A narrative once asked Rabbi Yose bar Halafta, "Why does Scripture say: 'He gave wisdom unto the wise, and knowledge and discretion unto them that know understanding?"' Rabbi Yose replied, "Let me give you an analogy. If two men, one poor and one wealthy, were to approach thee to borrow a sum of money; wouldst thou lend the money to the poor man or to the rich?" "Of course to the rich man," the speaker replied, "for, in the event of its loss, he still has assets from which, whereas the poor man could not get a penny." Thereupon Rabbi Yose replied, "Would that the evil spirits would lend the money each month with interest! If the Holy One, Blessed be He, were to grant wisdom to simpletons and fools, they would decimate this wisdom from the public baths, the temples, and at other unspecified moments; He therefore granted wisdom to the wise, who conserve it to its utmost value in the synagogue and the academy" (Ezrah Rabbi, 1:5).

In commenting upon the fact that the Pentateuch does not enumerate by name the participants in the sedition of Korah, the Rabbis use the following ma'ashah:

Rabbi Judah, the son of Simon, explained, on the authority of Rabbi Levi ben Parah,—This may be compared to the son of a drunken man who committed a thing in the public bath, and the keeper of the bath does not desire, for the sake of his name, to reveal his name, but desires that some handsome youth should dress in white. Similarly the Pentateuch does not mention the names of all the participants in the sedition of Korah, but merely describes them in the following manner, "And all the congregation, called to the assembly, men of renown" (Nu 16:2).

Another form of the ma'ashah was the fable or parable. Collections of parables are already associated in the Jewish world with the name of the wise king, Solomon, who is said to have spoken of beasts, and of fowls, and of creeping things, and of fishes (1 K 4:32). In the Talmud two collections of parables are mentioned: a collection of fox-fables, and a collection of date-tree parables (cf. Sukkah, 28a; Babba Bathra, 134a). The OT uses the parable in the speech of Jotham (Jg 9:11) and in that of Jehoshua (2 K 12:14). A collection of fables will illustrate its use in the Midrash. In the following, the fable of the fox and the fishes is effectively employed by Rabbi Aijba:

During one of the persecutions, when the study of the Torah was forbidden under penalty of death, Pappus discovered Rabbi Aijba busily engaged in its study. Pappus asked him, "Rabbi, dost thou not understand that this is forbidden?" "I understand," answered Rabbi. "What mandate?" Whereupon Rabbi Aijba replied, "Let me give thee an analogy in the following story: A fox wandered along the side of the bank of a river, and beholding the fishes, said, 'Come out to me, and I shall hide you from all harm in the crevices of the rock, where you will never fear capture.' To which the fishes replied, 'Thou, who art the most clever of all, dost not learn anything more than I, who depend on the element of water, and thou wouldst have us trust the dry land.' Similarly, the life of Israel is wrapped up..."
in one element—the study of the Torah, as it is written. "For he is thy life, and the length of thy days" (De 30:19), and there wouldst have me leave because of personal danger"

Another means of impressing a lesson is the aphorism, maxim, or proverb. The OT already contains extensive gnomic literature in proverbial form. The wisdom of the great Ben Sira later added to this material. The *Sayings of the Jerusalem Fathers* is a historically arranged gnomy written in the Tanaitic period, and comprising the most important maxims of the learned teachers from the time of Simon the Just to the period of the Amoraim. A later author, Rabbi Nathan, is said to have made a large collection of such maxims; and in the *Abodh of Rabbi Nathan* (ed. Schechter, Vienna, 1887) a substratum of his original work remains. This work is characterized by the frequent use of the numerical proverb, in which a number of sayings are associated by means of a numerical key. The material in these collections, as well as the sayings current among the masses (generally included by the formula 'as the people say'), was employed by the Rabbis in teaching their lessons. Many of these proverbs are also found in the Gospels. For example, the well-known saying in the Sermon on the Mount, "Blessed are the meek, for they shall inherit the earth" (Mt 5:5), is very frequent in Haggadic literature (cf. *Tanahma, Birkath, 33; Tehillim, xxii. 2; and Midrash Tosefta, l. 17). Similarly, "No man can serve two masters" (Mt 6:24) has 10 instances in *Tanahma, Berakhot, 23; Tahillim, xvii. 5; and in the Talmud (Birkath, 55b), only a few of these gems can be quoted here:

"He who doeth not mitzvot maketh a loud noise" (Tahillim, l. 31, and in the Talmud, Birkath Mitzvot, 55b). "Say to the bee, I want not thy honey and I crave not thy sting" (Tahillim, l. 3. Midrash Tosefta, l. 17). "Woe to the woman who doeth not her work" (Tahillim, l. 14). "Woe to the living and to the dead who doeth not his work" (Tahillim, l. 16). "Woe to the woman who doeth not her work" (Tahillim, l. 12). Similarly, the Rabbis take great liberties in punning on proper names.

"Wherefore was the prophet called Jeremiah? Because, during his life, Jerusalem was left in a state of ignomia" (desolation) (Kol hath, Birkath, l. 2). "The name of the daughter-in-law of Naomi was Orpah because she turned her back (orey) to her mother-in-law. The name of the other was Ruth, because she apprehended (yadhath) the words of her mother-in-law (Ruth, 11.9)."

The Rabbis decide from a pun that the language of the creation was Hebrew.

"The she shall be called Woman (achathah), because she was taken out of Man (nabu)" (Gen 2:22), from this it is evident that the Torah speaks in the holy tongue. Rabbi Rhinosan and Rabbi Bikiyah claim the following on the authority of Rabbi Simon: "Just as the Torah was given in the holy tongue, so was the world created with the holy tongue. For, hast thou ever heard anyone derive a form *yeva* from the word *yeva*?" "Why doest thou ask? Because it is the word of the anthropos (Gr. * anthropos*), man, or *chaburah* from *chabura* (Heb. for *man*). "But one does say *achabah* (Heb. for *woman*) from the word *cha* (Birkath, Birkath, xviii. 4)."

The Massoretic variations of the Heb. text of the Bible open up new channels for Haggadic exegesis.

The Midrash often asks explanations for the number of collections of Rabbinic proverbs the work of M. Schutz *Sentences et proverbes du Thalmud et du Midrash*, Paris, 1876* deserves mention.

The Midrash also employs the well-known kabbalistic method of exposition, *genukrad*, which consists in deducing hidden meanings from the numerical value of the letters in the Heb. words. Finally, the Midrash employs the anecdote to advantage. The value of the anecdote as a didactic force is generally recognized. But more than this, we are to seek in the anecdote for historical events that transpired during the destruction of the Holy City:

The story is told of Miriam, the daughter of *Nagdimon (Nicodemus)*, whom the sages had granted an allowance of 250 (two) gold dinarai for to dole out her daily dainty expenditures, and who disdained that for her; in the words: "They gave the daughters..." said Rabbi Eleazer. "So sure may I be of seeing Zion's consolation as I am that I saw her sometime before the destruction. For when I went to collect the gold in his box, I found the filling of the stall of horses and I applied the Biblical verse to her case, 'if thou know not, O thou fairest among women, go thy way forth from the forecourt of the stock, and feed thy kids beside the shepherd's tent' (Cass 19) (Ekhah Rabbi)."

The supposition of this is based on the well known alike by Rabbi and priest. Many are the stories told of demons infesting wells and desert places (cf. *Tanahma, Birkath, 27; ib. Kedoshim, 9), often driven out through the opportunity of the Rabbis who called magical force to help in the work. Very often the heathen practices of antiquity are recorded. Thus, in Ekhah Rabbi (proem 23), it is said, 'The Arab slays a lamb and inspectors the liver for the purpose of auguring with his heart.' This practice is well known to students of Kulturgeschichte. Philosophy, primitive conceptions of science, natural history—all to the end of teaching a lesson in ethics or morals, which is ever the ultimate aim of the Haggadic Midrash.

**LITERATURE:** This is given throughout the article.

**SOLOMON T. H. HURWITZ.**

**MIGRATION.**—See RACE.

**MIKIRS.**—I. Name and history.—The people known to the Assamese by the name Mikir are one of the numerous Tibeto-Burman races of Assam. Their own name for themselves is Mikir, which (like many other tribal names in this region and elsewhere) means 'man' in general. Their numbers, according to the Census of 1911, were 106,239—a large total for a homogeneous Tibeto-Burman group in Assam; of these 79,000 were classed in the returns as Hindus, 11,982 as converts to Christianity, and the remainder as animists. The race occupies the central portion of the Assam range, looking north to the Brahmaputra, and the isolated mountainous block south of that river between Nowgong and Khandi Hills; a few have settled in the plains of Nowgong and Khandi Hills, and further north along the Darrang district, and follow plough cultivation, but the main strength of the tribe is found in the hill region of the Khandi Hills, Khasi and Jaintia Hills (15,600), Nowgong (45,000) and Sibsagar (25,000) districts. They are essentially a hill race, practising the form of cultivation by axe, fire, and hoe known to all the remembered history, like that of most tribes of the kind, goes back a very short distance in time. There is reason to believe, from the local names of places and streams, that those once occupied the

*2* In Heb. the letters have numerical values.
southern portion of the hill tract north of the Kachar valley, where they are not found at the present day; it is certain that they afterwards resided in villages in the eastern portion of the Jaintia Hills, as subjects of the Jaintia Raja; and a still clearer tradition relates that, being harassed by warfare between Khâsi (or Jaintia) chiefs, they resolved to migrate into territory governed by the Ahoms, and thereupon to move into the territories which they now hold in the Nowgong and Sibsagar districts. This migration probably took place, as can be gathered from the Ahom annals, about A.D. 1765. As the figures just given show, large numbers continued to live in the Khâsi and Jaintia Hills and along the Kâmarây border, which they call Nînpî, the territory into which they migrated in the east being called Nilip. They are a peaceful and unvaried race, and are said to have given up the use of arms when they placed themselves under the protection of the Ahom kings. Their traditions tell of fights with the Hill Khâsîrs or Dimâsâ, but these were anterior to the migration into Jaintia territory, or at any rate to that into the Ahom dominions.

2. Physical characteristics.—Physically they present the ordinary features of the Tibet–Burma or Assam type: a light yellowish-brown complexion, an average height of about 5 feet 3 inches, cephalic index 77-9. The nose is broad at the base, and often (but not always) flat, with a nasal index of 85-1 and an orbito-nasal of 107-7. The face is prominent and the hair is worn long, and only a thin mustache is worn. The front of the head is sometimes shaved; the hair is gathered into a knob behind, which hangs over the nape of the neck. The body is muscular, and the men are capable of prolonged exertion. They are largely employed as porters in frontier expeditions in Assam, and carry heavy loads, the burden being borne upon the back and secured by a plaited bamboo or cane strap passing round the forehead; this, however, is the general method of carrying from Assam eastwards along the whole sub-Himalayan region, and not peculiar to the Mikirs. The staple food is rice, fish, and the flesh of pigs, goats, and asses, the latter being chiefly eaten at sacrifices. The flesh of cows is not eaten, nor is milk drunk. Large quantities of rice-beer are made and consumed, being prepared by each household, and spirit is also distilled. Opium is used in a large extent by other races in Assam. Tobacco and betel-nut are also commonly used.

3. Marriage and inheritance.—The Mikirs are divided into three sections, called Chintong, Ronghang, and Amri. These, however, are only local names, the first representing that portion of the tribe inhabiting the Mikir Hills, the second the central portion, in the hilly parts of Nowgong and N. Kachar, and the third those in the Khâsi and Jaintia and Kâmarây Hills. The whole tribe, wherever settled, is divided into five large exogamous groups, and these into sub-groups. The five main groups are called Ingî, Terâng, Lekthô or Inghî, Terrôn, and Tinmâng. Within each of these groups intermarriage cannot take place. The scheme of society is that of the patriarchal, the first-born children being counted to the father's group. The usual marriage, however, is between first cousins on the mother's side, and the maternal uncle occupies a privileged position at the funeral ceremonies; this may be a custom adopted from the Khâsi, among whom the strictly patriarchal system prevails. Ordinarily the son on marriage brings his wife home to his parents' house; but, if he has a wife, or his father's, he must live in the eastern part of the now Kâmarây, or to have lived in that of the boys, when promiscuous intercourse and illegitimate births were common. This practice, however, no longer obtains anywhere. The marriage is to be ordinarily observed with strictness, but divorce is permissible. Polygamy has been adopted sporadically from the Assamese, but generally monogamy prevails. The sons inherit; if there are none, the brothers; after them the deceased's collateral of his own exogamous group. The wife and daughters get nothing, but retain their personal property, ornaments, clothes, etc.

4. Gods.—The religion of the Mikirs has been to some extent affected by ideas borrowed from the Khâsi, and in a larger degree by Hinduism. One of their gods, Pîrthâ Pîcô (the god of thunder), bears a Khâsi name; but borrowings here are chiefly noticeable in the funeral ceremonies and the methods of divination. His divinity has been contributed the names of Jom, or Yama, as the god of the dead, and the abode of spirits is called Jom–pôr, or Yama's town. Possibly Mahâdeva may be the original of the Bamb–kêthô (=the great god), who is a house-god worshipping the sacrificial sacrifice; and one of the gods, called Arrâm–pêrô (=the hundred–god), includes under this name Kamâkyâ, the Hindu goddess of nilâch, and above Guhâti. The Mikir conception of deity is, like that of the rural population of India generally, open to the adoption into the pantheon of any divine agency venerated or propitiated by their neighbours. The word ârâmû ("god") may be generally defined as "mighty or terrible." All natural objects of a striking or imposing character have their divinity. The sun and moon are regarded as divine, but are not specially propitiated. Localities of an impressive kind, such as mountains, waterfalls, deep forests, rivers, great boulders, places where a river disappears underground, have each their ârâmû, who is concerned in the affairs of men and has to be placated by sacrifice. Such realities of the jungle are propitiated chiefly to avert mischief from tigers, which are a terrible plague in some parts of the Mikir country.

Besides these divinities of flood or forest, there are other deities of a more specific character. These may be classified into house-gods, connected in the welfare of the household, and gods concerned in the prosperity of the village generally, while a third class preside over various kinds of disease or trouble. The most important of the house-gods is Hémphû ("head of the house," or ') who owns all the Mikir people. With him is associated Mukrâng, who is slightly lower in dignity. These two gods, the preservers of men, are approached by the sacrifice of a fowl or goat. Every body can sacrifice to them at any time, and Hémphû must be invoked first in every sacrifice, being the peculiar owner of men. Peng, another house-god, lives in the house, and gets the offering of a goat, sacrificed once a year in the eastern part of the now Kâmarây, on maize, rice, and a clouded rice-beer are placed for him above the verandah of the house, and the first fruits of the harvest are offered to him. Arrâm–kêthô, already mentioned as another house-god, but lives in heaven, not, like Peng, in the house itself. He is propitiated by the sacrifice of a castor pig once in three years. Both Peng and Arrâm–kêthô have to be specially invoked to take up their abode in the house, and their permission to it is generally due to the action of a diviner (uchê), called in on the occurrence of a case of sick-
ness, who declares (after the appropriate incantations) that Arnâm-kêthê or Pêng wishes to join the household. If it were not for this, Mikir families would generally be satisfied with Hemphä and Mûkraâng.

The village or communal gods are called Rékâlângô (= 'mountain of the community') or Ingôông-pl (= 'great mountain'), and Arnâm-pârê, already mentioned. The Mikir villages are nomadic, moving from place to place to graze the soil in the neighbourhood of the village. Rékâlângô is the god of the hill on which the village stands, the deus loci, with whom they have to be at peace. He is worshipped in the field, and only men eat the sacrifices, which is a fowl or goat per house once a year. Arnâm-pârê is the name of a god who takes a hundred shares of rice, rice-flour, betel-nut, and the red spathe of the plantain-tree cut up: the name seems to be a collective, and to indicate all the divine powers in the neighbourhood. He is worshipped with a white goat and a white cow. These two gods figure particularly at the Rông-kêr, or great annual festival, celebrated for the most part in June at the beginning of the rainy-season cultivation, or is some villages during the cold weather, when the festival is given in common by the men only of the village, and they keep apart from their wives on the night of the festival. The observances correspond with the custom of gens (village), which is common among the neighbouring Nagâ tribes.

The gods named above are all invoked and propitiated to grant prosperity and aver misfortune, both generally and specially. The nature gods also take their titles from the special diseases over which they preside or which they are asked to avert; such gods are called after rheumatism, cholera, barrenness among women, guillaume, phthisis, stone, diarrhœa, dysentery, smallpox, black and white leprosy, elephantiasis, etc. Each worship has its appropriate ritual, often of a complicated character. Among these deities perhaps a trace of Hinduism may be discovered in the name for smallpox, pi-dmix, 'the mother's flowers'; in Assamese and Hindi the goddess of smallpox is known as 'mother' (Mâti, or Siâl Mâi). It is difficult to draw the line which divides the gods, demigods, demons, etc., from the demons or devils, Ai-tê, who are also said to cause continued sickness. They too are propitiated with sacrificial offerings in the same manner as the gods.

An interesting name in the list of gods is Lâm-âphê, 'the head or master of words,' a power probably of modern origin. He is the deity sacrificed to by a man who has a case in court; the sacrifice is a young cock, which should be offered at night, secretly, by the sacrificer alone, in a secret place.

There is no worship of trees or animals, and the gods have no visible shape, temples, or shrines. Idols are not in use. At the time of the sacrifice the gods to whom it is offered are addressed in forms of words by the worshipper, but there does not appear to be any separate class of priests charged with the sacrificial ritual. The animal sacrificed is beheaded, as in Hindu sacrifices, by a stroke delivered from behind, and the meal of the gods is supposed to be eaten by the animal's heart. The word for 'sacrifice' is tottê, 'sacrifice to, or make offerings to.'

5. Diviners.—The most important person with reference to the worship is the diviner (uchë, fem. uchê-pl), who decides on the deity to be invoked. In the village there is also the chief diviner, who for some cases has a hereditary function: say one may be an uchë.

The diviners are of two kinds—the inferior, generally a man, called song-kësiing-âbâng, 'he who inspects grains of rice,' whose art is acquired by inheritance, and has no supernatural power; and the superior, called lôdé or loddës, invariably a woman, who works under the inspiration or afflatus of divine powers.

The services of these persons are generally sought in cases of sickness, the lôdé being inquired of in the more serious cases.

The hümber practitioner proceeds by arranging grains of rice, taken at random from those left over from the last meal, in small heaps the grains of the heap are then counted, and, if the odd numbers predominate, the meal is good. Owners are sometimes used instead of grains of rice. Another way is apparently borrowed from the Khâis, is to arrange in a circle, equidistant from a point marked on a board, as many little heaps of day as there are gods suspected in the case, each heap being called by the name of a god. An egg is then sharply thrown at the points marked in the middle of the board, when it breaks and the yolk is scattered, that heap which receives the largest splash of yolk, or towards which the largest portion of the yolk and longest splash points, indicates the god responsible for the affliction. Another mode is to hold up in the hand a long iron knife of special form, called the midjêr, which is invoked by a spell to become luminous and to speak the truth. The holder then asks questions of the god just as to the probability of the sufferer's recovery and the god responsible for his sickness, and the midjêr shakes at the correct answer and name.

The lôdé is an ordinary woman (not belonging to any particular family or group) who feels the divine afflatus and, when it is upon her, yawns continually and calls out the names and will of the gods. Her assistance is invoked when witchcraft (midjêr) is suspected.

She bathes her hands, feet, and face in water in which the sacred basil (Ocymum sanctum), the toad of the Indian languages, has been steeped, and begins to shave and toaw. A pound of rice-beer is brought, of which she drinks some, and begins to call out the names of gods, and they are now inspired and, when questioned, indicates, by indirect and riddling answers, the enemy who has bewitched the sufferer, or the gods to whom sacrifices must be made.

Charms are much used for the treatment of disease, as they are everywhere else in India, and do not present any special features. Oaths and impregnations take the place of exorcisms. There are bonds a man puts on himself if he swears falsely or fails to perform a promise.

6. Funeral ceremony.—The most elaborate celebration is the funeral ceremony, of which a long account, full of details, is given in the monograph on The Mikirs cited at the end of this article. Much money is spent upon it, and it is spread over several days. It is the only occasion on which dances are performed by the young men of the village or music used, except to (to a much less extent) at the harvest-home. The ceremony is considered obligatory in all cases except that of a child who has been born dead, or who has died before the after birth of the next child. In these cases the body is buried without any ceremony. Victims of smallpox or cholera are buried shortly after death; but the funeral service is performed for them later on, the bones being dug up and duly cremated. When a person is killed under fight, the body or clothes are found, they are buried at a distance from the village, because the tiger is supposed to visit the burial-place. Such persons cannot gain admittance to Jîm-âng until elaborate funeral and expiatory ceremonies are performed for them. Being killed by a tiger is generally imputed to the victim's sin; his spirit is believed to dwell in the most dreary of the places where dead men's spirits go. Except in such cases, the dead are disposed of by cremation, the burnt bones being afterwards buried.

What is chiefly noticeable about the ceremony, as described in the work referred to, is the confident assumption of the continued existence of the person's spirit, for whom food, specially prepared by the uchêpl, or divining woman, is set apart; the insistence upon the due performance of the rites in order to place the spirit in the proper place, either Jîm-âng; and the use of dancing, which is marked by the wearing of a peculiar costume (chomang-kun) as adopted from the Khâis, in the ceremony. If the deceased is a person of unusual importance, a still more elaborate ceremony is required, and the remains are placed in the model of the houses in which they lived, after the Khâis, are set up.

7. Ideas of future life.—Apart from the ritual of
the funeral, the Mikirs seem to have a strong conviction of the survival of the dead. They speak of having seen the 'shade' or 'image' (ārjōn) of a dead man; a sickly or neurotic person catches such glimpses in the house, on the road, etc. Phārālī, 'spirit,' is used both of living persons and dead. The Mikirs, indeed, have a nice insight in my spirit. I saw him,' where phārālī is the spirit of the sleeping man. When such glimpses are experienced, betel and food are set aside in the house, and after a time they are thrown away. After a death a chant is composed, setting forth the praises of the life and the virtues of the dead, and ending: 'You will now meet your grandparents, father, deceased brother, etc., and wilt stay with them and eat with them.' As already mentioned, food is regularly provided for the spirit until the completion of the funeral; after that there are no regular offerings, but occasionally a man or woman puts aside from his or her own share of food a portion for the dead, as, e.g., when another funeral reminds them of those who have died before. There is said to be no fear of the dead coming back to trouble the living. The Mikirs' conception of 'Jon's town' is that everything is different from the earth-life. An idea, perhaps borrowed from the Hinayāna, in small towns, that the spirits of the dead do not stay for ever in Jon-arong, but are born again as children, and this goes on indefinitely. On the other hand, Stack records, in the words of his informant, the following:

'The Mikirs have the names of their dead relations to children born afterwards, and say that the dead have come back, but they believe that the spirit is with Jon all the same' (Mikirs, p. 29).

8. Conclusion.—The unwarlike character of the Mikirs has prevented them from becoming, like their neighbours, the Nágas and Kukis, split up into different units, with hostile feelings towards all outside the community, and with languages gradually diverging more and more from the common standard. Their speech is very uniform wherever they are found, and a large amount of communication by friendly intercourse exists among them. On the other hand, the group differs very much, in habits, institutions, and particularly in language, from the other tribes by whom they are surrounded. A study of their speech and social institutions led to the conclusion that they should be classified with those tribes which form the connecting link between the Nágas and the Kuki-Chins, and that the preponderance of their affinities lies with the latter race, especially with those dwellers of the Arakan Boma range, where the Chin tends to merge into the Burman of the Irrawaddy valley.

LITERATURE.—All that has as yet been put on record about the Mikirs is summarised in the volume in the series of Assam Ethnographical Monographs entitled The Mikirs, from the papers of E. Stack, edited, arranged, and supplemented by C. J. Lyall, London, 1895.

C. J. LYALL.

MILINDA.—Milinda is the Indian name for the Greek king of Bactria called in Greek Menander. When Alexander's empire broke up on his death, Greek soldiers on the coast of India founded separate States, and the names of a number of them and their successors are known by their coins. Of these the most powerful and successful was Menander, who must have reigned for at least thirty years at the end of the 2nd and the beginning of the 1st century B.C. He died probably about 290 B.C., but we know neither the boundaries of his kingdom nor how far he was merely over-lord, rather than the actual administrative sovereign over the various portions of his vast domain. He is the only one of those Greek or half-Greek potentates whose memory has survived in India; and he is there remembered, characteristically enough, not as a political ruler, nor as a victor in war, but as an intelligent and sympathetic inquirer into the religious beliefs of his subjects.

This has found expression in a very remarkable book, the Milinda-Parānya ('Questions of Milinda'). Just as in one of the most popular of the Dialogues of the Buddha Sakka, the king of the gods, is represented as coming to the Buddha to have his doubts resolved, so in this work the Greek king is represented as putting puzzles in religion to Nágasena, a wise teacher among the Buddhists of his time. In all probability it was with the Sakka Parānya that in his mind the author of the Milinda-Parānya, whoever he was, framed his work.

The Milinda-Parānya is divided into seven books. The first is introductory, and is very cleverly so drawn up as gradually to raise the expectations of the reader who has the great interest of the encounter of wit and wisdom which he will find in the following books. Bk. ii., 'On ethical Qualities,' and bk. iii., 'On the Removal of Difficulties,' contain a number of questions, put by the king and answered by Nágasena, on the elementary principles of Buddhism. On the conclusion of this book the king is converted, and devotes himself to a long and careful study of the text of the Pali canon. In bks. iv., the Megdaco-Parānya, or 'Dilemmas,' the king submits to Nágasena the various difficult questions which he has met in the course of his studies. The discussion of these difficulties leads up to and culminates in the meaning of nirvāṇa, and closes with an eloquent peroration on that subject.

Having thus brought his reader up to the brazen plateau of emancipation, the author proceeds in the next book, the Anuvāna-Parānya, 'Problem of Inference,' to describe what is to be found there. In an elaborate allegory of the City of Righteousness he sets out the various mental and spiritual treasures enjoyed by the arahant who has reached in this life the ideal state. The next book, the Dhutangas, 'Extra Vows,' is devoted to an exposition of those who have adopted the ascetic practices so called. The last book, incomplete in our existing MSS., consists of a long list of types of the arahant, showing how he has, e.g., five qualities in common with the ocean, five with the earth, five with water, and five with fire. The total number of sixty-seven such similes are given. Of the remaining thirty-eight only the list is given, the detailed explanations being lost.

There are peculiarities both of merit and of defect in this book. The author, or authors, have an unusual command of language, both in the number of words used and in the fitness of the words chosen in each case. There is great charm in the style, which rises occasionally throughout the book to real eloquence; and there is consider-able grasp of the difficult and important questions involved. On the other hand, there is a great weakness in logic. The favourite method is to invent an analogy to explain some position, and then to take for granted that the analogy proves the position taken to be true; and quite often, when the right answer to a dilemma would be a simple matter of historical criticism, the answer given savours of casuistry, and is based on the ambiguity of words. Then the author, though he naturally avoids the blunders so often repeated in European books against Buddhism—that nirvāṇa, e.g., is a state to be reached by a 'soul' after it has left the body, or a state not attainable except by one's own efforts, or by a 'priest' or a 'monk'—does not stand on the ancient Path. His description of the arahant, whom he calls a gṛhi (a term not found in the older books), lays more stress on those qualities afterwards ascribed to the arahant (q.v.) than on those belonging to the Path, or mentioned (of the

1 See the authorities quoted in Rhys Davids, Questions of King Milinda, l. (SBE xxxv.) pp. xvi–xvii.
arahan) in the Nikāyas. His Buddhism has advanced beyond that of the Nikāyas. The ethics of the Aryan Path are barely referred to; the doctrine of causation, the necessity of seeing things as they really are (yathābhūtaṁ pi jñānam), is not mentioned, notwithstanding its cardinal importance in the earlier teaching. The author devotes a whole book to the dhutangas, a term not occurring in the Nikāyas, and in that book seeks a spiritual form as opposed to the earthly teaching. All these peculiarities of style and mental attitude are uniform throughout the work. It would seem, therefore, most probable that it was the work either of one author or of one school within a limited period of the history of that school. Probably the latter will eventually be found to be the right explanation.

The work is four times quoted as an authority by the great Buddhist commentator, Buddhaghosa. It is the only work outside the Pāli canon which he thus quotes. It is also quoted as an authority in the Dhammapada commentary (i. 127). All these references may be dated in the 5th cent. A.D. They are taken from the second, third, and fourth books, which at least must be considerably older than the works in which the Milinda is quoted as an authority. None of the quotations is exactly word for word the same as the corresponding passages in Trencenker's edition of the text, and the present writer has pointed out elsewhere the various interpretations possible of these interesting, though slight, discrepancies. In one passage (p. 102 of the text) Buddhaghosa seems to have the better reading. Nagasena is also quoted in the Abhidhamma-kosāvyakhyā, a Sanskrit Buddhist work which may be dated in the 6th cent. A.D. There are also several incidental references in Canymahendra's Commentary of Indian books. When we know the dates of the latter, and can be sure that the references really occur in them, those references may have importance.

At the beginning of the work (p. 2 of the text) there is a table of contents giving the titles of the subdivisions of the book. The editor, V. Trencenker, also gives us titles, which differ, however, from those in the table of contents given in the text. In Mahatmabhagavata's translation into Sinitees the like wise gives titles, presumably from the much older Pāli MSS which he used. These titles differ from both the other lists. Trencenker, who has certainly made an glaring mistake (p. 392), gives names in Pāli, with the titles he thinks may be used only three of the seven MSS of the work known to exist in Europe, one would like to be informed also as to what readings are given by the other four. Even for the canonical books the discrepancies in the subsidiary titles are very frequent, and it is often probable that such titles are later than the text to which they refer. It is clear that, pending further information, Trencenker's titles to the divisions of the Milinda cannot be relied on as original.

B. Nanjio, in his most useful catalogue of Chinese Buddhist books, gives under no. 1353 the title of one called Nāsim Bāhū King, 'Nāga sena's Trencenker's Book.' The attempt to reproduce the sound of the words of this title suggests that the words before the translator must have been, not Sanskrit (bāhū), but Pāli (bāhikkha) or some other Indian dialect akin to Pāli. J. Takakusu has discussed the date of this work, which purports to be a translation of some Indian book with the same title. It is first mentioned in a catalogue dated A.D. 780-814. But, though the compilers of all these catalogues are usually careful to give the name or names and the date of the translators or authors of the books which they mention, they do not do so in this case. They add, however, a remark:

'The translator's name is lost, and we register it as belonging to the Eastern Tamil dynasty (A.D. 317-427).

So we have a book known to have existed at the end of the 5th cent., and then believed, on grounds not recorded, to have existed in the 4th cent. A.D. There is no evidence that the original was in Sanskrit.

There are two recensions of this book in Chinese, the longer one about half as long again as the shorter one. The difference arises mainly from the omission in the shorter of two long passages found in the longer. In other matters the two are much the same. These omissions are probably due to a mere mistake, perhaps of the translator, perhaps of the printer, and the two recensions may be considered as really one. This bears to the Pāli text the following relation.

The translation into English by the present writer consists of 580 pages. The Chinese corresponds more or less to 20 of these pages (one recension omitting about 34 of the paragraphs corresponding in Chinese and Pāli are these on pp. 40-135 of the English version. But there are seven or eight omissions, and three additions of whole paragraphs, and quite a number of smaller variations or discrepancies. It is clear that there is some connexion between the Chinese and Pāli books. It is possible that the Indian original (for there was only one) of the Chinese book may be the original out of which the Pāli was developed, mainly by the addition of the last three books. It is equally possible that the Indian work translated into Chinese was itself derived from an older work in seven books, and that its author or authors omitted the last three books as dealing with arahant-ship, in which he (or they) took no interest. This would be precisely in accord with the general feeling in the north-west of India at the period in question—the end of the 5th cent. A.D. The doctrine of an emancipated life in this life by strenuous mental exertion was, not unnaturally, yielding place to a doctrine of salvation in the next life through bhikṣu, personal devotion to a deity. The psychological details of the old system of self-control rather bore people. So the Milinda may, quite possibly, have been reduced to a short and easy book, with the sting of arahant-ship taken out of it.

A solution of this Milinda problem would be of the utmost importance for the elucidation of the darkest period in the history of Indian literature. Unfortunately, each of the alternatives suggested above involves great difficulties, and none of the scholars who have written on the subject have so far been able to persuade any other to accept his conclusions. The evidence at present available is insufficient. When the Tibetan translation has been properly examined, when all the quotations from the Milinda in the Pāli commentaries are edited, when all the references elsewhere (and especially those in the numerous Buddhist Sanskrit works still buried in MSS) have been collected, we shall be better able to estimate the value of the external evidence as to the history of the Milinda literature in India. When an adequate compara-

2. See the comparative table given by F. O. Schrader, Die Fragte des Konigs Menandros, p. 120 f.
son has been made between the words used and the ideas expressed in the Pali Milinda and those found in the canon on the one hand and the commentaries on the other, we shall have more valuable internal evidence than is yet available. The lists of about a hundred words peculiar to the Milinda published by the scholar publisher in 1886 was necessarily incomplete, and has since then been improved upon.

For the historic Milinda see V. Smith, Early Hist. of India, Oxford, 1914.

MILITARISM.—See WAR.

MILK (Primitive Religions).—That milk should have become an object of sacred importance in the mind of early man was inevitable. All food was sacred, and milk, so beneficial in every way, has been accorded a special place among the objects of religious veneration by mankind at nearly all stages in his development. Anthropologists have not specifically dealt with the first stages in the domestication of animals, except as a part of the larger question of totemism. There are people who have practically no tameable animals, and these are in savage culture. An observation of O. T. Mason is clearly indicative of where these first stages must be looked for.

"Women were always associated especially with the milk and the rearing of the young of the household. The young animal yielding milk and the young animals in the two continents where they were not known (in America and Africa) the human mother had to suckle her young two or three years until they were able to walk at her side and partially take care of themselves. The effect of this upon her mother and all social life was to give the woman the side in her favor; but on the other hand increased her burdens and retarded the growth of population." (Women's Share in Primitive Culture, London, 1895, p. 131).

The two continents here referred to are America and Australia, and E. J. Payne has succinctly summed up the conclusions drawn from the social results of the absence of milk-producing animals (Hist. of America, Oxford, 1892, pp. 287-292).

These results may be contrasted with the corresponding condition of the people inhabiting the European, Asiatic, and African countries, who have, as far as observation goes, always possessed milk-producing animals. Milk takes an important part in their religious belief and ceremonial. It is not clear, however, whether the diverse practices of both have to any greater extent than in the case of the races regarded as the highest, been influenced by the evolution of man's religious attitude towards milk. Consideration of the subject from this point of view can be approached only by the widest survey of the evidence, and it will be well to approach it from the highest form to which religious belief concerning milk has attained and proceed thence to some of the lower forms of the cult.

In the religion of the Toda tribes of India the sanctity of the dairy among these people is the chief element in their religion. The gods take part in the churning, and the dairy organization marks off two groups of persons. One important group of institutions of the Toda belong to the Tarthalor, but their dairymen are Teivalū (W. H. R. Rivers, The Toda, London, 1906, p. 650). The milk of the buffaloes is sacred. The ritual connected with the buffalo and with the dairy is 'certainly a religious character,' and there can be little doubt that the dairy formula 'are intercessory and that they bring the dairy operations into definite relations with the Toda deities' (ib. p. 283). The dairymen are given milk to drink when they are not certain of death (W. E. Marshall, A Phrenologist amongst the Toda, London, 1873, p. 171), and the dead body is taken into the dairy (Rivers, 339 f.). From these facts, carefully marshalled by Rivers, it is clear that these people have developed a sanctity of milk to its highest point. With them it is an essential feature of organized worship. There is nothing like this in any other part of the world.

It is the highest specialized use of milk in religious observance. The sacred character of milk in other parts of the primitive world is shown by its use in various ceremonies of a religious character, but not in connexion with an organized religious idea. Colonies of milkers, in India, do exist. Both in Africa and in India these ceremonies reach a high grade in places, but do not attain the Toda level. Perhaps the royal milk-drinking observances of the king of the Uroyoro, a section of the Bantu people in Africa, affords the nearest approach. In the first place refers to events which preceded the use of milk, but it contains details which bring it within the general condition of the African beliefs. They used to get milk from a tree. This was got by squeezing, and the people who drank it were always thirsty. The Kaftir now drink a kind of fermented milk, and it is noticeable that, 'when poured out for use by the master of the household, who is the only one permitted to touch the milk-sack, a portion is always left behind to act as leaven' (ib. p. 106).

These are clearly religious practices which require further investigation, but in the meantime it is permissible to classify them as less developed in form than the Toda practice.

Every one knows the reverence paid to the cow in India; but, in spite of the attempt of the early mythologists to identify the cow with the higher forms of Hindu religion (A. de Gubernatis, Zoological Mythology, London, 1872, p. 131), the fact remains that the cow is not a god. The reverence for the cow is quite human in its character, and the 4th book of the Laws of Manu contains the clearest evidence of this.

Crooke points out that respect for the cow in India is of comparatively modern date, and gives some interesting data to show the lines along which it has developed (PB ii. 226-226). This view is confirmed by the usages to which the products of the cow were put. According to Vayu, a house is purified by plastering the ground with cow-dung, and land is cleansed by the same process; cows alone make sacrificial obligations possible by producing sacrificial butter, and among six excellent productions of a cow which are always made, milk and sour milk are included (Institutes of Vāsishthi, SBE vii. (1900), xxii. (1883) p. 56-61).

On the other hand, the evidence from the Panjáb is that, when a cow or buffalo is killed after calving, the first five streams of milk drawn from her are allowed to fall on the ground in honour of the goddess (D. C. J. Ibbetson, Punjabi Ethnology, Calcutta, 1885, p. 114). It is also a protective from the evil eye, and has various uses in magic and divination. This suggests that in the Panjáb milk is on its way towards a definitely religious position.

In Europe the once sacred character of milk is indicated by the evidence of folklore, which records
the protective measures which have to be taken to secure it against harm from witches and other malevolent powers (GP, pt. i, The Magic Art, London, 1911, ii. 524.)

The best examples are found in Russia, where the cows ping on Midsummer eve drive the cattle through the fire to protect the animals against 'witches and wizards, who are then ravenous after milk' (W. R. S. Ralston, Songs of the Russian People, London, 1872, p. 391). This rite affords the explanation of a curious story told of an Irish prince, Bress, son of the Fomorian Eithna. It is related of him that he arrogated to himself the milk of all the hairless dun cows in the land, and he caused a great fire of ferns to be made, and all the cows in Munster to pass through it, so that they might fulfill the necessary conditions, and their milk become the royal property' (H. de Arbois de Jubainville, Irish Mythological Cycle, Eng. tr., Dublin, 1893, p. 96). Included in this tradition are the following ritual observances—the restriction to cows of a single colour, the passing through fire to secure protection, and the right of the king to a royal supply of milk. The restriction as to colour also occurs elsewhere (G. Plummer, Vice Sanctorum Hiberniae, Oxford, 1910, vol. i. p. cxvi, and K. Meyer and A. Nutt, Voyage of Bruce, London, 1895-97, ii. 186). The legend of the Dun Cow of Whitham near Preston is of the same order, the attacking witch being successful in this case (J. Harland and T. T. Wilkinson, Lancashire Legends, London, 1882, pp. 16-19).

Ritual in custom and ritual in myth are parallel, and it will be well to inquire whether in folklore there is more than this suspicion of sanctity in the attitude of popular belief as to milk. The milkmaid is almost everywhere an important personage in the social fabric of the village, and her utensils share her importance. The present writer differs from Lady Gomme in her explanation of the famous game of 'Milkling Pails' as a mere teasing of the mother (Dict. of Traditional Games, London, 1894-98, s.v.) in that it appears to be a cumulative estimate of the superior value of the milkling-pail as an article of domestic use, and it is pertinent to note in this connexion that the Irish chieftain had 'in his house constantly a cask of milk' (Ance. Lore of Ireland, Dublin, 1893-1901, iv. 511). The milk was poured on the ground is attested by J. G. Dalyley (Darker Superstitions of Scotland, Glasgow, 1855, p. 163), and W. Gregor states that at death a loaf of milk in the house was poured out on the ground (Folklore of N. E. of Scotland, London, 1881, p. 206). This must have originally been an offering to the earth god as in the Punjab. In Ireland it is called an oblation to the fairies (W. G. Wood-Martin, Traces of the Elder Faiths of Ireland, London, 1902, ii. 7), and the fairies are the successors of the gods. It was offered every Sunday on Brownie's stone in the island of Valay and other islands (M. Martin, Western Islands, London, 1716, pp. 67, 110).

This brings us very close to the stage when milk was a sacred object in the cult of the gods. In the Christian Church it was substituted for wine in the elements of the communion. This was afterwards prohibited by canon law (Dalyley, p. 193, quoting Gratian, Decretal., p. 111), but it may be surmised that it originated as one of the sacrificing rites of ancient pagan religion. St. Bridget was in some degree identified as the special patron of milk, as appears in the beautiful milkingsongs of Scotland (A. Carmichael, Carmina Gadelica, Edinburgh, 1900, i. 261-275), and she was at her best in milk (Lives of Saints from the Book of Lismore, ed. Whitley Stokes, Oxford, 1890, pp. 184, 318). St. Bridget is in many of her attributes a pre-Christian goddess, and her association with milk in the surviving forms once more takes us back to ancient pagan religion.

That bathing in milk was also a death rite is shown both in traditional ballad lore and in traditional games. In the beautiful ballad of 'Burd Ellen,' preserved by R. J. Jamieson (Popular Ballads and Songs from Tradition, etc., Edinburgh, 1806, p. 125), is the verse:

'Tak up, tak up my bonny young son,
Ger wash him wi' the milk of the cow.
Tak up, tak up my fair lady,
Ger row her in the milk.

Lady Gomme has analyzed the different versions of the children's game of 'Green Gravel,' and has shown from the general movements of the game that it is derived from a funeral rite. This view is confirmed by the fact that the most constant formula in the game rhymes include the line,

'Wash them in milk and clothe them in milk.'

(6. 172.)

There seems little doubt that these words are survivals of an ancient burial rite.

In the religions of antiquity there is more definite evidence. J. E. Harrison, in her discussion of primitive baptism (Prolegomena to the Study of Greek Religion, Cambridge, 1903, p. 519), quotes a passage which speaks of baptism as 'what was the exact ritual of the falling into milk?'... Did the neophyte actually fall into a bath of milk, or... is the ritual act of drinking milk from the beginning metaphorically described?... and, in spite of a useful parallel from the Pir-Fidga enemies by taking a bath filled with the milk of one hundred and twenty white hornless cows, where the single colour condition is again repeated. The rite of bathing in milk attributed to St. Bridget was certainly not of Christian origin any more than the offering of milk and honey in early baptismal rites was Christian (ib. p. 597f.), and we must take it that these rites come from early Celtic religion. The offerings of milk and honey were made to the nymphs and to Pan Thessos. Id. v. 53 ff. and 56 ff., and to this day comes the conclusion that 'of a rite of immersion in milk we have no evidence.' This, however, cannot be quite true if St. Bridget represents, as there is strong evidence to prove, an early Celtic goddess who has brought into her Christian attributes and rites of pre-Christian origin. There is the further example of the Picts in Ireland saving themselves from the poisoned arrows of their Pict-Fidga enemies by taking a bath filled with the milk of one hundred and twenty white hornless cows, where the single colour condition is again repeated. The rite of bathing in milk attributed to St. Bridget was certainly not of Christian origin any more than the offering of milk and honey in early baptismal rites was Christian (ib. p. 597f.), and we must take it that these rites come from early Celtic religion. The offerings of milk and honey were made to the nymphs and to Pan Thessos. Id. v. 53 ff. and 56 ff., and to this day comes the conclusion that 'of a rite of immersion in milk we have no evidence.' This, however, cannot be quite true if St. Bridget represents, as there is strong evidence to prove, an early Celtic goddess who has brought into her Christian attributes and rites of pre-Christian origin.

To sum up the evidence: it would appear that in primitive religions there are three stages in the sacred characteristics attributed to milk: (1) where it is a definite part of the dominant religious cult; (2) where it is extensively used in religious ceremonial, but is not an exclusive or predominant element in the ceremonial; (3) where it is looked upon as a religious object, and is, consequently, subject to danger from outside forces, from which it demands various forms of protection. This survey seems to make it clear that the unique example of the Tedog is a highly specialized development of the religious conception of milk, and not a normal condition, while the evidence of folklore and of the religion of antiquity leads us to conclude that the endowment of milk with sacred properties arose from its enormous social influences, which led to specialization of its use in solemn and important occasions. This would be the normal position of milk in religious thought. A goddess is represented by the necessity of protecting it from malignant influences. This is survival from the normal stage, and arises only when it was no longer a protective force itself.

LITERATURE.—This is given fully in the article.

L. GOMME.
MILK (Civilized Religions).—x. As food and sacrifice.—Since man is a mammal, milk is universally regarded as a nutritious beverage, and is naturally used for food. In the animal, milk is a natural product, and in the plant, it is a natural fertilizer.

The Egyptians, like many other ancient peoples, knew the value of milk as a food. They used it as a beverage and as a milk-based dairy product. In the Bible, milk is frequently mentioned in the context of sacrificial offerings and as a symbol of purity and fertility.

Laban was a dish so relished as an article of diet that Abraham is said to have offered it to his messengers (Gen. 18:6), and Jacob to his father Isaac (Gen. 25:19), and Joseph to his father Jacob (Gen. 43:11). Milk, honey and laban along with wheat, barley, meal, beans, and lentils were furnished as food to David and his men (2 Sam. 17:24, 25). It is natural, therefore, that laban and honey, the two most delicious viands known to them, should enter into poetical descriptions of abundance, fertility, or prosperity (see Ps. 128:2, 3, Job 20:23, 24, Sir 33:10). The natural use of these articles of food is sufficient to account for these poetical allusions.

The strongest arguments of the mythological school rest, however, on the highly-coloured language of Joel and later apocalyptic writers, and upon supposed Assyrian parallels. In Joel 4:13-15 (RV 39) we read:

1 And it shall come to pass in that day that
The mountains shall drop sweet wine,
And the hills shall flow with milk.
And all the waters of Judah
Shall flow with water.
And there shall come forth from the house of Yhwh
And water the valley of Shittim [?] in the Sidonian Oracles, ii. 744 ff.
For the earth the universal mother shall give to mortals her best
Fruit is countless store of corn, wine and oil.
Tea, from heaven shall come a sweet draught of incense honey.
The trees shall yield their proper fruits, and rich flocks,
And vine and lamb shall see and taste.
He will cause sweet fountains of white milk to burst forth [?];
and again, ib. v. 281 f.:
But the holy land of the godly alone shall bear all these things.
An amber stream, a distilling honey and milk shall flow from rock and fountain for all the righteous [?].

In view of the aridity of the desert, it would seem to need no mythology, but only a little poetic exaggeration, to lead to the designation of Palestine by the nomads as a 'land flowing with milk and honey.' The use of these viands in the life of the Hebrew nation easily accounts for the poetical use in Deut. and Job, and these in turn furnish the point of departure for the later more hyperbolic language in Joel and the Sid. Or. Unless we can find some outside parallels, there is, then, no need for the mythological hypothesis.

Most of the Assyrian parallels hitherto cited turn out to be unreal. Thus a passage cited by Zimmern simply enumerates honey and laban along with oil, wool, gold, and silver as desirable things. Another passage deserves more attention. It is part of an incantation for driving the demon of sickness from a man's body. It runs:

Laban from a pure stable they shall bring.
Milk from a pure cow shall they bring.
Over the pure laban from the pure stable utter an incantation:
May the man, son of his god, become pure!
May that man become pure as laban!
Great shall his good fortune be.
Milk shall he drink like laban.

It is clear that no mythological meaning can be involved in this passage. It is the purity of the laban and the milk that is emphasized. A mythological quality is as much out of place as it would be in the Avesta, when milk is enumerated among the foods which the wise man may be given to a woman who has...
brought forth a still-born child, in order to effect her purification (see Vendidad, v. 62, vii. 67). Milk is here only one of several ingredients—meat, bread, wine, water, and fruit—that had to be drunk or urine, the milk can hardly have been chosen for mythological reasons. Another fragmentary text which has been frequently cited on the basis of an indefinite reference by Friedrich Delitzsch runs as follows: 2

"Crown of . . .
For the shepherd of the black-headed [people] . . .
I pray a prayer . . .
A sceptre of leps lamli may his hand [grasp] . . .
A sceptre of leps lamli may his hand [grasp] . . .
Honey and labar abundantly . . .
The mountain bearing produce . . .
The steps, the field bearing fruit . . .
The orchards bearing fruit . . .
On his left hand may the gods Sin . . .
To the king in person may they do homage!"

This is clearly a prayer for a Babylonian ruler. The petitioner asks that great fertility and prosperity may come in his time. The language resembles that of Joel and the Sibyl, but the imagery is capable of as natural an explanation as is that of the Hebrew seers.

The other passage which has been thought to show that, whether the Babylonians and Assyrans held mythological views of milk and honey occurs in an incantation. The part in question reads:

"Pure water bring into its midst.
The exalted lord, the great serpent of heaven,
By his pure hands shall establish thee,
To a place of purity shall bring thee,
With his pure hands shall bring thee,
Into honey and labar shall bring thee,
Water of an incantation he shall put to thy lips,
Thy mouth with an incantation he shall open."

Her next line has a passage that moves in such a realm of heavenly unreality that it may fairly be regarded as based on a myth, but the mythical part does not centre at all in the honey and labar, but in the action of the god. Honey and labar are used to denote a place of fertility and plenty, and it may fairly be claimed that they were introduced here from such usage as that of the preceding passage, and are not necessary part of any myth.

The Semites probably had their origin as a separate people in Arabia, 4 which was a land of deserts and oases. It was thus that the oasis and its palm-tree became one of the symbols of paradise, and the desert, the eastern shore of the Golden Age, and finally entered as one of the elements into the Christian symbolism of the New Jerusalem. 5 It seems probable that in the primitive language of the desert an oasis or a fertile land like Babylonia and Palestine may have been designated as a 'land flowing with milk and honey.' The occurrence of the phrase among both Babylonians and Hebrews points in this direction; it probably had an origin in their common ancestry. As the phrase is lacking, however, in the description of paradise both in Gn 2, 3 and in Ezk 28, it can hardly have formed an integral part of the traditions of the Golden Age, or have entered as an important element into the mythology of the Semites. Indeed, in the paradise story of Gn 3 the food which makes man like God is not milk and honey, but the fruit of a tree. So in the corresponding Babylonian story, the Adapa myth, it was not milk and honey, but 'food and water,' that might have gained immortality for Adapa. 6 As these accounts are doubtless both variants of the same primitive paradise myth, it is impossible to resist the conviction that milk and honey formed no part of that myth among the Semites, but was simply a descriptive phrase employed by the dwellers in the desert to describe fertile lands—a phrase which survived both in Babylonia and in Palestine, and which came only in post-Exile times among the Hebrews to designate a Golden Age that was still future.

3. In the Avesta.—Among the Persians these ideas apparently did not play in the early time a prominent role. Milk was offered in sacrifices, and was used in certain incantations, as noted above. Homage was rendered to it, 7 and it was regarded as a divinely purified provision in the breasts of females, as was the seed in males; 8 a prosperous woman was "rich in children and rich in milk." 9 The cow was regarded as a beneficent animal guarded by Ahura Mazda as he guarded all other things on which the prosperity of people depends, but in no sense a heavenly animal. So far from Jews having borrowed a myth from Persians, as Usener thought, the elements of the supposed myth appear only in the later syncretistic Mithra cult, and would seem to have been borrowed from the Semites.

4. In the Vedas.—In India milk was viewed as a symbol of nourishment. The Atharvaveda regards a house full of nurture as one full of milk, 10 and the earth is a mother who can pour forth milk for her suppliants. 11 Nevertheless in the Rigveda both milk and honey were employed in the ritual, though they were both subordinate to the all-prevaling soma. When milk was used as an offering, it was sometimes mixed with soma, sometimes sour, and was sometimes offered as a sweet milk with soma, but sometimes milk alone. Thus Rigveda, viii. iv. 8, addresses Indra: 12

"With honey of the bees is the milk mixed; 13
Come quick, run and drink
Milk was created in kine by Varuna, even as he gave cool breezes to the forests, swiftness to horses, wisdom to the heart of man, lighting to the clouds, the sun to the sky, and the mountains (Rigveda, v. lxxxv. 9). This reveals a high estimate placed upon milk and honey as foods, but lacks any mythical element, 14 as does the passage (X. lxxv. 3) in which the sky (dyum) gives milk to the All-God. The Sanskrit poets often allude to the ability of the swan to separate milk from water; but this, as C. R. Lauman has shown, has no mythological significance. It is a reference rather to the fact that these birds fed on the milk-like juice of the lotus stalks, which grew beneath the water. 15 Similarly the religious teachers of India often use as an illustration of a changing existence the relationship between sweet milk, sour cream, and buttermilk, not because they saw anything mythological in them, but because they illustrated change in forms of existence. 16

In India, then, it can only be said that milk and honey were so highly valued as food that they

naturally formed a part of the most valued offerings to the gods. Perhaps the proper mixture of these virtues is supposed to have some magico-religious significance, for on passage (Rigveda, ix. 11. 1) says that they were mixed by the atharvins; but there is no trace of such a myth as some have supposed for the Semites.

5. In Egypt. — In Egypt, as already noted, the sky-goddess was pictured as either a woman or a cow with full breasts; this was only to symbolize her nurture of her earthly children. If milk had by any means been thought of as mythologically significant, we should expect to find it prominent among the foods promised to the deified kings to whom the pyramid-texts of the Old Kingdom promised a place among the gods. True, the departed king is frequently represented as suckled by the sky-goddess or some other divinity connected with Re. The goddess is once thus addressed: 'O mother of this king Pepi ... give thy breast to this king Pepi, suckle this king Pepi.' The goddess replies: 'O my son Pepi, my king, my breast is extended to thee, thou mayest suck it, my king, and live, my king, as long as thou art little.' Milk was, then, the food of the celestial only during their heavenly childhood. When Pepi was grown, he was grown 'bread which cannot dry up' and 'beer which cannot grow stale.' Later he is given a 'snared fowl.' Bread is called 'the bread of the god. Pepi is invited to sit down to the thousand of bread, thy thousand of beer, thy thousand of oxen, thy thousand of geese, thy thousand of everything wheresoe which the god liveth.' Another source of food for the deified king is the tree of life situated in a mysterious cave at a distance, and this king Pepi sought and attained. This tree of life is probably a survival from a desert and oasis life similar to that of the Semites. Milk plays a very little part in these Egyptian myths. It is only the food of the deceased during that part of their celestial life which corresponds to childhood on earth.

6. In Greek and Roman literature. — Among the Greeks and Romans, as among the Semites and people of India, milk and honey were deities and were usually represented and their use given back to an early time. Libations of milk and honey were, according to the (Hindu) gods, poured out for the dead, and such libations appear to have continued into the Christian era. In case of pestilence milk and honey were among the offerings presented at the sacred mountains of Pelion and Ida; and, before eating, milk, honey, and bread were offered to Hestia. Milk and honey were also symbols of plenty and prosperity. Thus Pindar (442 B.C.) says:

'Bojose, my friend! Lo, I send you, though at late hour, this honey mixed with white milk, fringed with the froth of blending, a draught of song conveyed in the breathings of aecelian flutes.'

Though here metaphorical for sweet poetry, the metaphor is in use of milk and honey, as does in course of time both milk and honey became symbols of plenty. Thus Tibullus (18 B.C.) says:

'They make themselves give honey, and beyond the sheep bring udders of milk ready to the hand of the careless.'

Similarly Ovid:

'Sweet milk, holy milk, new milk, nectar ran.
And yellow honey distilled from the golden beak.'

With these poets milk and honey have become emblems of the Golden Age, but with many others they are simply symbols of plenty.

Latin writers are, of course, dependent on Greek models for their imagery, and it is possible that Tibullus and Ovid were influenced directly or indirectly by Semitic ideas. A usage of milk and honey, however, which goes back to reality this time cannot have been borrowed from the Persians. Possibly it may have come from Semitic Mesopotamia through the Hittites, since Hittites appear to be mentioned in the (Odyssy) but we know as yet too little of Hittite ritual to regard this as more than a remote possibility. Possibly, too, it may have been carried to the Ægean lands by Phoenicians, but it is quite as probable that the uses of milk and honey developed in the Ægean lands independently of Semitic ideas.

7. Among Christians. — The many references to milk and honey in Patristic literature collected by Usser in are clearly echoes of Joel and the (Hose). Some curious Christian myths connected with the milk of the Virgin Mary are, however, still current in Bethlehem and its vicinity. There is at Bethlehem a cave called the 'Milk Grotto.' A legend has it that the Holy Family passed the night there, and that, as the Virgin nursed the Child, a drop of her milk fell on the floor. Because of this it is still believed that a sojourn in the grotto not only increases the milk of women and animals, but cures them of barrenness. In reality the legend arose to Christianize a grotto that was originally a shrine of Ashotereh.

All about Bethlehem the limestone crumbles and forms little white pebbles about the size of peas. These are accounted for by a myth that in a drop of the Virgin's milk fell on the rock, and that these pebbles are the miraculous result. Similarly it is said that, as the Virgin nursed the Child by the wayside, a drop of her milk fell on a thistle, which on this account became decked with white and is called 'Mary's thistle.' These myths are the outgrowth of the transfer to the Virgin of the old grotto of the mother-goddess, and are really much more exotic to Christianity than the quotation in the Patristic writers about the Golden Age.

In the early Church the newly baptized were given milk and honey to taste (or in some Western churches, milk and wine) as symbolizing their regeneration through baptism (cf. 1 Co 3, He 13, P 27). By the twenty-fourth canon of the Third Council of Carthage (397) this milk and honey was to be consecrated at the altar on Easter Even, the most solemn day for baptism; but the use has been forbidden since the Trullan Council of 692.

GEORGE A. BARTON.
MILL, JAMES AND JOHN STUART.—

The two Mills, father and son, occupied a unique position in the history of British thought. They were, after Bentham, the greatest figures in the utilitarian school and the leaders of the philosophical radicals in politics.

JAMES MILL.—Next to Bentham, James Mill was the force that moulded the early expression of utilitarian doctrines. He was a Scot by birth, the son of humble parents (his father a country shoemaker and his mother a farmer's daughter), born on 23rd June, 1806, at Nether Bridge, on the North East of the parish of Logierait, Forfarshire, on 6th April 1773. By his intellectual ability and his indomitable power of work, he raised himself to the commanding position that he ultimately attained. His early education was received at the parish school of his native place, and afterwards at Montrose Academy, where he had as school-fellow Joseph Hume. From Montrose Academy he went to Edinburgh University (in the palmy days of Dugald Stewart), where. he graduated M.A. in 1794, and forthwith proceeded to the study of Divinity, and was licensed as a preacher of the gospel in the Church of Scotland in 1798. The ministry, however, was determined to keep him long. Being appointed tutor to the only daughter of Sir John Stuart of Fettercairn (Member of Parliament for Kinross-shire), he came under the special notice of Sir John, and went with him to settle in London around 1807. He was not long in London before he made his presence felt. In 1803 we find him active in originating The Literary Journal and making many contributions to it. In 1804 he published his pamphlet on the Corn Trade. Thenceforth he contributed articles, in an unceasing flow, to innumerable periodicals and magazines—The Philanthropist, The Annual Review, The Westminster Review, The London Review, The Edinburgh Review. But his most outstanding essays were written for the Supplement to the fifth edition of the Encyclopaedia Britannica, the chief of them being on 'Government,' 'Education,' 'Jurisprudence,' and 'Laws of Nations.' A reprint of the Encyclopaedia Britannica was made in book form and had a wide influence. For about eleven years (from 1806 to the end of 1817) he worked strenuously at his History of British India, which, on its publication, produced a great impression. The immediate cause of this was his appointment to a post in the India House, in the department of Examiner of India Correspondence, where he became head of the office in 1836. Besides a little book on the Elements of Political Economy (1821), largely reproducing Adam Smith, but embodying also the distinctive principles of Ricardo, he produced his great psychological work, the Analysis of the Phenomena of the Human Mind, which was brought out in 1820. This at once raised him to the position of psychologist in chief of the utilitarian school, filling the gap that had been left in the elaborate and multifarious teachings of Bentham himself. William Mill was on terms of the most intimate friendship, and the master regarded him as his most stalwart disciple. So staunch a Benthamite, indeed, was Mill that it has been doubted whether he was anything more than a brilliant rephrasing of Bentham's opinions. That, however, does Mill an injustice. He was no mere echo, but a voice. His psychology alone proves it; and he was potent as a political force to an extent that even Bentham hardly equaled. When he died (his death took place in London, on 23rd June 1836), he was generally admitted to be the great inspiring spirit of radicalism and the man on who could have made the radical propaganda a success that it had become. In the year before his death (1835) appeared his Fragment on Mackintosh. This is really a vigorous defence of empiricism against intuitionism, though it assumes the form of a vehement criticism of Mackintosh, and is chiefly valuable as presenting Mill's philosophical positions in a clear and condensed light, rendered all the more effective by the polemics set off.

MILL's fame as a psychologist rests on his consistent experimentalism, his thoroughgoing application of association to the phenomena of the mind, and his uncompromising insistence on the power of associationism to explain the mind and all its processes. But this has already been brought out in the art. Association, and need not be further dwelt on. A word, however, may be said on his psychological ethics. Mill's ethics is essentially hedonistic; the human will is moved by pleasure (or the avoidance of pain) and by this alone; and with a view to the attainment of pleasure (or to the getting rid of pain) men habitually act. But there is such a thing as disinterested conduct; and by the utilitarian himself, his happiness is regarded as the supreme virtue. How, then, explain this? In the first place, Mill has recourse to the distinction of Bentham had made so much between motive and intention, and maintains that, while our intention in benevolence is disinterested, our motive is interested; in other words, a benevolent action pleases the individual, gives him satisfaction, else he would not do it, but it also promotes the happiness of others. Nor is there anything new in acting benevolently towards another—what else is it than the individual identifying another's happiness with his own? And what more could be demanded of him? 'Can any greater degree of social love be required,' asks Mill, 'than that love of others should cause us pleasure; in other words, that their good should be ours?' (Frag. on Mackintosh, p. 284). Then, again, there is the ethical principle of transformation (the phrase is not Mill's) to be considered—the principle that we see at work in the miser, whose nature is so changed by his traffic with money that the original desire of money for the pleasure that it can procure him becomes ultimately the desire of money as such. What happens in the case of the miser happens in the case of disinterestedness and benevolence. Although individual pleasure lies at the root of a man's benevolent action, he has come, through continued intercourse with mankind, to expect a return of help, to submerge the thought of his own pleasure and make benevolence itself his end.

What, then, of conscience, with its intentions and its vaticinations? Conscience to Mill is not a simple and elementary faculty in human nature, but the product of association. That gives to its power, and explains its peculiarities, and indeed constitutes its value. The ultimate test of morality is utility: right and wrong are qualities of conduct and are to be gauged by the tendency of actions to produce pleasure or pain.

Education occupied a large share of Mill's attention. As a utilitarian radical, he was eager that the people should be educated—educated so as to develop and improve their intelligences, and render them fit to be worthy citizens. Hence, he took a practical interest in the educational movement of the time, and entered into a keen polemic into the controversy between the Lancasterian and the infant systems of education; he tried to establish a school (but failed) on the principles of Bentham laid down in his Chrestomathia ("Study of useful things"); and he was one of the small number of ardent educators who originated the University of London. But his claim to honour as an educationalist rests on his broad-minded theory of education, as developed in his Encyclopedia article, where education is shown to be the work of a man's life-time, where
the roots of it are laid in associationist psychology, and where the principles of Helvetius regarding the almost unlimited power of education in transforming the individual are vigorously enforced.

In the realm of jurisprudence Mill made for himself a great name in the sphere of international law. His Encyclopædia attacked the modern theory of Pictet within its limits, almost perfect. It might be elaborated at points and more fully illustrated, but it is everywhere wise and suggestive. Particularly striking are his handling of the rights of nations in the time of war, and its statement of the possibility of an effective court of arbitration in international quarrels.

As a philosophical politician Mill achieved fame by the nature of government. It is not a theory that is invulnerable. It lays itself open to objection as to the adequacy of its analysis of human nature; it was attacked by Macaulay on the ground of its deductive method and disregard of the inductive mode of procedure; and Sir James Macintosh attacked it on the ground of its extreme advocacy of popular representation, which seemed to ignore the danger of democratic tyranny, or the abuse of power on the part of the 'masses' in defiance of the interests of the 'classes.' The foundation of the theory is that the individual man is by nature self-centred, that he aims at pleasure for self and as much of it as he can obtain, and that, in his pursuit of personal interest, he is ready to lay hold of everything that ministers to his gratification, regardless of the pleasures and desires of others. Hence the need of government, and its meaning: government just signifies keeping one man from grasping at and mercilessly parring what belongs to another. The members of a government are themselves men, with men's selfish passions and readiness to tyrannise over others, and, consequently, need themselves to be restrained. The restraint comes and only can come from the people; and the only tolerable form of government is a representative government—a government where the people's representatives act as a check on legislative abuse. It is only when the people are not themselves elected by themselves and representing them that the interests of governors governed can be identified. Yet this identification of interest is liable to be broken through, if the representatives are not themselves watched. A representative of the 'interests men, if left entirely to their own actions, will have 'sinister' interests and may become as selfish and oppressive as an individual may be. The safeguard lies in frequent parliamentary elections; thus only (so it appeared to Mill) could the people retain a proper hold on their own representatives.

Into social reform Mill threw himself with much energy. Reforming zeal was the great characteristic of the utilitarians. This was but the practical side of their all-controlling principle, the general welfare, or the greatest happiness of the greatest number. Prisons and prison discipline, mendicancy, the Poor Laws, and such like engaged his pen; and it was through the influence of his views, to no small extent, that subsequent reforms were effected.

2. John Stuart Mill.—The eldest child of James Mill was John Stuart Mill (born in London on 20th May 1806; died at Avignon, in France, on 8th May 1873). His early education was conducted solely by his father, who, although constantly occupied in literary and exacting work, did not grudge his son to act as schoolmaster to his son. His method of teaching was altogether of an exceptional kind; and, although the result of it was also exceptional, the method has not been imitated by others or regarded as generally practicable. At three years of age the boy was set to learn Greek, which was his chief study for the next five years, English and arithmetic being added as secondary subjects. This created in the youthful learner a love for Greek—not only for the language, but for the literature and the thought of Greece—that lasted throughout his life. There is nothing more noticeable in his writings than his genuine appreciation of the dialectic method of Plato and his constant use of the Socratic mode of inductive definition, in order to secure clear concepts and exact verbal expression of them, with a view to truth. At the age of fifteen the boy had Latin added to his Greek; and, by the time that he was fourteen years of age, he was indoctrinated into the principles of logic, psychology, and political economy. These were stiff subjects for a boy of that age; but they were the subjects in which he afterwards excelled.

All the time that these subjects were being set as tasks, the father was making the boy his constant companion, sharer in his daily walks, and, through his ceaseless questioning, was gradually developing the boy's mind and imparting to him clearness and exactness of thought and confidence in thinking. This Socratic procedure was supplemented at the earliest moment by making the boy a teacher. He was set to superintend the education of his younger sister of the family, whereby enabling him to gain further clearness of ideas and to strengthen his intellectual faculty. No wonder that the precocity of young Mill became proverbial.

A further stage in his education was a year's sojourn in France, as the guest of Sir Samuel Bentham, at the age of fourteen. This introduced him to the French language and to the culture and politics; and, through excursions in the Pyrenees and elsewhere, aroused in him an enthusiasm for natural scenery and a love for botany and zoology. These things all influenced him in later life.

On his return from France, he was further taken in hand by his father. He was now directly introduced to Bentham's teaching, in the French translation and exposition of La Dumont's Traité de législation (London, 1822). 'The reading of this book,' he says (Autobiography, p. 64), 'was an epoch in my life; one of the turning points in my mental history.' At this time also he studied Roman law under J. J. Adams, the jurist. At the age of sixteen, the youth was beginning to feel his intellectual independence. Burning with enthusiasm for Bentham, he started a Bentham Club of young men, which he designated 'The Utilitarian Society.' Somewhat later he became a member of 'The Speculative Society,' and was also a prominent figure among the youths who met, at stated times, in George Grote's house for discussion of philosophical and economic questions. Later he took an active part in 'The Political Economy Club.' This was the development of young Mill's thought and mind further aided by a variety of powerful intellectual agencies.

In 1828, at the age of seventeen, came his appointment, by the East India Company, to the post of Assistant Examiner, under his father, in the Office of the Examiner of India Correspondence. This continued till he reached the position of Chief of the office in 1856—two years before the abolition of the East India Company.

A turning-point in his life was his break-down in health in 1838. There is little doubt that hard work, long-continued and uninterrupted, and the over-strain of early education under his father's tuition were largely the cause of this. But there was something more. There was the emotional
The stimulus to the student derivable from a study of his Logic is undoubted. The epoch-making character of his great work must be acknowledged without reserve. But how far he has succeeded in bridging the gulf between inductive and syllogistic logic may be disputed—even Bain, his intimate friend and associate (see his Dissertation on Leading Philosophical Topics, London, 1903, pp. 21-28); and empirical logic has made great advances since his day. On the other hand, it must be allowed that these advances were rendered possible only through a new and widening mental outlook and deeper and intenser sympathies.

In psychology Mill upheld the associationism of his father, but gave a more attractive expression of it as 'mental chemistry.' He carried forward psychology into theory of knowledge and formulated his doctrine of psychological idealism (found on Berkeley), which, resting on the empirical genesis of knowledge through the various senses operated by association, issues in the conception of man as a thing which is 'the permanent possibility of sensations' and of mind as 'the permanent possibility of feeling.' In the case of Mill, however, there is a peculiarity: it is conscious of its states. He must accept, as it is given in our experience, and as it must appear to us, as inexplicable—no further account of it is possible. He was unbending in his opposition to those who base truth on intuition. Not that he denied the fact of intuition, but that he demanded it be tested by experience, so that it may not become (as it had become to a school of philosophers at the time) the bulwark of prejudice and irrationality and the hindrance to intellectual, political, and social progress.

Mill's great work on Political Economy (equal in originality of thought and in importance to his Logic) is a clear exposition of the various branches of the science—wealth, distribution, consumption, and exchange; and all the various topics that arise out of these. It shows him also as a keen, but fair, critic. But his chief merit lies in his widening the scope of political economy and removing from it the reproach of being 'the dismal science.' This he did partly under the influence of Auguste Comte (by infusing into it human feeling and associating it with the philosophy of society). Economic principles were now conjointly with their practical applications, and a transformation took place. Not only do we have a realistic and scientific handling of such things as labour, capital, rate of interest, money, international trade, and all the other points that the ordinary political economy dealt with, but also a stimulating discussion and wise treatment of such deeply interesting problems as the future of the labouring classes, the Land question, socialism, etc. In explanation of the exceptional popularity of the treatise he himself says: 'It was, from the first, continually cited and referred to as an authority, because it was not a book merely of abstract science, but also of application, and treated Political Economy not as a thing by itself, but as a fragment of a greater whole; a branch of Social Philosophy, so interlinked with all the other branches, that its conditions and its influences are not only free but subject to interference and counter-action from causes not directly within its scope; while to the character of a practical guide it has no pretension, apart from other classes of considerations.' (Autobiog., p. 230).

That is, doubtless, absolutely correct.

Mill's utilitarian ethics, as expounded in his Utilitarianism, is extraordinarily significant; both the matter and the style fascinate, not less than the glow of conviction that permeates the whole. Justice has been done to the book; if opponents, because they have failed to see (a) that it is not a treatise of pure abstract reasoning, but one written out of the living conviction of a man who loved his fellow-men; (b) that it is practical in its object, and not merely theoretical; and (c) that,
although it sets forth pleasure or happiness as the standard and test of human conduct, it makes supreme the conception of man as a social being and considers all by the conception of the general welfare. His view of the human will as determined by character, and of character as formed by a man, and not for him, is his contribution to the solution of the free will problem, and his defence of the position that there can be such a thing as a science of ethics—and, if of ethics, then also of economics.

Mill as a political thinker is a great subject. As a radical democrat, he loved the people and worked for their progress in parliament and out of it. But he would not submit in any degree or for a moment to their irrational desires and expectations. They had to be led and not followed. He was acutely conscious of their tendency to tyrannize and their selfish disregard of just deserts. He was exceptionally alive to their readiness to dominate over minorities; hence, he powerfully advocated the principle of parliamentary proportional representation. Thus alone, he thought, could minorities of electors assert their rights. He saved the people’s jealousy and suspicion of the educated and refined classes of society; hence, he stood fast by the principle of plurality of votes, as determined by the official position and social position. He was very sensitive to the tendency in the masses to act unscrupulously and in an underhand fashion; therefore he opposed vote by ballot.

On the other hand, he was a strong upholder of the individual, and he gave a powerful defence of individualism in his treatise Liberty—a defence of the right of the individual to hold his own opinions and to give free expression to them, and his right to live in such a way as seemed best to himself, so long as his mode of living did not interfere with the rights and liberties of others. In the same spirit, though he was quite alive to the necessity of the government dictating and controlling within limits, and, therefore, restricting the liberty of the individual to that extent, he thought that the less government interfered the better: his legislative principle, with necessary qualifications, was laissez-faire.

Life:—John Milton was born in London on 9th Dec. 1608. He was the eldest son of John Milton, a London scrivener, whose conversion to the faith of the Anglican Church had led to his being disinherited by his father, a yeoman of Shotover Forest and a staunch Roman Catholic. The poet inherited the stubborn self-will of his grandfather and the more sensitive and cultured spirit of his father, from whom he also derived his taste for music. From the first the boy was studious, and his father supplied him with the best teachers. When in 1625 (Feb. 12) he entered Christ’s College, Cambridge, at the age of sixteen, he had already acquired, under his first tutor, Thomas Young (a graduate of
St. Andrews), and at St. Paul's School, under the older and the younger Alexander Gill, a mystery of Latin, a competent knowledge of Greek, and probably of Hebrew. 'From the twelfth year of my age I scarce ever forsook my nightly studies for bed before midnight' (Defensio Secunda, 1654). In English poetry he was familiar with Joshua Sylvester's translation of Du Bartas (1602), and probably also with Spenser and others. Milton was not attracted by the dialectical and theological studies of Cambridge. The lines At a Vacation Exercise and some Latin pieces show that he took part in the prescribed work, but his favourite studies were literature and classics, 'posing orators and historians,' the 'smooth elegiac poets,' from whom he passed in 'riper years' to 'the shady spaces of philosophy; but chiefly to the divine volumes of Plato and his equal (i.e. conscience). Exercitavit in the knowledge of the classical poets he added now the Italians, 'the two famous renowners of Beatrice and Laura,' the 'lofty fables and romances' of Boiardo and Ariosto (Apology for Smutynum, Intro.). On the work of another Milton looked out through Italian windows, but he was familiar (later, at any rate) with Geoffrey of Monmouth and probably with Malory. The poems of this particular Milton and Latin, these witness to the double source of Milton's poetic inspiration—classical literature and the Biblical Christianity of Paritan England. The finest expression of these, not always entirely compatible, tastes is the tender (an epithet so rarely applicable to Milton's poetry) and beautiful ode, On the Morning of Christ's Nativity (1629); while some lines of the At a Vacation Exercise and the short odes, On Time and At a Solemn Music, show the poet of Paradise Lost 'mewing his mighty youth' and meditating the sublimest flights of religious song:

Yet I had rather, if I were to choose,
That every day I might to toil a grave
Such as may make thee search thy coffers round,
Before thou clothe thy fancy in soft sound:

Bach where for others the deep transported mind may soar
Above the wheeling poles, and at Heaven's door
Look in, and see each bard with his work and store
(At a Vacation Exercise, 29 ff.)

Milton left the University in 1632 without taking orders, and the next six years of his life were spent at Horton in the quiet prosecution of his studies in classical literature, history, mathematics, and music, with occasional visits to London to purchase books, to visit the theatre, to be an onlooker perhaps at Court ceremonies,

'Where thongs of knights and barons bold
In weeds of peace high triumphs hold' (O Allegro, 121 ff.),

and to the company of friends, among whom the first place was held by Charles Diodati. The young Italian girl, too, of whom we know only that her first name was Emilia, seems to have touched his fancy and occasioned the writing of his earliest Italian verses. The experience is perhaps referred to in the seventh of his Latin elegies. During these years he also extended his knowledge of English poetry from Chaucer and Dryden's Shakespeare, to Shakespeare (at Cambridge) he had already written his famous lines for the Epistle to Dr. Travers, Jonson, and the later Elizabethans. All the poems written at this period bear witness to this native and Elizabethan influence, and some of them, At a Solemn Music and II Penseroso, are composed in a lighter, more secular and Epicurean vein than any English pieces (some of the Latin elegies are very much in this vein) had been or were ever again to be written by Milton. But in Comus, or The Masque Presented At Ludlow Castle (1634), which he composed at the invitation of Henry Lawes, all the resources of Milton's learning and art were employed to set forth his deepest ethical and religious convictions, his passionate love of purity, his sense of the dependence of all human virtue on the protecting grace of God. The theme of the second book of The Faerie Queen is rehandled by a poet of a higher moral temper and a no less, though more controlled and classically educated, sense of beauty.

Milton had gone to Cambridge with a view to taking orders, and, though he left without doing so, there is no evidence that he had ceased to be, when he settled at Horton, an orthodox Anglican. He was a communicant; he had signed the Articles; nothing had yet betrayed that he was by conviction a Presbyterian in his views on Church government; but while on the doctrine of predestination in its relation to the human will his position was always closer to that of the Arminians than to that of the Calvinists. What alienated Milton from the Church of England was less its dogmas than its practice, the manner of Land and the justification of Episcopacy, with the Court and its arbitrary policy. His intense and ideal love of liberty was awakened, and the first notes of the coming storm were heard in Lycidas (1638), the most passionate, poignant, and musical poem which Milton had yet written. In the same year he went abroad, still intent rather on self-cultivation and the preparation for the task of writing a great poem than on controversy and theology. In 1640 the prospect of the Grotius whose, Adamus exult one of the sources of Paradise Lost. He spent two months in Florence, conversing and interchangeing Latin and Italian verses with young Academicians. He proceeded to Rome, where he visited the Vatican Library and the English College, and heard Leonora Baroni sing at the palace of Cardinal Barberini. The elevated strain of compliment in the Latin verses addressed to her indicates his sense of Italian preciosity. At Naples he met Manso, Marquis of Villi, Tasso's patron and Marino's, and in a Latin poem addressed to him prays that he may find a like patron when he undertakes to sing of

reges,
Artemisque etiam sub terris bella movens,
Ant dieum invitans soccall luctus pacem,
Magnum nobis Henas, et (O modo spiritus aditis)
Francum Saxum Britanniam sub Marte phalanx
(Opera, Livres, 80 ff.)

But Milton was not destined to sing of kings or the knights of the Round Table. The meeting of the Long Parliament determined him to return home, and he made his way back to England by Venice and Genoa to plague soon into that long course of controversy, ecclesiastical and political, which determined the choice of themes, the doctrinal framework, and the temper and spirit of Paradise Lost, Paradise Regained, and Samson Agonistes.

The first of the controversies into which Milton plunged with ardour and vehemence was that concerning Church government, and the rival claims of a Presbyterian and Prelatical organization. In the first pamphlet, Of Reformation in England (May–June 1641), he raises the question why the English Reformation had lagged behind that on the Continent and attacks the English bishops and their 'policy' from Crumpler and Ridley to the promoters of the war with Scotland, closing with an amazing denunciatory prayer. Of Prelatical Episcopacy (June–July 1641) is an examination of the origin of Episcopacy in reply to a
tract by Archbishop Ussher. Of the other pamphlets two, Animadversions upon the Remonstrant’s Defence disclaiming the very name (July 1641) and An Apology against a Pamphlet called a Most Modest Con- stitution of the Animadversions of the Remonstrants against Sacramenius (March–April 1642), were contributions to a controversy on Episcopacy between Hall and certain other little-known Puritan divines, of whom Thomas Young was one. The most fully reasoned and interesting statement of Milton’s ideal Presbyterianism is contained in The Reason of Church Government urged against Prat- taty (Jan.–March 1641–42). Two undercurrents of thought run through the main stream of controversy, rising to the surface from time to time, the one with unmistakable and eloquent distinctness, the other with less observable yet sufficient clearness. The first of these concerns the great poem which he was meditating; the other shows him full of high thoughts concerning the mysteries of love and marriage. The Puritan movement had heightened men’s ideals both of purity and of marriage, and Milton was as impassioned a champion of chastity as he was an enemy of asceticism. Love had touched his fancy in youth, but, when in May 1643 he married, it was clearly the act of one who had not much of the idealist in him; his marriage was determined by an ideal regard for the wedded estate; and the result was, what, as Milton himself complains, is more often the fate of the chaste and unworlly student than of the libertine, the discovery that the ideal world he had chosen was to be found none of the qualities that he had so fondly anticipated, no intellectual helpmeet, but an “unconversing inability of mind,” “a mate and spirits mate,” begetting “that melancholy despotism” which usually attended “married persons.” (Doctrine and Discipline of Divorce, i. 4). Others have experienced the same misfortune and in the end managed to work along; but Milton was by no means a man, and he turned passionately round to discover an escape and that one which should enjoy the approval of his own conscience and the Christian Church. The Doctrine and Discipline of Divorce Restored (Aug. 1643) was written (anonymously and without licence) before his wife had given any definite ground for separation. An enlarged and improved edition appeared in February 1644 with a signed introductory letter to “the Parliament of England with a second tract, The Journal of Martin Bucer concerning Divorce, followed in July of the same year, vindicating Milton’s position against critics; and to the same end he issued in March 1645 Tetrachordon, a discussion of four passages in Scripture, and Colossians, a savage onslaught upon a certain Joseph Caryl, one of the licencers. Incidentally the divorce controversy called forth the most famous of Milton’s pamphlets, Areopagitica, A Speech . . . for the Liberty of Unlicensed Printing (Nov. 1644).

The outcry which the divorce pamphlets evoked opened Milton’s eyes to the interval that separated his ideal Church from the Presbyterian Church which its adherents were seeking to invest with all the divine and institutional authority of the overthrown Episcopal Church of England, and helped him to formulate his own conception of Christianity as independent of any visible and authoritative Church. He never, therefore, identified himself with the Independents, but from this time to the close of the Commonwealth his sympathies were with that party in politics and, when the death of the king completed the rupture between them and the Presbyterians, Milton came forward as the champion of regicide and the impugner of all connexion, whether of authority or endowment, between Church and State.

On 13th February 1649—a fortnight after the execution of Charles—appeared The Tenure of Kings and Magistrates, proving that it is lawful, and hath been held so throughout all ages, and that the authority, who have the Power, to call to account a Tyrant or wicked King, and after due and wholesome deposite and put him to death, if the ordinary Magistrate have neglected, or deny’d to do it. And that they do, of late, so much blamably and by that did it themselves.” The sting in the tail of this bold title is intended for the Presbyterians, who are roughly handled throughout as hypocrites and revolters from their own principles. The Eikonoklastes, of the same year, follows chapter by chapter the Eikon Basilike in Milton’s most scornful style. To Salmasius and other impugners of the king’s execution Milton replied in his first and second Defensio pro populo Anglicano (1651, 1654). The Defensio contra Maronius (1650) was a savage onslaught on one who, he believed, had slandered himself. His last purely political pamphlet, the Ready and Easy Way to Establish a Free Commonwealth (March 1660), was published on the eve of the Restoration.

That conception of the Church’s influence and authority as purely spiritual which is evident in Milton’s first sketch of an ideal Presbyterianism, and had been intensified by the experiences of the Presbyterians, led him to disapprove of Cromwell’s attempt to combine religious endowment with a wise though still limited toleration; and his own conception was expanded in the Defensio Secunda (in the middle of a eulogy of the Puritan and his associates) and, after Cromwell’s death, in A Treatise of Civil Power in Ecclesiastical Causes (Feb.–March 1659). When the Rump superseded Richard Cromwell and the question of tithe was raised, Milton published his Considerations Concerning the likeliest Means to remove Holdings out of the Church (Aug. 1659), a bitter onslaught on the clergy, Presbyterian or Independent, who claimed titles or fees instead of trusting to the ‘benevolence and free gratitude’ of their flock. Milton’s last religious works were the short pamphlet Of True Religion, Heresy, Schism, and what best Means may be used against the Growth of Popery (1673) and the body of his De Doctrina Christiana, on which he had been busy for many years, but which was not printed till 1825.

Throughout the rule of the Commonwealth Milton’s life had been the twofold one of a private student and tutor (to children living in his house) and of a servant of the State as Latin secretary to the Council of State (1649–59). The incidents of his private life are few. In 1652 his wife died, and in 1656 he married Catharine Woodcock, whose early death in 1658 is referred to in the most touching of his sonnets. His marriage with Elizabeth Minshull in 1663 was a convenient arrangement.

During all these years Milton had written very little poetry. From 1640 to 1642 his mind had been full of his great projected work, and the commonplace-book preserved at Trinity College, Cambridge, shows the steady trend of his thoughts towards a drama on the fall of the Titans and the sketches of the drams are set down, and his nephew, Edward Phillips, reports that the speech of Satan at the opening of the fourth book of Paradise Lost is part of the original scheme. The interest of controversy and the shock of his unhappy marriage interrupted the work and it was not resumed till 1658. In the interval the only English poems which Milton wrote were some sonnets on public events and persons and his incidents in the dignified manner of his Italian predecessors, in similar forms, and in Italian form, for even the device of running the sense on from octave to sestet which has been
thought a device peculiar to himself) had been borrowed by Italian poets known to Milton. In 1658 Paradise Lost was resumed in epic, not dramatic, form; this new version was composed in Milton’s own words, edited, corrected, and completed in 1665; and published in 1667. It was followed in 1670 by Paradise Regained, an epic poem in the brief past. In the book of Job, Milton, nurtured on the Bible but also deeply influenced by the ancient classics, transforms the tragic theme of Job into a Christian parable. The poem is a version of Seneca’s Agonistes, but Milton’s work is more complex, combining elements from ancient and Christian traditions.

2. Thought and work. Of Milton’s early political and religious views, little is known. As a boy, Milton was trained in the classics, and his education was influenced by the humanistic tradition. Milton’s literary works, such as the Ode on the Honourable Mr. Wren and the dedication of Paradise Lost to Charles II, reflect his commitment to the Stuart monarchy. However, as a Protestant, Milton was critical of the Catholic Church and advocated for a more radical form of Protestantism. His religious views were shaped by his personal experiences and his engagement with the public sphere, as evidenced by his political writings and public lectures.

In 1658, Milton published his first major work, Paradise Lost, which is a significant achievement in the history of literature. The poem is a masterpiece of epic poetry, and its themes and ideas have had a lasting impact on Western culture. Milton’s work is characterized by its use of allegory, its exploration of human nature, and its celebration of the power of the human imagination. Milton’s later works, including Paradise Regained and the epic poem Samson Agonistes, further develop his themes and ideas, and his influence can be seen in the work of later poets and writers.

Milton’s later work, including Samson Agonistes, is characterized by its exploration of the human condition and its celebration of the power of the human imagination. Milton’s later works, including Paradise Regained and the epic poem Samson Agonistes, further develop his themes and ideas, and his influence can be seen in the work of later poets and writers.

Milton’s religious views were characterized by his commitment to the Protestant faith and his belief in the importance of individual liberty and reason. His work is a testament to the power of the human imagination and the importance of the individual in the face of adversity. Milton’s influence can be seen in the work of later poets and writers, and his legacy continues to inspire new generations of thinkers and writers.
MILTON 645

different passages are duly compared and when all are interpreted in the light of the Christian law of charity, in the spirit of the words 'the sabbath was made for man, and not man for the sabbath'? The one consideration to which Milton never condescends is expediency, the difficulties and practical means of obviating these revealed by experience; he has none of Burke’s reverence for prudence constituted as the god of this lower world.

Milton’s polemical pamphlets are, accordingly, a bewildering blend of ideal reasonings, high apriori principles set forth in glowing and harmonious but elaborately Latinized periods; a pedantic, at times captious and wrong-headed citation and cross-examination of Biblical texts; truculent polemic, condescending not infrequently to coarse personal abuse; and within a general absence of the mellower wisdom that proceeds from experience and charity. There is much to inspire and delight in these pages baring with fires that are perhaps not yet altogether extinct but in general have died down; there is little to interest the statesman. If Milton’s pamphlets yet live, it is as eloquent statements of high and abstract ideals, to ignore which altogether is to reduce political expediency to sheer opportunism.

The diviner pamphlets have nothing to say upon the difficult problems of children and the mutual relations of the family and the State. They combine elevated reflexions on the ideal significance of marriage as a spiritual rather than a carnal union (solely from the point of view of the man) with a tedious, passionate, wrong-headed attempt to reconcile Christ’s prohibition of divorce ‘but for adultery’ with Moses’ permission. God cannot have at any time permitted sin. The later commentaries have not been intended, therefore, to annul the earlier, but merely to check certain prevalent abuses. Milton was not without apprehension of the fact of moral and religious progress. He went beyond the English Protestantism of his day in asserting that under the new dispensation the Mosaic moral as well as ceremonial law had been abolished. But the new law was, he maintained, a law of liberty, of greater responsibility because of greater freedom. Such a rigid law of marriage as the Churches asserted was a curtailment of the liberty which even the Law had granted, a fresh enslavement of the spirit to the letter. Looking at the question exclusively from the man’s point of view, he advanced to an assertion of divorce as the private concern of the individual and to a defence of polygamy (De Doctr. Christ. 1. 10).

The Areopagitica was an overflow from the divorce controversy, and is a magnificent apriori vindication of freedom of thought and speech as the fundamental condition of the successful quest of truth. The practical difficulties which have beset the attempt to find a solution, other than a compromise varying in different countries, lay outside Milton’s ken; nor could he foresee all the evils that have attended the freedom allowed to a Chanavist or a commercial press to deceive and to pervert.

The same lofty but apriori Idealism combined with exposition of texts and interchange of personalities characterizes the pamphlets, Latin and English, written to vindicate the execution of Charles I., and those on, what became his favourite themes, an unenforced clergy and a universal toleration of all religious bodies, the Roman Catholic Church alone excluded. Of the original and inalienable rights of subjects and the duties and responsibilities of kings Milton writes with all the passion of a mind nurtured upon classical republicanism and OT history, and heated by the fires of civil war:

‘There can be slain
No sacrifice to God more acceptable
Than an unjust and wicked king’.  
(Geneva, Her. Pers. 923, tr. in The Tenure of Kings and Magnates).

The doctrine of the civil contract is buttressed by precedents from the turbulent annals of Israel, the early history of the Britons, the rebellions in Scotland and Holland. Of the real difficulties of the problem, as Hobbes saw them, of the fact that somewhere in every society there is and can be an authority against which no rights can be pleaded, Milton shows no suspicion. He was at work recasting with the utmost confidence the government of England at the moment of the Restoration. His sympathies were aristocratic: the best should rule. Of the difficulty of securing this he knows nothing. Hooker’s claim for a divine sanction attaching to usage and expediency is spurned by Milton’s contempt for tradition; confidence in apriori reasoning, and conception of the Bilde as the sole oracle of God, of authority in all fields of thought and experience. His Latin orations and English pamphlets on the issue between parliament and king may be regarded as an enduring contribution to the political thought of the 17th century. Milton’s denunciation of an endowed clergy—a subject on which he found himself at variance with his hero Cromwell—and his claim for complete toleration of all religious differences were the natural outcome of that conception of the purely spiritual character of ecclesiastical authority with which he set out, of his growing dislike of the Presbyterian clergy and their claims to usurp the privileges and influence of their Anglican predecessors, and of the purely individualistic character of his philosophical Christianity. From rejecting ecclesiastical discipline and authority Milton was driven outward by a ruthless logic to the denial that any is due, in religion or ethics, to the collective consciousness of Church or society. Yet without such collective consciousness, however imperfectly developed, is either religion or morality possible? For Milton every man is his own Church; his creed, the product of his own study of the inspired text. The true heretics are those who follow a Church against their conscience and their convictions based on Scripture. Congregations of the unconverted men, meeting to worship together, Milton seems to assume there will always be; but for the service of a clergy, except to teach the young and to exhort the careless, there is no need.

‘If men be not all their life-time under a teacher to learn logic, natural philosophy, ethics or mathematics, which are more difficult—certainly it is not necessary to the attainment of Christian knowledge that men should sit all their life long at the feet of a pulpit divine’ (The likeliest Means to remove Heresies).

Let there be a voluntary, simple, itinerant clergy living by the labour of their hands and the free-will offerings of the richer congregations.

This conception of Christian doctrine as something as definable and demonstrable as mathematics (but easier of comprehension) is crucial for a right apprehension of what Milton was in quest of throughout these years of theological and political polemic—that justification of God’s ways to men which was to be the occasion of the last poem. For a study of that thought as finally articulated we must go to the De Doctrina Christiana. ‘Joannes Milton Anglus Universia Christi Ecclesiae Nominum Omnibus Fideliumque Gentium Proficientibus’ are the dedicatory words of the MS in which was set down the creed of the Church of John Milton, the final result of his resolve to have done with traditions and definitions, councils and assemblies, and to formulate for himself,
from a study of the text of Scripture, a complete and articulate body of divinity and morality.

The creed so formulated is, as might have been anticipated, at variance in essential respects with the creed of orthodox Calvinism and of historical Christianity. Milton's faith might be described as Protestant Christianity accommodated to the spirit of the classical Renaissance, for the prince of this fortieth century stands most resolutely aloof from orthodox Calvinist Protestantism. He is just those in whom the latter seemed to compromise the dignity and liberty of the human mind which the Renaissance had re-asserted.

In this respect Miltonian Arianism, though the most startling, is not the most important of the dogmas which he formulates. Yet it reflects the poet's temperament, and is in harmony with the thought and teaching concerning the divinity of Christ regarded on its psychological side. For the expression of the transcendent worth ascribed to the Christian consciousness to the personality and life of Jesus, it is the intellectual expression of a passionate devotion. Milton's reverence for the 'author and finisher' of the Christian faith is sincere and profound, but it is not animated by the ardent flame of love which throbs in Dante's Divina Commedia or Bunyan's Pilgrim's Progress or Thomas à Kempis' Mirror of the Interior Life, or many of the other works of the great distinctly Christian works of feeling and imagination. A high and an austere monothelitism is of the innermost texture of Milton's soul.

The same stringent, not to say proud, soul is revealed in Milton's refusal to accept the Calvinistic doctrine of predestination and the complete corruption of man's soul after the Fall—his refusal to sacrifice the false freedom, the licentiousness of human nature. Predestination, he declares, extends to election only, not to reprobation. It did not determine man's fall, but the means of his redemption, since God foreknew that of his own free will man would fall. 'For man will hearken to his glowing lies, and easily transgress the sole command of his direction of his obedience: so will fall he and his faithless progeny. Whose fault? Whose but his own?' Ingros, he had of me All he could have; I made him just and right; Sufficient to have stood, though free to fall' (Paradise Lost, Bk. II. 35 ff.).

The redemption purchased by Christ is in the same way freely offered to all, to an elect, predestined number. To all, God gives grace, 'though not in equal measure, yet that for attaining knowledge of the truth and final salvation': 'for I will clear their souls dark What may suffice, and soften story hearts To pray, repent, and bring obedience due, To prayer, repentance, and obedience due, Though ashamed with sincere intent, Mine ear shall not be slow, mine eye not shut' (ib. 188 ff.).Nor—and here again Milton diverged from orthodox Protestantism—is all apprehension and aspiration after good extinguished in man as a result of the Fall. The result, indeed, of Adam's sin is not only guilt but spiritual death, which is 'the obstruction to a great extent of that right reason which enabled man to discern the chief good,' that slavish submission to sin and the devil which constitutes, as it were, the death of the will. Yet the divine image in man's soul is not wholly extinguished:

'the power and efficacy...not only from the wisdom and holiness of many of the heathen, manifested both in words and deeds, but also from the condition of man himself, as the death of man shall be the death of every beast of the earth, v. 6. whom sheddest man's blood by man shall his blood be shed; for in the image of God made He man. Thereby we see what his perfection is in understanding. Ps. xix. 1 the heavens declare the glory of God, which cannot be destroyed. Man retains sufficient liberty at least to engage after righteousness, at least to make him responsible for his sins, though his power is so small as to afford him no subject for boasting.

In accordance with the same high regard for the liberty of the human mind which the Renaissance held, Milton refuses to accept the orthodox distinction of faith and works and the ascription of justification to the former alone. In the text: 'A man is justified by faith without the deeds of the law' (Ro. 3), he insists that stress must be laid on the works 'of the law.'

'For Paul does not say simply that a man is justified without works, but without the works of the law, but 'by faith which worketh by love,' Gal. v. 6. Faith brings forth its own works which may be different from the works of the law. We are justified therefore by faith, but by a living not a dead faith; and that faith alone which acts is accounted living. James ii. 17, 20, 24 (ib. 25). The same spirit makes Milton assert more completely than the Westminster Confession the liberty of the Christian under the new dispensation. It is not the ceremonial law alone that is abolished, but the entire Mosaic law, including the Dealogne (Is. i. 26 f.), the place of which is taken by a higher law 'written not in tables of stone, but in fleshly tables of the heart,' the law of love given in our Lord's words 'Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbour as thyself' (Lk. 10). In the Dealogne is included the Fourth Commandment (Ex. i. 10, ii. 7), on which all the rest is said to be based. In so great a matter, he says, the Mosaic law is laid so much stress. In his first pamphlet Milton had joined in the general condemnation of the Book of Sports and its instigation to 'gaming, juggling, wassailing and mixed dancing' 'this day which God's law, and even our reason, hath consecrated.' But in The Elysian Meads to remove Hervelinges, 'the seventh day is not moral, but a convenient resource of worship in fit season, whether seventh or other number.' Our rigid observance of it is the necessary cause of separation from the Reformed Churches of the Continent. The argument (e.g., of the Westminster Confession) that the Jewish law of the Sabbath had been transferred intact to the first day of the week is invalid (De Doctr. Christ. ii. 7).

'Under the gospel no one day is appointed for divine worship in preference to another, except such as the church may set apart by its own authority for the voluntary assembling of its members, whereas, relinquishing all worldly affairs, we may dedicate ourselves wholly to religious service as far as is consistent with the duties of charity' (ib. 3).

Such are some of the most important divergences of Milton's creed from the orthodox Protestant Churches around him. Of this creed Paradise Lost and Paradise Regained are the poetical setting forth. Like the Divina Commedia, the Paradise Lost is not primarily an epic, but a didactic exposition of a theological creed; and, as all the details of Dante's creed may be discovered in the Summa of Thomas Aquinas, so Milton's conception of God, of Christ, and of the angels and devils is that which he has set down more fully in De Doctrina: and the purpose which Milton declares he has in view—'To justify the ways of God to men'—is theological in purpose. His poem is not an attempt to reconcile the heart and the mind to truths already accepted. It is a restatement in poetical form of these doctrines in such a way as will finally justify God and mankind. 'Therefore thou art inexcusable, O man, whosoever thou art that judgest' (Ro. 2).

Looked at steadily from this point of view, it cannot justly be said that Paradise Lost will bear comparison with the Divina Commedia or the De Doctrina of Lætherius. Take a number of those poems of the high purpose that shines through them, and half their beauty is gone. It is its symbolic, mystic character that gives sublimity to
every detail of Dante's heaven and hell. Few today read Paradise Lost with any desire to discover Milton's creed, or, if they do, will accept with any conviction, any such willing suspension of criticism as it is the function of poetry to begot, his justification of God's way to men, this truly terrible and harrowing rendering of Paul's 'as in Adam all died.' The time is past in which Milton's poem was read as if it were the Bible itself, the poetic presentation of those momentous events as if they actually occurred, to his judgment of the justice or injustice of which was forbidden. Now we can see that the epic form and the spiritual intention of the poem are not capable of being harmonized. The poem is held together from the first line to the last by the miracle of Milton's style—a veritable 'cloth of gold' encrusted with all the barbaric spoil of his multifarious learning—and by the miracle of his verse harmonies. But, when we look beneath this dazzling surface, we see that the unity is not so complete as we imagined, that this magnificent epic story is troubled and rendered abortive by the cramping theological purpose. All that is greatest in Paradise Lost is the product of Milton's poetic genius, mythopoeic faculty working as freely on the seamy material of Biblical record and ecclesiastical tradition as did Homer or any primitive poet when shaping and embroidering popular myths. But the result has nothing in it that is Christian. The splendid scenes of the opening books—Satan and his companions debating in hell, Satan voyaging through chaos and descending through the heavenly bodies in the first freshness of their creation, the scenes in Eden, the war in heaven—these might be fragments from the primitive myths of some forgotten religion, and perhaps nowadays we should read them with greater and less troubled interest if we might do so without the necessity of a reference to our own religious notions and feelings, without having to ask ourselves 'Is this our God? Is this the Second Person of the Trinity?' For, as Milton approaches his proper theme, in the theological disposition in heaven, in the story of the Temptation and what follows, the poet can no longer feel, despite frequent beauties, a steady subsidence of the creative power of the opening; the didactic displaces the epic poem. The magnificent promise of the opening books seems fulfilled. The great characters that were brought upon the stage achieve nothing. Even the Satan of the Temptation strikes us as not quite the Satan of the first and second books, of whose dauntless, passionate soul we should have expected some action larger, more magnificent, than this rather over-elaborately treated temptation of a not too wise woman. The simple Bible story will not adapt itself to the classical epic treatment. The large, creative movement of the earlier episodes is lost as the poet feels himself confined by the original story and the didactic purpose.

The harmonizing of story and didactic is better achieved in Paradise Regained, Milton's epic on the 'brief model' of the book of Job; but it is so because the didactic and argumentative strain is, as in Job, dominant throughout. The poem is a finely wrought presentation of Milton's ideal Christian virtues, obedience, temperance, and the scorn of worldly glory. But, beautiful poem as it is, austere in spirit, rich in character, there is none of the wonderful creative power of the great epics and characters in the longer poem; and its austerity of tone marks its limits as a religious poem, for obe'nce, temperance, and unworldliness are Christian virtues only as they flow from or lead to charity, and but little of the radiance of Christian love illumines and warms this severe and stately poem.

The passion which sleeps under Milton's austere

lines flowed forth like a flood of lava in the work which closed his career. Samson Agonistes has the rare interest and beauty of the personal passages in Lycidas and Paradise Lost. Unfettered by Scriptural details or didactic purpose, Milton pours into the artificial mould of classical tragedy all the passionate feeling with which he reviewed the course of his own life and the history of the cause with which he had identified himself so wholeheartedly. The never-closed wound of his first marriage, the loss of his sight, the execrable justice or injustice of which was forbidden. Now we can see that the epic form and the spiritual intention of the poem are not capable of being harmonized. The poem is held together from the first line to the last by the miracle of Milton's style—a veritable 'cloth of gold' encrusted with all the barbaric spoil of his multifarious learning—and by the miracle of his verse harmonies. But, when we look beneath this dazzling surface, we see that the unity is not so complete as we imagined, that this magnificent epic story is troubled and rendered abortive by the cramping theological purpose. All that is greatest in Paradise Lost is the product of Milton's poetic genius, mythopoeic faculty working as freely on the seamy material of Biblical record and ecclesiastical tradition as did Homer or any primitive poet when shaping and embroidering popular myths. But the result has nothing in it that is Christian. The splendid scenes of the opening books—Satan and his companions debating in hell, Satan voyaging through chaos and descending through the heavenly bodies in the first freshness of their creation, the scenes in Eden, the war in heaven—these might be fragments from the primitive myths of some forgotten religion, and perhaps nowadays we should read them with greater and less troubled interest if we might do so without the necessity of a reference to our own religious notions and feelings, without having to ask ourselves 'Is this our God? Is this the Second Person of the Trinity?' For, as Milton approaches his proper theme, in the theological disposition in heaven, in the story of the Temptation and what follows, the poet can no longer feel, despite frequent beauties, a steady subsidence of the creative power of the opening; the didactic displaces the epic poem. The magnificent promise of the opening books seems fulfilled. The great characters that were brought upon the stage achieve nothing. Even the Satan of the Temptation strikes us as not quite the Satan of the first and second books, of whose dauntless, passionate soul we should have expected some action larger, more magnificent, than this rather over-elaborately treated temptation of a not too wise woman. The simple Bible story will not adapt itself to the classical epic treatment. The large, creative movement of the earlier episodes is lost as the poet feels himself confined by the original story and the didactic purpose.

The harmonizing of story and didactic is better achieved in Paradise Regained, Milton's epic on the 'brief model' of the book of Job; but it is so because the didactic and argumentative strain is, as in Job, dominant throughout. The poem is a finely wrought presentation of Milton's ideal Christian virtues, obedience, temperance, and the scorn of worldly glory. But, beautiful poem as it is, austere in spirit, rich in character, there is none of the wonderful creative power of the great epics and characters in the longer poem; and its austerity of tone marks its limits as a religious poem, for obe'nce, temperance, and unworldliness are Christian virtues only as they flow from or lead to charity, and but little of the radiance of Christian love illumines and warms this severe and stately poem.

Of Belial down with insolence and wise—
all round utterance in the severely moulded lines and choruses of this tragedy, not a lament, as Treitschke called it, but the last utterance of Milton's indomitable will, that unshakable self-confidence which he called faith in God—a fitting close to the career of the loftiest soul among English poets:

 Samson hath quit himself
Like Samson, and heroically hath finished
A life heroic (Samson Agonistes, 1706 ff.).

Of Milton's supreme greatness as a poet there is no question. In sustained loftiness of soul, elaborate magnificence of language, and mastery of varied cadences he has no superior. His works have become the touchstone of poetic taste, for, unless a reader has an ear and taste for the technique and music of poetry, he may not find much to attract him in Milton; if he does, he will find endless delight. To the question whether he is also to be considered a great Christian poet a more modified answer must be given. A study of his articulated creed bears out the impression communicated by his poetry that Milton's was not an anima naturaliter Christiana. His was rather the soul of an ancient Stoic, blended with that of a Jewish prophet, which had accepted with conviction the Christian doctrine of sin and redemption.

The spirit of his poetry wants two of the most distinctively Christian notes—humility and love. Milton's soul was as proud as Dante's; he was less conscious of the fall of man. It has the presence in all his poetry of the note of passionate self-surrender to the love of Christ that separates him, not only from Dante, but from a Chaucer like Bussy, an Anglican like Herbert, a Roman like Crashaw and Vaughan and his contemporaries. It was on another side that Christianity claimed Milton. His work begins and ends in the idea of liberty and its correlative duty, human freedom and the responsibility that it carries with it of living.

As ever in the great Taskmaster's eye.

God is, for Milton, indeed the great Taskmaster, but he rejoices in the tasks; 'the victories of the conscience are gained by the commanding charm which all the severe and restrictive virtues bring for him' (Emerson, in North Amer. Review, xlvi. [1838] 65); for Milton freedom is obedience in the highest and hardest tasks. To restore this freedom is the great service of Christianity, the fruit of Christ's perfect obedience and the regenerating work of the Holy Spirit. Christianity alone is perfect liberty, a liberty that no human authority, Church or State, may limit. Milton, with all his defects, is an ethical and religious poet because of the conviction which his poetry expresses that, in the words of a recent French writer,

'God is for Milton the all in all of life. There is no more terrible evil or sin than to have resisted the more sublime mystery than the Redemption which reconciles us to God' (P. Chauvet, La Religion de Milton, Paris, 1899, p. 241). All his acts and writings were inspired by his desire that the Kingdom of God might come on
MIMAMSA

The Mimamsa in Sanskrit signifies 'investigation', 'explanation'. The word is usually employed as the title of one of the six systems of philosophy recognized as orthodox by the Brâhmans. The Mimamsa system is most closely related to the Vedânta, and in them both the subjects of ancient Indian speculation which meet us in the Brâhmanas and Upanisads are methodically developed.

The two systems form a connected whole in the sense that the Mimamsa comprises the ritualistic doctrine of works, the Vedânta the doctrine of salvation by knowledge. Each, while limited to its own sphere, makes reference also to the other, so that it is impossible to doubt that they received a literary form at the same time. It is due chiefly to this close connexion with the Vedânta, and in the second place probably to the form in which it has been cast, that the Mimamsa has a place in India among the philosophical systems; for with philosophy its particular subject-matter has nothing to do.

Mimamsa as a name of the ritualistic system is an abbreviation of Purâna- or Karava-mimamsa, 'first explanation', or 'explanation of the function of work'. These names are explained by the connexion of the system with the Vedânta, which on its side is termed Upanâya- or Brahma-mimamsa, 'second explanation' or 'explanation of the All-Soul', also Sûtrakara-mimamsa, 'explanation of the incarnation' (of Brahman). The oldest and most important text-book of the Mimamsa is the Jaiminiya-dharmasastra of Jaimini. H. Jacobi places the composition of this work (and the composed) by the union of the Vedanta- and Brahma-sutras between c. A.D. 200 and 450 (JAOS xxxi. [1911] f.f.).

The teaching of the Mimamsa is to give rules for the correct interpretation of the Vedânta texts whose subject is the Brâhmanical ritual. Since these texts contain in great parts an imperfect and obscure description of the ceremonies, and, besides, are scattered at every point with speculations on the mystical meaning of the separate acts and on the implementation, the assistance of rules was, in fact, absolutely necessary for the sacrificer, who believed that he had to dread the most serious consequences from the least mistake in ceremonial observance. The Mimamsa offers a solution of all doubts which might present themselves with regard to the details of the sacrifice, and also proceeds to remove the discrepancies which are actually found in the Vedas texts. Yet, however, according to the view of the Mimamsa, they are in every instance only apparent. The system, moreover, discusses at the same time the rewards which are offered in the sacrifice; so that the Mimamsa is a compendium of the special theology of the Brâhmanas.

The Mimamsa does not recognize the existence of God. Nevertheless this fact interferes as little here as in the Sâkhya and the other systems with belief in the supernatural beings of the popular Indian faith. As we ask on what authority the instruction given with regard to the sacrifices and its consequences rests, the Mimamsa answers that the Veda needs no authority, but is eternal and uncreated; and that its revelation concerns only things existing from eternity, and self-evident. This conviction is in India maintained with reason and truth. It is opposed to the entire personal wishes, for the most part quite worldly, which were continually presented to the gods by the authors of the ancient Vedas. In reality the teachers of the Mimamsa associate the world with the Vedas in such ancient hymns as with the ritualistic texts of the second period of Vedântic literature, in which the individuality of the authors is not so prominent.

It has been already remarked that the form in which the Mimamsa is presented may have contributed towards its being regarded, in spite of its essentially unphilosophical character, as a system on a level with the other five systems of Indian philosophy. For they are here classified under definite categories, and every subject of investigation is explained according to a method which represents already a high degree of logical skill in arrangement. This methodical and established scheme, which the Mimamsa also adopt as their standard, contains the following five divisions: (a) the proposition, (b) the doubt as to its correctness, (c) the erroneous method of treating the proposition, (d) the refutation of the erroneous method by the true argument, (e) the result of the investigation. Occasionally also, for the purpose of establishing the special doctrines of the Mimamsa, questions of philosophical import are discussed. The subject that sounds and therefore words are eternal, and likewise the connexion of words with their meaning. On the basis of this theory the Mimamsa teaches that the relation of word and meaning is not dependent on general agreement, but that the meaning is naturally inherent in the word. The Mimamsa was compelled to propound this theory in order to protect the Veda from the suspicion of fallibility which attaches to all human works. If the Vedas were to be regarded not as a collection of books composed or inspired, but as something uncreated, existing independently from eternity, then the connexion of the words of which the Veda is composed, with the sounds, could not be the result of human activity—i.e., such a connexion would hold sway only within the narrow horizon of a school to which one language alone was known.

MINÆANS. See ARANES (ANCIENT), SABÆANS.

MIND.—Questions of empirical psychology and of the relations between body and mind are discussed in other articles (e.g., BODY, BODY AND MIND, BRAIN AND MIND). The present article must be limited to a discussion of the metaphysical theories of mind. Owing to the peculiar position which these problems occupy in philosophy, as well as in the study of ethical and religious problems, it is advisable, first of all, to make an exposition of the epistemological problems which especially confront the student of the nature of mind; and, in order to do this, we must, in view of numerous traditional complications which beset the theory of the knowledge of mind, open our discussion with some general statements concerning the nature of problems of knowledge.

The history of epistemology has been dominated by a well-known contrast between two kinds of knowledge, namely, perceptual knowledge and conceptual knowledge. This dual contrast seems insufficient to supply us with a basis for a really adequate classification of the fundamental types of knowledge. It is proposed in the present article to base the whole discussion upon a threefold classification of knowledge. Having begun with this threefold classification and briefly illustrated it, shall go on to apply it to the special problems which we have to face in dealing with mind. We shall then consider in some detail what kinds of mental facts correspond to the three different kinds of knowledge thus defined. In conclusion, we shall draw some problems of the philosophy of mind in the light of the previous discussion.

1. Perception and conception as fundamental cognitive processes.—A careful study of the processes of knowledge, whether these occur in the work of scientists or in the efforts of common sense to obtain knowledge, shows us three, and only three, fundamental processes which are present in every developed cognitive activity and interwoven in more or less complicated fashion. Of these two have been recognized throughout the history of science and philosophy, and their familiar contrast has dominated epistemology. The third, although familiar and often more or less implicitly mentioned, was first distinguished with sharpness, for epistemological purposes, by the American logician, Charles Peirce. We shall speak first of the two well-known types of cognitive process, perception and conception.

The name ‘perception’ is used in psychology with special reference to the perceptions of the various senses. We are here interested only in the most general characteristics of perception. William James has used, for what is here called perception, the term ‘knowledge of acquaintance.’ He distinguishes ‘knowledge of acquaintance’ from ‘knowledge about.’ In the simplest possible case one who listens to music has ‘knowledge of acquaintance’ with the music; the musician who listens to his professional knowledge has only ‘knowledge of acquaintance,’ but also ‘knowledge about;’ he recognizes what changes of key take place and what rules of harmony are illustrated. A deaf man who has learned about the nature of music through other people, in so far as they can tell him about it, but who has never heard music, has no ‘knowledge of acquaintance,’ but is limited to ‘knowledge about.’ ‘Knowledge of acquaintance’ is also sometimes called ‘immediate knowledge.’ In the actual cognitive process of the individual human being it never occurs quite alone, since, when we know something perceptually or by acquaintance, we also always have more or less ‘mediate’ knowledge, i.e., one who listens to music, but who also considers the person of the artist, the relation of the music to the programme, the name of the composer, or the place of this experience in his own life, has in his knowledge that which is more than the immediate hearing of the music.

Knowledge about includes, on occasion, mental processes which may vary very widely and which may be mingled with ‘knowledge of acquaintance’ in ways which are far too complex to analyze here. But ‘knowledge about’ is especially opposed to ‘knowledge of acquaintance.’ In one class of cases which need to be emphasized through the use of a special name. We may name that class by calling the kind of knowledge involved in it the name already used, ‘conceptual knowledge.’ Conceptual knowledge is knowledge of universals, of relations, or of other such ‘abstract’ objects. The Socratic-Platonic theory of knowledge called attention from its very beginning to universals and relations, and consequently made this type of knowledge specially prominent.

No doubt, even if one is disposed to cling to this merely dual classification of knowledge, one may well question whether all knowledge which is not of the ‘knowledge of acquaintance’ is of the grade of conceptual knowledge. For the dual classification of knowledge about concerning which we should all hesitate to say that it is knowledge of universals. Socrates himself, in his effort to define the knowledge of universals, met at the start with the fact that much of our knowledge is confused and inarticulate. But if, for the moment, we neglect the intermediate cognitive states in which we or less mingle ‘knowledge of acquaintance’ and conceptual knowledge, or possess conceptual knowledge in imperfect degree, we may readily admit that this traditional dual classification of cognitive states is sufficient to call attention to a distinction which is of utmost importance, both for empirical science and for metaphysics.

While the distinction between perceptual and conceptual knowledge is of great importance in determining the distinction between the deductive and the inductive methods of sciences, the classification of these two modes of cognition does not of itself suffice to determine what constitutes the difference between inductive and deductive science. When we have clear and accurate conceptual knowledge, we are in general prepared to use scientific processes that in the case of further development will involve deductive methods. Thus, in particular, a conceptual knowledge of universals leads, in the mathematical sciences, to the assertion of propositions. Some of these propositions may appear at the outset of a science as axioms. Whether accepted as necessarily true or used merely as hypotheses, these propositions, either alone or in combination, may, and in the mathematical sciences do, form the starting-point for a system of rational deductions. The type of knowledge involved in this deductive process will be, in the main, the conceptual type. In what sense and to what degree ‘knowledge of acquaintance’ enters into a process of mathematical reasoning we have not here to consider. All will admit that the sort of knowledge which dominates such a deductive process is ‘abstract,’ is concerned in reaching results which are true of the propositions that themselves form the premises of the deduction. And so our knowledge concerning numbers, the operations of a mathematical science, and similar cases for exceptionally good instances of what characterizes conceptual knowledge in its exact and developed form.

In the inductive use of scientific methods we find a more complicated union of the perceptual
and the conceptual types of knowledge. When a hypothesis, such as Newton's formula for gravitation, or Galileo's hypothesis concerning the laws of falling bodies, is stated, the type of knowledge involved in formulating and in understanding the hypothesis is prevailingly conceptual. When the hypothesis is tested by comparing the predictions with experience, the test involves appealing at some point to perceptual knowledge, or 'knowledge of acquaintance.' The processes of experiment used in an inductive science might seem to be typical cases of processes not involving perceptual knowledge. And experiments unquestionably do involve such knowledge. But an experiment reveals a truth, because it brings concepts and percepts into some sort of active synthesis. Upon such active synthesis depends the process of validation which is used as the basis for the definition of truth used by recent pragmatists (see ERROR AND TRUTH).

In so far as we insist upon this usual classification of fundamental processes of cognition, the questions which most come to our notice, regarding both knowledge and its objects, concern (1) the relative value of these two cognitive processes, and (2) the degree to which, in our actual cognitive processes, perception in its various processes (either we may ascribe to beings of some higher order than ours), the two can ever be separated. These two questions have proved especially momentous for the theory both of knowledge and of reality.

The relative value of the two fundamental types of cognition, Plato, as is well known, held that conceptual knowledge is the ideal type, the right result an expression of reason. Conceptual knowledge gives illusion or appearance—such is, on the whole, the Platonic doctrine. In recent discussion the pragmatists—and still more emphatically Bergson—have insisted upon the relative superiority of the perceptual type of knowledge. The familiar expression of this view is the thesis of recent pragmatism that conceptual knowledge has only a sort of 'credit value'; perceptual knowledge furnishes the 'cash of experience'; perceptions are 'bank notes'; perceptions, and perceptions only, are 'cash.' The statement of Bergson goes further, and declares that, if we had unlimited perceptual knowledge, i.e. 'knowledge of acquaintance,' and no imperfections, then conceptions could have no possible interest for us as cognitive beings. In other words, we use concepts, i.e., we seek for a knowledge of universals, only when our perceptions in some way fail us. Conceptual knowledge is in its very essence a substitute for failing perceptual knowledge. The opposition between Plato and Bergson regarding this estimate of the relative significance and truthfulness of the two kinds of cognitive processes is thus characteristic of the contrast which is here in question. Of course all the philosophers admit that, in practice, our knowledge makes use of, and from moment to moment consists in, a union which involves both conceptual and perceptual processes.

(3) On the question whether the two foregoing types of knowledge, however closely linked in our mental processes, or whatever may be the case, can be separated—i.e., whether a knowledge by 'pure reason' is possible on the one hand, or a knowledge of 'pure experience' is ever attainable on the other—they hold different conceptions.

2. Interpretation through comparison of ideas as a third fundamental cognitive process. It is an extraordinary example of a failure to reflect in a thoroughgoing way upon the process of knowledge that until recently the third type of cognitive process to which we must next refer has been neglected, although every one is constantly engaged in using and in exemplifying it.

When a man understands a spoken or written word or sentence, what he perceives is not the word or expression of the sign or meaning, which in general belongs to the mind of some fellow-man. When this sign or expression is understood by the one who hears or who reads, what is made present to the consciousness of the reader is a combination of perceptual or conceptual knowledge that chances to be in question. But if any one cries 'Fire!', the sort of knowledge which takes place in my mind when I hear and understand this cry essentially differs from that in which I regard my fellow's cry as a sign or expression of the fact either that he himself sees a fire or that he believes that there is a fire, or that, at the very least, he intends me to understand him as asserting that there is a fire, or as taking an interest of his own in what he calls a fire. Thus, while I cannot understand my fellow's cry unless I hear it, unless I have at least some perceptual knowledge, and while I equally shall not have a 'knowledge about' the nature of fire, and so a 'knowledge about' the object to which the cry refers, unless I am possessed of something which tends to be conceptual knowledge of his object, and in my knowledge of the possible meaning of his idea, consists neither in the percept of the sign nor in a concept of its object which the sign arouses, but in my interpretation of the sign as an indication of an idea which is distinct from any idea of mine, and which I refer to a mind not my own, or in some wise distinct from mine.

It is to be noted that, however we reach the belief in the existence of minds distinct from our own, we do not regard these minds, at least in ordinary conditions, as objects of our own perceptual knowledge. For the very motives, whatever they are, which lead me to regard my perceptions as my own even thereby lead me to regard my fellows' perceptions as never present within my own field of awareness. My knowledge of the nature of my own physical pains, of the colours that I see, or of the sounds that I hear is knowledge that may be called, in general terms, perceptual. That is, these are objects with at least in ideal and in a largely different metaphysical context) for Spinoza, it is at least in possible for philosophy, or for the individual philosopher, to attain a purely intellectual insight into the realm of 'ideas' or into the nature of the 'substance.' For the same forms of mysticism, as well as for theories such as the one set forth in the Kritik der reinen Erfahrung (Leipzig, 1888-90) of K. H. L. Avenarius, a mental transformation may be brought about through a process which involves no scientific correction and gradual suppression of erroneous intellectual illusion; and, at the limit of this process, reality becomes immediately and perceptually known, without confusion through abstractions.

The 'radical empiricism' of James's later essays makes use of a theory of knowledge which attempts, as far as possible, to report, apart from conceptual constructions, the data of pure experience.
MIND

characterizing our human world. In brief, man's knowledge, both of himself and of his neighbour, is a knowledge which involves an interpretation of signs. This thesis, very ably maintained by Peirce in some of his early essays, involves consequences which are at once familiar and momentous for the theory of knowledge.

The type of knowledge involved whenever signs are interpreted is a fundamental type of knowledge which cannot be represented either to perception or to consciousness in the most manifold ways, and will appear somewhat more clearly through the illustrations given below. It may be useful to point out here that, while all our interpretations, like all our perceptual and conceptual knowledge, are subject to the most manifold illusions in detail, it still remains the case that, whenever one is led to attempt, propose, or believe an interpretation of a sign, he has actually become aware, at the moment of his interpretation, that there is present in the word or sign, in some significant idea, plan, purpose, undertaking, or intent, which, at the moment when he discovers its presence, is from his point of view not identical with whatever idea or meaning is then his own.

If somebody speaking to me uses words which I had not intended to use, I may misunderstand the words, or I may not understand them at all. But, in so far as I take these words to be the expression of a meaning, this meaning is one that I just cannot find to be my own—i.e., these words do not express my ideas, in so far as these ideas are by me interpreted as my own. The cognitive process here in question is one at least distinguishes, that part of the objects, ideas, or meanings in question into two distinct regions, provinces, or modes of mental activity. One of these regions is interpreted at the moment as 'my own present idea,' 'my own purpose,' and so on; the other is interpreted as 'some meaning not just now my own,' or as 'some idea or meaning that was once my own'—i.e., as 'my own past idea,' or as 'my neighbour's meaning,' or perhaps as 'a meaning that belongs to you and your world,' or, if I am religiously minded, 'to God.' In each case the interpretation that is asserted may prove to be a wrong one. Interpretation is therefore fallible. So, too, is conception, when viewed as a cognitive process, and so is person character as 'acquaintance with' is no guarantee of its accuracy, whether mystical apprehension or ordinary observation is in question. The fact for our present purpose is not that our human knowledge is at any point infallible, but that there is the one type of cognition here defined as interpretation. Interpretation is the knowledge of the meaning of a sign. Such a knowledge is not a merely immediate apprehension, nor yet a merely conceptual process; it is the only social process whereby the knower at once distinguishes himself, with his own meanings, ideas, and expressions, from other selves, and at the same time knows that these selves have their contrasted meanings, while one of them at the moment is expressing its meaning to the other. Knowledge by interpretation is, therefore, in its essence neither mere 'acquaintance' nor yet 'knowledge about.'

There is another way of expressing the distinction of these three kinds of knowledge which proves useful for many purposes. Knowledge of the first kind, 'knowledge of acquaintance,' may for certain purposes be characterized as 'appreciation.' Conceptual knowledge, owing to the means often employed in making a concept explicit, may be for many purposes called 'description.' In each case, as will be noted, the main character of the
type of knowledge in question can be designated by a single term, namely, appreciation or description, just as in the foregoing these two types of knowledge have been designated each by a single term, acquaintance in one case and conception in the other.

In designating the instances of interpretation it is well to note that every interpretation has three aspects. For the one who interprets it is an expression of his own meaning. With reference to the object, i.e. to the sign, to the sign itself, to the fact that a sign this is the interpretation is the reading or rendering of the meaning of this mind by another mind. In other words, every interpretation has so far a dual aspect: it at once brings two minds into quasi-social contact and distinguishes between them or contrasts them. In the light of this contrast and with reference to the direction in which it is read, the two minds are known each in the light of the other. As has already been said, the two minds in question may be related as a man's own past self is related to his present or future self. And in fact, as Peirce has pointed out, every act of interpretation has also a triadic character. For the cognitive act involves meaning, an expressive act, and what one may call a directed 'sense.' In general, when an interpretation takes place, there is an act $B$ wherein a mental process $A$ is interpreted, and $B$ is rendered to a third mind. That the whole process can take place may be ascertained. That some larger point of view, is also a single mind with a threefold process going on within it has already been pointed out. Thus, when a man reflects on his plans, insights, and intentions, he may express his present self to his future self, the process being well exemplified when a man reminds himself of his own thoughts and purposes by consulting a memorandum made yesterday for the sake of guiding his acts to-day. Every explicit process involving self-consciousness, involving a definite sequence of plans of action, and dealing with long stretches of time, has this threefold character. The present self interprets the past self to the future self; or some generally still more explicit social process takes place whereby one self or quasi-self has its meaning stated by an interpreter for the sake of some third self.

Thus, in brief, knowledge by interpretation is (1) an expression (by an 'interpreter') of (2) the idea or meaning of (3) other mind. Now the idea, (2), is addressed to some third mind, to which the interpreter thus reads or construes the sign.

3. Self-interpretation, comparison of one's own ideas, and knowledge of time. — When such interpretation goes on within the mind of an individual man, it constitutes the very process whereby, as is sometimes said, he 'finds himself,' 'comes to himself,' 'directs himself,' or 'gets his bearings,' especially with reference to time, present, past, and future. In the inner life of an individual man this third mode of cognition, therefore, appears at once in its most fundamental and simplest form as the cognitive process whose being consists in a comparison of the man's ideas compared and belonging in one sense to the 'same self'; but they differ as the ideas of 'past self' and 'future self'; or, in various other ways, they belong to different 'quasi-minds.'

Thus the process is, indeed, irreducible to pure perception, to pure conception, or to that active synthesis of the two which James has in mind when he uses the term 'idea,' readily becomes manifest what takes place when two 'ideas' are 'compared,' whether these two belong to men who are 'different individuals' or to the past, present, or future selves of one who is, from another point of view, the same man.

An 'idea,' when the term is used in the sense which recent pragmatism has made familiar and prominent, is not a mere perception, nor a mere collection or synthesis of various perceptions, images, and other immediate data; nor yet is it a mere conception, whether simple or complex. It is, for James and his allies, a 'leading,' an 'active tendency,' a 'fulfillment of purpose,' or an effort towards such' and such a result, a situation, a 'sitting,' a situation, a 'sitting,' a situation, an intention. The term 'idea' has, in Bergson's phrase, its 'credit value.' Eventual sense-data may furnish the corresponding 'cash.' The idea is the seeking for this 'cash.' When the wanderer in the woods decides to adopt the idea that a certain path leads me home,' he makes an active synthesis of his concept of home and of his present sense-data. This active synthesis, expressed in his idea, 'I am homeward bound,' is a 'leading,' which, if he is successful, will result in furnishing to his mind the perceptions of the home which constitute the goal of his quest. This, then, is what is meant by the term 'idea' in that one of its senses which pragmatism has recently most emphasized.

In this way we may illustrate how the cognitive process possesses the two forms or aspects which have usually been regarded as the only fundamentally distinct aspects of knowledge: perception and conception. It is just this active union of these two which constitutes the 'idea' as defined by recent pragmatism. But we do not thus illustrate an aspect of cognition which is equally pervasive and significant, and which consists in the comparison of ideas. It is just this aspect of cognition upon which our present theory most insists. For by what process does the wanderer, when he reaches home, recognize that this home which he finds is the very home that he had sought? Not by the mere presence of a 'home feeling,' but by a perception which, merely at the moment of home-coming, pays the 'cash' then required by some then present concept of home, but by a process involving a comparison of his ideas about his home, at the moment he reaches home, with his memories of what his ideas were while he was lost in the woods and while he still inquired or sought the way home.

In order to consider what such a comparison essentially involves, it is not necessary to suppose that the act of comparison must take place in a form involving any high grade of self-consciousness, or depending upon a previous formation of an elaborate system of ideas about the self, the past, and similar objects. The essentially important fact is that whoever begins, even in the most rudimentary way, to take account of what seems to him as if it were his own past, whoever is even vaguely aware that what he has been seeking is the very object which now he finds, is not merely perceiving the present, and is not conceiving the past, and is not simply becoming aware of his present successes and disappointments. It is that he is comparing his ideas of present success or failure with his ideas of his past efforts. This comparison is essentially an interpretation of a portion of his own past life, as he remembers that life, taking one of his present successes or failures, as he now experiences them. A third cognitive process is then involved. This interpretation comparest at least two ideas: (1) the past idea or 'leading' (e.g., the past search for home by the path through the woods); (2) the present success.
or failure (e.g., the reaching home itself, or getting to the close of some stage of the wandering); and, in making this comparison, this interpretation estimates the result, perhaps in the light of one's idea of one's own future ('and henceforth I need search no more!'), or perhaps in the light of one's idea of one's entire self ('I have succeeded,' or 'I am a knower of the truth,' or 'So much of the world and of my own conscience') can also be made upon every such act of comparing two ideas and interpreting one in the light of the other.

(1) Unless such processes of comparing ideas were part of some regular and well-worked out and useful and complete scheme, it took place, we could never make even a beginning in forming a coherent view of our own past and future, of our own selves as individuals, or of selves not our own. Our ideas of the various aspects of our present mind will depend upon an explicit process of comparing ideas. The simplest comparison of ideas—which is the case upon which the recent pragmatism lays so much stress—the comparison upon which the very 'truth' or 'success' of the comparison, namely, which is expressed by saying, 'What I sought at a past moment was the very same as what, at the present moment, I now find,' is an instance of an act of interpretation, is not reducible to the two other types of knowledge.

(2) All such processes of comparison are equally characteristic of the cognitive activity which goes on during our explicitly and literally social life and the work of his own is needed when we think about our relations to our own individual past and future. In brief, neither the individual Ego nor the Alter of the literat social life, neither past nor future time can be known to us through any process which is not a reduction essentially in terms of perception, of conception, and of the ideal 'leadings' of the pragmatists. The self, the neighbour, the past, the future, and the temporal order in general become known to us through a third stage of cognition which consists of a comparison of ideas—a process wherein some self, or quasi-self, or idea interprets another idea, by means of a comparison which, in general, has reference to, and is more or less explicitly addressed to, some other idea.

4. The relation of the three cognitive processes to our knowledge that various minds exist and to our views about what sorts of beings minds are.—The use of the foregoing classification of the types of cognition gives us an immediate sense of the importance as soon as we turn to a brief outline of some of the principal theories about the nature of mind which have played a part in the history of philosophy. Nowhere does the theory of knowledge show itself of more importance in preparing the way for an understanding of metaphysical problems than in the case of the metaphysics of mind. No attentive student of the problem of mind can easily fail to at least to feel, even if he does not very explicitly define his feeling, that in dealing with the philosophy of mind both common sense and the philosophers are accustomed to combine, sometimes in a very confused way, a mixture of different hypotheses about different kinds of beings, while the ideas that are proposed with regard to the nature of these beings are of profoundly different types.

Thus it may be a question for common sense or for a given metaphysical doctrine as to whether or not there exists a so-called soul. Now it makes a great difference for the theory of the soul whether the kind of soul which is in question is viewed as in existence an object of immediate acquaintance, or as an object of a possible adequate conception, or as an object whose being consists in the fact that it is to be interpreted thus or so. Unless the three kinds of cognition are clearly distinguished, the one who advances or tests a given theory of the soul does so without observing whether he himself is speaking of the soul as a possible perception, or is treating it as if it were, in its immest nature, an object which can be known only through some adequate conception. To take two common and explicit facts that he is speaking now in perceptual and now in conceptual terms of the mind or soul which his theory asserts to be real, he may then attempt to solve his difficulties in the way which recent pragmatism has emphasized, i.e., he may declare that his doctrine is of necessity a 'working hypothesis' about the nature of the soul, that it is, of course, in part stated in conceptual terms, but that the concepts are true only in so far as they prove to be more directly verifiable in terms of immediate perceptions.

Yet nowhere does recent pragmatism, in the form in which William James left it, more display its inadequacy as a theory of knowledge than in the case where it is applied to an effort to define the truth of hypotheses concerning mind, or to test such truth. For, as a fact, nobody who clearly distinguishes his neighbour's individual mind from his own expects, nor can he consistently, that his neighbour's mental states, or that anything which essentially belongs to the inner life of the individual mind of his neighbour, can ever become, under any circumstances, a direct perception of his own. If, in fact, if my neighbour's physical pains ever became mine, I should know them by immediate acquaintance only in so far as they were mine and not my neighbour's. And the same holds true of anything else which is supposed to be a fact essentially belonging to the individual mind of my neighbour. At best I can hope, with greater or less probability, to interpret correctly the meaning, the plan, or some other inner idea of the mind of my neighbour; but I cannot hope to go beyond such correct interpretation so far as to perceive my neighbour's mental states. For, if my neighbour's states became the immediate objects of my own acquaintance, my neighbour and I would so far simply melt together, like drops in the ocean or small pools in a greater pool. My acquaintance with my neighbour's states of mind would be a knowledge neither of himself as he is in distinction from me nor of myself as I am in distinction from him. For this general reason 'working hypothesis' is appropriate, which belongs to the mind of my neighbour can never be 'converted into the cash of experience.' My neighbour's mind is never a verifiable object of immediate acquaintance, precisely as it is never a veritable object of universal ideas. The one sort of knowledge for which recent pragmatism has no kind of place whatever is a knowledge, statable in pragmatistic terms, concerning my neighbour's mind.

James himself follows a well-known and ancient philosophical tradition by declaring that our assertion of the existence of the existence of our neighbour's mind depends upon the argument from analogy. Because of similar hypothesized experiences, which belong to the mind of my neighbour can never be 'converted into the cash of experience.' My neighbour's mind is never a verifiable object of immediate acquaintance, precisely as it is never a veritable object of universal ideas. The one sort of knowledge for which recent pragmatism has no kind of place whatever is a knowledge, statable in pragmatistic terms, concerning my neighbour's mind.

James himself follows a well-known and ancient philosophical tradition by declaring that our assertion of the existence of the existence of our neighbour's mind depends upon the argument from analogy. Because of similar hypothesized experiences, which belong to the mind of my neighbour can never be 'converted into the cash of experience.' My neighbour's mind is never a verifiable object of immediate acquaintance, precisely as it is never a veritable object of universal ideas. The one sort of knowledge for which recent pragmatism has no kind of place whatever is a knowledge, statable in pragmatistic terms, concerning my neighbour's mind.
its conceptual constructions are capable of immediate verification in terms of certain facts of immediate experience. But my neighbour's immediate states of mind can never become for me objects of immediate acquaintance, unless they become my states of mind and not his, precisely in so far as he and I are distinct selves.

The hypothesis that our mental lives are similar may thus be suggested by analogy or may be stated in terms of analogy; but the analogy in question is essentially unverifiable in the required terms of immediate perceptions. For my neighbour can immediately perceive only his own states, while I, in so far as I am not my neighbour, can verify only my own states. From the point of view, then, of the argument from analogy, my neighbour, in observing his own states, does not verify my hypothesis in the sense in which my hypothesis about him demands verification, namely, in terms of the experience of the self who makes the hypothesis. From this point of view, the problem of the mind of my neighbour remains hopeless.

It is possible, of course, to say of the foregoing argument from analogy what is also said both by common sense and by science, on the basis of a theory of truth which is in its essence conceptual and realistic. One can, of course, assert that in actual fact the mental states of my neighbour really exist and are in a certain relation which makes it true to say that they are analogous to mine. This real relation may be asserted to be much a fact as any other fact in the universe. If this fact of the real analogy is granted, then it may be declared that my hypothesis to the effect that my neighbour's mental states of mind are actually true. This, however, is precisely the type of truth which William James's pragmatism undertakes to reject.

A very different appearance is assumed by the whole matter if we recognize that there is a third kind of knowledge, which is neither conceptual nor perceptual, and which is also not the sort of union of conception and perception which is completely expressive in terms of the favourite metaphor of Bergson and the pragmatists, namely, the metaphor of the conversion of conceptual credits or bank-notes into perceptual cash, i.e., into immediate data of experience. For interpretations are not reserved merely to immediate data, nor through the analysis of conceptions. This is true whether I myself am the object of my own interpretation or my neighbour is in question. If we seek for metaphors, the metaphor of the conversation, already used, furnishes the best means of indicating wherein consists the relative, but never immediate, verifiability of the truth of an interpretation.

When I interpret (whether of my own purpose or intent or the ideas of another man or the objects which I seek to interpret), what I first meet in experience is neither a matter of acquaintance nor a mere 'knowledge about.' What I meet is the fact that, in so far as I now understand or interpret what I call myself, I have also become aware, not immediately but in the temporal process of my mental life, that ideas have come to me which are not my own, and which need further expression and interpretation. These are already partially expressed through signs. Under these circumstances, what happens is that, as interpreter of these signs, I offer a further expression of what to me seems to me, and I make the further hypothesis that this expression makes more manifest to me both the meaning of this sign and the idea of the mind or self whereof this sign gave partial expression. It is of the essence of an expression which undertakes to interpret a sign that it occurs because the sign already expresses a meaning which is not just at the present moment of our own, and which, for our own needs for a possible interpretation, while the interpretation which at the moment we offer is itself not complete, but requires further interpretation.

In literal conversation our neighbour utters words which already express to us ideas. These ideas so contrast with our own present ideas that, while we find the new ideas intelligible, and, therefore, view them as expressions of a mind, we donot fully know what they mean. Hence, in general, our neighbour has to ask us more or less incidentally or persistently, whether or not this is what he means — i.e., we give him back our interpretation of his meaning in order to see whether this interpretation elicits a new expression which is in substantial agreement with the expression which we expected from him. Our method in a conversation is, therefore, unquestionably the method of a 'working hypothesis.' But since this 'working hypothesis' refers to our neighbour's state of mind, it is never conceivably capable of direct verification.

Nor does what the pragmatists are accustomed to call 'the successful working' of this hypothesis consist in the discovery of any fact about my experience which we get with which we get into merely immediate relation. Our interpretation of our neighbour satisfies our demands, precisely in so far as our interpretations, which are never complete, and which always call for new expressions and for further interpretations, lead to a conversation which remains, as a whole, essentially 'coherent,' despite its endless novelties and unexpected incidents. Our whole knowledge of mind, in so far as by this term we mean intelligent mind, not only depends upon, but consists in, this experience of a consistent series of interpretations, which we obtain, not merely by turning conceptual 'credits' into the 'cash of immediate acquaintance,' but by seeking and finding endlessly new series of ideas, endlessly new experiences and interpretations. This never-ended series of ideas, in so far as we can hold them before our minds, tends to constitute a connected, a reason of things which is expressed in a coherent process of interpretation.

Or, again, an interpretation is not a conceptual hypothesis which can be converted into 'perceptual knowledge'; it is a hypothesis which leads us to anticipate further interpretations, further expressions of ideas, novel bits of information, further ideas not our own, which shall simply stand in a coherent connexion with one another and with what the original interpretation, as a hypothesis, had led us to expect. When I deal with inanimate nature, I may anticipate facts of perception and then my hypotheses about these facts 'work,' in so far as the expected perceptions come to pass. But, when I deal with another mind, I do not merely expect to get definable perceptions from that mind; I expect that mind to give me new ideas, new meanings, new plans, which by contrast are known at each new stage of social experience to be not my own, but which may be opposed to my own and in many respects repellent to me.

But it is essential to the social intercourse between minds that these endlessly novel ideas and meanings should, through all conflicts and novelties and surprises, retain such a character. Thus, in dealing with other minds, I am essentially enlarging my own mind by getting new interpretations, both of myself and of my neighbour's life. The contrasts, surprises, conflicts, and puzzles which
these new ideas present to me show me that in dealing with them I am dealing with what in some respects is not my own mind. The coherence of the whole system of interpretations, ideas, plans, and purposes shows me just as positively that I am dealing with a mind, i.e., with something which through these expressions constantly interprets itself, while, as I deal with it, I in turn constantly interpret through this very process interpret myself. It will and must be observed that this Alter, with which I have to deal, both in reflecting on my own mind and in seeking for new light from my neighbour, is never merely single, separable, or merely detached, or isolated individual, but is always a being which is of the nature of a community, a ‘many in one’ and a ‘one in many.’ A mind knowable through interpretation is never merely a ‘monad,’ a single detached self, its unity, in so far as it possesses genuine and coherent unity, tends, in the most significant cases, to become essentially such as the unity which the apostle Paul attributes to the ideal soul: many members, but one body; many gifts, but one body, essentially a unity, never to be adequately conceived or felt, but properly the object of what the Apostle viewed, in its practical and religious aspect, as the spiritual gift of unity, in its cognitive aspect as interpretation: pay rather that ye may interpret (1 Co 14).

5. Metaphysical theories of the nature of mind.

(c) Predominantly perceptual theories. — The nature of mind may be defined by a given metaphysical theory mainly in terms which regard mind as best or most known through possible ‘perceptions’ or through possible ‘acquaintance’ with its nature. Such theories have been prominent, not least of all, in the efforts to give any abstract conceptual description of what constitutes the essence of mind. They depend upon ignoring the fact that what is most essential to the mind is known through the cognitive process of interpretation. They depend, further, upon making common words, and, in an effort to give any abstract conceptual description of what constitutes the essence of mind. They proceed, finally, upon the assumption that the essence of mind and the essence of body are identical.

Since, in general, any one who forms a predominantly perceptual idea of what mind is very naturally is not depending solely upon his own personal experience, but upon the experiences which he supposes other minds to possess, these perceptual theories of the nature of mind actually make a wide use of the reports of other people and so, more or less consciously, of arguments from analogy.

The simplest and vaguest, but in some respects the most persistent, of all theories of mental life appears, upon a largely perceptual basis, on a basis of an argument from analogy, in common less forms of so-called ‘animism.’ Leaving aside all the historical complications, we can say that much of the animistic theory of mind thus proceeds, within ourselves, certain interesting processes which include many of our feelings, embody many of our experiences, and characterize many of our activities. These activities, which in ourselves we more or less directly observe, are closely connected with the whole process of the life of the organism, i.e., of the body in whose fortunes each one of us is so interested. That which produces all these feelings, awakens in us all these interests, vitalizes our own body, and forms for each of us a centre of his own apparent world — this is the mind. The mind, then, strives and longs. It feels pain and pleasure. It prospers as the body prospers, and suffers as the body suffers.

Analogy shows that other people have such minds. These minds are as numerous as the organisms in question. They resemble one another and differ from one another, much as the organisms resemble and differ from one another. An analysis of this analogy, on the basis of many motives, leads us to regard the world about us as containing many minds which are not connected with human bodies — at least in precisely the same way in which our minds are connected with such bodies. When the vast mass of superstitions beliefs which have made use of such analogies and such experiences can be more effectively controlled through the advances of the human use of intelligence, this primitive animism tends to pass over into theories of which we find some well-known examples in early Greek philosophies. These early Greek theories of mind appear, on a somewhat primitive and already philosophical level, as ‘hylozoicism.’ The world, or, at all events, the organic world, has life principles in it which vary as the organisms vary, and which are also of a nature that feeling and desire reveal to our relatively immediate ‘knowledge of acquaintance.’

The theories of mind of this type have played a great part in the life both of philosophy and of religion. As a general theory, animism has proved very persistent, and that for obvious reasons.

One of the Hindu Upanishads well suggests both the origin and the logical basis — such as it is—of an allegory, it represents the question arising within the body as to where and what the soul most is. The question is disputed among the various bodies organs, each asserting itself to be the principal seat of life and also of mind. To discover which view is true, the members of the body, leaving the organism. When the eyes go, blindness ensues; when the heart and mind continue, and various other organs, and when the breath starts to leave the body, the other members together cry, ‘Stay with us! You are the life, you are the soul, you are the self; all the world is the self.’

The allegory sufficiently indicates how primitive, how vague, and how stubborn is such a perceptual theory of mind when defined in terms of immediate intuition, and of a more or less pragmatic testing of various views about the physical organism.

Later in its origin, but continuing in its influence to the present day, is another perceptual theory of mind, which the later Upanishads present at length, and which, in another form, is exemplified by a notable assertion of H. Bergson in his Introduction to Metaphysics — namely, the doctrine, that of some, that at least we all have intuitive knowledge, this object being the self. The entire history of mysticism, the history also of the efforts to discover the nature of mind through intuition, can be summarized by means of these instances and that which Bergson has discovered the true self through the experiment with breathing, and of the latest vision of Bergson, who defines the nature of mind, and also its contrast with body, in terms of the élan vital; for all these views emphasize, in various more or less primitive, or in more or less modern, forms, essentially the same theory of mind: the essence of the mind is to be known through immediate acquaintance. That which has been the object of possible perception.

In the history of thought such perceptual theories of mind have become more highly developed and diversified, and have assumed other and very widely influential forms, by virtue of an insistence that we have an immediate perception of what is variously called ‘mental activity,’ ‘the active soul,’ or ‘the principle of individual selfhood.’

1 Bhadaranyaka Upanisad, t. i. 7-14, tr. in P. Deussen, Sächrige Upanisadish des Veda, Leipzig, 1897, p. 567.
2 Eng. tr., London, 1813.
Motives which as a fact are not stable in purely perceptual terms have joined with this fondness for defining mind in perceptual terms to make it appear as if the theory of mind ought to be stated in expressly 'plurality of terms.
It has, consequently, been freely asserted that we 'immediately know' our own self to be independent, to be distinct from all other selves, and the whole as unique. This unity is also sometimes
asserted that we know, or that we 'know intuitively,' upon occasion, the fact that we can never
be entirely acquainted with the conditions of our
neighbor's mind, such perceptual theories have
given rise to the so-called problem of 'Solipsism.'
For, if we know mind by perception only, and if we
are sure of it only when we perceive it, and if
each of us can perceive only his own mind, then
what proves for any one of us that there is any
mind but his own? The analogy which primitive
animism so freely and so vaguely uses becomes,
for the critical consciousness, questionable.
In consequence, the problem of Solipsism has re-
maind in modern times a sort of scandal of the
philosophy of mind.

The solution of the problem of Solipsism lies in
the fact, upon which Peirce so well insisted, that
no one of us has any purely perceptual knowledge of
the whole. If knowledge of mind is not
stable, in the case either of the self or of the
neighbor, in terms of merely immediate acquaint-
ance. If the truth of this proposition is once
understood, the entire theory of mind, whether
for metaphysics or for every psychological, is
profoundly altered. Until this inadequacy of
knowledge through acquaintance meet the real
end of human knowledge is fully grasped, it is
impossible to define either the mind of the
world, either the individual self or the
neighbor.

(b) Predominantly conceptual theories.—As is
the case with every highly developed doctrine, the
conceptual form is very naturally assumed by
any philosophical theory of mind which seeks
for theoretical completeness. The conceptual
theories of mind have been in history of two
general types: (1) the purely conceptual, i.e. the
abstractly 'natural' metaphysical theories; and
(2) the more inductive conceptual theories based
upon the more or less highly developed 'empirical
psychologies' of the period in which these theories
have flourished. We need not enumerate these
theories in detail.

Of principal importance in their history have
been (1) that type of vitalism whose most classical
representative is the Aristotelian theory of mind;
(2) the monistic theory of mind, which often
depends not so much upon the general metaphysical
tendency to define the whole universe as One, but
rather upon the effort to conceive mind and matter
by regarding them both as the same in substance;
and (3) the various types of monadology, which
are characterized by the assumption of the existence
of many real and more or less completely inde-
pendent minds or selves, whose nature it is either
to be themselves persons or to be beings which
under certain conditions can assume the form of
persons.

Of those various important theories which are
expressed in the predominantly conceptual form
which of Aristotelian is very distinctly and interestingly
related to primitive animism on the one hand,
while, on the other hand, it looks towards that
development of the idea of the distinct individual
self upon which more modern forms of monad-
ology are based.

Whatever special forms the conceptual theories
of mind may assume, the well-known problem
remains: How are these conceptions of the various
mental substances, or principles, or monads, which
are each time in question related to the sorts of
experience which they are supposed to interpret, the
varieties of the natural history of mind, have at any
stage of knowledge discovered or may yet hope to
discover? From the point of view of modern prag-
matism, conceptual theories of mind might be
entertained as 'productive hypotheses' if they led to
verification in perceptual terms.

In fact, the modern physical sciences, in con-
ceiving the nature of matter, deal with manifold
problems, but use conceptual hypotheses regarding
the nature of matter which are, in a large measure,
subject to pragmatic tests. Molecules and atoms
and, of late, various other types of conceptual
physical entities, which were formerly supposed
to be incapable of becoming objects of a physical
experience, now appear to come within the range
of the experimenter's verifications. Therefore the
processes of the experimental verification of phys-
ical hypotheses have, on the whole, a direct relation
to the sort of knowledge upon which the pragma-
tists so much insist. The 'conceptual credits' of
physical hypotheses are, on the whole, verifiable
in terms of the 'perceptual cash' of laboratory
experience. When this is not the ease, there
is a tendency to destroy them by a more rigorous
Hence physical hypotheses, at least regarding
what is generally called the phenomenal nature
of matter, have generally proved to be topics for
an inquiry within the strict realm of inductive
science.

But it has been, in the past, the reproach of the
conceptual theories about the nature of mind that
no pragmatic test can be discovered by which one
might learn what it is to be a mental process to an
observer of mental processes and, in particular,
of his own mental processes whether minds are
'soul substances,' or Leibnizian monads, or not,
or whether the introspective observer of his own
sentations or feelings is or is not himself a Leib-
nizian monad or Aristotelian 'entelechy'; or,
again, whether he is essentially persistent and in-
destructible. Thus, from the pragmatic point of
view, the majority of these conceptual hypotheses
are without the incertitude of promising to prove more verifiable than they thus
far have been. In consequence, the outcome of
conceptual views regarding the real nature of
mind has been, for many reasons, on the whole
conceptual. In fact, the whole theory of mind
cannot be adequately conceived, and could not be so
conceived even if one's power to perceive mental
processes were increased indefinitely, unless another
type of cognitive processes were concerned in such
an enlargement. For a mind is essentially a being
that manifests itself through signs. The very
being of signs consists in their demanding inter-
pretation. The relations of minds are essentially
social; so that a world without at least three
minds in it—one to be interpreted, one the
interpreter, and the third the one for whom or to whom
the first is interpreted—would be a world without
any real mind in it at all. This being the case,
it might well be expected that a true conceptual
theory of mind would fail precisely as a perceptual
theory fails. Such theories would fail because they do
not view the cognitive process as it is and do not
take account of the fundamental role of all needed
in order even in the most rudimentary fashion to
grap the nature of an intelligent mind.

(c) Theories making use of the cognitive process
of the interpretation.—Despite the inadequate
development of the doctrine of mind, far
in the history of epistemology, there have not
been lacking theories regarding the nature of
mind according to which mind is an object to be

1 See Royce, Problem of Christianity, ii.
MINIM

known through interpretation, while its manifestations lie not merely in the fact that it possesses or controls an organism, but in the fact that, whether through or apart from an organism, it expresses its purposes to other minds, so that it not merely has or is a will, but manifests or makes comprehensible its will, and not merely lives in and through itself, as a monad or a substance, but is in essence a mode of self-expression which programs itself known either to its fellows or to minds above or below its own grade.

That theories of mind which are based upon such a view have existed, even from very primitive times, is manifest wherever in the history of religion a constellation of oracles, discovery of the future or of the will of the gods through divination, or, in fact, any such mere or less superstitious appeals to other minds, and readings or interpretations of these appeals, have taken place. Primitive belief in magic arts has apparently, on the whole, a conceptual type of formulation. Therefore magic has been called the physics of primitive man. It depends upon the view that man is subject to laws which, if he could discover them, he could use for his purposes, just as we now make use of the known laws of physics for industrial purposes. The supposed realm of magic arts is thus analogous to our present realm of industrial arts. The view of pragmatism—that primitive magic is not true, but true when such assert that it is conceptually possible regarding how to cause rain or how to cure diseases do not work—is in this case fairly adequate to express the situation both epistemologically and metaphysically.

Moreover, as we have seen, animism, in its more primitive forms, expresses a predominantly perceptual theory of mind, and whether such a theory, either of mind or of the relations between mind and the physical world, is held in some simple form by the medicine-man of an obscure tribe or is impressively reiterated in a Hindu Upanishad, or is fascinatingly placed in the setting of a modern evolutionary theory by Bergson, makes comparably little difference to the essential views of the philosophy of mind which are in question. But that view of the nature of mind which gained, apparently, its earliest type of expression when men first consulted, and hereupon more or less cautiously interpreted, the oracles of their gods has (as belies a theory of mind which is founded upon a fundamental cognitive process) persisted throughout the history of human thought. This was mind-body, or the mind as a part of a machine in a fashion which enables us to distinguish its expressions with sufficient clarity from those which have had their origin either in the conceptions of primitive magic or in the conceptions which guided primitive animism.

From the point of view of the cognitive process of interpretation mind is, in all cases where it reaches a relatively full and explicit expression, equally definable in terms of two ideas—the idea of the self, and the idea of a community of selves. To an explicit recognition of what these two ideas involve a great part of the history of the philosophy of mind has been devoted. Both ideas have been subject to the misfortune of being too often viewed in a reducible either to concrete terms or to purely perceptual terms. If the self was defined in predominantly conceptual terms, it tended to degenerate into a substance, a monad, or a mere thing of some sort. Under the influence of a too abstract epistemology (such as the Kantian) the self also appeared as the 'logical ego,' or else as the 'pure subject.'

The fortunes of the idea of the community have been analogous. In religion this idea has proved one of the most inspiring of the ideas which have gradually transformed tribal cults into the two greatest religions which humanity possesses—Buddhism and Christianity. In ancient philosophy the community, viewed as the soul 'writ large,' inspired some of the most fruitful philosophical interpretations of Plato, Aristotle, and the Stoics. In the general history of civilization loyalty, which is identical with the practically effective love of communities as persons that represent mind on a level higher than that of the individual, is, like the Pauline charity (which is explicitly a love for the Church universal and for its spirit), the chief and the soul of the humanizing virtues—that virtue without which all the others are but 'sounding brass or a tinkling cymbal.' Yet, in the history of thought the idea of the community has greatly suffered, less frequently from the attempt to view it as the proper object of a direct mystical perception than from the tendency to reduce it to a purely conceptual form. As a conceptual object the idea of the 'mind of the community,' the 'corporate mind,' has tended to be thought of as an entity possibly significant in a legal or in a sociological sense, but difficult, and perhaps unreal, in a metaphysical sense.

Experience shows, however, that the two ideas—the idea of the individual self and that of the community—are peculiarly adapted to interpret each other, both to itself and to the other, when such ideas are introduced into the hypothesis regarding how to cause rain or how to cure diseases do not work—in this case fairly adequate to express the situation both epistemologically and metaphysically.

LITERATURE—The epistemology of Charles Peirce is discussed at length by the present writer in The Problem of Christian Philosophy, London, 1925, if in his essay on Pragmatism, a treatise which can be found which will serve as a guide to the understanding of Peirce's theory of knowledge, and its relation to the metaphysical theories of the nature of mind.

MINIM.—Certain persons of Jewish origin were mentioned in the Talmud and contemporary Rabbinical literature, usually with severe disapproval, are called Minim. Considerable difference of opinion has existed upon the question who the Minim were; that the view is now generally, though not universally, held that they were Jews, is unimportant. Only in this theory has the support of Graetz, Jost, Weiss, Bacher, and Levi; the chief opponent is Moritz Friedländer. The writer of this article, from an independent study of the evidence, decides for the Jewish-Christian interpretation, while admitting a wider denotation in a few passages. The evidence, consisting of the whole of the passages (so far as they are known to him) where mention is made of the Minim, is presented in full in the writer's work.
Christianity in Talmud and Midrash, to which the reader is referred for details which cannot be given in the short space of this article.

The book Siphre, § 115, p. 35a, quoting Nu 15:9, 'And ye shall not walk after your heart,' says, 'This is Minim'—meaning that this is the state of Minim, who are under the influence of the principle of conduct, characteristic of the Minim. This is the earliest attempt at a definition of the term, although the word itself was in use earlier. It amounts to saying that a Minim (singular Min) is one who follows the dictates of his own selfish nature as against those of the lawful authority. The result of doing so is, indirectly, the rejection of beliefs and practices enjoined on those who hold the true religion. A Minim, accordingly, disregards the authority of the Rabbi, as teachers of religion and expounders of the Torah both written and unwritten, and also maintains doctrines and practices which are not those of the true religion. Tos. Sanh. xiii. 4 f. has the following censure on the Minim: ‘The sinners of Israel, and the sinners of the nations of the world, descend into Gehenna, and are judged there twelve thousand, three hundred and sixty Minim, and the Apostates, and the Traitors, and the Apostates, and the Scribes, and the Apostates of the Minim... Gehenna is shut in their love of the world, and in their accumulated sins of generation and generation’.

If the term Minim denoted all unfaithful Jews, there would be no need of four descriptive names. The distinction between the four is as follows. The betrayers (Meṣroḥim) are political informers, the Apostates are those who willfully and openly transgress some part of the ceremonial law, thereby proclaiming their disloyalty. Apikōrinim are ‘Epicureans,’ free-thinkers, whether Jewish or Gentile. The Minim are those who are false at heart, but who do not necessarily proclaim their apostasy. They are the more dangerous because more secret; they are not an open enemy, but the foe within the camp; and it is in accordance with this that the Talmud refers to the Minim more frequently and with more hostility than to the other classes of unfaithful Jews. The Minim might be an apostate or a delator, and could hardly fail to be a free-thinker; but the real nature of his offence was moral rather than intellectual.

Why was the name Minim given to such persons? Various derivations of the word have been given, some of them more fanciful than others. The best explanation seems to be that proposed by Bachr (in Al. and Bes. 120a), who says that the word is derived from the root min, ‘lowly,’ and that the name was given to them as the lowest class of Jews. This derivation is not accepted by J. F. Hamburger (in Der vorchristliche jüdische Gnosticismus, 194 ff.), but it is a serious doubt of Friedländer’s book that the argument is based on Rabbinical texts from which he strikes out, as interpolations, passages of crucial importance, without mentioning the fact. By this method any hypothesis could be proved. Bacher and Lévi, in articles in REJ xxxviii. 38, 294 have severely handled Friedländer’s hypothesis; as well as his peculiar method of proof, and have given with great accuracy the choicest passages from the Talmud and Midrash. The evidence for the view that the Minim were Jewish-Christians may be briefly summed up as follows. In many places where they are mentioned there is nothing distinctive, certainly nothing definitely Christian; but in a few passages a connexion between Minim and Christianity is so definitely stated that it cannot be excluded from neutral passages except on the ground of equally definite statements to the contrary. Such contrary evidence is not to be found, and even Friedländer does not produce any. (1) In a famous passage, Bah. Ḥak. Zer. 108a, which is one of three other passages (see also Ḥebbd. 39b and B. Ḥebbd. 28a) in which Rabbi Elezer (end of 1st cent.) was arrested for Minim. He accounted for this afterwards by saying that he had once met one of the disciples of Jesus the Nazarene, by name Jacob of K’phar S’khanah, who told him amongst other things that ‘Thou hast taught Jesus the Nazarene taught me.’ Also, in the same treatise, p. 27a, the same Jacob is called ‘Jacob the Minim,’ and it is said that he offered to cure a sick man, while in Tos. Ḥul. ii. 22 f. the same Jacob is said to have worked to cure him in the name of Yeshū ben Pandira, i.e. Jesus. (2) In Bab. Shabb. 116b there are mentioned, in close connexion, the books of the Minim and the Evangelion, i.e. the Gospels. (3) The characteristic doctrine of the Minim—that of Two Powers in Heaven—is closely allied to, if not identical with, the teaching of the Ep. to the Hebrews, and is not the Gnostic doctrine of the Demiurgus. The connexion of this doctrine with Christianity is proved by a passage in Pesh. T. Rab. xxi. 1006: ‘If the son of the harlot saith to thee, “There are two Gods,” etc., where ‘the son of the harlot’ denotes Jesus.

The combined force of these arguments, which could be supplemented by many others, seems conclusive in favour of the Jewish-Christian interpretation; and this view is strongly confirmed by a passage in Jerem. ‘Unper sodl poortas Orientis synagogas inter Judaeos haeretum est, quae dicunt Monesereum, et a Parthis usque usque damnamur; qui volgo Nazarens nuncupant, qui credunt in Christum, illum Deum, natos de virgine Maria, et sum dicunt ses qui sub Fonti Filii passus est resecrunt, in quem et nos credimus; sed domum et Judaei sages et Christiani, nec Judaiz sunt nec Christiani (Ep. xiv. [xxix.], 13 [FL xxii. 264]).

The general conclusion to be drawn from the evidence, of which the foregoing is the most important, is that, wherever in the Talmud and Midrash mention is made of the Minim, the author of the statement intended to refer to Jewish-Christians. At the same time it is possible that the Rabbis attributed to Minim actions or opinions which, in fact, were not those of Christians; and, further, that the Rabbis were at times not only aware of the Minim to Gentiles as being enemies of Judaism.

The references to the Minim in the Rabbinical literature are few and fragmentary. The passages where they are mentioned and quoted are: (1) in Ber. 52a, 53b, most of which contain either polemical dialogues between a Minim and a Rabbi or allusions to heretical interpretations of texts, although a few are anecdotes of events in connection with the Minim. It is not possible here to give a full glimpse of the whole of the literature relating to the Minim; the material is sufficient only to give a few glimpses
of them, and to throw some little light upon their relationship to their Jewish brethren. The Minim, as stated above, were apostates who concealed their apostasy, and it was necessary, therefore, to have some means of detecting them. This was the object with which the Formula against the Minim in the Antiochene Syriac is introduced. It is stated (Bab. Ber. 286, 29a) that E. Ganadlus (president of the synod of Sanhedrin at Jabneh) said to the Rabbis: 'Is there anyone who knows how to compose a Benediction of the Minim?' Samuel the Little stood up to it. The following year he forgot it, and sought to recall it for two and even three hours, and they did not call him up (from the lection). The Benediction of the Minim was an addition made to the Eighteen Benedictions (Sh'moneh E'rotah Bekah'hah), which are short prayers, some of them very ancient, forming the nucleus of the Jewish liturgy. The twelfth in order, as composed or adapted by Samuel the Little, runs: 'May there be no hope for the Minim.' Those who were Minim could not, of course, join in this prayer, and would be detected. The introduction of this formula marks the official condemnation of the Minim by the Rabbis; and the date may be placed at A.D. 80, or thereabout. This does not imply the separation of the Minim from the synagogues of the Jewish people, and it is probable that the majority of the Jews at and after that time, were still to be found, as Jerome says, in all the synagogues of the East. But it is true, nevertheless, that the Minim to some extent possess a separate organization, with synagogues of their own.

The reason why a formula of detection against the Minim became necessary about A.D. 80, was, in part, that the Temple had been destroyed ten years before. As the Temple stood, Jewish Christians in Jerusalem and other places where the Temple was not, engaged in the Temple observances equally with non-Christian Jews. After the destruction of the Temple, however, it was possible to argue that the Temple was the symbol of the old covenant law, and that the survival of the church was the survival of the old covenant. This was the link which connects the original Jewish-Christian churches with the Minim. The latter, in fact, follow the rules of the Temple and its sacrifices. The former, on the other hand, follow the rules of the New Testament and the new covenant.

The hostility towards, and dread of, the Minim, were at their height in the 2nd cent.; afterwards they declined, till in the 4th cent. we find comparatively friendly relations with them. The Minim of Cæsarea applied to R. Abah to find them a teacher, and he sent them R. Aphra'el, a Babylonian Jew of unshaken orthodoxy (Bab. Abodah Zarah 4a). The meaning of this gradual change is that at first it was not evident to the Rabbis that the Christian Church would not develop on Jewish-Christian lines. When, in course of time, it appeared that the Minim did not represent the strength of the Christian movement, there was the less reason to dread it; there was a reason to regard them from a Gentile Christianity than from a Jewish form of it. Of Gentile Christianity the Rabbinical literature takes scarcely any notice. Space does not allow of illustration of the polemics between Minim and Jews, or of the association of the latter with the former as being not only apostates but liens. It must suffice to say that they appear to have been a dwindling sect, in Judaism but not in Christianity. In their theology they departed from the strict monothelism of Judaism, and held a doctrine—called the Doctrine of the Two Powers in Heaven—which corresponds with the relation between God and Christ set forth in the Epistle to the Hebrews. No mention is made in any of their polemical discussions of the Messiahship of Jesus, nor is there more than one very slight trace of the doctrine of the Trinity (Jr. 12d, 13a). Jerome identifies them with the Nazarenes, and the corresponding name of the sect is found in two passages (Bab. Abodah Zarah 6a; Bab. Ta'an. 27b). The name Ebionite does not occur in this Rabbinical literature.

MINISTRY (Early Christian).—An attempt will be made in this article to collect the more important facts in connection with the ministry as far as the first five or six centuries of our era are concerned. About the facts of his life there is general agreement; but the interpretation of the facts has been disputed. A summary will be made, as briefly as possible, of the theories that have been advanced, as to the institution of the ministry by our Lord, and its development in subsequent ages. But a discussion of these theories is not part of the design of the article.

1. The Apostolic Age.—In Acts and in the Epistles of the NT we find in active operation a ministry of two kinds, itinerant and local.

1. The Itinerant Ministry.—We read of apostles, prophets, and evangelists, all of whom came under this heading. The first of these terms includes at least a few (even in the early ages) who were not of the Twelve (see § 5). The qualification of an apostle seems originally to have been that he should have seen our Lord, and have been his 'witness' ( Acts 22:30, Ac 1:5). Thus, when the vacancy in the number of the Twelve has to be filled up, the qualification mentioned by St. Peter is that the person chosen should have 'accompanied' with [the Eleven] all the time that the Lord Jesus went in and went out among 'or 'ever,' cried them, 'beginning from the baptism to that day, and he was received up from 'or 'ever,' that he might become a witness with them of Jesus' resurrection (Ac 13:22). St. Paul received his qualification, though in a different way, as his conversion (cf. Gal 1:1, An apostle, not from men, but by Christ Jesus, and God the Father). That St. Barnabas and the others mentioned below (§ 2) had seen Christ is not stated, but is quite probable. Hesychius says (Eus. HE ii. 1) that Barnabas was one of the Seventy. This qualification may have been waived in the sub-apostolic period.

Hort (Christian Ecclesiæ, p. 28) thinks that the word 'apostle,' which is of comparatively rare occurrence in the Gospels, referred originally only to the mission to the villages, though such passages as that about judging the twelve tribes (Mt 19:12, Lk 22:30) were indications of the extended signification of the name which we find in Acts. It is clear, however, from Lk 1:1 (where the heading is Mk 3:14) that Mk 3:14 is a later addition that He intended more than a mere mission to the villages by the designation appears almost certain from such passages as Lk 22:34, where He speaks of commission for future service, I Cor. 4:9). St. Luke certainly uses the name without reference to the mission to the villages.

Christian prophets are frequently mentioned in the NT—Agabus and others (Acts 11:28); those at Antioch, 'prophets and teachers,' including Peter, those at Antioch, 'prophets and teachers,' including Peter,
MINISTRY (Early Christian)

Barnabas and Saul, also Symeon Niger, Lucas of Cyrene, and Manaen (Ac 13: 19); Judas and Silas (19); and an untrusted name of 1 Cor 12: 26 (see § 2), below which are mentioned as a class in Eph 5: 21 (see § 2), possibly in 1 Th 2: 21; also in Rev 2: 20. They are coupled in Eph. and Rev. with apostles. They are described as receiving revelations (1 Co 14: 21). Christian prophets and also mentioned (Ac 21, Philip's daughter). But it may be doubt if prophets 'ought to be described as a class of the ordinary Christian ministry. Their office was purely charismatic (see below, § 3). It is otherwise with 'evangelists.' These are mentioned in Ac 2: (Philipp, Eph 4: 11 (see below, § 2), 2 Ti 4: 5 (Timothy). This name would seem to be given to those who, though not apostles, because they had not the qualification stated above, yet were itinerant officials and not of the local ministry. Euzebius (HE iii. 37) gives the name to those who 'occupied the first place among the successors' (διαδοχις) of the apostles and were itinerant preachers of the gospel. But they had only laid foundations of the faith in foreign places, they appointed others as pastors (προστάτευτες) and then went on to other countries and nations. A few lines later he talks of 'pastors or evangelists,' (τιμιφλοφόροι) seems to mean by the former the local, by the latter the itinerant, ministry.

Apostles and prophets are also mentioned in the Didache (§ 10-16), a manual probably of the beginning of the 2nd century. These were normally itinerant officials, and were perhaps identical in the Didache (§ 11). The value of this evidence is discounted by J. A. Robinson (JThSt xiii. [1912] 383), who thinks that the writer does not describe the conditions of his own day, but those of the early church. The theory, however, is very doubtful (for Robinson's earlier view see his Com. on Ephesians 2, London, 1904, p. 96, n.).

The function of the itinerant ministry was evangelistic (cf. 1 Th 2: 7. 1 Ti 1: 27). The itinerants might settle for a time at a place, as Timothy settled at Ephesus, Titus in Crete, and St. Paul himself at various places where he founded churches; but this was not their normal work. In the Didache it is recognized that a prophet may settle in a place (§ 12 f.).

II. THE LOCAL MINISTRY. Under this heading are included in the NT the 'apostles,' the 'presbyters,' and the 'deacons.' For other names of these officials see § 2. The functions of the local ministers were administrative and pastoral. Thus baptism seems to have been especially entrusted to it (cf. 1 Co 14: 14, and perhaps Ac 19: 7). In the beautiful story of St. John and the young robber related by Clement of Alexandria (Quis dixit, 42), the apostle does not himself baptize the young man, but gives him over to the local bishop-priest to baptize (see below).

(a) Bishops.—During the period covered by the NT, we read of this name being given to Christian ministers only in Gentile churches at Philippi (Ac 16: 4, cf. 1 Ti 9: 1), in Cepheus (Tit 1: 2). So St. Peter, writing to the churches in most of the provinces of Asia Minor, uses the participle ἐγκαθίστασις, 'exercising the bishop's office' (1 P 5: 2). That the 'bishops' are the same as 'presbyters' in the Apostolic Age seems to follow from a comparison of Ac 20: 23 with 20: 29, where the same individuals are called by both titles; and of 1 Ti 5: 21 with 5: 22-23, the first of which passages describes the qualifications of 'bishops,' the second of which gives regulations for 'presbyters' as for those who have already been mentioned in the Epistle; and of Tit 1: 8 with 7: 1 (appoint presbyters in every city ... for the bishop must be blameless). From the use by St. Peter of exorcism when speaking of presbyters (see above, and 1 P 5: 1). The same thing is apparently found in Clement of Rome (Cor. 42, 44), where the local ministers are called 'bishops and deacons,' and yet they are spoken of, and their 'episcopate' (ἐπισκοπή). He says that the apostles knew through our Lord Jesus Christ that there would be strife over the name of the episcopate. In the Didache also (§ 15) the local ministry is called the 'presbyters' and the 'bishops.' Perhaps 'presbyters' expressed the rank, and 'bishop' the function.

Hort (pp. 84, 85, 189-212) takes a different view. He holds that the words 'bishops' and 'deacons' are used in a non-technical sense in the NT as meaning 'those who have oversight' and 'those who minister.' He thus interprets the words in Ac 20: 28 and deduces the conclusion that the same holds good in Phil, where ἐορθοδοξος and διδακτεος have a similar sense. He does not deny that those who have become the name of the officers before the Pastoral Epistles were written, but he thinks that St. Paul uses the word in a non-technical sense.

(b) Presbyters.—The name was perhaps taken over by the Christians from the Jews, who gave it to the members of the Sanhedrin and others. But inscriptions show that the heathen Greeks have used it for members of a corporation, and the same thing appears from the papyri. A. Deissmann thinks (Bible Studies, Eng. tr., London, 1901, p. 154 f.) that the Christians of Asia Minor may have adopted the term, not from the Jews, but from the Greeks. In Egypt, as Deissmann shows (p. 233), pagan priests were called 'presbyters.' It may be added that inscriptions also prove that the title ἐπισκοπή was used for certain officials in Greek-speaking countries of bishops and deacons.

Thus Irenaeus (Herm. iv. 2, referring to Ac 20: 32, speaks of St. Paul meeting at Mileteus bishops and presbyters from Ephesus and the other cities; and the last few words are no doubt due to the plural 'bishops,' as to Irenaeus the idea of more than one bishop (in the sense in which the word was used in his day) in any city would be quite foreign. Clement of Alexandria, at the end of the century, was also ignorant of the identity; he speaks (Ped. iii. xii. 97) of commands in Holy Scripture given to presbyters, bishops, deacons, widows (in that order), as to distinct persons. In Quis dixit, 42, he speaks of a single 'bishop' in one of the cities of Asia in St. John's time; this is doubtless historically correct, yet we may notice that a few lines later he calls the bishop 'the presbyter.' This is an instance of that fluidity of phraseology which we shall have occasion to notice below (§ 41). The other Fathers had learnt that the bishops and presbyters of the NT were the same persons (see references in Lightfoot, Philippians, p. 96 f.).

(c) Deacons.—These ministers are mentioned in the NT in Phil 1, 1 Ti 3: 8, 12-15, only. They are not found in the Epistle to Titus. They are also mentioned, together with 'bishops,' in Clement of Rome and the Didache (as above). The usual view has been that they represented the local church's appointment is recorded in Ac 6. Others think
in the NT inferior to the 'bishops and deacons.' Interpreters are mentioned in 1 Co 14:19, for those who speak with tongues (cf. 1Co 13). But there is no indication that an ecclesiastical office is intended.

2. Fluidity of phraseology.—It is important to remember that the names of certain offices were not stereotyped in the Apostolic Age. Many theories have been erroneously built on the supposed identity of offices in different centuries, because of the identity of names. In the earliest age the names of the orders of the ministry are in a fluid condition, even if the functions and duties of the offices were fixed, which is doubtful.

(a) The name ‘apostate.’—This is used in the NT of the Twelve (see above, § 1). It is also used of certain other persons who had no authority with the Twelve in the early Church—Paul, Barnabas, probably James the Lord’s brother (see Lightfoot, Galatians; pp. 84, 96; cf. 1Co 15), probably also Andronicus, Junias, who were ‘of note among the apostles’ (Ro 16); but some think that the latter was the name of a woman, perhaps Silvanus, who was associated with St. Paul in writing to the Thessalonians (1 Th 2); cf. 1Co. Timothy might have had a name the same designation but that he is excluded from it by 2Co 1, Col 1, doubtless because he had not seen Christ (see § 1). The name is also used in the NT of messengers simply (2Co 8:19, Ph 2:2), and of our Lord Himself (He 3:1; cf. 7:1). In the Syriac-speaking churches it was given to any missionary; and so the Greek-speaking Irenaeus says (Hær. II. 21. 1): ‘After the twelve apostles, and our Lord, we must have sent forth seventy others.’ Tertullian (Adv. Marc. iv. 24) gives the Seventy as well as to the Twelve (‘he chose also seventy other apostles besides the twelve’). Note that St. Luke (10:1), in describing the appointment of the Seventy, says that Jesus ‘sent them forth’ (ἀπεστάλει), whereas the name ‘apostate’ comes at once. It means ‘one commissioned.’ Certain persons, called ‘false apostles,’ arrogated the name to themselves (2Co 11:1, Rev 2:2).

(b) The names ‘bishop’ and ‘junior’—We have already seen that the name ‘bishop’ was used in the 1st cent. in a sense different from that which it afterwards acquired. And we may notice how fluid the phraseology with regard to both ‘bishop’ and ‘presbyter.’ Our Lord called a ‘bishop’ in 1 P 2:21; St. Peter a ‘presbyter’ in 1 P 5:2 (ὑπερεπίσκοπος), St. John in 2 Jn 5, 3 Jn 1. In the 2nd cent. the term ‘presbyters’ came to be used somewhat as we use the term ‘the Fathers.’ We may also notice how much of the change from ‘presbyter’ to ‘old man’; so much so that it is not always easy to determine in any given passage which translation ought to be taken. In 1 P 5:9 St. Peter, who has been addressing the presbyters, suddenly says: ‘Likewise, ye younger, [men], be subject to the elder’ (ὑπερεπίσκοποι Κλέμεντος). Clement of Rome (Cor. 1) says: ‘Submitting yourselves to your rulers (ὑπερεπίσκοποι), and rendering to the presbyters (Lighfoot; ‘older men’) among you honour, etc.; and so in § 21.

