
darkly at the 'better services.' In reality the
source of revelation for this sect is not Holy
Scripture, but the Spirit which descends on them
during the dance. Any one who feels the desire
for the 'better services' must undergo long pre-
paration before he is received into the sect by one
of the leaders and admitted to them. In the
'better services' a kind of formal dance takes
place, consisting of a series of variously arranged
movements performed singly and collectively, while
songs are sung without any instrumental accom-
paniment. The object of the dance is to induce at
least some of the performers to fall into an ecstasy
(named the 'bath of regeneration,' since the
radaenie is regarded as the real spiritual baptism
in opposition to the mere water-baptism of the
Church). The 'Christes,' 'Mothers of God,'
prophets and prophetesses especially, but some-
times also the ordinary members of the commu-
nity, when in the ecstatic state, break into improvis-
ed song, and prophesy the 'common fate' of their
sect and the 'private fate' of individual members.

This secret service closes with a common meal—
the 'love-feast'—which is regarded as the true
communion. The services generally begin in the
afternoon, and continue far into the night.

The sectaries have also provided a substitute for
the other sacraments of the State Church. But
the ritual varies in the different congregations and
even in the same congregation, according to cir-
cumstances. The Men of God do not believe, with
the Orthodox Church, that a sacrament must have
the prescribed form in order to be efficacious; in
their view, the Spirit operates unfeathered and
creates for Himself whatever form He chooses.
They seem to have special rites of their own, such
as dancing round a tub filled with water at the
summer solstice. Here, doubtless, we have to do
with a relic of Slavic heathenism, and various
heathen ideas are also found in their songs and
liturgical formula. This rite, however, has re-
ceived a Christian colouring in the vision of the
golden Christ, who appears out of the steam
above the vessel.

The attribution of sexual excesses and sacrificial
rites to the Men of God appears, according to the
Russian official reports themselves, to be utterly
idiosyncratic and merely a device of the State Church
to combat the sect, and brand as hypocritical
its asceticism which is more strenuous than her
own.
Our earliest sources of information regarding the sect, which they call ‘Christovostochchina,’ are Yevresin (who wrote in 1891), Dimitri, bishop of Rostov (who wrote between 1702 and 1709), and Theophylact Lapatin (1749), and further information is found in the reports of two trials of Khlysti held at Moscow between 1753-59 and 1745-57. The first shows the sect reckoning its adherents for the most part in the Moscow monasteries, among monks and peasant peasants connected with the monasteries; it also comprised some tradespeople. In the monasteries it seems to have marked a reaction against deeply-rooted immorality. It also spread beyond Moscow, to the district of Moscow itself, to Yaroslav and Uglich, and to the town of Venov, south of Moscow. In the first trial Prokofj Lupinik, a soldier of the bodyguard (stratoa), appears as ‘Christ,’ his wife, Akulina Ivanovna, and the nuns Natasha and Martha (who were both finally beheaded in Petrograd) as ‘Mothers of God.’ Altogether more than 500 persons were condemned.

According to the reports of the second trial, the sect had considerably diminished in the Moscow monasteries, but, on the other hand, had spread much more widely among the peasant population and had introduced a community of landowners in Vladimir and Nijni-Novgorod, while, at the same time, Moscow maintained its central position as the head-quarters of the sect.

Moscow was the scene of operations of the ‘Father of all the Christians’ Osipov, Vasiliy Osipov, and, more famous than those, Andreyan Petrov, who, known as the ‘Happy Idiot,’ had the entrance to the houses of the aristocracy, and carried on his propaganda there for the sect not entirely without success. The communities of Khlysti in other places also possessed ‘Christ’s’ and ‘Mothers of God.’

Lupinik and Petrov belong to the seven ‘Christa’ named by the legend which describes the origin of the Men of God (as the seventh they reckon Selevanov, the founder of the Skoptsy sect, which split off from the Khlystovitchchina in 1772). Since the reports of the trials prove the correctness of the assertions of their tradition regarding the seven ‘Christas’ and the ‘Mothers of God’ Akulina and Natasha, the tradition may be trusted as to what happened in the earlier times. The Khlysti, Danila Philipov and Ivan Suslov. Of these the first is said to have also ranked as ‘God Zebboth’ and to have founded the sect about the middle of the 17th century, while the other, according to the testimony of Kostroma, while the second, as his disciple, spread it in the Okha and Volga districts and introduced it into Moscow. The evidence of Dimitri and Theophylact, as to the founder of the Khlystovostochchina applies to Suslov; but ancient songs of the Khlysti speak of one ‘Christ,’ Averyan, who lived in the 14th cent., and of another, Yemelyan, who laboured in Moscow in the time of Ivan the Terrible. The majority of Russian scholars consider the sect much older than historical information reaches. Although the attempt to derive it from the heathenism of the Slavs and Finns must be given up, yet it is still possible to consider the idea of these authors a necessary consequence of the intense activity of the ‘Mother of God,’ Ulyana Vasilevna. The actual centre, however, was shifted in the middle of the century south-eastward into the government districts of Nijni-Novgorod, Samara, and Tambow, by the activity of Radayev and the ‘Christa’ Vasili Shtshbegov and Avarakum Kopylov. The former, with his peculiar mystical teaching, and the latter a little later ‘Christa,’ takes a special place among the Khlystovostochchina inasmuch as, by appealing to the trance-producing spirit, he caused asceticism to fall into decay, and shamefully devoted his faithful followers. On the other hand, Vasili Shtshbegov and the ‘Christas’ resembling him have no immoral rites ascribed to them, but merely unchastity.

In the further course of the century the centre of the sect was pushed still further southward into the Caucasus territory, especially through the conspicuous energy of Kopylov’s pupil, Pephil Katasonov. He and his followers again took the title ‘God Zebboth,’ and ruled not only all the communities of the Caucasus, where the Khlysti, under their new name ‘Shaloputy’ (‘scentaries’), lead a considerably harshest, but also those of Southern Russia upwards to Smolensk, each of which has its own ‘Christa.’ Many Khlysti communities honour as a Christ the orthodox ‘Father John of Kronstadt,’ famous through Russia for his firmament district.

The Khlysti communities are not large, since they depend for their increase, as they must, on account of their sexual abstinence, almost entirely on proselytism. Although they are now generally to be found everywhere in the Russian Empire where there are Russian peasants, their total number, which can be only approximately reckoned, cannot exceed 300,000. Their significance for the nation’s welfare, however, is on account of their sober, industrious mode of life, far greater than this number would lead one to suppose.

This article, the attitude of which is very different from that of Russian scholars, is based upon the writer’s book, *Die russischen Sektas,* i. (Leipzig, 1907), which, besides the Khlysti, deals with such sects as the Skakuny, Mal’yovanitsy, and Paniyashkovatsy, all of which are dependent on the different bodies of the Khlystovostochchina. The latter have assumed special forms as they passed from the sphere of influence of the Greek Orthodox Church to that of the Lutherans, the Methodists, and the Molokanites. Among the Lutherans the Finns of Ingemarndal the sectaries are called Skakuny (‘Hoppers’). Konrat Mal’yovany founded a sect intermediate between the Khlystovostochchina and the Stundists and the Molokans. The sect, he-maintained, that of Kief about 1860, and his teaching caused an epidemic of trance-phenomena. The Molokani-Khlystii are called Pryaniki (‘Jumpers’). There were, and still are, numerous other bodies which, on account of some peculiarity, split off from the sect. Although the ‘Worshippers of Napoleon,’ who used to reverence him as a Christ, seem to have died out, the Adamites, who seek to get rid of modesty as a relic of the Fall and, therefore, go naked at divine service and in their houses, still exist to-day. The sect of the Paniyashka regard the body as not only sinful but directly possessed by the devil, and intensify their asceticism accordingly.

LITERATURE.—The most important Russian works on the sect are: I. Dobrovolskii, *Lyubili nasta: Russkaya neskutebnaia Sergey* (1886) and *De Khlystovitchchina, a sect of the so-called spiritual Christians* (Kasan, 1886); fragments of this have been translated into German by A. Jahnas in *SWJ* and *IRU* xcv (1861) and *De SC* xcv (1861); A. N. Rentalskii, *Lyubili nasta i Skoptsy* (1886) and *De Khlystovitchchina* (1886); N. Rentalskii, *Lyubili nasta i Skoptsy* (1886) and *De Khlystovitchchina* (1886); N. Rentalski, *De Khlystovitchchina i Skoptsy* (1886; *Khystovitchchina i Skoptsy* in Russian), Moscow, 1883. There are also numerous articles in newspapers.

K. Grass.
MENCUS.—Life.—Mencius, or Meng-tse (371–288 B.C.), second only to Confucius in the annals of orthodox Chinese philosophy, was born in Loo-yang, the capital of the State of Lu, the native State of Confucius. While still very young, he lost his father; he was educated by his mother, who is famous among the women of China for the care with which she brought up her son. Nothing is known of his other ancestors, except that they were of the school of Confucius, whom Mencius regarded as supreme among men, and proposed to himself as an example (Mencius, II. i. 2, IV. ii. 25). When we get certain knowledge of him, he is a person already well known and accompanied by disciples, moving from one State to another according as the reception of himself and his doctrines was favourable or otherwise, accepting such gifts as he deemed consistent with his self-respect, and devoting himself to the exposition of his views on ethics and politics. This he did with so much and considerable liveliness, frequently using illustrations, some of which are famous.

From the man of Sung, who assisted his corn to grow long by his hands, we bear the seed of patience in the development of character (n. i. 2). The moral absurdity of not putting an immediate end to unrighteous practices is illustrated in a story of a man who cut down a tree, and who replied to one who remonstrated with him, 'I shall dynamite it next year, taking only one fowt a month till next year, and then I will make an end of the practice' (n. ii. 8). The Nu mountain, whose natural vegetation is destroyed by age and fire, and the knowing of cattle, is the figure of human nature, which, through the occurrences of desire goodness and cannot regain during the brief repose of the night or the calm of dawn (n. i. 8).

In addressing himself to the princes and governors of his time, Mencius may sometimes have been guilty of undue compliance with the faulty dispositions of those with whom he dealt (I. i. 5); if so, it was from no unworthy motive, but only to secure the more ready acceptance of his teaching. For the most part he spoke his mind with an admirable freedom, not overawed by the pomp and display of the great (VII. ii. 34), but acting according to his own teaching that respect is best shown by giving righteouse counsel (II. ii. 2). Mencius is quite conscious of his own worth. He alone in his age could bring tranquillity and good order to the empire (II. ii. 12). His words will not be altered by any future sage (III. iii. 9). He has, accordingly, a keen sense of the respect due to him (ii. xi. 11, iv. i. 24), though he occasionally employs unworthy shifts to maintain his dignity (I. ii. 20, II. ii. 29) in harmony with the continuity of the Confucian teaching (VII. iii. 33), he regarded as an urgent duty to oppose the teachings of Yang and Mo (III. iii. 9). This he did with vigour and acuteness, without always willing to receive repentant heretics without reproaches, not tying up the leg of a pig which had already been got back into the pen (VII. ii. 26). The last twenty years of his life Mencius spent in Lu, where, with the assistance of his disciples, he prepared that sole record of his teaching which is called by his name and now forms one of those standard writings known as The Four Books.

Ethic.—Mencius's view of human nature is fundamental. Man's nature is good in the sense that 'from the feelings proper to it it is constituted for the practice of what is good' (VI. i. 6). The virtues—beneficence, righteousness, propriety, knowledge—are innately infused into man from without, but have their rise from the feelings of communion, of shame and dislike, of reverence and respect (VI. i. 6). Kung of approving and disproving (I. i. 6).

These four principles are accepted as psychological facts not reducible, e.g., to any form of self-interest (I. i. 6). All that is needed for perfect virtue, in which a man becomes possessor of himself (III. i. 4), is that these innate principles be developed (II. i. 6, VII. i. 10); for although 'All things are already complete in us' (VII. i. 4); and for this human nature is self-sufficient, not from lack of ability, but simply from not making the necessary effort (I. i. 7, IV. i. 10). From another point of view Mencius analyses human nature into ch'i ('passion-nature,' ichtenes). The former is supreme, but the latter is not to be violently suppressed, but developed in accordance with righteousness. Otherwise one's nature suffers defeat—as it also suffers defeat through action in which the mind feels no complacency. The nature of the passion-nature with righteousness is to be accomplished only by persistent practice of righteousness; but, given a mind set on righteousness, this result necessarily follows (II. i. 2).

The violent suppression of the passion-nature, by which the integrity of a man's being is impaired, must be distinguished from the abstinence from desires in an ethical interest (VII. ii. 35). Mencius, as basing his ethics on human nature, appear to have been not unaware of the ambiguity of the term 'nature.' Such seems to be the drift of a great part of the more demagogic elements of Confucian ethics. For in the announcement of the substitution of the 'natural' for the 'harnessed' (VII. iii. 21), it is necessary to retain a clear distinction, for the level of human nature is not to be confounded with the phenomena of life' (VII. iii. 3) (Legge's tr.). Elsewhere he points out that there are desires which are necessary and natural, but in connection with them there is the appointment of heaven, and the superior man does not say of them, 'It is my nature.' There are also moral propensities which are the appointment of heaven, but which the superior man recognizes as natural (VII. ii. 24). In things equally natural there is a gradation of worth, which can be recognized by thinking (VII. i. 14 f.). Moreover, the sense of shame, which a man may not lack (VII. i. 6 f.), is indicative of his having a moral constitution, which alone is properly his nature. In the possession of this nature, good in its composition, all men are alike, evidence of this being found in the fact that, as in matters of physical taste, music, and beauty, there are common standards, as also it is in morals (VII. i. 7). This originally good nature is the child heart (IV. ii. 12), which differentiates man from the lower animals (IV. ii. 10); and all possessing it the ordinary man is of one kind with the sages (II. i. 2, III. i. 1), who simply have apprehended before me what my mind also approaches (VII. ii. 20). The sages, however, are spontaneously what other attain to by effort (IV. ii. 19, VII. ii. 33), though, they, too, learned from other men (II. i. 8). The great man is he who does not lose his child heart (IV. ii. 12); but for most men it is lost, and the recovery of education is its recovery (VII. i. 11). Morality is the supreme task laid on each man (IV. iii. 19), which requires unremitting diligence (VII. i. 9, VII. ii. 31). Nothing can be so spontaneously what other attain to by effort (IV. ii. 19, VII. ii. 33), though, they, too, learned from other men (II. i. 8). The great man is he who does not lose his child heart (IV. ii. 12); but for most men it is lost, and the recovery of education is its recovery (VII. i. 11). Morality is the supreme task laid on each man (IV. iii. 19), which requires unremitting diligence (VII. i. 9, VII. ii. 31). Nothing can be so spontaneously what other attain to by effort (IV. ii. 19, VII. ii. 33), though, they, too, learned from other men (II. i. 8). The great man is he who does not lose his child heart (IV. ii. 12); but for most men it is lost, and the recovery of education is its recovery (VII. i. 11). Morality is the supreme task laid on each man (IV. iii. 19), which requires unremitting diligence (VII. i. 9, VII. ii. 31). Nothing can be so spontaneously what other attain to by effort (IV. ii. 19, VII. ii. 33), though, they, too, learned from other men (II. i. 8).
the seductions and obscurations of sense (VI. i. 15). Righteousness is to be preferred before life itself (VI. i. 10). The righteous man is beyond the reach of calamity (IV. ii. 28, VII. i. 21). The only inevitable calamity is self-incurred (IV. i. 8). True greatness is to practise virtue for the sake of oneself and of others, superior to the seductions or threats of riches, honors, poverty, and fear (III. ii. 9). To rejoice in virtue breeds unconscious grace of heart and a perfection of man (IV. i. 27; cf. VII. i. 21).

Benevolence, righteousness, self-consecration, fidelity, with unwearied joy in these virtues— these constitute the nobility of Heaven (VII. i. 16). Realized virtue is sure of a transforming influence on others (IV. i. 12); failure to evoke a response should lead to self-examination (IV. i. 4). Virtue cannot be selfish; to find purity by withdrawing from all contact with evil one must become an earthworm (III. ii. 10). Each man is responsible to the extent of his moral attainment for the instruction of others (V. i. 7), and to instruct others is the greatest fidelity (II. i. 8, III. i. 4), while neglect of this duty degrades the virtuous to the level of those whom they should teach (IV. ii. 7). Of the special virtues, filial piety is the only one that is referred to in member of the Mencian school, and the definition of it is as serving one's parents with propriety, burying them with propriety, and sacrificing to them with propriety (III. i. 2). The service of parents is the greatest of all services to the root of all others; it has regard not only to physical sustenance, but to the wishes of the parents (IV. i. 19); and it takes unquestioned precedence of duties to wife or children (IV. ii. 30), filling itself in the funeral rites (IV. ii. 13); and, in view of the importance of sacrifice to ancestors, lack of posterity is the gravest instance of infantilism (IV. v. 3).

3. Politics.—Mencius has no scheme of social reconstruction. Existing social usages (e.g., concubinage) and the existing political arrangement—an empire consisting of small States, each with its own king, but owning the supremacy of one State whose ruler is emperor—all this Mencius simply accepts. What he is concerned with is the rectification of moral relations within this existing social framework. He bases his analysis into the five relations of father and son, sovereign and minister, husband and wife, old and young, friend and friend; and desires the cultivation of the corresponding virtues of filial piety, fidelity, order, fidelity, and friendliness (III. ii. 4). Of these relations that male and female should dwell together is the greatest (V. i. 5); and within the family we have in service of parents and obedience to elder brothers the fundamental exemplifications of benevolence and righteousness (IV. i. 27, VII. i. 2). Mencius opposes any such obliteration of natural relations as he finds in Mo's doctrine of universal love. Men have a root, "i.e., they have a special relation to their parents and therefore a special duty corresponding thereto (III. i. 5). So, too, Mencius opposes all pantocratic schemes, and teaches that society be established on the function in which those who labour with the mind govern, and those who labour with their strength are governed (III. i. 4), and in which the teacher of righteousness is the master (IV. ii. 4). Mencius's doctrine of the State two points are to be noted especially: the emphasis on morality and the democratic bias. Rule is based not on force, but on willing submission according to the law (IV. i. 16). If the ruler be virtuous, his influence will extend to all his subjects (IV. i. 20, ii. 5). There is no secret of statecraft—it needs only that the ruler give scope to the innate goodness of his nature (I. i. 7, II. ii. 6). Let him dismiss all talk of 'profit,' and think only of benevolence and righteousness (I. i. 1). In the disorderly times of Mencius such a benevolent government, having regard for the people's welfare (IV. i. 9), would be immediately successful (II. i. 1). The truly benevolent ruler has no enemy within the empire (VII. ii. 4). Rulers are the shepherds and parents of their people (I. i. 4, 6), and must make it their first thought that they (the people) have a certain livelihood, for without that they will abandon themselves to crime (I. i. 7). Mencius is very emphatic on the necessary precedence of a sound economic condition.

'A when pulse and grain are as abundant as fire and water, how shall the people be other than virtuous?' (VIII. i. 25).

Agriculture, therefore, and then education are primary interests of State (III. i. 9). The strength of a kingdom is in its morale (I. i. 5, IV. i. 1). Destruction is only self-incurred (IV. i. 8). A wise prince will be guided by his ministers (I. ii. 9), but he is himself ultimately responsible for the government of his State (I. i. 6); he must treat his ministers with respect (II. ii. 2), regarding them as his hands and feet, and they will then regard him as their belly and heart (IV. ii. 9). In the appointment of officials in old established families are to be preferred, an ancient kingdom being one in which there are families with this tradition of service (V. i. 7). Indeed, the art of governing lies in securing the appointment of these great families (IV. i. 6). New men, however, are not to be excluded (I. i. 7); only the ruler must seek those by whom he may be taught (II. ii. 2). The love of what is good is the main qualification for being a minister since those who have good thoughts will gladly lay them before him (VI. ii. 13). Let the ruler be guided in the appointment and dismissal of ministers by the voice of the people (I. i. 7). In a State the people are the most important element; the spirits of the land and grain are the next; and the sovereign is the lightest. Therefore to gain the favour of the people is the way to become emperor (VII. ii. 14). The voice of the people is determinative of the sovereignty in a kingdom (I. i. 10, and in accordance with it a prince may rebel even against the emperor (I. i. 3). For a sovereign forfeits his rights by wickedness and becomes a 'mere fellow' (I. ii. 8), and, if not removed by the members of the royal house (V. ii. 9) or other ministers (VII. i. 31), he may be removed by the leader of a righteous rebellion. He who takes on him righteousness that is not his must be sure that he is the 'minister of heaven' (II. i. 5, iii. 8). He who is such is marked out by the appointment of heaven showing its will by his personal action and his conduct of affairs, which are such as to win universal submission.

'Heaven sees according as my people see; heaven hears according as my people hear' (V. ii. 32).

All wars of ambition are condemned (IV. i. 14, VII. ii. 2), and ministers who encourage the ambitions of their prince are 'robbers of the people' (VII. ii. 9). If right government prevails in the empire, the prince of the feudal States will be submissive on the other hand to the protection of their virtue, and not in proportion to their strength (IV. i. 7). As for the details of a truly benevolent government, 'never has any one fallen into error who followed the laws of the ancient kings' (IV. i. 1), whence sovereigns should imitate Tao, and ministers Shun (IV. i. 2, VI. ii. 10).

4. Religion.—References in the writings of Mencius to religious worship are numerous and show that he accepted without criticism such worship of spirits and of ancestors as was then current. Of more interest are his references to heaven. He quotes, with approval, from the Shu Kong, or Book
of History, the saying that heaven, having produced the inferior people, appointed for them rulers and teachers to be assisting to God (I. ii. 3). As heaven protects all, so, in glad imitation, should the ruler of a small State. While the ruler of a small State should recognize the decree of heaven and be willing to serve the great State (I. ii. 3). Such obedience to heaven ensures preservation, while disobedience entails destruction (IV. i. 7). So, generally, calamity and happiness are men's own seeking (IV. i. 4), although heaven's decree and man's causality are both recognized:

That which happens without a man's causing it is from the ordinance of heaven (V. i. 6).

There is a decree for everything, and a man should receive submissively what can be correctly ascribed thereto; but he who understands what is meant will not stand under a precipitously nor can death under fates be justly ascribed to heaven's decree, though death in the discharge of duty may be so attributed (VII. i. 2). Man's duty, therefore, is to do the right and leave the issues to heaven (IV. i. 14, VII. i. 1), in which its powerful discipline of individuals has moral ends in view (VII. i. 1). From man's nature we can know heaven; and to preserve one's mental constitution and nourish one's nature is the way to serve heaven (VII. i. 1). To have no blame before heaven is one of the things in which the philosopher's delight lies (VII. i. 20). Heaven is the realized ideal after which man aspires (IV. i. 12). Specially suggestive is this saying: Though a man may be wicked yet if he adjust his thought, fast, and bathe, he may be forgiven to Shang-ti (IV. i. 25; for the full composition of Shang-ti see art. God [Chinese]).

A few of the famous points may be noted. Mencius indicates the correct method for understanding Nature by obedience and not by violence in the investigation of her phenomena (IV. ii. 26). He gives us a good canon of interpretation:

Those who explain the Odes (i.e., the classical Shi King) may not insist on one term so as to do violence to a sentence, nor on a sentence so as to do violence to the general scope (V. i. 4).

To this may be added his comment on the Book of History, which may perhaps be generalized:

"It would be better to omit the Book of History than to give entire credit to it." (V. ii. 9).

---

MENDELSJOHN. — Moses Mendelssohn, otherwise Rabbi Moses of Dessau, philosopher, writer, and Bible translator, was born 6th Sept. 1729 at Dessau, where his father, Mendel, was a poor scribe and teacher in a family descended from the Rabbi Moses Isserles, a distinguished Talmudist and philosopher of the 16th cent., known as Rema. Moses Mendelssohn was taught Rabbinics by the local Rabbi, David Frankel, who published a commentary on the Palestinian Talmud in 1742. Frankel was called to the Rabbinate of Berlin in that year, and the young student followed him there in 1743.

At Berlin Mendelssohn was taught French and English, K. G. Gessner, and taught himself Latin and Greek. His taste for philosophy was inspired by the study of Maimonides' 'Guide of the Perplexed.' He earned a precarious livelihood as a dealer in second-hand Jewish books, Isaac Bernhard, in whose warehouse he afterwards, and throughout his life, was employed as bookkeeper. His evenings and all his leisure he devoted to philosophy. He was a follower of Wolf and Leibnitz, his life being much influenced by the English School of eminences, especially Locke and Shaftesbury. His acquaintance with Lessing, who was also born in 1729, began in 1754, when he defended Lessing's drama Die Juden against adverse criticism. Lessing became his lifelong friend, and dubbed him the second Spinoza. It was Lessing who had Mendelssohn's first work published—pseud. —the Philosophische Gesprache (1755). In 1755 they collaborated in an anonymous and pleasant attack on the Berlin Academy—Pape ein Metaphysiker, and the next year Mendelssohn translated Rousseau's Emile (1759). In 1763 he published 'On l'inegalite parmi les hommes,' though he ridiculed the author's partiality for man in a state of nature. Though M. Steinschneider (Cat. Inc. Heb. in Bibl. Bodleiana, Berlin, 1832–90) enumerates 39 separate Hebrew works of his, and though he wrote Hebrew poetry when a child of ten, it is as a writer of classical German that Mendelssohn became famous. His essay on aesthetics, Von Erhabenen (1757), was studied by Schiller and Herder. In admiration rather than in Lessing's pity and terror, he found the moral object of Tragedy. The stories about his friendship with Frederick the Great are legendary. On the contrary, he criticized the king's Poesie diverser in 1760, and found fault with him for writing in French. The royal displeasure was so great that he was threatened with expulsion from Berlin, but the Marquis de Brissot intervened, and as a 'philosophe mauvais catholique' pleased with his Majesty as a 'philosophe mauvais protestant' to grant to the 'philosophe mauvais juif' the privilege of residence.

In 1783 Mendelssohn was awarded by the Berlin Academy a prize of 50 ducats for his essay Uber die Evidenz der metaphysischen Wissenschaften. In 1771 the Academy elected him a member, but Frederick the Great refused to confirm the appointment, and no protest, not even that of Queen Ulrica of Sweden, was of any avail to get the king to alter his decision with regard to the 'beruhmter Jude.' Among his own friends, and especially in Berlin, Mendelssohn enjoyed the highest esteem. In 1794 he was freed from Jewish communal duties, and in 1792 further honour was shown to him by his co-religionists.

His Socratic Dialogue called Phaedon, oder über die Unsterblichkeit der Seele was published in 1767, and created an immense sensation. It was translated into nearly all European languages. A Hebrew translation by Buber, and a German translation, with the Chinese text, are published separately. The Life and Works of Moses Mendelssohn, ed. E. Fuchs, The Mind of Men, tr. A. B. Hutchins, London, 1932.

F. J. MACLAGAN.
This reply produced a storm of protest. J. B. Kolbele in his *Antiphon* (1770) was among those who heaped invective upon him in various pamphlets, of which his best biographer, M. Kayserling, gives a full list. His anonymous *Proemino* also appeared in his defence.

The attack, though it injured his health, turned his thoughts to Judaism and the Jews. As early as 1761 he had prepared a Hebrew Commentary on the Pentateuch, and had presented the manuscript to a certain Joas Jamin, who published it as his own. Perhaps his most important work, so far as his influence on his co-religionists was concerned, was his translation of the Pentateuch into classical German with a *bläer*, or commentary, in Hebrew. His first assistant was Solomon Dubno (†1813), who quarrelled with Mendelssohn in 1779. Mendelssohn's brother Sani took Dubno's place in the translation of Exodus, but Hartwig Wessely, a scholar born rich, but afterwards impoverished, later became his chief collaborator. This translation of the Pentateuch met with much opposition from the orthodox Rabbis Landau, Jacob Lifia, Elijah Wilna, and Heresh Levin (formerly chief Rabbi of London and then of Berlin) because of what they thought a heretical misinterpretation in *Lv 19*, "Thou shalt not let thy neighbor's ox go astray; but thou shalt bring him again to his owner." This was toned down to "castrated," but the storm of opposition ceased, largely through the aid of Italian Rabbis, who, though orthodox, were also enlightened.

Mendelssohn's translation of the Psalms, which had begun in 1770, was not completed for thirteen years. During this period the translator took up the work only spasmodically and just when some particular need suited his mood of the moment. It was intended for Christian rather than for Jewish readers, and it was first printed in German characters, not Hebrew. The publisher Maerer bought the MS for 200 thalers and published it in 1783, but lost money by the publication; next year it was published in Hebrew characters with a *bläer* by one Joel Loe. The Song of Deborah and the Song of Songs were the other Bible translations completed by Mendelssohn. His commentary on Ecclesiastes he has published anonymously in 1769. It was clear and sympathetic, but, though greatly admired by Herder, is not used by students in Germany and is divided into sections, differing from the traditional chapters. Mendelssohn was a keen opponent of the higher criticism of those days, and quoted Bishop Benjamin Hesse's textural criticism. One immediate result of the translation was a change in the course of education of Jewish boys, and the incitement of German rather than Jewish ideas. Part of the Jewish Liturgy was also translated by him, viz. the Haggadah, a Passover service—a fact which seems to have escaped the notice of bibliographers.

In 1776 Mendelssohn collected money—and students—for the seminary college "Philanthropin" of Dessau. In 1781 he and his brother-in-law, Isaac Daniel Itzig, founded the Jewish Free school in Berlin, the first institution of the kind, where not only Bible and Talmud, but also German, French, and sciences were taught by Jewish and Christian teachers. Similar institutions were afterwards founded on the same plan in Breslia and other cities.

After his wife's death, Lessing had to battle for ten years in his *Anti-Jeude*, and conceived the idea of meeting the theologians with a comedy. This was the origin of his famous drama *Nathan der Weise*, which appeared in 1779, and was in some ways the *Die Juden*. Lessing himself founds the play on the story of the Jew Melchizedek in Boccaccio's *Decameron*. About no German work except Goethe's *Faust* has so much been written. Nathan is Mendelssohn, Recha his daughter Dorothea, the temple Lessing, the Swiss widow Daja is intended for Lavater, the duchess is Mendelssohn's mathematical friend Abraham Wolf Rechenburg, and so on. The play itself is not a plea for Jews and Judaism, but for toleration and humanity, and an attack upon religious persecution of all kinds. In Vienna it was confiscated. The controversy engaged by *Nathan der Weise* led to a plea for the civil emancipation of the Jews by C. W. von Dohm (*Über die bürgerliche Verherrlichung der Juden*, Berlin, 1781) and also to French by Mirabeau (London, 1787)

Three hundred copies of this translation were forwarded to Paris for the use of the French States General, but lost in that troublesome time, and eventually burnt in the Bastille. In 1788, Mendelssohn published a translation of Manasseh ben Israel's *Esperanza de Israel* (Amsterdam, 1659), with an introduction pleading for emancipation. He was again reproached for remaining a Jew, or for being a "wobbler" between Judaism and Christianity, and this induced him to write his *Jerusalem* (1780), a work on religious power and Judaism. In this book, translated into English in 1782, he vindicated and explained why he was not a Christian. It is a plea for the separation of State and Church, and urges that "Kirchenrecht" is incompatible with true religion. Jews, he urged, have no bodies or chains upon belief; Joseph Albe (†1444), who had reduced the thirteen creeds formulated by Maimonides to three (cf. *ERE* iv. 2468), was no heretic. Judaism required conformity with ceremonial law, but tolerated complete liberty of opinion.

In a Reader for his children, Mendelssohn substituted in the creeds the words 'I recognise as true and certain' for the words 'I believe.' Ceremonial laws he regarded as a sort of living scripture and the great bond between Jew and Jew, urging that, even if their utility were no longer clear, they were still binding. Actions are our duty, but creeds, symbols, and formulas are the fettlers of reason. In this way he reconciled the desirous of Leibnitz and the English deists with revealed law. His Jerusalem and his unfinished *Betrachtungen über Boppes Polenfrage* are both pleas for toleration, but not for uniformity of belief. In both he warns his disciples against prejudice, superstition, and even enthusiasm. *Jerusalem* excited an enormous sensation. Kant said that it was incontrovertible, and wrote in it; Mirabeau said that it ought to be translated into every European language; Michaelis found fault with its condemnation of Anglican bishops for consenting to sign the Thirty-nine Articles, and Mendelssohn had to explain his position in the *Berliner Monatschrift*, of which he was one of the founders in 1785. By some contemporaries he was attacked as an atheist and by others as a 'Talmud Rabbi,' but he saw no inconsistency between his philosophical belief and his faith. His Hebrew works are written entirely from the Rabbinical standpoint, and he was a good Talmudist, as is proved by his correspondence with Jacob Einhorn.

Mendelssohn's *Morgenstunden*, like his Bible translation, was in the first instance intended to lead his son Joseph to a true belief in God. Its publication in 1783 was designed as a refutation of Spinoza's own as well as of the charge that Lessing was a Spinozist. In 1835 Alexander von Humboldt, in a letter to M. Moritz, described how, in his youth, he and Mendelssohn had heard those words *Morgenstunden* given forth by the philosopher in his study. In the first part Mendelssohn proves the existence of God; the nature of the Divine Being and His characteristics
MENNONITES

were to be treated in the second part. Its philosophy is an attempt to advance upon the sensualism of Wolf by the help of English empiricism. He claimed that human common sense, when working hand in hand with reason, was infallible.

Hegel deprecates him as a philosopher, but, as a writer of German, his style furnishes the best example of German prose after Goethe and perhaps Lessing. Its characteristic was its Socratic irony. A predecessor of Kant, his writings are far easier to understand. Kant himself was proud that the Jewish scholar had attended one of his lectures, and was always polite to him, though he expressed disappointment that Mendelssohn had not reviewed his *Kritik der reinen Vernunft*, when it appeared in 1784. Simultaneously with the publication of the *Morgenstundens* appeared J. H. Jacob's treatise *Ueber die Lehre des Spinoza an den Herrn Moses Mendelssohn*. Lavater rebuked him for not being a Christian; Jacob not only charged him with atheism. He was profoundly disturbed by what he took to be a refusal to return.* In a letter retailed with his address *An die Freunde Losings*. He brought the manuscript to his publisher Voss on 31st Dec. 1787, and died two days later of a paralytic stroke. Though the death occurred in Leiden, in which city Lavater, Herder, and Goethe had all sided against the Jewish philosopher, brought about his end. He left three sons and three daughters. His son Theodore and Abraham, later called the philosopher's complete works in 1834–45.

Mendelssohn's first biographer, his pupil I. A. Eichel, described him as short and broad-shouldered, but feeble and pigeon-breasted, with thick black hair, dark complexion, bright eyes, and high forehead, a voice soft and gentle, and in conversation crisp and persuasive, but never long-winded (*Vielth Ulmsbüdern, Berlin, 1786*).

There is much difference of opinion among Jews as to whether his influence has been beneficial to them or not. The general view seems to be that it has proved better for Jews than for Judaism. In Germany, where were the 19th cent. Russian intellectuals known as the Maskilim, especially Perez Smolenskin, who denounced him for denying Jewish nationalism, befell his knowledge of the wisdom of Israel, and characterized him as a merchant of ideas. He would not doubt that he was the first and most typical of modern Jews, the first to identify himself with another nation and yet remain a Jew.

"... and hitherto he had impressed the whole mental activity of the Jew," says Segal in *Aspects of Hebrew Genius* (p. 105). "... was narrowed down by Mendelssohn into a mere religion. ... He separated the man from the Jew. ... To Mendelssohn's followers such a dual life became difficult. ... Traditional Judaism did not easily lend itself to be compressed and squeezed. ... Mendelssohn's followers experienced the conflict between Judaism and Germanism at every step. ... They threw off the burdens of Judaism. ... But ... the period of the great apostasy ... was followed by a period of religious reform and the readjustment of Judaism to the new conditions of Jewish existence."

Jewish nationalists of the present time, not quite fairly, regard Mendelssohn as the chief cause of their failure for assimilation felt by a small section of their co-religionists. Mendelssohn was an apologist for religion in general rather than for Judaism in particular. That was his chief merit in a Voltairean age and in sceptical Berlin. The fault of which, as others also, he himself would have appreciated, is the distich,

"Es ist ein Gott, das sagte Moses schon.
Doch den Beweis gab Moses Mendelssohn."

MENNONITES.—"Mennonites" is the name applied to those Protestant Christians who, on such subjects as the management of the congregation, baptism, oath-taking, ecclesiastical discipline, civil office, and the bearing of arms, agree wholly or partly with Menno Simons, from whom they derive their name.

1. Distribution.—The Mennonites have congregations in Switzerland (1,000 souls), Germany (18,000), France (1,000), Russia (70,000), the United States (about 120,000), and Canada (about 90,000); those in the Netherlands, though not the greatest in number (65,000), are the most important sections.

(a) Switzerland.—Their true fatherland is Switzerland; they originated there in 1534, when Conrad Grebel and Felix Manz, members of the congregation of Zurich, fled to Switzerland, degenerates, and the greatest abomination of the devil and the Roman pope. They founded a separate congregation in 1538 and baptized their members on confession of faith; a year afterwards they rejected the oath. It is possible, though not probable, that their opinions are connected with those of sects of the Middle Ages, especially the Waldenses. They wished to re-establish the Christian character of the civil authority, rejected paid ministry and the use of the sword, and demanded the exercise of the apostolic excommunication.

In the persecutions of the 16th cent. many of them died as martyrs or fled to South Germany, where they propagated their tenets. In the 17th cent. also the Mennonites in Switzerland were oppressed by the government; imprisonment and deportation to the Italian valleys greatly diminished their number. Again, at the beginning of the 18th cent., the persecution was renewed; even in 1811 the Mennonites were molested. In the midst of these sufferings there arose differences between them: the more rigid—called 'Anabaptists' or 'Anabaptists'—disapproved of every luxury, and demanded that in case of excommunication all intercourse, even between husband and wife, should be, during the period of excommunication, broken off; the less rigid followed Hans Relist; the names of these parties (also 'Obere Mennoniten' and 'Untere Mennoniten') are still preserved among the Mennonites of America.

At the present day the Mennonites in Switzerland are enjoying a new prosperity. They are now free citizens of the State, which allows them exemption from oath-taking and from military service. They have their own organ, *Der Zionstübcher* ('The Pilgrim to Zion').

(b) Germany.—The Mennonites in Germany have continued to survive in spite of great difficulties and oppressions. In the year 1867 they were obliged to give up one of their churches and their defences. Many of them, however, agreed with the resolution of the government, and obtained permission from it to serve in the baggage train of the army. Interest in their history has been aroused recently by the writings of L. Keller.
and Mrs. A. Brons; and, in 1884, in order to prevent the decline of their little number, the Mennonites founded the Vereinigung der Mennoniten-gemeinden in Deutschland (or the Union of the Congregations of Mennonites in the German Empire). Their periodical, Mennonitische Blätter, has been issued since 1895.

They have congregations in Alsace, the Bavarian Palatinate, Baden, Württemberg, Hesse, Nassau, at the lower part of the Rhine, in Westphalia, East Friesland, at Hamburg, Friedrichstadt, and in West and East Prussia.

(c) Russia. — In 1813 the Mennonites held their first conference at Toul in 1901; their paper, Christ sein, appeared in 1908.

(d) Russia. — An emigration of Mennonites to America took place when the celebrated empress Catharine had promised them great territories in her empire, where they would be permitted to live according to their own religion and customs. About 2000 left Prussia in 1789; and many others followed them until 1824. At first they suffered many trials, not the least of which were due to discord among themselves. As they persisted in their belief in apostolic succession, their congregations therefore declined under the imposition of hands. They prospered, however, in their new fatherland, which gave them a shelter also to the fugitive Mennonites from Hungary. At present their children and grandchildren are found in Warsaw, the Crimea, Saratau, Samara, Caucasus, and Chiwa. In their colonies the school management is exceedingly ordered, the church affairs are managed by the elders of the community, and the soldiers from among the brethren, fulfil not only the duties of their ministry, but also those of their civil calling.

In 1874 a great danger threatened the Mennonites: exemption from military service was abrogated, and thus the privilege conceded to them by the empress Catharine and the emperor Paul was annihilated. Large numbers of Mennonites prepared to quit Russia; in the years 1875-80 more than 15,000 left for America. This measure was made an impression upon the Russian government; the emperor sent the minister, F. E. L. von Todtlenen, to them; after mutual deliberation the resolution was made that the Mennonites could perform their military duties in the forestry of the State. This arrangement has been maintained ever since; the Mennonites, however, according to their old custom, have always sought to relieve the sufferers of war.

(e) America. — The Mennonites are far more numerous in America than in any other country. The first colonists were Dutchmen who, about 1650, settled in New Amsterdam (now New York). Under the pressure of the heavy persecutions in the Rhine-land, thirteen families at Creiseld resolved to emigrate to the New World. They landed on 6th October 1683, three pioneers having already bought 8000 acres of land in Pennsylvania from William Penn, and they founded Germantown (now part of Philadelphia). Seven other families followed in 1684, and the emigration continued during the whole of the 16th cent. and still more during the 19th. In 1820 Swiss Mennonites came to America, followed in 1823 by many Swiss from the Rhine, and afterwards, as we have said, by whole congregations from Russia, besides one from Galicia and one from West Prussia.

The emigrants formed many friendly connections with the Quakers and other sects, but they preserved their independence. They came with the hope of remaining free from all hindrances in following their own customs and institutions; some of them even entertained the desire to establish in the New World the true Kingdom of God according to His Ordinance. It was only after long deliberation that they dared to entrust the ministry of baptism to the Lord's servant and an elder who had not received the imposition of hands in Europe; and even now the most rigid of them will not permit their fellow-members to enter a church.

The Mennonites have a great regard for their past history—and not unjustly. Their forefathers were the first to protest against slavery; they committed their serpents to writing on 15th April 1888, and delivered the document to the magistrate. In a manly and Christian-like spirit they declared: 'Freedom of conscience reigns here, which is right and rational, and personal freedom ought to reign here for every one, criminals of course excepted.'

In the War of Independence their defencelessness was respected; nevertheless many emigrated in 1786 to Canada, as they could not approve of insurrection against the British government. Conservative in all things, they have not even yet, after two centuries, given up their old language, 'Pennsylvania Dutch.'

The Mennonites in America are divided into: (1) Old Mennonites, who form the great majority; their periodicals are the Mennonitische Rundschau and The Herald of Truth (the Germ. ed., Herold der Wahrheit, has ceased to appear since 1901—no evidence of the existence of the journals in Pennsylvania among them); (2) 'Amish' Mennonites; and (3) the 'General Conference.' Since 1860 the last-mentioned party has endeavored to form an organization between all the Mennonites of America, respecting the autonomy and the peculiarities of each congregation. The foundation of Bethel College at Newton, Kans., was favoured by them.1

2. Characteristics. — Wherever Mennonites are found—in Switzerland or in Germany, in Russia or in France, in the United States or in Canada—they are known as excellent husbandmen, simple in their manners, blameless in their behaviour, honest, conscientious, and diligent, so that most of them are in easy circumstances. In consequence of their seclusion the civilization of later times has had little influence on them; they are very conservative and often suspicious of opinions which differ from their own. An exception must be made in the case of the German Mennonites who live close to the frontiers of the Netherlands—East Friesland, Westphalia, and on the Rhine; they have been influenced by the Dutch (see below.) They have remained where their forefathers stood three centuries ago; in order to understand their opinions, it is, therefore, necessary to consult the writings composed by their fellow-believers in the 16th and 17th centuries.

3. Religious beliefs. — The oldest defenders of baptism after confession of faith entertained a strong aversion to the papal hierarchy. They would not reform the Roman Catholic Church; they would destroy it by the foundation of separate and wholly autonomous congregations. The preachers were elected by the majority; there was no tie between the congregations except that of community of faith and of love. According to the example of the segregation of Israel, the people of the Lord, from the Gentiles, the congregation of Christ ought to be separated from the world; this was done by the external bond of law and commandments that formed a sort of fence round the true believers. As the congregation of the Lord consists only of believing and regenerate children of the Lord, only those who are sufficiently advanced in years and experience, and, therefore,

1 One of the most renowned professors of this college was C. H. Wode, author of the Abriß der Geschichte der Men-
noniten, Newton, 1900-04, who died in 1910.
MENNONITES

able to believe, can be admitted into the congregation by baptism. Hence they highly valued baptism as a token of the confession of faith, but they did not acknowledge it as a baptism; he who was baptized as an infant was not baptized at all. The name of Anabaptists (q.v.), therefore, was an undeserved nickname, given them by their enemies.

They sought to maintain the purity of the congregation by excommunication, and taught that true believers must avoid all intercourse with an excommunicated member. The charge has often been brought against them that, since they regarded themselves as the perfect or holy congregation of the Lord, they do not admit that they are poor lost sinners. Their lives and their writings, however, contradict this accusation most positively. It is true that they separated most positively from all those who were of a different opinion, but it was from fear of seduction. By the simplicity of their manners and their dress they showed their rejection of the worldly. The congregation was a 'worldly,' a sinful, wedding. They were strangers on the earth; therefore no interference with the powers of the world, no use of the world's goods is to be hidden, not only by the gospel (Mt 5:6 and Ja 5:6) but also for conscience' sake, since in the spiritual Kingdom of God on earth the truth is the highest and the only law. By their sharp contrast between the world and the congregation—the natural and the spiritual—they insisted on the necessity of regeneration; but their doctrine on this subject is legal rather than evangelical in character. They teach that regeneration means an awakening of the soul by the threats and the promises of God, who moves us through these to avoid sin and to live according to His will. These threats and promises are written in His word; therefore it is the seed of regeneration. They meant in good faith to be orthodox, but their dislike of all scholastic terms and their desire to use only the phrases of the NT caused them, sometimes, to disagree with the orthodox; hence they refused to acknowledge the Holy Ghost as a person—they called Him a power of God—and yet they believed that they professed purely the doctrine of the Trinity. They rejected every dogma from which they feared damage to the practice of their piety, for the tenor of their religious life was above all things practical; hence they repudiated most positively the Calvinistic tenets of predestination, irresistible grace, and the perseverance of the saints. In the doctrine of the Lord's Supper they followed Zwinger; but, for them, it was more a token of mutual love and unity. They combined with it the rite of feet-washing.

Such were the tenets of the community with which Menno Simons (1496-1561) became connected in 1536. He had been a priest at Witmarsum in Friesland, but after a long inward struggle he left the Roman Catholic Church. From that time he defended in sermons, writings, and disputations the opinions of his fellow-believers so earnestly that they were called after him—Mennonites. They had already suffered heavy losses by persecutions; but they struggled bravely on; no torture—not even death at the stake—could terrify them. The congregation in Amsterdam was founded in 1530 by Jan Matthijsz, a member of the Celebrated Family of the celebrated Probably Mennonites. They formed more than one-tenth of the whole population, but as a rule neither the nobility nor the lower classes joined their ranks. In the 18th century their number declined for many reasons. The lay-preachers, elected from the brethren, no longer satisfied the congregations; consequently, a great number of
families passed into the State Church. The foundation of a theological seminary in Amsterdam (1735) did not produce any lasting improvement. At most, a handful of the former Mennonite leaders and the Men- nonite preachers continued, and the spiritual well-being of the people and the spreading of a higher civilization were objects of great care. The Textor's Gesellschaftsrednisse (1803; 1808) and the Manuskriptent des Roten Kreuzes and the Mennonite Schüller und das Wachstum der Mennoniten (1804; 1808) ("Society for the Promotion of the General Good")—two institutions— which to this day do a large amount of useful work—were founded in 1778 and 1784 by Mennonites. Thus, the rise of the Revolution of 1789, for their old ideals appeared to them to be realized by it; they gladly supported it by many sacrifices, but their prosperity greatly declined in the hard times of Napoleon. To improve this state of things, the Algemeene Doopsgezinde Societéit ("General Society of Mennonites") was founded at Amsterdam in 1811 by some wealthy congregations, and at present all the Mennonite congregations are members of it. This Society took upon itself the care of the theological seminary and the support of the independent congregations. By its influence the desirable end was obtained that all the congregations, in this country, possessed only ministers who had received a university education. From that time their seclusion from the other Protestants ceased. In the theological sciences the Mennonites are able to hold their own with the Dutch, e.g., J. G. de Hoop Scheffer, A. W. Wybrandse, C. Sepp, and Cramer. Often their ministers preach to congregations of another confession—in other words, they exchange pulpits. The professors of their seminary are members of the society of theology at the university of Amsterdam. Still the Mennonites have remained congregationalists; they are zealous for the entire independence of each congregation. Consequently, in the respective congregations there is some difference in the form of public worship—e.g., in the use of psalters and hymn-books—and there is also a difference in the manuals used for religious teaching. Nevertheless, they are strongly attached to each other and to their community, and promote their common interests in fraternal unanonymity. Their ministers are elected by the majority of the brethren (and often also of the sisters) or, in many congregations, by the church-committees. They are not ordained and wear no official dress, for they form no class and have no authority. Consequently, the opinions of the Mennonites are unchanged. Self-reliance, evident in the voluntary act of becoming a member of the congregation, is still the condition of membership, so that they would rather abolish the whole rite of baptism than permit the baptism of infants. They have no confessions of faith and would not tolerate them. They dislike dogmatic speculations, and hold that the characteristic of a true believer is not his creed but his life. Hence their toleration allows persons of very different opinions to live peacefully together in the same congregation. The majority of them are liberal; their political ideas are derived from rational grounds. A lie, they teach, does not necessarily presuppose the wish to deceive; it consists in the intentional assertion of what is contrary to a man's inward thought and rises prolatus cum intentione discordi fata. The liar may know that his lie will not deceive; yet, so long as he intends to assert what is false (and is not manifestly joking), his words are a lie. Nature has provided us with the power to express our thoughts by external signs. He who employs this faculty to convey to others the very opposite of his thought is violating moral order; he is using his power for an illegal end, even if he does not contain an intrinsic turpitude. The wish to deceive is an aggravation of the offence; but it is not requisite to make the words a lie (Thomas Aquinas, Summa Theologica, II, IIa, q. 110, arts. 1, 3). Falsehood is, further, an offence against justice: we owe the truth to our fellow-men. But, even apart from this aspect of it, the act is intrinsically evil. It is plain that, where so strict a view is taken as to the obligation of truth, the cases which we are considering constitute grave difficulties. Whatever be the circumstances, a lie can never be justified. Augustine seems to have thought that...
the only choice lay between silence and a frank declaration of the truth irrespective of consequences (de Mend. xiii.). But even to solve the problem; for in many cases silence is equivalent to an admission; and it may well be that to answer the question proposed, whether by words or by silent assent, would constitute a flagrant assault upon the sacred and inviolable character of those elementary principles of justice is not a whit less wrong than a sin against veracity.