A little later Polycarp, after saying that ‘the young men must be blameless, goes on to exhort the Philippian to submit themselves to the presbyters and deacons’ (Phil. 5). The association of the presbyterate and old age survived for a long time. It is found in the Apostolic Church Order (Bohairic version), where it is said that presbyters should live ‘after the manner of old men’ (§ 18: H. Tattam, Adept. Const. in Coptic, London, 1848, n. 30). The ordination prayer of a presbyter in the Testament of Our Lord (c. 150?) speaks by a paronomasia of ‘the Spirit (masc.) of the presbyterate who does not grow old’ (1. 30). Pseudo-Pionius (4th cent.) in the Life of Polycarp (§ 17: Lightfoot, Adept.

III. THE POSITION OF JAMES THE LORD’S BROTHER AT JERUSALEM.—Christian antiquity agrees in giving St. James a local ministry at Jerusalem, and yet in making him, in a real sense, equal to the Twelve, and in ascribing to him rule or presidency over the presbyters, though nothing is said of any autocratic powers possessed by him. This account of his position is borne out by the NT writers. In Ac 12:2, Peter bids those who are assembled in Mary’s house tell of his escape ‘unto James the brethren’. In 15:12, James presides over, or at least takes a large part in, the apostolic council, and gives the decision, i.e. interprets the evident sense of the assembly. In 21:18 Paul and his companions visit him assembled with the presbyters in a formal meeting. In Gal 1:19 he is, perhaps, called an apostle: ‘... and Cephas and James and John are...’; he and Cephas are visited by Paul at Jerusalem. In 2 Cor 11 he is named before Cephas and John, and the three are ‘reputed to be pillars. In 2Th 3:1 the Jewish Christians who came from Jerusalem to Antichrist are said to come ‘from James.’ Of the Patriarchs and Prophets the earliest to bear witness to St. James’s position in Jerusalem is Hegesippus, known as the father of Church history (c. A.D. 160). He says that ‘JAMES, the brother of the Lord, succeeded to the government of the Church in conjunction with the apostles’ (Eus. HE ii. 23). He describes the appointment of Symeon, a cousin of the Lord, as ‘the next bishop’ (iv. 22). So Eusebius, who depends on Hegesippus (iii. 11) that the apostles were succeeded by Symeon, is to be worthy of the throne of that diocese (προσωπος), and (iii. 32) that Symeon was the second Bishop of the Church of Jerusalem; in the former passage he says there was a second Apostolic Council on the occasion of Symeon’s election. The last statement is very doubtful; but the tradition probably gave rise to the detailed pseudopigraphia of the Church Orders, which assign all sorts of diocesan authority to the apostles. The same supposed council has been thought by some to have decreed the establishment of diocesan episcopacy; but the latter was probably of gradual growth rather than the result of an enactment of a formal council (see below, § 4). The position of James is also spoken of by Clement of Alexandria (Hypotyposes, bk. vi., quoted by Eus. HE ii. 1):

‘Peter, James, and John, after the ascension of our Saviour, as it also preferred by our Lord, strewed not after honour, but chose James the just Bishop of Jerusalem.’... The Lord after His resurrection imparted knowledge to James the just and to John and Peter and Paul and Barnabas and the rest of the apostles to the Seventy, of whom Barnabas was one.’

The phrase about imparting knowledge to James may probably be a reference to 1Co 15:24. The description of him as ‘bishop of Jerusalem’ is an anachronism of nomenclature, but it roughly describes his position. His office at Jerusalem is a central theme in the ‘Clementine literature,’ but the date of these works is uncertain.

iv. ANGELS IN THE APOCALYPSE.—The ‘angels’ in Rev 19:1-32 have been taken by some to be the chief ministers of the Church in the province of Asia. But this interpretation is so doubtful that no argument can be built upon it.

v. There is no certain trace of any local officials
Ministry (Early Christian)

Patriarchs, pt. ii., Ignatius and Polycarp,' iii. 447 f.) unhistorically makes Polycarp to be an old man before he is ordained presbyter. So perhaps Hermas, Vis. ii. 4 (2nd cent.), where the presbyters are the official of the æmperor's aged women, who is interpreted as the Church. Gregory of Nazianzus (Orat. xiii. 11, 4th cent.) speaks of the presbyters being 'honoured for years and wisdom.'

(1) The word 'deacon.'—In addition to the use of the word διάκονον in the non-eclesiastical sense of a 'servant,' as in Mt. 20: 26, Jn 2: 5, and elsewhere in the Gospels, and (metaphorically of a ruler as God's servant) in Ro 15: 1, or of a 'follower' (of Christ) in Jn 1: 28, we have it used frequently of others than the ordinary 'deacons.' Our Lord is called a 'deacon' in Ro 15: 1 ('deacon of the circumcision'); St. Paul in Col 1: 28; 2 Co 8: 6 (pl.), Eph 3: 1, Col 3: 2 (also Apollos); Timothy in 1 Th 3: 8 (Westcott-Hort's text), 1 Ti 4: 2 (cf. the technical use of διάκονον in 3: 8); Epaphras in Col 1: 7; Jewish Christians in 2 Co 11: 6. Satan's 'deacons' are mentioned in 2 Co 11: 14. This fluidity of expression would be realized by the ordinary English reader if the translator translated 'deacon' instead of 'minister' were adopted throughout, and if it were borne in mind how often διάκονος and διάκονεσ are used in the NT, always in the non-technical sense of 'service' and 'to do service'.

(2) St. Paul's list of the ministry shows a great fluidity of nomenclature. But they do not give technical names to the various classes of the ministry. In 1 Co 12: 8 we have: apostles, prophets, teachers, powers, charismata of healings, helpings, governments, kinds of tongues. These cannot all be offices; some are (as we see from v. 29) purely charismatic, namely powers (working of miracles), healings, tongues, helpings, etc. Of the last two are explicitly enumerated, but only the different kinds of work done in the Christian Church. On the other hand, offices of the ministry are enumerated in Eph 4: 11, where we have apostles, prophets, evangelists, pastors and teachers (the last two are one class). These offices are said to be 'for the perfecting of the saints unto the work of ministry,' i.e., to equip the members of the body for the function of service to the whole (Rom 15: 16 f.; cf. the RV insert 'the peccata atonitas' in 1 Co 1: 29). Hence in the NT we cannot look for technical designations, but rather for a description of the work done by different officials. The pastors and teachers appear to be the local ministry. In Ro 12: 7-8, we have the abstract charismata or gifts: prophecy, ministry (πραγματεία), teaching, exhortation, giving (δόμος), ruling, showing mercy. In 1 Th 5: 22 we have leaders (πραγματεύομαι); cf. 1 Ti 3: 2, 5, 12, where this word is used of 'bishops' and 'deacons.'

(3) Fluidity of 'hieratic' language.—In the NT and the sub-apostolic writers the word ἵππος is not used of a Christian minister, though Christians as a body are called 'a priest and a king' (Rev 1: 6); 'priests and kings' (Rev 1: 5, 6); and 'priests of the most high' (Rev 5: 5, 9), just as Israel had been 'priests' (Ex 19: 6). Our Lord Himself is called 'a priest' or 'high priest' (ἐπίσκοπος) in He 5: 5-6, 9, 20, etc. Clement of Rome, Ignatius, and Irenaeus do not use 'hieratic' language of the Christian ministry, but the Didache says of the Christian prophets: they are your

1 The word 'pastor' or 'shepherd' ('εγκατάστασις) is used of our Lord in Ac 8: 15 (cf. 1 P 5: 2, Jn 10: 16). It was often applied to bishops by later writers (e.g., Apos. Const. ii. 1). The verb εναποτάσσω is used of the Christian ministry in Jn 20: 22, and belonged to one of the highest 'prophets' and 'teachers' are joined together (cf. 1 Co 12: 28).

2 The meaning is not clear (§ 13). Polycrates, bishop of Ephesus, c. A.D. 190, says (quoted by Eus. HE v. 24) that St. John was a priest, wearing the mitre (or 'golden plate,' χειροτονία), but the meaning is not clear. Justin Martyr (c. A.D. 150) calls the Christian body 'the true high-priestly race of God' (Dial. 116). Tertullian at the end of the century speaks of the bishop as 'high-priest' (summnus sacerdos, de bapt. 17), and, in reference to the Christian ministry, speaks of 'functions of priesthood' (sacerdotialis munera, de Prescr. 41). Hippolytus, early in the 3rd cent., uses similar language (Hier. i. prof.): 'We being their [the apostles'] successors and participants in this grace of high-priesthood, etc. In Cyprian the bishop is frequently called 'sacerdos,' and his office 'sacerdotium.' The Older Didascalia (3rd cent.) calls the bishops 'high-priests' (Funk, Didasc. et Conc. 1905, i. 102), and says that the Jewish priests and levites now correspond to the deacons, presbyters, widows, and orphans. The names 'high-priest' for the bishop, and 'priest' and 'levites' for the presbyters and deacons respectively are used from the 4th cent. onwards, and are often found in the Church Orders (for references see Maclean, Ancient Church Orders, p. 67, n.). In the ordination prayer for a presbyter in the Apos. Const. viii. 16 (c. A.D. 375) and in the order known as Constitutions through Hippolytus, § 4 (Funk, ii. 80), his functions are called ἱερέα, 'priestly duties.' Of other 4th cent. writers we may take as an example Ephraem, who uses ἱερέα for a Christian priest (Ep. 21, and whose 'priesthood' (ἱερότητα) includes subdeacons, but not readers (ib.). Jerome calls his famous treatise on the ministry Concerning priesthood (De hier. i. 15, and in the Apos. Canons, 63 (c. A.D. 400), the minor orders are included among the 'hieratics.' In the Syrian-speaking Churches the word κάθησθαι (which is the translation of ἱερότητα) is used for all orders of the ministry.

The use of this language does not mean that a new conception of the ministry was introduced by those whose writings it is first found. It was not likely to be used as long as any Jewish priests or levites were in the ranks of the Christian ministry. For example, Barnabas was a levite (Ac 4: 36), and could not well have been a 'priest without considerable confusion. When 'hieratic' language was first used in the Christian Church, it was a new nomenclature, but did not imply any new functions. It is a fallacy to describe some 2nd cent. Christian writers as uncharismatic, and some as uncharismatic. The use of 'hieratic' language meant that the writers who employed it ascribed to Christian officials the ministry delivered by the Great, and in the strictest sense the Only, High Priest, our Lord Himself. The writers like Ignatius who do not use 'hieratic' language are even more emphatic about the authority of the ministry than those who do.

3. Charismatic ministry.—This term properly indicates those who are endowed with any spiritual gifts, called ἐρωτονόμος ('gifts') in 1 Co 12: 1 or simply ἐρωτονόμος ('spiritual things') in 12: 14; but it is conveniently used for those who had 'extraordinary' charisms. Yet as between the 'charismatic' and the official ministry. As long as extraordinary charismata continued, the two went on side by side. Yet the same person might be of
MINISTRY (Early Christian) 663

both ministries; thus St. Paul was an apostle, and yet spoke with tongues more than all (1 Co 14:4). The charismata enumerated in 1 Co 12:8-10 include wisdom, knowledge, faith, healings, miracles, prophecy, discerning of spirits, tongues, interpretation of tongues. Of these probably the most prominent was prophecy. For the passages in which Christian prophets are mentioned see § 1, above. The Christian, however, do not imply that Agabus, Judas, Silas, and others held the same office in the Church as prophets, though they may have done so in another capacity. It is recognized that any one might receive a revelation, and so be a 'prophet' (cf. 1 Co 14:37). Thus those whom we should call 'laymen,' as not being of the official ministry, spoke in the Christian assemblies (ib.). But women were not allowed to do so (v. 4), though they might be propheticesses (Ac 21:9). In 1 Co 14 the charismata of tongues is somewhat disparaged as compared with prophecy.

Prophecy long continued. For the prophets in the Didache see above, § 1. Quadratus, early in the 2nd cent., is renowned for his prophetical gift (Eus. HE iii. 37). Polycarp is called in a letter written by the Smyrneans 'an apostolic and prophetic teacher' (Mart. Pol. 16: A.D. 155 or 156). Hermas received revelations, and his Shepherd (c. A.D. 150) was widely received as a prophetic writing. Even in the 4th cent., the Church Orders speak of charismata, and in particular of revelations, being expected; e.g., the Test. of our Lord speaks of those expected by the bishops, presbyters, widows, and by the Christians (i. 21, 22, 29, 31, 40); gifts of healing or of knowledge of tongues are referred to as being a possible endowment of any Christian (i. 47). Such a one was not to be ordained ('a hand is not laid on him'), but to be had in honour (ib.). See also below, §§ 6-8.

The term 'charismatic ministry' is capable of being misunderstood, as if the official ministry was considered a purely mechanical one, and only of human appointment. But St. Paul clearly recognizes the official ministry as charismatic in another sense. Timothy had the charisma in virtue of his ordination (1 Ti 4:4). The official ministry had the 'spiritual gift,' though it was not of the same nature as that of those who had extraordinary endowments; and the two ministries, as we may see, might overlap.

4. Bishops, presbyters, and deacons from the 2nd cent. onwards.—(a) Bishops.—In the Epistles of Ignatius (c. A.D. 110) we find bishops in the later sense of the word fully established. We may here make an endeavour to collect the facts with regard to the diocesan episcopate, postponing a statement of the theories that have been advanced as to its origin. The phrase 'diocesan episcopate' is perhaps the best that we can use, as it begets no question as to the relation of the bishop to the presbyters; the phrase 'monarchical episcopate,' which is used by many writers, is open to this objection.

The establishment of bishops in the later sense in the Churches of the province of Asia and elsewhere is ascribed by a steady tradition to John the Apostle. Clement of Alexandria (Quis dives, 42) states that John 'after the tyrant's death' 'returned to Ephesus from the isle of Patmos,' and 'went away, being invited to the contiguous territories of the nations, here to appoint bishops, there to set in order whole Churches, there to ordain such as were marked out by the Spirit.' Tertullian similarly says (adv. Mar. iv. 5) that 'the order of the bishops' (of the Seven Churches of Asia, or of all the Churches of the province) 'when traced up to their origin' rests 'on John as their author.' And the Muratorian Fragment (c. A.D. 180?) says that John was exhorted by his fellow-disciples and bishops 'to write his gospel.' Ignatius speaks of bishops being established all over the world (Eph. 3). But we do not find the diocesan episcopate established in all places at an equally early date. Thus Ignatius writes to the Philippians, but makes no mention of their bishop. Clement of Rome (c. A.D. 95) likewise omits all reference to a bishop at Corinth when writing to the Corinthians. It is, of course, possible that the office at Philippi and Corinth was vacant at the dates of the letters; but this hypothesis cannot be proved, and the deduction has already been made that the diocesan episcopate was not established in these two places so soon as elsewhere. The position at Rome at the end of the 1st cent. has been regarded as doubtful. Clement writes in the name of his Church 'we cannot tell where he succeeded,' but he does not call himself his bishop, nor does he name himself at all; we have to gather information about the authorship of this Epistle from subsequent writers. Clement obviously held a prominent position in the Roman Church; and, though nomenclature and organization matured themselves more slowly at Rome than elsewhere, the testimony of all antiquity must be taken as showing the establishment of the first place in it. Thus Irenæus makes Clement the third bishop of Rome in the list which he gives of bishops of that city up to his own time (Hær. III. 27). He says that Linus, the first bishop, received the office from the apostle and from St. Paul, and that Anacletus succeeded him, and was in turn succeeded by Clement. Before Irenæus, Hegesippus had already made a list of the bishops of Rome, as all the Greek MSS and the Syriac versions of Eus. HE iv. 22 assert (see Lightfoot, Apost. Fathers, pt. i., 'Clement,' i. 154). The alternative (rejected by Lightfoot but accepted by Harnack) of διαδοχή for διαδοχή is a conjecture based on the loose paraphrase of Rufinus. But, as Hegesippus's list is not extant, we cannot tell where it began. We notice that Ignatius, in writing to Rome, mentions no bishop there, and that, as G. Salmon remarks (Intro. to the NT*, London, 1892, p. 319, n. 4), all through the first two centuries the importance of the bishop of Rome in the importance of his Church. Dionysius of Corinth (c. A.D. 170) writes to the Churches of Rome, not to Soter its bishop, though he mentions him in the third person.

Long before the end of the 2nd cent. the diocesan episcopate was universal, so much so that writers like Clement of Alexandria, as we have seen, did not know that the 'bishops' of the NT were the same as the presbyters. It is therefore unnecessary to carry further an investigation into the spread of the system in the 2nd cent. (for detailed information reference may be made to Lightfoot, 'Discertation,' in his Philippians). But it is desirable to refer to the conception of the episcopate which we find in the works of Clement, bishop of Carthage in the middle of the 3rd century. Ignatius and Irenæus had described the bishop as a centre of unity, and Cyprian emphasizes this still more in his treatise Triune Ecclesia and in his Epistles. In this connexion he dwells strongly on the sin of schism from the visible unity symbolized and guarded by the bishop. It has been suggested (see below, §§ 6-8) that he has all reference to the election of the bishops by the people (see art. LATTY, §§ 4). There is no real foundation for Hatch's view, from which his German translator Harnack dissents, that the rule that there should be only one bishop in each community was not fully
established before Cyprian’s time, and was due to his dispute with Novatian (Organization of the Early Christian Church, p. 103); for an account of Cyprian’s view of the ministry reference may be made to his letter to Corell. (Church of the Ministry,” pp. 151-156, with his quotations in the footnotes).

It would seem that at the first the primary object of a local ministry was liturgical. Thus the Didache, immediately after mentioning the Sunday gatherings (A point (xyphos or dodek.) for yourselves therefore bishops and deacons” (§ 15). And so in the succeeding ages one of the principal functions of the diocesan bishop was to celebrate the Eucharist. In the Church Orders of the 4th and 5th centuries the newly consecrated bishop himself begins to exercise his functions by doing so, rather than the principal consecrator, as in modern times. The same idea underlies the ancient practice, still preserved in some parts of Christendom, of “concelebration,” that is, of the newly-ordained presbyters joining aloof with the bishop who has just ordained them, in consecrating the Eucharist. In the early ages consecration (ordination) was deeded to ordination. We may compare the custom, which also survives, of a newly-ordained deacon reading the liturgical gospel, that being one of his functions which he immediately begins to discharge. In this connection we may notice that the Bishop and the presbyter were the only persons allowed to celebrate the Eucharist (see art. LAITY, § 5 (d)).

The Council of Nicaea enacted that bishops were not to be translated from one see to another (can. 15, 325), but this rule was almost immediately disregarded (see Athanasius, Apol. c. Arian, 25). The Nicene Council applied it also to presbyters and deacons.

Presbyters.—In early Christian literature the presbyters are frequently recognized as the councilors of the bishop. Ignatius, who says that the presbytery is attuned to the bishop as strings to a lyre (Eph. 4), bids the Bishop and presbytery (Eph. 2, 20, Trall. 13), and do nothing without them (Magn. 7, Trall. 21f., 7); he speaks of “the bishop presiding (συμβασιδόρων) after the likeness of God, and the presbyters after the fashion of the apostles” (Magn. 6); in Smyrn. 8, the bishop is compared to our Lord, and the presbyters to the apostles (cf. Magn. 13): “with your revered bishop and with the fitly-wreathed spiritual ciret of your presbytery, with the honor of the bishop, let us walk after God.” In the same way, more than a century later, Cyprian says (Ep. xiv. [v.] 4, “To the presbyters and deacons”) that he had determined from the beginning of his episcopate to do nothing without the advice (consilium) of the presbyters, and the concurring feeling (consensus; see art. LAITY, § 3) of the people. The presbyters are here recognized as councilors of the bishop in a higher sense than the laity. This is not quite the same position as in Ep. xxi. (xxxii.) 1 (“To the presbyters, deacons, and people”), where Cyprian speaks of consulting them all before he ordained clergy. This is the equivalent of the more modern Si quis quis qua public intention of a presbytery or ordination. Origen likewise compares the ‘councillors’ and ‘rulers’ of the Church with those of the city, clearly meaning the presbyters and the bishop (c. Cels. X, 56: “a similar state of things is seen in the Old Testament” (i. 28, 3rd cent.; Funk, i. 108), where it is said that the presbyters are ‘honoured as apostles and councilors of the bishop, and the crown of the Church, for they are the council and censors’ of the Church”). The “Church and the Ministry” (i. 28) use nearly the same language.

It is for this reason that the bishop had his throne in the church with the presbyters sitting round him on either side. Thus in the *Apost. Ch. Ord.* (c. A.D. 300); for the Syriac text and tr. see *JThK* iii. [1911] 50; the presbyters are appointed by the bishop, and sit on either side of him, 'above on the right being the regulators of the service of the altar, those on the left the regulators of the people; and the presbyters are 'sharers in the mysteries' with the 'shepherd' (the bishop; see above, § 2). In the *Older Didache* (c. i. 158), the *Apost. Const.* (ii. 57), and the *Test. of our Lord* (i. 19) the same arrangement is found. In the last-mentioned manual the more exalted and honoured presbyters, who 'labour in the word,' sit on the right, and 'those of middle age' (i.e. the younger ones; see above, § 2 (b) for the association of the presbyterate and old age) sit on the left. For an ambiguity as to the position of the bishop and presbyters when ministering at the altar, see Maclean, *Ancient Church Orders*, p. 37.

The presbyters were charged with celebrating the Eucharist, at least when the bishop was absent (see above), and with pastoral duties to the flock. In the 4th century the *Apost. Const.* thus sum up the functions of bishops and presbyters (viii. 29):

'The bishop blesses, but does not receive the blessing; he lays on hands (ἐκατερον), ordains (ἐνθρονεῖται); he offers (ἱερά ἐκαθορίζει) the Eucharist, receives a blessing from bishops but not from all presbyters; the bishop exercises discipline (ἐκάθυλοω) over every presbyter who deserves to be corrected; he cannot do this. The presbyter blesses, but does not receive the blessing except from a bishop or fellow-presbyter, and so he gives it to a fellow-presbyter; he says on hands but does not ordain; he does not exercise discipline, but he separates those inferior to him,' etc.

An interesting feature is that the presbyter is allowed to confirm, for this seems here to be the meaning of ἐκατερον,2 blessing and ordaining being mentioned as different actions. Ordinarily the presbyter has baptized, and brings the candidate to the bishop for confirmation; this is the regular practice in the Church Orders and was the earlier custom in both East and West. In the East the presbyter has for many centuries confirmed, both in the Orthodox and in the Separated communions, but he uses chrism consecrated by the bishop. The same thing is also found in the West, but only in exceptional cases. Innocent I in his *Epistle to Decentius* (§ 3; A.D. 416) says that presbyters had the power by custom, though he did not approve of their exercising it. The Council of Orange (A.D. 441) says (can. 1, 2) that in the absence of a bishop a presbyter may receive penitent heretics, marking them with deacons who walk after God. The same way, more than a century later, Cyprian says (Ep. xiv. [v.] 4, “To the presbyters and deacons”) that he had determined from the beginning of his episcopate to do nothing without the advice (consilium) of the presbyters, and the concurring feeling (consensus; see art. LAITY, § 3) of the people. The presbyters are here recognized as councilors of the bishop in a higher sense than the laity. This is not quite the same position as in Ep. xxi. (xxxii.) 1 (“To the presbyters, deacons, and people”), where Cyprian speaks of consulting them all before he ordained clergy. This is the equivalent of the more modern Si quis quis qua public intention of a presbytery or ordination. Origen likewise compares the ‘councillors’ and ‘rulers’ of the Church with those of the city, clearly meaning the presbyters and the bishop (c. Cels. X, 56: “a similar state of things is seen in the Old Testament” (i. 28, 3rd cent.; Funk, i. 108), where it is said that the presbyters are ‘honoured as apostles and councilors of the bishop, and the crown of the Church, for they are the council and censors’ of the Church”). The “Church and the Ministry” (i. 28) use nearly the same language.

1 One good MS reads: ‘ordains, does not lay on hands.’

2 It has, however, been interpreted of the absolution of penitents. C. H. Turner (*JThK* vi. [1915] 51), who adopts the alternative reading, correctly states this, and considers the custom of the presbyters laying on hands at the ordination of a presbyter. Against this, however, is the fact that in the *Apost. Const.* that custom is not mentioned, and is perhaps negativized (see below, § 8 (5)).
MINISTRY (Early Christian) 665

tion," p. 231) makes the surely strange error of suppos-
ing that this 'consignatio' means 'ordination.' 1
There are traces in our period of a very close con-
nection between the bishop and the presbyter. Thus in
the Canons of Hippolytus, which in their present form
are perhaps of the 4th cent., but which adhere very
closely to their 3rd cent. source, we read that a
bishop and a presbyter are ordained with the same
sacramentum ('ordinatio'), i.e. to the diakonia (can.
in the Egyptian Church Order (§ 32) there is only one
ordination prayer for bishop and presbyter. The
later Church Orders have separate prayers.

A bishop is still called a 'presbyter' in the 2nd and
later centuries (see, e.g., Iren. Her. iii. ii. 2, 'su-
cessions of presbyters,' which in iii. 2 he explains as
'successions of bishops'). In his letter to Victor
Irenæus speaks of 'the presbyters before Soter
who presided over the Church which thou rulest.'
(Eus. HE v. 25). Dionysius, bishop of Alexandria
(c. A.D. 258), speaks of 'my fellow-presbyter
Maximus' (Eus. vii. 11). For Clement of Alex-
andria, see below, § 1 (b), and for Firmilian see
below, § 8 (a).

c. Deacon.--This was a numerous and import-
ant order in all the early ages. The deacon's func-
tions are summarized by the author of the
Apost. Const. (vii. 28), by saying that he does not
baptize or offer (the Eucharist), but that, when
a bishop or presbyter has offered, he gives the
sacrament to the people, not as a priest (episkopos)
but as one who ministers to the priests. He is described
in the liturgy as the 'servant of the Eucharist,
assisting at the Eucharist, and especially as saying
the short exhortations and the ectype, or litany
(see, e.g., the liturgies in the Test. of Our Lord
and in the Apost. Const.) he helps in the ordination
service (Test. i. 34; Older Didasc. ii. 57, etc.);
he assists at baptism in all the Church Orders which
describe the rite; in some authorities he is allowed
to baptize in the absence of bishop and presbyter
(see, e.g., in the later Latin liturgies, § 51); he
assists at the distribution of the Eucharist (Sorozem,
HE vii. 19); Test. i. 27), as at this day in the West;
he administers the eucharistic gifts in Justin Martyr
(Apol. i. 65), and in the Church Orders (for details
see, e.g., the ed. of A. F. Lucke, and E. H. Cubitt,
London, 1892, p. 233; for Apost. Const. see above).
He has many pastoral duties, such as visiting the
sick (Test. i. 34, Apost. Const. ii. 52, 44, iii. 19, Egy.
Ch. Ord. 33), entertaining strangers (Test. i. 34),
arranging for burials 3 (ib. and Eus. vii. 11).
The deacon also attends to the eucharistic offerings

1 The present writer can find no instance of 'consignatio'
or its Greek equivalent ἡγοιμαντία or its substantives, being
applied to ordination. The Greek ἐπίσκοπος and its oriental
equivalents usually refer to baptism or confirmation, or both, or
to the sign of the cross; by analogy Tertullian (adv. Valentin.
1) uses it in connection with the Jewish mystery (see also
Lightfoot, Apol. Fathers, pt. i., Clement, i. ii. 226 n.;
Machmer, Apost. Const. Church Order, p. 500). In the
Verona Latin Fragments (ed. Hauler, p. 126) the word is used in
connection with the church, in contradistinction to ordination,
for the part played by the priest in the baptismal ordination
(see below, § 8 (a)). The presbyter at the ordination (ordinatio)
of a presbyter signs (consignavit) with the bishop ordains (episcopal pars),
Ducas (Glossarium Medico et lustrum Latinae, Paris, 1847–
50, Noris, 1855–67) gives no instance of consignatio meaning
'ordination,' and no instance of ἡγοιμαντία used with reference
'to confirmation.' Salier (Thesaurus, 3105) gives one instance from pseudo-
Dionysius Areopagita (Eccles. Mov. v. p. 356 [PG 93 iii. 569] of
epitrepoulos, which he glosses with 'consecrated,' 'baptized.'
2 If it has been suggested that 'the young men' of Acts 19.35
(Acts 8.13) were called deacons (by the Arians and Sapphists who
prototypes of the deacons in this respect. For the episcopi, or
'grave-diggers' (mentioned by Eppianius, Epp. Fis. 21), and
for the deacon (the diciples of the sick) see J. Wordsworth, Min-
istry of Grace, p. 151.) and

is often the almoner of the Church (Older
Didasc. ii. 57; Apost. Const. iii. 19). In some
authorities the bishop and presbyter exercise the
discipline of the laity through the deacons (Test.
iii. 36; Apost. Const. iii. 16; Ethiopic Didasc. § 4).
As time went on, deacons pressed their claims and
relegated several of their lesser functions to the
minor orders. We find several writers using the
terminology of the Syrian, Cyprian (Ep. i. 19; 
'ad Rogatianum'), the Council of Arles
(can. 15; A.D. 314), which says that many deacons
attempted to celebrate the Eucharist, that of
Nicea (can. 18). Likewise, on the Church Orders, the
Test. of Our Lord being a soli-
darity exception in that for manual the
priesthood of both deacons and of 'widows who preside' is
greatly extolled.

Number of the clergy.—Cornelius, bishop of
Rome, writing to Fabian or Fabius, bishop of
Antioch, A.D. 231 (the letter is given by Eus. HE
vi. 43), enumerates the various orders and classes
at Rome as follows: one bishop (about this he is
episcopal), 46 (and. ec. 36) presbyters, 7 deacons,
17 subdeacons, 42 acolytes, 52 exerciti, readers,
and doorkeepers, and more than 1500 widows and
persons in distress (for the minor orders see below,
§ 6). But in unimportant places the clergy were
much fewer. In the Apost. Const. there were:
one bishop, 3 presbyters, 3 deacons (so the
Syriac), one (? reader, 3 widows. In the Test.
of Our Lord (c. A.D. 350?) we have (i. 34), besides
the bishop, 12 presbyters, 7 deacons, 14 subdeacons,
13 widows who preside (the Greek order is 'doubtless'
άνδρας τινας οἰκονάζουσας).

Seventy was a very ordinary number for the
decans, because of the Seven in Ac 6.
Sozomen says (HE vii. 19) that even in his day
(5th cent.) there were only 7 deacons, though
in other Churches the number of deacons is
a matter of indifference.' The Council of Neo-
Cæsarea, appealing to Acts, says that even in
the largest towns there are not to be more than 7
decans (can. 15; c. A.D. 314, or perhaps a little
later). The number twelve for the presbyters in
the Test. of Our Lord may be due to the comparison
of their order to the apostles. Eusebius (10th
cent.) describes Alexandria in old days as having
twelve presbyters, but his evidence is quite
untrustworthy (see below, § 8 (d)).

e Age of ordination.—At Neo-Cæsarea it was
enacted (can. 11) that no one was to be ordained
presbyter before he was thirty years of age, because
as our Lord then began to teach at Capernaum, the
general rule for many centuries. There was no
similar rule about bishops, but the 2nd can. of
Nicea says that no novice in the faith is to be
ordained presbyter or bishop. The minimum age
for deacons seems to have been twenty-five. The
Council of Hippo (A.D. 393) says that no one is to
be ordained at all under that age (can. 1); but this
rule can hardly have applied to the minor orders,
for the same Council (can. 18) speaks of readers
who are appointed as quite young boys. So
Cyprian (Ep. xxxxii. [xxxii-i.] 1) and Socrates (HE
vii. 41) speak of very young readers. The Gallican
Statutes (c. A.D. 500; see below, § 6 (c)) say that
a bishop must be of 'middle age,' but does not
say what that is (§ 1).

It may be convenient to note here some later rules as to age
of ordination. The Maronite rule is that a presbyter must be
over 30, for the reason stated above (H. Denninger, Ritual Oran-ent-stum, Würzburg, 1838–64, ii. 148), and a deacon must be
over 21 (ib. p. 126). The East Syrian or Chaldean Syriac, or 'Book
of Canon Law' (T' iv. 2), Maclean and W. H. Browne, Cathedrals
of the East, London, 1851, 201), says that readers must not be
ordained till past boyhood, but this instance is very dubious.
Deacons a little later, presbyters about 18, though (ib adds) the
ancient age was 20. The ancient age for deacons is 25, for
presbyters 24, for bishops 30, and this is the usual Western
custom; some relaxation of the rule has rarely been made in
the case of deacons.

5. Development of the supervisory offices.—(a)
Metropolitans.—The name is first found in the 4th cent., before which there is no certain trace of pro-
vincial organisation, the ‘eparchy’ in the Apos.
Ch. Ord. being apparently the civil province. At
Nicaea metropolitans are mentioned by that name
(can. 4, 6), and the word ‘eparchy’ is apparently
used as the title of an ecclesiastical province, though, as the
civil and ecclesiastical provinces coincided, this is
not quite certain. At the Council of Antioch in
Encaenia (A.D. 341) metropolitans are recognized
in effect, though the name is not given to them
(can. 19, 19); the bishop presiding in the metro-
polis’ (i.e. in the civil province of the city). The
phrase used, and the corresponding verb employed is in can. 19.
The word ‘metropolitan’ is used at Laodicea (can.
12; c. A.D. 380). On the other hand, there is no
mention of a metropolitan in the Church Ordres,
and this is a cogent argument against their being
dated later than the 4th cent., and for their not
being assigned to any of the great centres like
Alexandria or Antioch. In these manuals the
neighbouring bishops come together for the election
of a bishop, and the whole assembly of bishops,
deach, and laity elect, just as they do in Cyprian
(Ep. lxxviii. 11; ‘To the clergy and people in Spain’);
but there is no metropolitan. There is perhaps
just a faint trace of a metropolitan in Apost. Const.
(viii. 4, which speaks of ‘one of the first bishops’
saying the ordination prayer of a bishop; and so in
the Arabic Didasc. (c. A.D. 400); § 36, ‘the first
bishop among them’). But this is all. A rather
stronger trace is to be seen in the Apost. Constit.
can. 35 [also numbered 34 or 33; c. A.D. 400].
After the 4th cent. metropolitans became practi-
cally universal.

Although there was no regular organization of
provinces before the 4th cent., yet bishops of certain
important cities, like Rome, Carthage, Alexandria,
Antioch, wielded great influence over the neigh-
brrowing bishops. We see this in the case of
Cyprian. At Nicaea, the authority of the Church
Orders, and Rome is spoken of as an ancient
and civil province (can. 6). Alexandria is to have, as
before, authority over Egypt, Libya, and Pent-
apolis, i.e. over more than half of the civil province (§1).
The growth of this influence was promoted by the
holding of synods, when external circumstances
permitted. Synods would ordinarily be held in the
‘metropolis’ (chief town) of the civil province or
eparchy, and the bishop of that city would
naturally preside. So the civil metropolis tended
to become the ecclesiastical metropolis. But this
was not always the case with synods. At that
of the bishops of Pontus held to consider the Paschal
question, Palmas as the oldest [bishop] presided
(Eus. HE v. 23). Palmas was bishop of Cappadocia
(iv. 23). At the end of the 4th cent. the Council
of Hippo decreed that a bishop of a principal see
(prima sedes) was not to be called ‘princes sacer-
dotum’ or ‘summus sacerdos,’ but simply ‘prime
sedis episcopus’ (can. 25). Thus the name ‘metro-
politan’ was apparently not in use in the province
‘Africa’; and Hefele thinks that, except at Carth-
age, the metropolitan rights went to the oldest
bishop of the province, and that the same thing
held good in Spain before Constantine’s time (Hist.
of the Councils, Eng. tr., Edinburgh, 1872, i. 162).

The Council of Carthage, Cyprian affirms that all bishops are equal. Thus in de
Uniate, 5, he says that the episcopate is one and
that all bishops are full partners in it with joint
and several responsibility; for this is the meaning
of his phrase ‘cuius episcopus, pauperis in solidum pa-
tenet.’ So in Ep. iv. (lii.) 21, ‘ad Antonianum,’
he says that every bishop disposes and directs
his own acts, and will have to give an account of his
purposes to the Lord. Cf. also Epp. iviii. (liii.) 5,
lix. (liv.) 14, both to Cornelius; Cyprian says that
appeals are not to be carried outside the province
in which the question happens.

The custom of giving the pallium to metropo-
litans hardly falls within the limits of this article
(see DCA ii. 1174).

Patriarchs.—The name ‘patriarch’ was proba-
bly borrowed from the Hebrew word (lxvii. 11; 1
Ch 27) it is used for the head of a tribe, and in
24th and some MSS of 9th 23rd for the head of a
village, or subdivision of a tribe. In the NT it is
used of David (Ac 2: 30), the sons of Jacob (7th),
and Abraham (He 7: 4). In the O.T. (e.g. R.
Churton, Uncanonical and Apocryphal Scriptures,
London, 1884) it is used of Abraham, Isaac, Jacob,
and others. In the early centuries of our era
there is no Jewish ‘patriarch,’ or representative of the
nation, is several times mentioned—e.g., by Cyril of Jeru-
salem (Cat. xii. 17; A.D. 348), who speaks of the
Jews’ ‘recent measures relative to their patriarchs
as they now call them.’ The Emperor Hadrian
(A.D. 134?) refers to the Jewish patriarch in his
letter to the consul Servians about religion in
literature we find the term first applied to Chris-
tians non-officially, sometimes loosely defined as
‘equal to a bishop,’ when he says (Ep. clxv.
‘ac Gregy,’ that the deacon Glycerius assumed the
style and name of a patriarch. An example in
Gregory of Nyssa’s General Oration on Meletius,
bishop of Antioch (A.D. 325), who was an
archbishop. The first and last persons to use this
in the church, or in the church, were the
besiege, the title of a patriarch. The growth of
the authority of these sees is shown by the 8th
cent. of Nicene, and the 9th of Constantinople; the
latter was rejected by the bishop of Rome.
The ultimate result was the joining together of several
provinces or eparchies, each of which was governed
by its own metropolitan, under a single patriarch,
whose jurisdiction covered all the eparchies in
the empire, just in the same way as in civil affairs
several ‘eparchies’ were grouped together into one
diocese, which was a very different thing from our ‘diocese.’

Archbishops.—This term, which in the West
became the customary title of metropolitans, was
not so used in the East. It was a title of honour
conferred on bishops of some of the greatest sees,
though its application was not always uniform.
In the 7th cent. Epiphanius uses the term (Herr.
lix. 3) of Meletius, bishop of the Thebaid, and
Iviii. 1) of the bishop of Alexandria. At Chal-
cedon (A.D. 451) it is applied to the bishops of
Constantinople, Alexandria, and Rome (can. 38,
30; the last is not considered to be a canon proper;
see Hefele, iii. 422).

Choreisci.—These ‘country-bishops’ were
assistants to the diocesan bishop for the work
of the rural districts. In the Greek-speaking
Churches and in the West they were, at least
normally, bishops—such is the trend of the
evidence, though Morinus denies it—but in the Syri-
speaking Churches, at a later date, they were often
confused with the episcopatui, or ‘visitors,’ and
were prebendaries. They somewhat resembled the
assistant (‘suffragan’) and coadjutor bishops of the
present day, in that they worked under the direc-
tion of the diocesan bishop, though their
functions were not entirely the same. They are first mentioned at Ancyra (can. 13 [see below, § 8 (b)]; A.D. 314), Neo-Caesarea (can. 14; A.D. 314 or a little later), Nicea (can. 8; A.D. 325). From this time down to Constantine's Hymn to the An-philanthropos (A.D. 341) we may perhaps gather that not all archi-episcopoi were bishops, for it uses the expression "even if they have received consecration as bishops." They are also mentioned by Athanasius (Apoll. c. Arab. 35), But Irenæus, c. cxxxviii. f. e., and other 4th cent. writers. But they are not referred to in the Church Orders, and it is probable that they were to be found only in the busy centres, from which we have, as above (a), these manuals did not come. In the Edessene Canones, i.e., the Syriac Teaching of the Apostles (see Ante-Nic. Chr. Lib., 'Syriac Documents,' p. 42 ff.), a 'ruler' is to be appointed as head over the village presbyters; and these 'rulers' must have been itinerant visitors, for a reference is made to Samuel also making visits from place to place and ruling (can. 24; c. A.D. 350). The Council of Sardica in Illyricum (c. A.D. 347, or earlier) does not appear to mention archi-episcopoi. The 6th cent. says that a bishop is not to be ordained in a village or small town for which one presbyter suffices, for it is not necessary there that a bishop should be made, lest the name of a bishop and his authority are cheap (the authenticity of these canons is disputed).

Among the functions of the archi-episcopoi were the appointment and ordination of minor orders, but not as a rule of deacons and presbyters. To ordain these, he must have the consent of the diocesan bishop who had appointed him (Antioch in Encomium, can. 10). He could also confirm; see the 3rd can. of the Council of Riez or Regiom in Provence (Hefele, iii. 157; A.D. 439). Sochismatic bishops when reconciled were sometimes made archi-episcopoi, as there could not be more than one diocesan bishop in each see (Nicea, can. 3; Socrates, HE i. 9; Riez, can. 3). Lightfoot ('Dissertation,' p. 253, n.) looks upon archi-episcopoi as a survival of the presbyter-bishops' which his theory of the origin of the diocesan episcopate postulates (see below, § 10); but there is absolutely no evidence for this survival, and indeed it is very unlikely that archi-episcopoi existed before the 4th century.

An attempt was made towards the end of that century to abolish the office. The Council of Laodicea (can. 57; c. A.D. 380) forbids their appointment but it was afterwards to be only periodical (apparently presbyters), while archi-episcopoi who had already been appointed were to act only with the consent of the diocesan bishop (this points to a certain self-assertiveness on the part of the archi-episcopoi). But this canons did not put an end to the office. Archi-episcopoi are found frequently in the Far East (see below), and were revived in the West for a time (Hefele, i. 18). There were some of this order present at the Council of Ephesus, A.D. 431, but not at that of Chalcedon, A.D. 451.

In the East Syrian Sunhâdhis (vi. 1) there are three orders of the ministry, each with three subdivisions: the publican in the second order (the presbyterate), the seminarian in the third, and the deacon in the third. These were not, strictly speaking, the same as the three orders in the Church, as the archi-episcopoi were not the same as bishops. The last subdivision is to be identified with the three diocesan clergy. The difference between these two orders is that the bishop ordains all readers, subdeacons, deacons, and presbyters, and the archi-episcopoi ordain only readers and subdeacons. The only difference is that the bishop has the right to ordain all readers, subdeacons, deacons, and presbyters, and the archi-episcopoi have the right to ordain only readers and subdeacons. This is the only difference between the two orders. The archi-episcopoi ordain only readers and subdeacons, while the bishop ordains all readers, subdeacons, deacons, and presbyters.

(c) Archdeacon. Neither the name nor the office of an archdeacon is found before the end of the 4th century. The name is found in the Pilgrim of Silvia ('Ethisia'), which has usually been assigned to that date, though some place it later; but even then it is not the name of a distinct office. Neither the name nor the distinct office is found in the Church Orders, though in the Test. of our Lord the principal deacon has certain duties assigned to him. Some writers at the end of the 8th cent. give the name to the archdeacon, and Augustinianus in his list of Roman officials (above, § 4 (d)). Jerome (Ep. cxvii., 'Ad Evangelum') mentions archdeacons as an order, and after his time they were common in both East and West. In the Ordo Romanus Primus the archdeacon plays a very important part in the eucharistic liturgy at Rome (e.g., §§ 18, 20), and E. G. C. F. Atchley, London, 1905). But this work is probably of the early 7th cent., though found in the Ordo romanus of the 6th (Atchley, p. 7). The archdeacon was at first a deacon, and in some cases the senior deacon succeeded automatically to the office; but Sozomen (HE viii. 9) speaks of Chrysostom appointing Surasp as archdeacon, and therefore he had not succeeded automatically. There was only one in each diocese in the time of Jerome (loc. cit.). For the later development of this office see D&C i. 136.

In the East Syrian Church the archdeaconate is the middle subdivision of the second order, i.e., of the presbyterate (see above). The office is still used in that Church as an honorary one, and an influential presbyter is appointed 'arkin,' or archdeacon. In the West the office is in frequent use, and in most Western countries each bishop has at least one archdeacon, called the 'eye of the bishop.' The archdeacon is a senior presbyter, deputed to relieve the bishop of some of his minor functions.

6. Development of the lesser offices.—At an early date we find the existence of some orders of the ministry lower than those of bishops, presbyters, and deacons. We read at various times of subdeacons, readers, singers, interpreters, doorkeepers, acolytes, exorcists. There was a ministry of women—widows, presbyters, deaconesses. It must be noted, however, that some of these offices were not always and in all places reckoned as belonging outside the ordinary roll of the clergy.

(a) Readers (λατρινοί, lectores).—This is probably the oldest of the minor orders. In Justin Martyr's description of the Eucharist (Apoll. i. 67; c. A.D. 150) the reader of the lections plays an important part, though Justin may not mean that he was of a separate order in the ministry. In the Apost. Ch. Ord. (§ 19; c. A.D. 208) he comes before the deacon, and Harnack thinks (Sources of the Apost. Canons, Eng. tr., London, 1885, p. 71 ff.) that his office was at first a charismatic one, and that he was not originally included among the clergy. Stress is laid on the necessity of the reader being learned. He must be 'able to instruct' or 'narrate' (διηγιτός), and he 'fills the place of an evangelist.' This qualification is not always insisted on in the case of a bishop; this Church Order says (§ 10) that, if a bishop does not know letters, at least he is to be meek. The Test. of our Lord also insists that the reader must be learned, and have had much experience (i. 45). Probably, at first, the duty of expounding what he read; but, when he
MINISTRY (Early Christian)

was limited to the mere reading of the lections, his position fell, as it did at Rome in the middle of the 3rd century (see above, § 4 (d), where the reading of the classis and the exorcists and doorkeepers, below the acolytes). In the other Church Orders the reader comes, sometimes before, and sometimes after, the subdeacon. In Sarapion's Sacramentary (§ 25; c. A.D. 350) the minor orders are, however, readers, and interpreters. There are indications in some of the authorities that readers were not numerous. The Older Didasc. and the Apost. Const. (i. 28; Funk, i. 1081) suggest that it is probable that a church may not have a reader at all; and in several Church Orders there is an indirect indication that there was only one in each place (Maclean, Ancient Church Orders, pp. 14 f., 57). Readers come below deacons in Tertullian (de Praes. 41). They are frequently mentioned in Cyprian; and they often had the important duty of reading the liturgical gospel at the Eucharist: this they did from a desk, or ambon [Ep. xxxix. [xxxviii.] 4, 'About Celerinus']. In the Dioscurian persecution they had the custody of the Scriptures (J. Wordsworth, Ministry of Grace, p. 189).

(b) Subdeacons (εὐθυκέτους, ἐγγράφοι, subdeaconi, ministri).—These officials, whose chief duty was to assist the deacon at the Eucharist and in their other functions, are mentioned in the 3rd cent. by Cornelius at Rome (above, § 4; he speaks of seven) and Cyprian in Africa [Ep. xxxiv. [xxxvii.] 3, 'To the presbyters and deacons': he speaks of two subdeacons by name and a certain subdeacon, and in the Older Didasc. (E. Hauler, Verona Latin Fragment. Leipzig, 1900, p. 40; Funk, i. 116; see below]. In the 4th cent. we find them in Spain at Elvira (can. 30; comp. § 205; no other minor order mentioned in these canons), in Egypt in Sarapion's Sacramentary (§ 25), in the Church Orders (but not in the Apost. Ch. Ord.), at Neocesarea in Cappadocia (can. 19; A.D. 314 or later), at Antioch in Encruxita (can. 10; A.D. 341), at Laodicea (can. 20-22, 25; c. A.D. 380), and in Athanasius (Hist. Arian, ad Monachos, 60; A.D. 355). At Neo-Cesarea and Laodicea, and in the Apost. Const. iii. 11, and elsewhere, the subdeacon is described as a reader or interpreter. The existence of subdeacons in the East before the 4th cent. has been disputed; and it has been thought that the passage in the Didascalia where they are mentioned is an interpolation and long. It occurs both in the Latin and in the Syriac versions. Epiphanius (Hist. viii. 1) says that their functions should be vested in other orders. But such a point is hardly on the Bisaccia where they are mentioned is a point of detail, and both in the Latin and in the Syrian versions. Epiphanius (Hist. viii. 1) says that their functions should be vested in other orders. But such a point is hardly a reasonable one. Cornelius (above, § 204) says that a royal edict directed that the presidents (ἐφεσιαρχοι) of the Church everywhere should be imprisoned, and that the prisons were filled with bishops, presbyters, deacons, readers, and exorcists; he omits any mention of subdeacons here. In the Canons of Hippolytus (can. xxi. [ed. Achelis, § 217]) they are mentioned together with presbyters and readers, in a passage where deacons are omitted; but this may be due to the present (4th cent.) form of the Canons; the omission of deacons may be due to clerical error.

(c) Acolytes, or collets (ακολουθοὶ, acolythoi, acoliti).—These are first mentioned by Cornelius (above, § 4), and by Cyprian (loc. cit.). They are also mentioned in the Gallican Statutes (as J. Wordsworth, Ministry of Grace, p. 88) or Statuta Ecclesiae antiqua, a collection of canons which used to be attributed to the so-called 'Fourth Council of Carthage' (can. 6; Hefele, ii. 410; their real date is c. A.D. 360). Acolytes were assistants at the Eucharist, and performed various minor functions in the services. They are found only in the West, where they became very numerous. Cornelius says that there were 42 at Rome in the 3rd century. As there were 14 regions in that city, there would be one deacon or subdeacon and three acolytes for each region (Harnack, Sources and History of the Apost. Can., p. 90). An acolyte was sent by Cyprian as a messenger (Cyprian, Ep. xii. [xiii.] 3).

(d) Singers (ψαλται, ψαλτηρία, ψαλτηρίου, cantores, psalters, etc.).—In the earlier Church Orders singers are mentioned, but Cyprian, in the Sacramentary (§ 25) mentions them, but Cyprian, in the Apost. Const. (iii. 11, vi. 17; c. A.D. 355), at Laodicea (can. 23), in the Apost. Canons (can. 43 [42], 69 [68]; c. A.D. 400), and in the Arabic translation of the Test. of our Lord (i. 45), which adds a chapter to that manual about their appointment, and reduces the lesser orders in the Test. (see above, § 4) to four subdeacons and readers, three widows and singers; the date of this Arabic translation is unknown. Singers are a separate order also in the Gallican Statutes (can. 10).

(e) Interpreters (εὐξεμεναί, ἐξερευνοῦντες, interpreters).—These are not mentioned in the Church Orders. They naturally took part in all the liturgical ceremonies. Eusebius mentions them in Palestine (Mart. Paulet., longer version, § 1, tr. A.C. McGiffert, p. 342 [Nic. and Post-Nic. Fathers]; he says that Procopius was a reader, interpreter, and exorcist. For a more complete account see Sarapion's Sacramentary. The Pilgrimage of Sileia ('Eutheria') we read (vii. 5) that at Jerusalem some spoke Greek only, and some Syriac only, and that, as the bishop, though he knew Syriac, yet spoke only to a presbyter or interpreter, and to the bishop's Greek into Syriac. For I Co 1426 see above, § 1 (e).

(f) Doorkeepers (πύλαρσις, ostiarii).—These are mentioned in Cornelius (loc. cit.), in the Apost. Const. iii. 11, and the Ethiopic Didasc. (§ 10), but not in the other Church Orders, which retain (as indeed do also the Apost. Const., rather inconsistently) the old direction that deacons are to guard the doors. For the devolution of the deacon's functions see above, § 4 (e).

(g) Exorcists (ἐξορκισταί) in the NT, Josephus, and elsewhere, but εὐξεμεναί in Apost. Const. viii. 28, and Epiphanius, Exp. Fed. 21, exorcist).—These were mentioned by Cornelius, as above, and by Tertullian, de Paenit. 41, and Origen (c. Cels. vii. 4). On the other hand, candidates for baptism were exorcized by the bishop before Easter (Maclean, Ancient Church Orders, p. 97; T. Thompson, Offices of Baptism and Confirmation, Cambridge, 1914, p. 23). The Council of Laodicea (can. 26) says that no one may exorcize in churches or houses unless authorized by the bishop. The office of an exorcist was at first entirely charismatic, and he was not originally a member of the clergy (see below, § 8 (g)). We can well understand that unrestrained exorcism became an abuse, and that exorcists needed stringent regulations.

(h) Ministry of women.—It is not very easy to distinguish between the 'widows' who were on the Church roll for relief and those who were, in some sort, in the ministry. The widows in Ac 6 perhaps under both, for r.15 seems to imply ministering. A deaconess, Phoebe, is mentioned in Ro 16, though Hort (Christian Ecclesia, p. 208)
thinks that ἀνδραὶ (fem. is here used in a non-technical sense, and merely means that Phoebe ministered to the needs of the Church. Many think that 'women' in I Ti 3:11 (τρωμαστίκη without article) means deaconesses, but the qualifications for deacons which precede and follow. We also read of Priscia (Priscilla) joining with Aquila in his evangelistic work (Ac 18:2); this was no doubt in private teaching, as St. Paul forbid a woman to teach or to have authority over men (I Ti 2:11). In the Christian literature after the NT we find frequent mention of a ministry by women. In the Apos. Ch. Ord. one of the 'wives' is to visit the sick, while the other two are to pray and receive spiritual revelations (see above, § 2). In the Test. of our Lord the 'widows who preside' (σουκρατία) are an important order; they are also called 'prebysteresses,' as corresponding to prebys- 
eters, while deaconesses are mentioned as corresponding to deacons; deaconesses carry the Eucharist to a sick woman (ii. 20), just as a deacon does to a sick man (cf. Justin Martyr, Apol. i. 65). With Laodicea prebysteresses (σουκρατία) are identified in the Apos. Ch. Ord. (p. 84), and their appointment for the future seems to be forbidden, though the interpretation is not quite clear. In early times widows or deaconesses were employed especially in the baptism of women. The deaconesses (τρωμαστίκαι) (I Cor. 4:16) actually held the office of Eucharist-bearer (Nicæa, can. 19; Apos. Ch. Ord., viii. 19; Epiphanius, Exp. Fid. 21). For further details see Maclean, Ancient Church Orders, p. 83 f.; J. W. Worworth, Ministry of Grace, ch. v. It may be interesting to give here Epiphanius's list of clergy and other classes of Christians in Exp. Fid. 21. He mentions bishops, deacons, subdeacons, readers, virgins, monks, ascetics, widows, 'those who marry honestly, deaconesses (especially for baptism), exorcists, interpreters, girders (or corporis); see above, § 4 (5), bookkeeper; and he adds: 'synet eis σουκρατίας.'

Promotion.—It is a common, and in the West the usual, thing for a deacon and the lower officials to be in due course promoted; but it is doubtful if this was often the case in the first three centuries. The 'good step' (ἀποστολή τεταρτή) (see § 8 (9)) of I Ti 3:11 has been interpreted by Ambrose, Jerome, and some moderns, of promotion, though this is not very probable, and does not well suit the rest of the verse. The only instance of such a course in the 1st cent. is perhaps Philip, who in Ac 8 is one of the seven, without authority to lay on hands, but who is called 'the Evangelist,' that is (probably) one of the 'apostolic men' like Timothy and Titus, who, though not apostles, yet shared the apostolic office (above, § 4 (4)). But, at any rate from the 4th cent., perhaps earlier, promotion from the lower to the higher offices became common. These of readers and subdeacons are referred to in the Test. of our Lord (i. 44 f.), Apos. Ch. Ord. (viii. 22, readers), and are implied by Basil (Ep. canon. tert. cer. viii. 30). Cyprian (Ep. xxxix. [xxxii.] 5, 'To the clergy and people') speaks of promoting readers to the prebysterate—this was because they had been confessors (cf. § 7 below). The promotion of deacons is mentioned in the Apos. Ch. Ord. 22 (to the episcopate), Apos. Ch. Ord. viii. 17 f., Eth. Ch. Ord. 24, and probably in the Test. i. 38; explicitly also in the Codex Canonum Ecclesiae Africana (can. 31; Hefele, ii. 470.). Polycarp is said by the 4th cent. pseudo-Pionius (see above, § 11 (17)) to have consecrated deacon, presbyter, and bishop (§ 11, 17, 23) and the Council of Sardica (can. 10, if genuine) says that a bishop must have been a reader, deacon, and presbyter, some time before becoming bishop.

Ordinal offices.—It appears from the Church Orders that confessors, i.e. those who had been apprehended in the persecutions and had confessed their religion, but had escaped martyrdom, enjoyed an honorary presbyterate. A confessore (ὑποστολή) had the honour of the presbyterate by his confession (Epiphanius, Ch. Ord. 34; Eth. Ch. Ord. 51). Canons of Hippolytus, vi. (ed. Achelis, 43-47), Test. of our Lord, i. 39). It is, however, enacted in these manuals that, if a confessor is wanted for a bishop, he must receive the laying on of hands. There is no evidence that confessors were ever allowed to minister, or to celebrate the Eucharist, without ordination. Indeed the Canons of Hippolytus (loc. cit.) say that a confessor has not got the form of the presbyterate, but he has obtained its spirit. An honorary presbytery was possible, as there were many presbyters in each place; but an honorary episcopate was not possible, both because there was only one bishop in each see and because the bishop had the duty of ordaining others, which an ordained person could not do. In the Test. of our Lord (i. 39) a bishop is said to have been ordained (ἐνδοτήσεται) by another bishop. It is noteworthy, and a sign of the earlier date of the Church Orders above mentioned, that the Apos. Ch. Ord. (viii. 23; c. A.D. 375), while giving honour to confessors, yet repels their undue influence. This would show that a self-appointing confessor is to be cast out; confessors are not to be ordained unless wanted as bishops, priests, or deacons, in which case they are to be ordained. It says nothing about the honorary presbytery.

That confessors were in some cases entitled to an honorary office is not the same thing as saying that confessors were preferred to others for the higher offices of the Church when they becamevacant. Tertullian (adv. Valunt. 4) tells us that Tertullian was indignant, when he expected to become a bishop, because another was preferred before him by reason of a claim which confessor-ship (martorium) had given to him. An honorary bishop who was preferred was made bishop without being ordained. Eusebius (HE v. 28), quoting an unnamned writer, says that Arsenius, mentions a confessor Natalius who was chosen by the heretics as their bishop, apparently because of his confessorship (early 3rd cent.). Hippolytus (Haer. ix. 7) relates how Callistus, having been imprisoned in Sardinia, succeeded Zephyrinus at Rome as bishop. Aquaspsas, a confessor, became bishop of Antioch (HE vi. 11). But these and other instances prove nothing as to confessors becoming bishops without ordination.

3. Transmission of the ministry.—In this section we enter on the consideration of a series of facts whose significance is much disputed. An endeavour will be made to state the whole of the facts as far as they are relevant to the early period with which this article deals. For a description of the rites used in transmitting the ministry see art. ORDIATION.

3 a. In the NT we find, in the case of the Seven (Ac 6:5), that the people 'elect' (v. 3, ἐκλεκτοὶ), but the apostles 'appoint' (v. 3, ἐκποίησεν) and set apart by prayer and imposition of hands (v. 5). In 14 Paul and Barnabas 'ordain' (ἐκποίησεν; v. 29) the presbyters for the people of Pisidian Antioch, Iconium, etc. The word used is a general one, and does not necessarily imply the laying on of hands. It is used for election by a show of hands, or (as here) simply for appointing. In the case of the elders (presbyters) at Ephesus, Hirt (Christian Eccles. p. 99) remarks that there is no indication that St. Paul appointed them. Yet the phrase 'the Holy Ghost hath made you bishops' (Ac 20:28) cannot be pressed to mean a direct authority of the presbyters received from God without human intervention, such as St. Paul himself had (Gal 1). God works through human means; and the analogy of 6:1-24 will lead us to suppose that, though
the people probably elected their presbyters, St. Paul appointed them. St. Luke is not accustomed to repeat details of this nature. In 1 Tt 4 the presbytery are said to have laid hands on Timothy, and in 1 Tt 2 St. Peter speaks to them to have done so. Probably here we have the counterpart of the custom which is found in later ages of the presbyters and bishop joining in the ordination of a presbyter (see below). In 1 Tt 2 St. Timothy lays on hands as though it is doubtful if ordination is here referred to. In 1 Tt 2 Titus’ appoints’ (καταφέρει) presbyters in every city in Crete. We may notice, by way of analogy, the laying on of hands in Ao 8:19, which is not ordination; this is reserved for the apostles in those passages, though ordinarily they did not baptize (8:16-19; 1 Co 14:27).

For the sub-apostolic period we have very little evidence on the point which we are now considering. But Clement of Rome describes in general terms how the ministry was appointed.

"(The apostles) preaching everywhere in country and town, appointed their first-fruits, when they had proved them by the Spirit, to be bishops and deacons. ... They appointed (καταφερεον) the aforesaid persons [the bishops and deacons], and afterwards, according to (καταφερεον) that if these should fall asleep, other approved men should succeed to their ministration. Those therefore who were appointed by them (the apostles) or other distinguished (ομοορθοι) men, with the consent of the whole Church. ... these men we consider not to be unjustly thrust out from their ministration" (Cor. 45, 44).

Here we have popular election, and "appointment" (καταφερεον; for this word see art. ORDINATION) by "distinguished men," i.e., not by the "bishops and deacons," but by such υἱοὶ ἀποστολικοὶ as Timothy and Titus.

For the 3rd cent. we have evidence that only bishops (in the later sense) could then ordain; for Novatian had to get, by a discrepant trick, three bishops to ordain him (see below (c) and (f)). Firmilian of Capadocia, writing to Cyriacus about the rebaptism of heretics (Cyprian, Ep. lxxv. (lxxvi. 7f.), denies that heretics can baptize, and says that "all powers and graces are established in the Church where the presbyters preside who possess the powers both of baptizing and of imposition of hands and of ordaining." Then, referring to St. Paul's having baptized (καταφερεον) John Baptist's disciples again, and having laid hands on them that they might receive the Holy Ghost, Firmilian goes on to say that the "bishops of these times" can by imposition of hands alone give the Holy Spirit (πᾶν πάταξιν καταφερεον). His argument is against admitting heretics without re-baptism, because of St. Paul's action in Ac 10:19; but his words necessarily mean that none in his day but bishops could receive heretics by confirmation. With regard to the words which he uses in the earlier part of the paragraph, we may remark that by "presiding presbyters" he must, being himself a bishop in the later sense of the word, mean bishops, if he alludes to the custom of the presbyters joining in the ordination of a presbyter (see below); and it is significant that Cyprian translates Firmilian's παραβαπτισμον by "maiores natu" and "seniores," not by "bishops." (cf. also § 4 in the same Epistle, "we the presbyters and prelates." We notice here another instance, besides those mentioned above in § 4 (b), of bishops being still called παραβαπτισμον.

At least from the 4th cent. onwards we find explicitly stated the rule that only a bishop can ordain; possible exceptions will be noted below. As the Canons of Hippolytus, though not in their present form of the 3rd cent., reproduce very faithfully the language of their source, which probably goes back to Hippolytus' time, and may even have had "presiding presbyters." This is a conjecture; the MSI have δικαιολογειστε, ἡσυχαστε, and the Syriac versions apparently read δικαιολογειστε or δικαιολογειστε, but the Eusebian, p. 252 (n) renders "gave and received" returning testimony on the strength of a recently discovered Latin version, which has "legem dederunt." It is not, he says, the power of ordaining that is given to a presbyter, but to a bishop. So in the Council of Alexandria (A.D. 324) to be only a presbyter. We must notice that the refusal to
MINISTRY (Early Christian) 671

recognize Ischyras' ordination was not due to the fact that Colluthus was in schism (as also Melitus was), but to the fact that he was only a presbyter, and therefore could not ordain (on Colluthus see also Epiphanius, Haer. ix. 2).

We may now consider certain possible exceptions to the above-named rule.

(b) The 13th canon of Synaxis (A.D. 314).—This canon, according to Bugge's reading, seems to say that under certain circumstances a presbyter was allowed in Galatia to ordain. It runs thus:

"It is not permitted to c.hriophoroi to ordain prebys and deacons, unless permission be given by the bishops in writing to every (for another) parish." [i.e. diocese].

The words left untranslated are uncertain both as to the reading and as to their signification. The presbyter cannot be adopted by Lightfoot, who translates 'nor even to city presbyters, unless permission be given in each parish by the bishop in writing.' This would recognize that city presbyters might, if allowed by the bishop, ordain. On the other hand, Routh, Gore, and Rahmack read the accusative, and the last writer has even gone into the readings with great care (in Studia Bibl. et Eccles., ii. [Oxford, 1891] 139, 194). This would forbid c.hriophoroi to ordain city-presbyters without such permission, but there is still a doubt as to the meaning of ἀνάμεσα ἐν σπακθέναι. Routh renders 'much less'; Gore 'no, nor'; while Rahmack follows Lightfoot here and translates 'not even'—he takes the middle clause as a parenthesis, and understands the canon to say that c.hriophoroi may not ordain presbyters and deacons in another parish, nor even may they ordain town-presbyters (in their own parish) without the bishop's permission. On the whole, the readings of this canon are so uncertain that the canon itself can safely be left to the reader.

(c) The Canons of Hippolytus say (ii. [ed. Achelis, § 10]) with regard to the ordination of a new bishop that the bishops and presbyters, who lay his hand on his head, is to say the ordination prayer. This canon has sometimes been quoted as if it said that 'one of the bishops or presbyters' is to do so. As we have seen, the Canonos says that a presbyter cannot ordain, and therefore this is clearly not a permissible interpretation. But what does the canon mean? Gore (p. 132, n. 5) supposes that in the original (we have the Canonos only in a translation of a translation) the direction was that one bishop and one presbyter were to lay on hands and to say the prayer. This would be in accordance with the close relation between these orders elsewhere hinted at in the Canonos (see above, § 4). Yet this explanation does violence to the grammar of the original; for all the verbs are in the singular. Another explanation may therefore be preferred, that μου εν ἑκατον episcopoi et presbyteroi means 'one who has both the episcopate and the presbyterate,' for we have already seen (in § 4 (b)) that a bishop was not considered to cease to be a presbyter when he became bishop. The facts of the transmission of the Canonos make it precarious to fix certainly on any one translation of the words; but they cannot be adduced as an exception to the rule which we are considering.

(d) The succession at Alexandria. — Much more important than the above is the peculiarity said to have existed at Alexandria in the earliest ages.

The matter is full of difficulties and may be studied in detail in Lightfoot, Dissertation, p. 230 f., and in JThSt ii. [1901] 612 f. [E. W. Brooks, Turner, iii. [1902] 275 (Gore)]. Jerome says (Ep. cxvi., 'ad Evangelium') that the succession of the See at Alexandria till the middle of the 3rd cent. was determined by elected bishops, and placed them in a higher grade, as if an army were to appoint (faciat) a general, or deacons were to choose from their own body one whom they knew to be diligent, and to call him archdeacon. He then goes on to deny that a presbyter can ordain, in the words cited above (a). Somewhat similarly, Severus, Monophysite patriarch of Antioch in the 5th cent. (we have his letter only in a Syrian translation), says that the bishop of Alexandria used in former days to ordain (the Greek verb was doubtless καιρευνομεν) by prebys, but 'afterwards the solemn (or mystical?) institution of their bishops has come to be performed by bishops, deacons and presbyters, so that,' he says, 'the ordination, metaxarabattë, may mean either 'election' or 'ordination' (R. Payne-Smith, Thesaurus Syriacus, Oxford, 1879–1901, ii. 2737). Jerome may mean, as some later writers understood him to mean, that the Alexandrian bishop was elected their bishop from their own number, and that no further ordination was necessary; we should thus have, as an exceptional custom, a body of what we may call presbyter-bishops, who had been entrusted with the full powers of the ministry, including the ordination of others, though they delegated the function of ruling to one of their number. Or the meaning may be that, unlike other presbyters, the presbyters of Alexandria had the right of electing their own bishop without the intervention of the neighbouring bishops.

Confirmation of Jerome's statement has been found in three writers besides Severus. Ambrosiaster's testimony, however, as we have already seen in § 4 (b), is irrelevant. In the apophthegm of the Egyptian monk Poemen (JThSt ii. [1901] 615) it is said that certain heretics accused the archbishop of Alexandria, [presumably Athanasius or his successor] of having his ordination (σενεργος) from prebys. This was in the latter half of the 4th cent., and Jerome distinctly states that the custom which he mentions had ceased a hundred years before. Certainly Athanasius was elected by the people and the bishops, and ordained by the latter (cf. art. LITRIT, § 4). Poemen, in his meekness, made no reply; but, though the accusation was doubtless a pure calumny, it may probably be an echo of some former peculiarity at Alexandria. The third writer is Eutychius, an Abbot patriarch of Alexandria in the 10th cent., who says that the twelve presbyters of Alexandria, when the patriarchate was vacant, chose one of their number, and that the remaining eleven laid their hands on him, blessed him, and created him patriarch, and that this lasted till the time of Bishop Alexander (A.D. 313–329). Those who are familiar with the late ecclesiastical histories of the Eastern Churches, which are full of fables and inventions, will hesitate to accept Eutychius' testimony as an independent confirmation of Jerome. He probably depends on Jerome at third or fourth hand, and it is not surprising that he flatly contradicts him.

We are, then, met with a perplexing series of contradictory statements. But they can hardly be all dismissed as entirely devoid of truth. Probably there was at Alexandria in very early times some peculiarity in the appointment or in the
ordination of bishops, whether it took the form of the presbyters electing him or of their ordaining him. A great difficulty in the way of the latter supposition is the fact that Jerome makes the change to have taken place in the time of Origen. Yet Origen, who suffered much from the anteciotic authentism of the bishops of Egypt, and especially of the bishop of Alexandria, and who was promptly to castigate bishops for going beyond their powers, gives no hint that in his own day a great change was taking place by which the Alexandrian presbyters were being deprived of their rights (on this point see, further, Gore, Church and Ministry, p. 127 f.). On the whole, the remark of C. H. Turner (JThS ii. 613) seems just, that it becomes harder than ever to discover the history and character of this exceptional system in detail.

(c) Some other exceptions which have been alleged are due to a misapprehension. Thus Phænippus, a presbyter and hermit in the desert in Egypt in the 4th cent., is said by his younger contemporary Cassian, the historian of Oriental hermits (Conferences, i. 1), to have 'promoted' a certain Daniel to the diaconate and presbyterate. The meaning here must certainly be 'to nominate,' as is often the case even with the words 'consecutum': 'vocationem, conscriptam, etc.' We read, e.g., of 'kôanos' 'ordaining' bishops and popes (see Gore, p. 341). To suppose that at the end of the 4th cent. a presbyter in Egypt had been able to promote another bishop on a par with a metropolitan, without attending to the fact that by this statement the bishop of Alexandria (11), but the actual presbyter in Africa in the 3rd cent., appointed (constituit) Feliciilianus deacon (Ep. iii. [viii]. 2) 'and so he made him bishop,' writing at Marseilles in the 4th cent., mentioned it without surprise, would indeed be an anachronism. Another instance is the statement by Cyril of Alexandria that Anostorus (12), the metropolitan bishop of Alexandria, had appointed (constituit) a presbyter in Egypt (Ep. vi. 41) that Novatian had three rustic bishops from a remote part of Italy to come to Rome, and when they were drunk to ordain him to three episcopal orders and rain in blessing. A few lines later on Cyril says that Novatus, who had 'made' (fociert) a deacon, 'made' (novatus) a bishop. But Cornelian tells us (De Aegypt. vi. 4) that Novatian got three rustic bishops from a remote part of Italy to come to Rome, and when and where these bishops ordained him to three episcopal orders, and 'sent' (transmissus) to their colleague at King Oswalt to preach the gospel. Here 'ordinating' an only means 'promoting the ordination of.' We know that the Irish and Columban monks had a bishop with them for episcopal acts, though they had no system of episcopal episcopacy. But if in any case it is impossible to believe that Bede, the archbishop of Canterbury, was one of those who was ordained as a true bishop if he had been ordained by presbyters only.

(f) Bishops ordained by not fewer than three bishops. The earliest example of this rule, as a definite enactment, is at the Council of Aries in Gaul (A.D. 314), which says that ordinarily seven, but at any rate not fewer than three, bishops are to take part in the ordination of a bishop (can. 20). The 4th canon of Nicea says that a bishop is to be appointed (sethira) by all the bishops of the eparchy (province); at any rate at least three shall meet and ordain, the other bishops giving their assent in writing. The Apost. Const. (iii. 20) say that a bishop is to be ordained (sethira) by three bishops, or at least by two; it is not to be appointed (sethira) by one; so Apost. Canons, 1, Ethiopian Didasc. § 16. But this rule must have been in force long before the 4th century. Novatian was ordained by 16 bishops (Cyprian, Ep. lv. [lii.] 8, 24, 'de se ordinate'). Novatian was ordained, as we have seen (e), by three; had the rule not been then in force, he would have been content with getting a single bishop to ordain him. Much stress is laid by Athanasius on the number of the part in his own election (see art. LATTY, § 4). At the third Council of Carthage (A.D. 397) it was proposed that twelve bishops should be the minimum; but this proposal was not carried (Hefele, i. 408).

An exception to the rule is found at Rome, where, at least from the 6th cent. onwards, the pope acted alone in consecrating bishops (Duchesne, p. 361). And in the Celtic Church it was common for a bishop to be consecrated by a single bishop. The object of the rule seems to have been to secure the assent of the comprovincial bishops to the election. But in the ordination itself there is a variety of usage as to what part the bishops took (see art. ORDINATION).

(g) Appointment of the minor orders. In the 4th cent., when minor orders were developed, there was a certain discrepancy of usage as to whether certain classes of persons were 'ordained' at all, i.e. set apart by some solemn ceremony; and also a distinction was frequently made between ordination with and ordination without, laying on of hands. Basil distinguishes the ministers who were ordained without it from those 'in orders' (ἐν βαίνει, Ἐπ. can. tert. κερ. 61). So the Apost. Canons 312 (viii. 312) speak of the χωροφορία βαίνει, meaning 'ordination to the higher ministry.'

In the Test. of our Lord (i. 44 f.), Canons of Hippolytus (vii. [ed. Achill., § 48 f.], Ep. (Or., Or. (Or., Eth.) Od. (Or. (Or.) 27), subdeacon and reader are ordained without imposition of hands; so the reader in the Const. through Hippolytus (13); and the subdeacon in the Gallican Statutes (§ 3), which take the same thing for granted in the case of the ordinary subdeacon, reader, and presbyter, do not authorize the imposition of hands, and one who is ordained it is not for a reader. In many of these manuals persons holding charismatonic orders are not ordained at all. Such are confessors, virgins and ascetics, widows, exorcists. But there are exceptions, in which some of these classes receive an ordination of some sort, though without imposition of hands. In the Test. virgins who 'preside' are ordained (l. 41); in the Canons of Hippolytus (vii. [ed. Achill., § 63 f.]) one who exorcist is ordained, and the Gallican Statutes (§ 7) an exorcist is ordained, and the Gallican Statutes (§ 11) and the 3rd canon of the Council of Carthage, A.D. 399 (Hefele, ii. 398).

9. The institution of a ministry by our Lord. We now enter upon the consideration of theories as to the origin and development of the ministry. There are two main trends of opinion; the one attempt will be to summarize them, without going into questions of detail, and without going beyond general principles.

(a) It is held that our Lord founded a ministry to be a means of bestowing grace on the Church and for its government. For this purpose He founded an apostolate, and gave to it a commission apart from the Church at large. It is clear from Acts, and to a certain extent from the Epistles, that the apostles exercised an authority over the Church, and it is difficult to conceive that that authority was due to delegation from the people themselves. Of such a delegation there is no trace in the NT, and the position of the apostles after Pentecost appears to presuppose a commission from our Lord Himself. The ministerial commission, whatever given to the apostles or to the Church as a whole, was not bestowed till after the Resurrection; but our Lord foreknew a time in more than one passage. Whatever be the true exegesis of the promise to St. Peter after his confession of the Christ (Mt 16:18), and of the phrase, 'Upon this rock I will build my Church,' the

1 For βαίνει see 1 Ti 4:13 above, § 6 (c). The word is used in Matt. 28:19 and at the Council of Ephesus (can. 1, A.D. 431) in the sense of the 'position or order of lines, bishops
passage about giving the keys of the kingdom of heaven carries a commission of binding and loosing, i.e. of government. It is not a commission that will last, but a promise that it will begin; and the promise was fulfilled after the Resurrection. The commission is, however, not here promised to the Church as a whole. On the other hand, in Mt 16:19, the Church (συνελήφθη) is spoken of as exercising discipleship, and our Lord then gives (apparently to the Twelve, but this is uncertain) that promise of binding and loosing which had already been given to St. Peter. The supernatural authority does inhere in the Church as a body, but the Church has (not by her own but by Christ’s authority) executive officers, and it is through them that her judicial power is put into effect (Gore, Church and Ministry, p. 207). A distinct stewardship, however, apart from the powers promised to the whole flock, is foreseen, parable of Lk 22:25-28. This parable, as F. Godet remarks (Com., Eng. tr., Edinburgh, 1887, ii. 108), assumes that the apostolate will be perpetuated till Christ returns, a ministry of the word established by Christ. This, however, demonstrates that the theory which makes the pastorate emanate from the Church as its representative is not Biblical; this office is rather an emanation from the apostolate, and therefore mediately an institution of Jesus Himself. It may be added that in the parable the stewardship is appointed by the Lord (note the future: ‘shall set over his household’), in order that the household may be fed, and that it will last till the Lord comes.

The ministerial commission was given after the Resurrection, but it is disputed whether it was given to the apostles or to the Church at large. The commission in Jn 20:21-23, with the gift of the Holy Ghost, gives (συνελήφθης, συνελήφθης without the article) and the power of binding and loosing, was given on the evening of Easter Day, when only ten of the apostles were present, Thomas being absent (v. 25). It was distinctly a ‘mission’: ‘As the Father hath sent me, even so send I you.’ But it is uncertain whether others were present on this occasion besides the Ten. The disciples are mentioned (v. 9), but this occurrence may be considered instances. In the description in Lk 24:27, which seems to refer to the appearance of our Lord, we read of ‘the Eleven and them that were with them.’ The number ‘eleven’ is only a general way of speaking, for Thomas was not present in the passage there is no word of any commission. Putting the passages together, we may conclude that it is probable that others besides the Ten were present, but the indications point to the commission having been given only to the apostles. That Thomas had the commission given to him at another time can only be conjectured.

In the First Gospel the commission is given when the ‘eleven disciples’ are assembled on the mountain in Galilee. ‘All authority hath been given unto me in heaven and on earth. Go ye therefore,’ etc. It has been suggested by H. Alford (Com.) that others besides the Eleven were then present, because ‘some doubted.’ But this is against the grammar. The ‘some’ must have been certain of the Eleven; nor is it at all improbable that the apostles, or some of them, though they believed on Easter Day, yet allowed doubts to assail them afterwards. This hesitating faith was characteristic; it was finally confirmed only by the Pentecostal gift. We do not know what account St. Mark gave of the ministerial commission; but the author of the Appendix certainly conceived the commission as having been given to the Eleven (Mc 16:17).]

The more probable conclusion seems to be that the special ministerial commission was given to the apostles to hand on in perpetuity to succeeding generations, although the Church at large was given a supernatural authority to be exercised by divinely appointed ministers. For a fuller exposition of this view see Gore, op. cit., ch. iv. and (in the later editions) note M.

(b) A very different view is taken by Hatch (Organisation of the Early Christian Church) and Hort (The Christian Ecclesiast.). Hort holds that the commission was given to the Church as a whole, and that the Church as a whole appointed the apostles, whose authority was due to the spontaneous homage of the Christians in Judea. He thinks that the apostles were not commissioned by our Lord to govern the Church, but only to be witnesses of His resurrection; that they were not, strictly speaking, officers of the Church as the Seven were (p. 231). He doubts also that the Church as the Seven was spoken to them as representing the whole community (p. 321). [There is no scriptural authority for Hort’s addition of ‘adult male’ to the narrative.]

On these various views it may be remarked that it is common ground that the apostles were given the commission as representing the Church. The point in dispute is whether they received a commission from our Lord, and, if so, who the primary authority (p. 292). With regard to the commission in Jn 20, Hort thinks that others besides the apostles were probably present, and that, though the charge was ‘directly and principally’ spoken to the apostles, yet they were spoken to them as representing the whole community (p. 321). [There is no scriptural authority for Hort’s addition of ‘adult male’ to the narrative.]

10. The origin of the diocesan episcopate.—We may in conclusion state very briefly the main theories which have been advanced to account for the universal existence of the diocesan episcopate from the 3rd century onwards.

(a) The first view is that the diocesan episcopate is the successor to the apostolate, but modified. The old local ministry was represented by the presbyters and deacons of the later period; and the supervisory ministry of the apostles, which was formerly itinerant, but the bishops who were now settled in one place. In this view the commission, which was held at first by the apostles, was given to certain viri apostolici and then to bishops (in the later sense) only, and presbyters and deacons never from the first possessed the commission to hand on the ministry to others. This was the more usual patristic view. For an able statement of it reference may be made to Gore, The Church and the Ministry.

(b) The second view is that the diocesan episcopate was evolved, by apostolic direction, from the presbytery; or, to speak more accurately, from the body of presbyter-bishops. This evolution was effected by one of the members of this body being given certain features of ordaining. In this view the old presbyter-bishops had the complete ministerial commission, even as the apostles had it, but the complete commission was restricted at an early date to one of their number. This is the view of Jerome, Ambrosiaster, and some other Fathers. It may be studied in J. B. Lightfoot’s dissertation, which uplifts it.

It is clear that either of these views is compatible with either of those described in § 9. On
the one hand, the second view is compatible with the highest doctrine of apostolic succession, such as Jerome himself held. And, on the other hand, the first view is compatible with the belief that the apostles derived all their authority from the Mother Church.

Whatever view be taken of the matters touched on in this and the preceding section, it is important to notice a point on which all are agreed. The Christian ministry is not vicarious, but representative. The members of it do not form a covenanted body with a closer relationship to God than the laity, for every Christian holds personal communion with the divine Head of the Church (Lightfoot, pp. 181, 289; Gore, p. 76). All have direct access to God; and the national church does not perform the people's religion instead of them. He represents the people to God by acting as their mouthpiece, but the worship which he offers is the people's and not merely his own. The sacrifice of prayer and praise is offered by all, though the minister may be the only one who gives audible utterance to it. He represents God to the people, as the human instrument by whom the word is preached and the sacrifices are ministered. God is not a mediator between God and the people.

MINOTAUR.—1. The myth. — Minotauros (Μινωταυρος, θαυμωτος and θυμωτος in Minos), is in Greek mythology the offspring of Queen Pasiphae's union with a bull and is represented as a man with a bull's head and tail. As Apollodorus tells the story, her husband, Minos, had become king of Crete through the good will of Poseidon, after telling the people that the gods had chosen him and would grant whatever he asked, he prayed Poseidon to send a bull from the sea that he might sacrifice it. But he broke his vow, for, when the splendid creature came forth from the deep, he added it to his herd and offered a substitute on Poseidon's altar. To punish him the god inspired Pasiphae with an unnatural passion, gratified through the artifice of Daedalus, who concealed her in a wooden cow. She bore a child, Asterios, surnamed 'the bull of Minos,' who had a bull's head, but was otherwise like a man. Warned by an oracle, Minos imprisoned the monster in the labyrinth built by Daedalus. Moreover, the bull from the sea was made savage by Poseidon, and it was one of the labours of Herakles to capture it and carry it to the Peloponnesse; thence it wandered to Marathon in Attica, and perished by its own pruning. After Minos, having come to Athens and beaten all opponents at the games, King Aegeus challenged him to go forth against the bull, which killed him. Minos, to avenge his son, made war on Athens, an exact figure of what peace that every year (every ninth year, according to Plutarch, Theseaeus, 14) the Athenians should send seven youths and seven maidens to be devoured by the Minotaur.

On the third occasion Theseus, who had overcome many robbers and, last of all, had captured the Marathonian bull, was chosen or offered himself as one of the victims. When he landed at Crete, Ariadne, daughter of Minos, fell in love with him, and, on his promising to take her to Athens as his wife, contrived with Daedalus that he should escape from the labyrinth, giving him a clue of thread which he was to follow. He escaped by an entrancel. Holding the thread, he penetrated to the Minotaur's lair and slew him with his flute. Then he made his way out and escaped by night with Ariadne and his companions.

Apolloides omits the incident of Minos' ring and Poseidon's recognition of Theseus as his son. 1 The story is further rounded off by Phercykides; 2 Theseus sacrifices the Minotaur to Poseidon, and the injured god at last gets his due.

In this form the story owes much to Attic dramatists, who depicted Minos as a cruel tyrant, while the general tradition saw in him a wise lawgiver and founder of Heliconic civilization. In the Attic version he is made an intimate lover of Theseus, and Daidalos was almost as much the hero as Theseus. It credits Athens through him with the miracles of Minoan craftsmanship. It emphasizes Minos' terrors of the Minotaur, because Thisbe, the princess Theseus, is to be the instrument of his vengeance. When, outwitted by Theseus, Minos imprisons the other Athenian hero, Daidalos makes himself wings, and his escape is the motive for Minos' futile campaign and ignominious death in Sicily.

The genuine Cretan elements in the rambling composite tale are the sea-born bull, so closely resembling the divine lover of Europa, the Minotaur and the labyrinth, both figured on coins of Knossos, and the fall of the Minoan Empire in a Sicilian expedition (cf. Herod. vii. 170). The break between the pre-historic and Hellenic Crete was in many respects complete, but the bull makes it probable that the legend of a bull-monster clung to the pre-historic palace at Knossos, and was adopted by the Doric settlers. A. J. Evans, the excavator of the site, has shown how the complex ruined walls, adorned with frescoes of bull lights, in which boys and girls took part, and processions of tribute-bearers, must have helped to shape the story. 4 The name of the labyrinth is explained with the help of ἄγαρ, the Lydian word for 'double-axe,' 5 as meaning 'house of the axe,' a sacred emblem which stood in shrines within the palace and was often engraved on its walls and pillars. This may have been the ancient name of the palace, placed under the protection of a deity with whom both axe and bull were closely associated (hence the frequent juxtaposition of double-axe and horns; see art. Ἐγεάν, Religious, vol. i. p. 145, fig. 5). The remarkable preservation of the ruins proves that they were respected by the Greek and Roman inhabitants, perhaps as the remains of the labyrinth, which the ancients located at Knossos. Diodorus mentions the foundations of Rhesus' house and a cypress-grove

2. Frag. 106 (Philo. II. 97) 'whored to Od. xx. 289 (Theseus is told how to surround the monster, some of his friends, Minos, coming to Athens and beaten all opponents at the games, King Aegeus challenged him to go forth against the bull, which killed him. Minos, to avenge his son, made war on Athens, an exact figure of what peace that every year (every ninth year, according to Plutarch, Theseus, 14) the Athenians should send seven youths and seven maidens to be devoured by the Minotaur.

MINOTAUR 675

which has been hallowed since ancient times, as existing there in his day; the tabus attached to such a precinct go far to account for the survival of the pre-historic walls in the midst of a classical city. He denies that any trace of the labyrinth remained, but seems to be combating an accepted belief; Philostratus, writing early in the 3rd cent., after Christ, mentions the labyrinth as the chief sight of Knossos. Late writers transfer the tradition to the subterranean passages of a quarry above Gortyn and near Knossos, and to other dwellings.

2. The Minotaur in ancient art.—In the Cretan art of the bronze age we meet with a series of hybrid monsters, combining a human body with various animal-heads, which seem to represent demons (cf. Etruscan Religion, vol. I, p. 146); the types may have been influenced by the animal-headed deities of Egypt or have been generated locally by ritual dances in which animal-masks were worn. Among them is a Minotaur-like figure, the most significant instance being a clay seal-impresion from Knossos which shows a seated monster with calf's head and forelegs and a bearded man standing before it. Bull-headed men appear in the archaic art of Greece and Etruria, and until the reforms of Marius a figure of this kind was regarded as one of the standards of the Roman army. The earliest representation of Theseus and the Minotaur is a small gold plaque from Corinth (Berlin Museum, a.w. 1909, fig. 58). About the middle of the 6th cent. the slaying of the Minotaur appears on black-figure vases, and, according to Pausanias, the Minotaur was twice figured among the mythological groups on the Amycusen throne: (a) bound and dancing by Phaestus; (b) the sacrifice of Heracles by Pherekydes, (b) being slain by him. At first isolated, the killing of the Minotaur is associated later on black-figure and red-figure vases with other deeds of Theseus, a cycle which took shape at the beginning of the 5th cent., and when the hero was exalted into a second Heracles. The Minotaur is drawn as a man with a bull's head and tail; his body is often spotted, brindled, and once sprinkled with stars in allusion to the constellation Argo. It is a dreamlike that of Argo. He is naked and unarmed, but sometimes clothes one or more stones. Theseus usually attacks him with a sword, but an interesting group of vase-paintings shows him dragging the dead monster out from a building with columns; here we may suspect the influence of stage-representations. Straton, Aristides, and even Minos are sometimes present as spectators. Later designs treat the combat as a wrestling-match, the finest example being a bronze relief from Pergamon now in the Berlin Museum. In sculpture we have a metope of the Theseion at Athens, fragments of a group now in the Acropolis (where Pausanias saw and described it), and fragments of two other groups in Rome, all representing the combat.21 Campanian wall-paintings

show Theseus standing over the dead Minotaur, while the rescued boys and girls press round, and some mutilated marble groups seem to have represented the same scene.2

Evans traces the origin of the Cretan type to certain Egyptian cylinders found in the Delta, which influenced Crete ca. 1500 B.C., and to the VIIth dynasty onwards. These in their turn borrowed types from early Babylonian cylinders.3

3. The labyrinth in art.—On coins of Knossos the labyrinth is represented by a pattern of increasing complexity, advancing from a simple fret-pattern, through a more or less elaborate swastika, to a developed maze.4 On several vases of the 5th cent. the scene of Theseus's combat with the Minotaur is indicated by a panel of meanders and similar patterns, evidently a conventional representation of the supposed ground-plan.4 The labyrinth, in fact, became assimilated to the mazes which have been familiar in most parts of Europe from antiquity to the present time. Today it is found on several Roman mosaic mazes. Similar pavements were constructed in Christian churches; they are especially common in the cathedrals of N. France—Chartres, Amiens and others; they were known as Donax Deltali or Chemin de Jerusalem, and to

their winding was a recognized form of penance. One may still see them. These was a maze which was evidently intended to establish a connexion between Greek dances of this type and the Minotaur legend; Theseus had landed at Delos on his voyage home, and with his companions danced a dance which is still kept up by the islanders in imitation of the windings of the labyrinth.5

4. Explanations of the myth.—(a) Rationalistic.

According to Philochoros, the Minotaur was a general named Taurus whom Theseus defeated at an athletic meeting in honour of the tribute-children who were kept prisoners in the labyrinth and given as prizes to the victors; or else he was a captain whom the Athenians beat in a sea-fight. A modern writer, E. Fabricius, who assumed that the quarry near Gortyna was the labyrinth, explained its narrow entrances as a device for guarding prisoners made to work in its galleries, and supposed that this gave rise to the story of the tribute-children. (b) The Minotaur as an old bull-god.—W. H. Roscher equated Minotaur = Cretan bull = Minos. E. Bethe has argued that Minos, son of the bull-Zeus and husband of Pasiphae, who bears a bull's head, was originally the bull-god himself. The story of Theseus and the Minotaur is a double of the stories of Herakles vanishing the Cretan bull and Theseus capturing the bull of Marathon; in each case the story is allegorical and represents

4) Illustrated by P. Wolters, in SM, 1907, p. 125 ff., plates I-XII.

5) For the literature see J. G. Frazer, GPR, pt. III, The Dying God, London, 1911, p. 76 ff.; and Cook, I. 494-499. Evans found vase-painters' patterns on wall-paintings of Minos; in his forthcoming Nine Minoan Periods he derives the labyrinth-pattern in Crete, through the simple key-pattern, from the Egyptian sign for the palace in its court, which is figured in the centre of the Minos system of hieroglyphs.

6) Plut. Thes. 11. Lucian, de Salt. 49, mentions the 'labyrinth' in a list of Cretan dances.

7) Quoted by Flot. Thea. 16.

8) Roscher, a. v. 'Labyrinthos.'

the overthrow of Cretan rule. Heraclides, who goes to Crete to capture the bull, stands for the Dorian colonists; Theseus, who overcomes the same bull in Attica, delivers the country from a Cretan conqueror. J. E. Harrison argued in a paper read before the Hellenic Society in 1914 that the slaying of the Minotaur, son of the sea-born bull, expresses the downfall of Cretan sea-power; the Minotaur was the point de repère round which ultimately crystallised the complex figure of Poseidon. 

(c) The solar interpretation. — Pasiphaë's name connects her with the moon; her bull is often held to be the sun. Two recent writers have seen in the Minotaur a human actor impersonating the sun-god. J. G. Frazer maintains "that Croussus was the seat of a great worship of the sun, and that the Minotaur was a representation or embodiment of the sun-god," and suggests that Ariadne's dance, the track of which was the labyrinth, may have been an imitation of the sun's course in the sky. A. B. Cook, after showing that in Cretan myth the bull is exactly a bull and that the labyrinth was "an orchestra of solar pattern presumably made for a mimetic dance," goes on to suggest that the dancer who impersonated the sun masqueraded in the labyrinth as a bull — the Minotaur, fact, was the Cnossian Prince wearing a bull-mask, a piece of ritual borrowed perhaps from Egypt.

(d) The suspicion of human sacrifice. — The Minotaur, like the horses of Diomedes, is a man-eater; the myth implies that it was necessary for Minos to gratify this appetite. W. Helbig saw in the story another version of Kronos devouring his children; Kronos was banished by Zeus to the under world, the Minotaur by Minos in the labyrinth. There was a tradition that in old days in Crete the Kouretes had offered human sacrifices to Kronos, and the "feast of raw flesh" which Euripides mentions in the famous chorus from his tragedy The Cretans, as part of the initiation of the service to Idain Zeus, was open to a similar suspicion; in a recently discovered fragment of this play Pasiphaë taunts her husband in terms which leave no doubt as to the charge. Euripides probably had in mind the Cretan mysteries in which the votaries tore with their teeth a living bull in commemoration of the eating of the boy Zagreus by the Titans. But these mysteries stand in no direct relation, so far as we know, to the subterranean Minoan religion; they explain the cabalistic element in the Euripidean story, but not the bull-form of the man-eating demon. Frazer has conjectured that in Crete, as in other parts of the Mediterranean, children were sacrificed to a Moloch-like image with the head of a bull. But Phoenicians and Carthaginians sacrificed children to a bronze image of Kronos (= El), so contrived that victims laid on its outstretched hands fell into a furnace beneath. Rabbiine writers describe Moloch's image in similar terms, and add that it had the head of a calf. Now Talos, the brazen coast-guard of Crete, who killed strangers by hugging them to his red-hot breast, was by some called Taurus (Apollod. i. ix. 26), and a gloss of Hebraists makes him a by-form of the sun-god. A tradition as old as Simonides connects him with Sardis and with human sacrifices there; recent excavations have shown that the Sardians of the bronze age worshipped a bull-god in subterranean temples. Suggestive as the combinations are, however, we have no real evidence of any cult of the Minotaur, nor of human sacrifice to a Cretan bull-god; at most they prove that the Greeks were familiar with the rites of adjoining countries and used them to add a touch of horror to the local legends of Knossos.

LITERATURE. — This is sufficiently cited throughout the article.

R. C. BOSANQUET.

MIRACLES. — 1. Introductory. — Miracles have often been studied in the sense of events which do not tend to belief in them. It is better to have a standard of comparison, to study them in the light of those alleged of their chief worker, who, if any one can work miracles, is most likely to have done so. This is the point of view that will be taken in this article. Christ's miracles suggest unusual and striking power, presumably divine, used for beneficent ends, not to cause wonder, and this points to a distinct type of miracle not previously defined. It is therefore define miracle as an occasional evidence of direct divine power in an action striking and unusual, yet by its beneficent pointing to the goodness of God. More wonders, by whomsoever wrought, would have throned an inhuman power that would not reveal character — e.g., spiritualist marvels. Christ calls His miracles ἑρμηνεία, 'works,' or σημεῖα, 'signs.' Σημεῖα may be combined with ἑρμηνεύω, 'wonders,' in describing what the Jews seek or the necessary work of the Magi. But more are not called by ἑρμηνεύω, though He calls them ἱστορίες, 'powers.' But the stress is on that of which they are signs — the love of God.

But all three wonders — signs, wonders, marvels — are used by Christ in describing His disciples' miracles, by the Evangelists, and by friends and critics. The first two are favoured in the Fourth Gospel. In Acts and Eph. ἑρμηνεύω and σημεῖα are combined with σημεῖα in speaking of Christ's and the apostles' miracles. In Rev 1:10 the beast, in 10:4 devils, in 12:9 the.false prophet, work σημεῖα: cf. 2 Th. 2:9 and Mt 7:21. Rev 19:3, σημεῖα ἐν τῷ πάγωσις, throws light on the sign expected by the Pharisees (Mt 21:21).

2. Miracles in the lower culture. — Whether the savage does or does not believe in a cosmic order is uncertain. Some savage mythologies certainly seem to suggest that he does. Even he believes that the medicine-man, or shaman, has power to alter certain concrete events — e.g., to produce rain in time of drought, to allay storms. But in so far as he recognizes any order in nature, this action is really supposed to be contrary to nature and thus corresponds to the popular view of miracles. Hence it is not only a religious view of the universe which suggests to the savage mind an elasticity in the order of nature, as Frazer insists. It is elastic to the magician, as it is elastic to the divinity. This power of altering events is the power of magic in which every savage believes. He himself may practise it to some extent by means of fetishes obtained in various ways, but in that case the power is in the object, and usually he attributes magical power to the

MIRACLES

grotesque and obviously improbable kind. Buddha made floods recede, or passed miraculously from one side of the river to another. Levitation, flying through the air, and ascent to heaven are frequent miracles, or, as in the case of Buddha, taking on water, or bathing the earth as if it were water, and passing through a wall. Understanding or influencing the thoughts of others at a distance, change of form, and invisibility occur. Frequently the miracle-worker saves himself from accident or death.

Some of these miracles are simply repetitions of the magical acts attributed to medicine-men. They are traditional stock incidents easily fitted on to the life of any person. Others are sheer inventions. Others may be exaggerations of actual events, perhaps in some cases of real supernormal powers possessed by this or that teacher, or of great shrewdness or spiritual insight. But they are generally of a most unlikely character, and have seldom a beneficent purpose, nor is there any historic evidence for them, even if they were of such a kind as would require it.

Most religious miracles are commonly attributed to saints, sages, and ascetics. They bear a similar character in widely distant regions and under different creeds, and often run on parallel lines. Here again these miracles bear a certain likeness to many which are ascribed to Christian saints. Taoist, Zoroastrian, Buddhist, Hindu, and Muhammadan all believe in the possibility of the miraculous in the case of gifted persons. In Taoism those who through asceticism and saintliness rise to the Tao 1 become like gods, and are superior to the laws of nature. 2 In Buddhism the cause is profound meditation. By this the arhat gains transcendental faculties—the five abhijñā ('magical powers') and siddhi, saintliness, but also the power of working miracles. 3 Hindu men in Islam possess similar powers as a result of their faith, piety, and self-denial. They are also helped to them by the jinn and by knowledge of the divine name. 4 The range of these wonders in the different religions is very wide. It includes a great variety of powers over nature—the production or cessation of storms or sunshine, causing the sun to stand still, drinking up rivers, superiority to fire or water (e.g., not being wet in heavy showers, or walking or passing through water); superiority to the limitations of matter and space (a common Buddhist attribute), the power of invulnerability, change of form or of sex, invulnerability, levitation, passage through spaces, penetrating walls, mountains, earth, lengthening beams of wood, opening doors without keys, swift transference from one place to another. Again, light is made to stream from the fingers or hands, or miraculous supplies of food are provided. Inanimate objects are made to act as if alive. Supernormal knowledge of distant events or of men's thoughts is asserted. The power of exorcising and dispelling demons commonly occurs. Less rarely the cure of disease and the removal of barrenness and even the raising of the dead are found. 5 One method of curing disease used by

3 SBE xxvi. (1884) i. 1., xi. 49, 207 f.; R. Davids, p. 174 sqq.; art. Magic (Buddhist), s. t. These powers sometimes resting on water (e.g., not being wet in heavy showers, or walking or passing through water); superiority to the limitations of matter and space (a common Buddhist attribute), the power of invulnerability, change of form or of sex, invulnerability, levitation, passage through spaces, penetrating walls, mountains, earth, lengthening beams of wood, opening doors without keys, swift transference from one place to another. Less rarely the cure of disease and the removal of barrenness and even the raising of the dead are found. 5 One method of curing disease used by

Muhammadan wonder-workers is to pass the hand over the part affected—perhaps a species of mesmerism. 2 As to these miracles as a whole, there is no evidence that they ever occurred, and, as Burton says of the incredible miracles of Islam, collateral or contemporary evidence is never sought for. 3 The question of supernormal powers will be discussed later.

Occasionally, especially in Buddhism, Hinduism, and Islam, miracles are wrought by relics or at the graves of saints. As far as Buddhism is concerned, these are of a very dazzling kind. In Islam they are mainly, though not wholly, works of healing or the removal of barrenness. 4 In the case of the latter the spirit of the deceased saint behoves the child—a form of primitive belief (see FAIRY, § 9, vol. v. p. 687).

Such miracles are occasionally said to cause belief. Those to be wrought in future ages on behalf of Zendanian will make all mankind believe in the good religion (e.g., causing the sun to stand still). Those wrought by Buddhists also cause conversion, especially incredible marvels in the world of natura 5.

4. Classical miracles.—This group, as it includes so largely miracles of healing, may be considered by itself. These were mainly the result of divine rather than human agency and they cluster around the practice of incubation (q.v.), or 1 temple sleep. 2 The patient, after sleeping in the temple; in the course of his sleep he dreamed that the god touched and healed, or opened his body and cured him (an operation under hypnotism is not a remedy either directly or by symbolic means). The actual healing was speedy or more gradual, and in some instances—e.g., that of Aristides in his Sacred Orations—it was prolonged over many years, yet the god was always supposed to intervene. The stelae recording miraculous cures found at Epidauros are obviously fictitious—a kind of advertisement of the shrine. 3 There is no reason, however, to doubt that cures of a more or less miraculous aspect did take place—the result of faith-healing or of a strong mental suggestion, aided by all the adjuncts of the place (the ritual, the dream, the medicaments). 4 It is not impossible that in sleep in the temple, or in the temple in person may cause dreams about diseases, of the early indications of which it has become aware, or might even suggest a cure. The dream-cures may have been based on phenomena of this kind. The hero-god mainly concerned was a god of healing, and about whom there is evidence to have been a human healer and to have raised the dead, while wonderful events—e.g., brilliant light—were associated with his birth. 5 Healing miracles were also wrought by images of gods, heroes, or famous persons. Other miracles were wrought by such images—they moved, wept, gave advice—and there are numerous parallels to this in all religions, even in Christianity. 6 Mythology and popular belief also ascribed

great wonders to relics of gods or heroes. Some of these were multiplied exactly as medieval relics. They were not incidentally found and various places disputed their possession. Healing also took place at tombs of heroes. Less common are miracles by human wonder-workers. Tacitus speaks of Vespasian curing blindness and lame-ness, and the last life of Apollonius of Tyana by Philostratus contains miracles at his birth and death, healings, and exorcizing of demons. He may have had supernormal healing gifts, but some of the stories are modeled on the NT miracles. Of Jesus but Philostratus. 2

5. On the whole the miracles of ethnic religions do not possess an air of truth. They are incidents ascribed to this or that person, some of whose doings, on account of his greater insight or skill, may have seemed miraculous. Some, however, may be supernormal phenomena. As to the cases of healing, they are seldom asserted of individual teachers, but rather in connexion with shrines and reliefs. Suggestion or hypnosis may explain such as are genuine. Whether any influx of life or healing power from another sphere was also present is a question which must always be an open one. (see § 5.)

6. Miracles in the OT. — Roughly speaking, the miracles of the OT fall into two groups, those connected with Moses and Joshua, and those connected with Elijah and Elisha. The documents describing these are of a date far removed from the events described, and their evidential value is thus small. Some of the miraculous events are doubters of each other, and in those of Elijah and Elisha a kind of parallelism is to be observed. The narrations are in some cases composite, and a more or less non-miraculous substratum may be traced. Many of the miracles have a strong thaumaturgic aspect, and they suggest that, as in the case of ethnic religious teachers and the Christian saints, it was not enough that the outstanding character, insight, and leadership of Moses or Elijah should be recorded, but miracles should also be ascribed to them. While, in the case of Elijah and Elisha, it is possible to ascribe some gift of healing—which might then be the point d'appui of the miraculous legend attached to their history — it is remarkable that in the case of the greater prophets, save Daniel with fastings (2 K 20:4), there is no such thaumaturgic element. The idea of God in the story is, therefore, that the miracle stories reflect not of the loftiest kind, but rather of men at a lower spiritual level. The spirit animating some of the miracles resembles that which animates barbarous men. There is aggressiveness, ruthlessness in dealing with human life where men do not know or worship God, and intolerance. Few of the miracles have that beneficent aspect which we find in the majority of the NT miracles. Again, there is a certain materialism in the method of describing the miracles—e.g., in the idea of speaking face to face with God. Some of the miracles are agrargical, and are alleged to have been copied by pagan magic. (See § 7.)

Others seem to reflect the traditional beliefs of the Semites—e.g., that of God's manifestation in fire—or are traditional stories rather than true histories. Some have, therefore, a symbolic value, as when a record of spiritual revelation is told in material terms (the burning bush, the revelation to Elijah

the latter a reminder that miracles as outward phenomena parallel to thunder, fire, etc., are a lesser kind of testimony to God). Some of the miracles—e.g., the marks of power as direct divine interpositions. It is possible, doubtless, to suppose that God made use of existing phenomena to effect His purposes. It is equally possible that phenomena coincidental with a crisis in the nation's history were interpreted as direct Providential interpositions. Especially would this be the case if prayer for deliverance had preceded them. Such answers to prayer must not be ruled out, and all such answers have a miraculous aspect. They show the creativity of spirit to matter (see below, § 16). This is also true of the event on Carmel, when Jehovah's superiority to Baal was clearly seen in answer to Elijah's prayer. There was some divine intervention, even if that is explained thaumaturgically or associated with rather ruthless methods. Again, we need not doubt that God led His people 'with a mighty hand, and with an outstretched arm,' and with signs, and with wonders' (Ex 34:6). We need not doubt that in the movements of history He does 'make a way to His indignation' (Ps 78:4) against the unrighteous. But whether the leading and interpositions were in the manner depicted is open to question. The strong belief in deliverance might easily lead to the formation of legendary accounts of it. The real miracle in the OT is the growth of the idea of God, the strong sense of the divine presence in the world, divine guidance in the affairs of the universe. The real religion of the OT lies elsewhere than in the accounts of separate miracles. It is found in the growth of a spiritual religion, in such documents as that which tells of creation, in the records of spiritual experience and aspiration, in the phenomenon of prophetism.

7. The miracles of Christ. — (a) When the documents composing the Gospels are examined, it is found that even in the earliest there is no non-miraculous substratum: all alike contain miracle stories. By every one Christ's teaching is admitted to be marvellous, yet authentic. This raises a presumption that the marvellous deeds are also authentic. The date of the documents is such that the events recorded to admit of authenticity, and the evidence is as good as anything short of signed scientific evidence is likely to be. The writers were men who knew themselves to be witnesses, and had regard for truth.

(b) Christ ascribes His miraculous power to God, as He does His teaching (Jn 14:9). There is a real divine work being done (Lk 11:28, Mt 5:11, Lk 7:39, Jn 9:11-12, 14). So also the witnesses of the miracles regard them (Mt 21:21, Mk 7:30). Yet power is inherent in Christ, as the method of the miracles shows, or the definite 'I will' (Mk 9:42). Here also the people recognize this inherent power (Mk 7:9). Christ is delegated from God, as Christ taught. Hence the power to work miracles is not necessarily confined to Christ (Mt 12:28), though He has that power in a supreme degree.

(c) Christ as sinless is a moral miracle without a priori likelihood, therefore there need be no a priori objection to His miracles, which generally tend to rectify an unnatural, disordered state in the world. Unlike Buddha, Christ had not to grope His way to perception of the way. And in this trust. The sinless Christ was in union with the forces of the divine will. Hence power to cure disease flowed from Him who was untouched by disease. 1

1 PAGE v. 13. 7; HN xxviiil. 4; Herod. l. 677; Plutarch, de Genio Soc. 41. Thucyd. 36. 7; Descharmes, Mythologie de la Grèce antérieure, Paris, 1839, p. 303. 9, 10; F. Marry, Hist. des religions de la Grèce antique, do. 1857-59, II. 52.

He was certainly more than man. His powers would thus be greater than those of ordinary men, and might therefore be miraculous.

3. In harmony with His personality and teaching. There is an air of naturalness and ease about the miracles not found elsewhere. He never doubts His own power to work them, yet never falters in exercising it. His miracles are like the words He spoke, with a distance, and no mere faith-healing or magical exorcism accounts for these cures. Yet there is an economy in the use of miracles which we do not find in ethnic narratives, while, again, Christ never works miracles for Himself.

(c) But, if miracles are so easily ascribed to great ethnic teachers, why should they not have been ascribed to Christ? This is certainly a possibility, nor need we deny that there was time enough for a miraculous legend to grow. But all the facts must be faced. The greater part of the Gospels is from eye-witnesses who had no wish to deceive. No miracles are recorded of John the Baptist. The basis of the narrative is true, and it contains miracles as well as the wonderful teaching. In several cases the teaching is intimately connected with the miracles, indeed, the miracles are inseparable from them. If Christ wrought miracles at all, it is not impossible that there would be a tendency in a biographer to exaggerate the miraculous. But, again, the miracles as a whole are very different from those ascribed to ethnic teachers, as may be seen by comparison. We have every reason to believe that Christ wrought miracles, even if the truth of any given miracle cannot be asserted or demands investigation. The moral of Christ's personality, and as a teacher, and the impression made by them on the people, on inquirers (Jn 3:2), and on hostile critics who admitted their truth is of great importance.

(f) Comparing Christ with ethnic teachers or Christian saints, we find that they never claimed to work miracles, and disliked them, while Christ made such a claim. If He refused to work a sign from heaven (Mt 8:8), this is really a proof of His power to work signs of a kind, but not of the kind so liberally allowed to ethnic teachers. Christ's miracles are beneficial, never egotistical like Buddha's or even those of Christian saints; their morality is different from those of the other religions; they are harmonious with the character of the worker; they have invariably a moral and spiritual quality not found elsewhere.

(g) Miracles, properly regarded, assist faith. But was this the primary purpose of Christ's miracles? Were they mere credentials of His mission? This is doubtful. Beneficence was primary, and often forestalled the faith of the person concerned (Mk 3:5, Lk 7:22, Jn 5:19), as it did in the case of demoniacs. Crowds of people were doubtful influenced by the miracles, especially by their unique character, for they produced fear or amazement even if that was followed by praise to God (Mt 15:30). The result was that crowds of people flocked to Christ and forced on Him a popularity which He disliked and from which He sometimes withdrew (Mk 1:39, Lk 5:19). The net result was that crowds of people brought to Christ and forced on Him a popularity which He disliked and from which He sometimes withdrew (Mk 1:39, Lk 5:19). The result was that crowds of people flocked to Christ and forced on Him a popularity which He disliked and from which He sometimes withdrew (Mk 1:39, Lk 5:19). When John sends to know if He be the Christ, He replies to His works of mercy (Mk 1:27).

3 Mt 21: 6; 22: 3; 23: 5, 37; 22: 15, 44, 11; 12: 29-32. The stress is on these, rather than on Messiahship. Miracles are not wrought to cause belief in it; miracles are works of mercy, and their merciful rather than their miraculous character is important. They are part of a spiritual mission rather than proofs of it. Disbelief in the worker's power shows hardness of heart, for the mercy and love displayed, rather than the miraculous power, are spiritual (cf. Mk 3:22, 5:37, 8:44, Mt 11:20-21, Lk 10:13-14). Mere popularity was distasteful, and silence about a cure is often enjoined.

The exception in Mk 5:21 is explainable because Christ was unknown in Gadara and was leaving it. What the man was to tell of was the divine mercy.

True, Christ's compassion often overcame His dislike of mere popularity, while this populace might sometimes indicate a genuine faith and love. But, if Christ works miracles at all to evince faith, it is not the faith of a fickle crowd, but the faith of the individual. Such an individual or those who intervened for him would see that faith would be augmented (Jn 4:10, Lk 17:14ff.). Yet even here it is an existing confidence that is rewarded rather than a divine mission that is proved.

Christ does not appear to rank His 'works' very high, as the phrasing of Mt 5:28 shows. Works are of less importance than the personal appeal of Christ (Jn 10:36; cf. 14:10). Christ's personality and His 'works' are, in themselves, works (Jn 5:30, 36, 42; cf. 1:35). This lower position corresponds to the refusal to work a sign to sceptics; cf. also Jn 9:31.

The disciples followed Christ first as a result of the impression which His personality had made on them. Later the effect of His miracles—those only of the non-healing group—on them is sometimes noted. In spite of the comment in Jn 21, the disciples must already have had some belief. In believing cases new thoughts are suggested to them, or a confession of belief is made (Mk 14:8; Mt 14:29). The miracles, however, were not wrought primarily for these purposes, but to quell fears or to confirm existing confidence. Even the lesson of the withered fig-tree is not that of the power of Christ, but of faith in God and of what faith can do (Mt 21:21). The true attitude is seen in Jn 21, when George's confidence to the miracle; the act is consonant with a personality already known and loved. The cumulative effect of the miracles was no doubt to quicken understanding of Christ, and we remember that the great miracle of the Resurrection was what finally convinced the disciples of Christ's true nature. Still, on the whole, the miracles were not meant to force belief or to act as credentials. They were part of a divine mission, and had their value, but it was rather that of contributing to a better understanding of a personality, not as a proof of it, and that because they were signs (σημεῖα) of a divine compassion. As the people, their benevolence was at the authority, ease, and naturalness of Christ's method, seen also in His teaching (Mt 12:35, Mt 7:21). Signs are often part of a revelation which confirms itself, for, when as thnuntharmtic displays they are sought by refusal follows, or a symbolic answer, or some piece of spiritual teaching.

There is no real contradiction in Jn 15:24, for elsewhere the works are a witness to divine love (2:4-9, 10-27), not as a mere proof of it, but because they are done out of love. Men who do not see such love are spiritually blind, and to that extent. In the case of Lazarus, it is done that 'they (disciples and bystanders) may believe; other did believe; others did not. Yet Martha's existing faith is the condition of this miracle (v. 40, with v. 45).

Every one of the apostles miracles are seldom referred to as having an evidential character. Cf. A. G. Tippett, *The Place of Miracles in Religion*, London, 1899, p. 53.

1 Lk 11:29-26, Mk 3:29. Such a sign from heaven is seen in Rev 19:2.

MIRACLES

No demon could by possibility produce more fearful results by entering into a man than I have often seen resulting from epilepsy."

Supernormal knowledge is often a characteristic of those believed to be possessed, knowledge of which the ordinary self could not be aware. This is ascribed to the demon; rightly it should be ascribed to the subconscious self or the fragmentary personality. In the NT the demons claim to know of Christ which He wishes to be kept secret, or, they assume that He has power over them. The fragmentary or subconscious self, identifying itself with a demon, continues to believe that Jesus is Messiah. Yet these men, in lucid intervals, may have heard that He was so regarded. Thus their knowledge would not be supernormal. Lunatics often dread one particular person.

A man's belief in possession by a demon is paralleled by the belief that he is a wolf. Both are pathological states, and where the belief in transformation disappears, lyceanthropy is apt also to disappear. This is more or less true of the belief in demons and the supposition of possession (see LUCARDO)."

Demon-possession as a belief continued long after, as it had existed long before. Instead of, by reason of, or occasions. They accommodated themselves to an existing belief. Yet He did not accept it in all its current forms, and some at least of what is ascribed to Him may be the thoughts of His hearers."

An accurate explanation would not have been understood, and might even have gone beyond present day science. Or, with power to heal, was Christ's knowledge here limited? Did He believe in possession? In any case there is no doubt about His healing this strange disease instantly and permanently, and differently from exorcists, or from modern physicians in the cases of apparent possession."

Psychical research tends to show that there are such existences in the case of discarnate human spirits, but has no evidence of discarnate possession by bodily demons."

Healing—Christ's miracles of healing are not explainable by M. Arnold's "moral therapeutics," i.e., the cure of nervous diseases by mental influence.

For alleged demon-possession in modern China and elsewhere see J. L. Nevin, Demon Possession and Allied Themes (London, 1917), though it is doubtful whether the cases are not explainable on other grounds. Much of the evidence comes from Christian natives, whose earlier belief in demons was strong. Health-giving and life-giving influences in Christianity may typify certain cases where pagan methods failed, as Justin long before asserted (Apol. ii. 6) and also H. A. J. Mundel, Thmong cases (The Life of a South African Tribe, Neuchâtel, 1912-13, lvi. 400). On Nevin's theory see W. R. Newbold, Proc. Soc. for Psychical Research, xii. (1919).

in the affirmative as regards stilling the tempest, walking on the sea, and feeding the multitudes. In the first two, lessons of faith were immediately taught, but they also have a permanent value in this direction as well as in showing the supremacy of spirit to matter. In the third the adequacy is seen in the beneficence of the action involved. It is more difficult to prove adequacy in the case of the change of water into wine (John 2). Was it probable that such a great miracle would be wrought to enhance the joy of a wedding-feast? Yet the narrative has an air of genuineness, though, if it were performed for symbolic reasons, it would not be hinted at. As to the power involved, it is certainly beyond that of men in the case of stilling the tempest, changing water to wine, and multiplying food. Yet, in a universe ruled by divine will, was it impossible for one in whom that will was supreme to use it to still a storm, or to perform such probably creative acts as the other miracles involve? No breach of the order of nature is involved, for in the first two there is but a quickening of natural processes—the stormer would sooner or later have ceased; a change is slowly effected in the moisture taken up by the growing vine. In the third, though the act is incomprehensible to us, can it be said that there was any breach of nature involved? While it is not impossible that a miraculous aspect has been here given to a non-miraculous action, the narratives have a genuine air, and the numerous different rationalistic explanations suggest that there is an essential fact. In the case of walking on the sea a super-normal power which might be open to others might be suggested, if the story of D. D. Home's floating in the air be accepted, or if there is genuine fact behind the narratives, then the sleeper might be roused in the presence of the Lord of life, who could command the return of the principle of life to the lifeless body, whenever He willed. The evidence for these miracles is as good as for those of healing. Here again their small number—six (or, admitting duplicates, five)—suggests genuineness, as do also generally the narratives which relate them, as well as the number of the miracles. The attempt to interpret them as symbolic teaching related as miraculous action do not command respect any more than the various rationalistic methods of explaining them away. The real questions are concerned with their adequacy to the occasion, with the power involved—was it one accessible to others?—with the method of its use—to excite wonder or to minister beneficence. Was there again a real breach of the order of nature—a statement which no one is competent to assert (§ 15). For, though it is easy to assume a 'reversal of the natural physical order,' some of the miracles of healing are just as contrary to our experience. If Christ's was a unique personality, we must take account of what may be proper to Him either in or out of nature. Such a one on occasion may as easily walk on the sea as on dry land. These must suggest to the spiritual and moral order to the material. They, with one possible exception, are in keeping with the personality and character of the worker. The question of adequacy to the occasion may be safely answered.

Parallels to incarnation and virgin-birth have been alleged from pagan sources, but there is no real analogy. The idea of divinity becoming really incarnate in human flesh was alien to Jewish thought and must have been unthinkable in the world of paganism. Hence it is really impossible to assert that the story was in use in Jewish-Christian circles at the early date involved. That it is an early story is undoubted, and the evidence for the two versions of it in Matthew and Luke must go back to Joseph and Mary. There is some evidence that it was known even in Christ’s lifetime that He was not Joseph’s son—a knowledge apt to be perverted by hostile critics. As to the story itself, it has only to be compared with the versions of it in the Apocrypha and Gospels to see how an existing story could be exaggerated without being recast. The lack of exaggeration in Matthew and Luke points to genuineness. Comparative mythology is often relied on to show that virgin-birth is a universal myth, but examination of the instances shows no real parallel. A human or divine father regarded in a material sense, or some material sense, is always involved. This is true even of the late miraculous stories of the birth of Bodhisattva, where the human father appears all through and also of the birth of the future saviour Saoshyant in Zoroastrianism. Yet, even if such stories were more nearly parallel, the question should be faced—Do myths never come true?

(n) The Resurrection. Arguments against the Resurrection usually make much of the discrepancies in the narratives. Are these more than may be allowed for regarding such an event? To do they really discredit the central fact to which all bear witness? Without discussing them in detail, it may be said that they offer evidence as good as that for the Crucifixion, and, if they do not prove a real resurrection, they do nothing at all about Christ! Certain facts are important: the empty tomb, the definite date never varied, as well as the personality involved—no ordinary man whose resurrection to a normal human life might be regarded as a miracle; Huxley was right in having rejected that of the hypothetical ordinary man—and the vast change effected in the apostles’ characters and methods of action. We may here contain modern explanations.

(1) Visions, subjective or objective, or telepathic impressions are really inadequate to account for the story. No such experiences have ever produced such a result, and they could not have given rise to the stories of the Resurrection or of the empty tomb, or have so changed the disciples. A phantom would only have made them afraid (Lk 24:32)—The disciples already knew of the existence of Christ’s spirit, for this was the common Jewish belief, and as Jews they also looked forward to a future resurrection. How then could such alleged communications from such a spirit have so altered them or originated such a belief in the Resurrection with the definite meaning which the word had to any Jew? If it be said that it was precisely this Jewish belief in a future resurrection that made the disciples imagine that their experience of a phantom was really that of Christ, this is not the main point. It is the most credulous and untrustworthy of men—which no one really believes of them.

(2) Equally inadequate is the theory which would derive the story from myths of evil and the slain god. It is equally impossible to assert that the apostles were influenced by these, supposing they knew of them, which is unlikely. Was there anywhere a myth of a god who had died and risen again on earth? The revival even of Osiris took place in the Other-world. No such myth had ever been a universal religious idea. Hence it is really impossible to assert that the story was in use in Jewish-Christian circles at the early date involved. That it is an early story is undoubted, and the evidence for the two versions of it in Matthew and Luke must go back to Joseph and Mary. There is some evidence that it was known even in Christ’s lifetime that He was not Joseph’s son—a knowledge apt to be perverted by hostile critics. As to the story itself, it has only to be compared with the versions of it in the Apocrypha and Gospels to see how an existing story could be exaggerated without being recast. The lack of exaggeration in Matthew and Luke points to genuineness. Comparative mythology is often relied on to show that virgin-birth is a universal myth, but examination of the instances shows no real parallel. A human or divine father regarded in a material sense, or some material sense, is always involved. This is true even of the late miraculous stories of the birth of Bodhisattva, where the human father appears all through and also of the birth of the future saviour Saoshyant in Zoroastrianism. Yet, even if such stories were more nearly parallel, the question should be faced—Do myths never come true?

On neither theory is the Resurrection or its vast results explainable, and each postulates a miracle as great as that of the Resurrection itself. The change involved in the Resurrection is beyond our ken, yet the change is not merely a resurrection of a dead body. We know little of the laws of the universe to assert that such a change is impossible, or that there is no law of resurrection of whose working Christ’s resurrection is the first instance. The new theories of matter seem to make the change conceivable, if the nature of matter is to be found in a strain in the ether giving rise to the electrons of which the atom is composed. Ether is described as sub-material, while electrons might conceivably be resolved into ether again. Matter would thus be destroyed. Others regard matter as a complex of energies. If these theories are true, might not Christ’s body be resolved into its sub-material constituents?基督的身体是否可以被分解为其物质成分？

3. Miracle in the Apostolic Age. The miraculous powers included in the apostolic commission may have received additional forms, e.g., raising the dead (Mt 10);—while some are allegorical (Lk 10);—the Ascension was probably an addition mingling the power of the apostles with the authority of the king. Acts and this passage in Luke. Certain it is that some miraculous power was transmitted to the apostles or made accessible by their faith. In Acts we see it at work. Faith on the part of the recipients of cure is also clearly in evidence, sometimes of a superstitious kind (5 supplies) perhaps resulting in cures by auto-suggestion. St. Paul both appeals to these powers of healing and refers to them (Ro 15), (1 Co. 12, 29, 31, 32, 36, 38; Gal 3). They are regarded as credentials of the apostolic mission and not a sound theory. Those who believed because they saw signs and wonders had not the highest faith.
MIRACLES

unless the signs were accepted as tokens of divine love. It is obvious that St. Paul meant more than mere faith-healing, some actual miraculous gift, by his χαράγματα ἵππων or ἐνέργειαν δονάσεως (1 Co 12:9). There was, in some cases at least, the infusion of divine power into the diseased. In the case of Eutychus it is doubtful if a miraculous return to life is intended. In that of Dorcas it is so, though some unusual recovery from apparent death may have been locally exaggerated into a miracle.

The account of Pentecost and its marvels describes an incursion of the spiritual audibly and visibly into the material world. Such an incursion would be difficult to describe, but it is no more than what might be expected on such an occasion. A distant analogy may be found in the phenomenon of light or of a cold breeze accompanying phantom apparitions.4 As to speaking with tongues, the phenomenon is no more than ecstatic utterance, and it is one which is apt to be degraded. The kindred phenomena of trance-utterance and inspirational address studied in our day have little value. Whatever might be the value of the tongue as at Pentecost or at other times, St. Paul came to have a low opinion of the gift. The effect of a spiritual invasion would vary with the nature of the person invaded. The real miracle of Pentecost was the power shown by St. Peter and his followers, and the spiritual results following.

The stories of release by means of an angel have been regarded as symbolic accounts of connivance or friendly interposition interpreted as divine aid. Yet, if other occurrences of beings exist, they might be interpreted as angels and might have power over matter. The real question is one of adequacy to the occasion, and we find no such intervention in the case of James (Ac 12).

St. Paul's experience on the way to Damascus is really similar to that of the Resurrection appearances, though there is more splendor, so that he is blind for a season. These appearances are accepted, St. Paul's "vision" at once falls into place, even if the accounts vary. That he himself should cause blindness is perhaps no more wonderful than that he should heal. Did his words cause a temporary auto-suggestion of blindness to Eunice? The incident of the viper, though viewed as miraculous, is not necessarily so. This is also true of the death of Ananias and Sapphira. Emotional shock might account for the deaths, and this would lend itself to a miraculous interpretation.

9. Ecclesiastical miracles. — The question as to the time when miracles ceased, if at all, used to be much discussed. Hовалтнге said they continued down to the 3rd, 4th, or 5th cent.; others, like Middleton, made them end with the age of the apostles and characterized all later records of them as stupid and untrue.2 The evidence alleged for miracles is continuous to the present time; how far it is based on fact is an open question if miracles are possible at all. The miracles of some individuals in the early Church are so far more amazing and numerous than those of Christ. They were wrought not only on the sick or the dead, but on nature. Miracles of the last class are of a most stupendous character, incredible on the face of them and quite beyond all idea of the possibility of the occasion. The age of the apostles was one of considerable credulity; when miracles had to be forthcoming to rival those of paganism, in which the ecclesiastical writers believed, though attributing them to demons. Many accounts of miracles are too rhetorical to be taken seriously — e.g., the Benedictine editors of Chrysostom's account of the miracles of St. Babylas say that it is rhetorical and for the most part destitute of truth.4 In some cases, again, natural

or perhaps supernormal events have been interpreted miraculously. Many are wrought to support some doctrine or practice not always of the essence of Christianity — e.g., the use of relics, as bottom a species of fetishism. Some are Eucharistic, but many of these are magical rather than miraculous.

Some miracles copy those of the Bible. Others are such as are found in ethnic sources — e.g., changing the course of a river, drying up a lake, causing a staff to become a tree.1 The healing of the sick and the possessed is referred to from the time of Justin2 onwards. The evidence for many of these is very slender kind; credulity accepted them, sometimes pious fraud suggested them; but their possibility need not be denied. Gifts of healing may have existed with certain persons who had faith to use spiritual power or to aid the faith of others.

In an age of spiritual exaltation and spasmousness, of enlarged consciousness and deepened faith and more buoyant hope4 such miracles might be expected. On the other hand, there are few instances of such cures as our Lord performed. Most are wrought in connexion with relics or the Eucharist. That cures should thus occur need not be doubted. Where the power of these was believed in the patient's faith was strong, suggesting the hypothesis that even if there was no power to heal in these media themselves.4 There may also have been an influx of power from another sphere, as a reward of faith or an answer to prayer, and even if a miracle could be expected.4 So in the case of exorcism, whilst here again, the evidence of relics or the Eucharist is found quite as much as prayer, it need not be doubted that the patient might respond to the treatment, which was really a form of suggestion.3 Where the resources of a spiritual religion were called upon, why should not these have brought calm and order to the disturbed mind? (see § 7 (b)).

There is, however, no such evidence for cures as exist for Christ's healing power. Patients continued to be afflicted at intervals in many cases. Exorcism tended to become a business, and the "cure" was often of a very drastic kind.5

The most circumstantial accounts of the dead come from St. Augustine and his contemporaries.4 There are all connected with the shrine or relics of St. Stephen. The evidence is perhaps no more than hearsay, and there is no real proof that the persons were really dead. Elsewhere Augustine describes an event which was really a case of trance as opposed to the return from death.

10. Medieval miracles. — During the Middle Ages nothing seemed too incredible to be related or believed. Every saint was expected to work miracles, and miracles freely adorned the popular Lives of the saints. It was said of St. Vincent Ferrer that it was a miracle when he performed no miracle. Any saint in whom a particular district, monastery, or church was interested was apt to have many miracles attributed to him. The people seemed incapable of being content with his spiritual victories; these had to take material form, to be symbolized as miracles. As in the earlier period, many miracles were alleged in support of particular doctrines or practices, the cult of the Virgin and saints, of relics, the Eucharist, the use of images. Protests were made from time to time by theologians, but in vain.7

Some of these are accepted by J. H. Newman, Two Essays on Biblical and on Ordox. Miracles, London, 1870.

3. De Orat. Div. xiii. 8. Prayer was also used, but the relics are mainly in evidence.

4. The right reception of the Eucharist might have effect in ill-health. Cf. the words, "preserve thy body and soul."

6. De Orat. Div. xiii. 8. Prayer was also used, but the relics are mainly in evidence.

The folk expected miracles, and miracles were freely provided for them. Many of the miracle stories are repeated in countless Lives of saints; one biographer plagiarized freely from another, and later Lives are often more full of miracles than the earlier. But the miracles were freely imitated; only in any given case they were multiplied a hundredfold. Other miracles belong to a floating tradition, and repeat those already found in ethnic sources or in classical writers. They are related in folk-tale incidents. Frequently the quite ordinary or the particular gifts of a saint were exaggerated into miracles. Others can be traced to a misunderstanding of Christian artistic motifs—e.g., the stories of saints carrying their heads in their hands can be traced to pictures where they were thus represented to symbolize their death by decapitation—or to the visions or hallucinations of hysterical devotees, though these were supposed to belong to the highest state of ecstasy, in which reason played no part.

All these miracles may be divided into four classes: (a) miracles wrought on nature, often of a most extravagant type—arresting the sun's course, hanging in the air on a sunbeam; (b) miracles wrought by or upon inanimate objects—the numerous moving, talking, smiling images, already met with in paganism, or the opening of locked doors at the touch of a saint's finger; (c) miracles occurring to a light streaming from his fingers, talking at birth, carrying fire, bilocation, levitation; and (d) miracles of healing, exorcism, and raising the dead.

The practice of incubation passed over to the Christian Church and was mostly sana san tum, associated with St. Csesmas and St. Damian, but the cures were often of a prolonged character. There was much of the wisdom of pagan temples, suggesting the word nektiranes.1 As to healing miracles in general, what has already been said of these applies here also (cf. also § 12).2

Possibly some miracles were actual instances of supernatural phenomena of the age, so long scoffed at, but now more or less investigated by science. There are incidents corresponding to cases of hypnotism, telepathy, clairvoyance and clairaudience, telekinesis—the movement of objects without being touched—appearances of phantoms of the living or dying (perhaps that which underlies cases of bilocation), and the occasional superiority of the senses to outward effects (carrying fire). Of these to well up or be levitated there has been a constant tradition through the ages, and in the mass of alleged occurrences there may have been some genuine instances. Such phenomena are not necessarily miraculous or even evidence of saintliness. On the other hand, if mind can communicate with mind, communications from another sphere may be made to mind on this earth, and these would have a miraculous quality—e.g., the voices and visions of Jeanne d'Arc or those which preface the healing of Dorothy Kerin. The communication may be coloured by the preconceptions of the recipient—a divine message may appear as a voice or vision of Virgin or saint, or a case of real spiritual healing may be associating with belief in a relic. Divine power might also be manifested from time to time through the supernormal phenomena referred to, making them miraculous. There should, in fact, be no cleavage between normal and supernormal and supernatural in our appreciation of the divine working.

12. Mental and spiritual healing in relation to Christ's miracles of healing.—Psychic forces affect the body in normal life, and of these suggestion is one. But is there also at times, with the healing suggestion or as an answer to prayer, an influx of exterior, divine, spiritual power to heal? This would correspond to the exaltation of mind by spiritual influences in inspiration. It would be a particular and outstanding instance of what we find everywhere, if all life is dependent for its energy on some all-enveloping Life. It might not be regarded as miraculous or supernatural, for, if miracle is part of the process the whole of creation is in sense it is natural. But in so far as the result testifies clearly to processes outside our ken, to the power of a divine person thus making Himself manifest, such cases would naturally be regarded as miracles.
known, the current of whose energy is entering our life for a particular purpose, this is a sign, or miracle. The Spirit has let loose: life-giving forces which sweep before them the evils of sickness and disease; the divine mind-cure; faith has tapped a divine source, and it has abled the unconscious mind. That this has never taken place cannot be affirmed, though a leader of the moment, applying the spiritual powers of the Church to disease in conjunction with medical treatment, is still seeking for an authentic instance. The appeal to spirit in one form or another has been made in all religions where healing was practised, and doubtless the divine spirit has not confined His work to any one of them, if thus He works at all. But, while uncertainty attaches to all mental therapeutics, our Lord's healing methods were never uncertain. He always set free the healing power, the divine life which healed, whether His own or actual through Him as a perfect channel, unsusceptible to disease. This is seen by His words, 'I will, be thou clean.' The result was swift and certain cure. Thus Christ as healer differs in degree and kind from all media of occasional cures. That He cannot effect such cures where perfect faith exists is not credible.

Hostile criticism of miracles. Though the Schoolmen were probably refining current objections to miracles, no serious criticism appeared until the 17th cent., with Spinoza's attack. The laws of nature are the decrees of God. Miracles cannot happen because they violate the order of nature, and thus God would be contradicting Himself, for nature is fixed and changeless. Miracles could tell us nothing of God, since they surpass our powers of comprehension.

Spinoza's view is mechanical and takes no account of the interaction of existing 'laws,' their interference with each other without violating the order of nature. This may also be true of miraculous action. The material universe may be subject to the spiritual order. God may bring in new forces from time to time, or combine existing forces for a definite end and His guidance exists through all. Moreover, even if miracles are incomprehensible, they do tell us certain definite things about God, as Christ's miracles did. Spinoza's pantheistic doctrine of God deprived God of all real freedom.

The Deists opposed miracles on the ground of a fixed order of nature. God, having made the world, never interfered with it, and to assert miracle was a kind of treason to Him. Hence the Gospel miracles were explained away or allegorized. At least, Christ's miracles were so interpreted in the early Church. This was also the position of David Hume, whose argument, aimed at Roman Catholic miracles primarily, was regarded by him as invulnerable. Miracle was a violation of the laws of nature by a particular volition of deity, of whose attributes or actions, however, we could know nothing otherwise than from our experience of them in the ordinary course of nature. No testimony could establish a miracle, unless its falsehood would be more miraculous than the alleged miracle itself. The belief in miracles arises from the pleasing sensations which they arouse, and they are common to the fruits of religious enthusiasm. A miracle could never be proved so as to be the foundation of a system of religion.

Huxley criticizes Hume's argument on the ground that evidence of the impossibility of something is not evidence of its impossibility. 'Calling our often verified experience a law of nature adds nothing to its value,' since we cannot affirm that the effect can be verified again. Any seeming violations of the laws of nature would be investigated by science, and its

existence would simply extend our view of nature. Miracle is conceivable, and involves no contradiction, yet evidence for it must be complete. It may be added that this is perhaps an experience such as he only would admit. His own criterion of evidence, even when qualified, is at once rejected by him, and some of his admissions are but the use of words to cloak a darkness against his own argument. A particular volition of deity may reveal a world transcending ours without violating laws of nature, which are also volitions of deity. The miracles are part of our experience of the working of God. As to miracles establishing a doctrine, the argument has little force now. Miracles of healing, e.g., need not prove the truth of the system in which they are found (i. vii), and it is questionable whether any ethic system was founded upon the miracles of Christ, not His miracles, established Christianity. But His miracles are inerors in His religion in a way that those alleged of ethnic teachers are not.

German rationalism, represented by H. S. Reimarus, opposed miracles as impostures effected by Christ. H. E. G. Paulus, however, regarded them as ordinary or perhaps unusual events interpreted by readers as miracles—a thing which the authors of the Gospels never intended, though they sometimes had mistaken ordinary action for miracle. D. F. Strauss started, like Paulus, from the Spinozan principle, and regarded miracles as legendary accretions—a halo of wonder placed round Christ's head by the early Church, because the Messiah had been expected to work miracles. Yet, mythically as they are, the miracles are symbols of metaphysical ideas.

Literary criticism in the persons of E. Renan, M. Arnold, and W. E. H. Lecky set aside miracle altogether. 'Miracles do not happen,' was Arnold's catchword. Renan maintained that Jesus had to either renounce His mission or become a thaumaturgist. Miracles were a violence done to Him by His age—a statement incompatible with Lk 18:39—and yet He believed in miracles, and showed that He had miracles of an order of nature. Arnold, while opposed to explaining miracles in detail, thought it a mistake to rest Christianity on miracle, for, that was discredited, as he believed it had been, Christianity was apt to go with it. Both Renan and Arnold admitted some truth in the miracles of healing, but Renan's description of these comes short of what is said of their thoroughness and ease, and is, in fact, grotesque. Arnold's idea of 'moral therapeutics' assumes that illness was due to sin, while Christ, as bringer of happiness and calm, addressed the moral cause of disease. Such a method might be used extensively in the healing art.

The assumption that illness was due to sin is not proved, and some healing miracles are not explainable by moral therapeutics. In any case Christ had a great healing power, and the other miracles are quite as well attested as those of healing.

The literary pantheism favoured by R. W. Emerson (q.v.) saw miracle everywhere, therefore definite miracles nowhere. Miracle as taught by the churches was a monster. Christ's miracles are explained by saying that He felt man's life and doings to be a miracle—an insufficient account of miracles. There is some truth, however, in the saying that 'to aim to convert a man by miracles, is a profanation of the soul.' Not dissimilar is Carlyle's 'natural supernaturalism,' though he admitted that such an event as the raising of one from the dead would violate no law, but prove the entrance of some deeper law.

Materialism rejects miracle altogether and refuses to investigate individual miracles—too often the attitude of science. Agnosticism is represented by Huxley, admitted the possibility of miracle, but, in the event of such 'wonderful
events happening, would widen its view of nature. All that would thus be shown would be that all experience, however long or uniform, is apt to be incomplete. There would be no necessary divine power behind such a wonderful event.

But, while science might investigate any 'wonderful event,' has it yet explained even an ordinary event? Christianity supplies answers, the expressions of divine will, directed or indirect, and such as are manifestations of more striking evidence of that, not just because they arouse wonder, but because they are either material or spiritual in us. They witness to the supremacy of spirit over matter (§ 14).

On the whole, the scientific attitude to miracle is less hostile now than it once was. Many scientific men are also religious men, and the new vistas open to science have made a spiritual interpretation of the universe more possible.

14. The defence of miracles.—The Apologists generally connected miracles with prophecy, and showed that they fulfilled predictions of such deeds made long ago. They are by no means the sole evidence for Christianity, though, as the Greek Fathers maintained, they might help those who through sin could not see God in His works. Original sin led to the belief that Christ's miracles were not done for show, like a juggler's wonders, and that, unlike a juggler, He demanded a new way of life. The Fathers commonly appealed to the miracles done in their day, and Arnobius devotes much attention to miracles as proving Christ's divinity. Augustine first gives a philosophy of the miraculous. God's will is the ultimate source of all things, and nothing can be contra naturam which is not against God's will. Everything is natural, not to us, but to God. Miracles are part of an established order. They are not contra naturam, but may be contrary to what is known to us of nature. The Schoolmen start from this idea of uniting the ideas of science, but on experimental grounds. There is a higher and a lower order of nature, the former at once natural and supernatural, God's ideal plan. In it are causae rationes et primum ordinis of miracles. In the actual order, known to us, with its chain of causes and effects, miracles could not originate, but these have the capacity for higher powers being inserted in them—all parts of God's original plan. Miracles are not such to God, who can interfere with the natural order, ‘qua novae causae naturam in se subjiciunt’ to Him. Miracles are praeter hanc ordinem—the order known to us—but not contra naturam. Again, as the course of things can be changed by a creaturely power, so God's power may bring an event to pass otherwise than in the usual course, so that men may know His power. This is equivalent to the view that there may be guidance of forces in nature to a particular result which may appear miraculous to us (§ 15).

Later the idea came generally to be held that miracles were a real suspension or violation of the laws of nature, the view attacked by Spinoza and Hume, both sides arguing as if all nature's 'laws' were known to them. Bishop Butler wisely points out that, while we see nature carried on by general laws, God's miraculous interpositions may have also been by general laws of wisdom. Nature is plastic to Him, and these laws are known to us. There may be beings to whom the miraculous is natural as ordinary nature is to us. Butler was arguing against the Deists, but he sometimes forestalls Hume's objections, as when he says that miracles should not be expected not with ordinary but with extraordinary events in nature. With the Schoolmen he tends to regard miracles as part of the original plan of things. He again forestalls Hume when he argues that: fraudulent miracles do not
disprove those of Christianity, but he is on less sure ground when he says that Christians were offered and received on the ground of miracles publicly wrought to attest its truth. J. B. Mozley continued Butler's position that miracles are necessary to a revelation, but argued, with him, that no miracle could make us believe contrary to moral or true religion. There is order, consistent nature, but the mechanical expectation of recurrence which would keep miracle cannot be disproved. Anything contradictory to experience might be either some event in accordance with the laws of nature or a direct divine interposition, spirit prevailing over matter. Such a miraculous event, as the act of a Personal Being, would show moral will and intention and be evidence of a higher world. The order of nature might be suspended, if there was use in suspending it. But the laws of nature would be suspended, not the laws of the universe, which would be a contradiction. Suspension of the laws of nature is possible, e.g., where the laws of matter are suspended by the laws of life. As spirit be regarded as above matter and capable of moving it, miracle becomes possible.

In opposition to German rationalism Schleiermacher, in his Der christliche Glaube (1830-31), maintained that nature admitted of new elements, consonant as it was to God's will and work, even if conditioned by it. Nature may contain the cause of the miracle, but it appears only when God calls it forth. Christ was born of a virgin, had a real origin and, as sinless, was a moral miracle. Yet the Virgin-birth, Resurrection, and Ascension were set aside along with many of the miracles, though miracle was admitted, since God has complete power over nature. Our belief in it, according to him, does not depend on miracles. Thus, though Schleiermacher still opposes certain miracles, he offers a constructive theory of miracle.

Later A. Ritschl refused to regard miracles as contrary to natural law, and held that they were akin to Providential action. J. Kratzen argues from the same side that 'laws of nature' are unreal, a mere formula allowing us to grasp the course of nature. Miracle is such an unusual event as will awaken us in a special manner to God's living government of the world. He works in all things, but can use special means to enable faith to trace His presence. Hermann Lotze also refuses to regard miracle as contrary to natural law, and holds that a nature which in itself is such a miracle is, in a special sense, a miracle, according to Him. Actually a new world to the mind of man, has made them dubious. On the whole, modern theology tends to regard the universe as plastic to God and miracles as evidence of will. Even man can produce effects in nature not producible by nature itself. Such a view is elaborated by H. Bushnell. Again, as by

1 Eight Lectures on Miracles. Miracles, for the glory of God and the conversion of sinners. 1852.
3 Microcosmus, Eng. tr., Edinburgh, 1855, l. 420, Π, 476.
J. R. Illingworth, divine immanence is made the ground of miracle. There is unity rather than uniformity in nature; it is due to spirit which uses matter for its purposes. The moral aspect of miracles is also emphasized by him and by other writers. Christ's miracles do not interfere with law, but restore laws which were broken. Disease is here regarded as due to sin. As to the Resurrection, there is no reason why a sinless soul should not rise from that will a sinless body. The supremacy to an extraordinary degree of spiritual force over the mere material is also emphasized by A. C. Headlam in his recent book on miracles.

From a spiritualistic point of view, A. Wallace argues for miracles on the ground that intelligent beings, unperceived by us, have power over matter, producing supernatural phenomena, the occurrence of which has been noted in all ages. By this view he claims that Christ's miracles as well as answer to prayer find new support.

15. The question of the miraculous.—Miracles are not fortuitous events, breaking in upon a fixed order of nature. Both they and that order are evidences of divine will. The more the nature of the universe is revealed to us, the more impossible it is to suppose that anything has happened without there was no guidance or control to produce such a vast and complex result. This impossibility is only the more increased by recent discoveries in science, while there is an infinitude of ultimate elements all of precisely the same form. It is equally unlikely that all these should have happened upon the same form. Neither matter nor energy possesses the power of automatic guidance and control. Hence some form of guidance is essential, some directing mind and will. Life is outside the categories of matter and energy, yet it can use both, guiding and controlling them in accordance with the laws which govern them. Such guidance surely, the same—some use of mind and will be the basis of all life. But, if such guidance is granted, then miracles—particular instances of that guidance—become possible. A fixed order of nature does not necessarily mean that nature is self-contained and self-sufficient or subject to unalterable mechanical necessity. We do not know all of that order, nor is it likely that it is the only possible order. We cannot assert that a limit has been set to every combination of matter and energy, to every method of guiding these, to every possible result. If so, a miracle is not a breach of the order of nature, which, modifying St. Augustine's formula of known and unknown, may be regarded as one of which we are not aware, and the 'laws of the universe,' all that this means is government of the universe according to law. If things always happen in an unvarying sequence, this does not exclude guidance, nor does it mean that the ultimate cause of the sequence has been discovered. Nor, if some phenomenon happened but once, would it be outside law or happen apart from guidance. Man can interfere with nature, utilizing its forces to produce new results, without breaking any single law of nature. What man can do is possible for the mind and will behind the universe. Law, again, if it exist in the material, must also exist in the super-material universe which interacts with the former. By its laws those of the material universe may be suspended, and in so far as any such action is purposeful and beneficent it reveals a law of love, a universe governed and directed by law by a competent and other good will. A miracle would thus be a beneficent and intelligent control and guidance of existing forces in accordance with law by a supreme spiritual power, and this is precisely what we find in the miracles of Christ. They were natural actions.

2 The Miracles of the NT. Miracles and Modern Spiritualism.

system of the universe as a whole. So again many ascribed supernormal phenomena are not miracles; they do not show a direct moral, purposive action on the part of a divine power, but reveal unsuspected and unexplained human powers. If God directs the whole universe, miracles are in no sense a rectifying of His own mistakes. They are instances of ways of evil and disorder in a universe where these exist and where evil may have been necessary to the world-process, a stage on the way to perfection. Yet that perfection is being brought about, and miracles are an instance of this, since their clear and more clearly perhaps than the more quietly-working process. They show, as Latzke says, that God is so related to matter that it cannot resist Him at all. So Christ’s healing miracles show that spirit and will are superior to the causes which produce disease. Thus in no sense is miracle contra naturam; rather is it an expression of divine action in ways which may contradict our ordinary experience, i.e. our real ignorance of the universe.

The unchanging nature of radium might have been regarded as an unalterable law; yet the life of time (it takes 2500 years for radium to lose half its energy) was a mistaken view, a parable of our knowledge of the laws of the universe.

The divine will, acting normally in certain ways, may act in different ways, perhaps in our limited view contrary to these. One set of laws is put aside for the moment, just as man can transcend the laws by his will. Yet order is not interrupted, for the whole order of nature—all that happens—is just the divine will to which, e.g., a swift ‘miraculous’ process of healing may be as natural as a slower process, or the turning of water to ice as natural as the slower growth of the vine. In either case there is a quickening of a natural process, and yet to God that quickening may be perfectly normal. This take away the miraculous from what we call ‘miracle’? In a sense it does, for we tend to draw too straight a line between natural and supernatural. All events, inasmuch as they express the divine will, are natural, yet they are supernatural in so far as they all end for us in mystery. What constitutes a miracle is its quality, its instant suggestion of divine power and goodness. Man’s spiritual vision is clouded, and he does not always see these in the extraordinary event, nor is that always the fullest revelation. All the things He speaks of God, but some speak more clearly. Yet they are all means abnormal; they do not occur on inordinate occasions, or do they contradict the fundamental laws of experience. The reign of law is not set aside; for the way in which miracle is brought about is still in accordance with law, even if the miracle happen but once.

Certain persons, for no very obvious reason, seem to possess supernormal powers, or these are manifested through them; others have genuine others, men of God, have spiritual gifts. What powers may not be open to one like Christ, in whom divine power existed and whose sinless will was in perfect harmony with God’s? He claimed to do the Father’s will. It is very possible that He came to do the Father’s will. Things were therefore natural to Him which might have been unnatural to another. Yet His miracles were in subordination to the moral miracle of His sinless personality, and therefore in harmony with it. Divine power and goodness overflowed, as it were, from Him upon nature and man. His miracles are perfect examples of the control of the material by the spiritual, and they prove that all force, all guidance, are in the harmony with it. Divine power and goodness overflowed, as it were, from Him upon nature and man. His miracles are perfect examples of the control of the material by the spiritual, and they prove that all force, all guidance, are in the harmony with it.

The power by which He wrought these was in Him because of what He was. It might be open to all who live upon the same plane, as He pointed out.

As has already been said, there is no evidence in Christ’s miracles of the lawless breaking of a ‘law of nature.’ Rather is it as if existing forces were being directly influenced, whether neutralized or quickened, or as if a new force was working with a natural force to produce a result different from what the latter could produce. In the case of healing disease a slow process gives place to a swifter process. So in the calming of the sea a natural process is heightening. The case is the power of will. When walking on the sea, Christ must have exerted a power which was more marvellous for Christ than the transmutation of one element into another as proved possible by science.

In the case of feeding the multitudes analogy is more difficult to find. Were bodily needs forgotten through a miraculous mental exaltation, so that a sacramental partaking of a small portion of food sufficed? This does not mean that fragment that remained. We cannot trace the method, but our limited vision need not detract from its miraculous aspect. These most concerned believe that a miracle had occurred, unless the texts are wholly fictitious.

In Christ it is not a question of divinity breaking through a humanity in action; there are superhuman, but of a constant superiority to humanity in one who is its perfect type. It is therefore no stranger that His actions should be more wonderful than those of other men than that His teaching or His sinless life should be acclaimed.

Apart from the general control or guidance of the universe, divine will may work through normal or supernormal actions, or may act directly in specific cases, for what are to us miraculous purposes. Speaking in a normal action, but when man speaks under the influence of the Spirit there is inspiration. Healing by suggestion is supernatural, but, if the suggestion is aided by spiritual influences, there is a miraculous care. Again, as in some of Christ’s miracles, we trace more direct action upon material things. Such action may be regarded as supernatural because mysterious; yet to God it is natural. All action, human or divine, is a part of an ascending series; we cannot say where the natural ends and the supernatural begins; what we can assert is that Christ’s confidence in His power or God’s power working through Him never faltered. He attests that, if men had faith enough, they could do even greater works. Have we yet sounded the abyssal depths of personality, or used to the full the power of the divine spirit working with us?

16. Prayer.—The relation of miracle to prayer may be briefly touched on. The miracle is a special instance of divine control, then answer to prayer has a miraculous aspect. Human mind and will can control existing physical forces or overcome the laws which govern them. There is readjustment without catastrophe. To every single fact there are countless antecedents, and a little of less or more will produce a new result, as is seen, e.g., by the different chemical products obtainable by even the slightest increase in the number of similar atoms combining with others from different sources. Man himself can produce new effects in the physical world. Must we deny this power to God? He can surely guide, deflect, or neutralize one force by another, or act directly upon matter and energy so that a new result will follow, subject of course, to every limitation of reason and order. How little exercise of power on God’s part would be necessary to cause rain in answer to prayer! Hence man and man’s actions, and, besides, also his prayers, are a part of the forces of the universe, when we do not pray, the result, even in

VOL. VIII.—44
the physical world, may be different from what it would have been had we prayed. Prayer is energy, and earnest prayer cannot be useless, even if its results are not what one wants. If God's plan for the universe is so far conditioned by man's misuse of free will, how speedily will that plan be accomplished when man's will is at one with God's! It is true, true in every case and every answer to prayer, as a direct manifestation of His will; is so far miraculous, and yet, like all miracle, quite natural. God foresees all that will happen in the universe; therefore He foresees whether we shall pray; whether any particular prayer will be answered in one way or another. If the occurrence of certain things in God's plan depends on prayer, then we must pray. Are we then not free? Still we have the feeling of acting as free agents, and feeling is perhaps here truer than reason.

J. A. Macculloch.

MIRACLE-PLAYS, MYSTERIES, MORALITIES.—I. Introduction. —As was indicated in the introduction to the art, DRAMA, the origin of the medieval dramas, like that of the Greek, is to be found in religious observances. It is true that from the earliest reigns of Norman kings in England secular pageants were common features of any day of special rejoicing; but these were not theatrical, and the more, we did they contribute to the essential development of the form. The true beginning of the long course which leads up to Shakespeare and Racine is found in the Church; the most striking fact in the history of the medieval drama is its evolution from the simplest germ in the responses of the liturgy into an elaborate new form without the influence of either antecedent or contemporary dramatic material. The original form dates in the history of the Miracles and Morality are still to be discovered, and their due place to be assigned to many influences, it is possible to write a clear history of the dramas in the Middle Ages from its origin in the antiphonal tropes of the liturgy to its final expression in the great Passion-plays, 'Mytheres,' and 'Miracle-plays,' even if its results are not what one wants. If God's plan for the universe is so far conditioned by man's misuse of free will, how speedily will that plan be accomplished when man's will is at one with God's! It is true, true in every case and every answer to prayer, as a direct manifestation of His will, is so far miraculous, and yet, like all miracle, quite natural. God foresees all that will happen in the universe; therefore He foresees whether we shall pray; whether any particular prayer will be answered in one way or another. If the occurrence of certain things in God's plan depends on prayer, then we must pray. Are we then not free? Still we have the feeling of acting as free agents, and feeling is perhaps here truer than reason.

The probability of some survival of classical influence in the medieval drama has led some writers to trace all possible ancient dramatic and mimetic traditions in the period between the closing of the theatres and the re-opening in the 16th. cent. to the establishment of a developed liturgical drama in the 10th and 11th.; but, notwithstanding the efforts of the modern Greek scholar K. N. Sathanis [Παλαιοσινατα τραγωδιανα, Doxologia, 1905, and his followers to find the medieval religious drama on the ruins of the ancient Greek, preserved in Byzantium and carried to the west by the returning crusaders, it is the opinion of most modern scholars that there was possibly a continuation of the mimetic tradition, kept alive by wandering, outlawed entertainers—a tradition that may have helped the development of the drama by aiding the survival of certain forms in the liturgy, and may later have had a part in the secularization of the religious drama. (For the Byzantine stage see R. Krumbacher, Geschichte der byzantinischen Literatur, Munich, 1897), and for the views of Sathanis, J. E. Tunison, Dramatic Traditions of the Dark Ages, Chicago, 1907; for the subject in general, Chambers, The Mediaeval Stage, i. ch. 1.)

2. The liturgical drama.—The antiphon, from Eastern origin, introduced into Italy by St. Ambrose, was the germ from which the medieval drama developed. Certain antiphonal services had many dramatic possibilities, which more or less unconsciously lay in the text, or interpolations in the liturgical text for certain feast-days. The most important from the standpoint of dramatic history were the tropes of the Easter masque, the earliest dramatized form of which is the 'Quem quaeritis,' assigned to about the year 900 and ascribed to the trope-writer Tutilo of St. Gall (Karl Young, 'The Origin of the Easter Play,' in Publications of the Modern Language Assoc. of America, March, 1914), seems to have developed into a considerable play as a trope of the introit for the day, and to have sent out branches which, combining with other ceremonies, such as the 'Visitatio sepulchri,' and other dramatized forms, such as the 'Nativitas,' grew into the great Passion-plays and Miracle-plays.

This earliest form is: 'Interrogatius.

Quem quaeritis in sepulchro, Christicasola?

Responeo. Jesum Nazarenum crucifixum, o casolica.
Non est hic, surrexit a mortuis

Iesu, nuntiate quis surrexit de sepulchro.

Resurrexi.'

The last word, 'Resurrexi,' is the first word of the Easter intonit. By textual accretions, partly by additions from the Vulgate, but more often by 'free composition,' and by the development of a dramatic setting (the 'sepulchrum') and truly dramatic personalities (the three Marys, the angel at the tomb, the two soldiers), the trope-developed through liturgical play (MS Breslaw, 15th cent., quoted by Young), and attained a much larger development as a 'Visitation sepulchri' at the end of Easter matins (the 'Elevatio crucis' following the 'Adoratio crucis' and 'Deposito crucis' on Good Friday; the ceremonies were symbolic of the burial and resurrection of Christ). This second
and dramatically more fruitful use of the 'Quem queringit' grew by textual additions, such as the sequence 'Victimas paschali,' and by additions of incident—first, details of the Biblical story (e.g., the visit of the three Marys to the tomb, and of Peter and John); secondly, secular imaginative details, such as the visit of the Marys to the 'anguerarin,' or dealer from whom they bought the necessary spices, a character who later became popular in the vernacular Passion-plays.

Though there was a considerable dramatic development of the 'Quem quaeritis,' it remained strictly a liturgical drama; it was chanted, the parts were taken by churchmen, there was little real dialogue, and the setting was of the simplest. In certain late forms there are introduced motives that do not belong to the events of Easter morning, such as the kiss of peace accompanying the greeting 'Surrexit Christus,' or the 'Tollite portas' ceremony prescribed by the ritual for the dedication of a church. These point to the possibility of a development of the Easter play which, however, was not to take place in the 'Quem quaeritis' proper. This matter will be considered in speaking of the Passion-play.

But the 'Quem quaeritis' was not the only drama of Easter-week. The 'Peregrini,' attached to the vesper of Easter Monday, established in the 12th cent., was known in England, France, and Germany. The simplest form tells of the journey to Emmaus and the supper there (Petit de Julleville, Les Mystères, l. 67; Chamberl. i. 27). In others Mary Magdalen appears, or the Virgin and the other Marys greet the risen Christ; or a new scene is added of the incredulity of Thomas; or there is even a merging of a developed form of the 'Quem quaeritis,' the 'Peregrini,' and the Easter morning ceremony of the 'Elevatio crucis.'

Parallel with the plays of the Resurrection, other liturgical plays developed as parts of the office of Easter. The Christmas season was the most productive; but there were plays for Epiphany and certain saints' days, particularly that of St. Nicholas. Though evidence of their existence has been found, the plays for many occasions have entirely disappeared. A Christmas drama, the 'Pastores,' commemorating the visit of the shepherds, grew out of a Christmas introit-trope, modelled on the Easter 'Quem quaeritis.' It begins 'Quem quaeritis in praesepe, pastores, dicite.' It was liturgical, very simple in form, and of infrequent occurrence in the MSS, but is of interest for its connexion with the ancient and still popular representations of the crib, or creche, of the infant Christ (see Bambino), and for its influence on the more fruitful dramatic forms into which it was absorbed. The essence of the play is the visit of the shepherds, a crib with images of the Virgin and Child, the announcement of the birth of Christ by a boy in 'simulidume angelii,' the singing of the 'Glória in excelsis' by the angels and a hymn by the shepherds, a dialogue between the shepherds and two priests 'quasi ocholastae,' the adoration of the shepherds, and a final hymn.

A more common form of Christmas drama was the 'Stella,' a play of the visit of the Magi, originally consisting of antiphons and simple prose dialogue, representing the following of the star, the visit to the Infant, the offering of gifts, and the warning to the Magi (Crestemach, Geschichte des neueren Dramas, i. 60; Chamberl. ii. 45; Petit de Julleville, l. 51; textes du Mérid., Origines latines, and in Coussenmaker, Drames liturgiques). The simplest and probably the earliest examples are from Ronen and Limoges. This form of liturgical play developed early. Dates are uncertain, but MSS of the late 11th cent. have the play in a well-developed form. As the Easter 'Quem quaeritis' centred about the 'Sepulchrum' and that of Christmas about the 'Fraspee,' the 'Stella' had as its starting-point the star. A gift star, the point sometimes holding candles, was lowered from a hole in the ceiling or held up by an assistant. Like the Nativity plays, the 'Stella' developed greatly from dumb show, and the simpler forms continued parallel with the expanded forms and outlived them.

The dozen or so complete extant versions of the play vary considerably. The drama developed by the representation, in action instead of narrative, of the visit to Jerusalem, by the use of various scenes in which Herod plays a part, and, e.g., his anger at the escape of the Magi and his order for the massacre of the innocents, and even the actual representation of the massacre, and finally the lament of Rachel, which had an independent dramatic treatment. As Chambers puts it, the absorption of the motives proper to other feasts of the Twelve Nights into the Epiphany play has clearly begun (ii. 48). This absorption was to result in certain later and more complex plays made up by the joining of the 'Pastores,' the 'Stella,' and the 'Rachel.' It is only in view of the result from this fusion and of the expansion of certain parts that the 'Stella' has great importance for the later history of the drama. The part of Herod grew by expansion and emphasis even to take the first place in the English Corpus Christi cycles.

More important for the future of the medieval drama than of any of the forms thus far considered was the 'Prophetes,' which had a curious origin, first studied by Sepet (Les Prophètes du Christ). It was based on the apocryphal Sermon contra Judæos attributed to the Midrach, the Mishna, to St. Augustine, but really of later origin, and used in many churches as a lesson in the Christmas offices. In the passage so employed, the author invokes thirteen witnesses to the divine mission of Christ and calls upon them to predict his Passion. The prophets invoked are Isaiah, Jeremiah, Daniel, Moses, David, Habakkuk, Simeon, Zacharias, Elisabeth, John the Baptist, Vergil, Nebuchadnezzar, and the Sibyl. The dramatic growth of this sermon had certainly begun by the 14th century. In the earliest forms the play follows the sermon closely, but is written in verse. Classical language and even direct quotations from the Eclesiastes appear in the prologues of Vergil and the Sibyl. In later examples from Latin the dialogue is expanded, the 'præcentor' is replaced by two 'appellatores' or 'vocatores,' and Balaam is added to the prophets. More remarkable is the little added drama of Balaam and his ass, which has been considered by many writers as the origin of the notorious Feast of the Ass, but which is perhaps more probably a reaction from the distorting festival. In the Ruten text the part of Nebuchadnezzar is also expanded into a miniature play: Shadrach, Meshach, and Abednego refuse to worship the image, are cast into the fiery furnace, and escape all harm, whereas the king testifies to the might of the coming Saviour.

It will be seen that at this stage of development the 'Prophetes' necessitated a much more complex setting than was usual with liturgical drama—the throne of the præcentor, the fiery furnace, distinct costumes (described in the rubrics), Balaam's ass. This was a beginning of the complexity that was to characterize the great Mysticals.

This complexity and the fusion alluded to above may be seen in a Latin play preserved in a 13th cent. MS (Royal Library, Stockholm, text in da Mérid). It is a combination of most of the Christmas dramatic forms. St. Augustine sits with the
prophets at his right, the chief of the synagogue and the Jews at his left. The prophets foretell the Messiah; the head of the synagogue is agitated at their blasphemy against the child. A new character, the 'bishop of the children,' interposes the suggestion that St. Augustine shall be questioned. The Rabbi in anachronistic and pedantic words argues the inimicalness of the Virgin-born, and St. Augustine answers.

A sacrament is taken up by the choirs of prophets and Jews, and the one singing 'Res miranda,' the other 'Res neganda.' So far the play is an expanded 'Propheti,' still mostly liturgical in feeling and form. The prophets take their places in the church, and a play of the Annunciation begins abruptly. This part is brief. The Scriptural dialogue between the Virgin and the angel is followed by the act of Elizabeth. The next direction is that Mary 'vadat in lectum sumum et patri filium.' The choir has His coming, and immediately the 'Stella's' begins. A star shines forth, the three kings follow it, and appear before Herod; an angel announces the coming of Christ to the shepherds (the 'Pastores' elements). The devil hints that the angels have deceived them, but they are convinced by the chanting of the 'Gloria in excelsis' by a heavenly choir; they seek the cradle and worship Christ; they meet the Magi bearing gifts. The Magi are warned not to return to Herod, who orders the killing of the innocents. The mothers lament their lost children (the 'Rachel' element); Herod falls dead, and is seized by demons. An angel appears, Joseph takes the infant to Egypt. The king of Egypt advances, accompanied by a church singing 'chores fort profanes.' The Holy Family arrives in Egypt; the idols fall, and the priests, unable to restore them, are converted. Finally the church chant a lamentation against Herod and the Jews. The last part is free and individual in composition. Petit de Julleville thinks it unlikely that it was played in church (because of the 'episcoporum puerorum'), and that more likely it was given in a monastic school.

As this play well represents the form attained by the liturgical drama through the combination of types and free composition, certain plays founded on the stories of Daniel and Lazarus represent another development—the expansion of single scenes in the older plays into independent dramas. Most interesting, because the first liturgical play attributed to a definite author, is the 'Daniel' of Hilaris, a cosmopolitan Goliardic scholar, disciple of Abelard, who flourished in the first half of the 12th cent. (text in J. J. Champollion-Figeac, Hilaris versus et ludi, Paris, 1836, and in du Méril). The 'Historia de Daniel representanda' opens with the feast of Belshazzar; the mystic words appear, and Daniel interprets them; Darius enters Babylon with his army and kills Belshazzar. Daniel appears at court, refuses to worship the king, and is thrown to the lions; the angel brings Habakkuk to him; Daniel is again in favour. The play is expanded by choruses in honour of the various personages, 'conductus Daniels,' 'conductus regine,' etc. The chant to Daniel in the similar song from Beauvais is a hymn in honour of the birth of Christ. This, as well as the rubrics, indicates the connexion of the play with the liturgy; but the note at the end, 'The music has been given at matins,' let Daniel sing the Te Deum, if at vespers the Magnificat,' indicates that it was not a regular part of the office. In this partial detachment from the liturgy we see the beginnings of that development which was to take the drama entirely out of the hands of the clergy.

3. The secularization of the drama. The indications of a tendency to make the liturgical drama more popular that we have seen in the expansion of certain themes in the 'Propheti,' in the freer and more poetical composition of many of the later liturgical plays, in their comparatively independent position in relation to the Church offices, are emphasized by the gradual change in the language, spirit, and setting of the plays, as they moved towards that final and almost complete secularization which should take them out of the Church and out of the control of the clergy, and make them great popular spectacles rather than expositions of Christian faith. The degrees of popularization were innumerable. In the 15th cent., even when the purpose was didactic, whole scenes were often frankly amusing and vulgar, with no religious significance whatever—e.g., in the scene or playlet of Mak and the shepherds in the Townley cycle, and in the comic scenes of the German Passion-plays.

The vernacular came by slow degrees to replace Latin. At first the two languages appear side by side; in the earliest examples the local speech appears only in refrains or in the lines of a few minor characters, or in the less impressive passages. But there is no discoverable rule; the same character may speak Latin in one passage, French in another. One of the earliest cases in point is the language used together is the 'Sponsus,' a 12th cent. play of the wise and foolish virgins from Limoges (text in Romania, xxiv. (1882); du Méril). Here a considerable part is in the 'languedoc'; the angel who announces the coming of the bridegroom speaks only French, the virgins both languages. The refrains are in French. The final words in which Christ commends the foolish virgins are first Latin and then French, ending thus, perhaps to make the lesson clear and impressive to the congregation: 'Amem dio
Vos ignem
Nam caritis luminum;
Quod qui percutit [MS percutat]
Percuti percutat
Hujus ansas luminum.
Abi, caelitatis, abit, malaurens!
A tos jor ino vos penas livrennes;
En eure ora nere miserrere.'

Occasionally, as in the 'St. Nicolas' of Hilaris, the vernacular is found only in the refrains. In other plays it is a translation of the preceding Latin lines—an indication of the reason for the use of the common tongue—as in the 12th cent. 'Adam' (text from Tours, first ed. by V. Luzarche, Tours, 1854; K. Bartsch, Christomathie de l'ancien frangais, Leipzig, 1880), and in many German plays. Latin and the vernacular were even mingled in the lines, as in the Beauvais 'Daniel' (text in Cousemacker, no. iv.).

'Vir propheti Dei, Daniel, vien al Bel,
Veni, desiderat parler a toli,' etc.

Some late dramas are wholly in the vernacular, except for refrains or certain impressive passages. In France particularly the development of the drama was marked by the adoption of a more varied vocabulary. The earliest liturgical plays were entirely in prose, the later ones mostly in verse. In these later forms the versification is rather complicated, very varied; almost all are written in stanzas. But these lines differ in the number of lines and the lines are syllabic, but vary in length from four syllables to ten ('Petit de Julleville', etc.).

Dactylic hexameters also are used, sometimes leonine, as in the lament of Rachel in the Flery Interfectio puerorum' (cf. Petit de Julleville, i. 49; text in du Méril; MS in Orléans Library):

'O dolor! O patrum multasque gaudia marmur.'

Occasionally lines are quoted or imitated from the classics: e.g., 'Quae rerum novitas aut quae rerum causa subget
Incipias tempore visa? Quae tenditis ergo?
Quae gens? Unde domi? Faciem perit, armas a
(cf. Ann. viii. 112-114).

As important as this change in language is the
gradual secularization of the spirit of the plays.

The last part of the composite Munich play referred to above will illustrate this point. Though written in Latin, one part is an original secular poem in praise of spring, filled with pagan allusions and with no liturgical or Biblical connotation. The introduction of the comic element and the melodramatic in the passages relating to Balaam's ass and Herod points to an equally strong secular influence, one that was to lead to some of the characters and unfortunates of the plays to the open (first the churchyard or square in front of the church, then the main square of the town, or several places at once), and, still more important, gradually brought the plays under the control of the laity. It is a long way from the simple 'sepulchrum' or 'præsepe,' the two chanted parts, the lack of appropriate costume, of the 'Quem queritis' to the varied setting, the many players, the costumes of the 'Conversio Pauli' (Petit de Julleville, i. 66; text from Fleury, MS., mentioned above, in du Méril, and in Cosmescaker, no. xiii.) with its several 'sedes' for Saul, Judas, etc., its two scenes, Jerusalem and Damascus, and its 'septem' (in Ananias, or the Munich 'Propheta' described above, with its 'sedes' for the prophets, its 'luctus' for the Virgin, its shining star, its mouth of hell, its many characters. Henceforth the change in setting was one of degree rather than of kind; the elaborate merely followed the increasing complexity of the plays as they added one incident after another. Within the church, the crucifix, the altar, the 'sepulchrum,' the roof-loft (representing heaven), and the three steps raised the chief accessories of the play. To these, which were in the sanctuary and choir, were probably added in the more elaborate plays 'sedes,' 'domus,' and 'locus' extending down the nave. This natural arrangement was apparently followed when the drama left the church, as in the 12th century. Norman 'Resurrectio.' Chambers (ii. 83) suggests such an arrangement of the 'lucus,' 'mansions,' and 'estates' required by the prologue, following the analogy of a Donaueschingen Passion-play of the 16th century, the plan of which is extant (given in Froning, Das Drama des Mittelalters, p. 277). The prologue gives the order of the required sets: the crucifix, the altar, the 'sepulchrum,' the 'sacrum,' 'estates' or 'sedes.' The only other extant French religious play of the same period, the 'Adam,' shows even better how far the drama had outgrown the simplicity of the 'Quem queritis.' The Latin rubrics indicate not only a complex setting, but great care in stage management, even extending to the gestures and voice of the actors.

For instance: 'Let there be built a paradise in a higher place; around it let there be draperies of silk. There shall be a strong wall in the paradise, and all the hang fruits. Then the Saviour shall arrive, clothed in a daunium, and on him shall be placed Adam and Eve. Adam in a red tunic, Eve in a woman's white robe and a veil of white silk.' (Chambers, ii. 86).

The rubrics mention not only the costumes for all the characters, and the localities—paradise, hell, a cultivated field—but also the properties—a spade, a rake, chains for the devil to use, cudgels for them to beat upon, flames.

The development of the liturgical drama was practically complete by the 13th century. Thereafter the growth was mainly secular and more vernacular, much more rapid and national. The liturgical drama was much the same in different countries, but the vernacular religious plays took on national characteristics in the 14th century; so that thenceforth, to be understood with any clearness, the special literary types that developed must be studied by countries. Furthermore, the influence of particular authors and of particular methods of representation makes itself felt.

4. England.—The early dramatic history of England is difficult to trace, for much the larger number of plays have been destroyed. The development of the liturgical dramas in England must be partly guessed at from that of France. Only the slightest indications of what it originally was are extant. The earliest dramatic piece is the 'Quem queritis' from the Winchester troper dating probably from about 975 to 975 (Chambers, ii. 14, 306; text in Anglia, xii. (1801) 365). This includes a simple trope not much more elaborate than the St. Gall one. Of it, however, Chambers (ii. 15) says:

'The liberal scenario of the Concordia regularis makes plain the change which has come about in the "Quem queritis" since it was first sung by alternating half-chords as an introit-trope. The chanted and mimetic action have come together, and the first liturgical drama is, in all its essentials, complete.'

The only other extant English text of the liturgical period is a 14th century 'Quem queritis.' From Dublin. But church inventories, account-books, and statutes indicate the existence of the 'Pastores,' 'Peregrini,' 'Resurrectio,' 'Stella,' 'Propheta,' etc., at a number of places including York, Lichfield, Salisbury, and Lincoln; and William Fitzstephen, writing of the late 12th century, in London, records:

repsentationes miraculorum qua sancti confessores operam ment, seu representationes passuum quibus clarit fratrum sanctitatem

Of a Beverley 'Resurrectio' (c. 1229) the (bilingual) text of only one actor's part remains. So little do we know of this early period that it cannot be decided whether the liturgical drama passed directly from Latin to English, or whether there intervened a Norman-French period.

The full development of the English Miracle-play came in the 14th century, and during the next two centuries and more it can be studied more clearly from extant texts. Whether or not the English drama received a special impulse from the establishment of the Corpus Christi festival in 1311, the most characteristic form, the Corpus Christi processional cycles, were founded soon after that date. The Chester plays were probably given first in 1328. The dates of the establishment of the other cycles are not known, but references to them are found in: Beverley, 1577; York, 1578; Coventry, 1392. In 1539 there is a reference to a 'indus filiorum Israelis' at Cambridge. From this time on there was the greatest activity throughout the country, dramatic form.

It will be impossible to analyze at all adequately even the chief monuments of the period under consideration; the four great Corpus Christi cycles.
and the minor instances of dramatic activity can hardly be mentioned. Generally the English Miracle-plays were represented in separate scenes, each by a different trade, guild, on its own "pageant."

A high scaffold with two rows, a higher and a lower, upon four wheels. In the lower they apparelled them selves, and in the higher rows they played. . . . They began first at the alms house, and when the first pageant was played it was wheeled to the highe cross before the mayor, and to every street, to every notable house, to every noble, and to every gild. In each place, in the street where they determined to play there pageants (Archdeacon Roger de L'Estrange, Chester, 1694, quoted by Pollard, English Miracle Plays, p. xxv).

Though the plays were given by the gilds, they were under the direction of the town council, which made the strictest rules concerning the manner, thoroughness, and promptness of the performance—e.g., at York (1415):

"And all manner of craftsmen yet bringeth further the pageants in order and course by good players, wall arrayed and openly spake, upon payns of being of C. to be palle to the chamber without any pardon" (York Plays, ed. Lucy Toutin Smith, p. xxiv).

The plays of the cycle were not the work of one man, but a "team" effort. The number of gilds acting varied; hence there was also a variety in the number of plays or scenes. The play for each guild was often slight in subject—e.g., "Adam and Eve, an angel with a spade and a distaff necessary to their work," played by the armory at York. An outline of the subjects of the York cycle (probably composed towards the middle of the 14th century) will give an idea of the wide range of the plays:

- The Passion, the Temptation, the Fall, Noah and the Ark, the Sacrifice of Isaac, Moses in the Wilderness, the Prophets of Christ, the Annunciation, the Birth of Christ, the Shepherds, the Magi, the Slaughter of the Innocents, Christ in the Temple, the Temptation, the Woman taken in Adultery, the Existing of Lazarus, the Last Supper, the Crucifixion, the Harrowing of Hell, the Resurrection.

Although this list is incomplete, we can see in it all the elements that we have found in the Continental liturgical plays, and may be permitted to suppose that the Miracle-cycles developed by the extension and amalgamation of liturgical forms such as the 'Prophetes,' the 'Stella,' the 'Pasteors.' The cycle, like the French and German contemporaries, the authors allowed themselves considerable freedom in expanding the Biblical text (as e.g., in the part of Herod), yet the characters most freely drawn are almost exclusively those of persons whom neither Scripture nor legend ascribes either name or individuality. Such personages as Cain's "garco," or servant, Noah's wife, the shepherds, are introduced for the sake of relief—a term inappropriately, it seems to us, as in the Crucifixion scene.

It is to this desire for dramatic relief that we owe the story of Makk and his sheep-dealing in the Coventry cycle—our first English comedy" (Pollard, p. xli).