Here, then, arises the question as to the permissibility of mental reservation when, and where, and to whom it shall be made. The answer to this question is, in my opinion, directly to be sought in the principles of the law. A speaker is said to have a mental reservation when his statement is true only if qualified by a restrictive clause, and when he does not openly express this clause but 'reserves' it within his own mind. Thus, e.g., should a member of the Government reply to some impertinent inquiry regarding matters of State, 'I do not know,' his answer is in all likelihood qualified by such a reservation, and is to be understood as signifying, 'I do not know in my capacity as a private citizen.'

The general verdict of theologians is that a man may lawfully use mental reservations under certain given conditions, viz., if they be a partial need of the case, and if the external circumstances are such as to indicate that the words may have to be understood in a restricted sense. Where these conditions are present, he may use reservations for the purpose of the case, and the words themselves are not to be understood as such. On the other hand, if the speaker reserves the words, he is to be understood to mean that he does not want the words to be understood in their ordinary sense, but that they are to be understood in a restricted sense.

In the 16th cent. a prolonged controversy arose as to the permissibility of the restriction purae mentalis, viz., a mental reservation, the case of which is not to be understood by any external circumstances whatever. The first to put forward this opinion appears to have been the famous canonist Martin de Apulien (Doctor Navarrus); 1459-1538). His authority was so great that he was followed by a number of other writers, a few of whom also had the authority of notes, including L. Lessius, A. Giovanni, etc. On the other hand, theologians no less eminent maintained what is clearly the case, that such reservations differ in no way from falsehoods. This was the view emphatically taught by P. Layman, J. Azor, H. de Comenius, and many others. In 1679 the pope condemned three propositions drawn from the works of those who defended the use of the restriction purae mentalis (H. Donzinger and C. Bannwart, Enchiridion Symbolorum, Freiburg, 1111. nos. 1176-11759). Since that time the opinion has been acknowledged to be theologically indefensible.

Protestant moralists reject the doctrine of mental reservation, and those of them who deal with the cases at issue solve the problem by adopting a less rigorous view as to falsehood. They teach that the right of lying consists in its being an offence against justice, and that, where that right exists, falsehood is legitimate—thus, e.g., Grothus, in Post Belli et Pacis, III. i. 11). J. Milton (Treatise of Christian Doctrine, in Prose Works, London, 1814-55, v. 115-119), Jeremy Taylor (Ductor Dubitantium, in Works, London, 1652, v. 311, 1821), W. Paley (Principles of Moral and Political Philosophy, bk. iii. ch. 15, in Works, London, 1821, v. 135). For reasons given above this view is regarded as erroneous by the Roman Catholic theologians.

MERCY.—Mercy, as an ethical quality predictable of both God and man, may be usefully dis-
To seek at God’s hands a pity which we refuse to others is insincere; not only so, but in the absence of a merciful spirit we lose the opportunity of appreciating the free, unbothered mercy of God. Hence the promise to the merciful that they shall receive mercy (Mt. 5:7) expresses one aspect of the moral nature of things.

Human mercy must take the mercy of God as its model and inspiration. Like its exemplar, it is not to be accurately doled out in proportion to the receiver’s deserts; in its perfection it will rather exhibit a certain abandonment to a loving grace flowing uninstructively, and will ask no questions about the offender save as to his penitence. But feasible and complaisant mercy is as demoralizing as indiscriminate charity. ‘Be ye merciful, even as your Father is merciful’ (Lk 6:36) is a call for discipline no less than lenity.

The supreme motive of mercifulness, whether to the guilty or to the necessitous, is not the natural desire to be treated mercifully in our own time of need; it is the thankful memory of pity bestowed on us by God. And the living sense that from the mercy of God all our hopes begin, the sight of its glorious freedom and absoluteness in the face of a far more a mode of comfortable security; it is charged with moral inspiration enabling Christian men to do and bear all things for the sake of the unmeasured divine love that for them has made all things new.

MERCY (Indian).—Adequately to discuss the significance and operation of the quality of mercy within the range of the Indian peoples would demand a book or treatise of no inconsiderable length. All that is practicable within the limits of an article is to attempt to exhibit the natural qualities and general tendencies that have been at work, to estimate the efficacy and worth of the influences that have been brought to bear, and to indicate the broad results in the character and disposition of the inhabitants of the country, as they are found in evidence at the present day. It is manifest that environment and ethological origin and development, no less than religious prejudices and ethical culture, have contributed to a resultant quality, which can be defined only in the most general terms.

It is clear, moreover, that, from early historical times at least, the expression of this quality in the races of India has been obstructed and almost stifled in two directions, the one more or less a consequence of the other. The barriers raised by caste, which became only more formidable with the lapse of time, while permitting or even enjoying the exhibition of kindness, generosity, and pity within the narrow caste limits, formed insuperable obstacles to the exercise of these qualities without, and therefore tended inevitably to isolation and degradation. And religious pride and prejudice, allying themselves with caste distinctions, promoted the growth of a narrow partisanship and class organization, within which the development of a spirit of fraternity and human kindness was as little practicable as that of community of interest. The earlier periods of Indian history and social life also show clearly the prevailing feelings of mutual hostility and dislike which existed universally among groups of primitive peoples dwelling in a wide land, among whom isolation and the difficulties of communication are an effective ground of suspicion and of the feeling that which presents itself as of unknown char-
Mercy (Indian) 587

The ceremony he had been led to believe was all that he needed, he supposed, to be complete.

As the days went by, the Gita became a constant feature of their lives. The Bhagavad-Gita was recited daily, and its lessons were applied to everyday situations.

In the end, the young man grew to love the Gita and its teachings. He realized that the true meaning of life was not in material possessions but in spiritual growth and inner peace. The Bhagavad-Gita had taught him to see beyond the surface of things and to look for the essence of reality.
greatest emperor, Aśoka, and emphasized and extolled a generous tolerance towards the feel- ings and beliefs of others. This love of their fellow men, with rare exceptions, has characterized its attitude and life in all countries to which it has been carried. In India the influence which it exerted in this respect was strong, and remained as a permanent force in the life of the people. The Buddhist faith itself had become extinct and had perished from the land. In the wider aspect also, and as illustrating this spirit, Buddhism alone of the great religions of the world has never been guilty of persecution.

Jainism, the ancient sect contemporary with Buddhism and possessed of similar views and doctrines, inherited also from Hinduism the principles of meekness and respect for life in all its manifestations, but carried those principles to an extravagant and abnormal length. Even noxious creatures, however irritating or insig- nificant, may not be destroyed; and the literal interpretation of the injunction to do no hurt to living beings has led with them to practical inconveniences of a serious nature, which are not compatible with the development and the qualities of a real compassion. Buddhism, moreover, in the days of its strength in India, made provision for sick, infirm, or worn-out animals in special hospitals; and similar institutions, established by adherents of the Hindu and Jain faiths, for many centuries past and even at the present time, bear witness to a compassionate spirit worthy of all commenda- tion. To Western thought, however, these institu- tions appear not seldom to defeat their own object, and to be accompanied by contradictions in feeling and practice which it is difficult to reconcile with the spirit of the implied religious teaching. The form has been preserved and the letter of the law obeyed; but the meaning and motive of the whole have, in many instances at least, lost their force and been disregarded in the external fulfillment of an obligation which satisfied the conscience, but did little to effect a change in the character or disposition of the individual.

With the coming of the Muhammadans a new spirit invaded India, antagonistic to the old, the consequences of which were great and permanent. Born of religious fanaticism, and nurtured in the cruel and jealous clash of battle, the warlike spirit of Islam bore down all religious opposition and refused to accept the symbol and confession of faith of the vanquished creed. From the minds of the conquering religious fanatics, in alliance with a temper naturally stern and self-contained, had banished all feelings of compassion towards aliens or foes. Thus a spirit of inhumanity, based ultimately upon religious precept and belief, not only inculcated indifference to life where the honour or extension of the faith was concerned, but urged the entire elimination of the infidel by force of arms. In a further respect also, and that wholly new to India, the example set has been followed with results calamitous for the whole peninsula, the untoward effects of which have only begun to be repaired within comparatively recent years. The warfare before Islam led the way religious prejudice or rivalry ever found expression to any considerable extent in overt acts of persecution. The warfare before Islam was waged by word and argument in the schools and royal courts, but not by violence. The followers of Muhammad taught men to throw the sword into the scale; and the spirit of division and hatred has never since that time been on both sides, ready to spring to arms and perpetrate cruelties on any violation of religious comity or outrage upon religious conviction.

Two further external influences deserve consider- ation, but are of very unequal weight and importance. Of non-Christian ethical systems that of the Parsis is unrivalled for its merciful spirit and regard for the poor and necessities of its own religion and the principle and to uplift the people of their own faith alone; and, except by way of example, it cannot be said that their principles or practice have made any deep impression on the nation as a whole. Their numbers, moreover, are too few, and their social servitude from Hindu and Muhammadan alike too complete, to enable them to exercise a wide-spread influence for good in this respect. They are and remain strangers in the land, whose character and life have been for the most part for themselves alone, neither shared in nor sought as a pattern by those among whom their lot was cast.

By with Christianity it has been entirely other- wise. From the beginning it threw itself into the national and social life of the country, and, as far as the religious sentiment and pride of its oppo- nents would permit, endeavoured to permeate society with its principles and to uplift the people as a whole to the level of its own ethical ideal. The influence of its temper and teaching has always been wider than the limits of its acknowl- edged churches or professed disciples. Its example has been pervasive and powerful, and mainly through its preaching and its schools it has exercised a far-reaching ethical influence on the doctrines and practice of the Indian people. Whether or how far early Buddhism was indebted to Christianity for moral precept and belief re- mains an open question, to which it is improbable that any definite or certain answer can ever be given. The later centuries, however, afford abund- ant evidence of the extent of Christian influence and the attractiveness of Christian ideals in modifying the hold of cruel rites upon the popular mind and in securing, although not always permanently, the acceptance of higher standards of right and mutual regard.

The influence described was never stronger than during the last two centuries, and it was especially marked in the reforming movements of the 19th cent., whose leaders never hesitated to acknowledge their indebtedness to Christian teaching and to the Christian Scriptures. Rama Mohan Roy, Keshab Chandra Sen, and others, to a large extent accepted the principles of the Christian faith, while repudiating its more distinctive doc- trines (see art. BRAHMAMANAJ). Moreover, it was on the ethical side that most would seem to have been learnt and adopted. The broad and kindly tolerance of all sects, which is a marked feature of the religious life of the Reformed churches, the gentle habit of mind and speech, and the regard for the rights and con- sideration for the sorer distress of others, if not altogether due to the leaders' knowledge and their own example of Christianity, were thereby greatly strengthened. With the example of the Arya Samaj (q.v.), however, which exercises a growing ascendency in many directions, the con-tribution of these sects to the spirit and thought of India has not been completed, and full effect at one time was anticipated. The lessen of their influence has been restricted in its range, although within these limits a genuine effect has been produced.

At the basis of Indian religious and moral
thought, therefore, at least in its earlier stages and as regards the conception of the nature of the gods, lay a belief in the generally beneficent and beneficent character of the divine powers. The Vedic deities are, for the most part, kindly disposed towards mankind. It is reasonable to suppose that in those remote ages also the quality of mercy was one of the attributes of the gods because it was appreciated and practised by their worshippers. On the other hand, the awesome and threatening character which a nature-religion often and quite naturally assumes must not be overlooked. The two elementary characteristics or tendencies met, and, being inseparable of complete reconciliation, existed side by side throughout the entire development of Indian spiritual and ethical history. Like most Orientals the Indian is by nature gentle and disposed to kindliness and generosity; and this aspect of his disposition found expression in the Bhagavad-Gita and kindred works, and was put into practice by those sects which more freely acknowledged its authority and were permeated by its spirit. Lower and darker forms of religious faith maintained a cruel and blood-stained ritual, the effectiveness of which on those who followed it could not fail to promote hardness and insensibility to suffering or need. And the more influential systems of philosophy, if not actively hostile to considerations of humanity and brotherly love, at least stood aside, and found the main interest in life in a region where the kindly mutual relations upon which mercy is dependent have no part.

It may be said, therefore, that the Indian faith that heaven is merciful has, on the whole, found expression in the Indian creed, and been translated into Indian practice. To generalize, however, with regard to races so diverse in origin, history, and character, on any but the broadest and most general basis, is impracticable. The cross-currents in the case of India are exceptionally numerous owing to the many elements that have entered into the life of the inhabitants of the country. An appreciation can take account of little more than the general characteristics of the majority, their habit of mind, and mode of action. These considerations, however, justify to the fullest extent the description of the native peoples of India as by nature indulgent and merciful.

LITERATURE.—The subject is discussed more or less incidentally in the philosophy of India. See art. HINDUISM, JANMAK, BABAHIYA-MARGA, BIMALA-SAMAI.

A. S. GEDEN.

MERCY (Muslim).—To despair of God's mercy is one of the great sins, for mercy is one of the attributes of God, and to doubt whether He will show it implies disbelief in this divine attribute.

'0 my servants who have transgressed to your own hurt, despair not of God's mercy, for all sins does God forgive' (Qur'an, xxxiv. 54). 'Who despairs of the mercy of his Lord, has drawn the cord of life' (Qur'an, vi. 92).

The words 'In the name of God, the Merciful One,' form the heading of all chapters of the Qur'an except the ninth. Al-Rahman, the Merciful One, is one of the names of God; it is used in some stras for Allah. The Qur'an refers in various ways to the mercy of God. The angels who celebrate His praises cry out: 'Our Lord! thou dost embrace all things in mercy and knowledge. And verily on the ground that he was a thing and, therefore, part of the 'all things.' The reply is that the mercy refers only to the obedient and 'adds to the ruin of the wicked' (xxvii. 84). The 'treasures of the Qur'an' is expressed by the word 'mercy' and the word 'mercy' is used as a description of divine books. The book of Moses is spoken of as a guide and a 'mercy' (xx. 20). The Qur'an is frequently called a 'mercy.'

'0 my servants, now hath a warning come to you from your Lord, and a medicine for what is in your breasts, and a guidance and a mercy to believers' (xx. 61). And we say to the Qur'an that it is a healing and a good omen to the faithful, that it shall add to the ruin of the wicked' (viii. 84). It is said of those who followed the Prophet that God put into their hearts 'mercy and compassion' (viii. 27); but this is not consistent with the denunciation of them (ix. 29-35) and the prohibition of friendship with them (v. 56). The words probably apply to Christians who became Muslims, for the passage goes on to address those who believe:

'Fear God and believe in His apostles; two portions of His mercy will be given to you; He will bestow upon you a light to walk in' (viii. 92).

The two portions are: one for believing in Muhammad, and one for belief in the former prophets (Bala'awi). The light is either the Qur'an to enable the convert to walk in the night path, or, if the walking refers to the bridge (al-Sirat) finer than a hair, over which all must pass at the Last Day, then the 'light which leads the servant of God to his own house' (vii. 159). And the bridge is an allusion to paradise, where the faithful shall walk over that bridge.

One chapter of the Qur'an (iv.) is called Suriat-al-Rahman, the 'chapter of the Merciful One,' and begins: 'The law of God, which He has created man, hath taught him articulate speech.' The phrase 'God is merciful' is in constant use, and in practical daily life has overshadowed the idea of His righteousness and justice. It too often leads to complacency and self-satisfaction. A man commits sin and says, 'God is merciful!' so, instead of leading to repentance and amendment of life, his idea of the mercy of God too often tends to make disobedience easy and safe.

LITERATURE.—There is no special literature on the subject; see literature under SALVATION (Muslim).

EDWARD SELL.

MERIT (Introductory and non-Christian).—In the earlier stages of religious development, as it is attested by abundant examples in artt. BLES, ARD OF THE (Primitive and Savage), ESCHATOLOGY, and STATE AFTER DEATH, the moral character of life in this world is not a factor either for securing immortality at all or for determining rank and status in the future world, whether immortality be attained by an individual or be vouchsafed to all. In these early stages earthly position, notably chieftainship, or a particular manner of death—e.g., in battle—is a requisite qualification for life in the future world; character, whether good, bad, or indifferent, has no weight in deciding the question. Why, however, religion advances, when immortality is not conferred automatically (if the religion in question believes it to be conferred at all), but is a boon which must be achieved by long and toilsome endeavour, then three conditions—sometimes separated, but usually combined in greater or less degree—are imposed: works, faith, and love.

The ideal combination of these three requisites is found in but one religion—and within Christianity only Roman Catholicism gives full recognition in its official statements to all three. The doctrine of the merit of good works has fared poorly. Some religions practically ignore it, notably the Bhakti-Marga and the Sufism (q.v.) of Persia. In both of these the attitude may be due to what they regard as undue stress on good works in Hinduism and Muhammadanism, respectively. The attribute of over-emphasis on faith and love to the exclusion of good works is dangerously apt to degenerate into an antinomianism which is a pitiful parody of religion at its best. Love alone is practically the sole condition of salvation to the Sufi, and to the follower of the Bhakti-Marga: faith is scarcely concerned except in so far as one naturally believes
with firmness what one loves with fervour. Faith and works are the essential bases of Mandaeanism (W. Brandt, Mandaeanische Religion, Leipzig, 1889, pp. 171-174). Mere intellectual faith, without love or works, has never been held, so far as the writer knows, to be the basis of salvation, except possibly in extreme Lutheranism.

The stress laid by St. Paul on justification 'by faith apart from the deeds of the law' (Ro 3:28; cf. 5, Gal 2:21) must not be wrested from its context in the Galatians-X chronology. St. Paul himself tells us that love is greater even than faith (1 Co 13), and that 'faith worketh by love' (Gal 5:6; cf. 1 Th 1:2, 1 Ti 1:1); there was reason for him to speak disparagingly of works—it was necessary for him to combat the excessive notionism of Judaism. But St. Paul was a man of balanced judgment, and to say that he condemned all works because he deprecated reliance on them alone would be a misrepresentation of his true attitude. He recognized the value and the merit of good works (2 Co 8:1f.), enjoining the church at Philippi to 'work out your own salvation with fear and trembling' (Ph 2:12), and at Thessalonica to 'work together for the good work of faith and charity' (1 Th 3:1). Everywhere, as among the Caribbeans and the Negroes of Guinea, the good alone enjoy immortality, the wicked being annihilated (Ps. 94:10). The distinction between 'good' and 'bad' must invariably be interpreted by the standards of the particular peoples concerned. If this is done, there is undoubtedly a very real ethical basis in this 'good' and 'bad', though quite rudimentary, as the foundation of the belief in the future destiny of the soul.

The doctrine of the merit of works is much developed in the higher religions, especially in Egyptian (cf. art. Ethics and Morality (Egyptian), 7:1f.) and Vedic (cf. Muir, V. [1872] 284 ff.), and reaches its non-Christian culmination in the Zoroastrian triad of 'good thoughts, good words, and good deeds' as antithetic to 'bad thoughts, bad words, and bad deeds.' The course of the evolution is well summarized by E. B. Tylor (PCC iv. 84 f.).

The idea of the merit of works is similar to the idea that has developed into the idea that what gives prosperity and renown to one of the gods is his or her ability to secure the most abundant crops, and to contrast the benefits enjoyed in the peaceful society with the miserable condition of the oppressed subject in the foreign lands at the time.

Turning to the higher religions, we observe, first, that the teaching of Muhammadanism on the subject of merit is practically the effect that good works are requisite, but that the true believer, being guided by Allah to perform them, is, in reality, saved only by divine grace, while the wicked are punished for the deeds of which they have committed, and for the refusal to submit to divine guidance. The problem is complicated here by the fatalism of Muhammadanism (see art. Fate [Muslim]).

At the Last Day 'every soul shall be recompensed as it hath deserved: no injustice on that day' (Qur'an, xl. 17). It is equally true that whoever of the 'People of the Book' 'believes in God and the last day, and doth that which is right, shall have their reward with their Lord' (ii. 59; cf. ii. 106, 215, iii. 194, iv. 60, 121-123, 125, v. 73, vii. 40, xi. 14, xxv. 64-76; the idea is closely paralleled by Aa 10, 10; and elsewhere faith is conjoined with observance of almsgiving and the appointed times of prayer (ii. 2-4), while throughout faith and works go together (e.g., iii. 190-199). The whole attitude of Islam on this matter may thus be summarized from the case also of the Koran (xxxvii. 22-55) which deals extensively with it:

'Gather together those who have acted unjustly, and guide them to the Road for Hell. But on this day they shall submit themselves to God. Just, therefore, is the doom which Our Lord hath passed upon you.

'Ye shall surely taste the painful punishment, and ye shall not be rewarded but as ye have wrought.'

'Save the sincere servans of God! . . . But for the fayour of my Lord, I had surely been of those who have been brought into damnation.'

In a word, the saved declare (vii. 41): 'Praise be to God who hath guided us hither! We had
The complete development of the theory of merit among the religious systems is undoubtedly found in India. The main aspects have already been considered at length in the art. KARMA, wherein the concept of merit is closely connected—as it is in several other religious systems—with belief in transmigration (q.v.) and in asceticism (q.v.). One aspect, however, has not been considered in detail, namely, the translation of merit by means of supernatural experiences in this life.

On the theory of sacrifice as set forth by the Brāhmaṇas,—i.e., that it is a rite which ipso facto compels the result at which it aims—is follows, that the accumulation of merit not only by sacrifices but also in other ways will constrain the gods themselves to bow before the might of the ascetic. This power may be used for good or evil, according to the purpose of him who possesses the merit in question. The records of India are full of stories of sages who have won enormous powers by the accumulation of merit, almost wholly by ascetic means.

Thus, Bull conquered Indra and all the other gods except Vigna, and ruled the world until Vigna enthroned him. Chya-ya, who could not compete with the gods, was caged in the sea by the gods to prevent him from interfering with their activities. The sage is again alluded to in the Purāṇas, where he is described as the ancestor of the Bhaṭṭas, theLearn how to skin the tiger in which the tiger is skinned, the skin is not skinned.

In later Zoroastrianism merit conditions very strictly one's position in the future world. Through full renunciation of sin and complete confession of it, the duty and good works which were before punishment become reward to a man (Sāvyastā that Sāvyastā, vii. 5-9). These who go evil and evil exactly balance go neither to heaven nor to hell, but to Hāmestāgān, the 'Ever-stationary' (cf. L. H. Gray, Macmillan, new ser., iii. [1862] 17s), which in one text (Dhāthita-Daik, xxiv. 6, xxxii. 2) is divided into two parts, one for those whose goodness slightly preponderates, and the other for those whose evil minutely outweighs the balance. Not only is punishment in keeping with one's sin (cf. M. N. Dhalla, Zoroastrian Theology, New York, 1914, pp. 5f., 273-375, 280f.), but in the future world justice is so strictly observed that even the good deeds of a wicked man receive reward.

For instance, a man whose whole body was either cooked in the caldron or was undergoing some other torment had one of his legs stretched out unbound, because he had either found a way to keep the, hungry animal that was dead and could not be used for food, or some poisonous creatures with it. He had not done any other evil deed, yet he was born again (Chicago, 190r, p. 381, with ref.; cf. also L. G. Canartell, Philosophy of the Zoroastrian Religion, in the American Historical Review, 1902, p. 167f.).

Merits as well as the doctrine of the merits of the saints teaches, not only for one's self, but also for others. The doctrine is as it were the opposite of asceticism as well as by the other form of Christianity. In the Buddhist Upāsana asamālamārthas, or ritual
to do justly, and to love mercy, and to walk humbly with thy God!" Nevertheless, there is always the idea in reserve of a judgment by which such deeds as to be cut down; and as is 1st, the alternative of reward for obedience and punishment for disobedience is very clearly propounded (cf. also 2nd).

With the codification of the prophetic morality in the Law, however, the standpoint of merit became much more clearly defined. In Dt 27-29, e.g., the whole duty of religion is brought under the heading of the blessing which rewards obedience to the Law after death is distinctly all of the curse which follows disobedience. In Dt 5:29 also is found the important idea of a 'righteousness before God' established by the performance of the precepts. Prophecy after the establishment of the Law tends more and more to be conformed to the legal standpoint. The general idea of reward and punishment is applied in a very atomistic way to the individual by Esriel (cf. Gn 31:18-22; other notable passages of a similar general tendency in later prophecy are Is 65:17-18; 66:14-16, Mal 3:1-4).

The practical way in which the motives of the hope of reward and fear of punishment operated in the Jewish legalistic code can be studied in Proverbs and Ecclesiastics (cf. Pr 19:17, Sir 12:9-29). It should be noted, however, that so far there is no idea of rewards or punishments in a future life. The life after death in which is conceivable in all the earlier stages of the Jewish religion as without moral distinction. In the further development of religion during the Greek period, however, moral distinctions are extended into the next life, while in the Pauline writings Judaism antagonistic to Greek influence the scribes further developed the preceding legalism into a complete formalism.

In this formalism the different moral duties are regarded in great detail and in separation from one another. The moral task is not viewed as a whole, but as the sum of single observances. The duties of fasting, prayer, and almsgiving are especially prominent. Reward varies precisely as performance:

* He who performs one precept has got himself one advocate; and he who commits one transgression has got himself one accuser (Pseudo Aabot, iv. 13, ed. G. Taylor, Cambridge, 1897, p. 69).

The reward is partly present, partly future; where this world falls fully to reward or punish, the next world rewards the balance.

This atomistic conception of moral duties is to give great prominence to the external and ceremonial duties. It leads naturally to the idea of righteousness by works which was so prevalent in Pharisaic circles in NT times.

Life under the Law was certainly not wholly formalism and externalism. Examples of real heart religion were still to be found among the Jews of this time. G. G. Montefiore rightly insists that the tendency to formalism represents only one aspect of the later Judaism, and that it is not fair to judge it by this aspect alone (see Origin and Growth of Religion as Illustrated by the Religion of the Ancient Hebrews [HL], London, 1897, lect. ix.).

The same truth is emphasized by G. Dalman in his Worte Jesu (Eng. tr., The Words of Jesus, Edinburgh, 1902).

Moreover, in the formalistic aspect of the religion of the scribes must here be emphasized, for the following reasons: (1) it distinguishes it from the earlier prophetic stages of the prophetic religion (§5); (2) it expresses the protest of the NT against the religion of the scribes; (3) it still influences the Roman Catholic conception of merit.

* Just because the catechisms for the elementary schools speak of it (Catechetical Instruction of the Church of Rome, 16th and 17th cent.; cf. also 19th cent.), to 18th for the Roman Catholic doctrine of good works, we must go back to the religion of Judaism (B. Thiene, in FRB. ser. xii. 110).

A brief glance at Hellenistic Judaism of the same period will conclude this part of our survey. The morality of the book of Wisdom and of Phil son's also combines with the wisdom literature of the Law Plato's philosophical doctrine of virtue. On the subject of moral retribution Wisdom remains practically one with the earlier Ecclesiastics. Plato, however, further distinguishes itself from the Wisdom literature and from the teaching of the scribes by avoiding the principle of 'atomism' and carrying back all virtues to one root, love or faith. The punishment of sin, moreover, here as a living death, the reward of virtue as communion with God (see J. Drummond, art. 'Philo', in DDB. v. 207).

As regards the views of ascetic paganism, when Christianity begins, the doctrine of Plato was a formative influence.

Plato 'in several dialogues expresses the thought that a judgment upon all souls takes place at death, at which they receive, according to their merits, eter life or, in the case of the good and the punishment for their evil deeds (Rep. x. 611 B, Gorg. 503 C, Phaedo, 118 F.) Here, however, the more conception of merit is overlaid by the other, that he who strives after righteousness and virtue seeks happiness, the happiness hereafter will not be overlooked by God (Rep. x. 613 A B) (J. Kusen, in PREP. xx. 503).

The last thoughts carry us beyond the sphere of the doctrine of merit. Nevertheless, there can be no doubt that in paganism, as well as in Judaism, the view that regards God above all things as a rewarder of good and evil, and tends to review his relation to men under legal analogies, was the dominant and most usual religious theory. The total position of things is well summed up by Schultze in SK. Lxxvii. 9:

* When Christianity entered the world and found its first expression in the dominion of Jesus' circle, the theocratic and priestly in the religious character of the scribes, and of every man's with which his fate was to be settled, was a self-evident axion. A different relation of man to God, now that the prophetic type of religion had ceased to be influential, was not in general imaginable. With faith in God as the representative of the moral order of the world, there appeared to be evidently given the faith that He rewards and punishes according to the rule of human law.'

2. The doctrine of the NT.—The teaching of Jesus links itself on to that of the OT prophets, and also to that better side of the later Judaism upon which Montefiore and Dalman insist. It is in the first place, essentially ethico-religious; religion and morality are completely blended in it. Jesus demands of His disciples an absolute conformity with the will of God (Mt 5:20), a righteousness better than that of the scribes (Mt 5:21). Without this none can enter into the kingdom of heaven (7). This better righteousness is, however, not to be attained by a closer conformity to the Law. Jesus further teaches that the only true righteousness is heart righteousness; that, apart from a right motive, outward conformity to the Law is worthless. Again, the idea of God as the Father, so central in His teaching, is the very antithesis of and makes impossible a legal conception of the relation of man to God. The righteousness which Jesus demands is, therefore, in the end just the spirit of sonship, energizing in the imitation of the Father (9).

While thus rejecting the 'legalism' of the scribes, Jesus employs in His ethical teaching the current ideas of reward and punishment. That righteousness shall be rewarded and rewarded was Jesus' message. He reiterates again and again (Mt 5:6, 20, etc.) He speaks once (unless it be the Evangelist) of 'good works' (ouncements, etc.) but he did not reproach the question: 'What shall I do that I may inherit eternal life?' (Mt 10): in His answer, moreover, He points the aker to the keeping of the commandments. Of, further, the teaching of the parables of the faithful and unfaithful servants
The principle of merit, therefore, occupies a somewhat ambiguous position in the teaching of Jesus Himself. The necessity of righteousness is absolute, alike for the Jewish Christianity of the Epistle of James and the anti-Jewish Christianity of Paul, as well as for the other NT writers (cfr. Ja 1:22, Gal 5:4-5, Eph 5:3, 1 Jn 3:22 esp. v.7). Throughout the NT also the doctrine of the Fatherhood of God is fundamental, though not so dominant as it is in the teaching of Jesus. The idea of retribution according to works is also generally prevalent. Paul, indeed, in the most important cycle of his teaching—that upon justification—appears to exclude the principle of merit altogether. Justification is by faith alone: by the works of the Law no man can be justified (Ro 3:28, Gal 3:11, observe especially the direct exclusion, in so many words, of the principle of merit in Ro 4:6). Yet the Apostle teaches also that reward and punishment are both just and justifying (e.g., Gal 6:7, 2 Th 1, and also Col 3:24, Eph 6:8, 1 Ti 4:8, 2 Ti 4:8). Even more prominent is the doctrine of retribution according to works in the Apocalypse, and the Epistles of James, 1 Peter, and to the Hebrews (cfr. 1 Cor 11:29, etc., Ja 2:24; 4:12, 1 P. 3). etc., He 10:10; 11:2, 13). The current idea of retribution is therefore almost universal in the NT, though, as Schults says (cfr. cit. p. 13), "without systematic development." Only in the Gospel and Epistles of John is it almost wanting. The reason for this is assigned by Schults as follows:

"At bottom there is no room for it. The true life work, which the community neglects at God of God, and in this belief eternal life is already given, is possession and as hope" (p. 13).

Here, then, enters a problem which the NT writers undeniably had to face. What is the relation of the doctrine of retribution, which the NT has in common with the current thought of its age, to the specifically Christian idea of the Divine Fatherhood, or of justification by faith? This is a problem whose full significance was later to be brought to light. We may, however, refer here to the passages in the NT which suggest the limitations with which the doctrine of retribution is to be taken.

To begin with Jesus Himself, when He describes, as He often does, the relation of God to men by comparing it to that of a master and his household servants (cfr. Mt 25:31-32, Lk 17), He thereby does away with the idea of merit and reward in the strict sense.

"The servant in the sense of antiquity acquires no merit. He the more praised when he has done all he should (Lk 17). His master can reward him, but that remains at bottom an act of good pleasure" (Schults, p. 15).

The same thing is also true, where Jesus actually does speak of paid labourers, and so leaves the way open for the strict idea of reward according to merit. He emphasizes by contrast the truth that God will not be bound by this rule, but reserves to Himself the right of graciously transcending it (Mt 20:15).

Finally, Jesus opens out the view of a reward which belongs rather to the personality revealed in the work than to the performance as such.

"Only where the tree is good, can the fruit be good (Mt 12:17). It is the conduct of life, the life itself (v.16)."

Paul, again, suggests a reconciliation between the idea of justification by faith and judgment according to works in the idea of reward for good works as the fruit of the Spirit (Gal 5:6ff.). Where justification is, there is also the gift of the Spirit, and therefore also good works. Thus Paul warns against both justification and its future judgment must coincide (R. S. Franks, Man, Sin, and Salvation, London and Edinburgh, 1906, p. 104).

Again, in Eph 2:8-10 good works appear not as a condition, but as a result of salvation. Sometimes, however, the ethical interest predominates that Paul even comes to represent future salvation as conditional on perseverance in faith and obedience (ib. p. 129). Cf. Ro 5:3, 1 Co 2:12, Ph 3:11 with exposition given by Franks (ib.), finally, we may take into account the recession of the idea of retribution in the Johannine writings, which has already been noticed. That tendency in the NT, at any rate in the most important parts of it, is in general to limit the principle of merit and retribution in favour of the doctrines of grace. But it must be admitted that such limitation is by no means universal or absolute (it is least observable in the minor NT writers); and there remains, therefore, a fundamental ethical and theological problem in Christian religion, as originally stated, which theology is called upon to solve. How difficult the task is, the history of doctrine reveals.

2. The doctrine of merit in the Christian Church.

We begin with primitive Gentile Christianity, and note that the whole cycle of Christian ideas by no means passed over equally to the Gentile Christians—which they received was naturally conditioned by their previous preparation. It is not the necessity of good works, we find an intense moral earnestness in primitive Gentile Christianity. But, further, the idea of the twofold retribution according to works (reward or punishment) was familiar to the whole Graeco-Roman world; hence this element of NT doctrine weasely assimilated, and, indeed, emphasized in more than its proper proportion, so much so that we have to recognize in the early Christian Church a return to a great extent to the Jewish doctrine of works. The doctrines, on the other hand, which should have prevented this return, such as, above all, the Pauline doctrine of justification by faith and but little receptivity awaiting them. Hence the stress is especially laid on the merit of fastings and amsugiving. Cfr. 2 Clem. xvi. 4 (amsugiving becomes a mitigation of sin); Barn. xix.; 2 Clem. ii. 3, vili. 4-6, Sim. ix. xviii. 5, xi. 4. We actually find already the idea of a work of supererogation (Hermas, Sim. v. iii. 3: "If thou dost a good work beyond the commandment of God, thou shalt win for thyself more abundant glory").

In the Greek Fathers this line of thought continues, side by side, indeed, with the idea of Grace, with which, however, it is never properly correlated. A more important and characteristic development belongs to Western theology, and begins with Tertullian. Himself a jurist, he gave to the doctrine of good works an essentially juristic stamp, which it has never lost in Latin Catholicism. A typical sentence is:"A good deed has God as its debtor, just as also evil one, because a judge is a rewarder of every cause" (de Poen. 2). Tertullian, in fact, looks upon the life of the Christian after baptism as strictly a life under the Law, its motives hope of reward and fear of punishment, and the result deter-
M ERIT (Christian)

mined purely according to legal standards. All good works are in general meritorious; merit, however, is reserved by St. John Damascene to such as go beyond the strict demands of God—e.g., fasting and the maintenance of virginity. Retribution is strictly according to merit (Scorpi., vi., De Pat. x., ad Scap. iv.).

These ideas are continued by the later Latin Fathers. Ambrose, however, begins to correlate them with the idea of divine grace—a work completed by Augustine. The latter still maintains that eternal life must be won by merit, and that the good we establish merit, but the divine grace alone can enable men to perform good works, so that all our merits are God's gifts, and, when God crowns our merits, He crowns in reality simply His own gifts (Euch. civ., Ep. cxxviii. 19).

The teaching of Augustine is systematized and modified by the medieval schoolmen. The idea that eternal salvation must be merited by good works, not by grace, carates to them all. Baptismal grace simply puts men into a condition to win merit. Works are not properly meritorious unless done from an inner principle of love (corpus), which is infused in the heart by the Sacraments, however, modified this doctrine by distinguishing between two degrees of merit, 'meritum de condigno' and 'meritum de condigno, et de gracia gratiae data.' In this way, he further taught that, while 'meritum de condigno,' or merit which God owes a reward in strict justice, is possible only by the help of saving grace, 'meritum de condigno, et de gracia gratiae data' because His mercy goes beyond strict justice, is possible by the help of general grace. In this way even the first grace can be merited (F. Loox, Dogmengeschichte, ii. 1906, p. 544 ff.) by Thomas Aquinas was more cautious. He denied the possibility of merit before baptism. All merit, however, so far as it proceeds from the free will is 'de condigno'; so far as it proceeds from grace, it is 'de condigno et de gratia' (ib. p. 549 f.). Duns Scotus taught that 'meritum de condigno' was possible to a man in 'vita naturalis' according to God's 'potentia absoluta,' not, however, according to his 'potentia ordinata' (ib. p. 590 f.). Finally, the Nominalist Scholastics, like William of Occam, taught without hesitation that he who does what is in him can merit 'de condigno' the grace which enables him 'de condigno et de gratia' to merit salvation (ib. p. 601 f.).

Luther, however, elevated what was thus occasionally expressed in the Middle Ages as a devo
tional point of view into the central doctrine of the faith. This teaching, in its ultimate form—there were many stages of development—is that salvation is by faith alone. Works are not the condition of eternal salvation, but a divine gift by faith is the condition of good works. Faith works by love, and its natural fruits are good works.

In opposition to Luther's view the Roman Catho
tice Church at the Council of Trent stamped with its approval the medieval doctrines of good works (see sen. vii. can. 6, viii. can. 1). The pope took up the Roman Catholic point of view when he says: 'The common opinion of all Catholics is that good works are truly and properly meritorious, and that not merely of some particular kind, but of any kind. The true and eternal life itself' (de Justificatione, v. 1 [Disputationes, Ingolstadt, 1585, vol. i. ii.]).

Protestantism as a whole, both Lutheran and Reformed, completely agrees with the position of Luther, as expressed above. In the Roman Church there was, however, a controversy as to the necessity of good works. If they were not to be regarded as the meritorious cause of salvation, the question was in what relation they stood to it. Melanchthon used phrases which were thought to imply that good works, though not the ground of justification, were nevertheless a causa sine qua non of our acceptance with God. To this mode of expression Luther objected, as good works are the consequence, and in no sense the condition, of justification. Agricola, a pupil of his, went further, and taught that good works are not necessary to salvation, the Law remaining under the gospel, not indeed as a means of justification, but as a revelation of the will of God as to what men ought to do (C. Hodge, Systematic Theology, London and Edinburgh, 1872-73, iii. 238).

The controversy was renewed not long afterwards in consequence of the doctrine of George W. David, professor at Wittenberg, who had also been a pupil of Luther and Melanchthon. Major was accused of teaching that good works were necessary to justification, but not to salvation. He maintained that good works were not necessary as meritorious of salvation, but were necessary as fruits of faith. He admitted that the sinner was in a state of salvation as soon as he believed, but taught that, if his faith did not produce good works, it was not saving faith. N. von Amsdorf, his chief opponent, taught, on the other hand, that, though the statement that good works were necessary to salvation might be true in a general way, it was misleading. Good works are necessary to sanctification, but not to salvation in the proper sense, which is identical with justification. Amsdorf went so far as even to say that good works were harmful to salvation (op. cit. p. 263 f.).

These controversies were closed by the Formula of Concord (1559), in which, on the one hand, condemns the statement that good works are necessary to salvation, but, on the other, equally rejects the doctrine that they are harmful to salvation. Men are to be shown how necessary it is to exercise themselves towards God in good works, but also how necessary it is to avoid all thought of good works in the matter of justification. Finally, the Formula condemns the idea that faith in Christ can consist with intentional or wilful sin (cf. F. C. Epist., ed. Leipzig, 1587, ix., 'de Bonis Operibus').

The Formula of Concord closes the discussion of the doctrine of good works in orthodox dogmatism. It remains now only to notice that, since the Formula was composed, the whole question of the place of good works in Christianity has gone through a phase. The essentially ethical character of modern Protestant theology, with its emphasis on the teaching of the OT prophets, and still more on that of Christ, makes the question whether good works are necessary to salvation seem almost absurd. At the same time, in the sense in which the Formula of Concord denies that good works are necessary to salvation, modern Protestant theology is absolutely at one with it. It repudiates the Roman Catholic
medieval romances Merlin played a prominent part, in close conjunction with the Arthurian legend, as a prophet and as a magician. In the earliest references which we have to him in Welsh literature he appears as a bard, while, later, he is represented in Welsh literature as a see, until finally, in the Merlin romances, his character as a magician predominates. The origin of the name Myrddin or Merddin is uncertain, and it is only by accident that it has become identical with the Latin Merlinus. Myrddin, the Welsh name for Carmarthen, since, in that name, Myrddin (in its mutated form Fryd-fyn) is the later phonetic equivalent of the Celtic Mori-danon (‘the fortress near the sea’). The reason for the substitution of I for dd (=soft th) in the Latin and other forms of the name is uncertain. Probably it was due to the absence of the soft sound of th from these languages, and the consequent necessity for substituting for it some other sound, but it is not clear why that sound should have been l. As for the derivation of the name, it may be stated that there is one obstacle, and that is a double one, to the popular view that it is simply a corruption of a certain proper name of a man who is not Christian. The Ritschlian doctrine on this point has been by no means generally accepted. Many would still agree with C. Gore when, commenting on Ro 2:29, he speaks of natural religion as the necessary and essential basis of all evangelic teaching (The Epistle to the Romans, London, 1899, i. 108 f.). It must, however, be admitted that the co-existence in the NT of the doctrine of justification by faith and of reward according to works remains one of the antinomies of the Christian religion, of which, if the Ritschlian position be refused, no satisfactory synthesis has yet been attained. And, further, Ritsch is surely right in saying that the ethics of good works is unsuitable as a comprehensive designation of the ethical side of Christianity (iii. 627, Eng. tr., p. 663). The phrase ‘good works’ suggests just that Pharisian atomism which is the very opposite of the teaching of Christ, and, while employed in the NT like many other phrases derived from Jewish thought, it is not one in which the specific genius of Christianity comes out, but rather one in connexion with which there is a perpetual danger of a reversion to a lower stage of religion.

ROBERT S. FRANKS.

MERLIN.—The name Merlin is a modification, first found in its Latinized form Merlina, of the Welsh Merfyn or Merddin. That the latter form was used in Welsh literature is shown by a line of the poet Dafydd ab Gwilym (middle 14th cent.), which attests the pronunciation of s in the first syllable. In
Since it is clear that the legend of Myrddin (Merlin), in its earlier developments, must have accompanied the Welsh materials of the ancient British tongue, it will be of interest, before considering its later evolution in Latin and other non-Welsh sources, to review the forms in which we find it in the literature of Wales. The Welsh material of the Myrddin legend do not go farther back than the 12th cent., but they doubtless embody more primitive features, though it is no longer easy to determine these exactly. The Welsh Myrddin legend showed its popularity in Wales, in the 12th cent. and later, to its convenience as a vehicle for the annunciation of prophecies as to the ultimate success of the Welsh in their struggle against the English. In this form of the legend Myrddin is represented as having, in the battle of Arderwydd (often wrongly written Ardderyd), caused the death of the son of his sister Gwenddwyl, who apparently was the wife of Rhuddderch Hael, a prince of Strathclyde, who, in the battle in question, was the opponent of another Northern prince, Gwenddolyn, with whose court Myrddin as a poet met. According to this Welsh legend, smitten with remorse, he flees in his frenzy, under the pursuit of Rhuddderch Hael and his hounds, to the Forest of Caledonia (Coed Celyddon), to which, in Welsh medieval legend, allusion was sometimes made as the home of spirits and departed spirits. In his flight the bard's sole companion is a little pig, and with his companion he reaches the shelter of an apple-tree in the heart of the forest. Under this apple-tree he is represented as uttering prophecies concerning future events in the history of Wales. It would appear from some of Myrddin's utterances that, in the way of the conventions of that period, his prophecies were sometimes made to him by a female friend, who bears in Welsh the name Chwimmian or Chwiplein, who is probably the original of the Viviane of the later Merlin romances. It is possible that, in earlier forms of the legend than those known to us from Welsh literature, this nymph or Egeria may have originally played a less shadowy part than that which comes to view in Welsh 12th cent. legend, when the chief use of the Myrddin story was as a vehicle for encouraging vaticinations. It is noteworthy that in no part of early Welsh literature, even in the Black Book of Carmarthen, which is one of the most important, there was any attempt to connect Myrddin with Carmarthen (in Welsh, Caer Ffyrdin), as was done by Geoffrey of Monmouth. Hence we may conclude that the story of the connexion of Myrddin with the North and with the battle of Arderwydd—fought, according to the Annales Cambriae (ed. Monumenta hist. Britannica, i, London, 1843, pp. 830-840), in A.D. 573—was traditional and well-established. The Northern associations of the story are further confirmed by the fact that Nennius mentions a Ridder Hen (Hist. Brit. ad ann. 597, ed. Mon. hist. Brit. i. 70), who is probably to be identified with Rhuddderch Hael, while the life of St. Kentigern (xvif. ed. and tr. A. P. Forbes, Historians of Scotland, v., Edinburgh, 1874) names a Rederech, who is doubtless also to be identified with the same person, and a Lailloch, or Laloik, whose name is clearly the same as that of Liallog, identified with Myrddin in a poem purporting to be a conversation between Myrddin and his sister Gwenddydd, found in the Laloik story (Laloik in the Annales Cambriae (The Conversion of Myrddin), H. L. D. Ward (in Romania, xxii. [1893] 504 E) has published another version of the Laloik story, from two fragments in the Brit. Mus., and has adduced conclusive evidence to show that Liallog (Laloik) is a proper name, found, e.g., in a Breton document called the Breton Cartulaire de Tréguier, in which it is written Lalaig (Lat. Lullagin), and in which it is written as Lalaig (Lat. Lullagin) in the Annales Cambriae (Arnortid). This simpler form of Liallog, Liallwe (Lallog), is probably a purely Welsh variant. It may be stated that the precise site of Arderwydd (given in the Annales Cambriae as Arnedwydd) has not been fixed with certainty, the usual identification with Arthur being based on a false pronunciation, but it is probable that the name Gwenddydd survives as the place-name Gwennadlo (Caer Wenedhol) near Carlisle. In the fragments given above, Laloik is said to have been driven mad by the events of the great battle 'in campo inter Label et Carwanowlo sitiato.'

The attribution of prophecies in Welsh literature to a bard Myrddin is not an isolated phenomenon, but is also found in the case of the Welsh poet Taliesin, in whose case, as in that of Myrddin, a legendary nucleus has survived, the chief feature of which is an account of his transformations. It is probable that the connexion of the name Taliesin with prophecy was earlier than that of Myrddin, as is suggested by the allusion into the mouth of the latter in the first poem of the Black Book of Carmarthen, a dialogue between him and Taliesin about the battle of Arderwydd, to the effect that Myrddin's prophecy was more widely known after that of Taliesin. The conception of a poet that is implied in the utterance of such vaticinations resembles the medieval idea of Vergil, who was then viewed more as a prophet and magician than as a poet (see D. Comparetti, Vergil in the Middle Ages, Eng. tr., E. F. M. Benceke, London, 1899). As for the genesis of such prophecies as those of Myrddin, the original models were probably oracular communication, and such imitations of them as bridged over the time between the period of their composition and the Middle Ages. In the Middle Ages and even later there was a congenial mental atmosphere for the composition of prophecies and the practice of magic, nor was there an interest in vaticinations confined to Wales, as may be seen, e.g., in the popularity of such writers of prophecies as Atcheryn, Lanfranc, John of Bridlington, Thomas of Epsom, and others in England, not to speak of Merlin himself.

In the Black Book of Carmarthen (12th cent.) the two chief forms of the prophecy connected with the Myrddin legend are those known as the Aflaillinn ('The Apple-trees') and the Holinau ('The Hail'). Both poems contain prophetic allusions, mainly to events of the 12th cent. in Wales. The former poem mentions Coed Celyddon ('the forest of Caledonia'), which was represented as the scene of the Myrddin legend, as well as Frydlyn (Pielland) in the North Mon (Anglesey), Ardudwy (N.W. Merioneth) and Dwyrydwy (near Carnarvon) in N. Wales, Core Pochan and Puan Adam (Pynlimon) in Cardiganshire, and the rivers Tawe, Teifi, Towy, Machafwy, and Edryw in S. Wales. The Holinau poem refers to the disagreement between Henry II. and Henry III., and also to the Welsh prince, Llewelyn ab Lorwerth, lord of Gwynnedd or N.W. Wales. There are allusions in this poem to Gwynnedd (N.W. Wales), and to Tŷ Ethin, the Land of the Heir-Apparent, which was the district situated in N. Wales between the rivers Conway and Clwyd. The student of the prophetic allusions of these poems would do well to consult the Disputationes and notes of J. Gwenogvryn Evans's edition of the Black Book of Carmarthen. Here, again, most of the topographical allusions are to places in S. Wales, such as Dyfed (S.W. Wales), St. Davids, Milford Haven, Mynyw (Monmouth), y Sarnfren.
and Castell Collwy in Radnorshire, together with the rivers Taraday, Mynwy (the Monnow), Machafwy, and Teifi, while there are also allusions to certain famous battles of early Welsh history, which are probably taken from some current ballad list of such battles.

In the *Book of Taliesin* (14th cent.) there is a similar prophetic poem (but without any account of the Myrddin legend itself), put into the mouth of the *Prophetes Prydain Foues* (*The Prophecy of Great Britain*). The events which are foretold are similar in character to those of the *Afallenau* and *Hoianau*. There are other poems in which, without expressly mentioning Myrddin, are clearly cognate with the Myrddin poems already mentioned.

In the *Red Book of Hergest* (14th cent.) there are two poems which have clear links with affinity with the *Afallenau* and *Hoianau*, but which may have been composed later. They undoubtedly belong, like the latter, to the Welsh Myrddin tradition. These two poems are (1) *Kyvessi Myrddin a Gweneddy y chaster* ('The Conversation of Myrddin with his sister Gweneddy'), and (2) *Gwysgargerd Vyrddin yn y bedd*, 'The Diffused Song of Myrddin in the grave.' Though there are allusions which make it clear that their writers were familiar with the legend of him called Myrddin, Myrddin in these poems is little else than the instrument of prophecy. It may be of interest to note that a common feature of the Myrddin and other prophetic books of the Middle Ages was an expectation of the return of the princes Cymru and Cadwalladr to life, in order to lead jointly the Welsh forces to victory over the English.

It is in the *Kyvessi* poem that the term *llallogen*, already mentioned, appears. Though the word is doubtless in origin a proper name, yet W. O. Pughe (Nat. Dict. of the Welsh Lang., 2, Denbigh, 1892, s.v.) interpreted both it and *llalageno* as meaning 'twin brother.' It is not improbable that the term was misunderstood in this sense, even by the author of the *Kyvessi*, since he makes Gwenddydd speak of 'my italyddion Myrddin,' while the term *Italagen*, as a synonym for *llallogen*, is doubtless invented from it by analogy. In the original Welsh *Italagen* is a name with which Myrddin is associated in the *Gwysgargerd Vyrddin*, and it is this Laloicen that is identified in the *Scithrochonum* (ii. 31; ed. W. Goodall, Edinburgh, 1759), as in the *Kyvessi* poem, with Merlin. Poems *xxi.,* *xxii.,* and *xxiii.* of the *Red Book of Hergest* (in Skene, *Four Ancient Books of Wales*) clearly belong to the same cycle as the preceding.

Occasional references to Myrddin are found in the Welsh poets of the Goddian period (A.D. 1100-1300), as, e.g., in Griffiths* Llyfr Y Gwaunad Gwynedd* (*Myrddin Archaeology of Wales*), Denbigh, 1870, p. 1294, where the poet says that Owain was 'fairer than Myrddin.' Gwylfard Brycheiniog, too (ib. p. 1389), speaks of the Lord Rhuddlan as called *Myrddin* in *Italogen* (as having been prophesied by Myrddin). Eidir Sais (ib. pp. 243-244) refers to Myrddin's brilliancy in song, and likewise Gwilym Ddu o Arfon (ib. p. 277) speaks of the *Italogen* of Myrddin of the stock of Maelchion.

The poet Sefnyn, also, in *Italogen* last breaths, Gyrrig, compares the dead bard to Myrddin (ib. p. 334). Further, a cynical and sarcastic poet, Madog Dwygraig, satirizes the *Afallenau* in one of the *Italogen* of Myrddin of the *stock of Meirchion* (*Italogen Meirchion*). In *Dafydd ab Gwilym* (poem xxviii.) there is an echo of the name of Myrddin as a poetic lover, while in poem xxvii. he is said to have made with the crafting of love a house of glass about a mistress. The few other allusions to Myrddin in Dafydd ab Gwilym are unimportant.

Later legend (see MS 162 in the Peniarth Collection, now in the National Library of Wales, Aberystwyth, written about 1600) associated Myrddin with the Island of Bardsey, off the coast of Carnarvonshire, and located his grave there (cf. R. Higden, *in Polychocronicon* [ed. T. Gale, Oxford, 1691, i. 1871]), and Giraldus Cambrensis may have had his legend in view when he wrote *Concerning the burial of Myrddin Cledinnus*' grave (see below) as being shown near Nevyn in Carnarvonshire.

That Wales was not without an interest in the prophecies of the Sibyl, which are probably the prototypes of the Merlin and similar vaticinations, is shown by the fact that MS 5 of the Peniarth Collection, belonging to the second quarter of the 14th cent., contains a Welsh translation of the Sibylline prophecies, called *Llyma Prophychondiaeth Sibh doeth* ('Here is the prophecy of the wise Sibyl'), based on the De *Sibilli* of Isidore of Seville. This translation is also found in the *Red Book of Hergest* (cols. 571-577), and in the Peniarth MS 14, pp. 45-57. The latter bears the title 'The Sibyl's Dream,' and belongs to the middle of the 13th century. It differs both from the versions of Peniarth 5 and from the *Red Book* text. The popularity of prophecies in this period in Wales is further shown by the inclusion in the Peniarth MS 3, written about 1390, of the *Kyvessi* poem, together with the *Afallenau* and *Hoianau*, while MS 20 of the same collection (15th cent.), by its inclusion of the same poem and the addition to it of a further prophetic extension, shows that this popularity continued. This is further proved by the fact that we find in the *Cochis Coftredwyd*, a MS written at varying dates from 1415 to 1460, copies of the *Afallenau* and *Hoianau* with the *Gwysgargerd Vyrddin* poem together with English prophecies by Bridlington, Bamister, Thomas of Erccleston, and others. We find the *Afallenau* and *Hoianau* in Peniarth MS 69, a MS of the first half of the 16th cent., while, in the latter half of that century and in the 17th, the Welsh Myrddin poems still continued to be copied, as we see from Llanstephan MS 41 (1610-1620), now in the National Library of Wales.

In the foregoing account the fortune of the Arderdd or Northern legend of Merlin, with the associated prophecies, has been traced. The Merlin thus depicted is called *Merlinus Silvestris,* and in Welsh *Myrddin Wyllt* ('Merlin the Wild'); while another Latin name by which he is known is that of *Merlinus Cledinnus* or *Cledinneus,* being so called in order to distinguish him from Merlins Ambrosius, who is a creation of Geoffrey of Monmouth, through the substitution of Merlinus for the Ambrosius of a narrative which Geoffrey found in Nennius. A later MS of the *Annals Cambriae,* in its account of the battle of Arderdd, reflects the Merlinus Silvestris tradition, in its addition to the original entry of the words 'inter filios Efler et Guengolen /filium Keillouin: in quo bello Guennolen eccletit: Merinus innasus effecit et Kyllaen,' the Northern conception of Merlin already mentioned, but also influenced by Geoffrey's account in connexion with the name Laloicen, the Life of St. Kentigern (*Scithrochonum*), which refers to Merlin's suffering in the words that are put into his mouth: 'Ego sun Christianus, libet tanti nominis reus, olim Quertiogini vates, Merinus vocatus in hae solitudine dira patiens fatus,' though the reference of the passage is here unmistakable in the reference to Vortigern.

2. The Vita Merlini.—This is a Latin hexameter poem, giving, in verses of considerable ease and accuracy, an account of the life of a woman. Nearly all writers upon it have taken it, owing to
its dedication, to be the work of Geoffrey of Monmouth, but the legend which it embodies is so entirely different from that given in Geoffrey’s Historia that it is in the highest degree improbable that he is its author. The legend which it incorporates and expands is essentially that of the Welsh Aflallesau and Heianau and of the ‘Lalocen’ tradition that is contained in the Life of St. Kentigern. Ferdinand Lot has published an analysis of the Latin Vita Merlini (xvi), and has shown it to be later than the Latinoecian fragments already mentioned; but he too readily assumes that Geoffrey was its author, and goes too far in seeking to trace the influence of the Vita Merlini on the Welsh Myrddin poems of the Black Book of Carmarthen and of the Red Book of Hergest, with the exception of the first poem of the former, which purports to be a dialogue between Myrddin and Taliesin. The Latinized proper names of the Vita Merlini show quite clearly that they were formed by some one who was familiar with the Welsh names of the Myrddin legend, such as ‘Gwilym for Gwilym, and ‘Taliesin for Tali- 
sin, and the like. At the same time, there are important departures from the Welsh form of the legend, as, for instance, the opposition of Gwilym to Merlin; but in the Vita Merlini, as in the history of the Welsh poems, the whole setting of the Latin poem and of the Welsh poems, in spite of certain discrepancies, is for the most part the same. The Vita Merlini, however, contains one name, Mel- 
dinas, which, as Lot has pointed out, is probably derived from an Irish rather than from a Welsh source, being, in all likelihood, that of the hero of the Welsh Meldinaid. Though the Vita Merlini appears to be the work of some one other than Geoffrey, it appeared during his lifetime, having been written about 1148, while he died in 1154. It was dedicated to Bishop Alexander’s successor, Robert, who was a man of considerable influence at the court of Stephen. The poem is of great interest as showing the popularity of the Northern and Welsh type of the Merlin legend in cultured circles in Britain in the 12th cent., but familiarity with Geoffrey’s history is already shown by the reference to Vortigern (l. 581).

3. Merlin in Geoffrey and in the Chronicles. —
The introduction of the figure of Merlin into the medieval Chronicle of the 13th cent. by Geoffrey of Monmouth, who deliberately transformed the Ambrosius of one of his sources, Nennius, into Merlinus, is due to Geoffrey. It is clear from the fact that, in the Prophecy and in the History of the Arthurian cycle of the 12th cent., Geoffrey calls Merlin Ambrosius Merlinus. The innovation in question was first made by Geoffrey, when he published ‘The Prophecy of Merlin’ as a separate work, before the appearance of his Historia Regum Brit- 
anniae. This Prophecy must have been published early enough for Ordericus Vitalis to quote from it, as he does in bk. xii. of his Historia, written about 1136 or 1137. Later it was incorporated in Geoffrey’s Historia and formed the basis of that work. The Ambrosius with whom Geoffrey identified Merlin first comes to view in Gildas (de Excidio Britannie, xxi., ed. Mom. hist. Brit. i. 15), as Ambrosius Aerobius, but that is to make him into a legendary person was Nennius, who describes him (xlii.-xlv.) as a child without a father, for whom Vortigern searched, by the advice of his sorcerer, in order to found the foundation of a tower that he was building. He was found, according to Nennius, in the field or plain of Elleti, in the region of Gelligwnning (=Glywyseg in Monmouthshire), and in Nennius’s narrative he is also associated with the famous fort of Dinas Emrys (Emrys being the Welsh derivative of Ambrosius), near Beddgelert, and is represented as a sorcerer (magna), who prophesies the final overthrow of the English by the Welsh. Ambrosius in Geoffrey appears as a separate character (Hist. Brit. vii. 1), but the role which he plays in that author was filled in Nennius by Guorthemir (Vortimer). It is (as) the son of the sorcerer Merlin with Carmathen (Hist. Brit. vi. 17).

Another new element which Geoffrey introduced into the story, and which became a notable feature of the Merlin romance, was the statement that the boy’s father was a supernatural being of the type known by the name of incubus. The suggestion made by Nennius, that the boy was the son of a Roman consul, is omitted by Geoffrey. The idea of introducing an incubus into the story probably came from a resemblance of the pseudo-Bede (de Elen. Phil., bk. i. PL xc. 1381), who doubtless reflects a view put forward by St. Augustine. The germ of the conception of Merlin as a sorcerer was already in Nennius, and the idea of putting prophecies into his mouth was ready to Geoffrey’s hand, and even then a practice of the times, as is seen by Geoffrey’s own reference (ll. 9, xii. 18) to the prophesying of the eagle at Shaftesbury. It is an instance of the close connexion between Merlinus Ambrosius and Merlinus Silvestris (or Celidensius), and attributes to the former only prophecies taken from Geoffrey, and he adds (ibid. b. ii. 6, 8) that he did not copy, in an out-of-the-way locality, a copy of the prophecies of Merlinus Celidensius in the British tongue. Geoffrey gives prominence to Merlin’s powers, not only as a prophet, but as a magician, and represents him other than as one magic power conveyed Stonehenge from Ireland to Salisbury Plain and changed the forms of Uther and his companions. In Geoffrey, however, Merlin is not mentioned later than Uther’s reign, but subsequent legend and romance could not resist the temptation to associate him with Uther’s son, Artur. In romance, Merlin, as a magician, tended to come more and more into prominence, until at last he became a figure second only to that of Arthur himself.

In the case of subsequent chronicles the following points may be noted. The Welsh Brut Tywilio, an adaptation of Geoffrey’s History, shows a development on the lines of the type of the Midlands, and is probably under its influence. For example, Merlin is represented as owing his birth to the machinations of Lucifer and other evil spirits, and the increased prominence of the magical conception of his character is seen at the statement that he, by his magic art alone, is able to draw the stones that are to be carried from Ireland to Salisbury Plain as far as the ships, after the complete failure of the warriors. The same tendency may be noted in Wace, who omits Merlin’s prophecies, with the exception of those about Vortigern, on the ground that they are unintelligible to him, while he invests Merlin throughout with superhuman powers, and does not even mention any mechanical assistance in the transmission of the blocks of Stonehenge. Traces of romantic influence come to view also in the Chronicle called Domes Normannicae (c. 1170; ed. R. Howlett, Chron. of the Reigns of the Kings of England, etc., London, 1834-39, ii. 539-573), which, it may be stated, contains many allusions to the section of Merlin’s prophecies that relate to the first half of the 12th century.

In Layamon’s Brut there are a few additional touches to the story of Merlin, such as Merlin’s explanation that the immediate cause of the fall of the tower was that Wacea the wreathing or building was the fighting of two dragons with one another at midnight. In this narrative, again, there is a
marked emphasis on the supernatural conception of Merlin, which shows itself on the side both of supernatural knowledge and of supernatural power. There are some points of contact in the narrative with the Merlin of the stories of the 13th and 14th century, in the description of the dream Merlin has in a forest, at Uther's instance, when he wished for his aid to Igerne as his mistress.

In the Latin hexameter poem called *Gesta Regum Britanniae* (ed. F. Michel, London, 1892), Merlin is entirely supernatural, as, e.g., where he transmits the stones to Stonehenge by means of magical songs, or where he magically changes Uther's form. Merlin, too, gives Arthur new strength in his contest with Frollo. Here, again, there is a link with the *Vita Merlini*, where it is said that Arthur was conveyed to an ever-to-be-remembered island, on which a royal maiden dwelt. In the case of other chronicles, some omit the prophecies or certain of them, as, for instance, Alfred of Beverley (c. 1150) ed. T. Hearne, Oxford, 1710), who omits most of them, and Richardus Clinicus (in 1162), who omitted the prophecies in the first edition of his *Vita Merlini* (ed. L. Murratori, *Antiquitates Italicæ mediæ ævi*, Milan, 1782-90, iv. 1079-1104), but who found it advisable to include them in his second and third editions. Again, it is clear that Geoffrey's versatility and his tendency to exaggerate the powers of Merlin; e.g., Ralph Nigre in his *Chronicon* (ed. R. Anstruther, London, 1851) has a mere allusion to the Merlin's transportation of the stones of Stonehenge.

There are, as already stated, traces in Giraldo's *Cambriscis* of an attempt at the fusion and reconciliation of the Caledonian tradition and that of Geoffrey, in his theory of the existence of two Mervins. Conde (B. 9), to the effect that Merlinus Caledonius was with Caractarh, while he knows of the madness of Merlinus Caledonius, but attributes it not to remorse at having killed his sister's son, but to fright at the sight of an apparition in the air. Giraldo, like many of the chroniclers who succeeded Geoffrey, succumbed to the temptation of bringing Merlin down to the time of King Arthur. One story, which Giraldo records (I, v. 8, 15), that Merlinus Caledonius had been found near Newn in Carnarvonshire, is probably connected with the legend that associated him with the island of Bardey. Merlin's burial appears to have been located in several stories during the 14th century. "Merlinus Grave" was pointed out, while in Scotland it was located at Drumelzier, anciently Dundeller, in Tweeddale.

The wide-spread popularity of the prophecies of Merlin may be gauged by the fact that two Latin poems appear to be extant embodying a number of them from the pen of a Scandinavian monk called Gunlabus Leith of Thingeywirn, while a similar MS in the Copenhagen Library was translated into English, with the History of Hulihan Einar, and published in London in 1718 (see San-Marte, *Die Sagen von Merlin*, Halle, 1853, p. 18).

In 1185 a commentary on the prophecies of Merlin by Alanus de Insulis, and in 1596 it was published at Frankfort. In this commentary Alanus testifies to the existence, in the Britanny of his day, of a strong belief in the prophecies concerning the future of Cornwall, a disciple of Peter Lombard, commented on these prophecies publicly in the University of Paris (see *Prophetie Merlini cum expositione Johannis Cornutensis*, ap. K. J. Greath, *Spiegle, Vaticin.,* 1595). For the rest, the prophecies continued, in Britain and in France, well into the 17th cent., if not later, and the Council of Trent sought to counteract the considerable effects of this popularity by putting the prophecies on the Index. A similar attitude of mind to that of the Council of Trent is reflected in the work called *Vincentii Bellowensis Speculum Historiale* (xx. 20). For English editions of the Life and Prophecies of Merlin see the Cambridge Modern History, 1880.

4. Merlin in romance.—Merlin first comes to view as a character of romance proper in a poem of which only a fragment has come down to us, probably dating from the 13th cent., and usually attributed to Robert de Boron, and printed by Ulrich, in their ed. of the *Huth Merlin*; see list. This poem was the basis of a French prose work which forms the Romance of Merlin, and this, again, is thought to be part of the work of the same author. It has come down to us in two forms, the first being generally called the 'ordinary' or 'vulgate' Merlin, while the second is known as the *Sole de Merlin*. Of the latter work Malory's first four books are an abridgment, and from it is derived one of the minor Arthurian stories, namely that of Balin and Balan. In the Merlin romances, as in the later developments of the Arthurian story (see *Arthur, Arthurian Cycle*), there is an ecclesiastical or theological development of the leading motive which led to the birth of Merlin being the conspiracy of the world of demons to produce an Antichrist, who would be the means of rending the world into two others as is the Roman Catholic Church, and two as is the Church of England. Thus the birth of Merlin is represented as a kind of counter-incarnation, and, through the machinations of the demons, he is brought into the world as the child of a woman whose family has been ruined by the evil spirits of her husband, and who has been betrayed by a demon. Providentially, however, Blaise, the confessor of Merlin's mother, baptizes the child as soon as it is born, and thereby brings it into the Christian fold. The child, nevertheless, retains, though a Christian, the demonic gifts of magic and prophecy, and these powers he puts to beneficial use even in his infancy, by saving his mother's life and startling her accusers by revealing their family secrets. The narrative then proceeds on the lines of Geoffrey's *History* in the account of his relations with Vortigern, Ambrosius, and Uther. After this, Arthur is represented as having been committed as an infant to Merlin's care, and Merlin hands him over to Antor, who brings him up as his own son. It is Merlin who reveals to Arthur the fact that he is the son of Uther Pendragon and Igerne, and it is to Merlin that Arthur looks for guidance and counsel. At *Merlin's Grave* was pointed out, while in Scotland it was located at Drumelzier, anciently Dunmeller, in Tweeddale.
introduction to the prose Lancelot and to the Arthurian cycle generally.

The point of view that has already indicated is to be found first in the fragmentary poem, attributed to Robert de Boron, giving, however, only the introductory part of the story, in a single MS of the Bibliothèque Nationale, and from there passed on to the present version on this poem in combination with the early history of the Grail, which bears the name Joseph du Graal. In two cases the Merlin stories form a small Arthurian cycle through the 5th century, and a short Artus, Of the ‘ordinary’ or ‘vulgate’ Merlin, which is a long and elaborate romance, several copies are extant. This story is continued in two forms, each of which has survived in a single MS. One of these is called the Huth Merlin, after the distinguished patron of learning, Alfred Huth, who bore the expense of its publication. It is a version of which Malory made use in his rendering of the story, and the Spanish and Portuguese translators also based their versions upon it. The other sequel is MS 337, also in the Bibliothèque Nationale, and is called by Paulinus Paris the Livre Artus.

In English the earliest form of the Merlin Romance is a metrical translation called Arthur and Merlin, which was made from French at the beginning of the 14th. century, and a later translation, generally known as the great prose Merlin, was made about the middle of the 15th. century. Spenser (Faery Queen, canto iii.) alludes to Merlin, and there is reference to his decease by the Lady of the Lake in Ariosto (Orlando furioso, canto iii. et seq.) On dramatic development of the Merlin story is doubtless mainly due to the desire of the French troubadours to bring the legend of Merlin, like those of Arthur and Tristan, into harmony with the spirit of civilization and culture of the time. In the 10th. century, Tennyson utilized the Merlin legend in his Idylls of the King, and gave a version of his own of the character of Viviane.

5. Merlin in satire.—Like the other medieval romances, that of Merlin tended, in the eyes of a more critical age, to provoke satire, and so it is not strange that Cervantes ridicule and parodies in his Don Quixote, while Rabelais also parodies the story of Merlin in his Pantagruel. His prophetic prophecies are also in the same strain, composed about 1533, while in his Gargantua he exposes the life and prophecies of Merlin to further ridicule. The comic spirit of the Divine Comedy or Rabelais and that which delighted in the prophecies and romance of Merlin illustrates the change from the characteristic mental attitude of the Middle Ages to that of later times.

MESMERISM.—See HYMNOM.

MESALISAN.—See Eucharites.

MESIAH. I. SCOPE OF THE ARTICLE.—Much confusion is caused by the fact that the term ‘Messianic’ is used in a much wider range of meaning than ‘Messiah.’ It has come to be applied by Christian writers to everything in the OT which is thought to refer, however vaguely, to the coming and work of Christ or to the Church, while, even where this implication is wanting, it is given very generally to all passages which speak of the hope of a better and glorious future. Messiah, on the other hand, refers definitely to a person, and it would seem, therefore, that the term ‘Messianic’ should be confined to passages which imply the coming of an extraordinary person, normally regarded as a king, who is to be in a special sense sent and endowed by God, and whose advent is to mark the end of a world-age. It would, indeed, be an advantage if the looser use of ‘Messianic’ could be dropped; it suggests that, just as, in the midst of a Golden Age, the principal and original element was the expectation of a Saviour-King, which might here and there be ignored, or which might be assumed to be implied even when it was not actually mentioned. In fact, however, the reverse is the case; the oldest and the most general expectation is that of the era of happiness, and with this the hope of the Messiah was sometimes combined in later times. For it is quite clear that a majority of the OT passages which deal with the hopes of a glorious future do not speak of the King of the future at all; Jehovah Himself is the agent of deliverance and of judgment, and it is Saviour and Releaver in the OT; the nation as a whole, or the dynasty of its kings, is the object of His favour. In such cases the Christian interpreter may have good ground for maintaining that, from the religious and ethical point of view, the Saviour of the world was realized in the coming of Christ, but historically they are not the same as the expectation of a Messiah, and can be called Messianic only in the lax sense. A writer who, as has already been shown, is led to this conclusion will, therefore, be confused in the consideration of the Messiah in the strict sense, and the term ‘Messianic’ will have a meaning only in connection with him. It may be added that, while eschatology does not always imply a Messiah, neither does the...
MESSIAH

Messiah himself always appear in a strictly eschatological setting.

I. ORIGIN OF THE WORD.—The term 'Messiah' represents the Heb. Mššh, the Aram. Mššhũ, 'anointed one.' It is used quite generally in the OT as an epithet, both of priests (Lv 9, 22) and of kings (1 Sm 10, 13, 1 S 16, 14, 1 Sam 16, 15). It is also applied to the curses of Saul (1 Sm 15, 29), while in Is 42, 1 it is applied to Cyrus. Nowhere in the OT does it occur in its later technical sense, which is first found in Enoch and Psalms of Solomon (see below, IV, The OT language).

Dalmann suggests that Messiah in its later sense is a shorter form of 'Jhri̇sh's Anointed,' and that no single passage of the OT was responsible for its adoption.

1. Christ is, of course, Xpws, the Gr. equivalent, whom and whom it is, that is, the Son of the living God, in the synoptic gospels.

In view of discussions connected with its use in the NT, it is well to note that it is sometimes used without the article even when it is an epithet; it is, in opposition to a proper name, e.g., 1 S 26, 18.

The general significance of anointing is discussed in the art. under that heading. In view of the fact that 'Messiah' did not become a technical term till late, the primitive meaning of anointing is quite irrelevant in considering the ideas associated with the figure; e.g., even if it be true that anointing was originally transferred from the image of a god to the king, we cannot argue that the Messiah was regarded as a divine being. Anointing had come to denote the two ideas of consecration and endowment.

III. TEACHING OF THE OT.—In order to discover the general trend of the OT teaching it is essential first to discuss, however briefly, the exegesis of the separate passages which speak, or may be reasonably thought to speak, of the coming of a Messiah; in no other way is it possible to realize the precise extent and nature of the hope. The examination is complicated not merely by difficulties of interpretation, but also by questions as to authenticity and date. Here it should be noted that, if critics reject as late certain passages which refer to the Messiah, it is by no means always from any a priori unwillingness to allow the Messianic hope to be of early date or to find it in the OT language any Jewish king ever to be a Messiah. External evidence such passages seem to be in consistent with the context. In many cases they presuppose the Exile in a way which seems to be impossible in a pre-Exile writer; in others the note of hope and promise seems to nullify the message of judgment and punishment which occupies the central place. Here the criterion to be applied is a very delicate one. How far did threats and promises actually exist side by side in the message of the same prophet? At what point do the promises become so contradictory of the threats that they can be regarded only as later insertions? However these questions may be answered in any particular case, it may not be superfluous to point out that, when a passage is regarded as 'unauthentic' and late, it does not lose its value, either historical or religious; and it still remains evidence of the Messianic hope, only the side from that of which it is commonly assigned. The principle being admitted that the prophetic books are composite works, comprising elements of various periods, each case must be looked at individually.

I. The data.—It will be well to begin with IS 7

1 The Words of Jesus, p. 291; see p. 292 for later Jewish use of the term.

as the passage which is most clearly typical of the OT belief, at any rate on one side. It seems to be Deuteronomic in tone, and is hardly be earlier than the reign of Josiah. Its main purport is to insist on the permanence of the Davidic dynasty (vv. 1-3). In its context this is contrasted with the fall of Saul's line (v. 16), but we may also assume an implied contrast with the various short-lived dynasties of the Northern Kingdom (cf. Hosea 8). The passage itself does not speak of any single pre-eminent or final successor, but in view of the messianic character of the language, and in no way exclusively prophetic, but precisely in proportion as the actual occupants of the throne proved themselves unworthy would it be natural to look for some one king who could realize the ideal. And, if at the same time there were other expectations of a wonderful Saviour, the two lines of hope would easily coalesce. At any rate, the personal Messiah in the OT is nearly always associated with the Davidic dynasty, and the references in the earlier prophets, which claim to be regarded as Messianic are all connected with it. They may, indeed, be earlier than 2 S 7, and in any case this passage will hardly be the origin of the hope; it rather points forward to literary form, something which already existed.

In Am 9:1-11 there is a promise of the restoration of the Davidic dynasty, with no reference to a personal Messiah, but the passage is almost certainly an Exilic addition (so J. Delitzsch and Marti, G. A. Smith, etc., though S. R. Driver defends it with some hesitation).

In Hosea it may not be necessary, with Marti and Volz, to reject all passages which speak of future happiness, but the only verse which is in any way Messianic in the strict sense is 3, 'Afterward shall the children of Israel return, and seek the Lord their God, and David their king.' Here, again, the stress is laid on the Davidic dynasty; but either the whole verse or at least the words 'David their king' are of doubtful authenticity.

The crux of the question with regard to early Messianic prophecy is reached when we come to Isaiah.

(c) Is 7:14.-Until a new factor was introduced by considerations derived from comparative religion, it was becoming generally agreed that the passage had no reference to the birth, miraculous or otherwise, of a Saviour-child or king at all. As Gray points out, the promised sign is not necessarily a marvel or miracle (cf. Ex 3:1, 1 S 16, 11), but is to be found in the person of our Lord, as predicted. 'By the time a child shortliy to be born reaches a certain age the promised deliverance will have come. His name Immanuel does not imply the divinity of the child, or even that he will play a role as God's agent in the deliverance (as a matter of fact, there is not the least hint that he does anything of the sort), but, after the common Hebrew usage, expresses the point of view of the parents; it is the reverse of Jehovah (1 S 4:3). H. Grossmann, however, and others argue that the passage is intelligible only if we suppose an already existing belief in the advent of a divine Saviour-child, who is to be born mysteriously, and who was presented to the world as the 'sign of prophecy,' the mother spoken of in the tradition; 'butter and honey' are the food of the gods, as in Iranian and Greek myth; and the whole passage

* Cambridge Bible, 'Joel and Amos.' Cambridge, 1897, p. 129.

Reference should be made to the very full and excellent discussion of this and the other Islamic passages in C. B. Gray, ICC, 'Isaiah.' Edinburgh, 1912.

has a mythological background. The theory has also a Semitic origin, but its main hypothesis cannot yet be regarded as proved (see below, 2 (d)). In this case it rests on the falsely assumption that the sign must be of a miraculous nature. Further, neither the article nor the noun in Am 5:22 is in the original text, and must be put upon it. If we reject the reference to the wife of Isaiah or Ahaz or to some other particular mother, the definite article may be generic as in Am 3:5, while it may not be original. (e) The passage may not be originally connected with, an eschatological passage in ch. 4 (cf. Is 2:2) where there is no mention of a Messiah. It speaks of a messianic king born at Bethlehem Euphrates, and, therefore, Davidic; in spite of his humble origin (so G. A. Smith, *The Twelve Prophets*, London, 1896, l. 413 ff.), he is to be a great and apparently a peaceful ruler. Is more than this hinted at? In particular, does v. 25 imply pre-existence or merely the antiquity of the family from which he springs? And what is the meaning of *she which travaileth*? Gressmann and others explain it of the divine mother, and J. M. P. Smith admits this, but regards the verse as a late gloss, implying a messianic interpretation of Is 7:14; the change of person from both v. 25 and v. 4 is very awkward, and so is the contradiction between Jehovah's abdication of His people and their turning to Him. But, even if a mysterious birth is hinted at, there is no suggestion that the mother is a virgin or that the child is in any way connected with Immanuel. Whatever the date of the verse may be, it follows some of the older commentators (Calvin, Orelli, etc.) and sees in the phrase a reference to the birth-pangs of Zion in Is 4, where exactly the same word is used for *travail*, while in both passages the return of the remnant is referred to (cf. Hos 13:1, Is 26:1, where the same figure of travail is used). She which travaileth is, therefore, Zion personified. (e) Verse 5 certainly implies that there is a *man* that shall be an Exilic type. (d) Verse 25 seems to belong to a different prophecy (tr. *This*—not *This man*—*shall be our protection*). The Messiah drops out, and the confidence of the passage rests on a different basis.

In Jeremiah the main stress is laid on the continuance of the Davidic line, and this figure prominently in the book as we have it—a feature which is significant in view of the Denteronomic origin of the fundamental passage 1 S 7. In 23 ff. we have the righteous Branch or Shoot (גosaic, not נזר, as in Is 11), with the name Jehovah Sid'qahu, *The Lord our Righteousness*, a name   ironic to the picture of the Messiah as drawn in many apocalyptic passages; in particular, the term *Branch* became technical. Here, again, the Messiah is Davidic, with a special endowment of the Spirit. We note, too, the stress laid on the return of the Golden Age—a feature which may be derived from foreign mythology. At any rate, we have the Davidic Messiah in a clearly eschatological setting; v. 5 seems to imply a date after 588 B.C.; the metaphor is that of a tree cut down to the stump and sending fresh shoots, which would describe exactly the revival of the kingdom after its ruin at the fall of Jerusalem.

**Messiah** is peculiarly difficult. Omitting minor questions of reading and exegesis, the main points are as follows: (a) **The passage** may not be originally connected with an eschatological passage in ch. 4 (cf. Is 2:2) where there is no mention of a Messiah. It speaks of a messianic king born at Bethlehem Euphrates, and, therefore, Davidic; in spite of his humble origin (so G. A. Smith, *The Twelve Prophets*, London, 1896, l. 413 ff.), he is to be a great and apparently a peaceful ruler. Is more than this hinted at? In particular, does v. 25 imply pre-existence or merely the antiquity of the family from which he springs? And what is the meaning of *she which travaileth*? Gressmann and others explain it of the divine mother, and J. M. P. Smith admits this, but regards the verse as a late gloss, implying a messianic interpretation of Is 7:14; the change of person from both v. 25 and v. 4 is very awkward, and so is the contradiction between Jehovah's abdication of His people and their turning to Him. But, even if a mysterious birth is hinted at, there is no suggestion that the mother is a virgin or that the child is in any way connected with Immanuel. Whatever the date of the verse may be, it follows some of the older commentators (Calvin, Orelli, etc.) and sees in the phrase a reference to the birth-pangs of Zion in Is 4, where exactly the same word is used for *travail*, while in both passages the return of the remnant is referred to (cf. Hos 13:1, Is 26:1, where the same figure of travail is used). She which travaileth is, therefore, Zion personified. (e) Verse 5 certainly implies that there is a *man* that shall be an Exilic type. (d) Verse 25 seems to belong to a different prophecy (tr. *This*—not *This man*—*shall be our protection*). The Messiah drops out, and the confidence of the passage rests on a different basis.

In Jeremiah the main stress is laid on the continuance of the Davidic line, and this figure prominently in the book as we have it—a feature which is significant in view of the Denteronomic origin of the fundamental passage 1 S 7. In 23 ff. we have the righteous Branch or Shoot (גosaic, not נזר, as in Is 11), with the name Jehovah Sid'qahu, *The Lord our Righteousness*, a name ironic to the picture of the Messiah as drawn in many apocalyptic passages; in particular, the term *Branch* became technical. Here, again, the Messiah is Davidic, with a special endowment of the Spirit. We note, too, the stress laid on the return of the Golden Age—a feature which may be derived from foreign mythology. At any rate, we have the Davidic Messiah in a clearly eschatological setting; v. 5 seems to imply a date after 588 B.C.; the metaphor is that of a tree cut down to the stump and sending fresh shoots, which would describe exactly the revival of the kingdom after its ruin at the fall of Jerusalem.
stress on the presence of Jahweh Himself. In the cedar twig planted on the mountain of the height of Israel may be a reference to the prophecies of Isaiah (1) and Jeremiah, while 'to the north' is perhaps Shiloh prophecy of Gn 49:10,11. The other hand, the idea of the ideal State of chs. 40 ff. the Prince is only one of a series of kings, and plays a very subordinated role in the so-called 'apocalyptic' vision of Joel. The general impression given by Ezekiel is that he was acquainted with popular hopes of an individual Messiah and, in particular, with the promises attached to the Davidic dynasty; these were too strong to be entirely ignored, but the priestly prophet himself had little real interest in them.

In Hag 2:29 Zerubbabel is to be the ruler in the Messianic Age. So in Zec 6:13 he is the 'Branch and the servant of Jahweh. The importance of the passages is twofold: (a) we have the first undoubted example of the identification of a historical person with the Messiah; (b) the reference to the Branch shows, even more decisively than before, the idea of the royal line as the Messiah.

Further, we must allow for the possibility of the writer of Ps 2:7 which stands in the writings of a particular prophet.

Further, we must allow for the possibility of the writer of Ps 2:7 which stands in the writings of a particular prophet.

As Ezr 3:8 belongs to another and a later prophecy. The verse may have been the symbol of royalty (cf. Gn 49:10), it here stands for humility. The King is victorious over his enemies ('saved' rather than 'having salvation'), but the stress is on the peaceful character of his rule. He is not explicitly Davidic.

In the Psalms we are concerned with a group of royal Psalms, especially 2, 45, 72, 89, 110, 118, 132. Here we are met with almost insoluble problems as to date, since there is not even the a priori. The problem has been raised in the case of passage, which stands in the writings of a particular prophet. Further, we must allow for the possibility of the writer of Ps 2:7 which stands in the writings of a particular prophet.

In those Psalms we find startling language used of kings, the extent of their dominion, and their power, usually with stress on the Davidic covenant. It is common ground that such language was never strictly true of any Israelite king in either kingdom. Are these Psalms, then, addressed to the expected Deliverer of the nation, i.e. to the Messiah? The objection to this view is the strong impression made in most cases that a definite living king is addressed; e.g., Ps 35 is clearly an actual marriage song and is addressed to a young woman. And, in some of these Psalms are to be understood historically, the general similarity of language suggests that the same principle is to be applied to all.

A. F. Kirkpatrick. In fact, argues that all have a practical historical reference, of course without prejudice to their spiritual application. In interpreting the language we are helped by the presence of the Hophath, or 'Court style,' to which Greimann and his earlier references, Exaggerated language of this kind was a regular feature of the court addresses and poems in honour of Oriental monarchs; cf. the language of Ps 21:13, which is certainly addressed to an actual king. It is possible that this Hophath is in Israel, and perhaps elsewhere (see below, 2:16), included elements derived from the Messianic expectation. If it was believed that some one must rule Israel in Messianic days, he should be the greatest of all, it was natural for the admiring of any king to suggest on his accession that he and no other was the long-desired. In this case the Psalms may be called anti-Messianic, and at least illustrate the nature of the Messianic hope.

A warning against too strict an interpretation of the Hophath is to be found in the phenomena presented by the Babylonian hymns. We find Nnmar addressed as 'begetter of gods and men,' King of kings to whom a judge superior to him; but then precisely the same flattery is offered to Assur, Ishtar, or Belo.

As R. P. Hamilton points out (The People of God, London, 1913, p. 8), 'the inscription of universal dominion to so many of them (as the gods) was merely a piece of inexpensive flattery which no one mistook for serious truth. . . . It was a sound policy to avoid too much partiality. In the same way we must beware of laying too much stress on the uniqueness, majesty, or finality ascribed to the king addressed in any particular Psalm. Its language, taken literally, may seem to be applicable only to a unique Messiah, but in the mouth of any Oriental its application is less strict or exclusive.

The following points are further to be noted.

(i.) As in the Prophets, the stress is on the Davidic covenant; 2:7 seems to be in the poet's eyes. This is especially marked in Ps 89, which refers to the nation and the dynasty, the nation itself being personified in v.46 (cf. Ps 80:2). So 'firstborn' in v.5 seems to refer to the description of Israel in Ex 4:24,15. Ps 2:7, on the other hand, suggests a parallel with 2 Isai. The Psalm as a whole is a prayer for the restoration of the monarchy and the nation, rather than for the coming of any particular king who is to mark a new epoch. The same applies to Ps 118, though 'horn of David to bud' (v.15) may refer to 'the Branch.' Ps 45, however, is not Davidic (Briggs and Selina ascribe it to N. Israel), nor is Ps 110 except in the title.

(ii.) The language of Ps 2:7 has a bearing on later Messianic ideas, terms being used which afterwards become titles of the Messiah. As they occur in the Psalter they are, however, hardly technical; they are not bound up with any particular figure or king to the exclusion of all others. We have 'anointed' (Ps 2:6,8,11, 120:1) used in its general sense (see above, § II.), 'son' (2:7), probably not in 2:2, 'firstborn' (89:38), while 'thine throne, O God' (44:2), may imply descent.

(iii.) Ps 110 stands alone in speaking of a priest-king, who is not, however, Levitical; it is very generally regarded as Maccabean, referring to Simon (see, however, Briggs, ad loc.).

There remain a few other OT passages, mainly fragments of poetry embedded in the historical books, which require brief notice.

Ps 49:1-15—It may be taken for granted that Shiloh is not a personal title of the Messiah. The first hint of such a view is found in the Talmud (Sanh. 99b), and it was not so used till the versions of the 16th century (Driver). The reading and interpretation are both doubtful, but it is possible that the passage is Messianic—it is well known that the question arises whether the Messiah is to be a king or not. Such passages have been understood in various ways.

* So Gessmann, p. 235. This interpretation, however, which is that of F.X. and H. K. as likely to occur in the first example of the Levitical Messiah (see Driver, Cambridge Bible, ad loc.).

* E. Selina, Der alttestamentliche Prophetenname, Leipzig, 1911, p. 199 f.

* The text is in disorder; Zerubbabel must have been originally 'crown' in the plural and 'then' both in v.12. Possibly when the power was centred in the high priest, and there was more intercourse with the person of the Levitical Messiah (see Driver, Cambridge Bible, ad loc.).

* E. Selina, Der alttestamentliche Prophetenname, Leipzig, 1911, p. 199 f.
verse is a late addition on the basis of the Isalic prophetes (Driver), or whether, with Gunkel, Gesammn, and Sellin, we are to regard it as a fragment of pre-prophetic eschatology, not specifically Davidic. But it is a strange euphemism to say that Jehovah shall rule only till the great one from the north dies, for if the reference is simply to the Davidic dynasty; Jehovah is to be independent till it is merged in the kingdom of its hero.

Of Gn 3:15 the most that can be urged in the way of Messianic interpretation is that the passage is a prediction of the ultimate victory of man, the seed of the woman, in the conflict with evil, typified by the serpent. The ‘seed’ cannot be understood as referring to any definite descendant of Adam in the singular. The same applies to the other predictions in Genesis with regard to the seed of Abraham, where the thought is of the nation; the exegesis of St. Paul in Gal 3:29 is accordingly untenable.

Nu 24:17 is usually understood as referring to David’s conquest of Moab. But, on the ground that ‘star’ suggests a semi-mythological figure, Sellin and others find in the passage a trace of a priestly Messianic hope; others regard it as Messianic but later. Note that the passage is certainly corrupt at the close.

De 23:15 may refer only to the dominion of Ephraim (the tribal kingdom to the N. Kingdom), but Sellin again urges that the hyperbole is too strong and that we have an echo of an early Messianic hope, transferred to Ephraim. In later times the passage influenced the idea of the dominion of the house of Joseph.

In Da 9:25-26 (applied Messianically in Lc 1:32 72) is clearly a promise of a succession of prophets, not of a single and final prophet.

A word must be said with regard to the Servant passages of Is 42:1. Very few critics now consider these to be Messianic in the strict sense, the reference being either to the actual nation or to the ideal Israel. This is so clear in the early songs that it must also hold good of Is 53; this is best understood of the sufferings of the Exile, which are seen to have a redemptive value not only for the nation, but for the world as a whole.8 (Gissman, p. 117) However, on the ground of the obscure and oracular character of the language, argues that the writer is using already existing material which would be understood by his readers. Is 53 is a mystery hymn, addressed to a dying and rising God, and therefore interpreted as an eschatological figure parallel to that of the Messiah, who is here neither Davidic nor specifically a king. It cannot be said that there is any real evidence for this view (for a criticism see Clemen, p. 140). Nor, again, is it possible to find a suffering God or Messiah in Zec 12:10, which clearly refers to some historical martyr.

In Da 7:13-14 there can be little doubt that the figure of a ‘son of (a) man’ appearing ‘on’ or ‘with the clouds of heaven’ is, in the context, a symbol of Israel itself, a human being in contrast to the ‘beasts’, the hostile world empires. But it is equally clear that the expression came to be understood of a personal Messiah (see below, IV. 2 (d) (2)), and it is urged with some reason that it did not originate with Daniel, but had a history behind it. The figure is introduced as familiar and identification is given in the ch. of the coming with clouds, which may, therefore, be assumed to be a recognized element in the concept.

Gissman believes that we have a figure of foreign origin, parallel with the Messiah and afterwards identified with him. To Sellin he is the Messiah transformed, the ‘Urmenschen’ or ‘primal man’, of paradise, who is to return once more; Clement is inclined to agree with this explanation of the origin.

In 9:26 the references in the A.V. to the Messiah are certainly misleading. In 1:26 ‘the anointed one, the prince’, is either Cyrus or Joshua; in 1:26 he is Omri the high priest.

2. Survey of OT teaching. (a) From our review of the OT passages it becomes clear that the expectation of the Messiah in the strict sense occupied a comparatively subordinate place.3 The fact that a large number of books and passages which deal with the future he is not mentioned at all is of the greatest significance as showing that his coming was not an essential or invariable element in the national hopes; e.g., he is never mentioned in Zephaniah, which is entirely eschatological, nor in Joel. It cannot be assumed, as the Christian interpreter often unconsciously assumes, that the Messiah is in such books a remote possibility. This form of messiahship is, in fact, no hint of him, and often no room for him. Furthermore, even in books or groups of writing where we have found possible references to him, there are many passages where he is ignored (e.g., in Isaiah). The idea is introduced suddenly and sporadically and as suddenly dropped.

Jehovah Himself is always the Redeemer and Savior, and this is the essential and unvarying element in the OT teaching; the stress is on His coming and manifestation and not on that of any representative.4

(b) There are constant references to hopes connected with the dynasty of David, and these sometimes take the form of the expectation of another David, a specially endowed ruler. During the degradation and after the fall of the monarchy the earlier period was naturally idealized and became to the nation its Golden Age, while it became more and more necessary that he who was to revive its glories should be regarded as no ordinary man, but as the special representative of Jehovah.

(c) The way in which the references to the Messiah are introduced and the fact that they are so frequently enigmatic in form suggest that the Messianic belief was, above all, an element in the popular religion. It is wanting in the Psalter and Chronicles, and, as we saw, Ezekiel seems to have been somewhat suspicious of it; the prophetic do not use it consistently, and it appears and disappears in an extraordinary way. Its connexion with the kingdom would concern it to the mind of the people, while religious teachers could avail themselves of it only with caution and reserve, though it could not always be entirely ignored. It is obvious that these were, in fact, the features which determined Christ’s attitude to the hope in later times.

(d) In recent years the whole subject has been reconsidered in the light of comparative religion.5 Gunkel and, especially for our present subject, Gissman have urged that Jewish eschatology, including the Messianic hope, is not a new development in the prophetic or Exilic periods, but that it goes back to a far earlier age and is really not specifically Jewish at all. They argue that the hope of a semi-divine Deliverer, or Heilbringer, 

1 P. 300 ff.; 2 P. 177; 3 P. 82.
4 See, for a full discussion of the traditional and other interpretations, Driver, ‘David’, ad loc.
5 See E. Kautzsch, HDB v. 639, 735.
6 Dalman, p. 265; 7 Sellin, p. 162.
was a common possession of the ancient world, especially in Egypt and Babylonism, and that the OT language is intelligible only when understood as one expression of that hope. Sellin especially argued that this description of foreign origin, as regards the Hebrew and Babylonia, was a false belief, which they do not in any way carry it back to a dim antiquity.

A similar verdict of 'not proven' must be passed on the hypothesis of a foreign origin (with regard to foreign influences and also in the case of parallel and partial parallels, especially as a later period, the case is somewhat different). The preceding discussions have already dealt with many of the points. Sellin discusses the supposed parallels in some detail, and concludes that there is no real parallel to the expectation of a divine deliverer to come at the end of history or to usher in a new era. The most that we find is a yearning for the return of the Golden Age of Paradise, together with the courtier's flattery applied to some particular king that he will be the one to bring this about—e.g., the famous Letter to Assurbanipal. A. H. Gardiner has shown that the Leyden Papyrus has been misinterpreted and contains no reference to a 'Messiah,' while the Golenischeff Papyrus refers to a contemporary king Amen-em-het. In all these cases we have examples of Hophet, with the natural hope that with a new nation, and becoming king must have originally referred to a divine Messiah; the latter, Gunkel and Zimmermann believe, is Babylonian in origin, while the same may be the case with the Hophet in general. He views of Jahweh are fascinating and has been argued with great ingenuity, but it has been generally felt that it lacks definite proof when we come to the details, whether of the OT passages or of the supposed parallels. As we have seen, the interpretation of the crucial passages is very doubtful. The Immannuel passage does not seem to refer to the Messiah hope at all, while, if she which travaileth in Micah is understood of Zion, the idea of a mysterious origin disappears; the Shiloh passage is open to so many interpretations that it is very unsafe to build on it. It is quite true that with regard to eschatology in general (and it must be remembered that we are considering starts from eschatology and not from the Messianic hope in particular) the prophets from Amos onwards give the impression of dealing with ideas already to some extent familiar, and it is evident that the same is something the same is something the same is something the same is something the same is something the same is something the same is something the same is something the same is something the same is something the same is something the same is something the same is something Messianah

A similar silence is found in some of the apocalyp
tic literature, and here silence is the more
significant since the writers are occupied
with the most positive hopes for the future. The
Messianah does not figure in Ezek. i.-xxvi., lxixi.
xxxii., xxxiii.-lvii., except in cv., where ‘my Son’
is suddenly introduced; Charles regards the chap-
ter as an independent prophecy, given by the picture
of the Golden Age in Jue. 1. 29, xiii. 29 there
is no Messianah; in xxxii. 18 he figures, though not pro-
minently, as the descendant of Judas and as ruler
in the temporary Messianah kingdom; Charles
however considers the clause to be an interpo-
lation. In the Asumption of Moses, which comes from
a ‘Pharisaic Quisitat,’ there is again no reference ;
Taxo (ix. 1) cannot be the Messianah; 
Jahweh Himself is the avenger, and Moses the only
mediator. The Messianah is in the same way ignored
in 3 and 4 Mac., the Secrets of Enoch, the Letter of
Aristeo, and the last parts of the Apocalypse of
Baruch.