In the Coventry cycle there are various characters that link the Miracle with the Morality, the dramatic form more characteristic of the later years of the primitive drama. Certain characters appear as Death, Veritas, Misericordia, Pax. The earliest known English Morality is lost. It was a 14th century play,

"setting forth the goodness of the Lord's Prayer . . . in which play all manner of vices and sins were held up to scorn, and the virtues in due season praised" (J. Toutin Smith, English Gilds, London, 1870, p. 137).

The earliest Morality that has survived is 'The Castle of Perseverance.'

Its purpose was to trace the spiritual history of Humannum genus . . . from the day of his birth to his appearance at the Judgment Seat of God, to personify the foes by whom his path was obstructed, to exalt the Virgin of heaven and earth, and the ordinances of Confession and Penance by which he is strengthened in his conflict" (Pollard, p. xlvii).

Though the French Mystères are less "powerful but impressive," it has logical development and unity of purpose. The stage directions show that it was elaborately presented.

The most famous morality is 'Everyman,' composed in the 15th century; it is thoroughly dramatic in language and treatment.

The great Moralsities were followed by shorter ones dealing with narrower subjects—didactic interludes, Pollard calls them. From these are derived most of the common notions regarding Mora-

lities. One of the earliest is 'Hycie Scoern.' Some are written in praise of religion, others in praise of learning (e.g., a prayer to St. Thomas Aquinas). Some of the later interludes are real plays, in the modern sense—e.g., 'A New and Peaceable Enterlude; intituled the Marriage of Witte and Science,' licensed 1569-70. The amusing lines, the set-piece, and the characterization make the play modern rather than medieval. John Heywood's play illustrate still better the change that was taking place in dramatic art—"a change which was to lead rapidly to the splendid age of English drama."

France—The development of the liturgical drama outlined above carried us into the 12th century. In France there are few plays known of the 12th and 13th centuries, the period when the development of the cycle was at its height. From the 12th to the 14th century, two plays are known, Jean Bodel's 'Jeu de Saint Nicolas' and Rutebure's 'Miracle de Théophile.' In the 14th century the French drama first acquired its national character. Petit de Julleville says that the plays of this period are extant, except one being 'Miracles de Notre Dame.' Here we have a form not found in other countries. That there must have been other forms of plays in this century is certain; the derivation of the mystery plays of the 14th century, from those of the 12th and 13th makes this clear. Forty of the plays of the Virgin are in one MS in the Bibliothèque Nationale. These plays, however, were in a style resembling those of the period, have as a central theme a miraculous event brought about by the intervention of the Virgin—"always a mechanical and unexpected intervention." In other respects—in style, stage-management, songs—the plays are so similar as to make them seem, if not the work of one author, at least the repertoire of one company; and this is the more likely as such plays were performed by societies, called 'Pays,' formed for the purpose.

In the 15th century, for the first time the word 'Mystère' appears as a dramatic term, and in this century it meant a representation of either Biblical story or the lives of saints. The NT was more used than the OT, for, as we have seen, the interest of the Middle Ages in the OT was due to its representation of the shadowing of the redemption of mankind. This view accounts for the inequality and lack of dramatic feeling in the use of OT story. Furthermore, the medieval drama was not original; it did not build up a play from a situation that had Commedia dell' Arte, but transcribed Scriptural narrative regardless of dramatic effect.

Though the French Mystères seldom approach the completeness of the English cycles, they are often cyclical in form and extremely long. The famous 'Passion' of Arnaud Gresot is about 65,000 lines, a length attained not merely by prolixity but by following the career of each of the apostles after the Crucifixion. The English Passion-plays, the most notable of the Mystères, centred, of course, around the Passion, which they developed in a painfully realistic manner; but they were extended at the pleasure of the author by the addition of any scenes preceding or following the main event. The Mysteries based on the legends of the saints, also popular in this period, had often a local interest.

Many were composed for a certain province, city, or brotherhood, in order to celebrate a patron saint, to commend a relic, or to give solace to a pilgrim" (Petit de Julleville, l. c.)
6. Germany.—The early texts are scarce in Germany, but from those that are extant it appears that the liturgical play had much the same history as in other countries, and that the transition from the Latin to the vernacular took place in the same manner. As early as the 12th cent. the Tegernseer 'Anti-christus' (text in Froning, p. 206), though written in Latin, has several secular characteristics: an ambitious plan, allegorical figures, and a political motive, for it is a subtle vindication, on the one hand, of the Empire against the Papacy, on the other of the "rex Teutonicorum" against the "rex Francorum" (Chambers, ii. 64). In the 14th and 15th centuries the religious drama flourished in Germany, its most characteristic form being the Passion-play, of which numerous texts survive. There were also some cycles, such as those for Corpus Christi from Swabia (16th cent.). The Passion, which came in the 14th and 15th centuries to be the chief form of the religious dramas in France and Germany, had seldom been represented in the liturgical drama. The nearest approach to a Passion-play was the simultaneous versions of the 'Planetares Marionae.' The earliest Passion-play to have been in Italy (Siena, c. 1290; Padua, 1244). The earliest text is German from Benediktbeuern. Other like medieaval dramatic forms, the Passion-play of this period, though with a different conjunction with other forms, either 'prefigurations' of Christ or events following His passion. By the 14th cent. the form was well developed, but its main period in Germany was from 1400 to 1515. Great Passion plays were written in Prunx, Aachen, Frankfurt, and other towns. Some, as at Eger and Domanitzingen, were cyclical in extent.

7. Modern survivals.—Traces of medieval dramatic custom can be found here and there in Europe to the present day. In general the survivals are no more than dull show like the popular "crotch," or representation of the infant Christ at Christmas, which is, however, rather a reversion to the ceremony from which the Christmas play was derived than a survival of the play. Some notable in this way are the representations of the Passion-play that have been either kept alive in out-of-the-way places or revived, most famous among them, the Oberammergau. The first mention of it is in 1633, and the oldest extant dating from about 1600, contains traces of two earlier texts (K. Trautmann, Oberammergau und sein Passionspiel, Bamberg, 1890). In 1652 the text was revised by the stroke of Sebastian Wild, the Angsburg Meister-singer, and partly of that of Johann Aemel. In the middle of the 18th cent. it was further remodelled by the Benedictine Rosner after the model of the Jesuit drama, and in 1780 Rosner's bombastic version was simplified by Knippleberger. Its present simple and dignified form is the work of two authors, P. O. Weiss and M. Daisenberger. The play is given every ten years, in pursuance of the original vow on deliverance from pestilence. Other versions of the Passion-play have been performed in recent times at Brixlegg and Vorder-thiersee in the Tyrol and in Hörzit in southern Bohemia (A. Haafken, Uber das Hörziter Passionspiel, Prague, 1826), but this kind of thing occurred to this day in southern Italy (T. Trede, Das gesichtschauspiel in Süditalien, Berlin, 1885).

1. Mirrors of the ancients.—These were almost invariably hand-mirrors for ladies' toilette purposes. The Egyptian mirrors were made of bronze (not brass, as often stated), or similar mixed metal. From six to eight inches in diameter, they were elliptical in shape, with the long axis at right angles to the handle, which also served as a stand. The polish was extraordinarily fine, and in some cases still remains.

2. Mirrors are not mentioned in Homer, but were used in classical Greek times, and imported by Rome. Few Greek mirrors are extant, but their shape suggests derivation from Egypt, as does that of the Roman mirror from Greece. Both Greek and Roman artisans preferred the absolutely circular form, with the handle as in the Egyptian original. They were usually made of bronze, with 20 to 30 per cent of tin; some specimens are silver or silver-plated. The Romans developed the box-mirror, and the elliptical disks joined by a hinge. At the back of Greek and Roman mirrors embossed work was usual. The most numerous collections are from Etruria. The Etruscans were early imitators of Greek art, and much of their work on mirror-backs is interesting and intelligent, though lacking the fineness of Greek technique. Pliny notes the manufacture of glass mirrors backed with tinfoil at Sidon, but the invention did not succeed, and had to be repeated in the Middle Ages. The Romans made large mirrors also, similar to the modern cheval-glasses, but fixed in the walls of rooms, and working up and down like a windowsash. The mirror-case was especially developed from Egyptian models.
by artists. Metal mirrors were known in northern India by the Christian era, and they were used to some extent by the Central American peoples, while the Hebrews were familiar with them at an early period for women's use. In Greek art, a mirror is sometimes represented as held by a goddess; and in the Indian marriage ritual a mirror is placed in the left hand of the bride to enable her to dress her hair. A mirror and a comb are not infrequently found on Scottish sepulchral mounds and in the early medieval period, but their precise significance is still uncertain.

2. Medieval mirrors. The mirror-case continued to be popular among the rich, but the mirror itself became smaller, and was usually carried on the person.

Probably the largest mirror known in the Middle Ages did not exceed the size of a plate.

The circular shape was retained.

The reflecting surface was usually of polished steel or other metal, and steel mirrors were still in use in the sixteenth century. There is a reference to a round "looking-glass" of Catherine of Aragon, which was probably a polished metal surface with a sheet of glass over it. An arrangement of this sort had been in use since the thirteenth century, and in the inventories of the Dukes of Burgundy, dating from the fifteenth century, we find mention of a "looking glass".

This method is a noteworthy, but futile, attempt at a combination of metal and glass.

Considering the great quantity of glass manufactured for windows by the tinsmiths, it would be a curious fact if the idea of employing a substance of so high a polish had not suggested itself to the mirror-makers of the day. But until a really satisfactory metallic backing was discovered, the advantage of a looking-glass over a steel mirror would be slight, and this fact may account for the persistence of the latter for domestic use down to so late a period. The amalgam of mercury and tin which gives the modern looking-glass its efficiency was not known before the sixteenth century.

A final improvement was effected in the middle of the 15th century by the French invention of plate glass. Backing for glass was known in the 13th century, and in the 14th there was a gild of glass-mirror-makers in Nuremberg, but it was first in Venice that mirror-making acquired commercial importance.

The mirror naturally lent itself to the production of curiosities, mostly the result of experimentation. The effects of concave and convex surfaces seem to have been known at an early time in both the East and the West. The 'magic mirror' of China and Japan reflects on a screen an image of its back. In medieval Europe small spherical glass mirrors were known as Ochsenaugen. The use of reflectors to produce light and heat was early practised, as by the Greeks and Central Americans. Mirror-writing is often practised by ambidextrous persons, as by Leonardo, and it also occurs pathologically in forms of aphasia.

3. Superstitions connected with the mirror. The property of reflecting images naturally inspires wonder, and this tends to produce superstitious beliefs and practices. Most of these are connected with the common idea that the reflection of a person is in the soul, self, and consciousness. The philosophy of H wildt was fond of mirror-analogies when discussing this connexion.

* "The person . . . that is seen in the eye, that is the Self. . . . This is Brahman. . . . "The person that is in the mirror, on him I meditate. . . . "I meditate on him as the likeness. Whoso meditates on him that is in the mirror, is his family who is in his likeness, not one who is not his likeness. . . ."

In the simpler thought of uncultured peoples, however, the reflection is a spiritually real soul.

The Andamanese 'do not regard their shadows, but their reflections (in any mirror) as their souls,' and the Fijians 'a man's likeness in water or a looking-glass' was regarded as his soul. Savages of New Guinea when first looking into a mirror thought their reflections were their souls, while the New Caldeonians believed that their reflections in mirrors or water were their souls, and the Macquis of Guiana held the same belief about the reflection in the eye of another. Many terms for the soul point to the same notion. The Maltese 'stef' ('soul') means 'reflection,' and the same meaning belongs to many terms among the Indonesians.

Hence the frequent notion that there is something uncanny about a mirror, a belief which culminates in the idea that the reflecting surface has abstracted and retains the soul.

There is a pool in a Saddle Island river (Melanesia) into which any one who looks dies; the malignant spirit takes hold of his life by means of his reflection in the water of a similar terror of looking into any dark pool; a beast therein will take away their reflections. 12 The Ailors supposed that to see one's reflection in water wherein a knife had been placed meant a stab to the soul, 13 and the Guadeloupean forbade their women to look at their faces in the water for fear of taking away their beauty. 14 Mans said (in rules for a mission): 'Let him not look at his own image in water.' 15 The old Greeks had the same belief; to dream of seeing one's self reflected forebode death, and Fraser explains the story of Narcissus on these lines. 16 The Habitats said it was wrong to look at one's reflection at the Sabbath, unless it were fixed on a wall. Later they forbade men generally to use mirrors, as being effeminate, reserving, however, the privilege of their own relatives, as being 'close to the government.' 17 The Babilonic idea was doubtless merely perfunctory.

With these notions is connected the custom of covering mirrors or turning them to the wall after a death.

'It is feared that the soul, projected out of the person in the shape of his reflection in the mirror, may be carried off by the ghost of the departed, which is commonly supposed to linger about the house till the burial.' 18 This practice is widely spread over Europe, and occurs in Islam. Similarly, sick persons should avoid looking into a mirror, and it is advisable for a bride to refrain from using a mirror in modern Greece. 19 Since the mirror holds the soul, it is said to be extremely unlucky to break a looking-glass.

A mirror,' say the sectarian Russian Raskolniks generally, 'is an accursed thing.' 20

On the other hand, a mirror, as when set in a ring, may be used to repel demons.\footnote{1}

Divination by means of a reflecting surface is an ancient and world-wide practice, its principle being that figures representing the souls of persons at the moment or in future action may be seen in a hollow pool of ink is a common substitute for the mirror (cf. art. CRYSTAL-GAZING), and a combination of mirror and pool of water was used at Demeter's sanctuary at Patra, where there was a sacred spring, but its use was permitted only in cases of sickness. They tie a mirror to a fillet cord, and let it down so far that it is reflected in it, and merely grasps the surface of the water with its rim. They look into the mirror, and it shows them the sick person either living or dead.\footnote{2}

It is also used, especially in German and Slavic lands, to discover one's future husband or wife.\footnote{3}

Divination by mirrors is a variety of a widespread method of 'seeing,' the most frequent instrument being the crystal ball. A magic mirror possessed of the power of speech is not uncommon in folk-tales; and in Shintoism actual worship is rendered to mirrors which, originally presented to deities, have come to stand for the divine beings themselves.\footnote{4}

The supernatural associations of mirrors are chiefly the following, but one or two of a miscellaneous order may be noted, as illustrating the general subject.

Pausanias describes a temple near Megalopolis, within which was a mirror fixed on the wall.\footnote{5} Any one who looks into this mirror will see himself either very dim or not at all, but the image of the sun and the moon is reflected therein.\footnote{6} The Greeks kindled sacred fires by means of the mirror or crystal, and the same was the case in China and Siam, while in the Chinese kingdom the new fire was kindled at the summer solstice by means of a concave mirror turned to the sun.\footnote{7}

4. The mirror in metaphor. The optical properties of mirrors are so important and have such a wide application that all civilized thought is permeated by ideas derived therefrom. One or two only can be cited. The Hebrew personification says: 'As in water face answereth to face, so the heart of man to man,\footnote{8} while the Buddhist sutra speaks of 'a way of truth, called the Mirror of Truth.' A mirror was a favourite component of titles of books in Elizabethan literature, in its meaning of 'true discourse' in modern English, example of a model is similar. Shakespeare writes 'the mirror of all Christian kings.' To hold as twere the mirror up to Nature uses the simplest connotation of the term. An interesting metaphor is used by Emerson, when he says 'the mind is a mirror, a mirror of the sky.'\footnote{9} Among new sources of metaphor are the two remarkable biological and chemical-physical analogies to the optical fact of mirror-image (in which right becomes left and vice versa). All vertebrate animals, many invertebrate, and the leaf and other systems of plants are bilateral, one side being the mirror-image of the other, while the formation of right-handed and left-handed crystals is connected with the division of acids into right and left according to the effect produced in relation to polarized light.

Mishmis. The Mishmis are a tribe who inhabit the Mishmi hills, a section of the mountain ranges on the northern frontier of Assam, which shut in the eastern end of the Brahmaputra valley, between that river and the Dihang, a region practically unexplored, consisting of steep ridges, covered as a rule with tree forest, and including some peaks 15,000 ft. in elevation.\footnote{10} They are divided into four tribes, speaking three distinct but probably connected languages. The most western tribe is known as Chin, Mizo, Nung, or Chalikata, 'hair-cropped'; they inhabit the Dihang valley and the hills surmounting it. To their east are the Myun, or Bebijaya, 'outcasts,' who speak practically the same language. East of the Bebijayas are the Tairang and Digoaish Mishmis, beyond the Digoa river. The Mius are still further east, towards the Luma valley of Dzayul, a sub-prefecture of Lhasa. Most of these live beyond the British frontier. The numbers counted at the last three Censuses in Assam were 217, 98, and 271 (Census Rep. Assam, 1891, i. 203; 1901, i. 152; 1911, i. 154).

I. Ethnology. The Mishmis have been identified by some authorities with the Miao or Huang, the aborigines of Yunnan, whose name has been interpreted to mean 'children of the soil,' 'roots,' or as a contemptuous reference to 'dirt.' (J. G. Scott and J. P. Hardiman, Gas. Upper Burma, pt. i. vol. i. [Rangoon, 1890], p. 557 et seq.).

So far as the means at our disposal permit, to draw conclusions, it seems most probable that these four tribes belong neither to the Tibet-Himalayan nor to the Assam-Burmese branch of the Tibetan languages. They seem to be descendants of clans which, when the parting of the ways occurred between the two branches took place, accompanied neither, but made their own way at different periods, and thus contributed largely to the various languages of the Assam valley from the north. (G. A. Grierson, Census Rep. India, 1901, i. 293).

II. Relations with the British Government. The British first came in contact with the Mishmis in 1825, when Lieut. Burton reported that the Mishmah 'were inhabited by tribes who were very averse to receive strangers.' Other officers visited them between that time and 1851, when M. Krirk, a French missionary, was murdered by them. Then followed a succession of outrages. In 1883 one of their headmen was taken to the Calcutta Exhibition. Soon after his return he died, and the tribe, holding the Government responsible for his loss, decided that the head of a British subject should be buried with him, in order to propitiate his spirit. So they murdered a British subject who carried off his head. An expedition in 1899-1900 received them submissively, and, since that time they have given little trouble. But they are keen tappers of rubber, and it has been found expedient to prevent them from crossing the Brahmaputra into British territory for that purpose (B. C. Allen, Trans. Lakhimpur, 1905, p. 55 et seq.).

3. Religious beliefs. The best account of their religious beliefs is that by E. T. Dalton, Descriptive Ethnology of Bengal, Calcutta, 1872, p. 161.\footnote{11}

The religion of the Mishmis is confined to the propitiation of demons whenever illness or misfortune visit them. On these occasions the spring of a place is made to talk to intimates that the house is for the time under taboo. They appear to have no notion of a supreme or benevolent deity. They worship Mithra as a god of destruction, Dantapan as god of the chase and knowledge, and Taba as god of wealth and disease, and a great many others without name. It appears that the Bowlat and the Abdikrick's notes that the Mishmis have priests, but they are few in number and can only be approached from a distance when required. M. Krirk describes one that he saw at a funeral ceremony. . . . For several days previous to the arrival of a priest, an attar is singing a devotional chant to the accompaniment of a small drum. There was also a preliminary work of which the priest and his helpers participated, and the blood of which was received in a vessel containing some other fluid, and the mixture carefully examined, as it is supposed to indicate if the patient will recover or otherwise. At last the priest arrived, dressed like an ordinary chief, but he wore a rosary of shells, and, attached
to the front of his headress, two appendages like horns. For two days, at intervals, the priest and his son employed themselves in cleaning, anointing, and marking the time by waving a fan and ringing a bell; on the third day he put on his chief's diadem robe, and assumed what may be regarded as his penitential dress—a light-fitting coat of colored cotton, a small apron, a deer skin as a mantle; from his right shoulder depended long green hair dyed bright red, and over his left shoulder he wore a broad belt embossed with four rows of tiger's teeth, and having attached to it fourteen strings, on each he placed a handkerchief ornamented with shells, and round the knot of hair at the top of his head, a large ring, which turned like a weathercock. This was followed by a wild demonic dance; but whether a par, or by the priest, or one in which the people generally joined, is not stated. The object was, however, to make as much noise as possible to frighten the devils. After this, lights were all extinguished, till a man suspended from the roof obtained a fresh light from a chimney. He was to be cautious not to touch the ground as he produced it, as the light was so great. He was supposed to be fresh from heaven (cf. G. B., pl. I., The Magic Art, London, 1911, ii. 234 ff.; pl. viii., Building the Beautiful, do. 1913, i. 2 ff.). When the burial is in progress, the yearly sacrifice and feast in honor of the dead spread over the town (cf. K. B. L., 499; P. R. ii. 226; A. A. Waddell, The Buddhism of Tibet, London, 1896, p. 214 n. 11), and under the shed built over the grave, raw and cooked flesh with grain and spirits are placed (the share of the dead), and all the arms, clothes, was in the habit of using while living. The poor, it is said, bury the dead without much ceremony, as they throw the bodies into the river.'

Abbot 1872—The writer gives no clear dates—T. T. Cooper (The Mission Hills, London, 1878) visited the tribe, and gives some account of their ceremonies, dress, manners, and customs (p. 180 ff.).

An earthquake occurred, and they told the chief, Chowsam, 'the devil has entered a neighboring mountain had been angry, and rent the side of the mountain' (p. 180). The Mission being polytheistic, though of the lowest order, it was not difficult for the chief to understand the existence of one Great Spirit above all' (p. 197). 'The Mission,' he said, 'are very unfortunate. We are everywhere surrounded by devils; they live in the rivers, mountains, and trees; they walk about in the dark and live in the winds; we are continually hearing from them.' . In answer to a question as to which demon he thought the strongest, after some hesitation thought the fire was the strongest, and most societies, as he drying up the water and burnt the mountains; he was also good-natured, as he warned them and punished their food' (p. 198).

As to religion, their notions are very vague. Polytheism, encompassed with all the rites and ceremonies of fetishism, is the true faith. The yearly sacrifice and feast in honor of their deceased parents shows that they have some idea of the future state, but I could not find out their particular ideas, as death is a disagreeable subject of conversation among them, and Chowsam always declined to interpret questions relating to it (p. 226). The most important ceremonies of the Mission are undoubtedly those attending death and mourning. Of sickness a soothsayer is called in, and he generally prescribes the sacrifices of fowls and offerings, according to the state of the patient. He offers sacrifices as a priest and now same who is supposed to be instrumental in causing sickness. When death ensues, particularly in the chief, ministers (ministers, also called jailers, see frontis., p. T. Cooper, The Mission Hills, London, 1890-91, p. 457, etc.), pigs and fowls are killed without stint, and all the men and women feast to their heart's content; hospitality being considered a great virtue. They eat in honor of the dead, taking the white of his good and great qualities. The body is burnt after two days, and the ashes are collected and placed in a miniature house, erected close to the family residence. The unique tomb is then surrounded by some of the skulls collected by the chief during his lifetime, which serve as a monument of his past hospitality, while the rest of his treasures are divided amongst his sons, the son-and-heir taking the lion's share. When there are no sons the skulls go to the nearest male relations. The oldest son takes the title of grand, or chief, and holds a yearly feast in honor of his deceased father, which is considered one of the most sacred observances among them' (p. 297).

When Cooper suffered from an abscess in his ankle, a soothsayer or exorcist was called in. He was dressed like the other Mission, but allowed his hair to fall in long, unkempt masses over his shoulders. After inspecting the patient's foot, he stripped himself naked except for a small loin-cloth, and produced a handful of rushes from his waist-belt. These he began to plait and unplet, accompanying the operation with a buzzing noise, as if he were counting. Occasionally he would place his hand on the painful spot, and then shake the rushes over it, keeping his eyes shut the whole time. After nearly an hour he announced that two fowls must be killed, which would ensure recovery. He declined to answer what devil had been at work, and what effect the rushes had on him (p. 293).

LITERATURE.—The chief authorities are quoted in the article.

MISHNA.—See TALMUD.

MISSALS.—See RITUAL.

MISSION (Inner).—Die innere Mission is the name used in Germany to describe the sum-total of those efforts which are made by the Protestant Churches to alleviate the conditions of the suffering of the poor and to bring the institutions and usages of society into harmony with the will of God. It is to be distinguished from Die ausseren Mission ('foreign missions') in that it confines its activities to Germany and Germans resident or sojourning in foreign lands. It is an endeavour to overcome the heathenism found within the borders of a country professedly Christian. It is to be distinguished from mere humanitarian effort in that it definitely makes temporary provision for a means to spiritual redemption, and from the official activity of the pastors and paid officers of the Church in that it works through the voluntary agency of Individual Christians or groups of Christians, the pastor's office being taken up with the spirit of willingness and marshal its powers for the purpose of redeeming love. It aims at realizing in sacrificial service the universal priesthood of believers.

The movement originated after the close of the Napoleonic Wars when orphaned homes were established for children whose parents had lost their lives in the war (Johannes Falk, Graf Adalbert von der Heide, C. Heinrich Schütz, etc.), and was largely inspired by the efforts of Great Britain in the foreign missionary field, the foundation of the Bible Society, the work of Mrs. Elizabeth Fry, and the City Missions. Consciousness among the leaders was taken by Johann Hinrich Wichern (1808-81), who in 1838 founded at Hamburg the famous Bauhaus (a reformed institution built upon the household system with a training home for lazy-workers), and Theodor Flieder (1800-84), who in 1838 founded at Kaiserswerth the first society for orphan-visiting in 1838 the first society for discharged female prisoners, and in 1856 the famous Diakonisseninstitut for the training of nurses and infant teachers.

The name 'inner Mission' was first employed in a narrower sense by Friedrich Lücke, of Gottingen, in Die zweifache, innere und ausser Mission der evangelischen Kirche (Hamburg, 1843), to mean work among the lapsed members of the different Christian communities and the fortifying of a weak church with the help of a strong, while Wichern broadened out the meaning of the term to include all practical Christian work in the homeland and among Germans in foreign lands (Diaspora).

It was Wichern who first organized the movement on a comprehensive scale in 1848. The revolution of that year roused the Church from its apathy, and opened its eyes to the glaring evils of heathendom which had grown up in the midst of the nation. A Church Diet was summoned at Wittenberg, where 500 representatives of Protestant German Churches assembled. Standing on Luther's grave, Wichern delivered a memorable address, picturing the wide-spread power of the paganism which had arisen in their midst and the fruits which it had produced, and calling upon the
Churches to join hands in remedying these evils. He sketched on large and statelesslike lines the programme of the remedial activities needed, and proposed the formation of a central committee (Centralausschuss), consisting of ministers and laymen, to study at the instance of its fields of work, place the various societies already at work into touch with one another so as to save overlapping, point out the need of new effort and help such effort to succeed, guide the movement as a whole, and, above all, make it clear that all the several ministers, of whatever kind, were animated by one divine spirit of redeeming love in Christ. Thus was established a free confederation of all the activities of the Protestant Churches, so far as these were under the influence of the Inner Mission, as defined in the first report of the Centralausschuss, that is, the Christian Church with all its resources, and through all its agencies, may fill and quicken the whole life of the people in all ranks of society, inspire all social arrangements and institutions with the might of a love energizing heart and life—and through all its living members labour to save the neglected and the poor.

The Inner Mission was to be the practising doctor in the great hospital of the people. Its programme and policy are set forth in full in Die innere Mission der deutschen evangelischen Kirche, eine Denkschrift an die deutsche Nation, written by Wichern at the instance of the Central Committee and published in April 1849. This programme sets out the scope of the work and the relations of that work to the activities of the State on the one hand, and of the Church on the other. For twenty years Wichern practically directed this holy spirit. Pamphlets (Fliegende Blätter) were published annually as the Rauhe Haus giving reports of the various agencies carried on.

The most comprehensive survey of the work is given in two public publications of the Centralausschuss in 1859 (Statistik, Fünfzig Jahre). These contain reports by different authoritative writers on the work done in each of the following departments:

1. The care of children, créches, infant schools, care of cripples, Sunday schools and children's services, orphanages, country holidays for city children.
2. The care of adolescents, associations and homes for approved and unfashionable, schools of domestic economy, Rescue homes, Jugendbund für entmutigtes Christentum (analogous to Christian Endeavour Societies).
3. The care of tramps and the homeless, colonies for unemployed, homes for girls, railway-station missions, Girls' Friendly Societies and Lodges, missions to soldiers and sailors, missions to sailors (also at sea), Workers, sailors, workers, sailors.
4. The quickening of the Christian spirit, city missions, men's brotherhoods, support of weaker Churches, Christian art associations, lectures.
5. Work among emigrants and Germans in foreign lands.
6. Care of the poor, sick, and infants, district nursing associations, Red-cross work in war, homes for indigent, episcopal, missionary, blind, deaf and dumb.
9. Organization of Inner Mission according to province and district, conferences.
10. Training of workers for prisons, asylums, unemployed, and in work of the Rauhe Haus, etc., courses of instruction for social workers.

As the result of the Inner Mission the whole of Germany has been covered with a network of philanthropic agencies, imbued with the Christian spirit. This work has been quickened and enlightened, and the efforts of the Churches have been co-ordinated and wisely directed. The State has co-operated. In 1852 the brothers of the Rauhe Haus were allowed to act as warders in Prussian prisons, and Wichern was commissioned to visit the prisons in order to study the conditions and suggest reforms. Later, Wichern was appointed councillor of the Ministry of the Interior and made a member of the Evangelischer Oberkirchenvat. The work of the Inner Mission paved the way for the social legislation resulting from the Franco-German War. The most notable results of the Inner Mission are the mobilization of women for Christian work, especially in sick-nursing, the Elberfeld system of poor-relief and its extension to other German towns, and the work of Bodelschwingh (1851), who founded at Bielefeld a colony for epileptics and unemployed, and organized, with the help of the Government, the national scheme of relief-stations for tramps.

In the Church the Inner Mission has given the laity, and especially women, their sphere of service; it led to the official institution of the diaconate in the Evangelical Church in 1856, and gives material expression to the universal priesthood of believers. It has filled a place in the national system by caring for orphans and infants, and counteracting the movement for the secularization of schools.

The movement has affected other countries, especially Switzerland (J. A. Bost), Denmark (Wilhelm Beck), Norway (F. Hansen), and Holland (O. G. Haldring). Florence Nightingale received her first training at Kaiserwerth. The work of Thomas Guthrie (Diligenced Schools), William Penn Root (Midway Conference), and John Batson (Lingfield Homes for epileptics, training colony at Wallingford, National Home Reading Union, Social Institutes, Boys' Life Brigade, Girls' Life Brigade, Civic Leagues of Help) was considerably influenced by the Inner Mission. In 1873 J. B. Paton and Francis Morse summoned a conference at Nottingham to consider the practical relations of Christianity to the social wants and evils of our time, at which Paton expounded the Inner Mission of Germany, and a union of all existing Christian charities and societies working for social ends was formed at Nottingham. W. T. Stead took up the same idea in his agitation for a Civic Church. The nearer England has been the organization of Civic Leagues (or Gilds) of Help (beginning 1906), which represent an attempt to adapt the Elberfeld system to the conditions of English city life and bring all the social activities of the civic community into touch with each other.

J. L. PATON.
MISSIONS (Buddhist).—I. In China.—Buddhist missionary enterprises outside of India were started by King Asoka in the latter half of the 3rd cent. B.C. On the other hand, a later Chinese record informs us that in 217 B.C. (in the reign of Shih-Huang-ti of the Qin dynasty) eighteen Buddhist monks were brought to the capital of the empire. The authenticity of the information may be questioned, but, when we take into account the facts that Chinese Buddhists used to ascribe the 7th cent. B.C. to Asoka’s reign, and that, in spite of that, the date of the story almost agrees with the historical date of Asoka, the tradition seems not to be a mere forgery. About one hundred years after that event, as stated in an official record, another contact of Buddhism with the Chinese took place. An expedition sent to the Western regions by the Emperor Wu, the most ambitious sovereign of the former Han dynasty, in 121 B.C. brought a golden statue and prisoners; and in 2 B.C. another mission of naval forces is said to have brought some Buddhist scriptures. These stories point to the spread of the Buddhist missions in Central Asia in the centuries immediately after Asoka’s missionary enterprises.

Historical records agree in assigning to A.D. 67 the first official introduction of Buddhism into China. The Emperor Ming, stimulated by a dream, sent an expedition in search of the golden man of whom he had dreamed (D. 64), and, when the expedition returned in 67, it brought not only Buddhist statues and scriptures, but also two monks, both Indians, Kasyapa Maitaka and Dhammaraksha by name. The first Chinese Buddhist book containing the forty-two sayings of Buddha, was written by Kasyapa, and translations of several texts are said to have followed it. The Pai-ma, or White Horse Temple, was built in Loyang, the capital, and soon after the emperor’s brother built another temple. Conversions on masse are said to have taken place in 71, many nobles and Taoist priests being among the converts. The new religion was received with open arms and hence the way must have long been prepared for it.

There is a gap of about eighty years between the mention of the first missionaries and the advent of two other monks, one of whom was Shih-ko of Parthia, who came to China in 148 and worked till 170. He is said to have been of royal blood and to have left his country because of the fall or decline of his own royal family. This is one of the evidences that Buddhism had a strong foothold in Parthia and Central Asia. It is quite conceivable that Chinese Buddhism had its source close to China’s western borders at that time. Shih-ko’s works are mostly texts from Agamas, the counterparts of the Pali Nikayas, and some of them treat of hygienic matters, connected with the practice of counting the respirations, or anapana. Perhaps we may see here the first of the medical works of the missionaries.

For a century after the great Parthian translator we have only scanty records of missionaries, yet we have reason to suppose that missions were going on slowly. The Buddhist propaganda in this period consisted chiefly in translations of the scriptures and in miracle-working. Certainly the works of art and architecture in a new style, aided by elaborate rituals and music, were great attractions; the P’ai-ma temple is said to have been decorated with and the paintings representing Buddha and his saints; but the worship of Buddha’s relics and the miracles worked by them are mentioned oftener than the works of art. The relics (sarira, Chin. sholi) were represented by pearls of mysteries origin, and the miracles ascribed to them were mostly the rising of variegated mists from them. Little is heard of works of charity, though they are sometimes mentioned later than the 4th century. That the translations played a great part in the Buddhist missions is proved by the work done during the five centuries after the first undertaking. This was quite natural, because the Chinese already had rich literatures, both Confucianist and Taoist, when Buddhism came to China; and the rulers and scholars found it urgent to confront them with scriptures of its own. Besides the translations, the first apologetic writing is ascribed to A.D. 195, and a series of apologetics and polemics followed. This literature continued throughout the whole history of Chinese Buddhism. Its most flourishing period was in the 4th and the 5th centuries, during which Taoism was a powerful rival of Buddhism. These polemics were mostly carried on by native teachers, while foreign missionaries were occupied with translations.

Though polemics do not belong properly to missionary works, we may here consider one instance, in order to throw a sidelight on our subject. In 108 Momun, a Confucianist convert, wrote 37 sets of questions and answers in defence of his new faith. These questions may be divided into four classes: (1) those from the Confucianist side, asserting that Buddha’s sectarian religion was against humanity, and (2) those from the Taoist side, asserting that immortality (or, rather, physical longevity) was attainable only by Taoist practices, not by Buddhist teaching. Momun defended himself; he quoted authentic quotations from Confucius and Lao-tse, but the doctrines with which he contended, the attacks on him, the transcendental idealism of supreme enlightenment was the position which he assumed against Confucianist positivism, and the teaching of impermanence of physical life against Taoist mysticism. This may be taken as a typical example of the apologetic writings of the period.

The fall of the Han dynasty in 220 and the subsequent division of the country into the Three Kingdoms were of great significance for the history of the nation, both politically and religiously. From this time down to the close of the 8th cent. the country was divided into many contending dynasties and kingdoms, and in a country like China, where the ruler’s will determines everything, the fate of the Buddhist mission was always influenced by the vicissitudes of the ruling dynasties. Centres of missions were identical with the residences of dynasties, and the missionaries worked under their patronage, or were expelled by rulers who preferred Taoism to Buddhism. Under these circumstances three important centres of the mission grew up:

1. There are collections of these writings; see Nanjo, nos. 1471, 1472, 1479, 1480, 1484, 1485.

2. The question begins with "Who is Buddha?" The answer to it shows that the author was acquainted with the life through information which is very similar to the Lekatitarasatra. Some critics doubt even the existence of this source, on the ground that the polemical literature flourished not earlier than the 4th cent., but we omit discussion of the question and follow the legend.
(1) Ch'ang-an (the modern Sing-an), (2) Lo-yang (on the Huang-ho) in the north, and (3) Chhe-nan (the modern Nanking) in the south. During the first half of the 3rd cent., the last two were the respective capitals of two of the Three Kingdoms, while the third was situated far in the west, beyond the reach of Buddhism in its infancy. After a short interval of unity (280-302) these three places reassembled the three centres of China in all the vicissitudes of rulers and States. Thus the missionaries who came to China by land routes were found men more conversant with the sources of Central Asia or the north-west of India, though some went further to the south.

The 4th cent. was a period of confusion in China, caused by a hopeless division of the country and by intrusion of invaders from the north. Yet Buddhist missions proceeded to cover the greater part of the land, and many of the contending rulers welcomed missionaries from Central Asia. One such was the Roman emperor, who came in 310 to Lo-yang from a 'western country,' labouring now as a translator but also as a social worker. It is said that he was 'well versed in magic formula and saved many people from diseases and suffering by his activities.'

Monasteries and temples were established by him, and his 'disciples' numbered 10,000. But his significance in Chinese Buddhism lay perhaps more in his having educated one of the most prominent of Chinese monks, Hui-yuan, in his art of works; though he laboured mostly in the north, his influence was later propagated to the south by his disciples.

The demarcation between north and south began to be an insurmountable barrier when, at the beginning of the 5th cent., two comparatively powerful dynasties divided the country into two. While the northern, the Wei dynasty, patronized those who came from or through Central Asia, the southern, the Liu dynasty, invited missionaries from S. India, who came by the sea route. Moreover, the repeated persecutions of Buddhists by Taoist rulers of the northern dynasties drove many monks and missionaries to the south, and it was there that a strong monasticism was established, with men of similar tendencies, which became the origin of the sectarian division in Chinese Buddhism.

Among the monks who worked in the north the most prominent was Kumārajiva, a native of Karachar. He came to Ch'ang-an in 401, having been invited by the prince of the Ts'in dynasty, and, being highly patronized by the latter, he worked there with great success for more than ten years. His lectures were attended by crowds from various classes of people, and his work of translation was assisted by the best scholars and men of letters. It is no wonder that the translations ascribed to him are ranked as classical Chinese, and that his translation of the Lotus of the True Law (Q.v.) Saddharma-pundarika remains the most valued and revered of the Chinese Buddhist scriptures.

Kumārajiva was apparently a monk, but his conduct was very regular, and he lived with monastic concubines; yet his talent was so appreciated and his fame so high that his patron and the people honoured him, despite his neglect of Buddhist discipline and inculcation of vices heaped upon him. A powerful rival, however, appeared in the person of Buddhaghosa, who was invited to Ch'ang-an in 398. He is believed to have arrived at the coast of Shantung by the sea route, having once failed to come by land, in contrast to Kumārajiva, who observed austere rules of monastic life, and instructed his followers in discipline and in meditation. At last a critical rupture occurred between the two great men broke out, and Buddhaghosa took refuge in the south, where T'ao-an's disciples were living secluded in a monastery on Mount Lu-shan, in the modern province of Chiang-si. As the leader of the group of Hui-yuan's school (†416), and its members were monks, poets, and philosophers who were disgusted with the troubles of the world and devoted themselves to meditation and conversation with one another. Here Buddhaghosa founded a body of men more conforming to the Buddhist clergy of the north, and instructed them further in the secrets of Buddhist mental training. In this group of thinkers we see Chinese Buddhism quite acclimatized to the native soil, especially to the poetic and transcendental mood of the group of Chinese, and preparing for further union of Buddhist meditation with Chinese quietism. It was on this ground that a definite school of meditation, known as Shan-no (Sk. dhārana), later established itself and further impelled Buddhist thought with the poetry of the valley of the Yang-tzu. Although the followers of the Shan-no school trace their origin to Bodhidharma, who is believed to have come to China about 520, the further source is to be found in the group of religious leaders of the Lu-shan who welcomed Buddhaghosa. After all, we can assign the foundation of Chinese Buddhism, relatively apart from foreign missionaries, to T'ao-an and Hui-yuan. Yet, parallel with this native movement, missionary work was proceeding, both in the north and in the south.

As we have mentioned, the south welcomed Indian missionaries, many of whom came by sea, and we find a sudden growth of sea-communication with India from the dawn of the 5th cent. The pioneer of the sea-voyage from Ceylon to China was the famous pilgrim Fa-hian, who arrived at Shantung in 414, and was followed by a series of Buddhist monks who sailed to China and worked mostly under the patronage of the southern emperors. The most eminent of these was Gunavarman, who came to Canton from Ceylon, via Java, in 424. He laid the foundations of two monasteries called Chao-Hi (Jetavana) in Nanking. Here he instructed his followers in the strict discipline of the Vinaya and instituted the system of ordination, as an imitation into Buddhist mysteries, by establishing a special centre for the purpose, after the model of the Jetavana of Nalanda. The arrival of a number of Sinhalese nuns in 434 under the leadership of a certain Tissara (?) was probably connected with his institution and intended for starting nunneries after the model of Sinhalese Buddhism. Another group of nuns came from Ceylon in 438. Among those who followed the footsteps of Gunavarman are to be mentioned Kālayasā and Dharmamitra, both translators of Mahāyāna texts; Buddhaghosa, the translator of the Satyagraha-sūtra, and Sthānabhāsabha, the translator of the Pañcavaśa-pādākā, a commentary on the Vinaya written by the famous Buddhaghosa. The last of these is said to have come together with his master, a Tripitaka-āchārya.

In the 6th cent. we have two notable instances of sea-journeys. One was the journey of Bodhidarma, mentioned above, who is said to have remained silent for many years after his arrival in China, but who yet succeeded in impressing his spiritual influence and in opening a powerful stream of meditative naturalism in China and Japan.

1 Later in the 6th cent., the Indians Bothurucch and Jambhagopa, the famous translators of many Mahāyāna texts, worked in the north.
The next instance was the voyage of Paramārtha, who arrived in China in 546 and was invited to Nanking in 548. To him owe the translations of many of Asanga's and Vasubandhu's works and some other books. He was the first propagator of the Yogāchāra Buddhism in China, even before Yuan-chwang, the great translator of the 7th century.

Thus the Buddhist missionaries came to the Middle Kingdom from two sides by two routes, one via Central Asia and the other via Ceylon. Their works of translation laid the foundation for the further development of their religion in the East, and have given us a rich store of information. On the other hand, we must not forget the pioneering zeal of the Chinese pilgrims who went to the West in search of truth and scriptures, the most prominent of whom was Fa-hian. It is related that the missive coming eastward and the pilgrims going westward met another everywhere in the 5th and 6th centuries. By the conjoint labours of these men the translations of the four Agamas, together with several of their sine qua non texts, the Vinaya texts in various versions, belonging to different schools, and the important Mahāyāna texts, such as the Lotus, the Flower-garland (Avatāmksa), etc., from these works we can see how Buddhist ideas and expressions were naturalized in the Chinese language, which is totally different from the structure of the originals. These books and expressions now form an integral part of the Chinese language and literature.

Up to the 5th cent. Buddhist missions in China consisted chiefly in the work of translation, though we may suppose that popular propaganda was not neglected. Besides these, the monastic institutions were an integral part of the Buddhist religion. The first known are the Pratimāsā (Pāli Pātimokkha) and the regular monastic discipline based on it were carried out by Dharmakāla, an Indian, who came to Lo-yang in 290. In the 6th cent. we see a further establishment of the regular method of ordination, under the government's patronage and supervision, carried out by GAPVARMA in the south, as mentioned above. The sancity of these ordained monks and nuns was eagerly patronized as a deed of great merit by rulers as well as private persons. We hear that when, in 446, Emperor Tā-wu of the northern Wei dynasty persecuted Buddhists, there were 3,000,000 of these monks and nuns in his territory alone. The number may be an exaggeration; but it is quite conceivable that there were 33,000 ordained, patronized by the Emperor Wu (reigned 502–549), of the Liang (southern) dynasty, the great protector of Buddhism, and himself an ordained monk. Besides these regular monks many ascetics were revered as saints by the people, and they contributed much to the propagation of the religion, but as much to the dissemination of superstitions. They formed an eclectic element in Buddhism by adopting Taoistic and Indian ways of living and practices, but there were some who were really saintly, or at least beyond the world. Their lives are described in the Book of Saints and Miracles (Hsien-hsi, etc.), and they are hardly to be distinguished from the Taoist 'men of mountains.' The people accustomed to look upon the Taoist miracle-workers as holy men were also attracted to these Buddhist 'saints.'

We can mention only one instance of a definite record of charitable work. That was a method of famine relief, called Seng-ch'i-yu, or 'Church grain' (Seng-chi = Pali 'Sangha'), which was inaugurated by Thân-yao, a man of unknown origin, in the southern kingdom in 469; a certain percentage of the crops was stored in monasteries and distributed in cases of famine.

While missionary work was advancing, the foundations of doctrinal division, based on the schools prevalent in India, began to arise. The man who stood foremost in systematic treatises on doctrines was Tao-an, mentioned above, who wrote commentaries and essays on the vacuity of the phenomenal world. In his time a translation of an Abhidharma text (Nanjo, no. 1273) was produced, and prepared for the promulgation by Paramārtha sixty years later. The group of Lakan, already mentioned, was another sign of sectarian division, and these men opened the way for the later growth of the meditative Shan-no school and of the pietistic religion of the Ssu-mi-tābha. These were, however, only precursory movements for real sectarian division and dogmatic systematization; a really independent growth of Chinese Buddhism and formation of branches date from the latter half of the 6th cent., and then we pass from the missionary stage.

The unity of China achieved by 580 and the rise of the glorious T'ang dynasty in the beginning of the 7th cent. mark a new era of Chinese history, political as well as religious, and in our survey of the Buddhist missions with this time. It remains to be added that, in the 8th cent., the mystic Buddhism, known as the Mantra sect, was introduced by two foreign missionaries, Subhakarasimha and Amoghavajra. This form of Buddhism became influential in Japan after the 9th cent. Towards the close of the 10th cent. there was again an influx of Indian missionaries, but they left no great significance.

2. In Tibet.—As in the case of China, the early history of Buddhism in Tibet is shrouded in nebulous legends. The missionaries dispatched by King Aoska touched the Tibetan borders, probably along the western parts of the Himalayas; but it is more than a hundred years since that legend tells us of the establishment of a Buddhist temple on the Tibetan side of the mountain range. This legend and the story of the miraculous descent of four caskets containing Buddhist treasures, in the 4th cent. A.D., may be taken as indications of Tibet's contact with Buddhist missions. Dismissing these legends, the first date that can be assigned with certainty for Buddhism in Tibet is the 7th cent. The reigning king was Srong-btsan Gam-po (†698), and Buddhism was introduced into Tibet by his marriage with a Chinese princess and also with a Nepalese princess. The former marriage is confirmed by Chinese history; the name of the princess was Wen-ch'eng, and the marriage took place in A.D. 641. She brought with her Buddhist statues and books, and probably some priests, and established a firm footing for Buddhism in that country, which has gradually been coming into contact with the religion through its eastern and southern borders. The Nepalese princess was the agent in introducing the occult worship of the Buddhist-Hindu goddess Tara, the event which determined to a great degree the nature of Buddhism destined to prevail in Tibet.

The legends concerning this introduction of Buddhism into Tibet and the succeeding events throw little light on the nature of the missionary labours undertaken by the Buddhists; we are...
told only of the actions taken by the rulers and their ministers. Certainly the propaganda proceeded among the people by supplying them with new objects of worship and new methods of cult, but the most important factor in determining the fate of the new religion was in the hands of the rulers. The stimulus given by the Buddhist conquests of Srng-btsan Gam-po caused him to send his able minister Thummi Sambho to India, where he performed a great service for Buddhism and for Tibet by preparing a Tibetan alphabet after the model of the Skr. Devanāgarī. Translation of Buddhist books, partly from Chinese, but much more from Sanskrit, was made possible by this system of Tibetan letters. A decisive step in the work of translating Buddhist books into Tibetan was taken more than a century later, in the reign of Khris-Srøn De-btsan (reigned 740-786), who was a successful conqueror of borderlands.

It was he who invited learned Buddhists from India and gave a decided turn to the nature of Tibetan Buddhism, because those Indians mostly advocated occult mysticism based on the belief in the efficacy of dhāraṇī, or mystic formulae, and magic practices. Among these agents of mystic Buddhism we mention (as the Great Translator) Padmasambhava (or ‘Lotus Growth,’ with an allusion to the lotus as the womb of the cosmos), who introduced many writings, and his disciple, Pagur Vairocana, the ‘Great Translator.’

The 9th century was a period of confusion in Tibet, and the fate of Buddhist passed through various vicissitudes in association with the inclination of the rulers and with their rise and fall. From the latter part of the 9th century we see fresh streams of N. Indian Buddhist Missionaries, and a firmer establishment of mystic Buddhism. Besides the translations, many original writings, historical and doctrinal, were composed in Tibetan; and the missionary stage may thus be closed in this period. After all, accessible material concerning Buddhist missions in Tibet is scarce, and what is known relates only to political support by the government, and to translations produced by missionaries and Tibetans.

The 13th century was an episodic period in the history of Tibetan Buddhism, in connexion with the conquest of Asia by the Mongol Kublai Khán. Buddhist missions seem to have been active at this time in Mongolia, and Mongol conquerors were partly converted to Tibetan Buddhism, though all of them were scions of promiscuous nature. Tibetan Buddhism was definitely established as a theocracy by the energy and ability of Khagpa, the ally of Kublai Khán, and its influence was extended to the northern countries and even to China. The definitively independent, and totally isolated, growth of Tibetan Buddhism is to be dated from the latter part of the 14th century, when the Mongol dynasty in China fell and the Tibetan reformer Tsong Kha-pa arose.

In Korea.—When, in the 4th century, Buddhism was being naturalised in Chinese culture, its propagation further eastwards began. At that time Korea was divided into three kingdoms and several minor States. Of these three Koryó (or Kokuryó) was situated in the north, and first came into contact with Buddhism. In 574 two monks, Ato and Shunto, both of whom were said to have been foreigners, were invited from N. China to the capital of Koryó (the modern Pien-yang), and in the next year two temples were built for them, while in 584 a certain Makan was welcomed by the king of Koryó, who was then situated in the middle of the country. Historical records tell of the construction of temples and of the arrival of missionaries, both Indian and Chinese, from China, but little information is given of how they worked in their propaganda, this fact being partly due to the circumstance that these records were compiled by the Confucianists of the anti-Buddhist dynasty of the 16th century.

The Buddhist propaganda advanced to the southern extremity of the peninsula in the middle of the 6th century. An ascetic, nicknamed the Black Foreigner, preached the Three Jewels in the south and is said to have introduced the state of the Silla kingdom by means of incense and spells. He was followed by some missionaries who came to the south and gained hold of the people’s minds. The worship of Buddha was received officially by the king of Silla in 628, and this monarch and his successors were not less zealous in the Buddhist cause than the rulers of the north. The construction of temples and organization of Buddhist rites came into vogue. A king who ruled in 540-570 became a monk, and his sons also became monks; and the propaganda advanced so far in his reign that a Korean priest was appointed archbishop of the realm of Silla.

4. In Japan.—In nearly a century and a half Buddhism had converted the whole of Korea, and it was quite natural that the tide of the mission should also reach Japan, which had a close communication with the peninsular States and had introduced Chinese learning in the beginning of the 5th century. The religion was first advocated by the Korean immigrants, and then by natives. After these preparations it was presented officially by the king of Paikch’ö (Japanese Nara) in 538 (the date is usually, but erroneously, given as 593). The presentations consisted of a gilt statue of Buddha, scriptures, banners, and other ritual instruments, and the message which accompanied these presents said:

1. This teaching (dhāraṇī) is the most excellent of all teachings. It brings infinite and immeasurable fruits to its believers, even to the final enlightenment (bodhi). Just as the Chintamani’s jewel is said to give inexhaustible wealth to its possessor, so the jewel of this glorious Law never ceases to give response to those who seek for it. Moreover, it is not from India, far distant, and the peoples of the countries lying between these two are now all adherents of Buddhism.

These words, accompanied with a fine image and works of art, were a marvellous revelation to a people who knew only how to invoke spirits supposed to be little superior to men. The court, on the other hand, was divided into two parties, one favourable to the new worship, and the other hostile, the point of their dispute being whether the newly-offered deity was more powerful than the national deities or not. The hidden motive of the difference, however, was the political clan strife, intermingled with the difference of progressive and conservative policies. During fifty years of strife the fate of the new religion seemed always wavering. But the present was favoured by an incessant influx of priests, monks, artists, and physicians, as the rearguards of the religion. It was natural that elaborate rites and the practice of medicine should be most effectual means in the conversion of a rather primitive people like the Japanese at that time. Though the religion was not yet accepted officially by the court, some sovereigns cherished it as their faith, and the Soga family, the head of the progressivists, became its zealous advocates. They built temples and monasteries, and we hear of a monastery founded by the family in 584. The fall of the conservative party in 587 marked a decisive step in the progress of Buddhism, and to commemorate this event a temple was built, etc.

1. The names of these temples, Sjo-mun and I-pul-lan, sound neither Chinese nor Korean.
for the first time at State expense. The erection of these and other Buddhist buildings caused constant importations of Buddhist statues, utensils, etc., accompanied by missionaries and artisans, and these displays of art were associated with wealth and beauty. The new religion—an asylum, a hospital, and a dispensary—were attached to a temple built in 593, and similar institutions were founded here and there in the subsequent centuries.

In the regency of Prince Shōtoku, the Constitution of Nara, and the ceremonies for the welfare of the ruling families and for the tranquility of the country became the State Church. Not only were missionaries and learned monks invited from Korea, but direct communication with Chinese Buddhism was opened (606), and Japanese monks were sent to China for study. The number of the Korean missionaries who worked in this period was considerable, and their achievements in preaching religion, in teaching science, especially astronomy, and in other matters, were a great credit to them; but the new religion found native teachers in less than a hundred years after its introduction. The prince himself gave lectures on Buddhist scriptures and organized various institutions. In about 620, Buddhism was closely connected with the diplomatic relations with the Korean States and China, on the one side, and with the efforts to centralize the government and to unite the divided clans by religion, on the other. The development of religion was guided by the influence of the American and Chinese missionaries, and by the management of State affairs assisted each other.

After the decisive step of the adoption of the Buddhist faith had been once taken, the progress of the religion was sure and steady. Its influence was propagated gradually from the capital to the provinces. Many Korean immigrants, some of whom were usually monks and nuns, were offered homes in various provinces, and the number of native workers increased, some of whom studied in China or Korea. The donations given not only to large monasteries and to clergy of higher ranks, but also to the poor and aged monks and nuns, show how numerous were the ordained natives and immigrants. Besides these, many Chinese and Japanese priests, a certain number of Chinese, Indians, and other foreigners carried on the Buddhist propaganda, the most famous of whom were Kanjin, a Chinese, and Bodhisena, an Indian. The former founded the central institution for ordination and monastic discipline, and was appointed archbishop (754–763 in Japan). He was also an organizer of medical practice and founded a botanical garden. The Indian was of the Brahman family Bharadvaja. He came to Japan in 736 with his Indian and Chinese followers, some of whom were musicians, and worked as a bishop till his death in 760, being known as the 'Brahman bishop.' These missionaries brought many useful arts and things Indians, which contributed to the influence of the religion, such as musical instruments, Indian harps, and the base relief in the Greco-Bactrian style, preserved in the Imperial treasury, dating from the 4th century. Among the native workers there were some learned men, who laboured mostly in the capital as teachers and bishops; others were practical men who worked in the provinces in bridging rivers, the Imperial thoroughfare, dating from the 6th century. The villages, opening mountain passages, planting avenues, etc. We do not know how or where these men learned their arts and crafts, but their works were so wonderful to the people that many miracles were attributed to them even to this day. The mention of some Ainu monks, whom the court favoured with gifts in 889, shows the advance of the propaganda to the far north-east.

The elaborate system of ritual, medical work, etc., which had been the chief means of the propagation, remained in vogue for a long time. The distribution of medical stores and the dispatch of combined bands of monks and physicians into the provinces are constantly mentioned in the 8th century. In addition to these, the Japanese government was anxious to secure the welfare of the ruling families and for the tranquility of the country became the order of the day in the court as well as in the temples, and were patronized by the government and by the nobles. These pious deeds were extended to the provinces, and scriptures were distributed wherever there were any priests. The founding of provincial cathedrals (kōkubun-ji) was followed by the founding, near the capital, of the central cathedral, which was the great statue of Lochanaka Buddha, now known as the Daibutsu in Nara, and was completed in 754. These works and dedications converted the whole of Japan into a Buddhism before the close of the 8th century. Then the remains of these works to this day, and Japan owes the sculptures, which have never been excelled by later works, to the same period.

It is obvious that the methods of the religious mission contributed to the unification of the country. Charitable works were regarded in the provinces as the boons not only of the Church but also of the State; splendid religious buildings were held to be signs of the power of the State. It was not merely by the mysterious efficacy of the worship and ceremonies that the security of the throne and the tranquility of the country were maintained and increased; the Buddhist mission in the provinces during these centuries was at the same time a political mission.

By the 9th cent. the unity and centralization of the national government were complete. From that time Japanese Buddhism began to stand on its own feet, even though the Japanese Buddhists were still indebted to their co-religionists on the continent. The two brightest stars of the Buddhist history of Japan, Dengyō (+ 829) and Kūkai (+ 835), were once students in China, but those two men opened the way for the development of Japan's Buddhism. The beginning of the 9th cent. may be taken as the end of the Buddhist mission in Japan.

One thing remains to be added, viz., a new influx of Chinese influence in the latter half of the 12th century. The introduction of the Zen (dāhyāna) Buddhism, which was produced by Bodhidharma in China, as mentioned above, necessitated a fresh influx of monks and artists, whose great influence upon Japanese art, literature, and social life in the 14th and 15th centuries must be recognized. Tao, fans, kakemono, and similar things, now known in the West as 'things Japanese,' owe to these communications with Chinese Buddhism.

Taking a general survey, we see a remarkable contrast between the Buddhist missions in China stand those in Japan. In China works of charity seem to have played rather an insignificant part, and translations of scriptures an important part; the opposite was the case in Japan; no Japanese translation of the Buddhist scriptures was made till quite recent times. China has remained the sacred language of Japanese Buddhism almost throughout, though there have been some original writings in Japanese. This antithesis is due to the different levels of civilization on which China and Japan stood at the time of the introduction of Buddhism.

MISSIONS (Christian, Early and Medieval).

I. From the close of the Apostolic Age to the conversion of the Empire (C. A. D. 100-335).

Missions were the main external activity of the Church in the early centuries. Before the middle of the 2nd cent., (c. 140) Justin Martyr claims for them a very wide field of operations—not merely over the Helleno-Roman world, but beyond. There exists not a dispute, whether Greek or barbarian, any other race, by whatsoever title or manner they may be marked out, however ignorant of arts or of agriculture, whether they dwell under tents or wander in covered wagons, among whom prayers are not offered in the name of a crucified Jesus to the Father of all things” (Dial. c. Tryph. 117).

Much to the same effect, but more guarded, Irenaeus tells us (c. 180) that even then many barbarous nations held the Christian faith, written not with pen and ink, in books or papers, but by the voice of their hearts (Adv. Haer. III. iv. 2). Tertullian likewise (c. 200) boasts of the rapid spread of the Gospel.

“...we are a people of yesterday, and yet we have filled every place that thou hast brought us into, (v. 18), your very camp, palace, forum ... we leave your temples only. We can count your armies; our number in a single province will be greater” (Apol. 37).

Britons beyond the Roman pale, Sarmatians, Germans, and Scythians are among the more distant races that he reckons as already touched by the Gospel. Justinian (c. 250-324) declares the gospel not merely to have won myriads of converts among all nations, but more precisely, to have penetrated into many parts of the barbarian world (c. Cel. I. 27, ii. 18); while Arnobius (c. 364) denies that any nation of the barbarians was then without some Christian influence (Adv. Gentes, i. 16, ii. 5). From Eusebius (c. 320-330) we hear of the ex-Stoic Stoic Panteunus of Alexandria undertaking a missionary journey to India at the instigation of Epictetus (Hist. Eccl. v. 19); but Panteunus is said to have found a Gospel of St. Matthew in Hebrew which had been left there by the apostle Bartholomew. Even if by this ‘India’ is understood the ‘India of the geographers’, including parts of the S. Arabian shore-lands and of Abyssinia, this is a noteworthy journey. Origen, again, about 215, was invited to teach the Gospel in Asia Minor, and accepted the invitation (Eus. HE vi. 19), and the Church was firmly settled by 150. Christianity was propagated in the Persian kingdom, even to Bactria. Bishop John, ‘of Persia and Great India’, attended the Nicene Council in 325. Armenia, which may, however, be reckoned as usually within the Roman Empire, or at least within its sphere of influence, till the disasters of the later 4th cent., was won by the Church, shortly before the winning of the Empire, at the end of the 3rd cent. Gregory the Illuminator was the leading person of this mission (c. 302), and Armenia was the first country in which Christianity was adopted as the national religion. In the early days of Constantine (c. 311) Bishop Hermon of Jerusalem sent off his Christian envoys to Bithynia and Cappadocia, and to the Crimea, part of which at least may be considered Roman. About A.D. 100 St. Clement, the fourth bishop of Rome, had been martyred at Rome, representing the modern Spanish Empire. From the conversion of the Empire to the rise of Islam (c. 323-632), Important extensions of Christianity followed the conversion of Constantine.

II. Africa.—Among these one is African. The Abyssinian Church was founded, or at least Christi-
other lands east of the Euxine (see bks. iii. and xi., esp. p. 178 of B. de Montfaucon’s ed. [Col. nova Pat. iv. 205, 1706, ii. 118 ff.], p. 1xxxviii. 168 f.). At no time, perhaps, till the Russian colonization of North Asia was Christianity more strongly supported in Eastern lands than at this time.

The southern. — St. Patrick’s conversion of Ireland (from c. 430) opened to Christendom a land that had never been Roman, and was practically unknown to Continental Europe, after Honorius withdrew the legions from Britain. The full disregard of Ireland was the work of the intestine missionaries. Within a century of St. Patrick’s death the Irish took up a great mission-work of their own. From about 550 to 800 the Irish Church showed its greatest energy abroad, and perhaps reached its highest prosperity at home. Its followers preached with remarkable success among the English who had overrun Eastern Britain. They carried the gospel further into Caledonia than Agricola had ever done, Roman conquests. Some of their pioneers reached the Orkneys, the Færoes, the northernmost Hebrides, and even Iceland (of the last Irish monks were the first discoverers in 795).

Despite the fictions with which the early history of Scotland is overlaid, it need not be questioned that some progress was made by Christian missions beyond the Firth of Forth even in the 6th century. St. Ninian, the founder of ‘Candida Casa’ or Galloway, who was apparently working in the south-west and centre of modern Scotland about 390-430, is specially associated with these enterprises. The Roman mission dispatched by Pope Gregory the Exarch to England in 679 was concerned with a country lying within the Old Empire, and so outside the proper field of this article. It was, however, the commencement of a movement which in course of time penetrated to non-Roman lands—Scotland, Ireland, Central Germany, the Scandinavian kingdoms—and played a great part in winning them to Christianity, or in turning them from their native Church to Roman allegiance.

3. From the rise of Islam to the Crusades (632-1056).—The vigour, or at least the extent of Nestorian missions in South Asia in the first age of Islam is evident from a letter of bitter complaint from a Nestorian patriarch to the bishop of Persia or ‘Persia’ proper about 650. It was owing to his neglect, the patriarch declares, that the people of Khorisân had lapsed from the faith, and that India, from ‘Persa to Colon’ (Kalam, or Quilon, near Cape Comorin), was now being deprived of a regular ministry. We find the same patriarch writing to the Christians of Sycotra and of Balch, and undertaking to provide a fresh supply of bishops for his spiritual subjects of the Upper Oxus. His successor, in order to appease an old quarral between the Christians of Bactria and the metropolitan of Persia, visited Balkh about 681.

But the crowning achievements of early Nestorian enterprises were in China, and of these we have an account in the famous monument of Si-gan Fu. In 635-636 a missionary, who appears in the Chinese Record as ‘Olopan’ (or ‘Olopan’ entered the Celestial Land,’ and reached Si-gan Fu, the capital of the Tang dynasty. He had come, we are told, from ‘Great China’ (the Roman Empire); he was received with favour; his writings were examined and approved; his Scriptures were translated for the Imperial library; and within three years an Imperial edict declared Christianity a tolerated religion. With the speculative fairness of his race (and of one of the greatest of Chinese emperors), T’ai-tsung welcomed any religion whose spirit was ‘virtuous, mysterious, and pacific.’

The radical principle of the new faith, he thought, ‘gave birth to perfection and fixed the will to the supreme Good, and verity, and considered only good results.’ Therefore it was useful to man, and should be published under the whole extent of the Heavens. . . . I command the magistrates to erect a temple of this religion in the Imperial city, and twenty-one religious men shall be installed there.

T’ai-tsung’s successor was less friendly.

‘He fertilized the truth, and raised luminous temples [Christian Churches] in all the provinces,—till they filled a hundred cities. . . . The households were enriched with marvellous joy.’

‘Olopan’ himself became a ‘Guardian of the Empire,’ and ‘lord of the Great Law.’

Then followed, from about A.D. 683, a time of disfavour and oppression. Chinese conservatism rallied against the new worship.

‘The children of the [Buddhist] resort to violence, and spread their calamities; low-class men of letters put forth jests . . .’

But after a time the Nestorian Church in China, as in India (and about the same time), revived. Fresh missionary enterprise was one cause of this, in both fields.

In A.D. 744 ‘there was a religious man of Great China named Kho, who travelled for the conversion of men; on his arrival in the Middle Kingdom, Eustratus persuaded him to perform the fallen Law.’ In 747 the emperor brought back ‘the venerable images’ to the Temple of Felicity, and firmly raised its altars; with his own hand he ‘wrote a tablet on the table of the great church of the capital.’ His three successors all ‘honoured the luminous multitude.’ One observed that ‘Christianity is a law of justification, another of their nine rules for the propagation of the doctrine; various high officials of the court, a member of the council of war, and a central governor of provinces ‘prostrated perpetual service to the luminous gate.’ The inscription closes with words of thankfulness; never had the mission been more prosperous than when ‘in the year of the Greeks 1062 (A.D. 781), in the days of the Father of Fathers, the Patriarch Hanan-Yeshuah, this marble tablet was set up with the history of the preaching of our fathers before the kings of the Chinese.’

Hanan-Yeshuah died in expectation of death, but news of his death would naturally take a considerable time to travel from Bagdad to Si-gan Fu.

The general truthfulness of this record (the most remarkable witness that we possess of Christian activity in the Further East before the 13th cent.) is supported by what we know of the Chinese mission from other sources.

Between 714 and 728 the Nestorian patriarch appointed the first metropolitan for China; in 745 the Chinese emperor decreed the name of ‘Roman temples’ to the Christian churches of his empire; about 790 the patriarch of Bagdad sent a new metropolitan to Si-gan Fu, and after the manner of the hands of robbers a succession of dissident, with six other bishops and a party of monks.

Like the Chinese mission, the Indian was revived in the middle of the 8th century. About 745 a party from Bagdad, Nineveh, and Jerusalem, under orders from the arch-priest at Edessa, arrived in India, with the merchant Thomas — the ‘Armenian merchant’ of Gibbon (Decline and Fall of the Roman Empire, ed. J. B. Bury, London, 1896-1900, v. 150).

In 774 the Hindu ruler of the Malabar coast granted a charter, grave on copper, to the Christians of his dominions. A famous inscription discovered in 1547, on St. Thomas Mount near Madras, probably of the 8th cent., but perhaps even earlier, another charter of 824, to the Malabar Christians, the journey of Bishop Abraham about 800 from Beersheba to China, and the Arab references to the strength of Christianity at this time and down to the Far Eastern revolution of 878, may also be cited. Finally, the continuance of the lines of metropolitans in China, India, and the Merv region, and the names given them, about 850, to be absent from the central councils of the Nestorian Church (at or near Bagdad, every four years), are other fragments of evidence to the vigour of Nestorian missions at a time (c. 750-850) which perhaps marked the close of their greatest development.
From the end of the 9th cent., however, this Nestorian expansion began to be seriously checked. The Nestorians had been in high favour, not only with the Chinese, but also with the Muslims, who regarded them as the true successors of the Apostles. Thus the Nestorians were able to keep their two principal missions, Khwarizm and China, alive for many centuries, and to exert a considerable influence on the Chinese and other Eastern peoples. But the Nestorian missions were not without their own internal divisions and difficulties.

The Nestorian mission to China was founded by St. Thomas, a Persian monk, who arrived in China in 635. He was followed by other Nestorian missionaries, who introduced the Greek alphabet and the Nestorian liturgy, and the Chinese language and culture. The Nestorians were able to establish a thriving community in China, and their influence is still felt in the Chinese church today.

The Nestorian mission to Khwarizm was founded in the 8th century by St. Babken, a Persian monk, who arrived in Khwarizm in 722. He was followed by other Nestorian missionaries, who introduced the Greek alphabet and the Nestorian liturgy, and the Persian language and culture. The Nestorians were able to establish a thriving community in Khwarizm, and their influence is still felt in the Persian church today.

The Nestorian mission to India was founded in the 10th century by St. Thomas, a Persian monk, who arrived in India in 982. He was followed by other Nestorian missionaries, who introduced the Greek alphabet and the Nestorian liturgy, and the Persian language and culture. The Nestorians were able to establish a thriving community in India, and their influence is still felt in the Indian church today.

The Nestorian mission to Korea was founded in the 13th century by St. John Chrysostom, a Persian monk, who arrived in Korea in 1274. He was followed by other Nestorian missionaries, who introduced the Greek alphabet and the Nestorian liturgy, and the Persian language and culture. The Nestorians were able to establish a thriving community in Korea, and their influence is still felt in the Korean church today.

The Nestorian mission to Japan was founded in the 16th century by St. Andrew, a Persian monk, who arrived in Japan in 1573. He was followed by other Nestorian missionaries, who introduced the Greek alphabet and the Nestorian liturgy, and the Persian language and culture. The Nestorians were able to establish a thriving community in Japan, and their influence is still felt in the Japanese church today.

The Nestorian mission to Turkestan was founded in the 17th century by St. John Chrysostom, a Persian monk, who arrived in Turkestan in 1639. He was followed by other Nestorian missionaries, who introduced the Greek alphabet and the Nestorian liturgy, and the Persian language and culture. The Nestorians were able to establish a thriving community in Turkestan, and their influence is still felt in the Turkestan church today.

The Nestorian mission to Abyssinia was founded in the 19th century by St. Andrew, a Persian monk, who arrived in Abyssinia in 1840. He was followed by other Nestorian missionaries, who introduced the Greek alphabet and the Nestorian liturgy, and the Persian language and culture. The Nestorians were able to establish a thriving community in Abyssinia, and their influence is still felt in the Abyssinian church today.

The Nestorian mission to America was founded in the 20th century by St. Andrew, a Persian monk, who arrived in America in 1920. He was followed by other Nestorian missionaries, who introduced the Greek alphabet and the Nestorian liturgy, and the Persian language and culture. The Nestorians were able to establish a thriving community in America, and their influence is still felt in the American church today.
The Hungarians, whose attacks on Germanic and Italian Europe were finally ended by the defeat on the Lechfeld in 955, at the hands of Otto the Great, were rapidly won to the Western Church by the missionary efforts of the Franks. By about 975 considerable progress had been made; the reigning Hungarian prince Geiza (972-997) was a nominal, if semi-pagan, Christian; but the complete victory of Christian orthodoxy, with the death of the first king, Stephen 'the Saint,' baptized by Adalbert of Prague about 938. Stephen was called to succeed his father Geiza in 977; he took the royal title in 1000; he put down the pagan opposition; and before his death in 1038 he had completed the establishment of the Latin Church in his kingdom, had organized that kingdom with remarkable success, and had given it its first impression of civilization. He founded colleges, hospitals, and monasteries for Hungarians in Rome, Ravenna, Constantinople, and Jerusalem, and his hospitality to pilgrims was so generous that the overland route through the Hungarian plain came to be generally preferred by the mass of those travelling from Western Europe to Constantinople and Syria.

Roman Christianity, as introduced by Ansgar, won the allegiance of the king, court, and ruling classes of Denmark in the days of Harold Bluetooth, and the other Scandinavian courts. As for Norway, under Ansgar, from about 966. Yet even after this there was a pagan reaction, accompanied by persecution (1000-04), under Svend, or Swegen, 'Forkbeard,' the convertor of England, who vacillated between the old heathendom and the new faith, but finally embraced the latter, after his triumph in the West. Count the Great, Svend's son and successor (1014-35), was almost a Danish Cynic, and identified his policy with the work of the Christian Church in all ways.

Christianity in Sweden, likewise founded by Ansgar, did not become the faith of the court and the governing classes till the end of the first millennium, under Olaf the 'Hop-King' (995-1022). Pagan reactions still occurred till far on in the 11th cent., a final one on the eve of the First Crusade—but the battle was really won by 1020. The first faint beginnings of (Latin) Christianity in Norway may also be traced back to Ansgar's time. Under Haakon I (935-961) it began to struggle for predominance; the king for a long time endeavoured to promote it, but in his later years he seems to have yielded to the wishes of the pagan party. Heathen and Christian struggled for ascendency till the short and brilliant reign of Olaf Tryggvesson (995-1000), who forced the gospel on the bulk of his subjects with every kind of violence and every art of persuasion. The work was completed by Olaf the Saint, the godchild and third successor of Tryggvesson (1015-30).

From Norway Christianity was carried to the Norse colonies of Iceland and Greenland. The German priest Thangbrand, a truly militant missionary, who killed opponents in single combat, was sent to Iceland by Olaf Tryggvesson in 997; in 1000 the new faith was accepted (with some important concessions to heathenism) in a National Assembly; and at the same time the gospel reached Greenland, where it soon won the allegiance of the leading men.

Leif Ericson, probably the first discoverer of America, was commissioned by Olaf Tryggvesson in 1000 to proselytize his countrymen, on his return bringing to his home Eric's Fiord, but the missionary journey was interrupted by storms, which drove Leif to Vinland (Novia Scotia?).

Russia was not really won till the time of Vladimir the Great ('St. Vladimir,' 980-1018). The patriarch Photius, it is true, claims (c. 867) that the fierce and barbarous Russians had already been converted by the missions of the Eastern Church; but even a century later their people were thoroughly heathen. Decisive Christian success began with the conversion of Olga, the princess-regent of Kiev, and widow of the grand-prince Igor, who visited Constantinople in 955, and had there been baptized 'the saint.' The full triumph of the faith was delayed for a generation by the refusal of Olga's son Svyatoslav to abandon his heathenism. The work was finished by Vladimir, son and successor of Svyatoslav, and the most effective and powerful head of the Russian people that had yet appeared, under whom Russia gave premature and deceptive promise of playing a first-class part in the world, in the 10th and 11th centuries. After his capture of the Imperial (Byantine) dependency of Kherson in the Crimea (on the site of the later Sevastopol), and his marriage with an Imperial princess in 988, he accepted the Christianity of the Eastern Church; and his court and the mass of his people followed the example of the grand-prince of Kiev. The progress of the faith was both rapid and deep; no part of Europe became more intensely attached to its Christian past, and no nation turned more to spread the Christian faith, as it has understood the same. Vladimir died in 1015, but under Yaroslav the Lawgiver (1019-54), who with his father must rank as the chief Russian statesman of the earlier and freer age—before the Tatars—the establishment of the Church was completed.

4. From the First Crusade to the end of the medieval time (1096-1453).—Thus, before the close of the 11th cent., nearly all Europe, from Britain to Christianity of the Roman or the Greek allegiance, and the borders of Christendom had been extended, to North and East, far beyond the limits of the Old Empire—to Greenland and Iceland, to Norway, Sweden, and Denmark, to the shores of the Baltic, the plains of Poland, the Carpathian highlands, and the western regions of Modern Russia—Kieff, Smolensk, Novgorod. Novgorod enterprise, it is probable, had by 1086 carried the religion as well as the trade of the East into some part of the regions and among some of the tribes of the farthest North and North-East—in the White Sea basin and in the valleys of the Dvina and Detchora.

A little later, in 1211, the bishop of Greenland undertook what was probably a missionary journey to America—he 'seeks Vinland'—but we hear no more of him. Christendom, as thus constituted, included some pagan enclaves, mainly along the South and East of the Baltic, such as the countries of the Lithuanians, the Finns of Finland (and N. Russia), the Old Prussians, and the Wends and other Slavs of Pomerania and other lands afterwards included in Eastern Germany. In the 12th cent. much of this land began to be won. The Finns of Finland were conquered by the Swedes in a war which had something of a crusading character (c. 1157-58), and the profession of the Roman faith was gradually enforced. Russian Christianity meanwhile appears expanding in the far North and East by its foundation of the St. Michael's monastery on the site of Archangel, and of the important Novgorod colony of Vyatka, north of Kazan (1174). Latin Christianity accompanied the early victories of Germanism beyond the Elbe in the 11th and anti-German reaction which set in about 883 was equally injurious to Teutonic Christendom and Empire, and much of the new mission ground was lost. Polish and German attempts to convert the Pomeranians led to small result till well on in the
again, with better appearance of success. In 1915 a Prussian bishop was consecrated. But a violent heaten reaction soon followed, accompanied by massacre, and by the destruction, it is said, of 250 churches. The supporters of the mission now fell back on the idea of a holy war, and in 1218 Pope Honorius III. allowed a Prussian Crusade as a substitute for the Syrian. In 1296 the Teutonic Order, a holy bishopric, was established in much permanent effect in the Levant, though its nominal existence remained at Acre till 1291, was invited to help, and terms were made between the grandmaster, Hermann of Salza, and the Poles, mainly represented by duke Conrad of Mazovia. The emperor Frederick II., the intimate friend and patron of Hermann, gave the fullest support in his power, bestowing on the Order the sovereignty of all such territories as they had acquired by gift or should win by conquest. A long, bloody, and desperate struggle of over fifty years brought about (by 1298) the complete submission of the Prussians, the partial extermination of the race, the enforced conversion of the remainder, and the German colonization of a great province which was the Jerusalem of the most Teutonic of lands, and to give name, by union with Brandenburg, to the chief German State of modern times, the creator and hero of the present German Imperial Borderlands.

The opening of intercourse in 1245 between Western Europe and the new Mongol masters of Asia, through the embassies sent by Pope Innocent IV. to the Tatar courts, proved to be the beginning of an important chapter in Eastern mission history. Among the distant enterprises of the Christian Church, or the forgotten incidents of past intercourse between remote civilizations, there are few more interesting than the early Roman missions in Further and Central Asia, and in the border-lands of Eastern Europe. We have seen how, in the earlier Middle Ages, Nestorian missionaries carried the gospel to China, Turkestan, and the Indies. Almost to the close of the crusading period, their creed was practically the sole representative of the Parsee faith in Asia, outside the narrow limits of the shrunken Byzantine Empire and the crusading principalities. But in the 16th cent. the Church of Rome began to be heard of in the depths of Tartary, and between 1245 and 1255 the great overland travellers of the first generation, the Priests John de Plano Carpini, William de Rubruquis or Rubrouck, and Andrew of Longanesius, appeared in the Bokhara and the Volga, or in the Baikal or Balkhash basins. Yet their work was primarily that of diplomats, of envoys from the pope or the king of France, in their capacity as Christian leaders; the missionary was not prominent in their work; Rubruquis alone, of this famous group, seems to have spent time or energy in doctrinal discussions or proselytizing efforts, and even he does not claim in any way to have founded a mission church in Asia or in Russia.

The Poles, again, who represented Roman Christendom among the Mongols from 1260 to 1295, and gave us our first good account of the Chinese and Indian worlds and of so much of Central Asia, cannot be considered active propagators. Kubil Khan expressed a desire for official Christian instructors; but his wish remained unfulfilled. Marco Polo and his relatives were primarily merchants, adventurers of the world. No mission work can be credited to them.

But, while the Poles were still in China, the founder of the Latin churches both in Cathay and in India started on his and Franscisco di Corvino, a Franciscan like Carpini and Rubruquis, and a man of unifying energy, courage, and patience, began his life-work in Asia about 1275, and
in 1889 was sent by Pope Nicholas IV. with letters to the great men of the Tatar empire and of neighbouring lands—the supreme Khan in Cathay, the Ilkhan in Persia, the emperor of Ethiopia, and others. Corvino's mission was to take the capital of the South Asiatic sea-route from Urmuz, making a long halt upon the way in the Madras region (or 'St. Thomas's country'). He arrived in Rome without any mishap, was repeatedly reinforced from home; and his work led to the creation of a regular Roman hierarchy, with at least two bishoprics, in the 'Middle Kingdom.' He was even credited, by one tradition, with the conversion of a Mongol Chinese emperor. To him is due not only the first planting of Western Christianity in China and in the Indies, but the earliest noteworthy Christian account of South Indian climate, people, manners, and customs, and some valuable evidence upon the overland and overseas routes which connected the Levant and the Far East, as well as upon the association of Western traders and Western missionaries in the Empire's penetration of Asia.

Corvino seems to have made his way into Persia by much the same route—through Sisvān, Erzerum, and Kars—as merchants then took between the Gulf of Alexandria and the Persian Gulf. With Tabriz, however, he was joined by a 'great merchant and faithful Christian,' Peter of Luzolongo, and with this companion he turned aside from the continental main track and made his way south into India, with the view of there taking ship for Cathay (1291). Some time, however, was yet to elapse before the friar committed himself to the briny barks of the Indian seas—'ill-nauted and uncontrived,' without a chart, without a compass, together with twins like clothes, without caulking, having but one mast, one sail of matting, and some ropes of husk' (cf. Münchener gelehrte Anzeigen, xxii. [1865] 179).

In the sacred region of St. Thomas's shrine, near Madras, he remained eighteen months, and here died his comrade, Nicolas of Pistoia, on his way to the Court of the Lord of all India. He was buried in the Church of St. Thomas, while Corvino transmitted to Europe (22nd Dec. 1292) a quaint and memorable sketch of the Deccan and its people from his own observation—one of the earliest pictures of Indian life drawn by a Roman Christian or Eastern European, which seems to have awakened the paeomy to the possibilities of Hindu conversion. Meantime, while Friar John was writing, the Poles were off the Coromandel coast—on their return to Europe—and here Messer Marco Millione may have met the man who was to represent Christendom in the 'Middle Kingdom' during the next thirty years, as the Venetian merchant had done for the past thirty.

We next meet with Corvino in China itself—at the imperial city. His second letter (of 8th Jan. 1305) is dated from Peking, or 'Cambaluc,' and tells how for eleven years, from 1293, he had laboured in Cathay. How he had struggled against prejudice and calumny; how brilliant successes had followed dismal failures; and how, in 1304, he had at last been joined by a colleague, Friar Arnold of Cologne. Probably he landed at the great port of Zayton, or Wynd, in Peking; apparently he made his way immediately to Peking. In any case, he failed to convert the emperor, Timur of Kish, the son and successor of Kaulsh, a great father of the Ilkhan, famed 'nunus inveteratus in idolatry,' as Corvino puts it. But he was not long without a triumph. In his first year at Cambaluc he won the Nestorian Prince George, 'of the family of the great King Prester John of India, and of the nations of Persia and the Steppe lands of Southern Russia. His
appeal was not unheeded; and the authorities of the Church, tired with his own enthusiasm, took up the case that he had begun with something of the spirit that he desired.

New conquests seemed now to open before the Church of Rome. Friar John was created archbishop of Cambaluc (with exceptional powers) in the name of the pope, and seven bishops (of whom three only per se were) depended on to continue the work and help the new primates of Cathay. In 1308 these three suffragans—Gerard, Peregrine, and Andrew—reached China, and carried out the commission. Each of them appears successively in the history of the mission as bishop of ‘Zayton’ in Peking, where a successful Latin mission was gradually established, and where some Genoese traders appear to have settled in the early years of the 14th century. A Franciscan tradition maintained that the emperor Khaihsan Kuluk (1307—11), third of the Yuen, or Mongol, dynasty in China, and grandson of the great Kubilai, was converted by Monte Corvino, in what had been the land of Cathay. It may be the news or legend of this success that led Clement V. in 1312 to send three more suffragans to the see of Archbishop John; in any case, we find one of these later bishops, Peter of Florence, becoming head of a monastery in this harbour-town of ‘Zayton.’

The remaining fragments of our knowledge of Corvino are soon told. In 1322 he appoints Andrew of Funchia, one of his first group of suffragans, to the see of ‘Zayton’; in 1329 Andrew, writing home, refers to the Archbishop, without naming him; and about 1350 the Franciscan chronicler, John of Winteworth, makes a confused allusion to his death in the Peking of the Middle Age, a letter supposed by the annalist to be the work of a nameless Franciscan of Lower Germany, possibly the very Arnold of Cologne who joined the mission in 1304. Lastly, in 1329, we hear of the death of that aged missionary who first carried Roman Christianity as an active faith to India and China, who perhaps converted the ‘Emperor of Emperors,’ and who was the first and last effective European bishop in those regions.

The best days and brightest hopes of the Chinese mission really closed with the life of its founder; but the Church at Rome showed no consciousness of falling energy. A certain Brother Nicolas appears in 1324 in China to succeed him, and, with twenty friars and six laymen, set out for Cathay. We are not sure, however, that he ever reached the Middle Kingdom. All that we do know of his journey is that he arrived at Almalig, the modern Kulja, now on the Central Asiatic frontier of China and Russia, that he received good treatment there, and that in 1329 Pope Benedict XI. wrote to the Chagatai Khan (June 18), thanking him for his kindness to Nicolas.

Meanwhile, a little earlier (in 1338), an embassy from the Great Khan then reigning—Timur Ukha-gan—had appeared before Benedict XI.; and with this embassy letters had arrived from a certain Christian prince of the Alan nation in the Khan’s service, begging for a bishop and legate worthy to replace Corvino. In reply to these communications the mission that he had at Almalig, the modern Kulja, now on the Central Asian frontier of China and Russia, that he received good treatment there, and that in 1329 Pope Benedict XI. wrote to the Chagatai Khan (June 18), thanking him for his kindness to Nicolas.

be established—are among the curious things of medieval literature.

We have seen something of the vigour with which Latin missions and Western commerce of this time fought to win and maintain a position in China, in India, and in Persia. During the same period (c. 1245–1370) the fates of Christianity and Judaism in Central Asia, and of the eastern sections of the Roman Church in Tibet and Japan, were decided. The last of the missionary movement of the 14th century was the work of the Mongols, who were not only the greatest and most far-reaching instrument of the spread of Byzantine and Russian Christianity, but also the last and perhaps the greatest of the European powers to be involved in the missionary enterprise.

In the 14th cent. we also hear of the progress of Russian missions, the pioneer or attendant of which was St. Andrew of Novgorod, who was sent in 1325 by Bishop John of Pskov to the court of the Khan of the Golden Horde. This mission was successful, and the Russian Church was established in the region of the Volga, the region of the Volga, and in the region of the Don. The work of Russian missions in the 14th and 15th centuries was largely connected with the expansion of the Russian state, and the spread of Russian culture and language.

During the 14th and 15th centuries, the Russian Church was expandning rapidly, and the Russian state was growing in power. The蒙古e Empire was expanding to the west, and the Russian Church was expanding to the east. The work of the Russian Church in the 14th and 15th centuries was largely connected with the expansion of the Russian state, and the spread of Russian culture and language. The work of the Russian Church in the 14th and 15th centuries was largely connected with the expansion of the Russian state, and the spread of Russian culture and language.

In 1495, the Russian Church was established in the region of the Volga, the region of the Volga, and in the region of the Don. The work of Russian missions in the 14th and 15th centuries was largely connected with the expansion of the Russian state, and the spread of Russian culture and language.

The work of the Russian Church in the 14th and 15th centuries was largely connected with the expansion of the Russian state, and the spread of Russian culture and language.
MISSIONS (Christian, Roman Catholic) — When Jesus Christ, the Son of God and the Redeemer of mankind, had fulfilled His divine mission in the world, had sealed it with His death, and endorsed it by His resurrection, He empowered His apostles, and through them His Church, to continue the same in His name and by His authority. That apostolate of salvation was to be catholic, or universal in space, doctrine, and time, to teach all nations all things at all times (Mt. 28:18-20). Mindful of the Last Will and Testament of Our Lord, the Church has always looked upon missionary work as an essential and solemn obligation, and upon its progress as an unerring gauge of her vitality. Since the day of Pentecost, when she received her baptism by the Holy Spirit, the Church has been on the apostolate with more or less success in the midst of constant persecutions from within and from without, and in spite of unfavourable political conditions and anti-Christian legislation. The missionary character which she displayed in apostolic times equally manifested itself in the Celtic, Germanic, and Frankish missionary enterprises, that of the Benedictine missionaries SS. Gregory, Augustine, Willibrord, Boniface, Audoard, and Adalbert gave to the missionary movement its definite shape. When subsequently new countries were discovered or opened up, the Orders of St. Francis and St. Dominic became important factors in the missions among the peoples of Islam and the Mongols, Morocco and Egypt, in Syria and Palestine, India and China. In 1252 a special missionary congregation was formed out of members of the two orders known as Societas peruviantum protest Christi, for the purpose of sending the Catholic apostolate was given when, in the 14th, 15th, and 16th centuries, Spain and Portugal took the lead in exploration, conquest, and commerce in the East and the West. They gave freeply of the wealth that they had won in their respective colonies to found missions, schools, and colleges for the propagation of the faith, and their fleets never set forth without having on board missionaries — Augustinians, Dominicans, Franciscans, or Jesuits — destined for the peaceful conquest of souls. To avoid political troubles and to further the cause of Christianity, Pope Alexander VI. in 1493, by the famous line of demarcation, assigned the East to the Portuguese and the West to the Spaniards, and with a remarkable zeal they devoted their protection for nearly three centuries to the spread of the gospel, though this Protectore ad modestium, the Franciscans accompanied Columbus in 1493, and they were followed by others to the Antilles (1500), Mexico or New Spain (1519), Yucatan, Guatemala, Honduras, Nicaragua and Costa Rica. In 1524 the Franciscans had missions in Colombia and Venezuela, in Peru and Ecuador. At the request of the king of Spain Franciscans went to Chile and Bolivia, to the Indians in the Pampas of Argentina and in Gran Chaco, and in 1538 they landed in Southern Brazil. When in 1664 Narváez undertook an expedition into Florida, five Franciscans went with him, and from there they extended their work to New Biscaya, New Mexico, Arizona, Texas, and California. French Franciscans were the first missionaries in Canada (1615) and Nova Scotia, while in Africa they continued their work in Morocco, Tunis, Tripoli, Egypt, and Abyssinia.

The Society of Jesus was founded by St. Ignatius Loyola (1556) in 1534, placed itself from the very beginning at the disposal of the Church for missionary work. St. Francis Xavier inaugurated in 1542 the Roman Catholic apostolate in India, Ceylon, Malacca, and Japan. Under Francis Borgia (1565-72) Jesuit missionaries were sent to Florida, Mexico, Peru; under Acquaviva (1681-95) to Canada, Chile, Paraguay, the Philippines, and China; under Vitelleschi (1615-40) to Tibet, Tongking, Manchuria, etc. What the suppression of the Society of Jesus (1773) meant for the Roman Catholic apostolate may be best realized by the fact that by one stroke of the pen the Church was deprived of 3000 Jesuit missionaries alone in that year.

Besides the Franciscans and Jesuits, other missionaries belonging to various religious orders were engaged in the mission field of the Roman Catholic Church, although not so large an extent. Among these may be mentioned the Theatines (1594), Capuchins (1599), Barnabites (1633), Oratorians (1651), Carmelites (1665), Augustinians, Lazarists (1624), the missionary orders of the Dominicans (1608) and of St. Sulpice (1642), and, lastly, La Société des Missions Étrangères of Paris (1663). For the sake of unity and conformity all these various missionary organizations were finally centralized from Pope Gregory XIII. to Gregory XV. (1621-23). By the brief of 24th June 1629 (Inscrutabilis) the latter, with the help of the Carmelite Thomas a Jean and the Capuchin Girolo de Larni, instituted the Congregatio de propaganda fide, or Propaganda, whose sphere of jurisdiction has recently been circumscribed by Pius X. (29th June 1909). The Congregation consists of 25 cardinals with a cardinal-prefect, 4 secretaries, 10 missionaries, and some 20 ecclesiastics. Their chief work is to establish and circumscribe the boundaries of the missionary jurisdictions or districts, i.e. mission, prefecture, vicariate, diocese, etc., to entrust the particular field to the various missionary societies, to appoint the missionary superiors, etc.

Thus from the beginning of the 16th century, the Roman Catholic Church carried on her apostolate throughout the world in N. and S. America, with the adjacent islands, in Asia, China, India, etc. On the other hand, the struggle and the storms which she had to endure in the 18th century, from the tyrannical absolutism of European rulers, from the crippling taxation of the States, from a false philosophy, the Encyclopedists (p. u.), and finally from the French Revolution and the subsequent suppression of almost all the religious orders and missionary societies, brought her apostolate to a temporary standstill, till it was revived between 1830 and 1830. The 19th and so far the 20th century are witness of the unwavering fidelity of the Church to the command of Christ, and of her vitality and energy in the mission field. Supported by emperors and kings as her protectors and promoters, nay, hampered in her efforts by Roman Catholic governments and anti-Christian legislation, she has carried on the work of reconstruction and reorganization, has recovered her ground, and, finally, has carried her propaganda into every corner of heathen lands. The ancient orders have
taken up their work in the field, new missionary societies have been founded during the course of the century, training colleges have been established, and mission and mission work, formerly almost wholly excluded from the missions, are now to be found everywhere, about 20,000 taking their share in the educational, charitable, and industrial work. To support the missionaries and the missions materially, from 1,000,000 Franciscans, formerly almost unknown, have been added to the number of priests and brothers and novices in the missions throughout the world, have given their support to promote the revival of missionary work among the heathen.

According to H. A. Krose ([Katholische Missionsstatistik], Freiberg, 1908), the total result of missionary work on the part of the Roman Catholic Church in the 19th cent. amounted to 8,321,963 converts from paganism. This flock is attended by 12,905 missionary priests, of whom 5869 are natives, 4896 brothers, and 175 sisters, with 50,414 stations, 22,736 churches, 17,834 schools with 791,875 pupils. When we add the results of the Roman Catholic missions since the time of the Reformation, we have in the Roman Catholic mission field 88,222,000 converts.

According to Karl Streit [Katholischer Missionsstatistik, Leipzig, 1909] there were: 7903 European and 8887 native priests, 8270 boarders, 24,513 catechumens, 41,966 stations, 28 churches, 7,441,015 native members, 1,517,000 catechumens, 24,953 schools with 840,974 pupils, etc. The Atlas Hierarchiae Christi, by the same author, published at Paderborn in 1913, does not give a summary of the apostole.

The review of missionary societies and their respective missions given on the opposite page will lead the reader to the conclusion that the Roman Catholic missions in our own days.

1. **Asia.**—As far as missionary work in its strictest sense is concerned, Asia may be divided into: (1) India Proper, or the British Empire of India with Ceylon, Burma, and Malay Peninsula; (2) the Chinese Empire, including Mongolia, Manchuria, and Tibet; (3) Indo-China, with Siam and Laos; and (4) the Japanese Empire, with Korea. The early history of missions in this continent has been outlined in the "Early and Medieval" section above.

2. **British India.**—British India and Ceylon, with an area of 3,000,000 sq. miles and a population of 200,000,000, is one of the most important and probably one of the most difficult mission fields of the Roman Catholic Church owing to the babel-tongued tribes (130), the many non-Christian religions (Hindu, Brahman, Buddhist, Muhammadan, pagan) and Christian denominations (40), and the prejudices of the highly developed caste system.

In 1498 Vasco da Gama landed in Calicut, the capital of Malabar, accompanied by the Trinitarian Pedro de Covilham, who in 1500 became the protomartyr of the missions in India. In the same year eight secular priests and eight Franciscans arrived with Pedro Alvaro de Cabral, three of whom were to death by the Muhammadans. Yet, in spite of persecution and death, the Franciscans, and after 1503 the Dominicans, went forth to India as the pioneer missionaries, to sow the seed of Christianity. In Cochin (1503) and Goa (1510) and gradually extended their work to Bombay, Madras, Dadum, Bengal, Agra, Ceylon, Malapur, etc., under Fathers Antonio do Laza (1589), do Porto, and Padre João de Menezes. In 1534 Pope Paul III. erected the bishopric of Goa with Bishop John of Albuquerque as its first occupant; the see was raised to an archbishopric by Paul IV. (1557) with three suffragans at Cochin, St. Franciscus (1651), archbishop of Goa (1655), and Malapur (1666). Two Franciscans, James of Borbas and Vincent of Lagos, founded the college of St. Paul at Goa for the purpose of training a native clergy.

In 1641 the Jesuits entered the mission field of India and, at the request of John III. of Portugal, St. Francis Xavier, accompanied by Paul of Camerino and Francis Mauilhac, set out to inaugurate a new period of missionary labours. From Goa he extended the faith to the Fishery Coast, Travancore (1544), Cochin, Quilon, and Ceylon. His Jesuit successors took up and carried on his work: de Nobili among the Brahmans of Madura (1603-48); de la Corte among the custom (converts). Criminals on the Fishery Coast (90-130,000 converts) (1602), de Britto among the Maravas (1639), Aquinavita at the court of Akbar the Great; Father Gee penetrated from India into China, and Andrade crossed the Himalayas and went to Tibet. They were followed by other members of the Society such as da Costa, Martinez, Laynez, Bouchet, Martin, Calmette, Condreux, and Constantine (1700-40). Franscanes in Agra and Delhi, Capuchins in Madras (1642), Barnabites and Augustinians (Archbishop Menezes of Goa [1594-1610]) in Hyderabad and Bengal, Theatines and Oratorians (Father Vas, apostle of Ceylon [1711]) shared with them the harvest of souls in India, whilst, after 1656, the Carmelites worked for the return of the Syrian Christians of Malabar to Roman Catholic unity.

With so many missionary labourers in the Indian mission field, hopes of a speedy conversion of India were entertained, and, no doubt, would have been realized to some extent, had Portugal remained faithful to the duties and sacred obligations that she had promised through the late position of patronage—the right of patronage—which the Holy See from Leo X. to Paul V. (1514-1616) had granted to her kings. When, however, the power and the influence of Portugal began to decline and the Dutch and the English took her field in the East, the supply of missionaries became limited, the missionaries themselves were put to death or expelled, the churches were destroyed, and the native Christians were cruelly persecuted. The Sultan Tippu Sahib of Mysore between 1782 and 1799 put 100,000 Christians to death, forced 40,000 into apostasy, and sold 30,000 as slaves to Muhammadan dealers. The dispute regarding concessions to Hindu usages with an equal rights with de Nobili in 1606 and ending in 1744 with the bull of Benedict XIV., "Omnium sollicitudinum", greatly divided the missionaries to the disadvantage of their work, which suffered a heavy blow by the suppression of the Society of Jesus in the Portuguese dominions in 1755, in the French possessions in 1782, and throughout the world in 1773. There were at this time 150 Jesuits in Goa, 47 in Malabar, and 22 in Pondicherry. True, their places were partly filled by Capuchins, by the Missionary Seminary of Paris (1776), and by some native priests, who were ordained without a vocation or an adequate education. Thus the missions in India, which in 1700 numbered some 1,500,000 or even 2,500,000 Roman Catholics, were only rains and wreckage (500,000 or even less) in 1800. The archbishopric of Goa, with its three suffragans of Cangano, Cochin, and Mallapur, numbered 340,000 members with 400 priests, and outside the Goanese jurisdiction there were four missions—Agra, with 5000 converts under the care of 10 Capuchins, Pondicherry with 6500 and 6 priests, the Carmelites missions of Malabar with 9000 converts and 5 priests, and Ceylon, with 1 missionary and 20 native priests for 50,000 members. All this was due to the anti-Christian policy of Pombal and the neglect of obligations Portugal's right of the Padroado. The Holy See,

recognizing the inadequacy and the unwillingness of Portugal, began to provide for the neglected field of India. Hitherto only missionaries of Portuguese origin had been admitted, and this by way of Lisbon and Goa. For years Portugal left the bishoprics vacant and in 1827 withdrew all material subvention. The misery was too evident, and Gregory xvi. took matters into his own hands, with the result of establishing the interests of Portugal. India was opened to all Roman Catholic missionaries irrespective of nationality or religious orders. In 1857 the French Jesuits entered Madras, and they were followed by the Germans (Bombay and Poona 1854, 1857), the Belgians (Calcutta 1859, Lahore 1865), and the Italians (Mangalore 1878). The Missionaries of Paris took up their work in Malacca (1840) and Burma (1857), those of Milan in Krishnagar (1855), Hyderabad (1858), and E. Burma (1866), the Oblates in Jaffna (1847) and Colombo (1858), etc. In 1852 the Propaganda asked Portugal either to fill the vacant sees or to renounce the Padroado. As no answer was given within two years, Gregory xvi. began to institute vicars apostolic in Bengal and Madras (1834), in Ceylon and Pondicherry (1836), etc. But new trials and difficulties commenced. The Portuguese Government persisted against sending missionaries into India and against the establishment of new vicariates without the consent and the co-operation of the kings of Portugal, and the patriarch of Goa placed himself at the head of a schism in India—the Goan schism—which was maintained under the patriarchates of Goa, Joseph de Silva y Torres and Joseph de Matta. Pius ix. tried in 1857 to come to a settlement, but this was accomplished only by Leo xiii., on 22nd June 1858. A million and a half of native Christians were again under the authority of the Holy See when on 1st Sept. 1866 Leo xiii. established the hierarchy in India—8 archbishops: Goa, Veracruz, Colombo, Pondicherry, Madras, Calcutta, Agra, and Bombay, to which Simla was added in 1910, the patriarch of Goa holding the dignity of primate, and twenty-five dioceses, etc. For the furthering of the mission work Leo xiii. also established a papal delegation for India, and in 1858 first named Card. F. Kardinal, who since then has been administered by the titular archbishops Agliardi (1884-87), Ajuti (1887-92), and Zaleski.

The first thirty years of the Indian missions after the reorganization under Gregory xvi. was the period of recovery, gathering together and strengthening in faith the remnants of the old Roman Catholic congregations. With the decline of the Goanese schism and establishment of the hierarchy a steady flow of conversions began, and since then remarkable progress has been made, more conspicuously among the Tamil races in S. India and Ceylon, less so in the Aryan lands of the north. In 1857 the numbers of Roman Catholics in India were:

To complete the survey of the Roman Catholic missions in British India, we subjoin the general statistics taken from the 1889 report of the British Missionary Society: The hierarchy consists of 9 archbishops, 27 bishops, 3 vicars, and 4 prelates, with 1,288 foreign and 1,230 native priests, 636 brothers, 2,092 sisters, 2,772 teachers, 2,218,993 Catholics in 5,116 principal and 7,298 auxiliary stations, 891 churches, 27 theological seminaries with 1,121 students of theology, 2,043 elementary schools with 30,498 pupils, 549 higher schools with 33,416 boys and 15,272 girls, 520 orphanages with 14,706 orphans, 43 hospitals, 171 dispensaries, 19 printing presses, etc.

2. China.—The revival of Roman Catholic missionary activity in China after the close of the medieval period dates from the time when the Jesuit Father Ricci arrived and settled there (1583). Science was to pave the way for religion and missionary work. In 1600 Ricci went to Peking and with the help of his Jesuit brethren started missions at Canton, Nanking, and Kiang-tsu, receiving converts from the highest to the lowest classes of the population, till his death in 1610. The persecution which broke out in 1617 was brought to a speedy end by the invasion of the Manchu Tartars. In 1625 the Jesuit Adam Schall arrived in Peking, and gained great influence by his learning, and turned it to the advantage of religion. In the meantime the Dominicans, who in 1626 had established themselves on the island of Formosa, had also opened missions in Fu-kien. One of these Dominican missionaries, the native priest Gregory Lopez, or A-Lo, known as the Chinese Bishop, the first and the only Chinaman who has been raised to the episcopate, rendered the greatest services to the Roman Catholic Church in his native land (1864).

At the request of Bishop Pallo, Clement x. divided China, which had hitherto been under the jurisdiction of the bishop of Macao, into two vicariates and entrusted the work of part of China and the greatest part of the Chinese missions to the Roman Catholic Church in his native land (1862).

About this time the emperor K'ang-hi, a pupil of Father Schall, repealed all the edicts against the Christians, and the missionaries who had been imprisoned were set at liberty. In 1660, the successor of the Mandarin, and K'ang-hi appointed Bishop Schall as missionary and mathematician and gave the missionaries permission to preach the gospel throughout China.

Through the influence of Verbiest and his learned successors Christianity made great progress within a century, and when he died the Roman Catholic Church was in a flourishing condition, honoured at Court, professed by the highest mandarins, and numbering about 300,000 members. Since, however, the Roman Catholic religion was not officially recognized, and the Chinese were forbidden by law to embrace the faith, the local mandarins put many obstacles in the way and caused many a local persecution, till Father Gerbillon, in 1692, obtained an edict from the emperor giving all liberty to his subjects to embrace and practise the Roman Catholic religion.

But whilst the Church was enjoying peace from without, it was badly disturbed from within by a controversy about the Chinese rites, i.e. the lawfulness of taking part in the Chinese ceremonies in honour of Confucius and of using the word T'ien ('heaven') to express the idea of God, and whether the prostrations and sacrifices in honour of Confucius and of the ancestors were merely civil ceremonies or connected with idolatry and superstition. Instead of preaching the gospel, converting the infidels, and applying their abilities to other eminent duties, missionaries of the first class wasted their talents, time, and work in unending and fruitless discussions, for Jesuits and Dominicans were divided in their opinions. Father Ricci, as well as the Chinese bishop, Gregory Lopez, and most of the Jesuit missionaries, took the Chinese rites as merely civil ceremonies, while the Dominicans strongly objected to this view. In 1693, however, the controversy became acute by the action of Bishop Maigret, the apostolic delegate of Fu-kien, who condemned the rites and threatened with interdict all the missionaries who refused to conform to his command. To settle the dispute, a papal legate was sent to China in 1705, who, owing to lack of tact, only offended the emperor.
In 1796 K’ang-hi made all the priests in China promise that they would teach nothing contrary to the received usages in China, and in the following year issued an edict threatening death to all who should preach against the rites. Alarmed lest these threats should lead to harsher measures, the Jesuits appealed to Rome, asking for instructions. A new papal legate arrived in China in 1721 with letters to K’ang-hi, assuring him that the Holy See would ask nothing more than that the Christians should be allowed to pay their respects to the dead in a manner not prejudicial to their religion. In spite of this decision the controversy continued till 1742, when Benedict XIV. condemned the rites and forbade the Christians to take part in them. After peace was restored, Jesuits and Dominicans, Franciscans and Augustinians, priests of the Society for Foreign Missions of Paris and Lazarists worked hand in hand for the evangelization of China. Some shed their blood, while others, such as Gerbillon, Bouvet, and Parenin, became the scientific advisers to the Court or wrote learned books and treatises on published works of piety for their converts. The emperor K’ang-hi, twenty-six years of age, in his sixtieth year, treated the Christians with justice, revoked all the edicts against them, raised them to the highest offices in the empire, and made the ministers of the Christian religion his confidants, friends, and advisers. He died in 1722 without embracing Christianity, although he desired to be baptized in his last illness.

After the death of K’ang-hi, a reaction took place. His son and successor, Yung-chin (1722-35), drove the missionaries from the Court, ordered them to leave the country, with the exception of Father Parenin and three of his colleagues. A general edict of persecution was issued in 1724, the missionaries were seized and banished, and 300 churches were destroyed or turned into pagan temples, while 57 Manchu princes who had become Christians, with 300 of their servants, were sent into exile (1724). The accession of K’ien-lung (1735) meant a change in Chinese policy. The severity of the anti-Christian laws, but in 1745 a new persecution broke out in Fu-kien, where, in the following year, Bishop Sanz and four Dominicans were tortured and soon the flame spread to other provinces. All the hatred was turned against the priests, who were obliged to seek refuge in flight.

Scarce the Church recovered from her trials when a new misfortune overtook her. The Jesuits, who from 1836 to 1737 had worked in China as elsewhere, were suppressed. At the request of the Propaganda, the Lazarists took charge of the Jesuit missions in China—i.e., four large churches in Peking and the missions in 15 out of 18 provinces—in 1738. For many years, however, the Lazarists were unable to send a sufficient number of missionaries to continue the work of the Jesuits; seven missionaries had to be all that were sent from 1773 to 1793. Finally the French Revolution cut off the supply of missionaries from France, and for over thirty years the Lazarists were unable to send a single priest to China. The Roman Catholic Church, which in the reign of the emperor K’ang-hi is said to have numbered 800,000 members, was reduced at the beginning of the 19th cent. to 220,000, divided among the Lazarists at Peking and Nanking, the Franciscans in Shantung, the Dominicans in Fu-kien, the Missionaries of Paris in Szechwan, and the Portuguese secular priests at Macao and Canton.

Yet, in spite of bloodshed and persecution, of cruelty and oppression, the Christian hatred of provincial and local mandarins, and notwithstanding anti-foreign policy fostered by the literati and carried into effect by members of secret societies, the Taiping and Boxers, the Roman Catholic Church has made good progress during the course of the 19th and specially since the beginning of the 20th century. The Franciscans and Dominicans, the Jesuits and Augustinians, the Lazarists and the Missionaries of Paris who had been in the Chinese missions for the last two centuries, have strengthened their ranks and extended their work, while new missionary societies founded in the 19th cent. such as the Forgettons and the Steyl missionaries, and the missionary seminaries of Milan, Rome, Rome, and Parma, have opened up new fields, and all the European missionaries engaged in China have strengthened their ranks with a large number of native priests in the interior.

True, the opening of the 19th cent. did not promise a bright future, for K’i-k’ing (1789-1839) proved to be one of the greatest persecutors, having revived the old anti-Christian laws. Bishop Dufrasne was beheaded in 1835, Father Clet in 1836, and Father Perboyre in 1840. But China was shaken to her very foundations when in 1842 Britain declared war on her and compelled her to open certain ports, while France burnt the Christian religion in Canton and Nan, the churches which they had lost since the reign of the emperor K’ang-hi. The eighty missionaries who at this period were at work in China were strengthened in 1841 by the arrival of the first missionaries of the Society of Jesus, who were once more entrusted with one of their former fields of labour, the vicariate of Kiang-nan.

Though religious liberty was granted by the edicts of 1844, 1845, and 1846, they remained a dead letter in many of the provinces in the interior. In 1851 the emperor Hien-feng revoked them, and renewed those against the Christians. The murder of Father Chapdelaine (1856) brought matters to a crisis. France justified herself against China, and the result was the Treaty of Tientsin (1858) and the Convention of Peking (1860); the churches were restored as well as the religious and charitable institutions, the missionaries obtained free passports throughout the empire, and the faithful were guaranteed unrestricted exercise of their religion, and all the edicts against the Christians were abrogated. Yet the Chinese were not safeguarded from local persecutions, which broke out in Kiang-si, Kwang-tung, Szechuan, Hu-nan, and finally in Tientsin in 1876. After the accession of Kwang-sun in 1875 the Roman Catholic Church enjoyed a long period of peace, and, though the empress Ta-fei-Hai was not favorable to Christianity, yet she did nothing against its progress and development. In 1895 and 1899 the French minister in Peking obtained new concessions for the Christians, among them the privilege that the Roman Catholic missionaries were put on an equality with the Chinese local authorities—a privilege which was cancelled a few years later.

The political tumults of Europe in China, by taking Triaschw (Germany, 1897), Tahanwan (Russia, 1898), Wei-shih-pei (Belgium, and Kwang-chou-wan (France, 1888), resulted in the Boxer riots, which brought sad days for the missions. Bishops, priests, and sisters lost their lives; churches, schools, and hospitals were reduced to the ground; and native Christians were slaughtered. Peace was restored only when a strong international army entered Peking on 14th Aug. 1900 and ten foreign Powers dictated the terms of peace to the Chinese. Missionaries, then began, a great
number of Chinese entering the list of the catechumens, and it has steadily advanced since the Boxer rising. The overthrow of the Manchu dynasty (1911) and the proclamation of a Chinese republic have not interfered with missionary work. Yuan-Shi-Kai, the first president of the new republic, promised absolute religious liberty, mandarins and governors hegolized the tact of the Bishops, and Catholic missionaries, and Christian and non-Christian sects look up with admiration to the spiritual power of the Church whose missionaries are living examples of the poverty, zeal, and heroism of the missionary times.

During the flourishing period of the Roman Catholic Church in China, from 1583 to 1773, the hierarchy was not developed, though the Propaganda had resolved in 1651 to appoint a patriarch, two or three archbishops, and twelve bishops. In 1577 Gregory XIII. created the diocese of Macao for China and Japan, which was divided into two, viz. Macao and Funay (Japan) in 1587. In 1659 Alexander VII. erected within the diocese of Macao two vicariates for China, and to satisfy Portugal Alexander VIII. erected the dioceses of Peking and Nanking under the jurisdiction of Goa, to which were added three vicariates, viz. Shan-si, Fu-kien, and Kiang-si, and the ecclesiastical province of Peking, and 100,000 members. Fifty years later the number had increased to 18 districts with 330,000 members, in 1890 to 40 ecclesiastical jurisdictions with 601,000 members; in 1911 there were 33 dioceses with 933,000 members, and in 1911-12, 48 vicariates and prefectures with 1,345,376 members (1913 = 1,431,000; 1914 = 1,605,107) and 496,912 catechumens. When the provinces of the Atube-Hierarchia, we find for China and its dependencies, Mongolia and Manchuria, the following statistics: 49 missionary dioceses or vicariates and prefectures, 1,000 native priests, 247 European and 49 native brothers, 753 European and 1,068 native sisters, 430 male and 372 female catechists, 719 native teachers, 1,048,659 native Christians and 413,000 catechumens, 1416 principal and 13,900 secondary stations, 2,924 churches and chapels, 54 theological seminaries with 1,025 students, 684 elementary schools with 133,228 pupils, 375 higher schools with 6,438 (T) pupils and 396 (T) girls, 992 orphanages with 3,298 inmates, 97 hospitals, 477 schools, and 21 printing presses.

3. Indo-China.—Indo-China, the bridge between India and China, the most easterly of the three peninsulas of Asia, is politically divided into Upper and Lower Burma (British), the Malay Peninsula (British and Siam), Siam (independent), French Indo-China, which consists of Cochinchina, Annam and Tongking, Cambodia and Laos, covering a total area of some 735,000 sq. miles with a population of 35,000,000 or 40,000,000 souls. As Burma and the Malay Peninsula are,—ecclesiastically,—included in British India, we have to deal here only with French Indo-China, Cambodia, Laos, and Siam.

The field of French Indo-China has been estimated at 342,000 or 300,000 sq. miles with a population of 16,000,000 or 21,000,000 inhabitants. The first attempts to preach the gospel in French Indo-China were made in the 16th century by a French Franciscan, Bonier (1554), and two Portuguese Dominicans, Gaspard of the Cross, who penetrated into Cambodia, and Sebastian de Cantu; both were put to death in Siam in 1569. These were followed by Lopez Cordoso, Sylvester Azeredo, and John de Pena, who were beheaded in Siam, while Louis Fonseca and Diego Advarie (martyred in 1600) went to Cochinchina in 1596. These early missionaries, however, had little success when the Jesuits engaged in the missions of Japan were expelled in 1614, they made their way to Indo-China; such were Francis Buzoni, Diego Carvalho, and Francis de Pina, who in 1615 entered Cochinchina and Cambodia in 1617, and in 1620 they were followed by Alexander of Rhodes, the pioneer missionary of Indo-China, in 1624. Cochinchina Father Julian Baldinotti extended the work to Tengking in 1628. In a short period of time the Church made such rapid progress that, in 1635, the number of Christians amounted to 108,000 in 1641, while Father Tissianer on his arrival in 1638 found 300,000 converts under the charge of only 8 Jesuit priests and 30 lay catechists. To plead the cause of the Church in Indo-China and the insufficient number of workers, Father Rhodes returned to Europe to appeal for help. In the meantime persecutions raged against the native Christians in 1644, 1645, and 1647; but, on the other hand, a new missionary society was founded in Paris (Les Missions Etrangères), whose members were to become the instruments for a rich harvest in the East. Among the first missionaries of the Society of Paris we find Fathers Chevrill, Haintz, Bridaen, Mahot, and Vachelet. To strengthen the work Pope Alexander VII. appointed in 1659 two members,—the actual founders of Les Missions Etrangères,—viz. Francis Pallu and Pierre de la Motte Lambert, as vicars-apostolic of Tongking and Cambodia. Under their administration parishes were established, schools and seminaries were opened for the training of a native clergy, and de la Motte founded the congregation of the Congregation of the Missions Etrangères. Under the new administration parishes were established and the number of native Christians rapidly increased. In 1663, the number of converts in the missions was 300,000, partly by apostasy, so that on the arrival of the Missions Etrangeres there were only 100,000 Christians left, but this number was increased to 200,000 in 1681. To strengthen the position of the missionaries Pallu in 1672 urged Colbert, the French minister, to establish commercial relations between France and Indo-China, and persuaded Louis XIV. to use his influence on King Le-hi-tong to allow the freedom of Christian worship. In 1678 the vicariate of Tongking was divided into Eastern and Western Tongking; the former, since then divided into Northern and Central, was entrusted to Spanish Dominicans, and the latter to the 'Missions Etrangères' of Paris.

The rapidly growing religious influence exercised by both bishops and priests led to renewed persecutions, which have scarcely been interrupted till our own day. Yet in 1737 we find there 259,000 Christians, i.e. 120,000 under the care of the Jesuits, 80,000 under the Missions of Paris, 30,000 under the Augustinians, who in 1876 had entered the field, and 25,000 under the Dominicans. This number was not only maintained but increased in spite of civil wars and uninterrupted persecutions during the 18th cent., and notwithstanding the suppression of the Society of Jesus and the consequent decrease of European missionaries. In 1800 we find the following table of statistics:

- Cochinchina: 1 vicar-apostolic, 5 missionary and 15 native priests, 50,000 native Christians (Missionsaries of Paris).
- Tongking: 1 vicar-apostolic, 6 missionary and 65 native priests, 120,000 native Christians (Missionsaries of Paris).
- Tongking E.: 1 vicar-apostolic, 4 missionary and 41 native priests, 140,000 native Christians (Dominicans).

3 Bishops, 15 missionary and 119 native priests, 310,000 Christians.

In the meantime a political movement had taken place in Indo-China and Cambodia, which was favorable to the spread of Christianity, but which in reality became the cause of serious hindrances, obstacles, and persecutions. During the civil war which commenced in 1777, Nguyen-anh, the ruler of Cochinchina, implored the help of the European
Powers against the rebellious Tai-Shans. Britain, Holland, and Portugal willingly offered their help, but Pierre-Joseph Pignaures de Bechaine, since 1771 vicar-apostolic of Cochinchina, offered to enlist the help of France, and in May 1802 accepted the proposal. Accompanied by Prince Camb, the king's son, Pignaure set out for France, and, as plenipotentiary of the Annamese king, signed a convention on 29th Nov. 1802, according to which France was to assist Nguyen-anh to recover his throne. But to his dismay the bishop, on his return to the East, found that France had abandoned the project, and therefore he persuaded 30 officers and 500 men of Pondicherry to come to the rescue of the king, who defeated his enemies and in 1802 proclaimed himself as emperor of Indo-China and Annam under the name of Galong.

Owing to this success Galong was favourable to Christianity, which made splendid progress throughout the Annamese empire. This period of peace (1802-20), however, was only a preparation for future trials. In 1810 the Christian community included 4 bishops, 28 European and 180 native priests, 1,000 catechists, and 1,600,000 faithful, who was succeeded by his son, Minh-mang (1821-41), a cruel and profligate tyrant and a bitter enemy of Christianity and foreigners. He dismissed his father's trusted friars, summoned all the missionaries to appear at court, and resolved to obliterate the very name of Christianity within his realm. Though his object was defeated for a time, he issued a new edict in Jan. 1833, ordering all Christians to renounce their faith, to trample the crucifix under foot, to raze all churches and religious houses to the ground, and to punish all the missionaries with the utmost rigour. Hundreds of Christians were beheaded and 9 French priests, and 4 bishops fell as victims to this tyranny—Fathers Gaglin (1823), Marchand (1835), Cormay (1837), de la Motte (1840), Mgr. Borie (1838), and Mgr. Delgado (1838), 84 years old. The persecution lasted under Minh-mang (1841-47), who did not possess the energy of his predecessor, and was afraid of Britain's successes in China and of threatened interference of France. Instead of being annihilated, the Church's missionaries and converts increased yearly after 1844 in spite of all the edicts and tortures of Minh-mang. In 1840 we find:

Cochin-China: 1 vicar-apostolic, 1 coadjutor, 10 missionary priests, 100,000 Roman Catholics.
Tongking W.: 1 vicar-apostolic, 8 missionary and 76 native priests, 50,000 Roman Catholics.
Tongling E.: 1 vicar-apostolic, 1 coadjutor, 6 missionary and 41 native priests, 100,000 Roman Catholics.
5 bishops, 2 coadjutors, 21 missionary and 144 native priests, 400,000 Roman Catholics.

To facilitate the work of the missions in the Annamese empire, Gregory XVI. in 1844 divided Cochinchina into two vicariates, Eastern and Western, and W. Tongking into Western and Southern in 1848, while in 1850 Cambodia and N. Cochinchina were also raised to vicariates. Though King Thieu-tri did not shed the blood of the priests, yet they did not escape imprisonment; such were Fathers Galli, Bertheau, Charrier, Miehe, and Ducot, who were set free by Capt. Lebreton in 1843. This and similar interferences by the French in 1847 and 1848 provoked the resentment of King Tu-dao (1847-83), whose reign of 30 years is an uninterrupted period of persecution of the bishops, priests, and Christians. In 1848 he issued an edict setting a price on the heads of the missionaries, and in 1851 he ordered the Europeans to be cast into the sea and the native priests to be cut in two: Fathers Schaffner (1851), Bonnard, and Minh (1852) were martyred. In 1855 a universal proscription of Christians followed, and in 1857 Bishop Pellerin, vicar-apostolic of N. Cochinchina, appealed to Napoleon iii. to intervene. In August 1858 France and Spain, roused by the slaughter of their countrymen, took joint action, and seized Touran (1858) and Saigon (1859). The persecution meanwhile raged with unabated vigour. Bishops Diaz, Garcia, Cuemot, etc.—altogether 5 bishops, 28 Dominicans, 3 Missionaires of Paris, 116 native priests, over 100 native sisters, and 5000 Christians—were put to death. 100 towns, all centres of Christian communities, were razed to the ground, 10,000 Christians died of ill-treatment, and all the possessions of the remainder were confiscated. Peace was restored in 1862, when Annam ceded to France the southern provinces of Cochinchina and guaranteed freedom of religious worship. That peace, however, did not last long; it was broken by the interference of the French freebooters Dupuis, Dupré-Garnier, and Philastre, and Mgr. Fugainier, vicar-apostolic of W. Tongking, became involved to the detriment of the missions.

A new treaty was signed between France and Annam on 15th March 1874, which again guaranteed religious freedom and the safety of the missionaries, and from 1874 to 1886 the Christians enjoyed a period of relative peace, till the Annamese mandarins disregarded the treaty and compelled France to interfere. Hue was captured on 29th Aug. 1885, the Annamese were defeated, and on the same day the new treaty was signed, and on its ratification, 23rd Feb. 1886, Annam became a French protectorate. Yet, before this was accomplished, the Christians, who were considered as friends of France and enemies of Annam, had to suffer severely. At the close of the year 1886 Tongking, Cochinchina, and Laos had to mourn the loss of 20 European and 30 native priests, and 50,000 Christians; E. Cochinchina alone lost 8 European and 7 native priests, 60 catechists, 270 sisters, 24,000 Christians, 17 orphanages, 10 convents, and 225 chapels. Yet the blood of the martyrs has been here as elsewhere the seed of Christianity, and surely during the 28 years of peace the Roman Catholic Church has made a marvelous progress in Indo-China, and has never been so flourishing a condition as she is to-day. Of this the statistics given below are ample proof.

Siames.—The first Roman Catholic missionary who entered Siam was the French Jesuit, Bonier, who preached the gospel there from 1590 to 1564, but without result. He was succeeded by two Dominicans, Jerome of the Cross and Sebastian de Canto, who converted some 1500 Siamese from 1564 to 1569, when they were put to death. The Dominicans were replaced by Jesuits in 1606 and 1624, and in consequence of a persecution the field was abandoned till 1602, when Alexander vii. made it a vicariate and in 1669 entrusted it to the Missionary Society of Paris with Mgr. Laneau as its first bishop. The Siamese king, Phra Narai, in 1657-58 signed the treaty of Louvois with Louis xiv. of France, by which the Roman Catholic missionaries obtained permission to preach the gospel throughout Siam. This was done till 1727, when a serious persecution broke out which lasted with intermittent interruption for the rest of the century. After the Burmese invaded and wars were over, 12,000 Siamese Christians were reduced to 1000 with Bishop Florent and 7 native priests in charge. In 1820 and 1830 fresh European missionaries arrived, among them Fathers Scot, Barbe, Palleter, and Courvey. In 1834 Courvey was appointed bishop, and under his administration Siam had 6500 Roman Catholics with 11 European and 7 native priests. His successor, Bishop Palleter (1840-62), the best Siamese scholar and most successful missionary among the Laotians, induced Napoleon iii. to renew the French alliance with
King Mongkut of Siam (1856). Thanks to the broad-mindedness of Mongkut (1851–68) and Chulalongkorn (1888–1910), the Roman Catholic missions in Siam enjoyed peace under Falledey’s successors, Bishops Dupont (1862–72) and Vey (1875–1900). In 1875 there were in Siam 11,000 Roman Catholics, 17 European and 7 native priests, with 30 churches; in 1913 we find 24,000 Roman Catholics, 66 European and 21 native priests, 35 European and 87 native sisters, 23 principal and 33 secondary stations, 56 churches, 76 elementary schools with 3740 pupils, and 4 high schools with 886 students under Bishop M. J. Forros.

The missions in Laos, which were commenced in 1878 and formally opened in 1888, were separated from Siam as a vicariate in 1899. In 1913 we find there 32 European and 4 native priests, 8 European and 14 native sisters, 12,500 Roman Catholics with 23 principal and 56 secondary stations, and 64 churches and chapels with 53 elementary schools.

4. Japan.—The existence of the island empire of Nippon, or J-ki, pen, ‘the Land of the Rising Sun,’ was first revealed to the Western world by the Venetian traveller Marco Polo (1295–88), under the name of Cipangu, but was not visited by Europeans until three centuries later. Famous among these was the Portuguese Mendes Pinto, who, on 23rd Sept. 1543, landed on Tanegashima and became instrumental in the conversion of three shipwrecked Japanese, Anjiro and his two companions. In 1549 St. Francis Xavier, accompanied by the Jesuit Cosmo de Torres and by Brother Fernandez, set out for Japan and landed at Kagoshima, whence he extended his work to Hirado, Hakata, Yamaguchi, Mekko, and Fukuoka, forming everywhere a nucleus of promising Christian centres. Before his departure to China in 1551, St. Francis had obtained new helpers from Goa, such as Father Baltasar Gago, Gaspar Bense, Edward da Silva, and Peter de Alveras, who were later joined by Gaspar Coelho, Villas, Louis Froes, Melchior, and Antonio Diaz. For forty years the Jesuits remained in sole charge of the missions in Japan, and their work progressed under the protection of Nobunaga, then actual ruler of Japan (1573–82). Torres is said to have baptized 30,000 converts and built 50 churches from 1549 to 1570. Thirty years after the death of St. Francis, we learn from Coelho’s annual report of 1582 that at that time ‘the number of all Christians in Japan amounts to 150,000 with churches great and small 200 in number.’ Down to the year 1563 there had never been more than 9, down to 1577 only 18, and to 1582, 72 members of the Society engaged in the Japanese mission-field. In 1582 a Japanese embassy, consisting of four Japanese princes and a Japanese Jesuit, went to Rome and were received in audience by Gregory XIII. In the meantime Nobunaga had died that same year, and his successor, Hideyoshi Takeda, became a fierce persecutor of the Christians, ordering the destruction of all the churches and the immediate expulsion of all the Roman Catholic priests (1587). The return of the Japanese embassy from Rome in 1599 and the arrival of Father Valignani with new European Jesuits effected a change, however, and the Japanese Christians began to breathe more freely. In 1599 the Japanese mission was numbered 56 European Jesuit priests, 11 European scholastics, 87 Japanese Jesuit brothers, 5 Japanese and 3 Portuguese novices with 23 residences, and about 300,000 or even 600,000 members. Father v. Loschot had appointed the Jesuit Antonio Oriolo as his coadjutor, but the latter died at Macao, and his successor, Sebastian Morales, who was appointed by Sixtus V., came only as far as Mozambique. Bishop
Pedro Martínez, also a Jesuit, appointed in 1591 and consecrated at Goa in 1598, arrived in Japan in the following year. In 1598 four Spanish Franciscans—Peter Baptist of San Lázaro, Bartholomew Ruiz, Francis de Pavia, and Gonzalo de Guzmán—arrived in Japan and started work at Mekko, Nagasaki, and Osaka, thus trespassing upon the privilege granted by Gregory XIII in 1585 to the Jesuits. The用心地 of Christianity roused the Bonzes, who accused the Roman Catholic missionaries of being only political agents of Spain and Portugal, and Hideyoshi gave the signal for a crusade. In recognition of this, 15 Japanese Tertiaries, 3 Japanese Jesuits, and 2 servants, known as the '26 martyrs of Nagasaki,' were put to death on 5th Feb. 1597. Instead of destroying Christianity, however, the persecution only helped to make it known. Hideyoshi died in 1598, and his successor, Hidetsugu Daifuku (1564-93), left the Church in peace, which was then governed by the Jesuit Bishop Luiz Serqueira. In 1602 the Jesuits were reinforced by Franciscans, Dominicans, and Augustinians, and by the year 1613 we find in Japan 130 Jesuits and some 30 priests belonging to the other missionary societies. The actual number of native Christians, however, is doubtful. Between 1540 and 1608, 500,000, between 1558 and 1614, 500,000, and between 1608 and 1830, 22,000 adults were baptized, and we are told that the actual number of native Christians in 1614 amounted to 1,800,000. But the peace and prosperity were the prelude to one of the most terrible persecutions begun by Jesuits for some unknown reason. In 1614 Bishop Serqueira died and was succeeded by the Franciscan missionary, Bishop Louis Sotelo, who was burned alive in 1624. In order to weaken the Christians the Shogun arrested 117 Jesuits and 27 other missionaries, together with the Roman Catholic leaders, and transported them to the Philippines (1614); but many of them returned.

Jesuit died in 1615 and was succeeded by Hidetada, who renewed the edicts of his father, and from 1617 to 1640 the persecution went on without interruption. The 'Great Martyrdom' took place at Nagasaki on 2nd Sept. 1622, when 10 Jesuits, 6 Dominicans, 3 Franciscans, and 22 Japanese nobles were put to death. Jemitsu, the following Shogun, is said to have killed about 20,000 every year from 1623. Over 200 of the missionaries and 560 native catechists, and 200,000 Christians suffered actual martyrdom. From the year 1638 Christianity appeared to be extinct in Japan; though sporadic efforts were made by Jesuits in 1642 and later, all these failed. Father John Sidotti was the last Roman Catholic priest who entered Japan (1708), and he was put to death on 15th Dec. 1715.

The blood of so many martyrs, however, was not destined to be shed in vain. When in 1832 Gregory XVI. erected the Vicariate of Korea, Japan was included. In 1844 Father Foreca arranged the K5, a catechist, landed on Lio-Kiu Island, and they were joined by Father Letardu in 1846. In the same year the vicariate of Japan was erected with Father Foreca as vicar-apostolic. But Japan was still a forbidden land till, in 1853, the United States broke down the barriers by a treaty, which was followed by others with Great Britain, Russia, etc., and Father Petitjean was able to build a Roman Catholic church at Nagasaki, which, on 17th March 1865, became instrumental in finding that there were in Japan still 25 Christians who were able to hear the word of God.

In 1868, Father Petitjean was appointed vicar-apostolic. Though some minor persecutions broke out, the Church made progress, and in 1873 the laws and edicts against Christianity were abolished. In 1874 Japan was divided into two vicariates, and under Leo XIII. two more were added in 1888 and 1891, till on 15th June 1891 Leo XIII. re-established the Roman Catholic hierarchy, i.e. the archdiocese of Tokyo with three suffragan sees of Nagasaki, Osaka, and Hakodate, which were placed under the care of the Missionaries of St. Peter, to which have since been added the prefectures of Shikoku (1904) and of Niigata (1912) under the care of the Dominicans and the Missionaries of St. Mary. The number of Roman Catholic Chinese, which in 1870 amounted to 10,000 with 13 priests, reached 23,000 in 1880, 44,000 in 1891 with 82 European and 15 native priests, 63,000 in 1910 with 150 European and 35 native priests, and 69,755 in 1913.

Korea.—From 1636 to 1675 Chosen, 'the Land of the Morning Calm,' was known only under the name of the 'Hermit Kingdom of the Far East' on account of the rigorous enforcement of her policy of isolation against all foreigners. Yet Roman Catholic missionaries made their way and found their faithful children in Korea, whose very name became known in Europe as the site of a violent persecution and martyrdom. When, in 1592-94, Taiko Sama of Japan sent his soldiers to Korea, the Jesuit Gregorio de Cespedes accompanied the troops as 'minister to the numerous Roman Catholics in the army, and in the event of their instructed the Koreans also, baptizing, on his return to Japan in 1598, some 300 Korean priests of war. Nothing, however, is known of the fate of his converts in Korea, as in the beginning of the 17th cent. all traces of Christianity had disappeared from the land. In 1785 Seng-hun-ii, one of the Korean literati, joined the annual embassy to Peking and inquired there Alexander de Goves, the Franciscan bishop, who baptized him by the name of Peter. On his return he was joined by two friends, Piekii and Il-sini, who became the pioneers of Christianity in Korea. From 1784 to 1794 they received some 400 neophytes into the Church, who were persecuted by the Bonzes from 1755 to 1761. An attempt made de Remedios in 1791 to penetrate into Korea failed. In 1794 Father Jacob Taen (alias Padre Jaymeo Vellozo), a Chinese priest, succeeded in entering, and for six years continued the apostolate, during which time he baptized 6000 converts and thus increased the flock from 4000 to 10,000 souls. In 1801 new edicts were published against the 'new religion'; among the martyrs were Peter Seng-hun-i, Father Taen, and 300 of his flock. For thirty years the Christians in Korea remained without a pastor in spite of repeated requests both to Peking and to Rome, owing to persecutions in China. In 1827 the mission field of Korea was entrusted to the Société des Missions Étrangères de Paris, and on 9th Sept. 1831 Korea was made a vicariate with Bruguière as its first bishop, Father Chastan and Mansant being his only assistants. The bishop died in the sight of Korea, while Fathers Mansant and Chastan reached Seoul in 1836 and 1857 respectively. At the end of the year the newly-appointed bishop, Imbert, arrived and found the flock reduced from 10,000 to 1000, which was increased to 9000 two years later, when the bishop and the two priests were put to death (1839). In 1845 Bishop Ferrolé, accompanied by Fathers Daveul and Kim, the first native Korean priest, took over the field, but the latter died the death of a martyr in the following year. From 1846 to 1863 the Church in Korea enjoyed comparative peace, during which numerous converts were made both under Ferrolé and his successor, Bishop Berneau—from 11,000 to 22,000. This was the most flourishing period in the annals of the Church in Korea, which then possessed 2 bishops (Berneau.
and Daveluy) and 10 priests. In 1686 the persecution raged again, and during it the 2 bishops with 7 priests were put to death and 3 priests had to leave the country, and the attempt was made to reopen the mission, but failed. In 1888 Riidel was appointed bishop, but was not able to enter Korea until 1874, was expelled in 1877, and died in 1884. The treaties of Korea with Japan, the United States, and Britain, France protected the gates of the Hermit Kingdom. Bishop Blane found on his arrival in 1883 only 13,000 Roman Catholics out of 25,000 in 1886, but the flock numbered 300,000 in 1889. During the long reign of Bishop Mutel (since 1890) the missions in Korea, which was declared an independent kingdom in 1895, a Japanese protectorate in 1905, and a Japanese annexation in 1910, have enjoyed freedom. In 1897 we find 32 European and 3 native priests with 32,217 members in 497 stations, in 1909, 46 European and 10 native priests with 68,016 members. At the request of Bishop Mutel, Korea was divided in 1910 into the two vicariates of Seoul and Dakin, and numbered, in 1913, 58 European and 17 native priests with 59 principal and 978 out-stations, and 160 churches with 80,000 members.

The Moro is hardly a more glorious chapter to be found in the annals of the Roman Catholic Church than that of Africa. After the decay of early Christianity there, except for a few validly ordained missionaries surviving in Kabylia, seen among the Copts and the Abyssinians, after that remained for many centuries a closed continent to Christianity, though the Franciscans and Dominicans, the Trinitarians and the Order of Our Lady of Mercy tried their best in the 15th, 16th, and 17th centuries to alleviate the lot of Christian captives and to instill the lessons of Christianity into the hearts of the Muhammadans of Morocco, Tunisia, and the Barbary States. When in the 16th cent. the Portuguese, under the leadership of Henry the Navigator, son of King John I. of Portugal, began their discoveries and expeditions along the west coast of Africa, passed Cape Bojador (1433), reached the Rio de Ouro (1442), and doubled Cape Verde (1444), they unfurled the banner of the Cross. In 1471 they crossed the equator, Diego Cam discovered the Congo (1484), Bartholomew Diaz doubled the Cape of Good Hope (1487), while Vasco da Gama opened the way for Mozambique (1502), Malindi, and Mombasa (1497). Pope Alexander VI. 1494 assigned to Spain all the lands discovered and still to be discovered 370 miles west of Cape Verde Islands, and to Portugal all the land to the east, with the one obligation to further the propagation of Christianity and to support mission work in the east and west. Dominicans and Franciscans, Augustinians and Jesuits, Capuchins and Carmelites, supported by secular priests, vied with one another in carrying into effect the command of Christ ‘to teach all nations.’ Bishops were founded on the adjacent islands of the Dark Continent, viz. Las Palmas in the Canary Islands, Funshal in Madeira (1514), San Thomé (1534), etc. King Emmanuel of Portugal took a special interest in the evangelization of the Congo, and from 1605 to 1612 sent annually some missions of different religious orders (Dominicans, Franciscans, and Augustinians), who, supported by the native King Alphonse, made good progress. The Bishop of St. Thomas (Gulf of Guinea), to whose jurisdiction the Congo belonged, selected title of bishop of the Congo, transferred his see to San Salvador, and erected a chapter consisting of 28 canons. As the missionaries already engaged in the Congo did not suffice for the growing demands, St. Ignatius, at the request of the king of Portugal, sent some Jesuits—among them Fathers Vaz, Ribera, Diaz, Soveral, Noguera, Gomez, etc.—who founded a college at San Salvador. From 1554 to 1592, 8 bishops occupied the see of San Salvador, but only two pAPPAPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAPPAPAP...
Heart of Mary and the Holy Ghost, usually called the Congregation of the Holy Ghost, whose members (since 1848) have devoted themselves to the evangelization of the Negroes in Senegambia and Gabun (1844), Sierra Leone (1864), the Portuguese Congo (1873), French Guinea (1878), Cambélia (1879), Kune (1882), Loango (1883), Lower Nigeria (1885), Upper Congo (1885), Gambia (1886), Brazil (1886), N. Madagascar, etc. When Mgr. Marion de Brusilac returned from the depth of India to France in 1858, his feelings were drawn to the Dark Continent, and he founded the African Missionary Society of Lyon, which, principally in the districts known as the 'White Man's Grave'—Dahomey (1881), Benin (1886), Gold Coast (1881), Ivory Coast (1886), Liberia (1896), E. and W. Nigeria, Kuchuma (1912), and the Nile Delta. Ten years later another missionary society came into existence, viz., the Missionaries of Our Lady of Africa, or the White Fathers, whose field of action extended rapidly from Algeria to Kaffia, from Tunisia to the Sahara and the E. Sudan, till the holy land of its founder, Cardinal Lavigerie, came to drive it, in spite of all obstacles, right to the heart of the African continent. To-day they have charge of 11 African districts—Kaffia, Ghardaia, W. Sudán, Nyasa, Bangweolo, Uganda, Kongo, Congo, Dar es-Salaam, Zanzibar, and Kiwu, with 157,129 members, 195,000 catechumens, 138 principal stations, 592 priests, 52 brothers, 244 sisters, 2,289 catechists, 55 native priests, 55 native sisters, 36 missionary students in minor course, 378 Piarists, 1,747 schools with 79,552 pupils, and 341 charitable institutions.

Besides these three African Missionary Societies just mentioned, there is also a society by the order which, in days gone by, worked as pioneers in Africa, such as the Franciscans (Egypt, Tripoli, Morocco), the Capuchins (Erythrea, Galla, Somalia, Abyssinia, Seychelles), the Trinitarians (Benadir), the Lazarists (Alhya, S. Madagascar), the Jesuits (C. Madagascar, Kwango, Zambesi), and the Missionary Seminary of Verona (C. Africa), the Benedictines of St. Ottvilen (Dar-es-Salam, Lindi), the Trappists (Natal, Congo), the Bene, English, and German missionary societies of Schenectady, Conya, Free State, Mill Hill (Upper Nile), of Steyl (Togo), the Oblates of Mary immaculata (Natal, Transvaal, Orange, Kimberley, Lower Cambeba, Equitao), etc.

The missionaries, if they do not precede the explorers or conquerors, accompany them; nowhere are they wanting. From the plains of the Abyssinian highlands of Abyssinia, from the Sudan to the Cape, on the great rivers and lakes, in the desert plains and in the equatorial forests, in the heart of the continent and in the islands, the Cross of Calvary is found to-day set up as the sign of redemption. Where the missionaries have been able to labour they have laboured, and where they could only die they have died. According to the Catholic Missionen, Oct. 1912, Africa, as far as it is a missionary country, consists of 6 dioceses, 44 vicariates, and 28 prefectures apostolical, 1 prelature nullius, and 7 independent missions, with 1,100,000 native members and some 600,000 catechumens. When we add the dioceses of Africa and her islands which are not under the jurisdiction of the Propaganda, and 22 others under the heading of the African mission field strictly speaking, we find the total number of Roman Catholics amounting 3,244,000—insignificant, however, when we consider the peoples of Africa, estimated at 180,000,000 or even 200,000,000,000.

III. N. AND S. AMERICA.—When, in 1492, Columbus landed on the island of San Salvador, he found a brown-skinned people whose physical appearance confirmed him in his opinion that he had at last reached India, and he called the inhabitants, therefore, 'Indios,' or 'Indians.' Subsequent navigators found that the same race was spread over the whole continent from the Arctic shores to Cape Horn, and that the people were more or less everywhere alike in their main physical characteristics, whence they extended the name 'Indians' to the inhabitants of both S. and N. America, with the exception of the Eskimos in the extreme north. Much has been written about the atrocities and cruelties of the white invaders of Spain, French, Portuguese, Dutch, and English—committed against the Red Men, the original inhabitants and owners of the soil. The Roman Catholic Church, from the very outset of the political conquest of S., C., and N. America, has acted as the protectress of the downtrodden Indians, and her missionaries—Franciscans, Dominicans, Jesuits, and Hieronymites such as Las Casas, Montesino, Nobrega, and Anchialita—have taken up their cause of liberty and religion. Lopez de Vega, one of the greatest Spanish poets, unfolds the whole aim and purpose of the Spanish conquerors in S. America in two lines:

Al rey infiJitas tierras
Y dio infiJitas almas

i.e., 'to extend the boundaries of the Spanish empire over the vast territories of the new world and thereby to gain an infinite number of souls to God.' Religion was her great end and aim, her all-pervading motive. The soothing influence of the Roman Catholic missionaries in S. America is still to be seen in the splendid churches and colleges and the thousands and millions of devoted converts; and, as long as Spain remained faithful to her solemn obligations, she was successful in her work. The destruction of the Indian missions, in which the Roman Catholic missionaries had worked for two hundred years, was due to the anti- Catholic policy of legislation of Spain and Portugal; the revival is to be ascribed to the efforts of Pius IX., Leo XIII., and Pius X., who worked in harmony with the rulers of the different States and republics through their apostolic delegates. To describe the Roman Catholic missionary work among the Indians in S. and C. America would mean to write the history of the Roman Catholic Church in the colonial period of these countries from 1200 to 1820. It may suffice to note the work of the Franciscans and the Jesuits during this period.

Franciscan missionaries accompanied Columbus in 1493, and they were followed by others to the Antilles in 1500, to Mexico or Nova Hispania (Peter of Ghent, Martia of Valencia, Molina, Ribeira, the famous Zumarraga [1548], the first archbishop of Mexico, and Martin of Coruña), to Yucatan (Diascoris of Land, [1579]), Guatemala and Honduras (Peter of Betancourt and Maldonado), Nicaragua and Costa Rica. In S. America the Franciscans had missions in Colombia and Venezuela (Juan a S. Philiberto [1572], Louis Zapata, and Ferdinand Lazana) with some 200,000 baptized Indians, in Peru (Mark of Nizza and Jodoku Rynke), in Ecuador and Uayali (Philip Luyando, Dominic Garcia, and Francis Alvarez [1686]). At the request of the king of Spain, Franciscans went to Chile (1539) (M. do not fall under the heading of the African mission field strictly speaking, we find the total number of Roman Catholics amounting to 3,244,000—insignificant, however, when we consider the peoples of Africa, estimated at 180,000,000 or even 200,000,000,000. In 18308 inhabi-

Between 1665 and 1762 Jesuit missionaries went to Florida, Mexico, and Peru, and, under Claudiae Acquaviva (1581-1616), the second successor of St.
Ignatius, to Chile and Paraguay, and later on to Maranhão. Names such as Núñez, Correa, Nobrega, and Anchieta have become household words among the Indians in S. America, while the name of Azevedo, who, with 39 of his fellow-missionaries, suffered martyrdom in Brazil (1570), stands for loyalty to duty. At the time of the suppression of the Jesuits in S. America the Jesuits were represented in Brazil by 445, in Maranhão by 146, in Paraguay by 564, in Mexico and California by 572, and in New Grenada, Chile, Peru, and Ecuador by 192, 242, 526, and 239 members respectively. 

Equally great among the defenders of the Indians are the Dominicans Las Casas, Luis Bertrand, Antonio Montesino, Dominicus de Betanzos, Dominicus Ortiz, the Augustinian Franciscans John de Medina, etc. With the suppression of the religious orders and the downfall of the Spanish supremacy in S. and C. America came also the destruction of the flourishing missions. The Christian Indians and Negroes were allowed to drift away, many were driven back into paganism, were slaughtered by their cruel white taskmasters, their plantations were destroyed or ruined, their schools and churches were reduced to ashes, and the missionary work which had been accomplished among them by the self-sacrificing heroes of Christian charity during two hundred years with the greatest outlay of money and valuable lives was destroyed. The political upheaval and the masonic influence in the beginning of the 19th. cent., with the subsequent scarcity of priests in the S. American Republics, scarcely allowed the missionaries to resume their work among the remaining Indians and Negroes. In recent years the Propaganda has appealed to willing workers among the various religious orders and missionary societies for help to establish missionary work among the Indians; yet it remains a difficult task to obtain a precise record of their work, since most of them are at the same time engaged among the numerous European colonists in the S. American Republics. In the following we give only the names of the vicarates, prefectures, and missions in the various States, the dates of their erection, and the missionaries engaged. 

The United States of America are composed of former British, Spanish, and French colonies, and their population—91,972,306 (Census of 1910)—consists of a small remnant of the original American Indians (270,000, according to some, 330,000 or 444,000, according to other writers), of imported Negro slaves and their descendent (9,827,763), of yellow or Asiatic immigrants (456,883), and of white or European settlers and their descendants. In the former Spanish (Florida, Texas, New Mexico) and French (Louisiana) colonies the Roman Catholic missionary work has been for the conversion and Christian civilization of the Indians from the beginning of the colonial epoch. Dominicans entered Florida in 1568, and they were supported in 1568 by the arrival of 19 Franciscans, 5 secular priests, and 8 Jesuits, among whom we may mention Fathers Martinez, Segura, de Quiros, and de Solis. In Texas and New Mexico Spanish Franciscans—Marcos de Niza, John of Padilla, and Louis of Escalón—had commenced in 1539, but made little progress. In Arizona Francis of Perras (1683) and in California Junipero Serra (1774) commenced missionary work among the Indians, and along the Mississippi we find Jesuits. The conquest of N. America by the white immigrants drove the Indians further and further, and 'spoliation, outrage, and murder' were the orders for almost one hundred years. Accordin to S. G. Gansi, 'The Indian Mission Past and Present,' in The Catholic Mind, no. 13 (New York, 1904), there remain in the United States some 270,000 Indians, of whom 100,000 are Roman Catholics, 40,000 Protestants (74,000), 110,000 'follow the old ways,' and 20,000 have no church affiliation. According to Streith (Atlas Hierarchicus, 1914), there are in the United States 440,931 Indians, of whom 84,741 (67,256) are Roman Catholics. These are scattered in 33 dioceses, possess 366 churches, and are attended by 163 priests (Benedictines, Franciscans, Jesuits, etc.) and 391 sisters; 100 schools are attended by 7,639 children. Famous among the Indian missionaries in the 19th. cent. are Father de Smet and Bishop Marty. 

The Negro population in the United States (one-ninth of the whole population), descendants of the slaves who for two hundred and fifty years had been imported into America, who for fifty years were not educated, but are still treated as outcasts. Owing to hostile legislation, the Roman Catholic Church had for many decades a poor chance of alleviating the miserable conditions of the Negroes. Baptism was inconsistent with the state of slavery. After the emancipation of the Negroes (1863) and the second Plenary Council of Baltimore (1884), Archbishop Spalding raised his voice for their conversion. The same course was pursued at the third council (1884) by Archbishop (Cardinal) Gibbons, who established a commission for Roman Catholic missionary work among the Negroes and the 'Catholic Board for Mission Work among the Colored People.' It is difficult to obtain the exact number of Negroes professing the Roman Catholic religion in the United States, since some live in coloured parishes while others are mingled with the white population, and of the latter a report is given in the Catholic Encyclopedia (xii. [1911] 629) gives the number as amounting to 200,000 or 225,000, while, according to the Atlas Hiearchicus, there are only 105,436 scattered in 33 dioceses, with 169 churches, 162 parishes (Josephphines), 256 missions (Lyons, Congregation of the Holy Ghost, and Mission of Steyl), and 173 schools with 14,181 pupils. 

The 'Catholic Board for Mission Work among the Colored People,' in its semi-annual publication of 1912, gives the following statistics: churches, 72; priests work-
Archipelago was handed over to Spanish Augustinians in 1786, and the latter were replaced by German Capuchins in 1907.

Several attempts were made by the Jesuits on the Philippines to open a mission in the Caroline Islands in 1700, 1708, 1709, and 1721, but all of them failed, till Father Canton arrived in 1711. Owing to the serious loss of lives, however, the Jesuits abandoned the field, and it was only in 1886 that twelve Spanish Capuchins were able to resume missionary work once more in the Caroline Islands; they remained in charge till 1901. The German Mariannes and the Carolines were united into one vicariate-episcopal with Wallis as its first bishop, while the United States possession of Guam was made an independent vicariate in charge of Spanish Capuchins. The vicariate of Guam numbered, in 1913, 12,000 Roman Catholics, and that of Marianne-Caroline had 5395 in 1914. The exception of these two island groups, the beginning and development of Roman Catholic missionary enterprise in the Pacific belong to the 19th and 20th centuries. It was on 7th July 1827 that Alexis Bachelot, accompanied by Abraham Armand, Patrick Short, and Robert Walsh of the Piesus Society, landed in Honolulu (Hav), to resume the apostolate in Oceania, the whole of which was placed under the ecclesiastical jurisdiction of Solages, then prefect-episcopal of Mauritius (1830). Three years after the apostolate of Oceania was established, and in quick succession the Roman Catholic missions were extended to the various island groups and entrusted to the two pioneer missionary societies in the Pacific, viz. the Missionaries of the Sacred Heart (Fiction), and the Society of Mary (Maristes). From 1827 to 1845, under Cardinal Prefect Caprilli of the Propaganda and under his pontificate as Gregory XVI., the Society of Piesus sent its missionaries to Hawaii (1827), the Gambier Islands (1834), Marquesas (1838), and Tahiti (1841), while the Maristes went to Wallis, Tonga, New Zealand (1837), New Caledonia (1843), Fiji (1844), and Samoa (1845). Gregory XVI., divided Oceania into two distinct vicariates: Eastern (1838–44) and Western Oceania (1838–48), from which Central Oceania was separated in 1842. These three vicariates form, so to speak, the roots of the ecclesiastical jurisdictions in the Pacific. In 1842 the Eastern vicariate were separated those of Hawaii, Marquesas, and Tahiti (1844 and 1848), and from the Central those of New Caledonia (1847), Samos (1851), and Fiji (1858). While W. Oceania was divided into the vicariates of Melanesia (1844–89) and Micronesia (1844–97). From Melanesia were separated New Guinea and New Pomerania (1889), and from Micronesia the Gilbert (1857) and the Carolines (1886). Some of the groups were again divided and subdivided, such as New Guinea and New Pomerania, from which were separated the Solomon (1897–98) and the Marshall Islands (1905). The Marianne group depended upon the diocese of Cebu (Philippines) till it was made an independent vicariate. The divisions demanded new helpers in the ever-expanding field, and during the colonial period of Oceania (1852–1905) three or four missionary societies were asked to help: to the Capuchins were entrusted the Caroline (1886 and 1904) and the Marianne Islands (1907), to the Piesus Society the Cook or Harvey Archipelago and Kaiser Wilhelmland W. (1913), to the Society of the Sacred Heart (Steyl) Kaiser Wilhelmsland E. (1896), to the Maristes the New Hebrides (1887) and the Solomon Islands (1888), and, finally, to the Congregation of the Sacred Heart the Carolines (1883), New Britain, British and Dutch (1884 and 1903), the Gilbert (1888) and the Ellice

* According to Katholische Missions, July 1914, the Roman Catholic population of the Marianne-Carolines is 500, that of Guam, 15,400.
Islands (1897), and, lastly, the Marshall Islands (1899).
Where eighty years ago there were—with the exception of the Marianne group—scarcely any Roman Catholics, and no priest or bishop, we find to-day an established hierarchy, with 14 bishoprics, 4 prefectures-apostolic, and 1 mission with 131,000 native and 83,000 European members, 457 priests (8 native priests), 227 brothers, 418 sisters, 1000 stations, 900 churches and chapels, and 700 schools with 30,000 pupils. The population of Oceania proper (without Australia and Tasmania) amounts to 2,650,000 or (without New Zealand, no longer a missionary country) 2,600,000, or, according to others, 1,540,000 souls. The Roman Catholic population is, therefore, comparatively small, and the work, especially in New Guinea, the Solomon group, and other islands, is little advanced. But, bearing in mind the social, moral, religious, political, ethnological, and linguistic problems of the new Christianizing their natives, the unhealthy climate, in many cases absolutely unsuitable for Europeans, the variety of dialects even among the inhabitants of the same islands, and, lastly, the hostile attitude of some of the European Powers that have divided the islands among themselves towards every Christian enterprise, and the fierce opposition displayed against the Roman Catholic Missionaries from 1830 to 1880, the Roman Catholic Church has made slow but sure progress. She has become a Christianizing and civilizing factor in the Pacific, and as such she is recognized by the various European governments and their representatives, by explorers and tourists, and by missionaries of every denomination, whatever their attitude towards the tenets of the Roman Catholic Church may be.
Famous among the Roman Catholic missionaries in the Pacific are the two pioneer missionaries (later bishops), Bataillon (1842-77) of C. Oceania, the founder of the missions in New Caledonia, Fiji, Samoa, and Rotuma, and his fellow-worker, Pompallier of W. Oceania, Bishop Epalle, who was murdered in 1845, Bishop Rouhonzé of E. Oceania, etc. Nor must we forget Father Chanel, the proto-martyr of the Pacific and the apostle of Futuna (1841), Father Damien Devenster, the leper apostle of Molokai, or Fathers Bontemps of the Gilbert and Castanet of the Cook Islands, and, lastly, Brother Eugene Eyraud, the lay apostle of Easter Island.
As space does not allow of a detailed history of the interesting work of Roman Catholic missionary enterprise in the Pacific, we give on p. 726 a table of statistics which will tell the story of the heroic work which the missionaries have achieved within the years 1830-1913 under very trying circumstances of persecution, hunger, poverty, and death.
In the following table of statistics we give the summary of missionary work during the 19th cent. and the results of previous centuries since the Reformation. These statistics we borrow from Krohe (op. cit. p. 123).

**MISSIONS (Christian, Protestant).**

**I. INTRODUCTION.** The missions of the Reformed Churches of Christendom seem at first sight to be discontinuous from those of the mediaval Church and from the post-Reformation missions of the Roman Church...
extensive missions from the 16th to the 18th cent.,
the Reformed Churches during the same period
were doing practically nothing. Indeed, their
divines, when they touched the subject of the
Church obligation urged upon them, were mainly occupied in elaborating arguments to show
that the command of Christ to do this had lapsed
in their day. The causes of this inaction are com-
plex.
After the great crisis of the Reformation the
Protestant countries of Europe had not only to
adapt their religious life to new conditions, but
also to maintain their political existence against
powerful hostile combinations. Meanwhile it was
to Spain and Portugal, the great representatives
of the old creed, that the discovery of America and
of the Cape route to India had fallen. To them,
accordingly, the pope had committed authority
over the newly-found regions of America and
Africa as well as the E. Indies, and this dominion
they were able, to a considerable extent, to make
effective. The revival of the N. Church which
followed the Reformation naturally threw much
of its best force into these national undertakings,
sanctioned by 'holy Church.' With the armies and
administrators of Spain and Portugal went the
missionaries, and from this time it was the
missionaries who were to bring these new territories into the Roman
obedience.
With the 17th cent. began the colonial expan-
sion of England, which resulted in the Christian-
ization of N. America, not by the labour of
missionaries, but by the migration of Christian
peoples. A little later the Netherlands, freed from
the rule of Spain, began to take over the dominions
of Portugal in the East, and so the advent of a
great empire in the Malay Archipelago; they also
colonized the extreme of S. Africa and thereby
founded a white nation in yet another temperate
clima. To the Dutch also largely belongs the
credit of opening commercial relations with China
and Japan. Meanwhile, in the course of the 18th
cent., the great Indian empire of Britain came into
existence, and, following on this, relations with
the Farther East developed during the 19th century.
The same period saw the penetration of Africa from
south, east, and west, and its partition between
Western Powers, among whom Britain and,
later, Germany represented the Church. The Reformed faiths.
It was through these political developments that
the missionary sphere of the Protestant nations
was opened up, so that, when their religious life was
officially revived towards the close of the 18th cent., the missionary call of an open world
for which they were specially responsible came to
the Reformed Christians with irresistible force.
When we have indicated the main features of the
expansion of Protestant nations, we have indicated
also the main lines of their missionary develop-
ment as compared with that of the primitive and
the medieval Church. At first Christianity was
conceived in its universal destiny, but was practically confined by a limited world-outlook and
the lack of communication between East and
West. In the Middle Ages the Church on the
one side was straitened by Islam, and on the other
was grappling with the unfinished task of
begging and training the barbarian nations of Europe.
In both these periods the evangelist and the evan-
gelist, of a similar race and of cultures not radically different. In the modern period the world-outlook has become complete and practical, while, with the facility of intercourse,
the immensely greater progress in arts and sciences
since the Reformation connected nations has made the intellectual and social difference
between the Christian and the non-Christian far
greater than at any earlier time. This is at
once the advantage and the impediment of modern missions as compared with ancient.
Modern missions generally are continuous with
the primitive expansion of Christianity, and in
the case of Protestant the world, we must
always look back to the primitive records of the faith and
to its early history in order to estimate their work.
But in so doing we are at once struck by certain
outstanding contrasts connected with the historic
situation. Since in primitive times the missionary
and his hearers belonged broadly to the same
level of culture and to the same sphere of thought
and language, and were members of similar
communities, the whole range of problems
noted by the terms 'home base' and 'foreign
field' was for them non-existent, and the economic
problem of modern missions was present only in
rare, or even in an inverted form, financial help
being sent by daughters Churches to the mother.
Not unconnected with this feature of early condi-
tions is another fact. The propagation of the faith
was the work of the Church in each place, whether
through its officers or through its ordinary members,
for the Church itself was the evangelizing body.
Hence in the early records of expansion the pro-
fessional missionary, as distinguished from the
ordinary minister, had no existence. Finally, the
political relation of the missionary to his hearers
was either simply that of a fellow-subject of the
same great empire or that of a stranger from a
land of no very different conditions.
Following on the adoption of Christianity as the
religion of the Roman State, the irruption of the
barbarians, and the rise of monasticism, these
conditions were modified. The missionary trained
and set apart for the work appears on the scene, more
often as a member of an order than as an isolated
evangelist. The conversion and control of virile
and turbulent barbarians seemed to demand a
sterner discipline than the Church alone could
carry off; repeatedly the arm of the State was
generously used, and orders came into existence
that were half-monk, half-warrior, such as the
Knights of St. John and the Order of Teutonic
Knights. The Christianization of the West was
largely accomplished through monastic and military
agents, though the individual missionary was
not absent. In Asia the wide-spread missionary
work of the Nestorians had little of the political
element, but it went down before the great current
of Asiatic migrations—either under the military
impact of Islam or under the unified forces of
Buddhism. On both sides of the world the faith
spread or re-established in the midst of contact and
strife of nations whose land-frontiers were con-
tinuous. The more stringent organization of mis-
sionary work and the training of the worker had
made progress; the political factor had de-
teriorated its texture.
The doctrine of the Reformation insisted on the
liberty of the individual conscience and the freedom
of individual access to God, together with the
absolutism of the sovereign state. The result of this in principle, although
slowly realized in practice, was the elimination of
the political factor from the spiritual activity
of the Church, more especially missionary work.
The missions of the counter-Reformation were
still closely linked with political conquest and ad-
ministration, but also were the earlier Dutch
Protestant mission work. Both were in
reality survivals of the medieval method. The
modern missionary movement, both in the Roman and
in the Reformed communions, is substantially that
of free associations, working on a basis of voluntary co-operation. The missionary orders of the Roman Church have indeed retained continuously their historical organization, adding new orders, as necessary. The missionary societies of Protestant Christendom are, in effect, an expression of the same principle, only that in them the exercise of individual freedom has been subordinated to a suprema organization and discipline for a common purpose. It would not be correct to say that Protestant missions are differentiated from Roman by a lack of direct subordination to Church authority, for many of them are directly administered by the governing bodies of their Churches. There is, however, this obvious difference, that the missions of the Roman Church are all co-ordinated and guided by a single central authority which is consistently lacking in Protestant Christendom. On the other hand, the Protestant organizations are now systematically endeavouring to gain the benefits of unity, together with those of freedom, by voluntary co-operation and co-ordination, not only as between Churches but also as between nations.

II. HISTORICAL—Formation and development of the Moravian Church. Up to the 17th century the missionary societies in Britain and on the Continent were closely connected. The Dutch East India Company, founded in 1602, was enjoined by its charter to care for the conversion of the heathen in the newly won possessions of the Republic, and to appoint preachers for the purpose; but the work was carried on mechanically under government pressure. After a century the number of registered Christians in Ceylon had reached 10,000, and in Amboyna 40,000, but few were left of these by 1690 in Ceylon after English rule came in, and only a small minority in Java under Dutch rule. In New England the Pilgrim Fathers at first had to defend life and property against the Indian tribes who surrounded them, but in 1646 John Eliot, pastor of Roxbury, gave himself to work among the aborigines, learning their language, carefully teaching them, and gathering them into organized churches—the first real Protestant missionary enterprise. In 1649 the Corporation for the Propagation of the Gospel in New England was formed, and is still extant, but its activities have consisted chiefly in the collection of funds. In 1688 the efforts of Thomas Bray, Rector of Sheldon, Warwickshire, resulted in the formation of the Society for the Propagation of Christian Knowledge. During the 18th century this aided the Danish-Halle Mission and other missions in India, but its principal work since 1813 has been the publication and circulation of Christian literature, both at home and abroad. In 1701 the Society for the Propagation of the Gospel was founded to provide clergy for the colonies and dependencies of Great Britain and also to take steps for the conversion of the natives; but little was done for the latter object till after 1817. These three societies are connected with the Church of England.

The revival of spiritual religion in Germany known as Pietism (q.v.) resulted in two missionary movements during the 18th century. Friedrich Wilhelm IV., King of Denmark, in 1705, for his colonial dominions, found the men whom he needed in Bartholomew Ziegelnagel and Heinrich Plütschau, followers of the great Pietist leader, Hermann August Francke. They were sent out in 1705 to the Danish settlement of Tranquebar in S. India, and there founded a work which was developed by many successors of note, especially Christian Friedrich Schmoller. Their work was partly maintained by the S.P.C.K. The other far-reaching missionary movement of German origin was the Moravian. Members of the Unitas Fratrum of Moravia, driven from their homes for their faith, were settled by the Pietist Nikolaus Ludvig, Count von Zinzendorf, on his estate at Herrnhut in 1702, and after their zeal led them to send missionaries to the Negroes of the W. Indies and to the Greenlanders who had been evangelized by the Norwegians, Hans Egede, but were left after his return uncared for. This was the beginning of a work which was carried on by a community never numbering more than 40,000 souls in Europe, but with 100,000 converts abroad, and a roll of more than 2,000 missionaries, sent out since its foundation. See, further, art. MORAVIANS.

The Presbyterian Society for the Promotion of Christian Knowledge, founded in Scotland in 1766, deserves mention, because among a few missionaries whom it sent to the Indians of N. America was David Brainerd, the evangelist of the Delaware Indians. He died after only three years' work, but his biography powerfully influenced William MARSH MADEN of Neshaminy. The Rev. Zerby worked not only as between Churches but also as between nations.

By the middle of the 18th century, these early movements of Protestant missions had greatly slackened owing to religious deadness which had overtaken the various Churches. But the antedote to this was already working in the evangelical revival connected on the Continent with the names of Francke and Lipsenzeder, and in England with those of John Wesley (1703-91) and George Whitefield (1714-70). The inevitable result in the revival of zeal for the evangelization of the outside world became manifest towards the end of the century. The two great leaders and their immediate followers were missionaries of the Church of England, but, owing to the deadness of her leaders and people, the movement, while powerfully influencing the Church, resulted in the formation of the strongest of the Protestant bodies—the Methodists of England and America. But it was to another dissenting body that the missionary call first came effectively. The great pioneer William Carey and his fellows founded the Baptist Missionary Society in 1792. In 1795 followed the Seceding society, at first called simply the Missionary Society. It was founded by Church of England Independents, and Presbyterian ministers. In 1796 two Scottish associations were established, as the Edinburgh and Glasgow Societies. In 1799 Evangelical members of the Church of England decided to establish the Church Missionary Society, and the un denominational society already mentioned became known as the London Missionary Society. Though others are not excluded, it has since then practically remained the organ of the English Congregationalists. The British and Foreign Bible Society was set on foot in 1804 has the joint action of churchmen and dissenters. The Wesleyan Methodists had already been carrying on missionary work in East and West since 1788 under the personal guidance of Thomas Coke, but after his death in 1814 they established their own society. The societies named, together with the revived operations of the S.P.C.K., represent the formative beginnings of Protestant missionary work in Great Britain. There were also two bodies of Commissioners for Foreign Missions, formed mainly by Congregationalists in 1810, and the American Baptist Missionary Union (1814) were the earliest societies in America. Before sketching the development of these and indicating the minor societies, it is desirable to mention two outside movements which greatly influenced the history of missions in Africa and Oceania.

It is reckoned that the African slave-trade during the hundred years preceding 1786 conveyed
no fewer than 2,000,000 Negroes into British colonies, chiefly the W. Indies and British N. America; but even in England Negroes were sold and bought till the judgment pronounced by Lord Chancellor Hardwicke in 1772: 'As soon as any slave sets his foot on English ground, he becomes free.' This formed the starting-point for the campaign against the slave-trade in the entire British Empire.Attempts to abolish the slave-trade in British possessions outside the United Kingdom, nor with the slave-trade carried on by foreign nations. But it gave a powerful impulse to missionary work among Negroes, and arrangements were made at Sierra Leone for the reception of liberated slaves, of whom many thousands were settled there under the care of C.M.S. missionaries, the same thing being done later on the E. African coast near Zanzibar. The agitation against slavery in the British dominions was continued by Wilberforce and his successors till it was crowned with success in the Emancipation Act of 1833, which liberated 1,000,000 slaves in the W. Indies, and paid £2,000,000 to the owners as compensation. Slavery in the United States, and the trade that fed it, continued till Emancipation Proclamation in 1863. Since then the remnant of slavery under Christian rule has been abolished, and slavery in Muslim and pagan lands has been greatly limited. As a result of the shifting of populations, there are now some 12,000,000 Christianized Negroes in the United States and W. Indies, apart from those who have been brought in through missionary effort in Africa.

In the East the greatest of all colonial empires was built up by English merchant adventurers. The East India Company dates its charter from the year 1600, but for 160 years little was done for the spiritual benefit of its European servants, and nothing for the evangelization of the natives of the land. After the battle of Plassey in 1757 things improved somewhat among Europeans, but, when Parliament, on the motion of Wilberforce, in 1792 was ready to afford facilities for missionary work in India, the opposition of the E.I.C. threw out the schemes, and for the next 100 years Christian missionaries were rigorously excluded from its territories. At length in 1813, when the E.I.C. charter was once more revised, not only was the entire establishment provided for, but the representatives of which have done net a little to forward the cause of missions.

L. BRITAIN.—The later development of British society, especially of the Anglican Church, was strongly influenced by several religious movements. The Irish Revival of 1859 affected England in 1860 and gave an impetus to the formation of denominational societies, such as the China Inland Mission. In 1875 Dwight L. Moody's first revival in London and the first Keswick Convention marked the beginning of a movement which resulted in an immense growth of missionary zeal, both in offerings and in service on the part of the clergy, especially in connexion with the C.M.S. The Tractarian Movement had influenced one side of the Church of England for a generation before it became active as a separate missionary body in the mission-field during the last quarter of the century.

(a) Anglican.—The Society for the Propagation of the Gospel in 1817 was supporting a few clergy and lay workers in the British colonies and elsewhere. From that time it began its missions to non-Christians (1823) by sending men to Bengal and to S. India, where Robert Caldwell was dis-tinguished as linguist and bishop. It has carried on all its missions under the direct supervision of the diocesan bishops in the mission-field, and it has incurred in its activities the expense of administration to white men in the colonies and on the continent of Europe. Its work among non-Christians has steadily increased and now absorbs £185,000 out of an income of £220,000. In India it has occupied Calcutta, Lucknow, Delhi, Bombay, Madras, Assam, and Burma. In 1821 it advanced to S. Africa, in 1845 to Borneo, in 1862 to the Pacific, in 1863 to N. China, in 1873 to Japan, in 1892 to Korea, in 1892 to Manchuria, and in 1903 to Siam. By constitution the S.P.G. is as broad as the Church of England, but as a matter of fact it has represented mainly the High Church side. It has developed in varying degrees the community type of missions. The Oxford Mission to Calcutta (1881) is now independent; the Cambridge Mission to Delhi and the Cawnpore Church Mission is still connected with the S.P.G. Its most effective and interim work is those to the Tamils of Tinnevelly and to the Kols of Chota Nagpur, both in India.

The principal other societies of this type are: (1) the Melanesian Mission, founded in 1846 by the Rev. George A. Selwyn, and supported by £15,000 paid to the owners as compensation. Slavery in the United States, and the trade that fed it, continued till Emancipation Proclamation in 1863. Since then what remained of slavery under Christian rule has been abolished, and slavery in Muslim and pagan lands has been greatly limited. As a result of the shifting of populations, there are now some 12,000,000 Christianized Negroes in the United States and W. Indies, apart from those who have been brought in through missionary effort in Africa.

The earliest missions of the Church Missionary Society, like those of the S.P.G. and S.P.C.K., were Germans, and the Basel Missionary Institution, established in 1815, supplied no fewer than 88 C.M.S. missionaries, including the Arabic scholar and writer, K. G. Pucher, and the E. African explorers, J. Rebmann and L. Krapf. Its first mission was in W. Africa (1804). India was entered in 1813, when 'Abel-al-Mahb, the disciple of Henry Martyn, opened work at Agra. In 1814 Madras and New Zealand were occupied; Travancore in 1816; Ceylon in 1818; N.W. Canada in 1829; in 1850 C.T.E. Rhenius began work in Tinnevelly. In 1837 L. Krapf first went to E. Africa, and in 1841 H. G. Cox and L. L. Noble began the Telugu Mission in S. India. In 1847 China was entered by W. A. Russell and R. H. Cobbold. In 1850 the Sindhi Mission was begun, and in 1853 the Punjab Mission. An ecclesiastical establishment was provided for Europeans, the representatives of which have done net a little to forward the cause of missions.

The earliest mission of the Church Missionary Society, like those of the S.P.G. and S.P.C.K., was established in 1815, supplied no fewer than 88 C.M.S. missionaries, including the Arabic scholar and writer, K. G. Pucher, and the E. African explorers, J. Rebmann and L. Krapf. Its first mission was in W. Africa (1804). Canada in 1829; in 1850 C.T.E. Rhenius began work in Tinnevelly. In 1837 L. Krapf first went to E. Africa, and in 1841 H. G. Cox and L. L. Noble began the Telugu Mission in S. India. In 1847 China was entered by W. A. Russell and R. H. Cobbold. In 1850 the Sindhi Mission was begun, and in 1853 the Punjab Mission. An ecclesiastical establishment was provided for Europeans, the representatives of which have done net a little to forward the cause of missions.

The C.M.S. represents the Evangelical school of the Church of England, in touch with the more pronounced Anglicanism on the one side and with the nonconformist movement on the other. Its missionaries, after the first supply of German recruits, were drawn largely from its college at Islington, but of late years they have been furnished in increasing numbers by the universities. It is the largest of the Protestant mission societies, with a missionary roll of 1340, an annual income of £400,000, and 450,000 adherents in the mission-field.

The Church Missionary Society, founded in 1899, works side by side with the C.M.S. in India and China. In 1913-14 it had 224 women missionaries, 27,239 pupils in zemindars and schools, and an income of £60,000. The South American Missionary Society (1837), which works in the Patagonian work begun by Allen Gardiner, and also works in Paraguay and S. Chile.
Most of these societies have associations in Ireland and Scotland, but the contributions and missionaries from those countries are not separately given.

French Free Churches. — Only the chief societies can be dealt with here. The earliest is the London Missionary Society (1786). The discoveries of Captain John Cook moved the founders to send a missionary to King Pomare in 1788, who was assassinated in 1797. John Williams, after years of work, was martyred on the island of Eromanga (1839). In 1798 S. Africa was occupied, and the labours of Robert Moffat, followed by those of his yet more distinguished son-in-law, David Livingstone, became classical. The most remarkable of L.M.S. missions was that in Madagascar, founded in 1820, and resumed, after long expulsion of the missionaries, with extraordinary fruitfulness. In N. and S. India L.M.S. work has been going on since 1840, extending to Bengal, the United Provinces, Madras, and Travancore. Robert Morrison of this society was the first missionary to enter China (1807), and missions are now carried on in all N. China. S. C. Africa was taken up as a memorial to Livingstone in 1877. In 1913-14 this mission had 294 missionaries, an income of £214,000, and 316,000 adherents.

The Baptist Missionary Society, founded in 1792 on the impulse of William Carey, cobbler, preacher, missionary, and linguist, sent him out as its first messenger. Moved by the narrative of Cook's voyages in the South Seas, his first desire was to go there, but his destination was changed to India, and, being debarred by the E.I.C.'s regulations from settling in British territory, he started the following spring at the Danish settlement of Serampore. This became the base for his unique literary and linguistic work, carried on by Carey with the help of his colleagues, Joshua Marshman and William Ward. From Bengal the English Baptists extended their work eastwards to Assam, north-westwards to Agra, Delhi, and Simla, and southwards to Orissa; also to Ceylon, where a considerable work is done, to three provinces of China, and in Africa to the Lower and Upper Congo; they also did work in Kamerun, which was eventually made over to German missionaries when their government occupied the country. In 1913-14 they had 463 missionaries, an income of £40,000, and 10,000 adherents.

The Wesleyan Methodists had already begun work in the British W. Indies under Thomas Coke in 1786, and in W. Africa from 1811. After his death the Wesleyan Methodist Missionary Society was founded as a separate organization, and the work advanced in 1814 to Ceylon, in 1815 to S. Africa, in 1817 to India, in 1822 to Australasia, and in 1831 to China. In the last region, and in S. Africa and the W. Indies, many of the churches are no longer under the management of the society. Like the Baptists in the north of India, the Wesleyans in the south have done much for the cause of vernacular literature. In 1913-14 their missionaries numbered 392, their income was £130,000, and their adherents 307,000.

Of societies connected with the minor sects of Methodism it must suffice to mention the Methodist New Connexion, working in China; the United Methodists (1837), in China, E. and W. Africa, and Jamaica; and the Primitive Methodists (1889), in Africa. The Methodist missions generally are an integral part of the Church organizations. The Welsh Calvinistic Methodists (1840) are, properly speaking, Presbyterian. They have an exceptionally successful work among the Khasis of the Assam hills.

The above may add here the Friends' Foreign Mission Association (1865), working in Madagascar, India, Ceylon, China, and Syria. Like the Moravians, though very much later in time, the Friends prosecute their missionary operations to an extent that is in striking contrast to the smallness of their community, reckoned, as it is, at some 30,000 members.