(b) Books where the Messianah is mentioned.—In
Enoch lxixii.-xx., (161-161 B.C.) the Messianah ap-
ppears after the judgment as the ‘white bull,’ a
human figure, with no very active or definite
name. In (c) however (xxviii.-lxixii., 94-66 B.C.)
we have material especially in xlvii.,
xxxvii., the central figure, the pre-existing Son
of man, judge, ruler, champion, and revealer.
Beside Son of man, he is called ‘the Flower One’
and the ‘Righteous’ titles which appear in the NT.
‘Messianah’ or ‘His Anointed’ also occurs in xlvii.
10, li. 4, and Charles regards these as the first
example of the use of the word as a technical
title, though Solomon strikes out the passages as interpo-
lations.

In the Testaments of the Twelve Patriarchs the salient
point is that the Messianah is descended from
Lavi, and is a priest (cf. Ps. 110); see Test. Reb.
vii. 12, Test. Levi, xiv. 14, xxiii. 1 ff., etc. In
Test. Jud. xxiv. 51, however, we find the usual Messianah ben Judah; so perhaps
Test. Naph. iv. 5. According to Charles, the
former conception is the original, and the book
dates from 109-105 B.C. the palmy days of Hyr-
canus, the Maccabean dynasty, which came of a
priestly family, being then regarded as Messianah.
But, after the breach between it and the Pharisaic
and the infamies of Hyrcanus’ successors, addi-
tions were made to the book, reverting to the
ordinary view. The conception of the Messianah is
that he is a mediator, intercessor, savior, with
power over evil spirits, and bringing sin to an end;
the ethical note is strongly marked.

In the Psalms of Solomon (70-40 B.C.) there is no
reference to the Messianah in 1.-xvi., though the
future deliverance is dealt with. In xvii. and
xviii. however, there is a very important descrip-
tion. He is Davidic in contrast to the non-Davidic
dynasty of the Hasmonaen; though himself
human, he comes with the power and special end-
worments of God; he is to conquer the nations and
purge Jerusalem of sin. The whole picture is full
of enthusiastic and vigorous touches, but there are
no transcendent conceptions. The end of
and the duration of the Messianah’s kingdom are not
clear, but ‘throughout his days’ in xvii. 42 suggests
that he is regarded as mortal. He is called ‘His’
or ‘the Lord’s Anointed,’ the title being here
certainly a technical one, its first occurrence, if the
passages in Enoch are rejected.

In the Sibylline Oracles, ii. 49 (165-51 B.C.), we read
‘of a holy prince, he who is reign over the
whole earth for all ages, though somewhat inconsist-
ently, judgment follows;’ ii. 352 (c. 140 B.C.)
speaks of a king from the high heaven by God who
is to bring peace to every land. In the later fifth
book (before A.D. 130) we have (in 108) again a king
sent from God who apparently destroys Nero redi-
iciousus (Antichrist), while 414 & c. speak of a
‘man’ from the realms of heaven, who destroys
evil-doers and sets up the new temple

The Fragment of a Zadokite Work, first published by S. Schechter in 1916, is placed by Charles
in 18-8 B.C. and by most scholars before A.D. 70,
and seems to have come from a reformatory party
among the priests. ‘A Teacher of righteousness’
has already appeared (i. 7, etc.), and a Messianah is
expected (iii. 10, viii. 1, ix. 10, 59, xv. 8, xviii. 8)
who is to arise ‘from Aaron and Israel.’ Charles
interprets this phrase as pointing to the sons of
Maran and Herod. This is not quite certain,
but the Messianah is clearly Leviticus, as in the Testa-
ments, the book being marked by hostility towards
Judaism. The ‘Teacher of righteousness’ or the
‘Lawgiver’ (viii. 5) is a forerunner of the Messianah,
thought at a considerable interval, and is identi-
fied with the ‘star’ of xi. 24, the companion of the
same passage being applied to the Messianah.

In the composite (Sirine) Apoc. of Baruch the Messianah appears in the three earlier Fragments,
A’, A’’, A’’, written before A.D. 70. (A’) he is revealed mysteriously, apparently from
heaven, whether he returns in glory; his rôle is a
passive one, and the whole conception is material-
istic. In xxviii. 1. (A’) and xlii. 1. (A”) he is
the warrior slaying enemies and ruling over the
Gentiles; the influence of Is 11 is marked.
In xiv. 9 the phrase ‘my servant Messianah’ occurs, but
the whole verse is regarded as an interpolation.
In the three later Fragments, B’, B’”, there is the
so-called Messianah Kingom without a Messianah.

2 (2) Esdras is again composite. In 7Th. (Extra
Apocatacylene) we have the remarkable conception of
‘My Son the Messianah’ revealed with his
companions and dying after a reign of 400 years
(cf. 14). In 12Th. (the ‘Eagle Vision’) he is the
lion of the seed of David who destroys sinners;
the text has been interpolated to represent him
as pre-existent and dying at the end, in order to
agree with 7Th. Of chief importance is the
Son of man vision (ch. 18), where the Messianah is
‘the man,’ as in Daniel, ‘My Son,’ pre-existent, destroy-
ing the ungodly by the fire of his mouth,
through his breath of fire from his lips, and restoring the ten tribes to the
heavenly Zion.

Philo makes only very slight references to the
Messianah, who is really foreign to his system.
That he is mentioned at all must be regarded as a con-
cession to the popular standpoint. De Exercet. 8.
speaks of the restoration of Israel on one day;
the dispersed are to return led by a divine superman
appearance, which, though unseen by all others, is
visible only to the delivered. ‘So in de Prumo. et
PZoom. 15-20 the Messianah is a man of war, refer-
ence being made to Nu 24.

In the same way the Messianah is recognized by
Josephus only very occasionally, and that in a way
which shows that he did not take the subject very
seriously. In BJ vi. v. 4 he practically treats
Vespasian as the Messianah in the sense that he is to
be the destined ‘governor of the habitable earth’
cf. the account of his interview with the same
emperor in iii. viii. 9, and see Sect. Vesp. ch. 4, and
Tac. Hist. v. 13, passages which are good evidence
that the existence of the Messianah was a

literature on the book by J. W. Lightley, in the London

4 See 7B, e., Messianah, for similar ideas connected with
Alexander, on the basis of the interview recorded in Jos. Ant.
i. viii. 4.
recognized feature of Judaism. In Ant. x. 4 he refuses to explain the 'stone' of Dn 2\textsuperscript{4} on the ground that his history is not concerned with the future.

As evidence of popular views, though not of the belief of Josephus himself, we have the various quasi-Messianic risings which he records: Theudas (Ant. xx. v. 1), the Egyptian (Ant. xx. viii. 6, Rev. 46), and the unnamed impostor (Ant. xx. viii. 10).

A Samaritan Hymn for the Day of Atonement,\textsuperscript{1} dated A.D. 1787, but certainly embodying earlier material, speaks of the Messiah under the title Tzab, which may mean 'the Restorer,' though A. Merx explains it as redivis, i.e., probably Moses, whose return was expected. This Tzab is not supernatural, but restores the lost dominion of the people, and is a prophet, the conception being based on the figure of Moses in opposition to the beliefs of the Jerusalem Jews. He dies after 110 years, and his death is followed by the judgment and the end. In 4\textsuperscript{th} century shows the antiquity of some Messianic belief among the Samaritans (cf. Jos. Ant. xviii. iv. 1).

2. Survey of the teaching.—(a) We note the sporadic character of the Messianic hope, as, in the OT, the Messianic hope was mentioned so often that the original meaning or even in eschatology.\textsuperscript{2} If it were not for the NT, we should never have imagined that there was a period when the hope of coming could be taken for granted as accepted in almost all circles. Here it is the centre of the hope for the future. This aspect is sometimes discussed (e.g., W. Baldensperger, Die messianisch-apokalyptischen Hoffnungen des Judentums, Strassburg, 1903, p. 92 ff.) as though the problem were the disappearance of the Messianic hope during the Maccabean period. If our interpretation of the evidence is correct, this misrepresents the facts, since there is nothing to show that the hope was at any previous period either universal or essential. It may be true,\textsuperscript{3} that the figure of the Davidic king came to seem too small for the larger stage on which Israel now found itself, and that the rule of the Maccabees lasted for a time well content, but it is best to recognize that the date was inscribed, not for anything like a chart of the rise and fall of the Messianic hope. The one thing we can say is that in the 1st cent. A.D. the Messianic hope had become more universal than ever before. We recognize that even then it is absent in the Ass. of Moses, and it is not taken very seriously by Philo or Josephus; but the NT evidence is indisputable, and is confirmed by the fact that the Messiah is an integral part of the creed of later Judaism. The explanation is probably to be sought in the political circumstances of the day and in the disfavour of the Herods and the Romans.

(b) There is some evidence which suggests that, as before, the hope was mainly an element in the popular religion. The Apocalypses in which it figures were largely popular products, and the NT proclaims that its chief strength lay among the people;\textsuperscript{4} 5

in itself directly Messianic, revived hopes for the future and prepared the way for the apocalyptic Messiah. This transcendent Messiah plays an active role as champion of the righteous in \textit{Enoch} ix. 21, etc., and \textit{Dial.} 49. The most significant feature, however, is his appearance as judge, not only of men and the nations, but of evil spirits (\textit{Enoch} lv. 4, etc.); this function is not ascribed to the human king. East Syrian authorities, and the translation of the \textit{Enoch} is not transcendent Messiah is never represented as a descendant of David—a fact which may throw light on our Lord's question (Mk 12:32); He may have been following a recognized line of thought which found the Davvidec descend too narrow for the great conception. As is well known, He never speaks of Himself as 'Son of David.' We may note that, though the Apocalypses apparently reject the Daedalic descent, they yet use Davvidec passages, such as Is 11, Ps 72, 89, in their picture of the Messiah. 

(e) Pre-existence and mysterious origin. — The Son of Man is clearly in some sense pre-existent in \textit{Enoch} (e.g., xviii. 3, 6, xvi. 1) and in 4 Es 13 and perhaps in \textit{Is} 7:12, though the former passage is doubtful, and G. H. Box regards the latter as interpolated. The question arises how far a personality of this sort is imputed. In Jewish thought everything of supersensible value was regarded as pre-existing in the mind of God, perhaps to some extent under the influence of the Platonic doctrine of ideas. This applied to such things as the Law and the Temple, while even Moses is pre-existent in \textit{Ass. Moses}, i. 14, iii. 12; it is this sort of pre-existence that is ascribed to the Messiah or his 'Name' in the Targums. But it must be allowed that the passage 4 Es 13:2 only has a general view of the Messiah seems to be regarded as pre-existent in a personal sense and revealed from heaven, and this was certainly the view of St. Paul. It should, however, be noted that in 4 Es 7:24 'my Son, the Messiah' who is thus revealed dies after 400 years; i.e., he is not a divine being. This point of view should be distinguished from the hints which we have of the mysterious origin and birth of the human Messiah, since the Son of man of \textit{Enoch} and \textit{Edras} is, of course, not born as a man at all. We have doubted the existence of such ideas in Isaiah and Micah, but they are clearly found in 4 Es 13:13, and the Talmud, the general idea being that the Messiah was born in secret (a. d. Bethlehem) and hidden on earth, or even in Paradise, until the time of his revelation. Some such tradition seems to underlie Rev 12; on the question of foreign influence see below, (g).

At the same time the passages cited as evidence of a belief in his birth of a virgin or divine mother are unreliable. \textit{Test. Jot. xix.}, which seems to speak of a virgin-birth, is with good reason regarded by Charles as corrupt; so in \textit{Enoch} xvi. 1, xix. 29 he reads for 'son of a woman' 'Son of man,' while the Midrash \textit{Ekeq} on La 5:1 is obscure and of very doubtful date. Nor, again, can 'the travail of the Messiah' be anything of the kind; the expression is figurative, and applies to the Messiah, not to his mother. According to

Justin, \textit{Dial.} 49, the Jewish belief is that the Messiah is to be born \textit{ἀνθρωπος} \& \textit{αὐτοῦ}. To the circle of ideas connected with pre-existence belongs the identification of the Messiah with the first or the One in 4 Es 13:14, etc. Some authorities said of the theory that this underlies the figure of the Son of man (see above, \textit{III. 2 d})'. 

(6) Forrunners of the Messiah. — The starting-point is Mal 3:1, wherein Elijah is to return before the Day of Jahweh (cf. Sir 48:1); the Messiah is not mentioned, and possibly Elijah is a kind of substitute for him. \textit{In the Gospels, however,} he has become a forerunner of the Messiah (Mt 11:10; Mk 6:4, 1 John 1:23). There are several instances of the belief in the return of Moses, based on Dt 18:15, and the two are combined in the Transfiguration: these are probably the two witnesses of Rev 11. \textit{In the later Antichrist legend the two witnesses are} Enoch and Elijah, \textit{who were translated without death}. There are also hints of other 'companions' of the Messiah in 4 Es 6:7, 13, 20. They are formed as such in 14, 15, Bar 76, 1 John 7:9, and \textit{2 Mac} 2:15; cf. Mt 16:13. We may compare the two predecessors of Saoshyanta (see below, (g)).

(f) Foreign influence. — We were doubtful of the traces which appeared of the Messianic idea to foreign sources, but this does not exclude the possibility of foreign influences at a later time on the details of the conception. Such influence is undoubtedly found in the development of Jewish Apocalyptic. We cannot discuss the wider question of the syncretistic character of its eschatology in general, but must confine ourselves to points which directly affect the conception of the Messiah. Naturally it is in the mysterious state and geographical and mythological traits appear most clearly. Hagne, following Greisemann, argues that such ideas lie behind 4 Es 13, and even goes further in holding that a star myth is implied in the appearance of the man in 6:12—14. Sir 41:15 also seems to be the whole idea of a mysterious revelation of the Messiah to Is 45:1. 'Verily thou art a God that hidest thyself, O God of Israel, the Saviour,' which, he agrees with Greisemann, cannot be of Jewish origin. He traces it to language such as that used by Assurians: 'I was born in the midst of mountains which no man knew . . . thou (Ishtar) . . . hast brought me forth from the mountains, hast called me to shepherd thy people.' Many critics argue in the same way with regard to the conception of a miraculous birth, comparing the language used by Saoshyanta. 'My mother was poor, my infancy I knew not,' the beliefs connected with Saoshyant, and the legends of the birth of Cyrus, Alexander, and others; there is, in fact, a general tendency to regard extraordinary men as

1 \textit{De} 7:14 is interpreted Messianically by \textit{Aq} (c. a.d. 190), and \textit{Edras} xxv. 19, for some of the Messiah, \textit{Jewish, 'Clow Man'} (Dalman, p. 245).

wonderfully born, and this was particularly marked with regard to Egyptian and Babylonian kings. When pronouncing upon the question of direct influence, we may admit that we find the same general tendency at work with regard to beliefs as to the origin of the Messiah, but always with the important proviso that we have found no real evidence, except in Christian miracles, of the idea of his birth from a virgin or divine mother, nor have we found any complete parallel to the expectation of a final eschatological king.

Something must be said of the possible influence of Zoroastrianism. Here, again, we would at once admit a general influence in the sphere of eschatology. Moulton allows this, though to a less extent even than Clemen. He draws attention to Bousset’s ° which, he argues, further, that Zarathustrha himself had very little influence in the west. Hence, all that the Jews can have known was Zoroastrianism in a comparatively debased form, as represented by the Magi, and this compels us to regard most of the parallels between the higher doctrines of the two religions as pure coincidence. We are concerned here mainly with two points.

(a) A great deal has been said of the connexion between Yima, the first man, and the Messiah. It is held that this lies behind the idea of the ‘Son of man’ (see above, III. 1 and 2 (d)), which Clemen remarks, ‘comes ultimately from the Persian’. There is, no doubt, some connexion between Yima and the Messiah, but to the account, though Moulton holds that the Persian connexion is the prominent feature, in the Gatha these there are simply Zarathushtra himself and his fellow-workers, whom the Prophet’s faith pictures as assiduously leading on an immediate regeneration. ° The hope failed, and Zarathushtra himself was to return as Saoshyant. This is certainly one real parallel with the Messiah proper, but it seems impossible to suppose any direct influence. Moulton distinguishes it from the ‘certainly fortuitous coincidences’, while Bousset holds that the connexion between Saoshyant and the forerunner Elijah, rather than with the Messiah himself. At the same time there may have been some connexion between the two, affecting directly the conceptions, especially in the idea of the Messiah coming from the sunsets, the zoroastian, the Messianic idea affecting at any rate the force of the Messianic hopes and its development under Christianity. After Alexander the title warrg (‘Saviour’) became common, with devotion of kings and emperors, accompanied by hints of divinity born of a virgin. We may instance the well-known Persian inscription, with the legends connected with Alexander. But here, again, it is doubtful whether we really have evidence of the existence of a belief in a final world-Saviour who is to usher in a new era, or only the inevitable court flattery which regards each king as greater than any of his predecessors.

(b) Interpretation of prophecy—A feature of this period is the habit of working on earlier prophecies—a tendency which we have found as early as Ezekiel and Zechariah; for a later example see To 14. ° In the apocalyptic books there are certain prophetic passages and ideas which became part of the stock-in-trade and are constantly referred to in dealing with the Messianic hope. The chief are Dn 7, Is 11, ° used continually (e.g., Ps. Sol. Lib.; Ps. 27; Isa. 11, Ps. 45, etc., Test. Jud. xxiv. 1, Nu 24), and the star of which is apparelled Messianically in Test. Levi xviii. 3, Jud. xxix. 1, but understood of the Teacher of Righteousness in Zcd. Frag. ix. 8.

We have in this use of prophecy many examples of the scribal method of working mechanically on the data and fusing the old and new into a single picture, of course not without contradictions. The application of a passage does not decide its historical meaning, but only the interpretation which had come to be put upon it. The vagaries of later Rabbinism had already begun—e.g., the interpretation of Am 22. ° in Zcd. Frag. ix. 5. ° We have an interesting example of independent development in, where the interpretation of the fourth kingdom as given in Dn 7 is definitely rejected.

We must also allow for the influence of Greek-
The most decisive proof of this position comes from the NT. It is clear that the death of the Messiah was regarded as the recompense of a sin offered up, and that the crucifixion of Jesus was the great stumbling-block, while it was not easy to find proof of its necessity from the OT. The story of the Ethiopian eunuch (Acts 8:27-39) is a more acceptable interpretation of Is 53 which is evidently not that generally accepted. The admissions of Trypho (Justin, Dial. 63, 89.1) do not express the Jewish belief, but are put into his mouth under the stress of argument, while the range of the Messiah, his personal sufferings, and the woes which are to precede his coming.

The Messiah ben Joseph, who does, in fact, die, in contrast to the Messiah ben Judah, appears clearly only after A.D. 135. According to Bousset, he is the Messiah of the ten tribes, slain in the battle by Gog and Magog; the conception seems to be derived from Zec 13, and certainly has no connexion with Is 53. It is possible that this figure is connected with the failure and death of Bar Kokhba, explaining them on the lines of the expectation of a preliminary Messiah who was to fail, and whose failure was to come at the hands of the Roman invasion.

V. Development under Christianity.

The starting-point of the evidence of the NT, and especially of the Gospels, is the way in which the Messiah is understood by the early Christians. As we have seen, it is taken for granted in the Apocalypse that it occurs, but it is still sporadic in its appearances, and the future can be painted without reference to it. In the Gospels the expectation of the Messiah is common to all. It appears, indeed, to be more seriously by the common people than by their leaders; but Pharisees, priests, and Sadducees all accept the hope without questioning its reality. The point at issue is only whether Jesus is really the Messiah. As regards the nature of the hope, it would appear, as against A. Schweitzer, that it was at least as much political and national as transcendental, corresponding closely to what we find in Ps Sol. The Messiah is to be a king descended from David, and his rule will be opposed only to that of the Romans.

A full discussion of our Lord’s own attitude to the Messiahian claims will be found in art. Jesus Christ. We may have emphasized the salient points.

(a) As against W. Wrede, it is certain that He did regard Himself as in some sense the Messiah. He did indeed, associated with such as in public teaching; it was His ‘secret’ discovered by St. Peter at Caesarea Philippi, and first avowed to the world at His trial. (b) His favourite designation of Himself in this connexion was ‘Son of man,’ the title being chosen as containing in it elements of transcendence and mystery, and as free from the political implications of Messiah, and still more of Son of David, a title which He avoids. The difficulty is to reconcile His use of this phrase with the absence of any public proclamation of His claim, since from its use in Zech we should infer that it would at once be recognized as a synonym for ‘Messiah’ itself. The difficulty is eased by eliminating, on literary grounds, a certain number of the passages in which it occurs; e.g., Mt 5:21 with Lk 6:21, or Mt 16:9 with Mk 8:22; while in others its use is ambiguous, since it might be supposed to refer to the unconquered person (Mk 5:36). It is not, however, possible, except by somewhat drastic criticism, to eliminate all passages where it is used publicly of Himself or privately to the disciples before St. Peter’s confession, especially in spite of Zech, that it was regarded as Messianic only in certain circles, and that it could still be used, as in Ps 8 and Ezekiel, in a wider sense.

(b) He did not regard Himself as the Messiah merely in the strict sense in which we have used the term, but as gathering up in Himself the various lines of OT hopes and promises. It does not, however, appear that direct argument drawn only from the OT played any considerable part in His teaching, except as recorded in the Fourth Gospel. The proofs from the OT in the NT seem rather to reflect a later stage of controversy between Jew and Christian, in which each adopted the same scriptural methods of interpretation.

(c) Christ added considerably to the content of the Messianic hope, especially in His teaching as to the necessity of the death of the Messiah. It is not possible to decide with any certainty as to the lines by which He was led to this conviction, though it was, no doubt, helped by a growing recognition of the hostility of the ruling judeans and of the inevitable sacrifice of that attitude. Further, He must have meditated on the deeper teaching of the OT as implying, especially in Ps 22 and Is 53, that the means of redemption and the condition of glory were linked with suffering, and that this quite independently of whether such passages were technically applied to the Messiah or not. Though in Acts and 1 Peter the Servant Servant’s passages are directly quoted, the argument is little in the Gospels, and hardly at all in Christ’s own teaching (see Lk 22:37, Mk 10:33). It would seem, then, that as the ultimate source of His conviction we are forced to fall back on an intuition which the Christian will regard as a revelation from the Father.

In the light of the expectation of the Parousia, the idea of a twofold advent of the Messiah was introduced, assuming that Jesus was not merely the Messiah of the future during His lifetime. There is no trace in earlier literature of any belief in two comings of the Messiah.

(c) If follows, finally, that the title ‘Messiah’ or ‘Christ’ used in the NT and in Christian literature generally, has a far richer meaning and content than any that we have felt justified in assigning to it in earlier periods. It gathered into itself the idea of the Logos, and of the Logos, and of the Logos, and of the Logos, and of the Logos. It was included in the whole work of redemption from sin and spiritual regeneration accomplished by Jesus. He has become the centre of history and the inaugurator of a new age in which the Messianic claims will be found in art. Jesus Christ. 

1 Dalman, Der leidende und der sterbende Messias, Berlins, 1888; Schürer, ii, 154. Bousset, Kyrios Christos, p. 271, agrees, though he does not grant the distinctive title of Jesus in Hellenistic Christianity is kyrios (Lord). See Bowman, Kyrios Christos, p. 115.
2 Not that in Philo the Logos largely takes the place of Messiah; in de Conf. 14, p. 141, the ‘branch’ of Zec 6:12 is applied to the Logos. Cf. also Lk 1:32.
3 But see Dalman, Words of Jesus, p. 360ff.
are in the NT transferred to Christ is of the deepest significance. The real desire of the highest spirits of Israel was not so much for a representative of Jehovah, however exalted, as for a revelation of God Himself. Christian belief finds this satisfied in the Incarnation, and we shall not be disturbed when we find that the OT says comparatively little about 'Messiah.' The vital question is whether the hope which it expressed with regard to the coming of God did find their fulfillment in the Christ.

VI. THE MESSIAH IN LATER JUDAISM.—From the end of the 1st. cent. A.D., a belief in the Messiah was an integral part of the Jewish creed—so true that the representation of the universality of the hope which we find in the NT is substantially correct. The Messiah is indeed strangely absent from the Mishna, possibly owing to fear of Rome, but he figures both in the Palestinian and in the Babylonian recensions of the Seder 'Plechar 'Ezra—a fact which indicates that his presence therein was maintained in the 1st cent. A.D.—and appears constantly in the Talmud. The failure of the Bar Kokhba rising in A.D. 135 marks an important stage. Attempts to anticipate the Messiah's coming were then abandoned, the principle being 'a plague on the miserable end,' and the political side was almost dropped. What remained of it was transferred to a temporary Messianic Kingdom, in which Israel was to be restored to Palestine, this national kingdom being, generally speaking, only preparatory to the 'olam hahololi, the world to come, where universalistic features are found. The Messiah is Son of David and an earthly deliverer, though in some sense pre-existent and appearing not by his insinuation on the need for repentance as the condition of the coming of the Messiah, while we also find considerable detail as to the features of the Messianic era, the Messianic wars, etc.

The twelfth article of the present Jewish creed, as drawn up by Maimonides, is as follows: 'I believe with perfect faith in the coming of the Messiah, and though he tarry I will wait daily for his coming.' Liberal Judaism, however, would seem to have abandoned the hope of a personal Messiah, though it still retains the Messianic hope in a wider and spiritualized sense—i.e., in which it may fairly claim to have the general trend of the OT on its side.

LITERATURE.—The literature bearing on special points has been indicated in the course of the article. The following may be mentioned in relation to the whole subject: J. Drummond, The Jewish Messiah, London, 1887; V. H. Statten, The Jewish and the Christian Messiah, Edinburgh, 1888; E. C. A. Reinach, De messia, Revue des sciences religieuses, 9th ser., 1888; says the Messiah Propheth, Edinburgh, 1900; C. A. Briggs, Messias Propheht, Edinburgh, 1856, and The Messiah of the Gospels, d. 1854; P. Voigt, Das christliche Judentum, und der Messias, Göttingen, 1887; E. Schürer, Jg. VI., Leipzig, 1875; E. D. A. Cheyne, 1895; W. Bouzener, Die Religion des Juden im neustestamentlichen Zeitalter, Berlin, 1900.

1 See Dalman, Words of Jesus, p. 291, etc.; J.B. in 'Messiah'; Oesterley and Box, Religion and Worship of the Second Temple, pp. 144, 145. 2 Yet Aquila, who spoke of the thrones of Din 7 as prepared for David and David, supported Bar Kokhba, who was not Davidian.

C. H. Dalman, Die Worte Jesu, Leipzig, 1899, 1902, 1904, 1906, 1910, 1912; together with relevant sections in works on OT and NT Theology, and articles in the Bible Dictionaries.

C. W. Emmet.

MESSIAHS (PSEUDO.).—From the final loss of the independence of the Jewish State until within a few generations ago, Jewish history has known the frequent advent and passing of self-styled Messiahs, prophets of hope in the darkest periods of the Diaspora, self-appointed leaders of the Jewish race in the Return to the land from which their ancestors were exiled. The appearance of a Messiah was often, especially in the case of the earlier ones, accompanied by revolts and uprisings, and these almost invariably occurred at times when, and in localities where, anti-Jewish persecution was prevalent. Moreover, these Messianic movements were frequently, especially in the latter cases, of a political nature. The religious aspect of the rising was, however, seldom absent, and in many instances the new teacher, anxious to signalize his activity and to secure influence by religious innovations, endeavoured to subvert the basic teachings of Judaism, to which, in consequence, considerable harm sometimes occurred. Now sects were composed of some occasions; on others wholesale adoption of Mahommedanism or Christianity took place.

Although it is to some extent customary to include a number of Jewish reformers and revolutionaries in the category of pseudo-Messiahs, only a proportion of these agitators in reality attributed to themselves the Messianic semi-divinity. Others, often against their own wish, were hailed by their unscrupulous followers for Messianic leader, promised in Jewish tradition to bring to the scattered and troubled people back to their inheritance. Just as there existed a belief in an Ephraimitic Messiah who was to be the forerunner of the Davidic Messiah, so, among the pseudo-Messiahs, many pretended to be not the Messiah Himself but His forerunner. The opening of the Christian era saw in the Holy Land a number of these local minor Messiahs. Thus we learn from Josephus (Ant. XX, v. 1; also Ac 5:20) that about A.D. 41 one Theudas, claiming to be a prophet, told his followers that he would divide the Jordan and enable them to cross dry-shod. They collected on the bank of the river for the miracle to be performed, but before the prophet could take steps to carry out his prophecy the whole party was massacred by a detachment of Roman soldiers. A similar fate overtook the followers of another Messian, an Egyptian. They collected, it is said to the number of 30,000, on the Mount of Olives to watch the fall of the walls of Jerusalem at the command of their leader, but the proceedings were interrupted by Felix and his soldiers (Jos. Ant. XX, v. 6:27; Jg. II, xiii. 5; and Ac 5:1). A third pretender preparing to lead the people into the wilderness was destroyed together with his followers by Festus the Procurator (Eleon, Ant. XX, v. 6:27).

A Messiah of a different description was Menahem, the son of Judah the Galilean and the grandson of Hezekiah the leader of the Zealots. He seized the city of Masada together with a large store of arms, with which he supplied the garrison, and then attacked Jerusalem. In battle with the soldiers of Agrippa II. Menahem was successful, and as a result captured Antonia, one of the defences of the capital. Emboldened by his successes, Menahem claimed the leadership of all, and thus aroused the jealousy of his colleagues and was assassinated. Menahem was the last Judean Messiah before the destruction of the Temple. Contemporary with these Messiahs of the OT time, similar personages arose among the Samaritans,
all of whom, after an existence more or less brief, passed away. Prominent among them were Simeon, Magus, who endeavoured to induce the early Christians to join his movement, but who is said ultimately to have become converted to Christianity and founded a church with many of his followers, and Dositheus, who, instead of resting the Hebrew State, founded a Samaritan sect that survived until the 6th century.

The destruction of the Temple led for a time to a cessation of public activity. For six years no new Messiah arose until at length, on the accession of Hadrian, the milder government of Trajan gave way to sterner rule. The repressive policy of the Romans aroused once more the spirit of the Jewish people still unembittered. A rebellion broke out and a leader was immediately at hand in the person of Bar Kokhba or Bar Kozibah (probably from the name of his birthplace). Of the personality of this leader little is known. His original name is even doubtful. It is conjectured that he was one Simeon of Cozela (1 Ch 4:32) or Chetzib (Gn 38). The name Bar Kokhba, or 'son of a star', is given to him by the famous R. Akiba, who believed this star was to be the Messiah. He appears to have been the fulfilment of the prophecy: 'There shall come forth a star out of Jacob . . . and shall smite through the corners of Moab, and break down all the sons of Sheth' (Nu 24:17). Bar Kokhba does not appear to have adopted the designation of Messiah himself. This dignity was attributed to him by R. Akiba and other sages. On the outbreak of the rebellion, the whole province, composed of Judea, Samaria, and Galilee, was evacuated, and the Roman three years later at this time has been estimated at as many as from 400,000 to 500,000 fighting men. Unfortunately, little is known of the campaign, but it is certain that the enemy and the generals in command at the time of the outbreak proved respectively inadequate and incapable. The services of Julius Severus, the greatest soldier of the age, were requisitioned from Britain, where he had been waging an incessant war with the marial natives, to recover the prestige of the Roman arms. But even he, with unlimited resources, was at first compelled to remain on the defensive, and trusted to his tactics of cutting off detached parties and supplies to wear down the enemy. In the course of operations 50 general engagements were fought, and with every victory the numbers of Bar Kokhba's followers increased. By this means he recruited the Jewish colonies of the enemy. The numbers of Bar Kokhba's army included non-Jews in its ranks. Those who could not fight helped to fill the rebel coffers. At first the campaign proved a series of successes for the pretender, Jerusalem was soon captured, and served as a capital for Bar Kokhba, who was proclaimed king, and duly carried out the duties of sovereignty. For three years the Holy City remained in his possession, and during that time his armies succeeded in taking 50 walled towns and 956 villages. At length the tide turned. After a desperate struggle, Jerusalem was captured by the Romans, and two stones of its buildings were left standing one on another. Other towns fell into the same hands until, of all the territories of Bar Kokhba, the town of Bither alone remained. Here he made his last stand, but not with the united support of the inmates of the fortress. Dissensions broke out among the garrison, and on the 9th of Ab, already the blackest anniversary in the Jewish calendar, Bither was stormed, Bar Kokhba killed, and every body brought in triumph to the Roman camp.

During the pacification that followed the males were slain by the thousand, and the women and children sold into slavery. Unheard of and un-
to the Holy Land, and, perhaps in consequence, his influence spread as far as Spain. His career commenced in A.D. 720, but was very short-lived. He was speedily captured and brought before the khaliif Yazid II., to whom he excused himself by stating that he had never been serious in his claims; he had merely been jesting himself at the expense of his co-religionists. Sereniss was accordingly handed over to the latter for punishment, while his followers, repenting of their heresy, were admitted to the fold.

For the next three centuries and a half no Messiah arose in Israel. Then there was in the West a small group of unimportant pretenders: in France (c. 1057), at Cordoba (c. 1117), and at Fez (c. 1177). Of these there are practically no records beyond the mere mention by Maimonides. About 1160, however, one of far greater importance arose in Kurdistan. David Alroy (or Alroi) came from the north of Persia, probably Adharbajan, being a member of one of the free Jewish tribes which claimed descent from the Ten Tribes, and to which the Aghas, the Afris, and Pathans of to-day trace their ancestry. The period was again one of political disorganization. One great element of disturbance was the efforts of the Crusaders to recover and to keep possession of the Holy Land. Moreover, intertribal warfare was incessant, and the weakness of the Sultan led almost to a paralyzing of the Government. It was in these circumstances that Alroy visited Baghdad, and on his return to his own people he raised the standard of revolt. A large following immediately collected, and Alroy, who had meanwhile proclaimed himself the Messiah, determined to break the yoke of the Minhâmadâns and to lead the Jews back to Palestine. From this point truth and legend have so intermingled in the story of Alroy that it is impossible to dissociate them. His command of the magic arts led to the acceptance of his mission far and wide. Only the Jews of Baghdad were sceptical, but his hold on the others was so strong that those in Baghdad were quite incapable of suppressing the movement. Alroy was said to have been summoned by the Sultan, to have appeared in answer to the summons and proclaimed his divine mission, to have been cast into prison, and to have miraculously escaped. Despite his magic powers, Alroy’s movement was undercut by a failure. He was sentenced to death, and the Jews of Jerusalem, having been warned of his approach, killed him in an unsuccessful attack on the stronghold of Amadia. According to a less reliable version, the governing powers, unable to overthrow the Messiah by means, bribed his father or father-in-law to put him to death. On the death of Alroy his followers, in order to appease the Sultan, had to pay a considerable fine. In Alroy’s instance also the pretender’s death did not mean the end of his cult. The sect of Menahemites, named after Menahem, the traditional designation of the Messiah, adopted by Alroy, continued for many years.

A century passed before the next prominent pseudo-Messiah appeared upon the scene, but before that period, in 1172, a minor prophet arose in Yemen. His course lasted a year, at the end of which term he was beheaded, it is said at his own request, in order to show by his return to life that he was the Messiah. Abraham ben Samuel Abulafia was born at Saragossa in 1240. While still a youth he was attracted to kabbalistic studies, and it was as a kabbalist rather than as a pseudo-Messiah that his career was of most influence. His life was spent in wandering from town to town and from country to country. In 1281 he was in Rome attempting to convert the pope to Judaism—of course without success. His boldness involved him in imprisonment, from which he is said to have escaped miraculously. Four years later, when in Sicily, Abulafia proclaimed himself the Messiah, and announced the millennium for the year 1290. The year denoted came and went, but the millennium still tarried. Abulafia continued his picturesque career for one more year and then disappeared from history. He had left his spiritual descendants, for his teachings were continued by two of his disciples, Joseph Jikatilla and Samuel, both of Medina. Where Abulafia had failed, they were little likely to succeed, and it was but for a moment that these two meteors flashed in the firmament.

Immediately following them came Nissim ben Abraham of Avila, who pointed to 1295 as the year of the millennium. There were sufficient believers to fill the Synagogue on the appointed day, there eagerly to await the divine manifestation; but again disappointment was the prevailing emotion, and, when the watchers found mystic little crosses on their garments, many, accepting them as heavenly manifestations, embraced Christianity. The fate of the prophet, as of many of his predecessors, is unknown.

A century later Moses Botarel of Cisneros appeared. As a prophet he did little consequence. In 1602 Asher Lammlein suddenly arose in Istriia and announced that, if the people would prepare themselves, the Messiah would appear that very year. At his suggestion fasting, prayer, and almsgiving became general throughout all the Jewish communities of Europe. Jews and Christians alike accepted his teachings and prepared for the advent of the Messiah and the return to the Holy Land. Here again the prophet was failed; no Messiah appeared; the prophet disappeared.

At the close of the 14th cent. Jacob Carson (or Carcasoni), a minor prophet, appeared in the north of Spain, and David Reuben, the picturesque emissary of his brother the mysterious king of Khaibar, or the East, also came upon the scene. Reuben, according to the generally accepted locality of the kingdom, was a district in S. Arabia inhabited by nomad tribes of Israelites, although the view has been put forward that Reuben came from India (see E. N. Adler, in *Documents of the Hebrew Genius*, p. xxxi, and *Auto de Fã and Jeste*, p. xxx.).

Reuben arrived at Venice in 1524 after having visited Palestine and Egypt. He immediately proceeded to Rome, where he procured an audience of the pope, Clement VII., to whom he announced that he had been sent by his brother to obtain allies and assistance in his war with the Sultan. In support of his claims Reuben brought letters of introduction from Portuguese officers in the East. The Jews of Italy found the means for him to proceed to Lisbon, and he arrived in Portugal in 1525, with the view of inducing the king, John III., to ally himself with the king of Khaibar. For a time the Portuguese policy seemed to favour such an alliance, and King John definitely promised a fleet of 8 ships and 466 cannon for the assistance of his new ally. At the same time the pressure that was being put upon the Marranos of Portugal was relaxed, doubts out of deference to the susceptibilities of Reuben.

The embassy, the ambassador, and the circumstances that surrounded them, as well as the accompanying legends that immediately began to be woven, endowed Reuben with almost superhuman powers in the eyes of the Jews, for whom the only hope lay in his actions. All their faculties were ever strained. The interest and excitement aroused by his advent were no less intense among the Marranos than among the Jews themselves. Miraculous powers, a semi-divinity, were attributed to him. If any proof of these
claims were needed, his existence as a Jew unmolested at the court of one of the most relentless of the persecutors of Jews and Judaisers was considered sufficient. The people looked eagerly to Molkho, expected, not a momentary palliation of their tortures, but a final release.

By no means the least of those who were dazzled by the appearance and favour of Reuben was Solomon Molkho (previously Diogo Fares) (c. 1494-1554), of Jewish descent. Fares, who was a young man of great promise, aroused by the stir caused by Reuben's mission, abandoned Christianity, adopting his ancestral Judaism in place of it, and endeavoured to attach himself as a disciple to the newcomer. The latter, however, severely discouraged all conversions to Judaism, fearing probably lest in consequence of them trouble might react on him and his mission, and Molkho found little or no favour with him. Molkho's conversion to Judaism had placed his life in great jeopardy; and, deprived of the protection of Reuben for which he had hoped, he left Portugal for Turkey. In the East, according to Molkho, he supposed to be quite unlearned in Jewish lore, is said to have displayed a remarkable acquaintance with that subject, and by his eloquence and learning, at the age of 21, attracted the attention of the sultan, who made him his tutor. Soon after, he was appointed to teach the Sultans, and the Imperial household. His teaching was in the domain of mysticism. He was a noted scholar, and his writings are still in demand.

As was expected by Reuben, the conversion and flight of Molkho, added to other incidents, shook the position which Reuben had acquired at the Portuguese court. The royal promises, although made apparently in good faith, lacked fulfilment, and the undoubted excitement of which he was the cause among the Neo-Christians of the kingdom, rendered his continued presence among them most undesirable. He, therefore, after having spent a year at the Portuguese court, Reuben was asked to withdraw. The ship in which he sailed was wrecked on the coast of Spain, and for a time he was under suspicion of the Inquisition. His release was, however, ordered by the emperor, Charles V., and he settled at Avignon, then under the sovereignty of the pope. From Avignon Reuben removed to Italy, preceding everywhere by the mysterious reputation which he had acquired, and followed by a host of believers, who hailed him as the precursor of the Messiah and even as the Messiah Himself.

Meanwhile Molkho had also come to Italy with the reputation which he had acquired in Turkey, enhanced, if possible, and a following that grew in numbers day to day. In Rome Molkho, imbued with Messianic tendencies, had visions and foretold floods and earthquakes, which, it must be added, subsequently occurred. More valuable to him, however, were the favour and protection which he had obtained from the pope, Clement VII, and from some of the cardinals. With their assistance he was able to defy his enemies, who were drawn not only from among the emissaries of the Inquisition, but also from the Jews, some of whom shrewdly considered his influence more than beneficial than detrimental to Jewry. His critics among his own countrymen were, however, numerically insignificant, and his influence among the Jews increased until he became indeed their accepted prophet. By Graetz Molkho has been described at this period of his career as "the Jewish Savonarola" (Hist. ix. 274). In order to avoid the flood which he foresaw would overtake Rome, Molkho repaired to France, where he met once again the first inspirer of his enthusiasm, David Reuben. His position in regard to Reuben had, however, undergone a change since their previous meeting; his fellow-prophet, Molkho, met him now, not as a devotee, but as an equal.

Reuben was still endeavouring to obtain assistance for his brother, the king of Khaibar, and from the authorities in Venice he received some encouragement in his mission. After the flood Molkho returned to Rome, where he was received with enthusiasm as a successful prophet. The pope, the cardinals, and the ambassadors of the Powers vied with one another in their flattering attentions to him. His influence was so great at this period that he was able to secure the indefinite postponement of the introduction of the Inquisition into Portugal; but his Jewish enemies, especially Jacob Mantin of Venice, were uniriting, and they ultimately succeeded in having him condemned to burning. The auto da fé was made and the victim was in due course which he had been acquired, he was later to be burnt in Rome, and it was then discovered, however, that the pope, in order to protect his favourite, had gone to the length of substituting another victim, and that Molkho himself was safely hidden within the papal apartments. In the circumstances it is not surprising that Molkho was smuggled out of Rome at the first opportunity.

Molkho thereupon rejoined Reuben, and the two decided to journey to Ratisbon, the seat of the Emperor, the one with the cause of the Jews of Khaibar, the other with the Emperor the casetadventurer. There is a tradition that advantage was taken of the interview with the emperor to endeavour to convert him to Judaism, and it was possibly this attempt that led to the arrest of both the ambassadors. They were put into chains and carried to Mantua, where at the Emperor's request Molkho was again tried by the Inquisition and sentenced to be burned.

At the last moment pardon was offered him on the condition that he would return to the Christian faith, but he rejected the offer with scorn. He had only one cause for repentance, was his reply, and that was that he had been a Christian in his youth. Molkho's ambition as prophet of the Inquisition was earned a martyr's crown. Some of his addresses were published by him in 1529 under the title of The Book of Wonder. Reuben was taken to Spain and there handed over to the Inquisition. His ultimate fate is surrounded by mystery, but he appears to have died while in the hands of the Holy Office. The evidence that he was burned in insufficient. A copy of Reuben's diary is in MS at the Bodleian. Graetz published a portion in his History, ix., and Neubauer published the whole of it in his Medieval Jewish Chronicles, ii.

Concerning the existence of Reuben there can be no legitimate doubt. His mission, however, was not so well authenticated, and there were those, no mean authorities, who consider him to have been merely a charlatan and impostor. Graetz (ix. ch. 8), for instance, judging from the language of Reuben's Journal, expressed the belief that it had been written by a German Jew, and Neubauer, taking the same view, only more positively. Rieger and Vogelstein (Gesch. der Juden in Rom, ii. 41-46, 53-58) are also very sceptical about his bona fides, yet they express respectful rather than beneficial than beneficial to Jewry. His critics among his own countrymen were, however, numerically insignificant, and his influence among the Jews increased until he became indeed their accepted prophet. By Graetz Molkho has been described at this period of his career as 'the Jewish Savonarola' (Hist. ix. 274). In order to avoid the flood which he foresaw would overtake Rome, Molkho repaired to France, where he met once again the first inspirer of his enthusiasm, David Reuben. Strictly speaking, neither Molkho nor Renueli should perhaps be included in the list of pseudo-Messiahs, for neither ever claimed divinity. They were Messiahs for the most part against their own inclinations. The same may be said of Isaac ben Shabbathai Shabati, the fallen Ari, (1534-72). He was the founder of the modern kabbala. An ascetic and a mystic, he never pretended to be more than the forerunner of the Messiah, not the Messiah Himself. His principal disciple, Hayyim Vital, who became the master of his mysticism, was by no means possessed of a soul unsouled by sin. Around him also a group of mystical legends have collected.

On Luria's death Vital succeeded to his position and also claimed to be Messiah ben Joseph, the precursor of Messiah ben David. Both Luria and Vital made Safad the scene of their principal activities. In the times of Vital a rival Messiah arose in the person of Abraham Shalom, who in 1574 sent a message to Vital pointing out that the latter was only Messiah ben Joseph, but not Messiah ben David. He offered, moreover, to shield Vital from the death that would otherwise have been his fate.

A substantial number of the pseudomessiahs was Shabbathai Sebi, born, the son of a Sephardic agent of an English merchant firm, at Smyrna, on the 9th of Ab (the anniversary of the destruction of Jerusalem and a fast day in the Jewish calendar) 1622 or 1628. He is generally believed to have died on the Day of Atonement in 1676. Even as a boy Shabbathai was noteworthy for his physical beauty and his strange introspective habits. For the ordinary learning of the Talmud, though he was trained in it, he had no liking, and the time spent by him at the school of R. Joseph Escapa was for the most part wasted. On the other hand, the Kabbalistic mysteries of the Zohar had a great attraction for his mind. He threw himself ardently into the study of kabbalistic literature and endeavoured, by carefully following out the ordinances laid down therein, and especially by the practice of asceticism, himself to solve the mysteries that the Zohar professed to offer its students.

At the age of six he had been left an orphan and whose subsequent career was almost as romantic as that of Shabbathai, was at the time of Leghorn, where he was reputed to be living an immoral life. Of great beauty and, moreover, of an eccentric disposition, she was already famous beyond the limits of the town, and her announcement that she was intended as the bride of the Messiah made her known to even a wider circle. In fact, her renown spread as far as Cairo, where it came to the ears of Shabbathai; he sent for and married her, declaring that she was his divinely appointed spouse.

Shabbathai Chasid, who at the age of six had been left an orphan and whose subsequent career was almost as romantic as that of Shabbathai, was at the time of Leghorn, where he was reputed to be living an immoral life. Of great beauty and, moreover, of an eccentric disposition, she was already famous beyond the limits of the town, and her announcement that she was intended as the bride of the Messiah made her known to even a wider circle. In fact, her renown spread as far as Cairo, where it came to the ears of Shabbathai; he sent for and married her, declaring that she was his divinely appointed spouse.

The approach of the apocalyptic year, 1666, attracted Shabbathai to Jerusalem, where, suppressing temporarily his extravagances, he built up an influence over the people on less theatrical bases. As the representative of the people of the city, he was sent as an ambassador to the East and was received with great acclaim and relief from an impending calamity, and the success of his mission rendered him all the more popular among the grateful people in whose midst he was sojourning. While in Cairo, Shabbathai succeeded in yet another mission. A册a -gun, who at the age of six had been left an orphan and whose subsequent career was almost as romantic as that of Shabbathai, was at the time of Leghorn, where she was reputed to be living an immoral life. Of great beauty and, moreover, of an eccentric disposition, she was already famous beyond the limits of the town, and her announcement that she was intended as the bride of the Messiah made her known to even a wider circle. In fact, her renown spread as far as Cairo, where it came to the ears of Shabbathai; he sent for and married her, declaring that she was his divinely appointed spouse.

Of great beauty and, moreover, of an eccentric disposition, she was already famous beyond the limits of the town, and her announcement that she was intended as the bride of the Messiah made her known to even a wider circle. In fact, her renown spread as far as Cairo, where it came to the ears of Shabbathai; he sent for and married her, declaring that she was his divinely appointed spouse.

From Smyrna Shabbathai is believed to have gone to Constantinople, supported in every sense by his disciples and strengthened in particular by two of them—Moses Pinheiro, a man of some scientific knowledge and of mature years, and Abba Yehuda, who for a while went with him, whose influence was strengthened by means of an alleged ancient MS of very doubtful authenticity, rendered Shabbathai still more steadfast in the belief in his own divine mission. It is doubtful whether Shabbathai, if he ever intended to visit this city, did so on this occasion, but it is certain that he arrived at Salonica, where mysticism was likely to find a sympathetic atmosphere, shortly after his banishment from Smyrna. In Salonica Shabbathai showed himself even more intoxicated with the consciousness of his new role than he had been at Smyrna, and his acts led here also to his practical expulsion by the Rabbis. After leaving Salonica the new Messiah spent some time wandering about the Orient, promulgating his views and his claims in every city that he visited and gaining adherents in all parts. In 1660 he was in Cairo, where he remained for about two years. There he gained a valuable supporter in the person of Carpaccio Chalebi of Aleppo, a mystic who had long awaited almost with impatience the coming of the Messiah, and whose wealth and influence were both extensive.

The approach of the apocalyptic year, 1666, attracted Shabbathai to Jerusalem, where, suppressing temporarily his extravagances, he built up an influence over the people on less theatrical bases. As the representative of the people of the city, he was sent as an ambassador to the East and was received with great acclaim and relief from an impending calamity, and the success of his mission rendered him all the more popular among the grateful people in whose midst he was sojourning. While in Cairo, Shabbathai succeeded in yet another mission. A册a -gun, who at the age of six had been left an orphan and whose subsequent career was almost as romantic as that of Shabbathai, was at the time of Leghorn, where she was reputed to be living an immoral life. Of great beauty and, moreover, of an eccentric disposition, she was already famous beyond the limits of the town, and her announcement that she was intended as the bride of the Messiah made her known to even a wider circle. In fact, her renown spread as far as Cairo, where it came to the ears of Shabbathai; he sent for and married her, declaring that she was his divinely appointed spouse.