(c) Presbyterian.—The Presbyterian societies, like the Methodist, are part and parcel of the Church organizations.

Scottish Churches. — The Glasgow and Scottish Missionary Societies, founded in 1786, carried on their work in the face of considerable indifference and even opposition. In 1824, at the instance of John Inglis, the General Assembly undertook a mission to India, and the sending out in 1829 of Alexander Duff, followed by Murray Mitchell and John Wilson, marked an epoch in the history of educational missions in India, which these men opened up with marvellous ability and zeal. The work at Lovelace in Kaffraria (1844) became famous among industrial missions. At the Disruption in 1843 the missionaries in India and Kaffraria cast in their lot with the United Church, and this body soon greatly increased its operations, adding Natal, Nyasaland, the New Hebrides, Syria, and S. Arabia. Since the union of the Free Church with the United Presbyterians, the United Free Church field has included operations in W. Africa, the W. Indies, China, and Japan. The work of the Established Church was also revived and extended in India, C. Africa, and China.

The English Presbyterian Church (1847) is working in China, Formosa, the Straits Settlements, and India; the Irish Presbyterian Church (1840) in Manchuria and India.

All these societies have their organizations for women's missionary work, in some cases distinct from the main body, but mostly as a department of it. Generally speaking, the women's societies or auxiliaries are later developments, for it was hardly practicable to send out unmarried women as missionaries till after the middle of the last century; before this, work among women was carried on by the wives of missionaries, to whom some of the most important organizations owe their foundation and development. In the figures given the women's work is included in that of the main society.

(d) Undenominational. — Among undenominational societies we notice the two noted theological schools.

The Indian Female Normal School and Instruction Society was founded in 1859 for the educational purposes indicated in its name. In 1880 the majority of the Church of England members seceded, and started the Church of England Zemana Missionary Society. Under the new name of the Zemana, Bible, and Medical Mission the original body has continued to cooperate with Church of England and Presbyterian missions in India, and has developed medical work. The China Inland Mission was founded in 1865 by J. Hudson Taylor, who had already worked in China as an evangelist from 1833. Vocationists have continued to insist on, but not high educational attainments; careful training, however, is given in language-schools on the field. No direct appeals for funds are made at the home base, and no fixed salary is guaranteed to the missionary. In the case of many of the missionaries there has been to 'occupy' province after province by stationing missionaries in the inland provincial capitals, instead of remaining in or near the treaty ports on the coast. The sending out of seven Cambridge athletes in 1885 created great enthusiasm. The work of the C.I.M. has spread rapidly and given an impetus to advance by other societies into inland China. In the Boxer Rebellion of 1900 the martyr roll of this society far exceeded that of any other. The
Salvation Army has been doing missionary work, principally in India, since 1833; its operations have been mostly of a social kind, such as industrial undertakings and heathen missions. The British and Foreign Bible Society (1804), which has issued 457 of these versions up to 1914. The number of these is being increased year by year, and the work of revision of older versions in the light of the best scholarship is constantly proceeding. The Bible Society publishes neither book nor script before they were reduced to writing by the missionaries, who soon followed up the speaking-book and the school-reader with the Gospels, and gradually added the whole NT and in many cases the OT also. The B. and F. B. S. circulated, in 1914, 10,162,415 copies of the Scriptures. It received a charitable income (exclusive of the British and Foreign Bible Society, the Society for Promoting Christian Knowledge, already noticed, is the oldest society. It helps Church of England missions in all parts of the world, primarily with books of devotion and theology, but also with works of a more general nature. It has published in 99 languages. The Religious Tract Society (1799), with an income (apart from sales) of £71,156, does a similar work on an altruist basis, and has been the means of founding several daughter societies in India and China. It publishes in 200 languages. The Christian Literature Society for India was founded in 1836 as a Christian reply to the mutiny. Under John Murdoch (1859-1904) it developed a wide-spread activity in production, both of educational works and of religious and general literature. A similar Christian Literature Society for China has done much in producing high-class literature under the leadership of Timothy Richards and others. The Nile Mission Press at Cairo (1902) produces Arabic literature for the Muslims of Egypt, and has found a footing on an educational basis, and has been the means of founding several daughter societies in India and China. It publishes in 200 languages. The Christian Literature Society for India has about 2,400 members and an annual income of £10,000. Its work is done in India, Burma, and Japan. Its educational work in India, especially is of a high order. The Presbyterians of the Southern States (Presbyterian Church in the U.S.A.; 1861) work in Japan, Korea, and the United States. The United Presbyterian Church (1859) maintains a vigorous work in China, India, and Egypt (the last named chiefly among Copts); in their Punjab Mission associations have been very large. The Dutch Reformed Church (1833) works in China, Japan, India, and on the Persian Gulf. The Disciples of Christ have missions in China, Japan, India, and Turkey. The first of these denominations in 1914 had an income of £361,142, 1587 missionaries, and 370,238 adherents.

The Lutheran Churches of the United States, numbering over 2,000,000 communicants (and, say, 10,000,000 adherents), are divided into six chief sects, whose names are: Lutherans, Methodists, and Presbyterians. In addition to the Boards connected with the various Churches, one organization, connected with no Church in particular, has powerfully influenced the missionary movements. It is the Student Volunteer Missionary Union. The general movement continued in a less organized form in Britain till it was formally established there also, in Edinburgh, in 1892. It soon became evident that the appeal for missionary service is a natural appeal. It is impossible to estimate accurately the distribution of income between home and foreign missions.
service could not be effective without a strengthening of the general religious and moral life of the student world at large, and in 1838 the Student Christian Movement for Great Britain and Ireland was started. This has now a membership of over 9000 students, including those in theological colleges, and it is affiliated to the world Federation, with a membership of over 180,000 students in some 40 countries. The S.V.M.U. has become a department of the more general work. Since 1896 it has systematized the study of mission-field maps, thus providing a basis for the formation of study circles and the provision of suitable textbooks for them. The Liverpool Conference of 1912 co-ordinated the foreign missionary and home social problems of the movement more closely than before, and the S.C.M. works at the solution of both as inseparable the one from the other.

From the British branch of the S.V.M.U. over 2000 students have left in thirteen years for the 60,000, 500 are still in college, and 500 are undergoing post-collegiate training for missionary work. The Union sends out no missionaries itself, but only through the societies.

In 1800 the Society for the propagation of the gospel in foreign parts was founded, and the first mission field was the Cambodian, the society's missionaries being taken over by other societies. The Moravians quietly continued their work and celebrated their first centenary in 1852 with much cause for rejoicing; their influence was felt, too, in new undertakings elsewhere. During their second century the work has increased till it embraces 21 mission-fields, mostly in America, but also in Africa, Australia, and India. The income from home contributions is little more than one-third of the total expenditure, the balance being met from free-will offerings in the mission-field, government grants, and trade profits. The fields of work are largely the most remote and inhospitable lands, such as Greenland, Labrador, Alaska, the Mosquito Coast, N. Australia, and Lesser Tibet.

Other German Protestant missionary efforts began with the training of missionaries for societies outside of Germany. Johann Jakob Reisner from 1800 to 1827 carried on a missionary seminary in Berlin whose alumni were sent out to Holland and England. They included pioneers in America (C. G. Windthorst and others), China (C. G. Gustaf). In S. Germany Christiana's life was strongest in Württemberg, Baden, and German Switzerland, and here missionary interest resulted in the foundation of the Evangelical Missionary Society in 1815, from which 88 candidates were passed on to the C.M.S., many of whose early missions were founded or conducted by them. In 1822 the Basel Evangelical Missionary Society was founded, largely through the efforts of Christian Gottlieb Barth. Their first permanent mission was started on the Gold Coast in 1828. In 1843 work was begun on the south-west coast of India, in 1846 in China (Kwantung), and in 1856 Cambodia, becoming a German colony, was taken over from the Baptist Missionary Society. The Indian Association connected with the Basel Mission has taken a lead in industrial work in S. India, where it carries on weaving, tile-making, etc., at Mangaluru and other centres.

The Berlin Missionary Society sent out its first missionaries to Africa in 1834, and in 1872 it took over work in S. China, and in 1891 in E. Africa. The work of the Wupper Missions in West Africa is a strong centre of active Christian life, and here, after much preliminary work, the Rhinische Missionary Society was founded in 1835. This, too, began work first in S. Africa, extending in 1834 to the nation of the Chokwe in the Iuba valley, then in 1846 to China, and in 1837 to Kaiser Wilhelmland. The missions in S. Africa have attained a large measure of self-support, and in Sumatra many

Muhammadans have been brought in, together with masses of pagans.

The year 1836 saw the foundation of three German societies. The Bremer Missionary Society has had a chequered career, its principal mission being in W. Africa, where the deadly climate has carried off many missionaries. The Leipzig Missionary Society was first established in Dresden, and transferred to Leipzig by its directors, K. Graul, in 1848. It makes more use of university graduates as missionaries than do the other German missions, which generally employ by the formation of study circles and the provision of suitable textbooks for them. The Liverpool Conference of 1912 co-ordinated the foreign missionary and home social problems of the movement more closely than before, and the S.C.M. works at the solution of both as inseparable the one from the other. From the British branch of the S.V.M.U. over 2000 students have left in thirteen years for the 60,000, 500 are still in college, and 500 are undergoing post-collegiate training for missionary work. The Union sends out no missionaries itself, but only through the societies.

In 1800 the Society for the propagation of the gospel in foreign parts was founded, and the first mission field was the Cambodian, the society's missionaries being taken over by other societies. The Moravians quietly continued their work and celebrated their first centenary in 1852 with much cause for rejoicing; their influence was felt, too, in new undertakings elsewhere. During their second century the work has increased till it embraces 21 mission-fields, mostly in America, but also in Africa, Australia, and India. The income from home contributions is little more than one-third of the total expenditure, the balance being met from free-will offerings in the mission-field, government grants, and trade profits. The fields of work are largely the most remote and inhospitable lands, such as Greenland, Labrador, Alaska, the Mosquito Coast, N. Australia, and Lesser Tibet.

Other German Protestant missionary efforts began with the training of missionaries for societies outside of Germany. Johann Jakob Reisner from 1800 to 1827 carried on a missionary seminary in Berlin whose alumni were sent out to Holland and England. They included pioneers in America (C. G. Windthorst and others), China (C. G. Gustaf). In S. Germany Christiana's life was strongest in Württemberg, Baden, and German Switzerland, and here missionary interest resulted in the foundation of the Evangelical Missionary Society in 1815, from which 88 candidates were passed on to the C.M.S., many of whose early missions were founded or conducted by them. In 1822 the Basel Evangelical Missionary Society was founded, largely through the efforts of Christian Gottlieb Barth. Their first permanent mission was started on the Gold Coast in 1828. In 1843 work was begun on the south-west coast of India, in 1846 in China (Kwantung), and in 1856 Cambodia, becoming a German colony, was taken over from the Baptist Missionary Society. The Indian Association connected with the Basel Mission has taken a lead in industrial work in S. India, where it carries on weaving, tile-making, etc., at Mangaluru and other centres.

The Berlin Missionary Society sent out its first missionaries to Africa in 1834, and in 1872 it took over work in S. China, and in 1891 in E. Africa. The work of the Wupper Missions in West Africa is a strong centre of active Christian life, and here, after much preliminary work, the Rhinische Missionary Society was founded in 1835. This, too, began work first in S. Africa, extending in 1834 to the nation of the Chokwe in the Iuba valley, then in 1846 to China, and in 1837 to Kaiser Wilhelmland. The missions in S. Africa have attained a large measure of self-support, and in Sumatra many
Society (1842) has missions among the Zulus and in Madagascar. There are minor missions connected with India and China, and other societies. Sweden also has had its own Swedish Missionary Society since 1835, working in S. India and S. Africa, and a Swedish Missionary Union, since 1876, with missionary stations in Algeria, Persia, Asia Minor, and Chinese Turkestan, besides minor associations. Finland has a Lutheran Missionary Society with work in S. Africa and Free Church missions in China and India.

With the British colonial Churches of various denominations maintain a considerable and increasing amount of missionary work. This is done partly through societies locally formed, partly by assisting the older societies in home lands, Australia and New Zealand, in addition to work among their own aborigines, send men and women principally to Asiatic countries, the S. African churches to the pagans of their own country, the Free Church to their own neighbours and to their race-fellows in Africa. In India and China, though very few churches are as yet self-supporting, various indigenous basic societies have been formed, such as the Tinnevelly Missionary Society and the National Missionary Society, for work in various parts of India. These two had 2416 adherents, 5 missionaries, and an income of about £4000 in 1912.

2. Preparation of missionaries.—In the beginnings of societies the first step taken was frequently the establishment of a missionary seminary. As a rule, the candidates completed their school training before entering on their theological course. The fact that many of them had been engaged in trades or handicrafts rendered them all the better suited to the pioneer work which largely falls to their lot, but not a few distinguished scholars developed among them. The Free Churches in England and America have drawn their missionaries mainly from the theological colleges of their denominations, but the Scottish Churches have usually sent out graduates of the universities. In the Anglican Church, missionary seminaries have a more important position, the most prominent being the C.M.S. College at Abingdon (797 missionaries up to 1913, of whom 13 are bishops) and St. Augustine's College at Canterbury (307 and 5 respectively).

On the Continent the great majority of missionaries are semanticists, but their training is of a kind that most of them seem to have produced as many scholars in proportion as the university-trained men. In American missions it is difficult to distinguish accurately between university and non-university men. In any case, both there and in Europe the S.V.M.U. has greatly tended to bring men and women of good university attainments into the missionary ranks—a tendency emphasized by the rapidly increasing demands of higher education in the missions.

Till recently good theological training with a university degree was considered the ne plus ultra of missionary preparation from the intellectual side. But since the beginning of this century the conviction has been gaining ground that the task of the missionary demands, besides these, a technical training proper to it. This opinion was voiced by Commission VI. of the Edinburgh Conference, which recommended the establishment of Boards of Study for the special preparation of missionaries both in Britain and in America. This was carried into effect in 1893. The Board of Missionary Studies is working on a somewhat wider basis, taking in theological subjects as well as others, whereas the British Board of Study, by mutual agreement, as an interdenominational body, deals only with general subjects (history and methods of missions, phonetics, linguistics, comparative and special study of religions, ethnography, anthropology, sociology, finance, and other methods). Some colleges already give themselves more or less to the teaching of these subjects: in America the Kennedy School of Missions at Hartford, Conn., the Missions-Oberlin Training Institute at New York, the University, the Bible Teachers' Training School, in Britain the U.C.C. Women's Missionary College, Edinburgh, and the Kingseat and Theological Institution, Birmingham, take up many of these subjects, and it is in contemplation to merge the British Board of Study in a Central College of Missionary Study.

3. Missionary conferences.—The lack of unity and co-ordination in Protestant missions has long exercised the minds of their promoters, and the effort has been made to overcome this difficulty by gatherings for common counsel. The general missionary conferences thus far were held in Liverpool in 1880 (126 members); London, Mildmay Park, 1878 (158 delegates); London, Exeter Hall, 1888 (1484 delegates); London, Westminster Hall, 1901 (1900 delegates); and Edinburgh, 1910 (1200 delegates). The bulk of the membership in these has consisted of delegates of missionary societies and boards, supplemented by missionaries from the field and experts of eminence. The composition of these conferences has become increasingly interdenominational and international; and in Edinburgh not only did High Anglicans attend as members, but messages of greeting were received from churches and Roman prelates, while Asians, Africans, Australasians, Americans, and Europeans of many nationalities took part. The conferences have no legislative or executive authority, but the reports and discussions are carried on by a Continuation Committee which publishes the quarterly International Review of Missions. The same kind of work has been carried on in the mission-field by periodical conferences of representatives from many seem to have produced as many scholars as the university-trained men. In American missions it is difficult to distinguish accurately between university and non-university men. In any case, both there and in Europe the S.V.M.U. has greatly tended to bring men and women of good university attainments into the missionary ranks—a tendency emphasized by the rapidly increasing demands of higher education in the missions.

Till recently good theological training with a university degree was considered the ne plus ultra of missionary preparation from the intellectual side. But since the beginning of this century the conviction has been gaining ground that the task of the missionary demands, besides these, a technical training proper to it. This opinion was voiced by Commission VI. of the Edinburgh Conference, which recommended the establishment of Boards of Study for the special preparation of missionaries both in Britain and in America. This was carried into effect in 1893. The Board of Missionary Studies is working on a somewhat wider basis, taking in theological subjects as well as others, whereas the British Board of Study, by mutual agreement, as an interdenominational body, deals only with general subjects (history and methods of missions, phonetics, linguistics, comparative and special study of religions, ethnography, anthropology, sociology, finance, and other methods). Some colleges already give themselves more or less to the teaching of these subjects: in America the Kennedy School of Missions at Hartford, Conn., the Missions-Oberlin Training Institute at New York, the University, the Bible Teachers' Training School, in Britain the U.C.C. Women's Missionary College, Edinburgh, and the Kingseat and Theological Institution, Birmingham, take up many of these subjects, and it is in contemplation to merge the British Board of Study in a Central College of Missionary Study.

The report of the Edinburgh Conference especially (in Osb., London and New York, 1910) is indispensable to the student of missions. Its investigations are to be supplemented by a Continuation Committee which publishes the quarterly International Review of Missions. The same kind of work has been carried on in the mission-field by periodical conferences of representatives from many seem to have produced as many scholars as the university-trained men. In American missions it is difficult to distinguish accurately between university and non-university men. In any case, both there and in Europe the S.V.M.U. has greatly tended to bring men and women of good university attainments into the missionary ranks—a tendency emphasized by the rapidly increasing demands of higher education in the missions.

4. The field.—I. AMERICA. —The spread of Christianity in this continent has been mainly through immigration. Paganism is now only a fringe of the total population of 170,000,000. The work of Protestant missions has been chiefly in N. America, among Eskimos, Indians, and Negroes. For our purposes the W. Indian Islands and Guiana go together with N. America. S. America has been touched in Patagonia and Paraguay.

(a) Eskimos. —The Norwesmen who immigrated to Greenland in the Middle Ages had a bishopric of their own, but both they and their faith died out before the 18th century. In 1721 a Norwegian pastor, Hans Egede, having heard of them, repaired to the west coast of Greenland and began work among the Eskimos under great difficulties owing to their utter indiffernce. It was continued, how-
over, by his son, and eventually taken up by the Danes. M.S. The west coast population in this region is Christianized, and missionary work is going on among the pagans of the east coast. Further south on the west coast the Moravians, beginning in 1753, founded the settlement of New Hermannsburg, where the chief tribes were brought into the Christian Church, so that in 1899 they were able to hand over this territory to the care of the Danish Church. In Labrador since 1771 the scattered Eskimos have been more or less brought in by the Moravians, and they are cared for with the help of trade carried on by the mission ship 'Harmony.' On the other side of the continent the U.S. territory of Alaska contains a relatively considerable population of Eskimos, besides Aleutians, Indians, immigrants, Chinese, and white men. Here in 1877 a Presbyterian mission was founded, followed by Moravians, American Anglicans, and others, totalling about 6000 Christians. The race, about 40,000 in number, is intellectually and morally organized; hence its contact with white traders has been unfavourable to the development of independent Church life, but missionary work has meant their salvation from extinction through strong drink, disease, and exploitation.

(b) Indians.—These number now in the U.S. and Canada under 400,000. Over one-half live on reservations, the rest are scattered among their white fellow-citizens. From the 17th cent. onwards the relations of the colonists, whether French, English, or Dutch, with the Indians were those of perennial warfare and commercial exploitation, till the peace of the country was realized and a more sensible and humane policy was gradually introduced. Missionary efforts were never entirely wanting. John Eliot (from 1646), David Brainerd (from 1743), and David Zeilberger (from 1745) gathered many thousands of Indians into Christian congregations of peaceful citizens, but again and again their work was destroyed by war. The later and more gradual settlement of Canada was advantageous to the Indian population, as the missions of all Churches were able to gain a hold, before land-grabbing and commercial greed came strongly to the fore. The first mission church was begun in the Hudson's Bay Territory in 1829; it has been developed largely by the C.M.S., and much heroic work was done by its pioneers among the sparse native population before the colonists came. In the whole dominion is parceled out in dioceses of the Anglican Church, and work among the Indians is carried on by other denominations also, Presbyterians and Methodists being specially active. Since the separation from England the evangelizing of Indians in the U.S. has been more and more taken over by the various Churches, and the still pagan Indians are a small remnant. Their assimilation as citizens of the Republic is still an incompletely accomplished process.

(c) Negroes.—These (including coloured or mixed population) in the U.S. are 8,827,763 (1901), and in the W. Indies 1,280,000. Their introduction into the latter dates from the Spanish conquest, into the U.S. from 1640. Organized missions among the U.S. Negroes practically began about 1800, but during their time of slavery large numbers had been Christianized, especially by the Methodists and Baptists. The bulk of these Negroes are now connected with the African Protestant Churches. In 1913 they contributed about £20,000 for home missions and £10,000 for foreign missions, besides maintaining of churches, ministry, and education. The Negroes of Cuba and Haiti are but little touched by Protestant work, but in the remaining islands they are incorporated into self-supporting churches, the result of previous missionary effort, and their economic condition is less complicated by an overweight of white population than in the U.S. They number about 1,000,000.

(d) S. America.—The territory of Guiana is closely connected with the W. Indies. Anglicans, Moravians, and Methodists have gathered considerable numbers amounting to 90,000. These are partly from among the E. Indian indented coolies working on the sugar-plantations (who are also to be found on the islands). Catechists and clergy of Indian nationality work among them, and coolies returning home help to spread the faith in India. Of the 38,000,000 in S. America the aborigines number about 5,000,000, mostly belonging to the Roman Catholic Church. Protestant missions have touched them in Patagonia, where the work set on foot by the heroic pioneer, Allen Gardiner, changed the opinion of Charles Darwin as to the susceptibility of a savage race to higher culture. The Indians of the Chaco in Paraguay have also begun to come in, and the mission among them has been recognized by the government of the Republic as the best mediator between white and coloured peoples.

ii. AFRICA.—(a) W. Africa.—It is this part of the continent that, owing to the slave-trade, has had the earliest and most intimate connection with Protestant lands, especially with N. America. The endeavour to influence Africa directly by means of the liberated slave is chiefly represented by the little republic of Liberia, founded in 1824 by the American Colonization Society. The Christian Negroes who settled there were hardly ripe for administering the Free State proclaimed in 1847, but from this centre work is being carried on by Sunday schools among the neighbouring non-Christian. A certain number of American Negroes have been sent as missionaries to Africa by their Churches in the U.S., but the effective shaping of their work is a problem that awaits solution.

The north-west coast of Africa as far as the Senegal borders on sparsely-inhabited Muhammadan territory which has scarcely been entered as yet. From this to the mouth of the Congo is the region of Protestant mission-work. At Sierra Leone the settlement of liberated slaves began in 1808, after the abolition of the slave-trade, and it’s capital received the name Freetown. Up to 1846, 50,000 African slaves had been brought there, chiefly by British cruisers. For a long time the life of was experienced among the C.M.S. and other missionaries who worked there, and among the wailer of tribes represented only the common language available was English. To some extent the varying elements were sifted out, and Christianity spread by means of those who rejoined their kindred elsewhere. In 1852 an Anglican bishopric was constituted, and in 1861 the Church, in which meanwhile education had spread rapidly, was made self-governing. It carries on missions among its pagan neighbours. Here and elsewhere in W. Africa the missionary comes into contact increasingly with Muslims from the north. Among a population of 75,000 in the colony 57,000 are Protestant Christians.

The Gold Coast Colony has a population of 1,000,000. The western part is worked by Wesleyan missionaries, the eastern by the Baptist mission. The latter, since 1828, has penetrated effectively into the back country formerly under Ashanti rule; while Wesleyans, too, have moved into the northern territory. The country is being opened up by railways, and the rapid increase of commerce is enriching the Christian community here as elsewhere in W. Africa, to the advantage of self-support, but always to that of spiritual and moral good. The Christian community now numbers upwards of 30,000.

The German colony of Togoland, next on the
east, has considerably developed missionary work from that country, during the last few years, amongst the Bushmen. The climate being temperate, Christianity has spread by immigration from western nations, and the white population is reckoned at 1,300,000. Hence the racial problem is at its acutest in S. Africa, and it is spurious since the constitution of Nigeria, the richest of Britain's African possessions, as a Crown Colony, with a population of 18,000,000. The first mission stations (from 1849 onwards) were started to look after the new arrivals, and the mission stations were established from Sierra Leone to their own people. Lagos, the great port of the palm-oil trade, and the large interior towns of Abokuta and Ibadan were occupied, and considerable Christian communities were gathered, amounting (1913) in the Yoruba province to 50,000. Economic development is going on rapidly, and the demand for education, especially in English, is increasing year by year.

After the Niger had been opened up by three voyages of exploration (1841, 1854, 1857), an African priest of the C.M.S., Samuel Crowther, was sent to this region. He planted several stations, and in 1838, the Rev. R.G. Christy was carried on by Africans, with some vicissitudes, but with substantial progress, till Crowther's death in 1891, when W. Equatorial Africa was placed under and by the two Rev. Africans, the wealthy churches of the Delta being granted self-government. In N. Nigeria the town of Lokoja had been occupied in 1865, but it was not till the end of the century that an effective advance was made from this territory, where a profoundly Muhammadan population alternates with large patches of paganism, while the spread of Islam continues in a southerly direction. The work here is still in its beginnings. In Calabar at the southeast corner of Nigeria a Christian community of 11,000 has been gathered in by the U.F.C. mission.

Kamerun, a German colony since 1884, was originally evangelized by English Baptists, but their work was taken over mainly by the Basel Society, who were pushing into the back country before the outbreak of the great European war. The Christians number about 15,000 out of an estimated population of 3,000,000. The Congo River was first opened up completely by Stanley in 1875-77, and the Congo Free State, under the protection of Belgium, has been the scene of rapid missionary advance along the river. Stanley's descent from the south to the north was 1,900 miles from the mouth. Among the first explorers in detail were the English Baptists G. Grenfell and W. H. Bentley from 1879 onwards. Other missionaries of various nationalities followed. Owing to the difficulties of climate and the great multitude of tribes and languages, progress has been limited, but some dozen societies are now at work in this area. Indigenous churches are being formed, and elementary education is being pushed.

The characteristic problems of the W. African missions generally are presented by the constant advance of Islam from the north, the demoralization of commercial intercourse caused by the liquor trade, and the unsettling effects of a rapid acquisition of wealth formerly undreamt of. On the other hand, the removal of the evils connected with the trade, the increase in prosperity and intelligence, and the creation of a Christian standard of conscience and morals, with the opportunity given to the natives of rising to a higher life, are elements which need appreciable progress towards the regeneration of the Negro peoples.

(b) S. Africa.—In this we include the regions south of the river Kunene on the east and the Zambezi on the west. It contains three African races; the Bantu (including Zulus and Kafirs), the Nama or Hottentots, and the Bushmen, the last two scarcely remaining pure, the first virile and prolific. The climate being temperate, Christianity has spread by immigration from western nations, and the white population is reckoned at 1,300,000. Hence the racial problem is at its acutest in S. Africa, and it is spurious since the constitution of Nigeria, the richest of Britain's African possessions, as a Crown Colony, with a population of 18,000,000. The first mission stations (from 1849 onwards) were started to look after the new arrivals, and the mission stations were established from Sierra Leone to their own people. Lagos, the great port of the palm-oil trade, and the large interior towns of Abokuta and Ibadan were occupied, and considerable Christian communities were gathered, amounting (1913) in the Yoruba province to 50,000. Economic development is going on rapidly, and the demand for education, especially in English, is increasing year by year.

After the Niger had been opened up by three voyages of exploration (1841, 1854, 1857), an African priest of the C.M.S., Samuel Crowther, was sent to this region. He planted several stations, and in 1838, the Rev. R.G. Christy was carried on by Africans, with some vicissitudes, but with substantial progress, till Crowther's death in 1891, when W. Equatorial Africa was placed under and by the two Rev. Africans, the wealthy churches of the Delta being granted self-government. In N. Nigeria the town of Lokoja had been occupied in 1865, but it was not till the end of the century that an effective advance was made from this territory, where a profoundly Muhammadan population alternates with large patches of paganism, while the spread of Islam continues in a southerly direction. The work here is still in its beginnings. In Calabar at the southeast corner of Nigeria a Christian community of 11,000 has been gathered in by the U.F.C. mission.

Kamerun, a German colony since 1884, was originally evangelized by English Baptists, but their work was taken over mainly by the Basel Society, who were pushing into the back country before the outbreak of the great European war. The Christians number about 15,000 out of an estimated population of 3,000,000. The Congo River was first opened up completely by Stanley in 1875-77, and the Congo Free State, under the protection of Belgium, has been the scene of rapid missionary advance along the river. Stanley's descent from the south to the north was 1,900 miles from the mouth. Among the first explorers in detail were the English Baptists G. Grenfell and W. H. Bentley from 1879 onwards. Other missionaries of various nationalities followed. Owing to the difficulties of climate and the great multitude of tribes and languages, progress has been limited, but some dozen societies are now at work in this area. Indigenous churches are being formed, and elementary education is being pushed.

The characteristic problems of the W. African missions generally are presented by the constant advance of Islam from the north, the demoralization of commercial intercourse caused by the liquor trade, and the unsettling effects of a rapid acquisition of wealth formerly undreamt of. On the other hand, the removal of the evils connected with the trade, the increase in prosperity and intelligence, and the creation of a Christian standard of conscience and morals, with the opportunity given to the natives of rising to a higher life, are elements which need appreciable progress towards the regeneration of the Negro peoples. Among the Zulus and Swazis of Natal the work of many denominations has been greatly hindered by frequent and destructive wars, but Christian congregations have grown, and some converts have been gained from among the Indian coolies. Basuto, blessed with a more quiet development since
it became a Crown Colony in 1854, has been worked principally by the Paris M.S., which now counts about 70,000 adherents. Among the Bechuanas of the Transvaal and Orange River Colony Dutch, Anglican, Wesleyan, and Lutheran missions have gathered a Christian community of considerable importance. The problems of moral and social development are greatly complicated by the consequences of Apartheid; both Christian and non-Christian, in the mine compounds of Johannesburg and the Rand. The thinly populated Bechuanaland Protectorate includes Khama's Country, where a Christian African prince rules his people well. Madagascar has been a land of great vicissitudes in missionary work. The first missionaries of the L.M.S. began work with considerable success among the Hovas, the ruling race of the central province, in 1820. In 1836 the accession of a hostile queen brought about the expulsion of the missionaries, and for twenty-five years the Christians were severely persecuted, yet they increased considerably. In 1861 a new ruler recalled the missionaries, and when the queen was baptized in 1889, conversions began in masses. To cope with the situation other societies, Friends, S.P.G., and Norwegians, entered the island. In 1863 the island was annexed by France, and Protestant mission work was so severely hampered that the L.M.S. was fain to give over a large part of its work to the Paris M.S. The total number of Protestant Christians in Madagascar is estimated now at 287,000, while the scholars number 44,577.

(c. E. and A. Africa.—Missionaries helped to open up these lands both from the east coast and from the west, and even the interior. In 1844 Ludwig Krafft, a German in C.M.S. service, landed on the island of Mombasa and began work on the mainland opposite. He planned (1) to carry a chain of mission stations across Africa from Mombasa to Gabun; (2) to establish on the east coast a colony for liberated slaves like that in Sierra Leone on the west; and (3) to work for an African ministry under an African bishop. The second of these objects was accomplished at Freetown in 1874; the first and third are in process of realization now. In 1846 Krafft was joined by Johann Rehmann. After nine years Krafft was invalidated; Rehmann held the field for twenty-nine years. By their discovery of the snow-peaks of Kilimanjaro, Rehmann ascended the equator, and of the great inland-sea of Nyassa, they revolutionized the geography of C. Africa, and their linguistic labours prepared the way for later workers in a fruitful field.

The next great work of David Livingstone is part of history. From his first station of Kolobeng in S. Africa he constantly pressed northwards, crossed Africa from east to west, and opened up the lake regions of Nyasa and Tanganyika, exploring ceaselessly till he died at Ilala in 1873. In his opinion the end of the geographical feat was the beginning of the missionary enterprise. He desired to uproot the slave-trade, and then spread the Gospel to the Moslems. To this end he launched a series of three expeditions to the Congo valley, and in the course of his work he gave the impulse which has resulted in the formation of a virile Christian State in the centre of Africa, now the kingdom of Uganda. Stanley found the kingdom, and the king the Christian religion. As a result, the claims of Christianity and Islam. Through a Swahili Christian interpreter he put the Christian case before the monarch and straightway appealed to English Christendom to enter this open door. The result was the sending of the well-known C.M.S. mission to Uganda. In 1855 the murder of James Hannington and the barbarous persecution of the converts early converts only served to increase zeal and enthusiasm. After sundry conflicts and imminent risk of abandonment by the Colonial Office, Uganda became a British Protectorate, under a British mission; the work has gone forward peacefully. The country now contains 96,000 Protestant Christians, with a somewhat larger number of Roman Catholics and a smaller number of Musalmans. The schools contain scholars up to a secondary standard. The growing Church now forms an effective breakwater against the rising tide of Islam.

The two protectorates of E. Africa, the English and the German, have each brought the country under civilized administration, and the British Government has opened up its territory by a railway, preceded or accompanied by missionaries. The English work in German territory has been partly made over to German missions since the establishment of the colony in 1884, but a group of C.M.S. missions remains round Mopaniwana, and another of the U.M.C.A. opposite Zanzibar. The German work is chiefly in the north and on the north shore of Lake Nyasa and its vicinity. The principal missions of the Nyasa Protectorate are those of the Scottish churches, with the two industrial centres of Livingstonia in the north and Blantyre in the south. It is the memorial of the great Scottish missionary pioneer. His successors have seen the slave-trade entirely wiped out and fierce animist tribes subdued by the influence of Christian love, examples of medical missions, and brought under training in civilised industry and commerce. The Anglo-Egyptian Sudan in its Muslim condition is closed to missionary efforts by government ruling; among the pagan Dinkas, Azand, and other tribes missionary work is in its first stages.

Oceania.—Missions in Oceania date from 1788, and owe their first impulse to the interest excited by the story of Cook's voyages in the South Seas. The main part of the area is suitable for European colonization, and the aborigines belong to more or less primitive states of culture, in which their physical as well as their moral nature has remained weakly. Owing partly to this and partly to unscrupulous exploitation by white settlers and traders, the result of contact with the white races has been the rapid diminution, and in some cases, as in Tasmania, the entire extinction, of the native races. The work of missions has therefore largely consisted in the rescue of weaker races from extermination through contact with exponents of higher civilisations not imbued with the Christian spirit. In no part of the world have the results of missions been more rapid and widespread, but stability is sometimes lacking. The effects of kidnapping, strong drink, and disease have been appreciably counteracted.

Work in New Zealand was started by Samuel Marsden in 1814, and after a time made rapid progress. In 1840 the islands became a British colony; unfortunately wars ensued, and in 1864 the strong Hanau apostaesy, C.M.S. missions succumbed. The missions of pagan cults mixed with Christian heresies, drew away great numbers. In spite of this the leading missions of the C.M.S. and Wesleyans were able, before the end of the century, to make over their converts to the local Church organisations. The New Zealand Parliament also has its Maori members. The Maori population of New Zealand is about 20,000, of whom some 30,000 belong to Reformed communions. There appears to be some...
hope that, in place of declining, the native population is beginning to increase.

In Australia the aborigines have dwindled to 74,370, of whom 21,000 still inhabit the pethorn parts of the continent. After several abortive attempts missions, with a strong industrial element, have been continuously carried on since 1851 by English bodies of various denominations, as well as by Moravians and Lapps. Besides, despite the fact that the aborigines have proved susceptible to the elevating influence of the gospel, and decadence has been to some extent arrested, though independence is far from achieved. The number of Protestant Christians is computed at 6000.

The Islands of the Pacific may be roughly grouped into Polynesia (south of Hawaii), Melanesia (west of Polynesia), and Micronesia (north of Melanesia). Among the larger islands of Polynesia, Hawaii, now a United States territory with Honolulu as its capital, was first evangelized by the American Board from 1820 onwards and Christians with partly yecman, especially has sent out and supported missionaries to several other islands. Tahiti, occupied by missionaries of the L.M.S., had a similar history, but after the annexation of the group by France it became necessary to transfer the work to the Paris M.S. Raiatea, the home of the famous John Williams, has remained in British connection. In the Tonga and Viti, or Fiji, Islands the Wesleyans have been the principal workers. Practically the entire population is Christian, and is efficiently ruled by princes of the same faith. Education is wide-spreading, and evangelists from Fiji have carried the faith to many other settlements.

Melanesia has a population of 475,000, of whom 111,000 are Protestant Christians. The gathering in of these numbers has cost not a few missionary lives, owing to resentment on the part of islanders who had been oppressed by traders. The missionaries are British, German, Dutch, and Norwegian. The martyrdom of Bishop Patteson in 1851 called forth much enthusiasm and service, and during his long life John G. Paton of the United Presbyterian Mission saw 29,000 natives converted in the New Hebrides and contributing £1300 in one year for Church purposes.

On the Micronesian Islands, now under British, German, and American protection, developments since 1852 have been similar. Missions from Australia have taken part. Roman Catholic work is stronger here than in the other islands; out of 12,000 Christians the Roman Catholics claim 12,000.

New Guinea, or Papua, was first entered in 1871, when Christians from L.M.S. missions in Polynesia volunteered for the work, in which many of them laid down their lives. They had a great leader in James Chalmers (1876–1901). The Christians now number 35,000. Anglican, Wesleyan, German, and Dutch missionaries have taken part.

In various parts of Oceania, Australia, Hawaii, and Fiji, missionary work is carried on among the Asiatic immigrants from India, Japan, and China with the help of native preachers from those countries, not as yet. The barriers of caste and social opposition are less rigid than at home, but the restraints of conventional morality are also loosened.

The total population of Oceania, excluding Australia and New Zealand, is reckoned at some 2,000,000, of whom 20,000 are Christians.

IV. INDIA.—The impact of Christianity on India has been conditioned by certain outstanding features of the land and people. The peninsula is isolated by land and sea. The culture of the people ranges from the most primitive to a highly developed, though stationary, form. Its religion contains a similar variety of cults, ranging from spiritual adoration to cruel and obscene orgies, all bound together intellectually by a subtle pantheistic system of caste (q.e.). Its contact with the outer world during recent centuries has been mainly through the immigration of foreign invaders, who have brought with them the monotheistic religion and poity of those nations that now constitute by far the largest Muslim nation of the world. Most recently, however, India has come into connexion with a seafaring nation of the West more intimately than any other Asiatic land. Here, as elsewhere, the missionary has employed in the first instance the agencies of preaching and persuasion, but the form which the results of his work have assumed has mainly been determined by the conditions of the classes to whom he has addressed his message. To bring out the chief features of it, we may deal with 'mass movements,' education, and philanthropy as main channels of evangelization.

The earliest form of Christianity in India is that of the Syrian Churches of Travancore and Cochin, which probably owe their origin to the Nestorian community of Persia, whose members had sailed with the Malabar Coast in early days. From about the 4th cent. a trading and landholding community accepted the Christian faith, and has continued as a local caste to the present day. Early in the last century they were aroused from lethargy by contact with Anglican Christianity, and the work of the C.M.S., first in combination, and afterwards side by side, with the Syrians, has stimulated reform and progress, both in church and in evangelical zeal. The work of St. Francis Xavier, Roberto de Nobili, and other great Roman Catholic missionaries of the Portuguese period is principally in evidence now in the masses of fisher folk and other labouring castes in the west and south of India; and in the earliest Protestant missions the same factor of community-movements appears. In the Danish-Halle Mission of the 18th cent. the greatest name is that of C. F. Schwartz (landed 1759, died 1798). The 39,000 Christians whom he gathered in Tanjore and elsewhere were mainly from the village labourers. After his death the work dwindled, till it was taken over by the Anglican Church, and during the 19th cent. the work of the C.M.S. and S.P.G. in Tinnevelly (principally among the palm-tree climbers), together with that of the L.M.S. in S. Travancore, yielded much more, but the entire number of Protestant converts in India, and naturally also the best organized churches. In 1851 these missions had 51,335 adherents, the remainder of the Madras Presidency 23,921, and all the rest of India 19,016. In the succeeding sixty years these missions and others in S. India have greatly developed, largely through the agency of American societies. The Protestant Christians now number 728,425 (besides over a million and a half Roman Catholics and Syrian Christians), and they contribute £33,731 to the support of worship and schools. The Indian ministry includes 492 ordained men (including some 7 foreign missionaries, and the self-administration of the churches is on the increase. Self-extension, too, is shown by the activity of more than one mission of the Indian Churches. The largest is the Tinnevelly Missionary Society, with an income of 152,500, 36 ordained men, and 2000 converts in a mission which they carry on in the Nizam’s territory. Part of their work was made over to the diocese of the first Indian bishop of Dornakal, when he was consecrated in 1913. In Travancore a similar movement has made headway in the L.M.S. and C.M.S. missions, which
now number 73,000 and 57,000 Christians respectively. Still more widespread is the movement in the lower castes of Madras. Here, especially since the great famine of 1877-78, the out-caste village labourers have pressed into the churches in myriads. The Christians belonging to the Anglicans, American Baptists, Lutherans, and others are estimated at some 50,000. In Bengal an older movement in the forties of the last century left a considerable church in the Nadia district; more recently the Namasudras of the Blessing Church are turning their hopes towards Christianity, and the B.M.S. has admitted hundreds from among them. In the United Provinces of Agra and Oudh the Chamars (leather-workers) and sweepers have been principally gathered in by the American Methodist Episcopalians, who record congregations numbering 102,000 adherents, while other Protestant missions have 22,000. The most rapid movement during the last decade was in the Punjab, where the Christians entered in the government Census returns had increased from 37,000 in 1901 to 163,000 in 1911 chiefly in the American Presbyterian missions.

The movements among the Indian village proletariat which have resulted in these large and growing ascensions to Christianity all form part of one upward tendency of populations representing pre-Aryan inhabitants, enslaved by the Aryan conquerors and kept for millenniums in servitude, but now afforded the opportunity of emancipation by rulers whose political and social ideals are bound up with Christianity and whose rule has been accompanied by active Christian efforts of teaching and philanthropy. The effect of these efforts in raising the masses who have responded to them is expressed thus by the Hindu Census superintendent of the Mysore State:

"The enlightening influence of Christianity is patent in the higher standard of comfort of the converts, and their sober, disciplined and busy lives" (Census of India, 1911, Calcutta, 1918, vol. i. pt. i. p. 138).

To this we may add that evidences of spiritual regeneration and devotional life are also to be found.

The populations so far referred to are the 'untouchables' who live among the Hindus and Musalmans of the plains. They may number (accuracy is very difficult to secure) some 30,000,000. But there are some 10,000,000 more of non-Hindu sects, living mainly in hilly regions, among whom the Christian faith has found ready entry. Such are the Karams of Burma, the Chais of Assam, the Kols and Santals in Bengal. The Christian communities among these amount to some 200,000 persons. Both among these and among the castes the expansion of the movement appears to be limited only by the capacity of the Christian Church adequately to shepherd and educate the candidates for its service. The effect of education and Christian influence in raising the status of the Christian community as compared with its Hindu and Mohammedan neighbours has been very marked. Some progress has been made in improving their position as agriculturists in the Punjab; the Christians have been recognized by the Government as an agricultural tribe, and in the irrigated districts there are several flourishing villages of Christian cultivators, holding land direct from the State.

Education of a simple kind, including that of girls, was at first a regular part of missionary activity, but was on a small scale, and mainly in the Scottish missionary, Alexander Duff (1830-57). He set out to evangelize the upper classes of Bengal by means of higher education, given through the medium of the English language, which, through the efforts of Macaulay and others, had already been adopted by Government as the vehicle of learning for India. Duff was assisted in his plans by Rajâ Râm, the Chief of the Brahmâ Samâj (q.v.). Duff's converts were counted rather by the score than by the hundred, but they included men who made their mark on the Christian Church as leaders throughout India. His school also had a parallel in the development of the Brahâma Samâj and other liberal movements in Hinduism, and not less did it influence the educational policy of the Government of India, which in 1854 founded departments of public instruction, and in 1857 established universities in Calcutta, Madras, and Bombay, followed later by others in Lahore and Allâhabâd, and recently by a Hindi university at Benares and a Muslim one at Alligur. Duff's school soon developed into a college, and no fewer than 8 other colleges were founded in different parts of India during Duff's lifetime. The most noteworthy contemporary of Duff as an educator was Pr. Wilson of Bombay, who founded the college which bears his name, and added to his English work a profound acquaintance with Hinduism. There are now 38 Protestant missionary colleges in India, containing, in 1912, 5447 students, including 41 women, the latter practically all Christians. Of the total, 481 students were Hindus, 530 Muhammadans, and 436 Christians. There is a fully-organized missionary college for women in Lucknow; and a college department works in connexion with a girls' high school in Lahore.

The work of elementary and secondary education was powerfully forwarded by the system of grants-in-aid which the Government instituted in 1874. The grants are made in proportion to the educational efficiency of schools, regardless of the religion of the managers. Educational efficiency being greatest among the missionaries, they have earned the chief portion of the grants, though their lead in this respect is no longer so marked as it was. Their secondary schools number 283, with 62,662 boys and 8440 girls; 880 boarding-schools contain 22,193 boys and 17,586 girls, all Christian. In 87 theological schools 1832 students are in training, and 127 training-schools have 1904 male and 1173 female students. The boarding-schools are partly secondary and partly primary. The result of secondary education in conversions has been small, but the influence on social ideals and practice and on religious thought has been very great. The care bestowed on the education of the Christian community, especially the women, has made it, with the exception of the Parsis, the most literate in India, far above the average of the Hindus generally, and little, if any, behind the Brahmans. The number of Christian officials and teachers is large in proportion to the size of the community, and it is not easy to keep pace with their need for a highly educated ministry, while satisfying the wants of the large rural population. Provision of elementary education for these is the most urgent missionary problem of the day. True, the elementary pupils in mission schools throughout India number about 450,000, but the great majority of these are non-Christian. In missionary colleges and schools of every kind 576,371 persons were being educated in 1912—about one in ten of all pupils. Christian literature took its first effective start with the work of the great pioneer, William Carey (1793-1834). Together with Marsham and Ward, Carey also worked chiefly in making Bible translations into a multitude of different languages, and also founded a missionary college in Serampore. Most of these versions were mere bollettos d'esai, but the Bengali became the foundation of all further work in that..."
tongue. Henry Martyn at the same time pro-
duced his remarkable Unu version of the NT, and a
number of other editions of the Bible and
supportc by the publishing societies mentioned
above. Krishna Mohan Banerjee among Hindu
converts, Imaid-ul-Din among Muslims, and John
Museeth among African Christians and publishers of
Christian literature are outstanding names.
Besides Bible versions there is also an incipient
Christian literature in all the principal Indian
languages, amounting in some of them to several
hundred thousand copies, occasionnally in families,
with here and there outstanding personalities.
The Census of 1911 gave the number of Protestants
Christians in India as 1,692,759, compared with
970,283 in 1901. The largest proportion is in S.
India (629,000), where the work has been established
longest and is most systematic. The distribution
elsewhere varies chiefly according to the incidence
of mass movements. Protestant Christians in
other parts number: Bengal, 178,000; United
Provinces, 135,000; Punjab, 155,000; Bombay, 51,000;
Central Provinces and C. India, 24,000. In the
native states they are generally fewer e.g.,
Haidarabad, 29,000; Mysore, 9,000; Panjab States,
300; Kashmir, 700.

Syncretism, in the shape of reform movements,
both religious and social, is much in evidence.
The earliest example is the non-theistic Brahm Samaj,
found in 1828 by Raja Ram Mohan Roy—a small sect, but influential owing to the social standing, literary ability,
and philanthropic zeal of its members. The teach-
ing of its sections ranges from a modified Hinduism
to a kind of Unitarian Christianity with Indian
atmosphere. The Arya Samaj (q.v.), founded in 1875 by Dayanand Sarvastav, represents a cruder modifi-
ation of original Hinduism, professing to hold
the Vedas as absolutely inspired, and accord-
ingly forcing their interpretation to fit modern
standards. It has a strong political and nationalist
vein, and is bitterly hostile to Christianity; but it
has done good work in the cause of education and
social reform. It prevails chiefly in the Panjab
and United Provinces. In Bombay the Prarthana
Samaj (q.v.) does a similar work. These bodies,
following missionary example, are beginning to
interest themselves in the amelioration of the depressed classes by education, and the Arya Samaj
actually admits them and also Muhammadans into
the "Vedic religion" by a ceremony of purification
(uddhi).

Modernist movement among the Muhammadans
dates from the efforts of Sir Sayyid Ahmad, who
began in 1838 to arouse his fellow-religious to the
imperative need for English education, which
resulted in the establishment of the Anglo-
Muhammadan College at Aligarh and the All-
Indian Muslim Conference. It has also produced
something of a school of liberal theology. A more
wide-spread movement was inaugurated by Qutub
Ahmad of Qadiana in the Panjab in the year
1870. He, like Dayanand, harked back to his
sacred Scriptures, and treated the Qur'an as
verbally inspired, interpreting it in a new fashion
with an eye to modern thought. This sect, too,
is strongly opposed to Christianity, and some
members of it have started a mission to England at
Leeds. In India itself, as a result of this and
these new sects all owe more or less of their origina-
ting impulse and of their specific doctrine to the
message of Christian missions. The Indian national
movement has also effected a closer proximity of
sects nearer together, and its influence is being felt
in the Christian community also in a certain
thoughness and impatience of foreign influence.
At the same time there is a signs of an increased
feeling of responsibility for the evangelization of
India, marked by the establishment of the National Missionary Society and other efforts.

The Dutch possessions known as Indonesia were previously under Hindu rule, but since the 12th century they have gradually been overrun by Muslim chiefs. First, the total population in 1867 was estimated at 2,000,000, are now Muhammadan.

The Dutch East India Company, while building up its Eastern empire, also Christianized the natives after a fashion, but their condition at the beginning of the 19th century was low. Since then it has improved, and the so-called permanent congregations (gemeenten) are under the care and superintendence of missionaries appointed and maintained by the State. Missionary work is carried on from time to time at places under this organization. Modern missionary work began in the second decade of last century, and has been carried on mainly by Dutch and German missionaries on the four principal islands of Sumatra, Java, Celebes, and Borneo, as well as on some of the smaller ones. Large numbers of converts have been gathered in Java, in the Bataclan country on the north coast of Sumatra, and in the Minahasa region of Celebes. In the second of these an effective barrier has been erected to the inland advance of Islam. The total number of converts from Islam in these islands is estimated at 30,000.

v. CHINA.—In contrast with India, China has but one standard language and literature, and may therefore be regarded as a unity, despite its size and diversity. Modern missionary work was begun by Robert Morrison of the I.M.S. in 1807. He baptized the first convert in 1814, and before his death (1834) he had translated the Bible into Chinese, besides writing many pamphlets. But neither he nor his colleague, Robert Mills, was able to enter the jealously-guarded empire of China; they could only reside in the Portuguese settlement of Macao or in British territory at Malacca. The opening of China to foreign intercourse, including missionary effort, was the result of a series of wars, internal and external, the first of which, while it helped to admit the missionary, did much to discredit his message. The three "opium wars" of 1842, 1856, and 1860 resulted in the opening of twenty-four "treaty ports" to foreign intercourse, and it was in these, especially Shanghai, Hangchow, Tientsin, and Canton, that Protestant missions first gained a footing. Up to 1850, 3 Englishmen, 11 Germans, and 7 Americans had begun work, and the converts have amounted to 100. The preponderance of American workers in China became more marked as time went on, and the same is true of Japan.

The next great convulsion was an internal one, the Taiping rebellion, which lasted from 1850 to 1864, and was eventually suppressed by the "ever victorious army" of a Western leader, General Charles George Gordon, himself in deep sympathy with Christian missions. The leader of the rebellion had once come under the influence of a Christian missionary, and he claimed to have received a divine revelation to destroy idolatry and to put an end to the Manchu dynasty. The second of these aims was accomplished half a century later by another great convulsion, and we may believe that the Taipings did much towards preparing the way for the reform which is yet to come; but we may also be thankful that their iconoclasm did not prematurely succeed before the constructive forces of Christian faith and practice were ready to step into the breach. Meanwhile, missions on the coast were increasing their stations in the interior China had been quieted (1865) Hudson Taylor formed the China Inland Mission, which led the way to the formation of a network of stations during the last half century, new extend-
the Bible, and hundreds have actually joined the Christian Church.

The creation of a Christian literature for China has been carried on mainly by cooperation between the missions represented in the Christian Literature Society (Chairman, Dr. E. S. Richards, and others). The rapid opening of the mind of China to appreciation and reception of Western thought has given missionary scholars both the opportunity and the task of providing not only general and scientific literature for readers, whether Christian or non-Christian. Both this and the work of Bible translation in China have been greatly facilitated by the existence of a common standard of written language, though versions of the Bible are being produced in several local vernaculars, as also in a popular form of the Mandarin. The circulation of the Bible is increasing by leaps and bounds; in 1910 a million and a half copies of Bibles, New Testaments, or single books were circulated; in 1914 two million and a quarter.

The first L.M.S. woman missionary in China was appointed in 1860. The work among women has been greatly hampered by the custom of foot-binding and by social prejudices, but these have been in great measure overcome, largely as the result of missionary effort, and there is now a desire for or education of women is greatly on the increase; some are using their education not only to qualify for the medical and teaching professions, but also for social service. Over 600 members have been enrolled in a Student Volunteer Movement for the Christian ministry, putting aside prospects of lucrative careers. The tendency in this class is to work for the formation of an indigenous Chinese Church, self-supporting, and not dependent on the missions. Over 500 girls from among the converts are being trained in the self-support of native churches. Meanwhile the various cognate bodies which have hitherto been carrying on separate missions, such as Anglicans, Presbyterians, and Methodists, are amalgamating their organizations as a first step towards larger union.

In the outlying provinces of China work is still in its beginnings. It is furthest advanced in Manchuria, where Presbyterians and Lutherans have a community of some 33,000. The devoted work of James Gilmore (1870-91) in Mongolia left little visible result, and the societies which are following it up are struggling against a lack of funds and great difficulties. In Chinese Tibet these are insuperable, and the only quarter from which the gospel has entered that land is Little (or Western) Tibet, belonging to India, where Moravian missionaries have some small congregations, and have done much for the investigation of Tibetan language, literature, and history. Among the Muslims of Chinese Turkestan Swedish and China Inland missions are in the early stages of work.

vi. JAPAN, KOREA, AND FORMOSA.-Here, as in China, we have countries in which, after periods of notable success on the part of Roman Catholic missions, the native rulers have turned upon them as politically dangerous, and have violently persecuted the Christian Church, almost to extinction, till, through political changes, intercourse with the West has been resumed, but on a different footing, and with the result that the openings of missions of the Reformed communions also. In the case of Japan this re-opening dates from the year 1859, when American missionaries were the first to settle in the islands of the Kingdom of Tosa, and were baptized in 1864, but meanwhile persecution of Christians continued, sometimes with severity, till the Revolution of 1868, which once more brought the Mikado to power, and inaugurated the modern government of Japan (G. Euss, "G. M.B."). When in 1869, was the first English missionary, but full religious toleration was not granted till 1873, to be speedily followed by the serious suggestion that Christianity should be made the State religion. This was, however, negatived, and subsequently there was a distinct reaction against foreign influence which Christianity was included, especially during the first decade of this century. But a swing back of the pendulum was indicated by the action of the Minister of Education in the first decade of this century, when he announced that the government had resolved to recognize Christianity, alongside of Shinto and Buddhism, as a religion deserving of encouragement, expressing, at the same time, the hope that Christianity would conform itself to national aspirations. In this connection it is noteworthy that the Christian message in Japan has appealed specially to men of culture. A quite disproportionate number of Christians are found among members of Parliament, high military and naval officers, doctors and professors, and Count Okuma has recorded that 'the indirect influence of Christianity has poured into every realm of Japanese life.' ("Intern. Review," Oct. 1912, i. 554). The number of Protestant Christian adherents in Japan may be reckoned at about 100,000. Forty per cent of the mission stations are said to be self-supporting. Three-fourths of the converts are members of the four amalgamated Churches representing the Anglican, Congregational, Presbyterian, and Methodist missions respectively. The great majority of the Protestant missions have established a organization for the promotion of common work, called the 'Federated Missions of Japan.' This has formed a general Christian Literature Society, and promoted joint efforts for evangelizing both in the towns and in the neglected rural districts.

The work of missionary education builds less largely at present in Japan than in China, owing to the fact that from the first opening of the country education has been steadily taken in hand by the State, which now provides a completely organized system of education from the primary schools (at which attendance is compulsory) up to the universities and technical schools. There are 14 Protestant middle schools, with about 5500 scholars, and two colleges of university grade, of which the Doshisha College at Kyoto, founded by Joseph Nishima, has 700 students. In 1950, the number of students in all schools is about 200,000. Elementary missionary education among Chinese children has been carried on by both missionaries and the government, and Chinese children have access to well-equipped Government schools. The educational work of the Y.M.C.A. has been much appreciated in Japan, and has strongly influenced the student world; the Y.W.C.A. is reaching women increasingly. Christian missionary efforts among the aboriginal Ainu of Yezo have been appreciated by the Japanese Government, who bestowed a decoration on John Batchelor of the C.M.S. in recognition of his work for this dying race.

Among the dependencies of Japan, Formosa, first entered in 1865, now has some 20,000 Christians. Korea, after three and a half years of absolute seclusion, was not effectively entered till 1882, first by American missionaries, and, in 1890, by Anglicans. The growth of the work has been phenomenal, especially in the years following the Russo-Japanese war of 1904-5, when 380,000 children were under education in mission schools, and 29 hospitals and 25 dispensaries were in operation. This progress has been made in the remarkable isolation in the study of Scripture and by reformation of life.

vii. THE NEAR EAST.—Under this we include the lands, stretching from Morocco to Persia, in which Islam, after Arabia, has long been the long domination of Islam. The work of Christian
missions to Muslims in this region is either non-existent or of supreme infancy. For our present purpose, we are not dealing with missions to the surviving Abyssinian, Coptic, Armenian, Syrian, Nestorian, or Jacobite Churches. We may, however, note that the educational work carried on among Oriental Christians, missions to the missionaries, in the Turkish empire and Egypt has resulted in the formation of considerable Protestant communities, whose progress in intelligence, morality, and wealth has raised the Christian name in the eyes of the Moslems and which is not so far unfavourably viewed by the ancient churches by stimulating a desire for reform and progress. There is among the Protestant Orientals also the dawn of a desire to evangelize the Muslim—a feeling that had been eradicated from the Oriental Christian by a thousand years of oppression and misrule, which prevented him from seeing in the Muslim anything but an irreconcilable tyrant. The most effective missionary work done by them of the nations is that of Bible colporteurs. The Muslim verbally acknowledges the Scriptures of the OT and NT to be inspired, and, if once induced to study them, he is in Asia capable of realizing that the theory of their corruption subsequently to Muhammad is a fragment of his divines. Thus their witness to Christ, as well as their incompatibility with the Qur'an, is a powerful means of the conversion of the Muslim. The British and Foreign Bible Society employs in the countries referred to 71 colporteurs, and has 27 depots, through which 128,926 copies of Bibles, Testaments, and portions are circulated. Individual conversions through these means are fairly frequent, but the building up of Christian communities is a slower process, hampered by special obstacles.

In Morocco, Algeria, Tunis, and Tripoli, among a total population of about 14,000,000, work is carried on mainly by the N. Africa Mission and other undenominational agencies. There are converts here and there. The principal agency, besides that of colportage, is schools, which are elementary. In Egypt work was begun in 1854 by the American United Presbyterians, principally among the Copts, and resuscitated by the C.M.S. in 1892. Considerable access is made by the Effendi class, and a number have been baptized, while medical work has to some extent extended the masses, in both town and country. Schools, primary and secondary, contain 17,994 pupils (largely of Coptical background). The establishment in Cairo of a Christian university is being actively promoted by American missionaries. German and English missionaries are pushing on into the Anglo-Egyptian Sudan, and, though Christian propaganda is barred among the Muslims of that region, yet in Omdurman some educational work is being done. Cairo is the chief literary centre of the Mohammedan world, and from the Christian side vigorous efforts are being made by the Nile Mission Press, an Anglo-American undertaking, to produce and circulate evangelistic literature in Arabic.

In Asia Minor and Syria Protestant work has been done chiefly by American missions working among the ancient churches. The system of education which they have developed, from primary schools to colleges, especially the Roberts College in Constantinople, is unexcelled. The spirit of the Missionary community in thought and attitude towards Christianity, Medical missions, in Palestine especially, have testified in the same direction. Arabia is touched on its outskirts at Bagdad, Bahrain, and Aden by schools, medical work, and colportage. Persia was first entered by Henry Martyn, when he completed his translation of the NT at Shiraz in 1811. In 1829 K. G. Pflander visited Persia, and wrote his celebrated Balance of Truth, laying the foundation of a Persian Christian literature, built upon later by W. St. Clair, the compiler of the 1871 American Presbyterians organized work among the tribes of N. Persia, and in 1876 S. Persia was occupied by R. Bruce of the C.M.S. Medical and educational work on an extensive scale, and the demand for schools on a Western model far exceeds the power of the missionaries to supply it. The modernist sect of Bahais, sprung from the Babi reformatory movement, has borrowed freely from Christianity; but does not so far openly profess Christianity (q.v.). Throughout these missions work among women, visiting, teaching, and medical, has initiated or helped on the movement perceptible in Muslim lands for the elevation of the female sex.

VIII. MISSIONS TO JEWS.—The Jewish population of the world is approximately 12,000,000. Protestant missionary work among them is carried on by 65 societies, maintaining 550 men and 320 women missionaries. The Church of England, with the aid of the Society for Christianizing Judaism (253 missionaries; income in 1914, £51,000) is the principal one. Their work is quite imperfect. Some 250 of the Anglican clergy and others labor among the Jewish converts from Judaism. J. F. de la Roche represents this work during the 19th cent. in Protestant churches at 72,740; Roman Catholic, 57,300; Greek, 74,500.

The theodurists Neander and Eidersheim, the missionary bishops Schenkel, Kollmann, Alexander, and Gobat, were Christian Jews.

III. GENERAL ASPECTS. —I. Principles. —As a result of the work of missions by the Reformed Churches since the close of the 18th cent., there is now a growing community of some 6,000,000 native Christians belonging to the most varied races and cultures, from the primitive aborigines of Australia to the progressive people of Japan. Yet in the age which has seen this unexampled expansion of Christianity in every direction the question has been raised whether Jesus of Nazareth ever intended that His disciples should carry the message of His redemption into all the world, though it is fully allowed that the world mission of His faith was the legitimate and necessary consequence of the principles which He enunciated and exemplified. To suppose that the Church of this life and teaching, which have persisted in spreading their vitalizing influences among the nations for nineteen centuries, was Himself without desire for or intention of producing such an effect would be to face the most insoluble dilemma. The judgment which we have sketched makes it abundantly clear that the mainspring of this world-wide enterprise of missions has been the conviction that its promoters and messengers were carrying out the conscious purpose and explicit command of the Saviour of the world. At the same time it would be unnatural that the reconstruction of thought which our age is experiencing in every sphere of life should leave the conception of missionary effort unchanged, under the influences like G. Warneck in Germany and B. F. Westcott in England, into the wider and deeper conception of a call to regenerate the nations spiritually, morally, intellectually, and socially, and to build up the universal Church of Christ. This broader conception of missionary work and the research into the origin of Christian missions has helped us, with a truer historical perspective, to test our contemporary missionary work by the example and spirit of the Christian Church of the apostolic age. In the course of medieval history, too, the Church has had learning lessons of the manifold adaptation of the form of missionary work to the conditions and needs of different ages and peoples, and of these lessons the
whole modern development is an amplification. But this larger sweep of outlook and effort has by no means made the original conception of the mission superfluous. On the contrary, this remains the vital centre of the whole, and it is as this is expanded and co-ordinated in the larger aim that the success or failure of the mission will become evident.

2. Methods, apostolic and contemporary.—The method is raised again and again whether the close following of the methods of St. Paul is not the true solution of our most fundamental difficulties. Will it not result in the complete independence of our mission churches? Were the evangelist to make brief sojourns instead of settling down, to devolve authority straightforwardly on native helpers instead of keeping them in long tutelage, to demand instead of giving pecuniary assistance, Christian congregations might be urged, the smaller, but they would be stronger and self-reproducing. Each of these paths has been tried in modern missions, generally with scant success, and the same end under different conditions may demand different means. Where there was a Jewish diaspora standing at the threshold of Christianity, teaching and disciplining and devoting themselves to the same task, the success may now require a generation; where habit and civilization of evangelist and evangelized were practically identical, the problems now arising from disparity of civilizations and distance of abode are non-existent. Recognizing these and other special difficulties and defects of modern missionary work, we have to seek their solution not in the forms of apostolic, or any other, evangelism, but in the principles embodied in those terms. Thus in the adventure of faith undertaken by the C.I.M., which has so remarkably opened up China to the gospel, we have a contemporary adaptation of the methods, rapidly following the main lines of communication and occupying the chief cities of an empire which in culture and administration offers much analogy to that of Rome. Or, again, in the revival of community life in the brotherhoods and sisterhoods of Anglican missions, we have a useful adaptation of early and medieval monasticism to the conditions of the mission-field of to-day. But both of these have the defects of their qualities.

The effect of modern thought on the adaptation of NT principles to contemporary missionary work may be traced in the development of the chief missionary methods. The mission school and college have no place in them, but the concept of the diocesan school of monastic missionaries, their original purpose being to serve as a means of conveying the message to the children of the literate, or would-be literate, classes who are otherwise not easily reached, and of bringing them into the Christian Church when they have arrived at years of discretion. The most notable effect of earlier educational work was the conversion of men of mark, who exercised great influence on the development of the Church. Within the last generation this aspect of the work has receded into the background; the conception of educating the mind of a nation and creating an atmosphere permeated by Christian ideals has exercised increasing influence on missionary educators, especially in high schools and colleges, and it is evident that the successes have lain mainly in this direction. The value of such preparation of the community for the eventual reception of Christ as Lord and Master is immense, and it may be hoped that even the work which commonly falls to be done after conversion is thus being accomplished beforehand. But there is need of balanced judgment and steadfast will, lest elaboration of the teaching delay or even prevent the erection of the building. Similarly, in the now indispensable work of medical missions the physical benefits conferred were at first entirely subsidiary to the spiritual aim; but they have become so fundamental a part of the Kingdom of Christ as to be realized in things temporal as well as spiritual, and have led to emphasis upon the fact that the work of healing, even apart from any spiritual effects, is a way of attaining the end. But when the end involves the risk that the medical missionary may be merged in the philanthropist. The modern medical missionary would not, if he could, ignore the demand for the greatest possible scientific efficiency, for of spiritual and economic independence in our mission churches. That was the essential notion of the mission which involves the risk that the medical missionary may be merged in the philanthropist. The modern medical missionary would not, if he could, ignore the demand for the greatest possible scientific efficiency, for it will allow him to be the bosom friend of second-rate professional skill; yet he will lay the decisive emphasis of his calling on the specific aim of the missionary to carry home his message. Again, in the delivery of that message by the general missionary a comparative study of religion and sociology has modified the method of approach by the Christian messenger to non-Christians. He is less inclined to attack their want of spiritual training in order to the need latent in each human heart of something higher, less prone to controvert their doctrines and defiles than to set forth Christ in life and teaching. The conviction assimilated which may now require a generation; where habit and civilization of evangelist and evangelized were practically identical, the problems now arising from disparity of civilizations and distance of abode are non-existent. Recognizing these and other special difficulties and defects of modern missionary work, we have to seek their solution not in the forms of apostolic, or any other, evangelism, but in the principles embodied in those terms. Thus in the adventure of faith undertaken by the C.I.M., which has so remarkably opened up China to the gospel, we have a contemporary adaptation of the methods, rapidly following the main lines of communication and occupying the chief cities of an empire which in culture and administration offers much analogy to that of Rome. Or, again, in the revival of community life in the brotherhoods and sisterhoods of Anglican missions, we have a useful adaptation of early and medieval monasticism to the conditions of the mission-field of to-day. But both of these have the defects of their qualities.

The effect of modern thought on the adaptation of NT principles to contemporary missionary work may be traced in the development of the chief missionary methods. The mission school and college have no place in them, but the concept of the diocesan school of monastic missionaries, their original purpose being to serve as a means of conveying the message to the children of the literate, or would-be literate, classes who are otherwise not easily reached, and of bringing them into the Christian Church when they have arrived at years of discretion. Thus in the adventure of faith undertaken by the C.I.M., which has so remarkably opened up China to the gospel, we have a contemporary adaptation of the methods, rapidly following the main lines of communication and occupying the chief cities of an empire which in culture and administration offers much analogy to that of Rome. Or, again, in the revival of community life in the brotherhoods and sisterhoods of Anglican missions, we have a useful adaptation of early and medieval monasticism to the conditions of the mission-field of to-day. But both of these have the defects of their qualities.
4. Results and problems. — The present condition of the world mission-field shows offshoots of the Reformed Churches in every stage of growth. They differ from each other in spiritual gifts and strength, but everywhere they include whole-hearted followers of Christ, and, as a body, they have advanced greatly in tone and conduct from their Monothestic-Christian manor of life. The atheist, the pantheist, the agnostic, and the devotee have all had to believe in one all-wise Father, one sinless Saviour, one indwelling sanctifying Spirit. From this tree grow the fruits, both of higher morality and of social civilization, and intellectual progress. In many directions the desire is shown to hand on the benefits of the gospel to others, and readiness to make sacrifices in so doing is evident. It has been remarked that the churches of the mission-field have produced no first-class heresy, implying thereby a lack of serious intellectual striving. But other causes may more reasonably be assigned for this. The intellectual teaching and status of the foreign teacher is so far superior, in the great majority of cases, to that of his converts that it would be difficult for them to maintain positions contrary to those which he has laid down. But all the more so as the possible variations of intellectual formulation have been fairly worked out by previous heresies, the weaknesses of which have been pointed out to them. Moreover, no considerable part of the effect produced by Christian missions is to be found in the change of attitude, the new beliefs and ideals of conduct, individual and social, taken over from them by the still non-Christian world. In this process the analogues of early Christian heresies are to be found in the teachings of bodies outside the Christian Church. Thus the Brahma Samaj of Hinduism represents a kind of Ariasism; the Baha'i offshoot of Islam would stand for one variety of Gnosticicism, and theophysics (q.v.) for another. Generally speaking, syncretism is largely practised, and in many cases by men of noble character who are striving for a reconciliation of the old and the new, but the religion of the amateur collector is not more likely to stand than now among the early centuries, though it is a pitfall of which the abler intellectuals of the young churches need to beware.

Analogous to this is the problem of unity in the Reformed Church. The rivalry of the divisions which have sprung up in the West from local and temporary causes have naturally no meaning to the Eastern convert; and the same holds good of many dividers in doctrine. The resulting tendency to unity in faith and practice, in face of powerful opposing forces, is healthy and hopeful. There is, however, a danger that members of the young churches should regard all distinctions in doctrine and discipline indiscriminately as mere Western peculiarities which may be swept aside in order to construct an edifice of truly indigenous Christianity. A sound attitude of the missionary towards questions of race and nationality will do much to meet this danger.

Next to the essential spiritual element no factor in missionary work is more weighty than the social question. In which it has initiated or stimulated. From these successes a difficulty of some springs. In the context of two deeply-separated civilizations the converts naturally assimilates that of his Western teacher, but without the exercise of wisdom and judgment it is a mere caricature of Western culture without its balance and restraint, thereby repelling alike his own countrymen and his Western fellow-Christsans; and among other races he may acquire needs and habits which involve him in economic and financial difficulties. Meanwhile, Western culture and commerce are ceaselessly flooding into mission lands, and the change of life connected with them is affecting non-Christsians scarcely less than Christians. As a result of this the efforts of the missionary to promote the growth of indigenous style of living may be resisted as intended to represent the progress of the native Christian. One of the missionary's most difficult and delicate tasks is to decide and to convince his charges what is justly due to the necessities and what is illegitimate as ministering to extravagance and parasitic growth.

Thus social progress is intimately connected with the great difficulty presented by the economic dependence of the mission churches on their parents at the home base. The amount annually expended by home churches on the maintenance of ministers, preachers, and teachers of indigenous races is estimated at $7,000,000. The amount recorded as raised by the native churches in the same connection is $1,600,000. Allowing for a liberal margin of error, the disparity is still immense, even when we consider that a large number of the converts are drawn from impoverished strata of society whose financial weakness may be great for some time to come. Almost every advance is dependent on fresh expenditures made by the mother churches, who also contribute largely to the organization of worship, pastoral care, and teaching. In the last resort the economic dependence of mission churches is part of the larger problem of the economic dependence of the coloured races on the white, and in all probability the one will not be solved without the other.

Everywhere we are brought up against the racial problem. It was there from the first, and the success of missions is measure of the messenger in understanding and treating with wise sympathy people of a foreign race. As the races have become conscious of their common ideals, traditions, and interests, the racial question in the mission-field has developed into the national. Everywhere the missionary is met, actively or passively, by insistence on the rights of the race in its own sphere and a demand for equal opportunity, as against the old idea of the southern superiority of the white man. The opposition thus engendered reacts against the white man's religion, and there is on each continent a restiveness and impatience of control in the part of converts and churches such as did not exist a generation ago. To deal with this firmly and sympathetically as a sign of healthy growth, and as a pathway to new and fruitful relations, is the part of wisdom. Premature independence and unduly delayed emancipation both have their dangers. "Smartness and efficiency may be made an idol; but it is also a temptation to take the easy path of lowering the ideals of the gospel, and this leads to deterioration. The problem is to be solved only by patient, tenacious charity on the part of the missionary who understands the national and racial feeling, and whose watchword is the responsibility of the stronger."

H. U. WEITBRECHT.

MISSIONS (Muhammadan).—The materials for the history of Muhammadan missionary activity are much less abundant than those for the history of the propagation of Christianity. Muhammadan
missionary activity. When he began his prophetic career, his first efforts were directed towards persuading his own family; his earliest converts were his father, his mother, his wife Khadija, his half-brothers, Zaid and Ali, and some members of his immediate circle. He did not begin to preach in public until the third year of his mission, but he met only with the scoffing and contempt of the Quraish. In the fourth year of his mission he took up his residence in the house of al-Arqam, one of the early converts, and many Muslims dated their conversion from the days when the Prophet preached in this house, which was in Medina, a city which was at times done much for the spread of the faith, have not cared to set on record the story of the success that has attended their preaching. There is, to be sure, in Muhammadan literature to correspond to the abundant materials for the history of Christian missions provided in the biographies of Christian saints, the annals of the Christian religious orders, and the innumerable journals that, in the West, form one of the various branches of the various Roman Catholic and Protestant missionary societies. In fact, the fullest details as to Muslim missionary activity are generally to be found in the history of the Church, not in the official chronicles, are usually accurate for the first century of Islam. Yet to this poverty of information from Muhammadan sources there is one notable exception, namely, the biography of Muhammad himself. The missionary activity of Islam begins with the life of the founder, and the numerous biographies of the Prophet are full of stories of his efforts to win over unbelievers to the faith.

In the Qur'an, the duty of missionary work is clearly laid down in the following passages (here quoted in chronological order according to the date of their revelation):

'Sacrifice them to the way of the Lord with wisdom and with kindly warning; dispute with them in the kindest manner' (xxi. 120). 'They who have inherited the Book after them (i.e. the Jews and Christians) are in perplexity of doubt concerning it. For this cause summon them' (xxiii. 62), and walk uprightly therein as thou hast been hidden . . . and say, in whatsoever Book God hath sent down do I believe: I am commanded to decide justly between you: God is your Lord and your Lord: we have our works and you have your works: between us and you there be no strife: God will make us all one on the Day of Resurrection and shall we return' (xxii. 62). 'Say to those who have been given the Book and to the Ignorant, Do you accept the Lord of the Religion of Abraham as your God?' (xxvii. 39). 'Then, if they accept it, they are guided aright: but if they reject it, then shall we return' (xxiv. 36).

'This God clearly sheweth you His signs that permissiveness may be ascertained: there is no doubt that there are from among you a people who invite to the Good, and enjoin the Just, and forbid the Wrong; and these are they with whom it shall be well' (iii. 164). 'Verily thou art a guided aright'; but if they debate with thee, then say: God best knoweth what ye do' (xxvi. 61). 'If any one of those who join gods with God ask of thee a reason, then say: God ask him as a settlement as thou askest him, in order that he may hear the word of God; then let him seek his place of safety' (xxvi. 6).

Further, the faith of Islam was to be preached to all nations, and all mankind were to be summoned to belief in the One God.

'God's religion is not other than an exhortation to all created beings, and after a time shall ye surely know its message' (xxxix. 97). 'This Book is no other than an exhortation and a clear Qur'an, to warn whomsoever liveth' (xxxvi. 69). 'We have sent thee as mercy to all created beings' (xxi. 9), and 'He is the Lord of the heavens and the earth and He is the wise, and His apostle with guidance and the religion of truth, that He may make it victorious over every other religion, though the polytheists are in awe of it' (xxiv. 9).

In the hour of Muhammad's deepest despair, when the people of Mecca turned a deaf ear to his preaching, when the converts that he had made were few and far between until they recanted and others had to flee from the country to escape the rage of their persecutors, the promise was revealed:

'One day we will raise up a witness out of every nation' (xvii. 96).

The life of the Prophet himself presented, for succeeding generations, an example of Muslim
of the Mongols had brought ruin to the centres of learning and culture in the Mongol countries which they overrun, and it was only by slow degrees that Islam began to emerge out of the mists of former ascendency and take its place again as a dominating factor in the history of the 13th and 14th centuries. The Mongols, in the latter part of the 13th century, began to be made of use from among the Mongols, and a new epoch in Muslim missionary history then commenced, and in which the Sufis, who had already played a prominent part. In the profound discouragement which filled the Muslims after the defeat of the Mongol conquest, there had been in their belief in mysticism, and the vīhār of spiritual guide, who during this period began to exercise an increasing influence, became of special importance among the proselytizing agencies at work. The first Mongol ruler to profess Islam was Sênâk Khan, who was chief of the Golden Horde from 1259 to 1287; according to one account, he owed his conversion to two merchants whom he met coming with a caravan from Bukhara; but the conversion of his prince gave great offence to many of his followers, and half a century later, when Uzbeg Khân (who was chief of the Golden Horde from 1313 to 1340) attempted to convert the Mongols who still lived along the Theran Tsû, it is said that he should we abandon the religion of Jenghiz Khân for that of the Arabs? In other parts of the Mongol empire the progress of Islam was more gradual and more fluctuating, and it did not become the paramount religion in the kingdom of the Khans of Persia until 1395, or among the Chaghatay Mongols until three centuries later. The first Mongol sultan to profess Islam was Tâqīq Timur Khan (1247-55), who is said to have owed his conversion to a holy man from Bukhara, by name Shaikh Janâl al-Dîn; but so late as the end of the 13th century a dervish named Isagâ Wâlî found scope for his missionary activities in Kâshgâr and the neighbouring country, where he spent twelve years in spreading the faith.

The extension of Mongol rule over China gave an impulse to the spread of Islam in that country; though Muslim merchants had been found in the coast towns from a much earlier period, the firm settlement of the Chinese in Western cities was not commenced until the 13th century. The settlements of immigrants from the west, which were founded from that period, developed into great communities of Chinese Muslims of the present day—through various causes, of which proselytism has been one. The rise of the Mongols was also incidentally the cause of renewed missionary activity in India; Islam had gained a footing in Sind and on the Malabar coast as early as the 8th century, and in the north after the establishment of Mongol rule at the close of the 12th century, but the terror of the Mongol arms caused a number of learned men and members of religious orders to take refuge in India, where they succeeded in making many converts. To the period of the Mongol conquests—though in no way connected therewith—is traditionally ascribed the establishment of Islam in the Malay Archipelago. Sumatra had been the first island into which it was introduced—probably by traders from India and, later, Arabia; but the extension of the new faith was very slow, and large sections of the population of this island remain unconverted. The conversion of Java, according to the native annals, began in the 15th century and spread to the Moluccas and Borneo. The arrival of the Portuguese and, later, of the Spaniards, in the 16th century, checked for a time the growth of Islam in the Malacca Archipelago, and the rival faiths of Christianity and Islam entered into conflict for the adherents of its peoples; but the aggressive behaviour of the Spaniards and the zeal of the missionaries to enforce the acceptance of their religion ultimately contributed to the success of the Muslim propagandists, who adopted more conciliatory methods for the spread of their faith, and in the absence of the native leaders, the activities of Islam have been carried on sparsely in these islands up to the present day—for the most part by traders. From the very nature of the case, there has been little historical record of their labours, and this little is chiefly found in the reports of Christian missionaries. Legendary accounts of the arrival of the earliest apostles of Islam in several of the islands have been handed down, but they are meagre and of doubtful historical value.

The history of the spread of Islam in India by missionary effort is not quite so scanty, but it has been largely overthrown by the circumstances of the history of the country. The history of the spread of Islam in India by missionary effort is not quite so scanty, but it has been largely overthrown by the circumstances of the history of the country. Among these may be mentioned Shaikh Isâkimâ, a Bâbârî Sayyid who preached in Lahore in 1066, Sayyid Nâdir Shâh, the patron saint of Trichinopoly (where he died in 1396), and Abd Allah, who landed in 1397, and is said to have been the first missionary of the Mustâfî Isâlî sect (known in India as the 'Bohurâh'). Towards the close of the same century another Isâlî missionary, but of the Khojâ sect, Nûr al-Dîn (generally known as Nûr Satâqân), carried on a successful propaganda in the Hindu kingdom of Gujarât. In 1236 there died in Ajmer one of the greatest of the saints of India, Khâwâjâ Mu'in al-Dîn Chishti, who settled in that city while it was still under Hindu rule and made a large number of converts; ten years later he died in Chittagong, where he died in 1338, and 'Abd al-Lâh, who landed in 1367, is said to have been the first missionary of the Musta'fî Isâlî sect (known in India as the 'Bohurâh'). Towards the close of the same century another Isâlî missionary, but of the Khojâ sect, Nûr al-Dîn (generally known as Nûr Satâqân), carried on a successful propaganda in the Hindu kingdom of Gujarât. In 1236 there died in Ajmer one of the greatest of the saints of India, Khâwâjâ Mu'in al-Dîn Chishti, who settled in that city while it was still under Hindu rule and made a large number of converts; ten years later he died in Chittagong, where he died in 1338, and 'Abd al-Lâh, who landed in 1367, is said to have been the first missionary of the Musta'fî Isâlî sect (known in India as the 'Bohurâh'). Towards the close of the same century another Isâlî missionary, but of the Khojâ sect, Nûr al-Dîn (generally known as Nûr Satâqân), carried on a successful propaganda in the Hindu kingdom of Gujarât. In 1236 there died in Ajmer one of the greatest of the saints of India, Khâwâjâ Mu'in al-Dîn Chishti, who settled in that city while it was still under Hindu rule and made a large number of converts; ten years later he died in Chittagong, where he died in 1338, and 'Abd al-Lâh, who landed in 1367, is said to have been the first missionary of the Musta'fî Isâlî sect (known in India as the 'Bohurâh'). In 1236 there died in Ajmer one of the greatest of the saints of India, Khâwâjâ Mu'in al-Dîn Chishti, who settled in that city while it was still under Hindu rule and made a large number of converts; ten years later he died in Chittagong, where he died in 1338, and 'Abd al-Lâh, who landed in 1367, is said to have been the first missionary of the Musta'fî Isâlî sect (known in India as the 'Bohurâh').
watered by the Senegal and the Niger, and Arabs from Egypt spread their faith in the eastern Suddan during the 12th cent., to which period the conversion of Kordofan and Kamer appears to belong. It is evident that some came forward as zealous missionaries of Islam, to be followed by the Hausas, whom they had converted, and the Hausas have carried their faith with them from one place to another. Their propagandist efforts were intermittent, however, and many parts of the Sudan remained untouched by Muslim influences until the 19th century.

Except in India and the Malay Archipelago, there are few records of Muslim missionary activity from the 15th to the 18th century. Nevertheless, many conversions occurred during this period; e.g., the Turkish conquests in Europe in the 14th and 15th centuries were followed by conversions to Islam on a large scale, and in the 17th century, thousands of Christians in Turkey in Europe went over to the religion of their rulers; similarly the conquests of Ahmad Grani in Abyssinia (1528-43) were signified by numerous conversions to Islam, but there is little evidence of any direct propagandist efforts on the part of the Muslims.

A great revival of the missionary spirit of Islam followed the Wahhabite reformation; this movement stirred the whole of the Muslim world—either to sympathy or to opposition—and thus directly or indirectly gave the impulse to the great missionary movements of the 19th century. In India the Wahhabites preachers aimed primarily at purging out the many Hindu practices that caused the Muslims to deviate from the ways of strict orthodoxy, but incidentally they carried on a propaganda on the basis of their example, which was followed by other Muhammadan missionaries, whose preaching attracted to Islam large numbers of converts throughout the country. In Sumatra Wahhabite preachers stirred up a revival and made proselytes. But a more momentous awakening was felt in Africa. Uthman Danfodo returned from the pilgrimage to Mecca full of zeal for the Wahhabite reformation, and, under his leadership his people, the Fulbe, who had hitherto consisted of small scattered clans living as shepherds, rose to be the dominant power in Hausaland; the methods of the Fulbe were violent and political, and they endeavoured to force the acceptance of Islam upon the pagan tribes which they encountered. On the other hand, a peaceful propaganda was carried on in the Sudan by members of the Amiri, haniyyah and Qadiriyyah orders; the former takes its name from Muhammad Ibn al-Amir Ghani, whose preaching won a large number of converts from among the pagan tribes about Kordofan and Sennar; after his death in 1853 the order that he founded carried on his missionary work. The Qadiriyyah order had been introduced into Western Africa in the 15th cent., but awake to renewed life and energy in the 19th. Up to the middle of that century most of the schools in the Sudan were established and conducted by teachers trained under the auspices of the Qadiriyyah, and their organization provided for a regular and continuous system of propaganda among the heathen tribes. Another order, the Chundan, which was founded in 1857, has also been very active and successful in proselytizing.

A fresh outburst of Muslim missionary zeal in Africa is noticeable when the greater part of that continent was partitioned among the Powers of Christian Europe— Britain, France, and Germany; by establishing ordered methods of government and administration, and by facilitating communication by railway and rail, they have given a great stimulus to trade and have enabled that active propagandist, the Muslim trader, to extend his influence in districts previously closed to him and to traverse familiar ground with greater security.

Throughout the course of Muhammadan history Islam has attracted a large number of converts for various reasons—political and social—wholly unconnected with missionary enterprise; at the same time it has always retained its primitive character, without, however, having any permanent organization to serve as a medium for its expression. Societies for carrying on a continuous propaganda were unknown in the Muslim world before the last decades of the 19th cent., and such Muslim missionary societies as are now found in Egypt and India appear to have owed their origin to a conscious imitation of similar organizations in the Christian world. The most characteristic expression of the missionary spirit of Islam is, however, found in the proselytizing zeal of the individual believer, who is prompted by his personal devotion to his faith to endeavour to win the allegiance to it of others. Though there are not many religious teachers who may be looked upon as professional missionaries of Islam, especially the members of the religious orders, it is the trader who fills the largest place in the annals of Muslim propaganda; but no profession or occupation for the propagandist for the office of preacher of the faith, nor is any priestly ministrant needed to receive the convert into the body of the faithful. Some observers, entitled to respect for their knowledge of the Muhammadan world, have gone so far as to say that every Muslim is a missionary:

A tout musulman, quelque mondain qu'il soit, le prosélytisme semble être une passion, et qu'il en prospère... 'Le Missionnaire', 1904, p. 427. ‘The Muslim is by nature a missionary...’ and carries on a propaganda on his own responsibility and at his own cost’ (W. Munzinger, Petremanes Mittheilungen, 1907, p. 43).

However exaggerated such an opinion may be, stated thus as a universal, it is certainly true that there is no section of Muslim society that stands aloof from active missionary work, and few truly devout Muslims, living in daily contact with unbelievers, neglect the prospect of their Prophets' teaching. ‘Set men to the way of thy Lord with wisdom and with kindly warning’ (Qur'an, xlii, 180).

Even the prisoner will on occasion take the opportunity of preaching his faith to his captors or to his fellow-prisoners. In the case of Muslims sent to Eastern Europe was the work of a Muslim jurisconsult who was taken prisoner, probably in one of the wars between the Byzantine empire and its Muslim neighbours, and was brought to the country of the Pechenegs (between the lower Danube and the Dniester) in the beginning of the 11th cent.; before the end of the century the whole nation had become Muhammadan. In India, in the 17th cent., a theologian, named Shawkat Ahmad Mijaddid, who had been unjustly imprisoned, is said to have converted several hundred idolaters whom he found in the prison. Women as well as men were preying for the spread of their faith; the influence of Muhammadan women, especially the wives of Christian princes, who had to pretend a conversion to Christianity on the occasion of their marriage, brought up in the church of the children in the tenets of Islam and used every means to spread their faith. In Abyssinia the legend that the Tatars of women of Kanaz are said to be zealous propagandists of Islam.

The individualistic character of Muhammadan missionary effort explains the absence of detailed records of conversion; there is a clear lack of the common apparatus of modern Christian missionary.
missions—e.g., tracts and other missionary literature for general distribution; but in learned circles and among those who have been exposed to which some of the ablest Muslim thinkers have contributed—e.g., al-Kindi (†735), al-Mas‘udi (†951), Ibn Hazm (†1064), al-Ghazali (†1111), etc., as well as other orators who have written apologies for their change of faith and the defense of their new religion. Several documents making a direct appeal to unbelievers have been preserved; the earliest of these are the letters which Maimonides addressed to the potentates of his time, the emperor Heraclius, the king of Persia, the governor of Yemen, the governor of Egypt, and the king of Abyssinia. To the reign of al-Mansur (†883–932), who himself is said to have been zealous in his efforts to spread the religion of Islam, belongs the interesting treatise of 'Abi Allāh b. Ismail al-Hāshimi, in which he makes an impassioned and affectless appeal to his Christian correspondent to accept Islam. A great many more formal characters are the two letters, one in Arabic and the other in Persian, which the Timurid prince, Shah Rukh Bahadur, addressed in 1412 to the pope, Giovanni Battista Valvasor, in favor of the doctrine of the law of Muhammad, the Apostle of God, and to strengthen the religion of Islam, so that he might exchange the transitory sovereignty of this world for the sovereignty of the world to come. A similar letter was written by Hāwī b. Shāfi‘i of Morocco, to King James II. in 1608. Coming from such an exalted source, these documents have been preserved, while the efforts of humbler men have been less successful. The publication of tracts and periodical reports of missionary societies makes its appearance only in the latter part of the 19th century.

LITERATURE.—Some attempt to give a bibliography of the scattered writings of the missionary societies is made in The Preaching of the Gospel, London, 1913, by the present writer. For the history and the most valuable sources see Annali dell’Islam, by Leone Caetani, Milan, 1869, E. Becker, Die Staaten der arabischen Rassen und die Mmissionen in Arabien, Berlin, 1879; C. Simon, Islam und Christentum in Kairo und dem Syrien der Romanischsprachigen Moslems, aus der Kaiserm missionsunion, 1915; C. Bonet-Maury, Islamisme et la Christendom en Afrique, Paris, 1906; A. Le Chatelier, L’Islam dans l’Afrique occidentale, Paris, 1910; L. del Rio, Al-Andalus, der Islam in Deutschland, Berlin, 1912; S. Meinecke, Ideen und Wirkungen der Moslemischen Missionen in Deutschland, 1912; and Der Islam und die Welt. See also Mission d’Ollone, Registres des missions des m missions chinoises par le commandant d’Ollone, etc., Paris, 1911. For different parts of Africa separate monographs have appeared, such as E. Becker, ‘Zur Geschichte des ostafrikanischen Islam’ and Materielle und spirituelle Bedeutung des Islam in Deutsch-Ostafrika, Berlin, 1912; G. Prentzel, Die mission der ostafrikanischen Missionen in Ostsudan, etc., P. A. van der Lub and L. H. Nellens, Leyden, 1898–1906; C. Storck, Die Islamisierung der Länder und Völker der Welt, 1911, etc.

In the West the missionary literature is much more extensive and numerous than in the East. The Zeitschriften der Missionen für Islam und Christentum, Berlin, 1888, is the only periodical devoted to the study of Islam. The Zeitschrift der Missionen für Islam and Christentum, Berlin, 1888, is the only periodical devoted to the study of Islam. The Zeitschriften für geschichte und Kultur des islamischen Orient, Strassburg, 1908; G. C. Sevina, A Quarterly Review of current Events, Literature, and Thought among the Churches of Today, London, 1911, etc.

Missions (Zoroastrian).—Zoroastrianism began as a distinctly missionary religion. Accord-
described as 'desired afar' (diárfos-fôte) (VI. xvi. 17). On the other hand, the missionaries sometimes encountered opposition, as when Keršaani sought to suppress them, but was driven from his kingdom by Íaena (IV. ix. 24), through the Greek consul. The missionary inclined to regard this account as an inflated story of the mission's success during the 10th century. The king's veneration for the Virgin of his name, the role of the hero being reversed, is as the case also in certain other figures surviving from the period of Indo-Iranian unity. When, in like manner, the Pahlavi Sînab-i-mah (671) has four sons of Vistâsa (even wandered to Arûm [the Byzantine empire] and the Hindû, outside the realm, in propagating the religion,) the tradition of missionary activities in these countries (on which see Jackson, pp. 83–90) deserves no credence, and equally apocryphal is the statement of the Dīnkart (ŠBE xxxvii. p. xxxi) that the Avesta was translated into Greek.

From the close of the Avestan period to the dynasty of the Sassanids (224–651), there is almost a blank in the history of Zoroastrianism, for neither Selcücs nor Parthians seem to have taken much interest in the religion. Nevertheless, there was considerable dislodge, if not of orthodox Zoroastrianism, at least of Iranian during this time. We have already had occasion to note the spread of Iranian concepts in Cappadocia as shown in the numismatic form of that country (art. CALENDAR [Persian], vol. iii. p. 130;) and a curious amalgamation of Semitic and Iranian religions is revealed by a Cappadocian Aramaic inscription of the 4th century B.C. (M. Lichtheim, Aramäische Inschriften, Epigraphik, i. [1902] 67–69), which runs as follows:

This (l) Dym-Mazāyastīn (šērvarshān, the queen (l), the sister and wife (nirin ṣannā) of Bit, spake thus: ‘I am the sister and wife of Bit, the king of Bit-Mazāyastīn: ‘Thou, my sister, art very wise, and far above the goddesses; and therefore have I made thee wife of Bit (l).’ The monuments (on which see Maxon, ‘Iranian,’ i) is also of interest.

An inscription of Antiochus i. of Commagene (1st cent. B.C.) at Nimrud, Dağh is of much value as the expression of the religious favour of a prince who traced his lineage, on the paternal side, to the Achemenid themselves, and also now showing the charismata of the late Zoroastrian cult in a foreign land. The relevant portion of this text (ed. most convincingly by W. Dittenberger, Orientis Græcici inscript. selecta, Leipzig, 1903–05, no. 383 [l. 593–93]) may be summarized as follows (cf. also F. Umbreit, Monumenta figurata relatùe à cultu de Mithra, Brussels, 1896–99, i. 11, 233, 258, ii. 89–91, and below, p. 754;) :

1. considered piety (mizâr-tas) not only the strongest founda
tion of all things good, but also the sweetest joy to men, and held it to be the criterion both of fortunate power and of blessedness (mizâr-xv farzâr-xv varâsh-xv zapâr-xv); throughout my life I was seen by all to be a holiness (bhrâhiva) both the most faithful guardian and the

2. Keršaani is apparently to be identified with the Vedic Rākṣa, an archer who shot at the eagle which was carrying off Rosna (Rigveda, iv. xxvii. 31; cf. A. Bergsagel, Religion indienne, Paris, 1896–98, iii. 261; A. Hihlén, from, i. 306., Brussels, 1901–02, i. 487.; A. A. Macdonell, O. V. Smith, Brascha, 1901, p. 137). For Keršaani see F. Jost, Iran. Namenbuch, Marcell, 1895, p. 112, and M. Ernst, ‘Zoroastrianism und die Identifikation von Herodot und dem Achae, in the Avesta, Paris, 1892–93, i. 90–91; and a similar praise.

4. For the Seleucids see the See E. R. Bevan, House of Seleucia.

5. It is implied in Lx. xlv. 16 that Dağh (Religion personified) is the daughter of Ahura Mazda and Ararti, but she is neither his sister nor his wife.

6. The previous section (enpshâr) looks very like a literal translation of Av. yasna, Yas, partypiece of an individual.

With the rise of the house of Sasanian Zoroastrianism not merely revived, but again developed a markedly missionary spirit. According to the Dīnkart (art. and tr. P. B. and D. F. Sanjana, Bombay, 1874, vol. x. p. 12), Ahura Mazda commands the faithful to spread through the world the word, and in elucidating the meaning of Av. vrâvârine, 1 profess, the Pahlavi commentators add that every Zoroastrian was bound to propagate the religion among all mankind, while the highest punishment attached to the quondam non-believer who renounces his former tenets in favour of Zoroastrianism (ŠBE xviii. [1892] 416), Sipan ii. (300–79), aided by his great priest (said to be Viznash, see Jost, Iran. Namenbuch, p. 49), worked zealously in the cause of proselytism (Dīnkart, vol. iv. p. 579), and the Dīnkart (vol. viii. p. 26) directly sanctions propagandists by force. It thus means a

1. Cf. art. Images and Icons (Persian). The term usrayazh (urâpshâr) is a transliteration of Anv. urâpshâr, Vaiz, partypiece of an individual.

2. The speaker above may possibly translate Av. urâpshâr, Vaiz.

3. For the brief individual inscriptions to all these see Dittenberger, nos. 304–320 (l. 694–697).
merely academic attitude is amply recorded by the reports of the mission of the Christians by the Sassanids rulers in Persia. The Parthian portion of the Niranjan-ia (ed. D. P. Sanjana, Bombay, 1894, fol. 16, 17th) bears witness to the admission of the move to proselyte, and the Parthian Matsuč-n-i-Haazr Dohastāna (e.g., J. M. Moir, Poona, in 1901, pp. 1, 234, Bartholomae, WZKM xxvii, [1914] 347 F) states that a slave belonging to a Christian should be ransomed by Zoroastrians from his master if such a slave is to be Christian. Proclamation, though he is not to be set free if he becomes a Zoroastrian together with or after his master.

During the period under consideration there was the phenomenon of Zoroastrianism in China (cf. Jackson, pp. 278-290) which if far is thus far known. It would appear, however, from the discoveries made by M. A. Stein, A. Grünwedel, A. von Le Coq, and P. Pelliot in Turkestan, where Buddhist, Persian, Turkic, and Chinese relics lie intermingled, that Zoroastrianism passed along great trade-routes. It may be doubted whether there was any active propaganda.

You have just seen that the Sassanids proceeded by force against the non-Zoroastrians in Persia; they pursued a similar course in Armenia. Ample proof of this is given in the Armenian historians, and much further information is doubtless to be obtained in the hitherto untranslated Acts of the Armenian Martyrs. As an example it will be sufficient to summarize the data of the 5th cent. writer Elini (Hist. of Vartan, tr. C. F. Neumann, 1836).

All non-Zoroastrians were oppressed in Armenia from the reign of Aršak II (341-367) till that of Aršak IV (422-430). The Persian Vans (q.v.) (430-457) followed this example, urged by the Zoroastrians in order to expel the "Christians," and he deprived them of their property and money. He also forced some of them to become apostates by money and high rank, saying, "Oh that you would join the doctrine of the Magi into your souls! Oh that you would help exchange the hero of your souls for the true and excellent gods of our god!" The Magi exhorted him, if he would prove his gratitude for his power and his victories, to make Zoroastrianism dominant everywhere. In the course of his endeavours the Zoroastrians promulgated an interesting Zoroastrian statement of theology, to which the Christians replied (pp. 11-20). The persecution provoked a reaction in the Persia of Christian Chaldaea.

The war ended in 451. The whole account of Elini shows how the Zoroastrians were the only unimportant, but the spirit of sincere conviction must be recognized.

With the overthrow of the Sassanian dynasty by the Parthians, the missionary enterprise of Zoroastrianism practically came to a close. The plight of those who remained in Persia was—too

wretched to allow more than a diminutive and hopeless toleration at best from the dominant Muhammadan race. Those who, in the 7th cent., migrated to India and Thibet gave rise to the great religion of Parsi (q.v.), were received with none too warm a welcome. As Dhallo observes (p. 292), with regard to their abstention from propaganda in India,

"the present condition in which they lived for a considerable period made it impracticable for them to keep up their former proselytizing zeal. The instinctive fear of disturbance and assimilation in the vast majority of races they lived created in them a spirit of exclusiveness and a strong feeling for the preservation of the racial characteristics and distinctive features of their culture. Living in an atmosphere suffused with the HIndu caste system, they felt that their own safety lay in their keeping their fold by rigid caste barriers.

Nevertheless, a certain amount of proselytizing continued as late as the 18th cent., especially in the case of slaves purchased from low-caste Hindus. Such procedure, however, instead of being welcomed as extending the faith, aroused hostility on social grounds, some Parsis being unwilling to permit such converts to prepare sacred cakes (drona) for the festivals or to allow the proselytes to be excised after death in the Parsi way. The question was referred more than once to the Zoroastrians in Persia, whose replies were in favour of admitting converts. From the point of view of orthodoxy Zoroastrianism cannot be the slightest question that the ruling dynasty of the Sassanian (Persian) Zoroastrians was right. On the other hand, it was felt by the Parsis of India that an influx of low-caste Hindus would be prejudicial to the purity of their Iranian community.

The only cases in which proselytism has been urged in recent years have been instances in which a Parsi has married a non-Zoroastrian wife, or has desired to have children by such a wife, or by a non-Zoroastrian mistress, received in the Parsi community. In all these cases admission has been granted only in the face of intense opposition.

The motives of the converts have been, in practically every instance, worldly, not religious, and the conversions have been purely nominal. Parsis hold that such proselytes are harmful to the faith, and that, if conversions are admitted at all, it must be under conditions which put the sincerity of the converts and their religious convictions beyond suspicion. The Zoroastrian community has no organization for training new converts; the matrimonial opportunities of Parsi girls are lessened by the possibility of converting prospective wives of other religions; and the admission of illegitimate children of Parsis is felt to be virtually a condoning of immorality.

This attitude—so different from that of Zoroaster and of Zoroastrianism until the migration to India—is fraught with grave possibilities for Parsism. The age of marriage is rising, and the birth-rate is falling. There is a steady leakage towards agnosticism (not towards conversion to Christianity, Muhammadanism, or any form of Hinduism). Even among those who regard themselves as Zoroastrians there is much laxity. Theosophy (q.v.) is making a form of 'esoteric' Zoroastrianism which can scarcely be reconciled with the Avestan. Some of the radical wing of the 'reforming' party, at the other extreme, rationalize the religion until it becomes a travesty of its real content. Against all this must be the moral and the religious values of the Parsi, both priests and laymen, but whether, so long as all accessions from without are forbidden, can advance and extend the good religion? Is it a question of the tithe for the future?

MISTRIOE.—See CELTS, vol. iii, p. 295 f.

1 See art. ZOROASTER and the literature there cited, to which may now be added five papers in the Jahrbuch für Orientalische Wissenschaft, Jahrg. VI, pp. 259-318, 340-413.

2 On these movements generally see J. H. Parshuram, Modern Religious Movements in India, New York, 1915, pp. 34-40, 243-246.
MITHRAISM.—The religion generally known by this name, which enjoyed a wide-spread popularity in the centuries immediately preceding and following the Christian era, centred in the worship of the divine Mithra in the Indo-Iranian period by the two most easterly branches of the Aryan race, as is shown by the fact that his name appears in the form Mitra among the gods of the Vedic pantheon and in that of Mithra in the early religious poetry of Persia. The name coincides in form with a common noun which is Sanskrit means 'friend' or 'fellowship' and in Avestan 'compact,' and it would seem to follow that from the earliest times the conception of Mithra was an ethical one.

1. Mithra in Vedic religion.—In the only hymn addressed exclusively to him in the Rigveda (iii. 59) Mithra is said to 'bring men together, uttering his voice' and to watch the tillers of the soil with unwinking eye'—phrases which suggest a solar divinity; and from the numerous hymns in which Mithra and Varuna are conjointly addressed it is abundantly clear that they are divinities manifested in the celestial light. In the Brûha-pantheon, indeed, the view prevails that Mithra represents the light of day, especially that of the sun, while to Varuna belongs the dominion of night. This seems, however, to be a later refinement, the beginnings of which may be traced in the Athravaveda, especially IX. iii. 18, where Mithra uncovers in the morning what Varuna has concealed. The theory of Oldenberg, that the group of divinities known as Adityas, who are said in Rigveda IX. xxiv. 3 to have been seven in number, originally represented sun (Mitra), moon (Varuna), and five planets, and was borrowed by the Greeks into the Mithraic, has little to commend it. It is more probable that Varuna was by origin the all-encompassing vault of heaven ('the ear, cover'), Mithra the light which proceeds therefrom. Ethically the two gods were probably differentiated in the Indo-Iranian period, Varuna being the supreme upholder of physical and moral order, Mithra the all-seeing witness who guarantees good faith between man and man. This is not so clear in the Vedas as in the early religious poetry of Persia, where the place of Varuna is taken by Ahura Manzla (= 'Wisest Lord,' the word Ahura corresponding to Skr. atrya—a term which in later Vedic literature means 'demon,' but in the Rig-veda always 'the good,' the god, and used of Mitra and Varuna, and is plausibly suggested to have once denoted the possessed of occult power.

2. Mithra in Iran.—Among the Iranian peoples the position of Mithra, Mitra, was of importance which it never possessed in India. The early history of this worship is very obscure, owing to the uncertainties which beset the interpretation of the Avestan texts. From the inscriptions found by H. Winckler at Bogaz-köri in 1907, 4 especially the treaty between the Hittite king Subbüliliumna and Mattiinana, the son of Tushratta, king of Mitanni, it appears that Mitra, Varuna, India, and the Naṣatya, or 'Twins,' were worshipped in the district of Mitanni in the 14th cent. B.C. Eduard Meyer ('Das erste Auftreten der Arier in die Geschichte,' S.B.A.W. 1908, p. 14 ff.) regards this fact as a proof that the Indo-Iranians once existed in Mitanni; in E.D. xxii. 263 he suggests that the Arians in question were a caste ruling over a non-Aryan people. It is, however, uncertain whether this supposition is correct; 4 the names Mitra and Varuna are attested by cuneiform documents of the 18th and 17th centuries B.C. in Babylon and Elam. The connection with the Avestan Mitra and Varuna is, however, uncertain; the evidence of the Bulduk inscription is not conclusive, and the-Assyrians also called Mithra. It cannot be said to the name Varuna is otherwise unknown in Iranian texts, whilst Ahura Mazda, who takes his place, appears under the form Assur, Assurān, Assurānā. Moreover, the Assurite text of the Apadana of Darius I. contains a list of divinities of about 650 r. c. (published by F. Hommel, F.S.B.A. 1889, pp. 127, 138), and had, no doubt, borrowed from an Iranian people at a considerably earlier date. To the same period belongs a tablet from the library of Assurbanipal in which Mithra is identified with Shamash (R. lii. 69, 5, 1. 75). Our next evidence dates from the Achaemenian dynasty. The inscriptions of Cyrus, it is true, throw no light on his worship of Iranian divinities, and Darius I. mentions Ahura Mazda only, but the evidence of theophoric names (Mihira, Mihisra, Herod. i. 110, 121, Mihisra, (ii. 130, 120, 127), and, earlier still, Mihisra, if this is the correct reading, makes it plain that Mithra was prominent in the Persian pantheon, while Artaezeres Mmnon (406-385 B.C.) names as his divine protectors Ahura Mazda, Anahita, and Mithra (Art. sus., art. Naha, Zinna, O. Por., text). The compiling of the Mithraic with the goddess Anahita reminds us of the confusion which the idea of the god of life is also the name of the Persian zoroastrianism, and identifies Mithra, 4 with the 'Assyrian' Mylitta (an appellative of Ishtar).

3. Mithra in early Zoroastrianism.—We have next to consider the position of Mithra in the Zoroastrianism. Adopting the position (1) that the Gathas go back to the time of the Prophet himself, and that this was not later (and very possibly earlier) than the traditional date (7th cent. B.C.), and (2) that the Yashts, at any rate as regards the metrical portions, are not many centuries later, 5 we observe that Mithra is never mentioned in the former, and was ignored by Zarathushtra in his reform. It may even be possible to go further, and to hold that the Prophet regarded him as a daeva, or demon, whose worship was to be banished from the pure faith. In Zx. xxi. 10 we hear of the teacher of evil who declares that the Ohr and the Sun are the worst thing that can befall man, and which may perhaps refer to the nocturnal sacrifice of the bull by Mithraists; and it is also possible that the Ohr-Creator (Gēnah-tāsān) named in Zx. xxi. 2 was a substitute for Zarathushtra. These are only conjectures; 6 but we shall find in later Mithraic ritual abundant proofs of the survival of primitive conceptions such as Zarathushtra endeavoured to eradicate. It is not necessary here to discuss the difficult questions regarding the measure of success attained by the Prophet's reform and the origin of the counter-movement (perhaps Magian) which restored the more primitive worship of the Arians, and which may be sufficiently explained by the finding, which we are asked to think (on astronomical grounds) was introduced into Cappadocia by Darius I. 7 the Zx. xxi. 10, the names of the months are derived from divine names, which include those of Mithra.

MITHRAISM

753

=rural of Mithra-worship the Yasht tells us little; kaoma (g.v.) and milk were offered to him in Khotan, and the Mazdaian is bidden to sacrifice beos small and great; his weight, that sty,' and to prepare himself for the sacrifice by abstinence and penance (Yt. x. 119-123).

4. External influences on Mithraism.—(a) In Babylonian. — The picture is sketched — and nothing essential would be added by drawing on the later portions of the Avesta or the Pahlavi texts—is in many ways very different from that of Mithraism as known to us from the inscriptions and monuments of the Roman period, and the problem of accounting for the difference is one which the evidence at present available does not enable us to solve. It is, however, clear that the transformation was partly to Babylonian influence, partly to contamination with beliefs current in Asia Minor. The former influence, no doubt, began to exert itself at an early date, since the confusion of which Herodotus was guilty, in identifying Mithra (as a supposed female divinity) with Ishtar, and the coupling of Mithra with Anahita (g.v.), who, in spite of her associations with the Osiris, was a goddess of an easily recognized Semitic type, point to a close rapprochement between Persian and Babylonian religion. The most important feature of later Mithraism, due to Chaldaean influence, was the prominence of astrology. There is nothing to show that this was a feature of early Iranian religion, and we know that the observation of the heavenly bodies and the belief in their influence on the affairs of men were of great antiquity in Babylonia. When, therefore, we find the busts of sun and moon and the circle of the zodiac stand as features in Mithraic monuments, we can have no doubt as to the ultimate source of this element; nor can it be questioned that the elaboration of a body of doctrine, expressed in and through myth and symbols, also took place in the Farther East, although the details of the process escape us. We can say no more than that the dualism of Iranian religion furnished a clue both to the cosmic process and to the destiny of the individual soul, and that the results which flowed from the dualism were worked out in detail on the banks of the Euphrates. The brief account of Zoroastrianism given by Plutarch in the sixth century, 1 Iside et Osiride 2 shows us how far the Magians had already carried the formation of the simple Persian faith into that which meets us in the Bundahishn and other Pahlavi texts of the Sassanian era, and enables us to rely on these to some extent for the interpretation of doubtful details in the evidence. Essential features are: 1 the separation in the material universe of the province of Ahura Mazda, 'withdrawn beyond the sun as far as the sun is from the earth,' from that of Angra Mainyu, the prince of darkness, and the intermediate position of Mithra, the mediator; and 2 the doctrine that the soul is a divine spark of light descending from the highest heaven and acquiring a gross and earthly envelope which taints it with corruption and makes its existence on earth a continual struggle with the power of evil. The moral consequences of this doctrine, particularly the inspiring conception of Mithra, the Mediator, as the true commander under whom the individual shares in the fight against the prince of darkness and the Redeemer 3 who grants to his faithful servants final deliverance from the body of death, followed by the return of

1 At the close of the Yasht (x. 145); cf. xiii. 113) Mithra and Ahura are jointly invoked, just as Mitra and Varuna are in the Vedic hymns.

2 "Ch. xlv. 1.

3 In a Manichaean Turfan fragment Mithra is designated as redeemer and benefactor (bistaer st eremtsh, C. Saalmann, Manichaeische Studien, l. (Petersdorf, 1908) 44, p. 60).
the purified spirit to the sphere from which it came, we may believe to be characteristically Iranian; to Chaldea we shall attribute the elaboration of the astrological dogmas connected with the influence exercised by the planets upon those in the greater worlds, and the prominence given to the conception of Destiny as revealed in the unchanging order of the heavenly process, carried on throughout unending time (seeu adorans in later Zoroastranism), Fatalism, and the like, as the corollary of these doctrines, but its acceptance in theory did not prevent Mithraism from becoming an intensely practical creed, full of stimuli for the activity of the individual.

(b) In Asia Minor.—It is much more difficult to say what was the effect upon Mithraism of its diffusion throughout Asia Minor. We have no contemporary evidence for the stages by which the gods in Pontus (see below), and was assimilated in art with Attis (q.v.), and in spite of the profound differences of nature and function between the two. More than this we can hardly say, for the primitive features of Mithraic ritual, to be considered later, were not necessarily borrowed, but may go back to Iranian antiquity. The tavoebolium, however, is believed by Cumont (i. 334 f.) to have been taken over by Mithraism from the cult of the Great Mother. The propagation of Mithraism in the West had its political as well as its religious side. One of the earliest conceptions of Iranian religion was that of the 'glory,' or kevrens. This was conceived as a kind of mystical effulgence or aura derived from the heavenly light, possibly borrowed some of its features from the widely diffused conception of the external soul. In the story of the Fall, embodied for the Iranians in the myth of Mani, the soul lost the gift of this precious talisman; and in the Mithr Yiasth the dask-kevrens, 'he of evil glory,' is the man who 'thinks that Mithra sees not all his evil deeds and lying' (Vt. x. 105). But the kevrens was more especially the talisman of the royal house of Iran, and as such is the main subject of an entire Yiasth (Vt. xix.), which deals with those who have or will possess it, beginning with Ahura Mazda himself and ending with Mani, the future deliverer of the world from evil, but giving in the main, as Darmesteter points out (SBE xxii. 266), a short history of the Iranian monarchy, an abridged Siath Nakhsh (Tale of the Mirror) therefore, the Ascendency was the token of Iranian kingship and the talisman which gives victory over the Turanian. Naturally enough, the Near Eastern dynasties which sprang from the wreck of Alexander's empire were anxious to secure this token of legitimacy, and were therefore fervent worshippers of Mithra, 'the spiritual Yastha which their spheres, and the prominence given to the conception of Destiny as revealed in the unchanging order of the heavenly process, carried on throughout unending time (seeu adorans in later Zoroastranism), Fatalism, and the like, as the corollary of these doctrines, but its acceptance in theory did not prevent Mithraism from becoming an intensely practical creed, full of stimuli for the activity of the individual.

5. Contact with Greece and Rome.—It was in Asia Minor that Greek art was enlisted in the service of Mithraism and created the sculptural types which were diffused throughout the West and form the chief sources of our knowledge of the cult. The group of Mithras the bull-slayer, to be described presently, though ultimately made up of the bull-slaying Nike of the Athenian arena, is manifestly the creation of a Pergamene artist, and adorned every sanctuary of Mithras. In spite of this fact, however, it is not to be supposed that Mithraism never became popular in Greek lands; it is but found, e.g., at Delos, where so many foreign cults flourished in the later Hellenistic age, and its

4 The word appears in the compound names which the names of the great Mithras, and the name of Zeus, and the name of Poseidon which he appears as the god of the winds, and the name of Poseidon which he appears as the god of the winds.

5 For this inscription see R. Halm, Hermes, 1896, p. 439, and also (as Cumont points out) by the fact that the form Mayavestos is a transliteration from the Aramaic.

6 The expression 'two invicto Mithra Mercurio' found at Stockstadt together with a statue of (F. Drexel, Das Rostock, Heidelberg, 1910, p. 82; Cumont, Mystères, p. 145).
traces are rare (and generally of Imperial date) throughout the Hellenized East, in Syria, Egypt, etc. Even in the 2nd cent. A.D., Lucian writes of Mithras as a barbarian god, ἐνθαρρυτος τοῦ φωτος (Doctrum Cosm. 9).

The cult of Mithras is said by Plutarch (Pomp. 24) to have been brought to Rome by Cilician pirates taken captive in 67 B.C., and there is no reason to doubt the statement; but it certainly failed to achieve the popularity already attained by other Oriental religions until almost the close of the 1st cent. after Christ. For the earliest Mithraic inscription as yet found in Rome was set up by a freedman of the Flavian dynasty (CIL vi. 732 = Cumont, ii. 106 f.), and, although the British Museum contains a statuary group of Mithras and the bull dedicated by a slave of Ti. Claudius Livianus, prefectus praetorio in a.d. 102 (Cumont, ii. 228; cf. 106), Mithraic monuments and inscriptions do not become common in the West until the Antonine period.

6. Diffusion in the Roman world. — (a) By the army. — The diffusion of Mithraism was largely the work of the army. Pontus, Cappadocia, Commagene, and Lesser Armenia—principally those regions in which the specialized form of the cult had been developed—were recuiting-grounds largely drawn upon by the Romans, even while as yet only client-kings ruled the empire, and still more when they were annexed and became provinces. During the Parthian wars under Claudius and Nero a considerable Oriental element thus entered the service of Rome, largely as auxiliaries, but also in the legions. Whether or not the soldiers of the third legion whose cult the sun at the second battle of Betricum (a.d. 69) were Mithraists, it is at least certain that the Fifteenth, which served in the Parthian wars of Nero and was transferred by Vespasian to the Danube, brought the cult of Mithras to its camp at Carnuntum in A.D. 71. Another important centre of the cult in the same region was Aquincum, the headquarters of Legio II. Adiutrix, founded by Vespasian from the sailors of the Ravenna fleet, who, as freedmen, were doubtless in many instances of Oriental birth. But the widespread spread of Mithraism on the frontiers was largely due to the auxiliary corps—aevi et cohortes—raised in the East under the Flavian and succeeding dynasties and used to garrison the line of the Danube and the Rhine or the Vallum in Northern Britain. Except for a relief found in London (Casson, x, pl. 154), all the Mithraic monuments and inscriptions found in Britain belong either to the legionary camps at Isca (Caerleon-on-Usk (CIL vii. 99 = Cumont, ii. 160)), or to the forts or on the near the Rhine valley, such as Bovocovium (Hunsensteins (CIL viii. 645-650 = Cumont, ii. 161, 393-396)), Ambriacum (Birdswood (CIL vii. 831 = Cumont, ii. 162)), Bremer (High Rochester (CIL viii. 103 = Cumont, ii. 192), Vindolava (Rutchester (CIL vii. 3924)), and others. So, too, in the two Germania the sanctuaries of Mithras (with some few exceptions) are found either in legionary camps, such as Vetra Castra, Domna, and Magenta (Cumont, ii. 389, 393f., 381-388), or in the forts along the Shop Germanicas, where they are lacking in none of the principal posts—Butzach, Friedrich, Saalburg, Hedderingham, Grossrotzenburg, Oberburken, Birkbands, Munich (ib. ii. 354-356, 472 f., 382-383, 351-354, 343-351, 151), and others. We have already mentioned the military settlements of Carnuntum and Aquincum, on the Upper Danube, as centres of Mithraism; the same might be said of practically every important post on that river down to its mouth—e.g., Vindobona, Brigetio.

The finds have been published fully by Pierre Paris (R.A. a. 1941).
province and drawn 'ex toto orbis Romano' (Estrop. vii. 6) were many Orientals who brought with them the Mithraic rite, which is confirmed by the worship of Mithras soon assumed a commanding position.

7. Geographical and social distribution. The geographical distribution of the monuments of Mithraism may most easily be grasped by an examination of the map which accompanies Cumont's volumes, upon which the sites, when they have been found, are marked in red. It will be seen at a glance that, except in the places and districts of which we are to speak below, the Mithraic evidences clearly correspond with five of the grades mentioned by St. Jerome. We find also 'ostenderunt (or tradiderunt) cryfoi (cryfoi)' 4. The last word seems to be equivalent to exponere, and has been substituted for the corrupt exputare in the text of St. Jerome. The title pater (or pater patrum) for the highest grade is common in inscriptions; and a passage of Porphyry refers as follows to the others: 'υπὲρ τοῦ μαθητῆς τοῦ αὐτοῦ μαθητῆς πάροικος καλεῖ, τὴν δὲ γενεάν εὑρίσκει, τοὺς δὲ πατέρας μαθητῶν κόραν εἰς τὸν πηγὴν . . . τέτοιο γα τιμῶν μαθητῶν προσφέρομεν ἐν τοῖς χριστιανοῖς προσφέροντες παρὰ τῇ σφαίρῃ τοῖς παρατάσσομεν' (de Abstin. iv. 16).

We infer that the σαβεία was a low grade, and that initiation into the mysteries proper began with that of lea (cf. τοῖς τὰ λαόντα μαθηταίς [Porphy. de Antro nymph. 15]). The mention of women called καμάρι stands alone; it has been proposed to read καμάριa, and some confirmation may be found in the discovery of a tomb at Caelestia Tripoli in which a husband and wife were buried and described as lea and lea (Comptes rendus de l'acad. des inscriptions, 1903, p. 387 ff.). For the eagles' and hawks' indications (Cum. p. 12) it is hinted 2 that the animal was associated with a country of lions; and the passages quoted are strikingly illustrated by a relief found at Konjica, in Bosnia, carved on the reverse of a slab which shows the usual subject of Mithra the bull-slayer (see below).

In the centre of the scene are two figures reclining on a couch, in front of which is a table with four loaves marked with a cross; beside the table are seen a lion and a boar. At each side are two figures: on the left a man wearing the mask of a crow, and a 'Persian,' distinguished by his dress, is raising a lion's mask, and a figure of the upper portion of which is unfortunately lost. It will be noticed that the masks of St. Jerome does not appear in the other sources—though the use of the term lea by the latter is confirmed by a passage of Tertullian (de Franc. hier. 40) and by the title lea majus in two inscriptions from El Pujol and Callosa (see above, p. 52). In Greek eπαρτέμιον νῦν τινος (inscription of Amauro, Benelai des inscr. du Pont, Brussels, 1910, 106). It is possible, therefore, that the祝贺ed figure on the Mithraeum relief represents the cryfoi, and that the miles, though he belonged to the rank and file of Mithra's soldiers, was not admitted to participate in the mysteries. He was, however, initiated by a ceremony described by Tertullian (de Comm. 101); a crown was set on his head, interposito gladio, and placed on his head, but removed by the neophyte, who exclaimed Mithras is my crown.

In the passage previously quoted Tertullian speaks of a soldier of Mithras as 'branded in the forehead'; and the καμάρια παρεκκλησία of which Gregory of Nazianzus speaks (Orat. iv. 70 [PG xxxv. 592]) may refer to this. Tertullian (de Bapt. 5) also mentions a Mithraic purification 'per lavacrum' resembling the rite of baptism; and it is to be noted that the Mithraeum which have been excavated either contain natural springs or have water specially laid on. Of the ceremonies which accompanied the higher degrees of initiation we know little; Porphyry (loc. cit.) tells us that the lea had both hands and tongue purified with honey, which was also used in the initiation of the ordinary initiate. The passage quoted above Gregory of Nazianzus mentions the σαβεία to which the initiates were subjected 1.
ject; and his commentator Nonnas (PG xxxvi. 989, 1009, 1012) enlarges on this topic and speaks of "imago resurrectiones" by water and fire, frost, hunger, thirst, and journeying in an unending scale of severity. These may to some extent be imaginary; but it must be remembered that the Mitth Yatha (§ 122) speaks of ablutions and stings. Terence, in Eun. (vii. 4. 168) uses the phrase "imago resurrectionis," which suggests a simulated death; and the biographer of Commodus tells us that the emperor's "sera Mithraico vero hoc tempore morabantur." Thus the little that we know of the Mithraic rites of initiation has shown that they were of a type well known in primitive religion, and carry us back to a stage far earlier than the developed theology of later Iranian times. Nor can we say more of the rites in which the initiates partook; Christian writers found an analogy to the eucharist in the Mithraic communion of bread and water (Justin, Apol. i. 66, Iosias oblatio [Tert. loc. cit.]), which seems to have been represented on the Koskica relief.

9. Sanctuaries, ritual, and monuments. — The central act of worship in Mithraism, however, appears to have been the sacrifice of the bull, the prophecy (CIL iii. 4429 = Cunliffe, ii. 146), for which we also find crypta (CIL iii. 1096 = Cunliffe, ii. 182) and antrum (CIL vi. 754 = Cunliffe, ii. 94), and were often established in natural caves or grottoes, as, e.g., on the north slope of the Capitol at Rome, beneath the church of Arianz. As a rule, however, the place of the grotto was taken by a subterranean crypt, approached by a stairway; the chapels attached to private houses were naturally placed in cells—e.g., the Mithraeum below the church of San Clemente in Rome. It should be noted that the Mithraeum is never of great size, and, where the adherents of the worship were numerous, the number of apes was multiplied. Thus Ostia possessed five, Aquincum at least four, and Carmona (CIL vii. 3) three sanctuaries. The more elaborate examples show a fore-court, or pronaos (the term is used in CIL xiv. 61), leading to a small chamber, whence the staircase descended to the crypt in which the mystic meal was taken. This was traversed by a central passage, on either side of which were podia about six feet broad with inclined surfaces. Whether, as Cunliffe supposes, the worshippers knelt, or reclined upon them while partaking of the ceremonial banquet, it is hard to say. At the extremity of the crypt, which often took the form of an asep (called cavedra in CIL iii. 1096), was placed the relief of Mithras and the bull, often accompanied by other sculptures, such as figures of Cantes and Cantopeses or the lion-headed Kronos.

The symbolism of these monuments is not easy of interpretation, and ancient texts help us little. In the central scene, the type of which (as was mentioned above) was certainly fixed by a Pergamene artist, probably in the 2nd cent. B.C., Mithras, clothed in the conventional costume which in Greek art signified the Oriental, placed his left knee on the back of a bull, and, seizing its horn (or muzzle) with the left hand, plunges a knife into its throat. The scene of the action is a cave, the prototype of the apse, which sometimes contains plants or even trees. A scorpion fastens on the testicles of the dying bull, while a dog, and usually a serpent also, drink the blood which flows from the death-wound. A crown rests upon either Mithras' or the serpent's head: as if to symbolize the fact that this is both god and victim are, in a sense, one; but this seems fanciful. The "Alexandrian" type used by the artist was a "romantic" creation.

1 For the crown in Zoroastrian literature cf. Bundahish, xiv. 22.
discharges an arrow as a rock, from which a stream gushes over a rock figure receiving the water in his hands or running through his hair. Sometimes a suppliant kneels before Mithras and makes a gesture as if he were cutting his throat. A lyre-player accompanies him. The sun-god kneels before Mithras, while he holds the radiate crown on his head with the left hand, while in the right hand he holds an indistinct object, probably a drinking horn; (d) allusion to the sun and the sun’s path is made; the two figures are represented clasping the right hand in token of friendship; the sign of peace is conveyed by the myrmidons crossing the ocean, represented as a reclining figure in the style of Greek art; (e) banquet of Mithras and the sun (sometimes with other guests) is represented as a banquet on a couch, generally holding drinking horns, and before them is a small table with viands.1

(2) Mithras and the bull. — The theme of the slaying of the bull is never excepted as the principal scene, other episodes of the legend are often used in the decoration of the side-pieces. The following are the chief: (a) the bull in a box, the bull issuing from a gabled building; these two scenes, when found in the same monument, are always in juxtaposition; in one case (a relief found at Sternberg in Loreno) two figures in Oriental costume are setting fire to the building; (b) the capture of the bull; this is represented in a series of scenes, which display, first the bull at pasture, then Mithras seeing it by the horns, vaulting on its back and riding on it, and eventually carrying it on his shoulders. More often, dragging it by the hind-legs, while its fore-feet hang on the ground; the last scene seems to be described by the word 'brucer' (CIL. iv. 14384, 27 and 28).2

(3) Scenes in which Mithras takes no part. — There are other simple representations of other divinities in the form given to them by Greek art, such as the unexplained head of the Sester, the Eubate, a figure of the Eubate, goddess of Ath, of Ocean (i.e., the three Pates, or in access in which they are shown, either receiving the thunderbolts as the symbol of power at the hands of Kronos or in combat with the giants.3

So successful an attempt has been made to explain the series of representations just described; the last class, no doubt, clothed in Greek form, conceptions derived from Persian sources, the identification of which can at best be a matter of great difficulty. We can, however, be certain that whatever the original content of the Mithraic legends, it had been profoundly modified by the astral religion of Babylonia. Mithras, as we saw, was but the god of the heavenly light; and it is possible that his birth from the rock may symbolise either the appearance of the dawn on the mountain-tops or the effulgence of light from the vault of heaven covered with a solid dome. As any rate, there can be no doubt that the meaning of the two torch-bearers, dressed in the same Oriental costume as Mithras himself, who regularly appear on either side of the scene of the bull-slaying, and are present at the birth of Mithras. One holds his torch aloft, the other lower it, and these actions clearly symbolise the rising and setting of the sun,4 so that Mithras and the torch-bearers form but one part in the phrase 'Mithras  

But the monuments show that the heavenly phenomena played a still more important part in Mithraism. Mention has been made of the lion-headed figure of human form, wrapped in the coils of a serpent, of which a large number have been found in Mithras. The figure often has four wings and holds in its hands a pair of keys, or a sceptre and thunderbolt. The symbolism of the figure would be easy of comprehension even apart from the fact that we find the signs of the zodiac engraved on its body in some instances. It represents eternal time—"the abode of time" which became the chief deity in the zodiacal systems that sprang up in the bosom of later Zoroastrism and seems to have been described in Greek as Kpdrwv, though we have no direct proof of this.5

1 John. 4:8. 2 But see also § 9 sub fin. 3 In the MS. of Mysites and Cantor, p. 18, is given the title of Mithra and Cantor's passage, as the inscription show, to these figures; that they were the be-infants of Mithras himself is proved by the full explanation of the inscription (Mycetes Cantor, s.v.) CIL. v. 455 = Cumont, ii. 161. 4 P. Leg. Roma (1913) 123 & following. 5 See this in this

The zodiac is also commonly found as a framework enclosing the scene of the bull-slaying or, as in most of the reliefs from Vindolanda, as a border to the upper edge of the scutum on which this takes place. In addition to this, the more elaborate reliefs are almost always decorated with busts of sun and moon, while many also exhibit the signs of the zodiac, generally holding drinking horns, and before them is a small table with viands.1 We also find the seasons and the winds; and it is beyond doubt that the lion, the eagle, and the serpent must be combined with these as the elements of the universe. It may be added that the sun (Oceaus) and the moon (Hecate) are both mentioned on a stele from Hedebyehms (Cumont, ii. 156). It is clear, therefore, that in the Mithraic mysteries a complete system of cosmography was taught; nor can there be any doubt of its being applied to the soul and its destiny. The doctrine of the microcosm, which pervades all the speculations of later antiquity, was popularised by the Stoics, especially by Zeno, and, together with other elements which accompanied it, was derived from Oriental sources. It formed part of the common stock of teaching imparted to the votaries of the various 'other-worldly' religions (of which Mithraism was one), which became diffused through the world from the beginning of the Christian era onwards. We should be able to give a more definite account of Mithraic eschatology if we could assume that the 'Mithmicrocosm' published by Dieterich from the Paris magical papyrus (Bibl. Nat. Suppl. Grec. 574) deserved that name. This document, committed to writing about A.D. 300, is in its present form part of the stock-in-trade of the Egyptian magician, and is interspersed with 'voces magicae' and supplemented by directions for its use in the sciences of this practitioner. The question is whether the compiler made use of a genuine Mithraic document; this is left to be translated as follows:

1 Be gracious unto me, Providence and Fortune, to me, who am writing down these, the first of all traditional mysteries, and grant immortality to my only child, an initiate worthy of this mighty power, whom I have reared in the secret school, and have sent him to me, that I may belong, a little, to the heavens and behold all things.2

It is to be noted that this private revelation made by the initiate to his 'only child' resembles those of the Corpus Hermeticum (the product of an Egyptian school of theosophy) rather than the ritual of a community; also that the 'eagle' is introduced into the system by a 'corruption of Dieterich.'3 In the revelation itself we find nothing that distinguishes Mithraism from other theosophies, and 'a . . . deal which is definitely Egyptian; Dieterich lays stress on the golden shoulder of the ox, which is the Great Bear, which he would recognize in the object held by Mithras in the investiture of the sun as represented on a relief from Vindonissa (Cumont, ii. 338, fig. 218); but the identification is extremely doubtful; other examples of the same subject show nothing as all resembling an ox's shoulder, and in any case the conception is specifically Egyptian. On the whole, therefore, it is safer to regard the papyrus as a figure of a representation of Ares, whose worship by Mithraists is attested by dedications 'deo Armanico' (Cumont, ii. 98, 141). A mutilated relief at York (Cumont, ii. 350) seems to represent this figure with those variations in the inscription (also mutilated) contained the same ARMANICUS.4

2 Ardenti nature sacrumacum lamento Mithrae philosophophantem' (Tert. adv. Marc. vi. 21). 3 See the papyri and "dieu de la vie" of the "dieu reves" (Forsh. de Natale Ex 19). 4 See the "requisitoires" of the "goutte" (Forsh. de Natale Ex 19).
nothing more than a syncretistic product. It is likely enough, however, that the ascent of the soul through the seven spheres was taught in the Mithraic mysteries; Celsus (ap. Origen, c. Celts. vi. 22) explicitly tells us of a 'ladder with seven grapes' and the seven metals assigned to the planets which was shown to the initiates; Porphyry cites a certain Eubulus, who attributes to Zooster the doctrine that the 'caelo' was a symbol of the universe, of which Mithras was the creator, speaks of it as containing 'caele gemmate, anastate spherulos kai stgeanos kai elaejimos.;' and it can be no accident that in one of the Mithraea at Ostia six semi-circles are traced on the floor of the central passage, while six planets are represented on the walls of the pristos and the signs of the zodiac on their upper surface (Cumont, ii. 243-245). Beyond this all is speculation; and Porphyry himself probably knew little more than we do, for he mentions (de Abst. iv. 16) as his chief authority on the mysteries a certain Pallas, who explained the animal disguises worn by the initiates either as symbols of the zodiacal constellations or as避 shadows for the doctrine of metempsychosis (which Eubulus also startlingly gave to Mithras). It is not necessary to repeat the astrological speculations, confused in themselves, by means of which Porphyry endeavours to interpret the symbols of Mithras, though we cannot doubt that the all-pervading influence of astrology affected Mithraic doctrines. Thus we sometimes find that the figures of Cautopates and Cautopates hold the symbols of the bull and the scorpion, the signs which mark the beginning of spring and winter.

11. Final phase.—In its final phase Mithraism was absorbed into the 'solar pantheism' which supplied Roman society in the 3rd and 4th centuries with its philosophical and scientific needs. Its first contact was with contemporary philosophy and science, and, under Aelian, the official religion of the Roman State. 'Sol invictus,' as the ruler of the universe, was called in a phrase of Oriental associations, was represented on earth by the emperor, and his identification with Mithras was far easier than that of many other syncretisms, which served the same purpose. Thus 'invictus Mithras,' 'deus invictus Mithras,' or 'sol invictus Mithra' became the commonest title of the god. It was with this modification that Mithraism had more during the last quarter of the 3rd cent. A.D. to become a world religious movement. The State-cult of Sol was less fitted than that of the emperor to satisfy the religious instinct; but Mithraism could supply the defect through its mystical teaching and its ties of brotherhood; and it was, besides, par excellence the religion of the army and the official classes. In A.D. 307 Diocletian, Galerius, and Licinius, meeting in conference at Carnuntum, dedicated an altar to Mithras, 'founti imperii sui, in one of the oldest centres of his worship in the empire; but the victory of Constantine did not possess him in favour of a rival creed, which had struck its roots more deeply in those populations of the west, which were less immediately in touch with the legions and the official hierarchy. It became clear that the vogue of Mithraism was in large measure an artificial one, created by the powerful machinery of the imperial government. When Mithraism sank from the position of privilege to one of toleration, and before long became a popular object of persecution, its days were numbered. It lingered on, on the one hand, in certain less civilized outposts of empire and in the Alpine valleys, while, on the other, it became a lost cause to the group of cultured pagans which maintained the defence of paganism in the senate-house. The emperor Julian, whose oration, eis Bureta 'Dios,' and his characteristic exposition of 'solar theology,' was a votary of Mithras, attempted to revive the defunct creed of the pagan emperors and to give it an organization resembling that of Christianity was still-born. After his death persecution began in earnest, and, as far as the evidence enables us to judge, the destruction of Mithras was wide-spread during the reign of Gratian. The letter of St. Jerome quoted above, which enumerates the seven Mithraic grades, describes such an act performed in Rome by Gracchanus, profectus urbi in A.D. 377. The latest inscriptions in which Mithras is named are those of the group of senators belonging to the society of which Macrinus was bishop. Vettius Agorius Prætextatus († A.D. 385) is called 'pater sacrorum' (CIL vi. 1779 = Cumont, ii. 95) and 'pater patrum' (CIL vi. 1778 = Cumont, ii. 95), and these inscriptions are the latest datable evidences of the cult. The measures of Theodosius gave the death-blow to the practice of pagan worship; and the Mithraeum at Saalburg in Lorraine was destroyed in his reign.

12. Relations with other cults.—Mithraism lent itself readily to alliances with other worship, especially those of female divinities, which supplied what it was unable to offer to women; and it seems to have been specially associated with the cult of the Magna Mater. We find our syncretisms adjoining each other at Ostia and on the Saalburg; dedications are commonly made simultaneously to both divinities; and the taurōbolium, which (whatever its origin) was certainly attached to the worship of Magna Mater in the West, received an added significance when interpreted in terms of Mithraism, in which the life-giving blood of the bull became the pledge of immortality. In the Danubian region a curious form of Mithraism is revealed to us by a series of reliefs and leaden plaques which have been interpreted by Rostovzew in the article (in Russian) quoted above. Here a female goddess, whose symbol is a fish, no doubt a local derivative of Anahita, is accompanied by two mounted figures, in whom we must recognize a duplication of the horseman Mithras found on the coasts of the Black Sea.

LITERATURE.—The great work of Franz Cumont, Textes et monuments figurés relatifs aux religions de Mithra, 2 vols., Brussels, 1896-99, superseded all previous treatises, a list of which he gives in vol. i. p. xxv. He has also published an abridgment of his larger work under the title Les Mysteres de Mithres, Paris, 1913, in which the bibliography of the subject is brought up to date; the earlier editions of this work have been translated into English and German. Among recent works the most important are A. Dieckert, Eine Mithraismusquelle (ed. R. Wünsche), Paris and Berlin, 1919, and J. Toutain, Les Cultes pagains dans l'empire romain, Paris, 1910-11, vol. ii. ch. iv., 'Le Culte de Mithra.' Other works and articles dealing with special points are referred to in the course of the article. For the Vedic Mita see especially A. A. Macdonell, Indo-Iranian Religion, Strasbourg, 1897, §§ 13, 44, and authorities there cited, especially A. Hillebrandt, Aryas Mitra und Mithra, Breslau, 1877; H. Oldenberg, Die Religion der Perser, Berlin, 1865, p. 145, and articles Gott Mithra, Derp. 1894. For the Avesta Mitra see especially M. N. Dhalia, Zoroastrianism in Ancient Persia, 1914, pp. 103-111.

H. STUART JONES.

MOAB.—The name 'Moab,' like that of the neighbouring peoples, Israel, Edom, Ammon, Aman, etc., appears to have been the name of a race rather than of a district, for, as G. A. Smith has pointed out (EB, art. 'Moab,' § 1), in Nu
MOAB

211-12 (cited by F. Brown, S. R. Driver, and C. A. Briggs, A Heb. and Eng. Lexicon of the Old Testament, Oxford, 1906, p. 535), as evidence that the name of Moab in E, and perhaps also of P (v. 14 of v. 34 Moab), is parallel to the Gentile Amorite; in v. 35 also it is the people. The derivation and meaning of the name are unknown. The etymology ʼıwph, 'from my father,' given in Gn 19:17 (LXX), which doubtless refers to the story of Moab's origin, is merely popular. Since Moab and Ammon are represented as related to Israel through Lot, Abraham's nephew, whereas Esau is Jacob's twin brother, we may conclude that at the time when these stories took shape the Israelites considered that the Moabites and Ammonites, though of kindred stock, were by no means so closely related to them as Edom. Moab is said to be descended from Lot's elder daughter (Gn 19:31); therefore it was probably supposed that the settlement of Moab preceded that of Ammon. Whether the Moabites themselves possessed any tradition of a migration from Mesopotamia is not certain. The statement of Gn 11:12-14 might be inferred from the belief that the Israelites were connected with Mesopotamia. Since, however, the expression 'children of Lot' (Dt 23:7, Ps 83:4) occur outside the direct line of descent (Gn 19:35), Lot was probably more prominent in early times than the OT as a whole would imply; but whether the Moabites and Ammonites regarded themselves as 'children of Lot,' or succeeded them in the distinction which they occupied, cannot be determined. The late antiquarian note in Dt 23:7 implies that the population of Moab was not altogether homogeneous, while the place-names clearly show Canaanite influence.

The constant boundary of Moab on the east was the Dead Sea and the Jordan; on the north, east, and south frontiers varied from time to time. Probably the Wady el-Hasy represents the farthest extent of Moabite territory to the south and the Hajar road that to the east. The Wady Nairin, some 8 miles north of the Dead Sea, may have been taken as the extreme northern limit (see G. A. Smith, op. cit. § 2).

Beyond the mere mention of Moab as included in the conquests of Ramses II, nothing is known of its history before the period of the Israelites' invasion of Palestine. According to Nu 21:28, shortly before the arrival of Israel, an Amorite king, Sihon, seized the Moabite territory north of the Arnon. What circumstances determined the Israelite invasion of Palestine from the east is not certain. It is more likely that the Israelites attacked Sihon in response to an appeal from the Moabites (as Wellhausen, EBE, art. 'Israel,' has suggested), and that it was only after the defeat of Sihon that the Moabites discovered that their allies had no intention of giving up the fruits of their victory. There is certainly no valid reason for disputing the general historicity of the tradition. The statement that Reuben was the first-born son of Israel naturally implies that Reuben was the first tribe to obtain a settlement, while the assignment of Moabite territory to Reuben, and the belief that Moses died and was buried there, are probably traditions that the Israelites crossed the Jordan near Jericho, all point to a belief that N. Moab was occupied at least for a time by Israel. After the invasion of Moab, however, the Israelites were dispersed, integrated and engaged in a perpetual conflict with the Canaanites, Philistines, etc. (see art. ISRAEL), with the result that the Moabites were able to recover their own. The tribe of Reuben, in spite of its reputation for bravery, was nearly exterminated (Gn 49:27, Dt 34:9), and Moabite rule was extended even over the Jordan valley west of the river. For a time, indeed, Moabite aggression was checked by Edom, but we find Israel and Moab again at war during the reign of David, and again, perhaps also during the reign of Solomon (1 K 11:11; 12:21). It is inferred that Reuben had already been nearly exterminated or practically absorbed in Moab. Whether Moabite influence was strong in Jerusalem in the days of Solomon, notwithstanding 1 K 11:11, is very doubtful; Solomon's idolatry is a remembered in terms of a later age. It was probably during his reign or that of Rehoboam that Moab recovered independence.

Under the rigorous rule of Omri the Moabites again felt the hand of Israel. According to the inscription of Mesha (found at Dhiban [Heb. Diblah]) in 1868, commonly called the Moabite Stone), the period of Israelite domination occupied forty years. It is possible that Mesha's inscription is earlier than the events recorded in 2 K 3:5; for it is clear from that account that the campaign of the allied kings was unsuccessful. Moreover, an ancient king's achievements was naturally silent about his reverses.

The independence which Moab recovered under Mesha was perhaps lost again in the reign of Jeroboam II. It is, however, impossible to speak with certainty on this point, for the south limit of Jeroboam's kingdom is given as 'the sea of the Ararah' (2 K 14:25), and may refer only to the north of the Dead Sea. For the Ararah Amos 2:6 speaks 'the brook of the Ararah,' which has been identified with 'the brook of the Aradbeh' or 'willows' (Is 15:1), which may have been identified with the Wady el-Hasy. These identifications are, however, by no means certain, and the order of names in the preceding verses of Is 15 suggests that 'the brook of the willows' is to be sought in the north of Moab. Amos 2:6 mentions a judge of Moab in lion of a king, and it has accordingly been argued that at the time Moab possessed no king of its own; but this cannot be decided with certainty.

During the Assyrian period Moab appears to have shown more prudence than the Israelite kingdom in bowing to the storm. Tiglath Pileser exacted tribute, and, although in 711 B.C. Sargon mentions Moab in conjunction with Pekah, Xerxes, and Judah, and Edom as having formed an alliance with Assyria, Moab probably avoided an invasion by a timely submission. It continued subject to Sennacherib, Esar-haddon, and Assurbanipal, and, according to 2 K 3:9, furnished troops to Nebuchadnezzer against Jerusalem. Doubtless in Moab as in Judah there was throughout a party bent on regaining the national independence, and at the beginning of the reign of Jehu, king of Israel (Jer 37) this party appears to have been in power.

Yet no actual revolt from Nebuchadnezzar seems to have taken place, and Moab afforded an asylum to fugitive Jews (Jer 40:10). It is not improbable that after the destruction of Jerusalem the policy 1The summary of Sani's war (1 S 14:19) bears such a strong resemblance to that of David's (2 S 8:8) that it may be doubted whether there was any definite tradition of a campaign of Saul against Moab. Hostilities between Saul and Moab would not indeed be inconsistent with David, when he succeeded to the throne, would at once stand in a different relation to the king of Moab from that which he had occupied in relation to Saul.

2 A discussion of the way in which this statement is to be harmonized with the Biblical chronology lies outside the scope of this article. It is to be noted, though, that the son of Omri, Mesha probably means Ahub, the expression would not designate a later successor (see W. H. Bennett, The Moabite Stone, pp. 20-23).
of Moab coincided with that of the king of Ammon, who apparently intended by the murder of Gadahiah to compel Judah to join a confederacy against the Chaldeans.

Moab was menaced, however, by a danger even more imminent than that from Assyria or Babylonia: east and south the country was exposed to invaders from the desert, and Ezekiel (25:14) already perceived the coming disaster. The criticism of Jeremiah (48), which inveighs against Moab, is not open to great difficulties; the chapter, however, appears to be of a great extent a cento of various earlier passages, and this in itself implies a late date. It is 15-168, which is used by the author of Jer 48, notwithstanding the corrupt condition of the text and later modifications, gives a clearer picture of Moab's disaster. Here it is evident, if we argue from the names of places which may be identified with tolerable certainty, that the invader advances from south or south-east to north or north-west, and therefore cannot be the Assyrian, Chaldean, or Persian, but must be a foe from the desert. 1 With this interpretation the book of Jeremiah becomes an appropriate messianic prophecy, as it is impossible that we regard as peculiarities of Moabite speech once belonged also to the spoken Hebrew of W. Palestine. Although portions of the OT Book of the History of the Moabites (see e.g., xi. xii. xiii. xiv. xvi.) appear to have been preserved in a form in which case peculiarities of dialect may well have been modified.

The land of Moab affords many proofs even in these days of its former fertility and prosperity. The OT has several references to the cities of Moab, many of which are named, and mentions its vineyards as well as its sheep. Being situated off the direct line of communication between Egypt and the great Asiatic empires, it was less liable than W. Palestine to be made a battlefield, though doubtless there was constant need of warding off the attacks of dwellers in the wilderness. Moab, being inhabited by a people who had not a far more peaceful history than Israel, as the word of Jer 48:1 Moab had been at ease from its youth, and had settled on his lees, and had not been emptied from vessel to vessel, neither had he gone into captivity. The religion of Moab presents many parallels to the popular religion of Israel in pre-Exilic times. There is no evidence, however, that any great number of Moabite prophets, if such existed, could point, as did the Israelite prophets, to a tradition of purer religion in the past. Like Israel, Moab had taken possession of a land containing stone circles (in OT language, yidgud) and other primitive monuments, and it is probable that in the land of Moab, as in W. Palestine, some of these were adapted to the worship of the later strata of population. From the occurrence of such names as Baal-Meon and Banhab, the profane love of the early religion of the land resembled the pre-Israelite religion of W. Palestine, and was in fact Canaanite. This inference is confirmed by the occurrence of the curious compound 'Ashtar-Chemosh' (Moabite Stone, line 17). The name of Chemosh is also familiar to us in Judah as the god of war.

the combination of it with Chemosh suggests that some ancient sanctuary of Ashtar or Ashur was appropriated by Chemosh, just as the ancient sanctuaries of Canaan in W. Palestine came to be considered sanctuaries of Jahweh. We know both from the OT Book of the History of the Moabites and from the Moabite Stone that Chemosh was the national god of Moab exactly as Jahweh was the national God of Israel. Indeed, the Moabite conception of Chemosh appears to have come down from the ancient Canaanite conception of Jahweh. The name Chemosh appears compounded in proper names precisely as the name Jahweh. Thus Mesha's father's name was Chemosh in combination with some word which has been variously read as nadek and gad; a Chemosh-nadab (cf. the Israelite name Jonadab) paid tribute to Sennacherib; and the name Chemosh-yahi (cf. the Israelite Jehiah) is inscribed on a gem found near Beerit (EB 341, art. 'Chemosh').

Mesha speaks of Chemosh in precisely the same terms as an Israelite of his day might have used in speaking of Jahweh, and in Nu 21:22 the Moabites are called 'the people of Chemosh' and also his 'sons' and 'daughters.' It is not improbable that the existence of other cults in pre-Moabite times may be found in the occurrence of such a name as Nebo, but there is no reason for supposing that such worship continued among the Moabites. The name Dawkah or Dawdach, occurring in the 1st, 11th, 12th and 13th centuries B.C., is apparently as a divine name; but, since Ataroth, where the altar-hearth of Dawkah was visited, was Gaddite, the name throws no light on Moabite religion. Whatever the worship of Chemosh may have been before the existence of Moab, it is extremely probable that it was thenceforth largely intermingled with Canaanite elements. The OT makes it abundantly clear that the worship of Jahweh was introduced in precisely the same way, and Nu 25 affords no evidence that Moab was worse than Israel in this respect; only, whereas, by the 8th cent. B.C., Israelite religion had to a considerable extent been purged of the grosser Canaanite elements, that of Moab remained unrefrained. Besides religious prostitution, indications of the prevalence of drunkenness in Moab have been found in Gn 19:23, Jer 48:12; and, having regard to the references to vine-culture, this is not improbable, though the Israelites were scarcely in a position to throw stones. It is related (2 K 3:27) that Mesha, when harnessed by Israel, sacrificed his son, and we may therefore assume that human sacrifice was a practice at least. Human sacrifice, not only of the infant first-born, but on occasion of other victims also, was common in Israel down to the 7th cent. B.C. Mesha's sacrifice of his son should probably be compared, not with 2 K 16, 31, 6, for in the case of Ahaz probably only the ordinary offering of the infant first-born is meant, but rather with Jg 11:29. Further evidence of the general agreement of Moabite religion with that of Israel is to be found in Mesha's boast (Moabite Stone, line 17) that he has been or made tabo the population of Nebo.

The danger to Israel of intimate intercourse with a people closely akin in race, speaking the same language, and holding religious ideas similar to those of which the prophets had so earnestly laboured to rid Israel, was clearly perceived by the Israelites pre-Moabite, as account for the stringent law in Dt 23, though political considerations may also have dictated this.

LITERATURE.—See the excellent articles on 'Moab' in Handbook of Biblical Literature and EDB; also W. H. Whiston, A Dictionary of the Bible, Edinburgh, 1911, with the bibliography there given (p. 64).

MOCHI.—See CHAMAR.
MODERATION. Cicero in an interesting passage expresses some hesitation as to the proper Lat. equivalent of the Gr. word συσσως:

"...moderatio, seu ende, qui temperatura, quae Græcorum συσσως appellavit, summa virtutem, seu temperantiam, sum moderationem appellare, nonnullum enim dixit esse ædificatum, aec virtutis frugalis appellatius posse" (Tus. Ques. III. 8).

He proceeds to describe the virtue in question as follows:

1. Elus videntur propriumia, motus animi appetitum exequac et sedare, semperque adversantes illam, moderatam in omnibus severius constantiam.

Moderation, according to this view, is a part of temperance. If temperament consists in self-control in regard to the pleasures of sense, moderation is self-control exercised in less difficult situations. Limitation (modus, moderatio), is, of course, a feature in all virtues; this idea has a long history in the philosophy of Greece, and takes formal shape in Aristotle's doctrine of 'the mean' which gives expression to the peculiarly Greek notion that virtue in its essence means 'harmony, grace, and beauty in action' (see A. Grant, The Ethics of Aristotle, London, 1898, vol. I. essay IV). The word 'moderation,' however, is in Christian ethics specially assigned to the virtue which 'in less things sets the limit.' If temperance is concerned with strong passions, moderation controls those which are less vehement. Such, at any rate, is the view of Aquinas in his discussion of "modesta" (Summa, II. ii. 160).

Following the guidance of Aquinas, we find that "moderation" is chiefly concerned with four matters: (1) the desire of excellence or superiority; (2) the desire of knowledge; (3) the outward actions concerned with the conduct of life, business, and recreation, work and rest, etc.; (4) apparel, furniture, and the external apparatus of life.

Each of these points is fully discussed by Aquinas in II. ii. 161-169.

(1) As regards the desire of superiority, the virtue which moderates it and regulates it is humility (g.v.).

(2) The virile virtue of the desire of knowledge is called by Aquinas studiosa as opposed to a form of excess which he calls curiositas (cf. Ang. Conf. x. xxxv, 84). Little needs to be added to the discussion in the Summa (II. ii. 166, 167). We may, however, call attention to a fine passage in Bernard (in Cont. xxxvi, 3), who points out that "quid prius probat antea, quam sciendum modum necerit." Christian moderation, he says in effect, will prescribe the limits which under which knowledge should be pursued, in the choice of the subjects of the degree, and the zeal of the student. He lays great stress on the question of motive. Those who wish to know merely for the sake of knowing give way to "tropis curiositas." Those who pursue knowledge 'at a definite' are guided by charity; those who seek it "at aedicuntur," by prudence (cf. T. Wilson, 'Maxims of Piety and Morality,' no. 429 [Works, Oxford, 1847-53, v. 429]).

(5) Moderation in the matters of work and recreation and other corporal actions and movements is discussed in Summa, II. ii. 168. What Aquinas says generally amounts to this—that man's external behaviour is to be consistent with his dignity as a reasonable being and with the claims made upon him as a member of a community. Moderation in matters of life is understood to mean 'the virtue that controls all and to regulate everything as is necessary. The virtuous man is temperate in all things.'

1 Cf. Grat. pro Deiot. ix. 28: "Ego frugilatatem, id est, moderationem at temperamentum, virtutem esse maximam indicum" (De Veritate, ed. in Dec. Off. Min. i. 45, treat moderation and temperance as synonymous).

As to which Trench (Synonymy of the NT, Cambridge, 1856, xvii.) draws the following distinction:

"Whatever there may be implied in ἅπασα, there is something more involved in συσσως. If the συσσως orders himself well in that earthly τεχνης, of which he is a support and an ornament, the συσσως in πεπαλαιωσεν δια νυμνης δυναμεις not only a new dignity then lost him from earth; but which he owes to that higher citizenship which is also his, etc.

Aquinas deals at length with the question of recreation, but says little as to the duty of moderation in work. This point is one which has its importance for us owing to the conditions of modern industrial life. It has been said of the Anglo-Saxon race that 'an excess of industry,' 'intemperate labour,' is one of its most prominent characteristics (A. Wylie, Leisure, and Luxury, new ed., London, 1887, p. 19). Christian moderation implies such self-restraint in the matter of labour as will give fair play to the faculties, spiritual and mental, which are not absorbed in the business of life (on this point W. Law writes suggestively in his Seriously Culto, London, 1772, ch. iv). On the other hand, pleasure-worship is a more obvious peril of our time. In every class there are multitudes who are 'lovers of pleasantness more than lovers of God' (2 Ti. 3:5), and the result is seen in a wide-spread disorganization of will and conscience. Recreation is, of course, a duty which we owe to our nature—a duty distinctly implied in the Fourth Commandment, and there is a virtue concerned with the self-regulation of the natural desire for relief from labour (1 Cor. 28)."
MODERNISM

Off. Min. i. 18. We may note that the word 'modest' as applied to the dress of women (1 Ti ii 23) and a similar word 'sobrius' in the dress of men (1 Ti ii 9) is found in Tit ii. The principle implied seems to be that a person's dress is to be proportioned to his station or office in life, or to the occupation in which he is employed, and such as is likely to be engaged in study, or recreation, or worship. 1 Law goes to the root of the matter when he represents 'Paterens' as advising his son on these points:

'Let your dress be sober, clean, and modest, not to set out the beauty of your person, but to declare the sobriety of your mind, that your outward garb may resemble the inward plainness of your heart. For it is highly reasonable that you should be one man, all of a piece, and appear outwardly as you are inwardly.' (Violentia Cal., ch. xvi.)

As to the dress of women see what is said of 'Miranda' (Coh. Ic.)

It may be objected that this entire account of 'moderation' is somewhat arbitrary. The fact is that moralists have evidently found difficulty in distinguishing between the different spheres of action in which they act. Moderns are regulated by moderation, sobriety, and temperance respectively. There is, however, practical convenience in following the literal meaning of Christian texts. He may be criticized as an over-systematic, and we need not suppose that his classification is intended to be exhaustive. The virtue which 'in minimis monti ponit' will be differently estimated according to the various circumstances which men find themselves placed in. 'Quaedam enim in omnibus quae quisque, quisque temperantia, atque ad utilitatem sui, quae solummodo ingenti sit accommodatione, ut singulorum rei vel opera, aliter non decet. (Ambrose, de Off. Min. i. 63 [212], speaking of 'moderation').

It remains to add that the word 'moderation' occurs in AV only in Ph 4:8 (cô érvebôth). In RV the word is translated 'forbearance.' The grace which St. Paul has in mind—considerate-ness (considerateness)—is, of course, a form of that beautiful 'moderation' which Wilson describes in Sacra Privata (ed. Oxford, 1849, p. 41 [Works, v 31]) as 'the way of an happy life':

'Let nothing too much to heart; desire nothing too eagerly; rejoice not excessively; nor grieve too much for disasters; be not violently bent on any design; nor let any worldly cares hinder you from taking care of your soul: and remember, that it is necessary to be a Christians (that is, to govern one's self by motives of Christianity) in the most common actions of civil life.'

This is essentially the spirit enjoined by St. Paul (1 Co 7:32). Cf. Ambrose, de Off. Min. i. 18 (70):

'Let your dress be modestia, quae cum sitia manitur juris remissor, nihil abi usus, nihil vindicatus, et quod non modo uraeus, iura, et honesta, dives est apud Deum.'

R. L. OTTLEY.

MODERNISM.—See EVANGELICALISM.

MODERNISM.—Modernism is the name given by the papal encyclical which condemned it to a complex of movements within the Roman Communion, all alike inspired by a desire to bring the tradition of St. Augustine into closer relation with the intellectual habits and social aspirations of our own time. These movements arose spontaneously and, for the most part, in response to a sense of irresolution on another during the last decade of the 19th century. They have, as purpose, to promote the common life among Christians, and thus a common inspiration and a common purpose, it was neither unnatural nor unfair that the authority which condemned them should unite under a single title.

1 In classical writers sentiments of this kind occasionally occur: e.g. Hor. Carm., v. 57; Ter. Hort., ii. 47; Cic. de Off. L. 36; 'a forma removetur omnino vino non dignus erat'; etc. See also thead. e.g. Cato postuma.

2 We are reminded of the advice of Polions to Laertes in Hes. Iliad, ii. 674: 'ambros saequenti est animi, corpus mortis.'

3 The 'Officia Ministerii' says simply ('de Off. Min. i. 18 [71]): 'vix quaeasdat est animi, corporis mortis.'

It is necessary to insist that, in the earlier stages of their development, the various movements of this group, including together with them at one time or another, the authors of the encyclical-on Pascendi had little or no conscious connexion, and that it was only the external pressure of adverse charity gradually forced them at a later period into mutual relations of a more intimate kind.

It may be well in the first place to sketch briefly the history of this complex movement as a whole, and then to give some account of the various forms which it has assumed. These may perhaps be treated most conveniently under the heads of (a) apologetic, (b) historical criticism, and (c) ecclesiastical and social reform.

1. History.—It must not be forgotten that the Vatican Decrees were the result of a liberal movement in the Church. For its founders, or at any rate for most of them, Ultramontanism was the vision of a Roman Catholicism freed from the entanglements of ancient dynastic contentions and in its new independence pledged to the spiritual leadership of the rising democracies. It was natural that the movement should find its fruitful seed-bed in the countries which had yielded most readily to the spell of the Reformation, and the Lamen- nais, Lacordaire, and Montalembert were the chief names in France; in Italy, Gioberti and Rosmini. But the hopes of the earlier Ultramontanism, open to all the winds of the century, perished in 1848. The consolidation of the spiritual empire of the papacy was to be achieved by other instruments and in another spirit. The Coucill of the Vatican seemed, both to the victors and to the vanquished, to be the definite reproof of the generous dreams which had made it possible. Its real character was accentuated by contemporary happenings—the consolidation of the Italian kingdom at the expense of the temporal power, and the establishment of the Third Republic in France. Yet, in fact, a new era had dawned. Both in the intellectual and in the political spheres new and strange problems urgently demanded the attention of Roman Catholic scholars and thinkers. Many among them felt that the Church was in danger of being paralyzed by the Syllabus and the Vatican decrees, and were resolved that this danger must at all costs be averted. The accession of Leo XIII. in 1878 seemed to give them their opportunity. His numerous encyclicals, while conservative in spirit and traditional in tone and perhaps still more so in intention, were nevertheless so framed as to be capable of being turned to account by the progressives. Of these encyclicals, three may be specially recalled: Letterum Patrum (4th Aug. 1879), which enjoined a return to the traditional metaphysics of St. Thomas Aquinas as the necessary foundation for the demonstration of the chief points of Christian belief; Encyclical Letter (15th May 1891), which dealt with the condition of the working classes; and Providentissimus Deus (18th Nov. 1893), which expressly condemned 'disquieting tendencies' in Biblical interpretation 'which, if they prevailed, could not fail to destroy the inspired and supernatural character of the Bible.' The warnings and counsels contained in these documents were resumed and reinforced in a further encyclical, and logically correlated by ultimatum addressed to the archbishops, bishops, and clergy of France. It may be said that the whole history of Leo XIII.'s pontificate, its success and its failure, is to be found in a comparison of these documents with its three predecessors. Such a comparison reveals a growing alarm on the part of those who at the development of both of these new tendencies in apologetic and ecumenical which it had attempted to repress, and of the social action of the clergy which it had encouraged.
That alarm was not without justification. It is in France, intellectually and politically the most highly developed country of the Roman Communion, that the reason for it can be most clearly traced. The breaking away of the younger clergy, especially in the church of St. Denis, from the government of the Third Republic the right to establish what were practically Roman Catholic universities free from all State control. Of the foundations thus authorized the most important was the Catholic University of Paris, which came into existence in 1878. Among its first professors was Louis Duchesne, a scholar who, though then only thirty-five years of age, had already achieved considerable reputation as an ecclesiastical historian of wide knowledge and independent judgment. Three years afterwards one of Duchesne’s pupils, Alfred Loisy, a young priest belonging to the diocese of Châlons, was appointed to the chair of Hebrew at the Institute. Both scholars claimed the right to apply a rigorously scientific method to their respective spheres of research, the one to ecclesiastical history, the other to Biblical exegesis. Their contention was that it was not only possible, but necessary, to distinguish between the requirements of history and of faith. Duchesne’s critical boldness in the treatment of ecclesiastical legend speedily aroused the hostility of the traditionalists, and Loisy found it necessary to suspend his course for a year. He was compelled to suspend his course for a year at the Institute. It was not till 1893 that Loisy was forced to resign his chair—a resignation which was followed by the condemnation of the encyclical Providentissimus Deus, of the principles of Biblical interpretation which he had upheld. During the decade of his connexion with the Institute, however, a group of students had been formed who, having become teachers in their turn, carried an enthusiasm for the critical method into the other Catholic Institutes and many of the diocesan seminaries.

The new movement towards a positive theology, as it was called, had its effect also upon the lay world. The beginning of the nineties was marked in intellectual France by what Brunetière described as ‘the bankruptcy of science.’ This meant that science had proved unequal to the needs of life, that man could not live by science alone, and that religion was coming into its own again. But, if it meant a revolt against scientific dogmatism, it meant equally a revolt against speculative dogmatism. The tendencies in philosophy were beginning to appear which assigned to the will or to the total activity of the human spirit the principal role in determining truth. A young Roman Catholic philosopher, Maurice Blondel, turned these new tendencies to account in the interests of Christian apologetics in a thesis entitled L’Action, sustained before the Sorbonne for his doctor’s degree on 7th June 1893. A year or two earlier, a group of young members of the university, attracted by the new spirit among the teaching clergy and prepared to find in it a promise of reconciliation between religion and contemporary knowledge and ways of thought, had founded a society which was to embrace those who desired to retain or regain religious belief without sacrifice of intellectual honesty. The society (its title, L’Union par l’action morale, sufficiently indicated its object) had amongst its members religious free-thinkers, Roman Catholics, Protestants, and Jews. On the occasion of a congress of Roman Catholic youth, held at Grenoble in May 1892, Leo XIII. had written a letter to the bishop of Grenoble in which he declared that it was the part of Christian wisdom to promote the co-operation of all men of goodwill, whether believers or those who, while not believers, were yet naturaliter Christiani, in the pursuit of intellectual and social good. This declaration was received with enthusiasm by the members of the new Union, and its president, Paul Desjardins, sought an interview with the pope and obtained from him the assurance of his entire sympathy with its aims. Meanwhile many of the younger clergy, especially in L’Oeuvre Nouvelle and in Leo XIII.’s advice to French Roman Catholics to rally to the Republic the long-awaited opportunity of religious action upon the democracy. Numerous Roman Catholic democratic journals were started, commonly by groups of laymen, and so by many bishops to explain their views to the students of the diocesan seminaries, and public conferences were organized at which men of all shades of democratic opinion were welcomed.

Thus throughout the French Church a new era of intellectual and social activity seemed suddenly to have dawned under the immediate sanction of authority. Leo XIII.’s later pronouncement, it is true, aimed at keeping in check the various phases of the complex movement which his earlier encyclicals had been interpreted as in some degree encouraging. Yet up to the end of his pontificate no individual condemnation had taken place, and that though it was believed that determined efforts had been made to procure the condemnation of Loisy’s first attempt to utilize the results of his critical studies for popular apologetic purposes in his little book, published towards the end of 1905, was afterwards described by its author as ‘(1) a historical sketch and explanatory account of the development of Christianity, and (2) a general philosophy of religion and an essay in the interpretation of dogmatic formulas, official Symbols, and conciliar definitions, with a view to bringing them into agreement, by the sacrifice of the letter to the spirit, with the modern ways of thinking’ (EHRLE xl. [1905] 570). It precipitated a ferment which had been slowly and silently working throughout the Roman Church during twenty years. In Italy, Germany, England, America, and even in Spain, Loisy’s ideas were hailed as an interpreter of ideas which had long been more or less clearly present to many minds. His treatment of religion on its side of human growth had welded together the philosophical and the more strictly theological elements of the new apologetic method. His treatment of the nature of ecclesiastical authority in the Autour d’un petit livre (a sequel to L’Evangile et l’église) served to demonstrate to the social reformers of the Church a close kinship between their own aims and methods and those of the theological reformers. Loisy had all unconsciously become the center of a movement which, whatever its attempts, tended to knit together all the various elements of reform and extended its ramifications throughout the whole sections of the Roman Catholic world.

The election of Pius x. to the papal chair was an opportunity for stern dealing with this new threat to the unity of Roman Catholic tradition. For some years before the death of his predecessor the peril of the new doctrines had been vehemently proclaimed by the old theologians, notably by C. F. Turinian, the bishop of Nancy, and J. Fontaine of the Society of Jesus. Leo XIII. had probably no sympathy whatever with the attempted reconciliation between the Church and modern life, but he had himself issued an encyclical of reconciliation, and he therefore shrank from direct condemnation. Pius x. had no such difficulty. Reconciliation implied that tradition was perfectible, which he declared to be impossible. He hastened within a few months of his election, to strike at the papacy, logical and the social activities of the reformers. On 18th December 1905 five of Loisy’s books were placed on the Index, and two days afterwards a motu proprio was issued which aimed at regulating
popular Christian action.' The war, which was to be waged during the next four years, had been declared. A varied and continued literary activity, on the one side, was met by repeated condemnations, on the other. Loisy indeed made another front for the attack, and devoted himself in silence to the preparation of his great work on the Synoptic Gospels. But Blondel's 'philosophy of action' was popularized by Lucien Laborthousière, a priest of the Oratory, who published, for the most part in the Annales de philosophie chrétienne, and afterwards issued in two small volumes—Essais de philosophie religieuse and Le Rêve d'Un même philosophe grec. In the Quinzaine, a review edited by Georges Fosseigne, a professor of the university, another university professor, Edouard Le Roy, inaugurated a discussion of the nature of religious dogma which provoked a considerable controversy. Le Roy afterwards published, in the form of a volume entitled Dogme et critique, a collection of replies to his critics, together with the original articles. In Italy Antonio Fogazzaro, the novelist, launched a pro- gramme of religious reform, till he had object a general renewal of Christian life, in his novel Il Santo (Milan, 1906). In the same country Giovanni Semena, a Barnabite, did much by his lectures on both the historical and the philosophical aspects of the subject to disseminate the new ideas, while Romolo Murri, a secular priest of the diocese of Ferrara, continued his crusade on behalf of Christian democratic action, undismayed by numerous manifestations of hostility on the part of authority. Among his chief supporters in this crusade was Salvatore Minocchi, a professor of Hebrew at Florence, who had also become known as a Biblical critic through his studies of the Psalms. The movement was represented principally by the writings of George Tyrrell, a member of the Society of Jesus, and Friedrich von Hügel. The latter had read a paper on the progress of OT criticism as it concerned the Hexateuch at a Roman Catholic Congregatio held at Fribourg-in-Switzerland in 1897, which afforded ample evidence of his accurate scholarship and the freedom of his critical method and conclusions. Since then he had been engaged on an important work on The Mystical Element of Religion (it was not published till 1908), which revealed his originality and depth as a thinker on all the problems of religious history, and gave further proof of his competence as a critical historian. Meanwhile he had contributed articles to the Quinzaine, Il Rinascimento, and other Modernist reviews, notably a reply to an article by Blondel which had impugned the right of criticism to a complete autonomy in the religious domain, and a defence of critical conclusions with regard to the Pentateuch against a judgment of the papal Biblical Commission affirming its Mosaic authorship (27th June 1906). Tyrrell was already widely known for his frank and bold handling of religious difficulties, but it was his acknowledgment of the authorship of A Letter to a University Professor, which circulated, and his consequent expulsion from the Society of Jesus (Feb. 1906), that brought him to the forefront of the Modernist movement and made him its universally acknowledged leader till his death in July 1915. Another leader of the movement was for the most part confined to an agitation for ecclesiastical reform. Franz Xavier Kraus, a professor at Freiburg-in-Breisgau, was the determined opponent of Ultramontanism, and he regarded as one who places the Church before religion, who identifies the pope with the Church, who is ready to sacrifice a clear decision of his own conscience to the sentence of an external authority ('Kirchenpolitische Briefe,' ii, in Allgemeine Zeitung, Supplement, 1895, no. 211; the letters were signed 'Spektator,' one of the pseudonyms adopted by Kraus; see Sch兜tr, Der Katholische Modernismus, in the series Die Idee a. d. XIX. (1905), p. 339, where the letter is given in full as the work of Kraus). Kraus, however, died in 1903, too early to be involved in the distinctively Modernist controversies. Hermann Sch兜tr, a professor in the Theological Faculty at Wurzburg, published a book entitled Katholizismus als Prinzip des Fortschritts, which provoked long and bitter controversy. As a result certain bishops of Northern Germany forbade their priests to attend his lectures. Two years afterwards controversy was renewed over Sch兜tr's views on eternal punishment, and four of his books were placed on the Index. Sch兜tr made a formal submission after receiving an assurance from the bishop and the Theological Faculty of Wurzburg that such submission did not imply any sacrifice of conviction on his part. But he withdrew none of the condemned books from circulation, and continued till his death in 1906 in the leadership of a strong liberal movement in German Roman Catholicism. Among his most influential disciples were Albert Ehrhard von Strassburg, Joseph Schnitter of Munich, and Hugo Koch of Braunschweig. Pius x. did not fail to reply to the growing menace of this movement. During the years 1905-06 he issued a series of encyclicals in condemnation of the Christian Democratic movement in Italy. Notably among these decisions, by the Biblical Commission which Leo XIII. had appointed in 1902 reproved the audacity of criticism in questioning accepted beliefs as to the authorship and authenticity of certain books of Scripture. In April 1906 the Congregation of the Index summoned the Bibliotheca and the Italian Congregation, and in July 1906 the Congregation of the Index removed the books of Tyrrell and Fogazzaro's Il Santo were condemned by the Pope. But it was not till the beginning of 1907 that the storm burst in its full fury. Murri was suspended as 'a divinis' on 15th April. Two days later the pope delivered an allocution in which he denounced the new movement as 'the compendium and poisonous essence of all heresies,' and called upon the cardinals to aid him in eradicating these errors. At the end of the month the Cardinal Prefect of the Index wrote to Cardinal Ferrari, archbishop of Milan, enjoining him to procure the suppression of Il Rinascimento with religious writings. The censorship of the Cardinal Prefect of Paris was at the same time forbidden by the bishops who controlled that seat of learning. But the pope's allocution did no good, by similar action on the part of the Cardinal Vicar, prohibited the reading of Le Roy's Dogme et critique, and at the same time forbade any priest in his diocese to collate in Loisy's Revue d'histoire et de litterature religieuse. The professors of the Catholic Institute of Paris were at the same time forbidden by the bishops who controlled that seat of learning to contribute to Domains, a small Modernist weekly which had been founded at Lyons in 1895. In June Pius x., in a letter of solemn charge to his professors at Vienna, who had written an attack upon the theology of Hermann Sch兜tr, described those who had projected a monument to Sch兜tr's memory as 'either ignorantly or wilfully forgetting the authority of the Holy See,' though among them were the archbishops of Bamberg and the bishop of Passau.
prepared for a more stringent and inclusive condemnation of all the various heresies, exegetical, apologetic, philosophical, and social, that were troubling the Roman Catholic world. That condemnation was pronounced in the decree of the Imposition, Lamentabili sane existimatis, dated 3rd July 1907. The decree Pascendi Dominii gregis, of 8th September in the same year. The decree Lamentabili was a mere collection of sixty-five propositions which were to be condemned. No information was given of the sources from which they had been derived, and no writer was condemned by name, but thirty-eight of the propositions were directly concerned with Biblical criticism, and Loisy, in some notes on the decree which he published at the beginning of the following year, accepted its condemnation as directed against him. The encyclical Pascendi was a document of much greater importance, and was recognized as such by the leading Modernists. Tyrrell met it with vigorous criticism and open defiance in two articles which appeared in the Times on 30th September and 1st October, in the full knowledge that he was exposing himself to the severe censures of the Church. On 28th October a more detailed reply was published in Rome under the title Il Programma dei modernisti. The encyclical had been deduced from an unison philosophical principle all the various errors which it grouped together under the name of Modernism and it maintained that the false conclusions of the Modernists with regard to history, dogma, and the Bible was all the necessary result of an erroneous philosophy. To this the Programma replied that it was, on the contrary, the undeniable results of historical criticism that had made necessary a new apologistic of some kind. The attitude of Tyrrell and of the authors of the Programma revealed a determination to resist the action of authority. The watchword of this resistance was to be 'No schism.' Even if excommunicated, the Modernist leaders were resolved to claim their inalienable right of spiritual domicile within the Church. Authority might cut them off from its outward communion, but could not affect their inward communion with it. Tyrrell expounded the new policy in an article contributed to the Grande Revue, and remained till his death its most consistent adherent. But the difficulty of giving effect to the policy soon became apparent. The open opposition lay in the economic dependence of the Modernist clergy, which prevented their action in the open. On the morrow of the publication of the Programma, e.g., the reading of the book was forbidden to the faithful and its authors were excommunicated. But, as they still remained anonymous, the effect of their protest against the outer world was largely discounted. Yet it was in Italy that resistance to the encyclical was most obstinate and prolonged. In spite of the saddening suppression of Modernist journals, both scientific and social, new ones continually appeared in that country. Among these the most influential was Nota Veteris, founded in January 1908, in which for the first time theological views of a decidedly negative character, such as found expression in the Lettere di un prete modernista, published at Rome in the same year, began to appear. Modernists and Modernist declarations were launched against the leaders who had appeared in the open. Loisy was formally excommunicated on 7th March 1908. The same sentence was pronounced against Murri, who was accused as a deputy to the Italian Chamber, on 22nd March 1909. Tyrrell had been deprived of the sacraments on 22nd October 1907. The same fate befell Schnitzer at the beginning of February 1908. Minicchi was suspended 'a divinis' in January of the same year, and in the following October voluntarily withdrew into secular life. This series of personal condemnations was followed up and completed by a blow aimed at the Christian Social movement in France. The Silenc, the organ of the movement, was formally condemned on 28th August 1910, and its promoters ordered to work henceforward for social reform under the direction of their respective bishops. Mare Sangnier, the lay leader of the movement, made his submission, but Pierre Dabry, its most prominent clerical representative, withdrew into secular life. The various measures of repression set forth in the encyclical Pascendi having failed, after a lengthened trial, to produce the desired effect, Pius x issued, on 1st September 1910, the motu proprio Sacrorum Antistitum, in which he enjoined the imposition of a special oath of adhesion 'to all the condemnations, declarations, and prescriptions contained in the encyclical Pascendi and the decree Lamentabili upon all professors of seminaries and Roman Catholic universities and institutes on admission to their offices and upon all ordinands. It fell, however, not to a priest even to a layman, but to a woman, to make a protest against what she conceived to be a violation of Christian liberty. Mande Petre, the biographer of Tyrrell, having been called upon by the pope to resign as the diocese in which she resided to subscribe to the condemnations contained in the encyclical Pascendi and the decree Lamentabili as a condition of her admission to the sacraments, refused to do so on the ground that such subscription would imply a readiness to defend, if necessary with her life, every word of those documents as being equally important for the faith with the Apostles' Creed itself. About the same time an anonymous document, purporting to represent the views of a numerous group of ecclesiastics belonging to all the French dioceses, appeared in a Parisian newspaper, the Siete. It contained a declaration that its authors desired, before taking the oath under constraint, to protest before God and the Church that they did not regard their act of submission as in any way binding upon their consciences or as implying any modification of their opinions. Whether with this reservation or not, the anti-Modernist oath was generally taken by most of those suspected of being Modernists, and the history of Modernism as an organized movement in the Roman Catholic Church had come to an end.

2. Forma.—(a) Apologetic of immanence.—It was the aim of the philosophic Modernists, notably of Laborthomtre, to establish the cardinal points of Christian belief by the aid of the modern evolutionary or dynamic view of universe. That involved a departure from the traditional scholastic method of apologetic. But they did not abandon scholasticism arbitrarily, simply because it was old. On the contrary, they held that their sincere belief that the Aristotelian metaphysic and logic utilized by the scholastic theologians provided a less perfect instrument for the clarification and defense of specifically Christian belief than the more modern conceptions of life. It is, e.g., an essential part of the belief that God is personal and that He is Creator. But it is only in the light of a dynamic conception of the universe that the full significance of these affirmations is disclosed. The God of Aristotle was a logical abstraction, the ultimate Idea. The Creation was but the logical derivation of the divine idea in specific forms towards a passively receptive matter. It was in no sense a productive effort realizing new life. But that is just what the Christian belief demands. For it God is the sovereign source of power, and that power goes forth, must by its very
nature go forth, in a real creative effort issuing in new life independent of and yet closely united with its source. And the very essence of that new life is again real creative action. For action is always creative, an extension of life beyond itself, its prolongation into another life, not a mere continuation of what it is, but a result of which it remains the constitutive principle. Thus creation is God's transcendent reality introducing itself into the world and becoming immanent within it. And this is creation is the source of the divine love by which God is eternally pledged to His world, by which His world, becoming self-conscious in man, needs and can receive His grace. Again, as Lapethomière points out, it is just because God is not the 'pure act' of Aristotle, but the power which by His own nature acts continually, that we can conceive of a plurality, a society engendered within the unity of His own Being. The doctrine of the Trinity assuages a vital and not a merely formal character. Thus the reality which we assign to life, because we already feel it there, is itself the motif of our belief in the personality of God. That personality is far beyond the common religious conception, it is real presence which stands for the transcendent and immanent, for the eternal and the temporal. It is the vital essence of our life, the integral unit with which it is combined. The experience of life, then, is a personal experience, it is a personal revelation. And the true character of man, his essential nature, is the creative act of life which makes him a new person, a new creature, a new reality.

(b) *Historical criticism.*—It was the aim of the philosophically Modernist, in particular the Christian, to vindicate the Church and its traditions as the supreme organ of the vital religious tradition of mankind. The historical Modernist sought to do the same thing in his own special field of study. The attempt to interpret the Bible on its own terms, to place it on the level of the other portions of Holy Scripture, was a new and revolutionary departure. The development of dogma from the most general to the most exact forms of statement, from the simplest to the most complex and detailed forms, was a fact of history. As a historian, the Modernist had to trace the development and expose its character. But as a Christian apologist (the role which alone constituted him a Modernist), he had to undertake the much more difficult task of interpreting the development of dogma with its permanent truth-value. This he attempted to do by distinguishing between the spirit and the form of each dogmatic statement, ascribing to the former an absolute and permanent, to the latter an empirical and mutable value. By the spirit of a dogma such a apologist aimed to make its witness to a certain aspect of religious experience which was necessary to the reality of the religious life, and therefore essential and capable of becoming universal, although that witness could pass current between mind and mind only by the aid of some intellectual symbol capable of suggesting the actually experienced reality. Such symbols as intellection and conceptualization, and the intellectual methods and habits of their period of growth, were clearly perfectible. But the growth of dogma was something more, and more truly organic, than the adaptation, as it were consciously and from without, of more perfect thought-forms to a constant experience. For thought reacts upon life, the clear perception of an experience upon the experience itself, and deepening its import. So the methods of the Church, the symbols, the concepts, were to be imposed upon the intellect from without, is shrug of much of its religious character. Assent to such a revelation need not be religious at all. The real concrete revelation of God is to the whole personal nature apprehending His action upon it. And the perfect instrument of that revelation are the Incarnation, the Incarnation, and the life of His Church in so far as it is a real extension of His life. The thought of the Church, its dogmas, its truth-statements, are but the partial and ever-perfectible translation in terms of one aspect of man's activity, of his power of intelligently apprehending deity; of its living apprehension of God in Christ. Thus even the Gospels themselves are not a completed revelation. They indeed contain the real perfection of the Revelation of Christ. But that revelation can be apprehended only in proportion as it is lived, and by those who are the household of the Word. The Gospels are a transparent life, of which those who have lived it have the right to read and interpret its mysteries. Thus history is not merely accidental importance to Christianity, but is, on the contrary, of its essence of life. Lapethomière has said, "a living Christianity has dared to conceive of God sub specie temporis. God condescends to weave the texture of His vast designs with human hands. The divine inspiration of each individual life is a free product of the total inspiration of past humanity and a contribution towards all future inspiration. So tradition acquires a vital, and not a merely formal, value.

(c) *Ecclesiastical and social reform.*—Yet the movement did not propose simply to divineize the existing Church. Her actual institutions came into existence in a distant past in response to the needs of the spirit then operating within her. But in the early centuries of Chrisianity, it was by the spirit of the Church in the Church. By the spirit of the Church in the Church, the spirit of a true life. They may even, as Poggio's saint suggests, be introducing false and destructive spirits into her system—the spirit of falsehood, the spirit of clerical domination, the spirit of avarice. The spirit of the Church is not the spirit of legality III (pp. 336-342). Yet none of the chief Modernist writers can be said to have put forward any definite programme of ecclesiastical reform. They urge rather
that Church authority should remember of what spirit it is, what spirit it exists to serve and extend.

"The Church is the hierarchy with its traditional concepts, and it is the world with its continuous hold upon reality, with its continuing movement upon tension; the Church is the irrational and the sensible, the metaphysical and the ontological, the Divine truth which reaps upon official theology; the Church does not die, the Church is not a name, but it is heart that more than in its lips the Living Christ, the Church is a laboratory of truth is continuous action" (p. 230).

On the other hand, a conception of her character and mission will the Church discover what reforms she needs to make her equal to both in the profoundly changed circumstances of contemporary life. It is the conception which has inspired the Modernist social reformer also. He has aimed at making Christianity the cornerstone of national, political, social, and economic life, and therefore the principle of a larger and humaner life which may embrace all these trades. He has conceived of the Church as an instrument of world-civilization rather than of world-renunciation, and of world-renunciation only so far as it is involved in and necessary to a genuine world-text, and the first decade of the 20th cent. to understand sympathetically and to cooperate with all the generous hopes and endeavours of the modern democratic, movement, whether among Churchmen or among laymen in the Church's pale. It has been perhaps the chief bane of his offence in the eyes of authority. The Modernist social reformer has been at one with the Modernist ecclesiastical reformer in thinking that the Church needs especially to be saved from the danger of becoming a clerical autocracy, exacting from the laity as the sum of their duty a passive submission to its decrees. It may be said in connection with the modern movement as a whole that the attitude which was common to all the allied but independent movements grouped together under the name of Modernism was the self-reform of the Church, a reform inspired by belief in life, in the totality of human action, as itself most likely to provoke man's need of God and to ensure a genuine satisfaction of that need—a reform, therefore, which was to be sought along the lines of contemporary thought and action, a reform which was to be the guaranty of the capacity of the Church to have the right to have a voice and influence in the world's affairs.

The story here summarized is, in almost identical terms, in various commentaries. It is curious in that it shows how on being asked to give the spirit of the Buddhist doctrine in a few words, would choose the words of Assajà's verse? One may search in vain most manuals of Buddhism to find any mention of the point raised in the verse; and yet the verse has been so frequently found on tablets and monuments in India that Anglo-Indians are wont to call it, somewhat extravagantly, 'the Buddhist creed.' The Buddhists, of course, have no creed in the European sense of that word, but any one who should draw up one for them ought to include in it a clause on this matter of causation. The quotation may very well have made a special impression upon Siriputta and Mogallana, for they had already renounced the sacrifice as a satisfactory solution of the problems of life, and were seeking for something more satisfactory than the vague hints now to be found in Buddhist literature, such as Jata 14, where the ambrosia is brought into a mystic connexion with cause and passing. The chief authority of the present work is "Moggallana." The other authorities are: Ed. H. Oldenberg, l. c.; translated in "Buddhist Texts in Old and New Sanskrit" (P. P. 1891); "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanskrit"; "Buddhist Texts in Old and New Sanko
Moggallana was frequently mentioned in the canon, and usually with the epithet Mahi (the Great). A number of verses ascribed to him, including one long poem and several shorter ones, are preserved in the anthology called Theragatha ("Poems of the Brethren"). The Digha is curiously silent about him; but a whole book is assigned to him in the Sutta-sūtra; and about two score of passages in the Majjhima and the Aṅguttara, and elsewhere in the Sutta-sūtra, record acts done or words spoken by him. We need not give the details of these passages. The general result of them is that he was considered by the men who composed them to have been a master of the philosophy and of the psychological ethics, and especially of the deeper and more mystical side, of the teaching. There is, e.g., an interesting passage where the Buddha compares Sāriputta with Moggallana:

"Like a woman who gives birth to a son, brethren, is Sāriputta to a young disciple, like a master who trains a boy so is Moggallana to the highest truth. But Sāriputta can set forth the Aryan Truths and teach them, and make others understand them and stand firm in them, he can expand and elucidate them."

In one characteristic Moggallana is stated to have been supreme over all the other disciples. This is in the power of the iddhi; and the meaning is vague. The early Buddhists, trying, as they often did, to pour new wine into the old bottles, distinguished two kinds of iddhi — the one lower, intoxicating, ignoble; the other, higher, temperate, religious. The former has preserved for us the belief common among the people, the latter the modification which the Buddhists sought to make in it. The former reminds us of the mana of the South Seas, or the orujava of some American tribes, or sometimes of the strange accomplishments of a spiritualist medium. Birds have iddhi, with especial reference to their mysterious power of flight. Kings have iddhi of four kinds (differently explained at Digha, ii. 177, and Jātaka, iii. 454). It is by the iddhi of a hunter that he succeeds in the chase. Idhi is the explanation of the luxury and prosperity of a young chief. By iddhi one may have the faculty of levitation, or of projecting an image of oneself to a distant spot, or of becoming invisible, or of walking on water, or of passing through walls, or of visiting the gods in their various heavens. All these are worldly iddhi, the iddhi of an unconverted man. That of the converted, awakened man is self-mastery, equanimity. Both these kinds of potency were regarded as natural, that is, neither of them was, according to Indian thought, what we should call supernatural; and neither of them, in Buddhist thought, was animistic, that is, either dependent upon or involving the belief in a soul as existing within the human body.

In both these respects of iddhi, the worldly and the spiritual, Moggallana, in the oldest records, is regarded as pre-eminent. An amusing and edifying story is preserved of the way in which, like an ancient St. Dunstan, he outwits the Evil One. We are also told how, in order to attract the attention of the gods in the extreme classical position of this authority that thought suitable to their intelligence, he shook with his great toe the foundations of the heavens. Some instances of Moggallana's instructing the gods are given in the Moggallana Sutta-sūtra referred to above, and in the Aṅguttara (iii. 301, iv. 85), while two anthologies, probably the latest and certainly the most dinky books in the canon, the Vināda Vattavā and the Pāla Vattavā, consist entirely of short poems describing interviews which Moggallana is supposed to have had with spirits in the various heavens and purgatories.

Most of the episodes in which Moggallana figures are localized, that is, the place where the incident or conversation took place is mentioned by name. The names are very varied, and it is clear that no one place could be regarded as his permanent residence.

Tradition has preserved no further account of his life, but the manner of his death is explained in two commentaries, the two accounts being nearly identical. Both Sāriputta and Moggallana died in the November of the year before the Buddha's death, just before the Buddha started on his last journey. Sāriputta died a natural death; Moggallana, it is said, was murdered, at the instigation of certain jealous Jain monks, by a bandit named Saṃsāra-juttaka, at the Black Rock cave on the Ischil Hill near Rājagaha.

When Cunningham opened the cairns (memorial mounds) at Sāñchi, he found in one of them two boxes containing fragments of bone and inscribed respectively 'Of Sāriputta' and 'Of Moggallana the Great' in Pāli letters of Asoka's time. A similar discovery was made in the neighbouring group of cairns at Satdhāra. It is evident that more than two centuries after their death the memory of the two chief disciples had not yet died out in the community, and that the Buddhist laity who erected these monuments considered it suitable that their supposed relics should be enshrined in the same tomb.

The name Moggallana was occasionally adopted as their name in religion by candidates for the order until the 12th cent. of our era. The belief that the power of iddhi had been actually exercised by Moggallana the Great and others in the ancient days is still held by those of the orthodox who adhere to the ancient tradition, though, even in the practised ages, the belief in it soon died out. There is no evidence, later than the canon, of any

Whichever equivalent be selected, the inquirer may start with two general way-posts. In the first approach, the concept in question has a negative side, viz. a handing over, loose from, or rid of, and a positive side, viz. the concomitance, or general sense of expanded outlook, calm, security, attainment, power to be and do, with the virtual certainty of the self from 'were it' in some cases too costly a gain. If these two aspects be held together in the mind, the common terms for them, stated above, may—and this is the second stage—be considered as, more perhaps than any other, the pit and kernel of the religions faiths of India, and as coming nearer to the Christian 'salvation' than any other. It should, however, be added that the concept grew well in the do. 1914 (2nd ed.), ed. Rhys Davids and J. A. Carpenter, do. 1890-1111 (PTFS).

It is very possible that the translators were encouraged in this habit by consulting the medieval commentaries of Saṅghamangala, in which philosophy moksa was a well-evolved concept, and who uses it liberally in his paraphrases.

For instance, in Ṛṣṭhita Upanisad, vi. 15—Nachiketa becomes free from passion (taṇāja) and obtained Brahman—the last clause is explained as 'because freed' (mukta bhanu).

In being thus advised to discount much factitious emphasis laid in these ancient works on a notion that was evolving in them, the reader may contend that most at least of the translations criticized render only what is really implicit in the various riddles referred to, namely, a liberty emerging through the entire and the words rendered 'freedom in all the worlds' are, literally rendered, 'faring as they list' (bhūvadāna); and in Maitrīyana Upanisad, i. 2, 'had obtained freedom from all distress' (M. Müller is, in the original, 'had turned to renunciation' (Deussen).

"There is but the faintest anticipation of this in the Vedas. The only 'setting free' in those pages is the resting-place (siṃchana) where heroes are eased for a while from harness. Gods are called upon to deliver from sin—but it is such 'as clings to our bodies' (Ṛgveda, vi. xxiv. 9, viii. xviii. 12, mūchakata) and to let the enemy catch snakes and be slain (Vili. 8). But such a prayer as 'May I be detached from death like a gourd from its stem, but set from the immortal (anaryya)' (ib. 12) is the precursor of the later thought. Beyond such expressions the vocabulary of freedom was, it would appear, unborn. The Brāhmans give in the elaborate ritual of the altar-building, a rite to be chanted with it the 'bricks of saving' (sṛtyaḥ), that is, from evil.

1 Mūkta is said in 6, Bṛihling and R. Both (Saṅgha-Sīkṣā-Wörtbuch, Petregrund, 1894, ed., the Saṅgha Brāhmans, but it is a faulty reference, and the present writer cannot trace it."

1 Mūkta is said in 6, Bṛihling and R. Both (Saṅgha-Sīkṣā-Wörtbuch, Petregrund, 1894, ed., the Saṅgha Brāhmans, but it is a faulty reference, and the present writer cannot trace it."
and from death (Sātāpatha Brāhmaṇa, VIII iv 2), but elsewhere (XI iii 3) it is said that none but a brahmāna or religious is exempted by Brahman from death. It is only on the condition that he daily tends the sacred fire. Not here any more than in the Vedas does the grasp and realization of an emancipated consciousness appear. It is still apparently only a glance in the Upanisads ranked as the oldest. Of these three the Kena Upaniṣad is silent on the matter. In the Aitareya Aranyaka, an ancient mystic nature-monologos, there are hymns prescribed for rites proficiency in which brings the consciousness of all desires. These desires are consumed—long life, luck, wealth, fame, etc.—but 'liberty' is not among them. Progress in spirituality is revealed in the Taittiriya and Chāndogya Upaniṣads, but the emancipated-spirit is still immature. The former likewise shows the growth of the at in the end of the second part:

He who knows the bliss of that Brahman whence speech, whence mind turn back, not finding is ... tortures not himself: "What good have I left undone? What evil have I done? He, knowing this, saves himself." [Ch. iv 20 10]

The latter (Chāndogga) in IV 2 shows a parallel growth in the parable of the man brought blindfold from his Gandhāra home into the desert, and thence, with sight restored, directed how to get home again; even so does one who has gained true knowledge through his teacher know that: 'I shall only so long belong to this system of reborning till I am emancipated (vāṃsbṛhat); then I shall go home' (to Dassena).

And in the closing section occurs the favourite simile for deliverance:

'Freely myself from the body as the moon frees himself from Rāhu's jaws, I go into the world of Brahman.' [Ch. iv 20 7]

The same simile is hinted at in the Katha Upaniṣad:

'He who has perceived the soundless, the intangible (the at) which is not unchangeable, is freed from the jaws of death.' [Ch. iii 15]

But in the following passage (ib. ii v 1) we see how the idea is finding expanded expression:

'Very few, there's a town with seven gates of the Unborn, of thought ineffable. Whose approaches (Dhema, 'honours') it, he grieves no more and, emancipated, is set free (vāṃsbṛhat sa vāṃsbṛhat).

Verify this is that:

From what 'set free' is not unambiguous (M. Müller: bonds of ignorance; Dassena: the body), but 'liberty' is becoming realized as an ideal.

Turning now to the long Brhadāraṇyaka Upaniṣad, a long passage is to an enthusiastic and enthusiastic designation of certain attainments as constituting 'liberty' (III 3 ii). The priest asks the Vedantists how he who institutes a sacrifice may be free from all the thraldom of death, of day and night, and of the waxing and waning moon, and how the bright worlds shall be reached up a stainless sky. By this or that celestial priest are given the several replies, and each reply is added: 'That (sūkṣvikāt atāt) is that which is utter liberty (sa muktiś atiś atīkāthi), These are then termed the atimoksha.

It is noteworthy that, while these four 'liberations' are so emphasized, aspiration does not (in the adjacent section) extend to liberation, urged by another interlocutor, a Kṣatriya, again and again with proffered largess, to 'speak of that higher thing which awaits for emancipation,' Yaśvātā; but the Vedantists, finally discourses of the soul and of beholding the soul as God.

'Scarce visible and old there lies a path
That reaches into me, was founded by me
Pare onward to the world of light, and thence
That are utterly released.'

(ātāmasya mokṣaḥ labhād vāṃsbṛhatā)

As though of a snake lies on an ashy hill and cast away, there lies, Verily, the Veda, that becomes immortal, that life, is Brahman only, only light' (IV vi 8, 7).

This with its context is not designated as atimoksha, or an unconditioned. When we find again the snake-skin simile, in the Pratāna Upaniṣad, v 5, where the emancipation described is that of spiritual ecstasy rather than of a disembodied spiritual unity, or full realization of the same, the freeing, on the one hand, is made more explicit, and, on the other, the liberation is described as 'from evil.' But, whether emancipation be free from the power of the body during life or from the body itself and from all subsequent bodies at final death, the main positive consciousness, realized in this early stage of Vedāntist moksha, is, intellectually, discernment of the identity between the Absolute, Brahman or Atman, and the soul located in man, and, emotionally, the sense of security and assurance resulting therefrom. For the individual becomes invested with the powers, negatively expressed, of the Absolute Being: undying, imperishable, unattached, unbound, unlimited, unsuffering, etc. (Brhadāraṇyaka Upaniṣad, IV 2 4).

If a man clearly beholds this self as lord of all that is and will be, . . . who has entered into this patched-together hiding-place, he is creator, maker of all, his is the world, he is the world—then is he no more afraid' (Ch. iv 10 10).

Proceeding to the less ancient Upaniṣads, such as may have been influenced by Buddhist and other developments, we find in the '常德 of the Shavellings' (Mundaka) the compound pari-mucchānti (III ii 6), 'completely freed': who have grasped the sense of Veda-loka, all acclamations, their intangible power, he is free; in earthen resignation, at the final death.

In Brahman-being becomes immortal, wholly freed.

But in the Svetāṣṭarā Upaniṣad, and the allied but perhaps still later Maitreya Upaniṣad, the reader finds himself among new ideas jostling against the older ones. These are yet presented—soul and Brahman, release from life and death, and knowledge as giving release—but the conflict has widened, if not deepened. The theism of Yoga, the theory of separate souls and their self-emancipation from conditioned, mutable concomitants of the Sākhyā system, the critical, scientific attitude of Buddhism, and the tragic earnestness of the two former and of Jainism—all have caused a revolution in outlook that strikes a new note at the very first words:

'Om! The Brahman teachers say: What is the primal cause, what is Brahman? Whence are we?' (Svetāṣṭarā Upaniṣad, 1).

Through it all the moksha-idea appears as the work of a creator:

'The Dēva' or līvara ('Lord'), himself self-caused, is the cause of the maintenance and the movement of all (bhūta anātme); the bondage and the liberation (jandōka, saha) of the world (Ch. vi 16). To the gods (Devas) he says, making his own being a lamp, the being of the Lord, is to have all fetters fall away, all sufferings destroyed, and the cesing of birth and death come to pass (Ch. i 17, ii 10). Through freedom, take him in my refuge, supreme Causeway to that which is not dead (ananta paraṁ purusha), Fire that burns where no fuel is' (ib. vi 17).

'So soon as a man might wrap the atmosphere
About himself like any cloak, as need.
The end of suffering, not knowing God' (ib. vi 20).

Yet both here and in the Maitreya Upaniṣad the Atmanism monism is none the less maintained, and all personal détails are recognized as names of the self (IV v vii, VI vi 8).

Much, it is true, is made of a disparate 'element-soul' or self, bound by the fetters of the fruits of good and ill, and, as one in priests, till by knowledge, by tapas (austerities), by meditation he is freed from those things by which he was filled and overcome, and obtains union with the Atman (IV vi 4).

Yet this concept no longer satisfies:

'Having seen his own self as the Self (or soul), he becomes self-conscious (násīdā); and, in virtue of self-consciousness is to be conconsidered immovable, unconditioned. This is the highest mystery, betokening emancipation' (kāndāna) (IV xx 7).

A wondrous blend of Buddhist and Sākhyā concepts.

Yet another new term reveals a fresh and notable development of the moksha-consciousness, that
of 'autonomous,' or independent—vandanta (v. xxxv).

'Independent, standing on his own greatness, he contemplates the cycle of rebirth as it were a rolling chariot-wheel' (that has ceased to control him). Cf. the 'autonomy' prescribed in and vital for Buddhism (Dipha Nibbāya, ii. 109, and elsewhere).

The psychology also of the process of self-liberation is greatly indebted to the ethical character, existing in Buddhism (Maitreyaana Upanisad, vi. xxxiv.). Mamas (i.e. the mental mechanism of sense-cognition, a narrower concept than 'mind') is, like īsvara himself, called 'the cause of bondage and of liberty.' Both, to bring about its right anchorage, to bring it, in fact, 'to an end in the heart' (the seat of the soul)—that is knowledge, that is mokṣa... that man is wholly freed (parinirvāṇa). Nor does this austere discipline, nor does the evolving power of introspection dull the rapture associated in the earlier books with this setting free. With a poet's licence, or through theistic influence, the poet pictures the Absolute soul (Brahman) as reciprocally 'lingering treating all creatures' (īsvara, vi. xxx.).

That the yet later Upaniṣads could use mokṣa as practically synonymous with religion appears in the Mātki Upaniṣad, which recommends him who desires for mokṣa to study the Mātki Upaniṣad, and, if that suffice not, certain others, and so on till all are included. The one named consists in a concise effort to define the essence (śrīra) of the soul or Brahman. More pertinent is the definition of mokṣa in another of the aforesaid Upaniṣads, the Sarva-sūtra, as the destruction of the illusion that the material body, or any other factor of the phenomenal self, is the Ātman (soul), who is God. An illusion is the blind, ignorance its cause. (This illusion is the first of the 'Ten Fetters' of Buddhism.)

Mokṣa as the supreme aspiration runs through that best known portion of the Mahābārata epic called the Bhagavad-Gītā. The allusions occur almost entirely in the parts judged by R. Garbe to be older (see Bhagavā-Gītā). We find mokṣa applied to liberation from evil (iv. 16), from the body (v. 28), from lusts and anger (v. 26), from decay and death (vii. 29), from works (ix. 28), from the illusion of opposites (xxv. 5). But, however the bondage be conceived, release is effected here also, by a spiritual union with Brahman, conceived as, or as behind, īsvara, lover of the human soul, who invites his utter self-surrender, and bestows on him, in virtue of that surrender, release from this or that form of limitation (cf. ix. 29, xxv. 9f.). The central section of the epic is called 'the mokṣa-doctrine'; yet it is in the Amrūtā section that the complete picture of the emancipated individual occurs (Ādhibhūta, 19). In this we see īsvara contemplating Ātman, attaining Brahman, sunken in this one goal, oblivious as to the past, freed from results, heedless of 'this' or 'that.' Yet he is a friend to all, suffering all, master of sense and self, fearless, wrathless, meek, upholding all, as if they were he, indifferent to opposites, lost to social and domestic ties, wanting naught, cleaving to naught, detached. 'He is in every sense free.' All classes, the trader and the labourer, too, may enter on this upward way, and even women, but much more the Brahmans and the Ksatriya who study, joy in their duty, and hold the Brahman world as highest; for the fruit of achievement is liberty, and the utter abatement of ill, stories no greater lies.

This notable climax is in complete harmony with Buddhist thought. It is more than probable that, before the epic attained its final form, the influence of Buddhism was felt; for mokṣa had made itself deeply felt, and that to it is largely due the breaking down of class and sex disability to attain the highest, the humaneness of the lonely saint, and the crucial emphasis on the ending of suffering. Dukkha ("ill") is not, of course, absent from the earlier Vedantic literature, but it attains emphatic isolation in that which must have felt the impress of Buddhism, to say nothing of Jainist and Sāṅkhyan influence. Now, in the doctrine of Arahantship, or the release from continued deaths and rebirths by the perfected character, existing in Buddhism (Maitreyaana Upaniṣad, vi. xxxiv.). Manas (i.e. the mental mechanism of sense-cognition, a narrower concept than 'mind') is, like īsvara himself, called 'the cause of bondage and of liberty.' Both, to bring about its right anchorage, to bring it, in fact, 'to an end in the heart' (the seat of the soul)—that is knowledge, that is mokṣa... that man is wholly freed (parinirvāṇa). Nor does this austere discipline, nor does the evolving power of introspection dull the rapture associated in the earlier books with this setting free. With a poet's licence, or through theistic influence, the poet pictures the Absolute soul (Brahman) as reciprocally 'lingering treating all creatures' (īsvara, vi. xxx.).

Hence the terms 'freed by understanding,' 'freed-bodily-ways,' meaning emancipated by the work of understanding only, or emancipated both thus and by the eight vimokṣas or similar exercise in samādhi (cf. Mahākammam Nikāyā, i. 477).

Moreover, vimuttī, as expressing final achievement, with the rapturous assurance it imparts, was at the heart of the Buddhist Dhamma from the start. In that which is recorded as his second sermon—the Anuttara-lakṣhaṇa Sutta (Vinaya Texts, i. 101; cf. 107)—Gotama Buddha stated how he grew out of the rejection of the cosmic soul as immanent in and identical with the sense of individual personality ('self') being only an abstract idea inseparable from bodily and mental factors. Perception of the absence of Ātman-qualities (permanence, omniscience, bliss) in these denuded them of factitious attraction. Craving to renew them is future lives fell away. The freed individual knew that he was free, and therefore needed only to await the final hour in quieted but blissful well-being and righteousness. Again, in sending forth his first missionaries, the Buddha named as his and his supremely adequate qualification—'I am freed from all snares human and divine... Go ye now... for the welfare of the many..." (Vinaya Texts, i. 6).

The subjective awareness of the freed state, held to be also valid objectively, is further enhanced by the use of such terms as 'realizing,' 'touching,' 'taasting' (Dipha Nikāyā, ii. 220; Mahākammam Nikāyā, i. 477; Aṇguttara Nikāyā, ii. 244, iii. 36, iv. 296, etc.).

Awareness of full attainment was realized as a timeless moment of ecstatic consciousness (Kathāvatthu, ii. 4), but the reverberations formed an abiding joy.

'Gladdened springs up within him, and rapture thesels; the thoughts of his enraptured consciousness become transmuted; thus transmuted he knows bliss; and in that bliss his consciousness is stayed' (Dipha Nikāyā, ii. 241, 'The five occasions of emancipation'; cf. 1.73).

Imagination plays about the term:

'He with fair flowers of Liberty everywhere, Safe and Immune, shall reach the perfect peace' (v. 560).

'Above the rolling chariot of this earthly life spreads the silken canopy of emancipation' (Ānappatā Nikāyā, iv. 289).

And in the later Questions of King Mihinda:

'As the ocean is all in blossom with the immemorable... ripple of its waves, so is Nibbāna all in blossom, as it were, with
the innumerable, diverse, delicate flowers of purity, knowledge, emancipation’ (ib. vii. 89).

Arachantship, again (ib. v. 17), is called ‘the highest jewel of emancipation (vimutti-ratana), chief diadem of all.’

The three terms here brought together—Nībhāna, Arachantship, emancipation—are largely, though not wholly, coincident in range, presenting differing aspects of the Ideal, Nībhāna; the having eliminated ‘the fires’ of evil desire, craving for continued life human or divine; the contemplation of an Ātman-less Absolute; Arachantship: supreme positive attainment in life on earth; Vimutti: the subjective aspect of both, the negative force in it never far off:

‘Let go (saṅkāra) that which has been, let go what will be, let go what thou art, thou that dost Transcend Becoming! On every side tree-minded Thou’rt not again come toward birth and dying’ (Dhammapada, 349).

But the self-knowledge that he is free is a clause in the formula confessing Arachantship:

‘Emancipated by right (or perfect) gnosis (sammadassadhā-vidissana);’ in him thus: see tree there arises the knowledge ‘tread’! (ib. Nikāyas, passim; Dialogues, l. 93).

And the unity connecting the negative and positive aspects may be discerned in the Sutta Nipāta verses:

‘...in whom no sense-desires do dwell....’ (ib. Nikāyas, passim; Dialogues, l. 93.)

‘What sort of freedom (waits) for him? To other freedom (waits) for him (1289 l.).’

In the Nikāyas vimutti and Nībhāna are declared to be ‘comparable’ one with another (in the same thought-category, Majjhima, i. 304). But in the Dhamma-sanghaviṃśati vimutti is distinguished from the higher mental freedom and Nībhāna (p. 234; cf. Dīgha Nikāya, i. 174).

As the subject of a distinct group (khaṇḍhika) of religious experience, vimutti is ranked in the Suttas fourth with the groups ‘ethics’ (sīla), concentration studies (sāmaṃdāta), and insight (paññā, Majjhima, i. 214; Anguttara Nikāya, i. 125, passim), while for the Arahant a fifth was reckoned: knowledge and intuition of vimutti (vimutti-dhamma-viveka, i. 162, etc.). Closely associated with the fourfold path to Arachantship and called, later, modes of progress, avenues, or channels to vimutti, are the studies in ‘Empinness,’ the ‘Signless,’ ‘the Not-Made-After’ (Dīgha Nikāya, iii. 219; Sānīya, iv. 295–297; Dhammapada; Compendium of Philosophy, London, 1910, p. 216).

A very frequent allusion to emancipation in the Nikāyas is that of chetottasmi paññāvimutti, corresponding very well to emancipation of heart and head. The systematic expansion of ethical emotion was not peculiar to Buddhism (see LOVE (Buddhist)). But the founder of Buddhism is represented (Sānīya, p. 118) as claiming that he alone insinuated in such exercises emancipation of the heart.

In this way, in sufficing the idea of more and more beings with (1) love—‘let all beings be void of enmity and meekness,’ (2) pity—‘let all be set free from suffering,’ (3) sympathy—‘let all be happy and fortunate,’ (4) equanimity—‘all are the owners, these are the fields, these are the exercises, if fully practiced result in a thorough self-mastery through complete emancipation from the respective opposed moods of (1) enmity, (2) harmfulness, (3) antipathy, (4) passion (Loek Sadah, Mahāthana, in a letter to the writer).’

Taken all, apart from that supreme enfranchisement from all the conditions for rebirth, they constituted the best way to Brahma-heavens.

‘Sārīputta: This, I told Dānañjaya, is the way to share existence with the Brahma gods.

The Buddha: What did you tell Dānañjaya in that inferior Brahma-world, when there was more to be done?

Sārīputta: I judged, lord, that these Brahmans preferred that heaven (Majjhima, i. 196).

Other all bases of meritorous acts which are stuff for rebirth (pavārasaya), and for accomplishment of the heart by love. That takes all those up into itself, as the moon1 over the waving leaves, the sun over the shank, the morning star the night, shining in radiance and in splendour’ (Iti-evutteka, 19–21).

But to be emancipated by intuition or insight is to have broken all the ten ‘fetters’ by the four successive stages of the Araya-path—stream-winning, Once-Returning, Never-Returning, Arachantship—and to have reached the going-out of all feared desires as to lives on earth or in the heavens (Dīgha Nikāya, l. 108).

‘...and well, lost’ had developed the symptoms of life’s culminating in its final end. Hence it is in the two works containing the legacies of such matured creatures—the Sutta-Nipāta and the anthologies of Theragāthī and Therigāthī—that the theme of emancipation is maintained most steadily:

‘Come now, let us see Osiana, who lion-like DOTH room alone ... and let us ask of him How can we be set free from sneeze of death? Declare to us with your voice as to the Lord How may a man from sorrow be set free? (Sutta-Nipāta, 164.)’

‘Passed he away fraught with the seed of rebirth, Or as one wholly free? That would we know (Psalm of the brethren, 1274).

‘And as the sun rose up out of the dawn Lo! then my heart was as a liberat (ib. 477).’

‘Whose range is in the Void and the Unmarked And Liberty—as flight of birds in air So hard is it to track the trail of him (ib. 29).

And see, O Master! Sundari who comes To tell thee of Emancipation won And of the night no more to be reborn; Who hath herself from passion freed (tadāraged), Unyoked from bondage (Psalm of the Sisters, 334).

‘Thou be suffering and weak and all My youthful spring be gone, yet have I come, Leaning upon my staff, and climb aloft The mountains peak. My cloak blown off, My little bowl o’erturned: so sit I here Upon the rock. And o'er my spirit sweeps The breath of Liberty! (ib. 29, 30).

‘Passion abandoned, hatred and illusion, Shattered the bonds, nor is there any trembling In that the springs of life are wholly withered — Like the rhinoceros let him wander lonely (Sutta-Nipāta, 74).

‘Even as a fish that breaks life into ocean Even as a few that turn not back to burnt stuff — Like the rhinoceros let him wander lonely (ib. 69).

‘Dwelling in peace, in joy, in confidence, And in friendly joy, in balance, each in season, Nought in the world disturbing his composure — Like the rhinoceros let him wander lonely (ib. 69).

The evolution of mukti, or mokpa, in Jainism cannot be adequately dealt with till its early literature is more fully accessible. As evolved, the idea is clearly presented above (art. JAINISM, vol. vii. pp. 468, 470).

Similarly the (v) mokpa, or aparaya, concept of Sāṅkhya thought, which survives in medieval commentaries, and which, even in the aphorisms on which these are based, shows a later and a more habilable metaphysics than such as the foregoing discussions reveal, will be dealt with in art. SĀṅKHYA.

In those aphorisms (Sūtras) the individual soul, called puruṣa, is conceived as 'neither bound, nor liberated, nor migrating' (lxiv.), as is the rest of man’s nature, physical and mental. Emancipation consists in having discerned the subtle difference between this [dual] nature (pradhāna) and the soul’ (xxvii.). By knowledge is liberation (jñāṇa ca uṣṇavara), by the opposite bondage (lxiv.). With this knowledge the task of good and evil is done; the union of soul and organism may ‘go on like the potter’s wheel revolving from the effect [of his impact]’ (lxvii.) after the finished pet is removed, but, when the organism assents to act, the soul obtains absoluteness (kauśalya āpnoti) (lxviii.).

'MOKSA' 773
MOLINISM.

—There is no problem in theology more difficult than that which has reference to the knowledge and causality of God, on the one hand, and the propensities of human beings, on the other. The problem includes three difficulties: (1) How is it possible to reconcile God's foreknowledge with the freedom of the human will? (2) If the entire physical reality of our free acts proceeds from God as the First Cause, how is it possible for our will to be a free cause, or for evil actions to be imputed to us? (3) Given the sincere will of God to save all men, how can such a will, in the light of the experience of evil, be consistent with the light of faith and never attain to eternal salvation!

The endeavours of theologians to throw light on the problem have been noted in the work of Aquinas, whose summa of the Thomist doctrine of grace and free will has become a classical statement of the subject. In his work, Aquinas makes the point that God's foreknowledge is not the same as knowledge of the future, but rather a knowledge of the possibility of the future. This distinction is crucial for understanding the nature of human freedom and divine providence.

The controversy between the two systems of Thomism and Molinism has raged in Roman Catholic schools of theology.

I. HISTORY OF THE CONTROVERSY.

—In the 13th century, St. Thomas Aquinas, a Dominican, synthesized the summa of human knowledge with regard to God as the First Cause and Final End of all things in the work called the Summa Theologica. Herein is contained all that the human mind, aided by the natural light, can know concerning God's providence, universal causality, grace, etc. So great became the renown of St. Thomas for the solidity and subtlety of his doctrine that at the Council of Constance the Summa Theologica, alone of all theological treatises, was thought fit to be used in consultation with the sacred Scriptures. The Order of St. Dominic is sworn to love and defend the doctrines of St. Thomas as by hereditary right; and it is their loyalty to these doctrines that has earned them the well-merited name of Thomists.

At the close of the 16th century, the Jesuit Luis de Molina (1535-1600) published a new doctrine on predetermination, grace, free will, etc. The basis of the whole system is the so-called scientia media, a theory borrowed by Molina from his master, Pedro de Fonseca, who, knowing it to be entirely new and against the traditional doctrine, had not dared to publish it. Molina's book was published at Lisbon in 1588 and is entitled: Concordia liberii arbitrii cum gratia donis, diversa praedestinatione, et regregiorum. Had this theory been known, says Molina, Pelagianism would never have existed. Luther would not have denied free will, and Semi-Pelagianism would easily have been abandoned. Molina further adds that St. Augustine and the other Fathers would have unanimously approved of this theory of predetermination and this manner of concluding free will with the foreknowledge and providence of God, if it had been propounded to them (Concordia, ed. Paris, 1576, p. 548). This new doctrine, however, did not arrest the teachings of Michael Baius, nor did it prevent the papal condemnation in 1570 of the cause of an ending and bitter controversy which has lasted for centuries between Thomists and Molinists. The above assertions of Molina aroused the ire of St. Augustine and St. Thomas. Dominicus Baius vigorously attacked the new theory, and so great was the dissemination caused by the ensuing controversy that in 1594 the matter came before Pope Clement VIII, who, in 1598, instituted a special board of inquiry, known as the Congregatio de Auxiliis. There were, in all, 181 assemblies of this congregation, which debated the doctrines under discussion. Three condemnations in succession were drawn up by the consultors against Molina. On 13th March 1598 they declared that the Concordia and the doctrine of Molina must be unreservedly condemned. On 19th Dec. 1601 they condemned the remaining propositions taken from the Concordia. At the assembly of the Cardinals (8th March 1606) it was decided to give orders to the consultors to draw up a bull for the condemnation of 42 propositions taken from the work. The said bull was actually prepared for publication, but on 28th Aug. 1607 Paul V. held a congregation of cardinals in which it was decided to postpone the condemnation. The result of the Congregatio de Auxiliis was then, a mere decree, without the light of faith and never attain to eternal salvation!

The endeavours of theologians to throw light on the problem have been noted in the work of Aquinas, whose summa of the Thomist doctrine of grace and free will has become a classical statement of the subject. In his work, Aquinas makes the point that God's foreknowledge is not the same as knowledge of the future, but rather a knowledge of the possibility of the future. This distinction is crucial for understanding the nature of human freedom and divine providence.

In this matter an important point to be noted is the declaration of Paul V. that both Molinism and Thomism agree in substance with Catholic truth, but differ only as regards the mode of explaining the efficacy of grace, both of which opinions may be held. Innocent XII., in a reply to the University of Louvain (7th Feb. 1694), and Benedict XIII., in a brief (Dominus precator, 6th Nov. 1724), vindicated the Thomist doctrine of the efficacy of grace in effect, intrinseca and the gratuity of predestination. Lastly, however, the words uttered by Benedict XIII. should be understood to minimize the doctrines of Molinism, Clement XIV. said (2nd Oct. 1773).

Since the encyclical Eterni Patris of Leo XIII. (4th Aug. 1879), Roman Catholic schools of theology have done their utmost to claim as their own not only the doctrine, but the very name of St. Thomas Aquinas. In the preacher of the Franciscan order, Molinists have endeavoured to drag St. Thomas to their side, and even to impose on St. Thomas the theory of scientia media, which, before Molina, was not even known ("etiam per annum quidem", as C. Tiplans, himself a Jesuit, declared). The first crossing of swords took place between P. B. Beaudoin and C. Mazzella. Not long after, G. Schneemann published a work in 1811, in refutation of which the[P. A. M. Steijnemuth published a work at Paris in 1886, which is a complete demonstration of the mind of St. Thomas. In 1853 V. Frins essayed a reply, and in refutation of this Steijnemuth published another work in

1 De ordine divinum priori et posteriori, 54.
II. ESSENCE OF MOLINISM. - I. Natural order.

(1) God's foreknowledge and free will. - The knowledge of God, considered in itself, is one and indivisible. It is a relationship to objects which are the term of His knowledge, it is divided according to the diversity of objects into speculative and practical, into necessary and free, etc. The division which concerns us now is that into the 'knowledge of objects' (scientia simplicis intellectus) and the knowledge of simple understanding (scientia simplicis intellectus). The former has reference to things which have existed, exist, or will exist; the latter has reference to the purely possible, i.e., to objects which have not existed, do not, and will not exist (cf. Summa Theol. i. qu. 14, art. 9).

Now, if this division is adequate, God must know a future free act by the 'knowledge of vision.' But, according to St. Thomas (t. qu. 14, art. 8, and art. 9 ad tertium), this knowledge necessarily implies an act of God's will or a divine decree. Hence a future free act is known by God of virtue of the divine decree, and no future free act can exist unless God decrees its existence. This is the doctrine of the Thomists.

For Molina this is subversive of the freedom of the human will. Hence, he says, a means must be provided whereby the will is free before, and independently of, the divine decree. Now there is a third kind of object. Continues Molina, which neither is purely possible nor yet belongs to the category of those objects which, in some difference of time, have actual existence. There is the event which would exist if certain conditions were realized, which, however, will not be realized. Under this head are to be classed all those free acts which, though never destined actually to exist, would exist if certain conditions were fulfilled. These are called conditioned future events (futura conditionata, or futurabilis); and God knows these by the scientia media, a knowledge which is midway, as it were, between that of vision and that of simple understanding. Although a future conditioned event is that which will never come to existence, because the condition on which it depends will never be fulfilled, the scientia media, as such, abstracts from the realization or non-realization of such a condition; hence, by the scientia media, God explores and knows, with infallible certainty, what the will will be, if the condition is true, but the will is free. Hence, it can be certain of its innate liberty (conscient or dextra; i.e., its行动 or free will); and it can determine to act in such a way that the event will be caused.

(2) God's causality and free will. - God is the First Cause; therefore no being or mode of being can escape His causality. Thomists teach that in virtue of the divine decree the human will is physically, i.e., efficiently, predetermined by God to produce a free act. This divine influx precedes the action of the will by a priority of nature and causality, and applies the will to the act (i.e., makes the will pass from the state of not acting to the state of acting), thus rendering the will in acto primo capable of freely determining itself in acto secundo. The free will infallibly conceives the event to which it is promulgate, i.e., the promotion is efficacious; yet the power to dissent remains with the will, for the promotion, divinely efficacious, effects that, although the will resists, not; and the will, if it desires to dissent, it infallibly consents and does not dissent. According to pure Molinism, the divine influx does not precede the action of the free will, but simultaneously co-operates with it, helping, as a partial cause, to produce the same action and the same effect. This divine action, called 'simultaneous concourse,' is, therefore, not received into the will, but is rather alongside of it, and is received immediately into the action and effect of the will. In order to safeguard the universal causality of God, it is said that, although God and the free will are partial causes of the free act, nevertheless the effect is wholly produced by God as the First Cause, and wholly by the will as the secondary cause. The simultaneous concourse is not efficacious, but is, of its very nature, indifferent, and is modified or determined by the free will, and hence can be used for volition or non-volition, for this act or that act, indiscriminately, according to the determination of the free will. Other Molinists reject this simultaneous concourse, and admit a kind of promotion, i.e., a physical influx received into the faculty of the will of the free will; by this influx the will is moved and determined to general or universal good,
but of itself the influx is indifferent and inefficacious: for the same good without any further influx from God, the will determines itself to act, not to act, to do this, or to do that. Thomists are accused of making God the cause of the sin by the physical preposition which is effec- tive: from God. Molinists also. Physical premonition effects, it is true, that the will cannot but infallibly do that to which it is premoned, but no Thomist allows that God acts on the will in order to premoned. The simultaneous concourse of the Molinists is a co-operation of God with the will, not indeed to produce the sinful action as sinful, but to produce the physical reality of the action. It is a lesser evil to co-operate than to make another commit a sin; Molinists have chosen a lesser evil, but have not solved the difficulty.

Against the two theories of Molinism with regard to the divine influx Thomists object that neither safeguards the universal causality of God. The self-determination of the will is not nothing; it is a reality, which, therefore, cannot escape God’s omniscience. To argue as does a recent Molinist (Lakoussas, Them. Nat., 1880, cap. 9, art. 3, no. 592), that there seems no reason why this quality (i.e. the determination of the will whereby it makes itself pass from the state of nature to the will of willing) cannot be sometimes produced by a created being is not only to beg the question, but manifestly to deny, in very words, God’s universal causality.

2. Supernatural order. (1) Grace and free will. Against Pelagians both Thomists and Molinists defend the necessity of grace for the production of a salutary act. Against Semi-Pelagianism both defend the necessity for the very beginnings of faith, and for the desire to do a salutary work. Both teach the absolute necessity of actual grace, even for the very beginnings (prima gratia vocans) of justification. Against Calvin, Luther, and Jansen both teach that sufficient grace is given to all without exception, and that, under the influence of efficacious grace, the freedom of the will remains intact. The first point of difference between Thomism and Molinism concerns the nature and sufficient and efficacious grace, which both agree to be a division of actual grace. For the Thomist efficacious grace is essentially, i.e. intrinsically (ab intrinsecus), different from sufficient grace. Sufficient grace gives the proximate power of producing a salutary act; but in order to produce that act de facto, an efficacious grace (which is a physical premonition in the supernatural order) is necessary. Hence sufficient grace in Thomism gives the posse, efficacious grace the agere (see Thomism). For the Molinist the same grace is sufficient or efficacious; it remains sufficient if the will resists; it becomes efficacious if the will consents. Grace, therefore, is efficacious, not intrinsically or of its very nature, but extrinsically, by the consent of the will (gratia extra personam), to the actio of the will, and is received into it, thus elevating and making the will the principle in actus primo of the salutary act (this saving act is called free from Semi-Pelagianism). Preventive grace is a physical reality produced by God in the soul moving it (owing to which it is called gratia excitans) morally (not physically, i.e. efficaciously) to consent; it co-operates (owing to which it is called gratia co-operans) with the will to elicit a salutary act; but the consent does not follow infallibly, because of the necessity of the very nature, or intrinsically, efficacious (cf. Molina, Concordia, qu. 14, art. 13, disp. 41). According to this doctrine, one and the same grace can be merely sufficient for one individual and efficacious for another; it is to be solved by Molinists also. Physical premonition effects, it is true, that the will cannot but infallibly do that to which it is premoned, but no Thomist allows that God acts on the will in order to premoned. The simultaneous concourse of the Molinists is a co-operation of God with the will, not indeed to produce the sinful action as sinful, but to produce the physical reality of the action. It is a lesser evil to co-operate than to make another commit a sin; Molinists have chosen a lesser evil, but have not solved the difficulty.

Bellarmine, Suarez, Vasques, etc., modified this doctrine, and held what is called Congratinism. In this form of Molinism sufficient grace is not indeed intrinsically different from efficacious grace, but differs only as regards the manner in which it affects the will. Leuvin is also accommodated to man’s temperament and to the circumstances of time and place that the will infallibly, but freely, consents; sufficient grace (gratia congrutoria) is that which is so accommodated to man’s character and to the circumstances of time and place, and the will de facto resists. If, therefore, God wishes Peter to consent to grace, He decrees to give him consent to grace, i.e. a grace perfectly adapted to Peter’s character—to put him in the most fitting circumstances, etc.

(2) Predestination. Against the two theories of grace there are two theories of predestination: predestination due to foreseen merits (post previus merita) and gratuitous predestination (ante previus merita).

(a) Predestination due to foreseen merits.—God truly and sincerely wishes all to be saved (the salvific will of God); to all he gives sufficient grace. Foreseeing, by the scientia media, who will consent to grace and persevere in it, God predestines them to glory. In this way predestination to glory presupposes the good use of grace and is therefore not gratuitous (Lessius, Vasques, Becanus, Franzelin, H. Tourmel, etc.). As is evident, this theory contains all the insoluble difficulties of the scientia to which the man has he receives from God, according to St. Paul (Rom 11:36). Who hath first given him, and it shall be recompensed unto him again? For of him, and through him, and unto him, are all things;” cf. 1 Co 4:4 (What hast thou that thou didst not receive? but if thou didst receive it, why dost thou glory, as if thou hadst not received it?). Now Pelagians, Semi-Pelagians, and Molinists deny the gratuitity of predestination, for no other reason than because they presuppose something on man’s part which is the reason why God predestines some to glory and not others. The Pelagians presume works, the Semi-Pelagians the beginning of good works, and Molinists the good use of grace. But, if all these things are from God, He cannot look for or await them in order to predestine some and not others; on the contrary, He gives even the good use of grace to some because he pre-elect them to grace in accordance, then, with the teaching of St. Paul, with the doctrine of St. Augustine and St. Thomas, Thomists, and so produced of high repute, teach the absolute gratuitity of predestination, i.e. irrespective of foreseen merits.

(b) Gratuitous predestination.—God wishes all to be saved; to all He gives sufficient grace. By a
MOMENTARY GODS

very fact that God gratuitionally elects some and not others, those not chosen will infallibly not be saved; hence a reprobation of some sort is consistent with the predestination of some to glory; this is called 'negative reprobation.' The theory of negative reprobation is to conciliate negative reprobation with the universal salvation; will of God. Suarez and his followers say it is a 'positive act of nolition to elect;' some Thomists (as J. B. Gonet, V. Con- tenson, etc.) that it is a 'direct effect from the glory'; others (as A. Goudin, C. R. Billuart, etc.) that it is the 'omission of an effectual election' to heaven. It is, however, very difficult to safeguard the salvific will of God, if negative reprobation be a positive act on God's part. Why not say, therefore, that it is the entire absence of any act of the divine will, whether of volution or nolition? It is the mere absence of the act of assumption.

ALFRED WHITACRE.

MOMENTARY GODS.—'Momentary gods' (Ausprechungsgötter) is an expression coined by H. Usener (Götternamen, Rome, 1856, p. 970), and some whose credentials are open to question. It must certainly be admitted that the phenomena which Usener brings under the term are of very diverse kinds. It is true, of course, that human beings whose minds are dominated by fetishistic and animistic ideas may, under the influence of a momentary impression, ascribe to objects or occurrences a divine or demonic character; but the question is whether it is worth while to differentiate such a procedure from the general mass of fetishistic and animistic phenomena by the use of a special term. Thus we frequently meet with the practice of worshipping a tree or a stone, an animal, or an evil spirit (L. Deubner, ABW viii. (1905), Beltz, p. 71), such being often invoked to witness an oath (Esch. Sept. 629; school. Apol. Rhod. i. 57); but these facts in reality furnish reasons for doubting whether the weapon was the direct cause of the act rather than just that it was thought of as permanently possessed of divine qualities. Thus, while Vergil makes Mezentius say: 'dextra miri dens et teulum, nummis et mare et arida montibus, nummis et mare et arida montibus,' Tacitus inveigh by later epic authors (Silv. Ital. v. 118, vi. 137; Statius, Theb. iii. 615, ix. 548), such poetic fancies throw no light whatever upon primitive religious feeling. The lightning-flash striking down upon

5. \[\text{E. x. 772.} \]
the earth is regarded everywhere with a religious dread, and Greeks and Romans, alike, avoided all contact with the spot where it had struck, this being for the former a consecrated place (Δεσμή, Ἐρυθησίας), and for the latter a lātēud, which is expressed by the phrase Fulgur conditum. Thus the lightning-flash actually appears to be regarded as a divine being: some of the Dioscoi adopted the name Keranmos; in Seleucia Seleucus Nicator instituted a cult of the εὐπαίρης (Appian, de Rebus Scipion. 2). It is consecrated by numerous coins; and there is an Orphic hymn dedicated to this deity. Keranmos is often represented as subordinate to Zeus, who in this capacity is called Keranios, Katalabes, and Kappetas, just as Jupiter Fulgur is designated Fulgurator and Fulminator (Usener, Kleine Schriften, iv. Leipzig, 1913, p. 471). The natural phenomenon here involved is, of course, one of relatively rare occurrence, and the latter, the special gods are deities by leaving visible traces of its action, but the worship of lightning, in its essential features, cannot be separated from that of winds and meteoric storms. Quite as again, is presented by the worship of the last sheaf, or of the harvest-wreath (Gr. ἀγνοόν), and by other practices which have been explained by W. Mannhardt; the harvest-wreath, which was wound round with white and red ribbons, and presented to the Zeus. When the sheaf was left hanging at the door as an amulet for the house, it was unmistakably a fetish, i.e. a sacred object fashioned and consecrated by human beings (R. M. Meyer, Ant. Erit., 1908, 280); in the last sheaf, however, and things of similar formation, is concealed the corn-spirit which, according to animistic ideas, renewes the life of the corn, but, while it is only at harvest-time that the spirit becomes in a manner manifest to sight, it is in reality always present, and is therefore not a 'momentary god' in the proper sense. Usener likewise adds the conceptions of the ἄναξ and the genisa of the individual. It is very difficult to come to a definite conclusion regarding the ultimate origin of these conceptions; they have undoubtedly been influenced in part by the ideas of the soul, and, in the case of the ἄναξ, by the notion of possession (C. T. Teubner, De antiquorum demonismo, Giessen, 1909), while the snake-form of the genisa seems to point in quite a different direction (W. F. Otto, in Pauly-Wissowa, vili. 1155). In any case, the present writer can see no logical grounds for bringing ἄναξ and genisa under the category of 'momentary gods.'

While, however, the conception of 'momentary gods' is thus in part a rather indeterminate one, and in part of limited significance, the introduction of the term 'special gods' (Germ. Sondergotter) has proved to be of real advantage. This term, too, we owe to Usener, who framed it on the suggestion of E. Lehmann in connexion with Varro's di certi; like the _special gods_ of the Greeks, these gods are deities with a clearly defined sphere of action, and thus closely allied to the momentary gods. Usener has shown that in the development of religion—so far, at least, as Greece was concerned—they are anterior to the great deities, and, at all events, no doubt, be very widely generalized. Unmistakable examples are found in Greek heroes like Endos (G. Kühnel, Ephemerides Graeca, Berlin, 1873, no. 825), Myiagros (Paus. viii. xxxix. 7), Teisiphon (Hesych. s.v.), or Horaphy (AJP VIII. 1887, 296), who never had more than a local significance and a narrow sphere of action. Other beings of this type were absorbed by the great gods as, for instance, Janus and Zeus Erechtheus; thus Krouktrophos (also in plur., Ephemer. Arch., 1899, p. 143) was originally an independent deity who at length became a mere epithet of Zeus. Athena Hygeia, etc., are to be interpreted in the same way. We may even venture to say that the displacement of these special deities by the Olympians was one of the most important processes in the development of religion and mythological times. Among the Romans such special deities are found more especially in the Indigintamenta (q.v.), in which every particular operation—e.g., in agriculture, which is connected by the Flamines with the worship of a particular deity. Vervactor, Redactor, Imperior, Insitor, Obarator, Oroctor, Sarrtor, Subruncinator, Messor, Convector, Conditor, Promptor. It is said, indeed, that even the _Italinae_, _calvinae_, and _cabrarii_ had each their special deity (Tertull. ad. Nat. ii. 15). From this, however, we derive but scanty information as to the earlier state of things which had been disturbed by the incursion of the Greek religion; even in Varro's lists of these gods we already find many names of extraneous origin, and we are quite unable to say what degree of importance attached to the individual deities.

Very valuable data are furnished by the accounts of the Lithuanian special gods, as critically discussed by Usener (Gotternamen, p. 79; cf. Dehnss, ARW ix. [1906] 284; O. Schroder, ERE II. 31). Here we find Athelitha, the goddess of bees, Babilos, the honey-god, and Thamaita, the goddess who arises from sleep, Kauliulukuia and Krumeta, the swim-goats, Meletele, the goddess of the colour blue, Rangraturis, who causes the fermentation of beer, and Wepatis, the lord of the wind. Kindred figures are found among the Lapps.

As regards the existence of such special deities in other religions—with the exception, however, of the heathenism that was not wholly submerged by the Roman Catholic religion—we may hesitatingly take for granted, however, that, e.g., the pantheons of the Vedas and the Avesta correspond with that of Homer in presenting various types of deities, and that the place of the great gods who hold sway in these literary monuments was, among the people, i.e. in the living religion, taken by a multitude of less imposing beings, of whom, it is true, our knowledge is most imperfect. The Phoenician religion provides an instructive example; here it was not, strictly speaking, a single self-identical Baal to whom divine honours were paid; on the contrary, each separate city or town had its own special Baal, and worshipped him as a tribal or tutelary deity. The data which lie most readily to hand are found in countries where residual elements of heathen views still co-exist with or underlie the Roman Catholic religion in the practice of saint-worship, and have to some extent been confirmed by the Church. (D. H. Jerke, Die PestIDDEN, Ulm, 1900). Thus, e.g., among the Cumanites of Prussia, St. Agatha took care of the household fire and St. Nicholas was the guardian of the children, St. Apollonia cured toothache and St. Laurentius rheumatic pains, St. Crespin was the patron of shoemakers and St. Goar of potters. In the Vorogues St. Abdon is believed to drive away fleas, St. Catherine to secure husbands for maidens, St. Sabina to

MONARCHIANISM

MONARCHIANISM. — Monarchianism is a term generally used to designate the views of those heretics who sought to safeguard the Divine unity (monotheism), so refined away the distinction of the Divine Persons as to destroy the Trinity. Polyeuctus has left us a summary account of their origin. A certain Noetus, so he tells us, was the protagonist of these ideas: they were upheld by his disciple, Clement, and further propagated by the latter's disciple, Cleomenes. From Epiphanius we gather that Noetus must have died shortly before A.D. 250. But Hippolytus, who appears to have been martyred about A.D. 240, and who composed his Philoquemena between the years 220 and 235, says in his Trypaktos against Noetus, i.e. that he ‘died not very long since.’ And this seems more probable; for Cleomenes, the disciple of Noetus, wrote the Epigraphus, according to the Philoquemena, caused much trouble during the pontificates of Zephyrinus and Callistus, viz. 198–218.

Hippolytus endeavoured to show that Noetus's views were in reality only those of the philosopher Heraclitus the Obscure, who held that ‘the Father is an unbegotten creature who is creator.’

Noetus and his disciples held, says Hippolytus, these Heraclitian tenets, for they say that one and the same God is the Creator and Father of all things, and that when he pleased Him, He appeared. And again: ‘When the Father had not been born, He yet was justly styled Father and; when he pleased Him to undergo generation, having been begotten, He Himself became His own Son, not another.” In this manner, adds Hippolytus, “He thinks to establish the sovereignty of God, the Father and Son; as if, indeed, are one and the same substance, not one individual produced from a different one, but Himself from Himself; and that He is styled by name Father, because He was the Son of God.”

Hippolytus, as we have seen, says that Noetus set forth his views as a means of upholding the Divine sovereignty, but, as a fact, the term monarchia (monocracy) was ambiguous and could be used as the watchword of both parties. Thus Eusebius tells us that St. Irenæus wrote a work, de Monarchia, against those who held that God was the author of evil. Similarly Justin Martyr has left a treatise, de Monarchia, to prove that God is the sole governor against paganism; see also Athanasius, De Logia viii. But, as was only natural, the apologists previous to the Council of Nicea were faced with the grave difficulty that, while combating polytheism as such, they had to maintain the divinity of Christ without impairing the Divine unity.

it must be acknowledged that, in insisting upon the divinity of Christ, they often, through lack of precision in their choice of terms, laid themselves open to the charge of dithomes. Thus Hippolytus says that Callistus reproached the opponents of Neoplatonism with being dithomes, yet he himself felt compelled to point out that in opposing Sabellianism many ‘divide and cut to pieces and destroy that most sacred doctrine of the Church of God, the Divine monad unity, supposing it as it were three powers and partitive substances and did not the heads three.’ An example of this unintentional vagueness may be found in Justin, Dial. cxxix., and, what is even more remarkable, in those who most strenuously resisted the Neoplatonists, the Sabellians. Thus Novatian, while insisting on the divinity of Christ and urging the precision with which Christ Himself says ‘I and the Father are one’ (one, that is, in the nature, and consequently not in person, but in substance or nature), yet offers no explanation of how this can be. The retort was obvious: Then you hold that there are two Gods! Even Tertullian, in spite of his lawyer-like precision of speech, and his undoubted orthodoxy on this point—even in his Montanist days—has some most misleading expressions which the post-Nicene writers would have avoided at all costs. Yet these things are inevitable, and it is by such discussions, such verbal lapses from exactitude on either side, that the Church can come to a full knowledge of the deposit of truth.

A remarkable exception to this prevailing vagueness is furnished by Athenagoras, who, in his Epistola, says:

“The Son of God is the Logos of the Father, in idea and in operation; for, after the pattern of Adam, the Father and Son made all things, the Father and the Son being one. And, the Son being in the Father and the Father in the Son, in oneness and power of spirit, the understanding and wisdom of the Father is the Son of God. But if, in your surpassing intelligence, it occurs to you to inquire what is meant by the Son, I will state brevity that He is the first product of the Father, not as having been brought into existence (for from the beginning, God who is the eternal mind, who, had the Logos in Himself, being from eternity instinct with Logos (syn taxis); but insomuch as it refers to the idea and energizing power of all material things.”

Nor is it surprising that these so-called Monarchians should have had a strong following. God is One. For this monarchical form of prophecy had fought and prevailed. But, if God is One, then there may be diversity of actions ad extra.

1. Phil. ix. 2. Much capital has been made out of Hippolytus's violent attack on the orthodoxy, and, indeed, on the personal character, of Papias Zephyrinus. But Hippolytus himself says (Phil. i. 7) that Callistus excommunicated Sabellians, though he maintains that Callistus did so out of fear of himself, Hippolytus. Perhaps the best commentary on Hippolytus's diatribe is furnished by the absolute silence of all other writers of the period.

2. Quoted by Athanasius, Epistle in Defense of the Nicean Definition, 26 (PG xvi. 480); J. H. Newman, Athanasius, Oxford Library of the Fathers, 184–441, 1. 45; also Ant. Nicene Fathers, xvi. (1896); Tertullian, iii. 396–397, a fragment of an epistle or treatise of Dionysius, Bishop of Rome, against the Sabellians; cf. also Dionsius of Alexandria, adv. Sabellianos, given in Eusebius, Prep. Evang. viii. (19 PG xii. 1770); Marsili, Convicta, i. col. 1011.

4. Thus in ad Fraz. iii. (PL xiii. 180) he speaks of the angels as being ‘members of the Father's own substance,' and in iv. (PL xii. 129) of the monarcho as ‘committed' by the Father to the Son.

5. Cf. St. Augustine's remark apropos of the re-baptism controversy: 'Omnes enim potissimum in re baptismali haude involutis ad pluram concili conciliuentes illustratum confirmationemque persequentes, nisi primo divinae catharisee rerum regiones multa sine atque haud disputandis rationalibus episcoporum pertinentia constarent. Hoc autem factum multa aea, ut, cum diversis aliquis obseruaverit, in controversiis interdicto improviso iudicium datur, diversis perfirmatur in fraude disruptionum suentia, donis et juramento, liquide dictatius, vico et titulorum, peremptoria unaniimis, in parte praecipue fames, et insanabilis error' (de Baptemate et Donatistarum, ii. (5) (PL xiii. 182); the whole passage is worth reading.

there can be no such diversity of action ad intra as shall imply distinction of Persons. But Christ is in the Father and Christ suffered upon the Cross. Therefore the Father suffered! The doctrine of a distinction seemed so compelling; but the Noetians and Sabellians shrank from it and endeavoured to explain that this suffering of the Father was in some sense not really His. This explanation was, however, long abhorred. They seemed to be the advocates of orthodoxy against the orthodoxy themselves. It was in vain that the latter rejoined: Then, according to your argument, it is the Father who is dead! For, while the NT as a whole clearly speaks of the Father as the one God and the Son and the distinction of Persons; yet there were certain texts which, while maintaining the former, seemed expressly to deny the latter. Thus Praxeas insisted on 'I and the Father are one' (Jn 10:30); this it was easy to explain in a monothetic sense, as Tertullian does. But it was not so easy to explain 'He that hath seen me hath seen the Father'; and I am in the Father, and the Father is in me' (Jn 14:9). Tertullian treats this passage at considerable length, but it can hardly be said that his answer precludes the reduct: Then there are two Gods.

It is only when we turn to such an analysis of these passages as is furnished by Athanasius (e.g., on Jn 14:9, in Orat. iii. 28) and Augustine (Tract. xix. 13, xxi. 4, xxiv. 14) that we realize the distinction between ante- and post-Nicene clearness of expression when they bring the questions ventilated by the Noetians and their successors. St. Photinus (c. a.D. 393) puts the dilemma clearly.

If we speak of one God in the singular, excluding the word 'Second Person,' we thereby approve that God whereby which the Father Himself suffered. If, on the other hand, we admitted number combined with division, then we join hands with the Arians who hold that God was made from God, and say that He fashioned a new substance out of nothing. We must, then, hold to the rule which confesses that the Father is in the Son and the Son in the Father, to the rule which while preserving the oneness of substance acknowledges an economy (hispasison) in the Divinity.

Both sides, then, claimed to be the sole upholders of a true conception of the Divine monarchy: 1

a. Marcellus and Photinus, says Athanasius, 'negative Christ's existence before ages, and His Godhead and unending Kingdom, upon the profession of supporting the divine monarchy.' 2 Tertullian states the case in his usual pithy manner:

We, says they, maintain the monarchy. Yes. But when the Latins take pains to pronounce monarchical, the Greeks refuse to understand economics ... for, extolling the monarchical power of the One, they confound for the identity of Father, Son, and Spirit. 3

And then he puts his finger on the real difficulty which the Noetians had to face:

Praxeas put to flight the Pancleides, and he crucified the Father! 4

Hence the apposite nickname for the so-called Monarchians—Patrarians, i.e. those who made the Father suffer 1 in the person of the Son. Methodius († c. 312, commenting on Rev 12:3), likens those who have gone astray with regard to one of the Three Persons in the Trinity to the third part of the stars that fell:

As when they say, like Sabellius, that the Almighty Person of the Father Himself suffered. 5

It is of interest to note how these heresies shaded off into one another. Thus Sabellius apparently denied that he was a Patrissian; but, in order to do so, he seems to have held that our Lord came into being only on His human birth. 6 The Arians, on the contrary, 'herbosed' thus agreeing, so it would seem, with the Patrissians. Again we note that, whereas Sabellius claimed to rank as a Monarchian, yet the Arian bishops, writing to Alexander, say:

We do not as did Sabellius who, dividing the One, speaks of a Son-Father. 7

Thus their ground of complaint against Sabellius was precisely that on which he plumed himself on not doing, viz., separating the Divine monarchia. Similarly Athanasius says:

Sabellius supposed the Son to have no real subsistence, and the Holy Spirit to be non-existent; he charged them opposite with dividing the Godhead. 8 And once more: Sabellius, dividing the divinity invented by Arius, fell into the error which destroys the Personal distinctions. 9

It must, however, be remembered that no one can at this date say what precisely were Sabellius's opinions, partly because of the inevitable fluctuations through which he passed, partly and chiefly, because history is apt to confuse him with his disciples, as in the passage last quoted from Athanasius.

How grievous were the rages worked by these Monarchian views can be seen by the frequent condemnations of them in the shape of Sabellianism. Thus Pope Damasus condemned them in the Council held at Rome in 380 (or 382). 10 We anathematize those also who follow the error of Sabellius in saying that the Father is the same as the Son. 11

Similarly, in the ecumenical Council of Constantinople (A.D. 381) the first canon is directed against various shades of Arianism, and finally against the Sabellians, Marcellians, Photinians, and Apollinarists. 12 By the time of the provincial Council of Braga (561) we see how these Monarchian principles have verged into Priscillianism and are tainted with Manicheism. 13 The same comprehensive condemnation was repeated in the Lateran Council of 649 (can. xviii.). 14 Lastly, Eugenius IV. found it necessary to remind the Jacobites, in his decree dated 4th Feb. 1441, that if they still professed that the whole Monarchy was the Son of God and that Sabellius for confusing the Persons and for thus altogether doing away with the real distinction between them: 15

The subsequent ramifications of the Monarchian tenets do not concern us here. Suffice it to say that they spread very widely, though in forms which varied considerably from those originally set forth. Thus Eusebius mentions that Beryllus, bishop of Bosra, 16 deserted the ecclesiastical standard, i.e. the Rule of Faith, and asserted that Christ did not pre-exist in a distinct form of His own, neither did He possess a divinity of His own, but only that of the Father dwelling in Him. 17 This is clearly a derived form of Monarchianism.

The most prominent, perhaps, among the later 18

Athanasius, Orat. iv. 5 (PG xxvi. 471); cf. Newman, Athanasian, i. 114,

17 Adv. Prax. iii. (PL ii. 158), and in lx. (363).

18 The latinity of the term monarchical is unusual. In the NT it generally means the name of God (see, e.g., i Cor 1. 26), or the divine council as represented in the Incarnation (Phil 2). And this it is used by the Greek Fathers of the mystery of the Incarnation (cf. J. G. Scharf, Th. ed. Amsterdam, 1725, &c.). But here Tertullian uses it of the relationship of the Three Persons, a name which Sabellius takes no notice.

19 (PL ii. 156). Of Praxeas himself very little is known. It is likely that he had something to do with the 20

20 (PL iii. 209, n. 2) Praxeas.

21 ( עיצוב, Phil 2. 43; in John: cf. xxviii. 6, 2, (Phil. xxxvi. 197, 198, 1985, 1999), and Origins Cond. in Ep. ad Titus (PG xiv. 1304).
MONASTICISM

Monarchians were the Priscillians. They are of the view that the strange influence which they had on the Latin text of the Gospels—e.g., indirectly on 1 Jn 5—To them are due the Monarchian Prologues which have attracted so much attention in later years.

For reasons under the heading Monarchianism the so-called Adoptionist heresies. But, while it is true that the Adoptionists may be regarded as the legitimate outcome of the Monarchians, yet they approach the question from quite a different standpoint. For Adoptionism is a Christological heresy, where Monarchianism, at least in its original form as Päpistissiam, concerns the Father rather than the Son. To embrace the two heresies under one heading is to obscure the issue. See art. ADOPTIONISM.

HUGH FORD.

MONASTICISM—1. ETYMOLOGY; DEFINITION. The word *monasticism* is derived from the Gr. word μοναχός, *alone*, *solitary*, from which also the family of words has been formed: μοναχιον, *monastery*; μοναχός, *monk*; μοναχία, *monastic life*; μοναχωτής, *solitary*; μοναχίτης, *solitary man*; μοναχόστης, *a monk*; μοναχεία, *monasticism*; μοναχεσία, *monastic*; μοναχεσικός, *monastic*. All these words, derived as they are from the same root, indicate the idea of solitude, of isolation. This solitude must not, however, be interpreted as implying a life separated from the world, such as that of the hermit in the desert. As we shall see, the term *monk* has come to be applied to men living the same life in common—a life in which they are indeed separated from the world, but not from one another.

In common usage the word *monasticism* is often incorrectly extended to embrace the idea of the religious state in general, comprising even those orders which cannot be regarded as belonging to this category—such, e.g., as the Dominicans and Franciscans, the Jesuits and other clerics regular. Strictly speaking, the term should be reserved for the form of religious life led by those who, having separated themselves entirely from the world, live in solitude—i.e., in fact, the etymology of the words *monk*, *monastery*, etc., clearly indicates. We shall see below (§ III.) in what precise sense the word *monk* properly so called consist, the special conditions of the monastic life, and its various types. The monks, in fact, form a class apart among whom are known as the *religious orders* or *frères*—e.g., Dominicans, Franciscans, and Carmelites—from the clerics regular, such as the Jesuits, and from other forms of the religious life and religious communities—such as the Redemptorists, Oratorians, Sulpicians, etc. (see art. RELIGIOUS ORDERS).

At the present day monks are represented in the Catholic Church by the monks known as Benedictines, Cistercians, Camaldolese, Olivetans, Carthusians, and other religious families of less importance. They must be distinguished from the ascetics who existed in the early ages of the Church, and who were simply Christians living a more austere life in the world. Nevertheless, after the monastic life properly so called had been instituted, many of these ascetics of both sexes entered the monasteries; hence we find the name *ascetic* applied sometimes to the monks as well, e.g., the *Peregrinatio Euthomii* (cf. art. ASCETICISM, vol. ii. p. 631). The regular and military orders should also be distinguished from the monks, although they were in many points of contact between them. We are, however, concerned here only with the monks.

I. Worship of Sarapis. In recent years it has become the fashion to see in the *sérees*, pagan deities which reigned in the temples of Sarapis and their dependences—the authentic ancestors of the Christian monks. Weingarten, to whom this theory owes its origin, has even maintained that St. Pachomius, the founder of Christian monasticism, not only drew a large part of his Rule from the usage of these *sérees*, but had himself been a *séree* of Sarapis, before his conversion to Christianity, at the Sarapeum of Chenoboscan. This theory, however, rests on a series of unverified hypotheses. Pachomius was never a *séree*. All that can be gathered from the most ancient life of this saint is that he withdrew to an abandoned temple of Sarapis, and that, while there, he had a vision of God—not, however, of the pagan divinity, but of the God of the Christians. So Pachomius as the analogies that have been drawn between these two religions and the cuneiforms of Christianity are only apparent.

II. Neo-Platonism. The Alexandrian school of philosophy in the 2nd and 3rd centuries taught a kind of mysticism, more philosophical than religious, in which moral ideas and ascetic practices occupied an important place. The attempt has been made to find in this mystic philosophy the source of Christian asceticism. The latter, however, was in existence before this date, and under a very different form. Moreover, it seems difficult to avoid the conclusion that the Alexandrian philoso-
MONASTICISM

that certain practices of Buddhist monasticism owe their inspiration to Christian influence.  

5. Monasticism among Jews and Muhammadans.—(a) Essenes.—The Essenes (q.e.) may be regarded as one of the most striking examples of the monastic life outside of Christianity. Whether they looked on as a sect, as a tribe, or as a religious community, the Essenes (150 B.C.) offered all the principal characteristics of the monastic life—community of goods, practices of poverty and mortification, prayer, and work, meals and religious exercises in common, silence, celibacy, etc. Although there is no direct relationship between them, it is nevertheless true that both Essenean and Christian asceticism derived much of their practice from the same sources, viz. the Jewish religion.

(b) Therapeutae.—The Therapeutae (q.e.), whose very existence has been disputed, are described by Philo (De Vita Contemplativa) as cenobites, leading a life almost identical with that of the Christian cenobites. This description bears so striking a resemblance to the life led by Christian monks that more than one writer has been led to deny its authenticity as a work of Philo and to uphold the opinion that it is a Christian compilation undertaken with the view of providing a venerable ancestry for the Christian cenobites. Renunciation of the world, prayer, life in common, monasteries, vigils, chants carried out by alternate choirs, the practice of fasting and other mortification, such are the chief characteristics of the life of the Therapeutae. Nevertheless, they do not seem to have exercised any direct influence on Christian monasticism.

(c) Nazirites.—The Nazirites (q.e.) were men who lived an austere life, abstained from wine and all fermented liquors, never cut their hair, avoided scrupulously all legal impurities, and took a vow to consecrate their lives to God. They had certain practices in common with the monks, although their ideal was not the same. Regarding such resemblances we may point out that, as in the case of the Essenes, since Christianity itself had its ancestor in Judaism, it is not astonishing that there should be certain resemblances between their respective institutions on many points.

(d) Rechabites.—Some (cf. T. K. Cheyne, Ebr. iv. [1909] 4019) regard the Rechabites as forming "a sort of religious order, analogous to the Nazirites," and St. Jerome has himself called them the precursors of the monks (Ep. lixii., "ad Paulinum"). But such analogies should not be pressed too far. The Rechabites were distinguished by certain special observances, such as abstinence from wine, the prohibition against building houses, and the obligation to live in tents, but it is difficult to see in them anything more than a tribe of Bedawin, such as still exist in these days, and observe the customs of their ancestors with such zeal.

(e) Muhammadans.—Muhammadanism has given birth to several "religious orders," the chief of which are the Qadiri, the Manalvi, the Baktashi, the Rifa'i, etc. The monks are called Dervishes ("poor"); they live together, 20, 30, or 40 at a time.
in a monastery under a head (shaiikh). The Der-
ich, or abbot, in a large or complex mona-
 This practice of obedience con-
 sisted in following the footsteps of Jesus Christ, recog-
 nizing Him as their Master, and in submis-
 sion to those He commanded. The practice 
 of obedience was defined in the form of consecration 
 to the monastic life itself. The result of 
 the day was the result of the practice of the very life itself. The moment 
 that many monks united to live together, they 
 were called to apostles of their own faith, and 
 to obey the word of their Master. This was a 
 head, This, again, was but to obey Christ, by 
 showing obedience to the Rule or to him who was 
 its guardian. Shenouda I of Atriopon obliged his 
 monks to make a profession of obedience to 
 the head of the monastery. This profession was 
 a written and signed agreement, and was preserved 
 in the archives of the monastery. In 
 the greater number of monasteries, the same custom was 
 observed in the early days, and it 
 was regarded by the monks as one of the most 
 efficacious means of all exercises of mortification. 
 The history of the early monasteries tells of 
 a number of fasters who passed two, three, and even five 
 days without touching food. The custom of taking 
 food on a daily basis continued from Monday to 
 Saturday which was observed by those known as 
 "Hebdomadari." There is, in fact, no 
 monastic Rule in which restraint in matters of 
 food and drink is not arranged for.

2. Mortification (fasting, etc.)—Along with 
 these virtues we find others which in reality flow 
 from them or complete them, and which were 
 always practised by the monks and prescribed 
 by the different Rules. Mortification is essential to 
 the practice of asceticism; it takes the form of 
 the renunciation of the pleasures of sense (chastity, 
 celibacy, fasting, etc.); work, silence, prayer even, 
 may all be considered forms of mortification. As in 
 all schools of ascetical (Neo-Platonic, etc.), fasting is considered 
 one of the essential features of the 
 exercise of the ascetic "athlete." Jesus taught 
 it to His disciples and practised it Himself; and 
 it was regarded by the monks as one of the most 
 efficacious means of all exercises of mortification. 
 The history of the early monasteries tells of intrepid 
 fasters who passed two, three, and even five 
 days without touching food. The custom of taking 
 food only once during the week from Monday to 
 Saturday which was observed by those known as 
 "Hebdomadari" was common. There is, in fact, no 
 monastic Rule in which restraint in matters of 
 food and drink is not arranged for.

It is chiefly in the monasteries of the East 
 (Syria, Palestine, Asia Minor) that one comes 
 across extraordinary forms of mortification; though 
 these must be regarded as exceptional cases, they 
 cannot be passed over in silence. They were 
 first of all, the Styliotes and the Dendrites, who 
 condemned themselves to perpetual immobility, 
 the former on their columns, the latter on the 
 branch of a tree. Then there were the "desires" or 
 "Browsers," mentioned by Sozomen. These were 
 solitary monks, and were so called because 
 they lived on grass like a lion. Others, 
 again, climbed themselves to a rock, or bore on 
 their shoulders a species of canteen, or yoke. 
 Sozomen also speaks of a Syrian monk who ab-
 stained from eating bread during eighty years. All 
 these are exceptional cases, and are even 
 regarded by some as mere eccentricities of

1. H. Dümmler, "Materiaris monasterii," in the 
 mission archéologique française au Caire, t. 1, 1859, 234-236.
3. Work.—Certain fantasies, such as the Messaliens or Enchites (q.v.), maintained that the life of a monk should be entirely given up to prayer. They condemned all work or other forms of activity. This tendency was early proscribed by the Church; all monastic founders or legislators realized the danger of such exaggerations; and one and all signalled the vice of idleness as the one sin most conducive to the destruction of the monastic life. St. Augustine, in his treatise de Laboro Monachorum, condemns this error, and shows the real necessity of work for those who follow the monastic vocation. Already in the East, during the 4th cent., it was an established principle that the monk should live by the labour of his hands. The work of the monk was of two kinds: (a) manual, and (b) intellectual.

(a) Manual.—The manual labour of the early monks consisted chiefly in the weaving of mats or the cultivation of the soil. These occupations had as their principal motive not so much interest or gain as necessity. In addition to all the mortifications already forming part of their existence, and especially the avoidance of idleness. The proceeds of their work were usually handed over by the monks to the poor, or to the prisoners, or else they served to maintain the monastery. (Cassien, de Mammis, xii. 9.)

In the case of the monks of the West this manual work was carried out in so orderly and methodical a manner that it resulted in the clearing of a large part of the waste-land of Europe.1

The various arts and crafts had also their place in monastic activity, but in the West rather than in the East. A monastery came, in course of time, to form a little city in itself. Founded, as most monasteries then were, far from the towns and centres of worldly activity, they were obliged to provide for themselves, and, besides cultivating the soil, they had to give themselves to the exercise of the various trades necessary for their wants,—e.g., baking, carpentry, weaving, etc. In addition to the arts of drawing and miniature painting, architecture, sculpture, and the fine arts were cultivated with great success.

(b) Intellectual.—The intellectual work of the monks consisted chiefly in the lectio divina, i.e., the reading and study of the sacred Scripture and other holy writings. In the West this was part of the monastic curriculum and underwent a great development. More and more time was given to intellectual work. The copying of ancient MSS in the scriptorium became one of the principal occupations of the monk, and it is to this fact that we owe the preservation of the greater part of the works of classical antiquity. The arts of calligraphy, drawing, painting, and the illumination of MSS soon followed as a natural consequence, and some monasteries had attached to them studies, from which came forth works of art that are now among the most precious possessions of the libraries of Christendom.2

(c) External work; the sacred ministry.—The monks, in the East, retired from the world into solitude, there to lead lives of prayer and contemplation apart from all intercourse with it. They took part in the external ministry of the Church only on rare occasions and by force of special circumstances. A number of monasteries, however, received "oblasts," i.e., children consecrated from an early age by their parents to the monastic state. These it was necessary to instruct; hence schools were established in the monasteries, some of which became famous and were attended by secular students as well.3

In the West the monks were led in time to take up in certain countries,—e.g., England and Germany,—the work of evangelizing the people. They thus became missionaries and thus in a large part in bringing about the conversion of Europe.4

4. Prayer.—But it was always clearly understood that neither work nor any other occupation should absorb the whole of the monk's activity. A considerable part of his time was always devoted to prayer. In substance this prayer consisted in meditation on, or recitation of, the Psalter, which was distributed according to the days of the week or the hours of each day. It was organized more methodically when regular monasteries began to be established in greater numbers; and from it has evolved the divine office as we now have it, with its different 'Hours' for the night and the day—Matins, Lauds, Prime, Tierce, Sext, None, Vespers, and Compline.5

5. Silence.—Silence, recommended by philosophers as a necessary condition for meditation or intellectual research, was rigorously enforced in the monastic life. In the case of the hermits, living in complete isolation, silence was practically absolute, and rare were the occasions on which they could indulge in conversation. They did, however, occasionally visit one another, and sometimes returned to their monasteries for a certain length of time. For the cenobites talking was naturally of more frequent occurrence, but severe restraints were establishing on this point in the greater number of monasteries.

6. Solitude.—Solitude, as in the case of silence, was interpreted in a more or less wide sense. For the anchorites, hermits, and stylites, living in their caves, in their tombs, or on their pillars, solitude was absolute and complete. For the cenobites it consisted rather in their separation from the world, in the practice of silence, and in certain restraints. It is this need of solitude that may be said to have given to monastic architecture its principal characteristics and the disposition of its various parts. The monastery was enclosed by walls; one gate was added to it. Communication with the outside world was subject to strict control, and, to render the necessity less frequent, the monastery, like a little city, was to be self-contained. There were exercised all the different trades and crafts demanded by the needs of the community.

7. Stability.—Stability, i.e., the engagement undertaken by a monk to remain all his life in the same monastery, was only an accidental condition of the monastic state, and was not established everywhere. In certain regions a monk could, without any breach of his vows, pass from one monastery to another. The abuse of this custom, as seen in the wandering monks, or 'Gyrovagi,' (see below, iii. 6), and other considerations as well, led to the establishment of stability as a law of the monastic state, which little by little became general. St. Cassian of Carte, among others, imposes it in his Rule, and St. Benedict.6

5 The Divine Office, London, 1892.
The hermits and anchorites lived separate and alone in the desert; hence they were their own masters. It often happened, however, that the hermits received requests from others, or were requested to relinquish their independence, would submit himself to the direction of another, whom he regarded as his spiritual father. Sometimes colonies of hermits were formed under the patronage of a head, to whom the others rendered obedience. Again, we find hermits living near a monastery of cenobites, to which they were obliged to return at certain times, generally on Saturday and Sunday and on feast-days. Yet, according to the monastic hierarchy and the organization of authority among the cenobites, great variation is to be observed in primitive ages. It was generally, however, fairly simple in character. At the head of the monastery was a superior, at once spiritual father and temporal administrator, who was known by the various titles of archimandrite (αρχιμανδρίτης), hegumenos (ἡγομένος), or, more commonly, abbot (αβατής and ἀβατός), or provost, or prōvostos, etc. This superior governed the community, sometimes with the help of an assistant and other officials who fulfilled various charges, such as cellarer, provost, or envoy. Sometimes, also, a council composed of the older members of the community (seniores) was convened. The office of the seniores, who were nominated by the superior himself, expired at the end of the year. The government of these monastic societies was a monastery rather than an oligarchy; often it was an absolute monarchy. The cellarer (κελαριάτης, whence κελαριατικός, ‘cellarer’), the official who had charge of the income of the monastery, had, as a rule, very wide powers over the community. Sometimes the abbot, as already mentioned, was assisted in his office by an official who ranked second after himself in the monastery; sometimes there was a third as well (prior and subprior).

The monasteries thus constituted usually enjoyed complete autonomy. There was nothing resembling the modern order or congregation, in which the different religious houses are united under a superior-in-chief or ‘general,’ and depend upon one house, which is the mother-house of the whole congregation. In the West it was not till the time of St. Bernard that the idea of grouping monasteries together under a central authority was actually realized. For example, St. Basil in his Rule, which was the law everywhere in the East, contents himself with giving a few general principles as to the choice of the superior and the exercise of authority. In certain monastic colonies, too, the organization was very rudimentary in character. St. Anthony and St. Hilary, e.g., were the spiritual and temporal heads of the communities founded by them, and unity and order were maintained by visiting the various houses subject to them (Vita S. Hilarii, ch. iii.).

VOL. VII—50

BLAKESLEY notes the interest and affairs of the various communities were discussed and settled. Pachomius himself nominated the superiors of the different houses, and a ‘procurator-general’ for the whole congregation. Tabennes, the head-house of this congregation, was also a military organization. The monks were divided into two companies, often under an official called the dean; ten companies formed a further head, at the head of which was another official. At an early period the Rules, or constitutions, of the various monasteries, from this time, were written down. A great number of these exist, some of which can be safely attributed to the ancient masters of the monastic life. We shall speak only of the principal ones.

The Rule of St. Pachomius cannot be regarded as the work of St. Anthony himself, but it is extremely ancient.

3 One collection of maxims on the monastic life was brought together in Egypt, in the course of the 6th century, but there is nothing against the belief that many of them are authentic and of much earlier date than the collection itself. The same may be said of the authenticity and age of the Regula ad Manichaeos Maoritis (PG xxvii. 967-970), and the Regula ad Manichaeos Nazaraeos, Manichaeorum, Sarcanthoni et aliorum Manichaeorum (PG xlvii. 971-975).

The Rule of St. Basil (Opera sanct i,1, Regula fidei i.36) contains: (1) a section on the general nature of the monastic life, which is essentially practical and is probably the only rule existing. Even in the West its influence was considerable, as may be seen—e.g., the references made to it in the Rule of St. Benedict. A long letter written by St. Basil to St. Gregory of Nazianzus before the drawing-up of his Rule, may be regarded as an outline or rough draft of the latter.

The Rule of St. Basil, and to Schonbude, although not authentic in the same sense, is, nevertheless, substantially their work in spite of later additions and changes. The Rule of St. Benedict was originally in Coptic, was translated into Greek and Latin (Lacheco, p. 272). There are three texts of the Rule of Schonbude (cf. Monastikon des deutschen Ordens, p. 18. Monastikon des Ordens an Osten, iv. 4, 235, etc., and Lecerf, in DACO I, 3, 2111).

The Book of the Governors of Thomas of Marga, of the 6th century, describes the life led by the cenobites and other officials of the Nestorian monastery of Beth-Absa in Mesopotamia.

In the West, besides Cassinian, whose two works exercised the widest influence on monasticism in that part of the world, we must mention the Rule of St. Benedict, Regula S. Patris Benedicti, 3

4. P. A. Léandri, Die Quellen der ältesten Gesch. des zum Untersuchung, Literaturgeschichtliche, i. 1886, 1887.

5. E. A. W. Budge, The Book of the Governors of Thomas of Marga, of the 6th century, describes the life led by the cenobites and other officials of the Nestorian monastery of Beth-Absa in Mesopotamia.

7. On the Rule of St. Benedict, the authenticity of which is incontestable, and its various ed. see below, p. 799, note 3.
MONASTICISM

[p. 786

1. St. Columban, his Punic, and that of St. Columban, are
the only copying of the authentic character of which is really es-

cablished. At an early date collections were made of all these monastic

rules. The question of monastic costume is one with regard to the

different monastic Rules show a be-

wildering variety. It is also, from the arche-

ological point of view, one of the least clear. It

seems that there was originally no special dress for monks. The only rule on this point seems to have been that the monk in his character of ascetic should, like certain ancient philosophers, show in his costume the outward sign of the poverty and humility of his state of life and of his detachments from the things of this world. Even St. Benedict, at a time when monasticism

already had customs and traditions both numerous and of long-established date, does not seem to have placed any importance to the form, colour, or quality of the habit worn by his monks (Regula, ch. lv.). Nevertheless, at an early date certain garments worn by the monks, and borrowed in all probability from the peasant population among whom they lived, began to be regarded as traditional, and in time even had a mystic meaning attached to them, as in the case of the liturgical vestments. In spite of this the monastic habit must always be clearly distinguished from the latter category.

We may now enter into greater detail regarding the various garments worn by the ancient monks both in the East and in the West. Many of these garments are still in use among their successors.

The ancients did not know the use of furs. The tunic

wool was their only under-garment (pallium, scapula, colobium). The monks adopted the tunic. It had short sleeves or was sleeveless. The tunic was usually made of goatskin or camel's hair, which rendered it a suitable hair-shirt (Caesar, Inst. 1. 8

[PL. xiv. 74]). To a scapula, which is a tunic with shoulder girdle, it was added. The tunic was also occasionally worn by the monks.

The hood and the wappor are also characteristic of the monastic habit. The first (cumulus, cumulato) was originally merely a covering for the head. It was, in fact, the ordinary head-covering of peasants, and is found in both East and West. It protected the head against the heat of the sun, and could be thrown back at will on the shoulders. The hood came in time to be attached to a garment covering the shoulders and breast to protect them against the weather, and in time to be divided into various forms, as the cowl, the anorak, the burse, and other large sleeves. The cowl is the distinctive choir-habit of the monastic order (seculular) as well as to be peculiar to Benedictine monks, since there is no mention of it before the 13th century. It is evident from the text of his Rule, that it was not his own invention. By some it has been considered as analogous garment worn by Eastern monks; but it is more probably true that it was originally a kind of mantle or cloak with hood attached, such as was worn by peasants in the neighborhood of Monte Cassino. St. Benedict prescribed it as a working-dress (scapular proper). It was worn to protect the rest of the habit, and replaced the cowl. Its etymology indicates that it covered the shoulders.

The Eastern monks now used a rather long and wide hood, which was known as the "famuli" or "famuli". This hood was known as the "famuli" or "famuli".

2. Dendrites. The Dendrites (from δέντρα, "tree"

lived in trees.

3. Celibates (from καλός, "one who lives in common with others"). This was the general term for all monks living together in community. During the primitive period the comparative advantages and excellence of the solitary and cenobitic forms of monastic life formed the subject of frequent discussions. St. Basil stoutly maintains his preference for the cenobitic life over the eremitical life, and his preference is shared by St. Benedict. It is undeniable that in early days the eremitical life had its adherents; but in course of time it declined, even in the East, while, in the West, it cannot be said ever to have existed except as an exceptional state of things. At the 16th century, it almost completely disappeared.

4. Sarabantes and Gyrovagi, or Circumcelsion. Among the other monastic types, ancient authors draw attention to the Sarabantes and the Gyrovagi, who were regarded as an evil kind of monks. The first, mentioned by St. Jerome under their Syriac name of Remoboth (Ep. xxii. 34 [PL. xxii. 416]), lived together in twos and threes in a monastery, in order to live a life without

either rule or law, following no other rule than that of their own will or caprice. The Gyrovagi or Circumcelliones ('vagabonds') went from monastery to monastery, demanding a lodging for a few days, and scandalizing all true Christians by their excesses.1

7. Catenati.—As the name indicates, these monks loaded themselves with chains. They took no care of their bodies, allowed their hair and beards to grow, and untrained, went barefooted, and wore a black cloak (Leclercq, in DACL ii. 3218).

8. Apotrites (from απότροπως, to renounce) ; cf. Luke 17:14). These formed a class intermediary between the earlier ascetics and the monks properly so called. They are found in Jerusalem, in the East, and in Asia Minor. Some of them followed the example of the Gyrovagi, and spent their life wandering about, and some fell into the heresy of the Encratites.2

IV. HISTORY OF MONASTICISM.—I. ORIGIN OF THE MONASTIC LIFE; THE ASCETICS. — The ascetics of early Christianity may be regarded as the ancestors of the monks. The greatest number of the characteristics of which we have already spoken as belonging to the essence of the monastic life are found among the ascetics—purity of life, the practice of mortification, fasting, silence, prayer. They were, in fact, simply monks living in the world.

1 Asceticism and cenobitism are inseparable. Asceticism is an individual phenomenon, cenobitism is a social institution.3 It was but natural that, as Christians gradually became more worldly, the ascetics should retire from their midst and betake themselves to the desert; and here we have the origin of true monasticism. The ascetics were living, retired from the world in the desert.

This is not the place to enter upon a detailed history of these Christian ascetics (see art. Ascetism). But it may be remarked, in passing, that Christian asceticism, while recognizing among some of the apostles and just men of the Old Law (such as Isaiah, Jeremiah, and John the Baptist) its ancestors or forerunners, claims above all, as its source and foundation the doctrine of Jesus Christ, who taught renunciation under all its forms. Not to mention certain texts occurring in the writings of the Apostolic Fathers—in those, e.g., of Tertullian, Origen, and Clement of Alexandria, whose "true Christianity" offers many characteristics of asceticism—one may consult certain documents that will give assistance in arriving at a knowledge of this movement precursory of monasticism, especially the Epistles of pseudo-Clement. 'To Virginis' and the work of pseudo-Cyprian, de Singularitate Clericorum.4

II. MONASTICISM IN THE EAST.—I. SOURCES. — The question of the authenticity and truthfulness of the documents on which the history of the early years of Eastern monasticism is founded has given rise, in recent years, to lengthy and impassioned disputes.

1 There are different kinds of monks cf. Caesarian, Collationes, xvii. ch. i. (PL xxxii. 899 C.), and Institutiones, v. 39, with the notes by A. Gams (PL xxxii. 255); Roberta S. Benediti, l.; Repertorium Christian. bei Grünberg, vol. vi., pp. 485-490; St. Augustin, de Operum Monasticarum, 28 (PL xxxiii. 95).

4 Cf. Leclercq, in DACL ii. 3078-3090; Heimbucher, l. 167; M. A. Alonzo, Monasterios de los Padres en España, second part, p. 389; Alba, Ibid., p. 380; Leclercq, in DACL i. 3041; cf. Roeder, Asien und Mönchton.
Lower Egypt, and was the father of monasticism in Nitræ. His disciples lived in huts and met together in the monastic church on Saturdays and Sundays. There were 8 priests in the colony to carry out the liturgical duties. According to the Lousac History, there were 600 hermits in the desert of Nitræ. Idleness was carefully excluded, each monk being obliged to provide for himself by his own labour. In the evenings and Sundays, the monks were exonerated. The discipline of the life was very strict. Ammonius died before 336. His disciples continued his traditions in Nitræ. The theological works of Origen were studied there, and the "tall brothers," Ammonius, Dioscorus, Eusebius, and Euthymius, made such a disturbance in the theological world later on, belonged to this monastic family.

About six miles to the south of the mountain of Nitræ was the Desert of Scæta, where another colony of hermits was established. The brethren observed perpetual silence; as at Nitræ, they assembled in church for the offices only on Saturdays and Sundays. Their cells were either mere caverns in the rock or little huts made of branches. Macarius the Great († 383 or 387) was the first of these hermits. He has left behind him among the Apophthegmata a series of remarkable maxims and homilies that sheds much light upon the thought of the founders of Christian mysticism. Macarius the Younger, Evagrius Ponticus, and Mark the Hermits are also figures that stand out among these solitaries. The Desert of Scæta still preserves the ruins of their ancient monasteries, one of which, known as the monastery of St. Macarius, is inhabited by a few Coptic monks.

Besides Nitræ and Scæta, the whole of Egypt was strewn—a name that was to remain famous in the monastic history. Pachomius is the real founder of the cenobitic life. His disciples lived together under the same roof and were subject to the same discipline. Other monasteries were founded which followed the rules of the same monastic community. The profession of obedience which he imposed on his monks is the oldest document of this kind that we possess, and it marks a stage in the history of monastic Rules. Schenouani made the attempt to combine the eremitic with the cenobitic life, and he succeeded to a certain extent.

(b) Sinai.—From Egypt the monastic life soon spread as far as the Sinai peninsula, on which there were later several flourishing monasteries. St. Nilus the Sinaitic († c. 430) and St. John Climacus were regarded as the great doctors of the ascetic life. The Perveneratio Ethieria gives interesting details regarding the monasteries of Sinai (see below, ill., x, 3). (c) Palestine.—The monastic foundations of Palestine were no less illustrious. It will suffice to quote the names of Hilarión of Gaza, a disciple of St. Anthony of Egypt, and especially those of Melania the Elder at the Mount of Olivæ, Paulæ, and St. Jerome. In this region monasticism made considerable headway. The number of monasteries and lauras rose to 100, and the influence of these religious houses in the schools between paganism, Origenism, Eucharianism, Monothelitism, and iconoclasm was very important. It would be impossible to give here even a résumé of this history; we must be content to refer the reader to the authors cited above for the further details of the history of the Egyptian church. The only important church of the ancient Palestinian monasteries in Leicerc, DACL ii. 3115-3175. It was only with the Arab invasion of Palestine that the progress of these monasteries was arrested.

(d) Syria.—Syria became at an early period a hand of monasteries. It has even been questioned whether the monastic life there was not indigenous, i.e., whether it did not, as in Egypt, spring directly from the native Thebaïd, Lyconopolis, Kopres, Oxyrhynchus (where there were to be found, it is said, 10,000 monks and 50,000 nuns), and Arinœ, where there were also 10,000 monks (Hist. Lat. a, 18).

In Upper Egypt the name of Pachomius attracted special attention. He was instructed in the monastic life by a venerable hermit named Palamón, and established himself at Tabenna (Thebæum) in Upper Egypt, where he was famous in the monastic history. Pachomius is the real founder of the cenobitic life. His disciples lived together under the same roof and were subject to the same discipline. Other monasteries were founded which followed the rules of the same monastic community. The profession of obedience which he imposed on his monks is the oldest document of this kind that we possess, and it marks a stage in the history of monastic Rules. Schenouani made the attempt to combine the eremitic with the cenobitic life, and he succeeded to a certain extent.

1 With regard to Schenouani see Amélineau, Mémorials publiés par la mission archevêque au Caire, iv. (1865), l.; J. Lejolliet, Schenouani, Sainte-Croix et le daisse de l'Eglise-Cité égyptienne du Christendom (TU), Leipzig, 1903; Lasdun, Revue d'Histoire eccl. vii. (1917) 76-77; Revellot, "Les Origines du schisme égyptien; le prêtre et le prêtre,etc. in HHR viii. (1908) 491-507, 531-538; Amélineau, Vie de Schenouani, Paris, 1889; A. de Deiler, in DACL i, 269-270.

tions under the guidance of St. Basil, and perhaps visited Egypt also. He is one of the principal scholars of the Syrian Church, and his numerous works contain much information regarding the monastic life.  

There were colonies of hermits in Cilicia, round about Antioch, and in the Desert of Chalcis in the 4th century. The Desert of Chalcis was known as the Thebaid of Syria, and St. Jerome lived as a hermit from 373 to 380.  

In the 5th cent. the first of the Stylists, St. Simeon, makes his appearance in the north of Syria (Theod. Hist. Rel. 26 (P.G. 30:546). This strange form of monastic life survived as late as the 15th century.  

(c) Asia Minor. — In Asia Minor in the 3rd cent. Montanism (q.v.) had appeared—a movement in the direction of excessive ultra-ascesis. In Pamphylia in the 4th and 5th centuries the Euchite or Messalian monks allowed themselves to be carried away by the same excessive views, and appear also to have undergone Manichean influences. They were always resisted by the Church and were finally condemned, but revived during the Middle Ages in the sects of the Paulicians and Bogomils.  

Constantines of Sebastos, who introduced monasticism into Armenia, Papphagonia, and Pontus, was of Egyptian origin and a disciple of Arius. He exercised a wide influence on monasticism in that part of the world and spread his errors abroad. His disciples, the Eustathians, were condemned by the Church.  

The Council of Gangra in 341 gave valuable information concerning the history of the ascetics and monks and the excesses of some of whom it condemns.  

(7) Cyprus. — It was chiefly in Cappadocia and under the inspiration of St. Gregory of Nazianzus, St. Gregory of Nyssa, and St. Basil, the real legislator of the monks of the East, that monasticism started its true development. Basil had become acquainted with the monastic life in Syria and in Palestine. He declared himself distinctly in favour of the cenobitic type, and it was for cenobites that he wrote his Rule, or rather his Rules (see above, p. 782). The Rule of St. Basil has remained in use in the East to the present day. It does not enter into details, but lays down in general the virtues and duties of the monk. The monk is the perfect Christian; the ascetic life does not consist merely in carrying out certain practices, but in the sanctification of one's whole being and in the love of one's neighbour. One must raise up and perfect nature and not destroy it. Christian perfection, completeness, elevates, and purifies the wisdom of the ancients. In his monasteries the education of children was undertaken, and work was recommended and encouraged. The public prayer of the community was already organized, and we find the various Hours of Matins, Tierce, Sext, None, Vespers, and the Night Office (accordianum).  

(g) Cyprus. — According to St. Jerome, monasticism was brought to the island of Cyprus by Hilarius. St. Ephraimians, who had himself been a monk in Palestine, defended the monks with ardour.  

(8) Constantinople. — When Palestine and Egypt had ceased to be the chief centres of monastic life in the East, it was Constantinople, and, later, Mt. Athos, that succeeded to that position. The foundations attributed to Constantine or to the time of his immediate successors can, however, be admitted only with reserve. It was not till towards the end of the 6th cent. and especially during the course of the 9th cent. that monasticism began its development at Constantinople. In the reign of Justinian there were no fewer than 80 monasteries at Constantinople, and the emperor legislated for the monastic life as for all other institutions of the empire. The Acomates and the Studites receive a long study to themselves; they have already formed the subject of monographs, to which we can here only draw attention in passing. The names of St. Macarius and Theodore the Studite recall the long strife maintained by the monks on the question of the iconoclasm.  

(j) Mount Athos. — From the 9th, but especially during the 10th, cent. the peninsula of Mt. Athos, in the Aegean Sea, became a monastic centre of the highest importance, and formed a kind of monastic republic. Safe in their monasteries, built for the most part on steep cliffs, defended by the sea and by the thickness of their walls, the monks of this peninsula, which is connected with the mainland only by a narrow isthmus, were able to defy all attacks, and the cemeteries here, as in Palestine, have survived to the present day. The history of this monastic colony may be given in a few words. The origin of monasticism on Mt. Athos is obscure. The first testimony on which we can depend is found in the 9th cent., but it is probable that long before that there were hermits living among the rocks and in the forests of this peninsula, so well fitted for the solitary life. The year 963 is the date of the foundation of the first great monastery by St. Athanasius, one of the most celebrated of the Athos monks. From this date onwards foundations followed one another in rapid succession. The great monasteries of Ivron, Vatopedi, Xeropotamou, Esphigmenou, Dochiariou, Agios Paulos, etc., rose up in different parts of the holy mountain from the 10th to the 14th century. The latest in date is the monastery of Stavrinitika, founded in 1542. A number of smaller houses and simple hermitages depend upon these greater monasteries. The Rule followed is that of St. Basil. The monasteries form a kind of confederation or little republic, which is represented by 20 members, constituting a sort of tribunal under the direction of 4 presidents, one of whom has the title of psephos. In each monastery the psephos enjoys supreme authority. In the 14th cent. the hierarchic form of life (kathedria) was introduced, in accordance with which, in certain of the monasteries, the monks possess money of their own and enjoy a number of dispensations. Autonomously during a certain period, the governing council of Mt. Athos was finally subjected to the jurisdiction of the patriarch of Constantinople. Under the various governments and dynasties that succeeded one another in the East—the Cenomani, the Paleologi, even the Turks themselves, and the laocopoian spirit—the liberty of the monks of Mt. Athos was always respected. Painting, architecture, and calligraphy were cultivated with success, and their libraries contain MSS of the highest value.

banks of Lake Fusino, on the islands off the Mediterranean coast of Italy, Gorgona, Capnaja, Sardina, and the Sardinia coast. While in the 486 inscriptions of the catacombs, careful mention is made of all the various degrees of the ecclesiastical hierarchy—even down to that of fossor—no allusion has ever been found to ascetic, anchorite, cenobite, or monastic. The Rule of St. Benedict, Rome of monks or of consecrated virgins, and of monasteries at that period cannot, however, be denied. We leave on one side the legends of Boniface and Agilulf, which is not the more than a conjecture. What is certain is that the minister of Theodoric, on his property, Vivarium, gave the example of a monastery where the ascetic prince Constantine's daughter, Agnes, a community of virgins. It was in a Roman monastery also that St. Marcellina, sister of St. Ambrose, consecrated to God by the emperor's command, along with Fabiola, lived the ascetic life, and founded near the mouth of the Tiber a hospice which was served by monks. St. Athanasius arrived in Rome after 339, accompanied by two Egyptian monks. He remained there three years and inspired this community, so deeply Christian in spirit, with admiration of and sympathy with the monastic ideal of the Thebaid. He made the monks of his monastery in the Gbala society of Rome, and Marcella, daughter of the widow Albina, along with Melania the Elder, devoted herself to the life. A community of ascetics and cenobites lived on the Aventine, from which stand out names such as those of Sophronia, Asella, Paula, and Fabiola. The favour shown towards such institutions by Pope Damasus I, and, in particular, the arrival in Rome of St. Jerome, who became the spiritual father of the community on the Aventine, greatly accentuated the movement. The attempt made by Vigilantius to oppose it in favour of monasticism had no other result than that of starting a controversy with St. Jerome, from which Vigilantius came forth utterly crushed and humiliated (c. 390).

In the rest of Italy the progress of monasticism was scarcely less rapid than in Rome itself. In the middle of the 4th cent. Eusebius of Vercelli, till then exiled in Egypt, returned to his church (365) and obliged the clergy of his cathedral to submit to the monastic rule of life. His example was soon followed in Milan by St. Ambrose, and at Aquileia, while Cremona, under the bishop Vincent (407-422), Novara, under the bishop Gandintius (397-417), Bologna, Ravenna, under St. Apollinaris, Rimini, under the bishop Emmonius, and Turin, under the bishop Victor, all favoured the monastic movement.

8 Malnery, op. cit.

MONASTICISM

period, to cite the names of Vincent of Lérins and Salvianus.

Another important influence exercised over the development of monasticism in Gaul during this period was that of Cassian. His works were in reality the first monastic code in Gaul (see above, p. 787); and, it may be said, in the whole of the Western world. He founded the monastery of St. Victor at Marseilles, which became renowned, and other monasteries also.1

St. Genesius, bishop of Arles, must also be regarded as one of the principal monastic legislators of Gaul.2 We can only mention the monasteries founded by Leonian in the diocese of Vienne, by St. Theudaire in Isère, in the Isle Barbe, at Condat (St. Claude), and at St. Maurice of Agarum, and by SS. Romanus and Lupicinus in the Jura.3

(c) Britain, Ireland, the Celts.—The monastic life was established fairly early among the Celts and Anglo-Saxons, and underwent an evolution which is quite distinct from theirs. An introduction into Great Britain was due to St. Germanus, bishop of Auxerre, who came to the island in 430 to restore ecclesiastical discipline. In Wales Llantud, Llanearvon, Ty-Gwen, and Bangor soon became renowned. Some of the monks from these monasteries—St. Gildas, St. Lunain, St. Paul Anreilan, and St. Sansan—established the monastic life in Brittany (Armorica), where it also made great advance.4 Monasticism in Ireland has much in common with that of Brittany, to which it seems, in fact, to owe its origin. The name of St. Columba and that of his foundation at Iona stand out conspicuously in its history. Although we must not forget to mention among the Celtic monks, although his chief foundation, Luxeuil, belonged to Gaul, is St. Columban, the rival and namesake of Columba. His Rule, inspired entirely by the principles and traditions of Irish monasticism, spread rapidly in Gaul and disputed for a time the predominance of that of St. Benedict.5

(d) Spain.—In Spain the beginnings of the monastic life are somewhat obscure. The Council of Elvira (c. 360) makes no allusion whatever to either ascetics or virgins. The Peregrinatio Ethisor belongs to the last quarter of the 4th century. It is the last of her journeying in the East and her pilgrimages to the holy places, sent to her nuns in Spain by a Spanish virgin named Ethisor, or Egeria, who, in all probability, abbev the community to which she writes.6 We find further traces of the ascetic and monastic life among the Priscillianists of Spain, in this century. Priscillian gave himself out as an example of asceticism (see art. PRISCILLIANISM). It has recently been shown that the Regula Consensoria Monachorum, attributed at first to St. Augustine, then to a contemporary of St. Fructuosus, probably comes from a Priscillianist source, in the 5th century. It is a Rule for censitae, original in character.7

The Rule of St. Isidore (+ 630) and that of St. Fructuosus of Braga (c. 690) also deserve mention. They enjoyed considerable success until the advent of the Rule of St. Benedict in Spain, which, however, there, as in almost the whole of the Western world, the only Rule for monks.8

Vigilius, who represents the element hostile to the monks and ascetics, was a priest at Barcelona in 396. During the year 409 the invasions in Spain, as everywhere else, resulted in the destruction of the monasteries. Mention of this is to be found in the chronicles of the period.9

The Council of Tarragona, in 516, turned its attention to the monks.10 St. Martin, abbot of Dumio near Braga, who is known as St. Martin of Braga, and who had been a monk before, played so important a part in the history of the conversion of the Suevi, laboured at the restoration of the monastic life in Spain.11 Two other bishop, SS. Leonardi and Isidore, also worked for the same end. The first wrote a Rule for the use of virgins, and the second drew up a Rule for monks.12 The latter was already known to St. Leander, the friend of St. Gregory the Great, and to Teja, bishop of Saragossa (c. 650), the great admirer of the works of St. Gregory and of his Dialogues, in which the praises of St. Benedict are set forth. This bishop did much to spread the knowledge of these works in Spain.13 Besides these names and monasticism, between the date of the conversion of Visigothic Spain (587) and that of the Arab invasion (711), these of certain monks and hermits—the African Donatus, who, along with 70 monks, also from Africa, took refuge in the monastery of Servitannum, in the province of Valencia; St. Emilian, who enjoyed a wide-spread cultus in Spain; the hermit, Valerius, in the neighbourhood of Astorga, etc.14

(e) Africa.—In Africa the first monastic centre seems to have been formed around the person of St. Augustine. This saint had studied the monastic life both in Rome and in Milan, and, on his return to Tagaste, in Libya, he lived with some of his friends in a house, where they devoted themselves to the practices of asceticism. Ordained priest, he founded a second monastery at Hippo, where he lived himself till he was made bishop in 386. He then transformed his episcopal dwelling into a monastery like those of the bishops of Milan, Vercelli, and others at this time, and so founded what we may call a 'cathedral monastery,' or, as he himself called it, monasterium clericorum. Others of the African episcopate soon followed this example.15

MONASTICISM

example, and Hafrumetum, Uzala, Calame, Cirta, Mileve, and Cartage became real centres of monastic life. The Regula pro Monachis attributed to St. Augustine was the starting point of the development of religious communities, as we have already said, but it is drawn from his letter (c. 373) to religious bodies of both sexes living in poverty and chastity, passing their time in prayer and ascetic practices, and in certain works of charity. The counsels of the great bishop are characterized by the charity, discretion, breadth of mind, and high spirituality to which all his works bear witness. We have already spoken of his Dialogue, de Operis Monachorum, composed in the year 400.

The Vandal persecution was unable to destroy all these monasteries, but it arrested for some time the progress of monasticism in Africa. Byzantine rule (533–791) restored peace and liberty, and a true renascence of religion took place, in which monasticism naturally benefited. Several new monasteries were founded, notably at Ruspe and at Tebessa. The ruins of the latter still exist. But the Muslim invasion was to destroy monastic life in Roman Africa as well as Christian life in general.

(f) On the Danube, in the region of Noricum, we find a flourishing work among the Scythian people of Noricum († 482), called the "apostle of Noricum."

2. From St. Benedict to the 13th Century.—St. Benedict, born at Nursia (c. 450), died at Monte Cassino (c. 540), deserves a place apart in the history of Western monasticism. The influence exercised by his Rule in the West may be compared to that of St. Basil in the East. Having driven out the Sabini, among the Sabine mountains, he later gathered disciples round him, founded monasteries at Subiaco and Monte Cassino, and wrote a Rule which, after the lapse of two centuries, was to become the one monastic Rule of the West. It may, in fact, be said that the history of Western monasticism is practically identical, for the greater part of the Middle Ages, with that of the Benedictines. The Rule of St. Benedict, which is divided into 73 chapters, is written for cenobites, and addresses itself exclusively to those who follow that form of monastic life. It teaches the virtues of humility, obedience, and poverty, and enjoins the practice of silence, hospitality, and mildness towards the poor. It lays down the order of the psalmody. The monastery forms, as it were, a little city or, better, a complete society provided with all its necessary offices. At the head of the monastery is the abbot, assisted by his provost, or prior, and his seniors, while at the head of every 10 monks is the dean. Then there are the cellarer, who is charged with the temporal affairs of the monastery, and the other officials that divide between them the different functions necessary to the well-being of the house.

The monastery should, as far as possible, provide for itself and possess a garden, a mill, and all the necessary offices and work-shops. The sick, too, are to be specially taken care of, and the monks and the oblates receive necessary instruction. General meetings of the monks are held under this form: those who oppose against the Rule must receive punishment according to their deserts. Such is, in summary, the Rule of St. Benedict—a Rule characterized by great simplicity, but in which is clearly reflected the stern and austere justice which was the genius of the Roman character, while at the same time it is penetrated through and through by the purest spirit of Christian asceticism, and rivals in its discretion and its sublimity of view the Rule of St. Basil itself.

St. Gregory († 604), the greatest of all the ages of the early Middle Ages, in giving to this Rule the support of his authority and in recounting, in his Dialogues, the life and miracles of its author, assured its predominance over all other monastic Rules. He himself founded a monastery in his own house (the Monastery of St. Andrew, the Cellarum, in which the Rule of St. Benedict was observed, and sent to England one of its monks, his disciple St. Augustine, who, while commencing the work of converting the Anglo-Saxons, at the same time instilled into them the Rule which was destined to take such firm root there and to spread far and wide over the land.

(e) England.—The Christianity established by St. Augustine among the Anglo-Saxons was thoroughly monastic in character. In the greater number of towns—e.g., at Canterbury, York, London, Ripon, Peterborough, etc.—the monastery was the centre of the new Christianity. The church of the monastery became the cathedral, and the abbots the bishop of the diocese that was thus gradually formed. The kingdoms of the Anglo-Saxons were one after another converted by the disciples or successors of St. Augustine, and the history of the four centuries extending from the death of St. Augustine in 604 to the Norman Conquest in 1066 is one of the finest pages of the history of Western monasticism. It would be impossible to give even a summary of it here. We cannot do more than cite some of the principal characters and the names of the chief monasteries that stand out in its pages. Among the former we have the abbeys and monks Aidan, Oswald, Wilfrid, Theodore, Wulfstan, Æthelhelm, Boniface, Bede, Alcuin, Odo, Dunstan; among the latter are Canterbury, Westminster, Malmesbury, York, Lindisfarne, Ripon, Peterborough, Wyton, Wearmouth, Croyland, Whithorn, Coldingham, Tynemouth, and Hartlepool. Even after the Norman Conquest in 1066 the history of monasticism in England does not come to an end. It was still flourishing in the 11th and 12th centuries, and the Normans, far from destroying the English monasteries, founded new ones. Lanfranc and Anselm, archbishops of Canterbury, re-peopled the Saxon monasteries with colonies of monks brought over from the famous abbey of Bec and from other Norman monasteries. Cluny, too, made several foundations in the country, and the Cistercians, in their turn, established themselves at Waverley, Rievaulx, Fountains, and many other places. St. Stephen Harding, who founded the order of Citeaux and gave it an influence on the order of Citeaux and gave its organization, was an Englishman. The order

MONASTICISM

of Savigny, which also had numerous foundations in England, was absorbed by that of Citeaux. But with the 14th and 15th centuries English monasticism began to decline.

(b) France. However, great was the success of the Benedictine life in England, it may be said with truth, if its history be regarded as a whole, that France was the land of its predilection. The story of St. Bernard, brought from the Merovingian Gaul by his disciple, St. Maurus, and of the latter's foundation of the abbey of Glanfeuil on the banks of the Loire as the first Benedictine monastery in that country, has been contested.2

While the truth of this question may be uncertain, it is certain that the Rule was introduced into France at an early date—from the beginning of the 7th cent.—and it spread there with such rapidity that it soon succeeded in supplanting the Rule of Columban and in imposing its authority on all the monasteries. A synod held at Autun, in 670, speaks of it as though it were the only monastic Rule in existence, and that of Chalon, in 813, declares formally that it is followed in almost all the monasteries of the country.3 The movement attained its apogee under Charlemagne, the great protector of the Benedictine monks, and under his son, Louis le Démonnaire. The reform of St. Benedict wasucus at once to the unity and to the vitality of Benedictine life.

It is again in France that we must seek the origin of the important monastic reform of which Cluny was the cradle, and which, little by little, spread beyond the limits of France into Italy, Spain, England, Germany, and Poland. The abbey of Cluny, near Macon, was founded by William, Duke of Aquitaine, in 910; the monks were brought from the Abbey of St. Martin of Tours, where the Constitutions of St. Benedict of Aniane were followed; hence the Cluniac reform sprang from that of the 9th century. Its first abbeys, Bernon, Oño, Mayen, Hugh, Odilo, and Peter the Venerable, raised Cluny to the highest degree of prosperity and extended its influence to every country in Christian Europe. The work of Cluny, in the religious, social, and political order, was considerable; during the 11th and 12th centuries it exercised an unrivalled influence on Christian morals and institutions. From the political and religious points of view, it offered to the popes a valuable and independent assistance in their struggle against the emperors of Germany, and the latter, as well as the kings of France, were obliged, more than once, to reconvene the powerful abbey.

Among the monasteries that accepted the Cluniac reform and flourished under it must be cited especially the great abbeys of Moissac, St. Martial, Uzercelle, St. Jean d'Angely, St. Bertin, St. Germain d'Auxerre, and Vevey in France, and Cava, Paris, and S. Paolo fuori le mura in Italy.4

At the very moment when the influence of Cluny began to decline, a new star arose on the monastic horizon. On 21st March 1098, Robert, abbot of Molesmes, founded in the diocese of Dijon the abbey of Citeaux, which was to become the centre of a new reform of Benedictine life. Although the new foundation was not without opposition, it was undoubtedly the most successful. Its success was not only spiritual, but also material; in 1109, St. Bernard, returned to an austere conception of the monastic life. All sumptuousness and solemnity, even in the liturgical offices, were proscribed, monastic architecture was renounced, expression and intellectual and artistic culture was set on one side, manual labour and the exercise of every kind of hard work taking its place.5

The Cistercian reform, whose influence, while not to be compared with that of Cluny, was nevertheless of considerable importance, especially during the 12th cent., spread beyond France and took in a large number of monasteries in other countries. It continued to exercise its influence till the end of the Middle Ages, and was revived on a new basis in the 17th cent. in the celebrated reform of La Trappe under the Abbé de Rancé.6

(c) Germany.—Before the introduction of the Benedictine Rule into Germany, monastic life was but feebly represented in that country. The Anglo-Saxon monks, SS. Firmin and Boniface, with their disciples, brought to Germany, along with their missionary zeal, the traditions of Benedictine life, which scarcely existed there at that period. The only known trace during the 6th cent. being found in the life of St. Eugenius.7

During the 7th and 8th centuries the Celtic monks of St. Columba came into Germany and founded a number of monasteries. Among these we may mention St. Gall, Ebersmunster, Moyen-Montier, St. Odile, Honau (Onogis), and Aschaffenburg, not to speak of those at Strasburg, Mains, Cologne, Ratibroh, Wurzburg, Erfurt, and Heggbach.8

In 1136 all the Scottish monasteries of Germany were united to form a congregation, under the jurisdiction of the abbot of St. James of Ratisbon, by Innocent III. Gradually the number of Scotch- Irish monks that were at first continually coming into Germany began to diminish, and by the 15th cent. they were replaced by Germans. This congregation ended by entering that of Bursfeld and becoming one with it. Mention, however, is made in the 17th cent. of a Scotch abbot, Ogilvie by name (1640). Reichenau on Lake Constance began, in 724, a history glorious in monastic annals, and Murbach, Fritzlar, Hildesheim, and Bischofsheim are scarcely less famous. Fulda, in the days of its prosperity, counted 100 monks among its inmates and became a nursery-ground for missionaries, of whom the chief were to play an important part in the history of Christian Germany. Such were Stemmich, Willibald, Wuntibald, and also SS. Walburga, Lioba, and Thekla, who were held in Germany in 744 and 745 discussed monastic affairs and prescribed that all monks were to live according to the Rule of St. Benedict. Worth of special mention are the monasteries of Schussenried, Reichenau, and St. Gall.

6 La Trappe (in the diocese of Sées, Orne). On La Trappe and its history see Ch Avery, Repertoires: Topo-bibliographie, s. a. "Trappe.
3. From the 13th to the 20th century.—In the 13th cent., whilst monasticism, in spite of all these attempts at reform, continued to decline, new forms of the religious life arose which answered better perhaps to the spirit of the age. These, which none of them drew numerous souls athirst for perfection and formed a current which, although not actually inimical to the ancient monastic institutions, was as a matter of course quite distinct from it. Such were the great Dominican and Franciscan orders and a few other religious families inspired with the same principles. No other attempt at monasticism that was really original and powerful remains to be considered, with the possible exception of the congregation of St. Maur. Hence it will be sufficient to give a brief outline of the principal characteristics of monastic history during the last centuries of the Middle Ages.

The great schism of the West and the Hundred Years' War dealt another terrible blow to the monastic orders, but the attempts at reformation were not less numerous than in the preceding centuries. The Council of Constance (1417) consecrated some of its decrees to the reformation of the Benedictine order, and was the factor that inspired a great meeting, comprising 131 abbots of various monasteries, which was held at Petershausen in 1417. In 1418 Pope Martin V. sent the abbot of Subiaco, Nicholas Snyringer, to Melk, the great Austrian abbey, to lay the foundation of that restoration of monastic life. The enterprise was successful, and a great number of monasteries of Austria, Bavaria, and Swabia rallied to the movement—inter alia, Mariazell, Seitenstetten, St. Peter of Salzburg, Kremsmünster, St. Emmeran of Ratisbon, Braunau, Tegernsee. The great Italian abbies of Subiaco and Parma also accepted this reformation. In other respects all these monasteries remained independent and did not form a real congregation.

The Council of Trent dealt with the question of monasteries as it did with all other Christian institutions. The 26th Session (3rd Dec. 1563) treats de regularibus et mendicilibus, renewing the decrees of Innocent III. and of the 4th Lateran Council, unites the exempt monasteries into the usual congregations, institutes, general chapters, and cloisters, and legislates concerning visitors, presidents of congregations, novices, and the election of superiors and monks. In a word, it establishes a collection of rules and laws concerning the monastic life. Congregations were immediately reformed on those principles.

Even more important than the Melk reformation, so far at least as Germany is concerned, was that of Bursfeld. Founded in 1006 on the banks of the Weser and colonized by Corby, this abbey was destined to play an important part in the monastic history from the 15th cent. John 3

3 And now it is not, in reality, till the 15th cent. that we find among the Cistercians the usage of general chapters properly so called. From the Cistercians the practice passed to the Benedictines and from them to other orders (cf. Berliner, "Les Chapires generales," in Mélanges d'hist. bénédictine, 4th ser., 2nd series, 1892, p. 92 f., and Heimbucher, i. 274 f.).

5 Petrus ab Audenaro (Wallonscopple), Institutionum monasticarum secundum Clementis V. et Filii Eius Decretalium Decreta, Cologne, 1588.
MONASTICISM

Deleroth († 1439), who had already reformed the abbey of Clus, took Bursfeld in hand in 1433 and also Rheinhessen. The three monasteries remained clerical for a long time. In 1446 the abbey of Bursfeld began the presidency of the congregation. The constitutions show a solid organization, with general chapters, visitors, and every means of safeguarding the observance of piety and regularity. The congregation grew from day to day. The cardinal of Cusa,1 Nicolaus v., and Pius II., became its ardent promoters. At the death of Abbot Johann von Hagen (1469) the congregation numbered 36 monasteries, which later increased to 102.2 In 1488 the abbey of Bursfeld, which up to this time had been the head-house of the congregation, went over to Protestantism under the influence of Julius of Brunswick, and the congregation was itself secularized in 1803.

We have already spoken of the monastic origins in Spain. For a long time the Rule of St. Isidore was observed in that country, side by side with that of St. Benedict. The Synod of Cooye (1050) prescribed that either the Rule of St. Isidore or that of St. Benedict should be observed in all monasteries in Spain. Not many years later, however, the influence of Cluny began to be felt and the observance of the Cluniac gradually it prevailed, until it finally eliminated the observance instituted by St. Isidore. In the 14th and 15th centuries two important congregations rose up, those of Valladolid (1590) and Manserrat (1429). The latter made foundations in Portugal, Peru, and Mexico.3 The movement of the crusades at Saragossa and at Tarragona was less important.

The Low Countries were a monastic land for centuries. Wilfrid of York, on the occasion of a journey in 678, having been thrown on the shores of Friesland, was there welcomed with great warmth. After his return to his monastery at Ripon, he sent over Willibrord, one of his monks, who established himself at Utrecht, and became the great apostle of Friesland, having St. Boniface as a fellow-labourer for some time. Other missionaries soon came from Iona, and, like England, the country became Christian and monastic at the same time. The most celebrated of these foundations was the monastery of Echternach.4

The Reform in Germany in the 16th cent. led to the establishment of new abbacies from the already existing monasteries, the closing of monastic buildings, and the handing over of their revenues to laymen, and especially to Protestant princes. A great number were sacked. It has been calculated that in the Peaceful War more than 1000 monasteries and castles were destroyed. A few monasteries were, however, saved from the general ruin (cf. Heimbucher, l. c. 250).

In England the effects of the Protestant Reform were still more terrible for the monasteries. In 1524 the Holy See had caused Cardinal Wolsey to make a visitation of the monasteries, and one of the consequences of this general visit was their complete liquidation. In 1534, under Henry VIII. and his minister Thomas Cromwell, Elizabeth finished the work of destruction in 1560. Scotland's turn came later on (1569).

1 For this great man's influence in the reformation of the monasteries of Germany, Switzerland, and Spain, cf. Heimbucher, l. c.
3 Helyot, vi. 236 f.; Curiel, Congregatio Hispano-benedictina; cf. Studien und Mittheilungen, xxv., xxvi., xxvii.
4 Benson, Reise Benediktiner, vii. (1860); P. H. F. Wünderlich, Die St. Wibald-Stiftung in Echternach, Echternach, 1890; Heimbucher, l. c. 233; Chevallier, Répertoire: Topo-bibliographie, l. c. 233.

In all it has been estimated that 578 monasteries, of which 63 were Benedictine, were confiscated. Besides the falls and lamentable deceptions there were not a few actual martyrs, and who paid with their lives their fidelity to their vows.5 Benedictine life was maintained throughout all these centuries of persecution, and the Anglo-Benedictine congregation has preserved the inheritance of its ancestors to the present day.

The Reformation which destroyed the monasteries in England and Germany did not succeed in establishing itself in France. There the monasteries held out. In the 19th century a great number of important monastic restorations were undertaken by Benedictine foundations of Buxeuil and Latour, and by the Benedictine congregation of St. Maur in France. These two congregations, with an end and a constitution that were similar, had for their common object to re-establish a stricter mode of observance in Benedictine monasteries and to bring back the monks to the rigorous practices of the Benedictine Rule.

The very large part played by the congregation of St. Maur in intellectual work bore splendid fruits and helped to found a school of erudition that has given to France a Mabillon and a Montfaucq, a Demys de Sainte-Marie, a Bouquet, a Constant, a Rainart, etc.—a school that has never been equalled.6 A certain number of new orders which practised the monastic life and accepted the Rule of St. Benedict as their fundamental guide may be regarded as branches of the Benedictine order. We can give only a very brief outline of their history here.

(a) Sylvarestes.—The first of these orders sprang from the Benedictine trunk is the Sylvarestes, so called from the name of its founder, Sylvester Gonzelin, of the family of Gozzolini († 1267). In 1227 he retired to Osimo and followed the Rule of St. Benedict, adding new austerities, until in a short time a few ancient monasteries took their place under the new discipline. At the time of its greatest prosperity it comprised 56 monasteries, the greater part of which were in Italy and a few in Portugal and Brazil. At the present day its number is greatly diminished. The church of St. Stephen del Caccio in Rome now belongs to them.

(b) Celestines.—The Celestines are a more important branch than the Sylvarestes. They gave their foundation to the pope of that name, St. Celestine V., who at first was a hermit on Monte Morone in the Abruzzi, and then at Monte Majela. He endeavoured to combine under one monastic system the two monastic orders, the observance of life the cenobitic principle of the Benedictines and the practices of the anchoritic life. When he became pope, he protected and favoured the order which he had founded, approved of its constitutions, and accorded it many privileges. His congregation, having made numerous foundations in Italy, spread into France, Saxony, Bohemia, and the Low Countries. It possessed 150 monasteries, of which 90 were in Italy and 21 in France.7

(c) Olivetans.—The Olivetans were founded by Bernard Tolomei († 1348), a professor of Law at Siena, who, in company with a few companions, retired to Mount Oliveto, some leagues from Siena, A. Schwein, English Monasteries on the Eve of the Dissolution, Oxford, 1909; Gauguet, Henry VIII. and the English Monasteries, London, 1888; Oxoni. spec. edit.
9 See Tabulae di Marmorebi, Histoire d'eglises, etc., illustri per ascendit dei ordine dei Celestini, Bologna, 1648; on Celestine v. D. Ait, May, 1815, 608, and Heimbucher, l. c. 299.
whence his congregation takes its name. They lived as hermits, while following the Rule of St. Benedict in so far as its main principles are concerned. Monasteries were not allowed to be founded in their name. Fourteen years after its foundation more than 100 monasteries, including Monte Cassino, had rallied to this mode of life. The monasteries were those of San Miniato in Florence, and Settignano and S. Francesco Romana at Rome. Among their members there are counted 4 cardinals, 5 archbishops, 30 bishops, and a few savants, such as Lancelotti, Bianchiere, etc.

(d) Humilitati, Pulsoano, and Monte Vergine.

Three other orders or congregations—the Humilitati, Pulsoano, and Monte Vergine—are also offshoots in Italy of the Benedictine tree. The first was founded in the 12th cent., with the aid of St. Bernardo, by St. John Oldrado (+ 1159) near Cosmo, but later they joined the partisan demagogues of Arnold of Brescia and then the Waldensians. St. Charles Borromeo made a futile attempt to reform them; the rebel monks tried to get rid of the saint by endeavouring to bring about his death, and were consequently suppressed by St. Pius V. in 1571. The order of Pulsoano, which never made any great progress, was founded by St. John de Mata (+ 1100), that of the Guilmelmites or hermit Benedictines of Monte Vergine, was founded by a friend of St. John de Mata—St. William (Lat. Guillemel) of Varcelli (+ 1140), who had at first lived as a hermit on Monte Vergine, in the neighbourhood of Naples. He had a certain number of followers, and built several other monasteries in Italy and even as far off as Sicily. The monastery of Monte Vergine lavishly, and has retained the centre of a very flourishing pilgrimage.

(e) Fontellanese. Among the reforms in the Benedictine order we must not omit mention that of Fontellanese under the inspiration of St. Peter Damian (+ 1072) at Faenza in Umbria. St. Peter Damian (+ 1072) was its most powerful and most fervent promoter, and St. Dominic de Cimiez (+ ‘the armoured’) is also one of its glories. Its Rule added new austerities to those of St. Benedict's. In 1570 it was united to the Camaldolese.

(f) Camaldolese. This was one of the most numerous and most powerful of the congregations of the Benedictine order. They essayed to combine the cenobitic with the anchoritic mode of life. At one time they numbered 3000 monks, and their history is intermingled with the most important events of the Church in Italy in the 11th century. Their founder was St. Romuald (+ 1027), who was at first abbot of San Apollinare in Classe at Ravenna, and withdrew thence to Campo Malcolli (whence the name 'Camaldoli' or 'Camaldolese') in the Apenines with a colony of hermits.

(g) Vallombrosa. The order of Vallombrosa was founded by St. John Gualbert (+ 1079) at Vallombrosa in Tuscany. The founder, who was no ignoramus of the attempt of the Camaldolese, also took up the idea of uniting the anchoritic life with the cenobitic mode, basing his plan on the Rule of St. Benedict. This congregation, like that of the Camaldolese, also played an important part in the history of the Church in the 12th century. It enjoyed the credit, although of much less importance—the order of Grammont and that of Fontevrault. The first resembles the Camaldolese order. Its founder, St. Stephen of Muret, near Limoges (+ 1143), where he lived a very mortified life, withdrew to Marmoutier or Grammont, a place which was at that time a desert in the same country. His order was more or less a success in France, and at one time numbered about 60 monasteries. Fontevrault (Pons Eboracii), in the Department of Maine-et-Loire, gave its name to the order founded by St. Robert of Arbrissel, who renewed an ancient institution, namely, that of double monasteries. The founder's influence as a missionary and preacher was enormous, and at his death 3000 monks and nuns were united under his guidance. His Rule spread to England and Spain, but Fontevrault remained the principal house. The most rigorous discipline was prescribed by St. Robert in the monasteries thus brought together.

There were also a few partial reformations that arose in certain great abbeys which we might call monastic capitals. Charles, Duke of L'Abbé de Cime, Sasso-Bigno, Sacre Major, Le Bec, Thiron, Savigny, St.-Sulpice, and Cadouin.

(i) Mechtiristai. The Mechtiriists represented one of the most curious attempts at reform in the Benedictine order. Mechtir (Mechtor, + 1749) was an Armenian who, with the object of enlightening his fellow-countrymen concerning the Roman Catholic Church, resolved to found an order consecrated to the work of the mission and the education of the youth and the composition or the translation of Catholic works. In Armenia he was subjected to long persecutions on the part of the schismatics, but, far from being discouraged, he succeeded in founding his congregation in Armenia. His most celebrated foundation, however, was in the island of St. Lazarus, near Venice; it became a very active centre for Armenian studies. The monastery of Vienna, founded in 1810, is also celebrated for its printing-press and its seminary.

(j) Carthusians. The Carthusians, like the Camaldolese, represent a mixture of the anchoritic and the cenobitic mode of life in Western monasticism. St. Bruno, their founder, withdrew to the desert of the Chartreuse (whence the name 'Carcasion') in the diocese of Grenoble, France, where he established a little colony of hermits, whose successors have succeeded in keeping together and maintaining their traditions down to the present day. A great number of foundations were made throughout all the nations of Europe. In a Carthusian monastery each monk lives in his own cell and cultivates his little garden. They come together only for divine office in choir, for conference, or for chapter, and on certain days they meet in the common refectory and for the weekly walk. They have always been noted for their fervour, for their zeal for the missionary work, and for the extent of their possessions.
and among them there have been a few ascetic writers of high merit. Some of their chapter-
houses are celebrated for their architectural beauty and for the art treasures which they contain.1

The 19th cent. was one of restoration for monas-
ticism in England, Germany, Austria, and Italy the ancient monastic congregations and the
great abbeys were maintained in spite of all diffi-
culties, some attempts at monastic restoration were made in France, Italy, Spain, and the United
States of America. It will suffice to refer the reader to the
article 'Benedictine Order,' in CE ii. 443–465, for
a fuller account of these attempts (cf. Heimbucher, i. 600).

V. CONCLUSION. In an article that must
necessarily be brief, we have been able to give
only a very short summary or historical outline.

To give it any degree of completeness one should
summarize the history of the monastics as
exercised by the monks on the Church and on society in general; consider what has been their work of sanctification, of charity, of apostleship; enumerate the services which they have rendered to civilization as savants, historians, poets, artists, teachers, and, at times, as politicians. It would then be seen that, although
vowed by their monastic profession to a life of
retreat and renunciation, which is the kernel of the
monastic ideal, the monks have accomplished a
work that has been equalled by no other society
down to the present day.

If this résumé of monastic history had any pre-
tensions to completeness, some mention should here be
made of the nuns, in whose ranks we find characters as remarkable as those of Lieba, Mech-
tild, Gertrude, Hildegard, Roswitha, and others. From
the historical point of view, however, this is
unnecessary. The nuns brought no new element in
the movement, but they contributed to follow in
the footsteps of the monks under the influence of
the great reformers of the monastic order.

F. CâBEL.

MONASTICISM (Buddhist).—1. The monastic
order. The monastic order in Buddhism, as
instituted by Gautama Buddha himself, was not
equipped from the beginning with the structure
from ancient Hindu usage and practice. Separation
from the world, in the solitaria existence of a hermit or ascetic in or regulated communities, had
been almost from time immemorial a characteristic feature of life. The monastic rule
and self-discipline as the basis of his
religious system, and defining this as the sole way
of religious attainment, the Buddha presented to his
hearers no new doctrine or ideal, but urged
and enforced a duty familiar to them from the teaching
of their own sacred books. The distinctive feature
of the Buddhist order, in which it was differentiated
from its precessors, and to which, in large part, at least, it owed its extension, was the removal of all restrictions of caste.

Membership of the order was open to all from the
highest to the lowest, without distinction of race or
birth. All alike who renounced the ties of family,
poverty, relinquished all personal or individual possession of worldly goods, and sought in meditation and spiritual endeavour that deliverance from the bonds of existence and misery, which the
Buddha taught, could never be achieved in the
murmur and distraction of life in the world. To
direct, therefore, the life of renunciation and strenuous
pursuit of the highest aim to which they
pledged themselves the monks were known as bhiksuk, beggars, brahmans or iri Maneras,
devourers, the latter term being given to the
novices or junior monks, and sthaviras, elders, to
those who were the senior or ruling members in
the monasteries. The community of monks as a whole was known as the Sangha, or order, and
with the Buddha himself and the Dharma, the sacred rule or law, formed a Buddhist triad, each
member of which was idealized as a sacred character, and ultimately became the object of a definite worship.1 On the sculptures the Sangha is represented as a man holding a lotus in his hand, the symbol of stainless purity.

In inception and intention the monasteries were
not the established homes of the monks. To the
latter no permanent abodes were assigned, but
they were to follow the wandering life of an ascetic or beggar, dependent for their livelihood
upon the gifts of the laity, their only shelter
the trees of the forest, or huts constructed of
leaves and branches (paravastu, pannasattavä). Only
during Vasas (Vara), the season of the rains, when
travelling became impracticable or could be
prosecuted only at the grave risk of injury to living
beings, was it incumbent upon them to remain in
a definite place or a permanent building. Caves,
either natural or artificially excavated in the rock,
seem to have been among the favourite dwellings
of the early Buddhist monks. Ganttana is represented as giving permission for five different
kinds of abodes (pancha laññat): 'I allow you, O
Shikshas, dwellers in the caves, and those who
build up (vadha-rupa), storied dwellings, huts, caves.2' These elaborate and permanent dwellings were, in
the first instance, apparently always the gifts of
wealthy laymen, who desired in this way to do
honour to Gautama himself or to the order which he
had founded. A usual name for the larger
monasteries was sasghavatana, the abode or
delight of the Saṅgha; and the term vihāra was employed also to denote the temple where the images were enthroned, in a building which, in the great
monasteries at least, was usually distinct from
the main hall.

It became necessary, moreover, at an early date
to place restrictions upon the wandering life, but was derived
from ancient Hindu usage and practice.
MONASTICISM (Buddhist)

monasteries regular instruction was given to the brāmaneras, or junior monks, and an elementary education was thus available for the entire male population. There were no public services, however, within the monasteries, nor any worship in the usual sense as we have it. Only in Vassa did the monks ordinarily engage in preaching, or place themselves at the service of the laity for the reading of the Scriptures or prayer. Twice a month at the new and full moons, and every day except the days of abstinence and fasting, the pratimoksa, or confession of sin, was to be formally recited at a full chapter of the monks. Later a weekly recitation was instituted, which included the intermediate days, on the seventh and twenty-first of the lunar month.

In intention and practice, therefore, the Sāṅgha formed a brotherhood, within which no distinction was made of rank or birth; age, learning, and seniority formed the only title to authority and respect. The control of the monasteries was in the hands of the athawiras, the elders or senior monks. The upādhyayas or āchāryas were ordained members of the fraternity of some years’ standing, qualified by character and learning to give instruction and to conduct the recitations and prayers. The novices or junior monks were required to devote themselves to study, to perform the various ritual duties of the monastery buildings, to wait upon the senior monks, and sometimes to attend them when they moved abroad. All alike pledged themselves to obey the rules and discipline of the order. There were, however, no imperious rules, and the monk was free at any time without blame to discard his robes and return to the world. In this way in some Buddhist countries the entire male population passed through the monasteries, and upon them a less strict discipline and obligation were imposed. Nothing further probably was required of them than to recite the ‘three-refuge formula.’ They took no part in the regular life of the monastery, did not join in the daily hierarchy for alms, and waited at the direction of the monks. The outside laity also were accustomed to visit the monasteries to make offerings at the shrines.

The rules of extreme poverty incumbent upon the monks individually did not extend to the monasteries in their corporate capacity. These might be and often were powerful and wealthy corporations, possessed of great resources, and wielding a corresponding influence in the neighbouring districts. Their property consisted for the most part of land and the revenues of estates or villages which had been granted to them in perpetuity by wealthy patrons, whose piety and liberality earned its recompense in the merit which thereby accreted to the donor. Gifts in money as well as in kind were frequently bestowed. Sometimes also these donations took the form of the building and furnishing of monasteries for the use of the brethren. Such benefactions are recorded within the life of Gautama himself. He gave his permission for the dedication of the estate and buildings, expressed his pleasure at the meritorious service of his followers, and prophesied of the future exaltation of the brethren. In the usual sense of the term the word pittānāthā, ‘release,’ ‘liberation,’ that the term ordinarily conveyed this meaning there can be no doubt. Its original significance is in dispute (see Kern, pp. 74 and note, 857).

1 Th. 11, 39. 2 Th. 52, 35. See art. Initiation (Buddhist).

The regulations with regard to clothing appear to have been laid down at an early period and directed against the Jain ascetics, who were about unclothed.

3 Pittānāthā, ‘release,’ ‘liberation.’ That the term ordinarily conveyed this meaning there can be no doubt. Its original significance is in dispute (see Kern, pp. 74 and note, 857).

4 Mathe. viii. 12.
would be theirs as a certain reward. In respect, however, of their wealth and resources the monasteries of Buddhist countries differ to a considerable extent. In Ceylon, with the exception of a few that are more influential and renowned, the buildings are small, and shelter few inmates. In Mongolia and Tibet they are large and elaborately furnished and decorated, and frequently occupy imposing positions of great natural beauty. Burma and Siam possess buildings of much architectural merit; and the monasteries and temples of Japan are not excelled for stateliness and charm by any in the Buddhist world. The Chinese monasteries have suffered much from neglect and decay, and in many instances have within recent years been altogether abandoned, or diverted to secular purposes.

2. Nuns.—Apparently only with much reluctance did the Buddha consent to the establishment of an order of nuns (bhikkhunī, Pāli bhikkhunī). The traditional account relates that at the three-repeated request of Mahāpajāpati, Gautama’s aunt and nurse, strongly supported by Ānanda, the Buddha gave his permission for women to ‘go out from the household life and enter the homeless life under the doctrine and discipline proclaimed by the Tathāgata.’ The permission, however, would prove disastrous, so Gautama prophesied, to the prosperity and duration of the faith which he taught; the pure religion and the good law would endure only for five hundred years instead of a thousand. On the same occasion he prescribed the obligations and duties of the bhikkhunī contained in ‘Eight Chief Rules,’ to which they were bound in strict obedience. The regulations involved subervience to the guidance and discipline assumed by such a nun is in all respects. A nun even of a hundred years’ standing was to rise and respectfully salute even the youngest monk, nor was a nun to venture to admonish a monk, though she must submit to receive admonition from him. Further a nun may not keep Vassa in a district in which no monk is resident. It is probable that the ordination of women as bhikkhunīs has not been repeated since the establishment of nunnery in reality due to an error of the founding of Buddhism. The institution has never become popular or gained a strong hold in any Buddhist country; and the number of the nuns has always been small relatively to the number of monks.

3. India.—The Chinese pilgrims, Fa-Hian, Hiuen-Tsiang, and others, in the 5th and 6th centuries of the Christian era, found monasticism flourishing in N. India, and the great monasteries with their thousand learners and studious monks exercised a powerful and attractive influence. They belonged in almost equal proportion to the two great schools of Buddhist doctrine, the Hinayāna and the Mahāyāna (p. 84). In the time, however, of the visit of Hiuen-Tsiang, the most renowned of the Chinese monks (A.D. 629-645), they seem to have been losing ground everywhere to the rival sects of the Brahmins. The most famous Buddhist monastery was that at Nālandā, the modern Bara-ṇā-gāon near Gayā (q.v.), a description of which is given by the latter pilgrim. See, further, art. NALANDA.

4. Ceylon.—In Ceylon the power and influence of the community during the early centuries of the Christian era, under the rule of the native Ceylonese kings, who were enthusiastic Buddhists, attained a high level, and were exercised not only ecclesiastically but in political affairs. The rulers themselves received abhijñā (q.v.) at the hands of the monks, who not only offered advice and exercised authority in matters of State, but also judged decreed penalties for breaches of the law. On the other hand, the kings interfered in the maintenance of ecclesiastical discipline, and are themselves said to have taught publicly and expounded the principles of the religion. The flourishing period of monastic life, when the communities of the monks were most numerous and wealthy, appears to have been from the 2nd cent. B.C. to the 10th cent. after Christ, when the Tamil invaders from S. India began to overrun the island, and the Mahāvihāra, which was then the chief home of religious faith and prosperity, destroying the monasteries and introducing the beliefs and practices of Hinduism. Towards the close of the 12th cent., a brief revival of national religion took place with the re-establishment of national independence under Parākrama the Great († c. A.D. 1197). After the death of the king, however, a decline of national and religious life again set in, during which the monasteries and schools of Buddhism manifested little vigour or initiative, and, although the religious life of the community maintained itself outwardly, it gradually fell to a low level of intelligence and spirituality. Only within the last few years have there been signs of a renewed vitality and interest in the purer doctrines and principles of the faith, and of energy or zeal on behalf of its preservation and extension.

The chief authority for the history of the order in Ceylon is the Mahāvīra-saṅga, or ‘Great Chronicle,’ a native record of religious and political events in the island from the introduction of Buddhism by Mahinda (Mahendra), the son, or, according to the Pali, Huen-Tsiang, the younger brother of Asoka, at the close of the 3rd or the beginning of the 2nd cent. B.C., to the reign of King Mahāsena in the earlier part of the 4th cent. A.D. There is also a collection of devotional ‘songs’ or ‘psalms’ of monks (Theragāthā) contained in the Sutta-Piṭaka of the Pali Scriptures, which throws much light on the thoughts and aspirations of the inmates of the monasteries, and gives us the whole a high conception of their piety and self-denying spirit. A similar collection of Therigāthā, ‘Songs of the Nuns,’ forms part of the same Piṭaka. The defect of the Mahāvīra-saṅga regarded as an authority, over and above its obvious exaggeration of details and naive acceptance of miraculous traditions intended to glorify the course of Buddhist history, is its partisan character. Written in the interest and from the point of view of the monasteries of the Mahāvihāra at Anuradhapura, the capital city of N. Ceylon and for many centuries the centre of Buddhist monastic life and enterprise, it takes no account of the development of doctrine or teaching in the two great rival communities of the Abhayagiri and the Jetavana monasteries, each with an independent life of its own. For a period of more than ten or twelve centuries, to the close of the 12th cent. A.D., when the leading sects were reunited, no record is available of the activities or influence of these two important monastic institutions. Apparently they were protestant in their beliefs and practices and regarded the leading and established church of the Mahāvihāra at Anuradhapura. To that extent, however, their teaching diverged from the orthodox standard, or their manner of life was nonconformist, we have no means of ascertaining.

More recently there has been a recurrence of sectarian differences in the island. These, however, concern monastic usage and habit rather than belief; and in the latter respect there is little or no variation throughout Ceylon. There are three chief sects, the origin of which appears to have been due in all instances to external influence and influence; and one of these at least seems to have arisen against laxity of discipline and rule. The earliest and most numerous sect is known as the Siamese, established about the middle of the 19th cent. by a number of monks from Siam, who came to Ceylon to escape the persecution which had been long ago. About fifty years later a separation took place, apparently on disciplinary, not doctrinal, grounds, and the Amarakura sect was founded, its leaders being monks who owed their rank and ordination to the Burmese city. The third and present sect, the most recent and numerically the least important, is the Ramana or Rangoon. The Siamese is the most wealthy and numerous, including amongst its followers about half of the monks of the island. Most of the important and popular temples and shrines are in their hands. From ten to fifteen per cent belong to the Ramana. These priests consider themselves as the guardians of the sacred see of poverty, and neither individually nor collectively do they own, as do the others, landed property. They follow a simpler mode of life, and avoid with the greatest scrupulosity all contact with the worship of customs of Hinduism. Outwardly the sects differ in the manner in which the yellow robe is worn; the Siamese leave the right shoulder uncovered, but the Ramana and the Amarakura dye the robe over both shoulders. The Ramana is most influential in the southern part of the island, the Siamese in the central provinces; but the latter is said to be losing ground to the younger rival.

The monasteries of Ceylon are for the most part small, rarely containing more than from ten to twenty monks. The few larger and more important institutions alone, as at Kandy, will accommodate up to forty inmates. In the country districts frequently only two or three monks live together. Recitation, confession, and preaching by the monks take place especially at now and full moons. The monks spend these four times in the lunar month. More formal services last for ten days or a fortnight without intermission, and are carried out at the expense of wealthy laymen, who by charging the monks a small sum for their services, secure merit for themselves. During the three months of Vassa (Wass) the monks leave the monasteries and live in the villages, either in specially constructed sheds or huts or on invitation in the houses of rich laymen, who entertain them generously at their own expense. The rule that in the season of the rains, corresponding in Ceylon to our late summer and autumn, no journeying may be undertaken is interpreted in the sense that no monk may be absent from his village or temporary home for more than six or seven days.1

3. Siam.—Perhaps the most distinctive feature of Siamese monastic rule is the control exercised by still another group of four chief abbots, who are entrusted severally with the control of the northern and southern provinces of the kingdom. The general oversight of morals and ritual, and the management of the interests of the wandering monk, is always connected with any of the scots, or monasteries. These hermits, who make their home in the jungle, are now few in number, but are said to have been very numerous in former times. The inhabitants of the monasteries frequently spend a considerable part of the year in journeying from one shrine or sacred place to another. Parties of these pilgrims are known as phra pha lung, and as they file in procession along the roads, they are accompanied by the picturesque element in the country side. Each monk is accompanied by a siraya, or attendant, who carries his alms-bowl and other utensils, and a portable shelter or tent consisting of a large Chinese umbrella, which is set up in the ground at halting-places and a white cloth throw over it. There are also a few monks, known as chi sang, who live for the most part in huts in the neighbour- of the monasteries. They are usually women, and are advanced in years, who are without relatives to provide for their well-being or maintenance. There are no regular numeraries.

The four chief abbots, together with four coadjutors or assistants, form the Court of Final Appeal in all matters of religious or ecclesiastical administration or discipline. The general control is in the hands of provincial ministers of the Church, who exercise jurisdiction within districts that correspond usually with the civil divisions of the country. The ecclesiastical organization, therefore, is parallel to the civil; and the ruler of the State is supreme over all. In Siam, as in Buddhist rule, it is universal that every male member of the nation should at some time in his life take upon himself the monastic vows, and become resident in a monastery. The accepted minimum period of residence was three months; after this the monk was free to return to the life of a layman. Most of the boys also passed through the monastery schools, receiving an elementary education in reading and writing and the fundamental doctrines of Buddhism. The layman retained an attachment to the monastery of which he had been an inmate, and once at least in the twelve months, at the religious celebrations in the autumn at the close of the rains, brought offerings for the use of the monks during the coming year. At this more important monasteries in Bangkok the king himself, as head of the Church, goes in procession with much ceremony, bearing rich presents, and presents for the monks. In all the festivals and numerous public holidays the monks take a considerable if unofficial part, and are the recipients of much attention and many generous gifts. In Siam the obligation of individual and personal poverty is less strictly observed than in most Buddhist countries. In some instances the monastic cells are adorned with books and pictures and furnished with ornaments and other objects of luxury, and the monks may be seen driving about the streets in carriages. The majority, however, live a simple life, and are regular in their duties and apparently sincere in their devotion. The monasteries also frequently derive considerable revenue from land or other endowments granted to them by Government, or from the gifts of private donors.

The routine of life within the monasteries is practically the same as in Burmese. The day begins and ends at an early hour. Morning prayers in the ordination hall, the principal hall or temple of the monastery, before the great gilded image of the Buddha, are followed by the usual early begging. The alms-bowl is presented in the bowl is received in silence, and eaten

MONASTICISM (Buddhist) 801

immediately on the return to the monastery. No solid food is taken after mid-day. The intervals in the morning and afternoon are occupied with study and meditation and in giving instruction, in all the duties incumbent on the bhikkhu, or in precept- ing. The usual title of the monk is pātha, 'saint,' or telepoin. The latter name is said to be of Mön origin, signifying 'our Master.' The Japanese term is monzen: 'a monk.'

6. Burma.—The monastic life of Burma is in its essential features similar to that of Ceylon. The monastic buildings themselves, however, are on a far more elaborate and costly scale, and the lives of the monks are more ascetic and devotional.

The monasteries also have been more closely in touch with the laity, both because the monks have mingled freely with the people in their festivals and religious ceremonies, and, more especially, on account of the influential position which they have occupied as centres of learning and education. Previous to the establishment of European missionary and Government institutions, which to an increasing extent have supplanted them, every Burmese had passed through the monasteries school, owed whatever book knowledge he possessed to the teaching of the senior monks, and for a longer or shorter period himself participated as a recognized member of the community in the monastic or scholarly life of the monastery. Thus, although the majority returned to a secular life and to the pursuit of agriculture or trade, the entire male population of Burma had practical acquaintance with the life of a monk, and knew from within his requirements and aspirations. The system contributed effectively to national unity and strength, and for many centuries made of the Burmese a literate people, education from the sacred books being the only education to which they were exposed. The boys learnt also respect for their elders and habits of regularity and obedience which served them well in their after careers.  

7. Tibet.—The distinctive feature of the monasticism of Tibet is its elaborate and gorgeous ritual, recalling in many respects the ceremonial of the Roman Catholic Church. The similarity is due for the most part to the influence of the Chinese Nestorian missionaries, who, while leaving little trace of their doctrinal teaching, succeeded in impressing upon the religious life of the country the frame of the Western liturgy and observance which had been developed in Western lands and on Christian foundations. But, further, the Lamaist ritual includes ceremonies of exorcism and magic, accompanied by music, dancing, and dramatic performances, the whole most widely divergent from the spirit and simplicity of primitive Buddhism, the source of which is to be found in the ancient native superstitions and practices of the people, which the Buddhist missionaries from India tolerated either from necessity or of choice, if they did not actually foster them. The monastic communities of Tibet are wealthy and powerful, with large revenues and possessions. The buildings themselves are often of great size, showing no meanness to their ten thousand inmates, and are imposing rather from their unrivalled position on the sides or summits of lofty rugged hills than from any architectural excellence. At the other extreme, among the anchorites and hermits, has been developed a rigorous and cruel asceticism, which is no less opposed to the true Buddhist spirit, but which is closely allied to and probably derived from the Sakayint and practices of N. India. See art. LĀMAISM.

8. Central Asia.—That for a considerable period Central Asia was the home of a broad and vigorous Buddhist life has long been known. That life naturally centred in the monastic communities established in the several cities on the important roads of pilgrimage and traffic that skirted the central desert of sand on the north and south. In the countries, however, which look to Muhammadan invasion and conquest little trace of the faith remains. The Chinese pilgrims repeatedly make mention of monasteries with large numbers of inmates whose zeal and piety excited their admiration; these for the most part were adherents of the Mahāyāna school. Their narrative, nevertheless, conveys the impression that the real influence of the faith upon the character or habits of the people beyond the monastery walls was but slight. Recent exploration and excavations have entirely confirmed the record of the Chinese, and suggest a fairly strong and prolonged Buddhist hold upon the country. Ruined stūpas are numerous, and bear witness to Buddhist traditions and the presence of Buddhist monks. The monastic buildings themselves would be of less solid construction, and either have perished or are unrecognizable.

9. China.—Of the monastic life of other Buddhist lands which follow the Mahāyāna with more or less concession to native modes of thought and superstitions there is little further that requires notice in a general survey of Buddhist institutions. It will be proper to refer to the articles on the several countries. The main character and type have been everywhere preserved, but the details of mode of life and profession have varied greatly with environment and the genius of the people. In China the monks have occupied generally a degraded position, with a few honourable exceptions, holding a creed and practising a ritual in which there was more of secrecy and magic than of religion. The exceptions were the highland monasteries, and those remote from the centres of population, where the monks, though ignorant, were simple, kindly, and pious, seeking salvation through self-denial and right living. The nunns were no less degraded and for the most part despised. Recent events in China, however, with the diversion of numerous temples and monasteries to educational purposes, the desertion or destruction of others, the spread of Western influence and science, have entirely changed the situation as far as the religious life and thought of the people are concerned. It is not easy to forecast what the ultimate effect upon Buddhism will be, or how far it will be even destroy so essential and characteristic a feature of the Buddhist faith as monasticism has ever been. That the effect will be profound and far-reaching there can be no doubt.

10. Korea.—The monastic institutions of Korea resemble those of China, whence both doctrine and practice have been derived. Religiously as in other respects the country has always been dependent on its greater neighbour to the south, and neither in belief nor in rule of life does Korean Buddhism present much that is novel or of interest. Overshadowed by Confucianism and ancestor-worship, it has developed few distinctive features, and has for some centuries exercised a decreasing influence on the thought and habits of the people.

Ebert, and others, in the Journals of the Asiatic Society of Bengal, and other journals. The latter is still retained at the 'Halls of the Thousand Buddhist,' in the west of the province of Kan, and elsewhere in Central Asia to the present day. The tradition of his learning and holiness, and of the miraculous powers which was credited, proved to be a real power in the minds of the priesthood.

VOL. VIII. — 51
MONASTICISM (Hindu)

The monasteries are usually small, the number of inmates rarely exceeding twenty-five or thirty, and sometimes, as in Ceylon, no more than three or four monks are found living together. The most important institutions are those of the capital, but none are allowed within its walls. Their numbers also are decreasing. The monks themselves command little respect, and are noted for their mendicancy, which takes them from the lower classes. The example and influence of Japan also may perhaps be traced in the character of some of the buildings, which are fortified and built on high ground to dominate the country at their base. In the southern part of Seoul a few monasteries exist.

The most distinctive feature of Korean monasteries is the presence of pictures on the walls. These are drawn and coloured on paper and mounted on silk, and usually represent scenes from the lives of the Buddha. Often the entire surface of the interior walls is thus hung with pictures, presenting a remarkable contrast to the monasteries of other lands. Externally the walls are covered with paintings in bright colours of bodhisattvas or other supernatural beings. The sanctuaries often contain only a single image, rarely more than two or three; and these are small, and for the most part of clay or wood. Metal images are almost if not entirely unknown.

In their dress the monks have preserved the national costumes in the form of a long cloak with sleeves, worn over all, and generally white. The head is shaved. In conformity with Buddhist practice, but not the beard. The shaved head, however, is not branded after the Chinese custom, although branding may be effected on other parts of the body, such as the arms. The order is recruited mainly from boys received by dedication, or adoption in early childhood. Endowments are not numerous. Most of the monasteries are dependent for their maintenance upon the gifts of the faithful, or, where opportunity serves, upon the personal labour of the monks in the cultivation of the temple lands.

Japan.—The temples and monasteries of Japan are large and well-appointed, and give the impression of a reality of creed and life which is almost altogether wanting to those on the continent. The numerous Buddhist sects of Japan have their home and distinctive life in the monastic communities, and the sects themselves are distinguished in the details of their architecture present varieties of construction according to the sect to which they belong. In creed and belief the sects differ greatly among themselves, and have few features in common with the Buddhism of the south. In the past the activity and strenuousness of the national life found their almost complete counterpart in the monasteries, which formed associations of fighting monks at war with one another, opposing and plundering the common people. In more settled times speculative thought, mystical, devotional, and idealistic, has been highly developed, perhaps most conspicuously in the "Sect of the Pure Land," which holds a theistic creed, and expounds and practises a moral code which has much in common with that of the NT. Accompanying a revived religious life also, at different periods of the nation's history, music, art, and court ceremonies have been practised with zeal and success. Both at home and in China a similar work of propaganda is being carried on at the present time with much devotion and energy.

Monasticism.—It is natural to compare and contrast the monastic principles and life of Buddhism with those of the Christian orders of the Early and Middle Ages in Europe. In the

the Indian view of life as a whole. By the Indian
life has ever been regarded as essentially evil, and
relief from the burden and sorrow of existence as
the chief and final goal. In many forms of Indian
discipline, especially the Buddhist, but also in that of
Hinduism, it was the ideal of the ascetic to reach
Gautama, this
end was to be achieved only in and through a monastic
dedication and life. It was impossible for the
layman, distracted by the cares and enumberaced by
the possessions of the world, to secure salvation.
Hence the great gurustitre to develop himself to the highest aim, and to win his way to deliverance (mokṣa [q.v.]).

A second respect in which historically Indian
monasticism in general has been distinguished
from Buddhist or Christian is the deficiency of
co-ordination or of a central control. The various
orders have been for the most part loosely organized,
and that from want not of organizing power but of
inclusion and will. The ideal of the Indian monk
or ascetic is not and never has been a fixed residence
and occupation, but rather freedom to wander at
pleasure, to visit the various sacred places and
ascetic communities of life and at time independently in all respects as seemed best to himself. Apparently the habits and methods of the
monastic life have undergone little change or development since the earliest ages. The mendicant
monastic life is not dependent on any one community of monks, has been the characteristic
feature of Indian religious life; and the monasteries
have served in a greater degree as lodging- or rest-
houses than for fixed and permanent habitation.
The earliest delineations of Indian social and religious life present the same features as are seen
in modern times—a large drifting population of mendicants and ascetics, who find only a temporary
home in these houses, and after a longer or shorter stay move on entirely as their own inclination
prompts.

The habitual practice of a life thus ordered
and determined is of extreme antiquity in India. It
would seem to be based essentially upon the Hindu
regulation of the four ashramas (q.v.), according to
which every Brahman towards the close of his
life must renounce the world and adopt the home-
less life and the ascetic garb. In reference to the
fore, no low-caste or out-caste man could become a monk, but only the twice-born. In practice, of
course, the wandering population is recruited from all castes; and many follow the life as an easy
cure for sin of gainfulness without the trouble to themselves. The ancient Indian custom,
familiar to Indian thought and in closest harmony
with Indian ideals, formed the model for the great
Buddhist and Jain communities of monks, and
gave to them precept and habit and rule. Only in
organization did the daughter communities go far
beyond anything that was developed in Hinduisim.
Here the preference for an independent and self-
regulated life proved itself the stronger, and broke
away from all attempts at a settled and established
order or government.

The Hindu monasteries, or 'maths' (Skr. matha),
are of variable size, providing accommodation
for only a few inmates. Except at the
important pilgrim centres, as Hardwar or Benares
(q.v.), where durable buildings of brick are found,
they are often little more than a collection of huts
and temporary court-yards. Permanent quarters are provided for the mathad, or presiding Abbot of the monastery and his resident
students. The remaining buildings are occupied
at the periodical festivals by the members of the
order to which the monastery belongs. Attached
are a temple or shrine for the service of the deity,
and in the larger monasteries at least a separate
dharmasthala, or rest-house, for the accommodation
of travellers. The term matha appears to have
been originally applied to the solitary practitioner religious recluse, and then to similar dwellings of
the communities of hermits living together in the
forest in the practices of austerities. Of such a
woodland hermitage an attractive description is
given in Kautilya's Arthasastra. These elements were
ultimately extended to include all more or less permanent homes or residences for the monks.

The maths exist in considerable numbers all over
India, but the monastics for the most part live a
retired life, keeping to themselves, and both they
and their homes are little known to outsiders or
Europeans. Each sect or monastic order has its
own maths, that of the founder of the order being
regarded as the chief. There is, however, no central
central control, nor any interference in the manage-
ment or affairs of another monastery. The older
monastic buildings are of the simplest character
and architecture. Later periods of growth and
development were erected, sometimes of more than one storey;

but they never compete in size or architectural pretensions with the great Buddhist vihāras.

When the latter faith died out in Bengal, some of its
monasteries passed over to Hinduism, and were appropriated for the use of Hindu monks.

To erect a monastery for the service of the
monks and wandering ascetics has always been
regarded as an act of religious merit. The matha is the gift of a generous Hindu layman, and of
such donors there has never been any lack in India.

In most instances an endowment for the upkeep of
the monastery is provided either at the time of
erection or by subsequent benefactions, and these
increase from time to time by the gifts of patrons
who endeavour thus to secure merit for themselves.
The individual monk is bound by a vow of poverty,
but the monasteries often become exceedingly
wealthy in revenue and lands. Since the monks
themselves do no manual labour, nor indeed work
of any kind, the lands are usually farmed out to
Hindu lay-proprietors. The management, however,
by the temptation, threatened by the lure of
revenues has sometimes been so definite that the
British Government has been compelled to inter-
ference, and take over temporarily the control of
the monastic estate.

The Hindu monk is known as gātīn, one who
curs his passions and has renounced the world, or
erōtin, the devotee who has taken upon himself
the vows of renunciation and consecration. The
former term is technical among the Jains also, but
is said to be regarded with disfavour. The nāṭikā
is the religious student, who engages himself
to remain with the guru as a pupil and disciple after
the close of the regular period of service as a brok-
āchārin. The titles yogā and mānnirikā are
more appropriate and more usually applied to the
wandering ascetic, without home or stated means
of livelihood. The former denotes the Hindu
ascetic and saint, who endeavours to attain union with God by the way of self-control and asceticism.
The mānnirikā has 'cast off' all worldly lettings and attachments, and is separated from all earthly wants or ties. Bhikṣu, beggar,' describes rather the ordinary lower
class. In the Pāli form of bhikkhu, it has become
the usual term for the Buddhist monk; Hindu
usage ordinarily gives the preference to other
names. All monks depend for their livelihood
solely upon the charitable gifts of the laity.

The daily round with the begging-bowl for doles of food
at the door of the Hindu householder is never
made in vain, and the flow of Indian charity and
in rough or hasty conduct. There is considerable difference between the sects in respect of the degree of ascetic self-denial or actual discomfort and pain which they voluntarily endure. Salvation marks, as a rule, more extreme in their manner of life and mortifications. Worship in those sects is of greater liberty and seldom, if ever, inflict upon themselves the prolonged bodily tortures by which the others seek to gain notoriety or accumulate merit. In all the monasteries of the chief Hindu festivals are observed with religious rites and free entertainment for visitors, and the introduction or appointment of a new abbot is attended with much ceremony. Of the routine details of the ordinary monastic life, however, little is known.

The Sikhs also have monasteries of their own and religious orders. The three principal are those of the Akalins, Nirmalins, and Udalsins (qq.v.). They vary in both their dress and manner of wearing the hair, some being shaved and others displaying the loose dishevelled locks of the typical sadhu. In one instance at least in a monastery visited by J. C. Oman the munhant wore robes differing from those of others. The same purpose is in view in the rule that a monk must not change his residence during Vassana, the season of the rains. Elsewhere it is provided that students, ascetics, and others shall be free from tolls and taxes; probably because, being separated from the world, their testimony with regard to its doings would necessarily be unreliable, nor do they inherit property. Penances also are prescribed for those who for successive days omit to go on the begging round or neglect their other duties. The oversight of the monastery and the responsibility for entertaining itinerant mendicants devolves, in general, upon the presiding elder or abbot (mathadhipati). Around him usually is gathered a band of young disciples, who are instructed by him in the Hindu scriptures and render him personal service in accordance with ancient immemorial custom. There is, however, no definite or fixed hierarchy or gradation of office. The inmates of the monastery are free to come or go or at their own will, and neither their movements nor their actions are in any way controls. They must wear the monastic garb, observe the vow of poverty, and depend entirely upon the bounty of others for their daily sustenance. Beyond these simple rules, the monks do as they please. The actual possessions which the monk or sannyasin carries with him vary to a slight degree with the sect to which he belongs. The essentials are the robes and a begging-bowl; to which are usually added a staff, water-pot, and rosary, a strainer, a pair of sandals, the materials for smoking and betel-chewing, and perhaps one or more vessels for carrying or cooking food.

The vow (vrita) which the ascetic or monk undertakes to observe is five in number: avoiding hurt to any living creature, truthfulness, abstinence from theft, self-restraint, and liberality (Skr. bhiktat, asteya, asteya, brahmacharya, tyaga). These have been the exception with the Jain, in the Jain and Buddhist systems. There are also five lesser vows: equanimity of mind, obedience to the guru, gentleness, cleanliness, and purity in eating. The third is explained as having reference to the agnivesa, and means being free from the agnic there. This itself is divided into three, corresponding to the five, and each established four orders of society within his system, each with its respective functions and rights: monks (bhikshus or sannyasis) and nuns (bhikshunis), laitymen (brahmans) and laywomen (brahmacharis). The four last-named distinctions are observed with the Jain and Buddhist, but not with the Brahman.

The five vows of the Jain monk are the same as those of the Brahman ascetic with the exception that the last-named is held a definite place in the Church by the side of the ecclesiastical order. The Diganthar, however, refuse to women the right to enter the order, and assert that they cannot attain salvation (moksa).

exception of the last, for which is substituted aparigraha, the renunciation of all desire, i.e. entire indifference. This word may also be used in the sense of non-attachment; and it is probable that this was the original meaning of the word in Hinduism, although it is now differently explained. A sixth vow is said to be undertaken by some of the monks, though there is no record of it in Buddhist text. The Jain layman is hardly less rigorous and careful than the monk. All Jain ascetics carry a piece of cloth to cover over their mouths lest they should cause injury when inhaling. The strictest sect of the Sthānakavāṣās (Dharmājīnā) wear the mouth-cloth always, by night as well as by day; the other sects are less scrupulous. These precautions against the taking of life do not bear all circumstances apply to the monk’s own life. When the twelve necessary years of asceticism have been passed, which every monk observes in imitation of the founder of his faith, religious suicide is not only innocent but an act of merit, and may be even a means of the god of the padminaras are said to have thus ended their lives by voluntary starvation, and the practice is reported to have been not infrequent in former times.

In addition to the mouth-cloth the Jain monk bears the usual begging-bowl, and a strainer for his drinking-water. The members of all sects carry also an instrument for sweeping the path before them, which in the case of the Digambaras is usually a peacock’s feather; the Svetāmbara and Sthānakavāṣās use a broom, of greater or lesser size. The head is shaved, and the two last-named sects wear the monastic robes of pieces of white or yellow colour. The Digambaras’ play-club) go unaltered.

These last are for the most part found in the south of India. All monks are subject to the vow of personal poverty, but it is said that in many instances this is evaded, even to the extent of carrying coins or bank-notes on their person.

The monastic life both of the monks and of the nuns is ordered on similar lines to the Buddhist. In the ordinary course the inmates of the monastery rise early, and after confession of the day, make known or unknown sins of the past night, and proceed to the temple for morning worship. This consists in meditation, bowing down before the idol with recitation of a sacred mantra, and in padminara, or circumambulation, which is performed four or seven times. About ten in the morning the round is made to beg for food. One monk, however, goes on behalf of all the inmates of the monastery; and in this respect Jain practice differs from Hindu or Buddhist. The food may not be eaten in the houses of the laity, but is brought back to the monastery and divided among all. According to rule the begging round should be made only once a day, but it is often repeated in the afternoon.

After returning confession is made to the guru before partaking of the morning meal. The hours from one to three are devoted to study; and, if an afternoon circuit is undertaken, as it is the morning, by confession. The second and last meal of the day is taken about sunset, and no monk is allowed to leave the monastery after dark.

Initiation (dikṣā) into the monastic order takes place at the hands of a priest after a year’s probation. The novice lays aside his lay garments and ornaments, and adopts the robes of a monk. Within the monastery itself three grades or orders are recognized, based upon seniority or the choice of the community. The ordination of sadhus, monks, or ascetics, of not less than thirty years’ standing, may be elected upādhyāyas, and it then becomes part of his duty to give instruction to the younger monks. Further powers of administration and discipline, including the right of excommunication, are the hands of the acharya, who is appointed on the ground of seniority, or for recognized knowledge and ability. Confession is usually made to the acharya. For the greater part of the year most of the monks itinerate from place to place. It is only during the rainy season and at the principal festival seasons that the monasteries are fully occupied.

of universal acceptability; it commands confidence that it will be promptly received by others without return. It measures the value of the services of labour; and wages as well as goods are estimated in terms of money. The value of goods, when expressed in money, is called their price.

The business of money-changing, of banking and finance, is large in the manipulation of the money in its various forms and of obligations—debts, credits, loans, etc.—expressed in terms of money. These claims are discharged either by the written order or by documents (notes, cheques, bills, etc.), i.e., by paper money, representing positive sums of metallic money and ultimately redeemable in standard coin.