Shabbathai Chasid, who at the age of six had been left an orphan and whose subsequent career was almost as romantic as that of Shabbathai, was at the time of Leghorn, where she was reputed to be living an immoral life. that the latest of miracles might be discussed. The merchants of the North Sea ports wrote to their agents in the Levant for information. Tribute coursed in upon the King of Kings. Embassies were sent to him from the four corners of the earth. In the synagogues he was publicly hailed as the Messiah, and those who doubted were in danger of their lives. Even among the Christians, the followers in their mission were to be found. In Hamburg, Protestant students went to their pastor and said: 'We have almost certain accounts not only from Jews, but also from our Christian correspondents at Smyrna, Aleppo, Constantinople, and elsewhere in the East, that the new Messiah of the Jews does many miracles, and the Jews of the whole world flock to him. What will then become of the Christian doctrine and the belief in our Messiah?' Prophets, male and female, in accordance with Joel's prediction (Jl 3:18), arose and exclaimed in Hebrew, a language with which they were supposed to have no acquaintance: 'Shabbathai Zejni the true Messiah of the Race of David; to him the crown and the kingdom are given!' The daughters of Rachel, Shabbathai's bitter enemy, blessed the name of the perpetrator, as had been foretold. In Persia the Jewish agriculturists refrained from work on account of the advent of their deliverer who would lead them back to the Promised Land.

At the beginning of the year 1666 Shabbathai left Smyrna for Constantinople, but before doing so he distributed the kingdoms of the earth among his principal followers. Some said that he had landed on European soil, he was arrested by an officer of the Sultan, who placed him in chains, and it was in this condition that Shabbathai approached the capital. Despite this undignified landing, Shabbathai's popularity was no wise languished, and he was received by hosts of believers in his divinity, who, by the gifts which they brought, enabled the Messiah to secure a considerable alleviation of the lot that would otherwise have fallen to his share. Shabbathai's courage did not, however, equal his popularity; and, when questioned by the authorities regarding his claims and intentions, he replied that he was merely a Rabbi sent from Jerusalem to collect funds for charitable purposes. Despite this falling away, the influence of the pretender, instead of waning, grew stronger, and in his prison in Constantinople Shabbathai held a court which was attended by Muslim men and Jews who alike proclaimed his divinity. After two months the prisoner was removed to Abydos, and there his court was continued with, if possible, even greater success than in the capital. His renown and exaggerated reports of the royal manner in which he was treated spread throughout the civilized world. The castle of Abydos became a place of pilgrimage to Jews far and near. In parts of Europe the Jews made preparations for the return to Palestine under Messianic guidance. In innumerable synagogues prayers for the pretender's welfare were regularly offered; and with every day the excitement both within Abydos and in Abydos spread throughout the world increased. Meanwhile Shabbathai, in order apparently to justify his existence, abrogated certain of the Jewish fast days.

Shabbathai's fall was due to the appearance of a rival, one Nehemiah Ha-Kohen, who posed as a forerunner of the Messiah. Shabbathai, learning of Nehemiah's prophecies, summoned him to Abydos. After a long journey Nehemiah arrived. An interview with Shabbathai was followed by dissatisfaction on both sides. Nehemiah, fearful of assassination by the Shabbathians, fled to Constantinople, where he embraced Mahomedanism and denounced to the authorities the treasnable intentions of his rival. Removed to Adrianople, Shabbathai at length realized the critical position in which he was placed. Hoping thereby to save his life, he also embraced Mahomedanism, and was followed in this course by his wife and some of his adherents. The Sultan was much pleased at this act and appointed the pretender to the places of his doorkeepers. Shabbathai, in order to retain his hold upon the Jews, announced: 'God has made me an Ishmaelite; He commanded, and it was done.' The allusion to his regeneration. His apostasy, despite the loyalty to him of many of his adherents, shattered his influence in Jewry, and hosts of Jews, their eyes at length opened to the last act of their prophet, repented bitterly of their support of the movement. For a time, in consequence of the schism caused by Shabbathai's apostasy, Turkish Jewry was in great danger of extermination, the fear of wholesale conversions to Mahomedanism being accompanied by that of the massacre of those who refused to follow Shabbathai's example. Powerful influences, however, warded off the latter danger.

Shabbathai seems never to have abandoned his Messianic claims. He managed to found a Judeo-Mahomedan sect of believers, the Dömmeh, who have survived, especially in Salonica, to the present day. After a time he fell into disgrace, was deprived of his office, and banished to Algiers, where he died, it is believed in 1766, leaving behind him a controversy which long continued in Israel. The Dömmeh are in a sense crypto-Jews, inasmuch, while outwardly conforming to Mahomedanism, they practise certain Jewish or debased Jewish rites in secret. There is, however, in practice little secrecy concerning their difference from the Mahomedans, from whom, although they mix in commerce, socially they keep carefully aloof.

Shabbathai was succeeded by quite a shod of petty Messiahs. The first of the line was Jacob Querido, or Jacob Soh, who was the real founder of the sect of Dömmeh. He was in reality the brother of Shabbathai's fourth wife, whom for her own purposes pretended that he was her son by the Messiah. Querido's principal doctrine was that the redemption could not come about until the world was either entirely good or completely wicked, and, as the latter state was by far the easier of attainment, he preached and practised licentiousness in order that the day of the millennium might dawn. Querido died at the end of the 17th cent., and was succeeded in due course by his son Berechiah (c. 1695-1740). Other Shabbathian Messiahs who flourished at this period were Miguel (Abraham) Cardoso (1630-1706), a Marrano, Werodek Mokiah (c. 1650-1729) of Eisenstadt, Löble Prossnitz (c. 1720), and Judah Hasid. These were all, more or less, prophets of Shabbathai so long as he survived, and they endeavoured to step into his place when he died. Mokiah flourished and preached in Italy and Poland. Prossnitz was of the class of clumsy conjurers; nevertheless he attracted many adherents in Austria and Germany. Hasid, who was a leader of the sect of Hasidim, the 'Ultra-holy,' traversed Europe at the head of considerable following whom he led to Jerusalem. He died, however, immediately after his arrival in that city, and with his death his followers were left leaderless and destitute.

The last of the most prominent of the successors of Shabbathai was Jacob Frank (1729-91). He was born in Podolia, where his first occupation was that of distiller. His original name was Janikav Lebovitz, but he obtained the new surname of Frank from the subjects of the Sultan in whose midst he sojourned for a long time. An
undisguised charlatan and an apostate from more than the safety of his life, he faced a career of waging war against Rabbinical Judaism, and in the peculiar views to which he gave expression he described himself as the re-incarnation of all the prophets and Messiahs who had preceded him. In Turkey he obtained considerable renown on account of his kabbalistic learning, and on the return to his birthplace the remnants of the Shabbathian party, who were known as Zoharites, appointed him their prophet. The Talmudists, however, disapproved most violently of his innovations, and, unable to make them accept baptism, he himself setting the example. Conversions to Christianity followed on a considerable scale; but, when the converts were discovered to be leading double lives, and, while outwardly Christians, to be following Jewish practices in secret, the attention of the ecclesiastical authorities was directed towards them. Frank was himself arrested in 1760 on a charge of heresy and heresies, in the castle of Zentzachou, where he remained for two years. This imprisonment did not by any means put an end to his movement or his teachings, and his prison became a centre for the promulgation of his doctrines. The invasion of the Russians in 1772 led to his liberation, and he was then free to make a triumphal progress through Poland, Bohemia, and Moravia. He lived in state until his death in 1787, latterly as the Baron of Offenheim, in various towns and cities with an immense retinue and a vast treasure, derived from his innumerable adherents, at his command. His later history, however, hardly belongs to the annals of Jewry, for his influence on Judaism had lapsed with his death. His followers, the Frankists, although for a time they kept themselves apart as pseudo-Jews of a peculiar description, were ultimately absorbed into the population in whose midst they lived.

Frank was the last of the series of pseudo-Messias to be accepted seriously by any considerable section of Jewry, but there is one other who deserves mention, before the catalogue of these actors on the world's stage is brought to a close. Not even Lazutzki's most determined enemy could sincerely suggest any such charge against him. One might almost say that he was merely a victim of his own delusions; his predecessors for the most part found the victims of their delusions either dead or insane, and soon the mysteries of this literature took complete possession of him and he firmly believed himself to be divinely inspired. He even went so far as to create a second Zobah, and by the work of his own hands and mind he was convinced of his divine mission. A circle of young devotees soon settled round him, and his fame began to spread to the confines of Jewry. The leading officials of Judaism in Germany were scandalized and, after some difficulty, brought pressure to bear upon the newly arisen prophet to undertake to refrain from teaching, by means of either the spoken or the written word, the new doctrines, to the desired promise, but was unable to observe it for very long, and, when he once more reverted to the forbidden studies, he was excommunicated by the board of Rabbis in Venice. Ultimately he fled to Palestine, where he died of plague shortly after his arrival.

LITERATURE.—On the general subject of pseudo-Messias relatively little has been written. The principal references to the subject are to be found in works on post-Biblical Jewish history. Much of the information contained in the following subjects is taken from supple-
METALS AND MINERALS. - t. Metals.

Fire and metallurgy may be regarded as the two main bases of material culture. The results of the modern applications of steam and electricity have been described as "punning and insignificant," when compared with those which followed the discovery of metals by the men of the stone age; \(^1\) and with the finding of the art of extracting metal from ore, "human culture was revolutionised."

Possibly the first attempts at utilizing minerals were made by applying a modification of hammer-work on stone to fragments of surface-ore. Copper and its alloys, especially a native bronze, would naturally be observed first; but the usual order of discovery is fist lead, then tin, then copper, iron - not absolutely; the order varied in different regions. For instance, it is unlikely that the West and Central Africans found any metal earlier than iron, which is so abundant in their country.

Copper is of importance to humanity by the discovery of metals and the invention of metallurgy, philosophers have inclined to attribute to them some remarkable cause. Lucretius, e.g., imagined a mighty conflagration; this, in consuming forests covering the earth, would have reduced the outcropping oree to a metallic state.\(^2\) But, with the discovery of fire-making, there are many possibilities, and various lines of discovery may have occurred. Gowland supposes that the discovery of metallurgy is to be found in the camp-fires of the Neolithic age.\(^3\) When these were made on metaliferous soil, the lumps of metal melted out would at once attract the attention of a stone-working people, and the brushes of the stone hammer on the soft and malleable mass would indicate its possibilities. The camp-fire may thus be regarded as the prototype of the most elaborate modern furnaces.\(^4\)

Naturally, a feeling of the importance of metals, and the miner and the worker in metal are regarded with wonder, and often with its entailed superstitious feelings. Among the Buggals of the Upper Congo no one is allowed to step on the approach, in the camp, with his mouth; such a one would pollute the fire and cause bad workmanship. The smith is made of copper, and some Supreme Being perform his work well. Neighbouring peoples simply regard the smith with respect.\(^5\) Some African smiths form sacred gods; the mythical Wakan in the Ojibwa, the Matap aided by the Sun, is part at least of the figure of the Greek Hephaestus.

The usual tabus and animistic beliefs are attached to the working of metals, to mining, and to the ore and metal themselves. The tin-miners of Mysore have a remarkable code of tabus and body of superstitious ideas, but the custom of the Chinese: workers, who, however, as will be seen, have a similar faith. The ore is supposed not only to be divine but to grow, to be able to speak of it, to do things of itself, and to have special likes or affinities for certain people and things and vice versa. It is thus held that the people with a certain amount of respect, to consult its convenience, and what is perhaps, more curious, to conduct the business of mining in such a way that the tin is obtained without its own knowledge.\(^6\) Of the tabus acts observed by the miners, the chief are that no living creature may be killed in the mine; that the same place must be put on; that shoes may not be worn, or an umbrella used. Numerous charms are employed by the "mining wizards" for the purposes of clearing away evil spirits and to induce the ore to show itself. The Malay possession ("medicine-men"), or mining wizards, used to enjoy "an extraordinary reputation, some of them being credited with the power of bringing ore to a place where it was known that no ore existed, to possess the power of sterilizing such ore as existed, and of turning it into mere grains of sand."\(^7\) No one but him was allowed to wear a black coat at the mine. He used a special language (tahitian pasea, "take language") for his professional duties, and he had a wonderful "note" for life.\(^8\) Sometimes each separate grain of ore was credited with personality.\(^9\) It was believed that the tin could announce its presence by a peculiar noise heard in the stillness and darkness of the mine: the real tin is described as a buffalo, in which shape it makes its way upwards.\(^9\) This being perhaps a mere superstition.

In Humboldt's eyes the spirit of the gold mines are treated with as much deference as the spirits of the tin mines in the Malay Peninsula. Tin, ivory, and the like, are kept away from the miners to the scene of their operations, for at the sound of such things the spirits of the mine would cause the gold to vanish.\(^10\) In some cases, for example in Transvaal, the removal of the precious metal is regarded as a theft which the spirits would punish if they caught the thieves in the act. Certainly the Buggals believe that gold has a soul which seeks to avenge itself on men who dig the precious metal.\(^11\)

In Malagasy the iron-ore deposits are under the protection of a dancing god ("forest god"), who is appeased before the iron is worked.\(^12\) He capriciously moves the iron about. His symbol is a piece of a four-footed animal. The working of the gold, a deep silence must be observed; no commands may be given or questions asked, prejudice being removed.\(^13\) The same holds good of the gold, a deep silence must be observed; no commands may be given or questions asked, prejudice being removed.\(^13\) The same holds good of the tin, which is regarded as a sacred fire for the sacrifices. The god's servants or priests are two old women, turned mermaids, who are never seen, but always smell of fish and bubble incognito. If a man is similarly possessed by the god, he is known as a sibele and during the ceremonies wears the paint of a mermaid. The same is undoubtedly true of the tin.\(^14\)

The last example is a perfect one for showing the development of an organized cult around a metal and the processes of its acquisition. There is some vagueness, which is worth noting, as to whether the metal itself is personified. As for its being deified, this is hardly to be inferred here or elsewhere.

The god appears to be rather the owner of the site, resembling the Hebrew Baal.\(^15\)

The Malays regard gold in a similar way. The gold "spirit" is believed to be under the care and in the gift of a danao or god.\(^16\) It has the form of a female person.\(^17\) The theanthropomorphism is analogous to that of the tin.

The same ideas are found at the other side of the world.

Gold was regarded by the Central Americans as possessed of "divine qualities," and it was gathered in fasting and penance.\(^18\)

An interesting detail with regard to the personality of metals is supplied by Malay superstition. The Malays believe that so long as gold is in the earth it has a soul, and if gold is taken from the ground, the soul flies away. The idea is parallel to those found in agricultural lore; presumably the corn spirit leaves John Barleycorn when he is ground, if not when he is reaped. The idea is elaborated by saying that the soul may be retrieved and will assist the usefulness of the implements when made.

Among the Allofooes of Celebes iron-working is a prominent industry. The goldsmith is apt to declare that the metal under the hammer. Every smithy, therefore, includes a bundle of famous (‘gods’), consisting of wooden imitations of iron implements, sacred to the soul of the iron realtor. ‘If we did not hang the figures over the anvil, the iron would fly away and be unworkable’ on account of the absence of the soul.

This is an interesting application of the principle of the external soul. The Chinese in their elaborate animism have not neglected metals. They consider metals and ores when in the ground to possess a soul (‘sama’). Animal or human shape, and this figure is either the mineral or a spirit guarding it. ‘Gold, jade, and pearls ... are the being of Heaven and Earth.’

As is towards the Scandinavian idea of guomus. The Chinese have tales of silver men and of ‘women in white’; when they were attacked and knocked down, they disappeared into the rocks and guomus. The same kind of analogy connects various metals with various things, according to colour or other properties. Gold, for instance, is the golden disease, and heal it on the homeopathic principle with a decoction from an English sovereign, English gold being the best.

One or two examples of the miscellaneous wonder lore which has gathered round metals may be cited. Fern-seed, itself a mythical vegetable gold-dust, guides to hidden treasures. A Malay recipe for curing leprosy brings into gold is to kill a wild pig, and sew up in it a quantity of ‘scrap’ brass; then pile timber over it, and burn it; when grass has grown up, dig up the gold. Hence brass is a magic ring of a mixture of all metals joined under certain constellations, and Van Heemstel concocted a ring of magic metal which cured disease. An obvious connection is practically universal between gold and the sun, silver and the moon. Iron is the lunar metal; hence peasants like to have silver in their pockets when they see the new moon, and to burn it for luck, i.e. doubling. The whole of the magnetic iron and cobalt are ignored.

The relative value of the familiar metals is the same in superstition and ordinary usage. It is interesting to note that the Hindus regarded alloys as impure, and never used them for religious purposes. Here may be detected the notion of mixture, adulteration, as a component of the idea of impurity. Another popular division of metals is into precious and base. The Chinese consider gold ‘the most genuine matter.’ In all the analogous estimates found in every age it would seem that aesthetic ideas supersede economic. Clearly the aesthetic value of gold and silver rather than their importance as currency is to the fore, and either view predominates over the mechanical importance of gold.

A similar predilection is shown in the genealogies of the metals. Mauz said that gold and silver arose from the union of various metals. In Chinese philosophy the ‘sama’ produced by the influence of the feminine principle in nature, being classed between silver and lead. The metal arsenic generates itself in two hundred years and after another two hundred years is converted into tin. Tin, being a product of the feminine principle, has tender qualities. When it is submitted to the influence of the masculine principle, it is changed into arsenic. It is found that wine kept in tin vessels has a poisonous action on man, which proves that the arsenic had not been completely transformed into tin.

This notion of transmutation of metals is a curious parallel to modern discoveries of degeneration of radium into a series of filial metals. The search of the alchemists for the philosopher’s stone included a similar hypothesis.

According to the Pahlavi Bundahish, gold, silver, iron, brass, tin, lead, quicksilver, and copper were derived from the various members of the dead Olympos; and on account of the perfection of gold it is produced from the life and seed. The Pahlavi Sipar in Sipar speaks (xxv. 15) of the duty of ‘profaning’ melted metal, i.e. practicing, habits of the heart so unsullied and pure that when they shall pour melted metal upon it, it does not burn. But the ordered slays a sinner. Metal, especially gold and silver, is a counterpart of Shiva himself in the world. From the divided body of Indra, according to the Satapatha Brahmana, metals arose, as well as all kinds of substances and living creatures; e.g. from the navel came lead. The five elements in Chinese natural philosophy are water, fire, wood, metal, and earth. Wood produces fire, fire earth, earth, metals, water, and water. The idea of animal souls for metals already referred to has probably no cosmological intention.

In the multitudinous superstitions relative to the protective, curative, or dangerous properties of metals, the analogies of their relative value and efficiency, e.g. between gold and steel, seems to predominate. The Satapatha Brahmana lays down that for the horse should be of gold, that for the parya-agga of copper, and that for the other sacrifices to Prajapati of iron. Gold is a symbol of the nobility, copper of heralds, messengers, and the like, iron of the peasants. The idea of the value of gold, its brilliance, analogous to fire and the sun, connect it with vitality. Hence its extraordinary popularity as a panacea to this day among the Chinese, in the form of leaf, dust, decoction, or grease. It is placed with the mushroom to assist revivification and to delay decomposition.

The Chinese also put mercury in coffins in order to preserve the body. With no knowledge of emulsifying they endeavour to insulate, as it were, the coffin against decay. The use of mercury may be referred to the analogy between a moving and apparently living body of worth and organic life. British folklore advises rubbing ringworm with silver.

Metals, in virtue of their various properties, are used both as medicines and as amulets, in either case dependent on magical notions. The Burmese believe that the wearing of silver and gold is itself protective, and base metals may be used in default of precious. Lump of gold are worn under the skin to secure invulnerability. There is a common practice of covering amulets with gold-leaf to add to their efficacy. For a person to wear something, as if a part of himself, which has a value of its own, adds to his own value and resisting power. On the same line of reasoning, metals of worth are the more useful in warding off ghosts and enemies. In European as in Semitic folklore, the most efficacious bullet against magical enemies is composed of silver, or a crooked sixpence; but all metals have efficacy in this direction.

The property of resistance is common to most metals; the precious metals possesses the further properties of beauty and value. Their strength and hardness of iron make it a favourite charm.
To keep off evil spirits, mourners in India carry a piece of iron—a key or a knife or any iron object. After a death, iron was placed in all the provisions in the house 'to prevent death from entering them,' and similar customs obtain in Ceylon and Morocco. 1 When Scotch fishermen return to port, it is customary to take the name of God in vain, the first man who heard him called out "Cauld air!' and the son of the crew grasped the nearest bit of iron and held it between his hands. 2 This to-day in parts of Scotland there survives a queer superstition about "pigs" and "mule iron." The last words heard by "Apache pig" when fishing: "If you hear a man do so, you must shout" "Och aye!"

Iron is an ineradicable idea in medicine. Iron is used as a tonic and that in early culture its strength was absorbed by men. The famous eight-inch iron arm-rings to keep off evil spirits or witchcraft, and they place iron by the side of sleeping infants for the same purpose. In Sarawak hitting a piece of iron is a similar protection. The Tjorjas believe that iron strengthens one's soul, and bold ceremonies at fatalties for this purpose. The people of Balabera drink water in which iron has been dipped. 3 In Surinam iron arm-rings are supposed to strengthen the wearer. 4 Scottish prisoners have in their regalia a sacred lump of iron, 'a piece of old scrap-iron with supernatural powers,' 5 Long iron nails are used by the Malays to protect newborn infants, cutlet-out scissors to drive away evil spirits from the dead, and a sword is put in a strange river before a man will drink from it. 6 When going alone in the forest a man will sit on his sweet, not only to drive away evil but to 'confirm' himself. Such iron implements are called 'representatives of iron.' 7 Scars on the arm are used in curing the sick.

The supernatural power of a sharp instrument is, of course, to be added in many cases to the intrinsic power of iron and steel as such. The Far East has the virtues of the gong as a repeller of evil or not. These rules usually apply to critical circumstances and persons.

Iron was not allowed to touch the body of the king of Kores. The Archon of Platea was forbidden to touch iron. Tools of iron might not be used at the home gates. The arval brothers offered an expiatory sacrifice when an iron graving-tool was used. Roman portraits were unadorned with iron workers. The hair of the Flaminian Diutius might be cut only with a bronze knife. It appears that the Greeks ascribed purificatory powers to bronze, because it had been brought from Africa. The Cape Town Steers retain stone implements for sacred purposes. Circumcision is performed with a quarta knife by the Bontone-toba and the Ovambo. Among the Indians it was ceremonially drawn from the slayer of a man or a lion, but with a flint knife. 8 The deeds cut the sacred mistletoe with a golden sickle. When making need-fire, the Scota removed all iron from their persons. In making the Yule-tide fire-wheel (olivet), the hammering must be done with a stone. Similar tabus were observed in ancient Palestine and Italy. No iron tool was employed in making Hebrew altars or in the building of the Temple at Jerusalem. An old Roman Privilege, a sacred bridge, was made and repaired without any use of iron or even bronze. Hindus have believed the use of iron for buildings to be productive of epidemics. 9

Frazer considers that the tabus against iron in ceremonial 'perhaps dates from that early time in the history of society when iron was still a novelty, and as such was viewed by many with suspicion and dislike.' 10 Thus, when iron ploughs were introduced in Poland, some bad harvests followed, and the farmers believed that the iron implements were the cause of the evil. 11 The hypothesis is inconclusive. Iron and steel are used in virtue of their death-dealing qualities to ward off supernatural (no less than physical) evil, and weapons made from them are essentially dangerous weapons. Mental and physical customs practised at critical seasons or with reference to persons or things in a critical and sensitive condition call for special treatment with special apparatus, or at least with certain objects that bear the name of King Charles I. Sufferers from paralysis or rheumatism collected copper coins from the charitable at the church-door, and these were committed into silver rings which were worn to cure the infirmity. 12

The acoustical properties of metals have also been important in popular religion. The belief that the sound of brass or iron has power to put spirits to flight prevailed also in classical antiquity, from which it may have been inherited by medieval Christendom. 13 In the Far East the virtues of the gong as a repeller of evil are well known. Brass is considered by the Chinese the most effective metal for repelling demons; 14 the sound of a brass instrument is the most terrifying.

An abstract set of beliefs and practices has a strong tabu against the use of iron and the substitution of other metals or substances, previously used or not. These rules usually apply to critical circumstances and persons.

Iron was not allowed to touch the body of the king of Kores. The Archon of Platea was forbidden to touch iron. Tools of iron might not be used at the home gates. The arval brothers offered an expiatory sacrifice when an iron graving-tool was used. Roman portraits were unadorned with iron workers. The hair of the Flaminian Diutius might be cut only with a bronze knife. It appears that the Greeks ascribed purificatory powers to bronze, because it had been brought from Africa. The Cape Town Steers retain stone implements for sacred purposes. Circumcision is performed with a quarta knife by the Bontone-toba and the Ovambo. Among the Indians it was ceremonially drawn from the slayer of a man or a lion, but with a flint knife. 8 The deeds cut the sacred mistletoe with a golden sickle. When making need-fire, the Scota removed all iron from their persons. In making the Yule-tide fire-wheel (olivet), the hammering must be done with a stone. Similar tabus were observed in ancient Palestine and Italy. No iron tool was employed in making Hebrew altars or in the building of the Temple at Jerusalem. An old Roman Privilege, a sacred bridge, was made and repaired without any use of iron or even bronze. Hindus have believed the use of iron for buildings to be productive of epidemics. 9

METALS AND MINERALS

2. Minerals. — The religious associations of minerals in general are fewer and less marked than those of metals, except in the case of salt. The use, however, of stones of various sorts and shapes as jewels and vehicles of magic is very widely spread; but, as it demands a special study (see art. STONES), it is touched upon here only to illustrate the general attitude towards the mineral world.

Australian medicine-men possess sacred stones full of strength, more or less regarded as "living spirits." They even open the caves in which they are found, rub their heads with them, to acquire their virtue.1 In Melanesia magic and worship are closely connected with sacred stones. The stone is not the "sui (the spirit) nor is the man the 'gods," but is a "connection." The stone is as it were, the "outward part" or "organ" of the sui, and the owner of such a "stone is the priest.2 These stones are kept in houses in order to bring home to the inmates. There are special stones for promoting the growth of the crops and for bringing successful marriages.3 A stone, at the same time, is the "sui"—to induce it to act. Food placed on a stone and then eaten gives meats to the eater.4

Both shape and material are concerned in the prestige of sacred stones.

The Australians are partial to a small round black stone, which is easily polished; the medicine-men cure a disease by pretending to excavate the stone, and rubbing the sick man’s body with the powder of the stone.5 In some tribes every man carried a round black pebble of magic power, sufficient for the cure of disease; in contact with anything coming from an enemy sent the magic force into his body, procuring his death or sickness.6 Rock-cystal, or quartz, is a favourite material of similar purposes.7 Attention lies upon the visible habits of rock-crystal for making rain, curing or causing disease, and for curing the sick.8 To cure disease they would extract a piece of rock-crystal, alleging that a hostile sorcerer had placed it in the patient’s body.9 To make rain the sorcerer breaks off a piece of rock-crystal and splits it towards the sky. While quartz is used for this purpose in Queensland, the stones are fixed in a hollow bone, or split open and placed in a pool, while the sick man is washed in the water. Some parts a quartz crystal is ground to powder, which is scattered over the patients, who pretend that it is rain.10 The liquid appearance of the crystal possibly suggests its connection with rain. The Wa-wamba of Central Africa animate a rain-stone and place it on the lake or in the sea to induce rain.11

Crystals are peculiarly associated with the jade or native gold of New Guinea.12 In the Banks’ islands a round stone, called "sumstone" (test-lou), is decorated with radiating tassels and hung in a tree to produce rain.13 In New Guinea a "wind-stone," which he swallows is procured by the Manager of the Jade Stones.14

This would accelerate his intercourse with disembodied shen, the object of his fast.15 There were many stories of a luminous variety of jade.

The discovery of salt, and its employment in food-preparation constitute an epoch as socially important as the discovery of metals. Neither has been achieved by the Australian natives; and many metal-using savages are still ignorant of salt. But its discovery generally comes early in culture, though long subsequent, in most cases, to the discovery of metal. Owing, perhaps, to its quasi-medical properties, as much as to its effect on foodstuffs, salt has attracted an amount of superstitious and religious attention. The bond, e.g., created in Arabia and other customs by eating salt together is in the highest degree sacred, and may deserve the name of "salt-communion." Very holy obligations were "covenants of salt." Salt has analogies with blood and all "strong foods"; on another side it has analogies with "strong" metals like iron. Primitive peoples ignorant of salt are supposed to correct its absence from their food by drinking fresh blood.

Harsh superstitions about salt have lasted into modern civilization, owing to its having been a sort of symbol of food-communion and of the common meal.

In mediævalism the salt separated the family from the retainers in hall.11 In Leonardo’s fresco of the Last Supper, Judas was to be recognised by the salt-cellar which he had overturned; the detail is visible in the copy by his pupil, Marco il Oggiono, in the Brera gallery.

Salt has been much used in sacrifice, indicating the analogy between sacred and ordinary meals. 

Mola salda was offered by the Latins to the Larva, and salt was sprinkled by Greeks and Latins on the head of the sacrificial animal. On the other hand, the Rabbi Chias, in the 3rd cent., stated: 'that in all salt there is some portion of the salt and sulphur of Sodom, which blinds the person whose eyes it touches.' We thus get the two poles with which salt is taken: on the one hand the benediction of nature, and on the other the curse. In ancient Egypt salt with the name of a goddess, Huitzocimli, of salt, who believed in the importance of the process.9

Prohibitions against the use of salt are instructive for the theory of tabu. Certain professions, and persons in certain states, are forbidden to use salt, as they are forbidden other critical substances.

Mourners may eat no salt among Hindus, Africans, and other peoples. Priests and medicine-men (as among the Egyptians, the Chinese, the Jews, and the South-Americans) may eat no salt throughout their lives.11 The salt-tubs of the Egyptian priesthood is especially emphasized.12 When travelling, the Central African might not use salt. If he did, and his wives were not behaving well, the salt would act as a corrosive poison.13 During the ceremonies of firstfruits among the Tscho Pon in California and abstinence from salt are ordered,14 and this is also the case after a solemn communion with a god by the Hindus. According to the laws of nature, salt may not be used in cooking, or on the other hand, any food at the Gilyk Bear Festival.15 Some Dayakans and their heads may eat no salt, or touch iron, or hang with women.16 The last is known also in India. In the Malay world the young, and the bride, and the newly married must abstain from salted food for three days.17 The following is a luminous instance of the etymology of the associations of salt.

The Jews and Arabs make up the salt, which means a unifying tie. The Greek salt, 'a bodiless salt' in the Greek idiom of the salt, 'a bodiless salt,' and 'a brine of iron,' 'a yoke of iron,' 'walls of iron,' 'an iron sinew.'18 A teacher of the law, said, the Rabbin, must be as hard as iron. Being also breakable into pieces, it is a symbol of the Torah with its numerous parts.

The symbolism of Dn 2 and 7 comparing the kingdoms of the world to metals was popular in medieval literature.

'The Prophet's 'horse is beautiful; silver is Media; copper is Greece; iron is not mentioned either at the time of the First or of the Second Temple, since it symbolises Edom (Home), which had destroyed the Temple. The iron would have a longer series of ages—gold, silver, brass, copper, tin, steel, iron.19

This elaborated a metallic symbolism: gold is wisdom; copper perception.20 The Sabians associated each planet with a metal, and the series is reversed in a similar manner with a planet as well as to a psychic quality. C. Boek, 792. Ross's famous metallic series of the ages of the world is not the same.
we live is iron. 1 The principle behind this is aesthetic.

In Italy Saturn and in Greece Cronus 2 was believed to have been a king who reigned in heaven or on earth during the bad time. He was a man who passed his days like gods without toil or sorrow, when life was a long round of festivity and death came like sleep, sudden but gentle, announced by none of his sad forebodings, the ailments and infirmities of age. 3

A. E. CRAWLEY.

METAMORPHOSIS. - 1. Evidence for the belief. — Metamorphosis, transformation, or shape-shifting is a power universally believed in at low levels of culture. It survives at higher levels, especially among the masses, though it is also found in myths which are current among the educated or where popular belief tends to take the form of dogma, as when 17th century theologians accepted the werewolf superstition as a fact. The evidence for this universal belief is copious, and is found in myths, legends, and sagas, as well as in poetry from all lands; in folk-tales, of which it is one of the commonest themes or the most important incident, as, e.g., in the "Transform" or the "True Bride" 4 cycle; in existing folk-belief, whether among savages or the peasantry; in the writings of modern travellers, explorers, and missionaries, as well as in literature — Egyptian, Babylonian, Hindu, Greek, and Celtic.

2. Varieties of metamorphosis. — Metamorphosis is asserted of every order of beings and even of inanimate things. (a) As far as men are concerned, what the belief current among all men do not necessarily claim the power of transformation, but any man will readily admit that others have this power. Hence we have beliefs in the existence of distant tribes or groups possessing the power of transformation, generally those who are credited with this power are medicine-men, shamans, sorcerers, wizards, and witches. To multiply instances is unnecessary; suffice it to say, wherever such a class of people is found, shape-shifting is always one of their magical powers. No one believes that he can change his form, though his savage ancestors did so; with him the belief survives in his firmly-rooted opinion that every witch can do anything to anyone. Chinese and other Eastern people, however, every one is believed to have some connexion with an animal form. Thus among the nations of W. Africa the bush-soul, one of the souls which each man possesses, exists in an animal; in Indo-China one of the souls of a man has the power of appearing as a man or as a wer-animal. 5 This aspect of the subject is fully discussed under LYCANTHROPY.

While metamorphosis into animal form is more general, that into tree, plant, or flower is also found here and there. Besides this, numerous myths and tales from all parts of the world explain the origin of some tree or plant by saying that it sprang from the body of the man, the arm, leg, head, or blood of some human being. Similarly, men are sorcerers bent on having sprout from plants. Where a tree springs from a dead human being the identity of the two is obvious, and here the stories may be based on the fact of the sprouting from the body of a man whose existence was known. The hive is supposed to be tenanted by the dead man's spirit or are identified with the man himself.

The medicine-man or wizard also has the power of transforming others. He may supply them with the magical means to change their form, but more usually he himself casts a spell upon them and transforms them. This is usually done through malice and no incident is common in form than this—but it is sometimes meted out as a punishment, though transformation for this reason is generally the act of the gods. In such cases the transformation may be for a longer or a shorter period, but it is often of a permanent character.

Instances are found at all levels of culture. Classical mythology knew many such punishments for impiety. The incident enters also into Christian literature, though it is rooted in earlier sources. Thus Christ is represented as a tried traveller who is refused food or on whom a trick is played by a peasant or a Jew, and the result for them is the punishment of transformation to animal form. In many cases groups of malignities are said to be human beings changed to stone for some act of impiety—the idea perhaps originating in the belief that the stones embody ghosts of the dead buried beneath them. Other instances of petrifaction, in some cases also for a punishment, are found in all mythologies—Australian, American Indian, Greek, Hebrew, etc. The idea of petrifaction may be connected with the fact that many rocks bear some resemblance to human form. 6 In folk-tales the power of petrifaction is usually in the hands of witch or wizard, and a touch with a wand, binding the victim with the witch's hair, or the repeating of a spell suffices. Cf. Medusa's head.

(b) The power of transformation on the part of men was reflected back upon the gods in all mythologies, from the lowest to the highest—Bushman, Australian, Polynesia, Scandinavian, Greek, Hindu, Egyptian, etc. There was no limit to the forms which they could take, animal or human, in order to serve their purposes—to escape danger, to benefit men, to carry on amours, and the like. As in Egypt, men looked forward to being able to assume any form in a future life, like the gods. 7 The gods, too, as has been seen, had the power of causing metamorphosis as a punishment to men.

(c) Demons and supernatural beings of all kinds were also believed to have similar powers. The jinn of Arabia, the bhuta of India, the devils of early and medieval Christianity, 4 the horse-heroes and other monstrous beings of popular belief, can assume any shape to carry out their ends. Often the form is that of an attractive girl or youth who lures away a human victim to destruction. Ghosts of the dead may appear as animals, or project themselves into animals temporarily, but there is a wide-spread belief in their more permanent transformation into animal forms (see ANIMALS, vol. i, p. 403). 8

(d) Animals themselves are sometimes believed to be capable of self-transformation. This is true of the fox in Japanese and Chinese, the tiger in Malaysia (see LYCANTHROPY), and there are many similar and similar animals are well known in folk-belief to have the power of changing into human shape.

(e) Inanimate objects may also be changed into other forms by magical power. The best instance of this occurs in the Transformation Flight group of Märchen, in which, e.g., a girl escaping with her lover throws down small objects which become a forest, a mountain, or a lake, and impede the progress of the pursuer (see Macduff, G.F., p. 171 ff.). Examples of this are found not only in European and Asiatic folk-tales, but in Samoan, American Indian, and Basuto stories.

3. Origin of the belief in metamorphosis. — An examination of the enormous mass of evidence for the belief in metamorphosis suggests that man's ideas of personality, or perhaps rather of the forms in which personality may lurk, is an exceedingly fluid one. There has been the hazy idea that the human thought when no clear distinction was drawn between man and the rest of the universe, between human and animal, between animate and inanimate, 9 J. Evans, "The Bellicrate Stones and their Folklore," F.L vi. (1891) 6 f.

inanimate. In this stage of thought animate and inanimate are equally believed to be alive; men, animals, and things have the same feelings and passions, or act and speak in the same manner. Or, when the idea of soul or spirit is attained, all are endowed with the same qualities, as the existence of soul or spirit. Such beliefs in the underlying similarity of all things hindered men from having a clear notion of personality. It was not fixed and unalterable; it might assume various forms, as in art, science, or religion. These were all practical, working belief that men, animals, and spirits or gods, as well as inanimate things, might assume some other form than their own from time to time. Hence it is not surprising to the savage if he now sees as a man he sees immediately after as an animal or a bush. Where the idea of spirit or soul exists, and where it is thought that the spirit can leave its containing body, nothing is easier than to believe further that it can enter for a time into an animal or a tree. Other lines of thought also served to support the belief in the solidarity of men, animals, and things, and in metamorphosis. Totemism, with the assertion of the kinship of a human clan and an animal or plant which has peculiar myths which are rooted in this primitive stratum of thought, and in turn have served to deepen it. Thus it is sometimes thought that at first, all men were animals, as the Algonquins say, 1 and only later took animal form. As the Hareskin Indians think, in the beginning the men were animals and animals were men, but afterwards changed their roles; or, according to the Zulus, all things were originally animals, but now men, or vice versa, are degenerate animals with souls which can leave their bodies. 2 Again, men were once animals who became men—a common Polynesian belief. When the totem of one totem disliked the animal which is the totem of another distant clan, they may come to regard the men of that clan as possessed of its nature and liable to assume its form. In all such cases, whether totemic in origin or not, it is easy to see how men and animals might be supposed to revert temporarily to the other forms which once were theirs.

It is also possible that an analogy between the habits of certain animals and those of human beings, in life or after death, may have aided the belief in metamorphosis. Thus, where ghosts of men are believed to return to the house in which they lived and which is also the haunt of such animals as strange totem, it is easy to imagine that these are forms of the dead man. This is the case in Zululand with the snake. Night-roaming animals like the cat, tiger, or wolf might be identified, as they were, with witches, who also roamed in darkness.

Hallucination might be a potent factor in aiding the belief. Savages have often declared that they have witnessed such a change of shape. The preconceived idea suggested the hallucination, and it in turn gave support to the belief. Or persons to whom drugs had been administered might have hallucinations of themselves as animals, as in classical and medieval instances (see Lycanthropy, § 2). Madness, again, has also had its part to play. Its victims, especially where the belief in metamorphosis prevails, often imitate the cries, motions, and actions of animals, and this could only serve to establish the belief more securely. The notion of the enemy of the country was largely moulded out of such cases of mania (see Lycanthropy, § 3).

3 D. Turner, Some a Hundred Years Ago, London, 1884, pp. 296, 520.

The custom of dressing in an animal skin at sacred dances, or before a bear, hunts, or of wearing animal-masks in war, would also aid the belief in metamorphosis. The frenzy of the dance would suggest self-transformation to the dancer, while the onlookers or the enemy would imagine that they saw human animals. There is no doubt also that medicine-men have often strengthened the belief by exploiting it—e.g., dressing as an animal, imitating its howls and songs. In practice the belief in the power of metamorphosis of men is generally limited to the medicine-man, sorcerer, etc., who transforms his victims usually by a special incantation. Self-transformation is caused in many ways, most of them magical. Sometimes, however, it is the result of a divine, supernatural, or demoniacal gift.

See, for a further discussion and examples, the art. Lycanthropy; cf. also Transmigration.

METAPHYSICS.—It is not easy to give a quite satisfactory definition of metaphysics. The name throws no real light upon its nature, having referred originally merely to the order of some Aristotelian text written in the form of a question. The subject is concerned with topics that can be properly dealt with only after the more special sciences (which may be taken to include the vital sciences as well as the more purely physical ones) have been discussed. For the purpose of this sketch, it may suffice to state that the subject of metaphysics is the most fundamental problems of knowledge and reality. It will be convenient to divide the treatment into three parts: (1) the nature of knowledge, (2) the concept of reality and its chief applications, and (3) the bearers of metaphysics on other subjects, either ethics and religion.

1. Knowledge.—The first thing that has to be noticed about knowledge is the ambiguity of the term. It is here employed in a very wide sense; but it is very commonly understood in a narrower one. Thus, knowledge is frequently distinguished from those modes of apprehension which are called sensation, perception, and imagination. It is thus confined to those modes of apprehension which involve definite thought or conception. Again, it is common, especially among Kant, to contrast knowledge with belief. It is now customary to use the term 'cognition' to include all these modes of apprehension; and it is in this extended sense that the term is here employed. But even cognition is generally distinguished by recent psychologists from other modes of consciousness, which are called feeling, or affection, and willing, or conation. There are valid grounds for these distinctions, but it is important to remember that, so far as we are directly aware of these distinguishable aspects of our consciousness, they are, in the widest sense of the word, known or cognized. We apprehend pleasantness and unpleasantness and the fact of striving just as truly as we apprehend sounds or colours, trees or stars, triangles or systems of philosophy. There are, however, some differences in our ways of knowing which it is very necessary to bear in mind. The most fundamental are those that have been called the terms 'simple apprehension and judgment,' 'immediacy and mediacy,' "acquaintance and description," "enjoyment and contemplation," "experiencing and experienced." 2 It may be well to take the last of these first. Whenever there is knowledge of any kind, there is some one who knows

2 These are the antitheses that are specially emphasized by G. F. Stout, W. Hamilton, B. Russell, S. Alexander, and C. Lloyd Morgan respectively.
and something that is known. Knowledge does not exist in vacuo, but at some particular centre; and that centre is not primarily aware of itself, but of some particular object. Whenever any one reflects upon his knowledge, however, he at once becomes aware of this double aspect: he realizes not only that something is apprehended, but that he apprehends it. What exactly is he, and what the something that he apprehends, are matters for further consideration; but the general fact can hardly be disputed. Now, when any one reflects further upon his knowledge, and especially when he considers with what confidence he is able to compare his own knowledge with that of others, he very soon comes to realize that some of the things that he apprehends are more closely connected with his particular way of apprehending them than others are. He finds that some things are cognized by others in substantially the same way in which they are cognized by him. To this class belong especially facts relating to number, to spatial and temporal order, to the forms of objects in space and time, and to the general conditions under which such objects occur. Such things come to be regarded as being in a special sense objective, i.e., as being independent of the person or of the being by whom they are apprehended. Some other things are more open to doubt in this respect. There is not the same amount of agreement about colours as there is about forms; and there is still more difference of opinion with regard to the extent to which beauty and ugliness, agreeableness and disagreeableness, are to be ascribed to particular objects that we apprehend. Thus we are led to distinguish some of the things that we know as not specially belonging to the particular objects that we contemplate; and others as being more peculiarly our own, things that we have or enjoy, things that are not merely experienced, but that are bound up with our attitude as experiencing. The things that are peculiar to us in this way and that are peculiar to us in another way in the latter class are such characteristics as pleasantness and unpleasantness, beauty and ugliness, emotional experiences, values, but the division between these and such experiences, that belief in the taste, smell, colour, etc., is not a very sharp one. Hence, instead of placing objects in one or other of these divisions, we may be led rather to recognize a subjective and an objective aspect in all modes of apprehension.

Once this important distinction has been duly recognized, the next that claims our attention is that between immediate and mediate apprehension. Some things are known to us in a quite direct way, and cannot be doubted. When any one has an experience of pain, he may be very uncertain with regard to its source and even with regard to the part of his organism to which it is to be referred, and he may even have some difficulty in distinguishing clearly between the pain that he is experiencing and some other fact that he is experiencing or that he has experienced; but he cannot really doubt that he is having this experience, whatever it may be, and however the object of his experience is to be described. Every man is in some degree a man of sorrows.

1 The lack of words to distinguish properly between the subjective and the objective aspects of cognition has been a great source of confusion. Sensation, e.g., has had to do duty both for sensing and for what is sensed; and it is only very recently that it has been possible to distinguish between perception and concept, perception and concept. Even now we do not readily grasp what the terms mean when he said that all the objects of immediate apprehension (not the objects of subjective activity) may (not being brought to thought (the apprehension of an objective concept). It is largely for that reason that makes it difficult for most people to understand such an ‘idealist’ as that of Plato or Hegel, in which ideas or ‘thoughts’ mean certain objective forms, orders, or universals. The New Realism has greatly helped to make this distinction clearer.

2 Another difficulty of error, its nature and conditions, cannot be here discussed. But see the references given at the end of this article.
to justify the belief in this more complete kind of reality. In doing this, he founded the doctrine which has been referred to as that of 'representative ideas,' which had a great appeal on subsequent speculation. According to this doctrine, the individual mind may be compared to a picture-gallery, the pictures being 'ideas.' One of the pictures is the picture of itself; and that must be supposed to have always been there. Some of the other pictures, such as that of God, must also be supposed to have been always there. Some may be supposed to have been painted by itself. Some are darts of no particular significance. But there are others which appear to be portraits; and these may be supposed to be the portraits of other beings outside the mind, and to have been, as it were, handed in by them. This is, no doubt, a somewhat crude way of stating it; but it appears to be substantially what Descartes sought to maintain, and, with some modifications, it reappears in the writings of several other philosophers. Berkeley dealt it a severe blow by contending that, if we see pictures only in a gallery, we have no ground for supposing that they ever exist in any other way than in a gallery; and Hume improved on this by arguing that, if we see only the pictures, the gallery is an unwarranted supposition. The unanswerable objection that he uses is that of actors on a stage. We see the actors only, and have no reason to suppose that there is a stage. This reduced the whole doctrine almost to an absurdity; and the conception of representative ideas was denounced with considerable force by Thomas Reid. What he had to put in its place, however, was not very clear. Kant took a more fruitful line by urging that we cannot without absurdity regard our knowledge of objects as distinct from the self that in the apprehension of the subject; and that our knowledge of the persistent reality of the self must, consequently, be regarded as derivative. He contends, however, that the order that we apprehend objects in which we apprehend an order that can never be completely systematized, and must, consequently, be treated as 'phenomenal' and distinguished from the real order, which may be supposed to belong to 'things in themselves,' and which we are led to postulate chiefly on moral grounds. But Kant's doctrine carried conviction at least with regard to the necessity of recognizing that some kind of reality belongs to the more mediate forms of apprehension as well as to those that are more immediate. When the significance of this is fully realized, it leads to the doctrine that may be characterized as that of 'epistemological realism,' i.e., a doctrine that everything that we in any way cognize has a kind of reality which is not simply to be identified with the fact that it is immediately apprehended at a particular moment.

The acceptance of a doctrine of this kind gives a new interest to the study of the objects of cognition. So long as these objects are regarded merely as a flow of presentations, the interest in them tends to become less. Kant added a more thorough realism—i.e., it is directed simply to the way in which they come to be apprehended by the individual consciousness. When they are regarded as things possessing permanent characteristics and permanent orders of their own, they become the subject-matter of an independent study, and may almost be said to have given rise to a new science. This is the science that has been called by Moreau, Gestaltwissenschaft, to distinguish and arrange the different kinds of objects that we apprehend. It is obvious that there is a very great variety of such objects, when this term is understood in its most comprehensive apprehend, e.g., a great variety of sense-data—sounds, colours, pains, strains, and so forth; we apprehend a great variety of percepts—stones, plants, animals, etc.; we apprehend orders, such as those of time and space, interaction, relative differences, causal dependence, etc.; we apprehend hypotheses, valuations, distinctions of beauty and ugliness, good and evil, etc. The study of these corresponds to some extent to the doctrine of categories; but, when it is approached from this point of view, it becomes very much more comprehensive than any of the lists of categories that are commonly set forth; and, in fact, it has a rather different aim from that implied in any of these lists. The problems raised by any such attempt to distinguish and arrange the various types of objects are evidently of a fundamental character, and seem, therefore, to belong properly to the subject-matter of the problem. It is, however, possible, however, to discuss some of them to a considerable extent without any definite attempt at a systematic metaphysical construction. This brief indication of the general nature of these problems must suffice here. The exposition of the possible, however, to discuss some of them to a considerable extent without any definite attempt at a systematic metaphysical construction. This brief indication of the general nature of these problems must suffice here.