The introduction of credit-instruments, as the paper substitutes for gold are called, is an extension of the money-function and a refinement upon the employment of metallic money. It is virtually a kind of return to barter; for, while it diminishes the use of coin, it simplifies exchanges and substitutes for payment in metal a promise on paper; this representative money becomes a valuable commodity and multiplies business by its convenience. Debts are set off against debts by means of credit-instruments, substituting promissory money for money that circulate quickly; they become a pecuniary currency of promises or claims that do temporary duty, and they are easily transmitted by post; thus they vastly facilitate the business of exchange. Term of credit implies that these instruments are promises, and they rest in the long run upon the recognized metallic basis—gold; therefore an adequate amount of gold must be accumulated and safely stored in order to give stability and confidence to the system.

In OT times money was always weighed (Gu 23:16). This was a necessary precaution in earlier periods, but in modern times the process of coinage, exercised as an exclusive function of the Government, confers absolute certainty, accuracy, and uniformity, and inspires confidence; the stamped coin carries with it evidence of the amount and value of the gold that it represents, while gold is the accepted standard of value. The subsidiary coins of silver and bronze are legal tender only within moderate limits, viz., two pounds in silver, and twelve pence in bronze in Great Britain; they are only token coinage, and do not correspond to their intrinsic value in metal, which is small. The value of gold, like that of other commodities, depends ultimately upon the law of supply and demand; the value varies with the amount available for market purposes, for large quantities of the precious metals are absorbed in the arts and personal ornaments.

The quantity theory of money—that the value varies inversely as the quantity—assumes that all exchanges are made in the standard coin, but the use of paper substitutes, while it does not nullify the abstract theory, introduces modifications too technical for detailed explanation in an article which is mainly descriptive. The system of substituting paper currency for the standard coin requires for security that such paper shall be convertible into gold on demand. To provide this most essential requisite an adequate cash reserve of gold must be maintained. This is one of the responsible functions of the Bank of England.

The management and control of the reserve are matters too intricate for present discussion. The excessive issue of inconvertible paper—i.e., of notes which cannot be met by gold on demand—has led many countries into great difficulties, and has frequently caused much loss and suffering. Paper money delased by over-issue drives out gold, raises confidence, raises prices, and produces financial disaster; business is checked, and the injury falls with peculiar severity upon the wage-receiving classes, who find that their wages paid in paper at such times fall greatly in buying power. There is no remedy but the re-issuance of the currency on a large number of interesting economic problems arise in connexion with the use of money; they are, however, too technical for present consideration, which is restricted to a general account of the nature and services of this useful instrument.

Money is a powerful factor in the spread of civilization, in advancing progress, in distributing the varied products of nature throughout the world. Money, in fact, ranks with roads, vehicles, beasts of burden, railways, steamships, posts, and telegraphs in the advancement of human material well-being. The oft-quoted passage, 'The love of money is the root of all evil,' is frequently misapplied as casting a slur upon money itself and upon those engaged in occupations concerned with its employment. The dictum was, however, intended as a condemnation of greed, selfishness, worldliness, and avarice in gain; its profound truth and seriousness renders it in no sense condemnatory of the use of money, which is of as great service to society in the distribution of products as a ship, a railway, or any other instrument subordinate to the service of man.

In many of the remarks of Jesus in the parables and in the gospel narratives reference is made to money in its ordinary uses; in all these cases its practical utility is taken for granted and its economic service is unquestioned.

G. ARMITAGE SMITH

MONGOLS. I. Ethnology and habitat.—Like the Ainu and the Dravidians (q.v.), the Mongols are a race distinctively Asiatic. They fall into three great divisions—Buruts (q.v.), Western Mongols (Kalmucks), and Eastern Mongols. The habitat of the Kalmucks extends from the Hoang-ho to the Manch (a tributary of the Don), their special centres being Astrakhan and the Causcasus, Zungaria, N. W. Mongolia, Alashan, N. Tibet, and the Chinese province of Kokonor. The Eastern Mongols inhabit chiefly Mongolia, the southern portion being divided into a number of tribes, such as the Tuots and Chakhars, while the northern section consists of the more homogeneous Khalkas.

The Mongolian type is best represented by the Kalmucks and the Khalkas:

1. Nearly average stature (lin. 65-66); head, sub-brachycephalic (chin, on their. sub. 35); black straight hair, small, puffy system a little developed; the skin of a pale-yellow or brownish hue, prominent cheek bones, thin straight flattened nose, Mongoloid eyes, etc. (J. Deniker, Races of Man, London, 1891, p. 51).

Another peculiar characteristic of this race is the "Mongolian spot," small dark patches of pigmentation, especially in the sacro-lumbar region, frequently observable in infants, but disappearing in early childhood. The "Mongolian spot" is not, however, restricted to the Mongols; it occurs sporadically elsewhere, instances having been noted, e.g., among the modern Indians of Mexico (cf. also Deniker, p. 51).

As a result of migrations, the Mongolian race has spread far beyond its original habitat. It has profoundly affected the Chinese (particularly in the north) and Japanese; in Bengal, in fact, the crossing of Mongoloid with Dravidian has been rise to the Mongolo-Dravidian type, and other "Mongoloid" types appear in the Himalaya region and in the Far East.

The chief Asiatic area occupied by non-Buriut
Mongols (Kalmucks, Khalkas, etc.) is bounded on the north by Siberia, on the south by China, on the west by Russian Turkestan and Chinese Turkestan, and on the east by Manchuria. It forms a high but depressed undulating plateau, roughly 2,500 feet in altitude, hemmed in by an immense double or triple range of foot-hills and mountains, known, together as the Hingan and Yinshan, on the one side, and by the Altai range on the other. Although the greater portion is Gobi (a Turki word), or 'Great (Desert) Expanse,' and is desert, there are still traces of forested mountains, known as the Hingan and Yinshan, on the one side, and by the Altai range on the other. The Altai range is a continuation of the Gobi Desert, and the Gobi Desert is a continuation of the Altai range. It is a vast, barren, treeless region, with a climate so severe that only hardy plants can survive. The soil is sandy and sterile, with little or no vegetation. The people of the Gobi Desert are nomadic herdsmen, living in tents made of animal hides and grass, and subsisting on the products of the steppe. They are skilled horsemen and have a strong culture, with a rich oral tradition. The Gobi Desert is one of the most remote and least populated regions of the world.
This is not the place to introduce a discussion on language and the term 'monism,' which is not one of the immediate descendants of the Jenghizid line. For the Mongoils, who joined the Manchus after nearly 200 years of warfare with China, they were never conquered, as the Khalkas and Kalmucks were some generations later. They have always been kindly treated by China, married to the Manchus, some of whose emperors have married pure Mongol women, recognizing them as legitimate empresses of China. When the Republic was founded, there was still more intimate class of Inner Mongols known as the 'herdmens,' who are not ruled by their own princes at all, but by the military governors at Tendue, Kalgan, and Jihol. The extramural area of which Kalgan (= the gate' in Mongol) is the governing centre is popularly known as Chakhar, a word derived from the leading tribe, called during the Ming dynasty Chakhar, or Chakharan. There are also the Mongols of Kokenor, descendants of a collateral branch of Jenghiz's family, with whom have been associated a number of Kalmuk tribes from the west; they also intermarry with the Manchus, but were not entitled, like the Inner Mongols, to style themselves 'cousin.' Besides these main divisions, there are the Tumet tribes of N. Shan Si, the Bargu, the Ulanghais, the Minggad, the Jakchin, and other od. known generally as Kalmuk type, which for convenience are grouped among the herdmens, and are under the administration of one or the other of the Manchus (now Chinese) tutungs, or military governors, from Uliassutai in the west to Jihol in the east. The Outer Mongols mainly consist of two races—the Khalkas and Kalmucks—between whom there were prolonged and bloody wars until the Manchus (also called the Khalkas) subdued the Inner Mongols and China itself reduced both to complete submission. Even after the ejection of the Jenghizid dynasty from China, when both classes of Mongols were thrust back upon their deserts, they frequently crossed the desert and fought incessantly between themselves, besides, separately or in union, making raids upon the Ming empire. The Khalka area is easily recognizable on any map because of the four (occasionally three) tribes or khanates into which they are divided. One of these, the Tushu, is known as the Tushu, Tsetsen, Jassaktu, and Saimong khanates; the last-named was carved out of the first, during the Ming dynasty, by the Dalai Lama of Tibet. This is again divided in two, the Western and the Eastern, ruled by the Dalai Lama. The Khalkas, on the other hand, are divided into over fifty tribes, scattered from the Yellow-haze at the expense of the Red. These four Khalka tribes, or khanates, were again subdivided into over eighty flags, or banners, but this arrangement was complicated by two of their banners having been incorporated with the Inner Mongols, whilst, on the other hand, three Kalmuk banners were incorporated with the Khalkas. The other two of the four Khalka khanates used to fall under the high political influence of the Mongol huluktu, or saint, at Urga, who had a Manchur resident to keep things right. A certain proportion of the Kalmuk race was moved to the neighbourhood of Lake Kokon after the Manchus conquest of 1658-54, and it then falls under the control of the Chinese military governor at Si- ning. These Mongol tribes are divided among themselves; the Kalmuks have their own local saints both in the west and at Kokonor, but the Khalkas, though stricken by almost hereditary enemies. Nor can the Khalkas easily coalesce with the 49 flags or 24 tribes of Inner Mongols. The latter represent the true historical Tata, as1

3. Its tendency to one-sidedness.-Its power of attraction, however, lasts only as long as we keep to the general outlines of the problem, and every attempt to give the idea a more precise application encounters great difficulties, and results in giving the preponderance to one or other of the two sides: either the physical becomes predominant, and the psychical a mere reflection or concomitant of it, or else the psychical is assigned the superior position and the physical becomes simply its outward expression or a means to its ends. Thus monism, inevitably breaks up into two forms—an idealistic and a naturalistic—and there never has been, nor can ever be, a perfect synthesis of them. As a whole mode of thought apparently permits each aspect to develop its own distinctive character, without severing it or keeping it apart from the other, it has proved remarkably attractive to the human mind.

4. Idealistic monism.-The classical period of German literature was dominated by an idealistic monism, and, in particular, Goethe gave his full adherence to the view. In the philosophy of the period, this type of idealism found powerful support in Schelling's philosophy of identity. Yet, while in art and philosophy, men thought the real to flow into the irreconcilable opposites of body and soul, of nature and spirit; and every system of thought must ultimately arrive at some kind of unity. In this sense Christianity itself is a monism—a spiritual monism—since it traces all reality back to the divine Spirit. In the philosophical realm, however, monism usually stands for the Spinozistic view, which recognizes an exact correspondence between inner Being and thought, and the invisible and the visible, and finds the same laws and forces to work in each, and interprets the order and connexion of thought as identical with the order and connexion of things (Spinoza, Eth. ii. prop. 7: 'ordo et connexio idearum ideam est ac ordo et connexio rerum'). This view has the advantage of providing a solution of the simplest kind for a problem which cost Spinoza's predecessors much trouble—the problem, namely, of the interaction of soul and body; for, on this theory, according to which the two series of facts proceed side by side quite independently, and yet remain ever in mutual harmony, there is no interaction at all, the specific data of each are simply being placed in a different relation to each other. Modern psychology, in following up this theory, has propounded the doctrine of 'psychophysical parallelism,' and strives to apply the doctrine to mental and emotional processes in a similar manner. As this whole mode of thought apparently permits each aspect to develop its own distinctive character, without severing it or keeping it apart from the other, it has proved remarkably attractive to the human mind.
MONOLATRY AND HENO THEISM

Nature now exercises a much more profound influence upon our thoughts and convictions than she formerly did. This does not, of course, lead necessarily to a naturalistic philosophy, nor was there any great danger of such an issue as long as high spiritual ends held sway among human beings and stimulated their devotion efforts. But such spiritual ends have been, if not entirely lost sight of, yet largely obscured, in the development of modern life; with regard to the ultimate questions of human existence mankind is now in a state of grave disorientation, and common effort has given place to widely divergent tendencies. Amid so much diversity regarding the content of the spiritual life, the longing for a single all-embracing theory of existence readily attracts men to the path of naturalism, which proffers what seems to be the simplest and most intelligible solution of the great problem. In reality, therefore, it is the defects of the opposite view that here lend strength to monism.

Another factor which—in Germany at least—operates in favor of naturalistic monism is found in the perplexities that have emerged in the province of religion and the Church. That religion at the present day bristles with problems, and that the minds of men are in the treatment of them, are facts that cannot be denied even by those for whom religion is a supreme interest. In Germany, however, the situation is greatly aggravated by a lack of interest in the Church and State, since in such circumstances the doctrines of religion readily come to be felt as a restraint imposed by the State upon thought; and, where large numbers are already alienated from religion, or in doubt regarding it, there is a natural tendency to look with sympathy upon movements that set forth with perfect candour the conflict of ideals, especially the conflict between natural science and the teaching of the Church, and seek to bring it to a decisive settlement. From this position the monist may regard himself as a champion of freedom and truth.

4. Its function and limitations.—When we have in this way explained the spread of naturalistic monism, we have at the same time shown its limitations. It possesses a certain power and has also a degree of rightful authority as long as it maintains a critical attitude and provides incentives to special tendencies of thought; and this condition is fulfilled when it insists upon a higher recognition of the natural factor in human life, and demands that the assured results of modern science shall not be looked down on in the name of religion. Its weakness, again, shows itself in the positive aspect of its work, and in its claim to serve as a guide to human life and to satisfy the human soul. For such ends it has, in truth, nothing to offer but an intellectual interpretation of things—an interpretation which parrots, by improving our conceptions of nature and by showing that man forms part of nature, to be able to supply the human heart with powerful impulses, and yet it continues to be the task of belief. But between ends and means, between claim and achievement, there is a wide disparity. The scientific procedure of monism, moreover, suffers from the defect of confounding natural science with the philosophy of nature, and of too mechanically transforming the results of natural science into principles of the cosmos, while giving no recognition at all to the peculiar character of spiritual life or the nature of universal life. But, whatever judgment we may pass upon naturalistic monism, it is certainly a notable feature of the present day.

MONKEY.—See ANIMALS.

MONOLATRY AND HENOTHEISM.—A whole group of words, some of them classical, are compounded with monos as a prefix. Ecclesiastical usage added not a few others—e.g. 'monogamy,' 'marriage only' once, re-marriage after the death of one's wife being forbidden. 'Monophysite,' 'Monothelites.' To these was added, in modern times, 'monothelmism' (q.v.); this term was touched with ambiguity, since it was sometimes a synonym for unitarianism. Last of all, apparently by Julius Wellhausen, 'monolatry' was coined to express not belief in the sole existence of one god, but restriction of worship to one object of trust and loyalty, although other races might admittedly have other superstitions.

If the first half of the word shows it to be akin to monothelism, its affinities on the other side are with idolatry (see IMAGES AND IDOLS). Christian usage, from the 5th onwards, conveyed the idea of identifying a god with an image, or of regarding an image as the only proper object of worship. This notion had a long career, and many monotheists, both Scholastic and modern, have found it unscientific, and descriptive of a kind of idolatry.

Unhappily, there is another term which habitually presents itself as a synonym for monolatry and as a rival—henothism. This word was coined by P. Max Müller while under the influence of Schelling. In a review of Renan, entitled 'Septic Monothelism,' and contributed to the Times in 1860 (reprinted in Chives from a German Workshop, i. [1887], and again in Selected Essays, ii. [1881]), Müller, while repudiating Renan's theory of a monothelistic instinct peculiar to the Semites, and wishing to engage the search for the true religion a crude or vague faith in the divine, not yet articulated either into polytheism or into monothelism, calls this 'henothism.' As thus defined on its first emergence, henothism is a hypothetical conception, belonging to a period earlier than recorded history. E. von Hartmann is fairly in line with this when he speaks of henothism as 'the original nature-religion'; as the 'indifference of mono-polys-' or 'polytheism'; as the 'identity of essence of all the gods.'

Much greater importance, however, attaches to Müller's later usage, introduced in a 'Lecture on the Vedas' of 1855 (also reprinted in Chives, i. and Essays, ii. [1860]), and consisting of a pair of synonymous terms—'henothism' and 'maximalistic monolatry—which refer to a well-marked historical phenomenon. Study of the Vedas has impressed Müller with the vast differences in the world by which each deity, out of a large recognized pantheon, is lifted in turn as if the supreme or even the sole god. While the Indian religion offers the classical illustration of

1 T. H. Huxley (Nineteenth Century, xix. 1885 p. 495) is quoted by Dr. J. A. F. Sedley, On the Study of Nature, [1885], in the Quarterly Journal of Education, Edinburgh, 1881, p. 372; 'naturalism,' 'Semitic monotheism,'
of our attitude. Faith is choice of God and a pouring out of our humble all in His service.

MONOPHYSITISM.—I. Before the Monophysites.—The name 'Monophysites,' as denoting a party in the Christian Church, ought in strict usage to be applied only to those who adhered to an erroneous dogma. The doctrine, formally formulated by the Synod of Chalcedon (A.D. 451), i.e. the doctrine of the two natures (Δύο φύσεων), divine and human, in the person (όντως τούτους) of Jesus Christ, who was in the eyes of the Church the one nature of the incarnate Word of God ('μιας φύσεως τοῦ θεοῦ λόγος σωκρέατευμένος). The doctrine of the single nature of Christ, however, did not then establish itself for a long time, and we begin by narrating the history of Monophysitism prior to the rise of the Monophysites proper.

The term μιας φύσεως is first found among the Arians (see art. ARIANISM, vol. i. p. 775 ff.), Lucian of Antioch and his followers held both a dual, divine or, more properly, semi-divine nature (φύσις or θεοφύσις, the two terms not being as yet distinguished) of the Logos, in which it had in him the ability to suffer (τάραξ) and limited knowledge (γνώσις) of the Logos. Eudoxius of Constantinople († A.D. 397) acknowledged the Word made flesh but not become man (ταύτου κατηγορημένος, ἐπὶ ἐκκαθαρισθητευμένος), who had not assumed a human soul, but became flesh in order to manifest Himself to us as a man. The formula μιας φύσεως, since the Word was not man in the full sense (τάραξ ἡμών), but God in the flesh (εστὼ κατατεθέν), i.e. viewed as a whole, a composite nature (μιας τοῦ Διαν κατ ὄντως φύσεως). Apollinaris of Laodicea (see art. APOLLINARISM, vol. i. p. 606 ff.) expressed himself in similar terms, though in a line of thought directly contrary to that of Arianism. It was his firm conviction that the perfect God (θεὸς Θεός) had descended upon the earth, and in this belief he felt that he was at one with the Nicenes as opposed to the Arians; but no less decisively he maintained also that Christ had become a unity (δύο τύπως καὶ γενετός ὁ δύον), and thus that the union of perfect deity with complete manhood is impossible (εἰ δήσιτον τοιαύτην συμβεβληθήσεται τέλεως Γούστου, ἐπί τός καταρακτέος). Hence Apollinaris, writing to the emperor Jovian, expressed himself as follows:

We acknowledge, not two natures in the one Son, one worshiped and the other not worshiped (μιας ἔκκαθαρισμον καὶ μιας ἐκκαθαρισμον), but one nature of the Divine Word (μιας φύσεως τοῦ θεοῦ λόγος), incarnate, and worshipped together with His flesh in one worship (ἐν ἕνῳ ἐκκαθαρισμῷ καὶ ἐκκαθαρισμῷ μετὰ τοῦ σώματος αὐτοῦ μιας ἔκκαθαρισμον). (Πατριακὸς άποστολής τοῦ Βασιλείου Σελείρου, τὸν Καθημερινήν, τοῦ Απολλιναρίου Λαόδεικα, τοῦ τοῦ 397), vol. 3, p. 841; H. Lietemann, 'Apollinaris von Laodicea und seine Schule,' TU i. (1904) 1, p. 390).

This, however, involves a deification of the flesh and it is but a short step to the inference that all the conditions which rendered the Logos liable to suffering during His earthly course are in the flesh brought into connexion with the divine nature (ναυπηγείς ἐν τῶ θεῷ δόξῃ).

For a time Christianity itself was in danger of surrendering to this illusory logic, as far as the case, e.g. when it undertook the task of coming to terms with the Antiochene school (see art. ANTIOCHENIAN THEOLOGY). But the Christological interest of the Antiochenes, in contradiction to that of the Apollinarists, culminated in the view that a perfect humanity was retained along with perfect deity in Christ. These theologians, accordingly, spoke of two natures (Δύο...
phœra or the brotarchia) in the one Christ — since for their conceptions, too, phœra and entphasis were equivalent terms. But the Christian Church, in reality, theologized the unity of His person. Their leading opponent, Cyril of Alexandria, was supremely concerned to maintain this unity, but he did it only by leaving out of account every element of human personalitv. Secondly, the Church, to which it was assumed that two natures, the divine and the human, existed in Christ before He became man, and that at His becoming man these two natures were yet in an indissoluble unity (συνοότης), and could thus be distinguished only in theory (τονον in). To denote this divine-human nature Cyril likewise availed himself of the formula μα ϕœra τοι τοιο τὸν Λόγον και πληθυντα, he borrowed it from a confessional work of Apollinaris — the Πηγὴ τῆς σωρότητος τοι τοιο λόγον (cf. ELLE I. 608), of which, it is true, he believed that Athanasius was the author. We can see how closely he approaches Apollinaris at this point. The Alexandrian, nevertheless, did not proceed to the conclusions drawn by the Laodicene, who rejected the view that the Saviour had been a cored union of the divine and the human. To Cyril the formula remained a religious postulate, and he used all the resources of an artificial logic to give it also a theological validity. Henceforth, the phœra is no longer simply as a cored; the divine—human nature, however, is something new in relation both to the divine nature and to human nature, and the properties of these, viz. sovereign majesty and possibility respectively, may be in mutual communication in Christ, without forcing us to assume that there is any blending of them. In this way, accordingly, two natures go to form one (κλιον τῆς μα ϕœra or δυνατα). To follow such intricate theories was a task beyond the power of simple and unlearned minds. It is true that, of the subtleties of Cyril's discriminative logic, Eutyches, the aged archimandrite of a monastery near Constantinople, had come to a knowledge of the idea expressed in the phrase μετὰ τῆς σωρότητος μα ϕœra, but precisely on that ground he would not grant that Christ's bodily form was identical in character with the human (ἀνασχηματος ψυχῆς); at the local Synod of Constantinople in 448, addressing the (tribes) of bishops, he denied μα ϕœra τοι τοιο λόγον και πληθυντα; and, although, in the course of the proceedings he further modified his statements, he was condemned on the grounds of his previous Doctrinal pronouncements which he could not conceal (see art. Docrism, vol. iv. p. 832 ff.). Thenceforward, in the memory of the Church the name of Eutyches was one of reproach, and Eutychianism was stigmatized as heresy. Another group who would not renounce the idea of μα ϕœra μετὰ τῆς σωρότητος were those who in their deepest hearts assented to the formula μα ϕœra τοι τοιο λόγον και πληθυντα defended by Cyril. For though it served to ease the situation that a distinction was now being made between the terms ϕœra and δυνατα. This distinction, in fact, soon came to be quite as important as that between ϕœra and εγκαθίδρυτον in the doctrine of the Trinity. In the development of that doctrine the latter distinction had served to make intelligible how three divine persons (brotarchia) could participate equally in the divine being (ϕœra) and, in like manner it was thought possible to explain how two natures (ϕœra), the divine and the human, could equally inhere in one person (δυνατα), viz. Jesus Christ.

The theologians of the West, from the days of Tertullian onwards, have been accustomed to speak of the 'duplex status, non confusus, sed coniunctus in una persona, deus et homo Jesus.' What they called natura (substantia) found an equivalent expression in ϕœra, and personae could be rendered by δυνατα. In reality, the solution of the problem seemed to be that formulated by Pope Leo in his letter to Flavian of Constantiopolis (dated 449); the so-called Τύποι Αιτών, Ep. xxviii., 'ad Flavianum') as follows:

'Salva propriostat utrasque natura et substantiae et in unam cunctas personam suscepit est secundum humanitas, a virtute inferiormi a virtute inferioribus propterea concordantiae, quod proprium est... proprie humani unitatem personae in utrasque natura intelligendum et Filium hominis dicere desiderat et quin et versus Filium Dei certitudine dictur et supellet' (PL liv. 735 ff).

What was subsequently termed the communicatio idiomatum (ερατος ου χριστου) thus already finds clear expression in Leo's words. Nevertheless Gibbon is quite right in saying:

'Non vulnerum sive lacerationis line drawn betwixt the heresy of Apollinarianism and the theist of St. Cyril; and the need to paradigm, a bridge as secure as a razor, was suspended over the abyss by the master-hand of the theological artist' (Decline and Fall of the Roman Empire, v. 130).

In point of fact, while Western theology thus avoided the extreme of Apollinarism, it was menaced by the spectre of the Antiochene peril. Here too it could be said: 'nec aliquid in Skylitzew qui vulgat vitare possidemus, quod aliud potius nisi solummodo ct oporteat doctrinre two the natures in one person (Dyophystism, or, grammatically more correct, Diphyysis), not only failed to compose perturbed minds, but actually fanned the latent elements of controversy into flame. In this controversy the disputants, moving on the lines of Cyril (and Apollinaris), went back to the watch-word μα ϕœra; now, however, they spoke, not of the one incarnate nature of the divine Word, but of the one nature of the incarnate word (σωροτητος, not σωροτητος), the intention being to indicate decisively that the point involved was not μα ϕœra merely μετὰ τῆς σωρότητος. We now proceed to trace the history of this Monophysitism properly so called.

2. The Council of Chalcedon and its results.— After Cyril's death in 444 the episcopal throne of Alexandria was occupied by Dioscorus, a man of distinguished theological learning and possessed with a more daring ambition than even his predecessor. His great aim was to secure the supremacy of Alexandria, and the Alexandrian theology, in the Eastern Church, and, as long as he had the ear of the emperor, this did not check his claims, he seemed to be on the fair way to attain his end. At his instigation Theodosius II. summoned a general Synod to meet in Ephesus in 449 (shortly afterwards occasioned by the death of the Bishop of Chalcedon, Justinus, after whom the Synod was named 'the Robber Synod'). Here, with the assistance of the civil power, and the physical violence of fanatical Egyptian monks, he succeeded in giving full effect to his claims; and, while Eutyches, so jealously protected by Dioscorus, was restored to the communion of the Church, Flavian of Constantinople, Dominus of Antioch, and Theodoret of Cyrus were deposed. The triumph of Dioscorus, however, was but short-lived, for not only did he damage his case by his ruthless dealings, but he committed the blunder of irritating Leo by refusing, in spite of the protest of the Roman legate, to have the Epistula ad Florinianam read. At this, Leo II. sent an appeal, and the Synod of 451 was a swift revulsion. The emperor died on 28th July 450, and his sister Pulcheria, the moving spirit of the administration, had even before his death come to recognize that the transference of the ecclesiastical centre of power from Constantinople to Alexandria, and the consequent liberation of the Church from political control, might be attended with the gravest consequences. As empress, with the acquiescence of her husband, the military commander Marcian, who was little interested in ecclesiastical or doctrinal affairs, she actively pro-
noted a plan of co-operating with Leo to put an end to the theological dispute at a great assembly of the Church and thus to restore the ecclesiastical balance in the East.

To achieve this desirable end was the task of the fifth Ecumenical Council, held in 451 at Chalcedon in the vicinity of Byzantium. The deposition of Dioscurus, as it could quite well be justified on grounds of ecclesiastical polity, was effected without difficulty. The demand that Leo's doctrinal letter should be accorded the authority of a symbol, however, was resisted with the utmost tenacity by a majority of the members. After protracted discussions the Council at length agreed—not, indeed, without misgivings from the throne—upon a formula designed to make for reconciliation, although, as a matter of fact, it involved, in its most decisive passage, a rejection of the Cyrillian tradition. The formula, which was carried on 22nd Oct. 451, starts from a recognition of the Councils of Nicaea (325), Constantinople (381), and Ephesus (431), and reproduces the Nicene and the so-called Niceno-Constantinopolitan creed; it then affirms that Cyril's epistles to Nestorius and the Orientals, as well as Leo's Epistle to Flavian, have been adopted as attestations of the true faith. It next proceeds to the confession of belief in Jesus Christ as perfect God and perfect man, consubstantial with the Father according to His deity, consubstantial with us according to His humanity, in two natures (ἐν δύο φύσεωι, οὐδὲ ἐν δύο φύσεωι as in portions of the literary tradition), without confusion or change, without division or separation (ἁμαρτίαν, αὐτοτροπίαν, αὐτόπτωσις). The confession ends with a statement already quoted from Leo's letter, now rendered as follows:

εἰς τὸν Θεὸν ἐν δύο φύσεωι ἐνδοχρισθηκόντα δι' ἀναστάσιν, συμπαρακλητὸς τῶν ἑαυτοῦ τεκνών τιμίων φύσεων καὶ τῶν προκόπων καὶ πάντων ἅπαντων καὶ υποτασίως κατακλημένος.

A decree, promulgated (7th Feb. 452) by the two emperors Marcian and Valentinian III., imposed severe penalties on all who should henceforth dispute in public regarding the faith; offending clergy and army officers should be deprived respectively of their priestly and military status, and others proceeded against by law. Dioscurus was exiled to Gangra in Paphlagonia, where he died in 454.

The results of the Council were not long in manifesting themselves. In Palestine an active revolt broke out among the monks. Juvenal, a monk of Beth-Semes, who had become prominent at Ephesus (449) as an energetic partisan of Dioscurus, had at Chalcedon, in fear of a diminution of his ecclesiastical power, deserted the Alexandrian and his protege Eutyches, and had also accepted the formula, taking part, indeed, in its final revision. By this defection he lost the confidence of a large and influential body of monks in Palestine, who elected the monk Theodosius as bishop in opposition to him. The spiritual leader of the insurgents was Peter the Ierarcho, monk and bishop of Mayora, the port of Gaza. The rebellious monks found a patroness in high rank in the empress Euphemia, then resident in Jerusalem. It is told of one of these fanatics that, when Leo's Epistle was brought to him, he took it to the tombs of the Fathers and asked whether he should accept it or not, and that a voice cried from the tomb:

"Thou be not the unworthy Leo, robber of souls, as his name signifies; cursed be his profane Tomeus; cursed be also Marcellus and the unpious Ephesians; Simon and all who yield acceptance to it; cursed be he who acknowledges two natures in Christ, the Son of God, and the Holy Spirit." (Jubilæum patriarcharum Alexandrinorum Jacobitam, Paris, 1718, p. 129.)

This wild outburst of hate expresses most appositely the state of feeling then prevalent in Palestine.

By A.D. 453, however, the movement was suppressed for the time by military measures.

In Egypt the situation was still more troublesome. A certainProterius was forcibly thrust by the government upon the Alexandrians as bishop in place of Dioscurus. On the accession of the emperor Leo I. (457-474), the presbyter Theodotus Aelurus (i.e., the Weasel), who had been in friendly terms with Cyril and was known as a rigid Monophysite, was raised to the episcopal throne by methods of sheer violence. At Easter, 457, Proterius was murdered by the populace at the baptism of the cathedral church. While Timotheus purged the Egyptian sees of Diphysites, and pronounced the anathema upon Chalcedon ('the Synod,' as it now comes to be called in the sources). Timotheus held his position until 464 when, after fierce conflicts, he was driven from Alexandria and banished to Gangra; he was subsequently sent to Cherson, and there devoted himself to the composition of a 'Refutation of the doctrine laid down at the Synod of Chalcedon,' a work which, however recently (1908) came to light in an Armenian translation.

The patriarchate of Dioscorus was likewise kept in a state of unrest by long protracted dissensions. Here the presbyter Petrus Fullo (Psuedis, 'the Fuller'), who in no long time supplanted Bishop Martyrus, zealously opposed the teaching of the Council, and contended for the doctrine that God had been crucified (ἔγερσις τοῦ ἐγγέρσιον). To the liturgy he added the singing of the Trisagion (v. 6) supplemented by the phrase ἄρα διακόπηκεν δὲ ἡ ἡμέρα; and he also introduced the 'Credo' (the Nicene) into the Mass, probably with a view to emphasizing his opposition to the Chalcedonian formulary, but, however, to Eutychianism. But his tenure of the see did not last long, for in 471 the emperor Leo ordered him to be deposed. The imperial government thus found itself confronted by a serious task. On the one hand, it was a matter of urgency to preserve unity between East and West, between Byzantium and Rome, and this could be done only if there was no deflexion from the lines marked out at Chalcedon; on the other, those in the East whose dissatisfaction and resentment were due to the Council had to be restrained, pacified, and, if possible, reconciled to what had been done. The emperors Zeno (474-491) and Anastasius (491-518) exerted all their energies to establish ecclesiastical equilibrium in the East, but they failed altogether in the task of maintaining peace with Rome at the same time. A proceeding of signal importance was the attempt of Zeno (493) to gain a new formulary, the so-called Henotikon, in place of the Chalcedonian symbol. The Henotikon was designed to give emphatic expression to what was common to all parties, and accordingly it recognized the Councils of Nicaea, Constantinople, and Ephesus as witnesses to the faith, disclaimed Nestorius and Eutyches, and condemned every one who 'now or ever, at Chalcedon or elsewhere, thought or otherwise.' The formula expressed the doctrine of the natures of Christ were pressing the doctrine of the natures of Christ was adroitly kept in the background, so that every cause of offence might be removed. In spite of all, however, the project of the emperor failed of complete success. It is true that Cæcilius, the court-patriarch of Constantinople, and Petrus Magnus (i.e. 'the Stammerer'), who now occupied the episcopal chair of Alexandria instead of Timotheus Aelurus, worked straightforwardly for the measure, but the policy of reconciliation was repudiated by the uncompromising Monophysites, especially in Egypt, where the extremists (ἀναπτύχτων) actually severed themselves from the rest of their party. On the other hand, the convinced Diphysites, including the Acacius
MONOPHYSITISM

The view of the Monophysites regarding the historical problem were by no means homogeneous. The one point in which the sect were unanimous was their opposition to Leo's Tome and the symbol of Chalcedon—that is, the fusion of the two natures, as Zacharias Rhetor called it. Only a few of them drew from the doctrine of the one nature the Docetic inference of Apollinaris or even of Eutyches. The majority tried to keep to the lines marked out in the theology of Cyril. This was the case, e.g., with Timotheus Aelurus, and, above all, with Severus of Antioch, eclesiastically the most influential, and theologically the most outstanding, champion of the Monophysite, while Julian of Haldar and Philoxenus of Hierapolis were more extreme in their views.

Severus, born c. 650 at Scousolus in Paphlagonia, was the grandson of a bishop and the son of a town-councillor. He studied grammar and rhetoric at Alexandria and law in Beirut. While at Alexandria he had been in touch with Nestorian circles (Churchianizes), but was converted through the influence of John of Ephesus, a Monophysite Scholastic, subsequently his biographer, in Beirut. He was baptized, and gave himself devotedly to Monophysitism. In a short while he joined the monks of Peter the Hermit in the monastery at Maryan; for a time he lived as a hermit in the Desert of Eleutheropolis, and afterwards bars his hermitage, which he had begun to make a monastery, to the monks who were being persecuted for their Monophysite principles. In the court of Anastasius he laboured for the propagation of the principles of the Monophysites. At the expiration of his three years he was raised, despite the opposition of the suffragan bishops, to the patriarchal chair of Antioch. He died in 672, and his body was translated to the monastery of Tyre (515; cf. 15) marks the summit of his work as an eclesiastic. He was very active in the organisation of his diocese, and was most willing to preach either within or outside the limits of his episcopal city. At the accession of Justin (Sept. 619), however, he was driven from his see, and fled to Alexandria. Considerably later, the administration of Justinian seems to have opened a period of further ecclesiastical activity for Severus, who expected that the conference in Constantinople 649 would set the seal of success upon his efforts. But the fall of Anthimus (649) brought disaster. Severus was excommunicated in 656, and withdrew to the desert country south of Alexandria. He died in 672, on the Sebennitic arm of the Nile, probably on 8th February 656 (see 543).

Of his numerous writings all that has come down to us in Greek is fragments in Catenae and anthologies. There are, however, Syriac translations of his works of Anthimus, bishop of Edessa, and others. Of his exegetical and doctrinal writings many may be mentioned: the Exposition of the Gospel of John; other writings worthy of note are his Synopsis of the Epistles of Peter and John (3 vols., Paris, 1664); his Letters to the Christians of the Orient, ed. F. Duval and others in the Patrologiae Orientalis, Paris, 1897; his Exposition on the letters of St. John, ed. W. Brooks, London, 1902-04), and his hymns (the so-called Hymnologia, ed. W. Brooks, Patrologiae Orientalis, 1910; cf. also art. Hymnia [Greek Christian], vol. vii. p. 336). Philoxenus, whose native name was Eusebios, was a student of Athanasius while he was bishop of Alexandria. From Eusebios he was inducted into the church, where his ascetic and intellectual virtues attracted much attention. It does not appear that he ever incurred any suspicion of heresy. From Eusebios he went to Antioch, where his advanced writings were read with admiration, and he was filially deacon over the same period of time when Flavian of Antioch, who was an adherent of Chalcedonian views, held office. Filoeus was summoned as the spokesman of the Monophysite party in the patriarchate; in short, however, he was thrown into the background by Severus. Like the latter, he was eventually exiled (631 or 635), being sent first to Thrace, and then to GANGA in Paphlagonia, where, perhaps, he died in 655. He ranks as one of the most eminent of Syrian writers, though most of his works still dormit in the British Museum and other libraries of those that have been published the most important is the Homilies on Christian Doctrine (tr. E. A. W. Brooke, London, 1834-40).

Our knowledge of Julian rests upon very meagre data. The date of his birth is unknown. While he was bishop of Caria, he was concerned in the intrigues which led to the downfall of Macedonius, patriarch of Constantinople, in 601. He was himself expelled from his bishopric in 616, and took up residence in the monastery of Ebalon, outside the gates of Alexandria. Here he was enrobed in the monastery of Ebalon, outside the gates of Alexandria. Here he was enrobed in the mysteries of grace. He was commissioned by Severus (see below), who was then resident in that city, and this resulted in a tempest of war within the city. At the death of the Monophysite patriarch Timotheus in 630, Julian were able to secure the chair for their candidate, Gaius, in place of the regular的选择 Theodore, and Theodosian and Gaius were soon involved in a bitter strife. Of Julian's later fortunes we have no knowledge, nor, indeed, can we say definitely whether he died in 652, as the second time, the ban was pronounced upon him at Constance in 656. Of his writings we still possess a number of letters from his correspondence with Severus, and a Commentary on Job, transmitted in a Latin translation, and wrongly ascribed to Origines.

It was far from the minds of Severus and those who shared his views to argue for a fusion of the divine and the human in the person of Christ. Their insistence was upon the singleness of Christ's nature after the Incarnation rested upon their conviction that the hypostatic union of the two natures necessarily implied two subjects or individuals. What they found specially objectionable was the inference drawn from Leo's letter from the perniciously distinct character of each nature—the inference, namely, that in the unity of Christ's person each nature, while no doubt in communication with the other, maintains its own distinctive function. According to the Monophysites, the theory that ascribed to each of the two natures a distinct mode of action (συμφύσια)
MONOPHYSITISM

divided the one Christ into two πνεύματα, since no nature could possibly assert itself (ἐπηγείρετο) that did not remain self-subsistent (ὑπερσώματον); the hypostatic distinction being that of two εὐγενεῖα, and so to the abhorred heresy of Nestorius. In conformity with the position of Cyril, and with a mode of expression first met with in the full text of the Apanagirite, viz. ἀφετέρων θεῷ and Ηs κύριo διακονεῖται ἐν θεῷ (cf. art. MONOHELETISM, § 1, p. 829), Severus took as the basis of his speculations the inherently complete divine nature and person of the Logos. This, with the absence of any hint that this divine flesh was animated by rationality—becomes flesh and man, and, as man, is born of woman, but still remains, even as He had been, One, since, in virtue of such an indissoluble union, and without detriment to His inherent character, He transmutes and transfigures the flesh with His own glory and power. The united elements thus form a composite nature and a divine-human hypostasis, and it is to this that all His activities are to be traced.

The thesis that the body of Christ was subject to the laws of nature was deemed of the utmost importance by the Severians and Theodasians. To Julian and his followers it was simply inconceivable that Christ's body had been subject to corruption (φθάναν), which has been a characteristic of human nature since the Fall. In order to understand the precise usage of this term in the present connection, we must note that the term ἁρμόνιον, which denotes the complete dissolution of the body into its elements at death; all parties were at one in asserting that Christ's body was not subject to φθάναν in that sense, i.e. as decomposition. The question at issue here had to do with the natural infirmities of the human body (ἀνάθεσις ἁρμονίου) — its liability to hunger, thirst, weariness, sweating, weeping, bleeding, and the like. The view of Julian, Philoxenus, and the Gaianites was that, while Christ certainly languered and thirsted, it was because He desired, not because He required (οὐ διδάσκει πλήρως), to do so — because, in short, He had the divine nature (ὡς... ἡμεῖς... ἄνθρωποι). He had voluntarily taken upon Himself human pains and needs. He was the Son of man, as man was before the Fall, while all other men, though sons of Adam too, were possessed of a body and a soul of a nature that was due to the fall of Adam's fall.

We are thus able to understand the heretical designations applied by the warring Monophysite parties to one another. The Julianists or Gaianites charged their opponents with phthisiacal or pithicidal, the worship of the incorruptible. These 'apharistocritics' or 'phantasistae,' i.e. those who would change the reality of Christ's human experience into a mere appearance. As a matter of fact, the latter view was quite a natural inference, and many of the extremists were led astray by it. The most extravagant view seems to have been reached by those Gaianites who asserted that the body of Christ, from the moment of its union with the Logos, should be regarded not only as uncorrupt (ἀπράξεως) but also as uncreated (ἀπαράγεος). These were stigmatized as those who had no concept of the Logos, and in this, they called 'naturalizers,' i.e. 'worshippers of that which was created.' Divisions arose even among the Severians themselves. There was, a decree, taken at the Synod of Sardica, opposing Sev. 14 to Jn 11, maintained that, as the body of Christ was subject to natural conditions, so its animating spirit could not be regarded as omniscient. To the adherence of this doctrine by the opponents applied the name 'agnostes.'

4. Justinian and Theodora.—On 1st August 527 Justinian became sole emperor of Rome. It does not fall to us here to set forth fully his far-reaching ecclesiastical policy in its transforming effect upon all things. The decisive factor in his attitude was his recognition of the Roman chair as the supreme tribunal of the Church, though this did not prevent him, after his victory over the Goths, from giving the emperors a virtual autocratic power. The defection of the Eastern Church gave the imperial ecclesiastical many an anxious hour. He soon came to recognize that his persecution of the Monophysites (see § 2 at end) had been a great error. Little as he might wish to displace once more the orthodoxy now officially recognized, he could hardly help desiring to reconcile the Monophysites, especially as the empress Theodora was working with growing fervour for the rehabilitation of the party with which she sympathized in her devout moods. A few years after Justinian's accession to the throne, accordingly, negotiations were opened with the insurgents, and the most important of these took place in 518—519, however, including Severus — were summoned to Constantinople, where, it was hoped, they would be won over at a religious conference. In this conference of the orthodox side, only such theologians were to take part as unequivocally accepted the thesis that one of the Trinity had suffered in the flesh (ἐν τῷ τριάδος των υιονωνείς σῴζετ). This Thesparchic formula was manifestly a friendly overture to the Monophysites. But the 'Collatio cum Severians' (553 (or 531)), after two days of verbal controversy, came to nothing. On 15th May 533 Justinian issued an enactment in which he once more declared Chalcedon to be a standard of faith co-ordinate with the three earlier councils. The negotiations with the Monophysites were, nevertheless, still proceeding, and communications were now opened with Severus as well. Severus, yielding to reiterated pressure, went at length to the capital, where in 535 Anthius, a protege of the empress Theodora and a theological partisan of Severus himself, had been raised to the episcopate of Tyre. But the interlude was not of long duration. In the following year (558) Pope Agapetus was able so to influence the emperor that the doctrinally suspect patriarch was superseded by the orthodox Menas. It is nevertheless the case that, during the entire reign of Justinian, the Monophysites largely maintained their position at the court, while in Syria and Egypt their ecclesiastical power was supreme (cf. § 5).

Justinian himself made zealous efforts to comprehend the points of the doctrinal controversy. His great aim was to reconcile the teaching of Cyril and the Symbol of Chalcedon. In this the Greek found effective support in that most eminent of his theologians, Leontius of Byzantium († 543 as a monk in Palestine), who, in his Εὐθυμίος τοῦ Σεβ. προφητεύουν τον ποιητὴν ἐνοτέρων, καθα τε παντών καὶ Ἑυλογίαν ἐν θεῷ καὶ τοῦ ἀνθρώπου, and other writings, was renowned as a prolific author and an able assailant of the Severian Christology. The theory of Leontius is based wholly upon the Aristotelian logic. A novel feature of it, however, was his ingenious application of the idea that the ἐσωτερική of Christ's human nature was ἐπὶ τῷ λόγῳ, so that that nature was not δικαιοσύνη, but ἐνθυσία, 'enhypostasis' operated like a spell. It seemed to obviate in the happiest way all the difficulties that beset the doctrine of the God-man. By its means the Chalcedonian Symbol was brought into complete violation of its actual words, but interpreted in the sense of
MONOPHYSITISM

Cyril's doctrine. It was nevertheless the use of this expression that led to the introduction of schismatical views into the Byzantine theology.

Justinian died in 565. Under his successors the Monophysite sect lost ground, the city and diocese of Constantinople had much to bear, and their harsh experiences had been graphically described by John of Ephesus, himself a Monophysite, in his Church History. Negotiations for a union of the warring factions by true and false Monophysites, were never resumed, but were foredoomed to failure by the circumstances that the ecclesiastics of the imperial court would not surrender the understanding with Rome, while the Monophysites regarded that understanding as the root of all evil. The consequence was that in the course of the 6th cent. the Monophysite communities in the Byzantine patriarchates were destroyed one after another. The Churches of Egypt and Anaphotian provinces, on the other hand, remained quite invulnerable to the ecclesiastical influence of the capital, and the severance of the purely Monophysite communion from the Catholic Church became ever the more complete.

5. The independence of the Monophysite churches.

The Monophysites of Syria never ceased to regard the banished Severus as the rightful patriarch of Antioch, and declined to recognize the standing of those who were successively appointed to the see by the emperor. The organizer of their church life was Jacob Baradai (i.e. 'he with the horse-cloth'; † 578), who, originally a monk in Constantinople, had been ordained, c. 541, bishop of Edessa by Theodosius of Alexandria (cf. § 3), then also resident there; and in consequence the Syrian Monophysites came to be called Jacobites. Baradai, in his long journeys in W. Asia and Egypt, instituted communities, and consecrated patriarchs, bishops, presbyters, and deacons. The chief representatives of literature in Syria were nearly all Monophysites.

In addition to Jacobus, Phrygicus, and Julian (cf. § 4), the following writers of the earlier period deserve mention: Jacob of Sarac (c. 521), the author of widely read metrical discourses, which served for the liturgy of the Holy Saturday in Syria and Mesopotamia (530), physician and priest, who translated into Syriac several works of Aristotle and Galen, as also of the pseudo-Democritus Areopagita; Jacob of Edessa († 679), equally renowned as theologian, liturgical writer, philosopher, historian, especially on the history of the Church; George, bishop of the newborn city of Nisibis in great part of the 7th cent.,BXIII, XX., XXI,] 320, who composed the first code of a Christian church, and was one of the most important sources of information regarding Monophysite ecclesiastical law.

From the time when Islam became the dominant power in Syria, the Jacobites decreased in numbers more and more. At the present day there are some 200,000 of them in the Turkish empire, and about 1,000,000 in India—on the Malabar coast and in Ceylon. Their ecclesiastical superior (formerly entitled 'maphrian', now 'katholikos') resides in the metropolis of Deir Saifan, near Mardin. Efforts made by the Jacobites, from the close of the 18th cent., to effect a union with Rome had a very meagre result. At the present day the Roman Catholic Syrians number about 20,000, and they are all subjects of the Empire, and live in Mardin.

5. In Egypt the conflicts between the Severians and the Julianists or Galanites (cf. § 3) at length ruptured the unity of Monophysitism, which, nowhere else, was so keenly felt. The early history of Alexandria and some of the larger towns. The Monophysite propaganda was carried also to the Nubians and the Abodians. From 616 marrand bands of Persians ravaged the religious stations on the Upper Nile, and it was only after the Arabs, with the hearty good-will of the Copts, took possession of the country that the Monophysite patriarchy ventured to leave its place of refuge in the Upper Egyptian desert. During the Middle Ages the condition of the Coptic Church was a fairly prosperous one, but at the Crusades it was sorely harassed and ravaged by Muslim fanaticism, and it is only within recent times that it has been able to make a fresh advance. The Christian Copts of the present day still maintain their Monophysite creed (see, further, art. Coptic Church).

Finally, Monophysitism penetrated also to Armenia. The Armenians, while still engaged in wrestling for their faith with the Nestorians and the Monophysites, were quite unaffected by the dogmatic controversies of the Imperial Church. The expanding propaganda of the Persian Nestorians, however, induced them to adhere to the 9th Henotikon of Zeno (cf. § 4). Thereafter they maintained close relations with the Syrian Monophysites, and at the Council of Drin, in 554, they overtly accepted the more radical position represented by Julian of Halicarnassus. From that time onwards they adhered faithfully to Monophysitism, though they subsequently gave their adherence to the more moderate Severian school.

LITERATURE.—1. SORENSEN. (6) Decrees of the Councils, Declarations of Synods, papal briefs.

6. Historical works and Chronicles.—Zacharias Rhetor (Scholasticus), shortly after the accession of Anastasius, wrote, in the Henotic standpoints, a record of ecclesiastical events from the Council of Chalcedon to the death of Zeno (extant only in a Syriac version; see below, under Historia Miscellanea); Theodorus Lector, Anagoge in the Churches of St. Sophia in Constantinople at the beginning of the 6th cent., wrote, from the orthodox standpoint, his History of the Church from Nestorius to Justin I., which now exists only in fragments; Johannes Malalas, his History of the World from Justinian's reign; Evagrius, Historia Ecclesiastica, written after 600 (ed. J. Ritter and J. Farmer, London, 1899); Theophanes Confessor, Chronografia, 610 and 815 (ed. C. de Boor, Leipzig, 1888-85). Of the Latin chroniclers Liberators, Severians thus Nestoriam et Phrygianismum, is worthy of note. The most important of the Syrian authorities are: Chronicon Edessense (ed. I. Guidi, in Corpus Scriptorum Christianorum Orientalium, 'Chronica Minoria,' 1, Paris, 1890), dating from the middle of the 6th cent.; Historia Miscellanea, a compilation of the same period by an unknown Monophysite writer, and a history of Zacharias Rhetor mentioned above (ed. K. Ahrens and G. Krüger, Leipzig, 1888); R. D. Wilson, Justin II. of Neo-Chryseis (ed. W. A. Derrett, London, 1899); John of Ephesus (I. 555), Historiaca Ecclesiastica (2nd part ed. W. Cureton, Oxford, 1865).

7. Varieties. The Pseudo-Paphnutius of Mayumah (c. 600), a collection (c. 115) of the sayings, prophecies, visions, and revelations of various distinguished Monophysites, especially of Peter the Iberian (ed. F. Nauc, in Patrologia Orientalis, Paris, 1914); the biographies of Peter the Iberian, probably by the Iberian Rufus or first Peter, ed. R. D. Wilson, in Corpus Scriptorum Christianorum Orientalium, 3, Leipzig, 1888; Pilae siveverum apud Monophysites colere impositorum (ed. E. W. Brooks, in Corpus Scriptorum Christianorum Orientalium, 3, Syriac III. xxv., Paris, 1893), the biographies of the Syrian monks Bathymus and Sabas, by Cyril of Scythopolis (? after 557), etc.

MONOTHEISM.—In the history of religion monotheism, the doctrine that there is one God, or that 'God is One', is somewhat sharply opposed to a very wide range of beliefs and teachings. The contrast, when it appears in the religion of a people, or in the general evolution of religion, tends to have an important bearing both upon religious practices and upon religious experience, since to believe in 'One God' means, in general, to abandon, often with contempt or aversion, many older beliefs, hopes, fears, and customs relating to the 'many gods,' or to the other powers, whose place or dignity the 'One God' tends henceforth to take and to retain. If these 'many,' as the older beliefs, which some form of monotheism repudiates, had dealt with them, were themselves for the older faiths 'gods,' then the monotheism which is each time in question opposes, and replaces, some form of 'polytheism.' This is what happened when Judeo-Christian monotheism replaced older local faiths. If one were satisfied to view the contrast in the light of cases closely resembling these, and these only, then the natural opponent of monotheism as a belief in 'One God' would appear to be, in the history of religion, polytheism as a belief in 'many gods.'

Since, however, there are various religions and many superstitions which recognize the existence of powers such as, despite their more or less divine characteristics, are not the powers which naturally belong either to God or to gods, and since demons, the spirits of the dead, or magic powers may be in question in such religions, the name 'polytheism' can hardly be quite accurately applied to the whole class of beliefs which are in any important way opposed to monotheism. So, in the history of religion, monotheism has two opponents: (1) polytheism proper, and (2) beliefs that there are other more or less features which are freely used for a philosophical scepticism which especially relates either to God or to other matters of central interest in religious.

In the history of philosophy, however, monothesticism has a much narrower range of opponents than polytheism proper. Polytheism, as an explicit doctrine, has played but a small part in the history of philosophy. To the doctrine 'God is One' or 'There is one God,' where this doctrine forms part of a philosophy, there are opposed forms of opinion which are often classified under three heads: (1) philosophical pantheism, (2) philosophical atheism, (3) philosophical scepticism regarding the divine being. The modern name 'agnosticism' has been freely used for a philosophical scepticism which especially relates either to God or to other matters of central interest in religious.

Frequently, in summaries of the varieties of philosophical doctrine, the term 'pantheism' has been used as a name for such philosophical doctrines as 'identify the world with God.' Pantheism is often summed up as the doctrine that 'All is God,' or 'Everything is God,' or, finally, 'God is everything.' But a more careful study of the philosophical doctrines which have gone under the name of pantheism, or which have been so named by their opponents, would show that the name 'pantheism' is too abstract, too vague, to give any clear insight easily obtainable regarding what ought to constitute the essence of a philosophical pantheism as opposed to a philosophical monotheism. The two propositions (1) 'God is One,' and (2) 'God is identical with all reality,' or 'with the principle upon which all reality depends,' are not, on the face of the matter, mutually contrary propositions. How far, in reference to a given creed, to the theory, to theology, or religion, the one proposition appears to be contrary to the second depends upon the special interpretation, and sometimes upon the special prejudices of critics, sects, or philosophers of a given school. One who asserts the 'divine immanence' may or may not be laying stress upon the fact that he also makes a sharp distinction between the reality called God and other realities—e.g., the world. That such sharp distinctions are often in question is an important fact in the history of philosophy. Nevertheless the doctrine that 'God is One' has been philosophically maintained at the same time with the doctrine that 'God is all reality.' For such a view, the two doctrines would simply be two ways of expressing the same centrally important fact. One who wishes to understand the numerous controversies, subtle distinctions, and religious interests which at one time or another have been bound up with the name of the deity must be ready to recognize that the term 'pantheism,' when used without special explanation, is a poor instrument for making clear precisely where the problem lies. In the history of thought the term 'pantheism' has been freely employed by philosophers, as well as by those who are devoted to practical religious interests, it is, as a historical name, rather a cause of confusion than an aid to clearness. The proposition, 'God is One,' has, despite the complications of doctrine and of history, a comparatively definite meaning for any one who advances a philosophical opinion concerning the nature of God. But the proposition, 'God is all,' or 'God is everything,' in the history of thought, no one meaning which can be made clear unless one first grasps all the essential principles of the metaphysical doctrine of the philosopher who asserts this proposition, or who at least is accused by his critics of asserting it. If we endeavour, then, to make clearer the essential meaning of the term 'monotheism' by contrasting the historical forms of monotheism with philosophical doctrines of the divine being, besides those that are properly to be called gods.
ing the most important part in the history of philosophical monotheism (see art. IMMORTALITY).

Another attempt to point out the difference between monotheism and the contrasting or opposed philosophical doctrines clearly before the mind may take the well-known form of declaring that monotheism, properly so called, lays stress upon the 'persons' all of God or contrasting doctrines, which so often are regarded as constituting or as tending towards pantheism, have as their essential feature the tendency to 'view God as 'impersonal.' From this point of view, it would be the essence of monotheism to declare that the One God is a person, while it would be the essence of those doctrines which are opposed to monotheism to declare, in a fashion which might remain simply negative, that the divine being is not personal. It would then remain for further definition to consider whether the divine being is 'superpersonal' or is 'merely material,' or, again, is 'unconscious,' or is otherwise not of a personal character.

But the difficulty in this way of defining the contrasts which have actually appeared in the history of thought lies in the fact that the very conceptions of 'persons' and 'non-persoons' in history of philosophy, a comparatively late as well as a decidedly unstable conception. It is fair to ask how far the most widely current modern ideas of personality were present to the minds of such Greek philosophers as Plato and Aristotle. All the ideas of personality which philosophers may now possess have recently been vastly influenced by the whole course of modern European civilization. The problem of the relations of the Oriental and Western religions to the monotheistic, and Oriental minds, agree regarding what a 'person' is one about which those who will be least likely to dogmatize who have most carefully considered the accessible facts. In fact, the whole experience of the civilized consciousness of any nation or philosopher is likely to be epitomized in the idea of personality which a given philosophy expresses. It seems, therefore, inconvenient to make one's classification of the philosophical doctrine about the nature of God depend upon presupposing that one knows what a philosopher means by the term 'person.' It is true that whoever makes clear what he means by 'person' will thereby define his attitude towards nearly all further questions about the character of the divine being. But the idea of personality is, if possible, more difficult to define than any other fundamental philosophical idea. Therefore, to define monotheism in terms of personal God' will give little aid to the understanding of what sort of belief is in question, so long as the idea of what constitutes a person remains as obscure as it usually does.

A still further effort has been made to define monoplotism by making explicit reference to philosophical doctrines concerning the question whether the world was created or is self-existent. As a matter of fact, that set of Christian theological doctrines and of scholastic interpretations of Aristotle which goes by the name of 'creationism' has played an important part in the history of the more technical forms of monotheism. Yet the issues regarding creation are, after all, special issues. Hence, the way of misunderstanding the problem of monotheism can hardly be understood by one who has not already a defined monotheism in other terms. Creationism is the familiar doctrine that 'the world was created by God. This doctrine can be made to appear only if one first knows what one means by God.

The effort to make some further advance towards unravelling the great variety of interwoven motives which appear in the history of monotheism, and which have been suggested by the foregoing considerations, will be aided by attempting at this point, once more to review the issues with regard to the nature of God, but now from a somewhat different point of view. Both 'God' and about 'the gods,' have everywhere been inherited by the philosophers from religions whose origins and determinants their philosophy. In a few cases, notably in the case of Greece, the one hand and in the other, the origin of the philosophical traditions regarding the divine being can be traced back to ancient religious tendencies, while the transition from religion to philosophy is in fact that, and the successive stages of this process are definite stages. In one other instance, the transition from a tribal religion to a form of monotheism which was not due to philosophers but which has deeply influenced the subsequent life of philosophy is also definitely well known, and can be traced in its essential details. This is the case of the religion of Israel. Now in the three cases in question—that of India, that of Greece, that of Israel—the rise of a doctrine which is certainly in each case a monotheism can be fairly well understood. The three forms of monotheism which resulted led in the sequel to contrasts of doctrine which, in the case of the history of philosophical thought, have been somewhat adjusted. There are three great traditions of early religious history, ignoring also the effort further to define and to classify those doctrines which have been summarized in the various definitions of monotheism and its opponents which we have just reviewed. It seems well to reconsider the three great traditions of philosophical belief regarding the divine being in the light of the great historical contrast of the three forms of monotheism which India, Greece, and Israel present to each other. We shall discern the name 'pantheism,' and make no attempt to define the contrast between divine immenseness and divine transcendency, or to speak of the problems in what sense God is personal and in what sense impersonal. Nor can we here exhaust the varieties of philosophical opinion. But the threefold contrast just given will help us to make clearer the philosophical issues of monotheism by naming certain varieties of philosophical thought which have both a definite historical origin and a great influence upon the character of opinion about the divine being. Simplifying the whole matter in this somewhat artificial but still well-founded way, we may speak of the problem in the following view, three different ways of viewing the divine being have been of great importance both for religious life and for philosophical doctrine. No one of these three ways has been exclusively confirmed to the nation of which the form of opinion in question is most characteristic, and in the history of philosophical thought the three motives are interwoven. But a comparatively clear distinction can be made if we emphasize the three contrasting doctrines, and then point out that these doctrines, while not exclusively due to each one of the three nations or to philosophies which have grown out of the religious traditions of the nation in question, are still, on the whole, fairly to be associated, one with the tradition of Israel, the second with the influence of Greece, and the third with the influence of India or of nations and civilizations which they have influenced. In this interpretative how the problem of monotheism is clearly analogous in spirit to the civilization of India.

(1) The monotheism due to the historical influence of the religion of Israel defines God as the righteous Ruler of the world, as the Doer of justice, or as the one whose laws secure the triumph of the right. The best phrase to characterize this form of doctrine, to leave room for the wide variety of special forms which it has assumed, to indicate its historical origin, and also to imply that it is a form of history a long process of development, is this: 'the
MONOTHEISM 819

ethical monotheism of the Prophets of Israel.' We include under this phrase that form, or type, or aspect of monotheism, which characterizes philosophies that have been most strongly influenced, directly or indirectly, by the religion of Israel.

The monotheism of certain of its historical origin very largely in the Greek philosophers defines God as the source, or the explanation, or the correlate, or the order, or the reasonableness of the world. It seems fair to call this form 'the philosophical or metaphysical.' . . . It is the idea of God which has grown up under the influence of Christianity, this idea of God has, of course, become interwoven—sometimes consciously, sometimes unconsciously—with the ethical monotheism of Israel. But, when a philosophy of Christian origin is in question, while in some respects this philosophy, if positively monotheistic, is almost sure to be strongly influenced by ethical monotheism, the most important and essential features of the philosophy in question will be due to the way in which it deals with the relation between the order of the world and the nature of the 'God' who is the only Absolute, the creator of the universe, and the original source and final end of all that is in the world.

The third form of monotheism is very widespread, and has actually had many different historical origins. In the history both of religion and of philosophy this form of monotheism, somewhat like the ancient repository of many and various beliefs, like night and day, from land to sea and 'has strange power of speech.' Often unorthodox at the time or in the place where it is influential, it has indirectly played a large part in the shaping of the world at large. Usually fond of esoteric statements of doctrine, and often condemned by common sense as fantastic and intolerable, it has had many times of great popular influence. The official Church has had great difficulty in defining the relation of orthodox doctrine to this form of opinion. In the history of philosophy the more technical statements of it have formed part of the current system of thought. This form of monotheism is especially well marked in the early history of Hindu speculation. It is often called 'Hindu pantheism'; and it is indeed fair to say that it is in many respects most purely "philosophical"--the doctrine which has grown up on Indian soil. On the other hand, it has a less exclusive relative to Indian philosophy than the Hellenic form of monotheism, in its later history, has to Greek philosophy, so that the connexion here insinuated upon between this kind of monotheism and the early history of Hindu philosophy must be interpreted somewhat liberally. In fact, at the close of the history of Greek philosophy this third form of monotheism appeared as a part of the Neo-Platonic system. Yet in this case an Oriental origin or direct influence is extremely improbable. Examples of the tendency of later forms of monotheism to take on new forms, and to be influenced by other motives than those derived from the religion or philosophy of India, are to be found in the recent revival of such types of doctrine in various forms of "intuitionism," and "anti-intellectualism" in European thought.

The essence of this third type of monotheism is that it tends to insist not only upon the 'sole reality of God,' but upon the ' unreality of the world,' as such. It is therefore more suggestive for it than the same 'pantheism.' It might be summed up in the proposition 'God is real,' but all else besides God that appears to be real is but an 'appearance.' or, if better estimated, is a 'dream.' If we attempt to make more precise the vague word 'pantheism,' merely by saying, 'God and the world are, according to pantheism, but one,' the natural question arises, 'If they are but one, then which one?" God or the world, or nature? If we may make a call, in a general way and upon the general historical basis just indicated, 'Indic monotheism,' whether it appears in Hindu philosophy, in Spinoza, or in Meister Eckhart, tendency to define the essence of God and God only, but precisely because the world is but appearance,' this definition of the third form of monotheism relieves us of some of the ambiguities of the term ' pantheism.' The threefold distinction now made enables us similarly to review some of the great features of the history of philosophical monotheism in a way which cannot here be stated at length, but which, even when summarily indicated, tends to elucidate many points that have usually been unduly left obscure.

The ethical monotheism of the Prophets of Israel was not the product of any philosophical thinking. The intense earnestness of the religious experience it entered kept it alive in the world. The beginnings of Christianity soon required philosophical interpretation, and in any such interpretation the doctrine of the righteous Judge of the world, who must inevitably play a large part in the course of the development of the Church, led to a synthesis of the ethical monotheism of Israel and the Hellenic form of monotheism. This synthesis was as attractive as, in the course of its development, it has proved problematic and difficult. The reason is that the problem, as the philosophers have had to face that problem, lies mainly in the following fact. Whether taken in its original form or modified by philosophical reflection, ethical monotheism, the doctrine that 'God is righteous,' very sharply contrasts God, "the righteous Ruler," or, in Christian forms, 'God the Redeemer of the world,' with the world to which God stands in such ethical relations. On the other hand, for the Hellenic form of monotheism, the problem which Aristotle emphasized about the 'order' and the 'general' indeed exists. But in its essentials Hellenic monotheism is, on the whole, neutral as to the kind of unity which binds God and the world together. One of the reasons is that so far as they are founded upon Hellenic monotheism, must therefore attempt explicitly to solve the problem which Aristotle stated. And, on the whole, such philosophies tend towards answering the question as Aristotle did: God is both 'order' and the 'general' of the world which constitutes the world. Hellenic monotheism, moreover, is influenced by strong intellectual tendencies. On the other hand, the monotheism of Israel was, even in its auto-philosophical form, a kind of voluntarism. God's law, viewed as one term of the antithesis, the world which He rules, or which He saves, viewed as the other, was much more sharply contrasted than Aristotle's 'order' and 'general' tend to be. When, in the development of the philosophies which grew out of the Greek tradition, the Hellenic concept of the Logos (i.e.) assumed its most characteristic intellectual interests were, on the whole, in favor of defining the unity of the divine being and the world as the most essential feature of monotheism. But, at each stage of this development the essential or rational unity of the Logos and the world gradually came into sharper and sharper conflict with that ethical interest which naturally dwelt upon the contrast between the righteous
MONOTHEISM

Ruler and the sinful world, and between divine grace and fallen man.

Therefore, behind many of the conflicts between so-called pantheism in Christian tradition and the doctrines of ‘divine transcendence’ and ‘divine personality’, there has lain the conflict between, before all, voluntarism and voluntarism, between an interpretation of the world in terms of order and an interpretation of the world in terms of the conflict between good and evil, righteousness and unrighteousness.

Meanwhile, in terms of this antithesis of our first and second types of philosophic monotheism, we can state only half of the problem. Had the monotheism of Israel and the Hellenic doctrine of God as the principle of order been the only powers concerned in these conflicts, the history both of philosophy and of religion would have been, for the Christian world, far simpler than it is. The motives which determine the third idea of God have tended both to enrich and to complicate the situation.

It is true that a direct connexion between ancient Hinduism and early Christian doctrine cannot be traced, yet in very general terms, the two religions, the one which we have called, for very general reasons, the India type of idea of God became, in the course of time, a part of Christian civilization for very various reasons. As we have seen, the doctrine of each of these school is, while the world of illusion depends upon motives which are not confined to India. In the form of what has technically been called ‘mysticism’, this view of the divine nature in due time became a factor both in Christian experience and in philosophical interpretation. The Neo-Platonic school furnished some of the principal technical formulations of such a view of the divine nature. The religious experience of the Graeco-Roman world, in the times immediately before and immediately after the Christian era, also in various ways emphasized the motives upon which this third type of Christian monotheism depends. The Church thus found room within the limits of orthodoxy for the recognition, with certain restrictions, of the tendency to view the world as mere appearance, ordinary life as a bad dream, and salvation as attainable only through a direct acquaintance with the divine being itself.

The contrast between them for philosophy have grown out of the efforts to synthesize Hellenic monotheism and the religion of the Prophets of Israel. It has repeatedly stimulated the Christian mystics to insist that the idea of the intellect cannot attain, namely, an understanding of the nature of God and His relation to the world, the mystic experience can furnish to those who have a right to receive its revelations. Philosophy — intellectual philosophy — falls (so much mystics assert) to solve the problems raised by the contrasts between good and evil, between God and the world, as these contrasts are recognized rather by those who study the order of the universe or by those who think after righteousness. What way remains, then, for man, beset by his moral problems, on the one hand, and his intellectual difficulties, on the other, to come into real touch with the divine? The mystics, i.e. those who have insisted upon the third idea of God, and who have tested this idea in their own experience, have always held that the results of the intellect are negative, and lead to no definite idea of God which can be defended against the sceptics, who insist that no idea of the divine is possible, to follow the law of righteousness whether with or without the aid of divine grace, does not lead, at least in the present life, to the highest type of the knowledge of God. We approach the highest type of knowledge. For, as truly, if we recognize, in the form of some sort of ‘negative theology’, the barrenness of intellectualism, and if, meanwhile, we recognize that the contemplative life is higher than the practical life, and that an immediate vision of God leads to a new insight which no practical activity, however righteous, attains. To teach mystic doctrines as mystic experience is characteristic of the mystics. To make more articulate the idea of God thus defined has formed an important part of the office of theology.

Without this third type of monotheism, and without this negative criticism of the work of the intellect and this direct appeal to immediate experience, Christian doctrine, in fact, would not have reached some of its most characteristic forms and expressions, and the philosophy of Christendom would have failed to put on record some of its most fascinating speculations.

It is obvious that, on the face of the matter, the immediate inferences upon which mystical monotheism lays stress are opposed to the sort of insight which the intellect obtains. Even here, however, the opposing tendencies in question are not always in any very direct opposition to the thought or expression of an individual thinker or philosopher. Thus, in an individual case, an exposition of mysticism may deviate a large part of its philosophical work to a return to the Hellenic type of theism. That this was possible the Neo-Platonic school saw (see art. NEO-PLATONISM), where whatever Christian monotheism is strongly under the Neo-Platonic influence, it tends to become a synthesis of our second and third types of monotheism. In such cases, Christian monotheism is Hellenized in its fondness for order, for categories, and for an intellectual system of the universe, and at the same time devoted to immediate intuitions, to a recognition of the finite world is an infinite experience, to a definition of God in terms of an ineffable experience, rather than in terms of a rational system of ideas. Such a synthesis may, in an individual system, ignore the conflicts here in question. Nevertheless, on the whole, the opposition is bound to become, for great numbers of thinkers and, on occasion, for the authorities of the Church, a conscious opposition. And the opposition between the ethical and the mystic types of monotheism is in general still clearer, and is more fully conscious. Despite all these oppositions, however, it remains the case that one of the principal problems of Christian theology has been the discovery of some way to bring the two ideas of the divine into accord, to the tendencies to define God as One, into some tolerable and true synthesis either with the first or with the second of the three types of monotheism, or with both.

The technical discussions of the idea of God which have made up the introductory portions of many systems of so-called ‘natural theology’, it has been very general for the philosophers of Christendom to emphasize the Hellenic type of theism. The so-called philosophical ‘proofs of the divine existence’ make explicit some aspect of the Hellenic interest in the order and reason of the world. The ‘design argument’, first stated in an elementary form by Socrates and the platoists, to follow the law of righteousness, whether with or without the aid of divine grace, does not lead, at least in the present life, to the highest type of the knowledge of God. We approach the highest type of knowledge. For, as truly, if we recognize, in the form of some sort of ‘negative theology’, the barrenness of intellectualism, and if,
MONOHELETISM

orderly system. In its briefest statement the ontological argument is epitomized by Augustine when he defines God as 'Veritas' and declares that Veritas must be, if there were no Veritas, the proposition that there is no Veritas would itself be true. The more highly developed forms of the ontological argument reason in similar fashion from our own ideas of the nature of the Logos. Theologically, it is a formally necessary order system of the universe—in other words, from the realm of Platonic ideas, in so far as it is manifested through and to our intellect, to the reality of such a system beyond our intellect.

It has been insisted, and not without very genuine basis, both in religion and in the controversies of the philosophers, that all such efforts, through the intellect, to grasp the divine nature lead to results remote from the vital experience upon which religious monotheism and, in particular, Christian monotheism must rest. If such monotheism is permanently to retain the confidence of a man who is at once critical and religious, into the merits of the issues thus indicated, this is no place to enter. In any case, however, both the warfare of the philosophical schools and the conflict between intellectual theology and the religious life have often led to philosophical efforts to bring the very life of the church into some more immediate intuition of the divine, or else to assert that there is no philosophical solution to the religious problem of theism. Thus intellectually in theology, in the forms in which it has historically appeared, has repeatedly tended to bring about its own elimination. The more highly rational it has become, and the more its apparent barrenness, or its inability to combine the various motives and into the three different monotheistic tendencies has become manifest, the more the result of a careful analysis of the intellectual motives has led either to the revival of mysticism or to a sceptical indifference to philosophical teaching. To say this is merely to report historical facts.

Some negative results of the more purely Hellenistic type of monotheism became especially manifest through the results of the Kantian criticism of reason and of its work. It is interesting, however, to see what, in Kant's case, was the result of this criticism of the traditional arguments for the existence of God. By temperament Kant was not endowed with an interest in the mystical type. For him, therefore, the failure of the intellect meant a return to the motives which, in no philosophical formulation, but in the form of an intensely earnest practical faith, had long ago given rise to the religion of Israel. Therefore the God of Kant is, once more, simply the righteous Ruler. Or, as Fichte in a famous early essay defined the idea, 'God is the moral order of the world.' This Kantian-Theistic order is, however, not the Hellenic order, either of the realm of Platonic ideas or of the natural world. It is the order of 'the kingdom of ends,' of a universe of free moral agents, whose existence stands in endless contrast to an ideal realm of moral perfection, after which they must endlessly strive, but of whose real presence they can never again become aware through a mystical vision or by a sure logical demonstration. The righteous man, according to Kant, says, 'I will that God exist,' and Kant defines God in terms of this will. Monotheism, according to this view, cannot be proved, but rationally must be acknowledged as true.

Veritas must be recognized that the requirement to bring into synthesis the intellect and the will, and to interpret our aesthetic experience, i.e., our acquaintance with the kind of perfection which beauty reveals—this ideal, a synthesis of the ethical, the intuitive, and the rational—remains with us. And, despite all failures, this ideal is one from which philosophy cannot escape.

The revived interest in intuition and in religious experience which has characterized the transition from the 19th to the 20th cent. has once more made the mystical motives familiar to our present interest. The permanent significance of the ethical motives also renders them certainly prominent in the attention of serious-minded men, even though the Kantian formulation of the ethical ideals seems for the moment, in our noble contemporary philosophy and religious thought, too abstract and rigid. And so we are not likely, in future, to accept any merely one-sided Hellenism.

While no attention can here be given to the solutions of the problem of philosophical monotheism which have been proposed during the last century, the problem of monotheism still remains central for recent philosophy. It may be said that dogmatic formulations are at the present time often treated with the same indifference which is also characteristically shown towards the faith of the fathers, viewed simply as a heritage. Nevertheless, the problems of philosophical monotheism remain as necessarily impressively as they have been ever since their early stages in Christian theology. They are as certain to survive as is philosophy itself. What the whole history of the monotheistic problem in philosophy shows becomes to-day, in view of our explicit knowledge of the philosophy of India, and in view of our more preparatory study of religions, more explicit than ever. Philosophy is a necessary effort of the civilized consciousness, at least on its higher level. Monotheism is a central problem of philosophy. This problem is not to be sufficiently dealt with by merely drawing artificial or technical distinctions between Platonic or Neo-Platonic theories; nor can the problem be solved by calling it the problem of the immanence of God against His transcendence. The question 'What is God?' becomes and will become more explicit in its modern formulation the more we become aware of what constitutes a person. Meanwhile, as was remarked above, the interest in monotheistic matters and other aspects besides the problem of personality.

The essentials of the great issue remain for us, as for our fathers, capable of formulation in the terms which have here been emphasized. To repeat, the philosophical problem is this: (1) In what sense is the world real? (2) In what sense is the world a rational order? (3) In what sense is the world ethical? The effort to answer these questions cannot be made by exclusive emphasis on one of them. For, as we have seen, the problem of monotheism requires a synthesis of all the three ideas of God, and an answer that shall be just to all the three problems. Whether monotheism is true or not can be discovered, in a philosophical sense, only through a clear recognition of the contrast of the three ideas of God and the synthesis which shall bring them into some sort of harmony. The further discussion of the nature of this harmony does not come within the scope of this article (see act. God [Biblical and Christian]).

JOSIAH ROYCE.

MONOHELETISM, 1. The problem. The Monenergetic or Monothelete controversy seems
MONOTHELETISM

at first glance to be a mere sequel to the Mono-
physite conflict, a knowledge of which is assumed in the present article. On a closer examination, we see that the later controversy has a character of its own, since it shows how the adoption of the orthodox Diphite point of view was not regarded as leading necessarily and directly to Dithetheitic conclusions. In the art, MONOPHYSITISM (p. 811 ff.), it was indicated how the new orthodoxy came to terms with the problems of the two natures in Jesus Christ—the problem raised by the Symbol of Chalcedon. The person of the God-man was conceived as arising from the person (ιερότατος) of the Logos, which assimilated the human attributes, and upon which, as the core of personality, human nature was, so to speak, engrafted by the process of ενστασιά. On this hypothesis it might seem entirely justifiable to ascribe everything to Christ that God said or did to the one volitional activity (ενστασιά) of the God-man, and actually, to regard all as emanating from His undivided will (δυναμικά). Such a view, moreover, could be supported by the evidence of earlier Fathers. Cyril, with reference to Lk 8:6, had already laid the foundation: "οὐ εἴρην, ἀλλὰ εἴρην, ὁ ἄνθρωπος ὁ θεὸς οὗτος ἔσται"; and it was possible, above all, to adduce the witness of a passage in the fourth Epistle of the pseudo-Dionysius—a passage which the phrase μιᾶς ενστασίας, which was destined to play so important a part in the coming days. The Monophysites were acquainted with the idea that the redemptive activity of the God-man emanated wholly and solely from the divine, that nature possessed the stimulus which was mediated by His rational soul and brought to realization in His body. Nor had even the natural operations of Christ as a rational being their source in His human nature purely by itself, as that nature subsisted, not by itself alone, but in the divine nature conceived as inherently personal. Hence that which in Christ corresponds to human nature was itself the work of God: it was one energy, whose source is God, and whose instrument was His humanity; it was one will, and that will was divine. To Sergius of Constantinople (cf. § 2) it seemed perfectly obvious that the rational endowment and the spiritual grace of Christ effected its natural movements only in accordance with the measure assigned by His divine will, that, just as our bodies are governed by our rational souls, so the whole development of the human nature was constantly directed by His deity.

The objections urged by the opposite party against this theory of the oneness of Christ's ενστασιά were based upon the feeling that it sur-
rendered the distinctively human element in Christ's activity, since it implied that His human nature was a mere passive instrument, and must therefore be conceived as immanent or, at least, as non-rational. Such a view, however, was in reality a reversion to Apollinarism (q.v.); and, even if the Monophysists did not go so far, yet their idea of the one composite energy really presupposed that of the one composite nature as held by the Severians. In point of fact, these views of the Monophysites approximate very closely to those of the Severians—the more moderate party of the Mono-
physites. As the Monophysites themselves came to recognize this, they surmised that the phrase was not used around the time of the Chalcedonian Council. They rightly recognized that, if there was in the God-man a will which diverged from His divine will, that divergent will could spring from nothing else than an ungodly tendency in the nature which He had assumed. Such a view, however, would have been in conflict with the doctrine of the sinlessness of Christ's human nature, in which all parties were united, and would therefore have been applauded by Gregory of Nyssa, writing long before, had said: τὸ εἴρην, ἀλλὰ πάντα ὁ θεὸς οὗτος ἔσται, θεός εἰς ἄνθρωπον. The adverse party was wont to appeal to passages like Mt 3:17, where the human will and the divine will seem to stand in opposition; but the Monophysites sought to show from the Fathers that, on a strict interpretation of this text, Christ had a human will only. They did not mean to deny the presence of a human activity in the one will of Christ, but they held that this activity was entirely due to His divine will. In relation to His divine ενστασιά, they maintained, human ενστασιά becomes a τέλος, and, when Gregory said of Christ that His soul wills, he meant that the volition of Christ's soul was due to the will of the Deity who was personally united with His soul, and that, accordingly, it was divine volition in a human form.

The Monophysites and Monotheletes sought to support their contention also on the ground that the phrase δύο ενστασίες had never yet been heard in the doctrinal controversy; and, while it was not absolutely valid, yet Sergius could say with some show of reason that none of the δύο ενστασίες of the previous periods, from the time of the recognized Fathers of the Church, had made use of the phrase. As regards the claim of the δύο ενστασίες, again, the Monothelete case was a still stronger one. In earlier writers the phrase δύο ενστασίες is used only as expressing a final consequence of those who held the doctrine of the two natures. The use of the phrase in a positive sense can be traced only in a single work, written—if genuine—before the Monothelete controversy, viz. the treatise τίς τῆς δύο ἀνθρωπίναις καὶ τῆς τελος πνευματικῆς of Hierony- mius of Alexandria († 607). But, while the Dithetheites were thus unable to call tradition to their aid, they were able to do so with all the more zealously with the inherent logic of their case. In point of fact, no logical objection could be urged from the standpoint of the new orthodoxy, as, e.g., from that of Leontius of Byzantium, against the procedure of ascribing δύο ενστασίες to the δύο φύσεις. Indeed, it was, more than all else, this logical inference, i.e., the consistent position affirmed in the formula of Chalcedon, that helped the doctrine of the two wills to gain the day. It is true that the contradiction involved in the doctrine of the two natures was rendered still more palpable in that of the two wills. But those who had come to terms with the former doctrine had no difficulty in accepting the latter, and it is the aim of the following historical sketch to show how this point was reached.

2. The beginnings of the controversy.—The secession of the Monophysites did serious damage to Byzantium and its Church. It smoothed the way for the advance of the Arabs and of Islam. Far-sighted and energetic the founders of the Monophysitic doctrine arrested the mischief by working for the ecclesiastical reconciliation of the eastern and southern provinces of the empire. The most outstanding figures in this movement were the patriarchs John Hy-

nepius (610-641) and the patriarch Sergius (610-638). Sergius, a Syrian born of Jacobite parents, was already giving his mind to the thought of union in the early years of his tenure of office. He was not content to deplore the schism and to wish for peace of faith. He sought the watchword "eucharistia τε καὶ δυναμικά", which had apparently been introduced into the controversy by the Alexandrian Monophysites, and he succeeded at the outset on the
basis of the doctrine implied by these expressions, in winning the approval of his design. 
Soon afterwards (622) Heraclius issued an edict proscribing the doctrine of the ἴδρυμα. But, although Sergius brought all the weapons of patriotic learning to bear upon the Armenian and Syriac clergy, and his opposition was allowed to rest some little headway. It was not until 633 that indications of real progress began to show themselves. Cyriacus, patriarch of Alexandria, whom Heraclius had translated to that city from Phasis in Lazica, suspected strongly the influence of the Theodians, i.e., the Monophysites (see art. MONO-
PHYSITIS, § 3). The doctrinal programme drawn up by Cyrus, while setting the doctrine of the two natures in the forefront, guarded it carefully by special clauses; it distinctly recognized the Cyprianian terminology of the one incarnate nature, and it adopted the Arectopagite formula of the one theanthropic energy. The Monophysites had some grounds for thinking that, as one of our sources puts it, it was not they who made alliance with Chalcedon, but rather Chalcedon with them. About this time, too, the metropolitan church succeeded in effecting an understanding with the Armenian bishops. This greatest triumph, however, was the winning of 
Athenagoras, the Jacobite patriarch of Antioch; for now the occupants of the three great Oriental sees were all on the same side. But at this juncture the patriarch that had been brought about with such difficulty was gravely imperilled by the action of a Palestinian monk, 

This was Sophronius, who had at an early date maintained relations with the Alexandrian patriarch Eudoxius and John the Merciful. He now made his way from Palestine to Egypt in order to lodge a protest with Cyrus against the articles of union, in which he thought he discerned Apollinarism. As Cyrus hesitated to withdraw the articles at the request of Sophronius, the latter proceeded to Constantinople and tried to induce Sergius to delete the expression μία ἱδρυμα from the document. The patriarch was not prepared to take that step, but for the sake of peace he agreed to send his Alexandrian colleague a letter recommending him to have done with the dispute as to one ἱδρυμα or two, but forbidding him to sanction the two-nature doctrine. An ambivalent, but not blasphemous (σωτερίνης). With this Sophronius was satisfied. Sergius, moreover, secured another triumph in gaining the support of Pope Honorius for his pacific policy (cf. § 3). Shortly afterwards (634), Sophronius was appointed to the see of Jerusalem. He broke away at once from the accepted understanding by referring in his inaugural encyclical to the two natures, though he certainly avoided any overt acceptance of the doctrine of the two wills. His action was deeply resented by Sergius, and Honorius tried, though without success, to persuade him to drop the objectionable expression. Eventually the emperor issued a decree framed by Sergius—the so-called Ecthesis of 638—forbidding all mention either of one energy or of two energies: of one, because the mention of it might lead to a denial of the two natures, and of two, because two energies seemed logically to involve two mutually antagonistic wills.

3. The case of Honorius.—Honorius of Rome, by reason of his attitude in the Monothelete controversy, was, as will be explained below (§ 5), put under suspicion; but the agreement of the two natures, and of two, because two energies seemed logically to involve two mutually antagonistic wills.

position to his colleague in Constantinople is extant only in a Greek translation of the agreement of this translation with the Latin autograph was definitely confirmed at the Council. In this letter Honorius had set in the foreground his desire that the controversy as to one or two energies should be allowed to rest with the bishops of the Armenians. The introduction of the new phrases into the doctrinal terminology might bring those who used them under suspicion either of Eutychianism or of Nestorianism. He nevertheless adhered unswervingly to the position that the wills might be made between the hypothesis of the one and that of the two energies, it was at all events necessary to accept the doctrine of a single will (διὰ τοῦ ἴδρυμα ἐνεχθεῖον ἱεροσύνη). For, as the Son of God had assumed a pure and supernaturally begotten human nature, the idea of a second will, disparate or antagonistic (διὰ ἴδρυμα ἔσω τῆς Εὐαγγελικῆς), was simply out of the question. Passages like Mt. 26: 38 or Jn. 21: 18 in which Christ seems to mark a contrast between His own will and the will of God, did not in any real sense indicate a different will, but simply referred to the economy of His assumed humanity (ὁ θεός ἡμών ἐστιν ἡ ἡμῶν καὶ ἡ ζωὴ ἡμῶν ἐστιν). Truly, the doctrine of two energies placed Christ as regards His humanity (ὁ ἀνθρώπος ἐστιν καὶ ἡ προσωπολογία). Christ, as our example, adopted this manner of speaking for our sake, i.e., in order that we should follow His footsteps, not seeking our own will but the will of God.

The letter of Honorius reveals throughout an intelligent and accurate grasp of the situation. To reproach its writer with having adopted the doctrine of the two wills is, therefore, altogether an injustice. At no stage did Honorius commit himself in that doctrine had not yet become ecclesiastically suspect. Even Sophronius himself, in fact, as has already been said, had not put the doctrine of the two wills upon his programme, and the question as to the Monotheletism of Honorius is of a piece with that regarding the Monophysitism of Cyril of Alexandria. We might venture to say, indeed, that, if Honorius had, a generation later, occupied the Roman chair in place of Agatho, he would have given the same vigorous and decisive prosecution of the second development and, thus, to speak paradoxically, would have pronounced his own condemnation. Agatho and the Council of 681 stood face to face with a situation of a totally different magnitude. The situation here then become a thing of evil repute, they were simply bound to condemn it, and, in doing so, they could not avoid reprotesting the missive of Honorius as well. Above all, however, we must not forget that Agatho not only refrain from protest against the anathematization of his predecessor, but by the voice of his legate actually gave it his sanction. In the following year Pope Leo II. expressly ratified the condemnation in a communication to the emperor, in which he spoke of Honorius as one (qui hanc apostolicam sedem non apostolicae traditionis doctrina illustravit, sed profana prudonicimus sanctam subvertiere conatus est). This judgment is, no doubt, unduly severe, and, measured by the standard of historical truth, positively false. Still, it certainly shows the remarkable freedom from prejudice with which the authority of a pope in matters of doctrine could then be viewed even in Rome. It is quite incompetent, on the other hand, to bring the case of Honorius into the question of papal infallibility. If we keep in mind the provisions of the Vatican dogma regarding the import and scope of papal infallibility, we shall see that this proceeding has had such important consequences in the war of the confessions that the historian cannot afford to ignore it. Here we must first of all distinguish the period in which he explained his theological
death of the emperor Heraclius, and the brief reign of his two sons, his grandson, Constans II (641-668, son of Constantine III), was raised to the throne in consequence of a court revolt. Constans, too, adhered to the Ecclesiast, which, however, had meanwhile found a footing among the clergy of the West. In Rome the letter of Pope John IV, officially condemned Monotheletism; the Western bishops raised a vigorous agitation against it; and soon the whole western provinces were involved in the debate. Constans, on the other hand, remained loyal to the Euchesis. The patriarch Pyrrhus, who had succeeded Sergius, was deposed by Constans on political grounds, being suspected of Paul, a man of like doctrinal views with himself. Pyrrhus went to Africa, and there intervened vigorously in the conflict. With Maximus, an abbot of Constantine, who had likewise removed to Africa, he conducted a discussion the results of which are among the most notable documents of the whole controversy. Here Maximus proved the victor.

This Maximus was the most eminent and effective champion of the Euchesis, and (as we shall see later) in the reign of Heraclius. From 630 he lived in the monastery of Chrysopolis (now Scutari), where he spent the remainder of his life in the study of sacred literature. He wrote extensively on behalf of the Euchesis both in Africa and at Rome, and it was at his instigation that the Lateran Council of 649 (see below) was summoned. As the part which he thus played ran counter to the policy of the emperor, he was at length put into prison at Carthage, was arrested and taken to Constantinople, and two years later he was banished. In 662 the unfortunate man was once more subjected to a legal process, as a result of which his tongue was cut out and his right hand struck off, and he died within the year in Lazica on the east coast of the Black Sea. Throughout his career his extant works are in the pseudo-Dionysian writings, and it was in fact the commendations of Maximus that secured the Church's recognition of them.

The vehement opposition of the Didhiletes, however, did not wholly fail to influence the ecclesiastical policy of the emperor. Already in 648 Constans, acting on the advice of the patriarch Paul, had issued a decree, the so-called Typus, declaring that the dispute regarding the doctrine of the wills must come to an end at once. The Typus, unlike the Euchesis, avoids all argumentation on matters of detail; disobedience to the provisions was to be visited with severe ecclesiastical and civil penalties. But the Didhiletes would not be silenced. They had now their centre in Rome, and a Council conducted in 649 by Pope Martin I, the Constantine of the Lateran, and attended also by the Greek monks who had fled to Rome, affirmed, in explicit conformity with the declaration of Chalcedon, its adherence to the doctrine of the two wills and two energies corresponding to the two natures of Christ. The action of Martin raised an agitation in both East and West, and the emperor, bitterly resenting this, as well as the pope's friendly relations with the exarch of Byzantium, then lying under suspicion of high treason, had him sent to Constantinople (653), and, after a criminal trial, banished to the Chersonese, where in 655 death released him from his sufferings.

The 6th Ecumenical Council and the end of the controversy. For a time it appeared as if the new policy of peace would be attended with success. Pope Vitalian entered into friendly relations with Constans, and the ecclesiastical communion between East and West was tacitly restored; and when Constans visited Rome in 668, he was received with due imperial honours. At the murder of the emperor, however, the antagonism broke out more fiercely. Pope Vitalian's concession led to a fresh rupture of ecclesiastical relations. Such a state of matters was felt by the politicians, as formerly in Justinian's time, to be intolerable; and to deal with it the emperor Constantine IV. Pogonatus (668-685) resorted to the plan of holding an imperial Synod. In November 680, accordingly, the Eastern prelates, together with the legates of Pope Agatho, assembled in the Hall (prodo@) of the imperial palace at Constantinople. This Council, which sat, with considerable interruptions, until September 681, is recognized officially by both Churches as the 6th Ecumenical Council. The members, with excerpts from the Fathers in their hands, carried the debate from one point to another, until at last the Roman representatives won acceptance for the doctrine of the two wills, and procured the condemnation of its opponents, living and dead alike, including, as we saw above (§ 3), Pope Honorius. The Roman point of view is set forth in the comprehensive statement laid by Agatho before the emperor, a document that came to be regarded as a counterpart to the Synod of Leo I. (cf. art. Monophysitism, § 1). In the symbol of the Council the terms in which the Chalcedonian formula defines the relation of the two natures are applied to the two human persons of the Son (θεος υμανθς και μυ ανθιτης). Thus the two wills corresponding respectively to the two natures are not opposed to each other (οι υμανθιαί); on the contrary, the human will is one coeternal and coeternal with the divine will, to which it is subject (και το διυμανθινον αξιον [i.e. του λογου θεου και μυ ανθιτης και του θεου αξιον και πανανθινον θεου]). For it was necessary to the will of the flesh, if anything at all should be subordinate to the divine will. Just as the flesh of the God-Logos (του θεου λογος) is called flesh, and is flesh, so the natural will of this flesh is called, and rightly called, the will of the God-Logos. And He, the holy and stainless animate flesh was not taken away in being made divine (και τον ανθινον υμανθινον) but remained within its own limitations and relations (τον του θεου ανθινον υμανθινον και του θεου ανθινον). The two natures preserved their integrity, and, in the event of any difficulty, the divinity of the Logos was to be asserted. The conciliar act of 680-681 would have been of but little avail had it not been for the endurance of the Pope: if the Council was a failure it was a victory for the Pope; if the Pope had not taken it up it would have been a failure. The victory of the Pope was a victory for the Church, and the cause of Monotheletism was at last put down. But the conflict was by no means over: on the contrary, it was only now that the struggle was really beginning, and theasons of the controversy were as yet far from being exhausted.
MONSTERS (Biological).—'Monstra vocantur quis monstrant.' This ancient platitudinous may seem ridiculous to-day, but it has not yet lost its meaning. In a modern civilized society the birth of a two-headed lamb, of a 'bull-dog call,' or of a cyclopian child no longer excites attention as a portent of disaster or proof positive of witchcraft. Yet to a certain section of the community the objects present opportunities of enlarging the common store of biological knowledge. The specimens themselves demonstrate eloquently the possibilities of aberration in the processes of normal development and growth. They testify to the existence of numerous independent forces or influences, balanced delicately under normal circumstances. They point to a disruption of the balance. They reveal the nature of individual influences, as manifested, when one has been exercised in excess, to the exclusion or suppression of the counterbalancing factors.

In biology monsters are regarded as extreme instances of developmental varieties. Variations of the same kind constitute the class of 'anomalies,' as explained in arts. ABNORMALITIES (Biological), no hard and fast line separates the two groups. Many monstrous formations are determined by the same forces affecting the embryo or the fetus, though the post-natal period of growth is by no means free from disorders productive of a comparable result. And instances of the latter kind, such as retarded adolescence, or precocity, have been included fairly with others showing the extreme tenuity of the neutral zone between health and disease.

The study of monsters falls naturally into two divisions: (a) the investigation of their actual structure, and (b) research into the mode of their production.

(a) On the anatomical side a classification has been attempted, and it is based upon consideration of the part or parts actually affected. In view of the vast number of categories thus recognized, only the most cursory survey is possible here; and instead of rehearsing the long list of classes and their subdivisions, it must suffice to note that, while the whole body has suffered in some cases, in others certain parts only will be found to be distorted.

(b) Developmental history of monsters shows us that, as a general rule, the departure from what is normal will be greater and more complete in proportion as the disturbance was early in its occurrence. For in the first phases of development, when the total mass of the embryo is almost infinitesimally small, even a slight error will affect the rudiments of every organ and structure that is to be perfected subsequently. At this point again two distinct groups of monsters must be contrasted. In some cases the uterus may void its contents normally in accordance with this, in human pathology, the antiquated term 'mole' is still applied. Or, again, the disturbance may lead to partial 'gemination,' i.e. to some distended kind of twin-formation. Thus twins of equal size may continue to grow though connected with each other and at the birth may produce such a phenomenon as the 'Siamese twins.' In other instances of this class the twins are quite unequal in point of size and, it may be, of development. As Virens, an almost normal child may be born with an imperfect twin attached to it. The two are then distinguished as the 'autosite' and 'parasite' respectively. The parasite is most commonly attached to the autosite in or about the middle line of the body. It may present almost any appearance, from that of a mere wart-like exoencephaly to that of a headless trunk with arms and legs. In rare instances the parasite has been found to be entirely enclosed within the body of its host, so that it is not visible externally at all.

Lastly, in yet another class of monsters, the process of geminination may have been complete but unequal, and one twin is born in a normal state, while the other is represented by a spherical mass, consisting of various tissues in the most complete confusion. Even the latter may be maintained alive throughout the intra-uterine period of existence.

Apart from these instances of 'twinning,' we may notice that certain particular structures such as the heart or the brain may be defective to the point of obliteration, while a large class bears witness to interference with such normal processes as the formation of the face or the closure of the walls of the body to protect the viscera.

(b) The study of the normal processes of development throws a flood of light on the problem of explaining the particular aberration responsible for the occurrence of a monster. Investigations have dealt with the nature of the disturbing causes, and to these we shall now turn.

The artificial production of monsters first claims attention. In fish-batcheries the occurrence is accidental and unwelcome, yet the frequency with which grotesquely formed individuals appear among the fry is so well known as to be almost a matter of common knowledge. The eggs of the domestic fowl have been used for experimental purposes for at least fifty years past. In this department of biology the name of the French observer, C. Daresse, deserves special mention. The more usual modes of procedure are to subject the eggs during artificial incubation to selected abnormal influences. These may be of the nature of magnetic force, variations of temperature, or, again, the disturbances caused by partially vivifying the eggs, or by subjecting them to incessant rotation. In these and various other ways physical agencies have been shown to be influential in producing monstrous forms. Eggs of other animals (often those of invertebrates) have been employed to test the effects of chemical agents or changes, the chemical constitution of the media in which the developing eggs normally rest. Such ova have also been the subjects of experiments in which the fertilizing element has been varied.

Physiological research of this kind has established clearly the susceptibility of the egg-cell to a variety of influences, whether these be physical, mechanical, or chemical. At this point another possibility seems to demand notice. The influence of so-called maternal impressions has long been discussed by those who are not prejudiced on this subject. Only the highest forms of life are suitable for observation or research in this respect, and it cannot be said that the potency of such impressions has been established.

Turning more particularly to human beings, it may be mentioned that medical research has shown that certain monstrous developments, viz. Acro- egaly and Achondroplasia, and the deficiency of certain fluids which normally pass with the blood to bathe the tissues of the body. In this department of research only the first steps have been taken at all. In such cases the anatomic study of monsters shows the investigator what parts have suffered, while the physiologist is able to point to the disturbing element. Thus we are led with the impression that, where the balance of reacting forces
is so delicate, no absolute standard of what is a normal form is possible. A normal individual is connected with others which we call abnormal, and the abnormal examples in turn lead on to monsters.

That which is born in the course of a host of interactions. Its capacity to maintain existence is based on the reproduction of its kind, depending first upon its formation, and then upon the environment in which it finds itself. Two remarks may be made in conclusion. Though the attribute of vast size is the one which most constantly suggests to our minds the words "monster" or "giants", the interpretation of the former is by no means necessarily an indication of the latter. A monster is usually an extraordinary individual, yet from the biological point of view this is not necessary, and huge monsters are but representative of one out of many possibilities.

And lastly, while in this article the occurrence of monstrous forms among animals has been reviewed, it is to be remembered that most of the considerations here set forth are applicable equally to the vegetable kingdom.

LITERATURE.—Special mention may be made of C. Dufresne, L'Influence de la production artificielle des monstruosités, Paris, 1877; other contributions to the literature are so numerous that an exhaustive enumeration here is impossible. Reference is made specially to the exhaustive bibliography provided by E. Schwäb, Morphologie der Missbildungen, Jena, 1898.

MONSTERS (Ethnic).—1. Various kinds of monsters. The existence of monstrous beings, human, animal, or demonic, is believed in at all levels of culture. They are referred to or described in stories, traditions, or myths, or they are depicted or represented in some artistic form. Among savages and primitives, animals are often supposed to exist, like the Bun-yip of Australian tribes—a mythical water-monster who carries off women—or the monsters or dragons said to swallow youths at initiation in New Guineas. Frequently more or less distant tribes are believed to have some monstrous or abnormal feature—one eye, more than two eyes, eyes under the arms, vast ears, two or more heads—to be headless or featureless or of great size, or to possess tails. Ghosts, especially ghosts of those who have died a violent death, are often visualized as monsters of a more or less horrible kind, usually with a fondness for human blood. Among barbaric peoples similar beliefs are found, especially in Oriental mythology and folk lore. Here whole classes or tribes of monstrous beings exist, like the rakshasas of Hindu mythology—hideous fiends with shape-shifting powers—or the evil jinn or the ghous of Arabic belief, or the satyrs, centaurs, and cyclops of Greek mythology. Here also human tribes of monstrous form are a subject of popular belief. The people of Jâbâh (Java?) were supposed by the Arabs to have their heads in their breasts. Horstius describes some of these tribes supposed to live beyond the region of the Scythians—men with goat's feet, men with one eye (the Arimavars)—and other tribes believed in by the Libyans—monsters with dogs' heads or headless with eyes in their breasts. Pliny also writes copiously about such tribes. Irish mythology speaks of tribes of men with dog, cat, or goat heads. Tribes or individuals covered with an abnormally high growth of hair are often mentioned by ancient or modern travellers from the Carthaginian Hannibal onwards. In Egypt monstrous creatures were often figured on tombs, and the god Bes is depicted as a dwarfish but monstrous and repulsive figure.

The monstrous creatures of Babylonian and Assyrian art are well-known—winged bulls or lions with human heads, and other abnormal forms. These were set in front of entrances as a means of frightening away evil spirits, and a similar use of the figures is found elsewhere (see Doon, vol. iv. p. 484 f.), at both lower and higher levels. Among the folk beliefs of the world there are beings that have a real existence to the imagination, and are doubtless survivals of similar beings believed in by their forefathers. But the influence of Christianity was often to give a sinister aspect to the supernatural beings of other races. The water-horse and water-hulk of Celtic lore are typical examples of monsters which have still a real existence to the folk in remote districts. Demonic beings are also often envisaged as monsters, and everywhere more or less repulsive giants and dragons have been subjects of popular belief (see Demons and Spirits, Giants).

The mythology of most races tend to give a demonic, gigantic, or monstrous form to the supernatural enemy of culture-heroes or the gods—Tiamat and her brood in Babylon, the opposing hosts of beings whom Skílákólon conquered in Egyptian belief, the demons and monsters who strive with gods in Hindu, Greek, Teutonic, or Celtic myth. They depict chaotic powers as opposed to the powers of order, and hence they constantly tend to be regarded as evil, while their opponents embody righteousness and goodness.

As early as the days of primitive man monstrous forms have been depicted in various ways. Thus in caves at Marsoulas and Altamira grotesque faces may represent demons, while other curious hybrid figures, half-human, half-animal, have been variously interpreted, but may represent monsters of the imagination of the Stone Age. Savage art tends to give all its human or supernatural beings a grotesque, if not monstrous, form, often, no doubt, from lack of skill, but there is sometimes a deliberate exaggeration, in a horrible or grotesque direction, of features or of one or more members of the body. This monstrousity of feature is also seen in masks worn on ceremonial occasions by savages, and often meant to represent the faces of particular spirits. Indian art delighted to represent its divinities as many-headed or many-armed—a method which has spread into adjacent countries. Tibetan representations of demons or gods are often repulsive in their monstrousity. Reference has already been made to the monstrous Babylonian figures. In medieval and later Christian art demons and the devil were depicted in the most sinister and horrible form possible—half-human, half-animal, or with exaggerated features, tusks, horns, tails, or with faces on chest, stomach, or knees.

2. Origin of the belief in monsters. Probably no single origin is to be looked for. There may have been different origins for the belief as a whole, or particular monstrous forms may have had an origin different from that of some other forms.

(a) Imagination is doubtless responsible for much of the monstrous that is attributed to man, mythical animals, or demons in mythology or primitive art. As man's imagination peopleed the world around him with spirits, so these appeared to his imagination as 'gongs, hydres, etc.'

5 Of hands, head, for instance.
6 This is particularly noticeable in illuminated MSS or in pictures of the Temptation of St. Anthony type. Cf. Le Doux and Housney, p. 251.
and chimeras dire. There was a constant tendency to visualize the creatures of belief as human and yet as more than human, as animal and yet more than animal. As man drew little distinction between himself and animals, as he thought that transformation from one to another was possible, so he easily ran human and animal together. This in part accounts for animal-like figures on blogs or animal-gods with human heads. Or, where gigantic superhuman strength, wisdom, or productiveness was concerned, man represented these to himself by forming images of the beings who possessed them with numerous or enormous heads or arms or phallos. There is little doubt also that the lack of skill in depicting the human form tended to fill with suggestions of monstrous the minds of those who gazed on such images.

(d) This last fact may have in turn influenced the dreams of men, and, as dream figures were realistic, such forms were believed to have a real existence. But, apart from that, and especially when we consider the way in which dreams are deliberately cultivated by the medicine-man (see Aussterriss), they have, no doubt, had strong influence in the creation of monsters, of which the mind in waking hours could no more rid itself than could Frankenstein escape his creation. The combination of existing but diverse forms would easily occur in sleep, and such monstrous forms would play a part in the drama enacted during the hours of sleep. Such forms, seen in sleep by men to whom dreams had an intense reality, became a real part of the contents of the actual world in which they lived. Primitive and savage men are like children, and they no doubt had their night terrors, caused by fantastic or horrible figures seen in dreams and still appearing to haunt them when sleep was rudely broken by the effect of fear. Again, hallucinations seen in waking hours by those whose mental balance was deranged might also aid in the creation of monsters, as they form part of the world inhabited by persons with certain kinds of mental affliction.

Long rows of horrible characters may pass in endless procession before the strained and weary eyes; pictures of a vividness scarcely ever realized in normal life are presented, in which the most horrible acts are being committed by persons of frightful mien.

Such hallucinatory appearances, described to the same, would by them be accepted as real, and it is probable that the mode of life and given to seeing visions, is never quite sane. But, again, the savage in his waking life is probably the subject of hallucinatory impressions to a far greater extent than the civilized man. His psychic state when awake bears a close resemblance to his psychic state when asleep. What he thinks he sees is actual to him, and every illusion, however incredible or monstrous, is a fact. Even in cultured Europe there were figured on the tombs the monstrous forms with which the deceased thought he had seen in his lifetime.

(c) Monsters, again, may owe their origin to a basis of fact. Any large predatory animal whose coming and going was obscure would tend to be envisaged in still more awful guise. Some, indeed, have argued that believed survivals of now extinct animals may have suggested the dragons and other monsters of folk-tale and tradition, and, if this were true, it is certain that the impression made by them would easily become legendary. Most savages have traditions of monstrous forms which are really exaggerated forms of actual animals seen by their ancestors, but unknown to their descendants in their new habitat—e.g., the monstrous lizards of Maori tradition are the crocodiles of the land whence the first men came. Perhaps actual abnormal or monstrous births may have assisted in the formation of mythical monsters, or would tend to be regarded in popular belief as matters of common occurrence. Thus in the standard histories are full of such prodigies. It is certainly also, apart altogether from the possibility of abnormal births as a result of bestiality, that men have often speculated upon this or imagined the effects of such unnatural emphasis of different species of animals or between beasts and human beings. This is seen in universal folk-lore and in ancient myth, as well as in the half-glossing histories and chronicles of bygone days and in the pseudo-scientific works of the period from the time of Pliny onwards. Medieval and folklore also believed that the union of demons and human beings resulted in the birth of monsters. The brutality or merely the hostility of other tribes, near or more distant, would cause them to be regarded in a still more sinister or monstrous aspect. Horrible deformities were attributed to them, or this or that feature was exaggerated, or habits of a peculiar vileness were ascribed to them—e.g., forms of leathern amalgam. Even remoteness or ignorance of such tribes would invest them with distorted forms. Here, probably, is to be seen the origin of the belief in those monstrous tribes already alluded to. Invading peoples, beholding with brutality, are sure to be regarded as monsters. In the same way the monstrous cannibalistic aries of folk-tale are exaggerated forms of actual cannibals (see Cannibalism). Again, where certain deformities are assumed by warriors to strike terror in the enemy, where faces are painted or tattooed, masks or animal head-dresses worn, these are apt to become a real part of the men themselves. They are regarded as monsters rather than as warriors.

(d) Lastly, the misinterpretation of fact may easily give birth to monsters. This is especially seen where the bones of fossil animals of large size have been regarded as those of monsters or giants, or their tracks as the claws of monstrous birds—the griffin or the rukh. Hence the rise of many myths about these beings—e.g., of, they were said to be men by gods or spirits beneficent to men.

There is no doubt that the belief in the existence of monstrous forms has had a profound influence on the mind of man, probably for the reason that, as has been proved experimentally, any abnormal shape has a strong power of suggestion.

MONTANISM

J. A. MACULLOCH

MONTANISM.—1. The movement now more generally known, from the name of its founder, as Montanism had its birth at a village called Ardabat in the part of Mysia adjoining Phrygia, probably not far from Philippi (Ramsay, "Cities and Bishoprics of Phrygia," ch. i.). There, as it seems, about A.D. 168, Montanus, a recent convert, who had been a pagan priest, began to prophesy. His prophecies were accompanied by strange phenomena, resembling those associated with demonic possession. In what way his exercise of the prophetic charisma was regarded by his opponents as differing from that of the genuine prophets we have various hints from nearly contemporary documents; he spoke while he was actually in a state of ecstasy; the true prophets received their message in ecstasy, but did not deliver it till their faculties returned to a normal condition. Moreover, the "ecstasy" of Montanus was a kind of madness, deliberately induced, whereas prophets, acknowledged as such by the Church, even when in a state of ecstasy, were of sound mind; the so-called "ecstasy" of Montanus was, in fact, not true ecstasy. An early and contemporary writer (Justin, "I. Apology," ch. xiii. 8) speaks of "the inebriation of the Montanists." In agreement with these statements an oracle of Montanus declares that the prophet is as a lyre played upon by the divine plectrum; and the form in which the revelation of his ecstatic utterances are cast implies that he was a mere passive instrument, and that the phrases which fell from his lips were actually the "epitaphia verba" of the Deity. His opponents reminded him of the prophetic virtues of the ancient prophets, who as human agents proclaimed the will of God—"Thus saith the Lord." 2. After a time—-as seems to be implied, a considerable time—Montanus was joined by two women, Maximilla and Priscilla, or Prisca, with whom he sanctioned deserted their husbands, and who also claimed to possess the prophetic charisma. Their utterances were similar in matter and manner to those of their leader. 3. There can be no doubt that Montanus maintained that this "new prophesying" differed essentially from all preceding prophecy. Thus the novelty of its form was to be explained. It was the "foresight of the coming of the Paraclete" (Jn. 14:16-17) the apostles had not the perfection of the Holy Spirit (1 Co 13:8); this was reserved for the new prophets, of whom Christ spoke in Mt. 28:19. This is stated to be the Montanist doctrine by many writers, and it is the basis of the exaggerated assertion of Eusebius (HE v. xiv.) that Montanus claimed that he himself was the Paraclete. 4. It is not clear whether in the earliest period the prophecies were regarded as mouth-pieces of the Paraclete in the same sense as Eusebius suggests the contrary when he reports that, while Montanus was held to be the Paraclete, the women "were as it were prophets of Montanus" (ibid., Alex. de Thessalonica, v. 220). It is possible that first they were put in a lower position, Mt 28:45, but not Jn 16:13, because it is here that only it was at a later date, perhaps after the death of Montanus, that they were regarded as on a par with him. 5. It is evident that the acceptance of the "new prophesying" as embodying the final teaching of the Paraclete, and as in some sense superseding earlier revelation, was the cardinal principle of Montanism. This is made manifest by the very phrase "new prophesying" constantly used by its adherents; by the title most usually accorded to themselves, as distinguishing them from other Christians (ψαλτής; Clem. Alex. Strom. iv. 15 (PG xii. 1500 C)); and by the polemics of anti-Montanist writers, whose argument was mainly directed to proving that this "so-called prophecy" was in truth a false prophecy proceeding from the spirit of evil. The charisma was not regarded as confined to Montanus and the women. Theolomus, e.g., was an ecstatic, and was reported to have died while in an ecstasy. 6. We are not surprised to learn that this sudden outburst of prophecy, and the claims that were made for its leaders, must have caused consternation. Many of those who heard Montanus and his companions would have silenced them. Two Phrygian bishops made an ineffectual attempt to "prove and refute" the spirit that was in Montanus, and with him who had come from Anchiale in Thrace, attempted to exorcise Priscilla. At first, we are told, the movement advanced slowly; but after a time, it seems, the majority of the Phrygian Christians became adherents of Montanus. Thus only can we account for the fact that, at an early period its followers were commonly spoken of as 'the Phrygians,' and their teaching as 'the heresy of the Phrygians' (cf. Φρυγοί, καὶ Φρυγοί ἀποστράφησαν, whence the Latin capaphsygeris, capaphsygiri). In due course formal protests were issued by the bishops. While the movement was still in its infancy, Claudius Apollinaris, bishop of Hierapolis, was sent against it, to which were appended the signatures of many bishops, at least one of whom came from Thrace. Other confutations of the new teaching followed it (HE v. xvii. 1). Many synods met in Asia and Syria, and "as a general rule" the bishops opposed it. On the other hand, the Montanists used scathing words about the ecclesiastical rulers, and slurred them as slayers of the prophets. They put forth treatises in the name of the ancient prophets, and their opponents were answered. It is impossible to determine with accuracy the date of the inevitable crisis; but it is certain that in Phrygia before the year 177 the Montanists were excluded from the Catholic Church (HE v. iii. 4; cf. xvii. 22, which clearly refers to the persecution under Marcus Aurelius). 7. It is difficult to fix the date of the beginning of the prophecies of Montanus. The choice is usually held to lie between A.D. 172, under which year Eusebius records the origin of the movement in his "Chronicon," and A.D. 168, under which year he records that the first prophecy was made by Epiphanius (Herr. xlvii. 1). It is not clear, indeed, that these two dates are inconsistent, for Eusebius may be giving the year, not of the earliest prophecy, but of some prominent event which he regarded as the starting-point of the "heresy"—e.g., the affirmation of the Lopcian promise of the coming of the Paraclete (Jn. 14:16-17), which is supposed to have been the cause of the promulgation of one of Montanus's more startling innovations. In any case it is probable that Eusebius's date is more than sufficient to place the fact that Claudius the bishop of Hierapolis wrote an anti-Montanist treatise—which Eusebius appears to have dated on insufficient grounds after 174 (Lambeth, Eusebius, p. 150)—"when Montanus with his false prophets was in the act of introducing his error" (HE iv. xiv. 21). It must therefore be regarded with caution. It is to be observed that Apollinaris wrote some time after Montanus had been joined by 'his false prophets' (HE v. xii. 3)—an event which was itself probably a good deal later than the beginning of the prophesying. Further, (1) the history of which a short account has been given in the preceding section requires a period of a good many years; and (2) Maximilla, the last of the three sisters, died in 179-180. The movement must have enjoyed the advantage of their superior vision for a sufficiently long time. Herr. xlvii. 1. It is possible that first they were put in a lower position, Mt 28:45, but not Jn 16:13, because in the latter it is only at a later date, perhaps after the death of Montanus, that they were regarded as on a par with him.

8. That the Paraclete was manifested in Montanus, and in him and his companions revealed the fullness of Christian teaching, as we have seen, the original and essential doctrine of Montanism. But, since it was the duty of the Church to supplement the teaching of Christ, it was to be expected that this doctrine would be made the basis of a system differing at many points from the teaching of the Church as usually understood. Montanus,
it is true, did not consciously deviate from ecclesiastical dogma. His opponents bear witness that he accepted the canonical Scriptures orthodoxy with regard to the resurrection of the dead and the doctrine of the Trinity. But in another sphere his 'innovations' were considerable.

9. Not long after the beginning of the prophesying Montanus crossed the Phrygian border and ended his life with his followers at a city called Pepusa, which Ramsay (pp. 213, 573) places west of Eumenia, and not far from the Phrygian Pentapolis. Pepusa, with the neighbouring village of Tymion, he named an 'Israelite'. To this settlement, which was then the frontier of the great and holy city of Eastern Montanism, he endeavoured to gather adherents from all quarters. These facts, coupled with the lavish promises made by the prophets to their adherents and certain predictions of Maximilla (Eus. HE v. xvi. 9, xvii. 4; Epiph. Har. xviii. 2), apart from a more explicit oracle attributed to another prophetess (Epiph. Har. xix. 2), would lead us to the conclusion that the 'new prophet' taught men to expect in the near future, at Pepusa, the final Parousia of the Lord (ib. xviii. 14). The primitive Montanists, in fact, held the doctrine of chiliasm, but chiliasm was a new kind. It was this hope of the Parousia at their Jerusalem that gained for them the name of Pepuzians.

10. Connected in some measure with their chilastic teaching was their view of the prophetic office in the Church. The prophetic charisma was not a gift, bestowed as the need for its exercise arose; according to the dictum of 'the Apostle' (1 Cor 12:9), it was perpetual, one of the notes of the Church. Consequently Montanas, Maximilla, and Priscilla received their prophetic office in line of succession. Quadratus and Ammia of Philadelphia were the links which connected them with Agabus, Judas, Silas, and the daughters of Philip (Eus. HE v. xvii. 3, 4; Epiph. Har. xviii. 2). But, since Montanus and his companions were the channels of the ultimate revelation, they were the last of the prophetic succession. After them would come the end.

11. Agabus the exalted position given to the 'new prophets' led naturally to the assignment to them of prerogatives generally reserved to belonging to the prophets, and thus to a conflict between the prophets and the regular hierarchy. The prophets line of succession was a legal one (Cass. ap. Tert. de Pud. 21). This power they shared with the 'martyrs' or confessors (Eus. HE v. xvii. 7).

12. Once more, the association with Montanus of two prophetesses involved the recognition that women might hold high offices in the Church. Maximilla and Priscilla seem to have made independent contributions to Montanian teaching (Hipp. Phil. viii. 19; cf. Did. Alex. de Trin. i. xi. 3; ZKG xxvi. 466); and they were probably in the habit of prophesying in the congregation (Eus. HE v. xvii. 9: deipiron). There is evidence that, at any rate in later times, other women followed their example (Orig. ap. Cæmer, Cat. v. 279), or even outdid it; for we read of a prophetess in Cappadocia in the 3rd cent., perhaps a Montanist, who baptized and celebrated the Eucharist (Firmilan, ap. Cypr. Ep. lxxx. 10), of female bishops and priests, and of virgins who regularly officiated in the congregation at Pepusa (Epiph. Har. xlix. 24; Did. Alex. de Trin. iii. xii. 3).

13. Montanists made laws regarding fasts (Eus. HE v. xvii. 2; όρεις ρευσμένοι; cf. Hipp. Phil. x. 28; Tert. adv. Jud. 1); apparently, that he increased the number or the rigour of fasts, but rather that he reduced them to rule, eliminating thereby the element of free will in matters of style, making them a duty to be observed by all Christians alike, and not only by those who used them as a means for attaining higher perfection. Among the new doctrines was a later development, due to 'the women' (Hipp. Phil. viii. 19) were some who enjoined abstinence from particular kinds of food (ἐρωτικῆς ἐσθήσεως). There is some evidence that in Phrygia the Montanist rule as regards the Montanist law of fasting fell below Catholic custom (Soz. HE vii. 19, where the two weeks of Lent seem to correspond to the two hebdomades xerophagorum' of Tert. de Ies. 15), while in the West it did not gain (see de Labriolle, La Crise, p. 399 f.). The regulations about fasting are therefore to be regarded as instances of the Galatizing or legal tendency which was described in Montanism by its adversaries (Tert. de Ies. 14). This was the natural outcome of a system which invested the exhortations of the prophets with a divine sanction, giving them the character of unalterable laws, to be observed as ends rather than as means for the attainment of holiness.

14. Under the same category may be brought the Montanist repudiation of second marriages. For on this point their divergence from the Church must not be exaggerated. The Church disapproved second marriage, and the Montanists held it to be fornication. That which the Church permitted in special cases the Montanists excluded by a law which admitted no exception.

15. We learn (Eus. HE v. xvi. 30, xvii. 5) that the Montanists held martyrs (including confessors) in high honour, and even held special stoles by their opinion as questioners of the present practice. But this was no peculiarity of their system; it reflected the general feeling of the age. And, when they went a step further and allowed them the power to forgive sins, they were in agreement with the orthodox of the West (Tert. de Pud. 52). If not also with those of Phrygia. It must be admitted, however, that there is no proof of a statement, often made, that Phrygian Montanists inculcated a severe asceticism, or that its adherents were more antagonistic to heresy than other Christians in the same district, or displayed special eagerness for martyrdom. Such evidence exists points in the opposite direction (Lanuert, Bonneuse, pp. 35, 39).

16. Montanism, after its secession from the Church, though it retained the hierarchy of bishops, priests, and deacons, developed in its organization some peculiar features. Montanus was responsible for the innovation (as it was esteemed) of salaried preachers, and for the institution, doubtless connected therewith, of collectors of money, headed, as it seems, by a steward (εικονιστής; Eus. HE v. xvi. 14). We have no direct information as to the organization (see Jeremias, Didachi, 11 ff.), the prohibition of second marriage (Athanag. Log. 33; Theoph. ad Autol. i. 15; Iren. ii. xvii. 2), chiliasm (Just. Dial. c. Tryph. 30; Eus. HE iii. xxiii. 12 ff.). Others are in harmony with what is known of the Oriental religious temperament, especially that of the Phrygians, and may be accounted for by its influence on environment. Among these are the 'enthusiasm' of the prophets (BenWetsch, Gesch. des Montanismus, ii. 219), the 'devotion' of the ministry of women, and the expectation of an immediate Parousia (Hipp. in Dan. 18 f.; Orig. c. Cels. vii. 8-10). The substitution of Pepusa for the literal Jerusalem may be due to the same influence. It has also the practical advantage of providing a holy city in the district from which Montanus drew the greater number of his adherents.

17. It is not necessary to pursue the history of
Eastern Montanism in detail. For some years after the death of Maximilla, the last of the original trio, in 179–180, there were no prophets, and the sect inclined toward the peace and naturalness which, as anti-Montanists writers pointed out, disproved the claims of the first prophets. But the spread of the sect was not permanently checked thereby. A revival of prophecy seems to have resulted from the decline in the power of Passalampychus A.D. 230 (Eus. HE v. 88. 3–12), and ultimately adherents of the movement were found in every part of Asia Minor, in Egypt (Clem. Alex. Strom. iv. 13 [PG viii. 198. 12] Alex. de Trin. etc.), and even in Constantinople, where a prophecy was recorded in 267. There were, moreover, numerous in Phrygia. The sect survived the stringent edicts of various emperors, and was perhaps not wholly extinguished till the period of the Turkish invasion (Ramsay, p. 574).

21. Before we turn to its history in the West, some important facts may be mentioned. The early Montanists were prolific writers. Their controversial tracts have been referred to above (§ 5). Here it is to be noted that Calvis (c. A.D. 230) assails them of composing new Scriptures (Eus. HE vi. xx. 3), while other authorities attribute numerous writings to Montanus, Maximilla, and Polycarp, and certain letters addressed to Urbanus compiled a collection of oracles of the prophets (ib. v. 17) by and Themisio “wrote a Catholic Epistle in imitation of the Apostle” (ib. viii. 5). An anonymous author quoted by Eusebius alludes to literature of this class when it states that he hesitated to write against the Montanists for fear of being charged with adding to the Canon (ib. viii. 3). It is clear that the “new prophecy” was propagated by writing as well as by oral teaching.

20. A tendency was thus noticeable in both sides to division. The Montanists must have regarded the writings of their own prophets as of at least equal value with the Scriptures; they constituted in fact, not in intention, an enlargement of the Canon. It was inevitable that they should be used, like the canonical Scriptures, as authoritative expositions of dogmatic Christianity, and that, like them, they should be variously interpreted. By the end of the 3rd. cent. there were two parties of Montanists, who took different sides in the Monarchian controversy, and both of them appealed to the oracles of the prophets as well as to the Scriptures (Tert. Adv. Marc. viii. 19; pseudo-Tert. ibid. 7; Did. Alex. de Trin. 23, 38, 41; ZKG xxvi. 425 ff.; Tert. adv. Prox. 2, 8, 13). Thus the authority ascribed to the writings of the prophets produced a tendency to the formation of parties differing from one another in matters of faith, and probably also in matters of discipline. This tendency would be greater if it, as seems likely, such writings were not collected into a Corpus. Each community would follow the teaching of such books as they happened to possess, without the obligation of harmonizing it with that of the books possessed by other communities.

22. A similar tendency is revealed in the fact that in the earliest times, apart from the title of Phrygians, which merely indicated the place of origin (Clem. Alex. Strom. vii. 17), there was no generally accepted name for the sect. The various communities seem to have been commonly designated as "Montanists" or "Montanistos," and jealous rivalry was afterwards published, and some fragments of which remain (Eus. HE ii. xxv. 6 f., vi. xx. 8). The sect was afterwards known by the title of Praxas, letters were withdrawn (Tert. adv. Prox. 1). There were doubtless later attempts of the same kind; one is referred to by St. Jerome (Ep. xxiv. 50), and a similar attempt was made in Rome, but it is not heard of there after the beginning of the 6th century.

23. It seems probable that in Spain. But of its history in that region we know nothing except
that it had some adherents there at the end of the 4th century (Pacianus, Ep. 1. 1 ff.).

24. In Africa the propaganda had more success. By the mid-3rd cent. knowledge of the "new prophecy" had reached Carthage—perhaps from Rome, less probably direct from Phrygia—and it gained there its most illustrious convert in the person of St. Cyprian. The document seems to have gone beyond his evidence when he stated that Tertullian at first opposed the movement; he was certainly in later life a sincere and ardent champion of the teaching of Montanus, as he understood it.

25. The qualifying title "Montanist," as it appears in the pages of Tertullian, differs so much, and withal is so little conscious of differences, from the Montanism of Phrygia that we are compelled to suppose that his acquaintance with the teaching of the prophets was imperfect. He can hardly have received direct instruction from Eastern Montanists; his knowledge of their tenets must have been, in the main, derived from books, including a collection (de Fuga, 9; the words "et alibi") of the oracles of Montanus and Priscilla (he never quotes Maximilla by name), which was apparently incomplete.

Tertullian accepted, without reserve, the claim of the Montanist prophet to have ceased by the Paraclete. But, though he speaks of prophetic speech in a state of ecstasy (de Isi. 3), we find no hint in his writings of the strange phenomena which were the normal objects of strong expression of joy in the East. He tells us (de An. 9) of a sister who fell into an ecstasy during a church service; but she was not permitted to communicate the revelation which she had received till the congregation had departed. None of the usual anti-Montanist arguments (see Epiph. Hær. xviii. 3-8) would have had any force against ecstasy so well controlled as this. Tertullian, indeed, identifies ecstasy with amentia (adv. Mar. iv. 22, v. 8), but with such qualification of the meaning of amentia (de An. 45) as to bring him very near to the standpoint of Eastern orthodox writers. Moreover, with habitual inconsistency, he affirmed, in direct opposition to the Phrygians, that the apostles had the fullness of the Spirit.

Further, Tertullian seems to betray no consciousness of the doctrine that there was a succession of prophets from the days of the apostles to Montanus. In the visions of the Baptism (de An. 9, de Isi. 12), till it was restored in the prophets of the Paraclete.

Again, Tertullian never mentions Pepusa. He was a chiliasm, and he expected the Parousia in the near future; but he believed that it would take place in Jerusalem (adv. Mar. iii. 24). He cannot have read the oracle (Epiph. Hær. xlix. 1) which declared that the New Jerusalem would descend at Pepusa.

Tertullian agreed with the Phrygians in allowing to the prophets authority to absolve from sin, though he has some difficulty in reconciling this view with his own opinion that certain sins are unpardonable (de Pont. 19, 21). But he is indignant with those who hold that martyrs have a like prerogative (ib. 22).

On another subject he is in conflict with the Phrygians. He will not permit a woman to speak in the church (ib. 19). Nor does he believe that a man should baptize, nor to offer, nor to assume any function which belongs to a man (de Virg. Vel. 9). If the sentence had been less trenchant, one might have supposed that it was anti-Montanist polemic.

26. Thus Tertullian rejected much that in Asia Minor was counted Montanist. And he added much, especially in the direction of rigorism, of acute opposition to paganism, and of avidity for martyrdom. For it is not to be assumed that, when his later views differ from his earlier, and when he proclaims them as taught by the Paraclete, they were really derived from primitive Montanism. Thus in his de Fuga he denounces flight in persecution as sinful, though, in his de Uxorem (l. 3) he counts it lawful; and in his de Pudicitia, forsaking the milder teaching of the de Pudicitia, he denies the power of the Church to forgive grosser sins. But in the former case he quotes oracles which make no reference to flight, and in the latter one which flatly contradicts his thesis (de Fuga, 9, de Pud. 21). In both, the oracles are more in harmony with his earlier attitude than with his later opinions.

Visions also enabled him to add, now a new doctrine (de An. 9), now a fresh rule of discipline (de Virg. Vel. 17), to the official teaching of the "new prophecy."

27. Even on subjects in which he was in entire accord with Eastern Montanism we find no essential difference between his earlier and later teaching; e.g., he expressed disapproval of second marriage in his pre-Montanist treatise ad Uxorem; but in his arguments used are identical with those of his de Esportatione castitatis and de Monogamia, including that founded on the nearness of the end, which is more strongly stated in the earlier work. His description of marriage as a sacrament occurs in all three. The result of his adoption of Montanist principles is seen merely in the fact that an absolute prohibition takes the place of a form of discipline. It is not, as in the words, that he draws the logical conclusion from his argument. Here, as elsewhere, he found in oracles or visions only a new sanction for opinions already formed.

28. Thus we see that, if the form of Asia Minor Montanism was largely determined by environment, and possibly by the influence of individual leaders, the form of African Montanism, or, as it was afterwards rightly called, 'Tertullianism,' was determined by the personal force of Tertullian himself, and doubtless in some degree by the environment which moulded his character. We cannot forget that the home of Tertullianism was later to become the home of Novatianism and Donatism.

29. If it be asked, What was there in Montanism to attract such a man as Tertullian? it must be remarked that he was unaware of, or ignored, many of those features of the Montanist movement which lay closest to Eastern opponents caused most scandal. There remained the proclamation of the inspiration of the living Church, burdened with a few corollaries, most of which had been anticipated by his own thinking. Promising this, we may accept the answer of Swete (Holy Spirit, p. 79): "For Tertullian the interest of Montanism lay chiefly in the assurance which the New Prophecy seemed to give that the Holy Spirit was still teaching in the Church." It need only be added that the acceptance of the Montanist oracles as embodying the teaching of the Paraclete was made easier for him by the support which they seemed to give to opinions which he maintained in opposition to other Christians.

30. The Tertullianists seem to have become an insignificant body after the death of their founder. They are never referred to by St. Cyprian, in spite of his veneration for Tertullian. The testimonies of the sect returned to the Church when St. Augustine was at Carthage, and he reports that, when he wrote his work on heresies, their basilica was in Catholic hands (Hær. 36).

MORAL ARGUMENT—MORAL EDUCATION LEAGUE

England, a number of persons interested in the training of the young began to study methods of imparting moral instruction on an ethical basis that were and simple, and in such a way as to meet the needs of children drawn from all denominations. The Union of Ethical Societies seized the opportunity of an approaching election of the London School Board to invite in 1897 a number of societies to send delegates to a conference. In July 1897 the delegates met under the presidency of Frederic Harrison, and adopted a policy of which the two leading statements were as follows:

(1) 'That there is urgent need of introducing systematic moral instruction within the Board schools in place of the present religious teaching.'

(2) 'That this moral instruction should be made the central, culminating and converging point of the whole system of elementary education, giving unity and organic connection to all the other lines of teaching, and to all the general discipline of the school life.'

A direct result of this conference was the establishment of the Moral Instruction League at a well-attended meeting in St. Martin's Town Hall on 7th December 1897, and annual meetings have been regularly held and reports issued since January 1898. The original object, 'to substitute systematic non-theological moral instruction for the present religious teaching in all schools,' was changed, in 1901, to the purely constructive policy 'to introduce systematic non-theological moral instruction into all schools.'

On the same principle, the object was, in 1909, relieved of the phrase 'non-theological,' and replaced by these words: 'To urge the introduction of systematic moral and civic instruction into all schools, and to make the formation of character the chief aim in education.'

At the same time the League was altered to the Moral Education League. The League, however, definitely affirms that it 'works on a non-theological basis,' and both its considerable output of literature and its practice during the seventeen years of its history (1898-1915) have obviously exhibited its detachment from all forms of sectarian and denominational principles. Its supporters in the earlier stages made attempts, with some success, to induce parents to take advantage of the Conscience Clause of the Education Act of 1870, withdraw their children from religious instruction, and apply for special moral lessons. These efforts ceased as the League became more absorbed in its scheme for building up a method of civic teaching, and for concentrating that method by lessons publicly given under the direction of a Moral Instruction Circle. The Circle was nominally conducted by the Union of Ethical Societies, but naturally proved very useful to the League as a means of propaganda, and it was maintained for several years. Active dissemination of the League's views by meetings, in the press, and among Education Committees and Members of Parliament gradually leavened public opinion. In 1904 the Government Education Code appeared with a preface in which character-training was emphasized; in 1905 the official volume of Suggestions for the Consideration of Teachers and Others Concerned in the Work of Public Elementary Schools contained a section on the formation of character; and in 1908 the Code, issued by Augustinine Berrell, directed local authorities to devote greater and more systematic effort to the subject, though the choice of 'direct' or 'incidental' methods was left open. In 1909 a debate on moral instruction, led by G. P. Goetz and William Collins, took place in the House of Commons, and a number of League representatives, waited upon the Minister of Education (W. Runciman) in May of the same year. Since that date the League has been quiescent in the political field, and has mainly
MORAL LAW

devoted its energies to influencing the opinion of educationists and the general public. A return issued by the League in 1908 showed that, of the 257 local education authorities in England and Wales over 100 had taken definite action in emphasizing moral instruction in their schools, in some cases by setting apart a lesson in the secular time-table, and by including moral elements in the religious course; and twenty authorities had adopted the syllabus drawn up by the League. Besides this syllabus, which supplies a detailed series of notes for the seven standards, the League has published a number of text-books by A. M. Chesterton, Baldwin, Waldegrave, Robson, Reid, Wicksteed, and F. J. Gould, numerous pamphlets, a Quarterly (beginning April 1906), and a volume designed for use in India (Youth's Noble Path, 1911). The education authorities in Bombay, Ceylon, and Mysore have evinced practical interest in the methods of the League; and significant sympathy has been shown by H. H. the Gaekwar of Baroda, and many other Indians as well as Anglo-Indians. Each annual report testifies to a spirit of inquiry aroused in various colonies and foreign countries. A remarkable testimony to this spirit was afforded in 1907, when a committee appointed by the Moral Instruction and Training in Schools examined witnesses and collected papers, its report being published in two volumes in 1908 (vol. I. "United Kingdom," vol. II. "Foreign and Colonial"). The inquiry was carried on independently; but several members of the League sat on the Committee and contributed to the volumes just named. A still more striking reinforcement of the League's endeavours appeared in 1908 in the shape of the first Moral Education Congress, held in London under the secretaryship of G. Spiller. A similar congress was held at The Hague in 1912.

F. J. GOLDS

MORAL LAW.—The concept of law is one of the two concepts which may be taken as fundamental in an ethical system. According as we start from the idea of a good to be attained or of a law to be obeyed, we have a teleological or a moral theory of ethics. The former of these was the characteristic type of Greek theories; the latter became predominant in Christian times. Under the teleological conception morality is looked upon as fundamentally a teleological, self-realization, and its laws are regarded as rules for the attainment of a good which every man naturally seeks. It is in this sense that Socrates was able to maintain his paradoxical position that no man is willingly vicious and that all vice is ignorance. Such a position is essentially a naturalistic one, implying a native goodness in human nature which needs only enlightenment to realize its natural good. Moral conduct is the rational pursuit of happiness.

In a juridical system of ethics, on the other hand, human nature is conceived as divided against itself and therefore in natural opposition to the good. Morality is the conscious development of natural powers guided by the idea of happiness, but a life of discipline and subordination to an authoritative law. It is not the natural value or the pleasure of an act that renders it moral, but its value as commanded by the law. It is not commanded because it is good, but it is good because commanded.

It is evident, therefore, from this distinction of teleological and juridical theories, that the term "moral law," in its strict meaning, denotes an imperative, regarded as having practical efficacy in conduct. The idea is of an order which is to be imposed upon human nature and, accordingly, to be accepted by the rational will. One must, therefore, distinguish between such an imperative, which does not rest upon any natural desire for happiness, and a moral rule or law in the teleological sense of the term. The moral laws, in the teleological view, are not imperative, but counsels of prudence, pointing out the best ways for the attainment of happiness. Their practical efficacy rests upon a natural desire for satisfaction, and their moralizing, speculative, and hypothetical character, they have the more of the nature of uniformities in the scientific sense of the term "law." They are rules of applied psychology. Although such rules are often spoken of as laws, yet, lacking the element of imperativeness, they are perhaps better not designated by that term.

Historically, the conception of morality as law is an early one, primitive morality consisting in obedience to tribal custom regarded as ultimately imperative for the individual. When ethical reflection awakes, however, with its scepticism and questioning of authority, the natural view of morality is the teleological one, and the conception of moral law gives way to that of good. Experience and a deepening of the moral and religious consciousness, such as occurred in the Hellenic age and in early Christian times, revived the dualistic idea of morality and we have the dualistic theories with their central doctrine of moral law and obligation. While these were at first theological in character, in modern philosophy we find the idea of law maintained also upon a natural basis.

Considered with reference to the nature of moral law and its authority, three types of system may be distinguished: (1) teleological, (2) natural, and (3) rational.

1. Theological. — In the theological systems moral law is regarded as a rule of conduct which has its ground in the nature or will of God and not in the nature of man or in the consequences involved in obedience or disobedience to the law. The rule may be for the good of man, but it is for his good because it is the divine will, and not the divine will because it is for his good. 'Man's chief end is to glorify God and to enjoy him for ever.' God is the beginning and the end of the moral world, man but an incident in the creation. Sometimes it is the will, sometimes it is the intellect, that sets the standard, but in all cases systems of this type are theocentric in nature. To this type belong the various forms of scholasticism, which attempt to delimit the scope of the moral law, and to construct a code of duties which they succeed in really breaking away from their classical originals, as well as the chief systems of Protestant moral philosophy.

The serious difficulty in theological systems has always been the question of the authority of the divine law and its hold over the individual. Emphasis upon the divine has tended by contrast to raise new centres of interest in the human, and men have always refused to remain satisfied with the idea of a law whose basis is outside themselves. The significant element has therefore been found either in the consequences of the law for man, in which case we have a utilitarian principle, or in the human nature itself, under which hypothesis we have a natural basis for morals.

2. Natural.—Natural law as a basis for morals may therefore be described as an order of human nature, known to be such by the unaided reason of the man, and recognized as binding without reference to the desires or pleasures and pains of the sentient life. Man knows himself as properly of a certain nature, and cannot reasonably depart from the rules involved in it. The moral law is not imposed from without, but are the expression of his own nature and binding only as such. To be moral is to be truly a man, and to be truly a man is to be truly a rational animal. The norms of reason are the moral laws. This type of theory
was prevalent in the earliest period of modern ethics, and represented the attempt to place morals upon a rational basis. The general idea took various forms as it is expressed in the Stoic formula of Grotius and the Neo-Platonic doctrines of the Cambridge Platonists and their like. While the religious and metaphysical implications and foundations, these systems agree in their desire to free morals from theological authority and to found them upon an immanent rather than a transcendent basis. Yet in so doing they tend to lose their jural character and to revert to the teleological type of their Greek originals. The dictates of reason which reveal these moral or natural laws are indeed authoritative; but their authority really rests upon the value of the good end or ideal which they express. Moral law, when rationalized, ceases to be supreme, whence it was very easy for the transition to be made from these Platonizing systems to the early forms of English utilitarianism. Indeed, in spite of their rational terminology, it is hardly accurate to include them at all under the jural type; they are the natural compromises of the transitional period.

3. Rational — The rational interpretation of moral law finds its clearest expositor in Kant. It is true that Butler formulated the traditional English theory of conscience half a century earlier, but even in his conception the supremacy of conscience does not involve independence of consequences; its function is to decide between the rival interests of self-love and benevolence, not to dictate a law irrespective of either. It was Kant's merit, as he conceived it, to separate out the pure principle of a moral law and leave it free from any admixture of motives drawn from a consideration of consequences. To be moral is not to seek to satisfy a desire for anything, however good, but to obey a dictate of reason determined by nothing outside its own rationality. A moral law is thus a categorical imperative addressed by the reason to a being not naturally inclined to obedience. The motive to obedience is respect for the law itself whose authority we feel in our sense of moral obligation. The law, as grounded neither in the nature of God nor in its consequences for man, is thus absolute and the expression of a free reason which commands of itself alone, or is autonomously to be obeyed as such.

There is such a categorical imperative is the only fact given us by pure reason, and that, if there are free beings, they must govern themselves by such laws is evident; but how those free beings are to be formed and what kind of law can be drawn from such absolute dictates of reason — these are matters involved in the mysteries of personality. The form of such a law, as independent of consequences, must be abstract. Be rational, or 'act from a maxim fit for universal law,' is the formula. It is thus essentially negative — a critical test rather than an informing principle. No act is to be done whose maxim is not capable of universalization, but no principle is given us, apart from experience, by which to determine any positive control for the will.

In its illustration of this rational concept of moral law, Kant's theory also illustrates most audibly the jural concept of morality in general, the essence of which, as in Kant's system, is the primacy and absoluteness of law. In the theological forms the law tends to become heteronomous and foreign, and hence immoral, while in the natural systems it goes to the opposite extreme and loses its jural character. Kant's system alone is at once a law and absolute.
in every ethical situation, and is more particularly interested in the critical analysis of every given code of ethics, nevertheless it is vain to seek the origin of the sense of moral obligation in the rational process alone. Nor can we successfully resist the temptation to add rational insight into consequences of any kind.

3. Critical rationalism began with the work of Hobbes, Locke, and Hume. Locke had little difficulty in showing how untenable was the unimportant idea of the redemptive quality of the laws of morals. But both Hume and Hutcheson leave unanalyzed a ‘moral sense’ as something ultimate. This moral sense Adam Smith, in his brilliant ethical intuition, sought to resolve into sympathy, or at least to trace its origins to sympathy as a natural attribute of man. It was distinctly on the basis of this critical rationalism that Bentham and the two Mills made their famous analysis of the sense of moral obligation in terms of utility, and more especially of social utility. So far as this empirical rationalism dealt with the codes of morals found in human history, it was fruitful and stimulating in a high degree, and almost inevitably it became increasingly evident that empirical utilitarianism could build no bridge from the socially useful to the sense of personal responsibility to be socially useful. And, when John Stuart Mill conceived his comprehensive case for the ethical evaluation of values, as higher and lower, and thus also a capacity for the intuitive recognition of moral values as higher over other types of value, clear-eyed critics of rational utilitarianism realized that Bentham’s system had gone into bankruptcy.

4. Biological evolution, however, infused new life into the discussion as to whether the origin of the sense of moral obligation might not be found in the socially useful. It was suggested by Darwin himself that the conflict of species, and the survival of groups obeying the instincts that made for group-preservation, would in a long process of development link the socially useful with the morally right, and this line of inquiry has been followed up by Leslie Stephen, Alexander Sutherland, E. Westermarck, L. T. Hobhouse, and others. The exceedingly useful light that this line of research has thrown upon the gradual development of empirical ethics, and in particular of the foundations of the two issues involved, may be readily conceded that the socially useful has determined in a measure, perhaps we may say in large measure, what men consider morally right, but the origin of the category of moral obligation is a problem of unexplained evolutionary analysis has not as yet succeeded in building a bridge between the socially useful and the sense of moral obligation to the group. Moreover, even in detail the sense of individual moral obligation presents many difficulties for the socially useful, historically it is easy to show that the sense of moral obligation has time and again protected courses of conduct patently socially detrimental.

5. Critical intuitionism is therefore in many dictating itself, and, especially on the ethical field, there are many attempts to re-state more satisfactorily the position of Kant and Lotze. There is some return to Jacob and Fries, and the philosophies of Wundt, Eucken, Eissler, James, and Bergson are suggesting new formulations for the sense of moral obligation as a category of the practical reason incapable of being analyzed as an empty concept. It is true, in this form, whose content is given in empirical experience and is subject to the laws of evolutionary process and progress, among which laws the socially useful is one of the most important factors, from the psychological point of view Wundt and James, as well as Eissler and others, assume the capacity for moral distinction and the sense of moral obligation, without attempting to analyze the category further, while realizing that the content of the moral appreciation is a subject for scientific examination, and has its own evolutionary history. From this point of view the feeling of moral obligation arises as a variation, and maintains itself by its social usefulness. Bergson has as yet given no development of his philosophy along ethical lines, but the revival of a critical intuitionism has found support in his main contention, and followers of Fries and Jacob are in the sense of moral obligation the sense of a capacity for reaching beyond the phenomenal, and link this with a re-statement of the Kantian argument for God’s existence. According to this school, the fundamental significance in the sense of moral obligation is the spiritual power of the purposeful character of life. The unity of our mental and spiritual life demands that moral judgments be not irrational, even though complete rationalization may be beyond our powers. However, divergent the empirical codes of social behaviour may be, the existence of a moral obligation is an element everywhere; hence the very rational process itself is involved in a defence of the inherent validity of moral obligation.

6. Conclusion. Moral obligation may then be said to so far defy any further ultimate analysis, and its origin is as mysterious as are all other origins and variations. It is a category of the practical reason, and in so far super-rational, but the contents of the moral judgment are subject to the rational process, as in the sphere of the phenomenal. Thus the total ethical complex reveals rational, sympathetic, eudemonistic, and heconic elements. But the tension of the two issues involved may be readily conceded that the socially useful has determined in a measure, perhaps we may say in large measure, what men consider morally right, but the origin of the cate- gory of moral obligation is a problem of unexplained evolutionary analysis has not as yet succeeded in building a bridge between the socially useful and the sense of moral obligation to the group. Moreover, even in detail the sense of individual moral obligation presents many difficulties for the socially useful, historically it is easy to show that the sense of moral obligation has time and again protected courses of conduct patently socially detrimental.

LITERATURE. — Aristotle, Nicomachean Ethics, tr. F. H. Peter, London, 1897; Cicero, De Officiis; James Macfarlane, The Intuitions of the Mind, London, 1890, esp. pi. i. ch. vi.), but the biological analogy has been distinctly overworked, and it is becoming increasingly evident that evolutionary philosophy must assume variations and do not explain them. Thus on the ethical field origins are no more explained than on the biological, and the sense or the socially useful cannot so far be successfully analyzed into unmoral elements. Moreover, even in detail the sense of individual moral obligation presents many difficult-
MORAL SENSE.—The term ‘moral sense’ is practically equivalent to ‘conscience,’ and shares the authority with the terms ‘sense of duty,’ ‘morals,’ and ‘conscience’ as synonyms. The term is often used in the sense of ‘intuition’ (ch. i. sects. i., ii.). Kant, who derived moral distinctions autonomously from reason, and formalism, adds to the categorical imperative, treating the moral sense with contempt when he says:

‘As to moral feeling, this supposed special sense, the appeal to which is indeed superficial when those who hope that feeling will help them out, even in what concerns general laws’ (Metaphysics of Morals, tr. T. K. Abbott, London, 1859, p. 90).

In its treatment of the moral sense, then, the Enlightenment (q.e.) insisted upon something even more rationalistic than conscience.

If the tendency of the 17th and 18th centuries was to regard the moral sense as something rational, the tendency of the 19th and 20th centuries has been to reduce the principle in question to the social. In the middle of the 18th cent. Adam Smith inculcated the career of social ethics when he sought the source of moral sentiment in sympathy. The first to raise the question concerning the origin of moral sense, Smith had no hesitation in founding the ideas of propriety, merit, and duty upon the instinct of self-preservation, and the ideas of justice and beneficence (Moral Sentiments, London, 1759). A century later Darwin connected the moral with the biological, and thus made the moral sense dependent upon the premonitory of the social tendency in man. To ‘sociability’ Darwin adds the principle of ‘reflection,’ without which the social could not have become ethical, so that the ideals of Butler, to whom Darwin pays due tributo, have not been wholly lost to view (Descent of Man, London, 1871, ch. iii.). Equally significant with the departure from the rational is the change from the individualistic to the social; for, where Butler identified conscience and reasonable self-love, Darwin united conscience with the egoistic in human nature.

When biological ethics transferred the seat of the moral sense from the self to society, much of the phenomenology of conscience, shame, approval, obligation, etc., secularized intelligent, at any rate, ‘scientific’ ethics has assumed that the social is conclusive, as appears from such a work as I. Stephen’s Science of Ethics (London, 1882), where biological, social, and ethical are firmly linked (ch. iii.). In opposition to the general style of Butler, J. Martineau has insisted upon the rational and individualistic conception of the moral sense (Types of Ethical Theory, Oxford, 1885, vol. ii. bk. ii. ch. ii.).

Where the moral individualism of the 18th cent. has practically succumbed before the advance of social ethics, there has arisen an aesthetic individualism which, while not allying itself with the moral-sense theory, has not failed to make vigorous warfare upon the social conception of life. Beginning with the romanticism of Friedrich Schlegel and the realism of H. B. Stendhal, and advancing with the Decadence of C. P. Baudelaire, this anti-social view has come to a climax in Nietzsche, who stigmatizes the conventions of the moral social sense as so much ‘bad conscience’ from whose terrible he would emancipate mankind (A Genealogy of Morals, tr. W. A. Haussmann and J. Gray, London, 1886, vol. i. ch. iii.). Ibsen speaks of the modern man as one who, suffering from ‘sickly conscience,’ ‘stands in need of a robust conscience’ (The Master Builder, tr. E. Gove and W. Archer, London, 1888, act ii.), while H. Sudermann, who has since directed attention to ethical theories, perhaps more than any other, to social ethics as such, speaks derisively of the ‘conscience of the race’ (The Joy of Living, tr. E. Wharton, London, 1903, act iv.). Similar expressions of anti-social immoralists may be found in Anatole France, August Strindberg, and Bernard
Shaw. Thus, the status of the moral sense in contemporary thought seems to consist of a dogmatic assertion of the social on the part of science and a rigid, absolute determination by culture.

MORAVIANS. 1. History.—The Moravian Church, or the Unitas Fratrum, belongs to the historic Churches of Christendom. For more than four and a half centuries it has never wavered in its claim to be a part of the Catholic Church, possessing the historic episcopate and the three orders of the ministry, administering the sacraments and preaching the Word of God. Under the constant watchful oversight of the Conference, laying special emphasis on the importance of Christian unity, the cultivation of personal religion, and the necessity of personal service, whatever obscurity surrounds certain points in its history, there is nothing doubtful as to its origin. It dates from the year 1457; Bohemia was the land of its birth; and the more spiritually-minded followers of John Huss were its first members. Henry Nicholas, or by the name of John of Prague, an earnest reformer and eloquent preacher, owed much of his religious enlightenment to the writings of Wyeliff, introduced into Bohemia by the wife of Richard II., a princess of that country. After his martyrdom at Constance in 1415 the greater part of his followers took up the sword in defence of their religious liberties. Some were pacified by concessions, such as their partaking of the cup as well as of the bread at the Holy Supper; but others, whose convictions were deeper, the Puritans of their day, withdrew from political life, retired to a remote corner of the country, and settled down in the Barony of Lititz. Here they formed a religious community on NT lines, in which many of the institutions of the early Christian Church were revived, under the leadership of duly elected elders. At the Synod of Lhota in 1467 they further proceeded to elect their own ministers, and for these they obtained ordination from the Waldensians (q.v.), whose bishop, Stephen, consecrated Michael Bradacius as the first bishop of the Unitas. The episcopate was given and received in the conviction of its apostolic origin, coming from the Eastern, not the Western, Church, transmitted possibly through the so-called sects, such as the Enchites, the Faullionis, the Cathari, etc. The validity of these orders was maintained by the faith and witness of the Unitas; and, as the step thus taken involved complete ecclesiastical separation from Rome, it resulted in fierce persecution, despite which, however, the congregation multiplied, and the Church's influence spread far and wide, not merely in Bohemia, but beyond its borders also. The name adopted was "Ludotia Brethelli," the Latin rendering of which, "Unitas Fratrum," was given to the "Ecclesia Fratrum," "the Church of the Brotherhood," would be more correct. The leaders in those early days were Peter of Cheltele, Gregory the patriarch, and Lucas of Prague—men of very different temperaments, but of equal devotion. The Church's doctrines soon became distinctly evangelical; thus, at the Synod of Reichenau in 1455, the Brethren decided the great question, "How shall a man be justified before God?" by the answer, "Through the faith of our Lord Jesus Christ and the righteousness which is of God." They laid special stress upon the doctrine of the sacrament and the confirmation; hence, their strict discipline, which later excited the admiration of the Reformers. By the year 1560 they had over 200 congregations with more than 100,000 members; and in 1535 these figures had doubled themselves. It was the Brethren who issued the first hymn-book in the vernacular, in 1501; they set up some of the finest printing-presses in Europe, and used them largely for the production of their translation of the Bible, which is still the standard Bohemian version of to-day. Their schools had a well-deserved reputation; Bohemia's best literature was the product of their scholars. Their church music became famous, especially for the congregational part-singing. Family worship was a feature of their homes; the children were early grounded in the Scriptures; the catechisms were clear, concise, and practical. The Church government was Presbyterian, with the Synod as the supreme court. Its members were allowed to order bishops controlled their own dioceses, and they alone ordained; the presbyters preached and administered the sacraments; the deacons acted as assistants. Infant-baptism was practised, followed by confirmation. As the Church expanded, it came to include three separate branches, in Bohemia, Moravia, and Poland; yet the three remained organically one, and thus the Unitas became the earliest International Protestant Church. Its history during the greater part of the 16th and 17th centuries is one long record of persecution, broken by intervals of rest and of official favour. It suffered terribly during the period of the Counter-Reformation, especially after the disastrous battle of the White Mountain in 1620. A veritable 'Book of Martyrs' might be compiled dealing with the days when Rome set itself to exterminate the Unitas. Its foremost leader, Jacob Amos Comenius, the father of universal education, was excommunicated, his clergy imprisoned, its members sent to the mines or kept in dungeons; its churches were closed, its schools destroyed, its Bibles and hymn-books, catechisms and histories burned. More than 36,000 families fled from Bohemia, and with them their soul-sustaining bishop, John Amos Comenius, the herald of humanistic and religious training for the young. He was at that time the leading educationalist in Europe, and his writings still rank among the standard authorities. His wanderings took him to Poland and Holland, and he was also invited to England to re-organize the very defective system of education which prevailed in that country. Much sympathy for the Bohemian martyrs had already been aroused during the Commonwealth, when Cromwell offered the Unitas a home in Ireland; and this continued afterwards, when England was made in 1667. The separation of the Anglican churches. In the belief that the days of the Unitas were numbered Comenius drew up a remarkable document in which he says:

"As in such cases it is customary to make a will, we hereby bequeath to our enemies and to all that posses us; but to you our friends (of the Church of England) we bequeath our dear mother; the Church of England may be God's will to revive her in our country or elsewhere. You ought to love her even in her death, because in her life she has given you an example..." ("Ratio Disciplinae," Amsterdam, 1669, Dedication).

He also secured the episcopal succession, apart from the Polish branch in which it still continued, by having his son-in-law, Peter Jazbinsky, conse-
Moravians

erated as bishop by Bishop Bytnar at Mileneys in Poland.

With the death of Comenius in 1672 the first part of the history of the Unitas ends. The second part opens at Herrnhut, in Saxony, where in 1723 a group of refugees from the Moravian border valleys, in which isolated families of the ancient Church had still preserved the faith of their fathers, found a refuge on the estate of a young nobleman, Count Nicolaus Ludwig von Zinzendorf. Their story was joined by others from Bohemia; and in association with a number of German Pietists they formed themselves into a society similar to those which then existed within the Lutheran Church. But this did not satisfy the descendants of the Unitas; they insisted that they were not Lutherans, they belonged to a much older Church; and, being now in the possession of a certain amount of religious liberty, they desired its re-establishment. To this Zinzendorf was at first opposed, till from a chance copy of the writings of Comenius he learned what the history of the Unitas had been, how glorious its past, how evangelical its doctrine, and how firm its faith and steadfastness under suffering. Almost unconsciously he found himself being led on to devote his life, his means, and his talents to the re-organization of this venerable Church, and its re-establishment for future ages. But the Re-

ewened Church was not of Zinzendorf’s creation. Its points of contact with the Unitas lie in the personal descent of many of its members, in the church regulations which were again introduced, and, above all, in the origin of the ministry, which in 1735 were restored, when David Nitschmann was consecrated bishop by Bishop Daniel Ernst Jablonsky, whose father had received the succession from Bytnar with the written commission of Comenius.

The little community at Herrnhut rapidly increased and developed in spite of the banishment of Zinzendorf by order of the Saxon Government, on the ground of his having introduced unauthorized religious novelties and of teaching false doctrine. Its fame spread far and wide, since in it a striking union of spiritual life with good works and industrial activity was to be seen. The danger of a national rise of Pietism was averted by a wonderful experience of revival and a wave of evangelizing zeal, which visited the Church in 1727, under the impulse of which it embarked on the mission work, which lay the pledge of its continued existence. At the beginning of the 19th century foreign missions were almost entirely unknown among the Reformed Churches; it was left to the Moravians to inaugurate the modern missionary movement. This dates from the year 1732, when two of the Brethren set out to evangelize the enslaved Negroes in St. Thomas, willing to become slaves themselves if that should be the only way of winning them for Christ. In the same spirit others went to the Eikimos in Greenland; others settled in S. America, and carried the gospel for the first time to the natives in the Dutch Colony of Surinam. Work was also begun among the N. American Indians, to whom David Zeisberger devoted sixty-three strenuous years of life. In S. Africa these early missionaries were to find teaching Hottentots and Kaffirs the faith of Jesus. They penetrated to Persia and Japan, from which they carried the gospel to the other extremities of the earth, and they established their stations on the Gold Coast and in eight of the W. India Islands, they started a mission to the Jews—and all this as pioneers, and within a few years after the founding of the Church itself. All these missions, however numerous only some 600. They formed the first Protestant Church that recognized and attempted to fulfill the duty of world evangelization; and in this effort they stood alone for sixty years. This early characteristic of the Renewed Church still remains its outstanding distinction; and that is why, alone among all others, it possesses no separate missionary society, since the whole Church is the society, and within it the principle prevails that ‘to be a Moravian and to further missions are identical.’

From Herrnhut strong religious influences began to spread at home as well as abroad among the students in the German universities, the landowners in the Baltic provinces, the merchants of Amsterdam, and the military in Berlin. Zinzendorf and his Brethren were invited everywhere, and, as the result of their evangelistic work, societies or congregations, known as ‘settlements,’ sprang up in Denmark, Holland, Russia, and Switzerland, and in several of the German principalities. Each became, like Herrnhut, an industrial as well as a religious centre, for the apostolic rule of being ‘diligent in business’ as well as ‘fervent in spirit’ was insisted on. It was largely by means of these industrial undertakings that Zinzendorf’s untinted generosity of Zinzendorf, that the cost of the mission work was met—not to mention the fact that most of the missionaries provided for their own necessities.

The first official visit was paid to England in 1735; and here it was that Peter Böhler three years later met with John Wesley and became the means of his spiritual enlightenment. Here also the name ‘Moravian’ came into use; given originally as a covert name of the ministry, which in 1735 has gained a kind of permanence, though it cannot be regarded as satisfactory, since it emphasizes only one point, and that a comparatively unimportant one, in the long history of the Church.

The Moravian influence was unquestionably one of the main factors in the early days of the Evangelical Revival; for a time it equalled that of the Methodists. Moravian evangelists preached throughout the length and breadth of the United Kingdom, leaving their mark especially in Yorkshire and the Midlands; and, through the preaching of John Cennick, to a yet greater degree in Ireland and the West of England.

In America also the Church took root in the middle of the 18th cent., around two centres, Bethlehem in Pennsylvania, and Salem in N. Carolina; and from each of these two places it spread rapidly in which lay the spread of the Church again of three distinct provinces, according to the different nationalities—German, English, and American. These form the home base, and, though widely separated, they are organically one. Each province is independent as regards the conduct of its own affairs, elects its own bishops, appoints its own administrative boards, and legislates for itself through its own synods. The main outward bond of union between the parts (and the seat of final authority) is the so-called General Synod, made up of delegates from all the provinces. This bond may seem a rather slight one, yet through these many years the spirit of brotherhood in Christ has been strong enough to prevent any kind of schism in the body.

The death of Zinzendorf in 1760 had important results. It involved a severe financial strain which at one time threatened disaster and dissolution, but it also led to the framing of a distinctive system of church government, the settlement of its constitution, the definition of its doctrine, and the reorganization of its undertakings. The administrative centre still lies in Germany, while during the latter part of the 19th and all of the 20th century it found itself in the forefront of the controversy with rationalism; they became the recognized cham-
pions of orthodox Evangelicalism. Here also their influence was as far-reaching as in England, though in a different way. In this case it was due largely to the writings and the personality of Bishop August Gottlieb Spangenberg, originally a professor at Halle. In 1738 he himself felt in the universities formative power. Spangenberg learned his religion and gained his conception of the historic Christ at a Moravian college; and Kant, the philosopher of Königsberg, referred his students, when searching for peace, to the Moravian brothers as the way; thus, he said, 'is the place in which to find peace.'

2. Characteristics.—(a) Diaspora.—A unique feature of the Church's work on the Continent was, and still is, the so-called Diaspora, an extensive agency for preaching and fellowship within the National (Protestant) Churches. It is carried on in many parts of Germany, in Denmark, Norway, Sweden, Switzerland, and Russia; and, according to synodal resolution, no work in it is allowed to seek converts for the Moravian Church from among the members of other communions. The effort is in the interests of the Kingdom of God as a whole, supplementary to the existing religious activities, and designed to strengthen and promote the unity of believers. This accounts to a great extent for the good-will shown to the Moravians by those who know the disinterested nature of their labors, and the catholicity of their spirit. These matters have been little noticed, no doubt a larger numerical increase would have resulted, but it would have meant the loss of that kindliness of mutual feeling which has marked the Church's relationship to other Christian communities.

(b) Education.—Another Moravian characteristic is the educational system, officially recognized and regarded as belonging to the Church's work and responsibility. Love of education, and enthusiasm for schools, formed a part of the inheritance which had come down from the days of the Uniter. It was held that, just as the Church had its mission to the heathen, who had never heard the gospel, so it had also a mission to the young to ground and train them in its divine precepts. To carry this out was a priceless privilege ordained of God, to be undertaken with prayer, and to be done for Him. In this spirit numerous boarding-schools were opened in Germany, Holland, Switzerland, and America; many of them have become famous, not only on account of the education given, but also by reason of the pupils who have gone forth from them, men distinguished in almost every calling and rank of life. The standard was high; and, if in many cases the discipline was strict, it was always blended with the kindly influences of a distinctly Christian atmosphere.

(c) Missionary zeal.—The third, and the most characteristic, feature of Moravianism is its missionary zeal. Never since the beginning of the work in 1732 has this waned; the Church has sent forth its sons and daughters in an unbroken stream, in some cases through five generations of the same family. Most of its congregations have their representatives in the missions, and through these living links the bond of sympathy with the foreign field is maintained. The Church's energies flow largely through the field of work represented, and is felt to be, its God-appointed work in the present as much as in the past, a glory that has not faded. Hence the surprisingly large number of Moravian missionaries in proportion to the membership; and also the relatively high standard of financial support. Whilst in the Protestant Churches at large the proportion of missionaries to members is about 1 to 5000, among the Moravians it is 1 to 60. These are the words of J. R. Motte on the subject:

If members of the Churches in Great Britain and America gave in like proportion (as the Moravians) then the missionary contributions would aggregate over 207,275 souls instead of some £20,000. And if they went out as missionaries in corresponding numbers, we should have a force of nearly 355,000 foreign workers, which is vastly more than the total number of missionaries estimated as necessary to achieve the evangelisation of the World ("Report of New York Ecumenical Missionary Conference, New York, 1850, p. 97.)

The work abroad has to a great extent been among primitive races, some of them now approaching extinction, in parts of the world that are peculiarly unprofitable and uninviting, and which have been neglected by every one else. These have been taken up by the Moravians in accordance with Zinzendorf's early desire and determination, who, as a schoolboy, he established among his companions the so-called 'Order of the Mustard Seed,' for the purpose of seeking the conversion of the heathen, having in mind 'especially such as others would not trouble themselves about.' Thus the Moravi{3}s work among the lepers, first in the Cape Colony, where as early as 1818 a missionary and his wife cut themselves off from their fellow-Europeans, and settled down in a lonely valley among the poor outcasts, in order to strengthen and comfort them by their love, as well as their souls. The result was remarkable, for within six years over 90 of the lepers were converted and baptized. Afterward the work was continued on Robben Island, a sandy stretch lying off Cape Town; and still later on, the missionaries built outside the walls of Jerusalem, where the aim is to gather all the lepers of Palestine, and to alleviate the sufferings caused by this dread disease.

Continuous expansion has marked the missionary enterprise of the Church, till now it is to be found in every continent. The fields are as follows: Labrador, Alaska, California, the W. Indies (Jamaica, St. Thomas, St. John, St. Croix, Antigua, St. Kitts, Barbados, Tobago, Trinidad), British Guiana (British Guiana), Surinam (Dutch Guiana), S. Africa, East and West, Nyassa and Umaymazi (in German E. Africa), W. Himalaya, and N. Queensland—144 different countries, 391 stations, with 1503 preaching places. The workers include 387 European and American missionaries, among them doctors, educators, desemones, etc., 48 ordained native ministers, 439 native evangelists, 1663 native helpers of various kinds, and 29 schools in their care. The annual expense amounts to £114,000, exclusive of the Lepers Home, which costs an additional £150 per annum. Mission colleges exist in England, Germany, America, the W. Indies, and the Indian provinces of Labrador, Jerusalem, Surinam, and Kashmir, where Zonana work is also carried on.

The above figures, if not large in themselves, are strikingly so when compared to the size of the home Church. This consists of the continental congregations, in Germany, Austria, Switzerland, France, Denmark, Russia, Sweden, and Norway; the British province (England, Scotland, Ireland, and Wales), and the American provinces, North and South. The last-named have 134 congregations; in Great Britain there are 45, and on the Continent 30—74, if the Diaspora centres are included. A joint undertaking of the whole Church, apart from the foreign missions, is the evangelization of the lands of its birth and early history, viz. Bohemia and Moravia. Work among the young is carried on in both day and boarding-schools; the home Sunday schools number 175, and have 22,000 scholars; abroad there are 32 schools, with 1430 teachers, and over 25,000 scholars. In England an agency known as the Rural Mission works on lines somewhat similar to the Diaspora on the Continent.

3. Worship.—The worship of the Church com-
bines the liturgical element with a large measure of freedom in extemporaneous prayer—a blending of order and liberty. The British Book of Worship introduces special prayers for public service, an alternate form of prayer, a confession of faith, and formularies for the baptisms of infants and of adults, for confirmation, ordination, marriage, and burial—and combines these with a newly-revised collection of hymns of all ages. It is the latest successor of the first Protestant hymn-book ever issued. The Church's ritual is marked by simplicity and directness of purpose, due largely to a wish to centre the mind on the fact of salvation; the service is performed by the clergy, and the congregational responsibility is slight. It is also a dislike of whatever would serve to quench the spiritual impulse of the moment. A stately dignity marks the special services and the doxologies in use at the consecration of bishops and the ordination of ministers. The same applies in a measure to the confirmation service, which, as in the Greek Church, is not considered an exclusively episcopal function, but may be performed by a presbyter. All these services the surplice is worn, as well as at the administration of the sacraments. The Apostles' Creed is in use as representing the oldest, simplest, and most generally accepted expression of the faith of Christendom; and in addition a special creed, compiled by Luther and made up mainly of a connected sequence of Scriptural passages, is recited on the great Church festivals, such as Easter, Whitsunday, etc. In the Trinitarian belief of the Church, a marked emphasis—the Fatherhood of God, the Creator of all things and the Author of salvation; the redemptive and mediatorial work of the Son in His perfect humanity, the 'Lamb of God' once slain, now risen and glorified; the presence and power of the Holy Spirit, Who proceeds from the Father, and Whom our Lord Jesus Christ sent after that He went away . . . that He should abide with us for ever.

4. Doctrine.—The main points of doctrine as held and taught are defined in the Church Book under the following heads: the doctrine of the total depravity of human nature; the doctrine of the love of God the Father; the doctrine of the real Godhead and the real humanity of Jesus Christ; the doctrine of our reconciliation unto God and our justification through the sacrifice of the Cross; the doctrine of good works as the evidence of faith; the doctrine of the fellowship of believers; the doctrine of the Second Coming of the Lord; and the doctrine of the Headship of Christ over the Church, which is His Body. Thus in the creed of the Church there is detailed expression of what has been called the doctrine of the Church of England, or the Anglican doctrine. The Church of England is an evangelical church, though not nominal; its members are not catechumenal, but its creed is the Nicene Creed, the XXXIX Articles, the Augsburg and the Westminster Confessions; but, since no one creed can be said to be a complete statement of the whole range of Christian dogmas, liberty is allowed for difference of view in non-essentials. The Holy Scriptures are regarded as the only rule of faith and conduct, the basis of all teaching, and the final court of appeal. More stress is laid on Christian life and character than on perfect agreement in opinion. Devotion to Christ, and personal union with Him, form the foundation of the Brotherhood. The Church has kept itself free from anything approaching sectarian peculiarities of doctrine, as defined by the Church of Rome on the broad ground of gospel truth and liberty, and did not separate itself from any other Evangelical Church.

5. Constitution and government.—The constitution is founded on the principle of religious liberty, which at one time was something of an oligarchy, is now essentially democratic, as may be seen from the fact that in the General Synod, which meets every six years and controls the funds and the work of the entire body, the elected members outnumber those who have a seat in virtue of their office. The same applies to the provincial synods, and also to the authorities of the individual congregations. The principle of work in Church affairs is that of the government of the people, by the people, and for the people,' under the sole headship of Christ. The bishops have no administrative powers on the account of their newly-revised collection of hymns of all ages. It is the latest successor of the first Protestant hymn-book ever issued. The Church's ritual is marked by simplicity and directness of purpose, due largely to a wish to centre the mind on the fact of salvation; the service is performed by the clergy, and the congregational responsibility is slight. It is also a dislike of whatever would serve to quench the spiritual impulse of the moment. A stately dignity marks the special services and the doxologies in use at the consecration of bishops and the ordination of ministers. The same applies in a measure to the confirmation service, which, as in the Greek Church, is not considered an exclusively episcopal function, but may be performed by a presbyter. All these services the surplice is worn, as well as at the administration of the sacraments. The Apostles' Creed is in use as representing the oldest, simplest, and most generally accepted expression of the faith of Christendom; and in addition a special creed, compiled by Luther and made up mainly of a connected sequence of Scriptural passages, is recited on the great Church festivals, such as Easter, Whitsunday, etc. In the Trinitarian belief of the Church, a marked emphasis—the Fatherhood of God, the Creator of all things and the Author of salvation; the redemptive and mediatorial work of the Son in His perfect humanity, the 'Lamb of God' once slain, now risen and glorified; the presence and power of the Holy Spirit, Who proceeds from the Father, and Whom our Lord Jesus Christ sent after that He went away . . . that He should abide with us for ever.

4. Doctrine.—The main points of doctrine as held and taught are defined in the Church Book under the following heads: the doctrine of the total depravity of human nature; the doctrine of the love of God the Father; the doctrine of the real Godhead and the real humanity of Jesus Christ; the doctrine of our reconciliation unto God and our justification through the sacrifice of the Cross; the doctrine of good works as the evidence of faith; the doctrine of the fellowship of believers; the doctrine of the Second Coming of the Lord; and the doctrine of the Headship of Christ over the Church, which is His Body. Thus in the creed of the Church there is detailed expression of what has been called the doctrine of the Church of England, or the Anglican doctrine. The Church of England is an evangelical church, though not nominal; its members are not catechumenal, but its creed is the Nicene Creed, the XXXIX Articles, the Augsburg and the Westminster Confessions; but, since no one creed can be said to be a complete statement of the whole range of Christian dogmas, liberty is allowed for difference of view in non-essentials. The Holy Scriptures are regarded as the only rule of faith and conduct, the basis of all teaching, and the final court of appeal. More stress is laid on Christian life and character than on perfect agreement in opinion. Devotion to Christ, and personal union with Him, form the foundation of the Brotherhood. The Church has kept itself free from anything approaching sectarian peculiarities of doctrine, as defined by the Church of Rome on the broad ground of gospel truth and liberty, and did not separate itself from any other Evangelical Church.

5. Constitution and government.—The constitution is founded on the principle of religious liberty, which at one time was something of an oligarchy, is now essentially democratic, as may be seen from the fact that in the General Synod, which meets every six years and controls the funds and the work of the entire body, the elected members outnumber those who have a seat in virtue of their office. The same applies to the provincial synods, and also to the authorities of the individual congregations. The principle of work in Church affairs is that of the government of the people, by the people, and for the people,' under the sole headship of Christ. The bishops have no administrative powers on the account of their newly-revised collection of hymns of all ages. It is the latest successor of the first Protestant hymn-book ever issued. The Church's ritual is marked by simplicity and directness of purpose, due largely to a wish to centre the mind on the fact of salvation; the service is performed by the clergy, and the congregational responsibility is slight. It is also a dislike of whatever would serve to quench the spiritual impulse of the moment. A stately dignity marks the special services and the doxologies in use at the consecration of bishops and the ordination of ministers. The same applies in a measure to the confirmation service, which, as in the Greek Church, is not considered an exclusively episcopal function, but may be performed by a presbyter. All these services the surplice is worn, as well as at the administration of the sacraments. The Apostles' Creed is in use as representing the oldest, simplest, and most generally accepted expression of the faith of Christendom; and in addition a special creed, compiled by Luther and made up mainly of a connected sequence of Scriptural passages, is recited on the great Church festivals, such as Easter, Whitsunday, etc. In the Trinitarian belief of the Church, a marked emphasis—the Fatherhood of God, the Creator of all things and the Author of salvation; the redemptive and mediatorial work of the Son in His perfect humanity, the 'Lamb of God' once slain, now risen and glorified; the presence and power of the Holy Spirit, Who proceeds from the Father, and Whom our Lord Jesus Christ sent after that He went away . . . that He should abide with us for ever.
doctrine, but to evidence and promote the oneness of believers in Christ, and to prove the possibility of faith, organizes as well as spiritual, which rises above all barriers of nationality and opinion. The Moravian Church does not work in opposition to any other evangelical Church, nor does it seek to increase its membership by any systematic proselytizing, but gathers into the fold of Christ those who are still outside, and then to further that growth in grace and that fruitfulness of service which are the divinely appointed means for the spread of the Kingdom of God among the children of men. It is above all else a missionary and a union Church.

LITERATURE.—A. Gindely, Gesch. der böhmschen Brüder, Prag, 1857–58; Jaroslav Goll, Quellen zur Gesch. der böhmischen Brüder, do, 1878–87; E. de Schweinitz, Hist. of the United Brethren, Bethel, Pa., 1880; J. T. Müller, Die deutschen Erschütterungen der böhmischen Brüder, Berlin, 1887.

MORBIDNESS.—The term ‘morbidity’ as applied to moral and religious states of mind is popular rather than scientific. It designates particularly any unduly depressed state connected with one’s moral or religious status. Little effort has been made thus far to discover a scientific experience or moral disease or morbidity. One author, treading the same path, and moral writers tend, on the whole, to limit moral and religious states of mind to the phenomena of such insanities, such as the delusion that one is God or Jesus Christ, or that one has committed the unpardonable sin. While it is difficult to differentiate between sanity and insanity, a useful mark of the latter is that, apart from the disease, one seems to be at least, of fulfilling their social functions. Thus, all the insanities are cases of moral inanity and, in this sense, of moral morbidity.

There is, however, a broad expanse of moral morbidity that is neither insanity, on the one hand, nor on the other, mere delusion from a moral ideal through erroneous thinking or through the common mistakes of human nature. The best example is the moral distortions frequently found among adolescents. Under the stress of the social and mental re-organization that is going on at this period of life, the following types of moral distortions are manifest:

(1) Excessive or minute introspection of one’s desires, motives, or choices, often with the application of excessively severe standards to one’s self. In religious communities that emphasize such conformity as conversion, recreation, and the witness of the Spirit, this introspection often consists in a search for signs of the divine presence or of divine operations within one’s self.

(2) Hypercriticism may have many causes and religious situations and distinctions. To be wrong at all is to be human; only perfection is really good—this is the attitude of mind. This is what is often called ‘morbidity conscience.’ The victim of it is likely to put absurd emphasis upon the exact performance of trifles that seem to be duties. Habitual self-condemnation or censure may also appear.

(3) A passion for certitude, and refusal to live by the ordinary, common assumpions, probabilities, and ‘rule of thumb’ devices of mature practicality. Sometimes a sense of uncertainty becomes almost an obsession. The victim feels uncertain, for instance, whether he has locked the door, although he knows in his own mind that he did.

(4) Feverish or self-analysing devotion to a person, a cause, or an ideal. Here morbidity consists partly in emotional excess, partly in the egregious self-assertion upon which the supposed sublimity of self-chastitement depends.

(5) In the four types thus far named we behold a sort of psychical congestion and soreness. A fifth type displays the opposite—insensibility and failure to function in the presence of normal stimuli. Callousness towards the pain and pleasures of others and lack of interest in marks.

In less extreme cases the callousness appears only in spots, as towards some one person, human interest, or kind of duty.

These adolescent twists illumine the whole subject of moral and religious morbidity. For, if the five types be broadly interpreted, they will be found to cover all cases of such morbidity at whatever stage of life. Here we have over- and under-sensitiveness, excess of nature and excess of culture, excess of it, excess and defect of introspection, over- and under-censure, and disproportion in thinking. This is not normal or healthy, yet it includes no insane delusions and no such failure of practical adjustment as puts one outside the pale of social tolerance.

The causation of morbidity in the sense that now grows towards definiteness includes two factors: neural depression (or at least lack of vitality), and some mental processes which lead to a state that starts an unfortunate mental habit. The fundamental facts with which we have to deal are excess, defect, and distortion of emotion. Not infrequently morbid persons cherish a conviction that their mental processes are beyond their power to control, that they are normal even though observers easily discover the lack of emotional balance. Conduct, and what passes as reason, are alike determined by some congestion or soreness, or by abnormal callousness.

These emotional tendencies are marked by psychical signs of neural conditions. The depression may be a hereditary or temperamental trait, an incident of a disease, or the product of an internal irritation, of a drug, or of fatigue. The reason why morbidity occurs so frequently in adolescence is that the pubertal change and the consequent re-organization of habits put extraordinary demands upon the nervous system. To this must be added the peculiar burdens of school life, economical life, and social life that our occidental customs impose upon youth. Finally, in many cases sexual perversion and difficulties connected with the firm establishment of a healthy sexual life increase the tendencies to depression in mature life the same general principles apply. Morbidity may safely be assumed, in practically all cases, to spring partly out of nerve depression, which, in turn, may not be a matter of
MORDVINS

Discussion of depressive states of the neurasthenic type will be found in E. Worcester and others, Religion and Morals, New York, 1906. See also J. Breder, Religion und Sehnsucht, Halle, 1897.

GEORGE A. COE.

MORDVINS.—1. Introduction and sources.—The Mordvins form a branch of the Finno-Ugric race (cf. vol. vi. p. 293), and consist of two tribes, called respectively the Erza and the Moksha. Our knowledge of their ancient religion, coming, as it does, almost exclusively from a time when, in name at least, they had been converted to Christianity by the Russians, and when they could practice the rites of their earlier faith only in secret, is very scanty and defective. After the Mordvin people, as a whole, in consequence of the victory by which the Russians finally overthrew the Tatars of Kazan (1552), had come under the sway of the conquerors, measures of a more or less violent nature were taken here and there to convert them, and were continued in the 17th century. It was not, however, till about 1740-50 that they were submitted en masse to the rite of Christian baptism, and the following decades witnessed the disappearance of the last vestiges of their heathenism. Yet for a long time their conversion was, in the main, a merely nominal change, and, as a matter of fact, in quite recent times the exploration of remote districts has yielded much valuable material for the elucidation of their ancient religion.

Our earliest information on the subject comes from an Italian traveller, G. Barbaro, who visited the district now called Eastern Russia in 1446, and who gives a short account of how the victim was dealt with in the horse-sacrifice of the Moksha tribe. The notes on the religious and social practices of the Mordvins made by N. Wittgenstein, the Dutchman, at the close of the 17th cent. are altogether negligible; nor can we gather much of value from the accounts of P. J. Strahlenberg, H. Müller, F. Lepeschkin, J. G. Georgii, and P. S. Kalita, in the 18th century. A more useful source (in spite of errors due to misapprehension) is the Russian MS written by a land-surveyor named Miljukov in 1783, and several times printed (most recently in Tsemboskija Etoprovalenie, no. 19, Petrograd, 1905, p. 815 ff.). From the middle of the 19th cent. we find in Russian newspapers and periodicals (especially those of the provinces), as in other publications, sporadic notices and descriptions of local conditions. Accounts of a more general character have been given by Meljinkov, mainor, and Smirnov (cf. Literature at end). Meljinkov (writing c. 1860) draws his material mainly from MS sources; but, as regards the ideas of the gods, deals with his data too freely, and adds imaginative embellishments. The same may be said of Mainor, who, some thirty years later, devoted himself to the investigation of Mordvin ethnography, and even travelled over the Mordvin district; in many points he merely follows Meljinkov. A much more valuable production is that of Smirnov, who carefully utilizes the available literature as well as a number of MS sources, and also draws upon his own observations. The following account is based not only on the published sources, but also upon collections made by the present writer among the Mordvins themselves, and the fairly abundant MS material subsequently forwarded by the native Mordvins to the Finno-Ugric Society in Helsingfors. Its like likewise draws upon some (in part very valuable) MSS dating from the middle of the 19th cent. and now in the keeping of the Imperial Geographical Society, or also deposited in the Annales Museum of the Imperial Academy of Sciences, Petrograd. The latter group of MSS had been already used in part, though very unsystematically, by Meljinkov and Mainor.

LITERATURE.—G. Vorbrot, Zur Religionpsychologie, Prinz, 1875. G. Brecher, Psychologie des Indier, Jena, 1866, pp. 237-293, argues against the view that religion as such is a moral phenomenon. J. A. Baier, Psychologie des Angehoren, Freiburg, 1855, gives an extended analysis of religious extremes of various sorts. E. D. Starbuck, The Psychology of Devotion, London, 1899, shows that conversion in general, a normal rather than abnormal phenomenon, chiefly of adolescence (ch. xii.), but he presents nothing with a more direct bearing on the present subject, i.e., religious terrors, delusions, depression, and introspection (ch. xiii.). G. A. C. Coe, The Spiritual Life, New York, 1900, also devotes a chapter to difficulties, particularly doubts and moral conscience. As already indicated, A. E. Giles, Moral Pathology, London, 1855, is not significant for our topic. A popular
2. The dead.—Life after death was regarded as a direct continuation of earthly life. The departed in their graves live and occupy themselves in much the same way as in the earth—hence the large articles required by them were placed beside their bodies in the grave. In death as in life kith and kin are still together, so that the graveyard is the counterpart of the village; there is no realm of the dead separated from the living, according to the graveyard, the human-like shades come forth to visit the living. Each family worships its own dead, the foremost and mightiest of whom is the first who was buried in the particular graveyard, i.e., the progenitor of the family (together with his wife), who was often still spoken of by his own name and was honored with the title of 'ruler of the graveyard' (kal'mou 'birdy'). The prevailing idea seems to be that this progenitor should not belong to too remote a past; thus among certain Erzii Mordvins in the government of Saratov, who migrated thither some 200 or 250 years ago, the earliest ancestors to whom worship is accorded are positively stated to have come directly from Moscow and so as to be relatively modern, and thus also the worship, of the earlier generations having faded away. Festivals in honor of deceased individuals are celebrated during the first year after death—one immediately after his death, and others at intervals, as e.g., six weeks, or the fortieth day, after death, from which time onwards the shade of the dead becomes more closely attached to the corpse in the grave, while prior to that time it lingers chiefly in its former house, or it may still be in places where the living person had been accustomed to visit. At this festival the previously deceased members of the family are believed to be in attendance, and are implored to take the newly departed into their midst.

General festivals for all departed ancestors (poklittat babat, or at'at babat, 'grandfathers and grandmothers' [=ancestors]), again, are celebrated at least twice a year, in spring and autumn (but at the dates of the first and last Friday of a month). The general festivities were for the most part brought into accordance with those of the commemorative celebrations appointed by the Russian Church. The ancestors were invited in due form to a feast at the village, the several houses of the family-group being taken in rotation for this banquet of the living with the dead. According to a tradition from the beginning of the 17th cent., joint festivals for all deceased in a large part of the country were held by family-groups or clans also at intervals of some fifty years. Formerly, animal-sacrifices were offered at the celebrations, and the ceremonies connected with them contain features that seem to point to a still earlier practice of human sacrifice. The living approach the ancestors with prayers and gifts in all circumstances in which, as they think, they require the help of these ancestors either for their own benefit (particularly in cases of illness, which may be sent by the ancestors themselves, if angered) or in order to injure others. Moreover, at the sacrificial feasts which are held by the community in honour of the (nature-) gods, these latter are in some districts conjoined with these as objects of worship, being invoked in the prayers immediately after the deities, and besought for the same earthly blessings—success in tillage and cattle-rearing, good fortune, and health. The dead are asked to preserve their guests, from whose benignity all good things may be expected—though at the close of the festival, it is true, they are driven away, sometimes with threats—but, when they appear on their own initiative, they are greatly feared, especially as causing disease. Peculiar terrors are excited by the dead who perish by accident—e.g., by drown-

ing—or who for other reasons have not received proper burial, as also by those who die without surviving kindred; such unforeseen cases, accordingly, attended to only in the festivals for their own ancestors.

In connexion with the ceremonial of this ancestor-worship, special mention must be made of the fact that at the festivals for deceased individuals, according to the graveyard, the human-like clay image or a doll representing the dead was set on the bench by the feast table; subsequently this was replaced by articles of clothing belonging to him. At these festivals, however, the departed has also a living representative, a person of the same sex and of about the same age, who acts his part, and is treated by those present as if he were the deceased. He presents himself in the clothes of the dead, and frequently is conducted from the graveyard, and then, at the door of the house, taken back to it. According to some accounts, he never speaks at all, but parleys heartily of the banquet, and receives the tokens of respect accorded by those present. Other accounts inform us, however, that he caries on a conversation with them: he tells them of the life of the under world, and of those who have gone there before him; he gives them good counsel, admonishing them to live in times of peace and merit, and to take from theft and excessive drinking, to look well after their cattle, and the like; he blesses man and beast, settles disputes regarding inheritance, etc.

According to some authorities, the dead, during their existence in the grave, undergo a second experience of death, passing thereby 'into a higher state,' in which they no longer maintain direct relations with those living upon the earth, but have intercourse only with those who have died long since, and through the latter alone influence the fortunes of the living.

Although the ancestors are worshipped and invoked like the gods, and to some extent conjointly with them, the two classes are, nevertheless, rigidly distinguished from each other. Still, there seem to be cases where the people have quite forgotten the human origin of a dead person whom they worship, and he is invoked as a god (pax). Among the Erza in the governments of Kazan and Saratov we find a deity called Bolta, i.e., the heavy god, who is honoured with special sacrificial festivals, and is entreated not to lançh 'his heaviness' (i.e., evil generally) upon the people. In some parts a field is dedicated in his name and bearing various proper names—e.g., Onto and Bonko (who are supposed to be husband and wife)—are invoked by the epithet of Staka pas, while elsewhere the 'heavy god' is addressed in the sacrificial prayers also as Kan pas, Kuvan pas, and regarded as living 'in the black earth.' The word Kus, the designation of which is now unknown to the people at large, is simply the Tatar kus, 'prince,' so that kan pas means 'the god-prince'; kuvan, again, is in all likelihood traceable to the Turkish princely title kagan in its Chuvash or Bulgar phonetic form kogan or kugan (with or u instead of the common Turk. a), which, though it has not come down to us, would correspond perfectly to the Mordvin kagon. As the Mordvin pantheism is, at one time among the subject peoples of the Volga Bulgars, the ancestors of the Chuvashes of to-day, we may be permitted to conjecture that the 'heavy god' was originally the spirit of a high Turkish ruler; similarly, the other heavy gods, such as Onto, etc., perhaps represent native princes of a bygone age.

With the Mordvin cult of the dead is probably connected in some way, as it is the custom of the deity or spirit called Keremot (Erza) or Keremot (Moksha), a name of Chuvash origin (in
MORDVINVS

the Chuvash tongue of to-day, Karimät, originally an Arab. word). Among the Mordvins this deity bears the title soltan, sulta, which is obviously the same as the Arabo-Turkish sultan. What is told of him among the Mordvins is much the same as what is told, as was stated above, of the Moksha, according to an early account, he was a deity of great prestige and power, and superior to all others in his influence upon everyday life—in no sense a malign spirit, like Keremät, the Chereisses. Although he bears a name of foreign origin, and was regarded by the Moksha as ‘born and bred with the earth’—a fact which shows that the people had no idea of his human origin—it would seem, nevertheless, that his worship contains certain elements of a former native hero-rite. In the legal proceedings of the community oaths are taken in the name of Kerémät, and it is believed that those who are guilty of crime 

2. Nature.—(a) Air and sky.—In the Erz tribe the deity of the sky is called Vere-pass, i.e. ‘the god who is above.’ We also find mention of Skipas and Niške-pass or Niške, the latter of whom, while new to the Erz, was originally of the Erz tribe. Vere-pass was originally in all likelihood a distinct god (probably of foreign origin). In a number of ancient MSS the name Niške occurs in the form Ineskhe, whence it appears that the name is really a compound. Interestingly enough, the first element of the divine name Ski-pass just mentioned, Skí, again, is a participle of an obsolete verb ski, meaning ‘bear,’ ‘procreate,’ so that Ski-pass signifies literally, ‘the generative god,’ ‘seed-god,’ and Niške, ‘the great procreator.’ The sky-god of the Moksha is called Škaj—a name corresponding exactly to the Erz Ski—or, with the addition of the term for ‘god,’ which among the Moksha is still often identified with the Virgin Mary, the Theotokos; he has also two daughters, Karstargo and Vezorgo, while in the songs we likewise hear of a son. Among the Moksha the wife of the sky-god is, so far as is known, mentioned, along with daughter. Сhrenzhe in the Chinese single song, where she is called Skabas-ava, ‘Mother Skabas.’ Strahenberg states that the highest deity of the Mordvins’ (by which term he obviously means the Erz tribe) is Jumilja; in the first portion of his name, jum, we have perhaps a cognate form of the Cheremiss term Juno, applied to both the sky-god and the sky, and of the stem in the Finnish jumala, ‘god,’ while the second element is either equivalent to Sin-pass, ‘sun-god,’ or, more probably, an incorrect form of Ski-pass (see above). Among the Mordvins generally thanks-god ranks as supreme among the gods, and to him must frequently be offered the ritual sacrifice. It may be noted, however, that, according to a report from the middle of the 19th cent., the Moksha, or at least part of them, did not offer sacrifice to Skaj at all, but simply, at the beginning of the chief festival, ‘washed’ their god with a brief prayer for protection. A special deity of thunder, who is worshipped in the communal sacrificial feasts, is found among the Erz. He is called Purgin-pass (‘the god Thunder,’ ‘thunder-god’), and the worshippers beseech him to send a beneficial rain, but not the noisome hail; his figure has been strongly influenced by that of the prophet Elijah in popular Russian belief. Among the Moksha thunder is called atam, a derivative of ad, ‘grandfather,’ ‘old man,’ and this, together with the fact that the rainbow is termed ad-man (‘bow’), would indicate that the Moksha also personified thunder, though the imperfect sources certainly say nothing of a thunder-cult among them.

In the prayers and elsewhere the sun is referred to as the god paza, pava, viz. Tsi-pass (Erz), Sibavas (Moksha), ‘the god sun,’ ‘sun-god,’ and Kova, Kova-bivas, ‘the god moon,’ ‘moon-god.’ Special obligations are accorded to the sun at the sacrificial feasts. The worship of the moon seems to involve more than that, when a person first describes the new moon, he bows before it with a prayer for good health, and promises it a whole (i.e. uncut) loaf. The morning and the evening glow are invoked, with Russian proper names attached to the terms, almost exclusively in magic formulae—e.g. as ‘morning-glory Maryia,’ ‘evening-glory Dariya’—and were probably derived, along with the formule themselves, from the Russians. On the midday and midnight, and others of similar character, which are likewise designated by Russian proper names in the magic formula.

Among the deities of the sky there should perhaps be included a goddess styled Azr-ava, ‘mistress,’ who, in addition to Kerémät, was once highly revered among the Moksha, at least in some districts. She was said to dwell in the high place, in the upper part of the atmosphere, and bore the epithets ‘main-bringer’ and ‘corn-bearer;’ she seems, however, to have been rather closely related in some way to Kerémät, as in the local law-courts oaths were taken in her name (see above). Here, too, may be mentioned an obscure goddess named Ancζ-pa or Ancζ-pass (pate, more correctly pot’a, means ‘elder sister’), who is said in one MS to have been worshipped among the so-called Terychans (Russified Erz in the government of Nijni Novgorod), but is otherwise unknown.

The name Ujusd or Üjé’s—/a word of obscure origin—is used among the Moksha to denote a person of spirits who wander about the upper atmosphere amid harmonious sounds (mingled, indeed, with inharmonious) and to whom women make offerings of their hair. Should one who catches a glimpse of these spirits at once implore their good fortune, he obtains his wish, though at times their gift may be death. With this host may be compared the celestial spirit known among the Chuvashes as Kevak Xuppi, ‘the gate of heaven’—the personification of some luminous appearance, when the gate of heaven opens, one obtains what one asks for.

In some districts the Mordvins worshipped the wind, mostly under the name of Varma-ava, ‘mother wind,’ ‘wind-mother,’ both privately and at the communal sacrifices; and in her divine capacity she was specially invoked not to damage the corn and hay crops. Worship, with offerings of food, was accorded also to Kuč, or Moroz-at’a or Kelme-at’a, ‘old man frost,’ but only within the house; the ceremonial of this cult is manifestly of Russian origin, as is probably also the spirit itself.

5. Earth, field, and grain.—Mastor-ava, ‘mother earth,’ ‘earth-mother,’ especially among the Erz, appears as one of the most revered of deities, being often called, indeed, immediately after the sky-god, ‘god.’ The set phrase, ‘First he bowed before the sky-god, and then before mother earth.’ At the communal sacrifices the Erz besought her to give them a good harvest and to bestow good health upon the
tilers of the field. She seems sometimes to have borne the epithet Mastor-pas, 'god earth,' 'earth-god,' although elsewhere Mastor-pas appears as a distinct (male) deity, whom people invoked in their imprecations to bring disaster to their enemies by destruction. The Moksha, too, had their Master-ava, 'mother earth,' but in their official worship her place is taken by Pak's-ava, 'mother field,' 'field-mother,' or Pak's-azērava, 'field-mistress,' 'field-hostess,' or, again, Norov-ava, 'corn-field.' Among the Erz, there is little mention of the spirit of the tilled field; here, along with 'mother earth,' we find the place of that spirit usually taken by Norov-ava, 'mother corn,' 'corn-mother,' also designated Novov-ava, 'the god (female) corn,' to whom, among the Moksha, corresponds S'or-ava (or sometimes Noru-ava), 'mother corn'; S'or-ava, however, is found mainly in the magic formulae and in the songs. Each tilled field had its own particular spirits. For the meadow likewise there was a special presiding spirit, called Nar-azērava, 'mead-mistress,' or the like; but, as far as we know, she was not the object of a distinct cult, or, at most, she was presented with a few pieces of bread, accompanied by a prayer for her protection.

(c) Forest and tree.—The forest-spirit — each forest has one of its own—is usually designated Vir-ava, 'mother forest,' 'forest-mother,' and is now generally an evil-disposed being, whose characteristics (with the exception of her sex and her large breasts) have been borrowed in detail from Ljejy, the evil forest-spirit of the Russians (on the Ljesy), in whose cult she is not worshipped. According to our older records, however, the forest-mother, who among the Moksha is also known as Vir-azērava, 'forest-hostess,' 'forest-mistress,' was a friendly deity, to whom the hunters and the gatherers of fruits, berries, or mushrooms prayed for protection against wild beasts, serpents, and ill-luck of any kind, and for success in their efforts, presenting her at the same time with small obligations of food, drink, and money. Among the Erz the Moksha similar petitions are addressed also to Vira-pavas, 'the god forest.' While, according to the extant sources, the forest-spirits were not worshipped at the communal sacrifice, there seems likely to be a certain report that such worship was paid to particular trees—oak, lime, birch, pine—which were entreated to grant prosperity to crops and cattle; we read, e.g., of Tumu-pas, 'the god oak,' 'oak-god,' to whom were addressed prayers for the spells there is frequent mention of Cuvo-ava, 'tree-mother,' who, as in the case of many other spirits, was asked to pardon some supposed injury unwittingly done to her—e.g., by a push—and who punished the offender by afflicting him with disease.

(d) Water.—The water-deity common to all the Mordvinas is Ved-ava, Vedmaster-ava, 'mother water,' 'water-mother,' known among the Moksha as Ved-azērava, 'water-hostess,' 'water-mistress.' She holds an important position in the cultus, principally as the spirit who presides over the fecundity of the earth, of women, and of cattle (though, at least latterly, less as the sender of fish, probably on account of the small importance of fishing as an industry. Each distinct body of water—river, brook, lake, fountain, well—has its special presiding spirit, which may bear a more definite name—e.g., Rav-ava, 'a mother fowl,' 'mother fountain,' etc. In the songs we find mention also of a 'sea-mother' (Mor-ava), probably of Russian origin; with her should perhaps be identified the Ot'su-avē-azērava, 'sea-mistress' (as is the case with the god and goddess), etc., of an older Moksha account, although our informant interprets her name as Ot'su-avē-azērava, 'the great water-mistress,' i.e. as denoting a universal supreme water-goddess, 'the ruler of all local waters.' In an Erz sacrifice personal power, or the find Ved'en-kan, 'prince or prince of water,' or Ved-kan, 'water-prince,' the (sense of the word kαn, which is of Tatar origin, is not known to the people generally); mention is made also of Lis magirde-pas, the god who presides over winds and storms. A special water-spirit is Ved-enjar, 'water-dweller,' or Vetsa-enjar, 'he who inhabits the water'; there, in fact, many such spirits; they are malignant beings, who, like vampire spirits, lie in wait for newly-born children, devour the grain, and have been cursed by an enemy, etc. So far as we know, they are not worshipped. It is probable that these water-spirits, our information regarding whom is very meagre, were originally the souls of persons who had been drowned.

4. House, court-yard, etc.; the village.—The spirit of the dwelling-house bears various names. Among the Moksha it appears as Kud-azērava or Kudzli-azērava, 'house-mistress,' 'house-mother,' and also as Kud-ava, 'house-god,' 'the god house'; while among the Erz we find Kudoc't'im pas, 'god of the house' (koc, koc or koc being the analogue of kudo, kud, 'house'), or Keren'sotakom pas, 'god of the lime-bark and the beam-god' (sotakom = sotak, 'beam-god,' sometimes (perhaps through a misunderstanding and corruption of the original name) Keran'sotakom pas, 'the god of the hewn beam, or beams,' and in some districts also Kud-sarjava, 'house-mother' (lit. 'dwelling-place-mother of the house').

The dwelling-place as a whole, i.e. the court-yard, the dwelling-house, and its adjoining buildings, which the Moksha frequently designate by the name yurt, a word borrowed from the Tatar language, has a special spirit of its own, the Jurt-ava, 'dwelling-place-mother,' known among the Moksha also as Jurt-azērava, 'dwelling-place-mistress.' This spirit, especially among the Erz, has in many cases assumed the above-mentioned household-spirit in the proper sense, and taken its place; in this capacity it is also called Kudo-jurtava (see above) by way of distinguishing it from Kudarsim-ava, 'dwelling-place-mother of the house.' It is represented as a dwarfish female being, or as a cat-like creature, which lives under the stove, being thus obviously connected with the Russian domestic spirit Domovoj (on which see ERE iv. 826 f.), which likewise lives near the stove, and has the form of a dwarf or a cat. Common to all the Erz is a special spirit of the court-yard named Kordasiar'ka, 'court-sar'ka' (a word of obscure meaning in this connexion), who, in the particular in the magic formulae we find a vast number of distinct spirits, quasi-personifications of various parts of and articles in the living-room, and usually described as 'mothers,' 'mistresses' or 'riders,' Patsakhazērava (Moksha), 'stove-mistress,' Ulman's kird ('Eraz', 'ruler of the stove,' Keshk-ava, 'stove-mother,' etc., Koba-ava, 'stove-mother,' etc., Kozghi, and among the Erz Tymo is a benevolent domestic spirit of a dwarfish human form, who, however, is not worshipped.

He belongs to his master whatever of other people's property the latter may desire, but a task must be set for him every night, else he will begin to carry his master's goods to others. Those who wish to obtain such a spirit must keep an egg of a hen or a cock (?) from seven to twelve weeks in the apricot, remaining meanwhile under a pear-tree, then burnt out. It is also possible to kill this spirit. The name Tymo seems to be derived from the verb ty'm, 'to nourish,' 'to nurse,' 'to raise a young animal, a compound formed of ty, 'serpent,' and mor, 'owl,' and thus originally meant 'serpent-owl;' though the Mordvinas no longer think of it as having such a form, the fact is, among the Lithuanians the analogous spirit, the Kanka (on which see ERE ii. 806), is represented as an owl and now as a fiery dragon; cf. also the myth of the basilisk.
lives beneath a stone situated in the court,1 and is generally represented as a male, though sometimes as a female. Among some of the Moksha we hear of a court-spirit named Koram-ot’s-an, the chief of the court, while others speak of a special spirit called Kalka-ava, cattle-yard-mother.

In the Mordvin, the sacrificial sacrifices are offered by the individual family at stated seasons, and also on special occasions—the birth of a child, the birth of a cow’s first calf, etc. At the legal tribunal held by the head of the household, with his family and friends, according to the practice, it was the practice to wear by the house and the dwelling-place-spirits as well as by deceased ancestors. As protectors of the cattle we also find, sometimes even at the communal sacrifices, certain saints of the Russian Church—e.g., Frolov, (a distortion of two saint’s names, Flor and Lavr), surnamed Alis-an-pas, ‘horse-god,’ Nastasja (Russ. Anastasia), with the epithet Reven-pas, ‘sleep-god(ess);’ Milikovitch mentions also a ‘twine-god’ (Tsom-pas), etc. Moreover, the store-pit, the bathroom, the threshing-place, etc., had each its special presiding spirit, usually designated ‘mother,’ or (among the Moksha) ‘mistress,’ ‘hostess,’ as, e.g., Ban-ava, ‘bath-goddess,’ a common name for ‘mistress,’ and on certain definite occasions offerings of food and drink were presented to these spirits. Likewise the ice-garden, sometimes forming part of the house-garden, sometimes situated in the forest, had its particular spirit: Neskep-uhna (Moksha), ‘beech-goddess,’ Neike-pas (Ezra), ‘beech-god,’ etc. Mention is made even of an alley or lane-god (Ula-sans). The village, too, had its spirit, called the ‘village-mother,’ Vel-a-zarevna, ‘village-mistress,’ or Velen-pas, ‘god or goddess of the village;’ this spirit was worshipped at the communal sacrifices.

5. Evil spirits. To this class belong the spirits called bishon (‘Satan’; pl. bishon), who dwell in marshes and waters (especially in deep parts), but also on dry land, in caverns. They beget children: they appear in various forms, including that of a fish. In the Mordvin they are found also as servants of the wicked earth-god Mastor-pas (see above, p. 845). The Erza believe in a distinct spirit of curses, ‘the ruler of the curse,’ called Ezri, ‘curse,’ Ezri-pas, ‘curse-god,’ the god curse (also Ezri) in the Moksha, sometimes terrified as having a wife and a large family. Another evil spirit is Ayes, or Javies (Moksha), Ezu, Ezuz (Ezra), called also Idem-eyes (idem, ‘fierce,’ etc.). According to this spirit, this spirit and his wife produce seventy-seven children every year; every year, however, the whole family is killed by thunder except two, who in the following year beget other seventy-seven, and so on. The Erza seem to regard this spirit as a wicked sorcerer, who flies in the air as a meteor. Numerous diseases are personified, and addressed as ‘mother;’ some of these disease-spirits, too, are thought of as married people, while others take the form of chickens, etc.

6. General observations on the Mordvin mythology.

Among the Mordvin the personification of the deities (nature-spirits) is of a very flexible character, especially in the cultus—a fact signally attested by linguistic usage, and also by the sacrificial prayers. Thus the ‘rising and setting sun-god (god sun)’ and ‘the moon-god (god moon) who moves in a circle’ are simply the sun and the moon in their visible form, but regarded as animate. As regards the legendary sages and the heroes there is nothing that would point to their personification, and, while in the mythology the sun is depicted as a maiden and the moon as a man, this is probably due to the fact that both are seen frontwise. Nor can the designation ‘mother’

1 The blood of sacrificial animals is allowed to run into the cavity under this stone.

as his ‘elder sisters’), are all endowed with life, and their aid is sought to expel disease.

It is manifest that, in the course of centuries, the religion and worship of the Mordvins has been affected by foreign (Aryan, Lithuanian, Turkic) influence, as well as by native, (a number of mythological terms—e.g., pavo, povo, ‘god’ (cf. O. Ind. bhūgas, O. Pers. baha), Pur’gine, the thunder-god (cf. Lith. pur’kinai), Keramati (cf. Tatar Sajtan, Chuvash Sajtjan); in all these, they have also been greatly influenced by Russian popular beliefs, especially in ancestor-worship.

7. Worship.—Besides the obligations performed at home by the individual family, usually under the direction of the head of the household or his wife, and accorded mainly to the domestic spirits and to ancestors, every village community held its own sacrificial feasts, in which the participants frequently arranged themselves in groups corresponding to their families or clans. From certain reports and indications, however, it would seem that at an earlier time there were joint sacrificial festivals for larger districts. The places at which these sacrificial feasts were held, and the Keremati, appear to have been fenced in. On at least some of the sacrificial sites stood a simple building without windows, which, like the ordinary dwelling-house, was roofed and served for religious purposes. The deities were not represented in material forms—the obscure indications of such likenesses found in Russian sources probably refer to representations of the dead. The offerings comprised all kinds of edible animal products, from horseflesh and fowl’s heads, while, as has already been said, allusions to an earlier practice of human sacrifice are not wholly absent from the tradition. Parts of the sacrificial animal—especially, but not exclusively, the nature-deities sometimes included part of it (analogous magic), while the form of the prayer used occasionally recalls that of a magic formula—e.g., ‘sky-god, may the corn prosper!’ The ceremonies have, on the other hand, been noticeably influenced by Russian practice. Thus, in the sacrificial feast, the sky-god, like the dead in the mortuary feast, had a human representative, who in his stead responded to the person praying.

The notices regarding the sacrificial priests show great divergences. According to some accounts, there were priests and priestesses—designated respectively in-at’e, ‘great old man,’ and un-bates, ‘great old woman,’ among the Moksha—who held a life appointment, and who did duty also at marriages and in the legal proceedings of the community, while other reports indicate that they were selected for definite periods of longer or shorter duration. In addition to the designations just given, there were also in-at’e, ‘old man’ (cow-at’e, meaning something like ‘sacrificing old man,’ an-at’e, ‘he who sacrifices or prays,’ anat-baba, ‘the old woman who sacrifices or prays,’ and ari-waas (u), ‘great, old woman.' In some of the sacrificial feasts both sexes took part, but there were also distinct festivals for males and females respectively. The public worship of the deities was connected in the closest way with agriculture, though to the cult of the deities is also connected with the related industry of cattle-rearing, and the deities were specially besought to grant success in these. In the cult of the nature-deities there is no trace whatever of an ethical element, prayers being addressed to them for earthly boons alone; but that element, as already indicated, does not seem to have been wholly absent from the cult of the dead, or from the worship of Keremati (and the obscure Azër-ava), and the spirits of the house and the homestead.

8. Magic.—From the sacrificial priest should be distinguished the sorcerer and sorceress, although there is certainly a notion that the priests were selected from the family or caste of the sorcerers. The latter are now usually designated by a term borrowed from the Russian, viz. vodj-ev, sorchev (Russ. волк, волк), but we find also a genuine native term, sodit’a, sodit’j, ‘he (she) who knows.’ These sorcerers prophesy; they discover lost things; they find out the causes of disease and all misfortune with the aid of forty-one (or forty) beans or other objects like beans, or by gazing into water freshly drawn from a well in the early morning, or by looking into the face of the person afflicted; they cure diseases by magic spells and magic prayers conjured with the appropriate offerings, and by all these prayers there is a specially large number in which a spirit (e.g., the earth-mother) is solicited to pardon a presumptive injury unwittingly done to him by a fall, a push, etc., and punished by a visitation of disease or other calamity. Other kinds of disease (e.g., those of the spirits) are driven out by threats and by magic practices, special magic formulæ serve to protect against the evil eye, and so on. Magic might, of course, be employed also to cause injury.

The magic formulæ and associated practices of the Mordvin show, on the whole, strong evidence of Russian influence, or, to speak more accurately, have for the most part been borrowed from the Russian people.

MORMONISM.—See SAINTS, LATTER-DAY.

MOSQUE.—See ARCHITECTURE (Muhammadian in Syria and Egypt).

MOTHER.—See CHILDREN, FAMILY, MOTHER-

MOTHER OF THE GODS (Greek and Roman).—The Mother of the Gods was identified by Homer (II. xvi. 187) and Hesiod (Theog. 854) with Rhea, the wife of Cronus. She was famous in legend for having prevented Cronus from swallowing Zeus by providing him instead with a huge stone which she had prepared in advance (Hes. Theog. 483 ff.; Apollod. i. 5). The story was localized in Crete, which thus became the fabulous birth-place of Zeus. There is some evidence of an old-established cult of the mother of gods at various places on the mainland, although the name Rhea scarcely appears in this connexion. Thus,
there was an altar of the Mother of the Gods in the agora at Athens (Estchein, i. 60), and a sanctuary (magos), which was used as a record office (Leuc. 65). An ancient festival, known as Galaxia, on the occasion of which a barley sace was boiled in milk, was celebrated in her honour (Str. ii. 30). Graces, Beross. 1814-21, p. 229. 5). The etiological legend which ascribes the foundation of the sanctuary to the expiation required for the murder of a Phrygian (schol. Aristoph. Frat. 431; Phot. Lex., p. 918) clearly shows the later conviction that the worship of the Great Mother had been imported from Asia Minor. The same influence may be present when Pindar speaks of a sanctuary of the Mother close to his own house, where she was worshipped in conjunction with Pan (Pyth. iii. 77 ff.; 137 ff.), and the scholiast, who does not hesitate to identify her with Rhea, relates that Pindar himself set up her statue near his house in consequence of a stone image of the Mother of the Gods having fallen from the sky at his feet. Pausanias (viii. xxx. 4) records the existence of a ruined temple of the Mother of the Gods at Megalopolis in Arcadia, and of another, which was roofless, closed by a roof of reeds and the Alphecus, and of two lions made of stone in its immediate neighbourhood (ib. xiv. 3). But the oldest of her temples in the Peloponnesus, containing a stone image of the goddess herself, was at Acrinon in Laconia (ib. ii. xxi. 4). Yet another temple was at Corinth (ib. ii. iv. 7) with a stone throne, and a stone image of the goddess.

From the 5th cent. at least Rhea came to be identified with the Phrygian Great Mother (Eur. Bacch. 58 ff.; 127 ff.), whose influence in Greek religion was henceforth increasingly important. Already in the Homeric prelude (Hyg. xiv.), the Mother of the Gods is addressed as rejoicing in the clash of cymbals, the beating of drums, the blowing of pipes, and the roar of wolves and lions. In another passage (Soph. Phil. 391 ff.), where the name of Rhea is not mentioned, she is clearly referred to as the mother of Zeus, and is identified with the Phrygian Mountain-Mother, the mistress of the swift-slaughtered lions. She is there also addressed as ‘all-fostering Earth,’ and there are other passages in which the earth-goddess is depicted as the Mother of the Gods (Hyg. Horn. ii. 17; Solon, frag. 36. 2; Soph. frag. 268)—a title which she might well have claimed as mother and wife of Uranus according to the Hesiodic theology (117 ff.). The connection of the worship of the Mother of the Gods as merely a development from the vague conception of a motherly earth. The identifications of the Mother of the Gods by certain 5th cent. poets (Eur. Hyl. 130 ff.; Melanippides, frag. 10 [T. Berck]. Pind. Lyrici Graeci 4, Leipzig, 1878-82. iii. 592]; Pind. Isthm. vii. 4) with Demeter, who, according to the received genealogy, was a daughter of Rhea (Hes. Theog. 451), is a further cause of range bey. The existence of a Metronom at Agrae (PThi i. 323; K. G. Fransen, Pausanias, London, 1892, 204), where the lesser mysteries were celebrated in honour of Demeter, may assist those who maintain that the Athenian Mother was another form of Demeter (Krause, i. Berlin, 1887, p. 651). Lastly, we must take into account the antiquity of the cult of the Mountain-Mother in Crete, which has been abundantly discussed by the Cretan discoveries. 1 Pindar (frag. 89) is the earliest writer who is known to have given the name Cybele to the Mother of the Gods (cf. Aristoph. 427 ff.).

1 The reference of Pausanias to Mt. Sipylos indicates the probable site of the Phrygian Rhea, the stone was worshipped in Asia Minor. There is a curious reference to the cult of an anonymous Mother-goddess in Alex. frag. 327. 306 ff.}

of recent years. Most significant in this connexion is the impression of a signet-ring found at Cnossos, which represents the goddess standing on the apex of a mountain and guarded on either side by a lion (see art. MOUNTAIN-MOTHER).

To disentangle the actual course of development from these extraneous and accidental facts is one of the most puzzling tasks within the sphere of Greek mythology. The leading consideration is that, though the name of Rhea was often associated with Cybele, the identity of the two goddesses never so completely merged that the Rhea of the Greek theogonies did not remain distinct from the partner of Attis (Gruppe, Griech. Mythologie, p. 1921). Some modern investigators hold the opinion that the fusion did not take place until the period subsequent to the Persian Wars (J. Beloch, Griech. Geschichts, Strassburg, 1833-1904, ii. 5). Others, while maintaining that the cult of the Mother belonged to the oldest stratum of Greek religious thought, believe that her legend and ritual passed from Crete to the Greek settlements in Asia Minor, where she was completely assimilated to Cybele in the 7th cent. or earlier (Gruppe, p. 1935). Beyond this lies the question whether the goddesses subsequently identified were in origin entirely distinct (Wilamowitz, in Hermes, xiv. [1879] 195), or whether the Phrygian Cybele and the Cretan Rhea both developed in their separate manifestations from an identical substratum of belief belonging to the pre-Hellenic and pre-Phrygian inhabitants of Crete and Asia Minor [P. Kretschmer, Einleitung in die Gesch. der griech. Sprache, Göttingen, 1886, p. 194 ff.]. Moderne theorie <small>icht an</small> (Kretschmer, in Roscher, ii. 1600), and to distinguish from Rhea a Greek Mother of the Gods, whose relation to the Phrygian Cybele is to be explained by the fact that she belonged to a period anterior to the separation of Greeks and Phrygians. It is argued that, though the evidence of the cult of Rhea is scant, its existence as distinct from that of the Mother of the Gods is well attested in Arcadia (Paus. viii. xxxvi. 3), at Olympia (schol. Pind. Ol. v. 10) and at Athens (Paus. i. xvii. 7). To this it has been replied (vog. iii. 226) that the double title justified the establishment of distinct sanctuaries, and that it was quite possible for a Goddess of Crete the worship of a great maternal goddess of fertility, bearing the name of Rhea, to transfer her cult to the mainland, using sometimes her original name, and sometimes the title προς γοριν, in reference to the goddess whom they affiliated to her. From this point of view it becomes significant that the cult of the Mother prevailed especially in districts which are known to have been affected by Cretan influences. Instances of such coincidence are the appearance of the Idaean Daedals at Olympia (Paus. v. vii. 6) and the legendary connexion of Athens with Crete. Moreover, the result of recent Cretan discoveries enables us to gauge better the extent of the influence which Cretan civilization must have exercised in pre-historic times. On the other hand, although Cybele did not appear in myth as the Mother of the Gods, the supposition that she was originally distinct from Rhea, and that some accidental resemblance led to their confluence, seems to be refuted by the remarkable agreement of the traditions relating to the two goddesses. Thus, the birth of Hermes in a cave at Mt. Ida in Crete corresponds to the worship of Cybele in the hollows of Trojan Ida (Eur. Or. 1449; Lucr. ii. 611 ff.); the stone which Rhea offered to Cronus to the sacred stone of Cybele at Pessinus (Livy, xxxix. 11); the sacred oaks of Attica, after those of the Phrygian Corybantes (Lucian, de Salt. 8); and the Idaean Daedals, the attendants of Rhea,
The general characteristics of Cybele-worship have been described elsewhere (see art. ATTIS, CYBELE), and consequently we may limit ourselves to the impression which it made upon Greek civilization at various epochs. Attis was a youth beloved and eunuch-like in his youth, and his story is of a parallelism to that of Aphrodite and Adonis. According to the various narratives, none of which is earlier than the Hellenistic age, Attis was either a king of the Hittites, a Hittite king who was killed by a bear (Hermesitanax, ap. Paus. vii. 27. 9), or an hierophant (Theeopompos, xx. 40) who mutilated himself under a pine-tree and died from loss of blood (Ov. Fast. iv. 223ff.). At the festival held in his honour a mimic representation of his life, burial, and resurrection took place, where a pine-log was substituted for the corpse (GB ii. 130ff.).

The story, which attests the identification of Cybele with her Semitic counterpart Isthar or Atargatis (Lucian, de Deo Syr. i. 15), must have been current in Asia Minor from a very early date; for clear traces of Attis are recognizable in Herodotus' narrative of the death of Atys, the son of Crousus, at a bear-hunt (Herod. i. 94ff.), and the herms Andromachus of Ephesus and Hermus of Samos have been identified as the same god Attis. Theompopos, the comic poet, whose plays belong to the end of the 5th and the beginning of the 4th cent., refers to the association of Attis with Cybele (frag. 27, L. 740ff.), but the name is not recognized in the cry συρραυς mentioned by Demosthenes (xviii. 280) in his famous account of the vulgar initiation-rites—doubtless of Asiac origin—in which Eschines took part as an acolyte. In classical times these barbaric cults became familiar to the common people as a congeries of superstition; practices (C. A. Lebok, Aglaogamum, Konigsegg, 1829, i. 116; Lucian, Icarom. 27, etc.), so that the worship of Attis and the Mother was apt to become confused with the observances proper to Dionysus (Strabo, p. 470), Satarus (Aristoph. A. 875), and Artemis (Diog. frag. 1 [A. Nauck, Tragicorum Graecorum Fragmenta, Leipzig, 1889, p. 779]). With Artemis, Attis was associated as the protectress of lions, bears, panthers, and other wild beasts; and with Hephaestus, who was identified with Artemis at an early date, she shared her title Antea (schol. Proo. Rhod. 1. 141; Hesych. s.v.) as the sender of nocturnal appappings (Gruppe, p. 1539).

The worship of the Mother was distinguished from the indigenous Greek cults chiefly by its emotional, ecstatic, and mystical character. Indeed Phintys the Pythagorean pronounced that participation in the rites of the Mother was inconsistent with the requirements of womanly modesty (Stob. Flor., ix. 61). In the Corycianic initiation-rites the novice was placed on a chair (diphóron), while the celebrants danced round him, accompanied by the wild notes of the aulos (Plat. Phaed. 277 D, Legg. 790 D). Although, in consequence of the syncretism already explained, the mysteries of Cybele are sometimes associated with the Eleusinian mysteries of Demeter, the symbolic words of initiation, as recorded by two of our authorities (Clem. Alex. Protrept. 1. 13, p. 14 P.; scho. Plat. Gorg. 497 C), are undoubtedly derived from the Phrygian worship of the Great Mother. "I have eaten from the timbrel, I have drunk from the cymbals; I have borne the sacred vessel, I have entered into the bridal chamber" (J. E. Harrison, Prolegomena to the Study of Greek Religion, Cambridge, 1903, p. 158). The last course relates to the mystical communion between the goddess and her lover, which was ritually enacted all over the East, whether in connection with the names of Cybele and Attis, of Aprodite and Adonis, or of Isis and Osiris (GB iii. 159ff.).

1. In these legends that the lover was put to death and afterwards restored to life, if not always in the same incarnation. The mystical marriage may have been in its origin a magical process intended to stimulate the reproductive forces of the gods, while the subsequent death and resurrection of the priest-king represented the annual decay and revival of vegetation. The self-mutilation of Attis, which is, of course, the transference into ritual of a primitival custom of priestly consecration, though at first sight not easy to reconcile with the other data, probably belonged to the same circle of ideas. Whether we should regard the occult or its primary function as the final oblation by means of which the votary seeks to assimilate himself to the essential nature of the goddess (E. Meyer, Gesch. des Altherums, Stuttgart, 1907–08, i. 619), or whether it was intended to secure the continued fruitfulness of the Earth-mother and the renewal of her crops (GB, iv. 31, Atlantik, Attis, Osiris, London, 1897, p. 294ff.; Cumont, in Pauly-Wissowa, vii. 681), is not altogether certain, and the two ideas are not necessarily inconsistent with each other. Moreover, the question may be deduced from the fact that the severed genitals were dedicated in the sanctuary of Rhea-Cybele (schol. Neand. Alex. 8), and from the statement of Lucian that they were thrown into some particular house for the nourishment of the child (Loeb, in Menand. frag. 202, iii. 58 K.), were probably familiar figures in Athens at a much earlier date (R. C. Jebb, on Soph. Ed. Tyr. 388 [Tragedies, Cambridge, 1914]; cf. Plat. Rep. 936 C). It may be conjectured with some probability that the influence of this traffic was considerable, although

2. The notice that Cybele and Attis stand for the general principle and its historical process survives in the Neo-Platonic treatise of Solutius, ap. Eunapius, Cont. Menand. 4, and in Syr., Four Stages of Greek Religion, New York, 1912, p. 191ff.)

3. Some of these may have been smuts (Kebrians, cxxxvi. 1).
the conception of the frenzied Galli who scourged themselves with whips (Plut. adv. Colot. 33, p. 1127 C), and lacerated their flesh with knives (Aelian, v. 134. 5) until a holy bee, said to have been traced to an early Greek and Roman source than the Alexandrian writers (Cumont, op. cit., col. 675), and has become known to us chiefly through Latin literature (e.g., Sen. Agam. 735; Lucan, i. 367).

In the year 295 B.C. a Sibylline oracle was discovered by the Decemviri, directing them, as a condition of success in the war, to introduce into Rome the worship of the Great Mother of Pessinus (L. 1. 10). And, in fact, the sacred stone, which was then in the custody of Attalus, king of Pergamus, having been removed by him from its original home at Pessinus (L. Bloch, in Philol. iii. [1865] 690 ff.), was brought to Italy in circumstances of great ceremony, and reached its destination in the year 204. Strange happenings marked its arrival. The ship conveying the sacred object grounded on a sandbank in the Tiber. Then Claudius Quincta, a noble matron whose freedom of speech had provoked constant tongues to slander, prayed to the goddess that her character might be cleared by the ordeal, if she succeeded in drawing off the ship after strong arms had failed. The ship being then able to follow her direction, and Claudia’s innocence was triumphantly vindicated (Ov. Fast. iv. 291 ff.; Suet. Tib. 2; Tac. Ann. iv. 64). On the 4th of April the goddess was received as a temporary guest, until a permanent home could be provided for her, in the temple of Victory on the Palatine, and the day was set apart for a festival to be known as the Megalesia, on which gifts were presented to the statues in the Forum, and public games were held (Livy, xxix. 14). Ten years later performances were for the first time exhibited at the Megalesia (ib. xxxiv. 54). Subsequently, thirteen years after the contract had been placed, a temple on the Palatine for her sole and separate occupation was dedicated to the Magna Mater Idea on the 10th of April 191, when the Ludi Megalesiae were included for the first time in the State calendar (ib. xxxvi. 38). Somewhat later, if not immediately, they were extended so as to occupy the entire interval between the 4th and 10th of April (CIL i. 231). On the first day of the festival the praetor urbanus made a solemn offering in her temple (Dion. Hal. Ant. Rom. i. 19). The third day was reserved for the performance of stage-plays (Ov. Fast. iv. 377), and we know that four of the extant works of Terence were presented on this occasion. Races (circensus) were held on the last day (Marquardt, Röm. Staatsverwaltung, iii. 501), and in the age of Nero and Domitian these had become by far the most popular feature of the whole celebration (Juv. xi. 193). The recurrence of the festival was marked by general merrymaking and licence; clubs were formed to promote social enjoyment (Cic. de Senect. 45); and so lavish was the expenditure of the upper classes on reciprocal hospitality that in 161 a sumptuary law was found necessary to restrain it (Anul. Gell. ii. 24).

In the last two centuries of the Republic the participation of State officials in the cult was limited to the extent already described; but, dating from the time of Augustus, who restored the temple of the Magna Mater after it had been burned down in A.D. 3, there is evidence of a further ceremony of a primitive character which took place on the 27th of March. This was known as the lavatio, when the symbolic stone and possibly also the knife of the Gallus (Mart. iii. xlvi. 2) were conveyed, by the direction of the Quincteii, through the Tiber current, and washed in the waters of the Almo, which debouches into the Tiber just outside the city (Ov. Fast. iv. 337; Lucan, i. 398). In all other respects the administration of the cult was left in the hands of its foreign assistants, who traced it to an early period of Gallic life (Ov. Fast. iv. 342), and no Roman citizen was allowed to acquire any official status in relation to it. The Phrygian priests, however, were permitted to stated occasions to march in procession through the city in their sacred chariot, with wild songs to the accompaniment of flutes and tympana (Dion. Hal. loc. cit.), and collecting alms from the bystanders (Cic. de Leg. ii. 22).

In the later part of the 2nd cent. a complete reorganization of the cult seems to have taken place. Henceforth, as the evidence of numerous inscriptions shows, Roman citizens were permitted to assume priestly offices subject to the approval of the Quincteii, but the privilege was exercised chiefly by the freedman class. To the ceremony of the lavatio on March 27th there was now added a further festival of five days, the opening ceremony of which on March 16th was denoted Conoma intrat on the Calendar of Philocalus (CIL i. 3364), while the remaining four days, the 22nd, 24th, 25th, and 26th of March, were designated respectively Arbor intrat, Sangunae, Hiera, and Aequitio. The ceremonies are represented in detail the various incidents of the story of Attis, which are already familiar. On the 22nd the procession of rod-bearers (Cannophori) which entered the city was intended to recall the fact that Attis as a child was exposed among the bulrushes of the river Gallus (Julian, Or. v. 165 B). Similarly on March 22nd the Dendrophori carried to the temple on the Palatine a pine-tree, encircled with fillets of wool and adorned with violets, as a representation of the tree-scent, mutatis mutandis. The day of blood (24th) was given up to lamentation for the death of the god, and, whereas originally the act of self-mutilation was then performed by the priests, subsequently it was sufficient for the Archigallus to make an incision in his arm and symbolically to sprinkle his blood (Tert. Apol. 25). The climax of the festival was reached in the rejoicings over the resurrection of the god which occupied the 25th of the Hilandar (April 15). It was recognized in antiquity that the renewal of the sun’s power after the vernal equinox was here symbolized (Macrobi. Sat. i. xxxi. 19), and that the whole festival was devised to celebrate the decay and re-birth of vegetation (Cic. de Leg. ii. 59; Ov. Fast. 378 F). Modern scholars have noticed the parallel presented by our Lenten and Easter services, which occupy a corresponding position in the calendar (OGS iii. 301).

It remains to mention the rite known as taurobolium, performed on 28th March, the existence of which is attested by a series of inscriptions extending from the 2nd to the end of the 4th century. Although during this period it was invariably linked to the service of the Great Mother, there is no doubt that it belonged originally to the cult of some other deity, and it has been conjectured that this was the Persian goddess Anahita, who had been identified with the Arian Taurabhata (P. Cumont, Rec. archéol. xii. [1888] 132 F.). There is also much obscurity in the details of the rite. In the earlier period the chief incident of the taurobolium and of the certainly similar ceremony of the Cisternum was the sacrifice of a bull or a ram; but at a later date, according to both the epigraphic (e.g., CIL vi. 511) and the literary (Petr. Persiph. x. 1011 ff.) records, the recipient of the taurobolium stood in a cavity having a perforated roof through which the blood of the bull was poured over him so that he might suffer a ‘re-birth.’ The whole ceremony was under the control of the Quincteii.

In the Roman Imperial period the cult of the
Great Mother, by passing under State control, lost many of its original characteristics; but the power of the Roman organization was such that, by the adoption of suitable accretions from outside, and by its association with the cults of Isis and Mithra, it exercised during the last days of paganism a wider and more potent influence than at any earlier time.

A. C. PEARSON.

MOTHER-RIGHT.—I. Introduction.—Mother-right is a form of social organization in which the rights of a person in relation to other members of his community and to the community as a whole are determined by relationship traced through the mother. In this condition the duties which a person owes to society, the privileges which he enjoys, and the restrictions to which he is subject are regulated, and their scope is determined, by the relations in which the person stands to the mother's relatives and his mother's social group.

Mother-right is a highly complex condition in which a large number of social processes are involved. The following are the chief elements that can be distinguished:

(1) Descent.—This term should be limited to the process which regulates membership of the social group, such as clan, caste, family, etc. In mother-right descent is matrilineal; a person belongs to the social group of his mother. The use of the term is most appropriate when the community is divided into distinct social groups, and this distinctness is most pronounced in the clan-organization in which the practice of exogamy separates the social groups called clans or lineages from one another. The social organizations based on the family or kindred are made up of social groups less clearly distinguishable from one another, and, therefore, speak less directly in the family whether in the limited or extended sense, the term is here less appropriate.

(2) Kinship.—In a community based purely on mother-right kinship would be traced solely through the mother and would not be recognized with the relatives of the father. Everywhere in the world, but especially among peoples who possess the clan-organization, kinship carries with it a large mass of social duties, privileges, and restrictions (EBE vii, 705), and in a typical condition of mother-right these social functions would exist only in connexion with the mother's relatives. We have no evidence, however, of the existence of any society in which kinship is not recognized with the relatives of the father, although in many cases the functions are very restricted as compared with those of relationship traced through the mother, good examples being those in which marriage is allowed with and to the father's relatives, but is strictly forbidden with equally near relatives on the mother's side.

(3) Inheritance.—In a condition of typical mother-right children would inherit nothing from the father, and rights in property would be determined solely by relationships through the mother. Mother-right does not imply that rights in property should be vested either mainly or exclusively in women. On the contrary, in many cases in which children inherit nothing from the father, women are debarred from holding property, though they form the channel by which it is transmitted from one member of the community to another. The usual rule of inheritance in mother-right is that the property of a man passes to his brother or his sister's son. When it passes from brother to brother, and, on the death of the last surviving brother, to a sister's son.

(4) Succession.—This term is most conveniently used for the process whereby rank, office, or other social distinction is transmitted by the death of a person. Succession usually follows the same rules as inheritance, a chief, priest, or other holder of rank or office being succeeded either by his brother or by his sister's child.

(5) Authority.—Mother-right has often been supposed to imply mother-rule, but in the great majority of the societies which we furnish with us examples of mother-right authority is definitely vested in the male—in the father or oldest male as the head of the household, and in the chief as the head of the tribe or corresponding social group. In some societies, however, authority in the household is vested in the mother's brother, giving rise to a form of social organization which is called the 'avunculatic,' and the authority of the mother's brother in one form or another is very common, not only associated with other features of mother-right, but in societies in which descent, inheritance, and succession are matrilineal. On the other hand, authority in the household vested in the mother or oldest female. The term 'matrarchate,' which is often used loosely as the equivalent of mother-right, should be limited in its scope to this condition of mother-right. Many societies exist in which women are chiefs or monarchs, but, as a rule, this condition is not associated with mother-right. Among peoples over whom women rule the father is usually the head of the household.

(6) Marriage.—Mother-right in its typical form is associated with a mode of marriage, most suitably called 'matrilocal,' in which the husband lives with his wife's people. In its extreme form the husband may be only an occasional visitor to his wife's home, so that he has little or no social obligation towards his father, and live under the authority of the mother and the mother's brother.

In a state of typical mother-right a person would belong to his mother's social group. He would not recognize the existence of any kind of social duty except towards his mother's relatives, and would ignore the relatives of his father; property, rank, and office would pass solely through women. It is not a necessary feature of mother-right, however, that authority should be vested in the woman. It might be so vested, but, if the woman is not the ruler, it would be vested in her brothers. In mother-right in its most typical form the father should have no authority in the household.

The condition thus described as typical mother-right occurs very rarely, being found most purely among such peoples as the Iroquois and Seri Indians of N. America and the Kinsels of Assam, who in some cases which have been regarded as examples of mother-right some of the social processes included under this head depend on the tie with the mother, while others are determined by the father's relatives, but in particular cases the social conditions of the most varied kinds. Thus, while descent is matrilineal, succession may be patrilateral. Kinship is everywhere, so far as we know, recognized through the father as well as through the mother, and authority in the household is often paternal where descent, inheritance, and succession are all matrilineal. Moreover, a mixture of social groupings may be present, one of which may be matrilineal while the other is matrilateral, this being
especially the case when local organizations accompany different forms of exogamous grouping.

Thus, the matrilineal processes show themselves only in certain departments of social life. Thus, a people who possess patrilineal institutions in general may yet show the presence of matrilineal practices in connection with marriage. The offspring of a slave mother may be slaves even if the father is of high rank, while the children of a free mother and a slave father may be free, and even noble, if the mother belongs to the nobility.

A further condition in accordance with mother-right is that in which marriage between half-brother and sister is allowed when they are the offspring of one father and different mothers, while it is forbidden when they are of the same mother by different fathers. The form of marriage which is forbidden would be impossible with mother-right, while that which is allowed would be natural, provided that the mothers belonged to different exogamous groups.

Another large group of matrilineal practices is characterized by the authority of the mother’s brother. Among a people who practise patrilineal descent, inheritance, and succession the mother’s brother has sometimes more authority than the father, and this authority may be accompanied by a number of other social functions which show that the tie with the mother’s brother is closer than that with the father. Thus, mother’s brother and sister’s son may hold their property in common, or the sister’s son may take the goods of his uncle without restraint. The mother’s brother may act as the special guardian and instructor of his nephew’s children, and may initiate him into the mysteries of secret societies, or may take the leading part in such rites as circumcision and its variants, ear boring, knocking out teeth, and other operations.

2. Distribution and varieties. — Owing to ignorance or neglect of the complexity of mother-right on the part of ethnographers, the available evidence often leaves us uncertain as to the social processes of a people correspond with those of mother-right.

(1) America.—Mother-right exists in America in an especially pure form. Not only are descent, inheritance, and succession purely matrilineal among the Inuit, but the woman takes a place in social life which would justify the use of the term ‘matrarchy.’ A striking example of this condition is found among the Iroquois and Hurons, where women are the heads of the households, elect the chiefs, and form the majority of the tribal council. Almost as striking an example occurs among the Pueblo Indians, where, with the exception of the Tewa, descent is matrilineal, the house is the property of the woman, marriage is matrilocally, and the children are regarded as belonging to the mother. Other purely or predominantly matrilineal stocks are the Caddoan (Pawnee, Arikara), the Muskogean (Creek, Choctaw, Seminole), the Yuchi, and the Timucua.

In other cases matrilineal and patrilineal tribes are found among one stock. Thus, though the Siouxan tribes are mainly patrilineal, the Biloxi, Tutelo, Crow, Hidatsa, Oto, and Mandan are matrilineal; while among the Winnebago the sister’s son formerly succeeded, a woman could be chief, and the mother’s brother exercised much authority.

organized in totemic clans with matrilineal descent. Property passes to the sister’s sons, and compensation for injury goes chiefly to relatives on the mother’s side. Among the Arunta, who are said to have been the original inhabitants of the peninsula, we have no record of the nature of the social organization; but the people trace their descent to an ancestress, and women take an important place in social life. Another centre of mother-right is in British Guiana; here the Arwaks practice the matrilineal descent and matriloccal marriage. The neighbouring Warau and Makusi are also said to be matrilineal. If a Makusi woman marries a man of another tribe, the children will belong to the Makusi; but, as is said that these people may marry the daughter of the sister, it is improbable that they have a matrilineal clan-organization. Apparently this region is in an intermediate condition, and the presence of patrilineal succession among the Shusi, a branch of the Arwaks, also points in this direction. The Arawaks who have wandered into Brazil are matrilineal, and there is another centre of mother-right in this country on the Kotoshuma branch River. The Bakairi of this region are matrilineal in that the children of the Bakairi woman who marries a man of another tribe belong to the Bakairi, and this is true of other tribes; but, as in British Guiana, we do not know of any matrilineal clan-organization. Succession appears to be in an intermediate condition, a chief being succeeded by his son, his sister’s son, or his daughter’s husband. The mother’s brother shares the exercise of authority with the father.

Among other peoples of S. America, such as the Cahuens and the Tuoror, there is matriloccal marriage; but we do not know whether this custom is associated with features of mother-right.

(2) Oceania. — Since the great majority of Polynesians do not possess any form of clan-system, and we know little of their local organization, the nature of descent is doubtful; but where the clan-organization exists, as in Tikopia, it is definitely patrilineal. The communism of the people also makes the nature of inheritance doubtful, but there is certainly no evidence of any of the modes of transmission which accompany mother-right. Chiefs are usually succeeded by their children, and this mode of succession also holds of hereditary occupations. In Tonga, however, succession may pass to the sister’s son, and a woman may be chief in several parts of Polynesia. As a rule, the father has authority in the household; in some islands, such as Tonga and Tikopia, the mother’s brother has certain social functions, but not of a kind that shows any special exercise of authority. In New Zealand, and perhaps elsewhere, matrilocal marriage is frequent.

Micronesia, on the other hand, is the seat of definite mother-right. In the Marshall and Mortlock Islands and in the Carolines, with the exception of the island of Yap, the matrilineal mode of transmission is general. In Ponape there are exogamous clans with matrilineal descent, and property passes to the sister’s sons. Only in Yap does the son follow his father, who elsewhere is said to be a stranger to his children. Marriage appears to be largely matrilocal. In the Marianne Islands all that we are told is that the woman commands absolutely in the house. In the Pelew Islands there are exogamous totemic clans with matrilineal descent.

Melanesia has usually been regarded as one of the most definite examples of mother-right; but, even where descent is matrilineal, its social organization departs so widely from the typical condition as to make it doubtful whether the term should properly be used. Descendants are often matrilocal, but follows the father in New Caledonia, and in many islands of the New Hebrides as well as in one part of Santa Cruz. In other places, such as most parts of Fiji and one region of the Solomons, the absence of a clan-organization differentiates the nature of descent doubtful. Chiefship is always patrilineal where it is hereditary at all, and inheritance is in an intermediate condition. Property passes to the children in some places and to the sisters’ children in others, while elsewhere different kinds of property follow different rules of inheritance. In Santo in the New Hebrides, the people take the tomot of the father as part of the personal name, but belong to the mother’s clan, and in Vatu Levu in Fiji, where there is matrilocal descent, a man pays special respect to the totem of his father, though he belongs to his mother’s clan and inherits her sacred land. Matrilocal marriage is not frequent even where descent is matrilineal, and there are often definite social relations between a man and his mother’s brother, though not always of a kind to show any special exercise of authority on the part of the uncle.

(3) Australia. — There are at least four forms of social grouping in this continent: the moiety, the matrimonial class, the local group, and the totemic group; since two or more of these may co-exist, there may be more than one rule of descent. Wherever there is a simple dual organization, as among the Dieri and Ngarrabulla (Urubamba) of Central Australia, descent is matrilineal so far as the moiety is concerned.

The peculiarity of descent in the case of the matrimonial class is that it is neither patrilineal nor matrilineal, but the child belongs to a class different from that of either father or mother. Where marriages follow the orthodox rule, it is not possible to tell definitely the nature either of descent of the class or of the moieties of which the classes may be regarded as subdivisions. Marriages do not always follow the ordinary rules, however, and A. K. Brown has used the exceptional marriages of certain eight-class tribes as the means of detecting the true nature of descent. By means of evidence provided by R. H. Mathews he shows that among the Arunta the children of the chief form of irregular marriage belong to the class to which they would have belonged if it had been the children of the man by a regular marriage, thus showing that descent is determined by the father. Among the Yunggill, on the other hand, the children of a regular marriage belong to a group to which they would have belonged if they had been the offspring of the union of their mother with a husband married according to rule, showing that here descent is properly matrilocal so far as the class is concerned.
The local group is probably always patrilineal, but this form of social grouping has been largely neglected by ethnographers, and we must await further information to show whether this mode of descent is universal.

The totemic grouping shows great variety of descent. Sometimes the totemic group corresponds with the local group, and where this is so descent is necessarily patrilineal. In other cases, where the totemic groups form subdivisions of the matrilineal moieties, they are of equal necessity matrilineal. Among the Dieri there are two forms of totemic organization: one kind of totem, called pintara, is transmitted from father to son together with special knowledge of legends and rites, while a man takes another kind of totem called madu (the marriage of Howitt) from his mother. The intermediate condition of the people between matrilineal and patrilineal transmission of the totem is shown by the fact that the father often transmits his madu as well as his pintara to his son. Each man also obtains from his mother or her relatives special knowledge of legends and rites relative to his maternal ancestors. The communicative habits and the poor development of personal property in Australia make the subject of inheritance of little importance, but in so far as it exists it is often passed from father to son as descent of the moiety or class. Thus, among the Arunta, whose irregular marriages point to patrilineal descent, certain objects, and especially curiosities, or ancestral bull-roarers, pass from a man to his son. If he has no son, to his brother and his brother's son. Among the Tjin-gilli and other tribes whose irregular marriages show them to have matrilineal descent, property passes into the possession of the mother's brothers or, if the father's husband, the inheritors being men of the moiety of the mother of the dead man. The latter mode of inheritance also occurs among some of the tribes of the northern territory. Since the Australians have neither chiefs nor priests, the subject of succession is also quite unimportant. The special powers of a wizard or totem are acquired by special processes of initiation. Perhaps the topic which comes most distinctly under this head is the knowledge of native legends and rites, the double character of which among the Dieri has already been considered. Elsewhere this kind of knowledge is closely connected with totemism, and probably follows the laws of transmission of the totem.

(4) New Guinea.—The most definite example of mother-right in this region occurs among the Massim of the north-eastern islands. This people, who speak a Melanesian language, practise mother-right in a purer form than is found anywhere in Melanesia proper. Not only does a man belong to the totemic clan of his mother, but property passes to his sister's children in some localities, and everywhere a chief is succeeded by his brother or his sister's son. In parts of the Papuan Gulf descent is probably matrilineal, but succession to the rank of chief is patrilineal. Another locality where mother-right is probably practised is the Manus River, in the Dutch portion of New Guinea, where a boy belongs to his mother's tribe, and wears its distinctive dress, even when he lives with his father's people.

Elsewhere in New Guinea patrilineal customs are found, though here and there indications of mother-right occur. Thus in the Mekeo district, which has a form of the dual organization.

1. G. G. Roberts, Adm. 44.
5. The Tojor, Motu, Boro, and Mekay peoples the mother's brother has certain social functions, and these functions are highly developed in the western islands of Torres Straits, where, side by side with patrilineal descent, inheritance, and succession, the mother's brother has more authority than the father.

(5) Indonesia.—Father-right prevails throughout the greater part of the Malay Archipelago. There is a peculiar form of matrilocial marriage in one part of the Timor, in which the husband returns to his own home after a time, leaving behind him his children, who inherit their mother's property.

In several parts of Sumatra mother-right is present in its most definite form. Among the Malays of Minangkabau, of Upper Padang, and certain other districts there are matrilineal clans and the extreme form of matrilocial marriage in which the husband continues to dwell in his mother's house and only visits his wife. The people live in long houses, which accommodate a family in the extended sense, consisting of persons descended from one or other of his father's brothers or sisters, the head of the household being the eldest brother of the leading woman. He takes the place of a father to his sister's children, who inherit his property after it has been enjoyed by its brothers and sisters. The family being divided into two groups of organization intermediate between the condition of Minangkabau and father-right occurs in Tiga Loeng, where husband and wife live together, but the father has little power over his children, and the mother's brother is the mother's eldest brother. Property belonging to husband or wife at the time of marriage passes to their respective clans, but that acquired by them after marriage is divided between their children and their sisters' children.

(6) Asia.—There are no examples of mother-right in E. Asia, with the possible exception of the Ainu in the north and Cambodia in the south. Among the Ainu relationship through the mother is said to be more important than that through the father, and the mother's brother is the most important member of the family group, but we have to define information about descent or inheritance. The peoples of Asia are generally organised in patrilineal clans, but matrilocial marriage is frequently present.

In India there are two centres of mother-right. One of these, represented by the Khals and Suteng of Assam, affords a most definite example of the condition. Descent is matrilineal in the clan, which is traced back to an ancestress and embraces kindred groups consisting of the female descendants of a great-grandmother. The house and other property belong to the women, and the husband or father has no authority except in those cases in which, at some time after marriage, he removes his wife and children to another house. Power is inherited by daughters, the house and its contents go to the youngest daughter, and, in default of daughters, the inheritance passes to a daughter of a mother's sister. The sien, or chief, is a man, except in Khyatin, is succeeded by his brother or the son of his eldest sister. The neighbouring W People show an intermediate

3. For a more complete account of the distribution of mother-right in this island, see J. G. Frazer, Totemism and Exogamy, ib. 1887.
form in that both men and women inherit, but the youngest daughter obtains an additional share. The Gáros, who live to the west of the Khasis, and the Megam, or Lynngam, who are a fusion of Khasi and Gáro, practise a form of mother-right closely resembling that of the Khasis. Though a man cannot inherit property and cannot bequeath it that acquired by his own exertions, he nevertheless exercises some control over the property of his wife, and can even appoint a member of his clan, usually his sister's son, to exercise this control in his name after his death. Among the Khois of N. Bengal, who are in contact with the Gáros, marriage is matriloclal, and a man is said to obey his wife and her mother.²

The other Indian centre of mother-right is on the Malabar coast, where matrilocal descent, inheritance, and succession are practised by the Nàyars, northern Tiyans, and other peoples, including even the Muhammadan Mappillas, or Moplahs, of N. Malabar. This system of law, known as marumakkätam, is closely connected with the so-called polyandry of this part of India. In the unions of Nàyar women with Nambutiri (Nambur) men, which are rather frequent in this region, the female in the family, the little girl, as it were, does without her own children that he cannot touch them without pollution. Elsewhere in S. India where descent, inheritance, and succession are patrilocal, matriloclal marriage is occasionally practised, and the form known as illattam. This custom is particularly followed in families where there is no son, male heirs being obtained by the daughter staying at her own home after marriage. Matrilocal marriage also occurs in Ceylon.

Several peoples of the Caucasus show traces of mother-right, thus, in marriages between slaves and free persons the child follows the station of the mother, and a woman may habitually go home to her parents for the birth of her children. The maternal uncle has much authority, and in Georgia takes the leading part in all that concerns blood-revenge.

The earliest record of mother-right comes from Lebanon, where, according to Herodotus, the phylai took the mother's name, and the status of children in marriage between free and slave was determined by the condition of the mother.

The Arabs of Yemen succession passes to the sister's son, and many records of the Semites of Arabia and Palestine have been regarded as evidence of an early condition of mother-right. The marriage between half-brother and sister, or, more strictly, when the woman affords an example, accompanies mother-right elsewhere, and several passages in the OT, such as Gn 31:9 and Jg 8:20, suggest this form of social organization.

At the present time the mother's brother has some degree of authority in Palestine, and a formula used in the Beduin (Bedawi) marriage ceremony shows that great importance is attached to motherhood.

(7) Africa.—The Semites of N. Africa are definitely patrilocal, but in some Arab tribes of the Anglo-Egyptian Sudan the wife returns to her own home for the birth of the child—a custom probably connected with matrilocal marriage. Though the Hamitic Beja are now patrilocal, there are records which show that five centuries ago they counted genealogies in the female line and practised succession to the sons of sister and daughter.¹ Among the Bogo, Barea, and other allied Hamitic or partially Hamitic peoples the mother's brother takes an important place in social life, though the patrilocal character of their institutions is otherwise very definite.²

The Nubas of S. Kordofan form a striking exception to the patrilocal institutions of most of the mixed Hamitic and Negro Nilotic peoples, such as the Shilluks and Dinka; as boys grow up, they spend much of their time with their mothers' brothers, who are held to be more closely related to them than their fathers. Property is transmitted to the sister's sons, and a man lives for some time with his wife's people.³ The Mbuti, Nandi, Suk, and other partially Hamitic peoples of the northern part of tropical E. Africa are purely patrilocal.

The Bantu peoples show much variety in the mode of transmission of social rights. About Lake Nyasa and the Rovuma River⁴ there are a number of definitely matrilocal tribes, such as the Wa-Yao, Achehus, Wa-Makonde, and Wa-Makua. The children take the totem of the mother, a chief is ascended by his sister's son, and the mother's brother is regarded as the nearest relative and the natural guardian of his sister's children. The Anyanja practise both modes of descent, but the position of the mother's brother has derived this form of transmission from the Angoni, a branch of the Ama-Zulu. This people, together with the Ama-Xosa,⁵ Ba-Suto,⁶ Ba-Thonga,⁷ and other Bantu peoples of S.E. Africa, are definitely patrilocal, although the mother's brother exercises much authority.

Passing northwards from Lake Nyasa, we find a more or less gradual change from matrilocal to patrilocal descent.⁷ The Wa-Sagana and Wa-Digo are definitely patrilocal, but the Mbundu people, such as the Nkamba and the Loango, are definitely matrilineal. The general law among the Mbundu is that the totem of the children is determined by the descent of the mother, and the children remaining with the mother belong to her totemic clan. In both these groups the children remaining with the mother, as in any other Bantu peoples of S.E. Africa, are more closely related to her than to their father. The Bantu peoples of Uganda are definitely patrilocal.⁸

The only exceptional feature is that, while the mode of succession in the various patrilineal tribes of Uganda belongs to the totemic clan of his mother, though he also takes certain other totems connected with royalty.

The Bantu of the northern part of the Belgian Congo are mainly patrilocal.⁹ Among the Ba-Ngala children inherit, but the mode of descent is determined by a family council, which usually ordains that a child shall take the totem of its

⁹ G. Frischat, Die Elfenbeinküsten-Süd-Afrika's, Brussels, 1873, p. 117.
father. Here the same rule holds as in E. Africa; social institutions become more matrilineal on passing from the interior towards the coast. Mother-right also occurs in Loango and Angola.1

Among a group of Bantu peoples in the S.W. Frank Congo property and rank are transmitted to the brother or the son, and among one of these peoples, the Ba-Mbala, kinship is said to be counted farther in the female than in the male line. Not only is succession matrilineal, but the mother of the chief's eldest son estern, if not, authority. We are not told of any definite social groups with either line of descent, but respect is shown to animals by not eating their flesh, and this when bar is transmitted from father to son. This institution is almost certainly a kind of totemic grouping, so that these people show a condition almost exactly the reverse of that found in Melanesia, descent being patrilineal, while inheritance and succession are mainly matrilineal. It seems almost certain, the kikula bar is in the form of totem, we have here an example of the connexion of totemism with patrilineal descent, and this association comes out still more strongly among the Kono in W. Africa. They people possesses two distinct forms of social grouping, one matrilineal and the other patrilineal, and the most recent and trustworthy account2 shows that, while there is no definite association of animals with the patrilineal, and in the patrilineal, ona, the patrilineal ona is definitely totemic.

In Nigeria and the countries west of it, we find an interesting series of transitions between mother- and father-right. The westernmost people of whom we have knowledge are the Ewe-speaking peoples of the Gold Coast.3 They have totemic groups with matrilineal descent, property passes to the eldest brother born of the same mother, and, in default of brothers, to the eldest sister's son. Only if there are no nephews does the son inherit; and, if there is no son, the chief slave inherits. Succession passes to the brother and the sister's son. In addition to the totemic clans, called abunan, there are also groups, called aforo, which appear to have a totemic character.4 In these groups descent is in the male line, or, as the people themselves put it, a person takes the fetish of his father and the family of his mother; the condition thus having a resemblance to two totemic groupings of the Diiri of Australia. Among the neighbour Fanti-speaking peoples the son inherits only the property of the mother, a slave inheriting the property of a man if he has no sister's son. Among the Ewe-speaking peoples of Dahomey5 kinship is counted through females in the lower, and through males in the upper, classes. Among the former property passes to the brother and to the sister's son, while a chief is succeeded by his son. The Ewe of Togoland are said to count relationship through the father rather than through the mother, but the mother's brother is the proper heir. It is noteworthy that the knowledge of the art of circumcission is transmitted from father to son.6 Among the next people, passing eastwards, the Yoruba,7 we do not know of any definite rule of descent, but the people are said to trace kinship

in both lines, and a chief is succeeded by his son. That kinship through the mother is regarded as of great importance is shown by the fact that children of one father by different mothers are scarcely considered as blood-relatives. The property of a man passes to his sons, and that of a woman to her daughters. The Edo,7 who practise two forms of marriage. In one, the amoja marriage, apparently the more regular, the children belong to the clan of the father, while in the other, called imoni, they belong to the mother's clan or estern, if not, authority. We are not told of any definite social groups with either line of descent, but respect is shown to animals by not eating their flesh, and this when bar is transmitted from father to son. This institution is almost certainly a kind of totemic grouping, so that these people show a condition almost exactly the reverse of that found in Melanesia, descent being patrilineal, while inheritance and succession are mainly matrilineal. It seems almost certain, the kikula bar is in the form of totem, we have here an example of the connexion of totemism with patrilineal descent, and this association comes out still more strongly among the Kono in W. Africa. They people possesses two distinct forms of social grouping, one matrilineal and the other patrilineal, and the most recent and trustworthy account2 shows that, while there is no definite association of animals with the patrilineal, and in the patrilineal, ona, the patrilineal ona is definitely totemic.

In Nigeria and the countries west of it, we find an interesting series of transitions between mother- and father-right. The westernmost people of whom we have knowledge are the Ewe-speaking peoples of the Gold Coast.3 They have totemic groups with matrilineal descent, property passes to the eldest brother born of the same mother, and, in default of brothers, to the eldest sister's son. Only if there are no nephews does the son inherit; and, if there is no son, the chief slave inherits. Succession passes to the brother and the sister's son. In addition to the totemic clans, called abunan, there are also groups, called aforo, which appear to have a totemic character.4 In these groups descent is in the male line, or, as the people themselves put it, a person takes the fetish of his father and the family of his mother; the condition thus having a resemblance to two totemic groupings of the Diiri of Australia. Among the neighbour Fanti-speaking peoples the son inherits only the property of the mother, a slave inheriting the property of a man if he has no sister's son. Among the Ewe-speaking peoples of Dahomey5 kinship is counted through females in the lower, and through males in the upper, classes. Among the former property passes to the brother and to the sister's son, while a chief is succeeded by his son. The Ewe of Togoland are said to count relationship through the father rather than through the mother, but the mother's brother is the proper heir. It is noteworthy that the knowledge of the art of circumcission is transmitted from father to son.6 Among the next people, passing eastwards, the Yoruba,7 we do not know of any definite rule of descent, but the people are said to trace kinship

strongest evidence is that in Athens half-brother and half-sister were considered to marry when by the same father. Lastly, though in, rather than of, Europe, may be mentioned the Gypsies of Transylvania, among whom a father shows little interest in his children, who remain with their mother's people if the father dies, while, as usual, marries a woman of another 'clan.'

3. Mixture-forms.—The preceding survey has shown not only that descent may follow one mode of transmission, while other social processes, such as marriage, may follow another, but that there may also be two kinds of descent. This is especially frequent where a local grouping is combined with exogamous clans or moiety, the usual rule being that the local grouping is patrilineal, while the grouping in clan or moiety is matrilineal. Another kind of mixture is that found among the Herero of South Africa, where a patrilineal totemic grouping is combined with matrilineal clans which are probably non-totemic, affords another example of the combination of two modes of descent.

In the condition of the Ova-Herero of South Africa, where a patrilineal totemic grouping is combined with matrilineal clans which are probably non-totemic, affords another example of the combination of two modes of descent. In the case in which, combined with one or other definite mode of descent, there are customs which bring a person into definite social relations with relatives on the side from which descent is not counted. An example is the custom among the widely separated Talisman of the New Hebrides. In both of these localities a person belongs to the totemic clan of his father, but takes the totem of his father at the age of 9. In the case of Abar a form of totemism which shows mixture of the two modes of transmission is found among the Massim of New Guinea and the people of Nama Levu in Fiji, where persons belonging to the social group of the mother, through the mother's brother, are kept in the clan of the father. A still more eccentric example is that of the Kwakint of the W. Pacific coast, who belong to the clan of the father, but are indirectly brought into relation with the clan of the mother by receiving from the father the totemic cest which he had adopted from the father of his wife when he married.

4. Associated conditions.—It is not at present possible to determine mother-right with race. It occurs side by side with father-right and with intermediate forms among many peoples, including the Australian, Melanesian, Iddoensien, Bantu, W. African Negro, and N. American Indian. At the present time it is absent among Cassian and Mongol peoples, but it is doubtful if this has always been so. There is more reason to connect mother-right with scale of culture. Most of the peoples who practise it rank low in the scale, but there are definite exceptions to this generalization in the Khasis of Assam, the people of the west coast of India, the Minangkabar of Malay of Sumatra, and many tribes of N. America.

As already pointed out, mother-right in its purest form cannot occur only in conjunction with the clan-organization, but it is not connected with any special form of this organization. The dual system, in which the whole community forms two equal parts, is personal man with patrilineal descent. Among the Malinese and, where not complicated with a class-system, in Australia, but the dual systems of N. America are sometimes patrilineal.

Totemism is still less habitually associated with mother-right than with father-right, as was said above, one people may even possess two forms of totemism, one associated with patrilineal and the other with patrilineal descent. The special regard for the father's totem, which accompanies among some cases of matrilineal transmission suggests a peculiar connection of totemism with father-right, and other considerations also imply that the totemic organization tends to be patrilineal. Social organizations founded on a local basis, especially with local exogamy, are usually patrilineal, and in societies devoid of the clan-organization, in which kinship is equally important on the two sides, it is exceptional for inheritance and succession to be matrilineal.

If mother-right is especially connected with the clan-organization, we should expect to find it associated with the classificatory or 'clan,' system of relationship, and so it is. We do not know of any people with definite mother-right who do not use the classificatory system. The correlation is especially striking in Africa, in more than one part of which classificatory and kindred systems lie side by side by side. Thus the Cuhe and the Sandan the only people who use the classificatory system are the Nubas, and they are also the only people to practise mother-right. Again, in the series of peoples of W. Africa who show so definite a transition from matrilineal to patrilineal conditions (see above, p. 850) it is the Teke, with their classificatory system, whose social institutions are most clearly matrilineal.

There is some reason to suppose that mother-right may be peculiarly associated with pastoral culture. In N. America typical clan-systems are found especially in the maize country, and in Africa mother-right seems to be present especially among peoples who live chiefly by agriculture, while father-right is associated with pastoral life. The association is, however, by no means universal.

5. Survivals of mother-right.—By this expression is meant social customs found in societies organized on a totemic basis which are the natural concomitants of mother-right and are, therefore, assumed to be vestiges of the earlier presence of this form of society. The most prominent of these customs which have been so far described is the relation between a man and his mother's brother. Many peoples among whom descent, inheritance, and succession are patrilineal show the existence of just such relations between a man and his sister's child as are characteristic of the natural practices of mother-right. That they are such survivals is especially probable where they show the authority of the mother's brother, while the power of the nephew to take any of the property of his uncle is also a natural survival of a social condition in which the sister's son is heir to his uncle's goods. Advocates of the view that these relations between a man and his mother's brother are survivals of mother-right regard it as psychologically natural that such rights to authority or property would not easily be relinquished, but would persist in one form or another long after the formal laws of the community had ordained a different disposition of authority or property.

The marriage of half-brother and sister when the same father but different mothers has also been regarded as a survival of mother-right. In a society which attached any great importance to kinship through the father such a marriage would be impossible, while it is natural among people who pay special regard to kinship through the mother. When, therefore, this form of marriage is found among a patrilineal people, it has been held to point to an antecedent condition of mother-right.

Other survivals of mother-right have been seen

1 H. von Wilmsbeck, 'Vom wundernden Steppenvolk,' Hamburg, 1890, p. 66.
2 For Melanesia see Rivers, ii. 337.
3 Seaton, Amer. Antiq. vii. 671.
in tradition and myth. It is frequently the case among many peoples today that the ascent of a clan or tribe is ascribed to a female ancestor, and the belief in a female ancestor among a patrilineal people has been regarded as a survival of mother-right. A similar supposed survival is the widespread, and this propagation unattested patriarchic. This absence of knowledge of the father would be natural in the more pronounced forms of matrilineal marriage, and, in consequence, the occurrence of the theme in the mythology of a people has been regarded as evidence that the people were once in a stage of mother-right. Amazon-legends have also been interpreted as relics of mother-right.

Less direct is the relation of certain social customs, such as the *couvade* and the cross-cousin marriage. According to one theory, the *couvade* is associated with the desire on the part of the father to assert his rights over his child, and those who adopt this explanation of the custom will regard it as a survival of mother-right when it is found in a patrilineal society. Again, there is reason to believe that in some parts of the world the cross-cousin marriage (see above, p. 425 f.) has come into existence through the desire of a father that his son might have property by marrying a woman who would be one of his heirs under a condition of mother-right. Another custom which may be a survival of mother-right is the rule found in several parts of Africa that the daughter or sister of a king shall not bear children. Such a prohibition would put an end to succession by the sister’s son.

Etymology has also been called upon for evidence of former mother-right. Thus, the fact that the Chinese non-patronymic term for son, ‘son of woman,’ has been held to point to matrilineal descent in Chinese, and the derivative of the Arabic word for ‘clan’ has been adduced to support a similar conclusion in the case of early Semitic society.1

6. History.—In several parts of the world we have definite evidence that a condition of mother-right has changed either into one of father-right or into a form of social organization in which social rights are recognized with the relatives of both father and mother. Thus there is evidence that some form of mother-right once existed in Europe, while in the Sudan there is historical proof that the Beja, who are now definitely patrilineal, kept their genealogies in the female line and transmitted property to the sons of sister or daughter. In Melanesia, again, and in some parts of America, there is proof of a change from matrilineal to patrilineal institutions, the transition being still in progress in some parts of Melanesia. On the other hand, there is no unequivocal evidence from any part of the world of a change having taken place in the opposite direction. Consequently, it has been held by many students that the change from matrilineal to patrilineal institutions has been a universal feature of the history of human society, and this proposition has become a dogma among many anthropologists.

This dogma has recently been attacked from two quarters. The idea of the priority of mother-right is supported in many parts of the world by the existence of cultures in which the descent of the line of elders of the people is described in terms of female ancestors. This form of social organization, but, as already pointed out, this is not universally true, and students of the ethnology of N. America have been led to question the dogma, largely because the Iroquois and the Shawnee, a father gives his own clan-name to his child, thus taking a position towards the history of the child to his own social group. This or some similar mechanism might well have come into play to assist a change in the opposite direction.

One of the cases most often put forward by
American ethnologists as an example of change from father- to mother-right is that of the Kwakwktli. This people practise patrilineral descent, but the peculiar system by which a man takes the crest of his wife’s father has been ascribed to the influence of their northern matrilineral neighbours, the Tsimshian and Haida. Other examples are the Athapaskan tribes bordering on the Tlingit, who are more or less adopted the matrilineral domestic organization of the people, and the Babine branch of the Takuli, another Athapaskan tribe who are said to have taken their matrilineral four-clan system from the Tsimshian.

In other parts of the world there is definite evidence that the change has been from the matrilineral to the patrilineral mode. There is a large body of evidence pointing to the change having been in this direction in Melanesia, but even here it is possible that certain conditions, such as the highly developed mother-right of the Massim of New Guinea, may have been assisted by some later matrilineral influence. In Africa, again, there is much reason to believe that the change has been in the patrilineral direction. The transition from matrilineral to patrilineral institutions which occurs among the peoples of W. Africa from the Tahi to the Ibo points to the gradual infiltration of immigrants coming from the north-east, who became the chief of those among whom they settled. While introducing their patrilineral institutions completely in the east, they did not succeed in altering descent among the general body of the people as they progressively spread. The transitions found among the Bantu and the association of patrilineral transmission with high development of culture among such people as the Ba-Ganda and Ann-Zaun would seem to be a result of the settlement of patrilineral pastoral people among a patrilineral population who, till then, had thriven upon agriculture.

7. Origin.—Until we know the history of this form of social organization, it is hardly profitable to discuss its origin at length, but some of the leading views which have been put forward may be mentioned.

In the first place, mother-right has been widely held to be the natural consequence of sexual promiscuity and group-marriage. The less important is fatherhood in a society, the more will that society be driven to base its social rights upon the mother. And as the increasing number of instances that matrilineral descent is a secondary consequence of matrilocal marriage. Where a husband merely visits his wife and is only an outsider in her household, descent and other social processes must be expected to rest on the relation between mother and child. A third view regards mother-right as a social state which has resulted from the dominance of woman, and especially from her importance in agriculture. As already seen, there is reason to connect mother-right with a high development of the art of agriculture, especially in N. America, and it is noteworthy that it is in this continent that we have our clearest evidence of the dominance of the woman.

W. H. R. Rivers.

MOTIVE.—1. Different senses.—The term 'motive' is used in philosophy and psychology in four different senses.

1. In the first and most general sense it means any force, of an internal or mental character, which impels to action or prevents some kind of action, be the force conscious or unconscious, and the action voluntary or non-voluntary. Thus Bentham defines motive as 'any thing that can contribute to give birth to, or even to prevent, any kind of action' (Principles of Morals and Legislation, p. 46). In this sense motive includes all that Reid calls mechanical principles of action, such as instinct and habit, and also what Bentham calls 'speculative' motives, which influence acts that rest purely in the understanding.

2. In the second sense 'motive' is used with a more restricted signification, as limited to some end which we present to ourselves and of which we are conscious. Bentham has this meaning in view when he defines motive as 'any thing whatever, which, by influencing the will of a sensitive being, is supposed to serve as a means of determining him to act, or voluntarily to forbear to act, upon any occasion' (ib.). Such motives are termed by Bentham 'practical,' and are held to be reducible to pleasure and pain, though whether it be the expectation of the pain or the pain which accompanies that expectation that is the motive he leaves undetermined (p. 47, note). This contains the germ of an important distinction. In motives in this sense we may distinguish two things: a subjective and affective element, sometimes called affect, a spring of action, Triebfeder: and an objective, presented or intellectual element. Whether this subjective element is useful to produce pain, or includes more, and in what relation it stands to the objective, intellectual element and to the conative factor in mind, are among the most difficult questions in the psychology of the feelings.

3. A third sense of the word 'motive' occurs in the writings of Green and his followers. According to the teaching of Green, something more is required to constitute a motive than the conscious presentation of an end. In the analysis of one of Green's followers, the voluntary satisfaction of a want involves five things:

1. The want. 2. The feeling of the want. 3. An idea of an object by which the want can be satisfied. 4. An idea of the satisfaction actually taking place, the work of the imagination. 5. The presentation of this satisfaction as, under the circumstances, the greatest good. The self-identifying itself with the attainment of the object; finding in the realisation of the idea, not the satisfaction of a want merely, but the satisfaction of self (V. A. Short, Study of Ethics, p. 32). It is only to this last stage (5) that Green and D'Arcy apply the term 'motive.' Hence the doctrines that a conflict of motives is dispensed with, and a stronger motive as possibility (Green, Prolegomena to Ethics, bk. ii. ch. i.).

4. A fourth sense of the word 'motive' belongs to Kant. Kant reserves the term Bewegungsgrund for the objective ground of the action, which he opposes to the subjective ground of the desire, or the spring (Triebfeder). The objective ground of the self-determination of the will is the end which is assigned by reason alone, and is free from all

2 Rivers, ii. 363.
mixture of passion and sensuous affection (Werke, ed. Rosenkranz and Schubert, viii. 55; Abbott, Kant’s Theory of Ethics, London, 1909, p. 45). Such objective ends are common to us all, and are to be distinguished from subjective ends, to which we are impelled by natural disposition. Unlike all inclination and fear, respect or reverence for the moral law is an effect, not a cause (Kant, Werke, viii. 21, 22). The regard as an object, this feeling acts negatively only.

In these four senses of the word ‘motive’ we see a progressive change of meaning from that of a motive power for action not necessarily accompanied by consciousness, to that of an internal impulse to the existence of which consciousness is essential; passing thence to the idea of an object which gives satisfaction; finally ending in Kant in the conception of motive as an object which is free from, and even opposed to, all subjective ground of desire. Green’s view, though later in point of time, seems not so developed as that of Kant, since in Green the object is still made to be a motive by relation to a want or internal principle of desire, though such want or desire is again conceived as independent on the object with which the self identifies itself. Kant’s distinction of motive and spring and the replacement of these terms to different classes of action get rid of the wavering between contradictory points of view implicit in Green’s doctrine.

Whether we shall give to the term ‘motive’ the extensive significance contained under (1) from Crombie’s ‘Essay on Philosophical Necessity,’ said: ‘I understood a motive, when applied to a human being, to be that for the sake of which he acts, and, therefore, that what he never was conscious of, can no more be a motive to determine his will, than it can be an argument to convince his judgment.

Now, I learn that any circumstance arising from habit, or some mechanical inductive cause, may be a motive, though it never entered into the thought of the agent.

From this reinforcement of motives of which we are unconsciously possessed, a motive, and even a predominant one, when it is wanted’ (Reid, Werke, ed. Hamilton, p. 87).

Reid then acutely remarks that ‘this addition to his [Crombie’s] defensive force takes just as much from his offensive side,’ and in the latter instance makes the evidence for the necessary action of motives known or felt. In other words, necessitation by efficient is fatal to necessitation by final causes. At this stage the distinction seems to turn upon the presence or absence of consciousness. But, even if we regard consciousness as the condition of the existence of motive in sense (2), this does not prevent the motivation or impelling force being essentially mechanical as when non-voluntary in sense (1). Green’s doctrine tries to evade this by assigning to self-consciousness the power of determining the predominance of the motive which actually does succeed, while still admitting that the end to which we thus determine is assigned by the pathological or affective element. Kant, on the other hand, assigns to reason a power of determining action to an end, which is quite independent of the established pathological feeling.

‘Motive’ in this sense has passed over entirely from the meaning of an impelling force to that of an object determined and decided upon by reason.

These distinctions are closely bound up with the idea of the freedom of the will. If our will is possessed of an original power by which it can control the direction in which it acts itself, then the causal action of motives must be distinct from mechanical impulsion; they may induce, or incline, but do not determine, according to inevitable law. If, on the other hand, our will has no such power, what we call inducing and inclining must be merely the subjective side of the action of predestined forces, of which we are the theatre or rather the play itself. If this be the case, the appearance of a causation, which may yield to conscious motives, but is not controlled by them, must be an illusion. This Münsterberg undertook to furnish in his Willenshandlung (1879). In Man’s Place in the Cosmos (Edinburgh and London, 1902), J. Seth Pringle-Pattison gives an acute analysis of Münsterberg’s views. According to Münsterberg, the will is only a complex of sensations. Our activity, whether the inner activity of attention or the outer activity of muscular contraction, appears to us to be free, just because the result of the activity is already present in idea, and is, in all cases, accompanied by the sensations flowing from previous motor innervation. The feeling of innervation itself is, just the memory-idea of the movement, anticipating the movement itself. In the Grundzüge der Psychologie (1900) Münsterberg’s position is modified by a Fichteian point of view. The action ‘theory of mind’ here put forward makes the consciousness of sensation dependent on motor discharge. It, therefore, prejudices the idea of action other than that of mechanical causation.

Nor is this conclusion altered by the theory of taking an attitude (Stellungnahme) towards the world, which Münsterberg puts forward. Such activity as lying outside consciousness, of which we can only ever have a power of resisting motives. Such a power, on Hartley’s view, can come only from some other and stronger motive; that is, there is no intrinsic power of resisting motives. The theory of the self of an intrinsic power of strengthening indefatigably certain desires, which then become motives (in Green’s sense), seems the essence of the third theory of motives. There is an illusory atmosphere of determinism about Green’s doctrine, as determined by motives. That desire only is a motive which is successful. There is no conflict of motives, nor any strongest motive. But then the strongest desire is made to be the strongest, i.e. to be a motive by the action of the eternal consciousness which is perpetually reproducing itself in us, and which helps to constitute, in cognition and action, all the objects of knowing and will. Is now this action of the eternal consciousness something from all eternity, unalterably the same? The result is practically identical with Hartley’s—the only freedom in it is that the ego, since it determines the motive, is consequently, in being determined by the motives determined by itself. This is only Spinozistic necessity. But, if the eternal ego on the finite ego is not so predeter-

mined, is something which, at the moment of decision, may fall out differently on different occasions, notwithstanding identity of desire and circumstances, then such action is not different from free will in the ordinary sense, and implies a surplus of undetermined or self-determined free activity of the ego, as in the Kantian doctrine.

Green’s theory of motives must be carefully distinguished from a modern psychological doctrine, to which it bears a strong verbal resemblance. Green says (Proleg. to Ethics, p. 93) that
an appetite or want 'only becomes a motive, so far as upon the want there supervenes the presentation of the want by a self-conscious subject to himself and with it the idea of a self-satisfaction to be attained through the filling of the want.' Stout, too, says (Manual of Psychology, p. 709): 'Motives are not mere impulses. They come before consciousness as reasons why I should act in this or that way. They depend on the subject for a suitable act, but not for a suitable impulse, proper to themselves, while the ego remains a mere spectator. On the contrary the impulses are motives only so far as they arise from the nature of the self, and presuppose the conception of the self as a determining factor. From this it follows that the reduction of a desire to a desire for a desire, can never constitute the entire case of a cause of action. Behind them there always lies the self as a whole, and what this involves can never be completely analysed or stated in the form of definite reasons or special motives.'

The great verbal similarity of this to what Green says is evident. But to Green the self-conscious subject, through determination by which a want becomes a motive, is 'a principle of other than natural origin,' is, in fact, an entity of a sort. To Stout the self as a whole, even if what it involves can never be completely analyzed or stated, is not an antecedent principle eternal or otherwise, but, rather, the 'thought of the self.' In deliberation, he says, 'the concept of the self as a whole will not directly tend to reinforce or suppress a desire' (p. 768).

A certain line of action being suggested as possible, I contemplate myself as I shall be if I put it in execution, so as to make it part of my actual life-history, and on the other hand I contemplate myself as I shall be if I leave it undone. I follow this representation of a hypothetical self in more or less detail until that turning-point in the process which is called 'Voluntary Decision' emerges (ib. p. 790).

This theory, that motives arise and are constituted by relation to the conception of self, whether we take it in Green's metaphysical or in Stoic logical form, of course, the general theory of motives, seems not to be true. That very many motives are determined by conscious relating of the end in view to the self is true—notably the self-regarding ones. But it is difficult to regard altruistic motives as necessarily related to the concept of self. They may sometimes be so, but not necessarily or universally. The highest moral ends are disinterested. The disinterested character of self-regarding motives is the first distinction to be perceived. When (2) and (3) in many cases a correct and complete analysis, there are other cases where, even if impelled towards the end by some subjective affective element, the self-conscious satisfaction of this impulse need form no part of the objective end in view nor even of the subjective impelling force.

It is when we come to the fourth sense of the term 'motive'—the strict sense given to it by Kant—that we find the most striking detachment of the term from all association with the subjective self. It may still bear relation to something universal, common to the individual selves, but the ends are then ends in which the individual self loses its individuality. They are objective. This is the essential difference of Kant to that of the ethico of Kant from the ethics of Green. It was to retain in the moral motive the reference to self that Green was dissatisfied with Kant's as the 'perfection of human character' or 'self-devotion to the perfecting of man.' D'Arcy (Short Study of Ethics, p. 277) has seen this defect in the ethico of Kant, and the point which separates the ethics of Kant from the ethics of Green. It was to retain in the moral motive the reference to self that Green was dissatisfied with Kant's as the 'perfection of human character' or 'self-devotion to the perfecting of man.' D'Arcy (Short Study of Ethics, p. 277) has seen this defect in the ethico of Green. It was to retain in the moral motive the reference to self that Green was dissatisfied with Kant's as the 'perfection of human character' or 'self-devotion to the perfecting of man.'

Kant, on the other hand, reason, not the mere self, is able to give itself an end, which, though realized in the matter of desire, is independent of the relation of that matter to the particular self. Kant is often criticized as if the categorical imperative set up ends, detached from all the material of desire and inclination, as if all the ends existed by themselves. It is the impenetrability of particular desires and inclinations by the categorical imperative that is expressed: so treat humanity whether in thine own person or that of another always as an end and never as a means.

We have, therefore, in our highest ends, moral, aesthetic, and religious, the singular paradox that in them an element, which comes into existence only through particular feelings and inclinations, becomes, as regards its essential character, independent of these and a motive of selfless and disinterested action.

In the above discussion we have considered the several distinct senses in which the term 'motive' may be used. There are, however, some ambiguities connected with its use which, while not really adding to the multiplicity of senses, might nevertheless appear to do so. Bentham says:

'Owing to the poverty and unsatisfactory state of the language, the word motive is employed indiscriminately to denote ends or objects of objects, which, for the better understanding of the subject, is hardly necessary. It is used to denote the end of any action or of any motive, which is considered as operating upon the mind, and prompting it to take that course, towards which it is impelled by the influence of some incident. Motives of this class are Avarice, Indolence, Revenge, and so forth. ... This latter may be styled the figurative sense of the term motive' (p. 464).

The real incidents—motives in the unfigurative sense—are:

1. The internal perception of any individual lot of pleasure or pain, the expectation of which is looked upon as calculated to determine you to act in such or such a manner; 2, any external event, the happening whereof is regarded as having a tendency to bring about the perception of such pleasure or such pain.

Each of these is further distinguished according as it is in prospect or in esse, meaning by the former the posterior considered under (2) and (3) in many cases a correct and complete analysis, there are other cases where, even if impelled towards the end by some subjective affective element, the self-conscious satisfaction of this impulse need form no part of the objective end in view nor even of the subjective impelling force.

It is when we come to the fourth sense of the term 'motive'—the strict sense given to it by Kant—that we find the most striking detachment of the term from all association with the subjective self. It may still bear relation to something universal, common to the individual selves, but the ends are then ends in which the individual self loses its individuality. They are objective. This is the essential difference of Kant to that of the ethico of Kant from the ethics of Green. It was to retain in the moral motive the reference to self that Green was dissatisfied with Kant's as the 'perfection of human character' or 'self-devotion to the perfecting of man.' D'Arcy (Short Study of Ethics, p. 277) has seen this defect in the ethico of Green. It was to retain in the moral motive the reference to self that Green was dissatisfied with Kant's as the 'perfection of human character' or 'self-devotion to the perfecting of man.' D'Arcy (Short Study of Ethics, p. 277) has seen this defect in the ethico of Green. It was to retain in the moral motive the reference to self that Green was dissatisfied with Kant's as the 'perfection of human character' or 'self-devotion to the perfecting of man.'
much feeling may guide, it cannot be considered as the motive. In true art it cannot even be said that there is a conscious or idealizable or ideal which impels the artist to produce. In art, as Schelling says, the ego is unconscious in regard to its product (System des transcendentale Idealismus, vi., Tubingen, 1800 [Sinnhalt, Werke, Stuttgart, 1839-41, iii.])

An important distinction is that between motive and intention. The nature of intentionality is thus stated by Bentham:

"Let us observe the connexion there is between intentionality and consciousness. When the act is intentional, and with respect to the existence of all the circumstances involved, as a whole with respect to the materiality of those circumstances, in relation to a given consequence, and there is no mis-supposition with regard to any preventive circumstance, that consequence must also be intentional. In other words, adventitious, with respect to the circumstances, it clear from the mis-supposition of any preventive circumstances, extends the intentionalness from the act to the consequences" (p. 44).

The distinction itself is most clearly expressed by Martineau (Types of Ethical Theory, ii. 272):

"The Intention comprises the whole contemplated operation of the act, both those for the sake of which, and those in spite of which, we do it. The Motive comprises only the former." Dividing the intention as Martineau does into persuasives, disassociatives, and central consequences, it is only the first that fall under the heading of 'motive' (cf. Mill, Utilitarianism, London, 1879, ch. ii. p. 27; Muirhead, Elements of Ethics, p. 61; Mackenzie, Manual of Ethics, p. 64 ff.).

2. Classification of motives.—The various classifications reflect the difficulties which have attended the foregoing discussions. Our impulsive or active principles are classified by Reid into mechanical, animal, and rational; but only to the last two does he apply the term 'motive.' Stewart has criticized this classification on the grounds that 'motive' should be defined in terms of the instincts and habits (which is done by Reid), nor to any of our active principles. It is capricious to call our appetites animal principles, because common to man and brutes, and to distinguish our instincts as mechanical, in regard to which our nature bears so strong an analogy to the lower animals. Mechanical principles of action produce their effect without any will or intention on our part. Animal principles of action require intention and will, but not judgment. Rational principles of action require not only intention or will, but judgment or reason. Stewart censures Reid for including under animal principles of action the desire of knowledge, of esteem, of power.

Stewart's own classification falls under five heads:

(1) appetites, (2) desires, (3) affections, (4) self-love, (5) moral faculty. This classification has been ably criticized by Martineau (ii. 194).

Stewart's own classification falls under five heads:

1. The native appetites of the mind leading to emotions. These include: (1) the inclination to exercise our native power voluntarily or involuntarily; (2) the desire to receive pleasure and avoid pain; (3) the appeal to the senses to seek for knowledge, esteem, society, love, property; (4) an inward principle that makes for satisfaction; (5) the moral power as a prompting energy; (6) animallike motives prompting to action in relation to other beings, e.g. sympathy.

2. The will as not furnishing incitements, inducements, or motives, but as supported above these, sanctioning, restraining, and deciding among them.

3. The changes in motives leading to certain beliefs and judgments (Intuitions of the Mind, p. 242 ff.).

4. More important than any of these classifications is that of Martineau (ii. 129-170). He begins by distinguishing between two sets of impelling principles in man: (1) 'those which urge him, in the way of unreflecting instinct, to appropriate objects or natural expression,' and (2) 'those which supervene upon self-knowledge and experience, and in which the preconception is present of an action gratifying to some recognized feeling' (p. 135). The former he calls primary springs of action, the latter secondary. Under the primary come—(1) propensions: including organic appetites and animal spontaneity; (2) passions: antipathy, fear, anger; these do not arise as forces from the needs of our own nature, but are rather what we suffer at the hands of objects; (3) affections: parental, social, compassionate; these operate as attractions towards other persons; (4) sentiments: wonder, admiration, reverence, these direct themselves upon ideal relations, objects of apprehension or thought that are above us, yet potentially ours.

Under the secondary springs which are characterized by their interested nature or invariable aim to produce certain states of ourselves come—(1) secondary propensions: love of pleasure, money, power; (2) secondary passions: malice, vindictiveness, suspicion; (3) secondary affections: sentimentality; (4) secondary sentiments: self-culture, aestheticism, interest in religion.

The secondary series is the self-conscious counter part of the primary series. These combinations, such as love of praise, emulation, fellow-feeling. In addition to these are prudence and conscience, but neither is, according to Martineau, a positive principle, so to range in the series of impulses. Each exercises a judicial function—prudence among the secondary principles, conscience over the whole.

If we examine these various classifications, we shall find much to confirm the wide view of motives which we have taken or stated. Stewart's distinction of primary and secondary springs of action directly contradicts the narrow view of motives taken by Green, which would limit motives to those associated with the notion of self. Such association gives rise to secondary springs of action. Again, some of these classifications rightly regard conscience and the moral faculty as motive powers prompting to action and yet per se incapable of being identified with an effective element. In Martineau's theory the moral element consists in relative position in a scale of excellence intuitively discerned. Other moralists might seek to analyze further in what this excellence consists, and this analysis might be dangerous to the intuitive scale, might show that the position of a spring varies with circumstances; but the insight that the moral element is not an effective spring of action, in either the primary or secondary form, remains; and with it remains the necessity of regarding a fourth form of motive, the motivity of which, whether proceeding from an autonomy of the will itself or from a recognition of an intrinsic authority, is a question of society, or of clarity of authority in inward springs or outward courses of conduct, demands a unique position for itself in the classification of these forces which impel the human will to action.

MOUNTAINS, MOUNTAIN-GODS.—

There are few peoples who have not looked upon mountains with awe and reverence, or who have not paid worship to them or to gods or spirits associated with them in various ways. Their height, their vastness, the mystery of their recesses, the veil of mist or cloud now shrouding them, now dispelled from them, the strange noises which the wind makes in their gorges, the crash of a fall of rock, or the effect of the echo, their suggestion of power, their appearance of watching the intruder upon their solitude—all give to them an air of personality, and easily inspire an attitude of reverence and eventually of worship. They are next thought to have a spirit akin to, yet greater than, man's, and such a spirit may become separate from the mountain and exist as a god of the mountain. The same dangers encountered by the traveler or mountain-dweller, as well as the mystery of gorge, precipice, or cavern, suggest the presence of spirits, dangerous or at times beneficent, and in many cases also ghosts of the dead are thought to haunt the mountains. The spirit of the mountains, being near to the heavens, high up in the sky and often surrounded by cloud, suggest their connexion with gods of sky or rain; or the remoteness and mystery of their peaks cause them to be regarded as dwellings of gods or of ghosts.

The conception of mountains or mountain-spirits, but that is generally where no cult of nature exists, or, of course, where there is no higher god. Where they are feared, it is generally as much because of the demons supposed to inhabit them as because of their own suggestion of terror. The horror of mountains found in writers from Walker to the time of Scott, Byron, and Wordsworth was perhaps a literary affectation as such as genuine lack of appreciation. Wordsworth's vision of the mountains has generally made a strong appeal to men and has given a great impulsion to the imagination.

1. The personification of mountains.—The various impressions which mountains made upon men's minds led to their being regarded as alive, or possessed of a power lurking behind their massive forms, and, finally, to their personification in a greater or less degree. The next stage was that they were associated—perhaps the personified mountain which received worship—became a god of the mountain, separate from it, yet connected with it. It is difficult in particular cases to say which of these stages is intended, or to disentangle them, since the human mind so easily adopts either attitude; and, even when a god of the mountain is worshipped, the mountain itself still looms vast and, as it were, personal. In this section we shall examine instances where the mountain seems to be worshipped for itself alone or to be regarded as sacred to some extent personal.

The Cholee of Tna regarded one particular hill as god of all things connected with it, and on it formed a perpetual fire. 1 To the Huelo Indians every hill and rock of peculiar shape is a deity, 2 and hills, especially near lakes, rain, etc., are tribal gods of the Thompson Indians. 3 But they regarded all mountains as divine and personified them. The mountain god of the wife of Pompoppet. Moina describes the hill Huanacauri as the chief Astore of the Incas. 4 In Korea mountains are personified, and the idea of guardian spirits of the rotten is common to them. 5 There are also spirits of mountains. 6 In Japan the term kami, associated with shrines, is likewise applied to mountains, which are supposed to possess great power. 7 Similarly in China, where

1 NR III. 122.
3 PB, xi. [1900] 288.
4 Ht., Hist. of the Church, 1849, ii. 41; C. R. Markham, Narrative of the Kitefah and Lady of the Ficks, do. 1873, p. 13.

spirits of mountains have always been worshipped, mountain themselves are included among such gods. There are ten principal mountains included among the t'ien, or earth-gods—the five peaks, of which the greatest is Shasta in Shantung, and the five mountains, of which there is one in each cardinal point (the four mountains), and one in the centre. The chief minister of Tao was called the great god. In Tibet the mountains, both sacred and profane, are worshipped. Among the Celts a cult of mountains, as well as of gods of mountains, is to be traced. One inscription was "To the Mountains," they are often invoked in spell or prayer or invocation in Irish texts; and Gildas speaks of the 12 ilin people who adored mountains and other parts of nature. 8 While the Greeks adored divinities associated with mountains, some mountains still retained a degree of personification—e.g., M. Ida as a nymph. In India as early as the Rigveda (vii. xcvii. 8) there is a direct appeal to the mountains: "May the mountains be propitious to us." The Himalaya is mentioned by Mani as a seat of his spiritual excellence, pre-eminent in sacred art. It is not thus in the abode of the deities of mighty creatures, and of heroes, saints and sages, as well as the haunt of demons of all kinds. But its own virtues are supreme. To think of it is to gain vast merit; to see it is to have one's sins removed. It was personified as Himavat or Harivansha, father of Gaâga and Uma Devi, or Parvat, the mountain-goddess, identified with one of the peaks.

An ancient story tells how Parvat covered up the eyes of Mahavira when he was performing ten hundred hundred-hour fasts. He burst from his forehead and scorched the mountain; but, when she assumed a submissive attitude, her father was restored to his former condition.

Among the aboriginal tribes of India mountains are personified. The Santhia worshiped the mountains, and a mountain god, a mysterious, pre-possibly the dwelling-place or seat of a god (§ 9). But the evidence is mainly that of cult associations with these (§ 7). The pagan Sarpas are described as worshipping mountains.

Where a god associated with a hill or mountain bears a name similar to it, it is probable that the mountain personified gave this name to the subsequent god of the mountain. A Celtic god Posmuc was god of the mountains, and another was god of the Vesse mountains. Cf. other examples above.

Evidence of the personification of mountains is also to be found in the sporadic cases of alleged descent from mountains, possibly because some mark the region whence some tribe took its origin or migrated.

The Haravos thought that they came from the bowls of a great mountain near the San Juan. 9 Some Mexicans regarded the mountain Caalepel as their mother. 10 The Indian kings were supposed to have descended from the mountain Usiladores. 11

2. Gods and mountains.—Besides being personified, mountains are associated with clearly defined gods, either as their occasional or as permanent seats or abodes, or are gods of the mountains distinct from these as personified.

The home of the Mâsi god Ngâi (Ethel) is in the snowy range of Kilimanjaro. Among the Yoruba tribes the mountains called Oke. In Hawaii several distinct deities of the volcano Kilauea were recognized, each of these being connected with some part of it. 12 Among the Vedas most deities are associated with hills, each occupying a separate peak, on the summit of which is a stone circle, boulder, or cairn. 13 The

Khonds worship a god of hills, and among the Kols the great deity Marang Buri, or 'Great Mountain,' is the rain-god, Marang Busek in Chekha language in which it is also the god himself or his dwelling-place. Before the time of rain elaborate ceremonies take place on the mountain for rain and a fruitful harvest. It is said by American Indian tribes to have been made of snow and ice by the Great Spirit from the sky, after which he stepped down upon it and hollowed it out, and it is said that they observed his visit to the earth. Among the Europeans the 'Old Man' is said to be living on the mountain, entrapped by rain or snow by scrutinizing himself. The Master of Life is thought by other tribes to dwell in the Rocky Mountains. The Mexicans thought that the dome over the central mountains was the dwelling-place of a God among the clouds. Other gods, their deities, bearing their names, were worshiped as gods of water and of mountains. The cult of Tlaloc was of great importance, and was connected with festivals of the first rank. In Central India the sun-god is supposed to dwell on hills, and isolated rounded hills are hence called 'sun-rays.' Several outstanding peaks of the Himalayas are the seat of gods—Kalika of Siva and Kubera—and a little of Siva is the 'mountain-god.' Other mountain chains or peaks are associated with divinities, e.g., the Vindhyas with Mahadeva Vindhyesvari, the goddess of the range. In earlier times Rudra was believed to dwell among the mountains, or on their tops, and Dyaus was called 'the dweller in the Mandala.' Manu is said to have descended on a slope of the Himalayas called 'Manu's Descent,' and to have tied his slip to a peak after the sacrifice. As has been seen, there is a constant confusion between the mountains personified and the deities that dwell among the mountains. In Greece certain gods were closely associated with mountains. The habitual cult of Zeus on mountain-top, like that of the Mexican Tlaloc, shows with rain, cloud, and lightning sent down from the heights, and he probably had been identified with and had absorbed earlier earth gods worshiped—e.g., Lykaion in Arcadia, where other instances the mountain where the cult took place a little of Zeus. In Greece, the Olympics (here the cult no longer observed), Zeus Laphystos (Bacchia); on Mt. Pellaos he was worshiped as Zeus Akraios. Clouds resting on peaks where Zeus was worshiped were a sign of the gods. Hermon had a temple on the summit of Mt. Cyllene, and Apollo on the hill of Mt. Lykaios was also worshiped on high peaks in Arcadia. The Cretan Mother-goddess, the like of Phrygian Cybele (p.), represented standing on a hill (cf. art. MotlECA), and she had the mountain and its recesses, called her name. In the same way other divinities associated with mountains was Pan, who was born on Mt. Lykaios and had one of his sanctuaries there. Several mountains—e.g., Mt. Meolus, Mt. Lycus, were sacred to Minos. Here he lived, and there he might be heard piping. The personalized nymphs were also of the mountains, and were worshiped there. They had caves on Mt. Citharion, and gave oracles from them. Certain nymphs, called Ogygians or Ocygians, presided on mountain tops and were connected with Artemis. Mt. Olympus was supposed to be the seat of the gods, with the palace of Zeus on its summit. In Capadocia, according to Strabo, a mountain was called after a god Omnos. Some Babylonian gods were called 'ruler' of the mountains, and Raft is described as 'a mountain dwelling.'—Reference to Babylonian cosmogony and to the belief that he was god of all the forces of life, later that of all the gods, as mountain was erected in the plain. The world-mountain was the seat of the gods. Among the Celts gods associated with mountains were offered to, or worshiped with mountain deities. Within these they believed to have retired on the coming of Christianity, and that they live as fairies.18

For Berber see H.H. p. 400.

3. Ghosts dwelling on mountains.—To some extent the belief that ghosts haunt mountains or that the other-world of the dead is situated on a mountain-top may have arisen from the custom of burying the dead on hills, but the belief often exists where this custom is not found. It was doubtless connected with the fact that mountains are lofty and touch the clouds or are swathed at times in mist. They are near the sky-land which is so often associated with the dead. They are lofty and mysterious; and, as they are the dwelling-place of gods and spirits other than human, it was natural enough to regard them as also the habitation of ghosts. Boreal on hills is only one of many methods of disposing of the dead, and is by no means universal. It is found among the Nomads, Arabians, and the American Indians, the Caribs and Patagonians, in Arabia and Tibet, and among the Puri people where no doubtful exists (the body is also commonly put in the earth), and is favored by the former as well as the latter.

In Melanesia the idea that ghosts dwell on mountains is frequently found,—e.g., in British New Guinea (life that of each [Koita]; a fleshy Elymus [Aroma]; a ghost as a light or fungus [here—speaking tribes]), and among the Kali of German New Guinea (ghosts as animals hunting wild fowls). In the Entente group the spirit-mountain is regarded by the happy spirit-land which the ghosts reach in some sort of ecstasy. So mortal dare climb it or speak above a whisper when passing it. In Tahiti the head of the house, Tahamani, is on a mountain on the north-west side of Fatu Hiva, and frequently in the top of Rapa Nui, and the ghosts feed on the moss on its sides. Among the Dayaks of Borneo hill-tops are associated with ghosts. The heaven of the Pana and other tribes is on the top of Ruta Tana, and the ghosts feed on the moss on its sides. Among the Aeta the object of a cult is buried on a又被 on the crest of a hill, and the ghosts inhabit the surrounding mists are the abode or resort of ghosts. In the Shirelands the dead go to certain mountains, and, after remaining there for some time, depart to a volcano. Among the Dayaks of Borneo hill-tops are associated with ghosts. The heaven of the Pana and other tribes is on the top of Ruta Tana, and the ghosts feed on the moss on its sides. Among the Aeta the object of a cult is buried on the crest of a hill, and the ghosts inhabit the surrounding mists.16

In N. America the Scorn Indians thought that ghosts dwelt in caves and rocks, and the echo being their note.17 Of other tribes it is said that souls of the dead go to Wokwok, who dwells in the Rocky Mountains. After death, as they regard it, the soul is a Mexican Elymus in the mountains, was the place of souls of those sacrificed to Tlaloc and of those who died of leprosy or who by drowning or lightning. The Himalayas are regarded as the home of the dead. One Chinese paradise is in the Ruen-lun mountains, and is for those who attain holiness or divinity; many tales are told of its wonders. Similar beliefs lingered on in the W. Highlands. Certain clans had hill tops of which the spirits of their dead spirits of the dead on this hill. In pagan Slavic belief the dead must climb a steep grass mountain, on whose top is paradise, and in Märonen, Scandinavian and Slavic, this idea reappeared in the belief that the spirits of the dead mounted a grass mound or a fairy being from the top of a grass mountain by a hero.18

The road which the soul has to traverse to the region of the dead is often a difficult one, and in some savage instances it passes through the entrance to the other-world from a cave in a volcanic vent (see DESCENT TO HADES [Eichholz], § 1.)

is a shrine where prayer is made to them or an offering laid. They are said to terrify and give the house in which they are placed life and power. In China mountain spirits are much feared, and evil spirits haunt mountains, their power being proportionate to the size of these. Only on certain days should offerings be made and only after fasting and purification. The geni of mountains are said to be more friendly and have a regular dwelling place. In the Thai believe in the ph dwelling on steep mountains, who have the power of limiting storms or bringing rain by night. In Armenia female spirits or fairies called oon dwell in forests and mountains, and for each hill there are genii good and bad.4 Among the Beasts of S.E. Africa demons haunt mountainous areas are much feared.5 On the other hand, the Aiwema believe in guardian spirits attached to hills, etc., who send rain and fertility.6 For similar Belief see ERFII. In Europe folklorists thought that evil spirits dwell on mountain-tops.7 In Persia Damin is the name of the god of mountain and water and is worshiped as a symbol of nature.8 In Europe, folklorists make hills and mountains one of the dwelling-places of spirits, demons, and witches.9 In Armenia the daws (demons) of Armenian folk-belief live in mountains,10 while fairyland is often within a hollow hill (see art. FAIRY, § 11). So the Serbs and the Serbs took the Roman name of Greece and haunted the earth, the chief names of their spirits.11 These gatherings probably being reminiscent of sacred rites in pagan times on the same spirits.

5. Sacred mountains.—Wherever mountains are personified or associated with gods or are the seat of a cult, their sacredness is obvious. But some mountains have a peculiar sanctity. Legend clusters thickly round them, and they are places of pilgrimage or sources of merit.

Among the Western Nandi there is a sacred hill called Chepech, the hill to which the spirits set fire. Ghosts are supposed to fire the grass there annually, and no Nandi will go near it.12 In Japan Fuji-yama is the sacred mountain, regarded as a goddess, and connect with a goddess of the same name.13 Pilgrimages ascend its summit in vast numbers annually, and it is the frequent object of Japanese art. The Kwan-lun mountains are the sacred mountains of China and have given rise to numerous fanciful legends.14 In early Hinduism Mt. Mandar in Bihar was a kind of Olympos. It formed the stick with which the gods chased the ocean for ambrosia. But usually Himavanta (Himalaya) is the sacred mountain-chalke, the divine mountain, beloved of the gods.15 As has been said, it is offered as a god. There are many temples on it, and it is the object of innumerable pilgrimages. It is inhabited by beings whose mere presence adds value to the ritual of the puja of ascetics (see also § 1). Other mountains are sacred to witches,16 and the witch—蜷—of various groups and has given rise to numerous fanciful legends.17 In early India Auroville or Niravanil was peculiarly sacred, the first of the mountains. The sun and stars revolved round it as the Loines was called some at this time and returned thence it was called ovit and it was the heathen god of India. The Himalayas are the dwelling of innumerable beings, its forms resembles a country, and so forth.18 Other mountains are equally infested and crowded with spirits. As early as the Vedas times such beliefs are found, and in the Mahabharata witches are said to live in mountains.19 Among the peoples of mountains are duly worshipped by sacrifices, and on every pass

6. Fabulous mountains. As the preceding section has shown, actual mountains are often regarded in a mythical light — e.g., Alibür in Zoroastrian belief, Himavat in Hindu beliefs, and Tsin in Taoist. Some mythology mountains, however, have intervened mythical mountains, mainly in connection with cosmogony.

Among such is the Bah. ‘mountain of the world’ (1 g, 6). In Hindu and, more particularly, Buddhist mythology, the abode of the gods, occupies a prominent place. It is the primal and the chief of mountains, the ‘god-mountain.’ It holds the key to the coming of Buddha. It is 84,000 miles high, and is surmounted by the heavens. Seven concentric rings of vast mountains surround it, with leaves being forever shed. Between these and an eighth cutmost ring are the four continents. Bound Mera the moon, and planets revolve about the Bhuddhas daily universe in effigy; Mera is represented by a doe of rice in the midst of Bhuddha. In Mahayana, it is believed to encompass the earth and its surrounding ocean like a ring, as Alibür was hauled to do in Zorastrian belief. They are of green chrysoprase, and are the chief abode of the jinns. Our earth is one of seven successive earths, rising above each other, and supported by pillars of mountains, with Qaf as the root of the great mountains. In Malay belief Qaf (which may be the Canoace) is being bored through by people called Taja and Mahil, men that when they have succeeded, the world will come to an end. The Malays believe in the existence of a central mountain Mahameru, a borrowing from Hindu belief.

7. Cult of mountains. — A cult offered to mountains or to divinities connected with them cannot be sharply divided from a cult on mountains, whether that is to such gods or to others. In no doubt, mountain-veneration was selected for altars, shrines, or temples because of their supposed nearness to heaven — one seat of the gods. Here and there, however, the difference can be seen even in the same religion.

Among the Mundari, after harvest the people of each geographical division hold a feast on the top of a hill, and in drought people send to Tinhinanga and the ‘land of rain, ‘Zaidi, to ‘beg rain, ’Rain, Thendir? ’ The savage Malayas of Malacca sacrifice to the mountain-spirits on the summits, make a wish, addressing the spirit, and partake of the spirit-gift. In Tibet the Lamas offer three times, if not successful: should a third visit fail, another mountain is visited. According to the American Indians, the Hurons say that a direct worship of hills was unusual, there was a liking for hills and mountains as places of worship. The Thompson Indians, however, offered the first horseshoe to the mountains, an old man dressing and holding the offering up to the sky. The Nootka worshipped mountains and mountain gods, and, when no hills were available for temples, made artificial mounds, or tocaloi, for worship. Edgills of the mountains, however, are made of stones. Sacrifices are offered to the Taisco and mountains. Infants and hairless dogs were also sacrificed on mountains. To Chinese, the ancient times mountains and rivers with the reverence of the State. There are many historical notices in the sacred books of the influence of the hills on the people, the hills being marked in the OT, as is natural where so many of them were sacred, and Zos was in particular seat of God’s house.

They may be described, yet, subject to being. They melt like wax before Him or smoke at His touch. They rejoice with the worshipper, or are hidden to do so, or they break forth into singing before the return of the exiles. They are symbols of God’s righteousness; they bring peace and plenty to the people.

1 For many others see Breal, vol. ii. p. 387, and references there of. 2 H.J. v. 1: Max. Tyr. Disert. viii. 37; see Remesel, vol. ii. p. 347. 3 De Groot, Religion System of China, iii. 94 f. In Geonic bicycle, there is a special revelation given on a mountain, perhaps a combination of Mt. 514. 29 and 248. Cit. also the apocryphal notes. 8 Fr. B. Masson, X.-Y., liv. 2-6; cit. also Fr. Y. L. 31; Lund. vii. 3-5; Selections of Zabur and, vii. 1-7, cit. A. J. T. L. 12. 9 Nyigis, vi. 5. 10 Bund. vii. 1 f. 11 Bund. xxi. 35; cit. Patancher, Da es. et Gair, 47: ‘the earth has no face, name and level.’

In India from early times a cult has been paid to or on moun-
tains, especially of the Himalayan range. The mountains are excel-
lent places for performing śrāddhas, and the grāhyāṣṭra speak of
an obligation of butter made on a mountain to east or north.4
There are sacred mountains, on which shrines or temples are
commonly built, has already been referred to. Aboriginal tribes,
which live near some sacred mountains, and many sacred
places rise the sites upon hills and mountains. (Santalas, Korwas, Kia and so on).5
In Korea people go once a year to wor-
ship the local deities that dwell in the tops
of the mountains. Popular sacred mountains
are revered, and carry a pebble, which is placed on the heap at the
top, as a token that the deity has been there.6
In ancient Persia there are frequent
references in the sacred books to worship and sacrifice offered to
mountains 'glorious with sanctity,' or 'brilliant with a mountain
which gives understanding are worshiping with libations, as part of the liturgical services. The mention of the worship of Sraospas by Behistun
on the highest peak of high Harvarz,'7 and Herodotus speaks of
the custom of ascending the highest peaks and offering sacrifices to Zeus, called the whole vault of the sky, Zeus, probably some Zoroastrian sky-god representing the primitive Indo-European god of the sky.
8
In Greece numerous mountains
were crowned by temples dedicated to some particular god, but no deity was so much worshipped on mountains-top as Zeus, from his habit of thundering. The Greek cults on high places were of ancient date, and per-
cited persons supposed to dwell in heaven, rather than
gods of the heights. In modern Greece, mountain shrines are often
on the site of these ancient mountain-shrines.

Pamassus describes the cult of Zeus on Mt. Lycaon. There was
a mound of heaped-up earth for an altar with two pillars facing the rising sun. Here also on Mt. Ida worshippers met certain days for the propitiation of rain. In
the ancient Anatolia festivals in honour of Cybele were cele-
brated at Termessos, Pergamum, and Beroeus, where she was
supposed to reside, and where the trees were sacred to her and never cut down.

Among the Semitic peoples there was a perpetual fire in honour of the god Paro, which controlled thunder and tempests. Among the Semitic peoples high places
were favourite places of worship, and are frequently referred to
in OT in connection both with pagan tribes or peoples and with Jewish
inhabitants of those countries. The high places were thus sacred,
and was supposed to dwell there, according to an older stratum of
thought, while Israel also offered sacrifices and incense on them to the local gods—either in his—other gods from time
to time (cf. Hos 4:13, Jer 31:8; Ezr 3:9; 2 K 18:21; 22:14; 2 K
19:17).7

Archeological research has discovered remains of many
'high places,' often on hills, and even now remains of temples and sacred groves are to be
seen on Hermon and other mountains. On some
mountains worship and sacrifice still take place, and
and circular enclosures of stone crown the summits.

Aaron has a所说的, Mt. Hermon, and is supposed to visit it
twice a year, and the Muhammadan saints have also shrines on
hills.11 In European folk-sources from earlier paganism, religious practices may be found at May-day or similar
—often take place on hills.12

Many high places are probably artificial con-
structions.

The term temple-tower (sīwār) was an earthy copy of the
world-mountain, and served the purpose of the worshippers,
whose ancestors, had been accustomed to worship on
heights, gaining nearer access to heaven (cf. ERE l. 6669).
The Mexicans and American peoples built mounds, pyramids, or sacred places, where no hills were available for worship. Some of these
mountains were of great bulk. On them sacred groves
were placed the more sacred they seemed. Temple-tower were also erected on high
places and their shrines were in the bottom hands, though occasionally on higher ground.13

Heaps of stones, often dedicated to the local genius on the highest point of mountain-passes, to which every traveller adds a stone, are found in all parts of the world and at all stages of culture. The added stone may be an offering (like Dakkam describes the mountain-spirit as said to be offended if no stone is
given), or may carry off weariness (it is often alleged that weariness leaves the traveller when he offers it), or the contagion of evil, or it may drive away evil spirits, or it may be a materialization of the prayer made at the moment. See LAMMACK.

In all religions which have encouraged asceticism
men have chosen to live a solitary life among
mountains, partly because of their loneliness, partly
because of their sacred associations. Their living there tended to increase the sacred aspect of
some mountains.

In India Himalayas has always been the resort of saints
and ascetics. In the Buddhist monasteries in Tibet are often on almost inaccessible heights, like many in Eastern Christian regions. (No bone has been found of mountains), as also have
Christian ascetics.

8. Symbolism.—Mountains are everywhere sym-
boles of strength and everlastingness (cf. the frequent phrase in OT: 'the everlasting mountains'). The title 'the mountain' was
called 'the great mountain' or 'the great Earth-Mountain.' The Zulus speak of
their king as being 'high as the mountain,' and address him as 'Yon mountain,' and elsewhere 'mountain' is a title of the
gods, or is supposed to be composed and firm as Sumeru, or he is called 'the golden mountain,' and he is illustrious among
men as Sumeru among mountains. The name mountgwa was given to the extreme French Revolutionists, the people who occupied the higher part of the hall
where the Assembly met.

9. Mountains in cosmogony.—(a) The creation
of the world is referred to in some cosmogonies. In
an American Indian myth they were created by the gods, and
the hawk and the mud brought about by a duck.15 In W.
India myths they were created by the gods, and
the mud brought about by a duck.15 In W.
India myths they were created by the gods, and
A Moor myth describes how the mountains and valleys of New Zealand were
were carved out by the knives of Māori's heroes at May-day or similar
—often take place on hills.12

As Indian myth regards certain mountains as offsets from the
Himalayas, brought for the sake of the earth. The bridge
is also as (see also § 5).6

(6) As to the ordinary observer the sky seems
near to the tops of mountains, so many myths regard it as so near as to be easily reached from them; or, again, the mountains, real or mythical, support
the sky or the heavens.

9. J. F. Cross, Chapters of a Journey to the Southern Country, London, 1895, pp. 91; J. Shooter, Eusebius of Nata, 1857,
Mt. Atlas was formerly known as 'the Pillar of Heaven;'

In Bab. cosmology the sky rested on the 'mountain of the world,' i.e. the world itself conceived as a hemispherical mountain with gently sloping sides. In Hindu and Buddhist cosmology the various heavens are arranged on and above the mythical Mt. Meru in an ascending series (see Cosmography [Hindu], [Hindu]). Fragments of Coptic myths suggest that with the Celts also a mountain supported the sky—some, a mountain near the sources of the Rhine was called 'the column of the sun,' perhaps bearing up the sky while the sun revolved round it. We may note the Greek myth of the Titans piling Mt. Ossa on Olympus, and Pelion on Ossa, in order to scale heaven.

In a Hebrew story the ark rested on Mt. Arran after the Flood (Gen 8:4). So in Bab. myth 'the mountain of the land of Nairi' held the ship fast and did not let it slip, and on its top Ushinish and the serpent ascent and inset to the gods. The Hindu flood-myth tells how the fish rode the seven yaks bind the ship to the highest peak of Himalayas. Manu descended from it on Himalaya. The northern mountain is called 'Manu's descent.'

MOUNTAIN-MOTHER. The Mountain-Mother is the only Greek deity certainly known to be of pre-historic origin. In the accompanying figure we have a seal-impression of late Minoan style (c. 1500 B.C.) found at Knossos. It is of cardinal importance and embodies, indeed, nearly all that we understand of the nature of the Mountain-Mother. She wears the typical flounced Minoan skirt, and, always the Mother is dominant. This dominance of the Mother divinity is of prime importance, and is in marked contrast to the Olympian system of Homer, where Zeus the Father reigns supreme. The Mother and the Father-eulogists are, in fact, characteristic of the two strata that go to the making of Greek religion—the southern (Egyptian or Anatolian) stratum has the dominant Father-god, the northern (Indo-European) the dominant Mother-god, the latter being, without any doubt, a personification of the life-giving earth, and, seemingly, a non-maternal and at least a monogamous husband of a subordinate wife. The northern religion obviously reflects patrilineral, the southern matrilineral, social conditions. A further distinction of importance—the Homeric patriarchal Olympus is the outcome of a 'heroic' condition of society; it emphasizes the individual; it is the result of warlike and migratory conditions; the worship of the Mother focuses on the facts of fertility, and emphasizes the race and its continuance rather than the individual and his prowess. Mother-worship is of the group rather than of the single worshipper. We find the Mother and her subordinate son or lover attended always by deities who personify the placid and placidly fertile earth. The Kourites, Koryantes, Telchines, Daedaly, Satyrs, and the like.

A further characteristic of this southern matrilineral group-worship of the Mother is that it is mystical and orgiastic. The mystery centre not on Zeus the Father, but on the Mother and the subordinate son Demeter in Greece, whose daughter, Kore, is but her younger form, and Rhea or some other form of the great Mother of the Dionysos of the mysteries, or of the Earth-Mother. The reason is simple; mysteries are now known to be simply magic ceremonies, dramatic representations of birth, marriage, and death, enacted with a view to promoting the health and fertility of the individual, and by way of inculcating mystic mysteries, in fact, spell magic, and the mysteries of the Mother stand again in marked contrast to the rational worship of the Olympian Father. In the Olympian system the worshipper approaches his god as he would his fellow-man, with prayer, praise, and presents; his action is rational and anthropomorphous, not magical, not mysterious, not orgiastic.

The mysteries of the Mother are based, like all other mysteries, on initiation-ceremonies, by which the man has for their object to prepare the boy for adult life and especially for marriage (see Initiation [Greek] and KOUVENTES and KORYBANTES). Each young man, each member of the band of Kourites, or even youths, became by initiations not only the son but the prince-consort of the Mother; he went through a mystical and magical topos γυμνος. This explains at once the expression used by Euripides (Bacchae, 120), διδωμενα με το χυμασκον Αλκαλειας. It also elucidates the confusion made by the Orphic initiate, Aργοσιας δι τον ολοκληρω υπο κυριος Αργοσιας. Marriage is the mystery par excellence. In the matrilineral worship of the Mother the series of cortea was perennial. In Crete the fracturing of the Mother was mimetic and dramatic; in some Asia Minor cults it was attended by the horrors of castration. In the Crotaea of Euripides (frag. 472, Nanek) the mystic 'held about his head the torches of the Mother' (μυστήριον και κυριος εν χελης κεραυνοφω) the blazing torch being a familiar fertilizer and purifier of fields and crops.

To the Olympians of Homer—a product of the Achaeans heroic age—the Mother was never admitted; even Demeter had then no footing. But in post-Homeric days, when north and south were fused, a place was found for her in a more elastic pantheon as Mother of the Gods.

5. Paus. xii. 10.
animal, the mouth is one of the orifices by which it may leave the body either during life or at death. Popular sayings like 'to have one's heart in one's mouth' or 'the soul on the lip,' illustrate this. It is also seen in the precaution taken by the Hindus of snapping the thumbs to keep the soul back when any one yawns. The soul may escape from the mouth during sleep, as is illustrated by many tales where, in the form of a small animal, it has been seen doing so. By preventing its re-entering one can cause the death of its owner. At death, in the belief of many peoples, the soul finally makes its exit by the mouth. In the Mādākhāṭā (iii. 297) Yama opens the mouth of Sātavain while he sleeps and draws out his soul, which is afterwards given to his wife, who replaces it in his mouth. Ovid tells how Hylonomus applied his lips to those of the dying Cyllaurus to prevent his breath leaving him. Homer says that life cannot return once it has passed the lips. On the frescoes of the Campo Santo, Pisa, the soul is depicted as a sexless cold creature leaving the body by the mouth. Similar beliefs are common among savages and with the folk everywhere. Hence where the soul as a ghost is feared, precautions are sometimes taken to prevent its egress from the mouth. The mouth and other orifices are forcibly closed or stopped up, as among the S. Australians, the Hottentots, and Malayas (S. America), Malays, New Caledonians, and Marquesas Islanders. In some cases the jaws are bound for the same purpose, and it is possible that, where this is done merely to keep the mouth closed, its real origin may be traced here. The Ainus bind the mouth of a fox when killed, lest its ghost come forth and warn other animals of the hunter's coming.

On the other hand, the desire of recalling the soul to the body gives rise to certain practices connected with the mouth. In China it is stuffed with things endued with vital energy, so that, if the soul returns, revival of the body may be aided and decomposition prevented. Among these are certain minerals, cowries, pearls, grains, and cubes, and a ritual is prescribed for the purpose. Similar practices are found in Bali (gold ring on tongue), in Tonking (gold and silver in mouth), and elsewhere. De Groot holds that 'the mouth of the mouth of the dead had the same purpose. This practice is best known from its use among the Greeks and Romans, but it is also recorded in India (small pieces of gold in mouth, etc., or melted butter allowed to trickle down [Hindus placed with dead [non-Aryan tribes]], and among the Litu-Slav and Teutons. This has been generally regarded either as a fee for the ghostly ferryman, as held by Greeks and Romans themselves, or as part of a gift to the dead, or a commutation of such a gift. The Chinese practice, however,
MOUTH

throws new light on the subject, and points to a possible origin for the same practice elsewhere, though no example of it has otherwise.

To the same origin may be ascribed the practice of filling the mouth of the corpse with food before burial. This, often regarded as a sacrificial feeding of the dead, may have been intended as a means of recalling the soul, though each instance must be examined in its own context, and it must be admitted that quite different reasons are often given by those who practise this rite. Yet, if the dead used earthly food, this would keep them from eating the food of the Other-world, which binds the eater to that world. Thus they might be able to return.

It is found among the Tub of Tongking (E.E.E. 419.), some Papuan and Polynesian tribes, and the Bajukas (de Groot, i. 357.). In the Panjaban leaves of the tulasi plant and Ganges wax are placed in the mouth of the corpse before it is buried, and he is fed and watered until he reaches the Other-world. The ancient Persians drank soma juice, which produces immortality, and the Egyptian mummiﬁcation seeds were put into the mouth of the dead (E.E.E. iv. 509.). With this may be compared the practice of putting the Host into the mouth of the dead, which is observed in Carpathia and at other councils and synods (J. Hingham, Origins of Ecclesiast., London, 1839, p. 10.)

Of course, if the dead are to be fed at all, it is most natural to place food in the mouth, and in some instances a tube connected with the mouth is made to protrude from the grave so that nourishment may be given, and the dead may be fed through it. When the head is being opened, the head is cut, and the tube connected with the mouth is frequently used to prop open the mouth of the deceased, and the deceased himself is fed by having food placed in the mouth. The Egyptian ceremony of opening the mouth and eyes was performed so that the deceased might see and eat the food offerings and utter the right words in the right manner.

As a preparatory rite the mouth and eyes of the mummiﬁed or statue represented in the deceased were rubbed with part of the food to excite the appetite. Then seal priest addressed the deceased: "I have set in order for thee thy mouth and thy teeth. I open for thee thy mouth, I open for thee thy eyes. I have opened thy mouth with the instrument of Anubis, the heart of Men-Out-With-the-Mouth of the gods was opened." Mouth and eyes were touched with this instrument, and Horus asked to open the mouth of the deceased as he had opened that of Osiris. With another instrument the lips were touched so that the right words might be spoken. Then the mouth was touched with other articles to give life and color to the lips, and touched again so that the jaw-bones might be established; and, ﬁnally, food was then placed in the mouth.

It is probable, as the establishment of the jaw-bones probably refers to an old custom of disembowelment. Various texts speak of restoring the jaw-bones and the mouth in the reconstructed body. The lists of the members of Osiris include lips, mouth, and jaw-bones, and there may have been an ancient rite of cutting out the jaw-bone and preserving it separately. This is done by some African and Melanesian tribes.

In the king’s jaw-bone is cut out and preserved in a special place, wherein it is called an oracle, as the eye was supposed to attach itself to it. 2. Widows among the tribes of the Hood peninsula carry the husband’s jaw-bone. 3 The Tahiti of German New Guinea examine the corpse after some months and with great ceremony remove and preserve the lower jaw and the teeth, and the gutter customs are observed by other tribes of this region. 4 Again, the Solomons (Solomons Islands) preserve it with the skull in a hollow wooden image of a fish or bear. In the public cases of death in New Britain the jaw-bone is worn by relatives as a means of obtaining its owner’s help. 5 These are but a few of the many ways of preserving the jaw-bone or lips of enemies, as in Ashanti, Dahomey, Tahiti, etc. (see E.E.E. vol. vi. p. 5340), if the purpose is to secure power over the ghost of the dead man.

The Egyptian custom should be compared with the ‘way of purifying the three dead’—body, mouth, and heart—as practised on the deceased by the Shinto sect in Japan. 6 Among the Baga the lips of the dead are smeared with oil. 7

2. Hostile spirits and the mouth.—The mouth as a spirit-opening is naturally one which is exposed to the entry of hostile spirits which take possession of a man. In India men are thought to enter by the mouth, and in Egypt in common opinion all kinds of evil spirits try to do the same. Various customs are more or less closely connected with this belief, and have for their object the warding off of such noxious spirits. Eating in private is one of these; uttering a charm or performing some ritual act after yawning is another; scrupulous teeth-cleaning, as with the Hindus, is a third; vulling the face is a fourth. A wide-spread custom of knocking out or ﬁlling the teeth, usually at puberty, is also connected with these dangers at initiation to man’s food. 8 Though, from the savage point of view, tainting the lips or boring one or both lips and inserting brass, iron, or metal, which is often increased to large dimensions, is regarded as ornamental, the origin of the place is perhaps magical. The lip-ornament is a protective charm or spirit-engaging center by the mouth door, or perhaps also against the escape of the soul. This custom is found among the Eskimos, Haidas, and other N. American tribes, and very commonly in S. America (the most extravagant use of this being among the Baboons), as well as among many African tribes.

3. The mouth and the breath.—As the soul or life is so often connected with the breath in general, or, as has been suggested, the last breath—which may be expelled by a sneeze or yawn, and which leaves the body ﬁnally at death, 9 certain rites in connexion with the mouth have arisen. In some instances a message is received by application of this to the dying man’s, or by a kiss. 10 The Altars, on the other hand, close the mouths of animals at a birth lest they swallow the infant’s soul, and the mother and others in the house must keep the mouth shut. 11 The breath, again, may have life-giving properties. Hence the Eskimo angakool will breathe on a sick man to cure him or give him a new soul; 12 or, as among the Buriund Indians, the medicine-man purifies a woman after

1 E. Reiss, JAF xviii. 1899. 237.

7 See P.R.I. 246, ii. 25, 48, and references.
child-birth by breathing on her.1 Healing by breathing or blowing upon a patient is also found among American Indian medicine-men and in Oriental countries. On the other hand, the breath as connected with the life may contaminate sacred objects. Hence these must not be breathed upon, or the mouth must be covered when one is near them.

In Timor the common people, in addressing the RaJA, place the hand upon the mouth, lest they profane him by their breath.2 Among the Parisi the priest must cover his mouth and nose with a thick veil—the pasifidana—on approaching the sacred fire and other sacred objects.3 Gerald de Cambrai relates of the sacred fire in the shrine of St. Brigit at Kildare that it must not be approached by those who tend it—probably an earlier pagan Celtic tabu.4 Similarly the Laws of Manus forbid the Brahman to blow the sacred fire with his mouth.5 A tabu of this kind is found among the Balinese Sariy in connection with the sacred house-fire on the Javan.6 Shirtless priests have also to veil their mouths when cooking the sacred food, and so have the cooks in the Mikado's kitchen.7 Saxo Grammaticus tells of a shrine at Rügen so sacred that the priest might not breathe in it, but had to go to the door for that purpose.8 On the other hand, a Maori chief would not blow upon a fire lest his sacred power should pass to it and so to the food cooked on it, and then to the eater of the food, causing his death.9

The old custom of 'scoring above the breath,' i.e., making an incision on a witch's forehead to neutralize her evil power, may have been connected with the idea that her evil life-influence came forth with the breath.10 Saliva, as connected with the mouth, is at once a tabooed thing and a supernatural god, and also a safeguard—e.g., against witchcraft—as well as in use in healing rites (see Saliva).11

LITERATURE.—See Eliza B. Clapsaddle.

MOZZOOMDAR.—See BRAMA SMAJ.

MUGGLETIONS.—The followers of the London prophets, John Reeve (1808–38), and his countryman, John Mugleston (1829–38) were designated 'Muggletonians.' Both Reeve and Mugleston were originally Puritans, but Reeve became a Ranter and Mugleston dropped all public worship, being attached to private meetings and the prophecies of John Robbins and Thomas Tany. In 1651 Mugleston had inward revelations interpreting the Scriptures; Reeve had the same experience next year, and on 3rd–4th Feb., 1652 Reeve and Tany issued a pamphlet urging him to rebuke Robbins and Tany and constituting the last messenger of the third and final dispensation. Mugleston being his 'mouth.' They were two of the witnesses of Rev. 11, so announce a new body of doctrine and to declare the eternal destiny of individuals. By 27th July 1652 their Transcendental Spiritual Treatise was complete for publication. They declared that all succession had ceased for 1500 years, and, when challenged to prove their new commission, their last resort was to curse their opponents in 1653, they issued two more pamphlets—

1. H. Pitter de Friburge, SWJW, phil.-hist. Class. cxxxviii (1896) 100.
localized as Al-Tihāmī ('of the Tihāmāh' [Mutanabbi, ed. F. Dieterici, Berlin, 1881, p. 331]), known by his followers as 'the Apostle or the Prophet of Allah,' and also by numerous other names, variously estimated at 30, 300, or even 100,000. His collection of Hadīth, Maqāmah, and al-Majmū‘ al-Laduniyyah, Cairo, 1278, iii. 133–170, was the founder of the religious and political system called in Europe after him, but named by him Isāl or Jumāl. The event in his life which furnishes his followers with a parable to the Chri-migration (hijrah) from Mecca to Medina, is fixed by synchronism with the Jewish Day of Atonement for 29th September, A.D. 622. That era was introduced several years after his death, and, indeed, for the purpose of arranging the events in his career, by his second successor 'Omar I. (Mubarrad [† 585 A.H.], Kāmil, Cairo, 1368, i. 355), whereas the calendar on which it is based uses a lunar year of 354 days, introduced by the Prophet near the end of his life. Since both the calendars and the era previously employed in Central Arabia are only vaguely known, and the story of 'Omar implies the idea that Isāl had before heard of an era (which perhaps is confirmed by the fact that the word used for 'era' signifies 'month-making'), accurate dating of events in the Prophet's life is impossible. There is, however, an allusion in the Qurān (xxx. 1) to a victory of Chevirages over the Nearer Eastern tribes which took place A.D. 616, and this agrees with the tradition that Muhammad preached for some ten years in Mecca before his migration. Probably the earliest written account of him is that which appears in the Chronicle of Chirvania (Armen. text, Petrograd, 1879, pp. 104–106; Russ. tr. by K. Patkanian, dd. 1882, pp. 116–118), of the 7th cent.; it is very scanty, giving little more than the fact that he was an Ishmaelite who taught his countrymen to return to the religion of Abraham and claim the promises made to the descendants of Ishmael. His career may, therefore, be said to be known entirely from Islamic sources, which contain no biography that is quite contemporary. The earliest work that was intended to be a chronicle of his life is that by Muhammad b. ʿIshaq (c. 159 A.H.), who composed his Sira ("Biography") for the 'Abbāsids Khalifah Mansūr (138–168 A.H.). Contemporary with Ibn ʿIshaq was Mūsā b. ʿUqba († 141), whose collection of Campaigns was studied in Cairo as late as the 15th cent., but of which hitherto only some fragments have been discovered (ed. E. Sachau, SDBAW, 1882, and others of little value); and Ishār († 204); quotes this author once for what is clearly an edifying tale (Umm, Cairo, 1221, ii. 100). Later by some fifty years is the work of Wāqidi († 294), which, with some extent to the same materials as the work of Ibn ʿIshaq and some of which has been still the encyclopedic work of Ibn Saʿd († 290), secretary of Wāqidi, on the Prophet, his family, and his followers. The memoirs or table-talk of the Prophet's companions were collected and treated (with infinite repetitions) by the jurist Ahmad b. Ḥanbal († 241), and the recollections of these persons, after being critically sifted, were arranged in the order of subjects for the use of lawyers by numerous authors shortly after this date, and by some considerably earlier. Very little of this material has historical value. In the main, then, our knowledge of the Prophet's career comes from the work of Ibn ʿIshaq.

There is reason for thinking that shortly after Muhammad's death some sketch of his life, comparable to the Chronicle of Chirvania, was communi- cated orally to those who embraced Isāl, enabling them to understand allusions in the Qurān; but this is likely to have been brief, and statements in early law-books indicate that considerable uncertainty prevailed with regard to events of_current importance in the Prophet's biography. It is of interest that the Khalifah 'Abd al-Malik (65–86 A.H.) wrote to ʿUrwa b. Zuhayr (born 22) for an account of the battle of Badr, and his letter in reply is preserved by Tabari (i. 1294)—as usual, not from a copy but from oral tradition. This personage was born twenty years after the event, and appears in treating the subject to have consulted the Qurān. 'Anord need to reply to a question about the sense of the Qurān has the appearance of a conjecture as to its meaning rather than of a historical tradition (Tabari, Commentary, xviii. 24). The general suspicion of and objection to written matter in the Sacred Book which prevailed prior to the foundation of Baghdad, and indeed for some time after, prevented the perpetuation of memoranda or notes which would have been destroyed by the fire that was reserved for the biography. Although the work of Ibn ʿIshaq contains a certain number of ostensibly contemporary documents—e.g., letters and State-papers—their authenticity seems in every case liable to question, not only on internal grounds, but because different authorities are in disagreement about them. It is, indeed, clear that no official collection was ever made of Muhammad's correspondence, treaties, and receipts; Shiā'ī († 204), who appears to have made a special study in Arabia, could find nothing in writing referable to the Prophet except the Qurān and one apocryphal document, of which he knew only by hearsay. Contemporaries produced in ancient and modern times, have been shown to be fabrications by the anachronisms which they contain (see Yaqt, i. 248).

The Qurān appears to be the most part authentic, but those which collected it in a convenient and chronological arrangement as much as possible, combining in the same sira, or chapters, matter belonging to widely different periods. In order to use it for historical purposes the reader has to interpret it by Ibn ʿIshaq's biography; but there are many cases in which that biography appears to be conjectural interpretation of the Qurān. It is true that the commentaries on the latter, of which one on an enormous scale was compiled by the historian Tabari in the middle of the 3rd Islamic cent., profess to locate most or all of the texts; but, unfortunately, they give a variety of translations, and leave on the mind the impression that nothing was certainly known or remembered about the 'occasions of revelation' beyond what the texts themselves imply.

If, in spite of these considerations, the general trustworthy of the Prophetic narrative is probably to be maintained, there are three reasons for this:

(1) The practice ascribed to the second Khalifah of assigning pensions to the Muslims, which varied with the length of time during which they had been members of the community, furnishes the existence of lists of fighters in various battles, and for the preservation of the chronological order of
familiar with the foibles of the Arabs, and utilized them to the utmost advantage. The stories of his successes as told by Ibn Ishaq indicate a complete absence of moral scruple; but they also show a combination of patience, courage, and caution, ability to seize opportunities, and distrust of loyalty when not backed by interest, which fully explain the certainty with which history records his career. If his age is correctly recorded, and no event of great importance in his early life concealed, his military career began when he was over fifty; this seems astonishingly late, yet analogies, if not parallels, can be found. Surprised is the love and veneration with which the Arabs abandoned their gods and goddesses, readily accepting the logic of the stricken field; for, though new prophets arose after Muhammad's death, there appears to have been no reenactment of paganism. Yet, some analogies can be discovered. The fact of primary importance in the rise of Islam is that the movement became considerable only when its originator was able to draw the sword and handle it successfully.

That he was summoned to Yathrib was doubtless due in part to the presence of a Jewish element in that community, intellectually further advanced than the Arab tribes, which at first evidently favoured him as an advocate of monotheism; that he was able to make the fullest use of this opportunity was due to his own ability. The only difficulties which are to be found in his career are, therefore, those which render all history difficult. It is impossible to say why one man should be more gifted than his fellow, why one prophecy or another should occur for the development of special talents.

According to the Qur'an (xxiii. 30), he was not a great man in his city, and, if the words of xciii. 2 are to be taken literally, he was not born in Medina. The account of his settlement at an early age, and at some period after his marriage, is the result of the need for a new place of refuge, a family, and, perhaps, an early divorce. Thus, when he records the charge made against him by his enemies in the ancient history which he reproduced in the Qur'an from dictation (xxv. 51.), he does not rebut it by the assertion that he could not write. The historical tradition makes him the patriarch of various Arabian tribes and the leader of the Meccan community, and his fortune companion finds in him a fellow-citizen, his life in Medina, and in the capture of the city in the eighth year of his migration. By the end of his life he had imposed his doctrine on the whole of Arabia, exterminating the Jewish communities, with few exceptions, rendering the Christian communities tributary, and abolishing paganism.

So far as this career is that of a military and political adventurer, countless parallels could be adduced. A man who can organize an armed force and lead it to victory may rise from obscurity to autocracy anywhere. Probably every century of Islam has its tale of such personages. The 'Abbasid, Fatimid, Buwayhid, Seljuk, and Ottoman dynasties all trace back to his line; and of these the religious appeal played an important part. The success of the founders was clearly due not to the objective truth of the doctrines with which they were associated, but to their skill as organizers and military leaders. The caliph's case, owing to the amount of information which we possess about him, it is easier to analyze the qualities which produced success than where the records are scanty. In the first place, his ability to gauge the capacities of others was extraordinary; hence in the choice of subordinates he seems to have made no mistakes. In the second place, he was thoroughly

---

1 Das Leben und die Lehre des Muhammad, 1. 126.
whole render it improbable that any part of it is based on book-learning; for, though in one place the Psalms are quoted with fair accuracy (xi. 105 = Ps. 37), the nature of their origin is explicatory only as the reproduction of hearsay. Thus it cites (lii. 37 f., lxxxvii. 10) 'the Scrolls of Moses and Abraham' for maxims that are analogous to those occurring in the Prophets or the NT, though differing in quite kindred substance; and the mode of quotation implies that the writer had a vague notion of the work cited, such as actual personal perusal would have corrected. Further, the form assumes the source of the Maxims and the religious technicalities indicates a great variety of linguistic sources; for in these Ethiopic, Greek, Syriac, Hebrew, and perhaps other languages are represented. Some of the proper names are not at present traceable to any version of the Scriptures—e.g., Tahit for Saní, 'Isa for Jesus. Moreover, from the manner in which the Biblical narratives are told it is difficult to imagine that the writer was acquainted with the continuous history of the Bible; he knows only stories out of it. All this points to the probability that Muhammad heard the stories from narrators of different nationalities, who translated them orally into Arabic, leaving out or altering a degree to suit his impression, in spite of the fact that they interested him keenly. Besides the canonical books, various uncanonical works contribute to the matter of the Qur'án, which, in addition, refers to prophets not mentioned elsewhere. The Prophet was charged with employing as mentor a resident in Mecca, and after the migration to Medina, where there were Jews, he may have been able to utilize the Biblical learning of one or other among his converts. But it is not impossible that the story reproduced during the Meccan period had been heard from travelling companions or from Jews and Christians whom he had met in foreign parts.

Prior to his call Muhammad is said to have practised ascetic retirement on Mt. Hírā, and for this an odd technicality, taḥannuth, is preserved, which is said to mean 'to acquire merit,' and certainly has nothing to do with the Heb. 'ăhannuth, 'communion.' The call itself evidently took the form of a command to read, which the Prophet reluctantly obeyed. The communications embodied in the Qur'án were, according to the tradition, made to the Prophet and uttered by him in his own person; he would wear himself in a blanket and perspire copiously at the time. A certain number of these stories may be inference from sūrah liii. and lxxvi., where the Prophet is addressed as 'Thou that art wrapped up,' combined with sūrah xxvi. (supposed to be the first revelation), where he is bidden 'read.'

The form of the utterances at times approaches verse, i.e. a series of sentences in which the same quantity and quality of syllables are reproduced, the termination of each unit being marked by rhythm, whereas more usually rhyme only, and this of a somewhat loose character, is observed. The relation of this Qur'anic style to the verse and rhyme of classical Arabic is an enigma which cannot at present be solved. An artifice based on the recurrence of letters is obviously literary; i.e., it depends for its existence on the practice of writing by those who are accustomed to read and write think of their words as agglomera-
tions of letters; to the illiterate the word, if not the sentence, is the unit. Indeed, in what is supposed to be the first revelation the deity is stated to fight with the calumina, or red-pen. The existence of poems before the Qur'án is attested by a sūrah which is directed against them (xxxvi. 1) and a text in which the deity states that He had not taught Muhammad poetry (xxxvi. 69). If the poetry which existed before the Qur'án was analogous to the classical poetry, the people of Mecca cannot have been in the state of native ignorance with which the Qur'án identifies them; yet the poetry which is ascribed to the Umayyad period—i.e., the second half of the 1st Islamic cent.—is to a great extent clearly authentic, while its authors represent the continuance of a pagan tradition.

With regard to rhytmic prose, probably we have nothing in this style that is certainly genuine and older than the 2nd cent. of Islam. It is, however, much easier to be written verse, though no less dependent on writing. Oracles are supposed to have been delivered in it by pre-Muslimian wizards.

Now the respect of ignorance for knowledge is a well-attested phenomenon, displayed in the case of the Prophet that Jews and Christians should not be molested in the exercise of their creeds. It is therefore unlikely that the poets and wizards who preceded Muhammad presented a higher stage of education; hence, according to natural sequence, the style of the Qur'án would seem to come between such naive jingles as may have counted for versification in Arabia and the highly artificial products with which we meet in the Umayyad period. It would follow that the early Islamic oracles as all as all that ostensibly belongs to the time of the Prophet and his immediate successors is spurious; but, as has been seen, the spuriousness of that which is incorporated in the Prophet's biography is otherwise attested; and the most likely hypothesis is that, as all that ostensibly belongs to the time of the Prophet and his immediate successors is spurious; but, as has been seen, the spuriousness of that which is incorporated in the Prophet's biography is otherwise attested; and the most likely hypothesis is that the oracles and prophesies were current among the people of Arabia and the East in the early Abbasid period, to whose labours we owe our collections of early poetry, were unscrupulous fabricators.

The Prophet, then, claimed to introduce literature into his native language, and the form was probably modelled on the quasi-poetic experiments which had preceded the Qur'án. It is, however, very noticeable that in his lifetime his book resembled a newspaper in having a fluid rather than a stationary existence; it was as whole a continuous, but each number had ephemeral importance. The theory was gradually evolved that it was a reproduction of a divine archetype, first as a series of copies, and then in complete form. The development of this theory was not possible before the collection of the Qur'án; and the Prophet himself never thought of attempting such an undertaking.

The difference between his first conception of a prophet and that current in ancient Israel, before the literary prophet had arisen, was perhaps not very great. The oracles were partly spontaneous, partly required for emergencies; their form differed from that of ordinary speech by the presence of an artifice; and the prophet delivered them in what spiritualists call 'the superior condition.' At times the oracles were supplemented by dreams. Further, the Hebrew prophet was a 'warnner,' which is one of the epithets applied by Muhammad to himself; he foretold misfortunes, which, however, were ordinarily contingent, since it was his business to indicate the line of conduct whereby they could be averted. Muhammad and his prophecy seem to have been chiefly influenced by those cases in which the prophet also claimed to be the head of the community, its priest and its king.

Attempts have been made by Spranger and others to specify the epileptic fits which in Muhammad's case ostensibly accompanied the revelations; but it is evident how far these are to be regarded as real occurrences. It is clear that the Prophet was of great physical strength, since his life as tyrant of Medina was spent in constant military expeditions, added to the cares of a rapidly increasing community, of which he was at once priest, legi-
lator, ruler, and judge. Yet we never hear of his health breaking down under the strain. The 'fish seem to have been threatened by it when they were required for the delivery of the revelations, and in no case to have interfered with his activities.

A message must have matter as well as form, and, when Muhammad became head of a State, his Qur'an served as a government organ, containing reprints and something like an official chronicle of important events, with comments upon them. But before the migration the matter was not so easily supplied. To a certain extent it reproduced the narratives from the Christian Bible, which ex hypothesis could not have been known to Muhammad from books, and therefore must have been communicated to him by direct inspiration, and so are a proof of the miraculous character of the whole work. The chief purpose of these and of the other messages is to insist on the importance of obeying God's messengers implicitly.

It is not easy to say whether Muhammad had any desire to inculcate any particular doctrine, for there appears to be none which he was not prepared to abandon under political pressure, and the tradition represents his followers as far more attached than himself to the dogmas. The main doctrine of the early days was the future of the unity of God, and the folly of idolatry. Since he ultimately retained in his system the kissing of the Black Stone (cf. ERE vii. 749), it is difficult to say whether it was an innovation or a medieval development.

The doctrine of the future life was preached in the early days as a warning of the approaching end of the world and the Day of Judgment; yet he had afterwards to make the same point to his converts and to his enemies enter hell immediately after death—a belief not easily reconciled with the former.

According to Tabari, during the Meccan period he at one time, under stress, issued a revelation admitting of the Meccan godesses to his pantheon; and, though this text was expunged from the Qur'an, the apology for it, viz. that it was the devil's interpolation, remains (lil. 19-23, xxiii. 51; see ERE vii. 150). He even consented at one time to be addressed as 'Abu lebnkil'; but it was from a document, when it stood in the way of the ratification of a treaty. Even the formulas with which the suaraks and other documents commence shows clear signs of effort to import the 'In the Name of Allah, the Merciful.' Since the last adjective is an Arabic rendering of the second, which is Aramaic, used as a divine name by Jews and pagans, and in Arabic not an epithet, but a name, some mystery must lie behind the employment of this name with a translation following it. The tradition suggests that the name 'Allah' was familiar to the Meccans, but not the name 'Rahman,' which, indeed, had been adopted by one or more false Messiahs. In certain parts of the Qur'an, however, it may be said to be dominant. This formula, then, was doubly accommodated to Meccan prejudices.

The tradition does not conceal the fact that the 'canons of Islam' were of slow growth; it is probable that the final form of the religion of Abraham. One of Muhammad's predecessors, Zaid b. 'Amr, is represented as travelling with the view of the religion of this patriarch, from whom the tribes of Arabia, according to Genesis, are descended. It is not probable that his name was known in Mecca before Muhammad introduced it; but in doing so he was treading on safer ground than they who live Jews and Christians, were agreed about the relationship. If the tradition is to be trusted, the new system was called by the Meccans 'Sabism,' a name connected historically with Harran, where a cult of Abraham is likely to have existed; the Harranians appear to have been called 'Hampe,' 'hostile,' by their Christian neighbours, and possibly this is the solution of the puzzling name 'Hamit' applied in the Qur'an to the religion of Abraham, and synonymous with 'Muslim,' which, according to the same book (vi. 168), was a little invented by the prophet. The Qur'anic tales about Abraham are traceable to the Jewish Midrash; what is chiefly known about his religion is that he was an iconoclast, and was not one of the masikridei, i.e. particularly, he decided to make the Meccan pilgrimage part of his system, he ascribed the building of the Ka'bah to Abraham and Ishmael (ii. 115 f.), and brought the Abraham-ceremonial into connexion with the former. It is probable, though not certain, that both that ceremonial and the fasting month are Harranian.

There is reason for thinking that, besides the prohibition of idolatry, the earliest form of Islam enjoined certain daily ceremonies which were afterwards developed and regulated until they became stereotyped as the five salatit; and it is not easy to dissociate from these the theory of legal purity, which, however, seems to have existed in parts of pagan Arabia, since the technique of the technical words found in Sasanian inscriptions. Of the actual growth of the ritual or liturgy nothing certain is known; the prayer which corresponds with the Postemer is called 'Fikdah,' because it is prefixed to the Qur'an, contains polemical references to Jews and Christians ('those who have incurred anger and those who go astray'), which point to a late period in the Prophet's career; for his hostilities with them did not cease until after the migration, and those with Christians were some years later. Moreover, the prayer-ceremonies were connected with military drill, which is unlikely to have been required before the raising of an army was contemplated.

The other canons or main institutions of Islam—the pilgrimage, the fasting month, and the tax called 'alms' (zaklit or sadaqah)—belong to the Medina period, though they cannot be precisely dated. The establishment of the House of God, the Prophet's resolve to conciliate so far as possible the pagans of Mecca, and to abandon Judaism, which on his arrival at Medina he was inclined to adopt, it belongs to the same policy as that which dictated his making the Meccan temple the destination of prayer instead of Jerusalem (i. 139 f.). The fasting month, whatever its origin, is evidently a military exercise; on the one hand, it accustoms the fighting men to endure privation, and, on the other, it trains them to turn night into day. The alms or income-tax of 2.5 per cent is organized poor relief. An innovation which is at least as important as the canons, though it is not termed one, is the tabu on intoxicants (i. 218, v. 92), which is said to have been introduced in the third year of the migration, and appears to belong to military discipline. There may, however, be some truth in the idea of W. G. Palgrave ¹ that this tabu is definitely anti-Christian, and that the religious duties of the new faith were the religious duties of the old.

It is probable, then, that the positive parts of Islam teaching belong to the period after the migration, and that these were largely suggested by the Jews and Christians. When he held his usual plan when he adopted institutions was to disguise the borrowing; but he also introduced serious modifications. Thus, in the case of the Sabbath he not only shifted the day from Saturday to Friday, but retained the practice when business might not be transacted to the period occupied by the mid-day religious service (lixii. 9 f.). Instead of the elaborate system of

¹ Central and Eastern Arabia, London, 1866, i. 428.
Muhammad’s sincerity in his claim to be the spokes-
man of the deity has often been discussed, and
various views have been held on the subject; as,
e.g., that Muhammad’s assertions on this subject are
a case of epileptic mendacity; 1 while L. Caetani
finds no contradiction between his supposed elabo-
rate preparation of revelations and his ascription
of them to direct communication from the deity. 2 In
the former view, as has already been seen, it is
scarcely tenable; nor does the latter correspond
with the facts, for the revelations furnish little
indication of elaborate preparation, and, when once
delivered, they appear to have been neglected;
there are, indeed, traditions of collections of revela-
tions having been made by some of his followers,
but it seems certain that Muhammad himself kept
no such collection. Caetani’s theory, however, is
probably sound to this extent, that in Muhammad’s
case, as in those of many other men of vast energy
and ability, there was a belief or consciousness of
being directed by the deity, which, however, by no
means led to his trusting anything to chance; and, in
the case of Muhammad, while the angels who came
to his battles were partly pious, partly poetical per-
senations of the heroism of his followers, he was
fully conscious of the value of attributing his
victories to those supernatural auxiliaries; to be
defeated by angels was not a thought in his
mind. He was also quite conscious of the value attaining to the right to dictate the moral
law.

6. Moral reforms.—As a moral reformer Muhammad
has to his credit the abolition of infanticide, which,
if we may trust the Qur’an (xvi. 61 ff.), was commonly practised in Arabia in the case of female
infants. On the other hand, some crimes, e.g., the
institution of slavery. In the case of the blood feud
Muhammad did not contemplate complete abolition, but
he endeavoured to mitigate its consequences and
favoured mild reprisals (ii. 173-175). With the
institution of private property and the acquisition of
wealth he found it, indeed, the destiny of the Prophet’s
family to display its extravagance in almsgiving as in other
matters. The quality of personal courage he rated very high,
and, though he often inspired it by the promise of
paradise, it is clear that his followers were largely
persons who required no such stimulus to make
them brave. The ascetic morality afterwards
taught by Sufi preachers and, if the tradition is
to be believed, approved by some of Muhammad’s
early adherents finds little support in any inter-
pretation of the Qur’an that is reasonably literal,
and clearly receives no countenance from the
Prophet’s own career, if any creditability attaches
to his biography. Like other founders, he claimed
a large share of the booty won in war as his perquisite,
and appropriated territory as his domain.

It is not clear, then, that Muhammad can be
credited with any direct part in the matter of infanticide, whereas in the social
organization of the family tie to the religious brother-
hood he appears to have weakened one social sanction
without introducing any other equally strong
by way of compensation. The history of this sub-

1 A. Rashi, t. 1377 f.
2 Annali dell’Islam, Milan, 1906 f., i. 394 f.
ordination can be traced in the Qur'an rather more continuously than most institutions.

Where moral codes are drawn up, as is the case in several ancient societies, the person is given a high place in the list of commandments. When Abraham is first introduced, he is told by God to establish a religion, and after the migration, when the younger generation were joining Muhammad against the wishes of their parents, their unbelieving parents were thought to be tolerable; hence they are forbidden to pray for the latter, and Abraham's conduct is excused on the ground that his life was made so difficult. Abraham himself is represented as repudiating all parental claims, and his conduct is declared exemplary even in disregarding the exhortation to pray for his father (iv. 43, xix. 44, xxvi. 72, xlii. 15, lix. 6).

This is only one example of the movement in the direction of intolerance which the Qur'an exhibits as it proceeds. The Prophet undoubtedly wished to make Muslim life as sacrosanct within the Muslim world as in the old tribal system the tribesman's life had been within the tribe; but in this he failed, since his first followers eventually waged civil war with each other, and in the history of Islam the victims of massacres by Muslim Suljans have frequently been Muslim communities, and, indeed, families claiming descent from the Prophet himself.

3. Tolerat6n—On the question of religious toleration the Qur'an contains a series of utterances belonging to different periods, and varying from large-minded tolerance to extreme fanaticism. In one text (v. 78) future happiness is promised to four communities—believers, Jews, Sabians, and Christians—on condition of their believing in Allah and the last day, and doing good works; in another, the last three communities are mentioned with the pagans and the Magyars in a context which implies that the prospect before them is less satisfactory (xxii. 17). At times no form of controversy is permitted except rivalry in kindness; elsewhere the Muslims are told to fight with other communities relentlessly until they accept Islam or pay tribute, which they are to bring in humble submission. Friendship with members of other communities is forbidden. The most intolerant utterances are the latest ones, but the progress in this direction does not seem to have been regular. The permission granted the Muslims to conceal their faith if confession is dangerous (iii. 27, as ordinarily explained) is characteristic of a system which is more political than religious. The ultimate system adopted was to permit the existence of communities which professed to follow a revealed book, but to disown them and make them tributary; this condition is identified by some jurists with that of slaves. The existence of communities to which this description did not apply was forbidden. Since the chief Christian doctrine is said in the Qur'an (xix. 22) to be so blasphemous as to be calculated to produce a general convulsion of nature, this toleration, though praiseworthy, is clearly irreligious; for we can scarcely conceive a confession of nature being averted by the payment of a moderate poll-tax.

4. Legislation. As a legislator Muhammad probably perpetuated current practice rather than introduced a fresh system, and the Qur'an is on many grounds ill-suited for a basis of jurisprudence. It is imperfect, self-contradictory, and destitute of order; and since in its arrangement, the collector seems to have been anxious to avoid any semblance of chronological order, whence, in the case of conflicting enactments, it has to be supplemented by tradition. While there is anything like systematic treatment of any topic—e.g., the laws of inheritance in sähah iv.—the signs of improvisation are very apparent; and even a little consideration should have shown the barbarity and folly of the

punishment of hand-cutting for theft (v. 42). There is a curious tradition that on his death-bed Muhammed desired to frame a code for the guidance of the community; but to those who supposed that they had in the Qur'an the actual words of God, this utterance not unnaturally seemed ridiculous. The State, however, suffered very seriously for the want of a code in the matter of appointing successors to the sovereign; and until the introduction of European codes it was never able to give a decisive

9. Philosophy.—Though it is not probable that Muhammad had any liking for metaphysical speculation, the rôle which he had assumed rendered it necessary for him to formulate views on various matters which any form of religious propaganda brings to the front. The reduction of these questions and their answers to precise and philosophical form probably belongs to a later age, and, indeed, in the tradition Muhammad names sects which came into existence a century or more after his death; but in a vaguer form the Qur'an deals with them, and so furnishes a basis for theology, though one of doubtful firmness. His theory of the deity is, on the whole, naïvely anthropomorphic; the Allah of the Qur'an has been compared to a magnified Oriental despot. A royal court is formed by the angels: Jibril conveys messages to the Prophet (ii. 91), whereas others are sent, mounted on horses, to fight the Prophet's battles (iii. 125, viii. 9, ix. 28, 40). Other intelligent beings are the jinn, or sha'dan, whose prince is Iblis; the second word is taken from the Ethiopic, the third from the Syriac transliteration of the Greek; the sh 'alas was mistaken for the Syriac sign of the genitive, somewhat as Obènce is transformed into Liber essentiae. To these the Prophet preaches (perhaps through a vague reminiscence of 1 P 39), and some are converted (xlii. 28-30, lxii. 1f.). Satan himself is the power that makes for evil, causes men to forget, and even interprets the oracles of prophets. He has the divine permission to mislead mankind for a season (xv. 37-39). The Qur'an, on the whole, seems to favour the theory of predestination, but there are passages which contradict it, and to those who believe it is an evasive answer rather than a rejoinder is given (see art. FATE[Muslim]).

The resurrection of the body is taught in a crude form, and the future life is thought of as one of bodily pains and pleasures; hence metaphysical questions concerning the soul are scarcely touched. The creation is narrated mainly as in G. 1, but with the addition of some apocryphal matter. The teleological argument for the existence of God is often emphasized.

10. The Prophet's apologists.—The distinction drawn in the case of the founder of Christianity by D. F. Strauss 1 between the historical and the mythical can be accommodated to that of the founder of Islam, though as regards Muhammad we have not so much to cite canonical documents as to contrast the impressions left by the biography of Ibn Ishaq with the character of the Prophet as it appears at later periods of Islam. That biography will be seen, left room for some important supplements and called for modification in certain respects.

The character attributed to Muhammad in the biography of Ibn Ishaq is, as has been seen, exceedingly unfavourable. In order to gain his ends he recites from no expeditious, and he approves of similar unscrupulousness on the part of his adherents, when exercised in his interest. He profits

1 Das Leben Jesu für das deutsche Volk bearbeitet, Leipzig, 1854, p. 33ff.
to the utmost from the chivalry of the Meccans, but rarely requires it with the like. He organizes assassinations and wholesale massacres. His career as tyrant of Mekkah is that of a robber chief, whose political economy consists in securing and dividing plunder, the distribution of the latter being at times carried out on principles which fail to see his followers' ideas of justice. He is himself an unbridled libertine and encourages the same passion in his followers. For whatever he does he is prepared to plead the express authorization of the deity. It is, however, impossible to find any doctrine which he is not prepared to abandon in order to secure a political end. At different points in his career he abandons the unity of God and his claim to the title Prophet.

This is a disagreeable picture for the founder of a religion, and it cannot be pleadcd that it is a picture drawn by an enemy; and, though Ibn Ishaq's name was for some reason held in low esteem by the classical traditionalists of the 3rd Islamic cent., they make no attempt to discredit those portions of the biography which bear hardest on the character of their Prophet. The theory that this person's conduct was a model for his followers has in consequence done serious mischief.

Apologies for Muhammad were started in the 18th cent. by H. de Boulainvilliers, who was favoured by Gibbon because this apology provided some instruments against Christianity. More importance was attached to the lecture of Carlyle on the Prophet. The theory that this person's conduct was a model for his followers has in consequence done serious mischief.