2. Reality.—The study of the theory of knowledge and Gestaltwissenschaft leads to the recognition that, in one sense at least, there is no meaning in the antithesis between the real and the phenomenal. As Parmenides and Plato urged, pure non-being is not to be thought or spoken of. But there is still a sense in which the things that we apprehend may be said to be more or less real. Sometimes our apprehension of things is very incomplete; and, when we gain a fuller apprehension of them, we may be said to know them more truly. Again, the things that we know are in many cases parts of larger wholes; and, so long as we do not apprehend the wholes of which they are parts, we cannot be said to have a full apprehension of the parts. This is at least the case when they are parts of an organic unity. We might, in such a case, not be said to know much of the brain if we did not understand the function which it fulfills in the life of the organism. Our apprehension of the part, in such a case, is not the apprehension of what is unreal; but it may be said to be less real when it is thus apprehended than it is when its relations to the whole are understood. And, if the universe is an organic whole, this distinction will apply to the apprehension of all the objects in it. Hence there may still be a sense in which it is legitimate to speak of an antithesis between appearance and reality, or of different degrees of reality, though both these expressions are open to some objection. Now, in apprehending and arranging the various objects of our cognition, we are at least trying to regard them as forming a complete cosmos, such that every object has a definite place in the total order; and constructive metaphysics, as distinguished from Gestaltwissenschaft, tries to find the way in which the objects of our experience can be so regarded. Here we are met at the outset by various forms of scepticism. Such a scepticism as that of Hume, no doubt, is effectively refuted by the Gestaltwissenschaft, which tries to find the way in which the objects of our experience can be so regarded. Here we are met at the outset by various forms of scepticism. Such a scepticism as that of Hume, no doubt, is effectively refuted by the Gestaltwissenschaft, which tries to find the way in which the objects of our experience can be so regarded. Here we are met at the outset by various forms of scepticism.
philosophical writers. If it is strictly pressed, it means that we have to be content with the theory of knowledge, supplemented by Gegenstandstheorie. The doctrine of the newer Realists, of whom Meinong is one of the ablest representatives, tends in this direction, though the supporters of it vary considerably in their applications. In the case of Kant himself, the attitude is modified by the two circumstances that, on the one hand, he had not fully reached the point of view of Gegenstandstheorie, and that his whole life-long contention against the subjectivism of Hume, while, on the other hand, he recognized that, though we cannot know anything about things as forming a real cosmos, we are justified in entertaining certain beliefs with regard to such reality, chiefly on moral grounds. This view of belief, as contrasted with knowledge, has been developed by the Pragmatists, who maintain that the ultimate ground of belief is not knowledge, but rather practical need. In general, the Pragmatists hold, further, that there is no real need to think of the world as a complete cosmos; but this is not an essential part of the Pragmatists' position. Bergson, again, while agreeing with the Pragmatists that their beliefs are based on practical needs, thinks that it is possible to reach a more perfect knowledge by means of intuition—a view which to some extent connects him with such earlier philosophers as Plato and Schelling. All these ways of thinking, and perhaps some others as well, tend to discredit the attempt to form a constructive doctrine of the objects of knowledge as constituting a cosmos. Yet the attempt continues to be made; and Kant at least recognized that, however futile it may be, it is hardly possible for the human intelligence to refrain from trying it, when the scientific interest has been fully developed in it. All that can be done here, however, is to indicate some of the chief ways in which this attempt has been made.

The earliest attempt at a constructive theory of the cosmos, and certainly one of the most interesting and remarkable, is that which is set forth in the "Nomismata." The difficulties of the subject, especially at so early a stage of human thought, prevent it from being dealt with in a perfectly lucid way; and it relies, in consequence, partly on popular and paradox: but it presents the doctrine that the cosmos is to be conceived as an unchanging spiritual unity, manifesting itself, especially in human life, in a process of slow development, appears to be definitely indicated; and this is probably most clearly in the conception of a long series of successive embodiments. The groundwork for this view is to be found in the intuitive experience of the cosmos, as well as in the influence of Oriental sources, but helped by the Platonic doctrines, succeeding more fully than any one else in ancient times in arriving at a conception of a cosmic system. The attempt is made by a process from unity to multiplicity and returning into unity again; but his views are difficult to disentangle, and he tends at times to appeal to a mystical intuition rather than to a clearly reasoned doctrine.

In more modern times the system of Spinoza is the first attempt at a thorough constructive theory of the cosmos. In his emphasis on the unity of the whole he recalls Parmenides. The fact that Parmenides described it as finite, while Spinoza insisted on its infinity, is perhaps a somewhat superficial difference; for they probably understood the term 'infinity' in different senses. More significant is Spinoza's conception, derived from the Cartesian philosophy, between the unity of the spatial world and that of the world of thought, and his attempt to represent these two forms of unity as essentially identical. This results in a quasi-mathematical conception of the universe, and makes it appear as what James describes as a 'block universe.' Leibniz endeavored to remove this defect by his conception of monads, which has served as the basis for subsequent theories of pluralism. The meaninglessness of the term 'monad' and the philosophical conception that this subject are both brought out by J. M. E. McTaggart, Some Fundamental Questions of Metaphysics, London, 1906, and B. Basset, The Value and Destiny of the Individual.

1 Kant's view of its futurity is mainly based on the difficulties which he brings out in his "antinomies." The solution of these is his doctrine of constructive metaphysics, but this subject is too large and difficult to be discussed here. Hegel's dialectic is the most elaborate attempt to deal with such problems. Cf. H. Bergson, "La Théorie de la Réincarnation," B. Russell, and others.

2 The philosophical conception of the contingency of spiritual life ought, no doubt, to be distinguished from the cruder forms of the doctrine of re-embodiment; but this is a subject that can only be treated in a larger work. The "Noomismata" philosophy of the Pragmatists and the "Noomismata" philosophy of the Pragmatists, while agreeing in this, still disagree as to the nature of the monads, with the recognition that they are parts of a world-order, the nature of which is definitely determined by the "block universe."
METAPHYSICS

determined, and which is selected as the best from an infinity of other possibilities. The possibility is to be distinguished from actuality in one of the most difficult problems that are raised by his philosophy; but, on the whole, it must be confessed that his philosophy in general, notwithstanding his ingenuity, is much more remarkable for the number of problems that it suggests than for the convincing character of the solutions that are proposed. His attempt was followed by a great deal of critical work, especially by Kant; and the constructions that followed upon this critical work are deserving of more careful attention.

The most important is that of Hegel, and it is also one of the most difficult to interpret. What can be said with confidence is that, by means of a more definite interpretation of the Platonic dialectic, he made a thoroughly going attempt to arrange all the fundamental concepts involved in thinking about the world in a definite order from the simplest to the most complex. By this means he sought to show that a certain conception of spiritual unity is the most comprehensive of all conceptions, and that a coherent view of the universe can be obtained. He then proceeds to interpret the non-human world ("nature") and the world of human life ("spirit") as an order of growth through which the spiritual significance of the whole is gradually unfolded. It is generally recognized that a considerable part of the working out of his dialectic carries conviction, but that there are several places in which the movement is difficult to follow. The treatment of the human life is generally recognized as being highly instructive, while the interpretation of "nature" is much more open to criticism. No subsequent writer, however, has succeeded in making substantial improvement on the general view of the cosmos that Hegel has presented. Most of those who have made attempts at a definitely constructive work are chiefly distinguished from Hegel by the more tentative character of their doctrine. They seem to provide, at most, only the disjuncta membra of a more complete system. Some of them may also be criticized on the ground that they rest on a subjective conception of knowledge in a few cases approximating even to the point of view of Berkeley. But into the details of their work we cannot here enter.

It may seem disappointing, after so many centuries of more or less continuous philosophical endeavor, that it should be so difficult to refer more definitely to results that are generally accepted as conclusive. But it is hardly surprising that the interpretation of the whole should present more difficulty than that of some special parts. It is probably necessary that we should have a fairly thorough appreciation of the kinds of order that are contained in the parts before we can have any definite conception of the order that is involved in the whole. By the help of mathematics we are getting a more and more thorough insight into the relations that are involved in the orders of number and space. The Platonic conception of Good has been made more definite by modern discussion. Physical science is helping us to interpret the causal order with more and more definiteness. Such dialectical discussions as those of Bradley, and such attempts to determine the value of metaphysics, whether it be right or not, are made to be justified.

Meinong, may be expected to throw fresh light on the most fundamental concepts, and thus supply new instruments for the reinterpretation of the whole. But probably our interpretation must always remain, to some extent, tentative.

3. Bearings of metaphysics on our subjects.—It would be a great mistake to suppose that the value of metaphysical speculation is to be measured exclusively by its success in providing us with a coherent doctrine of the cosmos. Any one who thinks seriously to the problems of knowledge and reality is almost bound to make some attempt to think about the universe as a whole; but the discussion of the special problems may be treated as an end in itself, and the value of such discussion is to be found largely in the light that it throws on other subjects that are commonly and conveniently regarded as distinct. The debt of the special sciences to metaphysical discussion could not easily be over-estimated. Almost all the special sciences, especially those that are concerned with human affairs, were first established on a firm foundation by Aristotle, who used in their establishment his fundamental concepts of form, matter, potentiality and actuality, together with his general doctrine of categories and causes. The atomic theory was mainly due to Leucippus and Democritus, working out the foundations that had been laid by the Eleatics. Mathematics, physics, and astronomy owed much to the Pythagoreans and, in later times, to the metaphysical analyses of Descartes, Leibniz, and Kant. Some of the most important ideas of modern biology were anticipated by the early hylozoists; and, in many other ways, the foundations of almost every department of knowledge and action can be traced to metaphysical analysis. This tends to be forgotten, too, the fact that, once the results of such analysis have been well established, they are incorporated in the body of the special sciences and arts and habits of life, and the work of clearing up the fundamental principles is largely ignored; just as, in our more ordinary life, we are sometimes apt to forget the labors of those by whom the means of living are provided. Hence it may be worth while to make some reference here to the fundamental concepts involved in several of the most important subjects.

(a) Psychology.—The fundamental sin of psychology appears to be that of studying the growth of cognition in the individual mind. In view of some recent attempts to produce a "psychology without cognition," which does not appear to differ very markedly from other forms of psychology. But in general the roots of any subject, like those of a plant, may often with advantage be kept out of view. We may have "psychology without a soul," because we can take the soul for granted; and it is certainly not the business of psychology to consider the soul except as cognizing or cognized. We may even have "psychology without cognition," just because it is entirely concerned with that, and consequently need not single it out as one of the special things which it has to deal with. So we may regard society without welfare, though apart from welfare wealth would have no meaning. Naturally, in studying psychology, it is the modes of apprehension, rather than the fact of apprehension, that chiefly call for attention. But, whether we are studying the modes of apprehension as such, or the modes of apprehension in what they concern, the problem is, in part, a problem for psychology. What is it that we apprehend most vividly and most readily? The modes of apprehension seems clear, but they are all forms of cognition. The recognition of this ought to guard us against any attempt to divide
up our conscious life into separate faculties, though it leaves us free to recognize many distinctions and many stages of growth. Hence psychology is best studied generally; but it is important to guard against the misconception that, in studying the order of growth in our cognition, we are either explaining cognition itself or accounting for its special modes of giving an account of the genesis of our ideas. These truths are one thing; other things have orders of their own. These are perhaps the chief ways in which the consideration of the fundamental problem of psychology may help to guard us against misconceptions in its study.

(b) Logic.—The fundamental conception of logic appears to be that of implication. It sets itself to consider the conditions under which one bit of knowledge may be taken to imply another. In order to discover this, it is necessary to determine the precise significance of the knowledge from which we start. Hence the importance of definition and of what are called the laws of thought, the aim of which is to ensure fixity of meaning. Obviously, if a fluctuated in meaning, its implications could not be determined. Formal logic is concerned simply with the attempt to tie down meanings and to discover what they imply. In modern logic the doctrine of causation is the chief instrument for the discovery of implications. Hume did much to clear up the general signification of causation by doing away with the unities of time and space, of the presentation and simultaneity, and substituting that of a definite order of sequence. Kant urged that the sequence is essentially logical rather than temporal, and that the general principle of implication—if A, then B—has to be conceived as expressing a necessary order among phenomena. More recent discussions have given still more definiteness to the conception. The dialectic of Hegel is another way in which implications can be brought out. According to this, every conception is to be opposed to another. The value of these methods cannot be discussed here; but it seems clear that the general significance of implication is one of those ultimate problems that concern metaphysics.

(c) Mathematics.—The mathematical sciences are closely connected with formal logic. As soon as the general characters of the orders of number and space have been made apparent, the working out of the logical implications of the orders of number and space is a logical problem, and the relations contained in these orders are, however, more complex than the relation of a predicate to a subject or of an individual to a class. But there are many orders from which implications can be directly drawn—e.g., the order of time and that of value. Hence it seems possible to regard mathematics as one of several ways in which the general principle of direct or formal implication can be developed. It may be well to notice one caution that is suggested by metaphysical reflection with regard to the application of mathematics. The conclusions reached by the study of the two orders of number and space are common and evincing, and some of them can be so readily applied to spatial and temporal objects, that there is a considerable temptation to regard all of them as being directly applicable to such objects. Such an interpretation is certainly misleading. It may be dodged, e.g., whether some of the speculations with regard to possible dimensions of space, in excess of three, have any direct application to existing objects. A similar caution is necessary with regard to the conception of infinity. On this point reference may be made to the art.

INFINITY.

(d) The natural sciences.—The natural sciences have nearly always presented a stumbling-block in the way of metaphysical construction. This is true chiefly to the appearance of definite order in what are sometimes called the brute facts of the natural world. Hegel compared nature to a bacchanalic dance. For Plato also, and for many others, it has tended to appear as if the unity and intelligibility that are postulated by the conception of a complete cosmos. The objects of nature seem to differ in kind, and no continuity in the ordering of kinds is readily discoverable. This applies to the objects of sense as well as to the objects of perception. There seems to be a gulf fixed between colours, sounds, smells, pains, etc., as well as between mechanical systems, chemical combinations, and organic bodies. Hence it has been sought to bridge these gulls by teleological conceptions—i.e., by the view that differences of kind are to be interpreted by reference to the conception of value, as in some way required for the constitution of the possible world. But this is at most a postulate; and it is generally recognized that we are not entitled to apply this interpretation in any direct way in the scientific study of natural objects. Apart from this, the chief forms of order that are available are those of time and space, extensive and intensive magnitude, causation, and the general law of continuity in the quantity of what is called energy (a conception that is perhaps still in need of more precise definition). Thus the doctrine of evolution supplies, to some extent, another principle of order; but it is erroneous to suppose that the earlier stages in this order can be regarded as, in any direct way, implying the later. The principle, simply called it, 'creative evolution,' has to be, in some form, recognized—i.e., the doctrine that what comes later is distinct in kind from what comes earlier. It does not follow from this, however, that there is not a definite and intelligible order. But there are still fundamental problems in the study of nature for which metaphysics can as yet offer no very satisfying solution. Still, the solution might be found in the conception of value. Evolution, in particular, is very naturally thought of as a process, though a somewhat discontinuous one, towards what is intrinsically better.

(e) Aesthetics.—In aesthetics at least the conception of value becomes prominent; and its legitimacy within this sphere, where it is applied very largely to objects that can be perceived or imagined, is hardly open to dispute. It is true that sometimes what is described as beautiful may have little claim to be regarded as more than pleasant, and even pleasant only to certain individuals. In this case the valuation is highly subjective, and may hardly deserve to be described as a definite valuation at all. But in the higher forms of art at least an effort is being made to produce something that has intrinsic value; and in some cases it is difficult to resist the conviction that something that may properly be described as a 'joy for ever'—has actually been secured. But the science of aesthetics is still largely in the making.

1 Cf. e.g., what is said by Aristotle in Met. xii. 10, where the lack of order in nature is likened to the life of a slave to whom, on account of his low estate, a certain licence is permitted. The religious conception of a 'Full' appearance is closely connected with this. See H. S. Chamberlain, The Foundations of the Nineteenth Century, London, 1909, ii. 34.
(6) Ethics.—It is in ethics rather than in aesthetics that the conception of intrinsic value comes definitely into prominence. Ethical writers may differ in their views of what is intrinsically valuable—whether it is the good will or pleasure or some form of happiness of the individual life—but almost all recognize that in the moral life men are engaged in the effort to realize something that is intrinsically good, and in the end without it life is unable to make the conception of such an ultimate good perfectly clear; and some are inclined to doubt its validity. It must be confessed that we seem to begin with valuations that have little conscious ground. Our primitive likings appear to be based on organic needs; and it is only gradually that we are led to regard them as means to ends that have a truer and more lasting value. We begin with organic impulses, and advance through the pleasant to the beautiful and good. Hence the moral life is still, on the whole, as it was in the time of Socrates, a struggle towards a good that is very imperfectly apprehended, and sometimes even not valued at all. It can be guided by custom, convention, positive laws, and generally recognized opinions rather than by any clear apprehension of a good that can be either defined or attained. But in ethical science some attempt is made at precision; and this involves a discussion of values that may properly be called metaphysical. The discussion of its attainability seems even to involve a general theory of the cosmos.

Apart from the fundamental conception of intrinsic value, the most important problem that concerns ethics is that of freedom. This is closely connected with the conception of value and also with that of causation. It is doubtful whether any idea can be given to moral freedom except that which may be expressed by saying that choice has a real place in the chain of causes; and choice can be interpreted only as a mode of valuation. It is essentially preference, i.e., the regarding of one thing as essentially more valuable than another. Thus the problem of values and causation are those that chiefly connect ethics with metaphysics.

Ethical values have important bearings on economics and politics; but these cannot be considered here. Nor can we attempt to appraise the significance of what is described by Nietzsche as the 'transvaluation of all values' (Ueberwindung aller Werthe) without special knowledge.

(g) Religion.—A chief element in the higher forms of religion consists in a certain intensification of the moral consciousness by its more definite concentration on the conception of intrinsic value, as in such sayings as 'What shall it profit a man, if he shall gain the whole world, and lose his own soul?' Or what shall a man give in exchange for his soul?' (MK 8:36). This intensification is generally combined with the conviction that the object of ultimate value is real and attainable. A conviction of this kind is sometimes based on a definite metaphysical doctrine. At other times it is based rather on some form of intuition of revelation, or on the authority of some great teacher, or simply on the intrinsic force of the moral principle itself. The founders of religions and their most influential prophets have generally connected the teaching with some form of more or less explicitly metaphysical character. Buddhism, which is perhaps the most purely ethical form of religion that has ever had an extensive influence, seems to be rather a more or less metaphysical Indian form of metaphysical construction that had its origin in the Upanisads. It conceives of what has ultimate value as the realization of the higher self, to be achieved by the control of the lower, and especially by the suppression of the lower forms of desire—a process which is supposed to be, in general, attainable only through a cycle of reincarnations.

The doctrine of the Pythagoreans, which was largely religious, had a somewhat similar character, and the influence of Thomsonianism was considerable; it can be described as religious, tenets, on the whole, in the same direction; as that of Plotinus even more definitely does. Christianity was perhaps in its origin less definitely metaphysical. It has never been to a large extent interpreted, in the course of its historical development, by means of Platonic and more or less kindred conceptions, and in some of its more recent phases is hardly distinguishable from the more esoteric forms of Buddhism. The relations have been thus expressed by Holmes: 1 Plato reasoned about God. Buddha kept silence about him. Christ made him the centre of the universe. But as a source of spiritual inspiration he has no rival (Creed of Buddha, p. 6).

The gospel of love is the most inspiring, because it implies, when its meaning is fully developed, that everything has value—a more thorough optimism than anything that is involved in the Platonic Good or the Buddhist Nirvana (whatever the exact interpretation of that may be). It is sometimes urged that metaphysical and religious views of the cosmos, by representing the establishment of the moral ideal as involved in the nature of things, have a certain tendency to weaken the moral motive, by making it appear that individual effort is unnecessary. No doubt some metaphysical systems have claimed to be both good and evil; and the same may be said of some forms of religion. But, on the whole, none of the deeper forms either of metaphysical construction or of religious insight has represented the moral ideal as attainable in any other way than through the individual choice of what is best.

1 The contrast in this respect is well, though perhaps more emphatically, brought out by H. S. Chamberlain, 1, 187-600.

METEORS, METEORIC STONES.—See PRODIGIES AND PORTENTS.

METHOD (Logical).—Besides the ideals proper to the concept, the judgment, and inference, there are certain secondary ideals for thought in general. These supplement the primary ideals in a way composed of wholes, which according to the ethics of Butler, the “adaptations of human nature to virtue” supplement the ‘eternal fitness of behaviour’ which had been described by Clarke. The secondary ideals should be stated with definite reference to the order and process of thinking, whereas the primary ideals are descriptions of truth when thought. A wide licence has been taken by logical writers in defining method, making it the study of logic and applied logic; and it is here proposed tentatively to name as secondary ideals systematization, reform, and development. The course of thought must be such as to approach reality in the subility of its complexity, by the process of their interconnection; to reconstitute concepts, judgments, and inferences, in correspondence with it; and to realize the mutual support that these give to each other, as well as rising with the same common.

Method emerged from an outworn analysis and dialectic of Aristotelian origin, and won a place in modern logical theory, chiefly through the use of the topic made by Descartes in introducing his method of idealism, and through the connection of empirical science introduced by Bacon; and Kant’s subsequent definition of it was in fair accordance with the Cartesian tradition:

“Just as the doctrine of elements in logic has for its aim the conditions of perfectness in a knowledge related to an object . . . so, general methodology, as the second part of logic, ought to be the form of science in general, to the way to evolve science from a diversity of knowledge.” (Logik, 189.)

An even more explicit reference to the course of conceptual growth is desirable, because only in some relation to ordered sequence can the ideals of concept, judgment, and inference become a personal discipline, and give not a mere consciousness of the world, but the ‘idea’ of the development of the natural ‘sense of method’ (cf. J. Brough, The Study of Mental Science, London, 1903, p. 5 ff.,).

The sense of method is an estimate of the extent to which the several faculties proper to a conviction have actually played their part in it.

1. Systematization.—The most general impulse of thinking is to make a double approach to reality, by analysis and by synthesis. This impulse has been recognized in various logical contexts; in Aristotle’s distinction between problems of reason or of essence and problems of fact or of existence; in Descartes’ rule of the unities of an investigation, and his rule to conduct our thoughts in the order of simple to complex; in Newton’s requirement that natural philosophy should proceed from compounds to ingredients, from motions to forces, and, in general, from effects to causes, before explaining phenomena by causes as principles. The impulse follows, as it were, an indefinitely receding horizon. There is neither simplicity nor complexity that is final, whether in the world of possible perceptions or in the extensions which scientific imagination may make into the imperceptible.

‘Scientists have tried to find it [the “simple fact”] in the two extremes, in the infinitely great and in the infinitely small—the astronomer is distance so great as to reduce a star to a point, the physicist in the universe to the end of a pencil. Galilei, Science and Method, Eng. tr., London, 1914, p. 10.

Even simplicities so laboured as these are provisional, if only because the structure of systematic science based on them is provisional. ‘In the . . . advance of science an uninterrupted, but progressive series of mental constructions . . . gives us an approximate but only approximate idea of the interconnected system of Reality’ (P. Bürgers, in Encyclopaedia of Phil. Sciences, l. 254).

Under this impulse the course of thinking will lead to the actualization of the primary ideals of concept, judgment, and inference, but does not in itself commit our whole nature, as they do, to expectation, submission, and reaction. Its more immediate end is reform within the ideal count.

2. Reform.—Analysis and synthesis provide for continuous revision and reconstitution of such idealcount contents as have previously been available for actualizing the primary ideals.

‘Only inasmuch as we are set free from the accidental associations of ideas formed through single perceptions, by a happy variety of observations and a steady attention to their distinctions and resemblances do we gradually become cognizant of the more general and essential connections of things ever more and more adequately shows the necessary pre-suppositions of the understanding “to hold good in the heterogeneous materials of the actual world” (F. H. Brindley, in Monceaux, Eng. tr., London, 2896, bl. ii. ch. iv. 1 & 2. i. 193.)

The ‘perceptions here spoken of are already permeated with the results of a contrary imposition of mind,’ but the spirit of reform, more expressly than that of systematization, claims to pass by any warnings from ancient realism as to the sanctity of universals, and equally by those of our modern pure logic as to identities, necessities, and systematic coherences. Its claim is among the inevitable paradoxes of permanence and change.

(a) Individual.—Even the unity of the individual, of that which is neither said of any subject nor contained in any subject’ (Aristotle), “the I” without anything added’ (Occam), ‘the point in the tissue of reality where it accepts the predicate’ (Bossuet), may be newly isolated and identified. This unity is more directly imposed in perception and is more firmly sustained by social reference and consent than the conceptual, yet there still continues scientific controversy on the more optimal identities, such as independent organs or organisms in biological sciences or physical objects in the natural ‘sense of method’ (cf. J. Brough, The Study of Mental Science, London, 1903, p. 5 ff.).

The sense of method is an estimate of the extent to which the several faculties proper to a conviction have actually played their part in it.
of a single concept—e.g., the atom in chemistry, the cell in biology, the vibration in acoustics—may call for readjustments throughout increasing complexities of science.

3. Development—But in method, as in organic life, the whole may decide the part. Nature is more than a 'tissue of uniformities,' as Mill described it. It is a unity. And the ideal of development means that the system of our thinking reacts upon its results. In perceptual observation, historical narrative, and explanatory conceptions of fact objects and instances are made possible by the growth of knowledge as a whole.

(c) Tabulation.—With the practice of practical control of nature, Bacon urged the tabulation of instances of event.

'[Natural and experimental history] is to retain and diffuse, that it confounds and discloses the understanding, unless it is arranged and presented to view in a suitable order. We must therefore form Tables and Arrangements of instances, in such a method and order that the understanding may be able to deal with them.' (Novum Organum, II. 10.)

If we are dealing with them is not by way of further analysis into the elements of a natural 'form' as Bacon intended, but only as numerical, the tables become 'statistics'; and statistics may be summarized through 'graphs'; and the duplication of these into affirmative and negative may be avoided by the inevitable lapses from accuracy may be regularized as 'probable error.'

(d) Hypothesis.—Method can pursue the synthesis of simple elements required in judgment, while still suspending the sentence or final submission of our judgment. Thus, we are required to retain the data as natural, but the course of thought freely varies its subjects and predicates, expands each tentatively 'form,' causal connexion, or 'law' into exemplifications, or imagined into natural consequences, and verifies these as independently true or real, or as not so. Many recent writers, including Jevons, Sigwart, and Besant, teach that such a development and trial of means is essential for all inductive inference. Thus we, if a pencil of light is a composite of variously colored rays, and is passed through a prism, we shall see the spectrum band; if the process is reversed, we shall reconstitute the untinted whiteness. If collisions are of human origin, they should serve some purpose, and our ingenuity may discover one (e) Colligation.—A hypothesis may command an indefinite number of such exemplifications or consequences, both already known and waiting for verification, defining the theory of elliptical orbits for planetary motion covered many planetary positions already registered, and the possibilities of further registrations. This is the 'colligation of facts by means of appropriate conceptions' (Whewell, Newer Organum Recomposed, bk. ii. iv.), or the discovery of 'types of order' (Royce, in Encyc. of Phil. Sciences, i. 99.): an achievement of intelligence which Whewell considers to be all that is possible in scientific investigation, but which Mill considers as an operation 'subordinate to induction,' that is to say, to induction as inference (Logic, bk. iii. ch. ix. § 3, bk. iv. ch. ii.).

Lotze in his *pure logic*, and independently of 'methods of investigation,' undertook to exhibit a serial order of schemata for judgment and inference in which was shown an increasing complexity of conceptual distinctness. The individual thought would be arranged in an ascending series, in which each higher member attempts to make good a judgment preceding one, due to its failure to satisfy, in regard to its own points of view, the demand of thought to reduce coincidence to coherence (Logic, Intro. § 111).

Thus the categorical form 'S is P,' is followed by the hypothetical, 'if S is X, it is P.' The syllogism, if not a mere method principle, involves the further conceptions which constitute the induction and analogy supporting its premises, and these, again, send their roots into larger systems of classification and explanation. Thus the reforms
METHODISM.—I. HISTORY AND POLICY.

In this article we shall confine ourselves to a description of the origin, growth, and leading features of the Methodism which is connected with the name of John Wesley. The Methodism within the Church of England which resulted in the rise of Wesley's Methodism is not within our province (see EVANGELICALISM).

1. The rise of Methodism.—According to Wesley, the ‘first rise’ of Methodism was in Oxford, in November 1729; the second, in Savannah, Georgia, in May 1738, and the third, in London, on 30th May 1738. We pass over the Methodism that found expression in the ‘Holy Club’ at Oxford, and in the ‘Society’ formed by Wesley in Savannah, and strike the path which leads to the origin of Methodism as an existing organization. The date, 1st May 1738, is significant. Wesley had returned to England, having learned many bitter lessons in Georgia. By his contact with the Moravians he had been enlightened and disheartened concerning his religious experience. He had learned that, although he had ‘followed after the law of righteousness,’ he had not attained to it. His disappointment at discovering that he had been pursuing a vain path. The Moravians explained his failure by showing him that he had not sought righteousness ‘by faith, but as it were by works.’ His conversations with them left in his mind the unsatisfactory impression that leads to salvation. Waiting in London for a solution of the problem that baffled him, he assisted in forming one of the Religious Societies so numerous at the time. His instinct for ‘fellowship’ led him to the dominant forces of his life, and explains much that happened in his career. The Religious Society which he joined met in the house of James Hutton. It owed much of its character to the advice of Peter Bohler, a Moravian to whom Wesley was unspeakably indebted for spiritual guidance. The Society was founded on 1st May 1738. Rules were drawn up for its management, and, as was the case in Savannah, the members of the Society who were intent on personal religious life were divided into little companies called ‘bands.’ The Society grew, and its meeting-place was changed to a room in Fetter Lane. At first the Society, like the other Religious Societies, was incomparably inferior to the Church of England; subsequently it was dominated by Moravian influences, and this connection was broken.

2. Wesley’s spiritual crisis.—Methodism, as it now exists, can be understood only by realizing the facts concerning the progress of Wesley’s religious experience. By much conversation, by close study of the NT, by prayer ‘without ceasing,’ he advanced from an intellectual understanding of the meaning of ‘saving faith’ to the understanding that comes through experience. While he was in the stage of an ever-brightening intellectual apprehension, he preached the doctrine of ‘salvation by faith’ in many of the London churches. He taught it as it stands in the Homilies; but it was resisted by clergy and their congregations, and the churches were closed against him. In this way a policy of exclusion from the churches was commenced, which, after a time, began to affect Wesley’s relation to the Church of England.

During this preliminary stage, Wesley was oppressed with a ‘burden’ which was to him intolerable—the burden of unrepented sin. That load was laid down with May 1738, in a ‘room’ in Aldersgate Street, the meeting-place of one of the Religious Societies. In that decisive hour he entered into an experience, new so far as he was concerned, but an old experience not only among Moravians but also among many Churchmen and Dissenters. It is an extraordinary fact, however, that it had become unintelligible to the mass of English Christians. Wesley’s ‘conversion’ filled the heart of the evangelist. He would gladly have borne his testimony in the churches, but he was compelled to wait until a wider sphere opened before him.

3. Beginning of field-preaching.—In April 1739 Wesley found his own voice, and began his evangelistic work. George Whitefield, a member of the Oxford ‘Holy Club,’ had entered into the experience of ‘consecrated salvation’ before Wesley, and had made a deep impression in Bristol by the preaching of the ‘new doctrines.’ Being excluded from the churches, he went into the open air, and addressed great crowds of people in Bristol and at Kingswood. Having to leave England for America, he wrote to Wesley asking him to take his place; Wesley consented, and on 2nd April 1739 he commenced his famous campaign of ‘field-preaching.’ In addition to preaching in Bristol and the Kingswood collie, he sought close touch with the Religious Societies in the city. His genius for administrative reform found scope in them. He divided them into ‘bands.’ The Societies in Baldwin Street and Nicholas Street became the ‘Room’ for their accommodation. A site was secured near the Horsefair, and the ‘Room’ was opened on 3rd June 1739. Afterwards Wesley went to London to assist in composing disputes which had arisen in the Fetter Lane Society. He again met Whitefield, who, being detained in England, had spent his time in preaching to multitudes in Moorfields, on Kennington Common, and elsewhere. Wesley joined him in his field-preaching. On 11th November 1739 he held a service amidst the ruins of ‘the King’s Foundery of cannon,’ a building near Moorfields, which had been shattered by an explosion. Wesley acquired the site and built a ‘Room’ upon it, which became famous in Methodist history. Some who indulge in regrets concerning the separation of the Methodists from the Church of England point to the building of these ‘Rooms’ as ‘the parting of the ways’; Methodists maintain that the formation of these churches was the result of new needs, and that the churches that led to the opening of the ‘Rooms’.

4. First Wesleyan Societies.—While he was still a member of the Fetter Lane Religious Society, Wesley formed a Society of his own type at the Foundery. It was started, probably, in the latter part of the year 1739, and is looked upon as the Mather Society of Methodism. In July 1740 Wesley was practically excluded from the Fetter Lane Society. Those who left him joined the Society at the Foundery. By that time the Societies, under the special direction of John and Charles Wesley, existed in London, Bristol, and Kingswood. In 1742 Newcastle-upon-Tyne was visited by Charles Wesley, who formed a Society there on the new pattern. These Societies are called by John Wesley, in the ‘Rules’ which he drew up for them and published in 1743, ‘The United Societies’; and they were the antecedents of the Methodist Church. In the ‘Rules’ a Society is described as ‘a company of men, having the form and seeking the power of godliness; united in order to pray together, to receive the word of instruction, and to watch in love, that they may help each other to work their salvation.’ In these new organizations the ‘band’ system was a prominent feature; but, in addition, the Societies were divided into various branches containing about 12 persons each, but placed under the care of a ‘leader,’ not only for their

1 I felt I did trust in Christ, Christ alone for salvation; and an assurance was given me that He had taken away my sins, even mine, and saved me from the law of sin and death (Journal, I, 1730).
own spiritual edification, but also that Wesley might be assisted in his pastoral supervision. At first the leaders visited the members at their homes and made personal visits, but before the members were expected to meet their leader at some fixed place, week by week. The Rules mentioned above are still, with slight alterations, the ‘general rules’ for Methodists, the ‘particular rules’ being later added, and the disciplinary ‘codes’ of the different Methodist churches. In the classes contributions, usually a penny a week, were made for the poor. At a later date these contributions were given for the support of the ministry, a special poor-fund being raised from other sources. Stewards were appointed to manage matters of finance, and the leaders met the ministers and stewards of each Society once a week to pay in the moneys that they had received, and to give information concerning any member who was sick or might need special pastoral attention. Out of these arrangements the Leaders’ Meeting arose, which became an integral part of the Methodist organization. The oversight of his Societies weighed heavily on Wesley’s mind. He never worshipped numerical success; he was not content to gather together a miscellaneous collection of converts upon any pretexts. He supplemented the work of the leaders by visiting the members himself in their homes, and met them once a quarter in the classes for personal conversation on their religious experience. If satisfied, he gave them that recognition of being members of the Methodist Society.

5. Attitude of the clergy. Those who have studied the constitution of the Religious Societies will know that the boundaries of the divergences between them and the United Societies. One line of divergence was caused by circumstances which Wesley deeply regretted. The Religious Societies were in close connexion with the Church of England, and many of their members were frequent communicants at the churches. Wesley would have gladly preserved this connexion and practice; but such a course was made impracticable by the boundation of the clergy. In some places they arranged among themselves not to partake of the Lord’s Table with the Methodists from the Lord’s Table. In Bristol, on 27th July 1740, Charles Wesley and a company of Kingswood Methodists were sent away from the Fleet Street Chapel. Charles Wesley, therefore, administered the Lord’s Supper to the Methodists in the school at Kingswood which had been built for the training of the colliers’ children. In Newcastle-upon-Tyne a similar crisis arose. It is significant that in Newcastle the difficulty was aggravated by the fact that three of the dissenting ministers of the town agreed to exclude from the communion all who would not refrain from hearing the Wesleys. The effect of these exclusions, and of Charles Wesley’s action, was speedily seen. The Methodists were diverted into a path which gradually but decisively diverged from the Church of England.

6. Enlisting of lay-preachers. Another line of divergence from the practices of the Religious Societies must also be noted. John Wesley’s conversion made him an evangelist. He longed to busy himself in the work only to select companies but to the world. His heart responded to the counsel of Lady Huntingdon: ‘Attempt nothing less than all mankind’ (Journal, iii. 48, note 1). But how could that advice be followed by the Local Societies, which were too small to elevate all his strength. Charles Wesley helped him, especially in the opening years of his mission, and a few friendly clergymen gave him occasional assistance; but such help was inadequate. The double task of the pastoral care of his Societies and the evangelization of the country was too great for a single man. But the way opened. He had great skill in discovering and using the working powers of the converts. He placed himself at the head of an order of lay-preachers who shared with him the hardships and the successes of his work. In 1738 and 1739 laymen had preached with his consent, but the lay-preachers is usually confined to dates from 1740. The importance of this step cannot be exaggerated. The lay-preachers were divided into ‘itinerants,’ ‘half-itinerants,’ and ‘local preachers.’ They first abandoned their business and gave themselves entirely to the wandering life of the evangelist, under Wesley’s personal supervision. For that work, at the beginning, they got no pay; later on a small sum was given them; but many years elapsed before they were rescued from the pinch of poverty. Assisted by them, Wesley went out to ‘reform the nation, particularly the Church, and to spread Scriptural holiness over the land’ (Minutes of Conference, L. 446). Wesley’s work as an evangelist, an educationalist, a philanthropist, a social reformer, and a pioneer in enterprises that have deeply affected the condition of the nation must be passed over here. Some idea of the man, and those who were associated with them in his Societies may be gathered from the fact that, when he died in 1791, there were 136,622 members in the Methodist Societies in Great Britain and Ireland, in other parts of the British Dominions, and in the United States of America.

7. Institution of the Conference. It is now necessary to indicate certain facts which have determined the character of the movement. While Wesley was the ‘head of his order,’ and spoke the last word in matters of administration, he thoroughly believed that there is safety in ‘a multitude of counsellors.’ He consulted the bands, the leaders, and persons of experience in his Societies, but the chief evidence of his reliance on the counsel of others is to be seen in the conferences which he held with the clergy who helped him, and with his lay-preachers. He also assembled the stewards and those who were sometimes associated, arose the ‘Yearly Conference of the People called Methodists.’ Towards the end of his life the vagueness of this description of the Conference was seen to be a danger. The power to appoint preachers to the numerous chapels that had been built would revert after Wesley’s death to the Conference so inadequately described. To meet this contingency, on 29th Feb. 1784 Wesley signed a Deed Poll expressing the words ‘the Yearly Conference of the People called Methodists,’ and declaring ‘what persons are members of the said Conference, and how the succession and identity thereof is to be continued.’ One hundred ‘preachers and exponents of God’s Holy Word’ then ‘under the care of and in connexion with Wesley were declared to be the Conference, and they and their successors to be chosen in the manner laid down in the Deed, were ‘forever’ to be the ‘Conference of the People called Methodists.’ This Deed Poll received decisive confirmation in 1835, when the Lord High Chancellor, Lord Lyndhurst, and the Vice-Chancellor, Sir Lancelot Southcote, were in trials which took place in their courts. In his judgment the Vice-Chancellor affirmed that the Conference had been ‘the supreme legislative and executive body’ in Methodism since the death of Wesley. The Conference in Wesley’s day was more than
a consultative assembly. It took complete oversight of preachers and people. It kept an eye on the moral character and doctrinal beliefs of the preachers, and stationed them in their Circuits. We shall accentuate only one part of its functions. In the form of "Model Deed" for the settlement of chapels then called "Preaching Houses," published first in 1763, a clause appears which constitutes Wesley's Notes upon the New Testament and his four volumes of Sermons as the standard by which trustees were to judge the orthodoxy of the preachers and stations. We may also add that the rights of trustees were strengthened by the clause in Wesley's Deed Poll which provided that, with the exception of clergy of the Church of England, the Conference might not appoint a preacher to the same chapel for more than three years successively.

8. Provision for the sacraments.—One other point remains to be considered at this stage. The question of the administration of the sacraments to the Societies had to be settled. The bulk of the Methodist people would not go to the parish churches for the sacrament of the Lord's Supper, and provision for its administration in their own chapels was necessarily desirable. In November 1763, Wesley opened his new chapel in City Road, London. In that chapel the sacraments were administered as they had been in some of the other Methodist chapels in London and the country. Wesley was joined by three preachers in which, being foreign to the rest of his Societies. He saw, however, that, if he yielded, he would have to qualify and appoint some of his lay-preachers to administer the sacraments; and, in his opinion, such appointment of lay-preachers would be the occasion of the division of the Societies led him to a solution of the problem. In 1769 he had sent two of his lay-preachers to New York to direct the work which had been begun there by certain Methodist local preachers. The work in America proved very successful, but the War of Independence gave it a new complexion. The Anglican clergy were scattered, and many of the Methodists had been without the sacraments for seven years. The difficulty was solved by ordaining a sufficient number of their lay-preachers, but Francis Asbury, who had been sent out as a preacher from England by Wesley, checked this movement and advised that Wesley should not ordain lay-preachers himself, that he, as a presbyter, had the power to ordain other presbyters; but he hesitated to do so. In 1784 the American crisis became acute; so, after much thought, he appointed Dr. Thomas Coke, a clergyman who acted with him, and Francis Asbury as 'superintendents' in N. America, and two other preachers as 'elders.' With the exception of Asbury, who was in America, these preachers were set apart by Wesley, assisted by other presbyters of the Church of England, by the imposition of hands. In this way the American difficulty was met, and the Methodist Episcopal Churches, which now number their membership by millions, entered on the remarkable career in the country, the time of Wesley's death, was agitated by the discussions which had accompanied the American War of Independence and the French Revolution. The doctrine of the sovereignty of the people 'fascinated the minds of his nation,' and the strong wish on the part of some to introduce into Methodism a democratic form of government. But the most serious contest was between the claims of the Conference and the trustees of chapels. That contest was settled, for the time being, by the 'Plan of Pacification' and by certain regulations that were passed at the Leeds Conference of 1797. In these documents we find the fundamental principles which still govern the Mother Church of?
Methodism. The pastoral power of the preachers was safeguarded, but its exercise was limited by giving to the Leaders Meetings and lay-court jurisdiction of questions relating to the Society, while matters of finance were placed more completely under the control of the Circuit Quarterly Meetings in which laymen were represented. Thus, in 1785 and 1797, it was insituted that remarkable increase in the influence of power which is a peculiarity of the system of Methodism. The settlement was almost universally approved. Out of a membership of nearly 100,000, about 5000 persons were elected to the General Conference held in London in 1785. It was resolved that the General Conference should be held annually, and that the proceedings of the conference should be published. This arrangement was adopted, and the General Conference was held annually from 1785 to 1797.

12. Connexional system of Wesleyan Methodism.—Speaking of Methodism in the present time, we may say that the Wesleyan Methodist Church, the mother church of the Methodists, has pursued its course along the lines laid down by John Wesley. The Connexional system is intact. The circuits consist of the several Societies within their boundaries, the Districts are composed of the circuits in their areas, and the Connexion is the aggregate of all the Societies, Circuits, and Districts. The connexions in which Methodism is established in connection with the Conference. This great organization is kept together by the unifying power of the Conference. Every attempt to introduce the principle of 'Circuit independency' has been successfully resisted. It is impossible here to describe minutely the organization of Wesleyan Methodism. It is the result not only of the work of Wesley, but of the continuance of his work done by his predecesors for more than a hundred years since his death. We need only note some of the changes which have taken place in the Conference since Wesley resigned in 1784. The specific naming of the 100 preachers who composed the Conference produced excitement and ill-feeling, especially among preachers who were not nominated in the Deed Poll. In 1791 the Conference, in accordance with Wesley's request conveyed in a letter, resolved that all preachers who were 'in full connexion' should enjoy every privilege that the members of the Conference enjoyed. That resolution almost completely allayed the ill-feeling that had been excited.

13. Lay-representation and the constituting of Conference.—The action of the Conference in 1785, however, is of still greater interest. Although no alteration can be made in the composition of the Conference created by Wesley's Deed Poll, save by process of law, it has been found possible to associate laymen, as well as ministers, with the 'Hundred.' The Conference, which assembles annually towards the end of July, now meets in two sessions. Its representative Session is held first, and consists of 300 ministers and 300 laymen. The resolutions they pass are made valid by the confirming vote of the 'Legal Conference.' Some of the lay-representatives are chosen by the ministers and laymen present at the preceding Conference; but the greater number are elected by the separate vote of the laymen assembled in the representative Sessions of the District Synods held in May. These sessions have been much enlarged, not only by the inclusion of many laymen who are members of District sub-committees, but also by the addition of the representatives of the Circuit Quarterly Meetings, which, in their turn, have been greatly enlarged through alterations made in the constitution of the Leaders' Meetings. The most striking of the alterations in the Leaders' Meetings is the addition to them of persons elected by the Society Meeting in each place to represent the laymen of the Society. The votes for the laymen and the duly qualified women chosen to attend the Conference represent a wide constituency. As there is a permanent ministerial element in the representative Session of the Conference consisting, for instance, of members of the Hundred, there is also a permanent lay element. It is composed of the lay-treasurers of certain funds, along with 48 laymen elected by the votes of ministers and laymen present at the Conference. One-third of this number retire annually, and are not eligible for immediate re-election. In the Representative Session it is estimated that nearly 60 members of the Hundred will be present, a quorum of 40 being necessary for the transacting of business, according to the Deed Poll. To these are added several ministerial officials, such as chairmen of Districts who are not members of the Hundred, 8 representatives of foreign missionaries, and others. The rest of the 200 ministers are chosen by the votes of the ministers in the Pastoral Session of each Synod in Great Britain, the number of ministerial and lay-representatives being governed by the principle of proportion of members of Society in the several Districts. The Representative Session of the Conference deals with all questions in which the expenditure of money is involved, and reviews the work done by the committees of ministers and laymen that have been appointed during the year. New legislation may also be proposed on subjects within the province of the Conference, but such new legislation is not confirmed until it has been submitted to the Representative Sessions of the Districts for consideration and report.

14. Home and Foreign Missions.—The work of Methodism has always been deemed of greater importance than its machinery. The wide-spread character of that work may be judged from the Minutes of Conference annually published. The work of the Home and the Foreign Missionary departments is worthy of special consideration. In recent years the evangelistic campaign has been quickened by the erection of large Mission Halls in some of the principal towns of England. The existence of renewed evangelistic enterprise in Wesleyan Methodism has made a deep impression on the Churches of Great Britain and other countries. The Foreign Missionary work of Methodism dates from 1769. The work gradually increased. In 1785 appointments in the United States, Nova Scotia, Newfoundland, and America were made. Minutes of Conference. Working in connexion with the Conference, Coke was the leading spirit of Methodist Foreign Missionary enterprise until his death in 1813.
more completely organized, and the present Wesleyan Methodist Missionary Society was formed. In estimating the importance of the work done by that Society, it must be remembered that its present operations are carried on in a field that is only a fragment of the area once occupied. Independent and affiliated Conferences formed in the United States, Canada, France, S. Africa, and Australia have taken over almost all the work which was begun by the British Conference in the several countries mentioned.

15. Statistics of world Methodism.—It is only at the decennial meetings of the Ecumenical Conference, when representatives of the Methodist Churches in both hemispheres meet, that an idea of the wide-spread influence of Methodism can be gained. Those Conferences were instituted in 1881, the latest being held in Toronto in 1911. The carefully compiled statistics presented to that Conference speak for themselves.

It was estimated that the members and adherents of the Methodist Churches, in 1910, numbered, in the Eastern Section, 6,794,471, and, in the Western Section, 25,334,076, making a total of 32,728,547.

The statistical tables show that there are many separate Methodist Churches in the world. It must, however, be understood that the divisions that have occurred have not been caused by doctrinal differences; in almost all cases they have arisen from varying opinions concerning ecclesiastical constitution and administration. In the Western Section the ‘color question’ has had an influence on the number of churches.

16. Methodist Episcopal Churches.—The success
of Methodism in the United States of America has
been remarkable. We have mentioned some facts
concerning its origin in 1784, and the action of
Wesley in ordaining Cokes as a Superintend-ent,
and two other preachers as presbyters, in 1784.
When Coke arrived in America, he ordained
Francis Asbury as a Superintendent. Asbury's
work and influence have left a deep mark on
Methodism in the United States. Asbury was a
man of high spiritual tone. He rivalled Wesley
in evangelistic enterprise, and gathered around
him men who possessed the courage and
devotion of the pioneer preacher. The War of
Independence had made the whole country
the sphere of the most enterprising Evangelism.
In settled towns, in clusters of huts, in lonely
backwoods, the Methodist preacher became a familiar
figure, as he preached and formed and visited his
little Societies. The growth of the churches in
the immense areas in which the pioneers worked
necessitated the helpful supervision not only of the
Superintendents but also of 'Presiding Elders,'
who rode hither and thither, constantly giving
inspiration and guidance to the scattered evangelists
and churches. For a considerable time the work
was carried on in close connexion with the British
Church, but it was not long before it developed in
England. A Conference was held in the States
in 1773, at which time there were 6 Circuitis, 10
preachers, and 160 members. From these small
beginnings American Methodism has advanced to
a prominent position.