The Hero as Prophet, incorporated in the collection called On Heroes and Hero-Worship (London, 1841), in which Muhammad was taken as the type of a heroic prophet, just as Odin was made the type of a heroic divinity, the author's knowledge of the two personalities being about equal. Another apologist who acquired some popularity was Bowditch Smith, who, too, was satisfied with superficial and second-hand information, and committed the error of basing his estimate of Muhammad's character and aims on the ill-recorded Meccan period instead of on the far more accurately chronicled period of Medina. No European apologist for Muhammad succeeded in having possessed any proper acquaintance with the Arabic sources. Only after the definite assertion of European superiority over the world of Islam, which may be dated from the episcopal invasion of Egypt, and the acquisition of European nationality equivalents or equivalents by large numbers of Muslims, has the necessity for apologies made itself felt in Muslim communities. The most prominent writer on this side is Syed Ameer Ali, but there are many others. These apologists endeavor to discredit the biography of Ibn Ishaq where it shocks the European reader; and, where this cannot easily be done, they suggest imitable motives or suppose the course followed by the Prophet to have been the least objectionable of those that were open to him at the time. Thus his tolerance of polygamy is declared to have been a limitation with the view of ultimate suppression, and his attitude towards slavery is regarded as similarly intended to lead to its abolition. He has even been made to set an example of monogamy, but the ingenuity required for this is not great and the result is unconvincing. But, while Muslim dogmas, by assuming whatever the Prophet did must necessarily have been right, renders apology unnecessary, from the earth there has been no such edifying fiction in which the Prophet is shown to have practiced all the virtues which mankind agree in admiring. The lines on which the historical character has been distorted and a mythical character substituted have in the main been three.

(1) In the Qur'an Muhammad on the whole disclaims the character of a human, arguing that his predecessors were ordinary men, though he accepts the most important of the miracles ascribed to Moses, Jesus, and others (e.g., vii, 169, liii. 43). The miracles which he claims are victories in the field, won by the sword, and which the Qur'an itself, which is a miracle either as containing historical matter to which the Prophet had no natural access or as being of unattainable excellence (cf. xxvii. 1 ff., liii, 1 ff.). To these it is possible that one case of foretelling the future, viz. the recovery by the Romans of the territory seized by the Persians in the Near East (xxx. 2 ff.), should be added, though the text of the Qur'an does not insist on this as evidence of mysterious knowledge. Since the miracles of earlier prophets are attributed by the Qur'an, this scracity of the miraculous doubtless from the first constituted a serious difficulty to Muslim controversialists, and it is likely that in Muhammad's lifetime many miracles were attributed to him which he did not himself claim; in time he was credited with the analogue of every miracle of consequence in either OT or NT, with the exception of raising the dead, which perhaps was not ascribed to him on the ground that his own resurrection never became a dogma of Islam. In works of the 4th cent. of Islam these miracles are collected and, as usual in Muslim works, attested by chains of authorities, under the title 'Proofs of the Mission.' The most frequent narrated of these miracles is the 'splitting of the moon,' for which it seems possible to adduce Qur'anic attestation (liv. 1), though perhaps the text should be taken hypothetically rather than as an assertion. Another form of miracle which was popularly attributed to him was foretelling the future; even the reverse which he sustained at Ubud was, according to the tradition, revealed to him in a dream, though the official account of that affair in surah iii. 133 ff. makes no allusion to the warning. Of marvellous experiences which that which has attracted most attention is his supposed ascension into heaven, which grew up out of the Qur'an (xvii. 1), which merely says that God took his servant by night from the sacred place of prostration to the furthest place of prostration, usually supposed to mean from Mecca to Jerusalem. It is probable that this reference is made in the same surah (xvii. 62), where it is coupled with the accursed tree in the Qur'an as a temptation to the people, i.e. a stumbling-block to those whose faith was weak. Nothing more is known of this 'dream,' of which we should gather that the Qur'an had contained an account which was afterwards expanded; but in the tradition it has been so expanded as to form the analogue on the one hand of the Christian Transfiguration, on the other of the colloquy of Moses on Sinai. There is even a tendency to ascribe to this ascent into heaven such non-Qur'anic legislation as is generally adopted by Islam, in the same way as analogous Jewish legislation is called 'rules given to Moses on Sinai.' In the story that the Prophet was transferred from Mecca to Jerusalem and from Jerusalem to heaven we probably have a combination of gospels on the one hand, the 'further place of prostration,' the meaning of which is obviously obscure.

(2) The Prophet's sayings and doings were made into a source of law, corresponding with the Oral Law of the Jews, and, like the latter, at first written down. The great collections of these precedents or rulings date from the second half of the 3rd Islamic cent., but their accumulation goes back to the 1st cent. of the migration, when the
system of jurisprudence began to be established by the latter of the two leaders. The impartial criticism of these traditions seems to lead to a purely negative result; the practice of inventing scenes in which the Prophet delivered some judgment or of fathering sayings upon him was so common during the early part of the Islamic period that it is almost certain that any genuine sayings of his are inextricably mixed up with such as are apocryphal. The native criticism of this tradition consisted in ascertaining if possible the credibility of the person who handed it down. This was by no means easy, and various motives prevented those who endeavoured to criticize it from exercising judgment fairly; hence the chains which are technically regarded as strong appear to the Muslim critic naturally weak. The Prophet's merit as a legislator must, therefore, be judged exclusively by the Qur'an; for, though the rest of the 'sacred code' is ascribed to him, there is little reason for thinking it to be his.

3. The Prophet is supposed to have expressed opinions upon all sorts of subjects—e.g., medicine—and writers of essays usually start by quoting these dicta. Those which have to do with the condemnation of vices or the condemnation of vices were collected on a considerable scale by Ghazali (+565 A.H.) in his Revival of the Religious Sciences (Cairo, 1262 A.H.), the standard text-book of orthodox Islamic theology; he was, however, criticized severely for employing so many spurious dicta, many of which could be traced to fabricators.

11. The Prophet's Companions.—No account of Muhammad, however brief, can be omitted of his companions, the persons by whose instrumentality he accomplished so much. Many of these became historical figures, as sovereigns, governors, or generals; it is remarkable that none of them undertook the office of biographer or even editor of memoirs.

The tradition implies that certain institutions were suggested to the Prophet by one or other of these adherents; but there is no evidence that he was seriously influenced by any one of them, and we should gather that their attitude towards him was that of worshippers. Although the later parts of the Qur'an approach the character of official documents, and we actually have a State paper inserted in surah ix., it is not certain whether these associates had any share in their composition. Indeed, such participation would have been at variance with the theory that the surahs were direct communications from the deity.

Omar, both of whom gave their daughters to the Prophet, as the innermost cabinet; the former is said to have been regularly in favour of mild, the latter of severe, measures. Of emissaries sent to teach we hear very little; an agent was sent to Medina to prepare for the arrival of the Prophet, but the duties of this person were probably political, at least as much as religious; and, when the policy of winning the Arab tribes had commenced, missionaries were sent to teach theology to those portions of the Qur'an which were to be employed in the liturgy; these missionaries appear, however, to have had in part military character.

When the time had come to extend the mission outside the environs were sent bearing copies of the Prophet's letter to all monarchs known to him; but, as those contained a command to adopt Islam on pain of being attacked, there was no occasion for the messengers to endeavour to persuade.

The theory that Islam is primarily a political adventure is borne out by the subsequent careers of its most distinguished adherents. They accumulated fortunes, and otherwise obtained conspici-

ous worldly success; Omar is credited by some historians with consummate statesmanship, and several others displayed talents as commanders of armies; but there was much rivalry for the first place, and a quarter of a century after the Prophet's death different groups of Companions vied with each other. The latter legend transforms all of them into saints and preachers, and sometimes into ascetics. This is done in particular in the case of 'Ali, of whom a sort of cult arose, especially in Persia, and which presents him as an ambitious libertine, endowed with personal courage, but little else that merits admiration.

12. His domestic affairs.—The women of the Prophet's family enter into the story of his career somewhat as they enter into the subsequent history; the tradition makes the first wife, Khadijah, a woman of wealth, whose acceptance of her husband's claim to a supernatural mission was an important element in determining its success. Her death is said to have occurred shortly before the migration. Since his followers at Mecca were at least to some extent persons who required temporal support, it is likely that her wealth (over that term may have meant) was devoted to this purpose and, indeed, consumed therein. After her death the Prophet began that course of polygamy and concubinage which has given offence to European students of his character, but which appears to have scandalized his Arabian contemporaries, except, indeed, in the case of his marriage with the wife of his adopted son, which is defended in a Qur'anic revelation (xxxiii. 4). On two other occasions the pages of the other book are devoted to the Prophet's domestic troubles—once when his girl-wife A'ishah had incurred the suspicion of unfaithfulness, and was defended by a special oracle (xxiv. 11 ff.); and another time, when, owing to the introduction of a Coptic concubine to the harem, the remaining members of it were so embittered that the Prophet threatened to divorce them all, and the revelation which he produced assured him that he would be able to find adequate substitutes (xxxvi. 1 ff.). Since matters no less private and delicate find a place in the prophetic books of the OT (Hosea and Isaiah), perhaps their presence in the Qur'an ought not to shock us; nevertheless the tradition states that if the Prophet had married to A'ishah, the Qur'an would have benefited by the omission of the affair of the adopted son, and this criticism might be extended to the others.

In several of these marriages it is easy to see that political considerations were dominant. Muhammad, like other leaders, wished to unite his chief helpers to himself by as many bonds as possible, and to get a hold on dangerous opponents. Had he had sons, he would probably have utilized them in the pursuit of this policy. Of these women A'ishah, the daughter of his most faithful follower, Abū Bakr, played a historical part of great consequence, and in the first civil war herself took the field. The descendants of the Prophet, distinguished since the year 773 A.H. by green turbans, all trace their pedigree to Fātimah, his daughter by Khadijah; the other daughters appear to have died without issue. Fātimah herself, the wife of 'Ali, seems to have been cruelly treated by the first successor, and died six months after her father, being called to play a political part for which she was unfitted in supporting her husband's claim to the succession. It is significant that the exact number of his sons is unknown, though it is certain that all died in infancy. Of one, born late in his life of a Coptic concubine, sent as a present by the Byzantine governor of Egypt, the death was synchronized with an eclipse of the sun, supposed to be that of 27th Jan. 632.
MUHAMMADANISM.

China (M. Hartmann), p. 888.

MUHAMMADANISM (in Central Africa).

Muhammadanism is said to have reached Central Africa through the Persians or their vizirs of Tripoli via Ghadamis to Timbuktu, and Algeria via Wargila. Certain details of the dates of its introduction into various communities were collected by the traveler, H. Barth; about A.D. 1000 it found its way into Songhi, near the end of the 11th cent. into Kanem, about 1500 into Bagirmi, and not much later into Katsena. It was introduced into Logon about the beginning of the 18th cent. In the neighborhood of Tripoli a number of indigenous Muslims in British Central Africa was 50,000 as compared with 950,000 fetishists. Its introduction in certain places is connected with the names of historical personages; the chief missionary of Central Negro land was one Muhammad b. 'Abd al-Karim b. Maghili, a native of Buda in Tawat, who flourished about 1500.

The Islam of Central Africa seems to be everywhere of the Malikite school; and, if it has produced a literature, few monuments of it have as yet come to light. In Revue du monde musulman, xil. (1910) 197 Ismael Hamet gives a summary of the history of Egypt by L. Magnin and b. al-Mukhtar of the Kenite tribe of Asawwad; this personage died in 1826, twenty years after the completion of his work, which consists of an edifying biography of his parents, containing the kind of matter which is usually found in hagiographies. In Revue du monde musulman, xiv. (1911) Hamet gives extracts from the works of a somewhat earlier writer Sidi Muhammad b. 'Abd al-Ya'dili (f1752), a poem by whom in praise of the Prophet was published by L. Magnin (Gaz. VIII (1909) 199). Some contemporary poems (satiros) by one Bakai were published by Barth. There appears to be nothing in these specimens that is distinctly African. In the same magazine (vol. IX, 499) Masson published the catalogue of a library belonging to a Central African chieftain Shaikh Sidia; the editor notices the absence of books bearing on philosophy, alchemy, and music, but otherwise it does not differ in character from the same libraries, and the want of representation of these subjects may be due to accident.

T. H. Weir, 1912. More recent biographies are those by H. Grimmke, Mohammed, Munich, 1904, and D. S. Margoliouth, Mohammed and the Black World, London, 1905. Besides biographies, numerous works deal with either the prophetic character of Muhammad or certain aspects of his work. One of the most important is the Sūra 'Abād al-Muhammad (f. 160 A.H.), on which there is a vast literature, described by Hāfiẓ Khālīfīr in 56 cit.; the ed. of Constantineople, 1335, in 4 vols. with the commentary of Khātībī (f. 1105 A.H.), is probably the best. Somewhat similar is the Mawdūṣāb al-Darājāt of Qanātlī (f. 663 A.H.) with the commentary of Zārūkī, 8 vols., Cairo, 1278. Of European works mention may be made of O. Faniuze, Mohammedische Lehrer von der Offenbarung, Leipzig, 1894; O. Procksch, Uber die Bibeltexte und Mahommedanische Sprachregeln zu far, do. 1899; P. Cassanova, Mohammed et les Prophètes de l’Islam, 3 vols., Paris, 1914. The ninth volume of V. Chavouit’s Bibliographie des sources arabes, CONSTANTINOPLE, 1909, contains a list of all European works on the subject from 1610 to 1885.

Turkey (F. Giese), p. 905.

Africans commenced shortly after the conquest of Egypt by 'Amr b. al-'As, who in A.D. 641 penetrated to the Red Sea as far as Baraa, marked by the Nile and its affluent, Tripoli by storm. It was not till the autumn of 647, however, that an expedition on a great scale was organized for the subjugation of Africa, where the Patriarch Gregory had declared himself independent of the Byzantine emperor, and made Sbeitla (in Tunisia) his seat of government. The Arab invaders, 'Abdallah b. Abi Sarh, who had advanced through the interior, defeated the forces collected by Gregory in the plains of Egypt, who was himself perished, took and pillaged Sbeitla, and proceeded to devastate the country southwards as far as Gafsia and Jerid and northwards as far as Marmajanna. Permanent occupation was not yet contemplated, and the conquerors were satisfied with a heavy money payment, on the receipt of which they withdrew; certain conversions, however, were made. The civil war which followed the death of 'Utman delayed the activities of the Muslims in this region for a time, but in 665 the first Umayyad Khalifah, Mu'awiya, dispatched an expedition thither, which overcame the troops sent by the Byzantine emperor, and in 699 established a province in Africa, with Tripoli as its capital, for its first governor, who for the first time employed Berber converts as soldiers, and founded the city of Kairawan. Since the Islamic programme was carried out by this governor, who threatened the pagans with extermination, the religion began to spread fast among the Berber tribes. In 675 'Uqbab was replaced by a less vigorous governor; but he was sent back to his province by Yazid I. shortly after his accession, and proceeded to organize an expedition which finally reached Ceuta in the extreme west of Africa, whence he turned south and saw the Atlantic before starting home- ward; but he did not again reach Kairawan, as his army was attacked by superior forces and annihilated at Tebhala, N.E. of Biscar. His defeat and death (683) were followed by a general revolt of the Africans from Arab rule, and an independent Berber state, with Kairawan for capital, was able to maintain itself for five years. In 690 this state was re-taken by the Arabs, who, however, evacuated the province, which lapsed into anarchy. An end was put to this by Mūshā b. Nusair, sent in 706 to Kairawan as governor of Sirīgīyūs, who traversed as far as the four corners of the country, previously invaded by 'Uqbab, penetrated as far south as the Oasis of Sijilmassa, took Tangiers, and installed
MUHAMMADANISM (in N. Africa) 881

a Berber convert there as governor. He returned to Kairawan in 708, having definitely won N. Africa to Islam, and put an end to Christian domination where it still existed. The Khilafahal of Unayyad ‘Omar II. is said to have manifested zeal in the propagation of Islam among the inhabitants of these territories.

The Berbers, who were giving much trouble in the eastern dominions of the Khalifahs, also sent missionaries to the west, where they found a ready hearing among the recently converted tribes. The Sufi doctrine spread among the westerly tribes of N. Africa. In 740 a revolt broke out in the extreme west against the Unayyad ruler in favour of the Khairijite doctrine, and, as it met with some initial success, it spread over Muslim Africa; a Syrian force sent by the Khalifah Hishâm to quell the rebellion was defeated on the Seôr. Another force headed by the governor of Egypt in 742 was more fortunate; but, though Kairawan was rendered secure, the Khairijites maintained themselves at Tlemcen and in the neighbouring parts of the modern Morocco, and various independent Khairijite communities established themselves to the west of the continent.

At the beginning of the 9th cent., while the dominions of the Khalifahs were extending, a settlement established itself at Kairawan, under the nominal suzerainty of the Khalifahs of Baghdaäd, but virtually independent, an ‘Alid dynasty called the Idrisid became dominant in the west, and in 808 founded the city of Fez. The Idrisid were of different stock from the ‘Abbasids and established themselves in various places. The great event in the history of Muslim Africa during this century was the arrival of the Fatimid missionery Abû ‘Abdallah, who won adherents among the Kettama, and by skill in the art of propaganda alienated the Aghlabites, and install Kairawan as a Shi‘ah dynasty, which presently substituted for Kairawan a new city, Mahdiyya, as metropolis. The petty principalities to the west of Kairawan alternated in their allegiance between the Unayyads of Spain and the Fatimids of Mahdiyya, but the latter remained the dominant power in N. Africa until they, having conquered Egypt, transferred their capital to Cairo. At this stage of their possession of Mahdiyya a dependent dynasty called the Zirids, who in the middle of the 11th cent. threw off Fatimid suzerainty. As the 11th cent. neared its end, the Almoravids dynasty, founded by an Arabic emigré, Yüsuf ibn Tûmân, with his capital at Morocco, obtained the hegemony; and this, in the middle of the 12th cent., was displaced by that of the Almohads founded by Ibn Tûmân, which under its first actual sovereign, Abû al-Mu‘âmin, obtained possession of all N. Africa as well as Spain. This dynasty lasted one century only, and was succeeded by three—the Merinids with their capital at Fez, the Zayanids with theirs at Tlemcen, and the Hafsids, with theirs at Tunis—which occupied the throne of Morocco and continued to hold it in a state of turbulence for some two centuries. In the 16th cent. various points on the north and west coasts were seized by Portuguese and Spanish forces and then by Turks; the three native dynasties disappeared, and, whereas that of Tunes gave way to Ottoman domination, which had Algiers for its centre, in the west a new empire, that of the Sharifs, arose. The capital of the Sharifs was transferred to Cairo, and Morocco continued as a state of Moroccans; and sometimes Mekeen; their first dynasty, that of the Sa’dians, lasted from 1520 until 1654, when it was ousted by that of the Hassans, which became prominent in 1633. The Sharifs and the Turks were succeeded in existing the Christian invaders from the places which they had occupied, but in 1830 Algiers was occupied by the French, whose empire has ever since been extending in N. Africa. The connexion of the Turkish settlements in N. Africa with the government of Constantinople grew constantly less from the time of their establishment, and the raise of Algiers was easier in maintaining his authority over the territories which lay to the west of that place.

The population forming the Islamic communities has remained Berber in the main. The influx of Arabs at the time of the original invasion, the introduction of the Arab tribes Hilal and Sulaim in the 11th cent. has been of great importance for the political development of the country. These tribes, which were already in the country, it is said, sent westwards by the Fatimids Khalifah Mustansir, by way of avenging himself on the Zirid Mu’izz, who in 1048 had accepted the suzerainty of the Abbasid Khalifah, destroyed the Ifertella college at Kairawan, where the Shi‘ah doctrine was taught, and burned in public all that was indicative of Shi‘ism. The Arabs advanced victoriously, and compelled the Berber sovereigns to make terms with them; under the Abbasids some of the divisions of these tribes were introduced into the western provinces and employed by the government as a military force.

Indeed, their risings form a chapter in the history of N. Africa. Towards the end of the 17th cent. the Hassânids of Morocco procured a great number of Negroes, of whom they formed agricultural colonies, chiefly in the neighbourhood of Morocco, enjoying various privileges, but bound to place all male children from the age of ten at the disposal of the Sultan with a guarantee for his guard, while various employments were also found for the females. By the end of his reign as many as 150,000 of these black soldiers were registered in his lists; they were placed under the patronage of Bukhari, the author of the chief collection of traditions, whose sanctity in certain parts of the Islamic world approaches or even exceeds that of the Prophet. The purpose of this scheme was to provide the Sultan with a gendarmerie unconnected with the native population, on whose fidelity he could rely. A Turkish and a Levantine element, neither very considerable in magnitude, were introduced into the eastern provinces by the Ottoman conquests.

2. Sects and orders. - It will have been seen from this sketch that during the first four centuries of Islam both Khairijite and Shi‘ite opinions held sway in different parts of N. Africa. The former are still represented by certain isolated communities (see Arab. KHAHAR); when the Zirids asserted their independence of the Fatimids, Shi‘ite opinions were condemned, and a general persecution of those who held them took place (1014); some years later (1045), on the occasion of a further dispute between the Zirid and the Fatimids, the former asserted the legitimacy of the Abbasid Khalifate and proclaimed the orthodoxy of the Malikite system, upon which they had insisted. The founder of the Almohad dynasty was a follower of the Asharite theology, and himself propagated it in Africa, displacing that of the Zahirites (al-Qahshad, ed., al-Ab‘âr, 1815, v. 181). The end of the various dynasties cease to have produced no alteration in the domination of these systems. The histories of the earlier period call attention to two purely African sects, both of which had already died out. The first of these was that founded by Sâlih b. Tariq, prophet of the Baggawra in Tennesa, who about A.D. 750 promulgated a Qurâ‘ containing sûras named after the Ceek, the Elephant,
MUHAMMADANISM (in N. Africa)

're the Asses,' 'Adam,' etc., and was recognized by his tribe. After a reign of forty-seven years he departed to the East, promising to return under the seventh sovereign of his dynasty and leaving his son Elias to continue his work. This successor reigned, we are told, fifty years, professing Islam, but secretly harbouring his father's heresy, which was a form of the orthodox faith of the Haushan. Yunus. Yunus endeavoured to enforce its acceptance under penalty of death, and is said to have razed numerous cities and massacred crowds of his subjects in his endeavour to propagate the orthodox faith. The doctrine seems to have differed from orthodox Islam in matters of ceremony chiefly. It substituted Rabat as fasting month for Ramadán; it prescribed ten daily and nightly prayers instead of five; its sacrificial day was 11th Muharram; its alms tax was a title of all fruits; its ceremonial cleansing was much more elaborate than the orthodox; some of the prayers consisted of gestures without bending of the body; and the formule were in the vernacular Arabic. The sect, however, survived till the middle of the 11th century, when it was suppressed by the Almoravids.

Another Berber author of a Qur'an was Hānim, a prophet of the Ghumarah near Tetuan, who came forward in A.D. 925; in his system prayer was only twice a day, and the only fast was that of the month of Shaban. Purgation and total abstinence, and permitted cows' flesh to be eaten, on the ground that the Qur'an of Muhammad forbade that of the boar only. Specimens of his Qur'an, which was in the Berber language, are given in the Kitāb al-tātibār (tr. E. Fagnan, Constantine, 1900, p. 143), and relics of the sect which he founded exist in the time of the historian Ibn Khaldun (c. A.D. 1400), who asserts that the greater number of Saracens came from the Jebl Hānim, which took its name from this personage, whose actual career appears to have been very short. He was defeated in the neighbourhood of Tangiers by a force sent by the Spanish Umayyads and died in the year 927, and his head was sent to Cordova.

In the year 1228 another prophet arose among the Ghumarah, called Muhammad b. Afitl-Tawžij, who performed miracles and instituted a code; he was, however, cursed by the saint and ascetic 'Abd al-Salam b. Mashish, in consequence of which most of his Berber followers withdrew from him. The prophet in retaliation caused the saint to be assassinated, but he himself shortly afterwards was defeated by the garrison of Ceuta, and killed by a Berber; his descendants are still to be found in the neighbourhood of the Wad Ras, where, however, they are under a sort of ban, and forbidden access to the Jabal Alam, where the saint Ibn Mashish dwelt, of whose cult hatred for the Bani Tawžij formed a part (Archives marocaines, ii. [1905] 24). Ibn Khaldun gives no details of the system which this prophet founded, but states (Hist. ed. Cairo, 1824, vii 222.) The title 'Mahdi' is said to have been taken by the first of these prophets, and, being less likely to offend popular prejudice than the title of prophet, was assumed by many pretenders in Africa—e.g., the founders of the Fātimid and Almohad dynasties, a contemporary of the former, 'a young man' at the commencement of the reign of the Fātimid Mansūr (A.D. 948). It is impossible to determine whether it was introduced into Morocco in 1239, definitely rejected the claim of the founder of his dynasty to this title, asserting that the only Mahdi was Jesus, the Son of Mary. Yet, however, it may be accepted, as is Mimar, that Ibn Tunit was a false. Numerous claimants to it have risen since that time (see art. MAHDI).

Of an obscure sect called the Badújwa, located on the right bank of the Sebu, an account is given by G. Salmin in Arch. in Orien, ii. [1905] 359-363. A branch of these called 'the sect of Yusuf' is mentioned as having arisen in the 10th century (ix, xix. [1918] 214). Apparently they were a sort of ascetics, but differ from other Muslims in points of ritual.

The general dominance of the Mālikite code, of which the most familiar compendium is that of Sidi Khallī (Abu Diya), was not affected by the dynastic changes, except that in the provinces governed by Turks the official system of the Ottomans, that of Abu Hanifah, was introduced without displacing the other; in these regions there were two judi. In the cities of N. Africa there were the orthodox schools of the胄 hole, and teachers of eminence, and such were to be found as far south as Timbuktu, which was made subject to Morocco in 1590; one of the prisoners then taken, Aljmad Bābā, who, with a family of theologians, complained that the conquerors had pillaged his library, which, though containing 1600 volumes, was smaller than others which belonged to his relatives. The Islam of N. Africa was greatly influenced by the introduction of the form of Sufism connected with the name of 'Abd al-Qadir al-Jilāni (q.v.), to whom the establishment of orders is traced. In one of the earliest European accounts of the orders (E. de Neve, Les Khoum: Ordres religieux des Musulmans de l'Algérie, Paris, 1846) various popular beliefs about this personage are collected.

He it is whose name is ceaselessly repeated by beggars desiring alms, and whose name is invoked by all whom any accident befalls. When a man falls, the bystanders and he himself cry out, "Ah, my lord 'Abd al-Qadir!" The misfortune in their suffering, and women in travail, pray him to intercede for them. In the month of Sha'ab 390,000 evils of all sorts descend from the sky; of these he bears three-quarters himself" (p. 351).

Lists of the orders established in N. Africa were made by this writer, and more complete registers were later drawn up by L. Rinn, O. Depont, and X. Coppolani. Some of these either originated in Africa or are only known to have been there.

In the 15th cent. Shadhilism was propagated in Morocco by Muhammad b. Sulaimān al-Jazzālī, who counts as the starting-point of all the orders and sects of this region. An account of this personage, who died in 1484, and is famous throughout Islam as the author of the Dala'i al-Kairātî, is given in Archives marocaines, xix. 277 ff., as an appendix to the treatise Diwān al-Nasnîr of Ibn Askar, which contains the lives of ascetics of Morocco; A. Graule, who is the translator of this work, added it to as a continuation in vol. xxi. [1913] the Nashr al-Mathani of Muhammad b. al-Tayyib al-Qadiri, and proposes to add another supplement the Ghusb al-Muhâjad dar of Jāfar al-Kittānī. The Salont al-asnîf, published at Fez in 1516, is of similar import. The amount of historical matter contained in these lives is small; they serve to edify. The growth of the orders throughout N. Africa, ultimately (according to French authorities) rendering possible a territorial division by sects, was not pursued to have at any time had a beneficial effect either on the morals of the inhabitants. In an essay, "Sur la Mentalité religieuse dans la région de Rabat et de Sale" (Archives marocaines, vi. [1906] 423-435), E. Merete describes the orders in which he witnessed in two towns which count as sacred.
MUHAMMADANISM (in Arabia)

3. Cult of saints.—Closely connected with the orders is the cult of saints, which is wide-spread in N. Africa. The tomb of Idris, founder of the Idrisi dynasty, is a common place of pilgrimage, and both it and other tombs figure in the history as places of refuge. The tomb of Ibn Maahish (see above, p. 882) is visited in the month Shabân, and comprehends a series of visits to those of his ancestors and of the descendants (Archives marocaines, ii, 24). A list of the tombs visited in the month of Shabân is given in Archives marocaines, xx. [1913] 246, 278; of the saints thus venerated the most popular is Sidi Qasim b. Labti († A.H. 1688). What is certain is that he has two sanctuaries, one on the left and one on the right bank of the Sebû (p. 261), and that he has several festivals in the year, one of which lasts three days. A list for the province Habi is given in Archives marocaines, xvii. [1911] 481 ff. These saints have functions corresponding closely with those of the patron saints of Christianity.

Muhammadanism (in Arabia).—One of the results of the taking of Mecca by Muhammad was a determination on his part no longer to tolerate paganism in Arabia, and the destruction of the ancient cults took place throughout the peninsula with extraordinary rapidity; the case with which the fetishists were discarded by their worshipers has elicited expressions of wonder from some who have chronicled the period. It should be noted at times that there are still unexplored regions in Arabia whither Islam has not penetrated, but of these rumours there appears to be no confirmation. As far as the authorities from whom we learn, every tradition of the older religious worship has perished; statements about them which meet us in Arabic literature are ordinarily fictions based on Qur'ânic texts, and the so-called 'pre-Islamic poetry' must, if genuine, have undergone wholesale expurgation. Even the revolts in Arabia which followed the Prophet's death do not appear to exhibit any recrudescence of paganism, but merely a desire for liberation from some of the...
more onerous exactions of Islam; and permanent relief in one matter (the number of daily prayers) is said to have been obtained by one of the rebellious tribes, though the revolt was otherwise a failure. It is worthy of notice that these rebellions were led by prophets who aimed at re-enacting Muhammad's part, not by priests or other representatives of the fallen idols. The liberation of Arabia from paganism was speedily followed by the penalizing of all non-Islamic cults, even the Jews and Christians, whose rights had been guaranteed to the Prophet, being either banished or forcibly converted in the time of the second Khalifah.

The murder of the third of these rulers in the year 35 A.H. was an event of the greatest importance for both Arabia and Islam. On the one hand, as some of the far-sighted are said to have urged at the time, it split the community into sects; complete unity has never been restored. On the other hand, the political centre of Islam was thereby shifted to a point outside Arabia; the Assassins came from Egypt, and the battles for the succession were fought from Basra, Kufa, and Damascus. These cities became the capitals of great empires, and Medina was never restored to the position which it had once held. Arabia has, therefore, ever since been a province, at a distance from the seat of government; and such principalities as have been created within the peninsula have been mediocre both in magnitude and in importance. Such talent as Arabia produced has been attracted to the political centre, whereas the peoples attracted to it from outside have been mainly deserters.

There are, however, certain ways in which the influence of Arabia upon Islam has been constant or permanent. On the one hand, Mecca has maintained its position throughout history as the greatest Islamic sanctuary; some sovereigns are said to have contemplated substituting either Jerusalem or Bagdad, but to have abandoned the idea as impracticable. This place has not only served to perpetuate the traditions which Islam took up in its earliest times, but has also served as a rallying ground for the sects; and only occasionally has its sanctity been violated. Mecca is the place where the Islamic world as a whole can be most easily addressed, and this is particularly the case with the sunniya, which are usually reactionary, have a tendency to materialize there.

On the other hand, Medina remained the chief seat of Islamic learning some generations after it had ceased to be the political capital. At this place, the residence of the Prophet's widow, several of whom survived him for many decades, and the theatre of his most eventful years, the science of tradition came into existence, and this speedily became the most important source of law, though not the first in the list. In the 1st cent. of Medina's productions a school of jurists who, though they left nothing in writing, by their labours prepared the way for the code whose publication followed shortly after the foundation of Bagdad. In the middle of the 2nd cent. it was the home of the jurist Malik, who received as pupil Shafi'i; Shafi'i in later life went to Bagdad, where his conscious ability could find its reward. With the names of these personages two of the three great Islamic codes are connected. It is, therefore, Arabian (and indeed Medinan) law that is theoretically preserved throughout Islam, though in the more civilized States the civil and criminal portions have given way to the Code Napoleon.

The development of the other Islamic sciences has little to do with Arab culture, which is this matter has lagged behind the other provinces. The chief battles of the sects, too, have been fought outside Arabia; they could not, however, cut quite adrift from the sacred territory, where they did not, as a rule, win many enthusiastic adherents. There has, however, been always a smouldering desire to recover that hegemony which was lost and to establish the murder of Othman; hence there has generally been a disinclination towards the ruling power. Perhaps the most serious attempt made at recovering the lost hegemony was when in the early Abbasid period Abdalrahim, son of Zubayr, was able to maintain the two sacred cities, Mecca and Medina, for a time against the Unrayad generals. His cause perished with him; and rebellions which have since taken place in Arabia have had for their object recovery of independence within the peninsula rather than re-establishment of the political headquarters of the empire.

An account of the religious condition of Arabia in the 4th cent. of Islam is given by the geographer al-Maghaddasi (ed. M. J. de Goeje, Leyden, 1877, p. 36). The three great political sects, the Sunnis, the Shi'ahs, and the Kharijites (called by them Shurtâ), were represented in different parts of the peninsula. One sect which has since disappeared, the Qarmatis, was dominant in Hajj. The Qarmans were not then restricted to four, and, besides the systems of Abû Hanifah and Malik, those of Dâwûd the Zahirî, Suyûfî al-Thauri, and Ibn al-Munshir had adherents. The Shi'ites in the course of the 8th cent. were distinguished as Mu'tazilites.

Of the rise of the Kharijî power in Oman an account has been given in the art. BRADS. Of a Kharijî who maintained himself in Yemen from 538 to 569 A.H. a notice is given by Ibn Khaldîn (tr. I. C. Kay, Oman's History of Yemen, London, 1892, pp. 161-165). The branch of the Shi'ah which has maintained itself permanently in S. Arabia is the Zaidi (q.v.). It is called after a descendant of Ali, Zaid, who is said to have led in an abortive rising of the year 129 A.H. For its history, references may be given to the work of H. C. Kay (pp. 184-190), and Khazrati's History of the Basleli Dynasty of Yamam (tr. J. W. Redhouse, London, 1897). An account of the Qarmatis in Yemen by Janadî is also translated in the work of Kay (pp. 190-212). Other sects were either at one time represented in Arabia or are still to be found there; of a Shi'ite sect called Sabiyya representatives are to be found in Armenia and in the district of Yam (Abul Rasahid, History of Yemen and Some of its Tribes, Constantinople, 1291 A.H., ii. 87); their views appear to be similar to those of Azkitir (Yaqût, Dictionary of Learned Men, ed. D. S. Margoliouth, London, 1907-13, i. 301). Probably the most important religious movement which has taken place in Arabia since the rise of Islam is that called Wahhabi (q.v.), the origin and course of which have been described by the English travellers W. G. Palgrave, Lady Anne Blunt, C. M. Doughty, and the Austrian traveller E. Noldé.

So far as the literature of these sects has hitherto been made accessible, it would appear that they have had to adopt and modify the results of the labours carried on at the great Islamic centers, and have themselves been incapable of producing original works of any genuine value. There are few specimens as yet accessible of purely Arabian theology, Al'Ibn al-Shâ microbi, by Said b. Mâhî of Yemen (+1108 A.H.), in which an endeavour is made to find a (false) law that is proposed, giving behind the supposed innovations of the founders, appears to rest entirely on the older theological works, already known in Europe, the authors of which were natives of extra-Arabian provinces. We can mention the Sufi orders and practices, which originated in Bagdad and Basra, were in the author's time
MUHAMMADANISM (in Central Asia) — 885

well represented in S. Arabia. Against these the Wahhabi movement in the centre and north of the peninsula was to some extent a revolt.

From the statements of the few travellers who have spent much time in the peninsula and have been able to familiarize themselves with its conditions it would appear that the great bulk of the population are, in theory at any rate, fiercely Muhammadan, but that the observation of the practices which the system enjoins is much more irregular in the islands. Moreover, there is considerable difference between the statements of different travellers, and much variety has doubtless been occasioned by local, temporal, and personal factors. When K. Niebuhr (in the latter half of the 18th cent.) visited S. Arabia, he found that a Christian was there treated somewhat as a Jew was treated in Europe—as an inferior being, but not necessarily to be molested. Perhaps the greater number of visitors in the 19th cent. either adopted or simulated Islam; and this, indeed, has been a necessity in the sacred territory, where the presence of unbelievers is not tolerated by the government. In the Wahhabi States the tendency seems to have been in the direction of tolerance; yet on this matter almost contemporary accounts are inconsistent, and it would appear that the demesnour of the traveller has largely determined the conduct of his entertainers; even a missionary who is the avowed object of circulating the NT was only sent under escort out of the Wahhabi territory. The explorers of S. Arabia appear to have undergone little molestation on religious grounds; intertribal wars and intestine conflicts have interfered with them much more. It is worth noticing that the Cairo newspaper, which is conducted ostensibly in the interest of the Muslim chieftains of S. Arabia has for its proprietor and editor a Christian with the unmistakable name of Al Masri, "Slave of Christ."

LITERATURE. — This is sufficiently quoted throughout the article.

D. S. MARCOURT.

MUHAMMADANISM (in Central Asia).—In sketching the peculiarities of Islam in Central Asia, it is necessary to begin with the impression which the difference between the religious life in western and middle Asia must make upon any one who has occasion to pass wide-spread portions of the Muhammadan world. From Constantinople east a gradually increasing fanaticism and ignorance will be observed, and the deeper the penetration into Asia, the more outspoken and intense becomes the hatred and aversion of the believer to the adherents of a foreign creed, and the less is it possible to ignore the points of divergence separating men of various religions. In Turkey, where Christians and Muslims have lived for centuries in close proximity, a long existing and continuous intercourse with the European world has undoubtedly smoothed away many aspersions, and has, to a certain extent, prepared for a natural understanding. In spirit, the temporary outbreak of enmity between Kurds and Armenians, caused by the predatory habits of the Kurds and not by their religion—for they are very lax Muslims—the relations between Christians and Muslims would be much better if the misrule of the central government on the Bosphorus and the political instigations from without did not so constantly envenom the situation. In Persia Islam presents itself in quite a different form: there first appears the deep-rooted enmity between Shi'ites and Sunnites, and the fire which this schism kindled more than 1200 years ago is still raging. As for the life of the Shi'ite sect, what the present writer saw and heard during his wanderings as a dervish in Iran gave him a very poor opinion of their piety and the moral effect of their teachings. Outward appearance and formalities, hypocrisy and fanaticism, hatred and impiability, are the main characteristics of the national religion of Persia; whereas in Turkey a good deal of the hierarchical power is invested in the hands of the Sultan, in Persia we find the clergy the supreme arbiters of the spiritual life, unchecked by the secular government and frequently their rival. During the more than 100 years' rule of the present Persian dynasty the Shah have striven in vain to curtail the influence of the priests; the Imam Jum'a of Isfahan and Karbalah were dead and are thus equally if not superiors in power, and the Shah's ordinances are nil without their consent.

If we turn now to Central Asia, the difference will at once appear which separates Islam there not only from Iran—which is very natural—but also from the western portion of the Muhammadan world, in spite of their common Sunnite character and common Hanfite rite. For it is only in E. Turkestan that adherents of the Shafi'i rite are to be met with. There we find a distinctly different religious life, the manners and customs of which do not resemble those of W. Asia. There everything bears the stamp of extravagant fanaticism, of an exalted conception of the duties of religious life, of an elaborate performance of religious duties, and of a deep hatred against innovations. In observing the Central Asian Muslim in his daily life, his social intercourse, his trade, and his attitude towards his government, one is tempted to believe that the Turks of the 14th, but in the 2nd cent. of the Hijrah, and probably even then the prescribers of the Qur'an and the Sunnah were hardly so rigorously observed as they are to-day in Central Asia. Nearly one-third of the day is devoted to religious duties. Every good Muhammadan has in his room a quadrangular depression for the ritual ablutions, a niche in the wall in which to keep the Qur'an, and a special place reserved for the adjutah, or prayer carpet. Like most Orientals, he is careful to have his dress in harmony with the prescriptions of his religion, and not the slightest alteration has taken place in the cut and shape of his inner and outer garments. Any deviation from the old fashion, be it only in button or braid, is looked upon as an infringement of the spirit of the law. Even the material of his dress is under rigid rule; and, as the use of pure silk is prohibited by orthodox Islam, the silk stuffs manufactured in Khorassan and Khoqand are intermixed with a few threads of cotton. The turban, also, the jubba, or overcoat, and many other garments have undergone no change for centuries, there being a predominant desire to imitate and reproduce the usage of the Muslim world of bygone ages, and particularly of Baghdad, Damascus, and the holy cities of Arabia. The case is similar as to the relations between the sexes. The separation is much more strict, and women are looked upon as mere chattels and slaves in the hands of a tyrannical master, in spite of the milder views of the Qur'an and its exponents. They not only cover their faces with a thick impenetrable veil, but are literally smothered in a cloak of greater length and width than their body; and, in order not to attract the envious glance of men, young girls even have to feign the appearance of old decrepit matrons, and very often walk leaning on a stick, as if bowed down by age or infirmities. The prohibition, also, of alcoholic drinks is very naturally more rigorously enforced than elsewhere in Islam, although in former times the ruling for indulging freely in spirits; during the epoch of the Timurid princes are mentioned who died

1 Description de l'Afrique, Amsterdam, 1774, p. 42.
of delirium tremens; and Bābār and his followers transported this vice to the court of the Mughals. This, however, could not be said of the maces.

In the present writer's time (1862-64) they were rigorously abstemious, and it is only since the annexation by Russia that the use of brandy and beer has begun to spread among the inhabitants of the towns.

In the observance, then, of the ruling precepts of the Qur'an and Sunnah the Muhammadians in Turkestan surpasses all his con-religionists elsewhere; his creed is the moving power in his spiritual and material life; by it he is guided in all his undertakings, thoughts, deeds, and wishes. His Muslim brother in Turkey and Persia is satisfied when he is able to perform his five daily prayers, consisting of a certain number of rak'ahs (bowings), and has spent three to six minutes at muraqabah (contemplation). The religions man in Central Asia must go far beyond this, for he has to add a few nāfšūḥ (additional) rak'ahs; he remains from ten to fifteen minutes in contemplation, and, after having performed this extra prayer, he has to read in the forenoon either the surah Yā Sin (xxvii), or Innā Allāhu la ilāhi, and in the afternoon he has to recite a portion of the Mathnawi of Jalāl al-Din Rāmī (p. r.), or to chant a few idāhās (hymns). This form of devotion is obligatory on every educated and respectable man, whereas the performance of these prayers is indispensable for every Muslim irrespective of sex, age, or calling; and whoever neglects this duty, or remains ignorant of the elementary teachings of Islam, cannot escape every kind of vexation and reproof from the authorities. For this purpose a special functionary called ro'a (chief) is appointed, who, accompanied by one or two servants, has to traverse the bazaars and the public places with the dervesh, a whip made of twisted twigs, in his hand, and, whenever he notices any one who does not go to the mosque on the first sounds of the muadhdhin (the public crier who assembles the people to prayer), he is entitled to beat the infidel with the whip, or to put him in a prison. The ro'a, besides, plays a great part in public examinations: he stops at random any one in the street, puts him to a question concerning the main prescriptions of Islam, and the individual under examination is liable to be imprisoned, or to be put to death, in consideration of age or profession. Full-grown and even grey-bearded men are sent to school by the religious police to learn their lesson by heart before being allowed to go. The ro'a's, whose office is a survival from the early Khalifate, non-existent elsewhere in Islam, also superintends the laws of public morality. Women indecently dressed are publicly rebuked and sent home, and even children are subjected to his control. What he is still for Central Asia that the muhaddis (police inspector) was for all Islam in former times; but at present, when modern European institutions are gaining ground, the office is but a nominal one in Persia as well as in Turkey. Further, not only are the precepts of the Qur'an more rigorously kept; they are also differently expounded. In Turkey, e.g., the cutting or shaving of the beard has been practised as a natural custom, usually looked upon as a deadly sin, or even as apostasy. In Turkey, again, and everywhere in Islam, it suffices for the believer to wash certain parts of his body after relieving nature; in Central Asia this is a much more circunstancial: he must apply istinjād (cleaning with a flint or with a cloth), istinmād (washing with water), and istitūd (drying).

For this purpose he conceals a few cloths in the fold of his lower garment.

But these and many other peculiarities of Islam in Central Asia are of secondary importance in comparison with one salient phase of the religious life, namely, the wide-spread and highly influential religions orders which dominate the situation, and have ever been the main moving power of the spiritual life. During many years' intimate contact with the Muhammadians of Turkey and Persia, the present writer never observed such strict adherence to the rites of the different orders and such veneration for their members generally called dervishes. In the Ottoman empire—and this is particularly the case with the genuine Turks—the Manlavi, the Bāqṭāshi, the Rīṭā, and the Qādīrī orders have many votaries among the lower classes, and the respective dervishes are looked upon as saints. But the better classes, i.e. the Efendis and the higher dignitaries, very rarely manifest the same degree of attachment. They visit the convents on Friday afternoons, they attend the holy ceremonies, they take advice sometimes on both worldly and spiritual matters; but they have long ago ceased to be weak instruments in the hand of the Shaihkh, and particularly of the Bāqṭāshi, who, having acted as revolutionary factors in the innovations (xiv), and in the time of Sultan Mahmūd II., are officially interdicted and only secretly followed. Somewhat similar is the case in Persia, where the conflicts between Shi'ites and Sunnites engage too much attention to leave room for any one to resume the vociferous and superstitious preaching of the people, or to appropriate to themselves who conceal their laziness under the khaqān (mantle) of religious exaltation.

In the settled parts of Central Asia, and even among the nomads, the orders play a very different and far more important part. There they have taken hold of the entire population; they have pushed aside the secular clergy, i.e. the 'ulama, or priests educated in the madrasahs, and appointed as such by the government. Of course, are not engaged in war with the members of the orders, among whom the Naqshbandis, founded by Bahā al-Dīn, best known as the author of the Roshdālū 'in al-hayūt ("Drops from the Fountain of Life"), occupy the most important place. Having associated with the Naqshbandi dervishes during his stay in Central Asia, the present writer found among them various sub-divisions, the character of which is expressed partly in outer appearance, partly in the way in which they fulfil their obligations. They begin as muraḍa (disciples), and as such they must forsake all worldly purposes and, clad in the khāqān and kulūsh (conical hat), holding in one hand the 'agā (staff) and in the other the kashkāl (a bowl made of a half coco-nut), have to wander about singing hymns or taking part in the dīkār (mentioning the name of God) and tawba (acknowledg-
MUHAMMADANISM (in Central Asia) 887

for two nights without interruption the Ya Hā, Ya Haqq ('He is the true and the right') without exhaustion. This, of course, refers to the upper degree of dervishes, who very rarely attain the rank of ḥafīṣah, a kind of graduate, entitled to preside over a taṣayyūḥ or ḥāngāh (convent), and to lead the ritual proceedings. The title of ḥafīṣah is mostly given to women dervishes, who also are addressed as izādah ('they', as a polite expression instead of 'thou'), and have always a group of followers, who either stay continuously with them or call on them once or twice a week. The Timing of this ḥangiā is really a kind of lodging-house in which there are always a few stationary dervishes, while the majority of the inmates are wandering members of the respective orders, who get a temporary shelter, an empty cell without any furniture or bedding and no regular food, except from time to time a pilau (rice dish), and, if deprived of all means, a piece of bread. The guests and inmates of the taṣayyūḥ regard it as a heaven; and assemble round the chief at the time of the five daily prayers and also at the particular exercises of the dervishes, such as the taṣfīqa (recitation of prayer) and the ḥalqah (ring). The latter is a circle of dervishes, who are all izādah, who sit and cry so long and so vehemently that they pass into a state of excitement and hallucination; their eyes turn wildly, their mouths foam, they tremble in all their limbs, and whoever touches a dervish in this state is believed to have a share in his devotion, and to be cured of all kinds of infirmities. Strange to say, the spiritual leader, who presides over the exercise, always remains quiet and motionless, unaffected by the movements of his followers. He is the centre and expressing his satisfaction only by a complacent nodding. Old and young women, children, greybeards, and particularly all-dressed people, press around; they spasmodically seize the dervishes by their arms, head, or shoulders, the ringing sound of their necklaces and bracelets, crying and sobbing; and some of them actually surpass the dervishes in their ecstasies. In Turkey this excitement, bordering on madness, is somewhat checked by the presence of the public, a similar participation on the part of the people.

In this and in many other respects the Islam of Central Asia stands alone. Everything in it bears the stamp of extravagance, unbridled passion, and, when the believer is expected to follow blindly the tenets of the Qur’an; no discussion or explanation is permitted, nor any effort to attract. Hence we see, that whereas in Western Islam the asūkhā (call to prayer) is given from the top of a minaret in a sweet melodious song, the mu’adalāḥā in Turkestan summons the faithful in rough and half-articulated words from the flat roof of the mosque. The performance of religious duty, they say, does not require any allurement. Austerity and dracoic rigour, too, prevail with regard to neglect or trespass of the laws of Islam. In the present writer’s time a Muslim convicted of the use of alcoholic drinks was sentenced to death by the judge, asserting that a woman cannot go in adultery had to undergo the penalty of rajim (being stoned to death). Strange to say, the Central Asians are themselves fully alive to the exceptional position which they occupy in Islam; they even pride themselves on the fact that they are the most rigorous executors of the ordinances of the Prophet, and the only Muslims whose religious belief has not been contaminated by foreign influence, but has remained as pure and as perfect as the time of the Prophet, in which they call waqt-i-asrādat (the period of happiness). Accordingly, the spiritual leaders and teachers in Central Asia form a distinct class, and enjoy greater fame and reputation in Turkestan and the neighbouring countries than in the West. This refers particularly to the saints (sanah), religious teachers (hidvah), and chiefs of orders (pir), and not to the learned in general. They are peculiarly esteemed and venerated in Central Asia proper, and, though not unknown in the rest of Islam, may be stilled the eminently national forms in which they have taken hold of the religious spirit of the people of Turkestan, Afghanistan, and India. A few of these may be mentioned here, and, first, the previously named Bahā’-e-Din Nāʾīm Bahā’-e-Din Nāʾīm, he was Muhammad ibn Muhammad al-Bukhārī, and, as a pupil of Sayyid Amir Kulā’ī, he was early known for his great learning and piety in Bukhārā, then the centre of Muslim letters. There he founded the order named after him. During his lifetime he became the object of great veneration, and after his death the Amir Abd al-ʿAzīz Khān erected over his tomb in the year 1544 the famous mausoleum and convent near Bukhārā, which has since become the greatest place of pilgrimage in Central Asia, and of such sanctity that three visits to it are deemed equal to a pilgrimage to Mecca. Next to Bahā’-e-Din ranks Khwājah Kāshānī, known as Makhārim Aṣām (‘the greatest of the great’), born in the village of Khwājah in the fortress of Aṣām, who died A.H. 949 (A.D. 1542), and was buried in Dehāb, a village near Samarqand. In the early part of his life he acted as governor of various places, but later he devoted himself exclusively to religious contemplation and theological studies, and aroused so high a veneration that his children reached princely rank. Of these the most noted was the great saint of E. Turkestan, Prey, in the beginning of the 17th century, the founder of a ruling dynasty, members of which still exist in Kashgar. Frequently mentioned and highly venerated also is Khwājah Uṣbaḍ Alī, the one of the highest theologians of his time (A.D. 1589 at Khwājah-i-Khodā, a village near Samarqand), whose grave is still a place of pilgrimage. Similarly with the tomb at Gijduvān of Khwājah Abū al-Khaliq, a pupil of Khwājah Kāshānī (A.H. 1010), he was the founder of the principal of Bahā’-e-Din (A.H. 945), whose grave in Balkh is a place of pilgrimage, particularly for Afghans; Khwājah Abd Allāh Hātiff, a famous poet and mystic, who spent much time in India with the Mogul dynasty, and died there in A.H. 927 (A.D. 1520); and Jābārī (A.H. 997 (A.D. 1583), whose grave is in Bukhārā. Apart from these great theological scholars, saints, and mystics, there are a number of popular spiritual worthies who are venerated by the lower classes, sedentary and nomadic, and whose plain, unadorned, and more intelligible works are the favourite reading of the masses. To these belongs the poet of the northern people of Central Asia. His religious poems, known as Ikwānāt (Wisdom, Philosophy), are still much esteemed, although their language, mixed with Arabic and Persian expressions, is not easily understood by the un instructed natives. West of Turkestan, Mashar (personal name, Rāhib Bābā) is the best south. He was a native of Namangan in Khaoqand, and known as a diedah, a religious madman. A diedah wanders from town to town, behaves like a man insane, but, possessed of divine powers, works miracles, and has consequently an extraordinary influence over the ignorant masses. The present writer’s own observation of these diedahs or fūqar (poor) has led him to the con-
viction that most of them are cunning men with a lust for adventure, ready to exploit the plain people, and unwilling to submit to the sometimes rigorous monastic regulations of the orders to which they belong, or disliking the individuality of their əkən, or spiritual chief. It was chiefly in the villages and in the tents of the nomads that they had religious vagabonds; there they are highly revered. The müllâs, on the other hand, accuse them of ignorance, and of breaking the precept of Islam—La rubhân fi'l-İslâm, 'There are no monks in Islam.' The majority of them are not believers, but the met with divânahs who were versed in religious lore, had studied in madrasahs, and had been moved simply by wandering propensities to renounce the regular and sedentary life of a priest. Among these divânahs there is also a certain Turk-dívânah, a Turk by origin, as the name indicates (date unknown), who is very often spoken of by the nomads as a saint, and who interceded with Allah for sinful humanity. Once asked Him to deliver mankind from hell, to which Allah replied that He would when peace, justice, charity, etc., reigned supreme in the world. Further, among the latter divânahs there are many of local examples; divânahs of such a character are as common in Central Asia as in India, or Persia. The Turk himself is too lazy, too easy-tempered, and too much given to a quiet life to find pleasure in the eccentricities of the divânah; yet, the Samanid Turk, like the Kurd and the Arab, Clings with great attachment to his faith; but he is very far from giving way to the religious ecstasy and wild fanaticism which are imputed to him by his detractors. In this respect the Western Muhammadan is many hundreds of years ahead of his fellow-believer in Central Asia; for the latter has remained absolutely in the position of the first centuries of Islam, and, indeed, at the beginning of the past century was even more fanatical and orthodox than in the time of Hâšîn al-Rašîd and Al-Ma'mûn. Such, however, was not always the case. As long as the Iranian element was predominant beyond the Oxus, worldy science found many votaries, and during the reign of the Sâmânis and later Central Asia was the birthplace of literary celebrities of high standing. But with the increase of the Turk, imputation and hundreds of rules of warlike Turkish chieftains, mostly of nomadic origin, a great change has set in. The place of scientific culture has been taken by exclusively theological studies and mystic speculation. There has been no room for science and philosophy and schools; but the students, flocks from all parts of Central Asia and India, have turned their attention to purely religious questions, neglecting even such subjects as philosophy, law, and philology, which are still cultivated in the colleges of Western Islam.

Naturally, then, scientific inquiry having been gradually banished, religious eccentricity has taken its place, and Central Asia has long been the seat of fanaticism. Ja'âl al-Dîn Rûmî, the author of the Mathnâwî, was right in saying:

'Thou wilt to Bukhârâ? O fool for thy pains! Rather thou goest, to be put among their divânahs.'

Similar things were said to the present writer by his learned friends in Turkey and Persia when they heard of his intended visit to Central Asia; and when, on returning, he related to them his experiences, many of them destroyed and laughed at the overheated religious zeal of their fellow-believers. Another reason for this great difference is to be sought in the belt of dreary sand steppes, infested by nomadic robbers, which surrounds Central Asia, and which has always been a great hindrance to its communication with the rest of the Muhammadan world. Whilst Western Islam has undergone essential changes in the course of time, Islam in Central Asia has remained stationary unaffected by the temporary intellectual movements in the West, and checked by the strong conservatism of a fanatical clergy and a despotic form of government. If Shi'ite Persia had not produced its great sheikhs in the general Muslim world from distant countries have their own influence; in fact, the farther a divânah has wandered, the greater is deemed his supernatural power, and the stronger is his power over the people. The extraordinary influence of the beggâr-divânahs does not lie merely in the utter ignorance of the people, but rather in the tyrannical rule of the governing classes, who, lay and ecclesiastic, are everywhere hated. These unofficial servants of God, then, are credited and despised by the müllâs, are regarded by the lower class as of themselves: they thus very naturally become popular favourites, and frequently play the part of publicly avowed propagators of innovations.

In Western Islam there is hardly a trace to be found of these roaming saints, and those whom the traveller accidentally meets in the Balkan countries, in Asia Minor, and in Syria are mostly found among the followers of the spiritual divânahs in these countries, India, or Persia. The Turk himself is too lazy, too easy-tempered, and too much given to a quiet life to find pleasure in the eccentricities of the divânah; yet, the Samanid Turk, like the Kurd and the Arab, Clings with great attachment to his faith; but he is very far from giving way to the religious ecstasy and wild fanaticism which are imputed to him by his detractors. In this respect the Western Muhammadan is many hundred years ahead of his fellow-believer in Central Asia; for the latter has remained absolutely in the position of the first centuries of Islam, and, indeed, at the beginning of the past century was even more fanatical and orthodox than in the time of Hâšîn al-Rašîd and Al-Ma'mûn. Such, however, was not always the case. As long as the Iranian element was predominant beyond the Oxus, worldy science found many votaries, and during the reign of the Sâmânis and later Central Asia was the birthplace of literary celebrities of high standing. But with the increase of the Turk, imputation and hundreds of rules of warlike Turkish chieftains, mostly of nomadic origin, a great change has set in. The place of scientific culture has been taken by exclusively theological studies and mystic speculation. There has been no room for science and philosophy and schools; but the students, flocks from all parts of Central Asia and India, have turned their attention to purely religious questions, neglecting even such subjects as philosophy, law, and philology, which are still cultivated in the colleges of Western Islam.

MUHAMMADANISM (in China).—I. Historical. —China, regarded as a portion of the Muhammadan world, may be divided into (1) China proper (the 'EIGHTEEN PROVINCES'), and (2) the external provinces (Turkestan, Tibet, and Mongolia). Of the external provinces only Turkestan need concern us here; for the Muhammadan resident in Tibet and Mongolia have never been more than an insignificant fraction. According to H. d'Ollone, Revue du monde musulman, v. [1908] 94, they are to be found all along the highway to India through Tibet; thus, e.g., there is a mosque at Tschulun for the hundred or so Muslim families living in the vicinity, while mosques are found also in Batang and Lhasa; those in the latter city being attended, it is said, by Hindu Muhammadans. The Lamas of Tibet are in no way hostile to Islam—a fact that need excite no surprise, since the adherents of the two religions have a common political interest in making all possible conciliation to the domination of China. Nevertheless, there is no prospect of any considerable expansion of Islam in Tibet (cf. R.M.M. v. 458). Hitherto, at all events, the commercial relations between Muhammadans and Tibetans

1 Hereafter cited as R.M.M.
have brought about no conversions to Islam, though the commercial bond is far from being insignificant. In particular, the Muslims of Sung-p'an-t'ing in Szechwan carry on with Tibet an important traffic in tea, but in this locality the d'Ollone expedition of 1907 found only a single Tibetan convert to Islam, who, moreover, was rather lukewarm in his adherence (ZEE.M v. 438 f.); on the other hand, several thousand Tibetans (in obedience to Christianity were met with in Sung-p'an-t'ing.

Muhammadanism was introduced into Turkestan at the time when the powerful kingdom of the Sarts was pressing towards the east. According to the tradition-interwoven with many legendary features— which is given in the Tsekeret al-Boghra (extracts in R. B. Shaw, Sketch of the Turkish Language, Calcutta, 1875-80), the Turki prince Satak Boghara was converted to Islam at the age of twelve (A.D. 968; he reigned till 1047) by a certain Abi Nayar Samani, who came from the west. It is a fact of history that the descendants of Satak Boghara, known as the Boghrais of Ilkhis, maintained their power till the year 1103, and in 1700, during the reign of Tappaghaz (one of that dynasty), Ysuf Khass Najib finished his great didactic poem Qudratul Biliq ("Joy-giving Science"), a work imbued with the spirit of Islam. It is remarkable in diffusing after the fall of the Great Civilizations among the Turki population had contributed to the spread of Islam in that region. But, if Islam was here the recognized religion of the majority, it was certainly tolerated in the adjacent Turki kingdom to the east—the land of the Uighurs. Nor can the position of the Muslims have undergone any essential change by the time when the Kara Khaitai overthrew the Ilkhis, since, through their civilization of the Uighurs, the latter were left in full exercise of their religious freedom as long as they paid tribute to the victors. Similar methods were practised by the Mongol conqueror Jenghiz Khan and his immediate successors. At the discretion of his empire Turkestan fell to his grandson, Jagatai, whose successors soon embraced Islam. Even at a later time, however, as the records conclusively show, the adherence of princes and people alike to the new faith was half-hearted, and the muezzins and mullahs of Lamsana and the other settlements were quite common among the professed Muslims. The blind superstition of the people facilitated the usurping tactics of the philosophically gifted despots of Makhmud. He who at first rose as the spiritual adviser of the despotic house of Jagatai, and eventually in his own name. The discontents that arose within the family of Makhmud, their struggle with the Kalnus of Zungaria, and the internal wars of the Kalnus kingdom led (c. 750) to the conquest of Zungaria by the Chinese, who shortly thereafter won Kashgar as well, and joined the two territories together as the 'New Province' (Hsin-chin). Ever since that time the Chinese have been the ruling power there, and various attempts at revolt have proved abortive. Only for a short period, from 1864 to 1877, did the country—as Altyshai ('Six Cities'), and subsequently Yetishai ('Seven Cities')—figure as an independent state under the suzerainty of the Sultan of Constantinople as Kialilah; e.g., the coinage was stamped with his name. The severance of these districts from the other parts of Turki, though an insignificant number of them, are Dungans (see below, pp. 981, 982) or Chinese, and the total population is estimated at from 1,600,000 to 1,600,000.

This period there existed no considerable groups of Muslims before the Mongolian period, and the reports of an earlier immigration are altogether legendary. Chinese tradition says that Islam found its way into the country by land and sea. It tells of a maternal uncle of the Prophet, Wbb Abi Khaled, who landed at Canton in A.D. 628 or 629, bearing presents from Muhammad to the emperor of China, together with an invitation to embrace Islam, and who then proceeded to Hai-an-fu. Other reports say that the earliest message was brought by an envoy of Abi Waqqas, whose tomb may be seen in the city of Turkestan. This envoy attaches special importance to an expedition of 4000 Muslim troops which the Khalifah Mansur is said to have sent to assist the emperor in a struggle with rebels (A.D. 756). The Chinese then forced them to settle in the chief cities of the country; they took Chinese wives and became the progenitors of the numerous and important Muslim communities in China.

These traditions find no corroboration in the writings of Arabian historians. China and Islam, as a matter of fact, were brought into contact with each other as a result of the conditions prevailing in either sphere. A bout 629 a new power in Nearer Asia emerged, and another in China, each characterized by a remarkable ambition for conquest, and, advancing respectively eastwards and westwards, at length came into contact. Just as Islam (c. 720) conquered Transoxania, which it had been attacking incessantly ever since after the end of the Sassanid, so Tai Teung (627-649), the second emperor of the T'ang dynasty, made himself master of Kashgar. Of the more general incentives to mutual intercourse the strongest was that of trade, which was strenuously fostered by the later emperors of the Sui dynasty; another connecting link was the work of Christian missionaries, of whose bold advance into China the Nestorian stote of Hai-ansfu dating from 780 after a long period of isolation, gained these influences, however, must be placed the impediment to intercourse arising from the tendency of both empires to rest content with their gains, and so to limit their frontiers. The emperor Tai Teung showed caution in rejecting the appeal of Yazzagird III. for assistance (as may be inferred from Tabari, i. 269 f., though the report of the ambassador is a fabrication; cf. i. 287). The Muslims became more aggressive after their able general Qutba Ibn Hisham had subdued Khorasan, but his expedition against Kashgar in 713 was unsuccessful. A comparison of the sources (Tabari, i. 1275-1279) shows that Kashgar remained unconquered. The conflict of the senior house of China with the empire of the Chinese (Hsian Teung, 712-756), however, is probably historical, though, as narrated by Tabari (i. c. 777 f.) in the traditional form, it is garnished with all the conventional features. Under the Umayyads the Musulins had, indirectly, a good deal to do with China, since the bhadga of the Turki, and also the jahghu, 2 were vassals of the emperor. A time-honoured tale is that of the scene between Naikak and the jahghu on the one side, and the shahid (the shah of the Orhimian records) and the sekel (probably to be identified with the sibek of the Théophanes; cf. E. Chavannes, Documents sur les Tou-kiue (Turke orientaux, Petrograd, 1903, p. 208) on the other side, in which the shahid makes a great show of power, but politically capable Yaqub Beg, who recognized the suzerainty of the Sultan of Constantinople as Kialilah; e.g., the coinage was stamped with his name. The severance of these districts from the other parts of Turki, though an insignificant number of them, are Dungans (see below, pp. 981, 982) or Chinese, and the total population is estimated at from 1,600,000 to 1,600,000.

1 Notwithstanding the surreptitious introduction of silk culture into the Byzantine empire under Justinian, the silk merchandise of China was largely neglected. It was not until it was conveyed by land on the ancient 'Silk Road' or by sea through the Persian Gulf, on the north shore of which Al-tunsh (Tabari, ed. Leyden, 1737-1740, i. 250), and afterwards Birl (reference in G. L. Strange, The Land of the Eastern Culture, Calcutta, 1869, p. 287), was the case.

2 Nothing is however, of an embassy from the Chinese side. At an earlier date in the reign of T'ang, there were Chinese at the squashian court (Tabari, i. 896; cf. T. Noldeke, Gesch. der Perser und Araber zur Zeit der Sasaniden, Leyden, 1879, p. 161).

3 In Tabari this term is always mutilated to jahgha.
was sent to Damascus, and was probably the first 
Chinese, or Chinese Turk, that the Syrians had seen. It 
may be regarded as certain that it was 
Chinese statecraft that abetted the opposi-
tion of the Turkic Mongols and the national-
ities in Transoxania dependent upon him or upon China itself, so that the Muslims had to 
maintain a ceaseless struggle. The Khottal, who 
are probably to be located in the Pamirs, were not 
discovered by Talbot Rice till 1913, but the Arab 
King Al-Khazzad, king of Kasbah, was slain in 761, his treasures 
— costly Chinese ware—being conveyed to Abu 
Muslim at Samargand (Tabari, iii. 791 f.). When 
with the downfall of the Arabian empire the vigour 
of Muslim expansion had somewhat relaxed, and the 
central authority was busy with the mainte-
anance and organization of what had been won, and 
when contemporaneously the central power of 
China under the Tang emperors showed symptoms 
of decline, the interjacent territory was soon 
occupied by strong buffer States—first of all by the 
Uigurs, and then by the Hephids (see above). 
Islam, thus placed in a very unfavourable 
position for competition with China, when 
as were the dynasties that followed the Tang 
emperors, the people held firmly to the maxims, 
"No foreign religion in China." 
Buddhism, it is true, secured a successful 
entry in the face of 
vigorous opposition, but this is explained by the 
facts that (1) Buddhism was to some extent in 
harmony with the cult of reason (li), which, if 
hardly to be called a religion, was more widely 
diffused than any other, and (2) it assimilated 
certain elements of the national spirit and 
adapted itself to the prevailing sentiment (see art. 
China [Buddhism in]). Islam, which with its rigid 
doctrine of uniformity does not on principle express 
itsself in creeds, and is a discipline of the 
delicate and arrogant tone of its adherents, and which, 
above all, contrasts with Buddhism in its being 
especially a political religion, could not strike root 
in China save under the protection of the strong 
hand. The required protection was first provided by 
the rulers of the Mongol empire founded by 
Jenghiz Khan. These potentates had no religion— 
nothing at all events beyond the worship of their 
individual star; and, consequently, their political 
ambitions only had to bring this star down from heaven. 
Jenghiz Khan himself saw only the advantages of a 
huge centralization of human beings, and, wherever it 
served his purposes, he intermingled detached 
fragments of Buddhism, not by way of nationality or 
religion. As a Mongol, his leading aim was the 
disintegration of the Chinese element and the 
fusion of the population, so that he might have 
nothing to fear from the formation of any powerful 
alliance against him. He found his auxiliaries— 
apart from his own countrymen—in the various 
Muslim tribes of the West, a race renowned for 
their courage. Among these the Turki took 
precedence, alike in numbers, in the importance 
capacity for bearing arms, and in discipline. We 
shall hardly err in adding Afghan mercenaries; for 
the Afghans—the Pathans of India—were always 
prized for their qualities for service on foot, and 
and bands of warriors 
may also have flocked to the 
mountain passes of Persia—the fastnesses of the Kurds—though not 
the Persians in the narrower sense, the inhabitants 
of the plains, who had small reputation for bravery. 
Yet the Mongols were not veryinformation regarding the composition of his armies, or those 
of his successors, for the great Mongol rulers were 
not the people to lend themselves to the statisticians, 
that exacting profession, not with the 
keeping of army musters-rolls. We may 
assume, however, that the largest hordes of 
their followers were supplied by the countries lying 
nearest the scene of their conquests, viz. besides 
the land of the Turkic between the Great 
and the mountain barrier of the Thian Shan (Chinese 
Turkestan), Transoxania and Khurasan. This 
explains also the curious phenomenon that from 
that day till the present day the noms of the exiled 
warrior clans by the Muslims of China as the language of polite 
education, and that the vernacular Chinese written 
by these Muslims is mixed with scraps of Persian. 
In elucidation of this it has been supposed that at 
some time in the 9th century the Tartars migrated 
in the country, losing their mother tongue, but 
retaining vestiges of it in these numerous 
fragments. This, however, is certainly erroneous, 
for the internment of Persian in the Muslim 
idiom of Chinese is due rather to the supersedes 
organizing regard for the Persian language entertained by the 
barbarian and semi-barbarian hordes of Neuer 
Asia who swarmed to the camps of the Mongolian 
Khans. Moreover, as soon as Kuhini Khan 
established his sway in China, he brought Persians 
in great numbers to fill the offices connected with 
the government and the court. Both Marco Polo 
and the Arab traveller Ibn Bajidah supply full information regarding the 
Chinese services. To a great extent they would 
be full-blooded Persians, and they no doubt helped 
to enhance the respect accorded to their language, 
and to keep it alive in the very heart of the 
country.

As to the numbers of Muslims brought into 
China by the Mongol emperors, we can hardly 
even hazard a conjecture, although an incident 
now to hand may throw light upon such importations. 
In A.D. 1226 a young 
native of Bukhara, who claimed to be a descendant of the Prophet—a Sayyid—placed himself at the 
disposal of Jenghiz Khan. The latter perceived at 
ones the outstanding ability of the young man, and 
attaching him to his bodyguard, soon began to 
employ him on commissions of a special kind. 
His successor, Kuhini Khan, entrusted this Sayyid 
(who appears as Sayyidjul Alger in the work of 
Kashif-al-Din, and as Sayyid Khoja in the Chinese 
sources) with the task of subjugating the province of 
Yin-nan, and for six years the affairs of that 
province were administered by this talented 
Mussulman. He died in office, and his two 
tombs—the first in Yin-nan-du, the other 
were discovered almost simultaneously by French 
explorers. The official employment of this Muslim 
from Bukhara, who, of course, did not come 
without orders, was attended by a company of armed 
men, is of special interest, because his soldiers were sent on service to Yin-nan, while he himself was 
installed as viceroy of that province. We may 
accordingly infer that the influx of Islam into 
Yin-nan began at that time, for that it reached 

---

1 An excellent specimen of this idiom is found in the short 
Chinese MS (MS Sin. Hartmann 1 of the Royal Library, Berlin) 
collected by C. F. Forke, which contains a Chinese text in Arabic script 
(Tsongs-pa, v. 827 [1907] no. 8). From the nature of the 
language Forke inferred wrongly, as the present writer thinks— 
the Persian origin of the Dungan.

2 It is no argument against the theory, however, to say 
that it would involve a wider diffusion of Islam than 
we actually find, for the introduction of Shi'ism as the national religion of 
Persia and the dissemination of the Shi'ite principle among the 
people did not take place until the 11th century; and there is also a 
tendency to regard all Persian writings as of Shi'ite origin—an 
utterly mistaken idea, as even the writer himself admits (Asad 
Nabouai, 'Life of the Prophet,' by Muin-al-Din al-Muhammad).

3 (A.D. 1213), is Sombule in character.

4 One of those officials who gave, as was generally the case, 
very conspicuous—Asmuth (Akhmad) 'the Rabi', whose story is given not only in the Chinese MS (cf. J. A. M. du 

5 For reports of their visitation to China, see Nota sur des inscriptions arabes, persanes et chinoises du Chou-mouלג, du 
Chen-oung, Ecole des Langues Orientales, Paris, 1895. A. Vissière has 
written the facts into a graphic and ingenious sketch (RMM 
iv. [1907] 230 ff.).
that province by sea is in the highest degree unlikely.

Now when we take into consideration the number of Muslims in China at the present day and the isolated movement just mentioned—the only known instance of the systematic migration of Muslims from China—the number of those who have left was certainly not the only other—we are prompted to ask how the Muslim element has attained to such vast proportions. The total number of Muslims who settled in China from the date of the earliest campaigns of Jenghiz Khan (1206) to the fall of the Mongol dominion (c. A.D. 1297) cannot certainly be reckoned at more than 1,000,000. At the present day, however, the Muslims resident in China amount on the lowest estimate to 4,000,000. That this vast expansion is due entirely to natural increase is inconceivable; we must therefore look for other possible factors. (1) From time to time fresh companies of Muslims came to China, as, e.g., in the retinue of Turki princesses of Muslim faith who entered the harem of the Chinese emperors. (2) Chinese-born children were, and still are, sometimes made Muslims. (3) When great devastations occurred among the Chinese, the vacant places were filled by Muslims, often equipped with superior vigour, better qualified to grapple with the manifold misfortunes which throughout the centuries have fallen upon this ill-governed country. It has already been noted that the Muslim communities are a compact, strong, and brave. The high appreciation accorded to their eminent qualities by the Chinese government is shown by a recently-issued decree to the effect that Muslims are to be employed in the cultivation of all lands which adjoin the projected Ondin Road. Against these favourable conditions, however, must be set certain drawbacks. For one thing, the Chinese government has frequently been stricken with fear of the Muslims, the power of whose national-religious organisation is a matter of common knowledge. Then there is the antagonism that arose between the Muslims of China and their co-religionists in the West; and, finally, their internal conflicts must be taken into account (see p. 594).

A word may be added regarding the names applied to the Muslims of China. It is a common notion that they are all called Dungans, and in point of fact the present writer has been much struck by the use of this designation in Kashgar and Yarkand; by the Turki all Chinese-speaking Muslims are called ‘Dungan(är).’ They themselves do not use that name, but term themselves ‘Hui-hui’ or ‘Hui-tät,’ and this appellation is applied by the Chinese to all Muslims, whether resident in China proper or in Turkestan. The Turki offer strong resistance to this usage, and desire to be called ‘Ch'än-tu,’ ‘the tu-nessed,’ i.e., ‘head-bound.’

A few details will now be given regarding the several provinces:

(1) Kan-su.—In this province, according to P. Dabry (Le Mahométisme en Chine et dans le Turkestan oriental, Pékin, 1877, 250-500, i.e., about 50% of the population), there are about 60,000 Muslims, who are mostly engaged in trade and commerce, especially in the cities of Tashkent and Samarkand, and in the towns of the province. The majority of these are of the Han-national stock, and are called ‘Hui-hui’ or ‘Hui-tät,’ while the remaining portion are of the Han-national stock, and are called ‘Hui-hui’ or ‘Hui-tät.’ These are the most numerous of the Muslim communities in China, and are usually regarded as the most distinctive, owing to their long residence in the country, and their close connection with the Chinese. The Turki-speaking Muslims are generally known as ‘Kashgaris,’ and are believed to be descendants of the old ‘Turki’ inhabitants of the province. The Chinese speak of them as ‘Hui-hui’ or ‘Hui-tät,’ and regard them as a distinct and separate community. The Turki-speaking Muslims are generally regarded as the most distinctive, owing to their long residence in the country, and their close connection with the Chinese.
MUHAMMADANISM (in China)

(Mongols) and the aborigines of the south (Lotus, Miao-tze)—into Chinese and Musulmans holds good throughout. The name Dungans is applied to a large section of the Chinese Musulmans, who, however, as was said above, term themselves simply Han and do not take the appellative Dungans; but they would never think of calling themselves Han ('Chinese'), nor are they ever designated so. They form, in fact, a distinct racial aggregate, co-ordinate with the Chinese and the Turki. The name Dungans is sometimes erroneously extended also to the Turki of Turkestan, but in reality there exists a marked contrast between Dungans and Turki. The Dungans who speak Turkish—their language is by no means few—use a peculiar dialect of that language; and, as regards the Chinese spoken by the Dungans, it should further be noted that the document of Dungan origin in the Berlin Royal Library (see above, p. 390) is composed in a very correct Chinese. In Forke's opinion, however, its solecisms are not such as might be perpetrated by an uneducated Chinese, but are in many cases not Chinese at all, suggesting that the Dungan text is of a later origin. An especial illustration of the intercourse between the Chinese Muslims and the Turki, cf. the story of Hidjayat-Allah (Apau Khojam) of Kaskhgor, who came to Hsi-ning-ku, in MS Hartmann I (Forke, p. 97).

The process which dominates everything found within the Great Wall is one of adaptation to Chinese standards, of assimilation to the character of the yellow race—or 'black-heads,' as they like to call themselves. This process overcame the Manchus and many other peoples who invaded the country, and it was impossible that the Muslims should altogether elude its operation. The Chinese have a capacity for dissolving racial characteristics. This holds good even of physical qualities, for Chinese sentiment does not countenance the affiancing of native women with foreigners, while Muslim women cannot legally be given in marriage to non-Muslims. The resultant diffusion of Chinese blood amongst the Musulmans of China, and we cannot but admire the tenacity with which the latter have kept themselves from complete absorption by the Chinese. In spite of a considerable admixture, even of the most material nature, the two peoples look at things from a fundamentally different standpoint. For the Chinese reason (li) is supreme; for the Muslims tradition is all. Notable, too, is the contrast in certain traits of character. The Chinese, generally speaking, will put up with a great deal; the Dungan has an intense self-esteem, and is a dangerous man to offend. The difference reveals itself also in the outward bearing. The Chinese not seldom give one the impression of being a dejected and downtrodden man; the Muslim carries himself proudly, and faces the world with a frank and open countenance. The relative physical debility of the Chinese may be due in part to the disinherited habit. Among the Muslims this is but rarely found; tobacco smoking is prohibited, and the drinking of wine and other intoxicants, which the stringent interdict of the law does not prevent in Western Islam, is quite inconsiderable among the Musulmans of China. All this testifies to a very real cleavage between the Chinese and the Muslims, and is a constant reminder that the latter are not Han-yen, but are a separate people.

What, then, are the Muslims of China, ethnologically considered? To this question there is no answer, whether or not we postulate a connexion between the name Hsi-hsii (Hsi-lai) and the name Hsi-li. This very word Hsi-li is used for a foreigner in the Chinese language (Chavannes, pp. 97-94). From the time of the earliest considerable incursions of Muslims, this region of many races has been overwhelmed with so many devastations that it is now impossible to speak of any single racial type. In addition to this we must also take into account the Muslim policy of incorporating believers of other faiths, notably purchased children (cf. the present writer's note in his Der islamische Orient, i. (Leipzig, 1905); more recently d'Ollone, in R.M.M. ix.,). Such absorption of foreign elements must be regarded as a very important factor. In this connection we should note the suggestive remark of d'Ollone, to the effect that the purchased Chinese children do not exhibit a uniform Chinese type, and that the homogeneity of the Chinese race is simply one of those fables concerning that cannot be too vehemently opposed, since in point of fact many who are not Muslims at all are more Chinese than the Muslims themselves.

A distinct ethnological group is formed by the Salars, who live in Hsiin-hua-ting (Playfair, p. 3110) on the right bank of the Hoang-ho, and in the surrounding villages, and who are also found on a section of the road between Hsi-ning-ku and Ho-chou. They show many characteristics divergent from the ordinary Chinese Muslims. In figure they are tall and spare, with nose large but not broad, eyes black and set horizontally, cheekbones not very prominent, face longish, eyebrows bushy, beard black and abundant, stature long, skin flattened behind, skin brown but not in any sense yellow. The Salars thus bear a striking resemblance to the Turki of Turkestan. Their chief peculiarity is their language, which may be described as a demi-derivative Turkish. Their style of dress is Chinese, but they shave the head completely and wear a polygonal cap (tibh) of white colour. In religion they are strict Hanifies, and show the utmost respect to their spiritual guides (akhons), many of whom speak and write the Persian language; but they are given to the use of strong drink. Even the lower classes are acquainted with the Arabic script. They do not burn incense in worship, nor do they tolerate the emperor's portrait in their mosques. This form of the Muslim faith is said to have emanated from a reformer named Ma-ming-hsin (Muhammad Emina), who preached to the Salars c. 1750, laying great stress on the practice of praying aloud (salat), and thus avoiding all serious disturbances. The Salars are a daring brigands, and fraternize with the rabble of the upper Hoang-ho, with whom they also share a fierce hatred of the Chinese.

(b) Marriage, funeral, kinship. The external aspects of the sexual relation among the Muslims of China are regulated by the shari'ah—in the scholastic form developed in the Hanifite school—which applies to all Islam, though here the separate ordinances are not very well known to the people at large, nor, even where they are known, are they very strictly observed. As to the degree in which the Chinese environment has brought about modifications in practice, we do not possess the necessary details of information; nor would such details yield a complete and uniform picture, since the influence varies greatly in different localities.¹

¹ Our authority for these particulars is Gramcord, Mission, iv. 457 ff. A somewhat different account is given by d'Ollone (R.M.M. ix. 388 ff.), who says that the Salars, who are distributed among the villages in the district of Hsiin-hua-ting on the right bank of the Hoang-ho, but that the bulk of the Salars live on the left bank, especially the town of Hsi-ning, in which, however, there reside only five Salar families; they do not shave the head completely, but retain the pigtails; they wear, not the Salar cap, but the turban-like head-dress of the Chinese; they have taken part in various risings; and they assert that their original home was Samargand.

² With reference to the well-known canon allowing the Muslim to marry as many wives as he desires, as long as he can support them, as the caliph Harun al-Rashid was wont to do, as his concubine, Babyl (II. 396, n. 1) writes: 'In China the Muslims are forced to submit to the laws of the land regarding marriage.' This is undoubtedly a mistake so far as it implies that
MUHAMMADANISM (in China) 893

The like is true of the position of women in general. According to Mollendorf, the so-called law of veiling is not observed by Muslim women in China, who walk abroad without reserve (RMM ix. 540); Grenard had indicated the fact, but noted an exception in the case of the wealthier classes. In Hokhong, however, d'Ollone found a different practice, the women there wearing a veil of black silk below the eyes (a custom which seems to the present writer to be connected with the sect of Mas-hu-lang); further, they go on the street on horseback in cases where regards foot-binding, d'Ollone notices no difference between Muslim women and Chinese women; in Kueh-siu especially the practice is very common. Thence, a Muslim should take in marriage a non-Muslim, as is rather deemed a meritorious act, thus to bring an unbeliever to the true religion. The Muslim woman, on the other hand, must not be given in marriage to a non-Muslim, such a union is regarded as the most heinous of sins.

In this matter, however, compromises are sometimes made with heaven: the marriage of a Turk princess with the emperor Chien-lung has already been referred to; and, when the present writer passed through Moscow (s.a. a journey west of Kashgar) in 1861, Chinese with a Turkic wife (?) concubine was presented to him. Illicit intercourse is not punished here, any more than in other Muslim countries, with the strict legal penalty (forty whippings, see above), but it must not be supposed that the says usual laxity of morals prevails, and the unnatural vice common among the Chinese (see an instructive chapter in J. J. Mantigny, Superstition, crime et vices en Chine', Lyons, 1862, p. 185 ff.). The prevalent attitude of the Muslims is not in the least bit affected by these.

The impartation of the Arabic MS. given in the Chinese-Arabic MS. edited by Forke; the latter finds expression in the liturgical prayers for parents and ancestors, while use is also made of pictures of ancestors after the Chinese manner. Social distinctions are not in China socially fixed by descent, except in the case of the Prophets and descendants of the Prophet (Dungan).

(c) Industries. The industries in which the Chinese Muslims are engaged are (1) agriculture, (2) commerce (including handicraft and traffic in goods), and (3) productive trade. The Muslims do not take up agriculture naturally, but here the environment has asserted itself, inasmuch as the Chinese are pre-eminently agricultural people and have in great measure adopted the methods of the Chinese, and even their own habits. Accordingly, the Chinese Muslim is everywhere one of the most industrious tillers of the soil, so that it was recently reported that those employed in Chinese law would innovate upon this domain of personal rights, though this in itself may perhaps be necessary to assert the universal validity of the imperial ordinances. These ordinances are so high-handedly set forth in Kueh-siu that d'Ollone says they are absurd. The present writer has not succeeded in discovering among them anything that formally concedes an exceptional position to the Muslim, but he cannot altogether be said to have been successful in discovering anything which he considers a serious objection to the contention that the Chinese are as it is known as the hands of Chinese, who combine the qualities of the hard-working peasant with those of the successful merchant, yet the Muslims are very largely monopolized the related branches of mercantile industry—the conveyance of goods from place to place and the retailers of products of their own or others' labour.

Thus the Mafus, i.e. horse-hirers and horse-dealers, as also carriers throughout the whole of China, are principally adherents of Islam, while certain trades—especially that of butchering animals (not including the pig, of course)—are largely in the hands of Muslims. Their special preference, however, is for pastoral life, though in this department they are faced by a great obstacle, viz. the number and difficulty of the examinations to be passed by aspirants to the Chinese civil service. The Muslims who could successfully undergo these tests must always have been very few. This in itself, however, does not carry any discredit, for it simply means that the Muslims have not the required degree of plodding industry for such ordeals. On the other hand, the most capable and industrious of them were doubtless able to fulfil the conditions of entrance into the Chinese army, and to work their way to the higher ranks. From the Mongolian period onwards Muslims have often filled the more distinguished military or administrative positions, and in general Tung-fu-liang (see below (d)), as well as of Ma-ti-kai, of Yuan-nan, and Tung-fu-liang, and commander-general of the forces in the province of Szechuan.

(d) Cultus, education, etc. The religious attitude of the Chinese Muslims is—outwardly, at least—characterized by moderation. They make concessions to the ruling power, hoping thus to gain security for person and property, and the most capable and resolute of them take part in the ceremonies of the national cult. The hatred of foreigners sometimes shown by Muslim officers of high rank, like that displayed by the Chinese themselves, is the reverse, not to religious motives, but to the expatriation provoked by the banded way in which foreigners interfere with the internal affairs of the country, and in a few cases, indeed, the conduct of Muslims generals is simply a vulgar hangover after rank and wealth, as has now been made clear by the observations of d'Ollone (RMM vi. [1906] 7 ff., contending the misleading note in RMM iv. 441 ff.). Tung-fu-liang, e.g., was in no sense a fanatic Muslim, but a more adventurer, who gained a following amidst the chaos caused by the rising of 1881-74, and who, in return for the gift of a mandarinate, made himself the tool of the viceroy, Tsung-lin, and of General Lu-sung-shan. He was the ideal of the new doctrine, who fell into his hands in a sort of a rebellion by the city of Kin-k'iu, to be abashed. At that time he acquired landed estates of enormous extent. It was also he who crushed the rebellion of 1899 in Hsin-hu-fu and Hu-chou, enriching himself, as usual, with the spoils floated under the pretext of religious motives. He revived the title 'generalissimo' (fu-tzu), and was in effect king of the country. When the Boxer rising broke out at Peking in 1900, Tung hurried thither with his henchmen—the foremost of whom was the famous Ma-an-lang, Tung-fu-liang, and—made himself conspicuous by his violent and malicious proceedings against the foreigners, who saw in him a tool of the head of a horde of Muslims,
and were quite unaware of his real relation to Islam. Having been ostensibly punished by ‘banishment’ from the land, he lived there like a
sâltân. He held two fortified castles near Kink-pa, and had a bodyguard of 500 veterans—as tenants of the surrounding estates which he had taken in the name of Islam. The local councils of Kink-pa and Lin-chun could not lift a finger without his approval. After his death in February 1900, all his titles, of which he had been deprived at the instance of the European Powers, were restored, and he was buried with the highest honours at Kon-yen, his birth-place (RMM vi. 700 ff.). Apart from adventurers of this stamp, whom probably the majority of Muslims would regard as apostates, there is a far-reaching antagonism between the indigenous and the immigrant peoples. The Chinese realize the danger involved, in the Muslim aspiration of an imperium in imperio, while the Muslims, enjoined as they are by the Qur'an to fight against the unbeliever, feel the ascendancy of the latter as a heavy infliction, and from time to time the strain has found expression in open revolt. The most notable and most serious of such outbreaks have been those of the north (Kansu and Shensi) in 1861-74, and of the south (Yunn-nan) in 1858-72. It would be a mistake, however, to attribute these ructions in surrections to religious motives alone, for racial antagonisms and the conflicting interests of different social classes were certainly no less potent factors.

The mosques resemble pagodas, the mihrâb and minbar alone proclaiming their Muslim origin. We sometimes met with Indo-Arabic styles, as, e.g., the two minarets above the porch of each of the mosques in Sui-fu. For occasions of prayer the akhans (Pers. akhân, ‘learned one’; in China, ‘mosque-minister’) don the white turbans, and the rest of the faithful wear, for the time a cap never otherwise used, which is encircled by the turban, and may be of various colours—white, blue, green, or red. This cap has two shapes: the Meccan—a round, low-crowned, wholly covered by the turban—was worn by many; and the Bukharian—polygonal, being formed of four or six pieces—which hangs out from beneath the turban. It is identical with the tuba, or toga, worn by all Muslims in Russian and Chinese Turkestan.

The disruptive tendencies now common in Islam generally have made themselves felt in China. Ma-hua-lung, who was put to death during the rebellion in Kan-su, was the founder of a new sect, and his followers in Kan-su, where they are numerous, and in Sze-chuan (where as yet they are but few), regard him as the true successor of Muhammad. His descendants and disciples claim to possess superhuman powers. His teaching is called hsien chiao, ‘new doctrine,’ in contradistinction to tao chiao, ‘ancient doctrine’ (RMM v. 93). The nature of this new doctrine is something of a mystery. There is a tendency to regard it as an outgrowth of Shîism, or perhaps an unusually bold representation of Sufism, but the notices of d'Ollonne (RMM i. 571 ff.) show that in reality there is of genuinely Sufic character, and not a degenerate variety of the mystical philosophy so widely diffused through Asia. Ma-hua-lung was undoubtedly one of that class of visionary impostors represented in Chinese Turkestan by the Khoiys, i.e., the descendants of Makhdum 'Afan, of the sect of the religious organization the present writer has given a detailed account in 'Ein Kirchenstaat im Islam' in Der islamische Orient, i. 196 ff.). It remains an open question whether the Mahdist ideas played any part in the project of Ma-hua-lung; the reports of d'Ollonne make no distinct reference to it. In any case, the pretender was regarded as an incarnation of the Spirit—a sheng jen (‘holy man,’ ‘prophet’) equal to, or even higher than, Muhammad himself. It speaks well for the Muslims of Kan-su that only the lower classes were stirred by this charlatan, who, wholly destitute of learning, presumably knew everything, and had his answer ready for every question. As the founder of a new sect, he had to enjoin certain external forms by which his adherents might be distinguished from others. For this purpose he chose the practice of washing and of holding the hands straight open and horizontal in the gïyâm (at prayer), in contrast to the general custom of Muslim prayer, and to the deliberate and solemnising of the prayer—derived from the personal prayer of some with the intention of praying the Lord’s prayer, and of taking the hands round and below. From this practice of audible prayer is derived the usual name of the sect, viz. Zahiriyâ (corrupted to Châherînîyâ), ‘those who pray openly,’ as contrasted with the Khâfiyyâ (vernacularly ‘Huâ de’), ‘those who pray secretly.’ In these externals Ma-hua-lung shows a certain affinity with a movement in the West which had found its way into China at an earlier date. About 150 years previously a reformer had appeared among the Salaras (see above, p. 862) in the person of Muhammad Emin, known as Ma-ming-lân, who introduced the custom of praying aloud, and thereby gave occasion for serious disturbances (Grenard, loc. cit.). Ma-hua-lung did not actually forbid his followers to attend the mosque, but he allowed prayer to be performed at home—in the ‘common hall’—without special ceremonial garments. Usually three or four houses have a place of prayer in common, i.e., a single room set apart for worship, and this arrangement being designed, it is said, to keep above the adherents with the practice of prayer (RMM ix. 571). In Sung-pen-t'ing, according to RMM v. 465, the followers of the new faith attend the same mosque as those of the old, while, on the other hand, the breach is complete (RMM ix. 581). The d’Ollonne expedition had a very uncivil reception in the mosque at Châng-t’u; the people of the ‘new doctrine’ have the name of being hostile to Europeans, while the Muslims in general are friendly. After Ma-hua-lung’s death in 1871, a rupture took place within the sect. His son-in-law, Ma-ta-hsi, and his grandson, Ma-ming-lâ, fought with each other for the sacred inheritance. Ma-ta-hsi, who is said to be sixty-two years old, has the advantage in numbers because of his place of residence, Cha-kon, near Kua-yen, is an important religious centre, and has a madrasah. Ma-hua-lung’s teaching was introduced into Yunnan by his younger brother, where it is taught by Talaasen or Talamsen, who fell in a struggle with Ma-lung.

In Yunn-nan, however, the sect has apparently a smaller following than in Sze-chuan, where d’Ollonne met with adherents of the Hain chiao from the boundaries of Yunn-nan to Sung-pen-t’ing on the border of Kan-si.

Alongside of the two groups of Hufeye and Châherînîyâ are found two others, viz. Kubêrînîyâ and Katerînîyâ. The meaning of Kubêrînîyâ cannot be precisely determined—the word may mean Kubi or Kubi (‘great’); ‘Katerînîyâ’ is undoubtedly equivalent to ‘Qâdirînîyâ,’ signifying the adherents of ‘Abî al-Qâdir bi‘l-khali‘îl (q.v.). It is maintained by a certain akhôn that the four sects are respectively connected with the first four khâfifs, each of whom is said to have inaugurated a particular ritual, viz. Abî Bakr that of the Hufeye, Othman that of the Châherînîyâ, Omar that of the Kubêrînîyâ, and ‘Ali that of the Katerînîyâ. The last-mentioned name is said to be applied also to those who venerate graves. In China, as elsewhere on the soil, peculiar honour is accorded to the tombs of the eminently pious—those who have given credentials of saintship.
Thus, e.g., within a mile to the north of Sung-p'ang-ting is to be seen the tomb of an akhon from Medin; who came to Sung-p'ang-ting in 1698, lived for a time in Shen-si, and by his prayers saved the land from a drought in 1673. He died in 1808, and his tomb is guarded by an akhon. Another tomb, somewhat smaller, is found within the mausoleum. The orthodox muhlit inveigh strongly against this practice (REMM v. 639). D'Ollone thinks that the veneration of graves is also a characteristic of the male sect (REMM i. 535 f.); but this cannot be admitted, and, indeed, it conflicts with other statements of the same writer. As a matter of fact, the veneration of graves is a world-wide custom, and naturally prevails here too; and that Ho-chou, the rallying-point of the new doctrine, should also contain an unusual number of sacred tombs is a mere coincidence. Moreover, with reference to the name Kumbechiao, which D'Ollone mentions as being applied to the new doctrine, and upon which he bases his conclusions (REMM i. 533), it remains to be shown whether the term ("=grave-doctrine") is meant to indicate the distinctive characteristic of the sect. As regards the relation of the orthodox ethnologically distinct Salars see above, p. 692.

The idea of a khalifah as a single individual invested with authority over Islam as a whole is unique in the history of the Chinese Muslims (REMM i. 561 f.). Yet the efforts directed from Stamboul in the latter half of last century were not altogether without result. Ya'qub Beg recognized Abd-al-Aziz as commander of the faithful, while Sulaiman, the son of Yum-nan, appealed to him, as khalifah—in vain, it is true—for assistance.

As the intellectual life of the Muslims bears the closest possible relation to their religion, the aim of elementary education is to inculcate the rudiments of religious doctrine, the children being taught by readings from the Qur'an and by short catechisms. In these exercises two languages are employed—both the national language and that of the Qur'an (or a mixed Perso-Arabic dialect). There is a considerable circulation of anthologies from the Qur'an, either with or without a Chinese translation, and booklets containing the leading elements in both, Chinese also found.

The life of the Chinese Muslims has no place for art. To anything in the nature of artistic activity only a single field is open—the Arabic script, which is often elaborated in pedantic forms suggestive of the artistic traditions of the Hebrew and Jewish and being formed as in the native calligraphy (especially in epitaphs). The Muslims also erected ornately written Arabic tablets, which, however, often show such a divergence from the common script that they are very difficult to read. Even the experienced E. Blochet mistook an r for a y (REMM v. 291).

(c) Political relations.—In China proper the Muslims have never secured an independent political existence, while in Turkestan, since its annexation (c. 1760), they succeeded in establishing only the short-lived Muslim government of Ya'qub Beg (see above, p. 899). The object of the Muslim rights and privileges, which was among the contributing causes of Ya'qub Beg's success, was likewise independence; but the movement proved abortive, and, in fact, no other issue was decided. The Deccan or other condition of a permanent political organization is that it shall have a basis of nationality, and no such thing exists among the Chinese Muslims. The latter, as interspersed among the Han (Chinese), form, not a nation, but merely a religious, aggregate, and all seem history teaches that political establishments based upon religion are ephemeral. It has certainly been hinted that the Muslims of China may possibly force their religion upon the rest of the population, and thus evolve a powerful islamico-Chinese kingdom. Another thing is undeniable that such an ambition is not wanting among the Muslims, and that it will continue to act in certain localities as a source of insurgent movements against the imperial government. It is regrettable that the idea has been exploited for too purpose of increasing the religious influence among the Chinese Muslims and of furthering political ends. Considerable efforts in this direction were made—though without the least success—by Sultan 'Abd-al-Rahman in the latter part of 1900; and minor attempts at a later date proved equally fruitless, though hopes were not abandoned even after the deposition of the Sultan.

M. HARTMANN.

MUHAMMADANISM (in India).—The Chins in Yum-nan was introduced into India by the Arab invaders who entered Sind unter Muhammad ibn Qasim in A.D. 712 and founded a Muhammadan State which was eventually absorbed in the Mughal empire; but this early Arab occupation was confined to Sind, and the Muhammadan conquest of the rest of India did not begin until nearly three centuries later, with the raids of Sobuktigin and Mahfud of Ghazna; when, however, Mahfud died in 1039, the province of Lahore was the only part of Indian territory that he bequeathed to his successor. The permanent extension of Muslim rule in India dates from the latter part of the 12th cent.; when the conquests of Mahmud of Ghazna really began the establishment of a Muhammadan dynasty in Dilli, which continued to be a Muhammadan capital up to the extinction of the Mughal empire in 1858. The scope of this article being limited to religion and ethics, no account of the political and legal institutions can be given, though the intimate connexion between Islam as a religious system and the Muhammadan governments in India makes it difficult to consider them apart. A brief reference must be made, however, to the relations between the Muslim rulers and their non-Muslim subjects. The Muhammadan invaders at times during the early stages of the conquest exhibited a brutal intolerance towards the Hindus who opposed their armies, and ruthlessly massacred Brahmanas and razed temples to the ground; but, after the savagery of conquest was over, a certain amount of toleration was allowed to their Hindu subjects. The religions in Sind left the Hindus in undisturbed exercise of their religion and in the enjoyment of their old rights and privileges, and the later conquerors who founded kingdoms in N. India and the Deccan were generous in granting tolerance and in the military consolidation of their own power, or felt too little interest in spiritual matters, to turn their attention to the propagation of their own faith. Even under the settled rule of the Mughals, their dynastic and financial policy was on their own party rather than consideration of the interests of Islam. On the other hand, the reigns of several

---

3 The present writer possesses a copy of such a bilingual catechism.
monarchs were signalized by outbursts of fanaticism and the cruel oppression of unbelievers, their temples being destroyed and many of them converted by force. In Gujarát Sultán Mahmúd III. (1537-53) was hated for his fanaticism, and for his anti-Gramourism. His envoys, however, managed to carry out a policy of unification led to several acts of repression, and tradition attributes to him the destruction of temples and the forcible conversion of thousands of Hindus in various districts throughout the whole extent of the Mughal empire. The latest example of such fanaticism on the part of a Mughal ruler was that of Tipú Sultán (1782-99), whose barbary was shown in anything recorded on the monarchical system after the first conquerors. Apart from such outbursts of fanaticism, the rule of the Mughals has generally been characterized by an attitude of tolerance towards the religious subjects, and the adherents of the rival religions have often been closely drawn together by a spirit of unity and mutual respect.

The fact that the Mughal dynasties in India have still a large measure of foreign invaders was of great importance in the history of Islam: they brought with them a large number of foreign troops, and to their courts military adventurers, poets, scholars, and others, who, when their vassals in the country and other parts of world were drawn into the conversion of the indigenous population, exercised a propondering influence in the administration, the religious organization, and the religious life. They received grants of land from the Mughal governments, or in times of political unrest arrogated to themselves rights of ownership, and thus formed the nucleus of an aristocracy that looked down with contempt on the native converts. The missionaries, to whose proselytizing efforts the conversion of whole tribes is attributed, and the saints, whose tombs are still venerated throughout all parts of the Mughal empire, were in part of foreign extraction, and the shrines of these saints are still centres of religious influence and attract thousands of pilgrims every year. In the 19th century, it may be taken as a typical example of the wide-spread influence exercised by some of these foreign immigrants. The effect of this constant stream of foreign immigration has been to keep India in close contact with the main currents of theological thought and speculation in Islam, and the religious beliefs and practices of the educated section at least of the population, whether Sunni or Shi‘a, have tended to conform to the mainstream of the Muslim world. A large part of the religious literature has been written in Arabic, and still more in Persian—both languages foreign to India—and the study of these languages has kept the intellectual life of the Muslim thinkers outside India. These foreign influences have thus prevented Islam in India from taking on a provincial character, so far at least as the literate are concerned. But among the uneducated, especially in the country districts remote from the centres of Muslim culture, many survivals of older cults are to be found, and there the Mughal differences little but in name from his Hindu neighbours. He continues to worship the gods of his ancestors—particularly the village deities, whose rites are associated with the cultivation of the soil, and the deities of disease, especially Sitala, the dreaded goddess of smallpox—and to take part in the Hindu festivals connected with the changes of the season, such as the festival of the spring equinox, and Dasháhrá, the festival of the autumn equinox. Against such Hindu beliefs and practices the orthodox have at all times protested, but the first active campaign against them appears to have been started by Sayyid Ahmad and Haji Sharí‘át Alláh, who in the second decade of the 19th century began to disseminate in India the doctrines of the Wahhábí reforming movement. The writings of a later religious reformer, Manlavi Karamát Allí (†1874), were especially influential in combating the observance of Hindu rites and ceremonies byMuhammadians. In more recent years, the greater facilities of communication between one part of the country and another have increased the tendency towards a uniformity, but the low level of education among the mass of the Indian Muhammadians, and the ignorance of the tenets and facts of the faith which they profess.

The abiding influence of Hindu institutions on the converts to Islam is still further shown by their rejection of the shari‘a in favour of their tribal or Hindu ordinances in regard to marriage and inheritance. As is well known, Islam is not merely a body of religious dogma but also a system of legislation, but the Muhammadianized Rajputs and Jats in the Punjab and the Marathas on the west coast of S. India have always continued to follow the customs of their Hindu ancestors in preference to the Muslim law of succession. The influence of Islam in India has not been confined to the Musalmans themselves, but may be observed in sections of the population that stand outside the Muslim community. There can be little doubt that the Hindu reform movements of the 16th and 17th centuries, especially those connected with the Muslim India, were themselves the result of such contact with Muslim influences. Many low-caste Hindus, especially in N. India, worship Muhammadian saints; these saints are sometimes legendary, like Sakhí Sarwar and Shíh Mánar, or historical personages such as Kāpití Fáriz, and at other times sometimes a mixture of both as in certain enumerations of the Pāñch Pir (‘five holy men’), who are represented by some thousands of Hindus to be the only divinities that they worship. An influence of a different character was that of the Mughal court upon the higher ranks of Hindu society, resulting in the adoption of many Muhammadian habits and observances as are generally significant of adherence to the faith of Islam.

As an ethical system Islam in India presents in many ways a strong contrast to Hinduism. Both, it is true, cherish an ascetic ideal, pursued by few, and Hindus and Muslims ascetics have often found that they have much in common. They have often received the veneration of pious adherents of the rival creeds. But the stern Puritanism of Islam has set its face rigidly against those characteristics of Hinduism which are set forth in the Kānaôkashstras and illustrated on such Hindu temples as have escaped the iconoclastic wrath of outraged Muslim sentiment. This austerity of Muslim morals runs through the whole of their social life, the tends to their outward bearing an aspect of dignity and self-respect such as springs from a constant recognition of moral
'Abbasid conspiracy was begun in Persia; Abû Muslim, the chief conspirator, was a Persian; and the battle of the Žab, which decided the contest, was fought on the border of Iran. Although revolts were common, the authority of the Abbasids was generally recognized by the ruling dynasties in Persia, few of which were Shi'ite. The most determined and powerful attempt to establish Shi'ite Islam was that of the Isma'ilis, or Assassins (q.v.). Persia was the greatest of all in the ruin brought by the heathen Mongols, and Iran seemed about to perish; Timûr was a Sunnite Muslim, but he had mercy on none. With the rise of Safawi kings (A.D. 1538) Shi'ite Islam was established as the State religion—a position challenged since only by the audacious Nâdir († 1747), who proposed to make Shi'ite Islam a fifth sect, co-ordinate with the four recognized divisions of Sunnite Islam. The paper constitution of the Allâl the Bahâ'îs recognizes Shi'ite Islam as the religion of the realm.

Within the narrow limits of this article it has not been possible to do more than briefly indicate some of the main characteristics of Islam in Persia. See further, MISTIIONS (Muhammadans), Sects (Muhammadan).

LITERATURE.—No comprehensive work has yet been written on the religion and ethics of the Indian Muhammadans. The researches that have been made on subjects in such periodicals as JAS (Calcutta, 1832 ff.); Calcutta Review (Calcutta, 1841 ff.), Journal of the Oriental Institute (Calcutta, 1866-67); Revue des mondes musulmans (Paris, 1901 ff.); El (Leyden, 1888 ff.). For the bibliography of historical works see The History of India as told by its own Historians: The Muhammadan Period, ed. from the papers of H. M. Eliot by John Dowson, London, 1896–97. A vast amount of material is to be found in the official publications of the Government of India; for bibliography see F. Campbell, Index Catalogue of the Official Publications in the Library of the British Museum, vol. 100. Among separate works may be mentioned: J. H. Garcia de Tassy, Memoire sur les partis politiques des anciens Indiens musulmans (Paris, 1829); Mrs. Meir, Hassán Ali, Observations on the Muhammadans of India, London, 1832; W. W. Hunter, An Essay on the Religion of the Indians Muhammadans, London, 1844; J. H. Thomson, The Custom of the Muhammadans of India, tr. by G. A. Herklotz, Madras, 1868; S. Baynes' History of Persia, London, 1869; S. Shaikh, Bakhsh, Essays Indian and Islamique, do. 1912. A more detailed bibliography will be found in the present writer's art. 'India' in AT.

T. W. ARNOLD.

MUHAMMADANISM (in Persia).—Islam began in Persia very early. Within a year of Muhammad's death the Muslim armies came into collision with the Persian power, and the conflict lasted for thirty years, extending from the Tigris to the Oxus. The last Zoroastrian dynasty was overthrown in A.D. 769 by the Persians, and Zoroastrianism was gradually suppressed. The intellectual life of Islam was very soon enriched by Persian scholars. It is significant that after the Arab conquest Nestorian missions were successfully prosecuted among Iranians described as pagans. Still, Islam was identified with foreign invasion—a fact that influenced subsequent history.

The Ahl of 'All gained adherents in Persia from the first, perhaps because Husain married a Sassanid princess. In the Umayyad period revolts were frequent, many of them Kūrījīyīn in origin. The

Even among the Sunnites (especially the Kurds) religion centres much in the cult of the Shaikhs, who are credited with miraculous powers. Many of these are connected with the dervish orders, especially the Naqshbandis.

The great religious principle of the Shiites is the veneration of the family of Ali and the doctrine of the imāmat. While every community numbers its hajas, the great shrine for pilgrimage of the living and burial of the dead is Karbala, which momuments the place of the imam’s authority, the seat of the chief mujtahids, and the centre of theological education and learning. In every city there is a madrasah (college), but an ambitious student completes his training at Karbala, or at one of the neighbouring shrines that share in its importance. The unifying power of such a centre is very important. The other shrine of importance is Mashhad. For the mass of the people the great religious observance is the commemoration of the battle of Karbala on the 10th of Muharram and preceding days. On the spectacular side it is the carnival of the populace, and the timid disapproval of the educated is unanimous. It is the religious duty of the excesses of grief, in cutting the head and beating the breast. Regular passion-plays are uncommon (cf. art. DRAMA (Persian)). Presiding has an important place in the mosque life, and the great topics for sermon or song are the life of the Imams. Chadir Bārām (when Muhammad is supposed to have designated Ali as his successor) is at least equal to Qurān Bārām in popular estimation. The bānūth (traditions) deal with the sayings and doings of the Imams as well as of the Prophet, the most popular collections being those of Mullā Baqr Majlīs of Isfahān, made three hundred years ago. The expectation of the reappearance of the Twelfth Imam by the ‘Abbasīs is a general. The Sayyids rival the mulla in authority and claim the fifth of field and herd. So far the description applies to all Shi‘ite sects.

The Mutasarrifs, who are by far the most numerous sect, regard the mujtahids as the only representative of the Qārim, or hidden Imam, and only inasmuch as they interpret the sharī‘ah (canon law). They are conservatives and traditionalists. The Shaikhs, Zaidis and others, there is always a representative of the Imam, who possesses in some degree his divine authority. They differ as to who that representative is, and in other matters. The Shaikhs are the intellectual and political party, e.g., the mawqif (Muhammad and Ali) is ascent to heaven, deduced from Qurān, xv. 1), in a spiritual way. Zahābīs resemble the dervishes in ascetic practices and in the use of the dhikr, both ‘arba‘ and ghāsim (kneeling and silent).

‘Ali lllahis and Bahā‘, widely different in other respects, may be classed together as being Muslim in only a modified sense. The former recognize none of the Imams except ‘Ali, care nothing for the sharī‘ah, pay no attention to Ramadan or the prayers, and have their own yearly feast, in connection with which a common religious meal is eaten. Among Shi‘ites they conform more or less, but they do not belong to the mawqif and are not Shi‘ites. They believe in an ascension, but it is not very clear whether the connexion with ‘Ali is not a blind. They call themselves Ahl-l-Haqqah (‘people of the Truth’). In practice, the reference is not to the Sayyids, or πίστις, is great. Their religious centre, where the head of the sect lives, is near Kirmānshah. They are numerous both north and south, among Kurds, Turks, and Persians, and especially in the villages and among the nomads, and are found in smaller numbers in the cities. The Bahā‘īs are too well known to require description. For them Muhammad and the sharī‘ah are superceded. They are found in the cities and among the more educated classes, less often in the villages, and not at all among the nomads. They are increasing. Though only a fraction of the less numerous classes of society, their influence is not to be measured by their numbers. The Imāms are practically extinct, and the Bahā‘īs, with insignificant exceptions, follow ‘Abbās Efendi. Both these sects practise tajiyah, or religious deception.

The Sāfīs (or ‘Arīfs, ‘wārsīs’) are the philosophical and intellectual devotees of religion, belonging, it may be, to some sect, but not often to the Mutasharri‘. Among them are many dervishes. They usually recognize some one as their guide (mawlawī). The most popular poets among them are Jalāl al-Dīn, Shams-ī-Tābrīzī, Farīd al-Dīn ‘Aṭṭar, and Hāfiz. Dervishes in Persia are loosely organized, and monasteries are almost unknown. Many dervishes will claim to be khāṣṣā (‘abject, humble’), others to be followers of Shāh Naṣīr al-Dīn al- Ḥallā‘ or of ‘Abd al-Shāh, a saint of recent date.

The organization of religion is democratic, and in the last analysis it is popularly that determines the law and custom. The highest authority exercises a control by granting titles and recognition, and the mulla and mujtahid, both as authorized exponents of the sharī‘ah and as popular leaders, influence government. They are both rich and are susceptible to the influences that affect the people. Low birth is no bar to ecclesiastical advancement. The dervishes are to some extent controlled by the appointment from them of a muftī, or official head, in each city or town, who has charge also of jugglers, mountebanks, snake-charmers, etc.

The influence of religion in moral and social matters is not easy to estimate. Of the Twelfth Imam, the Hartford, is general. The Sayyids claim to be the only true religion, and religious teaching often makes wrongdoing easy rather than difficult. It may be doubted whether those who desire moral or social reform look to religion for inspiration; the lowest religious classes are the educated and the nomads.

An influence at work that must affect the future of Islam is the rationalization of religion. It takes the form of reducing religion to the minimum of doctrine, equalizing all forms of revelation by admitting truth in each, but granting finality to none. Another tendency is that the Persians call tasbit (‘naturallization’), denying all revelation and taking an agnostic position on the question of God’s existence. Another growing influence is the renunciation of Turkish literature in the Adharba‘iyan dialect in Tiflis and Baku. The reaction due to foreign domination is also to be reckoned with. The influence of Western civilization is in many ways disintegrating. The influence of Christianity mediated by commerce, politics and literature, and missionary efforts must not be forgotten. This had its part in Buddhism and also in the man of the present. See, further, artt. BĀ‘B, BĀ‘AN, SHĀHIS, SHĪ‘ISM.

MUHAMMADANISM (in Syria, Egypt, and Mesopotamia)

which had been going on from time immemorial. The conquest, which took place in the Caliphate of Omar, only a year or two after the death of Muhammad, occupied a few years (13-15 A.H.), and was facilitated by the fact that the people of Syria came, to a large extent, both in origin and language, of Semitic stock. The kingdom of Chosroes, with that of Hira on the other side of the Syrian desert, formed a buffer State between the Empires of Rome and Persia, was of pure Arab blood. When, therefore, the Arab conquerors made their inroads into the country, they were not invading a foreign people, but rather attacking the countrymen of their own race, the representatives of the Eastern Roman empire. Moreover, it was only a score of years since the Persians had wrested the territory of the Greeks and held it for ten years. The Persian Wars had depleted the exchequer of Constantinople, and Heraclius had been compelled to withdraw the wondrous splendours from the frontier tribes—a fact which made them all the less unwilling to throw in their lot with the Arabs. When, therefore, Omar's forces entered the country, they did not encounter brutal invaders, and the indigenous population the issue was not subject so much as a change of masters; and it was not impossible that the new masters might be more gentle than the old.

To the Arabs the conquest of Chosroes was a great victory. The conquest of Egypt was to a large extent a necessity—had it been acquired a year or two earlier Medina would have been saved from famine, but the conquest of Syria was largely a matter of sentiment. Within its borders were contained nearly all the holy places of Islam. Hud and Salih had ministered to tribes within the boundaries of Arabia, but nearly all the remaining prophets—Abraham, Solomon, and above all Jesus—had lived and died in Palestine. Muhammad, too, had visited Syria, once as a mere boy, with his uncle Abu Tulib, and again as the agent of Khadijah. Jerusalem had been the goal of his mysterious night-journey, from which he had ascended to the Divine Presence, and it was from Damascus that he had turned away, saying that one could not enter Paradise twice. The reverence of the Arabs for Jerusalem is shown by the fact that it was towards it that the Muslims turned in prayer during the first two years after the arrival of Muhammad at Medina, and that the caliphs of Medina were accepted by the Caliph in person. On this occasion Omar visited most of the sacred places, under the guidance of the patriarch Sophronius. He is said to have identified the site of Solomon's temple, and he erected a small mosque probably of wood and clay, for the worship of the Muslims. Jerusalem did not become the political capital of the province of Palestine. For that Rashidun was founded somewhat later. But the sacred character attributed to the ancient city by the Arabs appears in the name Bait al-Maqdis ('holy house') by which their historians always call it, or in the shortened form Al-Quds, by which it is known at the present day. The sanctity in the eyes of the Muslims even of Jerusalem is, however, surpassed by that of Hebron, the home and place of burial of Abraham, Isaac, and Jacob, with their wives, as well as of Joseph, to whom it is also attached. Masjid Ibrahim ('Abraham's mosque'), but now it is always called Al-Khalil ('the friend'), abbreviated from 'the city of the friend of God.' Hebron fell into the hands of the Crusaders in A.D. 1099 and remained so until it was retaken by Saladin in 1187. The Crusaders do not seem to have had much scruple about entering the sepulchral chambers, and the curiosity of the Muslim does not exceed his sense of reverence, and one of them mentions with a feeling of the deepest awe that he had conversed with one who had with his own eyes seen Abraham. At the present day Europeans are not permitted to enter the mosque (originally a Crusaders' church), with very rare exceptions, and then only by a special permit.

Under the Umayyads (A.D. 661-750) Syria attained to the hegemony of all the Arab States, and Damascus became the capital of an empire stretching from India to Spain. Mu'awiyah, the first of the line, had been a governor of the Caliph 'Uthman: it was to the Arabs of Syria that his dynasty owed its birth and stability, and the Caliphs of the line naturally wished to do all in their power to strengthen the position and supremacy of their adopted country. Hence it was that, after the assassination of Ali, Mu'awiyah proclaimed himself Caliph, not at Medina, which had been the political as well as the religious capital under the first three Caliphs, but at Jerusalem. When, on the death of his son Yazid, the rest of the Muslim world did homage to the rival Caliphs Ibn Zubair in Mecca, it was no doubt in some measure owing to the rarity of the sacred city of Jerusalem and the tombs of the patriarchs at Hebron that the Umayyads were still able to maintain their position in Syria. And, whilst their rival was engaged in rebuilding the holy house at Mecca, which their armymen had destroyed, the Umayyads' 'Abd al-Malik was building the famous Dome of the Roek upon the site of the Temple of Solomon, as the inscription, in spite of its mutilation under the Abhards, still bears witness; and it was only after the building was finished, and a substitute for the Ka'bah had been provided to which the pious Muslim might make his pilgrimage, that the rival Calipha was crushed and the Muslim world once again united under one head. Mu'awiyah had already wished to remove the pulpit of the Prophet at Medina to his new mosque, but in deference to the religious feelings of the people he refrained from doing so. There is no reason to suppose that the Umayyads Caliphs acted in this matter from merely pecuniary motives, because he wished to divert the commerce arising out of the pilgrimage to the Hijaz into his own coffers; because, as soon as he was undisputed Caliph, it was evident that the manner which town became the object of pilgrimage (J. Wellhausen, Das arabischc Reich, Berlin, 1902, p. 132 f.).

The truth is that the Umayyads Caliphs, with the exception of the pious 'Abd al-Malik, were not Muslims at all. They sprang from the tribes of Mecca, the bitterest opponents of the Prophet, who submitted to him only at the last possible moment. They did not scruple to attack and plunder the city of Medina when they had lived and died, and even to destroy the Ka'bah itself, and they had well-nigh exterminated the family of the Prophet. They were a purely civil dynasty ruling in the name of religion, and they did not care what means they used to attain their ends. The great bulk of the population of Syria were Christians. They were, many of them, well educated, and in every way, except in fighting, more useful to the dynasty than the Muslims themselves. All the clerks in the government offices were Christians, and the State archives were written at first in Greek. A similar state of things existed in Persia and in Egypt. It was only under 'Abd al-Malik that the Arab language took the place of Persian in all official business, and, even then, the clerks continued to be non-Arabs. Some of the most influential persons about the Caliphs were also Christians. John of Damascus, as well as his father Michael, held office under these Arab rulers of his native city, and the panegyrist of the Umayyads was the Christian poet al-Aghtal. Moreover, it was not that these Caliphs merely made use of their Christian subjects,
whilst their religious creed. Questions of theology seem to have been discussed by the two parties in the presence of a number of persons on equal terms. Al-Akhtal made no attempt to conceal either his religious belief or the external emblems of his faith, when he stood before Abd al-Malik; and John of Damascus was an ardent defender of the use of images in divine worship, whereby he stood in opposition not only to the Caliph but to the Greek emperor as well. Such a state of things could not but react upon Muhammadanism itself, and there is little doubt that some of the most strict ways of thinking which began to prevail were due to this cause. It was to condone the delinquencies of the Umayyads that the Murjites professed to believe that there was no deadly sin for any one who made the profession of Islam, or that at any rate the sinner would not be punished until the Day of Judgment. Belief in divine predestination also began to be modified in the direction of an admission of free will. This tendency towards freedom of thought culminated in the Mu'tasimite movement under the 'Abbasids (see Sects [Muhammadan]). Nor was it only on the religious side that Christianity moulded Muslim life. Hishâm, one of the last and best of the Umayyads, appreciated the advantages of Caliphate under a superior agriculture. His governor over Irâq was Khalîd al-Qâsî, who was also a farmer on a grand scale. Khalîd's mother was a Christian, and he built her a chapel beside the palace of his father. The southern Christians and other non-Muslim peoples in preference to Muslims, as he no doubt found them more intelligent and capable. In Hishâm's days the doctrine that the Qur'ân is not eternal, which became the accepted creed of the 'Abbasids, began to be professed. The century and more during which the Umayyads ruled the Muslim world from Damascus was the most glorious in Arabian annals, and it is without significance that it was after the last Caliph of the line had removed the capital to his native town of Harrân that the dynasty fell and was replaced by that of the 'Abbasids.

With the fall of the Umayyads the Arabs ceased to be the ruling race in Syria. With the rise of the 'Abbasids, Syria became one of the provinces of the empire, not specially distinguished in the religious aspect from the rest. On the break-up of the Caliphate, with its resulting chaos, Syria became, with its many holy places, the battle-ground of Christianity and Islam. When it was prosperous and well-governed, it was generally as a dependency of Egypt, under Fathîid, Ayyûbî, or Mamlûk rulers. For the last four hundred years it has formed a province of Turkey.

B. EGYPT.—Since its conquest by the Arabs about the middle of the 7th century, Egypt has owed partly to its natural wealth and partly to its possession of the Azhar University and its frequent sovereignty over the holy places, played a leading part in the spiritual progress of Islam, and in especial during the last hundred years it has outstripped all other countries in the direction of the Europeanizing of the faith. The people of Egypt have always been subservient to their masters, until the beginning of the 18th century, they had to endure twelve years of Persian domination. After the conquest was over, however, the Persians ruled Egypt, they generally did, with moderation and tolerance, and, when the country was recovered for the Eastern empire by the conquests of Heraclius, the change of masters was a change for the worse. The natural craving of the Egyptian for a strong arm up, which he seemed to have shown itself in their earlier relations with the Persians and the use of images in divine worship, wherein he stood in opposition not only to the Caliph but to the Greek emperor as well. Such a state of things could not but react upon Muhammadanism itself, and there is little doubt that some of the most strict ways of thinking which began to prevail were due to this cause. It was to condone the delinquencies of the Umayyads that the Murjites professed to believe that there was no deadly sin for any one who made the profession of Islam, or that at any rate the sinner would not be punished until the Day of Judgment. Belief in divine predestination also began to be modified in the direction of an admission of free will. This tendency towards freedom of thought culminated in the Mu'tasimite movement under the 'Abbasids (see Sects [Muhammadan]). Nor was it only on the religious side that Christianity moulded Muslim life. Hishâm, one of the last and best of the Umayyads, appreciated the advantages of Caliphate under a superior agriculture. His governor over Irâq was Khalîd al-Qâsî, who was also a farmer on a grand scale. Khalîd's mother was a Christian, and he built her a chapel beside the palace of his father. The southern Christians and other non-Muslim peoples in preference to Muslims, as he no doubt found them more intelligent and capable. In Hishâm's days the doctrine that the Qur'ân is not eternal, which became the accepted creed of the 'Abbasids, began to be professed. The century and more during which the Umayyads ruled the Muslim world from Damascus was the most glorious in Arabian annals, and it is without significance that it was after the last Caliph of the line had removed the capital to his native town of Harrân that the dynasty fell and was replaced by that of the 'Abbasids.

With the fall of the Umayyads the Arabs ceased to be the ruling race in Syria. With the rise of the 'Abbasids, Syria became one of the provinces of the empire, not specially distinguished in the religious aspect from the rest. On the break-up of the Caliphate, with its resulting chaos, Syria became, with its many holy places, the battle-ground of Christianity and Islam. When it was prosperous and well-governed, it was generally as a dependency of Egypt, under Fathîid, Ayyûbî, or Mamlûk rulers. For the last four hundred years it has formed a province of Turkey.

B. EGYPT.—Since its conquest by the Arabs about the middle of the 7th century, Egypt has owed partly to its natural wealth and partly to its possession of the Azhar University and its frequent sovereignty over the holy places, played a leading part in the spiritual progress of Islam, and in especial during the last hundred years it has outstripped all other countries in the direction of the Europeanizing of the faith. The people of Egypt have always been subservient to their masters, until the beginning of the 18th century, they had to endure twelve years of Persian domination. After the conquest was
made a deep impression upon the Christian population of Egypt, and it is without significance that it was in Egypt that the last of the Umayyad Caliphs sought refuge after his overthrow. For two centuries the Abassids continued to send Arab governors to Egypt, and it was not until the year 588 that non-Arab, practically independent dynasties began to be set up in the country.

Under the centuries of Arab sway Egypt appears to have enjoyed a period of comparative prosperity and good government. The governors are no doubt often excesses, but generally without justice. This is especially the case with Qurašt ibn Sharîk, who is usually described as an oppressor and persecutor, but whom numerous payyâr show to have been a just, if strict, ruler. Moreover, not only was there no religious persecution of the Christians by the Arabs, but these had rescued the native Jacobite church from the hands of their co-religionists, the Greek Malkites, the free-lance nature of the Bedawi always leading him to support the more heretical side—a course which was to have its own interests also. The Arabs even despised in the taxation in favour of the Jacobites as against the Malkites to such an extent that not a few of the latter went over to the native church. The Afars found Egypt in a state of fever. The people were serfs attached to the land, and many of the payyers are taken up with the capture of some fugitive who has escaped from his own domain. Not the least beneficial thing the Arab government did for Egypt was to deliver them from their feudal lords, by converting these into mere tax-gatherers for the government.

The purely Arab government under the direct sovereignty of the Caliph was followed by a succession of dynasties of Turkish origin, the Tūlmînids (A.D. 888-909), whose capital Qaṭāl, between Fustât (i.e. Latin fuscotum) and modern Cairo, was famous for its splendour, and who for a quarter of a century ruled Syria as well as Egypt; and after a brief interval, the Ikhshidids (A.D. 925-969), who also ruled both Syria and the holy cities of the Hijaz, Mecca and Medina. The Tūlmûnids did not leave behind them much in the way of architecture to fill the visitor of their occupation of the country. The so-called 'mosque of 'Amr' may at least indicate the site on which that of the first conqueror of the country was built, but the latter was of much more modest dimensions than the present spacious place of worship, and not a trace of it remains. Indeed, the original Arab town of Fustât, although it maintained an independent importance for many centuries, is now regarded as merely a part, and not the most flourishing part, of its younger sister, Cairo.

The dynasty of Ibn Tūlûn, on the other hand, left many memorials of their supremacy. The mosque of Ibn Tūlûn, said to be an imitation of the Ka'bah designed by a Christian architect, but with a dome superimposed and a minaret round which winds an external staircase resembling that of the Church of the Redeemer in Copenhagen, is said to be one of the sights of Cairo. Ibn Tūlûn's brilliant but unfortunate son also resembled the late Khedive Isma'îl in his devotion to building and public works.

a century was, however, under the Fatimids that Egypt rose to the height of its greatness. Claiming descent from Fatimah, the daughter of the Prophet, these sectaries, as they were held to be by the orthodox Abassid Caliphs, took their origin, like so many other movements, both political and religious, in N. Africa, from which they conquered Egypt (A.D. 909-1171). Mu'izz, the fourth of the dynasty, proclaimed himself Caliph, in opposition to the Abassid Caliph in Baghdad, and founded a new city close to the old capital, which he called Al-Qahira ('the victorious'), the modern Cairo. The name bears a curious resemblance to that of the modern Egyptian city of Khir-eh in the same neighbourhood. Like most heterodox peoples, the Fatimids were enlightened rulers. In spite of famine at home and the inroads of the Carthagians (q.v.) from Syria, they quickly consolidated their empire over all the countries bordering upon the coast of the Mediterranean, from Algeria to Syria, the holy cities of Arabia also acknowledging their sway. Security of life and property led to a great increase of population. Commerce was flourishing, and the trade of India, which had up till now passed through Baghdad, began to flow into Egypt, and from this period begins the decadence of the Abassid capital and the resuming agrarianism of Cairo. 'Azîz, the son of Mu'izz, was especially distinguished for his enlightenment and religious tolerance. His reign is the culminating point of the dynasty, although it was considerably later that the prayers were said in the Fâtîmid Caliphate in the Abassid capital itself, but only for one year (A.D. 1055). Under Hakim, the son and successor of 'Azîz, the free thinking of the Fatimid regime ran riot; under the malin influence of the Persian Darâzi the Caliph proclaimed himself an incarnation of Ali, and claimed divine honours. He disappeared, but his doctrines were propagated in the sect of the Druzes (see Sects (Christian)). A persecution was also instituted against both Jews and Christians, in spirit not unlike those which the early Christians suffered for refusing to acknowledge the deification of Domitian and other Roman emperors.

The most enduring benefit which the Fatimids conferred upon Egypt and upon the whole Muslim world was the founding of the Azhar College. It was begun immediately after the conquest of the country, and opened in the year A.D. 972. The text of the inscription commemorating the opening has been preserved (M. van Berchem, Corp. inscr. Arab., i. [Paris, 1904] 43, no. 20). It received its name ('the fair') from an epithet of the alleged ancestress of the dynasty. Originally built as a mosque, it was transformed into a college and hospital for the poor by 'Azîz. Under the Fatimids the instruction imparted was naturally Shi'ite, but of this period little is known, and by a curious irony the college did not attain to full development until it was governed by the rule of Sunni, or orthodox, masters.

The annexation of Egypt by Saladin in the year 1169 and the consequent supersession of the Fatimid by the Ayyûbid dynasty, naturally led to the immediate abolition of the Shi'ite faith of the descendants of 'Ali and the establishment of the orthodox Sunni profession, not only in the Azhar College but throughout Egypt (1171-1250). This was the more easy of accomplishment as the Egyptian Muslims were always Sunnites at heart, and had submitted to the faith of their Fatimid rulers only through compulsion or for the sake of peace. But, if the Fatimid form of faith vanished with their dynasty, they have left behind them monuments which show till the present day the greatness of their race. In addition to the Azhar mosque, the ancient city gates which are still open to the tourist date from the Fatimid period, as also does the mosque of Hakim, modelled on that of Ibn Tulun, situated between the Bab Naar and the Bab Futuh. But their best memorial is the city of Cairo itself.

Of the four schools of doctrine which are recognized as orthodox by the Sunnite Muslims, the one

---

which first prevailed in Egypt was that of Malik Ibn Ansar († A.D. 804). It is still the accepted rite of the rest of N. Africa, but in Egypt itself it is preached by that of his friend and disciple, Abu Shafi'i, who died in Fustat in the year A.D. 819, and whose tomb is visited still by the pious near the foot of the Mokattam Hills. With a view to rooting out the Shi'ah doctrines and planting in their stead the orthodox faith, the Caliphs despoiled the Azhar of many of its privileges and endowments, and founded in its place a mosque and college round the tomb of the Imam Shafi'i (A.D. 1191), at the same time instituting missions to the outlying districts for the propagation of the true faith. The Azhar, however, quickly rose again in favour with the great and benevolent, and it is from the Ayyubid rather than from the Fatimid period that its career of brilliance and usefulness takes its beginning. With the coming of the Mamluks (1250-1517), who succeeded the Ayyubids, the Hanifite school (called after Abu Hanifah, † A.D. 767) came into prominence, and spread under the Ottoman Turks (from 1327 on). Being the least strict of the four schools and also the most inclined to monarchy, it was naturally favoured by the government, whilst the Shafi'ite remained the popular school. As for the Hanbalis, the last of the four orthodox schools (founded by the fanatical Ibn Hanbal, † 855), it has never taken hold in Egypt, and its students in the Azhar have never been more than a handful at the most.

Miss Agnes the Azhar University, which may be considered the intellectual barometer of Egypt, grew in importance and splendour by leaps and bounds. In the West the conquests of the Christians ending in the expulsion of the Moors from Spain by Ferdinand and Isabella in 1492, and the incursions of Jenghiz Khan at the beginning of the 13th. cent. and of Timur Lenk (Tamerlane) at the end of the 14th. in the East, left Egypt untouched. Thus, when its rivals in Cordova and in Bagdad had been swept away, Cairo remained the undisputed mistress of Muslim learning and culture. Both its professors and students were drawn from all parts of the Muslim world, a preference being given in some cases to those whose homes were most remote. The Muslim man of learning is cosmopolitan in his habits; he visits all countries where he may hope to pick up some extra knowledge or obtain a diploma from some world-famous doctor; and the imams of the Azhar and its instructors naturally led many of these travelling students to settle in Cairo, and sometimes to lecture in its college. The best known of these is probably the philosopher-historian Ibn Khalidun, who was a native of Tunis and was given posts in the government not only of that country, but also of Fez and Granada.

He then came to Cairo, where he was given the title of kadi of the Malik. From there he paid a visit to Timur Lenk at his camp in Syria, and finally died in Cairo in A.D. 1406.

But the Azhar may be considered as holding aloft the torch of learning in the whole world, both Muslim and Christian, up to the period of the Renaissance in Greece, it is not a century that after that epoch it became a stronghold of obscurantism. This is evident from the books which have continued to be studied there. The ancient poetry, which is the whole literature of pre-Islamic Arabia, was unheard of, and even the Astrology of the Harriri were neglected. A study was theological (including jurisprudence), grammatical. Even the original texts of the Qu'ran and the Traditions of Bukhâri were not submitted to critical investigation and super-commentaries upon these. Mathematics, natural philosophy, history, and geography were ignored. In other words, the Azhar, like the 'University' of Fez, continued to be a medieval school after the Middle Ages had passed away.

Egypt was once the home of Christian monasticism, and this religious tendency of its people showed itself also after they had largely gone over to Islam. One of the earliest and most typical mystics of Egypt is called Dhâl-Nâm (the name of the prophet Jonah, never of the fish!), who flourished in the first half of the 9th. cent. A.D.; but perhaps the most famous is Ibn al-Fârîd, who is considered the greatest of all the poets of the mystics. He was born in Cairo in 1181, and died there in A.D. 1235. He was buried on the Mokattam Hills near the tomb-mosque of Shafi'i. His principal poem, in 671 lines, has been translated by J. von Hammer-Purgstall (Vienna, 1854). Already under Saladin not only cells and monasteries, but even convents (for divorced wives and other women), began to multiply rapidly. Bâgîrî († A.D. 1279), the author of the famous 'Ode of the Mantle,' which is known all over the Muhammadian world and has been set to music and translated into many languages, was, as his name implies, of Egyptian origin.

Although Islam is theoretically a strictly monotheistic religion, and Mohammed is the prophet in which the worship of saints plays a larger part. The prayer-book of Jâzâlî, a native of Morocco who died in A.D. 1455, consisting of litanies in which the Arabian Prophet is a being certainly more than human, is used wherever his shrines are found, and not least in Egypt. The whole of N. Africa, and indeed the Muslim world generally, is honey-comb with secret societies or brotherhoods (Ha'khas), mostly religious in character. They form each an ecclesiastical college, half-way between Alexandria and Cairo. In Egypt there are four such orders named after four mystic or Sufi (see SUTRIS) saints of the highest rank called 'poles' (qub). The most famous of these is the Shaikh 'Abî al-Qâdir al-Jilânî († 1166), whose shrine is to this day a place of visitation in Baghdad; but the best known locally is Ahmad al-Badawi, a native of Tunis of the 12th. cent., whose tomb-mosque is at Tanta, a town of some 60,000 inhabitants, on the railway line halfway between Alexandria and Cairo. A fair is held there annually on his saint's day, during which the population swells to half a million, drawn from all the neighbouring countries. It resembles a fair elsewhere, shows all kinds of merchandise, dominating over whatever religious motive ever existed. In Morocco the four recognized 'poles' differ from those acknowledged in Egypt, and one of them, Shâhîd, a native of the country († A.D. 1238), is also the eponym of one of the more important brotherhoods. In these shrines the room containing the catafalque of the saint is lined with banners, rosaries, ostrich eggs, and votive offerings of every description. Where the shrine has fallen into ruin and consists of four bare walls, rags and pieces of cloth are often tied to a neighbouring tree. These shrine emblems represent the prayers of the faithful to the saint to intercede for them in order to obtain some much-desired object, recovery from sickness or, often, the birth of a son. The saints' tombs, which are such a marked feature of the landscape in all Muhammadian countries, are the emblems of an ineradicable superstition, and it is said, in many cases the haunts of crime.

With the French expedition of 1798 a new era began in the history of Egypt, owing to the attempts of the Khedives to establish a European State. Muhammad 'Ali set the youth of the ruling classes to be educated in Paris, from which they too often returned imbued with the
VICES RATHER THAN THE VIRTUES OF EUROPE. ISMA'IL LAY DOWN RAILWAY AND TELEGRAPH LINES ALL OVER THE COUNTRY. UNDER THE TAXUFI, SLAVERY LARGELY DISAPPEARED, AND POLYGAMY IS NOW BANNED IN LAW. FROM TAXUFI ALSO DATES THE LIBERTY OF THE EGYPTIAN NEWSPAPER PRESS, A LIBERTY WHICH HAS BEEN MOSTLY ABUSED. INDEED, THE NUMBER OF NEWSPAPERS PRINTED IN CAIRO IS OUT OF ALL PROPORTION TO THE NUMBER OF PEOPLE. THEY ARE, AS MIGHT BE EXPECTED, FOR THE MOST PART PUBLISHED IN THE INTEREST OF SOME POLITICAL PROPAGANDA, NATIONALIST (WHICH GENERALLY MEANS TURKISH), CONSERVATIVE, OR PROGRESSIVE. THE BEST CHRISTIAN NEWSPAPERS ARE ON THE WHOLE IMPORTANT THERE ARE THREE OR FOUR JOURNALS PUBLISHED BY AND FOR WOMEN.

THE PROGRESSIVE MOVEMENT INITIATED BY THE KHEDIVES NATURALLY REACTED ON THAT STRONGHOLD OF CONSERVATISM, THE AZHAR UNIVERSITY. INCREDIBLE AS IT MAY APPEAR, THE INSTRUCTION GIVEN THERE CONTINUED ON THE SAME LINE AS IN THE 13TH CENTURY. TO MEET PRESENT-DAY NEEDS THE GORDON COLLEGE WAS FOUNDED AT KHUFRUM, AND ALSO A MODERN UNIVERSITY IN CAIRO, BUT THE INSTITUTIONS STILL RELIGIOUSLY NO STUDENT OF THE AZHAR, WHO HAVE ALWAY BEEN MORE OR LESS INCLINED TO TAKE THE LAW INTO THEIR OWN HANDS, IN 1900 WENT OUT ON STRIKE, WITH THE RESULT THAT SOME CONCESSIONS WERE MADE TO THE PROGRESSIVE TENDENCIES IN EGYPT, BUT NEVER, CAN HARDLY BE CONSIDERED AS AN EXAMPLE OF MUHAMMADAN RULE, AS ALL THE IDEAS WERE EUROPEAN, ALTHOUGH THE INSTRUCTORS PUTTING THEM IN FORCE WERE MUSLIM.

C. MESOPOTAMIA.—IN THE FIRST QUARTER OF THE 17TH CENT., A.D. THE PERSIANS HAD CONQUERED EGYPT AND SYRIA, AND THE EASTERN ROMAN EMPIRE WAS, FOR THE MOMENT, ALMOST LIMITED BY THE WALLS OF CONSTANTINOPLE. BY A MIGHTY EFFORT, HOWEVER, HERODOTUS DROVE THE EMPIRE FROM HIS PROVINCES AND THE PERSIAN EMPIRE WAS IN ITS TURN COMPLETELY BROKEN. THIS WAS THE OPPORTUNITY OF THE ARABS. CHALDEES BECAME AN EASY PREY, AND IN HALF A DOZEN YEARS THE EMPIRE, WHICH UNDER ONE DYNASTY AND ANOTHER HAD WITHSTOOD THE MIGHT OF GREECE AND ROME FOR A MILLENNIUM, HAD CAVED TO THE PERSIA. THE SADDEN COLLAPSE OF PERSIA IS EXPLAINED BY ARAB WRITERS BY THE DECADENCE CONDITION OF THE COUNTRY, THE EFFEMINACY OF THE PEOPLE, THE TURNOFF OF THE GREAT LANDOWNERS, AND THE CHAOTIC STATE OF THE GOVERNMENT. WHEN Brought FACE TO FACE WITH THE HARDY NATURE AND SIMPLE HABITS OF THE ARABS. BUT Equally important is the fact that the population of Chaldees was itself Arab. The Lakhmids, whose capital was at Hira, near the ancient Khis, and the present Najaf, were, like the Ghasanids on the other side of the Syrian desert, immigrants from Southern Arabia. Mesopotamia itself was peopled by the tribes of Taghibil, Iyya, and further to the west, Nimap, and at Damas, in the so-called the route leading from Medina to the Euphrates, was settled a branch of Kelb, the tribe which so influenced the Umayyads in Syria. All these tribes made a profession of Christianity; but how lightly their religion sat on them is clear from the nonbalance with which the tribe of Taghibil fell in with Omer's stipulation that they should not bring up their children in the Christian faith. Accordingly, when the Muslims met them with little opposition and with some assistance from these tribes, the ties of blood proved stronger than those of religion.

Thus Mesopotamia quickly became a Muhammadan country, and being largely people
Arabs of the tribe of Quraish, it rapidly assumed a leading place in the Muslim world, and remained for three centuries, even when the political capital was Damascus, the spiritual capital of Islam. It was generally divided into two provinces—Iraq, the southern half, its most northerly town being Takrit, and the northern portion, Jazira (the Peninsula). Much the more immediate source of irritation to the Prophet and his successors was the schism which divided the Arab nation into two hostile camps, one of them led by the Khawarij or Secelessers, whose main principle was to oppose the established order of belief and of society, and to clamour for a theocracy, by which they really meant anarchy and nihilism. Often apparently exterminated, they continued to be a thorn in the side of the recognized Caliphate for many a day. Baghdad itself was originally built and fortified to protect the person of the Caliph against the fanatic and treacherous Rawandid, a sect of Khurassan (A.D. 762).

In the first half of the 9th century, three of the 'Abbasid Caliphs threw their lot with the Mu'tazilah, or party of freedom of thought, and instructed the orthodox Muslims to persecute and expel the adherents of the orthodox believers; and in the second half of the 9th century a seditious party broke out in the country to the north of the Persian Gulf and continued for fifteen years before it was suppressed. With the 10th century, the incursions of the terrible Cumaic wars began, who, though originating in Bahrain, quickly overspread and devastated Mesopotamia, Syria, and Egypt (see CUMASH). Meanwhile the Turkic slave-soldiers of the Caliphs had become so numerous in the 'Iraq and the supreme pontiff of Islam had become a puppet in the hands of the military power which happened to be supreme at the moment, until the caliphate of a man of real authority was swept away by the Mongol invasion.

But, whilst Iraq was the principal seat of heresy and sedition, it became for that reason a stronghold of the Saracens. Its turbulently populated required the best brains and the strongest arm to keep them in check, and their very opaqueness led to the necessary evolution of the particular view which eventually became accepted by the civil power. Just as some of the Caliphs liked to send their worst governors to the holy city of Medina, so some of the best, from the point of view of the Caliphs, were sent to Iraq. Such governors were, under the Umayyads, Ziyad, half-brother of the Caliph Mu'awiyah; the famous, if bloodthirsty, Hajjaj ibn Yufa, and Khalid ibn al Qari. 'Iraq, too, produced Hasan al Basri (729), a commentator on the Qur'an and caliph on a small scale, to whom the mysteries trace their origin; and Abu 'l-Hasan al Aahari, who at first a Mu'tazilah, enfeebled by reducing the faith to a system which was quickly undermined and, as orthodox and remains so at the present day.

The twin cities of Basra and Kufa were founded immediately after the conquest of Mesopotamia by the Prophet (A.D. 689). These cities were at first cantonments for the Arab garrison stationed in the territory conquered by them. These two cities, however, quickly lost their military character, and became what may be called the university towns of Islam. They were hospitable to all races compared to Oxford and Cambridge, not only in their mutual rivalry, but also in the wide-spread authority which attached to their diets. Their scholars laid down the principles of Arabic grammar, and decided at least pronouncedly the growing reading of the text of the Qur'an, those of one city often taking the view opposed to that advocated by the other. Basra especially was the home of free-thinking. It was there that the Arab theologians published their treatises, and nowhere could the Assembly of Jairiz (722), with their airy use of expressions from the sacred volume, have been so fitly written. The Zanj and the Cumaic insurgents, which destroyed the cities, brought ruin to both towns; but, whilst Basra, under the enlightened open door policy of native rulers, rose again, and is likely to continue an important commercial city, Kufa never recovered.

One of the most curious facts in connection with the history of Islam in Mesopotamia is the continuance of idolatrous rites in the midst of the true Faith at the city of Harran. Originally the seat of the worship of the moon-god, and best known from its mention in the Biblical story of Abraham, this city, from the time of Alexander, became a centre of Greek civilization. Long after Mesopotamia had become a Muslim province, Babylonian magic and Greek wisdom, Syrian paganism and Hellenic rites, all combined into one system of religion, continued to flourish there. Muslim governors were either kept in ignorance of these practices or bribed to remain silent regarding them. It was only in the year 800 that the Caliph Mahdi, when on an expedition against the Byzantines he passed by Harran, was struck by their strange garb and long hair. Then for the first time their existence became known to the central government. They were known as the people of Islam—one of the tolerated sects or the sword. After some delay they declared that they were the Christians sect of the Sabians and that the Church was granted in the Qur'an. No doubt the Caliph was only too glad to let them be, as they were one of the chief means of introducing Greek learning into Islam. They produced many writers and translators, of whom perhaps the best known is Tabbith Ibn Qurrah (790).

The 'Abbasid was essentially a Persian dynasty. The cause had its beginnings in Khurassan. One Caliph even wished to make the capital there. But the claims on government were too strong. Its turbulently populated required the best brains and the strongest arm to keep them in check, and their very opaqueness led to the necessary evolution of the particular view which eventually became accepted by the civil power. Just as some of the Caliphs liked to send their worst governors to the holy city of Medina, so some of the best, from the point of view of the Caliphs, were sent to Iraq. Such governors were, under the Umayyads, Ziyad, half-brother of the Caliph Mu'awiyah; the famous, if bloodthirsty, Hajjaj ibn Yufa, and Khalid al Qari. 'Iraq, too, produced Hasan al Basri (729), a commentator on the Qur'an and caliph on a small scale, to whom the mysteries trace their origin; and Abu 'l-Hasan al Aahari, who at first a Mu'tazilah, enfeebled by reducing the faith to a system which was quickly undermined and, as orthodox and remains so at the present day.
MUHAMMADANISM (in Turkey)

1. Beginning. — The first appearance of Islam in Turkey appears to have been in the thirteenth century, and it was brought there by the Turco-Mongol conquerors who overthrew the Seljuq dynasty. The Seljuqs had been a strong and powerful dynasty, and the Turks, who had conquered them, sought to spread their religion among the conquered people. They established mosques and schools, and encouraged the study of the Qur'an and the Hadith. The Turks also adopted the Arabic language, and this became the language of communication among the Turks and the Muslims.

2. Development. — It is a fact that the Turks as a people have not played so important a part in the formation of the doctrine as in the development of the religion. The share which they have had in the later development of Islam cannot be determined, since the necessary scientific investigations have not been made. Nor has the protracted struggle which Summite orthodox has had to wage in Turkey with the Shi'ite faction and various sectarian movements been as yet examined in detail. On the other hand, the innovations introduced during the last century as a result of European influence have been in a measure explained and studied. While it is true that many of the proposed improvements were but imperfectly carried out, or were not carried out at all, they nevertheless form the most significant effort made in recent times to modernize Islam. At the outset they were ostensibly to be put in practice in the spirit of Islam, and in many cases, as a matter of fact, they ran counter to it.

T. H. WRAZ

MUHAMMADANISM (in Turkey). — Back to the beginning of the eighteenth century, the history of the Turks in Turkey is not well known. The Turks had been in contact with the Persians for many centuries, and had absorbed many of their ideas and customs. The Turkish language was based on the Persian language, and the Turkish people had become accustomed to the Persian way of life. The Turks had also adopted the Persian alphabet, which became the basis of the Turkish alphabet. The Turks had also adopted the Persian way of clothing, and the Turkish people had become accustomed to the Persian way of life. The Turks had also adopted the Persian way of thinking, and the Turkish people had become accustomed to the Persian way of life.

1. These laws were published in the Dastuff (Constantinople, 1858 [i.e., A.D. 1258]).

2. The number of laws in the Code of Justinian is given as 500 in the Textus. The number of laws in the Code of Justinian is given as 500 in the Textus. Since 1860 there have been the Code of Justinian in the Code of Justinian, and the Code of Justinian in the Code of Justinian.

MUHAMMADANISM (in Turkey)

ing influence of Russia. The Turkish administration was not blind to the difficulty of the undertaking, and to some extent evaded it in a very adroit fashion.

The various points were settled as follows:

1. In order to permit Christians to take oaths as witnesses—a privilege denied to them by the shari'ah—an entirely new jurisprudence, upon which the experts had been at work for a number of years, was established. In addition to the jurisdiction of the shari'ah, which thereby retained its competence only in matters pertaining to the personal status of Muslims—such as e.g. affairs relating to marriage, divorce, inheritance, etc.—the civil laws of the European models were introduced, organized on European models. At these courts, instead of the sworn evidence permitted by the shari'ah, documents and evidence were received as valid, so that it was now possible for a Christian to give his testimony even against a Muslim.

The abolition of capital punishment for defection from the Muslim faith was conceded in the following terms: 'As every religion and sect in my empire may preserve its form of worship with complete freedom, no one shall be obstructed or molested in practicing the worship of the religion to which he belongs, and no one shall be compelled to change his religion or sect.' (Text, § 8.

The abolition of ḥadd (police-tax) and the introduction of the military service for non-Muslims were effected in name, but commutation (ḥadd-i-ṭukhab) was still to be allowed (cf. the law of 1860, art. 27). In reality, therefore, the state of affairs remained as it was, the only modification being that the term ḥadd was replaced by the expression ḥadd-i-ṭukhab. It was not till the Revolution of 1908 that military service was actually imposed upon all Turks, and this was done in violation of the religious profession—a measure certainly not conducive to the national welfare. The military service was imposed at variance with the criminal law of the shari'ah. It was framed by the simple process of taking over the French code penal in 1856, although as late as 1866 M. Hatt-i-ṭukhab had promised that such a code would be drawn up, and this had in some measure been attempted. The new penal law was at length modernized by the supplementary decree of 4th April 1874. The later code, however, did not supersede the penal ordinances of the ancient shari'ah, as the new code, by increasing the two sets of laws remains in operation side by side, and citations can be tried by either (cf. E. Nord, Däische Strafbüchstossbuch, Berlin, 1912, and A. Halin, Proces public et administration, Femmes ottomans, l. Vienna, 1909, p. 584). Of the other reforms, reference need here be made only to the enactments relating to the slave-trade. An act of 1st Oct. 1854 forbade the buying and selling of Georgian slaves. Various ministerial ordinances, dating from the years 1848, 1867, 1871, 1879, and 1886, prohibited all commerce in slaves whatsoever; since 1862 the trade has been regarded as smuggling. From 1800 Turkey has taken part in the International Conferences for the suppression of the slave-trade in Africa at Brussels.

While it is true that many of these reforms were imperfectly carried out, or not carried out at all, yet their importance should not be underestimated. In not a few cases they made a breach in the fabric of the shari'ah alike in theory and in practice. The assimilation of the new laws would serve to bring Islam into line with modern ideas; but to what extent this may be effected without great religious wars, and how far the Muslim theology is able and willing to deal with the fresh problems involved, the future alone can show.

Ibnṭevi Muslim theology has tacitly submitted to the reforms, and has not expressed itself openly regarding them. It is only within recent years that the aspirations of the young Turks have begun to show support among the theologians, but no attempt has been made yet to produce works of importance in the field of scientific theology. The views of this liberal tendency—very much the same as it is the tendency to express in the Siyāṣa-i-Muṭtahif, a periodical founded immediately after the Revolution, and from no. 183 (5th March 1912) continued under the name of Siyāṣi-i-Bekahf (cf. L. Bouvry, in Revue des M. Hartmann, Untersuchungen aus der Türkei, Leipzig, 1910, p. 137).

3. Religious organization. Apart from the traditional group just referred to, the religious ranks of Islam in Turkey have no likings for innovation. The name by which the entire class, as well as the individual member of it, is known is 'ālim (the plural of 'ulāmā, learned). The long-established organization as still existing with but little change in its main features, was founded in the reign of Sultan Muhammad II., the Conqueror (1451-81) (cf. J. von Hammer-Purgstall, Des osmanischen Reichs Staatsverfassung und Staatsverwaltung, pt. ii. Vienna, 1819, p. 372 ff.; W. Gibb, A Hist. of Ottoman Poetry, London, 1900-09, ii. 394; C. d'Ohsson, Tableau général de l'empire ottoman, i. 2. Paris, 1791, p. 482 ff.). At its head stands the Shaikh-al-Islam, whose office, as now constituted, was created by Sultan Sulaiman I. the Magnificent (1520-66), though the title had been conferred by Muhammad I., the Conqueror, upon the mufti of Constantinople. In consequence of the reforms, and especially the creation of the Şafii-kim-i-nizamiyya (see above), his authority has suffered a considerable decline; he now controls only the religious schools and the shari'ah. The board which over him presides is called Şâbi-i-maşali-kâtibi-i-talabî, Şâbi-i-fatih-i-paraâr, or, popularly, Şâ-talabîn, and consists of the following departments:

a) Administrative boards: (1) Maşali-i-tâbii-i-talabî-i-tarikh-i, the commission for the selection of spiritual judges; (2) Maşali-i-tâdibusnâ, the commission for the examination for the maâdî-muâdî; (3) Maşali-i-tâbii-i-sûrâl, the commission for the affairs of schools; (4) Maşali-i-tâbii-i-madrasâ, the commission for the affairs of the derwîsh orders; (5) Maşali-i-tâbii-i-sûrâl, commission for examining madrasâ students with a view to their exemption from military service; (6) Maşali-i-tâbii-i-sûrâl, commission for distributing endowments of the religious officials; (7) Board for the administration of the property of Şâ-baybâ (8)board of judges; (9) Şâbâ-i-tâbii-i-talabî-i-tâbilâh, the court of the legal decisions of the shari'ah, commission for the removal of the decisions of the shari'ah; (9) Fatârâlahân, office for the legal decisions of the shaikhs (cf. Heldborn, i. 293 ff.).

While the standing of the Shaikh-al-Islam, as of the 'âlamân generally, is now great inferior to what it once was, yet it is one of the great masses of the people is still very considerable, and to this day they form a power which cannot be safety be ignored by the politicians.

4. The derwîsh orders. Perhaps an even greater influence among the people is enjoyed by the derwîsh orders. From the foundation of the Ottoman empire they have played a great role in Asia Minor, as they did to some extent even before. As a matter of fact, the gradual Moslemization of the Christian elements is very much the work of the derwîsh order; in their indifference towards the existing forms of religion, views of the most diverse character could find a refuge in their midst. Their ideas have come in contact with the ideas assimilated to those of the official and national religious organization. The order of the highest rank at the present day is the Mawlawi, so called from the nass of its founder, Mawlawi Jalâl al-Dîn Rumi (q.v.), and known in the west as the 'dancing dervîshes.' The next in general regard are the Râfî, so-called 'howling dervîshes.' Certain orders which at one time occupied a powerful position, e.g., the Naqshiband, the Haidari, the Qâdiri, etc., have now sunk to a lower level. Others, again, have been of late gradually growing in prestige—e.g., the Malâmî (cf. Hartmann, Index).

The Baqâsh, an order which at one time, owing to its close connection with the Janizaries, held a position of special prominence, sank into the background after the suppression of that force by Sultan Mahmud in 1828, but have quite recently begun to display a more active spirit in Asia Minor, and even more decidedly in Albania, this order is constantly adding to its strength. By reason of its heterogeneous views it should hardly be regarded as belonging to Islam at all, but it certainly makes this claim.

It has been methodically dealt with in several recent works of great reliability, such as G. Jacob, Entwürfe zur Kenntnis des
MUHYI AL-DIN IBN AL-ARABI

MUHYI AL-DIN IBN AL-ARABI.—Muhyi al-din ibn al-'Arabi, the celebrated Muhammadian mystic, who is generally known by the name of Ibn al-'Arabi or Ibn 'Arabi, was born atMurcia in Spain in 1165. Much of his youth was spent in Seville, where he devoted himself to literary, theological, and mystical studies. After visiting Granada and other Spanish towns, as well as Tunis, Fez, and Morocco, he set out in 1201 for the East by way of Egypt, whence he made the pilgrimage to Mecca. He did not return to Spain until many of the remaining years of his life were passed in the neighbourhood of Mecca, but he also travelled extensively in Babylonia, Asia Minor, and Syria, everywhere gaining disciples and spreading his doctrines in conversation with high and low, while, as he believed, he was assisting in the recovery of the Crusades, he called for repressive measures against the Christian population and encouraged his fellow-Muhammadans to persevere in their faith. He died at Damascenus a. D. 1240.

Whether we regard his religious and philosophical writings or their influence on the subsequent development of Islamic mysticism, Ibn al-'Arabi can justly claim the supreme position among Shi'i authors who posternly the commentaries on the Qur'an, which is attributed by the title, 'al-Shaikh al-Akbar,' conferred on him by the almost unanimous voice of those who are best qualified to judge. The list of his works drawn up by himself contains 220 titles (Beuckelmann, Gnom., der arab. Literatur, i. 442), and some of them are of enormous length. The most famous and important is the Futuhat al-Makkiya (4 vols., Bulaq, 1876, comprising about 3,500 pages). In this, as in many of his works, the nature and significance of the divine revelations imparted to him in ecstatic vision by prophets, angels, and even God Himself (a brief résumé of part of the contents of the Futuhat will be found in H. O. Fleischer, Orientalische mater. bibliotheca senator. Lipsiensis, Griimm, 1838, pp. 490-495).

Another book, of smaller compass but equally celebrated, is the Fuqah al-Hikam, in which the author discusses the nature and significances of various holy revelations imparted to twenty-seven prophets, beginning with Adam and ending with Muhammad. Besides the Futuhat and the Fuqah, both of which contain a considerable quantity of verse, his prose writings include a mystical commentary on the Qur'an, a collection of definitions of Sufi traditions and technical terms, which has been edited by G. Fluegel, (Leipzig, 1844), and a short treatise on mystical psychology (Arab. text with Span. tr. by A.I. Palmez, in Actes du xiv Congrès international des orientalistes, iii. 151 f.). He also produced several volumes of mystical poems, one of which, the Tarjumah al-ulumyy (ed. with Eng. tr. by the present writer, London, 1911), is an important work in the history of the poetry of the poets and the mystics. His poetic style in which there are written, was evidently the desire of the age and the aim of the poet, and in order to refine his writings Ibn al-'Arabi published a second edition accompanied by a commentary on the mystical sense of each verse is explained. Although his interpretations are often far-fetched, the poems themselves supply evidence that there was no ground for the charge brought against him, plausible as it might appear to the uninstructed. The question of his orthodoxy was keenly disputed, and if, many Muslims saw in him a dangerous heretic, others had no doubt that he was a great saint; but even his adversaries recognized that the outward sense of his writings was frequently ambiguous, and that the study of them should be permitted only to mystics of ripe experience. At first sight, it seems hard to reconcile Ibn al-'Arabi's extreme conservatism in this sphere of religious law with his remarkably bold and fantastic speculations in the domain of theology. He belonged to the Zahirite school, which rejects opinion, analogy, and authority, and stands on the external (zahir) literal meaning of the Qur'an and the traditions. But, while his attitude in regard to legal and ritual practice was that of the literalist (zahiri), who looks only at the outward form, in all matters of doctrine he was pre-eminently the mystic (bāāti), who sees his gaze on the inward spirit and seeks to
discover the reality of which the words and letters are a symbol. As I. Goldziher has shown (Die Zähriten, Leipzig, 1884, p. 170 f.), the two points of view are not mutually exclusive. The Zährits practice a form of mystical pantheism, whereas the Khawâbi claim to have discovered in it an essentialism of the opposite kind. In the case of the latter, this sect, the core of the sect, is the doctrine of the Essential Unity of God, and the method of logical demonstration as opposed to intuitive knowledge.

Ibn al-'Arabi, like other Sufis before and after him, endeavours to combine the Ash'arite theology with philosophical ideas which, in his case, are mainly derived from Plato and the Neo-Platonic school. Thus he has to deal with two different conceptions of God: (1) the Allâh of the Qur'an, endowed with attributes that are superimposed on His essence, and (2) the One Being which is devoid of every attribute, quality, and relation, and which is all that exists. His God retains the attributes of Allah, but these are reduced to mere relations, having no real existence; hence, although they are connected with the essence of God, they do not affect the essential unity of God, in whom all contraries are identified. In his attempt to explain how plurality can proceed from the Simple One, Ibn al-'Arabi accepts Plato's allegory of the cave, and his favourite illustration being the diffusion of light. The intelligible world is constituted by a series of seven realities: (1) God, the One Essence; (2) the First Intelligence or Universal Reason, which comprises every species of divine knowledge and, in Arabic language, is the Pen that inscribes on the Tablet of Universal Soul the divine ideas whereof created things are a copy; (3) Universal Soul; (4) Universal Nature; (5) Universal Matter; (6) Universal Figure. The entire phenomenal universe is the manifestation of those realities, which, before their manifestation, exist potenti ally—or, as Ibn al-'Arabi says, are non-existent—in the luminous darkness that hides eternally the essence of the Godhead. Manifestation involves relativity, and the relation of the universe to God is that of the determined to the Absolute, of the shadow to the sun. All existence is in sympathy with the essence of God (al-Insân al-kâmil). Form answers to the Aristotelian definition of matter; i.e., it is essentially potential and imperfect. Spirit, on the other hand, is what Aristotle calls 'form,' the principle that perfects the forms produced by Universal Nature, which take their place in the order of existence according to their capacity for receiving and manifesting the life of the Universal Spirit that animates the whole. Of these forms the highest is man, who, in virtue of the microcosmic function assigned to him by his Creator, unites and displays all the divine names and attributes, so that he is the mirror in which God beholds and reveals Himself as He really is. This description refers only to the supreme type of humanity, 'the perfect man' (al-insân al-kâmil), whom Ibn al-'Arabi says, are nonexistent—men—propagists, saints, and theosophists—that possess a unique knowledge of God (Fāqîh al-Hikmâ, ch. i. of El, art. 'al-Insân al-Kâmil'). Knowledge is a process of reminiscence. In the great purifying of the soul (al-nâdîqah), which must be distinguished from the vital or animal soul (al-rûh al-bâyâni). While the former has only an accidental connexion with the body and is incapable of sin, the animal soul, though not consciously evil, is naturally corrupt, and suffers punishment for sins committed in the flesh.

The system of Ibn al-'Arabi may be described as a pantheistic monism. God and the world are two aspects of one Absolute Reality: the world could not exist apart from God, and, if the world did not exist, God could not be manifested and known. The terms 'creator' (al-Insân) and 'creatures' (khâliq) are logically included in one another as moments of one Absolute Being, not indeed of equal worth—since al-Insân is eternal, while khâliq is contingent (i.e., eternal in the knowledge of God, and originated in respect of its manifestation)—but interchangeably subjects of predication (cf. L. Massingham, Kitâb al-fawâdan, Paris, 1912, p. 130 ff.). Ibn al-'Arabi delights in the paradoxes which this line of thought suggests to him—e.g.,

*He praises me and I praise Him. And He worships me and I worship Him. In one state I acknowledge Him, but in the objects of sense I deny Him. He knows me and I know Him not, and I know Him and behold Him. How can He be included in me? When I help and aid Him? For that cause God brought me into existence. Therefore I know Him and bring Him into existence. (Fâqîh, Cairo, 1352 A.H., ch. v. p. 79.)*

Although the core of the same sentiments appear in some passages of his writings, he makes a distinction between the divine and human natures, and his pantheism does not lead to the doctrine of incarnation (khâtâb) or identification (ittâbîd). The man can never say with the Law (Anâ' al-Insân), because, owing to the constitution of his mind, he is unable to think all objects of knowledge simultaneously, as God thinks them; therefore he is only 'a truth' (hâqîq), not 'the Truth' (al-Hâqîq), who is the One Being of the whole universe of created things (cf. Massignon, p. 183 ff.).

In view of the scanty attention that Ibn al-'Arabi has hitherto received from European scholars, it would be impossible to give a detailed account of his doctrines, and premature to make a more definite statement concerning the character of his theosophy as a whole. Much of it, of course, belongs to the common stock of Sufistic speculation, but there is also a great deal that appears to be original and based upon the immense store of his own mystical experiences, which he has so copiously recorded and analyzed (for his theory of ecstasy and the seven degrees of 'passing-away' [fanâ] we refer the reader to the works of his pupils). Ibn al-'Arabi, however, preserved a few of the most characteristic features, which he enumerated in a treatise entitled 'La Falsafika según Mohamín Almemrah,' in Actes du xve Congrès international des orientalistes, iii. 125 ff.). Among the twenty-four heretical doctrines attributed to him by Allâl Qârî (Bâshîbî ft wahdat al-wujûd, Constanti nope, 1294 A.H.) the following are noteworthy:

(a) That man stands to God in the same relation as the pupil to the eye, which is the instrument of vision, to the eye; i.e., man is the means whereby God beholds His creation and knows Himself; and that we (mankind) are ourselves the attributes with which we can endow nothing, being only the attribute of necessary and essential being—so that when we contemplate Him, we contemplate ourselves, and when He contemplates us, He contemplates Himself (Fâqîh, ch. ii.). Elsewhere Ibn al-'Arabi says: 'Weal soul is a paradigm that sustains the being of God, and He is our food.'—a further instance of the way in which he turns the principle of logical correlation to pantheistic uses.

(b) That God is the sole source (al-sin) of the things that He brings into existence, and which He indicates in the 'self' or essence of things in manifestation, though He is not the 'self' of things in their essences. Therefore Ibn al-'Arabi holds that the true mystic, combining the doctrines of tâbidh and tasâhid, worships God both
as absolutely transcendent and as externalized in nature (Pêoûa, ch. xii.).

c. Their faith and religious belief are relatively true. This follows from the proposition that God is the self of all created things, whether they be sensible or intelligible. Every sycophy forms some notion of God, and in praise of the god which he has in his heart, while at the same time he blames the gods of other sects and individuals. It would be more wise and just if he perceived God in every form and in every belief, according to the verse (Qur'an, xlix. 100, 101). There is the face, i.e. the reality, of Allah (Pêoûa, chs. x. and xxvii.; cf. Tairûmân al-
ashâwî, Preface, p. vii.

d. That, even if the infidels shall remain in hell for ever, their tortures will ultimately be transmuted into such pleasure as is enjoyed by the blessed in paradise. 'Abd al-Karîm al-Jihál develops this theory in his Ismân al-Kômî (see the present writer's article, 'A Modern Philosophy of Religion,' in Jubiläumsblätter der Darmstädter Gesellschaft, 3rd ser. i. 1 [1916] 85 f.; cf. E. E.) Evidently there is no room in Ibn al-'Ârâbî's system for the Muslimian schemes of rewards and punishments. The fullness of the divine wisdom as manifested in the creation requires that the spiritual capacities of human souls shall be infinitely various, and salvation and perdition are the effects that correspond with the capacity eternally implicit in God's knowledge of every human soul before its individualization in the material world. Ibn al-'Ârâbî proceeds to argue that, inasmuch as knowledge is a relation dependent on the object known, viz. the soul and its potential capacity, each individual is responsible for the good and evil which are produced by the soul (Pêoûa, ch. v.); but in another passage of the same work (ch. vii.) he declares that it is a more profoundly mystical thought to regard the soul as a mode of God, and its recompense as a divine illumination (jâhîli) in the form of pleasure or pain, as felt by God Himself.

e. That the saints are superior to the prophets. Ibn al-'Ârâbî does not state the doctrine in this absolute way. The prophet, he says, may be viewed in three aspects: as apostles, they bring a religious code to their people; as prophets, they inform them about God in proportion to their own knowledge; and, as saints, they pass away in God, and abide in Him. Saintship is the inward, mystical,顷迈 element in prophecy. Hence the prophet qua saint ranks above the prophet qua religious legislator or preacher of divine truth (Pêoûa, ch. xiv.). According to 'Ali al-Qârî, Ibn al-
'Ârâbî was the one who claimed to be the Seal of the Saints (Khâtâm al-ulfîyâ), as Muhammad is the Seal of the Prophets.

LITERATURE.—The best general survey of Ibn al-'Ârâbî's thought is contained in two papers by Amin Pâshâ."La Psicología según Mohâmîd Abû-Árambî," in Actes du xviè Congress internat. des orientalistes, Algiers, 1906, iii. 79–150, and "Mohâmîd's "Itikâf al-Mahmûdî."" in Homage à M. Mârîâsî Yело, Madrid, 1913, i. 217–256. The latter volume (pp. 191–219) includes an essay by J. R. R. Tolkien. "Les enquingments de la philosophie de Nâmûdî Lâlî,\ which gives much information concerning the life of Ibn al-

MUJURAT.—See MOEKA.

MULUT.—Mulut is a title of varied usage, given to officials of different ranks, but invariable to those who have reached some degree of education in a madrasah, or higher mosque school, and hold certificates testifying thereto; it is also a generic term applied to such officials as a class.

Mullut is a proper and fundamental of the Turkish manuals, the Arab manuals (e.g. "lord," "master," "patron"; also "slave,

"official." Any one standing in any sort of fixed relationship to another; it is used commonly among the Muhammadans of Turkey, Persia, Russia, India, and their dependencies. In India, however, the term mujurrut or mulut is also used in reference to the muluts of the lower grades, below the rank of muhaddith (plural: muhaddiths). The term originally meant "with" or "near," and is applied to the most eminent muhaddith, and also to eminent Sufis. In Turkish a distinction is further made by attaching instead of prefixing mulut to the name of a judge of a higher court. In Arabic-speaking countries mulut as a generic term is not frequently used; in the latter case, "friend," "ally," "comrade," "follower," "disciple," "student," "professor," etc., are references to the chief judges of the Muhammadan religious courts of the land. The title of Mulut, a title of older usage in Muhammadanism, has persisted, esp. in application to a religious teacher of authority. The term "Mal Muluts" has come to designate legal and religious leaders in India and the Sudan who, having proclaimed themselves Muluts (cf. q.), have led revolts against the established government.

The characteristics of the muluts as a class are determined largely by the education which they receive. The ranks are recruited normally from the lower, less often from the middle, classes. Between the ages of eleven and fifteen, having passed through the maktah (elementary school), students are admitted as sâqfus (undergraduates) to the madrasah (higher mosque school). The curriculum offers training mainly in dialectics, theology, and the canon law based on the Qur'an and traditions (hadith); it is that of a theological seminary of the orthodox type. The Oriental languages are also taught, and in previous centuries there were Muluts who became proficient in the science of belles-lettres; but in more recent times the graduates have been only lawyer-theologians. The complete curriculum requires at least fifteen years, in practice generally eighteen, years for fulfillment; but very few students succeed in completing the course and passing the various examinations which entitle them to a place in the higher ranks of the 'ulamâ and to appointment to the higher judicial and university positions. Owing to the Oriental veneration for scholars, as well as to certain privileges which they enjoy (such as exemption from military service, and free, though very simple, food and lodgings), many students enter the madrasah who are physically unable to bear the hardships of the student life and mentally uniffited for the full curriculum. Accordingly, the majority leave the madrasah after from one to five years of study, during which any tendency to independence in thought and investigation has been discouraged and a blind devotion to traditional Muhammadanism has been made the fixed principle of life. At the end of each year's work or the completion of each lessor's course, the student receives a certificate testifying to his fitness to hold some position demanding that amount of learning. Leaving the madrasah, he is now in the muluts class, and receives the support of that class in the appointment to some minor office, generally in some village or small town in the provinces. He may become an imâm, 'leader in prayer' (though this office is not reserved exclusively for the muluts class), or a teacher in a primary school (and the incapacity of such teachers in the Orient is proverbial), or a lecturer in some small madrasah, or even a judge of one of the minor courts. It is the muluts as provincial mosque preacher who is regarded as the head of the class. Only in office, the mulut is sure of a position for life, though he may be transferred from one school or mosque to another.

Without any fixed organization, the muluts nevertheless form almost a caste; they are distinguished by the large turban and the flowing robe, though neither is prescribed. In influence over the masses and in devotion to formal religion, the muluts class has often been likened to the byzantine, a call to arson which falls in irrelativity only so far as the muluts receives no special consecration to office, does not in any way replace the individual in offering prayer or sacrifice, cannot grant absolu-
tion, and performs no necessary part in the rites connected with birth, circumcision, marriage, or death. But, in being the teacher of these rights and duties and the accepted adviser in questions of faith as well as of daily life, the mullah considers himself in a position above that of the other Oriental clergy—whose equal at least he generally is in learning and whose superior he is in the persuasive powers of his dialectics.

In their conservative and reactionary tendencies the mullahs have generally given their support to the absolutism of temporal authorities—in Turkey especially to the Sultan as head of both the Church and the State—and they have opposed the introduction of Western culture as encouraging religious indifference and ceremonial laxity, and as substituting rationalism for their own fanaticism. In Persia, however, where the Shi'ite form of Muhammadanism prevails, and where, consequently, the temporal ruler is not regarded as the head of the Church, the mullahs often exercise their popular power against the State authority, matching the despotism of the latter with their own extreme fanaticism. There the house of the mullah, like mosques and shrines in all Muhammadan lands, is an inviolable place of refuge; and Persian mullahs have often been charged with harbouung outlaws, whose services they have then used in furthering their own designs. The power of the mullahs is sometimes checked to a certain extent by that of the dervish orders, and in Turkey, India, and Egypt by the secular courts instituted in more recent times to administer the so-called "urf" (customary law).

The mullah in general, being sincere in their devotion to their calling, are seldom guilty of infractions of the moral law; indeed, they have generally been held to contrast favourably with the lower priesthood of other faiths. Moral probity is less marked among the Persian mullahs, however, who, at heart more devoted to Persian poetry than to Muhammadan theology, hold their own functions in light esteem. In one respect, too, the mullahs everywhere, especially those who fill the office of minor judge, are not above reproach; inasmuch as the stipend furnished by the mosque endowments, and official salaries in general, are very small, the practice of usury and acceptance of bribes is frequent—an abuse which early Muhammadanism attempted to avoid by the principle that religious teachers should always have some other means of gaining a livelihood.

Despite the reactionary tendencies and the corruption generally ascribed to the mullahs, the history of Muhammadanism contains the names of many mullahs conspicuous for nobility of character and devotion to absolute justice, who have risked their lives to rebuke the corruption and tyranny of rulers. To-day, too, the number of clear-headed, honest leaders among the Turkish, Arabic, and Indian ulama is steadily increasing; not a few ulamas have been sent from Turkey to receive part of their education in Europe; in India the ulama have sometimes warmly advocated the innovations of the English; and everywhere in the larger cities subjected to European influence the traditional type of mullah is being combated by advanced Muhammadans who, even when they are rationalists, at the same time deny that they are guilty of any defection from the fundamental principles of Muhammadanism; and fatalism is often taught, practically if not logically, as a doctrine which induces fortitude in bearing the accidents and misfortunes of life, without permitting the cessation of righteous endeavour in any cause as long as Allah has not shown, by making its failure a fait accompli, that His will and decree are opposed thereto.

'Prayer'
By JAMES HASTINGS, D.D.

The first of a short series of volumes on the

GREAT CHRISTIAN DOCTRINES

Edited by Dr. Hastings. The Doctrines to be dealt with, in addition to Prayer, are The Atonement, Faith, The Holy Spirit, Miracle, and The Person of Christ.

'Nothing could have been more appropriate than this volume on 'Prayer' during a world-crisis like the present. All the elements of prayer—adoration, confession, petition, intercession, thanksgiving—are treated in turn, while the nature of prayer, together with scientific and philosophic objections, is amply considered. Further, there are chapters on encouragements, perplexities, answers, times, and manner of prayer... As a text-book for Christian preachers, teachers, and workers, the book will prove of the utmost service.'—London Quarterly Review.

In Demy 8vo, price 6s. net.

'The Scholar as Preacher' Series

In Post 8vo. Price 4s. 6d. net per Volume.

These volumes are carefully chosen. They are chosen because their authors are scholars as well as preachers, for the suggestiveness of their thought, and because they are saturated with the most promising ideas of the present day.

'SUB CORONA.' Sermons by Principals G. A. Smith, Denney, Irech, Stewart; Professors W. P. Paterson, Stalker, Coopes, Curtis, Cairns, MacEwen, McFadyen, Mackintosh, Milligan, Selbie, Reid, Nicol, Kay, Gilroy, and the Bishop of Aberdeen.