The Methodist Episcopal Church and the
Methodist Episcopal Church (South) occupy the
chief positions among the Methodist Churches of
the United States. They separate in 1844, in
connexion with discussions which involved the
question of slavery. We may refer to some of
the constitutional arrangements of the Methodist
Episcopal Church. The members of the Church
are divided into local Societies, one or more of
which constitute a 'pastoral charge.' A quarterly
conference is organized in each 'pastoral charge.'
The travelling preachers, throughout the States,
are members of several Annual Conferences,
the sessions of which they are obliged to attend.
In addition to the ministerial Annual Conferences,
a General Conference is held every four years
composed of delegates from all the Annual Confer-
cences in the States. It consists of pastors and lay-
delegates, who are elected by the Annual Confer-
ences into the General Conference, dating from 1752. The
ministerial delegates are elected by the Annual Confer-
cences, each of which is entitled to one delegate at
least. The General Conference fixes the ratio of
representation and the manner of election. Every
four years a Lay Electoral Conference is consti-
tuted within the bounds of each Annual Conference
for the purpose of voting on constitutional changes
to be submitted to the General Conference, which
is the supreme legislative assembly. The Lay
Electoral Conference is composed of lay-members,
one from each pastoral charge, chosen by the lay-
members of the charge. Every year a Lay Electoral
Conference determines in such manner as the General Conference has
determined. Each Lay Electoral Conference is
entitled to elect as many lay-delegates to the
General Conference as there are ministerial dele-
gates in the charge; and if there is no Superintendent present, the Conference elects one of
its other members to preside pro tempore.
The presence of two-thirds of the whole number of
delegates constitutes a quorum for the transaction
of business. The General Conference elects by
ballot as many General Superintendents as it may
dean necessary from among the 'Travelling
Elders,' as the former Presiding Elders are now
called. The Constitution of the Church, under the
limitations and restrictions laid down in the
Discipline. The principal restrictions are that it
cannot revoke, alter, or change the Articles of
Religion, which were drawn up by John Wesley,
and which first appeared in The Sunday Service of
the Methodists in the United States of America,
published in 1784. Nor can the General Con-
ference establish any new standards, or rules of
discipline, contrary to the present existing
and established standards. In addition, it cannot
change or alter any part or rule of government so
as to do away with episcopacy or destroy the plan
of General Superintendency. It is also unable to
revoke or change the 'General Rules' of the
Church. Those 'Rules' are, with slight variations,
the 'Rules of the Society of the People called
Methodist,' as drawn up by John Wesley in 1743.
As to the procedure of the General Conference, the
Discipline shows that, in voting, the ministers and
laymen vote together; but it is provided that a
separate vote 'by orders' may be taken on any
question when it is thought advisable by a majority of
the order of delegates present and voting. In all cases of
separate voting the concurrence of the two
orders is required for the adoption of the proposed
measure. If the proposal concerns a change of
the constitution, a vote of both orders in the
General Conference is required. Such, in bare
outline, is a sketch of some of the outstanding
features of the organization of the Methodist
Episcopal Church, which was founded by a
study of the book of Doctrines and Discipline
(1912), by J. H. Riggs. A Comparative View
of Church Organizations there is a chapter on
American Episcopal Methodism which contains
important information enabling the student to
compare the constitution of the Mother Church
of Great Britain with that of the Methodist
Churches in the United States. For many years the visits
of fraternal delegates, representing the Conferences of Great Britain, have
served to strengthen the bond of union between
the Methodists of the two countries. The American
Methodists hold a conspicuous position among
the Churches devoted to the work of Foreign Missions.

17. Early secessionists. We have already mentioned
the first important Methodist secession in England,
taking place in 1797. As the Methodist New
Connexion is now part of the United Methodist
Church, it is not necessary to describe its original
constitution. In 1810 a small Society, numbering
10 members, was formed by Hugh Bourne in
Staffordshire, and became the gerra of the Primi-
tive Methodist Church. In 1816 a Society,
consisting of 23 persons, was formed by William
O'Bryan in Devonshire out of which arose the
Bible Christian Church. The reasons for the in-
stitution of these two Societies were similar. In
the former ease Bourne and William Clowes,
two earnest evangelists, were indisposed to submit
to the restrictions of Methodist discipline and
manner of work. They sought and found a sphere
in which they could have a larger freedom. They
made no attempt to act. In that way they separated.
They gathered their members out of the neglected
classes, and displayed in their work much of the spirit of ancient Methodism.
The same may be said of O'Bryan, the
founder of the Bible Christian Church.

18. Primitive Methodist Church.—Next to the
Wesleyan Methodists, the Primitive Methodists
hold the strongest position in Great Britain. The
constitution bears, in several points, a strong re-
seemance to that of the Wesleyan Methodist Church, but there is a marked difference in the composition of the Conference. H. B. Kendall, in his History of Primitive Methodist Church Principles and Polity (London, 1913), says:

'The Deed Poll provides that members shall be formed into Classes, Societies, Circuits and Districts, and that Societies shall have their Leaders' Meetings, and Circuits their Committees and Quarter Meeting' (p. 61).

Dealing with the functions of the Annual Conference, he mentions the Primitive Methodist Deed Poll. First of all, the conference is to be composed of 12 Permanent Members, irremovable from office except for incompetency or incapacity. Next, it is to be composed of others persons not exceeding 4, whose appointment is to be made by a by-law of the Conference. These may be ministers or laymen, official or unofficial members. Lastly, the conference is also composed of delegates, who have been elected thereto by their District Meetings, one-third of whom must be travelling preachers and two-thirds laymen, and no layman is to be appointed who is not a local preacher, or a class leader, or a Circuit steward. After long discussion and ten years of discussion, it was decided by the Conference of 1876 that the number of delegates to be sent by each to the highest court should be determined by the number of the Districts in being made up into a unit for one minister and two laymen (p. 61 f.).

Kendall is of opinion that the Primitive Methodist polity is a 'modified Presbyterianism,' one evidence of the fact being that the Churches are jointly governed by ministers and laymen, and that all ministers are in theory equal, the Superintendent differing from his colleagues only in function and responsibility (p. 62). Up to the present the Primitive Methodists have not shown any disposition to unite with other bodies, Methodists Churches. Their Foreign Missionary work is confined to Africa.

19. United Methodist Church.—In 1827, 1835, and 1849 there were secessions from the Wesleyan Methodist Church resulting from serious controversies concerning questions of government and administration. The first was occasioned by the introduction of an organ into one of the chapels in Leeds. It and its course constitutional questions were raised touching the power of the Conference, which re-emerged at a later stage. In 1835 the creation of the Theological Institution for the training of candidates for the ministry roused strong opposition, the agitation of the years of the agitation was soon nearly forgotten, and the controversy turned into an attack on the constitution of the Wesleyan Methodist Church. The agitation was elaborately organized and vigorously conducted in all parts of the country, and brought about the secession of several thousands of members, who formed themselves into the Wesleyan Association. The Association held its first Annual Assembly in Manchester in 1835. The Leeds reformers of 1827 joined the new Church.

The largest of all the secessions from the Wesleyan Methodist Church took place in 1849. Its immediate cause was the action taken by the Conference in dealing with certain anonymous publications in which the ministerial character of ministers holding high official responsibility was attacked. But, as before, the controversy soon involved the question of the constitution and, especially, the power of the Conference. It is difficult to state the number of persons lost to the Wesleyan Methodist Church through this agitation. The aggressive work of Methodism was paralyzed for several years. When the strife subsided, it was found that the number of members in the Wesleyan Methodist Church was nearly 100,000 less than when the agitation began. The 'Reformers' of 1849-52 formed themselves into a distinct community, which, by union with the Methodist Association, became the United Methodist Free Churches.

In 1897 an Act was passed by Parliament authorizing the union of the Methodist New Connexion, the Bible Christians, and the United Methodist Free Churches, under the name of 'The United Methodist Church.' The constitution of the new Church shows the need for change, but it retains the strong marks of original Methodism. The Conference, which is composed of ministers and laymen in equal numbers, meets once a year. It includes the President and Secretary, the President-designate, 12 ministers and 12 laymen, who form, in a sense, a permanent nucleus, the Connexional officers, the representatives of District Meetings, and such representatives of Connexional Funds and Institutions as the last preceding Conference has determined. The whole number of the Conference, exclusive of the Guardian Representatives and Connexional officers, is about 360. The Conference appoints a General Connexional Committee to have oversight of the affairs of the United Methodist Church during the intervals between the Conferences. The authority of the Church Meeting, the Leaders' Meeting, and the Circuit Quarterly Meeting is great. These meetings are to some extent, independent of the Conference, but the Conference has certain rights which it can exercise in case calling for its interference. The constitution of the United Methodist Church may be studied in the General Rules, approved by the Conference in September 1907, a new edition of which was published in 1911. Foreign Missions work is being done by this Church in China, Africa, Central America, and the West Indies. 20. Smaller Methodist Churches.—The Wesleyan Reform Union consists of those Churches and Circuits which held aloof from the amalgamation producing the United Methodist Free Churches. In 1889 a constitution was formed which is fully described in a pamphlet published by the Wesleyan Reform Union Conference, the latest edition being issued in 1886.

In 1885 several small Churches formed a union which held its first Annual Meeting in Manchester. The distinctive characteristics of the churches so united are an unaided ministry, conjoined with the free church-life of the Quakers and the doctrines and methods of Wesleyan Methodism (J. V. Heron, Independent Methodism [Wigan], 1910, p. 3). In 1886 this union assumed the name of the Independent Methodist Church. Its churches are situated chiefly in Lancashire, Yorkshire, and the northern counties, with some outlying churches in Nottinghamshire and Leicestershire, and a few besides in Bristol and the south-west. The Independent Methodists excel in Sunday School work. Although sharply divided by constitutional distinctions, the Methodists of England have so much in common, especially in their practical work, that they are being drawn nearer together. The Ecumenical and other Conferences have done much to promote the spirit of fraternity among them. In Canada and South Africa, Methodist Churches have united, and Methodist reunion in England is often sympathetically discussed.

Literature.—L. Polity, III.—Minutes of the Annual Conference of the People called Methodists, published annually, 1744-1914; Reports of Proceedings of Ecumenical Methodist Conferences, 1881, 1891, 1901, 1911; Minutes of the Standing Committee with Statements concerning Church Membership, published by direction of Conference (London, C. C. Micrographic Handbook and Index to the Minutes of the Standing Committee of the Methodist Church, 1845-1904); The Book of Public Prayers and Services for the Use of the People called Methodists, 1883; Doctrine and Discipline of the Methodist Church. Vol. VIII.—39
METHODOISM

II. DOCTRINE. - Let us look into the soul animating the body which has been described. Methodist was the offspring of the Evangelical Revival that took place in England during the 18th cent.; its doctrine was moulded under the religious conditions of that age.

1. Methodism and desisn. - A rationalistic desin then largely prevailed amongst educated men—a system of thought which fenced God off from man. Kind behind the laws of nature and bounded human knowledge by the limits of sense-perception and logical reason. The Deity was treated as an absentee from His world; and men consequently became godless in a manner as if the Revival swept down these artificial barriers. God was realized in living contact with His children. The sense of the divine was recovered; the transcendent became again immanent to consciousness. Accordingly, 'they, de 1888, 'if a man were Wesley's definition of religion; 'the work of God' was the habitual Methodist designation for the Revival, because in its phenomena God's immediate action upon human natures was striking. Hence the emphasis laid in the teaching of the Wesleys on 'the witness of the Spirit' (Ro 8). The doctrine of assurance—the personal certainty of the forgiveness of sins and of restored sonship toward God—was the outstanding feature of original Methodism. To most Churchmen of the time the peculiarities of this kind appeared a strange enthusiasm' (see G. Lavington, The Enthusiasm of Methodists and Papists considered, London, 1830); that a man might know his sins forgiven was deemed a dangerous presumption. Along with the Fatherhood of God, the Deity of the atoning Saviour and of the witnessing and sanctifying Spirit came to be freshly recognized; an article was made of the Socinianism which had flourished for a century; the 18th cent. was rife among both Anglicans and Dissenters.

2. Methodism and Calvinism. - The Methodist forces were soon divided on the question of predestination. Predestinarianism, like deism, magnifies the transcendence of God at the expense of His immanence, reducing finite will to an illusion and making man, even in his acceptancce of divine grace, the passive creature instead of the consenting child of God. The Puritan theology, in its prevailing strain, was intensely Calvinistic; and to it Whitefield, with the Welsh Methodist leaders and the Evangelical clergy generally, adhered, while the Wesleys espoused Arminianism. John Thomas, John Mather, and Charles Wesley, in their election and grace, in this respect inheriting the High Anglican tradition. But the spring of their universalism lay in the sense of God's mercy to mankind revealed within its own natures. They could not preach that God 'willeth all men to be saved' under the reservation that He has doomed some, of His mere pleasure, to perdition; as Christ's ambassadors, they cried, without any misgiving, 'Ye all may come, whoever wilt!' The
Weleyan teaching lifted a cloud from the character of God; it brought salvation to thousands who had deemed themselves predestined reprobates. Wesley vehemently contended against another tenet of Calvinism, the doctrine of a United Nations of Evangelicals—that of the necessary inherence of sin in the redefined. The current orthodoxy limited the salvation of Christ in the degree of its attainability as well as in the persons by whom it is attainable. John Wesley, in his revulsion against the conviction that the man who is ‘in Christ’ may become even on earth a thoroughly ‘new creature,’ that it is possible to be actually ‘cleansed from all sin through the blood of Jesus’ (1 Jn 1)—‘freed’ (as he would say) ‘from the last remains of sin’; on the strength of God’s promise and the warrant of experience, he taught his people to seek and expect the power to keep continually the Two Commandments of Jesus and so to become altogether holy and happy. To this effect he used to quote the Communion Prayer, ‘that we may perfectly love thee, and worthy magnify thy holy Name,’ insisting that this is to ask from God no boon beyond His promise. In the midst of controversy, Methodist was set at war with ‘inbred sin,’ inspired by the prospect of its extinction. The Class Meeting, with this ideal before it, became a school of holiness, a fountain of perfect love, a proof of a sanctifying and a powerful spur to moral endeavor. Sometimes the extravagances and self-delusions of unbalanced minds discredited the doctrine of Perfect Love; to such abuse all earnest religious teaching is liable. But the sight of the goal of faith given to the Methodism quickened and sustained the race for multitudes. The endurance of the Wesleyan Revival is due to the spiritual breadth and sanity of its program. Wesley declared in the object of Methodism as being ‘to spread Scriptural Holiness throughout the land.’ The hymns of Charles Wesley are the best exposition of Methodism in the fundamental respects which we have stated; they served as its keenest weapon in the arduous conflict which it waged with Calvinism. Along with the hymns, the doctrine which inspired them has leavened the whole Methodist Church.

2. Moravians.—Methodism owes a peculiar debt to the Moravian Brethren; their hand led the two Wesleys out of ‘the legal wilderness’ into the liberty of the sons of God. From this simple people, as well as from William Law, John Wesley learned deep lessons respecting faith and inward religion. But there came here also a parting of the ways. Leading members of the Unitas Fratrum in England, and others of Wesley’s early associates, were infected with the mystical tendency to despise the external duties of religion. Considering the inner light and the Holy Spirit’s witness as the sum of Christianity, men of this persuasion treated fellowship and Church order as superfluities; some of them ventured in theory, if not in practice, types Antinomianism. Among the latter the maxim was current, which Wesley denounces as an ‘enthusiastic doctrine of devils,’ that ‘we are not to do good unless our hearts are free to it’—in other words, that we should leave discretion, into the hand of God. But still the Wesleys, in a temporary, but widely operative, aberration in Moraviansism. In this outbreak Wesley saw the peril of the Revival; he raised a barrier against the ‘Rules of Society’ (dated 1st May 1743), which bear strongly upon public and social duty, and by the mutual oversight secured through the Class Meeting. Thus the experiment in religion was balanced by the practical; its origin was a forward hasty ness its complement and safeguard. Methodist recognized that, while salvation is ‘through faith alone, a true faith, works by love’; it enforced the teaching of St. James side by side with that of St. Paul, and found the two entirely consistent. Their home-training and Anglican schooling stood the Wesleyans in good stead at this crisis.

3. Methodist and the Church of England.—John and Charles Wesley were sons and ministers of the Church of England, and taught (as they supposed) her true doctrine. John Wesley quoted the Articles and Homilies in vindication of his most oppugned tenets. For the greater part of his people he revised the Thirty-nine Articles, reducing their number by omission and abbreviation to 25 (so printed in the Wesleyan Methodist Service Book); the changes are in many instances significant. There disappear, with others, art. viii. (Of the Three Creeds), xiii. (Of Works before justification), xv. (Of Christ alone without Sin), xvii. (Of Predestination and Election), xx. and xxi. (Of the Authority of the Church) and (Of the Authority of General Councils), xxiii. (Of Ministering in the Congregation), and xxxiii. (Of Excommunicate Persons). The title of art. xvi. becomes ‘Sin after justification’ instead of ‘Sin after Baptism,’ and ‘Ministers’ is changed to ‘Priest’s’ in xxxii.; ‘Traditions’ is paraphrased by ‘Rites and Ceremonies’ in xxxiv., the substance of the art. being preserved with notable alternations in detail. The Civil Magistrates (xxxvii.) Wesley turns into ‘the Rules of the British Dominions,’ adding his Parliament to ‘the King’s Majesty,’ merging ‘Ecclesiastical and Civil’ in ‘all Estates,’ and concluding with the first paragraph of the art.; he ignores the Royal Supremacy over the Church. The art. on ‘the Sacraments’ and ‘the Lord’s Supper’ are reproduced almost verbatim; but that of ‘Baptism’ is curtailed, the definition ending with the words ‘sign of . . . new Birth;’ the statement that by baptism persons are ‘grafted into the Church’ is avoided, while the clause recommending ‘the Baptism of young Children’ is retained. Art. ix. (Of Original or Birth-Sin,) is also cut down materially; the Wesleyan teaching on Sanification appeared to continue the assertion that ‘this infection of nature doth remain, yea in them that are regenerated.’ The reference to ‘flesh’ and ‘bones is dropped from the art. Of the Resurrection of Christ.’ The general effect of the revising is to emphasize the Protestant and Evangelical character of the formulary, to set aside the principle of State-establishment, and to eliminate Calvinism.

4. Doctrinal standards.—Neither the Articles of Religion nor any other Anglican document or dogmatic creed was laid down by Wesley as the ground of Christian fellowship. The revised Articles of Religion were, however, from the first incorporated, with certain necessary local adaptations, in the constitution of the Methodist Episcopal Church of America (see Doctrine and Discipline, etc., of this Church, pp. 21–26). ‘There is only one condition previously required,’ the Rules state, ‘that those who desire to enter these [the Methodist] Societies, who are desirous of a desire to flee from the wrath to come, to be saved from their sins. This “narrow gate” leads into the true way; the earnest seeker of salvation approves of Christ and the gospel as the means of his remedy; a deep repentance appears the best guarantee of orthodoxy. To his preachers, however, Wesley prescribed his Notes on the NT and the first four volumes of Sermons (ed. 1787–88, containing 44 Discourses) for the basis of a code of conduct. These standards are introduced into the Model Deed regulating the trusts upon which Wesleyan Methodist church-fabrics are secured, and into the Manual of the Local Preacher also declares his assent to ‘the general doctrine’ contained in the above writings as being
in accordance with the holy Scriptures. While they present no formal confession or dogmatic scheme, the Notes and Sermons contain the full evangelical creed in solution; they are a working standard of doctrine, a preaching ministry, and have proved a sufficient regulative canon for a Church that retains its Evangelical consciousness and is concerned above all things to preserve the life-conveying spirit of these authoritative documents.

A Catechism of Instructions of C.S. for the tenures of office in the Societies to any person holding opinions contrary to the total depravity of human nature, the Divinity and Atonement of Christ, the influence and witness of the Holy Spirit, and Christian Holiness, as believed by the Methodists.

6. Four salient points. — The characteristic features of Methodist teaching may be summed up as follows.

(1) Universal redemption. — Wesley and his preachers professed in the name of Jesus Christ 'a free, full, and present salvation to every sinner' — a salvation based on the Sacrifice of the Cross, bestowed upon men in the promise of repentance toward God and faith toward our Lord Jesus Christ,' and certified inwardly by the witness of the Spirit of God bringing peace of heart and the sense of God's fatherly love, and outwardly by a life of holy obedience.

(2) Entire sanctification. — Methodism holds the gospel to be as large in its intensity as in its extension, to be designed for the 'rooting out' from human nature of every plant which the Heavenly Father hath not planted; it encourages the Christian man to look for the perfect cure, in himself and in his race, of sin's disease. The Rules of Society, illustrated by Wesley's social work, virtually include the community with the individual man in the scope of Christ's redemption.

(3) The fellowship of believers. — Methodism stands for Christian brotherhood. It honours the ministry and cherishes the two sacraments; but, in its view, the proof of Church-membership lies essentially not in observance of sacraments, nor in obedience to priests, nor in subscription to creeds, but in the fulfilling on the part of Christ's brethren of their law of love by their seeking one another's company and finding in one another's love.

(4) Ordered Christian service. — This is the love of God, that we keep His commandments: the Wesleyan Rules of Society were conceived as an appellation of the central highlands of Christ to the situation of the Methodist people in early days. Interpreted with good sense and according to the spirit in which they were framed, these rules are found applicable to later times and to the circumstances of Methodists all over the world. They signify that the Christian man is Christ's in body as in spirit, and is called in concert with his fellows to bend everything in life to the furtherance of God's kingdom upon earth.

The above sketch is a narrative, not a criticism — a narrative of the genesis of Methodism as a product of and a factor in the life of Christendom. The changes which the system has undergone in thought and spirit, due to its wide expansion and the reaction upon it of later religious movements, cannot here be traced. Suffice it to say that through its manifold divisions and different movements a striking identity of doctrine prevails. Euncanonical Methodism retains the stamp of its origin.

MEXICANS (Ancient).—The territory of what is now the Republic of Mexico was inhabited in ancient times — in part it still is — by a great diversity of nations and tribes. The plains of Northern Mexico were the domain of tribes of a low culture stage, living mostly without fixed homes, relying chiefly on the pursuit of game, and to some extent on agriculture. These tribes, of whom we know very little, received from the Mexicans the general name of Chichimecas. The more cultivated nations were concentrated in the central highlands and in the ravines, valleys, and coast-lands of Southern Mexico. Though belonging to different linguistic stocks, and differentiated as to their advancement in culture, art, science, and political power, they were, nevertheless, identical in the special traits of their civilization, forming, so to speak, one great geographical culture province.

The name Mexicans belongs properly to the inhabitants of the city of Mexico or Tenochtitlan, who were otherwise called Aztecs, but the designation was extended to all tribes and tribal factions who spoke the same idiom, and were known to the Spaniards of Mexico by the name of Mexico, i.e., 'speaking intelligibly.' Their abodes in historical times were the central highlands, the Federal District, the States of Mexico, Puebla, and Morelos, and the territory of Tlaxcala, where they lived intermixed with the Spanish nation, with Mazatlan, Matlatzinacs, Popocatape, and other primitive nations. From that central home parts of the Mexican nation emigrated, in the modern period, to historic times, to the Atlantic coast, including as far as Guatemala, San Salvador, and the coasts and islands of the great lake of Nicaragua. Those were the tribes particularly connected with the mythical name of Toltecs. To the Maya-speaking people of Guatemala these emigrants were known.
by the name of Yaqui, which seems to be but another name of the Toltecs, who were commonly designated by the Mexicans as the Tonatiuh mixco Yaqui, that is, those who went to the rising sun." For all these tribes, undoubtedly, the succession of ages of cultural development must be taken into account, since their civilization, at the time of the Conquest, might have equaled, at least in many respects, that of the more ancient nations of the other side of the globe. Their religion had reached a correspondingly advanced stage of development, and was very elaborate, while their pantheon was unusually rich.

1. Religio-idees.—As with all the other nations of the world, the religious faith and the metaphysical ideas of the Mexicans had in part developed from attempts to grasp the connexion between the things of this world according to the principle of causality; in part they were the outcome of religious practice, and the crystallization of magic ceremonies, intended to produce certain effects by way of imitation. The great problems that presented themselves to the human mind because of the movement of the sun, the changes in the shape of the moon, and the varying location of the 'great star'—the morning star—have been treated by the Mexicans in a great number of myths and magical peregrinations. The most prominent and the most widely worshipped Mexican god, of whom the largest number of tales and myths were reported, Quetzacoatl, the 'feathered snake,' the creator of men, the wind-god of the later priestly school, was, in fact, nothing else than a mythical personification of the moon, who, in her decrease travels to the east, i.e., draws every day nearer to the sun, and finally dies in the rays of the rising sun. It was believed that, when the moon was dead, or his heart was transformed into the morning star. The counterpart of this deity, Tezcatlipoca, the young warrior, who was regarded as the watching eye, the god who sees and punishes all kinds of sin, and the sorcerer who roams about in the night, is, in reality, the new, waxing moon which makes her appearance in the evening sky, and will travel on in the night, as the eye of the night. On the other hand, deities like Quetzacoatl and Tezcatlipoca have developed from certain religious practices—e.g., the placing of maize-stalks or young maize-ears in the houses, in order to get rich crops. Xipe Totec, the 'slayed,' the god who wears a human skin, the heir of man and god, and his heart was transformed from well-known ceremonies celebrated in the beginning of the year in the time of sowing, in order to bring about the re-birth of vegetation. The two classes of deified beings next in the one great idea that the celestial powers, the sun, the moon, and the god of thunder and lightning, were at the same time the promoters of the growth and ripening of the fruit, and in the conviction that the new-born god (the rising sun) and the increasing agency (the waxing moon) were the causes of all birth and growth and of all that maintains and keeps up human life, and that they were the source of human life itself. The other two dead are to be added to these two classes—the ancestors, the founders of the tribe who had died in ancient times, and who had lived when the sun had not yet made its appearance in the sky. These deified ancestors were beloved and admired and, to live in the night and, consequently, were identified with the stars. Xiuhtecutli, the god of fire, who had likewise existed in the 'time of darkness and night,' before the sun, and was, accordingly, named Quetzacoatl, the 'old god,' because in some way the prototype of these ancestral gods.

2. Origin of the world.—The Mexicans believed that heaven, earth, and the sun had not been created at once, but that four ages of a somewhat imperfect creation had preceded the formation of the present world. The first of these pre-cosmic creations was named Quetzatl, 'serpent.' This was the sun of darkness, or sun of the earth, for the jaguar was considered to be the animal that swallowed the sun in time of eclipse, and, as the earth was the realm of darkness, the jaguar was identified with the earth. The sun then came to an end by darkness, when the jaguars were eating men. The second period was called Ecatonatiuh, 'wind-sun.' This period came to an end by great revolving storms, and men were transformed into apes. The third period had the name Quiahuinonatiuh, 'rain-sun,' meaning 'fire-rain.' In this period fire rained from the sky, volcanic ashes and lapilli were strewn over the earth, and reddish lava-cliffs arose. Men were transformed into birds. The fourth period was called Atotonatiuh, 'water-sun.' In this period a great deluge took place, men were transformed into fishes, and the sky fell down upon the earth. The fallen sky was caused by the joint action of Quitzontli and Tezcatlipoca, and the earth was revived. It was only then, in the year called Co tochtli, 'one rabbit,' that the present world was created. Its name is Ollinontliuh, or 'earthquake-sun,' because this present world is derived by earthquakes. One year after this creation, in the year one acatl, 'two reed,' the god Mixcoatl, 'cloud-snake,' the god of the North—or Tezcatlipoca in the form of Mixcoatl—drew fire out of the wooden sticks, kindled fire by means of the fire-drill. Then men were created, and war was begun, in order that there might be human hearts at hand for nourishing the sun. The first who was killed in war, i.e., the one who captured an enemy and offered on the sacrificial stone, was Xochiquetzal, the goddess of the moon, for it is the moon which dies every month in conjunction with the sun, and by her death gives life and strength to the rising sun.

Men being created, and war being commenced, there was opportunity for the creation of the sun. At the end of the first half of the first Mexican cycle of 52 years, in the year thirteen reed, the sun was created.

The gods assembled in Teotihuacan, the ancient city of the sun, and took counsel, asking each other who should take charge of lighting the world. The first who offered himself was Tecutacalli, the moon-god, the moon-god who, in fact, originated the moon, or whose deity would take charge of lighting the world. As no one re-plied, the gods requested Nanahuatzin, the 'bulldog,' the little god, to undertake it, and he consented. The gods kindled a great fire in the teotlaztli, the 'divine stove,' and Tecutacalli tried to throw himself into the fire, but he was afraid and drew back. Then Nanahuatzin shut his eyes and threw himself at ones into the fire, and after him Tecutacalli did the same. This took place at midnight. Then the gods conjectured in what direction the sun was to rise. It was in the east, where the sun rose at day-break, followed by the moon. The chronicles relate that originally the moon possessed the same splendor as the sun, but the gods struck her in the face with a rabbit, so that her splendour darkened, and now the figure of the rabbit is seen on the face of the moon. After having risen, the sun and the moon stood still for four days, whereupon the gods resolved to sacrifice themselves in order to give life to the sun. After the gods had killed themselves, the sun commenced to move, and ever since has made his regular courses, alternating with the moon.

3. Origin of men.—When heaven and earth were created, the gods took counsel and asked where to get beings to dwell on earth. Then Xolotli, the dog who jumps down from the sky—the god who carries the sertle, or the dead—went to the kingdom of the dead to fetch a bone of the dead. When he had given his message to the demon of the dead, the latter asked him to move four times round the sepulchre in the stone-circle, blowing the conch. The god called the worms to make a hole in the ground, and then the dog vomited the conch. The king of the dead gave the bone to him, but he ordered his ramas to follow him, so that the ground and the worms, which had brought the bone to the Maomanacs, a region situated far in the west.
There the goddess Chicomatzin or Quetzaliztli ground down the fragments on the grinding-stone, and put the pulverized material into a hollow stone bowl, which she set upon a pole. This was the bowl hollowed out of a precious stone, and set with gems. On this pulverized material Quetzaliztli sprinkled blood drawn by piercing her penis with a knife. In this way men were generated, and food was found for them in the same region of the west. It was the maize, whose place the black ant and the red ant gave to the god.

4. Heaven, earth and underworld, and the abode of the dead.—The Maya myth of the origin of mankind, derived from the earth (Italitepec) upwards there were thirteen regions or heavenly spheres (iluicuicati), and from the earth downwards there were nine regions or under worlds (miclanan). The second, third, and fourth of the heavenly spheres were the regions where the moon and the clouds, the stars and the sun moved, while the uppermost or thirteenth region was the abode of Omececatli, Omececatli, or Tonacacahuitl, Tonacacahuitl, the gods of generation. The second of the under-world regions was the Chicuauhapan, the 'nine streams,' the water that encircled the realm of the dead and was in a way identified with the ocean of the western region. The third under-world region was the tepetl (an onamiquian), the gateway by which the sun entered the under-world region. The most bottom region was the abode of Mixtecatl and Mixtecan, the lords of the dead. To this under-world region there went, however, only the men and the women who had died in their homes from sickness, injury, or the infirmities of age. Men who were drowned, struck by lightning, or caught in a struggle with the gods or magicians were believed to be taken by Tlaloc, the rain-god. Their corpses were not burned, but buried, blue colour—the colour of water and rain—having been put on their foreheads. They went to the region of the settlements. In the midst of a great mountain in the east, a paradise of vegetation, in order to serve him there. Men killed in war or sacrificed on the sacrificial stone and women who had died in childbirth belonged to a third order, and went to heaven, to the house of the sun. The warriors went to the east, to receive the rising sun and to accompany him up to the zenith. The women had their dwelling in the west, in the region of the settlements. In the morning they climbed up to the zenith, where, at noon, they received the sun from the hands of the warriors, and accompanied him on his downward course. At sunset they delivered the sun to the dwellers in the east, to the region of the settlements. Thus the sun illuminates the under world, and the dead awaken and live.

5. Principal deities.—A detailed study of Mexican mythology and the character of the Mexican gods leads to the conclusion that the forefathers of the Mexicans worshipped the sun, the moon, the morning star, the hearth-fire, the maize-god, and the other deities of vegetation, the god who pours down the beneficial rain, and a host of numina and spirits who were believed to dwell in particular places, as mountains, caves, water-holes, etc. In the course of time these cosmic potencies assumed very different shapes in the various parts of Mexico. In Tehuantepec, the earth-goddess, Tepoztlan, the earth-goddess and the fire-goddess of the towns of Quauhtitlan and Xochimilco; Teteo inman, the ‘mother of the gods,’ or Teo, ‘our grandmother,’ also called Tlazotlote, the ‘god of the orphics’; and Tlazqani, ‘mire-eater’ (i.e. sinner); she was generally worshipped as a harvest-goddess; Xochiquetzal, the goddess of flowers and of love, had her worshipers through the land; and a magnificent pyramid dedicated to her is still to be seen in Xochicalco, south of Cuernavaca. All these goddesses, without any doubt, were originally moon-goddesses, but developed into goddesses of...
fertility and generation, into earth-goddesses and patriarchs of women's art. Chalchihuitlicue, the 'goddess whose garments are precious stones,' was the impersonation of running water, brooks, and lakes; Uxtoctauatl that of the salt water, and accordingly the patroness of the salt-makers. Cent fecha, the maize-god, was represented either as a female or as a male deity, and was particularly related to the gods of generation, the authon of life.

6. Religious practices.—The Mexicans were penetrated by a feeling of absolute dependence on their gods. They regarded them as the givers of all things and as those who inflicted punishments upon them, and they were convinced that most of these punishments were brought down on them by their own sins. In order to obtain the favour of their gods or to appease their wrath, they used to address them with prayers, to present offerings to them, to humble themselves in their presence, and to torture themselves in their honour. In the work compiled by Bernardino de Sahagun, the original of which was written in Aztec, he has preserved many prayers directed to several gods, distinguished by a high and noble feeling, and by a very refined and polite language, while another chapter of the same work contains two ancient and very curious songs, which they used to sing in honour of their gods at the different anniversaries festivals (text, Germ. tr., and commentary in J. Zeller, Gesammelte Abhandlungen zur amerikan. Sprach- und Altertumskunde, Berlin, 1902-08, fil. 959-1107).

The offerings which the Mexicans were accustomed to bring to their gods consisted of food and garments, flowers, myrrh, and various kinds of aromatic herbs to be burned, and piles of wood to heap up and kindle on the top of their temple-pyramids. They humiliated themselves in the presence of their gods by eating ashes (talzquatl), i.e., by touching the earth with the finger and putting it to the mouth. When they requested something from their gods, and before every festival dedicated to them, they fasted, eating only once in the day, avoided red or white wine, and every kind of spices, abstained from sexual intercourse, and did not wash their heads. When the request which they had to make was a very earnest one, they would by piercing their tongue, burning, or the margin of their ears, sometimes drawing blood; they would put threads through the hole made in the tongue, and offer the blood issuing from their wounds, collecting it on agave leaves. If they had committed a sin such as intercourse with the wife of another man, and wished to atone for it, they went to the priests of the goddess Tiacoloteotl and made confession, and the priests, after having heard the confession, imposed some penance—e.g., to go naked in the night to some shrines of the women-goddesses (cineteteotl), there to deposit garments made of the common bark-paper. By performing this penance they were believed not only to have got rid of the sin committed, but also of the punishment imposed by the law. A Mexican religious practice that excited the curiosity and even the amazement of the Christian priests was the so-called 'eating of the god' (tequiualti). At a certain festival a number of devotees assembled, and, after having obtained the god from the paste obtained by grinding certain seeds, the high priest sacrificed the image and cut it into pieces. The assembled persons ate the pieces, and those who had partaken were obliged to pay for a year all expenses for the cult of the god in question.

Finally, the Mexicans felt compelled to bring living beings as an offering to their gods. They sacrificed to the fire-god by casting into the fire all kinds of animals that could be found in the fields, and they also offered human prisoners in the same way. The warriors who had captured them brought them, their limbs tied together, and hanging on a pole, like captured game, for the fire-god was the god of war and of the chase. The Mexicans killed quails by decapitating them, as an offering to the sun and other deities such as Uitzilopochtli, for the quail was the spotted bird, the image of the starry sky.

They fastened prisoners with extended arms and legs to a wooden frame, and shot them with arrows. This was a sacrifice for the earth-goddess, and was intended to fertilize the earth. There is no doubt that it was originally meant as an imitation of the sexual act. They decapitated a woman as an image of the 'mother of the gods'—the moon-goddess, the harvest-god—and flayed her, for the old moon, the waning moon, is cut into pieces, and her splendour is stripped off. Yet she would revive, and therefore the body of the victim was torn by a man who, in the following ceremonies of the feast, represented the goddess.

The Mexicans practiced to a terrible extent the offering of human hearts, torn out of the bodies of living men. They used for that purpose a stone of a rounded pyramidal shape. The victim was thrown forwards on the top of it, his extended arms and legs were held by four men, and the sacrificer, armed with a big stone knife, made a broad cut across the breast, and then tore the body in pieces. The heart was put in his hand, tore out the heart. The heart itself was presented to the sun, and with the blood they moistened the mouth of the idols, while the heads of the sacrificed were put in rows on poles. The body was delivered to the men who tortured the prisoner and had presented it as a sacrifice. He cooked the flesh with maize, and made a feast of it with his relatives and friends. With the thigh-bone of the dead man he made a bundle that was hung up on a high pole in the middle of the house-courtyard. This was a token of the value of the owner, and probably, at the same time, a fetish for luck and protection.

7. Annual festivities.—The year was divided into eighteen sections of twenty days each and five remaining days. On each of these twentieths they had a feast with many elaborate ceremonies, dedicated successively to various special deities, all these feasts being intimately connected with the exigencies of the different sections of the year with regard to the culture of the soil, sowing, and harvesting, and with the changing aspects that in the different years those important affairs presented to the anxious eye of the laborer. They commenced with the ceremonies early in the year—in the time of our February. At that time, in the houses and on sacred spots—mountains, caves, water-holes, and localities considered as the abodes of the rain-gods—they set up altars painted with the emblems of the numina of these localities were attached; and they carried children, who were brought from their parents, to the same localities and sacrificed them to the rain-gods, in order that these divinities might be satisfied with the sufficient quantity for the crops of the new year.

In the second twentieth they celebrated a great feast to Xipe Totec, the god of vegetation, a form of the ancient moon-goddess that was just before sowing, and it seemed to those ancient philosophers to be necessary to fertilize the earth, that she might receive the germ and bring forth the crops. For this important business a sacrifice of value was required. They took a prisoner of war, the most gallant whom they had at hand, and with him performed a ceremony that was in a way a testing. He was fastened by a rope to the central hole of a
stone of flat cylindrical shape, these-called temazcalte (spinning wheels) were used to provide the water. When the traveler was exhausted, after which he bound him, with extended arms and legs (tatejicatl), to a wooden frame, white and black. This was the blood sacrifice. This was the purpose of the ceremony, to bring the earth and fertilize it. This was the original form of the ceremony. The picture, and as it was formed in certain ancient towns up to the time of the conquest. In Mexico City, however, when the prisoner was exhausted and no longer had power to resist, he was killed by a new method. From this custom this second annual feast was called Tacxotl. 

In the twelfth month, the Mexicans celebrated the return of their gods, i.e., of the fire-gods, who were reputed to have gone out of the country during the rainy season. The feast given in their honor was called Tepetiuclatl. It concluded with another fire-ceremony, in which living prisoners were thrown into the flames. The thirteenth feast, called Tepetlhuani, the 'feast of the mountains reaper,' was held on the same day as the fire-gods—the gods of fertility—were honored by sacrifices, and offerings were brought to the rain-gods, i.e., to the gods of the mountains. The fourteenth feast, called Quecholli, was dedicated to Mixcoatl, the god of hunting and war, and was celebrated by a great ceremonial hunting. Arrows and other weapons were made. 

The fifteenth feast, called Paniquetzaliztli, 'raising the banners,' was the great feast of the god Uitzilopochtli, when the myth of the birth of this god and the victory which he obtained over his brethren, the Centzon Uitzma (the stars), was dramatized by a combat between the warriors and the priests. It was regarded as a day of good luck for humans, for the sacrifice. The fire-snake, the weapon with which Uitzilopochtli had killed his sister Co-yolxanahui, came down from the upper platform of the temple to burn the offerings heaped up on the great cylindrical stone at the base of the stair-case leading up to the platform. The sixteenth feast, Ateomoztli, was dedicated to the rain-gods. The seventeenth, Tittingli, was a commemoration of the death of the god, at which the cimacatl, the 'women-goddesses,' i.e., the female spirits of the women who had died in childbirth, and their patroness Ixmecti, the old goddess, the goddess of fire, played an important part. 

The eighteenth and last feast was called Tzoci, 'increasing,' and was dedicated to Xinticui, the god of fire, who was honored by offerings of all kinds of animals thrown into the flames. The god was represented in this feast by two different figures—at one time as a god of vegetation, clothed in green qetzal-feathers and wearing a mask of turquoise and green stones, and at another time as the god of the burning fire, clothed in feathers of the red macaw and wearing a mask of red and black stones. The firelast-days of the year, called nemontomi, were deemed unlucky. No feast was celebrated on them, nor any day of importance taken in hand.

Other ceremonies were performed to the deities who were believed to rule certain days, according to the names of days in the day in question, these names being composed of one of the numbers one to thirteen and of one of the twenty-day-signs. As these names, in the different years, were not assigned to a fixed date—the initial days of the years bearing different names—the feasts of the rulers of the days were denominated 'movable feasts.'

8. Priests.—For the performance of all these ceremonies, filling out, in the true sense of the word, nearly the whole year, and for the regular service of the different gods, many priests were employed, called tlamacazqui, 'servants of the gods,' and gathered at a sacred temple. The main ceremony consists in a ceremonial intercession on the goddess by Uitzilopochtli and, on the way to meet the god, Teteo innan was accompanied by chieftains called Cuauhcalli (men of the province of the Huaxteca). Ceremonial dances formed by the chiefs were performed. At the end of the feast warriors, riding with each other, took the mask out of the town, and buried it somewhere in the territory of their enemies. The goddess herself, i.e., the priestess wearing the skin of the victim, was likewise driven out of the town. For four or five days, until he was exhausted, after which he bound him, with extended arms and legs (tatejicitl), to a wooden frame, white and black. This was the blood sacrifice. This was the purpose of the ceremony. The picture, and as it was formed in certain ancient towns up to the time of the conquest. In Mexico City, however, when the prisoner was exhausted and no longer had power to resist, he was killed by a new method. From this custom this second annual feast was called Tlacaxtecaltezcalte. 

A woman representing Teteo innan, the 'mother of the gods,' was seated at midnight and stayed there until she was exhausted, after which she bound him, with extended arms and legs (tatejicitl), to a wooden frame, white and black. This was the blood sacrifice. This was the purpose of the ceremony. The picture, and as it was formed in certain ancient towns up to the time of the conquest. In Mexico City, however, when the prisoner was exhausted and no longer had power to resist, he was killed by a new method. From this custom this second annual feast was called Tlacaxtecaltezcalte.

MEXICANS (Modern)—An intimate knowledge of the religion of the ancient peoples of Mexico is necessary in order to understand the religious life of the present population of the country. On first acquaintance with the people an impression is given that the Roman Catholic religion is everywhere present, yet many of the pre-Columbian religions remain. Too much cannot be said of the energies and the fervor of the Roman Catholic priesthood in their attempts to Christianize the natives. The originality of their methods and their enthusiasm for the work resulted not only from the fact that they learned the native languages, and collected much data upon the customs and religion of the people, and to these early accounts we owe practically all our knowledge of the pre-Columbian life.

The native mentality of the people to read in pictures, and this was turned to account in their teaching of the Roman Catholic Catechism. Figures were drawn on large pieces of cloth representing most ingeniously, in a series of pictures, the various teachings of the Church. These pictures were also made in books, some of which, according to N. Leon (Ann. Anth., new ser., ii. [1800] 726), are still used among the Mazahua of Michoacan. A more ambitious attempt was made by the priests to teach the natives the Latin words of the Lord’s Prayer and other Articles of the Church. A native non-English word was selected, the sound of which was similar to a syllable of the Latin word, and the written word was represented by a picture. The first syllable, po, of paternos, was represented by a picture of a flag, which in Nahuiatl was poalli, and the second syllable, ter, was represented by a drawing of a stone, teltl in Nahuiatl. In this way, picture by picture, the native word was known, and each word recalled a similar word or syllable in the Latin.

J. de Torquemada tells us (Monarquia Indiana, Madrid, 1723, xv.) that the Christian priests illustrated the vices and virtues and the instability of life by pictures representing a great expanse of water on which were vessels manned by sailors. On one ship Indian men and women were praying, with garlands of roses in their hands, and they went to heaven accompanied by angels, while on another vessel the Indians were fighting with each other, ogling women, becoming intoxicated, and receiving glasses of wine from devils. According to J. de Acosta’s statement (The Natural and Moral Hist. of the Indies, ed. C. R. Markham, London, 1888, bk. vi, chap. 18), the Indians were in war, and unfriendly obedient to their native kings. Their governors and princes exercised arbitrary power, but were restrained by unwritten laws learned down from their forefathers, and by the public opinion. Their punishments were severe, but never cruel. Vices such as drunkenness and untruthfulness arose with the misery and slavery of the Spanish times. In material culture, too, the Mexicans were nearly equal to their conquerors. Spanish government did not add very much to their cultural population, and to-day the Indians are, if not the most refined, certainly the most honest, component of the population of the Mexican territory.

EDUARD SEILER.
MEXICANS (Modern)

the Pastorales, and the Mystery Plays performed at Corpus Christi and at other times. Soon after the Conquest the sacred dramas, so popular in Spain at that time, were introduced into Mexico, and were regarded as an important means of propaganda.

Class 2.—The casual observer seldom sees any of the native element among the peoples who have become Mexicanized. In this discussion he should consider the population good Roman Catholics. It is only after close intimacy extended over a considerable period of time, together with a knowledge of the nature of the native practices, that one gradually finds the underlying basis of the religion is based on the native ideas rather than upon the Christian faith. The veneration of Roman Catholicism is removed, and the native religion stands out clearly. The greater part of the population of Mexico are of mixed blood, with a strong preponderance of the Indian over the Spanish strain. This type of native is present even in the large cities and towns, where a great proportion of the people fall into Class 2, whose religion is Roman Catholic, with an undercurrent of the old ideas. The gente de Mexico City, e.g., are of this class.

Holy Week throughout Mexico is a time of great religious enthusiasm. In addition to the Passion Plays which have already been mentioned, there is a constant round of festivals, many of which are strongly flavoured by the native elements. The season of prayer and fasting appeals to the natives, some of whom wear the crown of thorns and mutilate themselves. From Holy Thursday until the Vigilia of Easter, the bells of the churches are silent, and the matraces, or rattles, take their place. Each child and adult has a rattle, and the strongest rattles belong to the children. Many of these are of noisy toys, as the Cristo de Dolores. The burning of Judas is a common sight in every Mexican town; figures of Judas, representing him as a man or woman, a negro, a soldier or a knife, a devil or a gentleman, are burned in every village plaza. Many of these figures contain jars filled with various objects, and, when the container is broken, the contents fall into the street. The figures are often made of clay and covered with mud. The figures are burnt in the street. The figures are burnt on the Sunday after the day, and are often placed on the street.
Worship by means of prayer, divination, and sacrifice takes many different forms. Human sacrifice has been abolished, although there are a few sporadic cases where it has been reported within the last century. Blood sacrifice is not uncommon among the people of this class, the ear or other parts of the body being cut out with a stone knife, and the blood allowed to drop upon the idols. Offerings of food and drink now form the main portion of the religious practices of the population, and with the change in custom no incense to the gods is also very common. Compulsory intoxication—a common feature of the ancient religion—is still carried out by means of the pulque of the Mexicans, and in the Huichols, the teoscio of the Tarahumara, and the boache of the Lacandon.

Divination is practiced in many forms, and among many peoples there is a class of soothsayers who look into the future by means of the movements of sacrificed animals, the smoke of the incense, the crystal, the image on the surface of a barrel of water, and many other ways. The prayers of the Corn, collected and translated by Prenn (Die Nagard-Expedition), furnish an excellent criterion of the nature of the religious ideas of the gods in general. The dances of the people are often held for magical purposes. Among the Tarahumara, e.g., the dance is a prayer, a petition for prosperity for the harvest, or for health and fertility, in turn.

The idea of renovation, the renewal of the incense-burners and the cleansing of the houses and of the places of worship at certain times of the year, is an ancient practice. Among the Lacandon, at the making of the new year, when the firstfruits are offered, the entire collection of incense-burners is renewed. The old ones are 'dead,' and new ones are made to take their place. Priests no longer form a distinct class by themselves in Mexico, but the head-man of the village or the Lacandon family now performs the priestly functions, and among some of the tribes the class of shamans still remains. It is claimed that one-fourth of the Huichols (q.v.) of Northern Mexico are shamans; the name of the tribe signifies 'doctor of healers.' It is they who have the power to look into the future and who understand and interpret the will of the gods. Religious temples, so common in the pre-Columbian culture, no longer play a part in the religious life, though the Lacandon still make pilgrimages to the ruined structures where they believe their gods reside, carrying with them incense-burners and other offerings. The religious practices are usually carried either on domestic habitation or in a house set apart for this purpose, this house being called topona, 'the house of all,' among the Huichols. Women are usually excluded from these religious places, except at the termination of the worship, when general feasting takes place, and the offerings, previously made to the gods, are consumed by the worshippers. Perhaps the best example of a people who have had no contact with Spanish influence are those who live in the State of Chiapas on a tributary of the Usumacinta River, which forms a portion of the boundary between Mexico and Guatemala. The early efforts of the Spaniards to Christianize these people met with failure, and they have not been disturbed for three hundred years. The customs, and especially the religion, of this people are important as an aid in understanding much of the life of the early Maya tribes, and many of the ceremonies are counterparts of those represented in the pre-Columbian MSS.

A geographical survey of the principal religions of the native Mexicans shows an interesting change from north to south. From the religious point of view, the ideas of the tribes of Sonora and Chihuahua are directly associated with those of the natives of the south-western portion of the United States: the religion of the Pueblo peoples and of the Navahos and Apaches shows a striking similarity to that of the tribes of the same name, those of the Cora, and other peoples of Northern Mexico. The rain and the importance of rain are the prime factors in the religion of all these peoples. The symbolism of the Huichols centres in the phenomena of nature. In the Comanche, the Cora, and other peoples of Northern Mexico, the religious ideas of the present native population show a great number of survivals of the ancient religion of the formerly highly cultivated peoples belonging to the Nahua, the Maya, and kindred civilizations.

MICHAELMAS.—1. The origin of the festival and the Michael churches in Italy.—The Martyrology in English, translated by Richard Whytford from a Latin work by de Wordie in 1525, records the Roman and Sarum tradition of the origin of the festival:

'The xxix day of September. In the moti of garsege the restorable memory of saunt Meclihael the archangel where a chiroc hyme is ascendent but is of poor byrding ye tymes of the day is alternatly set by the londre.

The Sarum Missal in the calendar has: '3 kl. Oct. Michaelis anchanguel.' In the text:

'Michaelis anchanguel.' (Miss. eccles. = Sarum, Burmisterland, 1861-83, pp. 257-258.)

The Kalendarsium of the Leofric Missel (B), a Glossbundary MS of the latter part of the 10th century, has: '3 kl. Oct. Sancti Michælis anchangeli.' (ib. p. 31.)

The earlier Galician Sacramentaries carry the evidence back to the 7th century. The Vatican MS of the 7th or early 5th cent. has 'Orationes in sancti Archangeli Michaelis.' The Rheinan MS and the S. Gall MS, of the 8th or early 9th cent. have the title: 'Dedicatio Basilicæ Angeli Michaelis.' (H. A. Wilson, The Galician Sacramentary, Oxford, 1891, pp. 300.)
The fabric in the Leonian Sacramentary throws still further light on the origin of the festival. It stands alone in assigning it to 30th Sept. and not 29th Sept., but it adds a note of locality which differs from that of the later Roman tradition: 'Fra. Kau O. N. to the Angelus in Salario' (C. L. Feltoe, Sacramentarium Leonianum, Cambridge, 1896, p. 106). Feltoe refers to a 9th cent. MS at Padua, which reads: '29 Sept. Dedic. basil. S. angeli Michalihelis via Salaria' (ib. p. 203). Michelihelis is a late form for the name of Michael. Thus the first printed edition of the Sacramentary, 'Italices Sacramentarium' (17th cent. ed., Venice, 1576, fol. 294 f.), traces the materials of this Verona MS of the 7th cent. to three collections made during the pontificates of Leo I. (440-461), Hilarus (461-468), and Simplicius (468-483). This carries the evidence of the rubric to the 8th century.

The festival is, therefore, in its origin the dedication of a church. The evidence is not confined to the liturgical books of the Roman rite. The early Mozarabic rite is represented in a MS of the 11th cent. at Paris (Bibl. Nat. nov. sec. lat. 2171). In a short treatise, Aduantitiones Festivitatum, the festival is announced thus: 'Adveniret die festi. Sancto Michaeli, sancti Michaelis arcaehangi vel sancto Michaelis angelici.' (MS 2171, p. 25.) And in the Martyrium Legum, a calendar in the same MS under Sept. 29, is: 'iii. (Kal. Oct.), (Dedic. basil. sancti Michaelis arcaechangi)' (G. Morin, Liber Comunius, Anecdotae Medievaliae, i. (1892) 392, 402. A contemporary MS from the same Spanish monastery of Silos in Old Castile (Bibl. Mus. Add. MS 50851) has two hymns: 'in diem sancti Michaelis Arcaechangeli,' where reference is made to the 'scoli.' The first hymn has the line: 'ut glorietur in die suo consortes socios'; and the second: 'Urieio Gabriele Rafaelo sacris.' (J. F. Poynter, H. M. F. Poynter, Bifolco, 1892, 254, 256). The Ambrosian rite in the 12th cent. refers to the 'dedicatio in monte Gargano.' The Kalendarium has: 'iii. k. Oct. a. Michaelis in monte Gargano,' and the ordo pro diecimaria diei: 'dedicatio s. Michaelis in monte Gar- gano' (Borodius, M. Magistretti, Milan, 1894, pp. 11, 17).

i. The Castello S. Angelo at Rome.—Quentin has sifted the further evidence of the Martyrology. The entry in the Martyrology of Bede: 'iii. Kl. Oct. Dedicatio ecclesiae sancti Michaelis.' This is modified by the Mâcon MSS: 'Romae, dedicatio basilicae sancti angelii Michaelis.' By the MS 1848, on one, dedicatio basilice sancti Mikaelis arcaehangi.' The entry by the Bollandists in the MS with the insertion of the words 'miliario sexto' between 'Romae' and 'dedicatio.' The earliest evidence supports that of the Leonian Sacramentary, and points to the dedication of a church at the sixth mile-stone on the Via Salaria. The MSS of Toul and Remiremont read: 'In Monte Gargano, dedicatio basilicae sancti Michaelis archangeli.' This is the source of the entry in the Martyrology of Ado, archbishop of Vienne, c. 870; but he adds: 'Sanctus dominus et arcanum sanctus.'

ii. The entry in the Martyrology of Ado, archbishop of Vienne, c. 870, but he adds: 'Sanctus dominus et arcanum sanctus.'

iii. The entry in the Martyrology of Ado, archbishop of Vienne, c. 870, but he adds: 'Sanctus dominus et arcanum sanctus.'

Baronius also identified the Church of St. Michael 'inter nubes' with the Castle of S. Angelo, assigning its dedication to Boniface II. (606) or Boniface IV. (607-614), in memory of the staying of the plague under Gregory the Great (C. Baronius, Martyrologium Romanum, Venice, 1692, p. 541).

ii. The church on the Via Salaria.—The dedication festival of Sept. 29 would seem to have three steps in historical progress. The earliest has reference to the church on the Salaria, the second to the Apulian church on Monte Gargano, the third to the church of S. Angelo in the sixth mile-stone on the Via Salaria is north of the site of Fide, somewhere between Castel Giubileo and Casale Margeridano. The Casali Sette Bagni, which lies on the hill-side north of the little stream of the Alia, can be far from the old Basilica of St. Michael. The evidence from the Michael shrine near Spoleto, which was known for its healing springs, may explain the origin of the dedication.

iii. The church on Monte Gargano.—Monte Gargano juts out from the north end of Apulia into the Adriatic. The Michael shrine is on the Monte S. Angelo, about ten miles from Manfredonia, the ancient Sipontum. The dedication is assigned to the 12th century. Baronius refers to it under the year 409 (Annales Ecclesiastici, ed. Mainz, 1601-05, sub anno xliii.; cf. his Martyr. Rom., p. 261). The 'Apparition S. Mich. Ang. is kept on May 8. The Liber Pontificalis of Anastasia Bibliotheca, iv. (1893) 392, 402. A contemporary MS from the same Spanish monastery of Silos in Old Castile (Bibl. Mus. Add. MS 50851) has two hymns: 'in diem sancti Michaelis Arcaechangeli,' where reference is made to the 'scoli.' The first hymn has the line: 'ut glorietur in die suo consortes socios'; and the second: 'Urieio Gabriele Rafaelo sacris.' (J. F. Poynter, H. M. F. Poynter, Bifolco, 1892, 254, 256). The Ambrosian rite in the 12th cent. refers to the 'dedicatio in monte Gargano.' The Kalendarium has: 'iii. k. Oct. a. Michaelis in monte Gargano,' and the ordo pro diecimaria diei: 'dedicatio s. Michaelis in monte Gar- gano' (Borodius, M. Magistretti, Milan, 1894, pp. 11, 17).

iv. The Michael sanctuary in Umbria.—The Antonine Itinerary thus notes two stations on the way from Rome to Milan: 'n. 10. Civitas spolitio... mil. vili.' 'This mutation is placed at Le Vene, near Spoleto (Itin. Ant. Aug., ed. G. Parthey and M. Pinder, Berlin, 1867, pp. 298, 378). Wesseling rejects the theory of P. Cursiter and translates it to a sanctuary at Jupiter Clitumnus, and accepts that of L. Holstein that there was a Christian sanctuary on this site when the Itinerary was written (P. Wesseling, Pet. Rom. Itinerarium, Amsterdam, 1735, p. 613). H. Leclercq states definitely that the sanctuary cannot have been dedicated to the 'Angel of God' before the epoch of Theodosius, or at the latest before the beginning of the 5th century. The inscriptions of the Tempio di Clitumnus belong to this date. The inscription over the central door reads: 'SCE DS ANGELOR QUI FEXIT RESURRECTIONEM. Leclercq says:

'Gedaëk, dente la premère destination de l'étendue, c'est-à-dire, et qui portait primitivement le nom de sanctuarium. Il a été transformé et dédié au Dieu des anges qu'à l'époque de Clitumnus' (DACG, art. 'Angels,' p. 219).

And again, after examining the theory of H. Grisar that these buildings (i.e. the Tempio di Clitumnus and the Church of S. Salvatore a Spoleto) are works of a school of the 12th cent., he concludes:

'Nous pensons donc, jusqu'à nouvelle démonstration, que conformément à l'opinion de Leo Holstein, le tempio di Clitumnus a une destination première de sanctuarium, et qui depuis les heures anciennes a gardé le titre de ces sanctuaires qui hantaient en assez grand nombre la rive du Clitumnus pour avoir dû donner le nom de Sanctuarum à l'île d'étape arrière entre Spoleto et Terni' (ib. p. 2149).
The consecration of the healing water of the Cithamine to the God of Angels suggests a similar origin for the basilica on the Via Salaria, and may perhaps be behind the dedication of Montecassino. The early Christian association of angeles with healing springs is recognized in Jn 5. Leclercq states that there is evidence of the prevalence of the cult of angels in Umbria from the first half of the 4th century. The Old Testament suggests that outside the walls of Spoleto is on the site of a small church originally dedicated to St. Michael in 429. There is another in the parish of Mandorlo near Perga, of the same epoch, called in the inscription: "basilica sanctum angelorum" (ib. p. 2148).

2. The Michael churches in the East.—I. St. Michael of Khonai. —The Church of St. Michael the Archistrategos was the centre of the angel cult of Asia. When the hill-station of Khonai took the place of Coloscope in the 7th cent., the Church of St. Michael of Khonai. The legend tells us that St. Michael had saved the people of the Lyson valley from inundation by clearing the gorge outside Coloscope. The miracle of Khonai in its present form is of the 9th cent., but it represents the foundation of the present church of Coloscope. W. M. Ramsay has no doubt of the identity of the Church of St. Michael of Khonai with the Church of Coloscope. The raid of the Turks in 1189 swept along the Lyson valley. Khonai on the hill-side escaped them, but the gorges along the valley were destroyed, and the great church was burnt (Nicetas Choniates, Annales de Isaco Agelo, bk. ii. ch. 2 [Hist. Byzant., Venice, 1729, xii. 210]). The legend also explains the origin of a spot called "Isaac's Mountain" (Ramsay, Cities and Bishops of Phrygia, i. 214 ff.). St. Michael of Khonai in the later Christian legend takes the place of the Zeus of Coloscope of pagan power. The association with Zeus was in the Christian period attributed to St. Michael. Ramsay sums up the importance of the legend in its bearing on early Christian history:

"The worship of angels was strong in Phrygia. Paul warned the Colosseans against it in the first century (Col. ii. 18). The Ciconians of Phrygia, Lycaonia, and Lycia, 355, regarded it as idolatry (Cons. Laod. Can. 35). Theodoret, about 420, says that this disease long continued to infect Phrygia and Pisidia (Interp. Ep. Col. ii. 18). But that which was once coated idolatry, was afterwards reckoned as piety (Cons. Laod. Can. 355)."

ii. Asia. —Michael the Archangel was honoured throughout Asia. His name is preserved in Mikhail near Pymme, in Mikhailitch on the Sangarios, and in other city names (Ramsay, Phrygia, i. 31 f.). He is connected with the introduction of Christianity into Isaura, and is associated with the cities of Akroinos-Nicopolis and Gordium-Edoukias. Sozomen speaks of the cures wrought at the Michaelleon, a shrine built by Constantine on the north shore of the Bosphorus (HE ii. 3). Its ancient name was Hestie, and was traditionally associated with a temple built by the Argonauts (Cedrenus, Hist. Compl. [Hist. Byzant. vii. 96]). It is now Church of St. Michael, near Istanbul, in the district of Sariyer, (ib. p. 417, n.). It is now a mosque, and is called St. Michael's Church. The mound, however, is now represented by Arnaouti. Procopius describes the rebuilding of this basilica by Constantine, and the building of another under the direction of St. Michael at Procrithous on the Asiatic shore. He is called He built another on the Asiatic coast at Mokadion (ib. i. 9). Procopius also mentions the Michael church erected by Justinian at Antioch (ib. ii. 11). It is the ancient town of Phthia, with a house of rest for the sick (ib. iv. 3), while at Perga in Pamphylia stood a ptocheion of St. Michael (ib. v. 9).

iii. Constantinople. —There are important references to the Michael churches of Constantinople and the neighbourhood as in the Insula of Anselmo Banduri (Hist. Byzant. xxii. and xxiv.) and in the Constantinopolitan Christians of C. D. du Cange (Hist. Byzant. xxii.). The latter gives a list of fifteen churches (Hist. Byzant. iv. 3) in the city and suburbs. S. Salvatore on the site of a temple of Saturn, in which had been an image of brass named Michael. The image was broken up, and the pagan festival was transferred to St. Michael (R. Sinker, DCA, p. 1179).

3. The Michael churches in the West. —In Italy and the East, headland, hill-top, and spring sanctuaries now dedicated to St. Michael were formerly sacred sites of earlier religions. The associations rest frequently on folk-lore; the testimony is that of legend and tradition or place-name. The same associations are to be expected in the West. In some cases the legend may be traced; in others it may linger in folk-lore, and can be looked for only in local traditions. If in connection to St. Michael and a site associated with a headland, hill-top, or spring, on a road or track of early origin, it is reasonable to look for a pre-Christian sanctuary.

i. Headland and hilltop churches. —On the French coast are St. Michel near the mouth of the Loire, St. Michel on the Pointe du Raz in Brittany, St. Michel en Grève to the south of Lannion, the Île St. Michel near the Cap de Frehel, and, best-known of all, Mont St. Michel. The legend associated with Mont St. Michel suggests the tradition of an ancient sanctuary of Celtic heathendom. The giant slain by Arthur on the site is said to have come from Spain, the Hades of Celtic mythology (Egils, Celtic Heathendom, p. 90 f.). He is said to have ravished Elen, who is equated with a goddess of Welsh mythology (ib. p. 161). Thus, by the overthrow of a giant by the champion of Christendom, the Celtic sanctuary becomes the sanctuary of St. Michael.

Among the coast and headland churches in England are St. Michael's Mount, the church of Lyme Regis, and that of Bere near Seaton, all of ancient origin. There are also near the mouth of the Camel opposite Padstow, St. Michael, Mawnan, overlooking Falmouth Bay, and St. Michael-Caer-hayes. On the west coast there is a Michael church at Workington in Cumberland; on the east coast, Garton in the East Riding, Sidestrand and Ormesby St. Michael, in Norfolk; on the south coast, Newhaven in Sussex and East Teignmouth, Devon. With a few exceptions the majority are in Dorset, Devon, and Cornwall, where the old lore lingered longest.

ii. Hill-top churches. —These are to be found throughout the West, sometimes as hermitage chapels, sometimes as town and village churches. St. Michael is the central church of Limoges, the Augustorium or metropolis of Limousin. St. Michael is also the central church of Castelnaudary on the old road between Carcassonne and Toulouse. These sites are frequently the high-places consecrated to early religious rites. The church of Penkridge in Staffordshire is dedicated to St. Michael. Penkridge is the Celtic site of the ancient city of Pennocernia, a place-name which bears evidence to the worship of the heathen god of the Britons (Rhyas, Celtic Heathendom, p. 202 f.). It is the Brythonic equivalent of the Irish Cean Cruach, 'the Chief of the Mound,' who bewed before the staff of St. Patrick.
Penkridge was formerly the sanctuary of the Celtic Zeus.

A Michael church may often witness to some pew from the foundation-legend of the Church of St. Michael 'in Monte Gargano.' The legend rests on a ‘libellus’ which was kept in the church. Garganus, a rich citizen, is said to have left a bull from the herd.

‘Quem domus collecta servorum multipliciter per devia queque requirere, inventi tandem in vertice montis foribus culmine unde specundum. Iamque promptus cursus salvatoris: statim corripit ira motus arcum, et appetit illum itaque lusum saeclaeque quendam fuisse retorta: eum a quo lecto est non veris, prostituit.' (Monobritannia, Saxonina, l. 560.; of Hereford Breviser; Canterbury, 1535.; 1 credit., 1011 230).

The sanctuary of the bull-shrines is here vindicated.

The terror is averted by the dedication of the site to St. Michael.

The Abbey of St. Francis of Assisi alludes to the forty days' fast in honour of St. Michael. It was kept 'ad herermum Alvernae.' It was on the occasion of one of these fasts that the birds gathered round his cell. They are called his 'arduus et invencibilis.' (Monobritannia, Saxonina, l. 612.)

The vision of the stigmata is assigned to the same sanctuary.

ii. Bennico itaque anteqnium spiritum redire caelo ... perducentur sapientiam seum: cui nomen Alvernae. Cum egitur in tinta solytium novem quadragesimam ibidem ad honorem archangeli Michaelis leuantire coepisset ... coepit immensam concordiam suam sedentem.

iii. The spring churches. —The dedication of wells and springs to St. Michael may be noted in the Michael churches of Askeville, at the head of the Askevile, in Dorset, at Dartmouth in Lincolnshire, and at Houghton-le-Spring in Durham. In Portugal near Leiria on the Monte de Sao Miguel a warm and a cold spring issue close together from the Olhos de Sao Pedro.

There is a remarkable example of a Michael church in association with a spring at Llanfihangel near Llanwili Major in Glamorganshire. The church is in a dell, and just outside the N.W. corner of its churchyard is a spring. The spring-head is ornamented with the bust of a woman, and the water used to issue from the breasts. It is now (April 1915) nearly filled up with mud.

iv. The Llanfihangel churches in Wales. —It has been noted by W. L. Bevan (Dios. Hist. of St. David's, London, 1888, p. 36.; op. Willa Band, The Celtic Church of Wales, p. 336) that the Michael churches in the diocese of St. David's, to the number of forty-five, with one exception, are in the country districts. It has been suggested by W. Davies (op. cit., p. 330) that they mark a second stage in the spread of Christianity in Wales:

The group of Michael churches would therefore represent the village or the lay tribe that had become Christian, but which still belonged to the lay tribe, and so could not be called by the name of the saint, or the tribe of the saint, or of his family. They thus form a group which marks the spread of Christianity. ... The term selected was one that would celebrate the victory of the cross over the Pagan' (ib. p. 336).

The Michael churches of Anglesey bear out this suggestion. There are four of them; and they are all in the near neighbourhood of sites of great antiquity, associated with the legend and myths of Wales. Llanfihangel yr Nwy, on the coast north-west of Beaumaris, is within the pre-historic site of Bwth Arthur. Llanfihangel Tre'r Bridd derives its name from the ancient Carmen Tur' Beirro; and is the east of Llanherneymedd. Llanfihangel-yn-Nhowyn, south-east of Valley, is near the seat of Cer-Ellen. Llanfihangel Essiclegog is partially connected with the old site of Blas Berw. This association of the Michael churches of Anglesey with the evidence of the evidence of the churches in Italy and the East, can hardly be accidental. It would seem to support the evidence that the Michael churches occupy the shrines and sites of the Christian heathendom.

v. The Michael churchyards. —The churchyard of St. Michael's at Lichfield is referred to in the MS Historia Ecclesiae Lichfeldensis in the Cathedral Library at Lichfield. It was a venerated site even in the time of St. Augustine:

'Corporibus occorsar sepellendi inselis magnitudinis coemeterium, quod fono Divi Michaelis idictum, fertur inservire; quod fuerat Augustino, qui Angelorum Apostolorum dictum, cum illius insidae partes inveterata, religione et ecclesiasticis fratribus ... MS Hist. Lich. lib. ap. B. E. Savage, The Church Heritage of Lichfield, Lichfield, 1015."

A note 'de Cemeteris' in the same MS speaks of certain national burial-places in the early ages of the Church:

'In primordiis nascentis Ecclesiae Anglicanae cemeteria primum extra paupera et amplissima et apud cemeterium Aelianum sanctum in qua Rex Arthus regis sepultus est; cemeterium Doro-

vemi Cantorum; Eoculi Brighanum; Lindisfruna; atque ados cemeterium Divo Michaeli sacrum Lichfeldensi ab Augusto Angelorum Apostolorum magni publici consensu, deinde very sanctissimis modo occupato.' (ib. p. 14.)

There is a passage in Bede which probably refers to a similar burial-place in the neighbourhood of Hereham:

'Sestamque quassarian, seniores rarcr et rustis circumdare, non longe ab Hugastaldensis ecclesiis ... habebant cemeterium sancti Michaelis archangelici, in quas vir Deus seipsum, ... manner cum passio, agnosceantur a locutione quidem operam dare consenere.' (IB. v. 5.)

The Church of St. Michael at Bordeaux is on the site of an ancient monastery, the soil of which has the property of preserving the bones of the dead.

vi. The Angel Victor in Ireland. —The Genat

Patraice, the hymn of St. Fiacre in honour of St. Patrick, has two references to St. Michael under the name of Victor. In v. 4 it is by his command that Patrick went across the sea:

'As'vest Victor tri gaisnt,'

"Mil con tess for tona,'

"Said Victor to Michael's kinsman, that he should go over the waves' (Irish Liber Hymnorum, B. Bradshaw Soc. xiii. 1898 88., xiv. 1898 28).

In I. 47, an angel sends Patrick to Victor, who stopped him from going to Armagh at his death:

"As'vest fa des co Victor, ba he ar: 'id ra 'hatter,'

"He sent him south to Victor: it was he [Victor] that stopped him;" (ib. xiii. 109., xiv. 36).

The gloss on v. 4 reads:

Victor, i. angel communis Scottiae gentium; ii. angelus Eirenicus gentium, et victor Scottorum;" (ib. xiii. 52).

The translation of the Irish gloss on v. 46 reads:

"i.e. to meet him, to summon him to go to Victor. He was his soul-friend, and he is the common angel of the Isles (aenoc cord oll na Aodgal); i.e. is Michael, the angel Scotoirum;" (ib. xii. 102., xiv. 184).

The hymn seems based on writings by Muirchru Mace Mochar, written in the 7th century, and preserved in the Book of Armagh. The hymn itself belongs to the 8th century (ib. xiv. 176). The name Victor may be traceable to the Latin of the Mozarabic Missal for Michaelians:

It is a point of affinity between the liturgical uses of Ireland and Spain.

But the name Michael is not sunk in the title Victor. J. H. Bernard, in his note on the Hymn of St. Colman Mac Murchon in honour of St. Michael, says:

"St. Michael was very popular in Ireland. In the Second Vision of Aedmon we read in section 19: 'the three hostages that were taken on behalf of the Lord for wounding every disease from the Irish' — are Peter the Apostle, and Mary the Virgin, and Michael the Archangel.' There are a large number of fragmentary Irish poems in praise of St. Michael in the manuscript collection of the Royal Irish Academy.

The Michaelmas goose. —There is an old saying: 'If you eat goose on Michaelmas-day you will never want money all the year round' (Hone, Every-Day Book; i. 1339). In Herefordshire in 1470, 'one goose fit for the lord's dinner on the feast of St. Michael the archangel' was due as..."
part of service or rent for land (ib.). G. Gascoigne, in his poems published in 1575, alludes to a similar custom:

"At Christname sa capon, At Michaelmas a goose, And somewhat else at New-year's tide, For fear their leases fis loose" (ib.).

Such customs lie deep in the folklore and religious beliefs of a people. Geese have sacred associations. They are "The Good, The Bad, And the Ugly" in the classical bestiaries. Some are "Quibus sacris Junoni" [Livy, v. 47]. The goose-pod, or "fuente de las oces," is still preserved in the cloister court of the cathedral of Barcelona. The cathedral is built on the site of a Roman temple—a temple ascribed to Hercules. Some columns in an adjoining street still witness to the antiquity of the site. There were sacred geese in the Greek temples [ERI i. 518]. Geese were tamed to the ancient Britons ('Bilorem et gallama et anserem gustare fas non putant') [Ces. de Rell. Gall. v. 12]. They also have a place in the story of St. Wurburga ('in Wedane mansione, quod est iuxta Hamptonian . . . infinita ancurum silvestriun . . . multituin' [Novus Legenda Angliae, ed. C. Horstmann, Oxford, 1901, i. 423]. The witness of East and West, the folklore and legend of Britain, alike point to the sacred associations of the Michaelmas goose. This established Michaelmas custom rests, together with the rest, on so many of the Michaelmas churches, on a foundation of primitive religion, and in Britain they are no less sacred to Christianity for thus keeping alive the deep-rooted religious convictions of Celtae heathendom.

5. The liturgical St. Michael and All Angels.—The festival of Michaelmas is specially honored in St. Michael, but the words of the officium or introit to the mass in Western countries are: 'Benedicite Dominum omnes anglia.' The festival thus includes All Angels. The English Prayer-Book entitles the festival 'St. Michael and All Angels.' The Collect of the Great Hail of the Treaty of 1564 under the title 'S. Mariae degli Angeli shows the same intention.

The Collect 'Deus, qui miro ordine,' the services of Angels and men in a wonderful order—is common to all the uses. Its subject is the ministry of angels. The gospel, epistle, and postcommunion are also common to all. The Gospel—'Qui patet Angeli referre to the guardianship of the angels, the Offertory—'Stetit Angelus' to the incense of prayer, the Postcommunion—'Beati Archangei tui Michaelis' to the intercession of St. Michael. The Epistle common to the Roman and Sarum and most of the Western uses—'Significavit Deus quaeso operet: sieri cito'—commemorates the Angel of the Apocalypse (H. Bradshaw Soc. xii. 1897) 1556.

The Epistle in the English Prayer-Book, 'There was war in heaven,' represents a different strain of liturgical tradition, and celebrates the victory of St. Michael over the dragon, 'that old serpent, the devil and Satan, which deceiveth the whole world.' The Westminster Missal of 1575 has this Epistle as a First Lesson, followed by the usual Epistle, 'Significavit Deus.' It is a rare instance of two prophetical lessons before the gospel, which in itself shows the influence of Gallican use. This influence is strengthened by its use as the First Lesson in the Missarum Missale Mixtum (ed. Lesley, p. 389).

It also appears as a Matins lesson in the Milan Breviary (Breviarium Ambrosianum, Milan, 1856, pars Aestiva, ii. Prop. de Tempore, p. 405). Wickham T. says it in the Missal of Durham, Abingdon, and Sherborne among old English uses; and in that of Rouen of 1499 and

the Cistercian Missal of 1627 (H. Bradshaw Soc. xii. 1596).

The English Epistle is inspired by the thought of the triumph of Christianity over heathenism, and belongs to the same cycle of ideas as the Angel Victor in Ireland.

THOMAS BARNES.

MICIUS.—'Micius' is the Latinized form of the words otherwise transliterated Mi Tze, or Mo Tze, meaning 'the philosopher Mih.' His personal name was Teih (or Ti). He was a native of the State of Sung, and is regarded by some as a younger contemporary of Confucius (E. Faber, E. H. Parker), and by others as being anterior to Mencius (J. Legge). His opinions are preserved in 71 chapters arranged in 15 books; but 18 of the chapters, in some cases along with their very titles, have been lost. Faber speaks of him as an ancient Chinese socialist, and Parker calls him 'a Quixotic Diogenes,' head of the school of simplicity, socialism, and universal love ('China and Religion, London, 1865, p. 67). It is this doctrine of universal love that is the best known, largely because of the criticism of it by Mencius (q. v.). All social disorders in the empire, and between persons, families, or States, spring from selfishness, and would be impossible if men loved the persons, families, and States of others as they love what belongs to themselves. Such universal love may be difficult; but, if men can be induced to sacrifice their lives for the sake of pleasing their sovereign, how much less difficult should they find it to practise universal love, which, moreover, would be responded to by love. Others would follow if only rulers would lead the way by administering justice in this principle, taking pleasure in it, stimulating men to it by rewards and praise, and discouraging them from opposition to it by punishment and fines. Micius addresses the ancient kings as examples, for equally with Confucius he builds on the ancient books. What gives rise to hate and all its evils is the principle of making distinctions. In spite of the brevity of life and the selfish desire to make the most of it for oneself, each man should be for the other as for himself. There is no one who would not prefer his friend or his sovereign one who practises universal love rather than one who acts on the opposite principle. To the objection that universal love is injurious to filial piety Micius replies that the filial son is one who wishes to secure the happiness of his parents by inducing men to love and benefit them, and that to love and benefit the parents of others is precisely to secure for one's own the same treatment in return (bk. iv.). It is here that Mencius joins issue with the Micht I Tze. Taking Micius's doctrine as in calculating equal love to all, he argues from the actual facts of human nature, pointing out that a man's affection for his brother's child is not merely the same as his affection for the child of his neighbour, and that man is related in a special way to his own parents, heaven having made man to have this one root (Mencius, bk. iii. pt. i. ch. 5, pp. ii. ch. 9). Legge admits that Micius appears to lose sight of the other sentiments of the human mind in his exclusive contemplation of the power of love, but denies that Micius taught equal love to all. It is true that we do not find in Micius the phrase 'without difference of degree,' used by I Tze, though it may be held that I Tze represents the logic of his master's doctrine. I Tze
also exposed himself to Maimonides' criticism by his exaggeration of his master's teaching on simplicity in funerary rites (Maimonides, bk. iii. pt. i. ch. 5). Maimonides did no more than discourage extravagance on the part of the wealthy in the making of his monuments for the dead; he did not mean to assume the right to dictate to men or gods, while he allowed all that was necessary for a decent interment (Maimonides, bk. v. ch. 25).

Among other points worthy of notice are these. In discussing the uniformity, Maimonides holds that men originally were hopelessly at sixes and sevens, each having his own view of right, and that order is based on submissive acceptance of the judgment of the supreme ruler, whose judgment is conform to heaven; if heaven's punishments are to be avoided. Hence the pieties of the ancient kings. Maimonides is firmly convinced of the existence of spiritual beings, the instruments of heaven's righteous administration, and so far affirms the necessity of religious belief for social stability (bk. viii.). Of two chapters criticizing the Confucian school one survives, though Chinese editors are inclined to deny this reference to it; a remark to the effect that the whole Maimonides deserves Legge's praise of him as 'an original thinker,' who exercised a bolder judgment on things than Confucius or any of his followers.

MICMACS.—See ALONGQUINS (Easterns).

MIDRASH AND MIDRASHIC LITERATURE.—The term midrash (from the root dǎrāsh, 'to seek,' 'to inquire') signifies 'research,' 'exercise,' 'study.' Applied by the Chronicler to historical writings of didactic import, 1 as the Midrash of the Prophet Iddo (2 Ch 13:19) and the Midrash of the book of Kings (2 Ch 24:20), it assumed later, with the advent of the sōfrin, or scribes, upon the stage of Jewish history, the connotation of free exposition or exegesis of Scripture, eventually becoming a general term for pure theoretic study as opposed to the practical pursuit of knowledge. From the latter usage the Jewish academy received its name bāth hom-midrāsh, 'house of study.' In a narrower sense, midrash is employed to mean any specific exposition of a Scriptural passage differing essentially from the p'rashah, the literal meaning (the plural form in such case being midrāshōth), and the name is then transferred to a collection of such free expositions, known collectively as midrāšot, Midrashic works.

The intellectual activity of the Rabbis with regard to this free exposition of the Bible was developed along two distinct lines, the Hålakâh and the Haggâdah, and a few brief remarks on the basic differences between these two currents of Rabbinic thought, flowing in parallel streams, are of paramount importance. Reduced to their bare etymology, the terms signify: hålakâh, 'way of acting,' 'habit,' 'rule of conduct'; haggâdah (also known in its Arabic form ʿaqqâdah or ʿagûdâh, 'narrative,' 'explanation.' The Hålakâh confines itself to the legalistic aspect of the Scriptures; the Haggâdah to their moralizing and edifying aspect.

From the midrashic standpoint, the Bible is a mirror, in which is reflected every move and event of the great universe. One teacher comments: 'Turn it, and again turn it; for the all is therein.' (Sayings of the Jewish Fathers, p. 96.) It requires only the light of a great thinker to extract from its compact pages all this esoteric wisdom; like a hammer which strikes the rock, it is possible to unravel all the secrets which lie beneath the surface of the cold letter of the text (Sanh. 34c). The Hålakâh takes up this work of rekindling the mystic spark of knowledge in the legal field; in all other fields of human activity that task is undertaken by the Haggâdah. The Hålakâh relies, for its powers, mainly on the intellectual and logical faculties of man; the Haggâdah on the imaginative and emotional faculties. The Hålakâh strives to preserve the letter of the law by insisting on the observance of all the details in the ritual; the Haggâdah, by a well-defined analysis of the relation of man to his environment, seeks to preserve its spirit.

Midrashic study, therefore, assumes a twofold aspect. On the one hand, it is concerned with the evolution of legalism—the Hålakâh; on the other, it centres about the problems of God, man, and the universe—the Haggâdah. The origin of Midrashic study is shrouded in the gloom of antiquity. The Rabbis themselves often assign Midrashic interpretations of Scripture to Biblical personages, but such statements are not to be taken literally. A noteworthy instance of this occurs in the Mishna (Shkîlām, vi. 6): 'This is the midrash which Jehoiada, the high-priest, taught,' etc. By such assertions the Rabbis probably mean to emphasize the continuity and binding force of the traditional law.

There can be no doubt, however, that this free method of inquiry into Scripture was well established during the period of the early scribes, the men of the Great Synagogue, who undertook the reconstructive work initiated by Ezra. 2 The author of Daniel uses Midrashic exegesis quite liberally in interpreting the words of Jeremiah (25:12; 29:10) in his famous prophecy of the weeks (ch. 9). With the advent of the scribes Midrashic study becomes a permanent institution in the Jewish intellectual world and passes through its process of evolution during the succeeding ages. Three historical periods are generally distinguished: (a) the period of the sōfrin, or scribes, 400 B.C.—A.D. 10; (b) the period of the Tannâmites, the early Rabbinical authorities, A.D. 10–220; (c) the period of the Amorâmis, later Rabbinic authorities, A.D. 220–500.

The historical side of the development of Midrashic study has been ably dealt with in the works of L. Zunz, Die gottesdienstlichen Vorträge der Juden, Frankfort, 1890; Z. Frankel, Hodogetria in Mischmah, Leipzig, 1859, and Introduction in Talmud Hierosolimitanum, Breslau, 1870; D. Hofmann, 'Zur Einleitung in die halachischen Midrashim' (Beilage des Rabbiner-Seminars zu Berlin), 1887; and especially in the works of W. Bachar, Die Aguda der Tannaim, Strassburg, 1903; Die Aguda der babylonischen Amorâmis, do. 1878, and Die Aguda der palästinischen Amorâmis, do. 1892-99. Only a few traces remain of the Midrashic exegesis of the early scribes (cf. Mahâh Sōfrin, viii.; Maṭhtah Shâghilah, v. 10f.).

During the second period, the Tannâmites, Midrashic study must have developed to grand proportions, as is evident from the fact that the various schools of Rabbis, begin in the time of H. Wein, Zur Geschichte des Talmud, Wina, 1904, iii. 229.

1 The following passage is of interest as confirming this position. Rabbi Levi says: 'We have received this midrash from the men of the Great Synagogue. Wherever Scripture uses the expression 'and it came to pass' (like the word 'creation' in the Bible) it means calamity' (Miqṭôtah, 100). Parallel passages on the authority of a number of different teachers are found in Megillah Rabbah, xii. 5; Yagîdîr Rabbâ, xl. 7; Rûch Rabbâ, i. p. 13; Eṣrâ Rabbâ, i. 11; Eṣrâ Rabbâ, i. 11 prom.; Pîtâkha Rabbâh, 6. In these the period of the Babylonian Exile is referred to in this way (cf. N. Krochmal, Moseh Nebâhî beh-Zamâhan, Warsaw, 1894, p. 224).
midrash and midrashic literature

was necessary to consider the amplifying or limiting value of certain particles used in the Pentateuch when considering the legal question involved in the passage, in order to include the additions of tradition or to exclude no longer sanctions. Thus the particles 'even,' 'every,' "also," were considered as amplifying, the particles 'but,' 'only,' 'from' as limiting, the original law. Rabbi Akiba's disciples included the most distinguished teachers of the Law, such as Rabbi Bar Nissim, Rabbi Yehudah ben Hasid, Simeon ben Yohai, and Yose [bar Hala, his disciple, Aqiva, followed his methods of exegesis in his Greek version of the OT. From the Minhag of Rabbi Akiba the following Halakhic Midrashim of the school of Rabbi Simeon ben Yohai on Exodus, contained in the Midrash Hag-Gadit, and published by D. Hoffmann (Mekhilta de Rabbi Simon b. Yochai, Neukork a. M., 1905); (ii.) the Sifre or Torath Kohanim, of which a complete running Halakhic commentary to Leviticus, and was edited by Rabbi Hyya (middle of 2nd cent.; cf. Hoffmann, 'Einleitung,' p. 22); the Sifre was issued in 1546, and the standard edition is Sifre, Commentar zum Buch Levitischen, herausgegeben von R. Abraham ben David und I. H. Weiss ... herausgegeben von Jakob Schlossberg, Vienna, 1862; (iii.) the Sifre Zuta, the Halakhic commentary to Numbers from the school of Rabbi Akiba, existing only in fragmentary form in various collections, foremost among which is the Yalkut Shimoni, the editio princeps of which uses the expression Zuta, smaller, to distinguish this Midrash from the Sifre to Numbers mentioned above (cf. Hoffmann, 'Einleitung,' pp. 59-66); and (iv.) the Sifre to Deuteronomy, which is the legal commentary to this book issued from the same school. It is usually bound with the Sifre to Numbers emanating from the school of Rabbi Ishmael (cf. above).

These Midrashic collections are but small remnants of the great number of such works which the ravages of time have destroyed. They were compiled, for the most part, during the first two centuries of our era. While some are primarily Halakhic, the Haggadic content in each instance forms no mean proportion, for the Rabbinists felt themselves bound by no rigorous division-line in arranging their materials. The later Misha and Talmud are similar extensive collections which comprise the greatest efforts of the Rabbinists in the realm of Hidduschen and Haggadah.

To illustrate the methods of the Halakhic Midrash the following passage, in which the legal aspect of tort is discussed, will be of interest:

"Eye for eye" (Ex 21:24) means a money-compensation. This, however, is a mere assertion; perhaps we are actually to understand the passage in its literal sense. Says Rabbi Elazar: "Scripture in one passage (Lv 24:20) the two injunctions, 'thou shalt not killest a beast shall make it good,' and 'he that killeth a man shall be put to death.' For what purpose is this collection?—in order to establish a line precedent for the laws of tort in the case of man and beast. Just as the damage inflicted on a beast is punishable by a fine, so the damage inflicted on a human being is punishable by a fine." Rabbi Hanoch adds: "In the case where one's beast has repeatedly inflicted death on several human beings, Scripture specifically imposes a fine on the owner to escape a deserved death-penalty. In this case, where the Scriptural penalty is only the loss of an eye, there is all the more reason to believe that the text meant to allow a money-compensation." (cf. Mekhilta de Rabbi Ishmael, Midchutim, 8.)

The binding force of the decisions of the Rabbinists with regard to their interpretation of the Mosaic law is clearly expressed in the following

"Concerning the authority of the words of the scribes, Scripture says (De 17:19): 'According to the tenor of the law which they shall teach thee.' It does not say which the Torah they shall teach them."

1 Cf. J. Winter and A. Wünsche, Die jüdische Litteratur, Trèves, 1861, i. 371-410; and J.E. v. 534.

Vol. VIII.—40
shall teach thee, but rather which they shall teach thee. . . .
Further on it says, 6 Thou shalt not turn aside from the
sentences which they shall teach thee, to the right hand, nor to
the left; which means that thou shalt listen to their opinions in
reverence to what is right, if they tell thee that it is left, and
in reference to what is left, if they tell thee that it is left; and
not to turn aside from the right hand, and concerning the left
that it is left, and concerning the left that it is right, thou must
yield to their opinion. (Midrash Sheshat Rabbâ, I, 2).

The Haggadáh. — The Haggadáh is the expression of the
philosophy of Jewish life, and, as a result, had a wider appeal
than the more abstract Halakháh. With a keen appreciation of
the cosning powers of the Haggadáh, Rabbi Isaac
informs us:

'Generations before, when the penny had a freer circulation,
there was a desire to listen to lectures on Mishnah and Talmud;' he
told us, 'when the penny was scarce, it is only desire for
Scripture and Haggadáh.' (Pesiqta of Rambah, Babadásh
hass-Shemash)

The Haggadáh Midráschar are of two kinds: (1) exegetical,
and (2) homiletic. The first form running commentaries to the
text of the various books of the OT, and in this respect follow the
method of the Haggadáh Midráschar. They are, however,
frequently introduced by several proems
—opening remarks generally based on some text in
the Haggadáh— which is rather a characteristic of the homiletic
Midráschar. The latter are collections of homilies or sermons
which are delivered during the Sabbath and festival services
in the synagogues, and which were based on the
portion of the law read during such service. The homiletic
Midráschar therefore, differ essentially in structure as well as in
the treatment of their subject-matter, from all the other Midráschar
works. They are regularly introduced by proems in which
a passage from the Haggadáh or Prophecies is
explained, and the context. Several homiletic works (notably the
Tanákháh) also resort to a Halachic exordium. The lesson of
the day is then attached to the opening verses of the portion of the
law read during such service, the text being often used merely as a
basis for a lesson on morals quite fully developed.
The homilies close, for the most part, with verses of
encouragement, prophesying the redemption of Israel and the advent of the Mesianic era. The two
cycles of homiletic Midráschar are in existence: (a) those originating in the three-year-cycle of
Scriptural Sabbath readings then in vogue in Palestine—the Schénirás cycle—and (b) those based on the readings during the special Sabbath in the Jewish calendar (occurring before Purim and Passover) and on the festivals and fast-days
—the Pesiqta cycle.

3. Exegetical Midráschar. — Of these the oldest and most important is B'rachatáh Rabbâ, a Haggadic
commentary on Genesis. It is the first in the collection
known as Midráschar Rabbâ, or Midráschar Babadá, which comprises ten Midráschar works,
one for each book of the Pentateuch, and one for each
of the Five Scrolls (the books of Esther, Canticles, Ruth, Lamentations, and Ecclesiastes). The
works included in this collection are of a miscellaneous character, and their time of
composition extends from the 6th to the 12th cen-
— the period in which the different Haggadic Midráschar were reformed. Of the Haggadáh Midráschar
Babá, there is no date during the oldest as well as the
richest from the point of view of subject-matter. Like most of the Midráschar, it had its
origin in Palestine, and was put into its final form no later than the 6th century. Older authorities associate the work with Rabbá Sheshháh, a Palestinian
of the teacher of the 3rd cent. (with whose remarks the
book opens, but he cannot be responsible for the
work in its present form. The historical and
legendary content of Genesis furnishes ample
material for Haggadic exposition. The ten
Midráschar works forming the collection B'rachatáh Rabbâ were printed for the first time in Venice,
1545. The standard edition is that of Wilna,
1578–87. The collection was translated into

Etzeh Rabbáh, a Haggadic commentary to
Lamentations, is also a very early exegetical
Midráschar, and is included in the Midráschar Rabbâ. This work (as well as B'rachatáh Rabbâ) is introduced by many elaborate proems followed by
commentary to the text of Lamentations. The
book is especially rich in anecdotes and legends of
the pathetic events that transpired during the
destruction of Jerusalem. A critical edition has
been issued by S. Buber, Etzeh Rabbáh, Wilna, 1899.

Sikh hosh-Shirin Rabbâ is an exegetical Midráschar
to Canticles, included in the Midráschar Rabbâ. The
entire work is an elaborate allegorical rendition of
the relations between the shepherd and his bride.
Rúth Rabbâ (also included in the Midráschar Rabbâ) is
an exegetical Midráschar to Ruth. The book is
introduced by a series of proems, and the conversion
of Ruth furnishes many a beautiful lesson to the
Rabbinical commentators.

Kohélet Rabbâ (also included in the above
collection) is an almost complete exegetical
commentary on Ecclesiastes. It is a book
of much of the material found in the Talmud and in
various earlier Midráschar works, and mentions
several sources by name—a sign of the late origin of the
Midráschar.

Finally, Ester Rabbâ is an exegetical commentary
on Esther included in the Midráschar Rabbâ. This is one of a number of extant Haggadic
Midráschar to the book of Esther, very popular
because of its use during the Jewish festival. The
others were published by S. Buber, Sammlung
apocryphischer Commentare zum Buche Esther, Wilna,
1886, and Agadische Abhandlungen zum Buche
Ester, Cracow, 1897.

Besides the above-mentioned Midráschar to the
Five Scrolls, Buber published several other extant
Midráschar to the books of Canticles, Ruth,
Lamentations, and Ecclesiastes, in Midráschar Sotsa,
Berlin, 1894.

There are still extant several Haggadic Midráschar dealing with the remaining books of Scripture. There can be no doubt that originally such exegetical works existed on all the books, but they have been lost. Foremost among them is Midráschar Tehillim, a Haggadic commentary to the book of
Psalms. It is also known as Sbhara Tébb, 'He
that seeketh good' (Ps 119), which are also the
opening words of the book. This Midráschar is
especially rich in the rhetorical devices employed by the
Haggadists—analogies, legends, tablons,
maxims, etc. A critical edition was issued by
Buber (Midráschar Tehillim, Wilna, 1891). A
Midráschar to the book of Samuel has, likewise, been
preserved, known as Midráschar Shlomóh. It is a collection of Haggadic comments on the book,
gleaned from various parts of Rabbinic literature.
The first edition of the work was Constantinople,
1517. A critical edition was issued by
(Smidráschar Samuel, Cracow, 1853). Midráschar Mihaíl is an incomplete Haggadic Midráschar to
Proverbs. The comments in this Midráschar are exceptionally
brief, so that the work approaches the character of a
Biblical commentary. A critical edition was

issued by S. Buber (Midrashische Werke, Wilna, 1899). The Midrashim to the books of Isaiah and Job are mentioned by older authorities, and, of the latter, extracts are found in the collection, Yalkut Rabbi, (to Is 61:11), and in a few other midrashic works. Several fragments of a Midrash to the book of Jonah have been published by A. Jellinek (Beitk. der hebr., Leipzig, 1853-57, l. 96-105); and by C. M. Horowitz, (Sammlung kleiner Midrashim, Berlin, 1881).

Finally, there are in existence a number of works known as Yalkutim, "collections," which are in the nature of the Talmud to all the books of Scripture, and which give (with their proper sources) a wealth of aggadistic material for each of the books. Three of these works are very important: the Yalkut Shimoni, frequently known merely as Yalkut, ascribed to Rabbi Simeon, the preacher (last edition, Wilna, 1838), the Yalkut ha-Midrash, ascribed to Rabbi Machir ben Abba Mari, only portions of which have appeared (Buber, Yalkut Machiri . . . zu den 150 Psalmen, Berdyazov, 1890), and the Midrash ha-Din, of which the part to Genesis has been published by Scherdel (op. cit.), and the part to Exodus by D. Hoffmann (Berlin, 1913-15).

4. Homiletic Midrashim. — The purely homiletic Midrashim (i. e., the cycle based on the triennial readings of the Pentateuch in the synagogues of Palestine) are: (1) the Tanhûmah, (2) Aggadath Bereshith, and (3) the four remaining works of the Midrash Rabbi on the four last books of the Pentateuch. The Tanhûmah (the best known of the Hamaqidei Dr., "Let him teach us," because of the frequent use of this formula to introduce the Halakhic exordiums in the Midrash) is a complete homiletic commentary to the Pentateuch, extant in two versions: (1) Yalkut ha-Midrash, and (2) the Sifre ha-Te'amim. A third version is known to have existed. A critical edition was issued by Buber (Midrashic Talmud, Wilna, 1885), S. A. Schneidewin (on Exodus, Wagdyt Rabbi on Leviticus, Brachah ha-Rabbah on Numbers, and Pekudei ha-Rabbah on Deuteronomy) are four homiletic works of different origin belonging to the same cycle. Of these the homilies to Leviticus are, no doubt, among the most interesting of the homilies for popular sayings and parables that illustrate the lesson of the day. The other three works include many homilies that are already found in the Tanhûmah collection. Aggadath Bereshith is a collection of homilies of great dimensions and to portions of the Prophets and Psalms, and was edited by Buber (Aggadath Bereikha, Cracow, 1902).

Two collections of homilies of the Pesidtah cycle have been preserved: (1) Pesidtah be-Kahana, and (2) Pesidtah Rabbi. The first consists of thirty-four homilies on the lessons for the first six Sabbaths and the feast days. It was edited by Buber (Pesidtah . . . von Be-Kahana, Lyce, 1889). The Pesidtah Rabbi is a later work, and also contains homilies for the special days of the Pesidtah cycle. It was edited critically by M. Friedmann (Pesidtah Rabbi, Vienna, 1890).

5. Style and content of the Haggadic Midrashim

In order to make their teachings most effective, the Rabbis resort to well-known rhetorical devices. Foremost among these is the use of the ma'ashah, "analogy." The analogy, or extended metaphor, is a well-known figure of literary composition; in the hands of the Rabbis it reached the zenith of its didactic powers. The analogies were drawn from two sources—first, from the events of every-day life, and, secondly, from the institutions of the Roman empire, during which period the Rabbis lived. On the subject of the political institutions of Rome as depicted in the ma'ashah an interesting volume of no mean size has been written (I. Ziegler, Die Konstantinische Zeitgeschichte der römischen Kaiserzeit, 1869). On the comparative side, Paul Fiebig has commented an interesting volume on the differences between the Rabbinic and the NT use of the ma'ashah (Altjüdische Gleichnisse und die Gleichnisse Jesu, Tubingen and Leipzig, 1904). The analogy was most helpful in explaining difficulties in the textual narrative, and often in accounting for extraneous matter in Scripture not quite adaptable to preaching purposes. A few examples will suffice to illustrate the use of the ma'ashah.
